OLYMPUS. There were two great musicians in antiquity of this name, and both celebrated performers on the flute. One of them flourished before the Trojan war, and the other was contemporary with Midas, who died six hundred and ninety-seven years before Christ. The first was a scholar of Marsyas, and a Mysian: the second, according to Suidas, was a Phrygian, and author of several poems, which were by some attributed to the first Olympus. But the most important addition which the disciple of Marsyas made to the musical knowledge of his time, was the invention of the *enharmonic genus*. Plato and Aristotle, as well as Plutarch, celebrate his musical as well as poetical talents, and tell us that some of his airs were still subsisting in their time. Religion only can insure permanence to music. The airs of Olympus used in the temple of worship during the time of Plutarch, were not more ancient than the chants or *osato fermo* to some of the hymns of the Romish church; and the melodies now sung to many of the hymns and psalms of the Lutherans and Calvinists, are such as were applied to them at the time of the reformation. Plato says, the music of Olympus was, in a particular manner, adapted to affect and animate the hearers: Aristotle, that it swelled the soul with enthusiasm; and Plutarch, that it surpassed, in simplicity and effect, every other music then known. According to this biographer, he was author of the curule song, which caused Alexander to seize his arms, when it was performed to him by Antigonus. To his musical abilities he joined those of poetry: and, according to Suidas and Jul. Pollux, he composed elegies and other plaintive songs, which were sung to the sound of the flute; and the melodies of these poems were so much celebrated in antiquity for their pathetic and plaintive cast, that Aristophanes, in the beginning of his comedy called "The Knights," where he introduces the two generals, Demosthenes and Nicias, travestied into valets, and complaining of their master, makes them say, "Let us weep and wail like two flutes breathing some air of Olympus." Plutarch ascribes to him several names or airs that are frequently mentioned by ancient writers; such as the Minerva, the Harastian, Curule or Chariot air, and the Spondean or Libation air.

OMNES. (L.) All, or all together. A word sometimes used in the old music, instead of *tutti*.

ONDEGGIARE, or ONDEGGIARE LA MANO. (I.) An expression signifying that the hand, when raised in beating time, is to be waved in the air, by way of marking the last part of the measure.

ONDEGGIAMENTO. (L.) With a waving, tremulous motion of the sound; as also, on the violin, tenor, &c., a *choue shake*.

ONGLEUR. The name formerly given to performers on the lyre, cithara, harp, lute, and guitar; supposed to be derived from the French word *ongle*, a nail, because those instruments

have always been played with the nails and ends of the fingers.

ONSLow, GEORGE. The following notice of this composer, who died in France, in October, 1853, appeared soon after that event in the London "Athlete."

"Some years ago, when the immediate surprise and delight excited by Beethoven's earliest works had subsided, and before chamber musicians or chamber audiences had begun to relish his later compositions, — before also the peculiar genius of Mendelssohn was fully developed, — the music of Onslow was in great request among our choicer amateurs, and the announcement of his death might have excited a livelier regret than it will now excite. Yes, in more respects than one, the composer just deceased claims an honorable mention amongst the distinguished and individual artists of the past half century.

"He was born at Clermont, in the Pays de Dôme, in July, 1784. His father was a member of the well-known English family — his mother a Brantôme. Thus he learned music merely as a gentleman's accomplishment; and though he studied the piano-forte under Hummel, Dussek, and Cramer, besides learning the violoncello, it was not, we are assured, till some time after boyhood was passed, that a hearing of Mahul's overture to "Stratonice" excited in him that desire of trying to exercise creative power which was only to be allayed by his devoting his life to the study and production of music. Unlike many other amateurs who confound wishes with means, and ideas with complete works, — determined, too, to undertake musical composition in its most delicate and complex, and intellectual forms, — Onslow, we are assured by M. Fetis, shut himself up and toiled laboriously ere he gave out his first stringed quartet: from that time until within a short period of his death productive and publishing, unceasingly, most successful, as well as most fertile compositions for the chamber. A few symphonies, and three operas, (no one of which is particularly striking, "L'Arlotto & le Fops," "Le Châporteur," and "Le Duc de Guano" are the only other works by Onslow which have been laid before the world. So far as we are aware, he never attempted sacred composition.

"The large mass of chamber music, however, finished by Onslow, well merits the epithet of remarkable. It is thoroughly original without being extraordinarily striking, — delicate and interesting without sickliness or the absence of occasional vigor, — sure in the phrases, ingenious in structure, — not always, it may be, sufficiently varied by happy strokes of episode, but always thoroughly well-reasoned out, and interesting to the players from the closeness of attention and readiness in dialogue, reply, and imitation which it demands. During later years — as frequently happens with those whose first thoughts are more pleasing than powerful — Onslow, in straining after novelty and contrast, became only affected or fragmentary. This may have done its part in abating the real and sympathy of his admirers — but enough remains from his pen to be referred to, to be returned upon, to be performed and partaken of with pleasure, so long as music is bound by its present laws, and as those who enjoy it retain their present organs of enjoyment. It would be superfluous to single out any of the

well-known quintets which have won Onslow a European celebrity, or to do more than mention his piano-forte *sextuor*, his piano-forte duets in F major and E minor, his piano-forte *trio* in G major (a singularly sweet and gracious specimen of his style,) his piano-forte *sonatas*, with violin, (in G minor and E major,) and with violoncello, (in F major and G minor.) The above are all classical works, having a beauty, an intricacy, and an expressiveness totally their own, appealing to the thoughtful, as opposed to the sensual musicians, happily conceived and carefully finished.

"The habits of Onslow's life were gentle and retired, tending to encourage self-occupation. He resided principally in his native Auvergne, travelled little, we believe, save to Paris, where he succeeded to Cherubini's membership of the *Académie des Beaux Arts*, and mixed in the concerns of the world of music only sparingly and occasionally. The kindness of his nature took the form of an over-graciousness of manner, which made intercourse with him fatiguing to all such as prefer discriminating judgment, and fresh, if irregular, sallies of humor, to compliment, be it ever so courtly, or approval, be it ever so sincere. His health had been for some time declining, but his death, at the close of a walk, was sudden. It is presumed that it may be followed by some votive honors in the country to which by right of citizenship, and more by the manner of his art, he may be said most closely to belong."

OPEN. An epithet applied to the string of a violin, guitar, &c., when not compressed by the finger; that is, when, without compression, it produces the very note to which it is tuned. The note so produced is called an *open* note.

OPEN HARMONY. Harmony of which the notes are separated by wide intervals.

ONTRASCIECK, JOHANN, first chapel-master to the Elector of Mentz, was born in Bohemia. He died in 1742.

OPERA. (L.) A work. The word *opera* is applied in its literal sense, by the Italians and other nations in imitation of them, to any musical work, and is used by composers in conjunction with the ordinary numbers, to distinguish their different publications; as, *Opera prima*, first work; *Opera secunda*, second work, &c.

OPERA. A musical drama, consisting of airs, recitatives, choruses, &c., enriched with magnificent scenery, machinery, and other decorations, and representing some passionate action.

Respecting the origin of the *opera*, writers are much divided. Some say that we owe its invention to the Venetians, from whom it passed to the French, and afterwards from France to England. Father Menestrier informs us that it sprang out of the remains of the dramatic music formerly used in the church, and that the Italians first brought it upon the stage about the year 1480. But, notwithstanding these assertions, it is much insisted on that the *opera* was invented by Ottavio Rinuccini, a native of Florence, about the year 1600 — an opinion strongly countenanced by the author's dedication of his "*Euridice*" to Mary de Medicis, consort of Henry the Fourth of France, in which he says he had written it 'merely to make a trial of the power of vocal

music in that form." The structure of the operatic drama was, however, very different, at that early period, from the representation which now bears the same denomination. No accompaniment of a whole orchestra was then required. The airs performed by the several singers were sustained by instruments of various kinds, assigned to each character respectively in the *dramatis personæ*, the names of which we find placed against those of the characters in the printed copies; and the whole was much less regular and dramatic than at present. At the beginning of the seventeenth century an *opera* was established at Venice, upon the model of which one was also instituted at Paris, about the year 1660. Soon after this time, a taste for this species of drama appeared in London, and old plays were wrought into the form of operas, and represented at the theatre in Lincoln's Inn Fields. Of these, a piece called "*Arsinoë*," compiled and composed by Claytons, was the first. Addison tells us that it was excellent, and met with great success; but from Galliard, a much more competent judge than that writer, we learn that it was a very indifferent, nay, execrable production. Other imperfect imitations of the Italian *opera* took place from time to time, in all which the words were English, though the music was Italian. At length, a regular Italian *opera* was established at the theatre in the Haymarket, under the denomination of the Royal Academy of Music, which, after a continuance of nine years, broke up. The *opera* was, however, afterwards resumed, and has maintained itself as an elegant and fascinating species of entertainment to all the lovers of exquisite music and fine dancing. And the English *opera*, which owes its existence to that of the Italians, has long proved an attractive vehicle of humor and sentiment, and served to display to great advantage the talents of the best composers and vocal performers.

During the year 1594, three young Florentine nobles, united by similarity of taste and customs, and by a love of poetry and music, formed the idea of reviving the musical declamation of Greek tragedy. They employed the poet Rinuccini to write a drama founded on the fable of Daphne; and that drama was set to music by Peri, the most celebrated composer of that time. The composition was privately represented in the Palazzo Borsì. The singers were the author and his friends, and the orchestra of this first *opera* was composed of only four instruments — a harpsichord, a harp, a violin, and a flute. No one thought of airs or recitative, if so it could be called; it was a species of measured intonation, which by us would be considered insufferably languid and monotonous. It is a pleasure to observe this embryo of the *opera*, and to compare it with the *chefs d'œuvre* of Mozart, of Cimarosa, of Rossini, and others, executed by such voices and orchestras as we hear in the present day; but even so suffocating a harmony as that of the former nevertheless produced at that time an extraordinary sensation. Four years after was represented, on the theatre of Florence, the first musical *opera*, entitled "*Euridice*," on the occasion of the marriage of Maria de' Medici. The introduction, at that time, of the anacronistic "*Cantate*," and of a chorus at the end of every act, produced the first imperfect outlines of the airs and choruses of modern *opera*. Monteverde, &

voice, perfectly in tune, and free from all defects in his delivery; together with a pathetic expression, the power of swelling and diminishing the tones, and an equal respect for the composer and poet, in singing plain, and being particularly attentive to the articulation and expression of the words.

It is recommended to place the instruments of accompaniment behind the scenes, which, in the first oratorio, were the following:—

<i>Una lira doppia, . . .</i>	} A double lyre, perhaps a viol da gamba.
<i>Un clavicembalo, . . .</i>	
<i>Un chitarone, . . .</i>	} A harpsichord.
<i>Dui flauti, o vero dui Tîbri all' antica, . . .</i>	} A large or double guitar.
	} Two common flutes.

The oratorio partakes, to a certain extent, of the dramatic form, though its subjects have been principally confined to the sacred. The popularity of the oratorio, the rendering it more familiar of late years, through the means of large societies in the cities, has led the people on in the right direction, and called forth a more vigorous exercise of the ideal faculty; the impassioned recitative, the melody in which sentiment finds an utterance, and the descriptive chorus, have all had their particular influence, affording sketches of pictorial beauty which each listener fills up with his own coloring. We are quite sure that in this musical country the oratorio has been the most important source of musical education, whether we consider it as a practical teacher to the student, or as a refining influence upon the auditor. Undertaken by men of taste and judgment—not as a pecuniary object, but from that innate love of art which so thoroughly imbues the mind of some few, to the advantage of the many—the performance of the oratorio has been brought to a perfection of which we may be proud.

Like all other tastes, the love of music may be nourished from the smallest germ into large and vigorous life: the habit of attending to its beauties, and the desire of appreciating them, lead to a conviction of its truth; whilst its effect upon the mind is to elevate and refine, perhaps beyond all other sensuous enjoyment. If you doubt, go listen to the "Creation," or any other sublime oratorio, and mark the potency of many impassioned scenes upon a people who, as yet, are but in the first chapter of what may become to them a noble volume. Listen to the heavenly sounds, and acknowledge that it is in moments like these that the heart expands in its sympathies, stretches out the hand to the weak, whispers encouragement to the depressed, and applauds the strong; that men grow gentler and better, determine upon goodness, and build up hopeful resolves. It is in moments like these that they catch glimpses of pure taste and brilliant fancy, and make for themselves a world of beauty; and the dream becomes a rest and solace after the hard buffets, and anxious cares, and gloomy realities of daily life. It is in looking at art with such feelings that we desire to see it encouraged in the midst of a population whose labors, in spite of their noble tendencies, are apt, without recreation, to lower the tone of the mind; and because we are anxious that every attempt should be in a right direction—emanate from the best feelings; not a mockery of art, but a true worship.

ORAFFI, PIETRO MARCELLINO, an It.-I-

lian poet and composer, flourished about the year 1650, and published "*Concerti Sacri*, 1, 2, 3, 4, et 5 vocum," Venice, 1640, and "*Musiche per congregazioni altro luogo di honesta ricreazione*, à 2, 3, 4, e 5 voci."

ORCHESTRA. This name was applied by the ancient Greeks to a certain circular part of the theatre where the dances were performed. At Rome, the *orchestra* was separated from the parts occupied by the performers, and furnished with seats appropriated to the senators, magistrates, vestals, and other persons of distinction. At present, we understand by the word *orchestra* that enclosed part of the theatre between the audience and the curtain, in which the instrumental performers sit. We, however, sometimes transfer the word from the place to the performers themselves: as when we say, "That theatre has a well-appointed or powerful orchestra."

The term *orchestra*, however, is now peculiarly applied to a body of instrumental performers, in which the violin family predominates. The following description of the composition of a grand orchestra is from a valuable article in Putnam's Magazine for October, 1853.

"The smallest number of a grand orchestra is sixty, and then the hall wherein they play should not be very large. Eighty and upwards, however, are necessary to the greatest effects.

"The centre of the orchestra, that around which all the rest revolves, is the stringed instruments; that is, the violins, violas, violoncellos, and double basses. The harmonies and effects of these stringed instruments find their original model in the treatment of four solo stringed instruments, two violins, a viola, and a violoncello, giving perfect harmony, and building up the school of quartet music. All the notes that are found in the orchestra, and a few more, can be counted in the piano-forte of seven octaves.

"Sound, in music, is caused by equal vibrations. The lowest note of the grand organ gives thirty-two vibrations in each second of time. Eight notes, or an octave above that, gives the lowest bass note of a seven octave piano-forte. A string of just half the proportions of this lowest note will give twice its vibrations, which are sixty-four to the second, that is to say, one hundred and twenty-eight. Another string of half the proportions of this gives another octave above, marked by double the last number of vibrations, or two hundred and fifty-six. So going on halving the proportions of the strings, we get double the vibrations, thus: 64, 128, 256, 512, 1024, 2048, 4096, 8192. These mathematical proportions are conformable to the claims of music as a science. Tubes measured in the same proportion produce the same results of grave, medium, and acute octaves. So, too, the pipe of the human voice. The larger the string, or tube, the graver or deeper the sound, and the reverse—Hence the deep voice of man, compared with the high tones of woman, or the piping treble of childhood. Sexual differences in voice are based on octaves. These octaves differ in pitch, but they are sympathetic unisons—an identity with a difference, if the paradox may be allowed. The masculine voice, singing a note or air, gives it actually an octave below the feminine voice. The differences in the pitch of instruments are simply imitations of the pitch of the human voice, and the valu-

of an instrument is its resemblance to the expression of the voice. Hence the superiority of the violin family of instruments. Without instruments, however, the grand mathematical truths of music could never have been discovered, nor the world know that a science as wide as that which calculates an eclipse, or draws a parallax, lies in the tremblings of a violin string.

"The instruments of the Creator, the different voices, the bass, baritone, tenor for the masculine, and the contralto, mezzo-soprano, and soprano for the feminine, are the originals, then, of the orchestra. The orchestral instruments, however, are more copious in mere notes, while so much inferior in tone to the voice.

"When a composer wishes to write for the orchestra, he takes music paper with a large number of musical staves, or groups of five parallel lines on them. He divides the musical measures, each one of equal time, by drawing down lines at right angles to the five line staves. This is called *scoring*; hence the term *score* or *full score*. The various instruments occupy different staves, which sometimes are as many as thirty or forty on a page; and the labor of the composer, therefore, in writing out the notes of each part may be taken as much more arduous than the work of the literary man. As for the power to combine all the sounds of the instruments in his mind's ear, and know beforehand how each one will come forth separately and together—that is a gift, and can never be taught. The best mode of grouping the instruments is as follows: first wooden wind instruments—then brass—then pulsatile—then stringed. Let the reader imagine the following list of instruments written on a sheet of music paper, each one followed by its notes, and the whole divided, as described above, by vertical lines, marking the measure, and he will have the score, from which the leader is enabled to tell what each man in the orchestra is doing, and how he is to be directed.

"Small or octave flute; grand flute; hautboys; clarinets; bassoons; trumpets, horns; trombones; tubas; kettle drums; bass drum; violins; violas; violoncellos; double basses.

"When a composer has written out his score, it is the business of the copyist to extract each separate part from the mass, so that the flute player shall only have his part on his desk, the hautboy player only his part, and so on. This often requires much skill, and good copyists are rare.

"The human voice is much more generally under than over two octaves, while the range of instruments is more than that, as will appear by the following: The lowest G on a seven octave piano-forte, or the fifth note from the last, is the lowest note of the double bass. In the orchestra seldom over two octaves are used for the double bass. The pitch of the violoncello is one octave above the double bass; but as it has four strings, or one string more than the double bass, it really begins on C, four notes above the lowest note of the double bass. It can play three octaves and upwards. The viola is precisely one octave in pitch above the violoncello, and gives from C three octaves and upwards. The violins are a fifth above the viola, and give from G three octaves and upwards. The octave flute is one octave higher than the grand flute, which begins

on C, four notes above the lowest note of the violin, and gives three octaves above. The hautboy gives two octaves and a half, beginning on the same C. The clarinets begin six notes lower than the hautboys, and go over three octaves. The bassoons have the same pitch as the violoncello. The trumpet begins generally on the G of the violin, and gives about two octaves. The horns are an octave below the trumpet. The trombones are three—alto, tenor, and bass; answering to the contralto, tenor, and bass voice, but with greater compass. The tubas or Sax horns answer in pitch to other brass instruments. There are some other instruments, such as the English horn, which is a larger hautboy. There is also a bass clarinet, and a double bass bassoon. The tympani, or kettle drums, are tuned to the first and fifth of the scale, being the intervals most in demand. For example, in the scale of C—namely, C, D, E, F, G, A, B—the kettle drums would be C, G: in the scale of G—namely, G, A, B, C, D, E, F—they would be G, D; and so with other scales. The wind instruments can give but one note at a time; but the violin can give two notes, and three or four if the bow be drawn suddenly across the string, when the rapidity of the sequence of the notes stands in the place of a simultaneous expression. It is usual in an orchestra to have but two flutes, two hautboys, two clarinets, two bassoons, two trumpets, four horns, two or three trombones, one pair of drums: but the stringed instruments to this proportion may be forty violins, twenty violas, thirty violoncellos and double basses; these more or less. All classical music, which means music of a certain age and rank, is so written for the orchestra since the time of Haydn's later works, except that in them but two horns are written, and the trombones seldom. The ability of performers to do more and better things on their instruments, has greatly increased during this century. In Handel's time orchestration was miserably poor: his scores, as such, have but feeble interest. Haydn advanced it immensely. Rossini added to its powers. The solo performances of instruments in overtures was never really brilliant up to Rossini's courageous innovation. There is, for example, no prominent solo writing in "*Don Giovanni*," by Mozart; it is smooth and elegant generalization. Rossini was the first to write for four horns in an overture; the effect is surpassing when we use the improved instruments, with valves giving all the half tones. The violin school was vastly roused by Paganini; and the piano-innovations of Thalberg and Liszt are copies of the immense graspings and combinations of the great Italian's genius. Beethoven introduced new effects for the violoncello, giving it a singing or passionate cantabile expression. Clarinets were not introduced into English orchestras till about 1780. Flutes have been much improved, and, indeed, excepting violins, it would be impossible to name an instrument that has not been regenerated within a few years. As cities grow in size, and players increase in number, it will be possible to break in upon the old conventionalisms of the orchestra more and more. For certain effects there might be twenty flutes, thirty trumpets, forty clarinets, &c. Military bands have been improved prodigiously of late years. Besides cornets, tubas, &c., there is the improvement of numbers; many of the Austrian

military bands now number eighty to one hundred players. We once heard all the bands of Paris play together, *al fresco*, amounting to 1800 performers. The bands in this country are yet too small, though their improvement under Dodworth and Noll has quite equalled our progress in other things.

"The orchestra, however, having stringed and bowed instruments, possesses the great point of expression. The reader, having followed us through our analysis, may judge of the skill and talent required to direct such a vast body of musicians, so that they shall speak to the life the thoughts of the composer, observing the nicest points of intonation, and the most flexible requirements of musical coloring; that they shall at one moment be like an infant's breathing, and the next like a tropical storm; at one moment like the sigh of love, at the next like the crash of armed hosts; or that they shall, as the ocean tempest, begin from a cloud no bigger than a man's hand, and, little by little, augment in intensity, — *crescendo poco à poco*, — until they boil over in lyrical wrath — strike, foam, and thunder aloft until the concave rings and the ground shakes; or, that during whole hours they shall follow all the caprices, whims, and zigzag of the singer on the stage; succeeding every word, never too loud or too feeble, but always lieges to musical order and law. So to direct them requires the skill of a Jullien. To appreciate such an orchestra, as the colossal exponent of passion and emotion, of the art of wordless eloquence and celestial purity, will be one of the noblest efforts in the big steps of popular progress. Understood rightly, it will widen the range of our objects of praise both in men and things."

A complete orchestra consists of a large number of instruments, and is, of course, only suited to large localities, as theatres, music halls, concert rooms, &c. M. Fétis, of Paris, gives the following proportions for an orchestra and chorus of three hundred and fifty-six performers.

First violins, 30	Flutes, 4	<i>Vocal.</i>
Second do., 30	Oboes, 4	Soprani, 50
Violas, 25	Clarinets, 4	Altos, 40
Violoncellos, 30	Bassoons, 8	Tenor, 40
Double basses, 20	Horns, 6	Bass, 40
	Trumpets, 2	Principals, 8
	Trombones, 3	
	Bugles, 5	
	Serpents, 2	
	Drums and cymbals, } 5	
135	43	178

with an organ of first rate power.

The full and complete effort of a number of voices and instruments conjoined depends upon the first proportions in which they are brought together in the orchestra. Often the materials are collected promiscuously; and too many of one kind, or too few of another, destroy the balance of sound which is necessary to a grand effect. The great defect in most orchestras proceeds from that part, which is the most essential, being commonly the weakest. This, no doubt, arises from the greater difficulty in procuring these performers; and the usual method of making up the number by materials more easily obtained, only adds to the evil, instead of diminishing it.

We often find a lack of sufficient power and ability in the first violins and violoncellos, while we are overpowered by the wind instruments. In the voices, we lament the weakness of the soprani, which are borne down by the tenors. To insure the well going of the chorus, the vocal leaders should be placed in the rear of their parts, in which place they will be better heard: and as it often happens that the most experienced musicians have the weakest voices, it is best to couple them with the strongest: these, correctly led, will contribute much to keep the part firm and steady. It is important that this arrangement be made a condition with the leaders, as they invariably think themselves entitled to a more conspicuous place, and press forward to get into the front; whereas the place of honor, as in the legions of Bonaparte, is in the rear. He always placed his rawest troops in front, and his veterans behind.

ORCHESTRAL. An epithet given to any composition intended for, or any performance by, an appointed or regular band.

ORCHESTRION. A beautiful and grand instrument, said to possess the combined power and variety of a full orchestra. The first one was built in the forest of Schwartzvald, by the well-known artist M. Blessing, of great musical celebrity. A similar instrument was exhibited at Philadelphia, in 1850, by a German, who said it was a new invention of his. His *orchestration* was capable of producing the tones of a variety of instruments, either as solos or in full concert. The compass is very extensive, and we have horns, violins, violoncellos, oboes, flutes, bassoons, and all the component parts of a full orchestra, with the swells and diminuendos. It does not occupy nine cubic feet of space.

ORDINARIO. (L.) Usual. An epithet applicable to time; as, *tempo ordinario*, in the usual time.

ORDOGNEZ, PIETRO. A Spanish musician, celebrated in Italy in the sixteenth century.

ORDONITZ, or ORDONNEZ, CARL VON, violinist in the Imperial Chapel at Vienna, after the year 1766. About 1780, he published at Lyons "*Six Quatuors pour le violon, Op. 1.*" Many more of his instrumental compositions are known in manuscript. They are principally symphonies. He is also the author of the German opera entitled "For once the Husband is Master."

ORGAN. A wind instrument blown by bellows, and containing numerous pipes of various kinds and dimensions, and of multifarious tones and powers. Of all musical instruments, this is the most proper for the sacred purpose to which it is most generally applied in all countries wherever it has been introduced. Its structure is lofty, elegant, and majestic; and its solemnity, grandeur, and rich volume of tone have justly obtained it an acknowledged preëminence over every other instrument.

An organ, when complete, is of threefold construction, and furnished with three sets of keys: one for what is called the great organ, and which is the middle set; a second (or lower set) for the choir organ; and a third (or upper set) for the swell. In the great organ, the chief stops are the two *diapasons*, the principal, the *trichord*, the

fifteenth, the *sesquialtra*, the mixture, (or furniture,) the trumpet, the clarion, and the cornet. The choir organ usually contains the stop diapason, the dulciana, the principal, the flute, the twelfth, the bassoon, and the *vox humana*. The swell comprises the two diapasous, the principal, the hautboy, trumpet, and cornet. Besides the complete organ, there are other organs of lesser sizes, and more limited powers, adapted to church, chapel, and chamber use. There is also the barrel or hand organ, consisting of a movable turning cylinder called a barrel, on which, by means of wires, pins, and staples, are set the tunes it is intended to perform. These pins and staples, by the revolution of the barrel, act upon the keys within, and give admission to the wind from the bellows to the pipes. The barrel organ is generally portable, and so contrived that the same action of the hand which turns the barrel, supplies the wind, by giving motion to the bellows.

The invention of the organ, which is attributed to the Greeks, is very ancient. From a passage in Cassiodorus, who lived about 528 years after Christ, we learn, in his time, that it was an instrument of the highest estimation for a while. It, however, appears that the use of it afterwards declined.

It has been a subject of frequent debate, at what time organs were first introduced into the church. Some writers say, that they were first applied to sacred use in the time of Pope Vitalian, about the year 670; others, that they were not employed in the church till the ninth century. A learned author has, however, shown that neither of these dates can be just; and Thomas Aquinas expressly says, that in his time (about the year 1250) the church did not use musical instruments; and Bingham affirms, that Marinus Saunus, who lived about the year 1290, first introduced the use of them into churches. But if we may credit the testimony of Gervas, the monk of Canterbury, who flourished at the beginning of the thirteenth century, organs were introduced more than one hundred years before his time. Bede, who died in 735, says nothing of the use of organs, or other musical instruments, in our churches or convents, though he minutely describes the manner in which the psalms and hymns were sung; yet Mabillon and Muratori inform us, that organs, during the tenth century, became common in Italy and Germany, and in England, and that about the same time they had admission into the convents throughout Europe.

ORGAN, HISTORY OF. Of all musical instruments, the organ is the largest, the most complicated, the most harmonious, and the most capable of producing an almost endless variety of combinations and effects. It may be called the king of instruments, as it imitates and includes them all. Hence a place has been universally assigned to it in our churches, as being, from its unquestionable superiority, the instrument most suitable to the majesty of divine worship. A large and powerful organ in the hands of a master, in one of his best moments of musical inspiration, is inferior to no source of the sublime in absorbing the imagination. The rush and concourse of sound has been not inaptly compared to the full and even volume of a mighty river, flowing onwards, wave after wave,

occasionally dashing against some rock, till, sweeping with momentarily increasing vehemence to the brow of a precipice, it rushes down, a wide-spreading and overwhelming flood.

Notwithstanding much laborious research, the origin of the organ is still enveloped in obscurity. Some of the instruments so called were acted upon by the force of water, whilst to others the application of bellows is mentioned. The only difference between them, however, was in the mode of introducing the air into the pipes; and their common origin may, probably, be referred to the ancient syrinx or Pan's pipe, made of reeds.

It must soon have been observed that there were other means of producing sounds from a pipe than by the mouth; also that the air might be confined in close cavities, and afterwards emitted at pleasure by means of openings of different dimensions. This was applied to united pipes like the syrinx, or to a simple flute; and subsequently a species of bagpipe was invented. By pursuing this course, they could not fail to arrive at an instrument strongly resembling our organ. Instead of a leathern bag, they used a wooden case to enclose the wind; above this they placed the pipe, the opening of which was closed by suckers, which could be opened or shut at will, in order to produce the embouchure of any one pipe. The descriptions left by authors of different ancient musical instruments, together with their representations on several monuments, prove that the ancients were occupied at different periods with these experiments. For some time they were constantly employed in seeking the best means of introducing air into the pipes. They employed the fall of water, pumps, steam, and bellows of different kinds. In these experiments, water was most frequently the cause of the motion by which the wind was introduced. They at last stopped at wind bellows, set in motion either by water or human strength. The application of these various means has distinguished two kinds of organ. That moved by water was called *hydraulic*; that by wind, *pneumatic*; although there was no real difference in the principle. It is only by means of air that the pipes can produce a sound. Although the earliest descriptions appear to belong to the *hydraulic*, of which Ctesibus, of Alexandria, is said to have been the discoverer, about the year 220, yet it seems natural to suppose that the *pneumatic* organ was the prior invention; and its antiquity seems confirmed by the discovery of a monument at Rome, mentioned by Merseune, in his "*Harmonie Universelle*," of which an engraving is given in Sir John Hawkins's "*History of Music*," vol. i. p. 403. The earliest account of any instrument of the kind occurs in Vitruvius, book 10, who flourished above a century before the Christian era. His was an *hydraulic*. But the most ancient notice taken of an instrument to which bellows were adapted, is to be found in the "*Anthology*," lib. i. cap. 86, which was first quoted by Du Cange, in his "*Glossarium medicæ et infimæ Latinitatis*," on the word *organum*. It is the description of an organ (in an epigram, A. D. 360) said to have been in the possession of Julian the Apostate who lived in the fourth century. Du Cange concluded that it was not an hydraulic instrument, but that it very much resembled the modern pneumatic organ. The description Cassiodor-

has given of an organ, in his explanation of the 150th Psalm, is more applicable to a small hydraulic than to our modern instruments.

The barbarism which spread amongst the people of Europe after the time of Cassiodorus, was not only destructive to the arts and sciences, but also to many of the works of art; and it seems that the organ, such as it then was, shared the same fate. St. Jerome mentions one which had twelve pairs of bellows, and fifteen pipes, and was heard at the distance of a mile, and another at Jerusalem, which was heard at the Mount of Olives.

The date of the introduction of the organ into the churches of Western Europe is uncertain. The use of musical instruments therein is unquestionably as old as the time of St. Ambrose, if not of Justin Martyr, two centuries before; but Pope Vitalian is generally allowed to have been the first who introduced the organ into the service of the Catholic church, about the year 670. The first organ we hear of in France was of Greek construction, and sent thither in 757, as a present to King Pepin, father of Charlemagne, by the Emperor Constantine Copronymus. This fact is rendered more worthy of credence by the assertion of Walter Oduigton, of Evesham, a musical writer of the thirteenth century, who, in his tract, "*De Speculatione Musice*," says that, "*Anno Domini 757, venit Organum primo in Franciam missum a potissimo Rege Græcorum Pipino Imperatore.*" During the reign of Charlemagne, organs are mentioned as having been brought from Greece into the western parts of Europe. Walfred Strabo gives a description of an organ which existed in the ninth century in a church at Aix-la-Chapelle. The softness of its tone he asserts to have caused the death of a female. This was one built by the artists of Charlemagne, in 812, on the Greek model, which the learned Benedictine, Don Bedos de Celles, in his "*L'Art du Facteur d'Orgues*," fol. 1766, thinks was the first that was furnished with bellows, and in which water was not employed. It is the opinion of Mabillon ("*De Carole Magno*," cap. 10,) that this instrument contributed greatly to the perfecting the Gregorian chant in France, as it is certain that the use of the organ passed from the King's Chapel, where that had been placed which came from Constantinople, to different churches of the kingdom, before it was common in Italy, England, or Germany. However, the reception of this kind of instrument into the churches of Verona, during the same reign, is recorded in some charters mentioned by Ughelli. After the time of Charlemagne, the organ is first mentioned by Eginhard, in 826, in the annals of Louis le Debonnaire. An organ was built for that emperor by Georgius, a Venetian presbyter, at Aix-la-Chapelle, which, says Don Bedos de Celles, was an hydraulic. Georgius is supposed to have been the father of organ-building in Germany, from whence we soon hear of artists in that line being sent into other countries.

In the latter part of the ninth century, the Germans possessed organs, and were able to play on them. Zarlino, in his "*Supplementi Musicale*," book viii. p. 290, says that some authors imagine the pneumatic organ to have been first used in Greece; that it passed from thence into Hungary, afterwards into Germany, and subsequently to Bavaria.

Elte, Bishop of Winchester, procured an or-

gan for his cathedral, in 951, which was the largest then known, having twenty-six pairs of bellows, requiring seventy men to fill it with wind. It had ten keys, with forty pipes to each key. Oswald, Archbishop of York, placed an organ in the church at Ramsey, with pipes of brass, and which cost thirty pounds. There was also one at Canterbury Cathedral previous to the year 1174.

Notwithstanding these early attempts, the organ long remained rude in its construction; the keys were from four to five, and even six inches broad; the pipes were of brass, and the compass did not exceed two octaves in the twelfth century, about which time half notes appear to have been introduced at Venice. At Venice, the important addition of pedals was first made by Bernhard, a German, to whose countrymen we owe most of the other improvements in bellows, stops, &c. Several elaborate works, in French and German, on the subject are extant, which are scarcely known even by name in this country. Some idea may be formed of the importance of having a fine organ from the following fact related by Andrew Werkmeister, in his "*Organum Groningense Redivivum*," 1704-5: "The magistrates of Groningen contracted with David Beck of Halberstadt, to construct an organ in the Castle Church of that city. In the year 1592, articles were drawn up between the magistrates and the organ builder, in which it was agreed by the former, that, for an instrument, the contents of which were minutely described, a certain stipulated sum should be paid to the latter upon its completion, provided it was approved, after trial and examination, by such organists as they should nominate for that purpose." This instrument, in its construction, employed the builder four years; and in 1596, the most eminent organists in Germany being invited, the names of all those who signed the certificate of approbation amounted to fifty-three in number, the whole of which may be found in the above-mentioned work.

Of the organs in England, we find scarcely any particulars from the reformation to the reign of Charles the First. Camden mentions one at Wrexham, and Fuller, misquoting it, describes its pipes as being made of gold. This shared the fate of organs in 1641. The old York organ (since burned,) was the only one that escaped the destruction of those times, owing, no doubt, to the protecting care of Lord Fairfax, a man who was fond of music and antiquities, and who preserved the painted windows of that cathedral from the general destruction. Yet Cromwell himself was partial to the organ, and caused the one at Magdalen College, Oxford, to be removed to Hampton Court. It was restored afterwards to the college, where it remained till about 1700. In 1660, only four organ builders were to be found in the whole kingdom of Great Britain—Preston, of York, Loosemore, of Exeter; Thamar, of Peterborough, and Ralph Dallans. This led to the introduction of foreign artists—Bernard Schmidt and his two nephews, the elder Harris and his son Renatus Harris. To these, succeeded Schreider, Smith's son-in-law, who built the organ at St. Martin's in the Fields, which was a present from George the First, who was elected churchwarden—Bridge, Byfield, Jordau, Swarbrook, Parker, Cranz, Snetzler, Eng-

land, Avery, Green, Davies, Blythe, Nicholls, Gray, Sen., Hill, Sen., Elliot, Bevington, Sen., Bishop, Hill, Gray, Bevington, Robson, Lincoln, &c., &c.

The following list of artists who have written on the general construction of the organ, its mechanism, &c., to some readers may be found useful.

Caux or Caus, Solomon de, 1615, 1616, 1620.

Preus, George, — *Grundregeln von der Structur*, &c., 1722.

Fabricius, Werner, — *Unterricht, wie man ein neu Orgelwerk*, 1756.

Zang, J. H., — *Vollkommene Orgelprobe*, 1798, 1804.

The following is a list of foreign works on the history of the organ.

Havinga, Gerhardus, — *Oorspong en Foortgang der Orgelen*, 1727.

Mittag, Joh. Gottfr., — *Historische Abhandlung*, &c., 1756.

Schmerbaueh, Gott. Heinr., — *De Organis*, 1770.

Spoussel, Joh. Ulrich, — *Orgelhistorie*, 1771.

Dlabacz, G. J., — *Etiaca von den Kirchenorgeln*.

Vollbeding, J. C., — *Kurzgefasste Geschichte der Orgel*, 1793.

Giovio Giam, — *Del nuovo Organo*, 1803.

Bähler, Franz, — *Etiaca über Musik, Orgel*, &c., 1815.

Michaelis, Chris. Fried., — *Zur Geschichte der Orgel*, 1825.

Antony, Joseph, — *Geschichtliche Darstellung*, &c., 1832.

Many other excellent works have been written on the organ, the titles of which may be found in Dr. Forkel's *Allgemeine Literatur der Musik*, Leipsic, 1792, 8vo.; Lichtenenthal's *Dizionario e Bibliografia della Musica*, Milan, 1826, 4 vols. in 8vo.; and in Carl Ferdinand Becker's *Systematisch-Chronologische Darstellung der Musikalischen Literatur*, Leipsic, 1836, in 4to.

On looking at a large church organ, the first thing which strikes the eye is the *case*, decorated with its various ornaments, as carving, gilding, &c., and with a number of large gilt metal pipes, symmetrically arranged, which fill up its exterior openings.

Within the case we directly see a principal piece or member called the *sound board*, upon which are placed the ranks of *pipes* which form the *stops*. This piece, with its appurtenances, receives the wind from the *bellows*, and distributes it to each pipe at the pleasure of the organist. The most remarkable parts of it are the *wind chest*, the *grooves*, and the *sliders*. The *wind chest* is the reservoir into which the wind passes from the bellows; it contains the *pallets* or valves, with their springs, &c. The *grooves* are canals for the wind, the near ends of which lie over the wind chest, and are firmly closed by the pallets. There are as many pallets as grooves. The *sliders* are movable slips of wood or rules running the length of the sound board, which serve to admit or exclude the wind from the pipes by means of *draw stops*, which are placed on each side of the rows of keys and music desk, in front of the organ. These draw stops communicate their movements to *trunnels*, which transmit it to the *levers*, and these again to the *sliders*, to which they are fastened.

It is thus that the organist opens and closes the stops. When he wishes to play on the instrument, he draws the stops which he intends to use, by pulling out the *draw stops* belonging to the proper sliders; he then with his fingers presses down the keys, which open the pallets by means of a complex piece of mechanism, serving to communicate the action of the keys to the pallets, and which is technically called the *movement*: the wind then enters into the grooves which are now opened, and causes those pipes or stops to speak, of which the sliders are drawn. As the organist lifts up his fingers, the pallets rise by means of a spring placed underneath each, close

the grooves as before, and the key rises at the same time.

Besides the principal or great organ, as it is termed, there is generally another smaller one placed within the same case, which has its own sound board and wind chest, row of keys, and stops. This is called the *choir organ*. Formerly, the choir organ was, in appearance at least, detached from the principal or great organ, and placed in front of it; this is still the case in the organs at Westminster Abbey and St. Paul's, &c.

A third organ, still smaller than the choir organ, having its own sound board, row of keys, and stops, is also placed in some remote part within the same case. This additional organ is called the *swell*. Its pipes are placed within a box, closed on all sides, so that the tone is scarcely audible, till, by the pressure of the foot on a pedal, a sliding shutter, or Venetian shades, or doors in front are gradually opened; the sounds then become louder and louder by degrees, as if advancing from a distance; as the foot allows the pedal to rise, the box again closes, and the tone gradually diminishes.

As the organist with his hands alone could not produce all the effect of which the instrument is capable, another set of keys, called the *pedals*, is placed within reach of his feet; these keys, when they have pipes exclusively appropriated to them, have their own sound board, wind chest, &c., or at least their own pallets, and are termed the pedal organ.

At the bottom of the organ is placed the *bellows*, which are kept in constant action by an *organ blower* while the organist is playing. The bellows supply the wind chests with all the wind expended in causing the pipes to speak. In old organs, the bellows (of which there were from two to twelve or fourteen pair, according to the size of the instrument) were generally placed outside the case.

The bellows supply the wind by which the pipes are enabled to speak. They require a good deal of room, for which reason they are generally placed at the bottom of the organ, and the wind is conducted from them to the wind chest by means of tubes called the *wind trunks*.

The bellows consist of two wooden boards or *leaves*, which are so connected at the sides by ribs of wood, lying in folds, and fastened together at the edges with leather, that they admit of being opened and closed with regard to one another. The under leaf is fastened so as to be immovable; to the upper or movable leaf is affixed a *lever* or *handle*, which, on being pressed down, opens the bellows and sucks in the air; the movable leaf then gradually returns to its original position by the downward pressure of several *weights* placed on the top of it, and in so doing forces the wind through the trunk into the wind chest.

In the under leaf of the bellows is inserted a valve, which, as the handle descends, opens inwardly to admit the air, but which immediately closes again, so that the wind shall not escape.

Large organs have generally several pairs of bellows, or one very large one supplied by several smaller ones, called *feeders*.

The *sound board* is a box extending nearly the whole width of the organ, rather shallow, but of considerable breadth, divided by partitions into as many compartments or channels, called *grooves*,

as there are keys, on the row of keys to which it belongs: these grooves are of various breadths, according to the size of the pipes. Each groove at the end which lies over the wind chest has an aperture opening into it, which is kept closed by a large valve called a *pallet*. The grooves run the entire breadth of the sound board, and serve as so many partial wind chests; one for each key.

The pallets are connected with the keys by *trackers*, or thin slips of wood, having wire hooks, and in some cases wire screws, at their ends; and by movable levers called *rollers*, so that by pressing down the keys they may be opened at will.

In the boards which close in the tops of the grooves are bored as many holes over each groove as there are *stops* placed on the sound board: this is called the *under board*. Parallel to and directly over the *under board* is situated the *upper board*, which is perforated with holes to correspond with those in the under board; in these holes the feet of the pipes are placed.

Between the upper and under boards are situated the *sliders*. These are movable slips of wood perforated with holes exactly corresponding to those in the under board over the grooves, and also to those in the upper board; and which, on being moved backwards or forwards, either open or close at once all the holes belonging to the pipes of any one stop. Hence there are as many sliders as there are stops in the organ.

If a stop be drawn, the holes in the slider exactly correspond with those in the grooves and those in the upper board, so that on pressing down a key the wind can enter into a pipe and cause it to speak.

The pallets belonging to the grooves, being placed in the wind chest, are kept closely pressed against the bottom of the grooves by means of springs, and are attached to the sound board by a leathern hinge.

When the pallets are closed, the wind is excluded from the grooves; and when opened, by pressing down the keys, the wind rushes in from the wind chest.

The *wind chest* is a long rectangular box, connected with the wind trunk, by which it is filled with wind. The wind chest is formed under the forepart of the sound board, and is of the same length, but deeper, though not so broad. It is the reservoir into which the wind passes from the wind trunk.

The pallets which close the bottom of the grooves open into the wind chest.

The *movement* is a complex piece of machinery, consisting of a system of levers with their appendages, called *trackers*, *rollers*, *roller board*, &c., which serves to transmit the action of the keys to the wind chest, pallets, and sound board.

The *tracker* is a thin strip or stick of some light wood, varying in length from one to eight or ten feet. At each end of the tracker is inserted a hook made of wire. Trackers have also wire screws at their ends, and, by leather buttons, can be lengthened or shortened at pleasure.

The *rollers* are stout wooden or iron rods; the former are generally of an hexagonal or octagonal form; the latter round. The rollers lie horizontally over the keys, and extend from each key to the groove belonging to it. At each end of the roller is inserted a wire, which, being let into a stud, serves as an axis upon which it partially revolves. Near to each extremity of the roller,

and projecting from it, is fastened a small piece of iron, perforated with an eye, called its *arm*; in each of these arms is inserted one of the hooks belonging to a tracker.

One arm of the roller lies directly over the key to which it belongs; the other end directly under the groove and pallet which it serves to govern.

The *roller board* is a large, irregularly-shaped board, placed perpendicularly over the keys, of the same length as the sound board, and having attached to it as many rollers as there are keys in the set to which it belongs. There is a roller board to each set of keys.

The hook at one end of a tracker is attached perpendicularly to the middle of one of the keys; the hook at its other end lays hold of that arm of the roller which stands directly over the key. When we press a key down, the roller partially revolves on its axis, and in so doing draws down the second tracker attached to the arm at its other extremity. This second tracker, by means of its hook and a wire passing through the wind chest, opens the pallet, and thus admits the wind into the groove belonging to that particular key.

The movement above explained is the simplest and most usual, especially in foreign organs; more complex arrangements are often met with, but they coincide with the above in all their essential parts.

In England, for example, a lever called a *back fall* is connected with each key: this lever, like the key itself, moves on a centre; but when the key is pressed down by the player, a small pin of wood or wire attached to it, called a *sticker*, throws up the near end of the back fall; the far end of which, as it descends, pulls down the first tracker, causing the roller to revolve, and thus, by means of the second tracker, opens the pallet as before.

Large organs have three rows of keys; the middle row for the great organ, the bottom row for the choir organ, and a third row at the top for the swell. In some of the large organs on the continent, there are four rows of keys or manuals.

Two of these rows of keys may generally be so connected by means of a draw stop, called the *copula* or *coupler*, that they may be both played at the same time. In old organs the copula generally connects the choir organ with the great organ; but the organs built in the present day connect the swell with the great organ: this is considered a great improvement on the old arrangement. Occasionally also all the three rows of keys may be connected; in all cases, however, the keys of the great organ are those which are to be played upon. Organs in which the pedal pipes are detached from the keys have a copula for the pedals, which connects them with either the great organ, choir organ, or both.

The *pedals* are a set of keys lying under and played upon by the feet of the organist. The arrangement of these keys is similar to that of the other rows of keys; except that the pedals comprise the two lower octaves, or an octave and a half, and contain only bass notes.

The stops belonging to the pedals have their own wind chest; this lies at the bottom of the organ. The pedal pipes can only be made to speak by pressing down the pedals; never by means of the keys. For, even when there is a copula connecting the keys and pedals, it is only

the set of keys that is connected to the pedals and made to speak with them, and never the reverse.

Few of the old organs have any pedal pipes; the pedals merely serve to pull down the lower keys of the great organ, and thus to supply the place of a third hand. In the large organs, the pedals have from eight to ten or twelve stops exclusively appropriated to them; some reed-stops, some flue stops.

A *stop* consists of a row or rank of pipes formed upon one uniform model, and generally placed on the same slider.

Among organ stops, some are only treble stops, and some only bass stops; hence some stops have only two or three octaves in compass; while others extend throughout the entire compass of the instrument.

The pipes belonging to one stop generally stand in the same row or series, though sometimes, for the sake of symmetry, or from want of room, an exception to this arrangement is permitted.

The stops are divided into *flue stops* and *reed stops*.

In another point of view, they are also divided into *foundation stops*, *mutation stops*, and *compound* or *furniture stops*.

A *foundation stop* is a stop of which the pipes every where give such notes only as we are prepared to expect from the keys that we touch, or at least the octaves above or below those notes. Thus the diapasons, trumpet, &c., are foundation stops, in the strictest sense; the principal, fifteenth, clarion, double diapason, &c., are also foundation stops, since they are octaves to those before mentioned.

Mutation stops are those which as to pitch do not correspond with the keys that we touch. They are the twelfth, tierce, and their octaves.

Compound stops consist of an assemblage of several pipes, three, four, five, or more to each key of the instrument, all speaking at the same time. Among compound stops are the sequentia, mixture, cornet, &c.

Compound stops are tuned in octaves, thirds, and fifths to the foundation stops.

Draw stops are situated in the front of the organ, by the sides of the rows of keys. On the knobs at the end of the draw stops, or occasionally underneath or above them, is written to what stop each draw stop belongs. The draw stops are connected with a *movable lever*, by means of which the sliders are put into motion. If we draw out a knob, the lever revolves and draws back the slider, so that the holes which are bored through it exactly coincide with those in the sound board and in the upper board upon which the pipes are placed; and, consequently, in playing, the pipes of this stop are enabled to speak. If we again push in the draw stop, these holes are once more closed.

Organ pipes may be distributed into flue pipes and reed pipes. They are made either of metal or of wood. The form of the metal pipes is either that of a cylinder or of a cone, direct or inverted. The form of the wooden pipes is generally that of a rectangular prism, though occasionally they are also pyramidal; these being the forms most easily constructed and most advantageous as to tone.

Pipes are either altogether *open* at top, or they are *stopped* totally or partially; the wooden pipes in the former case by means of a stopper, and

the metal pipes by a cap. Some of the stopped pipes have a small tube passing through the centre of the cap or stopper — this is called a *chimney*; these, of course, are only partially stopped.

The *body* of a metal pipe of this description is generally a cylinder, having a small portion towards its lower end flattened a little inwardly so as to produce a straight edge: the part thus pressed in does not extend quite to the bottom of the body of the pipe, it having a small portion cut off. The edge thus formed is termed the *upper lip*.

The *foot* is a tube of a conical form, having a straight edge formed in the same manner as that in the body of the pipe; this is termed the *under lip*.

The top of the foot is closed at its broad end by a circular metal plate called the *langward*, a segment of which is cut away so as to produce a straight edge parallel to that of the under lip, and leaving a narrow *fissure* or *flue* between them, directly underneath the straight edge of the upper lip.

The body and foot are soldered together with the lips exactly opposite to one another; and the aperture which is caused by the upper lip not exactly extending to the bottom of the body of the pipe, together with the fissure already described, constitutes the *mouth* of the pipe.

The mouth of a wooden pipe is constructed on the same principle; it also having an upper and an under lip, a langward, and a narrow fissure to admit the wind into the body of the pipe in the direction of the upper lip.

Reed pipes are generally made of metal; the body of the pipe is either of a conic or cylindrical form.

The mouthpiece of a reed pipe consists of a *metal block*, a *reed*, a *tongue*, and a *crooked wire*; all of which go into a hollow conical foot called the *socket*. The body of the pipe is soldered to the mouthpiece.

The *block* is a cylindrical piece of metal, having a ring at the top to prevent it from sinking too far into the socket.

The *reed* is a small tube, of which a portion is cut away lengthwise; it passes through the centre of the block, and is fastened to it.

The *tongue* is a thin, elastic slip of metal, which is somewhat bent, and which is applied so as nearly to close that part of the reed which is cut away. It is fixed in the block by means of a wooden wedge.

The *wire* passes through the block on the side of the tongue; the lower part of this wire is turned up and bent so as to press horizontally against the tongue. The upper part of the wire is a little crooked, to receive the tuning knife, which is used either to raise or depress it; this lengthens or shortens the tongue, and by this means flattens or sharpens the pitch of the pipe.

The peculiar tone of reed pipes arises from the tongue; for the wind, rushing through the opening between the tongue and the reed, causes the tongue to vibrate; the quicker these vibrations, the more acute the pitch of the pipe. To save expense, large reed pipes are sometimes made of wood.

The various qualities of tone in the different reed stops depend chiefly on the shape of the pipes.

The wind, passing through the foot of the

pipe and through the narrow fissure already described, impinges against the narrow edge of the upper lip, and causes it to vibrate. These vibrations are directly communicated to the column of air within the body of the pipe, and thus cause it to speak.

The pitch of organ pipes depends almost altogether on their lengths, very little upon their forms or their diameters, except in very large pipes; the latter circumstance, however, greatly influences the qualities of tone.

The length of the pipes belonging to any particular stop is generally governed by the length of that which is necessary to produce the note

This note was formerly the lowest note on the organ, and it is still retained as a sort of standard.

An *open* pipe necessary to produce the above note must be eight feet long in its body, as the length of the foot has no influence whatever on its pitch.

A *stopped* pipe producing the same note will only require to be four feet in length, as the vibrating column of air strikes against the cap at the top, and is reflected back again to the mouth, before the pipe can speak; hence the air passes through twice the distance it would have to go in an open pipe of the *same* length, and the pipe therefore sounds an octave lower than it would if not stopped.

The principal stops may be described as follows: —

1. *Open Diapason*, (open unison.) — This is one of the principal stops, and is the foundation and most essential stop in the organ.

It is called open from its pipes being open at the top; the pipes are made of metal, the lower ones frequently of wood, and, in large organs, they are generally placed in front.

2. *Stopped Diapason*, (stopped unison.) — The pipes of this stop are generally made of wood, and stopped at their tops by square plugs; though sometimes the pipes in the treble are made of metal. The two diapasons are the foundation of the organ.

3. *Principal*. — This stop is tuned an octave higher than the diapasons. It is composed of open metal pipes.

4. *Twelfth*. — This is an open set of pipes, a twelfth above the unison diapasons, and runs throughout the instrument. It is sometimes combined in the *sesquialtera*, and not a separate stop.

5. *Fifteenth*. — This stop consists of open metal pipes. It is tuned an octave above the principal, and is therefore two octaves above the diapasons. It covers the twelfth, which should not be drawn without the fifteenth.

6. *Sesquialtera*. — A compound stop of three or more ranks of small open metal pipes, which are tuned in thirds, fifths, and eighths, to the foundation stops; so that every key, when pressed, produces a common chord. The intervals which the pipes form with the diapasons are the seventeenth, nineteenth, and twenty-second. Towards the top of the instrument the pipes become so extremely shrill that it is usual to make several breaks or repetitions in the series, by em-

playing pipes similar to those used in the octaves below, and thus transposing the notes an octave lower.

7. *Mixture*. — This is a compound stop, consisting of three, four, five, or six ranks of small metal pipes, tuned in thirds, fifths, and eighths, to the foundation stops. Its tone is shriller than that of the sesquialtera.

8. *Cornet*. — This is also a compound stop, consisting of three or more ranks of open metal pipes, tuned in thirds, fifths, and eighths, to the foundation stops. It is only a half stop, as it seldom or never runs below middle C. Its tones are loud and rather harsh; for which reason it is not generally used in modern organs, as, for all useful purposes, the sesquialtera supplies its place. In some organs the cornet is nothing more than the treble of the sesquialtera.

9. *Larigot* (or octave twelfth) is a stop consisting of open pipes, tuned a twelfth above the principal. It is one of the mutation stops, running throughout the instrument.

10. *Nazard*. — The French name for the twelfth. See TWELFTH.

11. *Tierce*. — An open metal stop, tuned a major third above the fifteenth. It is seldom used except in large organs, as its place is supplied by the compound stops.

12. *Furniture*. — An open set of very small metal pipes, tuned three octaves above the diapasons. Its tones are very shrill, and it is only used in the very full organ.

13. *Trumpet*. — This is a very powerful reed stop, voiced in imitation of the instrument of that name. It is in unison with the diapasons; and it renders the chorus or full organ more complete and brilliant, as it strengthens the fundamental sounds, and diminishes the predominance of the sesquialtera, mixture, furniture, cornet, &c. The pipe of the trumpet consists of a conical tube, fixed in a metal block, in which also are the tongue, reed, and wire. This stop, like all other reed stops, is tuned by the elevation or depression of the wire.

14. *Clarion* is also a reed stop, and is tuned an octave higher than the trumpet. It is only used in the full organ.

The following seven stops properly come under the term *solo stops*, and may be drawn alone, or with one of the diapasons.

15. *Dulciana*, (or *Salcional*). — This is an open diapason set of pipes on a smaller scale, but voiced much softer and sweeter. A good dulciana is a great addition to an organ, (especially those that have only two rows of keys,) as it may be used in place of one of the choir diapasons.

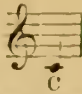

16. *Flute*. — The pipes of this stop are generally made of wood, and open, though formerly they were made of metal, and stopped. This stop is tuned in unison with the principal; but it is much softer and sweeter in tone.

17. *Hautboy*. — A fancy reed stop, the tone of which is in imitation of the oboe. The tubes are narrow and somewhat conical, spreading out at

the top. It seldom extends below

18. *Claribel*. — A stop of modern invention, of a very pleasing quality of tone, not unlike the

clarinet. This is a half stop from  and.

in general, is accompanied with the stop diapason bass. Organ builders sometimes combine them both in one, under the name *stop diapason*.

19. *Cromorne*, (commonly, but improperly called *cremona*), from *krum horn*, or crooked horn, is a reed stop, of a pleasing quality of tone. This stop is very useful for solo passages in the range of the tenor.

20. *Vox humana*, (human voice.) — A reed stop, in unison with the diapasons, the tones of which are supposed to resemble the human voice. Its tubes are cylindrical, with this difference, that blocks are placed within the tubes, and the sound issues through holes bored in these blocks, which occasion their peculiarity of tone. The largest pipes of the *vox humana* are not above twelve or fourteen inches.

21. *Bassoon*, (fagotto.) — A reed stop, tuned in unison with the diapasons, the pipes of which, like the *hautboy*, are of a conical form. This is only a half stop, and seldom extending above

The two following stops belong to the pedal organ.

22. *Double Diapason*. — An open set of metal or wood pipes, tuned an octave below the diapasons. It is the principal stop, in general, to the pedals; and sometimes it is connected with the keys of the organ.

23. *Double Trumpet* (trombone) is the most powerful stop in the organ. The pipes of this reed stop are of the same length as the double diapason, to which it is tuned in unison. This stop is only used in the pedal organ.

Other stops have been added, by different builders, in imitation of the large German and other organs, as the Posaune, Bourdon, Tenoroon Diapason, Doublette, Corno Trombone, Corno Clarion, Claribel Flute, Oboe Flute, (not a reed,) Wald Flute, Suabe Flute, Echo Dulciana Cornet, Flageolet, Piccolo, Quint or Double Twelfth, Decima and Duodecima, (from the Frankfort, Seville, and other great organs,) Super Octave, Cymballe, Contra Shawn, Tenoroon Shawn, Unison Grand Posaune, Super Clarion, Psaltery, Wald Krum Horn, Dulciana, Celestina, Contra Serpent, Corno di Bassetto, Bombarde, Ophicleide, Cornetto, Sub Bass, Tenoroon Trumpet, Swiss Cromorne Flute, Rohr Flute, Regal, or Violin Reed, Glockenspiel, Gems-horn, Contra Bourdon, Contra Fagotto, Echo Piccolo, Echo Dulciana Cornet, (a stop of five ranks of pipes,) Clarion Fifteenth, Clarinet and Chalameau, Cromorne Flute, Clarion Posaune, Contra Posaune, Carillons, Echo Trumpet, Tenth, or Double Tierce, &c., which have been added to give weight, power, and brilliancy to very large organs. Many of the stops are, as may be perceived, fancy solo stops, in imitation of the various instruments they are named after.

As there are a number of unison stops, as well as compound stops, such as the twelfth, sesquialtera, mixture, &c., sounding thirds, fifths, and eighths, together, the latter-mentioned stops must never be drawn alone, but should be added to the diapasons, &c., which are the body of the organ; and should be covered by the principal, which is

an octave above the diapasons, and the fifteenth, two octaves above the same.

The open or stopped diapason may either be drawn singly or together; so may the dulciana be drawn by itself, or with the others; but we will consider each organ separately.

Great Organ. — In drawing the stops, take them in the following order: —

Stops.

1. Open diapason.
2. Stopped do.
3. Principal.
4. Twelfth, } The twelfth must not be
5. Fifteenth, } drawn without the fifteenth.
6. Sesquialtera.
7. Mixture.
8. Trumpet, &c.

The trumpet covers the sesquialtera and mixture; but if there is no trumpet, only the sesquialtera, or mixture, should be drawn.

If the organ is very large, all other stops besides those above mentioned should only be drawn in addition.

If, as is sometimes the case in large organs, there are duplicates of the stops, numbered 1, 2, and 3, they may be drawn with the compound and mutation stops; this will enrich the effect of the whole chorus of stops, and cover, or at least qualify, the shrillness of the more acute stops.

The pedals may be used to strengthen the bass in all loud passages, and particularly in long holding notes.

Slow movements for the two diapasons only, of a grave and solemn character, are often met with in voluntaries. They generally consist of full harmonies, gliding gently into one another, and having frequent suspensions in one or more of the parts.

The trumpet and clarion should be reserved for passages of a striking character and of short duration; as the *stretto*, or node of a fugue.

The stops of the choir organ are more delicately voiced, and constructed on a smaller scale, than those in the great organ. For this reason, it is used to accompany solos, duets, trios, &c., for voices, and to play the *piano* passages in choruses and organ pieces.

The *fancy* stops, or at least some of them, are usually placed in the choir organ.

A choir organ generally contains the following stops: —

Stops.

1. Open diapason.
2. Stopped diapason.
3. Dulciana.
4. Principal.
5. Twelfth.
6. Fifteenth.
7. Flute.
8. Cromorne.

The flute and cromorne, being solo stops, may be drawn alone.

The dulciana is also sometimes used alone as a solo stop.

The swell, from its admitting of a perfect *crescendo* and *diminuendo*, is particularly adapted for ornamental solo playing, and for accompanying solo voices.

The *swell* organ usually contains the following stops: —

Stops.

1. Open diapason.
2. Stopped diapason.
3. Principal.
4. Hautboy.
5. Cromorne.
6. Trumpet.

The trumpet is also treated as a fancy or solo stop, and, like all fancy stops, drawn with the diapason only. In trumpet pieces, which are often met with in the older voluntaries, it is used as an *echo* to the trumpet on the great organ.

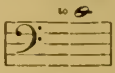

The style of the passages given to the fancy stops must be that of the instruments which they are intended to imitate.

As the swell does not extend throughout the entire compass of the instrument, the basses to the above combinations must generally be played on the choir organ.

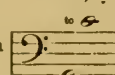

In using the swell, the *crescendo* and *diminuendo* should be as gradual as possible.

The organ is distinguished from every other keyed instrument by its pedals. With their assistance, the feet perform the office of an additional hand, and the hands are thereby at liberty to introduce other parts, either to reinforce the harmony, or to vary the designs in the melody. Hence we often meet with organ compositions for four, five, or even more parts. The organist should therefore endeavor to make himself as dexterous in the use of his feet as of his hands.

In the following examples, we shall suppose

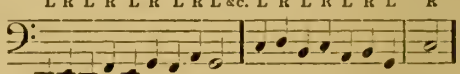

the pedals extend two octaves from 

as is now generally the case in modern organs. Although, in general, the compass of the pedals is as stated above, yet the ordinary compass is

only from  one octave and a half.

To use the pedals properly, that is, so as at once to connect the sounds, and yet attain the necessary degree of execution, we must as often as possible employ the two feet alternately, as in the following examples: —

L R L R L R L R L &c. L R L R L R L R

When several notes follow one another diatonically, it becomes necessary to pass one of the feet over or under the other. In the notes of the lower octave, it will be best, in ascending, to pass the left foot *under* the right, and *over* it in the second octave. The contrary takes place in descending for the right foot.

In the following examples, the line placed under the letters indicates that we must pass one foot *under* the other; a similar line drawn *over* the letters indicates that one foot must pass over the other.

L R L R L R L R L R L R L R L R

In ascending scales we cannot always begin with the left foot, nor in descending scales with the right ; as the following examples will demonstrate :—

L R L R L R L R L R

R L R L R L R L R L R L R

We cannot always avoid using the same foot twice in succession.

L R R L R L R L R L L

The foot may sometimes be changed on a long note without striking it again.

L R L R L R L R

There is another method of using the pedals, which consists in alternately employing the toe and the heel of the same foot. In this case, only the left foot is used for the lower octave, and the right foot for the upper octave.

In the following examples, T signifies the toe, H the heel.

LEFT FOOT. RIGHT FOOT.

H T H T H T H T T H T H T H T

This mode is, perhaps, less convenient than the other in a diatonic succession of notes ; but it has its advantages in chromatic passages. Example :

LEFT FOOT. RIGHT FOOT.

H T H T H T H T T H T H T H T

Rules cannot well be given for solo playing on the organ, as much depends on the caprice of the performer.

What relates to the drawing of the stops, singly and in succession, we have already explained. To acquire a knowledge of the style most appropriate to the various fancy stops, the student must have recourse to modern voluntaries for the organ, which contain one or more movements expressly calculated to display the power and variety of the instrument.

We shall merely insert one or two less obvious combinations, which will be found useful in solo playing.

Great organ. Open or stopped diapason, or together, for the right hand.

Swell. Plain and simple chords in the left hand.

Pedals. To play the bass by coupling the pedal keys of the great organ.

This will be found a very pleasing combina-

tion for slow airs and sacred melodies. The following combination will also serve for the same purpose :—

Choir organ. Stopped diapason and principal in the right hand for the melody ; *swell* and *pedals* as before for the harmony and bass.

Another very effective combination is obtained by coupling the *full swell* with the diapasons of the great organ.

In accompanying voices on the organ, *tutti passages*, if *loud*, must be accompanied on the great organ ; as many stops being drawn as the number of voices and the character of the music may require.

Tutti passages, if *soft*, must be accompanied on the choir organ ; generally speaking, with the diapasons and principal.

Soli passages must be accompanied on the choir organ with the dulciana, or dulciana and stop diapason.

Occasionally, also, we may employ for this purpose the *swell* with the two diapasons for the right hand, and the choir organ, as before, for the left ; particularly if there are occasional obligato passages of accompaniment of a light and elegant character.

One of the chief purposes to which the organ is applied in the Protestant service, is the accompaniment of the psalms. The melodies to which the psalms are sung are of the simplest and most natural description, as such only are adapted to be sung by a congregation, or any considerable part of them.

The practice of singing psalms in divine worship may be traced back to the times of Moses, David, and Solomon.

The earliest Christians introduced psalms and hymns in their worship, particularly in the Eastern and Greek churches. A canticle by St. Ambrose, Archbishop of Milan, is still extant. This is the well-known "Te Deum," still in use in the Catholic church.

In the western churches, Pope Gregory the Great, (who instituted the Gregorian Chant,) and, in later times, Luther, Calvin, and others, contributed largely in various ways to the improvement and general diffusion of this kind of singing.

The Germans have bestowed much pains on the improvement of psalm singing ; and also on the divers ways in which those melodies may be accompanied on the organ. Many extensive collections of psalm tunes, harmonized by some of their greatest composers, have been published under the name of "*Chorale.*"

As these several ways of accompanying such melodies admit of being applied to our own psalm tunes, we shall explain and exemplify them.

The ordinary manner in four parts.—In this, which is the usual mode of accompaniment, the right hand plays three out of the four parts, the melody being always the upper part, while the left hand merely strikes a plain bass.

EXAMPLE.

This way is not so well adapted to the nature of the human voice, because the upper parts are too high, too close to one another, and generally too remote from the bass.

In four parts with dispersed harmony.—This, which is the more modern and preferable manner, was first introduced by Sebastian Bach; it is much better adapted to the different species of voices. Two parts are generally played in the right hand, viz., the treble and the contralto, while the left hand plays the tenor and bass parts, or the tenor only; the bass part being played on the pedals.

EXAMPLE.

We have no means (says the Rev. Mr. Lacroix) of ascertaining the exact period when pure instrumental music was permitted to form a part of divine service. The primary use of the organ was undoubtedly to accompany and sustain the vocal chant. When, however, it had advanced towards its present state of perfection, it was employed by the Romish priests to fill up the intervals between the services of the mass, which were generally sung, and thus enable the choir to recruit its powers. For the same reason, it might have been similarly used in the Protestant churches, and retained, when found to conduce to the higher object of general edification, even when the discontinuance of chanting seemed to dispense with the necessity. The original character of the voluntary would appear to have been purely vocal; as, between the Reformation and Restoration there was little, if any, that could serve as an archetype for instrumental church music, except such as was intended for the voice. The fugue is the best species of music an organist can employ, provided his subject be lofty and sublime, which it can only be by deviating from every thing that is trivial, secular, or common. To compose a spirited and regular extemporaneous fugue, is no trivial excellence; and as it is necessarily a difficult and intricate

species of instrumental music, no one can complain if he meets with correct and effective performance. Happily, the musical world is enriched with many masterly fugues, composed expressly for the organ; and no player need deprecate the charge of unskilfulness who has modestly sufficient to prefer the works of Handel, Graun, Bach, Albrechtsberger, and others, to his own extemporaneous effusions.

The times usually set apart for this species of composition are three: at the commencement of the service; before the first lesson; and after the final benediction.

It is customary for the organist to begin the opening voluntary as soon as the minister enters the church, and pursue his subject during the short interval of time that elapses before he appears in the desk. This introductory voluntary is supposed to have a character of its own. It should be in a grave and solemn style, abounding in full, close-wrought harmony, and inspiring a feeling of reverential awe. The kind of pieces best suited for this purpose are short diapason pieces on the full or choir organ, abounding in suspensions, &c., and should be, except those used in penitential time, in the major mode.

The middle voluntary, before the first lesson, usually consists of pieces lasting about eight or ten minutes in performance, in which fancy stops are sometimes used, played on the swell or choir organ, and consisting of some devotional subject, selected from the vocal works of Handel, Haydn, Mozart, Beethoven, &c., or pieces expressly composed for that portion of the service.

The concluding or out-voluntary is that in which the organist generally shows off the full power and effects of the instrument he presides over. The pieces best suited for this occasion are those expressly composed for the organ, consisting generally of an introduction and fugue, wherein the pedals may be employed. The masterly fugues of Handel, Sebastian Bach, Graun, Albrechts-berger, Eberlein, Rinck, Hesse, and others, leave nothing to be desired in that class of writing, further than an effective performance. In this the organist should consider he must use all his powers, and consider that it is no child's play that he is about to perform. Nothing can be better than a fine performance of one of Handel's fugues on a large and powerful organ: the deep tones swell and increase in power; the volumes of sound that roll throughout the church, echoed by the arched roof, now and then seeming to die away, then increasing to that extent that every pipe seems employed, produce that feeling of awe, that sense of holiness, which all that have a soul for music must feel, while listening to the voluntary.

The organ (ogeb.) is frequently mentioned in the Old Testament, and its invention is ascribed to Jubal, in Genesis iv. 21, but it cannot have been like our modern organs. From Ezekiel xxxiii. 31, it seems rather to have been a kind of flute, at first composed of one or two, but afterwards of about seven pipes, made of reeds of unequal length and thickness, which were joined together. It corresponds most nearly to the pipe of Pan which was used among the Greeks, consisting of several pipes of unequal thickness and length joined together, which gave an harmonious sound when they were blown into by moving them successively under the lower lip.

ORGAN BUILDING. The progress of our countrymen in organ building has been every way satisfactory and flattering, and would seem to have quite exceeded the expectations formerly entertained by many of the old professional men. So far as regards the mere mechanical construction of the organ, doubtless it is a trade which may be taught and learned, like that of the carpenter, the cabinet maker, or the machinist. But the mechanical construction of his instrument, whatever may be its difficulties, is but a part of the work of the true organ builder. He must have genius and skill to invent and devise such plans, proportions, and combinations, for his various stops and pipes, and a capacity so to voice and tune them, that the greatest possible musical effect may be produced from his instrument. Hence organ building has been very properly considered a liberal art, inasmuch as it demands, in the words of an intelligent musical writer, "original genius and cultivated taste, united with knowledge, practice, and experience, and a musical ear delicately sensible to the perfection of tone and tune."

William M. Goodrich is admitted, on all hands, to have been the first American organ builder worthy of the name, although there were several persons in New England who carried on the business before his time. The first organ built in America was built by Edward Bromfield, Jr., in Boston, in 1745. In 1752 Mr. Thomas Johnston built an organ for Christ Church, Boston. The first foreign organ ever put up in Boston is presumed to have been the one erected in King's Chapel in the year 1714. The Messrs. Hook have now in their possession a remnant of one of Johnston's instruments, formerly in the Episcopal church at Salem. On the front, or name board, there is an inscription in German text, executed in ivory, as follows: "Thomas Johnston fecit, Boston, Nov. Anglorum, 1754." It was a small organ, with one bank of keys and six stops. Johnston died about 1768, and was succeeded by Dr. Josiah Leavitt, in early life a practising physician. Dr. Leavitt was engaged in the business for a number of years. After him came Mr. Henry Pratt, of Winchester, New Hampshire, who died in 1849. Mr. Pratt had built about twenty-three small church organs and some nineteen chamber organs, when Mr. Goodrich made his appearance. This talented artist was born in Templeton, Mass., in 1777; went to Boston about the year 1799, and continued in business there up to the time of his death, in 1833. It was Mr. Goodrich who gave a character to the art of organ building in this country, and constructed such instruments as rendered importations from Europe (to any extent) unnecessary. The writer of a very interesting memoir of Mr. Goodrich, and of the progress of the art in New England, says, —

"Persons remarkable for ingenuity or enterprise, who originate useful inventions and improvements, or who introduce and establish new branches of business and of the mechanic arts, may be ranked among our most useful citizens. They contribute, in an eminent degree, to the public prosperity, and to the rapid advance of the nation not only in wealth and power, but in those attributes which command influence and respect among the nations of Europe. To this class of citizens may justly be referred Mr. Wil-

liam M. Goodrich. He was well and extensively known as an ingenious, self-taught mechanic, and particularly as an excellent organ builder. His instruments are to be found in churches in every part of the Union, and even far beyond its limits. Mr. Goodrich was curious and inquisitive, not only in mechanics, but in other branches of knowledge; and he studied and investigated whatever interested him with great perseverance and attention. He had originally a fine musical ear. In early life he improved this faculty, both by study and practice, and he was ever afterwards extremely fond of music. This union of the mechanical and the musical taste and faculty naturally led him, when the opportunity offered, to undertake the construction of organs. It was the united love of these arts which constantly urged him on, made him overcome every difficulty, and raised him to that height of excellence which he finally attained."

Mr. Goodrich built his first church organ in Boston for Bishop Chevereux, of the Catholic Church, in 1805. This instrument he, in 1822, removed, and in its place set up a much larger and better one. "Soon after commencing business," says the writer of the memoir alluded to, "he was employed to clean, repair, and put in tune, two or three excellent English organs, then in Boston, and afterwards others in other places. From the opportunities which making those repairs afforded him he derived great and important advantages. His previous scales and plans, being mostly contrived by himself, were necessarily imperfect and incomplete. He had now the power of improving them. He carefully inspected the work of the best of these foreign organs, observed the contrivance and arrangement of the several parts, and took the dimensions and proportions of the pipes and other portions of the interior. All, or most of these, he introduced, at various times, into his own organs; and, after due trial, adopted such as he deemed the best for his own future use."

"It is highly creditable," continues the writer, "to Mr. Goodrich and his pupils, that during the whole period of his being in business, (from 1805 to 1833,) and notwithstanding the violent prejudice which existed, for a long time, against American manufactures, and in favor of every thing that was English, only three church organs were imported into Boston from abroad. Two of these, by Fruin, of London, are said not to be remarkable for excellence. The third, built by Elliot, of London, for the Old South Church, in 1822, is considered to be a very superior instrument. It cost the society seven thousand one hundred and twenty-eight dollars."

Soon after Mr. William M. Goodrich commenced business in Boston, his brother Ebenezer went into his manufactory to learn the business in Boston, finally set up on his own account, and built quite a number of instruments, mostly of small size. About the year 1807, Mr. Thomas Appleton, who had served a regular apprenticeship with a cabinet maker, entered into the employment of Mr. W. M. Goodrich, and continued with him several years. Mr. Appleton then formed a connection in business with a Mr. Babcock, a piano-forte maker, and two persons by the name of Hayt — under the name of Hayts, Babcock, & Appleton. They took a building in Milk Street, Boston, and commenced manufac-

turing organs and piano-fortes. In the course of a year, Mr. Goodrich was induced to join the establishment, and attend to the voicing and tuning of the instruments — the most delicate and difficult part of organ building, and a part for which the greatest amount of mere mechanical skill will always be found insufficient if it be not coupled with original genius and taste.

The Milk Street firm, after undergoing various changes, was finally, in 1820, dissolved. Mr. Appleton took a building in another situation, and continued the business on his own account. The first three organs he built were voiced and tuned by Ebenezer Goodrich. One of these was afterwards re-voiced and tuned by Corri, an Englishman, who came over with the Old South Church organ. Corri was employed by Mr. Appleton, in voicing and tuning, for several years, and was probably one of the most talented men he ever had with him. Mr. Appleton has built, since he first went into the business, a large number of organs, many of them, undoubtedly, very good instruments. He afterwards, we believe, formed a connection with a young builder by the name of Warren, under the firm of Appleton & Warren. Mr. Warren afterwards commenced business for himself at Montreal, Canada East.

About the year 1831, the art of organ building in America began to receive a new impulse. Messrs. E. & G. G. Hook commenced business in Boston about this time, and they had previously carried on the business in Salem, where they had already built for various persons nineteen organs. The elder Hook was, at the age of sixteen, an apprentice to the celebrated W. M. Goodrich, many of the peculiar qualities of whose mind he seems to possess in an eminent degree — such as great inquisitiveness and ingenuity in mechanics, united with a constant disposition to introduce new features in his method of construction, and to seize upon all foreign improvements deemed to be of any value.

William Nutting, Jr., formerly of Randolph, Vt., in 1853, opened a large organ establishment at Bellows Falls, Vt. He had previously built a number of organs, which have been considered as good as any built in the country.

There were, in 1853, in Boston and its immediate vicinity, four extensive organ factories, viz.: Appleton's at Reading, Stevens's at East Cambridge, Simmons's (Mr. William B. Simmons was for many years in the employ of Mr. Appleton, before commencing manufacturing on his own account) on Causeway Street, and Hook's on Leveret Street. John Mackay was connected with Mr. Appleton in 1810. In 1812, on account of the embargo which existed during the war, a portion of the material, (tin, zinc, and ivory,) used by organ builders, became so scarce that it could not be obtained, except at an almost ruinous expense; consequently, this branch of manufactures experienced a temporary decline.

ORGAN BELLOWS. A well-known pneumatic machine attached to an organ, and the office of which is, to supply the pipes with wind. The general fault in the bellows of organs is their want of capacity, which renders it laborious to the *blower* to keep the *chest* full, and subjects the instrument to continual exhaustion, when performed on in full chords.

ORGAN BUILDER. An artist whose profession is to construct, and to tune and repair organs. An *organ builder*, besides possessing a nice, accurate, and cultivated ear, and a sound judgment in the vibratory qualities of wood and metal, ought to be acquainted with pneumatics, generally versed in practical mechanics, and so far informed in plain counterpoint, and the simple elements of musical composition, as, in some degree, to be capable of trying the difficult stops and combinations of his own instruments, and of deciding for himself on their effects in performance.

ORGANARII. Ancient organists, who performed on the hydraulic organ; said to have been so called from the word *organum*, applied to a certain part of that instrument.

ORGANIC. The epithet applied by the ancients to that part of practical music which concerned instrumental performance. The *organic* comprehended three kinds of instruments, viz., wind instruments, as the trumpet, horn, flute, &c.; stringed instruments, as the lute, lyre, &c.; and pulsatile instruments, or those which are performed on by beating, as the drum, &c.

ORGANISTIC. An epithet applied to music composed for the organ.

ORGANIZARE. (L.) To organize, to sing in parts.

ORGANIZED PIANO-FORTE. An instrument consisting of an organ and piano-forte, so conjoined that the same set of keys serve for both, or for either singly, at the pleasure of the performer.

ORGANIZED LYRE. M. Adolphus Ledhuy was the inventor of this instrument. By a very simple mechanism he has so perfected the guitar lyre as to render the sounds of his new instrument susceptible of several different tones or stops, by which the performer may imitate several instruments, such as the lyre, the piano-forte, the harp, &c., the instrument being fingered as the guitar lyre. It has fifteen strings, embracing four complete octaves, separated into three distinct divisions, bass, tenor, and treble. It has a row of keys which include the extent of three octaves, to imitate the piano-forte; and it has two necks, each with six strings which are fingered as the guitar lyre.

ORGANIZING. Singing in parts.

ORGAN LOFT. The name given to the space between the front of a church organ and the curtains or case which conceals the lower part of the instrument. The area occupied by the organist.

ORGAN MUSIC. Concertos, voluntaries, services, anthems, chants, psalms, hymns, and whatever is either expressly composed for the organ, or the performance of which requires the accompaniment of that instrument.

ORGANO. (L.) The word *organo* is found in the scores of oratorio choruses, instrumental anthems, &c., at the beginning of that staff designed for the *organ*, and the execution of the thorough bass.

ORGANO, PERINUS, an excellent performer on the lute, born at Florence in 1470, died, as early as 1500, at Rome, where a monument has

been erected to his memory, in the church Ara Carli.

ORGANON. A double or manifold pipe. The shepherd's pipe is at this day called a mouth organ, and so is the Pandean pipe.

ORGANO PICCOLO. (L.) A small or chamber organ. See ORGAN.

ORGANORUM INTABULATURÆ. (L.) The general name formerly given to voluntaries, preludes, and all compositions for the organ.

ORGAN PIPES. The square and cylindrical tubes in an organ, from which proceed the various sounds of that noble and complicated instrument. The square pipes are always made of wood, the round ones of metal, consisting of a compound of lead and grain tin.

ORGAN STOP. An expression applied to any collection of pipes coming under one general name; as when we say, "the *dulciana stop* is sweet, the *trumpet stop* is powerful," &c.

ORGANUM. The art of descant, or double singing. An old mode of singing in two parts, generally in thirds, and first suggested by the organ, from the facility that instrument affords of sounding two or more notes at once. This word was also applied by the ancients to a brazen vessel which formed a principal part in the hydraulic organ, out of which the air, pressed by the incumbent water, was forced into the tibiae, or pipes.

ORGAN POINT. A succession of chords, in some of which the harmony of the fifth is taken unprepared on the bass as a holding note, whether preceded by the tonic or by the harmony of the fourth of the key.

ORGELGEHAUSE, (G.) The case of an organ.

ORGEL SCHULE, (G.) A school or method for the organ.

ORGEL STÜCKE, (G.) Pieces for the organ.

ORGITANO, professor of the harpsichord at Naples, was celebrated as a performer in 1770. He published, in London, a book of sonatas for the harpsichord.

ORGITANO, a Neapolitan by birth, died at an early age. He left some works evincing talent. It is probably this Orgitano who composed the opera buffa entitled "*L'Inferno a darte*," which was performed at the Theatre Fiorentini at Naples, in 1804, with great applause.

ORGOSINI, HENRY, a musician at the beginning of the seventeenth century. He published "*Neue Singekunst*," Leipsic, 1603, in German and Latin.

ORIA, GIOV. BATTISTA. A very celebrated singer in Italy about the year 1670.

ORIENTAL MUSIC. The music of the ancient Egyptians has survived by tradition, as has also their language—many of the words and phrases which are carved in the phonetic hieroglyphics still being heard in the mouths of the Copts, and even borrowed by their Arab conquerors. Hebrew music could have no other source than from the music of Egypt. The present practitioners of music in the East have no musical notation, and even express astonishment

at the idea of musical notes being represented on paper. They are ignorant, and their profession is held in much discredit. The use of music is forbidden by the Koran, although, as if in defiance of its own precept, the Koran itself is *chanted*. The history of Arabian music has its marvels and its miracles, like that of all ancient nations. Celebrated musicians visit, *incognito*, at the court of sultans and caliphs: they take a lute, excite at will all the passions in the soul of those who hear them, plunge them into sleep, disappear as mysteriously as they came, and are only recognized after their departure by their name, which they have written on the handle of their instrument. Such is the enthusiasm of the nations of the East for music, that, to give an idea of its power, they have all had recourse to fiction—yet the profession of musician is considered infamous amongst the Arabs. Eminent musicians have seized with avidity every opportunity of endeavoring to make themselves practically and experimentally acquainted with the insurmountable difficulties of the Eastern music, and have labored, with not much success, to represent it by the intervals of our scale. The singularity of this music consists principally in this, that each note is divided into three parts: that is, the progression is by intervals equal each to about one third of a diatonic interval in our scale, so that the octave contains eighteen notes instead of thirteen. The running up their scale has no other effect upon a Western ear than that of a slide of the voice, or such an effect as is produced by sliding the finger along a violin string. M. Fétis speaks of the music of the Arabs as (after the Italian system) the most singular, the least rational, which exists in respect to the formation of the musical scale and the tonality. A French musician, he continues, discovered that the disagreeable sensation which he experienced from the song of an Arab proceeded from this cause, namely, that the division of the scale of sounds had no analogy with that to which he was accustomed. This scale, so singular and eccentric to us, so natural to the ear of the inhabitants of a great part of Africa and Asia, is divided into thirds of tones, in such manner, that, instead of containing thirteen sounds in the extent of an octave, it admits eighteen. In the notation of the scale, M. Villoteau has tried to represent the position of the notes by broken flats and sharps; but these signs, or any which he might have made use of, would not have enabled him to make us understand the true intonation of these notes, distant from each other by third parts of a tone; for these intonations do not fall under our musical sense. The succession, in the melody, of these little intervals produces, at the first hearing, no other effect on the ear than that of a sliding of the voice; the multiplied ornaments, the frequent trills, and the little *tremblans* of the throat of the singers, joined to the snuffling of which they make continual use, complete a music made to lacerate our ear and to charm their

It is certain that they have no idea of harmony. "I knew, in Paris," says M. Fétis, "an Arab who was passionately fond of the Marseillaise, and often asked me to play that air for him on the piano; but when I attempted to play it with its harmony, he stopped my left hand, and said, 'No, not that air; only the other.' My bass was to his ear a second air, which prevented his hear-

ing the Marseillaise. Such is the effect of education on the organs."

The principal instrument in use among these Oriental musicians is the *kanoun*, described as a sort of dulcimer. The performer sits upon his haunches, and holds the instrument in his lap; or, when he walks in a procession, it is sustained by a string round his neck, like a Turkey merchant's box of rhubarb. Mr. Laue gives the dimensions of one rather larger than ordinary, as follows: the greatest length, thirty-nine inches and three quarters; the breadth, sixteen inches; the depth, two inches and one tenth. The face and back of this instrument were of a fine kind of deal, the sides of beech. The pegs were of poplar wood, inserted in a wrest-board of beech, the bridge of fine deal. The strings were of lamb's gut, three to each note; and the instrument embraced twenty-four notes. To the player of the Syrian *kanoun* the piano-forte would be an absolute object of wonder.

The Arab scale is thus represented; the fourth and fifth being apparently true, and the second and sixth rather flatter, the third and seventh rather sharper than our notes will show:—

ARAB SCALE.

To this we may add a native Syrian melody.

IKKI BELBOL. *Syrian melody.*

To continue our examples, we give the "Call to Prayer," as it is heard from the minarets of the mosques at Aleppo. This, we believe, was first brought to Europe by Captain Sir Byam Martin.

THE "CALL TO PRAYER" *As used at Aleppo.*

ORIGIN OF MUSIC. With respect to the origin of music, we need seek for no other cause than the natural constitution of man. He is so formed as to receive a mechanical delight from the perception of sweet and melodious sounds, whether heard in conjunction or in succession. The causes of this pleasure admit of a philosophical analysis. The laws of concord and discord, of harmony and melody, are founded in the natural constitution of man; and the same thing may be said of rhythm, or the proportional duration of length of musical sounds, compared with each other; for in this also there is a natural relation or a principle of comparison deducible from the fixed and determinate laws of order and pro-

portion. Man, therefore, may be said to seek as naturally for the gratification of music as for food to allay his hunger, or for drink to quench his thirst; it is the natural delight and pleasure of the ear; and it has a striking superiority over all the pleasures of sense, in this respect, that it can hardly be indulged in to excess, or carried so far as to jade and impair the power of sensibility. Man, being thus predisposed to take delight in musical sounds, would embrace the first hint that might suggest any method of producing them artificially. The whistling of the wind through a hollow reed might suggest the idea of a flute or pipe, which appears to have been an instrument of music of great antiquity. The horns of animals, when blown into, produce a powerful sound, and have been employed by all savage nations as instruments for martial or some other music. The ancient trumpet was nothing but an imitation of these horns in metal, and seems to have been invented in the very earliest ages. The only instruments of music spoken of in Scripture as in use during the patriarchal ages, were the pipe or flute, the trumpet, and a kind of kettle drum, called tympanum, the outside of which was of copper, of an oblong figure, and it was covered with skin only at one end, and beat either with sticks or with the hand. Stringed instruments seem to have been a much later invention. It is not improbable that vocal music, or some kind of singing, was of still greater antiquity than instrumental. This is so natural to man, that it is practised every where, even among the most rude and barbarous nations; but if a model were wanting to suggest the art, it is provided by nature in the sweetness and variety of the singing of birds; which might have prompted men to try the melody of their voices, as they are so much inclined to imitation. The inherent laws of concord and discord would direct them to those inflections and modulations of the voice which alone are capable of affording pleasure to the ear. And thus the various scales or modes of musical intonation would be practically made known long before their essential principles and laws were subjected to investigation.

ORISCUS. The name of one of the ten notes used in the middle ages.

ORISICHIIO. A celebrated church composer at Rome, about the middle of the last century. Grétry, who was acquainted with him, states that he was very exact in his composition, and that his music was characterized by great truth and expression. Grétry laughs, however, at the solemn countenance and consequential air he used to assume when performing any of his own works.

ORISTANEUS, JULIUS, organist of the Chapel Royal at Palermo, was born at Trepano, in Sicily. He flourished as a composer about the year 1600, and published, among others, the following works: "*Madrigali à 5 voci*," Venice, 1588, and "*Responsoria Nativitatis et Epiphaniae Domini*, 4 *voc.*," Palermo, 1602.

ORLANDI, SANTI, an Italian composer of the beginning of the seventeenth century, published "*Madrigali à 5 voc.*," Venice, 1607.

ORLANDI, pupil of Paer, composed the music of the opera buffa "*Podesta di Chioggia*

which was performed with success at Paris, in 1806.

ORLANDINI, GIUS. MAR., was an able and famous Bolognese writer, who furnished the theatre at Venice with many operas. His compositions seem more dramatic and elegant than those of any composer of the Italian school anterior to Hasse and Vinti. He is said to have been particularly happy in the composition of intermezzi, a gay kind of music, which was little understood by any other master till the time of Pergolesi.

His hymns in three parts are particularly natural and easy for psalm singers, and other persons not very deeply skilled in the knowledge of music. He wrote also *cantici* or catches, and continued to flourish from 1710 to 1745.

ORLANDO, FERDINANDO, a dramatic composer at Milan, born in Italy in 1780, was a pupil of Cimarosa, whose manner he successfully imitated. The first of the following operas was also the first work which he presented to the public. He wrote it for the Milan theatre, where it was performed with great applause, and showed the admirable genius and profound knowledge of the science which Orlando already manifested in his twenty-second year. The title of it is "*Il Podesta di Chioggia*," opera buffa, acted in 1801 at Milan. The following year he again brought out an opera, the second act of which did not please, and was therefore obliged to be recast, both by the poet and composer.

ORNAMENT AND GRACES IN SINGING. It is an extremely false taste to overload every performance with a profusion of ornament. When a piece has intrinsic merit, or when a singer has a fine voice, ornament, if profuse, has more chance to injure it than add to its effect. It is not to be denied, however, that ornament, when judiciously placed, is indispensable to a singer, and will require great care and practice in the acquisition. All good composers write such ornaments and graces as are allowable in singing their music; they do not leave room for a single appoggiatura; and no singer ought ever to attempt a grace that is not set down for him, or which is not pointed out for him by a judicious master. The violation of this rule, if it procure, by chance, a momentary applause from a mixed audience, will never insure a lasting reputation, nor lead to establish first-rate excellence in simple execution.

ORNEMENS. (F.) Graces; as the appoggiatura, turn, shake, &c.

ORNITHOPARCUS. Dr. Forkel not only classes this writer amongst the profoundly musical, but also among the witty authors of his age. He published at Leipsic, in 1517, a work entitled "*Musica activa micrologus, libris quatuor digestus, omnibus musicæ studiosis non tam utilis quam necessarius*." It is the first book on music that was printed in Germany, and went through several editions. It was translated into English by Dowland, in 1609.

OROLOGIO, ALESSANDRE. A musician and composer in the service of the Emperor of Germany, at Vienna, in the beginning of the seventeenth century. There were published by him "*Canzonetti a tre voci*," book i., Venice, 1590, and book ii., Venice, 1594; "*Intraden*," for five and

six voices, Hèlmstadt, 1597; and "*Motetti*," Venice, 1627. In the last publication he is called *Horologius*.

ORPHARION. An instrument formerly in use, resembling, and by some identified with, the bass viol.

ORPHEUS. It is the opinion of some eminent philologists of latter times, that there never was any such person as Orpheus, except in fairyland; and that his whole history was nothing but a mere romantic allegory, utterly devoid of truth and reality. But there is nothing alleged for this opinion from antiquity, except the one passage of Cicero concerning Aristotle, who seems to have meant no more than this, that there was no such poet as Orpheus anterior to Homer, or that the verses vulgarly called Orphical were not written by Orpheus. However, if it should be granted that Aristotle had denied the existence of such a man, there seems to be no reason why his single testimony should preponderate against the universal consent of all antiquity; which agrees, that Orpheus was the son of Egeer, by birth a Thracian, the father or chief founder of the mythological and allegorical theology amongst the Greeks, and of all their most sacred religious rites and mysteries; who is commonly supposed to have lived before the Trojan war, that is, in the time of the Israelitish judges, or, at least, to have been senior both to Hesiod and Homer, and to have died a violent death, most affirming that he was torn in pieces by women; for which reason, in the vision of Herus Pamphylus, in Plato, Orpheus's soul, passing into another body, is said to have chosen that of a swan, a reputed musical animal, on account of the great hatred he had conceived for all women, from the death which they had inflicted on him. And the historic truth of Orpheus was not only acknowledged by Plato, but also by Isocrates, who lived before Aristotle, in his oration in praise of Busiris, and confirmed by the grave historian Diodorus Siculus, who says, that Orpheus diligently applied himself to literature, and when he had learned the mythological part of theology, travelled into Egypt, where he soon became the greatest proficient, among the Greeks, in the mysteries of religion, theology, and poetry. Neither was this history of Orpheus contradicted by Origen, when so justly provoked by Celsus, who had preferred him to our Savior; and, according to Suidas, Orpheus the Thracian was the first inventor of the religious mysteries of the Greeks, and that religion was thence called *Threskeia*, as it was a Thracian invention. On account of the great antiquity of Orpheus, there have been numberless fables intermingled with his history; yet there appears no reason that we should disbelieve the existence of such a man.

ORSANI, D. FRANCESCO, pupil of Padre Martini, church composer, and member of the Philharmonic Society at Bologna, was eminent in Italy about the year 1770.

ORSINI, GAETANO. An excellent counter tenor singer in the service of the emperor at Vienna, where he died in 1740, at a very advanced age. He was principal singer in the opera *Costanza e Fortezza*, which was performed in the open air, at Prague, in 1723. Francis Benda, in the memoirs of Orsini's life, says that he drew

tears from his audience, by his pathetic manner of singing in the above opera.

ORSLER, or ORSCHLER, JOHANN GEORG, born in Silesia, was violinist in the Imperial Chapel at Vienna, in 1766. He had previously held the situation of chapel-master to the Prince of Lichtenstein till the death of that nobleman. He left numerous works in manuscript, consisting of violin music and compositions for the church.

ORSLER, JOSEPH. A musician at Vienna, and probably son of the preceding. Under this name the following instrumental works in manuscript are found in Traeg's Catalogue, Vienna, 1799: "*Sinfon. à 8*;" "*2 Quartetti à V., Vc., Viola obl., e B.*;" "*7 Sinfon. à 3: 2 V., e Vc.*;" "*2 Terzetti à Viola, Vc., e B., e à 2 Vc. e B.*;" and "*4 Sonate à Vc. e B.*" It would seem by the above music, the composer was a violoncellist. There were, in fact, in 1796, two Orsler (father and son) violoncellists, in the orchestra of the national theatre at Vienna.

ORTHIAN. The epithet applied by the ancients to a dactylic nome, or song, said to be invented by the Phrygian Olympus. Herodotus tells us that it was the Orthian nome that Arian sang when thrown into the sea.

ORTHIAN MODE. (Gr.) The *Orthian mode*, like the *Harmatian*, was a mode of *time*; two down and four up. Plutarch says that it consisted of loud and rapid notes, and was used to inflame the courage of soldiers, previous to battle. It is spoken of in the same manner by Homer, in the seventh book of his *Iliad*, as also by his commentator, Eustathius. Some confound the *Orthian* with the *Harmatian* mode.

ORTING, BENJAMIN, director of the music at the Church of St. Anne, at Augsburg, was born in that town in 1717. He was a pupil of Seyfert. His compositions consist of many canticles, motets, cantatas, &c., none of which have been published.

ORTIZ, or DE ORTO, DIEGO, of Toledo, a celebrated contrapuntist towards the middle of the sixteenth century, published, at Venice, "*Hymni, Magnificat, Salve, Salvi, &c., à 4 Voc.*," 1565. The following work has also been attributed to him: "*El primo libro, nel qual si tratta delle glose sopra le cadenze, ed altre sorte di punti*," Rome, 1553. Glareanus, in his *Dodecachordon*, eulogizes one of the compositions of Ortiz.

ORTOLANI, SIGNORA. This female singer was a pupil of Galuppi, and flourished at Venice about the year 1770.

OSBORNE, G. A., a distinguished pianist and composer, whose duets for piano and violin, which he composed with De Beriot, are favorite concert pieces.

OSCULATI, GIULIO. An Italian composer, who flourished towards the end of the sixteenth century. Bonometti has preserved some of this master's motets, by publishing them in the *Par-nassus Musicus Ferdinandæus*, in 1615.

O SIA. (I.) Sometimes written *ossia*. Or else; as, *o sia più facile*, or else in this more easy manner.

OSIO, FEODATO. A lawyer at Milan, born

there towards the end of the sixteenth century. He was first known as a writer of novels, but afterwards made law and music his principal pursuits. He left, at his death, the following works: "*L'Armonia del nudo parlare, ovvero la Musica ragione della voce continua, nella quale a forza di Arithmetiche e di Musiche Speculazioni si pongono alla prova le regole sino al presenta stabilite dagli osservatori del numero della prosa e del verso*," Milan, 1637, and "*Sylea novarum opinionum*," Frankfurt, 1669, part of which treats of music.

OSSERVANZA. (I.) A word implying that the movement at the beginning of which it is written is to be performed with scrupulous exactness, without adding to or diminishing any of the passages or parts.

OSSI, GIOVANNI, a celebrated singer, was, in 1725, in the service of Prince Borghese.

OSSOWSKY, STANISLAUS D', an amateur musician at Vienna, has been known, since 1792, through his compositions, which consist of the following printed works: "*Douze Variat. pour le Violon et B.*," 1792; "*Der Walzer Augustin, mit 6 Veränderungen f. Klav.*," Vienna, 1797; and "*12 Menuetten f. Klavier*," 1798. He was no longer living in 1807.

OSTI. A singer at the theatres in Rome about the year 1736. He rendered himself principally celebrated by the performance of female characters.

OSTIANO, VINCENZO. A contrapuntist of the sixteenth century, of whose compositions there is still found, amongst the printed works in the library at Munich, "*Canzonette Napolitane à 3 Voci*," Venice, 1579.

OSTINATO. (I.) Persevered in, adhered to, continued in despite of circumstances.

OSWALD, HEINRICH SIGISMUND, privy counsellor to the King of Prussia in the year 1790, was previously celebrated as an amateur musician. He published some collections of songs, a trio for the harpsichord and violins, and two cantatas for the harpsichord. In 1802 he was still living at Breslau.

OT. There were published, under this name, at Mentz, in 1795 and 1796, "*6 Canzonetti Ital. c. Cemb.*," Op. 5, and "*6 Canzonetti Ital. c. Cemb.*," Op. 6.

OTMAIER, GASPARD. This German composer was born in the year 1515, and published "*Weltliche Lieder*," Nuremberg, 1551.

OTTANI, BERNARDO, born at Turin about the year 1748, was chapel-master of the cathedral of that town, and member of the Philharmonic Society of Bologna. He studied counterpoint under Padre Martini; and at the time of the public examination of composers at Bologna, in 1770, he produced a "*Laudate pueri*," which, according to Dr. Burney, was full of spirituality. In 1772 he brought out, at Munich, an opera entitled "*L'Amore senza malizia*." Another, called "*Il Maestro*," was performed at various theatres in Germany about the year 1790. Two other of his works are "*L'Erminio*," op. ser., Cremona, 1784, and "*Amajonne*," op. ser., Turin, 1784. His brother, Cajetano Ottavi, was an excellent tenor singer, resident at Turin in 1770, and was also known as a good landscape painter.

OTTAVA, or **8VA**. (I.) An octave, or interval of seven diatonic degrees. This word is generally joined with *alto* or *basso*; the first signifies that the passage to which it is applied must be played an octave higher than it is written; the second that it must be played an octave lower.

OTTAVINA. (I.) A little or higher octave.

OTTETTO. (I.) A composition in eight parts.

OTTO, CARL, a vocal composer in Germany about the year 1796, published about that year, at Goslar, in Lower Saxony, "A Collection of good Songs for the Harpsichord," and "An Ode on Hope."

OTTO, ERNST JULIUS, born in 1804, at Königstein, organist at the cathedral in Dresden, is a distinguished church composer. The performances of church music, under his direction, are much sought. He first came into notice through a song of his, which was crowned by the *Musikverein* at Manheim.

OTTO, FRANZ, organist at Glatz, in Silesia, published, at Breslau, "*Neues vollständiges Choralbuch*," &c., 1784, and "6 *vollständige Klavier-Sonaten*," Breslau, 1798.

OTTO, GEORG, chapel-master of the Landgrave of Hesse-Cassel, was born at Torgau in 1550. He resided, in 1564, as a student of singing, at the school there, and was, in 1750, promoted to the precentorship at Salza, whence the celebrated musical connoisseur, the Landgrave Moritz, invited him, in 1585, to Cassel, as his chapel-master. Walther has collected the following titles of his works: "*Introitus totius Anni, 5 voc.*," Erfurt, 1574; "*Die teutschen Gesänge Lutheri auf die vornehmsten Feste, mit 5 und 6 Stimmen gesetzt*," Cassel, 1588; and "*Opus mus. nov.*" A second edition of the last-named work appeared at Erfurt in 1618. An edition of the second of the above works was printed at Erfurt, and still exists in the library at Munich. His complete printed works are preserved in the museum at Cassel.

OTTO, J. F. Under this name were published at Leipzig, about the year 1800, "6 *Klaviersolos*."

OTTO, VALERIUS. A celebrated organist and composer, of whose origin nothing further is known than that the city of Leipsic placed him, in 1592, as student of singing at the Gate School. There he became such an accomplished musician, that, fifteen years afterwards, he was appointed organist of the Lutheran church in the old town at Prague. He further styles himself in his last works, dated 1612, court instrumentalist to the Prince of Lichtenberg. Of his printed works we can name "*Musa Jessæ quinque vocibus ad octonos modos expressa*," Leipsic, 1609, and "*Neue Paduanen, Galliarden, Intraden, und Couranten, nach englischer und französischer Art, mit 5 Stimmen componirt und in Druck gegeben, durch*," &c., Leipsic, 1611.

OTTO, STEF., of Freyberg, in Misnia, wrote two works on music, about the years 1632 and 1648. Mattheson says that they treat ably and profoundly on the science, for the time in which they were written.

OTTUPLA. (I.) An expression implying

common time, or a measure of four times, marked with a C, or semicircle, placed at the beginning of the staff of the movement. Such a movement is said to be in *ottupla* time.

OTTUSI, OTTAVIO. Under this academical name Monteverde, or one of his partisans, addressed a letter to Artusi, in which he supported some propositions in opposition to the practice of that master. He pretended that the seventh of the dominant is more pleasing to the ear than the octave; that the fourth may be resolved by rising to the fifth, the third to the fourth, and the fifth to the major or minor sixth. Artusi strongly combatted these opinions.

OUVRARD, RENÉ, a French canon and chapel-master, born at Chinon, in Touraine, died in 1694. He left, at his death, a work, probably in manuscript, entitled "*Historia Musices apud Hebræos, Græcos, et Romanos*." The Abbé Cainicaise, who died in 1702, says of this work that it brings the history of music down to the seventeenth century, and contains the solution of many interesting and curious questions. He also states that the author had much contributed, by his preceding works, to the advancement of painting as well as of music.

OVERBECK, CHRISTIAN ADOLPH, a German writer and doctor of laws at Lubec, was born in that town. He published, in 1781, "Songs and Canticles, with an Accompaniment for the Harpsichord." He was also the author of a German parody of the *Salve Regina* of Pergolese, which he published at Hamburg in 1785, with an accompaniment for the harpsichord.

OVERBECK, JOHANN DANIEL, a relation, perhaps father, of the preceding, was born at Rethem, in Lower Saxony, in 1715, and was rector of the gymnasium at Lubec. Amongst numerous other writings, he published several pamphlets on the subject of music, two of which were entitled "An Answer to the Letter of the Singer Ruetz, as it respects the Opinions of Batteux," 1754, and "The Life of Gaspard Ruetz," Lubec 1755.

OVEREND, MARMADUKE, an English author and musician, published in London, in 1783 a work entitled "On the Science of Music."

OVERTURE, OUVERTURE, (F.) **OVERTURA**, (I.) The introductory symphony to an oratorio, opera, &c., and generally consisting of three or four different movements. The overture is chiefly distinguished from the sonata by consisting of less artificial melody, bolder masses of harmony, and stronger lights and shades. Its movements, in works of the modern school, generally contain snatches of the more prominent and leading airs in the opera, and introduce the audience to a general notion of the emotions which it is the desire of the author to excite. The Germans have composed overtures for poetical works, as Beethoven's Overture to Göthe's "Egmont." Overtures are often played independently of the work for which they were written, as at the beginning of concerts; but their highest office is to convey to the intelligent lover of music the whole character of the following piece. The latter mode of composing overtures was first conceived by the French; and such is the character of the overtures of their great composers,

particularly Cherubini. Carl Maria von Weber, in the overture to the "*Freischütz*" and "*Oberon*," has observed this rule, which did not exist when Mozart composed his admirable overtures to "*Figaro*" and "*Don Juan*," in which the general character of the following piece is given. In the oldest overtures the fugue was the chief part, preceded by a slow movement in four-four time, not too much prolonged, and closing in the dominant. The *grave* was often repeated after the fugue. Most of the overtures of Handel's oratorios have this form. Another form consists of an *alleuro*, an *andante*, and again an *allegro*, or *presto*. The most usual form, at present, is a brilliant and passionate *allegro*, preceded by a short, solemn passage. Gluck was the first who used this form.

OXIPYCNĪ. The name given by the ancient Greeks to high sounds in general, but more particularly to the highest of any three notes that are to one another as C natural to C sharp, and C sharp to D natural. The lowest were called the *baripycni*, and those in the middle *mesopycni*.

OZI, FRANÇOIS, born at Montpellier, about

the year 1750, was a celebrated performer on the bassoon.

OZI, ETIENNE, probably a son of the preceding, was born at Nîmes, in Languedoc, in 1754. He was professor of the bassoon at the Conservatory in Paris, and also first bassoon at the Academy of Music. He published "*Méthode de Basson, aussi précieuse pour les Maîtres que pour les Elèves, avec des Airs et Duos faciles*," Paris, 1787; "*Méthode nouvelle et raisonnable pour le Basson*," second edition, Paris, 1800; "*Sept Concert. pour Basson, avec Acc. de Gr. Orch.*," Ops. 3, 4, 6, 9, 11, Paris, to 1801 — the above were published separately; "*Trois Sinfon. conc. à Clar. et Fag.*," Ops. 5, 7, 10, Paris, to 1797; "*Vingt-quatre Duos à deux Bassons*," Paris, to 1798; "*Pet. Airs connus var. pour deux Vc.*," Liv. 1, 2, Paris, 1793 and 1794; "*Six Duos pour deux Vc.*," Paris, 1800. Ozi's instruction book for the bassoon was considered by far the best and most complete which had appeared.

OZI, MARIE JOSEPH, probably a son of the preceding, was adjudged the prize at Paris, in 1799, given to the best young artist on the piano-forte by the minister of the interior. He was then only twelve years of age.

P.

p This letter, by abbreviation, signifies *piano*, *sof.*, denoting that the force of the voice or instrument is to be diminished. *P P.* means *piu piano*, or more soft; and *P P P.*, as soft as possible.

PACÆUS, or **PACE**, **RICHARDUS**, Dean of St. Paul's in London, and a musical author, was a favorite of King Henry VIII., who employed him in several important services. Cardinal Wolsey was at length the means of his losing his sovereign's confidence, which affected him so much that he became insane. He died in 1532, being about fifty, though, according to Bayle, only forty years old. He left, besides other works, one entitled "*De Restitutione Musices.*"

PACCHIAROTTI, **GASPARO**, was born in the Roman states, in 1744. He began his musical career in 1770, at Palermo, in Sicily. In 1772 he was the principal singer in the theatre San Carlo at Naples, with De Amicis. For the five following years he sang at the provincial towns in Italy, and in 1778 went to England. Dr. Burney says, that "the natural tone of Pacchiarotti's voice was so interesting, sweet, and pathetic, that when he had a long note, or *mezza di voce*, he (the doctor) never wished him to change it, or to do any thing but swell, diminish, or prolong it, in whatever way he pleased." A great compass of voice downwards, with an ascent to B flat, and sometimes to C in alt., with an unbounded fancy, and the power not only of executing the most refined and difficult passages of other singers, but likewise of inventing new embellishments, which had never then been on paper, made him, during his long residence in England, a new singer every time he was heard. To sum up his merits, it may be said that his voice was naturally most sweet and touching; that he had a fine shake and exquisite taste, great fancy, and a divine expression in pathetic songs. In the summer of 1779, Pacchiarotti left England for Italy, but returned in 1780, and continued principal singer at the opera till the commemoration of Handel in 1784. He then again went to Italy, and afterwards lived in retirement at Padua. The following anecdote is related of Pacchiarotti. The "*Aracrazes*" of Metastasio was performed in one of the first theatres of Rome, with the music of Bertoni. Pacchiarotti executed the part of Araces. During the third representation, at the famous judgment scene, in which the author had placed a short symphony after the words "*Eppur sono innocente*," the beauty of the situation, the music, and the expression of the singer, had so enraptured the musicians, that Pacchiarotti perceived, after he had uttered these words, the orchestra did not proceed with the symphony. Displeased, he turned angrily to the leader, exclaiming, "What are you about?" The leader, as if awaking from a trance, sobbed out with great simplicity, "We are crying." In fact, not one of the performers had thought of the symphony, and all had their eyes, suffused with tears, fixed on the singer. He died at Padua in 1821.

PACCHIONI, **DON ANTONIO**, of Modena, was born in 1651. He was a pupil of Ercole and of Giov. Mar. Buononcini. After having profoundly studied the works of Palestrina, he became highly celebrated in the science of counterpoint. Besides the composition of much church music, an opera by him is known, which was performed at Modena in 1682, entitled "*La gran Matilda.*" He died in 1738.

PACCIOTTI, **FRANCESCO**. An Italian professor. The Milan *Indice de Spettac. Teatr.* names him as an opera composer between the years 1788 and 1791.

PACE, **ANTONIO**. Cerreto names him, in 1600, amongst the then celebrated Italian contrapuntists. Walther has also named a *Pietro Pace* as a celebrated professor.

PACE, **GIOV. BATTISTA**. A contrapuntist in Italy, of the sixteenth century. Some of his compositions are to be found in *De Antiquis, Lib. 1, d 2 voci, de diversi Autori de Bari*, Venice, 1585.

PACE, **VINCENT**. A contrapuntist in the latter half of the sixteenth century.

PACELLI, **ASPRILIO**, chapel-master at Warsaw, was born in 1570 at Vaseiano, in Italy. He was at first director of music in the German college at Roue, but received an invitation from King Sigismund III, of Poland to Warsaw, as royal chapel-master; which office he filled, with great credit to himself, for upwards of twenty years, and died there in 1623, aged fifty-three. He was buried in the Church of St. John the Baptist, where the king caused a monument to be erected to him with a very honorable inscription, from which the above particulars are chiefly derived. Of his printed works we can enumerate "*Cantiones Sacre*, 5, 6, 8-10 bis 20 *voc.*," Frankfort, 1604; "*Psalmi et Motetti*, 8 *voc.*," Frankfort, 1607; "*Cantiones Sacre*, 5, 6, 7-20 *voc.*," Frankfort, 1708; "*Psalmi, Motetti, et Magnificae*, 4 *voc.*," Frankfort; "*Madrigali à 4 voci, Lib. 1.*," Frankfort; and "*Madrigali à 5 voci, Lib. 2.*," Frankfort. Some of Pacelli's pieces are also to be found amongst *Fabio Costantini, Selectæ Cantiones excellentissim. Autor.*

PACELLI, **ANTONIO**, a Venetian composer, is especially known by a cantata (*Amor furente*) published in 1723, and by the music of the drama "*Il Finto Esau*," performed at Venice in 1698.

PACHELBEL, **JOHANN**, a celebrated organist and composer, was born at Nureuberg in the year 1653. Discovering in his youth a strong inclination for science, he was provided by his parents with the ablest instructors that could be procured. He studied for some time at Altdorf, but finding himself straitened in circumstances, he removed to the Gymnasium Poeticum in Ratisbon. Here he continued three years, prosecuting his studies, particularly in music, with so much diligence, that the fame of his proficiency was spread throughout all Germany. On his quitting Ratisbon, he went to Vienna, and became deputy

to the organist of St. Stephen's Church in that city. This situation, though attended with little profit, he found very agreeable, as it procured him the friendship and acquaintance of Kerl, at that time chapel-master at Vienna. In 1675, Pachelbel was sent for to Eisenach, and was there preferred to the dignity of court organist. Three years afterwards he removed to Erfurt, where his abilities caused him to be eminently distinguished. In 1690, he was invited to Stuttgart, but that city being threatened with invasion by the French, he quitted it, and settled at Gotha. Not long after this, on the death of Wecher, he succeeded to his place as organist of Nuremberg, in which he continued till his own death, about the year 1706.

Pachelbel is celebrated as one of the most excellent of those German organists of whom Kerl is accounted the father. He studied the grand and full styles, which he labored much to improve.

The works of Pachelbel, that are known, are very few, being only four funeral hymns, composed at Erfurt during the time that a violent pestilence raged there; seven sonatas for two violins and a bass; and airs, with variations, printed at Nuremberg.

PACHELBEL, WILHELM HIERONYMUS, son of the preceding, was born at Erfurt, about the year 1685. His father taught him the harpsichord and composition; by means of which instruction, he acquired sufficient skill to fill with credit the situation of organist at Wöhrd, near Nuremberg. In 1706 he was nominated organist of St. James's Church at Nuremberg. His published works are "Musical Amusements, consisting of a Prelude, Fugue, and Fantasia, for the Organ or Harpsichord," Nuremberg, 1725, and "Fugue in F for the Harpsichord," Nuremberg, 1725.

PACHNER, EUGEN, an excellent violinist, born, in 1747, at Melnik, in Bohemia, resided last, as ex-Benedictine monk, with his friends at Zdziz, where he died in 1790.

PACHYNERE, GEORG. Born in 1242, in a town of the Ottoman states. Having studied theology and the sciences during many years, he entered on the ecclesiastical functions. Among numerous other interesting works, he wrote "*De Harmonicâ et Musicâ*," and "*De quatuor Scientiis Mathematicis, Arithmeticâ, Musicâ, Geometriâ, et Astronomiâ*."

PACINI, ANDREA. A celebrated Italian soprano singer at Venice about the year 1725.

PACINI, ANNA, a celebrated Italian singer, performed at Hanover between the years 1783 and 1786. Her voice was a fine counter tenor.

PACINI, LUIGI, a good buffo singer, was born at Rome in 1776. His voice, at first a tenor, gradually became bass. He was a favorite at Milan, where he sang often in the theatre, between the years 1801 and 1819. His last appearance was in the autumn of 1819, in the theatre of La Scala. In the latter part of his life he was teacher of singing in the Conservatory at Viareggio, where he died in 1837. He was the brother of Anna.

PACINI, G. A Neapolitan composer, born about the year 1774. He studied composition at the Conservatory of La Pieta. In 1805 he was at Paris, and brought out, at the Theatre Feydeau

the opera "*Isabelle et Gertrude*;" and in 1808, at the same theatre, "*Amour et mauvaise Tête*," in three acts. Pacini was one of the editors, with Blangini, of the "*Journal des Troubadours pour le Chant*," published periodically at Paris.

PACINI, GIOVANNI, the celebrated opera composer, son of Luigi, known in Italy as *I avini di Roma*, was born in Syracuse, in 1796, but was sent to Rome for his musical education at a very early age. From there he went to Bologna where he received lessons in singing from Marchesi, and in harmony and counterpoint from Mattei. Before completing these lessons he went to Venice, and had some instruction from the old *maestro di capella*, at St. Marks, Furlanetto. Destined by his parents for a place in some chapel, he began with writing church music. But his taste soon led him to the theatre, where he composed, at the age of eighteen, a little opera, called "*Annetta e Lucindo*," which was favorably received at Venice. In 1815 he wrote a farce for Pisa, and in the same year, his "*Rosina*," for Florence. In 1817 he wrote four operas for a small theatre in Milan. From Milan he went to Venice, where he wrote "*L'Ingenua*," and returned to Milan in the carnival of 1818, to give his "*Adeleide e Comingio*." This opera, considered one of his best productions, was followed by "*Il Barone di Dolsheim*," at La Scala. To these works succeeded, in the principal Italian cities, "*L'Ambizione Delusa*," "*Gli Sponsali de' Silfi*," "*Il Falegname di Livonia*," "*Ser Marcantonio*," "*La Sposa fedele*," "*La Schiava di Bagdad*," "*La Gioventù d' Enrico V.*," "*La Vestale*," "*L'Eroe Scorzese*," "*La Sacerdotessa d' Irmisul*," "*Atala*," "*Isabella ed Enrico*," and many other works. In 1824 he made his debut at Naples, by "*Alessandro nelle Indie*." Here he married a young Neapolitan lady, and lived in retirement for about a year. In the summer of 1825 his "*Amazilia*" was produced at the San Carlos; and on the 19th of November following, for the festival of the queen, his "*L'Ultimo Giorno di Pompeia*," a serious opera, reckoned among his best works. In 1826 his "*Niobe*," written for Pasta, was brought out, at first with doubtful success, but afterwards with general acceptance. For some time after this, Pacini lived in a hired house at Portici, near Naples, having already written, at the age of hardly thirty, about thirty operas, several masses, cantatas, and some instrumental music. But this activity did not continue. Between 1826 and the summer of 1828, M. Fétis knows of no work of Pacini's, except "*I Crociati in Tolemaide*," which was successfully performed at Trieste. In December of 1828 he went to Turin, to bring out, at carnival, "*Gli Arabi nelle Gallie*," one of his best works. This was succeeded, in 1829 and 1830, by "*Margherita d' Auzou*," "*Cesare in Egitto*," and "*Gianni di Culais*." In this last year his "*Giovanna d' Arco*" failed at La Scala, although sung by Rubini, Tamhurini, and Mme. Lalande. Since that time Pacini has not been much before the world, although an opera of his, called "*Saffo*," has even enjoyed popularity in the theatres of New York and Boston. Fétis gives him credit for melody, facility of style, and good understanding of stage effect; but adds, that, being an imitator of Rossini, he shared the fate of his model, so prematurely abandoned by the Italians.

PADUANA, SIGNORA, a singer, educated at the Conservatory Delle Mendicanti, at Venice. In 1768 she was considered to possess the finest voice of any female in Italy.

PÆAN. A song of victory, sung by the ancient Greeks in honor of the gods, but chiefly of Mars and Apollo. Also the name of a certain foot in poetry, proper to the *pæon*. Quintilian derives the word from the proper name of *Pæon*, a physician to whom he attributes the invention of this species of hymn; but Plutarch gives the honor of its origin to Thaletas.

PAËR, FERDINANDO. This eminent dramatic composer was born at Parma, in 1771. After having studied in the seminary of that town, he devoted himself to composition under Ghiretti, a Neapolitan, and adjunct of the celebrated Sala at the Conservatory of La Pietà. At the age of ten, Paër went to Venice, and not long afterwards wrote an opera there, "*Circe*," which was successful. From Venice he proceeded to Padua, Milan, Florence, Naples, Rome, Bologna, &c. At length the Duke of Parma, who was his godfather, bestowed on him a pension, giving him permission to travel to Vienna, for the purpose of composing some works in that city. On the death of Naumann, in 1801, Paër was invited to Dresden, with the appointment of chapel-master for life. His patron, the Duke of Parma, dying about this period, gave Paër the opportunity of accepting the offer of the Elector of Saxony; and he accordingly, soon after, arrived at Dresden, where he composed several operas, each of which met with brilliant success. After the battle of Jena, Napoleon, being at Dresden, desired that Paër, together with his wife, who was an excellent singer, should be engaged in his suite. They accordingly followed the emperor to Posen and Warsaw, where they gave several concerts, at which Napoleon was present, who afterwards obtained their regular discharge from the Saxon court, and engaged Paër for the court of France; upon which he proceeded to Paris, where he subsequently continued to reside. The situations which he held under Napoleon were, conductor of the chamber music and composer to the emperor. Paër was a member of the Academy of the Fine Arts at Naples, and of those at Bologna and Venice. He had composed, up to the year 1811, thirty operas, exclusive of overtures, sonatas, cantatas, ariettes, and other light compositions. The operas which he brought out in Italy, with great success, are, "*Circe*," "*La Locanda de' Vagabondi*," "*Oro fa tutto*," "*Laodicea*," "*Cinina*," "*Agnese*," "*L'Intrigo amoroso*," "*Il Principe di Taranto*," "*Idomeneo*," "*I due Sordi*," "*La Testa riscaldata*," "*La Griselda*," &c. Those composed at Vienna are, "*Canilla*," "*Il Morto vivo*," "*Ginevra degli Almeri*," and "*Achille*." His works for the Austrian court consist in cantatas for the Empress Theresa, with whom he had the honor of singing them. They are entitled "*Buoco ed Ariadna*," "*La Conversazione armonica*," "*Il Trionfo della Chiesa Cattolica*," and "*Il S. Sepolero*." At Dresden he composed the following operas: "*I fuor'usciti*," and "*Leonora*;" and at Prague, "*Sergio*;" the success of which was the more flattering to Paër, as it was in this city that Mozart composed his *chefs d'œuvre*, "*Don Juan*," "*Figaro*," and "*Clemenza di Tito*." Before Paër's first arrival at Paris, three of

his operas, "*Il Principe di Taranto*," "*La Canilla*," and "*La Griselda*," had been submitted to the Parisian public, and well received. While residing in France he composed the following operas: "*Nuova Pompilio*," "*I Baccanti*," "*Didone*," "*Le Maître de Chapelle*," a French opera, and the cantatas "*Eloisa e Abelardo*," "*Safo*," and "*Ulisse e Penelope*." Paër died at Paris in 1839.

PAËR, MME. RICCARDI, wife of the preceding, was born at Parma. She was considered an excellent singer at Dresden, and accompanied her husband to Paris, after which time she principally resided with her family in Italy.

PAGANELLI, GIUS. ANT., conductor of the chamber music of the King of Spain, was born at Padua. In 1733, he was at Augsburg, and pianist in the orchestra at the theatre there. Several of his operas are known, also some instrumental music, and a part of the odes of Horace set to music.

PAGANINI, NICOLO, was born in Genoa, in February, 1784. His father, Antonio, was by profession a packer, of Portofranco, and being a lover of music, and having early perceived the fine disposition of his son for this art, placed him while a child to learn the violin. But Antonio being most of his time in the house, where he established a species of lottery to procure small gains, the education of Nicolo was severe, as he was obliged to attend to these matters and also to his violin. At the age of eight years, his mother, Teresa Boeciaro, dreamed that an angel came to her, and revealed to her that her son would be a great performer. At this age, in fact, he composed, under the direction of his father, a sonata of so difficult a nature that none but himself could execute it. At this time he went three times a week to perform in one of the churches, and the next year, at the age of nine, was brought forward for the first time at the theatre, on which occasion he executed some variations of his own composition on the republican French air *La Carmagnole*, being for the benefit of the celebrated soprano Marchesi.

He now took thirty lessons, in six months' tuition, under the direction of Costa, the most skilful master of the violin at Genoa, after which his father took him to Parma, to place him under Rolla. This latter being sick, his wife requested the son and father to remain in a room near that where her husband was confined to his bed. Young Nicolo, seeing a violin and new concerto lying on the table, played off the piece at sight in so beautiful a manner that Rolla would not believe it was performed by a child until he saw him do it with his own eyes. He then told the young Paganini he could teach him nothing, and recommended him to go to Paër, who was then director of the Conservatory of Parma, and who confided him to the care of Giretti, master of the chapel, who gave him three lessons a week in counterpoint for six months. Paganini then composed in the way of study, and without the instrument, twenty-four pieces for four hands. Paër then took so deep an interest in him, that he gave two lessons of instruction a day. After four months of that exercise, Paër legged of him a duetto, which the pupil composed with entire satisfaction to the master.

Paganini afterwards visited, with his father, the principal cities of Northern Italy, where he gave concerts with great applause. At fourteen he finally escaped from the severe tutelage of his father, and went with his brother to Lucca, where he gave a concert with great success. In fact, he created a profound sensation. He then travelled from city to city, his own master, and was all the rage. He also exercised himself on the guitar, which he played with rare perfection, though he deemed it an inferior instrument. "I do not like the guitar," he said, "but I esteem it as a conductor of thoughts. I take it sometimes to put my imagination in exercise, or to smooth down for me some difficulty that I cannot execute on the violin." In his twenty-first year he accepted of a permanent situation at the court of Lucca, where he was retained a long time by a love affair. It was at that epoch he commenced his celebrated performance on the large chord. At Lucca, besides directing the orchestra every time the royal family came to the opera, he played three times a week at court, and every fifteen days composed a grand concerto for the royal circle, at which was often present the reigning princess, Eliza Bacciochi, the beloved sister of Napoleon. "She never staid," says Paganini, "to the end of my concerto; for when I came to the harmonic sounds, she found her nervous system too strongly excited by them. Fortunately for me, there was another amiable lady, who was not so much affected, and who never quitted the circle. Her passion for music made her pay some attention, and I thought that she would not always be insensible to the admiration which I had for her beauty. I promised, one day, to surprise her in the succeeding concert with a sonata which would have reference to our attachment. At the same time I announced to the court a comic novelty or love scene. Curiosity was keenly excited when I presented myself with my violin, deprived of the two middle chords, so that I had only the G and E. The first was to personate the lady, the second the man. It commenced with a species of dialogue, which was intended to represent the caprices of an amorous friendship, or the little passions and reconciliations. The chords now gave out moans, sighs, and groans, now sported, laughed, or broke forth into the most drunken madness. The reconciliation terminated with a *coda brillante*. The composition pleased; the person for whom I had written it recompensed me with a sweet smile, and the Princess Eliza said to me, 'Since you have done so fine a thing on two chords, can you make us hear something marvellous on one?' Smiling at the remark, I promised to do so, and after some weeks, on the day of St. Napoleon, I executed on the chord C a sonata, which I entitled *Napoleone*. It had an effect so captivating, that a cantata of Cimarosa, which was executed the same evening, obtained scarcely the same applause. This led me to practise on one chord only." Paganini then informs us that his passion for travelling and being independent seized him anew; his gains amounted already to twenty thousand francs, and he proposed to give a portion to his parents before leaving them. His father was not satisfied, and threatened to kill him if he did not give up the whole, which he thought but a poor compensation for the sacrifices he had made in educating his son. Paga-

nini proposed to give him the income, which he accepted; and the son went for that purpose to hypothecate the whole by a legal process. After his death, says he, "I took care of my mother — to me a sweet duty." He lent to his sister the sum of five thousand francs, which she soon dissipated. The second sister, through the intercession of her mother, obtained also a considerable sum, which her husband soon squandered in gambling. The life of Paganini presented then nothing remarkable until the year 1813, when he appeared at Milan, where, for two or three years, his concerts caused an immense sensation. His variations called "The Witches" excited the most vivid enthusiasm; and while director of the Philharmonic Society of Milan, he contended successfully with the violinist Lafont. In 1816 he gave concerts at Venice, where he met with the German violinist Spohr, whom he considered the first *cantante* violinist.

In 1817 Paganini was at Verona; in 1818 at Turin and Piacenza; in 1819 at Rome, Florence, and Naples; in 1821 at Rome; in 1822 at Milan.

In the carnival of 1827, at Rome, Pope Leo XII. decorated him with the grand order of the Golden Spur. He was then forty-three years of age, and had not been out of Italy. At Vienna the emperor gave him an honorary title, and the city decreed to him a medal. His travels through Germany were a triumphal march. The King of Prussia named him master of the chapel. England and France confirmed his unexampled success. The naturally delicate constitution of Paganini had been rendered more feeble by excessive labor, and the privations he endured while a child, and his extreme enthusiasm for his art. He was attacked while he was a child with an affection of the chest. He was severely afflicted also with some complaint of his eyes, and underwent an operation which nearly lost him the left eye. Besides which, by his own confessions, he indulged while young in every kind of excess. He had to struggle against much opposition, and many times lost the entire proceeds of his concerts. A favorite saying of his was, "One must suffer much to make others feel," which was confirmed every time he played the *adagio* movement. In reference to the extraordinary and unprecedented mastery he obtained over the violin, his friend Schottky affirmed that Paganini possessed a musical secret, by means of which a pupil, in three years, would acquire a conception of the capacities of the instrument. Paganini himself declared it to be a fact that he possessed this secret, and that Gaetano Ciandalli, of Naples, was the only person acquainted with it. "After long and severe studies, and the ordinary methods, Gaetano," says Paganini, "arrived only to a mediocre perfection on the violin-cello. I professed much friendship for him, and gave him my discovery. In three days he was another person. The sounds which he drew from the instrument, and his movement of the bow, were much better than before." Paganini promised that he would one day completely initiate the public into this mystery. The biographical sketch from which we have taken these interesting details thinks this mystery may perhaps be explained. He was accustomed to play his pieces in a way and often in a tone written so high that no orchestra could accompany him. This circumstance explains in part the strange

quality of his sounds compared with those of the orchestral violins. Many artists, during his concerts, exhibited a curiosity to examine his violin, and pronounced it untuned or tuned after his own peculiar system. It is therefore probable that Paganini found a combination in the manner of according the instrument which diminishes the difficulty of fingering.

In England his weird and mystical appearance gave rise to many marvellous and absurd stories about him, which had extensive currency, until they were fully refuted by his own explanations. Returning through France to Italy, he purchased in 1834, at Parma, the villa Gajona, and in November of that year gave at Parma a concert for the poor, (a thing he often did,) and again set out upon a concert tour in Italy.

As a composer Paganini stands very high. His works are rich in invention, genial, and show a mastery of the scientific part of the art. He frequently indulges in grotesque turns, which seem quite in harmony with his eccentric nature. No violin virtuoso has surpassed him as a composer. But one must not consider every composition which bears the name of Paganini, as actually his. In the autumn of 1835 he gave notice in the Milan newspapers, that all the compositions published in other countries, particularly in Leipsic, were apocryphal; since up to that time he had had nothing printed except twenty-four *capricci* for the violin, six sonatas for violin and guitar, and six quartets for violin, viola, guitar, and violoncello; but that very soon all his works were to be published. Already since 1835 a nervous disorder had obliged him to refrain almost from playing; but in the autumn of 1839 he became a confirmed invalid, and so weak that he could scarcely hold his instrument. Recovering a little, he went to Marseilles, where he found benefit in change of air. He went back to Paris, and from there to Italy, where his illness so increased, that he succumbed to it entirely on the 27th of May, 1840, at Nizza. His body was embalmed and deposited on his estate, *villa Gajona*, church burial having been refused him, because he had allowed no priest to visit him during his sickness.

The world is full of anecdotes of Paganini, which we need not here recall. That he was not altogether so avaricious as has been often said, appears in the fact that after hearing a symphony of Berlioz, then an obscure and poor young artist, he sent him twenty thousand francs, with the most kind and flattering expressions. According to the *Journal des Debats*, the property which he left behind him amounted to one million seven hundred thousand francs, mostly in real estate. His oldest sister received the income of seventy-five thousand francs during her lifetime, after which it went to her children. His youngest sister had the income in the same way of fifty thousand francs. To an unknown lady in Lucca he left an annuity of six thousand francs; and to the mother of his son, a singer who once travelled with him, an annuity of twelve hundred francs. All the rest went to his son Achilles.

For explanations of Paganini's peculiar style and method, the reader is referred to the article in *Fetis'* "*Biographie Universelle*;" also to "*Notice sur le célèbre violoniste Nicolo Paganini, par M. J. Imbert de la Palatque*," Paris, E. Guyot. His life and adventures too are given at great length, in an octavo volume of four hundred and ten pages,

by professor Schottky, of Prague — "*Paganini, Leben und Treiben*," Prague, 1830.

PAGENDARM, JACOB, singer at Lubeck, was born in 1646. He pronounced a celebrated oration on music at the time of his being appointed to the above situation. He died in 1703. A work of his was published at Lubeck, entitled "*Cantiones Sacre*."

PAGIN, born in 1730, travelled into Italy from France for the express purpose of receiving lessons from Tartini. He had scarcely attained the age of twenty, when he returned to Paris, and frequently performed at the *Concert Spirituel*, with the greatest success: but as he would perform no music but that of Tartini, the French musicians opposed him; and the ironical applauses that he received at one of the above concerts decided him not to appear at any more of them. He was then engaged in the suite of the Count of Clermont. In 1770, Dr. Burney heard him in a private party, and admired the expression and lightness of his execution. He published six sonatas for the violin, Paris, 1748.

PAGNUZZI, P. GIUSEPPE LORENZO, organist at the convent of the holy mount Dell' Alvernia, in the Florentine states, and member of the Academia Filarmonea at Bologna, was born at Fabrino in 1738, and died at his convent in 1802, where he had devoted thirty years to the science of music; maintaining, both as a theoretical and practical professor, but chiefly as an organist, a distinguished rank amongst the first artists of Italy.

PAISIBLE. A celebrated flutist and composer for that instrument in England, towards the end of the seventeenth century. He published "*Musick performed before her Majesty and the new King of Spain, three Overtures*."

PAISIBLE, N., A celebrated violinist at the *Concert Spirituel* at Paris, and musician to the Duchess of Bourbon Conti, was born in that city in 1745. He was one of the best pupils of Gaviniès, who, charmed with his talent, assisted him in obtaining the preceding situations. Early in life he travelled through a part of France, the Low Countries, Germany, and as far as Petersburg obtaining every where success as an artist. At Petersburg, however, when he wished his playing to become known to the empress, Lolli, who was then in the service of that court, prevented him by his intrigues from being heard by the empress. He then gave two public concerts, which producing him a sum insufficient for his maintenance, induced him to engage in the service of a Russian count, with whom he went to Moscow. He did not long continue in this office, but again tried two concerts, which had worse success than those at St. Petersburg. At length, in 1781, driven to distraction by his misfortunes, and harassed with debts which he had no means of satisfying but by the sale of his very valuable violin, he formed the fatal resolution to terminate his existence, and accordingly blew out his brains, leaving a letter, tenderly taking farewell of his friends, and desiring them to pay his debts by the sale of his violin. He published several operas of music for his instrument.

PAISIELLO, GIOVANNI, son of François and of Grazzino Fogiale, was born at Tarento in

the year 1741. His father was a veterinary surgeon, particularly distinguished in his art; and the reputation he had acquired, not only in the province of Lucca, but in the whole kingdom, procured him the honor of being employed by the King of Naples, Charles III., during the war of Velletri. His father determined, as soon as his son had attained his fifth year, that he should study till he was thirteen, with the Jesuits, who had a college at Tarento; and as it was the custom of these fathers to have the service to the virgin sung in all their festivals, they remarked, when their young pupil sang the hours of matins, that he had a fine contralto voice and an excellent ear. Upon this observation, the Chevalier D. Girolamo Carducci, of the same city, and who superintended the music for the holy week in the church of the Capuchins, endeavored to make young Paisiello sing some pieces from memory. The boy, who was then under thirteen years of age, acquitted himself in such a manner, that it might have been imagined he had studied music for a length of time. This was in March, 1754. The Chevalier Carducci, perceiving the promising genius of Paisiello, advised his father to send him to Naples, in order that he might study music, and, for this purpose, instantly to place him with some good chapel-master; but his parents would not consent to this, for, being their only son, they could not resolve to part with him. The reiterated entreaties of the chevalier began at last to prevail, and they promised to give an answer, after having reflected more maturely. In short, after some time had elapsed, they determined on sending him to Naples; his departure was fixed for the month of May following, and in the mean time he employed all his time in learning the first elements of music, under an ecclesiastic, a secular priest, named Carlo Resta, of Tarento, an excellent tenor, who played very well on the arch-lute, an instrument which Paisiello made use of during the two or three months allotted to him for acquiring the first instructions. He afterwards set out for Naples with his father, and in June, 1754, was received into the conservatorio of St. Onofrio, where he had the happiness of finding, as a master, the celebrated Durante. It was under him that he studied, and at the end of five years became first master among the pupils of the conservatorio. During the next four years he composed there some masses, psalms, motets, oratorios, and a comic interlude, which was performed in the same institution. This interlude procured him the advantage of being employed to compose, in 1763, an opera for the theatre at Bologna.

Here begins the first epoch of his works.

At the theatre of the Marsigli, at Bologna, appeared "*La Pupilla*," "*I Francesi brillanti*," "*Il Mondo a Roverseo*;" at Modena, "*La Madama Uonorista*;" at Parma, "*La Virtuosa Ridicola*," "*Il Saggio d'Abano*;" at Venice, "*Il Ciarlone*," "*Le Pescatrice*;" at Rome, "*Il Marchese Tulipano*;" at Naples, "*La Vedova di bel Genio*," "*L'Inbrogljo della Vajusse*," "*L'Idolo Cinese*," (it was for this work that the court of Naples began the custom of having comic operas performed in the little theatre of the court), "*Luco Popirio*," "*Il Furbo mal accorto*," "*L'Olimpia*," and "*Pekas*," a cantata for the marriage of Ferdinand IV. with Maria Caroline of Austria; at Venice,

"*L'Innocente Fortunato*;" at Milan, "*Sismano nel Mogolle*;" at Naples, "*L'Arabo Cortese*," "*La Luna habitata*," "*La Contesa dei Nuni*;" at Rome, "*La Semiramide*," "*Il Montezuma*;" at Naples, "*Le Dardane*," "*Il Tamburro Notturmo*;" at Venice, the same work, with changes and augmentations; at Milan, "*L'Andromeda*." He also composed in this city two quartets, for two violins, tenor, and harpsichord, for the Archduchess Beatrice of Este, wife of Ferdinand of Austria, Duke of Milan. At Turin, "*Annibale in Italia*," "*I Filosofi*," "*Il Giocatore*;" at Naples, "*La Somiglianza dei Nuni*," "*L'Astuzie Amoroze*," a mass for the dead, for two choirs, for the funeral of the prince royal D. Gennaro di Borbone; "*Gli Scherzi d'Amore e di Fortuna*," "*Don Chisciotte della Mangia*," "*La Finta Maqa*," "*L'Osteria di Mere Chiore*;" at Modena, "*Alessandro nell'Indie*;" at Naples, "*Il Duello Comico*," "*Don Anchise Campanone*," "*Il Mondo della Luna*;" at Venice, "*La Frescatana*," "*La Discordia Fortunata*," "*Il Demofonte*." At this time he was engaged for the King's Theatre in London, but an invitation from the court of Russia caused him to break his engagement. At Naples, "*I Scerati Imaginari*;" at Florence, "*Il Gran Cid*," "*Il Finto Principe*;" at Rome, "*Le Due Contesse*," "*La Disfatta di Dario*." It was in this opera that an air in two movements was composed for the first time, "*Mentre ti lascio o figlia*," sung by the tenor Anzani, and which has since served as a model to all composers. At Naples, "*Dal Finto il Vero*." It was at the time when this opera appeared, that the court of Naples went, for the first time, to the comic theatre. In this same year, that is to say, on the 28th of July, 1766, Paisiello departed for Russia, and entered the service of Catharine II., with an appointment of four thousand rubles. As music master to the grand duchess, he had the further sum of nine hundred rubles; and his country house, which was allowed him during five or six months in the year, procured him two thousand rubles. With these and some other advantages, he had an annual income of nine thousand rubles.

Second Epoch.—Paisiello remained in Russia nine years, during which time he composed "*La Serva Padrona*," "*Il Matrimonio Inaspettato*," "*Il Barbiere di Siviglia*," "*I Filosofi Imaginari*," "*La Finta Amante*," (this opera was composed for Catharine's journey to Mohilow, in Poland, where she had an interview with Joseph II.), "*Il Mondo della Luua*," in one act, "*La Nitteti*," "*Lucinda ed Armidoro*," "*Aleide al Bivio*," "*Achille in Sciro*," a cantata for Prince Potcuikin, and an interlude for Prince Orloff.

During his residence in Russia, he composed for his pupil, the Grand Duchess Maria Fedorowna, wife of the Grand Duke Paul Petrowitz, afterwards empress, several sonatas and pieces for the piano, making two volumes. He also arranged a collection of rules for the accompaniment of a score on the piano-forte. This small treatise was printed in Russia, and on this occasion the empress presented him with an annual pension of nine hundred rubles. At Warsaw he composed the oratorio of "*La Passione*," set to Metastasio's words, for King Poniatowski.

Third Epoch.—At Vienna he wrote for the Emperor Joseph II. the opera of "*Il Re Tondoro*," and twelve concerted symphonies. From thence he returned to Naples. On his arrival in this

rity, Ferdinand IV. took him into his service, in quality of master of the chapel, with a salary of twelve hundred ducats. He then directly composed his opera "*Antigono*;" at Rome, "*L'Amore Ingenioso*," "*La Molinara*;" at Naples, "*La Grotta di Trofonio*," "*Le Gare Generose*," "*L'Olympiade*," "*Il Pirro*." This work was the first, of the serious kind, in which introductions and finales were employed. It also contains a scene where the principal person, executing a monologue, is surprised by soldiers, who arrive to the sound of a military march, and which agrees with the song of the actor; a scene which has since served as a model to many composers.

At this time Paisiello received from the King of Prussia (William) an invitation to Berlin, but which he could not accept, being in the service of the King of Naples, Ferdinand IV., of Bourbon.

A short time after, he gave, at Naples, "*I Zingari in Fiera*," and composed for the obsequies of General Hoche a funeral symphony, which procured him a recompense from General Bonaparte. He afterwards gave "*La Phedra*," with some analogous ballets, "*Le Varie Gelosie*," and "*Catone in Utica*."

He was now invited to take a new engagement in Russia; but the motives which had induced him to refuse the offers of the King of Prussia prevented him from accepting those of the court of Russia. The King of Naples commanded him to set to music "*Nina, o la Poesia d'Amore*," for the little country theatre of the Belvidere. This opera was afterwards performed at the Florentine theatre, with the addition of the quartet.

"*Giunone Lucina*" was composed for the churcing of the Queen of Naples, Caroline of Austria. In this cantata, an air, intermixed with choruses, was used for the first time, and which has been since imitated by other composers. It was followed by "*La Zenobia di Palmira*." Being invited to London, where it was impossible for him to go, he sent to the theatre of that city the opera of "*La Locanda*," which was afterwards performed at Naples, under the title of "*Il Fannatico in Berlino*," with the addition of a quintet. He then composed a grand "*Te Deum*," for the return of the King and Queen of Naples from Germany; a cantata, "*Dafne ed Alceo*," for the academy *dei Cavalieri*; a cantata, "*Le Retour de Persée*," for the academy *des Amis*; "*L'Elfrida*," and "*L'Elvira*;" at Venice, "*I Giuochi d'Agri-gento*;" at Naples, "*La Didone*," "*L'Inganno Felice*," and "*L'Andromaca*."

The French revolution having extended to Naples in 1789, the government assumed the republican form. The court abandoning Naples and returning into Sicily, the rulers of the state named Paisiello composer to the nation. But the Bourbon family, being reestablished, made it a crime in him to have accepted this employment, and for some time his appointments were suspended. At last, after two years had elapsed, he was restored to his situation. He was afterwards demanded at Paris by the First Consul of France, Napoleon Bonaparte; when Ferdinand, King of Naples, gave him a despatch, with an order to go to Paris, and place himself at the disposal of the first consul. Alquier, the minister of France, resident at Naples, pressed him on this occasion to declare his intentions respecting the fees and

the treatment he desired. Paisiello replied, that the honor of serving the first consul he considered as a sufficient recompense. On arriving at Paris, he was provided with a furnished apartment, and one of the court carriages; he was assigned a salary of twelve thousand francs, and a present of eighteen thousand francs for the expenses of his stay, besides those of his journey. He was offered at Paris several employments; such as those of director of the Imperial Academy and of the Conservatorio; he refused them all, and contented himself with that of director of the chapel, which he filled with excellent artists. He composed for this chapel sixteen sacred services, consisting of masses, motets, prayers, &c., and besides these he set the opera of "*Pros-rpine*," for the Academy of Music, and a "*Grand Mass*" for two choirs, a "*Te Deum*," and prayers for the coronation of the emperor. Finding that the climate of Paris did not agree with his wife, he quitted that city, after residing in it two years and a half, and returned to Italy; he still, however, continued to send every year to Napoleon a sacred composition for the anniversary of his birth, the 15th of August. A year after his departure, the emperor proposed to him to return to Paris, but the bad state of his health prevented him from accepting the invitation. The Bourbon family being obliged to quit Naples, King Joseph Napoleon confirmed to him the place of master of the chapel, of composer and director of the music of his chamber and of his chapel, with an appointment of one thousand eight hundred ducats. He wrote for this chapel twenty-four services, consisting of masses, motets, and prayers. At the same time, Napoleon sent him the cross of the legion of honor, which Joseph himself presented to him, with an additional pension of one thousand francs. Subsequently to this period, he composed the opera "*Dei Pittagorici*," which might serve as a model both to poets and musicians, and procured him the decoration of the order of the Two Sicilies from the king; he was also named a member of the Royal Society of Naples, and president of the musical direction of the royal Conservatorio. King Joseph having gone to Spain, Murat, who succeeded him, confirmed Paisiello in all his employments. At the period of the emperor's marriage with her imperial and royal highness the Archduchess of Austria, Paisiello thought it his duty to present her majesty with a sacred composition; and in token of her thanks, the empress sent him a present of four thousand francs, accompanied with a letter addressed to him, from the grand marshal of the palace, containing the acknowledgments of her majesty.

Besides the offices already spoken of, Paisiello was chapel-master of the cathedral of Naples, for which he composed several services *alla Palestrina*; he was also chapel-master to the municipality. He likewise composed for different religious houses, now destroyed, a great number of offices; such as three masses for two choirs, two masses for five voices, *alla Palestrina*, with an accompaniment for the violoncello and tenor, and a *Christus*; and besides these, three cantatas for a single voice, for amateurs; four nocturnos for two voices; six concertos for the piano-forte, written expressly for the infant, Princess of Parma, afterwards Queen of Spain, wife of Charles IV.

Paisiello is the first who introduced the viola into the comic opera at Naples. He was also the first who brought into the theatres and the churches of that city the use of concerted bassoons and clarinets.

It was Paisiello who had the merit of being the means of effecting the removal of the prohibition on the audience from applauding composers and singers in the theatre of San Carlos; the king set the example of the change by applauding an air sung by Carlo Raina, in the opera of "*Papirius*."

Paisiello (now chevalier) was named a member of many learned societies; such as of the Neapolitan Academy of Lucca, the Italian Academy, then sitting at Leghorn, and the Society of the Children of Apollo, at Paris; and on the 30th of December, 1809, he was elected an associate of the Institute of France. He died in Naples, in the year 1816, aged seventy-six. That city rendered him funeral honors, in causing to be executed a mass for the dead, found among his papers. The same evening his "*Nina*" was performed at the opera, when the King of Naples and the whole court attended.

Among the numerous works of which we have given the list, there are many which have had general success, and which have been often performed in the principal theatres of Europe. The following are among the most favorite of his comic operas: "*La Frescatana*," "*Le Due Contesse*," "*Il Re Teodoro*," "*Il Barbiere di Siviglia*," "*Il Furbo mal accorto*," "*D. Anchise Campanone*," "*La Modista raggiratrice*," "*I Zingari in Fiera*," "*Dal Finto il Vero*," "*L'Innamorato Felice*," "*L'Arabo Cortese*," "*L'Amor contrastato*," "*Il Tamburro Notturmo*," "*La Pazza per Amore*," "*L'Innocente Fortunata*," "*Il Matrimonio Inaspettato*," "*La Serva Padrona*," "*I Filosofi Imaginari*," "*Le Gare Generose*," and "*La Grotta di Trofonio*." Among the serious operas: "*La Disfatta di Dario*," "*L'Elfrida*," "*Il Pirro*," "*La Nitteti*," "*L'Antigono*," "*Lueinda ed Armidoro*," "*L'Olympiade*," "*Il Demetrio*," "*L'Andromaca*," "*La Fedra*," "*Catone in Utica*," and "*I Giuochi d'Agrigento*." Among the works for the church: "*La Passione*," the mass for two choirs, the "*Te Deum*," the motets and funeral symphonies.

To complete the account of Paisiello, some remarks on the nature of his talents, and on those qualities which characterized him, are merely necessary. To do this in few words, they are fertility of invention; an extraordinary and happy facility of finding subjects full both of nature and originality; a talent unique in developing them by the resources of melody, and embellishing them by interesting details; an arrangement always full of fancy and learning; and a taste, grace, and freshness of melody by which he has far surpassed most other composers, and has been a model to those who have labored after him. His composition, always very simple, and divested of all affectation of learning, is not only extremely correct, but exceedingly elegant, and his accompaniments, always very clear, are at the same time brilliant and full of effect. With regard to expression, although simplicity seems to be his principal and ruling characteristic, it is not less true that he knew perfectly how to introduce variety, to seize on the different methods of producing effect, and to pass from the comic, from the simple, and unaffected, to

the pathetic, the majestic, and even the terrible, without losing that grace and elegance from which it appears impossible for him to depart. Such are the qualities which have obtained Paisiello the suffrages of all, both those of the public and of amateurs, as well as those of the learned and of masters. No composer's works could at any time have been more universally admired, sought, applauded, and sung in all the nations of Europe, nor have better deserved the distinguished reception they every where met. No individual could have more enjoyed such universal success; for, placed at the same time among the most delightful authors and among the finest classics, he personally received the homage of his age, assuring to himself at the same time those of posterity.

PAITA, GIOVANNI, a Genoese by birth, was a celebrated tenor singer at Venice in 1726. Quanz speaks of him as singing an adagio in the greatest possible perfection. He was always called the *king of tenors*. He was likewise an excellent performer on the harpsichord, and established a school for singing in his native city, which afterwards became highly celebrated.

PAIX, JACOB, of Augsburg, was organist at Lauingen, where he published, in 1589, a treatise "*On the Utility of Music in Churches, Schools, and private Families*." The following practical works are also by him: "*A Guide to the Organ*," 1583; "*A Selection of Fugues by different Composers, for three, four, and more Voices*;" and some masses, fugues, &c., Lauingen, 1588.

PALADINI, GIUSEPPE, of Milan, was chapel-master in that city, and composed several oratorios, which were performed there between the years 1728 and 1743.

PALANCIA, called also TOMASO GOMEZ. A celebrated Spanish composer, resident in Italy towards the close of the sixteenth century.

PALAVICINO, BENEDETTO, a native of Cremona, and a celebrated musical composer, was chapel-master to the Duke of Mantua about the year 1600.

His works consist chiefly of madrigals for five and six voices, and are in general good. They contain, however, no great variety of style, melody, harmony, or modulation.

PALAZZOTTI, GIUSEPPE, also called TAGLIAVIA, a Sicilian priest, doctor of divinity and archdeacon of Cephalada, was likewise a fertile composer, and flourished about the year 1645. Mongitor, "*Bibl. Sicul.*," p. 395, assures us that Palazzotti published nine practical musical works, of which, however, we can only name "*Madrigali Concertati à 3 voc.*," Op. 9, Naples, 1632.

PALESTRINA, GIOVAN. PIETRO ALOISIO DA. A celebrated Italian composer. His birth has been fixed, with some degree of certainty, in the year 1524, at *Palestrina*, the *Præneste* of the ancients. Italy being divided into many independent states, each of which has a distinct and separate honor to maintain, the natives are not only very careful in settling a spot where a man of genius was born, but of recording the place where he was educated, with the name of his master; and as the painters of Italy

are appropriated to different schools, so are the musicians, and a composer or performer of great abilities is seldom mentioned without his country; by which it is known that he is of the Roman, Venetian, Neapolitan, Lombard, or Bolognese school, each of which has some peculiar characteristic that enables one intelligent musician of Italy immediately to discover the school of another by his works or performance. To these distinctions the natives of other countries so little attend, that, when it is known that a musician comes from Italy, no further inquiry is made. From this ancient custom of naming the master with the scholar and his country, all the writers of Italy, who have given any account of Palestrina, have thought it necessary to say, that he was a scholar of Gaudio Mell, *Fiamingo*, a Fleming; by whom they have been generally understood to mean Claude Goudimel, a native of Franche Comté, and a Huguenot, who was one of the first that set the translation of the Psalms, by Clement Marot and Theodore Beza, to music, and who was murdered at Lyons in 1572, on the fatal day of the massacre of Paris.

In some miscellaneous publications during our author's younger time, before his fame was established, we find him frequently called "*Gianetto da Palestrina*." He had this title in the "*Secondo Libro delle Muse*," a set of madrigals so called, that was printed at Venice, 1559; and in another set, under the title of "*Amorosi ardori di diversi eccellenti Musici*," as well as in the second book of Cipriano's madrigals, printed likewise at Venice, 1571, in four parts, where there is a "*Canzon di Gaudio, sopra di Pace non trovo, con 14 Stanze*," published about the same time.

The few circumstances and outlines of Palestrina's life that have been preserved from oblivion, and seem the most indisputable, are, that he was born in the year 1524; that having distinguished himself as a composer, about 1555, he was admitted into the Pope's Chapel at Rome; in 1582, at the age of thirty-three, he was elected chapel-master of Santa Maria Maggiore, in the same city, as, upon the death of Giovanni Animuccia, in 1571, he was honored with a similar appointment at St. Peter's; and lastly, having brought choral harmony to a degree of perfection that has never since been exceeded, he died in the year 1594, at the age of seventy.

The following account of his death and burial was entered in the register of the Pontifical Chapel by Ippolito Gamboce, *Puntatore*, who at that time had the care of the records:—

"February 2, 1594. This morning died the most excellent musician, Signor Giovanni Palestrina, our dear companion, and *maestro di cappella* of St. Peter's Church, whither his funeral was attended, not only by all the musicians of Rome, but by an infinite concourse of people, when "*Libera me, Domine*," was sung by the whole college." To this account Adam adds that of Torrigio, who says, "In St. Peter's Church, near the altar of St. Simon and St. Jude, was interred, in consequence of his extraordinary abilities, Pierluigi da Palestrina, the great musical composer, and *maestro di cappella* of this church. His funeral was attended by all the musicians of Rome, and "*Libera me, Domine*," as composed by himself, in five parts, was sung by three choirs. Upon his coffin was this inscription: '*Joannes Petrus Aloysius Prænestinus Musicæ Princeps*.'"

It would be endless to transcribe all the eulogiums that have been bestowed upon Palestrina by musical writers. Very honorable mention has been made of the great contrapuntist, during his lifetime, by Giovanni Guidetto, chaplain to Pope Gregory XIII., who, being appointed to collate, correct, and regulate the choir service of St. Peter's Church, 1582, says that he was unwilling to depend solely on his own judgment in this undertaking, and therefore had applied to that prince of musicians, Giovanni Pierluigi da Palestrina, to superintend and correct the whole work — an office which he was so obliging as to undertake: "and if," says he, "the compilation be found to have any merit, it must be chiefly ascribed to his kind assistance."

Some judgment may be formed, says the learned author of the "*Essay on Counterpoint*," of the great veneration in which he was held by the professors of his own time, from a collection of psalms, in five parts, that was published in 1592, and dedicated to Palestrina by fourteen of the greatest masters of Italy at that time; among these were Pietro Pontio and Costanzo Porta.

"In the year 1584 he dedicated a work to the pope, Gregory XIII., which, by the originality of treating the subject, and by its depth of conception, elicited approbation far exceeding that of any of his previous works. This work consists of twenty-nine motets from the '*Song of Solomon*.' The dedication contains a short synopsis of the life and intentions of the artist. In former years, he says, he threw away his songs, poems of unholy, idolatrous love, and he felt repentant and ashamed of it. For this reason he turned to the cultivation of sacred music, sang the praise of Christ and his virgin mother, and finally selected the '*Song of Solomon*,' a poem singing Christ's holy love to his bride, the soul. This caused him to give a more lively, inspired character to his music, in order to reach the glowing tenderness pervading the whole poem. The truth of this assertion, as those affirm who know the composition, he has proved throughout the whole work. The agony into which he was plunged by the loss of his wife here dissolved itself into pure, holy longing, and joyous hope of reunion: the bitterness of his former thoughts on death is now changed to serene earnestness."

The following catalogue comprises the principal works of this renowned master: "*Missa à 4, 5, e 6 voci, Lib. 1.*" Rome, 1554; "*Missa à 4-6 voci, Lib. 2.*" Rome, 1577; "*Missa di 4-6 voci, Lib. 3.*" Rome, 1570; "*Missa, Lib. 4.*" Venice, 1582; "*Missa, Lib. 5.*" Rome, 1590; "*Missa, Lib. 5.*" Venice, 1596; "*Missa, Lib. 7.*" 1594; "*Missa, Lib. 8.*" 1594; "*Missa, Lib. 9.*" and "*Missa, Lib. 11.*" Venice, 1600; "*Missa, Lib. 12.*" without date; "*Missa, à 4 voci.*" Milan, 1610; "*Motetti à 5, 6, 7, e 8 voci.*" Rome and Venice, 1590, 1588, 1589, 1596, and 1601; "*Liber 1, Motetorum, 5, 6, et 7 voci.*" Venice, 1579; "*Liber 2, Motetorum.*" Venice, 1579; "*Liber 3, Motetorum.*" Venice, 1586; "*Liber 4, Motetorum.*" Venice, 1594; "*Motetta Festorum totius Anni cum Communis Sanctorum, 4 vocib., Lib. 1.*" Venice, 1574; "*Offertorii à 5 e 6 voci, Lib. 1 e 2.*" Rome, 1593; "*Magnificat octo Tonorum.*" Venice; "*Lamentationes Jeremiæ, cum 4 voc.*" Venice, 1585; "*Lamentationi, à 4 voci.*" Rome, 1588; "*Lamentationi, à 5 voci.*" Cantiones Sacre, 4 voci, pro Festis et Alias Anni &

omnium Sanctor. Editio iterata," Antwerp, 1613; "*Hymni totius Anni, à 6 voc.*," Rome, 1589; "*Hymni à 5 voc.*," Venice, 1598; "*Lib. 1 de Madrigali à 5 voci*," Venice, 1593; "*Secondo Libro delle Muse*," Venice, 1595; and "*Madrigali Spirituali, Lib. 1 e 2*," Rome and Venice, 1594. Many of Palestrina's works are fortunately to be met with in selections made by other authors. The following are titles of the works in which some of Palestrina's pieces may be found: "*Musica Transalpina*," &c., London, 1588; "*Fab. Constantini selectæ Cantiones*," &c., Rome, 1614; "*Florilegium Sacrarum Cantionum*," &c., Antwerp, 1609; "*Paolucci Arte pratica di Contrapunto*," &c.; "*Eximeno dell' Origine e delle Regole della Musica, colla Storia del suo Progresso, Decadenza, e Rinovazione*," Rome, 1774. In this book is found Palestrina's mass of Pope Marcellus, and a "*Kyrie*." Sir J. Hawkins's "*History of Music*." In vol. iii. p. 175, is Palestrina's motet, "*Sicut cervus, à 4*;" and at page 185, of the same volume, is the spiritual madrigal, "*Credo gentill. à 5*." Dr. Burney's "*History of Music*." In vol. iii. p. 170, is a "*Canon à 3*," by Palestrina; and at p. 191, a motet by the same master, "*Exaltabo te Dom. à 5*." Kircher's "*Musurgia*." In vol. i. lib. 7, cap. 5, is a "*Crucifixus*" by Palestrina. Lastly, there are three pieces by this composer in the work entitled "*Musica Sacra, que cantatur quotannis per hebdomadam sanctam Romæ in sacello pontificio*."

PALIONE, GIUSEPPE, was born at Rome in 1781, and commenced his musical studies in 1792, under the direction of Fontemaggi and Fenaroli. He has composed the following works: "Three Airs and a Quartet in Lodoiska, Opera of Caruso;" "*La Finta Amante*," opera, Naples; "*Le Due Rivali*," "*La Vedova astuta*," and "*La Villanella rapita*;" the three last operas at Rome. Besides these, many of his vocal and instrumental works have been published, chiefly at Paris, where he died in 1819.

PALLADIUS, DAVID, a contrapuntist of Naples, flourished about the year 1600. The following of his works were printed: "*Cantiones Nuptiales, 4, 5, 6, et 7 voc.*," Wittenberg, 1590, and "*Neues Lied*," Magdeburg, 1590.

PALLAVICINI, VINCENZO, chapel-master at a Conservatory in Venice, flourished about the middle of the eighteenth century, when his compositions of almost every kind were in high repute.

PALLAVICINO, BENEDETTO. See **PALLAVICINO**.

PALLAVICINO, CARLO, of Brescia. A celebrated dramatic composer of the Venetian school. He was invited to the court of Saxony, where he enjoyed a high reputation. The following operas were successfully produced by him in Italy: "*Aureliano Demetrio*," 1666; "*Il Tiranno umiliato d'Amore, ovvero il Meraspe*," 1667; "*Diocleziano*," 1674; "*Enea in Italia*," 1675; "*Galeno*," 1676; "*Il Vespasiano*," 1678; "*Il Nerone*," 1679; "*Mesalina*," 1680; "*Bassiano, ovvero il Maggior impossibile*," 1682; "*Carlo Rè d'Italia*," "*Il Rè Infante*," 1683; "*Licinio Imperatore*," 1684; "*Recimero Rè de' Vandali*," "*Massimo Pupieno*," 1685; "*Penelope la Casta*;" "*La Didone derivate*," 1686; "*Amor innamorato*;" "*L'Ama-*

zone Corsara;" "*Elniro Re di Corinto*," 1687; and "*La Gerusalemme Liberata*," 1688.

PALLOTTA, MATT. A composer of sacred music, probably in the first half of the eighteenth century. He was a native of Palermo, in Sicily. Amongst his works are "*Cantionum Benedictus ad laudes in solemnibus matutinis hebdomadæ sanctæ à 4 voc.*," and "*Benedictus quinti modi, B molati*."

PALMA. A Neapolitan composer of some symphonies performed at the *Concert Spirituel*, in Paris, in 1752. He was a pupil of the profound Sala, and immediately on the completion of his musical education, he wrote several theatrical pieces at Naples, and in the rest of Italy, all of which were successful from their gay and piquant style. He was an excellent pianist and tenor singer.

PALMA, SILVESTRO DI, a composer, born at Naples about 1751, was a pupil of Paisiello, as also of Sala. He composed some of the airs in "*Le Vane Gelosie*," an opera, written in 1791 for Naples. His first entire opera was "*La Pietra Simpatica*," opera buffa, acted in 1797 at Vienna, and apparently with applause, since it has been arranged there for eight wind instruments. Palma settled permanently at Naples about the year 1804. He has since been only distinguished by an operetta, entitled "*La Sposa contrastata*."

PALSA, JOHANN, a very celebrated performer on the horn, in the service of the King of Prussia, at Berlin, was born at Jerneritz, in Bohemia, in 1754. In 1770 he performed with his colleague Türschmidts at the *Concert Spirituel* at Paris, in which they both remained till 1783, when they travelled into Germany, and were engaged by the Landgrave of Hesse Cassel at a high salary. In 1785 they went to England, where they were much admired. The following year they returned to Cassel. The editors of the French Dictionary of Musicians say, that it would be impossible to give an idea of the beauty and purity of the cantabile of Palsa, or the vivacity, quickness, and skill of Türschmidts. Accompanied by the orchestra of the theatre at Cassel, they performed on their silver horns (manufactured at Paris, and each valued at one hundred louis d'ors) two concertos in E major; and, in the rondos, passed to the keys of E minor and G major with as much facility as performers on the piano-forte. On the death of the landgrave they proceeded to Berlin, where they were engaged by the court, and where Palsa died in 1792, in the thirty-eighth year of his age. In the name of Türschmidts there were published, at Paris, "*Duos à 2 Cors de Chasse*," Ops. 1 and 2.

PALSCHAU. A German professor of the harpsichord, resident at St. Petersburg for many years up to 1800, when he was in the full enjoyment of a well-earned fame in that city. Dr. Burney speaks of a child of this name, who was celebrated on the harpsichord in the year 1750. Probably it was the subject of this article.

PAMIGER, or PAMINGER, LEONARD, a contrapuntist of the sixteenth century, resident at Passau, was a very learned man and intimate friend of Luther. According to an epitaph writ-

ten by his son, his death took place in 1568. His son also edited the following of his father's works: "*Primus Tomus Ecclesiasticorum Cantionum*, 4, 5, et plurimum vocum, 1 Ado. usque ad Passionem Domini et Saluatoris nostri J. C.," Norimb., 1573; "*Tomus 2*," Norimb. 1573; "*Tomus 3*," Norimb., 1576; and "*Tomus 4*," Norimb., 1580.

PAMIGER, or **PAMINGER**, **MAG. SOPHONIAS**, son of the preceding, and editor of his works, was ultimately private teacher at the Carthusian convent in Nuremberg. He was born in 1526, and studied at Wittenberg, where he had letters of recommendation from his father to Dr. Luther and Melancthon. Afterwards he was driven as a schoolman, on account of his adherence to Luther's doctrine, from one place to another. It was at Ottingen that he resided longest, having been invited there, in 1568, as rector, and also as inspector of the choir. At last he resigned all his situations, and removed, in 1575, to Nuremberg, where he made it his business to procure purchasers and patrons for his father's works, of which he himself superintended the edition. He then opened a private school in that town, and died in 1603. Amongst his numerous works we can mention "*Epitaphia Leonh. Pamingeri, Aschaniensis, viri pietate, eruditione et virtute prestantissimi, musici clarissimi, &c., a Soph. Pamingeri et quibusdam reverendis, clariss. piis ac eruditissimis scripta*," Ratisb. 1568.

PAMPANI, **ANTONIO GAETANO**, of the Roman states, was, during twenty years, master of the Conservatory of the Ospedaletto at Venice. He wrote the following operas: "*Anagilda*," 1735; "*Artaserse Longirmano*," 1737; "*Caduta d'Amulio*," 1746; "*La Clemenza di Tito*," 1748; "*Artaserse*," 1750; "*Il Veneziano*," 1752; "*Astianatte*," 1755; "*Demofoonte*," 1764; "*Demetrio*," 1768. Of all the above operas, "*Demofoonte*" was the most successful. Pampani also composed much church music. His style is said to have been noisy, and unworthy of the head of an Italian school.

PAN. So called because he exhilarated the minds of all the gods with the music of his pipe, which he invented, and by the harmony of the cithern, upon which he played skilfully as soon as he was born. The nymphs dance to the music of the pipe; which instrument Pan first invented thus: a nymph whom he was pursuing prayed the Naiades, the nymphs of the water, to change her into a bundle of reeds, just as Pan was laying hold of her, who therefore caught the reeds in his hands, instead of her. The winds moving these reeds backward and forward, occasioned mournful but musical sounds, which Pan perceiving, he cut them down, and made of them reeden pipes.

"He sighs; his sighs the tiny reeds return
In soft, small notes, like one that seemed to mourn;
The new, but pleasant notes the gods surprise;
Yet this shall make us friends at last, he cries;
So he this pipe of reeds unequal framed
With wax, and Syrinx, from his mistress, named."

Lucretius ascribes the invention of these pipes not to Pan, but to some countryman, who had observed, on another occasion, the whistling of the wind through reeds.

"And while soft evening gales blew o'er the plains,
And shook the sounding reeds, they taught the swains;
And thus the pipe was framed, and tuneful reed."

PANARMONION. (Gr.) A wind instrument used by the ancient Greeks, which, as far as we are able to collect from Plato, and the Commentaries of Proclus on that illustrious author, consisted of an assemblage of pipes, and resembled in some degree the modern organ. It is particularly worthy of notice, that every hole of these pipes, or imitations of pipes, as Proclus expressly calls them, was capable of emitting three different sounds, and in some circumstances more than three. It follows that they must have been of a construction utterly unknown to modern instrument makers, as it was to those of the time of the learned commentator, who flourished in the fifth century.

PANDEAN. An epithet formed from the name of Pan, and applied to any music adapted for performance by the *Fistule Panis*, or Pipes of Pan.

PANDEAN PIPES. A wind instrument of the greatest antiquity, made of reeds, fastened together, and tuned to each other; said to have been invented by Pan, the god of mountains, woods, and shepherds, and the son of Mercury. He is represented as a monster, with horns on his head, and the legs and feet of a goat. These several pipes are bound together side by side, and made to sound as many notes as there are pipes.

PANDECT, MUSICAL. A treatise that comprehends the whole of the harmonic science.

PANDORA. An ancient stringed instrument resembling a lute, and the strings of which are of brass. Its frets are of copper, like those of the cistrum; its back is like that of a guitar; and the rims of its table, like those of its ribs, are cut into semicircles. The Pandora was borrowed by the Spaniards from the Moors.

PANE, DOMENICO DEL, sopranoist of the pontifical chapel at Rome, was a composer whose works are remarkable for their elevated style. He first entered on his office in the chapel in 1654. Amongst the works which he published is one entitled "*Missæ dell' Abbate del Pane a tre, a quattro, cinque, sei, e otto voci*," Rome, 1687. This is a collection of masses in the style of Palestrina.

PANECK, JOHANN. The theatrical almanacs call him chapel-master. Previously to 1791, the operetta "*Die Christliche Judenbraut*," composed by him, was performed in many German theatres. It seems, however, that the critics could not agree on the merits of this work, since it was in many places hissed and hooted; for instance, at Bremen, it was, in 1796, pronounced to be trash, whilst at Vienna they could not perform it often enough, both at the Leopoldstadt and at the Carinthian Gate theatres.

PANTALON. (F.) One of the movements of the quadrille.

PANTOMIME. (From the Greek.) A species of musical entertainment, so called because it is all mimic. There is no scenic exhibition, the music of which requires a greater variety and liveliness of fancy than that of the pantomime. The scene may be perpetually changing; the bustle and business sustained, and the agility of the motley hero fully employed; yet how insipid

will be the effect, if the music be not equally agile and diversified, the imagination of the composer as active as the movements of the machinist! if he do not, in every instance, every minutia, accommodate himself to the varying spectacle, impart life to the action, and, working at the unconscious hearts of the spectators, give a momentary reality to the delusion! To do this is the business of the musician; and the reader, by reflecting on the difficulty of the task, will know how to appreciate good *pantomimic* music.

PANSERON, AUGUSTE MATHIEU, was born in Paris, in 1795. He received his first instruction from his father, himself a music teacher. Afterwards he entered the Conservatoire, where in the years 1806, 1808, 1811, and 1812, he won several prizes for *solfeggio*, *violoncello*, and composition. In 1813, having received the grand prize for composition, he made the Italian tour. In 1815, he produced his first French mass at Rome; after which he travelled through Russia and Germany, and received lessons from Winter and Salicri. In 1818 a "*Requiem*," and a "*De Profundis*," by him were performed in Vienna. After a short stay with Prince Esterhazy he went back to Paris, where his first opera, "*La Grille du Parc*," was brought out in 1819. The poor success of a second opera deterred him from the theatre, and he sought a quiet subsistence by composing romances and giving private lessons. It was Panseron who gave to the *romance* its peculiar form and character, and he was the first who accompanied it with different instruments. He published more than two hundred romances, some of which were reprinted in Germany, Italy, and England. His excellent "*Method of Vocalization*," published in 1839, led to his appointment as teacher of singing in the Conservatoire.

PANZAU, P. OCTAVIAN, dean of the Convent of the Holy Cross at Augsburg, was of a good family in that town, but studied music, and became organist about the year 1750. One of his works was published at Augsburg under the title "*Octonium Ecclesiasticum Organicum*."

PAOLINI, AURELIO, an instrumental composer, flourished about the year 1710, in which year he published a work at Amsterdam, entitled "*Sonate à tre*."

PAOLO, AGOSTINO. See AGOSTINI.

PAOLUCCI, PADRE GIUSEPPE, pupil of Padre Martini at Bologna, published a didactic work in two volumes in folio, entitled "*Arte pratica di Contrapunto dimostrata con Esempi di rari Autori e con Osservazioni*," Venice, 1765. In this book are to be found specimens of the *chefs d'œuvre* of the following great masters: Orlando Lasso, Perti, Clari, Palestrina, Caldara, Marcello, Berrabei, Vittoria, Colonna, Porta, Asola, Fux, Buononcini, Gonnella, Pacchioni, Handel, Turini, Agostini, Morales, and Zarlini. This was considered a work of high merit.

PAPA, TARQUINIO. A contrapuntist of the sixteenth century. Some pieces of his composition are found in "*Antiquis, Libro 1, à 2 voci, de div. Autori di Bari*," Venice, 1585.

PAPA, CLEMENS NON. See CLEMENS.

PAPAVOINE. A French violinist in the orchestra of the Théâtre Ambigu Comique at Par-

is, and afterwards *chef d'orchestre* of the theatre at Marseilles. He brought out at the Théâtre Italien at Paris, in 1760, an operetta entitled "*Barbacole, ou le Manuscrit volé*."

PAPE, ERNEST FERDINAND, director of the music at the Royal Gymnasium, and at the Cathedral of Arosen, in Sweden, about the year 1727, is regarded as the author of the "*Specimen Academicum de Triade Harmonica*," attributed to Westenbladh.

PAPPO, FRANCESCO, a professor of philosophy and divinity, also preacher at Milan in the year 1600, had acquired so much valuable knowledge in music and composition, that he wrote, in his leisure hours, several musical works, which met with approbation even at Rome. Of these were printed "*Notetti à 2 et à 4 voci*," Milan, 1608, and "*Partito delle Canzoni, à 2 e 4 voci*," Milan, 1608.

PARA. (Gr.) A conjunctive word, signifying *near*; as, *paramese*, near the middle chord or string.

PARABOSCO, GIROLAMO, was organist of St. Mark's Church at Venice, and, according to Crescimbeni, a most admirable performer. Several of his motets and madrigals are inserted in the collection that was published about the middle of the sixteenth century; some of which Dr. Burney took the trouble to score, but found in them no subject, and but little design or contrivance. And, if his literary abilities did not impose on the writers who speak of his musical productions, his character as a composer must have been established on works superior to these, which are mere *remplissage*. The compositions of the two Netherlanders, Jachet Berchem and Arhadelt, are infinitely superior to those of Parabosco. Parabosco died at Venice in 1587.

PARADIAZEUXIS. (Gr.) The name given by the ancients to an interval between two tetrachords consisting of one tone. The disjunction of the tetrachord *synemmenon* and the tetrachord *diæzeugmenon* was of this description.

PARADIES, MARIA THERESA, born at Vienna in 1759, became blind at the age of five years, evincing at the same time such a disposition for the arts and sciences, that notwithstanding her privation of sight, she soon became capable of playing the harpsichord, (on which she could perform from memory the most difficult fugues and concertos of Bach, Handel, &c.,) also to sing, compose, speak several languages, perform the usual operations of arithmetic, understand geography, dance, &c. About the year 1780 she commenced travelling, with her mother, to the principal capitals of Europe, and every where excited equal interest and admiration. The Empress Maria Theresa, before whom she had performed when only eleven years, gave her a pension of two hundred and fifty florins, which she lost at the death of that princess. About the year 1790 she was in London, when the celebrated Pitt heard her, and, according to the authors of the French "*Dictionary of Musicians*," was affected even to tears. Many of her compositions for the harpsichord, and more than one operetta by her, have been published.

PARADIES, PIETR. DOM., a celebrated composer, was born at Venice. He was a pupil of

Porpora He went to England towards the close of the year 1746, and produced, in January, 1747, the opera of "*Phaëton*," of the music of which Dr. Burney thus speaks: "In examining the airs of this opera, the first seems very common and ill-phrased; nor is there much *estro* or grace in any of his songs that I have seen. Indeed, he seems to have had no great experience as an opera composer, and during his residence in England he acquired more reputation by the lessons he published for the harpsichord, and the scholars he made for that instrument, on which he was an admirable master, than by his vocal composition." Previously to his visit to England, Paradis had composed, at Venice, "*Alessandro in Persia*," and "*Decreto del Fato*," both operas; also, a cantata entitled "*Le Muse in Gara*," written for the Conservatory of the Mendicanti. Most decidedly, however, his greatest work was his twelve harpsichord sonatas, which must ever charm the connoisseur of taste. Paradis was the master of Thomas Linley, and his sonatas formed part of the early study of the celebrated Cleuenti.

PARADIN, GUILLAUME, Dean of Beaujeu about the year 1581, was born at Cuiseaux, in Burgundy. He published, among many other works, "*Traité des Chœurs*," Beaujeu, 1566.

PARA HYPATE. (Gr.) The next sound above the gravest, of the lowest of the ancient diapason, or octave.

PARALLEL MOTION. That motion in which two or more parts move in the same direction, ascending or descending.

PARAMESE. (Gr.) The name applied by the ancients to the second sound of the second octave, because next in degree to the middle sound of their great system, or diastem. The paramese corresponded with our B above the fifth line in the bass.

PARANETE. (Gr.) The next sound to the *nete*, or most acute tone of the ancient diapason, or octave.

PARANETE DIAZEUGMENON. (Gr.) The name by which the ancients distinguished the third string of the fourth tetrachord, the tone of which was equivalent to our D under the first line in the treble clef.

PARANETE HYPERBOLEON. (Gr.) The name given by the ancients to the penultima of the supreme, or fifth tetrachord. This sound corresponded with our treble clef note on the second line.

PARANETE SYNEMMENON. (Gr.) The appellation by which the ancients distinguished the penultima, or last sound but one, of the third tetrachord. This sound corresponded with our C on the first ledger line above, in the bass.

PARAPHONIA. (Gr.) A word which, with the ancients, was, in some degree, synonymous with harmony. The paraphonia was that consonance resulting from sounds really different, as the fifth and the fourth, (the only harmony admitted in the Greek music,) but which excluded the unison, called *homophony*, and the octave, called *antiphony*.

PARAPHONOL. (Gr.) Certain combinations in the ancient music, which were neither concords nor discords, but between both. The moderns have no sounds that come under this predicament.

PARATHIPEMATIA. The name given by the ancients to the side apertures of their flutes.

PARAHYPATE MESON. (Gr.) Next the middle. The name applied by the ancients to the second sound of their second tetrachord, because it was next in degree to that sound which formed the *meson*, or middle sound, of the two first tetrachords.

PARAVICINI, MADAME, pupil of Viotti, was a distinguished performer on the violin. She was performing at Paris about the year 1795, and again as late as 1820 in Munich.

PAREDES, PEDRO SANCHES DE, a Portuguese, was an excellent classical scholar, composer, and organist. He died at Lisbon in 1635. Besides a Latin grammar which he published for the use of his countrymen, he wrote the following works (in manuscript) which concern music, namely, "*Lamentações da Semana Santa da varias vozes*," and "*Vilhancicos para a Route de Natal*." These compositions are still deposited in the church of Obidos, where the author held a benefice.

PAREJA, BARTOLOMEO RAMO DA. A professor of music in Salamanca, and afterwards,

in 1482, at Bologna. Von Murr communicated to Gerber the following remarks on this musician: "The title of his work, which is very scarce, is "*Tractatus de Musica*," Salamanca, no year named. Dr. Forkel, in his "*Literature*," p. 276, speaks of two editions of the above work, Bononie, 1482; but these do not now exist. Nicol Burtius, or Bursio, a professor of the classics at Parma, and who was also a poet, published at Bologna, in 1487, in opposition to the opinions of Pareja, a work entitled "*Musices Opusculum cum defensione Guidonis Aretini adversus quendam Hispanum veritatis prævariatorem, cum Fig. et Notis Mus.*" On this, Gio. Spadario, a pupil of Pareja, and who was a professor at Bologna in 1482, most strenuously defended his master against Bursio. Dr. Burney observes of this Pareja, that he was originally a professor of music at Toledo, and not at Salamanca, and that he was the first who maintained, though not without opposition, the necessity of a musical temperament.

PARENTI, FRANCESCO P. M., a composer and singing master, resident at Paris from the year 1790, was born at Naples in 1764. He was a pupil of the Conservatory of La Pietà, and studied counterpoint under Nicolo Sala, Giacomo Trajetta, and Tarantina. He brought out in Italy the following operas, which were all successful, especially at Rome: "*La Vendemia*," "*Il Matrimonio per Fanatismo*," "*I Viaggiatori Felici*." The above three were comic operas, and the following four serious: "*Antigone*," "*Il Re Pastore*," "*La Niteti*," and "*L'Artaserse*." When Parenti first arrived at Paris, several of his songs were inserted in "*Les Pélérins de la Mecque*," performed at the Théâtre Feydeau; for which theatre he also composed "*Les deux Portraits*," in two acts, 1792, "*Les Souliers mordorés*," 1793, "*L'Homme ou le Malheur*," in one act, and a few other *pièces de circonstance*. In 1802 he was conductor in the orchestra of the opera buffa at Paris. In 1799 he published a work entitled "*Recueil d'Hymnes philosophiques, civiques, et moraux, augmenté de la note en plein chant d'après la musique des meilleurs auteurs, pour faciliter, surtout dans les campagnes, la célébration des fêtes républicaines*." He also composed many masses, motets, and other pieces of church music, *alla Palestrina*.

PARFAIT. (F.) *Perfect*, in respect to intervals or chords.

PARIS, NICOLAUS, a distinguished singer at the Chapel Royal in Naples, and afterwards, about the year 1710, in the service of the Prince of Anspach.

PARIS, GUILLAUME ALEXIS, a celebrated conductor of the orchestra at the French theatre in St. Petersburg, was born in 1756. He accepted the above situation in 1799, which he filled with great credit.

PARISI, NICODEMO, a composer of the seventeenth century, published "*Missæ e Salmi à 5 voci*."

PARKE, JOHN, born about the end of the year 1745, studied under Simpson, the best performer on the hautboy at that time, and, for the theory of music, under Baumgarten. He made such progress in both branches, particularly in the former, that he was, in 1776, engaged by Smith and Stanley, the successors of Handel, to

play the principal hautboy part at the oratorios during Lent, which performances their majesties then honored every night with their presence. Here he gave universal satisfaction; and from that time his reputation daily increasing, he was engaged at Ranelagh, at which place there was a band of the best performers in the profession. This entertainment being but three nights in the week, he played at Mary-le-bone Gardens the other three, while they were under the direction of Pinto, the famous performer on the violin, who engaged all the best artists at the opera, and then made Mary-le-bone Gardens the grand resort of all the amateurs and lovers of music, who could there hear the best music played by the best performers of that day. In 1768, he was engaged to play the principal hautboy at the opera. In 1769, Fischer, the celebrated hautboyist from Dresden, went to England, and was allowed by all to be the most able performer on that instrument that had been heard, and Parke most cheerfully subscribed to the general opinion. Fischer only played his concerto at a concert, not being accustomed to play in an orchestra, and the proprietors of Vauxhall Gardens engaged him to play a concerto every night, at a very liberal salary, which he did for two seasons, and then resigned. Parke was engaged to succeed him, and did so with the universal applause of the public for a great number of years. The entertainment at that place was, at the period we are speaking of, a regular concert only, by the best singers and instrumental performers. In the same year that J. Parke succeeded Fischer at Vauxhall, they were in great want of a good performer on the hautboy at Drury Lane Theatre. Garrick then offered Parke such terms as to salary, together with indulgences to attend concerts, as he thought very much to his interest to accept; by which he also won Garrick's friendship, and they ever after lived on the most intimate and friendly terms, he frequently inviting him to his house at Hampton, &c. Some short time after this, his talent and respectability procured for him the patronage of the Duke of Cumberland, the universal patron of music. J. Parke had not only the high honor of his patronage, but of his esteem; the duke sometimes calling on him in the morning in the most friendly way, and occasionally ordering his band to have some music in a morning at Parke's house; on which occasions his royal highness always played the tenor. Besides this, the duke had music generally three mornings in the week, either at Cumberland House or at Windsor Lodge, where Parke frequently staid for a short time. To the duke's patronage Parke also owed the honor of being musician in ordinary to the king. It was at one of the concerts of Queen Charlotte, at Buckingham House, in the autumn of 1783, that he was so fortunate as to be introduced to the then Prince of Wales, who, being pleased with his performance, did him the honor to desire his presence at Carlton House on the following night; he accordingly attended, with Giardini, Schroeter, and Crossdill, who were his royal highness's chamber band. Parke was then put on a salary of one hundred pounds a year, and attached to the Carlton House band. He was in great repute at this time, having to perform at the Professional Concert, the Ancient Concert, which their majesties honored with their

presence every night, besides a great number of private ones; he likewise was engaged at all the music meetings in the country, namely, at Gloucester, Worcester, Hereford, Liverpool, Manchester, Birmingham, Chester, Oxford, Cambridge, Norwich; and, in fact, wherever there was a great provincial meeting he was engaged at it, for the space of near forty years. Having been long in the receipt of a good income, and living prudently, though respectably, Parke at length thought it better to retire from business while in the full possession of his powers, his instrument requiring more application than a man at his time of life (near seventy years of age) could agreeably bestow. Parke composed many concertos for his own performances, but could never be prevailed on to publish any of them. He died at London, in 1829.

PARKE, MISS, afterwards MRS. BEARDMORE, was the eldest daughter of the preceding; and among the first orchestral singers and most celebrated pianists. She was instructed both in singing and playing solely by her father. She died at an early age, in the year 1822, her husband surviving her only four months. Mrs. Beardmore published several sets of sonatas, besides detached pieces and some songs.

PARKE, WILLIAM THOMAS, the celebrated performer on the hautboy, was born in the year 1762, and at eight years old began to study music under his elder brother, John Parke. His first instruments were the German flute and hautboy, after which he received instructions on the piano-forte from Dance and Dr. Charles Burney, and subsequently studied harmony under that profound theorist C. F. Baumgarten. During the first six years he made so rapid a progress, that, at the age of fourteen, he was regularly engaged in the orchestras of Vauxhall and Drury Lane Theatre. It was at this time (1776) that Garrick retired, and disposed of his theatre to Sheridan, and his father-in-law, Mr. Linley. The instrument Parke played, in both these situations, was the *tenore*; but, during the eight years he remained in Drury Lane Theatre, his practice on the hautboy, his favorite instrument, was so unceasing, that he devoted many of those hours which are usually passed in sleep to the cultivation of it. In the year 1784, he removed to Covent Garden Theatre, and was placed in the situation of first hautboy, through the recommendation of Shic'd, who was then composer to that theatre, and who being an admirer of W. Parke's talent, wrote obligato parts for him in all the operas he produced. About two years after this, upon Fischer (the father of the hautboy, as he was justly termed) going abroad, Parke was engaged to succeed him at the Ladies' Concert; and shortly after, when the Professional Concert was in its zenith, he was invited to become a member, where he displayed his abilities as a solo performer, under the auspices of the Duke of Cumberland, and was honored with the warmest patronage of his royal highness till his death. He was also honored with the favor of George IV., when Prince of Wales, who commanded his attendance at all his music parties; upon which occasions Parke had the happiness to experience the most public approbation of his royal master, who condescended to permit his dedicating a concerto to him, com-

posed for and performed at the Professional Concert. In the year 1800, W. Parke was solicited to become the principal hautboy, and to perform concertos at Vauxhall Gardens; which he accepted, and remained in that situation till the new proprietors dispensed with the fine concert band which had for many years delighted the public, and substituted a military one in its stead. W. Parke, as a composer, acquired considerable reputation. He was employed as such for several seasons at Vauxhall, and during that period experienced the most flattering success. Among the numerous songs, glees, &c. there produced by him, "The Romp," "The Day of Fashion," "The Triple Courtship," and "The Canary Bird," were well known, as well as many others, which we have not space to enumerate. He is also author of many instrumental pieces, some of which were written for the theatre, particularly the overtures to "Netley Abbey" (with some of the songs in the piece) and "Lock and Key," both of which have been popular. In speaking of his performance on the hautboy, so well known, we will only observe, that his tone was remarkably sweet, his execution rapid and articulate, his shakes brilliant, his cantabiles and cadences varied and fanciful, and that his judicious style of playing adagio movements evinced the greatest feeling and expression. We must not avoid mentioning that W. Parke, by his industry and genius, added to the compass of the hautboy, as he played up to G in alt, which was a third higher than the usual extent of the instrument, E natural having been the highest note. W. Parke was a member of the Royal Society of Musicians, and was elected one of the court of assistants, or governor for life.

PARKER, MATTHEW, Archbishop of Canterbury, and court chaplain to Queen Elizabeth, was born at Norwich in 1504. He was so good a musician, that he composed the music to Queen Elizabeth's Liturgy. He also translated the Psalms; in which work he introduced some ingenious remarks on the church tones. He died in 1575.

PARLANTE. (L.) Literally, *speaking, talking*. Accented, as if with words, in a declamatory style. *Parlando* has the same meaning.

PARMA, NICOLO, a contrapuntist of the sixteenth century, born at Mantua, published "*Cantiones Sacre*, 5, 6-10 vocum," Venice, 1580.

PAROCHIAL DUTY. The signification of this expression includes the organ accompaniment of a congregation singing in the Psalms, and the performance of voluntaries.

PARODI, TERESA, a native of Genoa, was born on the 27th of August, 1827, of respectable parents. Her father was a retired and pensioned *employé* of the Sardinian government. She gave early evidence of musical talents, which drew upon her the notice of many lovers of art among the first families of Genoa, through whose patronage she enjoyed the best means of instruction which wealth and taste could command. At twelve years of age she was placed by her parents in the Musical Institute of Genoa, under Maestro Celli, from which she was removed to the tuition of a professor of celebrity in the same city, Maestro Degola. In

1844 she was taken to Milan to study under Felice Ronconi. In the capital of Lombardy she happened to be heard at a private concert by the husband of Pasta, who was so struck by the resemblance of her vocal gifts to those of his renowned consort, that he hurried back to his villa at Como, to tell Pasta that he had heard a young singer in whom her voice and dramatic spirit were renewed. Pasta repaired to Milan, and became at once so impressed with the young Teresa that she immediately endeavored to persuade Madame Parodi to consent to place her under her care. This was too advantageous an offer to be declined, and Teresa became the pupil and adopted daughter of Pasta. Ronconi bitterly complained of being deprived of his pupil, from whose success he reasonably expected to derive an increase of fame, and his entreaties prevailed upon Pasta to remain with Parodi for some time in Milan, imparting her lessons at the same time with the professor. Thence she withdrew with her to Como, where Parodi remained a year without returning to Milan.

Pasta devoted herself to her pupil *con amore*, recalling in the young Teresa's voice and form her own blooming youth, when she reigned the undisputed queen of song in Europe. The first tests to which Parodi's voice was subjected, satisfied her experienced instructress of her striking adaptedness to the delivery of those great effects which had made her own name so famous, and she at once avowed her conviction that her pupil must succeed in her chosen career — an assurance which added new incentives to the ardor of the young Genoese, ambitious, not more for her own fame than for a position which would enable her to benefit her aged parents and dependent sisters.

It was anticipated that a systematic course of thorough study for two years might prepare the young singer for a *début*, and, in this estimate of the time requisite, the more than ordinary development of the singer was allowed to have much weight. How wonderful, then, must be considered her progress, when, at the close of twelve months, Pasta embraced her pupil, and addressed her in these words: "My child, God has endowed you with a noble voice! I have done for you all that I can do, or that you now need. You are ready to appear before the world! Go, my child, and my blessing go with you. I shall live to behold you the first singer of Europe!"

The *Fiezza di Bergamo*, one of those united festivals of commerce and music so peculiar to Italy, presented to Parodi the first opportunity of a *début*, and Pasta, in dismissing her pupil, conferred upon her all the ornaments she had worn when enacting the queens of lyrical tragedy; the tiara, zone, and girdle of Medea; the crown, the mantle, and golden sickle of Norma; and thus armed and encouraged, the young Genoese, to fulfil her destiny, entered at once upon the grand opera.

She appeared for the first time at the *Teatro Riccardi*, in Bergamo, in 1845, in Donizetti's opera "*Gemma di Verony*." From Bergamo she went to Verona. Her success in both was immense. And the young *débutante* found herself at once the idol of the Italian public. Offers of engagements reached her from all quarters, and her difficulty was to choose from among them. She decided to accept an invitation extended by

the enthusiastic inhabitants of Spezzia, to dedicate by her presence a new and beautiful Opera House, which had just been built in that city. "*Eruani*" was the piece, and her representation of the heroine was a triumph in every scene. It established her fame.

The next year saw Parodi in "*La Semiramide*" and "*Norma*," both of which rôles she enacted at Palermo. Afterwards she performed in Florence and Rome. It was left, however, for her to excite the warm-hearted Sicilians to a sort of musical frenzy, when, in the very midst of the revolution, and among the wildest scenes of civil war, she sang, in a new opera by Coppola, called "*Il Fingallo*," at the great theatre of Palermo. So much, indeed, did the people there delight in her, that they made every concession to prevent her leaving; and there she lingered until the insurrection broke out, and she was obliged to take refuge with the French consul and other official personages, for twenty-two days, on board a Sardinian ship, a witness to the continual scenes of conflict, carnage, and destruction around her.

The first appearance of Parodi in London was under the auspices of the great impresario, Lumley, who engaged her in the midst of the furore created by Jenny Lind. Parodi appeared successively in "*La Favorita*," "*Lucrezia Borgia*," "*Don Giovanni*," "*Le Nozze di Figaro*," "*Il Matrimonio*," and in "*Norma*," and "*Semiramide*." The triumph of the young girl of twenty-two was as complete as her friend Pasta could have desired.

Parodi's London *début* was in the season of 1849. In the spring of 1850 she again appeared at Her Majesty's Theatre. She sang in the principal cities of the United States, in 1851-1852. In the winter of 1853-1854, Parodi was engaged at the Grand Opera in Paris.

PARRAN, ANTOINE, a Jesuit, died at Bourges in 1650, published at Paris, in 1636 and 1646, a work entitled "*Traité de Musique, contenant les Préceptes de la Composition*."

PARRY, JOHN, was born at Denbigh, in North Wales, in the year 1776. He gave very early proofs of his genius for music by making a fife of a piece of cane, and without the least tuition, learning to play all the popular airs of the day. A dancing master who resided near him taught him the notes, and their value in time, &c.; he also gave him a few lessons on the clarinet, so as to enable him to accompany the church singers in common psalm tunes. In 1793 the Denbigh militia were embodied, and young Parry was persuaded to join the corps for the eight and twenty days which it was to be trained in the county; but previously to the assembling of the regiment, the colonel received a route from the war office to march his men to Whitehaven, in Cumberland. The 6th of June was the day fixed for the corps to assemble at Denbigh, and on the tenth it marched off, and remained absent from the principality for ten years. A German was master of the band, under whom Parry was placed for general musical instructions; but his master, being fonder of paying court to Bacchus than to Apollo, sadly neglected him, although he gave him many striking proofs of his intimacy with thorough bass. In two years' time, Parry was able to lead the band, and in 1797 was made master of it — a situation which he held for ten

years, when he left the Royal Denbigh, and married into a respectable family of Plymouth. During the period that Parry was in the army, he made himself thoroughly acquainted with every wind instrument, so that he could take any part, in case of emergency; he also cultivated singing, and studied the harp, piano, and violin; but his principal instrument was the clarinet, on which he used to perform concertos. A circumstance peculiar to himself ought not to be omitted. He used to play at the mess dinners on two of Bainbridge's patent octave flageolets, and at a concert given by him and the master of the Duke of York's band at Rochester, he actually performed on three flageolets, which were fixed in a stand contrived for the purpose. This feat sounded afar, and he was requested to oblige a friend by exhibiting at Covent Garden Theatre; this he consented to do, and he made his *début* for the benefit of Mrs. T. Dibdin, in 1805. He performed the duet of "All's well" on two, and "*Viva Tutte*," in distinct parts, on three instruments. In 1807, he went to reside in London, when the double flageolet was becoming so very fashionable among ladies, that he had as much teaching as he could attend to.

Having composed several popular songs, &c., he was invited, in 1809, to write for Vauxhall Gardens. In 1814 he wrote a farce for his friend Lovegrove's benefit, called "Fair Cheating," which was performed three times at Drury Lane Theatre. The plot, dialogue, incidents, as well as the music, were from his pen. While this farce was in rehearsal, he formed an intimacy with Arnold, the then manager, and T. Dibdin, the prompter, who requested him to compose the music of that never-to-be-forgotten broad extravaganza, called "Harlequin Hoax," which was performed with unprecedented success at the English Opera House. In 1816 he composed the music of "Oberon's Oath," a grand spectacle by Thompson, author of the "Stranger," which was performed at Drury Lane. The following year he wrote a musical farce, called "High Notions, or a Trip to Exmouth," which was performed with the greatest success at Drury Lane for two and twenty nights. In 1818 he brought out a musical sketch at Covent Garden Theatre, called "Helpless Animals;" and in 1821, a very successful piece at the Lyceum, called "Two Wives, or a Hint to Husbands," which was performed for twenty-five successive nights. To write a dramatic piece is in itself no easy task; but to accomplish this, also to write the poetry for songs, compose the music, arranging the same for a full orchestra, and afterwards for the piano-forte, falls to the lot of but few individuals. Besides these dramatic compositions, Parry has, in conjunction with others, furnished parts of operas, &c. He adapted the whole of the music in the opera of "Ivanhoe," as performed at Covent Garden Theatre, and he wrote songs, duets, &c., for Messrs. Braham, Sinclair, Phillips, Incedon, Pyne, Munden, Harley, C. Taylor, Knight, T. Cooke, Mrs. Dickens, Mrs. Mountain, Mrs. Bland, Miss Stephens, Miss Povey, Miss Cubitt, and a number of very successful ballads for Collyer.

On the emancipation of Holland from the yoke of France, a grand *fête* was given at the City of London Tavern to the Prince of Orange. Parry was requested by the stewards of the day to

write an appropriate song, which he did, with an understanding that C. Taylor was to have sung it. But Braham, having been invited to the dinner, was requested to sing the song, which he did in the most masterly manner, although he neither saw a note nor a word of it till he entered the room. Braham also sang "Arthur the Brave," written by Parry in compliment to the glorious victories of the Duke of Wellington, who condescended to send the author a very gratifying letter of thanks. Parry also wrote an appropriate song called "England and her brave Allies," which was sung at the grand festival given to the Emperor of Russia, King of Prussia, &c., &c., at Guildhall, in 1814. In 1809 Parry adapted English words to a selection of Welsh melodies, for which the Cambrian Society presented him with a silver medal. He published two volumes of ancient British airs, with beautiful poetry, written chiefly on historical subjects, by Mrs. Hemans, of St. Asaph. He also conducted the "*Eisteddfod*," or congress of bards, at Wrexham, in 1820, and at Brecon in 1822; on each occasion he was presented with a handsome piece of plate. The meetings of the Welsh bards and minstrels, held in London, were entirely under his direction, as registrar of music to the Royal Cambrian Institution. At a *Gorsedd*, or meeting of Welsh bards, in 1821, a bardic degree was conferred on Mr. Parry, who was denominated *Bardd Atau*, or professor of music, and master of song. He wrote an historical essay on the harp, from the earliest period, which was published in the Transactions of the Royal Cambrian Institution. Having said so much in detail of Parry's general talent, something might be expected relative to his abilities as a composer; on that head we will quote his own words, written in a series of letters to a friend.

"When I went to London I found that I had almost every thing to learn; I accordingly applied myself seriously to study, with a view of turning my work out of hand without many glaring faults. I confined myself to vocal compositions, chiefly ballads, and easy pieces for the harp and piano-forte, also duets for flutes and other wind instruments; and never attempt now to soar above my sphere, well knowing that there are many musicians in the higher walk of the science much more able to produce erudite compositions than myself. I understand the genus of every instrument used in an orchestra; hence the rare instances of the necessity of a second rehearsal of any of my compositions. I score with uncommon facility and, I trust, tolerably correct; I know the power of the various instruments, and I endeavor to ascertain the ability of the different performers, and write accordingly. I do my utmost to walk peaceably through life, in friendship with all my brethren, interfering with no one, and, I trust, bearing the ill will of no man."

Parry has published upwards of three hundred compositions and arrangements, and several dramatic pieces. The following are among his more favorite publications. Arranged and adapted: "Two Volumes of Welsh Melodies, with English words;" "Two Volumes of Scottish Melodies;" "Two Volumes of Catches and Glee;" "Two Volumes of Minstrel Songs for the Flute;" "One ditto, called the Corydon;" "One ditto ditto, the Sapphouian, for the Violin;" "The

Opera of Ivanhoe for the Voice and P. F.;" Original compositions: "High Notions," a farce in two acts; "Two Wives," a farce in one act. "Helpless Animals," a farce in one act; "Fair Cheating," a farce in two acts, written and composed by Parry; "Harlequin Hoax," two acts. A number of duets and glee; also the following songs: "The Peasant Boy;" "The Minstrel Boy;" "*Ap Shenkin*;" "Love's a Tyrant;" "Sweet Home;" "Little Mary of the Dec;" "The voice of her I love;" "Beauty in Tears;" "Orange Boven;" "Arthur the Brave;" "England and her brave Allies;" "Farewell, my charming maid;" "Take a bumper and try;" "Adieu to the Cottage;" "The Sailor's Home;" "National Blunders;" "Fly, fly away;" "I never will deceive thee;" "O, bring me a bowl;" "Poor Dick;" "Mister Goose;" "Still I'll think of thee;" "The Banner of Battle;" "The maid I love so well;" "Taste pleasure while you may;" "As down the vale of life I glide;" "The Grotto;" "The last word;" "Take a hint;" "Woman's smile;" "Donald is now no more;" "I dinna care to tell;" "Smile again, my bonnie lassie;" and a vast number of others. Several pieces for the harp, twelve familiar rondos for the piano-forte, also popular airs with variations for the piano-forte, and a number of detached pieces. A long list of music for the double and single flageolet, flute, violin, &c., &c.; also books of instruction for several instruments, and many volumes of military music, particularly "Two Sets of Welsh Airs," and the *Æolian harmonies*, consisting of selections from the works of eminent authors, arranged for wind instruments.

PARSONS, ROBERT, was organist of Westminster Abbey. He was a gentleman of the Chapel Royal in the reign of Queen Elizabeth, and was drowned at Newark upon Trent, in 1569. Many of his compositions are extant in manuscript, and some of them have been spoken of in terms of high commendation.

PARSONS, SIR WILLIAM, doctor of music, was, from a very early period of his life, instructed in the science of music. He attained the first rudiments of his professional knowledge in Westminster Abbey, under the tuition of Dr. Cooke. Arduous in the pursuit of his scientific researches, he, in the year 1768, travelled to Italy to complete his musical education. We have not learned the exact time of his return to England, but find that, on the death of Stanley, an event which happened in the year 1786, Parsons was appointed master and conductor of his majesty's band of musicians. In the year 1790 he received from the University of Oxford the degree of doctor of music. He next went to Dublin, during the administration of Earl Camden, in the year 1795, when that nobleman conferred upon him the honor of knighthood. In the year 1796 he was appointed by the queen to instruct the princesses in music. In the same year his name was inserted in the commission of the peace for the county of Middlesex; in consequence of which he sat for several years at the public office, Bow Street.

PARTE. (I.) A part in vocal or instrumental music.

PARTE CANTANTE. (I.) The singing of vocal part.

PARTIE. (F.) A part. *Partie du violon*, a violin part.

PARTHENIA. (Gr.) Songs by a chorus of virgins at festivals.

PARTITURA. (I.) The entire draught of a composition in parts. *Partition, partitur, partizione*, are all of the same meaning as *partitura*.

PARTIMENTI. (I.) Exercises on thorough bass; figured basses for the practice of harmony.

PARTS. The names of the melodies of any harmonic composition, the performance of which, in union, forms its harmony. Four is the fewest number of parts with which the chords necessary to elaborate harmony can be completely filled. At the first introduction of counterpoint, there were only two parts, one of which was called tenor, and the other descant. At length a third was added, called triplum, and afterwards a fourth, called quadruplum. There are instrumental parts, as *organ part, violin part, violoncello part, &c.*; and the paper, or book, on which is separately written the particular melody appropriated to any single performer, or set of performers of the same melody, is called a *part*. In concert, every performer, except the composer, or conductor, who generally uses the *score*, sings or plays from his single *part*.

PARYPATE HYPATON. (Gr.) Next the principal. The appellation applied by the ancients to the second note of their lowest tetrachord, because it followed the first, or principal. This note corresponded with our C on the second space in the bass.

PARTENIO, GIOVANNI DOMENICO, was master of the Conservatory of the Mendicanti at Venice, and born at the commencement of the seventeenth century. The music of his following operas was much esteemed: "*Genserico*," 1669; "*La Costanza Triumfante*," 1673; "*Dionisio*," 1681; and "*Flavio Cuniberto*," 1682.

PAS. (F.) A dance; as, *pas seul, pas de deux*, a dance by one or by two performers; *pas redoublé*, a quick step.

PASCALE, FRANCESCO, a nobleman and amateur musician, born at Casentini, in Italy, lived in the seventeenth century. He published "*Madrigali à 5 voci*," Venice, 1615. Mersenne, in his "*Harmon.*," lib. 8, p. 179, says of one Pascalius, "*Insignis mathematicus vere praxeos theoriam, et infinitos propemodum dissonantiis utendi modos pollicetur.*" Judging from the dates, he probably meant the subject of this article.

PASI, ANTONIO, a celebrated soprano, born at Bologna about the year 1710, was a pupil of Pistocchi. He was an excellent singer of an adagio, according to the testimony of Quanz, who heard him at Parma in 1726.

PASINO, DON STEFFANO, an Italian composer, resided, in 1680, at Conato, and published many works, amongst which we can name the following: "*Misse à 2, 3, e 4 voci*;" "*Motetti Concertati à 2, 3, e 4 voci, con V. se piace, e Salmi à 5 voci*;" and "*12 Sonate à 2, 3, e 4 Stromenti, de quali una e composta in Canone, et un'altra ad imitazione di versi che sogliono fare diversi animali brutti*," Op. 8, Venice, 1679.

PASQUALI, NICOLO, an Italian violinist and composer, was first known, about the year 1743, in London, where he then resided. He afterwards settled at Edinburgh, and continued

there, as a teacher, to the period of his death, which took place in 1757. He published "Art of Thorough Bass made easy, containing Practical Rules for finding and applying its various Chords with facility, with a Variety of Examples, showing the manner of accompanying, with elegance, Concertos, Solos, Songs, Recitative, &c.," London; "Art of fingering the Harpsichord, illustrated with numerous Examples, expressly calculated for those who wish to obtain a complete Knowledge of that necessary Art," London; "Twelve Overtures for a Full Band;" "Quartettos for two Violins, &c.," sets 1 and 2; and "Songs."

PASQUALINI, MARC ANTONIO, a celebrated soprano singer at Rome, was engaged, in 1630, in the Papal Chapel, but quitted it again about the year 1643; after which time, till towards 1670, he was reckoned, as Doni and Quadrio affirm, one of the first and most favorite opera singers. To these merits he united also a talent for composition; proofs of which are to be found in several collections of vocal music made in his time. Dr. Burney possessed one of these collections made by Salvator Rosa, in which a song of Pasqualini occurs.

PASQUALINO. See **BINI**.

PASQUINI, or PASQUINO, ERCOLE, a celebrated organist of St. Peter's, at Rome, was born at Ferrara. He flourished about the year 1620.

PASQUINI, BERNARDO, son of the preceding, was chapel-master and organist to the Church of St. John of the Lateran, at Rome, where he was born in 1640. He flourished at Rome about the same time with Corelli, and was esteemed the most celebrated amongst the dramatic composers of his time; which may be easily concluded from the Theatre de Capranica being opened in 1679 with his compositions, as also from his having been employed in composing the drama which Rome caused to be acted in 1686, in compliment to Queen Christina of Sweden. Besides these proofs of his celebrity, some of the greatest masters are counted among his pupils; for instance, Gasparini in 1672, and, subsequently, Durante. Mattheson extols the excellent condition of the opera at Rome in 1690, particularly in respect to the orchestra, where Pasquini presided at the harpsichord, Corelli played the violin, and Gaetani the lute. Of his works Hawkins and Burney only notice the two following: "*Dov' è Amore a Pietà*," an opera, performed at Rome at the inauguration of the Theatre de Capranica, and "An Allegorical Drama, in honor of Queen Christina of Sweden," 1686.

PASSACAGLIO. (I.) A kind of chacone, but somewhat graver, and more delicate. See **PASSACAILLE**.

PASSACAILLE. (F.) A kind of chacone, of a tender and slow motion. It is generally written in three crotchets, and begins with the third. There are, however, *passacailles* in common time, beginning with the full bar, though they are very rare. See **CHACONE**.

PASSAGE. Any phrase, or short portion of an air, or other composition. Every member of a strain, or movement, is a *passage*.

PASSAGGIO. (I.) A succession of sounds

forming a member, or phrase, in a composition. See **PASSAGE**.

PASSAMEZZO. (I.) A slow dance, little differing from the action of walking. A movement of the body partaking of the air of walking, and the grace of gliding motions. This was an exhilarating tune. Sir John Falstaff had this music in his mind, when he sent for Sneak, the musician, to entertain his company after dinner.

PASSARINI, FRANCESCO, a native of Bologna, was a chapel-master in that city. He published the following works: "*Salmi Concertati a 3, 4, 5, e 6 voci, parte con violini, et parte senza; con Litanie della B. V. à cinque voci con due Violini*," Op. 1, 1671; and "*Compieta concertata d 5 voci, con Violini Obligati*," 1672. Some *Kyrie* of his composition are also to be found.

PASSEPIED. (F.) A movement written in three crotchets, or three quavers, in a bar; much resembling a minuet, but of a somewhat more lively character.

PASSETTO, GIORDANO, chapel-master at the Padua cathedral in the sixteenth century, published "*Madrigali*," Venice.

PASSING CHORDS. Chords in any piece, whose harmonies are too transient for their construction to be cognizable. See **TRANSIENT**.

PASSING NOTES, in harmony. Those notes in a composition which do not represent the sounds of the chord, or harmony, but which are only introduced for the purpose of ornamenting and enriching the general effect. If these happen on the weak part of a measure, they are termed *discords of regular transitim*; if on the strong parts, *discords of irregular transition*. The latter are properly *apoggiaturas*, which in the performance are dwelt upon; the former, *after notes*, which are passed over slightly.

PASSING NOTES, in melody, are notes introduced between two others, for the purpose of softening a distance, or melodizing a passage, and which notes are not calculated in the harmony.

PASSING SHAKE. A short trill, made *en passant*, in flowing passages of quavers, or semi-quavers, without breaking the time, or interrupting the natural course of the melody.

PASSIONATO, or CON PASSIONE. (I.) Impassioned, with pathos.

PASSIONE. (I.) The passion, or seven last words of our Saviour, set to music.

PASSION MUSIC. The music composed in Italy, and other Roman Catholic countries, expressly for Passion week.

PASSIONES. (L.) Compositions intended for Passion week.

PASTA, GIOVANNI, poet, composer, and ultimately master of the band in an Italian regiment, was born at Milan in 1604. He was also for some years organist of the Church of St. Alessandro, at Bergamo, then became a canon of St. Maria Falearina, and then again joined the army in his former capacity. He died in 1676. Among his works is "*Due Sorelle, Musica et Poesia concertate in Arie Musicali, Parte 1 e 2*," Venice.

PASTA, GIUDITTA. This distinguished singer was born at Milan in 1799, and made her first appearance on any stage at the King's Theatre, in 1817. She was then only in her eighteenth year; and though she could not, at so early an age, and without any musical experience, compete with the two admirable female singers, Fodor and Camporese, who performed in the same season, yet she showed, most distinctly, the possession of a talent that wanted only a little time and culture, and a fair opportunity for displaying itself. She left England at the close of the season, and retired to Italy, where she devoted the whole of her time to study and to the hearing of the best performers, but without the interference of any master.

In 1822 she returned to the stage, and chose Paris as the place of her second *début*, where she immediately produced a great sensation, and rose in popularity, not only with the French, but with all the foreign visitors at that capital. Here, it is said, a noble marquis, connected with the management of the King's Theatre, heard her, and took immediate steps for carrying her to London; in consequence of which she reappeared in London on Saturday, the 24th of March, 1824, in the character of Desdemona, in Rossini's "*Otello*."

Madame Pasta's voice was a *mezzo soprano*; its compass was extensive, and, though not strong, had quite power enough, except in concerted pieces, in which she could not contend successfully against the combined sounds of the other singers, and the thunder of orchestra. Her tones were rich and sweet, except when she forced them; and though devoid of that clearness and vibration which the real soprano — Madame Ronzi, for instance — possessed, yet they were well suited to her style of singing, and to the characters which she undertook. Her intonation was unimpeachable. Her style was pure, and totally divested of all spurious finery. As an actress, Madame Pasta was not less worthy of distinction; her expression and gesture were in excellent keeping with her singing; all three were the offspring of deep feeling and correct judgment. In figure she was rather below the middle size, but exceedingly well proportioned. Her first appearance in England was in male attire, and her form was then greatly admired. The principal operas in which Madame Pasta appeared in Italy and France were "*Otello*," "*Medea*," "*Camilla*," "*Nina*," "*Romeo e Giuletta*," "*Tancredi*," and "*La Rosa Bianca, e Rosa Rossa*." Afterwards her *Norma* was very celebrated. In 1853 Madame Pasta was living in elegant retirement at her villa on the Lake of Como.

PASTERWITZ, PATER GEORG VON, professor of philosophy, and director of the music in the Abbey of the Benedictines at Kremsmunster, in Upper Austria, was born in 1730. After visiting Italy, he brought out, in Germany two oratorios, entitled "*Giuseppe riconosciuto*," the words by Metastasio, and "*Samson*," which were performed in the years 1776 and 1777, with prodigious success. He also published "*8 Fughe secondo l'Ordine dei Toni Ecclesiastici per l'Organo o Clavicembalo*," Vienna, 1792; "*8 Fughe secondo F. A. B. C di Musica per l'Organo o Car.*" Op. 2, Vienna, 1792; "*8 Fughe per l'Organo*," &c., Op. 3, Vienna, 1792; and a canon, "*Te quasquis amat, à 4 voci*." In speaking of his fugues, *Geher*

says, "This erudite musical professor has afforded a convincing proof that the true science of counterpoint and fugue was not lost in Germany at the close of the eighteenth century; for in his works are found fugues on single and double themes, all treated, arranged, and analyzed in a masterly, and, at the same time, fluent manner."

PASTICCIO. (I.) An opera, the music of which is not the uniform production of one master, but selected from a variety of composers. This species of dramatic music, in which the words are written to the melodies, instead of the melodies being composed to the words, has long been adopted, both in Italy and England; but rarely with that consistency and force of effect derived from the original efforts of one composer of genius and feeling.

PASTORAL. A musical drama, the personages and scenery of which are chiefly rural. This species of the drama, which formed one of the earliest attempts in musical representation, and the proper characteristics of which are sweetness and simplicity, has in all ages been heard with delight, and has given exercise to the finest poetical and musical talents of the civilized nations of Europe. A *pastoral* is also any lyrical production, the subject of which is taken from rural life; and the Italians give the same name to an instrumental composition written in the pastoral style.

PATETICO. (I.) Pathetic.

PASTORAL MUSIC. Music the style of which is rustic or rural.

PASTORALE. (I.) An epithet applied to soft rural movements, generally written in twelve quavers, and moving by alternate crotchets and quavers, like the *Siciliano*.

PATHETIQUE. (F.) Pathetic.

PATON, MISS. See Wood, Mrs.

PATRASSI, MICHEL, a distinguished alto singer, was, in 1782, manager of an Italian company of actors at Brunswick.

PATRICIO, FRANCESCO, professor of philosophy and Bishop of Gaeta, was born at Clissa, in Dalmatia, in 1529. He published a work entitled "*Della Poetica*," Ferrara, 1586, part of which treats of the music of ancient Greece. He died in 1597.

PATRICK, NATHAN. An English church composer, at the commencement of the last century. Dr. Boyce, in his "Cathedral Music," quotes some of his compositions.

PATZELT, JOHANN. A German violinist and composer, both for his instrument and the piano-forte. He was a Bohemian by birth, was first in the imperial artillery, but bought his discharge, and travelled to seek his fortune by his instrument in 1788. He is said to have played in a most masterly manner. Traeg quotes in his "Catalogne," Vienna, 1799, the following manuscript compositions by Patzelt: "*Concerto à Vc. princip. c. 8 Ström.*," and "*2 Sonate à Vc. e B.*"

PAUKE, pl. PAUKEN. (G.) The kettle drum.

PAUL, P. DUTREIH, born at Lyons, was

the son of Jean Baptiste Dutreih, a physician in that town. He received a good education, but afterwards could not resist his inclination for a theatrical life. After performing as an amateur in his native town, he went to Rouen, and, under the name of Paul, was engaged, during two years, in the Opera Comique there; he was then invited to Paris, where, in 1804, he made his *début* at the Théâtre Feydeau, in the part of Azor. He since became one of the most favorite actors and singers of that theatre.

PAULATI, ANDREA, an eminent composer, produced at Venice, in 1713, the opera "*I Veri Amici*," which was again revived there in 1723.

PAULI, P. ARCIIANGELO, a Carmelite, born at Florence, published at Rome, in 1699, "*Directorium Chor.*," &c.

PAULI, G. ALBERT, wrote a Latin treatise in favor of vocal and instrumental church music, which was printed in 1719. He died in 1745.

PAULI, JOHANN ADAM FRIEDRICH, precentor at Graitz, in Voigtland, left, at his decease, two annual courses of church music of his own composition, comprising several coronation anthems, dirges, and psalms, for a full orchestra. He also left several more volumes of annual services by Hasse, Graun, Telemann, Homilius, Geo. Benda, Wolf, Doles, Reichardt, Tag, Krebs, &c.

PAULIN, a French composer about the year 1700, published a collection of his own motets.

PAULO, GIOVANNI BATTISTA, an eminent Italian contrapuntist, flourished at Naples about the year 1760.

PAULSEN, CARL FRIEDRICH FERDINAND, organist of St. Mary's Church at Flensburg, was born in 1763. He entered the above situation in the year 1781, and seems to have subsequently applied himself to the composition and publication of vocal melodies. The following are the titles of some of his printed works: "*Klavier und Singstücke*," Flensburg, 1794; "*Lieder mit Melodien, 1te Samml.*," Flensburg and Hamburg, 1797; and "*Derselben, 2te Samml.*," Flensburg and Hamburg, 1798.

PAUSA. (I.) A rest.

PAUSCH, EUGENIUS. Born in 1758. A Cistercian monk, and church composer at the convent of Walderbach. Of his works, he printed "6 Kurze doch solenné Messen, 7 Motetten, und 1 Requiem, mit 4 gewöhnlichen Singstimmen, 2 V., 2 Waldhorn, Orgel, und B.," Augsburg, 1790; "*Tu Deum solenne à 4 voc. ordinari.*, 2 V., 2 Hobois obl., 2 Cornibus non obl., 2 Clar., et Timp. obl., Organo et Violone," 1791.

PAUSE. This character is now generally called a *hold*, and shows that the note, measure, or rest under which it is placed, may be prolonged at the pleasure of the performer. The character used for the pause is a curve line with a dot, thus: —

The more ancient *pause* is, like the *hold*, ■

mark, or character, consisting of a curve drawn over a dot, and signifying that the *note*, or the *rest*, over which it is placed, is to be prolonged beyond the regular time. The exact length of the *pause* is not dictated by any stated rule, but left to the judgment, taste, and feeling of the performer, who sometimes is licensed by the words *ad libitum* to introduce whatever extempore embellishments his imagination may suggest.

PAUSE GÉNÉRALE. (F.) A pause for all the instruments, singers, &c.

PAUWELS, J., composer for the theatre at Brussels, was born there in 1771. His father was a musician, and the son evinced an early talent for music, in which he made rapid progress, being considered, when a boy, an excellent violinist. At the age of eighteen he went to Paris, where he soon procured an engagement in the orchestra of the Théâtre Feydeau. After a residence of three years in Paris, he returned to his native city, when his playing, which had been highly improved under the best masters in France, excited the admiration of his countrymen. He was appointed first violin in the orchestra of the Brussels theatre, and subsequently conductor. From that time he devoted many of his leisure hours to composition, and brought out much music for his instrument, as well as for the horn, the flute, and the piano-forte; also several songs, sung at the Brussels Concert, of which he was the founder, and three operas for the Brussels theatre, "*La Maisonnette dans le Bois*," "*L'Aut-ar malgré lui*," and "*Leontine et Fourose*." The last opera, which is in four acts, is considered his *chef-d'œuvre*; the other two were likewise successful. Pauwels died in his thirty-third year.

PAVAN, or PAVANE. A grave, stately dance, which took its name from *pavo*, a peacock. It was danced by princes in their mantles, and by ladies in gowns with long trains, whose motion resembled that of a peacock's tail. It was followed by a lighter kind of air, called a *galliard*. The modern minuet is derived from the pavan. Sir John Hawkins says, "The method of dancing it was anciently by gentlemen dressed with a cap and sword, by those of the long robe in their gowns, by princes in their mantles, and by ladies in gowns with long trains, the motion whereof in the dance resembled that of a peacock's tail." This dance was invented by the Spaniards. Every *pavan* has its galliard, a lighter kind of air, made out of the former.

PAXTON, WILLIAM and STEPHEN. There were two brothers of this name, one of whom was celebrated as a violoncello performer, and died previously to the year 1718, and the other ranked high as a composer of glees. Probably the following works may be deemed of their united composition. Instrumental: "Six Duets for Ve.," Op. 1; "Eight Duets for V. and Ve.," Op. 2; "Solos for V.," Op. 3; "Four Solos for V., and two Solos for Ve.," Op. 4; "Twelve easy Lessons for Ve., in which are introduced several favorite airs," Op. 6; "Six easy Solos for the Ve.," Op. 8. Vocal: "Collection of two Songs, Glees, and two Catches," Op. 7; "Glees," Op. 5. Amongst the most favorite part songs by the Paxtons, we may name "Go, Damon, go; Amarillis bids adieu," four voices; "Blest power," four

voices; "How sweet, how fresh," four voices "Round the hapless André's urn;" "Where grass and flowers," four voices; and "Breathe soft, ye winds," four voices. The eighth and ninth masses in Samuel Webbe's collection are also by one of the Paxtons.

PEALS. The name given by ringers to the several settled successions of sounds produced by bells; as *melodies* composed for bells.

PEARSON, or PIERSON, MARTIN. was master of the choristers at St. Paul's. He took his degree of bachelor of music in the year 1613, and about sixteen years afterwards published a work with the following singular title: "Mot-teets, or gravo Chamber Musique, containing Songs of Five Parts, of several Sorts, some full, and some Verse and Chorus, but all fit for the Voyees and Vials, with an Organ Part; which, for want of Organs, may be performed on Virgenals, Base Lute, Bandora, or Irish Harpe. Also a Mourning Song of Sixe Parts, for the Death of the late Right Honourable Sir F. Grevil, Knight." He died about the latter end of the year 1650.

PECCI, TOMASO, of a noble family at Siena, published there, about the year 1600, several operas of madrigals, which were much admired, and of which he had written both the words and music.

PECCI, DESIDERIO, a composer in Italy about the beginning of the seventeenth century, called *Il Ghiribizzoso*, (the deep one,) published of his works "*Le Musiche sopra l'Adone*," Venice, 1619.

PED., or PEDAL. The wooden rest for the foot under a piano-forte, by the use of which the dampers are raised from the strings, thus allowing them their full vibration.

PEDALS. The judicious and tasteful employment of the pedals is productive of the best effects. Care should be taken not to use them too frequently, or prolong their influence when the harmony of a phrase or passage happens to change.

In all well-written piano-forte music, the *swell pedal*, or that which raises the dampers from the strings, allowing their vibration to continue, is indicated by the abbreviation *ped.*, or the sign * and its relinquishment by the mark or asterisk ✱. When the *soft pedal* is used, which is placed under the left foot in grand piano-fortes, upright ditto of all kinds, and grand squares, it shifts the action so as to strike only one string; the *clavier*, or key-board, also is moved a little to the right. The sudden use of this pedal should be avoided, and indeed it ought never to be touched except when it is expressly set down in the works of the most judicious and tasteful masters. The combined action of the two pedals is sometimes productive of the most pleasing effects; but the young student is advised to trust more to his fingers than his feet, more to the delicacy, force, and variety of his manual touch than to the jumbling influence of the pedals, which they will most assuredly possess if not treated with the greatest skill. Many pianists of the first order never resort to them at all for their effects; but this is going to extremes, for a judicious use of them will impart a grace

and smoothness, particularly in *cantabile* passages, which cannot be obtained otherwise.

PEDAL NOTE. A holding note, during which the harmony formed by the other *parts* of the composition is allowed to proceed independently.

A *pedal* passage can only take place on a *tonic* or *dominant*. It generally occurs in the principal key of the piece, though a pedal passage may also be introduced in any relative key. The part which is immediately above the pedal note must be considered as the real bass, and the harmony must be treated regularly with regard to that part, as the pedal note must be considered as merely accidental. The best pedal passages are those in which the bass note frequently becomes an essential note. All regular progression of chords, sequences, &c., belonging to the same scale, may occur upon a pedal note; and even transient modulations, notes of embellishment, &c., may be introduced, as sequences of 7 6 on a dominant pedal. The chords formed by placing the dominant seventh, diminished seventh, or seventh of a leading note on the tonic, or the dominant treated as a temporary key note, are, by some authors, called *pedal harmonies*, from their frequent occurrence in such passages.

In instrumental music the harmony upon a pedal note may be executed by the two masses in two different manners. First, the stringed instruments may play the pedal note in unison, and the wind instruments execute the harmony above it. Secondly, the pedal note may be given to the grave instruments of both masses in unison, and the harmony to the acute instruments in both masses in the octave.

EXAMPLES.

No. 1. PEDAL ON THE DOMINANT.

Flutes. &c.

Harmony in 4 parts, executed by the wind insts. &c.

Hautboys. &c.

Clarinets. &c.

Bassoons. &c.

Stringed Insts. in unison executing the Pedal. &c.

No. 2. DOMINANT PEDAL FOR 20 INSTRUMENTS

The Flutes an octave higher. &c.

Clarinets. &c.

Bassoons. &c.

Horns & Trombones. &c.

Kettle drums. &c.

Violins. &c.

Tenor. &c.

Violoncello. &c.

Double basses. &c.

These instruments are added to strengthen the Pedal, as double basses alone would be insufficient to give it with effect.

PEDALE, or PED. (I.) An epithet applied to a fixed or stationary bass, during which the superior *parts* evolve through various harmonies, independent of the pedal note.

PEDALI. (I.) The pedals in piano or organ music.

PEDAL KEYS. That set of keys belonging to an organ which are played on by the feet.

PEDRILLO flourished at Naples about 1700, as one of the first Italian violinists.

PEGADO, BENTO NUNES, a Portuguese chapel-master at Evora, was one of the celebrated pupils of Antonio Pinheiro, and flourished about the year 1600. The following of his works are still preserved in the Royal Library at Lisbon: "*Parce Domine, à 7 Vozes, Motete para a Quaresma;*" "*Hei mihi Domine, à 6 Vozes, Responsorio de Defuntos;*" "*Ili sunt qui cum mulieribus, Motete dos Santos Innocentes;*" and "*Ad te suspiramus, Motete à N. Senhora.*"

PEGRINS, BENETON DE MORANGE DE, a French writer about the middle of the eighteenth century, inserted in the "*Mercur de France*" (1740) an article entitled "*Dissertation de l'Origine et de l'Utilité des Chansons, particulièrement des Vaudevilles.*"

PEKEL, BARTH, vice chapel-master to the Chapel Royal of the King of Poland in 1643, inserted in the "*Cribrum Musicum,*" of Marco Scac-

zhi, a *chef-d'œuvre* of his composition, in which three canons can be sung at the same time.

PELI, FRANCESCO, an Italian singer about the year 1720, established a singing school at Modena, which afterwards became very celebrated. He brought out at Munich, in 1737, an opera entitled "*La Costanza in Trionfo*."

PELLATIS, PADRE ANGELO, organist at Treviso, published at Venice, in 1667, "*Compendio per imparare le Regole del Canto Fermo*."

PELLEGRINI, VINCENZO, canon at Pesaro, in the papal states, and ultimately chapel-master of the metropolitan church at Milan, published several of his works, amongst which are to be noticed "*Missarum, Lib. 1*," Venice, 1604; "*Concerti à 1, 2, 3, 4, 5, e 6 voci, con una Missa à 6 voci*;" and "*Motetti*," Venice, 1619. In the "*Bergameno Parnassus Music. Ferdin.*," Venice, 1615, some of his works also occur.

PELLEGRINI, VALERIO, a singer in the service of the King of Spain, flourished about the year 1700.

PELLEGRINI, FERDINAND, a musician at Naples, published several works, the first of which appeared at Paris in 1754, and contains several sonatas for the harpsichord, with a letter on the rondo. In 1768 he brought out his ninth opera at Paris. It consists of six concertos for the harpsichord.

PELLEGRINI, PIETRO, was, in 1770, chapel-master of the Jesuits' Church at Brescia. He was celebrated as a performer on the harpsichord. Amongst his works is an opera entitled "*Cirene*."

PELLI flourished as chapel-master at Rome in the latter part of the last century, and published some musical works of taste. See Leveque's "*Tableau de Rome*," 1792.

PELLIO, GIOVANNI. A composer of the sixteenth century. Of his works we can mention only "*Canzoni Spirituali à 5 voci, Lib. 2*," Venice, 1597, and "*Canzoni Spirituali à 6 voci*," Venice, 1584. These may still be found in the library at Munich.

PENNA, LORENZO, of Bologna, a Carmelite monk, and a professor of music, was the author of a work entitled "*Albori Musicali*," printed at Bologna in 1672. This he divided into three parts. The first treats of the elements of the *canto figurato*; the second of counterpoint; and the third of thorough bass, or the art of accompaniment. In this, which is one of the best Italian works on the subject, the scale of Guido, with the use of the syllables and clefs, and the nature of the mutations, are explained in a very concise, intelligible manner, as are also the characters employed in the *cantus mensurabilis*. Of his rules of counterpoint little can be said, further than that they are perfectly consistent with the laws of harmony.

The third part of the work is taken from the writings of Luzzaschi, Merula, Frescobaldi, and other celebrated Italian organists. A continuation of the "*Albori Musicali*" was published at Venice in the year 1678. In 1689 Penna published at Modena a "*Directorio del Canto Fermo*."

PENNA, FRANCESCO, of Bologna, pub-

lished a treatise on music at Antwerp in 1683. Dr. Burney quotes this work in his *Travels*, vol. i. p. 39; but, as he had not himself seen it, it may probably belong to the preceding article.

PENNA, L. A professor of music, and probably of the piano-forte, at Paris. Of his published works may be noticed, "*Trois Sonates pour le Clav. avec V.*," Op. 2, Paris, 1791, and "*Romances pour Piano-forte*," Paris, 1787.

PENTACHORD. (Gr.) This word, with the ancients, sometimes signified an instrument containing five strings, and sometimes an order, or system, of five sounds.

PENTATONON. (Gr.) The name of that interval in the ancient music which was the same with our superfluous sixth, consisting of four tones, a major semitone, and a minor; hence it receives the name of *pentatonon*, or five tones.

PEPUSCH, JOHN CHRISTOPHER, one of the greatest theoretical musicians of modern times, was born at Berlin about the year 1667. His father, a minister of a Protestant congregation in that city, discovering in his son an early propensity to music, employed at the same time two different masters to instruct him, the one in the theory, and the other in the practice.

At the age of fourteen he was sent to court, and by accompanying one of the ladies who sang before the queen, so recommended himself, that he was immediately appointed to teach the prince on the harpsichord, and on that day gave him a lesson.

Pepusch quitted Berlin, and on going to England about the year 1700, was retained as a performer at Drury Lane. It is probable that he assisted in adapting the operas for the stage that were performed there.

The abilities of Pepusch, as a practical composer, were not likely to become a source of wealth to him; his music was correct, but it wanted variety of modulation; besides which, Handel had got possession of the public ear, and the whole kingdom were forming their taste of harmony and melody by the standard of his compositions. Pepusch, who soon became sensible of this, wisely betook himself to another course, and became a teacher of music. In the year 1713, at the same time with Croft, Pepusch was admitted to the degree of doctor in music in the University of Oxford, and continued to prosecute his studies with great assiduity. About the year 1722, Signora Margarita de l'Épine having quitted the stage with a large sum of money, Dr. Pepusch married her. The fortune which Margarita had acquired was estimated at ten thousand pounds, and the possession thereof enabled the doctor to live in a style of elegance, to which, till his marriage, he had been a stranger. This change in his circumstances was no interruption to his studies; he loved music, and he pursued the knowledge of it with ardor. He, at the instance of Gay and Rich, undertook to compose, or rather correct, the music to the "*Beggar's Opera*." Every one is aware that the music to this drama consists solely of ballad tunes and country dances; it was nevertheless necessary to settle the airs for performance, and also to compose basses to such as needed them. This Pepusch did, prefixing to the opera an overture, which was printed in the first, and has been continued in every succeeding edition of the work. About the year 1740, Pepusch's wife died, and he, having before lost his son, an only child, had scarcely any source of delight left,

other than the prosecution of his studies, and teaching a few favorite pupils, who attended him at his apartments. Here he drew up that account of the ancient genera, which was read before the Royal Society, and is published in the Philosophical Transactions for the months of October, November, and December, in the year 1746; and soon after the publication he was elected a fellow of the Royal Society. He died in the year 1752.

PER. (I.) For, or by.

PERA, GIROLAMO, of Venice, an excellent church composer, died in 1770. Joseph Schuster, chapel-master to the King of Sardinia, was a pupil of Girolamo Pera.

PERANDI, MARCO GIOSEFFO, chapel-master to the Elector of Saxony, was born at Rome. The celebrated Christoph Bernhard brought him, in 1640, from Rome to Dresden, where he honorably filled the above office, jointly with four more chapel masters, namely, Heinr. Schütz, Albrici, Bontempi, and the above-named Bernhard, until about the year 1670. As a composer he was particularly distinguished for his energetic expression of the passions; for which reason Mattheson calls him the celebrated *affekt-zwinger* (passion subduer.)

PER BISCANTUM. (L.) An expression by which the old ecclesiastical musicians signified the composition and performance of music in two parts.

PERCACCIO, GIOVANNI, chapel-master and organist at Breno, published "12 *Sonate da Camera à tre*," Op. 1, 1698.

PERCY, JOHN, an eminent English ballad composer at the latter end of the last century. Amongst other songs he published "I know a bank," "Soft as yon silver ray," "Sweet smells the brier," "Song of a Spirit," and the very celebrated ballad of "Wapping Old Stairs."

PERCUSSIONAL. An epithet applied to instruments that are struck; as a drum, tabor, gong, or bell. *Percussion* is the actual striking of a note or chord, the touch on the piano-forte, &c.

PERDENDOSI, or PERDENDO, or PERD. An Italian participle, signifying that the passage over which it is written is to be performed in a time gradually decreasing to the last note, and with a tone insensibly sinking on the ear till entirely lost.

PERDIGAL, a celebrated musician in the reign of Louis XIV., composed many songs that were in fashion at the court of that monarch.

PEREGO, CAMILLO, a good poet and musician, was an ecclesiastic of exemplary character at Milan. During thirty-five years he was engaged in the office of church singing master; not only teaching the young scholars in the seminary, but also the Milan clergy, the Ambrosian *canto fermo*. A proof of his competence for this task was given, many years after his death, by the Cardinal Feder. Borromeo, who caused the compendium to be printed which Perego had used in his instructions. It is entitled "*Regola del Canto Fermo Ambrosiano*," Milan, 1622. The author himself published, during his lifetime, several musical works, amongst which is "*Madrigali à 4 voci*," Venice, 1555.

PEREIRA, DOMINGOS NUNES, a Portuguese monk and preacher, born at Lisbon, was also chapel-master to the cathedral there, and was highly celebrated for his musical acquirements. He died in 1729. Amongst numerous musical works left by him in manuscript, the following can be named: "*Responsorios da Semana santa à 8 Vozes*," "*Responsorios de Officio dos Defuntos à 8 Vozes*," "*Liçoes de Defuntos à 4 Voz.*," "*Confitebor à 8 Voz.*," "*Laudate, pueri, Dominum, à 8 Voz.*," "*Laudate Dominum, omnes gentes, à 4 Voz.*," and "*Vilhancicos e Motetes à 4, 6, e 8 Voz.*"

PEREIRA, MARCOS SOARES, royal chapel-master at Lisbon, died in 1655. Many of his works for the church are to be found in the Royal Musical Library at Lisbon.

PEREIRA, ANTONIO, a Portuguese regular ecclesiastic, born at Macao, in the bishopric of Guarder, in the year 1725, became rector of the Conventual School, and published, besides school books, much music for the church. His works were, however, all destroyed by fire in 1755.

PEREIRA, TOMASI, a Jesuit and Portuguese missionary, enjoyed great power at the court of the Emperor of China, between the years 1680 and 1692. He was appointed ambassador from Portugal, and in that quality concluded a peace with the Chinese, reserving a right of free exercise of the Christian religion throughout the whole Chinese empire. It is said that it was principally through his profound knowledge in music, that he became so great a favorite with the Chinese court.

PEREZ, DAVID, of Spanish extraction, was born at Naples in 1711. He owed his musical education to Antonio Gallo and Francesco Mancini. His progress in composition was rapid, and he discovered an uncommon genius. On leaving the Conservatory, he did not observe the usual custom of travelling throughout Italy, but repaired to Sicily, where he filled the functions of chapel-master in the Cathedral of Palermo. The Sicilians are not less sensible to melody than the Italians; perhaps they are more so. It is certain that their ear, their tact, and their musical taste are as much practised as those of the Neapolitans; for all the operas composed at Naples are performed in their theatres. Perez composed his first operas for the theatre at Palermo from 1741 to 1748. They were greatly esteemed by the Sicilians, who admired his learning no less than the spirit and fascination of his style. While in Sicily, this composer obtained great reputation. He returned to Naples, and soon after his arrival gave his opera of "*La Clemenza di Tito*," at the theatre of San Carlos. This work had as much success at Naples as his preceding compositions experienced in Sicily. The fellow-citizens of Perez acknowledged in his style that of the great masters of their school. His reputation increased; and he was invited to Rome by the manager of the great theatre, where he immediately became very celebrated.

His first work was the opera of "*Semiramide*;" that of "*Farnace*" soon followed, and the Romans confirmed by their plaudits the approbation of his countrymen. From Rome he proceeded to the other Italian cities, and successively composed "*Didone abbandonata*," "*Zenobia*," and "*Alessandro nell' Indie*" which sustained a comparison

with the operas of the best masters of the most celebrated schools of Italy. Whilst most of the Italian cities disputed the possession of Perez, Joseph, King of Portugal, invited him, in 1752, to Lisbon, as his chapel-master; and the suffrages of the Portuguese were added to those of the Italians, when they heard "*Demofonte*," the opera in which the author first discovered to them his talent and his style.

Gizziello was the principal soprano, and Raaf, the tenor, two very celebrated singers. In 1755, on the occasion of the queen's birthday, Perez composed a march in the manege, to the grand pas of a beautiful horse. On this occasion the King of Portugal assembled the following great singers: Elisi, Manzoli, Caffarelli, Gizziello, Veroli, Babbi, Luciani, Raaf, Raina, and Gundagni. The compositions of Perez had therefore every advantage execution could bestow. His operas "*Demetrio*" and "*Solimano*" enjoyed the highest repute in Portugal. Perez was stimulated to exertion in their composition by their alternate performance with the "*Vologeso*" and "*Enea nel Lazio*" of Jomelli. The former were esteemed for the learned construction of the instrumental parts, the latter for their graceful and expressive melody.

The compositions of Perez bear the stamp of genius, strength, and science; but perhaps they were deficient in grace. Dr. Burney is, however, of a different opinion. He says, "It appears, on examining his scores, that this master had not, like Jomelli, much exercised his pen in the composition of fugues or learned counterpoint for the church. There is, however, an original grace and elegance in all his productions."

Perez died in the service of King Joseph, aged sixty-seven, after living twenty-seven years in Portugal, much admired, beloved, and respected. A dirge of his own composition was performed by the best musicians in Lisbon. Like Handel, he was blind during the latter years of his life; and when laboring under this calamity, and confined to his bed, frequently dictated, without an instrument, compositions in parts. He sang with great taste, particularly cantabile and pathetic airs. The following is a more regular list of his principal works for the theatres, besides which he left much church music of almost unrivalled beauty, some delightful specimens of which may be found in Novello's collection of motets. Operas: "*Clemenza di Tito*," Naples, 1749; "*Semiramide*," Rome, 1750; "*Farnace*," Rome, 1750; "*Merope*," 1750; "*La Didone abbandonata*," 1751; "*Zenobia*," 1751; "*Demetrio*," 1751; "*Alessandro nell' Indie*," 1751; "*Demofonte*," Lisbon, 1753; "*Alessandro nell' Indie*," recomposed, Lisbon, 1755; "*Solimano*," Lisbon, 1755; "*Ipermestra*," Lisbon, 1755; and "*Ezio*."

PERFECT. A word variously understood by musicians. When conjoined with the term *chord*, it implies a concord which comprehends all the consonances. When applied to *cadence*, it signifies that close in which the dominant, or fifth, falls to the final or key-note. A *perfect consonance* is a just and determined interval, as the octave, fifth, or fourth; and with the old masters, *perfect time*, or measure, was that which consisted of a ternary number, and which was perfect, in contradistinction to the imperfect, or binary measure.

PERFECT CADENCE. This consists of the dominant harmony, followed by that of the tonic; thus:—

The first or leading harmony is always major.

PERFECT CONCORDS, or CONSONANCES. Certain intervals are so called; they are the unison, octave, fifth, and fourth. Such intervals, if altered by a ♯, b, or ♮, lose their consonant character.

PERFECT INSTRUMENTS. It may be said with much reason that the only perfect instruments now in use are the violin, the violoncello, the double bass, the tenor, and one or two others. On these, any tone of which their compass is capable can be produced in every possible variety of execution.

The piano-forte, delightful as are its powers, cannot produce a gliding sound from one note to the other; neither can it prolong a note for any length of time without losing at its termination the vigor with which it produced the tone at its commencement. In addition to these disadvantages it labors under another, which is common to all wind instruments. It can produce full tones, diatonic semitones, and chromatic semitones, but it cannot yield an enharmonic tone. On the piano-forte, on the harp, and on all wind instruments, (with the exception of the organ in the Temple Church, London,) G flat is F sharp; A flat is G sharp; E sharp is F natural; B sharp is C natural; E flat is D sharp; and so on. The difference is so nicely arranged as scarcely to strike the finest ear; but it is undoubtedly an obstacle in the way of perfection which will most probably be overcome by and by. The organ in the Temple Church, in London, which we have made an exception to the above complaint, is a curious specimen. The black notes are split, in order to provide for the production of enharmonic tones, and the effect on a nice ear is very agreeable.

As the majority of organs are not made on the last-named principle, they must be classed among the imperfect instruments. At the same time, it is believed that general opinion unites in ascribing to the organ the first place among instruments. It is capable of prolonging sounds, of producing multiplied chords, of modulating and swelling its tones at the option of the performer, of suppressing or expanding its volume, and, in a word, of doing every thing which any other instrument can perform, except of gliding from one note to another. (See ENHARMONIC ORGAN.)

PERFORMER. A practical vocal or instrumental musician.

PERGOLESE, or PERGOLESI, GIOVANNI BATTISTA, was born at Jesi, in 1710. His friends, discovering, very early in his infancy, that he had a disposition for music, placed him in the Conservatorio at Naples, called *Dei Poveri in Gesù Cristo*, which has been since suppressed. Gaetano Greco, of whom the Italians still speak with reverence as a contrapuntist, then presided over that

celebrated school. This judicious master, soon perceiving traits of unusual genius in his young pupil, took particular pleasure in facilitating his studies, and in communicating to him all the mysteries of his art. The progress of the young musician was proportioned to the uncommon advantages of nature and art with which he was favored; and at a time when others had scarcely learned the gamut, he produced specimens of ability which would have done honor to the first masters of Naples. At the age of fourteen he began to perceive that taste and melody were sacrificed to the pedantry of learned counterpoint; and after vanquishing the necessary difficulty in the study of harmony, fugue, and scientific texture of the parts, he entreated his friends to take him home, that he might indulge his own fancies, and write some music that was most agreeable to his natural perceptions and feelings. The instant he quitted the Conservatorio, he totally changed his style, and adopted that of Vinci; from whom he received lessons in vocal composition, and also from Hasse, who was then in high favor. Though he so late entered in the course which they were pursuing with such rapidity, he soon came up with them, and taking the lead, attained the point to which their views were directed, before either. With equal simplicity and clearness, he surpassed them both in graceful and interesting melody. His countrymen, however, were the last to discover or allow his superiority; and his first opera, performed at the second theatre in Naples, called *Dei Fiorentini*, met with but little success. The Prince of Stegliono, however, first equerry to the King of Naples, discovering great abilities in young Pergolese, took him under his protection; and from the year 1730 to 1734, by his influence, procured employment for him at the *Teatro Nuovo*. During this period his productions were chiefly of the comic kind, and, with the exception of the "*Serva Padrona*," in the Neapolitan dialect, which is unintelligible to the rest of Italy. It was not till the year 1735 that an account of his merit penetrated even as far as Rome, and inclined the directors of the operas there to engage him to compose for the Tordinone Theatre in that city. Pergolese, ambitious of writing for a better theatre, as well as for better performers than those for whom he had been hitherto employed, and happy in having the exquisite poetry of Metastasio's "*Olimpiade*" to set, instead of the Neapolitan jargon, went to work with the zeal and enthusiasm of a man of genius, animated by hope, and glowing with an ardent passion for his art. The Romans, however, by some unaccountable fatality, received his opera with coldness; and the composer being a young man but little known, they seemed to require to be told by others that his music was excellent, and would soon, by the admiration of all Europe, make them ashamed of their injustice and want of taste. To complete poor Pergolese's mortification at the ill reception of his opera, "*Nerone*," composed by Duni, the next that was brought out on that stage, had very great success. Duni, a good musician, and a man of candor, though greatly inferior in genius to Pergolese, is said to have been ashamed of the treatment which he received; and with an honest indignation declared, that he was out of all patience with the Roman public, (*frenetico contra il pubblico Romano*). He even tried, during the short

life of Pergolese's opera, to make a party in its favor among the professors, who were captivated with the beauty of the music: but their efforts were vain; the time was not arrived when judgment and feeling were to unite in its favor.

Pergolese returned to Naples with the small crop of laurels which had been bestowed on him by professors and persons of taste, who in every country compose but a very inconsiderable part of an audience. He was, indeed, extremely mortified at the fate of his opera, and not much disposed to resume the pen, till the Duke of Mateloni, a Neapolitan nobleman, engaged him to compose a mass and vespers for the festival of a saint, which was about to be celebrated at Rome with the greatest magnificence. Though Pergolese had but too much cause to be dissatisfied with the Roman decrees, he could not decline the duke's proposition; and it was on this occasion that he composed the mass, "*Dixit*," and "*Laudate*," which have since been so often performed and transcribed by the curious. They were heard for the first time in the Church of San Lorenzo, with general rapture; and if any thing could console a man of genius for such unworthy treatment as he had lately experienced at Rome, it must have been such hearty and unequivocal approbation as he now received in the same city. His health, however, daily and visibly declined. His friends had perceived, by his frequent spitting of blood, for four or five years before this period, that he was likely to be cut off in his prime; and his malady was still increased by his last journey to Rome. His first patron, the Prince of Stegliono, who had never withdrawn his protection, advised him to take a small house at Torre del Greco, near Naples, by the seaside, almost at the foot of Mount Vesuvius. It is imagined by the Neapolitans, that persons afflicted with consumption are either speedily cured or killed in this situation.

During his last sickness, Pergolese composed his celebrated cantata of "*Orfeo ed Euridice*," like Purcell, who, under similar circumstances, produced "*From rosy bowers*," retaining his faculties in full vigor to the last moment of his existence, and, to complete the parallel, cut off likewise in the prime of life. At Torre del Greco, he also composed his "*Stabat Mater*," whence he used occasionally to go to Naples, to have them tried. The "*Salve Regina*," which is printed in England, was the last of his productions; and he died very soon after it was finished, in 1736. The instant his death was known, all Italy manifested an eager desire to hear and possess his productions, not excepting his first and most trivial farces and intermezzi: not only lovers of elegant music, and curious collectors elsewhere, but even the Neapolitans themselves, who had heard them with indifference during his lifetime, were now equally solicitous to do justice to the works of their deceased countryman. Rome, now sensible of her former injustice, as an *amende honorable*, revived his opera of "*Olimpiade*;" a mark of respect which had never been before conferred on any composer of the eighteenth century. It was now brought out with the utmost magnificence, and that indifference with which it had been heard but two years before was now converted into rapture. Pergolese's first and principal instrument was the violin, which was urged against him by envious rivals, as a proof that he was unable to compose for voices. If this objection were ever

in force with reasonable and candid judges, it must have been much enteebled, not only by the success of Pergolese in voeal compositions, but also by Sacchini, whose principal study and practice, during youth, was likewise bestowed on the violin. There does not appear to be any foundation for the report that the premature death of Pergolese was occasioned by poison. The disease of which he died was a consumption; and, as envy was said to have stimulated his rivals to so base an expedient to remove him, it has been well observed, that the success of Pergolese's productions, during his lifetime, was never sufficiently brilliant to render him an object of envy to his brethren, so as to make it necessary to despatch him by unfair means.

PERI, GIACOMO, or JACOPO, a native of Florence, says Battista Doni, flourished about the beginning of the seventeenth century, and was a pupil of Christopher Malvezzi. He was not only a good composer, but a famous singer, and performer on keyed instruments. He set the principal part of the music to a serious opera, entitled "*Euridice*," the words of which were written by Rinuccini, for the royal nuptials of Mary of Medicis with Henry IV. of France, in the year 1600.

PERIELESIS. A term formerly used in church music, signifying the interposition of one or more notes in the intonation, to indicate the approach of the *finale*, and apprise the choir that they were to take up the theme.

PERILLO, SALVADORE, a Neapolitan, born in 1731, was a pupil of Durante at the same time as Nic. Piccini. After completing his musical education, he resided at Venice. He was a natural and agreeable dramatic composer, and succeeded especially in comedy. Amongst his operas are the following: "*Berenice*," 1759; "*La Buona Figliola*," 1759; "*I Viaggiatori Ridioli*," 1761; "*La Donna Girandola*," 1763; "*La Finta Simplice*," 1764; "*La Villeggiatura di Mestre*," 1769; "*I Tre Vagabondi*," and "*Il Demetrio*," 1776.

PERILLO, FRANCESCO, a Neapolitan dramatic composer, is enumerated as such in the Milan *Indice de' Spet'ac. Teatr.* for 1783.

PERINI, GIACOMO. An Italian dramatic composer at Milan in 1671.

PERIOD. A musical sentence composed of several members. The *period* of the ancient Greeks consisted of three couplets: the *strophe*, the *antistrophe*, and the *epode*.

PERIODENBAU. (G.) Periodology, the construction of periods, or composition.

PERMON, a harpist at Paris in the year 1794, was a pupil of Krumpholtz, and published "*Duo pour deux Harpes, dont la seconde peut s'exécuter sur le P. F., avec Acc. de Violon et B.*"

PERNE, FRANÇOIS L., born at Paris in 1772, was a pupil of the Abbé d'Haudimont. Perne was a professor of harmony, member of the Royal Academy of Music, and performer on the double bass in the chamber band of Napoleon. He composed some church music, amongst which is a mass for a full orchestra, performed at the Church of St. Gervais at Paris, being the first mass that was heard there after the troubles of the revolution. Perne was also a profound theorist in music.

PEROTTI, GIOVANNI DOMENICO, an Italian composer, born at Vercelli, resided, in 1789, at Rome, and wrote there his second serious opera, entitled "*Agosilao*." His first was called "*Zemira e Gardarte*," and was performed at Alessandria in 1787.

PEROTTI, AUGUSTINO, royal chapel-master of St. Mark at Venice, and member of the Philharmonic Academy at Bologna, wrote, in 1811, "*A Dissertation on the State of Music in Italy*," which was crowned by the academy of *belles-lettres* at Venice. Some highly interesting extracts from this work may be found in the first volume of the "*Harmonicon*," p. 137, &c.

PERPETUAL PSALMODY. See PSALMODY ISLAND, and LAUS PERENNIS.

PERRY, FREDERIC CLEMENT, was born at Cambridge, England, and received his musical education from his father till the age of twelve years, when he was placed under the care of Ambrose, organist of Chelmsford, with whom he continued a year and a half. At the age of sixteen he settled at Stortford, for the purpose of attending some pupils for his father, when he was appointed organist of the church there, which situation he held for about five years. In the year 1823, Perry quitted that town to reside at Belchamp Walter, near Sudbury, in Suffolk, at which village he had before passed several years of his youth, and at which place he remained. His principal instruments were the organ and piano-forte; for the latter of which he composed and arranged some pleasing music, especially the three airs, "*Scots wha hae*," "*Ah, perdona*," and "*My love is like the red rose*."

PERRY, GEORGE, a very ingenious musician, and leader of the band at the Norwich Theatre. In the year 1817, an oratorio of his composition was performed in London, entitled "*Elijah and the Priests of Baal*," and was allowed to be a work of talent. He has also published a recitative and air, entitled "*The high-born soul*;" this song is for a bass voice, and has been much admired.

PERSIANI, MADAME, one of the most celebrated operatic singers of this century, is the daughter of the famous tenor Tacchinardi. She was born about the year 1800. She has been distinguished for the almost unrivalled flexibility of her high soprano voice, and for her graceful execution of the most florid Italian music. In the winter of 1852 she was engaged in the opera at St. Petersburg.

PERSUIS, L'OISEAU DE, born at Avignon, was, in 1811, *chef d'orchestre* at the Academy of Music, and in Napoleon's chapel at Paris. About the year 1780 he produced at the *Coucert Spirituel* several motets of his own composition, and an oratorio entitled "*Le Passage de la Mer Rouge*," all of which had great success. In 1807 he brought out at the Academy of Music, in conjunction with Lesueur, "*Le Triomphe de Trajan*," and at the *Théâtre Feydeau*, "*Fanny Morina*," in three acts, 1799; "*Le Fruit Défendu*," in one act, 1800; "*Mirzel*," in one act, 1801; "*La Nuit de Grenade*," 1792; and "*L'honor et Angels*."

PERTI, GIACOMO ANTONIO, born at Bologna in 1656, was one of the greatest professors of the ancient school of music in that city. His compositions for the church are considered as classical. He was first in the service of the princes of Tuscany, and from thence was invited by the Imperial Court to Vienna, in which city he resided nearly the whole of his life. He formed many eminent pupils, at the head of whom may be placed the celebrated Padre Martini. According to Quadrio, Perti was living at Bologna in 1744, when he must have nearly attained his ninetieth year. His pupil Padre Martini published, in his "*Saggio di Contrapunto*," seven *chefs-d'œuvre* in sacred composition by his master Perti; and Paolucci, Padre Martini's pupil, also published four sacred pieces by Perti, in his "*Arte Pratica di Contrapunto*." Dr. Burney was in possession of a scientific mass for eight voices, by this composer; and among the manuscripts at Traeg's, in Vienna, is a piece by Perti, entitled "*Adoramus à 4 voci da Cantarsi nel Tempo dell' Elevazione il Venerdì Santo*." The following list contains his principal operas and two of his oratorios: "*Atide*," 1679; "*Marzio Coriolano*," 1683; "*Flavio*," 1686; "*Rosaura*," 1689; "*L'Incoronazione di Dario*," 1689; "*L'Ingegno acorpo per Vendetta*," 1691; "*Brenno in Efeso*," 1690; "*Furio Camillo*," 1692; "*Nerone fatto Cesare*," 1693; "*Il Re Infante*," 1694; "*Ladice e Barenice*," 1695; "*Apollo Geloso*," 1798; "*Le Premier Acte d'Arivostio*," 1699; "*Il Veneslao*," 1708; "*Lucio Vero*," 1717; "*Giesu al Sepolcro*," oratorio; and "*Morte di Giesu*," oratorio, 1718.

PERVIN, JEAN. Author of "*Chansons à quatre, cinq, six, sept, et huit Parties*," Lyons, 1578.

PESANTE. (I.) With importance and weight, impressively.

PESCETTI, GIOVANNI BATTISTA. A celebrated Venetian composer and pupil of Lotti. Immediately on the completion of his education, he composed a grand mass at Venice, at the beauty of which Hasse, who was present, was much surprised. "Nature," said Hasse, "has shortened for him the road to his art." About the year 1737, he went to London, where he resided two or three years. There his opera of "*Demetrio*" was performed at the King's Theatre, and had a run against Handel's opera of "*Giustina*," which was brought out at the same time at Covent Garden. He also produced in England a serenata called "*Diana ed Endimione*," which was sung at the King's Theatre in 1739. He in the same year published "*9 Sonate per il Cembalo*." Among his other operas we can name "*Il Prototipo*," 1726; "*La Cantatrice*," 1727; "*Dorinda*," 1729; "*I Tre Difensori della Patria*," "*Alessandro nell' Indie*," 1739; "*Tullo Ostilio*," 1740; and "*Ezio*," 1747.

PESCII, C. A., concert master to the Duke of Brunswick in 1760, gave his prince instruction on the violin. In 1767 he followed the duke to London, where he published "Three Sets of Trios for the Violin," Op. 1, 2, 3. He also published, at Offenbach and Leipsic, some music for his instrument. He died at Brunswick in 1793.

PESENTI, BENEDETTO, is named by Cer-

reto, in 1600, as one of the best contrapuntists of that period.

PESENTI, MARTINO, an instrumental composer, was born at Venice in 1640. He was blind from birth. Many of his works were published, amongst which we can name "*Caprica Stravaganti*," Venice, 1647; "*Misse à 3 Voci*," Venice, 1647; "*Motetti a 3 Voci*," Venice, 1647; and "*Correnti alla Francese, Balletti, Gagliarde, Passemezzi, parte Cromatici, e parte Enarmonici, à 1, 2, e 3 Strom. Lib. 1-4*," Venice, 1647.

PESTALOZZIAN SYSTEM. This system of teaching music is now considered, by amateurs as well as instructors, as incomparably the best system extant. It presents to the student a most perfect and beautiful analysis and synthetical arrangement of the elements of music, calling his attention to one character after another, just as fast as his progress demands it, and no faster. It flings away most of the technical encumbrances which have so puzzled young beginners, and makes the whole subject so simple that a child six years old can understand it. It is called the Pestalozzian system, because it is the inductive mode of instruction, and because it was prepared by, and first applied to, music under the patronage and direction of a wealthy Swiss gentleman by the name of Pestalozzi. Professor Mason, of Boston, claims to have introduced it into this country—he having had it translated from the German of Kubler. This method of teaching was adopted by the Boston Academy of Music, and it has since been introduced into common schools very extensively.

PESTEL, JOHANN ERNEST, a celebrated court organist at Altenburg, was born in 1659. He was a pupil of the great organist Johann Ernest Witte, and afterwards of the younger Weckmann. On the completion of his studies he was appointed organist at Weida, in Voigtland, from whence he passed to the same situation at Altenburg; finally, in the year 1687, being appointed court organist. He was living in 1740. He composed much music for the organ, and many sacred pieces, none of which, however, were printed.

PETERSEN, P., a flutist at Hamburg, was considered, towards the close of the last century, second only to Dulon on his instrument. He composed much music for the flute, some of which may be found in Plant's "*Erato and Euterpe*," Hamburg, 1790. Petersen also, after much patient investigation and a variety of trials, was so successful as to invent a piece of mechanism for the improvement of the flute, which, from its effect and simplicity, is equally valuable and praiseworthy. It is a small lever, one inch in length, which can easily be moved by the thumb of the left hand. By means of this, the pitch of the flute is in an instant raised or depressed the eighth of a tone, and, while playing, the *crescendo* and *decrescendo* are maintained perfectly pure. With the assistance of a small fine-wormed screw, which, from its effect, is called the *pitch-screw*, the flute may be tuned with very little trouble, and without disturbing the effect of the lever. The whole arrangement is in the highest degree simple, and, with respect to its construction and duration, is far preferable to the key. M. Petersen adds, that the knobs or

projections which are necessary to receive the metal and pins of the keys, are injurious to the tone of the flute; that the pins will necessarily give, in course of time and friction; and that the stoppers, being thus disarranged, will yield the tone with less purity. In his flute, the two lower pieces are united into one; the middle piece has but a very trifling projection, and is not to be separated from the mechanism above described, which is affixed to both parts. Next comes the headpiece, which is free from all metal, and only four inches in length, on which is the mouthhole. This is affixed to it in the same manner as the mouthpiece of a clarinet. By means of these improvements, M. Petersen's flute attained a degree of perfection unknown in this instrument before.

PETIT, MILE. A remarkable little *pianiste*, who arrived in this country in 1851, accompanied by her father, M. Petit, the composer and clarinetist. This diminutive phenomenon, who is eleven years of age, is a *protégée* of the royal family of Holland, and has repeatedly performed before them some of the most difficult music written for the piano. She sits down to the instrument with all the *aplomb* of a full-grown artist, and her little fingers sweep over the keys with a skill and precision that seem like magic. Her style is brilliant, rapid, thorough, clean, and correct.

PETIT, ADRIEN, called also **COCLICUS**, a musician of the sixteenth century, and pupil of Josquin Deprès, published in 1552, at Nuremberg, a musical work, in which he treats, first, on the manner of singing with taste; secondly, on the rules of counterpoint; and thirdly, on composition.

PETIT CHŒUR. (F.) The little choir. A sacred composition in three parts is said to be à *petit chœur*.

PETIT, N., a clarinet pupil of Charles Duvernoy, performed with great success on that instrument, in the concert of the pupils of the Conservatory at Paris, in the year 1802.

PETITE MESURE À DEUX TEMPS. (F.) Two crotchet time, marked $\frac{2}{4}$.

PETRI, GEORG GOTTFRIED, singer and conductor of the music at Gorlitz, was born in 1715. He published in 1765 a dissertation, in Latin, to prove that the conjunction of musical with other studies is not only useful, but necessary to scholars. He also published the following practical works: "Cantatas for all the Gospels of Sundays and Holidays," 1757; "Musical Amusements," in two volumes, 1761 and 1762; and "The three Men in the Furnace," a musical drama, 1765. He died at Gorlitz in 1795.

PETRI, JOHANN SAMUEL, singer and professor at the gymnasium at Baudissin, was born at Sorau in 1738. He published in 1767 "*Anleitung zur practischen Musik*," (Introduction to practical Music.) In 1772 he was nominated to his place of singer. His work, it is said, might serve as a model of the didactic style. It treats, first, of music in general; secondly, of thorough-bass; thirdly, of the organ; fourthly, of the harpsichord and other keyed instruments; fifthly, of the violin and tenor; sixthly, of the violon-

cello and double bass; and seventhly, of the flute.

PETRIDES, (the two brothers.) Joseph was born in the year 1755, and his brother Peter in 1766, at Praguc. Their father was a respectable organist, and the sons very early followed the same profession. Joseph, however, when in college at Klosterbruk, in Moravia, had not an opportunity of practising the organ, but was obliged to learn nearly all other instruments, particularly the French horn. As there was music in the church every day, he of course soon made progress on that instrument, so that he could, in a few years, play tolerably well the concertos of Puntò. His brother Peter, at that time in Prague, having taken a fancy to the same instrument, Joseph, when he returned to Praguc, studied, with his brother, the double concertos composed for Balzar and Thirsmid by Rosetti, and they soon began to perform in public; after which, being encouraged by success, they travelled, and gave public concerts in most of the principal towns of Germany. In the year 1791, at Vienna, they had a profitable public concert at the national theatre. Soon after, they had the honor to play before the imperial family. After this success, they felt the curiosity, or perhaps vanity, to visit Italy, particularly as they had good recommendations for Venice, Florence, Rome, and to the Queen of Naples. In 1793, when at Naples, and the day already fixed to play before the court, the fatal news arrived, that the King of France was guillotined! The queen, on this, sent the Petrides a present of twenty-four ounces, and retreated to Casserta. Soon after this, under the patronage of Count Esterhazy, Austrian ambassador, of the Chevalier and Lady Hamilton, &c., &c., the Petrides had a public and successful concert at the theatre Dei Fiorentini, under the direction of that kind and great composer, Cimarosa. In a few weeks they set out for Rome, with many letters of recommendation. There they played before several of the cardinals, receiving many benedictions, but no money, except from Cardinal Herzan, Austrian ambassador, Duke Ceri, and Prince Giustiniani.

At the basilic of St. Peter, they had the honor to kiss publicly the feet of his holiness Pius VI., and had the papal benediction for it. But this benediction seems to have availed them little; for within two days after that epoch, Joseph was attacked with a dangerous putrid fever, and his brother with the same, the day after. It was in the month of July, when the heat was excessive, and the danger was consequently imminent; bleeding, plastering, &c., &c., were continued, till poor Joseph was reduced to a skeleton. At length, after seven weeks, they began to be a little better, and as they intended to go from Rome to Florence, they resolved, for the purpose of avoiding the expenses of a land journey, to go from Civita Vecchia by sea, particularly also as the physician recommended it to them for the benefit of the air. They accordingly embarked at Civita Vecchia for Leghorn, when, in the following night, so violent a storm came on that the ship and all on board were considered as lost, and before daylight they were wrecked on the coast of Biombino. Men and women were all obliged to throw themselves in the water; when the poor but charitable sailors, swimming to their relief,

carried their half dead to the shore. The trunk of the Petrides, with their clothes, music, their boxes with instruments, all their little property, was under water. With great difficulty, however, they recovered the next day some of their things, but all either damaged or completely ruined. The poor Petrides, in bad health, and under these sad circumstances, were reduced to the last extremity: they could not understand how it was possible, that, after so many benedictions as they had received at Rome, so many disasters should immediately befall them; but so it was! At last they got to Leghorn by land; but Joseph, from so much suffering, was again worse, and obliged to keep his bed during six weeks. At last he recovered so far that they could attempt a public concert, which succeeded tolerably well. From Leghorn they set out for Geneva, where, after another successful concert, they embarked for Spain, but again, in the Gulf of Lyon, encountered a terrible hurricane, which drove them to the little Sardinian island of St. Peter, where, after two months' delay, the ship was repaired, and they embarked again, and landed in 1794 in Barcelona. Here they also engaged at the Italian opera, and produced some songs of their own composition with horns obligato, which had a good effect, and procured them two very profitable benefits at the same theatre. In this city they met M. Sor, who, then only fourteen years old, had composed an Italian opera, called "*Calipso*," which surprised and pleased every body in that place. There being now war nearly throughout all Europe, the brothers resolved to rest for some time in the delightful climate of Spain; but after the peace of Campo Formio between France and Austria, they determined to travel in France. There they gave concerts in nearly all the principal towns. At Paris they played twice at the amateur concerts, and twice at the Théâtre Louvois between the acts. Soon after, war between Austria and France being again declared, they were obliged to return a second time to Spain. In the year 1799 they were at Madrid, and were engaged for eight oratorios, to play every night a concerto or solo at these performances: their echo concertante had great success. They were also invited to different private concerts, and at last were commanded to play before their Catholic majesties Carlos IV. and the Queen of Spain. As the king was one of the best tempered of men, and a passionate amateur of music, he took himself the part of primo violino, and led with M. Vaccary (well known in London) the music of Petrides. At the end of the concert, the chamberlain of the king handed the brothers a present of 9000 reales, or 750 pesos duros, all in gold. A few days after, they were recalled a second time to play before the royal family, and received two gold watches, one set in pearls, another with small diamonds, also gold chains to both. Besides these gifts, the queen was so benevolent as to present them with a letter of recommendation for the Princess of Brazil, afterwards Queen of Portugal. Soon after they left Madrid for Lisbon, where they were advantageously engaged at the Italian opera; they also were engaged to play between the acts, sometimes a concerto, at other times a solo or *concertante con eco*, for which they received at the same theatre two very productive benefits. Fortunately for the Petrides, it happened that, just

at that epoch, his royal highness, Prince Augustus of England, afterwards Duke of Sussex, was at Lisbon, who heard the brothers play obligato at the theatre, and soon after sent for them to his palace, where they had the honor to play frequently before his royal highness. The prince was then so kind as to give them four letters of recommendation for the royal family of England; and when the Petrides, after some months, went to London in 1802, these letters were of the greatest advantage to them, and directly procured them many engagements. Their first *début* at London, was for the benefit of Salomon, at Willis's rooms, where they played, in the first act, a double concerto, and in the second an echo concertante, which was universally applauded and encored. Three days after they were offered the engagement of the Italian opera, which they accepted for the subsequent season. They had soon many private concerts, and shortly after the principal engagements, as hornists, at London and in the country. Thus, after a wandering and eventful life of fifteen years over the greatest part of Germany, all Italy, Sicily, Malta, France, Spain, and Portugal, the Petrides settled in London; and they declared that they soon found England to be the best, the most generous, and most hospitable country under heaven.

PETRINI, chamber musician and harpist of the Chapel Royal at Berlin, died in that city in 1750.

PETRINI, FRANZ, son of the preceding, and born at Berlin about the year 1744, was considered a more able performer on the harp than his father. In 1765 he was at the court of Mecklenburg-Schwerin, and from thence went to Paris, where he died in 1819. He published many works for his instrument, as also "*Système de l'Harmonie*," Paris, 1796.

PETRINO, JACQUES. An Italian contrapuntist of the sixteenth century. Among his works is one entitled "*Jac. Petrino Jubilo di S. Bernardo, con alcune Canzonette Spirituali à 3 et 4 voci*," Parma, 1589. This work is still in the Royal Library at Munich.

PETROBELLI, FRANCESCO, chapel-master of the cathedral church at Padua, published "*Motetti*," Venice, 1657; "*Salmi Dominicali à 8 voci*," Op. 19, Venice, 1686; and "*Psalmi breves, 8 vocibus*," Op. 17, Venice, 1686.

PETRUCCI, ANGELO, an Italian composer, brought out at Mantua, in 1766, the opera of "*La Nitteti*."

PETSCHKE, ADOLPH FRIEDRICH, was, in the year 1795, a theological candidate and director of the Royal Saxon Institution for the Deaf and Dumb, in which city he was born in 1759, and where he published the two following musical works: "*Anhang zu Meerbachs Clavierschule*," 1784, and "*Versuch eines Unterrichts zum Clavierspielen*," 1785. He died in Leipzig in 1822.

PETTEIA. (Gr.) The last of the three parts into which the *melopœia* of the ancients was subdivided. According to Aristides Quintilian, it was the art of ascertaining the sounds which ought, or ought not, to be used; those which should be more or less frequently introduced, and those with which the strain ought to conclude.

PETTO. (I.) The chest; as, *voce di petto*, the chest voice.

PEU. (F.) A little.

PEVERNAGE, ANDREAS, chapel-master of St. Mary's Church at Antwerp, was considered one of the best composers of his time. He died in that city in 1589. Amongst his numerous works we can name "*Chansons à 5 part.*," Antwerp, 1547; "*Cantiones Sacr.* 6, 7, et 8 voc.," Antwerp, 1578; "*Chansons Spirituelles à 5 part.*, Liv. 1 et 2," Antwerp, 1589 and 1590; "*Chansons Spirit. à 5 part.*, Liv. 3 et 4," Antwerp, 1590 and 1591; "*Missa* 5, 6, et 7 voc.," *Missa*, under the title "*Laudes Vespertine Mariæ, Hymni venerabilis Sacrament., Hymni sive Cantiones Natalitiæ*, 4, 5, et 6 voc.," Antwerp, 1604; "*Harmonia Cælestis*," Antwerp, 1583. This work contains compositions for four, five, six, and eight voices, collected by Pevernage; and "*Harmonia Cælestis*," part ii., Antwerp, 1606. It will be seen that several of the foregoing works were published after the death of Pevernage.

PEZ, JOHANN CHRISTOPH, born at Munich, was court and chamber musician there, and afterwards chapel-master at Cologne and Stuttgart, in which latter town he died in 1716. He published much sacred and instrumental music.

PEZELIUS, or BEZEL, JOANNES. A celebrated German musician towards the close of the seventeenth century. He published many musical works in the Latin language, between the years 1674 and 1686.

PEZOLD, CHRISTIAN, professor of the harpsichord at the Chapel Royal, and organist of the Lutheran Church at Dresden, was, in the opinion of Mattheson, a skillful performer, and one of the most agreeable composers of his time. Graun, who was his pupil, fully confirms this testimony. Some persons affirm that he was living in 1739, whilst by others it is said that his death took place in 1733.

PEZZANA, an Italian musician, was considered eminent in his own country about the year 1800.

PEZZE (I.) Fragments, select detached pieces of music.

PEFAFF, MARTIN. Master of the band of a German infantry regiment in garrison at Freyburg in 1795. He composed the music of the following operettas: "*Die Lyranten*," and "*Die Komödianten von Quirlewoitsch*."

PEFAFFENZELLER, F. B., a composer at Munich, published "*Deutsche Lieder*," Ingolstadt, 1797, and "*Neue Lieder, zweyter Theil*," Augsburg and Munich, 1799.

PEFFINGER, PH. J. This musician was born at Strasburg. Having, from his infancy, evinced a strong disposition for music, his first steps in that art were directed by Ph. J. Schmidt, under whom he made rapid progress on the piano and in counterpoint. In the year 1790 he was nominated, by the senate of Strasburg, chapel-master of their city, and director of the music at the *Temple Neuf*. At this period he formed an acquaintance with Pleyel, who was then chapel-master of the cathedral, and in the following year he accompanied Pleyel to London, where he remained six months. It was in that metropolis that he had the opportunity of becoming known to the immortal Haydn: there, also, he acquired a taste for the study of Handel, being charmed with the oratorios of that great master, as per-

formed in London. Peffinger published about eighteen works, some for the piano-forte and others vocal. He also composed for the Royal Academy of Music, in Paris, the opera of "*Zaira*," words by Voltaire. He died in Paris in 1821.

PFEIFFER, FRANZ ANTON, a celebrated performer on the bassoon, was born in Germany in 1750. He was chamber musician to the Duke of Mecklenburg. He composed much music for his instrument, none of which, however, was published. He died in 1792.

PFEIFFER, JOHANN, chapel-master to the Margrave Frederic, of Brandenburg-Culmbach, was born at Nuremberg in 1697. He was a violin pupil of Fischer, and composed much music for the violin and harpsichord. He died in 1811.

PFEIFFER, J. M. A composer of some vocal and instrumental music published in England and at Manheim in the latter part of the last century. Among his works are "Six English and Six Italian Ariettes," first book, London, 1789; "Six English and Six Italian Ariettes," second book, London, 1789; "*Sonate à 4 mains, Il y a de la malice dedans*," Manheim; "*Il Maestro e Scolare à 4 m.*," Manheim; "Three Pieces and One Concerto for the Harpsichord, with Fl. and Vc.," London, 1789; and "*Douze petits Pièces caractéristiques pour le Clav.*"

PFEIFFER, TOBIAS FRIEDRICH, professor of music at Dusseldorf, was born near Weimar, and was for many years an actor in that town. In 1789 he brought out, of his own composition, at a private theatre in Leipsic, a musical interlude, entitled "*Die Freuden der Redlichen*." Previously to the year 1801, several of his works for the piano-forte, and a cantata, had been published.

PFEILSTUKER, F. Under this name were published at Augsburg, in 1800, "*12 Lieder mit Begleit. des Klav.*"

PFEILSTÜCKER, N., a professor of the clarinet, probably resident at Paris, published there, in 1802, "*Concert. pour Clarinette princip.*"

PHILHARMONIC SOCIETY. A musical subscription society in London, of long and respectable standing. It consists of directors, associates, conductors, and regularly engaged performers; and, in the oratorios, operas, glees, duets, songs, overtures, concertos, preludes, studies, &c., which form its *bills of fare*, gives the finest specimens of vocal and instrumental execution. Philharmonic Societies also exist in many of the principal cities in Europe and America. Their music is principally orchestral.

PHILHARMONIC HALL, at Liverpool, built in 1840. In its general architectural plan, it resembles the hall at Birmingham, but differs in being divided at the sides into shallow compartments or recesses, somewhat resembling the boxes of a theatre. Within the podium, or main body of the house, the length is one hundred and six feet; the width is sixty-four feet, and the height sixty-five feet. It has a flat ceiling, with deep panels, and a coving; it is lighted, at evening, by a series of gas jets placed on the top of the cornice, some fifty feet above the level of the floor. It will seat two thousand and two hundred persons.

PHILIDOR, MICHEL DANICAN, born in Dauphny, was musician to Louis XIII. His real name was Dnican, and it is said that the king first occasioned his being called Philidor, because he had heard a celebrated player on the hautboy of that name, and, on hearing Danican perform on the same instrument, exclaimed, "*J'ai trouvé un second Philidor.*"

PHILIDOR, FRANÇOIS ANDRÉ DANICAN, great-grandson of the preceding, was born at Dreux in 1726, and entered as page in the band of the King of France, then under the direction of the chapel-master, Camppra. He devoted himself from very early life to the study of composition, in which he made a rapid progress. In 1737, being then only eleven years of age, he composed his first motet, with full choruses, which had such success that the king complimented him after its performance. Having at the usual age quitted the situation of page, he settled at Paris, where he supported himself by teaching and copying music, and every year went to Versailles to have a new motet of his composition performed there. The extreme partiality of Philidor for the game of chess, and the reputation which he had acquired in playing it, at length induced him to travel, and in 1745 he left Paris for Holland, England, Germany, &c. His musical taste was much improved by his travels; in the course of which he had often the opportunity of hearing the works of the first masters both of Italy and Germany. In 1753 he was in England, and put his knowledge of the English language and musical taste to the proof, by setting to music Dryden's Ode to St. Cecilia. We believe this was never either printed or publicly performed, though it is said to have been submitted to Handel, who found the choruses well worked up, though the work was in other respects not without faults. Philidor had, however, turned his mind, whilst in England, more to chess than music, and in 1749 published there his analysis of that game. On his return to France in 1754, he again betook himself to musical studies; and a motet by him, entitled "*Lauda Jerusalem,*" was sung at Versailles before the queen of Louis XV., who considered it to be much in the Italian style, which she did not like, and therefore refused Philidor the appointment of chapel-master, which he had hoped to obtain. He next turned his mind to dramatic composition, and the first entire piece that he produced was entitled "*Blaise le Savetier.*" It was performed with the greatest success at the fair of St. Laurent in 1759; and it is from this epoch that his musical reputation commenced. He may be regarded as one of the founders, with Duni and Monsigny, of the modern French comic opera. The most successful of his dramatic works for the Opera Comique are, "*Le Soldat Magicien,*" 1760; "*Le Maréchal,*" 1761; this had more than one hundred representations; "*Saucho Pança,*" 1762; "*Le Bûcheron,*" 1763; "*Le Sorcier,*" 1764; "*Tom Jones,*" 1765; and "*Les Femmes vengées,*" 1775. His other productions for the same theatre are, "*Zéline et Mélide;*" "*Le Quiproquo;*" "*La Nouvelle Ecole des Femmes;*" "*L'Amitié au Village;*" "*Le Bon Fils;*" "*L'Huître et les Plaideurs;*" "*Le Jardinier de Sidon;*" "*Le Jardinier supposé;*" and "*Le Jardinier et son Seigneur.*" He also composed for the Royal Academy of Music "*Bélisaire,*" opera in three

acts; "*Thémistocle;*" "*Persée;*" in this opera a song by Medusa, "*J'ai perdu la beauté qui me rendait si vain;*" is considered as a *chef-d'œuvre* of harmony; lastly, "*Ernelinde.*" We should add, that Philidor likewise set to music the "*Carmen seculare;*" he finished this composition in London in 1779, and it is considered his best work. He died in London in 1795, generally beloved for his evenness of temper, his probity, and his extreme disinterestedness.

PHILIPPI, GASPARO. A celebrated church composer about the year 1600.

PHILIPPUS DE MONTE, so called from Mons, the place of his birth, a learned musician in the sixteenth century, was born in 1522. Many masses, motets, madrigals, &c., were published in his name. Next to Orlando Lasso, who was also a native of Mons, Philippus is the most celebrated of the musicians of the Flemish school.

PHILLIPS, PETER, an English composer, who resided chiefly on the continent, being for some time organist of the collegiate church of St. Vincent, at Soignies, in Germany, and afterwards engaged in the service of Albert, Archduke of Austria. Dr. Burney says, that "the first regular fugue for the organ, upon one subject, which he had ever met with, was composed by Peter Phillips, about the end of the sixteenth century." It is inserted in the virginal book of Queen Elizabeth, which contains eighteen or twenty of his compositions.

PHILLIS, M., a professor of the guitar at Paris, published "*Etude nouvelle pour la Guitare ou Lyre, dans les tons les plus usités majeurs et mineurs, où l'on démontre les difficultés, les agréments, et les positions du demanchement, composé par Phillis,*" Paris, 1799, and "*Six Romances nouv. avec Acc. de Guitare,*" Paris, 1801.

PHILGELIA. A kind of hymn sung by the ancient Greeks in honor of Apollo.

PHILOMUSICAL. An epithet applied to any country, city, town, or society, which loves, cultivates, and encourages the musical art.

PHILOMATHES, WENCESLAUS, born in Bohemia, flourished at the beginning of the sixteenth century. His principal works are "*Musica plana,*" Vienna, 1512, and Strasburg, 1543; "*Liber Musicorum quartus de regimine utriusque cantus, et modo cantandi,*" Leipsic, 1518; "*Compendium Musicae,*" Wittenberg, 1534; and "*Wencesl. Philomathis, de nova Domo, Musicorum Libri 4, compendioso carmine lucubrati,*" Strasburg, 1543.

PHILOXENUS. This celebrated poet and musician was a native of Cythera, and author of a great number of lyric poems, which are entirely lost. His innovations in music are stigmatized by Plutarch and the comic poets of his own time. He was so great an epicure, that he is said to have wished for a throat as long as that of a crane, and all palate, in order to prolong the relish of the delicious morsels he swallowed. He was, however, as much celebrated for his jests as his gluttony. Being served with a small fish, at the table of Dionysius of Syracuse, and seeing an enormous turbot placed before the tyrant, he put the head of the little fish close to his mouth, and pretended to whisper to it; then placed it close to his ear, as if to receive the answer more distinctly. Upon being asked by Dionysius for

an explanation of this mummery, he said, "I am writing a poem, sir, upon Galatæa, one of the Nereids, and as I want information concerning several particulars relative to her father Nereus and the watery element, which are quite out of my ken, I was in hopes of obtaining some satisfaction from this fish; but he tells me that he is too young and ignorant to be able to satisfy my curiosity, and refers me to that grown gentleman before your majesty, who is much better acquainted with aquatic affairs." The tyrant understood him, and had the complaisance to send the turbot. But though, from this instance, he appears to have been high in favor with Dionysius, he afterwards proved so awkward a courtier, that he preferred the labor of carrying stones from a quarry to the disgust of praising the bad verses of his patron.

PHINOT, or FINOT, DOMINIQUE, a composer of sacred and profane vocal music, chiefly published at Venice and Lyons, between the years 1547 and 1564.

PHONASCOS. (Gr.) The name given by the ancients to one who taught the management of the voice.

PHONICS. The art of treating and combining musical sounds.

PHORBIA. (Gr.) A certain bandage used by the ancient vocal performers. Called also a *capistrum*. See that word.

PHORMIX. (Gr.) A stringed instrument of remote antiquity, similar to the cithara, or lyre, but supposed to have been of superior tone and power.

PHOTIX. (Gr.) The name given by the ancients to their crooked flute. Its shape was that of a bull's horn, as may be seen in many gems, medals, and remains of ancient sculpture. The ancient Egyptians also had a flute to which they gave the same name.

PIRASE. Any regular and symmetrical course of notes which commence and complete the intended expression.

PHRASES MANQUÉES. (F.) Certain imperfect and unsymmetrical passages, or phrases, sometimes introduced by injudicious composers, by which the melody is maimed, and the expression destroyed or weakened.

PHYRGIAN. An epithet applied by the ancients to that of their modes which held a middle place between the Lydian and Doric, so called because supposed to have been invented by the Phrygian Marsyas. The Phrygian mode was one of the most ancient in the Greek music. Its character was bold, impetuous, and vehement to a degree perfectly terrific. In this mode the trumpets and other military instruments were used. The lowest note in this mode corresponded with our E natural, on the third space in the bass.

PHYRYSIS, of Mitylene, was the first who, at the Panathenean games, obtained the prize on the cithara, about four hundred and fifty-seven years before Christ. According to Suidas, he was originally King Hiero's cook; but this prince, chancing to hear him play on the flute, placed him under the instructions of Aristocides, a descendant of Terpander. Phrynis may be regarded as one of the first innovators upon the cithara, in antiquity. He is said to have played in a delicate and effeminate style, which the comic poets Aristophanes and Pherecrates ridiculed upon the stage.

PIACERE. (I.) Will, pleasure; as, a *piacere*, at the pleasure of the performer.

PIACEVOLE. (I.) In a pleasing style.

PIANGENDO. (I.) Plaintively.

PIANGEVOLMENTE. (I.) A term implying that the movement to which it is prefixed, or the passage over which it is written, is to be performed in a soft, doleful, and complaining style.

PIANISSIMO, or PIANISS, or P P. (I.) Very soft. The superlative of *piano*.

PIANIST. One who plays on the piano-forte; a professor of that instrument.

PIANO, or PIA., or P. (I.) Soft. A word used adverbially in opposition to *forte*, loud or strong.

PIANO A QUEUE. (F.) A grand piano-forte.

PIANO CARRÉ. (F.) A square piano-forte.

PIANO-PIANO, or PIU PIANO. (I.) More soft, or very soft.

PIANO-FORTE. (I.) A well-known stringed and keyed instrument, of German origin; so called from its equal command both of softness and strength. The chief beauty of this instrument, and which, indeed, constitutes its principal advantage over the harpsichord, is its capacity of obeying the touch, so as to enable the performer to vary and accommodate the expression to all those delicacies, energies, and striking lights and shades which so greatly characterize the more refined compositions of the present day. The piano-forte, though of recent invention, has received both in Europe and this country many useful and invaluable improvements; and in that state in which it assumes the name of grand piano-forte, and is furnished with its additional keys, is not only qualified to give brilliancy of effect to sonatas, concertos, and all pieces of extraordinary execution, but forms an expressive accompaniment to the voice, and is one of the noblest and most elegant instruments in the whole compass of musical practice.

The piano-forte, above all other instruments, is best calculated to form a musician; it is the epitome of an orchestra — an abridgment — a *multum in parvo*, which can enable the performer not only to conceive, but express, all possible harmonious combinations by himself, independent of the aid of others; the degree of his success, of course, being in proportion to his capabilities of developing the almost inexhaustible powers of the instrument. Even if he be not able to render them adequate vindication, he can arrive at a better notion of harmony or counterpoint by the help of the piano-forte, and in less time too, than is possible through the means of any single-voiced instrument. The piano-forte has been the means of developing the sublimest ideas of the composer, and the delicacy of its touch has enabled him to give the lightest shades as well as the boldest strokes of musical expression. It is, of all instruments, preëminently the best for the accompaniment of the voice; and no performer, however skilful, can so well support the singer as he who is able to vent his feelings in the power of song. If the piano-forte cannot show itself to advantage amidst a crowd of instruments, it plays its part well in private. On what instrument can we find the *score* or *partition* of a composition in all its *nuances*, its delicate shades of meaning, (in construction as well as expression,) so well in

terpreted together, as on the piano-forte, when it is under the magical fingers of a Henselt or a Chopin, or is awakened into almost conscious musical existence at the Promethean touch of a Liszt! Who that ever heard this last-mentioned marvel sing Schubert's Serenade, or instrument Rossini's magnificent overture to "*Guillaume Tell*" on the piano-forte, was not enraptured to the highest enthusiasm which the musical art can awaken in a sensitive mind? No hautboy or cor Anglais ever expressed the "*Ranz des Vaches*," in that delicious overture, with more soul-breathing tenderness or *sostenuto*! And yet we are told by some that the piano-forte is incapable of sentiment, because neither the *glissade* nor the *trill* (close shake) of the violin tribe of instruments can be effected upon it. With respect to these latter capabilities, when used (as generally they are) to excess, they produce a disagreeable effect, *usque ad nauseam*; while on the other hand, the piano-forte possesses enough power to express the most delicate *legato* or *crescendo* passages, when under the treatment of hands that "be cunning in their art;" and as to power or strength of sound, we surely do not wish the scale, or portions of the scale, of a single instrument, to resemble those great guns in a fortification at Groningen, which (according to Strada) had the names *ut, re, mi, fa, sol, la*, from the sounds uttered by them in their explosion!

The organ is certainly the noblest instrument for majesty of sound, which, in a large-scaled structure, may be combined and varied with infinites of registers and qualities, at the pleasure of an ingenious performer; but with regard to sentiment, it admits no more than appertains to strongly-opposed contrasts of *forte* and *piano*. It is true some beautiful effects can be produced by the use of the *scoll*, but still the touch has no power to communicate sentiment to an individual tone, the *crescendo* and *diminuendo* being too slow in their operation to obey the sudden dictates of an enthusiastic musician. Yet be it not supposed for a moment that this mighty construction of musical ingenuity — this congregation of giant reeds, so associated with the "capacious mouth" of the Polyphemus Handel, has been spoken of irreverently here. Forbid it, Music! The pedal of a great organ is the voice of sublimity.

The harp (the poet's musical idol) only presents to the ear a *pizzicato* tone, similar to the strings of the violin, &c., when pinched by the fingers instead of sounded by the bow. It is also an instrument more indebted to romantic association than to any intrinsic power of expression, although we read of most extraordinary effects having been produced by it, and its relation, the lyre. It is an elegant and graceful instrument; but its sentiment, like that of lip-oratory, never reaches the heart. The harp is a thing rather to be read about, more to be idealized than enjoyed on its own peculiar pretensions. One of the greatest disadvantages of the harp (and all instruments of the same description, such as the guitar, mandoline, &c.) is, that it cannot remain in tune, from the circumstance of the strings requiring to be pulled, in order to produce tone, which renders it flat. When a performer upon the violin, viola, or violoncello is tuning his instrument, should he have drawn up one of the strings too sharp, a slight pull with the fingers, in

the manner the harp is played, is often found sufficient to slacken it enough to render it perfectly in tune; thus, if merely pulling a string on a violin once or twice will alter the pitch, it necessarily follows, that the same thing being constantly done upon the harp must render that instrument out of tune.

The guitar is capable, in a small space, of the most heart-touching expression; but then its tone is not fit to be heard from afar, even in a theatre or concert room; besides, its style of harmony (in the best of hands) is not *comme il faut*, or perfectly according to severe counterpoint; nor, strange as the assertion may seem, can it admit of alteration without injuring the genius of the instrument. This is plain from a comparison of Huerta's performance with that of the accomplished and scientific Sor.

Now, the piano-forte (be it always understood, in the hands of a great master) has advantages over every other instrument, too, which will be enumerated here. In the first place, none possesses the extensive range, the depth of bass combined with height of treble, which belong to it, and enable it to represent so effectually the extremes of a grand orchestra. In the next place, a greater number of notes can be simultaneously produced upon it than upon any other instrument, the organ excepted, but with the advantage of perspicuous velocity over the capability of the latter. A curious illustration of this fact may be afforded by the following anecdote: "Mr. Scarborough, organist of Spalding, betted that he would strike *one million* of notes on the piano in the space of twelve hours! This singular wager was decided on the 4th of June, 1823. Mr. S. took a compass of three octaves, ascending and descending the different scales, and struck

109,296 notes in the 1st hour.	
125,928	2d "
121,176	3d "
121,176	4th "
125,136	5th "
125,136	6th "
127,512	7th "
127,512	8th "
47,520	20 minutes.

Making 1,030,392 notes in eight hours and twenty minutes, which, with the periods of rest, amounted to eleven hours and forty-five minutes!" Thirdly, better music has been written for the piano-forte *expressly* than for any other instrument whatever, — witness the works of Beethoven alone; and fourthly, it is not only the best accompaniment to vocal music, in the absence of an orchestra, but allows the performer upon it to sing a part or a solo with more freedom and ease than either organ, harp, or guitar. Lastly, it is the most general instrument in use, and need not be hawked about, with the player, but is sure to be found in the drawing rooms of the rich, the elegant, and the art-devoted, in all classes of society.

The origin of the piano-forte is traceable to an instrument called *psalterion*, or *tyrpanum*, (known even yet by the familiar name of dulciner,) which was a box, across which brass and steel wires were extended between iron pins, and attuned so that a perfect gamut was obtained. The performer held in each hand a little wooden rod or hammer, with which he struck the strings

with a degree of velocity and neatness according to his proficiency in the art.

According to Mr. Lane, the Egyptians have an instrument in common use, closely allied to the dulcimer, which they call *kánoon*. It is probably the first instrument of the same class, and may owe its origin to the Greeks. That supposition is favored by its name being derived from the word *κανόω*, and has the same signification, that is, "rule," "law," "custom."

The clavichord was an improvement on the psalterion, by the addition of a clavier, or keyboard, by means of which little plates of copper, moved by the digital action on the keys, caused the strings to vibrate.

The clavichordium little differed from the foregoing in its mechanical construction; but its strings were of gut, acted upon by soft leather hammers put into motion by the keys.

The virginal, consecrated by many productions of the English Palestrina, the immortal William Byrde, by Dr. John Bull, and several other worthies of by-gone days, was a keyed instrument, consisting of metal strings, vibrated by quills, or other media, affixed to the end of the lever or key. Some suppose that this tinkling machine was invented in England about the time of Elizabeth, and was so named in compliment to that

"Fair vestal, throned by the west!"

who, it is said, was remarkably fond of it, and, moreover, was a great and skillful performer upon it. But the former part of this statement, regarding the date of its invention, has been denied by M. Fétis, who asserts that it existed before Elizabeth's time, in 1530, and bore the same name.

The harpsichord, according to the same writer, was also in existence before that period. This instrument, similar in shape to the modern grand piano, had two key boards, which could be used separately or together; in the latter case, the upper or superior key board yielding, at one touch, a sound attuned to the octave of the lower. The action consisted of a key, and what was called a *jack*, which was a piece of pear tree, with a small movable tongue of holly, through which a cutting of erow-quill was passed, to touch the string when the jack was in action. Be it remembered, that this was the instrument on which were developed some of the finest inspirations of Handel, Haydn, Mozart, Scarlatti, the Bachs, Clementi, &c.; and for that circumstance it is entitled to some veneration, although its tone has been wittily but severely compared to "a kind of *scratch* with a sound at the end of it."

The spinet, which was nothing more than a square harpsichord, was constructed upon similar principles. There was, however, a peculiar kind, which was called *soraino*, on account of the comparative softness of its tone.

The clavichord, harpsichord, and spinet continued to be used till towards the end of the last century. But the tone of these several instruments being one and all more or less harsh and disagreeable, induced many ingenious men to experiment in the hope of improving it: accordingly we find, as related by some, that a manufacturer in Paris, named Marius, presented to the inspection of the *Académie des Sciences* of

that city some specimens of harpsichords, in which he substituted small hammers in the place of quills, &c. Shortly afterwards, Christoforo, a Florentine, advanced this discovery so much, that his instrument (the first called piano) may be said to have been the model on which all subsequent improvement was based. Others assert that it was the invention of a German mechanic, named Viator, about a century ago, who, from some cause or other, failed in realizing his project. Again, we are told that it was the discovery of a musician of the name of Schröder; and lastly, that we owe it to Christofoli, a harpsichord maker of Padua. Be this as it may, it appears that the new modifications received no decided public approbation till about the year 1760, when a manufacturer in London, named Ztumpf, commenced such a successful career in the construction of them, with additional improvements, that he realized in a short time a considerable fortune, with which he was enabled to retire.

Such was the incontestable superiority of the English piano-fortes at this period, that the continent continued to be supplied with them for a considerable time. At length, Herr Silbermann, in Germany, commenced a successful rivalry, which, in the year 1776, was much encroached upon by the pretensions of MM. Érard, (brothers,) of Paris, who were the first to construct pianos on the improved plan in France. Still the English, for some time, enjoyed an almost exclusive fame for this manufacture. The piano-fortes of Ztumpf, Kirkman, Longuan and Broderip, Broadwood, Stodart, Toukison, Clementi and Co., Rolfe, Astor, and a host of others, continued to be sought for all over the world, scarcely a year passing without some important addition or improvement being made in them. The grand pianos of Érard (Paris and London) have long been esteemed unsurpassed. Also Pleyel, Pape, Herz, and other makers in Paris are much celebrated. Excellent pianos are manufactured in Vienna and other parts of Germany.

The upright piano-forte was doubtless taken from the upright harpsichord, and was the invention of an Englishman of the name of Hancock, a musical instrument maker, resident in some part of Westminster. He was a man of much ingenuity, and produced several varieties in keyed instruments; amongst which we find the organized piano-forte, the portable grand piano-forte, and an instrument, also a piano-forte, in the shape of a spinet (This was the origin of the square piano.) The portable grand, in its day, was a successful and desirable instrument; but has long since been superseded by others of the kind, called kit-grands, bondoir-grands, pocket-grands, and semi-grands.

The next novelty was the invention of John Isaac Hawkins, who constructed an upright instrument, with a detached sound board, in an iron frame; and the whole was so arranged as to be able to meet the atmosphere with compensating powers. In the bass, it had spiral or helical strings, by which length was gained; and, in the treble, three octaves of equal tension were accomplished by a uniform size of wire. It was patented, but did not take with the public sufficiently to come into notice.

Following Hawkins, came William Southwell, an Irishman, who patented an improvement in upright piano-fortes, and gave it the name of

the cabinet piano-forte. The name still remains in use.

The unique piano-forte was introduced by Messrs. Wilkinson and Wornum, and was the invention and patent of the latter gentleman. This instrument met the taste of the day for instruments of little altitude; it did not stand higher than three feet three inches, and the strings were all placed diagonally towards the floor; the action was simple and effective, but it did not content the mind of its most ingenious inventor, and in a short time gave way to a new proof of his mechanical and philosophical genius, in the production of the piccolo piano-forte, which he (Mr. Wornum) patented, and which became, perhaps, the most popular piano in the four quarters of the world. Its action is equally applicable to both upright and horizontal instruments, and, for delicacy of tone and promptness of touch, it has not yet been surpassed.

The perseverance of Mr. Wornum's mechanical genius at length succeeded in producing a down-striking action, which is by far the most ingenious of modern improvements in the piano-forte, inasmuch as both tone and touch are wonderfully improved by it—a result exactly the reverse of the foreign application of the same action.

Mr. Mott's *sostinente* was an application of a cylinder and silk loops to an upright piano-forte. The loops were attached to the strings, and the cylinder, which was moved by the foot, as it were, *bowed* them, and produced tones somewhat similar to those of the seraphine.

Mr. Kirkman's octave string was applied as the third string of a grand piano, tuned an octave higher in pitch than the other two, and was somewhat in effect like two diapasens and a principal in an organ. It pleased for a time, but is now thought of no more.

Messrs. Cramer, Addison, and Beale produced a piano-forte totally formed of iron; and considering that metal is not so sonorous as wood, the tone is amazingly full and mellow.

At Paris a Monsieur Montal produced a piano-forte which in a great measure supplies a quality that has long been a desideratum, and the want of which has allowed other instruments to assert a superiority that henceforth must be ceded. It consisted in a new mechanism, which the inventor called "*mécanique à répétition expressive*," because by it the touch was so far improved as to allow the performer to reiterate the tone at pleasure without raising the fingers from the keys. Some marvellous men, like Liszt, in the absence of this mechanism, contrived to produce the *sostenuto* and *tremolo* without apparently repeating their touch; but the ingenuity of M. Montal enables the less practised performer to produce such a desirable effect.

Piano-fortes of the very best quality are now manufactured among us, and such is the perfection of modern manufacture, that even the inexperienced are sure to find, at all respectable houses, instruments in every quality worthy of the first performer in the world.

But now for a few words in the shape of advice to those who would select a piano-forte. The tone or *timbre* of this instrument depends almost wholly upon the seasoning of the wood; particularly in that part of it called the sound board, which should consist of the finest deal or pine.

similar to that used in the upper side of a violin. The case, too, or cabinet maker's portion of the construction, has some influence upon the quality of its voice; and the mechanical part should never be made or formed of green wood. Therefore it is always better to purchase an instrument from those factories whose means enable them to expose their materials to heat and cold, in fact to all vicissitudes of season, for years together. It is most important that the wood forming the block upon which the wires are strung should be thoroughly seasoned, as it is termed; for if untempered timber be used, the instrument will not only not remain in tune, but the quality of the tone will be greatly injured. A poor man may be a good artisan, but he cannot produce in every respect a good or durable piano-forte. Moreover, the shape or form of the instrument has something to do with its musical quality. To those who wish to purchase a piano-forte merely as a handsome piece of furniture, it were well to recommend the various modifications of upright constructions, in handsome cases of mahogany, rose, or zebra wood; but to the musician, amateur, or artist, it would be better to advise the choice of a good square or grand piano—they have better tone, are more durable, and their action is less liable to be out of order.

For many years after the settlement of this country, our pianos were imported from Europe; but the humidity of the atmosphere, during the passage across the ocean, was found to open the joints, or crack the wood, rust the wires, and loosen the keys, and greatly to injure, if not, in some instances, entirely destroy the tone of the instrument. This, among other causes, led to the construction of piano-fortes in America. At first, deficient in taste and skill, our artists were not very successful. But they had ingenuity and perseverance; and experience soon gave them the rest. They at length introduced several important improvements in the manufacture, and now make the article to a great extent, while the demand for their work is increasing throughout the Union.

For excellence of material, simplicity of style, elegance of finish, and faithfulness of workmanship, and above all for volume and variety, mellow sweetness, brilliancy, and permanency of tone, the American pianos now challenge competition from all quarters of the world. In a word, so high stands the reputation of the artists of Boston, New York, Albany, Philadelphia, and other cities and places of the United States, in this business, that, as is well known, a second-hand piano-forte from the hands of any of them will often command as much money at auction as can be obtained for a new glittering instrument just imported from London.

PIANO-FORTE SCHOOL. An extensive and complete method for the piano-forte.

PIANO-FORTE SCORE. A score in which the orchestral accompaniments are compressed into a piano-forte part.

PIANO-VIOLINO. Colonel A. S. Wood, of Buchanan, Va., invented, in 1837, a new and curious instrument. It is a common piano of the usual construction, and played in the usual manner. A pedal, touched by the foot of the performer, turns a flying wheel, which regulates the movements

of the machinery. As each particular key of the piano is touched, a corresponding key within the box of machinery is acted on, and brings down on the proper string one of the four bows, (which are constantly moving on grooves,) and at the same time passes on the string a finger, thus forming a perfect note, in every respect, to the note of the piano.

PIANO, SEMPRE STACCATO E MARCATO IL BASSO. Soft, with the bass always well marked and detached.

PIANTANIDA, GIOVANNI, a celebrated violinist at Bologna, was born at Florence in 1705. In 1734 he went to Petersburg, with a company of Italian performers, and met with the greatest success in that city. He returned to Italy about four years afterwards. Dr. Burney, who heard him when at the advanced age of sixty, still considered him the best violinist in Italy, notwithstanding an awkward and embarrassed air which he had in playing. His wife was an excellent singer, who accompanied him to St. Petersburg. Six of his trios for the violin, and six concertos, were published at Amsterdam.

PIANTANIDA, ABBÉ, a pupil of Fioroni, has composed much church music. He resided at Milan in 1812.

PIATTI. (I.) The cymbals.

PIAZZA, GIOVANNI BATTISTA. An instrumental composer, who flourished in Italy about the year 1650.

PIB-CORN, or HORNPIPE. The name given by the Welsh to a wind instrument, consisting of a wooden pipe with holes at the sides, and a horn at each end, the one to collect the wind blown into it by the mouth, and the other to convey the sound, as modulated by the performer. This instrument is so common in Wales, that the shepherds' boys amuse themselves with it while tending their flocks.

PIC, GIOVANNI, the celebrated Prince of Miranda and of Concordia, was born in 1463. To extensive information in the sciences he joined profound knowledge of the art of composition, and of music in general. His compositions were much sought after in the age in which he lived. He died at Florence, in 1494, aged thirty-one.

PICCHI, GIOVANNI MARIA, organist of the Casa Grande at Venice, published there, in 1625, "*Canzoni da Sonar.*"

PICCHIETTATO. (I.) Struck, intonated with vehemence.

PICCINELLI, called also **LA FRANCESINA**, was first female singer at the Milan opera in 1770.

PICCINI, NICOLA, was born in 1728, at Bari, in the kingdom of Naples, and may be ranked amongst the most fertile and original composers that the Neapolitan school has ever produced. His father designed him for the church; but an invincible passion for music frustrated this intention. He practised for some time in secret, and was, by accident, discovered to have made considerable progress in the art, before his father could be prevailed with to let him have a master. In 1742 he was placed in the Conservatory of San

Onofrio, under the direction of Leo, and after his death, under Durante. Piccini spent twelve years in study before he left the Conservatory; he then began his professional career at the Florentine Theatre in Naples, with a comic opera, entitled "*Le Donne Dispettose.*" In 1758 he was invited to Rome, where he composed "*Alessandro nell' Indie.*" This opera, besides several airs which are truly excellent, contains one of the finest overtures that ever was composed. Two years afterwards, his comic opera of "*La Buona Figliuola*" had a success that no previous drama could boast of. It was no sooner heard at Rome than copies were multiplied, and there was no musical theatre in Europe where this burletta was not frequently performed, in some language or other, during many years. His serious opera, the "*Olimpiade,*" performed in the following winter, was equally successful; and for fifteen years Piccini was considered the first musical composer in Rome. Anfossi was at last unfairly preferred to him; and, in consequence, he left Rome in disgust, and returned to Naples.

From the latter city he was invited to France, and in December, 1776, arrived at Paris. Previously to this time, as Sacchiui had informed Dr. Burney, he had composed at least three hundred operas; of which, in one instance, thirteen had been produced in the short space of seven months. When Piccini arrived in France, he knew not a word of the French language; but Marmontel undertook to be his instructor. The latter engaged to make, in six operas of Quinault, the changes which were requisite, in order that they might be set to modern music. For some time, he passed every morning with Piccini, explained a scene to him, taught him to repeat it, marked, by convenient signs, the quantity of each word and syllable, and then left Piccini to work by himself. His task was to set to music what he had learned, and on the following morning he sang it to Marmontel. If, which seldom happened, there was any incorrectness in regard to the expression or quantity of the language, on that they immediately went to work together, in order to perfect it. This kind of labor they continued steadily to pursue for almost twelve months.

Before Piccini had completed his first work in France, he found himself opposed by a most formidable rival in Gluck, who about this time effected a great revolution in French music. He had introduced into it the forms of recitative and song from the Italian school, whilst from the German school he had brought grandeur and strength of harmony. A musical war was excited, which, for a while, divided and exasperated all Paris. Whilst this war was at its height, Berton, the director of the opera, made an attempt to put an end to it by reconciling the two chiefs. He gave a splendid supper, at which Piccini and Gluck, after embracing each other, sat down together, and conversed with the greatest cordiality during the whole evening. They parted good friends; but the war went on with as much fury between their respective partisans as before.

The opera of "*Roland*" was the first which was produced by Piccini at Paris; it was followed by "*Atys*" and by "*Iphigenia in Tauris*;" the whole of which were received with general admiration by all except those who were devoted to the cause of his opponent.

When, in the year 1781, Sacchini went to Paris, an opera was required from each of these masters, for the entertainment of that year at Fontainebleau. Piccini chose the story of "*Didon*," and Sacchini that of "*Chimène*." Sacchini was first ready, and his piece was put in rehearsal without delay. Every prejudice was in its favor: the orchestra, the actors, and the managers of the opera, with one accord, extolled him to the skies. When the poetry of "*Didon*" was finished, Piccini went to the country residence of Marmontel, who wrote it, and continued there for seventeen days, till he had invented the whole of the music. In six weeks it was completely ready for performance; and such was the success of this charming piece as to eclipse all rivalry.

Piccini possessed an astonishing versatility of genius. Whilst "*Didon*," at the Opera House, excited the most powerful emotions of sympathy and grief, his other operas of "The pretended Lord," and "Sleeper awakened," gave birth to emotions that were perfectly opposite.

A singing school was, about this time, established at Paris, of which Piccini was appointed the principal master. He also proposed to establish an annual concert; but in this he was unsuccessful.

At the breaking out of the French revolution, Piccini, having lost his pensions, returned to Naples. The Neapolitan minister had the cruelty, however, to forbid him from appearing in public; in consequence of which he remained almost constantly shut up in his chamber, in solitude and indigence. During this time he amused himself by setting to music several of the Italian psalms of Saverio Mattei.

In the year 1799 he returned to Paris, where he solicited from Bonaparte the renewal of his pensions. He was graciously received, and munificently recompensed by composing a march for the consular guard, at the express command of the first consul. Not long afterwards, he was appointed to an inspector's place in the national conservatory of music. This situation he continued to hold till the time of his death which took place in 1801, at the age of seventy-two years.

PICCINI, LUDOVICO, son of the preceding, was born at Naples about the year 1765, and received his musical education from his father. In 1784, he brought out, at the Opéra Comique at Paris, "*Les Amours de Cherubin*;" and in 1788, at the Théâtre de Beaujolais, "*La Suite des Chasseurs et la Laitière*." In 1791 he returned, with his father, to Naples, and composed in that city two comic operas, "*Gli Accidenti Inaspettati*," and "*La Serva Onorata*." At Venice, he produced, in 1793, "*L'Anante Statua*;" at Genoa, "*Il Matrimonio per Raggio*;" at Florence, "*La Notte Imbrogliata*;" and again at Naples, a cantata entitled "*Ero e Leandro*," which he composed for Mrs. Billington. In 1796 he was engaged as chapel-master by the court of Sweden, and passed six years at Stockholm, where, among other music, he wrote a comic opera called "The Sleep Walker." He returned to Paris in 1802, a year after the lamented death of his father. He then produced at the Opéra Comique "*Le Sigisbé*" of Marmontel, in three acts; "*L'Ainée et la Cadette*," and "*L'Avis aux Jaloux*." He also composed, for the Royal Academy of Music, "*Hippomène et Atalante*," a piece in one act.

PICCINI, ALEXANDRE, grandson of Nicolò Piccini, was born at Paris about the year 1780. He was a member of the choir of Napoleon's Chapel Royal, and was a professor of the piano-forte. He studied composition under Lesueur. The following is a list of his principal dramatic works. At the Théâtre de la Montansier, "*Le Terme du Voyage*," "*La Forteresse*," "*L'Entre Sol*," "*Gilles en deuil*," "*Les Deux Voisins*," "*Lui-même*;" at the Théâtre des Jeunes Artistes, "*Arlequin au Village*," "*La Pension des Jeunes Demeiselles*," "*Arlequin bon Ami*," "*Le Pavillon*;" at the Théâtre Saint Martin, "*Romulus*," "*Robinson Crusoe*," and other melodramas; at the Théâtre Feydeau, "*Avis au Public*," and "*Ils sont chez eux*," operas of M. Desangiers.

PICCIOLI, GIACOMO ANTONIO, an ecclesiastic and learned contrapuntist, towards the end of the sixteenth century, was a pupil of the renowned Constantino Porta, and published many works, chiefly at Venice and Milan, between the years 1580 and 1600.

PICCOLO. (I.) Little; as, *violino piccolo*, a small violin.

PICCITONO, PADRE ANGELO DA, an ecclesiastic, published at Venice, in 1547, a musical work called "*Fior Angelico di Musica*." It is a book which, however difficult to find at present, is, from its dulness and pedantry, still more difficult to read.

PICERLI, SILVERIO, an ecclesiastic, published at Naples, in 1631, "*Specchio Primo et Secondo di Musica*."

PICHL, WENZEL. A celebrated violinist and composer, born in Bohemia in 1743. He studied the violin first under Von Dittersdorf, and afterwards under Nardini. In 1791 he was at Milan, in the service of the Archduke Ferdinand as composer of music. In 1797, on the French taking possession of Milan, he followed his noble master to Vienna, where he died in 1805. Among his numerous works we can name the following: "100 *Variazioni per il V. sulla scala del B. fermo*," Naples, 1787; "*Exercice de Violon, ou 100 Variaz. p. le Violon seul*;" "6 *Duos p. Violon et A.*," Op. 18, Offenbach, 1794; "3 *Duos p. 2 V.*," Op. 16, Paris, 1793; "3 *Quat. à Clav., V., A., et B.*," Paris, 1793; "1 *Sinfonie*," Op. 17, Berlin; "6 *Six Sonat. p. V. et B.*," Op. 20, Parts I. and II., Brunswick, 1796; "12 *Caprices p. Violon seul*," Op. 21, Brunswick, 1796; "3 *Sonat. p. le Clav., Fl., et B.*," Op. 26, Vienna, 1796; "3 *Quint. à 2 V., 2 A., et B.*," Op. 30, Offenbach, 1797; "3 *Duos p. 2 V.*," Op. 34, Offenbach, 1798; "3 *Duos conc. p. 2 V.*," Op. 48, Vienna, 1800; "6 *Fugues, avec un Prelude fugué p. un Violon*," Op. 35, Leipsic; "6 *Ariette à Voce Soli ou Camb.*," Op. 42, Vienna; "12 *Variaz. di V. c. altro V.*," Op. 44, 1801.

PIECES. A name of general import, and applicable to all kinds of compositions; as, *pieces* for a full band, pieces for the organ, pieces for the piano-forte, &c.

PIEDS. (F.) The feet; as, *avec les pieds*, with the feet, in organ playing.

PIETOSO. (I.) With pity, compassionately.

PIELTAIN, DIEUDONNÉ PASCAI, born

at Liege in 1754, was one of the best violin pupils of Jarnowick. After having performed for six seasons at the *Concert Spirituel*, he went to London, and remained there above nine years. He ultimately settled in his native town. He published many concertos for his instrument. He died in 1833.

PIELTAIN, the younger, was a celebrated performer on the horn, and a pupil of Punto. He accompanied his elder brother to England.

PIENO. (I.) Full. A word often substituted for *tutti* or *grossi*, and sometimes for *choro*; as, *pieno choro*, a full chorus. It is sometimes employed in a vehement or energetic sense; as, *vieno spirito*.

PIERSON, II. II. Professor of music in the University of Edinburgh, and known by the name of Mansfeldt, under which cognomen he has published various compositions. Although the son of a high dignitary of the church, an enthusiasm for the art led him in very early life to study music as a profession. Mr. Pierson was elected in 1819 to the professorship at Edinburgh, but resigned ultimately because he was not permitted to have his written lectures read by any person but himself, and a nervous defect in speech prevented him undertaking that duty. He has written an oratorio, "Jerusalem," which, with some others of his productions, has been received with much public favor.

PIETAGRUA, CARLO LUIGI, an esteemed Florentine composer, brought out at Venice the operas "*Il Pastor Fido*," 1721, and "*Romolo e Tufo*," 1722.

PIETAGRUA, GASPARO, an ecclesiastic at Milan, flourished as a composer about the year 1620. Of his compositions there were printed "*Concerti e Canzoni Francesi ad 1, 2, 3, e 4, con Messe da Viro e da Morti, Magnificat, Falsi Bordonì, Litanie della Madonna e dei Santi*," Milan, 1629; "*Canzonette a tre*," Milan, 1629; "*Motetti à voce sola*," Milan, 1629; and "*Messa e Salmi alla Romana per cantarsi alli Vesperti di tutto l'anno con tuoi Magnificat, le quattro Antifone, et otto Falsi Bordonì à 4 voci, Lib. 5.*"

PIFFERO. A little flute, or fife.

PIFFET, called LE GRAND NEZ. A violinist in the opera orchestra at Paris, about the year 1750. He composed some cantatas, and was considered one of the best solo players of his time.

PIGGOT, FRANCIS. Bachelor in music of the University of Cambridge in 1698, and first organist of the Temple Church. He succeeded Purcell as one of the organists of the Chapel Royal. An anthem of his, "I was glad," is extant in many cathedrals.

PIGNATTA, PIETRO ROMULO, of Rome, was an eminent dramatic composer. Amongst his works are the following operas: "*Costanza vince il Destino*," 1695; "*Almiro Re di Corinto*;" "*Sigismondo Primo*," 1696; "*L'Inganno senza Danno*," 1697; "*Paolo Emilio*," 1699; "*Il Vanto d'Amore*," 1700; and "*Oronte in Egitto*," 1705.

PILLAGO, CARLO, of Rovigo, was organist to the Church of St. Mark, at Venice, and a very eminent performer on his instrument. He published "*Sacri Concerti à voce sola*," Venice, 1642.

PILKINGTON, FRANCIS. An English musician of the sixteenth century, and luteist to the cathedral at Chester. He took his degree of bachelor of music at Oxford in 1595. Pilkington was one of the authors of a collection of airs and songs for the lute and viol da gamba, published in London, in a folio volume, in 1605.

PIMENTEL, PEDRO, a celebrated performer on the organ at Lisbon, died in 1599, and left the following published work: "*Livro de Cifra de varias obras para se tangerem na Orgão.*"

PINA E MENDOÇA, LEONIZ DE, a Portuguese nobleman, wrote, in 1650, a book entitled "*Varios Opusculos pertenentes à Theorica da Musica.*"

PINDAR. Born at Thebes, in Bœotia, about five hundred and twenty years before Christ. He received his first musical instructions from his father, who was a flute player by profession; after which, according to Suidas, he was placed under Myrtis, a lady of distinguished abilities in lyric poetry. It was during this period that he became acquainted with the poetess Corinna, who was likewise a student under Myrtis. Plutarch tells us that Pindar profited from the lessons which Corinna, more advanced in her studies, gave him at this school. It is very natural to suppose that the first poetical effusions of a genius so full of fire and imagination as that of Pindar would be wild and luxuriant; and Lucian has preserved six verses, said to have been the exordium of his first essay, in which he crowded almost all the subjects for song which ancient history and mythology then furnished. Upon communicating this attempt to Corinna, she told him, smiling, that he should sow with the hand, and not empty his whole sack at once. Pindar, however, soon quitted the leading strings of these ladies, his poetical nurses, and became the disciple of Simonides, now arrived at extreme old age; after which he soon surpassed all his masters, and acquired great reputation over all Greece; but, like a true prophet, was less honored in his own country than elsewhere; for at Thebes he was frequently pronounced to be vanquished, in the musical and poetical contests, by candidates of inferior merit.

There is no great poet or musician in antiquity whose moral character has been less censured than that of Pindar. Plutarch has preserved a single verse of his "*Epicædium*," or dirge, that was sung at his funeral, which, short and simple as it is, implies great praise: "*This man was pleasing to strangers, and dear to his fellow-citizens.*" His works abound with precepts of the purest morality, and it does not appear that he ever traduced even his enemies; comforting himself for their malignity by a maxim which he inserted in his first Pythic, and which afterwards became proverbial, "*That it is better to be envied than pitied.*"

Pausanias says that the character of poet was truly consecrated in the person of Pindar by the god of verse himself, who was pleased, by an express oracle, to order the inhabitants of Delphos to set apart, for Pindar, one half of the first fruit offerings brought by the religious to his shrine, and to allow him a conspicuous place in his temple; where, in an iron chair, he used to sit and sing his hymns in honor of that god,

This chair was remaining in the time of Pausanias, several centuries after, and shown to him as a relic not unworthy of the sanctity and magnificence of that place.

A bard who sang like Pindar would be heard with the same rapture in a pagan temple as a Farinelli in an Italian church; and, as both would draw together crowded congregations, both would be equally caressed and encouraged by the priests.

But though Pindar's muse was pensioned at Delphos, and well paid by princes and potentates elsewhere, she seems, however, sometimes to have sung the spontaneous strains of pure friendship. Of this kind were, probably, the verses bestowed upon the musician Midas, of Agrigentum, in Sicily, who had twice obtained the palm of victory by his performance on the flute at the Pythic games. It is in his twelfth Pythic ode that Pindar celebrates the victory of Midas over all Greece, upon that instrument which Minerva herself had invented.

Fabricius tells us that Pindar lived to the age of ninety; and according to the chronology of Dr. Blair, he died four hundred and thirty-five years before Christ, aged eighty-six. His fellow-citizens erected a monument to him, in the Hippodrome at Thebes, which was still subsisting in the time of Pausanias; and his renown was so great after his death, that his posterity derived very considerable honors and privileges from it. When Alexander the Great attacked the city of Thebes, he gave express orders for the soldiers to spare the house and family of Pindar. The Lacedæmonians had done the same before this period; for when they ravaged Bœotia, and burned the capital, the following words were written upon the door of the poet: "Forbear to burn this house; it was the dwelling of Pindar." Respect for the memory of this great poet continued so long, that, even in Plutarch's time, the best part of the sacred victim, at the Theoxenian festival, was appropriated to his descendants.

PINELLI DE GERARDIS, GIOVANNI BATTISTA. Born at Genoa in 1543, of a noble family. In 1581 he succeeded Scandelli as chapel-master to the Elector of Saxony, at Dresden, but was soon obliged, from misconduct, to vacate his place, when he quitted Dresden for Prague, in which city he died. His published works are, "6 *Misse à 4 Voci*," Dresden, 1582; "*Deutsche Magnificat über die 8 Kirchentöne*," Dresden, 1583; "*Madrigali*," Dresden, 1584; "*Cantiones*, 8, 10, et 15 *Voc.*," Dresden, 1584; "*Neue kurzzeitliche Deutsche Lieder mit 5 Stimmen, &c.*," Dresden, 1584; "*Lib. 1 dei Neapolitane à 5 Voci*," Dresden, 1585; and "*18 Musetten für 5 Stimmen*," Prague, 1588.

PINELLI, GIOVANNI VINCENZO, a learned Italian, who resided at Padua, was born at Naples in 1535. He was an excellent musician, and a pupil of Philippus de Monte. He died in 1601 or 1602.

PINHEIRO, ANTONIO, chapel-master of the cathedral at Evora, in Portugal, was born in the province of Alentejo, and studied music under his eminent countryman, Francesco Guerreiro. He died in 1617. A very clever "*Magnificat*," of his composition, is in the Royal Library at Lisbon.

PINTO, THOMAS. This excellent performer on the violin was born in England, of Italian parents. When a boy he was a miraculous player on his instrument, and, long before he was of age, was employed as the leader of large bands in concerts. At this time, however, he was very idle, inclining more to the fine gentleman than the musical student, kept a horse, was always in boots in a morning, with a switch in his hand instead of a fiddlestick; till the arrival of Giardini, whose superiority to all the performers he had ever heard, inclined him to think it necessary to practise, which he did, for some time, with great diligence. With a very powerful hand, and an astonishingly quick eye, he was, in general, so careless a player, that he performed the most difficult music *at sight*, better than ever after, for he was then obliged to look at the notes with some care and attention; but afterwards, trusting to his memory, he frequently committed mistakes, and missed the expression of passages, which, if he had thought worth looking at, he would have executed with certainty. After leading at the opera, whenever Giardini laid down the truncheon, he was engaged as first violin at Drury Lane Theatre, where he led for many years. After the death of his first wife, Sybilla, a German singer, he married the celebrated Miss Brent, and settled in Ireland, where he died in the year 1773.

PINTO, G. F., grandson of the preceding, was a remarkable instance of premature musical genius. He studied the violin under Salomon, and, at fifteen years of age, had arrived at such perfection on that instrument, that he could lead an orchestra, in the performance of the symphonies of Haydn, nearly as well as his master. Neither had he confined his studies to the above instrument, as he was almost equally great on the piano-forte as on the violin, and was well versed in counterpoint, which he evinced, at about the age of seventeen, by several vocal publications, of great merit and originality. This extraordinary genius became a martyr to dissipation about the year 1808, and before he had completed his twenty-first year. Amongst his published works we can mention the following songs: "A shepherd loved a nymph so fair," "From thee, Eliza, I must go," "It was a winter's evening," "Little warbler," "Nature, sweet mistress," and "The smiling plains." (*Harm. Inst. Cat.*) There is also a minuetto by Pinto, in a forcible and pleasing style of composition, in No. 14 of the "*Harmonicon*."

PINTO, MRS., better known as MISS BRENT, was the wife of Thomas Pinto. She was a celebrated singer, and a pupil of Dr. Arne, who wrote expressly for her the part of Maudane, in "*Artaxerxes*."

PIO, ANTONIO, chapel-master at Ravenna, was a native of that city. He is numbered amongst the dramatic composers of Italy, between the years 1783 and 1791. One of his operas was entitled "*Nettuno ed Egle*," op. ser. Venice, 1783.

PIONNIER, JEAN. Chapel-master at Loretto, in the middle of the sixteenth century. Amongst his printed works we can name "*Motetti à 5 Voc.*, *Lib. 2*," Venice, 1564.

PIOZZI. A composer of this name published at Manheim, about the year 1780, two operas of quatuors, for the harpsichord, two violins, and bass.

PIPE. Any tube formed of a reed, or of wood, metal, &c., and which, being inflated at one end, produces a musical sound, acute or grave, soft or loud, according to the material, and its form and dimensions. The *pipe*, which originally was no more than a simple outen straw, formed one of the first instruments by which melodious sounds were attempted.

PIPE, or ABUB, sometimes means *flute* or *hautboy*. The Jews, in their Gemara, give us the following account of it. "Our rabbins," say they, "have delivered that there was an *abub* or *pipe* in the sanctuary. It was smooth, thin, made of reed, and so old as the days of Moses. The king commanded, and they gilded it with gold, but it was not so sweet as before; they took off the gilding, and the sound was as sweet as ever."

PIPER. A performer on a pipe. Pipers were formerly one of the class of itinerant musicians, and performed on a variety of wind instruments, as the bagpipe, musette, courtant, &c.

PIPES OF PAN, or MOUTH ORGAN. A wind instrument consisting of a range of pipes bound together side by side, and gradually lessening, with respect to each other, in length and diameter. The longest pipe is about six inches, and the shortest about two inches in length. In performance it is held in the hand, and the pipes are blown into by the mouth at the upper ends. Some inform us that Marsyas, others that Silenus, was the first that joined pipes of different lengths together with wax; but Virgil attributes the invention to Pan.

PIQUE. (F.) The dash or dot used to indicate that certain notes are to be played *staccato* or detached.

PIRLINGER, JOSEPH, chamber musician to the court, and violinist at Vienna, published at Paris, in 1786, "*Six Quatuors pour Violons, Viole, et Basse*," and "*Six Symphonies à huit*." He has since brought before the public, at Vienna, "*Divertissement pour deux Violons*," "12 leichte Duos für Anfänger auf 2 Violinen," Vienna, and "*Neue Violinschule*," Vienna, 1800. This is a modernized edition of the *Violinschule* of Leopold Mozart. He has left in manuscript eighteen trios for two violins and bass.

PISARI, PASCALO, singer in the Pontifical Chapel at Rome, and a celebrated contrapuntist, resided in that city in the year 1770. Dr. Burney heard, at Rome, a very learned mass by this master, for sixteen voices.

PISARONI, BENEDETTA ROSAMONDA, was born at Piacenza in 1793. After learning music under the direction of an obscure master of her native city, she took lessons in singing of the famous Marchesi, who taught her the principles of the beautiful school of the eighteenth century. When she made her *début*, at the age of eighteen, in the rôles of the Griselida and the Camilla of Paër, Mme. Pisaroni had a high soprano voice. After a severe illness, which she had towards the year 1813, she lost several notes in the upper register, while the low tones

acquired a powerful and unexpected sonorousness. Then she found herself obliged to sing the parts written for the contralto, and became one of the greatest singers of her time.

PISENDEL, JOHANN GEORG, born at Carlsburg, in Franconia, in 1687, was entered, at nine years of age, as a chorister in the chapel of the Margrave of Anspach, under Pistocchi and Corelli; from the latter of whom he learned the violin, and made such progress, that, at fifteen years of age, he was nominated violinist of the chapel. In 1709 he went to Leipsic to attend some of the lectures in that university. In 1712 he was engaged for the chapel of the King of Poland, and was subsequently attached to the suite of the hereditary Prince of Saxony, whom he accompanied into France and Italy. Finally, after the death of Volumier in 1730, Pissendel was made concert master at Dresden, and, in 1731, was nominated *chef d'orchestre* of the theatre there, to which the celebrated Hesse was composer. These situations he held, with the greatest credit, till his death, which took place in 1755.

PISTICCI, ATANASIO, a monk and church composer, flourished in the early part of the seventeenth century. Amongst other works he published "*Motetti*," Venice, 1633; "*Motetti à 2 e 3 Voci*," book iii.; and "*Salmi à 4 Voci*."

PISTOCCHI, FR. ANT. This musician, considered by the Italians to be the father of the modern school of singing, was born at Bologna about the year 1660. He first devoted his talents to the stage; but meeting with little success, on account of his disagreeable personal appearance, and the want of power in his voice, he quitted that pursuit, and entered into holy orders. Being an excellent contrapuntist, he was afterwards invited to Anspach as chapel-master to the margrave, but did not long continue in that situation, as, in the year 1700, he had returned from Germany to Bologna, where he opened a school for singing, of which several of the principal vocal artists of the following age became pupils; amongst these we may name Antonio Bernacchi, Antonio Pasi, J. B. Minelli, Ant. Pio. Fabri, and Bartolino. Dr. Burney says that "Pistocchi had a very fine soprano voice, which he lost by a dissolute life, together with a fortune which he had acquired by the exercise of it. In this distress he was reduced to the necessity of becoming a copyist, in which employment, by his attention and assiduity, he arrived at such a degree of skill in music as to be able himself to compose. In the course of a few years, he discovered that his voice was returning, and, having experienced great misery whilst he was deprived of that faculty, he practised incessantly, till it settled into a fine contralto. With this valuable acquisition he determined to travel, and accordingly visited most of the courts of Europe. The encouragement he met with, and the offer of the employment of chapel-master to the Margrave of Anspach, with a handsome stipend, induced him to settle at that court, where, in the possession of a newly-acquired fortune, he continued many years. At length he returned to Italy, and retired to a convent, in which he died."

It will be observed that Dr. Burney's account of this musician does not well accord with the

opening account of him, translated from the French "Dictionary of Musicians." It is probable that Dr. Burney's account is the correct one, in what relates to the failure and recovery of the voice of Pistocchi, though it seems unaccountable that he has not alluded to his celebrated school of singing. Among Pistocchi's works are the following operas: "*Narciso*," Anspach, 1697; "*Leandro*," 1679; "*Il Girello*," 1681; "*Il Martirio di S. Adriano*," Venice, 1699; and "*Le Rize di Democrito*," Vienna, 1700. He also published some sacred music, cantatas, &c. Pistocchi died at Bologna in 1720.

PISTORINI, ANTONIO. A dramatic composer of Florence, celebrated for his comic operas and interludes, about the year 1730.

PITCH. The acuteness or gravity of any particular sound, or of the tuning of any instrument. Any sound less acute than some other sound is said to be of a lower *pitch* than that other sound; and *vice versa*. The *opera pitch* is tuned above most others, and is therefore said to be higher than the common *concert pitch*.

PITCH PIPE. An instrument used by vocal practitioners to ascertain the *pitch* of the key in which they are about to sing. It is blown at one end, like a common flute, and being shortened or lengthened by a graduated scale, is capable of producing, with mechanical exactness, all the semitonic degrees within its compass.

PITICCHIO, FRANCESCO, chapel-master at Palermo, resided some years in Germany (chiefly at Brunswick and Dresden) with a company of Italian singers. In 1784 he brought out, at Dresden, an opera entitled "*Gli Amanti alla Prova*." He next produced "*Il Bertoldo*," op. buffa, Vienna, 1787, and "*La Didone abbandonata*," opera-seria, Dresden, 1788. He also published several sets of Italian canzonets, and six quintets for violins, &c.

PITONI, OTTAVIO, born in 1657, was chapel-master at St. Peter's, and conductor of the music in the German college at Rome. He wrote much sacred music, and, according to Abbé Gerber, made some approaches towards the modern school. He died at Rome in 1743.

PITERLIN, FRIEDRICH ADOLPH, was, in 1796, conductor in the orchestra of a theatre at Magdeburg. He published some vocal and instrumental music, principally dramatic, amongst which is an opera called "*The Gypsies*." He died in 1804.

PIU. (1.) A word of augmentation; as, *piu presto*, quicker; *piu piano*, more soft; *piu forte*, louder.

PIVA. A hautboy, or cornet.

PIVA, GREGORIO, an Italian vocal composer, flourished about the year 1700.

PIXIS, F. W., senior. Organist of the reformed church at Manheim since the year 1770. He published "Eight short and easy Preludes for the Organ or Piano-forte, Part I.," Manheim, 1791; "Eight ditto, Part II.," Manheim, 1792; and "Two Sonatas for the Piano-forte," Manheim, 1792.

PIXIS, FRIEDRICH WILHELM, eldest son of the preceding, was born at Manheim in 1786.

He was, from the age of thirteen, highly celebrated for his performance on the violin, in the style of Fränzl and Viotti, and accompanied his father in a musical tour through Germany; in the principal cities of which country he was heard, as a child, with enthusiasm, especially at Berlin, in the year 1800.

PIXIS, JOHANN PETER, younger brother of the preceding, was born at Manheim in 1788. He was a celebrated pianist from the age of twelve years, having received his principal instructions on that instrument from his father. In 1809 he settled at Munich, and afterwards at Vienna. In 1825 he became fixed at Paris, where he was considered one of the best piano professors of the day. There he adopted an orphan girl, by the name of Francilla Pixis, to whose musical education he devoted himself almost exclusively, and made of her a distinguished singer. In 1833 he travelled with her in Germany, where she sang with much success. Not succeeding in Paris, they went to Italy, where she sang, at Naples, in "*Saffo*," an opera written for her by Pacini in 1840. More than one hundred and fifty works have been published under the name of J. P. Pixis, including a symphony, quintets, quartets, trios, sonatas, concertos, &c., for piano, with strings, and many smaller pieces.

PIZZATTI, an Italian abbot, has published the following works: "*La Scienza de' Suoni, e dell' Armonia; diretta specialmente a render ragione de' Fenomeni, ed a conoscere la natura e le leggi della medesima, ed a giovare alla pratica del Contrapunto; divisa in 5 parti*," Venice, 1782, and "*Tavola degli Esempi appartenenti alla Scienza de' Suoni e dell' Armonia*."

PIZZICATO, or PIZZ. (1.) An expression particularly applicable to violin music, and implying that the movement, or the passage over which it is written, is to be performed by the fingers instead of the bow.

PLA, PLAS, or PLATS. There were two brothers of one of the above names, Spaniards by birth, who were very celebrated performers on the hautboy. About the year 1752 they were at Paris, from whence they proceeded to Germany, and, in 1761, were engaged in the chapel of the Duke of Wurtemberg; in the first year of which engagement one of the brothers died. Some of their music for the hautboy and flute was published.

PLACIDAMENTE. (1.) With placidity, quietly.

PLAGAL. An epithet used in opposition to *authentic*, and applied to the octave when arithmetically divided. When a melody is so constructed as to lie between the two extremes of an octave, making its *final* on one of those extremes, the mode is said to be *authentic*; but if the *final* be on the *dominant*, the mode is called *plagal*. These distinctions have, however, long since ceased to be noticed, and now are only known in the old music of the church.

PLAGAL CADENCE. A form of final cadence in which the harmony of the key note was preceded by that of the subdominant.

PLAGIARIST, MUSICAL. A composer who purloins or borrows from the productions of others.

PLAIN SONG. The name given to the old ecclesiastical chant, when in its most simple state, and without those harmonic appendages with which it has long since been enriched by cultivated science.

PLAIN CHANT. See **PLAIN SONG.**

PLAINTIVO. (I.) Expressively, plaintively.

PLANELLI, knight of the order of Jerusalem, at Naples, published there, in 1772, an excellent work entitled "*Dell' Opera in Musica.*"

PLANTADE, N., a French composer, and pupil of Langle, was born at Pontoise. He was for several years chapel-master to the King of Holland, and afterwards returned to Paris. Among his numerous works are the following: "*Romances, av. Acc. de Clav., Cahier 1, 2, 3, 4,*" Paris, 1796; "*Trois Duos pour le Chant, avec Acc. de Harpe ou Clav.,*" Op. 8, Paris, 1796; "*Recueil de Romances et Chansons, avec Acc. de Clav.,*" Op. 6, Paris, 1796; "*Le Jaloux malgré lui,*" operetta, Paris, 1798; "*Les deux Sœurs,*" Paris, 1791; "*Les Souliers modérés,*" Paris, 1793; "*Palma, ou le Voyage en Grèce,*" Paris, 1799; "*Romagnesi,*" Paris, 1799; "*Au plus brave la plus belle,*" Paris, 1799; "*Zoé, ou la pauvre Petite,*" opera, in one act; "*Recueil de Romances avec Clav.,*" Op. 13, Paris, 1802; and "*Esther,*" op. ser. of Racine, Paris, 1803.

PLAQUÉS. (F.) Struck at once, in speaking of chords.

PLARR, GOTTLIEB IMMANUEL. A musical amateur, born at Dresden in 1748. He published "*Six Quadrilles pour le Clav.,*" Dresden, 1791; "*Kleine Klavierstücke in Musik gesetzt,*" Dresden, 1792; "*Six Polonoises pour le Clav.,*" Dresden, 1793; and "*Sechs Polonoisen fürs Klavier,*" Dresden, 1795.

PLASMA. (Gr.) A term used by the ancients; sometimes to signify a florid, and at other times a soft and delicate modulation of the voice.

PLATANIA, IGNAZIO. A dramatic composer at Rome, between the years 1783 and 1791. This is probably the Platania mentioned in the French "Dictionary of Musicians."

PLATEL, N., a French violoncellist in the latter years of the last century. He published some music for his instrument.

PLATES. Quadrilateral sheets of copper, or pewter, on which music is stamped, or engraved, in order to be printed.

PLATNER, AUGUSTIN, a composer at the beginning of the seventeenth century, published, among other works, "*Missa à 8 voc.,*" Nuremberg, 1623.

PLATONE, LUIGI, a Neapolitan dramatic composer, is known by the following works: "*Amor non ha riguardi,*" opera buffa, Naples, 1787; "*Le Convulsioni,*" opera buffa, Naples, 1787; and "*Il Matrimonio per sorpresa,*" opera buffa, Rome, 1788.

PLATTI, GIOVANNI, of Venice, an excellent performer on the violin and hautboy, was chamber musician to the Bishop of Wurtzburg about the year 1740. He published at Nuremberg, about 1746, two works, of six sonatas each,

for the harpsichord, also six concertos for the same instrument, six solos, &c. His wife was principal singer at the chapel of Wurtzburg.

PLAWENN, or PLAUEN, LEOPOLD, a Benedictine monk at Zwiallen, published the following works: "*Sacræ nymphæ duplicium aquarum in dei et divorum laudes a 3, 4, 5, et 6 vocibus et instrumentis animata,*" Inspruck, 1659. The third volume appeared at Keupen in 1672, and contains "*Missa 4 festiva, et quatuor exequiata ceteræ una cum choro vocali ad placitum*" The fourth volume, comprising canticles for three, four, five, and six voices, with instruments, appeared at Ulm in 1679.

PLAYERS ON HIGH AND LOW INSTRUMENTS. A title assumed by the French minstrels of the fourteenth century, when the laws of counterpoint were forming, and began to give exercise to bass and treble instruments in concert—a denomination which was afterwards confirmed by a charter in the year 1401, granted them by Charles VI.

PLAYFORD, JOHN, born in the year 1613, was by trade a music seller, in London. In the year 1665 he published "An Introduction to the Skill of Music," which appears to have been in a great measure extracted from Morley's "Introduction," Butler's "Principles of Music," and other works on the subject. It is divided into three books; the first containing the principles of music, with directions for singing; the second, instructions for the bass, treble, and tenor viol, and also for the treble violin, with lessons to each; the third, the art of descant, or of composing music in parts. This work, which is written in a plain and familiar style, succeeded so well, that, before the year 1684, it had passed into ten editions. Of these, the last is fuller than any of the former, and is also much more correct. In the preface there are many curious and interesting particulars relative to music and musical professors. Playford appears to have possessed the friendship of most of the eminent musicians of his time, and, in consequence, was the publisher of a great number of musical works, between the years 1650 and 1685. He was a good judge of music, and was very industrious in his trade, contributing not a little to the improvement of the art of printing music from the letter press types, by the use of what he, in some of his publications, calls the *new-tied note*. It must be here remarked, that the musical works formerly in use in England were printed from metal types; the notes were distinct from each other, and the quavers and semi-quavers were signified only by single or double tails, without any connection whatever. Matthew Lock, in his "*Melothesia,*" printed in 1673, from copper plates, joined them together; and from hence it is supposed that Playford took the hint, and transferred the same improvement to letter press types. His skill in music was not so great as to entitle him to the appellation of a master. He knew nothing of the theory of the science, but was well versed in the practice, and understood the rules of composition well enough to write good harmony. Of this he has given proof in a great number of songs in two, three, and four parts, printed in the "Musical Companion," and also in his "Psalms and Hymns,"

in four parts, and in the collection entitled "The whole Book of Psalms, with the usual Hymns and Spiritual Songs, composed in three Parts." Playford lived to the age of eighty, and died, as is generally supposed, about the year 1693. He was succeeded in his business by his son Henry, who, in 1701, published what he called the second book of the "Pleasant Musical Companion, being a choice Collection of Catches for three and four Voices; published chiefly for the Encouragement of Musical Societies, which will speedily be set up in all the Towns and Cities in England." The design of this work was to give to the public a scheme for instituting musical clubs in different places, with certain rules mentioned in the preface, and to afford them also a useful collection of music. It seems to have had some success in promoting the practice of catch singing in London and Oxford; but it does not appear to have had that extensive influence which the compiler expected. It is conjectured that Henry Playford survived his father but a very few years; for we meet with no publication by him subsequent to the year 1710.

PLAYHOUSE TUNES. The general name by which, in the seventeenth century, all melodies first introduced to the public by the theatres were designated. Of these, for a long time, the principal in Great Britain was that of "Genius of England."

PLECTRUM. (L.) The quill formerly used, instead of the ends of the fingers, in agitating the strings of various instruments.

PLEIN JEU. (F.) Full organ.

PLEIGNIERE, M. DE LA, a French musician, published, about the year 1783, a work entitled "*Méthode pour exécuter les Variations d'Harmonie avec les Clavecins ordinaires, sans ôter les Mains de dessus le Clavier.*"

PLEYEL, IGNAZ, was born near Vienna, in 1757, and was until the age of twenty a favorite pupil of Haydn. In 1777 he was appointed chapel master to the Count Erdödy, but his eagerness to visit Italy did not allow him to remain long in that position; the count at first opposed, but furnished him the means, and he set out for Naples. He had already composed his first set of quatuors, which were admired for their graceful melody and individuality of manner. But, strangely enough, Haydn had taught him nothing about the laws of rhythm. Arrived in Italy, Pleyel became acquainted with all the distinguished artists there from that time forward. Cimarosa, Guglielmi, Paisiello became his friends; and his taste was formed by hearing singers like Marchesi at Milan, Guadagni at Padua, the Gabrielli, Pacchiarotti, and many others. He heard and admired Nardini, Pugnani, and many more who were the glory of Italy. Although his talent led him to instrumental music, yet he had a desire to try his powers upon the stage, and he composed for the grand theatre at Naples the opera "*Ifigenia*," which was successful. Returning to Germany in 1781, Pleyel remained there a short time, and then made a shorter journey to Italy. In 1783 he became adjunct chapel-master with the old Richter to the Cathedral of Strasburg. Here he was obliged to write music for the church; he composed several masses and

motets, which were liked, but unfortunately were consumed in a conflagration. The ten years from 1783 to 1793 were the period in which Pleyel composed most of his works. His violin quartets and piano-forte sonatas had an almost unexampled popularity. Editions were multiplied *in infinitum*, and copies scattered most profusely throughout Vienna, Berlin, Leipsic, Paris, London, and Holland. About the year 1795 Pleyel's fame eclipsed that of all the other musicians, and no other music was in demand. He had composed symphonies, too, which had hardly enough grandeur for that form, but were distinguished for agreeable melodies, clearness, and facility of execution. Towards the end of 1791, he was engaged, by the directors of the Professional Concert in London, to write some symphonies; this was to offset the rival enterprise of Salomon, who had performed, with great success, twelve symphonies composed for him by Haydn. Pleyel accordingly went to London. The first concert was given on the 13th of February, 1792. The success of Pleyel's music was prodigious. He surpassed himself, and showed himself worthy to contend with his illustrious master. The symphonies were three in number. Unfortunately, the Professional Concert was dissolved a few years after, its library dispersed, and the symphonies lost forever. With the proceeds of his London engagement (£200) and some other savings he was able to buy an estate near Strasburg, where he succeeded Richter as first chapel-master of the cathedral; but the revolution threw him out of this employment, and he retired to his estate. Even there he was not undisturbed. His place was classed as *aristocratic*; seven times he was denounced in the year 1793, and he only escaped death by flight. Returning to see his family, he was arrested in the middle of the night, and conducted before the municipal officers of Strasburg. Interrogated about his opinions, he declared himself a citizen; but they required, in proof of his sincerity, that he should write the music to a sort of drama for the anniversary of the 10th of August. He was allowed to do it in his own house, under guard of two *gensdarmes* and the poet (a *Septembriseur*) who had written the text, and gave him instructions. After an uninterrupted toil of seven days and nights, the work was finished, and the author returned to Strasburg to direct the execution. In it he had employed seven bells on the seven tones of the gamut. These bells had been taken from various churches and hung in the cupola of the cathedral. The first sound which they uttered, and which was a perfect chord, produced such an extraordinary effect, that Pleyel fainted. The inhabitants of Strasburg have preserved the memory of this fine work, and the score is still preserved in the family of the composer. Distrusted by this experience of provincial life, Pleyel sold his property and removed with his family to Paris in 1795. The continually growing success of his music suggested to him the idea of becoming his own publisher, and securing to himself the profits made upon it by the music dealers. He established a music store, to which he afterwards added the manufacture of pianos. These establishments prospered, but the care which they required insensibly turned Pleyel off from composition, so that long before his death he ceased to write. At the most, he produced

twelve quatuors, which were never published, but which Dussek, Onslow, and others pronounced superior to his earlier ones.

After a career so laborious, Pleyel retired at last to an estate far from Paris, and gave himself up to his agricultural tastes. He was living happy when the revolution of July troubled his old age with fears about his property. His health was already feeble; his maladies increased, and after three months of continual suffering he died, on the 14th of November, 1831, at the age of seventy-four years. He had married in 1788, and had several children, the most of whom died young.

The principal works of Pleyel are, I. SYMPHONIES FOR GRAND ORCHESTRA, to the number of twenty-nine. II. SEPTETS, SEXTETS, and QUINTETS. 1. Septuor for two violins, alto, violoncello, contrabasso, and two horns. 2. Sextuor for two violins, two altos, violoncello, and contrabasso, Op. 37. 3. Five books of quintets for two violins, two altos, and 'cello. All the other compositions in this form, bearing the name of Pleyel, were only arrangements of his other works. III. QUARTETS. 1. Op. 1, 2, 3, 4, 5, 6, and 7, containing 45 quartets for two violins, alto, and 'cello. 2. Six quatuors for flute, violin, alto, and bass, Op. 56. IV. TRIOS. Op. 11, trios for violin, alto, and bass. Also three books of trios for two violins and 'cello. V. CONCERTOS. 1. For violin, Nos. 1 and 2. 2. For violoncello, Nos. 1, 2, 3, and 4. 3. *Symphonie Concertante*, for violin and alto, Op. 35. 4. For two violins, Op. 57. 5. For violin, alto, and bass, Op. 59. 6. For two violins, alto, 'cello, flute, hautboy, and bassoon. 7. For flute, hautboy, horn, and bassoon. 8. For piano and violin, Nos. 1 and 2. VI. DUOS. 1. Six books for two violins. 2. For violin and 'cello, Op. 12. 3. For violin and alto, Op. 30. VII. PIANO MUSIC. 1. Concertos for piano, Nos. 1 and 2. 2. Sonatas for piano, violin, and bass, Op. 14, (books 1 and 2,) Op. 15, Op. 16, (books 1 and 2,) Op. 23, 24, 29. 3. Grand Sonatas, Op. 31, 32, 33, 34. 4. Six *Sonates progressives* for piano and violin, Op. 27. 5. Six do., Op. 28. In the multitude of works ascribed to Pleyel it is difficult to distinguish those which are original from those which are arrangements or extracts from his other works.

PLEYEL, CAMILLE, oldest son of the preceding, was born at Strasburg in 1792. He has devoted himself wholly to the manufacture of pianos, having associated himself for that purpose with Kalkbrenner in 1824. He is also an excellent pianist and composer, and has written quartets, trios, sonatas, &c.

PLEYEL, MARIE CAMILLE, was born in Paris about the year 1810. Madame Pleyel is one of the most distinguished female pianists in Europe, and by her beauty and intellectual gifts has long been an ornament of the most refined Parisian circles. Since 1847 she has been a teacher in the Conservatoire at Brussels.

PLOUVIER, P. J. Professor of the guitar at Paris about the year 1807.

PLUS. (F.) More; as, *plus animé*, with greater animation.

PNEUMATIC. An epithet borrowed from

the Greek, and given to wind instruments in general, in distinguishing them from those of the stringed or pulsatile species. Also applied to the modern organ, in contradistinction to the epithet *hydraulic*, proper to the ancient organ, because that instrument was actuated by the compression of water.

POCHETTINO, POCETTO. (I.) A little; as, *ritard. un pochettino*, play somewhat slower.

POCO. (I.) Little. A term of diminution; as *poco largo*, rather slow; *poco piano*, a little soft; *poco piu lento*, a little slower; *poco piu allegro*, a little quicker.

POCO A POCO. (I.) By little and little, gradually; as, *poco a poco crescendo*, louder and louder by degrees; *poco a poco diminuendo*, softer and softer by degrees.

PODBIELSKI, CHRISTIAN WILHELM, organist at Königsberg, studied in the university of that town, receiving at the same time musical instruction from his father, till he became a very eminent performer on the organ and harpsichord, for which instruments he wrote much esteemed music. He died suddenly at Königsberg in 1792.

PODIO, GUGL. DI, an Italian priest and didactic writer on harmony, published, in 1495, a work entitled "*Ars Musicorum, sive Commentarium Facultatis Musicae.*"

PODIUS, FRANCISCUS, a celebrated Sicilian composer, published "*Ricerche, Lib. 1.*" Palermo, 1604.

POESSINGER, FRANZ ALEXANDER, a violinist at Vienna, published there much music for his instrument, between the years 1792 and 1803.

POET MUSICIANS. A compound appellation applied by musical writers to the bards and lyrists of former times, who generally blended in their profession the arts of poetry and music, singing their rhapsodies to melodies of their own composing.

POETIC. A term applied by the ancients to the art of accommodating melody to verse.

POGGI, TERESINA. A distinguished singer of Bologna in the latter part of the last century.

POGGIATO. (I.) Dwelt upon, impressive.

POHL, WILHELM. A doctor of medicine, and celebrated amateur composer of instrumental music. He resided at Vienna, where he died about the year 1807.

POHLE, DAVID. Chapel-master at Halle and at Mersburg, about the end of the seventeenth century. He published at Halle, in 1665, "*The Spiritual Odes of Heydenreich*," which were performed in the ducal chapel there.

POINT D'ORGUE. (F.) A pause; also a pedal passage.

POINTÉE. (F.) Dotted, in speaking of the duration of notes.

POI A POI TUTTE LE CORDE. (I.) All the strings, one after another. An expression used in playing the grand piano-forte.

POINT. This word, as conjoined with others

has various significations. The different uses to which points were formerly applied render the perusal of old compositions extremely difficult and perplexing. In those works we meet with the point of perfection, point of augmentation, point of division, and point of alteration. The point of perfection was added to those notes which were denoted by the modal signs to be perfect, or equal to three notes of the same value, but which were rendered imperfect by position. The point of augmentation is that in modern use, which the old masters used only in common or imperfect time. The point of division, or imperfection, was placed between two shorter notes that followed, and were succeeded by two longer in perfect modes, to render both the long notes imperfect. The point of alteration, or of duplication, was placed before two shorter notes preceding a longer, in order to double the length of the second short note. In modern music, the point, taken as an increased power of the note, is always equal to the half of the note to which it appertains. See the article Dot.

POKORNY, GOTTHARD, chapel-master of St. Peter's Church, in Brünn, was born in Bohemia in 1733, and was one of the best organists and violinists of his age. He wrote much church music, none of which, however, has been published. He died at Brünn in 1802.

POKORNY, a celebrated female performer on the horn, performed at the *Concert Spirituel* in Paris, about the year 1780.

POLACCA. A Polish movement of three crotchets in a bar, chiefly characterized by its emphasis being laid on the fifth quaver of the bar.

POLANI, GIROLAMO, a Venetian composer, brought out the following operas with success: "*Prassitele in Gnido*," 1700; "*La Vendetta disarmata dall' Amore*," 1704; "*Creso tolto alle Fiamme*," 1705; "*Rosilda*;" "*Vindice la Pazzia della Vendetta*," 1707; "*La Virtù trionfante di Amore*," 1704; "*La Virtù trionfante di Amore vendicativo*," "*Il Cieco Geloso*," 1708; "*Berengario Rè d'Italia*," 1710; and "*Chi la fà, l'aspetta*," 1717.

POLANI, a good violinist, and pupil of Tartini, resided at Rome about the year 1785, and was the master of M. P. Baillet.

POLAROLO, CARLO FRANCESCO, chapel-master of St. Mark's Church at Venice, was born at Brescia in 1653. He was one of the most prolific authors of his age, and is said to have been the first embellisher of theatrical instrumental music. He died in 1723.

POLAROLO, ANTONIO, son of the preceding, was also chapel-master of St. Mark's Church at Venice, and well sustained his father's celebrity. He produced the following operas: "*Aristeo*," 1700; "*Griselda*," 1701; "*Demetrio e Tolomeo*;" "*Leusippo e Teone*," 1702; "*Lucio Papirio Dittatore*;" "*Plautilla*," 1721; and "*Cosroe*," 1723.

POLETTI. A dramatic composer of Ferrara in the latter part of the last century.

POLL, AGOSTINO, chapel-master to the Duke of Wurtemberg at Stuttgart, about the year 1790; also a conductor of the orchestra of the Italian opera in that town. He composed

some church and dramatic music, and was master to several pupils who afterwards became eminent.

POLIDORI, ORTENSIO, a prolific church composer, born at Camerino, flourished about the middle of the seventeenth century. Amongst his works are "*Messe à 5 et 8 voci con Ripieni et 2 I.*;" "*Salmi concertati à 3 e 5 voci, Lib. 2, con Stromenti*;" "*Salmi à 2 Cori, parte concertati e parte pieni, Libro 2*;" "*Motetti à voce sola et à duoi*," Op. 13, Venice, 1637; and "*Salmi concertati*," Venice, 1641.

POLIDORI. An Italian composer of this name published at Paris, in 1780, "*Six Trios pour Violon*," Op. 1.

POLIPHANT. (From the Greek.) An instrument strung with wire, and somewhat resembling the lute. In the time of Elizabeth, the poliphant was much in fashion, and, as supposed, a great favorite with that sovereign.

POLITIANO, ANGELO, canon of the cathedral at Florence, and professor of the Greek and Latin languages in that city, was born in Tuscany in 1454. His writings contain many things interesting to musicians, and he was himself an excellent lutist, singer, and composer. His passion for music was such, that he gave directions to be permitted to hear it in the last moments of his life. It is said that, being deeply enamoured of a lady of distinction, probably of the house of Medicis, and not being able to render her favorable to his suit, by either entreaties or presents, he was so much affected as to bring on a violent fever, during the ravings of which he was seized with an anxiety to set to music some verses expressive of the force of his affection. For this purpose he rushed from his bed, and, seizing his lute, sang the desired poetry with such sensibility, that the impression it made on him was the immediate cause of his death. Amongst his practical works was a drama, produced in 1475, entitled "*Orfeo*."

POLKA. This dance, which is equally popular in Bohemia, Hungary, Sweden, Norway, &c., "is," says Miss Bremer, "highly characteristic; it paints the northern inhabitants' highest joy in life; it is the Berserker gladness in the dance. Supported upon the arm of the woman, the man throws himself high in the air; then catches her in his arms, and swings round with her in wild circles; then they separate, then they unite again, and whirl again round, as it were in superabundance of life and delight. The measure is determined, bold, and full of life. It is a dance intoxication, in which people for the moment release themselves from every care, every burden, and oppression of existence."

POLLEDRO, GIACOMO BATTISTA, an eminent violinist and composer for his instrument, is a native of Turin, born in 1776. He was very celebrated in Germany in the year 1812, about which time he was heard in most of the principal cities of that country. He published at Leipsic "*3 Conc. pour V.*," Ops. 6, 7, 10; "*3 Var. pour V., &c.*," Ops. 3, 5, 8; and "*3 Trios pour 2 V. et B.*," Ops. 2, 4, and 9.

POLLINI, FRANCESCO. A pianist and composer from Milan, who resided in 1803 at Paris.

POLONOISE. A movement of three crotchets

in a bar, and of the singularity of character of having every rhythmical caesura, not on the first, but last crotchet of the bar. The *Polonoise* is generally written in two strains, and its movement, though majestic, is smooth and fluent.

POLTORATZKY, M. F. Imperial chapel-master at Petersburg in 1768. His choir was composed of fifty-four singers.

POLYCEPHALE. A kind of air in the ancient Greek music performed by flutes, in honor of Apollo. This species of *nome*, or melody, was, according to some authors, invented by the second Phrygian Olympus; and according to others by Crates, his disciple.

POLYMNASTIC. The epithet by which the ancients distinguished certain flutes, invented, as some authors assert, by a woman named Polymnestis; but according to others, by Polymnestus, son of Colophonian Melas.

POLYMNESTES, of Colophon, in Ionia, was a composer for the flute, as well as an improver of the lyre; and it appears to have been no uncommon accomplishment for those ancient musicians to perform equally well upon both those instruments. Polymnestes is said to have invented the hyper-Lydian mode. This mode being half a tone below the Dorian, which was the lowest of the five original modes, was, perhaps, the first extension of the scales, downwards, as the mixo-Lydian was upwards. Plutarch, who assigns to him this invention, says, that he relaxed and tightened the strings more than had been done before; that is, altered their tension by new tunings, relaxing them for his new mode; and on the contrary, when he played in the old modes, tightening them again.

POLYODIA. (Gr.) A term applied by the Greeks to any conjunction or combination of sounds, whether rude or dissonant, unisonous or in octaves.

POLYPHONIA. (Gr.) A combination of many sounds.

POLYPHONIC. (Gr.) An epithet applicable to all compositions consisting of a plurality of parts, but generally confined to instrumental music, as concertos, overtures, accompanied sonatas, &c.

POLYPECTRUM. A kind of ancient spinnet, said to have been invented by Guido; so called from its strings being agitated by a number of quills.

POLYTHONGUM. (L.) An instrument used by the ancients, and so named from its containing many strings. Its tone was soft and effeminate, and its scale between those of the lyre and the sambuca.

POMPOSO. (I.) A word implying that the movement to which it is prefixed is to be performed in a grand and dignified style.

PONCINI. Chapel-master and church composer at Parma in 1770.

PONCTUATION MUSICALE. (F.) Musical punctuation or phrasing.

PONDEROSO. (I) Weightily, heavily.

PONTICELLO. (I.) The bridge, in speaking of the violin, guitar, &c.

PONTE, ADAM DE. A composer of the sixteenth century. Several of his motets may be found in the first book of the "*Thesaurus Musicus*," Venice, 1586.

PONZIO, PIETRO, of Parma, published, in 1583, a musical book entitled "*Dialoghi della Musica*." It is a work of value for the time in which it was written. He also, according to Dr. Burney, printed, in 1588, his "*Ragionamenti di Musica*;" probably, however, the two above-mentioned works are the same, but with different titles. Amongst his practical publications are "*Psalmi Vesperarum totius Anni 4 vocum*," Venice, 1578; "*Lib. 1, Missarum, 4 voc.*;" "*Lib. 2, Missarum, 4 voc.*," Venice, 1585; "*6 Misse à 8 voci*," Venice, 1590; and "*Magnificats, 1tes und 2tes Buch*."

PONZIO, GIUSEPPE, a Neapolitan dramatic composer, brought out at Venice, in 1766, the serious opera entitled "*Artaserse*." According to the Milan "*Indice de' Spettac. Teatr.*" for 1791, Ponzio was then still living.

PORDENONE, MARC. ANTONIO. A composer of the sixteenth century. One of his works is entitled "*Madrigali à 5 voci, Lib. 1 e 2*," Venice, 1567.

PORFIRI, DOM. PIETRO, a good Venetian composer, towards the close of the seventeenth century, brought out, in 1687, the opera of "*Zenocrate Ambasciatore ai Macedoni*."

PORPORA, NICOLO. The celebrated pupil of Alessandro Scarlatti, born at Naples in 1687. He was placed, at an early age, under his great master, and, by his rapid progress, proved himself worthy of the care and lessons of such an instructor. He left the Conservatory rich in all the principles and gifts of the school. After the example of his master, he commenced by travelling, and gave "*Ariane e Teseo*," his first opera, at Vienna, in 1717, with such success that it was performed in the theatre at Venice in 1727, and in London in 1734. Previously to this, however, he was living at Vienna, in the reign of Charles VI., poor and unemployed. His music did not please the imperial connoisseur, as being too full of *trills* and *mordenti*. Hasse wrote an oratorio for the emperor, who asked him for a second. He entreated his majesty to let Porpora execute it. The emperor at first refused, saying that he did not like that capering style; but touched with Hasse's generosity, he at length complied with his request. Porpora, having received a hint from his friend, did not introduce a single trill in the whole oratorio. The emperor, surprised, continually repeated, during the rehearsal, "'Tis quite a different man; here are no trills!" But when they came to the fugue, which concluded the sacred composition, he observed that the theme commenced with four trilled notes. It is well known that, in fugues, the subject passes from one part to another, but does not change. When the emperor, who was privileged never to laugh, heard in the full height of the fugue this deluge of trills, which seem like the music of some enraged paralytics, he could no longer maintain his gravity, and laughed, perhaps for the first time in his life. In France, the land of pleasantry, this might have appeared misplaced; but at Vienna it was the commencement of Porpora's fortune. The suffrages of one of the first courts of Germany, and those of a public enthusiastically devoted to music, at length encouraged Porpora to fresh and greater efforts. His first work was acknowledged to possess force

originality, depth, and that inspiration which incessantly invents and creates, but which is not always accompanied by perfection. In 1726 he gave his opera of "*Siface*," at Venice; but, less fortunate than at Vienna, his success was contested by those rivalries which, when not continual and inflexible, are useful rather than prejudicial to genius, but when they assume the hateful garb of envy, retard, if not destroy, its progress. Leonardo Vinci, a classical composer, was at Venice at the same time with Porpora, and represented his opera of "*Ciro*" at another theatre, which, either from its greater merit, or from the superiority afforded by a more dramatic subject, met with better success than that of Porpora; but the latter did not consider himself defeated. His ardor increased, and, by a succession of operas given in the same city, the Venetians were enabled to appreciate his talents as they deserved. He, in his turn, obtained that applause which had been before granted to Leonardo Vinci. Satisfied with this triumph, Porpora left Venice for Dresden, where his growing reputation had preceded him, and where he was engaged by the elector as chapel-master and singing master to the electoral Princess Marie Antoinette. Dresden was the Naples of Germany, as far as regards music; Porpora was therefore excited to make a brilliant display of his abilities, which was particularly necessary, as Hasse, the Saxon, menaced him with even a more formidable rivalry than he had experienced from Vinci at Venice. He exerted all his courage, and wrote several operas, which were represented, and saw his efforts and his works crowned by the applause of the court and the public, notwithstanding the reputation and the presence of his rival. He even obtained a second victory, not less flattering than the first. He presented to the public his pupil, the young and beautiful Mingotti, who became one of the greatest singers in Europe. He opposed her, with success, to Faustina, the celebrated wife of Hasse, who had long been unrivalled in Germany, Italy, and England.

In 1773 Porpora was engaged by the English nobility to compose for and direct an Italian opera they had established in opposition to Handel. His efforts were neither unworthy of his courage nor abilities; but he could not resist the force of public opinion, and although assisted by the great Farinelli, his operas were heard with an indifference which almost amounted to contempt. Porpora therefore quitted England, and returned to Italy; but such was his disappointment at the reception he had experienced, that he ceased to compose. He was for some time principal master at the Incurabili Conservatory at Venice. He retired late in life to Naples, where he died in great poverty in 1767, at the age of eighty. This misfortune arose more from the generosity of his disposition than from any imprudence.

Porpora was particularly distinguished as a singing master. Farinelli, Mingotti, Caffarelli, and many other theatrical singers were his pupils. Their celebrity sufficiently attests the excellence of his instructions. He was also an admirable performer on the harpsichord. As a composer, he was considered as a model of style in recitative. He excelled, also, in the cantabile, and his cantatas have been always highly esteemed. Dr. Burney remarks, that "perhaps the art is more

indebted to Porpora for having polished and refined recitative and measured air, than for enriching it by the fertility of his invention." He is said to have composed fifty operas, besides sacred music. The theory of sounds was also known to him; and, proceeding from effects to their causes, he analyzed his art as a musician and as a philosopher. He was called, by his fellow-citizens, the Patriarch of Harmony.

Porpora has been represented as a man of wit and repartee. Passing one day through an abbey in Germany, the monks requested him to assist at the office, in order to hear their organist whose talents they greatly extolled. The office finished, "Well, what think you of our organist?" said the prior. "Why," replied Porpora, "he is a clever man." "And likewise," interrupted the prior, "a good and charitable man, and his simplicity is really evangelical." "O, as for his simplicity," replied Porpora, "I perceived that; for his left hand knoweth not what his right hand doeth."

PORRECTUS. (L.) The name of one of the ten notes used in the middle ages.

PORRO, N., a composer and editor of music at Paris, published a periodical work entitled "*Journal de Guitare*," and much separate music for the same instrument, between the years 1785 and 1799.

PORSILE, GIUSEPPE, of Naples, the son of Carlo Porsile, who composed the opera of "*Nerone*" for that city in 1686, appears to have been in the service of the emperor at Vienna, in 1720. Between that period and 1735, he composed several dramas for the theatres of Italy. His favor, however, was permanent at Vienna, as he was employed there, in 1733, to set the oratorio of "*Giuseppe riconosciuto*," by Metastasio, which Hasse publicly declared to be the finest music he ever heard. Some of his other operas are "*Sisara*," 1719; "*Meride e Selinunte*," 1721; "*Roboamo e Geroboamo*," and "*Spartaco*," 1726.

PORTA, COSTANZO, a Franciscan friar, and a native of Cremona, is highly celebrated among the musicians of the sixteenth century. He was a pupil of Willaert, and fellow-student with Zarlino. In the early part of his life he was chapel-master at Padua; afterwards of the cathedral church of Osimo, a small city on the river Musone, near Ancona, then at Ravenna, and lastly at Loretto, where he died in the year 1691. He left behind him motets for five voices, printed at Venice in 1546, and other works of the same kind, printed also there in 1566 and 1580. These are all excellent and elaborate compositions.

PORTA, ERCOLE, a Bolognese composer of the seventeenth century, published, at Venice, a work entitled "*Lusinghe d' Amore e Canzonetti a 3 voci*."

PORTA, FRANCESCO DELLA, a celebrated organist and composer, and chapel-master of St. Antonio's Church at Milan, was a pupil of G. D. Ripalta. He died in 1666. Amongst his works are "*Ricercate à 4 voci*," Milan, and "*Motetti, Lib. 1 e 2*," Venice.

PORTA, GIOVANNI, a learned Venetian composer in the early part of the last century, was at first chapel-master to Cardinal Ottoloni,

and subsequently entered the service of the court of Bavaria, in which country he died about the year 1740. He composed several operas, also some church and instrumental music. G. Porta was one of the most able masters of his time, uniting learning with invention and fire.

PORTA, BERARDO, pupil of Magrini, who was of the school of Leo, was born at Rome about the year 1760. He was at first chapel-master and *chef d'orchestre* at Tivoli, where he composed several operas, some oratorios, and instrumental music. In 1788 he went to Paris, where he brought out the following among other works. For the theatre: "*Le Diable à quatre*," 1783; "*Pagamin, ou le Calendrier des Vieillards*," 1792; "*Laurette au Village*," 1792; and "*La Réunion du 10 Août*," 1794. Instrumental: "*Trois Trios à trois Fl.*," Op. 1, Paris, 1798, and "*Trois Trios à trois Fl.*," Op. 2, Paris, 1798.

PORTAFERRARI, DOM. CARLO ANTONIO, of Bologna, published at Modena, in 1732, "*Regole per Canto Fermo Ecclesiastico*."

PORTAMENTO. A term applied by the Italians to the manner or habit of sustaining and conducting the voice. A singer who is easy, yet firm and steady in the execution of his passages, is said to have a good *portamento*. The word is sometimes used in the same sense as *legato*. It is a gliding of the voice, and is used only in slow movements to connect *two notes* separated by an interval. It consists in gliding the voice quickly and continuously from the former of the two notes to the latter, and by this means anticipating it in regard to intonation.

EXAMPLES.

If the portamento is applied to an ascending interval we must gradually pass from a soft to a loud degree of tone, with a smooth and gentle impulse of the throat; and the contrary if the interval descends. The portamento or glide is one of the greatest beauties in singing, if applied with moderation and propriety; but we must carefully avoid a slow, heavy, and dragging manner of sliding the voice up and down, so as to give it the appearance of stopping, with affectation, on each intermediate point of the interval through which it has to pass. This must be more particularly observed in descending intervals; as otherwise the effect produced will be either that of a heavy groan or a long yawn.

PORTE DE VOIX. (F.) An appoggiatura.

PORTÉE. (F.) The staff on which the notes are written.

PORTER, WALTER, was a gentleman of the Chapel Royal of Charles I., and master of the choristers at Westminster. He was patronized by Sir Edward Spencer, and was killed in the rebellion. His works are, "*Airs and Madrigals for two, three, four, and five Voices*, with a

Thorough Bass for the Organ or Theorbo Lute, the Italian Way," printed in 1639; "*Hymns and Motets for two Voices*," in 1657; and "*The Psalmus of George Sandys, set to Music for two Voices, with a Thorough Bass for the Organ*," printed about the year 1670.

PORTINARIO, FRANCESCO, an eminent contrapuntist, flourished at Padua about the middle of the sixteenth century. Amongst his works we can name "*Il Terzo Libro di Madrigali, à 5 e 6 voci, con tre Dialoghi à 6, et uno à Otto*," Venice, 1557.

PORTMANN, JOHANN GOTTLIEB, born near Dresden, in the year 1739, was a singer in the court chapel at Darmstadt. He published several didactic works on singing and music in general, also a collection of psalms. He died in 1798.

PORTO, PEDRO DE, chapel-master at Seville in the year 1600, was born in Portugal. A motet of his composition, commencing with the words, "*Clamabat autem Jesus*," is considered by his countrymen as one of the very best works of its kind.

PORTO. An Italian bass singer, engaged at the King's Theatre, London, in the season of 1824.

PORTOGALLO, MARCO ANTONIO. A celebrated dramatic composer, formerly in the service of the Portuguese court at Lisbon. The following are amongst the operas composed by him: "*Il Molinaro*," op. buffa, Breslau, 1792; "*La Somiglianza, ossia i Gobbi*," Dresden, 1793; this piece was performed at Vienna in 1794, under the title of "*Le Confusioni della Somiglianza*;" "*Lo Spazza Cammino*," op. buffa, Dresden, 1794; "*La Vedova Raggiratrice*," op. buffa, Dresden, 1795; "*La Donna di Genio Volubile*," op. buffa, Dresden, 1798; "*Le Donne Cambiate*," an interlude, Dresden, 1799; this opera was given in Germany under the name "*Der Teufel ist los*;" "*Non irritar le Donne*," op. buffa, 1801; "*Argenide e Sese*;" "*Fernando in Mexico*;" and "*La Morte di Mitridate*."

POSATO. (I.) Quietly, steadily.

POSAUNE. (G.) The trombone.

POSCENTIO, PEREGRINO, an Italian composer, published, in 1650, "*Canzoni à 2, 3, e 4 Strumenti*."

POSÉMENT. (F.) A very slow time; adagio.

POSITION. (F.) A position or shift on the violin, or any other instrument.

POSITION OF THE MOUTH, in singing. Bernacchi says, "Without a proper position of the mouth, it is impossible to produce a good tone. The under jaw must fall from the upper so far that one can see the tongue. The under jaw and the lips must not twist to the right or left, but fall perpendicularly. The lips must not be brought into a round form, or placed in an unnatural position, but must be opened easily and without constraint. The tongue must be level, and lie so that its tip just touches the under teeth; it should not stand up or roll itself into a ball; the tongue is an unruly member, and will not always take the proper position without force. It may therefore be pushed down by means of a stick cut in the right shape, or by the handle of a silver

spoon. This must be persevered in until all traces of the evil habit have disappeared. The lips must not be totally withdrawn from the teeth, else a shrill, disagreeable sound will follow; the proper position of the mouth must be taken *before* commencing a tone; the contrary will cause a sort of howl. The position of the mouth must not be changed during the emission of a tone. In repetition of the same word, the position of the mouth must not be altered, else the same vowel will have different pronunciations."

POSITIF. (F.) POSITIV. (G) The choir organ.

POSITIVE. An appellation formerly given to the little organ placed in front of the full or great organ.

POSSIBILE. (I.) Possible; as, *il piu forte possibile*, as loud as possible.

POSSËIN, JOHN SAMUEL CHARLÈS, born in 1755, was a native of Berlin, and held some high musical appointments at the Prussian court.

He went to England in 1792. Possin was a man of very singular habits, and never would put his name to any of his works. He adapted for Salomon the twelve symphonies which Haydn composed expressly for that gentleman, and which are admirably done; indeed they were the first adaptation of orchestra music worthy of notice. He also added a thorough bass accompaniment to them. Possin suffered under a long and painful disorder, that enfeebled his powers for several of the latter years of his life, and finally terminated his existence in 1822. He died worth upwards of ten thousand pounds, and left a will, some parts of which were as curious as the general tenor of his life. He devised to Mr. Saust all his manuscript music, (mostly vocal,) desiring that it might not be published. Possin was pronounced, by Haydn, to have been one of the best musical theorists of his day.

POST HORN. (G.) A sort of bugle; also a movement suited to and imitating the notes of such an instrument.

Post Horn, SCALE IN Bb.

	F	G	A	B	C	D	E	F	G	A	B	C	D	E	F	G	A	B	C	D	E
1st valve, . . .	1	1	1	0	1	1	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
2d valve, . . .	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2
3d valve, . . .	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3

The above is also the scale for the post horn in Eb and C.

POST POSITION. The putting a discord upon the accented part of a bar, followed by a concord on the next unaccented part, but not prepared and resolved according to the rules for discords.

POTTER, CIPRIANI, born in London in the year 1792, began to learn the piano-forte at the age of seven, under his father, who was a respectable professor and teacher of that instrument. Whilst speaking of his family, we may observe that his grandfather was the inventor of the patent German flute; his grandfather on the mother's side was a German professor of the bassoon, and was first bassoon at the opera, the celebrated Holmes having been his pupil. At an early period Cipriani Potter showed a disposition for composition, and commenced learning counterpoint under Attwood, from whom he received the greatest attention and gratuitous instruction for some time; he then continued his theoretical studies under Dr. Calcott and Dr. Crotch. On the arrival of Woelfl in England, he received instructions in composition in a general manner from him, during the term of five years. At the age of fourteen C. Potter wrote violin quartets, symphonies, and piano-forte sonatas. He already showed a preference for Beethoven's music, which, however, was rather ridiculed by the profession, on the presumption that he was too young to appreciate its peculiar merit. His first performance in public was at the Philharmonic, when he played a sestet of his own composition, and met with more encouragement as a performer than as a composer; the same season an overture of his was performed, which was but tolerably received. This cold

reception of his compositions determined him to make a pecuniary sacrifice, and travel for a year or two to Germany and Italy. At Vienna he renewed his studies in counterpoint and composition under Förster, Beethoven being kind enough to peruse and correct his works during his stay at Vienna. After having visited the principal towns in Germany, he made a tour in Italy for the purpose of becoming acquainted with the pure Italian style. On his return to England, the remarks on his compositions were, by some, that he was a servile imitator of Beethoven; by others, that he sacrificed too much for originality; in short, not being acknowledged sufficiently as a writer, he did not venture upon performing his own music, and at the Philharmonic and other concerts played several of Mozart's and Beethoven's concertos with great success; though his zeal for composition was not quite destroyed, as he generally produced each season a symphony for the Philharmonic trials. It is remarkable that C. Potter's works have been highly spoken of in the *Musikalische Zeitung*, published at Leipsic, and other German publications, when in London they were not noticed by critics, at other times mentioned with cold approbation, and in one instance abused. The following is a list of his principal works. Unpublished: Violin Quartets, Symphonies, Octaves, Sonatas, Concertantes, &c. Published: "Sonata in C," London; "Sonata in E minor," Leipsic; "Sonata in D major," Leipsic; "Duet for two Pianos," Vienna; "Fantasia and March," Vienna; "Rhenish Song, with Variations," Bonn; "Toccatta in G," London; "Second Toccatta in B flat," Leipsic; "Rondeau in C," London; "Fin ch'han, with Variations," Lon-

don; "*Placidità Andante*," London; "*Rondeau in F*," Leipsic.

POTTIHOE, a celebrated Dutch organist, was born in Amsterdam in 1726. He lost his sight from the small-pox at the age of seven. Dr. Burney heard him perform in 1772, when he played, amongst other music, two fugues of great difficulty; and though each key of his organ required a weight equal to two pounds to press it down, he went through the piece with as much skill, and apparent lightness of finger, as if he had been playing on the harpsichord.

POTTIER, MATTHIAS, an ecclesiastic and composer at Antwerp, is named on one of his works, *Italie Musicus R. D. Matth. Pottier, Cathedralis Ecclesie B. M. Antverpiensis Phonascus*. He published "*Flores selectissimarum Missarum*, 4, 5, et 6 Vocum," Antwerp, 1500, and "*Missæ 7, 8 Voc.*," Antwerp, 1640.

POTPOURRI. (F.) A medley. A capriccio or fantasia, in which various melodies and fragments of musical pieces are strung together and oddly contrasted.

POULLAN, MLE., an excellent performer on the harpsichord at Paris, published there, in 1783, "*Trois Sonates pour Clavécin, avec V. et Vc.*," Op. 1.

POULAIN. Organist of St. Leu at Paris, about the year 1750.

POULE. (F.) One of the movements of the quadrille.

POUR LA PREMIERE FOIS. (F.) A phrase sometimes written at the end of a strain, to signify that the passage over which it is placed is to be omitted in the repetition of that strain.

POUSAM, FR. MANOEL, a Portuguese Augustine monk and composer, was chapel-master of a convent in Lisbon, where he died in 1683. He composed, amongst other music, "*Liber Passionum et eorum, que a Dm̄inica Palmarum usque ad Sabbatum Sanctum cantari solent*," Lisbon, 1576; "*Missæ Defunctorum à 8 Voc.*;" and "*Vil-hancicos e Motetes*."

POUSSÉ, (F.) In violin or violoncello music this term is used to indicate an up-bow.

POUTEAU, N. An organist at Paris. He studied composition under Bordier, and the organ under Forqueray. He composed some instrumental music for the violin and piano, and in 1777 set to music one act of the opera "*Alain et Rosette*," which was successful at the *Théâtre de l'Opera*.

POVEY, MISS. A good singer in the early part of this century at Drury Lane Theatre. Her voice was rich, pure, and brilliant. She was also principal singer at the Catholic chapel in Moorfields.

POWELL, THOMAS, was born in London in the year 1776, and began music at a very early age. After studying practically and theoretically for some years, he became member of the Royal Society of Musicians. He still, however, continued to persevere in his professional studies, particularly composition and the violoncello, taking up occasionally the piano-forte, harp, or violin, as a relief to the former instrument. In the year 1811 he married; some time after which he

went to Dublin, where he taught in some of the first families. The Duke of Leinster was a pupil of his, as was also a son of Lord Leitrim. He composed many pieces of music in different styles; one of which was an introduction and fugue for the organ, that was performed at Christchurch and St. Patrick's Cathedral, as also at the castle chapel. On its performance at the cathedral, the Bishop of Kildare was so pleased, that he expressed a wish to have it entered in the choir, which was accordingly done. Powell was also requested by the lord lieutenant to perform at some of the concerts at the castle. He also played several times in public at the Rotunda. Powell played his first concerto on the violoncello to the English public, at a concert in the Haymarket Theatre, for the benefit of the Choral Fund; the concerto was his own composition, and was received with great applause. After that period he was indefatigable in practising his favorite instrument, and his style of playing became to be very like that of the celebrated B. Romberg. We have further been given to understand, that Powell, though he has never sung in public since his manhood, had a fine bass voice, the compass of which was very extraordinary, as he could with ease sustain the double B flat, and also take the upper F, in the bass clef, being a compass (in his natural voice) of two octaves and a fifth, besides which he had five notes higher, (with the falsetto,) touching the D flat, on the fourth line of the treble clef, making in the whole a compass of three octaves and a third. We are told that when he discovered the extraordinary compass of his voice, he exercised it regularly for some years, and that he brought it to a very great degree of strength and flexibility, having also a perfect shake, (seldom met with in a bass voice,) which he could sustain for some time. He had also the power of singing rapid passages with as much ease and flexibility as a tenor. The following singular anecdote happened to Powell, whilst passing a week at Glasgow. Walking in a field near that town, he met with some colliers working at a coalpit, when, his curiosity being excited by the baskets ascending and descending, sometimes with coals, and at others with men, he felt a wish to make an arrangement with the master for his own descent to the regions below; but the conversation concerning this intended trip was soon put an end to, his attention being arrested by four distinct sounds, which continued in regular time and tune, and were produced by the crane which was then working by steam. From the peculiar circumstance by which these sounds were produced, and a certain pleasing effect in them, Powell was desirous to compose a piece of music founded on these same notes, and accordingly did write an overture for a full orchestra, in eighteen different parts, commencing with the four notes in question, thus:—

the allegro and the whole of the piece being afterwards strongly marked with them, in the different degrees of counterpoint, and various other effects. The two last passages in the slow movement of this piece are said to be characteristic, the ascending and descending scales together conveying to the mind an idea of the basket

ascending and descending at the same time in the coalpit. The allegro begins with the four notes above written. The commencement of the overture (which is very slow) has also the same notes, only that the E is made flat instead of natural, which produces the minor key. This composition is one of the best of the author, and is a striking proof that the greatest powers of the human mind are frequently produced from causes apparently most trivial and purely accidental. There is another musical anecdote of Powell, which shows his readiness and power as a violoncellist. There was a concert at the Haymarket Theatre, to which he went in the boxes with a party of friends, arriving half an hour before the commencement. After his party were seated, he left them for a short time to see what was going forward on the stage; and had scarcely entered behind the scenes, when a gentleman (who, we believe, was one of the committee for the concert, and to whom he was known) addressed him, and said they were in great distress, as Lindley, who was to perform, had only just informed them, that, in consequence of a bad finger, he could not attend; he then requested Powell to take Lindley's part, which would essentially serve the interests of the concert. It was near seven o'clock. Powell was at a loss to know how to decide, as of course he had not his violoncello with him, and had two miles to go for it: wishing, however, to render every assistance in his power, he consented. There being no time to be lost, he immediately sent for a coach, (forgetting at the moment his friends in the box,) and proceeded home for his instrument; where seizing it for a few minutes to exercise his fingers a little, he returned to the theatre just in time for the piece. On his entrance in the orchestra, his friends, who were quite ignorant of the circumstance, and displeas'd at his long absence, did not at first recognize him, and there were different opinions expressed as to who it could be, until he began to play. After the piece, in which he had to take an obligato part, had commenced some little time, Powell's solo began, and he had several rounds of applause.

On leaving Dublin, Powell visited Edinburgh, where he met with great professional success. He has composed several pieces for the violoncello, as also for the piano-forte. The following list comprises his best compositions, both published and manuscript. For the violoncello, not published: "Fifteen Concertos," fantasia, Op. 21; "Kinloch, with Introduction and Variations;" "Potpourri, Introduction and Rondo," Op. 22; "Rousseau's Dream, with Introduction," Op. 23; "Capriccio," Op. 24; "Introduction and Polacca," Op. 25. Published for the violoncello: "Three Duets for Violin and Violoncello," Op. 1; "Three Duets for two Violoncellos," Op. 2; "Three Duets for two Violoncellos;" "A Grand Duet for Violin and Violoncello." For the violin, not published: "A Duet for the Violin and Violoncello;" "Blue Bell, with Variations;" "A Concerto;" "Three Duets;" "Three Trios Concertanti for two Violins and Violoncello;" "A Quartet, 'Hope told,' with Variations," (published.) For the piano-forte, not published: "A Grand Trio, with an Accompaniment for a Violin and a Violoncello Obligato;" "Introduction and Fugue for the Organ," as performed at Christ Church and St. Patrick's Cathedral, &c.; "In-

roduction and Fugue for the Organ;" "Overture for a full Orchestra;" "Overture for a full Orchestra," as performed at Vauxhall Gardens; "Grand Overture," as composed from the four notes given in the above anecdote; "A Polacca, with Introduction." For the piano-forte, published: "Sonata, with Violin Accompaniment," Op. 1; "Sonata, with Violin and Violoncello Accompaniment," Op. 2; "A Set of Grand Sonatas, with Violoncello Accompaniment, (obligato)," Op. 4; "Grand March and Rondo," as performed by the military band at Vauxhall Gardens; "La Campanella, a Rondo;" "Le Troubadour du Tage, with Variations." For the harp, published: "A Duet for Harp and Piano-forte;" "A Duet for Harp and Piano-forte;" "Haydn's Surprise, with Variations for the Harp or Piano-forte," 1809; "Kinloch, with Variations;" and some vocal pieces.

POZZABONELLO, FRANCESCO, of a noble Italian family, wrote a work entitled "*Dithyrambus pulsu Cytharæ modulatus*." He died at Rome in 1623, in the flower of his age.

POZZI, an Italian musician, who resided several years at St. Petersburg, published, amongst other works, "*Quatuor p. Fl., V., A., et Vr.*," Op. 1, Petersburg, 1795; "*Polonoise à grand Orch.*," Petersburg, 1796; "*Ariettes Ital.*," Op. 3, Petersburg, 1797; and "*6 Ariettes Italiennes*," Op. 4, Petersburg, 1797.

PRACHT, AUGUST WILHELM, a musician, resident at Konigsberg in 1793, published "*Lieder zum Singen beym Klaviere*," Zerbst, 1796; "*6 Kleine Klavier-Sonaten fur Liebhaber, 1ster Theil*," Zerbst, 1797; and "*Sonate pour le Clav. avec l'Acc. d'un V. Obl. et Vc.*," Berlin, 1798.

PRACTICE. Performance for the purpose of improvement; that active exertion of the pupil, without which the greatest genius, aided by the ablest instruction, cannot insure future excellence.

PRACTICE OF THE SCALE. Of all exercises in singing, that of the scale is the most necessary and the most difficult. By it, when well directed, we form, develop, and strengthen the voice. By this exercise, also, we are enabled to remedy, or at least to palliate, any natural defects in the voice, or in the organs by which it is formed. In practice, let the singer stand in an upright, natural, and dignified attitude, without any effort or stiffness. Let him keep his head upright, but without bending it back; for, if the muscles of the throat are too much extended, they cannot act with freedom. The mouth must assume the same position as in smiling, and be kept sufficiently open, so as, without any subsequent alteration, to pronounce the vowel to which the notes of the scale are to be sung. This position is very favorable to clearness of articulation, and to the obtaining of a full and round quality of tone. If the mouth be opened too wide, the voice becomes hollow and sepulchral. Indeed, guttural, dental, and nasal qualities of tone depend, in a great measure, upon the mouth being opened too much or too little. The student must take care that, in opening his mouth in the manner described, his countenance does not assume any unpleasant expression. He must also avoid making any grimaces with

those features of the face which are capable of movement. Occasional practice before a looking glass will be found very useful to correct bad habits of this kind. The tongue must lie behind the bottom teeth, without, however, pressing against them. Before the emission of a sound, and while the student disposes his mouth in the manner indicated, — a position which must remain unchanged throughout the whole duration of the note, — he must take breath copiously and with promptitude. The scale, both ascending and descending, must be practised on the vowel A, pronounced as in the word *father*; that is, with the Italian pronunciation. After a while, the scale may be practised upon the same vowel, pronounced as in the words *male*, *female*, &c. As soon as the student has taken breath, he must attack the note he intends to sing firmly, and not as if it were preceded or followed by an *appoggiatura*. On its first emission the sound must be very *soft*; it must then be made to increase gradually in intensity of tone, till it becomes as *loud* as the voice will conveniently allow; the tone must then be gradually diminished to the end of the note, where it must seem to die away insensibly. All this must be managed without any movement of either the mouth or tongue, or the smallest jerk or concussion of the chest. This manner of sustaining a note is called, by the Italians, the *messa di voce*, or *putting forth of the voice*. It must have a beginning, a middle, and an end. The *messa di voce* must be practised on every note of the scale within the compass of the voice, taking breath between each note. The *forte* should fall exactly in the middle of the duration of each sound. In this manner let the student daily sing two or three notes in the ascending scale, and as many in the descending scale, and he will soon ascertain the natural compass of his voice, equalize it as to power and quality of tone, and fix the limits within which he will be able to execute a melody without effort or fatigue. This practice must be conducted with moderation, so as not to injure the chest. The practice of swelling and diminishing a long note in the same breath is absolutely necessary to acquire expression and the power of giving the true accent to musical sentences. The *messa di voce* is generally indicated by this character <>, placed over any long note. The scale may also be practised with the voice sustaining each note in the same degree of *forte* or *piano* throughout, carefully avoiding any unsteadiness or tremulous and undulating movement in the tone; or each note may begin *forte*, and diminish gradually in quantity of tone to the end; this is generally indicated by the character >: or, again, each note may begin *piano*, and be swelled gradually to the end; this is indicated by <. The scale may be practised with the notes detached by separate emissions of the breath, or smoothly connected in one continuous emission of it. In practising the scales do not attempt any notes higher than the voice can conveniently reach; nothing is so likely to spoil the voice as forcing it beyond its natural limits. Nor must we too far try the breath during the exercises, as it is only by degrees that we can accustom ourselves to sing notes of very long duration.

PRADHER, LOUIS BARTHELEMI, professor of the piano-forte at the Conservatory in

Paris, was born in that city in 1781. He was frequently termed the Cramer of Paris, and was equally celebrated as a pianist and composer. He was teacher to some of the royal family of France, and was in what may be termed the zenith of fashion. As a player he was especially distinguished by a vigorous and spirited style of execution. Pradher commenced his studies in music at the age of eight years, at first under the direction of his uncle Lefèvre, and subsequently under Gobert, a professor of the Royal School, to which he was attached as a pupil. This school having been suppressed at the epoch of the revolution, Madame de Montgeroult, directed by the government to form two piano pupils, chose Pradher for one, and gave him instructions during two years and a half. The Conservatory being then established, Pradher was elected a pupil of it, under his first master, Gobert, and in the two first public exhibitions of the pupils obtained the first and second prizes for piano-forte playing. He studied harmony under Berton; but in the middle of his course quitted the Conservatory, and married Mlle. Philidor, daughter of the celebrated composer of that name. About a year after this, a professorship becoming vacant at the Conservatory, by the death of Hyacinthe Jadin, Pradher obtained the situation, after a competition with several candidates, on which occasion he performed, at first sight, some manuscript fugues of extreme difficulty, and which had been composed expressly for this competition. He has since formed many excellent pupils, some of whom have gained the first and second prizes; the principal of these, up to the year 1811, were Mesdames Damont, Herse, and Ravel, and Messieurs Chancourtin, Dubois, Meisemberg, and Lambert. Pradher has published a considerable number of musical works, consisting, up to the year 1811, of thirteen collections of romances, and a great number of detached pieces of the same kind, many of which had brilliant success; such as, for instance, "*Le Bouton de Rose*," and "*Le Printemps*;" also several vocal rondos; "Two Piano-forte Sonatas," dedicated to Berton; "A Grand Sonata," dedicated to Mehul; "Two Pot-pourris;" "A Rondo alla Polacca;" "Fantasia on the Air '*Du point de jour*,'" "A Fantasia on an Air of Lambert;" "A Variation for the Piano-forte ou the Romance of Helena;" and "A Piano-forte Concerto." He had composed, up to the same period, for the Théâtre Feydeau, three operas, namely, "*La Folie Musicale*," "*Le Chevalier d'Industrie*," and "*Jeune et Vieille*."

PRÆSCLE. (L.) Females hired by the ancients to sound the dead at funerals.

PRÄLL-TRILLER. A passing shake, or passing notes; as, —

PRÆTORIUS, MICHAEL, a native of Creuzberg, a city on the River Werra, in Thuringia, belonging to the Duke of Saxe-Eisenach, was born in the year 1571. Having made great proficiency in music, he was appointed by Henry Julius, Duke of Brunswick, chapel-master and chamber organist of his court, and also private secretary

to his consort Elizabeth. Being an ecclesiastic by profession, he afterwards became prior of the Benedictine monastery of Ringhelm, in the bishopric of Hildesheim. He was also, but in what part of his life it is not known, chapel-master to the Elector at Dresden. He died at Wolfenbuttel on the day of his nativity, 1621, having just completed his fiftieth year. The musical compositions of Prætorius are numerous, and consist of motets, masses, hymns, and other church offices. He wrote also a treatise, intended to consist of four volumes in quarto; but only three were printed, entitled "*Syntagma Musicum*." This work contains a history of the progress of ecclesiastical music, from the period of its origin to his own time.

PRÆTORIUS, GODESCALCUS, or ABDIAS, professor of philosophy at Wittenberg, was born in 1528. He is said to have perfectly mastered fourteen different languages. At the time he was rector of the school at Magdeburg, he formed an intimate acquaintance with the musician Martin Agricola, and being very partial to the science of music, undertook, conjointly with Agricola, to publish a work on singing. Agricola, however, dying before the work was completed, Prætorius finished and published it alone, under the title "*Melodiæ Scholasticæ sub Horarum Intervallis Decantandæ, &c. In usum scholæ Magdeburgensis*." Prætorius died in 1573, and an edition of the above work, probably the second, is dated Magdeburg, 1584.

PRÆTORIUS, or SCHULTZ, HIERONYMUS, a celebrated organist and composer at Hamburg, was born in that city in 1560. His father gave him his first lessons in music, which he subsequently studied at Cologne, and with such zeal that he was nominated, in 1580, chorister to the town of Erfurt. He died in 1629, having succeeded his father, in 1582, in the first-mentioned situation. Among his works are a "*Te Deum*" for sixteen voices; the "*Canticles of Luther and others, with many original Melodies*;" "*Cantiones Sacræ*," consisting of Latin hymns for from five to eight voices, and for all the principal festivals of the year, Hamburg, 1599; "*Magnificat, 8 Vocum*," Hamburg, 1602; "*Six Masses*," for from five to eight voices, Hamburg, 1616; "*Cantionum Sacrarum, 5 ad 20 Vocum, Lib. 4*," Hamburg, 1618; "*Opus Musicum Novum et Perfectum, 5 Tomis concinnatum*," Frankfort, 1623.

PRÆTORIUS, MAGISTER JOHANN, born in 1634, was rector of the gymnasium at Halle, where he died in 1705. By his erudition, as well as his musical compositions, he attained great celebrity. In 1681, he produced at Halle an oratorio of his composition, entitled "*David*," which was much applauded.

PRANDINI, GIOVANNI BATTISTA, an instrumental composer in Italy, in the beginning of the eighteenth century, published at Venice, in 1715, "*Sonate per Camera d tre*," Op. 1.

PRATI, ALESSIO, chapel-master to the elector palatine, and a very agreeable and generally esteemed composer, was born at Ferrara in 1737. In 1767 he went to Paris, and composed there an opera for the *Théâtre de l'Opera Comique*, entitled "*L'Ecole de la Jeunesse*." From Paris

he proceeded to St. Petersburg, where he was eminently successful, and at length returned to his native country, where he composed at Florence his opera of "*Ifigenia*," which was greatly admired. It is even said that, after its first representation, the archduke purchased the work, and withdrew it from public performance, that he might have the pleasure of being its sole possessor. Others of his operas are "*Armide Abbandonnata*," Munich, 1785; "*La Semiramide, ossia la Vendetta di Nino*," a melodrama, Florence, 1785; "*Olimpia*," Naples, 1786; and "*Demofoonte*," Venice, 1787. He also composed much chamber music for the harpsichord, harp, flute, &c., and several collections of Italian and French canzonets. He died at Ferrara in 1788.

PRATTICO. (I) The appellation given by the Italians to a practical musician, who performs, but does not study the science or theory of composition.

PRATT, JOHN, a native of Cambridge, and son of Jonas Pratt, a music seller and teacher of several instruments, was at the age of eight years admitted a chorister in the choir of King's College, and continued as such till his voice broke, when he became a pupil of Dr. Randal, (who was then the organist,) and for whom he officiated as deputy, until the time of the doctor's death, which happened in the month of March, 1799. He was then appointed, by Dr. Sumner, provost of King's College, organist to that society, and, on the 21st of September following, was appointed, by the vice chancellor, organist to the university, and, in the year 1813, succeeded Paris, as organist to St. Peter's College. The only work of importance which he published is a selection of ancient and modern psalm tunes and hymns, in one volume, entitled "*Psalmodia Cantabrigiænsis*." He has composed several services and anthems, which are frequently performed at the chapel in Cambridge.

PRECENTOR. (L.) The appellation given formerly to the master of the choir.

PRECIPITATO. (I.) In a hurried manner.

PRECISIONE. (I.) Precision, exactitude.

PREDIERI, LUCA ANTONIO, of Bologna, after having resided many years in the service of the court at Vienna, died in his own country. He is said to have joined much imagination in his works to great truth and expression. Charles VI. had a particular esteem for this composer. The following are some of his dramatic productions: "*La Griselda*," 1711; "*Astarto*," 1715; "*Lucio Papirio*," 1715; "*Il Trionfo di Solimano*," 1719; "*Merope*," 1719; "*Scipione il Grande*," 1731; "*Zoe*," 1736; "*Il Sacrificio d'Abraham*," 1738; and "*Isaaco Figura del Redentore*," 1740.

PREGHIERA. (I.) Prayer.

PREINDL, JOSEPH, born in 1758, and chapel-master at Vienna in 1793, published much music for the harpsichord, besides masses, graduals, offertories, &c.

PRELLEUR, PIERRE. A French composer, who resided in London. In 1728 he was elected organist at St. Alban's; about the same time he was employed in the orchestra of the theatre in Goodman's Fields, for which house he composed

some ballets and interludes, which were very successful. In 1731 he published a work entitled "The Modern Music Master, &c." It contains instructions for singing, as also for playing most of the instruments then in use.

PRELOQUIUM. (L.) The term applied to that introductory excess of words, or syllables, which precedes the first bar of a chant.

PRELUDE, PRELUDIO, (I.) PRELUDIUM; (L.) A short introductory composition, or extempore performance, to prepare the ear for the succeeding movements.

PREMIERE. (F.) First; as, *premiere fois*, first time.

PRENITZ, CASPAR, by birth a Bavarian, published at Ratisbon, in 1690, a collection of Latin psalms for voices and instruments. He was the master of Pachelbel.

PREPARATION. That disposition of the harmony by which discords are lawfully introduced. This preparation chiefly consists in employing a harmony, one of whose notes will form the discordant note of the prepared combination.

PREPARED SHAKE. A shake with two or more introductory notes.

PRESCIMONIUS, NICOLAUS JOSEPHIUS, doctor of laws, and advocate at Palermo in 1708, was born at Francavilla, in Sicily, in 1669. He was the composer of no less than fourteen oratorios, of most of which he probably wrote both the words and music. The following are the titles of these works: "*La Gara de' Fiumi, Serenata à 5 Voci,*" Palermo, 1693; "*La Nascita di Sansone annunziata dall' Angelo; Figura della Sacratissima Annunziazione del Verbo; Dialogo à 5 Voci,*" Messina, 1694; "*L'Onnipotenza glorificata da' tre fanciulli nella Fornace di Babilonia; Dialogo à 5 Voci per la sacra Cena del Redentore,*" Naples, 1695; "*Il Trionfo degli Dei; Serenata à 4 Voci, due Chori, e 60 Stromenti,*" Messina, 1695; "*Gli Angeli Salmisti per la Concezione di Maria; Dialogo à 5 Voci,*" Rome, 1696; "*Il Fuoco Panegirista del Creatore nella Fornace di Babilonia; Dialogo à 5 Voci,*" Palermo; "*La Notte Felice; Serenata à 6 Voci,*" Palermo, 1700; "*La Crisi Vitale del Mondo languente nel Sudor di Sangue del Redentore in Getsemani; Oratorio à 3 Voci,*" Messina, 1701; "*I Miracoli della Provvidenza; Oratorio à 5 Voci,*" Palermo, 1703; "*Il Tripudio delle Ninfe nella spiaggia di Mare Dolce; Senerata à 3 Voci, e piu Stromenti,*" Palermo, 1704; "*Il Giudizio di Salomone nella Contesa delle due Madri; Sacro Trattenimento armonico,*" Palermo, 1705; "*La Figlia unigenita di Geste, sacrificata à Dio dal Padre; Dialogo à 5 Voci,*" Palermo, 1705; "*La Virtù in Gara; Trattenimento armonico à 4 Voci,*" Palermo, 1706; and "*R Latte di Iaele, Figura dell' Eucharistia sacrosanta, e dell' immacolata Purità di Maria Virgine; Oratorio à 5 Voci, e piu Stromenti,*" Palermo, 1700.

PRESTENZA. (I.) Rapidity, quickness; as, *con prestenza*, with rapidity.

PRESTISSIMO, or PRESTISS. (I.) The superlative of *presto*. A word denoting the most rapid time.

PRESTO. (I.) A word implying that the movement at the beginning of which it is placed

is to be performed in a very quick, though not the quickest, time.

PRETI, ALFONSO, published his first book of madrigals at Venice, in 1537.

PREU, FRIEDRICH. Musician at Leipsic in 1781. He had much talent, but was unfortunate, which determined his friends to print, in 1781 and 1785, for his benefit, by subscription, two volumes of his songs. Besides these, he composed the following works: "*Adraste,*" a German opera; "*The Wildfire,*" ditto; "*Bella and Fernando, or the Satyr,*" ditto, 1791; and "*The Milliner,*" operetta.

PREUSS, CARL, court musician at Hanover, published at Cassel, in 1778, "Three Quatuors for the Harpsichord, two Violins, and Violoncello, Part I.;" and, in 1783, a volume of "Odes and Songs."

PREVOST, EUGENE, born in Paris, in 1806, and pupil of Lesueur, has composed a number of popular pieces for the Opera Comique.

PREVOST, GUILLAUME. Contrapuntist of the sixteenth century. Lechner, in his "*Motette Sacra,*" has preserved many pieces of this master's composition.

PREYSING, HEINRICH BALTHASAR, chamber musician at Gotha, has been known in Germany, since the year 1780, by several compositions for the violoncello. He died at Gotha in 1802, leaving two sons, both eminent performers on bow instruments.

PRIMA DONNA. (I.) The principal female singer in the Italian opera.

PRIMAVERA, GIOVANNI LEONARDO, called *Dell' Arpa*, from his eminence on the harp, flourished at Naples in the middle of the sixteenth century. He was also a poet and composer. Amongst his works are "*Madrigali à 5 e 6 Voci,*" Venice, 1565; "*Canzonette Neapolitane à 3 Voci, Lib. 1, 2, e 3,*" Venice, 1570; and "*Madrigali à 5 Voci,*" Venice, 1573.

PRIMA VISTA. (I.) At first sight.

PRIMA VOLTA. (I.) First time.

PRIMITIVE CHORD. That chord, the lowest note of which is of the same literal denomination as the fundamental bass of the harmony. The chord, taken in any other way, as when its lowest note is the third or the fifth of the fundamental bass, is called a *derivative*.

PRIMO. (I.) First; as, *primo violono*, first violin; *primo flauto*, first flute.

PRIMO BUFFO. (I.) First comic actor and singer.

PRIMO MUSICO. (I.) Principal male singer.

PRIMO TEMPO, or PRIM. TEMP. (I.) In the original time. An expression used after a *retardation* or *acceleration* of the time, to signify that the *first* motion of the measure is resumed.

PRINCIPAL. A word used adjectively to signify the leader of a band; as the *principal* violin. Also applied substantively to a certain stop in the organ. See *Stor*.

PRINCIPALMENTE. (I.) Principally.

PRING, JACOB, JOSEPH, and ISAAC. There were three brothers of this name, who were eminent as professors and vocal composers in England. Joseph Pring was organist of the

cathedral at Bangor, and Isaac settled at Oxford, as professor and organist of New College there, whilst Jacob Pring resided principally in London till his death, which took place in 1799. Jacob Pring was one of the first founders, with Dr. Calcott, Samuel Webbe, Mr. Horsley, &c., of the society called *Concentores Sodalcs*.

PRINTZ, WOLFGANG CASPAR, was born at Waldthurn, a small city in the Upper Palatinate, in the year 1641. His father was a magistrate, and a receiver of the public revenues there, till, on account of his religion, he quitted his station, and removed to Vohenstraus, a small town in the territory of Farstenburg. Young Printz, discovering a taste for music, was instructed in the principles of composition, and the practice of the harpsichord, violin, and other instruments. He was admitted a student in the university at Altdorff, where he continued three years; and from thence he was taken into the service of Count Promnitz, at Dresden, as director of his music and court organist. With this nobleman he travelled through Silesia, Moravia, and Austria. On the decease of the count, Printz was invited to the office of ehanter in the church of a town named Triebel, where he married; but, after a year's continuance in that employment, being called to the same office in the church at Sorau, in Upper Saxony, he entered upon it in the year 1665. Some years afterwards he was appointed to the direction of the choir in the same church; and, as it is supposed, continued in that station until the time of his death, which took place in the year 1717.

His works are numerous. Among them there is a history of vocal and instrumental music, which was published at Dresden, in the year 1690, with the title of "*Historische Beschreibung der edlen Sing und Klingkunst*." This is written in chronological order, and the author begins it with an account of the invention of the harp by Jubal. He has delineated the Hebrew instruments chiefly from the authority of Joannes Schutterus, the author of "*Collectanea Philologica*." The Grecian and Hebrew music are treated at some length, and the history is continued through all the later writers to his own time, concluding with an account of himself and his studies. He dates the invention of music in consonance from the year 940, and ascribes it to St. Dunstan, who, he says, composed songs, in different parts, for bass, tenor, descant, and vngunt, or alt. He asserts, however, that St. Dunstan proceeded no farther in it than to the *contapuntus simplex*, and that it was not till some years after its invention that the practice of singing in consonance became general. Printz appears to have been an able man in his profession, and to have bestowed great pains on the composition of his work, the brevity of which is its only fault. Another work by him has been mentioned, "*De Instrumentis in toto Orbe Musicis*," which is said to have been written only a short time before his death.

PRIOLI, GIOVANNI, chapel-master to the Emperor Ferdinand II. at Vienna, at the beginning of the seventeenth century, published, among many other works, "*Pars I. Concentuum Sacrorum*," Venice, 1618; "*Misse à 8 e 9 voc.*," Venice, 1624; and "*Delicie Musicali*," Vienna, 1625.

PROBE, (G.) PROVA, (I.) A rehearsal.

PROCHI, HEINRICH, born in 1809, at Vienna, first became distinguished as a violinist. He was afterwards chapel-master in Vienna, and is well known by his songs with instrumental accompaniments, such as piano, violoncello, and horn. He has also written masses, overtures, violin quartets, &c.

PROCKSCH, GASPARD. A good German clarinetist, and composer for his instrument. Some of his music was published at Paris about the year 1779.

PRODUCTION OF SOUND. It has been proved beyond all manner of doubt that sound is produced by certain undulations of the air, (and is not, as was supposed by ancient philosophers, a thing that would be, if no hearing animal existed;) but *how* these undulations produce sound, is, and ever *must* be, a matter of doubt. Some have thought the drum of the ear so peculiarly constructed, that, after receiving the impulse from the motions in the air, it would cause undulations still to pass on within, until they should arrive at the brain, and thus give the sensation of sound. The cavity intervening between the external air and the inner chamber appeared to these anatomists to have no other use than to allow a free motion to the little piston that is employed to agitate the air within the labyrinth, and, as the piston condenses on a very small surface, consequently the agitations that are very gentle when received, being rendered more dense by this process, have greater effect when they reach the powers of perception. The gravity or acuteness of a sound is as to the quantity of air displaced, the force with which the string is moved signifying very little. The degrees of acuteness are according to the specific density of the substance which emits the sound. The strength of a tone is as the moment of the particles of air; the moment of these particles is as their velocity, and the velocity of these particles is as the velocity of the string which sets them in motion. In a still night the voices of workmen at the distillery at Battersea may be heard at Westminster Bridge, a distance of three miles. The watchword at Portsmouth, it is said, can be heard at Ryde, in the Isle of Wight, a distance of four or five miles. The echo in Woodstock Park is repeated seventeen times by day and twenty by night. The artillery at the siege of Genoa by the French was heard at Leghorn, a distance of ninety miles. The firing at the battle of Waterloo was heard at Dover, at a distance, in a direct line, of one hundred and forty miles, of which one hundred and ten were over land, and the remainder over water.

PROFESSORSHIP, MUSICAL. That station in a university which entitles the professor to confer musical degrees, give public lectures on the harmonic science, and compose for, and conduct, all musical performances ordained by, or connected with, the academical regulations. The *professorship* was instituted at Oxford at the beginning of the seventeenth century, by Dr. William Heyther, under the title of a *music lecture*. In order to promote the practice of which he himself was a graduate, the learned founder presented to the University Music School a harpsieon, a chest

of viols, and a variety of manuscript and printed music.

PROGRAMME. A list of pieces to be performed in a concert, oratorio, opera, &c.

PROGRESSION signifies a succession of triads, or perfect chords, which are confined to the tonic. Although a change of any note implies partial modulation, yet in all cases where the new tonic remains undecided by the omission of the leading note, the original tonic continues a predominant sound, and the term progression is retained.

PROGRESSIVE. An epithet properly applied to lessons expressly composed for the purpose of practical improvement, and that are so constructed in point of increasing execution as to lead the practitioner, by insensible degrees, to those difficulties which he could not well encounter without such preparatory exercises. In music, as in all the arts and sciences, the path to improvement has been greatly smoothed, and the labor of the tutor much abridged, by those simple introductory precepts and practical examples which some of the first professors have deigned to furnish; and excellence has, in consequence, been more generally attained than in former ages, when the early advances of the juvenile pupil were less consulted by the learned and ingenious.

PROGRESSIVE NOTES. Those notes which succeed each other, either in ascent or descent, by those degrees, the settled order of which constitutes the key of the composition, or of the movement, or the passage in which they take place.

PROLATION. A method, used in the old music, for determining the power of semibreves and minims. The mark of *prolation* was placed after the clef, and sometimes after the sign of the mode, by a circle, or semicircle, punctuated or unpunctuated, according to the following rules: the *prolation* was divided into perfect and imperfect, and each of these into major or minor, in the same manner as the mode. The perfect *prolation* was for the ternary measure, and was marked by a point in a circle when *major*, and by a point in a semicircle when *minor*.

PRONOMUS. An ancient Theban musician. He was the inventor of a flute, upon which he could play in three different modes. Before his time there was a particular flute for every mode or key; and so out of tune are the generality of modern flutes, it were almost to be wished that the custom had still continued. The words and music of a hymn, composed by Pronomus for the inhabitants of Chalcis when they went to Delos, were existing in the time of Pausanias, as was likewise the tomb of this musician, erected by the citizens of Thebes, near that of Epaminondas.

PROPHET. The name given, in remote times, to bards and rhapsodists. It is in this sense that we sometimes understand the word *prophet* in the Old Testament; as when "Saul met a company of *prophets* with a *psaltery*, *tabret*, and *harp*."

PROPORTION. The ratio which two terms bear to each other upon comparing them, as two numbers, two lines, two sounds, &c.

PROSÆ. Certain hymns used in the Romish church, called also *sequentia*. They are in rhyme, but derive their names of *proseæ*, or *proses*, from their deficiency in measure and quantity. See **SEQUENTIA**.

PROSCORDA. (Gr.) An instrumental and varied accompaniment to the ancient vocal music, invented, as we learn from Plutarch, by the Grecian musician *Crexus*; before whose time, the accompaniment was in unison, or *note for note*.

PROSLAMBANOMENOS. The name given by the ancient Greeks to the lowest note in their system, and which was equivalent to our A on the first space in the bass. This note was called *proslambanomenos*, because, being subjoined to the lowest tetrachord, for the purpose of furnishing the octave to the *mesæ*, or middle chord, it was a kind of *supernumerary* sound.

PROSOIDA. (Gr.) A sacred song, or hymn, sung by the ancients in honor of the gods.

PROSOIDIAC. An epithet by which the ancient Greeks distinguished a species of *nome*, or air, sung in honor of Mars; and the invention of which was attributed to Olympus.

PROSODY. A term, partly grammatical and partly musical, relating to the accent and metrical quantity of syllables, in lyrical composition. A just *prosody* is so indispensable to genuine *melody*, that a respectable Italian author has defined it the *guide of song*. That *prosody* formed an important part of the ancient music is indeed evident, as well from the *origin* of the word as from numerous passages in the Greek and Roman classics. *Prosody* was also a kind of *nome* performed by flutes, and peculiar to the cantics which were sung by the Greeks at the entrance of sacrifices. Plutarch attributes the invention of *prosodies* to Clonas, of Tegæa.

PROTA, GIUSEPPE, born at Naples in 1699, was distinguished both as a teacher and composer. Protà first studied in the Conservatory Dei Poveri di Giesu Cristo, and afterwards in that of La Pietà, under Alessandro Scarlatti; but from the rank of a pupil he soon rose to that of a master, and was named director of the latter of these establishments. Protà is amongst the last of those whose time was chiefly absorbed by instruction. We know of none of his compositions; but as his reputation is somewhat extended, it is probable that it is due both to his labors as a composer and a professor. His style is said to have been full of truth and expression.

PROTESIS. The name given by the ancient Greeks to a certain pause in their music.

PROTOPSALTES. The name of that of the two principal singers in the patriarchal church of Constantinople, who is stationed on the right side of the choir.

PROVEDI, FRANCESCO. Author of an Italian treatise entitled "*Paragone della Musica Antica e della Moderna*." This is to be found in the first volume of the "*Raccolta d'Opuscoli Scientifici e Filologici*," Venice, 1754.

PRUDENT, EMILE, born in 1820, lives in Paris. He is a distinguished pianist of the school of Thalberg, in whose footsteps he also follows as a composer.

PRUDENTIUS, BERTRANDUS, a monk of Poitou, left, at his decease, a manuscript poem entitled "*L'Eloge de la Musique*." It is still in the Royal Library at Paris.

PRUME, FRANCOIS, born at Stavelot, in Belgium, in 1816, was an excellent violinist and composer for his instrument. After many concert tours, he settled down as teacher in the Conservatory at Liege, where he died in 1849.

PSALM, in general, a song; in a narrow sense, a sacred song, (from the Greek.) *Psalms* is used particularly to denote the sacred songs which are

contained in the collection of religious lyric poems in the Old Testament. They are mostly of the time of David, or of a later period, one only, perhaps, (the 90th, the Psalm of Moses,) being of more ancient date.

PSALMIST, or **PSALMOGRAPHIST**. A composer, writer, or singer of psalms, hymns, or divine songs. An appellation exclusively applied by divines to David, king of Israel, the supposed author of the Book of Psalms in the Old Testament.

PSALMISTÆ. (L.) Certain canonical singers in the primitive church, who were not considered as laymen, but amalgamated with the ordinary clergy.

PSALMODY.* Among the various inventions noticed in the early annals of the Bible, as ministering to the comforts and necessities of mankind, music is the only one, the chief object of which was to animate the affections and delight and refine the senses.

From that time the inspired authors of holy writ — lawgivers, prophets, evangelists, and apostles — the poets and philosophers of the ancient heathen world, and writers innumerable, both sacred and profane, of more modern times, have united in recommending the cultivation of music as a means of soothing the evil passions, softening the manners, improving the mind, and contributing to devotion.

From the time of Moses it was constantly employed in religious and civil festivals, in public and private rejoicings, and on occasions of grief and mourning. Females as well as males bore a part in such performances, legislators and prophets were the national bards, and judges and kings condescended to handle the harp and the lyre in the service of their God.

An instance of the happy and elevating effect of music, employed in this manner, is recorded in Exodus; when, at the glorious triumph of the Lord over his enemies in the Red Sea, "Miriam the prophetess took a timbrel in her hand, and all the women went out after her," and the praises of the Deliverer of Israel were celebrated in the presence of the assembled camp. The company of singers whom David employed in the ordinary worship of God, together with his own skill in sacred music, are expressly recorded in the Holy Scriptures; as well as the "men singers, and women singers, and the musical instruments of all sorts" which were provided for public worship by his son, the wise king Solomon. Music, indeed, was in general use among the Hebrews from the time of their quitting Egypt till they ceased to be a nation. And though we are ignorant of what sort it was, and know not whether it were regarded as a study for the young in the schools of the prophets, or an acquirement of more advanced life, yet this at least is certain, that it must have had a powerful influence over the mind, and that the practice of the art was not limited or confined to a few.

With regard to the testimony of heathens in favor of music, it is needless to treat of the in-

fluence which it exercised in the early and fabulous ages of Greece. It may suffice to mention that in the more advanced period of the history of that nation, melody and poetic song, the two great divisions under which all their music was classed, constituted a material part of national education, and were made the grand medium for instilling the most important precepts into the minds of youth. Gymnastic exercises were resorted to for the improvement of the body, and music was regarded as the appropriate recreation and discipline for the mind, among that cultivated heathen people. Their children were taught the lyre, and their tender memories were stored with the songs of their most famous poets; and gentleness and modesty, orderly demeanor and elegance of manners, were expected as the fruits of this kind of instruction. Hence musical exercises became the business of the statesman, the warrior, and the bard; besides being used by the heathen priests as an important auxiliary in the celebration of their religious rites. Philosophers of every class considered this art to be worthy of their especial notice; and it is remarkable that Plato and Aristotle, who disagreed so widely in other maxims of politics, held but this one opinion with regard to music, that it was the most efficacious instrument for humanizing the public character, and providing for the virtuous education of the state.

Little can be said in favor of the music of the Romans as compared with that of the Greeks. In the earliest period of the history of this people, we find that it was rude and coarse in its character, and chiefly used for the purposes of religion and of war. At a later age, with other arts and sciences, their poetry and music were improved by their intercourse with their more refined neighbors, the Etruscans; and subsequently still more so after the examples afforded them by their vanquished foes, the Greeks, whose customs they readily adopted whenever they found them superior to their own. But the manners of the Roman people had then become degenerate and corrupt, and it was not, therefore, to be expected, when they availed themselves of the refinements of their vanquished neighbors, that the musical art, perverted from the important ends of religion, morals, and policy, to a mere object of luxury and gratification, should, as in ancient Greece, be employed to instil into the minds of youth the precepts of morality and virtue. We hear little, therefore, of its being so employed in any period of ancient Rome.

On referring to the testimony of sacred writers, we find that the custom of the Jews in chanting psalms and hymns was at once adopted, and consecrated to the highest uses, by our Lord and his disciples. All authorities agree, that sacred songs formed a part of the devotions of the early Christians; but the precise nature of their mode of chanting or singing is not known. It may reasonably be conjectured, however, that part of the sacred music of the apostles and their immediate successors, in Palestine and the adjacent countries, was formed on the model of that used by the Hebrews, particularly in chanting the Psalms; though, where paganism prevailed, it is not unlikely that an admixture of the music of the heathen temples may have been introduced.

According to the account given by Eusebius

* Under the head **PSALMODY** will be found many sketches of individuals who have been composers and teachers of psalmody and singing in this country, from its first settlement, down to 1851. These valuable historical memoranda will be found chronologically arranged.

of the consecration of churches in the time of the Emperor Constantine the Great, it is probable that it was not until the fourth century that music formed a regular part of the offices of the Christian church. At first the laity were wont to join in a very rude and inartificial manner; wherefore it was expressly ordained by the council of Laodicea, in the fourth century, that none but the canons or singing men should presume to sing in the church. Henceforward, musical science became confined in a great measure to ecclesiastics, and was regarded as the peculiar business of monks and priests.

St. Basil, St. Ambrose, St. Jerome, and St. Chrysostom, early and celebrated fathers of the church, are all to be numbered among the promoters of sacred music of the more elevated and richer kind. At Antioch, where the first and last of these holy men were brought up, the antiphonal method of singing the Psalms, i. e., the singing of the verses alternately by the choir, was first introduced; and this practice, being brought by St. Ambrose to Milan, became generally adopted throughout Christendom, under the name of the *Ambrosian* chant.

Further improvements were made in the management of the sacred orchestra by Pope Gregory I. — a man not more remarkable for his virtues than for his general learning and profound skill in the science of music. He invented the simple notation by the seven first letters of the Roman alphabet, (from whence are derived the names of the notes now in use,) and thereby superseded the more complicated system of the Greek church, which previously prevailed. He increased the number of tones, from four (or the *tetrachord*) to eight, (or the *octave*,) and introduced into the church a new and improved species of chaot, or plain song, which hence acquired the name of the *Gregorian* chant. (See that term.) To promote and secure these objects, he established a school for singing, and not only endowed it with ample revenues, but superintended in person the instruction of the young pupils; and such was its success that it flourished for three hundred years after his death. By these and other proofs of the interest he took in the art, considerable advancement was made in this delightful part of devotional service.

The science of music, at this age, being confined to the ecclesiastics, it was the custom of the English clergy to travel to Rome for their improvement in it, and masters from that city visited England. But at length a school for instruction in ecclesiastical music was established by St. Austin at Canterbury, by which greater facilities were afforded for the general cultivation of the art. Many of the sovereigns of Europe concurred in encouraging the pious and edifying practice; and at the latter end of the ninth century Alfred the Great, himself an excellent musician, founded a professorship for the purpose at Oxford. By these and various other arrangements of a similar description, the art of music was recommended to public notice, and formed an important branch of the education of all learned persons.

Such was the condition and progress of musical science previous to the dawn of the reformation. Its effect, in connection with the offices of religion, was grand and imposing. But the leaders of the reformation differed materially in their opinions

of the manner in which the art was to be rendered most effective for the purposes they had in view. The bold and uncompromising scheme of reformation pursued by Luther was modified, in respect to church music, by his own skill and proficiency in the art. (See *LUTHER*.) Brought up from childhood with a correct and cultivated taste for harmony, it had constituted a delightful recreation for him in early days; and he had formed a high opinion of its moral influence on the human heart. "Music he called a half discipline and schoolmistress, to make the people gentler, milder, more moral, and wiser." With whatever spirit and success he attacked the corrupt doctrines of the Romish church, he declared that "he never meant to abolish all external forms of worship, but to purge that which had hitherto been used, and to show what was the true Christian way." Hence he made it his business to adapt a religious service in German to the ancient and splendid music of the Roman mass, and to introduce a variety of hymns and psalms into the church, some of the best of the tunes to which were composed (as is thought) by himself.

Zwingle, another of the leading reformers, exhibited a fondness for music scarcely less ardent than that of Luther. "In the midst of labors the most incessant," says his biographer, "he never ceased to cultivate his talent for music, of which he had acquired the elements in his infancy. This art then formed an essential part of the instruction communicated to young men intended for the ecclesiastical profession; and Zwingle regarded it as a means calculated not only to give repose to the mind after fatiguing occupations, and communicate to it fresh power and energy, but to soften down and correct a temper partaking of too much ardor or austerity. He therefore particularly recommended music to young persons destined to a laborious and sedentary life."

The gloomy views of the Genevan reformer, Calvin, led him to pursue a course very different from that of Luther, and to mark his hostility to the pretensions of Rome by an entire rejection of all the usages of her church. Not a musical instrument was suffered within the walls of Geneva for more than a century after the reformation; and music, except his own plain metrical psalmody, was proscribed wherever the doctrines of Calvin were received.

In England, as in Germany, the object of the reformers was to purify religion from whatever was corrupt, and retain all that was good; and here, therefore, choral music was preserved, at least in cathedrals and collegiate churches. The influence of the royal family was considerable in effecting its preservation. Henry VIII., having been educated with some distant view to an ecclesiastical life, was naturally led, in his early days, to the cultivation of music; in which, both by talent and acquirement, he was admirably skilled. Hence it was his delight, as it was that of his minister Wolsey, and several of the nobility, to have the choral service preserved in its most solemn form; the schools for music connected with all cathedrals were retained; and by a report published and sanctioned with regard to the state of ecclesiastical affairs, it appears that choral music was ordered to be carried on, "reduced, nevertheless, to that state of purity and

simplicity from which it had deviated." In the succeeding reigns, Edward VI., Mary, and Elizabeth were all practical musicians, and cherished a great fondness for the art. The latter queen, especially, with the help of Archbishop Parker, a man preëminently skilled in music, was enabled to effect considerable improvements in this part of the divine service. But the progress of sacred melody was soon interrupted by the effects of the usurpation, and the sullen character of those unhappy times. Music was not only banished from the church, but in a great degree also from private families. By an ordinance made in the year 1644, organs in churches and chapels were ordered to be taken down; and the fury of the populace was not less conspicuous in the demolition of these instruments, than in the impious zeal with which they disfigured and destroyed whatever else had been used in the service of God.

On the restoration of Charles II., and the return of the clergy to the station and property of which they had been despoiled, the next measure, after the establishment of the liturgy, was the revival of sacred melody, and the choral service of the church. This work was attended with peculiar difficulty, in consequence of the dispersion of all persons who had previously been engaged in this service. And when, at length, the instruments of music were replaced, few persons could be found who were capable of leading and sustaining the parts of the pious song. The two universities, particularly that of Oxford, used most diligent endeavors to meet these wants. Books of instruction were written, and services and anthems composed, to supply the place of those which were lost; able persons were appointed to teach and conduct the choir; and by the help of the musical taste and science of the sovereign, and the direct encouragement given by him to the work, this portion of the service of God was ultimately established.

It has already been remarked that the custom of singing the praises of God, after the manner of psalms, was expressly sanctioned and practised by our Lord himself; and there is no reason to suppose that this devotional exercise was ever wholly superseded by choral harmony; although the notices of history may be more numerous and express upon that department of Christian worship. Certain it is, that the reformers were well aware of the power of psalmody, as well as that of the higher and more cultivated kind of church music. Singular instances, indeed, are on record of the zeal and devotion with which the earliest martyrs of that age delivered themselves up to cruelties and death, singing psalms and the praises of God. The disciples of Wickliffe in England, during the fourteenth century, and those of John Huss and Jerome of Prague in the fifteenth, were celebrated psalm singers; and Luther eagerly availed himself of this kind of melody for carrying forward those purposes, which have already been described. He employed some persons to versify the psalms and hymns in the German language, and others to set them to music; rendering the most valuable assistance himself in both these undertakings. His own modest and simple account of this proceeding we read in the following words: "I, and some others, to give a beginning, and set the example to such as are more capable, have collected some spiritual

songs, to further and bring into use the sacred gospel." And speaking of the tunes, he adds, "They are arranged for four voices, for no other reason than that I am anxious that young people, who should and *must* be educated in music and other good arts, should have wherewith to get rid of their lasciviousness and carnal songs, and instead of them, learn something salutary, and receive what is good with pleasure, as to youth is meet."

About this time a Frenchman, named Clement Marot, completed a version, in his native language, of about fifty psalms; and, after his death, the remainder of the work was supplied by Theodore Beza, his friend. This version was received with the greatest approbation, and led to some further and very successful measures on the part of Calvin to render psalm singing acceptable to the people. From an act of devotion appropriate to the church, the use of singing was now carried into the camp and the field of war; and in the frequent acts of resistance made by Protestants against their persecutors, a devotional psalm, shouted forth with energy by four or five thousand men in array, served as the signal for battle. An example of a similar kind may be found in the one hundred and forty-ninth Psalm, which is thought to be an ode sung when David's army was marching out to war against the devoted nations.

For the most part, however, the plainest melody, and the most monotonous, was found in the Genevan church. In other parts of Switzerland, and in France and Flanders, a style more harmonious, with the tunes arranged for several voices, and generally accompanied by musical instruments, was approved and introduced into the churches.

That the singing of psalms generally prevailed at the earliest periods of the reformation is certain; though the practice was not expressly countenanced by public authority till the year 1548. Under the sanction of a license granted at that time, several persons attempted to render the psalms into English verse, and the musical taste of Archbishop Parker, together with the influence he possessed, was of the greatest value in forwarding this pious work. An entire version of the Psalms was not, however, published till 1562, when it appeared for the first time as an appendage to the Book of Common Prayer. This is the well-known version of Sternhold and Hopkins, which is more valuable as a close translation from the original Hebrew, than on account of any merit in the versification, even making ample allowances for the state of English poetry at the period when it was composed. The tunes of this edition, comprising the mere melody, were chiefly taken from the books of the Lutherans and Calvinists; and it is highly gratifying to the promoters of popular psalmody to know, that one principal object proposed by this undertaking was to supply the common people with a set of songs calculated at once to occupy their leisure, to reform their manners, and to elevate their devotional feelings. The title page of this work (as it is still published with the Book of Common Prayer) declares that it was "set forth and allowed to be sung in all churches of the people together,"—"and moreover in private houses for their godly solace and comfort, laying apart all ungodly songs and ballads which tend only to the nourishment of vice and the corrupt-

ing of youth." Further attempts were afterwards made towards the perfection of this work, the express object of which was to render psalmody a popular exercise, and enable "the unskilful, by small practice, to attain to sing that part (of the harmony) which is fittest for their voice." Many other publications on this subject answered the design with which they were written; and, amongst the rest appeared the celebrated work by Thomas Ravenscroft, B. M., containing a melody for every one of the one hundred and fifty psalms. Several of these compositions are still in use, and form the most popular tunes for congregational worship at the present day; such as Windsor, St. David's, Canterbury, York, Rochester, and many others. It may be interesting also to remember, that John Milton, the father of the celebrated poet, was among the number of those who assisted Ravenscroft in this important work.

The psalm books of this period were commonly prefixed by instructions in the theory and practice of vocal music; but it does not appear that any other more particular or efficacious plan was adopted for introducing the art into common notice, either among the young or old; and indeed, at that period, the education of the people had been so little attended to, that it is probable the instructions in music prefixed to the psalm books were intelligible to very few persons, except the clergyman of the parish and the clerk. The latter person, it is to be remembered, in that age, was of a superior class to his successors. He was literally a clerk, (*clericus*), an assistant to the clergyman in the ministerial duties of his office. As an ecclesiastic, his education was suitable to the nature of that calling; and a knowledge of music would, as we have seen, necessarily form part of it. Henry III. granted a charter of incorporation to these persons, which was confirmed by several succeeding kings; and they appear to have attracted to their fraternity people of the first quality, lovers of music, and such as delighted in singing; and the occupation was in high esteem with those who had a taste for this sacred work. Thus far, then, there were facilities of an unusual kind for promoting the cultivation of sacred song. But in a short time, the same cause which had interrupted the choral service of the cathedral entirely disturbed the progress of this lower and more popular branch of music. After the turbulent period which followed the days of King Charles I., the office of clerk was never held in the high esteem it had obtained before; and with the reputation of this office the art itself lost ground. To this cause, in a great measure, may be traced the inharmonious and contemptible minstrelsy which has been found in English churches in more modern days. The village musicians, unable to enjoy the beautiful simplicity, and produce the happy effect contemplated by Ravenscroft and his assistants, proceeded in an opposite direction, adopting altogether a different plan, and attempting far more than their imperfect skill could possibly enable them to perform. Fugues and other elaborate pieces of music were introduced by such musicians before the village congregation; entirely unsuited to the place, even if they were well performed, but, in the hands of such ignorant, self-taught practitioners, calculated only to deaden piety and excite contempt.

Thus parochial psalmody degenerated. It is said, indeed, that the accidental settlement of people from Flanders, for the purposes of trade, in Gloucestershire, Somersetshire, and Wiltshire, has preserved a somewhat better state of harmony in the congregations of those districts, and that other causes have operated in the same favorable manner in Birmingham and its vicinity; and it is certain that the people of Lancashire are such proficients in the art of singing, as to supply the choruses of the most celebrated concerts of the metropolis, and other parts of the kingdom, with valuable assistance. It may, therefore, be inferred that the spirit of psalmody has not departed, though it is obvious that efforts of more than a common kind are necessary to raise and establish the art in that degree of excellence which the service of God requires and demands.

Those who are conversant with the history of church music in this country will not need to be told that great changes have taken place in this department of music during the last half century, or even quarter of a century. These changes respect not only the manner of conducting this branch of public worship, but the character of the music employed, and the intelligence of the people in regard to the act of singing.

As a nation is musically educated, so in the same ratio shall we find its intellectual development. The savage celebrates his exploits by vocal entertainments, and makes night, as well as day, hideous with sounds more inharmonious than the growl of the bear, or the yell of the hyena. Ascend a step, and these rough accents are modulated to greater euphony. Here, instruments of wood are rudely manufactured by the ingenuity of unlettered men, while another pace, and the mine yields its treasures to human cunning, to be wrought into fantastic shapes, and adorned with curious devices. Look where we will, wherever we find a highly musical people, the arts are cultivated, intellect stretches its gigantic arms into the misty regions of discovery, and the kindly courtesies and charities of life cluster around the domestic hearth. Germany has for ages been the favored land of music. In no part of the world are its charms more highly appreciated, or more closely studied, "as exemplified in the stirring melodies of her mountains, or the rich harmonies of her academies. To her composers are we more indebted than to those of any other country, Italy not excepted, for combinations of sound that portray with fidelity every modification of emotion. The gentle feelings of humanity are breathed forth with witching softness, whilst the harsher passions find in more startling and broken cadences a fitting representation of their overwhelming force." Mirth is made to speak in lighter measures, and grief in more tender strains than elsewhere. And Germany has also been the birthplace of genius and the home of art. The learned from all parts of Christendom have crowded within her borders, and young men have crossed many seas to gather the instruction of her academies. It could scarcely have been otherwise. A nation which had cultivated its perceptions, awakened its imagination, and refined its taste by listening to the wonderful creations of Handel, Haydn, Mozart, and Beethoven, whose melodies come upon the ear through wild and gloomy masses of sound, like gleams of sun-

shine from an April sky, must of necessity be pre-eminent in the world of literature and art.

Music aids a people to procure its freedom, and to maintain it when established. No song in favor of tyranny ever became popular with the mass, but the spirited remonstrance, the keen rebuke, or word of warning is echoed and re-echoed from the centre to the circumference of an enslaved kingdom. Who shall say that Athens was not in part indebted for the continuance of her institutions to her fine banqueting song in praise of Harmodius and Aristogiton? Wales could not be robbed of her ancient usages, her traditions, and her laws, without the destruction of her bards. The name of Tell, "embalmed in music," has aided more than a thousand swords to bar the valleys of Switzerland against the invader; and the heart of Germany throbs at the name of Körner with unspoken hopes, which shall find a noble, though it may be a terrible fulfilment.

The composition and performance of psalmody appears to have been practised and encouraged in Germany, France, and the Low Countries, long before it was introduced into England. A large proportion of the old melodies now sung in the English parochial churches were composed and arranged, or *set*, by German musicians, and it seems highly probable, from all that can be collected on the subject, that the practice of psalmody had its origin in Germany. It does not, however, appear that even in that country it at first gained admission into public worship, but that it was a long time confined to family devotion, especially among the reformers. The first psalmody was sung from manuscript copies; then it was engraved on plates, and impressions thus obtained, which rendered it much more easy for people to get copies of such tunes as were popular. The first music printed of which we have any account was a set of masses, in 1503. These were composed by Josquin, in the time of Sextus IV., and were printed from engraved plates by one Petruccio, who in 1513 obtained a patent for *printing figurative song*, and *pieces for the organ*. Previous to this time there had been *printed a book* upon the subject of music, called a "Musical Dictionary," which was probably the first musical publication printed; it was by John Tinctor, in 1474. There were only a few books printed, even from engraved plates, previous to the year 1600. During the long and disastrous period emphatically termed "the dark ages," when ignorance and superstition generally prevailed in the west of Europe, the singing of the praises of God was a part of divine worship from which the people were debarred. Not only were the words which were actually sung composed in a language unknown to the great mass of the people; but the music was so complex that no one uneducated could bear a part in it; to sing, then, one must have studied music scientifically. But at the reformation from the unscriptural and anti-scriptural errors and practices of Popery, in the sixteenth century, the singing of psalms and hymns was revived, and revindicated to the common people, among the means of grace of which Christendom had been long deprived by Papal tyranny and usurpation.

Martin Luther, about the year 1517, introduced metrical psalmody into the service of the

church, which not only kept alive the enthusiasm of the reformers, but formed a rallying point for his followers. The ancient airs which Luther supplied, some of them, were originally licentious songs. The hundredth psalm, written long before the time of Luther, was a love ditty. The queen of Henry II. sang her favorite psalm, "Rebuke me not in thy indignation," to a fashionable jig; and Anthony, King of Navarre, sang, "Stand up, O Lord, to revenge my quarrel," to the air of a dance of Poitou. This infectious frenzy of psalm singing at length reached England, and Sternhold, an enthusiast in the reformation, being much offended at the lascivious ballads which prevailed among the courtiers, with a laudable design to check these indecencies, provided the courtiers with his psalms, "thinking thereby," says Anthony Wood, "that they would sing them instead of the sonnets; but they did not." The Puritans, however, afterwards nearly destroyed these germs of melody, assigning as a reason, that music should be so simplified as to suit all persons, and that all voices may join. We subjoin a specimen of the Puritanical music.

excellent melody of the hundredth psalm, or Old Hundred; but modern inquiry renders it certain that he only harmonized it, and adapted sacred words to it, as he did to many other similar airs, which were popular in his time.

An English version of the Psalms of David was made soon after that made in France, by Thomas Sternhold, groom of the robes to Henry VIII., and John Hopkins, a schoolmaster, assisted by William Whittyngham, an English divine of considerable learning. Sternhold and Hopkins's version of nineteen psalms was printed by Edward Whit-churche, in 1549, and was entitled "Certayne Psalmes chosen out of the Psalter of David, and drawn into English Metre by Thomas Sternhold, Grome of ye Kynge's Majesties Roobes." A second edition, containing thirty-seven "Psalmes of David, drawn into English Metre by Thomas Sternhold," with "seven additional Psalmes, translated by John Hopkins," was "imprinted at London, by Edward Whit-churche, anno Domini 1551," in 16mo. Soon after the publication of this version, vocal psalmody was introduced into the church of England, either by permission or by tacit connivance; since the accurate ecclesiastical historian Strype states that in the month of September, 1559, "began the new morning prayer at St. Antholin's, London, the bell beginning to ring at five; when a psalm was sung after the Geneva fashion, all the congregation, men, women, and boys, singing together." Several musical manuals now soon appeared, for the purpose of facilitating the practice of vocal psalmody in England; among the authors and publishers of which, no one was more assiduous than John Playford, whose "Introduction to the Skill of Musick, or Psalmes and Hymns, in four parts, on the Common Tunes," and other publications of a similar nature, entitle him to be considered, in some respects, as one of the fathers of metrical psalmody.

Windsor Tune appeared in Ravenscroft's book, and also in the collection of Ainsworth, 1612. It was there written as follows:—

Ainsworth's Psalms were brought to this country by the Puritans, and used by them until the introduction of printing and the publication of the Bay Psalm Book. As early as 1590, Henry Ainsworth was a distinguished leader among the Brownists. He was a native of England, and probably retired to Holland in 1593—the period of the general banishment of the Brownists. He lived at Amsterdam, where he was porter to a bookseller. He died in 1622, and, as some supposed, from violence. His version of the Psalms seems to have been prepared and published about the year 1612. The tunes in Ainsworth's Collection consist only of a melody, and that of a character not remarkably agreeable to modern ears: though, doubtless, to the Puritans they afforded high gratification. The poetry and music were alike akin to jargon, and yet were the only words

and tune, used for many years after the settlement of Plymouth. Mr. Walter, of Roxbury, in 1720, commenced the reformation in psalmody by his first book. It is probable that our ancient psalmody came from Rome. It seems the most natural thing in the world that the Hussites, and others of the continental dissenters from the Catholic church, should have carried with them into the wilds and mountain fastnesses to which they were driven, strains and reminiscences of the cathedral music which had been familiar to them from their earliest youth. The abundance of minors, the unsmooth cadences, the odd and peculiar changes in the scales, written and sung without accidentals as they were—these and other peculiarities seem common to both; and arrangements of Ainsworth's melodies would probably have much the same effect as do the arrangements of the Gregorian chant, when the latter has the old form preserved.

Until about 1812, the reading of our teachers was confined, at best, to a few such books as those published by Holyoke, and Swan, and Jenks, and Harmon; and the style of performance was formed by copying that of some favorite teacher who had preceded them, and they were consequently satisfied with very ordinary compositions, and with a still more ordinary, and perhaps altogether defective, style of execution. The compositions of Billings, Swan, Kimball, Holyoke, and others of the old school of psalmody, were truly native: they had little opportunity of becoming familiar with books—even such as then existed—upon the science. Some of their compositions, however, and some of Ingalls, Reed, Holden, and other old Americans, will be sung and admired so long as music shall exist on earth. That in the early publications there was much "frivolous and anti-devotional music," we do not wish to deny—but such was the prevailing taste until the appearance of the "Village Harmony," "Bridgewater Collection," "Harmonia Sacra," and other similar books, when a reformation commenced.

Until very recently America has been, as it were, destitute of music. Discarding all the little charms and graces which add so much to the amenities of life, the settlers of this country banished, as one of the relics of Popery, all which might truly be denominated music. Shunning the organ because of its apparent identity with the service of the Roman church, they expatriated with it the immortal works of Mozart and a host of others, whose only crime consisted in having written their works for that church. Any thing—even to "Yankee Doodle" in long metre, which can be seen by any possessor of a certain old psalm book published the last century—was pre-erable, and accounted more sacred, than the sublime strains of Rossini or Mozart. The more execrable it was, the more acceptable to the rigid Puritan, until it really seemed that religion and refinement were entirely incompatible the one with the other. But this morbid delusion could not last forever. The human mind is necessarily progressive, and, with the advance of other departments of art in America, music has also progressed. Now, if music be elevating in its nature, the higher the style of music the more impressive its effect upon the character. The same frame of mind induces pleasure in listening to the Te Deum as in listening to Old Hundred.

Not that all can at once or to a similar extent enjoy the masterpieces of art."

In 1620, on the 9th day of December, the Pilgrim Fathers worshipped God with prayer and the *singing of psalms*, near Plymouth, Massachusetts, where, soon after, they landed on the rock now sacred to their memory. December 9, 1620, was the first Christian Sabbath in New England. The Mayflower had crossed the ocean, it had reached the bleak shores of the new world on Saturday; the Lord's day was approaching — a day which the Pilgrims regarded as holy; and on this day they devoutly raised the *first song* of praise and thanksgiving ever sung on this continent. Psalmody was first introduced in the reformed religion by the dissenters, and was more used by them than by the established church. But their great aversion to every thing resembling poetry caused them to abandon every kind of what was then called "*curious singing*," and they did not then know the use of musical instruments. The history of psalmody, psalm singing, and psalm writing, forms a portion, and by no means an unimportant portion, of the history of the reformation. The metrical psalms of Sternhold were first introduced by the Puritans. Metrical psalmody was also adopted by Calvin; austere as he was, he introduced *singing* of psalms, in opposition to reading them. He expelled pictures from the church, mutilated the statues, and dashed the painted glass in pieces; but the congregation were allowed to *sing*.

The Pilgrims, when they came to this country, brought with them, from the mother country, the style of singing prevalent there when they left, and the book they used was "Ainsworth's Psalms," which was published at Amsterdam, in 1612. In the preface to this versification, Mr. Ainsworth says, "Tunes for the psalms, I find not any set of God: therefore, all people may use the most grave, decent, and comfortable manner of singing that they know." Ainsworth's version was the first used in this country, and was used by the first church, at Plymouth, and by all the congregations in the New England colonies, until 1640. The book had this title: "The Book of Psalms: Englished both in Prose and Metre. With annotations opening the words and sentences, by conference with other Scriptures. By Henry Ainsworth. Bee yee filled with the Spirit; speaking to yourselves in Psalms, and Hymns, and Spiritual Songs: singing and making melodie in your hearts to the Lord." A copy of this version is preserved in the Massachusetts Historical Society. The Psalms were Englished in *prose* on the left side of the page, and the *metre* on the right hand side.

The United States of America, especially those which are commonly termed the New England States, were colonized principally by non-conformists, and used, with Ainsworth, the version of Sternhold and Hopkins to some extent. To this kind of music they became strongly attached, and until the day of Billings they adhered to this style of music. It was such as fitted the men and the time; and now there is to be aged, and some of their descendants, more pathos, more heart-thrilling expression, in some of the old psalm tunes, feelingly displayed, than in a whole batch of modernisms. The strains go home, and the "fountain of the great deep is broken up" — the great deep of unfathomable

feeling that lies far, far below the surface of the world-hardened heart; and as the unwonted, yet unchecked tear starts in the eye, the softened spirit yields to their influence, and shakes off the load of earthly care, rising, purified and spiritualized, into a clearer atmosphere. Strange, inexplicable associations brood over the mind "like the far-off dream of paradise," mingling their chaste melancholy with musings of still, subdued, more cheerful character. How many glad hearts in the olden time have rejoiced in these songs of praise — how many sorrowful ones sighed out their complaints in those plaintive notes that steal sadly, yet sweetly on the ear — hearts that, now cold in death, are laid to rest around that sacred urn, within those walls they had so often swelled with emotion!

In 1632 an attempt was made in Scotland to supersede the old English version of the Psalms, which had been in use since 1564, by that of King James I. But while the Scottish divines withstood the introduction of the king's version, they appear at the same time to have taken measures for obtaining a version of which they could entirely approve.

In England, the old version was used until 1696, when there appeared the "New Version" of the Psalms. The old version of the Psalms fell gradually into disuse after the publication of "A New Version of the Psalms of David, fitted to the Tunes used in Churches. By Nahum Tate and Nicholas Brady. London, 1696," in duodecimo. It was preceded by a specimen, "printed for the Company of Stationers," in 1695, also in duodecimo, and entitled "An Essay of a New Version of the Psalms of David, consisting of the first Twenty; fitted to the Tunes used in Churches." This new version was introduced to the public under the sanction of an order in privy council, by King William III., dated December 3, 1696.

The "New Version" of Tate and Brady is now used in most of the churches in England and in Ireland, as well as in the chapels of the Episcopal communion in Scotland, and in the British colonies. It has also been adopted by the Protestant Episcopal church in the United States of America.

Nicholas Brady versified some of the psalms in 1692, and in the same year wrote an Ode for the Feast of St. Cecilia, which was set to music by Purcell. This ode was performed in London, by the Purcell Club, November 22, 1852.

In 1636, a committee of ministers of the Congregational or Independent churches was appointed, who, in 1640, completed from the Hebrew a metrical version of the Psalms, which was subsequently referred for improvement to the Rev. Henry Dunster, principal of Harvard College, Massachusetts, who was aided, as to the poetry, by Mr. Richard Lyon, an English gentleman, at that time resident in Harvard College. Between the years 1755 and 1757, this translation received a very careful revision from the Rev. Thomas Prince, M. A., rector of the South Church, Boston; whose revised edition was published in October, 1758, and was introduced into the South Church on the Sunday after his funeral.

The early settlers of America were religious men; they were men of high intellectual attainments — leaning, it is true, to the *useful*, rather than the ornamental literature; but that connec-

tion which must subsist between all sciences, that "commune vinculum," led them in a considerable degree to the latter. We must consider their acquirements, not in relation to the present models of literature, but in relation to the times in which they lived. Many of them were distinguished for their talents, and held in high repute. Their first attempts in the department of belles lettres were undoubtedly rude, when compared with the contemporaneous productions of the old world; but they are worthy of attention, because they so exhibit the spirit of the age, and for their influence on all succeeding writers — an influence which has not yet entirely ceased. Independent of any intrinsic merit, they are valuable, because they are relics of men in whom we unavoidably feel a great interest, and who are constantly, in some form or other, presented to our notice. As might be expected, their earliest productions in poetry were religious songs, hymns, psalms, &c. The first on record (as quoted by a distinguished critic, Mr. Kettel) was a psalm, extracted from the "Bay Psalm Book." We adjoin a specimen.

"The rivers on of Babylon,
there, where we did sit downe,
Yes, even then we mourned when
we remembred Zion.
Our harp, we did hang it amid,
upon the willow tree,
Because there they that us away
led in captivity."

The Puritans of New England and the Moravians of Pennsylvania, almost without exception, were accustomed to have singing at their family devotions, in which all the members of the family soon learned to take a part. So with the Scotch Covenanters; they were called a "psalm-singing generation," in fact, because all, old and young, were accustomed to sing.

In 1640 "The New England Version, or the Bay Psalm Book," was first published in this country, at Cambridge, Massachusetts; being the first book of any note printed in the Colonies. This book continued to be used until about 1646, when a new edition, with some important alterations, was published.

In 1647 Rev. John Cotton published his celebrated treatise on singing, in which the *duty* of singing, the *manner* and *matter*, were fully discussed. Music was taught among the natives, in this country, by Mr. Eliot, as early as 1660; and in 1687, Dr. Mather says, "A whole congregation of Indians praise God with singing, and some of them are excellent singers."

In 1690 the publication of music from engraved plates, made in this country, commenced; and it is generally supposed that a collection of psalm tunes, in two and three parts, was, during this year, engraved and published; but we have not been able to obtain certain knowledge of this fact. There are to be found, in some of the old libraries, versions of the psalms, with tunes "pricked with pen and ink," or, as we would now say, copied upon blank leaves inserted for that purpose at the end of the books; and such we are inclined to believe must have been the books of 1690. From this period to 1800 we find a number of musical works were published in the colonies, some of which were very small works, and partly elementary. They were all undoubtedly considered valuable in their day, and many of them are very good specimens of art, and executed, mechanically, very well.

In 1691 an association of New England ministers of the gospel compiled, had published, and introduced into some of the churches, a book entitled "The Bay Psalm Book." This was an improved edition of the book published at Cambridge, in 1640; but as the Pilgrim Fathers brought with them Ainsworth's version, and were unwilling to change any thing they had once adopted, the new book of 1691 was not much used until 1693, when it was very generally adopted. About this time also appeared in this country a reprint of the version of the Psalms by Sternhold and Hopkins, which had been published in London as early as 1549, but not much used here until 1693, when it was first republished at Cambridge, Massachusetts. Sternhold was one of the fathers of metrical psalmody; and was in his time considered as an excellent poet. The name of Hopkins became associated with Sternhold, because he assisted in versifying many of the psalms; their names were thus united, as were the names of Billings and Holden in this country.

In 1710 Rev. John Tufts, of Newbury, "the great seaport town," published an engraved music book, containing twenty-eight tunes, entitled "A very plain and easy Introduction to the Art of Singing Psalm Tunes; with the Cantus or Trebles of twenty-eight Psalms, contrived in such a manner, as that the Learner may attain the Skill of singing them, with the greatest Ease and Speed imaginable."

Mr. Tufts, instead of writing the notes of his tunes upon the staff, as we now write them, represented the notes by the initial letters of the syllables — thus making it easy to call the notes by name, but rather difficult to know the length of the notes — though by F with two dots (F:) the pupil understood the longest note, a breve; by (F.) with one dot, the next or half breve; and plain F represented a minium; the black notes were represented by the small *f* printed in the same way. Notes written in his style would appear thus:—

And we should now write them thus:

In 1712 Rev. John Tufts, "by the great desire of his many friends and the concurrence of many divines," was induced to issue a second and more correct edition of his book. This edition was entitled "An Introduction to the Singing of Psalm Tunes in a plain and easy Method. With a Collection of Tunes in Three Parts, all neatly engraved in Copper Plates." There were several editions of this work published, and it was more or less used until 1721.

In August, 1713, an organ was introduced into Boston, in New England. It was presented to the Queen's Chapel, by Thomas Brattle, Esq.; but so great were the public prejudices then existing, that this organ remained *seven months* in the porch of the church before it was unpacked. At length, however, in 1714, it was put up, and was regularly used in that church (which, after the reign of Queen Anne took the name of the King's Chapel) until 1756, when it was sold to

St. Paul's Church, Newburyport. It was used there eighty years, and in 1836 was sold, and put up at St. John's Church, in Portsmouth, New Hampshire. The original pipes and wind-chest remain in perfect order to this day; and this aged organ, the first introduced into New England, and probably the first erected in the colonies, bids fair to last another century.

In 1745 Mr. Edward Bromfield, of Boston, Massachusetts, aged twenty-two, being then well skilled in music, did with his own hands make and complete a most excellent organ, with two banks of keys and several hundred pipes. This instrument was equal to any that had come over from England. He was a Boston boy, born in 1723, and died August, 1746, before he had quite finished all the pipes he intended to put in his excellent organ.

In 1718 Dr. Cotton Mather published at Boston, Massachusetts, "*Psalterium Americanum*; the Book of Psalms in a Translation exactly conformed unto the Original; but all in Blank Verse, fitted unto the Tunes commonly used in our Churches. Which pure offering is accompanied with illustrations digging for hidden treasures in it; and rules to employ it according to the glorious and various intentions of it. Whereto are added some portions of the sacred Scriptures, to enrich the Cantional. Boston, in N. E. . . . 1718." 12mo.

In this singular publication, (which is a close translation from the Hebrew,) Dr. Mather has not only disregarded the modern practice of breaking the lines, whether rhymed or not, but he has "run out" (to use a printer's phrase) the whole matter: so that while each psalm looks exactly like prose, and may be read as such, it is in fact modulated, so that it may be sung as lyric verse.

The following extract from the twenty-third Psalm will enable the reader to form some idea of this extraordinary translation of the Book of Psalms.

"PSALM XXIII.

A PSALM OF DAVID.

1. My Shepherd is th' ETERNAL God, || I shall not be in [any] want :
2. In pastures of a tender grass || He [ever] makes me to lie down : || To waters of tranquillities || He gently carries me [along.]
3. My feeble and my wandering Soul || He [kindly] does fetch back again ; || in the plain paths of righteousness || He does lead [and guide] me along ; || Because of the regard He has || [ever] unto His glorious Name." ||

Of the state of psalmody among the Puritans at the close of the sixteenth century, and in the former part of the seventeenth century, we have no certain information. Various metrical translations, indeed, were published by private individuals.

But the greatest improvement of psalmody among dissenters (and indeed of all modern psalmody) was effected by the publication, in the year 1707, of Dr. Watts's Hymns, and in 1719 of his "Psalms of David imitated in the Language of the New Testament, and applied to the Christian State and Worship." The best compositions of Watts, and of his friend, the learned and pious Dr. Doddridge, (whose hymns were published after his decease in 1751), are found in every section of psalms and hymns, which have been

published within the last sixty years, whether for the use of the church of England or of dissenters from her communion. In the course of the present century many exquisite pieces of sacred and devotional poetry have been composed by dissenters, which are deservedly found in various collections and selections printed for use in public worship.

All the great bodies of dissenters now have denominational hymn books, containing the best versions, or imitations, of the Psalms of David together with hymns selected from our most eminent devotional poets.

In 1721, Rev. Thomas Walter, of Roxbury, Massachusetts, published "The Grounds and Rules of Musick Explained : or an Introduction to the Art of Singing by Note : Fitted to the Meanest Capacities. Let every thing that hath breath praise the Lord." This book became very popular in Massachusetts and throughout the New England colonies. It went through several editions, the last of which contained twenty-four tunes, in three parts, *cantus*, *medius*, and *bassus*, and was published in 1764. The tunes in Walter's collection were, some of them, taken from Ainsworth's Psalms, and some of them from Ravenscroft's collection; and as these tunes were in parts, choirs were soon selected in most of the churches to sing them; though all who could sing were permitted and requested to assist in this part of worship. In the author's preface, he says, "My Rules will be Serviceable upon a threefold Account. *First*, They will instruct us in the right and true Singing of the Tunes that are already in Use in our Churches; which when they first came out of the Hands of the Composers of them, were Sung according to the Rules of the *Scale of Musick*, but are now miserably tortured; and twisted, and quavered, in some Churches, into all horrid Medly of confused and disorderly Noises. Our Tunes are, for want of a Standard to appeal to in all our Singing, left to the Mercy of every unskilful Throat to chop and alter, twist and change, according to their infinitely divers and no less odd Humour and Fancies. Yea, I have myself heard (for instance) *Oxford* Tune sung in *Three* Churches (which I purposely forbear to mention) with as much Difference as there can possibly be between *York* and *Oxford*, or any two other different Tunes. Therefore any man that pleads with me for what they call the *Old Way*, I can confute him only by making this Demand, *What is the OLD WAY?* which I am sure they cannot tell. For, one Town says their's is the true *Old Way*, another Town thinks the same of their's, and so does a third of their Way of Tuning it.

"Again, It will serve for the Introduction of more Tunes into the Divine Service. For at present we are confined to *eight* or *ten* Tunes, and in some congregations to little more than half that Number, which being so often sung over, are too apt, if not to create a Distaste, yet mightily to lessen the Relish of them.

"One more advantage is this, That by the just and equal *Timing* of the Notes, our Singing will be reduc'd to an exact Length, so as not to fatigue the Singer with a Protraction of the Notes beyond the Compass of a Man's Breath, and the Power of his Spirit; A Fault very frequent in the *Country*, where I myself have twice in one Note paused to take Breath. And

then the even, unaffected, and smooth sounding the Notes, and the Omission of those unnatural *Quaverings* and *Tarnings* will serve to prevent all that Discord and lengthy Tediousness which is so much a Fault in our Singing of Psalms; For much time is taken up in shaking out these Tunes and Quavers; and besides, no two Men in the Congregation quaver alike, or together!"

In 1727 Rev. John Barnard, who had received musical instruction before he came to this country, and who practised and taught music after he came to reside and preach in Marblehead, Massachusetts, published a "Book of Psalms, together with fifty tunes to sing them, neatly engraven on copper-plates." He introduced a number of new tunes: but the price of his book was so great as to prevent its general sale, and the music was not considered so good as some of the old and popular pieces of the day.

In 1729 was published in London, and very soon introduced into this country, "The Whole Book of Psalms, in Three Parts, by John Playford." This book was much used in England and here for many years. In his introduction, Mr. Playford says, "The praising of God by Psalms and Hymns, as it seems a part of Natural Religion, owned and used by all Mankind; so we find the practice of it very early in the Church of God. There can be no just cause to doubt, but that it was at least contemporary with Instrumental Music, a thing as ancient as the time of Adam, invented by Jubal." In explanation of the gamut or scale of music, he says, "First, in the first column you have ye several Notes us'd in Musick. Begin yn at Gamut, and read ym upwards, & yn down again, & so backward and forward till you have learned them by heart; then observe what syllables each proper name points to in ye second column, for by these single syllables you are to sing—ye names in the first Column being only to give Denomination to ye several lines and spaces in ye Gaauut." The book contains 308 pages, 12mo., and is well printed.

In 1755 Thomas Bailey republished a portion of an English work, by William Tansur, at Newbury, Massachusetts, entitled "A Complete Melody, in Three Parts," which had a great sale, though it contained only about one third of the music in Tansur's English Singing Book, comprising a portion of the Psalms with new melodies. William Tansur wrote "St. Martin's," as early as 1735.

In 1761 James Lyons, A. M., published at Philadelphia, Pennsylvania, a new book of music, entitled "Urania, or a choice collection of Psalm Tunes, Anthems, and Hymns, from the most approved authors; with some tunes entirely new, in two, three and four parts: the whole peculiarly adapted to the use of churches and private families. To which are prefixed the plainest and most necessary Rules of Psalmody. Price 15 shillings." This was the largest and most general collection of music that had as yet been published in this country; it was well executed, and the expense of getting it up was so great as to deeply involve in debt the author, and to bankrupt the publisher. There was some very good original music in this collection. It contained 216 pages. In 1785 Mr. Lyons published another small book of Lessons for the Uranian Society, Philadelphia. This was an elementary work, designed to promote a knowledge

of the science, and contained little besides the rules and some introductory lessons in vocal music, which the society constantly practised.

In 1763 was published in Philadelphia a pamphlet in which the author anticipates the "Complete Introduction of the Organ into all places of Public Worship." The title of this is as follows: "The Lawfulness, Excellency, and Advantages of Instrumental Musick in the Publick Worship of God, Urg'd and Enforc'd, from Scripture, and the Example of the far greater part of Christians in all ages. Addressed to All (particularly the *Presbyterians* and *Baptists*) who have hitherto been taught to look upon the Use of Instrumental Musick in the Worship of God as *Unlawful*. By a Presbyterian.

'Musick has charms to sooth the Savage Brest,
'To soften Rocks, and bend the knotted Oak.'
CONGREVE."

In 1764 Josiah Flagg, Esq., of Boston, Massachusetts, published a collection of music containing one hundred and sixteen tunes, neatly engraved and very well printed. This work was not near as large as the book of Mr. Lyons, but it sold to a much greater extent. Its title was, "A Collection of the best Psalm Tunes, in two, three, and four Parts, from the most approved Authors; fitted to all Measures, and approved of by the best Masters in Boston, New England; to which are added some Hymns and Anthems: the greater part of them never before printed in America."

In 1764 Daniel Bailey, of Newbury, Massachusetts, and John W. Gilman, of Exeter, New Hampshire, published "A New and Complete Introduction to the Grounds and Rules of Music, in two Parts." The plates were engraved by Gilman, of Exeter, and the printing done by Bailey, of Newbury. The first part of this work was devoted to elementary subjects, and the second part contained about thirty tunes and anthems.

In 1769 Thomas Bailey, of Newbury, Massachusetts, republished a part of William Tansur's Second Book of English Psalmody, and called it "Universal Harmony." He also selected largely from a work just published in London, entitled "Psalmodia Evangelica," by Thomas Williams, which contained music arranged in three parts and figured for the organ. Thus originated the name, "Williams and Tansur's Collection of Church Music." It is stated in the History of Newburyport that William Tansur published there, in 1769, a singing book entitled "The American Harmony;" but we have never been able to find any copy of the work, and think it must have been a mistake. Tansur wrote "St. Thomas" in 1768.

September 5, 1772. Jacob Bailey Moore was born at Georgetown, on the Kennebec, Maine. His ancestors were of Scotland, and emigrated to this country soon after it was settled. He studied medicine, and settled in Andover, New Hampshire, in 1796, and practised his profession with great success until 1812, when he received the appointment of surgeon's mate in the 11th regiment of United States infantry. He continued in the service until December of that year, when he returned to his family much indisposed, and died of a lung complaint on the 10th of January, 1813. From his youth he had cultivated music and composed many excellent pieces. Some of

his earliest tunes were published in "The Columbian Repository," by Samuel Holyoke. He was an excellent musician, and also had a taste for poetry, and wrote much for the papers of his day.

In 1774 John Stickney, teacher of music, published at Newburyport, Massachusetts, "The Gentlemen and Ladies' Musical Companion," a small, but in its time a very valuable collection of psalms and anthems, together with explanatory rules for learning to sing; the whole corrected and rendered plain by the author. John Stickney was born in Stoughton, Massachusetts, in 1742; and while a butcher boy he learned the new style of music, near Boston, of one Dunbar; went to Hatfield, and there taught the *new music* to all such as desired to learn it, and afterwards taught in all the principal towns in that region, but not without much opposition from those who preferred the old style, or that of the Pilgrims. For many years the wife of Mr. Stickney taught music with him, she being a very excellent singer, and having a powerful voice; she travelled with him from place to place, and was an excellent assistant. They finally settled at South Hadley, and continued to teach until John was sixty-five years old. Mr. Stickney died in 1826. His book was printed by Daniel Bailey, of Newburyport, who printed many of the early collections. The music was engraved, and is like other specimens of that time.

In 1778 Elias Mann published "The North Hampton Collection of Church Music." Mr. Mann was born in Weymouth, Massachusetts, in 1750, and early removed to Northampton, where he died, May 12, 1825, aged seventy-five. In 1807 Mr. Mann published, at Boston, "The Massachusetts Collection of Sacred Harmony," containing a plain and concise introduction to the grounds of music; also a large number of psalm tunes, selected from the most approved and eminent authors; adapted to the different metres and keys generally used in churches; together with a number of select pieces and anthems, suitable for various occasions; comprising 200 pages. John Cobb, of Northampton, born in Abington, Massachusetts, May 23, 1785, assisted Mr. Mann in publishing this collection; and Cephas Cobb, born July 31, 1788, brother of John, also assisted in making the compilation. The Cobbs are now (1853) both living, the former at Northampton and the latter at Abington, and were both teachers of music.

In 1780 Andrew Law, of Newark, New Jersey, commenced publishing music. He was then somewhat celebrated as a teacher of vocal and instrumental music. In 1782 he published "A Collection of the best and most approved Tunes and Anthems" then known to exist. A second volume was afterwards published, containing 64 pages, engraved, called "The Christian Harmony." In his preface to this work, Mr. Law says, "The art of singing will consist of three leading parts; the Musical Primer, the Christian Harmony, and the Musical Magazine. The second part, or the Christian Harmony, will be further divided into two volumes, and the third part, or Magazine, into a course of numbers. It is to comprise the elements or rules of the science, together with a regular gradation of the best sacred music, from the plainest tunes up to the nicest airs and anthems." We have been

told that Mr. Law published a singing book, entitled "Sacred Hymns," as early as 1779, but we have never seen the book. In 1786 he published at Baltimore, Maryland, an "Original Collection of Music," and in 1792 he published the fourth edition of a work entitled "The Rudiments of Music," 76 pages, engraved. The copy before us was owned by Timothy Swan, author of "Poland," and presented by him to the Harvard Musical Association. "The Musical Magazine," by Mr. Law, was the first musical periodical ever published in this country. Some years after the discontinuance of his Magazine, Mr. Law invented a new system of notation. He furnished, in this system, seven new musical characters or notes, situated between the single bars, which divide the time in the same manner as if they were on the spaces and the lines. One of his notes was of a square figure, one of a diamond, and one of a quarter diamond. Each kind was varied by strokes, and made breves, semibreves, minims and crotchets, quavers and semiquavers, in the same manner as the notes now in use. Mr. Law said there were but *seven sounds* in nature, and these seven sounds constitute the musical scale; they require only seven characters to represent them. Each of his characters is applied to one of these seven sounds, and thus each sound has its peculiar character. His system met with some favor, and many persons adopted it, and professed to derive great advantages from it. As late as 1820 Mr. Law resided in Newark, and from thence wrote letters for publication, recommending his system of notation.

In 1782 Joel Barlow, an American statesman and poet, published a corrected and enlarged edition of Dr. Watts's version of the Psalms, and a collection of hymns, with the recommendation of the General Association of the Congregationalist Ministers of Connecticut, at whose request the work had been undertaken.

In 1783 Oliver Bronson (sometimes spelled Brunson and Brownson) published a book entitled "Select Tunes and Anthems." It contained the rules of music, and some very beautiful original pieces. Mr. Bronson wrote "Jubilee," "Invitation," "Virginia," and some other pieces, which are still found in the books of 1800.

In 1784 Thomas Hastings, of Litchfield county, Connecticut, was born. He is now (1853) probably one of the oldest living American composers. In 1796 he removed to Clinton, New York, and soon after published a small collection of music for the Handel and Burney Society of Oneida county. This collection was several years after very much enlarged, and published under the title of "The Springfield Collection," and became a very popular work. In 1822 Mr. Hastings published one of the most valuable books on the subject of music which had ever appeared in this country, entitled "A Dissertation on Musical Taste." This was printed at Albany, New York, and was an octavo volume of 228 pages. The work was well received by the musical public at the time, and will be referred to as authority upon that subject when its author shall have ceased to exist. This dissertation gave Mr. Hastings a name and fame among those who were attempting to raise the standard of musical taste. We next find him engaged as editor of a religious newspaper, published at Utica, New York, entitled "The West-

vn Recorder; and in the columns of this paper will be found many very able articles in favor of sacred music as distinguished from secular. Since 1831 Mr. H. has been more or less engaged in teaching and lecturing upon the subject of sacred music, and has assisted in the publication of "Spiritual Songs," "The Christian Psalmist," "The Manhattan Collection," "The Sacred Lyre," "The Psalmist," "The Choralist," and "The Mendelssohn Collection;" all of which books were of a high character, and all of which sold extensively. Mr. Hastings has composed many beautiful hymn tunes, and has written very many poems and devotional hymns, which have obtained a wide circulation both in this country and in Europe. He now resides in New York city.

In 1786 Isaiah Thomas, of Worcester, Massachusetts, procured from Europe a font of *music type*, the first brought to this country; and he was the first printer in America who used movable music type. It will be noticed in the books printed by Mr. Thomas after this, that he says, "printed typographically," &c. The oldest book thus printed is "The Worcester Collection."

In the edition of the American Indian (or Mohawk) version of "The Book of Common Prayer," printed at London, in 1787, at the expense of the British government, for the use of the Christian Indian tribes, the following portions of the Psalms are translated into the Mohawk language, viz., the twenty-third, sixty-seventh, hundredth, hundred and seventeenth, and the hundred and thirty-fourth psalms, with "*Gloria Patri*," the hymn "*Veni Creator*," and two hymns on baptism and the Lord's supper; and, in 1839, "A Collection of Psalms and Hymns for the use of the six Indian Nations," was printed at Hamilton, in the diocese of Toronto, "at the expense of the New England Corporation," as the society for supporting missions to those nations is now termed. It contains the psalms just enumerated in English and Mohawk, and eighty-one hymns; sixty-eight of which are in Mohawk and English, and consist of those most generally approved in this country. The remaining thirteen hymns are in Mohawk only. Among them is Bishop Ken's admirable "Evening Hymn," rendered into Mohawk verse, in words of one syllable, which the devoted clerical missionary to the Mohawks, the Rev. Abraham Nells, in 1844, informed the writer of the present article is sung to Tallis's well-known tune, to which the Mohawk verse is eminently adapted.

In 1788 Simeon Jocelyn, of New Haven, Connecticut, published a collection entitled "Chorister's Companion," and in 1793 he published a supplement. His first book contained some very good pieces of music; but, as his name was not attached to them, we are not certain they were of his composition, though they were supposed to be his. This same year a book, called "The Federal Harmony," was printed at Boston.

In 1789 Abraham Wood, of Northborough, Massachusetts, published a small collection of original psalmody, to which he gave the title "Divine Songs." The book contained only 36 pages, but it was well received by the public, as he intimates in a second edition, published in 1790.

In 1793 Oliver Holden, a resident of Charlestown, Massachusetts, and a carpenter and joiner

by trade, published his first book of sacred music, arranged in three and four parts, the music being much of it original, entitled "The American Harmony." He then commenced teaching music, and opened a store for the sale of music and other books. Soon after he published another book, in two volumes, called "Union Harmony, or an Universal Collection of Sacred Music." In 1795 he associated himself with Hans Gram and Samuel Holyoke, and they published "The Massachusetts Compiler." In 1797, Mr. Holden published "The Worcester Collection of Sacred Harmony," which he altered, revised, and corrected, adding an appendix containing a number of new psalm tunes, and some other new pieces of music. This was the sixth edition of the work, and consisted of 156 pages; it was printed upon movable types by Isaiah Thomas, of Worcester, Massachusetts, who in 1786 procured the type in Europe. Mr. Holden was a conscientiously religious and amiable man, as any one might judge from the style of his compositions. He was the author of many very excellent tunes. His "Confidence," to the words "Now can my soul in God rejoice;" "Paradise," "Now to the shining realms above," and his "Coronation," "All hail the power of Jesus' name," will live for generations yet to sing and admire. Holden was from his youth passionately fond of music; and though in the latter years of his life he ceased to instruct and to compose, he retained his love for the art to his death, which took place at Charlestown, in 1831. Up to the time in which Mr. Holden ceased publishing music, there had been no American author whose productions had been so well received and so generally admired.

In 1793 David Belknap, of Framingham, Massachusetts, published "The Haruonist's Companion."

In 1793 Daniel Reed, of New Haven, Connecticut, published "The Columbian Haruony." He was the author of "Greenwich," "Russia," "Sherbourne," "Newport," and "Windham," a tune which has been sung for half a century, and will probably continue to be sung longer than any other piece of music that has ever yet been composed on this side the Atlantic. Billings, Holden, and Reed invented many pleasing melodies, and although their haruonies have in progress of time ceased to satisfy the prevailing musical taste, yet many of their melodies cannot yet be spared, and their names appear in very many of our numerous collections of church psalmody. The *pitch-pipe* originally belonging to Daniel Reed was used to *set the pitch* at a Concert of Ancient Harmony, given May, 1853, at New Haven, Connecticut. The music was well executed, but the interest it excited depended chiefly upon the old associations it brought to mind; for the compositions that were sung are in themselves imperfect, and although they were inspired by religious feeling, they seem to have been composed in accordance with no science or system of rules, but to have been made to conform merely to the demands of an uncultivated ear; and consequently much harshness is often manifest, which grates upon the feelings of those accustomed to more polished productions. Not that the tunes are destitute of merit, for there are in them many fine melodies; but each part has its own melody, and as

these, although good in themselves, sometimes fail to harmonize with each other, the general effect of the tune is in such cases inferior.

In 1793 Hans Gram published, at Boston, a small collection of music.

In 1793 Jacob French, of Stoughton, Massachusetts, published "The Psalmodist's Companion."

In 1793 Joseph Stone and Abraham Wood, together, published their "Columbian Harmony." This bore the same name as one published by Daniel Reed.

In 1793 Jacob Kimball, of Topsfield, Massachusetts, published "The Rural Harmony," mostly original, or, if not original, consisting of tunes never before published in this country. It was intended for the use of schools and musical societies.

In 1794 Samuel Belcher, Esq., published "The Harmony of Maine."

In 1794 Amos Bull, of Hartford, Connecticut, published "The Repository." He wrote "Middletown."

In 1794, November 24, Edward W. Hooker was born at Goshen, Connecticut. At the age of twelve years he commenced the study of music, under E. Roberts, who was the first teacher in that state who ventured to advocate a change of the light fugue style of music for the more solid and scientific class of compositions. The Rev. Dr. Hooker has published several very interesting and important tracts upon the subject of music, also essays, lectures, and addresses; his aim having always been to take up practical topics in the art, and more particularly to direct attention to the subject of sacred music. In 1840 Dr. Hooker presented an able report on the subject of church music to the General Convention of Ministers in Vermont, which was attacked by a writer in Boston, through the columns of the *New England Puritan*; and this led to a series of articles exposing the impositions of compilers of music, who had made alterations in every new edition of their music books, rendering previous editions useless. This controversy attracted much attention at the time. Dr. Hooker has done good service to the cause of music, and although he has never made it a profession, possesses a fine musical library, and his "Plea for Sacred Music" will long outlive its author.

In 1795 Hans Gram, Samuel Holyoke, and Oliver Holden published "The Massachusetts Compiler." In their preface, which bears date February, 1795, they say, "Many American votaries of sacred music have long since expressed their wishes for a compendium of the genuine principles of that science. These circumstances induced us to associate and prepare this publication." The work is well printed, and contains the theoretical and practical elements of music, together with a musical dictionary, occupying 36 quarto pages, to which are added 72 pages of original and selected music.

In this year Samuel Babcock, of Watertown, Massachusetts, published an original collection of church music, called "The Middlesex Collection." Amos Albee also published an edition of "The Norfolk Collection;" and Benjamin Dearborn published "The Vocal Instructor."

In 1797 Daniel Belknap, a teacher of music, then living in Framingham, Massachusetts, pub-

lished a small collection entitled "The Harmonist's Companion."

In 1797 the Rev. Timothy Dwight, D. D., an eminent poet and divine, (president of Yale College, Connecticut,) was requested by the General Assembly of Ministers in that state to revise the whole of Dr. Watts's version, or rather imitation of the Psalms, and "to versify the psalms omitted by Watts." The task was undertaken accordingly; and the whole was published in 1800.

Many of the leading denominations in the United States of America (as the Lutherans, the Methodist Episcopal church, &c.) have their own separate psalm and hymn books. The best and most copious of all the collections which the writer has seen was published (it is believed for the use of the Congregationalists) by Messrs. Lowell Mason and David Green, at Boston, Massachusetts, in 1832, in octavo. It is entitled "Church Psalmody; a collection of Psalms and Hymns, adapted to public worship."

In 1798 Dr. Amos Pillsbury, of Charleston, South Carolina, published "The United States Sacred Harmony." This was a compilation of many of the most popular tunes of the day, by various authors, and contained so great a variety, that it met with a ready sale, and went through several editions.

In August, 1798, William Little, and William Smith, of Philadelphia, Pennsylvania, published "The Easy Instructor, or a New Method of teaching Sacred Harmony. Containing the Rudiments of Music on an improved Plan, wherein the naming and timing of the notes are familiarized to the weakest capacity. With a choice Collection of Psalm Tunes and Anthems from the most celebrated Authors, with a number composed in Europe and America, entirely new; suited to all the Metres sung in the different Churches in the United States. Published for the Use of Singing Societies in general, but more particularly for those who have not the Advantage of an Instructor." This was an engraved book, and some of the later editions were printed at Albany, New York, by the proprietors of the copyright, Webster and Skinner. It contained 104 tunes. The authors in their advertisement say, "As the introduction of the four singing syllables, by characters, showing at sight the name of the notes, may, perhaps, be considered as subjecting those who are taught in this manner to difficulty in understanding other books, without this assistance, the authors would just observe, that if pupils are made acquainted with the principles here laid down, the objection will be found, by experience, more specious than solid. To this it might be added, that in the old way, there are not less than seven different ways of applying the four singing syllables to the lines and spaces, which is attended with great difficulty. But this difficulty is entirely removed upon the present plan; and we know of no objection to this plan, unless that it is not in use; which objection is no objection at all; or, at least, cannot be decisive, as this would give currency to the entire rejection and exclusion of all improvements whatever." A committee was appointed by the Uranian Society of Philadelphia to examine this book, consisting of Edward Stammers and Richard T. Leech, who reported that "it contains a well-digested system of

principles and rules, and a judicious collection of tunes: and from the improvement of having only four significant characters, indicating, at sight, the names of the notes, and a sliding rule for timing the same, this book is considered easier to be learned than any we have seen. Were it possible to acquire the sound of the eight notes but by imitation, they verily believe they might be obtained by the help of this book, even without an instructor." The work was published by subscription, and before it was published the editors had obtained more than three thousand subscribers. The notes used were four, — round, square, diamond, and triangle, and were applied to the staff thus: —

Sol, Law, Me, Faw.

He wrote "Caldwell" and "Middlebury," and his brother, N. Little, wrote "Carolina," "Franklin," and "Meditation." There does not appear in the book any piece written by William Smith, though he assisted in making the selections.

In 1799 J. Benjamin, of Northampton, Massachusetts, published a collection of music, entitled "*Harmonia Cœlestis*." In this work most of the tunes were figured for the harpsichord and organ, both which instruments were then beginning to attract attention in this country. The music, most of it, was from English books which were not known in the states, and being of a different style from the pieces in other publications, the book was much admired by such as could appreciate the new music.

In 1799, July 25, Emory Perry was born at Holliston, Massachusetts. He was chosen *chorister* when seventeen years old, and received thirty dollars a year for his services. When nineteen, he moved to Milford, and had a salary of one hundred dollars per annum. When twenty-two, he went to Worcester for a salary of three hundred dollars, where he has ever since resided. Mr. Perry has taught at least three hundred schools, averaging seventy-five scholars each. He uses the violin in his schools and in church. He possesses a very remarkable voice, having a range of compass such as is seldom met with. In his best days he could sing from CC, second ledger line below the bass staff, to C, second line above, in the tenor, being a range of three octaves, of such uniform quality of tone that it was impossible to notice any change. His power of tone through this whole compass was very great, and the quality from middle C up was sweet and rich. His lower tones, though strong and rich, were, perhaps, something too reedy. He has sung, with equally good effect, the songs of Raphael and Uriel in the "Creation," and one would hardly know which to admire most, his tenor or his bass.

In 1800 a citizen of Massachusetts published, at Boston, an original collection of "Sacred Dirges, Hymns, and Anthems," containing 28 pages, quarto. Printed by Isaiah Thomas and E. T. Andrews.

In 1760 Timothy Swan, of Suffield, Connecticut, was born. In 1801, while he resided at Suffield, he published "The New England Harmony," the only collection that we have ever

seen by this author. It was printed at Northampton, Massachusetts, by Andrew Wright, and contained 104 pages. Mr. Swan presented a copy of this book to the Harvard Musical Association, October 26, 1841. He was the author of "China," to the words "Why should we mourn departing friends;" and "Pownal," to the words, "Sure there's a righteous God!" "Poland," to the words "God of my life, look gently down," and a number of other pieces of sacred music, which were received with great favor throughout the country at the time, and which have outlived the composer. Swan's music was truly original and devotional, and his tunes have so long held a place in successive age books, that they have seemed to belong to an age gone by. After publishing his book, Mr. S. went into Vermont, and afterwards settled at Northfield, Massachusetts, where he died, in 1842, aged eighty-two years, beloved and respected by all who knew him.

In 1804 William Cooper published, at Boston, Massachusetts, "Beauties of Church Music; and the Sure Guide to the Art of Singing," containing 200 pages. In this publication Mr. Cooper was assisted by Jonathan Huntington, who was afterwards well known as a teacher of music at Northampton, and in that vicinity.

In 1805 Cushing and Appleton, of Salem, Massachusetts, published "The Salem Collection," 124 pages. The music for this book was selected by a committee of the church of Rev. Dr. Prince. This committee selected about seventy tunes, which they stated would be sufficient for any congregation; but the publishers added some other tunes of their own selection or composition. In the preface, the committee mention "The Massachusetts Compiler," by Gram, Holyoke, and Holden, 1795, as one of the best existing publications.

In 1805 Jeremiah Ingalls published, at Exeter, New Hampshire, "The Christian Harmony, or Songsters' Companion," a book containing 200 pages. Mr. Ingalls was a resident of Newbury, Vermont. He makes no apology, in the brief preface to his book, for introducing a new publication, but with diffidence submits it to the public, with the hope that its merits may secure for it general approbation. Mr. Ingalls did not make money by the sale of his book, but was under the necessity of working at his trade, that of a cooper, by day, and used to teach singing schools evenings. He played the violoncello in his schools, and sometimes other instruments. He had a very good tenor voice, and usually sang the air. He removed to Rochester, Vermont, from Newbury, and from thence to Hancock, where he died, about 1828, very poor, but respected.

In 1805 Stephen Jenks, of New Canaan, Connecticut, published "The Delights of Harmony, or Norfolk Compiler: Being a new collection of Psalm Tunes, Hymns, and Anthems;" with a variety of set pieces, from the most approved American and European authors. Likewise the necessary rules of Psalmody made easy. The whole particularly designed for the use of Singing Schools and Musical Societies in the United States.

*The singers went before with joy, on instruments they played:
The damsels with their umbrels, then, in beauty were arrayed.*

This book contained 96 pages, was published by subscription, and was printed for the

author by H. Mann and Co., at Dedham, Massachusetts. In his preface, Mr. Jenks says, "That a tribute of praise is due to the great Author of nature, every rational being will readily grant; and divine songs seem to have been given us to express those sentiments of devotion and reverence which become every Christian. The royal Psalmist David, whom we imitate, (though but faintly, for want of a heart like his, he being a man after God's own heart,) was seldom met without a psalm in his mouth, or an instrument in his hand. Hence all must allow music to be the gift of God, as a true representation of the sweet concert and harmony which his infinite wisdom hath made in his first creation, and it is given to us as a temporal blessing, for his service and our recreation. Nothing so much elevates the mind and raises the devout affections, calms the swelling passions, calls home the wandering thoughts, and prepares the heart for the worship of God, as the singing of psalms. It fills the mind with solemnity, and raises us, as it were, above the things of this world." The author returns his thanks to the subscribers for his book, and says that "their liberality so far exceeds his expectations, he is determined to put the work to subscribers at eighty-eight cents a copy, although the conditions were one cent a page." Of the music in this book, twenty-six pieces were composed by Mr. Jenks, and the selections were printed *verbatim* from the original copies of the American composers.

In 1806 Abijah Forbush, of Shelburne Falls, Massachusetts, published "The Psalmist's Assistant," containing 108 pages of original psalm and hymn tunes, together with a number of favorite pieces from different authors. The book was published at Boston. In 1842 Mr. Forbush completed a new collection of sacred music, mostly original, which he designed for publication. Many of the compositions were truly beautiful; but "modern authors" had so completely monopolized the psalmody market, that Mr. Forbush could not find a publisher in town or country willing to undertake the publication.

In 1809 Joel Harmon, Jr., published at Northampton, Massachusetts, "The Columbian Sacred Minstrel," being an original composition of airs, consisting of three, four, five, and six parts, containing 80 pages. Mr. Harmon was a resident of Pawlet, Vermont, and one of the reformers who wished to discountenance fugging music. In his preface he says, "It is with pleasure that the author discovers that *fugging music* is generally disapproved of, by almost every person of correct taste. The confusion introduced by the parts falling in, one after the other, each at the same time conveying a separate idea, renders the performance a perfect jargon of words." This book was published by subscription. This same year, Samuel Holyoke, A. M., published at Exeter, New Hampshire, "The Columbian Repository of Sacred Harmony," containing 472 pages quarto — the largest collection ever published in the United States.

In 1812 Brown, Mitchell, and Holt published at Boston, Massachusetts, "Templi Carmina, or Songs of the Temple;" afterwards called "Bridgewater Collection," 350 pages; and one of the most popular collections of church music ever published in this country.

In 1812 John Cole, of Baltimore, Maryland,

published "The Minstrel," a collection of celebrated songs, set to music. This was a 12mo of 316 pages, and contained a great variety of English, Scotch, and Irish popular airs.

George W. Lucas was born April 12, 1800 in Glastenbury, Hartford County, Connecticut, commenced teaching church music at the age of sixteen, in Sulfield and Enfield, Connecticut, and has ever since been constantly and extensively engaged in that business. He early received a thorough English education, and afterwards a classical education at the Seminary in Bloomfield, New Jersey. He studied music, as a private pupil, under Thomas Hastings, at Albany, New York, two years. Mr. Lucas has taught and lectured on music in most of the principal cities and towns in the United States and the two Canadas; has written much on the subject of music for the public press, and several of his public lectures have been published. He has composed and published music on sheets, and his "Ordination Anthem" was published in the Boston Collection of Anthems. He was elected honorary member of the Boston Handel and Haydn Society, in 1828, and to the same honor by the Sacred Music Society of Montreal, in Canada East, in 1842; was president of the National Musical Convention at Boston, in 1843. Mr. Lucas has taught more than fifty thousand juvenile and adult singers in classes of from fifty to five hundred members — has delivered over one thousand public lectures; has fitted and conducted the music on more than one thousand public occasions of unusual interest, and was never unsuccessful. Mr. Lucas resided in Northampton, Massachusetts, from 1820 to 1835; during which time he taught in Canada at three different times, and went to Charleston, South Carolina, in the autumn of 1835. In 1837 he removed to Troy, New York, where he remained until 1844, when he commenced travelling in the Western States, teaching and lecturing. He has kept a private journal of his travels, observations, &c., which is a curiosity. Some of his music was published in Taylor's "Golden Lyre," and he is now preparing an original collection for publication. He returned to Northampton in the winter of 1852-3.

In 1813 David Pool and Josiah Holbrook published at Providence, Rhode Island, "The American and European Harmony; or Abington Collection of Sacred Music." Mr. Holbrook was a native of Abington, and was a teacher of music there, where he died. Mr. Pool also lived in Abington. There was a teacher there about the time in which Holbrook flourished, named Bartholomew Brown, who had acquired considerable reputation.

In 1813 appeared "The Village Harmony; or Youth's Assistant to Sacred Music." Consisting of Psalm Tunes and Occasional Pieces, selected from the works of the most eminent composers, to which is prefixed a concise introduction to Psalmody." Exeter, New Hampshire, October, 1816. Published by Charles Norris and Co., Proprietors. The first edition of this book was published in 1813, at Exeter, and it went through some seventeen editions. In the thirteenth edition, the proprietors say, "Many of the light and frivolous pieces of former editions have been expunged, to make way for such as are more solemn and interesting, and better adapted to

the sanctuary of the *Most High*." The book contains 350 pages. In the "General Observations," the editor says, "When a tune is well learnt by note, it may be sung in words. Pronounce every word as distinctly as possible. Never sing through the *Nose*, for that will spoil the voice, make the music disagreeable, and have a disgusting effect upon the hearer."

In 1816 Timothy Flint published, at Cincinnati, Ohio, "The Columbian Harmonist." This is a small book, with only one staff printed on a page, and containing 201 pages.

In 1818 Rev. Samuel Willard, of Greenfield, Massachusetts, published "The Deerfield Collection of Sacred Music." This was a small collection of such pieces of music as were then popular in New England. The author assumes it as a fundamental principle that the design of sacred vocal music is to express sentiment and to excite corresponding feelings; and therefore concludes that the words ought, by all means, to receive a distinct and expressive utterance. Among other things, he tells his readers "not to prolong the vowels, and directs them to suspend the time of a movement and shorten the notes, wherever a pause would be required in good reading." He also intimates that "three varieties of time can be made to answer all the purposes of nine."

In 1819 E. Goodale published, at Hallowell, Maine, "The Hallowell Collection of Sacred Music," 216 pages.

In 1819 Rev. Jonathan M. Wainwright, A. M., of Hartford, Connecticut, published "Chants, adapted to the Hymns in the Morning and Evening Service of the Protestant Episcopal Church." In his preface he says, "Metrical music is but a modern invention, and adds nothing to true devotion, and the worship of God. The conceit of versifying the Psalms, though it seems in some degree to unite the peculiar advantages of the anthem and chant, in no less degree excludes the excellences and effects of both; and owes its success not so much to its propriety and fitness for the holy sanctuary, as to its gratifying the natural propensity of mankind to be pleased with rhymes and metre."

In 1820 Samuel Dyer, of Baltimore, Maryland, published "A New Selection of Sacred Music," containing 244 pieces of music.

In 1820 E. Riley, of New York, published "Vocal Melodies." This was a collection of foreign airs, adapted to American words, and arranged for the piano-forte; the music was engraved, and published in numbers of eight pages, quarto, at twenty-five cents per number, and the work consisted of twelve numbers.

In 1820 A. P. Heinrich, of Kentucky, author of "The Dawning of Music," published "The Western Minstrel," a selection of songs and airs for the voice and piano-forte. In his preface he says, "If I should be able by this effort to create but one single *Star* in the West, no one would be ever more proud than myself to be called an American musician."

In 1820 the Boston Handel and Haydn Society published a collection of music—"Choruses." The work was commenced by subscription, and published in numbers, at 31½ cents each. This society was instituted in 1815, and incorporated in 1816. Its presidents have been, to 1853, Thomas S. Webb, Benjamin Holt, Amasa Winchester,

Robert Rogerson, Lowell Mason, Samuel Richardson, Charles W. Lovett, Bartholomew Brown, Charles Zeuner, Increase S. Withington, George J. Webb, James Clark, Jonas Chickering, Charles C. Perkins, Silas Meriam.

Since 1820 musical publications have become numerous; in fact the making of singing books has become a trade. As a matter of history, however, we will give a concise statement of the date of publication, the authors' names, residence, and the titles of the books published.

In 1822 appeared "The Handel and Haydn Society Collection of Sacred Music," by Lowell Mason, a native of New England, born January 8, 1792. In 1820, Mr. Mason was a clerk in a banking institution at Savannah, Georgia. He had from childhood a great love and talent for music, and all his leisure time was devoted to its study. While at Savannah, he manifested a greater partiality for the notes of the musical scale than for promissory notes, and a fondness for the calculation of rhythmic values rather than for the computation of interest tables; consequently, he turned his leisure from the dull monotony of the bank ledger, to the soul inspiring pages of the music book. At Savannah he compiled his first collection of church music. He labored long and constantly, and at last his book was made.

When he had finished it, he obtained leave of absence from the bank for a short time, and straightway bent his steps to Philadelphia. He went to the book publishers, and offered to give the copyright to any house in the city that would publish it, and give him a few copies for his own use. But they would not touch it. It was too hazardous an enterprise, in their estimation, for wise men to undertake.

Our young editor then went to Boston, and made the same proposal to the publishers of that city. But the shrewd Yankee booksellers laughed at him. Yankee forecast and prudence were not to be thrown off their balance so easily.

Finding that every body looked askance at his book, the young man put his manuscript crotchets and quavers into his pocket, and was about returning to Savannah, when he met a gentleman of considerable musical intelligence, who desired to examine his work. The gentleman expressed great satisfaction with it, and asked the young man what he was going to do with it.

"Take it home with me," was the reply.

The gentleman asked permission to show the manuscript to the board of managers of the "Boston Handel and Haydn Society," of which he was a member. It was granted. The result was, that said society offered to take the book and publish it, and give the young editor a certain copyright interest in it. The offer was promptly and gladly accepted, and the work was published in the year 1822, as the "Boston Handel and Haydn Society Collection of Church Music." It became immensely popular, and ran through some sixteen or seventeen large editions.

The great success which attended the publication of this book decided the whole future course of Lowell Mason, the young editor. He returned to the bank in Savannah, but not there to stay. The Bostonians were determined that he should take up his abode with them. Accordingly, during the year 1826, we find him lecturing on church music in different churches in

Boston. One of these lectures was published, and was extensively circulated. It was widely and favorably noticed by the press, and thus its sentiments of reform were disseminated all over the land.

Thus commenced the musical career of one of the most remarkable men of the age. Mr. Mason is not what we call a genius. Had he been a musical genius, he probably never would and never could have accomplished what he has done. But he had just that rare conformation of faculties which qualified him eminently for a great enterprise. His voice was not naturally a good one, and he never attempted to make any thing great out of it. He never aimed to become a Caffarelli, a Brahau, Salvi, or any other star of vocal renown. Psalmody, in all its relations and interests, formed the subject matter of his first thoughts and most earnest study. And the character of his mind qualified him in an eminent degree for taking a comprehensive view, not only of this, but of all subjects which came before him. He saw quickly what needed to be done, and his Herculean executive powers were not long in setting a system of means in operation, which have wrought a wonderful improvement in music.

One of his earliest and most favorite schemes was to get music introduced into the Boston schools as a popular branch of education. He worked long and hard, and finally had the satisfaction of witnessing the complete success of his undertaking. He had enlisted many of the most prominent and influential gentlemen in the city in the enterprise, and, through their agency the city government was induced to make an appropriation of funds sufficient to put a good teacher of music into every one of the public schools. The higher schools had already introduced vocal music; so that now it might be said that music was actually taught in all the schools in Boston.

Closely connected with this movement was another of equal importance, which is traceable to the action of the "Boston Academy of Music," which had its origin in the plans of musical improvement set on foot by Mr. Mason.

But another and most important plan for the spread of correct musical knowledge throughout the country, which was proposed by the "Boston Academy of Music," was the formation of a class for those teachers of music who desired to become acquainted with the system of instruction laid down in the "Boston Academy's Manual," a work prepared by Mr. Mason, on the Pestalozzian or inductive method of teaching. In the year 1834, twelve gentlemen — all teachers of music — assembled in Boston, and for ten days listened to lectures on teaching from the professors in the Academy — Messrs. Lowell Mason and George James Webb. These twelve gentlemen were so much gratified with this course of lectures, and especially with the method of teaching introduced, that they strongly recommended a repetition of the course the next year. Accordingly, in the month of August, 1835, a similar class was organized, and the number of gentlemen teachers in attendance was increased to nineteen. The interest taken in these exercises was so great that it led to the permanent establishment of an annual "Teachers' Class."

The progress and growth of this "Teachers' Class" and "Musical Convention" have been un-

paralleled. In 1834 it numbered twelve persons; in 1850 it numbered one thousand two hundred and fifty! The number of those who actually took part in the singing exercises, concerts, &c., was about one thousand. These were divided into four distinct choirs, of about two hundred and fifty singers each, and arranged all around the spacious gallery of the Tremont Temple, filling it to its utmost capacity.

Mr. Mason has been the principal editor of quite a number of musical works; some for juvenile singers, and others for adult vocal music classes. But his largest works are books of church music.

The books of psalmody of which Mr. Mason has been the principal editor,* are eight in number, viz., "The Boston Handel and Haydn Society Collection," "The Choir," "The Boston Academy's Collection," "The Modern Psalmist," the "Carmina Sacra" — which has unquestionably been the most popular tune-book ever made. — "The Psalter," "The National Psalmist," and last, the "Cantica Laudis, or the American Book of Church Music." Each of these works has a distinct character, and an individuality of design which show a versatility of talent and a comprehensiveness of mind which do great credit to Mr. M. as an American musician.

It must be apparent that Mr. M. did not mistake his calling when he closed the bank ledger and opened the singing book. He has been the instrument of an amount of good to his country which cannot be overrated. Nor have his direct personal labor and enterprise in musical matters been the whole amount of his contribution to the cause of music in this country. He has reared a son, — William Mason, now pursuing his musical studies in Germany, under the greatest masters, — who is spoken of by the best musicians as a young man of wonderful promise.

Let no one infer that we are blind to the important services rendered to the cause of psalmody in this country by others. The name of Thomas Hastings is enshrined in the affections of all who love sacred music, sweet and spiritual poetry, or amiableness and true moral excellence. And he has done great service to the cause of devotional song, both by his pen and by his public lectures. He has filled a niche in the great enterprise which, perhaps, no other man could fill so well. And his labors are worthy of distinct and grateful mention. He began to exert an influence even prior to the commencement of Mr. Mason's career; but not possessing the requisite business qualifications for managing a great enterprise, his life has been spent in a more quiet and retired way. But he will not lose his reward.

In 1822 Warriner and Hastings, Utica, New York, published "Musica Sacra." T. M. Baker, Charlestown, Massachusetts, published the "Musical Cabinet," a selection of popular songs, with piano-forte accompaniment; 252 pages 8vo.

In 1823 N. D. Gould, Boston, Massachusetts, published "The Social Harmony," 152 pages quarto.

In 1826 John Wyeth, Harrisburg, Penna

* Mr. George James Webb, a gentleman of fine accomplishments and a thorough musical scholar, has been associated with Mr. Mason in the compilation of several works, though we believe the books of church music have been chiefly edited by Mr. M., and the books of secular music chiefly by Mr. W.

vania, published "Wyeth's Repository," 144 pages.

In 1827 John Cole, Baltimore, Maryland, published "The Seraph," two hundred and thirty pieces of music; also, "Beauties of Psalmody," ninety pieces of music. Of this latter work he published three editions. Allen D. Carden published "Missouri Harmony." S. Dyer published "New York Collection of Church Music," and "Philadelphia Collection of Church Music."

In 1828 the Stoughton (Massachusetts) Musical Society published "Stoughton Collection." Rev. J. M. Wainwright, New York, published "Music of the Church," 292 pages. A new edition was published in 1852, and much improved; calculated for use in the Episcopal churches; 231 pages. The book contains, also, general directions for the performance of sacred music, psalmody, anthems, singing, and chanting. The harmonies of all the tunes in this collection were carefully corrected by George F. Bristow, organist of St. John's, New York.

In 1829 E. Ives, Jr., and D. Dutton, Jr., Hartford, Connecticut, published "American Psalmody, or the Hartford Collection," 368 pages. Lowell Mason, Boston, Massachusetts, published "The Modern Psalmist."

In 1830 Samuel Belcher, of Hallowell, Maine, published "Harmony of Music."

In 1831 William B. Snyder and W. L. Chapell published "Western Lyre." New York Committee published "Methodist Harmonist," 250 pages.

In 1832 N. D. Gould, Boston, Massachusetts, published "National Church Harmony." Lowell Mason, Boston, Massachusetts, published "Lyra Sacra," 386 pages.

E. Jones, New York, published "Melodies of the Church." James W. Pahner, Cincinnati, Ohio, published "Western Harmonious Companion." Barrett and Coleman, Nashua, New Hampshire, published "Christian Psalmody."

In 1833 Lowell Mason, Boston, Massachusetts, published "The Choir." Henry E. Moore, Concord, New Hampshire, published "The New Hampshire Collection of Church Music," 352 pages. Mr. Moore was an excellent musician, and a composer of some note. He was the son of Dr. Jacob B. Moore, and was born in Andover, New Hampshire, July 21, 1803. He established "The Gratton Journal," at Plymouth, New Hampshire, in 1824, which paper he conducted with ability for a few years; but music reigned mistress in his soul, and he returned to Concord, New Hampshire, where he continued to teach music until 1838, when he went to East Cambridge, and continued to teach in that vicinity until his death, which took place October 23, 1841, his age being thirty-eight. A few moments before his death he commenced singing "Old Hundred," always a favorite tune of his, to the words, "Be thou, O God, exalted high," and as the last note sounded, almost in the same instant he died. He published a "Musical Catechism," "The Merrimack Collection of Instrumental Music," "The National Choir, a Collection of Anthems," "The Northern Harp," and a few weeks previous to his death he commenced the publication of "The Boston Eoliad," a weekly paper devoted to the subject of music.

In 1834 Robert Willis, Lexington, Kentucky,

published "Lexington Cabinet." Henry Eaton Moore, Concord, New Hampshire, published "The National Choir, a Collection of Anthems." T. B. Mason published "Ohio Sacred Harp."

In 1835 Lowell Mason, Boston, Massachusetts, published "Boston Academy's Collection," 360 pages. This work was published, with alterations, yearly, until 1850. The Boston Academy of Music (see that article) was instituted and incorporated in 1833. Its presidents, to 1853, have been Bradford Sumner, William W. Stone, Jacob Abbott, Samuel A. Eliot.

In 1836 Rev. Thomas Whittemore, Boston, Massachusetts, published "Songs of Zion." W. Nash, Ohio, published "Sacred Harp." T. B. Mason published "Ohio Sacred Harp," improved. Thomas Hastings, New York, published "Manhattan Collection." D. Copeland published "Billings and Holden Society's Collection."

In 1837 Webb and Mason, Boston, Massachusetts, published "The Odeon, a Collection of Secular Melodies," 304 pages.

In 1838 Henry E. Moore, Concord, New Hampshire, published "Northern Harp," 304 pages. Mason and Webb, Boston, published "The Boston Glee Book," 264 pages. Rev. Dr. Wainwright, New York, published "Psalmody Evangelica."

In 1839 George Kingsley, New York, published "Sacred Choir." Charles Zeuner, Boston, Massachusetts, published "American Harp," 460 pages. This is one of the collections of music, which, however familiar it becomes, however much it may be sung, is ever fresh and new. The wealth of melody and magnificent harmony lavished upon "The American Harp" is sufficient to set up a hundred common tune manufacturers. Mr. Zeuner's oratorio, "Feast of Tabernacles," was well worthy of celebrity, though, after a few performances in Boston, it was withdrawn, we fear forever, to make room for other compositions. The first edition of this work was published in 1832, at which time Mr. Zeuner resided in Boston, and was organist at Park Street Church, and president of the Musical Professional Society, and organist for the Handel and Haydn Society. In "The American Harp," every piece of music (except *fee* tunes, one of which was Old Hundred) was composed by Mr. Zeuner, and was emphatically original. David Paine, Portland, Maine, published "Portland Sacred Music Society's Collection." Lowell Mason, Boston, Massachusetts, published "Modern Psalmist," 352 pages. Benjamin Sweetser, Jr., Portland, Maine, published "Cumberland Collection."

In 1840 was published "Ancient Harmony Revived." N. D. Gould, Boston, Massachusetts, published "Sacred Minstrel." Joseph Muenscher, Gambia, Ohio, published "Church Choir," 432 pages. George James Webb, Boston, Massachusetts, published "Massachusetts Collection." Thomas Comer, Boston, Massachusetts, published "Boston Musical Institute's Collection of Church Music." This was published under the direction of a committee, consisting of E. W. Champney, L. Marshall, and W. H. Oakes. 352 pages.

In 1841 John W. Moore, Bellows Falls, Vermont, published "Sacred Minstrel," in monthly numbers. Lowell Mason, Boston, Massachusetts, published "Carmina Sacra, or Boston Collection;" published yearly, with alterations, till

1849; 352 pages. Rev. Thomas Whittemore, Boston, Massachusetts, published "Gospel Harmonist." 350 pages.

In 1842 Baker and Woodbury, Boston, Massachusetts, published "Boston Musical Education Society's Collection." George Kingsley, New York, published "Social Choir," three volumes, 500 pages. Mr. Kingsley was born in Northampton, Massachusetts, July 7, 1811, and he now (1853) resides there in the house formerly occupied by his grandfather. The Kingsley family are all musical. W. H. Day, Boston, Massachusetts, published "David's Harp," 176 pages and 216 tunes. Mr. Day is a practical musician and an experienced teacher. John W. Moore, Bellows Falls, Vermont, published "World of Music," semi-monthly, 8 pages quarto.

In 1844 J. H. C. Standbridge and W. H. W. Darley, Philadelphia, Pennsylvania, published "Cantus Ecclesie." N. D. Gould, Boston, Massachusetts, published "Companion for the Psalmist; containing original Music for Hymns of peculiar Character and Metre; and to most of which no Tunes are to be found in existing Publications."

In 1845 "The Boston Academy's Collection of Choruses," 263 pages quarto, was issued. Thomas Hastings and William B. Bradbury, New York, published "The Psalmist." Charles Jarvis, Philadelphia, Pennsylvania, published "Collection of Chants," 60 pages. Mr. Wilmot Marsh printed metrical versions of some ecclesiastical hymns, and of the twenty-third, hundredth, and hundred and twenty-third Psalms, in pp. 5-10 of "Biblical Versions of Devout Hymns," (London, 1845, 8vo.,) which were executed in the thirteenth and fourteenth centuries. These versions do not appear to have been made with the design of being sung; but they are valuable as being specimens of the English language in those centuries.

In 1846 Lowell Mason, Boston, Massachusetts, published "The Psalter," 352 pages. J. Cole, Baltimore, Maryland, published "The Seraph." A. N. and J. Johnson, Jr., published "The Musical Gazette," semi-weekly, 8 pages quarto. E. Ives, New York, published "Mozart Collection." T. Bissel, Boston, Massachusetts, published "Sacred Harmony." George Hood, Boston, Massachusetts, published "History of Music in New England," 252 pages, 12mo. This was the first and only work published in this country containing any thing like a connected history of Psalmody from the landing of the Pilgrims. The work also contains some interesting sketches of reformers and early psalmists.

In 1847 John B. Aiken, Philadelphia, Pennsylvania, published "Juvenile Minstrel, a New System of Musical Notation, with a choice Collection of Moral and Sacred Songs," long 12mo., half bound. Bradbury and Hastings, New York, published "The New York Choralist." Leonard and Fillmore, Louisville, Kentucky, published "The Christian Psalmist," 383 pages. Baker and Woodbury, Boston, Massachusetts, published "The Choral, a Collection of Church Music, adapted to the Worship of all Denominations," 320 pages. John B. Aiken, Philadelphia, published "The Christian Minstrel, New Notation, with a Collection of Psalm Tunes, Anthems, and Chants."

In 1847 E. Ives, of New York city, published

a series of music books, intended as educational consisting of, 1. "Musical A, B, C," pp. 128, 16 mo.; 2. "Music Spelling Book," pp. 192, 8mo.; 3. "Musical Reader," pp. 160, 4to. He also published, about the same time, "The Mozart Collection," 320 pages, 8vo.; "The Beethoven Collection," pp. 192, 4to.; "The Musical Wreath," 4to.; and "The American Psalmody," 8vo. The first three works of Mr. Ives were designed expressly to teach the reading of music at sight, and to form a correct musical taste. In his system he makes do, re, mi, fa, &c., stationary on the staff, and considers the use of these syllables, thus, preferable to that of transposing them along with the changes of the key, or diatonic scale. He says the transposition of the names do, re, mi, &c., never was practised in Germany. Neither the system of Pestalozzi, nor any other book or books of German origin, ever contained the plan of solfaing by transposition, nor any thing like or equivalent to the same, in any shape or form whatever. Mr. Ives also asserts that the so called Pestalozzian system, adopted extensively in this country previous to 1847, was compiled from the method adopted at the Fellenberg school, at Hoffwill, and was brought thence to this country by William C. Woodbridge. This Hoffwill system was never adopted by the musicians of Germany, but was repudiated by the professor at the Fellenberg school, when Mr. Woodbridge was there.

In 1848 Asa Fitz, Boston, Massachusetts, published "Congregational Singer." V. C. Taylor, Hartford, Connecticut, published "Sacred Minstrel." Charles Zeuner, Boston, Massachusetts, published "The Ancient Lyre," 364 pages. Prof. C. D. Cleveland, Philadelphia, Pennsylvania, published "Hymns for Schools, and Tunes suited to the Metres of the Hymns."

In 1848 William Houser, of Spire's Turn Out Jefferson county, Georgia, published, at Philadelphia, Pennsylvania, "The Hesperian Harp, a Collection of Psalm and Hymn Tunes, Odes, Anthems, Sunday School, Infant, Revival, Temperance, Patriotic, and Moral Pieces." The book consists of 576 pages, and the author says he had diligently labored for twelve years in preparing the work for publication. The plan of embracing Sunday school, infant, revival, and other pieces in the same volume with church music, is a *new* one, if not a good one. Mr. Houser (his name is one of German origin, the original spelling being Hauser, and the pronunciation How'-zer, though he signs his name Houser) introduces one other peculiar feature in his book, that is, the *shape* of the heads of his notes. He says, "The French sing ut, re, mi, fa, sol, la, *sc*; the Italians, do, ray, mi, fa, sol, la, si; and the English, fa, sol, la, mi. But the present race of teachers, American and English, are aping the Italians in the use of do, ray, me, &c.; and some of them gravely assert that the seven musical sounds cannot be expressed without using seven distinct syllables, as do, ray, &c. But if this doctrine is true, all song and hymn singing must be incorrect, for our poets have been so far behind this age of light, or so stupid in the full blaze of it, as not to have woven these almighty syllables into their songs. Now, I contend that the four old syllables, mi, fa, sol, la (pronounced me, *faw*, sole, law) are *fully adequate* to the expression of every musical sound in the scale; and that *four*

shapes, the glorious *patent notes* of William Smith and William Little, are just the thing." The notes he uses in his book are

In 1846 A. N. Johnson, Boston, Massachusetts, published "The Choir Chorus Book; a collection of choruses from distinguished composers, adapted to English words, and arranged with particular reference to choir practice, and for the use of musical societies." The work contained 284 pages.

In 1849 Day and Beals, Boston, Massachusetts, published "One Lined Psalmist." Joseph Bird, Watertown, Massachusetts, published "Gleanings from the History of Music," 291 pages 12mo. Bradbury and Hastings, New York, published "Mendelssohn Collection," 400 pages. Johnson, Osgood, and Hill, Boston, Massachusetts, published "Bay State Collection." Leonard Marshall, Boston, Massachusetts, published "The Antiquarian," 312 pages. Mason and Webb, Boston, Massachusetts, published "National Psalmist," 352 pages. The publishers of the Psalmist, in order that congregational singing might be promoted, made a selection of a certain number of the most common tunes from the work, and had them printed in a small and cheap volume for the use of the congregations where the "Psalmist" was used by the choir. This little work they called "The Congregational Tune Book." Tuckerman, Bancroft, and Oliver, Boston, Massachusetts, published "National Lyre," 160 pages. S. Parkman Tuckerman had previously published a collection of chants and other pieces for church service. In 1851 Mr. T. received the degree of doctor in music, from the Archbishop of Canterbury; and in 1852, during a residence at Rome, he was created a master of sacred music in the Academy of St. Cecilia. He returned to Boston, Massachusetts, in June, 1853, having spent the last four years in Europe. Several anthems of Dr. Tuckerman's composition have been published in England, and some of them are now in use in the cathedrals. While absent he collected a large and valuable library of music.

In 1849 Rev. D. H. Mansfield, Boston, Massachusetts, published "The American Vocalist," a selection of tunes, anthems, sentences, and hymns, old and new. In his preface, Mr. Mansfield says, his design in adding another to the numerous musical publications now in use is, to preserve in a single volume the most valuable music now in existence; much of which has been crowded from our churches by the soulless and unmeaning harmony of the present day. An evidence of the inferiority of modern music is its short life. With very few exceptions, the ten thousand tunes composed within the last twenty years are dead and gone. Old Windham and China have acted as pall bearers for half a century. The old composers were probably better acquainted both with God and man; they had studied human nature as well as scientific theories. Many of them were holy men, and their music, composed among the hills and forests

of Puritanic New England, is but an embodiment of pious devotion. Speaking of the minor scale, the author says, "The uncertainty of its structure, together with the comparative difficulty of its execution or performance, has created an aversion to the study of the minor scale, though by far the sweetest and most effective music is found in it." The book contains 376 pages, and many of the pieces are selected from Billings, Holden, Maxim, Edson, Holyoke, Read, Kimball, Morgan, Wood, Swan, and other old writers.

In 1850, B. F. Baker and L. H. Southard, Boston, Massachusetts, published "Haydn Collection," 352 pages. This collection contains about 290 pieces of music. Lowell Mason, Boston, Massachusetts, published "Cantica Landis," 384 pages. Lowell Mason and I. B. Woodbury, New York, published "Musical Review and Choral Advocate," monthly. Lowell Mason, Boston, Massachusetts, published "New Carmina Sacra." An improved book with this title came out in 1853, professing to embody, in one volume, the best tunes in the former various publications of Mr. Mason; it also has some new music in an appendix, and a selection of the best tunes of Charles Zeuner. V. C. Taylor, Hartford, Connecticut, published "Golden Lyre." Mr. Taylor is an organist, residing at Hartford. 180 of the tunes in his collection are of his own composition; 25 of 31 anthems are his, and 18 of the 25 chants. About 50 old standard tunes make the balance of his book. In 1849 he published a collection entitled "Sacred Minstrel." The only objection we have heard made to this collection is, that the initials of the author of the work appear over too many of the pieces. The author says, however, that this objection can be best answered by inviting a thorough familiarity with the contents of the book; for as he thinks it the result of a first impression only, he feels confident it will almost invariably disappear before this test, and leave the conviction on the mind, that in reality no book of the kind is less liable to the charge of sameness and monotony. Richard S. Willis, New York, published "Church Chorals." I. B. Woodbury, New York, published "The Dulcimer," or the New York Collection of Sacred Music," 352 pages.

In 1850 Edward Hamilton published "Songs of Sacred Praise, or the American Collection of Church Music," 328 pages, containing a number of his own compositions. Mr. Hamilton was born in Worcester, Massachusetts, January 6, 1812. He is a son of Sewall Hamilton, a singer, teacher, and leader of a choir. The family were all musical, back to the great-grandfather, who used to "line" the hymn and sing it. Edward's grandfather, Asa Hamilton, was a fifer in the revolutionary war, played the flute in the old style, and sang "a glorious bass." His father had a good tenor voice, played the flute and violoncello in the manner of 35 years ago. Edward has a bass voice, with a compass of chest tones from DD to E above the F clef. He has performed the part of Goliath, and the High Priest, in the oratorio of "David," at the Boston Handel and Haydn Society's concerts, and the part of Saul repeatedly in other places. He also sang the leading bass in the oratorio of "Judas Maccabæus," at Boston in the winter of 1853, three times. His voice

is full, and he sustains the lower notes perfectly well. Mr Hamilton was educated for the law, but his love of music induced him to abandon that profession in 1817, and devote time to the more liberal acquirement of teaching music. He was then a teacher in a school in Vermont, or somewhere about the age of twenty years. In 1821 he was chosen of the choir of Lever Street church, Boston, where he sings at present. Mr Hamilton has contributed largely to the newspapers of the day and is credited with "Levi's" "Gospel" "March" an important and useful article upon the subject of "Fasting Intemperance," emphasizing the non-necessity of fasting, with an account of the Intemperance Regatta of Wiley and Tabor; and he is now writing a treatise upon the fundamental principles of harmony and melody. He plays the flute, viola, and organ. He is the conductor of the Musical Society of Worcester, and has taught music in most of the large towns in the eastern states, and some in New Hampshire. These are, in brief, the principal facts of Hamilton's life. "The Part is my Companion," and "Come with me."

In 1825 H. V. Townsend, Hartford, Connecticut, published "Musical Muses," 24 pages. Hastings and Headover, New York, published "Fragments of their Melodies," consisting altogether in six of the former publications of the authors. J. L. Wine and J. H. Gould, Boston, Massachusetts, published "Euterpe's Gems," a collection of Antient, Charming, Rare, &c. — in which is added the Epitaphia (Antient Service). J. H. Woodbury, New York, published "Liber Musica, or New York Harmon Book," Juno Zanted, New York, published "The Last Partitions and Intervals for the Organ, &c." Augustus Freeman, Boston, Massachusetts, published "Antients and Moderns set to music for Church, meeting, &c." J. L. Jones, New York, published "Temple Melodist."

Thomas Hastings, New York, published "Selected Songs for Family and Social Singing." The music in this collection is arranged principally in four parts in three parts. 144 pages.

In 1828 Isaac Johnson, and Augustus Freeman, Massachusetts, published "Melodie Gems," Songs and Hymns Part Worcester, Massachusetts, published "Singing School Companion," 24 pages. Leonard Marshall and H. L. Stone, Boston, Massachusetts, published "The Harmony Book," 24 pages.

In 1828 William J. Gould, Boston, Massachusetts, published "Gospel Music in America," 24 pages. Juno Zanted, New York, published "The Amateur's Companion." Mr Zanted was formerly musical instructor of the military at Westport, being chosen of Lever, and organist of the Ann Street St. Peterborough. Mr Zanted has also since published "The New-ten Instruction Book."

William J. Hamilton, George J. Lovv, Thurston Hastings, and J. L. Stone, published "The Musical Library of Sacred Music," containing about one thousand pieces. It is a useful and original musical collection. "Lovers of the Lyre" and "Lecturers" containing also "The Singing Book," an excellent new and practical arrangement of the elements of music. 64 pages. Mr Lovv is a resident of New York, where for many years he has been a teacher of

musical music, with the exception of one year spent in Europe. In 1828 he was called to take charge of the instruction in sacred music in the Union Theological Seminary. His proficiency as a teacher has not less than his ability as a composer and choir director, abundantly attested the appointments as an instructor.

George Augustus Northampton, Massachusetts, published "Temple Cantata," a collection of sacred music, comprising 16 pages.

In 1828 J. M. Dewey and J. L. Emerson, of Southwick, Massachusetts, published "The Harmony Collection of Sacred Music," in which are published many original compositions. The book was printed in Boston, in 1827, by J. E. Munsie and Co. It contains 120 pages, and the editors say that "while endeavoring to meet the wants of a music-loving people, whose characteristics is an amiable progressive, and whose improvable ability is from year to year so rapidly increasing they would not fail to make ample selections from those great compositions, which are daily becoming more and more generally understood by the American people; and they have also availed themselves of such contributions from some of our best American composers." J. M. Dewey was born in Oxford, New Hampshire, March 26, 1801, and commenced the study of music at an early age under Colonel James Rodgers. He has a beautiful voice, and generally sings well. He first learned the old psalm-tune, and practiced it. He has published singing books in the Hubbard Musical Society, under the edit of such men as Simpson, Rogers, Green, Mowbray, &c. in such places as extracts from the "Lecturer," "Musical," &c. Mr Dewey was chosen president of the Boston Philharmonic Institute in 1828, and served two years. He has been a successful teacher of music for many years.

PSALMODY ISLAND In regard to that part of France which was formerly comprehended in the province of Normandy, and which had its name from a monastery founded there about the end of the fourteenth century, by Corvella, a Syrian monk, the composition of whose office regulated the preserving a perpetual psalmody, used by the monks under Louis Potholus.

PSALMODY The art of writing or composing divine hymns and songs.

PSALMS Divine hymns or songs. An imitation generally confined to those contained in that book of the Old Testament called the "Book of Psalms," consisting of 150, and usually attributed to David. Some of these compositions bear the names of Asaph, Lemuel, Solomon, &c. or their best, which has induced the opinion that they were the victims of those just and pious, though it is equally probable that they were the numerous who composed the melodies, which they were sung. The records have been much doubted respecting the kind of verse in which the Psalms were originally written, indeed, it is not even known whether it was verse, prose, or a species of poetical prose. Nor have we any trace of the Hebrew music in which compositions at knowledge in that point, as well as concerning their manner of being sung and used.

PSALTER The Psalms of David, collected

and bound together, with or without the tunes to which they are generally sung in divine service.

PSALTERY, or PSALTERION. A stringed instrument much used by the ancient Hebrews, and by them called *Nebel*. We know but little of the ancient form of this instrument, but have reason to conclude, that its construction resembled that of our harp. The psaltery now in use is a flat instrument, in the form of a trapezium, or a triangle truncated at top. It is strung with thirteen wire chords, mounted on two bridges, and tuned in unisons. It is performed with a plectrum, or quill, whence it is usually ranked among the instruments of percussion.

PSALTRIE. Certain female singers employed by the ancient Greeks and Romans, to perform at their feasts and banquets, after the Asiatic manner.

PTOLEMY. This great astronomer and musician seems the most learned, close, and philosophical writer upon the subject of music among the younger Greeks. He appears to have been more a free agent, and a more bold and original thinker on the subject, than most of his predecessors: indeed, he was not insensible of his own force and superiority, for he treats all former musical writers and their systems with little ceremony. Some parts of his disputes and doctrines are now become unintelligible, — notwithstanding all the pains that the learned Englishman, Dr. Wallis, bestowed on him one hundred years ago, — particularly his third book, which forms a very striking contrast with the scientific solidity and precision of the two first. The instant he sets his foot within his beloved circle, the magic of it transforms him at once from a philosopher to a dotard. He passes suddenly from accurate reasoning and demonstration to dreams, analogies, and all the fanciful resemblances of the Pythagorean and Platonic schools; discovers music in the human soul and the celestial motions; compares the rational, irascible, and concupiscent parts of the soul to the eighth, fifth, and fourth; makes the sciences and the virtues, some diatonic, some chromatic, and some enharmonic; turns the zodiac into a lyre, making the equinoctial the key note of the Dorian mode, sends the mixo-Lydian to Greenland, and the hyper-Dorian to the Hottentots.

He seems to have been possessed with an unbounded rage for constructing new scales, and correcting those of former times. He gives us no less than eight different forms of the diatonic scale, three of which were his own; the other five went under the names of more ancient musicians of great renown — such as Archyta of Tarentum, Aristoxenus, Eratosthenes, and Dilymus. Most of these scales seem but to differ in deformity, according to our present ideas of harmony and temperament. Indeed there is only one of them which modern ears could suffer.

PUCITA, VINCENZO, an eminent Italian dramatic composer, was born at Rome in 1778, resided some years in England during the latter part of the last century, and composed several operas, the most popular of which was entitled "*La Vestale*." The titles of some of his other operas were "*Baïceus*," "*Aristodemo*," "*La Genetra de Socus*," "*La tre Sultane*," "*I Villaggiuolari*

Bizzari," "*La Caccia di Enrico IV.*," and "*Adolfo e Chiara*." The music of Puccita contains many beauties, and seems to be extraordinarily overlooked. Puccita also wrote, in 1802, an opera buffa for Milan, entitled "*Il Pasticcio*." It was completely successful.

PUERINI, GIULIO CESARE, a good master of the Roman school, composed an oratorio there in 1592.

PUESDENA, FRANCESCO, court chapel-master in Sicily, brought out at Venice, in 1791, an opera entitled "*Gelsomina*."

PUGNANI, GAETANO, a celebrated violinist to the King of Sardinia, was born at Turin in 1727. From his childhood he received instructions in music of G. Battista Somis, his countryman, and one of the best pupils of Corelli. In 1754 Pugnani went to Paris where he performed at the *Concert Spirituel*, and where, at that time, J. Stamitz, Gavinius and Pagan were at the zenith of their fame. After a short stay in France, Pugnani proceeded to the other capitals of Europe, and remained a long time in England. It was there that he composed some of his principal violin music. About the year 1770, he returned to Italy. Some curious anecdotes are related of Pugnani, amongst which are the following. In his early youth, but when already much advanced on the violin, he went to Padua, to see Tartini, and consult him on his playing; before he commenced, begging Tartini to give him his free opinion. Scarcely had he begun a sonata, when Tartini caught hold of his arm, and said, "You are too high." He then recommenced, and coming to the same passage, Tartini again stopped him, saying, "You are too low." On this he quietly laid down his violin, and entreated that great master to give him some lessons. He remained, in fact, for some months at Padua for that purpose, studying under Tartini's directions. Pugnani was one day at a French house of entertainment, called the *Delices*, where Voltaire recited some poetry, to which the violinist listened with the most lively interest. Madame Denis then begged Pugnani to perform on the violin; he accordingly commenced, but irritated at hearing Voltaire still speak loud and interrupt his performance, he exclaimed, at the same time locking up his violin, "*M. de Voltaire fait très-bien les vers, mais quant à la musique, il n'y entend pas le diable*." He was once performing a concerto in a very numerous company, and had come to an *ad libitum* passage, when he was so lost in attention to his playing, that, thinking himself alone, he walked about the whole room till he had finished his very beautiful cadence. Pugnani founded a violin school at Turin, in the same way as Corelli had done at Rome, and Tartini at Padua. From his school issued many of the first violinists of the latter part of the last century; amongst others, Viotti, Bruni, Olivieri, &c. It has been remarked that the pupils of Pugnani were particularly skilful in the direction of an orchestra. Thus, indeed, was the principal talent of their master, which he had the art of transmitting to others. "He commanded the orchestra," says Rangoni, "like a general in the midst of his soldiers; his bow was the staff of authority, to the movements of which every one paid the most exact attention. By a single

stroke with it on the desk he animated the whole orchestra, hastening or retarding the time at his pleasure. To the singers, also, he had the habit of explaining the slightest shades of distinction in their parts; and, in fine, kept the vocal and instrumental performers in perfect union." Pugnani published in London, Amsterdam, and Paris, thirteen operas of instrumental music, amongst which are the following: "Six Violin Trios," Op. 1, London, 1763; "Six Violin Trios," Op. 2, London, 1763; "Six Violin Quartets," Op. 3, London, 1763; "Six Overtures," Op. 4, London, 1763; "Six Violin Solos," Op. 7, London, 1763; "Six Overtures," Op. 8, London, 1763; and "Three Quintets," London, 1763. He also published, in 1770, some trios with an accompaniment for the violin and bass, forming his Op. 6. His principal dramatic works are the following, most of which were composed for the opera at Turin during the time he conducted the orchestra there: "Issea, per le Nozze della Contessa di Provensa" 1771; "Tamas Kouli-kan," 1772; "L'Aurora, per le Nozze di S. A. R. il Principe di Piemonte," 1775; "Achille in Sciro," 1785; "Demofonte," 1788; "Demetrio à Rodi, per le Nozze di S. A. R. il Duca d'Aosta," 1789. The whole of these works were successful at most of the theatres in Italy. Pugnani died at Turin in 1798, and J. B. Cartier has written his eulogium in these few words: "He was the master of Viotti."

PUIH, W. A German composer, who resided at Milan towards the end of the last century. He published, in 1784, at Berlin and Amsterdam, "Six Symphonies," Op. 1; "Six Quartets," Op. 2; "Three Concertos for V.," Op. 3; "Six Duos for V.," Op. 4; and "Six Quintets for V.," Op. 5.

PUIHLER, JOHANN, of Schwandorf, in Bavaria, was at first chapel-master to the Emperor Ferdinand I., and afterwards master of the choristers in the cathedral at Ratisbon. He published at Munich, in 1582, a selection from the works of Orlando di Lasso.

PUJOLAS. There were two musicians of this name (father and son) at Paris, in 1790. They published the following works: "Huit Marches à l'Usage Militaire;" "Six Trios à V., A., B., Liv. 1 et 2," Op. 3, 1792; "Six Trios à 2 V. et B.," Op. 4; "Six Duos à 2 Fl.," Op. 6, Offenbach, 1793; "Six Quat. à Fl., V., A., et B., Liv. 1 et 2," Op. 8, Paris, 1796; "Premier Concert à Violon principal avec Acc.," Paris, 1797; and "Six Duos, p. 2 Fl.," Op. 9, 1801.

PULITI, or DE PULITIS, GABRIELE, a Franciscan monk, and organist at the cathedral church of Capo d'Istria, published at Venice, in 1618, "Salmi e Litanie della Madonna à 5 voci."

PULSATILE. An epithet applied to those instruments which are struck in performance, as the drum, tambourine, &c.

PULSATILE ACCOMPANIMENT. An accompaniment consisting of regular and monotonous repetitions of the chords, and which is particularly adapted to display the powers of the singer, either in airs of expression or of rapidity.

PUNTA. (I.) The point; as, *Della punta del arco*, with the point or tip of the bow.

PUNTATO. (I.) Pointed, detached

PUNTO, JOHANN WENZEL. This celebrated performer on the horn, whose name was properly Stich, was born at Tetschen, in Bohemia, in 1755. His instructor on the horn was Hampel of Dresden, under whose care he was placed by the Count Von Thun, of whom Punto was by birth a serf. From Dresden he returned to the count's service at Prague, but was so ill used by his master as shortly after to decide on privately quitting that kingdom; which step he put in execution after encountering many difficulties. After passing the frontier, he changed his name to Punto. He then travelled to various courts of Germany, where his powers on his instrument occasioned general astonishment and admiration. He died at Prague in 1803. The following is a list of his principal works: "Méthode pour apprendre facilement les Elémens des premier et second Cors aux jeunes Elèves, dans laquelle sont indiqués les Coups de Langue et les Liaisons les plus nécessaires, pour tirer les beaux Sons de cet Instrument, composée par Hampel, et perfectionnée par Punto, son Elève," Paris, 1798; "Etudes pour le Cor," Paris, 1798; "3 Quintetti à Corno 2do. Ob. o Fl., V., A., et B.," Paris, 1798; "6 Quartetti à Corno 2do., V., A., et B., Ops. 1, 2, et 3," Paris, 1798; "12 petits Trios à 3 Corni," Paris, 1798; "24 petits Duos à 2 Corni," Paris, 1793; "Duos d'Airs à 2 Cors," Paris, 1793; "3 Quatuors favor. de l'Auteur p. Fl., A., et B.," Op. 18, Paris, 1796; "3 Quat. favor p. Cor. V., A., et B.," Paris, 1796; "Concerto p. Corno primo in Es, à 9, No. 3," Paris, 1793; "Conc. p. Corno secondo, No. 5," Paris, 1797; "Conc. p. Corno 2do in D, No. 6," Paris, 1797; "Conc. p. Corno 2do. in F, No. 7," Paris, 1798; "Conc. p. Corno princip. avec Acc. à gr. Orchest.," Paris, 1800; "20 Trios à 3 Cors," Paris, 1800; "8 Duos à 2 Cors," Paris, 1800; "Etude ou Exereice Journalier, Ouvrage périodique pour le Cor," Paris, 1800; "6 Trios p. Fl., ou 2 V. et B.," Paris, 1800; "3 Quint. p. Cor, Fl., ou Hautb., V., A., et B.," 1800; "3 Duos p. Cor et Busson," 1802; and "Sextuor p. Cor, Clar., Basson, V., A., et C. B.," Op. 34, 1802.

PUPITRE. (F.) A music desk.

PUPPO, JOSEPH. Born at Lucca in 1749. He received his early musical education in the Conservatory of St. Onotrio, at Naples. Here his progress in the study of composition was as brilliant as rapid; but his inclination still led him to devote his principal attention to the violin. After quitting the Conservatory, he visited several cities of Italy, the south of France, Spain, Portugal, England, Scotland, Ireland, and at length settled at Paris, where he resided many years. In 1789 he directed the orchestra of the Théâtre de Monsieur there, in conjunction with Mestrino and Viotti; and in 1799, he was *chef d'orchestre* at the Théâtre Français. He afterwards retired to Italy, and died at Naples in 1816. His publications are few, and all instrumental.

PURCELL, HENRY, was born in London in 1658. His father, Henry, and uncle, Thomas Purcell, were both musicians, and gentlemen of the Chapel Royal at the restoration. From whom Henry received his first instructions in music cannot be ascertained; but his father dying in

1664, when he was only six years old, it is probable that he was qualified for a chorister by Captain Cook, who was master of the children from the restoration till his death, in 1672. As Purcell was appointed organist of Westminster Abbey at eighteen years of age, he must have learned the elements of his art at an early period of his life. He certainly was taught to sing at the King's Chapel, and received lessons from Pelham Humphrey, Cook's successor, till his voice broke—an accident which usually happens to youth at sixteen or seventeen years of age. After this, perhaps, he had a few lessons on composition from Dr. Blow, which were sufficient to cancel all the instructions he had received from other masters, and to occasion the boast inscribed on his tombstone, that he had been "*master to the famous Mr. Henry Purcell.*"

Nothing is more common than this petty larceny among musicians. If the first master has drudged eight or ten years with a pupil of genius, and it is thought necessary, in compliance with fashion or caprice, that he should receive a few lessons from a second, the persevering assiduity of the first and principal instructor is usually forgotten, while the second arrogates to himself the *whole* honor, both of the talents and cultivation of his new scholar. Purcell is said to have profited so much from his first lessons and early application, as to have composed, while a singing boy in the chapel, many of his anthems, which have been constantly sung in English cathedrals ever since. Eighteen was a very early age for the appointment of organist of Westminster Abbey, one of the first cathedrals in Great Britain for choral compositions and performance. It was not likely he would stop here: the world is more partial to promising youth than to accomplished age. At twenty-four, in 1682, he was promoted to one of the three places of organist of the Chapel Royal, on the death of Edward Low, the successor of Dr. Christopher Gibbons in the same station. After this, he produced so many admirable compositions for the church and chapel of which he was organist, and where he was certain of having them better performed than elsewhere, that his fame soon extended to the remotest parts of the kingdom. From this time, his anthems were procured with eagerness, and heard with pious rapture, wherever they could be performed; nor was he long suffered to devote his talents exclusively to the service of the church. He was very early in life solicited to compose for the stage and chamber; in both which undertakings he was so decidedly superior to all his predecessors, that his compositions seem to speak a new and more intelligible language. His songs contain whatever the ear could then wish, or heart feel. In fact, no other vocal music was listened to with pleasure, for nearly thirty years after Purcell's death; when they gave way only to the favorite opera songs of Handel.

The unlimited powers of this musician's genius embraced every species of composition that was then known, with equal felicity. In writing for the church, whether he adhered to the elaborate and learned style of his great predecessors, Tallis, Bird, and Gibbons, in which no instrument is employed but the organ, and the several parts moving in fugue, imitation, or plain counterpoint; or, on the contrary, giving way to feeling

and imagination, adopted the new and more expressive style, of which he was himself one of the principal inventors, accompanying the voice parts with instruments, to enrich the harmony, and enforce the melody and meaning of the words, he manifested equal abilities and resources. His compositions for the theatre, though the coloring and effects of an orchestra were then but little known, yet, as he employed them more than his predecessors, and gave to the voice a melody more interesting and impassioned than during that century had been heard in England, or even perhaps, in Italy, he soon became the delight and darling of the nation. And in the several species of chamber music which he attempted, whether sonatas for instruments, or odes, cantatas, songs, ballads, and catches for the voice, he so far surpassed whatever England had produced or imported before, that all other musical compositions seem to have been instantly consigned to contempt and oblivion.

Many of his numerous compositions for the church, particularly those printed in the second and third volumes of Dr. Boyce's collection, are still retained in the cathedrals, and in the King's Chapel. Besides the whole service, with three full and six verse anthems, in Dr. Boyce's collection, there are nine verse and full anthems, wholly different, still sung in the cathedral at York. And in Dr. Tudway's collection in the British Museum, there are, besides a whole service in B flat, different from that in Boyce, eight full and verse anthems different from all the rest, four of which were composed for the Chapel Royal of Charles II., with instrumental accompaniments. And exclusive of these, and the hymns printed in the two books of "*Harmonia Sacra*," in a manuscript bequeathed to Christchurch, Oxford, by Dr. Aldrich, there are two motets and a "*Gloria Patri*," for four and five voices, in Latin, with seven psalms and hymns for three and four voices, by this fertile and diligent composer, which have all their peculiar merit, while some of them may, without hyperbole, be said to reach the true sublime of sacred music.

To enter into a critical examination of Purcell's numerous compositions would exceed the limits, and be foreign to the purpose, of this work; we cannot, however, avoid a few remarks on his "*Te Deum and Jubilate*." It has been erroneously imagined that these were originally composed for the feast of the sons of the clergy; and Dr. Tudway says positively, that the "*Te Deum and Jubilate*" of Mr. Henry Purcell were intended for the opening of the new Church of St. Paul, and though he did not live to see it finished, they were afterwards performed three several times, when Queen Anne went thither in state. The following title to a printed copy in the library of Christchurch, Oxford, incontestably confirms both these opinions—" *Te Deum and Jubilate*, for Voices and Instruments, made for St. Cecilia's Day, 1694, by Henry Purcell."

There is in this a grandeur in the movement, and a richness in the harmony of the chorus, "All, all the earth doth worship Thee;" and the distribution of the parts in ascending after each other by the harmonic intervals of the perfect chord, has a beautiful effect. But all the composers of this hymn seem to have mistaken the cry of joy for that of sorrow, in setting "To Thee all angels cry aloud." Here Purcell, as well as

Handel, has changed his key from 'major to minor; and in modulation, admirable in itself, has given the movement a pathetic expression, which, in reading, and considering the idea of that eternal praise which the heavenly hosts offer up to the throne of God, it does not seem to require.

The cherubin and seraphim singing in *duo*, and the universal acclaim of *Holy*, are certainly most happily designed, and expressed almost with the energy of inspiration. And in the choruses and disposition of the whole work, Purcell is still, and ever will continue, admirable among Englishmen, as long as the present language of this hymn shall remain intelligible.

"Also the Holy Ghost the Comforter" is a delightful fragment of harmony and melody, which time can never injure; and "Thou art the King of Glory," in double fugue, is grand and masterly. "When thou tookest upon thee," and "When thou hadst overcome the sharpness of leath," have permanent beauties of melody, contrivance, and expression, that are wholly out of the reach of fashion. The whole movement of "O Lord, save thy people," in which the sound is truly an echo to the sense, and likewise the expression of the words, "Lift them up forever," is admirable. The supplication at the words, "Have mercy upon us," is truly pathetic; but the short fugue, "Let me never be confounded," though regular, might have been written by a man of less genius than Purcell. The opening of the "*Jubilate*" is well calculated to display a fine performer, and, therefore, the military cast which is given to the whole air may be proper; it does not, however, appear to us to be exactly appropriate. Yet Purcell and his contemporaries in England were of a different opinion, as it prevails too generally in all their works. "Be ye sure," &c., if sung with taste and feeling, will always be good music; and so will the next movement, as long as the science of music shall be held in reverence. In the verse, "For the Lord is gracious," Purcell had displayed his uncommon powers of expression, particularly at "His mercy is everlasting," which is exquisite composition. The "*Gloria Patri, alla Palestrina*," but more animated, perhaps, than any movement that Palestrina was ever permitted to compose, abounds with such science and contrivance as musicians can alone properly appreciate; but the general effect of the whole is so glorious and sublime, that it cannot but charm into rapture the most ignorant, as well as the most scientific hearer.

These admirable compositions were constantly performed at St. Paul's on the feast of the sons of the clergy, from the decease of the author, in 1695, till the year 1713, when Handel's *Te Deum* for the peace of Utrecht was produced by command of Queen Anne; from which period till 1743, when Handel's second *Te Deum*, for the battle of Dettingen, was composed, they seem to have been alternately performed. Since that time, Purcell's "*Te Deum* and *Jubilate*" have been but seldom executed, even at the triennial meetings of the three choirs of Hereford, Worcester, and Gloucester. Handel's superior knowledge and use of instruments, and more polished melody, added to the novelty of his productions, took such entire possession of the national favor, that Purcell's "*Te Deum*" is now only performed occasionally, as an antique curiosity.

This author's theatrical compositions, if we recollect the number and excellence of his productions for the church, and the shortness of his life, will surprise by their multiplicity.

Of his detached and incidental songs, dialogues, and scenes, those whose merits are prominent will be mentioned in speaking of the "*Orpheus Britannicus*," or posthumous collection of his miscellaneous compositions. But before we enter on an examination of this work, it is necessary to acquaint the reader that the chief part of his instrumental music for the playhouse is included in a publication that appeared two years after his decease, under the title of "A Collection of Ayres, composed for the Theatre, and on other Occasions, by the late Mr. Henry Purcell. London, printed for Frances Purcell, Executrix of the Author," 1697. These airs are in four parts, for two violins, tenor, and bass, and continued to be played as overtures and act tunes till they were superseded by Handel's hautboy concertos, as those were by his overtures; while Boyce's sonatas and Arne's compositions served as act tunes. In process of time, these were supplanted by Martini's concertos and sonatas; which, in their turn, were abandoned for the symphonies of Stamitz, Canabich, Holtzbauer, and other Germans, with those of Abel, Bach, and Giardini; which, having done their duty, "slept with their fathers," and gave way to those of Vanhall, Pleyel, and Boccherini; which are gradually sinking into insignificance, being all completely eclipsed by the stupendous grandeur of Haydn, Beethoven, Mozart, Cherubini, and some others, whose symphonies are the delight and admiration of the present day.

Few of Purcell's single songs appear to have been printed during his life. The collection of his vocal secular music, which reflects the greatest honor on his memory, and long rendered his name dear to the English nation, was published by his widow two years after his decease, under the title of "*Orpheus Britannicus*." Here were treasured up the songs, from which the natives of England received their first great delight and impression from the vocal music of a single voice. Before that period, they had cultivated madrigals and songs in parts, with diligence and success; but in all single songs, till those of Purcell appeared, the principal effects were produced from the words, and not the melody; for the airs, antecedent to Purcell's time, were as misshapen as if they had been composed of notes scattered about by chance, instead of being cast in a regular mould. Exclusive admirers of modern symmetry and elegance may call Purcell's taste barbarous; yet, in defiance of superior cultivation and refinement, and of every vicissitude of fashion, through all his rudeness and barbarism, original genius, feeling, and passion are, and ever will be, discernible in his works, by candid and competent judges of the art.

The following is Dr. Burney's critique on the music in the "*Orpheus Britannicus*."

"'Ye twice ten hundred Deities' opens with, perhaps, the best piece of recitative in the English language. The words are admirably expressed throughout this song by modulation as well as melody; and there is a propriety in the changes of movement, which does as much honor to Purcell's judgment as the whole composition to his genius. If ever it should be said of a

composer that he had *devancé son siècle*, Purcell is entitled to that praise. The music in 'King Arthur' is well known, and frequently performed: in this there are movements, particularly in the duet, 'Two daughters of this aged stream,' and 'Fairest isle, all isles excelling,' which the lapse of time has not injured. These do not, perhaps, contain a single passage which the best of modern composers would reject.

"'From rosy bowers' is said to have 'been set in his last sickness,' at which time he seems to have realized the poetical fable of the 'Swan,' and to have sung more sweetly as he approached his dissolution.

"The variety of movement, the artful, yet pathetic modulation, and above all, the exquisite expression of the words, render it the most affecting composition extant, to every Englishman who regards music, not merely as an agreeable arrangement and combination of sounds, but as the vehicle of sentiment and the voice of passion. To those who understand the full power of the language, and feel the force, spirit, and shade of meaning which every word bears, according to its place in a sentence, may we not venture to repeat, that this unrivalled composition will have charms and effects, which, perhaps, Purcell's music only can produce?

"'Where Myra sings' is a duet that will ever be captivating; of which he has augmented the force by notes the most select and expressive that the musical scale can furnish.

"'Lost is my quiet' is another duet, still in its bloom. And 'Celebrate this festival,' a birthday song for Queen Mary, is still graceful and pleasing, notwithstanding its old-fashioned thoughts and embellishments.

"'I'll sail upon the Dog Star' has all the fire of Handel's prime. 'Mad Bess' is a song so celebrated, that it needs no panegyric or renewal of public attention, as every captivating English singer revives its memory.

"'Let Caesar and Urania live' was a duet in a birthday ode during the reign of William and Mary, which continued so long in favor, that not only while these sovereigns jointly wielded the sceptre, but even when George II. had lost his royal consort, and there ceased to be a Urania for whom to offer up prayers, Dr. Greene, and after him Dr. Boyce, used frequently to introduce it into their own and the laureate's new odes. The latter part of this duet is extremely beautiful.

"'I attempt from love's sickness to fly' is an elegant little ballad, which, though long dead, might easily be reanimated and brought into fashion by the voice of any favorite singer, who might be disposed to try the experiment.

"The short scene in 'Bonduea,' beginning with the words, 'Hear, ye gods of Britain,' abounds in beauties of various kinds. The introductory sentence just cited has anticipated a species of dramatic music which has been supposed of recent invention. It is set in an accompanied recitative, *a tempo* or *aria parlante*.

"It is said that Queen Mary having expressed her entire approbation of the old Scotch tune, 'Cold and raw,' Purcell made it a perpetual bass to an air in the next birthday ode, 1602, beginning, 'May her blest example chase'—a piece of pleasantry which is likewise said to have

been occasioned by her majesty asking for this tune after Mr. Gostling, one of the gentlemen of the Chapel Royal, and the celebrated Mrs. Arabella Hunt, with Purcell to accompany them on the harpsichord, had exerted their united talents to amuse so great a personage with compositions, which they, mistakenly, thought of a superior class.

"The pleasing melody and harmony, and the ingenious design and variety of movement in the duet, 'I spy Celia,' cannot but afford considerable entertainment to Purcell's admirers, and, indeed, to the admirers of English music in general.

"'Bonduea,' of which he set the songs in the last year of his life, 1695, and 'The Prophetess, or History of Dioclesian,' which he set entirely after it was transformed into an opera by Dryden, were both originally written by Beauumont and Fletcher. Purcell's music for the last was performed at the Queen's Theatre, 1690, and published by himself, in score, in 1691.

"In this opera, the ballad air 'What shall I do to show how much I love her?' after it had done its duty to these words upwards of thirty years, became the favorite tune in the 'Beggar's Opera,' from its first performance, in 1727, to the present time, where it is adapted to the words, 'Virgins are like the fair flower in its lustre,' &c."

It does not appear that in Purcell's time any of the works of Corelli had been published, even in Italy; and though, a few years before his death, they might have been brought to England and circulated in manuscript, yet they were not sold at any of the music shops till 1710; so that Purcell had no better Italian instrumental music to imitate than that of Bassani, Torelli, and others inferior to them. Yet are his sonatas infinitely superior in fancy, modulation, design, and contrivance to every production of that description anterior to the works of Corelli.

In regard to his models of vocal music, we may discern his obligations to Carissimi in the best of his recitatives, and to Lulli in the worst; and it is evident that he admired Stradella's manner of writing, though he scorned to pillage his passages. We must not take our leave of Purcell's vocal music without a grateful memorial of his catches, rounds, and glees, of which the humor, originality, and melody were so congenial with the national taste, as to render them almost the sole productions of that facetious character, in general use, for nearly fourscore years; and though the countenance and premium since bestowed upon this species of composition, united with the modern refinements in melody and performance, have given birth to many glees of a more elegant, graceful, and exalted kind, than any which Purcell produced, yet he seems hardly ever to have been equalled in the wit, pleasantry, and contrivance of his catches.

In many instances, he has surpassed even Handel in the expression of English words and national feeling; and we may fairly sum up his merits as a musician in a single sentence. His beauties in composition were entirely his own, while his occasional barbarisms may be considered as unavoidable compliances with the false taste of the age in which he lived. The following epitaph, written by Dryden, is placed on the tomb of Purcell:—

Here lies
Henry Purcell, Esquire,
Who left this life,
And is gone to that blessed place
Where only his harmony
Can be exceeded.
Obili 21mo. die Novembria,
Anno ætatis sue 37mo.
Anno Domini, 1685.

PURCELL, DANIEL. Brother to the preceding, from whom he derived most of that little reputation which, as a musician, he obtained. He was, for some time, organist of Magdalen College, Oxford, and afterwards of St. Andrew's Church in Holborn. He offered himself as candidate for a prize, payable out of a sum of two hundred pounds, raised by a party of the nobility, to be given to the four best composers of music to Mr. Congreve's poem, "The Judgment of Paris." Weldon and Eccles obtained the two highest prizes, and he is supposed to have succeeded in one of the others.

Daniel Purcell composed the music to an opera called "Brutus of Alba, or Augusta's Triumph," written by George Powell, the comedian, and performed, in 1697, at the theatre in Dorset Garden; and to another, entitled "The Grove, or Love's Paradise." The latter, which was his *chef-d'œuvre*, appears to have been written in Southwick, in Hants, the seat of Philip Norton, Esq., where, during the summer time, the friends of that gentleman were frequently entertained with dramatic representations; or else the Grange, in the same county, the residence of his principal friend and patron, Anthony Henley, Esq. He was also the composer of many of the songs for different plays, several of which are inserted in "The Pills to purge Melancholy." These have in general but little to recommend them, and their author is at this day better known for his puns, with which the old jest books abound, than for his musical compositions.

PURKIS, JOHN, was born in London in 1781. His extraordinary genius for music was discovered in early infancy, and was considered by his parents as a blessing of divine Providence in compensation for the greatest calamity that can befall human nature, and with which this child of genius was visited; it being discovered, when he was about twelve months old, that he had been totally blind of cataract in both eyes from his birth. It need scarcely be added, that the best advice from eminent oculists of that day was sought after; they, however, offered no hopes of relief, which, at the moment, was a source of inconsolable grief to his parents. But the wisdom of the Creator was beyond their conception; for no sooner was the child possessed of the powers of speech, than his parents were convinced of his acute sensibility to sounds, nothing affording him so much amusement as the jingling of a bunch of keys, or the sound of a drum or trumpet. At three years of age, he could sing correctly several popular airs, and his fingers were always in motion, like those of a musician. These early symptoms of genius were carefully watched and cultivated by his anxious parents; and no opportunity was ever lost of gratifying their child of misfortune (as they considered him) with the sounds of musical instruments, under the hands of accomplished players. At about six years of age, his intellect and ca-

capacity for music were found so strong, that it was determined he should be placed under a master of ability; and accordingly a contract was entered into with Thomas Grenville, then organist of the Foundling Hospital, and a blind man also, but of good abilities, and celebrated for his care in the instruction of blind persons. He taught the theoretical parts of music to the blind by means of a mechanical table and apparatus invented by Mr. Stanley, whose abilities have immortalized his name. Here it is but justice to say, that much merit was due to Grenville for the great attention he paid in imparting the knowledge of the use of Stanley's table to his infant pupil Purkis, and for the general interest he took in the progress of his studies, which were so rapid, that at seven years of age he could perform any overtures of Handel and others of the celebrated old masters, on the organ, in a surprising manner; indeed, so finished was his style of playing, that persons hearing the instrument, and not seeing the performer, could not believe that it was a blind child who produced such effects. At this tender age, he was in the habit of playing voluntaries and other parts of the service at the Foundling Chapel, to the great delight of his master and the congregation, who frequently seated themselves in the organ gallery, for the purpose of being eye witnesses to the playing of young Purkis, who was then generally known at the chapel by the appellation of *young Handel*. Caressed as he now was by all classes of persons, his abilities could not but be highly gratifying to his parents; and that calamity which they at first considered a misfortune, would already have been forgotten, but for the extra attendance necessary in his domestic concerns. At nine years of age, it may be fairly stated, that young Purkis had so far accomplished himself in organ playing, as to require little aid of a master; and it was about this period that his musical memory began to display itself in so extraordinary a manner as to leave no doubt of his possessing very unusual talents. The Stanley table was now thrown aside; for, when a new piece of music was to be added to his store, it was only requisite for any person capable of reading music to take up a book and read over the time and characters, as rapidly as a newspaper would be read over by one person to another, and the composition became instantly transmitted to little Purkis's memory, ready for performance on the instrument, when required. Indeed, one of his near relations said, he had himself witnessed many pages of newly-published music being read by the fireside to this extraordinary genius, when he did not touch an instrument till the following day, and he could then remember the whole of the preceding lecture. Having, as before stated, acquired the age of nine years, he was presented with the vacant situation of organist to Margaret Chapel, in Margaret Street, Cavendish Square, where he received a stipend of ten pounds per annum for the duties of the office, which he filled to the ample satisfaction of his employers for a space of nearly three years, when the situation of organist to the parish church of St. Olave, Southwark, became vacant. And here we find young Purkis led by his anxious father into a contested election with eleven adult candidates for this appointment, taking the lead at a trial of skill in performances

on the church organ, and, after a three day's poll, triumphantly placed, at the early age of twelve, in the situation of organist to that parish, by a majority of one hundred and eleven. He, of course, relinquished the chapel in Margaret Street for the improved income of thirty pounds per annum. On procuring this appointment, the subject of our memoir felt himself stimulated to bestow additional pains on every branch of his profession; and he has been known to devote, about that period, eight and even ten hours a day to study and practice. He now also attempted authorship, and published a "Sonata for the Piano-forte," and likewise adapted the overture to "Oscar and Malvina," as a duet for the same instrument. As we trace him through his studies, we also find that he progressively became master of many different instruments, the knowledge of which he acquired entirely by self-application. He has been known to take the first violin in a quartet, and lead it in a masterly style; he was a good tenor player, and has enjoyed many hours of harmony with the celebrated Lindley, in playing duets with him on the violoncello, on which instrument he was an excellent performer. The harp also became in turn a favorite, and was an instrument on which he played nearly as well as on the piano-forte. Even wind instruments were not neglected by him, and he made himself familiar with the French horn, bassoon, hautboy, clarinet, flute, flageolet, and indeed almost every instrument used in the orchestra. Thus, from being a constant attendant at all the most popular concerts, his whole delight, it may fairly be presumed, was derived from his studies; and he found from his scientific analysis of public musical performances such an inexhaustible variety of entertainment, as to counterbalance those delights which human nature presents to those blessed with vision, and to which he was an utter stranger. His ear was so acute, that, if a whole orchestra were performing, and one instrument in the band was a quarter of a tone too flat or too sharp, Purkis could discriminate the error, and point out the identical instrument from which it had arisen. It is also worthy of remark, that when any manuscript or new composition was performed in his presence, his memory was so retentive, that, on the day following, any person who would apply pen to paper and write according to his dictation, would find himself possessed of the subject of the manuscript composition. Still following him through his enterprising career, we next find his name in the list of candidates for the situation of organist at many churches where vacancies were declared. This he did chiefly for the sake of playing their different organs, and, in one or two instances, he appears to have been a favorite candidate. From his familiarity with church organs, he was found to have acquired a very extensive knowledge of the mechanism of that instrument, and could, after performing on any large organ, very accurately calculate the number of pipes it contained. He also well judged the required powers of an organ, or what force of tone was adapted to buildings of certain dimensions. Purkis had now been three times an unsuccessful candidate for the situation of organist to the honorable society of the Temple, when, notwithstanding his appointment at St. Olave's, Southwark, he accepted a deputy organist's sit-

uation at the Temple Church for upwards of three years; and this more from the pleasure he derived from playing on the finest organ in Great Britain (as he considered it) than for the emolument. Although Purkis had never travelled out of his native country, he had performed on almost all the popular organs in England, namely, at the cathedrals of Exeter, Salisbury, and Winchester, Bristol, Bath, &c.; he had therefore had good opportunities of judging of the comparative qualities of that instrument. At little more than twenty-one years of age, we find Purkis competing for the situation of organist to St. Clement's, Danes, Strand; where, after a contest of several weeks, his abilities were rewarded with success, and he took his seat as organist of that church, not relinquishing his appointment at St. Olave's, Southwark, until he had filled it for many years to the entire satisfaction of the inhabitants; in proof of which, on electing a new organist, he was appointed umpire in the church, at a trial of skill amongst the candidates for the succession to his office.

We have already remarked that Purkis showed some degree of mechanical knowledge, and we now take the opportunity of noticing that, though almost his whole life had been devoted to the pursuit of music, yet other studies occasionally occupied his mind, notwithstanding his natural defect precluded him from those advantages mankind in general acquire from reading the works of learned authors on the subjects of their studies. By a mechanical invention he was made acquainted with the use of the alphabet and arithmetical figures, and thus became a very good arithmetician. By a system of his own, he also kept his private accounts very correctly, and even a sort of almanac. He evinced, likewise, some mechanical genius in bringing to perfection the double flageolet, (originally invented by Scott,) for which a patent was granted. This instrument was first brought into use by Purkis's public performance of duets on it. In his private estimation, it was, of course, always considered but as a pleasing toy. As we have now reached the mature age of this extraordinary genius, we shall pass over many occurrences to one of the most important circumstances in the annals of his life. Our readers are already made acquainted with the fact of his total blindness from birth, and may suppose that with a mind so active and well stored, and with a disposition naturally cheerful, there would have been an indifference on the part of Purkis respecting his natural defect. On coming, however, to mature age, this was found not to be the case. He felt the inconvenience of constantly wanting a guide, and it was his greatest, his only annoyance to reflect on the trouble he gave to his friends. Here a kind Providence again interposed, and indulged him so far as to grant him the *blessing of useful sight*, in the thirtieth year of his age. We will not presume to say perfect vision, as this is not the epoch for miracles, but useful sight, sufficient for all the domestic purposes of his life, and such as enabled him to perambulate the bustling streets of the city of London in confidence, without any other guide than a pair of spectacles. This important advantage was bestowed on him by the hands of a skilful oculist from Exeter, after several operations on his eyes, the first of which was performed on the 9th of June, 1810. On the 19th

of October he gave a performance to a select party on the cathedral organ, previous to his departure for Loudon; and it was then that he first took the opportunity of surveying that magnificent edifice, which he could now distinctly see; also, for the first time, the pipes of the organ, of which he before had only enjoyed the sounds. The window of stained glass, the admiration of all who visit this cathedral, afforded him particular sensations of delight, and he expressed it to be a *harmony of colors*. On the 20th of October he felt himself competent to bid farewell to Exeter and his kind friends there, whose attentions to him he ever most gratefully acknowledged. From thence he travelled to Bath, without any attendant, where he was joined by his sister, who was residing near that city, and on the 2d of November he arrived in London. In the following spring he gave a public concert in Hanover Square Rooms, which was well attended by many persons of rank and fashion, to witness, in particular, his performance on the grand piano-forte, harp, &c.

Although the publications of Purkis are not very numerous, yet what have appeared have been generally admired; and it may be presumed that, as he on all occasions required an amanuensis, (from those days having been spent in darkness in which mankind acquire the art of using pen and ink,) his publications were not voluminous, although some of his manuscript compositions were truly sublime.

We may next record the acquaintance of Purkis with Lord Kirkwall, who was such a devoted admirer of his talent that he gave him unlimited power in directing the construction of a very costly chamber organ, which was built at Messrs. Flight and Robson's, in St. Martin's Lane. It was played by machinery as well as by the fingers, and was universally allowed to be one of the sweetest toned organs ever built. Many thousands of persons went to hear Purkis on this organ at Flight and Robson's rooms; and it may justly be inferred that its attraction, with Purkis's performance on it, gave the first idea to those eminent builders of constructing the stupendous organ exhibited in their rooms under the name of the Apollonicou. Whilst this immense instrument was constructing, Purkis devoted much time at the manufactory in rendering such assistance as was in his power. On the Saturdays of each week, he entertained from two to three hundred persons by a public performance on the Apollonicou. The mechanism of this instrument was so admirably constructed, as well as every other part of it, that, by the aid of the pedals for the feet, and the extraordinary span of Purkis's hand, he was enabled alone to produce as much effect as the *five* performers whom the Apollonicou was originally intended to employ. We must not omit to notice that when Lord Kirkwall had placed his enchanting organ in his mansion, he was honored by a visit from his majesty, then prince regent, who was well known to be a true lover of music, and a just discriminator of musical talent. The prince was much gratified by the mechanical performance of the organ, and Purkis was introduced, who, in the course of the evening, played before his majesty several pieces of music by Handel, Haydn, Mozart, &c. Handel's "*Te Deum*" especially was given by him in so masterly a style, and with

such precision, that every one present was astonished.

PUTINI, BARTOLOMEO, an excellent singer about the year 1755, performed, during several years, at the opera at Dresden, and afterwards at St. Petersburg.

PUZZI, a celebrated performer on the French horn, resided in England in the early part of this century. His style of playing was not less beautiful than popular; indeed, it was nearly impossible to conceive any thing more perfect, whether the tone, the execution, or the general expression be considered.

PYRENE. A singer of wonderful powers, who flourished 709 years before the Christian era. Professor Murchard, of Berlin, gives the following sketch, taken from ancient tablets, discovered in an amphora of metal at Corinth.

"On the third day of the music feast at Ephyræ, there was represented a tragedy, after the old manner. And when the Choragi had spoken, the chorus sang in the Hypomixolydian mode; and the chorus consisted of men, youths, boys, and maidens. But Pyrene, the daughter of Teiresias, sang the Hypopotamon, which had never before been heard, since it lies five tones higher than the Hyperbolaion. And all the people clapped their hands aloud, so great was the joy that reigned in the hearts of all the hearers. But King Telestes caused to be presented to the divine songstress a costly set of jewels as a gift. For the like had never before been heard."

"We here become acquainted, for the first time, with a songstress who lived 709 years before Christ. I had imagined that I before knew what Hypomixolydian meant, but I now feel convinced that I am ignorant about the matter; for it is said that Pyrene, the daughter of Teiresias, sang the Hypopotamon (which signifies something on the other side of the river, not to be attended to,) which had never before been heard of. Now it is supposed by the moderns, that the Hyperbolaion of the ancients was our A above gamut. If this were correct, then Pyrene must have sung to E in alt, in which case it is not easy to divine how this tone could have created such admiration in all Greece, as it lies perfectly within the compass of a female soprano voice, and our soprano singers sing a full octave higher. Hence it is much more probable that the Hyperbolaion of the ancients was the tone of B or C in alt; for that the tone of F in alt, or G in alt, should have caused such astonishment is much more likely. Now, in Hypolydian and Hypomixolydian modes, the Hyperbolaion does not occur at all, and yet Pyrene sang in these modes, and, therefore, five times higher than the Hyperbolaion! It is particularly remarkable that Lasus (the person who inscribed the tablets) should twice observe of the Hypopotamon that it had never been heard before. It must, consequently, have been extraordinarily high. It is also stated that the chorus consisted of men, youths, boys, and maidens; that the chorus sang is also mentioned. Hence, how can it be any longer doubted that the ancients, in the time of Lasus, were perfectly acquainted with the varieties of the human voice, and that they combined harmoniously the bass, tenor, treble, and descent? For it is in the highest degree proba-

ble, that the men sang the bass, the youths the tenor, the boys the treble, and the maidens the descant. The opinion that, among the ancients, female parts were played by men, is, therefore, contradicted, as it is certain from the above text that, in the chorus at least, there were female singers. But King Telestes caused to be presented to the divine songstress a costly present; hence we see that it is not our age alone that is entitled to the epithet enthusiastic; that it is not with us alone that singers are idolized; the ancient Greeks also were enthusiastic, and not less lavish of their 'divine' than we are, since even on a swineherd they once bestowed this glowing epithet."

PYRRHICS. Ancient military dances, in which the dancers were armed.

PYTHAGORAS. The invention of the harmonical canon, or monochord, has been ascribed to him both by ancient and modern writers. The monochord was an instrument of a single string,

furnished with movable bridges, and contrived for the measuring and adjusting the ratios of musical intervals, by accurate divisions. Aristides Quintilianus says, that this instrument was recommended by Pythagoras on his death bed, as the musical investigator, the criterion of truth. It appears to have been in constant use among the ancients, as the only means of forming the ear to the accurate perception, and the voice to the true intonation, of those minute and difficult intervals which were then practised in melody.

The discovery of musical ratios has also been assigned to him, with the method of determining the gravity or acuteness of sounds, by the greater or less degree of velocity in the vibrations of strings, the addition of an eighth string to the lyre, the harmony of the spheres, and the Greek musical notation. His right, indeed, to some of these discoveries has been disputed by several authors, who have given them to others with as little reason, perhaps, as they had been before bestowed upon him.

Q.

Q. Sometimes used as an abbreviation of quick; as, *Q. T.*, quick time.

QUADRILLE. (F.) A French dance, or rather a set of five consecutive dance movements, called "*Le Pantalon*," "*La Poule*," "*L'Eté*," "*La Trenise, ou La Pastourelle*," "*La Finale*."

QUADRIO, FRANCESCO XAVERIO, an Italian Jesuit, was the author of a work which appeared at Bologna and Milan from 1739 to 1746, in four volumes quarto, entitled "*Della Storia e della Ragione d' Ogni Poesia*." In this book are to be found many articles relating to musical literature; amongst others, remarks on the musical merits of Guido Aretinus, on the cantata, on the opera, and on the oratorio. He died in 1756.

QUADRIPARTITE. An epithet applicable to a score in four parts.

QUADRIVIUM. (L.) The collective name under which, in the ninth and tenth centuries, were comprehended the four sciences, which were then considered as the highest branches of philosophical learning; viz., music, arithmetic, geometry, and astronomy.

QUADRUPLE COUNTERPOINT. Counterpoint for four voices or instruments, each of which may be taken as a bass, acute, or middle part. A *quadruple counterpoint* admits of twenty-four different inversions.

QUADRUPLE CROCHE. (F.) A semi-demi-semiquaver.

QUADRUPLO. (L.) An expression formerly applied to vocal performances of the church in four parts. To sing in *organo, triplo, or quadruplo*, was to sing in four distinct parts or melodias.

QUAGLIA, GIOVANNI BATTISTA. An Italian musician of the seventeenth century. Amongst the "*Motetti Sacri à Voce sola con Instr.*," published at Bologna in 1695, is to be found a motet of Quaglia's composition, "*Quis splendor, que lux*," for a soprano voice with instruments.

QUAGLIATI, PAOLO, a celebrated contrapuntist of Rome, flourished about the year 1600. He was one of the first masters who relinquished the pedantry of canons, fugues, and other Gothic inventions; and, in imitation of the ancient Greeks, aspired only at expression, grace, and propriety. "Quagliati was a professor of the harpsichord, and an excellent chapel-master," says Della Valle, who was his pupil; "he introduced a new species of music into the churches of Rome, not only in compositions for a single voice, (*monodie*.) but for two, three, four, and very often more voices in chorus, ending with a numerous crowd of many choirs, or choruses, singing together; specimens of which may be seen in many of his motets, that have since been printed. And the music of my cart, or movable

stage, composed by the same Quagliati, in my own room, chiefly in the manner he found most agreeable to me, and performed in masks through the streets of Rome, during the carnival of 1606, was the first dramatic action, or representation in music, that had ever been heard in that city."

Here he seems to have forgotten the performance of Emilio del Cavaliere's oratorio, "*Dell' Anima e del Corpo*," which was exhibited at Rome, in action, on a stage in the church of Santa Maria della Vallicella, in 1600. Had Della Valle said the first *secular* dramatic representation of this kind in music, he would have been more correct.

"Though no more than five voices, or five instruments, — the exact number that an ambulant cart could contain, — were employed, yet these afforded great variety; as, besides the dialogue of single voices, sometimes two, or three, and, at last, all the five, sang together, which had an admirable effect.

"The music of this piece, as may be seen in the copies of it that were afterwards printed, though dramatic, was not entirely in simple recitative, which would have been tiresome, but ornamented with beautiful passages and movements in measure, without deviating, however, from the true theatrical style; on which account it pleased extremely, as appeared from the prodigious course of people whom it attracted, and who, so far from being tired, heard it performed five or six several times; some even continued to follow our cart to ten or twelve different places where it stopped, and never quitted us, as long as we remained in the street, which was from four o'clock in the afternoon till midnight."

This narration furnishes a curious coincidence in the history of the stage, that the first opera, or musical secular drama, performed in modern Rome, like the first tragedy in ancient Greece, was exhibited in a cart.

QUAISAIN, ADRIEN, a French dramatic composer, born in 1766, produced in 1798, at the Théâtre des Arts, at Paris, an opera entitled "*Silvain et Lusette, ou la Vendange*." He died in 1828, having composed a great number of melodramas.

QUALENBERG, J. M., court musician to the Elector Palatine of Bavaria, was the author of an essay entitled "*Wahre Geschichte einer Steiner Geige*," (i. e., The True History of a Stein Violin.) This essay was published in the *Mus. Korrespond.* for 1791. Qualenberg died in 1788. This is probably the same person as the Michael Qualenberg mentioned, in the French "Dictionary of Musicians," as being a clarinetist at Mannheim, about the year 1788.

QUANDT, CHRISTIAN FRIEDRICH, a doctor of medicine at Jena, in 1791, was a celebrated musical amateur. He wrote several essays on musical subjects, in the German peri-

odical publications. He died at Niesky in 1806.

QUANTITY, in music, as well as in prosody, does not signify the number of notes, or syllables, but their relative duration. It is from the quantity as much as from the position of the notes, that the character, beauty, and expression of every melody proceeds. One of the greatest excellences of vocal composition is that strict union which should ever subsist between the words and the music. The first object of a composer is to choose such words as will ally themselves with his melody, both in sentiment and quantity. Much of the beauty of a composition depends upon this: but even in the finest works we discover innumerable mistakes of this kind; such as joining little words to long, and long words to short sounds. In the Italian, defects of this kind rarely occur, so admirably is that language adapted to the purposes of the composer; and in every attempt to render it into English we invariably find the beauty of its expression impaired.

QUANTZ, or **QUANZ**, **JOHANN JOACHIM**, was born near Hanover in 1697. He was known principally as a flutist and composer for that instrument, on which he gave instructions to Frederic the Great of Prussia, when prince royal. Previously to the year 1724, Quantz went from Germany to Rome, for the purpose of taking lessons in counterpoint of Gasparini. He next proceeded to Naples, in which city he found his countryman Hasse, who was studying under the renowned Alessandro Scarlatti, to whom Quantz was very desirous of being introduced by Hasse, who readily assented to his wishes; but upon mentioning the subject to old Scarlatti, he replied, "My son, you know I hate wind instruments: they are never in tune." Hasse, however, did not cease importuning him, until he had obtained the permission which Quantz desired.

In the year 1752, Quantz published, in the German and French languages, an excellent "Treatise on the Art of playing the German Flute;" a work which is not merely useful to practitioners on that instrument, but to musicians in general. His advice to young students in music is built upon good sense and experience; and, although his own genius for composition was not original, he was an accurate observer of the beauties and defects of others, both in composition and performance. This work was afterwards translated into the Dutch language, and published at Amsterdam in 1775. Quantz died at Potsdam in 1773, having been in the service of the court of Prussia till his decease. The king, who was extremely partial to him, ordered a monument to be erected to his memory. The following are the principal works of Quantz. Theoretical: "Essay of a Method for learning to play the German Flute," Berlin, 1752; "Uses of the German Flutes with two Keys," 1760. This work is extremely interesting, its utility not being confined to flute players, since it contains many details that should be well understood by every musician. "The History of my Life;" "Answer to the Objections of Mons. Moldenit." This Moldenit was a Danish amateur, who had written against Quantz's method of using the tongue in flute playing. The two preceding works, and

different other letters by Quantz, were published in Marburg's "*Historisch-Kritische Beyträge*," &c. Practical: Many songs and odes inserted in different collections published at Berlin. "New Melodies to the Hymns of Professor Gellert," Berlin, 1760; "Several Pastoral Airs," 1747. Concertos amounting to at least three hundred in number. Nearly two hundred solos for the flute, of which, however, there are only known, at present, "Six Sonatas for the Fl. with B.," Op. 1, Dresden, 1759, and "Six Duos for Fl.," Op. 2, Berlin, 1759. Two other operas of solos, published as his at Paris and Amsterdam, are certainly not of his composition. He also composed many quatuors and trios, of which still less is now known. Most of his remaining works were to be found, a few years since, in the music warehouse of Westphal, at Hamburg.

QUARLES, **CHARLES**. Organist of Trinity College, Cambridge, in 1698.

QUARTA. (I.) **QUARTE**. (F.) An interval of a fourth.

QUART DE SOUPIR. (F.) A semiquaver rest.

QUART DE SON. (F.) A quarter tone.

QUARTER TONE. An interval introduced into the enharmonic genus of Aristoxenus. The quarter tone is of two kinds, viz., the major enharmonic, in the connection of 576 to 625, which is the complement of two semitones to the major tone; and the enharmonic minor, in the computation of 125 to 128, which is the complement of the two same semitones minor with the minor tone. This is a small interval, which in mathematical theory is found to exist between D♯ and Eb, G♯ and Ab, &c.

QUARTETTO. (I.) A quartet, a musical composition for four instruments, generally stringed instruments, in concert, (i. e. two violins, one viola, and one violoncello;) also a composition for four voices, with or without accompaniment. In instrumental quartetts, Haydn opened a new path. Mozart, Beethoven, the two Rombergs, Spohr, Ries, Onslow, Feska, Mendelssohn, followed. The simple charm of harmony and melody gives the chief effect to the quartetto. The quartetto is better the more independent are the four voices; the predominance of one voice gives rise to the solo quartetto. Quintetts and sestettos, for stringed instruments, are often reckoned among the quartetto music.

QUARTET, or **QUARTETTE**. The English term for **QUARTETTO**, or **QUAUAOR**, which see.

QUARTIERO, **PIETRO PAOLO**. A celebrated Italian composer of the sixteenth century.

QUASI. (I.) In the manner of. As, *quasi andante*, in the manner of andante.

QUATREMERE DE QUINCY inserted, in 1789, in the French journal entitled "*Le Mercure*," a very interesting article, entitled "*De la Nature des Opéras Bouffons, et de l'Union de la Comédie et de la Musique dans ces Poèmes*."

QUAUAOR. (L.) Quartet. See that word.

QUAVER. A character, or note, equal in duration to the eighth part of a semibreve, the quarter of a minim, or one half of a crotchet.

QUEDENFELD, a German composer, published the following works at Dresden: "3 *Sonata fur Klavier*," 1790, and "*Kleine Klavierstücke*," 1792.

QUEERSTRICHE. (G.) Leger lines.

QUEEN ELIZABETH founded a school of counterpoint when she ascended the throne, equal to any in Europe. She reckoned music among her most favorite amusements, and always delighted in the performance of it. Before the reformation, as there was but one religion, so there was but one kind of ecclesiastical music, which was a plain chant; and this kind of sacred music was derived, in the middle ages, from the church of Rome. During the long and pompous reign of Elizabeth, choral music became as eminent in England as in any other part of Europe. Elizabeth was taught music at a very early age, and her voice, though shrill, was sweet, and she touched the lute with taste and skill.

QUEEN MARY. During the reign of Mary, ecclesiastical music was transferred to Latin words again; previously, or till the year 1549, parish churches had all used the same kind of chant as cathedrals, with English words. The gloomy princess herself was a performer on the virginals, an instrument resembling the spinet, and also on the lute. Queen Catharine of Arragon, her mother, after her separation from the king, exhorted her "to suffer cheerfully, keep her heart clean," and after recommending to her the outward duties of her religion, the injured queen desired her to recreate herself with her virginals and her lute. Fuller informs us that on Mary's coming to the crown, she caused a solemn dirge to be chanted in Latin, on the day her royal brother's body was buried in Westminster.

QUEISSER, CARL TRAUOGOTT, born at Döben, in Germany, in 1800, has had great fame as a trombone player. He died in Leipsic in 1845.

QUEK, or QUECK, JOHANN CHRISTIAN, a German musician, published "*Klavier und Singstücke*, 1ste, 2te, und 3te Sammlung," Göttingen, 1790-1792, and "*Sonate pour le Clav.*," Op. 4, Frankfurt, 1798.

QUERCU, or VAN DER EYCKEN, SYMONA, born at Brussels, flourished in the beginning of the sixteenth century, as a singer, at Milan. He published at Vienna a work entitled "*Opusculum Musices perquam brevissimum: de Gregoriana et figurativa atque contrapuncto simplici percommode tractans: omnibus cantu oblectantibus utile ac necessarium*," 1509. The book is dedicated to an Archduke of Austria, the dedication bearing date Milan, 1508.

QUERHAMER, CASPAR, a distinguished scholar, musician, and poet, was burgomaster at Halle, from the year 1534 to 1556. He was a zealous partisan of the pope, and exerted himself in every way to retain the Roman Catholic religion at Halle, publishing several works against Luther. Observing that the principles of Luther partly became popular through the use of his psalms and hymns in the German language, Querhamer advised the magistrates of Halle to publish also Catholic hymns in German, a collection of which accordingly appeared in 1537, accompanied with their melodies. This collec-

tion is usually attributed to Querhamer, though it is not known what part he had in the composition of the music. He died in 1557.

QUERIMONIA. (L.) A spiritual cantata of a dolorous cast; in the manner of the *Lachrimæ*. See LACHRIMÆ.

QUERINI, GIULIO CESARE, a monk and chapel-master of the cathedral church at Foligno, in the Papal States, flourished towards the end of the seventeenth century. He composed some sacred music.

QUESNA, or QUESDNA, FRANCESCO. An Italian composer towards the close of the seventeenth century. In 1692 he brought out, at Venice, the opera of "*La Gelidaura*."

QUESTO. (I.) This, or that.

QUICK STEP. A species of march, generally written in two crotchets in a bar. So called because it forms an accompaniment to a brisk motion.

QUIETÓ. (I.) With calmness, or repose; quietly.

QULISMA. The name of one of the ten notes used in the middle ages.

QUINCY. See QUATREMER.

QUINTA, (I.) or QUINTE. (F.) A fifth.

QUINTA PARS. (L.) An expression applied, by the ecclesiastical musicians of the fourteenth century, to the fifth or additional part of the choral service. Though before the close of the fifteenth century, the harmonic parts of the church compositions were greatly multiplied, yet it appears that the established number, introduced in the Pope's Chapel, were till that time confined to four: the *cantus*, or treble; *altus*, or counter tenor; the tenor, and the bass. Therefore, when an additional part was employed, it was called the *quinta pars*; and if a sixth was introduced, it was called *sexta pars*.

QUINTEtto, or QUINTEt. (I.) A vocal or instrumental composition in five parts, in which each part is obligato, and performed by a single voice or instrument. *Quintuor* has the same meaning.

QUINTOIER. A term applied by the old French writers on music to a species of descent, chiefly consisting of fifths; much used about two hundred years after the time of Guido, though of a much less refined and artful texture than the counterpoint of that learned and ingenious musician.

QUINTOLE. (Gr.) A musical figure of five notes, having the value of four.

QUIRSFELD, JOHANN, archdeacon at Perna, was born at Dresden, in 1642. He published at Perna, in 1675, "*Breviarium Musicum*," of which several subsequent editions were printed. He also wrote some other works on music.

QUI TOLLIS. (L.) A movement of the *Gloria*.

QUITSCHREIBER, GEORG, a musical author and composer, was born at Cranichfeld in 1569. In 1594 Albert, Count of Schwartzburg, named him singer and schoolmaster at Rudolstadt. In 1598 he obtained a place in the choir at Jena, from whence he was removed, in 1614, to the situation of minister at Hainichen and Hiebriz, and finally, in 1638, to that of minister at

Magdala, Ottsted, and Moeina, where he died in 1638. He published the following works: "*Kurz Musikbüchlein in Deutschen, &c.*," Jena, 1607; "*Kirchengesänge, Psalmen Davids, &c.*," Jena, 1608; "*De Canendi Elegantiâ, Præcepta*," Jena, 1598; "*Teutsche Harmonie, den 4ten Psalm mit 6 Stimmen componirt in sich enthaltend*," Jena, 1622; and "*3 Geistl. Lieder mit 4 Stimmen gesetzt*."

QUEUE. (F.) The tailpiece of a violin, violoncello, tenor, &c.; the tail or stem, with its hooks or blocks, used to indicate the duration of a note.

QUOINTE, an ecclesiastic and esteemed church composer, flourished about the year 1720,

and published many sacred musical works at Amsterdam about that period, amongst which were "*Cantiques Spirituels, Lib. 1, 2, et 3*;" "*Missæ, Litanæ, Motetti, et Tantum Ergo Sacramentum*," Op. 3; this is for five principal voices, and five second voices; "*Missæ brevis, Motetto, Te Deum, et Litanæ*," Op. 5, for five voices and five instruments; "*Salmi concertati à 1, 2, 3, 4, e 5 voci e 4-5 Strumenti*," Op. 6; "*Motetti à l'occe sola e B. C.*," Op. 7; and "*Geistliche Gesänge, verschiedener Komponisten von 1, 2, 3, 4, und 5 Stimmen, ohne Instrumente*," Op. 11.

QUODLIBET. (L.) A musical pot-pourri

QUONIAM TU SOLUS. (L.) Part of the Gloria, in the mass.

R.

R., or R. H., indicates the right hand in piano-forte music. *Recht* (G.) has the same meaning.

RAAB, ERNST HEINRICH OTTO, was horn at Berlin in 1750. His father, Leopold Friedrich Raab, was a good violinist and pupil of Benda, and instructed his son in music, who afterwards procured the appointment of chamber musician to the Emperor of Russia.

RAAF. See RAFF.

RAAM. An excellent performer on the hautboy, at Munich, in 1803.

RABOIN, a guitarist at Paris, published there two collections of romances, ariettes, &c., for his instrument in 1798.

RABBIA. (I.) Rage, fury. *Con rabbia*, with rage, furiously.

RACANUS, JOHANN BATTISTA, a composer of the sixteenth century, published "*Cantiones Sacr. 5 voc.*," Venice, and "*Misse à 4 e 5 voc.*," Venice, 1588.

RACKNITZ, JOSEPH FRIEDRICH, FREYHERR VON, a Saxon nobleman, was born at Dresden in 1744. He was an excellent amateur musician, and published several operas of sonatas and songs; also, "*12 Entr'-Actes composés et arrangés pour le Clav.*," 1795.

RADICAL. Used in various senses. When the basses of any chords are the roots of their respective triads, the cadence is termed radical. There are four species of radical cadence—the perfect, the imperfect, the false, and the mixed. The three principal distances or sounds, the tonic, dominant, and sub-dominant, are the radical parts of every tonic.

RADICAL BASS. Synonymous with fundamental bass.

RADICAL CADENCE. When the basses of both chords are the roots of their respective triads, the cadence is termed radical; and of these radical cadences there are four in general use—the perfect, imperfect, false, and mixed.

RADDOLCENDO, or RADDOL. (I.) From the verb *raddolere*, to soften, to sweeten, to mitigate. An expression applied to passages designed to be performed in a soft, assuaging style.

RADDOPIATE NOTE. (I.) Repeated notes.

RADDOPIAMENTO. (I.) The doubling of an interval either in unison or octaves. *Redoublement* (F.) has the same meaning.

RADEKER, JOHANN, organist at Beverik, near Haarlem, was the son of Heinrich Radeker, who was organist of the great church at Haarlem. Both the father and son published, at Amsterdam, several light compositions for the harpsi-

chord. The son also wrote a history of the very celebrated organ at Haarlem, the work being entitled "*Korte beschryving van het beraemde erprachtige orgel, in de groote of St. Barvoos kerk te Haarlem*," Haarlem, 1775.

RADICCHI, GIUSEPPE, a dramatic composer of Rome, brought out at Venice, in 1778, the opera "*Medonte*."

RAFF, ANTON, a celebrated German singer to the Elector of Bavaria, was one of the very few natives of that country who have extended their vocal fame beyond the confines of Germany. Raff was born near Bonn, in the year 1714. After receiving the rudiments of his education in his village school, he went to the Jesuits' college at Cologne, to be qualified for the priesthood of the Roman Catholic church. There he remained till the age of twenty, without giving the least consideration to his vocal powers. He then declined further ecclesiastical studies, and undertook the situation of private tutor in the family of a neighboring nobleman, where he first amused his leisure hours in practising by himself to sing by note, and to compose some easy airs. Shortly after this he received instructions from one of the court musicians, at Cologne, under whom he so rapidly improved, that the nobleman in whose service he was, took him, in 1736, for further instruction to Munich. He here sang at some public concerts with much applause, of which Antonio Ferrandini, then director of the royal music in Munich, being informed, engaged him for the Italian opera. At the close of the season he proceeded to Italy, where he became a pupil of the celebrated Bernacchi. Towards the close of the year 1738, on occasion of the marriage of Maria Theresa, at Florence, Bernacchi first permitted his pupil to sing in public in Italy, when he took the principal tenor part in the cantata performed on that occasion. From this time his performance was so much admired, that he was offered engagements at most of the principal theatres in Italy, and continued in high repute there till 1742, when he returned to his native country. He was now engaged to sing at the celebration of the marriage of the Elector Carl Theodor, also at the coronation of the emperor at Frankfurt. In 1749, after performing at various German courts, he appeared at Vienna in Jomelli's "*Didone*:" he next revisited Italy, where he remained till 1752, and then proceeded to Lisbon, in which city he had three very profitable seasons, and from whence he was invited, in 1755, to Madrid. Here he resided till 1759, enjoying the friendship and patronage of the renowned Farinelli, who, in the latter year, being obliged to quit Spain on account of the death of the king, was accompanied by Raff to Naples. Lastly, in the year 1770, he again returned to his native country, and settled at Munich, where he opened a singing school, about the year 1779, and from

which many very excellent pupils afterwards spread through Germany. He died at Munich in 1797.

RAGAZZANI, OTTAVIO, a Carmelite monk and composer of the seventeenth century, was born at Parma. He published madrigals and other works.

RAGNONI, FRANCESCO, an Italian composer and didactic writer on singing, flourished about the year 1620.

RAGUÉ, L. C., a Parisian musician and harpist, published many works in the latter part of the last century, both in Paris and London. Amongst these we can name "*Mennon*," opera, Paris, 1764; "*L'Amour filial*," Paris, 1786; "*Trois Sinfon.*," Op. 10, Paris, 1787; "*Six Duos pour Violon et A. ou Vc.*," Op. 11, Paris, 1787; "*Trois Sonates pour Harpe et Vc.*," Op. 12; "*Trois Sonates pour Harpe et Vc.*," Op. 13; "*Trio pour Harpe, Vc., et Vc.*," Op. 18, Paris, 1793; "*Quat. pour Harpe, Vc., A., et B.*," Op. 19, Paris, 1796; and "*Premier Concerto pour Harpe avec Acc. de l'Orch.*," Paris, 1796.

RAGUENET, FRANCOIS, a doctor of the Sorbonne, and superintendent of the household of the Prince of La Tour d'Auvergne, at Paris, was born at Rouen about 1660. He wrote several works on the belles lettres and on music. He was found, in 1722, dead in his chamber, with his throat cut. He was then about sixty years of age. Raguenet was probably the first writer who tried to open the eyes of his countrymen to the low state of music in France; this he did in his work entitled "*Parallèle des Italiens et des Français, en ce qui regarde la Musique et les Opéras*," Paris, 1702.

RAIMONDI, IGNAZIO, a celebrated violinist, and a good composer for his instrument, was a pupil of Barbella. He settled at Amsterdam about the year 1760, where, and at Berlin, he published several operas of concertos, symphonies, and duos. About the year 1791, he quitted Holland for Paris, where he brought out a comic opera, entitled "*La Muette*." Finally, he went to London, where he was considered an excellent leader of an orchestra up to about the year 1800.

RALENTANDO, or RALEN. (I.) An expression implying that the time of the passage over which it is written is to be gradually decreased; also a corresponding decrease in the quantity of tone.

RAMAZZOTTI, DOMITIO, an Italian composer of the sixteenth century, published, amongst other works, "*Salmi l'espert. e Magnificat, à 5 voci*," Venice, 1567.

RAMEAU, JEAN PHILIPPE, was born at Dijon in 1683. After having learned the rudiments of music, his taste for the art led him, while young, to leave his native country, and wander about with the performers of a German opera. At the age of eighteen he composed a musical entertainment, which was represented at Avignon, and was received with as much applause as can be thought due to so puerile an essay. He at length became a candidate for the place of organist of the Church of St. Paul in Paris; but failing to obtain it, he had almost determined to decline that branch of his profes-

sion, but was prevented by the offer of the place of organist of the cathedral church of Clermont, in Auvergne, which he accepted. In this retirement he studied with the utmost assiduity the theory of his art. His investigations in the course of this pursuit gave birth to his "*Traité de l'Harmonie*," printed at Paris in 1722, and to his "*Nouveau Système de Musique Théorique*," printed at the same place in 1726. But the work for which Rameau is most celebrated is his "*Démonstration du Principe de l'Harmonie*," Paris, 1750; in which, as his countrymen say, he has shown that the whole depends upon one single and clear principle, namely, the fundamental bass; and in this respect he is by them compared to Newton, who, by the single principle of gravitation, was able to assign reasons for some of the most remarkable phenomena in physics: for this reason they scruple not to style Rameau the Newton of harmony.

With such extraordinary talents as these, and a style in musical composition far surpassing, in the opinion of some, that of the greatest among French musicians, it had been a natural reproach had Rameau been suffered to remain organist of a country cathedral. He was called to Paris, and appointed to the management of the opera, in which employment it was his care to procure the ablest performers of all kinds that could be found, and to furnish, from the inexhaustible stores of his own invention, compositions worthy of so great a genius. His music was of an original cast, and the performers complained at first that it could not be executed; but he asserted the contrary, and evinced it by experiment. By practice he acquired a great facility in composing, so that he was never at a loss to adapt sounds to sentiments. It was a saying of Quinault, that "the poet was the musician's servant;" but Rameau would say, "*Qu'on me donne la Gazette d'Hollande, et je la mettrai en musique*." The king, to reward his extraordinary merit, conferred upon him the ribbon of the order of St. Michael, and a little before his death raised him to the rank of noblesse.

This philosophical artist died at Paris in the year 1764. As a theorist, the character of Rameau stands very high; and as a testimony to his merit in this particular, it is mentioned as a fact, that Handel was ever used to speak of him in terms of great respect. As a musician composer, his character remains to be settled; while one set of men celebrate his works for the grace and spirit of them, others object to them, that they are either stiff and labored, or light and trifling, even to puerility. He is accused of having pillered from Italy a considerable number of charming airs, which, a severe critic adds, were not entirely smothered by his barbarous art. The following catalogue contains Rameau's principal works. Theoretical: "*Traité de l'Harmonie réduite à ses Principes naturels*," 1722; "*Nouveau Système de Musique Théorique*," 1726; "*Génération Harmonique, ou Traité de la Musique Théorique et Pratique*," 1537; "*Dissertation sur l'Accompagnement*," 1731; "*Dissertation sur le Principe de l'Harmonie*," 1750; "*Nouvelles Réflexions sur la Démonstration du Principe de l'Harmonie*," 1752; "*Réponse à une Lettre de M. Euler*," 1752; "*Observations sur votre Instinct pour la Musique*," 1754; "*Erreurs sur la Musique dans l'Encyclopédie*," 1755; "*Code de Musique Pratique*,"

1760. Practical: "*Trois Livres de Pièces de Clavecin*," 1703, 1721, 1726; "*Hippolyte et Ariane*," opera, 1733; "*Les Indes Galantes*," ballet, 1735; "*Castor et Pollux*," opera, 1737; "*Les Tablettes Lyriques*," ballet, 1739; "*Un Livre de Pièces de Clavecin en Concerto*," 1740; "*Dardanus*," opera, 1743; "*Les Fêtes de Polymnie*," ballet, 1745; "*Le Temple de la Gloire*," ballet, 1745; "*Les Intermèdes de la Princesse de Navarre*," comedy, 1745; "*Samson*," opera; "*Pygmalion*," 1747; "*Les Fêtes de l'Hymen et de l'Amour*," ballet, 1748; "*Zais*," ballet, 1748; "*Nais*," ballet, 1749; "*Platée*," ballet, 1749; "*Zoroastre*," opera, 1749; "*Acante et Céphise*," 1751; "*La Guirlande*," 1751; "*Anacréon*," ballet, 1754; "*La Fête de Pamélie*," ballet, 1754; "*Les Surprises de l'Amour*," 1757; "*Les Sybarites*," 1759; and "*Les Paladins*," 1760.

RAMIS, BART. See PAREJA.

RAMLER, KARL WILHELM, professor of belles lettres, and director of the national theatre at Berlin, in 1787, was born at Colberg in 1725. He published at Leipsic, in 1758, a work entitled "*Introduction aux Belles Lettres d'après l'Ouvrage de M. Battenz, avec des Augmentations*." Much is said in this work on the subject of music. He also wrote an apology for the opera, which was published in the second volume of Marpurge's "*Beiträge*," and a collection of the opinions of Remond de St. Mard on the same subject. Ramler is likewise known by his epigrams, odes, songs, sacred and profane cantatas, especially the sublime one, the "*Tod Jesu*," which he wrote for Graun's music. He died at Berlin in 1798.

RAMONEDA, IGNAZIO, a Spanish monk, and conductor of the music in the royal cloister of St. Lorenzo, in the Escorial, published a large work on Catholic church music, under the following title: "*Arte de Canto-Llano en compendio breve, y metodo muy facil para que las particulares, que de ben saberlo, adquirieran con brevedad, y poco trabajo la inteligencia y destreza conveniente*," Madrid, 1778.

RAMPINI, D. GIACOMO, of Padua, was chapel-master of the cathedral in that town, and was equally successful as composer of church and theatrical music. Amongst his operas are "*Armida in Damasco*," 1771; "*Gloria Trionfante d'Amore*," 1712; "*Ercole sul Termidonte*," 1715; and "*Il Trionfo della Costanza*."

RAMPOLLINUS, MATTHIAS, an Italian composer, flourished in Florence about the year 1560. He set to music almost the whole of Petrarch's sonnets, and dedicated them to the Archduke Cosmo Medicis.

RANGLES, ELIZABETH, the little Cambrian prodigy, was born at Wrexham, in North Wales, on the 1st of August, 1800. Her father, who was organist of the church, was blind, and had been so from the age of three years: he lost his sight by the small-pox. His parents placed him under Parry, the celebrated Welsh harper, who was also blind, and he soon made great progress, and eventually became the best lyrist of his day. He had several children, but none of them betrayed any peculiar talent for music, except the youngest daughter, who, when she was but sixteen months old, would go to the piano-forte and endeavor to pick out a melody;

but no particular notice was taken of this, until one morning, when Mr. Randles (being unwell) remained in bed rather later than usual, and heard some one in the adjoining room play "The Blue Bells of Scotland;" not very correctly, to be sure, but distinctly enough for him to recognize the melody immediately: he called out, thinking it was some of his elder children, for them to desist, when he was informed that it was Bessy who was playing. She was permitted to proceed, and she actually performed the air, by striking the various keys by the side of her tiny hand. In a very short period she could play several simple tunes, and so wonderfully quick was her ear, that when her father sounded any note with his voice, she would run to the instrument and touch it: *this she did long before she could speak.*

Mr. Randles became of course exceedingly fond of her, and regularly taught her the melody of "*Ar hyd y nos*," or "The livelong night," placing her left hand on the key note. This appeared to delight her, yet she did not seem satisfied with one note; she endeavored to strike others, so as to form a proper bass to the treble. Her father, seeing this, (as he used to say,) took some pains with her, and she soon could play this, and several other little tunes, treble and bass, in a very correct manner. Nunn and Staunton's company of comedians was at Wrexham in the summer of 1802. Staunton, who had often heard the child play, requested that her father would permit her to perform an air on the stage for his benefit. Randles consented, and taught her "The Downfall of Paris," for her *début* in public, which took place *before she was two years old!* The important night arrived, an instrument was prepared, and at the end of the play the Lilliputian minstrel was led on the stage by a little daughter of the manager: the applause from a crowded audience was commensurate with the novelty of the scene. Randles was sitting behind the scenes, and when he heard the plaudits of the audience, cried out, while tears trickled down his face, "I never regretted the loss of sight till this moment. O, what would I give to see my darling child!" Bessy was placed at the instrument, with an apple on her right side, and a cake on her left, both of which she was to receive if she played well. She commenced, and, to the utter astonishment of all present, performed the air with the greatest correctness, particularly the running passages in the third part; this she contrived to execute with the thumb and the side of her right hand, for her utmost stretch could not compass a fourth.

The progress that little Bess made was truly astonishing. Parry taught her the notes and first rudiments of music, and she continued to improve so rapidly, and to perform with such execution, that her patrons proposed to introduce her to his majesty George III. and the royal family; accordingly, when she was only just turned of three years and a half, she was brought to London, accompanied by her father and eldest sister. The blind minstrel and his infant prodigy were introduced to their majesties and the princesses, who were highly delighted with their performance. The king presented the child with a hundred guineas. A circumstance occurred during this visit which ought to be recorded. The king went to Randles, *ut*

he had played a Welsh air on the harp, and said, "Hah! blind, blind: who taught you to play?" "Mr. Parry, Sir Watkin William Wynn's harper, and please your majesty." "Hah! why, he was blind too. I remember him well; he and his son used to perform Handel's choruses on two Welsh harps very finely before me, about thirty years ago." This anecdote will serve to corroborate many others which have been published of that sovereign's retentive memory.

Shortly after this a public breakfast was given at Cumberbund Gardens, for the benefit of Miss Randles: tickets, one guinea each. No less than five hundred persons of the first rank in the kingdom attended, and the child's performance was the admiration of every one. The profits of the breakfast, together with the various sums of money presented to Miss Randles, were vested in the funds, in the names of trustees, for her sole benefit; and in order to accumulate enough to defray the expenses of her education, it was recommended that she should perform at the principal provincial towns in the kingdom. Queen Caroline, then Princess of Wales, took great interest in the welfare of the little minstrel; she was invited to pass a few days at Blackheath, where she was introduced to the Princess Charlotte, who soon became very much attached to her. One day, while amusing themselves in some innocent pastime, the Princess Charlotte said to Miss Randles, "Do you know that my grandfather is King of England, and my father is Prince of Wales?" "Well," quickly replied Bessy, "and my father is organist of Wrexham."

Having been furnished plentifully with letters of recommendation to all parts of the kingdom, Mr. Randles and his little prodigy, accompanied for a long period by Mr. Parry, made a very extensive and profitable tour. The "Wandering Cambrians," as they were denominated, were exceedingly well received every where, and were invited to the nobility's mansions which were contiguous to the towns where they gave concerts. Their performances were exceedingly entertaining and varied. Randles played the harp exquisitely; Eliza the piano-forte; Parry, alternately, the flute, clarinet, and two and three flageolets. They sang songs, duets, and trios, particularly some harmonized Welsh melodies, in a very pleasing manner.

Miss Randles was improving daily, and, when only six years old, could play many of Dussek's brilliant sonatas, also sing several difficult duets. Her taste and expression in playing an adagio were, in the opinion of professional men, the most extraordinary feature in her performance; and her sight reading was also very wonderful, so much so, that, when trying over new music, (that her father might select the best calculated for her,) she used to talk and play away at the same time. Her father asked her one day, "How is it, Bessy, that you play that strange music, and yet talk all the while?" "O, father," said she, "I can see half the leaf at once."

Early in 1808, she paid London another visit, where she was heartily welcomed by her early friends, and a concert was given for her benefit at the Hanover Square rooms, under the direction of the honorable John Spencer. Madame Catalani, the Vaughans, Knyvitts, Bianchi, Weissell,

Lindley, Kramer, Naldi, &c., &c., gave their powerful aid, gratuitously, on the occasion. Sir G. Smart conducted the performance. The room was crowded. As Parry was desirous of residing in London, he could not accompany Mr. Randles and his daughter any longer; consequently they returned home, and Bessy began to learn the harp; her education was also properly attended to, and she was invited to pass a few weeks at the houses of various families of distinction alternately, where, mixing with polished society, she became a very clever, accomplished girl. Many offers were made to her father by different ladies of rank, to adopt her as their own. The Princess of Wales, in particular, was very anxious to have her; but the poor dark father would not, nay, could not, part with her; she was the only solace of his life; she read to him, played for him, sang to him; in short, he could not exist without her for any length of time. Her performance on the piano-forte, when she was about fourteen years old, was quite masterly; she also soon became a proficient on the pedal harp; she likewise played the organ regularly at the church, and her extempore performance on that noble instrument, *à la* Wesley, was truly astonishing.

In 1818 she paid London a visit, with a view of taking a few lessons on the harp from Dizi, and on the piano from Kalkbrenner, and to see (as she expressed herself) whether she could find any thing new in the art. Both these celebrated professors paid her talents the highest compliment; Dizi in particular, after placing before her all the difficult pieces he could find, and hearing her execute them with the greatest facility, said, "O, miss, I must write expressly for you, I find."

About this time she was strongly urged, by a select number of families at Liverpool, to make that town her residence, they engaging to find her as many pupils as she might feel disposed to accept; after many arguments, pro and con, with the poor father, who was grown very nervous and feeble, she was at length permitted to go, provided she came over every Saturday, and remained with him until the Monday. This she continued to do for a long time, though the distance by land and water was nearly twenty-five miles.

After their father's death, the daughters removed to Liverpool. The only musical instructions Miss Randles ever received were from her father and Parry, with the exception of a few lessons from Latour, when she went to London in 1808.

RANZ DES VACHES. Airs of much celebrity among the Swiss, and performed by their young herdsmen on the bagpipe, while they watch their flocks on the mountains. There are many of these airs, some of which are great favorites with the mountaineers of the Alps of Switzerland, and are adapted to be played upon a kind of long trumpet called the Alp horn. The sounds of these tunes, as well as the words which are set to them, are expressive of the scenes and business of pastoral life: the hut, the roaring torrent, the bellowing of the cattle, and the tinkling of the bells which are suspended from their necks; and the associations which they thus recall to the minds of the natives when

they are in foreign countries, often produce that unconquerable longing for home, which is said to have been especially remarked among the Swiss soldiers in foreign service. Rousseau relates that the Ranz des Vaches were so dear to the Swiss in the French armies, that the bands were forbidden, under pain of death, to play them to the troops, as they immediately drew tears from them, and made those who heard desert, or die of what is called *la maladie du pays*—so ardent a desire did it excite in them to return to their native country. Many of these beautiful melodies are familiar to American ears, English words having been set to them, and are among our most popular songs.

RAPIDAMENTE. (L.) Rapidly.

RAPIDO. (L.) Rapid.

RAPPEL. Birdlike.

RAOUL, of Laon, flourished in the eleventh century. He wrote on the semitone, which he called *l'ainé du chant*.

RAOUL, N. A celebrated French violoncellist, published, in the latter part of the last century, an instruction book for his instrument, as also some practical works.

RAPHAEL, IGNAZ WENZEL, an amateur musician, resident at Vienna, was born at a village of Bohemia in 1761. He was an excellent pianist and a very pleasing singer; also composed for the church, theatre, and chamber. He died of consumption in 1799, in the thirty-eighth year of his age. Amongst his works are, for the church, a "Vater unser," and "Te Deum laudamus;" both these compositions are considered sublime and full of genius. For the theatre, "Das Veilchen Fest," ballet, 1795; "Pygmalion," ballet; this was considered enchanting music; and "Virginia," melodrama. For the chamber, many favorite songs and canons, in manuscript; "Airs var. pour le Clav.," Op. 1, Offenbach, 1795; "Six Variations pour le Clav.," Vienna, 1796; "Two Marches," 1797; "Lied der Freude bey Ankunft des Erzherzog Carl zu Wien," Vienna, 1799; and "Aufruf eines Oesterreichers," Vienna, 1799.

RASCH, JOHANN, a church composer of the sixteenth century, published the following works at Munich: "Cantioncule Paschales," 1572; "Cantiones Ecclesiast. de Nativ. Christi, 4 voc.," 1572; "In Monte Olivarum," 1572; and "Salve Regina, 6 voc.," 1572.

RASEL, or RASELIUS, ANDREAS, chapel-master to the elector palatine, was born in 1583. He published the following works: "Hexachordum, sive questiones musicæ practicæ," Nuremberg, 1589; "Teutsche Spruch auss Southglichen Evangelien durchs gantze Jahr mit 5 Stim. gesucht, &c.," Nuremberg, 1594; "Cantiones Sacre, 5, 6, 8, et 9 voc.," Nuremberg, 1595; and "Regensburgischer Kirchnmusik, &c.," This last book is a collection of Protestant psalms and hymns of the time of Luther.

RASETTI, AMADEO, an Italian professor of the harpsichord, resident at Paris, published there, among other works, "Six Sonatin. p. le Clav. dans le Style d'Eckard, Haydn, Clementi, Cramer, Steibelt, et Mozart, Part. I. et II.," Op. 7, Paris, 1792; "Premier Recueil de Romances, avec Clav.," Op. 8, Paris, 1791; "Potpourri arrangé pour le

Clav., No. 21," Op. 9, Paris, 1795; "Trois Sonat pour le Clav., No. 1, Solo, No. 2, avec V. et B., No 3, avec 2 V., A., et B.," Op. 10, Paris, 1796; "Trois Trios pour le Clav., Fl., ou V., et Vc.," Op. 13, Paris, 1799; and "Six Qual. Conc. pour 2 V., A., et B.," Op. 7, Paris, 1788.

RASI, FRANCESCO, an Italian composer, published "*Madrigali*," Venice, 1613.

RATHE, a celebrated clarinetist and composer for his instrument at Paris, in the latter part of the last century.

RATHGEBER, VALENTIN, a Benedictine monk in Franconia, and church composer, published numerous works between the years 1722 and 1730.

RATTI, BARTOLOMEO. Chapel-master at Padua, and church composer, in the beginning of the seventeenth century.

RAUCH, ANDREAS, organist of a town near Vienna, published several musical works, amongst which are "Thymiatarium Musicale, &c.," Nuremberg, 1625; "Concentus votivus," Vienna, 1634; "Motetti, deutsche Concerte und Misse von 3 und 4 Stim. mit V.;" and "Currens triumphalis musicus."

RAULT, FELIX, a celebrated French flutist, was born at Bourdeaux in 1736. The following, among many other of his works, were published: "Trois Duos pour deux Fl.," Op. 1, Paris, 1796; "Trois Duos pour deux Fl.," Op. 2, Paris, 1796; "Deux Concert. pour Fl., No. 1, in D, No. 2, in G," Paris; "Six Duos facil. pour deux Fl.," Op. 5, Offenbach, 1797; "Six Duos pour Deux Fl.," Op. 6, Paris; "Six Duos pour deux Fl.," Op. 7, Paris; "Six Duos Concert. pour deux Fl., Liv. 1 et 2," Op. 8, Paris, 1798; and "Six Trios pour deux Fl. et Basson," Ops. 25 and 26, Paris and Offenbach.

RAUPACH, CHRISTOPH, organist at Stralsund, was a celebrated performer and composer; he was born in the duchy of Schleswick in 1686; and received his principal musical instruction from his father, who was also an organist. When he had attained the age of fourteen his father died, and young Raupach then proceeded to Hamburg, where he continued his musical education under a celebrated organist, named Bronner. After passing two years in this city, he was requested by his brother to return to Rostock, and to become a candidate for the place of organist at Stralsund, which was then vacant. He did so, and obtained the appointment, being then under seventeen years of age. His success, however, caused no relaxation of his studies, and from that period he composed much, and wrote several theoretical works on music.

RAUSCHELBACH, JUSTUS THEODOR, organist at Bremen, was a pupil of Emanuel Bach. He published several operas of piano-forte music at Leipzig, subsequently to the year 1789.

RAUZZINI, VENANZIO. This excellent musician was born at Rome, in 1747, and was dedicated from his infancy to the profession of music. At an early age he had acquired considerable celebrity, and, while a very young man, was engaged as a principal singer at the opera in Vienna. In the great cities of Germany, this was a very distinguished station; and in some of the petty courts, where the business of a primo

minister consisted chiefly in arranging the amusements of his master, the appointment of a leading singer was one of the most important functions attached to his high office. From Vienna, Rauzzini was induced to proceed to Munich, and remained several years in the service of the Elector of Bavaria. At this time he was seen by Dr. Burney, in whose musical tour he is mentioned in terms of warm approbation. In 1774 he was engaged as one of the principal singers at the opera in London, and carried with him to England the reputation of being the best performer on the piano-forte yet seen, and of understanding composition better than any public singer who had preceded him. After a short residence in the metropolis, he settled at Bath, where he formed a connection with La Motte, as conductor of the concerts. The imprudence of the latter obliged him shortly after to withdraw, and Rauzzini was left singly in the concern; which he continued to conduct from that period, with the greatest credit to himself, and most perfect satisfaction on the part of the public. In private life, few men were more esteemed; none more generally beloved. A polished vivacity of manners, a mild and cheerful disposition, and a copious fund of general and polite information, rendered him an attractive and agreeable companion. Constitutionally generous and hospitable, he delighted in society. His natural gaiety of temper, the mode of his education, and an improvidence common amongst his countrymen and those of his profession, occasionally involved him in difficulties; but his principal embarrassments were occasioned, early in life, by the advantages which were taken of his inexperience and facility. As a scientific musician, Rauzzini long ranked amongst the first in England. He was the composer of several operas, and of a great variety of detached pieces of acknowledged merit. His taste and abilities as a teacher were unrivalled. Some of the first performers have ingenuously avowed the benefit which they derived from his instruction and advice; and the public will acknowledge its share of the obligation, since Mara, Billington, Mountain, Braham, and Incedon may be named amongst his pupils. Rauzzini died at Bath, in the year 1810, aged sixty-two. At his funeral, Braham and a select number of his musical friends were chief mourners.

RAVA, GAETANO. A Neapolitan dramatic composer in the latter half of the last century.

RAVAL, SEBASTIAN. A Spanish contrapuntist, resident at Rome about the year 1600.

RAVENS CROFT, JOHN. A violinist and composer, chiefly of harp-pipes. He died in London about the year 1745.

RAVENS CROFT, THOMAS, an English bachelor of music, published "A brief Discourse of the true, but neglected, Use of characterizing the Degrees by their Perfection, Imperfection, and Diminution in measurable Musick, against the common Practise and Custome of these Times," London, 1614; also, "The whole Book of Psalmes, with the Hymnes Evangelicall, and Songs Spirituall, composed into four Parts, by sundry Authors, to such severall Tunes as have bene and are usually sung in England, Scotland, Wales, Germany, Italy, France, and

the Netherlands," London, 1621. These psalms are all arranged for four voices. Ravenscroft is, however, now better known as the composer of the popular glee, "We be three poor mariners."

RAVEZZOLI, an Italian composer, flourished towards the middle of the eighteenth century. At the age of twenty-five, he was nominated chapel-master of St. Peter's at Rome, after a contest with many competitors; who, to revenge themselves, procured a female to be introduced in the Vatican, where Ravezzoli professionally resided, and where no woman was allowed to enter. He was then informed against, and imprisoned in the Castle of St. Angelo. There, in the midst of his violent chagrin, he made the words and composed the music of a duet expressive of his wretched situation, and wrote it on the wall of his prison with a piece of charcoal. A copy of this composition was, according to the editors of the French "Dictionary of Musicians," in the possession of Barni, the violinist, in 1811. After Ravezzoli's death, the female who had been placed in the Vatican confessed that he had been made the victim to the jealousy of his rivals.

RAVVIVANDO. (I.) Reviving, reanimating, accelerating; as, *ravvivando il tempo*, animating or quickening the time.

RAWLINGS, THOMAS, an English musician, was born about the year 1703. He performed at almost all Handel's oratorios, operas, &c., and was a scholar of the celebrated Dr. Pepusch.

RAWLINGS, ROBERT, son of the preceding, and born in 1742, was, at the early age of seventeen, appointed musical page to the Duke of York, and organist of Chelsea College. He received his first musical tuition under his father, and subsequently studied under an old Italian, named Barsanti, at that time in England, and who was considered a very celebrated theorist. He travelled on the continent during nine years with his master, and until his death; on which event taking place abroad, Rawlings returned, and resumed his musical career, entering the king's band, which appointment was given him, personally, by his majesty George III. He was also elected one of the queen's private band. He died in the year 1814.

RAWLINGS, THOMAS A., son of the preceding, was born in 1775. He received his earliest instructions in music under his father, who, on his son's attaining the age of about seven, began to teach him music, without having, in the first instance, any idea of making it the boy's profession. When young Rawlings, however, was in his thirteenth year, his father expressed a wish that he should study music with a view to the profession; and this arose from his perceiving in the lad, about that time, no common genius for the art. His next anxiety was to select one of the first masters in theory for him; and he was doubtful whether to fix on Baumgarten, a man of known celebrity, or Dittenhofer, also a very eminent theorist, but finally determined upon the latter. Young Rawlings then continued to prosecute his studies with attention for seven years, during which period he composed some music for the Professional Concert-

that was received with distinguished applause; so much so, that he was even engaged by the committee for the concert to compose a *quartetto* expressly for their performances in the following season. Instrumental music not being at that time much patronized, Rawlings discontinued writing, and performed on the violin and violoncello at the Opera, Ancient, Vocal, and all the first concerts, including the City and Philharmonic, also giving instruction on the piano, violin, and thorough bass. We should mention that during the period he was under Dittenhofer, the celebrated Haydn visited England, for Salomon's concerts, when Rawlings had the honor of being introduced to him by his master, who was on terms of great intimacy with Haydn. Rawlings had now several opportunities of witnessing the scoring, by Haydn, of some of his celebrated symphonies. The first piano-forte piece composed by Rawlings was, we believe, "No. 10 of the National Melodies," (published by Chappell,) which met with very great success; so much so as to induce him to continue writing for the piano. Among the best of his productions are the following: "The Bugle," (Flute ad lib.) "Spring," "May Day," "Les Plaisirs de la Chasse," "Le Retour," (Flute ad lib.) "The Wreath," duet; "The Bouquet," duet; "Kelvin Grove," (Flute ad lib.); "Aurora ah Sorgerai;" "Concerto di Camera, with Accts. for Flute, two Violins, Tenor, and Violoncello;" and several others of minor consideration.

RAWLINS, JOHN, an English clergyman, published, in 1773, a work entitled "The Power of Music, and the particular Influence of Church Music: a Sermon preached in the Cathedral Church of Worcester, at the Anniversary Meeting of the Choirs of Worcester, Hereford, and Gloucester."

RAYMONT, a French poet and composer, brought out at the Théâtre Beaujolois in Paris, previously to the year 1788, the following operettas, of which he wrote both the words and music, with the exception only of the words of the last named: "L'Amateur de Musique," "L'Amant Celo," "Anacreon," "L'Armoire," "Le Chevalier de Letigny," and "Le Braconnier."

RAYMUNDUS, VICTORIUS, a composer of the sixteenth century, published at Venice, in 1584, "Missa, 3 à 5 Voci, Lib. 1."

RE, BENEDETTO. An Italian contrapuntist, about the year 1590. Bonometti has preserved several of Re's motets, in his "Parnass. Mus. Ferdinand."

RE, GIUSEPPE. An Italian dramatic composer, born at Vercelli. His works bear date since the year 1783.

RE. The syllable applied by Guido to the second note of his hexachords. In the natural hexachord, it is expressed by the letter D. It is the second syllable in the diatonic scale—Do, Re.

READ, RICHARD. An English church composer and bachelor of music, about the year 1592.

READING, JOHN, a pupil of Dr. Blow, was lay vicar, and also master of the choristers, in the cathedral church of Lincoln. Removing from thence, he became organist of the parish

church of St. John, Hackney, and afterwards of St. Dunstan in the West, and St. Mary Woolnoth, London. He published, towards the end of the seventeenth century, a collection of anthems of his own composition.

REBEC. A Moorish word, signifying an instrument with two strings, played on with a bow. The Moors brought the *Rebec* into Spain; whence it passed into Italy, and after the addition of a third string, obtained the name of *Rebecca*, whence the old English Rebec, or fiddle with three strings. For the lively, as well as rural character of this instrument, we have the testimony of Milton and other authors.

REBEL, JEAN FERRY. A French violinist, and composer of light music for his instrument, in the early part of the last century.

REBEL, FRANCOIS, son of the preceding, born at Paris in 1701, was superintendent of the royal music, and director of the opera at Paris. In conjunction with his intimate friend, F. Francœur, he brought out the following operas at the Royal Academy of Music: "Pyrame et Thisbé," 1726; "Thyrsis et Zélie," 1728; "Scanderberg," 1735; "Le Ballet de la Paix," 1738; "Les Augustales," prologue, 1744; "Zelindor et Ismène," 1745; "Les Génies Tutélaires," 1751; and "Le Prince de Noisy," 1760.

REBELLO, JOAO SOARES, or JOAO LOURENCO. A celebrated Portuguese composer, born at Caminha in 1609. When in his fifteenth year, he entered the service of the royal house of Braganza. His compositions were replete with fire and energy. Rebello died near Lisbon in 1661. Many of his manuscript compositions are in the Royal Musical Library at Lisbon; and amongst his public works is "Psalmi tum Vesperarum tum Completorii. Item Magnificat, Lamentationes, et Miserere," Rome, 1657. This work is in seventeen volumes, large quarto.

REBELLO, MANOEL, a celebrated Portuguese composer, and chapel-master at Evora, and born at Aviz, in the province of Transtagana, flourished about the year 1625. Many of his masses, motets, &c., are in the Royal Musical Library at Lisbon.

REBER, NAPOLEÓN HENRI, a distinguished French composer, was born on the Upper Rhine in 1807. In 1828 he went to the Conservatory at Paris, and studied under Reicha, Lesueur, and others. Since 1835 Reber has distinguished himself by the composition of symphonies, quintets, quartets, &c.; and more recently by several operas for the Opera Comique, as "Le Nuit de Noël," "Le Père Gaillard," &c. In December, 1853, he was elected a member of the French Academy, in the place of Onslow, deceased.

RECHEAT. An old term applied by Hurten to the series of notes which they wind on the horn, to call back the hounds from a false scent, when they have lost their game.

RECHERCHE, (F.) Research. The name formerly given, by the French, to a certain kind of cadence, in which the performer, by some extemporaneous prelude, leads the ear to the subject and style of the piece he is going to play. The Italians call *recherches*, or cadences,

those *arbitrii*, or points, introduced by the singer, according to his fancy and genius, while the accompaniment ceases, and from which he returns, at his pleasure, to the subject matter of the air.

RECITAL. Formerly the general name for any performance with a single voice, but at present only applied to recitative.

RECITANTE, or RECITANDO. (L.) In the style of a recitative; or declamatory.

RECITATIVE. A species of musical recitation, forming the medium between air and rhetorical declamation, and in which the composer and performer, rejecting the rigorous rules of *time* endeavor to imitate the inflections, accent, and emphasis of natural speech. Recitative (so called because its true province lies in narration at 1 recital) was first introduced in the year 1660, by Emilio del Cavaliere, at Rome; and was so powerfully recommended by its effect as to be speedily adopted in other parts of Italy, and, by degrees, through the rest of Europe. The force and beauty of this species of composition will ever, in a considerable degree, depend on the character of the language in which it is used; as that is more or less accented and melodious, so the more or less natural and striking will be the effect of the recitative. The ancient Greeks, whose language itself was melody, recited all their poetry in a kind of recitative; and, from the musical tones of their syllables, they could, as it were, sing in speaking. But all the modern languages, not excepting even the Italian, are too distant from that musical sweetness to admit of that melodious intonation, and we are consequently obliged either to sing or to speak; we cannot, as it were, do both at the same time. And it is this distinction which has rendered recitative or artificial declamation so necessary to the moderns; the transition from air to natural speech would, in our oratorio, serious opera, or cantata, be too abrupt, not to offend and disgust the ear. There is no province of musical composition in which genius and science have an ampler scope for their fairest and fullest display than in recitative, upon success in which connoisseurs more highly reckon, because they know there is none in which excellence is more difficult of attainment. In Italy it is sufficient to excel in recitative to be ranked with the most illustrious of their composers; and some masters have been immortalized for their talents in this species of writing. But however highly we may, with justice, reckon upon the beauty and value of good recitative; though it is nothing less than a species of unmeasured melody, highly impassioned and strongly expressive, and forms a union between the air and the words at once gratifying to the ear and consonant to the feeling, and always introduces the song by which it is succeeded with a heightened and interesting effect; yet it ought, nevertheless, to be sparingly employed, and should never continue longer at a time than the contexture and business of the scene absolutely demand. Most vocal composers, from Emilio down to those of the present day, do not appear to have been sufficiently attentive to the necessary brevity, nor sufficiently aware that, however beautiful and interesting recitative may be in itself when duly limited, it becomes wearisome the moment it exceeds a certain length; and by previously fa-

tiguating the attention, not only enfeebles its own intended effect, but defeats the grand object of advantageously preparing the ear for the approaching melody.

Recitative is a sort of artificial declamation, adapted to musical notes, by which means it forms a kind of medium between ordinary recitation and measured air or song. It is generally met with in Italian operas, serious or comic; in oratorios, masses, and other sacred compositions; in serenatas, cantatas, &c., and other pieces, consisting of several movements, in which only music is employed. It serves to connect the different situations, scenes, &c., and to narrate sentiments and events past, present, and to come. It is always written in common time of four crotchets in a bar. The lengths of the notes, as given by the composer, are merely approximations; they are executed by the singer absolutely according to his fancy; sometimes long, sometimes short; sometimes in a hurried and impassioned style of delivery; sometimes in one that is tranquil and sedate, according to the passions expressed by the words, and to the singer's conception of them. Recitatives are not written in any fixed or permanent key; indeed, they generally begin in one key and conclude in another, modulating frequently and at will. The signature is generally that of C, though the key in which the recitative actually begins is frequently influenced by that of the preceding movement; as is that in which it concludes, by the key of the movement which immediately follows it. The laws of prosody, as to long and short syllables, accent, emphasis, punctuation, &c., must always be strictly attended to. In recitatives, the words are never repeated, and only one note is sung to each syllable. All grace notes and embellishments are of course excluded by this rule, except, in some highly impassioned situations, an occasional rapid flight of notes, or *volatina*, may be introduced to connect distant intervals. No positive rules can be assigned for singing recitative. The singer must study to express with energy and propriety, the impassioned feelings conveyed by the words. All that the voice recites in any one phrase must belong to a single chord. He must never recite on a chord not heard previously or indicated at the very moment of the change by the accompaniment; for, as the voice passes from one chord to another, it is the peculiar province of the accompaniment to support and assist it. A *simple* or plain recitative is generally written with no other accompaniment than a bass part, of which the notes are figured, so as to indicate the chords upon which the recitative is constructed. The harmony thus indicated is generally played, on a piano-forte, by striking the chords, when changes in them occur, quite *short* and *plain*, or occasionally also by arpeggiating them. In the Italian opera, oratorios, and other public performances, the violoncellos also take the chords in arpeggio to make them more sensible to the singers and to the audience. In sacred music, long holding notes, as *semibreves* and *minims*, are sometimes given to the principal instruments of the orchestra; these are generally held on from one chord to another, when this is possible; sometimes quickly reiterated, or *tremolo* notes are used in place of holding notes. In all these cases, however, no regular time or measure is observed; all depends on rules of prosody and

the fancy of the singer, to whom the orchestra is wholly subservient. The phrases of simple recitatives are often interrupted by short symphonies, or *ritornelli*, given to the orchestral or piano accompaniment. These interjected passages generally consist of fragments of measured air or melody, or of short and striking descriptive passages, clothed in regular rhythm. Recitatives of this sort are said to be *ob'igato*, or *accompanied*. As soon as any one of these intermediate fragments is concluded, the recitative is again written in $\frac{1}{2}$ time, and declaimed in the same free manner as before.

RECITATIVE ACCOMPANIED. A recitative is said to be accompanied when, besides the bass, there are *parts* for other instruments, as violas, hautboys, flutes, &c. When the recitative is measured, i. e., performed to the rules of time, the accompanists have only to observe those rules; but when unmeasured, as recitatives generally are, the instrumental performers take for the guide of their time the syllabic progress of the singer; for which purpose the words as well as the notes of the vocal *part* are written in their books, on separate staves, under the notes of the accompaniment.

RECITATIVO SECCO, or PARLANTE. (I.) Simple recitative, or recitative unaccompanied. See **RECITATIVE**.

RECITATIVO INSTRUMENTATO. (I.) Accompanied recitative.

RECLAME. (F.) The song of a bird.

RECLAMER. (F.) To sing in imitation of a bird.

RECOMPOSED. Composed again; as Milton's "Masque of Comus," originally set to music by Henry Laws, was afterwards reset, or *re-composed*, by Dr. Arne.

RECORD. Among bird fanciers this verb is used to signify the first essays of a bird in singing. Bullfinches, and some other birds, are taught to sing with a kind of flageolet, called a recorder.

RECORDER. An old wind instrument somewhat resembling a flute, but of a smaller bore and shriller tone. It is said to have had six holes, and to have answered to the *tibia minor*, or flageolet of Mercurius. This instrument has been, by some musical authors, confounded with the flute; and we meet with old books of instruction for the flute, the directions of which are also professedly given for the recorder.

RECTE. (L.) A word signifying *forwards*, and particularly pertaining to the *canon*.

RECTOR CHORI. (L.) The director or regulator of choral performances.

REDITTA. (I.) The same as *repeat*, *replica*, *replicato*, and *represa*; all which signify that we are to repeat the strain, or movement, over which it is written.

REDFORD, JOHN, organist and master of the choristers at St. Paul's Cathedral in London, about the year 1543, is proved to have been a good contrapuntist by one of his four part anthems, published by Sir John Hawkins in the first volume of his history.

REDI, FRANCESCO. A celebrated Italian singer, towards the end of the seventeenth century. In 1703 he established a singing school at Florence, which afterwards became very celebrated. Amongst the eminent pupils of this school was Vittoria Tesi.

REDOWA. A slow and graceful dance in triple time.

REED. The little movable tube attached to the mouth of a hautboy, bassoon, or clarinet, and through which those instruments are blown. Also the name given by organ builders to a kind of *langue*, consisting of a thin, narrow plate of brass, and which, being fixed to one end of an organ pipe, is put into a vibratory motion by the action of the wind, and produces a reedy thickness of tone. Those stops of an organ which consist of pipes so furnished are called *reed stops*.

REEDY-TONED. Said of any voice, the quality of which partakes somewhat of the tone of the reed.

REEL. A lively Scotch dance, generally written in common time of four crotchets in a bar, but sometimes in jig time of six quavers.

REDOUBLED. An epithet applied to any simple interval carried into its octave; as the thirteenth, composed of a sixth and octave, is a redoubled sixth; and the fifteenth, containing two octaves, is a redoubled octave. To find the simple of any redoubled interval, we must throw out seven as often as the compound will admit, and the remainder will be the name of the simple interval; as seven thrown out from thirteen leaves the simple interval of a *sixth*, and twice seven taken from fifteen leaves that of a *second*.

REDUNDANT KIND. An interval greater than that of the major third, and forming a passing chromatic to the fourth.

REDDOLENDO. (I.) To be performed, by voice or instrument, in a soft and pleasing style.

REEVE, WILLIAM, was born in London in 1757. He was not originally intended for the profession of music. His father placed him as a writer to a law stationer. He did not long continue in this employment, but became a pupil of Richardson, organist of St. James's Church, Westminster, who instructed him in the principles of music. After his education was completed, he, in 1781, accepted the appointment of organist at Totness, in Devonshire. In this situation he continued about two years, when he had the offer of an engagement from the Astleys, to compose music for the pantomimes and dramatic spectacles exhibited at their theatres. On this he returned to London, and continued for several years in their employment. He was also for some time an actor at the regular theatres, and in the year 1789 is stated to have performed the Grinler, in "The Enraged Musician," at the little theatre in the Haymarket, with considerable applause. Whilst the pantomime of "Oscar and Malvina" was in preparation at Covent Garden Theatre, a disagreement took place between the managers and Mr. Shield, in consequence of which that gentleman was induced to send in his resignation. Reeve, at that time a chorus singer in the same theatre, was requested to complete the piece by writing an overture and

some of the vocal music. The public were pleased with his efforts, and from this period he became a successful dramatic composer. About the year 1792 he was elected organist of the Church of St. Martin, Ludgate, which situation he resigned. He was also a joint proprietor at Sadler's Wells; and, by his industry and abilities, acquired a considerable independence.

Reeve's chief forte was in the composition of comic songs, and in these he was eminently successful. His pieces for the theatre are very numerous, and are principally as follows: "Oscar and Malvina," pantomime, 1791; "Orpheus and Eurydice," 1792; "Apparition," musical drama, 1794; "British Fortitude," musical drama, 1794; "Hercules and Omphale," pantomime, 1794; "Merry Sherwood," pantomime, 1795; "Harlequin and Oberon," pantomime, 1796; "Bantry Bay," musical interlude, 1797; "Round Tower," 1797; "Joan of Arc," historical ballet, 1798; "Embarkation," musical entertainment, 1799; "Harlequin Almanac," 1801; "Caravan," musical romance, 1803; "The Dash," musical farce, 1804; "White Plume," musical romance, 1806; "An Bratach," 1806: in conjunction with Mazzinghi, he composed "Ramah Droog," comic opera, 1798; "Turnpike Gate," 1799; "Paul and Virginia," 1800. He also wrote part of the music in the "Cabinet," 1802; "Thirty Thousand," 1804; "Kais," 1808; "Tricks upon Travellers," 1810; and "Outside Passengers," 1811. Reeve also published a work entitled "The Juvenile Preceptor, or Entertaining Instructor; a complete and concise Introduction to the Piano-forte, with twenty-four Lessons and four easy Duets."

REEVE, COTTON, is a native of Norwich, and the only son, as also a pupil, of John Reeve, a man who, during half a century, was equally respected and known in the counties of Norfolk, Suffolk, and Cambridgeshire for his talent as a musician and composer of simple and plaintive melodies. His grandfather and great-grandfather were of the same profession. When Cotton Reeve was a boy his father was unfortunately induced to embark his money in trade, and in a short period lost the accumulation of thirty years' prosperity and industry; which circumstance, added to the illiberal treatment the son received from some gentlemen of Norwich, induced him to go, "unknowing and unknown," to London. On his arrival there he was engaged as a deputy at Vauxhall Gardens, and in the course of the season as a regular performer. At that time he commenced seriously studying the violin, and took lessons of Salomon for two years. The ensuing winter he was also engaged at the Italian opera, where, in process of time, he worked his way to the top of the orchestra, having been for several seasons principal second, and on the death of Weichsel, senior, officiated for his son as leader; his business during this time extending in the first line of concerts, &c., both public and private. He was afterwards leader at Vauxhall Gardens and the Haymarket Theatre, and in 1819 was sent for by Mr Harris, and engaged for a term of years as leader at Covent Garden Theatre. Of his compositions few have been published, and those are chiefly confined to themes written for the use of his pupils rather than for emolument or public celebrity.

REEVES, J. SIMS, the tenor, is of a musical family. He has created the greatest sensation of any tenor since the days of Braham. He has three sisters and a brother, who in 1850 were in the Royal Academy of Music. His father was a professor of music and singing; and from the paternal instructions did young Reeves, who was born in Woolwich in 1821, acquire the first rudiments of music. Like the tenor Garcia—the father of Malibran and Pauline Viardot—the elder Reeves was a severe taskmaster, and the child of seven years had hard studies to pursue; but he was already passionately attached to "sweet sounds," and up to the age of twelve remained at home to continue the discipline. While at a grammar school for two years, Reeves never neglected his musical studies; and he sang occasionally at concerts, having a beautiful soprano voice. At fourteen he became a pupil of H. Calcott for harmony and counterpoint, and of John Cramer for the piano-forte; acquiring at the same time some knowledge of the oboe, bassoon, violoncello, and violin, all of which instruments Reeves played pretty well. His passion for singing was increased by constant visits to the Italian Opera, Rubini being the young student's idol. He then took lessons from Hobbs, the tenor, T. Cooke, Salisbury, and others; and in June, 1839, made his *début* as first tenor at Newcastle-on-Tyne. Encouraged by this reception, Reeves resolved to visit and study in Italy, making Milan his head quarters, and availing himself of the valuable instructions of the celebrated singing master, Mazzucato, the chief *maestro di canti* at the Conservatorio. It was under his able guidance that Reeves acquired a thorough understanding of the formation of voice and the production of tone. Under the Maestro Bajetti, Reeves's schooling may be regarded to have terminated for finish of execution and refinement of method; and then he made his *début* at La Scala, having been engaged for two years by Merelli.

W. H. Reeves, who has sung in New York and Boston, connected with the Bishop troupe, is a brother of the above-named J. S. Reeves, and with good taste, chaste style, great compass of voice, and a pleasing person, takes a high rank in his profession.

REFRAIN. The burden of a song, or *return* to the first part, as in a rondo.

REGAL. The name formerly given to a kind of organ, very different in its construction from our barrel organs, but which, like them, was portable.

REGGIO, HOSTE DA, an Italian contrapuntist of the sixteenth century, published, amongst other works, "*Madrigali e Motetti à 3 voci*," Venice, 1562.

REGGIO, PIETRO, a celebrated luteist of the seventeenth century, was a native of Genoa, and in early life belonged to the chapel of Queen Christina of Sweden. After she renounced her government, Reggio went to England, and resided some time at Oxford, where he published, in 1677, a small instruction book for singing. He also set to music several of the love songs of Cowley. He next established himself in London, where he died in 1685.

REGGIO, SPERITO DA. Named by Cerveto as one of the most celebrated composers of the sixteenth century. Amongst his works is to be found, in the Munich library, "*Madrigali à 5 voci*," Venice, 1568.

REGGIO, ANTONIO, published at Amsterdam, about the year 1776, "Six Sonatas for the Harpsichord."

REGINA CÆLI. (L.) A hymn to the Virgin.

REGISTER. A term applied to the compass, or graduated notes, of a voice. It is also a stop on the organ. A series of notes exactly similar in quality in the voice or any instrument.

REGLE DE L'OCTAVE. (F.) Rule of the octave. An expression applied by the old writers on harmony to the rule for accompanying the eight notes of a key; which, sometimes, they also call *Quadrebte Syghte*.

REGULAR. Alike applicable to any clef, motion, phrase, or section.

REGNARD, JACOB, vice chapel-master to the Emperor Rudolph II., at Prague, was born in Flanders. He was a very voluminous composer, chiefly of vocal music for the church. His works bear date from the year 1552 to 1611.

REGNARD, FRANÇOIS, an instrumental performer in the orchestra of the cathedral church at Dornick, in 1570, was born at Douay, in Flanders, and considered amongst the good composers of his time. He set to music much of the poetry of Ronsard, for four and five voices. He also published "50 *Motetti à 4 e 5 voci*," Douay, 1575, and "*Chansons à 4 e 5 part.*," Paris, 1579.

REGO, PEDRO VAZ, chapel-master at Elvas, in Portugal, was born in 1670. He was considered one of the most scientific and industrious composers of his time. He died at Evora in 1736.

REHEARSAL. The private execution of any music preparatory to its public performance. Rehearsals, especially of new music, are indispensably necessary, not only to ascertain that the parts are correctly copied, and the performers perfect, but to afford the composer an opportunity of explaining to the band the spirit and design of his work, and of making such alterations and improvements in the composition as the effect may suggest.

REGOLA. (L.) A rule, or formula; a precept.

REICHA, JOSEPH, was born in 1746. He was chapel-master, about 1787, to the Elector of Cologne at Bonn. Amongst his works, which are much esteemed in Germany, are "6 *Duos Conc. p. V. et Vc., Liv. 1 et 2*," Op. 1, Bonn, 1795; "3 *Concerts p. le Vc., Liv. 1, 2, et 3*," Op. 2, Offenbach, 1799; "*Sinfon. Concert. p. 2 V., ou V. et Vc.*," Op. 3, Bonn, 1795; "2 *Concerts p. le Vc. in D et C*," Paris, 1792; "3 *Duos p. V. et Vc.*," Op. 4, 1802; and "*Concert. p. le Vc., Liv. 1*," Op. 4, 1803.

REICHA, ANTON, nephew of the preceding, was born at Prague in 1770. At a very early age he quitted his native country, and resided

with his uncle at Bonn, where he received his education. When still a boy, he had an irresistible propensity for music, especially composition, and was at first obliged to gratify his desires in this respect without the knowledge of his uncle. It was at the same time with the celebrated Beethoven, his junior by two years, and a native of Bonn, that he learned the elements of the art. Different books, such as those of Marpurge, Kirnberger, Sulzer, and Mattheson, served them for guides. The first public attempt of Reicha in composition were some Italian scenes for the concerts. These had such success, that no one at the court of Cologne would at first credit their being written by a boy. When only seventeen years of age, he produced his first symphony. In 1794 he left Bonn for Hamburg, where he remained five years, applying himself without intermission to the study of his profession. He then found his knowledge of algebra of essential service to him in his musical studies. Whilst at Hamburg, he wrote the music of a French opera, in two acts, entitled "*Godefroy de Monfort*," for which piece the manager of the French opera there made him a very handsome offer, after hearing its rehearsal. He was, however, advised to bring the work out at Paris, and accordingly arrived there, in 1799, making his *début* as composer at the concert of Cléry, by a symphony, which had prodigious success. In the mean time, the performance of his opera was deferred from time to time by the differences between the two theatres Favart and Feydeau. They at length united, and Reicha's composition was just about to appear, when he withdrew it, being under the obligation of quitting Paris for Vienna. It is in this city that he lived in the closest friendship with Haydn, Albrechtsberger, Salieri, and Beethoven. Amongst the numerous works which he composed and published at Vienna, were symphonies and other instrumental pieces, oratorios, a requiem, &c. He also brought out a work entitled "*36 Fugues pour le Piano, précédées d'une Ode Dedicatoire* [in German] à Joseph Haydn." These fugues had such success, that the edition was exhausted within a year. He was then commanded by the empress, mother of Maria Louise of France, who was a distinguished musical amateur, to compose some scenes of an opera seria in two acts, called "*Argene Regina di Granatta*;" when the empress was so gratified with the composition, that she desired him to finish the opera, and sang herself, at her private concerts, the songs written for the part of Argene. It is probable that Reicha would never again have quitted Vienna, but for the various political events which disturbed the peace of that capital in the first years of the present century, and rendered it an unfit residence for a man devoted to peaceful studies. Be this as it may, he returned to Paris in the year 1808, in which capital he remained as one of the professors at the Conservatory, giving instructions in, and lectures on, composition, at that great national establishment. Reicha was a professed admirer and follower of the great Haydn, whom he has most elegantly apostrophized in the poem prefixed to his before-mentioned fugues. His merit as a theorist has been manifested to the world in a clear and comprehensive treatise on melody, and in a work entitled "*Cours complet de Composition Musicale, ou Traité complet et raisonné d'Harmonie*"

pratique," replete with the best rules of art, and invaluable to the musical student. His practical skill has been shown in a variety of compositions, but especially in some admirable quintets, composed expressly for the flute, clarinet, cor Anglais, French horn, and bassoon; these are performed frequently at L'Ecole des Fils d'Apollon, and, indeed, on all occasions when first-rate performers on the appropriate instruments assemble together. No description, no imagination, can do justice to these compositions. The effect produced by the extraordinary combinations of apparently opposite toned instruments, added to Reicha's vigorous style of writing and judicious arrangement, have rendered these quintets the admiration of the musical world.

Reicha of middle stature, and most urbane manners, his general courtesy greatly endearing him to strangers, to whom he was uniformly obliging. In private life he was cheerful and amiable; his favorite amusement was a game of tric-trac. His rooms were decorated with a profusion of elegant and curious articles, which had been presented to him by numerous individuals in public and private life, as testimonies of friendship, and of the respect and admiration due to his genius and perseverance. In Germany, Reicha was very commonly called the restorer of fugue. He died the 28th of May, 1836.

REICHARDT, JOHANN FRIEDRICH, chapel-master to three kings of Prussia, namely, Frederic II., Frederic William II., and III., manager of the French and German theatres, and conductor of the orchestra to the King of Westphalia, and member of several learned societies, was born at Königsberg, in Prussia, in 1752. At the age of ten, his musical talent was such, that he travelled to several of the great towns in the north of Europe, for the purpose of exhibiting his performances on the violin and piano; for the former of which instruments he was the pupil of Veichtner, of the school of Benda, and for the piano, of Reichter. In 1769, and 1770, Reichardt studied at the University of Königsberg, under the celebrated philosopher Kant, and in the two following years he belonged to the University of Leipsic. He then travelled through Germany, and, on his return to Prussia, was appointed to a place under government. Towards the close of the year 1775, after the death of J. G. Graun, Reichardt was appointed his successor, as royal chapel-master, by Frederic the Great; which appointment he is said to have owed to the composition of an Italian opera that he had sent to the king, the same opera having also been composed by the two chapel-masters, Naumann, of Dresden, and Schwabenberger. He now continued assiduously to attend to composition in the style of Graun and Hasse, for the Italian opera of Frederic, and established at Berlin a spiritual concert, where the *chef-d'œuvre* of Leo, Majo, Jomelli, Sacchini, Piccini, Berton, &c. were performed. It is worthy of remark, that Reichardt distributed to the audience at these concerts a book of the words to be sung, containing also an historical and critical sketch of each composer whose works were to be performed the same evening. In the year 1782, he took his first journey to Italy, hastily, however, it being without the king's

knowledge, who disliked the modern music of Italy. In the year 1785, he went to London, where his composition of the "Passion," words by Metastasio, and some Italian scenes by him, were performed at the Pantheon and Opera Concerts. From London he proceeded to Paris, where the same compositions had great success at the *Concert Spirituel*. The Royal Academy of Music then engaged him to compose two operas, namely, "Tamerlan," words by Morel, and, "Panthée," words by Berquin. In 1786 he brought his opera of "Tamerlan" to the theatre, entirely finished, and its rehearsals had commenced, when Frederic the Great died, and Reichardt was obliged to return with all possible expedition to Berlin, to compose a grand funeral cantata, to the words of the Marquis de Lucchesini, and which was to be performed at the interment of the king. A very brilliant epoch for music in Prussia commenced with the reign of Frederic William II. The king's orchestra was united to the excellent band of the prince royal, the whole being placed under Reichardt's direction, who procured several of the most celebrated performers from other parts of Germany, so that, in a short time, the royal band at Berlin was decidedly the finest in Europe. Among the performers in it were the two Duponts, Vachon, Ritter, Thurschmidt, Palsa, and Bähr. The Italian opera was then the principal musical exhibition at the court; Reichardt accordingly composed the operas "Andromeda," "Protesilao," "Brenno," and the "Olimpiade." The style of his music was new, as he attempted to unite the scenic effect and truth of declamation of Gluck, with the beauty and richness of the Italian vocal school, and the powerful orchestral accompaniments of Germany. His ballet music was also written so as to form concertos for the most eminent performers of his orchestra. He also wrote at this time several German comic operas and melodramas for the national theatre. In 1790 he took a second journey to Italy, with the intention of passing the Passion week in Rome, and of seeking throughout Italy, and especially at Naples, some eminent vocal performers for the Berlin opera. In this journey he experienced so much fatigue as to undermine his naturally robust constitution, and on his return to Berlin he was prevented, by the state of his health, from bringing out his opera of "Olimpiade" at the appointed time. Hence arose such mistrust and misapprehensions, as for the first time caused him such chagrin as to be the occasion of his offering the resignation of his musical appointments. The king, however, would not accept of it; but, as Reichardt alleged that retirement was necessary for the reestablishment of his health, his majesty permitted him to pass three years at his country house on the frontiers of Saxony, continuing to him the whole of his salary during the time. The same year, however, two royal marriages of two princesses of Prussia with the Duke of York and Prince of Orange, were to be celebrated, when the king sent for Reichardt, desiring him to give on that occasion his opera of "Olimpiade." Accordingly he did so, and afterwards returned to his retirement. In 1792, he took a third journey to Paris, and on his return published some letters on his travels; soon after which he was suspected of revolutionary principles, and, in consequence, was dismissed

from his situations by the king, at the end of his three years' leave of absence. In 1794 he went to Hamburg, where he commenced editing a periodical journal, called "*Frankreich*," (France,) which had much success during ten years. He then purchased an estate in Holstein. Just as he had done so, however, he was acquitted of the political charge made against him in Prussia, and indemnified for his losses by the situation of director of the salt works at Halle, near which town was his country house, and to which he immediately returned. In 1797, on the death of King Frederic William II., Reichardt was not only continued in his musical offices, but received additional employment from the king, as composer to the Italian opera and national theatre. On occasion of the coronation, he produced the German opera, "*Die Geisterinsel*," (The Isle of Spirits,) altered from the Tempest of Shakspeare; and the following year he composed for the Italian opera "*Rosamonda*," which was so successful that the king made him a present of above two hundred pounds, and increased his annual salary by above one hundred pounds. In 1799 his opera "*Brenno*" was revived, when he again received from the king the sum of one hundred and twenty pounds. The following year he set to music some odes of Frederic II., to celebrate the birthday of that great prince, as also the jubilee of the Academy of Sciences, re-established by him. In 1801 he composed Kotzebue's opera of "*The Enchanted Castle*," for the opening of the new national theatre, also several grand instrumental pieces for a chivalric drama, to be performed at the same theatre. These were followed by several other German dramatic pieces, till the year 1803, when he set out on his fourth journey to France, and was presented to the first consul at Paris, by the Prussian minister, the Marquis de Lucchesini. In 1806, when the French occupied Halle and the surrounding country, Reichardt followed the court of Prussia, and passed a whole year at Dantzic, Königsberg, and Memel. After the peace of Tilsit, when the King of Prussia ceded the principality of Halberstadt and other provinces, the King of Westphalia called together all his new subjects who were possessed of property in his acquired provinces, under a penalty of the confiscation of their estates for non-appearance. The King of Prussia at the same time advised his former subjects of those provinces to appear and lay claim to their property. Reichardt, amongst others, did so. His situation of director of the salt works being, however, suppressed by the new government, he addressed himself to the regency of Cassel, and obtained a promise of indemnification for that place by another of equivalent income. For this purpose he presented himself personally at Cassel, and was proposed by two counsellors of state, as a proper person to be appointed either sub-prefect of Halle, or secretary general to the prefecture of Magdeburg. The King of Westphalia also offered him the places of manager of his German and French theatres, and conductor of his orchestra. The salary of these offices was above three hundred and fifty pounds per annum, and he held them during the year 1808; in the course of which he brought out a grand divertissement, on the occasion of the queen's birthday, another on the return of the king from the baths, also a French operetta en-

titled "*L'heureux Naufrage*." At the close of this year he went to Vienna, to procure additional singers for his court. On his arrival, the directors of the theatre in that city presented him with a beautiful poem, called *Bradamante*, written by the celebrated poet Colin, in the style of Ariosto; they invited him at the same time to set these words to music for the Vienna theatre. He accordingly commenced; but before he could complete the opera, he was recalled by his court, when he entered into a negotiation with the theatrical direction at Vienna for an honorable and lucrative post, which they offered him. Previously, however, to his opera (which had been rehearsed with great success in the palace of Prince Lobkowitz, one of the directors) being performed at the theatre, and before the negotiation for his new place was terminated, a war broke out between Austria and France, when he was obliged again to retreat to his country house near Halle. Here he was nominated correspondent to various learned societies, especially the Institute in Paris. He died in 1814. The following is a list of his works. Printed books: "Letters of an attentive Traveller respecting Music," vol. i. 1775, vol. ii. 1776; "Letters on the Comic Opera, and on Poetry for Music," 1775; "Letters on the Music of Berlin," 1775; "Letters on the Duties of an Orchestral Musician," 1776; "Life of the celebrated Musician Eurico G. Fiorino," 1779; "Musical Magazine," vol. i. 1782, vol. ii. 1788 and 1791; "Spirit of the Musical Magazine," 1791; "The Youth of Handel," 1790; "Letter to the Musical Public respecting the two French Operas 'Tamerlan' and 'Panthee,'" 1788; "Letters to Count Mirabeau on Lavater," 1786; "Musical Gazette," 1791; "The Musical Week," 1792; "The Musical Months," 1793; "France," a political journal, 1794 to 1803; "Confidential Letters, written during a Journey in France," 1803 and 1804; "Berlin Musical Gazette," 3 volumes, 1805 and 1806; "Confidential Letters on Vienna," 1810; and many small essays and criticisms, in different literary and musical journals. Printed music: "Sonatas for the Harpsichord," Berlin, 1771; "*Hanschen und Gretchen*," taken from the French "*Rose et Colas*," an operetta, Riga, 1772; "Mélange of Music for the Piano, Violin, and Voice," Riga, 1773; "*Concerto per il Clavi-Cembalo*," Riga, 1773; "*Concerto per il Violino*," Riga, 1773; "Eleven Concertos for the Harpsichord, written for the Use of Ladies," Amsterdam, 1774; "Italian and German Cantatas and Songs, written for the Use of Ladies," Berlin, 1775; "11 *Sonate per il Clavi-Cembalo*," Berlin, 1776; "*Concerto per il Clavi-Cembalo*," Leipsic, 1777; "Symphony," Offenbach, 1777; "Eleven Sonatas for the Harpsichord, with a Violin Accompaniment," Amsterdam, 1777; "11 *Sonate per il Clavi-Cembalo*," Berlin, 1778; "*Sonate per il Violino Solo e Basso*," Berlin, 1778; "*Sonate a due Violini e Violoncello*," Offenbach, 1778; "*Ino*," duodrama, Leipsic, 1779; "Odes and Songs by Klopstock, Stolberg, Claudius, &c.," Berlin, 1779; "Procris and Cephalus," duodrama, Leipsic, 1780; "Ariadne at Naxos," cantata of Gerstenberg, Leipsic, 1780; "Songs by Goethe, Bürger, Voss, and Sprickmann," vol. ii., Berlin, 1780; "Songs for Children," from the library of Caupe, Hauburg, 1781; "Odes and Songs by Herder, Goethe, and others," vol. iii.,

Berlin, 1781; "Love alone is happiness," opera, in three acts, Dessau, 1781; "Songs for Germans," Dessau, 1781; "Songs for Children," vol. iii. 1786, vol. iv. 1791; "Songs by Klesl, Uz, Hagedorn," Grolkau, 1782; "Two Sonatas for the Harpsichord," Amsterdam, 1782; "Three Sonatas for the Violin, Tenor, and Violoncello," Amsterdam, 1782; "Songs by Gleim and Jacobi," Gotha, 1783; "Light Pieces for the Voice and Piano-forte," Königsberg, 1783; "Sonata per Clavi-Cembalo, col Flauto Obl.," Berlin, 1787; "Cantus Lugubris in Obitum Frederici Magni," Paris, 1787; "Sinfonia dell' Opera 'Andromeda,'" Belg. in. 1788; "Overture dell' Opera 'Protesilao ver à Cemb.," 1789; "Alcuni Ballo e Cori dell' Opera 'Protesilao,' per il Cemb.," 1789; "Cecilia," four volumes, containing canticles, hymns, airs, ducts, trios, quartets, and choruses for the church, 1790-1792; "Cavatina e Rondo dell' Opera 'Olimpiade,'" Brunswick, 1792; "Coro e Ballo dell' opera 'Olimpiade,'" Brunswick, 1792; "Coro e Ballo Triumphali dell' Opera 'Brenno,'" and "Overture dell' Opera 'Brenno.'" Manuscripts. First, Italian operas: "Le Sesse Galanti," opera, in three acts, 1775; "La Gioia dopo il Duolo," a theatrical cantata, in two acts, 1776; "Artemisia," opera, in three acts, 1773; "Andromeda," 1787; "Protesilao," 1778; "Olimpiade," 1790; and "Rosamonda." French operas; "Tamerlan," opera, in four acts, 1785; "Panthée," opera, in four acts, 1786; "L'Heureux Naufrage," operetta, 1808. German operas: "The Woodman," opera, in one act, 1775; "Claudine of Villa-bella," by Goethe, opera, in three acts, 1788; "Hercule," monodrama, with choruses, in one act, 1804; and "Bradamante," opera, in four acts, 1808. Church music: "La Passione di Metastasio," 1785; "Te Deum," for the coronation of Frederic William II., 1786; "Te Deum," for the general peace, 1809; and several German cantatas.

REICHARDT, JULIA, daughter of the celebrated F. Benda, and wife of the preceding, was born at Berlin in 1752. She was one of the best German singers of the last century, and a good performer on the harpsichord. She also composed and published some vocal music, which was much admired. She died in 1783.

REICHEL, F. G. An instrumental composer of Hamburg. Besides many of his compositions known in manuscript, he published the following controversial work: "Musicalischer Querstrich mitten durch des Herrn J. G. B. Unterricht, &c.," Hamburg, 1784; as also, "2 Quadrillen und 10 Englische, für 9 Instr.," Op. 10, Brunswick; "Opera-Arien für 2 Flöten arrangirt," 1797; "2 Cellulons und 12 Angliaisen, für 5 Instr.," Op. 12; "Parthis für 2 Clarionett., 2 Horner, und Fag.," Op. 13; and "Diver. p. le P. F., Fl., V., et Cc.," Op. 16, Hamburg, 1798, in which year he died.

REICHERT. Chamber musician to Count Bruhl, at Dresden, about the year 1755. He wrote the music of the interlude, "Il Giuocatore e la Bacchetona."

REICHWEIN, JOHANN GEORG, chapel-master of the cathedral at Ratisbon, published there the following works: "Delicia Sacrae, sive Missa tres breves à 4 vocib. concert. 2 Viol. ad lib. et 4 Ripien cum B. C. nec non Psalmi. 11 ab und. 2, 7, et 4 vocib. cum et sine Violin. ac Ripienis," 1711; "Sacra Thymiamata;" i. e., "Ofertoria per

Festa Anni majora à 4 vel 5 Vocib., Concertantib., et 5 Instrum.," 1688.

REIMANN, MATTHÄUS, doctor of laws, and counsellor to the Emperor Rodolph II., published the two following musical works: "Noctes Musicae," Leipsic, 1598, and "Cithara Sacra Psalmodie Davidis ad usum testudinis accommoda.," Cologne, 1613.

REIMANN, J. BALTHAZAR, born at Breslau in 1702, was a skilful organist, and published some psalm tunes of his own composition.

REIN, JOHANN BALTHAZAR, musician at Altona, published there, in 1755, a book of psalms for four voices.

REINAGLE, JOSEPH, was born at Portsmouth, England, in 1762. The father of this eminent professor was born near Vienna, and received his education at one of the German universities. He was intended for the church, but afterwards followed music as a profession, and went to England, residing for some time in Portsmouth, where the subject of this memoir was born. The father at first intended his son for the navy, and entered him as a midshipman at an early age; his friends, however, soon abandoned the idea of a naval life for the boy, and he was removed to Edinburgh, where he served two years as an apprentice to a working jeweller; who leaving the country, and not returning, it was resolved that music should be the boy's profession. He was accordingly instructed in the French horn and trumpet by his father, who, through the interest of the musical Lord Kelly, held the situation of household trumpeter to the king. Young Reinagle made great progress, and soon appeared in public as a concerto player on the above instruments. By the advice of his medical friends, he, however, discontinued them, and directed his attention to the practice of the violoncello, of which instrument he rapidly acquired a knowledge, through the valuable instructions of the celebrated Schetkey, who married his sister. His younger brother and pupil, Hugh Reinagle, increasing in fame as a violoncellist, Joseph relinquished the study of the violoncello for that of the violin, under Aragoni and Pinto, and was soon appointed leader of the concerts at the theatre in Edinburgh. His brother Hugh now died in Lisbon, where he had gone for the recovery of his health; when Joseph, feeling a great desire to support the name his brother had so justly acquired as a violoncellist, and acting under the advice of the celebrated John Mahon and other musical friends, resumed the study of the violoncello. He made his appearance as concerto player at the New Musical Fund concert on the same night with J. Cramer, Monzani, and Eley. He was announced to play Borghi's favorite concerto in E flat; but Crossdill having succeeded so well in the performance of that piece, his friends wished him not to play it; he therefore adopted one of his violin concertos, and performed it instead of Borghi's. The time would not allow the bills to be altered, and the audience received his concerto with great applause. Borghi, who was present, was pleased, indeed, to say, that he was flattered by the mistake which had taken place. After the commemoration of Handel in Westminster Abbey, Reinagle went to Ireland, under the patronage

of Lord Westmoreland, then lord-lieutenant. Here a whimsical circumstance happened worthy of narration. The late celebrated Mr. Curran introduced himself to Reinagle, and invited him to dine with some musical friends at his country house, five miles from Dublin. Reinagle, anxious to embrace the opportunity of enjoying that great man's society, most willingly assented; upon which Curran, being in great haste, would not permit our musician to seek for any conveyance, but requested him to ride double on his horse. In this ludicrous way, sitting behind Mr. Curran, they reached his house, to the amusement of many friends they met on the road. Reinagle passed two years in Dublin, and on his return to London played at Salomon's concerts, at which Haydn presided. He then had the honor of enjoying Haydn's intimate acquaintance and friendship, and received many serviceable hints on composition from that great master. He was selected as his principal violoncello at many concerts, where he met Viotti, Salomon, Clementi, Schrocter, &c. At length he was engaged to play at the Oxford concerts, in which city he was so favorably received, that he was advised by Lord Abingdon, and other musical amateurs, to reside there. Reinagle's productions are, in manuscript, "Six Violin Concertos," "Six Violoncello Concertos," also overtures, trios, duets, &c., for violins and piano-forte. Published: "Four Sets of Duets," "Two single Duets," "Treatise on the Violoncello," "Six easy Duets for Violoncello," and "One Set of Quartets for Two Violins, Tenor, and Violoncello."

REINARDS, W., a flutist, published, at Amsterdam and Berlin, many works for his instrument, between the years 1765 and 1797.

REINER, AMBROSIVS, chapel-master to the Archduke Ferdinand Charles of Austria, in the year 1650, published "Motetti à 2, 3, e 4 voci, con V., Lib. 1;" "Motetti à 4, 5, e 6 voci, con 2 V., Lib. 2;" "Motetti à 8 voci, Lib. 3," Innsbruck, 1648; and "Misse à 5 voci, con 3 Stromenti."

REINERUS, JACOBUS, a Benedictine monk, and director of the music at Weingarten, in Swabia, towards the end of the sixteenth century. He was a voluminous composer. Amongst his published works were the following: "Cantiones 5 et 6 vocum," Munich, 1579; "Cantiones Germanicæ 4 et 5 vocum, et vive voci, et Musicis Instrumentis accommodate," Munich, 1581; "Psalmi Penitentiales 3 vocibus concinnati," Munich, 1586; "Teutsche und Lateinische Lieder mit 3 und 4 Stimmen," Laugingen, 1593; "Cantiones seu Motete 4 et 5 vocum, nebst einigen Magnificat," Cosnitz, 1593; "Motete Sacre 5 et 6 vocum," Cosnitz, 1595; "Cantiones 6, 7, 8, adjunctaque in fine una 10 vocum," Munich, 1591; "Cantiones 4 vocum," Munich, 1600; and "Misse 6 vocum," Dittengen, 1604.

REINHARD, a violinist, was, in 1796, *chef-d'orchestre* of the national theatre at Vienna.

REINHARD, ANDREAS. A writer of some Latin works on music, some of which were published at Leipzig in the first ten years of the seventeenth century.

REINHARD, CHRIST. WILHELM, organist at Cassel in 1806, was born there in 1770.

He is considered a good performer, and has composed some instrumental music.

REINHARDT, JOHANN CHRISTOPH, was, in 1789, chamber musician to the court at Gotha, where he published, in 1788, a vocal work entitled "*Geistliche und Moralische Lieder*."

REINHARDT, ADELHEIDE, principal female singer to the court of Gotha, was probably the wife of the preceding.

REINHARDT, JOHANN GEORG. Sub-organist to the court at Vienna, between the years 1721 and 1727. He composed the following works: "*Litanie de B. M. V., à 4 voci*," "*Pastorella sopra il Tema, 'In dulce jubilo, &c., per l'Organo*," and "*Diversi Pezzi per il Cembalo*," 1725.

REINICKE, LEOPOLD CARL, an eminent performer on the bassoon, was born at Dessau in 1774. He was a pupil in composition of Chapel-master Naumann, as also of Reichardt. In 1807 he brought out, at the Dessau theatre, with success, "*Adelheit von Schrofeneck*," a grand opera. He has also published some instrumental music.

REINKE, JOHANN ADAM, born in 1623, was a celebrated German organist and composer, who lived till within a few months of the age of a hundred years. In his younger days, having been elected successor to the famous Scheidemann, organist of St. Catharine's Church in Hamburg, it is related that a musician of Amsterdam declared, that Reinke must be so presumptuous a man to take Scheidemann's place, that he should like to see him. This observation having been repeated to Reinke, he sent him one of his compositions, thus superscribed: "This is the portrait of the audacious youth whom you wished to see." The Dutchman found in the composition so much genius and learning, that he immediately went to Hamburg, for the purpose of hearing him play on the organ. After this he said he could have kissed his feet, in testimony of the veneration with which his talents had impressed him. Reinke died at Hamburg in 1722.

REINMANN, GEORG FRIEDRICH, a German musician, published at Erfurt, in 1644, an introduction to singing, under the title of "*Musik Buchlein*."

REINMANN, JOHANN HARTMANN, chapel-master to the Duke of Saxe-Saalfeld, was born at Saalfeld in 1677. He studied composition under the Chapel-master Erlebach, and afterwards published some church music. He died in 1728, being at the time burgomaster of his native town.

REINWALD, L., chamber musician to the court at Hildesheim, in Saxony, published the following works: "*Il Sinfon. à 9*," Op. 1, Berlin, 1792; "*2 Sammlungen von Quadrillen und Angl. fürs Klav.*," Berlin, 1794; and "*Die Friedensfeyer: Heil uns, Heil! ein Rundgesang beym Klavier*," Hamburg, 1797.

REISCH, GEORG, of Friburg, author of a work in twelve books, comprising a distinct treatise on each of the liberal sciences, in Latin, called "*Margarita Philosophica*," first published in 1503, in which one of the books is appropriated to music. His work, however, though fre-

quently cited by Italians, contains no instruction for the practice of harmony, as the author, though posterior to Gaffurius, chiefly follows Boethius.

REISIG, GOTTLIEB, music director and rector of the Latin school at Lichtenstein, was born in 1664. He had studied vocal and instrumental music, also composition, and, in the year 1734, wrote a work entitled "*Trifolium Historico-Musicum*," in three parts, the first containing biographies of German musicians, and the others the history of German organs, and other matter, chiefly relating to that instrument. This book was never published.

REISSIGER, CARL GOTTLIEB, was born at Betzig, near Wittenberg, in 1793. He had his first musical lessons of his father. In 1811 he was admitted to the St. Thomas School in Leipzig, where he studied harmony and the piano with Schicht. In 1815-16 he wrote some motets. In 1818 he pursued a course of theology at the University of Leipzig, but without interrupting his musical labors. To music his whole nature drew him, but he was too poor to abandon the clerical profession. But his good master, Schicht, obtained for him the means of passing three years in Vienna, where he went in 1821, to continue his labors in composition. There he wrote his first opera, "*Das Rockenweibchen*," which the censorship did not allow to be brought out, except the overture, which gave a favorable impression of the young composer's talents. Several other overtures procured him the *entrée* to the imperial theatres. The German opera was then well composed, and Reissiger had the advantage of hearing good works performed by good artists. Before quitting Vienna he appeared with much success in a concert at the court theatre, where he sang a bass song of Handel and executed a piano-forte concerto of his own. Antonia and Steiner at that time published several of his compositions. In May, 1822, Reissiger left Vienna to continue his studies under Winter, at Munich, where he displayed most laudable activity in art. A mass which he wrote there, and an overture on a theme of five notes furnished him by Winter, won for him that master's friendship. Such was the success of these works, that he was engaged to compose for the royal theatre the overture, entr'actes, and choruses to the tragedy of "*Nero*," which were much applauded. He was then called suddenly to Leipzig by the death of his friend and teacher, Schicht. In May, 1823, he arrived at Berlin, where some noble families guaranteed him a subsistence. Here he wrote the Italian opera "*Diloue*," which was performed at Dresden. It was now decided to send Reissiger to Italy; the King of Prussia granted aid, and the minister commissioned him to collect information in France and Italy on the subject of a conservatory, which it was proposed to institute at Berlin. Reissiger arrived in Paris in August, 1824, and remained till February, 1825. The publication of his works sufficed to cover his expenses there. In his tour through Italy he visited Turin, Genoa, Milan, Florence, Bologna, Rome, and Naples. After spending four weeks in this latter city, he returned to Rome, where he made the acquaintance of the Abbe Baini. In October he returned to Berlin, visiting by the way

Padua, Venice, the Tyrol, and Vienna. At Rome he had written an opera called "*Ahuenschätz*," the brilliant overture to which created an enthusiasm at Dresden; but the opera itself was never performed, because the libretto bore too close a resemblance to that of the "*Freyschütz*." At Berlin Reissiger was charged with the framing of a plan for a Prussian Conservatory of Music, which was approved, but never put in execution. At the same time he was made professor in the *Sing-Akademie*, under the direction of Zelter. In October, 1826, he was called to the Hague, to organize a conservatory, which still exists. Returning to Berlin he received the appointment of director of music at Dresden, in the place of Marschner, who had just been called to Hannover. There he had to direct not only the German opera, but the Italian during the long illness of Morlacchi. In this position he gave such proofs of talent, that in 1827 the King of Saxony raised him to the place of chapel-master, which had been vacated by the death of Weber. In the same year he wrote a solemn mass, and "*Yelva*," a melodrama in three acts, successful throughout Germany. His "*Libella*," a romantic opera, was equally successful in Dresden, in 1828. This was followed by "*Die Felsenmühle*," which enjoyed public favor at Dresden, Leipzig, Berlin, Breslau, Copenhagen, and elsewhere. "*Tarandot*," another opera, had also great fame in Germany. But the German critics have considered Reissiger's talent more remarkable in religious than in dramatic music. More recently he has cultivated the symphony form with success. He has also written overtures, quintets, quartets, sonatas, &c.

RELATIVE. An epithet applied to those chords and those modes, or keys, which, by reason of the affinity and identity of some of their component sounds, admit of an easy and natural transition from one to the other. Thus, in the chords of D and G, the note D being common to both, in passing from one harmony to the other we have only to change two of the three sounds. Again, the major mode of every key being formed of the identical naturals, sharps, or flats, proper to the minor mode of its third below, every major key is called the *relative* of such minor key, and every minor key the relative of its third above, taken in the major mode.

RELATIVE KEYS. Keys which differ only by having in their scales one flat or sharp more or fewer.

RELATION. That connection which any two sounds have with one another, in respect of the interval which they form. When the interval is just, the *relation* is just, and false when the interval is false; that is, when it is either superfluous or diminished. Formerly false relations were forbidden; but modern composers, rejecting the rigorous trammels of early contrapuntists, have enlarged the bounds both of harmony and melody, and given them a freedom to which we owe many beauties unknown to the fathers of the musical science.

RELFE, JOIN, was born in 1763. He commenced his musical studies under the tuition of his father, who was upwards of fifty years organist of Greenwich Hospital. At the age of eighteen, he was articled for two years to Keeble,

organist of St. George's, Hanover Square, who was then considered one of the first theorists and organ performers of the day. To the celebrity of Keeble's name as a master, and the extensive professional connections of Relfe senior, his son was indebted for the early encouragement he experienced as a piano-forte teacher, which was followed up by full employment of forty years in that line of professional practice. His musical compositions have been but few, and those chiefly of a theoretical nature, commencing with a "Set of Sonatas," dedicated, by permission, to the Princesses Mary and Sophia, a popular ballad, entitled "Mary's Dream," with some others not worthy of mention; "The Principles of Harmony," first published in 1798, in periodical numbers, entitled "*Guida Armonica*," and in which nearly the whole theoretical plan of Logier, as far as it is connected with offering elementary instructions through the medium of exercises, will be found to have been anticipated; various single pieces, chiefly composed for the improvement of professional and private pupils placed under his tuition; a pamphlet entitled "Remarks on the present State of Musical Instruction, with a Prospectus of a new Order of Thorough-bass Designation, and a demonstrative View of the defective Nature of the customary Mode; to which are annexed, Definitions of Twenty Diagrams exhibited in a Music Scroll," 1819. His last work, entitled "*Lucidus Ordo*," was published in 1821, and consisted in an attempt to divest the subject of thorough bass and musical composition of all its intricacies, and to exhibit the whole science in a lucid and simple form, capable of application to every species of composition.

RELIGIOSO. (I.) With religious feeling; in a devotional manner.

RELLSTAB, JOHANN CARL FRIEDRICH, printer, and proprietor of a music warehouse at Berlin, was born in that city in 1759. He was first brought up to the musical profession, and studied under Agricola and Fasch. He wrote several musical works, amongst which are the following: "Essay on the Union of Musical and Rhetorical Declamation, intended principally for the Use of Musical Performers and Composers, with Examples," Berlin, 1786; "Essay, containing the Observations of a Traveller respecting Church Music, Concerts, &c.," Berlin, 1789; "Instructions for Amateurs of the Harpsichord, to finger in the Style of Bach," Berlin, 1790; "The Harpsichord Magazine," Berlin, 1787. This was continued in the following year, under the title of "Melody and Harmony." It contains several of Rellstab's vocal and instrumental compositions. "*Lieder und Gesänge verschiedener Art zum singen am Clavier, 1ster Theil*," Berlin, 1791; "*2ter Theil*," Berlin, 1791; "*Six Solfeggi p. il Cembalo*," Berlin, 1792; "*Sonata p. il Organo*," "*12 Märsche fürs Klavier*," Op. 79; "*Sonatine p. Comb. C. Fl.*," "*Wildheit und Witz, Charakterstück f. Klavier*." The following are in manuscript: "Pygmalion," a cantata from Ramler; "The Shepherds at the Manger," a cantata from Ramler; lastly, "Seven Symphonies and Overtures."

RELLSTAB, HEINRICH FRIEDRICH LUDWIG, born at Berlin in 1799, was destined for music by his father, after whose death he became

a soldier in the war of 1815, and was advanced to an officer. His military duties, however, never robbed him of his taste for the arts. Poetry occupied him especially, and he wrote the books for operas and songs for the *Liedertafel*, which he founded, in 1819, with Berger and Klein. In 1821 he left the military service, and went to Frankfort on the Oder, where he wrote his tragedy of "Charles the Bold," published in 1824. From this time he gave himself up to literature and musical criticism. Poems, little histories, and romances by Rellstab, have been published since 1825. Among the latter is a satirical one, entitled "*Honriette, ou la belle Cantatrice*," of which Mlle. Soutag formed the subject, and which gave great offence. Rellstab has continued to live in Berlin, where he is yet distinguished as a musical critic, (1854.)

RELUZZI. A musician at Prague. Twelve of his symphonies were known about the year 1760.

RELZER, JOHANN, chamber musician to the Bishop of Wurtzburg, about the year 1740, was a native of Vienna. He was considered one of the best violinists of his time.

REMBT, JOHANN ERNST, organist of the principal church at Suhl, in Saxony, was born there in 1749. He was an excellent performer on the organ, and a good contrapuntist. In 1787, he published, at Leipsic, "*6 Orgel Trios*," which he previously submitted to the inspection of the renowned Sebastian Bach, whose works he had profoundly studied. Amongst his other published compositions are "*50 Vierstimmige Fuggetten für die Orgel componirt und Hrn. Kapellm. Hüller Zugeeignet*," Leipsic, 1791; "*12 leichte triomfässige Choralvorspiele, 1r. Heft*," Leipsic, 1797; and "*Derselben 2r. Heft*," Leipsic, 1797. At that period he had many other practical works ready for publication.

REMI, of Auxerre, a monk in the convent of St. Germain, in the ninth century, was considered one of the most learned men of his age. He wrote, amongst other works, a "Commentary on the treatise *de Musica* of Martianus Capella."

REMORINI, RANIERI. This singer is well known in the modern musical annals of Italy; in that country he was a performer of celebrity for many years. He has been attached to the Italian opera at Lisbon, and went to London in April, 1824, to perform his engagement at the King's Theatre, where he appeared for the first time in Rossini's opera of the "*Turco in Italia*," in the character of Selim, a Turkish prince. He died at Bologna in 1827. The principal quality in Remorini's voice was strength; his tones were not only loud, but were propelled by a force that threw them into every corner of the house at once. His compass was not great. His execution was vigorous and neat, and his intonation, the chief requisite in a singer, perfect. His long experience of the stage in a country where negligent action is not overlooked, also gave him an easy and correct manner of acting.

REMPLISSAGE. (F.) A term applied to the florid or decorative flights and flourishes introduced in concertos and bravura airs.

REMPY, JOHANN MATTHIAS, a German

composer, chiefly of Protestant hymns, died in the year 1802.

RENALDI, GIULIO, an Italian composer of the sixteenth century, was born at Padua. Of his works we can name "*Madrigali à 4, 5, e 6 voci, con dialogi à 7 voci*," Book 1, Venice, 1567, and "*Madrigali à 4 voci, Lib. 2.*"

RENAUD, a French musician, was chapel-master to the Empress of Russia. He composed the music of two comic operas, entitled "*Le Cuvier*," and "*Le Mauvais Ménage*."

RENAUD, MLLÉ., the elder, a celebrated singer at the Théâtre Italien, in Paris, between the years 1785 and 1790. She was remarkable for the ease with which she sang, and for her correct articulation and intonation. Two of her sisters also sang at the same theatre, and at the same period. They were called "*La courtes de rossignols*."

RENER, ADAM, a celebrated contrapuntist, resided at Liege from 1538 to 1555.

RENVERSEMENT. (F.) An inversion.

RENVOI. (F.) A repeat. A name given to the character § .

RENVOISY, RICHARD, master of the choristers of the holy chapel in Dijon, set to music the Psalms of David, for four voices, in the sixteenth century; they were published in Paris.

REPEAT. A character indicating that certain measures, passages, or strains, are to be sung or played twice — thus:

The pupil will notice two kinds, or characters — they both now have the same meaning. Sometimes one is used, sometimes the other. The repeat is also used in *double endings*. The repeat serves instead of writing the same thing twice over. The sign of one repeat, in common use, is a double bar, with dots before it; or two parallel lines drawn perpendicularly across the staff, with dots on one or both sides; and it shows that the preceding strain is to be repeated — that is, if it be near the beginning of the piece, all hitherto sung or played is to be repeated; or if towards the end of a piece, all from such another mark. In gavots, we usually find the repeat at about the third part of a piece — in minutes, courants, &c., towards the end. It is always understood that if there be dots on each side the bar, they direct to a repetition both of the preceding and the following strain; if there be only dots on one side, then only the strain on that side is to be repeated. A repeat was also denoted by a character set over the place where the repetition begins and continued to the end of the strain. When the song ends with a repetition of the first strain, or part of it, instead of a repeat, the words *Da Capo*, that is, from the beginning, are used.

The repeat may be always employed where the repetition is simple and exact. There are several kinds — one with dots drawn across the staff; one with dots on the second and third spaces,

with a sign over them, thus: § ; and they all show what part is to be sung over again, thus:

REPERCUSSION. A frequent repetition of the same sound. This happens in the harmonica triad, the essential sounds of whose three chords are repeated oftener than the others; i. e., the *final* and the *dominant*, which are properly the *repercussions* of each mode.

REPETITION. (F.) A rehearsal.

REPLICA. (I.) A word implying a repeat. *Replicato* has the same meaning.

REPONSE. (F.) The answer in a fugue, imitation, or canon.

REPRISE. (F.) A pause, or suspension. An extempore grace. See CADENCE.

REQUENO, VINCENZO, an abbot, and member of the Accademia Clementina, was a Spaniard by birth, but resided in Italy during many years. He published a work entitled "*Saggi di Ristabilimento dell' Arte Armonica de' Greci e Romani Cantori*," Parua, 1798.

REQUIEM. A funeral service composed and performed for the repose of a departed soul. *Requiem*s are very common in Roman Catholic countries, where almost every one distinguished by birth, or extraordinary talent, receives this musical honor.

RESAREICAM, ANTONIO DA. A Portuguese ecclesiastic and composer, born at Lisbon in 1621. He left many masses and other pieces of sacred music of his composition, in manuscript, at his death, which took place in 1686.

RESOLUTION. That modulation, or change of harmony, by which the unacording note of any discord falls to one of the concurring notes of the succeeding harmony; as when the ninth is *resolved* into the eighth, the fourth into the third, &c. Formerly a *canon* was said to be *resolved*, or written in *resolution*, when, instead of being comprised in a single staff, all the *parts* were given in separate staves; i. e., when each part was placed under the next above it in point of scale or natural order.

RESONANCE. A prolongation or reflection of any sound, as when it is returned by the air enclosed in the body of a stringed instrument, or by elliptic and parabolic vaults, or subterraneous caverns.

RESOUND, TO. A verb sometimes implying to *echo*, *reflect*, or *turn back a sound*, in which sense it is active; sometimes signifying to be *echoed*, to be *reflected*, or *turned back*, and then its sense is neuter.

RESPIRATION is that peculiar action of the lungs which is necessary to draw the air into and expel it from the chest. This action consists of two alternate movements; viz., *inspiration*, or taking in the breath, and *expiration*, or the expulsion of the breath. In *inspiration* the lungs, acting somewhat like a pair of bellows, dilate, to introduce the external air into the chest; in *expira-*

tion they contract for the purpose of expelling it. The air must be drawn into the lungs copiously and with great quickness; but it should only be allowed to escape from the chest slowly, gradually, and with the utmost smoothness; in fact, the emission of it cannot be husbanded with too much economy. The air thus thrown into motion by respiration is the principal agent of the vocal organs. When the sounds are once formed they must be emitted freely, and by a prompt impulse, that they may not become imperfect and unsteady. If the emission of the voice be not performed with sufficient quickness, the tone becomes *guttural*; and if the voice be too much forced towards the head, prior to its emission, it becomes *nasal*.

RESPONSE, or RESPONSO. (L.) The name of a kind of anthem sung in the Roman church after the morning lesson, and which concludes in the manner of a rondo. In a fugue the *response* is the repetition of the given subject by another part.

RESTA, NOEL, of Milan, composed the comic opera "*I tre Sigisbei Ridicoli*," performed in 1748.

RESELLI. A good Italian violinist at Bologna at the commencement of the present century.

RESTS. Characters of silence, each of which denotes a cessation of sound equal in duration to that of the note after which it is named; thus, a semibreve *rest* is equal in length to a semibreve, a minim *rest* equal in length to a minim, a crotchet *rest* equal in length to a crotchet, and so on through all the different characters of notation. Hence it is easy to conceive that in variously combining these signs we may at pleasure express silences of any duration. For examples, see **CHARACTERS**.

RESTORATION. The act of restoring a note made flat or sharp to its primitive sound.

RETARDANDO. (L.) A retarding of the movement.

RETARDATION. The carrying one, two, or more notes of a preceding chord into the succeeding combination.

RETRO. (L.) This adverb signifies *backward*, and is applied to the subject of a *canon*, when so constructed as to admit of its being sung in a retrograde direction.

RETROGRADO. (L.) In retrograde movement.

RETZEL, ANTON, chapel-master to the Duke of Holstein, was born at Brunswick about the year 1724. He was an eminent performer on the bassoon, and a good contrapuntist. His music is in the style of Graun: some of it was published at Amsterdam.

REUFFIUS, JACOBUS, a musician of the seventeenth century, published "*Opellæ Musica*," Nuremberg, 1643.

REUSCHEL, JOHANN GEORG, singer at Marekrsbach, in Bohemia, in the middle of the seventeenth century, published "*Decas Missarum Sacrarum 4, 5, 6-18 vocum*," Freyberg, 1667.

REUSCHLUS, JOHANNES, chancellor of the Bishop of Meissen, was an excellent musician.

He published at Leipzig, in 1554, "*Meloaien zu des Georgii Fabricii Lateinischen Oden*," of which several editions were published.

REUSNER, JACOB, a German composer, flourished about the year 1600, and published, amongst other works, "*Missa 6 vocum*," Dillingen, 1601, and "*Missa 4 et 5 vocum, cum Officio B. M. V.*," Dillingen, 1604.

REUSSNER, ELLAS, a lutist and composer for his instrument in Schleswic, flourished in the middle of the seventeenth century, and published "*Lauten-lust, aus Præludien, Paduzzen, Couranten, Sarabanden, Gigueen, Gavotten und andern Piècen*," Breslau, 1608.

REUSSNER, ESAIAS, son of the preceding, was a lutist in the service of the Prince of Liegnitz-Brieg, and of the Elector of Brandenburg. He published, in 1676, "*Neue Lautenfrüchte*;" also "*Hundert geistliche Melodien Evangelischer Lied-er auf die Laute gesetzt*."

REUTER, GEORG, Sen., imperial chapel-master and organist of St. Stephen's Church at Vienna, was born there in 1660. He died in 1731.

REUTER, CARL, eldest son of the preceding, was also chapel-master of St. Stephen's Cathedral at Vienna about the year 1740. Reuter died at Vienna in the year 1770.

REY, JEAN BAPTISTE, born at Lauzerte, in the department of the Tarn and Garonne, in France, in 1734, was self-instructed in the art of music, at the Abbey of St. Sernin, at Toulouse. At the age of seventeen he was elected a member of the orchestra in the cathedral at Auch: three years after which he was attached to the grand opera of Toulouse, and continued the exercise of his art with increasing success in various towns, especially at Montpellier, Marseilles, Bourdeaux, and Nantes, till he had attained his fortieth year. His fame had, by that time, reached Paris, several motets of his composition having been performed at the chapel of Louis XV. In 1776, when at Nantes, he received a *lettre de cachet*, ordering him to appear at Paris, and to be attached to the Royal Academy of Music, where he remained, till his death, in the situation of director of the orchestra. In 1779 Louis XVI. appointed him chamber musician, with a salary of two thousand francs, and a promise that he should succeed to the place of superintendent of the royal music, and be decorated with the *ordon noir*—advantages which he lost, however, by the events of the revolution. During the thirty-five years that Rey conducted the opera orchestra, he did not cease to contribute in sustaining the preëminence of that establishment. He either composed or revived several works performed at the theatre; he completed the opera of "*Arvire and Evelina*," of the celebrated Sacchini, who was his intimate friend, and had confided to him that task. When Napoleon assumed the imperial dignity, he promoted Rey to the situation of *chef-d'orchestre* of the Chapel Royal. He died in 1810, which event is said to have been hastened by his grief for the loss of a daughter, in the preceding year, who had considerable musical talent. Rey's brother was violoncellist at the Royal Academy of Music, and assisted J. B. Rey in the composition of the opera of "*Apollon*."

et Coronis." In an access of delirium, from brain fever, he cut his throat, in the year 1811.

REY, N., an amateur at Paris, published there the following work: "*Système harmonique, développé et traité d'après les principes du célèbre Rameau; ou Grammaire de Musique, sous le titre de Tablature, se rapportant au Dictionnaire de J. J. Rousseau, pour servir à l'intelligence et à l'enseignement de tout l'ensemble de la musique, contenant introduction, explication, règles de composition, définitions, observations, principes pour les commençans, &c., avec théorie pour trouver et s'exercer à diriger toutes les harmonies et mélodies.*" 1798.

REYHER, ANDREAS, doctor of philosophy, and rector of the gymnasium at Gotha, was born in 1601. He published "*Margarita Philosophica in annulo Synopsis totius Philosophiæ.*" Nuremberg, 1636, and "*Specimen Musicum pro Exereitio Hebraico conjugandi.*" Gotha, 1671.

REYMANN, F. G., ballet master to the court theatre at Strelitz, published, about the year 1783, the operetta "*Der Dervische.*" Much of his instrumental music is also to be found in manuscript.

REYNVAAN, J. VERSCHUERE, an advocate at Flushing, in Holland, published "*Catechismus der Muzyk.*" Amsterdam, 1788, a work of merit; also "*Muzykaal kunst-woordenboek, behelzende de verklarungen als mede het gebruik en de kracht der kunstwoorden, die in de Muzyk voorkomen.*" Amsterdam, 1795. He was also the composer of "Six Harpsichord Sonatas, with Violin Acc.," published at Amsterdam in 1700.

REYS, GASPARDOS, chapel-master, first at Lisbon and afterwards at Braga, about the year 1630, was a pupil of D. Lobo, and composed much church music.

RHAPSODIE. (F.) A rhapsody, a capriccio.

RHAPSODISTS, or RHAPSODI. (Gr.) Persons among the ancients whose profession it was to sing or recite the verses of Homer and other celebrated poets. It appears that particular forms were observed in repeating the works of the great epic bard, and that the rhapsodi were clothed in red when they sang from the Iliad, and in blue when they chanted the Odyssey. They performed in the theatres, and sometimes contended for prizes, both in recitation and in singing. But ancient authors seem to speak of other rhapsodi of higher antiquity than these; persons who wrote heroic poems, or songs, in praise of heroes and distinguished men, and sang their own compositions from town to town for a subsistence; of which profession Homer himself is said to have been. It is, however, highly probable that they were all of the same class, and that their business was, indifferently, to sing or rehearse either their own poems or those of other authors. It is not a subject of wonder if, after Homer's time, they chiefly confined themselves to his productions, for which the people had the utmost veneration; and it is natural to suppose that they should erect public stages, and dispute the prizes of recitation, in places of general resort.

RHAW, or RHAU, GEORG, a celebrated German musician, and improver of Protestant psalmody, was also a printer at Wittenberg. He

was born at Eislefeld, in Franconia, in 1488, and at an early age was appointed singer and director of music at Leipsic; in which qualities he brought out, at the time of the celebrated thesis sustained between M. Luther and Eck, a mass for twelve voices, which was performed at the commencement of the thesis, and a "*Te Deum.*" to be sung at the conclusion. After this he settled in his printing business at Wittenberg, and thence produced, in 1538, a collection of motets for four voices, by different masters, under the title of "*Selectæ Harmonicæ, 4 vocum.*" and, in 1544, a second collection, containing one hundred and twenty-three German canticles, for four and five voices, for the use of schools. In 1518 appeared the first edition of his work entitled "*Enchiridion utriusque Musicæ practicæ ex variis Musicorum Libris congestum.*" this went through seven editions up to the year 1553. His death took place in 1548.

RHEIN, FR. A celebrated French flutist and composer for his instrument at Vienna. He died previously to the year 1799.

RHEINECK, CHRISTOPH, a pleasing composer, excellent tenor singer, and pianist, was born at Memmingen in 1748. He learned the elements of singing from his father. It was at Lyons that he made the greatest progress in music, and in that city he produced his first opera, "*Le Nouveau Pygmalion.*" which was not only favorably received as a novelty, but long remained a stock piece at the Lyons theatre. Shortly after the appearance of this composition, he was invited by the minister, Turgot, to settle at Paris, which request was accompanied by an offer of a profitable place under government. He consented, first requesting to visit his father in Germany, whom he saw only a few days before he was deprived of him by death. This event delayed his arrival in Paris nearly a month; in which short interval Turgot had been disgraced, and consequently was incapable of fulfilling his promise to Rheineck. Frustrated in his hopes, he quitted Paris, and settled as innkeeper in his native town, where he died about the year 1796. The following of his compositions were printed: "*Der Todgesang Jesu.*" an oratorio, the poetry by Stadelé, 1778; "*Melodies to Schellhorn's Collection of Psalms.*" "A Mass;" "*Le Nouveau Pygmalion.*" comic opera, Lyons; "*Le Fils Reconnaissant.*" comic opera, Lyons; and "*Rinaldo.*" grand opera, in Germany, with Stadelé's poetry, Memmingen, 1779; four collections of songs, printed subsequently to the year 1770, and many songs and piano-forte pieces, published in the five volumes of the Spire Collection. Amongst his music left in manuscript are "Six Harpsichord Concertos."

RHEINER, FELIX. A celebrated performer on the bassoon in the Royal Chapel at Munich. He died previously to the year 1785.

RHETORICAL has various meanings. The double bar shows the rhetorical termination of a strain; and the Germans divide accent into grammatical and rhetorical, the first of which we call accent, and the latter euphysis.

RHEMANN, or RIEMANN, JACOB, a celebrated instrumental composer about the year 1720, published at Amsterdam "*Suites pour le B.*

de Violæ et B. C.," Op. 1; "6 Sonate à V. solo e B. C.," Op. 2; and "Sonate à V., Viol da gamba e continuo," Op. 3.

RHOMBOLD. (Gr.) A four-sided figure standing on one of its angles, and intimating that the notes of the passage over which it is placed are to swell in sound as that widens, and decrease as it narrows.

RHYTHMIC. A term applied to that part of the ancient music which taught the practice and rules of movement and rhythm.

RHYTHMOPŒIA. (Gr.) That part of the science of the ancient music which prescribed the laws of rhythm, or whatever appertained to the rhythmic art. The *rhythmopœia* had for its object the movement or time, the measure of which it denoted, together with its divisions, order, and mixture, whether to move the passions or to calm them. It was principally connected with poetry, because poetry alone regulated the movements of the ancient music. The *rhythmopœia* was divided into three principal modes, or tropes; one low and confined, another raised and dignified, and a middle one, tranquil and peaceable.

RHYTHM. That property, or quality, in the melopœia of the ancients, and melody of the moderns, by which the cadences of every kind of movement are regulated and determined. The *rhythmus* of the ancient musicians was, however, materially different from that observed by modern composers; the former was prescribed by the long and short syllables of the poetry, and had no other variety than that afforded by its metrical laws. The modern *rhythmus*, on the contrary, only requires the so accommodating long and short notes to the syllables, as to properly separate the words, and give due force to the accented syllables. Vassius and other writers on the lyric poetry of the ancients attribute to their *rhythmus* the whole force of their music. Much, however, of the great effects of which we read is, doubtless, to be ascribed to the power and richness of their language, and to their judicious attending to the rendering the expression so obvious, clear, and pointed, that not a syllable of the verse was lost to the ear of the audience. "Rhythm is the measure and outline of motion. It is the pulse of life, by which we note its moments. In music, it is the periodical recurrence of accent, the measured beat, which marks the character and live expression of the movement. Pulsation seems a universal fact in nature; whatsoever has life manifests it in regular pulsations, in successive impulses, or alternately advancing and retiring waves. It is and it is not; we touch it and we miss it; it comes and it goes; it has its climax and its recommencement, and that in each little infinitesimal instant of its history. Every thing, in fact, (to use a vulgar phrase,) is 'touch and go.' Thought is a perpetual series of new volitions, not an undivided flow. Every influence propels itself in waves. It is so with sensation, so with every sort of contact into which our senses come with any thing; things vibrate to each other, but do not rest in contact. The sense of touch is titillation of the nerves. The German word for what we call the measure in a piece of music is *takt*, or touch.

"Rhythm is the principle of order in the magic world of tones. It gives to sound its wavy outline. It derives melody from harmony. Rhythm is every where, and lends a beautiful self-balance to the outgoing of every unimpeded energy.

"Every art has its rhythm, or something corresponding. And this is why music is so congenial with every form of beauty, and can so readily translate or transfuse the *spirit* of what we feel through any other sense besides the ear; for rhythm is the law, or common term uniting all these spheres, and distributing their elements in correspondence one with another.

"'Rhythmical feeling is genius,' says Novalis. 'Every man has his individual rhythm. All method is rhythm; have rhythm in your power, and the world is yours.'" — *J. S. Dwight*.

RIBIBLE. A small viol with three strings. The diminutive of *REBEC*. See that word.

RIBBE, J. C., a German musician, published "6 Sonaten fürs Klav. mit Fl.," Berlin, 1789, and "3 Gr. Duos Concert. p. 2 Fl.," Berlin, 1798.

RIBOVIVS, LAURENTIUS, a singer in Königsberg in the first half of the seventeenth century, published there, in 1638, "*Enchiridion Musieum*," a short work, containing the principles of singing.

RICCATI, GIORDANO, an Italian count, born at Treviso, was a good mathematician, and wrote the following works relating to music: "*Delle Corde ovvero Fibre Elastiche*," Bologna, 1767; "*Delle Vibrazioni Sonore dei Cilindri*," Verona, 1782; and "*Dissertazione fisico-matematica delle Vibrazioni del Tamburo*." The second of these works is to be found in the first volume of the "*Memorie di Matemat. e Fisic. della Soc. Ital. Veron.*," and the third work in the "*Saggi Scientifici e Letterati dell' Accad. di Padua*."

RICCI, or RIZZIO, DAVID, a celebrated luteist and singer, born at Turin, about 1540, was the son of a poor musician in that city, who instructed his son in music and singing to such an extent that he got an appointment at the court of Savoy. At this time the Duke of Savoy sent an ambassador to Mary Queen of Scots, whom it is well known that Rizzio accompanied, and afterwards became the unfortunate favorite of that unfortunate queen, being stabbed by her side in 1566. It is a common opinion that several old Scotch songs, as "Cowden knows," "Galashiels," "Gala Water," "Ettrick Banks," "Braes of Yarrow," "Bush aboon," "Traquair," &c., were composed by David Rizzio; but this must be an error, the style of the Scotch music being determined before the reign of Mary, and the best of these airs having been traditionally traced to much more distant periods. Neither ought it to be imagined that a stranger, who, in the latter part of his life, was devoted to business, as Mary's secretary, should acquire or invent a style of music so different in every respect from that to which he had been accustomed in his own country. Melody is so much the characteristic of the Scotch airs, that it is even doubtful whether they had basses before the last century; whilst in Rizzio's time, harmony was the favorite study of the Italian composers. Palestrina himself obtained the glorious title of the father

of harmony, and attached himself exclusively to counterpoint; and when Rizzio studied his art, Palestrina's music must have been in the highest favor in Italy. Besides, although the style of the ancient Scotch melody has been well imitated by Oswald and other Scotch musicians, no foreigner has been known to have acquired its true spirit. Geminiani, who was a great admirer of Scotch airs, said that he had destroyed several quires of paper in endeavoring to compose a second part to the beautiful air, "The broom of Cowden knows." Tassoni, author of "*La Seschia rapita*," speaks of this music as very much esteemed by the Italians of his day, and attributes its invention to King James of Scotland — an opinion which might easily be adopted by a foreigner, because all the Scotch kings of this name, and particularly the first, third, fourth, and fifth, were versed in music and poetry.

The testimony of Tassoni proves that this music is derived from an earlier period than that in which Rizzio existed. One must not, however, adopt his opinion of the inventor, nor must they be believed who give the honor of this invention to the monks of Melrose. It is more probable that these delightful melodies had their origin amongst shepherds, who really experienced the sentiments and affections they so well express.

Rizzio may have been one of the first who made a collection of these melodies, or he may have executed them more delicately than any of the Scotch musicians of the same period, or he may perhaps have corrected the extravagance of certain passages; for one is struck by the regularity of some of these airs, whilst we are amused by the wildness of others; and in either case the Scotch may be said to owe him obligation. But that this style of pastoral melody, so different from the Italian melody of the same age, and so peculiar in every respect, should have been established and invented by him, appears impossible.

RICCI, FREDERIC, the composer, died May, 1852, in the prime of life and talent. He was stricken by apoplexy in the post carriage between Warsaw and St. Petersburg. Ricci was the author of many operas, more successful in Italy than elsewhere. The "*Prigioni d'Edinburgo*" is the most famous of his operas, among which "*Rolla*," "*Estella*," and "*Griselda*," are not unknown. His "*Corrado d'Altamura*" failed in Paris, in 1844. He had recently produced, at Venice, "*I due Ritratti*," an opera of which he composed both words and music, and in May, 1852, was summoned to Russia, under the especial patronage of Field Marshal Paskewitch, and saw before him the promise of that brilliant career which the great wealth and cultivation of the Russian aristocracy secure to a few fortunate artists of every kind. On the 2d December he wrote, that for the first time fortune smiled upon him. He quotes from his own opera of "*Rolla*," of which the tenor part was written for Moriani: "A nameless stone shall cover my grave;" smiles at the thought; says that it will be his own fault if it is so, and within a few weeks reaches the scene of his anticipated triumphs, a corpse.

RICCI, MICHEL ANGELO, an Italian contrapuntist, flourished early in the seventeenth

century. Some of his compositions may be found in the "*Bergomeno. Parnas. Mus. Ferdinandi. 1-5 vocum*," Venice, 1615.

RICCIO, ANGELO MARIA, doctor of theology, and professor of the Greek language at Florence, published there, in 1747, a work entitled "*Dissertationes Homerice*," in which are the three following dissertations relating to music: 1. "*Dissert. de Achille citharâ canente veterique Græcorum Musicâ*;" 2. "*Au musicâ curentur morbi*;" and 3. "*Dissert. de Musicâ virili et effeminatâ Græcorum nonnullisque aliis ad cognitionem musicæ pertinentibus*."

RICCIO, ANTONIO TEODORO, a contrapuntist of the sixteenth century, born at Brescia, was at first chapel-master at Ferrara, from whence he was invited to the Chapel Royal at Vienna, but afterwards left that court for Dresden, where he embraced the Protestant religion. After a few years he again removed to Königsberg, and lastly to Wittenberg, where he died in 1590. Of his published works we can mention "*Lib. 1 de Madrigali à 5 voci*," Venice, 1567; "*Lib. 2 de Madrigali à 6, 7, 8, e 12 voci*," Venice, 1567; "*Canzoni alla Napolitana à 5 e 6 voci*," Nuremberg, 1577; "*Cantiones Sacre, 5, 6, ed 8 vocum*," Nuremberg, 1578; "*Motetti à 5 ed 8 voci*," Frankfurt; "*Messe*," Königsberg, 1579; "*Motette 4 et plar. vocum*," 1580; and, "*Introitus, qui in solemnitatibus majoribus et præcipuorum Sanctorum Festis in Ecclesia decantari solent*," Venice, 1589.

RICCIO, GIOVANNI BATTISTA, an Italian composer, published, about the year 1625, "*Divine Laudi Musicali à 1, 2, 3, e 4 voci*," and "*Canzoni di Sonare à 1, 2, 3, e 4 stromenti*."

RICERCARI. (I.) The name formerly given to *solfeggi* for the voice, as also to original compositions, or exercises, for instruments. This term, in the early times of counterpoint, was used instead of the word *fantasia*, which afterwards supplied its place; and to this succeeded the terms *concerto*, *concerto*, *sinfonia*, *sonata*, &c.

RICERCATA. (I.) A fugue replete with contrapuntal artifices.

RICHARDSON, VAUGHAN. A scholar of Dr. Blow, and organist of the cathedral of Winchester. He published, in the year 1703, "*A Collection of Songs for one, two, and three Voices, accompanied with Instruments*," and also composed several anthems, which are well known in most cathedrals.

RICIL. An epithet applied to those compositions, the parts of which are elaborately and ingeniously combined, and which in performance produce an elegance and fulness of effect.

RICHEFORT, or RICCIAFORT, J., a native of the Netherlands, is placed by Walther in the middle of the sixteenth century; but he was certainly a composer many years before that period, as we find his name not only in the second book of "*Motetti della Corona*," published at Fossembrone, 1519, and preserved in the British Museum, in which collection he was author of the fourth motet, "*Miseremini mei*," but to a motet in a music book belonging to Henry VIII. when Prince of Wales, and preserved at Cambridge

Glareanus says that "great praise is due in our times to the vocal compositions of John Richefort." In the Museum collection of French songs, in four, five, and six parts, printed in the Netherlands during the sixteenth century, there is one by this author for three tenors and a bass, which, though it would be thought somewhat monotonous by modern ears, has great merit for the artful contexture of the parts, which are moving throughout in close fugue and imitation. He died about the year 1560.

RICHER, ANDRÉ, a musician, born at Paris in 1714, was a page of the king's band, under Lalande and Bernier. Some of his motets were performed at the Chapel Royal, and, with his cantatas, were published. Four of his children were musicians, amongst whom the daughter married the celebrated Philidor.

RICHER, LOUIS AUGUSTIN, youngest son of the preceding, and born at Versailles in 1740, became a page of the king's band in 1748, and about 1756 sang at the *Concert Spirituel* with great applause. On the death of his father he became music master to the Dukes of Chartres and Bourbon; and in 1779 the king granted him the reversion of the situation of music master *des enfans de France*, then held by Lagarde. Richer was a professor of singing at the Conservatory, and died at Paris in 1819.

RICHTER, CARL GOTTLIEB, organist at the old church in Königsberg, was born at Berlin in 1728. Yielding to the wishes of his family, he first studied surgery; but his inclination for music soon becoming irresistible, he was permitted to dedicate his talents to that art, and took lessons of the celebrated Schaffrath. In 1754 he entered the service of General the Count of Truchsess, at Custrin, from whence he proceeded to Königsberg, where, after a short time, he was appointed organist of the castle, and subsequently of the before-named church. Richter was master of the celebrated Reichardt. He was considered one of the first German organists and performers on the harpsichord. Not many of his works were published, probably on account of the delicacy of his health. Amongst them are "Six Trios for the Flute," Königsberg, 1771; "Two Concertos for the Harpsichord," Riga, 1772; and "Nine Concertos for the Harpsichord," Königsberg, 1774 and 1775. He died in 1809.

RICHTER, FRANZ XAVIER, chapel-master of the cathedral at Strasburg, was born at Hollisau, in Moravia, in 1709. In 1760, he was chamber musician at Manheim, where he composed seven operas of harpsichord and violin music, each containing six pieces. These works were published at Paris, Amsterdam, and Nuremberg. Many symphonies and masses of his composition have remained in manuscript. He died at Strasburg in 1789. He also left a treatise on counterpoint, abridged from Fux, which has been translated into French by C. Kalkbrenner, and published at Paris in 1804 under the following title: "*Fr. Xav. Richter, Traité d'Harmonie et de Composition, revu, corrigé, augmenté, et publié avec 93 planches par C. Kalkbrenner.*"

RICHTER, JOHANN CHRISTOPH, court musician at Dresden, died about the year 1749.

RICHTER, JOHANN SIEGMUND, organist and composer at Nuremberg, was born in that town in 1657. He was an excellent performer on the harpsichord, and good vocal composer. He died in 1719.

RICHTER, JOSEPH, a musician at Vienna, published, amongst other works, the following: "3 *Quat. à 2 V., A., et B.,*" Op. 1, Offenbach, 1796; "3 *ditto,*" Op. 2, Offenbach, 1797; "3 *Duos pour 2 V.,*" Op. 3, Offenbach, 1797; "3 *Trios pour Fl., V., et Vc.,*" Op. 4, Offenbach, 1798; "3 *Duos pour 2 V.,*" Op. 5, Offenbach, 1798; and "6 *Trios pour 2 V. et B.,*" Op. 3, Paris.

RICIERI, GIOVANNI ANTONIO, a musician of Vicenza, was at first a pupil of Freschi, of that town, and afterwards went to Ferrara, where he continued his study of vocal music under J. B. Bassani. He next applied himself to composition, when the sensibility, grace, and vivacity which characterized his works, conciliated the favor of all his hearers. Being invited by a Polish prince to pass some time in that country, he remained in it during six years, and composed there many pieces, as well for the theatre as for the church and chamber. On his return to his own country he established a music school at Bologna, in which many distinguished artists were educated; amongst others Padre Martini. At the same time he was unanimously admitted a member of the academy at Bologna. He was also appointed to compose new music to the psalms for St. Peter's Chapel at Rome. He died at Bologna in 1746.

RICORDANZA. (I.) Recollection, remembrance, reminiscence.

RICORDI GIOVANNI, a celebrated music dealer, and founder of the "*Gazetta Musicale di Milano,*" died at Milan, March 15, 1853. His son, Tito Ricordi, succeeds him in business.

RIDOTTO. (I.) A species of entertainment consisting of singing and dancing, in the latter of which the whole company joins. The *ridotto* was first introduced into England in the year 1722, at the opera house in the Haymarket, and was afterwards repeated at various places of public resort, with considerable success. *Ridotto* is also used by the Italians for *adapted, arranged*; and the term frequently occurs in this sense in titles.

RIECK, JOHANN ERNST, organist at Strasburg, published in that town, in 1658, a work for three and four voices, with instruments, and containing allemandes, giges, ballets, &c.

RIECK, chamber musician to Prince Henry of Prussia, was born at Berlin in 1730. He was a celebrated violinist, pianist, and composer.

RIEDEL, a clergyman at Weida, is known as a musician by the following works: "*Freundschaft und Liebe, eine Samml. vermischter Klavier und Gesangstücke,*" Leipsic, 1798, and "6 *Sonat. facil. pour le Clav.,*" Leipsic, 1798.

RIEDT, FRIEDRICH WILHELM, chamber musician and flutist to the King of Prussia, was born at Berlin in 1710. His father had a place under government, to which the son afterwards succeeded. Having, however, made himself master of the flute, he was desirous of learning

composition, and for that purpose took lessons of the celebrated Graun and of Schaffraht. In 1741 the king nominated him chamber musician, and flutist to his chapel. In 1750 he was elected director of the Society of Musical Amateurs at the university, which situation he filled for many years. He died at Berlin in 1783. Amongst his works are the following. Theoretical: "Essays on the Intervals in Music, as respects their Number, Place, and Advantages in Composition," Berlin, 1753; "An Apology for the Essay on Intervals," &c., published in the "*Beyträge*" of Marburg, vol. i. p. 414; "Considerations on the arbitrary Variations in Musical Ideas during the Performance of a Melody," in the "*Beyträge*" of Marburg, vol. ii. p. 95; "Tables of all the Primitive Chords, their Uses," &c., "*Beyträge*," vol. ii. p. 387; and "Two Musical Questions, namely, If the perfect Unison is or is not a real Interval? And if augmented or diminished Unisons may or may not be admitted in Music?" "*Beyträge*," vol. iii. p. 271. Practical: various instrumental music, chiefly for the flute, published at Paris, Leipsic, and Berlin.

RIEFF, J. G., secretary at Mentz about the year 1797, is known as a musician by the following, amongst other publications: "*Volklieder beyrn Klav.*," Mainz, 1796; "*Lieder der Liebe zum Klav. 2te Samml.*," Mainz, 1798; "*Würde der Frauen f. Klav.*," Bonn, 1798; "3 *Sonat. pour le Clav. avec V. obl.*," Op. 4, 1796; "*Sonate à 4 Mains*," Op. 6, Offenbach, 1796; "*Sonat. pour le Clav. avec V.*," Op. 8.

RIEGL. See RIGEL.

RIEGER, GOTTFRIED, a composer of operatic music and director of the national theatre at Brunn, was born in Austrian Silesia in 1764. He also wrote masses, string quartets, sonatas for the piano, &c., &c.

RIEGLER, FRANZ XAVIER, professor of music in the Royal School at Presburg, was one of the best pianists of his time. He published "*Anleitung zum Klavier*," &c., Vienna, 1779, and three practical works, each containing two sonatas for the harpsichord, and published at Vienna.

RIEL, JOHANN FRIEDRICH HEINRICH, professor of singing at Königsberg, was born at Potsdam in 1775. He was a pupil in composition of the celebrated Fasch, and afterwards established a singing school at Königsberg on the principles of that of his master.

RIEM, WILHELM FRIEDRICH, composer and organist of the reformed church at Leipsic, and born in 1779, was a pupil of Hiller. He has published the following, among other works: "2 *Sammlungen Gesänge beyrn Klaviere*," Ops. 9 and 17; "1 *Quintet, für 2 V., 2 A., und B.*," Op. 6; "1 *Quartet, für P. F., 2 A., und V.*," Op. 8; "4 *Sonat., für P. F., und V.*," Ops. 5 and 13; "7 *Klaviersolns*," Op. 1, 1804; "*Düts.*," Ops. 2, 3, 4, 7; "*Caprices pour P. F.*," Op. 10; "6 *Sonatinen pour P. F.*," Op. 11; &c., &c.

RIEPEL, JOSEPH, director of the music of the Prince of Tour and Taxis at Ratisbon, towards the middle of the eighteenth century, was an able violinist and composer. His principal merit as a musician consists, however, in having been the first German writer who regularly explained the subject of rhythm, and rendered it

intelligible to students. Hiller says that Riepel was a man who had a profound knowledge of the essentials of composition, and who sought to separate from it what is superfluous. His views were not bounded by the production of dry rules, but he especially attached himself to the familiar exemplification of his opinions. Several of his didactic pieces were published in succession, though they form, in fact, but parts of the same work. The following are the titles: "*Anfangsgründe zur musikalischen Setzkunst*," Ratisbon, 1754; "*Gründregeln zur Tonordnung insgemein*," Frankfort and Leipsic, 1755; "*Gründliche Erklärung der Tonordnung*," Frankfort and Leipsic, 1757; "*Erläuterung der bezüglichen Tonordnung*," Augsburg, 1765; "*Unentbehrliche Anmerkungen zum Contrapunct*," &c., Ratisbon, 1768; and "*Harmonisches Silbenmaas*, &c.," Ratisbon, 1776. It is the latter work which was particularly recommended by Hiller. After the death of Riepel, which took place in 1782, one of his pupils, the singer Schubart, of Ratisbon, published, in 1786, another work of his master, entitled "*Basschlüssel*." Of Riepel's practical works, there were only printed three violin concertos with accompaniments, which appeared in 1756. Besides these there are known, in manuscript, two symphonies and two harpsichord concertos. Dr. Burney, in his "*Travels*," cites a very ingenious composition by Riepel, in which he imitates nearly all the sounds peculiar to war.

RIES, FERDINAND, was born at the town of Bonn, in Germany, in the year 1784: his father was leader of the orchestra of the Elector of Cologne, and his grandfather had been first violinist in the same band. At five years of age he began to display the dawning of great musical talents, which were encouraged by his father, under whose auspices he commenced his first studies in that art; his subsequent master was Bernhard Romberg, a violoncellist of the first merit, who was at the time a member of the court chapel of the elector. The entrance of the French army into Germany at the time of the revolution occasioned the dispersion of the electoral orchestra; by which event young Ries was not only disappointed of a situation in that band which he had long been promised, but the disturbances which necessarily ensued proved also highly injurious to the affairs of the elder Ries, and by preventing his son from prosecuting those studies in which he was so rapidly advancing, obliged him to resort entirely to books for instruction, particularly on the subject of thorough bass, to which he especially devoted his attention. Previously to this period, and when only nine years of age, the child had composed a minuet, which trifle appears to have been his earliest production in the art. When thirteen years old he went to Arnsberg, in Westphalia, to receive lessons in thorough bass and composition; but his master not proving equal to the development of such a genius, only taught him the violin, and after a residence of a few months he returned to his paternal roof. He now devoted himself with greater energy than ever to the cultivation of his talent; and some quartets of the first masters, which he at that time arranged for the piano, having first put them into score, have subsequently been published, but without his name. In 1801, an opportunity offer-

ing of going to Munich, he availed himself of it. Here, being entirely left to himself, and very young, he was exposed to a thousand difficulties and distresses, which, had he not possessed an unusually active and energetic mind, he would undoubtedly have sunk under. Finding no employment for his talents, he next removed to Vienna, being enabled to do so merely by the scanty savings of what he had earned by copying music. His principal motive in selecting Vienna as the next theatre of his endeavors was the expectation of the patronage of Beethoven, who had been the early friend of his father, and whose works he had particularly studied. Arrived at Vienna, he immediately applied to this great master, who not only received him with peculiar kindness, but evinced in every possible manner his affection and regard for the child of his early friend. Having first relieved all his pecuniary distresses, Beethoven agreed to give him every instruction, and to advance his interests in the musical world to the fullest extent of his power. Ries was, indeed, the first pupil that Beethoven publicly acknowledged as such. Shortly after his arrival, he was enabled essentially to assist this kind friend, by revising, copying, &c., of the celebrated work, "The Mount of Olives," which Beethoven was then engaged in, and in the composition of which he was greatly pressed for time. There is an anecdote current relative to the *début* of Ries in public, which we shall here state in some detail. He had selected on this occasion, for his performance, the well-known concerto of Beethoven in C minor, and which at that time had not been published. As a cadence *ad lib.* was requisite to make it complete, Ries, distrusting his own abilities, requested Beethoven to compose one for him; but to this he would in no way consent, desiring Ries to compose one himself, as he was perfectly competent to the undertaking. In compliance, therefore, with the wishes of his master, Ries set himself to work, and shortly produced a cadence. Beethoven was much delighted with it, one passage excepted, which appeared to him too abstruse and complex to be attempted as a first performance in public. Ries, with the praiseworthy ambition his talent inspired, could not, however, be persuaded to make any alteration in the passage; feeling convinced in his own mind that practice would enable him to overcome the difficulty, and if so, that the passage would, of course, greatly conduce to his professional success. Beethoven, still doubtful of the capability of his pupil to execute the cadence, begged, a few days preceding Ries's appearance in public, that he would allow him to hear it. Unfortunately it did not as yet perfectly succeed, and Beethoven now insisted more strongly than before on the rashness of the attempt. Still nothing would persuade the young aspirant to lay aside all hopes; his pride was roused, and on his return home he set himself so arduously to work, that he at length completely conquered the difficulty. He did not mention his success to his master. The day arrived; Beethoven stood by him to turn over; he drew near the fatal passage, and, exerting all his talent and energies, executed it brilliantly, to the great and undisguised satisfaction of his master; who, after having bestowed the warmest panegyrics on his perseverance, candidly acknowledged, that had he not succeeded, he

would never have given him any further instruction. Beethoven's lessons to Ries, it should, however, be here remarked, were only on the practice of the art; he would not give him a single lesson in thorough bass and composition; saying, in the first place, that he did not feel competent to explain the subject, to do which required a peculiar talent, much practice as well as consideration, and that he felt, likewise, he should be trespassing on the peculiar province of Albrechtsberger, who was considered by every musician the first master in that branch of the science. At this time Albrechtsberger was far advanced in years, and it was not without some difficulty he was persuaded to receive Ries as a pupil. He at length agreed to commence his instruction, at what was considered a very high price at Vienna, namely, a ducat a lesson; and as Ries at that time possessed but twenty-eight ducats, he was unable to profit by his store as much as he could have wished; still, his musical memory being very remarkable, he retained enough of Albrechtsberger's instructions, in the twenty-eight lessons he took, to be of eminent use to him in the further prosecution of the science. Fated, as it were, to misfortune, Ries, in 1805, again fell into the hands of the French; and his native place, Bonn, being at that time under their government, he, as son of a resident family, became liable to be drawn as a conscript; which having happened to him, he found it absolutely necessary to return home immediately, or he might otherwise have exposed his relatives to much danger. As he was unable, from the movements of the enemy, to pursue his road in a direct line, he was constrained to make a considerable *détour*; and thus, in the month of December, at which time he was ordered to join his regiment, and on foot, as no conveyance could then be procured, he commenced his melancholy journey from Vienna to Leipsic. Arrived at Coblentz, a singular, and we may add fortunate, circumstance saved him from being added to the list of conscripts. When a child, he had lost the sight of one eye by the small-pox, which rendering him unfit for military service, he was accordingly dismissed. Being now at liberty, he determined upon bending his steps towards Paris; but disasters still pursued him, and in this city he found no sale for any of his compositions, though some of what he there offered for sale have subsequently been printed throughout all Europe, as well as in Paris itself. He then endeavored to get pupils: here he was again unsuccessful; and his spirits beginning to fail under this combination of untoward events, he conceived the idea of abandoning the art, in which he seemed destined to meet misfortunes, and to which resolution a dislike for the French music greatly contributed. He laid his plans in this respect before a friend, whom, having some interest in government, he begged to apply for some employment for him. This gentleman, however, so decidedly condemned the idea of his renouncing the science to which for so many years he had devoted himself, and in which he had already attained so great a degree of perfection, that he at length persuaded him to try his fortune in the same profession in Russia; at the same time adding, that should he return unsuccessful, he would then promote his wishes to the utmost of his power. He immediately com-

menced his long journey, but at Vienna was again detained by the Austrian army, who were then awaiting the approach of the French. By them he was instantly enlisted as a soldier, and was sent to their quarters to undergo the usual discipline. But the rapid march of the French was such that it was found useless to continue these operations, and the last recruits were therefore dismissed.

The following year Riee continued his journey into Russia, where, for the first time, he began to reap the fruits of his arduous exertions and continued perseverance. In his way to that country he passed through and remained some time in the cities of Cassel, Hamburg, and Copenhagen, at each of which places he met with uncommon applause and encouragement. In crossing from Sweden to Russia, he had again to combat with the disasters of fortune; the vessel was seized by the English, and the whole crew were made prisoners, and detained for a week on a barren rock. Having at length succeeded in reaching Petersburg, he was here much delighted to meet his former master, Bernhard Romberg, with whom he joined in making a musical tour through many of the principal cities of Russia, where his success equalled his most sanguine expectations. It had been his intention to proceed to Moscow; but the campaign of 1812 interfering with these arrangements, he decided upon going to England, as the only place of security from disturbances which were overwhelming the continent, and were thus continually thwarting his professional designs. Having on his way stopped at Stockholm, he was nominated a member of the Royal Swedish Academy of Music. Riee arrived in England in 1813, and was shortly afterwards admitted a member of the Philharmonic Society, through the influence and kindness of the late Mr. Salomon. He subsequently married there. His professional success in London was very great, and he was considered not only as a prolific, but a scientific and pleasing composer; though it must be confessed his works sometimes failed to produce the delight which could have been desired; chiefly from a want of melody, for which science could not compensate. An attempt at too great originality seems to have been decidedly the rock which interrupted the progressive success of his musical efforts; as in straining that point too far, he overlooked simplicity, which is assuredly an essential mark of true talent. Riee's fifth fantasia occasioned some discussion in the musical world; as upon the whole it was not considered worthy the genius its author usually displayed in his compositions, and disappointed many who had formed greater expectations from his previous productions. The sixth was more approved, and upon the whole, was considered a composition of great merit, and called forth much applause. His eighth was both a brilliant, effective, and spirited production. With regard to his fantasia "The Dream," it is decidedly one of his best pieces. The music is visionary, original, and pleasing, and excites in the mind those composing and delightful sensations which imagination would picture to itself as the effects of sleep. With regard to Riee's other compositions, they are mostly perfect specimens of the German school. It has previously been stated that he was the favorite pupil of Beethoven, and consequently his productions

savor much of that profound science with which his great master was so highly gifted. His compositions are far more adapted to the ear of a connoisseur than an amateur, being more abstruse than pleasing and at the same time extremely chromatic. On Riee's first going to England some little sensation was excited by the announcement that a concerto in C seven sharps minor would be performed by a pupil of Beethoven's from Germany. The performance, however, went off well, and Riee's subsequent efforts of the same kind proved that this attempt was far from being above his capacity. Indeed, his claims to the applause and admiration of the public, both as a pianist and composer, will never be denied, at least by the lovers of genuine harmony. He gave a farewell concert in London, in May, 1824, after which he returned to Bonn, his native city, where he quietly employed himself in the composition of some elaborate works. In 1830 he removed to Frankfurt, and brought out his opera "*La Fiancée du Brigand*." In 1831 he revisited England, to produce his fairy opera "*Liska*," or the "*Witch of Gellenstein*," and to conduct the Dublin festivals. Soon after this he travelled in Italy, and conducted a musical festival at Aix-la-Chapelle, in 1834. In 1836 he spent some time in Paris, and again in London, where he wrote his oratorio, "*The Adoration of the Magi*," for the festival at Aix-la-Chapelle in 1837. He died on the 13th of January, 1838, at the age of fifty-one years.

Among the compositions of Riee the most important are, 1. "Six Symphonies for Grand Orchestra," Op. 23, 80, 90, 110, 112, 148. 2. Overtures to Schiller's "*Don Carlos*," "*La Fiancée du Brigand*," Schiller's "*Braut von Messine*," and "*Liska*." 3. Quintets, quartets, sextets, septuors, and an octet, for strings and other instruments. 4. Trios for piano, violin, and violoncello. 5. Duos for piano and violin. 6. Sonatas for piano alone, and with horn, violoncello, &c. 7. A great many rondos, fantasias, variations, &c. 8. Songs for one or more voices. Riee published, with Herr Wegeler, of Bonn, some biographical notices of Beethoven.

RIFIORIMENTI. (I.) The name given to those decorative interpolations suggested by the taste of a vocal or instrumental performer.

RIGADE, ANDRÉ JEAN, a French composer, born in Provence about the year 1730, studied under Piccini, at the Conservatory of Santo Onofrio, at Naples. Amongst other dramatic works, he brought out at Paris the comic opera of "*Zolie et Lindor*." He died at Paris about the year 1800.

RIGADOON. A lively kind of dance, performed in *figure* by a man and woman, and the tune of which is always written in triple time. The rigadon was borrowed originally from Provence. The word is formed from the French word *rigadon*, signifying the same thing.

RIGATTI, GIOVANNI ANTONIO, an Italian contrapuntist and voluminous composer, about the middle of the seventeenth century, published (probably at Venice) the following, amongst other works: "*Messa e Salmi à 3, 5, 6, 7, e 8 voci, con 2 Violini de altri Instrumenti à beneplacito et parti à 5, à Capella*;" "*Messa e Salmi à 3 voci, et 1 F. et 4 parti di Ripieni à beneplacito*;" "*Motetti à*

2, 3, e 4 voci, con alcune Cantilene e Ripieni;" "Motetti a voce sola, Lib. 1, 2;" and "Motetti d 2, 3 voci, con una Messa brece à 3 voci."

RIGEL, HENRI JOSEPH, born in 1741 at Wertheim, in Franconia, was a pupil of the celebrated Jomelli. He was first sent into France by Richter, as teacher of music to a private pupil, after the completion of whose education he settled, in 1768, in Paris. His skill on the harpsichord soon procured him a sufficient number of pupils; at the same time he devoted much of his leisure to composition, and produced several operas of sonatas, duos, quatuors, and even symphonies, which were performed with success at the *Concert des Amateurs*. He also composed many operas of church music, and brought out, at the *Concert Spirituel*, the oratorios of "La Sortie d'Egypte," "Jephthé," and "La Prise de Jéricho;" likewise a "Salve Regina." There are also several operas of his composition for different theatres, namely: for the Théâtre Feydeau, "Le Secretier et le Financier," "Blanche et Vermeille," "L'Automate," and "Rosanie;" which latter piece was afterwards performed at the Théâtre de Monsieur, under the title of "Aëlie;" at the Théâtres de Beaujolais and de Montansier, "Aline et Zamorin," "Lucas le bon Fermier," "Les Amours du Gros Caillon," and "Aliz de Beaucaire." Finally, "Cora et Alonzo," a grand opera, words by Duboisson, was requested from him by the administration of the opera, about the year 1780; but it was never performed. The celebrated Gluck had a high opinion of the works of Rigel. Notwithstanding this, Rigel could never get his music performed at the grand opera. He was appointed, however, conductor of the music at the *Concert Spirituel* and *Concert Olympique*, and professor of singing at the Conservatory. His compositions are said to be characterized by great purity both of melody and harmony. He died at Paris in 1799.

RIGEL, LOUIS, eldest son of the preceding, was born at Paris about the year 1769. He was a pupil of his father's, and became a very good pianist and excellent professor. He performed also on the violin, and well understood composition. L. Rigel was the first who arranged for the piano the six grand symphonies of Haydn. He also arranged in the same way some trios by Pleyel. He resided at Havre de Grace, where he died in 1811.

RIGEL, HENRI JEAN, younger brother of the preceding, was born at Paris in 1772. He was a pupil of his father's for the piano and composition, and from the age of thirteen was nominated sub-professor at the *École de Chant*, and a short time afterwards made his *début* as pianist and composer at the *Concert Spirituel*, where several pieces of his composition were performed; amongst which were "Gédéon," "Judith," "Le Retour de Tobie," and a grand symphony for a full orchestra. Early in the French revolution, Bonaparte, then general, appointed Rigel to go with the expedition to Egypt. On his arrival at Cairo he was nominated member of the Egyptian Institute, and composed an opera which was performed in that city. On his return to France the emperor conferred on him the situation of pianist in his private band. Rigel enjoyed a high reputation in France as performer on the

piano, and was particularly celebrated as an accompanist. He also composed much music for his instrument, and some vocal pieces in good taste.

RIGHI, FRANCESCO. Chapel-master of the Jesuits' Church at Rome, in the middle of the seventeenth century. He published much church and theatrical music. Amongst the latter is the opera of "L'Innoenza riconosciuta," which was performed at Genoa in 1653.

RIGHI, GIUSEPPE MARIA, a composer of the Bolognese school, brought out in 1694 the opera of "La Bernarda," being the author both of the words and music.

RIGHINI, VINCENZO, chapel-master to the King of Prussia at Berlin, was born at Bologna about the year 1756, where he grounded himself in music under the celebrated Padre Martini. At the conclusion of his musical education in 1776, he went to Prague, and engaged himself as actor in the Italian company of Bustelli; also producing for that theatre several vocal compositions, and at length even operas. After remaining three years in Prague he proceeded to Vienna, where a fine opening was procured for his talents, by his appointment to the situations of director and composer to the Italian opera in that city; at the same time he was fixed on by the Emperor Joseph II. as singing master to the Princess Elizabeth of Wurtemberg. About the year 1788 he received an invitation from the Elector of Mentz to settle in that city as chapel-master. This being more profitable to him than remaining at Vienna, he accepted the offer, and, on his arrival at Mentz, wrote much music for the theatre, also a grand mass. He then received an invitation from King Frederic William II. of Prussia to set to music the grand opera "Enea nel Lazio," for the Berlin Theatre Royal. This composition meeting the approval of the king, he appointed him his chapel-master, with an income of four thousand dollars; which situation he held till the year 1804, when, with the permission of his court, he revisited his native country, and died at Bologna in 1812. The following list contains his principal works: "La Vedova Scaltra," opera buffa, Prague; "La Bottega del Caffè," opera buffa, Prague; "Don Giovanni, ossia il Convitato di Pietra," opera buffa, Prague; "La Sorpresa Amorosa, Cantata à 3 voci;" "Il Natale d'Apollò," Prague; "Grosse Serenade mit vollem Orchester," Prague; "L'Incontro Inaspettato," opera buffa, Vienna, 1785; "Le Demogorgone, ossia il Filosofo confuso," opera buffa, 1785; "Die Scene aus des Metastasio Oper Antigono: Berenice che fai," Mainz; "Die Scene aus des Metastasio Olimpiade, 'Se eerea, se dice,'" "Armida," opera seria, Aschaffenberg; "Alcide al Bivio," opera seria, 1789; "Eine grosse solemne Messe," Frankfurt; "Enea nel Lazio," opera seria, Berlin, 1793; "Il Trionfo d'Arianna," opera seria, Berlin, 1793; "Atalanta e Meleagro, Festa Teatrale che introduce ad un Ballo Allegorico," Berlin, 1797; "Armida," opera seria, Berlin, 1799; "Tigrane," opera seria, Berlin, 1799; "Gerusalemme liberata," opera seria, Berlin, 1802; "Der Zauberwald (La Selva incantata)," Leipsic; "6 Lieder zum Singen beyne Klavier, worunter 2 mit Variationen," Mannheim, Offenbach, and Hamburg; "12 Arietti Ital.," Mainz, Altona, and Brunswick; "12 Ari

ette Ital. Zweyter Theil," Berlin, 1799; "12 Charakteristische Tänze und Märsche zum Carneval, 1799, fürs Klav. eingerichtet;" "Serenata à 2 Clar., 2 Cor., et 2 Fag.," Leipsic, 1797; "Aria con Recit. à R. solo, acc. da 2 F., A., e B.;" "Minerva belebt die Statuen des Dardalus," pantomimic dance; "Cantate avec Chœurs et Danses Russes, exécutée le 12 Fév., 1801, à Berlin, arrang. pour le Clav.," Op. 5, Berlin, 1802; "Adieux d'Essex à Elizabeth, Romance pour le Clav.," Berlin, 1802; "Concert. pour Fl. princip. avec 2 F., 2 Ob., 2 Fag., 2 Cors, A., et B.," Angsburg, 1802; "Dolci Ariette," Leipsic; "12 Duetti con acc. di P. F.," Op. 8, Berlin, 1802; "12 Deutsche Lieder mit Begleit. des P. F.," Op. 9, Berlin, 1803; "Esercices pour se perfectionner dans l'Art du Chant," Op. 10, Leipsic, 1804; "6 Lieder mit Begleit. des P. F., 11tes Werk," Leipsic, 1804; "6 Lieder mit Begleit. des P. F., 12tes Werk," Leipsic, 1804; "Sammlung deutscher u. italt. (auch franz.) Gesänge, (dabey sind auch Duetten,) 10 Hefte," Leipsic, 1804; "Musica vocale. Let. C. Scena: Berenice, che fai," Leipsic, 1804; and "Overture de l'Op. Tigrane, à 4 m. pour P. F.," Leipsic, 1804.

RIGHINI, ROSINE ELEONORE E. II., wife of the preceding, was born at Stettin in 1767. She was an excellent singer, and very beautiful woman. She performed principally at Berlin, where she died in 1801.

RIGOLL. An old kind of instrument, consisting of several sticks placed by the side of each other, but separated by beads. It was performed upon by being struck with a ball fixed upon the end of a stick.

RIMBAULT, STEPHEN FRANCIS, born in London about the year 1773, received his musical education from Dittenhofer, Hook, and Possin. His principal original works are, "Three Grand Sonatas for the Piano-forte, with Flute Accompaniment," and several sets of duets, all of which have been well received. Afterwards he almost wholly applied himself to the adaptation of the great works of Haydn, Mozart, Beethoven, Rossini, Paer, Winter, &c., particularly of twelve of Mozart's grand symphonies, for the piano-forte, both as duets and single, with accompaniments for the violin, flute, and violoncello. In these, considering the difficulty of giving the spirit of an orchestra to so few instruments, he succeeded in a very high degree. Most of these adaptations were published by Hodsoll.

RIMONTE, PIETRO, a Spanish composer, flourished about the year 1600, and published "Lamentationes Jeremie, 6 voc.," Antwerp, 1607, and "Paraiso Espanol de Madrigales y Villancicos à 4, 5, y 6 voz.," Antwerp, 1614.

RINALDO DA MONTAGNANA, a contrapuntist of the sixteenth century, published, "Il Primo Libro de Motetti à 4 voci," Venice, 1573.

RINALDO DA CAPUA, born in the first years of the last century, was a Neapolitan composer of great genius and fire, whose productions have been much admired. It has, however, been said, and perhaps with truth, that his science was not equal to his genius; for, being educated as a dilettante, he probably did not submit to all the drudgery of a dry study, which every one intended for the profession of music must necessarily go through. Amongst his dramatic works are the following: "Farnace," 1739; "Liberta

Noeiva," 1744; "Ambizione Delusa," 1744; and "La Comedia in Comedia," 1744.

RINCK, CHRISTIAN HEINRICH, the celebrated organist at Darmstadt, was a pupil of J. C. Kittel, of Erfurt. Amongst his published works, up to the year 1812, are, "6 Kurze und Leichte Orgel-präludien, mit und ohne, Pedal zu Spielen," vol. i., 1795; "12 Kleine und Leichte Orgelstücke," vol. ii., Gotha, 1797; "Air Russe, avec 6 Var. p. le Clav.," Gotha, 1797; "3 Sonat. très-faciles, p. le P. F., avec un Violon Obl.," Part I., Gotha, 1797; "12 Préludes pour l'Orgue, 6me Recueil," Op. 25; and "12 Orgelstücke, Hrn. Vierling, zugeeignet, 7te Samml.," Op. 29, Offenbach, 1812. Rinck died August 7, 1846.

Mr. Lowell Mason, in his "Letters from Europe," 1852, says of him,—

"The organist, too, must be interested in Darmstadt, for here lived Rinck, a name better known in England and America than any other organ composer. He was for many years the organist to the grand duke, and was universally esteemed as a learned and accomplished musician, an elegant and tasteful organist, a worthy citizen, and an excellent man. . . .

"Rinck's works, or many of them, have been republished in America, especially his "Organ School," and much of his organ music. They have circulated in every part of the land; so that wherever there is an organist, Rinck is known in his works, and studied. Whoever studies his organ music, with a tolerable musical ability, cannot fail to form a good style. We have for many years been accustomed to say, in answer to the question, 'How shall I acquire a good style of organ playing, and especially of voluntary playing?' 'Study Rinck, for he is a sure guide.' He is not great, like Bach, but he is ever beautiful and elegant. It was said, long ago, that one who desired to acquire an elegant style of writing the English language must spend his days and nights with Addison; and it is equally true that he who would acquire the most tasteful style of organ playing must spend his days and nights with Rinck. We visited Darmstadt with especial reference to the library of Rinck, which we knew was for sale. The lover of music and of its progress amongst us will be glad to know that it is already packed, and will be on its way to America in a few days. . . .

"The library of Rinck contains the most approved musical treatises, and popular works on the literature of music, that are to be found in the German language, with books of music, and especially of church music, in the greatest variety, from the sixteenth century down to the present day."

RINGERS. Persons who are in the habit of ringing church bells for their amusement. The practice of ringing bells in *change* is so peculiar to England as to have occasioned its being called, by foreigners, *the ringing island*; but the antiquity of it is not ascertained. There used to be, in London, societies of *ringers*.

RINFORZANDO. (I.) See FORZANDO.

RIOTTE, P. J., a composer at Vienna, has published many popular instrumental works, amongst which we can name "Amusements p. le Beau Monde sur le P. F.," Op. 6, Leipsic, and "Concert p. la Fl. av. Acc.," Op. 22, Leipsic, 1811

RIPALTA, GIOVANNI DOMENICO, a celebrated chapel-master and organist near Milan, was born in that country in 1570. He was engaged in the suite of Henry III. of France. Amongst his printed works is "*Messa à 5 con Partitura*," Milan, 1629.

RIPLENO. (I.) Full. This word is used in orchestral compositions to distinguish those parts which are only occasionally introduced to fill up and supply the chorus.

RISOLUTO. (I.) A word implying a firm, determined manner of expression.

RISPOLI, SALVADORE, an Italian dramatic composer, was born at Naples, about the year 1736. Amongst his works are, "*Ipermestra*," opera seria, Milan, 1786; "*Idalide*," opera seria, Turin, 1786; and "*Il Trionfo di David*," opera seria, Naples, 1788.

RIST, JOHANN, a German ecclesiastic, was born near Hamburg in the year 1607. He was at the same time the patron of musicians, and himself an excellent composer. In a work by him, entitled "*Aprilens Unterredung*," he treats of ancient and modern music. He also composed a collection of German and Italian sacred songs, descriptive of the passion of our Savior. These were published at Hamburg in 1655. Rist died in 1667.

RISTORI, GIOVANNI ALBERTO, a celebrated Bolognese composer, held, in 1740, the appointment of imperial chapel-master at St. Petersburg, from whence he removed to Dresden, where he was vice chapel-master and church composer to the Elector of Saxony. In early life, whilst in Italy, he composed the two following operas: "*La Pace Triionfante in Arcadia*," 1713, and "*Euristeo*," 1714.

RISVEGLIATO. (I.) With much animation.

RITENENTE, RITENUTO. (I.) A keeping back, a decrease in the speed of the movement.

RITARDANDO. (I.) An expression implying a slackening of the time.

RITORNELLO, or RITORNEL. (I.) A term formerly much in use, and applied to the short introductory symphony to an air; also to short instrumental passages introduced between the strains to relieve the voice and improve the general effect, or to the concluding symphony after the melody. It appears from several passages in the Greek authors, that these *ritornelli*, or symphonies, were introduced in the ancient as well as in the modern music. The name by which the Greeks distinguished them was that of *mesaulion*, a figurative expression in the singular number, implying an entry, or passage, leading to something else. Meibonius, speaking of the *mesaulion*, or symphony, calls it an interpiping, which clearly indicates that *ritornelli*, or intermediate symphonies, were anciently in use.

RITSCHHEL, GEORG. Chamber musician, and violinist of the Electoral Chapel at Munich in 1786. He published at Paris, in 1780, six instrumental quintets.

RITTER, GEORG WENZEL, born at Mannheim, in 1748, was a celebrated performer on the

bassoon, and published, in Paris, several works for his instrument. He died at Berlin in 1808.

RITTER, PETER, concert master at Mannheim since the year 1801, was born about the year 1760. He was a good violoncellist, also an instrumental and vocal composer. Amongst his compositions are the following: "*Der Eremit auf Formentera*," operetta, Mannheim, 1788; "*Der Sklavenhändler*," operetta, Mannheim, 1790; "*Die Weihe*," mus. prolog., Mannheim, 1792; "*Die lustigen Weiber*," operetta, Mannheim, 1794; and "*Maria von Montaban*," operetta, 1801.

RIVERSA, ALROVESCIO. (I.) Inverted, reverted.

RIVOGLIAMENTO. (I.) Changing. This word is used to signify the changing the notes of the bass, or some other part, in the treble, or *vice versa*. This frequently occurs in double counterpoint, where the treble notes are transposed into the bass, or those of the bass into the treble; and that by so artificial a manoeuvre that the harmony, though varied, is still as correct as in the natural order of the parts.

RIZZIO. See Ricci.

ROBINEAU, ABBÉ ALEXANDRE, published at Paris, about the year 1770, six violin solos and a concerto for the same instrument. He was one of the best pupils of Gaviniès.

ROBINSON, MRS. ANASTASIA. She was descended from a good family in the county of Leicester; her father was a portrait painter, and married a woman of some fortune, by whom he had only this child. Mr. Robinson had a disorder in his eyes, which terminated in the loss of sight, and thus deprived him of the means of supporting his family by the exercise of his pencil. Yielding to his daughter's strong propensity to music, her father placed her under Dr. Croft, Sandoni, and an Italian singer called the Baroness. Anastasia, though she had a fine voice, never became a first-rate singer, as her intonation was sometimes imperfect; she, however, sang at the opera for some years, till at length her personal charms and accomplishments, and the amiability of her character, won the heart of the Earl of Peterborough, who privately married her, and after some time publicly owned her as his wife. The countess survived the earl about fifteen years, and died in 1750.

ROBUSCHI, FERDINANDO. An Italian composer, born at Colorno, in the duchy of Parma, August 15, 1765. Amongst his dramatic works he composed the following: "*Padre e Figlio Castrini*," opera buffa, 1788; "*Attalo, Re di Bittonia*," opera seria, Padua, 1788; "*Il Geloso Disperato*," opera buffa, Rome, 1788; "*La Morte di Cesare*," opera seria, 1790; and "*Chi sta ben non si muove*," opera buffa, Florence, 1787.

ROCCA, ANGELO. An Augustine monk, born in the duchy of Spoleto, in Italy, in 1545, died in Rome in 1620. In his work entitled "*Commentarius de Campanis*," published at Rome in 1612, much is to be found respecting music.

ROCCHIANO, GIOVANNI BATISTA, an Italian chapel-master, born at Orvieto, flourished in the first half of the seventeenth century, and published some masses and motets.

ROCHA, FRANCI-CO DA. A Portuguese

monk and church composer, born at Lisbon in 1640. He wrote numerous works for the church, and composed a mass at the early age of eleven years. He died at his convent in Lisbon, in 1720.

ROCHEFORT, JEAN BAPTISTE, conductor of the orchestra at Cassel, and subsequently violoncellist at the Royal Academy of Music at Paris, was born in that city in 1746. He produced many dramatic works, both at Paris and Cassel, and much instrumental music.

ROCHEFORT, GUILLAUME DE, a member of the Academy of Inscriptions at Paris, and translator of the Iliad and Odyssey of Homer, published the following work on the subject of music: "*Mémoire sur la Musique des Anciens, où l'on expose les Principes des Proportions authentiques, dites de Pythagore, et de divers Systèmes de Musique chez les Grecs, les Chinois, et les Egyptiens, avec un Parallèle entre la Système des Egyptiens et celui des Modernes*," Paris, 1770.

ROCK HARMONICON. An improved instrument, lately exhibited in Liverpool. It is composed, in the first place, of a wooden frame, with four horizontal bars of wood crossing it from right to left, on which (being properly padded) are placed stones or portions of certain sorts of rock, properly cut into sizes, &c., and regularly arranged in musical order, like the keys of a piano-forte. The performers, of whom there are three, are each provided with two wooden hammers, with which they strike the stones, and thus make them discourse most excellent music. The manner in which the Messrs. Harrison perform is astonishing, and proves that they must be accomplished musicians, thoroughly versed in the principles of their art; for unless they understood the principles of harmony it would be impossible for them to perform as they do on this the most perfect rock harmonicon that has ever yet been exhibited. It has a complete chromatic scale from the top to the bottom, and its compass is so great that it is capable of performing any operatic music, however difficult. The arrangement of the keys is most ingenious, and whether as a beautiful musical instrument, or as an ingenious piece of mechanism, it is well worth attention and inspection. The stones from which the notes are produced were brought from the mountain of Skiddaw, in Cumberland.

RODE, PIERRE, a celebrated French violinist, was born at Bourdeaux, February 26, 1774. His first masters in music were Fauvee, Daosta, and Gervais. He went to Paris when thirteen years of age, and was introduced to Viotti, who, with his usual good nature, interested himself much in perfecting the talent of the young artist. In 1790 Rode made his *début* by the performance of the thirteenth concerto of his master, and was highly successful. In 1794 he embarked for Hamburg, and was shipwrecked on the English coast. He then obtained from the English government permission to go to London, chiefly for the purpose of visiting Viotti. On his arrival, he performed at a concert for the benefit of a charity, but for political reasons could not long continue in England. He embarked, therefore, for Hamburg, and from thence travelled through Geruany. On his return to

Paris, he excited renewed enthusiasm, and was appointed professor of the violu at the Conservatory, and shortly afterwards first violin in the private band of Bonaparte, then first consul. A few years after this, he went to St. Petersburg in company with Boieldieu, where he received the appointment of first violin to the Emperor Alexander. He remained in Russia five years, and in 1809 returned to his native country. Disappointed in not exciting the sensation by his performances which he formerly created, he no longer performed in public, but, weary of this seclusion, and ambitious of distinction, he, in 1811, returned to Germany, and made the tour of the principal German cities. In 1814 Rode established himself at Berlin, and was married. He afterwards removed to Bourdeaux, which he never quitted except on the occasion of his last visit to Paris, in 1828, whither he went with the intention of once again entering the lists as a public performer. He appeared several times, but was observed to be no longer what he once was. The shock which this produced on his sensitive nature was too great for him to bear, and had a fatal effect on his constitution. In 1829 he was attacked by a partial paralysis, under which he sank, and died on the 25th of November, 1830. As a composer for his instrument, Rode occupies a distinguished place. His melodies have a remarkable sweetness; the plan of his compositions is well conceived, and they have traits of much brilliancy and originality. Amongst his published works, up to the year 1804, are the following: "3 *Concerts p. le Clav. Princip.*, No. 1, in D minor," 1794; "No. 2, in E," 1795; "No. 3, in G minor," Paris, 1796; "3 *Concerts p. le V. Princip.*, No. 4, in A," 1798; "No. 5, in D," and "No. 6, in B," Paris and Ofenbach, 1800; "1 *Concert p. le V. Princ.*, No. 7, in A minor," Paris; "*Air varié p. le V., avec V., A., et B.*," Op. 10. Leipsic; "*Quat. p. 2 V., A., Vc., Nos. 1, 2, 3*," Op. 11, Leipsic; "*4me quat. p. detti*," Op. 13, Leipsic; "*Audante varié p. V. avec V., A., B.*, No. 2, in A minor," Leipsic; "*Air varié p. V. Princ. d gr. Or. in E*," Leipsic; "*Sme Conc. de V., in F minor*," Leipsic; "*Conc. p. Fl. arr. p. Hoffmeister*, in E minor," Leipsic; "*9me Conc. p. V. in C*," Leipsic; "*Méthode de Violon, par Rode, Kreutzer, et Baillet, redigée p. Baillet. Adoptée p. le Conservatoire pour servir à l'Etude dans cet Etablissement*;" "*Exercices p. le Violon de toutes les Positions, et 50 Var. sur la Gamme, Supplément de Méthode de Violon*," Leipsic; "*Arietta, 'Dul di ch'io', c. P. F. o. Arpa*," Leipsic; "*Air varié p. P. F. tiré de l'Air à gr Orch.*," Leipsic; and "*Polonoise p. P. F.*, Nos. 1, 2," Leipsic.

RODEWALD, CARL, concert master at Cassel, was born in Silesia, in 1755. He was a violin pupil of F. Benda, and united in his playing the style of that master with the modern school. Kirnberger was his master in composition. Amongst his publications, the most successful was a "*Stabat Mater*," which for many years shared the approbation of the public with those of Haydn and Pergolesi.

RODIO, ROCCO. A celebrated Italian contrapuntist, born in Calabria in 1550. An improved edition of his principal didactic work bears the following title: "*Regole di Musica di Rocco Rodio, sotto brevissimo risposte ad alcuni dubij propostogli da un Cavaliero, intorno alle varie opinioni de Co.*"

trapontisti. Con la Dimostrazione di tutti i Canoni sopra il Canto Fermo, con li Contraponti doppij, e rivoltati, e loro regole. Aggiuntavi un'altra breve Dimostrazione de dodici Tuoni regolari finti e trasportati. Et di nuovo da Don Batt. Olifante, Aggiuntivi un Trattato di Proporzioni necessario à detto Libro," Naples, 1609. Padre Martini often cites this work in terms of high approbation.

RODOLPHE, or RUDOLPHE, JEAN JOSEPH, born at Strasburg in 1730, learned the French horn and the elements of music from his father, who was a performer on that instrument. About the age of fifteen he studied the violin under Leclair, and was soon after employed as leader in several concert orchestras in France. About 1754 he went to Italy, in the service of the Duke of Parma. Rodolphe was the first who performed a concertante horn accompaniment to a public Italian singer; it was the celebrated Piraglier, and the air was one by Traetta. He was also the first who accompanied motets with a horn in the Italian churches. Whilst at Parma he learned composition of Traetta. In 1760 he quitted Italy, and entered the service of the Duke of Wurtemberg, at Stuttgart, where he took further lessons in counterpoint from Jomelli, and composed music for many ballets of the celebrated Noverre. In 1763 Rodolphe went to Paris, and entered the band of the Prince de Conti. In 1765 he was admitted a member of the orchestra of the Royal Academy of Music, when he introduced, with great effect, a horn concertante accompaniment to the air of Boyer, "*Amour sous ce riant Ombrage.*" About the year 1780 he presented to M. Amelot a plan for a school of music, which idea was acted on, in 1784, by M. de Breteuil, when Rodolphe was appointed professor of composition to the new establishment, now called the Conservatory, and for which he has since written the following important works: "*Solfèges dédiés à la Nation, divisés en deux Parties. La Première contenant la Théorie de cet Art; la Deuxième les Leçons avec la Basse et les Gradations nécessaires pour parvenir aux Difficultés,*" Paris, 1799; and "*Théorie d'Accompagnement et de Composition,*" Paris, 1799. On occasion of the marriage of the Count d'Artois, Rodolphe composed the opera of "*Ismenor,*" and for the Italian theatre in Paris, the operas of "*La Mariage par Capitulation,*" in 1761, and "*L'Aveugle de Palmyre,*" in 1767. He also published some practical works for the horn and violin.

RODRIGUES, JOAO. A Portuguese monk and musician in the first half of the sixteenth century.

RODRIGUES, MANOEL, a celebrated organist and harpist, born at Elvas, in Portugal, flourished about the year 1600. He published "*Flores da Musica, para o Instrumento de Tecla e Harpa,*" Lisbon.

ROE, RICHARD, a singer of some mark, and the author of some critical musical essays in the "*Monthly Review,*" and a few songs, (some of which were written for Mr. John Parry,) died in London, April, 1853.

ROEMHILD, JOHANN THEODORE, a good German church composer, was born in 1684. He was court and cathedral organist at Mersburg, and published a variety of sacred cantatas, motets, &c.

ROESER, VALENTIN, a clarinetist at Paris, about the year 1769, resided afterwards, in 1781, at Vienna, where he published "*Instructions for Composers of Clarinet and Horn Music,*" and some symphonies, quatuors, and other instrumental music.

ROESLER, JOSEPH. A composer at Prague, at the commencement of the present century, when he was conductor of the music in the orchestra of the Italian opera in that city. He died in 1811, in the thirty-sixth year of his age, being known by various admired dramatic and instrumental compositions.

ROESSIG, C. G., published at Beyreuth, in 1779, a work in octavo, entitled "*Versuche in Musikalischen Dramen nebst einigen Anmerkungen, &c.*;" i. e., "*An Essay on Musical Dramas, with Notes relating to the History and Rules of that Species of Poetry; also on the Morality and Advantages of the Theatre.*" Roessig was born at Mersburg in 1752, and in 1784 was an advocate at Leipsic. He died in 1806.

ROGANTINI, FRANCESCO. An eminent church composer about the year 1650.

ROGERS, BENJAMIN, was the son of Peter Rogers, a gentleman of the Chapel of St. George, at Windsor. He was first a chorister under the tuition of Dr. Nathaniel Giles, and then a clerk or singer in the chapel. Afterwards he was appointed organist of Christchurch, Dublin, where he continued until the breaking out of the rebellion, in 1641, when he returned to Windsor, and again became a clerk in the chapter.

The troubles during the rebellion soon deprived him also of this situation; and aided by a small annual allowance, which was paid him in compensation for his losses, he was compelled to earn a subsistence by teaching music at Windsor.

In 1653 he composed "*A Set of Airs in Four Parts for Violins,*" which were presented to the Archduke Leopold, afterwards Emperor of Germany, and were often played before him.

Through the interest of Dr. Ingels, chaplain to the Lord Commissioner White Locke, Rogers was recommended to the University of Cambridge, and having received from Cromwell a mandate for that purpose, was admitted, in 1658, to the degree of bachelor of music.

In the year 1662 he was again appointed a clerk of St. George's Chapel at Windsor, with some addition of salary, and was also elected organist of Eton College. Both these places he held until, a vacancy occurring in Magdalen College, Oxford, he was chosen organist there. In 1669, upon the opening of the new theatre at Oxford, he took the degree of doctor of music.

He continued in his latter station of organist until the year 1685, when he was ejected by order of King James II. The college allowed him a small pension, on which he lived, in the outskirts of the city, to an old age, entirely neglected.

His works are not numerous. There are some of his detached compositions in a collection entitled "*Court Ayres, consisting of Pavans, Almagnes, Corants, and Sarabands, of Two Parts,*" published by Playford in 1655; some hymns and anthems for two voices, in a collection entitled "*Cantica Sacra;*" and others in the psalms and hymns, in four parts, published by Playford.

His services and anthems, of which there are several in English cathedral books, are the most celebrated of his works. They contain great sweetness of melody and correctness of harmony. One of his full anthems, "Lord, who shall dwell in thy tabernacle?" is inserted in Page's "Harmonia Sacra," and another for four voices, "Teach me, O Lord," amongst Dr. Crotch's specimens.

ROGGIUS, NICOLAUS, a musician resident at Brunswick, was born at Gottingen, and published in the former town, in 1566, "*Musice Practice, sive Artis canendi elementa, modorumque musicorum doctrina, questionibus breviter et perspicue exposita.*"

ROGNONE TAEGIO, FRANCESCO, concert-master of the Duke of Milan, and chapel-master of the church of St. Ambrosio Maggiore in that city, about the year 1620, rendered himself celebrated as a composer, by the following works: "*Messe e Salmi Falsi Bordonni, e Motetti à 5, col Basso per l'Organo,*" Milan, 1610; "*Madrigali à 5 col Basso,*" Venice, 1613; "*Aggiunta del Scholare di Violino et altri Stromenti, col Basso continuo per l'Organo,*" Milan, 1614; "*Selea de varii passaggi secondo l'uso moderno, per cantare et suonare con ogni sorte de stromenti, divisa in due parti, &c.,*" Milan, 1620 and 1646; "*Correnti e Gagliarde à 4, con la quinta parte ad arbitrio, per suonar su varii Stromenti,*" Milan, 1624; and "*Partito all'Organo delle Messe, Motetti à 4, 5,*" Venice, 1624.

ROGNONE TAEGIO, GIOVANNI DOMENICO, an ecclesiastic and eminent organist of the church of St. Sepolcro, at Milan, published the following works: "*Canzonette à 3 e 4 insieme, con alcuni altre di Rugger Trofeo,*" Milan, 1615; "*Madrigali à 8, Lib. 1, due Cori con Partitura,*" Milan, 1619; "*Missa per Defonti all'Ambrosiana, con l'aggiunta per servirsene alla Romana,*" Milan, 1624.

ROGNONI, RICARDO, the father of the two preceding, was a composer at Milan, towards the end of the sixteenth century. He was also an eminent performer on the violin, as well as on several other instruments. Of his compositions we can name "*Canzonette alla Neapolitana à 3 e 4 voci,*" Venice, 1586; "*Libro di Passaggi per Voci e Stromenti,*" Venice, 1592; and "*Pavane e Balli con 2 Canzoni e diverse Sorti di Brandi per suonare à 4 e 5 voci,*" Milan, 1603.

ROHMANN. See **ROMANO**.

ROHR. (G.) A reed.

ROHRWERK (G.) The reed stops taken collectively.

ROI, one of the oldest French contrapuntists, flourished about the year 1450, being a contemporary of Ockenheim.

ROI, BARTOLOMEO, a Neapolitan chapel-master, was eminent as a contrapuntist about the year 1600.

ROLLA, ALESSANDRO. Member of the Conservatory at Milan, and first violin at the great theatre in that city. He was very celebrated as a performer on the tenor. He was born in Paris in 1767, and died at Milan in 1837. Amongst his works are the following: "*Concerto per il Violino, in G,*" Paris, 1795; "*Serenata à 2 V., 2*

Alti, 2 Cor. obl.," Op. 2, Paris and Offenbach 1795; "*Trois Trios pour V., A., et B.,*" Paris, 1795; "*Trois Duos pour V. et A.,*" Op. 1, Paris and Offenbach, 1795; "*2 Conc. pour Alto princiep. Nos. 3 et 4,*" Offenbach, 1800; "*3 Gr. Duetti concert. à V. e A.,*" Zurich, 1803; "*3 Duos conc. pour 2 V.,*" Op. 3, Bonn, 1803; and "*Trois Trios pour V., A., et B., Liv. 2,*" Paris.

ROLLE, JOHANN HEINRICH, was born at Quedlinburg in 1718. As early as his thirteenth year he composed a complete church service, which was well received. From 1736 to 1740 he studied philosophy and law at Leipsic; but he afterwards devoted his musical talents to the church. Rolle was a favorite and a truly devotional harmonist. His oratorio of "Thirsa and her Sons" is full of good taste, new passages, pleasing effects, and pathos. He was likewise the author of several pieces for the organ and harpsichord, which have great merit. Specimens of his sacred music are inserted in La Trobe's publication. Rolle died in the year 1785.

ROLLING. A word applied to that rapid pulsation of the drum by which the sounds so closely succeed each other, as to beat upon the ear with a rumbling continuity of effect.

ROMANCE. (F.) **ROMANZA.** (I.) Formerly the name given to the long lyric tales sung by the minstrels; now, a term applied to an irregular, though delicate and refined composition.

ROMANESCA. (I.) An old, lively, Italian dance. See **GALLIARD**.

ROMANA, GIULIA. A celebrated Italian female singer, in the latter part of the seventeenth century.

ROMANI, a celebrated Italian violinist, performed in London in the year 1770.

ROMANO, MICHAËLE, was a pupil of Soriano, and afterwards chapel-master in the church called Cathedrale de Concordia, at Venice. This person, as well as his master, is celebrated for the composition of canons; a specimen of which, in one for nine choirs, or thirty-six voices, is inserted in Kircher's "*Musurgia.*" He is, however, best known by his work entitled "*Musica vaga et artificiosa,*" published at Venice in 1615, in which the subject of canon is very learnedly discussed and explained by a variety of examples. In the preface to this work are contained memoirs of the most celebrated Italian musicians who were living at the time when it was written.

ROMANO, or ROHMANN, L. II., chapel-master to the King of Sweden, was an excellent composer in the early part of the last century. Amongst his works we can name the two following, which were published at Amsterdam: "*12 Sonates à 2 Fl. et Basse cont. Lib. 1,*" and "*Sonat à 2 Fl. et B. C. Lib. 2.*"

ROMANO, GIULIO. See **CACCINI**.

ROMANO, ALESSANDRO. See **ALESSANDRO**.

ROMANO, BALLABENE. See **BALLABENE**.

ROMBERG, ANTON, a celebrated performer on the bassoon, was born in 1745, and in the year 1792 resided at Boln. In the spring of 1799 he

was at Hamburg, where he gave a family concert, consisting of the performance of his brother, himself, and their children.

ROMBERG, BERNHARD, eldest son of the preceding, and an excellent violoncellist, was born in 1770. In the year 1790 he was a member of the court chapel of the Elector of Cologne at Bonn, which establishment was broken up early in the French revolution. He then went, with his cousin Andreas Romberg, the violinist, to Hamburg, where they both procured engagements in the orchestra of the German theatre. This was in the year 1793; two years after which time the cousins quitted Hamburg, and travelled together into Italy, from whence they again returned to Hamburg in 1797; they then separated, and in 1799 Bernhard proceeded alone, by way of England and Spain, to Lisbon. In 1803 we find him once more in Hamburg, and in 1805 holding a situation in the Royal Chapel at Berlin. Romberg was an excellent composer for his instrument, and has also written some very pleasing vocal music. Amongst his works are the following: "*Die weidergesundene Statue*," operetta, Bonn, 1790; "*Der Schiffbruch*," operetta, Bonn, 1791; "*Arietta p. il Vc. solo, Violino, Viola, c B.*," Vienna; "*Deux Gr. Concertos pour Vc. avec Acc.*," Ops. 1 et 2, Paris, 1802; "*Potpourri pour le Vc. avec Acc. de 2 V., A., B., et 2 Fl.*," Op. 4; "*Gr. Concerto pour Vc.*," Op. 3; "*Troisième Concerto pour Vc.*," Op. 6; "*Quatrième Concerto pour Vc.*," Op. 7; "*Gr. Trio pour Vc., V., et A.*," Op. 8; "*Trois Duos pour 2 Vc.*," Op. 9; "*Fantaisie pour Vc. avec Orchest.*," Op. 10; "*Ouverture à gr. Orchest.*," Op. 11; "*Quat., No. 4, pour 2 V., A., Vc.*," Op. 12; "*Capricho, y Rondo en el gusto Español, con una Miscelania de Bolero, Gitano, Cachirulo, y Zorongo, para Vc. obligado, c. Acc. de 2 V., A., y Vc.*," Obra. 13, Paris; "*Rondeau Espagnol p. P. F. arr. de l'Œuv. 13.*," Paris; "*Nouvelle Polon. p. P. F. No. 1.*," Paris; "*Ulysse und Circe*," Oper. Paris; "*Quat. p. P. F., V., A., Vc.*," Op. 22, Moscow and Leipsic; "*Trauersymphonie für Orch. dem Andenken der Königin Luise von Preussen gedicmet. 23 Werk.*," "*Divertimento p. Vc. avec 2 V., A., B.*," Op. 24, Moscow and Leipsic; "*Quatuors, Nos. 5, 6, 7, p. 2 V., A., Vc.*," Op. 25, Moscow and Leipsic; and "*Ouvert. de l'Op. Ulysse et Circe, à gr. Orch.*," Op. 26, Moscow and Leipsic.

ROMBERG, ANTON, Jun., brother of the preceding, was born in 1777. He was a good violinist and performer on the bassoon.

ROMBERG, ANGELIKA, sister of the preceding, born in 1779, became known to the German public as a pleasing singer and a good pianist.

ROMBERG, HEINRICH, brother of Anton Romberg, and born in 1748, was an excellent clarinetist, and held the situation of music director to the Bishop of Munster.

ROMBERG, DR. ANDREAS, eldest son of the preceding, was an excellent violinist, and the companion for several years of Bernhard Romberg, as before related. He was born in 1767 and died at Gotha, November 10, 1821. After Bernhard left Hamburg, in 1799, Andreas particularly paid attention to composition. He had, however, previously become known by several admired dramatic and vocal pieces, written chiefly

at Bonn, and some of them published there and at Leipsic; a few of these were, however, the joint compositions of himself and cousin. In the year 1809, the university of Kiel, in Holstein, conferred on him the degree of doctor of arts. The following are his principal works: "*Das graue Ungheuer*," operetta, Bonn, 1790; "*Der Rabe*," operetta, Bonn, 1791; "*Die Macht der Musik*," operetta, Bonn, 1791; "*Ein Fasten-Oratorium, nach dem vom Hrn. Reichardt aus Händels Messias zusammen-gesetzten und in seinem Kunst-magazin abgedruckten Texte*," Bonn, 1793; "*Eine Sammlung von Liedern*," 1793; "*3 Quatuors pour 2 V., Viola, et Vc.*," Op. 1, Leipsic, 1798; "*3 Duos pour 2 V. et Vc.*," Op. 2, Leipsic, 1800, by Andreas and Bernhard; "*2 Canons für 3 und 6 Stimmen*," "*6 Lieder bey'm Klavier zu singen*," Leipsic, 1799; "*6 Canzoni coll' Acc. del Clavicemb.*," Leipsic, 1800; "*Kosegartens Cantate, Die Harmonie der Sphären*," about 1800; "*3 Quat. p. 2 V., A., et Vc., dédiés à Jos. Haydn*," Op. 2, Bonn, 1802; "*Gr. Concerto, p. V. avec Acc. No. 1.*," Op. 3, 1802, with Bernhard; "*Six Duos Conc. pour V. et Vc., 2 et 3 Suite*," Paris, with Bernhard; "*3 Quint. pour Fl., V., 2 Alt. et Vc.*," Op. 1, Nos. 1, 2, 3, 1803; "*Psalm, Dixit Dominus, &c.*," 1800; "*Selmar und Selma, Elegie von Klopstock, für 2 Singst. mit Begl. 2 V., A., u. B.*," Op. 3, 1800; "*Simphonie in Es*," Op. 6; "*3 Duos Conc. pour 2 V.*," Op. 4; "*3 Quat. pour 2 V., A., et Vc.*," Op. 7; "*Deuzième Concerto pour V. avec Orch.*," Op. 8; "*Gr. Quintetto pour 2 V., 2 A., et Vc.*," Op. 23, Hamburg, 1808; "*Deuzième Simphonie à gr. Orchest. in D dur*," Op. 22, 1808; "*Der Messias von Klopstock*," manuscript; "*Te Deum*," manuscript; "*Die Glocke, Gedicht von Schiller, in Chören, &c.*," ("*Song of the Bell*,") 1808; "*Etudes, ou trois Sonates p. un V.*," Op. 32, Leipsic; and "*Troisième Simph. in C.*," Op. 33, Leipsic.

ROMBERG, BALTHASAR, younger brother of the preceding, born in 1775, promised to become a superior artist on the violoncello, but died at the age of seventeen.

ROMBERG, THERESE, sister of the preceding, born in 1781, was known in Germany as a good pianist and singer.

ROMI, first violin and director of the music in the orchestra of the Italian theatre at Lisbon in 1801.

RONCAGLIA, FRANCESCO, an excellent Italian soprano, of the Bolognese school, flourished between the years 1772 and 1792. He was considered one of the first singers in Europe.

RONCONI, DOMENICO. A celebrated tenor and professor of singing, born in Lombardy, in 1772. He made his *debut* in 1796, and held a prominent place on the lyric stage up to 1829. He sang in all the principal cities of Europe, and receiving an appointment from the King of Bavaria, established himself in Munich, where he resided for ten years. In 1829 he returned to Milan, where he gave instruction in singing.

RONDE. (F.) A semibreve.

RONDINO, RONDILETTA, RONDINETTO, or RONDOLETTO. (I.) A short rondo.

RONDO, (I.) or RONDEAU, (F.) A composition, vocal or instrumental, generally consisting of three strains, the first of which

closes in the original key, while each of the others is so constructed in point of modulation as to reconduct the ear in an easy and natural manner to the first strain. This construction is an inherent and indispensable quality in the *rondo*, since it takes its name from the circumstance of the melody *going round*, after both the second and third strain, to the first strain, with which it finally closes. In the vocal rondo considerable discernment is requisite in the choice of proper words. The lines of the first strain should be complete in themselves, while those of each of the other strains should not only rise out of them, but, like the music, lead to them again.

RONG, WILHELM. Chamber musician to the King of Prussia at Berlin from 1786 to 1821. He has published many ingenious musical works, amongst which are the following: "*Versuch einer El mentarlehre für die Jugend, am Klavier*," Potsdam, 1793; "*48 Tabellen aus einer Tonart in jede andere auszuweichen, &c.*," 1800; "*Theoretisch-praktisches Handbuch der Tonarten Kenntniss*;" "*Mein Vortheil, alle Tonarten mit ihrer Verwandtschaft ohne Mühe zu erkennen.*" He was also known as a composer of songs and collections of dance music.

RONZI, SIGNOR and MADAME. See DE BEGNIS.

ROOT. The term applied by theorists to the fundamental note of any chord.

RORE, CIPRIANO DI. See CIPRIANO.

ROSA, SALVATOR, chiefly celebrated as a painter and poet, was born at Renessa, near Naples, in the year 1615. He was originally intended for the church, and was educated in accordance with that intention; but his mind, of all others, was ill calculated for a monkish life, and at an early age he abandoned his probationary habit, and returned to his father's house. We now first hear of him in connection with music, and cannot resist giving an account of his progress in this science, in the very entertaining words of Lady Morgan.

"The contumacious student of the Padri Somaschi escaped from the restraints of their cloister, and the horrid howl of their *laude spirituali*, to all the intoxication of sound and sight, with every sense in full accordance with the musical passion of the day. It is little wonderful if, at this epoch of his life, Salvator gave himself up unresistingly to the pursuit of a science which he cultivated with ardor even when time had preached his tumultuous pulse to rest, or if the floating capital of genius, which was as yet unappropriated, was in part applied to that species of composition which, in the youth of a man, as of nations, precedes deeper and more important studies, and for which, in either, there is but one age. All poetry and passion, his young muse dallied with the innocence of love, and inspired strains which, though the simple breathings of an ardent temperament, the exuberance of youthful excitement and an overteeming sensibility, were assigning him a place among the first Italian lyrists of his age. Little did he then dream that posterity would apply the rigid rules of criticism to the 'idle visions' of his boyish fancy; or that his bars and basses would be analyzed by the learned empirics of future ages, declared 'not only ad-

mirable for a *dilettante*,' but, 'in point of melody superior to that of most of the masters of his time.'

"His musical productions became so popular, that the 'spinners and knitters in the sun did use to chant them,' (an image which every street in Naples, during the winter season, daily exhibits;) and there were in some of these short lyric poems, which he set to music, a softness and delicacy that rendered them even worthy to be sung

'By some fair queen in summer bower
With ravishing divisions of her lute.'

still, however, they are more curious as compared to that stern strain of harp invective which runs through all his maturer compositions, and to that dark, deep, and indignant feeling which pervades all his satires.

"Having acquired considerable mastery on the lute, (for which, like Petrarch, he preserved a passion till the last year of his life,) he soon became one of the most brilliant and successful serenaders of Naples. Many of those gay and galliard figures which, in after life, escaped from his graphic pencil and rapid graver, with hair and leather floating in the breeze, are said to have been but copies of himself, as he stood niched under the shadow of a balcony, or reclined on the prow of a felucca, singing to his lute the charms or cruelty of some listening Irene or Cloris of the moment.

"This mode of life, of course, could not last very long; it was necessary that he should turn his serious exertions to some profession; and a family connection drew them to that of painting. From this time, Rosa advanced rapidly in reputation and in wealth; and his house became the resort of some of the most intellectual and cultivated men in Rome.

"His pathetic cantatas, and their plaintive compositions, drew tears from the brightest eyes in Rome; the 'potent, grave, and reverend signors' of the conclave did not disdain to solicit admission to those evening *conversazioni* of the *Via Babuina*, where the comic muse alone presided, but where, under the guise of national *narvel*, veiled in a rustic dialect, and set off by the most humorous gesticulations, truths were let drop with impunity, more perilous than those for translating which from the pages of Lucian a *protégé* of the Grand Duke de' Medici was at the same moment confined by the Inquisition.

"The manner of the daring *improvvisatore*, as left on record by his chroniclers, or handed down by tradition, was no less singular and attractive than the matter which inspired him. The apartment in which he received his company was affectedly simple. The walls, hung with faded tapestry, exhibited none of his beautiful pictures, which might well have attracted attention from the actor to his works. A few rows of rooms included all the furniture; and they were secured at an early hour by the impatience of an audience, select and exclusive, either invited by himself or introduced by his friends. When the company were assembled, and not before, Salvator appeared in the circle, but with the air of a host rather than that of an exhibitor, until the desire to hear him recite his poetry, or to *improvvisare*, expressed by some individual, produced a general acclamation of entreaty. It was a part

of his coquetry to require much solicitation; and when at last he consented, he rose with an air of timidity and confusion, and presented himself with his lute or a roll of paper containing the heads of his subject. After some graceful hesitation, a few preluding chords, or a slight hem! to clear his full, deep voice, the scene changed; the elegant, the sublime Salvator disappeared, and was replaced by the gesticulating and grimacing Coviello, who, long before he spoke, excited such bursts of merriment, *con le più ridicolose smorfie al suo modo Napolitano*, (with the most laughable grimaces in the true Neapolitan style,) that even the gravest of his audience were ready to burst. When the adroit *improvisatore* had thus wound up his auditory to a certain pitch of exaltation, and prepared them at least to receive with good humor whatever he might hazard, he suddenly stepped forth and exclaimed with great energy, in the broad Neapolitan of the Largo di Castello, '*Siente chisso vè, anza gli uocci*'—a Neapolitan idiom, meaning 'Awaken, and heed me,' but literally translated, 'Listen, and open your eyes.' He then began his recitation. 'Whatever were its faults of composition,' says one of his biographers, 'it was impossible to detect them, as long as he recited; nor could their charm be understood by those who did not hear them recited by himself. When some of these productions were published after his death, it was supposed that they would lose much of their apparent merit, because his fervid and abundant genius, rich in its natural fertility, despised the trammels of art, as submitting talent to mean and slavish rules. The contrary, however, was the fact; for they excited universal admiration.'

"With a thirst of praise which scarcely any applause could satisfy, Salvator united a quickness of perception that rendered him suspicious of pleasing, even at the moment he was most successful. A gaping mouth, a closing lid, a languid look, or an impatient hem! threw him into utter confusion, and deprived him of all presence of mind, of all power of concealing his mortification. When he perceived that some witty sally had fallen lifeless, that some epigrammatic point had escaped the notice of his auditors, he was wont to exclaim to his particular friends, when the strangers were departed, 'What folly to lose my time and talent in reading before these heasts of burden, who feel nothing, and have no intellect beyond what is necessary to understand the street ballads of the *blind band!*'

"Observing the manners of an age in which he deemed it an indignity to have been born, with the deep and philosophic view which distinguished all he thought and produced, Salvator perceived that the church was making the same monopoly of music as she had done of painting, and would, in the end, degrade one art (as she had already deteriorated the other) to the worst purposes. The finest singers were now shut up in the Roman monasteries; and all Rome was then resorting to the *Spirito Santo*, to hear the sister Veronica, a beautiful nun, who awakened emotions in her auditors that did not all belong to heaven.

"It was in the palaces of the *Porporati* that the first musical dramas were given, which bore any resemblance to the modern opera by which they are now succeeded in the *Argentina*; and the choir of the Pontifical Chapel (which gave

the musical tone to all the churches of Christendom, while it engrossed all the patronage of the government) was gradually abandoning those learned combinations, and that solemn and affecting simplicity, which were calculated to answer the purposes of a passionate devotion, and to satisfy, at the same moment, the taste of the amateur and the enthusiasm of the devotee.

"The first attempt at a regular drama was made at Rome in one of these palaces, as early as 1632, three years before Salvator's first arrival there. It was called '*Il Ritorno di Angelica nella India*,' and was composed by the then fashionable secular composer Tignali. Public operas were at this time performing in Venice and Bologna.

"It may be curious to observe, that the instruments which were then found in the secular orchestras of Italy, were the organ, viol, viol da gamba, harp, lute, guitar, spinet, harpsichord, theorbo, and trumpet: while the court band of Louis XIII. and XIV. only consisted of the famed '*four-and-twenty fiddlers all in a row*,' and even they were imported from Italy. The first and the most distinguished was Baptiste Lulli, brought from Florence by Maria de' Medici, at the age of fourteen. From a simple *violinier*, he became the founder of the French opera, and the model upon which Cambra, Destouches, and other French composers founded their braying monotonies. At the same period in England, the music of Lawes and Bird was laid aside as profane, and replaced by those pious discords,

'Such as from lab'ring lungs enthusiast blows,
High sounds attempted through the vocal nose.'

Vincenzo Galileo (the father of the celebrated astronomer) remarks, however, in his '*Dialogo della Musica*,' that the best Italian lyres were made for the English market.

"While the music of the church was thus gradually assuming an effeminate character, the palaces of the great were filled with the most worthless of the profession, of both sexes. The genius which went to the composition of the finest music was then, as now, less prized and rewarded than the voice which executed it, and the profligacy of the public singers in Italy was no impediment to their reception into the first families of the country. Upon this shameless laxity of manners, and the visible degradation of ecclesiastical music, Salvator fell with a Puritan's severity, scarcely surpassed by the anathemas of Calvin, or the vituperations of Erasmus. He attacked the style of singing in the Pontifical Chapel. He attacked the vices of a profession which now, beyond every other, received the special patronage of the lords of the conclave; and though his efforts at reformation were as yet confined to his recitations, and to the frank utterance of opinions over which he held no control, yet these philippics increased the number of his enemies, even more than an attack on religion itself would have done.

"While, however, all the singers in Rome, with their patrons and partisans, took the field against the satirist, the great composers, distinguished alike for their genius and their morals, rallied round him; and the musical album of Salvator, brought a century after his death into England, (the land which has always been true to his merits, and in sympathy with his genius.)

is a record that he offended none but those whose enmity was distinction."

"Among the musical manuscripts purchased at Rome in 1770," says Dr. Burney, in his "History of Music," "one that ranks the highest in my own favor was the music book of Salvator Rosa, the painter; in which are contained, not only the airs and cantatas set by Carissimi, Cesti, Luigi (Rossi,) Cavelli, Legrenze, Capellino, Pasqualini, and Bandini, of which the words of several are by Salvator Rosa, but eight entire cantatas, written, set, and transcribed by the celebrated painter himself. The book was purchased of his granddaughter, who occupied the house in which her ancestor had lived and died. The handwriting was ascertained by collation with his letters and satires, of which the originals are preserved by his descendants. The historians of Italian poetry, though they often mention Salvator as a satirist, seem never to have heard of his lyrical productions. Other single airs by Luigi and Legrenze, the words by Salvator Rosa, fill up the volume, in which there is nothing so precious as the musical and poetical compositions of Rosa." It is enough to establish the musical genius of Salvator Rosa, that his compositions were pronounced by the most learned and elegant musical professors of the last century to be, "in point of melody, superior to most of the masters of his time." Rosa died at Rome in 1673.

ROSALIA. A term applied by the Italians to the repetition of a passage given one note higher. A resource very tiresome in its effect, when injudiciously introduced, but capable of greatly heightening the melody, when dictated by taste and sanctioned by judgment.

ROSARIO, ANTONIO DO, a Portuguese ecclesiastic and church composer, born at Lisbon in 1682, wrote the following works, which are to be found in the Royal Library of Portugal: "8 *Magnificat sobre o Canto Chão dos outo tons*;" " *Lamentações, et Motetes da Quaresma e Semana Santa, à 8, 6, e 4 Vozes*;" " *Responsorios das Matinas da Conceição da Senhora, à 4*;" " *Responsorios das Matinas de S. Jeronymo, à 8*;" " *Villancicos à 8 e à 4*;" and " *Areza nova de S. José posta em Canto Chão.*"

ROSE, JOHANN HEINRICH VIKTOR, organist of the principal church at Quedlinburg, was born in that town in 1743, and was a pupil of his father, J. G. Rose. In 1756 the Princess Amelia, then abbess of the convent of Quedlinburg, took him to Berlin, and procured for him the best masters on the violoncello. At Berlin he remained till 1763, when he entered the service of the Prince of Anhalt-Bernburg, which he quitted in 1767 for that of the Prince of Anhalt-Dessau, with whom he continued as chamber musician, till his first royal patroness procured him, in 1772, the organist's situation of his native town. Rose performed well on several instruments, and published, in 1792, a collection of psalms for his own church, with new melodies, arranged for four voices.

ROSEINGRAVE, THOMAS, was the son of one of the vicars choral of St. Patrick's Church, Dublin, under whom he received the first rudiments of his musical education. As he exhibited early indications of musical genius, the chapter of St. Patrick's allowed him a pension,

to enable him to travel into other countries for improvement. He accordingly went to Rome in the year 1710. How long he continued abroad is not exactly known; but in 1720 he appears to have had some concern in the management of the opera at the Haymarket; for in that year he brought upon the stage, with some additional songs of his own, the opera of "*Narcissus*," written by Rolli, and set to music by Domenico Scarlatti.

Roseingrave afterwards became teacher of music, in the principles of which he was supposed to be deeply skilled. His style, however, both of playing and composing, was harsh and disgusting, showing much learning, but very little either of elegance or variety. About the year 1725, an organ having been erected in the new church of St. George, Hanover Square, he was appointed the organist.

A few years after he had obtained this situation, he fixed his affections on a female, by whom he was rejected at a time when he thought himself most secure of her affections. This disappointment was so severely felt by the unfortunate lover as to occasion a temporary and very strange kind of insanity. He used to say that the lady's cruelty had so literally and completely broken his heart, that he heard the strings of it crack at the time he received his sentence; and on that account, he ever afterwards called the disorder of his intellects his *crepation*, from the Italian verb *crepare*, to crack. After this misfortune, he was never able to hear any noise without great emotion. If, during his performance on the organ, any one near him coughed, sneezed, or blew his nose with violence, he would instantly quit the instrument and run out of church, seemingly in the greatest pain and terror, crying out that it was *Old Scratch* who tormented him, and played on his *crepation*.

About the year 1737, on account of his occasional insanity, he was superseded at St. George's Church by Keeble, who, during his life, divided with him the salary. He died in the year 1750.

Roseingrave was an enthusiastic admirer of Palestrina, and the ornaments of his bed chamber were scraps of paper containing select passages from the works of that composer.

Some time previously to his death, he published a collection of "Lessons for the Harpsichord," of his friend Domenico Scarlatti, in which are contained also two or three of his own. His other works, that are to be met with in print, are additional songs to the opera of "*Narcissus*;" voluntaries and fugues for the organ and harpsichord; and twelve solos for a German flute, with a thorough bass for the harpsichord.

ROSELLI, SIGNOR, an Italian soprano, sang at the Concert of Ancient Music, in London, in 1749.

ROSENI. An instrumental composer at Paris, about the year 1776.

ROSENMÜLLER, JOHN, was a Saxon by birth, and joint professor of music with Tobias Michaelis in the Academy of St. Thomas at Leipsic, until he was imprisoned on suspicion of having committed a heinous crime. He found means to escape from prison, and fled to Hamburg. After some stay there, he went to Italy, where his skill on the organ was universally

admired. At length he obtained the situation of chapel-master in the great church at Wolfenbuttel. He was born about 1615, and died in the year 1685.

The most celebrated of his compositions are, "*Sonate da Camera à 5 Strumenti*," and a collection of airs of various kinds.

ROSETTI, ANTONIO, chapel-master to the Duke of Mecklenburg-Schwerin, was born at Milan about the year 1744. His musical taste was principally formed after the model of the great Haydn; Rosetti having been, about the year 1766, violinist of the Imperial Chapel, and chamber musician to Count Althan at Vienna, which place he held till about 1780, when he became chapel-master to the Prince of Wallenstein. His usual instrument was the double bass, but his principal merits were as composer and leader of an orchestra; and these procured him, in 1789, his first-named situation at Schwerin, where he succeeded the celebrated Westenholtz. His published compositions were numerous, but considered to be occasionally too close imitations of Haydn. The following is a list of his principal published works up to the year 1786: "Six Trios for the Harpsichord and Violin," Op. 1, Paris; "Six Trios for the Harpsichord," Op. 2; "A Concerto for the Harpsichord," Op. 3, Frankfurt; "Three Concertos for the Harpsichord, with V. and C.,", Spire; "Three ditto," Op. 4, Berlin; "6 V. Duos," Vienna; "Three Symph. for full Orch.," Op. 1, Amsterdam; "Trois Conc. for Horn, Nos. 1, 2, 3," Paris, 1784; "Trois Conc. for Flute, Nos. 4, 5, and 6," Paris; and "Three Trios for the Harpsichord," Op. 5.

Several composers of this name flourished about this same period, so that it is impossible to decide to which to attribute many of their published works. And according to some authorities, many of the works in the list given above belong actually to the subject of the following article.

ROSETTI, FRANCESCO ANTONIO, born at Leutmeritz, in Bohemia, in 1750, was educated for the church in the seminary at Prague, till the age of nineteen, when, wishing to embrace the musical profession, he obtained a dispensation for that purpose from Rome. Soon after this he undertook a journey as musician, in the course of which he was engaged in the situation of chapel-master to the Duke of Wallenstein. Here he was permitted by the duke to proceed on his journey to Paris for the purpose of further musical improvement. On his return he composed the celebrated oratorio of "*Der Sterbende Jesus*." In 1792 he was invited to Berlin, by the order of Frederic William III., when his new oratorio, "Jesus in Gethsemane," also a "Hallelujah" of his composition, were performed in the Chapel Royal, before the Prussian court. From about this time his health began to fail, and, in 1792, he died of an affection in the chest, and in the forty-second year of his age. Besides the works above mentioned, he composed a "*Requiem*," which was performed at Prague, in 1791, at the funeral of Mozart.

ROSLINGRAVE. See ROSEINGRAVE.

ROSINI, GIROLAMO, of Perouse, was a soprano in the Pope's Chapel at Rome, early in

the seventeenth century. He was the first Italian sopranoist, all who preceded him having been Spaniards by birth.

ROSS, JOHN, organist of St. Paul's Chapel in Aberdeen, was born at Newcastle-upon-Tyne in 1764. He filled that situation forty years, with great credit, being highly esteemed as a teacher of music, as well as celebrated as an organist and composer. His talents for the art discovered themselves at a very early period of life. When only five years of age, he could play several airs on the violin with perfect correctness. Having attained his eleventh year, he was placed under the tuition of Hawdon, then organist of St. Nicholas Church in Newcastle. This gentleman was of the old school, having received his musical education from the well-known Charles Avison. Ross prosecuted his studies under him for seven years, during which time his taste was much improved, by obtaining an acquaintance with the works of the old masters, particularly those of Handel. This laid the foundation of his musical knowledge, and led him to the true style of organ playing. Most of the psalm tunes which he used were compositions of his own, and his voluntaries were always extempore. Many of these were specimens of original genius, indescribably beautiful, and producing an enchanting effect.

It was towards the end of the year 1783 that Ross was appointed organist of St. Paul's Chapel in Aberdeen, at which time he was only seventeen years of age. On his arrival in that city he was happy to find weekly concerts established on a very extensive scale. At these he was invited to preside at the organ and harpsichord, and continued to do so for many years, until the concert ceased. They had been previously supported with spirit, by public subscription, for upwards of forty years. In the year 1812, owing to a general failure of the crop, the poor in Aberdeen were reduced to the greatest want, and although liberal exertions were made by the inhabitants, their necessities were not altogether supplied. Something more was required to be done, and Ross was requested to give a musical performance for the relief of the distressed. This he willingly undertook, and an oratorio was performed in St. Paul's Chapel, which answered the proposed charitable purpose, and at the same time afforded much amusement to the musical amateurs of Aberdeen. This and a similar performance the year following yielded the sum of three hundred and fourteen pounds. On these occasions Ross received the thanks of the magistrates and most respectable inhabitants of the city. The following is a list of some of Ross's principal compositions: "Six Concertos for the Piano-forte, with Acc.;" "Seven Sets of three Sonatas for the Piano-forte;" "Ten Songs in Score, with an Acc. for the Piano-forte;" "Nine Songs, with an Acc. for the Piano-forte;" "Fifteen Songs, with ditto;" "Six Songs, with ditto," Edinburgh; "Two Sets of Six Canzonets;" "Six Hymns for three Voices, with an Acc. for the Organ;" "An Ode to Charity, consisting of Airs, Recitatives, and Choruses, with an Acc. for the Organ;" "Four Sets of Six Waltzes;" also a very considerable number of single sonatas, songs, and airs, with variations.

ROSSETTI. See ROSETTI.

ROSSETTUS, BLASIIUS, probably an Italian ecclesiastic and musician, published at Verona, in 1529, "*Rudimenta Musicae, de triplici musicae specie; de modo devite solvendi divinum pensum; et de auferendis nonnullis abusibus in Templo Dei.*"

ROSSETUS, STEPHANUS, a contrapuntist of the sixteenth century, published "*Madrigali à 6 voci.*" Venice, 1566; "*Madrigali à 3 voci.*," Venice, 1567; "*Cantiones Sacre 5 et 6 voci.*," Nuremberg, 1573; "*Madrigali à 4 voci.*," Venice, 1560; and "*Motettæ 5 et 6 voci.*," Nuremberg, 1573.

ROSSI, CRISTOFERO. A Milanese composer of church music, about the middle of the seventeenth century.

ROSSI, EMILIO, chapel-master at Loretto about the year 1530, was a very celebrated contrapuntist, and especially remarkable for his varied use of fugue. An ingenious five part canon by this composer may be seen in Sir John Hawkins's "History," vol. ii. p. 365. Numerous scholastic and didactic works of Emilio Rossi are still preserved in the library of the Vatican at Rome.

ROSSI, GIOVANNI BATTISTA, a Genoese musician, was one of the best Italian organists at the commencement of the seventeenth century. He published "*Organo de Cantori per intende da se stesso ogni passo difficile che si trova nella musica.*"

ROSSI, GIOVANNI MARIA, of Brescia, a celebrated Italian composer, flourished about the year 1560. Amongst his published works is "*Libro 1 de Motetti à 5 voci.*," Venice, 1567.

ROSSI, HENRIETTE, COUNTESS DE. See SONTAG.

ROSSI, or RUBEUS, LEMME, a professor of the Greek language at Perugia in the middle of the seventeenth century, is the author of the following work: "*Sistema Musico, ovvero musica speculativa, dove si spiegano i piu celebri sistemi di tutti trè generi.*" Perugia, 1666.

ROSSI, LORENZO. A Florentine dramatic and instrumental composer in the latter years of the last century.

ROSSI, LUIGI, born towards the close of the sixteenth century, was so eminent in Rome as a musician that he was called *Il Divino*. He was a contemporary of Carissini, and concurred with him in perfecting the harmony and melody of their age. He was also celebrated for his cantatas, and was one of the earliest composers of that species of music.

ROSSI, MICHAEL ANGELO, a composer and violinist of Rome, published in that city, in 1627, the opera "*Erminia sul Giordano.*" His "*Tocate e Corrente d'Intavolatura d'Organo e Cimbalo.*" was printed in the same city.

ROSSI, SALOMON, a Jew, born about the year 1600, was a good composer for the age in which he lived. Amongst his published works are "*Libro 1 de Madrigali à 5 voci.*," Antwerp, 1610, and "*Sonate Gagliardi, Branti, e Correnti a 2 V.*," Op. 4, Venice, 1623.

ROSSI, DOM. VON. An instrumental composer at Vienna about the year 1797.

ROSSINI, GIOACCHINO, was born in Feb-

ruary, 1792, at Pesaro, a small town in the papal states, situated on the Gulf of Venice. His father was an inferior performer on the French horn, and belonged to one of those strolling companies of netors and musicians who, to gain a livelihood, attend the fairs of the small towns in Italy: his mother, who passed for one of the prettiest women of Romagna, was a *secunda donna* of passable talents. Their son, of course, accompanied them in these excursions. In 1799 Rossini's father took him to Bologna, where he began to study music in 1802; his first master being D. Angelo Tesi. In the course of a few months the young Gioacchino already earned *paoli* by singing in the churches. His pleasing soprano voice, and the vivacity of his youthful manners, gained him many friends among the priests who directed the *Funzioni*. Under Professor Angelo Tesi, Rossini became a tolerable proficient in singing, in the art of accompanying, and in the rules of counterpoint. In 1806 he was capable of singing at first sight any piece of music put before him, and great hopes were conceived of his future excellence; it was augured from his growth, and the quality of his voice, that he would make an excellent tenor.

On the 27th of August, 1806, he quitted Bologna to make the musical tour of Romagna. He took his place at the piano as director of the orchestra at Lugo, Ferrara, Forli, Sinigaglia, and other little towns. It was only in 1807 that the young Rossini gave up singing in the church. The 20th of March, in the same year, he entered the Lyceum of Bologna, and received lessons in music from Padre Stanislao Mattei.

A year after (the 11th of August, 1808) he made so considerable a progress as to be qualified to compose a symphony, and a cantata entitled "*Il Pianto d'Armonia.*" This was his first essay in vocal music. Immediately after this he was chosen director of the academy of the *Concordi*, a musical society at that time existing in the bosom of the Lyceum at Bologna. "*Demetrius et Polibio*" is the first opera composed by Rossini. It is said to have been written in 1809, but it was not performed till 1812, in the Theatre Valle at Rome. Some have imagined that it was rewritten by the master for this representation; but there is no proof of the fact. His known indolence, and the active duties he was obliged to perform this year, would rather tell against such a supposition.

Such was the progress Rossini had made at nineteen that he was chosen to direct, as head of the orchestra, the "Four Seasons" of Haydn, which were executed at Bologna: the "Creation," which was given on the same occasion, (May, 1811,) was directed by the celebrated soprano Marchesi. When the parents of Rossini had no engagement, they returned to their residence at Pesaro. Some rich amateurs of this town, we believe of the family Perticari, took the young Rossini under their protection. A young lady of considerable beauty and fortune formed the happy idea of sending him to Venice: he there composed, for the Theatre San Mose, a little opera, in one act, entitled "*La Cambiale di Matrimonio.*" 1810. This was the first opera of Rossini performed upon the stage. After a success very flattering to a beginner, he returned to Bologna; and, in the autumn of the following year, (1811,) produced "*L'Equivoco Stravagante.*" The

following year he returned to Venice, and composed for the carnival "*L'Ingauno Felice*."

In this piece genius shines forth in every part. An experienced eye will at once recognize in this opera in one act the parent ideas of fifteen or twenty pieces, which at a later period contributed to decide the fortune of the *chef-d'œuvres* of Rossini.

The "*Ingauno Felice*" resembles the first pictures of Raphael, which he painted in the school of Peruggino, and which display all the faults and all the timidity of early youth. Rossini, not venturing to assume the master at twenty, was fearful as yet to attempt to please himself only. The same year his patrons procured him an engagement at Ferrara; and, during the last season, he composed an oratorio entitled "*Ciro in Babilonia*;" a work containing many beauties, but considered by critics as inferior in energy to the "*Ingauno Felice*." After this he was again summoned to Venice; but the *impresario* of San Mosè, not content with gaining for a few *sequini* the talents of a pleasing composer, who was patronized by the ladies, and whose rising genius was destined to bring new honors to his theatre, thought that, as he was poor, he might treat him cavalierly with impunity. Rossini at once gave him a proof of that independence of character by which he has since been always distinguished. In quality of composer, Rossini's power over the orchestra was absolute, and he could oblige them to execute whatever he composed. In the new opera, therefore, of "*La Scala di Seta*," which he made for the insolent *impresario*, he brought together an assemblage of all the extravagances and whimsical combinations in which, it may well be supposed, a head like his is sufficiently fertile. For instance, in the allegro of the overture the violins are made to break off at the end of every bar, in order to give a rap with the bow upon the tin shades of the candlesticks. It would be difficult to imagine the astonishment and indignation of an immense concourse of people assembled from every quarter of Venice, and even from the *Tercu Firma*, to hear the new opera of the young *maestro*. This public, who, during the greater part of the afternoon, had besieged the doors, who had been forced to wait whole hours in the passages, and at last to endure the "tug of war" at the opening of the doors, thought themselves personally insulted, and hissed with all the vengeance of an enraged Italian public. Rossini, not in the least moved by all this uproar, coolly asked the trembling *impresario*, with a smile, what he had gained by treating him so cavalierly. He then quitted the theatre, and started at once for Milan, where his friends had procured him an engagement. However, a month after, he made his peace with the humbled manager; and, returning to Venice, successfully produced two *farze* (operas in one act) at the Theatre San Mosè, "*L'Occasione fa il Ladro*," 1812, and "*Il Figlio per Azzardo*," in the carnival of 1813. It was also during this carnival that Rossini composed his "*Tancredi*."

No adequate idea can be formed of the success which this delightful opera obtained at Venice. Suffice it to say that the presence of Napoleon himself, who honored the Venetians with a visit, was unable to draw off their attention from Rossini. All was enthusiasm! *tutto furore*, to use the terms of that expressive language, which seems

to have been created for the use of the arts. From the gondolier to the patrician, every body was repeating "*Mi rivedrai, ti rivedro*." In the very courts of law the judges were obliged to impose silence on the auditory, who were ceaselessly humming "*Ti rivedro*."

The delightful opera of "*Tancredi*" made the tour of Europe in the short space of four years.

It may well be supposed that, in such a place as Venice, Rossini was not less happy as a man than celebrated as a composer. The fame of his genius, aided by the agreeableness of his manners, won him the heart of the charming *cantatrice buffa*, the Signora Marcolini, then in the flower of her beauty and her talents. Her charms were all-powerful, and she succeeded in estranging his affections from his former fair patrons.

It was for Marcolini, it was for her delicious contralto voice and admirable comic powers, that he composed the gay and animated part of the "*Italiana in Algeri*," which at once placed the youthful composer in the first rank of *maestri*.

Such was the run that this new piece obtained, that Rossini had leisure to indulge for some time in his natural indolence; for indolent he was to excess. This the following anecdote will serve to prove.

During his residence in Venice this year (1813) he lodged in a little room at one of the small inns. When the weather was cold he used to lie and write his music in bed, in order to save the expense of fuel. On one of these occasions a duet, which he had just finished for a new opera, "*Il Figlio per Azzardo*," slipped from the bed and fell on the floor. Rossini peeped for it in vain from under the bed clothes; it had fallen under the bed. After many a painful effort he crept from his snug place, and leaned over the side of the bed to look for it. He sees it, but it lies beyond the reach of his arm; he makes one or two ineffectual efforts to reach it; he is half frozen with cold; and, wrapping himself up in the coverlet, exclaims, "Curse the duet; I will write it over again: there will be nothing difficult in this, since I know it by heart." He began again, but not a single idea could he retrace; he fidgets about for some time—he scrawls—but not a note can he recall. Still his indolence will not let him get out of bed to reach the unfortunate paper. "Well," he exclaims, in a fit of impatience, "I will rewrite the whole duet. Let such composers as are rich enough keep fires in their chambers; I cannot afford it. There let the confounded paper lie. It has fallen, and it would not be lucky to pick it up again."

He had scarcely finished the second duet when one of his friends entered. "Have the goodness to reach me the duet that lies under the bed." The friend poked it out with his cane, and gave it to Rossini. "Come," said the composer, snuggling close in his bed, "I will sing you these two duets, and do you tell me which pleases you the best." The friend gave the preference to the first; the second was too rapid and too lively for the situation in which it was to stand. Another thought came into Rossini's head; he seized his pen, and, without loss of time, worked it up into a *terzetto* for the same opera. The relater of this anecdote states that there was not the slightest resemblance between the two duets. The *terzetto* finished, Rossini dressed himself in haste,

cursing the cold the whole time, and set off with his friend to the *casino* to warm himself and take a cup of coffee. After this he sent the lad of the *casino* with the duet and the terzetto to the copyist of San Mosè, to be inserted in the score. In the autumn of the same year (1812) Rossini was engaged at Milan, when, for the Scala, he composed "*La Pietra del Paragone*." He had now attained his twentieth year. His opera had the good fortune to be sustained by the talents of Signora Marcolini, Galli, Bonoldi, and Parlamanini, who were in the flower of their fame, and obtained a success for this piece which was little short of extravagance.

"*La Pietra del Paragone*" (The Touchstone) is considered by some critics as the *chef-d'œuvre* of Rossini in the buffa style. After obtaining such distinguished success at Milan, Rossini revisited Pesaro and his family, to whom he was warmly attached. The only person with whom he has been known to correspond is his mother, and his letters to her are thus singularly addressed: "*All' Ornatissima Signora Rossini, Madre del celebre Maestro, in Bologna.*"

Such is the character of a man, who, half in jest, half in earnest, scruples not to make an avowal of the glory that surrounds him, and laughs at the modest prudery of the academy. Deriving happiness from the effects produced by his genius upon a people the most sensitive upon earth, and intoxicated with the voice of praise from his very cradle, he believes implicitly in his own celebrity, and cannot see why a man, gilded like Rossini, should not rank in the same degree as a general of division or a minister of state. They had gained a grand prize in the lottery of ambition, he had gained a grand prize in the lottery of nature. This is one of Rossini's own phrases. I heard it from his own lips, says one of his biographers, at a party given by Prince Ghigi at Rome, in 1819.

About the time of his journey to Pesaro, an attention was shown him as honorable as it was rare, and which is equally creditable to the giver and the receiver: his genius proved the means of his exemption from the almost universal operation of the miserable conscription laws. The minister of the interior ventured to propose to Prince Eugene, the Viceroy of Italy, an exception in his favor. The prince at first hesitated, through fear of a repudiation from head quarters, at Paris, the daily advices from which were most pressing and most rigorous upon this point; but he at length yielded to the decided feelings of the public.

After this narrow escape of being sent for a soldier, Rossini went to Bologna, where the same adventure awaited him as at Milan — the enthusiasm of the public, and the more grateful meed of the smiles of beauty.

The rigorists of Bologna, so celebrated in Italy for the severity of their critical taste, and who exercised the same dictatorship over music as the members of the French Academy did over the three unities, reproached him, and not without reason, with having sometimes transgressed against the rules of composition. Rossini did not deny the justice of the charge. "I should not have so many faults to reproach myself with," was his reply, "if I had leisure to read my manuscript twice over; but you know very well, that scarcely six weeks are allowed me to compose an opera. I take my pleasure during

the first month; and pray when would you have me take my pleasure, if not at my present age, and with my present success? Would you have me wait till I am grown old and full of spleen? At length the two last weeks arrive: I compose every morning a duo or air, which is to be rehearsed that very evening. How, then, would you have me detect little faults of grammar in the accompaniments?" (*l'Instrumentazione.*)

Notwithstanding the candor of this excuse, a great bustle was made in the musical circles of Bologna respecting those faults of grammar. This is the same complaint that the pedants of his time made against Voltaire, whom they accused of not knowing orthography. So much the worse for orthography, was the dry remark of Rivarol.

After listening as patiently as possible to the declamation of these pedants against Rossini for violating the rules of composition, a celebrated critic made this reply: "Pray, who laid down these rules? Were they made by persons superior in genius to the author of '*Tancredi*'? Does stupidity cease to be stupidity because sanctioned by antiquity and the usages of the schools? Let us examine these pretended rules a little more closely; and pray what are we to say of rules that can be infringed without the public perceiving it, and without our pleasure being in the least diminished?"

M. Berton, of the Institute, renewed this dispute at Paris. The fact is, that the faults here complained of are scarcely perceptible while listening to the operas of Rossini. It is like objecting as a crime to Voltaire that he does not employ the same phrases and terms of expression as La Bruyère and Montesquieu. The second of these great writers has this memorable sentence: "A member of the French Academy writes as they write; a man of wit writes as *he* writes."

Rossini is full of grammatical faults: well, be it so; and yet there is not a village in Italy which could not furnish a dozen of these critics upon notes, who, for a single sequin, would undertake to correct the errors in any one of his operas.

After his success at Bologna, which was considered as the head quarters of Italian music, Rossini received offers from almost every town in Italy. Every *impresario* was required, as a *sine qua non*, to furnish his theatre with an opera from the pen of Rossini. The consideration he generally received for an opera was a thousand francs, and he generally wrote from four to five in a year.

From 1810 to 1816 Rossini visited in succession all the principal towns of Italy, remaining from three to four months in each. Wherever he arrived he was received with acclamations, and *flêted* by the *dilettanti* of the place. The first fifteen or twenty days were passed with his friends, dining out, and shrugging up his shoulders at the nonsense of the *libretto* which was given him to set to music. For, besides the fire of his own natural genius, Rossini was inspired with a good taste by his first admirer, the Countess P——, of Pesaro. She had read with him the works of Ariosto and Metastasio, as well as the comedies of Machiavel, the "*Fiabe*" of Gozzi, and the poems of Burati; he was, therefore, fully competent to judge of the worthlessness of these

libretti. "Tu mi hai dato versi, ma non situazione," he has been heard frequently to repeat to an unhappy votary of the nine, who stammered out a thousand excuses, and two hours after came to salute him in a sonnet, "umiliato alla gloria del più gran maestro d'Italia e del mondo."

After two or three weeks spent in this dissipated manner, Rossini begins to refuse invitations to dinners and musical *soirées*, and falls to work in good earnest. He occupies himself in studying the voices of the performers; he makes them sing at the piano; and on more than one occasion he has been driven to the mortifying necessity of mutilating, and "curtailing of their fair proportions," some of his most brilliant and happy ideas, because the tenor could not reach the note which was necessary to express the composer's feeling, or because the *prima donna* always sang false in some particular tone. Sometimes, in a whole company, he could find no one but a bass who could sing at all. At length, about three weeks before the first representation, having acquired a competent knowledge of the voices, he begins to write. He rises late, and passes the day in composing, in the midst of the conversation of his new friends; who, with the most provoking politeness, will not quit him for a single instant. The day of the first representation is now rapidly approaching, and yet he cannot resist the pressing solicitations of these friends to dine with them at *l'Osteria*. This of course leads to a supper: the sparkling champagne circulates freely; the hours of morning steal on apace. At length a compunctious visiting shoots across the mind of the truant *maestro*; he rises abruptly; his friends will see him to his own door: they parade the silent streets unbonneted, shouting some musical impromptu, perhaps a portion of a *Miserere*, to the great scandal and annoyance of the good Catholics in their beds. At length he reaches his house, and shuts himself up in his chamber; and it is at this, to every-day mortals, most ungenial hour, that he is visited by some of the most brilliant of his inspirations. These he hastily scratches down upon odds and ends of paper, and next morning arranges them, amidst the same interruptions of conversation as before. Figure to yourself a quick and ardent mind, susceptible of every impression, and capable of turning to advantage the most trifling occurrence of passing observation. When composing his "*Mosè*," some one said to him, "What, you are going to make the Hebrew sing! do you mean to make them *twang it* as they do in the synagogue?" The idea struck him at once, and he sketched out on the spot a riuu draught of the magnificent chorus so much admired in this opera, and which is observed to begin with a kind of nasal *twang* peculiar to the synagogue.

But let us return to our little Italian town, which was left in the anxiety, or rather in the agitation, that precedes the day of the first representation of an opera. At length the most important of evenings arrives. The *maestro* takes his place at the piano; the theatre overflows; people have flocked from ten leagues' distance. The curious form an encampment around the theatre in their calashes; all the inns are filled to excess, where insolence reigns at its height. All occupations have ceased; at the moment of the performance, the town has the aspect of a desert. All the passions, all the solitudes, all

the life of a whole population, is concentrated in the theatre.

The overture commences; so intense is the attention that the buzzing of a fly could be heard. On its conclusion the most tremendous uproar ensues. It is either applauded to the clouds, or hissed, or rather howled at, without mercy. It is not in Italy as in other countries, where the first representation is seldom decisive, and where either vanity or timidity prevents each man from intruding his individual opinion, lest it should be found in discordance with the opinions of the majority. In an Italian theatre, they shout, they scream, they stamp, they belabor the backs of the seats with their canes, with all the violence of persons possessed. It is thus that they force upon others the judgment which they have formed, and strive to prove that it is the only sound one; for, strange to say, there is no intolerance equal to that of the eminently sensitive. When you see a man moderate and reasonable in what regards the arts, begin to talk to him of history, politics, or political economy; such a man will make a distinguished magistrate, a good physician, a sound lawyer, an excellent academician, in a word, whatever you will, except an enthusiast in music or painting.

At the close of each air the same terrific uproar ensues: the howlings of an angry sea could give but a faint idea of its fury.

Such, at the time, is the taste of an Italian audience, that they at once distinguish whether the merit of an air belongs to the singer or the composer. The cry is *Bravo David! Bravo Pisaroni!* or the whole theatre resounds with *Bravo maestro!* Rossini then rises from his place at the piano, his countenance wearing an air of gravity—a thing very unusual with him; he makes three obeisances, which are followed by salvos of applause, mingled with a variety of short and panegyric phrases. This done, they proceed to the next piece.

Rossini presides at the piano during the three first representations, after which he receives his eight hundred or a thousand francs, is invited to a grand parting dinner, given by his friends, that is to say, by the whole town, and he then starts in his *veturino* with his portmanteau much fuller of music paper than of other effects, to commence a similar course, in some other town forty miles distant. It is usual with him to write to his mother after the first three representations, and send her and his aged father two thirds of the little sum he has received. He sets off with ten or twelve sequins in his pocket, the happiest of men, and doubly happy if chance should throw some fellow-traveller in his way, whom he can quiz in good earnest. On one occasion, as he was travelling, in *veturino*, from Arcona to Reggio, he passed himself off for a master of music, a mortal enemy of Rossini, and filled up the time by singing the most execrable music imaginable, to some of the words of his own best airs, to show his superiority to that animal Rossini, whom ignorant pretenders to taste had the folly to extol to the skies.

After terminating his engagements at Bologna, Rossini accepted an offer made him at Milan, whither he repaired in the spring of 1814. It was for the Scala that he composed "*Aureliano in Palmira*." In spite of many beauties, and particularly the duet "*Se tu m'ami, O mia regi-*

na, which some critics have considered as the most beautiful thing of the kind that has proceeded from our composer's pen, it proved unsuccessful. It was Rossini's first failure: it annoyed him not a little, and he at once determined on changing his style.

Unsuccessful in "*Aureliano in Palmira*," which Rossini had composed for the carnival season, he made another effort in the autumn of the same year, (1814), and produced the "*Turco in Italia*," which was considered as a kind of sequel to the "*Italiana in Algeri*." Incessant cries resounded of *Bravo Galli!* (the celebrated bass singer,) but not a single *Bravo maestro!* for, as we have before observed, on the first representations of an opera, the applauses bestowed on the singers and the master are things perfectly distinct. Trilling as this circumstance may appear, it had a decided influence upon the fate of the opera; for, although some of the pieces, particularly the piquant duct, "*E' un bel uso di Turchia*," and the celebrated quintetto, "*Oh! guardate, che accidente*," met with much applause, yet the opera, upon the whole, was coolly received. The national pride was wounded. They declared that Rossini had copied himself. He might take this liberty with little towns; but for the Scala, the first theatre in the world! repeated the Milanese, with peculiar emphasis, he must take pains to produce something new. That the fate of this opera was determined by some local circumstances, is evident from the fact, that, four years after, the "*Turco in Italia*" was reproduced in Milan, and received with the greatest enthusiasm.

The glory of Rossini had now reached Naples, where the astonishment was that there could be any great composer who was not a Neapolitan. The director of the theatre at Naples was a M. Barbaja, formerly of Milan, who, from being a waiter at a coffee house, had, by good luck at play, and, above all, by the lucrative situation of manager of a faro bank, acquired a fortune of several millions of francs. Trained up to business at Milan, in the midst of French *fournisseurs*, who, in army contracts, made and dissipated a fortune every six months, he could not fail of acquiring a certain tact, which was afterwards very useful to him. He had sufficient address to ingratiate himself into regal favor, and to obtain the post of director of the Theatre San Carlo, as well as that of Del Fondo. He had sufficient foresight to see that, from the manner the reputation of Rossini was gaining ground in the world, this young composer, good or bad, right or wrong, would become the popular composer of the day. He therefore set off post, to go and find him out at Bologna. Rossini, accustomed to have to deal with poor devils of *impresari*, who were ever on the verge of bankruptcy, was astonished at a visit from a *millionnaire*, who would probably find it unworthy his dignity to haggle about a few dozen sequins. An engagement was offered and accepted on the spot. Afterwards, on his arrival at Naples, Rossini signed a *scrittura* for several years. He engaged to compose two new operas every year; and was moreover to arrange the music of all the operas M. Barbaja should think proper to produce either at San Carlo, or the secondary theatre Del Fondo. In consideration of this, he was to receive twelve thousand francs per an-

num, as well as an interest in a bank for play, which was furnished out by M. Barbaja, and which brought in the composer some thirty or forty louis more yearly.

The musical direction of these two theatres, which Rossini had undertaken without giving it a moment's reflection, was an immense task, a herculean labor: incredible was the quantity of music he was obliged to transpose and arrange, according to the compass of the voices of the different donnas, or according to the interest or caprice of their various patrons and protectors. This would have been sufficient to overwhelm a man of tender nerves or sombre habits. Mozart would have sunk under it. The gay and daring character of Rossini brought him through every obstacle, every snare that the envious laid to entrap him. All he saw in an enemy was a butt for satire and ridicule, in which he was a most perfect adept.

Rossini entered with a light heart upon the heavy duties that had devolved upon him, and like *Figaro* of his own "*Barbiere*," undertook a thousand commissions that poured in upon him from every side. He got through them all with a smile, and a ready joke upon all who came in his way. This drew down upon him a host of enemies; the most sworn among whom, in latter years, has been M. Barbaja himself, whom he treated so unceremoniously as to marry his mistress. His engagement at Naples did not conclude till 1822, and had a most decided influence upon his talents, his happiness, and the economy of his whole life.

Always happy, Rossini, towards the close of 1815, made his *début* at Naples in the most brilliant manner, with the serious opera of "*Elisabetta Regina d'Inghiltera*."

After the flattering reception which his "*Elisabetta*" experienced at Naples, Rossini was called to Rome for the carnival of 1816, where he composed his semi-serious opera, "*Torvaldo e Dorlisca*," for the Theatre Valle, and his *chef-d'œuvre*, the "*Barbiere di Siviglia*."

The first of these operas was considered as very mediocre, and quickly consigned to the tomb of the Capulets. Elevated by the success he had attained at Rome, Rossini returned to Naples in the spring of 1816, and recommenced his labors with fresh spirit.

The next subject proposed to Rossini was "*Otello*;" but he had the good taste to object to the Italian imitation, or rather caricature, of Shakspeare. The author, the Marquis di Berio, was a man of consideration in Naples, and his *libretto* was at last adopted.

The great merit of this opera, Rossini's *chef-d'œuvre* in the forcible style, is, that it is full of fire: it is a perfect volcano, said the critics of San Carlo. Yet it must be observed that this force is always the same; there are no shades; we never pass

"From grave to gay, from lively to severe."

The trombones are always in our ears. This violence, which those but little gifted in the arts are apt to mistake for the sublime, is doubly monotonous by the almost total absence of simple recitative. Those of the "*Otello*" are nearly all of the accompanied kind: this is a resource which the composer ought prudently to economize; when he lavishes it upon every occa-

sion, what is he to do in movements where all the powers of his art are necessary to be brought into action?

Rossini returned to Rome for the carnival season, which commences the 26th of December, and lasts till about the middle of February following, where he composed "*La Cenerentola*," for the Theatre Valle. The music of this opera is altogether Rossinian. Neither Paisiello, Cimarosa, nor Guglielmi, ever indulged in the excess of levity that marked such airs as "*Una volta, e due, e tre!*" This, and many others like it, absolutely border upon the trivial.

This opera met with considerable success at Rome, and has since become a favorite in most of the capitals of Europe.

At the conclusion of the carnival, Rossini proceeded to Milan, where, in the spring season of 1817, he composed the celebrated "*Gazza Ladra*."

The public of Milan had taken a pique at Rossini's quitting them for Naples; hence, on the first evening of its representation, the crowd flocked to the Scala with a full determination of hissing the author of "*Il Barbiere*," "*Elisabetto*," and "*Otello*." Rossini was aware of this disposition on the part of the Milanese, and took his seat at the piano in by no means the best of spirits.

But he was most agreeably disappointed. Never was a piece received with such enthusiasm; *furor* would be the energetic term an Italian would employ. At every instant the pit arose *en masse*, to hail Rossini with acclamations. At the close of the performance, the composer was heard to declare, in the *Cafè dell' Accademia*, that independent of the exertions of the evening, he was overcome with fatigue at the innumerable obeisances he was called on to make to the public, who were every moment interrupting the performance with *Bravo maestro! Viva Rossini!*

Crowned with fresh laurels, Rossini returned to Naples in the autumn of 1817, and immediately gave his "*Armida*." On the day of its first representation, the public visited him with the sins of Signora Colbran's voice. Besides, they were piqued at the extraordinary success of the "*Gazza Ladra*" at Milan, and could not understand why Rossini should produce any thing inferior for themselves. There is nothing so dangerous to disappoint a public in as in the expectation of their pleasure. "*Armida*" was very coldly received, in spite of its magnificent duet "*Amore possente nune*;" perhaps the most celebrated that ever proceeded from this composer's pen.

Of the opera "*Adelaide de Borgogna*," which was brought out at Rome in the carnival of the same year, but little is known except the air, "*O erude stelle!*" which is often performed and heard with delight.

Of the opera "*Adina, ossia il Califfo di Bagdad*," the only particulars we are able to collect are, that it was written for the opera at Lisbon, and performed there in 1818, at the Theatre San Carlo in that city.

"*Mosè in Egitto*" was produced at Naples the same year, in the Theatre San Carlo, and performed, in the first instance, as a kind of oratorio during the Lent season. The success of this opera was immense.

In the autumn of 1818, Rossini produced, at San Carlo, his serious opera of "*Riccardo e Zo-*

raida;" the principal characters of which were sustained by Signora Colbran, Nozzari, Davide, Benedetti, and Signora Pisaroni.

This, like several of this composer's operas, has no overture. Rossini had often tried to convince the managers and his friends, by a number of very specious arguments, that overtures are not only unnecessary, but very absurd things; but we believe the true secret is, that Rossini did not like the labor of composing them, and that his reasonings served only as a pretext for his natural indolence.

On the 20th of February, 1819, he brought out a cantata written in honor of his majesty the King of Naples, and sung by Signora Colbran, at the Theatre San Carlo. It was full of grace and expression, and the simple and appropriate accompaniment was much admired.

During the Lent of the same year, he produced his serious opera of "*Ermione*." It was so coldly received as to amount almost to a failure; only a very few parts of it were applauded.

On the 9th of May following, he produced a cantata, which was composed on occasion of a visit made by his majesty Francis I, of Austria, to the Theatre San Carlo. It was sung by Colbran, Davide, and Rubini, and honored by the gracious notice of the sovereign.

Rossini was very active this year, 1819. Besides the works above mentioned, he also composed an opera, entitled "*Odoardo e Cristina*," which was performed in the spring, at the Theatre San Benedetto at Venice. This opera introduced to the public Carolina Cortesi, one of the prettiest actresses that had appeared upon the stage for some years.

On the 4th of October, 1819, Rossini produced the "*Donna del Lago*," which was sung at the Theatre San Carlo by Signora Pisaroni, (one of the least handsome figures that could be imagined,) Signora Colbran, Nozzari, Davide, and Benedetti. It may be said that, after the "*Elisabetta*," Rossini succeeded only by the force of his genius. His principal merit lay in his style, which was altogether different from that of his contemporaries, and in the wide range of his ideas, which possessed a character entirely new to the public. He enlivened the tediousness of the opera seria, and imparted to it a life and animation to which it had before been a stranger. But then the public could not separate Rossini from the general discontent that was felt against M. Barbaja and the Signora Colbran. Impatience at last rose to its height, and made itself heard in a manner that could not be misunderstood. Rossini has been known to become quite ill from the hisses that resounded from this vast interior. This, in a man of his natural indifference, and who feels a perfect confidence in his merits, speaks volumes. It took place at the first representation of the "*Donna del Lago*."

This first representation took place on a gala day; the theatre was illuminated, and the court was not present to place any restraint on the uproarious spirit of the audience. Nothing could equal the extreme hilarity of a number of young officers, who filled, *per privilegio*, the first five rows of the pit, and who had drunk deeply to the health of their king, as all good and loyal subjects should do. One of these gentry, at the first sound of the trumpets, began to imitate with

his cane the noise of a horse in full gallop. The public were struck with the facetiousness of the idea, and in an instant the pit is full of five hundred imitators, who join in this novel accompaniment. The ears of the poor *maestro* found neither novelty nor pleasure in such an addition to his music; it was but too ominous of the issue that awaited his opera, and he sat upon thorns in expectation of the fate that was prepared for him.

The same night he had to set off post for Milan to fulfil an engagement which had for some time been contracted there. On the following day the public at Naples were too candid not to acknowledge the act of injustice into which they had been betrayed; and accordingly the next evening the opera was hailed with all the applause which it so justly merits. The trumpet accompaniment was softened down by diminishing the number of instruments, which on the first evening was really deafening.

Rossini has devoted but little attention to sacred music; however, this year we find him composing a grand mass at Naples. It took him three or four days to give the character of church music to some of his most beautiful *motives*. The Neapolitans found it a delicious treat; they saw pass successively before their eyes, and under a little different form, all the sublime airs of their favorite composer. One of the priests exclaimed, in a serious tone, "Rossini, if thou dost but knock at the gate of Paradise with this mass, in spite of all thy sins, St. Peter will not have the heart to refuse thee an entrance." This phrase is delicious in the Neapolitan dialect on account of its grotesque energy.

We saw Rossini quit Naples on the night of the 4th of October amidst a storm of hisses; on the 26th of December following we find him bringing out his "*Bianca e Faliero*," in the Scala at Milan. The music was full of reminiscences, and its reception was so cold as to amount to little short of a failure.

In the carnival of 1821 Rossini gave his "*Mattilda di Sabran*" at the Theatre d'Apollone, at Rome, which was built by the French, and is the only tolerable theatre in this city. This opera introduced to the public the pretty and favorite singer, Catharina Lipparini. The opinion of the public was, that the *libretto* was execrable, but the music charming.

In the spring of 1822 Rossini returned to Naples, and brought out his "*Zelmira*," which was sung at San Carlo, by Signora Colbran, Nozzari, Davide, Ambrogi, Benedetto, and Signora Ceconi.

Rossini also composed a *pastorale* for four voices, entitled "*La Riconoscenza*," which was performed at San Carlo, on the 27th of December, for his own benefit. It was sung by the Signoras Dardanelli and Cornelli, with Rubini and Benedetti. Rossini quitted Naples the following morning, and departed for Bologna. On the 15th of March following he was married to Signora Colbran. The ceremony took place at Castenaso, near Bologna, where the lady has a country seat. Meanwhile Davide, Nozzari, and Ambrogi arrived from Naples, and a few days after they all started together to Vienna, where Rossini had accepted an engagement, and where he was to make his *début* with "*Zelmira*."

On the 30th of March Rossini made his *début* at Vienna with the opera of "*Cenerentola*."

"*Zelmira*" had been promised, but as the former opera had already been adapted to German words, and performed at Vienna under the title of "*Die Aschenbrödel*," Rossini wished to pay a compliment to the German taste, and expressed a wish that this opera should take the precedence, and be given by the German company. At the rehearsal he desired the music to be performed in a quicker time than had usually been done; which, however, did not very well accord with the ponderous nature of the German language. When this inconvenience was pointed out to him he replied, with the frankness and *naïveté* peculiar to him, that "the words with him were quite a secondary consideration; that the music and effect were every thing." Who durst contradict him?

At length his promised "*Zelmira*" was produced. He attended to all the arrangements of the opera, but declined pre-iding at the piano, excusing himself, with a well-turned compliment to the orchestra, by expressing his confidence that his music was perfectly safe in their hands, and did not require his interference. Nothing could exceed the enthusiasm with which this opera was received. Not only the master, but also the singers, were called for, at the close of the piece, to receive the congratulations of the audience.

The next opera that followed was "*La Gazza Ladra*," the favorite overture to which was greeted with tumultuous applause, and, what was altogether new in the annals of theatrical usages, the *maestro* was called for at its conclusion; nor was the opera allowed to proceed till he had made his appearance. The fact is, that on the first representation of this opera in Vienna, in 1819, this overture had been the cause of a musical war, in which numerous dissertations were printed on both sides. The "*Gazza Ladra*" was followed by "*Corradino*," "*Elizabetta*," and "*Ricciardo*;" but "*Zelmira*" remained the favorite opera, and held its course triumphantly through the whole season.

We now come to a period in which we find insurrection in the pit, redoubled intrigue behind the scenes, tumult, scandal, a war of pamphlets, and diplomacy itself called in to the aid of music. Rossini had entered into a contract with the *impressario* of the Fenice Theatre in Venice. Six thousand francs were insured to Signor Rossini, and four thousand to Madame Colbran Rossini, upon condition that he should bring out two operas during the carnival, one old and one new, and Madame was to perform in both. All Venice had been waiting for these operas with the utmost anxiety. "*Zelmira*," performed at Naples, had long been promised, and the company at the Fenice was already occupied in rehearsing it, when the rival theatre of San Benedetto announced the representation of the same piece.

The two theatres immediately contested the right to this opera, and the disputes grew so high, that the government interfered. A stormy contest ensued, at the close of which it was decided that San Benedetto had the legitimate right to "*Zelmira*;" and it was represented at this theatre, to the great detriment of the Fenice, which had been at considerable expense, and after all found its hopes frustrated.

Rossini was not allowed to remain neutral during this scene. He was assailed by the *sugry*

manager; and, to remedy an evil, which it seemed impossible not to impute, in some degree, to him, he proposed the representation of "*Maometto*," which we have seen condemned at Naples, but whose fame he promised to re-establish by re-composing the whole second act. This promise given, he departed for Verona, remained there a considerable time, spent his leisure very agreeably among his friends and admirers, and wrote a cantata in honor of the Emperor of Austria, which was performed during the congress; but not a note did he rewrite of the promised second act. The manager's indignation knew no bounds; the public, fearful of being disappointed of their pleasures, began to take an active part in the business; and the report was spread that Signora Colbran had lost her voice. Things did not wear a better aspect in the inside of the theatre; the rehearsals became scenes of discord. One day Galli, the celebrated bass, took an affront, and set off in the middle of the second act. Rossini, in disgust, broke up the meeting and withdrew. The manager appealed to the public authorities, and Rossini was placed under arrest.

Under all these terrible auspices the fatal day approached. An irritated public filled the theatre at an early hour; cries resounded from every side that the manager had reproduced an old, condemned opera, and that Rossini had neglected to fulfil his engagements. The overture was hissed, the first scene hooted, and the second drowned by the impromptu accompaniment of the pit, whose discords, if we may be pardoned a musical phrase, no art could resolve. Silence could only be obtained when clamor and fury had howled themselves to rest, and were tired out by their exertions.

The enemies of Rossini had circulated a report through the house—a report, by the way, that had but too much truth in it—that Rossini had only altered one miserable trio, and had simply introduced some shreds of his other works; and towards the close of the opera an uproar arose of which no image in nature could convey an adequate idea. Galli and Madame Colbran Rossini drank the bitter cup of humiliation to the lees. Sinclair, the English tenor, partook of these attentions, and was overwhelmed with hisses and outrages. From seven in the evening till three in the morning this tempestuous outrage endured, and fears were entertained for the safety of the scenery and the decorations of the house.

Rossini endeavored to make his peace with the Venetians the following carnival by calling his talents into action in the opera of "*Semiramide*," which was performed at the Theatre Della Fenice, and sung by Madame Colbran Rossini, Rosa Mariani, (a delightful contralto,) Sinclair, Galli, and Lucio Mariani. A passage in the overture tended much to conciliate the audience and obliterate the former unfavorable impression, and this feeling was strengthened by an air of Mariani's, which was full of beauty and sweetness. The next piece that called forth applause was a duet between this lady and Madame Colbran Rossini; besides which an air of Galli, and a terzetto between him and the two above-mentioned ladies, were received with tumultuous applause. Rossini was called for at the end of the second act, and came forward with a humble obeisance to receive this token of reconciliation.

After having received the homage of the lovers

of music in Paris, we find Rossini fulfilling his engagements in London. The following is a chronological list of his works: 1. "*Demetrio e Polibio*." This is Rossini's first opera. It is said to have been written in the spring of 1809, though not performed till 1812 at the Theatre Valle in Rome. 2. "*La Cambiale di Matrimonio*," 1810, *farza*, (by *farza* is understood an opera in one act,) written at Venice for the Stagione del' Autunno. 3. "*L'Equivoco Stravagante*," 1811, *autunno*, composed at Bologna for the Theatre Del Corso. 4. "*L'Inganno Felice*," 1812, *carnivale*, written for the Theatre San Mosè at Venice. This is the only one of Rossini's early works that has retained its place on the stage. 5. "*La Scala di Seta*," *farza*, 1812, *primavera*, performed in the San Mosè at Venice. 6. "*La Pietra del Paragone*," 1812, *autunno*, at the Scala in Milan. 7. "*L'Occasione fa il Ladro*," *farza*, 1812, *autunno*, in the Theatre San Mosè at Venice. 8. "*Il Figlio per Azzardo*," *farza*, 1813, *carnivale*, at the same theatre. 9. "*Il Taveredi*," 1813, *carnivale*, at the grand Theatre Della Fenice at Venice. 10. "*L'Italiana in Algeri*," 1813, *estate*, performed at the Theatre San Benedetto at Venice. 11. "*Anreliano in Palmira*," 1814, *carnivale*, sung in the Theatre of La Scala at Milan. 12. "*Il Turco in Italia*," 1814, *autunno*, at the Theatre of La Scala at Milan. 13. "*Sigismondo*," 1814, in the Theatre Della Fenice at Venice. 14. "*Elisabetta*," 1815, *autunno*, Naples, sung at San Carlo. 15. "*Torvaldo e Dorsisca*," 1816, *carnivale*, in the Theatre Valle at Rome. 16. "*Il Barbiere di Siviglia*," the same season, at the Theatre Argentina in the same city. 17. "*La Gazzetta*," 1816, *estate*, performed at the Theatre Dei Fiorentini at Naples. 18. "*L'Otello*," 1816, *inverno*, sung in the Theatre Del Fondo, (a handsome round theatre, which is subsidiary to that of San Carlo.) 19. "*La Cenerentola*," 1817, *carnivale*, performed in the Theatre Valle at Rome. 20. "*La Gazza Ladra*," 1817, *primavera*, Milan, sung in the Scala. 21. "*Armida*," 1817, *autunno*, Naples, sung at the Theatre San Carlo. 22. "*Adelaide di Borgogna*," 1818, *carnivale*, Rome, performed in the Theatre Argentina. 23. "*Adina, ossia il Califfo di Bagdad*," Rossini composed this piece for the opera at Lisbon, where it was performed in the Theatre San Carlo. 24. "*Mosè in Egitto*," 1818, Naples, sung, during Lent, in the Theatre San Carlo. 25. "*Ricciardo e Zoraide*," 1818, Naples, sung, during the *autunno*, at San Carlo. 25. "*Ermione*," 1819, Naples, sung, during the Lent season, at San Carlo. The *libretto* is an imitation of the *Andromaque* of Racine. Rossini aimed at an imitation of the style of Gluck. 27. "*Odoardo e Cristina*," 1819, *primavera*, Venice, sung at the Theatre San Benedetto. 28. "*La Donna del Lago*," 4th of October, 1819, Naples, sung in the Theatre San Carlo. 29. "*Bianca e Faliero*," 1820, *carnivale*, Milan, performed at the Scala. 30. "*Maometto Secondo*," 1820, *carnivale*, Naples, at the Theatre San Carlo. 31. "*Matilda di Sabran*," 1821, *carnivale*, Rome, at the Theatre d'Apollone. 32. "*Zelmira*," 1822, Naples, *inverno*, sung at the Theatre San Carlo. 33. "*Semiramide*," 1823, *carnivale*, at the grand Theatre Della Fenice. 34. "*Il Viaggio a Rheims*," at the Théâtre Italien at Paris in the summer of 1825. 35. "*Le Sidge de Corinthe*," at the Opera, Paris, October, 1826. 36. "*Moise*," at the same theatre in 1827. 37. "*Le Comte Ory*," at the same the-

atre in 1828. 38. "*Guillaume Tell*," at the same theatre in 1829. Rossini has devoted but little attention to sacred compositions; we know of no other than the two following: 1. "*Ciro in Babilonia*," an oratorio, 1812, composed at Ferrara for the Lent season, and performed at the Teatro Communale. 2. "A Grand Mass," composed in 1819 at Naples. Rossini has composed many cantatas, but we know of no other than the nine following: 1. "*Il Pianto d'Armonia*," 1808, performed in the Lyceum of Bologna. This is Rossini's first attempt. The style resembles the weaker parts of "*L'Inganno Felice*." 2. "*Didone abbandonata*," 1811. 3. "*Eglo e Irene*," 1814. 4. "*Teti e Peleo*," 1816, composed for the occasion of the nuptials of her royal highness the Duchess of Berri, sung at the Theatre Del Fonda at Naples. 5. "A Cantata," for a single voice, composed in honor of his majesty the King of Naples, 1819. 6. "A Cantata," performed before his majesty Francis I., Emperor of Austria, the 9th of May, 1819, when this prince appeared for the first time at the Theatre San Carlo. 7. "A Patriotic Hymn," composed at Naples in 1820. Another Hymn of the same kind, but of very opposite politics, composed at Bologna in 1815. For the same offence Cimarosa had, a few years before, been thrown into prison. 8. "*La Riconoscenza*," a *pastorale*, for four voices, performed at San Carlo, the 27th December, 1821, for Rossini's benefit. 9. "*Il vero Omaggio*," a cantata, executed at Verona, during the congress, in honor of his majesty the Emperor of Austria. Rossini also composed a mass, which was performed at a country town near Paris in 1832, and subsequently to this his celebrated "*Stabat Mater*," in 1838, for grand orchestra and chorus, which is now so well known. Since this he has composed nothing except a hymn to Pio Nono at the time of the recent Roman political troubles. He is still living, (1854,) in luxurious retirement, principally at Bologna.

ROSWICK, MICHAEL, a Saxon musician at the beginning of the sixteenth century, published "*Compendiaria Musica Editio, cuncta, quæ ad practicam attinent, mira quadam brevitate complectens*," Leipsie, 1516 and 1519.

ROTA, ANDREA, a Bolognese composer of the sixteenth century, born about 1540, published, amongst other works, "*Madrigali à 5 Voci*," Venice, 1579.

ROTA, ANTONIO, was not only celebrated throughout Italy as a performer on the cornet, but was also a composer. He resided at Padua, and died in 1548, leaving amongst other writings a manuscript treatise on the cornet, and a practical work entitled "*Ricercari, Motetti, Balli, Madrigali e Canzoni Francesc*:" this was published at Venice in 1546.

ROTA, CYPRIANO DE, an Italian composer of the sixteenth century, was the author of the following amongst other works, "*Madrigalium Libri 5 Vocum*," Venice, 1562 and 1565.

ROTA, ROSA, a celebrated Italian singer, was, in 1770, a pupil of Galuppi in the Conservatory of the Incurabili at Venice. Dr. Burney heard her, and spoke highly of her talent.

ROTE. An instrument frequently mentioned by Chaucer, as well as by the old French poets,

and which, from the analogy of its name to the Latin word *rota*, a wheel, is generally supposed to have been the same with the French *vielle*, or English hurdygurdy, the tones of which are produced by the friction of a wheel.

ROTH, WILHELM A. T., born at Erfurt about the year 1720, learned the elements of music of Adlung, and continued his studies, principally of the harpsichord, at Weimar, under the celebrated Walther. In 1754 he settled as a teacher of music at Berlin, and in 1757 published there a collection of songs of his own composition.

ROTIE, JOHANN CHRISTOPH, born in 1653, was the son of a singer at Rosswein, who taught him the elements of vocal and instrumental music. He first entered the service of the Duke of Coburg as violinist in the Chapel Royal, and subsequently (in 1693) became chamber musician to the Prince of Schwartzburg. He died in 1720, leaving several considerable works for the church.

ROTIE, JOHANN ERNEST, eldest son of the preceding, was born at Coburg in 1688. Having received the elements of his musical education from his father, he went to Berlin, where he obtained the situation of a chorister. He next became a bass singer to several German theatres; till, tired of the wandering life of an actor, he settled at Sondershausen, where he was received in the prince's chapel as a singer and violinist. He died at the above town in 1774.

ROTIE, AUGUST FRIEDRICH, younger brother of the preceding, born at Sondershausen in 1696, was a good violinist, and in 1723 entered the service of the Margrave of Bayreuth. Some years after this he returned to his native town, when his prince nominated him chamber musician and director of his chapel. He died at Sondershausen in 1784.

ROTONDA. (I) Round, full, in speaking of the tone of a voice or instrument.

ROUGET DE L'ISLE. Author of the French national song the Marseilloise.

ROULADE, or ROULEMEN. (F.) A term applied to all kinds of rapid movements, or passages, but particularly to a rapid flight of notes extemporaneously introduced as an embellishment. See VOLATA.

ROUNDELAY, or RONDEL. From the French word *rondelet*. A kind of ancient poem, so denominated, according to Menage, from its form, by which it constantly returned to the first verse, and thus went *round*. The common roundelay consisted of thirteen verses, eight in one rhyme, and five in another. One of its rules was, that the first verse should have a complete sense, and yet join agreeably with the closing verse, though in itself independent.

Some writers speak of the roundelay, or rondel, as a kind of air appropriated to dancing; and in this sense the word seems to imply little more than dancing in a circle. Our old English poets use this word as signifying a simple, rural strain, both short and lively.

ROUND. A species of fugue in the unison,

composed in imitation of a catch, and so called because the performers follow each other through the several parts in a circulating motion. The following round on the diatonic scale was written and composed by T. Goodban, Canterbury. We copy it from Novello's "Musical Times."

Moderato.

1 All who sing and wish to please, must
2 Do Re Mi Fa
3 Na-ture's bless-ings all should seize, -
Sing in tune, the words ex - - press;
Sol La Si Do
which to ills give sweet re - - dress;
Keep the time, take breath with ease, The
Do Si La Sol
Har-mo - ny bids an - ger cense, and
Sounds sus - tain, the voice sup - press
Fa Mi Re Do
soothes the mind that feels dis - tress.

ROUSSEAU, JEAN JACQUES. This celebrated philosopher, author, and musician, was born at Geneva in 1712. His father was a watchmaker in that town, and destined his son first to learn the business of enamel painting, and afterwards of copperplate engraving; but the aversion of Jean Jacques to both these occupations soon decided him to quit Geneva, which he did in 1728, and wandering, at first, through various parts of France and Italy, he picked up a miserable pittance, chiefly by writing music.

It was at Venice that his natural love for this art was more decidedly developed, and his taste especially led him towards the best music in Italy. On his arrival at Paris, he soon became known as a philosopher and orator, and not less as being one of the most singular in his conduct of human beings. He began his literary career by painting in the most vivid colors the dangers of theatrical representations; at the same time he wrote himself a comedy, "*Narcisse*." He published his opinion that the French language was incapable of truly musical adaptation, and, at the same time, he set to music a French opera, "*Le Devin du Village*." He demonstrated the moral injuriousness of romances, and he wrote the "*Nouvelle Eloïse*." Part of his daily occupation, after his first arrival at Paris, still consisted in copying music, which he continued chiefly for the support of a poor relation. At the same time he completed, besides many other *chefs-d'œuvre*, both the words and music of his "*Devin du Village*," and invented, in his "*Pygmalion*," the species of performance since called melodrama. His "*Devin du Village*" had just been brought out, and received with enthusiasm, when, in 1752, a company of Italian singers arrived at Paris, whose success aroused the jealousy of the French composers. Two parties were immediately formed in Paris, the one supporting Italian music, the other abusing it; till at length the controversy ran so high, that the Italian singers were ordered to quit France. Rousseau, warm partisan of the Italians, then seemed to forget, not only his "*Devin du Village*," but various other advantages that the French theatre offered him, and wrote, in 1753, his celebrated letter on French music. In this work, written with all his characteristic eloquence and enthusiasm, he went so far as to declare that the French had absolutely no music; that their ariettes were *not* ariettes; their recitatives *not* recitatives; and that their harmony was nothing better than the work of schoolboys, which they used without the least discretion. He added, at the same time, a parallel of the advantages of Italian music in the above respects, and concluded by a critique of a very celebrated monologue in the "*Arnide*" of Lully. This critique was immediately refuted by Rameau, who had previously attacked the "*Devin du Village*." A host of other pamphlets followed, abusing and ridiculing the opinions of Rousseau in every possible way. Pasquinades and songs were written against him, and in every print shop he was indecently caricatured. At one of the theatres a farce called "The Fairies" was produced, in which his character and opinions were outraged. He was refused the payment of the sums due to him from the theatre for the performances of his own opera, and even forbidden to enter the house when his own piece was played. These persecutions continued and came home to their object, being even greatly heightened by his restless and diseased imagination. He now more and more shunned the society of the capital, and at length, on the invitation of the Marquis of Girardin, retired to the village of Ermenonville, where, after a residence of only six weeks, he died. The following are the writings of this great author on the subject of music: 1. "*Projet concernant de nouveaux Signes pour la Musique*." This was read by

the author at the Academy of Sciences in 1742. 2. "Dissertation sur la Musique Moderne," Paris, 1743. 3. "Lettre d'un Symphoniste de l'Académie Royale de Musique à ses Camarades de l'Orchestre," Paris, 1752. 4. "Lettre sur la Musique Française," with the motto "Sunt verba et voces præteraque nihil," Paris, 1753. 5. "Dictionnaire de Musique." Neither in this work nor in any of his posterior musical publications did he disavow or change his opinions respecting French music. 6. Many articles concerning music in the *Encyclopédie*. These were written about the year 1750. 7. "Une Lettre à M. l'Abbé Raynal au Sujet d'un nouveau Mode de Musique inventé par M. Blainville." 8. "Examen des Principes avancés par M. Rameau dans sa Brochure intitulée 'Erreurs sur la Musique dans l'Encyclopédie.'" And 9. "Lettre à M. Burney sur la Musique, avec des Fragmens de l'Observation sur l'Alceste Italienne de M. le Chevalier Gluck." His principal practical works consist of "Pygmalion," a melodrama; "Le Devin du Village," interlude; "Fragmens de Daphnis et Chloé, composés du premier Acte, de l'Esquisse du Prologue et de différens Morceaux préparés pour le second Acte," Paris, 1780; "Les six nouveaux Airs du Devin du Village," Paris, 1780; and "Les Consolations des Misères de ma Vie, ou Recueil d'Airs, Romances, et Duos," with this motto, "Nature est un doux guide; je queste partout sa piste; nous l'avons confondue de traces artificielles;" from Montaigne. This work was magnificently engraved at Paris, in 1781. It contains nearly one hundred songs, ariettes, and duos, with French and Italian text.

ROUSSEL, FRANÇOIS, a French composer of the sixteenth century, published, amongst other works, "Chansons à 4, 5, et 6 parts," Paris, 1577.

ROUSSEL, FERDINAND, a French professor of music, published in 1775, at Paris, a work entitled "Le Guide Musical, ou Théorie et Pratique abrégées de la Musique Vocale et Instrumentale, selon les Règles de l'Accompagnement et de la Composition."

ROUSSIER, ABBÉ PIERRE JOSEPH, was born at Marseilles in 1716. He wrote several works on music which were published at Paris and Geneva between the years 1764 and 1783. He died at Ecouis, in Normandy, about the year 1790.

ROVEDINO, an excellent Italian bass singer, performed at Paris in 1790, and subsequently went to London, where he belonged to the King's Theatre for upwards of ten seasons.

ROVETTA, D. GIOVANNI BATTISTA. Chapel master of St. Mark's at Venice, and church and dramatic composer there, towards the middle of the seventeenth century. Amongst his works are the following. Sacred music: "Messa e Salmi à 5, 6, 7, e 8 Voci, con 2 V.;" "Salmi à 5 e 6 Voci, con 2 V.;" "Salmi à 3 e 4 Voci, con 2 V., ó altri Stromenti;" "Salmi à 8 Voci;" "Motetti à 2 e 3 Voci;" "Motetti Concertati à 2 e 3 Voci, con V. se piace;" "Motetti concertati à 2 e 3 Voci, con Litanie à 4 Voci;" "Madrigali concertati à 6 Voci, con 2 V. e B.," Venice, 1625. Dramatic: "Ercole in Lidia," opera, 1645; "Antiope," opera, 1649, conjointly with Leardini; "Costanza di Rosmonda," opera, 1659; "Amori di Apollo e

Leucoteo," opera, 1663; and "Rosilena," opera, 1664.

ROY, ADRIEN LE. See ЛЕНОУ.

ROYAL SOCIETY OF MUSICIANS, LONDON. The origin of this institution, like that of many others, was purely accidental. In 1738, a celebrated oboe player, of the name of Kytch, went to England from Germany, whose performance was held in such high estimation that he was engaged at two or three private parties of an evening to play opera songs, &c., which he executed with exquisite taste and feeling. But with all the patronage and encouragement that Kytch enjoyed, he, like too many other talented men, was very improvident; he neglected his family, then himself; consequently he became totally incapable of appearing before any respectable assembly; and at last he was found, one morning, dead in St. James's market. That a great good often arises from partial evil was verified in this instance. Soon after the death of Kytch, Festing, the celebrated violinist, Weidemann, the flute player, (who instructed George III.) and Vincent, the oboe player, were standing at the door of the Orange Coffee House, in the Haymarket, when they observed two very interesting boys driving mule asses; on inquiring who they were, they proved to be the orphans of the unfortunate Kytch. With a feeling that reflects honor on their memories, they entered into a subscription to rescue the children of their departed brother professor from such a degrading situation, and, on consulting with Dr. Greene, and several other eminent composers, on the necessity of a fund to alleviate the distress of indigent musicians, their widows and orphans, they established on the 19th of April, 1738, this society. In a document printed in May, 1738, several rules and regulations are inserted, and among the names enrolled as members are, George Frederic Handel, Esq., Dr. Arne, Dr. Boyce, Dr. Burney, Dr. Hayes, Dr. Greene, Dr. Pepusch, J. C. Smith, (Handel's amanuensis,) &c.

ROY, SIMON DE. A French contrapuntist of the sixteenth century. Several of his motets may be found in "Joanelli Nov. Thes. Mus.," Venice, 1568.

ROYER, JOSEPH NICOLAS PANCRACE, a native of Burgundy, was born about the year 1705. He went to reside in Paris about the year 1725, and there acquired much reputation for his manner of singing, and for his excellent performance on the organ and harpsichord. Through the interest of his friends, aided by his own merits, he obtained a reversionary grant of the place of music master to the royal family of France; and he came into possession of it in the year 1746. In the following year he was appointed director of the *Concert Spirituel*, and in 1754 obtained the situation of composer of the music for the king's chamber, and inspector general of the opera. He did not long enjoy these advantageous and lucrative employments, for he died in the month of January following, in the fiftieth year of his age.

Royer composed the operas of "Pyrrhus," "Zaide," "Le Pouvoir de l'Amour," "Amalthis," and "Prométhée," and many lessons for the harpsichord, of which, however, only one collection has hitherto been published.

ROZE, NICOLAS, librarian to the Conservatory of Music, was born near Chalons-sur-Saone, in 1745, and, from the age of seven, officiated as chorister in the town of Beaune. Shortly afterwards he studied music under Rousseau of Dijon, and made such progress in counterpoint, that before he was ten years of age a motet of his composition was performed with a full orchestra. His voice was also so remarkable at that age, that persons came from all the neighboring towns to hear him. In 1769, after having composed a grand mass for the town of Beaune, he brought it to Paris for the inspection of Dauvergne, then superintendent of the king's band. This able master immediately engaged Roze to write a motet for the *Concert Spirituel*. It was from this time that his talents became very generally known, and he was accordingly soon nominated conductor of the music at the cathedral of Angers; in which city, during a residence of five years, he established a public concert, and otherwise promoted the interest of music. In 1775 Roze, now the Abbé Roze, was named chapel-master of the Saints-Innocens Church, at Paris, where his compositions and performance became very celebrated. On the death of Langlé, in 1807, he received his appointment of librarian.

RUBATO, or ROBATO. (L.) Robbed, borrowed. The term *tempo rubato* is applied to a style of performance in which some notes are held longer than their legitimate time, while others are curtailed of their proportionate durations, in order that, on the whole, the aggregate value of the measure may not be disturbed.

RUBINELLI, GIOVANNI, a celebrated contraltist, was born at Brescia, about the year 1752. In 1772 he belonged to the Duke of Wurtemberg's chapel at Stuttgart, and his name first appears in 1774, as a principal singer in Italy. He, in that year, performed at Modena, in Paisiello's "*Alessandro nell' Indie*," and in Anfossi's "*Demofonte*." After this he appeared as principal singer in all the great theatres of Italy, previously to his going to London, in April, 1786. His journey from Rome, where he had just sung at the carnival, was by no means propitious. The weather was unusually severe; and he was not only overturned in his chaise at Maçon, in France, but after quitting the ship in which he sailed from Calais to Dover, the boat that was to have landed him was overset near the shore, and he remained a considerable time in the water. The first opera in which Rubinelli appeared in England was a pasticcio, called "*Virginia*," on the 4th of May. His own part, however, was chiefly composed by Angiolo Tarchi, a young Neapolitan, who afterwards rapidly advanced to great eminence. In figure Rubinelli was tall and majestic, in countenance mild and benign. There was dignity in his appearance on the stage; and the instant the tone of his voice was heard, no doubt remained with the audience that he was the first singer. His style was grand and truly dramatic, his execution neat and distinct, his taste and embellishments new, select, and masterly, and his articulation so pure and well accented, that, in his recitatives, no one conversant in the Italian language ever had occasion to look at the book of the words while he was singing. Rubinelli, from the fulness of his voice and greater simplicity of style, pleased a

more considerable number of hearers than Paëchierotti; though none, perhaps, so exquisitely as that singer used to delight his real admirers. Rubinelli, finding himself censured, on his first arrival in England, for changing and embellishing his airs, sang, "Return, O God of hosts!" in Westminster Abbey, in so plain and undorned a manner, that even those who venerate Handel the most, thought him insipid. The second opera, in which Rubinelli and Mara sang together, was "*Armida*." All the music, except Mara's part in this drama, was the composition of Mortellari.

RUBINI, GIOVANNI BATTISTA, the most celebrated living tenor, was born on the 7th of April, 1795, at Romano, a little town of the province of Bergamo. The son of a professor of music, he acquired the elements of the art in his earliest years, and at the age of eight he already sang in the churches, or took his part on the violin in the orchestra. At a later period he was put under the charge of Don Santo, a priest, and organist of Adro, near Brescia, who was learned in harmony and in the art of singing. After having tried the voice of the young Rubini, he decided that the child had no talent for singing, and sent him back to his father, who, convinced of the mistake of the organist of Adro, continued to give lessons to his son, who made his *début* at the age of twelve, in a female part. After this attempt Rubini repaired to Bergamo, having an engagement to play the violin solos between the acts and to sing in the choruses. His first attempt as a singer in the theatre of this city was in an air of Lambertini, which had been introduced into a comedy; he had a brilliant success, and received from the impresario *five francs* as a reward. The recollection of this incident still sometimes amuses the now celebrated artist. Notwithstanding this, he had the mortification of seeing his triumph effaced by the refusal of the impresario at Milan to receive him into the chorus of his theatre, because he had not voice enough. An engagement offered him in a strolling troupe, which was about to go into Piedmont, was the only resource which remained to him. On his arrival at Fossano, Rubini sang the *roles* of the first tenor, as well as at Saluzzo and Verceil. In the last-named place he met a violinist named Madi, with whom he associated himself for the purpose of giving concerts; but their tour to Alexandria, Novi, and Valenza, proving unsuccessful, they were compelled to return to Verceil. The misery which he experienced in these excursions induced him to quit the strolling troupe, and go to Milan. He could only find there an engagement at forty-five francs a month, at Pavia; but the success which he met there was such that he was engaged for the carnival of 1815, at Brescia, where he received one thousand francs for three months. This price was doubled in the following spring, for the theatre San Moè, at Venice, and finally Barbaja engaged him for the theatre Fiorentini, at Naples, at eighty-four ducats a month. After a year Barbaja wished to dismiss Rubini, although he had obtained the favor of the public, and only consented to retain him on condition of reducing his salary to seventy ducats. The singer could have obtained more advantageous situations elsewhere, but he wished

to remain in Naples, where he received useful lessons from Nozzari. Still, in subscribing to the hard conditions of the manager, he said to him, with the confidence of an artist who knew his real worth, and what he was one day to become, "You profit by the advantage which my position gives you; but I will catch you later." He was not deceived; some operas written for him in 1816 and 1817, the profound impression which he produced at Rome in the "*Gazza Ladra*," the brilliant success which he obtained at Palermo, and after his return to Naples, caused his compensation to be raised to a considerable sum. In 1825 he appeared at Paris for the first time; making his *début* on the 6th of October, in the rôle of Ramiro, in "*La Cenerentola*." The charm of his voice; his style, peculiar to himself, which he has borrowed from no school; his rare elegance of vocalization, and ornaments in the best taste, made his triumph sure. "*La Donna del Lago*," "*La Gazza Ladra*," and "*Otello*," consolidated his reputation, and made the journalists of that day give him the title of the "king of tenors." Babaja, who had yielded Rubini to the management of the Italian theatre at Paris, recalled him at the end of six months. After his return to Naples in 1826, he was sent to Milan, and then to Vienna, where he had already been in 1824. In this interval Bellini's "*Il Pirata*" and "*La Sonnambula*," as well as Donizetti's "*Anna Bolena*," had at last given to Rubini the kind of music which suited best his talent and organization, and in which he showed himself much superior to what he had been in the operas of Rossini. Bellini and Rubini seemed to have been born for each other, and for their mutual glory to be inseparable. It is from this time (1826) that the incontestable superiority of Rubini in his special walk bears date. In the works already cited, he made use of the frequent contrast of *piano* and *forte*, which is the distinctive characteristic of his style, which he perhaps abuses by too frequent use, but by means of which he excites the most lively emotions. It is his individual mark, and it is by this that he has created a manner, of which the imitators are, unhappily, far inferior to the model which he has given.

Up to the year 1831, Rubini had been in the pay of Barbaja, who had been obliged to increase his salary to sixty thousand francs. Free, now, from all engagements, Rubini returned to Paris, where he excited the most lively enthusiasm in "*Il Pirata*," "*Anna Bolena*," "*La Sonnambula*," and the other works of his new repertoire. From this time he sang every year, alternately, six months in Paris, and the other six either in London or at the English festivals, with the exception of the summer of 1838, in which he went to Italy, and to his native place, Bergamo. His reputation increased from day to day, and his success has caused him to be recognized as the first tenor of his time. His wealth surpassed that of all singers, even those whom fortune has most favored. In the first year after his engagement with Barbaja, he made one hundred and twenty-five thousand francs; since which time his annual income has exceeded two hundred thousand francs, and the total of his fortune is upwards of two millions and a half. Rubini married, in 1819, Mlle. Chomel, a French cantatrice, who had some success at Naples,

under the name of Comelli. She sang in London, in 1831, with her husband, in "*Il Pirata*," which was the last season that she sang in public. She was born at Paris May 31, 1794.

"Rubini's voice," says a recent critic, "is a tenor, in the full sense of the word. It begins from E, and rises in *petto* notes to B above the lines; it continues in *di testa* notes to the F, ever in an intonation of perfect justness and evenness. Thus the scale which it runs over is of two octaves and one note. But that is but its ordinary compass; for we have heard Rubini, in Donizetti's "*Roberto Devereux*," leap even to G. He had, indeed, never ascended so high; and he himself, after that *tour de force*, appeared astonished at the feat.

"So much for its extent. As for its power, it has not been below what the strongest dramatic expression may require from a singer. But this strength, however great, never offends the ear by too rough bursts. His voice is enveloped, as it were, in a light gauze, which, without interfering with the most rapid leaps, softens the asperities almost always inseparable from an energetic vibration. Hence the unspeakable sweetness and charm which spread round the singer when he utters passages of sorrow and tenderness. It is of him that one may say, without exaggeration, that he has tears in his voice.

"We willingly acknowledge that nature comes in for a large share in those qualities so rare and so precious; but what art has added is immense. One of the wonders of that art is revealed in the transitions from the chest to the head voice, and *vice versa*. When he has reached the limit of the chest register, E, for instance, the change in entering the head voice is effected so marvellously that it is impossible to seize the moment of the transition. Another of those wonders is that, gifted with very broad lungs, and which respire a large quantity of air, he measures his respiration with so much dexterity that he loses of his breath but just what is required to produce the sound proportioned to the value of the notes. His manner of drawing breath is also one of the secrets of art for which it is impossible to account. He so cleverly dissembles the artifice of respiration, that, in the longest passages, one cannot perceive the moment when his breath is renewed. To explain such a phenomenon, he must fill and empty his lungs almost instantaneously, and without the least interruption, as would be the case with a cup which one emptied with one hand and filled with the other. It may be easily imagined what advantage a singer must derive from such a faculty, which he is as much indebted for to nature as to practice. By this means he can impart to his phrases a brilliant and varied color, for his organ retains in its gradation the strength necessary for commencing, pursuing, and ending, without any interruption, the longest periods.

"There are those who, after seeing Rubini, will tell you that he is a cold and stiff actor, if they do not even add that he is no actor at all. This is another error that it is easy to dispel. This immobility he is reproached with, is the necessary consequence of his manner of singing. Behold Rubini in those famous *adapts*, when, motionless, and his head inclined backwards, to open to sound a broader passage, he raises that harmonious and limpid voice, which moves the audience so deeply! The slightest motion of the

body would produce a waving in that voice which is of itself so sure, and deprive it of that evenness and finish, whose charm is unspeakable. It is his voice that weeps, and makes you weep; you are moved — you feel enraptured; Talma himself, with his admirable mimic powers, did not produce more stirring effects.

"Such are the various aspects under which this great singer presents himself. Nature and art have combined to render him a real phenomenon. His voice is strong, sweet, just, and even; it is nature which has made it thus, and nature never proved more liberal. His method is a perfect one, because it is founded in truth and the most exquisite taste. Rubini has carried scientific singing to perfection; he does better all that was done before him, and art is moreover indebted to him for many innovations which have already enriched all methods. Thus, to mention but one, Rubini has been the first to introduce into song those vigorous aspirations which consist in protracting a sound upon the same note before the solution of the cadence. This shake imparted to the voice, this sort of musical sob, ever produces a great effect, and there is now no singer that does not strive to imitate it.

"Yet, as nothing in the world is quite perfect, Rubini likewise pays his tribute to human nature. In our opinion he is too negligent in his manner of delivering a *recitativo*. Then, again, in *ensemble* pieces, he does not even take the trouble to sing; and when he condescends to open his lips, it is to remain completely silent. One may say that Rubini does not exist in *ensemble* pieces. He likewise often sings with his chest voice. It is, perhaps, to these *naïve* artifices that Rubini is indebted for the so complete preservation of his organ, which is now as fresh as in his most youthful days; but it is not the less true, that by that excessive laziness he may endanger the dramatic conception of the composer, and paralyze the exertions of his comrades. We have said nothing of Rubini's private character, for our object was the artist only; but we cannot dismiss this brief sketch without doing justice to his generous feelings, the simplicity of his habits, and the kindness of his heart. All his comrades, and all who have had opportunities of knowing him, will bear witness to his eminent qualities both as an artist and as a man of the world."

Rubini is still living, in 1854, in princely retirement, in the neighborhood of Milan, having for some years retired from the stage.

RÜCKUNG. (G.) Syncopation in melody.

RUDIMENTS. The first elements or principles of music. Those who desire a more connected explanation of the rudiments of music may find all they wish in "Moore's Rudiments," now (1854) publishing, with "Progressive Exercises to be written upon Slates." This work also embraces the "Grammar of Music," and a "Treatise upon Counterpoint."

RUE, PIERRE DE LA. One of the most voluminous composers of the sixteenth century was Pierre de la Rue, or, as he was sometimes called, *Petrus Platensis*. He resided chiefly in Germany, and was in great favor with Prince Albert and the Princess Isabella of the Low Countries. He published, at Antwerp, "*El Par-*

nasso Espagnol de Madrigales y Villancicos, à quatro, cinco, y seis Voces," besides several masses and motets to Latin words.

Many of his compositions are still extant in the "Collection of Masses and Motets" preserved in the British Museum, some of which were published early in the sixteenth century, immediately after the invention of musical types. He was a very learned and excellent contrapuntist.

RUEFZ, GASPARD, a musician and learned author of Lubec, was born at Wismar in 1708. His father was a pupil of the celebrated Buxtehude, and taught his son the elements of music and harpsichord playing, whilst he learned from Wilken the flute, hautboy, and violin, and from Hölken the organ. In 1737 he obtained the situation of chanter at Lubec. His death took place in 1755. He wrote the following works on music: "*Wiederlegte Vorurtheile vom Ursprunge der Kirchenmusic, &c.*," (i. e., "Refutation of existing Prejudices as to the Origin of Church Music,") Lubec, 1750; "Refutation of existing Prejudices as to the present State of Church Music," Lubec, 1752; and "Refutation of existing Prejudices against Church Music, and the Expenses which it requires," Rostock and Wismar, 1753. These three dissertations are considered the best which have been written on the same subjects.

RUFFO, VINCENZO. An Italian contrapuntist of the sixteenth century. Amongst his works are the following: "*Madrigali à 5 voci, Lib. 1.*," Venice, 1553; "*Madrigali Cromatici à 6, 7, 8 voci,*" Venice, 1554; "*Madrigali Cromatici à 5 voci,*" Venice, 1555, 1558; "*Madrigali Cromatici à 4 voci,*" Venice, 1555, 1560; "*Il Libro Primo de Motetti à 6 voci,*" Venice, 1583; and "*Il Libro Primo de Motetti à 5 voci.*"

RUGGERI, GIOVANNI MARIA, a vocal and instrumental composer at Venice, published, amongst others, the following highly esteemed works: "*Mariane,*" opera, 1696; "*Miltiade,*" opera, 1699; "*Amor per Vendetta,*" opera, 1702; "*Arato in Sparta,*" opera, 1703; "*Armidà abbandonata,*" opera, 1710; "*12 Cantate con e senza l.*," Op. 5, Venice, 1705; and "*Sonate à 2 V. e C.*," Op. 4.

RUGGERIO, FRANCESCO, a celebrated maker of violins at Cremona, was called *Il Beer*. He lived towards the middle of the seventeenth century. Two of his violins, sold in 1790, bore the dates 1640 and 1670.

RUGGERIO, GIOVANNI B., called *Il Bom*, was a celebrated violin maker at Brixia about the year 1653.

RUHEPUNCT. (G.) A point of repose in melody; a cadence.

RUIMONTE, P. DE, a native of Saragossa, was, in 1620, chapel-master to Prince Albert, governor of the Pays Bas. He published a work entitled "*Il Parnasso Espanol de Madrigales y Villancicos,*" and two books of masses and motets.

RULED PAPER. Paper on which the *staves* are ruled for receiving the written notes of any composition. Formerly this paper was wholly ruled by hand, and by common quill pens, the tedious operation of which was afterwards superseded by the invention of five-pointed pens made

of brass. At present, however, the still more expeditious method of ruling the paper with a machine is generally adopted.

RULOFFS, or **ROELOFFS**, **BARTH.**, organist and conductor of the theatrical orchestra at Amsterdam, was born in that city in 1740. He was considered a good violinist and composer, and had also merit as a poet. He produced many works for the Dutch theatre, of some of which he wrote both the poetry and music.

RUSO, **ABBÉ**, born at Dijon about the year 1700, was master of the choristers in the church of Tournay, and died in 1754. Some of his printed masses are highly esteemed.

RUSO, **FREDERIC**, violoncellist of the Chapel Royal of France, was born at Versailles in 1755. He was a pupil of the younger Dupont, and entered the orchestra of the Royal Academy of Music in 1787. He was also a singing master of high repute, and published several operas of vocal and instrumental music.

RUSSE. (F.) Russian; as *d la Russe*, in the Russian style.

RUSSELL, **WILLIAM**, bachelor of music, was born in London in the year 1777. At the age of eight he was placed under the tuition of Cope, organist of the Church of St. Savior, Southwark; but his father, being partial to cathedral music, engaged also Shrubsole, the organist of Spa Fields Chapel, who had formerly been in the cathedral of Canterbury, and the organist at Bangor, to instruct his son in cathedral service. Afterwards, as a sort of finishing master, he was put under Groombridge, the organist of Hackney and of the Church of St. Stephen in Coleman Street; with him he continued about two years. Russell then left off all masters till the year 1797, when he placed himself for about three years under Dr. Arnold.

An ardent and laudable desire to attain eminence in his profession first led Russell to examine the writings of Haydn and Mozart; and it was, perhaps, in a great measure, from an attentive study of their scores that he might date his great knowledge and excellence in the art, both as a performer and composer.

In the year 1789 his father appointed him his deputy, as organist of St. Mary's, Aldermanbury, and he continued to officiate there till the autumn of 1793, when he was appointed organist of Queen Street Chapel, in Lincoln's-Inn-Fields. At the time that he was engaged in this chapel, a cathedral service was performed there by a small but very respectable choir. Russell continued in this engagement till the middle of 1798, when the chapel was converted into a Methodist meeting house. He then returned, for about three months, to St. Mary's, Aldermanbury, till September of the same year, when he was elected organist of St. Ann's, Limehouse. In 1801 he was unanimously elected organist of the Foundling Chapel. In the year 1798 he was a candidate with six others for this situation, at the resignation of Grenville; but, owing to the powerful interest that had been made for the person who succeeded, his wishes were at that time frustrated. In 1807, induced chiefly by the excellence of the organ, which was not only the largest, but one of the finest in England, he offered himself a candidate for the place of organist at Christchurch, Spitalfields. He was

opposed by no fewer than ten rivals; yet such were his fame and excellence as a performer upon this instrument, that although he was personally unknown to every person in the parish, except one, he was only outnumbered in votes by the person who succeeded, and for whom exertions had been made, and promises of votes obtained, for several years before.

With respect to his theatrical engagements, Russell's *entré* was (at the recommendation of his friend and master, Dr. Arnold) as piano-forte player and composer at Sadler's Wells, in the year 1800. He continued to hold these situations for four seasons, till a change of proprietors took place, and Reeve purchased an eighth in the concern, after which his services, of course, were no longer wanted. In 1801 the managers of Covent Garden Theatre engaged him to preside at the piano-forte there, for the express purpose, as they stated to him, of accompanying Mrs. Billington, Storce, and Braham.

Russell's theatrical compositions are numerous, but consist chiefly of dramatic spectacles and pantomimes. They amount, in the whole, to about twenty, and were principally written for Covent Garden, Sadler's Wells, and the Circus. He composed, also, two oratorios: "The Redemption of Israel," and "Job," and four odes, one on music, another to the genius of Handel, a third on St. Cecilia's day, and a fourth to harmony, besides several voluntaries, glees, and single songs.

As a composer Russell had great excellence; and it is only to be wished that the managers of Covent Garden had put into his hands things of greater importance than pantomimes. As a performer on the piano-forte and organ, he had few equals. He died in the year 1813, aged thirty-six.

RUSSELL, **HENRY.** An Englishman, who has acquired considerable reputation in this country as a singer of ballads and similar music, mostly of his own composition.

RUSSIAN MUSIC. The Russians are a musical people; they possess a great number of national songs, which, at first hearing, are not without a certain charm; but they have the fault of being all formed on the same model, which gives them a monotonous tinge, by which one is soon fatigued. But a more complicated kind of music could not be executed on the *balalaika*, the only instrument by which the Russian *moujik* is accompanied. A piece of wood, rudely shaped, narrower and more flat than the guitar, furnished with three strings, has neither great resonances nor very attractive charms. Military music is generally very good in Russia, the intonation of the horns and trumpets being peculiarly remarkable. A sort of music, peculiar to Russia, remains to be mentioned. It is produced by a kind of tubes, which give but one note each. Such an orchestra, to be effective, must, of course, be very numerous; but the effect is admirable. The sound, better supplied than that of any other wind instrument, may be swelled and diminished at pleasure, and thus joins force to expression. This music, which is sufficiently rare in Russia, is in great requisition at the *fêtes*. It is generally played in a garden, and the effect produced at a great distance, on a delightful Russian night, is wonderful.

RUST, FRIEDRICH WILHELM, leader of the band of the Prince of Anhalt-Dessau, was born in 1739. He was a celebrated performer from his childhood, both on the harpsichord and violin. He published many vocal and instrumental works between the year 1765 and his death, which took place at Dessau in 1796.

RUSTIC SONG. A song, the words of which are on a rural subject, and the melody rude and familiar.

RUST, RUSTI, or RUAT, GIACOMO, chapel-master at Barcelona about the year 1767, was born at Rome in 1741. He studied music and composition, first at the Conservatory Della Pietà, and then at Rome, under the Chapel-master Rinaldo, of Capua. He next removed to Venice, where, in 1764, he gave his first opera, entitled "*La Contadina in Corte*." After obtaining his chapel-master's situation, he produced the following operas: "*Idolo Cinese*," 1774; "*Amor Bizarro*," 1775; "*Alessandro nell' Indie*," 1775; "*Il Fion di tella asciutta*," 1776; "*Il Socrate*" 1776; "*Il Giove*," 1776; "*I due*

Protetti," 1777; "*Artaserse*," op. ser., Modena, 1784; and "*Il Talismano*," second act only, Milan, 1785. Rust died about the year 1787.

RUTINI, GIOVANNI PLACIDO, a Florentine composer, born about the year 1730. He first travelled through Germany, and about 1757 was established at Prague. In 1766 he returned to Italy, and then produced at Modena, and other cities of that country, several operas of his composition, amongst which are the following three: "*Gli Sposi in Maschera*," Modena, 1766; "*Amor Industrioso*," 1765; and "*Vologeso*." During his residence in Germany several of his works, for the voice and harpsichord, were published at Nuremberg and Leipsic.

RYST, HERMANN VAN DER, founder of the College of Music of St. Cecile, near Dieste, in the Netherlands, was born in that town about the year 1550. He was, during twelve years, member of the chapel of the Duke of Bavaria, of which the celebrated Orlando Lasso was then chapel-master

S.

S. This letter is used as an abbreviation of Solo; as, *org. S.*, organ solo. It is sometimes used thus, (:S:), with dots on each side of it, to mark a repeat; but more generally thus, :§:.

SAAI, ANTON W. C. Harpist to the Duke of Mecklenburg-Schwerin, and composer for his instrument, since the year 1795.

SABADINI, BERNARDO, a distinguished Venetian composer, was chapel-master of the cathedral and court of Parma. The following of his works are known: "*Favore degli Dei*," "*Gloria d'Amore*," 1690; "*Eracleu*," 1696; and "*I Disegni della Divina Sapienza*," oratorio, 1698.

SABBATINI, P. LUD. ANT., commonly called *Sabbatini of Padua*, was a pupil in counterpoint of Padre Martini, as also, probably, of P. Valloti, whom he succeeded as chapel-master of the Church of St Anthony at Padua. He published several theoretical and practical works, namely: "A Treatise on Chords, according to the Classification of Fundamental Bass;" this book is entitled, in Italian, "*La vera Idea delle Musicali Numeriche Segnature*," Venice, 1799; "Treatise on Fugue," in two volumes, with many examples from the works of P. Valloti, Venice, 1801; "*Elementi teorici e pratici di Musica*," Rome, 1790: this is a *solieggio*, the rules and lessons of which are in canon; the "*25 Salmi di Benedetto Marcello*," a new edition, published in 1803, in conjunction with P. Auselmo Marsand: of Sabbatini's part in this edition it is said on the title, "*Il quale ha ridotto il testo à moderna lettura*;" and of Marsand's part, "*Da cui fu corretta e ricorretta la stampa*." Sabbatini has also composed a great variety of music for the church, which chiefly remained in manuscript. He died at Padua in 1809. At the funeral service of Jonuelli, a grand mass by Sabbatini was performed.

SABBATINI, GALEAZZO, of Pisaro, was an excellent theoretical and practical musician. Amongst other works, he published at Venice, in 1644, "*Regola facile e breve per suonare sopra il Basso Continuo nell'Organo*," &c. A second edition of this work appeared at Rome in 1699.

SABECA, or SAMBUCA. An instrument rendered *sackbut*; but it is more probable that it was a large stringed instrument resembling the harp.

SABINO, HIPPOLITO. An Italian composer, chiefly of madrigals, which were published at Venice between the years 1570 and 1584.

SACCHI, D. GIOVENALE, canon of the Church of St. Paul, and member of the Royal Academy at Mantua, was considered as an excellent musical theorist. He died at Milan, where he was professor of eloquence at the College of Nobili, in 1789. He wrote several works on musical subjects, published at Milan between the years 1761 and 1778.

SACCHI, SIGNORA. See SCHLICK.

SACCHINI, ANTONIO MARIA GASPARO. This celebrated Italian composer was born at Puzzuoli in 1734. In early youth he studied, during several years, under the renowned Durante, at the Conservatory of St. Onofrio, at Naples, where Piccini, Traetta, and Guglielmi were his fellow-students. He there prosecuted his studies on the violin with particular care; and the dexterity which he acquired on this instrument gave him that facility of throwing a certain elegance and *éclat* into his accompaniments which was afterwards so conspicuous in his compositions. After quitting this excellent school, he was not long in making himself known by his works, the celebrity of which procured him, in 1762, an engagement as composer to the principal theatre at Rome, where he chiefly resided during seven or eight years, making, however, occasional excursions to the principal towns of Italy for the purpose of bringing out his works. The Italian connoisseurs seemed now to agree that if Piccini had the advantage of Sacchini in the buffo style, the latter certainly excelled in the serious opera. In 1769 he was chosen successor to Galuppi, in the direction of the Conservatory of L'Ospedaletto at Venice. This institution was entirely for females, and the girls, who were severely disciplined with regard to morals, generally remained there till they married. It was an object of curiosity to strangers who attended their concerts, not only to hear all kinds of female voices, but also all sorts of instruments played by females, without the exception even of the double bass, horn, or bassoon. During the time that Sacchini was director of this institution, he formed a great number of good singers in it; among whom may be distinguished Gabrielli, Canti, and Pasquali. In October, 1767, the King's Theatre in London was opened with a new serious opera, by different composers, called "*Tiranno*," in which an admirable cantabile air, composed by Sacchini, was sung in an exquisite manner by Guarducci. This air was the first of Sacchini's compositions ever performed on the English stage. Five years after this, namely, in 1772, Sacchini himself went to England, where he not only supported the high reputation he had acquired on the continent, but vanquished the natural enemies of his talents in England. His operas of the "*Cid*" and "*Tamerlano*" were equal, if not superior, to most of the musical dramas performed in any part of Europe; indeed, each of these dramas was so entire, so masterly, and yet so new and natural, that there was nothing left for criticism to censure, though innumerable beauties to point out and admire. It is evident that this composer had a taste so exquisite, and so totally free from pedantry, that he was frequently new without effort, never thinking of himself, or his fame, for any particular excellence, but totally occupied with the ideas of the poet, and the propriety, consistency, and effect of the whole drama. His accompaniments, though always rich and ingenious, never call off attention from the voice, but the

principal melody is invariably rendered distinguishable through all the contrivance of imitative and picturesque design in the instruments. His dramatic works, in the year 1778, amounted to seventy-eight in number; and by the many masses and motets which he composed while he remained at Venice, in the character of *Maestro dell' Ospedaletto's Conservatorio*, he manifested himself to be able to write for the church as well as for the stage.

He remained too long in England for his fame and fortune. The first was injured by cabals, and by what ought to have increased it, the number of his works; and the second by inactivity and want of economy. "Upon a difference with Rauzzini," says Dr. Burney, "this singer, from a friend, became his foe; declaring himself to be the author of the principal songs in all the late operas to which Sacchini had set his name, and threatening to make affidavit of it before a magistrate." The utmost of this accusation that can be looked upon as true, may have been that, during Sacchini's severe fit of the gout, when he was called upon for his operas before they were ready, he employed Rauzzini, as he and others had done Anfossi in Italy, to fill up the parts, set some of the recitatives, and, perhaps, compose a few of the airs for the under singers. The story, however, gained ground, and was propagated by his enemies, though always disbelieved and condemned by his friends and by the reasonable part of the public. In the summer of 1781, Sacchini went, for the first time, to Paris, where he was almost adored. After increasing his reputation there by new productions, he returned, in the following year, to London, where he only augmented his debts and embarrassments; so that, in 1784, he took a final leave of the country, and settled at Paris, where he not only obtained a pension from the Queen of France, but the theatrical pension, in consequence of three successful pieces. The last of Sacchini's works was the opera of "*Evelina*," founded on an interesting event in the history of the ancient princes of Wales. This graceful, elegant, and judicious composer died, however, before it could be performed, at Paris, in 1785. He was honored with a public funeral, and with every mark of respect and distinction which sensibility and gratitude could bestow on a person who had contributed so largely to the public pleasures.

SACELLUS, LEO. Chapel-master of the Duomo Church at Vicenza in 1600. Amongst his works were published at Antwerp "*Flores* 2, 3, et 4 vocum," 1619.

SACRED MUSIC. Oratorios, church services, anthems, chants, hymns, psalms, and whatever a musician composes for the purpose of public worship or private devotion.

SACRIST. A person retained in a cathedral, whose office it is to copy out the music for the use of the choir, and take care of the books.

SACKBUT, or SACBUT. A brass wind instrument resembling the trumpet, so contrived as to be capable of being drawn out to different lengths, according to the acuteness and gravity of the scale required. The *sackbut* is usually about eight feet long, and when extended to its full length about fifteen. There are, however, *sackbuts* of different sizes to execute different

parts; particularly a small one, called by the Italians *trombone-piccolo*, and the Germans *Kleine alt Posaune*, proper for the counter tenor. Respecting the sackbut of the ancient Hebrews, so various have been the conjectures of commentators that their opinions form no satisfactory information to the curious inquirer. Indeed, scarce any ancient instrument has been heard of, for which the sackbut, or the psaltery, has not furnished a name. A well-known passage in Daniel puts it out of all doubt that music was cultivated and brought to a considerable degree of perfection amongst the ancients, if we may judge by the number and variety of the instruments mentioned in it, of which the names of two occur for the first time in the sacred writings, viz., the sackbut and dulcimer. "Nebuchadnezzar, the king, made an image of gold, whose height was threescore cubits, and the breadth thereof six cubits. Then a herald cried aloud, To you it is commanded, O people, nations, and languages, that at what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, dulcimer, and all kinds of music, ye fall down and worship the golden image which Nebuchadnezzar, the king, hath set up." There are various conjectures concerning the sackbut and dulcimer. It is thought that the sackbut was a wind instrument, formed of the root of a tree, and played upon by stops, like a flute. Isadore considers it a kind of flute or hautboy, and others have imagined it an instrument of four strings; but, as the word seems to signify something that may be lengthened or shortened, there can be little doubt that it was what we call the trombone. An ancient sackbut was found in the ruins of Pompeii, and appears to have resembled our modern trombone, which was formed by the Italians from the one they discovered in the ashes of Vesuvius, where it had been buried nearly two thousand years. Whether the sackbut was ever lost, or only fell into disuse, is not certain. The ancient one found at Pompeii was presented to King George IV. by the King of Sicily. It is made of bronze, with the upper part and mouthpiece of gold, and its tone is said to be unrivalled. The dulcimer is supposed by the Padre Martini to have signified a concert of instruments or voices, rather than any single instrument. The possession of these instruments, and the reference of several passages in the sacred writings, are sufficient proofs that music was cultivated amongst the Babylonians; and the Padre Martini naturally supposes that, as this people were every where celebrated for luxury and splendor, their music partook of the character. The Assyrians invented a trigonum or triangulum, a stringed instrument of a triangular shape, played upon with a plectrum. The trigonum is supposed to have been the instrument which King David played upon; but that is a fact which cannot be easily decided, on account of the difference in the numbers of the strings; for David is mentioned as playing upon the ten-stringed harp, whereas the one we have just described contains twelve strings. The Phœnicians had several musical instruments, one called after their own country, Phœnicæ, and another called naubum or nebel, which was played upon at the feast of Bacchus. There were also a number of other tribes in Asia, such as the Edomites, the Moabites, the Phrygians, the Lydians, the Ætoliens, the Ionians, and the Do-

rians, of whose manners and customs we know very little; but we may presume that they studied and promoted the science of music, for we find that several of the Grecian modes derived their names from some of these countries, as the Lydian, Phrygian, Dorian, &c.

SAINT-AMANS, LOUIS JOSEPH, born at Marseilles in 1749, was at first a provincial actor, and afterwards engaged himself as music master to the family of a Swiss baron, with whom he travelled in Italy for nearly three years, improving himself greatly in music by the study of the *chefs-d'œuvre* of Durante, Pergolese, and other great masters of that country. In the year 1769 he went to Paris, and made himself known by a motet of his composition for a single voice, entitled "*Cantate Domino*." This was sung at the *Concert Spirituel*. Encouraged by its great success, he composed an opera for the Théâtre Italien; it was called "*Alvar et Mincia*," and performed in 1770. His next works were "*La Coquette de Village*," an opera in two acts, 1771; "*Le Poirier*," in one act, 1772; and "*Le Médecin d'Amour*," in one act, 1773. In 1774 his "*Forté Enchantée*," opera ballet in two acts, and his "*Faux Vicinard*," in one act, were rehearsed at the Grand Opéra, but rejected. In 1776 "*Orsès*," a tragic opera, was rehearsed at the same theatre, and also rejected. The managers of the opera requested him, the same year, to write the music of the ballets and the recitative for the "*Olympiade*" of Sacchini, which had been translated into French, and was to have been performed; but the cabal then existing in Paris against the Italian music prevented its appearance, and Saint-Amans received no remuneration for his trouble. In 1776 he also composed the music of "*La Mort de Didon*," a ballet, by Gardel; and in 1777 produced the oratorio, "*David et Goliath*," which was performed with success. In 1778 Saint-Amans went to Brussels, where he was appointed music director at the theatre, and brought out, of his own composition, "*Daphnis et Thémire*," a pastoral; "*L'Occasion*," an opera buffa in one act; "*La fausse Veuve*," and "*Psyché et L'Amour*;" these operas, especially the last, were highly successful. In 1783 he set new music to the "*Rosière de Salency*" of Favart. This was successful, as was also an "*O salutaris*," which he composed about the same time, for the *fête Dieu*. In 1784 he was invited to Paris, with the offer of a professorship in the Royal School of Music. For Paris he then wrote, in 1785, new music to the "*Fête de Flore*," an opera in one act, and "*Le Prix de l'Arc*," an opera in one act, for the court theatre. In 1788 he put new music to "*La Fête Uzgèle*." In 1790 he brought out "*Lawrence*," which was performed at Paris and at Strasburg; in 1791, "*Ninette à la Cour*," with new music; in 1794, "*L'Heureux Démenti*," in two acts, and "*Aspasie*," in two acts; in 1795, "*Le Pauvre Homme*," in one act; in 1797, "*La Fête de la Paix*," an interlude. In 1798 he was nominated professor at the Conservatory. In 1799 he produced at the Théâtre des Jeunes Artistes, "*La Tireuse de Cartes*," in one act; and in 1802, "*Chacun a son Plan*," at the Théâtre Porte St. Martin. About this period, some alterations having taken place in the expenditure of the Conservatory, Saint-Amans was made one of the victims to economy, when he again quitted Paris for

Brest, in the capacity of director of the orchestra there. In this town he brought out, in 1804, an "*O filii*," for three voices and choruses, which was performed at Easter; also, in the same year, "*La Destruction de Jéricho*," a grand oratorio, in celebration of the victories of Napoleon. In 1807 he produced a "*Te Deum*," for three voices and chorus, also in honor of Napoleon; "*La Leçon Littéraire*," a comic opera in one act; two collections of romances, and a scene of "*Aleyone*," the words by Demoustier. To the above may be added various operas, published at different periods, between the years 1769 and 1807, and a didactic work entitled "*Table Élémentaire des accords, contenant la nomenclature, les notes sur lesquelles ils sont employés, leurs sons fondamentaux, l'énumération des intervalles qui les composent, le chiffre qui les désigne; les observations sur la préparation des dissonances; la manière de les sauver et les exemples qui y sont relatifs*," Paris, 1800.

SAITE. (G.) A string of a musical instrument.

SALA, NICOLO. Born at Naples in 1701. He was a pupil of Leo, and, on leaving his master, being appointed master of the Conservatory of La Pietà at Naples, he began an immense work, to which he consecrated his whole life. He made it, in some sort, the monumental history of harmony, by classing and preserving the masterpieces of the Neapolitan school, according to the progress of the art. He finished it at the end of the century in which it was begun. It was printed and published at the expense of the King of Naples, under the title of "*Regole del Contrapunto pratico*," when it was unfortunately destroyed during the revolution at Naples, in 1799, by the furious populace, who attacked the royal printing office, and destroyed the plates. Sala died in 1800, inconsolable at his immense loss; but, if his life had been prolonged during eight years, his old age would have been consoled by the reproduction of his work by M. Choron, in his "*Principes de Composition des Ecoles d'Italie*." It is probable that Sala was so entirely occupied by this great work, that he had small leisure for composition. We know of no work composed by him either for the theatre or church.

SALARI, FRANCESCO, born at Verona, has been known as a dramatic composer since the year 1777, when he produced the comic opera of "*L'Amo Ramingo*."

SALBLINGER, SIGISMUND, a musician at Augsburg in the sixteenth century, published in that town, in 1545, a work entitled "*Concentus 4, 5, 6, et 8 vocum*," and dedicated to the magistracy of Augsburg. The book contains a collection of the compositions of the most celebrated madrigalists up to the period of its publication.

SALDANIA, GONÇALO MENDES, a Portuguese composer, born at Lisbon, was a pupil of Duarte Lobo, and flourished as one of the best musicians in his native country about the year 1625.

SALE, FRANCISCUS, chapel-master at Halle, in Tyrol, at the close of the sixteenth century, was a Fleming by birth, and published a volume of masses under the title "*Patrocinium Mivices*," 1589. Several other works by him, consisting of masses and motets, are to be found in the Royal

Library at Munich. They bear date from 1574 to 1598.

SALE, JOHN, was born in London in the year 1758, and in 1767 was admitted as a chorister of the Royal Chapel at Windsor, and Eton College Chapel, under Mr. Webb, organist of those choirs. This situation he continued to hold till 1775. In 1777 he was appointed lay vicar of the choirs of Windsor and Eton, which office he retained till Christmas, 1796; being, at that period, a member of five choirs, namely, Windsor, Eton, his majesty's Chapel Royal, St. Paul's, and Westminster Abbey. In 1788 Sale succeeded Ladd as gentleman of his majesty's Chapels Royal; Soaper as vicar choral of St. Paul's, in 1794; and Hindle as lay vicar of Westminster Abbey, in 1796; and at Christmas, in the latter year, resigned Windsor and Eton. In 1800 he succeeded Bellamy, senior, as almoner and master of the choristers of St. Paul's, both of which he relinquished in 1812. In 1818 he became senior gentleman (or father) of the Royal Chapels; by which, according to custom from time immemorial, he is excused all duty or attendance. Sale was a principal bass singer at the King's Concert of Ancient Music, Academy of Ancient Music, Ladies' Concert, vocal and other concerts, oratorios, &c., in London, as well as at Liverpool, Chester, Worcester, Birmingham, Hull, Norwich, Nottingham, Halifax, Yarmouth, Lincoln, Winchester, at various times, for above thirty years, always acquitting himself with professional credit. It may further, with great truth, be said that he through life preserved an irreproachable private character, and was greatly esteemed and respected. Sale's voice was a genuine bass, of fine tone and sufficient compass to do every justice to part singing. He has composed many good glees, &c., some of which are printed. He also, with the permission of the noble family of the Wellesleys, published some of the Earl of Mornington's glees, amongst which is that great favorite, "O, bird of eve."

SALE, J. B., son of the preceding, was born at Windsor in the year 1779, and admitted as a chorister in the choirs of Windsor and Eton in 1785. In the year 1800 he succeeded Bellamy as lay vicar at Westminster Abbey; in 1803 was appointed gentleman of his majesty's chapel, vice Champness; in 1808 he succeeded to a second situation at Westminster Abbey, in the place of Guise, and finally was appointed organist of St. Margaret's, Westminster, in 1809. J. B. Sale was an excellent teacher of the piano-forte and singing. He attended the king's concerts at Windsor, and the Ancient Concert, during many years. In music he was a true disciple of the Handel school. His voice was a powerful bass, and he chiefly accustomed himself to sing anthems and part songs. As a composer, he has written but little; some few of his songs, duets, and glees, however, are much admired; among others, "The Butterfly," a vocal duet.

SALE, GEORGE CHARLES, youngest son of John Sale, was born at Windsor in 1796, and was admitted chorister in St. Paul's Cathedral, under his father, who then was almoner and master of the boys. He was a very fine performer on the organ, and, in 1817, succeeded Dr. Busby as organist of St. Mary's, Newington, where there were upwards of twenty candidates.

SALES, PIETRO POMPEO, chapel-master and counsellor of finance to the Elector of Treves, at Coblenz, was born at Brescia, in 1729. After rendering himself conspicuous for talent in his own country, he travelled through various parts of Germany. In 1763 he was recalled to Padua, to compose a serious opera for that city. Having acquitted himself with credit in this instance, he went to England, where he remained several years, and, about 1768, returned to Germany. In 1772 we find him engaged in the composition of an opera for the court theatre of Bavaria, and in 1777 he revisited London with his wife, who was an agreeable singer. He composed many works for the church, amongst which his *chef-d'œuvre* is considered to be the oratorio of "*Betulia Liberata*." He died in Germany in 1797. Very few, if any, of his compositions were published.

SALIERI, ANTONIO, chapel-master to the Emperor of Austria, at Vienna, was born at Legnano, a Venetian fortress, in the year 1750. At eleven years of age, he began to learn the harpsichord; but his passion for music soon increased to such a degree, that on the death of his father, who was an eminent merchant, and who died just as his son had attained his fifteenth year, the boy devoted himself entirely to the study of his favorite art. The patronage of Mozenigo, a Venetian nobleman, furnished him with an opportunity of resorting to that city to continue his studies, which he afterwards concluded at Naples. Giovanni Pescetti, a celebrated chapel-master at St. Mark, was his first master; after whose death, he made choice of Pierre Passini. About this time, the celebrated Gassmann came to Venice, when the young Salieri availed himself of the opportunity of taking some lessons from him, both on the harpsichord and in singing. The affection he soon conceived for this master induced him to accompany Gassmann to Vienna, his patron having consented to the journey, that he might have an opportunity of perfecting himself in composition. He arrived at Vienna in the spring of 1766, where he remained eight succeeding years, enjoying, during the whole of that period, the benefit of lessons from Gassmann in counterpoint. On his master's death, Salieri was nominated at once to his places of chapel-master to the court and theatre at Vienna; whilst enjoying which situations the precepts of the celebrated Gluck replaced in some degree those of his former master. The age and infirmities of Gluck disabling him from satisfying the continual demands of the public at Paris for new compositions for their theatres, Salieri, under the auspices of Gluck, and with the assistance of his ideas as to the manner of treating the subject, composed the opera for him entitled "*Les Danaïdes*." Gluck assured him, on this occasion, that he was the only German that had ever been able to familiarize himself with his style. It was supposed in Paris that Salieri had not the least hand in the composition of this opera, with the exception of the third act; so completely did the imitation succeed. In 1784 Salieri went to Paris with his opera, which was performed several times before the royal family, and at each representation with increased success. The queen even flattered him by singing in it herself at every performance. At length this opera came

out at the great theatre of the capital; and critics then discovered in the details of the piece, principally in the recitative and the vocal parts, a peculiar style, which announced the most striking talent. It was not till after the thirteenth representation that Gluck, in an address to the public, declared Salieri to be the sole composer of the "*Danaïdes*." The directors of the opera immediately paid him a remuneration of ten thousand francs, and three thousand more for the expenses of his journey. The queen likewise made him a very considerable present, and a printer paid him two thousand francs for the score. Before his departure for Vienna, the directors engaged him to compose the opera of "*Les Horaces et les Curiaces*." Shortly afterwards he set, for the theatre of Vienna, the opera of "*Axius, King of Ormus*," for which the Emperor Joseph II. presented him with two hundred ducats, and a pension for life of three hundred ducats. Soon after this he married a young lady, who brought him a considerable estate. After this time he continued composing both in the serious and comic styles, and did not cease to enrich the different theatres of Europe, especially those of his own country; to which he consecrated the best fruits of his labors, especially in the comic department. At Venice he produced, successively, the "*Scola de Gelosi*," the "*Partenza inaspettata*," the "*Talismano*," the "*Dama Pastorella*," and the "*Europa riconosciuta*," the latter being a work in a more lofty style. All these operas were successful. On his return to Vienna from Italy Salieri again displayed there the variety and fertility of his talent. In addition to the numerous operas which he had already composed for that city, he now produced the "*Spazzo Camino*," the "*Bella Mentitrice*," the grand opera of "*Semiramide*," the "*Grotto di Trofonio*," three other comic operas, entitled the "*Avaro*," the "*Prodiogo*," and the "*Cifra*," and various other pieces of instrumental and church music, especially an oratorio called the "*Passione di J. C. nostro Signore*." Salieri's music offers a fine model of Italian melody united to the rich harmony of the land of his adoption. He has never abused the style of either country, but, with a master's hand, has avoided confounding, altering, or destroying their distinct merits, at the same time that he has rendered the beauties of both conspicuous; thus exhibiting an example of sober wisdom, in the unprejudiced adoption of the richest models both of harmony and melody. No greater test, indeed, can be given of the intrinsic beauty of this author's compositions, than the rapture with which they were heard, and the magic effect they had on the audience, even when adapted to German or French, instead of the original Italian words. Salieri cultivated gratuitously the talents of two favorite German composers, Joseph Weigl and Francis Süssmayer; indeed, various amiable traits are related of his private life. We have omitted to mention that, in consequence of the almost unrivalled approbation his opera of the "*Danaïdes*" met with at Paris, Salieri received, in 1790, a second invitation from that capital, which he accepted, and was received with so much enthusiasm that the most alluring proposals were made to him to settle in France. But he preferred remaining faithful to his engagements at Vienna. Accordingly, soon after his return from this second

journey to the French capital, the Emperor Joseph appointed him, with expressions of the highest esteem, officiating leader at the Imperial Chapel, in the room of Joseph Bono, and with an extra salary of two hundred ducats. This favor of his sovereign was greatly increased by his being exonerated in the succeeding year from the drudgery attached to one of his other offices, namely, that of always presiding at the piano in the Italian opera. Salieri died in 1825, at Vienna.

SALII. (L. pl.) The name given by the Romans to the young men, twelve in number, whom Numa himself appointed out of the patricians, as a kind of dancers, and singers of hymns in praise of the god of war. The festivals in which the Salii were employed, and which constituted the sixth branch of that emperor's religious institutions, were celebrated about the time of the Panathenæa at Athens, in the month of March, and at the public expense. They continued several days, during which the Salii, &c. proceeded through the city to the Forum and the Capitol, as well as to many other public places, beating upon the anelia, or sacred shields.

SALIMBENI, FELICE. A celebrated soprano singer, born at Milan about the year 1712. He was a pupil of Nicolo Porpora. In 1733 he entered the service of the emperor at Vienna, which he quitted in 1737, and returned to Italy. In 1743 he became attached to the court of Prussia, and remained at Berlin about seven years, whence he proceeded to Dresden, and being on the point of again returning to his native country, he died at Laybach, in 1751. Salimbeni was decidedly one of the best sopranists that Italy has produced. His voice was pure and pleasing, and his tone, though penetrating, sufficiently round and full. He shone most in adagios, in which he often produced tears from his audience.

SALINAS, FRANCISCUS, was the son of the treasurer of Burgos, and born about the year 1513. Although from the day of his birth he labored under the misfortune of an incurable blindness, he was the author of one of the most valuable books on music now extant in any language. He began very early to devote himself to the study of music. During his youth nearly the whole of his time was employed in singing to, and playing on, the organ. While he was a boy, a young female, who was about to take the veil, happened to come to the place where he resided. She had expressed a desire of learning to play on the organ, and for that purpose became an inmate in his father's house. She was taught music by Salinas, while he, in return, received a knowledge of Latin. From the little instruction thus obtained, having become extremely eager towards the acquirement of more, he prevailed with his parents to send him to Salamanca, where for some years he assiduously applied himself to the study of the Greek language, and also to the study of philosophy and the arts. The narrowness of his circumstances, however, after a while compelled him to leave that university; and from thence he was taken into the king's palace, where he was patronized by Petrus Sarmenus, Archbishop of Compostella. When the archbishop was made a cardinal, Salinas went with him to Rome, more, as he said,

for the sake of learning than for enriching himself. Here he studied the works of Boethius, and of the ancient Greek writers about harmony. In these researches he spent upwards of thirty years; until, depressed by the loss of friends and by other misfortunes, he resolved upon returning to Spain with the slender pittance he had saved, in order that he might pass the remainder of his days in retirement. From Spain he was, however, afterwards recalled into Italy; whence, after residing there some years, he was invited to Salamanca, and, with a stipend sufficiently liberal, was appointed professor of music there. Salinas was an excellent composer for the organ and other instruments, and on account of his great abilities, was much esteemed by persons of rank, but in particular by Pope Paul IV., through whose favor he was created Abbot of St. Pancratio della Rocca Salagna, in the kingdom of Naples. He died in 1590, at the advanced age of seventy-seven years.

He wrote a treatise "*De Musica*," which is divided into seven books. In the first he treats only of the different methods of calculating the ratios of sound. In the eighth and ninth chapters of the second book, he contends against the musicians of his time, that the diatesseron, or fourth, is a concordant interval. The ditone and semiditone he ranks amongst the consonances, and also the lesser intervals. The subsequent chapters of this book contain a great number of scales and diagrams, contrived, with much ingenuity, to explain and illustrate the several subjects he has spoken of. In the third book he speaks of the genera of the ancients, and with so much learning and sagacity, that Dr. Pepusch has declared that the true enharmonic, which for many ages had been supposed lost, was in this work accurately determined. All, however, that seems to have been discovered is, that it consisted of certain divisions of the tetrachord, to which we are at this day entire strangers. Salinas, in another part of his book, shows the method of constructing what he calls the type of the diatonic. Though he seems to have been very solicitous to attempt some of the harsher intervals in the diatonic series, it is by no means to be inferred from his works that he had any desire to restore the ancient genera. The pains he has taken to ascertain the true divisions of the chromatic and enharmonic genera seem resolvable into that eager desire of rendering the writings of the ancient Greeks intelligible, which he uniformly manifests in the course of his works.

Salinas next treats of the temperament of the organ and other instruments, and makes some interesting observations on the powers of the human voice. He then speaks of the lute and the viol, and of the temperaments adapted to each. In the tenth chapter of the fourth book there is a diagram, representing, in a collateral view, the tetrachords of the ancients, conjoined with the hexachords of Guido, and showing how the latter spring out of the former. The ancient division of the genera into species is afterwards noticed. In a subsequent chapter he exposes the errors of Aristoxenus, in a manner very different both from Ptolemy and Boethius; and after that censures each of these writers with a degree of freedom which shows, that though he entertained a reverence for the ancients, he was by

no means bigoted to their opinions, but assumed the liberty, in many instances, of thinking and judging for himself. The last subject treated by him is the rhythms of the ancients; and he enters into a copious dissertation on the various kinds of metre used by the Greek, the Roman, and the Spanish poets.

The most curious parts of the concluding chapters are the little fragments of old Spanish melody which belong to his specimens of versification. Some of these are very graceful and pleasing, particularly when we consider that at that time they had received no polish from the opera. Of this work it may be sufficient to say, that a greater degree of credit is due to it than to almost any other production of modern writers of the same kind. The author was a practical as well as theoretical musician, and throughout the whole of his book he manifests a disposition the farthest removed, that can possibly be imagined, from that credulity which betrayed Glareanus and others into error. This disposition led him to inquire accurately and minutely into the doctrines of the Greek writers: and from the confidence with which he sometimes blames them, we are led into the persuasion that the truth was on his side.

SALMO. (L.) A psalm.

SALMODIA. (L.) Psalmody. See that word.

SALMON, THOMAS, an English musician of the seventeenth century, published in London, in 1672, besides several other musical tracts, a work entitled "*An Essay on the Advancement of Music, by casting away the Perplexity of different Clefs, and uniting all Sorts of Music, Lute, Viol, Violins, Organ, Harpsichord, Voice, &c., in one universal Character.*"

SALMON, MRS. This British vocalist (celebrated in the early part of this century) was a member of a family eminent for vocal as well as general musical ability, the Mahons of Oxford. Her mother, whose name was Munday, was sister to the celebrated Miss Mahon, also to Mrs. Ambrose and Mrs. Second, both public singers. Her first master was John Ashley; but time, practice, and observation appear to have been her most capable instructors. With all her acquisitions she certainly can be justly said to have belonged to no school. She sang English and Italian with the same brilliancy of tone, and the same facility. One of the critics of her day says of her: "Clearness, beauty, rapidity, polish, invention, and taste are her attributes; and with these she makes so perfect a combination of what is delightful to the ear, without being offensive to the judgment, that she takes a rank far beyond that which it has been usual to allot to qualities which have been held rather to pertain to organic than to intellectual superiority. Though never grand, and seldom, if ever, pathetic or touching, though never extorting the tribute of applause by sudden, powerful, and irresistible appeals to the imagination or to the heart, she still is sure of her object. She captivates by sweetness, delicacy and variety, by exquisite ornament, by uncommon ease, leaving the judgment free, whilst she wins upon the senses."

SALOMON, a native of Provence, born in

1661, was admitted into the band of the Chapel Royal of France, to play on the bass viol, an instrument on which he excelled. He composed an opera entitled "*Médée et Jason*," which was performed in the Royal Academy in 1713, with great applause. Salomon died, at Versailles, in the year 1731.

SALOMON, JOHANN PETER, was born at Bonn, in the electorate of Cologne, in 1745, according to a baptismal certificate found amongst his papers. He was educated for the law, but his love for music predominating over every other inclination, he was at length allowed to devote himself to its study, and soon became celebrated in Germany and France, not only for his performance on the violin, but for his profound knowledge of the art generally. He went to England about 1781; after which time that country proved the place of his constant residence, the scene of his best efforts, and the source of his warmest attachments. Salomon was one of those few whose right to contend for the honor of being the greatest performer on the violin in Europe was undisputed; "his taste, refinement, and enthusiasm," to use the words of Dr. Burney, "excited universal admiration, and caused his instruction to be eagerly sought for." Amongst his pupils, Pinto proved the extent of his master's skill, and his ability in communicating it. Unfortunately, this extraordinary young man, whose musical progress reflected so much honor upon his master, possessed qualities which are not unusually the concomitants of genius, and he perished just as he was ripening into unrivalled excellence. England is indebted to the spirit and enterprise of Salomon for having brought into it, at a great pecuniary risk, that most original, brilliant, and fertile musical genius, the immortal Haydn! It was in London that he produced those great masterpieces, the twelve symphonies, written for Salomon's concerts, which are, and most probably will ever continue, the standard of perfection in this species of composition; indeed, they are acknowledged as such wherever modulated sounds are understood or felt. His discriminating judgment was not exercised in one department of music only; he brought out of obscurity, and placed in their proper sphere, the unequalled vocal powers of Braham, who avowed the obligation, and was proud to boast of having possessed a friend whose unsolicited patronage was a recommendation of the most gratifying and valuable kind. Disinterested in his views, and anxious for the preservation and improvement of his favorite art, he was one of the early promoters and active assistants of the Philharmonic Society, the first concert of which he led with a zeal and ability that age had not abated; and the last business that occupied his attention was relative to the preparations for the ensuing season, in which he manifested a clear and unimpaired state of mind only four days previous to his death. Salomon had lived chiefly in the higher circles, where his good sense and polished manners ever rendered him acceptable; indeed, his education qualified him for any society. His classical attainments were considerable; and to these he added the more current and useful acquisition of four living languages, which he wrote and spoke with astonishing correctness and fluency. But the quali-

ties of his heart are those which have left the most lasting impression on his friends. He was honorable, generous, and sincere; his talents were always to be gratuitously commended if appealed to by distress; and his purse was so readily opened when his compassion was excited, that if a very faithful and vigilant servant, who lived with him twenty-eight years, had not been more cautious, his master would, in all probability, have offered his independence at the shrines of charity. He died in London, after a long illness, which originated in a fall from his horse. His remains were interred in the cloisters of Westminster Abbey.

SALTANDO, or SALTO. (I.) Proceeding by skips or bounds.

SALTARELLO. (I.) A particular kind of jig, so called from the dance of that name, chiefly consisting of leaping motions.

SALVATOR ROSA. See Rosa.

SALVE REGINA. (L.) A hymn to the Virgin.

SAMBUCA. An ancient stringed instrument used by the Greeks, but the particular construction of which is, at present, unknown.

SAMBUCUS. An ancient wind instrument, resembling a flute; supposed to be so called from its being made of elder wood, the Latin name for which is *sambucus*.

SAMPUNIA. A pneumatic instrument, used by the ancient Hebrews, resembling the modern bagpipe.

SANCES, GIOVANNI FELICE, chapel-master to the Emperor Leopold I., at Vienna, in the first half of the seventeenth century. He composed many motets and other vocal music, part of which was published at Venice, between the years 1638 and 1649.

SANCTUS. (L.) A principal movement of the mass or Catholic service.

SANDER, F. S., a Bohemian musician resident at Breslau in Silesia, was considered, in Germany, a good vocal and instrumental composer. He has also brought out some dramatic pieces. His works bear date from the year 1783 to 1797.

SANDERSON, JAMES. This English dramatic composer was born in 1769, at Workington, in the county of Durham. From childhood he evinced a strong passion for music, and when at school, at a very early age, was much delighted by playing on a toy fiddle. He soon after was presented by his friends with a small violin, and learned the gamut from an old book, lent to him by a dancing master, being soon able to play easy tunes by note. His father, about this time, removed to Sunderland, where, after three years' continuance of practice, young Sanderson became a tolerable dance player. He next became acquainted with a violinist in the orchestra of the theatre, and was permitted to sit by his side during the performance; by which means, together with indefatigable practice, he improved sufficiently to be engaged at the theatre, on a salary, for the ensuing season: he was also invited to play at the amateur concerts in Sunerland. Being now desirous of obtaining a me

knowledge of harmony, he procured an old spinet, as also a work by Hicks on thorough bass and composition, and scored several instrumental pieces with great attention; till, at length, when only fifteen years of age, he considered himself capable of teaching the piano-forte and violin; and as there appeared to be a good opening at North and South Shields, he went to those towns, and boldly solicited the patronage of the principal families. The result of this step was so successful, that he remained three years at Shields with much employment as a teacher. At the expiration of this time the manager of the theatre at Newcastle engaged Sanderson as the leader of his orchestra. There he remained twelve months, till, by a casualty, he was introduced to Astley, the proprietor of the Amphitheatre in London, who engaged him to join his orchestra at an increased salary. His first attempt at dramatic composition was at Chester, in 1789, when he composed appropriate symphonies to various parts of Collins's "Ode on the Passions," which was to be recited by the celebrated G. Cooke, the tragedian, for his benefit in that town. His next work was the comic pantomime of "Harlequin in Ireland," performed at Astley's theatre in 1792, with much applause. From this time till the year 1820, he produced no less than one hundred and fifty-four melodramas, burlettas, pantomimes, spectacles, &c., for the minor theatres, receiving, also, during many years of that time, a salary of eight guineas a week as *chef-d'orchestre*. He also, since the year 1799, published various operas for his instrument, and in 1822 submitted an overture in full score to the Philharmonic Society, of which he was a member. We should not forget to mention, that his vocal compositions, for Vauxhall and other public places, were very numerous. There have been few instances of an individual, entirely self-instructed in music, and possessed in early life of such slight opportunities of attaining musical information, having overcome, so completely as Sanderson did, by his own perseverance and natural talent, all obstacles to professional advancement. His laborious life affords an example of the fruits of honest industry, which every young musician, ungifted by fortune, would do well to reflect on with attention.

SANDONI, PIETRO GIUSEPPE, of Bologna, was a harpsichord maker, also a composer of some eminence. Amongst his works were "*Artaserse*," an opera, performed at Verona in 1709, and "*Contate da Camera e Sonate per il Cembalo*," published in London. He married Cuzzoni, in England, where he died about 1750.

SANDONI, FRANCESCA CUZZONI, wife of the preceding, but usually called Cuzzoni, was born at Parma, in 1700, and received her vocal instructions from Lauzi. After singing at most of the great theatres in Italy, she was engaged for the opera in London, soon after the arrival of Senesino. Her voice was a very fine contralto. Till the time of her arrival in England, Cuzzoni, as a female singer, was in full possession of the public favor; she then, however, quarrelled with Handel, who patronized her rival, Faustina, and the following year Cuzzoni quitted the kingdom. In 1748 she returned, but being then advanced in years gave little satisfaction. She died indigent, in her native country,

in the year 1770. The following anecdote is related of Cuzzoni. Handel had composed for her the song of *Falsa Imagine*, in "*Otho*," which occasioned so severe a dispute between them, on account of her refusing to sing it, that, at last, Handel threatened to throw the refractory signora out of the window; telling her, "that he always knew she was a very devil, but that he should now let her know, in her turn, that he was Beelzebub, the prince of devils." He then actually seized her by the waist, and lifted up the sash. Alarmed at this fearful process, Cuzzoni now consented, and by the exquisite grace, pathos, not less than by the beautiful ornaments, with which she executed and diversified the few simple notes that compose the air, she added more to her reputation than by any other performance.

SANES, FELICE, an Italian church composer, flourished, probably at Venice, towards the close of the seventeenth century.

SANFT. (G.) Soft; as, *mit sanften Stimmen*, with soft stops, in organ music.

SAN-ROMANO, CARLO GIUSEPPE, chapel-master and organist at Milan, was born there in 1630. He studied the harpsichord and composition under A. M. Turato and M. A. Graucini. He published various motets and other church music at Milan.

SANS. (F.) Without; as, *sans pedales*, without the pedals, in organ playing.

SANTARELLI, Chaplain of the order of Malta, and chapel-master to the pope at Rome. To extraordinary skill in the practice of music and singing he joined a profound knowledge of the theory and history of his art. In 1764 he published at Rome the first volume of his "Treatise on Church Music, from the earliest Ages to the present Time." The manuscript of his second volume was complete in 1770, but has not been printed. The exact title of his work is "*Della Musica del Santuario della Disciplina de suoi Cantori*." He also wrote some letters on church composers and modern church music, which may be seen in Gerbert's "History of Church Music," vol. ii. p. 354, et seq. He died in 1790.

SANTI, ALFONSO, of Ferrara. An esteemed Italian dramatic composer previously to the year 1733.

SANTINELLI, an Italian nobleman, held a place in the court of Leopold I. of Austria, and was also considered one of the best musicians of his time. He composed, in 1660, on occasion of the marriage of the emperor, the opera "*Gli Amori di Orfeo ed Euridice*," which is said to have exceeded in beauty all preceding compositions of a similar nature, and to have been the occasion of the establishment of the grand Italian opera at Vienna.

SANTIS, GIOVANNI DE, a Neapolitan violinist and composer, flourished about the year 1740. A publisher at Amsterdam, having procured, through his correspondents, some manuscript violin concertos and solos of this master, printed them at Amsterdam; at which, it is said, Santis was so indignant, that he set out on a journey to Holland, for the express purpose of being revenged on the publisher, but died on his route.

SANTO-LAPIS, a celebrated Bolognese composer, flourished in the middle of the eighteenth century. Amongst his dramatic works are "*L'In felice Aventurato*," opera seria, 1754; "*Il Finto Cavaliere*," opera buffa; and a part of "*La Fede in Cimento*," the remainder being by F. Gasparini.

SAPIO, —. A celebrated Italian professor of singing. He was chapel-master, and also gave instructions in singing, to Marie Antoinette, the unfortunate queen of Louis XVI. He married a French woman, but emigrated with his family, in the French revolution, to England, where he resided many years, his lessons in singing being considered unrivalled.

SAPIO, —, son of the preceding, was born in England. He was not brought up to music, but studied it simply as an accomplishment. After receiving a classical education, he entered the army, which he left in consequence of family circumstances, that led him to prefer a profession offering speedier and more certain emoluments. Sapiro's voice was a tenor of much compass, and he had the faculty of assimilating his falsetto, with ease, to the natural voice at their junction, which added all that he could want to the upper part of his scale. The quality of his tone was full and brilliant. He inherited from nature a quick and lively apprehension. He was a declamatory singer, and his manner was more rhetorical and effective than that of most concert singers.

SAPPHO. A poetess and musician of Lesbos, in the forty-fourth Olympiad. She acquired the name of the tenth muse. She invented the poetic measure known as Sapphic verse, and also established a new mode in music, entitled *mizolydian*. Plutarch states that the tragic poets adopted this mode, it being highly fitted for pathetic representations.

SARABANDE, (F.) or **SARABANDA**, (I.) A dance said to be originally derived from the Saracens. According to some authors, it had its appellation from a comedian named Sarabandi, who first introduced it in France. The tune of the *sarabande* is written in $\frac{3}{2}$ or $\frac{3}{4}$, and its character is both expressive and majestic. One of its distinguishing features is the lengthening of the second note of the measure, which at once gives a gravity and consequence to the movement.

SARATELLI, GIUSEPPE, of Padua, born in 1714, was the predecessor of Galuppi in the situation of chapel-master of St. Mark's Church at Venice. He was also a professor of great eminence at the Conservatory of the Mendicanti. He died in 1762.

SARRO, DOMENICO, vice-maestro of the Chapel Royal at Naples, flourished from the year 1725 to 1734. This master was much esteemed, both for his ecclesiastical and secular productions. The most celebrated of his operas were, "*Tito Sempronio Gracco*," for Naples, 1725, and Metastasio's "*Didone abbandonata*," for Turin, 1727. He was one of the early reformers, who, like Vinci, simplified harmony and polished melody in his productions for the stage.

SARTI, GIUSEPPE, imperial chapel-master at St. Petersburg, was born at Faenza in 1730. In

1756 he held the situations of court chapel-master and music-master to the royal family in Copenhagen; he also composed there some operas, which were only moderately successful. Some time after this, we find him holding the place of chapel-master of the Conservatory Della Pietà at Venice; and it is from this epoch that his high reputation in Italy must be dated. His music was then deemed divine. All the Italian theatres were anxious for his compositions, which he could not produce in sufficient number. In 1782 he was elected chapel-master of the Duomo at Milan. His most popular opera, at this time, was "*Giulio Sabino*," composed in 1781 for Venice, and published at Vienna in 1784. Some German critics, however, were of opinion, that the harmony of this opera was weak and defective, and that its only merit lay in the melody. Be that as it may, the high reputation of this work extended itself even to St. Petersburg, when the Empress of Russia invited Sarti to her capital, with the appointment of imperial chapel-master, for a term of three years. In 1785, he accordingly arrived there, and made his *début* at St. Petersburg, by a *concert spirituel* for Good Friday, introducing also some Russian psalms, which were performed by sixty-six voices and a hundred Russian horns, besides the customary orchestra. Still, however, this concert was not noisy enough to please the Russians; so that shortly after, on the occasion of the taking of Okzakow, he produced a *Te Deum*, in which he introduced real firing of cannon; the guns being placed in the court of the castle, and discharged with great precision, in the appointed passages of the music. After the representation of "*Armida*," in 1786, the empress presented Sarti with a gold snuffbox and diamond ring, and appointed him director of the Conservatory of Music at Catharimenski, with a salary of thirty-five thousand rubles, besides his lodging, and a purse of fifteen thousand rubles as an indemnity for his travelling expenses. She also conferred on him a title of nobility. After a residence of eighteen years in Russia, and receiving various additional favors from the court and nobility, the Emperor Alexander permitted him, in 1801, on account of his health, to retire, with the continuance of his pension, to a warmer climate. He then went to Berlin; but his constitution was so broken up, that he died in that city in the following year, 1802. The following are amongst Sarti's principal dramatic compositions: "*La Giardiniera brillante*," opera buffa, Dresden, 1781; "*I Contrattempi*," opera buffa, Dresden, 1782; "*Il Trioufo della Pace*," opera seria, Mantua, 1783; "*Didone*," opera seria, 1785; "*Amor Timido*," *Cantata à voce sola*," Vicenza, 1787; "*I Pretendenti Delusi*," opera buffa, 1788; "*Cleomene*," opera seria, Bologna, 1788; "*La Calcolajo di Strasburgo*," opera buffa, Chiavari, 1788; "*La Clemenza di Tito*," opera seria, 1788; "*Idalide*," opera seria, Petersburg, 1785; "*Le Nozze di Dorrina*," opera buffa, 1790; "*I Ricchi Delusi*," opera buffa, London; "*L'Araro*," an interlude; "*Gl'Amanti Consolati*," opera buffa, 1799; and "*Epomina*," opera seria, Turin. In the second volume of La Trobe's *sacred music*, there is an exquisitely beautiful trio from a *Miserere* by Sarti. It begins "*Amphius lara me*."

SARTORIO, ANTONIO, chapel-master of St

Mark's Church at Venice, composed many operas between the years 1652 and 1681.

SARTORIUS, ERASMUS, a celebrated German poet and musical writer, was born at Schleswick in 1577. He held the situations of chapel-master and vicar of the cathedral at Hamburg, and died in that city in 1639. His principal work is entitled "*Institutiones Musicae, cum Doctrinâ de Modis*," Hamburg, 1635.

SATTEL. (G.) The nut of a violin finger-board, &c.

SAUVEUR, JOSEPH, professor of mathematics at the Royal College in Paris, and member of the Academy of Sciences, was born at La Flèche in 1653. He had not the faculty of speech till seven years of age. Another peculiarity of his life was, that he could not be prevailed on to see the person he was about to marry till the contract of marriage was signed. He was fond of music, but had neither voice nor ear. His great object was to simplify the science, with which view he proposed to constitute one fixed key for all the music in the world, and also produced a specimen of a mode of writing music on one line. He also invented a musical chronometer. His treatises on music were all published in the Memoirs of the Academy of Sciences, between the years 1701 and 1713. He died in 1716.

SAVART, FELIX, the distinguished French physician and writer on acoustics, was born at Mézières in 1791, and died in 1841.

SAVIONI, MARIO, counter tenor singer in the Pope's Chapel at Rome, about the year 1642, was also a good composer.

SAX, CHARLES JOSEPH, a celebrated manufacturer of musical instruments in Brussels, was born at Dinant, on the Meuse, in 1793.

SAX, ADOLPH ANTOINE JOSEPH, son of the preceding, and inventor of the *Saxophone*, and the whole modern family of brass instruments, called *Sax-tubas*, *Sax-horns*, &c., was born at Dinant in 1814. These instruments are combined in the following manner:—

1	Sax-tuba in B flat, (octave,)
1	" in E flat soprano,
4	" in B flat contralto,
3	" in E flat alto tenor,
2	" in B flat baritone,
2	" in B flat bass,
1	" in E flat contra-basso,
1	" in B flat contra-basso.

The form of M. Sax's *tuba* is borrowed from the figures which we see upon Trajan's pillar at Rome. With the Romans this instrument was sometimes called *tuba*, sometimes *buccina*, and even *are recurvo*, because it was curved in such a manner that the large part, after passing under the arm of the musician, repassed over his shoulder, and presented the bell in front. The advantage of this form, for power of sound in the open air, is, that it avoids the elbows, which impair the free propagation of the sonorous waves. Nothing can give an idea of the volume of sound produced by these new acoustic contrivances of the intelligent naker, to whom we owe already so many beautiful inventions. The contra bassos in E flat and B flat possess an unheard-of power. This latter instrument, very easy to play, has

forty-eight feet of development in its tube, with a conical diameter well proportioned. It is the giant, the mammoth of the species.

SBALZO. (L.) A skip in melody, in contradistinction to a progression by single degrees only.

SBARRA DOPPIA. (L.) A double bar.

SCACCHI, MARCO, a native of Rome, was chapel-master to Sigismund III. and to Uladislau IV., successively Kings of Poland. He was the author of a treatise published in 1643, entitled "*Cribrum Musicum ad Triticum Sifertinum, seu Examinatio succincta Psalmorum, &c.*;" of "*Cantilena 5 voc. et Lachrymæ Sepulchrales*," 1647; and of a set of canons entitled "*Canones, sive Lachrymæ Sepulchrales ad Tumulum Johannis Stobaci*." The compositions of Scacchi are greatly esteemed by the Italians for the closeness of their texture, and for the great ingenuity and contrivance that are to be found in them.

SCACCIA, ANGELO MARIA, a Milanese violinist and composer for his instrument, flourished towards the middle of the eighteenth century.

SCALA. (L.) A scale or gamut.

SCALD. The name given by the ancient northern nations to their bards, whose employment it was to compose those odes and hymns which were chanted at every public solemnity. These songs were, in general, descriptive of eminent exploits, and were animated by an enthusiastic spirit.

SCALE. (From the Latin *scala*.) The denomination first given to the arrangement made by Guido, of the six syllables *ut, re, mi, fa, sol, la*; also called *gamut*. This order of sounds, to which the French have added that of *si*, bears the name of *scale*, (i. e., *ladder*), because it represents a kind of ladder, by means of which the voice, or instrument, rises to acute, and descends to grave; each of the seven syllables being, as it were, one step of the ladder. The word *scale* is also used to signify a series of sounds rising or falling from any given pitch, or tone, to the greatest practicable distance, through such intermediate degrees as make the succession most agreeable and perfect, and in which we have all the harmonical divisions most commodiously divided. This scale is properly called the *universal system*, as including all the particular systems. This enumeration of all the diatonic sounds of our system, ranged in order, and which we call *scale*, was denominated by the Greeks *tetrachord*, because, in effect, their scales were composed of only four sounds, which they repeated from tetrachord to tetrachord, as we repeat ours from octave to octave.

Guido was led to the invention of the method of solmization, or singing by syllables, which are so used as to mark the places of the semitones, by observing that in a hymn to St. John, the first and middle syllables of the first three lines formed a regular ascent in the scale of the major mode, as we should say. Several different copies of this hymn are yet to be found. One of the most modern copies we here insert, as a curiosity worthy of preservation.

HYMN TO ST. JOHN.

UT queant laxis, RE-sonare fibris, MI - ra
ges - torum, FAMuili tu - orum, SOL - ve polluti,
LA - bil ro - a - tum, Sanc - te Johannes.

Every concord, or harmonic interval, is resolvable into a certain number of degrees; the octave, for instance, into three greater tones, two less tones, and two semitones; the greater sixth, into two greater tones, two less tones, and one semitone; the less sixth into two greater tones, one less tone, and two semitones; the fifth into two greater tones, one less tone, and one semitone; the fourth into one greater tone, one less tone, and one semitone; the greater third into one greater tone and one less tone; and the less third into one greater tone and one less tone. It is true there is a variety of other intervals or degrees, besides greater tones, less tones, and semitones, into which the concords may be divided; but these three are preferred to all the rest, and these alone are in use. Further, it is not any order or progression of these degrees that will produce melody. A number, for instance, of greater tones will make no music, because no number of them is equal to any concord, and the same is true of the other degrees. There is a necessity, therefore, of mixing the degrees to make music; and the mixture must be such that no two of the same kind be ever next each other.

The design of the scale of music is to show how a voice may rise and fall less than any harmonic interval, and thereby move from the one extreme of any interval to the other, in the most agreeable succession of sounds. The scale, therefore, is a system, exhibiting the whole principles of music, which are either harmonic intervals (commonly called *concords*) or concinnous intervals; the first are the essential principles, the others subservient to them, to make the greater variety. Accordingly in the scale we have all the concords, with their concinnous degrees, so placed as to make the most perfect succession of sounds from any given fundamental or key, which is supposed to be represented by *c*. It is not to be supposed that the voice is never to move up and down by any other more immediate distances than those of the concinnous degrees; for though that be the most usual movement, yet to move by harmonic distances, as concords, at once, is not excluded, but is even absolutely necessary. In effect, the degrees were only invented for variety sake, and that we might not always move up and down by harmonic intervals, though those are the most perfect, the others deriving all their agreeableness from their subserviency to them. Besides the harmonic and concinnous intervals, which are the immediate principles of music, and are directly applied in practice, there are other discord relations, which happen unavoidably in music, in a kind of accidental and indirect manner; for in the succession of the several notes of

the scale there are to be considered not only the relations of those that succeed others immediately, but also of those betwixt which other notes intervene. Now, the immediate succession may be conducted so as to produce good melody, and yet among the distant notes there may be very gross discords, that would not be allowed in immediate succession, much less in consonance. Thus, in the first series, or scale, above delivered, though the progression be melodious, as the terms refer to one common fundamental, yet are there several discords among the mutual relations of the terms; e. gr., from the 4th to 7th is 32, 45, and from the greater 2d to the greater 6th is 27, 40, and from the greater 2d to 4th is 27, 32, which are all discords; and the same will happen in the second series. From what we have observed here, and under the article *KEY*, it appears that the scale supposes no determined pitch of tune, but that, being assigned to any key, it marks out the tune of all the rest, with relation to it, shows what notes can be naturally joined to any key, and thereby teaches the just and natural limitations of melody, and when the song is carried through several keys, yet it is still the same natural scale, only applied to different fundamentals. If a series of sounds be fixed to the relations of the scale, it will be found exceedingly defective; but this imperfection is not any defect of the scale, but follows accidentally from its being confined to this condition, which is foreign to the nature and office of the scale of music. This is the case in musical instruments, and in this consists their great deficiency. For, suppose a series of sounds, as those of an organ or harpsichord, fixed in the order of this scale, and the lowest taken at any pitch of tune, it is evident that we can proceed from any note only by one particular order of degrees, since from every note of the scale to its octave is contained a different order of the tones and semitones. Hence we cannot find any interval required from any note upwards or downwards, since the intervals from every note to every other are also limited. And hence a song may be so contrived that, beginning at a particular note of the instrument, all the intervals, or the other notes, shall be found exactly on the instrument, or in the fixed series; yet were the song, though perfectly diatonic, begun in any other note, it would not proceed. In effect, it is demonstrable there can be no such thing as a perfect scale fixed on instruments, (i. e., no such scale as from any note, upwards or downwards, shall contain any harmonic or concinnous interval required.) The only remedy for this defect of instruments whose notes are fixed, must be by inserting other notes and degrees betwixt those of the diatonic series. Hence some authors speak of dividing the octave into 16, 18, 20, 24, 26, 31, and other numbers of degrees; but it is easy to conceive how hard it must be to perform on such an instrument. We have a remedy on easier terms; for a scale, proceeding by twelve degrees, that is, thirteen notes, including the extremes, to an octave, renders our instrument so perfect that we have little reason to complain. This, then, is the present scale for instruments, viz.: between the extremes of every interval of the natural scale is put a note, which divides it into two unequal parts, called semitones, whence the whole may be called the semitonic scale, as containing twelve semitones, betwixt thirteen notes,

within the compass of an octave. And to preserve the diatonic series distinct, these inserted notes take either the name of the natural note next below, with the mark called a *sharp*, or the name of the natural note next above, with the mark called a *flat*.

The student will remember that if, after sounding one note, we ascend or descend an octave, we have executed what is termed a scale, or passage. The diatonic scale consists principally of whole tones, and the chromatic entirely of half tones. In the diatonic scale of eight notes, there are five whole tones and two half tones. The ascending scale is the same as the descending.

The chromatic scale consists of thirteen notes and twelve semitones; in this scale, the ascending differs from the descending — in the former, sharps are used to raise each note; in the latter, flats to lower each.

There are two kinds of diatonic scales, major and minor. In the major scale, the semitones fall between the third and fourth and the seventh and eighth notes, both ascending and descending.

Every diatonic scale is also called a key, and said to be in a certain key. Thus when the scale begins upon C, it is said to be in the scale and key of C; when it begins on D, it is said to be in the scale and key of D; and so on.

The scale of C is termed the natural scale, because it can be produced without the aid of sharp or flat signs. In every other diatonic major scale, sharps and flats are required to place the semitones in their proper places.

If we form a scale of ascending fifths, we shall find that every scale a fifth higher than the preceding one will require an additional #, which additional sharp is always found a semitone below the new key note, or first of the scale. G has one sharp, F#; D, a fifth higher, has two sharps, F# and C#. The scale of ascending fifths will thus be formed: —

If we make a scale of descending fifths, we shall find that every new key, a fifth below a preceding one, will require an added b, the additional b being a fifth below the new key note.

Sharps and flats not placed at the commencement of the staff are called *accidentals*. If there are two notes on the line or space in one bar, and the first is made sharp, the second also must be sharpened; and if the note ending a bar be # or b, and a note of the same name be in the following, that also must be made sharp or flat; but if a different note begins the next bar, the preceding sharp or flat has no effect.

A scale of flat keys may thus be formed: —

Besides the major diatonic and chromatic scales, there is another kind, termed "minor," or "lesser," which differs principally from the major by having its third note flattened, or brought nearer to the second; so that, instead of the semitones falling between the third and fourth and seventh and eighth, they fall between the second and third and seventh and eighth.

In ascending, the semitones fall between the second and third and seventh and eighth.

ASCENDING.

But this is not the only respect in which the minor scale differs from the major: the latter is the same both ascending and descending; while the descending scale of the former is not the same as its ascending.

DESCENDING.

In descending, the semitones fall between the fifth and sixth and second and third.

It will always be found that accidental sharps or naturals are used in the ascending minor scale, in order to place the seventh note only a semitone from the eighth; but these figures are omitted at the signature, because, though used in ascending, they are not in descending, as the above two examples prove.

Minor scales are termed "relative," because they have the same signatures as the major scales of a third above. Thus E minor has the same signature as G major; it, therefore, is termed the relative minor to G.

THE MAJOR SCALES AND KEYS, WITH THEIR RELATIVE MINORS.

Major Keys. Their Relative Minors.

E MAJOR. C SHARP MINOR.

F MAJOR. D MINOR.

B FLAT MAJOR. G MINOR.

E FLAT MAJOR. C MINOR.

B MAJOR. G SHARP MINOR.

F SHARP MAJOR. D SHARP MINOR.

D FLAT MAJOR. B FLAT MINOR.

A FLAT MAJOR. F MINOR.

The relative minor is always found a tone and a semitone below the major scale of the same signature. If, therefore, the third note is found to be two tones from the first, the scale is major; if only a tone and a semitone, it is minor.

SCALE OF NATURE. This is the scale from which our modern scales arise, and from which we derive important principles relative to every branch of the science of music. It is a gradual succession of fixed sounds, which nature produces from a string when divided into equal parts. Theorists have made three grand divisions, viz., the *diatonic*, the *chromatic*, and the *enharmonic*.

SCALETTA, ORAZIO, chapel-master of St. Anthony's Church at Padua, was born at Bergamo. He died of the plague, at Padua, in 1630. Amongst other works, he is known by the following: "*Scala di Musica per principianti*," Milan, 1599; "*Scala di Musica molto necessaria, fatta con ogni brevità*," &c., Venice, 1600, (a fifth edition of this work appeared at Milan in 1610; other editions at Milan in 1647 and 1666, and at Rome in 1666 and 1677); "*Madrigali à 6 voci*," Venice; and "*Messa breve da Morti à 4 voci*," Venice.

SCANDELLI, ANTONIO, chapel-master to the Elector of Saxony, was appointed to that office in 1560, and died at Dresden in 1580. He published several collections of songs at Nuremberg.

SCANELLO. The name given by the Italians to the bridge of a violin, violoncello, &c.

SCARLATTI, ALESSANDRO, was born at Trapani, in Sicily, in 1659. The name of his master is unknown; but the reputation of Carissimi, who then flourished at the head of the Roman school, having reached Naples, Scarlatti thought it right to repair to the metropolis of the arts, and to hear the compositions of this master, in order to form his style on so great a model, and to profit by Carissimi's instructions. Scarlatti was the greatest harp player of his day. By the aid of this instrument he sought to introduce himself to Carissimi. The stratagem succeeded, and the most sincere attachment was the effect. Carissimi, in exchange for the delightful airs composed and performed by Scarlatti, revealed to him the secrets of his art. Scarlatti augmented these acquisitions by the learning and experience afforded by travel. Instead of returning to Naples, he visited the theatres and masters of Bologna, Florence, and Venice, at which latter city he analyzed the principles of the art, as he had done at Rome. From thence he proceeded to Vienna, whose rising school promised future greatness to Germany when it should have been visited and enlightened by the masters of Italy. In this city he made the first essay of his talents for composition, and his theatrical and sacred works were alike successful. On his return to Naples he halted at Rome, where he composed several operas as a testimony of gratitude for his favorable reception on his first visit to this city: they were received with transport. Arrived at Naples, and possessed of talents ripened by science and experience, Scarlatti devoted himself entirely to his own country, and applied himself not only to the production of numerous sacred and profane compositions, but also to the regeneration of the Neapolitan school, by the best principles, the best regulations, and the most perfect methods of instruction. Until the time of Scarlatti, the overture to an opera consisted of meagre obligato symphony, produced by certain routine, and frequently in bad taste. Scarlatti reformed this department of the opera, and established it less upon the form than upon the foundation of the work itself, making it a species of musical prologue or programme of the action; he informed it with truth, images, and melody. He perfected the *obligato* or accompanied recitative, and invented the introduction of the *da capo* or *ritornel* of the symphonies into recitatives of strong passion, which before his time was neither practised nor known by the Italian composers.

Dr. Burney says, "The most voluminous and most original composer of cantatas that has ever existed in any country to which my inquiries have reached, seems to have been Alessandro Scarlatti. Indeed, this master's genius was truly creative; and I find part of his property among the stolen goods of all the best composers of the first forty or fifty years of the present century, 1790. The violoncello parts of many of his cantatas were so excellent that whoever was able to do them justice was thought a supernatural being." Although the modulation in the cantatas is sometimes crude and unnatural, yet they are never without some beauty. Durante, a pupil of Scarlatti, afterwards arranged several of them as duets of great learning. Sacchini, when teach

ing at the Conservatory of L'Ospedaletto at Venice, at the end of each lesson respectfully kissed the book which contained them. Scarlatti is said to have composed near a hundred operas, besides oratorios, and two hundred masses. His invention was so fertile, and his application so intense, that he composed with greater rapidity than his copyist could write. "*La Principessa Fedele*" is generally cited as his best dramatic production. The Italians speak of him as the glory of the art, and the chief of composers. Hasse said of him, that, in point of harmony, he was the greatest master of Italy. In 1725 Quantz saw him at Naples, where he was still composing for the church, and played extremely well on the harp, notwithstanding his advanced age. He died in 1725.

SCARLATTI, DOMENICO, son of the preceding, was born in 1683, and inherited the talents of his father. He was less his pupil than his successor, and imitated him in his conduct as well as in his productions. While a youth, he studied under Francesco Gasparini, then a composer and excellent harpsichord player at Rome. As soon as his musical studies were completed, he visited the schools of Italy, and particularly that of Venice, in 1709, which had become the rival of Naples. After having observed the progress of this school, Scarlatti did not fear to try his strength; and he was supported by the applause of the public, and the approbation and esteem of the *cognoscenti*; never was success less contested. Scarlatti sought the friendship of the masters of the Venetian school, and became acquainted with Handel, who, although a German, was considered as an Italian in Venice, where he studied his art. Scarlatti became so attached to this composer, who then held the rank in Germany that his father had occupied in Italy, that he followed him to Rome, profiting by his counsel, advice, and even by his conversation. He only quitted him to repair to Portugal, where he was engaged as chapel-master. He composed operas and sacred music at Lisbon, which were as successful as those produced at Venice. D. Scarlatti quitted Portugal in 1726, and made some stay at Rome, where he became acquainted with Quantz. At Naples his compositions for the church and the theatre obtained the unanimous approbation of his countrymen, less for the double consideration of the memory of his father, and the affection which attracts towards an artist born on the same spot as ourselves, than for the real merit of works which united science with taste, and cultivation with genius. Hasse, known by the title of *Il Sassone*, (the Saxon,) was then studying at Naples, and, witnessing the success of Domenico Scarlatti, solicited and obtained his friendship; he was heard to say, fifty years after, that no composer had ever greater enthusiasm and taste for his art. His reception was the same wherever he appeared. He was engaged by the court of Madrid, and first appeared in the opera of "*Merope*." Besides being appointed master of the Royal Chapel, he became teacher of the harpsichord to the queen, on which he particularly excelled, as well as on the harp. The style of this composer, which was formed on that of his father, was grand and majestic. His modulations in his compositions for the church had nothing of the monotonous austerity of the ancient chants,

and his theatrical productions possessed the art of expressing with truth and grace the emotions and sentiments of the soul. He also composed for the harpsichord; and his lessons, dedicated to the Queen of Spain, were, according to Burney, "the wonder and delight of every hearer who had a spark of enthusiasm about him, and could feel new and bold effects, intrepidly produced by the breach of almost all the old and established rules of composition."

SCARLATTI, GIUSEPPE, grandson of Alessandro Scarlatti, was born at Naples about the year 1718, and passed the greater part of his life at Vienna, where he was much esteemed, both as a dramatic composer and performer on the harpsichord. He died at Vienna in 1776. Amongst his works are the following operas: "*Pompeo in Armenia*," 1747; "*Adriano in Siria*," 1752; "*Ezio*," 1754; "*L'Effetti della gran Madre Natura*," Venice, 1754; "*De gustibus non est disputandum*," Venice, 1754; "*Chi tutto abbraccia, nulla stringe*," Venice, 1754; "*Mercato di Malmantile*," 1757; this opera had prodigious success; "*Isole disabitata*," Vienna, 1757; "*Isipile*," "*Narcisso*," "*La Serca scaltra*," 1759; "*La Clemenza di Tito*," 1760; and "*La Moglia Padrona*," Vienna, 1768.

SCENA. (I.) A scene. A term applied by the Italians to a portion of an opera comprised in any one entire composition.

SCENA DA CAMERA. (I.) An expression applied by the Italians to all vocal compositions not designed for the church or theatre, but the chamber only; as cantatas, canzonets, &c.

SCENIC MUSIC. Music adapted to dramatic business.

SCHACK. An actor at Munich and Vienna, also a theatrical composer, much admired in Germany. Amongst his works are the following: a second part to the opera "*Una cosa rara*," Vienna, 1789; "*Das Schlaraffenland*," about 1790; "*Die Wiener Zeitung*," 1790; "*Don Quixote*," operetta, Vienna, 1792; "*Der Stein der Weisen*," Vienna, 1792; and "*Die Zaubertrömmel*," operetta, 1796.

SCHIADECK, JOHANN. An instrumental composer at Vienna. He died previously to the year 1807. His works are much admired, and are chiefly for the harpsichord and violin. Amongst them are "3 *Grosse Sonaten für das Klavier*," Vienna, 1801; "3 *Quatuors pour 2 V. A., et Vc.*," Op. 2, Vienna, 1802.

SCHIAFRATI, CHRISTOPH, chamber musician of the Princess and Abbess Amelia at Berlin, was born near Dresden in 1709. He was one of the most distinguished contrapuntists of Germany, and the art is much indebted to his tuition for many of the best singers, performers, and composers of Germany, in the latter half of the last century. Amongst his pupils was the celebrated C. G. Richter, of Berlin. Of his printed compositions we can only name "*Sei duetti à Cembalo Oblig. e Violin o Flauto Concerto*," Op. 1, 1752, and "Six Harpsichord Sonatas," Op. 2, 1754. He died about the year 1762.

SCHAH-CULL, the Orpheus of the Persians, flourished at Bagdad towards the middle of the seventeenth century. Amurath IV., having taken that city in 1638, gave orders for a mas-

sacre of thirty thousand of the inhabitants. A part of the condemned had already been put to the sword, when Sehah-Culi found means to penetrate to the sultan, who was present at the slaughter. He then immediately sang, accompanied by his harp, the tragic fate of Bagdad, and this in strains so deeply affecting that the heart of the cruel monarch became, for the first time, accessible to pity. He ordered the work of blood to be put a stop to, and took the savior of his country, together with four other musicians, with him to Constantinople. These were the first founders of good music in the Turkish empire. The musicians of Constantinople perform, to this day, the celebrated composition which saved the lives of so many unfortunate victims of despotism and barbarity. See "*Toderini Litteratura Turcæsa*," Venice, 1787.

SCHALE, CHRISTIAN FRIEDRICH, chamber musician and organist of the cathedral at Berlin, was born at Brandenburg in 1713. He was considered one of the best organists and harpsichord performers in Germany, and composed various excellent works for these instruments. He died at Berlin in 1800.

SCHALL, CLAUS, royal concert master at Copenhagen, was born in that city. He was considered a man of much talent, especially as conductor of an orchestra. He was also a good solo performer on the violin. He composed several ballets, also Danish operettas, and some violin, flute, and horn music. He died at Copenhagen in 1834, at an advanced age.

SCHALMERS. The old French name for hautboy.

SCHAUENSEE, FRANCOIS JOSEPH L. M. DE, organist of a convent at Lucerne, in Switzerland, was born in that town in 1720. From the age of five years he took lessons in singing, and at six years old began to study the organ. At twelve he had made such progress in that art, that his master could confide in him for the organ performance of the convent, even on the days of festival. In 1731 he was sent to a convent of Benedictines, in the neighborhood of St. Gall, to continue his studies. This convent having no organ, he applied himself to the harpsichord, and began also the violin and violoncello. In 1735 he returned home, and, after about three years' study of counterpoint, composed a small dramatic piece, the performance of which was so applauded as to decide him to consecrate his talents to composition; and that he might meet with less distraction in his new occupation, he became a monk in the convent of St. Urban, of the Cistercian order. Soon, however, disgusted with this state of life, he returned to his family in about a year; almost immediately deciding to accept his grandfather's offer to send him to Milan, that he might perfect himself in the Italian language, and from thence proceed to Rome. At Milan, having the opportunity of hearing the best music, both sacred and theatrical, and becoming acquainted with several celebrated performers, he laid aside composition for a short time, and devoted himself to practice on the piano-forte, on which he made such progress as to be soon considered one of the best players in that city. He then took lessons on the violin of Galimberti, and soon became eminent on that

instrument also, in the style of Corelli. Having passed a year at Milan in the above manner, he recommenced composition by writing some sonatas for the harpsichord, which were afterwards published. A few months after this time he entered as ensign in a Swiss regiment, in the service of the King of Sardinia, with which he made the campaign of 1742, and, after being promoted, was taken prisoner. In 1743 his regiment was in garrison in Sardinia: there he not only finished his opera of harpsichord sonatas, but composed, for the birthday of his colonel, an operetta, which was performed at Cagliari, and so pleased the viceroy that he requested Schauensee to compose a "*Te Deum*," to be sung on the occasion of a victory obtained over the Spaniards. The great success of this performance determined him immediately to compose a new opera; it was entitled "*Applausi Festosi*," and played in 1744, in presence of the viceroy, meeting with universal applause. His regiment was then ordered to quit Sardinia for Nice, when Schauensee, being made prisoner, was allowed to return to his own country on his parole. He there composed much church and other music, and at length took orders as priest of the Roman Catholic Church.

SCHUBE, JOHANN ADOLPH, chapel-master to the King of Denmark, was born at Leipzig in 1708. He studied the harpsichord and organ in early life, but without the intention of following music as a profession, till 1725, when his father suffered so severely in his pecuniary circumstances as to decide young Scheibe to pursue the study of music in a professional point of view. Being shortly after disappointed in obtaining several vacant situations as organist, he devoted himself more exclusively to composition. In 1730 he produced some lessons for the harpsichord, and other practical works. In 1735 he went to Prague, and passed the following winter at Gotha. In 1736 he resided for some time at Sondershausen, whence he proceeded to Hamburg, with a wish of composing an opera for the theatre of that city. Unfortunately, however, the theatre was closed immediately afterwards, and he then turned his mind to procure the means of subsistence from didactic writings. He began by publishing a weekly periodical work entitled "*The Critical Musician*." This seemed to promise success, when, in 1740, the Margrave of Brandenburg-Culmbach nominated him chapel-master. This appointment did not interfere with the continuance of his "*Critical Musician*." Some time afterwards he obtained the place of chapel-master to the King of Denmark. He then published at Leipzig, in 1745, the second edition of his "*Critical Musician*," enlarged by various controversial essays which it had produced. On the arrival of Sarti at Copenhagen, Scheibe was superseded as chapel-master, receiving a pension for life of about seventy pounds a year. Shortly before his death he commenced another work on musical composition, which was to extend to four volumes in quarto; but he died at Copenhagen in 1776, immediately after the publication of his first volume. Scheibe was a voluminous composer, and, besides his published works, his manuscripts amounted, in 1740, to no less than one hundred and fifty pieces of church music, one hundred and fifty flute concertos, above thirty violin concertos, seventy symphonies, a great

number of trios and solos for the harpsichord, and numerous Italian and German cantatas. His printed works bear date from 1729 to 1773.

SCHIEDT, SAMUEL, chapel-master and organist at Halle, was born there in 1587. The church of St. Maurice in that town is indebted to him for a superb organ, he having left in his will a sufficient sum for its construction. He died in 1654, having left many works of sacred vocal music, published at Hamburg, Halle, Leipsic, and Grlitz, between the years 1624 and 1653. His principal work was published in the former year at Hamburg, in three volumes folio, and is entitled "*Tabulatura Nova*."

SCHEME. (From the Greek.) A term used in the ancient music to express the varieties arising from the different positions of tones and semitones, in a consonance.

SHEMIUTH. (II.) A stringed instrument, or possibly a species of music, or a particular part of a composition.

SCHENCK, JOHANN. Chapel-master to an Austrian nobleman at Vienna, in 1796. He not only composed many favorite German operettas for different theatres of Vienna, but also some symphonies and other instrumental music. Amongst his dramatic works we can name the following: "*Im Finstern ist nicht gut tapfen*;" "*Die Weinklese*," 1791; "*Die Weihnacht auf dem Lande*," 1792; "*Das Singspiel ohne Titel*," 1790; "*Der Aerntekranz*," 1791; "*Achmed und Almanzine*," 1795; "*Der Bettelstudent*," 1796; "*Gestänge zum Sultan Achmet, oder Achmet und Zenide, von Island*," 1797; "*Die Jagd*," 1798; "*Der Dorfbarbier*," 1798; and "*Der Fassbinder*."

SCHERER, a German musician, resident in Italy, published, previously to the year 1785, "Six Trios for the Harpsichord and Violin," Op. 1, Genoa; "Six Solos for the Violoncello," Op. 5, Genoa; and "Six Symphonies," Op. 6, Genoa.

SCHERZANDISSIMO. (I.) In an exceedingly playful style.

SCHERZANDO, or **SCHERZO**. (I.) In a sportive, playful manner.

SCHETKY, F. G. C. An excellent violoncellist, in the service of the Prince of Hesse-Darmstadt in 1772. Previously to the year 1780, he had published in London and at the Hague five operas of instrumental music. He also left at his death many manuscript compositions for his instrument. He died at Edinburgh in 1773.

SCHIASSI, CAJETANO MARIA, a Bolognese composer and violinist, produced several esteemed operas in Italy. He also published some violin music at Amsterdam in 1720. Amongst others of his dramatic works are the following: "*Amor tra nemici*," 1732; "*Fede ne tradimenti*," 1732; "*Alessandro nell' Indie*," 1734; "*Demofonte*," and "*Didone abbandonata*," 1735.

SCHIATTI, LUIGI, concert-master to the Margrave of Baden-Durlach towards the middle of the eighteenth century, was appointed, in 1747, to a situation in the Imperial Chapel at St. Petersburg. At the time he resided in Germany, he published at Amsterdam "Six Violin Trios," Op. 1. Other pieces of vocal and instru-

mental music by this composer are known in manuscript.

SCHIAVELLI, GIULIO, a contrapuntist, towards the middle of the sixteenth century, published, amongst other works, "*Motetti à 5 e 6 voci*," Venice, 1565.

SCHICHT, JOHANN GOTTFRIED, music director of the grand concert, and organist of the new church at Leipsic, was born near Zittau in 1753. He first resided for some years at Leipsic, being occupied in composition and teaching music. On the resignation of Chapel-master Hiller, in 1785, Schicht was unanimously appointed his successor. He composed many practical works of great merit, for the church and chamber, also published enlarged editions of Pleyel's and Clementi's piano-forte methods, and of Celoni's method for singing. In 1810 he was appointed cantor and director of music to the St. Thomas School at Leipsic; which functions he filled with honor till his death in 1823.

SCHICK, ERNST, formerly chamber musician to the Elector of Mentz, and one of the best violinists of Lolli's school, was born at the Hague in 1756. In 1811 he belonged to the Prussian Chapel Royal in Berlin. Amongst his published works are "Six Violin Concertos," Berlin, 1783.

SCHICKHARD, JOH. CHRISTIAN. A good instrumental composer, resident at Hamburg about the year 1730. He published much music at Amsterdam, chiefly for the hautboy and flute.

SCHIEBEL, JOHANN GEORG. Author of a German work entitled "The Wonders effected by Nature on Man, Animals, and other Creatures, by means of harmonious Sounds." He was a poet and singer at Ratzeburg, and died in 1684.

SCHIMPKE. A Bohemian musician and distinguished instrumental composer in the latter part of the last century. He died in 1789.

SCHINDLOEKER, WOLFGANG, violoncellist and chamber musician to the Grand Duke of Wurtzburg, was born at Vienna in 1789. He received his musical education principally from his uncle, who was chamber violoncellist to the court at Vienna, and a good composer. At fifteen years of age young Schindloeker made his *début* as concerto player at the court theatre at Vienna, and succeeded to the first-named situation in Wurtzburg in 1807.

SCHIOERRING, NIELS, chamber musician to the King of Denmark at Copenhagen, about the year 1784, was a pupil of Emmanuel Bach. He published some psalms in the Danish and German languages. He died previously to the year 1801.

SCHISMA. (G.) In the ancient music, a small interval equal to the half of a comma, or the eighteenth part of a tone.

SCHLETT, musical professor at Munich in 1804, was considered a good theorist and composer.

SCHLICK, JOHANN CONRAD. A celebrated German violoncellist and admired composer, towards the close of the last century. He was chamber musician and secretary to Prince Au-

gustus at Gotha. His works, which are all instrumental, bear date from the years 1787 to 1803.

SCHLICK, REGINA, wife of the preceding, was celebrated by her maiden name of Sacchi, as a performer on the violin. She was born at Mantua in 1764, and received her musical education at the Conservatory della Pietà at Venice. She afterwards passed some years at Paris.

SCHLÜSSEL. (G.) The clef.

SCHMELZER, JOHANN HEINRICH, vice chapel-master to the court of Vienna towards the close of the seventeenth century, was by birth an Austrian. He was the first German who had occupied that situation. He was living in 1695. He published at Nuremberg thirteen sonatas under the title "*Sacro-profanus Conventus musicus fidium aliorumque instrumentorum.*"

SCHMELZER, ANDREAS ANTON, son of the preceding, flourished at Vienna, about the year 1677, as director and first violin in the imperial band.

SCHMELZER, JOHANN WILHELM. A composer, also celebrated at Vienna in the latter part of the seventeenth century.

SCHMETZER, GEORG, a singer and music director at Augsburg, died there in 1694. He composed much music, chiefly sacred.

SCHMID, JOSEPH, a musician at Vienna, published some piano-forte music there in the years 1798 and 1799.

SCHMIDT, JOHANN CHRISTOPH, chapel-master to the King of Poland and Elector of Saxony, was born in 1664. He was a good church composer; also brought out a French opera at Dresden in 1718. He died at Dresden in 1728.

SCHMIDT, J. P. S., a pupil of Naumann, was born in Prussia, and was a pianist. He published some instrumental music at Offenbach towards the close of the last century. In 1806 he was still chamber assessor at Berlin.

SCHMIDT, or SCHMITT, JOSEPH ADAM. A composer of instrumental music at Wurtzburg and Amsterdam. He was originally a monk, but afterwards left his convent and settled at Amsterdam.

SCHMIEDT, SIEGFRIED, a good vocal composer, born at Suhl about the year 1756, resided at Leipzig from the years 1786 to 1796, when he retired to his native town, and died in 1799. His compositions were numerous, and principally for the church. Few of them have been published.

SCHMITT, ALOYS, a professor of the piano and composer of some note in Germany, was born at Erlenbach, in Bavaria, in 1789. His father gave him a liberal education and taught him music. At the age of fourteen he was considered a virtuoso on the piano. At twenty he became a pupil of André, at Offenbach, in composition. In 1816 he established himself as teacher of the piano in Frankfurt, and began to be favorably known by his compositions for that instrument. Afterwards he removed to Berlin, and then to Hanover, as organist to the court. Since 1829 he has lived independently at Frankfurt on the Maine. He has composed overtures, symphonies, quar-

tets, concertos for piano, sonatas, rondos, songs, &c.

SCHMITT, JACQUES, brother to the preceding, was born in 1796. After studying with his brother, he established himself as professor of the piano at Hamburg, where he has composed much for that instrument, besides a serious opera called "Alfred the Great."

SCHMITT, NICOL. Performer on the bassoon and composer for his instrument. Several of his works were published at Paris between the years 1788 and 1797.

SCHMITTBAUER, JOHANN ALOYSIUS, chapel-master at Carlsruhe, and born in 1718, received the principal part of his musical education at Stuttgart, under Jomelli. From thence he went to Rastadt, and proceeded to Carlsruhe in 1777. He was a composer much esteemed by the Germans, and excelled principally in church music. He died at Carlsruhe in 1809. Of his works we can mention the following. For the church: "*Stabat Mater,*" 1774; "*A Grand Mass,*" Cologne, 1776; a cantata for Easter, entitled "*The Friends at the Tomb of the Savior;*" and "*A Mass,*" Spire, 1781. For the theatre: "*Lindor and Esmene,*" an operetta; "*The Sepulchro in Arcadia,*" an operetta; "*Endymion,*" opera, 1774; "*Hercules,*" 1790. For the chamber: a cantata entitled "*The Resolute Soldier,*" in the Spire collection; "*Regrets at the Departure of Madame Todi from Carlsruhe,*" for two sopranis, with accompaniments; a cantata entitled "*Our Ancestors during the first Storm;*" "*Six Quatuors for Fl., V., T., and B.;*" "*Three Symphonies for full Orchestra;*" "*Three Flute Trios and three Harpsichord Quartets.*"

SCHMOLL, FRIEDRICH, organist at Groustadt, published some harpsichord music at Offenbach and Spire between the years 1780 and 1790. He died in 1792.

SCHMUGEL, JOHANN CHRISTOPH, born in 1726, was organist at the principal church at Luneburg. He published some organ and vocal music at Hamburg and Berlin. He died suddenly in 1798.

SCHNARRPFEIFEN. (G.) Reed pipes, reed stops.

SCHNEIDER, GEORG LAURENZ, music director at Coburg, was born in Franconia in 1765. He was a striking instance of precocity of musical talent, and received, when only thirteen years of age, the appointment of music director to a German prince. Amongst his works are several operettas, besides both vocal and instrumental music for the chamber.

SCHNEIDER, JOHANN, an excellent German organist at St. Nicholas's Church at Leipzig, was born near Coburg in 1702. He learned the elements of music of Müller, composition of Reinmann, the harpsichord of Sebastian Bach, and the violin under Graun and Graf. In the year 1726 he was engaged as violinist in the chapel of the Duke of Weimar, from whence he removed to Leipzig. He died some time between the years 1770 and 1780.

SCHNEIDER, JOHANN CHRISTIAN FRIEDRICH, a celebrated composer and writer

upon music, was born in 1785 at Waltersdorf, near Zittau. He commenced the study of music when he was four years old under his father, who was then organist at Gersdorf. So rapid was his progress that he was employed as town organist before his feet could reach the pedals. At the age of eight he played the piano-forte sonatas of Mozart. At twelve he was sent to the gymnasium at Zittau to pursue his literary studies. There the organist Unger became his master, and taught him to carry on a fugue in four parts. Discouraged at not being allowed to appear in public as a pianist, he was almost ready to abandon music, although he had written several pieces for wind instruments and some masses in the style of Haydn. But the interest which he inspired in a wealthy advocate, who went to Zittau in 1803 to attend a performance of Haydn's "Creation," gave him new means and encouragement. In 1804 Schneider was named director of the singing society at Zittau; but in the next year he went to complete his studies at the University of Leipzig. In 1807 he became organist to the university, and established his reputation by the performance of his vocal and instrumental works in the Leipzig concerts. In 1808 he performed a piano-forte concerto of his own there with success. Since 1803 he had published his first set of sonatas for piano; but after his arrival in Leipzig his productions rapidly increased. In 1810 he accepted the place of orchestra leader in a troupe which gave opera performances alternately at Dresden and at Leipzig. In 1813 he was appointed organist to the Church of St. Thomas in the latter city. From this period his great compositions date. Having become musical director of the new theatre in Leipzig in 1817, he achieved a brilliant success in the production of several of his overtures. In 1821 he became chapel-master to the Prince of Anhalt-Dessau, a position which he occupied until his death in 1853. Considered as one of the chiefs of the more recent German school, he owes his fame chiefly to his oratorios, which have been performed in the great musical festivals upon the Rhine and Elbe. The principal of these are, "The Deluge," "The Last Judgment," "Paradise Lost," "Pharaoh," "The Lord Jesus Christ," "Absalom," "The Infancy of Christ," "Gideon," "Gethsemane and Golgotha," &c. Friedrich Schneider is also known as a didactic writer and theorist by the following works: 1. "*Elementarbuch der Harmonie und Tonsetzkunst*," (Elementary Treatise on Harmony and Composition,) Leipzig, 1820 and 1827; 2. "*Vorschule der Musik*," (Principles of Music,) Leipzig, 1827; 3. "*Handbuch des Organisten*," (Manue. for Organists,) Halberstadt, 1829, 1830.

SCHNEIDER, JOHANN GOTTLÖB, brother to the preceding, is one of the best German organists of the day. He was born at Gersdorf in 1789. In 1811 he obtained the place of organist to the church of the University at Leipzig. In 1816-17 he gave organ concerts at Görlitz, Dresden, and Zittau. Three years afterwards he organized, with his colleague Blöher, the first great musical festival in the Church of St. Nicholas, where the "Creation" was performed under his direction, he also singing the part of Uriel. In the same year he gave concerts at Zittau, Freyberg, Leipzig, Weimar, Gotha, and Dresden. In 1825 he was appointed court organist at Dresden,

which position he still occupied in 1853, and where his organ playing has long been the theme of general admiration. He has published but few of his compositions, chiefly organ fugues and choruses.

SCHNEIDER, J. G. W., or only WILHELM. A vocal composer, first resident at Halle, and afterwards at Berlin, where he died in 1812. His works bear date from the years 1802 to 1810.

SCHNEIDER, FRANZ, was born in 1737 at Pulkau. At an early age he was taught singing, playing on the violin, piano, organ, and several wind instruments. At the age of twenty he was invited to Melk by Albrechtsberger, of whom he took lessons; and when Albrechtsberger left Vienna, Schneider became his successor. He composed much music, among which were deposited in the convent library, in manuscript, fifty masses, thirty-three motets, and other pieces of merit. The Abbé Vogler, who undertook a journey for the express purpose of hearing him, one day gave him, alternately with Forkel, a very difficult chromatic theme, from which he improvised fugues indicative of the full powers of his organ, an instrument with thirty-two feet pedal registers. He died in 1812.

SCHNYDER VON WARTENSEE, XAVER. the celebrated teacher of musical composition and writer upon music at Frankfort on the Maine, was born in 1786 at Lucerne. He has composed operas, cantatas, quartets for solo voices, songs, &c.

SCHBOERT, or SCHUBART, a celebrated performer on the harpsichord, was in the service of the Prince of Conti at Paris, in which capital he arrived from his native place (Strasburg) in the year 1760. His compositions for the harpsichord were numerous and effective; many of them were published at Paris, and reprinted at Amsterdam and London. He was poisoned, in 1768, by eating some mushrooms of noxious quality which he had collected himself in the fields.

SCHOENEBECK, CARL SIEGEMUND, a German violoncellist and esteemed vocal and instrumental composer, was born in 1758. His performance was much admired in the principal towns of Germany. He published many works for his instrument, chiefly at Offenbach.

SCHOENFELD, JOHANN PHILIP, chapel-master of the new church at Strasburg, was born in 1742. He was an eminent vocal composer. Several collections of his songs were published at Berlin, Nuremberg, and Brunswick.

SCHOENHERR, GOTTLÖB FRIEDRICH, born in 1760 at Freyberg, in Saxony, was an able musician and composer. He died in 1807.

SCHOENION. (Gr.) A term used in the ancient music, signifying a kind of *nome*, or scientific air, composed for flutes.

SCHOLLENBERGER, GASPARD, first introduced into Germany instrumental music in the churches. According to Walther, he published, in 1713, a work in folio entitled "*Offertoria festiva pro toto anno, à 4 voc., 2 violins, viola, violone, et organo*," Op. 3.

SCHOPP, JOHANN, of Hamburg, so early as the year 1640 and 1644 published paduanas

galliards, allemandes, and thirty concertos for violins.

SCHRAMM, JOHANN CHRISTIAN, chamber musician and performer on the harpsichord to the King of Prussia, at Berlin, was a native of Dresden, where his father was organ builder to the court. He studied the elements of music under Chapel-master Richter, and succeeded Chapel-master Bach in his above-named situation. Little or none of his music has been published. He died at Berlin in 1796, aged eighty-five.

SCHREIBART. (G.) Style.

SCHREYER, CHRISTIAN HEINRICH, theological candidate and amateur musician at Dresden, was born there in 1751. He was entirely self-taught in music. He composed various pieces for the church, also much harpsichord music. He also wrote an instruction book for choristers, entitled "*Nützliche Unterweisung zum Choralgesang.*"

SCHROEDEL, FRIEDRICH LUDWIG, born at Baireuth, about the year 1754, was a celebrated violoncellist and chamber musician to the Prince of Anhalt-Bernberg at Ballenstedt. He died in the year 1800. Six duos for violoncello and bass, of his composition, were published at Leipsic.

SCHROEDER-DEVRIENT, WILHELMINA, the celebrated dramatic singer, was born at Hamburg in 1805. She was daughter of the great actress, Sophie Schroeder. At the age of five she made her *début* in the *corps de ballet* at the Hamburg theatre. Her mother resolved to make a tragic actress of her, and in 1820 she played at Vienna in the "*Phèdre*" of Racine, and in several plays of Schiller. Soon after she devoted herself to the study of singing, and changed her career, appearing in the part of Pamina in Mozart's "*Magic Flute.*" She soon took the first rank among the *prime donne* of the German stage. During her stay at Vienna she continued her vocal studies under an Italian master named Mazatti. In the "*Swiss Family*" and in "*Fidelio*" her successes were confirmed. Arrived at Berlin in 1823, she excited the liveliest interest. It was in that year that she married the distinguished actor Devrient, who was engaged with her at the theatre of Dresden, where they both continued as late as 1847, though they had been divorced some years. In 1829 and 1830 she appeared in Paris, in a German troupe, and made the greatest sensation in "*Fidelio*," "*Euryanthe*," "*Oberou*," &c., and as Donna Anna in "*Don Juan.*" Madame Schroeder Devrient will long be remembered as one of the finest dramatic talents that have ever appeared on the German stage.

SCHROETER, GASPARD. A celebrated organist at Brieg, in Silesia, towards the year 1700. He formed many excellent pupils, amongst whom we may distinguish Kirsten, organist at Breslau.

SCHROETER, CHRISTOPH GOTTLIEB, organist at Nordhausen, was born at Hohenstein, on the frontiers of Bohemia, in 1699. At seven years of age he went to Dresden as a chorister, receiving lessons in music from Chapel-master Schmitt. From thence, in 1717, he was entered in the University of Leipsic, with a view of studying theology; but his mother dying within the

same year, he abandoned that pursuit, and returned to Dresden, where Chapel-master Schmitt recommended him to Lotti as his secretary. In this situation he had not only to write out fair the compositions of Lotti, but also frequently to supply the middle parts. This place he held till the return of Lotti to Italy. Shortly afterwards an opportunity was afforded him of travelling with a nobleman (a musical amateur) to most of the courts of Germany, also to Holland and England; from whence he did not return till 1724, when he proceeded to Jena, to study the belles-lettres. His musical abilities becoming now well known, the students engaged him to give public lectures on the theory and practice of music. In 1726 he obtained, without solicitation, the place of organist of the principal church in Minden, and in 1732 that of organist at Nordhausen, where he resided till his death, which took place in 1782. The profound and extensive knowledge of Schroeter, and the zeal with which he applied himself to his art, merited a much higher reward than he met with. It was a monochord given to him by the organist Behnisch, of Dresden, that first led to his learned researches on that instrument, and to his musical calculations, of which he afterwards made use, when nominated, in 1739, member of the Musical Society of Mitzer. The tuning and repairs of harpsichords, which he was in the habit of occupying himself with, at length suggested to him his great invention of the piano-forte. Being at the time (1717) only a pupil at the School of the Holy Cross at Leipsic, he constructed a double model of his improved instrument, which he procured to be shown to the court in 1721. Although the king then testified his satisfaction at the invention, and from that time thousands of these instruments were constructed, Schroeter received neither reward nor even the honor of being recognized the first discoverer of the improvement. He next turned his mind to another and not less important invention, namely, to make the organ play either piano or forte without any use of the stops. He had nearly succeeded in this, when, in 1740, a mechanic offered him five hundred crowns if he would communicate to him his invention, and cede to him his claim of being the author of it. Schroeter rejected this proposal with disgust, and soon abandoned the idea altogether. He wrote many musical works, chiefly theoretical, also a considerable number of practical pieces, both vocal and instrumental.

SCHROETER, JOHANN SAMUEL. This celebrated performer on and composer for the piano-forte was a native of Warsaw, and born in 1700. He went to London in 1782, where his talents were so highly appreciated, that although he formed a very advantageous matrimonial alliance, entering, at the same time, into an engagement never again to play in public, yet he soon found it impossible wholly to retire. He consequently was induced to accept the situation of music master to the queen, in which he succeeded John Christian Bach. He also had an appointment under the Prince of Wales, at whose concerts he performed, as well as occasionally at the private concerts of several of the nobility.

His compositions consist chiefly of concertos and sonatas for the piano-forte, the whole of which afford indications of great taste and judg-

ment. Schroeter contributed very essentially towards the introduction of a naturally melodious performance on keyed instruments.

For some years previously to his decease, he lost his voice by a severe cold, and could not make himself understood otherwise than in a whisper. He died at Pimlico in 1788.

SCHROETER, JOH. HEINRICH, younger brother of the preceding, was born at Warsaw in 1762. At seven years of age he performed a concerto on the violin, at a public concert in Leipsic. About 1782 he went to England with his brother, and published there some duos for the violin.

SCHROETER, CORONA ELIZABETH WILHELMINE, sister of the two preceding, was born at Warsaw in 1748. About the year 1764 she made her *début* as a public singer at Leipsic, from whence, in 1778, she was engaged in the service of the Duke of Weimar. She was especially celebrated for her singing of adagios. Her talent for vocal composition was also remarkable. This was evinced by twenty-five charming songs, published by her at Weimar in 1786.

SCHUBACK, JACOBUS, syndic of the city of Hamburg, was born there in 1726. To his extensive knowledge of jurisprudence he joined an exquisite taste for music. He not only performed with skill on several instruments, and was a good conductor of an orchestra, but was also distinguished as a composer of and writer on music. He died at Hamburg in 1784.

SCHUBART, CHRISTIAN FRIEDRICH DANIEL, music director to the court and theatre at Stuttgart, was born at Obersonthem in 1739. He was destined by his friends for the church, but his extraordinary ability as a performer on the harpsichord, joined to his general musical talents, determined him, in 1766, to accept the proffered situation of organist at Ulm, which he exchanged afterwards for his first-mentioned situation at Stuttgart. His musical works consist of various theoretical essays, also several cantatas and other vocal music, published between the years 1783 and 1790. He was also celebrated in Germany as a poet. He died in 1791.

SCHUBARTH, JOHANN CASPAR, singer and organist at Regensburg, was born at Rodach, in the principality of Coburg, in 1757. He was a pupil in composition of the celebrated Riepel. He published some sacred music; also left, at his death, to his master, Riepel, some of his manuscripts for publication. The first of these that appeared from the press was his didactic work entitled "*Basschlüssel*," containing instructions for beginners in, or amateurs of, composition.

SCHUBERT, HEINRICH FRANZ, a celebrated violinist and composer for his instrument, was born at Prague in 1794. He died at the early age of thirty-four.

SCHUBERT, JOHANN FRIEDRICH, a violinist and composer, was born at Rudolstadt in 1770. After leading various theatrical orchestras in Germany, he obtained, in 1801, the appointment of director of the orchestra of the theatre of Glogau, where he first evinced his talent for composition. In 1804, he removed to a similar situation at Ballenstedt. Schubert published, amongst other works, a treatise on singing, en-

titled "*Neue Singschule, oder gründliche und vollständige Anweisung zur Singkunst in 3 Abtheilungen mit hülflichen Übungsstücken*," Leipsic, 1804; also several operas of instrumental music.

SCHUBERT, JOSEPH, chamber musician to the Elector of Saxony, was born in Bohemia in 1757. After studying the harpsichord at Prague, principally under the Abbé Fischer, he went, in 1778, to Berlin, and in the following year was engaged as chamber musician by the Margrave of Schwedt, whose service he exchanged, in 1788, for that of the elector. He composed several operas, also many pieces of instrumental music. His works were published principally at Dresden, and bear date from the year 1780 to 1803.

SCHUBERT, FRANZ. Ferdinand, Ignaz, and Franz were the three sons of school-teacher Schubert, of the Lichtenthal parish, one of the suburbs of Vienna. Ferdinand was born in that parish on the 18th October, 1794; Franz in the suburb Himmelfortgrand, on the last day of January, 1797; Ignaz, it is presumed, was the youngest of the three, but we have no means of ascertaining. The father was their first music teacher; but their studies in singing, violin, piano-forte, and organ playing, as well as in the science of music, were perfected under the guidance of Michael Hobzer. Ferdinand's progress was such that at the age of thirteen years he played the violin concertos of Fodor, in the choir of the church, and is now one of the most distinguished organists in the Austrian capital. He, however, did not make music his profession.

Franz profited so greatly by the instructions of his father and Michael Hobzer, that at the age of eleven he was placed among the singing boys of the Court Chapel—a place for which his uncommonly fine voice peculiarly fitted him. In this position he remained five years, studied the piano-forte and stringed instruments with such success as soon to be able to lead the rehearsals of the orchestra as first violinist. The court organist was his instructor at this time in thorough bass, and old *Salie* in composition. After his voice changed he left the institution, being about seventeen years of age, and lived sometimes in lodgings, sometimes in his father's house; studied the works of that great triumvirate, Haydn, Mozart, and Beethoven; gave lessons, and devoted all the rest of his time to original composition. Long before he had mastered the rules of composition, and with no one to guide him, he had written quartets, symphonies, and piano-forte music; now he tried his hand at every possible style and form of composition, and the result of his labors, both as to quantity and quality, almost surpass the limits of credibility.

Operas, symphonies, choruses, overtures, cantatas, psalms, masses, graduales, offertories, Stabat Mater, hallelujahs, many sonatas, trios, variations, fantasias, rondos, dances, marches, impromptus, vocal and string quartets, Italian arias, a grand octet, &c., &c., prove his wonderful productiveness. In ballads and songs it would be difficult to find his equal in musical history; more than two hundred were printed, and have become the common inheritance of the musical world, and many others were left in manuscript.

"The exceeding beauty of his melodies and

yet more of his harmonies, reveals him to us as master of the very soul of the art. What sweet devotion in his 'Ave Maria,' with its accompaniment, so steadily preserved, like prayer without ceasing, yet rising and falling like the panting bosom which pours it forth! What longing, desolate sadness in his song of Gretchen, in Faust--and how skilfully the ceaseless hum and motion of her spinning wheel accompanies her heart-breaking strains! What tender yearnings in the 'Last Greeting,' the 'Complaints of a Young Maiden,' and in 'I should fly from thee'--what stirring dramatic motion in his 'Erl King,' and the 'Post Horn'--what solemnity and grandeur in the 'Stars'--what fine, reflective soliloquizing in the song of the 'Old Man'--what wild grace in the rocking, wavy motion of the 'Barcarole,' and 'Fisher Maiden'--and what exquisite breathings and droppings of love, moonlight, flowers, and every thing fairy-like and heavenly, in his 'Serenade!' I should have mentioned the stormy sorrow of his 'Atlas'--and the mighty descent of the godlike forms to earth, in music to Schiller's dithyrambic. 'Never, believe me, appear the immortals, never alone.'

"In every mood of passion and feeling he is at home. We do not easily forget songs that thus sway us as the wind does the willow. They waken in us dreams as wild and sweet as ever bard or lover indulged--they are indeed the most genuine poetry of song. They spring from a genius imbued with the very soul of poetry."

This remarkable genius died young. He appears to have composed his best works for the pure love of it, and he left the manuscript scores carelessly scattered about without the least concern for present or for future fame. Many of his best works he never heard performed. His monument is ornamented with his bust in bronze, and the following inscription:--

"The art of music buried here a rich possession, but yet far fairer hopes. FRANZ SCHUBERT lies here. Born on the 30th January, 1797, died on the 19th November, 1828, thirty-one years old."

SCHUERER, ADAM. Church composer to the Elector of Saxony at Dresden, from 1750 to 1780. His masses were greatly admired, both in Germany and other countries. He was one of the masters of Schuster.

SCHUERMANN, GEORG CASPAR, chapel-master to the Duke of Brunswick, was a celebrated composer, poet, singer, and performer on the harpsichord in the latter part of the seventeenth and beginning of the eighteenth century. In 1701 he was sent by the duke to Italy for his improvement in music. On his return he produced several operas, two of which were published in Hamburg, namely, "*Alceste*," in 1719, and "*Telemachus*," in 1721. He also composed many church cantatas, together with chamber music, both vocal and instrumental.

SCHULE. (G.) A school or method for learning any instrument, &c.

SCHULTESIUS, JOHANN PAUL, perpetual secretary in the Academy of the Beaux-Arts at Leghorn, was born near Coburg in 1748. He was a pupil of Philip Emmanuel Bach. In 1773 he went to Italy, where he afterwards resided, enjoying the acquaintance and esteem of the first musicians of his day. He published several

works on music, amongst which is "A Treatise on Church Music," 1 vol. 8vo., Leghorn, 1807. His practical works were chiefly for the pianoforte, on which he was an eminent performer. Many of them were published in various towns of Italy and Germany, and bear date between the years 1780 and 1797.

SCHULTZE, CHRISTIAN AUGUST, composer, pianist, and distinguished performer on the tenor and violin, resided at Nuremberg in 1803. He was born in Saxony in 1759, where his father was a clergyman and great admirer of church music, keeping up on that subject a constant correspondence with the Bachs, Hiller, G. Benda, and other celebrated masters. Such a father gave his son, as may be supposed, the advantage of the best masters in the science of music, which at length qualified him for the situation of chapel-master at Nuremberg, to which he was elected in 1798. He published various cantatas, and some instrumental music.

SCHULZ, JOHANN ABRAHAM PETER, was a native of the territory of Luneburg, in the Prussian dominions. During his youth he studied music under Kirnberger at Berlin. Some time after he had completed his education, he was appointed by Frederic the Great music director of the French theatre at Berlin. He afterwards obtained the situation of chapel-master to Prince Henry of Prussia, and went to reside at Reinsberg. An invitation, with the promise of a large salary, however, induced him in a short time to leave Reinsberg, and go to Copenhagen, as principal chapel-master to the King of Denmark. Schulz retained this situation till he was far advanced in years, when he was permitted to resign it, with a pension from the Danish court; and during the latter part of his life he resided almost entirely at Reinsberg. He died, however, at Schwedt in 1800.

The works of Schulz are known and esteemed through every part of Germany. He was undoubtedly a nervous and excellent composer, and also an elegant writer on the subject of music. He composed a great number of songs: his "*Athalia*," written at the request of Prince Henry, is considered to be his best piece. He also composed the tunes to Uz's religious lyric poems. With respect to his other works, they consist chiefly of "A Dissertation on the Theory of Music," printed in the second volume of Sulzer's "Theory of the Fine Arts," and another "On the Influence of Music in the Formation and Character of a People." He likewise published a sketch of musical tables, which might be employed in theoretical works on music, where proper types of the notes are wanting.

SCHULZ, JOHANN PHILIP CHRISTIAN. Born at Langensalza, in Thuringia, in 1773. After studying theology at Leipsic, he determined to quit that pursuit and devote himself to music. He first composed various light dramatic music for a minor theatre at Leipsic, where he also conducted the orchestra. From the year 1810 he also became director of the weekly public concerts at Leipsic. Several of his dramatic pieces also some collections of songs, have been published at Leipsic, and are much admired. An extremely pleasing pastoral duet by this composer, adapted to English words, may be found in the "Vocal Anthology." He died in 1827.

SCHUMANN, ROBERT, the very original composer and critic, was born at Zwickau, in Saxony, in 1810. He established the Leipzig "*Neue Zeitschrift für Musik*," one of the most earnest and best musical journals ever published. But his strong tendency to composition soon got the better of his critical faculty. From his twelfth year he had composed music to the 150th psalm with orchestra, fragments of an opera, pieces for the piano, &c. His first models were Haydn and Mozart; afterwards Moschles and Ries. As he grew older he developed a most decided individuality, and the boldness and strangeness of his compositions have caused his genius to be as earnestly denied by some, as it is enthusiastically admired by others. He has composed a vast number of piano-forte pieces, many of them in novel and fantastic forms, and many of exceeding beauty and simplicity; also quartets and quintets for string instruments, several remarkable symphonies, large vocal works, cantatas, &c., and many exquisite songs. In 1840 Schumann married the celebrated pianiste Clara Wieck. For some years (1853) he has been chapel-master at Düsseldorf, where he conducted the last festival.

SCHUSTER, JOSEPH, chapel-master to the King of Sardinia and to the Elector of Saxony at Dresden, and one of the most agreeable of German composers, was born at Dresden in 1748. His father, who was chamber musician and singer in the Chapel Royal of Poland, procured for his son's instructor in music Schurer, then composer to the Elector of Saxony. Young Schuster next accompanied Chapel-master Naumann, in 1765, in a journey to Italy, where he studied counterpoint at Venice under the celebrated Girolamo Pera, profiting at the same time by the lessons and advice of Naumann. The gay and brilliant style of his dramatic compositions procured a favorable reception for several of his operas at the Italian theatres during the three years that he resided in that country. The same justice was done to his talent on his return to Dresden, in 1772, when the elector nominated him his church and chamber composer. In 1774 he took a second journey to Italy, chiefly with a view of profoundly studying the style of the celebrated Padre Martini of Bologna: at the same time he took the opportunity of writing many more operas for the theatres of Naples and Venice. It was in this journey that the king of Naples appointed him his chapel-master. He again returned to Dresden in 1776, but in 1778 revisited Italy the third time, where, besides the honor and profit derived from his compositions, he now enjoyed the society of the celebrated Hasse, who was living at an advanced age in Venice. In 1781 Hasse confided to Schuster the last mass of his composition, to be presented to the Elector of Saxony. In 1787 Schuster was nominated chapel-master to the elector, and the direction of the music, both at the Chapel Royal and opera, was confided to him, alternately with Naumann and Seydelmann. The characteristics of Schuster's works are gayety and brilliancy. Some of his musical ideas are irresistibly comic, which caused his compositions to be highly popular in Germany. He died at Dresden in 1812. His principal compositions are as follows:—

For the church: "*Missa à 4 voci*," 1768; "*La*

Passione," Dresden, 1778; "*Ester*," oratorio, Venice, 1781; "*Il Moisè riconosciuto*," oratorio, Dresden, 1786; "*Betulia liberata*," oratorio, Dresden, 1797; "*Confitebuntur*," a psalm; "*Te Deum*," 1800; and "*Gioas, Re di Giuda*," Dresden, 1803. For the theatre: "*The Alchymist*," opera; the airs in "*The Philistine*," by Junker; "*The Desert Isle*," opera in one act; "*Keep your level*," operetta; "*La Fedeltà in Anore*," Dresden; "*L'Idolo Cinese*," Dresden, 1774; "*La Didone abbandonata*," Naples, 1776; "*Il Demofonte*," Forti, 1776; "*L'Amore Artigiano*," Venice, 1776; "*La Schiava liberata*," Dresden, 1777; "*La Didone*," Venice, 1779; "*Ruggiero e Bradamante*," Padua, 1779; "*Creso in Media*," Naples, 1779; "*Le Bon Ton*," opera buffa, Venice, 1780; "*Amor e Psyche*," Naples, 1780; "*L'Isola disabitata*," Naples, 1781; "*Il Marito Indolente*," Dresden, 1782; "*Il Pazzo per Forza*," Dresden, 1784; "*Lo Spirito di Contraddizione*," Dresden, 1785; "*Gli Avari in Trappola*," 1787; "*Rubenzahl, ossia il vero Amore*," Dresden, 1789; "*Il Serco Padrone*," Dresden, 1793; "*Osmano, Dey d'Algeri*," Dresden, 1800; "*Cloris e Fillide*," a pastoral, for soprano and tenor voices, with an accompaniment for two violins and bass; and several German operettas, probably translated from the Italian. For the chamber: "*6 Divertimenti per il Cemb. con V.*," "*Concerto for the Harpsichord*," "*Musikalische Todtenfeyer*," Dresden, 1791; "*Six petites Pièces pour le Clav. avec V.*," Dresden, 1796. Several of his symphonies and instrumental pieces may also be found in manuscript.

SCHUTZ, GABRIEL, a celebrated musician at Nuremberg, died there in 1711.

SCHUTZ, JACOBUS BALTHAZAR, son of the preceding, was a celebrated violinist and singer at Nuremberg, where he died in 1700, aged thirty-nine.

SCHUTZ, HEINRICH, was born in the year 1585 at Kösteritz, a village on the River Elster, in Voightland. His grandfather was a privy counsellor, and his father a burgomaster of Weissenfels. In 1599 he was introduced to the Count Palatine Moritz, at his court of Hesse-Cassel, and was, by the direction of that prince, instructed in languages and the arts. Having perfected himself in the rudiments of literature, he was admitted about eight years afterwards into the university of Marburg, and began to study the law. In this he made great proficiency; but his patron, finding that he had an invincible propensity to music, generously offered to take him from the university, and, at his own expense, to place him under the tuition of Gabrielli, at that time a celebrated musician at Venice. This offer was so entirely accordant to the wishes of the young man, that it was immediately accepted. Schutz went to Venice, and continued there until the death of his master, which took place in the year 1612. He then returned to Hesse-Cassel, and the count palatine settled on him an annual pension of two hundred guilders, and at the same time honored him with a gold chain and medal. In 1628, having a desire to revisit Italy, he obtained permission for that purpose, and during his abode at Venice, in the year following, he published a collection of motets, with the title of "*Sigillarius*." Soon after his return to Dresden the electorate of Saxony bestowed the seat of war

Not liking, therefore, to make that city the place of his residence, he accepted an invitation from his Danish majesty to reside at Copenhagen. From thence he afterwards removed to Brunswick-Lunenburg, and in 1642 returned to Denmark, where he was appointed director of the king's music. Towards the latter end of his life he became very deaf, and employed much of his time in reading the Scriptures and in the study of theology. He did not, however, renounce the science of music, for in his retirement he composed many noble works. He set to music several of the psalms, and the history of the passion as it is recorded by three of the evangelists. He died in the year 1672, in the eighty-eighth year of his age.

His principal works are, "*Historie der Auferstehung Jesu Christi*," in seven books, published at Dresden in 1623; "*Kleinen geistlichen Concerten*," for one, two, three, four, and five voices, at Leipzig, 1636; and "*Symphonie Sacra*," the first part of which was published at Friburg in 1629, the second at Dresden in 1647, and the third in 1650. Eleven years after this period all the works of Schutz were reprinted together at Dresden.

SCHWACIL. (G.) Piano, or soft.

SCHWEIGEN. (G.) Rests.

SCHWANBERG, JOHANN, chapel-master to the Duke of Brunswick, was born at Wolfenbüttel in 1740. After having familiarized himself in early life with the works of Graun, which he took for his model, he visited Italy, with the permission and at the expense of the Duke of Brunswick, and resided in that country about six years, where he received instructions from the best masters of the age, and amongst others from Saratelli and Latilla. On his return to Germany he was considered an excellent dramatic composer, and was also celebrated for his performance on the harpsichord. He composed several cantatas, also some harpsichord music, only one opus of which was published. The following are amongst his principal operas, which also remained in manuscript: "*Adriano in Siria*," 1762; "*Solimano*," 1762; "*Ezio*," 1763; "*Talrestri*," "*La Didone abbandonata*," "*Issipile*," 1766; "*Zenobia*," "*Il Parnasso accusato e difeso*," "*Antigono*," "*Romeo e Giulia*," 1782; and "*L'Olimpiade*," 1782.

SCHWARTZKOPFF, THEODOR, chapel-master to the Duke of Wurtemberg at Stuttgart, flourished towards the end of the seventeenth and beginning of the eighteenth centuries. He published "*Fuga Melancholicæ Harmonica, i. e., Concertus Sacri, Missas, Psalmos, et Hymnos continentis, à 4 vocibus necessariis, et 5 instrum. ad libitum*," Stuttgart, 1648, and "*Harmonia Sacra, i. e., Psalmi à 1, 2, 3, 4, 5, et 6 voci, concert. et Instrum.*," Stuttgart, 1697.

SCHWEGLER, JOHANN DAVID, a celebrated performer on the hautboy and composer for wind instruments, was born at Endersbach in 1759. He was in the service of the Duke of Wurtemberg, and, up to the year 1789, had published a great quantity of instrumental music.

SCHWEIGL, IGNAZ, a violinist resident at Vienna, published in that city, in 1786, a method for the violin, under the title of "*Grundlehre der*

Violin, zur Erleichterung der Lehrer und zum Vortheil der Schüler gründlicher Unterricht, die Violin zu spielen. Worin sich die Anfänger von den Ersten Grundsätzen allgemach zum Begriffe eines Contrapuncts Nachahmungen Kanon einer Fuge geführt wird. Vor jene zum Vortheil, die weder von Mitlern noch von Lehrmeister unterstützt werden können."

SCHWEITZER, ANTON, chapel-master to the Duke of Gotha, was born at Coburg in 1737. He composed various dramatic works for the German stage, amongst which the opera of "*Alceste*" is considered his *chef-d'œuvre*. He died in 1787, in the fifty-first year of his age.

SCHWEMMER, HEINRICH, a musician and esteemed composer at Nuremberg, was born in Franconia in 1621. He was a pupil of Kindermann. He formed many excellent pupils; amongst others Johann Krieger, Pachelbel, Gabriel Schutz, and M. Zeidler. He died in 1696.

SCHWENKE, CHRISTIAN FRIEDRICH GOTTLIEB, son of Johann Gottlieb Schwenke, a performer on the bassoon at Hamburg, was born at Hanover in 1766. He was a pupil in counterpoint of Kirnberger, and was an eminent composer of vocal music, chiefly of cantatas and oratorios. He succeeded the celebrated Emanuel Bach as music director at Hamburg. His principal works bear date from 1789 to 1799, but few of them have been published.

SCHWINDEL, FRIEDRICH. The composer of several overtures and symphonies for a full band, as well as of quartets, trios, and duets, and some sonatas for the piano-forte. The former, which were thought so pleasing and excellent before the Vienna school was known, seem to have been wholly laid aside. But though they have been admired by dilettanti in Germany, those professors who allowed the author to have genius denied him taste and correctness. Schwindel died at Carlsruhe in 1786.

SCIOLTO. (I.) A word implying that the notes are to be performed in a free, separate, and distinct manner.

SCIOLIST. One who professes to understand and teach, or perform upon, many different instruments, but who is not a thorough master of any.

SCIROLI, GREGORIO, chapel-master at Naples, and previously music-master to the Conservatory at Palermo, published at Paris, in 1770, "*Six Trios for the Violin*," Op. 1.

SCOLARI, GIUSEPPE, an Italian dramatic composer, resident at Vienna, produced many works for the different theatres of Italy. Amongst his operas we can name the following: "*Pandolfo*," 1745; "*La Fata Maravagliosa*," 1746; "*Olimpiade*," 1747; "*Il Vello d'Oro*," 1749; "*Chi tutto abbraccia nulla stringe*," Venice, 1753; "*La Conversazione*," 1753; "*Artaserse*," 1758; "*Alessandro nell'Indie*," 1758; "*Il Ciarlatano*," 1759; "*La Buona Figliuola maritata*," 1762; "*Cajo Maria*," Milan; "*La Famiglia in Scompiglio*," Dresden, 1766; and "*La Donna Stravagante et la Schiava riconosciuta*," Venice, 1766.

SCOZZESE. (I.) In the Scottish style.

SCOLARO. (I.) A scholar, an accomplished pupil.

SCOLIA. (Gr. pl.) The name given by the ancients to songs in general, but more especially to those of a festive kind. Of all the different kinds of scolia that were in use among the inhabitants of Greece, and that were distinct from religious hymns, those of which we have any remains are chiefly such as were sung at table, during the time of public banquets, or private repasts. We are told, however, by several Greek writers, that in the *first use* of these they were real pæans, sacred canticles, or hymns, sung by the whole company to some divinity. It was afterwards the custom for each of the guests to sing one of these songs alone, holding a branch of myrtle in his hands, which he passed to his next neighbor after his song; and this may be called the *second manner* of singing these songs. The *third manner* was distinguished by the accompaniment of the lyre, and required the skill of professed singers and citharædists. As there were three ways of performing these *scolia*, the subjects upon which they were composed may be likewise arranged under three classes. The *first class* consisted of mere songs, of which several have been preserved to us by Athenæus. The *second class of scolia* comprehends mythological hymns and historical songs. The *third and last class of scolia* was upon common and miscellaneous subjects, and not peculiar to any age or country. The greater number, and the best of these, were upon love and wine. "Love inspires music and poetry" was a memorable maxim among the Greeks.

SCORE. The original and entire draught, or its transcript, of any composition in parts. In the score all the parts of the piece are ranged perpendicularly under each other, so that the eye, catching the corresponding bars of the several staves, sees at a glance the whole construction and design of the harmony. As in this disposition one single line of music comprehends as many staves as there are parts, these staves are held together by a brace drawn down the margin at the beginning of the line. The use of the score is indispensable in composition: to the conductor of any performance it is also highly requisite, in order to his knowing whether each performer properly executes his part, and to enable him to supply any accidental omission with the piano-forte or organ at which he presides. The word *score* originated from the bar, which in its early use was drawn through all the parts, thus:—

SCORING. The art of forming a score, by collecting and properly arranging under each other the several detached parts of any composition.

SCOTCH SCALE. A scale different from that of the other nations of Europe, by its omission of the fourth and seventh—a peculiarity from which all the genuine Scottish melodies derive their national and distinguishing character. This scale is erroneously supposed by some writers to be the same with the original enharmonic scale of the ancient Greeks.

SCOTCH TUNES. Melodies peculiar to the ancient North Britons, and the characteristic sweetness of which is, in a degree, attributable to their consisting of the diatonic intervals unmixed with those chromatic notes which divide the octave into twelve semitones. Some give David Rizzio the credit of being the inventor of this species of music; others, and certainly with more probability, say we owe it to John the Archchanter from Rome, who carried it with him when he settled among the Northumbrians. The Scotch music, without possessing much claim to art, has a decidedly characteristic feature. It is unlike the compositions of any other country. Even its quickest airs have something peculiarly melancholy in their style, which is touching and agreeable. The principal feature in the Scotch music is the frequent introduction of short catching sounds before long notes. The ancient music of Scotland has become a matter of faith or conjecture, so that no one arrogates to himself the knowledge to establish the facts of its truth, or the superiority of the whole or of any neglected portion of it. Music, like all other fine arts, has been progressive, being common to all ages and nations. From the accounts of Plato, the study of music was for a long time confined to the priesthood, and was considered sacred, and forbidden on all light occasions; but we can trace no accurate judgment of the relative excellence of the ancient music in the various nations. So far as Scotland is concerned, the first real account of its rise and spread is to be learned in the various meetings of the clans during the rude and warlike times of the country. The "Blackmatch," as originally organized through the Highlands in the feudal times, on their great days of assembly, brought together the finest looking men their chiefs could muster, and also all the wandering and ancient bards, who performed extemporaneous airs and stories, accompanied with their harps and pipes, to suit the nature of these occasions. Through these, the national music of Scotland was kept alive, and the spirit of poetry kept floating from mind to mind without the aid of the printer, and perhaps long before the Celtic nation had reduced the science to any positive rules.

Since the harp ceased with the feudal times, there appears to have been no musician of high merit in the Highlands capable of imparting, much less preserving, the music as then sung to its native words, or of giving that effect to its circulation which popular verses never fail to produce, although there have appeared in Edinburgh and other places many industrious collections of the Scottish music, among the first of which was that of Oswald and McGibbons, who had the aid of Allan Ramsay, the author of the

"Gentle Shepherd," to write verses to the air. It is delightful to look into the creation of the songs and airs of Scotland, because the most of these had a romantic origin in the love of their chiefs, or the return of some wanderer, the birth of an heir, or the settlement of some quarrel, while others, inspired from inward feeling, addressed themselves to the grandeur of the majestic mountains. Among the most modern authors, King James I., and also King James IV., were celebrated composers; and onward to the period of James VI. may be reckoned the bright era of Scottish music. All these preserved, composed, and discoursed most eloquent music and words, while one of the Jameses invented a new style of music, plaintive and melancholy, in which he was imitated by many of the Italians. In reference to James IV. and V., it would appear that the Scotch are now far behind them in their devotion to the gentle art; and even yet, while all the branches of polite education are fast progressing, the science of music has almost been a dead letter, at least in the education of the Scottish youth, except some small beginnings recently in the education of young ladies in superior seminaries; while in Germany, and other parts of the continent, it has long been one of the elementary branches of education.

SCOTCH BAGPIPE. The bagpipe has generally been considered as a national instrument of Scotland. Strip a Highlander, according to the common notion, of his bagpipe and kilt, and what do you leave him? A naked Pict, meagre and pale, the ghost of what he was. Popular as this instrument may have been in the Highland districts, the musical magistrates of the city of Aberdeen in 1630 "discharge the common piper of all going through the town at night or in the morning, in time coming, with his pipe, it being an uncivill forme to be usit within sie a famous burgh, and being often found fault with, als weil be sundrie neighbouris of the towne as be straigeris."

SCOTTISH HARPERS. The last of this race, representing the more respectable class of harpers, was Roderick, or, as he was generally called, Blind Rory, a Highlander, who, if tradition is to be trusted, was born a gentleman, and lived on that footing at Dunvegan Castle, in Skye, in the family of the Laird of McLeod. His name will be familiar to many as the supposed instructor of Flora McIvor. The proficiency of the Highlanders in harp music is sufficiently proved by the "ports," as they are called, or airs composed for the harp, of which the Skene manuscript contains one, the Stralock manuscript four, all of which were translated by Mr. Graham, and are remarkable for their elevated character; the wild, romantic style of their modulation often reminding us of the strange and more gloomy conceptions of Beethoven's adagios, and that tone of melancholy which pervades them, so much in harmony with the character of the Celtic muse. The following, entitled "Port Jean Lindsay," is from the Gordon manuscript of 1627:

The merit of originally introducing the harp into Scotland must be ascribed to Ireland, though it seems very early to have become a favorite instrument, and one on which the Highland harpers appear to have attained a proficiency little, if at all, inferior to that of the Irish and the Welsh. During the fifteenth century it appears to have been extremely fashionable, James I. having touched it, as Fordun says, like another Orpheus. It was considered an instrument "fit to be used by knights, esquires, clerks, persons of rank, and ladies with plump and beautiful hands, and whose courteous and gentle sounds should be heard by the elegant and the good."

SCOTTISH MELODIES. Scottish airs must not be considered as the results of rudeness or ignorance, for they were written conformably to the approved, and, indeed, the only principles of composition prevailing in the remote periods which produced them. The flat seventh, in the ascending minor key, which is a remarkable feature in Scottish music, was the regular form of intonation in all their music once; and the modulation which characterizes Scotch music, giving it a nationality, from the minor chord of the tonic to the major chord of the tone below, as from D F A to C E G, may be also found in the works of the greatest masters. Beethoven, in particular, was in the habit of resorting to these simple and old-fashioned forms of tonality, probably from a sense of their superiority in expressing certain emotions, and as a contrast and corrective to the too chromatic and luscious sweetness of modern intervals. Scotch music belongs to an old school, less refined, less flexible, and less voluptuous than the one now prevailing, but yet founded in principles of science as well as in the principles of the human heart. The ancient melody of Scotland is distinguished from modern music by those tonal peculiarities which characterize all music of an early date. The individual character of Scotch music, as a class, depends upon the manner in which those tonalities have been made use of, as demonstrative either of melodic skill or expressive of mental emotion. In both of these respects the Scotch melodies undoubtedly possess great excellence. The range of their modulations is limited; but these modulations are conducted often with great art and ingenuity, in a musical point of

view, while they are made eminently subservient to purposes of expression. The modulations chiefly used are from the major to the relative minor, and *vice versa*; from the minor chord of the tonic to the major chord of the tone below; and from the tonic to the dominant, particularly in minor keys. See "Bonny Dundee." The air, "She rose and loot me in," which may be traced as far back as the seventeenth century, is constructed on the modern minor key, with a sharp seventh, and is as perfectly chromatic within the minor key as the most scientific composition.

There is a close correspondence and harmony between national music and national disposition. The sounds with which a country most abounds reproduce themselves in its music; it would be strange if it were not so; and it would be equally singular, if the scenery and the climate, which so powerfully affect our associations, and by which, undoubtedly, a grave or lively character is in some measure impressed upon a national genius, should not be traced in those musical sounds which are the most natural channels through which we vent our emotions of gayety or gloom. The Swiss music derives its peculiarities from the mountain echoes among which it has been produced, and vividly reflects the hardy and elastic temperament of a people at once pastoral and warlike. The ripple of smooth canals, and the undulation of the Adriatic, and the prolonged, melancholy, and monotonous cry of the boatmen, may have given their character to the Venetian *barearoles*. The light and dancing measures of France, pleasing and lively, but without deep feeling, show the animal gayety and levity of the country which gave them birth. The plaintive and gloomy airs of the northern nations have a natural connection with that more thoughtful and brooding turn of mind, which an in-door existence, or a sombre landscape and uncertain climate without, have a tendency to create. The few specimens of *savage* music which are known to exist are wonderfully in harmony with the wild, ferocious character of the nations in which they have their origin; they are strains such as would scatter dismay among the ranks of hostile tribes, or form a fit accompaniment to the "dismal dance around the furnace blue." Not only is something of national character always impressed on music, but the music of each age has its peculiarities, essentially connected with the general state of the social condition, and therefore likely to render it unsuited to the tastes and habitudes of others.

SDRUCCIOLATO. (I.) Gliding. Sliding the finger along the keys or strings of an instrument.

SEA SHELLS. Mr. Freberhuyser, a musician of Albany, New York, has invented a new musical instrument, the materials used for its construction being sea shells. The exterior of the shell is not disturbed, and retains all its rough attractions. The mouthpiece is fitted to a screw tube adjusted at the head of the shell. Along the sides the key holes are arranged at proper intervals, and the edges carefully lined. A valve, lined with velvet, hinged at one corner, covers the mouth of the shell, and is compressed or opened as the character of the music requires. At the opposite and extreme corner of the mouth,

the vent is left for the egress of the surplus air. The instrument, therefore, with the valves and keys closed, is air tight, and the variations in the size and natural organization of the shell furnish the change in the tone of the instrument. The music is powerful, but not agreeable.

SEBASTIANI, CLAUDIUS, organist at Metz, published, in 1553, a singular work, entitled "*Bellum musicale, inter plani et mensuralis cantus reges, de principatu in musicæ provincie obtinendo contententes.*" This book is ludicrously descriptive of a contest between the king of plain descent and the king of figurate descent, which latter gains the victory, and afterwards, on a treaty of peace being concluded, the empire of church music is divided between them.

SEBASTIANI DI ALBANO, P. L., an Italian ecclesiastic and musical writer, died at Rome in 1809. He published, in that city, in 1789, a work entitled "Elements of the Theory of Music," and at Venice, in 1802, "An easy and sure Method of composing Fugues."

SEC. (F.) SECCO. (I.) In a dry or unornamental manner.

SECHSZENTHEIL NOTE. (G.) A semi-quaver, or sixteenth note.

SECONDE (F.) SECONDA, or SECONDO. (I.) The second.

SECOND. An interval of conjoint degree. There are four kinds of *seconds* — the *diminished second*, containing four commas; the *minor second*, consisting of five commas; the *major second*, consisting of nine commas; and the *redundant second*, composed of a whole tone and a minor semitone.

SECTIO CANONIS. (L.) The name given to that celebrated division of a chord, by which the portions of its several sounds are precisely ascertained. It was invented by Euclid, and includes his name in its general title, as "the sectio canonis of Euclid."

SECULAR MUSIC. Operas, serenatas, cantatas, songs, catches, glees, sonatas, concertos, and whatever is composed for the theatre or chamber. An expression used in opposition to that of *sacred music*, or compositions for the church or chapel.

SECULARS. Those unordained officiates of any cathedral or chapel, whose functions are confined to the vocal department of the choir.

SEER. The ancient name for a bard, or rhapsodist.

SEGNO, or :\$: (I.) A sign; as, *al segno*, go back to the sign or mark.

SEGUE. (I.) It follows; as, *segue coro*, the chorus follows. It is also used in the sense of *in similar or like manner*, to show that a subsequent passage is to be played like that which precedes it.

SEGUE SUBITO SENZA CAMBIARE IL TEMPO. Proceed directly, and without changing the time.

SEGUE SENZA INTERMISSIONE. Go on without stopping.

SEGUIN, EDMUND, the vocalist, died at

New York, December 11, 1852. He was somewhat noted as one of the "Seguin troupe." A correspondent of Novello's "Musical Times," says, "He had one of the finest bass voices ever heard, and commenced his career in England with more than ordinary success. Mr. Seguin, after experiencing a little disappointment in his own country, repaired to New York, where his death recently occurred. He was one of the earliest pupils of the Royal Academy of Music, where he distinguished himself by his musical and vocal attainments. Mr. Seguin made his *début* as a *basso cantante* at Her Majesty's Theatre, in or about the year 1834, in Cimarosa's '*Matrimonio Segreto*,' as Count Robinson, and was recognized at once as a singer of undoubted promise, and obtained a very flattering reception. His style, however, was not exactly suited to the exigencies of the Italian opera. He was found much better adapted to English opera and Drury Lane, where he appeared, in conjunction with Malibran, under Mr. Bunn's management, in '*La Sonnambula*,' and other operas. Mr. Seguin subsequently transferred his services to the Lyceum. Some tempting offers having been made to him by the manager on the other side of the Atlantic, he accepted an engagement for himself and wife about fourteen years ago; they obtained a fair repute in the new world as singers, and have invariably given satisfaction in all their engagements. Mrs. Seguin was formerly Miss Childe, a pupil of the Royal Academy of Music, and appeared for two or three seasons at Her Majesty's Theatre, under Laporte's management, as *seconda donna*." Mrs. Seguin, when she first landed in America, lacked that which her constant practice here could alone impart — ease and self-possession upon the stage. Her musical education was most thorough, and she much improved after singing in the States.

SEIDEL, FRIEDRICH LUDWIG, organist of St. Mary's Church at Berlin, published there, between the years 1792 and 1802, several collections of vocal and some instrumental music.

SEITENBEWEGUNG. (G.) Oblique motion.

SEIZIEME DE SOUPIRE. (F.) A demi-semiquaver rest.

SEJAN, NICHOLAS, born at Paris in 1745, was a harpsichord and organ pupil, from the year 1753, of his uncle, Forqueray, organist of St. Merry. At the age of thirteen, having previously learned the elements of composition under Bordier, young Sejan played at St. Merry an extemporaneous *Te Deum*, which astonished Daquin, Couperin, and some other celebrated organists who were present. In 1760, before he had attained his fifteenth year, he stood for the situation of organist of St. André-des-Ares' parish church, which he obtained against a strong competition. In 1772 he was nominated joint organist of the cathedral of Notre Dame, and in 1783 organist of St. Sulpice. In 1789 he was appointed court organist; he was also made professor of his instrument at the Conservatory, from its first formation. Finally, he became organist of the Church of the Invalides. Four, only, of the works of this great organist were published, namely, "Six Sonatas for the Piano-forte, with V.;" "A Collection of Rondeaux and Airs;"

"Three Trios for the Piano-forte, with V. and B.;" and "*Fugues et Noëls pour l'Orgue ou le Piano*."

SELAH. (H.) This term was anciently used to indicate the interlude, in which the priests should blow the trumpets, to carry up the sentiments expressed for a memorial before God. The term *higgaion selah* indicates the sound of stringed instruments used by the Levites, in connection with the blowing of the trumpets on the part of the priests. The Levites usually stood in the singers' gallery, opposite to the priests with trumpets.

SELLE, THOMAS, singer, minor canon and music director of the cathedral at Hamburg, was born in Saxony in 1599. He composed several masses and other sacred works, and also wrote some books on music. He died at Hamburg in 1663.

SELVAGGI, G. A Neapolitan amateur composer, resident in France since the year 1797. He published two sets of romances in 1798 and 1799. He is said, by the editors of the French Dictionary of Musicians, to have brought into France the most complete collection that exists of the compositions of Palestrina and Durante.

SEMI. (L.) A word signifying *half*; *semi-breve*, half a breve; *semi-quaver*, half a quaver.

SEMI-BREVE. A note of the fourth degree of length, reckoning from the *large*. The longest note now in common use. Half a breve. The semibreve is now made round, but was anciently in the form of a lozenge. It was divided into major and minor: the major was equal to two thirds of the perfect breve, and the minor to one third. The semibreve, the half short, once, with a single exception, the shortest note, has long been practically the starting point in our measure of time; while the *minim*, *minimum*, originally the least in duration, has been completely outstripped by crotchet, quaver, semi and demisemi-quaver, whose minor subdivisions, like numerals ascending beyond millions, have become difficult of appreciation or name. These designations have, under the simplifying and reformatory processes which mark the age, already become, in some degree, and may eventually be wholly superseded by the names of half note, quarter note, eighth, sixteenth, and so on, as in a similar manner you now find the figures 2-2, 4-4, &c., often substituted for the character formerly in use to mark the common time.

SEMICHORUS. A short, unelaborated chorus. A word used in opposition to *chorus*, or *full chorus*.

SEMICON. An instrument used by the ancients, of which, at present, little more is known than that it resembled the harp, and contained thirty-five strings.

SEMI-CROMA. (Gr.) A semi-quaver.
SEMI-DIAPASON. (Gr.) An octave diminished by a minor *semitone*.
SEMI-DIAPENTE. (From the Greek.) An imperfect or false 5th. See *HEMIDIAPENTE*.
SEMI-DIATESERON. A defective or false 5th.
SEMI-DITONE. (From the Greek.) A lesser third. See *HEMIDIATON*.

SEMIQUAVER. A note of the eighth degree of length, reckoning from the *large*. Half a quaver.

SEMPlice. (I.) A word implying that the movement before which it is placed is to be performed with chasteness and simplicity.

SEMPRE, or SEMP. (I.) Always, or throughout; as, *sempre piano*, soft throughout. *Sempre piano e ritenuto*, always more and more soft, and falling off in the degree of movement. *Sempre piu decrescendo e piu ralentando*, gradually softer and slower. *Sempre piu forte, . . . all. ff. mo.*, louder and louder to the fortissimo.

SEMIMINIM, or CRUTCHETAM. Half a minim. The name originally given to the crotchet. See **CRUTCHET**.

SEMITONE. Half a tone; the smallest of all the intervals admitted in modern music. There are two species of semitones; the major and the minor. The semitone major is produced by rising a degree, as from G natural to A flat; the semitone minor, by passing from a natural note to its sharp.

SEMITONIC. An epithet applied to intervals consisting of half tones. The semitonic or chromatic scale proceeds by semitones, and is formed by a division of the diatonic scale into semitones, ascending by sharps, and descending by flats, thus:—

Each semitone in the above example may form a tonic, and retain the natural scale entire; and it will be good exercise for the student to take any sound in the chromatic scale, and form the natural in both modes; for instance, the major of E flat, or the minor of C sharp. By this method, he will not only see the utility of flats and sharps in removing the tonic from one part of the scale to another, but will ascertain where they must be placed, in order to bring the semitones in their proper places.

SENAILLÉ, J. B., a good French violinist and composer for his instrument, died at Paris in 1730, aged forty-two.

SENESINO, FRANCESCO BERNARDO. See **BERNARDI**.

SENFL, LUDWIG, chapel-master to the Duke of Bavaria, about the year 1533, was a native of Zurich, and a pupil of Heinrich Isaac. Martin Luther preferred Senfl's motets to those of any other composer; and Sebald Hayden, in the preface to his work "*De Arte Canendi*," calls him in *Musica totius Germaniæ Princeps*. He probably died about 1555.

SENS IMBERT, a performer on the serpent at one of the churches at Paris, published there a method for his instrument, in 1780.

SENSIBLE. The appellation given to the sharp seventh of any key, because it renders the ear sensible of the next tone above, which is the fundamental, or tonic of the key.

SENTENCES. Certain interlude strains sometimes introduced in the service of the established

church, especially of particular chapels; as those of the Asylum and Magdalen.

SENTIMENTO, SENTIMENTALE. (I.) With feeling and sentiment.

SENZA. (I.) Without; as, *senza stromenti*, without instruments; *senza organo*, without the organ.

SENZA RIGORE. (I.) Not in strict time. An expression which has, in some degree, the same sense as that of *ad libitum*.

SEPTETTO. (L.) A septet, or piece for seven instruments.

SEPTUOR. A composition for seven voices or instruments.

SEQUENCE. A regular alternate succession of similar chords; as when, in the common chord, the note which makes the fifth to the bass is changed to the sixth, and after making a fifth to the succeeding bass note, is again changed to the sixth, and so on.

SEQUENTIA. (L.) Certain hymns used in the Romish church, otherwise called *prose*, (i. e., *proses*), because, though in their composition rhyme is adhered to, the laws of measure and quantity established by the ancient Greeks and Romans are neglected. These hymns are always sung after the *introitus*; whence their name of *sequentia*. Of this kind is the "*Stabat Mater*."

SEQUENZA. (I.) A hymn formerly sung in the Romish service after the Gradual, immediately before the Gospel, and sometimes in the vespers, before *Magnificat*.

SERIA. (I.) Serious, tragic; as, *opera seria*, a serious opera.

SERIOSO. (I.) In a serious style.

SERENADE. A concert performed at night in the open air, and under the window of the party it is designed to entertain. This word, Italian in its origin, seems to be derived from *sereno*, or from the Latin *serum*, in the evening. When the concert is performed in the morning, or at break of day, it is called an *aubade*.

SERENATA. (I.) A vocal composition on an amorous subject, consisting of choruses, solos, duets, trios, &c. Handel's "*Acis and Galatea*," and Dr. Boyce's "*Solomon*," are serenatas. Also a lover's vespers, or evening song.

SERIOUS SONG. A song consisting of plain-tive words and music.

SERPEGGIANDO. (I.) Gently and silently creeping onwards; quietly advancing.

SERPENT, SERPENTE. (I.) A bass wind instrument, which has its name from its curvilinear form, and consists of several folds or wreaths, which are usually covered with leather. It has three distinct parts—a mouthpiece, neck, and tail—and six circular apertures for the modulation of its notes. The scale of this instrument, which includes every semitone in its compass, begins two octaves below the C clef note, and in its original form extended no higher than G, the twelfth above; but in skilful hands it was capable of rising to B flat above the bass clef note; and some solo performers carry it still higher. It is a brass instrument of a loud and coarse tone, much used, formerly, in military

bands, and sometimes introduced into the orchestra, where it is employed to strengthen the double basses in the forte passages. Slow passages produce the best effect on this instrument. The best keys for it are those of C, F, Bb, Eb, and Ab.

On the occasion of first using this variety of the bassoon, Handel, then a stranger to this newly-invented machine, was so shocked and disgusted with the powerful coarseness of its tone, that he exclaimed, in a fury, "Vat de diffel be dat?" On being told it was a newly-invented instrument, called the serpent, "O," he replied, "de serpent. Ay, ay! but, by Jove, dis is not de serpent dat tempted Eve, I am sure." He forthwith commanded its silence. However opposed to the ser-

pent, he held a favorable opinion of the bassoon, and had little fear of its overpowering effects, for he caused one to be constructed of the enormous length of sixteen feet, for a celebrated bassoonist named Lampe, who alone was capable of giving it full justice. In his hands, the effect was extraordinary indeed, and only in his hands, for, after his death, an attempt was made to use it at the great Handel commemoration, by Ashley, celebrated on the bassoon; but he did not succeed, and after that, the great bassoon remained useless and unattempted.

Late improvements have made the compass of the serpent as extensive, by additional holes and keys, as the bass horn, as will be seen by the following scale:—

SCALE FOR THE SERPENT.

SERRA, PAOLO. Singer in the Papal Chapel at Rome, in 1763, in which year he published, in that city, "*Introduzione Armonica sopra la nuova serie di suoni modulati in oggid.*"

SERRE, J. A., a miniature painter and musician at Geneva, was a great antagonist of the theories of Rameau and Tartini, and published the following works: "*Essais sur les Principes de l'Harmonie*," Paris, 1753. "*Observations sur les Principes de l'Harmonie, occasionnées par quelques Ecrits modernes sur ce Sujet, et particulièrement par l'Article 'Fondamental' de M. d'Alembert dans l'Encyclopédie, le Traité de Théorie Musicale de M. Tartini, et le Guide Harmonique de M. Geminiani*," Geneva, 1763.

SERVICE. A church composition, consisting of choruses, trios, duets, solos, &c.

SERVI SYMPHIONIACI. (L. pl.) Among the Romans, a band of musicians kept by a person of rank for his own amusement, or that of his guests.

SESQUI. A Latin particle, signifying a whole and a half, and which, when joined with *altera*, *terza*, *quarta*, &c., expresses a kind of ratio; particularly the several species of triples. The ratio denoted by *sesqui* is the second ratio of inequality, called, also, super-particular ratio, and which contains the less once, and some certain part over, as 3 : 2, where the first term contains the second once, and a unit over, which is a quota part of 2. If the part remaining be just half the less term, the ratio is called *sesqui altera*; if it be a third part of the less term, as 4 : 3, the ratio is *sesqui quarta*; and so on to infinity, still adding to *sesqui* the ordinal number of the less term.

SESQUIALTERA. The name given by the ancients to that ratio which includes a whole and its half.

SESQUI-ALTERATE. *The greater Perfect.* One of the kinds of triples expressed by the Latin particle *sesqui*. A triple in the old music, in which the breve is three measures, or semibreves, and that without having any point, or dot, annexed to it.

SESQUI-ALTERATE. *Lesser Perfect.* A triple time in the old music, in which the semibreve contains three measures, or minims, independent of any dot.

SESQUI-ALTERATE. *The greater Imperfect.* A triple in the old music, in which the breve, when dotted, contains three measures, or semibreves, and when without a dot, two.

SESQUI-ALTERATE. *Lesser Imperfect.* A triple time in the old music, in which the semibreve, when dotted, contains three measures, or minims, and when without a dot, two.

SEQUITERTIA. A musical ratio is said to be *sequitertia* when it is as 4 to 3.

SEQUITONE. A minor third; or interval consisting of three semitones.

SET TO MUSIC. An expression applied to any lyrical poem, or poetical prose composition, to which music is superadded. Such a composition is said to be *set to music*.

SESTETTO, (L.) or SESTUOR. A vocal or instrumental composition in six parts.

SETTIMA. (I.) A seventh. See that word.

SETZART. (G.) Style of composition.

SEVENTH. A dissonant interval called by the Greeks *heptachordon*, because it is formed of seven sounds, or six diatonic degrees. There are four kinds of sevenths—the minor seventh, composed of four tones (three majors and one minor) and two major semitones; the major seventh, composed diatonically of five tones (three majors and two minors) and a major semitone; the diminished seventh, consisting of three tones (two minors and one major) and three major semitones; and the superfluous seventh, containing five tones, (three minors and two majors,) a semitone major, and a semitone minor. The chord of the seventh, when minor, is so conso-

nant and agreeable, that Geminiani and others have not scrupled to pronounce it a concord.

SEXTA PARS. (L.) Four parts being the number to which, in general, church compositions were limited during the fifteenth century, when an additional part was introduced, it was called *quinta pars*, and if still another were added, it was denominated *sexta pars*.

SEXTON, WILLIAM, organist, subprecentor, and master of the choristers of St. George's Chapel, Windsor, and lay clerk, &c., of Eton College Chapel, was admitted as chorister to both of the above chapels in 1773, being in the ninth year of his age. One of the most singular circumstances in his life was, that during a space of nearly fifty-one years, he had never been absent from his professional duties so long as fourteen days at one time. He was next placed as a pupil under Edward Webb, a celebrated organist of Windsor and Eton. He next officiated as deputy organist, &c., till the year 1801, when he was appointed organist of St. George's Chapel, at the same time continuing his duties at Eton College, the organist there being alive, but past duty; so that both master and scholar may be said to have been (to use a professional phrase) real cathedralists. Sexton composed some anthems, canons, glees, songs, &c., but did not publish any of them. In 1808 he printed a volume of eight anthems, by Handel, composed for the Duke of Chandos. These he shortened and arranged for the organ and voices, for the use of cathedrals.

SEXTUPLE. The name formerly given to measures of two times, composed of six equal notes, three for each time. The measures are now more generally called *compound common time*.

SEYDELMANN, FRANZ, chapel-master at Dresden, was born there in 1748. He learned the elements of his profession of C. J. Weber, and afterwards studied counterpoint under Chapel-master Naumann, whom, together with Schuster, he accompanied in their journey to Italy, in 1765. On his return to Dresden, he was nominated, in 1772, church and chamber composer to the court, and was directed to perform the duties of conductor of the opera and chapel-master alternately with Naumann and Schuster. He composed some harpsichord sonatas, several oratorios, and the following, amongst other operas: "The Wounded Hussar;" "La Bella Arsene," 1780; "Il Capriccio corretto;" "La Figliuola di Misnia," 1784; "Il Mostro," 1787; "Il Turco in Italia," 1788; "Amor per Oro," opera buffa, 1790; and "La Serva scaltra." He died at Dresden in 1806.

SEYFARTH, JOHANN GABRIEL, chamber musician, violinist, and ballet composer at Berlin, was born in 1711. After finishing his musical studies, under the organist Walther for the harpsichord, Hock for the violin, and Fasch for composition, he entered the service of Prince Henry of Prussia. He wrote much instrumental music, besides many works for the theatre. He died at Berlin in 1796.

SEYFRIED, IGNAZ XAVIER, chapel-master of the new theatre at Vienna, was born there in 1776. He was intended to be brought up for

the law, but his passion for music soon became irresistible. He composed various operas for the Schikaneder theatre, at Vienna, between the years 1796 and 1810. He also composed much instrumental music.

SFORZATO, SFORZANDO, or SF., (L.) implies that a particular note or passage is to be played with emphasis and force.

SHAKE. An embellishment consisting of the alternate reiteration of two notes comprehending an interval not greater than one whole tone, nor less than a semitone. The *shake* is expressed by this character, *tr*. The shake is sometimes double; that is, two shakes are simultaneously given on the same instrument, and by the same hand: generally in thirds, but sometimes in sixths.

SHALISHIM. A triangle, invented by the Syrians. Triangular rods were used, of metal, charged with rings.

SHARP. A character, the power of which is to raise the note before which it is placed half a tone higher than it would be without it. The sign of elevation is \sharp . This artificial note or character, when prefixed to any note, shows that it is to be sung or played a semitone, or half a tone higher than the natural note which have been without. When the semitone takes the name of the natural note next above it, it is marked with a character called a *flat*. It is indifferent, in the main, which of the two be used, though there are sometimes particular reasons for the one rather than the other. The use of flats and sharps is by way of remedy to the deficiencies of the fixed scales of instruments. The character now used for the sharp was originally designed to represent, by its four cross lines, the four commas of the chromatic scale.

SHAW, OLIVER, an eminent composer and teacher of music at Providence, R. I., died in that city on the last day of December, 1843, aged seventy.

Mr. Shaw was a man of placid disposition, unobtrusive manners, and truly Christian character. He was warmly devoted to his divine art, and his numerous compositions bear the impress of genius. His "Mary's Tears," "Nothing true but Heaven," "Arrayed in Clouds," "Home of my Soul," and other sacred pieces, will ever hold a place among the best compositions of their kind.

SHAWM. A religious instrument of the ancient Hebrews, supposed to be similar to the horn.

SHELL. Some shells, when blown into, produce a musical sound. The ancients, it is supposed, supplied shells with distended strings, and thus converted them into tensile instruments.

SIEMINTTI. (II.) A stringed instrument. It was also sometimes used to denote a species of music, and also a particular part of a composition.

SIEPHARD, JOHN, an English contrapuntist of the sixteenth century, studied music at Oxford. Several of his works are to be found in the publication entitled "Mornyng and Evenyng Prayer and Communion, set for the Voyce, in foure Partes, to be sung in Churches, both for

Men and Children, wyth dyvers other godly Prayers and Anthems, of sundry Men's doynings," London, 1565.

SHERARD, JAMES, an English apothecary, composed, early in the last century, two sets of sonatas, which might easily be mistaken for the compositions of Corelli.

SHERIDAN, MRS. See LINLEY.

SHIELD, WILLIAM. Born in 1754. This very eminent English composer was first taught to modulate his voice and practise the violin, when he was only six years old, by his father; and subsequently received a few lessons of thorough bass, in his infancy, from the celebrated Avison, of Newcastle upon Tyne. At the death of his father, he was bound by indenture to Edward Davison, boat builder, in South Shields; and during his apprenticeship, for want of better violin performers, led the Newcastle subscription concerts, where he repeatedly played the solo parts of Geminiani's and Giardini's concertos. Having produced an admired specimen of sacred music, when the new church was to be consecrated at Sunderland, he was requested to compose the anthem, which was performed by the then excellent Durham choir, to an immense congregation. At Scarborough, in the fashionable Spa season, he was the occasional leader of the concerts, and the constant one in the orchestra of the theatre, for which he composed many songs, written by the ingenious pastoral poet Cunningham, who was an actor in Bates's company at that period. At one of the concerts, he was impetuned by the eminent professors, Fischer and Borghi, to fill a vacant seat in the orchestra of the Italian Opera House, which gratifying offer was most readily accepted, and that great musical general, Giardini, placed him in the rank of the second violins; but the following season the excellent leader, Mr. Cramer, removed him to the principal viola; at which post he remained eighteen years, in the course of which time he produced upwards of twenty operas for Colman's and for Covent Garden Theatre: of the latter he became the musical director, and was also appointed one of the musicians in ordinary to his majesty. His engagements comprised Bach and Abel's concerts, the Professional concerts, the Ladies' Friday concert, the grand Sunday concerts, and the Wednesday concert of ancient music; from the latter of which he withdrew, as the necessary attendance at the Monday's rehearsal interfered with his theatrical duty; but Lord Sandwich, who was the influential friend of Mr. Harris and Joah Bates, commanded his return to a duty which he always performed with profitable pleasure, and at last relinquished with mortifying regret. Shield had the good fortune, about this time, to travel from London to Taplow with the greatest of instrumental composers, Haydn; and gained more important information by four days' communion with that founder of a style which has given fame to so many imitators, than ever he did by the best directed studies in any four years of any part of his life. In the summer of 1791, he accompanied his countryman Ritson to Paris; from which city he proceeded, with several agreeable foreigners, to Italy, who, like himself, were anxious to improve their taste by being auditors and spectators of operatic per-

formances in Turin, Milan, Bologna, Piacenza, Parma, Lodi, Modena, Florence, Sienna, and Rome. There he remained stationary, until he became familiar with the object of his journey; after which he returned with the courier to Turin, and from thence, by the speediest conveyances, in 1792, to resume his reserved situations in London.

Soon after this period, he published his well-known "Introduction to Harmony," and ever since continued studious to augment his knowledge of the divine art and science of music. At the death of Sir William Parsons, his majesty George IV. appointed him master of his musicians in ordinary. He died in London in 1829.

Of the merits of Shield as a composer, we cannot more justly speak than in the words of the Quarterly Musical Review. "Late as he appeared, he struck out for himself a style of writing, pure, chaste, and original. His great prominent characteristic, however, is simplicity. No composer has ever woven so few notes into such sweet and impressive melodies, while the construction of the bass and harmony is alike natural, easy, and unaffected. We cannot open one of his operas without being instantly captivated with this quality of his music. In such delightful little entertainments as '*Marian*' and '*Rosina*,' his airs breathe all the beauty of rural life, though the more ornamented and difficult parts are carried far beyond the common style of bravura. Shield appears to have been singularly fortunate in the great compass and agility of the female singers for whom he wrote his airs of execution. In '*Marian*' there is a hautboy song of amazing extent and much complication. In most of his works where he introduces bravuras, we find passages combining the difficulties of execution, in a manner which, if not absolutely new, lay considerable claims to novelty, and full of the same ingenious cast of expression that is discernible throughout all the parts of his style. Perhaps no writer is so remarkable for songs containing so much that is strictly national. After Purcell, we consider Shield to be the finest and most perfect example of really English writers. Ballads, in all the different modes of sentiment and description, abound in his operas. Sea and hunting songs, the rural ditty, the convivial song and glee, the sweet, sentimental ballad, are so frequent, that indeed, with the occasional interposition of songs of execution, they may be said to make up the customary and continual alterations from air to air. It will strike the observer as singular, that the later composers for the stage should have made so little use of the minor key. Shield has applied it in a most beautiful manner. The taste of our own age bears us out in the belief, that as much of Mr. Shield's music will descend to posterity, carrying with it the intrinsic marks of English genius, as of any other writer since the days of Arne. As a whole, we have found nothing superior to '*Rosina*.' His works are very numerous, though in many of his pieces he has availed himself, with facility, of popular airs, and of selections from Handel and foreign composers."

The titles of Shield's published works are as follows: "An Introduction to Harmony," "A Canto," "Six Canzonets," "Two Sets of Trios for a Violin, Tenor, and Violoncello." Dramatic pieces: "Fleeth of Bacon," "Rosina," "Poor

Foldier," "Marian," "Farmer," "Hartford Bridge," "Woodman," "Robin Hood," "Abroad and at Home," "Fontainebleau," "Noble Peasant," "Crusade," "The Travellers in Switzerland," "Omni," "Lord Mayor's Day," "Picture of Paris," the major part of "Oscar and Malvina," "Look and Key," "Patrick in Prussia," "Choleric Fathers," "Netley Abbey," "Two Faces under a Hood," &c., &c. Single pieces which remain popular: "Shakspeare's Load-stars," "The Thorn," "The Bird of the Rose," "O, bring me wine," "The Wolf," "The Heaving of the Lead," "The Post Captain," "Old Towler," "The Streamlet," "The Ploughboy," "Let Fame sound her trumpet," "The pretty little heart," "How shall we mortals," "Village Maids," "Ah, welladay, my poor heart," "The Battle Song," "I've traversed Judah's barren land," "'Tis no harm to know it, ye know," "Heigh-ho!" "Tom Moody," "Poor Barbara," "The Literary Fund Glee," "Johnny and Mary," better known by its beginning "Down the bourne and through the mead," the words of which were furnished by Mr. Holcroft, (although this ballad has been frequently inserted in the collections of inaccurate editors, in the class of original Scottish songs,) "The Prince and old England forever," "Our Laws, Constitution, and King," "Oxfordshire Nancy bewitched," composed at the request of Mr. Garrick, after that monarch of the histrionic art had ceased to be the greatest ornament of the British stage.

SHIFT. That motion of the hand along the finger board of a violin, violoncello, &c., necessary to the execution of passages, the notes of which, in point of gravity or acuteness, lie at a considerable distance from each other.

SHOPIAR. (II.) A trumpet, or beut horn, so called because it gave a brilliant, clear, ringing sound.

SHORT OCTAVES. An appellation given to some of the lower octaves of an organ, because, from the omission of some of the intermediate notes, the extreme keys lie nearer to each other than those of the full octaves.

SIRILL. An epithet applied to those acute sounds which form the upper part of the scale of soprano voices and treble instruments.

SIUSHANEDUTH, or SIOSHANNIM. (II.) A musical instrument, somewhat resembling the lily. It is possible the *cymbal* is meant, as that instrument resembles the flower.

SHUTTLEWORTH, OBADIAH. Organist of the church of St. Michael, Cornhill, London. He played the first violin at the Swan Concert in Cornhill, from the first institution of that society till the time of his death, which took place about the year 1735. He was, besides, a very good composer, and wrote twelve concertos and various sonatas for violins, of which some of his friends were favored with manuscript copies.

SI. One of the seven syllables said to be originally used in France in *solfaing*. Guido, whose system was divided by hexachords, used only six syllables, though his *gamut*, as well as ours, was composed of seven notes. The necessity of a seventh syllable, however, soon became evident, and I e Maire, a French musician of the

seventeenth century, has generally the credit of having introduced the syllable *si*, though some attribute its invention to Vander Pullen, and others to Jean de Muris.

SIBLEY, STEPHEN. This veteran musician died at his residence in Portsea, England, on Friday, 23d October, 1842, in the seventy-seventh year of his age. Mr. S. filled the office of organist at St. Thomas's Church, Portsmouth, and St. John's Chapel, Portsea, during the very long term of fifty-two years.

SICILIANO. (I.) An epithet applied to a movement of six or twelve quavers in a bar, of rather a slow time, and proceeding by alternate crotchets and quavers, each measure of the time beginning with a crotchet. The style of this species of movement is simple, and the effect at once tender, soothing, and pastoral.

SIDE DRUM. The common military *drum*. So called from its hanging at the side of the drummer during performance.

SIEBER, professor and editor of music at Paris, was born in Franconia. In 1765 he was received in the orchestra of the Royal Academy of Music as first horn. He was celebrated for his editions of the classical instrumental works of all Europe.

SIEBER, GEORGE JULIEN, son of the preceding, and born at Paris in 1775, was a pupil of Nicodami for the piano, and of the celebrated Berton for composition. He has composed some piano-forte and vocal music, and was also proprietor of a music warehouse.

SIEBERS, JOHANN FRIEDRICH LUDWIG. Organist of the cathedral at Magdeburg from the year 1776, previously to which time he had held the same situation at Brunswick. He published, amongst other works, "Songs from the Romance of Siegwart," Magdeburg, 1779; "A Symphony for the Harpsichord, with Accompaniments," Frankfort; and "Three Sonatas for the Harpsichord," Op. 1, Berlin. He died at Magdeburg in 1806.

SIEBIGK, CHRISTIAN ALBRECHT L., a professor at Breslau in 1804, resided, about the year 1797, in Leipsic, where he published some music for the piano-forte. He has since edited, at Breslau, a work entitled "*Museum berühmter Tonkünstler*," which contains biographical sketches and portraits of several of the most eminent modern musicians; amongst others, of Sebastian Bach, Haydn, Mozart, Clementi, Zuniesteeg, &c.

SIEGUE. (I.) It follows. A word always used in reference to something that is to continue or to succeed. When applied to a particular passage, it signifies that though that passage does not continue to be made out in the same form of notes in which it commenced, yet the same execution is to be preserved. When it relates to any succeeding movement, it announces the immediate approach of that movement; as, *siegue* *it coro*, the chorus follows; *siegue* *l'aria*, the air follows.

SIGHTSMAN. The appellation given to him who reads or sings music readily at first sight; hence we say, "Such a one is a good *sightsman*."

SIGISMUNDO D'INTIA, knight of the order

of St. Mark, and born at Palermo, in Sicily, flourished about the year 1610, not only as a skilful musical performer and composer, but also as a poet. In his works Dr. Burney found the earliest specimens of recitative. Amongst his published works were "*Madrigali à 5 voci*," Op. 1, Venice, 1611; "*Madrigali à 5 voci*," Op. 2, Venice, 1611; "*Le Musiche del Cavalier Sigismundo d'India, Lib. 5.*" Venice, 1623; and "*Mozetti*," Venice, 1627.

SIGNATURE. A name given to the number of flats or sharps indispensable to each key, and placed at the beginning of each staff. The signature is, or should be, always a guide to the key of a piece of music. Sometimes the printer makes a mistake, and prints the signature wrong, and sometimes an author understands harmony so imperfectly that he does not know himself what key his composition is in. Strictly speaking, there are very few tunes in which the key does not change one or more times in the course of the tune; but it is not necessary that the singer should notice the change, and indeed no one can tell where it is, unless familiar with the science of harmony. The signature should always tell the principal key in which a tune is written, and, as far as singing is concerned, the whole tune should be regarded as in the key indicated by the signature.

SIGNS. The general name for all the different characters used in music; as sharps, flats, repeats, pauses, dots, directs, &c.

SILBERMANN. The name of a celebrated German family of instrument makers. The chief was André Silbermann, born in Saxony in 1678. He was the son of a carpenter, and devoted his youth to the study of organ building. He finally settled in Strasburg, where, in 1708, he married Anna Maria Schmid, by whom he had twelve children. He died in 1734, having in the space of twenty-seven years constructed thirty organs.

SILBERMANN, GOTTFRIED, younger brother of the preceding, was born in 1684; learned the art of organ building of his brother; and in 1714 gave a proof of his own ability by constructing the cathedral organ at Freyberg, which had forty-five stops. He was one of the first makers of piano-fortes, and the invention of that instrument has been commonly ascribed to him in Germany. He submitted two pianos to the examination of John Sebastian Bach, who praised the novelty of the mechanism, but found the upper octaves feeble. Silbermann devoted himself in silence to new researches, and offered no more instruments for sale until he had remedied the defect. The next time Bach declared the instrument faultless. The pianos of Silbermann were from that time famous. He was also the inventor of the *clavicin d'amour*.

SILBERMANN, JOHANN ANDRÉ, eldest son of André, was born at Strasburg in 1712, where also he died in 1783. He was the maker of fifty-four church organs, some of them very celebrated.

SILBERMANN, JOHANN DANIEL, second son of André, was born at Strasburg in 1717, and was also a famous organ builder. In 1761 he removed to Freyberg, where he devoted himself with success to the manufacture of harpsichords and pianos. He died at Leipzig in 1766,

leaving some manuscript compositions of some merit.

SILBERMANN, JOHANN HEINRICH, youngest son of André, was born at Strasburg in 1727. He devoted himself especially to the manufacture of pianos, and his were the first instruments which made their way into France. He died in 1799.

SILVANI, GIUSEPPE ANTONIO, chapel-master of St. Stephen's Church at Bologna, published there, in 1720, his eleventh opus, comprising four masses for four voices.

SIMICUM. An ancient instrument consisting of thirty-five strings. This instrument, which is mentioned by Athenæus, is not supposed to have produced as many different notes as it contained strings, one half of which are conjectured to have been in unison, or octaves, with the other, like the strings of the arch-lute, double-harp, or harpsichord.

SIMILAR MOTION. When two or more parts ascend or descend simultaneously, they are said to be in *similar motion*.

SIMMS, JOHN, a native of Staffordshire, and the father of a celebrated musical family, was descended from respectable parents, who gave him a good commercial education, and intended him to fill the situation of clerk in a merchant's counting house. He, however, continued in his father's business (the iron trade) during the early part of his life, when, being passionately fond of music, he amused himself, in his leisure hours, in the cultivation of that art, and afterwards became a respectable amateur performer on several instruments, particularly the organ and violin. Possessing also a mechanical genius, he directed his attention to the construction of musical instruments, and, without the aid of instruction, produced several excellent specimens, one of which, namely, an upright harpsichord, was exhibited to an audience of the first distinction and respectability, among whom were the Dowager Countess of Stafford and family, the Viscount Dudley and Ward, &c., who expressed the greatest satisfaction at its mechanism. From knowledge thus acquired, he, during the last thirty years of his active life, was in great practice as a tuner and repairer of musical instruments, and was employed by a large circle of nobility and gentry in the counties of Stafford, Worcester, Salop, &c., by whom he was greatly esteemed, and his skill highly appreciated. He married early in life, and had the satisfaction of having a wife equally musical. This union was productive of a family consisting of eight sons and two daughters, all of whom played at an early age; which enabled them, on several occasions, to give concerts of vocal and instrumental music without other assistance. There were, in 1825, five of the sons in the profession of music, namely, Bishop Simms, organist of St. Philip's Church and St. Mary's Chapel, Birmingham; James Simms, organist of Bromsgrove and Chaddesly; Edward Simms, organist of Ashburn and Oakover; and Samuel and Henry Simms, organists, Stourbridge. From their originality of style, genuine taste, and neatness of execution, they had not only established a high reputation in their respective situations, but had called forth warm

expressions of approbation from strangers. On some occasions, where opportunity had offered, their performance had been honored by high encomiums from some of the first judges in the kingdom; amongst whom was the late William Knivett, organist to the king. In the sacred department of their profession, the rich variety and novel effects produced by their judicious management of the organ, together with their manner of conducting the singing in their respective churches, had not only been held in high estimation by the officiating ministers and congregations, but had, in many instances, attracted the notice and admiration of several dignitaries of the church, namely, Dr. Porteus, Bishop of London, Dr. Law, Bishop of Chester, &c. Their compositions, sacred and secular, are rather numerous.

SIMMS, EDWARD, Jun., eldest grandson of John Simms, was resident at Coventry as a professor of music, and much esteemed, both there and in London, as an organ and piano-forte player and teacher. He commenced the study of music at six years of age, under his uncles, the Messrs. Simms, of Stourbridge, under whom he practised, with great success, for about twelve years. He subsequently became a pupil of Kalkbrenner, in London, from whom he, at various times, received the most flattering encomiums on his compositions and performance. He has published various works for the piano-forte. He has likewise written many original pieces for the organ, as well as twenty psalm tunes in the old church style, in score, for four and five voices, with a considerable number of chants and secular glees, which are not published.

SIMONELLI, MATTEO, was a singer in the Pontifical Chapel in the year 1662, and was, in the language of the Italian writers, a grand contrapuntist; for which reason, and for his excellence in the church style, he has been called the Palestrina of his time. In teaching, he was extremely successful, and he had the honor of being the first master to Corelli.

It does not appear that any of his compositions were ever published; but his works were preserved with great care in the college of the pontifical singers at Rome.

SIMONIDES. There were in antiquity many poets of that name; but by the marbles it appears, that the elder and most illustrious of them was born in the fifty-fifth Olympiad, five hundred and thirty-eight years before Christ, and died in his nineteenth year; which nearly agrees with the chronology of Eusebius. He was a native of Ceos, one of the Cyclades, in the neighborhood of Attica, and the preceptor of Pindar. Both Plato and Cicero gave him the character not only of a good poet and musician, but speak of him as a person of great virtue and wisdom.

SIMPLE. A term applied to that counterpoint in which note is set against note, and which is called *simple*, in opposition to more elaborate composition, known by the name of figurative counterpoint. *Simple fugue*, or *simple imitation*, is that style of composition in which a single subject is adopted, or some partial echo preserved, amongst the several *parts*. This word, in the old music, is frequently used in contradistinction to *double*, applied to *variations*, as double 1, double 2, &c., and signifies the plain *melico*, or subject,

on which the variations are founded. *Simple cadence* is that in which the notes are equal through all the *parts*. *Simple concords* are those wherein we hear only two notes in consonance; and *simple intervals* are those in which no parts or divisions are supposed, and which the ancient Greeks called *diastems*.

SIMPLE SOUND. A pure, unmixed, single sound. Some theorists will not allow that there is, musically speaking, any such sound in nature; but, on the contrary, assert, that every sound which is produced is, at least, accompanied with its twelfth and seventeenth.

SIMPLICITY. In composition, a natural, unadorned melody, or inconplex combination of *parts*, in which the composer endeavors, rather by the force of his genius and feeling than the refinements of science, to awaken the softer passions, or rouse the mind to ardor. In performance, *simplicity* is that chaste, unaffected style, which, rejecting all vain and unmeaning flourish, only aims at conveying the ideas of the composer, without disturbing the purity of the text.

SIMPSON, CHRISTOPHER, one of the most eminent English musicians of his time, born about 1610, was the author of two treatises on music, and was likewise much celebrated for his skill in playing on the viol. Of his birth and education we meet with no records, except that, in his younger days, he was a soldier in the army raised by William Cavendish, Duke of Newcastle, for the service of King Charles I. against the parliament; that he was a member of the Romish communion, and was patronized by Sir Robert Bolles, whose son he taught to play on the viol.

In 1665 he published, in a thin folio volume, a work entitled "*Chelys Minuritionum*," printed in two columns, one English, the other Latin.

The design of the treatise is to render familiar a practice which the performers on the viol da gamba, about the time of its publication, were emulous to excel in, namely, the making of extemporary divisions on a ground bass; but, as this required some previous knowledge of the principles of harmony, the author here undertakes to unfold them.

It is divided into three parts; the first contains instructions at large for playing on the instrument; the second teaches the use of concords and discords, and is, in truth, a compendium of descant; and the third part contains the method of managing the division to a ground, which is illustrated by many examples.

In 1667 Simpson published "*A Compendium of Practical Music*," in five parts; containing, 1. the rudiments of song; 2. the principles of composition; 3. the use of discords; 4. the form of figurate descant; 5. the contrivance of canon.

The first part contains little more than what is to be found in every book that professes to teach the precepts of singing.

The second part treats of the principles of composition and of counterpoint, intervals, and concords, with their use and application; of the key or tone; and of closes or cadences belonging to the key. From the directions here given, it appears that it was the ancient practice to frame the bass part first.

He begins his rules for composition with

directions how to frame a bass, and how to join a treble to a bass; after which he proceeds to composition of three, four, five, six, seven, and eight parts, and to compositions for two choirs or choruses each.

The third part of the book teaches the use of the discords, and shows the nature of syncopation, and of relation enharmonical. Here he takes notice of the three scales of music; the diatonic, the chromatic, and the enharmonic, of which he gives a concise but clear definition.

He inclines to the opinion that the modern scale, in which the octave is divided into twelve semitones, is, in fact, a commixture of the diatonic and chromatic.

The fourth part relates to the form of figurate descent, and treats, first, in a very concise and perspicuous manner, of the ancient modes or tones. In his directions for figurate descent, the author shows how they are made to pass through each other, and speaks of the consecution of fourths and fifths, thirds and sixths. He explains the nature of fugue in general, and then gives directions for constructing a fugue *per arsin et thesin*, and also a double fugue.

He next treats of vocal music, which, he says, is to be preferred to that of instruments, because, of all sounds, that of the human voice is most grateful. He mentions the different kinds of vocal music in use in his time, and afterwards speaks of music composed for instruments. Of the latter he observes, that it, no less than vocal music, abounds in points, fugues, and all other figures of descent.

The fifth part is on the subject of canon, a species of composition in which the author says the English have been particularly excellent. He explains the method of composing canon in two or three parts, as also canon in the unison; syncopated or driving canon; canon a note higher or lower; canon rising or falling a note each repetition; retrograde canon, or canon *recte et retro*; double descent, in which the parts are so contrived that the treble may be the bass, and the bass the treble; and canon on a given plain song, with examples of each.

Lastly, he gives direction for the composition of the catch or round, called, by some, canon in the unison.

SINCLAIR, JOHN, was born near Edinburgh, in the year 1790, and from a child received constant instructions in music. When a boy, he was very partial to the stage, and passed all his leisure hours in performing plays with his little companions, in a place they procured for the purpose in Edinburgh. At length, being desirous of trying his success in a regular theatre, he and one of his school-fellows earnestly entreated the prompter of the Edinburgh theatre to hear them recite, which he declined.

Sinclair's attachment to the stage having now come to the knowledge of his father, it was looked upon by him (a devout follower of the church of Scotland) with the utmost horror, and his future attendance at theatrical meetings was strictly prohibited; but still the son so particularly disliked the profession his father wished to bring him up to, that he resolved at last to run away from home. At this time, Gow, of Edinburgh, was applied to by the late Colonel Campbell, of Shawfield, to prevail on Sinclair (whose

musical abilities were then much adured) to join his regiment as clarinet player. On Gow's application to this effect, Sinclair, considering himself under many obligations to Gow, who had been always very friendly to him, was easily persuaded, without the knowledge of his parents, to accept the offer, and accordingly joined Colonel Campbell's regiment. He continued in this situation some time, during which he went to Aberdeen, where he taught singing in most of the principal families, and saved sufficient money to pay one hundred pounds for his discharge, and to procure a substitute. This enabled him to visit London, where he remained some time, and then again returned to Aberdeen. His friends, however, being convinced that his musical abilities, if known, would procure him an engagement in a London theatre, induced him to revisit the metropolis, and try his success on the stage, which he consented to do; and at a benefit about to take place at the Haymarket Theatre, he was announced for the part of Cheerly, in "Lock and Key," as a young gentleman, being his first appearance. His flattering reception induced him to decline the acceptance of an ensign's commission, that was at this time presented to him; and on being introduced to T. Welsh, he was immediately taken by that gentleman as a pupil for three years, and on singing to Mr. Harris, was engaged by him at Covent Garden Theatre for five years, which engagement was afterwards lengthened to seven, T. Welsh sharing his salary, benefits, &c., during the time he remained under his tuition. His *début* at Covent Garden was in the character of Don Carlos, in the "Duenna." Sinclair married, in 1816, the daughter of Captain Norton, who fell in Egypt, under Sir Ralph Abercrombie, a young lady to whom he had been secretly attached; the marriage took place in Edinburgh, without the consent of her mother; but a reconciliation was brought about immediately after the ceremony, through the intervention of friends. His engagement with Mr. Harris having terminated in July, 1818, and his fortune being sufficient without the aid of the theatre, Sinclair now resolved to fulfil the desire he had always entertained of visiting Italy, for the purpose of hearing the best music, and of studying under the first Italian masters; he consequently declined any offer that was made to him of renewing his engagement at Covent Garden, and passed the remainder of the year, and part of the following, in fulfilling engagements he had contracted in the north, and in county towns in England.

At length he quitted England in April, 1819, for Paris, where he received instructions for some time from the celebrated Pellegrini, of the Italian opera there. He then went to Milan, where he put himself under Banderani, one of the masters of the Conservatory, which he likewise frequently attended, for the purpose of studying their method of teaching, &c. Not having originally intended singing on the continent, he refused an engagement which was offered him at Milan, and determined, before appearing in an Italian theatre, to hear and study the style of every principal singer in Italy; which he at length accomplished, by visiting every town where any celebrated opera was performing, or singer engaged. In May, 1821, he went to Naples, where he sang to Rossini, and, by his request, to th

manager of San Carlo, who immediately proposed an engagement to him, on terms which were accepted; when a sudden stop was put to all negotiations between them, in consequence of the revolution, which so greatly involved the manager, (by removing his gaming tables, the great source of his profit,) that he declined continuing the management of the theatre, and quitted Naples. Sinclair now availed himself of offers he received from the north of Italy, and left Naples, though not until he had greatly profited by Rossini's advice and instructions. At the carnival of 1821 he was engaged at Pisa, where he previously sang with great *clat* at the court of the Grand Duke of Tuscany, who liberally rewarded him. The following spring he sang at Bologna, where he was voted member of the Philharmonic Academy; a distinction considered as highly honorable, and but rarely granted. From thence he was engaged at Modena, and the following autumn at Florence. At Venice, in the carnival 1822-1823, he likewise profited by Rossini's assistance, and had the advantage of having an opera written for him by that celebrated master; he had there also the honor of singing at the grand concert given to the Emperors of Russia and Austria. In the spring of 1823 he was engaged at Genoa, on account of the King of Sardinia's visit to that town, who sent for him to sing at his palace, and greatly distinguished him. It was here that he terminated his theatrical career in Italy, declining, amongst many other offers, a most advantageous one to return to Naples, and likewise one from Vienna, by the then re-established manager of San Carlo. He at last, after repeated invitations, concluded, in December, 1824, an engagement with Mr. C. Kemble, for the season, for fifty nights. Sinclair came to America about the year 1830, and sang for some time in concerts.

SINFONIA, or SINF. (I.) Symphony. See that word.

SINFONIA DA CAMERA. (I.) An appellation given by the Italians to symphonies composed for chamber use, as quartets, trios, &c.

SINGHIOZZANDO. (I.) Sobbingly.

SINGING. The art of producing with the voice the sounds of any melody, together with the words to which that melody is set. To perform this with justness and felicity of effect, a fine voice, sensible ear, good natural taste, and considerable knowledge in the science of music, are indispensable requisites. From the voice itself, all must be drawn, in respect of sweetness, power, and modulation, of which by practice it is capable, while judgment, sense, and feeling dictate the graces, accent, and expression.

Singing is first mentioned in the history of Jacob; it is also mentioned in almost every book of the Old and New Testament, and sometimes in every chapter for a considerable space together. Singing has always been a part of divine worship by heathens, Jews, and Christians. The gospel not only authorizes it by example, but expressly enjoins it. Singing was by the early Christians usually performed in a standing posture. The Jewish hymns were accompanied with various musical instruments, to assist the voices of the Levites.

SINGING BOYS. An old, familiar appellation, sometimes applied to the young gentlemen of the choir of the King's Chapel, Westminster Abbey, St. Paul's, and other cathedrals in England.

SINGING MEN. The appellation formerly given by the common people to the gentlemen of cathedral choirs in England.

SINGSTIMMEN. (G.) Tho voices, the vocal parts.

SINISTRÆ. (L.) The name by which the Romans distinguished their left-handed flutes. Those made for the right hand were called *dextræ*.

SINO, or SIN'. (I.) As far as; as, *con fuoco sin' al fine*, with spirit to the end.

SI PIACE. (I.) If you please. An expression signifying that the passage or movement, over which it is written, may be sung or played in the performer's own style, or even omitted, if his pleasure direct.

SI RIPLICA. (I.) An expression implying that the passage or strain over which it is written is to be repeated.

SIRMEN, LUDOVICO. Chapel-master at Bergamo. Six violin trios of his composition were published at Paris in 1769.

SIRMEN, MADDALENA LOMBARDINI, a celebrated female singer, violinist, and composer, received her first musical instruction at the Conservatory of the Mendicanti, at Venice. She then took lessons on the violin from Tartini, till, by her performance, she was able to rival Nardini. In 1782 she was principal singer at the court of Dresden, and before that period had visited England and Paris, where her performances were highly applauded. She composed much violin music, a great part of which was published at Amsterdam.

SISTRA. (L. pl.) Instruments of brass, about eighteen inches long, to be held upright and shaken, the rings moving to and fro upon the bars. These were made in all shapes, and some to resemble snakes.

SISTRUM. This was a rod of iron, bent into an oval or oblong shape, or square at two corners and curved at the others, and furnished with a number of movable rings; so that, when shaken, or struck with another rod of iron, it emitted the sound desired. Some of these instruments were in the shape of a shoulder belt, with brass wires across, which played in holes, wherein they were stopped by their flat heads. They were played on by shaking in cadence, and thereby the brass wires made a shrill and loud noise. The Eastern instruments named the *diff*, and our tambourines, are instruments similar to the *sistra*. There was also an ancient stringed instrument of percussion, known by the names *sistrum*, *cistrum*, and *citron*. This instrument was of Egyptian invention, and was much used by the priests of Isis and Osiris in sacrifice. The *cistrum* is described by musical writers as of an oval form. Three sticks, obliquely traversing the instrument, were agitated by a motion given to the whole, and the strings struck by these produced a melodious sound. Oiselius and other

authors observe, that the representation of the *cistrum* is found on ancient medals and on talismans. Osiris is sometimes pictured on them with a dog's head, and a *cistrum* in his hand.

SI TACE. (I.) Be silent.

SIXTEENTH. The replicate of the ninth; an interval consisting of two octaves and a second.

SIXTH. An interval of five diatonic degrees. There are four kinds of sixths, two consonant, and two dissonant. The consonant sixths are, first, the *minor sixth*, composed of three tones and two semitones major; secondly, the *major sixth*, composed of four tones and a major semitone. The dissonant sixths are, first, the *diminished sixth*, composed of two tones and three major semitones; secondly, the *superfluous sixth*, composed of four tones, a major semitone, and a minor semitone.

SKENE MANUSCRIPT. This manuscript existed during the reign of James VI., and is supposed to have been noted in great part between 1615 and 1620; and while no part of it is likely to be more recent than this latter date, there is every reason to believe that one portion of it was committed to writing before 1615, and probably about the commencement of the seventeenth century. It belonged to, if it was not actually noted by, John Skene, of Hallyards, a principal clerk of the Court of Sessions in Scotland, who died in 1644. It contained, in all, one hundred and five tunes, of which the greater part were certainly Scottish, and some of them familiar, such as "The Flowers of the Forest," a number of dancing airs, &c. The airs were noted for the *mauldour*, a five-stringed instrument, of the lute class, then fashionable; and the peculiarity of the mode of notation, which is totally different from that of modern times, for a long while interposed a formidable difficulty to deciphering the musical contents of the manuscript. That difficulty was subsequently overcome, and the airs reduced to ordinary notation, by Mr. G. J. Graham. Although the airs in the Skene Manuscript cannot be of a later date than about the year 1620, it is impossible to say how much earlier many of them were composed; for it is natural to suppose that the collector, in forming an anthology of Scottish airs, would not confine himself to the airs then current, but would select the best from the whole range of existing tunes, including those which, even at that time, were entitled to the name of old airs. The oldest collection of Scotch airs we know in a printed form is Thompson's "*Orpheus Caledonius*," the first volume of which appeared in 1725, and the second in 1733. The Skene collection is about a hundred years older than any published. Several Scotch tunes were known in England—witness Iago's "Tak' yer auld cloak about ye," in Othello, and others which had found their way into printed collections before the publication of the "Orpheus;" and Gay introduced some of these Scotch airs into the "Beggar's Opera." The next ancient Scotch manuscript is "Ane Playing Booke for the Lute, wherein are contained many currents, and other musical things. *Musica mentis medicina maeste.* At Aberdeen, noted and collected by Robert Gordon, in the year of our Lord 1627, in February." Two

Scotch compositions, bearing the dates of 1503 and 1507, were discovered in 1839, recorded in the register of Burgh Sasines for the city of Aberdeen; and nearly fifty of the popular melodies of Scotland, noted in the same tablature as those of the Skene Manuscript, were discovered in the midst of a little volume of very closely written notes of sermons, preached by the covenanting minister, James Guthrie, who was executed in 1661, for declining the jurisdiction of the king and council.

SKIP. A term applied to any transition exceeding that of a whole tone.

SKIPPING NOTES. Notes which do not proceed by conjoint degrees, nor in any regular course, but which lie at awkward and unexpected distances from each other.

SLANTANDO. (I.) The abbreviation of *si lentando*, it slackens; or the time of the passage decreases.

SLIDE. The German slide consists of two *appoggiaturas*, moving by regular degrees to the principal note, thus:—

SLUR. A character consisting of a curvilinear line, drawn over or under the heads of those notes which are meant, in performance, to be blended by a kind of smooth, gliding progression. It shows what number of notes are to be sung to one syllable, thus:—

SLURRED. Notes or passages performed in a smooth and gliding manner are said to be *slurred*.

SLURRING. Performing in a smooth, gliding style.

SMANIOSO. (I.) With fury.

SMORFIOSO. (I.) In an affected manner.

SIVORI, CAMILLO, was born in Genoa, June 6, 1817. The same place also had the honor of giving birth to the great Paganini, whose mantle, many think, has fallen on the shoulders of Sivori. It is a somewhat remarkable circumstance, and one which may please the curious in such matters, that the birth of the young artist was somewhat hastened by the peculiar and wonderful strains of Paganini's violin; for on the night he was born his mother attended a concert given by the great maestro at the Teatro Santo Agostino, in Genoa. He had hardly reached the age of eighteen months before he gave evidence, almost miraculous, of that innate propensity for music which in after life raised him to such fame. At this early age he began to fiddle on two sticks, using one as the bow, and the other as the violin, at the same time humming over such "glimpses of music" as came into his mind. We are well assured that before

two years had passed over the youthful Camillo's head, hearing some music from a cavalcade which was passing by, he rushed from the house, and followed them several miles to their place of destination. The nurse soon missed the little runaway, and ran all over the village in a state of distraction, seeking for him every where, and not finding him until he returned with the cavalcade in the evening. At two years of age he was taken from his nurse into his father's family, and even at that age cried for a violin. He teased his father so much, that a violin was purchased for him; and at three years old he began to apply himself to the instrument with all the eagerness and will to learn, of one of riper years. At the age of four years he could perform every thing he heard his sisters play or sing. The report of his previous skill spread over Genoa, and the youthful artist was invited every where. The highest nobility in the city had him at their *soirées*. Even the king and queen dowager, hearing of the wonders of the child, often invited him to the palace, and made him many presents. He would never go to church, or any other place of public resort, unless there was music on the occasion; and if there was, no power hardly could prevent him from visiting such places. When he was six years old a new era in his existence, and a new phase in his fortunes, took place. Paganini arrived in his native city, and hearing the marvellous accounts of young Sivori, wrote to his father, and requested him to bring his wonderful boy. Camillo was soon ushered into the presence of the great maestro, and requested to play. He did so, and Paganini immediately became interested in the youthful artist, and took him under his tuition. In less than two months he made such advances in his practice and studies under Paganini, that he played concertos in public written expressly for him by his great instructor, together with six short sonatas. All these pieces, written in Paganini's own hand, he has preserved, and continually carries them with him wherever he goes. Averse as Paganini was to give instruction to any one, however great the reward offered for such services might be, still he took a great interest in Camillo, and seemed to love to be with him. Six months after this, Paganini left his native city, and anxiously besought Sivori's father to let him take Camillo with him. But the father, knowing what a capricious and eccentric character Paganini was, refused to part with his child, and intrust him to the charge of such a man. Paganini then advised his father to place young Camillo under Costa, who had instructed the great artist in his first studies. He was thus placed, and during three years Costa kept him almost entirely to the music of Corelli, Tartini, Paganini, and Viotti. When Paganini returned to Genoa he was enchanted with the improvement young Camillo had made, and advised his father what course to pursue with him. He was then placed under other masters.

His father was now desirous that his son should make a tour in France and England. And in the year 1829, when he was but ten years of age, he started on his journey, accompanied by M. Dellepiane, his second master, an intimate friend of Paganini. At Paris he played twice at the Conservatoire, where he obtained such applause and success as never fell to the lot of any

other youthful artist. From this time he continued to improve upon his favorite instrument, and to astonish the people wherever he went. The first time he played in London was on the occasion of Madame Pasta's benefit at Her Majesty's Theatre; and subsequently he gave free concerts on his own account. Every night during his stay in London, he was engaged at *soirées*, and his reception every where was most enthusiastic. From London he returned to Paris, where he continued his studies nearly a year, and thence proceeded to Havre, Rouen, Amiens, Lille, &c. After an absence of eighteen months he returned home to Genoa. He now applied himself closely to the study of counterpoint under Serra, an ingenious composer after the manner of Mozart, though but little known as yet beyond the native walls of Genoa. His instructions in harmony were rigorous and inflexible. The young artist studied under him for eight years. When Paganini returned from France and England, young Camillo frequently called upon him to hear him play, and ask his advice. And although the great violinist was at this time most grievously indisposed, yet he neither refused his assent unto nor withheld his playing from his young friend. We have not room to follow this young artist through all his brilliant career. Suffice it to say that he visited all the great cities of Europe, and was every where victorious, sweeping all before him, and creating a great *furor* in all the audiences that heard him play.

His ear became so refined and sensitive that he grew dissatisfied with his violin, although it was the best he could procure, and was manufactured by Andrew Guarnerius. He requested his father to write to Paganini for one of his violins, and offer him any price for it. His father did write, and the great master sent back word that he would not sell him one, but make him a present of one. In 1840 Sivori travelled to Nice on purpose to receive the violin from the hands of his former master. He found Paganini in a most deplorable situation, hardly able to utter a word distinctly; and yet in this fearful state he signified his wish to hear his pupil play. He did play, in a room adjacent to that in which the sick artist lay, and performed whatever he called for. Paganini complimented him highly, gave him his violin, and said, "You will be the only survivor of my manner. Go to Paris—study there—there all artists beget their reputations." In six days Sivori was obliged to leave his sick friend, and in a few weeks he received a letter informing him that Paganini was no more. The violin which Sivori now uses is the one he received from the hands of his dying friend and master. Sivori's concert tour in America, in 1846, (part of the time in company with Herz, the pianist,) is fresh in the memory of music lovers. Since that time he has been a distinguished ornament of all the principal classical concerts in London, besides having made several brilliant concert tours upon the continent.

In person Sivori is quite below the ordinary stature, measuring but little if any over five feet, slenderly formed, very expressive dark eyes, high but not broad forehead, the perceptive organs well developed. In manners he is very modest and unassuming, apparently not wishing to pass himself off upon the public for more than he is worth.

SMART, SIR GEORGE. This eminent professor and orchestra conductor was the son of a proprietor of a music warehouse in London. At the oratorios for some years past, at several of the first London concerts, and at the great provincial meetings, his high talent as conductor has conciliated all opinions. As a teacher, also, of the piano-forte and singing, he was very deservedly placed in the front rank of the profession. He has risen into estimation, indeed, by a combination of qualities not often to be found in the same individual, namely, by extreme correctness and skill in his instrumental performance, by a general acquaintance with the details of musical business, by unassuming and gentlemanly manners, and by integrity and liberality of conduct. Probably from Sir G. Smart's numerous professional avocations, he has given but few of his compositions to the public. The few that are known are highly creditable to his talents as a contrapuntist.

SMART, HENRY, brother to the preceding, began his musical education, and studied the violin under the celebrated Cramer, and in the early part of his life played in the orchestras of the Italian Opera, the Haymarket Theatre, and the Concert of Ancient Music, where we believe he occupied the stand of the principal viola. About the year 1803 he retired from the musical profession, and, in conjunction with his father, became the proprietor of a brewery. The concern, however, did not answer his expectations, and he again resumed his original occupation. He was employed with his brother, Sir George Smart, in teaching, and assisted in several schools, where his ability and attention were highly esteemed. His character, however, as a violinist, induced Mr. Arnold to engage Smart at the opening of the English Opera House, as leader of the band, where he remained during many seasons. He was then retained at Drury Lane in a similar capacity. He continued to lead the Drury Lane band till 1821. He has also led the oratorios since the management was undertaken by his brother in 1813. It was his peculiar pride to have formed the Drury Lane band entirely of English professors; and so justly did they estimate his character and services that a cup was presented to him, to record his merits and their gratitude. He died of a typhus fever at Dublin, in November, 1823, aged forty-five. He was a member of the Philharmonic Concert, which he led in turn. Nor were his merits known only in the metropolis. He had assisted at many provincial meetings, where his talents and his urbanity were alike conspicuous, and gained the universal esteem. About 1821 he set up a manufactory of piano-fortes upon a peculiar structure, and he obtained a patent for an improvement of great importance in the touch of these instruments.

SMITH, JOHN CHRISTOPHER, an English musician and composer, was conductor of several grand concerts in London, between the years 1732 and 1768. His talents were principally formed under the direction of Handel, several of whose oratorios he produced; amongst others, he gave eight performances of Handel's "Samson," from the year 1760 to 1768. Amongst his own compositions may be named "Teraminta," an opera, 1732; "Rosalinda," an opera, 1739;

"Lamentation of David on the Death of Saul and Jonathan," an oratorio, 1766; and "Six Sets of Harpsichord Lessons."

SMITH, ROBERT, professor at Trinity College, Cambridge, published, in 1749, "Harmonics, or the Philosophy of Sounds." A second edition of this work appeared in 1760.

SMITH, JOHN STAFFORD, was born at Gloucester about the year 1750, where his father, who initiated him in music, was organist of the cathedral. Young Smith went to London early in life, and was placed under Dr. Boyce, to finish his musical education. From the excellence of his boy's voice, he obtained the situation of chorister of the Chapel Royal; and was, after some years, chosen one of the organists of that chapel. Whilst yet a youth, he gave strong indications of genius in composition, and gained a prize medal given by the Noblemen's Catch Club, for the best glee. Amongst his most admired works are the following: "Whilst fools their time," glee, four voices; "Return, blest days," glee, four voices; "Blest pair of sirens," glee, five voices; and "When to the Muses." He also published "A Collection of Songs of various kinds, and for different Voices, with the Music," folio, 1785, and "Musica Antiqua, a Selection of Music from the Twelfth to the Eighteenth Century," two volumes, folio, 1812.

SMITH, CHARLES, was born in London in 1786: his father, Mr. Felton Smith, was brought up in the choir of Christchurch, Oxford, and displayed much musical talent, but on leaving college declined making it his profession. At the early age of four years Charles Smith evinced a great genius for music, both vocal and instrumental, playing at that age, on the piano-forte, any tune he had heard, and singing several of Dibdin's favorite songs with the greatest truth and correctness, though he could not speak the words plainly. The premature genius he thus displayed induced his parents to give him a master, and before he was five years old he was put under the care of Costellow, with whom he made a most rapid progress: before he even attained the age of six he composed a little air, to which his mother wrote the words; this, with some of Dr. Arne's beautiful airs, he used to sing, accompanying himself on the piano-forte, to the astonishment of all who heard him. At the age of eight, his mother requested the advice of Dr. Arnold, concerning his future destination, when the doctor, with great promptitude and kindness, immediately called at the house of his parents to hear him. The child played a very difficult sonata of Clementi's, at which performance the doctor expressed himself highly gratified, and requested a specimen of his vocal talents; he then sang, accompanying himself, "Henry's Cottage Maid," and "In infancy." The doctor was delighted at this last trial; but when he saw little Smith put "The soldier tired" upon his desk, he laughed, and said, "My dear, you are a clever little fellow, but I hope you are not going to attempt that song." He replied, "Yes, sir, if you please, I'll try it; but I only bought it yesterday, so I fear I shall not sing it very well." He, however, executed the air, and accompanied himself in a style which the doctor said he could have had no conception of; not supposing

it possible that a child of that age could have breath sufficient to go through the running passages. The doctor then told his parents that he was certainly a native genius; that it would be a sin to rob the profession of him; that he had every requisite to make a fine singer; but as the voice of a boy was very precarious, he advised them not to depend upon that, but recommended his being put into the Chapel Royal, where he would be well grounded in the theory of music, &c. The doctor's advice was taken, and soon after he was introduced to Dr. Ayrton, the master of the boys, who, being highly delighted with the child, introduced him as a chorister on the first vacancy, which did not happen till the year 1796. In the summer of that year the princess royal was married, and though young Smith had only been a few months in the school, he was selected to sing a principal part in the marriage anthem; in performing which he pleased Dr. Ayrton so much, that he gave him a silver coin. The doctor's great age and infirmities prevented his paying that attention which his parents thought so promising a child required, and the other branches of his education not being so well attended to as they wished, induced them, in the year 1798, to take him out of the school, and introduce him to J. Ashley, who, for Handel's music and ballads, was considered one of the first masters of his day. Mr. Ashley saw the youth's merits, and eagerly accepted him as an articulated pupil. In 1799 he began to sing in private parties, and in the year 1800 he came forward at the oratorios and vocal concerts at Ranelagh, &c. After being heard at these places, he was eagerly engaged at all the private concerts, ladies' glee concerts, and all the country music meetings, city balls, dinners, suppers, &c. He was also a regular attendant of the Prince's Harmonic Club, held for several seasons at the Thatched House tavern, and often had the honor to join in glees and sing duets with the king, whose fine voice, taste, and skill in the science were well known. He was also a regular attendant at the Royal Kentish Bowmen's Lodge, in Kent, where concerts were given to the ladies who graced the lodge with their presence. Here Smith used to be greatly caressed by the Duchesses of Devonshire and Gordon, Mrs. Crew, and other ladies of high rank and fashion, whose parties in town he constantly attended, when there was no regular concert; for as, when only thirteen, he played concertos and accompanied himself finely, many parties preferred his single performance to a regular concert. At sixteen, Smith was liberated from the control of Mr. Ashley, and continued his vocal career without any interval of leisure, having sometimes three engagements of a night, till the year 1803; in the summer of which he went with a party to Edinburgh and Glasgow, to perform glee concerts, and at both places met with much encouragement. In the month of September he returned to town. He had then completed his seventeenth year, and Mr. Ashley, on hearing him, found his voice beginning to be unsteady, on which he advised him to sing soprano no more; in consequence of which he retired, and applied himself to study the theory of music, the practice of the organ, and to teaching, of which he had soon a great share. He had very early become a proficient on the organ and now often officiated for Mr. Kuy-

vett and Mr. Stafford Smith, at the Chapel Royal. When he was about eighteen, he became Mr. Bartleman's deputy at Croydon Church, and on that gentleman's resignation he was elected organist there. To his skill on this instrument Dr. Crotch and Charles Wesley have often borne testimony. During this time, Smith's talent for composition had not lain dormant: he composed several songs for bass and tenor voices, which were sung by T. Welsh and himself (for his voice was now sunk to a tenor) with great applause; also several ballads, which were sung by Miss Bolton, and other professional persons. When near twenty, Smith was solicited by a theatrical performer to accompany her and her husband to Ireland, where she was going to sing and give recitations. Much against the inclination of his parents, he acceded to her proposal, and joined the party; he returned at the stated period, but his mind, in consequence of some connections he had formed there, had become unsettled, and in a few weeks he returned back to Dublin, where he remained ten months, and then rejoined his family in London: he was soon reinstated in his business, and was appointed organist of Welbeck Chapel, on the resignation of Mr. Charles Wesley. He now, in conjunction with J. Pocock, began to write for the theatres; and in 1809 composed the music to a farce called "Yes or No," which had a great run. Some time after this he undertook the whole of the music to a melodrama called "The Tourist Friend;" this was succeeded by "Hit or Miss," which had an astonishing run, as had also "Any Thing New." He wrote, also, two songs in "How to die for Love." Soon after this, Mr. Pocock, on some difference with the managers, left Drury Lane, and wrote for Covent Garden, to which house Mr. Bishop was appointed composer. C. Smith, not wishing to write with any other writer, then gave up his theatrical pursuits entirely. His voice at this period was settled to a bass; and in 1813, he appeared at the oratorios, and was received with great applause. He continued singing in public during three seasons. In 1815 he married Miss Booth, of Norwich, a young lady justly celebrated for her musical talents, and whose exertions in her profession were of the most essential service to him. The following year, having the offer of a very lucrative situation in Liverpool, where he had sung the year before, and made some valuable connections, he accepted it, and the success, from his very first year, exceeded his most sanguine hopes. During his residence in Liverpool, Smith composed much music for the piano, and some sweet ballads, published by Power in the Strand. "The Baby Boy," and "Far o'er the sea," both sung by Mrs. Salmon with the most unbounded applause, established his fame as a ballad writer; but his best composition was "The Battle of Hohenlinden."

SMORZANDO, or SMORZATO, or SMORZ. (I.) An expression implying that the sounds of the passage over which it is placed are to be gradually diminished, in the *legato* manner.

SNEGASIUS, CYRIACUS, published, at Oxford, in 1590, a tract upon harmonics, or the use of the monochord, an instrument for measuring and ascertaining the proportions of sounds by a single string, of which he ascribes the inven-

tion to the Arabians: this is the only new idea Dr. Burney could find in this book, of which the original title is, "*Nova et Exquisita Monochordi Dimensio*." The same author published likewise, in 1590, an elementary tract, entitled "*Isagoges Musicae*," in two books, the chief merit of which seems brevity; consisting of little more than definitions of musical terms, with short examples in notation.

SOAVE. (I.) A word implying that the movement to which it is prefixed is to be performed in a soft, sweet, and engaging style. See **DOLCE**.

SODI, a Parisian harpist and dramatic composer, brought out several operettas at the Théâtre Italienne, between the years 1753 and 1760.

SOECK PIPE. The appellation given by the ancient northern poets to the bagpipe.

SOGETTO. (I.) The theme, or subject. See those words.

SOERENSEN, JOHANN, doctor of medicine at Lobenstein, was born at Holstein in 1767. Early in life he studied music under Gambold and La Trobe; and afterwards at Copenhagen, under J. A. P. Schulz. He published much admired vocal music, in the north of Germany, since the year 1796.

SOL. The fifth of the six syllables invented by Guido, and applied to the notes of his gamut. The natural *sol* answers to the letter G.

SOLA, CHARLES MICHAEL ALEXIS, born at Turin in 1786, was placed at an early age under Pugnani, to learn the theory of music. At the death of that great master, Sola became desirous of devoting his attention to the study of some instruments, without, at the same time, giving up that of counterpoint. He decided on the flute, and accordingly engaged for his masters, first Pipino, and subsequently Vondano, two flutists much distinguished at that period. After making rapid progress on his instrument, he accepted an engagement as flutist, for the term of two years, at the Theatre Royal in Turin. Being then desirous of visiting foreign countries, he entered as a volunteer musician in the third demi-brigade, in which situation he remained nearly four years. He then obtained his discharge, and settled at Geneva, in the family of Madame de Staël, as singing master to her daughter, in which situation he remained nearly four years. At one of the concerts which were periodically given by Madame de Staël, Sola, who was the principal musician, finding that the conversation of the company was so loud that it was impossible for the music to be heard, spoke to his brother musicians, and they accordingly commenced and finished a quartet in four different keys, receiving afterwards the approbation of the company, who had not discovered the circumstance, though one gentleman observed that he could not *understand* the music they were playing. He likewise, during this period, received further instructions in counterpoint from Bideau, (the elder,) formerly violoncellist at the Comédie Italienne, in Paris, and a profound harmonist. In 1816 he wrote a French opera, called "*Le Tribunal*," which was performed at Geneva with great success. In 1817, by the earnest sollicita-

tion of Lady Charlotte Campbell, he went to England, and, remaining in London, made himself known by many very beautiful compositions, both vocal and instrumental, as also several tasteful adaptations. His compositions are quite numerous.

SOLERE, or SOLLER, ETIENNE, a clarinetist at Paris, was born at Mont Louis in 1753. In 1784 he made his *début* at the *Concert Spirituel*. He then became a member of the Chapel Royal, and afterwards professor of his instrument at the Conservatory. He published much music for his instrument. He died in 1817.

SOLFAING. Singing the notes of the scale to the monosyllables applied to them by Guido. See **SOLMIZATION**.

SOLFEGGI. (I. pl.) Exercises for the voice, according to the rules of solmization.

SOLFEGGIARE. (I.) To *solfa*. See **SOLMIZATION**.

SOLFEGGIO. (I.) An exercise for the voice, through all the various intervals, as named in solmization.

SOLFEGGIAMENTI. (I. pl.) Compositions intended as exercises for singing at sight, and of which the syllables *do, re, mi, fa, sol, la, si*, form the subject.

SOLI. (I. pl.) Two or more instruments, playing their respective *parts* singly, are said to perform *sol*. This word, in the *score*, always indicates the composer's design, that the *parts* over which it is written should be performed by single instruments; that is, should not be *doubled*.

SOLIÉ, JEAN PIERRE, a favorite French dramatic composer, was also a singer at the Théâtre Feydeau about the year 1767. He died at Paris, in 1812, aged fifty-six. Amongst his dramatic works we can name the following: "*Jean et Geneviève*," in one act, 1792; "*Le Jockey*," in one act; "*La Soubrette*," in one act; "*Azeline*," in three acts, 1796; "*Le Chapitre Second*," in one act, 1799; "*La Pluie et le beau Temps*," in one act, 1800; "*Lisez l'Intarquet*," in one act, 1801; "*L'Epoux Généreux*," in one act; "*Henriette et Versuil*," in one act; "*L'Incertitude Maternelle*," in one act, 1803; "*Les Deux Oncles*," in one act, 1804; "*Chacun son Tour*," in one act, 1805; "*L'Opéra au Village*," 1807; "*Le Hussard Noir*," in one act; "*Anna*," in one act; "*Mademoiselle de Guise*," in three acts, 1808; and "*Les Ménestrels*," in three acts, 1811.

SOLLECITO. (I.) A word formerly used to signify sometimes a pathetic style of performance, at other times a careful and exact manner.

SOLMIZATION, or SOLFAING. The art of sounding the notes, together with the corresponding syllables, of the gamut. This preparatory exercise, so necessary to sight-singing, and which, by uniting in the mind of the practitioner the ideas of the different syllables with those of the intervals, facilitates the recollection of the several sounds, was of very ancient adoption. Aristides Quintilianus informs us that the Greeks had four syllables, or denominations of notes, which they applied to the sounds of their *tetrachord*, as we assign our *sol, fa*, to those of our

octave. These four syllables were the following: *te, ta, the, tho*. The *te* answered to the first sound, or the *hypate*, of the first tetrachord; the *ta* to the *parhypate*; the *the* to the *lychanos*; and the *tho* to the *nete*; and so on, in replicating the tetrachord.

Guido, having substituted his hexachord in place of the ancient tetrachord, adopted at the same time, for his solmization, six other syllables, — *ut, re, mi, fa, sol, la*, — taken from the hymn of St. John the Baptist.

It appears, however, that the use of these syllables was not quickly adopted, except in Italy, where they were first introduced; and that the syllables, *pro, to, do, no, a*, were, long after, continued to be used in France, though at length those of Guido were received in that as well as in the other countries of Europe.

Of the seven notes in the French scale, only four, for a while, were used by the English, as *mi, fa, sol, la*; but now they, as well as the Italians, employ them all, with the exception of changing *ut* for *do*, as a softer and more vocal syllable. By applying these syllables to the several notes, the practitioner not only utters the sound with more fulness, ease, and freedom, but, by the association of ideas, attains a ready recollection of the places of the tones and semitones, and, by feeling the relation between the syllabic and the musical sounds, acquires the power of expressing them with truth and certainty.

In 1582 six syllables were used in solmization, and at that time *v* was used for *u*; as, *ut, ut*. The syllables were, —

In the application of syllables to the notes, the Americans once used *fa, sol, la, mi*. Guido introduced the following: *ut, re, mi, fa, sol, la*. Hearing the monks, in a church at Rome, sing a hymn in Sapphic verse in honor of St. John, he observed that the first syllable of the first word of each hemistich rose either a tone or semitone higher than the first syllable of the last preceding hemistich, so as to form a complete hexachord, beginning with the tonic and ascending to the ninth. The words of the hymn and the melody, as it was then sung, have been discovered in the library of the Cathedral Church of Sens.

The French retain the original six, with the addition of *si* for the seventh, viz.: *ut, re, mi, fa, sol, la, si*. The Italians, for the sake of a softer pronunciation, have changed the *ut* into *do*, viz.: *do, re, mi, fa, sol, la, si*. C. H. Graun, the celebrated Prussian chapel-master, employed *da, me, ni, po, tu, la, be*; which accustomed the student to sing upon all the vowels, intermixed with the principal consonants. The following exhibits the manner in which the different syllables are applied to notes: —

Guido's system,.....	ut,	ut, re, mi, fa,	sol, la,	ut.
The French,	ut,	ut, re, mi, fa,	sol, la, si,	ut.
The Italian,	do,	do, re, mi, fa,	sol, la, si,	do.
C. H. Graun's }	da,	da, me, ni, po,	tu, la, be,	da.
application, }				
The English,	fa,	fa, sol, la, fa,	sol, la, mi,	fa.

In Guido's system the seventh is left blank, not knowing what syllable was used previous to the application of *si* by the French. In sharpening notes we use the syllables *re* and *si*, which bring the syllables in the chromatic octave as follows: —

SOLMIZATION À LA GREC. A species of solmization formerly practised, in which the old Greek system of tetrachords was adhered to, so far as to use but four characters, which were repeated from tetrachord to tetrachord as we now repeat from octave to octave. The Greek solmization consisted of the four monosyllables, *τα, τη, τω, τε*; and the English, for a long while, used only four of the six syllables of their hexachords — *mi, fa, sol, la*.

SOLNITZ, A G., an instrumental composer of talent at Leyden in 1758, died there, aged thirty-six. Some of his music was published at Amsterdam.

SOLO. (I.) A composition for a single voice or instrument.

SOMIS, LORENZO, chapel-master to the King of Sardinia, was recorded in Italy as an imitator of Corelli, but in a style somewhat modernized, after the model of Vivaldi. He printed at Rome, in 1722, his "*Opera Prima, di Sonate à Violino e Violoncello o Cembalo*," the pieces contained in which are much in Corelli's manner; some of them with double-stopped fugues, like those of his model, and some without. Somis was one of the greatest masters of the violin of his time; but his chief professional honor is the having formed, amongst his scholars, such a performer as Giardini.

SOMMEILS. The name by which the French distinguished the airs in their old serious operas, because they were calculated to tranquillize the feelings, and lull, even to drowsiness.

SONATA. (I.) An instrumental composition, consisting of several movements calculated to display the powers and expression of the instruments for which it is written. The *sonata*, which is designed for a single instrument to each part, is, in instrumental composition, what the cantata is in vocal composition; and varies from the overture and concerto as the trio or quartet differs from the chorus. There are several kinds of sonatas. The Italians, however, reduced them principally to two: the *sonata da camera*, or chamber sonata; and the *sonata da chiesa*, or church sonata.

The *sonata*, in the modern sense, is a composition for piano, organ, or other instrument, usually of three or four distinct movements, each with a unity of its own, yet all related so as to form one varied but consistent whole. It commonly begins with an allegro, sometimes preceded by a slow introduction. Then comes the andante, adagio, or largo; then the lively and playful minuet and trio, or scherzo; and lastly the finale, in quick time. The sonata form is common also to the symphony, and the trio, quartet, quintet, &c., for string instruments.

SONATINA. (I.) A short sonata. The diminutive of that term.

SONG. A short lyric poem set to music. In poetry, a little composition, consisting of easy and natural verses, set to a tune in order to be sung. Song, in music, is applied in general to a single piece of music, whether contrived for the voice or an instrument. The use of *songs* seems to be a natural consequence from that of words, and, in effect, is scarcely less general. The ancients had the art of singing before they had that of writing; and their laws, as well as their histories, were sung long before they were inscribed. All lyric poetry, properly speaking, consists of songs: but we only treat of that which more commonly bears this name, and which, as far as concerns the ancient songs, will lead us to some curious particulars.

To begin with the songs of the table. In the most remote times of Greece, all the guests, according to Diæarchus, Plutarch, and Artemon, sang together, and in the same strain, the praises of the Divinity. Hence these songs were real pæans, or sacred canticles. The guests afterwards sang successively, each in his turn holding a branch of myrtle, which passed from the hand of him who had sung to him who was to sing next.

At length, when music was improved and the lyre was used in feasts, only the ingenious and scientific were qualified to sing at table, at least to the accompaniment of the lyre. The others, obliged to sing unaccompanied and to confine themselves to the branch of myrtle, gave birth to a Greek proverb, by which they said of a man, when they would tax him with ignorance, that he sang with the myrtle.

The subjects of the *scotia*, or songs sung to the lyre, were not only drawn from love and wine, like the modern festive songs, but from history, war, and even morality.

The Greeks had also songs proper to the different professions; such as the song of the shepherds, the song of the reapers, the song of the millers, the song of the weavers, the song of the wool carders, the song of the nurses, the song of the lovers, the song of the ladies, and the song of the young girls.

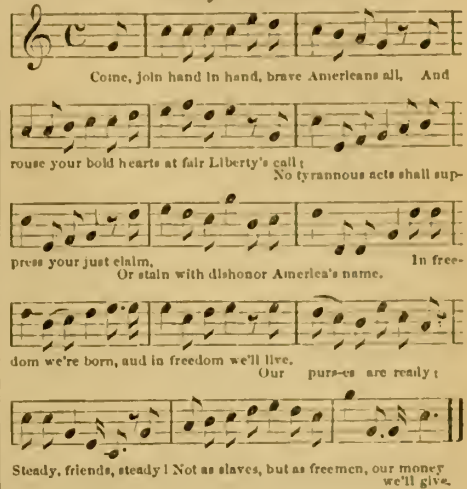

They had also a marriage song, called "*Hymeneæ*;" the song "*Datis*," for merry occasions; for lamentation, "*Jaleme*;" and "*Linos*" for funerals. Lastly, there were also hymns or songs in honor of the gods and heroes. This genus passed from the Greeks to the Romans; and several of the odes of Horace are amatory, others bacchanalian. The ecclesiastics among our Saxon ancestors had a particular song, psalm, or hymn for each of the canonical hours; as daybreak song, matin song; third song, or song for the third hour of the day; midday song; song for the ninth hour; evening song, or vespers; and midnight song. The moderns have also their songs of different kinds, according to the taste and genius of each country; but the Italians, English, and French are most celebrated in this species of composition. The genuine Scotch and Irish songs have, however, the merit of an originality of character, and possess an exclusive sweetness, which has always delighted the ears of every nation.

Our own country has, as yet, little to boast of in the way of national melodies. Yet the American revolution lends a lasting interest to a few patriotic songs, which sprang into existence

during that memorable struggle. We subjoin the words and tunes of a few of these, with some account of the origin of each.

THE LIBERTY SONG,

Copied from an Almanac published at Boston in the year 1769.

Come, join hand in hand, brave Americans all, And
rouse your bold hearts at fair Liberty's call; No tyrannous acts shall sup-
press your just claim, Or stain with dishonor America's name. In free-
dom we're born, and in freedom we'll live, Our purses are ready!
Steady, friends, steady! Not as slaves, but as freemen, our money we'll give.

1. Come, join hand in hand, brave Americans all,
And rouse your bold hearts at fair Liberty's call;
No tyrannous acts shall suppress your just claim,
Or stain with dishonor America's name.

CHORUS.

In freedom we're born, and in freedom we'll live!
Our purses are ready!
Steady, friends, steady!
Not as slaves, but as freemen, our money we'll give.

2. Our worthy forefathers — let's give them a cheer —
To eliminate unknown did courageously steer;
Through oceans to deserts for freedom they came,
And, dying, bequeathed us their freedom and fame.
In freedom we're born, &c.

3. Their generous bosoms all dangers despised,
So highly, so wisely, their birthrights they prized;
We'll keep what they gave, we will plous'r keep,
Nor frustrate their toils on the land and the deep.
In freedom we're born, &c.

4. The tree their own hands had to Liberty reared
They lived to behold growing strong and revered;
With transport they cried, "Now our wishes we gain,
For our children shall gather the fruits of our pain."
In freedom we're born, &c.

5. Swarms of placenten and pensioners soon will appear,
Like locusts, deforming the charms of the year;
Suns vainly will rise, showers vainly descend,
If we are to drudge for what others shall spend.
In freedom we're born, &c.

6. Then join hand in hand, brave Americans all;
By uniting, we stand; by dividing, we fall;
In so righteous a cause let us hope to succeed,
For Heaven approves of each generous deed.
In freedom we're born, &c.

7. All ages shall speak with amazement and applause
Of the courage we'll show in support of our laws;
To die we can bear — but to serve we disdain;
For shame is to freemen more dreadful than pain.
In freedom we're born, &c.

8. This bumper I crown for n'r sovereign's health,
And this for Britannia's glory and wealth;
That wealth and that glory immortal may be,
If she is but just, and if we are but free.
In freedom we're born, and in freedom we'll live!
Our purses are ready!
Steady, friends, steady!
Not as slaves, but as freemen, our money we'll give.

The "Song of Liberty" was written by Mrs Mercy Warren, wife of General James Warren, of Plymouth, Mass., and is the first native composition set to music and published that we have seen in this country. It was very popular

throughout the colonies. Mrs. Warren also wrote several political pieces before the revolution, and afterwards a very interesting history of the principal events of the war. She died at Plymouth in 1814. In 1770 a *new version* of this song was published in Bickerstaff's Almanac. The old music was retained; but the words were new, and the title of the song changed to "The Massachusetts Song of Liberty." The new song commenced with this verse:—

Come, swallow your humpers, ye Tories, and roar,
That the sons of fair freedom are hampered once more;
But know that no cut-throats our spirits can tame,
For a host of oppressors shall smother the flame.

In freedom we're born, and, like sons of the brave,
Will never surrender,
But swear to defend her;
And scorn to survive, if unable to save.

In 1755 simultaneous attacks were made upon the French posts in America. That against Fort Duquesne (the present site of Pittsburg) was conducted by General Braddock; and those against Niagara and Frontenac, by Governor Shirley, of Massachusetts, and General Johnson, of New York. The army of Shirley and Johnson, during the summer of 1755, lay on the eastern bank of the Hudson, a little south of the city of Albany. In the early part of June the troops of the eastern provinces began to pour in, company after company; and such a motley assembly of

The joke took, to the no small amusement of the British. Brother Jonathan exclaimed it was 'nation fine, and in a few days nothing was heard in the provincial camp but the air of Yankee Doodle. Little did the author, in his composition, then suppose that an air made for the purpose of levity and ridicule should be marked for such high destinies. In twenty years from that time the national march inspired the heroes of Bunker's Hill, and, in less than thirty, Lord Cornwallis and his army marched into the American lines to the tune of Yankee Doodle.

This tune, however, was not original with Dr. Shæckburg. He made it from an old song which can be traced back to the reign of Charles I.; a song which has in its day been used for a great variety of words. One of these songs, written in ridicule of the Protector, began with this line—"The Roundheads and the Cavaliers." Another set of words to the same tune was entitled Nankee Doodle, and ran thus:—

"Nankee Doodle came to town
Upon a little pony,
With a feather in his hat,
Upon a macaroni."

The first American parody upon the original which we have seen was entitled Lydia Fisher. An aged and respectable lady, born in New England, says she remembers it well, and that it was a common song long before the revolution. It was also a favorite New England jig. Before the war it was customary to sing the tune with various impromptu verses, such as,—

"Lydia Locket lost her pocket,
Lydia Fisher found it;
Not a bit of money in it,
Only binding round it."

Perhaps there may be something in this, for within our recollection the "gals and boys" of Massachusetts had something like it in their

men never before thronged together on such an occasion, unless an example may be found in the ragged regiment of Sir John Falstaff. It would have relaxed the gravity of an anchorite to have seen the descendants of the Puritans marching through the streets of that ancient city, (Albany,) and taking their situations to the left of the British army, some with long coats, some with short coats, and others with no coats at all, with colors as varied as the rainbow; some with their hair cropped like the army of Cromwell, and others with wigs, the locks of which floated with grace around their shoulders. Their march, their accoutrements, and the whole arrangements of the troops furnished matter of amusement to the rest of the British army. The music played the airs of two centuries ago; and the *tout ensemble*, upon the whole, exhibited a sight to the wondering strangers to which they had been unaccustomed. Among the club of wits that belonged to the British army there was a Dr. Shæckburg, attached to the staff, who combined with the science of a surgeon the skill and talents of a musician. To please the new comers he composed a tune, and with much gravity recommended it to the officers as one of the most celebrated airs of martial music. It was this:—

sports. But our version is a little different from the old lady's, and runs thus:—

"Lucy Locket lost her pocket
In a rainy shower;
Philip Carteret he ran arter it,
And found it in an hour."

At a later period the Tories had a song commencing, —

"Yankee Doodle came to town
For to buy a firelock;
We will tar and feather him,
And so we will John Hancock."

This version has a very strong resemblance to the original—the first line being the same, with the exception of the N, for which the Y is substituted. The occurrence of the word *feather* in the third line is no less remarkable. A long string of similar verses is known to exist, which were supposed to allude to the coming of Oliver Cromwell (on a small horse) into Oxford, with his single plume, which he wore fastened in a sort of knot, which the adherents of the royal party called "a macaroni" out of derision. What renders the history of this tune the more remarkable is, that to this very day the words of "Lydia Locket," alias "Lucy Locket," are sung to it by school children.

The tune is written in the same time, and has the same number of bars, as Yankee Doodle; and from its close resemblance, together with the identity of the words, we have little doubt but that the latter (Yankee Doodle,) was composed as a sort of parody to the more ancient one; and though perhaps first used or adapted as a military air in 1755, as stated above, some other individual than Dr. Shæckburg was the author. The tune as originally written is in the key of C, $\frac{2}{4}$ time, and the notes are very similar in their situation to those in Yankee Doodle. The old tune is this:—

In Poulson's Advertiser we find still another version of this tune, said to be the *original*. We are not prepared to believe the authority so good here, since the notes are represented by letters; and the tune has as much resemblance to Nancy Dawson as it has to Lydia Locket or Yankee Doodle. The letters given by Poulson are, —

which, when reduced to music paper, read, —

The British, preceding the revolutionary war, when disposed to ridicule the simplicity of Yankee manners and hilarity, were accustomed to sing airs or songs set to words invented for the passing occasion, having for their object to satirize and sneer at the New Englanders. It is remembered that the English officers then among us, acting under civil and military appointments, often felt lordly over us colonists, and, by countenancing such slurs, they sometimes expressed their superciliousness. When the battles of Concord and Lexington began the war, the English, when advancing in triumph, played along the road, "God save the King;" but when the Americans had made the retreat so disastrous to the invaders, these then struck up the scouted Yankee Doodle, as if to say, "See what we simple Jonathans can do!"

From that time the tune of intended derision was assumed throughout all the American colonies as the national air of the sons of liberty, even as the Methodists — once reproachfully so called — assumed it as their acceptable appellation. Even the name of "sons of liberty," which was so popular at the outset, was a name adopted from the appellation given us in Parliament, by Colonel Barre, in his speech.

"Adams and Liberty." This was one of the

most popular songs of early revolutionary times. It was written by Robert Treat Paine, of Taunton, Massachusetts; and it was said that he received from its sale the sum of seven hundred and fifty dollars.

To the tune of Yankee Doodle Francis Hopkinson, of Philadelphia, adapted the words of the song known as the "Battle of the Kegs." Mr. H. was a native of Philadelphia, and a signer of the Declaration of Independence. The circumstances upon which he founded this famous battle were these: David Bushnell had invented some articles of submarine machinery, with which he intended to destroy the British vessels stationed in the Delaware. His plans, however, all failed. But in December, 1777, he charged a large number of kegs with powder, and prepared them so that they would explode on coming in contact with the British ships: these were launched at night, but they never reached the intended destination, having been dispersed by the floating ice. They, however, exploded in the vicinity of the enemy, and aroused all the British troops and sailors in the neighborhood, who kept up a continued discharge of cannon and small arms at every object in the river for hours; and this was the "Battle of the Kegs."

"STAR-SPANGLED BANNER."

(As originally written.)

O say, can you see, by the dawn's early light, What so proudly we hail'd at the twilight's last gleaming? Whose broad stripes and bright stars, thro' the

perilous fight, O'er the ramparts we watch'd were so gallantly streaming? And the rocket's red glare, the bombs bursting in air, Gave proof, thro' the night, that our

flag still was there! O say, does that star-spangled banner still wave, O'er the land of the free and the home of the brave?

This beautiful and patriotic national song was composed by Francis S. Key, Esq., under the following circumstances: A gentleman had left Baltimore with a flag of truce, for the purpose of getting released from the British fleet a friend of his who had been captured at Marlborough. He went as far as the mouth of the Patuxent, and was not permitted to return, lest the intended attack on Baltimore should be disclosed. He was, therefore, brought up the bay to the mouth of the Patapsco, where the flag vessel was kept under the guns of a frigate; and he was com-

pelled to witness the bombardment of Fort Mifflin, which the admiral had boasted he would carry in a few hours, and that the city must fall. He watched the flag of the fort through the whole day, with an anxiety that can be better felt than described, until the night prevented him from seeing it. In the night he watched the bombshells, and at early dawn his eye was again greeted by the proudly waving flag of his country.

"And the star-spangled banner in triumph shall wave,
O'er the land of the free and the home of the brave."

Hon. Francis S. Key died in 1846. He was a distinguished civilian, and not only wrote the best patriotic song ever penned, but many tasteful fugitive pieces, which have been published

since his death. A fine moral vein pervades all his writings.

In 1789 Ethan Allen wrote the following song:—

When Death sends his summons to seize on my body, No crocodile tears on the way shall be shed;

No counterfeit raiment shall fly in compassion, My earnest request is, no mourning be made.

Ethan Allen was born in Roxbury, Litchfield county, Connecticut. He went into Vermont at an early age, and in 1770 took a very active part in the disturbances that occurred between the New Hampshire grants and the State of New York; for which cause he was declared, by New York, an *outlaw*, and a large reward was offered for his apprehension. He was active in the revolution; and, though an honest man, was supposed to be an infidel. He died at Colchester, Vermont, February 13, 1789, and was buried at the Winooski Cemetery, near Burlington. Sometime before his death he wrote the notes and words above, and gave them the title of "Ethan Allen's Epitaph, written by himself." There can be but little doubt that the words were original; but we think the music is from an old Scotch melody, which might have been then new, and which afterwards became very popular as "Allen's Song." There were six verses of this "epitaph," the first of which accompanies the music above; and the remaining five give directions concerning the manner in which Mr. Allen wished to be carried to the grave—"early next morning, by four clever fellows," who, on the way, were directed "to sing and make the woods ring" with the above music. After the burial, the "clever fellows" and their companions were to have a feast, "with thirty-six gallons of brandy and wine," which was to continue until the "clock struck nine." This feast was to be closed with a "grand dance," when, if any dissensions arose, the strongest, with "handsome thorn cudgels," were to belabor the weakest, and "end all disputes with a full-flowing bowl."

SONG OF BIRDS. The song of birds has been defined, by the Hon. D. Barrington, to be a succession of three or more different notes, which are continued without interruption, during the same interval, with a musical bar of four crotchets, in an *adagio* movement, or whilst a pendulum swings four seconds. It is affirmed by this author that the notes of birds are no more innate than language in man, and that they depend upon imitation, as far as their organs will enable them to imitate the sounds which they have frequent opportunities of hearing; and their adlering so steadily, even in a wild state, to the

same song, is owing to the nestlings attending only to the instructions of the parent bird, whilst they disregard the notes of all others that may, perhaps, be singing around them. Birds in a wild state do not commonly sing more than six or seven months out of the twelve; but birds that are caged and have plenty of food sing the greatest part of the year: and some suppose that the female of no species of birds ever sings. It has been remarked that there is no instance of any bird singing whose size exceeds that of the English blackbird; and this is supposed to arise from the difficulty it would have of concealing itself, did it call the attention of its enemies, not only by its bulk, but by the proportional loudness of its notes. It has also been noticed that certain passages of the *song*, in a few kinds of birds, correspond with the intervals of our scale, of which, indeed, the cuckoo affords a striking and well-known instance. But much the greater part of such *song* is not capable of musical notation; partly because the rapidity is often so great, and it is also so uncertain when they may stop, that we cannot reduce the passages to the form of any musical bar whatsoever; partly, also, because the pitch of most birds is considerably higher than that of the shrillest notes of our highest instruments; and principally because the intervals used by birds are commonly so minute, and consequently so different from the more gross intervals into which we divide our octave, that we cannot judge of them.

Most people who have not attended to the notes of birds suppose that all those of the same species sing exactly the same notes and passages; which is by no means true, though it must be admitted that there is a general resemblance. Thus the London bird catchers prefer the song of the Kentish goldfinches and Essex chaffinches; but some of the nightingale fanciers prefer a Surrey bird to one of Middlesex.

The nightingale has been almost universally esteemed the most capital of singing birds; and its superiority chiefly consists in the following particulars: its tone is much more mellow than that of any other bird; though, by the exertion of its powers, it can be extremely brilliant. Another point of superiority is its continuance of song without a pause, which is often extended to twenty seconds; and when respiration becomes

necessary, it takes it with as much judgment as an opera singer.

The writer once met with that unrivalled songster, the mocking bird, in Trumbull county, Ohio. He was hunting for rare birds on the banks of a branch of the Mahoning, when from a small grove of soft maple a succession of songs was heard, as though there were assembled representatives from all the feathered tribes. Creeping cautiously up to the grove, the song of the veros was recognized, followed by that of various other birds, and occasionally interrupted by the harsh notes of the jay; but nothing was seen from which all these varied sounds could proceed. At length a single songster, the mocking bird, was observed near the tip of one of the highest trees, which continued for some moments to pour forth the most varied and enchanting song, but soon took alarm and disappeared, and all efforts to secure it were unsuccessful. As a songster, it stands at the head of all our birds; and as a mimic is imitable, repeating, and frequently improving upon, the songs of all other birds, and in the cage imitating every sound that it hears. For these qualifications it is highly valued, and single birds have been sold for one hundred dollars. A pair of these birds visited Tallmage, in Summit county, Ohio, for several successive years, and raised their young there.

The singing of most birds seems entirely a spontaneous effusion, produced by no lassitude in muscle or relaxation of the parts of action. In certain seasons and weather the nightingale sings all day and all night; and we never observe that the powers of song are weaker, or that the notes become harsh and untunable, after all these hours of practice. The song-thrush, in a mild, moist April, will commence his tune early in the morning, and pipe unceasingly through the day; yet at the close of eve, when he retires to rest, there is no obvious decay in his musical powers, or any sensible effort required to continue his harmony to the last. Birds of one species sing in general very like each other, with different degrees of execution. Some countries may produce finer songsters, but without great variation in the notes. In the thrush, however, it is remarkable that there seem to be regular notes, each individual piping a voluntary of his own. Their voices may always be distinguished amid the choristers of the copse, yet some one performer will more particularly engage attention by a peculiar modulation of tune; and should stations of these birds be visited the same morning, few or none probably would be found to persevere in the same round of notes — whatever is uttered seeming the effusion of the moment. At times a strain will break out perfectly unlike any preceding utterance, and we may wait a long time without noticing any repetition of it. Harsh, strained, and tense as the notes of this bird are, yet they are pleasing from their variety. The voice of the blackbird is infinitely more mellow, but has much less variety, compass, or execution; and he, too, commences carols with the morning light, persevering from hour to hour without effort or any sensible faltering of voice. The cuckoo waxes us throughout some long May morning with the unceasing monotony of its song; and though there are others as vociferous, yet it is the only bird we know that seems to suffer from the use of the organs of voice.

Little exertion as the few notes it makes use of seem to require, yet, by the middle or end of June, it loses its utterance, becomes hoarse, and ceases from any further essay.

The following table, formed by Mr. Barrington, agreeably to the idea of M. de Piles, in estimating the merits of painters, is designed to exhibit the comparative merit of the British singing birds: in which twenty is supposed to be the point of absolute perfection:—

BIRDS.	Mellowness of tone.	Sprightly notes.	Plaintive notes.	Compass.	Execution.
Nightingale,	19	14	19	19	19
Sky-lark,	4	19	4	18	18
Wood-lark,	18	4	17	12	8
Thrush,	17	12	12	12	12
Linnæus,	12	16	12	16	18
Goldfinch,	4	19	4	12	12
Chaffinch,	4	12	4	8	8
Greenfinch,	4	4	4	4	6
Hedge Sparrow,	6	0	6	4	4
Ash-thrasher, or Siskin,	2	4	0	4	4
Red Poll,	0	4	0	4	4
Thrush,	4	4	4	4	4
Blackbird,	4	4	0	2	2
Robin,	6	16	12	12	12
Wren,	0	12	0	4	4
Reed Sparrow,	0	4	0	2	2
Blackcap, or Norfolk Mock Nightingale,	14	12	12	11	11

SONI MOBILES. The name by which the ancients distinguished the intermediary sounds of their tetrachords, because, instead of being fixed like the *Soni Stabiles*, or extremes, they were changed with the mode, and therefore were continually moving or varying. See **SONI STABILES**.

SONI STABILES, or SONI STANTES. The name given by the ancient Greeks to the extremes of their tetrachords, because, though from the various modes of dividing the tetrachord, or fourth, the intermediate sounds were continually liable to be changed, yet the extreme sounds were fixed and unalterable. See **SONI MOBILES**.

SONNET. (From the Italian.) A lyrical composition properly comprised in fourteen verses; viz., two stanzas of four verses each, and two of three each; the first eight verses being in alternative rhymes. The sonnet is of Italian origin, and Petrarch has the honor of its invention. Du Bellai is said by Pasquier to have first introduced sonnets into France; but Du Bellai himself tells us that Melin de S. Gelais first translated the Italian sonnets into French. Who first gave them an English dress is not certainly known; but Milton has left us twenty-three examples of this species of song, amongst which that addressed to the musician Laws is one of the best, though it serves to prove how difficult of construction the sonnet is in the English language.

SONNETTI, J. J. A pamphlet entitled "*Le Brigandage de la Musique Italienne*," was published under this author's name in 1777. There are many curious anecdotes in it relating to musicians.

SONNETTO. (L.) A sonnet. See that word.

SONNLEITHNER, doctor of laws, &c., at Vienna, was a very able amateur church composer. He died in 1796.

SONNLEITHNER, JOSEPH FERDINAND, son of the preceding, was born at Vienna about the year 1765. He was the editor, from the year 1791, of a very useful publication entitled "*The Vienna Theatrical Almanac*." He has also written several practical works.

SONOROUS. Sounding. An epithet applicable to whatever is capable of yielding sounds; but more especially to those bodies, natural or artificial, which produce musical sounds.

SONS. (F. pl.) The name formerly given by the Provençal minstrels to their airs and lyric poems.

SONTAG, HENRIETTA, was born at Coblenz, on the 13th of May, 1805, of one of those families of nomadic actors of which Goethe has given us the poetical history in his *Wilhelm Meister*. Born, like the halcyon, on the stormy waves, she early knew the vicissitudes and trials of an artist life. When only six years old she made her *début* at Darmstadt, in an opera very popular in Germany, the "Daughter of the Danube," where, in the part of Salome, she was admired for the infantile graces of her person and the correctness of her voice. Three years later, having lost her father, Henrietta, with her mother, went to Prague, where she played children's parts under the direction of Weber, then at the head of the theatre orchestra. Her precocious success obtained for her, by most especial favor, permission to follow the courses of the Conservatoire in that city, although she had not yet reached the age required by the rules. There, for four years, she studied vocal music, the piano, and the elements of vocalization. The indisposition of the prima donna of the theatre gave her an opportunity, for the first time, to undertake a rather important rôle, that of the Princess of Navarre in Boieldieu's "John of Paris." She was then fifteen. The facility of her voice, her budding beauty, the trouble which made her heart full of mysterious presentiments, achieved her a success which augured well for the future of her talent.

From Prague Henrietta Sontag went to Vienna, where she met Mme. Mainvielle-Fodor, whose example and good counsels developed the happy tendencies she had received from nature. Singing alternately in German and Italian opera, she could try her powers in both of these so different languages, and give herself time to choose between the glittering caprices of the Italian music and the sober and profound accents of the new German school. Being offered an engagement at the German Opera in Leipsic, in 1824, she went to that focus of philosophical and literary discussions, and there acquired a great fame by the manner in which she interpreted the "*Freyschütz*" and "*Euryanthe*" of Weber.

The admirers of this great musician's genius were composed of the youth of the universities, and of all the ardent and generous souls who wished to redeem Germany from foreign dominion, as well in the realm of the imagination as in that of politics. They shouted with enthusiasm the name of Fraulein Sontag, which spread through all Germany as that of a *virtuoso* of the first order, called to renew the marvellous things of Mara. It was at Leipsic that Mara, that famous German singer of the end of the eighteenth century, had been educated under the care of old Professor Hiller. They felt obliged to Mlle. Sontag for consecrating a magnificent organ, and a vocalization far from common that side of the Rhine to the rendering of the strong and deep music of Weber, of Beethoven, of Spohr, and of all the new German composers who had broken *all truce with foreign impiety*, and given full scope to the genius of their country. Surrounded with homage, celebrated by all the *beaux esprits*, sung by the students, and escorted by the huzzas of

the German press, Mlle. Sontag was called to Berlin, where she made her *début* with immense success at the theatre of Königsstadt. It was at Berlin, it will be remembered, that *Der Freyschütz* was represented for the first time, in 1821. It was at Berlin, that Protestant, rationalist city, the centre of an intellectual and political movement which sought to absorb the activity of Germany at the expense of Vienna, the Catholic city, where reigned the spirit of tradition, the sensuality, the breeze, and the facile melodies of Italy; it was at Berlin, we say, that the new school of dramatic music, founded by Weber, had found its fulcrum. Mlle. Sontag was enthusiastically received there, as an inspired interpreter of the national music. The Hegelian philosophers made her the subject of their learned commentaries, and in her limpid and sonorous voice they hailed the *blending of the subjective with the objective in an absolute unity!* The old King of Prussia received her at the court with a paternal kindness. There it was that diplomacy found occasion to approach Mlle. Sontag, and to lay siege to the heart of the Muse.

Availing herself of leave of absence, Mlle. Sontag went at length to Paris, and made her *début* at the Italian theatre on the 15th of June, 1826, in the rôle of Rosina, in the "Barber of Seville." Her success was brilliant, especially in Rode's variations, which she introduced in the second act during the singing lesson. This success was confirmed and even increased in the "*Donna del Lago*," and the "*Italiana in Algieri*," in which she had to transpose several passages written for a contralto. On her return to Berlin she was received with redoubled interest. In that city she remained till the end of the year 1826; then, abandoning Germany and the school which had brought her up in the depths of its sanctuary, she went to fix her abode in Paris. She began with the rôle of Desdemona, in "*Otello*," on the 2d of January, 1828. She made one of that constellation of admirable artists who at that time charmed Paris and London, and among whom Pasta, Pisanoni, Malibran, and Sontag shone as stars of the first magnitude.

Between these two last *cantatrici*, differing so greatly in their kinds of merit, one of those fruitful rivalries declared itself of which Hoffman has given us such a dramatic picture. This rivalry was pushed so far between the imperious Juno and the blonde Venus that they could not meet in the same saloon. On the stage, when they sang in the same opera, whether it were "*Don Juan*," or "*Semiramide*," their heroic jealousy revealed itself in killing cadenzas and vocal Congreve rockets, which set the audience on fire. Now the Trojans, and now the Greeks, carried it. The parterre rose and subsided like the waves of the sea under the Olympic deities. Finally, one day, Mlle. Malibran and Mlle. Sontag having to sing a duet in a princely house, the blending of these two voices, so different in *timbre* and in character of expression, produced such an effect that the success of the two great singers brought about their reconciliation. From that time a calm reigned *sul mare infido*. But in the midst of these successes and these festivals of art a black speck rose on the horizon: diplomacy was secretly at work; its protocols grew threatening; and it was suddenly learned that Mlle. Sontag was about to quit the theatre for

duties more austere. A year since she had formed a private union with Count Rossi, who was not disposed to share his happiness. She bade adieu to the Parisian public in a performance for the benefit of the poor, which took place at the opera, in January, 1830. Returning to Berlin, at the instance of her friends and numerous admirers she consented to give a few more representations, and then quitted the stage definitively, two months before the revolution of July. But before accepting the new rôle which she had chosen for life, before despoiling herself of the brilliant fame which she had so justly acquired Mlle. Sontag made a tour to Russia, giving concerts, as brilliant as they were remunerative, at Warsaw, Moscow, St. Petersburg, and then at Hainburg and other important cities of Germany.

It was after this tour that, under the name of Madamae the Countess of Rossi, following the fortunes of her husband, she passed several years in succession at Brussels, at the Haye, at Frankfurt, and at Berlin, letting her voice be heard only in the reunions of that high European society which the revolution of February shook to its foundations.

Mlle. Sontag possessed a soprano voice of very great extent, of great equality of *timbre*, and of marvellous flexibility. In the upper octave, from the medium C to C above the staff, that voice rang deliciously like a silver bell; and you had never to fear a doubtful intonation, or a want of equilibrium in its prodigious exercises. This rare flexibility of organ was the result of the munificence of nature, fructified by incessant and well-directed labors. Until her arrival at Vienna, where she had occasion to hear the great virtuosos of Italy, she had been guided only by her happy instinct, and by the more or less enlightened taste of her public. It was to the counsels of Mme. Mainvielle-Podor, and still more to the example which the exquisite talent of that admirable singer daily offered her, that Mlle. Sontag owed the expansion of those native qualities, which, until then, had remained, as it were, shut up in the bud. The competition with rivals like Mmes. Pisaroni and Malibran, those heroic combats which she had to sustain on the theatres of Vienna, Paris, and London, perfected her talent to that degree of savory maturity, which has made Mlle. Sontag one of the most brilliant singers of Europe.

In the magnificent casket of vocal gems which Mlle. Sontag displayed every night before her admirers, we especially remarked the limpidity of her chromatic gamuts and the brilliancy of her trills, which sparkled like rubies on a velvet ground. Each note of those long-descending spirals stood out as if it had been struck isolatedly and attached itself to the following note by an imperceptible and delicate solder; and all these marvels were accomplished with a perfect grace, never disfiguring her countenance by the slightest sign of effort. Her charming figure, her fine limpid and soft eyes, her elegant form, and her stature, springing and supple as the stem of a young poplar, finished the picture, and completed the enchantment.

Mlle. Sontag tried her power in every kind. Born in Germany at the commencement of this stormy century, she was nourished on the vigorous and powerful music of the new German

school, and obtained her first successes in the masterpieces of Weber. At Paris she undertook successively the parts of Desdemona, of Semiramis, and of Donna Anna in Mozart's *chef-d'œuvre*. In spite of the enthusiasm which she seems to have excited in her countrymen by her manner of rendering the dramatic inspiration of Weber, (an enthusiasm of which we find the echo in the works of Louis Boerne,) — in spite of the brilliant qualities she has displayed in the part of Desdemona, and, above all, in that of Donna Anna, which was almost imposed upon her by the jealousy of Malibran, — it is in the light music and in the temperate style that Mlle. Sontag found her true superiority. Her Rosina in the "Barber," her Ninette in "La Gazza Ladra," her Aménide in "Tancredi," and her Elena in the "Donna del Lago," have been her finest triumphs.

The voice of Mlle. Sontag is well preserved. If the lower chords have lost their fullness and grown dull a little under the hand of time, as it always happens with soprano voices, the upper notes are still full of roundness and of charm. Her talent is almost as exquisite as it was twenty years ago; her vocalization has lost nothing of the marvellous flexibility that characterized it then; and without much effort of imagination, one finds again to-day in Mlle. Sontag the finish, the charm, the tempered and serene expression which distinguished her among the eminent *cantatrici* who have been the marvel of Europe for the last half century. Welcomed with distinction by a select public, which assembled at the report of her glory and of her misfortune, Mlle. Sontag has sung several pieces of her old *repertoire* with great success.

The above is from the French of M. Seude, (1850.) After twenty years' retirement from public life as an artist, the Countess Rossi, moved by pecuniary reverses of her husband, again returned to the stage. After brilliant seasons in Paris, various German cities, and in London, she emigrated to the United States in the autumn of 1852, where she has continued to the present time, (spring of 1854,) singing in opera and concerts with most brilliant success.

SONS PLEINS. (F.) Terms which often occur in flute music, and which indicate that the notes must be blown with a very full, round tone.

SOPRA. (I.) Above, or upper; as, *nella parte di sopra*, in the higher or upper part; *di sopra*, above; *contrapunto sopra il soggetto*, counterpoint above the subject.

SOPRANO. (I.) The treble or higher species of the female voice. See **VOICE**.

SOPRANI. (I. pl.) The treble or higher voice parts; as, *a due soprani*, for two trebles; *a tre soprani*, for three trebles.

SORDINO. (I.) A small utensil of copper or silver applied to the bridge of a violin, or violoncello, to render the sound fainter by intercepting the vibrations of the body of the instrument.

SORDINI. (I. pl.) The dampers; thus, *senza sordini*, in piano music, means without the dampers, or with the open pedal pressed down.

SORGE, GEORG ANDREAS, organist at Lobenstein, was born in 1703. He was a good

performer, composer, and singer; also wrote many theoretical works, the best of which is his "Elements of Composition," published at Lobenstein in 1745, in three volumes quarto. His work entitled "*Compendium Harmonicum*" gave rise to a controversy with Marpurg, who published critical notes on it in 1760. His practical publications were principally for the harpsichord and organ, and many of them were printed at Nuremberg. Sorgé died at Lobenstein in 1778.

SORIANO, FRANCESCO, chapel-master of St. Peter's Church at Rome, published, in 1610, one hundred and ten canons upon the chant to the hymn, "*Ave Maria Stella*," for three, four, five, six, seven, and eight voices; from which the musical reader will have a much higher opinion of his patience than his genius.

SOSPIRO. (I.) A word expressive of silence, formerly written over those characters called *rests*, and generally considered as equal in length to a crotchet.

SOSTENUTO, or SOS. (I.) A word implying that the notes of the movement, or passage against which it is placed, are to be sustained, or held on, to the extremity of their lengths.

SOTTO. (I.) Below, inferior; as, *sotto il soggetto*, below the subject.

SOTTO VOCE. (I.) An expression implying that the movement, or passage, over which it is written, is to be played or sung moderately loud. See *MEZZA VOCE*.

SOUHAITTY, JEAN JACQUES, a French ecclesiastic, published, in 1677, an essay entitled "*Nouveaux Elémens du Chant*." In this book he proposes a new method of writing plain chant by figures instead of notes.

SOUND. Musical sound may be considered as certain aerial agitations, of such qualities and dispositions as to produce that agreeable and appreciable effect upon the ear which we denominate melodious, or harmonical. *Sound* being the object of the musical science, it may be expected that we should, in treating of this article, go into the philosophy of its causes and effects; but we must confine our observations chiefly to that affection of sound by which it becomes distinguished into acute and grave. This difference has hitherto appeared to have no other causes than the different velocities of the vibrations of the sounding bodies. In fact, the tone or pitch of a sound seems to have been discovered, by an abundance of experiments, to depend on the nature of those vibrations whose difference we can conceive no otherwise than as having different velocities; and since it is proved that all the vibrations of the same chord are all performed in equal time, and that the tone of a sound, which continues for some time after the stroke, is, in quality and pitch, the same from first to last, it follows that the tone is necessarily connected with a certain quantity of time consumed in each vibration; and it is from this principle, combined with that of tonic arrangement, that all the phenomena of tone are deduced.

If the vibrations be isochronous, the sound is called musical, and is said to be acuter, or higher, than any other sound whose vibrations are slower and graver, or lower than any other sound whose vibrations are quicker.

From the same principle arise what we call *conords*, &c., which are resolvable into the frequent unions and coincidences of those vibrations of two sonorous bodies, and consequently of the undulations of the air communicated by those vibrations. On the contrary, the result of less frequent coincidences of those vibrations is what we call *discord*.

Another considerable distinction of musical sounds is that by which they are denominated *long* and *short*; not with regard to the sonorous body's retaining a motion, once received, a longer or shorter time, but to the continuation of the impulse of the efficient cause on the sonorous body for a longer or shorter time; as in the notes of a violin, &c., which are made longer or shorter by strokes of different length or quickness.

This continuity is, properly, a succession of several sounds, or the effect of several distinct strokes or repeated impulses on the sonorous body, so quick that we may judge it one continued sound, especially if it be continued in the same degree of strength; and hence arises the doctrine of *measure* and *time*. Sounds, again, are distinguished by musicians into *simple* and *compound*. A simple sound is the single product of one voice or one instrument. A compound sound consists of the sounds of several distinct voices or instruments, all united in the same individual time or measure of duration; that is, all striking the ear together, whatever may be their other differences. But in this sense they are twofold compound—natural and artificial. A *natural compound* is that proceeding from the manifold reflections of the first sound from adjacent bodies, when the reflections are not so sudden as to occasion echoes, but are all given at the same moment, as well as in the same tone or pitch with the first note. The *artificial compound* is a mixture of several different sounds. (See that term.)

Every impression made on the ear sufficient to attract attention is sound. These impressions are made on what we technically call the tympanum of the ear, and are caused by the vibrations of bodies. The power of hearing is nothing more than to feel vibrations on the nerves of the ear. Every living creature, every body in motion, produces few or more vibrations, and, consequently, sounds. The human ear is not capable of distinguishing or feeling the impression of every sound. Some, it is true, have what is termed a sharp ear, or great power of hearing; such are susceptible to vibrations, whether slow or quick; while in others the same impression is entirely wanting. Of two persons in the same open field, one will be sensible of the slow vibrations from a distant church bell, the lowing of animals, or an earthquake; while the other will say, I do not hear them; and simply because the nerves of the ear, or this organ in the one, are more susceptible than in the other. Sounds may be produced by uniform and regular, or irregular, vibrations of bodies; that is, when the interval of time from one vibration to the other is always the same in length, in the one instance; and, in the other, where a certain number of vibrations are produced in the first second of time, and, more or less, in the second space. In the first case, the sound is pleasant and easily distinguished; in the second, it is not so distinguished, and is unpleasant. The pendulum of a clock

for example, is governed by the mainspring, which keeps it always in regular motion, and one and the same sound is constantly produced. But where the intervals of such vibrations are longer, or shorter, or irregular, the impressions or sounds are unpleasant and often disagreeable; such sounds are termed noise. Uniform vibrations always produce simple sounds. We use the term *sound* for all impressions of regular vibrations, and classify the sounds according to their height or pitch. All sounds in music are, in regard to their pitch, mathematically regulated, and the succession of these sounds is called the scale of music; and each sound has its absolute unchangeable pitch or degree of the scale.

Sound is a perception of the soul, communicated by means of the ear, or the effect of a collision of bodies, and a tremulous motion consequent thereon, communicated thence to the circumambient fluid, and propagated through it to the organs of hearing. Sound is any thing and every thing hearable. It is noise, report, the object of hearing, that which strikes the ear; a vibration of the air, caused by a collision of bodies or other means, sufficient to effect the auditory nerves when perfect. It is noise without signification; empty noise; noise, and nothing else. Sound is the noise produced by all vibrating bodies. Every motion communicated to the air is propagated onward like a wave; but a certain suddenness or force is necessary in order to affect the ear so as to produce an audible sound. The slow waving of a flag through the air is noiseless; but the sudden removal and return of a portion of air, caused by the lash of a whip or other means, produces an explosion; and as there is an endless variety in vibrating bodies, so, also, there is an endless variety of sounds. Musical sounds are certain aerial agitations of such qualities and dispositions as to produce that agreeable and appreciable effect upon the ear which we denominate melodious or harmonical. Sound in music denotes a quality in the several agitations of the air, considered as their dispositions, measure, &c.; and it may be so combined as to make music or harmony. The differences in the acuteness and gravity of sounds have hitherto appeared to have no other causes than the different velocities of the vibrations of the sounding bodies. The tone or pitch of a sound seems to have been discovered, by an abundance of experiments, to depend on the nature of those vibrations whose difference we can conceive no otherwise than as having different velocities; and since it is proved that all the vibrations of the same chord are performed in equal time, and that the tone of sound, which continues for some time after the stroke, is the same from the first to the last, it follows that the tone is necessarily connected with a certain quality of time in making each vibration; and it is from this principle that all the phenomena of tune are deduced.

Sounds are not and cannot all be musical; for instance, those produced by irregular vibrations. If the impulse is short and single, we hear a sound like the blow of a hammer on stone, the report of a pistol, or the crack of a whip; if of perceptible duration and irregular, we hear a crash like the falling of a tree or of a building; if of some length of time and interrupted, we hear a rumble like a peal of thunder or an earthquake; and such is the extreme sensibility of the

ear that all sounds, whether musical or unmusical, are perfectly distinguishable from one another. The term *unmusical*, therefore, is not only applied to all jarring and discordant sounds, but to whatever is unharmonious, unmelodious, or disagreeable to a cultivated ear. All musical sounds are produced by regular vibrations. There are three principal points of distinction in musical sounds — the quality, the intensity, and the pitch. The quality of sounds depends on the nature and structure of the bodies vibrating, and may be of any length of time, from the shortest to the longest possible sound; as the notes of a violin, &c., which are made longer or shorter by strokes of different length or quickness. The intensity of sounds depends on the force of the impulse, and may be of any degree of strength, from the softest to the loudest sound. All sounds are supposed to be perfectly round; and the following diagram shows the gradual inflation or increase of strength of any given sound, from soft to loud.

The *pitch* of sounds depends on the frequency of the vibrations, and may be of any degree of elevation, from the lowest to the most acute sound. On this distinction the whole doctrine of harmony is founded; and sounds are either *high* or *low*, according to their relative position.

The greater clearness with which sounds, even distant sounds, are heard during the night, is an interesting phenomenon. It was noticed by the ancients, and ascribed to the repose of animal nature. The noise of cataracts is three times louder during the night than in the day. The air during the day is a mixed medium, in which the sounds are scattered and reflected in passing through streams of air of different densities, as in the experiment of mixing atmospheric air and hydrogen. At midnight, on the contrary, when the air is transparent and of uniform density, as may be seen by the brilliancy and number of the stars, the slightest sound reaches the ear without interruption.

SOUNDING BOARD. In a harpsichord or piano forte, a broad, thin board, horizontally placed, and over which the strings are distended, and the vibration of which greatly contributes to the tone. This board is also called the *belly* of an instrument.

SOUPIR. (F.) A crotchet rest.

SOURDELINE. (F.) A kind of musette, or bagpipe.

SOURDET. (F.) The little pipe of a trumpet.

SOUSDOMINANTE. (F.) The subdominant, or fourth of the scale.

SOUSMEDIANTE. (F.) The submediant, or sixth of the scale.

SOZZI, FRANCESCO, a violin pupil of Nardini, was born at Florence, and belonged, in 1790

to the chapel of the Grand Duke of Tuscany. He afterwards resided several years in Germany, and published some violin music at Augsburg in 1801.

SPACES. The voids or intervals between the lines of the staff. The staff consists of five lines and four spaces. The lines and spaces being equally used, a note on any space is two notes higher than a note on the space immediately below it, and two notes lower than a note on the space immediately above it.

SPANISH MUSIC. The species of music in which the Spanish most delight is the romance; they have several beautiful compositions of this kind. The guitar is the instrument most generally employed to accompany the voice: this instrument is quite as national as their beads and their chocolate, and is to be found in every house from that of the peer to the barber. The Spanish guitar is constructed with double strings, each pair being tuned in unison, with the exception of the lowest, which are tuned in octaves. All play the guitar, and all have a tact in playing it. The song of the Spaniards is full of feeling; their inflections of voice are highly impassioned; and their features, in playing, assume a variety of expression, analogous to the sentiments uttered. The Spanish style of music is pleasing but variable. The national fondness for dancing appears to exercise some influence over all their strains; notwithstanding which many of their airs have an extremely melancholy expression. As opera writers they have never excelled; but for love songs and martial choruses, their style is equal to that of any other people in the world. Their serenades are among the sweetest efforts of simple composition that exist, containing, notwithstanding the plainness of their style, considerable feeling, and an obvious expression of deep passion.

SPAZIANO, FRANCESCO, was the first person who collected and published at Florence, in 1529, the "*Canti Carnascialeschi*." They consist of songs, ballads, madrigals, &c., on every sort of subject, and take their name from being sung late at night in the streets of Florence, during the carnival, by parties of men in masks, often to the number of three hundred, and all carrying lighted tapers. They were attended, also, by a band of musical instruments.

SPAZIER, JOHANN CARL GOTTLIEB, doctor of laws and inspector of education, &c., at Dessau, was born at Berlin in 1761. He published many musical essays of high interest, chiefly in periodical publications; also several sets of vocal music. His works bear date from the year 1781 to 1800. He died at Leipzig in 1805.

SPEAKING MACHINE. In 1842 Mr. Faber, at Hamburg, invented a speaking machine—the result of a beautiful adaptation of mechanics to the laws of acoustics. Hitherto attempts to imitate the human voice have not been very successful; in fact, our knowledge of the physiology of the larynx and its appendages has been so limited that we have not even an explanation of the mode in which the falsetto is produced.

Mr. Faber's instrument solves the difficulty. The machine consists of a pair of bellows worked by a pedal similar to that of an organ, of a caoutchouc imitation of the larynx, tongue, nostrils, and of a set of keys by which the springs are brought into action. The weather naturally affects the tension of the India rubber; and although Mr. Faber can raise the voice or depress it, and can lay a stress upon a single syllable or word, still one cannot avoid feeling there is room for improvement. This is even more evident when the instrument is made to sing; but when we remember what difficulty many people have to regulate their own *chordæ vocales*, it is not surprising that Mr. Faber has not yet succeeded in giving us an instrument equal to the human voice. We will mention a discovery in mechanics announced in New York. This instrument is played on by keys like a piano-forte, and can be made to say any thing in any language that its inventor desires. The New York "American" newspaper says, "We heard it say 'Mr. Speaker' in a tone so distinct and startling that no speaker could have failed to be attracted by it; and then it went on, now in German, now in English, then in Latin, &c." It is appropriately named "*the speaking machine*." "The tone is not that of a human voice; though it resembles that of some persons, in being mainly through the *nose*. But no one could fail to perceive at once that the sound was produced by some artificial wind instrument. Its outward appearance is very simple. A Turk's head, with turban and long beard, faces the spectator, and the words are uttered by movements of the lips, the tongue, the palate, and all the articulating organs, precisely as in the living person. These movements are produced by machinery concealed beneath a drapery behind the figure, and moved by keys at its right. These keys are sixteen in number, each representing a particular sound. It requires no little skill to use the keys, as a great number of them must be quickly and properly struck to utter even the simplest words. A bellows beneath supplies the *breath*, which the machinery thus manufactures into *words*. The Turk recited to us the alphabet, counted fifty, gave the Latin titles of several European monarchs, held an edifying conversation with us about the weather, sang a German song, and bade us good day in very distinct and courteous phrase. The utterance is, of course, very slow, and sometimes difficult and indistinct; but it is easy to see that the fault lies in an inability to work the keys with sufficient rapidity, and not in any want of vocal organs. It is certainly very curious, and shows that the inventor, who is an Austrian, is possessed of great skill and ingenuity. We understand that the instrument engaged his close attention for about *fourteen* years."

SPEAKING TRUMPET. A tube from six to fifteen feet long, made of tin, perfectly straight, and with a very large aperture at one end, and a mouthpiece just big enough to receive both lips. The mouth being applied to this instrument, it carries the voice to a very great distance; so that it may be distinctly heard through a circle of a mile, or farther. Hence its great use at sea. The invention of the speaking trumpet is supposed to be modern, and is generally ascribed to Sir Samuel Moreland. See STENTOROPHONIC TUBE.

SPECII, JOHANN, a composer for the piano-forte, probably resident at Vienna, published some sonatas, &c., in that city, at the close of the last and commencement of the present centuries. Three violin quartets by him are also printed.

SPECIES. A subdivision of one of the genera of the ancient music.

SPERGER, JOHANN, a celebrated performer on the double bass, and instrumental composer, was chamber musician to the Duke of Meeklenburg from the year 1789. Amongst his works we can name the following: "3 *Quartetti d 2 V., A., et B.*," Op. 1, Berlin, 1792; "*Flötenduo*," Vienna, 1792; and "3 *Trios, d Fl., A., e Vc., Nos. 1 e 2*," Vienna, 1796.

SPERLING, JOHANN PETER GABRIEL, secretary to the magistracy, and music director at Bautzen, in Lusatia, published, amongst others, the following works: "*Conventus Vespertinus seu Psalmi minores per annum, 4 voc., 2 V., 3 Violinis, seu Trombonis et B. G.*," Bautzen, 1700; "*Principia Musica*," &c., Bautzen, 1705; and "*Porta Musica*," Bautzen, 1708.

SPICCATO. (L.) A word denoting that the notes over which it is placed are to be performed in a distinct and pointed manner. See **STACCATO**.

SPIESS, MEINRAD. Prior of a convent in Suabia, and member of the Musical Society of Mitzler from the year 1743. He was a pupil of Joseph Bernabei, and was living in 1774. He published in 1746, at Augsburg, a work in the German language, with the title "*Tractatus Musicopræcticus*," &c. According to Hiller, it is a work containing many excellent remarks on the science of music, but so badly written that it were to be wished some one would translate it from bad German into good. Spiess also published many masses and other church music between the years 1713 and 1734.

SPINÆ. (L.) The original name of the quills of the *spinet*, and from which word that instrument received its appellation. See **SPINET**.

SPINDLER, FRANZ STANISLAUS, a self-taught musician, was born at Augsburg in 1759. In 1782 he became an actor at the theatre of Augsburg, and soon after produced several successful operettas. He afterwards attached himself to the theatre at Breslau, for which he composed several pieces in the same style up to about the year 1800.

SPINET. A stringed instrument formerly much in use, somewhat similar to the harpsichord, and, like that, consisting of a case, sounding board, keys, jacks, and a bridge. The principal difference of the spinet and harpsichord is, that the latter is larger, and contains two or three sets of jacks and strings, so disposed and tuned as to admit of a variety of *stops*; while the former has only one set of jacks and strings, and consequently only one *stop*. When the spinet was first brought into use, though its invention was certainly anterior to that of the harpsichord, is not exactly known. But that it was derived from the harp is evident from its character as well as construction, internal and external; and, indeed, it was originally called the *couched harp*, though since denominated *spinet*, from its quills, which resemble *thorns*, called in Latin *spinæ*.

SPIRITOSO. (L.) With spirit.

SPOFFORTH. A celebrated English glee composer. Amongst the most celebrated of his compositions are the following: "Where are those hours," glee, four voices; "Lightly o'er the village green," glee, three voices; "Hark, the goddess Diana," duet; and a set of "Canzonets."

SPOHR, LUDWIG, concert master, violinist, and composer to the Duke of Gotha, was born at Seesen, in the Duchy of Brunswick, in 1784. His father was a doctor of medicine in Brunswick, and a celebrated amateur performer on the flute. He received his early instructions on the violin from Maucourt, and made his *début* at Brunswick, as a public performer, at the age of twelve years, on which occasion he played a concerto of his own composition. The Duke of Brunswick, who was himself a performer on the violin, interested himself much from this time in the success of young Spohr, and received him, when thirteen years of age, as musician in the Chapel Royal. On his attaining his eighteenth year, the duke allowed him to accompany Franz Eck, younger brother and violin pupil of J. F. Eck, to Russia, paying the whole of his expenses. He thus enjoyed the lessons of this excellent master during a year and a half. On his return he applied himself still more studiously to his instrument, and then commenced travelling through different towns of Saxony and Prussia; in the course of which journey, in 1805, he was offered his first-named situation at Gotha, which he accepted, after obtaining the consent of his patron the Duke of Brunswick. In 1820 Spohr made his first appearance in England at the Philharmonic concerts, when his *début* was thus noticed by an eminent reviewer: "He first played a concerto in the dramatic style; the composition was very clever, and classed under its proper head. A quartet, in which he afterwards assisted, was so entirely calculated to display the single performer as to injure its effect as a concerted piece. His manner is totally without pretension; his tone fine, his intonation admirable, and his execution of the most finished order." On another occasion this critic observes, "We have the traces, in Spohr's execution, of a mind continually turning towards refinement, and deserting strength for polish. His tone is pure and delicate, rather than remarkable for volume or richness; his taste was cultivated to the highest excess; and his execution was so finished that it appeared to encroach, in a measure, upon the vigor of his performance. But he was very far from being deficient in the energy necessary to make a great player. The fact seems to be that this quality, which for its inherent pre-eminence is most distinguishable in other violinists, was, in Spohr, cast into secondary importance, and rendered less discernible by the predominating influence of his superior refinement. His delicacy was so beautiful, and so frequent an object of admiration, that his force was lowered in the comparison. But though it must be confessed that his bow arm had not the openness and command so peculiarly striking in Mori, yet he could sustain and protract his tones to an extraordinary duration. His method of taking the staccato passages was excellent; but the saltations he frequently made in his passages of execution

could not be said to accord with the general composedness of his manner. And as it is frequently the consequence of a too subtle habit of refining to obliterate the stronger traces of sensibility, so his expression was more remarkable for polished elegance than for those powerful and striking modifications of tone that are the offspring of intense feeling. It is probably owing to this softening down of the bright and brilliant effects that he failed (if such a man could he ever said to fail) in eliciting those stronger bursts of the public approbation that attend those exhibitions of art that are directed against, and that reach, the affections of a mixed audience. Thus, though in the very first rank of his profession and of talent, Spohr perhaps excited a lower degree of interest than has frequently attended the performance of men whose excellences were far below his standard. But such is the common fate of every extreme cultivation and polish. It transcends the judgment of the million. The Roman critics remarked the preëminent beauty with which Spohr enriched his playing by a strict imitation of vocal effects. They said he was the finest singer upon the violin that ever appeared. This, perhaps, is the highest praise that can be bestowed; for, although instrumental music certainly raises emotions and passions, yet they are very faint and vague when compared with the full, deep, and definite affections awakened by the human voice. The nearer an instrument approaches the voice, the nearer is art to the attainment of its object: and the reverse of the proposition equally applies to singers; the more they wander through the mazes of execution towards instrumental effect, the farther they stray from the seat of their own proper dominion — the heart."

The most brilliant period in Spohr's career was from 1815 to 1825. Since that time he has occupied the place of chapel-master to the electoral court of Hesse-Cassel. Called to London in 1840, he brought out there a new symphony and oratorio of his own composition, and was received with the most marked consideration by persons of the first distinction. He was again invited to London in the summer of 1852, when he conducted the performance of his oratorio of "Calvary," or "Die letzte Dinge," and of his opera of "Faust," at the Royal Italian Theatre. Spohr has founded in Germany a violin school that is more large and vigorous than that of his predecessors. Its principles are exposed in his "Violinschule," ("Violin School,") in three parts, Vienna, 1831, a folio of two hundred and fifty pages.

The principal compositions of Spohr are the following:—

I. RELIGIOUS MUSIC. 1. "Mass for five solo Voices and two Choirs of five Voices each, without Accompaniment," Op. 54. 2. "Three Psalms of Mendelssohn, for two Choirs and Solos," Op. 85. 3. "Vater unser," of Muhluann, for four Voices." 4. "Hymn, 'Gott, du bist gross,' for four Choirs, with Solos and Orchestra," Op. 98. 5. "Die letzten Dinge," oratorio. 6. "Des Heilands letzte Stunden," oratorio. 7. "Das jüngste Gericht," ("The Last Judgment,") oratorio.

II. DRAMATIC MUSIC. 1. "Der Zweikampf der Geliebten," opera. 2. "Der Berggeist," do. 3. "Faust," do. 4. "Jessonda," grand opera; considered one of Spohr's best works. 5. "Zenire u. Azor." 6. "Pietro d'Albano." 7. "Der Aelch-

mist." 8. "Das befreite Deutschland," scenic oratorio.

III. VOCAL MUSIC. 1. "Songs for four Men's Voices," Ops. 44, 90. 2. "Scena and Aria, with Orchestra," ("Tu m'abbandoni,") Op. 71. 3. "Songs for one Voice," Ops. 25, 37, 41, 72, 94, 101, 103.

IV. INSTRUMENTAL MUSIC. 1. "Symphonies for Grand Orchestra," Op. 20, in E flat; Op. 49, in D minor; Op. 78, in C minor; the symphony, "Die Weihe der Töne," ("Consecration of Tones;") also two or more symphonies since one of them for double orchestra, and one called "The Seasons." 2. "Four Overtures," Ops. 12, 15, 21, (to "Atrium,") and one to "Macbeth." 3. "Nonetto, for Violin, Alto, Violoncello, Oboe, Clarinet, Flute, Horn, Bassoon, and Double Bass," Op. 31. 4. "Ottetto, for Violin, two Altos, Violoncello, Clarinet, two Horns, and Double Bass," Op. 32. 5. "Double Quatuors, for four Violins, two Altos, and two Violoncellos," Ops. 64, 77, 87. 6. "Quintets for Strings," Ops. 33, 69, 91. 7. "Quatuors for Strings," Ops. 4, 11, 15, 29, 30, 43, 45, (three,) 58, (three,) 61, 68, 74, (three,) 82, (three,) 84, (three,) 93. 8. "Duos for two Violins," Ops. 3, 9, 13, 39, 67. Also, violin concertos, concertos for clarinet, pot-pourris for violin, with orchestra or quartet, a quintet for piano, flute, clarinet, horn, and bassoon, (op. 52,) rondos, music for the harp, &c.

Dr. Spohr had a daughter, celebrated as an alto singer, who married and resided in New York. She has sung in public, there and in Boston, as Madam Spohr-Zahn.

SPONDAULA. (Gr.) The name given by the ancients to a performer on the flute, or some similar instrument, who, while the sacrifice was offering, played to the priest some suitable air, to prevent his listening to any thing which might interrupt him in his duty.

SPONTIASM. (Gr.) An alteration in the harmonic genus, by which a chord was elevated three dièses above its ordinary pitch, so that the *spontiasm* was precisely the opposite of the *eclipsis*.

SPONTINI, GASPARD. This celebrated dramatic composer was born at Jesi, a small town of the Roman States, in 1778. After studying the first principles of music under the celebrated Padre Martini at Bologna, and under Boroni at Rome, he was entered, at the age of thirteen, as a pupil of the Conservatory of La Pietà at Naples, then under the direction of the celebrated masters Sala and Trajetta. At the expiration of a year he was nominated a master in this Conservatory. At seventeen years of age he composed an opera buffa entitled "I Puntigli delle Donne," the success of which was so complete that all the theatrical managers of Italy were anxious to obtain his operas. The year following he went to Rome, where he composed "Gli Amanti in Cemento;" and thence passed on to Venice, where he wrote "L'Amor Segreto." He next returned to Rome, and set to music the drama of Metastasio called "L'Isola Disabitata." This he sent to Parma, being disabled from going there himself by engagements at Naples and Palermo. It was at Naples that he became acquainted with Cimarosa, by whose instructions he profited during five years, when he proceeded to Palermo. In the mean time he was not inactive in composition, having written, whilst at Naples, "L'Eroismo Ridicolo," opera buffa, for that city; "Il Tesoro riconosciuto," opera seria, for Florence; and "La Finta Filosofa," and "La Fuga in Maschera," also for Naples. About this period, the Neapolitan court being at Palermo,

the manager of the Theatre Royal there engaged Spontini to write two opere buffe and one opera seria. The two former were called "*I Quadre Parlanti*" and "*Il Finto Pittore*," and the latter "*Gli Elisi delusi*." The climate of Sicily not agreeing with Spontini, he then returned to Rome, where he wrote "*Il Geloso e l'Audace*." Shortly afterwards he was invited to Venice, where he brought out the two operas, "*Le Metamorfosi di Pasquale*," and "*Chi piu guarda, me no vede*." Having now produced, with success, eleven comic and three serious operas at the principal theatres of Italy, he resolved to visit Paris, where he arrived about the year 1804. He first made himself known in that city by his "*Finta Filosofa*," performed at the Théâtre de l'Opéra Buffa. He then gave, at the Théâtre Feydeau, "*La Petite Maison*," which failed on account of the words, and "*Milton*," which was highly successful. From this period he confined his composition to the Royal Academy of Music, where he brought out, in 1807, his celebrated opera of "*La Vestale*;" in 1809, "*Fernand-Cortez*;" and subsequently, "*Olimpie*." A modern French critic observes, "In allowing to Rossini the merit of novelty, — to Mayer harmony, science, and correctness, — to Spontini sensibility, vigor, and truth of expression, — we believe that we have awarded to each his just praise; and we leave to an enlightened public the task of judging which of these three celebrated dramatic composers approaches nearest to perfection in his art. We must, however, confess that the question appears to us to be resolved, in France, in favor of the author of '*La Vestale*,' of '*Fernand-Cortez*,' and of '*Olimpie*.'" He died February 24, 1851.

SPRING. An embellishment. The German spring consists of two small notes before a principal, similar to the Italian mordente, but very distinct; thus: —

All kinds of graces are liable to alteration by the use of incidentals.

STABAT MATER. (L.) A hymn on the crucifixion.

STABINGHER, MATTHIAS. A German musician. Resident in France about the year 1770, and in Italy in 1780. He produced in 1784, at Bologna, a ballet entitled "*La Morte d'Arrigo l'I.*" and at Genoa, in 1785, a comic opera entitled "*L'Astuzie di Bettina*." Several of his instrumental works for the flute have also been published in Paris.

STACCATISSIMO. (L.) Very detached.

STACCATO, or STAC. (L.) A word signifying that the notes of the passage over which it is written are to be performed in a short, pointed, and distinct manner. It is the opposite of *legato*, which word see. It is represented either by the word itself, or by small dots or dashes placed over or under the notes, thus: —

STADELMAYER, JOHANN, native of Frey-singen, in Bavaria, was chapel-master to an arch-duke of Austria about 1640. He published many sacred vocal works between the years 1603 and 1660.

STADEN, JOHANN, organist and church composer at Nuremberg, his native city, died there in 1634. He published, between the years 1616 and 1632, six grand opera of motets and psalms, amongst which are some for twelve voices. On his death, the magistracy of his town caused a medal to be struck, with his portrait, in honor of his memory.

STADEN, SIEGMUND THEOPHILUS, or GOTTLIEB, son and pupil of the preceding, was born at Nuremberg in 1607. He was considered a great master both in theory and practice, and held the situation of organist in one of the large churches of the above town till his death, which took place in 1655. He published, in 1616 and 1648, a work entitled "*Rudimentum Musicum*;" also, in 1651, a collection of songs for three voices and instruments.

STADLER, MAXIMILIAN, the abbé, was born in 1748 in a little town in Lower Austria. He distinguished himself in 1826 in the controversy about the genuineness of Mozart's "*Requiem*," against Gottfried Weber. He was distinguished equally as an organist and as a composer, having written masses, motets, fugues, &c., and an oratorio, "*Jerusalem Delivered*." He died near Vienna in 1833.

STAFF. (Pl. *Staves*.) The five horizontal and parallel lines on and between which the notes are placed. Guido, the great improver of the modern music, is said by some to have first used the staff; but others give an earlier date to its introduction. Kircher affirms that, in the Jesuit's library at Messina, he found a Greek manuscript of hymns more than seven hundred years old, in which some of the music was written on staves of eight lines, marked at the beginning with eight Greek letters: the notes, or rather points, were on the lines, but no use was made of the spaces. This however, at most, only deprives Guido of the original invention of the staff, and still leaves him the credit of its great improvement, by reducing it to five lines, and employing both lines and spaces.

STAFF OF FOUR LINES. There are now extant several specimens of the style of music in use among the monks of the earlier Christian ages. These examples are very curious, and, to the casual observer, extremely interesting. The airs are written on four lines, and are marked with treble and bass clefs; but they would appear to have been intended almost entirely for the use of singers. Instrumental music of that period is much more rare and uncommon. The compositions alluded to are very feeble, and evince an ignorance of the extent to which musical sounds might be made available. They are merely loose themes, without any attempt whatever at artistic effect. As time wore on, the writing on five lines instead of on four became universally adopted in Europe, and the style of composition gradually improved. See above.

STAGGINS, NICHOLAS, was educated under his father, a musician, but of no great emi-

nence, who lived in London. He had interest enough to procure the place of composer to King Charles II., and afterwards to be made master of the band of William III. In the year 1644 he was admitted to the degree of doctor in music; but through the favor of Dr. James, the vice chancellor of Cambridge, the most difficult part of the exercise for his act was dispensed with. This partiality occasioned great murmurings; notwithstanding which the university also thought proper to appoint him their public professor of music. There was at Cambridge no endowment for a musical professorship, so that the appointment must have been merely honorary; by virtue of it, however, Dr. Tudway succeeded to the title on the death of Staggin's. In a collection of "Choice Ayres, Songs, and Dialogues, to sing to the Theorb Lute or Bass Viol," published in 1675, there is a song composed by Dr. Staggin's to the words "While Alexis;" and there is another, "How unhappy a lover am I," in Smith's "*Musica Antiqua*." It does not appear that he ever composed anthems or services, or, indeed, any work that could render him justly eminent in his profession.

STAINER, or STEINER, JACOB, a celebrated violin maker at Absom, a small village of the Tyrol, lived towards the close of the seventeenth century. He was an apprentice of Amati. His instruments were not highly valued till after his death, since which time to the present period they have produced very considerable prices. The Stainer violins, compared with the Amatis, are high and narrow, and the box more confined; the sound holes are cut more perpendicular, and are shorter; there is also a kind of notch at the turn. The Straduaris violins are of a larger pattern, particularly those of Antonius the son, and have a wider box than the Amatis, and longer sound holes, which are cut at the ends very sharp and broad, with a little hollow at that end which other makers cut flat. The varnishes of the Amatis and Stainers are yellow, as well as those of Straduaris the father; the son's varnish is red. Of the audible characteristics, surely of the most importance, though too frequently a secondary consideration, generally speaking, the Amatis have a mild and sweet tone, the Stainers a sharp and piercing tone, and the Straduaris a rich and full tone. See AMATI, and STRADUARIUS.

STAMITZ, JOHANN CARL, concert master and chamber musician at Manheim in 1756, was born in 1719 at a small town in Bohemia, where his father was a schoolmaster. He was the founder of the famous violin school at Manheim, which for a long time preserved a high reputation. J. C. Stamitz was one of those professors whose works have deservedly attained celebrity. They consist principally of symphonies, or overtures, concertos, quartets, and trios. Though truly masterly, they still are of the old school, and are considered by some critics to savor too much of the church style.

STAMITZ, CARL, elder son of the preceding, was born at Manheim in 1746. He studied the violin under his father, and his father's pupil, Cannabich, and was engaged in the chapel of a German prince, till in 1770 he went to Paris, and for a long time sustained his reputation there as a

great musician, both as a concerto player on the violoncello and tenor and as an instrumental composer. Many of his works were published at Paris, Berlin, and Amsterdam. He died at Jena, on his journey to Russia, in 1801. His writings had all the fire and spirit of those of his father; whilst he contrived to keep pace with modern improvements, without the servile imitation of any style.

STANLEY, JOHN, bachelor of music, was born in the year 1713. At two years old he totally lost his sight by falling on a marble hearth with a china basin in his hand. At the age of seven he first began to learn music, as an art that was likely to amuse him, but without his friends supposing it possible for him, circumstanced as he was, to make it his profession. His master was Reading, a scholar of Dr. Blow, and organist of Hackney. But his father, finding that he not only received great pleasure from music, but had made a rapid progress, placed him with Dr. Greene, under whom he studied with great diligence and a success that was astonishing. At eleven years of age he obtained the place of organist at All Hallows, Bread Street; and in 1726, at the age of thirteen, was elected organist of St. Andrew's in preference to a great number of candidates. In 1734 the benchers of the honorable society of the Inner Temple, elected him one of their organists. These two places he retained till the time of his death. Few professors have spent a more active life in every branch of his art than this extraordinary musician; having been not only a most neat, pleasing, and accurate performer, but a natural and agreeable composer, and an intelligent instructor. He was the conductor and soul of the Swan and Castle concerts in the city as long as they subsisted. Upon the death of Handel, he and Smith undertook to superintend the performance of oratorios during Lent; and after Mr. Smith retired he carried them on, in conjunction with Linley, till within two years of his death in 1786. That Stanley was able to accompany a singer as he did, and, above all, to conduct the oratorios, is astonishing, and far beyond all possibility of explanation. It is said that Miss Arlound, his sister-in-law, played each oratorio once throughout to him, previously to the public performance, and that he needed no further help. He published several opera of instrumental music.

STANZEN, JOHANN L., organist at Hildesheim, published at Cassel, in 1782 and 1783, "A Collection of Songs, with Piano-forte Accompaniments, in two vols." He also published six opera of piano-forte music, at Offenbach and Brunswick, between the years 1793 and 1797.

STARK. (G.) *Forle*, loud; as, *mit starken Stimmen*, with loud stops, in organ playing.

STARZER, a very celebrated ballet composer and excellent violinist at Vienna, died there about the year 1793.

STATION. This word is sometimes used by ancient musical authors for any fixed pitch or degree of sound, whether produced by intension or remission.

STECHER, MARIAN, a good composer for the organ and piano-forte, resided at Munich in

the latter part of the last century. Stecher's works bear date from the year 1793 to 1803.

STECKLER, MILE, a celebrated female harpist at Paris, was a pupil of Krumpholz. She made her *début* at the *concert spirituel* in 1780.

STEFFAN, JOSEPH ANTON, professor of the harpsichord at Vienna, was born in 1726. He was a pupil of Wagenseil, whose style of playing, however, he soon neglected for one entirely his own. He was music master to Marie Antoinette, Queen of France, and to the Queen of Naples. He published several operas of music for his instrument, at Vienna, between the years 1756 and 1798; also a collection of German songs, in four volumes, in 1778 and 1781.

STEFFANI, AGOSTINO, was born in the year 1655 at Castello-Franco, a small frontier town in the territory of Venice. In his childhood he was a singer in some neighboring cathedral, church, or chapel; but he had not served more than two years in the choir when a German nobleman was so much pleased with his voice and figure that he procured his discharge and took him into Bavaria. At the expense of this nobleman, Steffani was instructed in all the branches of useful and ornamental literature. The direction of his musical studies was committed to Ercole Bernabei. In compliance with the request of his patron, who was desirous of rendering his learning of further advantage to him, he took holy orders, and was soon afterwards made an abbate. In the course of his studies he had composed several masses, motets, magnificats, and other kinds of church music, which, after his promotion, were performed in the chapel at Munich. The reigning Duke of Brunswick, the father of King George I., was so greatly delighted with them that he invited Steffani to the court of Hanover, and, it is said, conferred on him the employment of chapel-master. He also committed to his care the management of the opera, an entertainment which had then but lately found its way into Germany. After his settlement in Germany, Steffani applied himself wholly to the study of secular music, and composed many operas, among which were "Alexander the Great," "Orlando," and "Alcibiades." These were translated from the Italian into the German language, and were performed at Hamburg between the years 1694 and 1700. He composed also a few madrigals in five parts, some of which are very fine. But the most celebrated of all his works are his duets for two voices, with a bass accompaniment, so calculated as simply to sustain the harmony, without increasing in effect the number of parts. Of these compositions, it is, perhaps, their best praise that Handel professed to imitate them in twelve duets which he composed for Queen Caroline. Their characteristic is a fine and elegant melody, original and varied modulation, and a texture of parts so close, that, in some instances, canon itself is scarcely more strict; and, which is very remarkable, this connection is maintained with each art as not to affect the air, or create any necessity of varying it in order to accommodate it to the harmony.

The musical talents of Steffani, though very splendid, were far from being the only distinguished part of his character. His great natural endowments enabled him to act in a sphere that

few of his profession ever attained. He bore a diplomatic character, and was frequently employed in negotiations to foreign courts. For his conduct in the scheme of erecting the duchy of Brunswick-Luneburg into an electorate, he received from the elector a pension of one thousand five hundred rix dollars per annum; and by the pope, Innocent XI., he was promoted to the bishopric of Spigua. Being now a statesman and a dignitary of the church, he forbore any longer to set his name to his compositions, but adopted that of his secretary, Gregorio Puia; and, perhaps influenced by the same motives, he, in 1708, resigned his employment of chapel-master in favor of Handel. About 1724 the Academy of Ancient Music in London elected him their president. He died at Frankfurt in the year 1730, after an indisposition of only a few days' continuance.

Besides the works above mentioned, there are extant in print, by Steffani, a series of letters entitled "*Quanta certezza abbia da suoi Principi, la Musica*;" "*Psalmodia Vespert.*, 8 voc.," published in 1674; a collection of motets, entitled "*Sacer Janus, Quadryfons*, 3 voc., *Monachir*," in 1685; and a "Collection of Airs," said to be taken from his operas. The latter are not, however, to be regarded as his genuine productions.

Of the works of this excellent composer, Stevens's "Collection of Sacred Music" contains three duets; namely, "Come, ye Children," "I will give Thanks," "O, praise the Lord;" and four trios, "Rejoice in the Lord," "O, hear ye this," "O, be joyful," and "Thou art my Portion." In Dr. Crotel's publication there is a "*Qui diligit Mariam*," by Steffani, which forms a fine specimen of his works.

STEGMANN, CARL DAVID, music director at the theatre of Grossmann, at Dresden, was born there in 1751. He was a pupil of Houllins, and was not only a good dramatic composer, but also an able violinist and performer on the harpsichord. His dramatic works, written for various towns in Germany, bear date from 1773 to 1800. He also composed much instrumental music, most of which has remained in manuscript.

STIEBELT, DANIEL, was born at Berlin in 1755. His father was well known as a manufacturer of piano-fortes. His musical talents were developed at an early age; and good fortune introduced him to William III., of Prussia, under whose patronage he was enabled to pursue his studies in playing and composition. He afterwards travelled abroad, and resided during fifteen years in London and Paris. It is to him that the Parisians are indebted for their first acquaintance with the "Creation" of Haydn. The French critics of this period were of opinion that the work abounded with many excellences, but, upon the whole, was heavy and tedious. During his residence in Paris, it is said that he gave considerable offence to his fellow-artists by assuming an air of *hauteur* incompatible with the modesty of a professor. He affected to despise his mother tongue, and preferred speaking bad French to good German. In 1799 Steibelt returned to Germany, and afterwards went to Russia, where he had the honor of being nominated, by the Emperor Alexander, to the office of chapel-master. He died at St. Petersburg in

1823, after a painful and protracted illness. Due respect was shown to his memory by the united efforts of his brother artists, assisted by a great number of amateurs, who performed a solemn dirge to his honor.

Steibelt was not less esteemed as an admirable player than as a pleasing composer. His forte lay in music of the bravura kind, which he gave with great precision, power, and effect, united to singular beauty and delicacy of manner. His compositions for the piano-forte, particularly those of the middle part of his life, had numerous admirers as well in Germany as in England, but particularly in France. This may be easily accounted for from the character of his music, which is full of gayety, animation, and spirit, easy of conception, and generally not difficult in the performance. That portion of his works which to us appears less subjected to the fashion of the day, and more abounding in richness and originality of invention, than the greater part of his other compositions, is his "*Etudes*," in two volumes. But some of his sonatas, particularly that dedicated to Madame Bonaparte, will be admired so long as the piano-forte music of this age shall be esteemed. For other instruments and a full orchestra he wrote but little; and he showed his judgment in so doing; for in the little he attempted his success was very limited. He produced a few operas, which, however, appear never to have circulated beyond the limits of the cities for which they were composed. The last of his compositions of this kind was "The Judgment of Midas," which he left to his son in an unfinished state, and, unfortunately, was the only thing he had to leave him; for Steibelt had the misfortune, like many other men of genius, to pay but little regard to economy and the grosser things of this world. The embarrassment of his circumstances had no small effect upon the vigor and elasticity of his mind. In consideration of the merits of the father and the distressed situation of the son, Count Miloradowitsh, of St. Petersburg, humanely suggested the idea of a great concert for the benefit of the latter, which produced the desired result.

Steibelt occupied the latter days of his life in recomposing his opera of "Romeo and Juliet," the score of which he on his dying bed dedicated to the King of Prussia, out of a feeling of gratitude for the patronage and favors he had received from his royal father. His two other operas, "Cinderella" and "The Judgment of Midas," were written for the Imperial French Theatre at St. Petersburg, where they were performed with considerable applause. Of Steibelt it may be truly said, that if he neither opened any new paths in science, nor enlarged its boundaries, at least he has done much for the cultivation and improvement of that which was already known. He has contributed very considerably to advance the interests of music, by increasing the number of amateurs through the medium of his instructions, and by means of his compositions, which have been, and many of them still continue, deservedly amongst the most popular piano-forte works in his time sent forth to the world.

STEIN, JOHANN ANDREAS, an organist at Augsburg, born in 1728, was particularly celebrated as a manufacturer of organs. He was the inventor of a musical instrument called the ue-

lodica, which was fashionable at Paris for some time. He died at Augsburg in 1792.

STEIN, FRIEDRICH, youngest son of the preceding, was born at Augsburg in 1784. He was a pupil of Albrechts-berger, and was a celebrated pianist and admired dramatic composer. He died in his twenty-fifth year at Vienna, in 1809.

STEINER. See STAINER.

STEINFELD, A. J., organist at Bergedorf, near Hamburg, published several operas of vocal and instrumental music in that city between the years 1784 and 1802.

STEINGUDEN, CONSTANTIN, chapel-master at Constance in the seventeenth century, published there, in 1666, his Op. 4, entitled "*Flores Nyemales à 3, 4 voci*," with instrumental accompaniments.

STEINMULLER. There were three brothers of this name, hornists in the celebrated chapel of Prince Esterhazy when it was under the direction of Haydn. They wrote much music for their instrument.

STELLA, SCIPIONE, an Italian monk, was celebrated at Naples as an able contrapuntist, and especially canonist, at the beginning of the seventeenth century. Amongst his works is "*Il Libro 2do de Madrigali à 5 voci*," second edition, Venice, 1808.

STEM. That part of a note which branches upward or downward from the point or head. See *TAIL*.

STENTATO. A word sometimes used by the Italians to signify that the voice should be thrown out freely in the passages over which it is written, for the expression of some extraordinary emotion.

STENTOROPHONIC TUBE. (From the Greek.) A speaking trumpet, so called from Stentor, the herald or crier mentioned by Homer, and who, as that author tells us, could call louder than fifty men. The stentorophonic horn of Alexander the Great is famous: with this, it is said, he could give orders to his army at the distance of one hundred stadia, which is above twenty English miles.

STEPHENS, MISS. This eminent artist was born in London, and received the first rudiments of instruction in the art of singing from Lanza, under whose tuition she passed a considerable period. Proceeding upon the genuine Italian method of forming the voice, Lanza initiated his pupil very slowly, but very surely, we apprehend, in the elements. Her power of sustaining and her intonation are therefore both fixed. Whilst under her first master, Miss Stephens was brought out at the Pantheon. At length, however, the slowness, though correctness, of Lanza's process of tuition induced the father of Miss Stephens to apply to Thomas Welsh, who at once saw the great vocal promise of the young lady, and exerted himself in every way to bring her sufficiently forward to appear before the public with *éclat*. She made her *début* at Covent Garden Theatre with brilliant approbation. The quality of her tone was full and rich. The peculiar bent of her talent was towards ballads and songs of

simple declamation; in a word, towards that particular style which is generally esteemed to be purely English, though the formation of the voice may (indeed it must, for there are no other) have been conducted upon the principles of Italian teaching. It is impossible for any thing to be more pure, more chaste, than the simplicity with which Miss Stephens gave such songs as "Auld Robin Gray," "Angels ever bright and fair," and "Pious Orgies" of Handel. Her ornaments were correct and pleasing, but seldom far sought or surprising, while there was little of the coarseness of the stage to be discovered.

STERKEL, ABBÉ J. F., was born at Wurtzburg about the year 1750. He was a composer, principally of sonatas and concertos for the harpsichord; and a great many sets of these, at different times, have been published. He travelled into Italy for improvement, and appears to have considerably benefited himself by attending to and studying the Italian style of composition. "His works," says Dr. Burney, "although they are not very learned or consonant to harmonical rules, are full of spirit, and abound in tasteful and pleasing passages. His violin concertos generally consist of passages of effect and such as give importance to the player. Indeed, his pieces, though not very original, are less tinctured with Bachism or Haydnism than those of most of his countrymen who have not visited Italy; and though less solid, and less his own property, than Kozeluch's, yet they are more easy to execute, and more intelligible to unlearned hearers."

STESICHORUS, a much respected bard, who, according to Athenæus, was born at Himera, in Sicily. His first name was Tisias; but he acquired the title of Stesichorus from the changes he made in the manner of performing the dithyrambic chorus, which was sung and danced round the altar or statue of Bacchus during the worship of that god. Our latest chronologers agree in fixing the time of his death to have been five hundred and fifty-six years before Christ. A character of his numerous poems may be seen in Quintilian, who speaks of them as subsisting in his time. At present, only a few fragments of them remain. Among his musical improvements, Plutarch enumerates the changes which he made in the harmonian or chariot air, composed by Olympos.

STESSO. (L.) The same.

STEUERLEIN, JOHANN, a celebrated church composer, was born at Schmalkald in 1546. His compositions bear date from 1571 to 1601. He died in 1613.

STEUP, H. C. A pianist at Amsterdam, and also proprietor of a music warehouse there. Many of his instrumental compositions have been published since the year 1800.

STEVENS, R. J. S. This celebrated composer of part songs was organist of the Charter House and of the Temple; also Gresham professor of music. He published a very beautiful selection of sacred music in three volumes folio. Amongst his glees, the following are the most admired: "Sigh no more, ladies," five voices; "Ye spotted snakes," four voices; "It was a lover and his lass," five voices; "O mistress mine," five voices; and, "See what horrid tem-

pests," four voices. His compositions appeared chiefly between the years 1795 and 1805.

STEVENS, WILLIAM S., was born in Westminster in 1778. At six or seven years of age he was sent to Wallingford, in Berkshire, where he received a classical education; at thirteen he was removed to Laytonstone, in Essex, where for two years he studied the mathematics and the French language, and improved himself in the classics. The first musical impulse he felt (being, as a child, inclined to mechanics) was a desire to make a fife, one of his schoolfellows having an instrument of that sort which he would not lend him. He began this mechanical undertaking by giving sixpence from his pocket money for a piece of bamboo cane, with which, and the assistance of an iron skewer, made hot, he burned the several holes for his fife, and formed a tolerably well-tuned and well-toned instrument, with which he emulated the strains of his rival schoolfellow. Having evinced thus early (for he was but eight years old at the time) a decided aptitude for music, his father bought him a flute, and he received some lessons from a teacher in the town; after which he made so great a progress as soon to excel his master, by his own confession. In the course of a few years he became acquainted with keyed instruments; at that period, however, very scarce. His father bought him a virginal, the fruitful mother of the piano-forte. For this instrument he felt a very strong attachment, as he soon found that he could play all his flute music on it; he felt, however, the want of rules and signs to assist and regulate his harmonies and to combine both his hands. The assistance of a master was therefore procured, whose name was Thomas Smart, a pupil of Drs. Pepusch, Nares, and Boyce. Under his tuition he soon evinced his improvement on a good Kirkman's harpsichord, and, in a little time, equally so on the organ, to which he had now constant access in the Churches of St. Bride, St. Clement, and the Temple. Under Smart he also studied thorough bass, which had the greatest charms for him; principally because, though now a good practical player from figured notes, he felt that he wanted the principles of harmony, fundamental, deep, and certain: these he wished for, to lead him to that perfect knowledge of the art which he aimed at and was resolved to attain. In this respect he more especially succeeded in his subsequent studies with R. J. S. Stevens, of the Charter House, and, lastly, with Dr. Cook, of Westminster Abbey: the former opened to him the harmonic code, and taught him counterpoint and composition; and with the latter he studied the nature of cathedral music, the accompaniment of its services, and obtained a true idea of scores and of the ready manner of reading them.

Stevens having considerable expectations, which were considered as certainties, both from his father's as well as other property, was brought up to no profession, although he studied for more than one. Fearing, however, (what in fact happened,) that his expectations might not be realized in full by the alter circumstances of his life, he resolved to apply himself to the musical profession as a teacher; soon after which determination he was appointed pianist and master of the choristers at the Haymarket Theatre, which

situation he held until a new management expelled the piano-forte from the orchestra. At various times he published songs, glees, and a few sonatas, capriccios, &c.; he also employed his pen and talents on other subjects than music; having written and presented to government an "Essay on Projectiles," so far as ball shooting is concerned, which essay found its way to Woolwich Warren; and guns, it has been said, were cast on the plan he recommended. He next turned his mind to giving a plan for the orchestra at Drury Lane Theatre, when to be rebuilt after the fire: his idea was only in part acted on, provision being, however, made for the completion of the plan, should it be afterwards thought advisable. After this he sedulously exerted his inventive faculties to devise a plan for preventing the forgery of bank notes, and did not discontinue his efforts till it was resolved by the directors to call in the small notes and pay in specie. He was not idle after the above project ceased to occupy his mind, but wrote "An Essay descriptive of a new Method of Navigation, by newly-invented Charts and Instruments, by which the Longitude is found, kept, and always known." He also wrote on every part of musical science, harmony, modulation, fingering, expression, &c.; also, "A complete double counterpoint of the preparation and resolution of the seventh for all the modulations both in major and minor, making sequences through each octave; in four parts, forming twenty-three inversions, and showing every discord that can arise in music, with their natural resolutions."

Amongst his published practical works are the following: "*Le Lever de l'Amour*," a sonata for the piano-forte; "*Le Reveil de Diane*," a sonata for the piano-forte; "A set of capriccios or short preludes," &c. Songs: "Art thou not dear unto my heart?" "The Curfew," from Gray's Elegy; "The Indian Girl's Lamentation over her Lover killed by Lightning;" "The Castilian Lover." Glees: "The Voice of Spring;" "Mary of Buttenere," an extemporary effusion; "The Grand Musical Magazine," discontinued after about six or eight numbers; and "A Treatise on Piano-forte Expression." Theoretical: "A Card, simplifying the Reading of the Counter Tenor Clef."

STEVENSON, SIR JOHN. A native of Ireland. He was born about the year 1772, and received his earliest musical instructions under Dr. Murphy, in the Cathedral Church of St. Patrick, Dublin. In this situation he first acquired that taste, both for secular and sacred music, which he cultivated with so much success. Whilst he continued in Ireland, the musical afterpieces of the "Son-in-Law" and "Agreeable Surprise," being the property of the manager of the Haymarket Theatre, in London, and the original music not having been published, he was requested to reset them, for the purpose of their being played in Dublin; and in this city they were performed with his music. Besides these he composed for the Irish stage the operas of "The Contract" and "Love in a Blaze," the former written by Dr. Holton, and the latter by Mrs. Atkinson. It is stated that the degree of doctor of music was conferred upon him under circumstances which greatly redound to his credit; and that he received from the Hibernian

Catch Club a massive and elegant silver cup in testimony of their estimation of his talents and in consideration of the many delightful compositions which he had contributed to the entertainment of the club and the honor of the country. Sir John Stevenson's compositions are principally vocal. Several of his glees and duets have obtained great celebrity. He has also published some church music. His most popular work, however, is his arrangement of the Irish Melodies to the poetry of Moore. The following are amongst the more admired publications of Sir John Stevenson:—

Glees: "And will he not come again?"; "Allen a Dale," three voices; "Alice Brand," three voices; "Doubt thou the stars are fire"; "Come, let us play," madrigal, three voices; "Fairy Glee"; "Hail to the mighty power of song," charter glee; "Raise the song," "He is gone on the mountain"; "See our oars with feathered spray," boat glee; "O, stay, sweet fair," &c. Duets: "Tell me where is Fancy bred"; "Those laughing eyes"; "Sweet stream, if e'er thy limpid flow"; "Valentine's Day," &c. Songs: "Cheerful as the bird of May"; "Cypress Wreath"; "Dearest girl, I soon must leave thee"; "Doubt not, sweet maid"; "Fairest, awake"; "Farewell, my harp"; "Harper's Son, in Rokeby"; "Remember your vows"; "To the brook and the willow"; "Come, take the harp"; "Dear Fanny"; "Does the harp of Rosa slumber"; "Go, sweet enchantress"; "I am wearing away"; "Maid of Marlivale"; "O, turn away those mournful eyes"; "Waters of Elle," &c. "Symphonies and Accompaniments to the Irish Melodies," eight parts, words by T. Moore, Esq.; "Symphonies and Accompaniments to popular National Airs," words by T. Moore, Esq.; some of the "Series of Sacred Songs, Duets, and Trios," words by T. Moore, Esq.; and "Handel's Songs, arranged with a Piano-forte Accompaniment."

STICCADO. An instrument consisting of small lengths of wood, flat at bottom, rounded at the top, and resting on edges of a kind of open box. They are unequal, both in length and thickness, gradually increasing from the smallest to the largest, and are tuned to the diatonic scale. This instrument is called a *sticcado* because the parts from which the tones proceed are generally formed of wood; but they sometimes consist of metal, and sometimes even of glass.

STICH. See **PENRO.**

STILO DI RECITATIVO. (I.) A tedious, monotonous style of composition, in the manner of recitative, formerly much adopted in Italy, and sometimes extending through a whole narrative, or drama, without the least change of measure or mixture of air, except now and then a formal close.

STILLINGFLEET, BENJAMIN, an English author and naturalist, published in London, in 1771, a commentary on Tartini's treatise on music, with the title, "Principles and Power of Harmony." He died in 1771.

STOBÆUS, JOANNES, was chapel-master at Königsberg, in Prussia, towards the commencement of the seventeenth century. Amongst other works he published "*Cantiones Sacrae*, 4, 5, 10 voc.," Frankfurt, 1624.

STOELZEL, GOTTFRIED HEINRICH, chapel-master to the Duke of Saxe-Gotha, was born in 1690. He received the rudiments of his musical education from his father, who was an organist, and in 1707 was entered at the University of Leipsic, where he formed an acquaintance with the celebrated G. Hoffmann, then music director at the new church in that town. After a residence of three years at Leipsic, he proceeded to Breslau, in Silesia, where he continued two years, giving lessons in music. At the same time he composed there numerous overtures, concertos, and other works; the most remarkable of which were a sereenado on the occasion of the coronation of the Emperor Charles VI., and a dramatic piece entitled "*Narcissus*," in honor of the Countess of Neidhardt; of this he wrote both the music and words. He now began to feel a strong inclination to visit Italy; and accordingly, after writing several more operas for the German theatres, he proceeded to Venice, and from thence to Florence and Rome, in all which places he was introduced to the principal musicians of that period; amongst others Gasparini, Vivaldi, Polaroli, Vinacessi, B. Marcello, Buononcini, A. Scarlatti, &c. From Italy he went to Prague, where he remained three years, and composed the words and music to various operas and oratorios. He also wrote some masses and instrumental music. In 1719 he entered the service of the Count of Gera. He died in 1749. Amongst his works was an interesting "Treatise on Recitative," which he drew up for a musical society about the year 1739.

STONARD, W., organist of Christ Church, Oxford, and made doctor of music in 1608, composed several anthems, the words of which are inserted in Clifford's collection. He was also the composer of some pieces communicated by Walter Porter to Dr. Wilson, the professor of music at Oxford, which were directed to be preserved forever among the archives of the music school.

STOP. A word applied by violin and violoncello performers to that pressure of the strings by which they are brought into contact with the finger board and by which the pitch of the note is determined. Hence a string, when so pressed, is said to be *stopped*. — *Stop of an Organ*. A collection of pipes similar in tone and quality, which run through the whole, or a great part, of the compass of the instrument. In a *great organ*, the stops are numerous and multifarious, commonly comprising the following: *Open Diapason Stop*. A metallic stop which commands the whole scale of the organ, and which is called *open* in contradistinction to the *stop diapason*, the pipes of which are closed at the top. — *Stopped Diapason Stop*. A stop the pipes of which are generally made of wood, and its bass, up to middle C, *altveys* of wood. They are only half as long as those of the open diapason, and are stopped at the upper end with wooden *stoppers*, or plugs, which render the tone more soft and mellow than that of the open diapason. — *Principal Stop*. A metallic stop originally distinguished by that name, because holding, in point of pitch, the middle station between the diapason and fifteenth, it forms the standard for tuning the other stops. — *Twelfth Stop*. A metallic stop so denominated from its being tuned twelve notes above the diapason. This stop, on account of its pitch, or tuning, can

never properly be used alone. The *open diapason*, *stopped diapason*, *principal*, and *fifteenth* are the best qualified to accommodate it to the ear. — *Fifteenth Stop*. A stop which derives its name from its pitch, or sente, being fifteen notes higher than that of the *diapason*. This stop and the *twelfth*, uncllowed and embodied by the two *diapasons* and *principal*, form a proper compound for accompanying choral parts in common choirs and parochial churches. — *Sesquialtera Stop*. A mixed stop running through the scale of the instrument, and consisting of three, four, and sometimes five ranks of pipes, tuned in thirds, fifths, and eighths. In small organs, this stop is generally divided at middle C, when the lower part is called the *sesquialtera*, and the upper part the *cornet*. The whole of this stop lies above the *fifteenth*; the first rank being a *seventeenth*, the second rank a *nineteenth*, and the third rank a *twenty-second* above the *diapason*. — *Mixture*, or *Furniture Stop*. A stop comprising two or more ranks of pipes, shriller than those of the *sesquialtera*, and only calculated to be used together with that and other stops. The *mixture* is nearly the same as the *sesquialtera*, and greatly enriches the instrument. — *Trumpet Stop*. A reed metallic stop, so called because its tone is imitative of the trumpet. In large organs, it generally extends through the whole compass. The mouths of its pipes are not formed like those of the pipes of other stops, but resemble that of the real trumpet. At the bottom of each of the pipes of this stop, in a cavity called the *socket*, is fixed a brass reed, stopped at the lower end and open in front: it is furnished with a tongue, or brass spring, which covers the opening, and which, when the wind is impelled into the pipe, is thereby put into vibratory motion, which produces the imitative tone peculiar to this stop. The *trumpet stop* is the most powerful in the instrument, and improves the tone as much as it increases the peal of the *chorus*. Unisonous with the *diapasons*, it strengthens the foundation, subdues the dissonances of the thirds and fifths of the *sesquialtera*, and imparts to the compound a richness and grandeur of effect adequate to the sublimest subjects. — *Clarion*, or *Octave Trumpet Stop*. A reed stop resembling the tone of the trumpet, as may be inferred from its name, but the scale of which is an octave higher than the *trumpet stop*. This stop forms a brilliant supplement to the *chorus*, and is judiciously employed on occasions which require every power of the instrument; but should not be commonly used, nor ever, indeed, without the other stops. — *Tierce Stop*. A stop which is tuned a major third higher than the *fifteenth*, and only employed in the full organ. — *Larigot Stop*, or *Octave Twelfth*. A stop the scale of which is an octave above the *twelfth*. Only used in the full organ. — *Cornet Stop*. A stop consisting of five pipes to each note, tuned somewhat in the manner of the *sesquialtera*, having, besides the unison of the *diapason*, its third, fifth, eighth, and seventeenth. The *cornet* being only a treble stop, it is employed in parish churches in conjunction with the *diapason* interludes and the *giving out* of the psalms. — *Dulciana Stop*. A stop in the choir organ of a peculiar sweetness of tone, which it chiefly derives from the bodies of its pipes being longer and smaller than those of the pipes of other stops. It is in unison with the *diapasons*, and equals them in compass upwards, but

only descends to G, *gamut*. — *Flute Stop*. A *stop* imitative of the common flute, or flageolet. It is in unison with the *principal*, but of a much softer tone than that *stop*. — *Bassoon Stop*. A reed *stop* imitative of the instrument from which it derives its name. This *stop*, so far as it extends upwards in the scale, is in unison with the *diapasons*, in company with which it only ought to be used. — *Vox-humana Stop*. A reed *stop* the tone of which, as its name implies, resembles the human voice. The quality of this *stop* is seldom so good as to render it agreeable when heard alone; it is therefore advantageously blended with the *diapasons*, with which it is in unison. — *Hautboy Stop*. A reed *stop* voiced in imitation of the hautboy. It is in unison with the *diapasons*, with which it only should be used. — *Cremona Stop*. A reed *stop* in unison with the *diapasons*. The name of this *stop* has induced most organ builders to erroneously suppose that it was originally meant as an imitation of the Cremona violin; but the writers best informed upon the subject inform us that it was designed to imitate an ancient instrument called a *Krum horn*, which word has been corrupted into Cremona.

STOPPLES. Certain plugs with which the ancients stopped or opened the holes of a flute, before the performance began, in order to accommodate its scale, or range of sounds, to some particular mode or genus.

STORACE, STEFANO. This eminent composer of theatrical music was the son of Stephen Storace, a well-known Italian performer on the double bass, who resided in England. He was born in the year 1763. In the early part of his life he exhibited a strong propensity to music; and this his father took such pains to cultivate, that, before his son had attained the age of eleven, he was able to perform on the violin the most difficult solos of Tartini and Giardini with great correctness. Not long afterwards he was sent into Italy, where he studied the harpsichord, violin, and the art of composition. His proficiency in the science must have been very rapid, since he not only wrote what is considered by many as his best composition, the finale to the first act of the "Pirates," but most of the other pieces for which he was so greatly admired during his residence on the continent. On his return to England he went to reside in Bath; but, finding that there was no opening either at that place or in London for the exercise of his professional talents, he was induced, for a while, to give up his musical pursuits, and to turn his attention to drawing; an art for which, as well as music, he had always a great predilection. His introduction to Drury Lane Theatre was at length effected through the friendship and interference of Michael Kelly, who had formed an acquaintance with him in Italy; and he was appointed composer to that theatre, where he had full scope for the expansion of his great abilities; the public judgment of his productions continuing throughout his musical career to be so favorable that he is said to have received from the music dealers greater prices for some of his operas than ever had been given before. At the early age of thirty-three Storace was attacked by a violent fit of the gout, which flew into his head and deprived the world of this highly-praising young man in the year 1796. He left behind him

several children by his wife, the daughter of Mr. Hall the engraver. Storace had just before been to Bath for the purpose of hearing Braham sing, and, with the consent of the managers, had engaged him for a limited number of nights at Drury Lane, where he was to appear in Storace's new opera of "Mahmoud," which was in preparation. Before his opera was ready, however, the regretted composer sank into the grave. Although his death paralyzed the work, it did not prevent its being afterwards produced, though in an incomplete state. With the consent of the managers, of Mr. Hoare, the author of the opera, and by the friendly assistance of Kelly, together with some additional music selected by Signora Storace, the composer's sister it was performed for the benefit of his family.

The compositions of Storace are full of spirit and fire; and his melodies, at least, have not often been excelled by theatrical composers. In his quartettos and finales he was chiefly excellent. His productions for the theatre consist chiefly of the following operas: "Doctor and Apothecary," farce, 1788; "Haunted Tower," comic opera, 1789; "No Song, no Supper," musical farce, 1790; "Siege of Belgrade," comic opera, 1791; "Cave of Trophonius," musical entertainment, 1791; "Pirates," comic opera, 1792; "Dido," opera, 1792; "Prize," musical entertainment, 1794; "Cherokee," comic opera, 1794; "Glorious First of June," musical entertainment, 1794; "Lodoiska," (selected,) musical romance, 1794; "Three and the Deuce," comic drama, 1795; "My Grandmother," musical farce, 1795; "Mahmoud," opera, 1796; and "Iron Chest," play, 1796.

STORACE, ANNA CELINA. This excellent actress and theatrical singer was a pupil of Sacchini. Her eminence commenced about 1780, at the opera at Florence, whence she was invited to Vienna by the emperor in 1784, a salary being assigned to her of near five hundred pounds per annum. She quitted Vienna after the carnival of 1787, when she went to London, and in a short time ranked amongst the favorite comic performers and singers of the stage. She died near London about the year 1814.

STRADELLA, ALESSANDRO, of Naples, was born about the year 1645, and was not only an excellent composer, but also eminent as a performer on the violin. In addition to these qualifications, he possessed a fine voice and an exquisite taste in singing. His compositions, which are all vocal, are perhaps superior to any that were produced in the seventeenth century, with the single exception of the works of Cavissimi; and perhaps, had he enjoyed equal longevity, he might have rivalled even that wonderful musician. Stradella, probably at a very early period of his life, having acquired great reputation by his talents, was employed by a noble Venetian to teach a young lady of a noble Roman family, named Hortensia, to sing. Hortensia, on whom nature had bestowed a beautiful person and exquisite voice, notwithstanding her illustrious birth, having been seduced from her friends, had submitted to live with this Venetian in a criminal manner. Her delight in music and admiration of the talents of her instructor soon gave birth to a passion of a different kind; and like Heloise, she found that, though at first

"Guiltless she gazed and listened while he sung,
While science flowed seraphic from his tongue;
From lips like his the precepts too much move;
They music taught — but more, alas! to love!"

By frequent access, Hortensia and her master became mutually enamoured of each other. Before their attachment was discovered, they agreed to quit Venice together and fly to Naples. After travelling in the most secret manner, they arrived at Rome in their way to that city. The Venetian seducer, enraged at their escape, determined to satiate his revenge in having them assassinated in whatever part of the world they could be found; and for this purpose engaged two desperate ruffians, by a large sum of ready money, and a promise of a still greater reward when the work should be accomplished. The assassins proceeded directly to Naples, the place of Stradella's nativity, supposing that he would naturally return thither for an asylum in preference to any other part of Italy. After many fruitless researches in that city, they were at length informed that Stradella and the lady resided at Rome, where she was regarded as his wife. Of this they conveyed intelligence to their employer, assuring him of their determination to go through with the business they had undertaken, provided he would procure them letters of recommendation to the Venetian ambassador at Rome, to grant them an asylum as soon as the deed should be perpetrated. After waiting at Naples for the necessary letters and instructions, they proceeded to Rome, where, such was the celebrity of Stradella, they very shortly discovered his residence. But hearing that he was soon to conduct an oratorio of his own composition in the Church of St. John Lateran, in which he was not only to play, but to sing, the principal part, and as this performance was to begin at three o'clock in the evening, they determined to avail themselves of the darkness of the night, when he and his mistress should return home.

On their arrival at the church the oratorio was begun; and the excellence of the music and its performance, joined to the rapture that was expressed by the whole congregation, made an impression, and softened the rocky hearts even of these human savages to such a degree as to incline them to relent and to spare the life of a man whose genius and abilities were the delight of all Italy. Here we have an instance of the miraculous power of modern music, superior to any that could be well authenticated of the ancient, and which may fairly lead us to conclude that the fabulous stories of Orpheus, Amphion, &c., were but exaggerations of matters of fact well known in those days, but which have not descended to posterity. Both these assassins, being equally affected by the performance and alike inclined to mercy, accosted him in the street when he quitted the church. After complimenting him on his oratorio, they confessed the business on which they had been sent by the Venetian nobleman, whose mistress he had taken away; adding that, charmed by his music, they had abandoned their purpose, and determined to relinquish the rest of the reward that had been promised them, and to tell their employer that Stradella and his mistress had quitted Rome the night before their arrival in that city.

After this providential escape the lovers set out that very night for Turin, as a place most remote from their implacable enemy and his

emissaries; and the assassins, returning to Venice, told the enraged Venetian that they had traced the fugitives to Turin, where the laws being not only more severe, but the difficulty of escaping so much greater, than in any other part of Italy, on account of the garrison, they should decline any further concern in the business. The intelligence did not, however, incline the exasperated nobleman to relinquish his purpose, but rather stimulated him to new attempts. He therefore engaged two other assassins in his service, procuring for them letters of recommendation from the Abbé d'Estrade, at that time the French ambassador at Venice, addressed to the Marquis de Villars, ambassador from France to Turin — the Abbé d'Estrade requesting, at the desire of the Venetian ambassador, protection for two merchants, who intended to reside some time in that city; which being delivered by these new assassins, they paid their court regularly to the ambassador, waiting for a favorable opportunity to accomplish their undertaking with safety. The Duchess of Savoy, at that time regent, having been informed of the sudden flight of Stradella and Hortensia from Rome and of their arrival at Turin, and knowing the danger they were in from the vindictive spirit of their enemy, placed the lady in a convent, and retained Stradella in her palace as her *maestro di capella*. In this situation, apparently so secure, Stradella's fear for his safety began to abate; till one day, at six o'clock in the evening, as he was walking for the air on the ramparts of the city, he was attacked by two ruffians, who each gave him a stab in the breast with a dagger, and immediately escaped to the house of the French ambassador as to a sanctuary. The assault, having been witnessed by numbers of people who were walking in the same place, occasioned such an uproar in the city that the news soon reached the duchess, who instantly ordered the gates to be shut and the assassins to be demanded of the French ambassador; but he, insisting on the privileges granted to men of his functions by the law of nations, refused to give them up. This transaction, however, made a great noise all over Italy; and M. de Villars wrote immediately to the Abbé d'Estrade to know the reason of the attack upon Stradella by the two men whom he had recommended; and was informed by the abbé that he had been surprised into a recommendation of these assassins by one of the most powerful of the Venetian nobility.

In the mean while Stradella's wounds, though extremely dangerous, proved not to be mortal; and the Marquis de Villars, having been informed by the surgeons that he would recover, in order to prevent any further dispute about the privileges of the *corps diplomatique*, suffered the assassins to escape. But so invincible was the implacability of the enraged Venetian that, never relinquishing his purpose, he continued to maintain spies at Turin to watch the motions of Stradella. A year having elapsed after the cure of his wounds, he fancied himself secure from any further attempts upon his life. The duchess regent, interesting herself in the happiness of the two persons who had suffered so much and who seemed born for each other, had the ceremony of their marriage performed in her own palace; after which Stradella, being invited to Genoa to compose an opera for that city, went thither with

his wife, determining to return to Turin during the carnival. But the Venetian, being informed of this change of residence, sent assassins after them, who rushed into their chamber early one morning and stabbed them both to the heart. The murderers, having secured a bark which lay in the port, by instantly retreating to it, escaped from justice, and were never afterwards heard of. This occurred about the year 1679. Among various other works, Stradella composed the following: "*Oratorio di S. Gio. Battista, a 5 voci con Stromenti,*" and "*La Forza dell' Amor Paterno,*" opera seria, Genoa, 1678.

STRADIVARI, or STRADIVARIUS, ANTONIO. There were two celebrated violin makers (father and son) of this name at Cremona, in Italy, in the early part of the last century. The signature on their instruments was, "*Antonius Stradivarius Cremonensis faciobat, anno.*" See **AMATI**, and **STAINER**.

STRAIN. A word applied to those successive parts of a composition into which it is divided by double bars. The first strain lies between the first brace and the first double bar; the second strain between the first and second double bars; the third strain between the second and third double bars; and so on.

STRAKOSCH, MAURICE, the brilliant pianist, was born at Lemberg, in Poland, in 1825. His father was a wealthy man, and a colonel in the Polish army. He displayed great aptitude for music at a very early age; and he had every opportunity of studying music thoroughly, as his father emigrated to Germany in 1828. When he became proficient in his art he went to Denmark and gave many concerts there. From thence he went to St. Petersburg, where he received much honor from the emperor, and was engaged to instruct the Princess Olga, one of the most beautiful women in the world. Shortly after he visited Paris, where he was highly praised; and from thence he went to Lyons, Marseilles, and then made a three years' tour through Spain and Italy. Every where his efforts were crowned with marked success; and since 1848 he has been in this country. In New York, Boston, and all the principal cities he has given concerts, and been well received. Besides many compositions for the piano in the modern fantasia style, Strakosch has composed a German opera, "*Sardanapalus,*" and an Italian opera, "*Giovanna di Napoli,*" which was brought out in New York.

STRASCINO. (I.) A drag. This grace is chiefly confined to vocal music, and is only used in slow passages. It consists of an unequal and descending motion, and generally includes from eight to twelve notes. In music of a pathetic cast the *strascino* is of powerful effect, especially when performed by a soprano voice; but it requires to be introduced with the nicest judgment, and to be executed with taste and precision.

STRATHSPEY. A lively Scotch dance, the tune of which is generally written in common time.

STRAUSS, JOHN. This celebrated composer of waltzes, &c., was born at Vienna March 14, 1801. In accordance with the wishes of his

parents, he was early apprenticed to learn the business of bookbinding; but he found the study of music more congenial with his taste and temperament. At the age of nineteen he became a member of Lanner's celebrated orchestra; and it was here that he found ample field for the free indulgence of his peculiar talent and predilection for accompanying movements for dances, waltzes, &c. His first attempts in this species of composition were eminently successful; and in a short time he himself appeared as the conductor of a band which he had organized, and shared in common with his former principal the laurels so freely bestowed by the public of Vienna. There probably existed, in his time, no composer whose works were more generally appreciated. The Strauss waltzes have found their way over the wide world. Many of his compositions were dedicated to the crowned heads of Europe and the nobility; and he was the recipient of the most magnificent and costly souvenirs from those he thus honored. Strauss died at Vienna, September 15, 1849. It is said that a son of the great Strauss has gained some laurels by getting up a band similar to the one led by his father, and by the performance of the same music.

STRAUSS, JOSEPH, chapel-master to the Grand Duke of Baden at Carlsruhe, was born at Brünn, in Moravia, in 1793. Less known than the waltz composer, he is an artist in a more important sense, having composed excellent works in all kinds. A symphony of his was crowned at Vienna in 1838. In 1840 he directed the German opera at London.

STREICHER, JOHANN ANDRÉ, a celebrated piano-forte maker in Stuttgart, was born there in 1761, and died in 1833. He first made the *Flügel*, or grand piano, popular in Germany.

STREPITOSO. (I.) A word signifying that the movement to which it is prefixed is to be performed in an impetuous, boisterous style.

STRETTO, or STRET. (I.) Shortened. A word formerly used to signify that the movement to which it is prefixed was to be performed in a quick, concise style.

STRIGGIO, ALESSANDRO. A lutanist and voluminous composer, whom Morley and others have frequently mentioned. His madrigals, in six parts, were published at Venice in 1560. A copy of them is preserved in the collection at Christ Church, Oxford, but they do not contain anything remarkable either for genius or science.

STRING. Any wire, or preparation of sheep or catgut, used in musical instruments. The ancients originally strung their instruments with thongs of leather; but afterwards so far refined upon their construction as to adopt not only strings formed of the baser metals, but also of silver and gold—the latter of which was even in common use. Respecting the proportions and vibrations of strings, it is necessary to observe that, if two chords differ only in length, their tones, i. e., the number of the vibrations they make in the same time, are found to be in an inverted ratio of their lengths; if they vary only in thickness, their sounds are in an inverted ratio of their diameters. To estimate the tension of strings we must conceive them to be distended by weights, in which case (other things

being equal) their sounds are in a direct ratio of the square roots of the weights; i. e., the note or sound of a string stretched by a weight four will be an octave above the note of a string stretched by a weight one.

STRINGED. An epithet applied to those instruments the sonorous parts of which consist of strings; as catgut, or wire of silver, brass, or steel.

STRINGENDO. (I.) Pressing, hurrying, contracting. Nearly the same as *accelerando*.

STRISCIANDO. (I.) Gliding, sliding.

STROFA. (I.) A strophe.

STROMENTI DI VENTO. (I.) Wind instruments; as hautboys, horns, clarinets, bassoons, flutes, trumpets, &c.

STROMENTO. (I.) An instrument.

STROPIE. (Gr.) A stanza, or certain number of verses including a perfect sense, succeeded by another, consisting of the same number and measure of verses and in the same disposition and rhythmus, called *antistrophe*. What the couplet is in songs and the stanza in epic poetry, the strophe is in odes.

STROZZI, or STROZZA, BARBARA, a noble Venetian lady, flourished about the middle of the seventeenth century, and was the author of some vocal compositions, containing an intermixture of air and recitative. These she published in 1653, with the title of "*Cantate, Ariette, e Duetti*," intuiating, in the preface, that, having invented this mixed style, she had given a specimen of it to the public by way of trial. The style of the airs is too simple to be pleasing; yet the experiment succeeded. She is allowed to have been the inventor of that elegant species of vocal composition called the *cantata*.

STRUCK, PAUL, a musician at Vienna, and pupil of Haydn, published several operas of instrumental music, chiefly for the harpsichord, at Offenbach and Vienna, subsequently to the year 1797. He is considered a good composer.

STRUNGK, NICOLAUS ADAM, a celebrated violinist of the seventeenth century, was chapel-master to the Elector of Saxony. He was born in 1640 at Zell, where his father, Delphins Strungk, was then court organist. When twelve years of age he removed with his father to Brunswick, and was soon after himself made organist of the Church of St. Magnus in that town. Soon after this his partiality for the violin was evinced, and he went to Lubeck to take lessons on that instrument of an excellent player there, named Schnittelbach. He improved so rapidly that at the age of twenty he was nominated first violin in the chapel of the Duke of Wolfenbuttel, where he remained but a short time, preferring another situation in the chapel of the Duke of Zell. After this he obtained the duke's consent to take a journey to Vienna, where he performed before the emperor, who rewarded him with his portrait in miniature attached to a gold chain. On the death of the Duke of Zell he was engaged in the chapel of the Duke of Hanover, whence he was invited to Hamburg as music director and composer to the theatre. He there wrote, up to the year 1685, eight operas, till at length Fred-

erie William, Elector of Brandenburg, came to Hanburg, and, desirous of possessing so eminent an artist in his chapel, demanded him of the magistracy of Hanburg, and nominated him chapel-master. The Elector of Hanover, on hearing of this appointment, reclaimed Strungk as his vassal; at the same time, to indemnify him for any loss of salary, he nominated him first his chamber organist, and afterwards canon to the Church of Notre Dame at Einbeck. The Duke of Hanover then took Strungk with him in a journey to Italy, where he had the advantage of meeting Corelli. Strungk remained several years in Italy, and, on his return, again passed through Vienna, where he once more performed before the emperor, choosing this time the harpsichord for his instrument. A second chain of gold testified the satisfaction of the monarch. From Vienna he proceeded to Dresden, where the Elector John George VI. appointed him vice chapel-master, and after the death of Bernhard he was appointed full chapel-master, filling that situation from 1692 to 1696, when he appears to have settled at Leipsic, where he died in 1700. Amongst his published instrumental music we can mention "Ricreare on the Death of his Mother at Venice, December 20th, 1685," and "Musical Exercises for the Violin, or Viola da Gauba, containing several Sonatas, &c., and some Chaconnes for two Violins," Dresden, 1681. His church and dramatic music was, however, the most esteemed. That he was a man of humor and pleasantry may be inferred from the following story related by Walther:—

Strungk, being at Rome, upon his arrival made it his business to see Corelli. Upon their first interview Strungk gave him to understand that he was a musician. "What is your instrument?" asked Corelli. "I can play," answered Strungk, "upon the harpsichord, and a little on the violin, and should esteem myself extremely happy, might I hear your performance on this latter instrument, on which I am informed you excel." Corelli very politely condescended to this request of a stranger; he played a solo. Strungk accompanied him on the harpsichord, and afterwards played a toccata, with which Corelli was so much taken that he laid down his instrument to admire him. When Strungk had done at the harpsichord he took up the violin, and began to touch it in a very careless manner; upon which Corelli remarked that he had a good bow hand, and wanted nothing but practice to become a master of the instrument. At this instant Strungk put the violin out of tune, and, applying it to its place, played on with such dexterity, attempering the dissonances occasioned by the mistuning of the instrument with such amazing skill and dexterity, that Corelli cried out in broken German, "I am called Arcangelo, a name that, in the language of my country, signifies archangel; but let me tell you that you, sir, are an arch devil."

STUDIO. (I.) A term applied by modern masters to piano-forte and other exercises.

STUMPE, JOHANN CHRISTIAN. An excellent performer on the bassoon and composer for wind instruments at Frankfort, where he died in 1801.

STYLE. That cast or manner of composition

or performance on which the effect chiefly, if not wholly, depends. The command of a good *style* can only result from natural taste, aided by judgment and long experience. The happiest subject ill treated, i. e., in a bad *style*, will be barren of effect; and the finest composition, executed in a defective manner, will labor under equal disadvantages.

STYLES, or STILES, F. H. E., published in the transactions of the Royal Society of London for 1760 a dissertation entitled "An Explanation of the Modes or Tones in the ancient Grecian Music."

STYLO RAPPRESENTATIVO. (I.) An appellation given to recitative music, because it is almost exclusively adapted to the drama.

SUB. A Latin preposition, corresponding with the Greek word *hypo*, the Italian *sotto*, the French *dessous*, and the English *below*. This word is frequently used in musical treatises in conjunction with the Greek names of the intervals, as *sub-diapason*, *sub-diapente*, *sub-diatessaron*, &c.

SUBCHANTER. The deputy of the precentor in a cathedral.

SUBDOMINANT. The name given by some chorists to the fourth note of any mode, or key; because the *dominant*, or fifth, is immediately above it; or rather because it has the same interval with the *tonic* in descending, which the *dominant* has with the *tonic* in ascending.

SUBHARMONICS. Organ builders, in tuning, have always heard a "hum;" and Tartini speaks of "a bass note" being heard when double notes are played on the violin. But it is of the actual law of these "humms" and "bass notes" that we now speak. The reader must place himself in very close connection with the pipes of an organ, and, having drawn the "principal" stop alone, must play the following notes, and to each chord he will hear a *given* bass, which is produced by the vibration of the two notes. This given bass we call *subharmonics*:—

Upon examination, it will be found that in this given bass there is the most perfect law; that is, whenever a major third is held down, the subharmonic is a fifteenth below the low note; and in every instance where the minor third is held, the subharmonic will be a seventeenth below the low note.

The following will show, at the same moment, the notes held down and the subharmonics produced:—

If these notes be inverted the subharmonic will be the same, as shown in the following explanation of sixths:—

There are also regular *double* subharmonics; for instance, if three notes be held down, nature gives two regular low notes, thus:—

This last is easily explained; viz., whenever a major third is held down it produces the fifteenth below the low note, which accounts for the upper subharmonic in the first chord; the lower subharmonic is produced from the two low notes, which, being minor thirds from each other, give F. We will now explain fourths:—

The above shows that perfect fourths give a subharmonic of a fifteenth below the high note; but that the imperfect fourth does not, (see the Db.) This imperfect fourth is very difficult to determine upon an organ that is not tuned in equal temperament.

Fifths produce the same subharmonics as fourths, being, in point of fact, inverted fourths. The theory of sevenths is as follows:—

The above shows that every minor seventh gives for its subharmonic a sound of three octaves below the high note: and seconds, being inverted sevenths, give the same. The major seventh in each instance gives a much lower, but regular, sound, as just shown.

The following also shows that the closer the interval the deeper the subharmonic:—

The Db marked with a * will sound Eb on an organ tuned in unequal temperament. If we approach the quarter tone, we obtain subharmonics as deep as pedal pipes; for instance, G and Ab in altissimo, being a small semitone from each other on most of our organs, produce BB for the subharmonic, thus:—

the subharmonic being nearly five octaves below.

If we could have a set of pipes tuned in quarter tones, the result would be that some of the highest notes would produce subharmonics as low as CCC. But directly the two pipes are tuned in unison, a muteness or absence of subharmonics must immediately be experienced. Two pipes sounding *nearly* the same note produce a subharmonic of seven or eight octaves below, and lower still beyond calculation.

A short study of these subharmonics will be useful to violin players in double-stopping the highest notes of the instrument; indeed, it will be an easy matter to play in tune to the sixteenth of a tone, or even closer: for instance, suppose the two notes to be E and C (thirds) in altissimo; should the subharmonic sound Bb, the third will be a quarter of a tone too small; and should the subharmonic sound B, the third will still be out of tune by the eighth of a tone; and should the subharmonic sound a note between B and C, the third will be a sixteenth of a tone too small. This last fact will also enable organists to test the temperament of their "king of instruments" with the utmost nicety.

SUBITO. (I.) Quick, expeditiously; as *colti subito*, turn over quick.

SUBJECT. The theme or text of any movement. That prevailing idea from which the subordinate passages are supposed to spring, and to which they ought at least to bear some sensible reference or affinity.

SUBMEDIANT. The appellation given to the sixth of the key, or middle note between the octave and the subdominant.

SUB-SEMITONE. The name by which theorists distinguish the *sharp seventh*, or *sensible*, of any key. See **SENSIBLE**.

SUB-TONIC. The semitone immediately below the tonic. See **SUB-SEMITONE**.

SUCCESSION. A word applied to the notes

of melody, in contradistinction to those of harmony, which are given in *combination*. Of *succession* there are two kinds, *conjunct* and *disjunct*. *Conjunct succession* is when the sounds proceed regularly, upward or downward, through the several intervening degrees. *Disjunct succession* is when they immediately pass from one degree to another without touching the intermediate degrees.

SUDRE, FRANÇOIS. Born at Toulouse in 1791. He visited many of the large cities in Europe for the purpose of bringing before the public an ingenious system of conveying intelligence by means of seven primitive musical sounds. In his system these sounds are employed to represent the twenty-four letters of the alphabet, and are to be combined in words of all kinds.

SUITE. (F.) The name formerly given to a set, or course, of lessons, sonatas, concertos, &c. Also applied to a single piece when consisting of several movements.

SUITES DE PIECES. (F.) A collection of pieces.

SUMPUNJAH, or the *dulcimer* of the ancients, was a wind instrument made of reeds; by the Syrians called *sambojah*, and by the Italians *zampogna*.

SUO LOCO. (I.) In its own place. See **LOCO**.

SUPERIUS. (L.) The name by which the contrapuntists of the fifteenth and sixteenth centuries distinguished the upper part of any composition.

SUPERIUS. The name formerly given to trebles when their station was very high in the scale.

SUPER-TONIC. The *second of the key*, or the note next above the key note; i. e., C, being the key note, D will be the *super-tonic*.

SUPPOSED BASS. A term applied to any bass note of a different literal denomination from that of the accompanying chord; as the bass note E, or G, taken with the chord of C. See **FUNDAMENTAL BASS**.

SUR-SHARP. The fifth tetrachord above, added by Guido, was called the tetrachord of the *sur-sharp*.

SUSPENSION. A theoretical expression applied to the retaining in any chord some note or notes of the preceding chord.

SUSSMAYER, FRANZ XAVER. Music director and composer to the National Theatre at Vienna since the year 1795. He was a pupil of Salieri. He published various operas and operettas for Vienna and other towns in Germany, which bear date from the year 1792 to 1801. He died at Vienna in 1803. Süssmayer was the friend of Mozart, and he it was who completed the "Requiem" which Mozart left unfinished.

SUSTAINED. Notes are said to be *sustained* when their sound is continued through their whole power or length. See **SOSTENUTO**.

SVEGLIATO. (I.) A word indicating a brisk, lively style of performance.

SWELINCK, JAN PETER, organist of the great church at Amsterdam, was born at Deventer about the year 1610. By a peculiar method of

fingering, he attained, in early youth, great perfection in playing on the harpsichord and organ. Being ignorant, however, of composition, he went, about the year 1557, to Venice, for the purpose of receiving instructions from the celebrated Zarlino. On his return to Holland he was regarded as the phoenix of organists, and crowds attended whenever he performed. Some amateurs of music amongst the merchants of Amsterdam wishing to provide for Swelinc in his old age, borrowed of him the small sum of two hundred florins, (about twenty pounds,) on the condition that they would make mercantile purchases with it, from which he should derive all the benefit, they taking upon themselves the risk of loss. After some years, this small capital had produced no less a sum than four thousand florins, which placed the old musician quite at his ease. He died in 1622. Amongst his works were the following: "*Pseaumes d'après Labrasser à 4-8 part., Liv. 2.*," Amsterdam; "*Chansons à 4 et 5 part.,*" Antwerp, 1592; "*Nieu Chyterboeck,*" Amsterdam, 1602; "*Rimes Françaises et Italiennes mises en Musique à 2 et 3 part. avec une chanson à 4,*" Leyden, 1612; "*Pseaumes mis en Musique à 4 à 8 part. Liv. 2,*" Leyden, 1613; "*Ditto, Liv. 3,*" Leyden, 1614; "*Ditto, Liv. 4,*" Amsterdam, 1622; and "*Cantiones Sacre cum B. contin. 5 voc.,*" Antwerp, 1623. It is also said that he translated into Dutch the "*Instituzioni*" of Zarlino.

SWELL. The name given to a part of an organ consisting of a certain quantity of pipes enclosed in a large wooden case called the *swell box*. In the front of this box are one or more oblong apertures, over which there is a movable shutter called a *slide*, and which, by means of a communicating pedal, can be raised and depressed at the pleasure of the performer, who, by pressing the pedal with his foot, uncovers the apertures of the box, gives free vent to the sound, and produces a *crescendo*, or *swell*.

SWIETEN, GOTTFRIED, FREYHERR VAN, president of the commission of public instruction at Vienna, and a distinguished amateur of music, died in 1803. He was the intimate friend of Haydn.

SYLVA, TRISTAO DA. Chapel-master to King Alphonso V., of Portugal, in the fifteenth century.

SYLVEIRA, FR. PLACIDO DA, a Portuguese church composer, died in 1736.

SYMBOLS. The musical name given by the Greeks to the twenty-four letters of their alphabet, all of which they employed as characters indicative of sounds.

SYMONDS, HENRY, one of the king's band of musicians in England, and organist of the Church of St. Martin, Ludgate, and also of the Church of St. John, was a celebrated master of the harpsichord in his time. He published six sets of lessons for his instrument. Symonds died about the year 1730.

SYMPHONIA. (Gr.) A pulsatile instrument of the ancients made of a hollow tree, closed at each end with leather, and struck with sticks. It produced notes of varied pitch, and consequently was not the same with our monotonous drum.

SYMPHONIAC. (From the Greek.) An epithet applied to music in parts, or *counterpoint*. See that word.

SYMPHONIAL. (From the Greek.) Said of tones agreeing in quality. The tones of the violin and violoncello, or of the hautboy and bassoon, are *symphonical*.

SYMPHONIALE. A word frequently prefixed to the old canons, or perpetual fugues, to indicate that they are in unison; i. e., that the second part is to follow the first in the same intervals, and the third to observe the same rule with regard to the second.

SYMPHONOL. (Gr. pl.) The name given by the ancients to concords and those sounds which so mix and unite that the tone of the lower is scarcely distinguishable from the upper. The unisons, or duplicates, of the same sound, were called *homophonoi*. See that word.

SYMPHONIOUS. An epithet applied by the poets to an harmonious combination of voices or instruments, or to any "concord of sweet sounds."

SYMPHONIST. A composer of symphonies, overtures, or instrumental music in general. In France, the term *symphonist* is also applied to a composer of church music.

SYMPHONY, or SYM. (From the Greek.) The word *symphony*, in the ancient music, signifies that union of sounds which forms a concert. When the whole concerted in *unison*, it was called a *symphony*; but when one half of the concertants were in the octave, or double octave, of the other half, it was called *antiphony*.

At present the word *symphony* is applied to overtures and other instrumental compositions, consisting of a variety of movements, and designed for a full band. The introductory, intermediary, and concluding instrumental passages in vocal compositions are also called *symphonies*.

SYMPOSIACI. (From the Greek.) An epithet generally applicable to cheerful and convivial compositions; as catches, glees, rounds, &c.

SYNAPHË. (Gr.) A term applied by the ancients to the conjunction of two tetrachords; or, more properly, it is the resonance of the homologous chords of two conjoint tetrachords. The Greeks reckoned three *synaphes*; one between the tetrachord of the hypates and that of the mesis; one between the tetrachord of the mesis and that of the conjunct; and one between the tetrachord of the disjunct and that of the hyperboles.

SYNAULIA. (From the Greek.) In the ancient music, a concert of flute players who answered each other alternately without any union of the voice.

SYNCOPIATION. (From the Greek.) A term applied to that disposition of the melody or harmony of a composition, by which the last note of one bar is so connected with the first note of the succeeding bar as to form but one and the same sound. *Syncoption* is also frequently used during the course of a bar, or measure; as when the last note of one of the measures is united to the first note of the succeeding measure, which is also called *binding*, or *legato*.

Syncoption is likewise used for a *driving note*; i. e., when some shorter note at the beginning of a measure, or half measure, is followed by two, three, or more longer notes, before any other occurs equal to that which gave birth to the *driving note*, to make the number even.

SYNCOPE. The division of a note, introduced when two or more notes of one part an

swer to a single note of another, as when the semibreve of the one corresponds with two or three notes of the other. But to give a clear idea of the *syncope*, first it is necessary to observe, that every measure in common time has two parts, one commencing when the hand falls, the other when it rises. Secondly, that any note which contains two times, or a rise and fall of the hand, is divisible into two parts, for the first of which the hand descends, and for the latter of which it rises. Thirdly, that every note (though of less value than a semibreve) being divisible into two others, one of these will be during the first part of the measure, the other during the second part. The *syncope* is frequently introduced in melody for the purpose of expression; but its principal use respects the harmony, the concords and discords of which it serves to prepare and resolve. In harmony, there are three *synscopes*: the first is when all the parts *syncopate* at the same time, but without discords, which the Latin writers call *syncope æquivagans*. The second is when only one of the parts *syncopates*, but without discord. This is called by the Italians *contrapunto legato*. The third is when one part *syncopates*, and that in order to introduce some discord; and this is the *contrapunto syncopato* of the Italians. This term also implies a soft, smooth, and delicate manner of shortening, or cutting off, the notes of a passage in its performance; a style or mode of expression of which only the example of a great master can convey a just and clear idea.

SYNMEMENON. (Gr.) The united, or conjunct. The appellation given by the ancients to their third tetrachord, from its beginning with the last note of the second tetrachord. When this third tetrachord was, on the contrary, separated from the second, and conjoint with the fourth, it took the name of *diezeugmenon*. See that word.

SYNMEMENON DIATONOS. (From the Greek.) This was in the music of the ancients the third chord of the tetrachord *synmemenon* in diatonic genus.

SYNTONIC. (Gr.) The epithet by which Aristoxenus and other ancient musical writers distinguish a species of the diatonic genus, which was nearly the same with our natural diatonic. In the syntonic genus, the tetrachord was divided into a semitone and two equal tones; whereas in the flat diatonic, after the semitonic, the first interval was three quarters of a tone, and the other five quarters.

SYNTONO-LYDIAN. The name of one of the modes in the ancient music. Plato tells us that the mixo-lydian and syntonolydian modes were peculiar to tears.

SYRINGA. (L.) Pipes of Pan. These pipes have also been known as the *syrix*, or *Pandean pipes*. Every classical reader knows the history of Pan, who became a shepherd to win the affections of Dryope, in which he succeeded. He also courted the nymph Syrinx. This time, however, he did not succeed so well. Syrinx fled from her lover, till coming to a river, where her flight was stopped, she prayed to the water nymphs to change her into a bundle of reeds, just as Pan was laying hold of her; and he caught the reeds in his hands instead of her. The winds, moving the reeds backward and forward, occasioned mournful but musical sounds, which Pan perceiving, cut them down and made of them reed-pipes.

"So he this pipe of reeds unequal framed
With wax, and Syrinx from his mistress named."

This originated the *syrix*. There are many wonderful tales told of the effect of the music Pan made with his pipe of uneven reeds, (*syrix*), and it is said he could even cheer the gods themselves. But the greatest wonder of all was, that as often as Pan blew his pipe the dogs of the sheep were filled with milk. Unfortunately for the umpire, Pan at length had the vanity or

temerity to contend for the palm of music with Apollo. King Midas, of Phrygia, was umpire, and he, like many of our modern connoisseurs, foolishly determined the victory to Pan. But the unfortunate king paid dearly for his decision; for Apollo stretched his ears to the length of asses, which made it necessary for him to wear long hair, that he might hide the deformity.

SYRINGE. A kind of fistula, or pipe, used by the ancient Romans to regulate the voice in oratory and singing.

SYSIGIA. A Greek term, signifying any combination of sounds so proportioned to each other as to affect the ear with pleasure.

SYSTALTIC. (From the Greek.) An epithet applied by the ancients to that of the subdivisions of their melopœia which constituted the mournful and pathetic. See *MELOPœIA*.

SYSTEM. An interval compounded, or supposed to be compounded, of several lesser intervals, as the fourth, the fifth, the sixth, the octave, &c., the components of which, considered as the elements of the *systems*, are called *diastems*. A *system* is also a method of calculation to determine the relations of sounds, or an order of sign established to express them; and, lastly, a *system* is the code of harmonic rules drawn from those common principles by which they are computed. There is an affinity of different intervals, and, consequently, an affinity also of possible *systems*. Any interval, between the terms of which one or more sounds intervened, was by the ancients called a *system*: E, G, for example, constituted the *system* of a minor third; E, A, of a fourth; E, B, of a fifth, &c. *Systems* were divided into general and particular. The *particular systems* were those which were composed of at least two intervals. The *general systems*, or diagrams, were formed of the sum of all the particular *systems*, and, consequently, contained all the sounds in music.

The whole *system* of the Greeks was originally composed only of four sounds at most, which formed the concord of their lyre, or cithara. These four sounds, according to some authors, were by conjoint degrees; according to others, they were not diatonic; but the two extremes were at the distance of an octave, and the two intermediate ones divided it into a fourth on each side, and a tone in the middle. This *system* did not, however, continue long confined to so few sounds. Chorebus, son of Athis, King of Lydia, as Boethius informs us, added a fifth chord, Hyagnis a sixth, Terpander a seventh, to equal the number of the planets, and Lychaon an eighth. But Pliny gives a different account of the progression of the ancient *system*: according to that writer, Terpander added three chords to the tetrachord, and was the first who used the cithara with seven chords; Simonides joined to it an eighth, and Tiuotheus a ninth. Whichever of these accounts may be the true one, it seems pretty certain that the *system* of the Greeks was gradually extended, both upward and downward, and that it attained, and even exceeded, the limits of the bis-diapason, or double octave, an extent which they called *systema perfectum, maximum immestatum, the great system, the perfect system*. This entire *system* was composed of four tetrachords, three conjoint and one disjoint, and the chord called *proslambanomenos*, which was added below these tetrachords to complete the double octave. This general

system of the Greeks remained nearly in this state till the eleventh century, when Guido made a considerable change by adding a new chord below, which he called *hypoproslambanomenos*; also a fifth tetra chord above, or tetra chord of the *sur-sharp*, and substituting hexachords in the place of the ancient tetra chords. Since the time of Guido the general system has again been greatly extended and divided into octaves, which have long been adopted throughout Europe, and which the ear certainly recognizes as the most natural of all possible partitions of the great scale of sounds.

SYSTEMA MASSIMO. One of the appellations given by the Italians to the Greek system as perfected by Pythagoras, by his addition of the *proslambanomenos* below the *hypate hypaton*.

SYSTEMA PARTICIPATUM. (L.) A division of the octave or diapason into twelve semitones

SYSTEMA TEMPERATUM. (L.) The **at-**tempered system. See **TEMPERAMENT.**

T.

T. This letter is sometimes used as the abbreviation of *tutti*, all; and is opposed to the letter *S*, or word *solo*, alone.

T.A. One of the four syllables used by the ancient Greeks in so^{ng}ing their music. It answered to the *hypate*, or first sound of the *trachord*.

TABLATURE. This word was formerly applied to the totality or general assemblage of the signs used in music; so that to understand the notes, clefs, and other necessary marks, so far as to be able to sing at sight, was to be skilled in the *tablature*. The literal notation for the lute was also distinguished by this appellation. The German *tablature* was invented in the sixteenth century, and from its ingenuity and utility was formerly well known. A specimen of it may be seen in the tract entitled "*Monochordum Andrea Reinhardi, Lipsie, 1604.*"

TABOR. A small drum, usually forming an accompaniment to the pipe. They are both played by the same performer. While the tones of the pipe are regulated by the fingers of the left hand, which stop the holes, the tabor is beat by the right. The *tabor* and *pipe* were formerly favorite instruments with the common people of most of the countries of Europe, and were particularly calculated for dancing music.

TABORET. A small *tabor*.

TABRET. A kind of drum used by the ancient Hebrews. The first mention we have of instrumental music in the Scriptures is in the words of Laban, at the flight of Jacob, where he mentions both the *tabret* and the harp. Laban was a Syrian, and brother of Rebecca, Isaac's wife; and it is therefore probable that the *tabret*, as well as harp, were Egyptian instruments. The *tabret* was composed of a circular hoop, either of wood or brass, which was covered with a piece of skin tensely drawn and hung round with small bells. It was held in the left hand, and beaten to notes of music with the right: the ladies in the East, to this day, dance to the sound of this instrument.

TACET. (L.) A word by which the performer is to understand that the instrument with the name of which it is conjoined is to be silent; as, *violino tacet*, the violin is not to play. *Oboe tacet*, the oboe is silent.

TACCHINARDI, NICOLAS, the famous tenor singer, was born at Florence in 1776. At first intended for the church, he made some literary studies, which he abandoned for designing and painting. From his eleventh year he learned music; that is to say, singing and the violin. At the age of seventeen he became a violinist in the theatre orchestra of Florence, and continued in that position for five years; but his voice having developed itself into a fine tenor, he began to sing in churches and in concerts. Then he tried his powers in amateur theatres, making the tenor *Babini* his model. Finally, in 1804, he made his

début in the theatres of Livorno and Pisa, and afterwards at Florence and Venice, where the purity of his taste and his excellent vocal method were admired. Called to Milan in the next year at the coronation of Napoleon, he shone at La Scala by the side of Mme. Festa, and in 1806 at the Theatre Carcano, with the Strinasacchi. In Rome he had unexampled success, exciting the enthusiasm of the public for five years. He was intimate with Canova, who modelled a bust of him; and he cultivated sculpture with some success. In 1811 Tacchinardi was called to Paris, and appeared for the first time at the Odeon Theatre in Zingarelli's "*Destruction of Jerusalem.*" At his entrance many exclaimed, "He is a hump-back!" but the talent of the artist soon effaced that impression. They admired the purity of his style, and the ease with which he passed imperceptibly from the chest to the head voice; also at his lavish yet tasteful use of ornament and *floriture*. In this last respect he differed totally from Crivelli, who at that time shared with him the part of first tenor at the Italian Opera, and who was distinguished for his simple, large, expressive manner. In "*Adolfo e Chiara,*" a poor opera by Pucitta, the first success of Tacchinardi was compromised, because his awkward exterior and his nullity as an actor made him compare unfavorably with Elleviou, who was charming the public in a French opera on the same subject. But he had his revenge in "*La Molinara*" of Paisiello, and from that day became the idol of the *habitués* of the Odeon. After the events of 1815 he returned to Italy, and sang with success in the principal theatres of his country. The Grand Duke of Tuscany made him his first singer in 1822, but left him the liberty of continuing his dramatic career. In the following year he sang at Vienna, and then went to Spain, where he was admired at the theatre of Barcelona, although he was nearly fifty years old. In 1831 he renounced the stage and continued in the service of the Duke of Tuscany. He also devoted himself to teaching singing, and produced several distinguished pupils, especially his daughter (Mme. Persiani) and the Frezzolini. To accustom his pupils to dramatic action, he constructed a little theatre in a country house which he possessed near Florence. He composed many exercises for the voice, and published a little work entitled "*Dell' Opera in Musica sul Teatro Italiano, e de' suoi difetti.*"

TACTART. (G.) The species of time or measure.

TACTUS, or TACT. (L.) In the ancient music, the stroke of the hand by which the time was measured or beaten. When the time consisted of a breve in a bar, the *time stroke* was called *tactus major*; and when of a semibreve in a bar, *tactus minor*. But the semibreve, being, with modern musicians, the standard, or principal time note, has become the sign of the present

tactus major; and the minim, or $\frac{2}{4}$, that of the *tactus minor*.

TADEI, ALESSANDRO. A celebrated composer of the seventeenth century. Several motets of his composition may be found in the *Parnassus Musicus Ferdinandus*.

TADOLINI, GIOVANNI, opera composer and director, was born at Bologna in 1793. From 1811 to 1813 he was engaged at the Italian Opera in Paris, as accompanist at the piano, while Spontini was director. He returned to Italy after the invasion of Paris by the allied armies in 1814. There he composed various successful operas, and was recalled with his young wife, a singer of talent, to Paris, in 1830, where he resumed his old functions as accompanist and director at the Italian Theatre, which he still retained as late as 1844. Besides operas, he has published cantatas, romances, canzonets, and some instrumental music.

TAEUBER, TEIBER, TEUBER, or TEYBER, ANTON. Chapel-master at Vienna in 1798. Amongst his works are "*La Passione di Jesu Christo*," oratorio, in manuscript, Vienna, 1790; "*3 Quat. p. 2 V., A., et B.*," Op. 1, Vienna, 1788; "*Die Einnahme von Belgrad*," Dresden, 1792; "*6 Mdrsche und eine Retirade*," Dresden, 1792; "*12 Menuetten und 12 Allemanden*," Dresden, 1798; "*Gestnge beyrn Klavier*," Dresden, 1798; "*Xermes und Mirabella*," melodrama, in manuscript; and "*Gr. Sinfon, d plus. Instrum.*," Ofenbach, 1799.

TAG, CHRISTIAN GOTTHILF, music director at Hoenstein, in Saxony, about the year 1783, was considered in Germany as an excellent church composer. His works, consisting of masses, motets, &c., and several theatrical pieces, bear date from the year 1783 to 1803. He died in 1811.

TAGLIA, PIETRO. An Italian composer of the middle of the sixteenth century, of whose works have been published, "*Madrigali à 4 voci*," Milan, 1555.

TAGLIETTI, GIULIO. A voluminous composer to the Collegio de Nobili di St. Antonio, at Brescia, towards the year 1700.

TAGLIETTI, LUIGI, an Italian instrumental composer, published in 1750, at Amsterdam, his Op. 6, consisting of concertos and symphonies for violins, &c.

TAIL. That part of any note which runs perpendicularly upward, or downward, from its head.

TAILLARD, CONSTANT, called L'AÎNÉ. First flute at the *Concert Spirituel* in Paris about the year 1760. He published some music for his instrument.

TAILLE. (I.) The name by which formerly the tenor *part* of a vocal score was designated.

TAILPIECE. The thin, broad piece of ebony horizontally suspended over the lower end of a violin, and to which one end of the strings is attached.

TAKT. (G.) The measure.

TAKTSTRICH. (G.) The lines or bars which mark the division of a piece into measures.

TALESIO, PEDRO, professor of music at Coimbra in the beginning of the seventeenth century, published "*Arte do Canto Chão com huma breve instrução pura os Sacerdotes, Diaconos, e Subdiaconos, e Moços do Coro conforme o Uso Romano*," Coimbra, 1617.

TALETELLERS. The name formerly given by the Irish to their bards, or harpers, because in a kind of cathedral chant they recited their poetical histories. The celebrated Cormac Dall, who flourished at the beginning of the eighteenth century, was the last bard who bore the appellation of *taleteller*.

TALLIS, THOMAS, the master of Bird, and one of the greatest musicians, not only of England, but of Europe, during the sixteenth century, in which so many able contrapuntists were produced, was born early in the reign of Henry VIII.; but though it has been frequently asserted that he was organist of the chapel royal during the reigns of that monarch, Edward VI., Queen Mary, and Queen Elizabeth, yet it would be difficult to prove that in the three first of these reigns laymen were ever appointed to any such office. In the reigns of Henry and his daughter Mary, when the Roman Catholic religion prevailed, the organ in convents was usually played by monks, and in cathedrals and collegiate churches and chapels by the canons and others of the priesthood. The first lay organists of the chapel royal upon record were Dr. Tye, Blithman, the master of Dr. Bull, Tallis, and Bird; all during the reign of Queen Elizabeth.

Though the melody of the cathedral service was first adjusted to English words by Marbeck, yet Tallis first enriched it with harmony. But the most curious and extraordinary of all his labors was his song of forty parts, which is still subsisting. This wonderful effort of harmonical abilities is not divided into choirs of four parts, soprano, alto, tenor, and bass, in each, like the compositions *a multi cori* of Benevoli and others; but consists of eight trebles placed under each other, eight mezzo soprano or mean parts, eight counter tenors, eight tenors, and eight basses, with one line allotted to the organ. All these several parts, as may be imagined, are not in simple counterpoint, or filled up in mere harmony without meaning or design, but have each a share in the short subjects of riddle and imitation which are introduced upon every change of words. The first subject is begun in G by the first mezzo soprano; the second *medius*, in like manner beginning in G, is answered in the octave below by the first tenor, and that by the first counter tenor in D, the fifth above; then the first bass has the subject in D, the eighth below the counter tenor; and thus all the forty real parts are severally introduced in the course of thirty-nine bars, when the whole phalanx is employed at once during six bars more; after which a new subject is led off by the lowest bass, and pursued by other parts, severally, for about twenty-four bars, when there is another general chorus of all the parts; and thus this stupendous, though perhaps Gothic, specimen of human labor and intellect is carried on in alternate flight, *pursuit*,

attack, and choral union to the end, when the polyphonic phenomenon is terminated by twelve oars of universal chorus, in quadragintesimal harmony.

This venerable musician died in the year 1585, and was buried in the old parish church of Greenwich, in Kent. The following epitaph, which Dr. Boyce has printed in the first volume of his collection of cathedral music, Strype, in his continuation of Stowe's Survey, printed in 1720, says he found engraved in Gothic letters on a brass plate in the chancel:—

"Entered here doth ly a worthy wyght,
Who for long time in musick bore the bell;
His name in stone was Thomas Tallis byght;
In honest vertuous lyf he dyd excell.

He served long tyme in chappel with grete prayse,
Fower sovereygne reignes, (a thing not ollen scene)
I mean King Henry, and Prince Edward's dayes,
Queene Marie, and Elizabeth our queene.

He married was, though children he had none,
And ly'd in love lull three and thirty yeres
With loyal spouse, whose name ye clep was Jone,
Who, here entombed, him company now bears.

As he dyd lyve, so also dyd he dy,
In joyld and quiet sort, O happy man!
To God he left off for mercy did he cry
Wherefore he lyves, let Deth do what he can."

The stone to which this plate was affixed had been renewed by Dr. Aldrich; but the old church having been pulled down about the year 1720, in order to be rebuilt, no memorial remains of Tallis.

TALOU. The heel of a bow; that part near the nut.

TAMBOUR DE BASQUE, or TAMBOURINE. (Fr.) A drum in the shape of a sieve, furnished at the sides with small bells and loose bits of tin. A tinkling cymbal; or, to describe it, perhaps, in clearer terms, a kind of hand drum, formed of a circular frame and distended parchment. It is sometimes furnished with tin jingles, which are put into motion by shaking the instrument with one hand, while the parchment is struck with the other.

TAMBOURIN. A kind of dance formerly much in fashion on the French stage. Its air was very lively, and consisted of two crotchets in a bar.

TAMBURA. The Arabian name for all instruments of the guitar kind.

TAMBURINI, ANTONIO, the famous baritone singer, was born, in 1800, at Faenza. He lived in Italy until 1832, when he yielded to pressing invitations to Paris and London, and afterwards to St. Petersburg. His name is always associated with those of Rubini, Lablache, Persiani, Grisi, &c.

TAMBURO. (I.) A drum.

TAMBURONA. (I.) A great drum.

TANSUR, WILLIAM, an English musician, born about the year 1700. He published, in 1735, a work entitled "*A complete Melody, or the Harmony of Zion, in three Volumes: the first containing an Introduction to Vocal and Instrumental Music; the second comprising the Psalms, with new Melodies; and the third being composed of Part Songs.*" Some years afterwards he published two other works, the one entitled "Universal Harmony," and the other "A new Musical Gram-

mar and Dictionary." On the titlepage of the latter he calls himself William Tansur, Sen., *musico-theorico*; the work being stated to be sold by the author, and by his son, chorister of Trinity College, Cambridge.

TANTO. (I.) Much, very, too much. Thus, *allegro non tanto*, fast, but not too fast.

TANTUM ERGO. (L.) A hymn sung at the benediction.

TAPPIA, GIOVANNI, a priest, resident at Naples about 1528, was born in Spain. He was the founder of the first musical conservatory at Naples; soon after which various others were formed, both in Naples and Venice. These institutions have, on the whole, much contributed towards the improvement of the art. Their first establishment was occasioned by the great want of singers in all large towns, which was owing to the government not having the means of maintaining musical schools, and the convents having their own interest too much at heart to offer any assistance. Tappia, full of enthusiasm for the art, resolved at last to do the utmost for its emancipation. He first gave in several plans to his government, which were not accepted. He then desired to accomplish these plans himself, and applied publicly for assistance; in vain, however, for nothing succeeded; till at last, after several years' exertions, he took the resolution to rely on nothing but the intrinsic merit of his plans and his own perseverance, and went from house to house, from place to place, to beg subscriptions. Though but too often denied, publicly scoffed and laughed at, he was here and there listened to, and obtained small donations, afterwards greater ones; and this work he carried on for full nine years, when he added his own, not inconsiderable, fortune to the total sum he had begged, and found himself in possession of a large capital. With this he now founded the first conservatory at Naples, which he dedicated to and named after the Madonna di Loretto.

TAPRAY, J. F., a Frenchman by birth, and a pupil of Domenico Scarlatti, was considered a good performer on the harpsichord. In 1763 he was organist at Besancon, after which he went to Paris, and was nominated organist of the military school. He had published, up to the year 1801, twenty-eight works of harpsichord music and romances.

TARADE, a good violinist in the orchestra of the Royal Academy of Music at Paris, brought out, in 1765, at the Comédie Italienne, a successful opera entitled "*La Réconciliation Villageoise.*"

TARANTELLA. (I.) A swift, delirious sort of Italian dance in whirling six-eight measure. The form has been adopted in many compositions of the modern school of piano-forte writers, as Thalberg, Liszt, Chopin, &c.

TARANTULA DANCE. A particular but ordinary tune, so called from its reputed power in curing the effects of the poisonous bite of the tarantula. It was in Apulia, in Italy, that the pretence was first propagated; and many learned physicians and naturalists of Italy, France, England, and other countries have yielded to the opinion; which, however, more scrupulous and curious inquirers assert to have been built upon fraud and fallacy.

TARCHI, ANGIOLIO, an Italian composer and professor of singing, resident at Paris, was born at Naples in 1760. He studied during thirteen years at the Conservatory of La Pieta, under Tarentino and Sala. Whilst still there, in 1781, he wrote his first dramatic work, being an opera buffa entitled "*L'Architetto*." Its success was such, when performed within the walls of the Conservatory, that the king (Ferdinand IV.) desired it might be played at one of his private theatres. In 1783, being still a pupil of the Conservatory, he composed for the new theatre at Naples "*La Caccia d' Enrico II.*," an opera buffa, which had much success. He then gave, at the Theatre del Fondo, an interlude, which he followed up by three operas. At this epoch, being at Rome, he wrote for the Theatre of Capranica "*I due Fratelli Pappamosca*," an interlude. In 1784 he composed in the same city, for the Theatre de Valle, the interlude of "*Don Fallopio*," and in 1785, at Milan, for the Theatre of La Canobia, the opera seria entitled "*Ademira*." After this period his works succeeded rapidly in the following order: "*Arianna e Bacco*," opera seria, Turin, 1785; "*Ifigenia in Tauride*," opera seria, Venice, 1786; "*L'Ariarate*," opera seria, Milan, 1786; "*Publio*," opera seria, Florence, 1786; "*Arminia*," opera seria, Mantua, 1786; "*Demofonte*," opera seria, Crema, 1786; "*Il Trionfo di Clelia*," opera seria, Turin, 1787; "*Paolo e Virginia*," Venice, 1787; "*Artaserse*," Mantua, 1787; "*I due Rivali*," opera buffa, Rome, 1788; "*Mitridate*," Rome, 1788; "*Il Conte di Sablagna*," Milan, 1788; "*Antioco*," Padua, 1788; "*Il Disertore*," London, 1789; "*Alessandro nell' Indie*," London, 1789; "*Lo Spazzacammino*," opera buffa, Monza, a country house near Milan, 1789; "*L'Apoteose d' Ercole*," Venice, 1790; "*Esio*," Vicenza, 1790; "*L'Olimpiade*," Rome, 1790; "*Giulio Sabino*," opera seria, Turin, 1791; "*Don Chisciotte*," Paris, 1791; "*Adrasto*," Milan, 1791; "*Isacco*," oratorio, Mantua, 1792; "*Ester*," oratorio, Florence, 1792; and "*La Morte di Nerone*," Milan, 1792. Tarchi produced at the Théâtre de l'Opéra Comique, at Paris, subsequently to the year 1796, "*Le Cabriolet jaune*," in one act; "*Le Trente et Quarante*," in one act; "*St. Foix*," in one act; "*D'Auberge en Auberge*," in three acts, &c. Some masses and other sacred music by this musician have also been performed at Naples.

TARDANDO. (I.) Retarding.

TARDIEU, ABBÉ, of Tarascow, brother of a chapel-master of the same name, celebrated in Provence, lived early in the eighteenth century. He much promoted the substitution of the violoncello for the viol da gamba.

TARDITI, ORAZIO, Chapel-master at Faenza, in the Papal States, in the first half of the seventeenth century. Judging from the number of his published works, he appears to have been a prolific composer of sacred music, especially of motets.

TARDO. (I.) Slow. A word synonymous with *largo*.

TARONI, ANTONIO, canon of St. Barbara's Church, in Mantua, and composer, towards the middle of the sixteenth century, published "*Madrigali à 5 voci*," Venice, 1612, and "*Misse da Capella à 5 voci*," Venice, 1616.

TARTINI, GIUSEPPE, was born at Pirano, in the Province of Istria, in 1692. His father, having been a great benefactor to the Cathedral Church at Parenza, had been ennobled in reward for his piety. Giuseppe was originally intended for the law; but mixing music with his other studies during the course of his education, it soon tyrannized over the whole circle of the sister sciences. This is not so surprising as another strong propensity, which, during his youth, greatly occupied his attention: this was *fencing*, an art not likely to become necessary to the safety or honor of a man of so pious and pacific a disposition engaged in a civil employment; and yet he is said even in this art to have equalled the master of whom he received instructions. In 1710 he was sent to the University of Padua to pursue his studies as a civilian; but, before he was twenty, having married without the consent of his parents, they wholly abandoned him, and obliged him to wander about in search of an asylum; which, after many hardships, he found in a convent at Assisi, where he was received by a monk, his relation, who, commiserating his misfortunes, let him remain there till something better could be done for him. Here he practised the violin to keep off melancholy reflections, till he was discovered on a great festival in the orchestra of the convent, by the accident of a remarkably high wind, which, forcing open the doors of the church, blew aside the curtain of the orchestra, and exposed all the performers to the sight of the congregation: being thus recognized by a Paduan acquaintance, differences were accommodated, and he settled with his wife for some time in Venice. This lady was of the true Xantippe breed; but as, fortunately, poor Tartini was very Socratic in wisdom, virtue, and patience, her reign was unmolested by any domestic war or useless opposition to her supremacy.

During his residence at Venice, the celebrated Veracini arrived in that city, whose performance awakened an extraordinary emulation in Tartini; for, though he was acknowledged to have himself a powerful hand, he had never heard such a great player before, or conceived it possible for the bow to possess such varied powers of energy and expression as were commanded by Veracini.

In fact, Tartini quitted Venice the very next day, and proceeded to Ancona, in order to study the use of the bow in greater tranquillity and with more convenience than he could at Venice. This happened in 1714, the year in which he discovered the phenomenon of the *third* sound. This phenomenon of the third sound is the resonance of a third note when the two upper notes of a chord are sounded. Thus, if two parts are sung in thirds, every sensitive ear will feel the impression of a bass or lower part. This may be distinctly heard if you play a series of consecutive thirds on the violin, they being perfectly in tune. "If you do not hear the bass," said Tartini to his pupils, "the thirds or sixths which you are playing are not perfect in the intonation." Here, too, during the carnival of the same year, he heard and perceived the extraordinary effects of a piece of simple recitative, which he mentions in his "*Trattato di Musica*." It was likewise during his residence at Ancona that by diligence and practice he acquired reputation sufficient to entitle him, in 1721, to an invitation to the distinguished place of first violin and mas-

ter of the band to the celebrated Church of St. Anthony of Padua. By this time his fame was so much extended that he had repeated offers from Paris and London to visit those capitals; but by a singular species of devotion and attachment to his patron saint, to whom he consecrated himself and his instrument, he constantly declined entering into any other service. By the year 1748 he had made many excellent scholars, and had established such a system of practice for students on the violin that he was celebrated all over Europe; and in this respect his reputation increased till the period of his death, which took place in the year 1770, to the infinite regret of the inhabitants of Padua, where he had resided nearly fifty years, and was not only regarded as its most attractive ornament, but even as a philosopher and saint.

M. De Lalande states that he had from Tartini's own mouth the following singular anecdote respecting one of his compositions, which shows to what a degree his imagination was inflamed:—

"He dreamed one night, in 1713, that he had made a compact with the devil, who promised to be at his service on all occasions; and, during this vision, every thing succeeded according to his mind: his wishes were anticipated and his desires always surpassed by the assistance of his new servant. In short, he imagined that he presented the devil his violin, in order to discover what kind of a musician he was, when, to his great astonishment, he heard him play a solo so singularly beautiful, which he executed with such superior taste and precision, that it surpassed all the music he had ever heard or conceived in his life. So great was his surprise and so exquisite his delight upon this occasion that it deprived him of the power of breathing. He awoke with the violence of his sensations, and instantly seized his fiddle, in the hopes of expressing what he had just heard; but in vain. He, however, directly composed a piece, which is, perhaps, the best of all his works, and called it the "Devil's Sonata." He knew it, however, to be so inferior to what his sleep had produced, that he stated he would have broken his instrument and abandoned music forever if he could have subsisted by any other means."

The following are some of the principal works of Tartini: "*Trattato di Musica secondo la vera Scienza dell' Armonia*," Padua, 1754; "*Riposta di Giuseppe Tartini alla critica del di lui Trattato di Musica di M. Serre di Ginevra*," Venice, 1767; "*Dissertazione dei Principi dell' Armonia Musicale, covenuta del Diatonico Genere*," Padua, 1767; "*Lettera alla Signora Maddalena Lombardini, inseriente ad una importante Lezione per i Suonatori di Violino*." The Abbé Fauzago speaks also of a manuscript treatise by Tartini, entitled "*Lezioni sopra i vari generi di appoggiature, di trilli, tremoli e mordenti*," &c. Amongst his practical works are many opera of violin sonatas, also numerous concertos. Dr. Burney states that the two books of sonatas, published in England as Tartini's, contain more than fifty different pieces. A manuscript of his, called "*Lezioni pratiche del Violino*," was in the hands of many of his pupils. We can further name "*L'Arte dell' arco o siano 50 Variazioni per V. e sempre collo stesso B.*," Naples, 1792; and "*Adagio varié de plusieurs façons différentes: très-utiles aux personnes qui veulent apprendre à faire des traits sous chaque note d'har-*

monie," &c., published in Paris about the year 1801.

TARTRE, LE. Organist and vocal composer at Paris about the year 1716. His motets met with much applause, and were often performed in the churches. Of his printed works can be named "*La Paix, Cantate*," "*Miserere à grand Chœur*," and "*8 Recueils d' Airs à chanter*."

TASTATURA. (I.) The appellation formerly given to the whole range of keys of an organ or harpsichord. Hence the little preludes played by way of trying the instrument were called *tastature*.

TASTIERA. (I.) The finger board of any instrument.

TASTO. (I.) The touch of any instrument. Hence, also, a key or thing touched.

TASTO SOLO, or T. S. (I.) These words imply that the bass notes over or under which they are written are not to be accompanied with chords; but that, while the left hand performs them on the organ or piano-forte, the right is either to remain at rest or perform in octaves.

TATTOO, or TAPTO. The beat of drum at night by which the soldiers are called to their quarters.

TAUBE, CHRISTIAN FRIEDRICH, published at Dresden, in 1730, an octavo work, in two volumes, entitled "*Untersuchung Melodischer Lehrstutze*," i. e., "Examination of the Principles of Melody."

TAUBER, or TAUBERT, J. F. Flutist and composer for his instrument in the electoral chapel at Bernburg. He was an able professor of his instrument. In 1792, at a concert given by him in Berlin, he evinced such extraordinary skill as to astonish his audience. Gerber, though he only heard him perform the first flute in an easy trio from the "*Creation*," heard enough, he says, to convince him of Tauber's deep feeling, beautiful expression, and almost unlimited power over his instrument. He was born at Naumberg, in Saxony, about the year 1750, and received his musical instructions at Dresden under Götze: he was then entered at the University of Göttingen, and after that procured an appointment in the service of the Elector of Bernburg. Unhappily this able artist had weak lungs, which soon incapacitated him for the use of his instrument. He died of asthma, in 1803, at Ballenstadt. After his decease several of his werks were published.

TAUBERT, WILHELM, a distinguished pianist and composer of symphonies, piano-forte trios, sonatas, &c., and of a great variety of songs, was born at Berlin in 1811. He was a pupil of Berger and of B. Klein. For some years he has been chapel-master at the Royal Opera in Berlin, where, in 1832, he produced an operetta called "*Die Kirmesse*," ("The Fair,") which was well received; also "*Blue Beard*," a romantic opera. He was the author of Jenny Lind's "*Birdling*" song.

TAUSCH, FRANZ, a clarinetist and instrumental composer, also a member of the chapel of the Queen Dowager of Prussia at Berlin, was

born at Heidelberg in 1762. He had no other instructor in his art than his father, who, at the time of the birth of his son, was only an under musician at Heidelberg church. Soon after, however, on the occasion of a hunting festival, ordered by the court to take place at Heidelberg, Tausch, senior, so attracted the observation of the prince elector, by his talents on the clarinet, that this promoter of the arts engaged him immediately for his chapel at Mannheim. Scarcely had young Franz reached his fourth year when he received instructions from his father on the violin; and at the age of eight played before the court on the clarinet. From this early age he was, indeed, considered as an efficient member of the chapel both for the clarinet and violin. In the year 1777, when the Prince Elector of Bavaria changed his residence from Mannheim to Munich, young Tausch, then aged fifteen, was obliged to follow the court, though against the wishes of his father. At Munich he remained till 1780, when he accompanied Chapel-master Winter to Vienna, where several offers of engagements were made to him; but he remained faithful to his prince, and again returned to Munich in 1781. In 1784 he set out on a second journey, and within nine months visited, besides several other courts, those of Berlin and Dresden; after which he again retired to Munich. Five years posterior to this he received a professional invitation to Berlin, by order of the Queen of Prussia, which, with his wife, who was an excellent pianist, he accepted. In 1791, at the command of the King of Prussia, he performed at the service in the Chapel Royal until the arrival of Baer from Petersburg. In the following year he went to Paris, and performed at several concerts, to the brilliancy of which his remarkable talents did not a little contribute. In 1796 he visited Hamburg, and was there again greatly admired. In 1799 he gave at his own house, in Berlin, a very superior weekly concert, in which the first amateurs of that city played. His published works are not numerous, and consist chiefly of concertos. He was still living in 1826.

TAUSCHER, J. G., a German writer on the organ, died about the year 1787.

TAUTOLOGY. A tiresome repetition of the same passage or passages.

TAVARES, MANOEL, a composer, born at Portalégre, in Portugal, flourished about the year 1625. He was at first singer in the chapel of King John III., after which he became chapel-master of the Cathedral Church at Mureia, and lastly at Cuença, where he died. In the Royal Musical Library at Lisbon are found many masses, motets, &c., of his composition.

TAVARES, NICOLAO, a Portuguese musician, born at Portalégre, flourished about the year 1625. He was only twenty-five years of age when he died, being then chapel-master at Cadiz and at Cuença. Of his compositions several pieces in manuscript are preserved in the Royal Musical Library at Lisbon.

TAVERNER, JOHN. Organist of Boston, in Lincolnshire, and likewise a member of Cardinal, (now Christ Church) College, Oxford. Being in religion a Lutheran, and connected with John Frith, the martyr, and some others, he was, to-

gether with them, accused of heresy. They were all seized and imprisoned in a deep cavern under the college, at that time used for the keeping of salt fish, the putrid stench arising from which actually suffocated one of them. Frith was convicted and burned at Smithfield in the year 1533; but Taverner had kept more within the bounds of moderation than the others, and was only accused of having concealed some heretical books under the boards of the school where he taught. On this account, and from his great eminence as a musician, he was fortunate enough to escape condemnation. It is necessary to remark that there were two Taverners living about the same time, who had the same Christian name. The one above mentioned is known as Taverner the musician; the other was one of the Gresham professors, and the publisher of Matthew's Bible in 1539. This person, indeed, took a degree in Oxford; but he is not known to have at all excelled in musical science.

TAYLOR, RICHARD, was born in the city of Chester in the year 1758. In his origin he traces a long line of ancient Britons, his family having for three centuries resided in the Isle of Mona, (Anglesea,) where his ancestors were all seafaring men excepting his father, who was sent to Chester to be instructed in another profession, owing to his father (Richard Taylor's grandfather) having been drowned in his own vessel previous to the birth of his son. Taylor, in the first sixteen years of his life, evinced an impassioned thirst for music, never being so happy as when he could get to the theatre or to any place where music was to be heard; on which occasions he used to take a pride in bearing off in his memory some of the best and most esteemed English airs; as, "Thou soft-flowing Avon," "Would you taste the noontide Air," "Water parted from the Sea," &c. He was never fond of light and trifling songs; they did not make up any part of his early mental furniture; on the contrary, he had a very strong bias in favor of sacred and classical music, which seemed more congenial to his feelings. In his eighteenth year Taylor became attached to the choir of a Calvinistic chapel, under the Rev. William Armitage. In early life he published several light vocal pieces; but the sublime oratorios in the score of Handel were his delight, and from those stores his knowledge in composition was derived. The only scientific work published by Taylor is "The Principles of Music at one View," which has gone through many editions. A new edition of it afterwards came out, a circular, on one sheet, and filled ingeniously with every thing belonging to the elements of the science. A patriotic song by Taylor, called the "Glorious Sixth of May," went through nine editions. It was published on the occasion of a contested election at Chester. It is worth remarking that this tune was played by the military bands at the entrance of the Duke of Wellington and the allied sovereigns into Paris after the battle of Waterloo. The following are among Taylor's principal compositions. Rural pieces: "Lo, Winter with her hoary Train;" "The gloomy Season's past;" "Summer now upholds her Scenes;" "Clad in her brown Vesture;" "Gently as the breathing Gale;" "See how you Lark, music only;" "From Bowers of Amaranthine."

National pieces: "Hark! how the dismal Tempest roars;" "Now see the bloody Flag unfurled;" "Says Bony, I'll invade you," duet; "Our Arms were piled." Sacred music: "Beauties of Sacred Verse," vols. i. ii. and iii.; "Star of Bethlehem;" "In Heaven the rapturous Song began;" "Angels, roll the Rock away;" "O'er the gloomy Hills of Darkness;" "We worship thee, O Lord."

TAYLOR, THOMAS, son of the preceding, was born in the city of Chester in 1787, and was an organist and music master of considerable abilities. At a very early period of life he gave a specimen of his acquirements by presiding at the grand piano-forte during the subscription concert given by Yaniewicz, Mme. Catalani, &c., at the Royal Hotel in Chester: he there played the beautiful concerto of Viotti in G, &c., accompanied by Yaniewicz and Charles Nicholson.

His compositions and arrangements are not numerous, but they are select. Sacred music: "A Book of original Chants;" "Hallelujah," (Messiah), arranged; "Lift up your heads," arranged; "As from the power," arranged; National Songs: "Old England, my country," poetry by Bloomfield; "John Bull is his name," poetry by R. Taylor. Many Welsh airs, the poetry to all which was written by his father.

TAYLOR, JAMES. A very able musician, resident at Norwich. His ability as a theorist is conspicuous in various papers published in the Quarterly Musical Review. Amongst these are "Remarks on the Minor Key," (Quart. Mus. Rev., vol. i. p. 141;); "On Modulation," (Quart. Mus. Rev., vol. i. p. 302;); and "On Consecutive Fifths and Octaves," (Quart. Mus. Rev., vol. ii. p. 271.) He was still living in 1824.

TE. One of the syllables used by the ancient Greeks in *solfajng* their music. It answered to the *pyrypate*, or the second sound of the tetrachord.

TE DEUM. A Latin hymn of the church, so called from the first two words. The same name is retained in the English title.

TEDESCA, or TEDESCO. (1.) German; as, *alla Tedesco*, in the German style.

TEDESCHI, ARRIGO. Chapel-master to the Church of St. John, at Florence, in 1480. Several part songs for three voices of his composition are known in Italy.

TEDESCO, FORTUNATA, is a German by birth, a native of Brunn, in Moravia. Her real name is Deutch. In Italy she translated this into the Italian *Tedesco*, and under this name has gained a high fame, especially in America. She was born in 1824, and is said, both in her voice (a contralto) and in her person, to resemble Johanna Wagner. She is very happily married to a Creole, but still retains the name by which she has become famous. Cornet and Meyerbeer, who heard her in Paris, have this year (1853) engaged her for Vienna and Berlin.

The chief qualities of Madame Tedesco's voice are power, grandeur, and largeness. She sings with great ease, and manages her voice with admirable skill. Her voice is always in tune, whether she sings high or low, forte or piano. She has established a high reputation in Paris and in London.

TEIXEIRA, ANTONIO, singer at the Patriarchal Church in Lisbon, was born there in 1707, and was, by command of the king, sent to Rome in the ninth year of his age to study counterpoint. In the year 1728 he returned to Lisbon, and immediately obtained the above-mentioned employment. He published much church music.

TELEMANN, GEORG PHILIP, was born at Magdeburg in 1681. His father was a minister of the Lutheran church, who, dying in the infancy of his son, left him to the care of his mother. As the child grew up he discovered a strong propensity to music, which his mother endeavored to get the better of, intending him for the university. Finding, however, that her son, who had been taught the rudiments of music, as other children in the German schools usually are, was determined to pursue the study, she at length gave way to his inclination. As a proof of the early abilities of Telemann, it is said that he composed motets and other pieces of the church service in his infancy, and that, by the time he was twelve years of age, he had composed almost the whole of an opera. In the year 1701, being sent to Leipsic to study the law, he was appointed to the direction of the operas, and was also chosen first music director and organist of the new church. In the year 1704 he became chapel-master to the Count of Promnitz, which situation, in 1709, he exchanged for that of secretary and chapel-master to the Duke of Eisenach. In 1712 he was chosen chapel-master to the Carmelite monastery at Frankfort on the Maine. Shortly after he obtained the music direction in St. Catharine's Church, and was appointed chapel-master at the court of Saxe-Gotha. In the year 1721 the city of Hamburg, desirous of having such an extraordinary man amongst them, prevailed on him to accept the place of director of their music and also the office of chanter in the Church of St. John. He had scarcely been a year at Hamburg when an offer was made him of the place of music director at Leipsic, which by the decease of Kuhman had then lately become vacant; but being so well settled he declined accepting it, and it was therefore conferred on John Sebastian Bach.

Telemann was a very voluminous composer, and the greatest church musician in Germany. Handel, speaking of his uncommon skill and readiness, used to say that he could write a church piece, of eight parts, with the same expedition as another would write a letter. The time of his death is variously reported, but the better opinion is that it took place about the year 1767. The following list contains many of the principal published works of Telemann. His manuscripts were literally innumerable, even by himself.

"Six Sonatas for Violin and Harpsichord," Frankfort, 1715; "Light Chamber Music for Violin, Flute, Harpsichord, and Hautboy," Frankfort, 1716; "6 Sonatine per Violino e Cembalo," 1718; "Six Trios for different Instruments," 1718; "Harmonic Divine Service, or Cantatas for all the Epistles of Sundays and Holydays, for the Voice and Instruments," Hamburg, 1725; "Extracts from the Airs usually sung to the Gospels in the Churches of Hamburg, for one Voice with Thorough Bass;" "The faithful Music Master," Hamburg, 1728; "Sonate à deux flûtes

trav., o due violini senza basso," Amsterdam; "The general Lutheran Psalm Book, containing more than five hundred Melodies, arranged for Four Voices," Hamburg, 1730; "3 *Trietti Methodichi et 3 Scherzi*, for two V. or Fl. with B," 1731; "Cantatas, with gay Poetry, for a Soprano and Violins;" "Six new Sonatas for the Harpsichord, &c.;" " *Scherzi Melodichi per divertimento di coloro che prendono l'acque minerali in Pirmonte, con ariette semplici e facili, a violino, viola e fondam.,*" 1734; "Seven times seven and one Minuets for the Harpsichord, &c.;" "Heroic Music, or twelve Marches for the Harpsichord, &c.;" "A second Set of seven times seven and one Minuets;" "An Overture, &c., for Violins;" "Six Quatuors for Violin, Fl., &c." "Gay Ariettes from the Opera Adelaide;" "Pionpine, or the ill-assorted Marriage, being an Interlude for two Voices and Instruments;" "Singing Exercises;" "Jubilee Music, consisting of two Cantatas for one and two Voices, with Instruments," 1733; "Easy Fugues for the Organ or Harpsichord;" "Methodical Sonatas for Violin or Flute, with B.;" "Continuation of the Methodical or Sonatas;" "Twelve Fantasias for the Flute;" "Three dozen Fantasias for the Harpsichord;" "Table Music, being a Collection of Overtures, Concertos, &c., for a Chamber Band;" and "Quatuors or Trios for Flute, Violin, and Violoncello."

TELEMANN, GEORGE MICHAEL, chantor, conductor of the music, and master of the choristers at the cathedral of Riga, was born at Ploen in 1748. He published at Hamburg, in 1773, a work entitled "*Unterricht in General-Bass-Spielen*;" and at Leipsic, in 1785, a book called "*Beiträge zur Kirchenmusik*," &c. He was a man of talent, and grandson of G. P. Telemann.

TELER, MARK, an ecclesiastic and musician at Maestricht, published at Augsburg, in 1726, his Opus 1, entitled "*Musica Sacra, stylo planè Italico et cromatico pro compositionis amatoribus, complectens 9 motetta brevia de tempore et 2 missas solennes.*" The second volume of this work was not published till after Teller's decease.

TELLTALE. A movable piece of ivory, or lead, suspended in front of a chamber organ, on one side of the keys, by a string, one end of which, being attached to the bellows within, rises as they sink, and apprises the performer in what degree the wind is exhausted.

TEMA. (I.) A subject, or theme.

TEMPELHOF, GEORG FRIEDRICH, a Prussian major of artillery, and teacher of the mathematics to one of the princes of Prussia subsequently to the year 1786, published at Berlin, in 1775, a pamphlet entitled "Reflections on the Musical Temperament of Kirnberger, with easy Instructions for tuning Organs, Harpsichords," &c.

TEMPERAMENT. The accommodation or adjustment of the imperfect sounds, by transferring a part of their defects to the more perfect ones, in order to remedy, in some degree, the false intervals of those instruments, the sounds of which are fixed; as the organ, harpsichord, piano-forte, &c. *Temperament* is what the Italians call *partecipazione, participato*, or *systema temperata*, because it is founded on temperature;

that is, on the diminution of some intervals, and augmentation of others, by which it partakes of the diatonic and chromatic systems.

TEMPESTOSO. (I.) In a tempestuous manner; violently agitated.

TEMPO, or **TEMP**. (I.) Time. (See that word.)

TEMPO COMMODO. (I.) In a convenient degree of movement.

TEMPO DI BALLO. (I.) Words used to signify that the time of the movement to which they are prefixed is that of a dancing minuet.

TEMPO DI CAPELLA. (I.) An expression implying a certain species of quick common time, formerly used in church music, and called *alla breve*. See **ALLA BREVE**.

TEMPO DI GAVOTTA. (I.) In the time of a gavot.

TEMPO DI MARCIA. (I.) In the time of a march.

TEMPO DI MINUETTO. (I.) In minuet time.

TEMPO GIUSTO. (I.) In exact time.

TEMPO PRIMO, or **TEMP. PRIM.** (I.) In the primary or original time.

TEMPOREGIATO. (I.) A word signifying that the accompanist is, in some particular passages, to pause, or prolong the measure, in order to afford the voice, or principal instrument, an opportunity of introducing some extemporary grace or embellishment. Also a holding note. See **HOLDING NOTE**.

TEMPO RUBATO. (I.) An expression applied to a time alternately accelerated and retarded for the purpose of enforcing the expression.

TENALIA, or **TENAGLIA**, **ANTONIO FRANCESCO**, a celebrated church composer, born at Florence, flourished about the year 1650 at Rome. Under his portrait, engraved by Clowet, stands *Tenalia Florentinus musicis in rebus excellens*. He also wrote for the theatre; since, in the year 1660, the opera "*Clearco*," of his composition, was performed at Rome. It is one of the first pieces in which the *da capo* appears.

TENDREMENT. (F.) Tenderly, gently; in a moving and affecting manner.

TENDUCCI, GIUSTO FERNANDO, was born at Sienna. He went to England in 1758, and first appeared in a pasticcio called "*Attalo*." It was, however, in the opera of "*Ciro riconosciuto*," set by Cocchi, performed in the beginning of 1759, that this excellent singer was first particularly noticed. From London he proceeded to Scotland and Ireland in company with Dr. Arne, and in 1765 returned to London. He afterwards quitted England on account of his debts, and was afterwards well received in all the great theatres of Italy.

TENEBRÆ. (L.) A musical office in the Romish church, celebrated in the afternoon of Maundy Thursday, Good Friday, and other solemn days, to commemorate the darkness that overspread the face of the earth at the time of the crucifixion.

TENELLA. A burden used by the ancient Greeks to songs of triumph, as *Io triumphe* was by the Romans.

TENERAMENTE, TENERO, or CON TENEREZZA. (L.) Tenderly, or with tenderness.

TENETE SINO ALLA FINE DEL SUONO. (L.) Keep the keys down as long as the sound lasts.

TENIERS, DAVID, a celebrated Flemish painter of the seventeenth century, was, at the same time, an excellent viol da gambist. He painted himself playing on this instrument by the side of his family, which picture has been engraved by Le Bas.

TENOR. The second of the four parts in harmonical composition, reckoning from the bass. The tenor is the part most accommodated to the common voice of man; from which circumstance it has sometimes, by way of preference, been called "the human voice." Its general compass extends from C above G gamut to G the treble clef note.

The tenor was formerly the plain song, or principal part in a composition, and derived the name of tenor from the Latin word *teneo*, I hold; because it held or sustained the air, point, substance, or meaning of the whole cantus; and every part superadded to it was considered but as its auxiliary. It appears that the contrary practice of giving the air to the soprano, or treble, had its rise in the theatre, and followed the introduction of *castrati* into musical performances; since which it has been universally adopted, both in vocal and instrumental music.

TENOR BASS VOICE. The second species of the male voices, reckoning from the bass, or deepest. See **VOICE**.

TENOR CLEF. The name given to the C clef when placed on the fourth line of the staff. See **CLEF**.

TENOR VIOLIN, or VIOLA. A stringed instrument resembling the violin, but lower in its scale; having its lowest note in C above G gamut. In concert, this instrument takes the part next above the bass.

TENOR VOICE. The third species of the male voices, reckoning from the bass. See **VOICE**.

TENSILE. An epithet applied to stringed instruments, on account of the tension of their cords, or wires; as a guitar or violin.

TENTH. An interval comprehending nine conjoint degrees, or ten sounds, diatonically divided. The tenth is the octave of the first third, or the third of the second octave; and it is major, or minor, according to the simple interval of which it is the replicate.

TENUTO, or TEN. (L.) A word signifying that the notes are to be sustained or held on. See **SOSTENUTO**.

TEPPER VON FERGUSSON was, in 1801, Russian imperial chapel-master at St. Petersburg. He was the son of an ex-banker at Warsaw, and seems, by a residence of eight years at Vienna, to have accomplished himself as an able performer; for, in 1795, his extraordinary ability on the piano, as well as his taste and knowledge of the

science, were highly praised at Hamburg also, in which city he made some stay in 1796, probably, before his departure for Petersburg. Soon after his arrival in Russia he had the good fortune to be appointed teacher of the piano to the imperial princesses, with a salary of two thousand rubles. He then wrote successively several operettas for the court theatre, and with so much success that the emperor nominated him chapel-master, with a considerable salary. Of his compositions little is known out of Russia.

TER. (L.) Thrice.

TERNARY, or PERFECT MEASURE. Triple time. See **TIME**.

TERRADELLAS, or TERRADEGLAS, DOMENICO, was born at Barcelona in 1701. He was sent to study at Naples, in the Conservatory of San Onofrio, under Durante. He began his musical career about the year 1739, when he composed the opera of "*Astolfo*" and part of "*Romolo*," in conjunction with Latilla, for the Teatro della Dame, at Rome.

In 1746 he went to England, where he composed two operas; but, unfortunately for him, none of the singers of that time stood high in the favor of the public. His compositions, however, when executed in Italy by the first class, acquired for him great reputation. Besides the favorite songs in his operas of "*Mithridates*" and "*Bellerophon*," which were printed by Walsh, he published, whilst in England, a collection of "Twelve Italian Airs and Duets," in which he is less masterly and original than in most of his other productions. In the songs which he wrote for Reginelli we find boldness and force as well as pathos; and some *arie di bravura* of his composition for the celebrated tenor singer Babbi, at Rome, abound with great fire and spirit. If his productions be compared with those of his contemporaries, his writings in general must be allowed to have great merit, though his passages now seem old and uncommon. Terradellas died at Rome, in 1751, in consequence, as was reported, of the bad success of one of his operas.

TERZA, or TERZI, GIUSEPPE, published at Naples, in 1805, an essay entitled "*Nuova Sistema del Suono*." It is nothing more than a prospectus, ably drawn up, of a larger work upon the art of a chapel-master. He examines in it the opinions of Aristotle, Descartes, Newton, and others upon the origin of sounds, and demonstrates much extensive and useful learning. He, however, has not carried the work into execution.

TERZETTO. (L.) A piece for three voices or instruments.

TERZI, GIOVANNI ANTONIO, a celebrated luteist and composer for his instrument, flourished in the beginning of the seventeenth century at Bergamo.

TERZIANI, PIETRO, an Italian composer, brought out, in 1788, at Venice, an opera seria entitled "*Il Cresco*."

TESI-TRAMONTINI, VITTORIA, a celebrated Italian singer, was born at Florence about the year 1690. She was a pupil of Francesco Redi, and afterwards, at Bologna, of Campeggi and Bernacchi. In 1719 she sang at the opera

at Dresden; afterwards returned to Italy; and, from 1748 to 1772, resided at Vienna, having long before the latter period quitted the stage. She died about the year 1775. Tesi's voice had great compass, and she sang with equal facility in both high and low compositions. Dr. Burney says that she generously refused, at Vienna, the hand of a count in marriage, from consideration for his family, and married afterwards a journeyman baker.

TESSARINI, CARLO, first violin and concert master at the metropolitan church of Urbino, was born at Rimini in 1690. From the year 1724 he enjoyed a high reputation in Italy as composer and violinist. In 1752 he went to Amsterdam. His later compositions were written so completely in the modern school of his time that they bore no resemblance even to those of his own works which he had composed forty years previously. They consisted chiefly of violin music; also of "A Method for the Violin," Amsterdam, 1762.

TESTAMANZI, FABRIZIO, published at Milan, in 1636, "*Breve Metodo di Canto Fermo.*"

TESTO. (I.) The text, subject, or theme of any composition. A word applied by the Italians to the poetry of a song. When the words are well written, the song is said to have a good *testo*.

TESTORI, CARLO GIOVANNI, a musician at Vercelli, in Piedmont, published, towards the middle of the last century, a work entitled "*Musica ragionata.*"

TESTUDO. (L.) The name given by the Romans, in imitation of the ancient Greeks, to the lyre of Mercury, because the inventor made it of the back or hollow of a sea tortoise. See SHELL.

TETARTOS. (Gr.) Fourth. The epithet applied by the ancients to that of their four authentic modes called the Mixolydian.

TETRACHORD. (From the Greek.) A concord in the music of the ancients consisting of three degrees or intervals, and four terms or sounds; also called by the Greeks *diatessaron*, and by us a fourth. In this system the extremes were fixed; but the middle sounds were varied according to the *mode*. In the ancient music all the primitive or chief divisions were confined to four chords; so that the great scale consisted of replicates, and all the upper tetrachords were considered only as repetitions of the first or lowest. The tetrachord consists of two tones and one semitone; two tetrachords, having a tone between them, make an octave, thus:—

In the Greek and Roman music the tetrachord was divided into three scales—the diatonic, the chromatic, and the enharmonic; thus:—

TETRADIAPASON. The Greek appellation of the quadruple octave, which we also call the twenty-ninth. The system of the ancients not extending to this interval, they only knew it in imagination or by name.

TETRATONON. The Greek name of an interval of four tones, called, at present, the superfluous fifth.

TEVO, ZACCARIA, a native of Saxa, in Sicily, a Franciscan monk, bachelor in divinity and professor or master of music in Venice, published in the year 1706, in quarto, a work entitled "*Il Musico Testore.*" containing, in substance, the whole of what has been written on the subject by Boethius, Franchinus, Galilei, Mersennus, Kircher, and, in short, every other author on the subject of music before his time.

TEXTOR, ABEL, a composer at the beginning of the seventeenth century, wrote "*Dolyetta Musicale delle Canzonette Villanelle ed Arie Neapolitana, dei diversi excell. Musici, à 3 voci. Novamente poste in luce.*" Frankfurt, 1620. How much earlier the first edition of this republication appeared cannot now be ascertained.

TEXTOR, GUGLIELMO, a composer of the sixteenth century, published "*Madrigali à 5 voci.*" Venice, 1566. This work was to be found in the library at Munich.

TEYBER. A German composer in the service of the Margrave of Baden in 1789.

TEYBER, ELIZABETH, an excellent singer at the German theatre of Vienna, was the daughter of a violinist at the Imperial Chapel, and studied singing and declamation under Chapelmaster Hasse and Vittoria Tesi. She had also some lessons from Haydn. About the year 1769 she went to Naples, where she sang at the theatre with much success. Thence she was invited to Petersburg, from which city she returned some time afterwards with her constitution so debilitated that she was at first interdicted from ever again singing. A second journey to Italy, however, partially restored her health; and a few years afterwards she again sang, occasionally, at Vienna.

TEYBER, FRANZ. A vocal composer at Vienna, known by the following works: "*Alexander.*" an opera, the poetry by Schickaneder; and "*Gestirne von Salis.*" Vienna, 1803.

THALBERG, SIGISMUND, the celebrated pianist, was born at Geneva January 7, 1812. At an early age he was taken to Vienna, where his musical education commenced. He is said to have received lessons from Sechter and from Hummel; but M. Fétis states that Thalberg himself denied this, as well as the assertion that he acquired his talent by indefatigable labor. At the age of fifteen he began to excite attention in saloons and concerts. At sixteen he published his first works, now regarded by himself as trifles, but in which there are indications of the peculiar style which he has since developed. One who knows Thalberg as he has since become, both as pianist and as composer, says M. Fétis, will find it interesting to examine his "*Melange sur les thèmes d'Euryanthe.*" (op. 1), his fantasia on a Scotch air, (op. 2,) and his impromptu on motives from the "*Siège de Corinthe.*" (op. 3,) which appeared at Vienna in 1828. Two years after this he made his first visit to England to give concerts. The journals of that day are full of him. He had written for this tour a concerto, (op. 5;) but it was not for this speciality that his talent suited him; the constraint of the classical form and of the orchestra was too much for him. His thoughts then turned to the development of the sonorous power of the piano; to the combinations of various effects; and, above

all, to a novelty of which the invention properly belongs to him. The old school of pianists was divided into two principal categories; namely, the brilliant pianists, such as Clementi and his pupils; and the harmonists, such as Mozart and Beethoven. Each of these schools was subdivided into several shades. Thus Dussek, by his national instinct, tended to the harmonic school, although he wrote incorrectly and must be considered one of the brilliant pianists. Kalkbrenner afterwards followed the same direction. On the other hand, Hummel, and then Moscheles, pianists of the harmonic school, gave more of brilliancy to their compositions than did Mozart and Beethoven. But in both schools we remark that song and harmony on the one hand, and the brilliant traits on the other, are always separated, and that these two elements of piano-forte music only appear one by one in turn, and in an order nearly symmetrical. In the brilliant passages of these two schools it is the scales that predominate; the *arpeggi* appear only at long intervals, and almost always in the same forms. In the singing and harmonious passages, if the two hands are brought together they occupy but one side of the key board; if they are widely separated they leave a void between them; the harmony is not filled up. Such was the state of piano playing when Thalberg conceived the idea of uniting song and harmony and brilliant passages in one, instead of letting them alternate with one another by a sort of formula. He sought to make the whole key board speak at once throughout its entire compass, leaving no void in the middle. This thought, gradually matured and developed, led him to the discovery of a multitude of ingenious combinations of the fingers, whereby the song or melody could always be heard strongly accented in the midst of rapid arpeggio passages and very complicated forms of accompaniment. In this new system the scales ceased to be a principal part in the brilliant piano music; different forms of *arpeggi* took their place; the fingering was greatly modified; and the frequent passage of the thumb became its essential characteristic. It was by means of the thumb, taken alternately in the two hands, that the melody established itself in the centre of the instrument.

In 1830 Thalberg made an artistic tour through Germany. In 1834 he accompanied the Austrian Emperor Ferdinand, as pianist to the imperial chamber, to Töplitz, to the meeting of his sovereign with the Emperor of Russia and the King of Prussia. There his playing awakened a warm interest. But his true European fame dates from his success in Paris during his first visit there in the latter part of the year 1835. Since then he has made frequent tours in France, Belgium, England, Russia, and Germany; and every where the precision, delicacy, and finish of his playing, the beautiful sound which he draws from his instrument, the brilliant effects which he combines, and the individual charm which he has put into his musical forms, have excited a general enthusiasm. These forms, imitated by most of the new school pianists in their compositions, or rather their arrangements of themes from operas, have become the fashion of nearly all the piano music of our time. Thalberg and Liszt stand preëminently at the head of this new school of pianists. Among the productions by which

Thalberg and his peculiar method have acquired the most celebrity, are his fantasias on themes from "*Robert le Diable*," from "*Les Huguenots*," from "*Mosé*," from "*Don Juan*," and from "*La Donna del Lago*." He has also published some charming *études*; and more recently in England (1853) a course of instructive exercises entitled "*The Art of Singing applied to the Piano-Forte*." This very useful work has been republished in this country by Oliver Ditson, Boston, Massachusetts.

THALES, or THIALETAS, a poet-musician, sometimes confounded with the philosopher Thales, of Miletus, was born in the Isle of Crete. He was a contemporary of Lycurgus, and lived, therefore, about three hundred years after the Trojan war. To him is attributed the second establishment of music at Sparta. Most of his songs were about the necessity of obeying the laws. Strabo accords to him the invention of the Cretan lyre; Porphyry assures us that Pythagoras loved to sing the old poems of Thaletas; and the scholiast of Pindar says that this musician was the first who composed airs called *hyporchemata* for warlike dances. The Greeks, fond of the marvellous, ascribed to the music of Thaletas the singular virtue of curing diseases; and said that, in obedience to the oracle of Delphi, he went to Sparta, and by his songs delivered that city from the plague.

THE. One of the four words used by the ancient Greeks in solving. It answered to the *tychanos*, or third sound of the tetrachord.

THEILE, JOHANN, was the son of a tailor at Naumburg, and born in the year 1646. He studied in the Universities of Halle and Leipsic. From thence he went to Weissenfels, in Saxony, and under Schütz, the chapel-master there, perfected himself in the art of composition. Thus qualified, he removed to Stettin, in Pomerania, and became a teacher of music. In 1673 he was made chapel-master at Gottorp; but, being driven from thence by the wars, he settled at Hamburg. He was subsequently elected to the office of chapel-master at Wollenbüttel in the room of Rosenmüller. After holding this place for some years he entered the service of Christian, the second Duke of Meiseburg, in which he continued until the death of that prince. During this time he composed many pieces for the church, and in some of them professes to imitate the style of Palestrina. He was the composer of a highly valuable work, the title to which begins thus: "*Nove Sonate rarissime Artis et suavitatis Musicae, partim 3 vocum, cum simplicis, duplo et triplo inversis Fugis, partim 4 vocum*," &c. From the evidence of deep learning contained in his works, Theile was justly ranked among the first of the German musicians. He died at Naumburg in the year 1724.

THEILE. (G.) Parts, or capital divisions of the measure.

THEILE, ANDREAS, was a celebrated musician, contemporary with, and, as it has been generally supposed, brother of, the last-mentioned composer. He was the author of a collection of lessons, published in the year 1596, entitled "*Neue Clavier-Ubung*."

THEMA. (G. and L.) The subject. See that word.

THEORBO. (I.) An old stringed instrument resembling the lute both in tone and form; the only difference being that the theorbo has eight bass strings twice as long as those of the lute, which renders their tone exceedingly soft and pleasing, and that it has two necks, the longest of which sustains the four last or deepest-toned strings. The theorbo is said to have been invented in France by the Sieur Hotteman, and thence introduced into Italy.

THEORIST. A scientific musician. A person who speculates upon, and is acquainted with, the essence, nature, and properties of sound as connected with the established laws of harmony, melody, and modulation.

THEORY. The doctrine of music as it regards speculation on the science and its object — sound — independent of practice. A person may be a good theoretical musician without performing or singing well.

TIPEP, (II.) is frequently joined with the flute, hautboy, or timbrel, meaning the *tabor* or *tabret*; but in place of the tabor or tabret translators have it often *the dance*; thus substituting, rather improperly, the effect for the cause; for, although in common life the tabret might have been employed to encourage dancing, it certainly was not introduced into the temple service with that design, unless we refer it to the solemn dancing at the nightly rejoicings during the feast of tabernacles. It resembled in form the flute or hautboy, only it had fewer holes, and consequently possessed a more limited range of musical notes.

THEURGIC HYMNS. Songs of incantation, such as those ascribed to Orpheus, performed in the mysteries upon the most solemn occasions. These hymns were the first of which we have any account in Greece. They are supposed to have originated in Egypt.

THIEME, FRIEDRICH. A German musician, resident, during many years, in France. Amongst other works of merit, he published "*Elémens de Musique Pratique et Solfèges nouveaux pour apprendre la Musique et le Goût du Chant*," Paris, 1784; a second edition of this work was published under the title, "*Principes Elémentaires de Musique Pratique et Solfèges Italiens*," Paris; "*Principes abrégés de Musique à l'Usage de ceux qui veulent apprendre à jouer du Violon*," Op. 10; "*Principes abrégés de Musique Pratique pour le Forte-Piano, suivies de six petites Sonates formées d'Airs connus*;" "*Trois Sonates en Duos dialogués pour deux Violons d'une Exécution facile*," Op. 12; and "*Nouvelle Théorie sur les différens Mouvements des Airs, fondée sur la Pratique de la Musique Moacrne, avec le Projet d'un nouveau Chronomètre, destiné à perpétuer à jamais, pour tous les Temps, comme pour tous les Lieux, le Mouvement et la Mesure des Airs de toutes les Compositions Musicales*," Paris, 1800. Thieme died at Rouen in 1802.

THILLON, ANNA. This charming vocalist and fascinating actress is a native of London. Her maiden name was Hunt. A thousand romantic causes are assigned for her adopting the profession of which she is such an ornament; but the real one was the embarrassment of her father's circumstances, which reduced him suddenly from affluence and splendor, and forced him to

retire to France and live in obscurity. Having married M. Thillon, the *chef-d'orchestre* of the Philharmonic Society of Havre, she determined upon appearing in public; and accordingly made her *début* in "*Der Freyschutz*" at the little theatre of Clermont, where she met with prodigious success. From thence she proceeded to the Grand Theatre at Nantes, where she continued for two years, increasing in fame and ability. The young vocalist was on the point of setting out for Italy, "*cette patrie des beaux arts*," where the director of the Theatre of La Renaissance, M. Antenor Joly, who was seeking in the provinces for *artistes* for the new Theatre Ventadour, heard the *prima donna* of Nantes, and was so charmed with her that he prevailed upon her to relinquish the idea of visiting Italy, and engaged her for the French capital; where she shortly afterwards appeared in "*Lady Mebril*," and forced the Parisians to confess that she was not only a fine singer, but one of the most pleasing actresses that ever trod the stage. To a soprano of great compass and sweetness, but not great power, she unites exquisite finish and brilliant flexibility, added to a style and pathos peculiarly her own. The charm of her singing is, if possible, enhanced by the loveliness of her face, the elegant symmetry of her figure, and the piquant fascination of her acting. She shines chiefly in the light, sparkling comic operas of Auber, Balfe, &c., in which she has uniformly drawn large audiences in this country, where she has sung in the principal cities, and in California, since 1850.

THILO, CARL AUGUST. A German musician resident at Copenhagen in the middle of the last century. He published "*Directions for Self-Instruction in the Science of Music and in playing the Harpsichord*." The original edition was published in the Danish language, at Copenhagen, in 1746. Of his practical works we can name the following: "*Odes with Melodies*," Copenhagen; "*The Italian Air 'D'un genio chi m'accende*," &c., for Sopr., V., and B.;" "*Twelve Minuets*;" and "*Sinfonia per il Cembalo*."

THIN. An epithet applied to music the harmony of which is meagre and scanty, and used to distinguish it from rich and elaborate composition. All those tones, both of voices and instruments, which are not rich and round, are called *thin*.

THIRD. An interval so called because it contains three diatonic sounds. The Greeks not admitting the third as a consonance, it obtained no general name amongst them, but took that of the lesser or greater interval from which it was formed. There are four species of thirds — two consonant and two dissonant. The consonant are, first, the major third, called by the ancients *ditone*, composed of two tones; secondly, the minor third, called *hemiditone*, consisting of a tone and a half. The dissonant thirds are, first, the diminished third, composed of two major semitones; secondly, the superfluous third, composed of two tones and a half. This last interval, not having place in the same mode or key, is never used either in harmony or in melody. The Italians sometimes introduce the diminished third in airs, but it is never used in harmony. The consonant thirds are the spirit of harmony, particularly the major third, which is sonorous

and brilliant; the minor third is more tender, and even pathetic; a difference of character from which skilful composers derive some of the best and most poignant effects. The old French theorists had almost as severe laws respecting the thirds as we now observe in regard to the fifths and eighths. It was by them forbidden to have two in immediate succession, even of different kinds, particularly in the same direction.

THIRTEENTH. An interval forming the octave of the first sixth, or the sixth of the first octave. It contains twelve diatonic degrees, i. e., thirteen sounds.

THO, or TO. One of the four words used by the ancient Greeks in solfaing. It answered to the note, or fourth sound of the tetrachord.

THOLLÉ, THOMAS, born at Liege about the year 1760, first studied music in that city under Moreau, who was one of the masters of Grétry; from thence he was entered as a chorister of the cathedral at Antwerp. At about the age of fourteen he was sent to Italy, and studied at the Conservatory of Loretto under Fenaroli and Sala. Having finished his musical education, he was engaged in several of the principal towns of Italy as a buffo tenor singer, and at length went to France, where he was elected chapel-master of one of the churches in Poitiers. At the time of the revolution he proceeded to Paris, where he afterwards resided, being chiefly employed as a singing master. Thollé published five collections of romances of his own composition and many other detached vocal pieces.

THOMAS, CHARLES LOUIS AMBROISE, a French dramatic composer, was born at Metz in 1811. He commenced the violin and piano at the age of seven. In 1828 he entered the Conservatory of Paris. In 1829 he obtained the first prize for the piano; in 1830 the first prize for harmony; and two years later the first prize of the Academy and Institute for composition. He spent three years in Italy, and then went to Vienna. Returning to Paris in 1836, he composed and brought out the following dramatic works: "*La double Echelle*," comic opera, 1837; "*Le Perroquet de la Régence*," ditto, 1838; "*La Gipsy*," ballet, 1839; "*Le Panier fleuri*," comic opera, 1839; "*Carlina*," 1840; "*Le Compto de Carmagnola*," grand opera, 1841; "*Le Guerillero*," ditto, 1842; "*Angélique et Medor*," comic, 1843. He has also published a "*Requiem*," written at Rome, and much other religious music; also quintets, trios, &c., for string instruments and piano.

THOMAS, CHRISTIAN GOTTFRIED, a German church composer, resided, in 1789, at Hamburg and stood for the place of music director vacant by the death of Bach. He is known by various vocal compositions, chiefly sacred; also by a few instrumental pieces in manuscript.

THOMASI, GIOVANNI, an Italian composer of the sixteenth century, published "*Tricima*," Venice, 1546.

THOMPSON, THOMAS, organist of St. Nicholas's Church, Newcastle upon Tyne, was born of musical parents at Sunderland, in the county of Durham, in the year 1777. His father, when a boy, was under James Hesletine, organist of the cathedral, Durham, a pupil of the celebrated Dr. Blow. At the time his son Thomas was born he

was leader of the concerts at Sunderland, and in 1778 removed to Newcastle, where shortly afterwards subscription concerts were established, at which he continued to assist as principal second violin until they were abandoned in 1813. Thomas, at the early age of nine years, was initiated into the practice of the violin and French horn under the tuition of his father, and performed on the horn at the theatre and at concerts when only twelve years old. At this time he had lessons on the piano-forte from Hlawdon, the organist of All Saints, and on the organ and piano-forte from Charles Avison, son to that accomplished musician, Avison, of Newcastle. In the beginning of the year 1793 his father was induced to place him under the tuition of the justly celebrated Muzio Clementi; and under so competent a master he pursued the study of his favorite instrument with such ardor that he practised upon an average ten hours a day. This persevering industry could not fail to secure the approbation of Clementi, whose kind though strict admonitions left a powerful impression upon the mind of his admiring pupil. He was introduced by Clementi to Frick, the author of a well-known treatise on modulation, and received instructions from him in thorough bass and composition. In 1801 and 1803 he had lessons of J. B. Cramer, and continued to visit London at intervals for the purpose of hearing and receiving lessons from the first performers; amongst others, Ries and Kalkbrenner.

In 1794 Thompson was called from London by the death of Hlawdon, to whom he succeeded as organist of All Saints; and, upon the death of Avison in 1795, was appointed by the corporation of Newcastle organist of St. Nicholas. In the year 1796 there was an oratorio at Newcastle under the patronage of Prince William of Gloucester: the elder Cramer led the band, and young Thompson had the honor of presiding at the organ; and again in 1814 he presided at the organ on the occasion of a musical festival under the direction of General Ashley. In 1797 the subscription concerts recommenced, when he played a sonata on each concert night until about 1800; after which time he played alternately with Monro. Since these concerts were discontinued he performed little in public; but during their continuance the brilliancy of his finger in rapid passages, and the still more striking feeling, expression, and taste displayed in the cantabile parts of the performance, never failed to call forth great and merited applause. His behavior to his numerous pupils was kind and conciliatory; and to those who showed a disposition to profit by his instructions, his exertions for their improvement were unwearied. Thompson's compositions have been principally confined to songs and duets, many of them elegant and pleasing, and all marked by a simple and flowing melody.

THORNE, JOHN, an English musician, of York, flourished about the year 1520. Sir J. Hawkins has inserted in his history a motet for three voices, "*Stella Celi*," by this composer.

THOROUGH BASS. Thorough bass was invented, about the year 1605, by Ludovico Viadana, some time *maestro di capella* of the Cathedral Church at Fano, a small city situated in the Gulf of Venice, in the duchy of Urbino, and

afterwards of the cathedral of Mantua. See Bass, THOROUGH.

THIRENODIA. (L.) A funeral song. See DINGE.

THUMA, or **TUMA**, chapel-master to the Empress Dowager Elizabeth at Vienna, was born in Bohemia in 1704. He was a pupil of Fuchs, and succeeded his master, in 1722, as chapel-master to the Emperor Charles VI. He was appointed to his first-named place in 1741. After the death of the empress dowager he retired to a convent, where he died in 1774. He was considered an excellent church composer.

THÜRING, **TREBENSIS JOHANN**, lived in the beginning of the seventeenth century as a schoolmaster at Willerstadt, whence he published the following of his compositions: "*Cantiones*," Erfurt, 1617; "*2 Christliche Erndten-Gedänge*," Jena, 1620; "*15 Geistliche Metten, nebst der Litaney und dem Te Deum laudamus, von 4 bis 8 Stimmen*," Erfurt, 1621; and "*Sertum Spirituale Musicale*," Erfurt, 1637.

TIBALDI, **GIOVANNI BATTISTA**, an instrumental composer at Modena, lived about 1720, and published "*Sonate à 3*," Ops. 1 et 2, Amsterdam.

TIBIA. (L.) The name of the ancient flute. See FLUTE.

TIBLE PARES. (L. plu.) Two flutes of the same pitch, which among the ancients were played together by the same performer.

TIBICIN, or **TIBICINIST.** (From the Latin.) An ancient flute player.

TIBICINA. (From the Latin.) An ancient female performer on the flute.

TIED NOTES. Notes the stems of which are joined together by cross lines, as in united quavers, semi-quavers, &c.; or notes over the heads of which a curve is drawn, to signify that they are to be *sturred*.

TIERCE. The interval of a third. See THIRD.

TIERCE OF PICARDY. The name formerly given in France to the major third, introduced instead of the minor, in the concluding chord of a composition in the minor mode. The major mode being considered as more harmonious than the minor, it was a law to finish on the first; but a more polished taste has discarded that Gothic fashion; and we now conclude with the third proper to the mode in which the composition is written.

The major third, as formerly adopted, was called the tierce of Picardy, because the use of this final chord continued longest in church music, and consequently in Picardy, where they had music in a great number of cathedrals, and other churches.

TIES. Those thick lines which unite the tails, or stems, of notes, and distinguish quavers, semi-quavers, &c., from crotchets. The thin curves drawn over the heads of notes meant to be *sturred* are also called *ties*.

TIETZ, or **TITZ**, **A. FERDINAND**, an excellent violinist, resided in 1789 at St. Petersburg. So much of his music is known in manuscript at Vienna that it is probable he lived in that city previously to removing to Russia. Amongst his published works are "*Six Quatuors à 2 V., A., et B.*," Vienna, 1789; and "*Sonate pour le Clav. ar. V. obl.*," Op. 1, Gotha and Petersburg, 1796.

TIGRINI, **ORAZIO**, canon of Arezzo, published at Venice, in 1588, a musical work entitled "*Compendio della Musica*," which he dedicated to Zarlino, from whom he received a letter of thanks

for the laurel crown with which he had bound his brows; which letter is prefixed to the work, with complimentary verses innumerable from other friends. This compendium is not only well digested by the author, but rendered more clear and pleasant in the perusal by the printer, who has made use of large Roman types instead of Italic, in which most of the books that were published in Italy before the present century were printed. This author is the first, according to Dr. Burney, who has censured the impropriety and absurdity of composing music for the church upon the subject of old and vulgar ballad tunes.

TILL, **JOHANN HERMANN**, organist at Spandau, about the year 1730, published a catechism of music.

TILLIÈRE. A good French violoncellist. He published, in 1764, a method for his instrument, which is still recommended by several French professors of the violoncello. He published also at Paris, in 1777, "*Six Duos pour 2 Vc.*"

TIMBALE. (F.) A kettledrum. See KETTLEDRUM.

TIMBREL. One of the names of the ancient Hebrew drum. This instrument is very much like our *tambourine*, consisting of a brass hoop, over which was stretched a parchment. It was held in the left hand, and struck with the right, and was played on while dancing, on occasions of great joy. "And Miriam, the prophetess, took a *timbrel* in her hand," &c.

TIME. The measure of sounds, in regard to their continuance or duration. The old musicians were acquainted with no more than two sorts of *time*: one of *three* measures in a bar, which they called perfect; and the other of *two*, considered as imperfect. When the time was perfect, the breve was equal to three semibreves, which was expressed by an entire circle, barred or not barred, and sometimes also by this compound character, $\frac{3}{1}$. When the *time* was imperfect, the breve was only equal to two semibreves, which was indicated by a semicircle, or C. Sometimes the C was reversed, as thus, C , which signified a diminution, by one half, of the powers of the notes; a particularity sometimes denoted in the more modern music by a perpendicular bar drawn through the character; as thus, C . The *time* of the full C was generally called the *major time*, and that of the reversed C the *minor time*. The moderns have added to the old music a combination of *times*; but still we may say that we have no more than two *times*, twofold and triple; since the *time* of nine crotchets, or nine quavers in a bar, is but a species of triple time; and that of six crotchets, or six quavers in a bar, though called a compound twofold time, being measured by two beats, one down and one up, is as absolutely twofold time as that of four or two crotchets in a bar. With respect to the velocities of the different species of *time*, they are as various as the measures and modifications of music; and are generally expressed by some Italian word or phrase at the beginning of each movement; as *larghetto*, rather slow; *presto*, quick, &c. But when once the *time* of the movement is determined, all the measures are to be perfectly equal, that is, every bar is to take up the same quantity

of *time*, and the corresponding divisions of the bars are to be perfectly symmetrical with respect to each other. Our slowest *time* is forty quarter notes in a minute, and our fastest two hundred and eight quarter notes in a minute. The rhythmical signature teaches us how many beats in a measure; and these are good guides. We also have the metronome and the rhythmometer, by which we can perform music with a certain degree of slowness and fastness.

TIME TABLE. A representation of the several notes in music, and their relative lengths and durations.

TIMIST. A performer who preserves a just and steady time.

TIMOROSO. (I.) A word signifying a style of performance expressive of awe or dread.

TIMOTHEUS, one of the most celebrated poet-musicians of antiquity, was born at Miletus, an Ionian city of Caria, four hundred and forty-six years before Christ. He was contemporary with Philip of Macedon and Euripides, and not only excelled in lyric and dithyrambic poetry, but in his performance upon the cithara. According to Pausanias, he perfected that instrument, by the addition of four new strings to the seven which it had before.

TIMPANO. (I.) The *timpano*, or kettledrum, was introduced into the English orchestra about 1743. Among the spoils of war was a pair of brass drums, taken at the battle of Dettingen, which Handel employed in his grand *Te Deum*, composed and performed in honor of the victory.

TINCTOR, JOANNES, doctor of laws and canon at Nivelles, in Brabant, was born in that town about the year 1450. Early in life he was invited to Naples by king Ferdinand, of Arragon, and appointed royal chaplain and professor of music there. The various treatises which he wrote for the newly-established royal music school at Naples prove how much interest and pains he took in its improvement. He seems to have left Naples, and returned, in 1490, to his own country, where he died. Besides the treatises above alluded to, Tinctor is the author of a dictionary of music, entitled "*Terminorum Musicae Definitorium*." This work, the first of its kind, is also the first book on music which was printed. Dr. Burney found a copy of this dictionary in the king's library, and Forkel also saw one in the library of the Duke of Gotha. There is neither printer's name nor date on the book. Burney, however, (on what authority is not known,) states, that the edition he saw was printed at Naples in 1474. Amongst his minor treatises, three were entitled "*De Arte Contrapuncti*," "*Proportionale Musicae*," and "*De Origine Musicae*." Tinctor was assisted in laying the foundation of the Naples music school (since so highly celebrated) by Garnerius and Franchinus Gaffurius, Milanese.

TINEO, J. SANCHEZ DI. A Spanish contrapunctist towards the close of the sixteenth century.

TINTI, SALVATORE, a Florentine violinist, flourished between the years 1770 and 1800, in which latter year he died at Venice. Amongst his compositions are the following: "*Three Quin-*

celi à 4, 2 A., e Vc.," in manuscript, at Træg's, in Vienna; and "*Six Quartetti à 2 V., A., e Vc.*," which were printed at Vienna.

TINTINNABULA. (L. pl.) Little bells used by the ancients. Great bells, such as we now hang in the towers of churches, were not known till about the sixth century.

TINTINNALOGIA. (L.) The art of ringing bells.

TIPPING. A certain distinct articulation, given to the flute by the appulse of the performer's tongue against the roof of the mouth.

TIRANNA. (I.) A Spanish national air.

TIRATA. (I.) A term formerly applied to any number of notes of equal value or length, and moving in conjoint degrees.

TIRÉ. (F.) Drawn. This term is used in violin music to denote a down bow.

TIRRY, ANT., chamber musician and clarinetist to the Duke of Wurtemberg in the latter years of the last century, was born in Hungary about the year 1757.

TISCHER, GASPARD, a German organist and composer, flourished about the year 1714.

TISCHER, JOHANN NICHOLAS, concert-master to the Prince of Saxe-Coburg and organist at Smalkalden, was one of the most agreeable and esteemed composers of his time. He was born in 1707, and received his first lessons in music from Johann B. Rauch. He was then made clerk to a magistrate at Halberstadt, where he received further instructions in music from Graaf, organist of the cathedral in that town. Thence he went to Arnstadt, where he learned composition, the violin, and the viol d'amore of Schwartzberg, chapel-master to Prince William of Schwartzburg, and commenced himself to teach. Not being able, on account of his religion, to procure the situation of organist at Arnstadt, to which he had been recommended by the Dowager Princess of Schwartzburg, he continued his travels, and visited Brunswick, Hamburg, Berlin, and Dresden, where he missed no opportunity of hearing the most eminent masters and profiting by their advice. At length he returned to his native country; but finding no means of subsistence there, and being desirous of marrying, he engaged himself, in 1728, as hautboyist in the regiment of the Duke of Brunswick. In 1730 he quitted that situation, being appointed organist at Smalkalden. Besides the organ, harpsichord, violin, and hautboy, Tischer performed well on the flute, horn, and violoncello. The following is a list of his works: "*Fifty Pieces of Church Music*, finished up to 1732;" "*Six Concertos for Hautboy and Tenor*;" "*Six Symphonies for two Flutes, 2 V., T., and B.*;" "*Six Symphonies, with the Addition of two Horns*;" "*Six Violin Concertos*;" "*Overture for Violin*;" "*Two Sets of Solos for Violin*;" "*Twenty-four Harlequinades, in all Keys*;" "*Six Fugues*;" "*The Four Seasons, under the Title of Harmonic Amusement for the Harpsichord*;" and "*Six Harpsichord Concertos*." The above works were all finished before the year 1732, but it is doubtful which of them were printed. The following compositions, written since the year 1748, have been all pub-

lished: "Six Galantries for Ladies' Amusement, Parts 1, 2, and 3," Nuremberg; "Musical Amusement, consisting of three Collections for the Harpsichord, Parts 1, 2, and 3," Nuremberg; "Six small Collections for the Harpsichord, for the Use of Beginners;" "Six Numbers, each consisting of two Harpsichord Concertos;" "A seventh Number of same Work, containing one Concerto;" "Kyrie and Alleluia, in two Concertos for the Harpsichord;" and "Six easy and pleasing Collections for Beginners on the Harpsichord," Munich, 1766.

TITON DU TILLET, ÉVRARD, born at Paris in 1677, was at first a captain of dragoons, afterwards master of the dauphin's household, and lastly commissary of war. He published, in 1732, a work entitled "*Le Parnasse Français*." This is a valuable book, and contains, first, remarks on poetry and music, and on the excellence of these two arts together, with special observations on French poetry and music, and on the French drama. Secondly and thirdly, separate remarks on, and necrological sketches of, French musicians, &c. He died in 1762.

TOBI, FL. J., published at Paris, in 1780, three trios for clarinet, violin, and bass, Op. 1.

TOCCÁTA. (I.) An obsolete form of piece for the organ or harpsichord, something like our *capriccio*.

TOCCATINA. The diminutive of *toccata*.

TODERINI, GIAMBATTISTA, an Italian abbé, was private tutor to the son of the ambassador of Venice to Constantinople. He published at Venice, in 1787, a work in three volumes, entitled "*Litteratura Turческа*." The first volume treats of Turkish music. He states it to be false what Niebuhr advances of the Turks of distinction disdaining to learn music. They only avoid playing in public. The Turks, he says, have taken much of their music from the Persians. The sultan has a numerous band of musicians, who perform on all religious and other festivals. There is also a chamber band in the seraglio, who perform before the sultan several times in the week. Occasionally eminent musicians of the city, whether Greeks, Armenians, Jews, or Turks, are permitted to perform in this chamber band.

TODI, MARIA FRANCESCA, born in Portugal about the year 1748, was a pupil of David Perez, and one of the most celebrated singers of the last century. About 1772 she went to England, and sang contralto at the King's Theatre. From thence she proceeded to Paris about the year 1780, and made her *début* at the *Concert Spirituel* with prodigious success. The following year she was engaged at Berlin, and thence went to St. Petersburg, where she was nominated singer to the court, and, after her representation of the *Armida* of Sarti, was presented by the empress, Catharine III, with a diamond necklace. In 1787, on the invitation of Frederic William II., she returned to Berlin, a salary being assured to her of nearly one thousand pounds a year. In 1789 she quitted Prussia, with the intention of returning to Paris, and, in passing through Mentz, sang before the court of the elector. The horrors of the French revolution, which then began to rage, prevented her continuing her journey, and in 1790 she was singing

at Hanover. She subsequently returned to Portugal, where she died in 1793.

TOESCHI, C. JOSEPH, first violinist in the Royal Chapel at Mannheim in 1756, was ten years afterwards concert master there, and finally, in 1786, was appointed private music director to the Elector of Bavaria. Toeschi published much instrumental music at Paris and Amsterdam. He was a pupil of J. Stamitz. He died at Munich in 1788, aged sixty-four.

TOLLET, THOMAS. This English musician composed the "Ground," well known by his name, and published directions to play on the French flageolet. In conjunction with John Lenton, he also composed and published, about the year 1694, a work entitled "A Concert of Music in three Parts."

TOLLING. The act of ringing a deep-toned church bell to announce a recent death. The custom of tolling is supposed to have originated in the intention of apprising the searchers of the parish that their official inspection is required.

TOMASCHEK, JOHANN WENZEL, composer to the Count George von Bourguoi, in Prague, was born in Bohemia in 1774. His early disposition for music induced his father to have him instructed in the art, and the master of the choristers in the town of Chruden was fixed upon as his teacher. Under his direction the boy made great progress in two years, both on the violin and in singing; at the end of that time he could sing even the most difficult passages at first sight. He then returned to his friends, but with a greatly increased desire to perfect himself in music. The organ was now the object of his wishes; he therefore requested his father to allow him to receive instructions on that instrument. The latter, however, refused; notwithstanding which, Tomasek took the resolution of learning the organ without the assistance of a master. A small piano-forte, given him by his brother, was, in this respect, of essential service to him. He now spent all his leisure hours in practising on this instrument, which he had concealed in a distant room of the house. At first he played only chords, but afterwards exercised his genius by preluding. He soon found, however, that, without previous instruction and studying the rudiments on a systematic plan, he could never be able to proceed. At length another lad of his own age, who was then receiving instructions from the chapel-master of the place, drew him out of this dilemma. Their meetings, however, could only be by stealth, his parents having, from anxiety for his morals, prohibited him all intercourse with the other boys of the town. From this child he learned all the various keys, as also the meaning of different musical terms, &c. He also borrowed some sonatas from him. But these happy hours were soon interrupted by a fresh prohibition from his parents, who had discovered the meetings of the two young musicians. Still, not at all discouraged, Tomasek redoubled his zeal and application, and industriously studied the pieces for the organ and piano-forte lent by his little friend, and which he had copied. At length, in 1787, he was admitted as a chorister into the convent of the Minorites at Iglau, where he went at the same time to the Latin school during three years. There he still

continued to practise on the piano-forte. After remaining three years at Iglau he quitted the convent, under a false pretence of having lost his voice, and was sent to Prague to continue his studies. There the purest taste for music was then reigning, it being the flourishing epoch of Mozart. Tomaschek's natural love of music, it may be well conceived, was increased and his talents developed by the opportunities now afforded him of hearing the works of the first masters. He soon discovered his want of systematic fingering; upon which he studied the great piano-forte method of Türk, attending at the same time to the theories of music, harmony, and counterpoint. Being occupied the whole of the day in his literary academic lessons, he was obliged to spend his night in his favorite occupation. At the end of nine years, without having received any verbal instruction whatsoever in music, he succeeded to such a degree as to find himself possessed of all the theoretical information requisite to form an able musician. He found, also, that he had made such progress in practice that he decided on giving up his literary pursuits, exchanging them for the business of teacher of music. Still he continued to apply himself zealously to composition. In 1799 his brother, however, wished him much to devote himself to the law; and in compliance with his wishes he was about to do so, when a happy accident prevented it. His music to Burger's poem of "Leonora" appeared just at this time, and so much charmed one of his pupils, Count George Bourguoi, that he took Tomaschek into his family as composer, and enabled him, by a sufficient salary and leisure, to pursue his art without interruption. In this situation he was living in 1811, continually producing offerings to the Muses, and fully justifying the count's patronage; as he not only became one of the most able pianists of Germany, especially in fantasias and fugues, but has also produced many excellent and original compositions for the piano-forte, the voice, and full orchestra. Nageli, who was considered an able judge in the science, ranked him amongst the inventive musical geniuses, in his lecture before the Swiss Musical Society at Zurich in 1812.

TOMASELLI, GIUSEPPE, an Italian singing master, began his musical career in Milan, went afterwards to Salzburg, and then to Vienna, where, in 1812, he was appointed court singer in the Imperial Chapel. He had a fine *baritono*, and sang with much expression. He dedicated himself almost entirely to giving instructions in singing, and has brought out many able pupils, of which Vienna in particular can muster a great number. Several celebrated female singers, such as Milder, Sessi, &c., took lessons of him.

TOMASI, BLASIO, or **BLASIUS DE TOMASIIS**. Organist and composer in the beginning of the seventeenth century at Comacchio, a town under the jurisdiction of Ferrara. He published "*Madrigali à 5 voci*," Op. 1, Venice, 1611; "*Mottetti à 2, 3, e 4 voci, con Litanie à 4 voci*," Venice, 1615; and "*11 Concerti, à 1, 2-8 voci*," 1615.

TOMASINI, LUIGI. An Italian violinist and composer, who resided at Vienna. Much of his violin music was known there subsequently to the year 1780.

TOMEONI, FLORIDO, a native of Lueca, was resident at Paris for many years as professor of music. He published there, in 1799, a work entitled "*Théorie de la Musique Vocale, avec des Remarques sur la Prononciation des Langues Française et Italienne*." This work contains some judicious reflections on the Italian and French schools of music.

TOMI, D. FLAMINIO. An abbé, and excellent singer at Venice about 1770. His sister, Francesca Tomi, was at the same time one of the most distinguished pupils of the Conservatorio Dei Mendicanti.

TOMKINS, THOMAS, the son of one of the chanters in the choir of the Cathedral Church of Gloucestershire, received his musical education under Bird. His abilities were such as very early in life to obtain for him the place of gentleman of the Chapel Royal, and afterwards that of organist. Some years subsequent to the latter promotion he became organist of the Cathedral of Worcester, and in that city composed songs of three, four, five, and six parts, which appear to have been published about the year 1623. He was also the author of a work in ten books, or parts, consisting of anthems, hymns, and other pieces adapted to the church service, entitled "*Musica Deo Sacra et Ecclesie Anglicane*," or music dedicated to the honor and service of God, and to the use of cathedrals and other churches of England, especially the Chapel Royal of King Charles I. The words of some others of his compositions are to be seen in Clifford's collection. There is in the library of Magdalen College, Oxford, a manuscript of Tomkins, consisting of vocal church music in four and five parts. Some of the madrigals, also, in the "*Triumphs of Oriana*," are of his composition. Dr. Burney has given us the following character of his works: "By the compositions I have scored, or examined in score, of Tomkins, he seems to me to have had more force and facility than Morley. In his songs there is much melody and accent, as well as pure harmony and ingenious contrivance." The times of his birth and death are both unknown; and the principal data from which can be ascertained the period when he flourished are, that he was a pupil of Bird; that he was admitted to the degree of bachelor of music in the University of Oxford in 1607; and that, according to the assertion of Wood, he was living after the breaking out of the rebellion. Tomkins had several brothers, all of whom were educated to the profession of music. Giles was organist of the Cathedral Church of Salisbury; John was organist of St. Paul's and a gentleman of the chapel; and Nicholas, one of the gentlemen of the privy chamber to King Charles I., was a person well acquainted with the practice of music.

TON. (F.) The key; as, *le ton d'ut*, the key of C.

TONART. (G.) Mode.

TONADILLAS. National Spanish airs, sung to a guitar accompaniment.

TONAUSWEICHTUNG. (G.) Modulation.

STONE. This word is received in various senses.

First, *tone* is used incorrectly to signify a certain degree of distance or interval between two sounds, as in the *Major tone* and the *Minor tone*, the ratio of the first of which is eight to nine, and which results from the difference of the fourth to the fifth; while the ratio of the latter is nine to ten, and results from the difference of the minor third to the fourth.

Secondly, the word *tone* implies a property of sound by which it comes under the relation of grave and acute; or the degrees of elevation in any sound as produced by the particular velocity of the vibrations of the sonorous body.

Thirdly, we understand by *tone* the particular quality of the sound of any voice or instrument, independent of the acuteness or gravity of the note it produces; as when we speak of a thin tone, a full tone, a rich tone, a mellow tone, a liquid tone, a round tone, &c.

A tone is a given, fixed sound, of certain pitch, and the word cannot, strictly speaking, be properly used to express the difference between one and two of the scale. Again: since tone means sound, we may not, strictly speaking, use the word *semitone*, for that would be half of a sound. These terms are, however, generally used, and it will be a long time before other and more correct words will take their place. In time the word *step*, or some equivalent, will be generally used to designate the difference between any one tone and the next regular succeeding tone of the scale. When speaking of harmony, or of intervals in relation to harmony, the terms *seconds*, *thirds*, *fourths*, &c., or major seconds, minor seconds, &c., are, and have ever been, in general use.

TONLEUM. In the ancient music, one of the divisions of the chromatic genus. In the toniacum division, the tetrachord rose by a hemitone and trihemitone.

TONIC, or TONIQUE. (F.) The name given to the key note of any composition. Also applied by Aristoxenus to that of the three kinds of chromatic genus, which proceeded by two consecutive semitones and a minor third, and was the ordinary chromatic of the Greeks. *Tonic* is also sometimes used adjectively, as when we speak of the tonic chord, the tonic note, &c.

TONINI, an Italian instrumental composer, born at Verona about 1668, published "*Sonate à 2 V. e Contin.*," Op. 2, Amsterdam; "*Balletti da Camera, à V. e Vc. o B. C.*," Op. 3, Amsterdam; and "*Sonate à 2 V., Vc., e Contin.*," Op. 4, Amsterdam.

TONLEITER. (G.) The scale.

TONOLINI, GIOVANNI BATTISTA, organist at Salò, in the Brescian territory, was born there, and flourished as a church composer at the beginning of the seventeenth century.

TONORIUM. (L.) A kind of pitchpipe, something like the fistula, or syringe, used by the ancient Romans to regulate the voices of orators, actors, and singers.

TONSCHLUSS. (G.) A cadence.

TONSETZER. (G.) A composer.

TONSTÜCK. (G.) A musical composition.

TONSTUFE. (G.) A degree on the staff.

TOPH. (H.) An instrument like the tam-

bourine, which was known to the Jews before they quitted Syria.

TORELLI, GASPARO, an Italian composer flourished about the year 1570. He was celebrated for his madrigals and other vocal compositions.

TORELLI, GIUSEPPE, a native of Verona, member of the Philharmonic Academy at Bologna, and a famous performer on the violin, was concert master at Anspach about the year 1703. After that he removed to Bologna, and became chapel-master in the Church of San Petronio in that city. He composed and published various collections of airs and sonatas for violins; but the most considerable of his works is his eighth opera, published at Bologna by his brother Felice Torelli, after the death of the author in 1709, entitled "*Concerti Grossi*," &c.

TORLEZ, music master to the academies of Grenoble and of Moulins in 1767, published at Paris, about that time, "*Cinq Motets à Voix seule avec Symphonie*."

TORRI, ANNA MARIA. A celebrated singer at the court of Mantua in 1690.

TORRI, PIETRO, an Italian by birth, was, in the younger part of his life, chamber musician to the Margrave of Bayreuth; after that he became chapel-master of the great church at Brussels. It is said that he was a disciple of Steffani; which is probable, seeing that his compositions are chiefly duets and close imitations of the style of that master. One of the most celebrated of his works of this kind is a duet entitled "*Heracitus and Democritus*," in which the affections of laughing and weeping are contrasted and expressed with singular art and ingenuity. He died about the year 1722.

TORRIANI, GIOVANNI ANTONIO. A composer of the seventeenth century, born at Cremona. Amongst his works was an oratorio entitled "*La Conversione di San Romualdo*," 1688.

TOSCANI, GIOV. FRED., an agreeable tenor singer, was born at Warsaw in 1750, of Italian parents. He settled for some years at Cassel, and was considered a good buffo caricato singer, both on the German and Italian stage.

TOSCANO, NICOLO, born at Monte di Trepiani, in Sicily, was an ecclesiastic and excellent singer. So much did he excel in his art that the common people reported that he had an organ always concealed within his clothes. Having traversed all Italy, he passed the latter years of his life in his convent. He died in 1605.

TOSI, PIETRO FRANCESCO, was an Italian singer, greatly celebrated in his time. Having resided in most of the courts of Europe, and being an attentive hearer of others, and a person of reflection, he attained to such a degree of skill and judgment in the practice of singing as enabled him to compose a treatise on the subject, which he published at Bologna in the year 1723, with the following title: "*Opinioni dei Cantori antichi e moderni, o siano Osservazioni sopra il Canto Figurato di Pier Francesco Tosi, Accademico Filarmonico*."

Tosi not only visited England, but had made London his residence from the latter end of King William's reign to the end of that of George I., except during such short intervals as business,

or the desire of seeing his friends and relations, called him away; nevertheless it does not appear that he ever sang in the opera there. The treatise of Tosi above mentioned is altogether practical, and contains a great number of particulars respecting the management of the voice, and the method of singing with grace and elegance. Moreover, it contains short memoirs and general characters of the most celebrated singers, male and female, of the author's time. Tosi was, it seems, not only a very fine singer, but also a composer. Galliard relates that, after his voice had left him, he composed several cantatas of an exquisite taste, especially in the recitatives, in which he says the author excels, in the pathetic and expression, all others. He died in London, having attained above the age of eighty.

TOST, JOHANN, a musician at Presburg, composed, about 1795, "*Mann und Frau*;" "*Wittwer und Wittwe*," operetta; and "Songs to Figaro, the Eccentric, the Liar," and other comedies.

TOUCH. A word applied to the resistance made to the fingers by the keys of an organ, harpsichord, or piano-forte. When the keys are put down with difficulty, the instrument is said to have a *hard*, or *heavy touch*; when a little pressure is sufficient, it is said to have a *soft*, or *light touch*.

TOUCHEMOLIN. There were two brothers of this name, who were good violinists from about the year 1754. They composed some music for their instrument and for the harpsichord.

TOUCHES. (F.) The keys of a piano or organ.

TOULOUSE, P., professor of the guitar at Jena in 1800, published there, for some years after the above date, a monthly number of songs, with an accompaniment for the guitar.

TOVAR, FRANCESCO. A Spanish musician of the sixteenth century. In 1550 he published, at Barcelona, a work entitled "*Libro de Musica Practica*."

TOWN PIPERS. Certain performers on the pipe, one of whom was formerly retained by most of the principal towns in Scotland to assist in the celebration of particular holidays, festivals, rejoicings, &c.

TOWNSEND, JOHN, was born in the county of Yorkshire. When he was only twelve months old his family removed to Liverpool, where his father became a merchant. The son began to study music when only five years of age under his father, who was an amateur, and had weekly concerts at his house. At the age of seven he played the flute, and sometimes the violoncello, at these concerts. His father having taught him also a little of the theory of music, he composed several marches, &c., in eight parts, for violins, tenor, flutes, horns, and violoncello, which were generally performed at the above-named weekly concerts. When ten years of age his partiality for the flute became more decided, and he used to practise six or seven hours a day. About that time he was placed under the celebrated flute player and composer, Müller, who gave him a subject once a week to compose variations on, which he executed in the various styles of articulation. He was afterwards pupil to George Ware, and benefited much by him in the theory

of music. At the age of fifteen he began to perform concertos in public.

TOYS. A name formerly given to little trilling airs or dance tunes.

TOZZI, ANTONIO, of Bologna, was a pupil of Padre Martini. In 1765 he was chapel-master to the Duke of Brunswick, and in 1791 pianist in the orchestra of the principal theatre at Madrid. Amongst his dramatic works are the following: "*Tigrane*," 1762; "*Invincenza vendicata*," 1763; "*Andromeda*," 1765; "*Rinaldo*," 1775; "*La Serva Astuta*," opera buffa, 1785; and "*La Caccia d' Enrico II*," opera buffa, 1788. He also composed for Madrid, in 1790, an oratorio entitled "*Elena al Calvario*."

TRABACCI, GIOVANNI MARIA. Organist of the Chapel Royal at Naples at the beginning of the seventeenth century. He published several sets of madrigals and organ music.

TRABATONE, EGIDIO, organist of St. Victor's Church at Varese, in the Milanese, at the commencement of the seventeenth century, was born at Decio, and published "*Messe, Motetti, Magnificat, Falsibordoni e Litanie della B. V.*," Mailand, 1615.

TRACHEA. (Gr.) The windpipe. This cartilaginous and membranaceous canal, which begins at the root of the tongue and terminates at the lungs, receives the air, the expulsion of which forms both the speaking and the singing voice.

TRADOTTO. (I.) Transposed, arranged, or accommodated. An expression applied to a composition when made out from the original score in a new form for the convenience of some particular instrument or instruments.

TRAEG, ANDREAS. A musician, resident at Vienna in 1798, of whose works have been published "*6 Sinfon. d grand Orchestre*," Vienna, 1798; and "*6 Fantaisies pour Flûtes*," Op. 1. Many of his songs and dances are known in manuscript.

TRAETTA, or TRAJETTA, TOMASO, one of the most celebrated pupils of Durante, was born at Naples in 1738. When arrived at the early age of twenty-one he quitted the Conservatory of La Pietà, and, two years afterwards, composed for the Theatre St. Carlo the opera of "*Farnace*," the success of which was so brilliant that he was at once engaged by different theatres to compose six more operas, some tragic and others comic. Amongst these he gave the "*Ezio*" of Metastasio at Rome, which, with the five others, were all highly applauded. Every great theatre of Italy was then anxious for his music. After having travelled through that country triumphing over all competition, he at length attached himself to the service of the court of Parma. His opera of "*Ippolito ed Aricia*" was amongst the most favorite given by him about this time. He next received two invitations from Vienna to write there two grand operas, with choruses and ballets. Their success was prodigious. On the death of the Infante Don Philip, Trajetta went to Venice, where the direction of the Conservatory of the Ospedaletto was intrusted to him. There, however, he did not long remain, for the empress, Catharine II, in-

vited him, two years afterwards, to St. Petersburg, to succeed Galuppi as her principal chapel-master. He was there engaged for a term of five years; and, at the expiration of that time, the empress retained him two years longer. During his residence in Russia he composed seven operas and many cantatas. It is related that, after a representation of his "*Didone*," Catharine II. sent him a gold snuff-box, with her portrait on it, accompanied by a letter, in which she said that the present was from "*Didone*." Trajetta soon after this went to England, but remained there only during a single season, in which he brought out "*Germondo*," a serious opera, and "*La Serva Rivale*," a burletta, previously performed in Italy; but, says Dr. Burney, "Sacchini had so firmly established himself in the public favor that he was not to be supplanted by a composer in the same style, neither so young, so graceful, nor so fanciful as himself." Trajetta died in his own country, in 1779. The following is a list of the principal operas of this great composer: "*Didone abbandonata*," 1757; "*Ifigenia*," Vienna, 1758; "*Farnace*," 1758; "*Ezio*," 1758; "*Il Buovo d'Antona*," 1758; "*Ippolito ed Aricia*," 1759; "*Armida*," Vienna, 1760; "*La Francese à Malaghera*," 1764; "*Semiramide riconosciuta*," 1765; "*La Serva Rivale*," 1766; "*Amore in Trappola*," 1768; "*Isola disabitata*," Petersburg, 1769; "*Olimpiade*," Petersburg, 1770; "*Antigone*," opera seria, 1772; "*Germondo*," London, 1776; "*La Difetta di Dario*," 1778; "*Artenice*," Naples, 1784; "*Stordilano, Principe di Granada*," opera buffa, 1785; and "*Sfonisba*," Manheim, 1796.

TRAGÉDIE EN MUSIQUE. (F.) A serious or tragic opera.

TRAGEDY. Formerly any little, doleful, historical ballad, as "The Children in the Wood," "The Lady Isabella's Tragedy," &c.

TRAMEZZANI, DIOMIRO. A favorite Italian tenor singer, born at Milan in 1776, who performed at the King's Theatre in London for many seasons up to about the year 1814. To a beautiful voice he joined delicate apprehension, intense feeling, and rich expression.

TRASCHEL, CHRISTOPH, a German composer and professor of the harpsichord, resident at Dresden, was born near Rosbach in 1721. He studied philosophy and theology at the University of Leipsic, but at length attached himself to music, as affording more immediate means of supplying the deficiencies of his fortune. He became intimately acquainted about the same time with the celebrated Bach, who assisted him in the early part of his musical career. He did not quit Leipsic till 1755, when he proceeded to Dresden in the capacity of a teacher of music. Nor did his merit long remain unknown in his new residence, his instructions being sought after by the first families of Dresden. His performance on the harpsichord was in the style of Bach, and to this he joined a profound knowledge of the history and theory of his art. He died at Dresden in the year 1800.

TRANSIENT. An epithet applied to those chords of whose harmony no account is meant to be taken, but which are used as *passing chords*.

TRANSITION. The softening a disjunct interval by the introduction of intermediate sounds.

In harmony, *transition* is the changing the genus, or mode, in a sensible but regular manner. Thus when, in the diatonic genus, the bass moves so as to require in the *parts* the introduction of a minor semitone, it is a *chromatic transition*; and if we change the tone by favor of a diminished seventh, it is an *enharmonic transition*.

TRANSMISSION OF SOUNDS. Sounds of all qualities and pitches move with equal rapidity; but quality and pitch must not be confounded with intensity, for the loudest instruments in a band will be heard farthest, of course; but the notes of all reach the ear at the same instant. The transmission may be facilitated or impeded by contrivance or accident. The speaking tube, in hotels or dwellings, shows how the ordinary tones of the voice may be conveyed perfectly between distant points. The length of the tube seems to be immaterial.

TRANSPPOSITION. A change made in a composition, either in the transcript or the performance, by which the whole is removed into another key, higher or lower, as the compass of the voices or instruments require. In order to render the transposition just, all the intervals of the original must be exactly preserved, which can only be done by introducing the sharps, or flats, proper to the adopted key; thus:—

Written.

Transposed.

TRAUTMANN, HEINRICH, of Ulm, was cantor at Lindau at the beginning of the seventeenth century, and published at Kempten, in 1618, an octavo work entitled "*Compendium Musicae Latino-Germanicum in usum scholæ Lindaviensis maxime accommodatum*."

TRAVANET, MADAME B. DE, was lady in waiting to Madame Elizabeth, sister of Louis XI. She wrote the words and music of the very popular French romance "*Pauvre Jacques, quand j'étais près de toi*." The following anecdote is related respecting the composition of this song. Madame Elizabeth had retired to Montreuil, near Paris, and devoted much of her time to rural occupations. Wishing to establish a dairy of a superior description, she ordered some heifers of a very fine breed from Switzerland, and desired that a Swiss girl might be sent who had been accustomed to take care of them. This girl's name was Mary: handsome, innocent, but always inclined to melancholy, she could not forget her mountains, and especially her lover Jacques, to whom she was betrothed. At length she confided the simple story of her love to Madame de Travanel, who was much affected, and immedi-

ately wrote the words and music of "*Pauvre Jacques*." Soon after this Mary caught the air, and was heard singing it by Madaue Elizabeth. The princess listened to her with lively interest; and knowing that the words depicted her true situation, she gave private orders that Jacques might be sent for from Switzerland, and united him in marriage to his Mary.

TRAVENOL, LOUIS, a violinist in Paris, published there, in 1754, a pamphlet entitled "*Arrêt du Conseil d'État d'Apollon, rendu en faveur de l'Orchestre de l'Opéra, contre le nommé J. J. Rousseau, &c.*"

TRAVERS, JOHN, received his education in music in the Chapel of St. George, at Windsor; and being a favorite boy of Dr Henry Godolphin, Dean of St. Paul's and Provost of Eton College, was by him put apprentice to Greene, and, about the year 1725 became organist of St. Paul's Church, Covent Garden, and after that of Fulham. Upon the decease of Jonathan Martin, in 1737, Travers was appointed organist of the Royal Chapel; soon after which, upon some disgust, he quitted his place at Fulham. Travers was a sound musician; he commenced an early acquaintance with Dr. Pepusch, and received some assistance from him in the course of his studies, which, by a sedulous application, he was very careful to improve. In the chapel books are sundry anthems of his composition; but as a composer he is best known to the world by eighteen canzonets, being verses and songs chiefly taken from the posthumous works of Prior, which he set for two and three voices, in a style as elegant as it is original. Amongst these is the much-admired duet of "*Haste, my Nanette*." Travers published, likewise, the whole Book of Psalms for one, two, three, four, and five voices, with a thorough bass for the harpsichord. He died in the year 1758, and, as organist of the Chapel Royal was succeeded by Dr. William Boyce.

TRAVERSA. (I.) A German flute. See FLUTE, GERMAN.

TRAVERSA, GIOACHIMO. Violinist to the Duke of Carignan, at Paris, about the year 1770. He published some quatuors and other music for his instrument.

TRAVIS, MISS, was an English singer, a native of Shaw, a village near Oldham, in Lancashire. She was an artied apprentice to the directors of the Ancient Concert, who provided her with an Italian and a singing master, paying all expenses, making her a handsome present at the close of the season, and permitting her to form engagements entirely for her own emolument. Her only musical instructor was Mr. Greatorex. The peculiar and proper distinction of Miss Travis's performance was, that it was genuine English singing, of the best school. She was, in point of style, amongst the female, what Mr. Vaughan was amongst the men singers of the day; simple in her manner, pure in her tone, accurate in her intonation, chaste in her declamation, and with so much of science that her auditor was never distressed by any apprehension of her failure or extravagance. As a singer of glees, she was, perhaps, the very best of her time; for her tone, from its richness and volume, blended ad assimilated with male voices

better than that of any female then (1825) before the public; and she was, moreover, practised in the finest school for this department of vocal art.

TRE. (I.) Three; as, *à tre voce*, for three voices.

TREBLE The highest of the parts in music. That which is sung by women and boys, and played on violins, hautboys, flutes, and other acute instruments.

TREBLE CLEF. The character used to determine the pitch and names of the highest of the parts of music.

TREBLE CLEF NOTE. That note which in the treble staff is placed on the line with the clef; i. e., the second line.

TREBLE VIOL. An instrument the invention of which preceded that of the modern violin. It was furnished with six strings, tuned chiefly by *fourths*; its finger board was fretted to the notes D, on the third line of the bass staff, G on the fourth space, and C on the first ledger line above; E on the first line of the *treble* staff, A on the second space, and D on the fourth line

TREBLE VOICE. The highest species of the feminine voice.

TREE, MISS M., a very pleasing singer at Covent Garden Theatre, made her *début* in London about the year 1820. Besides possessing great merit as an actress, she was considered in the very first rank of English female vocalists. Her voice was a mezzo soprano, the tones of which, especially the lower ones, were peculiarly rich and attractive.

TREFFZ, JETTY, was born at Vienna, on the 28th of June, 1826. Her father, a Polish gentleman, was an officer in the Austrian service. Her mother was a daughter of that beautiful Laura Schwan, of Manheim, who was loved and sung by the great poet of Germany, Frederic Schiller, but who, undazzled by the poet's fame and unflattered by his muse, preferred the less brilliant attractions of the Professor Treffz, and espoused him. Jetty's mother was possessed of a considerable fortune, and was determined to have her daughter educated in the most perfect manner. Unfortunately, the greater part of her fortune was embezzled by a nefarious tutor, to whose keeping it was intrusted, when Jetty was only thirteen years of age. Nevertheless, it was most probably to this circumstance, so much to be deplored at the time, that the world is indebted for an opportunity of admiring a talent of too rare an occurrence to suffer it to be buried in the dilettantism of private life. The Prince Guizeppe Poniatowsky, an enthusiast in the cause of music and a composer of no mean acquirements, who had long been on intimate terms with Jetty's father, was the first who discovered the great talent of the young girl. Jetty had received from nature a mezzo soprano voice of remarkable beauty and flexibility, powerful, sonorous, and of unusual extent. From her earliest days passionately fond of music, she joined to a brilliant imagination an *esprit facile* and penetrating and a memory singularly retentive. Added to these, Jetty possessed a face and figure the most prepossessing, and promising those graces and attractions which are now her ac-

knowledge rights. Such was Jetty Treffz when Prince Poniatowsky first discovered her latent talent and counselled her parents not to allow it to go uncultivated. Signor Gentiluomo, an Italian professor of singing, was Jetty's first master. After fifteen days of study, Mercelli, the director of the Italian Opera at Vienna, wishing to have in his possession a young girl whose future he could not but foresee, engaged her. Jetty immediately applied herself to her studies with an enthusiastic zeal. Among her instructors at this time may be particularly mentioned M. Charles Köent, a professional musical critic, and a singer of taste and talent. Much to Jetty's chagrin and disappointment, since she burned to distinguish herself on the stage, Mercelli detained her a whole year without giving her a single part to play. She threw up her engagement in consequence, and departed for Dresden, where, in her fifteenth year, she made her *début* in the character of Juliet, in the "*Montecchi e Capuletti*." The celebrated Schröder Devrient was the Romeo. Jetty's success was triumphant. The Queen of Saxony, charmed with the grace and talent of the young *débutante*, commanded her attendant, the Baron de Lutichaw, to present Jetty to her, in her box, the same evening. But her majesty of Saxony did not stop here. At her own expense, and under her immediate inspection, Jetty received lessons from the famous singing-master Morlachi, and from Schröder Devrient, "the best model that she could have found in all Germany for the mimic art. There were, however, several little intrigues on the part of this great artist, which determined her pupil, who now commenced to become her rival, to quit Dresden, after a twelvemonth's sojourn, during which she had been constantly distinguished by the queen, and applauded by the public, on all occasions, with the greatest fervor.

TREIBER, JOHANN FRIEDRICH, rector of the town school at Arnstadt, published there, in 1701, a programme entitled "*De Musica Davidica, itemque discursibus per urbem musica nocturnis*." He died in 1719.

TREIBER, JOHANN PHILIP, son of the preceding, published a work entitled "The accurate Organist in General Bass," Arnstadt, 1704. He had previously printed another book called "*Sonderbare Invention, eine einzige Arie aus allen Tönen und Accorden, auch jeglichen Tacten oder Messuren zu componiren*," Jena, 1702. He died in 1727.

TREMANDO. (I.) Trembling. A word denoting that the passage over which it is placed is to be performed in a tremulous manner.

TREMOLO, TREMOLANTE, or TREMENTE (I.) A word intimating that the notes are to be drawn out with a tremulous motion, in imitation of the *beatings* of an organ.

TRENCHMORE. The name of an old dance the exact cast of which is not now known, but which is supposed to have been very lively.

TRÉNISE. (F.) One of the twelve movements of the quadrille.

TRENTO, PIETRO, chapel-master at Naples, wrote in 1803, for the Theatre San Carlo, the opera seria "*Agenia in Aulide*," which was very

successful. His second opera was "*Quanti casi mi un giorno*."

TRENTO, VITTORIO. A Venetian dramatic composer, born in 1761. Amongst his works are the following: "*La Virtù riconosciuta*," ballo, Verona, 1785; "*Enrichetta e Valour*," ballo, Venice, 1788; "*Il Seraglio, ossia l' Equivoco in Equivoco*," ballo, Venice, 1788; "*Demofonte*," ballo, Padua, 1791; "*Flammingo*," ballo, Padua, 1791; and "*The Triumph of Love*," ballet, performed at Drury Lane Theatre in 1797.

TRESTI, FLAMINIO, an Italian church composer, flourished in the last years of the sixteenth and beginning of the seventeenth centuries.

TREU, DANIEL GOTTLIEB, chapel-master to the Count of Schaffgotsch, at Hirschberg, was born in 1695 at Stuttgart, where his father was a printer. His genius for music developed itself at a very early age, and when only twelve years old he published, of his own composition, "Three Overtures for the Violin and three other Instruments." He next composed four German operas; and at length manifested such unusual application in his musical studies that at the age of twenty-one he composed a violin concerto every morning, marking down the middle parts by means of a musical shorthand which he had himself invented. About this time he presented to the Duke of Wurtemberg, on the occasion of his birthday, a poem which he had himself written and set to music. He also performed a solo on the violin before the duke. His competitor on this occasion was J. A. Breccanello, who also performed before the duke for the first time, and was appointed chapel-master. Treu, however, partly succeeded in his object, as the prince recognized his high talent, and presented him with a sufficient sum of money to pay the expenses of a journey to Italy. He proceeded by Bavaria and the Tyrol to Venice, where he took some lessons of A. Vivaldi. As Treu played more or less almost every instrument, he had no difficulty in gaining his livelihood in a city like Venice, where music was singularly cultivated. In about a year he had acquired so high a reputation that gondolas were sent to take him to the houses of the first families in the city: having been invited, amongst others, to the house of the Count of Thurn-Taxis, that celebrated musical amateur was so pleased with Treu's skill in singing at sight that he desired him to accept the free run of his house and table. He now studied with great attention the Italian language, with the view of bringing out some Italian operas, of which he subsequently composed twelve at Venice. His reputation had then so increased that he was offered the place of composer to the Theatre of St. Angelo. Being invited, however, in the same year (1725) to take the situation of chapel-master at Breslau, he preferred the latter, and set out for his new destination. He composed for the theatre of that town four operas; namely, "*Astasio*," 1725; "*Coriolano*," 1726; "*Ulisse e Telemaco*," 1726; and "*Don Chisciotta*," 1727. He was then called to Prague, where he had the direction of several chapels of the nobility till 1740, when he held his first-named situation. The subsequent events of his life are not known.

TRIAD. The harmonic *triad*, or common chord, or harmony, is a union of any sound with

its third, major or minor, and its perfect fifth, and is termed major or minor triad, according to the nature of its third, thus:—

There are also two other triads; one consisting of two minor thirds, as from B to F; and the other of two major thirds, as from C to G sharp, thus:—

TRIAL, JEAN CLAUDE, born at Avignon in 1732, was a violin pupil of Granier, and composed some motets and music for his instrument at a very early age. He afterwards went to Paris, and was appointed first violin at the Opéra Comique. He next entered the service of the Prince of Conti, through whose interest he procured the situation of director of the Royal Academy of Music. Here his theatrical occupations were such as to leave him but little time for composition. He was just, however, preparing to bring out, in conjunction with Dauvergne and Berton, the opera of "*Linus*," when he died suddenly, in 1771. Amongst his dramatic works for the opera were "*Silvie*," 1765; the last act of this was by Berton; "*Théonis*," 1767, with Berton and Granier; and "*La Fête de Flore*," 1771. He also produced at the Comédie Italienne, in 1766, "*Esopé à Cythère*." He likewise composed much music for the Prince of Conti, &c.

TRIAL, D'ARMAND, son of the preceding, was born at Paris in 1771. He was a pupil of the Conservatory, and afterwards became professor of the piano and dramatic composer.

TRIANGLE. A steel instrument, so called from its consisting of three bars of polished steel, so united at their ends as to produce a kind of triangular frame. The part for the triangle is always written in the treble clef, and consists of various repetitions of the note C only; as,—

TRIAS DEFICIENS. (L.) *Imperfect triad*. The chord of the third, fifth, and eighth, taken on the seventh of the key, and consisting of two minor thirds; that is, two thirds, each of which contains three semitones.

TRIAS HARMONICA. (J.) *The harmonic triad*. A compound of three radical sounds, consisting of a fundamental note, its third, and its fifth. Of these three sounds, the gravest is called the *fundamental*; the *fifth* the excluded sound, or *sonus exclusus*; and the *third* the harmonic mean, or *medius harmonicus*.

This division of the fifth into two thirds is performed in two ways: first, harmonically; as when the greater third is lowest, in which case the *triad* is said to be perfect and natural. Secondly, arithmetically; as when the lesser third is lowest; and then the *triad* is called flat, or imperfect.

TRICHORD. (From the Greek.) The name given to the three stringed lyre, supposed to have been the invention of Mercury. See **DIACHORD**.

TRI-DIAPASON. (From the Greek.) A triple octave, or twenty-second.

TRIEBEL, J. N. A good German church composer, resident at Schneckenthal. His works bear date from 1789 to 1800.

TRIEMER, JOHANN SEBALD, a violoncellist and composer for his instrument, was a native of Weimar. In 1725 he belonged to the theatrical orchestra at Hamburg, whence he proceeded to Paris in 1727, and finally settled in Holland, where he died in 1762. Some of his music was published at Amsterdam.

TRIER, JOHANN, a celebrated organist at Zittau, died in 1789. He left many excellent compositions in manuscript.

TRIGON A three-stringed instrument, resembling the lyre used by the ancient Greeks.

TRIGONUM, or TRIANGULAR HARP. An instrument supposed to have been of Phrygian invention; in the circumstance of wanting one side to complete the triangle, it resembled the Theban harp. From Sophocles we learn that a certain musician of the name of Alexander Alexandrinus was so admirable a performer upon the trigonum, and had given such proofs of his abilities at Rome, that he made the inhabitants musically mad.

TRIMESTONE. (G.) An interval consisting of one greater and two lesser semitones; i. e., a minor third.

TRILL, or TRILLO. A shake. See **SHAKE**.

TRILLANDO. (I.) Shaking, or with shakes.

TRILLETTA. (I.) A short, or passing shake. The diminutive of *trillo*.

TRIMELES. A kind of nome in the ancient music performed on flutes.

TRIMERES. A nome of the ancient Greeks which was executed in three consecutive modes, viz., the Phrygian, the Doric, and the Lydian. The invention of this compound nome is attributed by some writers to Saccadas of Argos; by others to Clonos Thegeates.

TRIMETERS. Ancient lyrical verses of a six-feet measure.

TRINKLIED. (G.) A bacchanalian or drinking song.

TRIO, or TERZETTO, or TERZETT. A composition for three voices or instruments.

TRIOLE. Same as **TRIPLET**, which see.

TRIPARTITE. (From the Latin.) Scores in three parts are said to be *tripartite*.

TRIPLE, or TRIPLE TIME. A time consisting of three measures in a bar, the first two of which are bent with the falling of the hand, or foot, and the third marked by its elevation. There were formerly in use no less than six different triple measures: first, that of three breves in a bar, denoted by the figure 3; secondly, that of three semibreves in a bar, the sign of which was $\frac{3}{2}$; thirdly, that of three minims in a bar, marked by $\frac{3}{4}$; fourthly, that of three crotchets in a bar, implied by $\frac{3}{4}$; fifthly, that of three quavers in a bar, signified by $\frac{3}{8}$; sixthly, that of three semiquavers in a bar, expressed by $\frac{3}{16}$. But at present we only employ three different triples: that of three minims, that of three crotchets, and that of three quavers. The reader, being informed that the semibreve (which is now the longest note in common use, and therefore made the common standard of reckoning) is equal in duration to two minims, or to four crotchets, or eight quavers, will readily comprehend the propriety of announcing these different measures by the above figures, and will perceive that, to indicate a time of three minims in a bar, (i. e., three halves, or second parts, of a semibreve,) no method more

concise or simple could be adopted than that of placing at the beginning of the movement the figures $\frac{3}{2}$; for a time of three crotchets, (i. e., three fourth parts of a semibreve,) the figures $\frac{3}{4}$; and for a time of three quavers, (i. e., three eighths of a semibreve,) the figures $\frac{3}{8}$.

The old musicians considered the triple, or three-timed measure, as superior to the binary, or two-timed; and for that reason called it the perfect time.

TRIPLE CROCIE. (F.) A demisemiquaver. See that word.

TRIPLE PROGRESSION. An expression in old music, implying a series of perfect fifths. A progression of sounds thus explained by theorists: let any sound be represented by unity, or the number 1; and as the third part of a string has been found to produce the twelfth, or octave of the fifth above the whole string, a series of fifths may be represented by a triple geometric progression of numbers, continually multiplied by 3,—as 1, 3, 9, 27, 81, 243, 729,—and these terms may be equally supposed to represent twelfths, or fifths, either ascending or descending. For whether we divide by 3, or multiply by 3, the terms will, in either way, be in the proportion of a twelfth, or octave to the fifth.

TRIPLET. The name given to three notes sung or played in the time of two; thus:—

TRIPLUM. (L.) Formerly the name of the treble, or highest part. See **TRÉBLE**.

TRIPODIAN. (From the Greek.) A stringed instrument, said to have been invented by Pythagoras, the Zacynthian; which, on account of the difficulty of its performance, continued in use but for a short time. It resembled in form the Delphic tripod, whence it had its name. The legs were equidistant, and fixed upon a movable base that was turned by the foot of the player; the strings were placed between the legs of the stool; the vase at the top served for the purpose of a sound board; and the strings of the three sides of the instrument were tuned to three different modes, the Doric, Lydian, and Phrygian. The performer, sitting on a chair made on purpose, struck the strings with the fingers of his left hand, using the plectrum with his right, while he turned the instrument with his foot to whichever of the three modes he pleased; so that by great practice he was enabled to change the modes with such readiness and velocity that those who did not see him would imagine they heard three different performers playing in three different modes.

TRISAGIUM. A hymn in the old church music, in which the word *holy* is repeated three times successively. See **CHURCHICAL HYMNS**.

TRITE. A Greek term signifying three, or third. Three chords of the ancient system were called by this name, from their actual situation in the tetrahords of which they respectively formed a part. See **TRITE-DIEZEGEMENON**, **TRITE-HYPERBOLÆON**, and **TRITE-SYMMEMENON**.

TRITE-DIEZEGEMENON. (From the Greek.) The third string of the diezegemnon, or fourth tetrahord of the ancients, reckoning from the top. The sound of this string corresponded with our C above the bass clef.

TRITE-HYPERBOLÆON. (Gr.) The third string of the ancient hyperbolæon, or fifth tetrahord; and which answered to our G on the second line in the treble.

TRITE-SYMMEMENON. (From the Greek.) The third string, reckoning from the top of the third, or symmemnon, tetrahord; and which corresponded with our B flat above the fifth line in the bass.

TRITON AVIS. The name of a beautiful West Indian bird, remarkable for its musical powers. It is said to have three distinct notes, (its tonic, or lower note, and the twelfth and seventeenth of that note,) and to be capable of sounding them all at the same time.

TRITONE. A dissonant interval, otherwise called a superfluous fourth; a kind of redundant third, consisting of three tones, two major and one minor; or more properly, of two tones and two semitones, one greater and one less; as from C to F sharp. The ratio of the tritone in numbers is as 43:32.

TRITONS. (Gr.) Third. The epithet applied by the ancients to that of their four authentic modes, called the *Æolian*, and sometimes, though improperly, the *Lydian*.

TRITO, GIACOMO, professor at the Conservatory of La Pietà at Naples about the year 1790, brought out in that town, in 1787, the opera of "*La Virginia del sole*," and, in 1788, "*La*

Molinarella." Amongst his other compositions are "*Arminio*," opera seria, 1786, written for Rome; "*Lo Avventure Amorse*," opera buffa, also for Rome, 1788; "*I due Gemelli*," opera buffa, Capua, 1788; "*Le Vicende Amorse*," opera buffa, Fano and Rome, 1788; "*Il Cartesiano Fantastico*," opera buffa, Naples, 1791; "*L'Inganno Fortunato, ossia la Proba Reciproca*," opera buffa, Madrid, 1791; "*Gli Amici Rivali*," opera buffa, Vienna, 1792; "*Le Trame Spiritose*," Naples, 1792; "*Ginevra e Ariodante*," Naples, 1803; and "*Gli Americani*," Naples, 1804. This composer seemed to have the idea of forming a new school; or rather, he appeared desirous to unite the soft melody of his country to German harmony, in order to render it fitter for the expression of the great passions of the tragie opera.

TRIUMPHANT MUSIC. A general name for songs and instrumental pieces composed or performed for the celebration of victories. The ancient Greeks indulged to excess in the vain-glorious practice of adding insult to conquest. Lysander, the Spartan general, destroyed the walls of the subdued Athenians to the exulting sounds of voices and flutes.

TRIVIUM. (L.) The name by which the first three of the seven liberal arts, grammar, rhetoric, and logic, were formerly distinguished. The other four, consisting of arithmetic, music, geometry, and astronomy, were called the *quadrivium*.

TROCIEE. A dissyllabic foot, composed of one long and one short syllable.

TROFEO, RUGGERO. Chapel-master of the Church Della Scala at Milan in the sixteenth century. He published, amongst other works, some collections of canzonets.

TROLL. To *troll* is to sing a catch, canon, round, or any composition, so taking up the *parts* that the voices follow each other in regular succession or a circular motion.

TROMBA, or TROMLO. (I.) A trumpet.

TROMBA, GIULIO, first violin at the Church of St. Anthony at Padua, was a pupil of Tartini, and succeeded his master in the above situation in the year 1770.

TROMBA DI BASSO. (I.) Bass trumpet.

TROMBA MARINA. (I.) The trumpet marine, a species of monochord.

TROMBETTA. (I.) A small trumpet. The diminutive of *tromba*.

TROMBETTO, ASCANIO, a Bolognese composer, flourished at Naples about the year 1571, and published there a collection of the then admired *vilanelle*; also a work entitled "*Sacred Symphonie*;" a third publication by him was entitled "*Napolitane, à 3 voci*," Venice, 1773.

TROMBONE, or TROMBONO. A long brass instrument somewhat similar to the trumpet. Of this instrument there are three kinds—the bass, the tenor, and the alto. The bass trombone begins at G gamut and reaches to C above the bass clef note, producing every semitone within that compass. The tenor trombone begins at A, one note above G gamut, and produces every semitone up to the fifteenth above. This powerfully sonorous instrument is, by some

esteemed extremely useful in grand choruses and other full compositions; but many acknowledged judges think it more powerful than musical. The trombone is, perhaps, the most difficult of all brass instruments to make discourse sweet sounds; yet in skilful hands there is no music more effective, especially in concerts. The trombone is one of the oldest instruments at the present day. The Hebrews and the Romans both employed it in their triumphal and religious

ceremonies. The secret of manufacturing the instrument in such a manner as to draw from it its peculiar effect became lost, and trombones went out of vogue. One was discovered among the ruins of Herculaneum, and was sent as a curiosity, by the King of Naples, to George III., who caused experiments to be made upon that model. These resulted in the adoption of the trombone, now in such general use in military music.

SCALE FOR THE Bb TROMBONE.

SCALE FOR THE G TROMBONE.

SCALE FOR THE F TROMBONE.

In the preceding scales for the Bb, G, and F trombones, the figures above the notes mark the positions on which they can be played; and the learner will observe that these notes cannot be correctly sounded in any other position. It is of the utmost importance that the pupil become familiar with the positions and with the scale before he attempt to perform music, especially with accompaniments.

The first thing to be learned is the *manner of holding the instrument*. The trombone should be held with the left hand in nearly a horizontal position, the lower end inclined a little downward, the thumb over the lower crosspiece of the bell, the first finger on the side of the mouthpiece, the second and third fingers over the cross piece of the trombone, the fourth finger on the outside and under the trombone. The slide should be held with the right hand; the thumb on the upper side; the first, second, and third fingers under the crosspiece; the fourth finger outside and

under the slide. The fore arm alone will follow the motion of the wrist; but when the slide is to be moved in connected positions, the wrist only will perform the movement; thus:—

EXAMPLE.

The *attitude* is very important. Let the performer keep the head directly opposite the music he is playing, the two elbows about six inches distant from the body.

There are seven positions on the trombone; the first is when the slide is closed; the second when the slide is pushed about three and one quarter inches; the third when the slide is pushed about three and a quarter inches farther from the second, &c., from position to position; but the only true guide, after all, for the positions, is the good

musical ear, so that from one position to the next the instrument should differ precisely a half tone.

The following exercises on the seven positions

give all the notes which can readily be sounded. It will be well for the learner to practise each position till he shall have committed it perfectly.

First Position.

Second Position.

Third Position.

Fourth Position.

Fifth Position.

Sixth Position.

Seventh Position.

It is apprehended that these directions will be a sure guide and preceptor for the Bb tenor trombone, as we have given in the first position the chord in Bb; also two scales for the different bass trombones in G and in F.

TROMBONO PICCOLO. (L.) A small sackbut. See **SACKBUT**.

TROMLITZ, JOHANN GEORG, a celebrated musician and flutist, was born at Gera about the year 1726. He resided at Leipsic from 1760, and was there considered as an excellent player, though his *embouchure* was imperfect. Being obliged to renounce his instrument, owing to the state of his health, he dedicated his time to the instruction of numerous students in the university; besides which he exercised his talents in the fabrication of some excellent flutes, and also in the engraving of some of his own musical compositions. He wrote many works for his instrument; and also published at Leipsic, in 1786, a short dissertation on the flute and the best manner of performing on it; a second edition of which work appeared in 1790.

TROMMEL. (G.) The great drum.

TROMP DE BEARN. A Jew's harp. See **JEW'S HARP**.

TROOP. A kind of march, generally in quick time.

TROPER. A book, formerly used in the church, containing the sequences or chants sung after the recital of the epistle. There is now extant in the Bodleian Library at Oxford a very

curious manuscript of this kind, with the musical notes, which the catalogue calls a *troparion*.

TROPPO. (L.) An adverb signifying *too much*; as, *allegro ma non troppo*, fast, but not too fast.

TROPPO CARICATA. (L.) An expression applied by the Italians to an air overburdened with accompaniments.

TROST, JOHANN CASPAR. Organist at Halberstadt in 1660. He translated many didactic works of the first importance from the Latin and Italian languages into German.

TROUBADOURS. The appellation given to the early poet musicians or bards of Provence and Normandy. See **BARD**.

TRÜBENSEE, JOSEPH. Chapel-master to the Prince of Lichtenstein at Vienna about the year 1796. He was a celebrated performer on the hautboy, and also a good vocal and instrumental composer.

TRUMPET. The loudest of all portable wind instruments, and consisting of a folded tube, generally made of brass, and sometimes of silver. The ancients had various instruments of the trumpet kind; as the *tuba*, *cornua*, &c. Moses, as the Scripture informs us, made two of silver to be used by the priests; and Solomon, as Josephus relates, made two hundred similar to those of Moses, and for the same purpose. The modern trumpet consists of a mouthpiece, nearly an inch across. The pieces which conduct the wind are called the *branches*; the parts in which it is

bent, the *potences*; and the canal between the second bend and the extremity, the *pavilion*; the rings where the branches take asunder or are soldered together, the *knobs*, which are five in number, and serve to cover the joints. One peculiarity in this powerful and noble instrument is, that, like the horn, it only commands certain notes within its compass. The trumpet produces, as natural and easy sounds, G above the bass clef note, or violin G, C on the first ledger line below in the treble, E on the first line of the staff, G on the second line, C on the third space, and all the succeeding notes up to C in alt, including the sharp of F, the fourth of the key. Solo performers can also produce B flat, (the third above the treble clef note;) and by the aid of a newly-invented *slide* many other notes which the common trumpet cannot sound are now produced.

The crooked trumpet, or horn, was a very ancient instrument, made of the horns of oxen cut off at the smallest extremity. In progress of time rams' horns were used for the same purpose. This instrument was chiefly used in war. The form of the straight trumpet is better known: it was used by the priests, both on extraordinary occasions and also in the daily service of the temple. In time of peace, when the people or the rulers were to be convened together, this trumpet was blown *softly*; but when the camps were to move forward, or the people were to march to war, it was sounded with a deeper tone.

The number of trumpets in the public service of the sanctuary and temple could never be less than two nor above one hundred and twenty, because that was the number at the beginning of the temple service. The manner of blowing the trumpet was, first by a long, plain blast; then by one with breakings and quaverings; and then by a long, plain blast again. In our language, the blowing of the trumpet is often described by the arbitrary word *taratantara*; but if such a word were to describe the Jewish manner, it should be *tantaratan*, making the flourish in the middle, and the plain notes at either end.

The trumpet is a noble instrument, and is much used in war among the cavalry to direct them in the service. The word is formed from the French *trompette*. Menage derives it from the Greek *turbo*, a shell anciently used for a trumpet. Ducange derives it from the corrupt Latin *trumpa*, or the Italian *tromba*, or *trombetta*; others from the Celtic *trompill*, which signifies the same.

In war there are eight principal manners of sounding the trumpet: the first, called the *cavalquet*, used when an army approaches a city or passes through it in a march; the second, the *boute-felle*, used when the army is to decamp or march; the third is, when they sound to horse and then to the standard; the fourth is the *charge*; the fifth the *watch*; the sixth is called the *double cavalquet*; the seventh the *chamade*; and the eighth the *retreat*; besides various flourishes, voluntaries, &c., used in rejoicings. There are also people who blow the trumpet so softly, and draw so delicate a sound from it, that it is used not only in church music, but even in chamber music; and it is on this account that in the Italian and German music we frequently find parts entitled *tromba prima*, or 1st trumpet, *tromba II^a*, *segonda*, III^a, *terza*, second, third trumpet, &c., as being intended to be played with trumpets. There are two notable defects in the

trumpet observed by Mr. Roberts in the Philosophical Transactions; the first is, that it will only perform certain notes within its compass, commonly called trumpet notes; the second, that four of the notes it does perform are not in exact tune. The same defects are found in the trumpet marine; and the reason is the same in both.

The *bucina*, or ancient trumpet, is ascribed to the Egyptian Osiris, who made use of it in grand sacrifices. The Hebrews derived it from the Egyptians most probably during their long captivity; as the first mention of it in the Holy Scriptures is at the descent of the Lord upon Mount Sinai, and the second where he says to Moses, "Make thee two trumpets of silver; of a whole piece shalt thou make them, that thou mayest use them for the calling of the assembly and for the journeying of the camp." Previous to this period the trumpets of the Israelites appear to have been made of the horn of the ram or some other animal, and were called *bucina*; their form resembled the modern hunting horn; but after that time they were made of metal, and assumed a shape somewhat similar to the modern instrument. Mr. Bruce says, "The Abyssinian soldiers make use of an ancient trumpet which is called *meleket*. It is made of a cane that has less than half an inch aperture, and about five feet four inches in length. To this long stalk is fixed at the end a round piece of the neck of a gourd, which has just the form of the round end of our own trumpet, and is on the outside ornamented with small, white shells. It is all covered over with parchment, and is a very neat instrument. This trumpet sounds only one note, E, in a loud, hoarse, and terrible tone. It is played slow when on a march or before an enemy appears in sight; but afterwards it is repeated very quick and with great violence, and has the effect upon the Abyssinian soldiers of transporting them absolutely to fury and madness, and of making them so regardless of life as to throw themselves in the middle of the enemy, which they do with great gallantry."

In the ninety-sixth Olympiad a prize was instituted at the Olympic games for the best performer on the trumpet; and the first of these honors gained there was adjudged to Timæus, of Elis. In the same year another was obtained by Crates, the countryman of Timæus, on the cornet, or horn. Archias, of Hybla, in Sicily, was victor on the trumpet at three several Olympiads; and the famous trumpeter Herodorus, of Megara, carried off the prize ten several times, and was, Athenæus informs us, victor in the whole circle of sacred games, having by turns been crowned at the Olympian, Pythian, Nemean, and Isthmian. According to some authors, Herodorus was as remarkable for his gigantic figure as for the strength of his lungs, which was so powerful that his performance could not be heard with safety unless at a great distance. The exertions used by the ancients in blowing the flute and the trumpet were so great, that, for the preservation of their cheeks, they were obliged to use a *capistrum*, or muzzle, which, however, was not always adequate to the purpose. According to Lucian, Harmonides, a juvenile scholar of Timotheus, at his first public performance, began his flute solo with so violent a blast that he breathed into the instrument his last breath; and from an epigram of Archias, the Hyblæan, we learn that that trum-

pete dedicated a statue to Apollo, in gratitude for that deity's preservation of his cheeks and blood vessels while with his utmost force he proclaimed the Olympic games.

TRUMPET MARINE. A kind of monochord consisting of three tables, which form its triangular body. It has a very narrow neck, with one thick string mounted on a bridge, which is firm on one side and tremulous on the other. It is struck with a bow by the right hand, while the thumb of the left is pressed on the string. The peculiarity of its sound, which resembles that of the trumpet, is produced by the tremulation of the bridge. The trumpet marine has the same defects with the trumpet; viz., that it performs none but trumpet notes, and some of those either too flat or too sharp. The reason Mr. Fr. Roberts accounts for, only premising the common observation of two unison strings, that if one be struck the other will move; the impulses made on the air by one string setting another in motion which lies in a disposition to have its vibrations synchronous to them: to which it may be added, that a string will move, not only at the string of a unison, but also at that of an eighth or twelfth, there being no contrariety in the motions to hinder each other. Now, in the trumpet marine you do not stop close, as in other instruments, but touch the string gently with your thumb, whereby there is a mutual concurrence of the upper and lower part of the string to produce the sound. Hence it is concluded that the trumpet marine yields no musical sound but when the stop makes the upper part of the string an aliquot part of the remainder, and consequently of the whole; otherwise the vibrations of the parts will stop one another, and make a sound suitable to their motion, altogether confused. Now, these aliquot parts, he shows, are the very stops which produce the trumpet notes.

TSELTSEL. This was composed of broad and large plates of brass of a convex form, like cymbals. In the Gemara and Jerusalem Talmud we are told of "a cymbal in the sanctuary, made of brass, whose sound was very sweet. It became cracked, and the wise men sent to Alexandria for workmen to mend it, but when mended it was not so sweet as before; they therefore took off the mending, and allowed it to continue as it was."

TUBA. (L.) A wind instrument used by the Hebrews; called by them *the trumpet of the jubilee*.

TUBA COMMUNIS. (L.) An ancient instrument of the trumpet kind; so called in contradistinction to the *tuba ductilis*.

TUBA DUCTILIS. (L.) An ancient trumpet of a curvilinear form. See *TUNA COMMUNIS*.

TUBA STENTOROPHONICA. The name given by Sir Samuel Morehead and other writers to his invention of the speaking trumpet. See *SPEAKING TRUMPET*.

TUCH, HEINRICH AGATIUS GOTTLÖB, a composer and book and music seller at Dessau, was born at Gera in 1768. He received the elements of his musical education from N. G. Gru-

ner. In 1780 a fire destroyed his parents' house and property at Gera, and they were obliged to remove to Sangerhausen, where young Tuch had the advantage of further instruction from the organist Rolle. He subsequently went to the University of Leipsic, chiefly with a view to study theology and the fine arts. All other pursuits, however, soon gave way to that of music, in which he perfected himself under the music director Dole. From the year 1790 to 1800 he filled several theatrical engagements, either as bass singer, music director, or composer. He then entirely quitted the theatrical life, and established a warehouse for music and books at Dessau. He still, however, continued to compose, even engraving himself several of his works with extreme neatness. His compositions consist of several pieces for the theatres, also of some church music, sonatas, &c., for the piano-forte, collections of songs, and some music for wind instruments. They bear date from about the years 1790 to 1813.

TUCKER, REV. WILLIAM, one of the gentlemen of King Charles II.'s Chapel, was a very judicious composer of vocal music. He died in 1678. Mr. Mason, of London, in speaking of the full anthem, "O, give thanks unto the Lord!" by this ingenious dilettante, very truly observes that "every syllable in this composition has its just length, and each part of a sentence its proper pause; it admits no perplexing alterations or unmeaning repetitions, but proceeds in one full yet distinct strain, harmonically yet intelligibly."

TUCZEK, or TUSSEK, VINCENZ, chapel-master to the Duke of Courland at Sagan, was, in 1796, pianist at one of the theatres in Prague, where he wrote several operas, which, being written in Bohemian text, are little known even in the rest of Germany.

TUDWAY, THOMAS, received his education in music in the Chapel Royal under Dr. Blow, and was a fellow-disciple of Turner, Purcell, and Estrick. In 1664 he was admitted to sing a tenor in the chapel at Windsor. After this, in 1664, he went to Cambridge, to which university he was invited by the offer of the place of organist of King's College Chapel; and in 1681 was admitted to the degree of bachelor in his faculty. In the year 1705 Queen Anne made a visit to the University of Cambridge; upon which occasion he composed an anthem, "Thou, O God, hast heard my vows," which he performed as an exercise for the degree of doctor in music, and was created accordingly, and honored with the title of public professor of music in that university. He also composed an anthem, "Is it true that God will dwell with men upon the earth?" on occasion of her majesty's first going to her Royal Chapel at Windsor; and for these compositions, and perhaps some others on similar occasions, he obtained permission to style himself composer and organist extraordinary to Queen Anne. A few songs and catches are the whole of Dr. Tudway's works in print; nevertheless it appears that he was a man studious in his profession, and a composer of anthems to a considerable number. In the latter part of his life Dr. Tudway mostly resided in London. Having a general acquaintance with music, and being personally intimate with the most eminent of the profession, he was

employed by Edward, Earl of Oxford, in collecting for him musical compositions, chiefly of the Italians, and in making a collection of the most valuable English services and anthems. Of these he scored with his own hand as many as filled seven thick quarto volumes, which are now deposited in the British Museum.

TULOU, JEAN LOUIS, the celebrated flutist, was born at Paris September 12, 1786. He entered the Conservatoire in 1796, where, in 1799, he received the second prize for flute playing, and in 1801 the first prize. From that time he was, beyond dispute, the first flutist in France, if not in all Europe. In 1804 he entered the orchestra of the Italian Opera as first flutist, where he remained until 1813, when he succeeded his early master, Wunderlich, as first flute at the Grand Opera. He was a careless, happy, pleasure-loving being, fond of hunting, painting, and various other distractions from his proper calling; so that he neglected practice for long periods, and often came to a concert unprepared. He would let his flute get mislaid, and borrow another on the eve of a public performance. Once, at a concert of Mme. Catalani, he was seen preparing to play a difficult piece upon an instrument which was cracked throughout the whole length of one of its pieces. He had not perceived the flaw until the moment for commencing, and then began to doctor it with bits of thread and wax before the eyes of all the audience. All his friends were trembling with anxiety; but he, full of assurance, as if every thing were in the best possible order, played with such spirit, grace, and perfection that transports of enthusiasm burst from the whole house. He actually shared the triumphs of the great *cantatrice*.

In 1814 a rival to Tulou appeared in the person of Drouet, who to great execution added the charms of youth and novelty. Each had his ardent party of admirers. For nearly two years the victory remained uncertain, when Lehrun composed his opera "*Le Rossignol*," in which the song of the king of birds was given to the flute of Tulou. This was decisive. Throughout the whole opera he produced accents so new, so pure, so tender, and so brilliant at the same time, that the audience were in a frenzy of admiration. Numerous successive representations continually added to the triumph of Tulou. Drouet removed to England.

In the first days of the restoration Tulou took sides with the ardent youth whose sarcasms pursued the old dynasty and its partisans. For this he was disgraced, and not invited along with other artists to join the new chapel of the king; and some years afterwards, when his old master, Wunderlich, vacated the professorship in the Conservatory, it was not he, but an artist of inferior talent, who was called to fill it. Irritated by this injustice, he resigned his place at the Opera in 1822. For five years he only appeared before the world as a composer. Finally, under a new administration, he was recalled to the Grand Opera, with the title of *first flute solo*, in 1826, and soon after was made professor at the Conservatory. These functions he still discharged, together with that of first flute at the Société des Concerts, as late as 1843. He established a manufactory of flutes on the old system, which has been quite celebrated.

The compositions of Tulou are much sought for by amateurs of the flute. Among them are a "*Symphonic Concertante*," for flute, hautboy, and bassoon; another for flute, hautboy, and horn or bassoon; "Five Concertos for Flute and Orchestra;" "Two Grand Solos for Flute and Orchestra;" "Fantasias," for ditto; "*Airs variés*," for ditto; trios, duos, polonaises, &c.

TUNABLE. An epithet given to those pipes, strings, and other sonorous bodies which, from the equal density of their parts, are capable of being perfectly tuned.

TUNE. A succession of measured sounds at once agreeable to the ear and possessing a distinct and striking character; as the air to "God save the King;" "Roslin Castle," &c.

TUNEFUL. An epithet applied to sounds melodious either in their tone or by their succession, but more especially the former; as when we speak of *tuneful birds*, *tuneful bells*, &c.

TUNELESS. An epithet given to sounds out of tune or unmelodious in their succession; also to false strings, false pipes, &c.

TUNER. One whose profession it is to rectify the false sounds of musical instruments.

TUNING. As all stringed musical instruments are very liable to go out of tune even with much care and good treatment, it may easily be supposed what will be the consequence of the reverse. But after all the care that can possibly be taken of them they will not keep their tune long, perhaps three months at the most; and that depends upon their being frequently tuned previously to their standing so long. In a general way, they ought to be tuned once in six weeks; but as instruments differ so much in excellence, there can be no certain length of time fixed: some require tuning once a month, others oftener, according to the use they have had; and new instruments (except those of which the strings have been well stretched still more frequently, till they are brought to their tension and will keep their tune. If this be true, which we believe will be allowed by all musical instrument makers and most professional men, then, of course, those instruments which are tuned only half yearly or yearly can seldom be in tune. Instruments will not keep their tune if they are made use of as tables or sideboards, or if books, &c., be heaped upon the outside, and many things deposited in the inside among the strings. Exposing them much to the sun or open air, great heat from fire, removing them from one room to another, and from the town to the country, will put them out of tune. Placing an instrument in a new-plastered, damp room will break the strings; and new strings will not keep their tune long.

TUNING FORK. A steel utensil about three inches long, consisting of two prongs and a handle, and which, being struck against a table or any other substance, produces the tone to which itself was originally set. This instrument was invented by Mr. John Shore, sergeant trumpeter to George I. It is chiefly used by harpsichord and piano-forte tuners. There are forks of various tones or pitches; but the A and C forks are most generally used.

TUNING HAMMER. A steel or iron utensil used by harpsichord and piano-forte tuners. It is about four inches long, and formed like a common hammer. With the head of the hammer the pegs, round which the ends of the wires are twisted, are driven into the sockets; and the bottom of the handle is furnished with a square or oblong hole, in a longitudinal direction, which, being of a size to fit the tops of the pegs, enables the hand to turn them, and thereby to relax or distend the wires.

TUNSTED, SIMON, a Franciscan monk, born at Norwich, in England, flourished in the middle of the fourteenth century. Two musical treatises by him are to be found in the Bodleian Library at Oxford. The following are their titles: "*De musica continua et discretæ, cum diagrammatibus, per Simonem Tunstede,*" 1351; and "*De quatuor principalibus in quibus totius musicæ radices consistunt.*"

TURINI, FRANCESCO, a profound contrapuntist, was the son of Gregorio Turini, a singer in the chapel of the Emperor Rudolph II., and was born at Prague in 1590. Whilst still a boy he lost his father, when he received, through the especial favor of the emperor, the appointment of chamber organist, with permission of visiting Rome and Venice to study the organ and composition there under the first masters. He returned afterwards to Prague, where he filled the situation which had been given him with high credit for several years, until he was invited to fill the situation of organist at Brescia, in which town he died in 1656. His works consist chiefly of masses, motets, and madrigals, and bear date from the years 1615 to 1643.

TÜRK, DANIEL GOTTLÖB, organist, singer, music director, and preceptor at the Lutheran Gymnasium at Halle subsequently to the year 1787, was born in 1756. In 1773 he was a student at the University of Leipsic, and at the same time was a violinist in the orchestra of the Grand Concert there. The celebrated Hassler having arrived about that time at Leipsic, Türk took lessons of him during three months to learn the harpsichord sonatas of Emmanuel Bach. The following year he succeeded to the situation of Hassler. Amongst his principal published works are the following: "*Kürze Anweisung zum Generalbassspielen,*" Halle, 1791; "*Kürze Anweisung zum Klavierspielen, ein Auszug aus der grossen Klavierschule,*" Halle, 1792; "*6 Klaviersonaten grösstentheils für Kenner, oder 3te Samml. der grössern Sonaten,*" Halle, 1789; "*6 Kleine Klaviersonaten, 3ter Theil,*" Halle, 1793; "*60 Handstücke für Anfänger des Klaviers, 1ter Theil,*" Halle, 1792; "*60 Handstücke für angehende Klavierspieler, 2ter Theil,*" Halle, 1795. The last two works ought particularly to be distinguished as elementary publications: they are both in four divisions; the first containing short and easy exercises; the second, exercises rather more difficult; the third, exercises containing three and more parts; and the fourth, sundry pieces. References are occasionally made in these compositions to his "*Grosse Klavierschule,*" the last edition of which was published in 1800.

TURKISH MUSIC. It has been ascertained from the best authorities that it was not until the reign of the Sultan Amurath that the art of

music was cultivated or known amongst the Turks, and they undoubtedly derived it from Persia. When Amurath conquered Bagdad, he ordered a general massacre of the Persians. A harper named Sach-Cule, however, played an air of so pathetic and affecting a nature that the sultan was influenced by it to put a stop to the execution of his harsh decree. The musician and four of his companions were conducted to Constantinople, and by them the knowledge of music was imparted to the Turks. Music flourished under Mahomet IV. chiefly through the exertions of Osman Effendi, who was an able musician, teaching as well as practising the art, and forming a great number of scholars. The first, however, that applied notes to Turkish airs was Prince Cantemir, who dedicated a volume of melodies, now very rare, to Achmet II. The Turks prize this work, but seldom use it. They compose and execute from memory, it being extremely difficult to reduce to a regular scale the notation of Turkish music. They are not, however, without a system or rules; for their music has not only all the times and sounds of ours, but, possessing quarter tones, is much richer in materials, and consequently much more melodious. The Turks make music a part of the education of the higher orders; and the sultan has a magnificent band composed of the best musicians of Constantinople. They play in unison or in octaves; which practice, though hostile to harmony in the musical sense of the word, is productive of a grand martial effect, and is very imposing. The musical instruments of the Turks are: 1. The *keman*; 2. The *ajakli-keman*; 3. The *sine-keman*; all of the violin kind, and resembling our violin, the bass viol, and the viol d'amour. 4. The *rebab*, a two-stringed instrument, played with a bow: it is shaped like a sphere, and is now little used. 5. The *tambour*, which is an instrument of eight strings, with a long handle, on which the scale of notes is marked. This instrument is played upon with a small flexible plate of tortoise shell. 6. The *nei*, a flute made of cane, the fashionable instrument among persons of rank. 7. The *ghirif*, a species of octavo flute. 8. The *mescal*, an instrument like the syrinx, composed of twenty-three cane pipes of unequal length, each of which gives three different sounds from the manner of blowing it. 9. The *santur*, or psaltery, which is the same as our instrument of that name. 10. The *canun*, or psaltery, with catgut strings, on which the ladies of the seraglio play with a tortoise-shell plectrum.

The military instruments are: 1. The *zur-na*. 2. The *kaba-surna*, a large and small oboe. 3. The *bora*, a tin trumpet. 4. The *zil*, or cymbals. 5. The *daul*, or large drum. 6. The *tombaleh*, a small drum. 7. The triangle. 8. An instrument formed of several small bells hung on an inverted crescent, which is fixed on the top of a staff about six feet high and played by agitating it. This instrument may be seen in the hands of many of the itinerant musicians, and was formerly used in several of our military bands.

Among the wind instruments used by the Turks is also a flute, called *solomanic*: it is entirely open and without any reed, so that to fill it is no easy matter. This is the favorite instrument of the Merlavi dervishes, who excel in playing on the flute; it is made either of a reed or of

piece of fine wood. The *sumara* is a sort of flute with two pipes: the shorter is used for playing airs, and the latter for a continued bass.

The dancing dervishes of Turkey (who resemble those of Persia) have often been described, and by no traveller more vividly than Mr. McFarlane, in the Appendix to his clever work entitled "Constantinople in 1828." The music to which these dervishes perform their rotatory ambulations is composed of tambourines, small drums, and Turkish flutes, or pipes. The ceremony commences with prayer; then they "begin to chant in a very slow, mild, and subdued tone, turning round at first very slowly, and in time with the low and deliberate notes of the music. This slow motion increases till it becomes a rapid whirl, which they continue ten or fifteen minutes to the wild, thrilling notes of the choir. An instantaneous pause ensues, which is followed after a rest by another dance; and that by a third, generally wilder, more rapid, and more maniac-like than the preceding. "The sounds of *Allah il Allah, La ulla il Allah*, rose louder and shriller," says Mr. McFarlane, describing this third dance as he witnessed it at Pera; "the measure of the music was quicker and more inspiring; the pipes screamed, the tambourines and little Eastern drums clanged, the dancers spun round, marking their orbits with perspiration, which fell in large drops on the floor; the eyes of the Moslem spectators glistened with delight; the immobility of their form and face was gone; they seemed electrified, and to own, in an extended degree, the effect of ancient music on the savage mind as described by some historians—an effect strengthened by the rapid, giddy whirl before them, and torn that mysterious but existing connection between sound and motion. The low, wooden dome reëchoed and trembled to the efforts of the minstrels; and the whole *Techré* at last (to my eyes) seemed to reel round with the frantic dancers."

TURN. An embellishment formed of appoggiaturas, consisting of the note on which the *turn* is made, the note above it, and the semitone below it. There are two sorts of turns, the *common turn* and the *back turn*. The common turn commences on the note above; the back turn on the semitone below. The following example shows the *regular turn* and the *inverted turn*:—

TURNER, DR. WILLIAM. A pupil of Blow. In the choir books of the Royal Chapel and of many cathedrals is an anthem, "I will always give thanks," called the Club Anthem, as having been composed by Humphrey, Blow, and Turner in conjunction, and intended by them as a memorial of the strict friendship that subsisted between them. Dr. Turner died in 1740, at the age of eighty-eight, and was buried in the cloister of Westminster Abbey.

TÜRRSCHMIEDT, JOHANN, the eldest of the very able family of performers on the horn, and probably the father of Carl Türschmiedt,

was born in Bohemia in 1725. He was in the service of the Prince Oettingen-Wallerstein.

TÜRRSCHMIEDT, ANTON, younger brother of the preceding, was also a good hornist in the service of Prince Albrecht von Tesehen.

TÜRRSCHMIEDT, CARL. Hornist in the chamber band of the King of Prussia. He was the constant companion of the celebrated Palsa. He died at Berlin in 1797. See Palsa.

TÜRRSCHMIEDT, JOSEPH, younger brother of the preceding, was in Paris, and considered to be a good second hornist, in the year 1797.

TÜRRSCHMIEDT, CARL NICOL, son of Carl Türschmiedt, was born in Paris in 1776. He studied the horn under his father and under Brun of Berlin, and was considered an excellent performer.

TUTTA FORZA. (I.) With the utmost vehemence; as loud as possible.

TUTTE CORDE. (I.) Upon all the strings. This term is sometimes met with in music for the piano, to imply that the pedal, which shifts the movement, must no longer be pressed down.

TUTTI. (I.) All. A word used in contradistinction to *solo*, to point out when the whole band or all the instruments of the kind required are introduced.

TWELFTH. An interval comprising eleven conjunct degrees, or twelve sounds, continuous and diatonically arranged.

TYE, or TIE. A curve line between two notes, which so binds them that the two form but one note of the length of both.

TYE, DR. CHRISTOPHER, though not inserted in the list of musicians of the Chapel Royal or household in the reign of Edward VI., was doubtless at the head of all the ecclesiastical composers at that period. Neither the state of the church nor the religious principles of its nominal members were then sufficiently settled to render it possible to determine who, among quiet and obedient subjects, were Protestants and who Catholics; for, during the conflict between the zealots of both religions, the changes were so violent and rapid that great flexibility or great dissimulation must have been practised by those who not only escaped persecution, but still continued in offices either of church or state. The few who seem to have been truly pious and conscientious on both sides suffered martyrdom in support of their opinions; the rest appear to have been either unprincipled or fluctuating between the two religions. One of the principal evils which the champions for reformation combated was, the use of the Latin language in the service of the church; however, the best choral compositions produced by the best masters of those times which have come down to us are to Latin words. Dr. Burney, in his second volume, has exhibited specimens of Dr. Tye's clear and masterly manner of composing for the church in that language when he was at least a nominal Catholic, either during the reign of Henry VIII. or Queen Mary; and the worthy Dr. Boyce has given an admirable specimen of his abilities in the anthem for four

voices, "I will exalt thee, O Lord," inserted in the second volume of his excellent "Collection of Cathedral Music by English Masters." There is hardly any instance to be found in the productions of composers for the church during his time of a piece so constantly and regularly in any one key as this is in that of C minor and its relatives: the harmony is pure; the time and melody, though not strongly marked and accented as in those of the best compositions of the present and last centuries, are free both from pedantry and the difficulties of complicated measures, which this composer had the merit of being the first to abandon.

That he translated the first fourteen chapters of the Acts of the Apostles into metre, in imitation of Sternhold's Psalms, which were the delight of the court in which he lived, was doubtless an absurd undertaking; and was rendered still more ridiculous by the elaborate music to which he set them, consisting of fugues and canons of the most artificial and complicated description. Dr. Tye, however, if compared with his contemporaries, was, perhaps, as good a poet as Sternhold, and as great a musician as Europe could then boast; and it is hardly fair to expect more perfection from him, or to blame an individual for the general defects of the age in which he lived.

TYMPANI. (I.) The kettledrums.

TYRO. (L.) A learner or beginner in music, whether scientific or practical.

TYROL SINGING. In the mountains of the Tyrol, hundreds of the women and children come out when it is near bedtime and sing their national song, until they hear their husbands, fathers, or brothers answer them from the hills on their return home. On the shores of the Adriatic the wives of the fishermen come down to the beach about sunset and sing a melody. They sing the first verse, and then listen for

some time; and then sing the second verse, and listen until they hear the answer come from the fishermen, who are thus guided by the sounds to their own village.

TYROLIENNE. (F.) A dance peculiar to the inhabitants of the Tyrol.

TYRTÆUS, an Athenian general and musician, is celebrated by all antiquity for the composition of military songs and airs, as well as the performance of them. He was called to the assistance of the Lacedæmonians, in the second war with the Messenians, about six hundred and eighty-five years before Christ; and a memorable victory which they obtained over that people is attributed by the ancient scholiasts upon Horace to the animating sound of a new military flute, or clarion, invented and played upon by Tyrtæus. Plutarch tells us that they gave him the freedom of their city, and that his military airs were constantly sung and played in the Spartan army to the last hour of the republic. And Lyeurgus the orator, in his oration against Leocrates, says, "The Spartans made a law, that, whenever they were in arms and going out upon any military expedition, they should all be first summoned to the king's tent to hear the songs of Tyrtæus," thinking it the best means of sending them forth in a disposition to die with pleasure for their country. He was likewise the author of a celebrated song and dance performed at festivals by three choirs, the first of which was composed of old men, the second of such as were arrived at maturity, and the third of boys. The first began by this verse:—

"In youth our souls with martial ardor glowed."

The second, —

"We present glory seek — point out the road"

The third, —

"Though now with children we can only class,
We hope our future deeds will yours surpass."

U.

UBER, CHRISTIAN BENJAMIN, advocate, &c., at Breslau, was born there in 1746. He was a distinguished musical amateur and performer on the harpsichord; also composed much harpsichord music and several operettas and cantatas, which appeared between the years 1772 and 1787.

UBER, FRIEDRICH CHRISTIAN HERMANN, son of the preceding, was born at Breslau in 1781. He at first pursued the study of the law at the University of Halle; but the counsels of Türk determined him to yield to his natural bent and devote himself to musical composition. Türk had resigned to him the direction of the winter concerts at Halle; and there he had his first works executed, consisting of a concerto for the violin and a cantata. The favorable reception of these efforts led him to undertake the composition of an opera, "*Die Ruinen von Portici*," which he did not finish. The overture and certain airs from it alone were known about 1803. Returning to Breslau, he again began to prepare himself for the legal profession; but his earnest appeals to his father, and the success of a second cantata, "*Die Feier der Liebe*," decided the latter to leave him to his own tastes. In 1804 he accompanied Prince Radziwill to Berlin, and entered the service of Prince Louis Frederic of Prussia, as solo violinist, on the recommendation of Bernard Romberg; but the events of 1806 deprived him of that position. He had already given a grand concert at Berlin, at which his talent on the violin was greatly admired. In 1807 a place was offered him in the chapel of Brunswick; but he left it in December, 1808, to enter the service of the King of Westphalia, as first violin and director of the German Opera. He wrote at Cassel several concertos: the German intermezzo "*Der falsche Werber*;" the music to "*Moses*," a drama by Klingemann; to "*The Diver*," by Schiller; and several French comic operas, of which the only one now known is "*Les Marins*." At the dissolution of the kingdom of Westphalia, in 1814, Uber accepted the place of director of music in the theatre of Mayence, where he produced the operetta, "*Der frohe Tag*." Appointed musical director to the *troupe* of Seconda, at Dresden, in 1816, he wrote there the music of "*Saxonia*," an allegorical piece. After this he spent some time in Leipsic, giving private lessons; and then accepted, in 1817, the place of *cantor* and director of the music at the Church of the Cross in Dresden. There he wrote a cantata for the jubilee of the King of Saxony in 1818; another entitled "*Die Feier der Auferstehung*;" the music to the drama "*Der ewige Jude*;" and the oratorio, "*The Last Words of the Savior*." He died on the 2d of March, 1822, just as they were executing his oratorio for the first time in the Church of the Cross.

UBER, ALEXANDER, second son of Christian Benjamin, was born at Breslau in 1783. He was a distinguished violoncellist, and a composer

of instrumental music, songs, &c. He died in 1824.

ÜBERMÄSSIGE. (G.) Augmented, superfluous in regard to intervals.

ÜBUNG. (G.) An exercise or study for any musical instrument.

UCCELLINI, DOM. MARCO. Chapel-master to the college of Parma about the middle of the seventeenth century. He composed the operas "*Le Nave d'Enea*," 1673; "*Eventi di Filandro ed Edessa*," 1675; and "*Giove di Elide fulminato*," 1677. Several sonatas, symphonies, &c., by him were also published.

UDALSCHALK, abbot of a convent at Augsburg, died in 1151. Many hymns composed by him are still sung in the churches of that town.

UFFENBACH, JOHANN FRIEDRICH, was born at Frankfort in 1687. In early life he studied the law, and afterwards devoted his talents entirely to music and poetry. Amongst his works was "*The Imitation of Jesus Christ*, by Thomas à Kempis," adapted to music.

UFFENBACH, ZACH. CONRAD D', brother of the preceding, and a lawyer, was born at Frankfort in 1683. In a work published by him in 1713, entitled "*Merkwürdige Reisen*," &c., are to be found several interesting anecdotes relating to music. He was himself a good amateur flutist and violinist. He died at Frankfort in 1735.

UGAB. (II.) An organ.

UGOLINI, BLAS., a learned Italian, published at Venice, subsequently to the year 1756, a work in several folio volumes, entitled "*The-saurus antiquitatum sacrarum, complectens selectis-sima clarissimorum virorum opuscula, in quibus veterum Hebræorum leges, instituta, ritus sacri et ci-viles illustrantur*." The thirty-second volume of this collection is entirely devoted to the subject of Hebrew music.

UGUALE. (I.) A word signifying an equal and just time.

UGUALMENTE. (I.) Equally, all alike.

UHDE, JOHANN OTHON, a lawyer and musical amateur at Berlin, was born in Lithuania in 1725. He was a violin pupil of Simonetti, and studied the harpsichord and composition under Schafroth. He composed, subsequently to the year 1746, several symphonies, concertos, trios, &c., for the violin. He also wrote many French, Italian, and German airs, which he sang himself in private concerts. He died suddenly in 1766.

UHLMANN, JOHANN ADAM, music director to the court at Bamberg, was born at Kronach in 1732. He studied composition at Munich, and went afterwards to Bamberg in the above situation, where, by his abilities as a master of counterpoint, he formed many excellen-

pupils. He was himself an able composer; but his works are difficult. His modesty prevented him from publishing any of them. His chief instrument was the violin, over which he had the most perfect command. He died at Bamberg in 1802.

ULBRICH, MAXIMILIAN. Bookkeeper under the Lower Austrian government, at Vienna, in 1796. Though only an amateur, he possessed such distinguished talents in composition that both his instrumental and vocal works met with a good reception. His symphonies are particularly esteemed; they are best calculated for performance on solemn occasions.

ULICH, JOHANN, singer and composer at Wittenberg in the seventeenth century, was born at Leipsic. He published a short introduction to singing at Wittenberg in 1678.

ULLALOO. One of the vocal deplorations of the Irish over the dead.

ULLINGER, AUGUSTIN, an able church composer at Munich, died too soon for musical science in 1780.

ULLOA, DON PEDRO, published at Madrid, in 1717, a work entitled "*Musica Universalis, o Principios Universales de Musica.*"

ULRICH, JOHANN RUDOLF. An excellent performer on the hautboy and composer for that instrument, formerly in the service of the Duke of Wurtemberg at Stuttgart. He retired to Switzerland about the year 1780. Died 1795.

UMBREIT, CARL GOTTLIEB, organist at Sonne, born near Gotha in 1763, was an eminent pupil of the great organist Kittel. He entered upon a very honorable career as a musician, by publishing, in small collections, several of his organ pieces and chorals, in order to promote the genuine art of organ playing. The published works of Umbreit are, "12 *Orgelstücke verschiedener Art, &c., 1ste Sammlung,*" Leipsic and Gotha, 1798; "12 *Dergleichen, 2te Samml.,*" Gotha, 1800; "15 *Leichte Choral-Vorspiele für die Orgel,*" Gotha, 1800; "12 *Orgelstücke versch. Art, 3te bis 6te Samml.,*" Gotha, 1802 and 1806; "Fünfzig *Choral-Melodien 4 stimmig für die Orgel bearbeitet,*" Gotha, 1808; "Allgemeines *Choralbuch für die Protestantische Kirche vierstimmig ausgesetzt mit einer Einleitung über den Kirchengesang und dessen Begleitung durch die Orgel, von, &c.,*" Gotha, 1811. This choral book contains three hundred and thirty-two melodies to twelve of the best and newest collections of hymns of Upper and Lower Saxony. In all, there are melodies to three thousand eight hundred and thirty hymns, for four voices, with a bass. Umbreit is also the first who in such collections mentioned the names of the composers of these hymns. By this work he raised himself a lasting monument of his harmonic knowledge and of his talents for organ accompaniment.

UMKEHRUNG. (G.) Inversion in speaking of chords.

UMLAUFF, IGNAZ, chapel-master to the emperor, and music director at the German opera at Vienna, first entered that orchestra in 1772, as the capacity of violinist, and, in 1778, was nominated director. He furthermore superintended the music in the Imperial Chapel during

the absence of Salieri, and was also, in 1796, appointed piano-forte master to the young archduke. His works consist of several church compositions, some piano-forte music, and about six operettas.

UMSTADT, JOSEPH, music director in the chapel of Count Brühl, published some harpsichord music about the year 1750.

UN. (I.) Δ ; as, *un poco*, a little.

UNA CORDA. (I.) Implies that a passage is to be played upon only one string.

UNACCENTED. Those parts of a measure are unaccented which are not of much importance.

UNACCOMPANIED. An air intended to be sung, or a recitative designed to be spoken, without the assistance of instruments, is said to be *unaccompanied*.

UNDER PART. That *part* in a duet, or trio, which is subordinate to, or beneath, the other *part* or *parts*.

UNDULATION. That agitation in the air occasioned by the vibration of any sonorous body. So called because it resembles the motion of waves.

UNGER, CAROLINE, called in Italy *Ungher*, one of the best singers of recent times, was born at Vienna in 1800, and there pursued her vocal studies. She made her *début* in 1819 in the rôle of Cherubino, in Mozart's "*Nozze di Figaro.*" In 1825 she sang at Naples, Milan, Turin, and Rome with great success. She was tall and beautiful, possessed a true dramatic feeling, and only lacked equality of voice to be counted among the great singers of Italian opera. In 1833 she made her first appearance in Paris, where her success was not very decided. Thence she proceeded to Florence, where her triumph was complete; thence to Venice, Rome, Trieste, Vienna, Dresden, (in 1839;) and finally again to Trieste and Florence. In 1840 she retired from the stage, having married happily, and settled in Dresden.

UNGER, JOHANN FRIEDRICH, counsellor of justice at Brunswick, was born there in 1716. He invented a machine to be attached to a harpsichord which should write down every successive note performed on the instrument. He published at Brunswick, in 1774, a detailed description of this machine, entitled "*Entwurf einer Maschine,*" &c. He died at Brunswick in 1781. See HOHLFELD.

UNGERADE TAKTART. (G.) Triple time.

UNHARMONIOUS. Dissonant, discordant.

UNISON, or UNIS. That consonance, or coincidence of sounds, proceeding from an equality in the number of vibrations made in a given time by two sonorous bodies; or the union of two sounds, so directly similar to each other in respect of gravity, or acuteness, that the ear, perceiving no difference, receives them as one and the same. The ancients were much divided in opinion respecting the question, whether the *unisón* be a consonance. Aristotle speaks in the negative; Muris, Mersennus, and others declare in the affirmative. The decision of the question, however depends on the definition we give to the word *consonance*. If, by a consonance, we only under

stand the simultaneous junction of two or more sounds agreeable to the ear, the *unison* is a dissonance; but if we imply by the consonance the combination of sounds of a different pitch, i. e. sounds less or more acute with respect to each other, the *unison*, by its own definition, is not a consonance.

UNISONI, UNISONO, UNISONANT, or UNIS. (I. pl.) A word implying that the parts in a score over which it is written are in unison with each other; as, *violini unisoni*, the violins in unison; *fauti unisoni*, the flutes in unison.

UNISONOUS, or UNISONANT. An epithet applied to those sounds which are of the same degree of acuteness or gravity; i. e., in unison with each other.

UNISON PASSAGES. The unison performs an important part in orchestral music. Passages in unison must be often employed; and, when they are used to express a pleasing or majestic trait of melody, their effect is certain. Such passages vary the harmony by suffering it to repose for a while, without diminishing its interest or robbing the orchestra of either its fulness or its power.

The unison is susceptible of several different modifications; viz.,—

1. The unison with stringed instruments only.
2. The unison with wind instruments only.
3. The unison with both stringed and wind instruments combined.
4. The unison varied in different ways.

EXAMPLES.

Unison with syncopations, &c.

Interrupted by rests.

With appoggiaturas, &c.

With passing notes.

UNIVOCAL. The epithet applied by Ptolemy to the octave and its replicates.

UNMELODIOUS. An epithet applicable to any succession of notes not forming an air; not producing an appreciable effect.

UNMUSICAL. An epithet applied not only to all jarring and dissonant sounds, but to whatever is not absolutely harmonious, melodious, or agreeable to a cultivated ear. Unmusical sounds are those produced by irregular vibrations. If the impulse is short and single, we hear a sound like the blow of a hammer on stone, the report of a pistol, or the crack of a whip; if of perceptible duration, and irregular, we hear a crash like the falling of a tree or of a building; if of some length of time, and interrupted, we hear a rumbling like a peal of thunder or an earthquake; and such is the extreme sensibility of the ear that all sounds, whether musical or unmusical, are perfectly distinguishable from one another.

UN POCO RITENUTO. (I.) A very little slower.

UNSTRUNG. Said of any instrument from which the strings have been taken.

UNTUNABLE. An epithet applied to those pipes, or strings, which from some flaw, or the inequality of their parts, cannot be brought to an exactly unisonous pitch

UPINGE. The name of a song consecrated by the ancient Greeks to Diana.

URBANI, an Italian composer, resided for many years in Scotland and Ireland from about the year 1784. His taste in arranging Scotch music, and even in composing imitations of it, was highly considered at Edinburgh, where he published several volumes of Scotch melodies, with new accompaniments, and some of his own airs intermixed. One of his most admired songs in the Scotch style is "The Red Rose," given in the Vocal Anthology. Amongst his other works were "*Il Farnace*," op. ser., performed at Dublin; and "*Il Trionfo di Clelia*," op. ser., also performed at Dublin, in which city he died in the year 1816.

URENA, PIETRO D' a Spanish monk, flourished in the sixteenth century in the Milanese. He was born blind, and before his death attained the dignity of a bishop. Arteaga pretends that he was the first who added a seventh syllable to the Guidonian scale.

URFEY, THOMAS D' A celebrated convivial songster in the reign of Charles II. He lived chiefly in the ale and wine houses of London, where he sang his own compositions with much humor. He had also an excellent voice, which, however, seems to have been nearly the extent of his musical talents. In 1719 there was pub-

lished in London a collection of his songs, entitled "Wit and Mirth, or Pills to purge Melancholy; being a collection of the best merry ballads and songs, old and new, fitted to all humors, having each their proper tune for either voice or instrument." To this book his portrait is prefixed.

URIO, FRANCESCO ANTONIO, chapel-master at Venice in the seventeenth century, published at Bologna, in 1697, "*Salmi Concertati, à 3 Voci, con Violini*," Op. 2.

URSILLO, FABIO, published at Amsterdam, about the year 1748, three sets of violin trios. He was a chapel-master at Rome.

URSINI, GIACOMO, an Italian composer, born at Pantremoli, flourished about the middle of the sixteenth century. He published, amongst other works, "*Madrigali à 4 Voci*," Venice; and "*Ein anderes Werk*," Venice, 1550.

URSO, CAMILLA, belongs to an Italian family which has rendered considerable service to art. Her father, Salvator Urso, born at Palermo in 1810, was the son of a distinguished musician, and himself received a thorough musical education. He established himself at Nantes, where he was organist of the Church of the Holy Cross. At the age of six years she was one of the most charming children in the world. Her musical sensibility was so exquisite that the slightest sound caused her to weep or laugh according as it expressed joy or grief. Her father, from an early period, devoted all his time to the education of this interesting child, whom he looked upon as a superior being, committed by Providence to his care. The occasion which first revealed to Camilla her vocation, and when she made choice of the instrument which was to give her, at such a tender age, the joys and glories of the artist, deserves to be related. Her father had taken her to a mass of St. Cecilia in the Church of the Holy Cross, where he was organist. The temple had been sumptuously decorated for the solemnities of the day; and the rays of the autumn sun, shining through the windows of stained glass, shed a grave and religious light upon the nave. At the moment when Camilla had taken a place at her father's side, a well-trained orchestra gave the opening chords of the *Kyrie Eleison*. Soon the sound of the organ and of the voices of the choir joined with the harmonies of the instruments. From that moment Camilla remained motionless as the pillar against which she was leaning; all the pomp of the divine service had disappeared from her eyes; she had but one sense left — hearing; and while other children of her age were gazing with curious eyes upon the altar, blazing with tapers, and the gilded vestments of the priests, Camilla saw nothing, heard nothing, but the music and the singing. Finally, the service being finished, the music ceased, the crowd began to retire, while she still stood, as if listening, mute and motionless as a statue. Her father was obliged to take her by the arm to make her conscious that they were alone and that it was time to return home. Camilla followed, and confided to him, on the way, all her impressions. What she had found to be most beautiful, most touching, in the midst of the mass of St. Cecilia, the instrument which had most charmed her among all those whose

sounds rang among the vaults of the church, was the violin, the king of instruments — the violin, whose tones weep and sing like the human voice; that instrument which best obeys the hand, the most efficient agent of the will and the inspiration of the artist. "I wish to learn the violin," said the little Camilla, resolutely, to her father. M. Urso, like a sensible man, did not attempt to oppose an inclination announced in so characteristic a manner: he procured a teacher of the violin for his daughter, and himself taught her the first elements of music. Nature had endowed the child with those rare qualities which are the certain indications of an irresistible destiny. The progress of Camilla was so rapid, that, at the end of about a year, she appeared for the first time in public at a concert given for the benefit of the widow of an artist. The *début* of the young virtuoso produced an immense sensation. The principal journal of Nantes speaks as follows of her performance on this occasion: "Never had violinist a *pose* more exact, firmer, and at the same time perfectly easy; never was bow guided with greater precision than by this little Urso, whose delivery made all the mothers smile. Listen, now, to the *air varié* of the celebrated De Beriot: under these fingers, which are yet often busied in dressing a doll, the instrument gives out a purity and sweetness of tone, with an expression most remarkable. Every light and shade is observed, and all the intentions of the composer are faithfully rendered. Here come more energetic passages: the feeble child will find strength necessary; and the voice of the instrument assumes a fulness which one could not look for in the diminutive violin. Effects of double stopping, *staccato*, rapid arpeggios, every thing, is executed with the same precision, the same purity, the same grace. It is impossible to describe the ovation that the child received. Repeatedly interrupted by applause and acclamations, she was saluted at the end by salvos of bravos and a shower of bouquets." Shortly after this concert, M. Urso, desiring to perfect the education of his daughter by placing her under the greatest masters, did not hesitate to abandon the position which he held at Nantes, in order to establish himself with his whole family at Paris, where, as soon as he arrived, he presented himself to M. Massart, professor at the Conservatoire. Struck by the extraordinary talent of Camilla, and deeply interested in her by the sweetness of her disposition, Massart admitted her to his class, and wished, beside, to give her private instruction. With such a teacher, the young pupil could not but make the most rapid progress. One who heard her at this period at a private *soirée* says of her, "Her attitude was at once modest and confident; one would say that she had a consciousness of herself, of her talent, and that this conviction inspired her with the boldness which is indispensable to the success of all who would offer themselves for the suffrages or to the criticism of the public. This strength, which springs from confidence in his own resources, is as necessary to the artist as superiority of talent." Success followed the young artiste every where. Dilettanti, artists; every body, overwhelmed her with praise and loaded her with bonbons and toys; a kind of ovation to which the little Camilla was not yet of an age to be insensible.

Proud of the success of his daughter, M. Urso, with a view to better his modest circumstances, started on a tour through the departments. It was a succession of triumphs. Then a series of concerts in some of the German cities, Heidelberg, Baden-Baden, Mayence; another series of ovations. Finally the Urso family returned to Paris, where Massart was awaiting his pupil with impatience. Camilla returned with now ardor to her studies under the skilful and paternal direction of her excellent professor. In a few months she made her appearance in the public concerts of Paris before audiences whose verdict decides the fate of aspiring artists; at the Salle Herz, Société Polytechnique, the Conservatoire, the Association of Musical Artists. Every where her success was the same; and, crowned with the approval of these audiences, she now, in the words of her biographer, "is walking in the steps of the greatest *virtuosi*. She plays the violin, not as any well-organized child might play, after a certain period devoted to study, but indeed with a skill truly prodigious. Her *pose*, her energy, her bowing reveal the consummate artist. But what is most surprising is the sentiment of her execution; she excels in that essential expression which comes wholly from the soul, and which the composer, from lack of means to note and write out, abandons to the discretion and intelligence of the executant."

Camilla Urso came to the United States in 1852, and has performed at the principal concerts in New York, Boston, Philadelphia, and indeed all the principal cities of the Union, to the admiration of all. As we write, (March, 1854,) she is connected with the concert troupe of Mme. Sonntag, giving concerts in New Orleans, Mobile, &c.

USEDA, JOSEPHIA, called SPAGNOLETTI, was a celebrated singer in Italy about the year 1760.

USUS. That branch of the ancient melopœia which comprehended the rules for so regulating the order or succession of the

sounds as to produce an agreeable melody. There were four species of *usua*, as we learn from Aristides and Euclid.

The first was, when the notes followed each other *di grado*, as the Italians say, or in conjoint degrees, i. e., without mixing any intermediate sound. The second, when the notes descended gradually, or *di grado descendente*. The third, when the notes, after having ascended by natural, or diatonic sounds, descended through the same degrees, except that, instead of B natural, B flat was always touched in descending. The fourth regarded time, i. e., the length or duration of the sounds.

The few rules found in the scarce and obscure treatises of the ancients still remaining, leave us greatly in the dark with respect to many important points in the music of the Greeks and Romans; but even from these we may collect that their system, when a living science, was carried to a noble extent, and that the effects of its practice were great and striking.

UT. The first of the monosyllables adopted by Guido, and still used by the French in solmization. The Italians, deeming this syllable too hard for free and easy pronunciation, substitute in its place that of *do*. *Ut* and *do* are always the *tonic*, or key note, of the major mode, and the *mediant*, or third, of the minor mode.

UT QUEANT LAXIS, &c. (L.) A hymn composed about 770, and ascribed to St. John the Baptist. Rendered famous by Guido, who took from its first strophe the monosyllables applied to the notes of his gamut.

UTENTHIAL, ALEXANDER, a favorite composer of the sixteenth century, was in the service of the Archduke Ferdinand of Austria. Many of his published church pieces are to be found in the public library at Munich, under the name of Uttendal. His works bear date from the years 1570 to 1583.

UTRICULARIS TIBLA. (L.) The name given by the Romans to the *bagpipe*. See that word.

UTTINI, FRANCESCO, chapel-master to the King of Sweden, was the predecessor of Krauso at Stockholm. He resigned his office, with a pension, about the year 1795. He was in England many years previously, and published in London, in 1770, several sonatas for different instruments. He produced several operas whilst at Stockholm.

V.

V is used for the abbreviation of the word *violin*; and, when written double, implies both the first and second violins. It is sometimes used as, V. P., violin primo; V. S., violin secondo; and V. S., *volti subito*, turn over quickly.

VA. (I.) Go on; as, *va crescendo*, go on increasing

VACCAJ, NICOLO, an operatic composer, was born in 1791 at Tolentino, in the Roman States. In 1811 he became a pupil of Paisiello at Naples; and between that time and 1820 he produced half a dozen operas, besides cantatas, ballets, &c. Disgusted with the dramatic career, he then taught singing first at Venice, then at Trieste in 1821, and at Vienna in 1823. In 1824 he went to Milan, where he wrote the opera buffa "*Pietro il Grande*" for Parma; and in the same year his "*Pastorella feudataria*" was produced at Turin. Called to Naples in 1825, he composed "*Zudig ed Astartea*;" and on returning to Milan he brought out "*Giulietta e Romeo*," his best work. In 1829 he went to Paris, where he was considered one of the best masters of Italian singing. After two years he also went to London and taught; but after the revolution of 1830 he returned to Italy, where he composed more operas, and in 1838 became the first master of composition in the Conservatory at Milan, which place he still occupied in 1843.

VACCARI, FRANCESCO, an excellent violinist, was born at Modena in 1773. At five years of age his father set him to study the violin, and, finding much talent in the child for the instrument, frequently encouraged him to play at sight by gifts of new music. Shortly after he had attained his ninth year he was introduced by his father to Pugnani, who at first did not like to be troubled by a child's playing; though, on hearing him, he could not refrain from applauding his execution. Young Vaccari then went to Florence to receive some instructions from Nardini. When thirteen he proceeded to Mantua, where Pichl, at a public concert, presented him with a concerto of his composition, which the boy performed, without hesitation, at first sight. After visiting most of the great towns of Italy, the son of the Grand Duke of Parma took Vaccari with him into Spain; and, in 1804, the King of Spain appointed him first violin of his chamber band. On account of the political troubles in Madrid he left Spain for Portugal, and in the year 1823 was performing in England for the second time, having been there previously in 1815. On the subject of one of the Philharmonic concerts of 1823 a modern critic observes, "The most brilliant feature in this concert was a concerto on the violin by Signor Vaccari. This excellent—we had almost written unrivalled—violinist has an appointment at the court of Madrid, from which, for the present, prudence bids him retire. He took a chief part in these concerts about eight years ago, and then

made an astonishing impression upon the musical world. He is what he was; and to those who admire the genuine tone of this fine instrument, who think that playing always in tune is a merit, who consider gracefulness and taste as indispensable to a perfect performer, and who approve of that execution which is without trick and invariably accompanied by a delightful result,—to such persons, the retreat of Vaccari to this country will prove the source of as much pleasure as instrumental music can afford."

VACHER, PIERRE JEAN, was born at Paris in 1772. He commenced the study of the violin at eight years of age, first under André Monin, and afterwards under the celebrated Viotti. From the age of fourteen to nineteen he was engaged as violinist at the great theatre at Bourdeaux. At the commencement of the French revolution he went to Paris, where he remained several years engaged in the orchestra of the Vaudeville theatre. He then became known as composer of some popular airs for that theatre. Vacher was afterwards employed in the orchestras of the Théâtre Feydeau, and of the Academy of Music, &c. Several romances of his composition became great favorites of the French public; amongst these were "*Pour Toi*," "*Le Plaisir et l'Espérance*," "*La Verdure*," "*L'Invocation d l'Amitié*," "*Le Voyage à Barège*," and "*La Sympathie en Amour*." He also published several operas of violin music.

VACHON, PIERRE, concert-master of the King of Prussia at Berlin, was born in Provence about the year 1730. He was first heard in Paris in 1758, at the *Concert Spirituel*, where he performed a concerto of his own composition with great applause. In 1766 he was first violin to the Prince of Conti at Paris. In 1784 he went to Germany, where he received his first-mentioned appointment. Besides much violin music, he composed the following amongst other operas: "*Les Femmes et le Secret*," 1767; "*Esopé à Cythère*," in conjunction with Trial; "*Hippomène et Atalante*," 1769; "*Renaud d'Aste*," 1765; "*Le Meunier*," 1765; and "*Sara*," 1773.

VACILLANDO. (I.) Changing, vacillating.

VAGUE, a professor of music at Marseilles, published at Paris, in 1733, a small work entitled "*L'Art d'apprendre la Musique, exposé d'une Manière nouvelle et intelligible par une Suite de Leçons qui se servent successivement de préparation*." This work was highly spoken of, and went through two editions.

VALENTINI, GIOVANNI. An esteemed Neapolitan dramatic composer. Amongst his operas were the following: "*Le Nozze in contrasto*," opera buffa, 1784; "*I Castellani Burlati*," opera buffa, Parma, 1786; "*La Statua Matematica*," opera buffa, Pesaro, 1786; and "*L'Impresario in Rovina*," opera buffa, Cremona, 1788.

VALENTINI, GIOVANNI, a celebrated Ital.

ian church composer, flourished in the beginning of the seventeenth century. He was organist to Sigismund III, King of Poland and Sweden, and afterwards to the imperial court at Vienna. His works bear date from the years 1611 to 1625.

VALENTINI, PIETRO FRANCESCO, a Roman by birth, and the descendant of a noble family, was educated in the music school at Rome instituted by Palestrina and Nanini. He was an excellent theorist. Notwithstanding his high birth, he was so reduced in circumstances as to be necessitated to make music his profession, and even to play for hire. He composed many pieces of great value, and amongst the rest a canon, printed in Kircher's "*Musurgia*," entitled "*Nodus Solonensis*," which may be sung two thousand ways. Valentini's works bear date from about the years 1629 to 1654.

VALENTINI, GIUSEPPE, published in Holland, about the year 1720, nine different works for violins; the seventh and last of which were "*Concerti Grossi*," for four violins, tenor, and two basses; but they have been long since consigned to oblivion.

VALIADOLID, FRANCISCO D., chapel-master to the Episcopal seminary at Lisbon, was born at Funchal, the principal town in the Island of Madeira. He had for pupils in music, first, Manuel Fernandes, and afterwards, at Lisbon, Joac. Alvares Provo; whereupon he was soon appointed to the above situation, in the enjoyment of which he died in 1700. He labored much in the completion of a work in which he proposed to unfold all the mysteries of the theory and practice of music, but was prevented by his death from publishing it. He also left many practical works, as masses, psalms, lamentations, responses, motets, &c.

VALLADE, JOHANN BAPTIST ANTON, organist at Mendorf towards the middle of the last century, published at Augsburg several works for his instrument and for the harpsichord.

VALLARA, P. FRANCESCO MARIA. An Italian professor of music early in the seventeenth century. He published at Modena, in 1707, a treatise entitled "*Scuola Corale*," &c.

VALLE, GUGLIELMO DELLA, an Italian ecclesiastic of Bologna, read at Rome, in 1784, a eulogium on Padre Martini, which he afterwards published.

VALLE, PIETRO DELLA, a Roman knight and amateur musician, studied music from his seventh year under the first masters. He published, in 1640, an able historical dissertation, written in opposition to the opinions of Lelio Guidiccioni, and entitled "*Della Musica dell'età nostra, che non è punto inferiore, anzi è migliore di quella dell'età passata*." He also composed some sacred music.

VALLO, DOMENICO, published at Naples, in 1804, a volume in duodecimo entitled "*Compendio Elementare di Musica Specolativo-Pratica*."

VALLOTTI, or VALOTTI, PADRE FRANCESCO ANTONIO, chapel-master of St. Anthony's Church at Padua, was born in Piedmont in 1697. In his youth he was highly celebrated for his skill on the organ, and, after the year 1750, was considered one of the best church composers

of Italy. A few years before his death he published the first part of a work entitled "*Della Scienza Teorica e Pratica della Moderna Musica*," Padua, 1779. Three other volumes were to have followed. The first, which is merely theoretical, probably contains his system, alluded to in the memoir of his pupil the Abbé Vogler. The publication of the additional volume was probably interrupted by his decease. Vallotti also wrote a dissertation on modulation; in speaking of which, Dr. Burney, in his *Travels*, expresses a wish that it may be published, on account of the clear and able manner in which the subject is treated. His practical works were principally for the church, and amongst them is the requiem that was performed at the funeral of Tartini.

VALSE. (F.) A waltz.

VALUE, VALEUR. (F.) VALORE. (I.) The duration of a note in regard to length of time.

VANDENBROCK, OTHON, born at Ypres, in Flanders, about the middle of the last century, was a celebrated performer on the horn. His masters on that instrument were F. Banneux and Spandau. He also studied composition under Fux. He published various works for his instrument, chiefly at Paris, between the years 1790 and 1800. He also brought out several operettas at the minor theatres of that city; but the work by which he is best known is his "*Méthode nouvelle et raisonnée pour apprendre à sonner du Cor*," Paris, 1797; an improved edition of which appeared in 1789, under the title "*Méthode de Cor, avec laquelle on peut apprendre et connaître parfaitement l'étendue de cet instrument*."

VANDERHAGEN, AMAND J. F. J., member of the legion of honor and master of the band of the imperial and royal French guards, was born at Antwerp. He was a pupil of his uncle, A. Vanderhagen, a celebrated hautboyist, and of Paul Vanhalder. He composed a great variety of music for wind instruments, especially for the clarinet and flute. Many of his works were greatly admired, both for the beauty of their melody and harmony and for the facility of performance. His "*Méthode nouvelle et raisonnée pour l'Hautbois, divisée en 2 Parties*," Paris, 1798, was considered one of the very best instruction books for that instrument. His introductions to the flute and to the clarinet are also highly spoken of: the title of the former is "*Méthode claire et facile pour apprendre à jouer en très-peu de temps de la Flûte*," Paris, 1798. He also composed some vocal music.

VANDINI, ANTONIO. Principal violoncellist of the Church of St. Anthony, at Padua. He was throughout life an intimate friend of Tartini, and was with him at Prague in 1723, and subsequently, during three years, in the service of the Count of Kinsky. He died at Padua in 1773, far advanced in years.

VANHALL, or WANHALL, JOHANN, born in Bohemia in 1739, resided chiefly at Vienna. The spirited, natural, and unaffected symphonies of this excellent composer seem to have preceded those of Haydn, at least in England. His quartets and other compositions for violins certainly deserve a place among the first productions in which the unity of melody, pleasing harmon-

and a free, manly style are constantly preserved. Of his writings that have been published there are several symphonies, quartets, trios, duets, and solos, and some sets of sonatas for the harpsichord. Part of his second sonata in the key of D major, and part of the second in his ninth opera, are inserted as specimens of his compositions in Dr. Crotch's publication. He died at Vienna in the year 1813.

VANINI, FRANCESCA, a celebrated Italian singer, was the wife of Boschi, the eminent bass singer. She went to London with her husband in 1710, but was much past her prime when she arrived in that country; and her performance made no great impression, though she had previously been highly celebrated in Italy.

VANMALDÈRE, PIERRE, concert master to Prince Charles of Austria at Brussels, was a celebrated violinist. Some of his compositions for his instrument were highly esteemed. He also brought out at the Théâtre Italien in Paris, about the year 1754, a comic opera called "*La Bagarre*." He died at Brussels in 1771.

VANMALDÈRE, brother of the preceding, and successor to his musical appointments at Brussels, was a pupil of Martinelli at Venice.

VANNEO, STEFFANO, an Augustine monk, published at Rome, in the year 1538, his "*Recanetum de Musica aurea*." It was written originally in Italian, and translated into Latin by Vincenzo Rossetto, of Verona.

VAQUERAS, a celebrated Spanish contrapuntist, flourished probably about the year 1520. Some specimens of his compositions may be found in the "*Dodecachordon*" of Glareanus.

VARENNE, JEAN JAQUES, a French violinist, born at Poitiers in 1760, had resided, in 1782, for some time, at Berlin.

VARESE, ANGIOLO, called SANTANGIOLINO, an Italian violinist, was, from 1788 to 1790, leader of the orchestra in the opera buffa at Monza.

VARESE, FABIO, chanter of the Church Della Passione at Milan, was, towards the end of the sixteenth century, known also as a composer and poet.

VARIAMENTO. (I.) A variation.

VARIATIONS, (F.,) VARIAZIONI, (I.,) or abridged, VAR. Variations. A name given to certain ornamental repetitions in which, while the original notes, harmony, and modulation are, or should be, so far preserved as to sustain the present subject, the passages are branched out in flourishes, or multiplied sounds, and a more busy and brilliant execution every where assumed. These repetitions, or *variations*, were formerly called *doublets*. Hence in the old lessons, or sonatas, instead of *Variation 1*, *Variation 2*, &c., we find written *Double 1*, *Double 2*, &c.

VARIATO. (I.) Varied, altered.

VAROTI, MICHELE. A church composer of the sixteenth century. His principal works bear date from 1563 to 1568.

VAUDEVILLE. (F.) A ballad, or song; so called from Vaudeville, a Norman town, where dwelt Oliver Bassell, the first inventor of this

kind of air. This term has now no particular force even in the country that produced it. It is supposed that, as the people of Normandy met in the *Val de Vire* (Valley of Vire) for the purpose of dancing to these airs, they were, at first, called *Vaux de Vire*, and by corruption *Vaudevilles*. Such also is the account given, but with caution, by M. Meusnier de Querlon, the very learned and industrious antiquarian, in his *Mémoire Historique sur la Chanson*, prefixed to the "*Anthologie Française*;" who likewise says that the *Vaudeville* had its origin about the time of Francis I., and is the same thing as the *passacaille*, or *passacalla*, of Spain, named also *Chanson des Rues*, or street tune, in opposition to the *Villanelle*, or peasant's song.

VAUGHAN, —. This celebrated tenor singer was a native of Norwich, where he received the first rudiments of his musical instruction in the choir of the Cathedral Church. There were at that time (early part of this century) subscription concerts at Norwich, upon a good scale, where the best secular music was performed under the direction of an amateur; at these young Vaughan sung with great applause. His voice, his countenance, and his manners were alike prepossessing; and, what adds an interest to the relation, his father died and left him an orphan very young, at the very instant when the first notes of a concert for his benefit were performing. He was immediately befriended and protected. Dr. Berwick, a very sound musician, then the organist of the Cathedral and of St. Peter's and the most esteemed teacher of his day, continued to instruct him; but he was still more fortunate in the friendship of a clergyman, deeply learned in the science and enthusiastically fond of it, who used such exertions to forward his promotion as belong only to warm, disinterested affection. His merits, aided by such assistance, soon translated him to the chapel of Windsor; and he gradually went on till he arrived at the eminent distinction of succeeding the celebrated Harrison in the choirs and concerts of the metropolis, and was ranked as one of the very first tenor orchestral singers in England; being always conspicuous for most correct intonation, singularly agreeable tone, simple grace, uniform polish, and sublimity.

VAUGHAN, MRS. Wife of the preceding. This lady made her first appearance as an orchestral singer about the year 1797, being then Miss Tennant. In 1800 she was engaged at the Concert of Ancient Music, and in subsequent years became a great favorite with the public.

VECCII, ORAZIO, a native of Milan was for many years chapel-master at Padua. His vocal compositions have obtained considerable celebrity. He composed masses and hymns and one book of madrigals; but his principal compositions are canzonets, of which he was the author of no fewer than seven sets. Milton, who was a great lover of music and very well understood the science, esteemed Vecchi as one of the most accomplished masters of his time. There are two madrigals from the first edition of his first book, which was printed at Venice in 1539, inserted in Smith's "*Musica Antiqua*."

VECOLI, PIETRO. A contrapuntist of the sixteenth century, born in Lucca. Of his works,

the following is to be found in the Public Library at Munich: "*Madrigali à 5 voci*," Toriuo, 1581.

VECOLI, REGOLO. An Italian contrapuntist of the sixteenth century. Some of his compositions are to be found in a collection of Neapolitan songs, published at Venice in 1751, in six volumes. A work by him, entitled "*Madrigali à 5 voci*," Lyons, 1577, is in the Munich Library.

VEGGIO, CLAUDIO. A contrapuntist of the sixteenth century. In the Public Library at Munich is a printed work by him, entitled "*Madrigali à 4 voci*," Venice, 1540.

VEICHTNER, FRANZ ADAM, chapel-master to the Duke of Courland at Milan, was a pupil of F. Benda. He was celebrated both as a violinist and composer. Amongst his pupils for the violin was Chapel-master Reichardt. He published many symphonies, concertos, &c.; also some oratorios and cantatas. He went to St. Petersburg about the year 1790, from which town most of his works are dated, up to the year 1802.

VEIT, WENZEL HEINRICH, a composer of quintets, quartets, &c., for string instruments, was born in 1805 at Kzeptitz, in Bohemia.

VELOCE. (I.) Swift. A word implying that the movement to which it is prefixed is to be sung or played in a rapid time.

VELOCISSIMO. (I.) With extreme rapidity.

VENEZIANA, ALLA. (I.) In the Venetian style.

VENTO, IVO DI. Chapel-master to the Duke William of Bavaria, at Munich, towards the end of the sixteenth century.

VENTO, MATTHIAS. This composer went from Italy into England, about the year 1763, at the invitation of Giardini, during his management of the opera. His harpsichord pieces, of which ten sets have been published, are so much alike that the invention, with respect to melody and modulation, may almost be compressed into two or three movements. In these sonatas, as well as in his songs, he, however, avoids vulgar passages, and has a graceful, easy, and flowing melody. He had a great number of scholars, which insured the expense of printing his pieces, though not their general reception with the public. His duos for voices are alike trivial and uninteresting. He wrote an opera called "*Artaserse*." Vento died in 1777.

VERACINI, ANTONIO, uncle and master to Francesco Maria Veracini, the celebrated performer on the violin, published at Florence, in 1692, ten sonatas, the usual number till Corelli's time, and afterwards "*Sonate da Chiesa*," two sets; but this author not being possessed of the knowledge, hand, or caprice of his nephew, his works are now not sufficiently interesting to merit any further notice.

VERACINI, FRANCESCO MARIA, was born at Florence about 1685. He and his contemporary Tartini were rewarded in their day as the greatest masters of the violin that had ever appeared. Their abilities were not confined to

the mere excellence of their performance, but extended equally to composition, in which they both manifested great genius and science. But whatever resemblance there may have been in the professional skill of these two masters, it was impossible for any two men to be more dissimilar in disposition. Tartini was so humble and timid that he was never happy but in obscurity; while Veracini was in an equal degree vainglorious. Being at Lucca at the time of *La Festa della Croce*, which is celebrated every year on the 14th of September, when it is customary for the principal professors of Italy, vocal and instrumental, to meet, Veracini put down his name for a solo concerto; but when he entered the choir in order to take possession of the principal place, he found it already occupied by Padre Girolamo Laurentii, of Bologna, who, not knowing him, as he had been some years in Poland, asked him where he was going. Veracini answered, to the place of first violin. Laurentii then told him that he had been always engaged to fill that post himself, but that if he wished to play a concerto, either at vespers or during high mass, he should have a place assigned him. Veracini, with great contempt and indignation, turned his back to him and went to the lowest place in the orchestra. In that part of the service in which Laurentii performed his concerto he did not play a note, but listened with great attention; and being called upon would not play a concerto, but requested the old father would permit him to play a solo at the bottom of the choir, desiring Lanzelli, the violoncellist of Turin, to accompany him; when he played it in such a manner as to extort "*Evviva!*" in the public church. Whenever he was about to make a close, he turned to Laurentii and called out, "*Così si suona per fare il primo violino*" — "This is the way to play the first fiddle." Many silly stories of a similar description are handed about Italy concerning the arrogance of this performer, who was usually complimented with the title "*Capo pazzo*." Veracini would instruct no one except a nephew, who died young. The only master he had himself in his youth was Antonio Veracini, of Florence; but by travelling all over Europe he acquired a style of playing peculiar to himself. Besides being in the service of the King of Poland, he was a considerable time at different courts of Germany, and twice in England, where, during the time of Farinelli, he composed several operas. Burney mentions having himself heard him lead a band at a concert in Hickford's room in such a bold and masterly manner as he had never before witnessed. Soon after this Veracini was shipwrecked, and lost his two Steiner violins, esteemed the best in the world, and all his effects. In his usual light way, he used to call one of these instruments St. Peter, and the other St. Paul. As a composer he had certainly a great share of whim and caprice; but he built his freaks on a good foundation. The peculiarities in his performance were his bow hand, his shake, his learned arpeggios, and a tone so loud and clear that it could be distinctly heard through the most numerous band of a church or the ure

VERÄNDERUNGEN. (G.) Variations

VERBINDUNG. (G.) Combination.

VERDELOT, PHILIPPUS, a Flemish con-

trapuntist, appears to have lived principally in Italy, where his name not only occurs in most of the music catalogues, but is also frequently mentioned by Zarlino, Pietro Pontio, and other writers, as one of the best masters of the beginning of the sixteenth century. His works are all written either in Latin or Italian, and bear date previously to the year 1550.

VERDI, GIUSEPPE. Since Rossini, Bellini, and Donizetti, this composer has been the reigning star of the Italian opera. Yet, though his operas have been for several years the fashion and the rage in every theatre throughout the world where operas are heard, it is in vain that we have searched for any satisfactory notice of his life. The following, from the Illustrated London News for May 30, 1846, is all that we can find:—

“Verdi was born in an insignificant village of Lombardy, called Busseto. His family was poor and unable to defray the expenses of a musical education for the young Giuseppe, who derived his first ideas on the subject from the organist of the village church. He soon found, however, friends and appreciators of the extraordinary talent he manifested; and by the intervention of these he was at length sent to Milan. At an unfortunate season at the Scala (1839) he brought out his first opera, ‘*Oberto di San Bonifacio*,’ a work which, though unequal in its parts and displaying many of the faults of a young composer, nevertheless contained portions of extraordinary merit. But the young, unknown, and almost unbefriended composer was not likely to meet a better fate than all the other writers whose works that year had met with defeat at La Scala. The work was for a time buried in oblivion, but at length exhumed by the kindness of a zealous friend of Verdi, named Pasetti la Marini. Mrs. Shaw, Salvi, the tenor, and Marini, the basso, all appeared in this opera, which created, on this its second appearance, such a *fanatismo* as can only be witnessed in Italy.

“An opera buffa was the next work undertaken by our composer; but during its composition he lost his beloved wife; and certainly, after that, his thoughts tended rather to the *serio* than the *buffo*. This work, however, has been reproduced at Venice with a success that would not have been expected, considering the circumstances under which it was written. But Verdi’s day of triumph was approaching. ‘*Nabucco*,’ known and admired in England as ‘*Nino*,’ created a degree of enthusiasm extraordinary even in Italy. It was performed sixty times running, and on each occasion the actors had to retrace their steps from twenty to thirty times before the curtain, after the fashion of Italian theatres. ‘*I Lombardi*,’ the next work brought out, enjoyed perhaps still greater triumph, on account of the brilliant talent of Frezzolini, whose style of singing is admirably adapted to do justice to the works of Verdi’s school. ‘*Ernani*’ is another of his most popular compositions. Then followed ‘*Giovanna d’Arco*,’ also performed in by Frezzolini, a magnificent work and brilliantly successful; ‘*Alzira*’ and ‘*I due Foscari*,’ the latter hardly equal to those we have named. The last work (1846) of the great maestro is ‘*Attila*,’ a highly dramatic and most original composition, with a degree of local coloring and effectiveness quite new to the lyrical stage. This

opera, brought out at Venice with Loewe, Guasco, Marini, and Constantini, enjoys that favor which the works of this master always command among his countrymen. The enthusiastic appreciation in Italy of a composer of Verdi’s stamp would appear strange to those who have imagined Italian musical taste to be represented by the sickly, sentimental compositions until lately classed as ‘*Italian music*’ *par excellence*; but Verdi’s works show that the ‘*fatherland of song*’ has newer and more vigorous resources.”

The writer adds that Verdi was then (1846) thirty years of age, though looking much older. The traces of care and illness, as well as of deep thought, were visible on his countenance. He lived quiet and retired; his active mind, however, was always employed, and he devoted a large portion of time to his musical and literary studies.

Verdi’s operas have been among the most prominent and popular of those presented by Italian troupes in this country also, since ‘*Ernani*,’ the greatest favorite of them all, was first presented in Boston and New York, about the year 1847, by such singers as Tedesco, Perelli, Vita, and Novelli. ‘*I Lombardi*,’ ‘*Nabucco*,’ ‘*Attila*,’ and ‘*Macbetta*,’ (a later work than either of the above named, in which Bosio and Badiali rendered the principal parts,) have also had their turn of favor. The last opera of Verdi, which appears to be enjoying great favor in the European theatres at this present time, (1853,) is ‘*Rigoletto*.’

VERDONCK, CORNELIUS, an excellent composer and musician, born at Corehout, in Flanders, in 1564, lived in the latter part of his life at Antwerp, and died there in 1625. He published several works in the above town, and also at Amsterdam, of which the following only can be named: ‘*Poesies Françaises de divers Auteurs mises en Musique d 5 part. avec une Chanson d 10*,’ Antwerp, 1599; and ‘*Madrigali à 9 voci*,’ Antwerp, 1604.

VERMINDERTE. (G.) Diminished, in speaking of intervals.

VERNIER, JEAN AIMÉ, born at Paris in 1769, commenced learning the harp and violin at a very early age, and at eleven performed a violin concerto at the *Concert Spirituel* with much success. In the following year he played the harp in a quatuor at the same concert. In 1787 he first performed in a sonata of his own composition. Vernier had no other master than his father, who was an able professor of the mandolin with six strings. In 1795 he was elected harpist at the Théâtre Feydeau. In 1813 he succeeded Dalvimare in the orchestra of the Grand Opera, from which post he retired in 1838. He has published much music for the harp and various romances.

VEROCAI, GIOVANNI, concert master to the Duke of Brunswick, and celebrated as a violinist, was a native of Italy. After visiting several towns in Germany, he went, in 1729, to Petersburg, where he was engaged by the court. About 1743 we find him again at Brunswick, where he brought out an opera named ‘*Demofoonte*.’

VERSE. The appellation given to those por-

tions of an anthem meant to be performed by a single voice to each part; also the epithet applied to an anthem beginning with *verse*. In secular music, as a song or ballad, each stanza of the words is a *verse*.

VERSEITEN. (G.) Short movements for the organ, intended as preludes, interludes, or postludes to psalm tunes, &c.

VERSEITTO. (I.) A little *verse*. The diminutive of *verso*.

VERSETZUNG-ZEICHEN. (G.) Marks of transposition; the sharp, the flat, and the natural.

VERSI SCIOLTI. The name given by the Italians to their blank *verse*. The recitative portions of their operas are generally written in *versi sciolti*.

VERSO. (I.) A *verse*.

VERSO, ANTONIO LO, a celebrated contrapuntist of the sixteenth century, born at Plaza, in Sicily, was a pupil of Pietro Vinci. He published several sets of madrigals between the years 1590 and 1612.

VERSUS FESCENNINI. Nuptial songs, so called because they were first used by the people of Fescennia, a city of Etruria. The style of this kind of poetry, which was afterwards refined into that of the epithalamium, was, at its origin, in no way peculiar for its delicacy.

VERTICAL SLUR. A perpendicular slur, showing that the chord before which it stands is to be performed in imitation of harp music.

VERWANDT. (G.) Related as to the keys.

VERWECHSLUNG. (G.) A change, or mutation.

VERZIERUNG. (G.) Embellishment, variation.

VESI, SIMONE, chapel-master at Padua about the year 1650, was born at Forli, in the Roman States. He published several masses, motets, &c., at Venice.

VESPA, GERONIMO. A celebrated Italian composer towards the close of the sixteenth century. Amongst his works are, "*Madrigali à 5 voci*," Venice, 1570; and "*Madrigali à 5 voci*," Venice, 1575.

VESPER HYMN. A vocal hymn used in the evening service of the Catholic church.

VESPERS. (From the Latin.) Name of the last evening service in the Romish church; a service chiefly consisting of singing.

VESPERTINI PSALMI. (I. pl.) Evening hymns, or psalms.

VESTRIS, MADAME. This delightful actress and very pleasing theatrical singer was a daughter of Bartalozzi, the celebrated engraver. She was engaged for a short time at the King's Theatre about the year 1816; after which she visited Italy and sang at several of the theatres in that country. Her voice was a *mezzo soprano* of more than usual compass; and her style had more of true expression and simplicity than of modern agility. This lady was possessed of ex-

traordinary versatility of talent, and was equally an acquisition to both Drury Lane and the King's Theatres.

VETTER, DANIEL, organist of St. Nicholas's Church at Leipsic, died in that city about the year 1730. He published, in 1716, a collection of vocal music, arranged for the piano, and entitled "*Musical Amusement*."

VETTER, HEINRICH LUDWIG, concert-master to the Prince of Anhalt, was an excellent performer on the violin and hautboy. He published some instrumental music at Offenbach and Spire. In the year 1800 he was living at Hanau, having retired from the profession.

VIADANA, LUDOVICO, chapel-master, first of the Cathedral of Fano, a small city in the duchy of Urbino, and afterwards of the Cathedral in Mantua, is celebrated for having, about the year 1605, improved the science of music by the invention of the figured or thorough bass. Dr. Burney says, indeed, that he has found instances of the minute beginnings of this expedient before the time of Viadana; but he allows that this musician was the first who drew up general rules for expressing harmony by figures inserted over the bass. Of the works of Viadana, the two following are the chief: "*Opus Musicum Sacrorum Concentuum*," published in the year 1612; "*Opera omnia Sacrorum Concentuum*, 1, 2, 3, et 4 *vocum*," in the year 1613, and again in 1629.

VIAL, a Parisian musician, published, in 1767, a small work in three folio sheets entitled "*Arbre Généalogique de l'Harmonie*." The first sheet contains the genealogical tree, of which the two other sheets are explanations. The whole is very carefully arranged according to the system of Rameau.

VIANA, MATIAS JUAN. A Spanish church composer, deemed by Yriarte, in his history "*Della Musica*" of 1779, one of the first and most accomplished musicians of his country.

VIBRANTE. (I.) A peculiar vibratory manner of touching the keys of the piano.

VIBRATION. That tremulous motion of any sonorous body by which the sound is produced. The vibratory action being communicated to the air, the air becomes the vehicle by which it is borne to the ear; and the sound is grave or acute as the vibrations are fewer or more numerous in any given time.

Vibration is the quick repetition of an emphasis upon the same note, three or four, or perhaps more, times, according to the length of the note and the fancy of the singer. Occasionally introduced, it produces a very striking effect; but it becomes ludicrous if too often used. It is indicated by the Italian word *vibrato*. The merit of all embellishments consists in their distinct and voluble execution. They are most properly employed in the brilliant style. Embellishments may sometimes be introduced to advantage in the *cantabile*, or expressive style; but here they must be delivered with less rapidity. In the *adagio* they can only be executed slowly and under the form of measured notes; that is, as integral and rhythmical divisions of the bar.

The word *vibrato* is also applied to a certain

tremulous motion given to a note; as when the finger of the flutist tremulates over the hole, without coming in contact with the instrument

VIBRATISSIMO. (I.) The superlative of *vibrato*.

VIBRATO. (I.) With a strong, vibrating quality of tone.

VICENTINO. See **VINCENTINO**.

VIDAL, B., a guitarist and composer and danger of music for his instrument, at Paris, published, in 1797, a work entitled "*Journal de Guitare*;" also some other music for his instrument.

VIDO. (I.) A word formerly applied to the sound drawn from the open string of a violin, violoncello, &c.; i. e., when not being brought into contact with the finger board by the pressure of the fingers, its vibration extends through its whole length. A sound so drawn was called a *chord a vido*.

VIEIRA, ANTONIO, chapel-master at Crato, in Portugal, and born at Villa Vicosá, studied music under Manuel Rebello. He was afterwards chapel-master to the church at Loretto; then at Lisbon; and lastly at Crato, as above, where he died, probably about 1650. The compositions he has left are greatly admired by connoisseurs, and are still preserved in the Royal Musical Library at Lisbon. In the Crassbeeck catalogue they stand as follows: "*Missa do 1 Tom à 12 Vozes*;" "*Miserere à 8 Vozes do 8 Tom*;" "*Dixit Dominus, à 8 do 1 Tom, com Instrumentos*;" "*Beatus vir à 12 do 1 Tom*;" "*Lauda Hierusalem Dominum, à 8 Vozes do 8 Tom*;" "*Motete, Pater Peccavi*;" and "*Motete do Defuntos, Domine quando vereris*."

VIEIRA, ANTONIO, a Portuguese priest, born in Lisbon, became attached to his order in 1664, and in the end distinguished himself as one of the most celebrated organists of his country. He died in 1707, leaving a work for the organ under the following title: "*Diverças Obras de Orgão para os Tungedores deste Instrumento*," folio, manuscript.

VIELLE. (F.) An old French instrument resembling the English hurdygurdy. See **ROTE**.

VIERDANCK, JOHANN, a celebrated church composer in the middle of the seventeenth century, was organist of St. Mary's Church at Stralsund. In 1641 and 1643 he published two volumes of spiritual concertos. His other works consist chiefly of masses and motets.

VIERLING, JOHANN GOTTFRIED, an excellent organist and composer at Smalkalden, was born near Meiningen in 1750. He studied composition under Kirnberger at Berlin, and was one of the most celebrated organists of Germany. His works consist of concertos, sonatas, &c., for the harpsichord and organ, and of several collections of sacred music. He also published a didactic work entitled "*Allgemein fasslicher Unterricht im Generalbass*," Leipsic, 1805.

VIERTELNOTE. (G.) A quarter note, or crotchet.

VIIETATO. Forbidden. A word applied by the Italians to such intervals and modulations as

are not allowed by the established laws of harmony.

VIEXTEMPS, HENRY. This distinguished composer and performer was born at the town of Verviers, in Belgium, in 1820. The discovery of that wonderful musical talent which has given him the high reputation he has for years enjoyed was altogether accidental. His performances upon a child's toy of a fiddle, while only five years of age, gave positive promise of what he would one day become. Not only did the people of the neighborhood in which he lived openly express their admiration of this first dawning of his talent, but De Beriot, the great violinist, happening to pass through the town of Verviers, also saw and heard him. So delighted was he with his performances that he offered to be his teacher upon the instrument, on the single condition that he himself might be intrusted with the sole care of his musical education. The offer was accepted, and De Beriot kept his word most faithfully. He watched over the marked and rapid improvement of his pupil with unflagging interest, and obviously felt as much pleasure in the task as he had anticipated. The youth made great progress in the science to which he had shown so early and decided a partiality. The result was, that, at the early age of twelve years, he played at the Conservatoire in Paris—the sternest critical school, perhaps, in the world—with the most entire success; and De Beriot's task was completed. Young Viextemps then returned home, and, accompanied by his father, he travelled first all over his own country, and immediately afterwards in Germany, obtaining every where the highest encomiums as a composer and performer upon the violin. He went to Vienna, and found himself in the presence of a community whose very element is music. And even there, at so early an age, he was perfectly successful, and acquired a reputation which extended over the entire continent. He performed there the most difficult compositions of Beethoven, Spohr, Mayseker, and Mendelssohn in a style of surpassing accuracy and brilliancy, and, when afterwards he reached Leipsic and Dresden, the last named of these great composers paid him the most marked and decided eulogiums. The same success attended him at Berlin and St. Petersburg, where he made a long stay, and at which capital he was honored with the universally awarded title of "*Le Roi de Violin*." After acquiring so wide a renown in the old world, he came, in 1843, to America, where he gave concerts with much success.

"His tones," says a high authority, "are remarkable for their richness and clearness; his management of the bow is beautiful; and he executes his compositions, which have a more melancholy than lively character, with that calmness and sweetness which kindle enthusiasm in all hearts open to the influence of harmony. He plays the accord and octave passages with the greatest precision; his arpeggios are unequalled; his staccatos are pure and distinct; but all derive their chief excellence from that calmness which reigns throughout, and is a distinguishing characteristic of his performances. His memory, too, is extraordinary; for he plays nearly all Paganini's, as well as other most classical com-

positions perfectly. His best composition is the great concerto in E flat, which is considered by all artists as a masterpiece; and it is that for which the King of the Belgians made him Knight of the Order of St. Leopold."

Since 1846, Vieuxtemps has held the place of solo violiust in the Imperial Chapel at St. Petersburg.

VIGANO, SALVADORE, ballet master at Venice since the year 1788, appears to have been the husband of the celebrated dancer Madame Vigand, with whom he went to Vienna about 1792, where he continued several years as a dancer at the theatre of that capital. In the year 1797 they were both at Berlin, where, during the nuptial festivities, they danced at the great Opera Theatre. He was also the inventor and composer of the music for his ballets.

VIGANONI, GIUSEPPE, a celebrated Italian singer, went to England about the year 1795, and was engaged as principal tenor at the opera. His voice was of no considerable volume; but his taste was exquisite and his manner polished. He remained in England many years, and was as much esteemed as a teacher as for his public performance. He died at Bergauo in the autumn of 1823.

VIGNATI, GIUSEPPE. Chapel-master at Milan towards the year 1740. His compositions, both for the church and theatre, were much esteemed.

VIGNOLI, GABRIEL, a Venetian composer of the seventeenth century, published a work of part songs entitled "*Sacri ribombi di pace e di guerra*," 1665.

VIGOROSO. (I.) A word implying that the movement before which it is placed is to be performed in a bold, energetic style.

VIGUERIE, BERNARD, pianist and composer at Paris, was born at Carcassonne, in the province of Languedoc, in 1761. He studied music in his eighteenth year under Laguna, organist of the Cathedral Church in the above town, and went, in his twenty-first year, to Paris, where he further prosecuted his studies under Charpentier, organist of St. Paul's Church. At length, about the year 1795, he established a music warehouse in Paris, from which he published many works of other composers, also some instrumental music of his own composition.

VILHALVA, ANTONIO RODRIGUES, chapel-master of the Cathedral Church at Evora, was born at Vilhalva, near the town of Fronteira, in the province of Alentijo, in Portugal. In his youth he had a fine voice, and studied music about 1625, under the celebrated Manuel Rebello, with such diligence and success that he was first appointed chapel-master of the Royal Hospital at Lisbon, and subsequently of the Cathedral Church of that capital. He composed many psalms, masses, and hymns, which are still preserved in the Royal Musical Library at Lisbon. The chief work among them is a mass for eight voices, in four parts.

VILHENA, DIEGO DIAS DE, chapel-master at Evora, in Portugal, was one of the most distinguished contrapuntists of his country, and a pupil of the great master Antonio Pinheiro.

He died in 1617, and left, besides several practical works, which are still to be found in the Royal Musical Library at Lisbon, a tract in manuscript entitled "*Arte de Canto Chdo para Principiantes*."

VILLANELLA. (I.) The air of an old rustic dance, the time of which was gay and brisk and the measure strongly marked. The subject, or melody, was first played in a plain style, and then embellished with variations. The *villanella* was a tune of a light and trivial character. It originated with the Neapolitans. Morley speaks of it in a contemptuous strain. It admits "many perfect chords of one kind, and even disallowances at pleasure, suiting a clownish music to a clownish matter."

VILLANI, CASPARO, organist at the Dom Church at Piacenza about the year 1610, published, amongst other works, "*Salmi à 5-8 voci, con B. C.*," Venice; and "*Missa e Vespere*," Venice, 1611.

VILLEBLANCHE, ARMAND DE, born at Paris in 1786, received his first musical instructions in England from the celebrated harpist M. de Marin, who was his relation. He next took lessons of the Abbé Rose at Paris, and subsequently of J. B. Cramer, on the piano. He composed and published several sets of sonatas, &c., for the piano-forte, also several cantatas and romances. He likewise brought out in 1809, at the Théâtre Feydeau at Paris, a successful opera entitled "*Le Nègre par Amour*," and since that time several other dramatic pieces. He perished under Napoleon, in the retreat from Moscow, in December, 1812.

VILLOTEAU, G. A., a Parisian professor of music, member of several learned societies, and of the committee for Egyptian arts and sciences, was born at Bellême in 1759. In 1807 he published at Paris an essay on the utility of an exact and complete theory of the natural principles of music. This work was only meant to be introductory to a larger one on the analogy of music with those arts which have for their object the imitation of language. This latter has been published in two volumes octavo.

VILLOTTE. (I.) One of the names given to the first secular music in *parts* after the invention of counterpoint, and which was founded on the popular melodies of Naples.

VIMERCATI, a celebrated performer on the mandolin, born in 1778, performed at the King's Theatre and the oratorios in London in the season of 1824. This instrument is strung with wire, and is played with a plectrum, or piece of wood, held between the thumb and fore finger. The tone has not the sweetness that is yielded by catgut strings, but is more penetrating, and therefore better calculated for a capacious theatre or a large room. Signor Vimercati obtained great mastery over his instrument.

VINA. The *vina*, or *been*, is the oldest musical instrument in use in Hindostan; it is a fretted instrument of the guitar kind. The finger board is 21 6-8ths inches long. A little beyond each end of the finger board are two large gourds, and beyond these are the pegs and tailpiece which hold the wires. The whole length of the instru-

ment is three feet seven inches. The first gourd is fixed at ten inches from the top, and the second is about two feet eleven and a half inches. The gourds are very large, about fourteen inches in diameter. The finger board is about two inches wide. The wires are seven in number, and consist of two steel ones, very close together, on the right side; four brass ones on the finger board; and one brass one on the left side. The instrument is held over the left shoulder, the upper gourd resting on that shoulder, and the lower one on the right knee.

VINACESE, BENEDETTO. A chevalier of Brescia and chapel-master to an Italian prince. His sacred compositions were highly esteemed. In 1697 he published at Venice his first opera of sonatas in three parts. Amongst his operas we can name "*Gli sfoghi di giubilo*," "*Cuor nello scrigno*," Cremona, 1696; "*Innocenza giustificata*," 1699; "*Amanti generosi*," 1703.

VINCENTINO, NICOLÒ, a learned composer and priest, was born at Vicenza in 1511, and died at Rome about 1575. With respect to this writer there are few modern books on music in which some mention is not made. He published at Rome, in 1555, a work entitled "*L'Antica Musica ridotta alla Moderna Prattica*," containing chiefly a series of dissertations on the music of the ancients in comparison with that of the moderns. The author's principal design in publishing it seems to have been to revive the practice of the ancient music; and, for this purpose, he invented an instrument of the harpsichord kind, so constructed and tuned as (he has told us) to answer the division of the ancient tetrachord in each of the three genera. Such a multiplicity and confusion of chords as attended this invention introduced a great variety of intervals, to which the ordinary division of the scale, by tones and semitones, was by no means commensurate. He was therefore reduced to the necessity of giving to his instrument no fewer than six rows of keys, the powers of which he has attempted to explain, but in very obscure terms.

The success which he fancied he had attained by this instrument, induced, after his death, many persons to attempt the recovery of the ancient musical genera; and several alterations of different kinds were made in it by a reduction of the keys and other methods. All these were, however, to no purpose. The arrangements of the tones and semitones in the musical instruments continue at this day precisely the same as they did when Vincentino's ideas on the subject first occurred to his mind.

His work has been variously spoken of by musicians. Some have condemned it as containing the most absurd doctrines; others have stood forward in its defence. Among the latter is to be numbered Dr. Pepusch. On the whole, however, it appears that Vincentino derived all his knowledge of the ancient writers from the works of Boethius and his contemporaries, and that, beyond some whimsical notions of his own, there is nothing contained in his publication which is not also to be found in them.

VINCI, LEONARDO DA. Born at Vinci, a chateau in the neighborhood of Florence, in 1445. Highly distinguished as a painter, he was also celebrated as a performer on the violin, and was engaged in this capacity in the service of the

Duke of Milan, at a salary of five hundred crowns. He was in the habit of using a violin with a silver neck, and a head in the form of a horse's, and of singing to his own accompaniment. He died at Fontainebleau in 1523, at the age of seventy-five, expiring in the arms of Francis I., who had come to visit him in his illness. This scene has been made the subject of an admirable picture by Menagout.

VINCI, LEONARDO DA, was born at Naples in 1690. This composer manifested at an early age the rarest ability; and although he devoted but few years to his studies, they were not less complete. He was still at the Conservatory when, on the report of his fame as one of the pupils who gave the brightest hopes of future excellence, he was engaged at Rome to compose the opera of "*Semiramis*." The applause of the Romans, who are not more difficult to satisfy than any of the Italians, flattered the self-love of the young artist; he was animated with fresh ardor, and continued to receive the reward of his zeal. The Romans were struck with the melody of his airs, the science of his accompaniments, and the brilliancy of his style, which was the purest and finest of his time, then so fertile in great masters. Vinci returned to Naples, in order to add to his triumph the applause of his fellow-citizens: he composed the opera of "*Astyanax*," the success of which surpassed his greatest hopes and spread his reputation beyond the shores of his native country. From this moment the theatres of the greatest cities in Italy solicited his services. Venice carried off the prize; and in 1725 he gave his first opera in that city, where he was not only able to dispute the reputation and abilities of Porpora, but had the glory of seeing his opera of "*Siface*" preferred to the "*Siroe*" of his rival. Vinci then gave his "*Ifigenia*," which was equally fortunate with "*Siface*." His talents increased with his success. He returned to his country to offer there anew the tribute of his acquirements, the graces of youth united to the masculine beauties of a riper age. He composed immediately on his arrival the opera of "*Rosmira*," which delighted by the novelty and beauty of its combinations; the freshness, purity, and truth of its melody; and particularly by the profound and scientific knowledge of all the secrets of harmony, as displayed in its modulations. He was again called to Rome, where the public, notwithstanding its known character for inconstancy, appeared to relish no music but that of Vinci, and he composed "*Artaserse*" and "*Didone*." The former is considered as his *chef-d'œuvre*, and also amongst the first productions of the Italian theatre. The reputation of Vinci had now reached its height; but this glorious epoch was also that of his death. During the brilliant success of "*Didone*" at Rome he became attached to a lady of rank, talents, and beauty, who, it is said, recompensed his affection. On his return to Naples his fellow-citizens wished to hear this opera; and while he was preparing it for representation, one of the relations of this lady, hearing that Vinci had boasted of the favors he had received from her, mixed some poison in a cup of chocolate, which she presented to him, and thus put an end to his life in the year 1732. Vinci possessed, together with the talent of invention, that of the most perfect execution. He completed the improvements

an recitative, rigorously adapted the music to the expression of words, and was the first composer who effected any great change in the musical drama after the invention of recitative by Jacopo Peri in 1600. The accompanied recitatives in "*Didone*" are particularly celebrated. He composed many operas besides those already mentioned, amongst which are several of the comic kind.

VINCI, MARIANA. A celebrated Italian singer. She performed at the opera in Lisbon in 1801, and created the greatest enthusiasm both by her singing, person, and acting. It was said of her, that if the public was composed of only the deaf and blind, the former should not fail to see Vinci, and the latter to hear her. From Lisbon she went to England, and made her *début* at the King's Theatre, in 1801, in the opera of "*La Principessa Filosofa*," by Andreozzi. She had the advantage of a fine figure, a tall and majestic deportment, sang with great sweetness and taste, and was as well received by the British public as she had previously been on the continent.

VINCIUS, PETRUS, a very distinguished composer in the second half of the sixteenth century, was born at Nicosia, in Sicily. Early in life he was chapel-master, first in Rome, and afterwards of the Church of St. Mareo and Major at Bergamo. He returned at length to his native country, and died there in 1584. His printed works consisted chiefly of motets, and bear date between the years 1578 and 1591.

VINDERS, JERONIMUS, a Flemish composer, lived about the year 1540. Of his published works, we can only name his "*Lamentatio super Morte Josquin de Prez, 7 vocum*," which is printed in "*Le septième Livre, contenant 24 Chansons à 5 et à 6 Parties, par feu de bonne Mémoire et très-excellent en Musique Josquin de Prez. Avec 3 Epitaphes du dict Josquin, composés par divers Auteurs*," Antwerp, 1545.

VIOCCA, PIETRO, an Italian composer, lived about 1720. From his works the following may be named: "*Tre Marie a Pied della Croce*," oratorio; "*Partenza Amorosa*," opera; "*Die Kronung Ludwigs 15, Königs in Frankreich*." This was brought out at the opera theatre at Hanburg in 1722. Mattheson makes mention of it as follows: "*Viocca set the music, and Mattheson found the Italian words*." By this it would appear that he resided about this time at Hanburg.

VIOLETTA. A stringed instrument, resembling, in shape and tone, the violin, of which it was the origin; that impressive and commanding instrument being little more than an improvement of the old viol. This instrument formerly consisted of five or six strings, the tones of which were regulated by being brought, by the fingers, into contact with the frets with which the neck was furnished. The viol was, for a long while, in such high esteem as to dispute the preëminence with the harp, especially in the early times of music in France; and, indeed, being reduced to four strings, and stripped of the frets with which *viols* of all kinds seem to have been furnished till the sixteenth century, it still holds the first place among the treble instruments, under the denomination of *violin*.

There were anciently *viols* of divers kinds. The first and principal was the *bass viol*, called by the Italians *viola di gamba*, or the *leg viol*, because held between the legs. It is the largest of all, and is mounted with six strings. Its neck is divided in half notes, by seven frets fixed thereon, and its sound is very deep, soft, and agreeable. The tablature or music for the bass viol is laid down on six lines, or rules. What the Italians call *alto viola* is the counter tenor of this, and their *tenore viola* the tenor. They sometimes called it simply the *viol*. Some authors will have it the *lyra*, others the *cithara*, others the *chelys*, and others the *testudo* of the ancients. The love viol, *viola d'amore*, which is a kind of triple viol, or violin, having six brass or steel strings like those of the harpsichord, was a good instrument, and yielded a kind of silver sound, which had something in it very agreeable. There was also a large viol, with forty-four strings, long used, called by the Italians *viola di bardone*, which instrument was little known in other nations. The *viola bastarda*, or bastard viol, of the Italians, was never used among us; but Brossard says it was a kind of bass viol, mounted with six or seven strings, and tuned as the common one. Another was what the Italians call *viola di braccio*, arm viol, or simply *braccio*, arm. It was an instrument answering to our counter tenor, treble or fifth violin. Their *viola prima*, or first viol, is really our counter tenor violin; and they commonly used the clef of C, *sol ut* on the first line to denote the piece intended for their instrument. Their *viola seconda* is much the same as our tenor violin, having the clef of C, *sol ut* on the second line. The *viola terza* was nearly a fifth violin, the clef C, *sol ut* being on the third line. The Italian *viola quarta*, or fourth viol, was not known in England or France, nor in this country, though we frequently find it mentioned in the Italian compositions — the clef on the fourth line. Their *violaletta*, or little viol, was in reality the English triple viol, though writers frequently confound the term with what has been said of the *viola prima*, *seconda*, *terza*, &c.

VIOLA. A tenor violin. This instrument is similar in its tone and formation, to the violin; but its dimensions are somewhat greater, and its compass a fifth lower, in the great scale of sounds. Its lowest note is C on the second space in the bass. The part it takes in concert is between that of the bass and the second violin.

VIOLA, ALFONS DELLA, chapel-master to the Duke of Este, at Ferrara, about the year 1541, was born in that city. It is a common opinion that he was the first who united singing with declamation on the boards of a theatre; if so, he may be truly named as the first opera composer. Indeed, the earliest monument which now remains to us in the form of an opera appeared at Ferrara, in 1541, under the title of "*Orbecche, Tragedia di Giambattista Giraldis Cinthio Ferrarese: in Ferrara, in Casa dell'Autore, dinanzi ad Ercole 2 d'Este, Duca di Ferrara. fece la Musica Alfonso della Viola: fu l'Architetto e il Dipintore Girolamo Carpi di Ferrara*." He also composed the operas "*Il Sacrificio*," 1565; "*Artusa*," 1563; and "*Lo Sfortunato*," 1567. There were likewise published by him "*Madrigali*," Ferrara, 1599.

VIOLA DA GAMBIST. A performer, or

professor, of the *viol da gamba*. See VIOL DA GAMBA.

VIOL DA BRACCIA. (L.) The name formerly given to the *alto viola*, or counter tenor violin, because it was played on the arm, or shoulder, like the treble or common violin. So called to distinguish it from the *viol da gamba*, which is held between the legs. See VIOL DA GAMBA.

VIOL DA GAMBA, or GREATER VIOL. A viol with six strings, formerly much used in Germany, but at present little practised. The place of *gambist* is now as totally suppressed in the chapels of that country as is that of *tutenists* in England. This instrument, which is a remnant of the old *chest of viols*, is so crude and nasal in its tone that even the hand of the scientific and skilful Charles Frederic Abel could not render it attractive to the ears of a British audience. Its name of *viol da gamba* is derived from the circumstance of its being held between the legs during performance. See VIOL DA BRACCIA.

VIOL D'AMOUR, or LOVE VIOL. A viol, or violin, furnished with six brass or steel wires instead of sheepgut, and usually played with a bow. It yields a kind of silver sound, at once so soft, sweet, and tender as to have given birth to the name by which it is known.

VIOLARS. Certain practical musicians much encouraged in Provence during the twelfth century, and so named because they performed on the *vièle* and *viol*. Their office was to accompany the Troubadours, or bards, when they recited their poetry.

VIOLETTA MARINA. A stringed instrument not now in use, supposed to have been similar in shape and tone to the *viol d'amour*. It was first introduced in England by Signior Cas-trucci in the year 1732.

VIOLIN, or FIDDLE. A well-known stringed instrument, of brilliant tone and active execution. When, or by what nation, this important and interesting instrument was first invented, is not at present known; nor can the form and character of the violin used in England in the time of Chaucer, who mentions it, be exactly ascertained. There is, however, much reason for supposing that, from its first introduction, it underwent continual alterations and improvements; since even towards the end of the sixteenth century its shape appears to have been vague and undetermined. It has, however, long attained its present excellence and formed the leading instrument in concert. During the protectorship the violin was in little esteem in England, and gave way to the rising prevalence of the viol; but at the restoration viols began to be out of fashion, and violins resumed their former consequence. The antiquity of this instrument has long been a subject of dispute with the learned. It is generally supposed, and with much reason, that no instrument played with the bow was known to the ancients.

The history of the violin is a standing contradiction to the doctrine of *progress*. More than two hundred and fifty years have transpired since its origin in Italy; and yet, although countless attempts have been made from time to time to improve upon its construction, it not only

remains without material change, but the oldest specimens, by connoisseurs, are esteemed of the greatest value—especially those which were manufactured by the brothers Amati, and by Straduarus, at Cremona, about the year 1650.

Prior to the introduction of the violin into England, the leading instrument at concerts was the viol, which was furnished with frets. The removal of these mechanical guides from the finger board, which constituted one of the peculiarities of the violin, was intensely ridiculed by musical men, as presenting a conclusive impediment to all further use of what they pronounced a mere bawble. But its grandest property consisted in that very change; for it made the ear, and not the fingers, the umpire of tone and of taste. It substituted mind and soul for the mere exercise of manual skill. The truth and certainty of which its opponents thought it might rob the viol were more effectually secured by calling into action the far nicer faculties of the organ of hearing. There are in existence, at this day, some of the instruments manufactured more than two hundred years ago by the artists above mentioned. "The Amati," says a writer on this subject, "is rather smaller in size than the violins of the present day, and is easily recognized by its peculiar sweetness of tone."

But, although there has been little or no alteration of its shape, the method of performing upon this instrument has been wonderfully improved within the last century. Although Corelli, and Tartini, and others had aimed to develop its powers, it was not until Haydn wrought a revolution in music, by introducing true nature into the science and displacing the dry rules of mere art, that the capabilities of this instrument began to be felt and understood. The cultivation of the female voice was not fairly commenced until about this period. From this beautiful auxiliary, it has been remarked, the violin received its first lessons in pathos and feeling, and in return it has taught the voice grace and execution.

To the violinist there is almost as much of beauty in the form of a perfectly modelled instrument as there is of sweetness in its tones; and as, in all cases of natural organization, this exterior beauty is intimately connected with the perfect efficiency of the object for the purposes for which it is intended,—the tone of the violin depending upon the exact proportion and perfect adjustment of its part,—it may well be questioned whether any conceivable alteration in the form and construction of the violin could by possibility be an improvement. Its contour is a sequence of lines of beauty; its model, in exact obedience to the rigid laws of proportion, falls into graceful profiles; in a word, it may be instanced as a faultless illustration of the beauty of fitness, even to the consummate grace of the scroll which terminates the neck of the instrument.

The oldest makers may be supposed to have determined their contours (as we have little doubt the Greek sculptors and architects did in those remains which exist only to foil the researches of formalists) by hand and by eye. We know not whether we are safe in saying that Anthony Straduarus was the first to reduce the principles of construction to communicable rule. What M. Vuillaume can so readily and so accurately determine in his "Copies" was, it is obvious, previously perfectly systematized in the

inventor's mind. Straduarus, besides the most rigid adherence to uniform principle in the outlines, maintained a system of gradients in the thicknesses of the parts throughout.

It is not every one who is aware that no less than fifty-eight pieces go to make up a violin; or, employing twice the reckoned number of pieces in the purfling, (as Choron and Lafago do in the "Manuel de Musique,") the number of parts amounts to seventy. These pieces are as follows: two for the back; two for the belly; six for the blocks at the top, bottom, and four corners; six for the sides; twelve for the lining for the sides; one bass bar; twelve for the purfling; one rest for tailpiece; one neck; one finger board; one tailpiece; four pegs; one nut; one button for the tailpiece; four strings; one catgut or wire to connect the tailpiece with the button; one sound post; one bridge.

The violin takes its name from the Italian word *violino*, which latter is a diminutive of *viola*. It has four strings, the lowest of which is tuned to G, the next higher to D, and the next to A, and the highest to E. These mounted strings are struck or played with a bow. The violin consists, like most other stringed instruments, of three parts—the neck, the table, and the sound board. At the sides are two apertures, and sometimes a third towards the top, shaped like a heart. Its bridge, which is below the apertures, bears up the strings, which are fastened to the two extremes of the instrument; at one of them by a screw, which stretches or loosens them at pleasure. The style and sound of the violin are the gayest and most sprightly of all other instruments; and hence it is, of all others, the fittest for dancing. Yet there are ways of touching it, which render it grave, soft, languishing, and fit for church or parlor music. The notes to which the violin is tuned are as follows:—

Most nations have used the clef G re sol on the second line to denote the music for the violin; but in France they use the same clef as the first line at bottom. The first method is good where the song goes very low, the second where it goes very high. Nothing can surpass the melting tones which the violin produces in the hands of a skilful performer. Yet common and well known as the violin now is as a musical stringed instrument, it still requires the greatest skill in the performer to make it agreeable. As the world goes, there is hardly a worse instrument than a fiddle. We had as lief hear the filing of a saw as ninety-nine hundredths of the vile scraping of catgut with which the world is annoyed. Our Puritanical ancestors had even a worse opinion of it than we of the present day—a fiddle in the meeting house was by them regarded as downright sacrilege. Now, all this bad odor grows out of a want of knowledge of and skill upon the instrument. As a simple instrument, it stands at the very head of the list: nothing can surpass it when in the hands of a skilful performer: for richness and variety of tone it is almost a miracle. Persons who have never heard it can have no idea of it. Talk to them of a fiddle, and they think of nothing but the unearthly scrapings, to the time of which, in their younger days, perchance, they "shaved it down" in the "Chorus Jig" or "Money Musk"—and as for going to hear it, commend them to a hurdygurdy sooner.

The London Musical World says, "The first violin that there is any account of was constructed in Italy about the year 1600; but those which are esteemed by musical men as most valuable were manufactured by the family of A. and J. Amati, at Cremona, in the year 1650. The violin was first introduced into concerts about two hundred years ago; and when first played upon it was pronounced a humbug, never capable of being used with any success."

Directions for playing the notes of the scale.— Hold the violin, with the left hand, about half an inch from the bottom of its head, which is generally termed the nut, and let it lie between the root of your thumb and fore finger, leaning the body of the instrument against the collar bone, with the elbow immediately underneath, that the fingers may more easily touch the strings.

The bow must be held between the thumb and fingers of the right hand, just above its nut, the hair being turned inward against the outside of the thumb, and the fingers placed at a little distance from each other upon the wood, so as to command the whole length of the bow.

4th string, G. 3d string, D. 2d string, A. 1st string, E.

Its harmony is from fifth to fifth; and it generally makes the treble or highest parts in concerts. Its play is composed of bass, counter-tenor, tenor, and treble; to which may be added a fifth part. Each part has four fifths, which rise to a greater seventh. In compositions of music, violin is expressed by V; double V denotes two violins. The word *violin* alone, stands for *treble violin*. When the Italians prefix *alto*, *tenore*, or *basso*, it then expresses the counter-tenor, tenor, or bass violin. In compositions where there are two, three, or more different violins, they make use of *primo*, *secondo*, *terzo*, or of the characters I, II, III; or 1st, 2d, 3d, &c., to denote the difference. The violin, we have said, has only four strings, each of a different thickness, the smallest whereof makes the E si mi of the highest octave of the organ; the second, a fifth below the first, makes the A mi la; the third, a fifth below the second, is D la re; lastly, the fourth, a fifth below the third, is G re sol. The natural compass of the strings of the violin may be seen by the following scale:—

There are four notes appertaining to the fourth, or biggest string; viz., G, A, B, and C. G is to be played open; A must be stopped with the fore finger of the left hand, almost at the distance of an inch from the nut; B with the second finger, about half an inch from the first; and C with the third finger, close to the second.

The third string has in a like manner four notes, which are as follows; viz., D, E, F, and G. D is struck open; E is to be stopped with the fore finger, about an inch from the nut; F with the second finger, close to the first; and G with the third finger, three quarters of an inch from the second.

The second string has also four notes; viz., A, B, C, and D. A must be struck open; B is to be stopped with the fore finger, about an inch from the nut; C with the second finger, close to the first; and D with the third finger, about three quarters of an inch from the second.

The first, or treble string, has five notes, which are as follows; viz., E, F, G, A, and B. Strike E open; stop F with the fore finger, very near the nut; G with the second finger, about three quarters of an inch from the first; A with the third finger, at the same distance from the second; and B with the little finger, half an inch from the third.

It will be necessary likewise to take notice that all the notes on the first or treble string, excepting E, are termed in alt., for distinction's sake; and that the first note on every string must be drawn with a down bow.

The distance from the nut to the bridge must be eleven inches and one tenth.

To produce a good tone, draw the bow gently upon the strings and parallel with the bridge. Then practise the first gamut.

When you are acquainted with the manner of stopping according to the first scale you may proceed to the scale of flats and sharps, and the manner of shifting the hand up the finger board, or neck of the violin.

DIATONIC SCALE OF THE VIOLIN.

4th string.	3d string.	2d string.	1st string.
-------------	------------	------------	-------------

0	1	2	3	4	0	1	2	3	4	0	1	2	3	4	0	1	2	3	4

OF TUNING THE VIOLIN.

The second string must be tuned A, and the other strings by fifths; as, for example:—

4th, or G.	3d, or D.	2d, or A.	1st, or E.
------------	-----------	-----------	------------

SCALE FOR TUNING THE STRINGS.

Rule 1st. Screw up the second string, A, to the same pitch with A on the flute or clarinet.

Rule 2d. Then tune D, the third string, five notes below A, the second string.

Rule 3d. Tune G, the fourth string, five notes below D, the third string.

Rule 4th. Tune E, the first string, five notes above A, the second string.

In the scale of shifts, the first, or half shift, is on the fifth line, or G. The second, or whole shift, is on the eighth line, or A. The double shift is on the seventeenth line, or D. The last shift is on the twentieth line, or E. In shifting, place the first finger on the line or letter at which the shift is marked, and then move the hand accordingly.

Observe that A \sharp and B \flat , D \sharp and E \flat , and G \sharp and A \flat , are not stopped with the same finger.

HALF SHIFT.

-------------	------------	------------	-------------

LAST SHIFT.

4th string.	3d string.	2d string.	1st string.
-------------	------------	------------	-------------

When the same tone may be produced in different methods and on different strings, observation and practice must determine which to take. By practice this will become easy.

The method of using the fourth finger instead of an open string will be often found convenient, and sometimes preferable, for its softness in accompanying a voice, and in piano passages when the open string would sound harsh.

The cipher, in the diatonic scale, signifies that the string, or note, must be played open; and the figures 1, 2, 3, 4 signify the 1st, 2d, 3d, and 4th fingers. When you find a figure placed under a note, and the same figure under the next, it denotes that the same finger must be stopped about half an inch farther than it was before.

The notes over or under a slur are stopped in two different ways—either on the string open, or on the next with the little finger; the latter will be found frequently convenient, and sometimes necessary.

When the same finger is used twice, which will be found necessary in the chromatic scale the second time it must be stopped about half an inch.

NUT.

Last Shift. Double Shift. Whole Shift. Half Shift.

Directions for bowing. — Press the bow on the strings with the fore finger only, and not with the weight of the whole hand; make use of the bow from the point to that part under the fingers. Observe in up bows, when the nut approaches the violin, to keep your hand bent downwards from the joint of the wrist, and bring the hand upwards.

In playing quick passages, let the motion proceed from the joints of the wrist and elbow, and not at all, or very little, from the joint of the shoulder; but in playing long notes, when the bow is drawn from end to end, the joint of the shoulder is also employed.

At last, be careful to draw the bow smooth and even from end to end without stopping, or else you cannot produce any harmonious sounds.

One of the chief beauties of the violin is the swelling and the diminishing of the sound. It is practised on long notes, in slow and expressive movements, in the following manner: begin the sound very soft, and, pressing the bow with the fore finger, increase the sound gradually to the middle of the note, and then decrease gradually to the end. Some notes should be softly sustained, others played quick and loud. These

distinctions, however, cannot be correctly and gracefully acquired but by long practice.

VIOLINIST. A performer on, or professor of, the violin.

VIOLINO PRINCIPALE. (I.) The first violin.

VIOLS. During the seventeenth century most of the musical families of England were in possession of a chest of viols, consisting of two trebles, two tenors, and two basses, with six strings upon each, all tuned alike by fourths and thirds, and the necks fretted. The compass and *accordatura* of this instrumental family, says Burney, were the following:—

Treble Viol.

Bass Viol, or Viol da Gamba. Tenor Viol, or Viol da Braccio.

These instruments had but a feeble vibration, and would make no way in a large room. The frets on the necks show how little trust was reposed in the ear of the performer, that the note, without their aid, could ever be stopped in tune. There existed no knowledge of the bow, no variety, and no accent; yet from such weak and rude beginnings, in accompanying madrigals upon these toneless instruments, the taste for instrumental music took its rise. For now the players found that they could dispense with the voices; and, as they got more and more interested in their own progress, they applied themselves to music specially produced for instruments, extending over a larger range of notes than the vocal compositions which they had previously used.

The people of England became much prejudiced in favor of the viol as an instrument of a gentleman; so much so that the progress of the violin, notwithstanding its manifest superiority, was most strenuously and obstinately opposed. Antony Wood was one of the first converts to the violin in England. "In the latter end of the year 1657 Davis Mell, the most eminent violinist of London, and clockmaker, being in Oxon, Peter Pitt, Will Bull, Kenelm Digby, and others of All Souls, as also Antony Wood, did give a very handsome entertainment in the tavern called the Salutation. The company did look on Mr. Mell to have a prodigious hand on the violin, and they thought that no person, as all in London did, could go beyond him."

Wood lived, however, to hear a rival of Mr. Mell. "Thomas Baltzar, a Lubecker born, and the most famous artist for the violin that the world had yet produced, was now (1658) in Oxon; and this day, July 24, Antony Wood was with him, and Mr. Edward Low, lately organist of Christ Church, at the house of William Ellis. Antony Wood did then and there, to his very great astonishment, hear him play on the violin. He then saw him run up his fingers to the end of the finger board of the violin, and run them back insensibly, and all with alacrity and in very good tune, which he nor any in England saw the like before."

The apparition of Baltzar must have been even more astonishing than that of Paganini in our own day. He surprised our innocent ancestors just when, after *sawing* madrigals, they fancied that they had been performing instrumental music.

VIOLIST. A performer or professor of the viol.

VIOLONCELLO. A small bass viol containing four strings, the lowest of which is tuned to double C. The strings are in fifths; consequently the pitch of that next the gravest is G gamut; that of the next, D on the third line in the bass; and that of the upper string, A on the fifth line. The violoncello was called the *violona* till the introduction of the double bass, which assumed that name. The notes to which the instrument is tuned are as follows:—

The violoncello of the Italians was properly

the English fifth violin, which was a little *oass* violin, half the size of the common bass violin, and its strings just half as thick and half as long, rendering the sound just an octave lower. Their *violone* was a double bass, almost twice as large as the common bass violin, and the strings larger and longer in proportion; and consequently its sound was an octave lower than that of the *bass* violin. It had a fine effect in great concerts.

The bass viol, or violoncello, was ever esteemed an excellent instrument, not only in concerts, but also for playing lessons.

The best position for holding the bass viol is for the lower part of it to rest on the calves of the legs, the edge of the back to rest on the left leg; by which means it turns the strings of the bass convenient for the bow hand, and places it in the most convenient position for playing.

COMPASS OF THE STRINGS.

The bass viol is a musical stringed instrument, of the same shape as the violin, but much larger. It is struck with the bow as the violin is; has the same number of strings; and has eight stops, which are subdivided into semi-stops: its sound is grave, and has a much nobler effect in concert than that of the violin.

At first pay no attention to the letters which are sharpened and flatted. Learn only the places of the *large* letters as they stand upon the strings.

The four letters, A, D, G, and C, at the nut, are called open notes, as each string, when put in motion by the bow, produces its respective tone without placing any of the fingers upon it.

The other letters are called stopped notes, because it requires the assistance of the fingers to producing any of their particular tones.

Observe the distance between the letters strictly, and whether they be whole tones or semi-tones.

By committing the following table to memory, you will more readily learn to stop in tune:—

TABLE.

From C to D	is a whole tone.
" D to E "	" " "
" E to F "	semitone.
" F to G "	whole tone.
" G to A "	" " "
" A to B "	" " "
" B to C "	semitone.

When you have learned the places of the *several* letters upon the strings, endeavor to learn how to tune the strings as in the following scale.

One of the principal beauties of the bass viol is expression; such as the *piano*, the *crescendo*,

the *forte*, &c. All this is done by a pressure of the bow, more or less, as the passage requires; and music without it would be like a painting without shades to show it.

The first thing to be learned is the diatonic scale as it is here subjoined:—

DIATONIC SCALE FOR THE VIOLONCELLO.
C string. G string.

In all music where the notes go up beyond D, you must use the half shift, &c.

When the same tone may be produced in different methods and on different strings, observation and practice must determine which to take. By practice this will become easy.

SCALE FOR TUNING THE STRINGS.

The strings must be tuned the distance of a fifth from each other.

Rule 1st. Screw up the first string, A, to the same pitch with A on the flute or clarinet.

Rule 2d. Then tune D, the second string, five notes below A, the first string.

Rule 3d. Tune G, the third string, five notes below D, the second string.

Rule 4th. Tune C, the fourth string, five notes below G, the third string.

The first string must be tuned A, and the other strings by fifths, as in example.

The strings may be also tuned by the voice, for which the intermediate small notes are inserted.

If the fifths between the strings be perfect,— Then A, the first finger, third string, will be an eighth below A, first string; and D, the third finger, first string, will be an eighth above D, second string; and D, the first finger, fourth string, will be an eighth below D, second string; and G, the third finger, second string, will be an eighth above G, third string; and C, the third finger, third string, will be an eighth above C, fourth string.

EXAMPLE OF SOUNDING BY EIGHTHS.

The bow must be held a short distance from the nut, and the greater part of the first joint of all the fingers, except the fourth, must reach over, but not so far as to touch the end of the thumb; also observe that the back or stick of the bow must incline towards the finger board, and must be drawn from one end to the other in a parallel line, about two inches and a half from the bridge.

CHROMATIC NOTES FOR THE VIOLONCELLO.

PLAIN SCALE OF THE FINGER BOARD.

The number of notes in each bar ought to be attended to; for if you have 2, 4, 6, 8, or any equal number, in playing the first down, the next up, and so on alternately down and up, you will, of course, finish with an up bow, and be prepared to begin the next bar with a down bow;

but when you find the number unequal, such as 3, 5, 7, 9, &c., you should endeavor to play the two shortest notes with one stroke of the bow, and, in that case, you will find yourself where you would if the number had been equal. Sometimes you will find a succession of bars with an unequal

number of notes, particularly in triple time, which frequently consists of three notes in a bar; in such a case you should bow alternately down and up, by which the first note of every second bar will come with a down bow.

In 1834, C. E. Clark, of Dansville, New York, invented an improved violoncello, which he called *double toned*. The invention did not relate to additional strings, — the outside is unaltered, — but by the combination of steel wires, brought to an extraordinary degree of tension and fitted in the interior of the instrument, a poor and indifferent violoncello can be made much better, if not equal to the best, in depth and fulness of tone. John Holmes, of Holmes's Hole, Martha's Vineyard, has applied the same improvement to violins.

VIOLON. (F.) A violin.

VIOLONO. (I.) The name originally given by the Italians and French to the violoncello, but afterwards transferred to the double bass, to which instrument it is still applied. Its pitch is an octave below that of the violoncello, and its true use is to sustain the harmony; in which application of its powers it has a firm and noble effect. See **DOUBLE BASS**.

VIOTTI, GIOVANNI BATTISTA. This celebrated violinist was born at a village in Piedmont in 1753. He was a pupil of Pugnani, and at an early age held the office of first violin in the Chapel Royal of Turin. About the year 1778 he left Italy with the intention of travelling through Germany, and passed some time at Berlin; whence he removed to Paris, making his *début* at the *Concert Spirituel* there in the spring of 1782. He on that occasion performed a concerto of his own composition, in which the Parisians observed an originality of style that appeared to fix the limits of this kind of performance — a fruitful imagination, a happy freedom, and all the fire of youth, attempered by a pure and noble taste. The audience applauded the beautiful movements in this concerto, which from the very first bars announced the genius of the composer, and that development of original thought where the progression of sentiment raises the effect to the highest degree. With respect to Viotti's execution the enthusiasm was extraordinary; the finish of his *adagio*, the brilliancy of his *allegro*, the energy and grace of the ensemble, won the favor of every hearer. The queen (Marie Antoinette) now desired that Viotti should come to Versailles to perform at one of the court concerts: the day was fixed, most of the nobility had arrived, and the music had commenced with a solo by Viotti, the first bars of which commanded the greatest attention, when suddenly a cry was heard in the adjoining apartment, "Make room for the Count d'Artois;" which interruption and the tumult occasioned by the count's entry so provoked Viotti that he put his violin under his arm and left the palace, to the great scandal of all the spectators. Very shortly after this time this singular character determined to play no more in public; his friends, however, were still allowed the privilege of hearing him in private concerts. In 1790 a deputy of the constituent assembly, an intimate friend of Viotti, was lodging on a fifth floor, and requested Viotti to give a concert at his apartment. He consented, and the first nobility of France were invited,

when Viotti remarked, "We have long enough descended to them; they must now ascend to us." Viotti had a talent for repartee. One day the minister Calonne asked him which violin was the most true. "That," replied he, observing the minister closely, "which is the least false." A violinist named Puppo being in the habit of boasting that he was a pupil of Tartini, which was known not to be the case, Viotti, being once in his company at a musical party, together with M. Lahoussaye, who was a real pupil of that great master, asked Lahoussaye to play something in the style of Tartini, observing at the same time to Puppo, "Listen well, sir, to M. Lahoussaye, who will give you a good idea of Tartini's manner of playing."

Viotti remained in France till the year 1790, when the horrors of the French revolution chased away the Muses, and Viotti in their train. He next went to England and made his *début* at Salomon's concert with a degree of success equal to what he had experienced in France. Soon afterwards he became concerned in the management of the King's Theatre, and subsequently succeeded W. Cramer as leader of the opera orchestra. He thus proceeded, continually reaping professional honors of the highest class, till the year 1798, when he very unexpectedly received an order from government to quit England without delay, being suspected of partaking and encouraging those revolutionary principles which, at the above period, were alarmingly spreading throughout England. No good evidence has, however, been since adduced of Viotti's having really participated in such principles; and it has been thought in no way credible that a man of his known mild disposition should have used the heinous and sanguinary expressions against the highest personage in the realm which were at the time publicly imputed to him. From London Viotti proceeded through Holland to Hamburg, in the neighborhood of which city he lived in the strictest retirement, at a place called Schoenefeld. Nor was he idle there; for he not only put the finishing hand to the accomplishment of the youthful violinist, Pixis, who with his father resided at Schoenefeld during a whole summer for the express purpose of receiving Viotti's valuable instructions, but he also published in Hamburg "Six Duets for Violins." To the work is prefixed his portrait; also a preface, in which are these words: "This book is the fruit of the leisure afforded me by misfortune. Some of the pieces were dictated by trouble, others by hope." He remained in the neighborhood of Hamburg till the year 1801, when, the revolutionary storm having blown over, he was allowed to return to London. He did not, however, return to the public duties of the musical profession, but he performed at private concerts, and at length became infected, to use Gerber's words, "like many other first-rate artists, with the British spirit of traffic, and embarked as a partner in the wine trade." In this way he paid his devotions for some years both to Mercury and Apollo; but with so little success, that, at length, he lost his entire fortune in business, and was obliged to solicit some trifling place at the French court. Louis XVIII. kindly proposed to him the direction of the Royal Academy of Music, upon the duties of which office he entered, but found the situation too arduous for his age and state of health, and

shortly afterwards retired on a small pension. In the year 1822 he once more returned to England, with the view of passing the remainder of his days in quietude; which, however, he did not long enjoy, as he died in London in March, 1824. M. Eymar has thus described some of the moral qualities of Viotti: "There never existed a man who attached such great value to the simplest gifts of Nature; there never was a child who more ardently enjoyed them. A violet found under the grass would transport him with joy, or the gathering of fresh fruit render him the happiest of mortals: he found in the one a perfume ever new, in the other a flavor always more and more delicious. His organs, thus delicate and sensible, seemed to have preserved the impressibility of early youth; whilst stretched on the grass, he would pass whole hours in admiring the color or inhaling the odor of a rose. Every thing that belonged to the country was, for this extraordinary man, a new object of amusement, interest, and enjoyment: all his senses were excited by the slightest impressions; every thing around him affected his imagination; all nature spoke to his heart, which overflowed with sentiment." We are also indebted to M. Eymar for the knowledge of the "*Ranz des Vaches*," which Viotti used to play with emotion on the days he consecrated to music. At M. Eymar's request, Viotti copied for him this air, accompanying the gift with the following lines: "This '*Ranz des Vaches*' is neither the one which our friend J. J. Rousseau has favored us with in his works, nor is it that of which M. De la Borde speaks in his book on music. I am not aware that it is known to many persons; all I can say is, that I have heard it in Switzerland, and that I learned it in a way ever to be impressed in my memory. I was walking alone, towards evening, in one of those gloomy spots where one never wishes to speak; the weather was beautiful; the wind, which I dislike, was still; every thing was calm and analogous to my sensations; and I felt within me that melancholy which has ever been present to my mind at the hour of evening, and will remain as long as I exist. My thoughts were wandering, and my steps followed them; my heart gave the preference to no particular object, but it was prepared for that tenderness and love which have since caused me so much pain and taught me such real happiness. My imagination, idle, if I may use the expression, from the absence of the passions, was without motion. I climbed and descended the most imposing steep, till at length chance led me to a valley, to which at first I paid no attention; and it was not till some time afterwards that I perceived it was beautiful, and such as I had often read of in the works of Gessner. Flowers, grass, a stream, all were there, and all formed the most harmonious picture. At length, though not fatigued, I mechanically sat down upon a piece of rock and gave myself up to that profound reverie which I not unfrequently indulge in, and in which my ideas wander so as to make me forget that I am an inhabitant of the earth. I know not what it is that produces in me this species of ecstasy, whether it be the sleep of the soul, or an absence of the thinking faculty; I can only say that I delight in the feeling, and willingly abandon myself to it. On this stone then was I sitting, when on a sudden my ear, or rather my existence, was struck by

sounds, now sudden and short, and now again prolonged and slower, which proceeded from one mountain and flew to the other without being repeated by the echoes. It was a long strain, and a female voice mingled in perfect unison with the sad though sweet and affecting sounds. Struck as if by enchantment, I shook off my lethargic sensations, and, whilst I intently listened, learned, or rather engraved on my memory, the '*Ranz des Vaches*,' which I now send you. I have thought it most characteristic to note it down without bars: it is of a nature to be perfectly without restraint; regularity of time would destroy its effect; for its wild sounds prolonging themselves in the air, the time they took to reach from one mountain to another could not be determined. It is then depth of thought and feeling which ought to guide us in the execution of this air, rather than rhythm and measured cadence. This '*Ranz des Vaches*,' played in strict time, would be unnatural, and lose its simplicity. To produce its true effect, imagination must transport the performer to the mountains where the melody is indigenous; whilst executing it in Paris, it must be felt as in Switzerland. It is thus that, in some moments of inspiration, I have myself played it on my violin, accompanied by Mlle. Montgerault."

With respect to the compositions of Viotti, he published first, for bow instruments, "Twenty-five Concertos for the Violin," which were engraved in successive numbers in Paris from the year 1785, the twentieth number being published there, by Pleyel, in 1799. It is sufficient to state in their praise that numerous subsequent editions of them have been published at London, Vienna, Berlin, Offenbach, &c. 2. "*1me. 2de. Sinfonie Concertante p. 2 Violons princip. av. Orchest.*," Paris, 1788. 3. "*6 Quatuors Concert. p. 2 V., A., et B., Liv. 1 et 2*," Op. 3, Paris. 4. "*6 Trios à 2 V. et B.*," Op. 2, Paris. 5. "*36 Duos p. 2 V.*" 6. "*12 Solos à V. et B., Liv. 1 et 2*," Op. 4, Vienna. 7. "*Recueil d'Airs connus et variés p. le V. et B.*," Paris. 8. "*3 Duos p. 2 V.*," Op. 29, Offenbach, 1800. Piano-forte: probably the only genuine piece for this instrument written by Viotti is the "*Concert p. le Clav. à 5 et 6 Octaves*," Op. 24, Offenbach. The other concertos and sonatas for this instrument are probably only his violin music arranged for the piano by other masters. Vocal: the only two vocal pieces composed by Viotti are, 1. "*Aria: 'Consola amato bene, &c., c. Accomp. d'Orch.*," Paris; and 2. "*Aria: 'Chè gioja, chè contento, c. Accomp. d'Orch., No. 289*," Paris. Dussek published piano-forte variations to these airs. The principal pupils of the Viotti school are Rode, Alday, Libon, Labarre, J. P. Cartier, Vacher, Pixis, Mori, &c.

VIRELAY. The name of an old country ballad, or song, invented by Oliver Bassell, of Vaudeville, and hence also called a vaudeville. See VAUDEVILLE.

VIRGINAL. A stringed and keyed instrument, resembling the spinet; formerly in much esteem, but now entirely out of use.

VIRGULA. (L.) The name of one of the ten notes used in the middle ages.

VIRGULUM. (L.) The term formerly applied to that part of a note now called the tail or stem.

VIRTU, VIRTUOSITA. (I.) Taste and address in performance.

VIRTUOSO. (I.) One who feels delight in, and possesses taste for, the musical science.

VISCONTI, GASPARO, an instrumental composer, and probably violinist, was born at Cremona. He resided in England at the beginning of the last century. Some of his instrumental music was published at Amsterdam.

VITALI, ANGELO, of Modena, a good composer, brought out at Venice, in 1680, the music of the drama "*Tomiri*."

VITALI, FILIPPO, horn at Florence, was a chanter in the Pontifical Chapel in 1636. He published several works of sacred music at Rome.

VITALI, GIOVANNI BATTISTA, a native of Cremona, lived at the end of the seventeenth and beginning of the eighteenth centuries. He enjoyed a high reputation in Italy as a singer. He was also esteemed as a church and instrumental composer.

VITE. (F.) Quick, lively.

VITO, PADRE. A Portuguese ecclesiastic, produced at the *Concert Spirituel* at Paris, in 1781, a *Stabat Mater*, in which are found two movements of great beauty, namely, the duo "*O quam tristis*," and the movement, "*Pro peccatis*." This *Stabat* was printed in London in 1783.

VITTORI, LORETTO, born at Spoleto, a Roman chevalier, belonged to the Pontifical Chapel at Rome, as a soprano, in 1662. He was also a good composer. Amongst his works was a favorite opera entitled "*Galatea*," which he published and dedicated to Cardinal Barbarini.

VITTORIA, TOMASO LUDOVICO DA, chapel-master of the Church of St. Apollinare at Rome, and afterwards a singer in the Pontifical Chapel, was an excellent harmonist. He printed at Rome, in 1583, a set of masses, which he dedicated to Philip II., King of Spain, and two years afterwards another set, a copy of which is preserved in Dr. Aldrick's collection at Christ Church, Oxford. His burial service, or "Mass for the Dead," was much celebrated, as were also his "Penitential Psalms." Peacham, who styles him "a very rare and excellent author, whose vein was grave and sweet," informs us that he quitted Rome, and resided, about the year 1594, at the court of Bavaria.

VIVACE. (I.) A term implying that the movement to which it is prefixed is to be sung or played in a brisk and animated style.

VIVACISSIMO. (I.) Extremely lively. The superlative of *vivace*. See that word.

VIVALDI, ANTONIO, an Italian ecclesiastic and chapel-master at the Conservatory of La Pietà at Venice, was very celebrated both in Italy and Germany in the first half of the last century. He held during some time the situation of chapel-master to Philip, landgrave of Hesse-Darmstadt, but, from the year 1713 to his death, never quitted Venice. He was esteemed as a great master of the violin, and also an excellent writer for that instrument. It is said that, one day, whilst saying mass, a theme for a fugue suddenly struck him, when he immediately quitted the altar

where he was officiating and hastened to the sacristy to write down the theme, afterwards returning to finish the mass: for this conduct he was brought before the Inquisition, who happily considered him only as a musician, that is to say, as a madman, and confined their sentence to the forbidding him to say mass in future.

VIVIANI, GIOVANNI BONAVENTURA, of Verona, was chapel-master to the Emperor of Germany, at Innsbruck, towards the close of the seventeenth century. We know only the third of his published works, which is entitled "*In-treccio Armonico di Fiori Ecclesiastici*," Augsburg, 1676. He also wrote for the theatre, and amongst his operas was "*Astiage*," composed in 1677.

VIVIER, —, has long enjoyed the reputation of being the most extraordinary performer on the horn on the continent of Europe. M. Vivier has a double claim to notice — first, as a very fine player, with a beautiful mellow tone, execution remarkable for finish and vigor, and a style of irreproachable elegance and correctness; next, as the inventor, or rather the discoverer, of properties hitherto unknown or unrecognized in the instrument. The unwieldy and unmanageable nature of this fine orchestral instrument has ever been the stumbling block of professors and the puzzle of theorists. The peculiarity of its structure limited its scale of open notes to the harmonics producible upon instruments of vibration. For example, the scale of the horn — suppose the key of C — is C, G, E, and B flat; C, D, E, F, F sharp, G; which notes only could be produced without difficulty. Skilful cornists, however, brought the shut notes, as they are called, so much under command that they have been generally available in melodies and passages, but never so much so as to conceal the difference of tone. Composers have been compelled to restrict their use of the horn to suit this deficiency, and, till Weber and Spohr made instrumentation more complicated, confined themselves to the use of the open notes. But by Vivier's discovery, presuming it possible to be brought into common use, the scale of the horn will be doubled, all the "shut notes" being producible with as much ease and with as full a tone as the open ones. Another property discovered by M. Vivier is the possibility of playing two, three, four, and even five notes in harmony; and these combinations are not merely confined to simple common chords and their inversions, but to sevenths and other discords, with the power of modulating from one key to another. Last, and most wonderful of all, is the fact that M. Vivier can play a melody while he is sustaining a harmony.

VIVO. (I.) Animated, lively.

VOCAL. An epithet applied to those musical sounds which proceed from the human musical organs; also to music composed for the voice, and to performances consisting of singing.

VOCAL APPARATUS. Respiration is the first operation in the production of sound; the lungs being the principal operators, furnishing, like the bellows of an organ, the air necessary for the formation of sound. The lungs, after receiving the air, exhale it through the bronchial tubes, which are several in number, gradually meeting as they rise, until they resolve themselves into

two large tubes, which form the bifurcations of the windpipe; this latter is about an inch in diameter. Above the windpipe, and communicating with it, is the larynx, composed of four parts, or pieces, which have the power of playing one into the other, or of moving together as a whole, as in the gradual raising or lowering of the voice; these several parts are four in number, and are called cartilages: the thyroid, circoid, and two arythenoids. The larynx is placed on the fore part of the throat, and can be seen and touched from the outside, (Adam's apple.) Two horizontal membranes are placed one on either side of it, called the vocal chords; the opening between them is of a triangular form, less than half an inch wide, and is called the glottis; these two membranes are often called the lips of the glottis, being, in the utterance of musical sound, what the lips are to the mouth, and the only passage through which the air passes to and from the lungs. Placed just above the vocal chords is the superior glottis. The larynx terminates in a wide opening, formed by two folds of the mucous membrane, which opening is covered during the period of deglutition by a small tongue called the epiglottis, situated just at the root of the tongue. The cavity, which may be seen at the back of the throat, and which extends as far forward as the roof of the mouth, is the pharynx. It is here that the voice first impinges, in passing from the larynx through the glottis; the larynx produces the sound, the pharynx modifies it. The pharynx communicates above with the nasal apparatus. The palate, or upper part of the mouth, is furnished with a soft, fleshy curtain, from the centre of which hangs the uvula, (erroneously termed, in common parlance, the palate,) thus forming a sort of double arch. Pendent from this uvula are two fibres, called the posterior props; and in front of them, also pendent from the uvula, two smaller fibres, forming a triangular space, between which are placed the tonsils.

This anatomical knowledge is of great importance, and should form a principal part of the study of the singer, being necessary in order to comprehend the different musical sounds.

VOCALIST. A singer, male or female.

VOCALITY. Quality of being uttered by the voice.

VOCALIZE. To practise singing on the vowels, chiefly the Italian A.

VOCAL MACHINERY OF BIRDS. It is difficult to account for so small a creature as a bird making a tone as loud as some animals a thousand times its size; but a recent discovery has shown that, in birds, the lungs have several openings, communicating with corresponding airbags, or cells, which fill the whole cavity of the body from the neck downwards, and into which the air passes and repasses in the progress of breathing. This is not all: the bones are hollow, from which airpipes are conveyed to the most solid parts of the body, even into the quills and feathers. The air, being rarefied by the heat of their bodies, adds levity. By forcing the air out of the body, they can dart down from the greatest heights with astonishing velocity. No doubt the same machinery forms the basis of their vocal powers, and at once resolves the mystery.

VOCAL SCORE. An arrangement in notes

of all the separate voice parts, placed in their proper bars under each other, and used by the vocal conductor.

VOCE. (L.) Voice.

VOCE DI CAMERA. An expression applied by the Italians to a voice the strength or quality of which is only calculated for chamber performance.

VOCE DI PETTO. (L.) The natural, or chest voice.

VOCE DI TESTA. (L.) The head voice. A *false* *setto*, or feigned voice.

VOCE MUSICALE. The appellation by which the Italians formerly distinguished the tonic, or major key note; in solmization called *do*.

VOCE SOLA. (L.) An expression implying that the movement, or passage, over which it is written is to be sung without accompaniment.

VOGEL, JOHANN CHRISTOPH, born at Nuremberg in 1756, was a pupil of Kiechel. Very early in life he went to St. Petersburg, and about 1776 left Russia for Paris, where he became second hornist in the service of the Duke de Montmorency. At that early age he had already composed much music, principally, however, for others, under whose name it was published. Immediately on his arrival in France he took the compositions of Gluck for his models; but it was not till 1786 that he hazarded submitting to the public his first opera, "*La Toison d'Or*," which he dedicated to Gluck, who praised it highly. Vogel died of a putrid fever in 1788, at the early age of thirty-two. At his death he left an opera completed, entitled "*Demophon*," the music of which was an additional proof of his dramatic talent. The editors of the French Dictionary of Musicians state that, in the year 1791, on the day devoted to the performance of a church service, the overture to "*Demophon*" was played in the Champ de Mars by twelve hundred wind instruments, with an unparalleled effect.

VOGLER, JOHANN CASPAR, court organist and burgomaster at Weimar, was born near Schwartzburg in 1698. He was one of the best organ pupils of Sebastian Bach. In 1735 he stood for the place of organist at Hanover, which he obtained in preference to various other candidates. He did not, however, take possession of the office, as his prince constantly refused to give him his discharge; but, as an indemnification, nominated him burgomaster as above, to which place was attached considerable pecuniary emolument. He died at Weimar about the year 1765.

VOGLER, ABBÉ GEORG JOSEPH. This celebrated musician was born at Würzburg in 1749. His predilection for music discovered itself at a very early age, which induced his father, at that time a violin maker, to procure his son a piano-forte, the instrument to which he was most partial, as also an experienced teacher. The boy's zeal and talent soon made him equal to his instructor, whilst at the same time he taught himself to play on several other instruments, attaining a high degree of perfection on the violin especially. His piano-forte had a pedal, which was not at that time common. On the action of this pedal Vogler made such remarks as soon led him to propose improvements in its construction. H.

likewise used a new method of fingering the piano, which he tried with success on several of his first pupils. Without neglecting his other studies at the seminary of Manheim, where he was then educating for the church, he also made at that time several successful attempts at composition, and established an amateur concert, at which, under his direction, the works of the best composers were performed. The sublime music and religious musical festivals of the Jesuits, both at Würzburg and at Bamberg, where he next went to study the civil and canon law, not a little contributed to his ardent love of the musical art and to the excitement of his genius. Thus accomplished as an artist, he was now desirous of serving his country by some appointment: as, however, there was no immediate prospect of this, he proceeded again to Manheim, where he experienced such marked approbation that the elector, Carl Theodor, sent him to Padre Martini, at Bologna, to study counterpoint. But as he found the principles he had hitherto adopted were not in unison with the system of this master, he went to Padua, where Padre Vallotti resided, of whose newly-discovered system he had already heard on his arrival at Venice. Whether Vallotti had or had not ever before imparted this system to a pupil, Vogler certainly received instructions in it from him for the space of seven months; at the end of which time the impatience of the pupil was such that the Padre, who was eighty years of age, thus addressed him: "You seem to wish to know in five months that which has cost me fifty years to attain!" and gave up his office of teacher. After Vogler had written recitative at Venice with Hasse, melodies at Rome with Mislivecsek, and, lastly, choruses and fugues under the direction of Vallotti, at the same time studying theology at Padua, he returned, in 1775, to Manheim, where he succeeded to the direction of the Electoral Chapel. Of his subsequent travels, it is to be observed that he pursued them in Spain, Africa, Asia, and the Armenian isles, with a view of obtaining the ancient, pure, and unperverted sacred music of those countries. He first submitted his new system of music to the approbation of the Academy of Sciences at Paris in 1780, and then to the Royal Academy of London in 1783; and although, in 1786, he held the situation of chapel-master at Stockholm, this did not prevent him from indulging his love of observation in foreign countries. In 1790 we find him in London, where he was heard with much applause on his newly-invented orchestron, an instrument something like the panharmonicon. By his performance on this instrument at the Pantheon he realized one thousand pounds sterling. The same year he returned to Geruany, where his orchestron was also heard with admiration at Coblenz and Frankfort. At the latter place his second concerto, including Handel's celebrated "Hallelujah" arranged as three distinct themes, astonished his hearers. From hence he went to Suabia, and, in Etzlingen, was presented with the *wine of honor*. In the year 1792 he was again at Hamburg, where he was heard several times in the churches. After his return to Stockholm he commenced, in 1793, reading lectures on his introductory system of harmony, and pursued those courses in two successive years. In the year 1795 he again undertook a journey to Paris, in order to hear the revolutionary music of

that place. Of this opportunity he also availed himself to give a concert on the organ at the Church of St. Sulpice for the benefit of the poor, which produced fifteen thousand livres. On returning through Amsterdam, he took his orchestron, which had then become much worn and decayed, to Stockholm; he there hired a spacious saloon, with three adjoining rooms for domestic purposes, and had his instrument erected, in 1796, in one of the smaller rooms; it being so placed that the whole power of its sounds vibrated against a door, by opening or closing of which the pianissimo, crescendo, and fortissimo of the instrument could be completely produced. Some other curious mechanism was also contrived to regulate the sound of the orchestron in the saloon. At the end of the year 1796, when the ten years of his engagement as Swedish chapel-master had expired, he had the satisfaction to see that the pupils in instrumental music, belonging to the royal music school which he had established, had increased to the number of seventeen, and in that year the academy had an orchestra of twenty-eight Swedes, of whom four, whose united ages did not exceed thirty-six years, executed in public a quartet composed by Vogler; besides this, several entire operas were performed by mere children of the singing school, which was then under the direction of Haffner, as its chapel-master, and of the son of the famous Piccini, as singing master. From the happy results of his various exertions to promote the music of Stockholm, it is no wonder that the period of his service was extended by the duke regent to the eleventh year. At length he quitted Stockholm entirely in 1799, with a pension for life of five hundred Swedish dollars. He next proceeded to Copenhagen, where he produced his very successful opera of "*Hermann von Unna*." He then continued for some time at Altona, during the publication of some of his sacred music, and, in the summer of the year 1800, visited Berlin; here he gave three concerts on the organ, the first in the garrison church, and the second and third in the Church of St. Mary. On these occasions he always regulated his organ according to his own system of simplifications, which system met with such approbation in Berlin that he received a commission from the king to build quite a new organ according to that plan at New Rupin; he at the same time much assisted the amateur theatre at Berlin by bringing out his "*Hermann von Unna*." He quitted Berlin at the end of the year 1800. The next intelligence concerning him was from Prague, where, in 1801, he delivered his introductory discourse as a public teacher of music; the question proposed by him being, "What is an academy of music?" Previously to his pronouncing this discourse his patent of appointment by the imperial government was read, upon which Councillor Ungar declared his nomination to the governorship of the institution. He then advertised his lectures on theoretical music, and in these bills styled himself "*Protonotarius apostolicus*, formerly elect. palat. consistory councillor, first chapel-master and public teacher of music, and pensioner of his majesty the King of Sweden, and now musician extraordinary at Prague." It is said that he delivered these lectures, at first, to a numerous auditory. In 1803 he left Prague for Vienna, being invited to write an opera for

one of the theatres there. When the war broke out in 1804 he left Austria for Bavaria, where at Munich, on occasion of the nuptials of the princess, he represented his opera of "*Castor und Pollux*" with great success; he afterwards made a tour to Frankfort and the neighboring places, and was then invited to Darmstadt by the grand duke. Here he met with much encouragement, the grand duke immediately engaging him in his service, with a salary of three thousand florins, and free board and lodging; he also conferred on him the dignity of privy councillor of spiritual affairs; at the same time he presented him with the order of merit of the first class, and appointed him director of the court orchestra.

We must not omit to observe that the two able musicians, Winter and Knecht, were pupils of Vogler's music school at Manheim. It should likewise be noticed respecting his orchestration that he worked four years on its arrangement. In 1797 he prepared in Stockholm another new invented instrument, named the *organo chordinum*. It was manufactured by an able pianoforte maker of that town named Rackwitz, and, it is said, afterwards excited much admiration, so much so that several of them were ordered. The following are amongst the Abbé Vogler's principal works. Books, essays, &c.: "*Bemerkungen über die der Musik vortheilhafteste Bauart eines Musikchors*;" "*Aesthetisch kritische Zergliederung des wesentlich vierstimmigen Singesatzes des vom Hrn. Musikdirector Knecht in Musik gesetzten ersten Psalms*;" "*Verbesserung der Forkelschen Veränderungen*," Frankfort, 1793; "*Introduction to the Art of Harmony*," Stockholm, 1795, in the Swedish language; "*Organisten-Schule mit 90 Schwedischen Chorälen*," Stockholm, 1797; "*Klavier und Generalbassschule*," Stockholm, 1797; "*Choral System*," Copenhagen, 1800; "*Aeusserung über Hrn. Knechts Harmonik*;" in this work he explains his simplification system; "*Handbuch zur Harmonielehre*," Prague, 1802; "*Vergleichungsplan der vorigen mit der nun umgeschaffenen Orgel im Hoftheater zu München*," Munich, 1807; "*Ueber die harmonische Akustik und ihren Einfluss auf alle Musikalische Bildungszweige*," Munich, 1807; and "*Gründliche Anleitung zum Klavierstimmen für die, welche ein gutes Gehör haben*," Stuttgart, 1807. Operas: "*Albert der dritte von Bayern*," in five acts, Munich, 1781; "*Gustavus Adolphus*," Stockholm, 1791; "*Castor und Pollux*," Manheim, 1791; "*Hermann von Unna*," Copenhagen, 1800; and "*Samori*," grand opera, Vienna, 1804. Amongst his chamber music, which is chiefly for the piano-forte with violin accompaniments, we may distinguish a curious work entitled "*Polymelos, ou Caractères de Musique de différentes Nations, pour Clav. avec 2 V. A., et B.*," Speier, 1792. Amongst his church compositions are many beautiful hymns, and a delightful motet entitled "*Rorate cæli*." This is printed, with the Latin and also English words, in the "*Vocal Anthology*."

VOGT, AUGUST GEORG, a celebrated oboist, was born at Strasburg in 1781. In 1808 he became adjunct professor of the hautboy in the Conservatory at Paris. In 1825 the Philharmonic Society called him to London. In 1829 he returned to Paris, where he received the decoration of the Legion of Honor. He composed concertos, *airs variés*, and fantasias for the oboe.

VOICE. The sound, or sounds, produced by the vocal organs in singing. There are six species of the human voice, which rank in the following order: the bass; the baritone, or tenor bass; the tenor; the counter tenor; the mezzo soprano; and the soprano, or treble. A good bass voice generally extends from F or E, below G gamut, to C or D, above the bass clef note; the baritone from about G gamut to F above the bass clef note; the tenor from C above G gamut to G, the treble clef note, or A above it; the counter tenor from E or F above G gamut, to B, or C, above the treble clef note; the mezzo soprano from A or B, above the bass clef note, to E or F, above the treble clef note; and the soprano, or treble, from C above the bass clef note to A, B, or C, in alt., and sometimes higher. To *voice* a pipe, is to bring it to its intended tone or power; and *to voice* is an expression applied by organ builders to the regulating of the tone of a pipe; but there is no instrument that can well compare with the human voice, or which is quite similar to it. All musical instruments endeavor to imitate it, and their glory consists in the nearness of their approach to this standard. The violoncello, the alto, the violin, are those which have best succeeded in this imitation. As an exception to this rule of superiority stands the organ; which, although not so similar to the voice as the above-mentioned instruments, comes first after it in power and effect; rendered superior, in its grandeur of expression and deep-toned melody, to any other instrument, by combining within itself the peculiarities of all, from the deep bass to the birdlike flute. The power of imitation is possessed by the human voice in an eminent degree; for not only, when cultivated, can it produce the tones of many instruments, but the natural voice can imitate, with more or less study, almost all sounds with which the ear is acquainted.

To take proper care of the voice is of so much importance to every singer that the greatest attention should be paid to all the means for its preservation and to every species of indisposition that tends to injure it. There are but few maladies that affect the organs of the voice alone, as the greater part of the troubles to which it is liable are merely symptoms or parts of other complicated diseases. In every case of this kind a judicious singer will at once seek the advice of an experienced physician, without making the matter worse by trying to cure himself or by resorting to quacks.

One of the most common affections of the voice is hoarseness, causing it to lose in volume of sound and in distinctness and precision of tone. The origin of hoarseness is often catarrhal, in which case it must be treated as a catarrh. It is, however, frequently caused by speaking or singing too much; when it arises from the dryness of the larynx, and the consequent relaxation of its muscles. In this case singing must be postponed for some time, to give room for those parts to recover the necessary power and humidity. They may also be assisted in it by the application of gently softening and moistening remedies, such as gargling with lukewarm elder tea and honey. Hoarseness is very often the consequence of a faulty respiration. When the vowel tone is not brought out with proper economy of breath, when it is produced more by a forcible discharge from off the

lungs than by a quiet emission of the breath, the necessary moisture is driven away from the vocal chords, and an irritation is felt, which produces frequent coughing. This cough takes away the flexibility of the voice, and may destroy its organs prematurely; nay, it may be very detrimental to the chest itself. Hoarseness from swallowing very fat meats or drinks will lose itself in a short time after this stimulus has ceased.

Sometimes it is the symptom of more serious indisposition, especially of consumption. But upon this we can only so far touch as to give the following rules: If hoarseness comes often, and from every little cause, from every little exertion of the voice, there is reason to be seriously alarmed for the chest, and carefully to avoid every thing that might hurt it; for this often repeated and continued hoarseness is a certain sign, if not of decided consumption, at least of great weakness in the chest, and a tendency to all the ills connected with it.

United to hoarseness is generally another defect of the voice, *roughness*, which is caused by too much or too little moisture in the breathing passages, or by a natural unevenness of them, or by sickness. It comes from the same causes as hoarseness, and is remedied by the same means. Good domestic remedies for it are the yolk of an egg, with sugar and a little claret. To add alcohol to it is not good for every organ; it creates an unpleasant irritation and cough. Honey and liquorice, taken in small quantities, are useful; but they easily produce a stopping of the passages of the chest and throat with phlegm. Tea with sugar is beneficial to some organs, but very often produces greater roughness of voice. Gargling with warm elder tea, and inhaling the vapor of tea, are recommended in such cases. After applying these remedies internally, it is very beneficial to wash the neck with lukewarm water, and to rub it with flannel after it is thoroughly dry. When the organ of the voice becomes dry by too much exercise, or the necessary mucus is taken from the vocal chords, this mucus will very seldom be fully restored by artificial means. The best remedy in this case is, to chew a piece of hard bread, or cracker, until it makes a moist paste; eat this paste slowly, and drink a few swallows of moderately cold water after it. This simple remedy is applied by the best singers with good success. Strong spirituous drinks, such as brandy, rum, &c., are, by their astringent effect, particularly apt to cause roughness of the voice, which will be easily observed. The only remedy in this case is, to abstain from them altogether. The singer has especially to be very careful in the selection of the beer he may drink. It is a very common but mistaken error, committed by bass singers in particular, to think that beer is beneficial to the voice. The sound of the high and middle tones is always endangered by it; and though the lower tones may apparently gain in volume, they generally become rough and hard. Where roughness is natural, or arises from climate, (in the north it is almost epidemical,) very little can be done to amend it. Correct respiration, and careful *soffeggio* singing, can alone aid, and this in a limited measure.

Catarrh has its origin mostly in a cold, and therefore requires warmth and remedies that excite perspiration; such as elder tea, balm tea,

oftentimes made stronger by elderberry jam, &c. The same is to be observed of all those ills that are connected with, and are a consequence of, catarrhs; as cough, sore throat, swelling of the external and internal glands of the neck, of the tonsils of the throat, of the glottis: local remedies merely may be called in to aid these local indispositions; gargling with elder tea, honey, &c.; and, if the evil is deeper down in the throat, inhaling the vapor of tea. External applications of camomile bags are advisable, especially for swellings of the glands. But, above all things, the throat must be kept warm by day and night. To wrap the neck in flannel, and to wash both it and the chest with lukewarm brandy, are useful for this purpose. Asthma and want of breath, if occasioned by weakness of the chest, require the treatment of a physician. Domestic remedies may do much harm; but correct practice of singing, under the direction of a teacher acquainted with physiology, will most certainly contribute materially to the strengthening of the organs of respiration, provided there be no natural defect in their construction.

From these rules, in cases of indisposition of the throat, the reader may deduce for himself, for the most part, what he has to do for the preservation of his voice; and we will only add the following remarks. The most important thing to be observed is, the condition of the body when singing and the manner of singing. Never sing while indisposed, particularly in the organs of the voice; never sing immediately after running fast, or after riding, lifting, or similar bodily exertion; when the voice is not at command, is wavering, incorrect, or pausing; which may have very bad consequences withal. Never sing immediately before or after meals, for it hurts both the voice and the health together. Never talk or sing too long; it will raise an irritation, a burning, a pricking in the throat or chest, which are always signs of the approach of a state of indisposition. During singing, stand free and easy; and do not hold anything before the mouth which might prevent the free flow of the breath, and thus weaken the chest and deaden the tone. The chest must always be held freely erect, that the lungs may expand; strengthening the breath, and giving more ease to the song. Never, or at least very seldom, touch the extreme limits of your power of voice. Frequent repetition of this over-singing might produce a sudden and entire loss of voice. Do not sing in a place either too cold or too warm, so as to lose the proper proportion of warmth between the breath inhaled and exhaled. A singer must be more moderate than any body else in eating and drinking, for the sake of the preservation of his voice; and this precious treasure is well worth such a privation. This is particularly applicable to tenor, soprano, and alto voices; the bass voice is not so delicate. As to the choice of meats and drinks, prefer the lighter and milder articles, and avoid all that is very fat, and even rich fruit, nuts, &c., all strong, spirituous drinks, &c. Tobacco smoking does not hurt the voice if used moderately; nay, it may be of material use, by promoting the secretion and discharge of the phlegm from the organs of breathing, and thus making the voice purer and clearer. Snufftaking, however, stops up the canals, obstructing the resonance of the tone, and consequently making it weaker; and

it should therefore be avoided by the singer. He should be so dressed as to keep the body as equally warm as possible, to prevent being either heated or taking cold, both of which necessarily hurt the voice; but he should also be dressed with ease and comfort, particularly in those parts which are active in singing, as the throat and chest, in order to allow them a free and unmolested motion; otherwise, by being compressed in their action, they would injure the health. Practice on wind instruments is not admissible for the singer; his breath and the strength of his chest belong to his voice, and must be preserved for it. Lastly, take great care for the preservation of the teeth. Their decay and loss will take away the chief instrument for the resonance of the voice; and this loss will be felt the more, as it prevents the perfect and clear articulation of the words. The singer must therefore do nothing which would hurt the teeth.

The delivery of the voice is a fundamental part of vocal music. Very few persons know how to manage their voices so as to produce the most agreeable sounds: some give the *nasal* sound, and make a noise more akin to the sound of a ram's horn than a human voice; others give the *dental* sound, which makes one feel as if the party was laboring under some great physical deficiency; and various other equally injudicious ways are contrived, as unpleasant as is that of commencing the word with a sort of *huh*, similar to the noise made by the Irish stone drivers, or paviors, or an American woodman.

In all cases a moderate breath must be taken, and not a long one; for by so doing the lungs become much oppressed, and have an inclination to eject the air in a body instead of gradually: thus all command of the voice would be lost. In taking breath the throat must be well opened, and the palate raised, so that the lungs may be inflated instantaneously and noiselessly. The breath must never be taken in the middle of a word, but in the various points of suspension. When exercising the voice, the person should stand erect, firm, and at ease, with the shoulders back, chest expanded, head upright, and a general freedom about the face, throat, and body. The mouth should be opened so as to present an easy, smiling, and graceful appearance, with the jaw and lips perfectly loose; the upper lip raised sufficiently to show the upper row of teeth. The tongue should remain flat in the mouth, the uvula and soft palate inclined towards the passage of the nose, thus preventing the breath from passing through, (otherwise the voice becomes nasal,) leaving open only the passage to the mouth, through which it passes unobstructed, thereby giving a strong vibratory power. The throat should be kept well open, and all tossing of the head particularly avoided; the jaw should be allowed to fall inward, and then the voice should be thrown out, as it were from the chest, and all pain or pressure, or contraction of the throat carefully avoided. Great care must be taken not to project the lips, as by so doing the muscles of the throat become compressed, which prevents a free expansion of the sound, and also checks the power of vibration. The lips must not be extended very much laterally, as it produces a thin quality of tone, and also stiffens the muscles of the throat and mouth, which greatly lessens the vibratory and expansive power. The mouth be-

ing nearly closed is also bad, as it brings the teeth in contact; the consequence of which is, the sound becomes *nasal* and *dental*.

It is now obvious that vocal music, as an approved branch of common education, is rapidly making its way into the schools and academies of our country, eventually to become one of the educational habits of the mass. The knowledge of music must prevail where there is industrious, earnest, and intelligent teaching, and the work will be hastened in proportion to the improvement of teachers and text books. At present the Pestalozzian system is very generally adopted but this system does not begin at the right point, and consequently the pupil is at work for a number of lessons before he sees any considerable *musical meaning* in what he is doing. It begins always — we mean in its school books — with rhythm, time beating, bars, measures, comparative notes, &c. But does musical science originate or practically begin with any of these principles? These are mostly common, more or less, with all other arts. The purest tone, any more than the ring of a hammer, is still no part of musical science so long as it is only varied by time. But — and here is the great point — let another sound be heard in *pleasing relation above or below it, in pitch*, and we are at once within its exclusive province. Music, then, originates in the *RISE* and *FALL* of tones; and these, as it is well known, are controlled by the given pitch, or starting tone, called the *tonic*, or *key*. Certainly, then, its study properly commences at this point; and the *tonic* must immediately take the chair of state and rule by evident "right divine."

VOIGT, JOHANN CARL. Organist at Waldenberg, in Saxony, towards the middle of the last century. He wrote, in the year 1740, a dialogue on music between an organist and his deputy, in which the abuses prevalent in musical performances at that period are vigorously controverted.

VOIGT, JOHANN GEORG IEREMANN, organist of St. Thomas's Church at Leipsic, was born at Osterwick in 1769. He received the rudiments of his musical education partly from his father, and partly from J. G. Rose, town musician of Quedlinburg. On the death of his father, about the year 1780, he was apprenticed by his guardian, for a term of years, to another musician, under whom he studied various stringed and wind instruments. On the completion of his apprenticeship in the year 1788 he went to Leipsic, where he was appointed violinist and solo performer on the hautboy at the principal concert; from thence, in 1790, he removed to Zeitz, being elected organist of the principal church in that town. In 1801 he returned to Leipsic, being invited to fill the situations of organist of St. Peter's Church, and of violinist and concerto violoncellist in the concert orchestra. In the following year he obtained his first-named appointment. Voigt published at Offenbach and Leipsic several works of instrumental music, and left many manuscript compositions at his death, which took place at Leipsic in 1811.

VOIGT, CARL LUDWIG, son of the preceding, was born at Zeitz in 1791, and succeeded his father as violoncellist in the theatre, concert, and churches at Leipsic in 1811. He published many compositions for the violoncello, with other string instruments.

VOLANTE. (L.) Flying. In a light and rapid manner.

VOLATA. The appellation sometimes given by the Italians to a division, or rapid flight of notes.

VOLÉE. (F.) A rapid flight of notes.

VOLKERT, FRANZ, an organist at Vienna, was distinguished from 1810 to 1830 as a composer of comic operas, melodramas, parodies, &c., which he had represented at the Leopoldstadt Theatre, where he was director. He wrote more than a hundred of such works; also some instrumental music.

VOLKMAR, TOBIAS, a distinguished church composer, music director, and chorister at Hirschberg, in Silesia, was born in 1678. He studied composition under Johann Krieger, of Zittau, whose solemn and profound style he so completely adopted that he was called, at Hirschberg, Krieger the Second. He was living in 1740.

VOLKSLIED. (G.) People's song. A popular song, tune, or ballad.

VOLL. (G.) Full; as *mit vollem Orgel*, with full organ.

VOLLKOMMEN. (G.) Perfect.

VOLTA. (L.) An old, three-timed air, peculiar to an Italian dance of the same name, and forming a kind of galliard; also a word used by modern composers for *time*; as *volta prima*, the first time; *volta seconda*, the second time.

VOLTI. (L.) Turn over.

VOLTI SUBITO, or **V. S.** (L.) Turn over quickly.

VOLUME. Quantity or fulness; as when we say, "Such a performer possesses an extensive or rich *volume* of voice."

VOLUNTARY. A voluntary is an extempore performance upon, or a composition written for, the organ, and serving to relieve and embellish divine service. This species of music, though necessarily limited to a gravity and solemnity of style, admits of considerable variety. The change, order, and number of its movements have never been settled by any law deduced from the authority of particular example or general usage; consequently much is left to the fancy, taste, and judgment of the composer; and if, in the aggregate, he preserve a sufficient degree of dignity, seriousness, and science, not admitting any lighter ideas, or passages, than are calculated to relieve the more solemn parts, he may be said to keep within the pale described by the sacred use for which the organ is so truly fitted and designed. The voluntary was originally so called because its performance, or non-performance, was at the option of the organist.

VON. (G.) By, of; often occurs in German titles.

VORBEREITUNG. (G.) Preparation. A term used in harmony.

VORSCHLAG. (G.) An appoggiatura.

VORSPIELE. (G.) Preludes.

VORZEICHNUNG. (G.) The signature.

VOSS, CHARLES, a favorite piano-forte com-

poser, was born at Strelitz in 1810, and yet lives in Berlin.

VOSSIUS, GERARD JOHN, born in 1577 at a small town in the neighborhood of Heidelberg, was a man of universal learning and abilities. He commenced his studies at Dort about the year 1590, and ten years afterwards was chosen director of the college in that place, though at the time only twenty-three years of age. In 1614 he was appointed director of the theological college which the States of Holland had then lately founded in the University of Leyden. Before he received this latter appointment, Vossius had attached himself to the profession of divinity, and had warmly espoused the side of Arminius at the famous Synod of Dort. These principles, and his history of the Pelagian controversy, recommended him to the notice of Archbishop Laud, who procured for him a prebendal stall in the Church of Canterbury, with permission to hold it notwithstanding his residence at Leyden. On this promotion he went over to England to be installed; and having received an honorary degree of doctor of laws at Oxford, returned to Leyden; from whence, in 1633, he removed to Amsterdam, and became the first professor of history in the college then newly founded in that city. He died at that place in the year 1649, at the age of seventy-two. Vossius published at Amsterdam, in 1650, a work "*De quatuor Artibus popularibus*;" and afterwards another, "*De Universe Mathesias Natura et Compositione*;" in each of which are contained many curious particulars relative to music and musicians.

VOSSIUS, ISAAC, son of the preceding, was born at Leyden in the year 1618, and, under the instruction of his father, soon became distinguished for his proficiency in academical learning. He was honored by the patronage of Christina, Queen of Sweden, who invited him to her court, and was taught by him the Greek language. About the year 1652, having, however, formed a design of writing against Salmasius, who at that time stood high in her favor, the queen withdrew her regard and dismissed him from any further attendance. At the death of his father, Vossius was offered the situation of professor of history in the University of Leyden, but he thought proper to decline it. In 1760 he went to England, and at Oxford was admitted to an honorary degree of doctor of laws. Three years afterwards he was made a canon of Windsor by order of King Charles II, who permitted him to reside in the castle, where he died in the year 1688. Of his works the most popular is his treatise "*De Poematum Cantu et Viribus Rhythmi*," printed at Oxford in 1673. This he begins by a remark that music is of two kinds; namely, such as consist of sounds only, and such as consist of sounds joined to words. He then gives an account of the rhythms of the ancient Greeks, and of the various kinds of metrical feet used in their verses, all of which he affects to admire with rapture. His contempt of modern music and musicians he freely expresses, and says that all the powers of exciting the passions by music had ceased above a thousand years before his time. On the controverted question, whether the ancients were acquainted with music in consonance, he, with the utmost confidence, gives it as his decided opinion that they

were. The improvement of the musical scale has, he says, erroneously been ascribed to Guido; since, in forming his scale, he derived all his ideas from the organs and harps of his time, which consisted, the one of twenty pipes, and the other of twenty strings. As to the application of the syllables, he considers that to be an invention of no use whatever. The invention of the *cantus mensurabilis*, the substitute for the ancient rhythms, he holds in the utmost contempt. The arguments against the imperfection of ancient music, arising from the form of the instruments, he endeavors, but in vain, to refute. In the course of this work the author is lavish of his censures of the ignorance and folly of other writers on music, though his own enthusiasm and bigotry have laid him widely open to the latter imputation. In short, it abounds in evidence of that gross credulity for which its author is well known to have been remarkable. This, however, is by no means the only weakness with which he is charged; his partiality for the ancients, his bold and hasty conclusions, his affected contempt of all modern improvements, his in-

solent treatment of such persons as differed from him in opinion, and, above all, his vanity, have placed him in the foremost rank of literary coxcombs. As to his work, its general character may be given in a few words: it is a futile, unsatisfactory, and for the most part unintelligible, disquisition.

VOX ACUTA. (L.) In the ancient music, the highest note in the bisdiapason, or double octave.

VOX GRAVIS. (L.) In the ancient music, the lowest note in the bisdiapason, or double octave.

VUIDE, or VIDE. (F.) Open; *es corde vuide*, the open string. Used in all music for stringed instruments to show that the note over which it is placed must be played on the open string.

VULPIUS, MELCHIOR, an excellent church composer, was born at Wasungen, in Thuringia, about the year 1560. He published in 1604, at Leipsic, a choral book, a second edition of which appeared at Jera in 1609.

W.

WACH, CARL GOTTFRIED WILHELM, a performer on the double bass at Leipsic, was born at Löbau in 1755. He was considered an excellent performer, and also arranged much dramatic music for instrumental pieces. Amongst his works are "*Le Prisonnier*," an opera of Della Maria's, arranged as quintets, Leipsic, 1803; and "*Die Schwitze Familie*," opera by Weigl, arranged as quintets, Leipsic, 1811.

WÆLRANT, RUBERT, a celebrated Flemish composer, was born in 1517. He resided chiefly in Italy, where many of his works were published, and the remainder at Antwerp. He was the principal promoter of the use of the syllable *si* in solmization, in addition to the six Guidonian syllables. He died at Antwerp in 1595, in the seventy-eighth year of his age. Amongst his works are "*Cantiones Neapolitane, 3 et 4 voc.*," Venice, 1565; "*Symphonia angelica, 4, 5, 6, 7, et 8 voc.*," Antwerp, 1565; "*Madrigali e Canzoni Francesi, à 5 voci*," Antwerp, 1558. A very beautiful specimen of the madrigals of this master is to be found in the "Vocal Anthology."

WAERT, GIACHES DI, a celebrated Flemish contrapuntist, flourished at Antwerp about the year 1560.

WAGENSEIL, GEORG CHRISTOPH, chamber musician to the Emperor of Germany, was born in the year 1688, and was living in 1784. From the spirited compositions of this master for the harpsichord, before the piano-forte was brought to any perfection, the lovers of music, observes Dr. Burney, received great delight. The Germans long allowed Wagenseil's sonatas to be written in a lively and easy style; but those musicians who are attached to the more refined and expressive style of Emmanuel Bach consider them as too trifling.

WAGNER, GEORG GOTTFRIED, chorister at Plauen, in Voigtland, was born at Muhlberg in 1698. Besides the harpsichord, he studied the violin and several other instruments, his progress on which was much facilitated by the opportunities afforded him of hearing the best musicians at Leipsic. The celebrated Bach having succeeded Kuhnau, Wagner had now the opportunity of hearing the works of this great master during a period of three years, and till he got his first-named appointment, in 1726, which he still held in 1740. He composed much church and instrumental music, all of which remained in manuscript.

WAGNER, CARL, a celebrated performer on the horn, belonging to the Chapel Royal at Darmstadt in 1795, was also considered a good vocal and instrumental composer. He was a pupil of Portmann, after whose death he published a new edition of his master's method for the horn.

WAGNER, JOHANNA. This celebrated vocalist is the niece of Richard Wagner, the chapel-master of Dresden, whom Liszt, in a recent pam-

phlet, pronounces to be the greatest composer of the age. The early days of Johanna Wagner were passed at Würzburg, in Bavaria, her parents being engaged at the theatre. As a child she was selected to represent the good spirit in the fairy spectacles, her declamatory powers being remarkable. At fifteen years of age she made a successful *début* in Abigail, in the comic piece, "*Le Verre d'Eau*," at the theatre of Ballenstadt. She subsequently appeared as Preciosa and Esmeralda, and made a great sensation in the part of Cordelia, in "*King Lear*." At this epoch of her career it was remarked that her style was distinguished as much for juvenile grace as tragic energy. Her original destiny was fixed for the drama; but as her parents, who had a reputation as teachers of singing, perceived that she had a good voice, she was taught the character of the Page in Meyerbeer's "*Huguenots*." Her organ, however, daily increasing in compass and power, she was allotted the part of Caterina, in Halévy's "*Reine de Chypre*;" and the striking success she met with decided Mlle. Wagner to quit definitively the legitimate drama for opera. Her uncle strongly urged her to visit Dresden; but before she went to that city she visited Paris with her father, and there took lessons for six months of Manuel Garcia, the brother of Viardot and Malibran, and the master of Jenny Lind. On the arrival of Mlle. Wagner at Dresden she was engaged for five years at the theatre; and from this time she took the line followed by Madame Schröder Devrient, although without any servile imitation of the style of that eminent *artiste*. In Agatha, in Weber's "*Der Freyschütz*," and in Beethoven's "*Fidelio*," she acquired great fame. Her next engagement, owing to political events having affected the Dresden theatre, was at Hamburg; and she was the first singer in Germany who undertook the part of Fides, in Meyerbeer's "*Prophète*." It was her delineation of this character which spread her name throughout Germany. She afterwards sang in Vienna and Berlin with signal success, in the last-mentioned capital being the successor of Mme. Viardot in Fides. The result was, that the royal intendant of the Berlin Opera House entered into an engagement with Mlle. Johanna Wagner for ten years, on terms far beyond those ever before granted to any prima donna in Germany. In her contract, leave of absence for six months during the year was reserved for the young and gifted *artiste*.

The *répertoire* of Mlle. Wagner is rich and varied; and, owing to her genius, the masterpieces of Gluck and of Spontini have been most successfully revived at Berlin. "*Iphigenie en Tauride*," and "*Clytemnestre en Aulide*," and the Grand Priestess in the "*Vestale*," have been highly popular. Her Alice in "*Robert le Diable*," Valentina in the "*Huguenots*," and Fides in the "*Prophète*," have displayed her supremacy in Meyerbeer's operas. In the revival of Spontini's "*Olympia*" she was the Statira, surpassing, ac-

ording to the German critics, the celebrated Milder, who was the original representative. Rellstab, the eloquent critic of Berlin, writes of her Statira, "In passion she is a Medusa, in imperious command a Juno, and in pathos a Niobe." Mlle. Wagner does not confine her line of characters to the classic models. Her Norma, Lucrezia Borgia, and Romeo, in Bellini's works, have created as great a sensation in Germany as her Fidès, Fidelio, Statira, Alice, Valentina, &c. Her Donna Anna in "*Don Giovanni*," and Odette in Halèvy's "*Charles VI.*," show the versatility of her lyric capabilities.

Mlle. Wagner, while she has acquired within such a brief period her artistic fame, seems to have inspired her admirers in Germany with the highest respect for her personal qualities. When she quitted Hamburg, in the spring of 1851, for her engagement at Berlin, there was a grand ceremonial at the Tonhalle: she was crowned in public; and the population accompanied her to the railroad, greeting her with prolonged acclamations.

WAGNER, RICHARD. M. Fétis, in a series of articles in the "*Revue et Gazette Musicale*," gives the following particulars of the history of this remarkable innovator in dramatic music, who for some years has been so lauded by some and decried by others in the musical world of Germany, Paris, and London; and who, since the autumn of 1853, has excited no little attention among the lovers of great orchestral music in this country by the successful and repeated performance of his overture to "*Tannhäuser*." M. Fétis gleans his materials from Wagner's own "Communications to his Friends."

Richard Wagner was born at Leipsic on the 10th of May, 1813. He thinks it a good fortune that he lost his father in his earliest years; for after relating the story of a king who drove from his palace a certain young fairy, who wanted to endow his new-born son with a spirit of discontent with the ætial and of passionate pursuit of the new, he says that this same fairy comes to us all at our birth, and that we might all become geniuses, if she were not repulsed from us by what is called education. "Without let or hindrance," he adds, "after the death of my father, the fairy glided into my cradle and bestowed on me the gift that never left me, and which, in complete independence, has made me always my own teacher, directing me in life and art. *Behold, in that consists all genius.*" But the boy was not isolated from all influences. He had family relations, a mother, a sister, a brother, all connected somehow with the theatre, who made him frequent the side scenes; and there he imbibed a dramatic taste. He played little plays, in his own chamber, however, and alone; he invented his own subjects, and took no pleasure in the hackneyed drama which he saw. He was sent to a gymnasium, ("neglected as his education was,") where he acquired a knowledge of antiquity and a taste for poetry and music; and he even tried his hand at painting, until the painter, who had received him into his house, died.

"I was writing dramas," says Wagner, "when at the age of fifteen I became acquainted with Beethoven's symphonies; these decided my exclusive passion for the study of music, which had acted powerfully upon my organization ever since

I heard the '*Freyschütz*' of Weber. Still, my studies in this art never turned me from my propensity to imitate the poets; only this propensity submitted itself to the musical impulse, and I cultivated poetry only from the musical point of view. Thus I remember, in my exaltation about the '*Pastoral Symphony*,' I composed a *comédie champêtre*, borrowing the subject from Goethe's '*Lovers' Humors*.' I made no poetical sketch; I wrote the verses and the music at once, and let the dramatic situations and their musical expression arise conjointly."

In the beginning of his eighteenth year he was deeply excited by the revolution of 1830 and the unhappy fate of Poland. Too young to be an actor in those events, his emotion sought vent in the writing of a great deal of instrumental music, particularly sonatas, overtures, and one symphony, which was performed at a subscription concert in 1833. Wagner did not hear it, because poor health had obliged him to leave Leipsic and seek a milder climate at Würtzburg, near his brother, professor of singing and father of the famous *prima donna* Johanna Wagner.

After a year of repose, he became director of music in the theatre at Magdeburg. So far, as he says himself, he had been but an imitator of the style of renowned composers. The "*Oberon*" of Weber, and the "*Vampire*" of Marschner, then in vogue at Leipsic, suggested to him the text of an opera entitled "*The Fairies*," which he drew from one of Gozzi's novels. He set it at once to music, a mere echo of his impressions of Beethoven, Weber, and Marschner. About this time passions of another and more private nature got possession of him and modified his ideas. He wrote another opera, "*The Novice of Palermo*," which was represented on the Magdeburg stage on the 29th of March, 1836, and failed. His chagrin led him to resign his place. In 1837 we find him at Königsberg as conductor of the theatre orchestra; but, for reasons not known, he remained there only a few months. It appears that he married in this period, as he says, too lightly.

He was afterwards engaged as musical director in the theatre at Riga, and there commenced a comic opera on a subject taken from the "*Thousand and One Nights*," which his disgust at the life of the theatre and his position soon led him to abandon. He resolved to go to Paris, and wrote the first two acts of his "*Rienzi*." Driven by despair, "he broke," as he says, "the relations which had existed till that moment," and was *en route* for Paris without sufficient means for such a journey. The vessel in which he embarked was wrecked upon the coast of Norway; but finally he reached the shores of France, and in a few days entered Paris, possessing nothing but the sketch of an opera and the hope of better times. "I trusted in the universal language of music to fill the gulf which my unmistakable instinct told me existed between me and Parisian life."

His first care was to look out for immediate aid. M. Maurice Schlesinger, music publisher and proprietor of the "*Gazette Musicale*," gave him employment enough to satisfy his more pressing wants, placed him in relation with artists and literary men, and even tried to direct him by his counsels. He made him compose romances to French words, so that his name might

penetrate the saloons; but the unusual forms of his melodies went against the ears and larynxes of those who tried to sing them. Schlesinger procured him a commission to write an overture for the *Société des Concerts*, and he chose Goethe's "Faust" for a subject, designing to make it the first movement of a grand symphony; but such an enigma did it prove upon rehearsal that a public performance of it was put out of the question. An opera in the mixed style, called "*La Défense de l'Amour*," met with no more success.

These failures in a small sphere did not disturb a mind so organized as Wagner's; they only made him greater in his own eyes. He looked up to a higher order of success; he yielded to the counsels of his friends to encourage their good will; but he would be content with nothing short of the Grand Opera, with all its means of musical and scenic effect: the persuasion that this was his true place was what had drawn him to Paris. What he saw at the *Académie Royale* had surpassed all his imaginings, and lent new energy to his desire to exhibit his power in a serious work upon that vast stage. His brain whirled with the excitement of the music in the first opera he heard there; yet before long he felt a hope, nay, a certainty, of bearing off the palm from all rivals as soon as a work of his own should be brought out. To support himself, in the mean while, the author of "*Tannhäuser*" was obliged to arrange vaudeville music for a theatre on the Boulevards, which, however, did not pay, because it did not answer the purpose. There remained but one resource for Wagner, offered him by Schlesinger: the arrangement of new operas for the violin and *cornet-à-pistons*. Such drudgery was not to his liking; and Schlesinger proposed to him to write fantastic pieces for his musical journal, which were translated by another out of the German into French. Here he succeeded better. Two novels from his pen were remarkable for interest of subject and originality of form. The first is a young composer's pilgrimage to Vienna to see Beethoven; the other the death by starvation of a young musician seeking recognition in Paris. The first embodied his sentiments, the second his personal experience.

Two years of fruitless efforts in Paris convinced Wagner that that was no place for his ideas and tastes. One thought now occupied him; which was, to return to Germany and procure a representation in a grand theatre of his "*Rienzi*," now completed, and which seemed to him the complete realization of the idea he had pursued from early youth. He had also finished the poem of his "*Hollandais volant*," — Flying Dutchman, — and was negotiating with his country for the admission of these works in some capital. His evil fortunes were suddenly at an end. He received letters from Dresden and Berlin informing him of the acceptance of "*Rienzi*" at the theatre of one of those cities, and of the "Flying Dutchman" at the other. A commission to arrange an opera of Halévy for the piano, and the sale of his *Hollandais* libretto, to be used by another composer under another name, gave him the means for this journey; and he left Paris in the beginning of 1842, after three years of torture there, with a new era opening before him.

On the way from Paris Wagner's mind was preoccupied with a new work, in which, developing his tendencies more fully, he proposed to

break definitively with the existing forms of the musical drama and place the art under new conditions. The subject of this work lay in the old legend and chanson of "*Tannhäuser*." "This Tannhäuser," says M. Fétis, "was of a noble family of Franconia, one of those German troubadours who flourished in the twelfth and thirteenth centuries under the name of *minnesingers*, or singers of love. Tannhäuser was a good knight, according to the old popular German ballad: —

*Der Tannhäuser war ein Ritter gut:

"He cultivated poesy and music with equal success, and was a worthy rival of Wolfram von Eschenbach, Walter von der Vogelweide, Rodolph of Rotenburg, Ulrich of Lichtenstein; in a word, of the most celebrated, judging by the sixteen songs and ballads that have reached us under his name. In 1207 Tannhäuser, or Thannhäuser, or, finally, Tannhäuser, received, like all the minstrel poets of Germany, an invitation from the landgrave of Thuringia to take part in the famous poetical tournament held by the prince at his Castle of Wartburg, near Eisenach. Here begins the plot of Wagner's opera. It seems that the good knight had found on his way one of those rare manuscripts of which we have an instance in the 'Metamorphoses' of Ovid, and that he was seized with a veritable passion for the allegories of paganism, especially for the galantries of Venus. He chose this theme for his improvisation, and sang with enthusiasm of the delights of a mysterious place called the *Venusberg*. A cry of indignation escaped all lips when they heard him eulogizing sensual love instead of that pure, Platonic love which fired most of the minnesingers for the beauties that existed in their imagination. Declared unworthy of the prize, Tannhäuser went off with a bleeding heart. He was seized with remorse, and went to Rome to confess his sins and seek for absolution; but this was refused. Desperate and furious, hoping no joy but in that that had caused his ruin, the poet dedicated himself anew to the worship of the false divinity that had led him astray. He died impenitent, and fell into the power of the evil one. Such is the legend handed down from age to age and still repeated evenings by the peaceable people of Thuringia."

On his way to Dresden to bring out his "*Rienzi*," Wagner followed the valley of Thuringia, and passed near the Castle of Wartburg, the sight of which inspired his project with new force. From that moment he was elaborating the subject of "*Tannhäuser*," and caressing his imagination with the hope of fine success.

Arrived in Dresden, he set about the rehearsals of his "*Rienzi*," finding a new sense of satisfaction in the zeal and praises of the singers. The first performance was a triumph; though M. Fétis intimates that the public understood not what it was applauding, and was only carried away by the momentary charm of novelty. At all events, he reaped a solid benefit, about which he records his great surprise: "What! I, but just now isolated, abandoned, without hearth or home, find myself all at once loved, admired, and even contemplated with astonishment. Moreover, as an effect of this success, I found a solid and durable basis of a prosperous existence in my unexpected appointment a chapel-master to the King of Saxony!"

The success of "Rienzi" decided the director of the Court Theatre at Dresden to put upon the stage the "*Fliegende Holländer*," — Flying Dutchman, — which met with a signal failure on the 2d of January, 1843. Early in 1844 it was again produced twice, under better auspices, at Berlin, but on the second time to an almost empty house. The critics spoke of the eccentricity of its musical forms, and this had its weight with the public. One consolation Wagner had, however, in a letter from Spohr, who had produced the "Holländer" in the theatre at Cassel, and encouraged him to go on in the path he had marked out for himself.

Wagner's hopes of revolutionizing the musical drama seemed for a time dashed. At Hamburg his "Rienzi" had not succeeded. Autograph copies of his two operas, which he had sent to the theatre directors in several great cities, were in most cases returned unopened. But he lost no faith in his own conception; he ascribed the failure either to defects of execution or to the dullness of the public. The response of here and there an appreciative individual confirmed him in his self-reliance; and thenceforth, he says, he addressed himself, not to the masses, who had no affinity with him, but to the few whose tone of thought and feeling was analogous to his own. He returned in earnest to the composition of his "*Tannhäuser*;" the painful and laborious task impaired his health; the physicians urged a suspension of labor and a visit to the baths of Bohemia. There he only half followed their prescription, for he already sketched the plan of his last opera, "*Lohengrin*."

Returning to Dresden, he commenced the rehearsals of "*Tannhäuser*." The director of the Royal Theatre hoped much from this work, and lavished great expense upon it. It required an enormous orchestra — nearly two hundred instruments, we have been told. Actors, orchestra, and chorus vied with one another in zeal and carefulness to make the execution answer to the poet-musician's thought. But the result was a disappointment; the audience went off with open signs of discontent, and only one more performance was tolerated.

He sought to get his "*Tannhäuser*" introduced into other theatres. "I took measures for the propagation of my opera, and particularly turned my eyes towards the theatre at Berlin; but I received a formal refusal from the superintendent of the royal theatres of Prussia. The general intendant of music to the royal court seemed more favorably disposed: through his mediation I solicited the royal interest in behalf of the execution of my work, and begged permission to dedicate the score of '*Tannhäuser*.' I was told, in reply, that the king never accepted the dedication of a work with which he was unacquainted; but that, considering the obstacles to the representation of my opera in the theatre, the king might consent to hear it if I would arrange some portions of it for military music to be played on parade. I could not have been more profoundly humiliated, nor taught to feel my true position with more certainty. From that time all publicity of art had ceased for me."

Nevertheless, he immediately set about the composition of "*Lohengrin*." His sense of separation from the public, he says, excited him to try to manifest himself to his own circle of sym-

pathizers in the full development of his ideas. Three years had passed between the production of the "*Holländer*" and the "*Tannhäuser*;" this last was played for the first time on the 20th of October, 1845. The "*Lohengrin*" was finished in the latter part of 1847, and had begun to be studied by the singers in the early part of 1848, when the political events of that year suddenly interrupted his artistic projects. Wagner was a radical: though he had never taken any active part in politics, he says his instinct led him to take an interest in it the moment that any revolutionary element was mingled in it. Before this explosion Wagner had been preoccupied with a plan of reforming the taste of the population of Dresden by a new organization of the Royal Theatre and new kinds of exhibitions; but he despaired of achieving any thing so long as the theatre was under court influence; nothing but a revolution could render possible the realization of his views. It came. Wagner went down into the street, and the revolution was victorious. But the triumph was a short one, for the Prussian army came to the aid of the court of Saxony. Dresden was reconquered, and Wagner was a fugitive from his country. Arriving, not without danger, in that beautiful valley of Thuringia through which he had travelled with enthusiasm seven years before, he followed its windings, agitated by very different feelings. In a few days he crossed the frontier of Switzerland, in the character of a political refugee, and fixed his abode at Zurich, where he has since lived in meditation and retirement. During the years 1849 and 1850 his name was current in Germany chiefly through the efforts of Liszt, that lover of new things, to convince the public of the value of the Wagner operas, in which he recognized a new era for art. Through the Goethe-like supremacy of Liszt in matters of art at Weimar, the operas were repeatedly brought out there in the Court Theatre; enthusiastic reports were written to the principal German musical journals, a strong and earnest Wagner party sprang up, headed by Liszt and the editor (Brendel) of the Leipzig "*Neue Zeitschrift für Music*," and Wagner seized the favorable moment to set forth his programme of a grand revolution in the musical drama, and in fact in all art, in his three principal books, entitled "*Das Kunstwerk der Zukunft*," — The artistic Mission of the Future, — "*Kunst und Revolution*," — Art and Revolution, — and "*Oper und Drama*," — Opera and Drama, — followed by the "Communications to his Friends" above mentioned.

In 1851 the "Police Gazette" contained the following: —

"Wagner, Richard, late chapel-master from Dresden, one of the most prominent adherents of the revolutionary party, who was prosecuted for his participation in the revolution in Dresden in May, 1849, is supposed to have the intention of quitting Zurich, where he has for some time resided, to come into Germany. A portrait of Wagner is here appended; should he be identified, he is to be handed over to the Royal State Tribunal in Dresden."

WALDER, J. J., a musician at Zurich, in Switzerland, about the year 1790, published in that town, in 1788, a method for singing; also, about the same time, several collections of songs

WALDIORN, (G.) The French horn. Literally, *woodhorn*.

WALKER, JOSEPH C., an English author, born at Dublin in 1760, published in London, in 1786, a work entitled "Historical Memoirs of the Irish Bards, interspersed with Anecdotes of, and occasional Observations on, the Music of Ireland; also an historical and descriptive Account of the Musical Instruments of the Ancient Irish; and an Appendix, containing several biographical and other Papers, with select Irish Melodies."

WALLACE, WILLIAM VINCENT, was born in Ireland in 1815. His father was master of a military band, and an excellent practical musician, playing nearly every instrument in the orchestra. The young Wallace displayed a wonderful aptitude to excel his father in all these accomplishments, and at the age of fifteen could handle with considerable mastery nearly every instrument, and could play with extraordinary excellence the piano-forte, the violin, the clarinet, and the guitar. Nor was this a display of mere mechanical facility; his great store of mechanical power was practically applied, for he had written over two hundred compositions, fantasias, marches, &c., for military bands, before the period at which we have commenced his history. So Wallace at fifteen, though a young leader, was an old musician. His position in Dublin brought him in contact with all the musical celebrities of that day, and doubtless his musical purposes were strengthened by the kind encouragement and judicious commendation of Paganini, Catalani, and others. For three years he occupied a high musical position in Dublin, and had the honor of directing the first performance of Beethoven's "Mount of Olives" in Ireland. At the age of eighteen his strength seemed to sink under the pressure of his many studies and various engagements. A long sea voyage was recommended for the establishment of his health; so he sailed for Sidney, far away in the South Seas. For a long period after his arrival in Sidney he led an active life; his fiddle remained unpacked, and he literally plunged into the bush. But for one characteristic circumstance the world might never have known Wallace, the composer. During one of his brief visits to the town of Sidney he was invited by some friends to attend a musical party. He went, little dreaming how that evening was to influence his destiny forever. When he entered the room he saw four gentlemen seated round a table, working away, with greater will than power, at a quartet of Mozart. All the music slumbering at his heart seemed to spring at once into vivid life, and he became possessed with the great musical desire. Much to the surprise of his host, he played first fiddle to the next quartet, and so they played on till morning. The fame of his playing spread through the town like wildfire, and reached the ears of the governor, Sir John Burke, who urged Wallace to give a concert. After much persuasion he consented. His success was great; and Sir John Burke, as a mark of his delight, sent him two hundred sheep, which was in that country a princely gift.

After giving several concerts, a restless desire to travel seized upon him. First he visited Van Dieman's, then New Zealand, from whence he went on a whaling voyage in the South Seas.

From New Zealand he journeyed to the East Indies. With that unconsciousness or recklessness of danger which was his characteristic in those days, he penetrated far into the interior, and encountered "incidents" of travel from which nothing but a remarkable coolness and presence of mind could have delivered him. After seeing all he deemed worthy, tiger hunting included, he longed for change of scene, and so started from Madras, after half a day's thought, for Valparaiso, in South America. From Santiago he crossed the majestic Cordilleras of the Andes to Buenos Ayres, where his stay, however, on account of the blockade, was but brief. He returned to Santiago, where he displayed a remarkable evidence of his enthusiasm for art. He had given a pledge to play at a concert, on a certain day, in Valparaiso, for the benefit of a charity, but some circumstances drove the promise from his memory. Being reminded by a friend of the fact when it was apparently impossible for him to reach Valparaiso in time, Wallace resolved to ride on horseback the whole distance, one hundred and twenty-five miles, to keep faith; and he performed this equestrian feat with thirteen horses in less than eleven hours, and was in time for the concert. From Chili he went to Peru, and gave a concert at Lima, which produced the large sum of five thousand dollars.

He then visited the West Indies; and then went to Vera Cruz, Tampico, and the city of Mexico. His success in these cities was great, and there can be but little doubt that he realized a great amount of money. In New Orleans his triumph was more gratifying than any triumph he had yet achieved, for it was wrung from a critical and exacting audience. So great was the enthusiasm his performance excited that the musicians in the orchestra forgot to play, and laid down their instruments to join in the tumult of applause. From New Orleans he journeyed through the States, and his concerts were a succession of triumphs.

"We remember as well as though it were but yesterday," says a writer in a New York journal, "being one of a party invited to meet a new musical wonder from the south. We were introduced to a tall, slim, and gentlemanly man, carefully and elegantly dressed. There was high intelligence in his face, but it seemed to lack fire; there was a languor in his air which made us think that the luxurious indolence of the south had become, as it were, a part of his nature. He seemed half a-dreaming; and the wild romance of his life, which spread abroad, linked half a dozen heartrending love tales with the name of our melancholy musician. He played the piano. His famous 'Cracoviense' was the first piece, and it was generally acknowledged that he was the greatest pianist that had then visited America. But when he took his violin in hand and exhibited such extraordinary mastery over the instrument and such impassioned sentiment, we were, one and all, carried away with mingled feelings of astonishment and delight. His success in this country which followed this well-remembered evening is familiar to all. He was looked upon as a gifted and eccentric genius and as a musician of high attainments. His compositions for the instruments upon which he played were acknowledged as full of originality and power."

Wallace next went to London. As a pianist

he took a position at once; but there were many good pianists, some of them the rage, and piano compositions were a drug in the market. "We have often heard Wallace tell how, on his first arrival in London, he left some of his piano compositions with C., the publisher of Bond Street, and how, on his second visit, they were politely handed back to him; how he on his return home, somewhat discomfited, but with an inward consciousness of future greatness, marked on the margin of said pieces, '*Refused by C., on such a date;*' and how, after the triumphant success of '*Maritana*,' C. came to his lodgings and paid him twenty guineas for one of the very pieces he had formerly refused even as a gift; and how they had a hearty laugh at the turn of Fortune's wheel."

He determined to write an opera. "*Maritana*" was produced, and met with a success far beyond the most sanguine hopes of the composer. His second opera, "*Matilda of Hungary*," called forth admiring comments from the best musical writers in England. From the first to the second opera there was a wonderful mental stride. By this work Wallace placed himself at the head of English operatic composers. In the many English operas written during the past twenty years there are countless prominent beauties that the world will not willingly let die; but in all there was a want of that character, that strong individuality, which stamp a style and mark a school. In "*Matilda of Hungary*" these requisites are found.

The success of Wallace's opera in England attracted the attention of the continental musical world, and he received an invitation from Vienna to superintend the production of "*Maritana*." Wallace longed to be heard in Germany; and he started with his scores, and arrived in Vienna shortly after Benedict. They both sent in their operas for approval, and the work of Wallace was accepted, although he was a foreigner and unknown compared with Benedict. The opera was most carefully rehearsed and admirably performed, and was received with more public enthusiasm in Vienna than it even met with in London. It was played night after night for many months, and ran through all the German theatres.

Wallace studied most assiduously while in Germany, and wrote the greater part of his grand opera, "*Lurlei*." His fourth opera was "*The Maid of Zurich*." We find mentioned also two Italian operas, "*Gulnare*" and "*Olga*."

When Wallace left Germany, after a brief visit to London, he went to Paris, where he revelled in the fellowship of the most brilliant musical minds in the world. The great ambition of an operatic composer's life was in a fair way of being realized. He was commissioned to write an opera for the Grand Opera of Paris. Elated with the bright prospect before him, he sought out St. George, and from him procured a *libretto* for his opera. Full of the subject, he began his work; but before he had finished the first number that calamity which of all calamities he feared the most overtook him, and he became blind. The first oculist in France attended him assiduously; week succeeded week until they grew into months, and still he remained in total darkness. The anxiety, the torture of mind, which he endured during this trying period may be better

imagined than described. At length a change for the better was apparent; and a long sea voyage was ordered him, as the only means of permanent relief. So once again he became a wanderer. He arrived in Rio Janeiro. He remained in South America some eight months and gave several concerts. He played frequently before the court, and received from the hands of the emperor a superb diamond ring. Leaving Rio, he visited New Orleans, where, together with Strakosch, he gave several concerts with wonderful success. From New Orleans Wallace worked his way to New York, through the west, narrowly escaping death by the explosion of the steamer *St. Louis*, on the Mississippi, in the summer of 1850. He immediately registered his declaration of intention to become a citizen, and prepared himself to work upon new operas in hand. He had only been here a brief space of time when he made a lucrative and brilliant engagement, for a number of years, with the firm of William Hall & Son, awarding to them the sole right of publishing his compositions in this country. The amount of his music already published in this country, not including his operas, is immense.

WALLIS, JOHN, doctor of divinity, an eminent divine and mathematician, was born at Ashford, in Kent, in the year 1616. From the grammar school at Felsted, in Essex, he went to Emanuel College, Cambridge, but was afterwards elected fellow of Queen's College. About the year 1640 he was admitted into holy orders, and, leaving the university, became domestic chaplain to Sir Richard Darley and the Lady Vere. Four years after his admission to orders he was chosen one of the scribes, or secretaries, to the Assembly of Divines at Westminster. In 1649 he was made Savilian professor of geometry at Oxford; on which occasion he entered himself at Exeter College, and was admitted to the degree of master of arts, and, in 1654, to that of doctor in divinity. Soon after this, on the decease of Dr. Gerard Langbaine, he was appointed *custos archivorum* of the university. He was one of those persons whose private meetings for the improvement of philosophy by experiments gave rise to the institution of the Royal Society; and after its establishment he was not only a constant attendant on, but a frequent correspondent of, this society. His learning was not less deep than it was extensive; and a singular degree of acuteness and penetration is discoverable in all his writings; the only parts of which necessary to be mentioned are his edition of Ptolemy, with the appendix entitled "*De veterum Harmonia ad hodiernam comparata*;" his "*Porphyrii in Harmonica Ptolemaei Commentarius, ex Cod. MS. Græce et Latine editus*;" and "*Manuelis Bryennii Harmonica, ex Cod. MS.*;" all contained in the third volume of his works, printed at Oxford in the year 1669. Dr. Wallis was also the author of various musical papers inserted in the Philosophical Transactions, particularly a discourse on the trembling of consonant strings; another on the division of the monochord; another on the imperfection of the organ; and the fourth on the strange effects reported of music in former times. He died in 1705 in the eighty-eighth year of his age.

WALLISER, CHRISTOPH THOMAS, director of music in the Cathedral of St. Thomas, also to the University of Strasburg from the year

1599, died in that town in 1648. He published, in 1611, a work entitled "*Musica figurata præcepta brevia, fucilli ac perspicua methodo conscripta et ad captum tyronum accommodata, &c.*;" "*Chorus nubium ex Aristophanis comedia ad æquales compositis; et chori musici novi, Elia, dramati sacro tragico accommodata,*" Strasburg, 1613; "*Chori musici novi harmonicis 4, 5, et 6 vocum numeris exornati et in Charicliis tragica comedia in Argentoratensis academie theatro exhibita, interpositi,*" Strasburg, 1641. This was one of the first attempts made in Germany to imitate the Greek, or rather the Italian, custom of introducing choruses in dramatic pieces.

WALMSLEY, THOMAS FORBES. Born in the year 1783. He was the third son of William Walmsley, Esq., clerk of the papers to the House of Lords. He received the rudiments of his musical education in the choir of Westminster Abbey, and of his classical studies in Westminster school; and, in 1798, was introduced by the Hon. John Spencer (who first instructed him in playing, on Attwood, organist and composer to his majesty's Chapel Royal, &c., under whom he studied the piano, organ, and counterpoint. In 1803 he began his career as a teacher of the piano and singing, and, in 1805, as a composer of vocal music. In 1810 he married the eldest daughter of William Capon, Esq., (draughtsman to his royal highness the Duke of York,) a lady of superior endowments, by whom he had five sons and three daughters. In 1812 he became assistant organist at St. Martin's in the Fields. Among his most popular works are the following. Cantatas and cauzonets: "The Sailor," "The Soldier, "O Memory," "To Hope," "To-morrow," "O Woman," "The Tear," "Thyrza," "Flowers are Fresh," duet; "Dear is the Dawn," ditto; and "The Weird Sister of the Lake." Glee, rounds, and trios: "The Fairy of the Dale," three voices; this is light, elegant, and expressive: "Ye mariners of England," four voices, with double accompaniment for the piano-forte; "Underneath this stone doth lie," round for four voices; this is in a chaste, subdued style; the theme is plain, but the harmony is rich; "O'er the glad waters," round for four voices; "Six Glee, for 3, 4, 5, and 6 Voices," inscribed to Attwood; "No more with unavailing love," for four voices; "Hail, lovely power," for four voices; "The Bride's Wreath," for four voices; "As those we love decay," for three voices; "Busy, curious, thirsty fly," for four voices; and "From flower to flower," for five voices.

WALTER, GEORG ANTON, a German instrumental composer, resident at Paris, was also a good violinist. His principal published works bear date from the years 1790 to 1800.

WALTER, IGNAZ, singer in the Electoral Chapel at Metz, was born in Bohemia in 1759. He was a pupil in composition of Chapel-master Starzer, of Vienna. He composed many operettas, also some church and instrumental music, up to the year 1800.

WALTHER, JOHANN GOTTFRIED, was of a family that, from the time of Luther downwards, has produced many excellent musicians. He flourished in the first half of the last century, and was organist of the Churches of St. Peter and Paul in the city of Weimar, and is said

by Mattheson to have ranked among the most famous organists and composers for the organ of his time. The friends of music owe the highest obligation to him as the author of a laborious and most valuable work, compiled by him and published at Leipsic in 1732, entitled "*Musikalisches Lexicon, oder Musikalische Bibliothek,*" in a large octavo volume, containing not only an explanation, in the manner of Brossard, of all the terms used in music, but memoirs of musicians in all ages and all countries, from the first instructors of the science down to his own time.

WALTHER, JOHANN, one of the most celebrated contrapuntists of the sixteenth century, was chapel-master to the Elector Maurice, of Saxony, at Dresden. In the library of the Duke of Saxe Coburg is to be found a manuscript collection of German and Latin hymns, which were sung by the Protestants in the time of Luther. It has the following motto:—

"Si nescis Christum et vincis Ariona cantu,
Debetur musis gloria nulla tuis."

The greatest of his works is, however, the one entitled "*Wittenbergisch Teutsch Geistl. Gesangbüchlein mit 4 und 5 Stimmen, durch Johann Walthern, Churfürstlichen von Sachsen Sängemeistern aufs neue mit Fleiss corrigirt, und mit vielen schönen Liedern gebessert und gemehrt,*" Wittenberg 1544. It contains sixty-three German hymns for four, five, and six voices, and thirty-seven Latin hymns for four and five voices.

WALTZ, or WALZ. (G.) The name of a modern dance originally used in Suabia. The measure of its music is *triple*, usually written in $\frac{3}{4}$ or $\frac{3}{8}$ time, and performed moderately slow, or, at the quickest, in *allegretto*. The waltz, though of comparatively late introduction into this country, has long been a favorite species of movement in Germany, and is frequently introduced in the overtures, concertos, sonatas, and other extended forms of composition.

WANHAL, JOHANN. See VANHALL.

WARBLE. To warble, is to sing in a manner imitating that of birds. Those soprano performers whose voices are of a clear, flutelike, and shrill tone, and who run divisions with smooth rapidity and liquid sweetness, are said to warble.

WARE, GEORGE, an eminent musician and composer, died in 1850, at his residence in Parliament Place, Liverpool, in the eighty-second year of his age. Mr. Ware was the original leader of "*Der Freischütz*" in England, and was the author of several elaborate works on the theory and practice of musical composition.

WARREN, E. T. An English musician, and author of a work entitled "Reliques of Ancient Music." He also published an annual collection of catches and glees, and a monthly collection of the same, both of which works were in high repute. He flourished in the last thirty years of the eighteenth century.

WARWICK, THOMAS, was organist of Westminster Abbey, and also one of the organists of the Chapel Royal. He composed a song in forty parts, which was performed in 1635, by forty musicians, before King Charles II. Sir Philip Warwick, secretary of the treasury in the reign of Charles II., was his son.

WATER MUSIC. Music expressly composed for performance upon the water, and consisting of a combination of parts for wind instruments; particularly horns, flutes, hautboys, and bassoons.

Handel, who had fallen into disgrace with his patron, George I., hit upon a scheme of regaining the king's pleasure, by forming a band of wind instruments upon the water, to play some melodious airs (called his water music) which he had written for the time and occasion of a royal regatta. The king was so much pleased and surprised by the effect that he sent for Handel, who was instantly restored to favor. This, probably, was the first band of wind instruments ever heard in England. Wind instruments were used in the time of Charles II., as appears from a passage in Pepys's Diary, p. 201. He went to the playhouse, and says, "That which did please me beyond any thing in the whole world was the *wind musique*, which is so sweet that it ravished me."

WATSON, THOMAS, an English musician and poet, published in London, in 1590, a work entitled "The first Set of Italian Madrigals Englished, not to the Sense of the original Dittic, but after the Affection of the Noate." Some of the works of Luca Marenzio are in this collection.

WAVING LINE. When a waving line is placed vertically before the chord the notes are played successively, from the lowest ascending to the highest, and retained down the full time of the chord.

WAYGHITES, or WAITS. This substantive formerly signified hautboys; and, which is remarkable, has no singular number. From the instruments its signification was, after a time, transferred to the performers, who, being in the habit of parading the streets by night with their music, occasioned the name to be applied, generally, to all musicians who followed a similar practice. Hence those persons who annually, at the approach of Christmas, salute the public with their nocturnal concerts, were, and are to this day, called *wayghts*.

WEBB, DANIEL, an English author and amateur musician, published in London, in the latter part of the last century, a work entitled "Observations on the Correspondence between Poetry and Music." He died in 1798.

WEBBE, SAMUEL, was born in 1740. His father was of high respectability and independent fortune, but dying suddenly at Minorca, whither he went to assume an office under government, while his son was an infant, and the family property being alienated from the rightful descendants, his widow was reduced to such comparative indigence that her son received but very little education, and was apprenticed to the trade of cabinet maker at the very early age of eleven. His disposition was averse from so mechanical an employment; and his indenture was no sooner concluded than he determined not to follow his trade. He applied himself to the study of Latin. His mother died in less than a year after this period, and he had recourse to copying music for his support, though as yet wholly unacquainted with the art, to which, however, he was very much attached. From a German professor, named Barbaud, organist to the Bavarian

Chapel in London, with whom he became acquainted in the course of his business as a copyist, he acquired the rudiments of music. In the mean time his industry was so unceasing, that, when fully employed, he would write from five in the morning till twelve at night, and when this was not the case he pursued the study of music; having also obtained a respectable knowledge of Latin, he turned to the acquisition of French. At the age of twenty-three he married, and the birth of a child added to his difficulties. His ardor for knowledge, however, seemed to augment with his embarrassments, and he now engaged an Italian master. Soon after this he began to teach music and to compose; and scarcely a year passed without his receiving a prize medal, and sometimes two, for his glees, from the Glee Club, down to the time when this donation to merit was discontinued. He subsequently acquired a competent, and indeed extensive, knowledge of the German and Hebrew; nor did he neglect the manly exercises, for he is said to have excelled both in fencing and dancing. These high accomplishments were accompanied with a simplicity and goodness of heart which endeared him to the whole circle of his connections.

Webbe's glees and part songs have been collected and published in three volumes, and they amount to no less than one hundred and seven compositions. We have subjoined the list; and this collection, though it by no means comprises all his works, for he has written masses and songs which have attained a great celebrity, may yet be considered as comprehending those parts which have most essentially contributed to his fame: "As o'er the varied meads," "A generous friendship," "As Nancy danced," "Arise, ye winds," "As the moments roll," "Around the festive board," "Alas! how vain," "Awake, sweet muse," "Belinda's sparkling wit," "Bacchus, Jove's delighted boy," "Breathe soft, ye winds," "Balmly zephyrs," "Bid me, when forty winters," "Come live with me," "Come, rosy health," "Cecilia more than all," "Cupid, my pleasure," "Come, push round," "Discord, dire sister," "Daughter sweet," "Divine Cecilia," "Fair eye of night," "Glorious Apollo," "Great Bacchus," "Hither, all ye loves," "Hail, happy meeting," "Hence, all ye vain delights," "Hail, music," "If love and all the world," "In care and sorrow," "I'll enjoy the present time," "Let not love," "Live to-day," "Music's the language," "Me Bacchus fires," "My fair is beautiful," "My name it is slight," "Now I'm prepared," "*Non fide al mar*," "O night," "O love," "On his death bed," "O come, O bella," "Pretty warbler," "*Quand io beco*," "Rise, my joy," "Sister of Phœbus," "Seek not to draw me," "Surely that's the charming maid," "Since I'm horn a mortal man," "So full of life," "Swiftly from the mountain's brow," "Sweet bird," "To me the wanton girls," "Thy voice, O Harmony," "The Spring," "To the festive board," "There behold the mighty bowl," "'Tis Beauty calls," "The mighty conqueror," "Thy beauteous eyes," "The death of fair Adonis," "The girl that I love," "To the prie tyrant," "The sun that sets," "To the gods of the ocean," "The man who in his breast," "The fragran painting," "The gods of wit and wine," "To love I wake," "The glorious sun," "True as th

needle," "To a heart full of love," "The blossom so pleasing," "When innocence and beauty," "When charming Chloe," "When shall we three meet again," "Who can be happy," "When winds breathe soft," "When Nature formed," "Where'er my Delia comes," "Wine gives the lover vigor," "Wanton gales," "What bright joy," "When we dwell," "We our short lives will measure," "Where hapless Ilion," "What may arrive," "With breath," "Wine and good cheer," and "You gave me your heart."

WEBBE, SAMUEL, Jr., eldest son of the preceding, was born in London about the year 1770. He received his principal instructions in music from his father, and early in life was considered an excellent pianist and organist. He soon, also, attained eminence as a composer of part songs; one or more of his works of that description having been adjudged the prize medal from the Glee Club. About the year 1798 he settled in Liverpool for some time. He afterwards, however, returned to London, where he engaged with Messrs. Logier and Kalkbrenner in the conduct of a musical school on Logier's system, and became organist of the Spanish ambassador's chapel, near Manchester Square. Among his numerous vocal works we can mention the following. Songs: "I'll sing of love," "Farewell to Northmaven," "Harp on the willow," "Love wakes and weeps," "Ode to Solitude." Duet: "In Celia's face." Glees: "Star, O stay, thou lovely shade," three voices; "Six Airs from Beggar's Opera harmonized;" "One morning, very early," four voices; "Come away, death," four voices; and "Gentle stranger, have you seen." Webbe has also ably arranged, as motets, seven different pieces from the well-known "*Passione*" of Haydn. He has also composed a "*Paternoster*" and other music for the Catholic church, some of which may be found in Novello's collection of motets.

WEBER, BERNHARD ANSELM, chapel-master to the King of Prussia at Berlin, was born at Manheim in 1766. He was first educated for the church; at the same time receiving instructions in music from the Abbé Vogler, Holzbauer, and Einberger. In 1787 he was elected conductor of the orchestra in Grossmann's theatre at Hanover. Here he remained three years, when he was invited by the Abbé Vogler to accompany him in a journey through part of Germany, Holland, and the north of Europe. They remained for some time at Stockholm, where Weber produced a mass, a *Te Deum*, and several other pieces for the church. In 1792 we find him at Berlin; from whence, in the following summer, he proceeded to Vienna, where he became known to the celebrated Salieri, who gave him much encouragement in theatrical composition. He was appointed to his first-named situation in the year 1803. His works consist chiefly of dramatic pieces and piano-forte music, bearing date from the years 1784 to 1809. He died at Berlin in 1821.

WEBER, HEINRICH DIONYS. A vocal and instrumental composer, resident at Prague in the year 1800. He was considered in Germany to be a man of much talent.

WEBER, DR. FRIEDRICH AUGUST, a physician at Heilbronn, was born there in 1753.

He was a distinguished musical amateur and composer, and wrote many theoretical and practical works. He died at Heilbronn in 1806.

WEBER, GEORG, organist of the Ducal Chapel at Würzburg in 1807, was considered an eminent organist, pianist, and professor of music. Some of his works, both instrumental and vocal, have been published.

WEBER, GOTTFRIED, the composer and writer about music, was born March 1, 1779, at Freinsheim, in Rhenish Bavaria. Being the only son of the burgomaster, who was afterwards counsellor of justice at Manheim, he received a serious education and made his first studies under the pastor of his native village, which he continued at the gymnasium in Manheim. In 1796 he went to the University of Heidelberg. In the following year he undertook a journey to Munich, Regensburg, and Vienna, in which latter city he remained some time; when he resumed his studies at Heidelberg in 1799, spent a year in the office of a respectable advocate in Manheim, and betook himself in 1800 to Göttingen, where he studied a year and a half. This, with some practice in the Imperial Chamber at Wetzlar, prepared for Godfrey Weber an honorable official career. In 1802 he established himself at Manheim as an advocate. His success at the bar procured for him, in 1804, the appointment of prosecuting attorney for the city. After ten years' exercise of that function, during which he had leisure enough for an ardent devotion to music, he was called in 1814 to Mayence as a judge; and four years afterwards the Grand Duke of Hesse made him counsellor of justice at Darmstadt. In 1825 he was member of a commission for framing a new civil and criminal code for the Grand Duchy; for his zeal and industry in which he was rewarded, in July, 1832, by the appointment of attorney general to the Supreme Court of Appeal and of Cassation. He died on the 12th of September, 1839, at the baths of Kreuznach, at the age of sixty.

His musical education, which was that of an amateur, began at the piano, at which he made, at first, but little progress; then he took lessons on the flute and violoncello, on both which instruments he acquired some skill. His taste for the art increasing with his progress, he devoted himself to it with ardor during the twelve years of his life in Manheim after his return from Göttingen. He founded there a school for music and some spiritual concerts, which long continued to be famous. It was also during his first years in Manheim that he made attempts at composition, without possessing much idea of harmony or counterpoint. He wrote his first masses; they were received with favor, but he soon saw that, to produce any thing of permanent value, he must master the science of composition. He read all the treatises which he could lay his hand upon. Struck by the contradictions which he found in the different systems of Kirnberger, Vogler, Marpurg, and others, and lacking practical education, he came to the conclusion that all the received ideas about the generating principles of the chords, the scales, &c., were sheer illusions: he became a sceptic as to any absolute musical science, and based every thing upon the mere empirical ground of practice and usage. He read the scores of the great masters and

deduced his rules from a comparison of cases in their practice. In his "Attempt at a systematic Theory of Composition," — *Versuch einer geordneten Theorie der Tonsetzkunst*, — Mayence, 1817-21, in three volumes, he declares that he does not believe in the existence of a system that accords with all the facts of harmonical experience. The originality of so bold a work excited great attention, and a second edition was called for in 1824, and still a third in 1830-32. The Germans themselves soon felt the emptiness of such a negative theory, but gave Godfrey Weber all credit for his remarkable powers of analysis, displayed in his close and accurate comparison of a multitude of particular cases. A translation of this work, under the title of "Godfrey Weber's Theory of Musical Composition," by James F. Warner, was published in Boston, Massachusetts, in 1846.

His second work, an extract of the more elementary portions of the first, was published in 1822, and called "Allgemeine Musiklehre für Lehrer und Lernende." To the third edition of this (1831) Weber appended a dictionary of music. He also published the following: 3. "Die Generalbasslehre," &c., — Doctrine of Thorough Bass, for Self-Instruction, — 1833. 4. "On the chronometrical Marking of Time, with a Comparison of Maelzel's Degrees with the simple Oscillations of the Pendulum," 1817. 5. "Description and Scale of G. Weber's Double Trombone," an instrument which he invented, 1817. 6. "Versuch einer praktischen Akustik der Blasinstrumente," — Practical Acoustics of wind Instruments. 7. "Ueber Saiteninstrumente mit Bänden," — On stringed Instruments with Bows, — 1823. 8. "On an important Improvement of the Horn." 9. "On the Simplification and Improvement of the Kettledrums." 10. "Results of Inquiries into the Authenticity of Mozart's Requiem," 1826. 11. "Further Results," &c., 1827. Most of the above works were written for encyclopædias and musical journals. In 1824 Weber undertook the publication of a periodical magazine of the history and literature of music, entitled "*Cecilia*." He was principal editor of the first eighty numbers of this excellent work, forming twenty octavo volumes. Interrupted for a time, it was resumed after his death by Dehn, of Berlin.

Godfrey Weber aspired to the reputation of a great composer, and always expressed regret that his fame as a theoretic writer had so absorbed that which he had coveted for his compositions. This, it is said, gave him a distaste for music in his latter years. He began to publish when his musical education was scarcely sketched out. The arrival of the Abbé Vogler at Darmstadt, and the acquaintance which he formed at his school with Carl Maria von Weber and with Meyerbeer, and their ardent love for art, stimulated his creative faculty, and it was then that he produced his best works. Among these are, "A Te Deum (in E flat) for four Voices and Orchestra," Op. 18; "A Requiem (in F minor) for male Voices, Violas, Bass Horns, Drums, and organ Obligato," Op. 24; "Three Masses," Ops. 27, 28, 33; "A Hymn to God," for two choirs, Op. 42; a great variety of songs for one or more voices. Also, some instrumental pieces: a sonata for piano, a trio for violin, alto, and violoncello, &c. Gottfried Weber was a member of most of the musical academies of Europe. That of Stock-

holm made him an honorary academician in 1827.

WEBER, EDMUND VON, director of the music at the Court Theatre in Salzburg in 1797, was a pupil of Haydn. He was elder brother of the celebrated C. M. Von Weber. Some of his instrumental works have been published. He has also composed some dramatic pieces.

WEBER, CARL MARIA VON. The following account of this favorite composer is abridged from "Hogarth's Musical History:" —

Carl Maria von Weber was born in 1786 at Eutin, a small town in Holstein. His father, who was a violinist of some note, gave him a liberal education, and enabled him to cultivate his talents for music and painting, between which his inclinations seem, in his early years, to have been divided. His ardor in the study of painting, however, abated as his mind became more and more engrossed by his love of music. After he had acquired great skill as a piano-forte player, his father placed him under the care of Michael Haydn, brother of the illustrious Joseph Haydn, and himself a celebrated composer in the ecclesiastical style. Under him Weber labored earnestly; but, according to his own account, without much success. The master was then far advanced in years and of an austere disposition. "There was too awful a distance," Weber himself says, "between the old man and the child."

At this time, in 1798, his first work was published, consisting of six "*Fughetti*," or short fugues, which were favorably noticed by the "*Leipsic Musical Gazette*." In the same year he went to Munich, where he received instructions from M. Kalcher, the organist of the Royal Chapel, to whom he ascribes his knowledge of the laws of counterpoint and their ready application to practice. Under the eye of this master he composed an opera, a grand mass, and many instrumental pieces; all which were afterwards committed to the flames. The art of lithography, recently invented, now attracted his attention; and his attempts to improve upon the invention for a time entirely occupied his mind. But his ardor in this pursuit soon subsided, and he returned to his musical labors.

At the age of fourteen he composed the opera "*Das Waldmädchen*," — The Wood Girl, — which was performed for the first time in November, 1800, and received with applause at Vienna, Prague, and St. Petersburg. The whole of the second act was composed in ten days, "one of the unfortunate consequences," he himself says, and the remark is worthy of being attended to, "of those marvellous anecdotes of celebrated men which act so strongly on the youthful mind and incite to emulation." After this he was induced, by reading an article in a musical journal, to think of composing in an ancient style and of reviving the use of forgotten instruments. According to this plan, he composed an opera called "*Peter Schmol und seine Nachbarn*," — Peter Schmol and his Neighbors, — which had little success, but received the warm approbation of his old master, Michael Haydn.

Soon afterwards he visited Vienna and mingled in the musical society of that city. He became acquainted with the Abbé Vogler, a learned and profound musician, who generously under-

took to give him the benefit of his own knowledge and experience. Aided by the advice and assistance of Vogler, Weber for two years devoted himself to a severe study of the works of the great masters; and, during this period, published only one or two trifles. After having finished this course of education, he received the situation of *maestro di capella* at Breslau. During his residence there he composed an opera called "*Rubezahl*, or *Number-Nip*," the celebrated spirit, or fiend, of the Hartz Mountains.

In 1806 he entered into the employment of the Duke Eugene, of Wurtemberg. Here he composed several symphonies and other pieces of instrumental music. He also remodelled his opera of "*The Wood Girl*," and reproduced it under the title of "*Sylvana*." In 1810 he composed the opera of "*Abu Hassan*" at Darmstadt. This piece, which is founded on a well-known and amusing story in the "*Arabian Nights*," had considerable success. The tale is well dramatized, and the music light and comic. It was brought out in London some years ago and frequently performed.

In 1813 he was employed to reorganize and direct the opera at Pragne, and relinquished the management in 1816, after having accomplished the object for which he undertook it. He then received an invitation to Dresden, for the purpose of establishing a German opera in that city. He had previously declined many handsome offers from various quarters; but this invitation he accepted with alacrity, as it promised to gratify the wish he had long entertained, of placing on a proper footing the national opera of his own country. He continued to hold this situation till his death.

At Dresden he composed his far-famed "*Freischütz*." He did not, however, bring it out there, but, by permission of his sovereign, at Berlin, where it was first performed in the beginning of 1822. It was received with an enthusiasm which rapidly spread over Germany, and at once raised its author's name to the summit of popularity. His well-regulated mind bore with calmness this sudden celebrity. "I am delighted," he says, in a letter to a friend, "that my '*Freischütz*' has given you pleasure. I need the approbation of men of merit to stimulate me to activity. Carried to my present height by the storm of applause, I am ever in fear of a fall. How much better it is to pursue one's way in peace and quiet!" Nothing but "*Der Freischütz*" was performed in any theatre in Germany, and nothing but the airs from it were heard even in the streets of the smallest villages. In July, 1824, an English version of it was produced in London, at the English Opera House, and fully gratified the highly-raised expectations of the public. On the opening of the great winter theatres, it was brought out at both of them. Each theatre had a different version of it, and in each version it was injured by wanton changes, mutilations, and interpolations, according to the prevailing usage in English adaptations of foreign operas. The great features of the piece, however, remained; it was got up with much splendor and magnificence; and, generally speaking, was well performed. It was received with an enthusiasm not inferior to that which it had excited in Germany; it made the round of all the provincial theatres; and, wher-

ever it appeared, was played night after night to overflowing houses.

In the winter of 1822 Weber produced the musical drama of "*Preciosa*," founded on a tale of Cervantes. This piece was very successful, not only at Dresden, where it was originally produced, but all over Germany. The attempts, however, to adapt it to the French and English stage failed, notwithstanding the beauty and romantic character of the music.

In November, 1823, the opera of "*Euryanthe*" was produced at Vienna, and received as warmly as the "*Freischütz*" had been. The applause was enthusiastic, and the composer was four times called upon the stage during the first performance. Its progress in general favor, however, was less rapid than that of the "*Freischütz*." It was rather coldly received at Berlin; and the musical wits of that place punned upon its title, and called it "*L'Ennujante!*" People were disappointed, not because they did not meet with the same excellence as in the "*Freischütz*," but because it was not the same kind of excellence. "The effect produced by my '*Euryanthe*,'" Weber says, in one of his letters, "is precisely what I anticipated. My indiscreet friends have, in this instance, lent their hand to my enemies, by requiring that '*Euryanthe*' should seduce as many as the '*Freischütz*' had done; both the one and the other are equally foolish in doing so." "*Euryanthe*," however, was calculated to gain a lasting success, if a slow one. Its story, though it wants the attractions of *diablerie*, is interesting, and resembles that of Shakspeare's "*Cymbeline*;" and the music, though not capable of immediately striking the popular ear, makes a profound impression when the performers have surmounted the great difficulties of its execution.

In the year 1824 Weber undertook to compose an opera for Covent Garden Theatre; and the drama of "*Oberon*" was written for him by Mr. Planché. Mr. Kemble, then manager of that theatre, in the course of a tour through Germany, in which he was accompanied by Sir George Smart, went to Dresden in the month of August, 1825, for the purpose of visiting Weber and making the final arrangements respecting this opera, which was to be brought out, under his own superintendence, in the following spring. On this occasion the travellers were witnesses of Weber's zeal for the improvement of music. He carried them to a tea garden, the price of admission to which was a few groschen, — something about threepence, English, — where a good and numerous orchestra were playing for the entertainment of the company. On his desiring them to mention any overture they wished to hear, they named one, which was played with admirable precision and effect. Weber then told them that this band was supported as a kind of nursery for instrumental performers, who entered it for a low remuneration, as vacancies in the orchestra of the opera and other regular orchestras in the city were filled up from it, and it afforded a supply of well-trained and experienced players.

On the 5th of March Weber arrived in London. His expected visit had excited great interest, and the attentions he received were in the highest degree gratifying to his feelings. Or his arrival, in place of being required, as an alien, to present himself at the passport office, he was waited upon and requested to give himself no

trouble, as that matter had been arranged for him. He took up his abode in the house of Sir George Smart, whose attention to his comforts was unremitting. The letters written by him from London to his wife, Caroline Brand, a distinguished actress, to whom he had been married for some years, give an account of every thing that occurred to him at this time and place his character in the most amiable light. In a letter written a few days after his arrival he describes the impression made upon him by his reception in England.

"The English way of living," he says, "suits mine exactly; and my little stock of English, in which I make tolerable progress, is of inculcable use to me. * * * The people are really too kind to me. No king had ever more done for him out of love. I might almost say they carry me in their arms. At seven o'clock in the evening we went to Covent Garden, where 'Rob Roy,' an opera after Sir Walter Scott's novel, was played. The house is handsomely decorated, and not too large. When I came forward to the front of the stage box, that I might have a better view of it, some one called out, 'Weber! Weber!' and though I drew back immediately, there followed a clamor of applause that I thought never would have ended. Then the overture to the '*Freischütz*' was called for, and every time I showed myself the storm again broke loose. Fortunately, soon after the overture 'Rob Roy' began, and things gradually became more quiet. Could a man wish for more enthusiasm or more love? I must confess that I was completely overpowered by it, though I am of a calm disposition and somewhat accustomed to such scenes. I know not what I would have given to have had you by my side, that you might have seen me in my foreign garb of honor. And now, my dear love, I can assure you that you may be quite at ease, both as to the singers and the orchestra. Miss Paton is a singer of the first rank, and will play '*Reiza*' divinely. Braham not less so, though in a totally different style. There are also several good tenors, and I really cannot see why the English singing should be so much abused. The singers have a perfectly good Italian education, fine voices and expression. The orchestra is not remarkable, but still very good, and the choruses particularly so. In short, I feel quite at ease as to the fate of 'Oberon.'"

This opera, after very careful preparation, was brought out on the 12th of April. It was admirably performed in every department, and the great powers of Braham and Miss Paton never were more fully displayed. The composer, in a letter to his wife written the same night, describes the reception of the piece. "My best-beloved Caroline," he says, "through God's grace and assistance, I have this evening met with the most complete success. The brilliancy and affecting nature of the triumph are indescribable. God alone be thanked for it! When I entered the orchestra the whole of the house, which was filled to overflowing, rose up, and I was saluted by huzzas, and waving of hats and handkerchiefs, which I thought would never have done. They insisted on encoring the overture. Every air was interrupted twice or thrice with bursts of applause. * * * So much for this night, dear life, from your heartily-tired husband, who,

however, could not sleep in peace till he had communicated to you this new blessing of Heaven. Good night!"

During his residence in London Weber showed great simplicity of manners, quiet and retiring habits, and a mild and cheerful temper. He greatly enjoyed the society of a few accomplished and intelligent persons, but disliked gay and fashionable parties, which he always avoided except on the very few occasions of his being invited to them as a musician, when he considered his attendance as a sacrifice to professional duty. At table he was temperate; never exceeding, after dinner, two or three glasses of port, which he preferred to every other wine, feeling, no doubt, the benefit of its cordial and restorative quality in a climate so severely trying to his feeble constitution. He greatly enjoyed, too, a glass of good porter. He disliked the introduction of the "*Freischütz*" as a subject of conversation. Notwithstanding the extraordinary success of that opera, though it had been performed times innumerable at every theatre in Germany and printed in a great variety of forms, he had never derived any pecuniary advantage from it whatever; and he felt sore and mortified that a work which had profited so many should have contributed nothing to the benefit of his family. So strong was this feeling that to dwell on the merits or the popularity of the "*Freischütz*" was the only thing that seemed capable of disturbing the gentleness of his temper.

Weber was now in the last stage of the fatal malady under which he had long labored. It was a pulmonary disease, which had been aggravated by the fatigues of a long journey and the severity of a climate to which he was unaccustomed. "To-day," he says to his wife on the 17th of April, "is enough to be the death of any one. A thick, dark, yellow fog overhangs the sky, so that one can hardly see in the house without candles. The sun stands powerless, like a ruddy point in the clouds. No, there is no living in this climate. The longing I feel for Hosterwitz and the clear air is indescribable. But patience, patience—one day rolls on after another; two months are already over. I have formed an acquaintance with Dr. Kind, a nephew of our own Kind. He is determined to make me well. God help me! that will never be in this life. I have lost all hope in physicians and their art. Repose is my best doctor, and henceforth it shall be my sole object to obtain it."

"Oberon" continued to draw good houses, but its popularity was not equal to that of the "*Freischütz*." The composer, while he was the delight of the small circle of musical friends among whom he lived, was disqualified, by his feelings, habits, and manners, from sharing in the golden harvest so abundantly reaped by foreign favorites among the English aristocracy. His feelings were too high, his habits too retiring, and his manners too plain and simple to enable him to profit by their liberality. He was willing to increase the emoluments of his long and painful journey to England by attending private parties for the usual remuneration to artists of distinction; but he was not willing to seek invitations to such parties by paying court to their givers; and the consequence was, that two or three such invitations were all he received. On the 25th of May he had a benefit concert; and

on this occasion, when it might naturally have been expected that an overflowing audience would have testified the sentiments of the English public towards one of the greatest musicians who had ever visited our shores, the room was not more than half filled. Weber, struggling at once with illness and with suppressed feelings of disappointment and mortification, was hardly able to get through the business of the evening as conductor. At the end of the concert he threw himself on a sofa in a state of exhaustion, which filled his surrounding friends with alarm.

His whole thoughts were now turned towards his home, and his impatience to be once more in the bosom of his family was extreme. This joyful hope was destined never to be realized. On the morning of the 5th of June, 1826, Weber was found dead in his bed.

On the 21st of June his remains were interred in the vaults below the Roman Catholic chapel in Moorfields. The procession was attended by a numerous body of his friends and professional brethren, Sir George Smart being chief mourner. The funeral service, in which the "Requiem" of Mozart was performed by a large vocal and instrumental band, took place in the presence of two thousand persons, by whom the chapel was filled; and the ceremony was solemn and impressive.

The last account of Weber's family that we have met with is that given by Moscheles, who visited Dresden in October, 1826, and wrote to a friend in London. "I visited poor Weber's widow, and found her still inconsolable for the loss of her husband. She burst into tears as soon as she saw me. What has been rumored here, and even in England, as to their not having lived happily together, is, I can assure you, a calumny. He has left two fine young boys." The unvenomed tongue of detraction none can escape; but if ever there was a case in which such rumors were utterly groundless and malignant, it was that of Weber. Besides the two boys whom he left, he had three children who died in their infancy.

Weber's character may be gathered from the foregoing sketch, brief as it is, of the circumstances of his life. He was modest, gentle, and affectionate; possessed of a strong intellect and much firmness. His mind was highly cultivated, and his knowledge of literature considerable. In the earlier part of his life he exercised his pen, with some distinction, as a critic, in the musical journals of that period; and left, at his death, an unfinished work, entitled "*Tonkünstlers Leben, eine Arabeske*," — The Life of a Composer, an Arabesque, — which was published, after his death, by the guardian of his children, along with an autobiographical sketch of his life and fragments of his correspondence. This production, as its title indicates, is written in that fantastic and incoherent style to which the German literati are somewhat too much addicted; there is, too, a vague and misty air about the general speculations, also characteristic of the German literary school, which frequently renders the aim and meaning of the author difficult to come at; and there is a good deal of laborious and overstrained humor. With all this there are many acute and profound observations on musical subjects; and the whole is interesting, as throwing light on the intellectual constitution of a great artist.

If the author of the "*Freischütz*," "*Euryanthe*," and "*Oberon*" has not raised himself to the level of Beethoven and Mozart, he is but a little lower than these mighty masters. His powerful and original genius was strengthened by a profound knowledge of his art, and his mind was enriched and fertilized, (if the expression may be allowed,) not only by a most extensive study of the works of the greatest composers, but by the closest observation of all the phenomena of nature from which musical impressions are derived. From these sources his strong and active imagination was stored with materials which, as he lived, only became more and more exhaustless. None of his works exhibits such a richness of ideas as "*Oberon*," a piece that was written when his body, wasted by disease, was sinking into the grave. Though, however, this opera may be considered the greatest of his compositions, containing strains the most tender, romantic, and impassioned, magnificent choral harmonies, and novel and beautiful orchestral effects, — and though, among those who are capable of appreciating the highest efforts of art, it has even exalted the reputation of the author of the "*Freischütz*," — yet it has never excited those mingled feelings of amazement and delight with which that unique production was every where hailed. Weber's fancy loved to wander in the regions of enchantment, and to embody the wild and fantastic images of German superstition. "Like Salvator," to adopt the language of the best criticism on the genius of Weber we have yet met with, "he gloried in delineating the wild and savage aspects of Nature, and in wandering, like Beethoven, in her sullen and more gloomy recesses. The romantic turn of his mind, inspired by his early studies, rendered the wild legend of the '*Freischütz*' perhaps the most suitable subject on which he could have employed his talents. In depicting, or rather in aggravating, the horrors of the '*wolf's glen*,' with its fearful omens and all its unearthly sights and sounds, in painting the grief and despair of his hero, and the gloomy, diabolical spirit of the lost and abandoned Caspar, he found full scope for his peculiar talent. Were we to compare him with any of our romance writers, we should say that he possessed, though mingled with and controlled by a finer taste and far greater discretion, a congeniality of soul with Monk Lewis and Mrs. Radcliffe; and, rich as the dramatic literature of his country is in tales of superstition and *diablerie*, we think it to be regretted that he did not at least furnish us with another romantic opera from that prolific source." Some of the most powerful passages in "*Oberon*" afford striking manifestations of this peculiar turn of the author's genius. Among these are the incantation scene, "*Spirits of air*;" and the fiendlike chorus, mingled with shouts of laughter, of the evoked demons; the chorus which forms the finale to the second act; and the scene in which the hero is tempted by evil spirits. In all these we recognize in every note the author of the "*Freischütz*."

Weber's instrumental accompaniments are stronger than those of Mozart. Whether this species of coloring has reached its height, or whether it will continue to increase in strength, it seems hardly possible to conjecture. Every succeeding generation of dramatic composers has added variety, richness, and force to the effects

of the orchestra; and accompaniments, at first thought too predominant and overpowering, have come, in course of time, to be considered thin and feeble.

WEBERLING, JOHANN FRIEDRICH, violinist in the chapel of the Duke of Wurtemberg, was born at Stuttgart in 1758. He published three concertos for the violin, composed in a brilliant style, three solos for the violin, three concertos for the horn, and several duos, variations, &c., for the flute. He died in 1825.

WECHSELNOTEN. (G.) Irregular transient notes, *appoggiaturas*.

WECKMANN, MATHIAS, organist of St. James's Church at Hamburg, was born in 1621. He was a pupil in singing of J. Gabrieli; and in composition, of Chapel-master H. Schutz. He sang in the Elector's Chapel at Dresden till the change of his voice, when he applied himself more especially to the organ, and was soon nominated by the elector court organist. He was thence invited to Nykøping, in Denmark, by the prince royal of that country, who appointed him his chapel-master. The prince dying, Weckmann returned to his organist situation at Dresden, which he only quitted some years afterwards for his more lucrative appointment at Hamburg, where he died in 1674. He published, amongst other works, "*Canzones pour deux V., Basson, et B. C.,*" Dresden, 1651.

WEEKES, THOMAS, organist of Winchester, and afterwards of Chichester, was the author of a set of madrigals for three, four, five, and six voices, printed in 1597. He published also, in the year following, ballets and madrigals to five voices, with one to six voices, in 1600; "A Set of Madrigals in six Parts;" and, in 1608, "Ayeres or Phantastiecke Spirites for three Voices." He likewise composed many services and anthems which are well known and much esteemed. There is a madrigal of his composition printed in the "Triumphs of Oriana," and an anthem in Barraud's collection. Several of the madrigals of Weekes were highly esteemed and frequently performed by English glee singers. Among these are "Welcome, sweet Pleasure," and "The Fightingale."

WEICH. (G.) Soft; minor, in respect to keys and mode.

WEICHMANN, JOHANN. A German musician. Amongst his works are "Musica, or the Art of Singing," 1647; and various ballets, courantes, allemandes, and sarabands, for two voices or instruments, Königsberg, 1649.

WEICHSEL, CARL, an excellent violinist, and brother of the celebrated Mrs. Billington, was born in London in 1764. He was a pupil of W. Cramer, and for several seasons led the orchestra at the King's Theatre. He published some violin music in London, as also at Vienna, between the years 1790 and 1800.

WEIGL, JOSEPH, Sen., a celebrated violoncellist, resided at Vienna about the year 1772. He was a member of the Chapel Royal there.

WEIGL, JOSEPH, son of the preceding, and chapel-master and conductor of the orchestra at the Theatre Royal in Vienna, was born there in

1765. He was a pupil of Albrechtsberger and Salieri. He wrote several dramatic pieces of considerable merit for the Vienna theatre: on the appearance of one of which, "*La Principessa d'Amalfi*," opera buffa, 1794, he received a very flattering letter of approval from the great Haydn, who named the piece a *chef-d'œuvre*. In 1802 Weigl was appointed chapel-master, &c., at Stuttgart. The success of his Italian operas at Vienna procured him engagements at La Scala, in Milan, in 1807 and 1815. After the death of Salieri he obtained (in 1825) the place of second imperial chapel-master. From that time he ceased writing for the theatre, and devoted himself solely to church music. His compositions are very numerous, including about thirty operas, among which the most famous is the "Swiss Family;" some fifteen ballets; eighteen dramatic oratorios and cantatas; ten masses, graduals, offertories, &c.; overtures, airs, romances, choruses, &c.

WEIGL, THADDEUS. Younger brother of the preceding, and also a composer to the Theatre Royal at Vienna since the year 1797. He produced many dramatic pieces of merit, and in 1804 was appointed to the situation of director of the music at the Theatre Royal, in the place of Süssmayer.

WEIMAR, GEORG PETER, music master at the gymnasium in Erfurt, was born near that town in 1734. He was considered a very excellent master, and published, amongst other works, "A Method for Singing," Leipsic, 1795, and various sets of cantatas, motets, and hymns. He died in 1800.

WEINLICH, CHRISTIAN EHREGOTT, music director in the Church of the Holy Cross at Dresden, was born in 1743. He was a pupil of Homilius, and in 1767 was appointed organist of the Reformed Church at Leipsic, whence he removed to the same situation in Dresden, being also nominated chorus-master to the opera buffa there. He composed various oratorios of considerable merit; also some instrumental music. His works bear date between the years 1775 and 1801.

WEISS, CHARLES, flutist and composer, was born at Mulhausen, in Switzerland, and accompanied an English nobleman to Rome, in 1760, in the capacity of music master. Through the interest of his pupil he afterwards established himself in London, where he died in 1795. He held the situation of first flutist in the private concerts of George III. His playing was much admired, and he also composed some good music for his instrument.

WEISS, CARL R., son of the preceding, is a native of Mulhausen. He received musical instructions from his father from so early an age that he played a concerto on the flute when only nine years old. His father, however, would not consent to his following the musical profession; he was therefore, much against his inclination, sent into a counting house, the routine of which so disgusted him that he soon neglected his business and was sent to Paris, and thence proceeded to Italy. In Bergamo he was introduced to the eminent composer Mayer: from that moment his only delight consisted in music paper, and he entertained a hope that his father would still allow him to follow the stream of Nature, and embrace

music as his profession. This, however, was not the case; but three years afterwards, being in Naples, a singular circumstance afforded him an opportunity of breaking what he conceived to be his mercantile chains. He was invited every evening at that time to musical parties, and thus again was obliged to neglect his mercantile occupations. His employer, who was a rich merchant, reproaching him for this want of attention, said that he must either give up the mercantile or the musical pen, for that one combining with the other formed bad harmony. "I think you are right," exclaimed Weiss; "and I will avoid these discords by leaving you." Scarcely had he pronounced these words when an eruption of Mount Vesuvius gave the signal of alarm throughout the town. Weiss, although not superstitious, could not help feeling at that moment that his new career would not always be accompanied with sunshine. Still he was delighted at having obtained his freedom from the counting house, and was directly advised by his friends to settle as a professor of the flute at Naples. His first pupil was the son of the Princess Filangini; and he was proceeding with very good prospects, when he found that his presence in Naples interfered with the business of a valued friend, who was also a flute master. He therefore decided to leave Naples for Rome, where he gave his first concert, which, unexpectedly, was so crowded that he cleared in one evening as much as he got in a whole year from his mercantile pursuits. The idea of going to England to join his father, who was living there, was now constantly present to his mind. He first, however, travelled farther in Italy, and, being in Genoa at the time the English troops took possession of that town, circumstances obliged him to accept an offer of employment as clerk in the office of Sir John Dalrymple. The Italian levy being discharged at the expiration of two years, Weiss proceeded to Milan, and thence to Geneva, where he procured an introduction to Madame de Staël, who promised him good letters for England, but died before he required them. He now determined to proceed to London without any letters of introduction, and, after the usual difficulties in making talents known in a foreign country, he settled in London, with a considerable share of patronage both as composer and performer. At the end of the season of 1821 Weiss left London on a tour to Brussels, Spa, and Aix-la-Chapelle. When he arrived at Lille his passport was not returned from the minister in Paris, and, having no connection in Lille, he did not wish to comply with the prefect's order to remain until he received his document. He therefore took the diligence next morning for Brussels without passport. No unpleasant rencontre happened until he left Spa for Aix-la-Chapelle. On the frontier of Prussia and the Netherlands he was requested to show his passport. Weiss explained the matter by saying that he was requested by the amateurs of music to go to Aix-la-Chapelle to give a concert. His name was not unknown to the officers, but they insisted on having evident proofs that he was a performer. Weiss had then no other choice left but to take out his flute, when, after a short prelude, he was allowed to pass. He published about seventy compositions for the flute; among others a concerto, many etudes, fantasias, trios, duos, &c.

WEISS, FRANZ, a violinist in the service of Prince Razumowsky at Vienna, was born in Silesia in 1778. He played the alto in the celebrated quartet party where the quartets of Beethoven were first executed by Schuppanzich. He died at Vienna in 1830. He was a composer of some merit, and wrote ballets, symphonies, and overtures, besides "*Trois Quatuors pour 2 V., A., et Ve.*," Op. 1; "*Trois Duos pour 2 V.,*" Op. 2; "*Caprices et Variat. pour une Fl.*," Op. 3; "*Gr. Sonate pour le Clav.*," Op. 4, 1803; "*Gr. Quintuor pour 2 V., 2 A., et Ve.*," Op. 5; "*Gr. Sonate pour le Clav.*," Op. 6.

WELDON, JOHN, a native of Chichester, received his instruction in music from John Walter, organist of Eton College, and afterwards from Henry Purcell. From Eton he went to Oxford, and was appointed organist of New College; but in 1701 he was appointed a gentleman extraordinary of the Royal Chapel, and in 1708 succeeded Dr. Blow as one of his majesty's organists. In 1715, upon the establishment of a second composer's place, Weldon was admitted to it. He had been but a short time in this station before he gave a specimen of his abilities in the composition of the communion service, as well as by the several anthems required by the conditions of his appointment. At the same time that Weldon was organist of the Royal Chapel he held the same situation in the Church of St. Bride's, London; and King George I. having presented the parish of St. Martin in the Fields with an organ, Weldon, perhaps in compliment to the king, was chosen organist. He was a very sweet and elegant composer of church music. This composer died in 1736, and was succeeded in the King's Chapel by Dr. Boyce.

WELSH BARDS. When Edward I., of England, conquered Wales, he found that the songs of the Welsh bards had so powerful an influence over the minds of the people that for his own safety he adopted the cruel policy of putting them all to death.

WELSH TUNES. Melodies of the ancient Cambrians, and said by Caradoc, in his Chronicle of Wales, to be derived from the Irish through the means of Griffith Ap-Conan, of Irish birth, and King of North Wales. Many of the Welsh tunes are sufficiently in the measure and style of those of Ireland to sanction this opinion; which is further confirmed by the similarity of the ancient instruments of the two countries.

Wynne, in his History of Wales, asserts on the authority of Caradoc, a Welsh writer of the twelfth century, that the Irish devised all the instruments, tunes, and measures in use among the Welsh.

WELSH HARP. An instrument formerly much used by the Cambrian harpers, and said to have about a hundred strings. Its form is somewhat different from any other harp, and the great number of strings renders it a very difficult instrument to play, and it is seldom found to be in perfect tune.

WELSIL, THOMAS. This eminent English musician was born about 1770 at Wells, in Somersetshire. At the age of six he was a chorister in the cathedral, and by singing the anthems on Sundays attracted the lovers of music from

Bath, Bristol, Bridgewater, and still more distant towns; so that on Saturdays the city hotels felt the increase of visitors, and on Sundays the church was crowded to excess. The reputation of so young a singer soon reached the ears of Mr. Sheridan, who sent to Wells and engaged the lad for the oratorios, then conducted by Linley, at the Opera House in the Haymarket. On his first performance the boy founded a reputation which, until that period, it had never been the fate of any child to enjoy: the attraction of his voice and style of singing was prodigious, and an engagement followed for the stage, during which he performed in many operas written expressly to exhibit his powers. The first was "The Prisoner," by Attwood; this was succeeded by "The Prize," "The Adopted Child," "The Mariners," "The Cherokee," and "Lodoiska." It was remarkable that Storace betrayed a wish to suppress the growth of the boy's reputation, and refused to compose for him; so that, had not Mr. Kemble, the manager, insisted on the production of "The Cherokee," and the beautiful song, "Sweet bird," in the opera of "Lodoiska," his fame (owing to the unkindness of Storace) would have been suffered to fade, instead of grow, as it did, to high importance. Through the liberal feelings of Mr. Kemble, who bestowed great pains on him, he was also brought into notice as an actor; Mr. Kemble conceiving, on Welsh's performing the character of Prince Arthur, in "King John," that he displayed a mind well suited to the stage.

His musical education, however, still continued to be carefully attended to; and his masters were Horn, senior, John Cramer, and Baumgarten: with the last gentleman he studied the theory of music, and was his favorite pupil. The works produced by Welsh, when about twenty-three years of age, were the farces of "The Greeneyed Monster" and "Twenty Years ago," at the Lyceum Theatre, and a full opera at Covent Garden entitled "Kantschatka," which, although not successful as a drama, gave the composer of the music great scope, and placed Welsh high in his profession for taste and song writing, and ability in the arrangement of the orchestra. The chorus which commenced the opera, as well as many others in the piece, was beautifully constructed, and received decided marks of public admiration by frequent encores. For some time after there appeared no theatrical compositions of Welsh; but his time was well employed for the gratification of the public in teaching pupils for the stage, and in this department he had no rival. Sinclair, Charles Horn, Miss Stephens, Miss Merry, and Miss Wilson are the persons who, fortunately for themselves and the public, became his apprentices, and made their *débuts* under his direction and care.

Welsh appears to have studiously endeavored to give to his female pupils each a different style: perhaps the natural ability of each may have marked the line best suited to their respective talents, which, under so judicious a master, would of course be embraced as affording legitimate grounds for discrimination.

WENK, A. H., secretary to the Duke of Saxe-Gotha, was considered as a good composer, pianist, and performer on the harmonica. He resided for many years up to the year 1810, at

Amsterdam. He was a violin pupil of Hatasch, and studied the piano and composition under G. Benda, with whom he resided for some time at Paris, where, and subsequently at Leipsic, he published some instrumental music.

WENKEL, JOHANN FRIEDRICH WILHELM, organist at Uelzen, in the duchy of Luneberg, was born in 1734. He first studied the organ and composition under Schroeter, and in 1756 went to Berlin, where he formed an acquaintance with Bach, Marpurg, and Kimberger, through whose interest he obtained the situation of singing master at the Secondary School in Berlin. After remaining there seven years, he was invited to Stendal as director of music in the four principal churches. In 1768 he quitted that situation for the place of organist at Uelzen, where he was still living in 1791, with the reputation of being one of the best organists, pianists, and composers of Germany. His works are principally instrumental.

WERCKMEISTER, ANDREAS, the son of a brewer at Benneckenstein, a small town in Thuringia, was born in 1645. After the usual school education, he was sent to the College of Quedlinburg, and, having much improved himself in music, was some time afterwards invited by the council of Hasselfelde, a city in the principality of Blankenburg, to become their organist. While in this employment, he was sent for to the same office at Elrich, but was prevented from going thither by the Duke Rudolphus Augustus, who wished to keep him within his own district. Being, however, invited, in the year 1674, to Elbingerode, with the offer of the places of organist and recorder of the town, he was permitted to accept them. He was some time afterwards appointed organist of the Church of St. Martin at Wallerstadt, in which station he died in the year 1706. His works are "Orgel Probe," printed in 1681; "*Musica Mathematica*," in 1687; "Sonatas for a Violin, with a Thorough Bass," in 1689; "*Musicalische Temperatur*," in 1691; "A Treatise, in German, on the Use and Abuse of Music," printed in the same year; "*Hypomnemata Musica*," in 1697; "*Erweiterte Orgel Probe*," in 1698; "*Cybrum Musicum*," in 1700; "A Translation of Steffani's Letters, with Notes," in 1700; "Reflections on Thorough Bass," in German, without a date; "*Harmonologia Musica*," in 1702; "*Organum Gruningense redicivum*," in 1705; and "Musical Paradoxal Discourse," published the year after his death.

WERNER, GREGORIUS JOSEPH, chapel-master to Prince Esterhazy at Eisenach, in Hungary, about the year 1736, was the predecessor of Haydn in that office. He composed several cantatas, and a curious work entitled "*Neuer und sehr curios Musikalischer Instrumentalkalender Parthien Weiss, mit 2 V. und B. in die 12 Monate eingetheilt und nach eines jededeeden Art und Eigenschaft mit Bizarrrien und seltsamen Erfindungen*," Augsburg, 1748.

WERNER, JOHANN GOTTLÖB, formerly chorister in Hohenstein, and afterwards music director at Merseburg, published at Leipsic a work entitled "40 Orgelstücke für angehende Orgelspieler, nebst Bemerkungen, 2 Abtheilungen;" also the following: "Two hundred and forty-one Preludes;" "Two Interludes and four Varia-

tions; "Eight choral Preludes;" "Twelve miscellaneous Organ Pieces;" and "*Choral-Buch zu den neuen protestantischen Gesangbüchern vierstimmig für die Orgel ausgesetzt nebst Vor und Zwischen-spielen*;" Leipzig, 1815. This volume contains all the best old German church melodies from the time of Luther.

WESENTLICH. (G.) Essential, in regard to chords, melody, &c.

WESLEY, CHARLES. This celebrated musician was born at Bristol in 1757. He was the son of the Rev. Charles Wesley, and nephew to John Wesley, the leader of the Methodists. His musical genius was observed when he was not quite three years old, when he surprised his father by playing a tune on the harpsichord readily and in just time. Soon afterwards he played several others. Whatever his mother sang, or whatever he heard in the streets, he could, without difficulty, make out upon this instrument. Almost from his birth his mother used to quiet and amuse him with the harpsichord. On these occasions he would not suffer her to play only with one hand, but, even before he could speak, would seize hold of the other and put it upon the keys. When he played by himself she used to tie him by his back string to the chair, in order to prevent his falling. Even at this age he always put a true bass to every tune he played. From the beginning he played without study or hesitation. Whenever, as was frequently the case, he was asked to play before a stranger, he would invariably inquire, in a phrase of his own, "*Is he a musiker?*" and if he was answered in the affirmative, he always did with the greatest readiness. His style, on all occasions, was *con spirito*; and there was something in his manner so much beyond what could be expected from a child, that his hearers, learned or unlearned, were invariably astonished and delighted. When he was four years old Mr. Wesley took him to London; and Beard, who was the first musical man who had heard him there, was so much pleased with his musical abilities that he kindly offered his interest with Dr. Boyce to get him admitted among the king's boys. This, however, his father declined, as he then had no thoughts of bringing him up to the profession of music. He was also introduced, among others, to Stanley and Worgan. The latter, in particular, was extremely kind to him, and would frequently entertain him by playing on the harpsichord. The child was greatly struck by his bold and full manner of playing, and seemed even then to catch a spark of his fire. Mr. Wesley soon afterwards returned with him to Bristol; and when he was about six years old he was put under the tuition of Rooke, a very good-natured man, but of no great eminence, who allowed him to run on *ad libitum*, whilst he sat by apparently more to observe than to control him. Rogers, at that time the oldest organist in Bristol, was one of his first friends. He would often seat him on his knee and make the boy play to him, declaring that he was more delighted in hearing him than himself. For some years his study and practice were almost entirely confined to the works of Corelli, Scarlatti, and Handel; and so rapid was his progress, that, at the age of twelve or thirteen, it was thought that

no person was able to excel him in performing the compositions of these masters.

On going to London he received instructions on the harpsichord from Kelway, and in the rules of composition from Dr. Boyce. His first work, "A Set of six Concertos for the Organ or Harpsichord," was published under the immediate inspection of that master; and, for a first attempt, was indeed a wonderful production, as it contained some fugues which would have done credit to a professor of the greatest experience and the first eminence. About the year 1779 a domestic subscription concert, for twelve nights in each season, was opened at Wesley's house in Chesterfield Street, Marylebone, which continued for some years, and in which many of his own compositions were heard with pleasure. His performance on the organ, and particularly his extempore playing on that sublime instrument, was the admiration and delight of all his auditors. In 1784 he published "A Set of eight Songs," in an extremely fine and masterly style; and an anthem by him, "My soul hath patiently tarried," is also inserted in Page's "*Harmonica Sacra*." He was still living at London in 1829.

WESLEY, SAMUEL, brother of the preceding, was born in 1766, and also afforded a very early indication of musical genius. When only three years of age he could play on the organ, and when eight years old attempted to compose an oratorio. Some of the airs which he wrote for the organ were shown to Dr. Boyce, who remarked that they were among the most pleasing that he had ever heard. "This boy," he said, "unites by nature as true a bass as I can do by rule and study." S. Wesley composed a high mass for the chapel of the unfortunate pontiff Pius VI. The pope thanked the composer for it in a Latin letter, written to his apostolic vicar in London. He published, amongst other works, some anthems, sonatas, and duets for the piano-forte, and a series of voluntaries for the organ; all of which afford the most satisfactory evidence of taste and genius. His compositions are masterly and grand; and his extempore performance of fugues on the organ was astonishing. He produced from that solemn instrument all the grand and serious graces of which it is capable. His melodies, though struck out on the instant, were sweet and varied, and never commonplace; his harmony was appropriate, and followed them with all the exactness and discrimination of the most studious master; and his execution, which was very great, was always sacrificed to the superior charms of expression. S. Wesley died about the year 1815. A full-length portrait of him, at the age of eight, was engraved in London. He is standing at a table, with a pen in his hand, and music before him, as if composing; and by the foot of the table lies a book of music, with the title, "Ruth, an Oratorio, by Samuel Wesley, aged eight years."

WESSELY, JOHANN, concert master to the Duke of Bernburg at Ballenstadt, was born in Bohemia in 1762. He was not only a good violinist and conductor, but also an agreeable quartet composer in the style of Pleyel. By the "*Gotha Theatrical Calendar*" for 1799, we find him engaged in that year in the theatrical orchestras of Cassel and Altona. In the former town he seems to have resided from the year

1797 to 1800, when he was invited to his first named situation at Ballenstadt. His works bear date from the years 1788 to 1804.

WESSELY, BERNIARD, born of Jewish parents at Berlin in 1767, obtained, in 1788, the situation of music director at the National Theatre in Berlin. He studied music under Kirnberger, Fasch, and Schulz, and became known as a composer, in 1786, by two cantatas; the one on the death of Moses Mendelssohn, and the other on the coronation of the King of Prussia, both of which pieces were performed in public and highly applauded. It is remarkable that, though a Jew, Wessely played the second violin at the performance of Handel's "Messiah" in the Church of St. Nicholas at Berlin. In 1796 he was appointed chapel-master to Prince Henry of Prussia at Rheinsberg. He has published various works of vocal and instrumental music of great merit. His works bear date from 1786 to 1802, in which latter year he wrote both the words and music of a cantata on the death of his master, Prince Henry. This composition was performed in the Garrison Church at Berlin with considerable applause.

WESTENHOLZ, CARL AUGUST, chapel-master to the Duke of Mecklenburg-Schwerin at Ludwigslust, was born in 1736. He was a pupil in singing and composition of J. A. Kemzen, and studied the violoncello under Vortizka. He wrote many oratorios, cantatas, and other pieces for the church, only one of which was published; namely, his cantata entitled "The Shepherds at the Manger of Bethlehem." He died at Ludwigslust in 1789.

WESTERHOFF, C. W., a much-esteemed vocal and instrumental composer, was concert master, violinist, and tenorist in the Ducal Chapel at Buckeberg in 1799. He has published much instrumental music.

WESTON, —, of Charlton, Northamptonshire, England, died in March, 1849. He obtained a local celebrity, seldom equalled, for purity of tone and accuracy of time in leading concerts of the old masters. For this last half century he has held the high post of premier violin and leader at all the concerts in that neighborhood; and many are the amateurs and others that can bear witness to his ability and steadiness in that arduous though lofty position. His manner was, on all occasions, mild and placid, and towards the latter part of his life showed the playful, kindly spirit of one on whom Time had laid his hand with gentlest care: this did not preclude him from giving to his bow, when it was needed, all the energy and strength the choruses of the great masters require, or the delicacy and finish the instrumental pieces may demand. We may easily conceive he was one of that fast-fading school of violinists that like steady, sound, legitimate playing, before the fantastic tricks that are so much practised now. In his walk he earned and deservedly held a high reputation over what may be called a long, a momentous epoch — a venerable existence of seventy-nine years. He was followed to the grave by twelve of his old friends and pupils, and sleeps now beneath the green turf —

"Washed by still rains, and daisy blossomed" —

of Charlton churchyard, in the shadow of those walls whose echoes he has so often raised to the voice of devotion and praise.

WESTPHAL, JOHANN CHRISTOPH, son of the proprietor of the celebrated music warehouse at Hamburg, was appointed, in 1803, organist of St. Nicholas's Church in that town. He was celebrated as a performer on that instrument; also as a pianist and violoncellist. He has also composed some good instrumental music.

WEYSE, C. E. F., an excellent pianist, resided at Copenhagen in 1798. He has published much instrumental music, of which four *allegri di bravura* for the piano-forte were republished at Berlin, in 1796, by the Chapel-masters Schulz and Reichardt. They are considered to be brilliant and excellent, but very difficult studies for pianists. He also produced a symphony, some sonatas, and several operas.

WHISTLE. A small, shrill wind instrument, in tone resembling a fife, but blown at the end like the old English flute.

WHITE, ROBERT, who preceded Bird and Tallis, and who died before their fame was well established, was an excellent composer of church services in the style of Palestrina; whom, however, he did not imitate, as he was anterior to him, and a great master of harmony before the productions of this chief of the Roman school were published, or at least circulated, in other parts of Europe. He died in 1581. The works of White do not appear to have been ever printed; but in the library of Christ Church, Oxford, a sufficient number of them, in manuscript, has been preserved to excite not only wonder, but indignation, at the little notice that has been taken of him by musical writers.

WHITE, JOHN, professor of music at Leeds and organist of the church at Wakefield, was born in the year 1779 in the city of York. His parents first intended to place him as an apprentice to a medical friend, but, finding his taste for music to be decidedly predominant, they were induced to hesitate upon their choice. They observed, that wherever the sound of a violin was heard the young boy was found to be an eager listener; that neither marbles, hoop, cricket, nor, indeed, any other juvenile amusement, possessed the least charm for him; that, although compelled to attend the grammar school from seven in the morning till five in the evening, he sought no relief from the confinement of school in the amusements of his schoolfellows, but preferred sitting to hear the strains of even indifferent music. A turn so decisive his parents at length determined should be encouraged, and young White was regularly brought up to the profession of music; when such was the rapidity of his progress, that, at the age of twelve, he surprised the citizens of York by the performance of one of the concertos of Borghi, an author whose compositions were at that time esteemed the *chef-d'œuvres* of art. In 1794 Lord Harewood having intimated his wish to obtain a leader, teacher, and director for his private concerts and oratorios at Harewood House, young White, who was then only fifteen years of age, was considered the only person in the neighboring country able

to undertake the situation. In consideration, however, of his youth, and the inexperience which must necessarily attend him, his first engagement was only for the short term of a month; but that month superinduced a long succession of years, a permanent salary being soon proposed to him and accepted. White went regularly with the family to London for the space of eight years, although not particularly wanted by them for the fulfilment of any musical department. His object was, to gain as much knowledge as possible in the profession, to which, with the utmost ardor, he had now devoted himself. He selected his various masters, and became a pupil of Dussek on the piano-forte; of John Ashley in thorough bass, the organ, and singing; of Raimondi on the violin; of P. Meyer on the harp; and of Dahmen on the violoncello. Various as were the instruments he determined to undertake, they appear not to have confounded his progress, for he obtained considerable success on all. At this time, also, he became particularly intimate with Salomon, who introduced him to the professional concerts in town, and, when Lindley or Dahmen had previous engagements, took him to various parties to supply their places as principal violoncello. At this period of his musical progress, so nicely balanced was his skill on the two instruments, the violin and violoncello, that it became difficult to determine on which was his superiority. A wager, indeed, was laid between Raimondi and Salomon which was his principal instrument: the former said the violin; the latter persisted in declaring that it was the violoncello. One thing, however, is certain, that the violoncello brought him more into notice with the professors; but engagements on one or the other, for he was equally ready for either, were offered in all the principal orchestras in the metropolis.

In 1803 he married; soon after which he settled at Leeds. His reputation there rapidly increased, and he may be said to have had the patronage of nearly all the noblemen's and gentlemen's families within the space of twenty miles. In 1804 he was appointed organist of Harewood church; in 1807 of St. Paul's Church, Leeds; and in 1821 of the parish church in Wakefield. The organist he here succeeded, Mr. Clementshaw, was a man of no ordinary character in his profession. He was of the true Handelian school: it was thought, therefore, that his loss must produce a chasm in the organ department, whoever should be elected his successor; but this chasm was completely filled up by White. In Yorkshire White was the favorite and popular leader, particularly in Handel's oratorio music, which may be said to have been greatly cultivated and improved under his direction. His skill, indeed, in this department was very great, and gave a confidence and accuracy to the chorus singers of the West Riding which rendered them almost unrivalled.

As a concerto player, no one in the recollection of the oldest inhabitant ever played so many concertos or gave more general satisfaction in this very difficult and trying department. From the years 1793 to 1818 there is a list of performances, with concertos, played by White, in Edinburgh, Glasgow, Manchester, (occasionally,) York, Leeds, Sheffield, (almost regularly for many years,) Hull, Doncaster, Rotherham, Scar-

borough, Harrowgate, &c.; in short, in all the principal towns in the northern part of the kingdom.

WHITEFIELD, the celebrated preacher, was the first person who adapted devotional poetry to the old popular songs of the Scotch and English. His reason was, as he said, "because it was not right that the devil should have all the good music." He was such a lover of old tunes, that, were he now living, he would probably be willing, rather than give up *the best music*, that the devil should take the modern school of "professors."

WHYTHORNE, or WHITHORNE, THOMAS, an English musician, was born in 1531. A collection of his songs was published under the following title: "Songs of three, fower, and five voyces, composed and made by Thomas Whythorne, Gent., the which songes he of sundrie sortes; that is to say, some long, some short, some hard, some easie to be song, and some between both; also some solenne, and some pleasant or mery; so that, according to the skill of the singers (not being musicians) and disposition or delight of the hearers, they may here find songes to their contentation and liking;" London, 1571. At the back of the titlepage is a portrait of Whythorne, engraved on wood.

WIDERKEHR, JACQUES CHRIST. MICHEL, born at Strasburg in 1751, was a pupil of the celebrated Richter. He went to Paris in 1783, and was received as a violoncellist at the *Concert Spirituel* and *Concert Olympique*. Widerkehr was a distinguished instrumental composer. Amongst his works are two opera of sonatas for the piano-forte; two opera of violin duos; two of quintets; two of symphonies, with grand orchestra; and, finally, eleven concertante symphonies. The whole were performed in public at Paris, in various concerts, and with considerable applause.

WIDMANN, ERASMUS. Chapel-master to the Count of Hohenlohe at Weckereheim. He published various opera of sacred and instrumental music and several didactic works. His compositions bear date from the years 1607 to 1623.

WIECK, CLARA, who became the wife of the composer Robert Schumann, and who for some years has been accounted the greatest of female pianists, is the daughter of the much-esteemed music teacher Wieck, of Leipsic, where she was born in 1818. She is also favorably known as a composer.

WIEDERHOLUNG. (G.) Repetition.

WIEDERKEHR, JOHANN. A German instrumental composer, resident at Paris. Amongst his works are the following: "3 *Quat. à 2 V., A., et Vc.*," Op. 1, Paris; "3 *Quat. à 2 V., A., et Vc.*," Op. 6, Offenbach; "3 *Sonat. pour le Clar. avec V.*," Op. 4, Paris, 1796; "3 *Sonat. pour le Clar. avec V. ad lib.*," Op. 5, Paris, 1797; "3 *Sonat. pour le Clar. avec V. ad lib.*," Op. 5, Offenbach; "3 *Quat. Conc. pour 2 V., A., et Vc.*," Op. 6, Paris, 1796; "3 *Sinfon. Conc. pour Clar. in C, Fl., Oboe, Cor in F, 2 Fag. et Vc. oblig.*," Paris, 1800; "2me. *Sinfon. pour Clar et Basson princ.*," and "3me. *Sinf. pour Cor a Basson princ.*"

WIESE, CHRISTIAN LUDWIG GUSTAV FRIEHLER VON, born at Anspach in 1732

was a celebrated musical amateur. He wrote several theoretical works on music between the years 1790 and 1795.

WIESNER, NORBERT, an instrumental composer at Vienna in 1800, was also known as a pianist and harpist.

WILBYE, JOHN. A celebrated English musician, who flourished at the end of the sixteenth and commencement of the seventeenth centuries. He published "Madrigals to three, four, five, and six Voices," London, 1598; "Madrigals to three, four, five, and six Voices," second book, London, 1600. Amongst his more favorite compositions are the following: "Flora gave me fairest flowers," madrigal, five voices. A copy of this, with separate piano-forte accompaniment, is inserted in the Vocal Anthology. "Fly, love, to the heaven above," madrigal, three voices; and "Down in a valley as Alexis trips," madrigal, five voices.

WILCKE, JOHANN CASPAR, chamber musician and tenor singer to the Prince of Schwartzburg, was born at Weimar in 1707. His master in singing was the celebrated J. Pfeiffer. After performing in several German towns he went to Russia, when he was engaged at Moscow, in the Imperial Chapel, at an annual salary of about one hundred and twenty pounds. He did not however remain longer than six months; though he was in such favor with the court of Russia that on quitting that country he was intrusted with several valuable presents for the Prince Royal of Prussia, and was accompanied to the frontiers of Russia by two grenadiers of the imperial guard. Shortly afterwards he accepted his first-named situation, which he filled till his death in the year 1758.

WILDE, JOHANN, chamber musician to the Emperor of Russia at St Petersburg after the year 1741, was a native of Bavaria. He was eminent as a violinist and performer on the viol da gamba.

WILLAERT, ADRIANO, was a pupil of John Mouton and the master of Zarlino. He is placed by the Italians at the head of the Venetian school. He was born at Bruges, in Flanders, and, during his youth, studied the law at Paris; if with the view of making it his profession, there must have been an early conflict between legislation and music, which latter, having a powerful advocate in his own heart, gained the cause; for, by his own account, he went to Rome in the time of Leo X., where he found that his motet, "*Verbum bonum et suave*," was performed as the composition of Josquin: he therefore had been a composer some time before his visit to Rome. He died, at an advanced age, about the year 1550. Amongst his published works we can enumerate the following: "*Verbum bonum et suave*," &c., motet for six voices; this is printed in the "*Metetti della Corona*," Fossombrone, 1519; "*Famosissimi Adriani Willaert, Chori Divi Marci illustrissime Republice Venetiarum Magistri, Musica 4 vocum, (quæ vulgo Motecta nuncupatur.) juveter omni studio ac diligentia in lucem edita*," Venice, 1539; "*Motetta 6 vocum*," Venice, 1542; several motets in Sablinger's "*Concertus*," Augsburg, 1545; "*Pater noster à 4 voci*," printed in the "*Fior. de Motetti*," Lib. 1, Venice, 1539; "*Fantasia o Ricercari delli eccellentiss. Adr. Vuigliardi e Cipr. Kore, suo Dis-*

cepto," Venice, 1549; "*Psalmi vespertini, omnium dierum festivitatem per annum, 4 vocum*," by Willaert and Jachet, Venice, 1557; "*Musica nova à 3, 4, 5, 6, e 7 voci*," Ferrara, 1588; this collection was published by Willaert's pupil and friend F. Viola and contains Willaert's portrait; "*Cantiones Musice, seu Motetta, cum aliis ejusdem cantionibus Italicis, 4, 5, 6, and 7 vocum*," Venice; and "*Villanelle Neapolitane, 4 vocum*," Venice. A four-part motet by Willaert is also given by Sir J. Hawkins in his "History of Musicians," vol. ii. p. 474.

WILLING, JOHANN LUDWIG, organist at Nordhausen, was born at Kuhndorf in 1756. He was a pupil of J. E. Renbt, and was considered one of the best German musicians of the last century. He died in 1805. His works were chiefly instrumental, and for the organ and piano-forte.

WILLMANN, SAMUEL DAVID, organist at Berlin, published from the year 1783 the following amongst other works: "*3 Quart. pour le Clar. avec Fl., V., et B.*," Berlin, 1789; "*3 Solos f. die Flöte mit Begl. des Fortep. oder Ve.*," Berlin, 1796; "*4 Duetten f. 2 Fl.*," Berlin, 1797; and "*Der Leyermann und ein Walzer*," Berlin, 1797.

WILLMERS, F. J. RUDOLPH, a talented pianist and composer for his instrument, was born at Copenhagen in 1820. He studied under Hummel; and in 1836 he studied composition under Friedrich Schneider at Dessau, with whom he passed two years. He then visited the north of Germany, Sweden, Norway, and finally returned to Denmark. In 1840 he made an artistic tour in Germany with much *éclat*.

WILMS, J. W., professor of music at Amsterdam, and a good pianist and flutist, was born in 1771. He has published many works, chiefly for the piano-forte. His "*Sinfonies à grand Orchestre*," Op. 9, are highly considered in Germany. They are published at Leipzig by Kühnel.

WILSON, DR. JOHN, a native of Feversham, in Kent, born in 1597, was first a gentleman of the Chapel Royal, and afterwards, in his faculty of music, a servant in ordinary to the king. He is reported to have been the best lute player of his time, and, being a constant attendant on his majesty, frequently played to him in private. He was created doctor in music at Oxford in 1614, and continued in that university about two years; but, on the surrender of the city, he went to reside in the family of Sir William Walter, of Sar-den, in Oxfordshire. In the year 1653 he obtained the musical professorship and resided in Balliol College. After the restoration he was made a gentleman of the Chapel Royal. These preferments drew him from Oxford, and induced him to resign his professorship to Edward Low, who for some time before had officiated as his deputy.

He died in the year 1676, at the age of seventy-nine, and was interred in the cloisters of St. Peter's Church, Westminster. His compositions are, "*Psalterium Carolinum, the Devotions of his Sacred Majesty in his Solitudes and Sufferings rendered in Verse, set to Music for three Voices and an Organ or Theorbo*," published in 1657; "*Cheerful Airs, or Ballads; first composed for one single Voice, and since set for three Voices*," published at Oxford in 1660; "*Aires for a Voice alone to a Theorbo or Bass Viol*," printed in a collection en-

titled "*Select Airs and Dialogues*," in 1653; and "*Divine Services and Anthems*," published in the year 1663. He also composed "*Fantasias for Viols*," and music to several of the odes of Horace, and to some select passages in Ausonius, Claudian, Petronius Arbitr, and Statius. The latter was never published, but is extant in a manuscript volume, curiously bound in blue Turkey leather, with silver clasps, which he presented to the university, with a strict injunction that no one should be permitted to peruse it until after his death. It is now deposited under the archives of the Bodleian Library. Dr. Burney says that Wilson "seems to have set words to music more clumsily than any composer of equal rank in the profession;" and in another place, that "his compositions will certainly not bear a severe scrutiny either as to genius or to knowledge."

WILSON, JOHN, renowned as a singer of the Scotch ballads, was born in the Canongate of Edinburgh on Christmas day, in the year 1800, and served an apprenticeship as a printer till his nineteenth year. He was married shortly afterwards, and by this marriage had six children. At an early age he gave indications of high talent in his profession as a compositor, and was ultimately engaged as a reader or corrector of the press by the well-known James Ballantyne, the printer of Scott's novels, a great portion of the manuscript of which passed through the hands of Wilson, who thus became acquainted with the author of *Waverley*. At this period Wilson began to feel the defects of his early education, for he had been sent to work when only ten years of age, and he applied himself diligently to the acquirement of the French and Latin languages, with a view to qualify him for rising in his profession. By close application in the evenings he soon became versed in those two languages; and shortly afterwards, in company with two intimate friends, he turned his attention to the study of Italian.

Wilson was always passionately fond of singing; but in boyhood his voice was thin and husky in quality. His taste was first formed under the auspices of John Mather, who at that time was leader and teacher of a musical association called the Edinburgh Institution, which met in the High Church Aisle, and to the classes of which great numbers of children were admitted gratuitously. The tuition received at the institution, with some occasional practice in a band in the Tron Church led by Benjamin Gladhill, formed the early musical education of John Wilson. Long afterwards both his teachers were delighted with his musical powers, expressed their astonishment, and said that such success could not have been predicted from his early capabilities. One quality, however, he seems always to have had; and that was, a devoted attachment to singing. He never tired of it. He delighted in exercising his voice. He attained a smattering of music, which enabled him to read a psalm tune, and he used occasionally to make his appearance in the precentor's desk of some obscure kirk or meeting house, and gradually began to indulge hopes of becoming a candidate for some such situation. About this time a musical companion was appointed precentor to Duddingston Church, the clergyman of which, Mr. Thompson, the cel-

ebrated landscape painter, was passionately fond of music; and he, together with his lady, aided by their new precentor, made a during innovation on the ancient mode of drawing the music, and established in the church a little band.

The romantic walk to this sweet little church accorded well with Wilson's attachment to rural scenery, and he was in the habit of accompanying his friend to Duddingston on the Sunday mornings to assist him in his musical avocation, occasionally officiating for him in his absence. His voice now began to be developed, and the liberal and enlightened artistic clergyman, a man well known to have been the means of forwarding many deserving young men, was the first to appreciate the quality of Wilson's voice and the first to advise sedulous cultivation. Cheered onward thus, he applied himself diligently to musical education, and soon afterward became a candidate for, and was appointed precentor of, the Relief Church in Roxburg Place, with a yearly salary of seventeen guineas. After remaining several years there, where he was much admired and was presented with a piece of plate from the congregation, his now beautiful tenor voice and his fine musical taste, which began to be much talked of and attracted crowded audiences, induced the town council to appoint him, in 1826, as precentor to the new Church of St. Mary, the pastor of which, the Rev. Henry Grey, was at that time the most popular of the Edinburgh preachers. Situated in a fashionable neighborhood, the congregation chiefly of the higher classes, the modest bearing and amiable character of their young precentor, together with the beautiful manner in which, even at that time, he chanted the pleasing melodies of his country, made him a welcome guest at many of their tables, and induced many of them to employ him in teaching singing to their children.

About this time Mr. Ballantyne got into embarrassed circumstances and was obliged to reduce the expenses of his printing establishment. Unwilling to part with Wilson, he asked him to remain at a reduced salary; but as Wilson's family was increasing, he thought it justifiable to endeavor to better his circumstances, and left the printing business finally in January, 1827. He was now well employed as a teacher of singing, and enabled to put himself under the tuition of an accomplished teacher.

Wilson continued teaching singing and appearing occasionally at private concerts in Edinburgh until June, 1827, when, ever anxious for improvement, he went to London, where he remained for three months, receiving lessons from Signor Lanza, an Italian master of the vocal art. His progress pleased his teacher so much, that, on his return, Lanza gave him a letter, saying that he had intended visiting Edinburgh, but had abandoned that intention in consequence of the return to his native town of his pupil, whom he now considered as well qualified to teach as he was himself. The mode he had learned from Lanza of bringing out the *voce di petto*, or chest voice, was so superior to any hitherto practised in Edinburgh that he soon acquired a great number of pupils.

Wilson still retained his situation as precentor in St. Mary's Church, and during the winter season his time was fully occupied in teaching. By this means he was again enabled to visit Lon-

don in the summer of 1828, when he received lessons from Aspull, then a celebrated teacher of harmony, counterpoint, and thorough bass. After three months' exercise under this master, during which time he was kept practising daily from seven o'clock morning till 10 o'clock evening in a room where there were three pupils, each singing different tunes and practising on different piano-fortes, Wilson went home maturely versed in the theory and practice of music. Again, in the summer of 1829, after another winter's teaching, he visited London, and remained there until February, 1830, under his last and most eminent teacher, the far-famed Crivelli, to whose tuition he was so much attached that he studied assiduously to perfect himself as a musician, and remained until he had scarcely sufficient means to pay his passage home. On arriving at Edinburgh, he found the funds he had left to sustain his family totally exhausted; and he was fond of relating how, when on this occasion walking along the streets on his way to a friend to borrow a one-pound note, he met with a pupil who had not paid him his fees for lessons received during the previous winter, and who, accusing himself of neglect, pulled out his purse, and sent him home to his wife and family with three guineas in his pocket. After this Wilson never knew poverty.

Previous to this period Wilson had taken lessons in elocution both in Edinburgh and in London, and in March, 1830, made his first appearance on the stage of the Edinburgh theatre, as Henry Bertram, in the opera of "Guy Mannering." Many of his friends and acquaintances were present, and several of them recollect well the tremulous anxiety that pervaded the house when his voice was first heard behind the scenes, in the opening of the beautiful duct, "Now hope, now fear," and with what unmingled delight they hailed his success. On the following night he sang in the opera of "Rosina," and during the same week his fame was stamped as an actor as well as a singer by his masterly impersonation of "Massaniello." On that evening, among other magnates who at the time frequented the Edinburgh theatre, was James Ballantyne, Mr. Wilson's former employer, in whose critical acumen with regard to the drama and opera all parties had unbounded confidence. As the opera advanced, and the young vocalist warmed in his part, the veteran connoisseur was seen to get restless and fidgety, until Wilson, with matchless purity and intensity of feeling, chanted, in tones that thrilled through every heart, the delightful song, "My sister dear;" when, unable to contain himself, Mr. Ballantyne exclaimed aloud, "Bravo! bravo! that *will* do! that *will* do! I was wrong in my estimation of his powers, after all."

Mr. Wilson was now an established favorite. The public press was teeming with his praise, and he remained performing for three weeks at the Edinburgh theatre, at the conclusion of which he had a bumper benefit. Immediately thereafter he went to Perth, where he performed during the summer, and was engaged for Covent Garden, where he appeared for the first time October 30th. He sang at Covent Garden and Drury Lane until 1837. He was engaged in English opera in 1838; and in September of that year came to this country. He died at Montreal, August, 1849.

WILSON, MARMADUKE CHARLES, was born of respectable parents in London in 1796. As he very early evinced considerable talent, both in the performance and composition of music, he was placed under the charge of Mr. William Beale. With this gentleman he continued till 1812. In the year 1803, being seven years of age, he performed on the piano at the Hanover Square Rooms, and obtained unanimous applause from the audience, not only on account of the execution exceeding what could have been expected from his years, but for the actual merit of the performance itself. Samuel Wesley, being attracted by his promising talent, proposed that Wilson's musical education should be completed under his superintendence: this desirable proposition was acceded to, and, while with Wesley, he repeatedly performed in public with uniform success and applause. Upon his performance of the 4th of May, 1813, a morning paper remarks, that "the amateurs and professors who were in the room were unanimous in declaring that he would be one of the most accomplished performers on the piano-forte that England had ever produced."

Notwithstanding the signal success which attended his early efforts, a natural diffidence and a repugnance to the gaze of the many induced him, on the completion of his studies, to withdraw from public performances, and to restrict himself to composition and private tuition.

Wilson's compositions partake largely of the beauties and peculiar character of those of his friend and principal master; they abound in vigorous and scientific movements, blended with passages of exquisite harmony and pathos. The principal and most popular of them are: Instrumental, Op. 1, "The Air of Up, Jack, up, and the day's your own," arranged as a rondo for the piano-forte. 2. "A Duet for the Harp and Piano-forte," dedicated to the Right Hon. Lady Foley. 3. "The Tenth Air of the Series of Dramatic Airs," arranged by various composers for the Harmonic Institution. 4. "Airs from Himmel's Opera of Fanchon," arranged for the piano-forte. 5. "An Air, with Variations," dedicated to Mr. Atkinson. 6. "A Sonata," dedicated to J. B. Crauer, Esq. Vocal: 1. "The Exile," a ballad. 2. "Merrily swim we, the moon shines bright," a glee for four voices, the words from "The Lord of the Monastery." 3. "Love wakes and sleeps," a serenade, the words from the novel of "The Pirate." 4. "Carle, now the king's come," a solo and chorus.

WINDLADE. (G.) The wind chest of a organ.

WIND INSTRUMENTS. Those instruments the sounds of which are produced by the breath or by the wind of hollows. So called in contradistinction to those which are struck or which are performed with the bow, as the drum, tambourine, violin, violoncello, &c. For descriptions of the various wind instruments and scales, refer to the same under the several heads as alphabetically arranged in this Encyclopædia. Persons who have listened to sounds attentively have noticed that, besides their acuteness and gravity, loudness or softness, shape and figure, there is another quality belonging to them, which musicians have agreed to denominate *color*. Thus the trombone has been called *deep red*; the trumpet, *scarlet*; the clarinet, *orange*; the

oboe, *yellow*; the bassoon, *deep yellow*; the flute, *sky blue*; the diapason, *deeper blue*; the double diapason, *purple*; the horn, *violet*; &c.

WINNEBERGER, PAUL. A violoncellist and composer, in the year 1800, at the French theatre in Hamburg. He is known by three violin quartets, published at Offenbach in 1800; concertos for violoncello and orchestra; sonatas for piano, with and without other instruments; &c.

WINTER, JOHANN CHRISTIAN, chorister and music director at Hanover, was born at Helsenstadt in 1718. He wrote several dissertations on church music in the Latin language; also the words and music of many cantatas.

WINTER, PETER VON. This eminent composer was violinist and vice chapel-master to the King of Bavaria at Munich. He was born in 1754. In 1770 he conducted the orchestra of the theatre at Munich. He not only composed for the theatres of his own country, but has enriched the Italian stage by many excellent works. The following list contains his principal compositions. For the church: "Messa à 4 voci, 2 V., 2 Fl., 2 Ob., 2 Cor., 2 Fag., Viola, 2 Tromp., Timp., B., e Organ," Vienna; "Graduale à 4 voci, 2 V., 2 Viole, 2 Fl., 2 Cor., 2 Tromp., Timp., e B.," Vienna; "Die Pilger auf Kalfari," oratorio, Munich; "Bettulia liberata," oratorio, Venice, 1792; and "Die Auferstehung," cantata. For the theatre: "Helen und Paris," opera, Munich; this was translated into Italian, and performed at Florence in 1784; "Bellerophon," melodrama, Mannheim, 1787; "Psyche," German opera; "Circe," serious opera, in Italian; "Orpheus," ballet, with songs. This work had the greatest success in London. It is a grand tragic pantomime, in four acts, intermixed with songs and choruses. "Leonardo and Blandine," melodrama; "Cora and Alonzo," melodrama; "Armida," in three acts, with choruses, melodrama; "Der Bettelstudent," operetta, Vienna; "Das Hirtenmädchen," operetta, Vienna; "Scherz, List, und Rache," operetta; "Catone in Utica," opera seria, Venice, 1791; "Antigone," opera seria, Naples, 1791; "I Sacrifizi di Creta," opera seria, Venice, 1792; "Armida und Rinaldo," melodrama, Vienna, 1793; "I Fratelli Rivali," opera buffa, 1794; "Ogus, ossia il Trionfo di bel Sesso," opera buffa, Prague, 1791; "Die Sommerbelustigungen," ballet, Berlin, 1795; "Das unterbrochene Opferfest," operetta, Vienna, 1796. The music of this operetta was published in various editions, for instruments, at different towns in Germany. "I due Vedovi," opera buffa, Vienna, 1796; "Die Thomasnacht," operetta, Bayreuth, 1795; "Die Pyramiden von Babilon," or the second part of the "Zauberflöte." The second act was composed for the Schikaneder theatre at Vienna in 1797. "Elisa," operetta, Vienna, 1798; "Das Labyrinth," operetta, Vienna, 1798; "Der Sturm von Shakspeare," Munich, 1799; "Maria von Montalban," opera seria, Munich, 1800; "Tamerlan," opera, in French, Paris, 1802; "Castore e Polux," opera, in Italian, London, 1803; and "Frauenbund," Munich, 1804. For the chamber. First, vocal: "Pigmatione," cantata; "Piramo e Thisbe," cantata; "Die verlassene Dido," cantata; "Vortigeme," cantata; "Hector," cantata; "Igneus de Castro," cantata; "Henry IV.," cantata; "Bayersche Lustbarkeit," cantata; "Der Franz

Lustgarten," cantata; "Die Hochzeit des Figaro," cantata; "Andromaque," cantata; "Progne et Philomele," cantata; "Gestänge beyrn Klavier," first and second part, Munich, 1800; "Gestänge beyrn Klavier, 3ter Theil," Augsb., 1801; "3 Kantatinen," Italian and German, Op. 15; "9 Kanzonetten," Italian and German, Op. 16; "Quartet für Gesang," Italian and German, Op. 17; "Die Erlösung des Menschen, mit untergelegtem Stabat Mater;" "Timoteo, oder: Die Macht der Töne," a grand cantata from Dryden's "Alexander's Feast," Leipsic, 1809; "Colmal," grand opera, Munich, 1809; "Die Blinden," opera, 1810; and "Die Erlösung des Menschen," cantata for four voices, with orchestra and Stabat Mater, Leipsic, 1805. Instrumental: "6 Concerti à V. princip. e. Acc.;" "Concerto à Obse princip. e. Acc.;" "Concertini à V., Clar., Cor., de Bassetto, e Fag. princip. e. Acc. di 2 V., Viola, e B.;" "Rondo con Var. à V. princip. 2 V., 2 Fl., 2 Cor., V., e B.;" "3 Sinfon. à Grand Orchestra," Ops. 1, 2, and 3, Offenbach, 1795; "Quatuor pour 2 V., A., et B.," Op. 5, Munich, 1800; "3 Quintetti pour 2 V., 2 A., et B.," Op. 6, Leipsic, 1802; "Sestetto pour 2 V., 2 Cors, A., et B.," Op. 9, 1803; "3 Nouv. Quat. pour 2 V., A., et B.," Paris, 1803; "Septuor pour 2 Cors, Clar. 2 V., A. et B.," Op. 10, Leipsic, 1804; "Sinfon. concert. pour V., Cl., Fag., et Cor.," &c., Op. 11; "Ouverture de Proserpine," in parts, Leipsic, 1809; and "Ouverture de Calypso," in parts, Leipsic, 1809. Winter died in 1825.

WIRBEL. (G.) The peg of a violin, tenor, guitar, &c.

WIRES. Wires are used to form the strings of harpsichords, pianos, and other similar instruments, and also to cover the catgut strings of many large strings used on instruments.

WISE, MICHAEL, was a native of Salisbury, and one of the first of the children of the Chapel Royal after the restoration. He became composer and master of the choristers at Salisbury in 1668, and in 1675 was appointed a gentleman of the Chapel Royal. Eleven years after this last promotion he was made almoner and master of the choristers of St. Paul's. He was much favored by Charles II.; and being appointed to attend the king in one of his journeys, he claimed, as his organist for the time being, the privilege of playing on the organ in the church of whatever place the king stopped at. It is said that in one place he had the presumption to begin his voluntary before the preacher had finished the sermon; and it is possible that some such unwarrantable and indiscreet behavior as this might have drawn upon him the royal displeasure; for, on the king's decease, we find that he was under a suspension, and at the coronation of James II. Edward Morton officiated in his room. He composed many fine anthems, "Awake up my glory," "Prepare ye the way of the Lord," "Awake, put on thy strength," and some others. He composed also that well-known two-part song, "Old Chiron thus preached to his pupil Achilles," and some catches, printed in the "Musical Companion." He was a man of great pleasantry, but ended his days unfortunately. Whilst he was at Salisbury, in the year 1687, some harsh words took place between him and his wife, on which he rushed out of the house in a violent rage, and (it being towards midnight) was stopped

by one of the watchmen. With this man he began a new fray, and, in the contest, received a dreadful blow on the head, which fractured his skull and killed him.

WITT, CHRISTIAN FRIEDRICH, chapel-master to the Duke of Gotha, was born at Altenburg, where his father was court organist. He was sent early in life by his prince to Vienna, for improvement in music, and on his return was first appointed court organist, and afterwards, in 1713, chapel-master. He died in 1716. He wrote various hymns, also some harpsichord and organ music.

WITT, FRIEDRICH, chapel-master to the grand duke of Würzburg, and a very able and agreeable composer, was born in Franconia in 1771. He studied the violoncello early in life, and was appointed professor of that instrument in the chapel of the Duke of Octing-Wallerstein in the year 1790. His master in composition was the Chapel-master Rosetti. F. Witt composed several oratorios and cantatas, also much instrumental music. His principal works are dated between the years 1800 and 1807.

WITTHAUER, JOHANN GEORG, a professor of music at Berlin, and subsequently organist at Lubeck, was born at Neustadt, in Sussia, in 1750. He was a harpsichord pupil of J. Adlung, of Erfurt. He died at Lubeck in 1802. Amongst his works was an improved edition of "*Löhleins Klavierschule*," and several sonatas for the harpsichord, published between the years 1783 and 1793.

WITVOGEL, G. FRIEDRICH, organist of the new Lutheran Church of Amsterdam, was a native of Barel, in the duchy of Oldenburg. He engaged, in 1730, in the music trade at Amsterdam, where he published the works of most of the great masters, also some Protestant church music of his own composition.

WOELFFL, JOSEPH. This celebrated pianist and composer was born at Salzburg in 1772, where he studied the piano-forte and composition under Leopold Mozart and Michael Haydn. In the year 1793, or 1794, he commenced a musical tour, proceeding first to Warsaw, and afterwards going to Vienna, where, in 1795, he produced his first opera, entitled "*Der Hölleberg*," at the Schikaneder theatre, which was received with great applause. The distracted state of Germany, on account of the wars of that period, determined Woelffl to visit England. In his journey thither he performed at Prague, Dresden, Leipsic, Berlin, and Hamburg, where he gave his last concert in 1799. After remaining for some time in England, his playing being the theme of universal admiration, he went in 1801 to Paris, where he was also considered the most extraordinary pianist in Europe. He there produced an operetta which was favorably received, entitled "*L'Amour Romanesque*." He soon after returned to England, and resided there till his death, which took place in the year 1811. He composed several other operas, besides a long list of instrumental works, consisting of sonatas, concertos, quartets, trios, &c.

WOETS, JOSEPH BERNARD, professor of the piano at Paris, was born at Dunkirk in 1783. He received his first instructions in

music from his father, who was an organist in that town; and afterwards became a pupil of the Conservatory at Paris, studying the piano under Boieldieu, and composition under Berton. He has published several works of admired piano-forte music, and some collections of romances.

WOLDEMAR, MICHEL, a violinist at Paris, born at Orleans in 1750, was a pupil of Lollie. He composed much music for his instrument, amongst which are "*2 Conc. pour V.*;" "*12 Duos pour V.*;" "*6 Rêves d'un V. seul*;" "*6 Caprices pour V.*;" "*4 Sonat. fantasmagoriques, intitulées l'Ombre de Lolli, l'Ombre de Tartini, l'Ombre de Pugnani, et l'Ombre de Mestrino*;" "*Thèmes de Mozart et Haydn, variés pour Violon seul*;" "*Grand Solos, Liv. 1 and 2*." He has also published a method for bowing, and a method for the clarinet; likewise two works, the one entitled "*Barème Lyrique de Woldeimar, ou l'Art de composer toute sorte de Musique sans savoir la Composition*," Paris, 1800, and the other "*Tableau Mélo-tachygraphique*." This is a treatise on musical short hand.

WOLF, ERNST WILHELM, was born at Great Behringen, near Gotha, in 1735, and studied music at Jena. In 1761, when his studies were completed, he was appointed concert master to the Duke of Weimar. He not only composed a great number of German comic operas, but also several excellent pieces for the harpsichord. In 1782 he brought out an Easter cantata, or anthem, in score, and afterwards a funeral anthem, of which the music is admirable, though in the former the airs are somewhat too dramatic for the church. He is justly esteemed a composer of much originality. A chorus, taken from each of the above pieces, is inserted in La Tröbe's sacred music as a specimen of his compositions. He died at Weimar in 1792. Amongst his works we can enumerate the following. Theoretical: "*Musical Travels in June, July, and August, 1782*," Weimar, 1784; "*Lessons of Music*," &c., Dresden, 1788, in folio. Church music: "*Osterkantate, nach H. J. Tode's Poesie*," Schwerin, 1789; "*Jesus in Gethsemane*," a cantata, Schwerin, 1789; "*Die letzte Stimme der sterbenden Liebe am Kreuz*," cantata; "*Der Sieg des Erlösers*," cantata; "*Der leidende Erlöser*," cantata; "*Die letzte Stunde des sterbenden Erlösers*," cantata; "*Kleines Passions Oratorium*;" "*Hier will ich bey dir*," &c., a passion cantata; "*Der 100te Psalm*." Theatrical music: various operettas and cantatas; also the operas of "*Alceste*," words by Wieland; and "*Superba*," words by Sechendorf. To these we might add various instrumental sonatas, concertos, &c., chiefly for the harpsichord, and bearing date from the years 1774 to 1789.

WOLF, GEORG FRIEDRICH, chapel-master to a German nobleman, was born at Haynrode, in the duchy of Schwartzburg. He published a method for the piano-forte entitled "*Unterricht im Klavierspielen*," in two volumes, which went through several editions after the year 1783; also a method for singing, and a concise musical dictionary. His practical works consist of piano-forte and vocal music. In 1802 he received the appointment of chapel-master at Wernigerode, in Upper Saxony, where he died in 1814.

WOLF, LUDWIG, an excellent violinist and composer for his instrument, belonged to the orchestra of the theatre at Frankfort in the year 1796.

WORGAN, JOHN, born at London about 1715, was at first a pupil of his elder brother, afterwards of Roseingrave, and finally of Geminiani. Handel and Palestrina were the subjects of his persevering study. By analyzing the works of Handel he became a learned fuguist on the organ. He obtained the places of organist at St. Butolph's and St. Andrew's; and the University of Oxford conferred on him the degree of doctor in music. He died in 1790. His principal works are the oratorios "Hannah" and "Manassch." Some collections of organ pieces and a great number of songs for one or more voices, which he composed for the Vauxhall Concerts, have been printed at London.

WRANITZKY, PAUL, an excellent violinist, was elected, in 1790, first violin and director of the opera orchestra at the National Theatre of Vienna. He was born in Bohemia in 1756, and was a pupil of the celebrated Haydn. His compositions are very numerous and highly admired. They consist of several theatrical pieces, performed at Vienna between the years 1791 and 1800, and various opera of instrumental music, consisting of symphonies, concertos, sestets, quin-

tets, quartets, trios, duos, and solos, bearing date between the years 1790 and 1800. His German opera called "Oberon," which was performed at Frankfort in 1790 on the occasion of the coronation of the Emperor Leopold II., had such success, that, during six weeks, it was performed every night. Wranitzky died at Vienna in 1808.

WRANITZKY, ANTON, younger brother of the preceding, was chapel-master to the Prince of Lobkowitz at Vienna, and from about the year 1796 was considered one of the best violinists in that capital. He died in 1819. He has composed various works for his instrument.

WUNDERLICH, JOHANN GEORG, born at Bayreuth in 1755, was, in the year 1800, flutist in the orchestra of the Grand Opera at Paris; also professor of that instrument (in the second class) at the Conservatory. He has published various works for the flute. He died in 1819.

WUNDERLICH, CHRISTIAN FRIEDRICH, chamber musician and performer on the hautboy in the chapel of the Margrave of Anspach, was born at Culmbach in 1722. He was considered, in his youth, as an excellent player both on the hautboy and clarinet, for both of which instruments he composed various works between the years 1738 and 1770.

X.

XAVIER, ANTON MARIA, chamber violinist to the Emperor Napoleon, and member of the Royal Academy of Music, was born at Paris in 1769. He was of a noble family, but was obliged on account of the French revolution to follow music as a profession. He was a pupil of Bertheaume and of Mestrino. His violin playing was greatly admired at Paris. He published likewise several compositions for his instrument and many romances.

XIMENES, FRAN., cardinal, and Archbishop of Toledo, was born at Tordelaguna in 1457. He

took a very active part in the organization of the Spanish church music of his time; and introduced the Mozarabic or Gothic chant, which differs in several respects from the Gregorian and Ambrosian chants. It is very similar to the ancient African church music introduced by St. Augustin. A law of the council of Toledo determines that no person shall be admitted to the ecclesiastical dignity in Spain without being able to sing the whole missal, or at least all the customary chants and hymns of the church, in the Mozarabic style.

Y.

YANIEWICZ, FELIX. A Polish gentleman, born at Wilna, and in his youth attached to the court of Stanislaus, King of Poland. His genius for music showed itself at a very early age, and was so much admired by King Stanislaus that he signified his desire that every means should be employed for the cultivation of a talent so remarkable. With this object in view, a liberal pension was assigned to Yaniewicz, that he might travel in Germany, Italy, and France for the improvement of his art. Whilst in Paris, where he was particularly noticed by several members of the royal family, the French revolution broke out, and soon after the sun of Polish liberty set, perhaps forever. Amidst the tempest of political commotion which involved the ruin of Stanislaus and the dismantlement of Poland, Yaniewicz's fortunes were involved in the general wreck; and in 1792 he went to England, where he remained. There he married an English lady, by whom he had one son and two daughters. Both his daughters seemed to inherit their father's musical talent. The eldest, Felicia, became distinguished as an admirable pianist, possessing great force, neatness, brilliancy of touch and execution. Her public performances have been equally creditable to herself and to her father, who was her chief instructor and the model of her taste. As a singer, her pure and unpretending style and delicate intonation have given great pleasure to her hearers in public and in private. The youngest, Pauline, gave great promise of musical excellence. Yaniewicz was long well known in the musical world as a very eminent performer on the violin. His style seems to have been more the result of his own peculiar mode of feeling and expression than any scholastic imitation or predilection. With great spirit and precision in the more brilliant passages, there was blended in those of the cantabile character a strain of amatory feeling and serious tenderness which gave an indescribable charm to his performance. His tone was pure and equal, his intonation remarkably exact, and his style free from those unmeaning harlequinades and flattering flippery embellishments which disfigure the violin playing of so many performers whose merits are otherwise considerable. His concer-

tos, trios, duets, and other compositions gave proof of a fine and cultivated taste.

YONGE. Author of a work entitled "*Musica Transalpina*," published in London in the year 1588. The dedication to this work supplies the following interesting notice of the state of music in London at that time: "Since I first began to keep house in this city, it hath been no small comfort unto me that a great number of gentlemen and merchants of good account, as well of this realm as of foreign nations, have taken in good part such entertainments of pleasure as my poor ability was able to afford them, both by the exercise of music, daily used in my house, and by furnishing them with books of that kind, yearly sent to me out of Italy and other places; which, being for the most part Italian songs, are for sweetness of air very well liked of all, but most in account with them that understand the language."

YOST, MICHAEL. Under this name several pieces of instrumental music were published at Paris about the year 1790. All of them, however, were the composition of J. C. Vogel.

YOUNG, MATTHEW, an Irish bishop, published at Dublin, in 1784, a treatise entitled "An Inquiry into the principal Phenomena of Sounds and Musical Strings." He died at Whitworth, in Lancashire, in the year 1800.

YRIARTE, DON TOMAS DE, a Spanish author, published at Madrid, in 1779, a poem, in five cantos, entitled "*La Musica*." There is an indifferent French translation of this poem, entitled "*La Musique, Poème de D. Thomas Yriarte, trad. de l'Espagnol par Grainville, et accompagné de Notes par Langles*." Paris, 1800.

YSSANDON, JEAN, a French musician, published at Paris, in 1582, a work entitled "*Traité de Musique pratique, divisée en deux Parties*," &c.

YZO published in 1754, probably at Paris, two works, entitled "*Apologie de la Musique et des musiciens Français, contre les Assertions peu mélodieuses, peu mesurées et mal fondées de J. J. Rousseau, Citoyen de Genève*," and "*Lettre sur celle de J. J. Rousseau sur la Musique*."

Z.

ZA. A syllable formerly applied by the French, in their church music, to B flat, to distinguish it from B natural, called *si*. Mons. Lœulie, the author of "*Éléments, ou Principes de Musique*," printed at Amsterdam in the year 1698, rejecting the syllable *za*, has retained only *si*; and this method of solimination has been since practised throughout France.

ZABERN, JACOB, published at Munich, in 1800, a work entitled "*Ars bene cantandi choralem cantum*."

ZACCARIIS, or ZACHRIIS, CÆSAR DE, born at Cremona, was musician to the Bavarian court, and flourished towards the end of the sixteenth century.

ZACCHARELLI, an Italian dramatic composer in the latter part of the last century.

ZACCHINI, GIULIO, an organist at Venice, published in 1572 a work entitled "*Motetti à 4 voci*."

ZACCONI, LUDOVICO, an Augustine monk of Pesaro, and afterwards a musician in the service of the Duke of Bavaria, was the author of an excellent work, printed at Venice, first in 1591 and afterwards in 1596, under the title of "*Pratica di Musica*." This is justly esteemed one of the most valuable treatises on the subject of practical music that is extant; and although it seems chiefly intended for the use of experienced musicians, it abounds with precepts which are applicable to practice, and suited even to ordinary capacities. In the year 1662 he published a second part of this work, in which he treats of the elements of music and the principles of composition. The rules for the composition of counterpoint, fugue, and canon are taken from the writings of Zarlino, Artusi, and other Italians.

ZACH, JOHANN, was born in Bohemia, and received his musical education under the first organists and contrapuntists of his day. He was chapel-master to the Elector of Mentz, and his instrumental compositions were much admired. He died in poverty in 1773.

ZACHARIÄ, JUSTIN FRIEDRICH WILHELM, an eminent German poet and composer, was professor of *belles lettres* at the Gymnasium in Brunswick, where he died in 1777. His compositions were chiefly vocal.

ZACHAU, FRIEDRICH WILHELM, the son of a musician of Leipsic, was born in that town in 1663. He was placed at the public school there, and became a deeply-skilled proficient in the science of music, and likewise attained some excellence as a performer on the organ and other instruments. He studied under Thiel at Stettin, and in 1684 was appointed organist of the Church of the Virgin Mary at Halle, in Saxony, where he continued until his death in the year 1721. He composed several pieces for the church and some lessons for the harpsichord.

His professional celebrity occasioned him to have many pupils; and it is no small addition to his character that he was the musical preceptor of Handel.

ZAIN, a celebrated performer on the bassoon, was born in Franconia. He was engaged, in 1761, in the Imperial Chapel of St. Petersburg, and resided in Russia during twenty years.

ZAMPIERI, or SAMPIERI, a good Italian violinist, resided for some time in England about the year 1795. He was a very singular character, and gave several concerts, at which he introduced his own compositions, whimsically describing in the bills the story his music was meant to illustrate.

ZAMPOGNA, or SAMPOGNA. The *flute à bec*, or common flute.

ZANCHIUS, court musician and organist to the Emperor Rudolph II., was born at Treviso about 1570. He flourished at Prague at the commencement of the seventeenth century, and published there, amongst other works, "*5 Vesperpsalmen von 8 und 12 Stimmen*," 1603.

ZANETTI or ZANETTINI, ANTONIO, a Venetian, was born at Volterra about the year 1740. He brought out at Venice the following operas: "*Medea in Atene*," 1675 and 1678; "*L'Aurora*," 1678; "*Irene e Costantino*," 1681; "*Temistocle in Bando*," 1683; "*Virgilio Console*," 1704; and "*Artaserse*," 1705.

ZANETTI, FRANCESCO, chapel-master at Perugia, was born at Volterra about the year 1740. In 1790 he resided in England, where he published several compositions for the violin. Amongst his dramatic works are "*L'Antigono*," Leghorn, 1765; "*La Didone abbandonata*," Leghorn, 1766; and "*Le Cognate in Contessa*," opera buffa, Alessandria, 1783.

ZANOTTI, FRANC. M., an Italian author, published "*Lettere del Sgr. Franc. M. Zanotti, del P. Giamb. Martini, del P. Giovenale Sacchi, Accademici dell' Istituto di Bologna, nelle quali si propongono e risolvono alcuni dubbj appartenenti al trattato: Della divisione del tempo nella musica, nel ballo e nella poesia, pubblicato in Milano nell' anno 1770, e all' altro: delle quinte successive nel contrapunto, e delle regole degli accompagnamenti, pubbl. l' anno 1780*," Milan, 1782.

ZANOTTI, GIOVANNI CALISTO, was in 1770, chapel-master at Bologna. In 1791 he is named as a dramatic composer in the Milan theatrical calendar.

ZAPE, JOHANN NEPOMUK, pianist at Gratz, published, chiefly at Vienna, many works for his instrument since the year 1800.

ZAPPA, FRANCESCO, a good violoncellist and composer for his instrument, published some of his music at Paris about the year 1776.

ZARABANDA. An old dance in waltz time. See **SARABANDA.**

ZARGE. (G.) The sides of any musical instrument; such as the violin, tenor, violoncello, guitar, &c.

ZARLINO, GIUSEPPE, a celebrated chapel-master of St. Mark's Church at Venice, was born at Chinggia, near Venice, at the commencement of the sixteenth century. He was a pupil of Adrian Willaert, and succeeded Cyprian de Rore, whose office he filled in 1565. His theoretical works raised him to the rank of one of the first classical authors of the sixteenth century. He was, after Guido, one of the first authors who wrote on music scientifically, making use of the monochord to treat of the length of the strings and the consonances. The merit of having discovered the relation between the major and minor third is also attributed to him. All his works were printed at Venice in 1538, in four volumes folio. Zarlino was the composer of the "*Modulationes sex Vocum per Phil. Usbertum editæ*," Venice, 1566. He likewise composed for the theatre. In 1630 one of his operas, called "*Otfeo*," was represented at Paris by a company of singers brought there by Cardinal Mazarin. Walther fixes the time of the death of Zarlino in the year 1559; but he is deceived, since he succeeded Rore in 1565. Fetis names the year 1590; and this opinion is most probable. Dr. Burney says, "There are few musical authors whom I have more frequently consulted than Zarlino, having been encouraged by his great reputation and the extent of his plan to hope for satisfaction from his writings concerning many difficulties in the music of the early contrapuntists; but I must own that I have been more frequently discouraged from the pursuit by his prolixity than enlightened by his science: the most trivial information is involved in such a crowd of words, and the suspense it occasions is so great, that patience and curiosity must be invincible indeed to support a musical inquirer through a regular perusal of all his works." However, as there is perhaps more pedantry discovered by writers upon music in general than any other art, from their ambition of being thought profoundly skilled in the useless jargon of ancient Greek theorists, if we make allowance for Zarlino's infirmity in that particular, many useful precepts, and much curious information concerning the music of the sixteenth century, may be collected from his works.

ZEITMAASS. (G.) The time, or movement.

ZELLER, G. B. L., chapel-master to the Duke of Mecklenburg-Strelitz and composer of some dramatic and violin music, died at Strelitz in the year 1803.

ZELO, con, ZELOSO. (I.) With zeal, enthusiastically.

ZELTER, CARL FRIEDRICH, was born at Berlin in 1758. His father, a Saxon, had him instructed during his childhood and youth in various elegant as well as useful acquirements. Engaged in the cultivation of his mind, for which purpose he attended the Joachimsthal College, he had already attained his seventeenth year, when he was articulated to his father's business, that of a builder. Hitherto he had not shown much inclination for music, and had manifested but

little attention to the instruction he received on the piano-forte and organ from a Berlin organist.

After a tedious and painful illness, by which he was attacked in his eighteenth year, an extraordinary passion for music all at once sprung up in him. But as at this period nearly the whole of his time was devoted to his professional pursuits, the evening alone was left to him to satisfy his thirst for harmony. Thus whole nights were frequently spent in copying music and in practising the violin and piano-forte. This enjoyment, however, was but of short duration, for his instructor in the latter instrument could no longer attend him; and, fearing that such constant and unwearied application might injure his health, his father endeavored to check his voluntary studies. But this did not stop his progress, for, as he was now deprived of his instruments, he began to compose, for which purpose only pen, ink, and paper were necessary. He had no rules, and, being governed only by his fancy, his deficiency in the knowledge of composition was constantly manifesting itself; and, having no acquaintance with scientific musicians, he had no means of gaining information through the medium of conversation. He therefore procured some scores of Emanuel Bach and Hasse, the study of which showed him the importance of order and unity in composition, and taught him how to preserve a constant flow of melody in the middle parts.

Now, however, his health actually began to sink under his exertions and the many privations to which his earnest application subjected him. His thoughts were exclusively devoted to the art of which he was enamoured, and all else was neglected. His business was neglected for it, and his health ruined. His father again remonstrated, and the young enthusiast renewed his promises of obedience: he for some days took more sleep and paid more attention to his affairs, but in less than a month relapsed into his former habits, though he did also attend to his drawing, his geometry, and other business; but at the same time prosecuted his musical studies with all the ardor which his little remaining strength would permit.

In the year 1783, having completed his probationary architectural drawing, he was admitted among the number of master builders. And now, for the first time, he received lessons in counterpoint from M. Fasch. "I have," he himself states, "made as much use of this excellent instruction as I possibly could in the midst of my other occupations. To this worthy M. Fasch I am entirely indebted for whatever merit many of my compositions may possess."

After alluding to three themes with variations of his composition published at Berlin, and many songs scattered in various publications, he adds, "I have besides composed several pieces of music for particular occasions. The best among these are a cantata upon the death of the Emperor Friedrich II. in the year 1787, and another cantata upon the birthday of a beloved mother in the year 1793. A variety of single arias and scenas, many of which I scarcely even can recollect, are not to be taken into account. The concerto for the tenor which I composed in the year 1780, it it has merit, has on the other hand many faults, and is not theoretically correct. All the rest of my musical works are studies, consisting of fugued choral pieces and fugues, which I have

never considered worthy of preservation. If I should hereafter be enabled to devote more time to my beloved art, I hope to indemnify the friends of my muse, if any such there be, for those works which, from precipitance or without any blame attaching to me, have already been brought before the public."

"Thus far only," Gerber states, "extend the particulars which Zelter had the kindness to furnish me with in 1793. But it is necessary to add a few explanatory observations. For the benefit of such of my readers as have no other idea of a master builder than that he must be begirt with a leathern apron and armed with a trowel, I must remind them, in the first place, that Zelter's tools consisted solely of a case of drawing instruments and a pen; and that no one can have any conception of his great, his important, occupations who has not had an opportunity of witnessing the solid taste, the grandeur and splendor, of the architecture of Berlin." How many an artist might, with a feeling of shame, look upon this pattern of activity, who day after day superintended the building of various great edifices, yet nevertheless ever bore in mind with reference to music the words of Horace, *nulla dies sine linea!* In order also to be as useful as possible when his fatiguing professional duties of the day were completed, he, in his hours of relaxation, joined the singing academy of Fasch and became one of its most active members; indeed, it may be said that he was Fasch's right hand.

And when, in the year 1797, Gerber revisited Berlin, Zelter singly at the piano-forte directed the whole, while Fasch, then become aged and infirm, was most commonly a silent listener in one corner of the room. And this school, or society, performed before Naumann, Himmel, and other distinguished composers one of Naumann's learned compositions written for them, (a Latin psalm,) and a part of Fasch's masterpiece for four choirs. In the same year, too, Zelter conducted Graun's "*Tod Jesu*" at the Opera House, in which the choruses were sung by the united members of Fasch's society; the orchestra having consisted of the members of the Royal Chapel and the best amateurs in Berlin.

The following are the titles of Zelter's detached papers and compositions. On the representation of Gluck's opera, "*Alceste*," at the Berlin Opera House, from the letters of an artist, published in the fifth number of the Journal, entitled "*Deutschland*," Berlin, 1796, after many interesting observations upon the dramatic treatment of the story by Calsabigi, he remarks, "The conductor of the opera should always have the right to wield the helm of the vessel, because he is more likely to enter into the beauties of an excellent poem than a poet is to understand any thing of music, even what is meant by a dissonance." Analysis of a scene from Benda's "*Romeo and Juliet*," in the first volume of the "Lyceum of the Fine Arts," Berlin, 1797-8; dance and aria from the opera "*Azur*," with variations, for the piano-forte; "*La Malade, piéce caractéristique pour le Clavecin*;" Schiller's "*Ode an die Freude*," — Ode to Joy, — for the piano-forte; "*Seize chorales composées*" par M. M. Reichardt, Gürlich, Zelter, &c.; "*Trinklied*," "Drinking Song," of K. Mächler; twelve songs with piano-forte accompaniment. The following greater vocal productions also are

quoted in Reilstab's catalogue: "*Aria di Bravura: Grato Flauto, &c., p. Soprano con Flauto concertato. Rondo à 6; Dove sei, mia bella nice, &c., p. Soprano con Flauto concertato*;" fragment from Wieland's "*Seraphine*" in score; all of which were already written about the year 1790; and another of the same description from his celebrated cantata, already alluded to, on the death of the Emperor Friedrich II.

The following works of his also have appeared in print: "Memoir of Carl Friedrich Christian Fasch, by C. F. Zelter, with a Portrait," Berlin, 1801; another set of twelve songs, with piano-forte accompaniment; "*Der Taucher*," — The Diver, — by Schiller, for the piano-forte; "Collection of Ballads and Songs," books 1, 2, 3, 4; "*Johanna Sebus*," for several voices, with piano-forte. He subsequently collected his gems of songs and arias of every description, and published them in numbers. There is also a "*Te Deum*" of his composition.

In 1809 Zelter was appointed by the king professor of music at the Berlin Academy of Arts and Sciences; and as a proof that it was not a mere empty title conferred upon him, the king called him the very same year to Königsberg to attempt the revival of a taste for church music, which had sunk to a very low ebb — a task for which he was eminently qualified. At the commencement of this year, too, a new society had been formed at Berlin, consisting of about twenty-four male members of the Singing Academy, under the name of "*Die Liedertafel*," — The Vocal Club, — of which Zelter was president. The members were divided into two bodies of tenors and two of basses; they assembled once a month and sang their songs, the poetry and music being of their own production, their president making his remarks on them. In fact, it was a revival, in a much improved form, of the guild of the old German "*Meister-sänger*," and did no little credit to the state of cultivation and the attainments of the *dilettanti* of Berlin.

Zelter died, at a rather advanced age, in 1832. He appears to have been not only a skilful musician and an ardent lover of his art, but also a man of strong mind and of refined taste generally; and the correspondence between himself and Goethe, which commenced in 1796, on the occasion of his setting to music Goethe's song, "*Ich denke Dein*," and was continued until 1832, — when it was terminated by the poet's death, — forms six volumes, every page of which is replete with information and amusement. It has been said of Lord Bacon's Essays that they are not essays, but severally contain hints for many essays. The same may be observed of the criticisms of Zelter and Goethe; they are fragmentary rather than elaborate, and contain the germ of more extensive disquisition.

ZENARO, DA SALO GIULIO, a musician of the sixteenth century, published at Venice, in 1590, "*Madrigali Spirituali à 3 voci*."

ZERSTREUT. (G.) Dispersed, scattered, with respect to the notes of arpeggios or chords, the situation of the different parts of a composition, &c.

ZIANI, DON PIETRO ANDREA, by birth a Venetian, was in early age chapel-master of St. Mark's at Venice, and subsequently entered the service of the court at Vienna. He was one

of the best theorists of his time, and the number of his practical works attests the fecundity of his talent. Besides seven sets of sonatas, which were all published, he produced the following operas: "*La Guerriera Spartana*," 1654; "*Eupatra*," 1655; "*Le Fortune di Rodope e di Dalmira*," 1657; "*L'Incostanza trionfante*," 1658; "*Antigona deusa da Alceste*," 1660; "*Annibale in Capua*," 1661; "*Gli Scherzi di Fortuna*;" "*Le Lagrime della Vergine*;" "*Le Fatiche d'Erocle*," 1662; "*Amore Guerriero*," 1663; "*Alciade*," 1667; "*Seniramide*," 1671; "*Eraclio*," 1671; "*Attila*," 1672; and "*Candaule*," 1679.

ZIANI, MARCO ANTONIO, was a relation of the preceding, and his successor in the place of chapel-master at Vienna. Some of his sonatas were published at Amsterdam. The following are amongst his operas and oratorios: "*Alessandro Magno in Sidone*," 1679; "*La Ninfa Bizarra*," 1680; "*Alciade*," 1680; "*Damira placata*," 1680; "*La Virtù sublimata dal Grande*," 1683; "*Tullo Ostilio*," 1685; "*Inganno regnante*," 1688; "*Il gran Tamerlano*," 1689; "*Creonte*," 1690; "*Falsirena*," 1690; "*Amante Eroc*," 1693; "*Marte deluso*," "*La Virtù Trionfante dell' Amore e dell' Odio*," 1691; "*Rosalinda*," 1693; "*Amor Figlio del Merto*," 1694; "*La Finta pazzia d'Ulisse*;" "*Domicio*;" "*Constanza in Trionfo*," 1696; "*Emene*," 1697; "*Odoardo*;" "*Il Giudizio di Salomone*;" "*Egisto, Rè di Cipro*," 1698; "*Amori trà gli odi, ossia il Ramiro in Norvegia*;" "*Il Theodosio*," 1699; "*Duello d'Amore e di Vendetta*;" "*Gordiano Pio*;" "*Il Meleagro*," 1700; "*Temistocle*," 1701; "*Romolo*," 1702; "*Esopo*," 1703; "*Alboino*," 1707; "*Cheloniada*," 1709; "*Gesù flagellato*," oratorio, 1714; and the first act of the opera "*Atenaide*."

ZIEGLER, FRANZ, a monk at the Abbey of Eberbach, published at Nuremberg, in 1740, a work entitled "84 *Interludia, sive breviores versiculi ad musicam choralem ubique necessarii*." Sometime afterwards he published a second collection of eighty easy fugues.

ZIEGLER, CHRISTIAN GOTTLIEB. An excellent organist and learned musician at Quedlinburg in the first half of the last century.

ZIEGLER, JOSEPH. A good violinist at Vienna about the year 1750. He was one of the masters of Von Dittersdorf.

ZIELCHIE, HANS HEINRICH, chamber musician and flutist to the King of Denmark, also court organist at Copenhagen, published there and at Berlin much music for the flute between the years 1775 and 1790.

ZIMMERMANN, MATTHIAS. A German church composer towards the close of the seventeenth century.

ZIMMERMANN, ANTON, organist of the Cathedral Church at Presburg died in 1781. He left much instrumental music of his composition, chiefly in manuscript.

ZIMMERMANN, PIERRE JOSEPH GUILAUME, was born at Paris in 1785. He was a pupil of Boieldien at the Conservatory. At fourteen years of age he obtained the prize for performance on the piano-forte, and, having studied harmony under Catel, he, two years afterwards, gained the first prize for that also. His compo-

sitions consist of piano-forte music and a great variety of romances.

ZINCKE. A small hornpipe, or whistle, of German origin; supposed to be so called from the word *Zinken*, the small branches on the head of a deer.

ZINCKEN. (G.) A kind of rustic pipe, now longer used; a cornet.

ZINGARESA, ALLA. (I.) In the gypsy style.

ZINGARELLI, NICOLO, chapel-master of St. Peter's at Rome, was born at Naples in 1752, or, according to Gerber, at Milan in 1760. Having lost his father at an early age, he was placed at the Conservatory of Loretto to learn the rudiments of composition under Feneroli. Cimarosa and Giordanello were here his fellow-students. On quitting the Conservatory he learned the higher branches of the science from Speranza. One of his earliest works was his "*Montezuma*," which was produced at the Naples theatre in 1781, and, though not free from faults, gained the approbation of Haydn. He then wrote for almost all the theatres in Italy; and after having visited Paris in the year 1789, where he produced his "*Antigone*," he returned to Italy, being chosen chapel-master to the Cathedral of Milan. This situation he subsequently relinquished, being elected, on the death of the celebrated Guglielmi in 1804, to his place in the chapel of the Vatican. From this epoch church music was the only species of composition to which he applied himself. The following list contains his principal dramatic works: "*Telemuco, ossia la Vertù vincitrice*," cantata, Milan, 1785; "*Ricimero*," opera seria, Venice, 1785; "*Armida*," opera seria, Rome, 1786; "*Montezuma*," opera seria, Naples, 1781; "*La Morte di Cesare*," opera seria, Milan, 1791; "*Antigone*," Paris, 1789; "*Il Mercato di Monfregoso*," Vienna, 1793; "*La Soccia rapita*," opera buffa, 1795; "*Stanze del Canto Vigesimo della Gierusalemme liberata di Tasso*," Paris, 1795; "*Roméo e Giulietta*," opera buffa, Vienna, 1797; "*Dio salvi Francesco Imperatore; Inno Patriottico degli Austriaci, con Acc. d' Orchestra: Gott erhalte Franz den Kaiser, trasportato in Lingua Ital. de Carpani*," Vienna, 1789; "*Pirro Rè d' Epiro*," opera seria, Vienna, 1798; "*Era, Cantata, ossia Monologo con Acc. di Comb.*" Vienna, 1802; "*Preghiera, coll' Acc. di Cembalo*," Vienna, 1803; "*L' Oracolo de Samiti*," opera seria, Naples, 1805; "*Der 33 Gesang aus Dante's Hölle, für mehrstimmigen Gesang*," 1808; "*La Distruzione di Gierusalemme*," oratorio, Florence, 1800; "*Il Trionfo di Davide*," oratorio; "*Ifigenia*," opera; "*Artaserse*," opera; "*Apelle e Campaspe*," opera; "*Il Conte di Saldagna*," opera; "*Ines de Castro*," opera; and "*Il Rittrato*." Zingarelli died in 1837.

ZINK, BENEDICT FRIEDRICH, organist of the Cathedral at Schleswick in 1783, published some admired instrumental music. He died at Ludwigslust in 1801.

ZINK, HARTNACK OTTO CONRAD, son of the preceding, was master of the choristers at the Chapel Royal of Copenhagen. He was considered a good performer on the flute and piano-forte, and published several compositions for those instruments.

ZITHER. (G.) The guitar, or cithern.

ZITHERN. An instrument which may be called a compound of the harp and guitar. The harmonies of the first-named instrument are produced from it, and it possesses the sweetest notes pertaining to both, but not great compass. It was first introduced into this country by the Hauser family (Tyrolium) in 1849.

ZONKA, or ZONCA, or ZONGA, JOHANN BAPTISTE. A good bass singer and performer on the harmonica, belonging to the Elector's Chapel at Munich till 1786, when he returned to Italy, his native country. He published several bass songs, with instrumental accompaniments.

ZOPPIS, FRANCESCO. Chapel-master to the Emperor of Russia at St. Petersburg in 1756. He first went to that country with an Italian opera company, of which he was the *compositore*. Both his serious and comic operas were very successful. The following are the only two of his entire works which are well known out of Russia: "*Sacrificio d' Abramo*," oratorio; and "*Tolozoso*," opera. Several detached airs from his other operas became popular in Germany.

ZOPPO, or ZOPPE. A term applied by the Italians to a certain species of counterpoint called *contrapunta alla zoppa*, in which, to the given subject, one note is so placed against, or between, two others as to produce in the performance a *syncope*, or leaping effect.

ZUCCARI, CARLO, an Italian violinist and composer, flourished about the year 1770. He was for some time in England, and published in London "The Art of Adagio," consisting of solos for the violin and bass, and "Three Trios for two Violins and Bass."

ZUCCARI, GIOVANNI, an Italian dramatic composer, resided at Venice about the year 1726, and produced there the opera of "*Seleno*," in which the celebrated Caresini made his first appearance on the Venice boards.

ZUCCHI. A celebrated Milanese violinist at the commencement of the last century.

ZUCHELLI, CHARLES. This bass singer is said to be an Englishman by birth, and to have passed the first eight or nine years of his childhood in England. His organs of speech having, therefore, been early trained to the pronunciation of the English language, he spoke it far better than foreigners in general, though with a slight foreign accent. He sang at the Ancient Concert in 1822; and though he certainly did not shine in Haendel's finest bass songs, such as "Why do the nations," and "O, ruddier than the cherry," being manifestly unacquainted with the style of these songs, still the splendor of his voice had its effect. He also performed at the King's Theatre.

ZUCHINO, GREGORIO, a monk, born at Brescia, flourished in the first years of the seventeenth century. Amongst his published works are "*Harmonia Sacra*, 8, 9, 10-16 *voc.*, seu *Motetti*," Venice, 1603; and "*Missæ d 8-16 voc.*," Venice, 1603.

ZUFÄLLIG. (G.) Accidental in respect to sharps, flats, or intervals, or to chords chromatically altered, &c.

ZUFFI, GIOVANNI AMBROSIO, organist at Milan in the beginning of the seventeenth century, published in that city "*Concerti Eccles.* à 1, 2, 3, 4 *voci, Parte Ima. e 2da.*," Milan, 1621; and "*Concerti e Magnificat à 4 voci.*," Milar, 1624.

ZUFOLO. (L.) Any little flute or flageolet; but more especially that which is used to teach birds.

ZULEHNER, a German musician and composer of a mass and other works at Mentz, published, in the latter part of the last century, a very extensive collection of the best Italian, French, and German operas and oratorios, arranged for the piano-forte.

ZUMSTEEG, JOHANN RUDOLF, was born at Gausingen in 1760. He was an excellent violoncellist and highly esteemed vocal composer. In the year 1792 he was elected concert master and director of the opera at Stuttgard. Zumsteeg received his early instructions in music from the Chapel-master Agostino Poli; but he acquired the greater part of his theoretical knowledge by studying the works of Mattheson, Marpurg, and D'Alembert. His compositions are in general distinguished by the gravity and dignity of their style. He died at Stuttgard in 1802. The following is a list of his principal works. For the church: "Cantatas and other Sacred Music for the Festivals of an entire Year." For the theatre: "The law of the Tartars," opera; "Renaud and Armida," opera; "*Schuss de Gausewitz*," opera; "Zalaor," opera; "The Fête of Spring," opera; "Tamira," a duodrama; songs for Schiller's "Robbers;" "Prolog von Schubert, in Stuttgard, am Geburtsfeste des Herzogs aufgeführt," 1790; "Airs du Divertissement, donné par ses Enfants, à son Altesse Royale Mad. la Duchesse régénante de Wurtemberg, née Princesse de Prusse, à l'occasion du jour de Ste. Dorothée, sa Fête," Stoccard, 1796; "Die Geisterinsel Ein Singspiel in 3 Akt. von Gotter, zum ersten Mal aufgeführt zu Stuttgard," 1798; "Das Pfauenfest," opera, Stuttgard, 1801; "Zalaor," opera. Chamber music: "Lieder, zerstreut eingerichtet in dem Musikalischen Potpourri 1, 2, 3, und 4 Vierteljahr," Stuttgard, 1790; "Des Pfarrers Tochter von Taubenhain, eine Ballade von Bürger, mit Begleit. des Klav.," Leipsic, 1792; "Colma, ein Gesang Ossians, von Gothe, mit Begleit. des Klav.," Leipsic, 1794; "Die Entführung, oder Ritter Karl von Eicherhast und Fräul. Gertrude von Hochburg, eine Ballade v. Bürger, mit Begleit. des Klav.," Leipsic, 1794; "12 Lieder mit Klavier-Begleitung," Leipsic, 1797; "Die Bussende, eine Ballade von Stollberg, mit Klav. Begleit.," Leipsic, 1797; "Hagars Klage in der Wüste Bersaba, für eine Singstimme und Klav.," Leipsic, 1797; "Gesänge der Wehmuth von Salis und Matthison," Leipsic, 1797; "Leonore, eine Ballade von Bürger, in Musik gesetzt f. Klav.," Leipsic, 1798; "Iglon's der Mohrin Kinygeesung, f. Klav.," Leipsic, 1800; "Traurige Corallen, Duett aus der Geisterinsel fürs Klav.," Leipsic, 1800; "Kleine Balladen und Lieder mit Klavier-Begleitung, Part 1 und 2," Leipsic, 1800; "Dritter Heft, Part 3," Leipsic, 1801; "3 Duos à Flute e Fc.," Augsburg, 1800; "Etheine, Ballade, vom Frhrn. v. Uthenstein," Leipsic, 1801; "3 Gesänge mit Klavier," Leipsic, 1801; "Trauerkantate, in Partitur und f. Klav. gedruckt," Leipsic, 1802; "Requiem auf den Tod des Grafen Zeppelin," 1801; "Kleine Balladen und Lieder, Part 4," Leipsic

1802; "Part 5 ditto," 1803; "Sixth and Seventh Parts ditto," 1803; "Ritter Toggenburg, Ballade für Guitarre, Violin, und Violoncell.," 1802; "Elbondokani, Singspiel in 1 Akt, von Justi nach dem Kalifen von Bagdad, fürs Klav. gedruckt," 1802; "Johanna's Abschied, aus Schiller's Mädchen von Orleans, fürs Klavier; von unbekannter Hand vollendet, aber weit unter Zumsteeg's Geiste," Leipsic, 1803; "Die Frühlingsfeier, Ode zur Deklamation mit Orchester-begleit.," Leipsic, 1804; "Der Abschied an Fanny; Kantate f. 1 Singstimme," Leipsic, 1804; "Duo conc. p. 2 Violoncelles, et Sonat. p. Vc. et B.;" "Schiller's Ode an die Freude, mit P. F.;" "L'Amor timido, Cantata di Metastasio a voce sola con P. F. ed. Orchestra," 1804; and "Concert p. Vc. av. Orchestre, No. 1."

ZUPHELIUS, MATTHIAS. A contrapuntist of the sixteenth century. Several motets of his composition may be found in "*Petr. Joanelli Nov. Thes. Music.*," Venice, 1568.

ZURÜCKHALTUNG. (G.) A holding back in the time; a retardation, or suspension.

ZUSAMMENGESETZT. (G.) Compound, in speaking of times.

ZUSAMMENSCHLAG. (G.) Italian, *acciacatura*. In the *half beat*, the inferior note is struck only once, and at the same time with the principal note, but is immediately quitted.

ZWEISTIMMIG. (G.) For two voices or parts.

ZWISCHENRÄUME. (G.) The spaces between the lines of the staff.

ZWISCHENSPIEL. (G.) An interlude in organ playing.

ZYGMANTOWSKY, NICOLAS, a celebrated performer on the violoncello, was born in 1769. He played on the tenor at a public concert when only four years of age, and on the violoncello at seven. He died before he had attained his eleventh year.

ZYKA, JOSEPH, chamber musician and violoncellist at the Chapel Royal at Berlin, was born in Bohemia. He flourished about the middle of the last century, when much of his music was known in manuscript.

ZYKA, JOSEPH, Jr., youngest son of the preceding, was chamber musician and performer on the tenor to the King of Prussia at Berlin. He composed various operettas; also some piano-forte music and cantatas. In the year 1797 he presented a "*Stabat Mater*," of his own composition, to the Emperor of Russia, who rewarded him on the occasion with an elegant gold repeater and chain.

MOORE'S COMPLETE ENCYCLOPÆDIA OF MUSIC.

This work was first published in 1854; and to its contents I devoted more than seventeen years' time and labor. It was the first American book of its kind, and is to-day the only extensive and full work upon music published in this country.

Since the time in which this work was published, I have been engaged in preparing a *second volume*, not yet ready, from which selections have been made for this APPENDIX; thus, briefly, bringing all musical events down to the present time. I most respectfully tender sincere thanks to such of my friends as have assisted me in my labors, while I acknowledge my obligations to such editors of periodicals as have aided in the collection of biographical and historical matter for my work, as well as to my brethren of the press, at home and abroad, for the many notices given my Encyclopædia.

The use which has been made of the information contained in the first volume, by abstracts and quotations, has, I trust, made the work better known, and created a thirst for the second volume, which will embrace all such subjects as I was compelled to omit for want of space and information. I hope to make an acceptable second volume in due time. I am thankful to Him who has preserved my life, and given me health and strength to labor in the musical field during more than half a century; and, though my work has been small, it has been performed faithfully, and with the desire of doing the best I could do. I hope my future efforts will be yet more valuable.

JOHN W. MOORE.

CONTAINING

SKETCHES OF EMINENT MUSICIANS AND COMPOSERS,

WITH MUSICAL EVENTS WHICH HAVE TRANSPIRED SINCE THE PUBLICATION OF THE ORIGINAL WORK.

BY JOHN W. MOORE.

ABERDEEN CANTUS. "Cantus, Songs and Fancies. To Thre, Foure or Five partes, both apt for voices and viols. With a briefe Introduction of Musick, as is taught in the Musick-Schole of Aberdene, by T. D. [Thomas Davidson] Master of Musick. Aberdene, printed by John Forbes, and are to be sold at his Shop. Anno Dom. MDCLXII." The above title is printed within a rude wood-cut border, representing a lady with a lute on one side, and a gentleman with a music-book on the other. It usually passes under the printer's name, as "Forbes's Cantus," although Mr. T. D. or Thomas Davidson, may have been the editor; and it may be objected that the word "Cantus" is improperly used, as applied to a collection of airs, instead of to only one of the parts. The first edition of the "Cantus" is of very great rarity, and contains sixty-one songs. This collection, the earliest printed in Scotland, 1662, contains a set of English tunes, or tunes composed in an English style, rather than of genuine Scottish melodies, and is a small oblong quarto, fifty leaves. The dedication, by Forbes, is a curiosity, abounding in bombast. He speaks of "the heavenly melody and the nightingales of Bon-Accord," or Aberdene, to which place "many have come of purpose from the outmost partes of the Iland, to hear the cheerfull Psalms and heavenly melodies;" and he adds, "to have been born in Aberdene, hath been sufficient to advance any one to the profession of music elsewhere."

The second edition of the *Cantus*, 1666, a quarto of fifty leaves, containing only fifty-five songs, six having, for some reason, been omitted, is very rare. It has on the title the same rude wood-cut border as in the first edition. A third edition was published in 1682, to which were added several choice Italian

songs. John Forbes was the city printer, and his prayer was "that all his painful labors might tend for the good of the city and his country." In the *Cantus*, the notes are lozenge shaped semibreves, minims, and crotchets, without any bars. We give one of the songs, thrown into modern notation. "Love will find out the way." This is an exact copy of the melody, as printed in 1662; but the simple melody of this fine old song would be scarcely discernible amidst the superfluous extravagance of modern embellishment. Psalm-book makers have used it.

O- ver the mountains, and un-der the caves.

O - ver the fountains and un - der the waves

O-ver wa - ters that are deepest, and which

Nep- tune o - bey, O - ver rocks that are

steep - est, love will point out the way.

ABT, FRANZ, was born at Eilenburg, in the Prussian province of Saxony, Dec. 21, 1819. His father, a clergyman of the Lutheran Church, was distinguished as a musician, and gave Franz, who evinced great love and aptitude for the art, his first musical instruction, and then placed him at the celebrated Thomas School at Leipsic, where, from olden times, music — particularly singing — had been cultivated; and here his musical love found natural sustenance. This was fortunate, as, before entering upon the third year of his university studies, the death of his father deprived him of the means of continuing the study of law, and he was compelled to teach music in order to support himself and his mother. He devoted himself now to the doctrine of harmony, and began to compose songs, some of which became known in 1838; as in April of that year, in addition to songs, he found a publisher for his first, "*Six contre-dances*," W. A. Kunzel. Some of these were arranged for orchestra, and were played at two gardens largely frequented by the Leipsic public. His first waltz was approved by the celebrated Queisser, and was performed in the garden of the *Hôtel de Prusse*, to the great delight of the audience, and there was a public summons for its repetition; the publisher was satisfied, and made for Abt several thousand dollars. Franz now became conductor of the Philharmonic Society, and in September, 1841, married, and found a position as leader of an orchestra at Zurich. Here he composed seven songs, "*Agathe*," "*Irene*," "*Paulina*," "*Adelheid*," "*Agnes*," and two others. "*Agathe*, "When the swallows homeward fly," was finished May 14, 1842; it was first sung by Fraulein Agathe Reuss, at Zurich, and pleased the audience; but, as Abt was unknown, it was a long time before he could find a publisher willing to risk the publication of the seven songs. At last, after many trials, Gopel, of Stutgard, brought them out, and the "*Swallows*" flew with rapidity over the world; and his name became known to almost every musical household. Abt remained at Zurich until 1851, when he accepted the position of *Kapellmeister* of the Bruns-wick theatre; which he retained until 1855, when he held office at the theatre, court, and chapel. In 1865 he was one of the conductors of the great festival at Dresden. He came to this country, and was present at the Peace Jubilee in Boston, where he directed the performance of some of his own music; he arrived in New York, May 2, 1872, and was welcomed by a testimonial concert, for his benefit, at Steinway Hall, May 18, 1872. It is said that Theodore Wachtel has sung one of Abt's songs six hundred and seventy-eight times, in operas, as an interlude. Other singers are equally devoted to Abt's music, and receive every new song of his with joy. At Boston, he complimented us by saying, "The Americans have more talent for music than the English; and I think the growth of musical taste among the people here is wonderful, promising a great future."

ACCOMPANIMENT OF ANTHEMS consists principally of the voice parts played without much modification.

ACCOMPANIMENT OF THE CHORAL. The first and easiest task for the practice of

accompaniment. Such harmonies should be chosen as are most easily attached to, and best support, the melody, the accompaniment should correspond with the general character of the choral and words, taking into consideration the features of each verse.

ACCOMPANIMENT OF CHORUS. The chorus accompaniments, except those to anthems, are generally written for the orchestra, which is, for this purpose, divided into the string, the reed, and the brass; the brass in emphatic passages, the strings and reeds supporting the voices.

ACCOMPANIMENT OF INTERVALS. The intervals belonging to chords are not always indicated; but the rules of accompaniment make known the chord which each bass note ought to carry. Figures are sometimes used, though not necessary, to designate the chords. In every chord there is a characteristic interval, which being marked, the others follow as a matter of course.

ACCOMPANIMENT OF RECITATIVE. Recitatives are of two kinds, accompanied and unaccompanied; they are sung without particular regard to time, and require only simple chords in arpeggio, frequently played by the violoncello; when accompanied more fully, they seldom require other instruments than the strings.

ACCOMPANIMENT OF SOLOS. In solos the accompaniment may not interfere with the melody so as to take attention away from it, but it may be made to express the sentiment of the words or the air; and symphonies may be added during the rests of the voice as well as at the beginning and end of a piece. Solo accompaniments may be played by one or more instruments, or by an orchestra. Solos in anthems are accompanied by the organ; in oratorios, by the orchestra.

ACCOMPANIMENTS. H. Berlioz says, "The history of the race is the history of the individual." The time was, when the human race was only a child. Grown-up men and women spake and thought like children; and pre-historic men, dwelling in caves or in Swiss lake-cities, were not much more than adult infants. The child is first an animal, then a little savage. He grows up through the barbarous, half-civilized, and civilized stages of the school-books. His first expression is a mere animal cry. As he grows in months he expresses his crude emotions in crowings and vague attempts at songs. Still later, he acquires some sense of rhythm and time, and catches a hint of pitch; and his savage cries resolve into simple melodies or songs. Then he seeks to mark the time with barbaric beatings and poundings with sticks or stones upon some resounding body; and a drum becomes a treasure of unending delight.

The types of the lake dwellers and the stone-age men are extinct. We have only the savage type left, that has advanced to the tom-tom and conch-shell, — the drum period of the boy. From that up, we have still living on the earth all the various stages of musical growth, from the tom-tom of the South-Sea Islanders to the grand orchestras of our cities.

In making this glance at the history of music, both in the race and in the child, we notice how early the desire for accompani-

ment springs up. The savage and the boy both want a drum to mark the measures of their music. It is not enough to sing. They want some kind of measured accent, even if it is only a dull thud, or the sharp rattle of bits of wood struck together. After a time the mere barbaric instruments of percussion fail to satisfy, and something with pitch is wanted; and the flute, violin, and trumpet types of instruments are invented. Then harmony is demanded; and from the Pan-pipes and the harp spring up the organ and pianoforte. Lastly, all instruments are united, and the desire for accompaniment is fully satisfied in the orchestra.

The child, on first attempting to draw, makes only outlines of animals and things. The Japanese and Chinese, still children in pictorial art, paint with exquisite skill and fidelity, but seem to have very little idea of perspective. It was the same in Egypt at the time the Pyramids were built. The hieroglyphics are in the flat, — only outlines.

In music the accompaniment is the background, — the perspective. The song alone is only outline drawing. It does not satisfy. Some perspective, background, and harmonic shading is demanded, or the tone-picture appears flat and only in unsatisfactory outline. The human voice is the best instrument we have. We wish to hear it more than any other; so it is easy to see that all other instruments stand in relation to it as the background, or accompaniment. The voice may be accompanied by any instrument; but no instrument or combination of instruments is ever accompanied by voices. The voice gives the form — the drawing — of the tone-picture: the orchestra, organ, or piano give coloring, background, perspective, and shading. The voice may, indeed, give color and shading, just as figures in a picture have both form, tints, lights, and shadows; but there can be no distance, no atmospheric effects, no enchantment of horizon, without scenery and a background. The background has also form, and the accompaniment has melody or form as well as the figures or solo voice. At the same time it must ever be kept in view, that the accompaniment is only the background, and that the background is only secondary. The figures make the central and primary points of the picture: the solo is the chief and first point of interest in the tone-picture.

Holding to this evident and natural analogy between pictures and music, or, better, between a solo and accompaniment and a figure-piece, it is easy to draw a lesson for the musician from the art of the painter. In the first place, the background is secondary to the figures; and the accompaniment is kept in a secondary place by being softer, and by being of a simple and unobtrusive character. Its character is settled by the composer; its manner of rendering is in the hands of the accompanist. He must have sufficient humility to take a second place in the performance. Here the vanity of the player of pianoforte accompaniments often destroys the whole performance through a silly fear that somehow people would not notice the playing. Nothing could be more shallow. People of sense and culture recognize the artist in the good accompanist:

and, the more retiring and self-sacrificing he is, the greater the estimation in which he will be held. This position of retirement can hardly be carried to excess within the limits of the actual music. In fact, a mere touching of almost unheard chords is a favorite method of writing accompaniments with some composers.

Finally, the accompaniment must be in keeping with the subject or story both in coloring, manner, and form. These things concern the composer. At least, he designs the coloring and form of the accompaniment, and points out the manner of its rendering. By the coloring is meant the selection of the instrument or instruments on which it is given. In orchestral accompaniment the instruments are fixed and marked by the composer, and the band have no choice in the matter. Their only duty is to see that the balance of the instruments is preserved, and that no one exceeds its plainly-marked duty. In accompaniment on the organ the coloring is obtained by the registration. In the best works, the grouping of the stops is more or less plainly marked. Where only general directions, or no directions at all, are given, the organist has some choice, and here he has a hand in the coloring. He must study the music, and arrange his stops to give the appropriate coloring to the accompaniment. Many pages could be written on this subject, did space permit. We can only now say, that in this matter of coloring the organist has more freedom than any other accompanist; and, consequently, he should study the matter more carefully. In piano accompaniment there can be no choice in color, as the instrument is the poorest accompaniment of all, being colorless, and like a photograph in its cold light and shade.

ACCOMPLISHED SINGER. An essay or tract, published at Boston, Mass., in 1721, and written by Dr. Cotton Mather. It is entitled "The Accomplished Singer. Instructions how the piety of singing with a true devotion may be obtained and expressed: the **GLORIOUS** God after an uncommon manner glorified in it, and his people edified. Intended for the assistance of all that sing psalms with grace in their hearts; but more particularly to accompany the laudable endeavors of those who are learning to sing by rule, and seeking to preserve a **REGULAR SINGING** in the assemblies of the faithful."

In order to know *why* such an essay as the one by Mather was necessary at the time in which it was written, the reader must understand, that, soon after the settlement of the colonies, so many and so great troubles came upon the Puritans, that, however desirous they may have been of improving their music, they could not do so; and the cultivation of music was neglected, until the congregations throughout New England were rarely able to sing more than three or four tunes. The knowledge and use of the notes, too, had so long been neglected, that the few melodies sung became corrupted, until no two individuals sang them alike. In fact, it was with great difficulty that this part of worship was performed; and, when attempted, it was rendered with a medley of confused and disorderly sounds or noises, rather than in a

decorous song. This decline in music had been so gradual and imperceptible, that the confusion and discord had become grateful to the ears of the Puritans; and, consequently, a melody sung in time and tune was to them really offensive. At this stage of affairs, some of the best men of the day, seeing the need of reform, resolved to set about the work. The most able divines commenced preaching upon the subject; and several excellent and spirited discourses were published, and scattered among the people. No sooner had the cry of *reform* been heard, than, singular as it may now seem, it was opposed by a large party in almost every church, and opposed with a virulence of feeling, and tenacity of attachment to their old customs, that seemed to defy their best efforts. Objections were urged even by serious, and on other subjects well-informed persons, which, however trifling and pitiful they may seem to us, were to them important and solemn. The idea of learning to sing by note, or to sing a melody correctly, had something in it little less fearful in itself, or in its effects, than witchcraft and its scenes through which the Puritans had just passed.

They said, "It was a *new way* of singing, — an unknown tongue, — not so melodious as the usual way. There were so many *new tunes* one could never learn them. The new way of singing made disturbance in churches, grieved good men, exasperated them, and caused them to behave disorderly. It was popish, and would, if allowed, introduce instruments. The names of the notes were blasphemous. It was needless, and the old way was good enough. It was a contrivance to get money. It would take too much time to learn the new way of singing; it would make the young disorderly, and keep them from the proper influence of the family."

Such were the objections raised by the good old Puritans to the introduction of music among them in 1720, *one hundred years* after the landing of the Pilgrims upon these shores. To prove the unreasonableness of such objections, the *musical reformers* of America labored long and faithfully and successfully.

"The Accomplished Singer" says, "The skill of *regular singing* is among the gifts of God unto the children of men, and by no means unthankfully to be neglected or despised. For the congregations wherein it is wanting, to recover a *regular singing* would be really a *reformation*, and a recovery out of apostasy, and what we may judge that Heaven would be pleased withal. We ought certainly to serve our God with the *best*; and *regular singing* must needs be better than the confused noise of a *wilderness*. God is not for confusion in the churches of his saints; but requires, '*Let all things be done decently.*' It is a great mistake for some people, that the tunes regulated with the notes used in the regular singing of our churches are the same that are used in the churches of Rome. And if they were? Our psalms, too, are used there. But the tunes in the *French Psalmody*, and from them in the Dutch also, were set by a famous *martyr* of JESUS CHRIST; and when Sternhold and Hopkins illuminated England with their ver-

sion of the Psalms, the tunes have been set by such as good Protestants may be willing to hold communion withal. The tunes commonly used in our churches are *few*; it were well if they were more. But they are also grave, and such as well become the oracles of God. It is to be desired that we may see in the rising generation, a fresh and strong disposition to *learn* the proper *tunes*, that God may be glorified, and religion beautified, with a regular singing among us for all time to come."

Rev. Mr. Walter said, "Their singing sounded like five hundred different tunes roared out at the same time." The singing had become so hideous and disorderly, that some of the able men of the day undertook to reform it; and for this purpose Dr. Mather published his essay. It designed to show that "the people *ought to sing*, and how, and what they ought to sing; that singing is natural worship, and a positive institution of God." He recommends young people to learn to *sing by rule*, and says, "Our blessed Saviour himself, no doubt, at the Passover, as often as it recurred, sung at least a part of what they called *The Great Hallel*, which was the hundred and thirteenth Psalm, with the five that followed it."

ADAM, ADOLPH CHARLES [mentioned in vol. i. p. 22], died at Paris, May 2, 1856, aged fifty-three. His death was from disease of the heart. On Friday he was in perfect health and his usual spirits; was at the Grand Opera with his friends that night, and later accompanied them to the Theatre Lyrique, where one of his own operas, "*Si J'étais Roi*," a favorite with the public, was in rehearsal for a series of representations. On reaching home, he wrote a letter and some notes of music, which he left upon his piano-forte. Not appearing, at the usual hour the next morning, his wife went to his room at eight o'clock to call him, and, receiving no answer, approached his bed, and found him dead. He had previously suffered from heart-disease; and the family physician thought that the extinction of vitality must have been instantaneous, — without warning, without pain; such a death as the illustrious composer had desired; without precedent decay, in the midst of his strength and honors. At his funeral, when the solemn services of the church were ended, a procession composed of artists of all kinds, and men of letters, with a numerous body of friends, numbering in all some three thousand persons, followed his remains to their resting-place. He left at his death, for publication, his *memoirs*, containing curious details of his experience behind the scenes of the stage and in politics. He was above all, and before all, a Frenchman; worked assiduously, and obtained both fame and money. The avocations of M. Adam were many. He composed operas and ballets without number; he wrote *feuilletons* in the daily papers; provided the church with music; was a professor in the Conservatoire, a member of the institute, and at one time manager of the theatre. He was as amiable as he was clever, and was much loved by friends and acquaintances. His works were sparkling, pretty, and popular; and he will rank, among French

composers of his day, next to Auher, although below him in inventive fancy.

ADAMS, Dr. F. W., was born in 1787; was a resident of Montpelier, Vt., where he died in 1859, at the age of seventy-two years. He early turned his attention to violin making and practice; and at the time of his death he had completed one hundred and forty instruments; they were valued at very high prices, and he would not often sell one even at the prices he had named. He called his violins "Ancient Cremonas Revived," and made most of them from maple and pine, taking his wood from old trees partially decayed, and contending that the Cremonas were mostly so excellent because the wood of which they were made had become very old before it was used, and *not* because the violins themselves had been made so many years, or were better made. His opinion was, that a new violin, if it could be made from timber of the same age, and in the same condition of the timber of the old Cremonas, would sound as well as the old ones. He succeeded in his imitations of the ancient Cremonas beyond expectation; and some of his instruments were very powerful and sweet-toned, especially those from the oldest woods. He became famous for his charities, was a good reader of music, a respectable singer, and a superior violinist. He explored Northern Vermont and Canada for ancient woods of the forests.

ADAMS, Mrs. JEAN, was born in the town of Crawfordsdyke, in the parish of Greenoak, and shire of Renfrew, in the west of Scotland. Her father was a common shipmaster, and her breeding was as is ordinary for girls of her station and circumstances; but, after the death of her father, she went to reside with a minister in the neighborhood, where she had access to peruse such of his books as her fancy led her to read. She afterwards taught a day-school, became known as a song-writer, and died in the town hospital at Glasgow, April 3, 1765. Evidence exists that she wrote the celebrated song, "There is nae Luck about the House," and it appears in a volume of her poems, published by subscription in 1734; but the authorship has been by some ascribed to William Julius Mickle, though the measure and rhythm of Jean Adams's other poems are so like that of this song as forcibly to recall it to recollection, while nothing written by Mickle has the remotest resemblance to it.

A parody on this song appeared in England, in 1782, on the conclusion of peace with America, and was printed in the common stall-form, which began thus:—

"But are you sure the news is true?
And is it really fact?
Have Conway, Burke, and Fox at last
Laid North upon his back?

Chorus.—There is nae luck about the court,
There is nae luck at it;
There can be nae while we're at war
Wi' North America."

Mr. Mickle did not include "There is nae luck" in his collection of poems, nor did he claim it; but Rev. Mr. Sim, who became the editor of Mickle's works, claims it for him, and says, "Mrs. Mickle, though laboring un-

der paralysis, recollects that it was given to her as her husband's composition." Mrs. Fullerton, on the contrary, who was a pupil of Jean Adams, says, "I frequently heard her repeat it, and affirm it to be her own composition;" and a daughter of Mrs. Fullerton, as late as Jan. 24, 1810, says, "It was written by Jean Adams on a couple in the town where her father lived. I have always heard it spoken of as being her composition; and my aunt often sang it as such."

AIBLINGER, JOSEPH KASPER, a German musician, born in 1775, acquired a competent knowledge of his profession without the aid of any master. He resided some time in Italy, where he studied the Italian masters; but returned to Germany confirmed in his prepossession for the productions of German musicians, and soon became favorably known among his countrymen. In 1823 he became conductor of the Royal Orchestra at Munich, and died there, May, 1867, aged ninety-two years. His own compositions are remarkable for tender simplicity and for careful treatment of the male voices.

AINSWORTH, HENRY, was a native of England, and a Puritan, who, as early as 1590, became a distinguished leader among the Brownists. He retired to Holland in 1593, the period of the general banishment of the sect with which he had become identified. Young says, "He was a very learned man, and a close student, which much impaired his health. We have heard some, eminent in the knowledge of the tongues, of the University of Leyden, say that they thought he had not his better for the Hebrew tongue in any University, nor scarce in Europe. He was a man very modest, amiable, and social in his ordinary course and carriage, of an innocent and unblamable life and conversation, of a meek spirit and calm temper, void of passion, and not easily provoked. Yet he would be something smart in his style to his opposers, in his public writings; at which we, that have seen his constant carriage, both in public disputes and the managing of all church affairs, and such like occurrences, have sometimes marvelled. He had an excellent gift of teaching and opening the Scriptures; and things did flow from him with that facility, plainness, and sweetness, as did much affect his hearers. He was powerful and profound in doctrine, although his voice was not strong; and had this excellency above many, that he was most ready and pregnant in the Scriptures, as if the book of God had been written in his heart; being as ready in his quotations, without tossing or turning his book, as if they had laid open before his eyes, and seldom missing a word in citing of any place, teaching not only the word and doctrine of God, but in the words of God, and for the most part in a continued phrase and words of Scripture. In a word, the times and place in which he lived were not worthy of such a man."

Ainsworth's knowledge of the Hebrew, and his annotations on the Holy Scriptures, gained for him much reputation. After completing a very learned commentary on the five books of Moses, in which he shows himself a complete master of the Oriental languages, and of the Jewish antiquities, he was called the Rabbl of

his age. He lived at Amsterdam, where he was at one time a porter to a bookseller; and, afterwards, for some years, he was teacher of the church at Amsterdam. While thus living, he is said to have restored to a Jew a valuable diamond which had been lost, asking as a compensation, that the Jew would procure for him a conference with some rabbies, who might enlighten him concerning the prophecies of the Old Testament relating to the Messiah. This the Israelite solemnly promised to bring about; but after repeated efforts, failing of success, it was believed at the time, that he poisoned Ainsworth through shame and vexation. It is certain that Ainsworth, from violence or some other cause, died very suddenly in 1622. [See Article "Psalmody," vol. i. pp. 757, 758.]

AINSWORTH'S PSALMS were brought to Plymouth, Mass., by the Pilgrims. Thomas Prince, the historian, says, "I have seen an edition of Ainsworth, published in 1618, in quarto form, which was used here." Rev. Thomas Symmes, who was settled at Bradford, Mass., says, "The church at Plymouth made use of Ainsworth until the year 1692; and although the New England version was completed by Pres. Dunster, about the middle of 1640, the Plymouth church did not use it till two and fifty years after, but stuck to Ainsworth; and, until about 1682, their excellent custom was to sing *without reading the lines.*"

Ainsworth's Version of the Psalms was printed with the melodies in which they were to be sung, placed over the psalms. The music was in the lozenge or diamond shaped notes, without bars, and was in the German choral style. The following is a specimen of the words and music of this famous versification:—

CANTERBURY TUNE.

O Bless-ed man, that doth not in

the wick-ed coun-sells walk;

nor stand in sin-ner's way; nor sit

in seat of scorn-ful folk.

In the preface to his "Book of Psalms," Ainsworth says, "I have enterprised (Christian reader) this work, with regard of God's honour, and comfort of his people; that his word might dwell in us richly, in all wisdom; and that we might teach and admonish ourselves in psalmes and hymnes, and songs spiritual. This I have laboured to effect by setting

over into our tongue the Psalmes in metre, as agreeable to the originall Hebrew, as are other usuall translations. For the better discerning hereof, I turned them into prose, and set these versions one by another, to be the more easily compared. And, because the Psalmes have hard words and phrases, I have added notes to explain them with brevity; which was to me as laborious as if I had made a larger commentary."

PROSE OF PSALM.

O Blessed is the man, that doth not walk, in the counsell of the wicked, nor stand in the way of sinners, nor sit in the seat of the scornfull.

SAME PSALM IN METRE.

O Blessed man, that doth not in
The wicked counsell walk;
Nor stand in sinner's way; nor sit
In seat of scornful folk.

As a rule, the Pilgrims of Massachusetts sang the Psalm of David as versified by Henry Ainsworth; but some individuals had copies of Sternhold and Hopkins; and they sang sometimes, perhaps, different psalms to the tunes arranged by that ancient bachelor of music, Thomas Ravenscroft. It is probable that they occasionally, also, sang the hymns and songs of simple old George Withler, to the plain and plaintive two-part melodies of Orlando Gibbons. And, after some years, they made a psalm-book for themselves, and published it among the cherished first fruits of a New England free press. "Old Hundred" was undoubtedly one of the tunes used by the earliest Church of England missionaries in Virginia; and it was also one of the songs of the Puritan Fathers of New England, and was in some of the books of psalmody which they brought from Holland. It was probably one of the tunes with which the wild forests of the *New World* were early made vocal. Its use was not confined to the early European settlers; for its lofty strains were taught by them to the native inhabitants of the forest whom they found here. It was sung by the new-made converts of the missionaries, and by John Eliot, who taught it in the various missionary settlements, among the Indians, whose descendants sing it even to this day. This one tune has been sung, perhaps, more than any other ever written; and there have not been published in this country many singing-books of note, since the first settlement, which have not contained "Old Hundred."

ALBANI, EMMA, an American artist who has shared the laurels and honors of the Royal Italian Opera with Adelina Patti, was born at Plattsburg, N.Y., in 1850. Her father, Joseph La Jenness, was a French music-teacher of Montreal, Canada, where he married the daughter of a wealthy Scotchman, and afterwards settled in Plattsburg. Emma La Jenness was the oldest of a family of six children, and was trained in early childhood, in the study of music, by her father, and displayed remarkable talents for the divine art from the most tender years. The father, not meeting with success in Plattsburg as a teacher, removed to Albany, where Emma was engaged to sing, and where her progress as a vocalist and pianist soon attracted atten-

tion; and she was sent to Paris to study under the famous Duprez. She next studied with Lamperti at Milan, who welcomed her with the remark, "There's a fortune in that little throat." She made her first appearance in opera at Messina, under the assumed name of Emma Albani, with success; she then had engagements at Malta, Florence, and at the principal opera-houses of Italy, and later in London, Eng., and at St. Petersburg; and has since ranked with the first artists in Europe. Her voice is a rich soprano, commanding a compass extending to E-flat in alt. She is clever as an actress; is a brunette, with black hair and eyes, and a fair complexion; every feature gives token of a sensitive nervous organization; slightly below the medium size, and slender. She is womanly in her ways, unassuming in manners, remarkably fond of her friends, and a devout Catholic. She returned to America, October, 1874, after brilliant success in St. Petersburg, Moscow, Italy, France, and England. Her voice has a peculiarly genial and sympathetic expression, and an expansiveness that permits the hearer in the remotest part of the theatre to enjoy its delicacy and perfection as completely as the leader of the orchestra. It is flexible, firm, clear, and sweet, and has a freshness that grants sips of delight from every sound. Her tones are full, and if speaking of fruit it might be said that they were ripe and luscious. Her style of singing is of a school of which she herself is the sole representative, although it resembles somewhat that of Adeline Patti. Every note expresses feeling. The composer's score is always her guide; and to that she clings with a tenacity seldom found in these days, when for effect pyrotechnical departures are indulged in and too often applauded. Her singing is absolutely free from trick or exaggeration of any description. Albani's acting constitutes a power and a charm in accord with her singing. She is always thoroughly up in her part, conscientious and earnest, thinking more of the character she is impersonating than of herself. She masters and portrays every phase of passion, feeling, and sentiment; and is admirable whether as the simple Amina, the furious Lucia, the piquant Zerlina, or the mad Ophelia. The utter absence of show or pretentiousness is of itself an indefinable attraction. She idealizes the composer's characters, voice and action being in unison. Her dramatic talent of itself is sufficient to stamp her as a genius.

ALBONI, MARIETTA [mentioned vol. i. p. 3] achieved her musical reputation at a very early age. Her father was a captain in the Papal army; and her husband was Count Pepoli, a Venetian, and the son of the eminent poet of that name. The parents of this gifted artist did all in their power to dissuade her from embracing the musical profession; her musical studies were discontinued, and every thing was done to subdue her vocal tendencies. But her talents still continued to develop themselves, and her voice to gain in strength and richness, proving that she possessed qualifications as a vocalist of the highest order; this caused her father at last to resolve "that such wonderful musical powers as she possessed should not on his account be suffered

to lie dormant; but that, on the contrary, they should be developed to the greatest possible extent." Alboni's reputation was made at Milan, after which she travelled through Europe; and, after her starring tour through France, she in one year secured forty thousand dollars; and with this she purchased a beautiful chateau in the Champs Elysées, in Paris. She came to America in 1852, and remained for about one year, visiting several of the large cities.

ALBRECHT, the second clarinetist of the Germania Musical Society, on their disbanding in 1854, presented his library of music and music books to the Icarian Community at Nauvoo, Ill. [This statement was made by "The Newport (R. I.) Daily News." Whether Mr. Albrecht presented his library, as stated, is a question; for in 1857, at which time he was a resident of Philadelphia, it was in his possession, and he advertised it for sale there. It has also been said that the library of Mr. Mason is much larger than any other musical library in this country.] The library at that time consisted of:—

1. History of Music: 58 works in 68 volumes.
2. Biographies and Dictionaries: 91 works, 109 vols.
3. Acoustics, or Science of Sound: 6 works, 6 vols.
4. Construction of Instruments: 9 works, 10 vols.
5. Elements of Theoretical and Practical Music: 58 works, 58 vols.
6. Theory of Musical Composition: 35 works, 40 vols.
7. Instruction Books for Song and Instrument: 53 works, 54 vols.
8. Essays on Musical Expression: 28 works, 31 vols.
6. Musical Novels, Almanacs, Descriptions of Musical Festivals, Musical Travels, &c.: 86 works, 122 vols.
10. Historical and Critical Musical Journals: 25 works, 138 vols.
11. Polemical and Satirical Writings: 14 works, 14 vols.
12. Accounts and Reports of Musical Societies: 15 works, 15 vols.

Making in all 478 works, in 665 volumes.

It is a well-known fact, that libraries of this kind are very rare. In the public libraries of this country, among from 80,000 to 100,000 volumes, scarcely fifty books can be found which range under the head of musical literature. Besides the above-named collection of Mr. Albrecht, which is considered the most complete in America, we only know of but three more in this country: the first is owned by Dr. La Roche of Philadelphia, and consists of 400 volumes; the second, belonging to Mr. Lowell Mason of New York (and including the library of the late Prof. Rink), numbers from 300 to 400 volumes; the third is the musical library of the Harvard Musical Association of Cambridge and Boston, which numbers from 300 to 400 volumes. Many lovers of music claim to have collections of musical books; but by a close examination it soon appears that they consist mainly of choral books, hymns, psalms, and other music, which of course are out of place in a collection of musical writings.

ALEXANDER, upon his return from the conquest of India, became enamoured of, and devoted himself entirely to, a beautiful young female, and was ready to give up all his plans of conquest for her. His officers became impatient, and began to murmur; while his tutor, Aristotle, upbraided him, and endeavored to show him the impropriety of his conduct. Alexander for a time forbore to visit her; and, when he did, he was forced by her tears, caresses, and reproaches to excuse himself by telling her why he had absented himself from her. She resolved to be revenged upon Aristotle, and requested Alexander to be at his window the next morning at daybreak, when she went into the palace garden, and sung under the window of Aristotle, who was so charmed that he asked her to marry him; to which proposal she consented upon condition that he would first bring from the stable a saddle, and allow her to put it upon his back, while he was upon his hands and knees, and to mount upon it and be carried round the garden. To this he consented readily; and while she was thus mounted, and taking an airing upon her wise horse, she laughingly sung the following song:—

Alexander the Great, who had been a spectator of this philosophic feat, now came to them, and inquired if the tutor had lost his senses; when Aristotle with shame replied, "I reproached you with the intemperance of youth, from which my old age has not been able to protect me."

ALLAN, CARADORI, was born in Milan, 1800. Her mother and father both dying,

she was obliged to employ professionally her musical talent, cultivated previously as an accomplishment; she adopted the stage, Jan. 12, 1822, and gradually rose, as a vocalist, to eminence and distinction. In 1825 she accepted an engagement in London, appearing at the King's Theatre, as the page in Mozart's "Figaro," with success, assuming the name of Mlle. Caradori; and for many years was the leading attraction in musical circles throughout England and the Continent. Her father was Baron de Munck, an officer in the French service; she married an English gentleman, Mr. Allan, secretary of the King's Theatre, 1823. Her European fame being established, she determined to visit America; and arriving in New York, September, 1837, was at once taken into favor by the *élite*. Here she at once made arrangements with Mr. Simpson, manager of the Park Theatre, and made her first appearance, Oct. 30, 1837, as Rosina, in the opera "*Il Barbiere di Siviglia*;" the house was crowded, and she rose at once into public favor as a finished vocalist and fine actress. Caradori remained in New York and other large cities, singing in a variety of operas and in sacred and secular concerts with decided success; appearing to equal advantage in the concert-room or on the stage. In 1840 Madame Allan made a concert tour through the United States, warbling sweet music to enchanted listeners, and then bade farewell to her friends in this country. Returning to England, she was received with enthusiasm; but having obtained a competency, and won hosts of friends both in the Old and New World, she retired gracefully from the stage, and lived in elegance and ease until her death in 1865, in the sixty-fifth year of her age. She was a lovely woman, distinguished artist, and celebrated *prima donna*, taking rank with the first of Italian female vocalists. On her tombstone are written two lines of Handel's incomparable song,—

"Angels, ever bright and fair,
Take, oh, take me to your care."

AMBROSE, SAINT, was born at Trevis, 340, and died 397. He greatly improved the singing in the Western churches, and wrote the "*Te Deum Laudamus*," which has never been surpassed in excellence by any human composition. It was written on the occasion of the baptism of St. Augustine. He was made Bishop of Milan, A.D., 374, and established his chant 386; it was in his time first ordered that the hymns and psalms should be sung after the manner of the Eastern nations. The first *regular choir* and form of church service was established at Antioch in the time of Constantine; and at Antioch the *antiphonal* method of singing the psalms, that is, the singing of the verses alternately, by separate choirs, was first introduced; and this practice, being brought by St. Ambrose to Milan, became generally adopted throughout Christendom, under the name of the Ambrosian Chant. Some of the chants known at this time, we have reason to believe, came down direct from the primitive Christians, and were used long before the advent of the Saviour. An order of monks was established

at Antioch in the earliest ages of Christianity, who preserved the old psalmody and the music of the Hebrews. Ambrose adopted the Greek nomenclature; and so great was the sensibility of the ancient Greeks, and so soft and refined their language, that they seem to have been in both respects to the rest of the world what the modern Italians are at present. And of these last the language itself is music; and their ears are so polished and accustomed to sweet sounds that they are rendered fastidious judges of melody, both by habit and education.

AMBROSE, WILLIAM AUGUSTUS, chiefly known by his writings published in Schumann's Musical Journal, was born in Mantz, Bohemia, November, 1816. In early childhood he could sing, or perform upon the piano-forte, any melody he had once heard; he also had the faculty of varying any theme given him; he has written numerous musical works, and some of his compositions have had a large circulation.

AMODIO, ALESSANDRO, born at Naples, 1831, was early placed under the training of the most celebrated *maestri* of the city, learned the flute, and, at the age of eighteen, found himself in possession of a superbly rich *barytone* voice, which he at once cultivated and developed. After leaving the schools, he became so enamoured of the stage, that, failing to obtain the consent of his family to a public career, he ran away with a singing troupe, and engaged to sing in opera at Florence. Lively, amiable, and well educated, he sang from pure love of the art, and became extensively known in his own country, at Naples, Florence, Milan, and other places. He came to this country with the La Grange opera company, 1855; travelled through the States, singing in opera and at concerts with success; visited the Tacon Theatre at Havana; went to Venezuela, sang in Caracas, and died of fever at sea, near Havana, on his way to his adopted home, New York, June, 1861.

AMODIO, FREDRICO, brother of Alessandro, born at Naples, 1833, became extensively known in his own country as a singer, and going to South America, where he added to his reputation, was with Alessandro there, and when he died. Being gifted with a rich, musical *barytone* voice, on arriving in this country, 1861, he took the place of his brother in New York. The love of these brothers was remarkable. The family consisted of six sons and two daughters; the father was for many years editor of the official journal of Naples.

ANCIENT HARMONY. Longinus speaks much in favor of ancient harmony, and says the principal subject in music becomes more agreeable to the ear when it is broken into divisions; but Kepler, whose name is so well known to the musical world, would never allow that the ancients had any idea of real harmony; and he compares their accompaniments (admitting it possible that they have any), to the droning of a bagpipe. Father Marceunus says, they might, indeed, vary the sounds of the lyre, or strike several strings together as at present; but, as all we have been able to collect shows them to have been ignorant of counterpoint, it is natural to suppose that there was little variety in their performances.

A learned Venetian, who wrote on music in 1580, supposes it impossible for the ancients to have made much correct use of instruments of many strings without playing in consonance. The Irish harp had a greater number of strings than the lyre, yet for many ages that delightful instrument was only used for playing a simple melody, or a single part; nor had its primeval players any idea of playing in parts or of counterpoint. Though the most ancient histories of music are now lost, yet, ever since the revival of literature, we find the Italians and Germans at a very early period compiling general, critical, and philological histories of music. Old and scarce books also contain much information on this head. What ancient music really was, is not very easy to be determined now; but that it constituted the delight of human kind is evident. All the ancient philosophers and historians are diffuse in its praise. Yet the subject of ancient music cannot be easily treated of, because it is enveloped in all those clouds of obscurity that hang over the pristine ages.

ANCIENT INSTRUMENTS. When the cities of Herculaneum and Pompeii were discovered, a *sackbut* was dug up, after having been buried nearly two thousand years by the dreadful catastrophe which destroyed those great places. This ancient instrument, which is frequently mentioned in the sacred writings, might have been lost to us forever, had it not been preserved in the ashes of Mount Vesuvius, to give force and variety and energy to the music of modern times. The lower part of this sackbut was made of bronze, and the upper, with the mouth-piece, of solid gold. Soon after being found, the King of Naples made a present of it to George IV.; and, from this antique, the instruments now called by the Italians *Tromboni* have been fashioned. In quality of tone the trombone has not been equalled by any of modern make; and perhaps it has done more towards augmenting the sublime effects of the orchestra than any one of the known instruments. For some years the sax-horn was used in its place, but the trombone is again coming into favor. [See vol. i. p. 840.]

ANCIENT TIME-BEATING. The ancients were accustomed to beat time to their music in several different ways. The most common way was by the foot, which they lifted up and beat down alternately, according to what was afterwards called common or triple time, &c. This was generally performed by music-masters, who were placed in the middle of the orchestra, among the musicians, in a conspicuous situation, in order that they might be seen by every one. Their feet, on these occasions, were generally furnished with wooden or iron sandals, in order that they might mark the time in a more distinct manner. They also beat the time on their hands, the right finger on the palm of the left hand; and they often used oyster shells and bones in the same manner as we use castanets. To become a good time-beater required long and constant practice. The position was a responsible one, and large compensation was paid for such service.

ANCIENT TRAGEDY. In the ancient tragedy the declamation of the actor was accompanied by certain *musical instruments*

which regulated the tones of the voice; and the stage was occupied by a *chorus* consisting of a number of persons, who, though not actually engaged in the action of the piece, were interested in it, and mingled their reflections or exclamations with the dialogue of the drama. In the modern opera the characters speak in recitative, and there is a chorus; and hence it is inferred that the modern opera spring from the ancient tragedy. It may be true that the idea of recitative was suggested to its inventors by what they had read of the musical declamation of the ancient tragedies; but, before the invention of opera, the knowledge of the mode of performing ancient tragedy had been lost for ages.

ANSCHUTZ, CARL, born in Germany, came to this country in 1857, and soon became identified with the cause of musical progress in the United States, being considered one of the most accomplished musicians among us. He was more partial to the old than the new school, because of his long sojourn in England; was a composer of considerable merit, and an excellent conductor, especially of opera. He died at his residence in Boston, Jan. 23, 1870, of cancer in the throat, which compelled him for four months to live on fluids entirely; for eight days before death, he had only been able to swallow a little water. The day before he died, he bit his wife's finger, to indicate his hunger; and, on being asked what he wanted, replied in an almost inaudible whisper, "I'm hungry." He belonged to a type of German musicians which is fast dying out, and of which he was, perhaps, in this country, the only representative; his name will live in the history of art, and his influence will prove beneficial. In 1861 he was connected with the Academy of Music, and the National Musical Institute, New York.

ANTIPHONAL SINGING, a species of music common among the early Christians. In this music, a certain phrase of melody, after having been sung by one portion of the choristers, is echoed by the others, at certain distances, and at a higher or lower pitch; and the successive accumulation of these different masses of sound into one grand and harmonious whole, it was supposed, produced the greatest effects of which music was capable. Pliny says the ancients "were accustomed to sing songs to Christ, as God, one to another, or with alternate voices. As any one is able, he is enlisted to sing to God, either from the sacred Scriptures or according to his own peculiar talent." The Psalms of David were performed by *alternate* voices or choirs, some of them, the one responding to the other; this was practised in the time of St. Ignatius and in the time of St. Ambrose, both of whom introduced antiphonal singing among their people; it has been supposed to have been practised by the Israelites. Out of this manner of singing arose the *fugue*. In 1853 the choral service at the Church of the Advent, Boston, Mass., was sung antiphonally, the choir consisting of ten boys and five adults, under the direction of the organist, H. S. Cutler. The matter of employing boys instead of females, as trebles, had never before met with favor in the United States; but in 1855 four parishes in this country employed boys; namely, St. Mark's in

Philadelphia, Trinity and Dr. Muhlenberg's in New York, and the Advent in Boston.

APPY, HENRI, the eldest son of John Appy, solo violinist to King William I. of Holland, was born at the Hague, in 1828. While quite young he exhibited great musical talent, and gave concerts in Amsterdam and other cities, which, proving successful, were extended through Belgium, Germany, and France. In 1848 he was appointed solo violinist to William II.; in 1850 he gave concerts with Mlle. Bertha Johansen, and came to America in 1851, and later made a tour of the country with Mme. Biscaccianti; he was also engaged for the farewell concerts of Jenny Lind. He is now established in Rochester, N. Y., as a teacher and conductor.

ARDITI, LUIGI, born at Crescentino, Piedmont, 1822; learned violin playing and composition of Caldera; entered the Milan Conservatory, and in 1841 produced the opera "*I Briganti*"; was orchestral conductor at Vercelli, 1842; travelled extensively with concert companies, and came to this country with Marty, 1846; conducted opera and went through the United States with Alboni, Grisi, Mario, and others, as conductor of concerts; returning to his native country in 1856, he became conductor at the Naum Theatre, Constantinople. Many of his compositions have been published.

ART OF PLAYING ON INSTRUMENTS. Instrumental performance is naturally divided into the individual and collective. It is composed of the art of playing on individual instruments, and of combining the performance of a certain number of persons, so as to produce a united effect in time and sentiment. Instruments, as is commonly known, are divided into five principal kinds: the *first* is composed of instruments played with the bow; the *second*, of instruments played by snapping the strings; the *third*, of instruments with key-boards; the *fourth*, of wind instruments; and the *fifth*, of instruments of percussion.

Each of these kinds of instruments requires peculiar qualities, to be well played; thus instruments played with the bow demand especially a delicate ear, to produce precision of tone, which is formed by pressing the fingers upon the strings, and much suppleness of arm, for the management of the bow. Good execution, upon instruments played by snapping the strings, cannot be attained without great strength of finger, to resist the impression of the strings, and to obtain a fine tone. Instruments with key-boards, in which the intonations are already made, require length, suppleness, activity, and strength of fingers. In order to acquire skill upon wind instruments, the same accuracy of ear is requisite as for stringed instruments; and, besides, the faculty of moving the lips with facility, of modifying their pressure, and of regulating the force of the breath,—qualities which collectively constitute what is called the *cambouchure*. As to instruments of percussion, it seems, at first view, that any robust man ought to possess the necessary qualities for playing on them; yet great differences are perceptible between different drummers, though they may have had the same education. To play the drum the performer must possess a certain suppleness of wrist, and a certain power of touch, which

it would be impossible to analyze, but which are not the less real.

In the enumeration of qualities necessary to play well upon instruments, I have not mentioned sensibility or imagination, which are elements of all talent, because we were considering none but physical qualities. In vain would a pianist or oboeist be endowed with the most exquisite sensibility, if the fingers of the one were stiff or feeble, and the lips of the other thin and dry; they could no more become great instrumentists, than could the best made man become a singer if he had no voice.

The playing of bowed instruments, as the violin, alto, violoncello, and contra-basso, is composed of two distinct parts; the *fingering*, and the *management of the bow*. The *fingering* (or *touch*) is the art of forming the intonations by the pressure of the fingers upon the strings against the upper part of the neck, or finger-board. This pressure, which shortens the vibrating length of the string more or less, cannot produce pure sounds, unless it is very energetic; for a string does not vibrate in a satisfactory manner except when it is very firmly fixed at its points of attachment. It is, consequently, necessary that a violinist or a violoncellist should press the fingers with much force upon the strings, notwithstanding the painful sensation which this exercise produces in the commencement of his studies. Sometimes the ends of an artist's fingers become armed with a sort of callous, or hardening of the skin, by the long use of his instrument. No inconvenience, however, seems to result from this, as to the production of sound.

Another important point in fingering is precision,—that is, the art of placing the fingers upon the strings in such a manner as to render the intonations just. All violins or violoncellos are not of the same dimensions; certain makers having adopted larger forms for these instruments than others. Now, the spreading of the fingers to form the intonations is always in proportion to the length of the neck of the violin, alto, or violoncello; for it is evident that the length of the string is in proportion to the dimensions of the instrument. The greater the length, the greater must be the spreading of the fingers to pass from one sound to another; the less the distance, the more the fingers must be brought together. A delicate ear promptly informs the performer of the faults he commits against precision. But this is not enough: to play just always, he must be provided with a certain power of address, and must have had long practice on the sounds. There are different degrees in the manner of playing *just* and *false*. An approximation to justness is all to which ordinary instruments ever attain; absolute precision is the lot of but a very small number of artists. This is especially difficult to acquire in what are called *passages of double string*. In these passages, which produce the effect of a union of two voices, the bow touches two strings, and produces at the same time two intonations, which are the result of a combination of the fingers of the left hand. Besides the necessary influence of the fingers upon precision of tone, it appears that the bow has also an influence depending upon the manner in which it strikes

the string, and that, as the position of the left hand is fixed in a precise way for each sound, the intonation may be higher or lower, according to the mode of pressure with the bow. The celebrated violinist Paganini, at least, used to ascribe the extraordinary precision of his playing to this power of the bow.

The action of the fingers of the left hand upon the strings affects only the justness of the intonations and the purity of the vibrations. The quality of the sounds, as more or less soft or loud, more or less hard or me, ow, is the result of the management of the bow by the right hand. This management, which in appearance is nothing more than alternately drawing and pushing the frail instrument upon the strings, is excessively difficult. Experience has shown that a perfect correspondence cannot be effected between the movements of the bow and those of the fingers, without reducing, as much as possible, the action of the arm which directs the bow, in such a manner that the wrist may act freely and without stiffness. [See in vol. i. articles Execution, Bowing, and Instruments, under appropriate heads, such as Flute, Violoncello, Horn, &c.]

ART OF WRITING MUSIC. In poetry, as in some of the arts of design, composition presents itself to the imagination of the poet, or of the artist, under the form of a simple idea, expressed as it is conceived, that is to say, without complication of elements. It is not so in music. In this art, every thing is complicated; for to compose is not merely to imagine agreeable melodies, or to find the true expression of the different sentiments which affect us, or to make beautiful combinations of harmony, or to dispose of the voices in an advantageous manner, or to invent fine effects of instrumentation; but it is to do all this at once, and many other things besides. In a quartet, in a chorus, in an overture, in a symphony,—each voice and each instrument advances in its own peculiar manner; and the combination of all these movements constitutes the music; and from all this we may form some opinion of the complicated character of that operation of the mind which we call *composition*, and of the studies necessary to be pursued in order to overcome the obstacles of so difficult an art.

There was a time when it could not be said that musicians composed: they merely arranged sounds. This period included nearly three centuries; that is to say, from the end of the thirteenth to about the year 1590. A few popular airs, and the chants of the church, were the only melodies with which they were acquainted; and it was not uncommon, as in the books of the psalm-tune makers of this country, to see the same air used as a common theme of twenty different compositions, and applied indifferently to every kind of words. No traces of expression, of enthusiasm, of passion, or of elevation, are to be remarked in the great multitude of such tunes. In music, it is necessary that musicians should employ themselves in creating the material resources of their art; and they must not deceive themselves in seeking these means. It will require all their efforts to arrange in order the chaos of varied forms of which the connection of sounds is susceptible. They will find wonder

ful combinations of harmony in the works of the old masters, and observe that they managed great difficulties with much skill. The art of writing music can be acquired by study and much practice; and those who laid the foundation of this science were men of genius. Composition consists of different operations, say five, which are, 1, to give to each part notes of equal duration; 2, to make the duration of the notes of one of the parts shorter by half than those of another; 3, to reduce them in one part to a fourth of the length of those of another; 4, to connect the notes by syncope in one part, whilst another proceeds according to the time of the measure; 5, to mingle together these different kinds of combinations, including accidental points and various ornaments. Select an air, and commence writing for two voices, then for three, four, five, or six, or more; and it will be found that, the greater the number, the more complicated are the combinations. Studies of this character, frequently repeated, will teach us to foresee all cases, to overcome all difficulties, and in time to understand the art of writing. One must study harmony, for its rules are applied at every instant, and under all circumstances; we cannot write even a few measures correctly without a knowledge of harmony, which includes counterpoint and thorough bass.

ASSYRIAN MUSIC. Recent investigations seem to show that the parent of all known musical science was Assyria. From the Assyrian people, the Hebrews, the Egyptians, and all Eastern nations derived their knowledge of music. The unveiled monuments show that in the time of Sennacherib music was a highly cultivated art, and must have existed through generations. It is known that this polished nation used a harp of twenty-one strings, the frame of which was four feet high, which was used to accompany minstrel songs and for performing dance music. Among this people, the lyre of tortoise-shell, the double pipe, the trumpet, drum, and bell were common, and representations of the bagpipe have been discovered in Assyria; but, as yet, none of the stringed instruments of the violin family, played with a bow, have been found.

AUBER, DANIEL FRANÇOIS ESPRIT [mentioned in vol. i. p. 75], died in Paris, France, May, 1871, aged eighty-seven years. Some authorities give the date of his birth 1782. Fetis, the musical historian, says that Auber's father told him that the composer was born in 1782; and if so, he was eighty-nine at the time of his death, or in his ninetieth year. The characteristics of Auber's music are sprightliness, grace, and great clearness and simplicity in their dramatic effects; his combinations are ingenious, if not profound, and his melodies simple, and often tender, although rarely pathetic. It has elicited widely different criticisms, but all agree that it is seldom dull and never offensive; if he had written for a different class of hearers, it is possible that he might have written something much better than any thing he has left behind him. He

was fond of praise, proud of his vigorous health in old age, and eager to write, and write well, in order to show that he had lost none of his old spirit. Some of his operas are the most successful now represented upon the stage; many of them have been translated into English and German, and almost all into Italian, and their melodies are known all over the civilized world; while many persons consider him one of the most distinguished musical composers that France has produced. From 1820 to 1870, a period of fifty years, Auber was an industrious and prolific composer; but the French ideal of opera is not that of Italy or of Germany; the pre-requisite condition is dramatic power and liveliness; the music is a secondary consideration, but that, too, must be bright and sparkling. All these conditions Auber met; and his devotion to the French ideal of opera is the secret of his marvellous success with the Parisians. His career was an eventful one. In his time Mozart, Haydn, and Beethoven were living, and died; Schumann was born, flourished, and passed away; Rossini was also born and died; Schubert, Mendelssohn, Bach, Handel, Cherubini, and others died younger; Auber in the number of his days outlived them all.

AUGUSTINE, SAINT, was born in Africa, A. D. 345, and died 440, aged ninety-five. He wrote six books upon music, which were printed at Lyons in 1586, eleven hundred and forty-six years after his death. There is, in one of the English libraries, a manuscript sermon of his, on the practice of church music; but his books, it is said, contained no other rules than those upon metre and time. It has been supposed that the ancients knew how to produce the effects of *piano*, *crescendo*, and *forte*, because their musicians were directed to "take care to lessen the sound of instruments, in order to augment them afterwards: to diminish, to swell, to vary, to diversify." We know that music was employed from the earliest ages of the Christian Church, in its religious service; but what that music was, can only be matter of conjecture; though it may be supposed to have been similar to that which had formerly been used in the different countries where they dwelt. In Judea, the religious chants formerly used in the Jewish worship would still be used; and, in other parts of the Roman Empire, the new Christians would have recourse to the Pagan hymns of the Greeks and Romans.

AUSTIN, SAINT, established a school for instruction in ecclesiastical music at Canterbury, Eng., about the middle of the ninth century, by which greater facilities were offered for the general cultivation of the art of music. The science of music, at this early age, being confined to the ecclesiastics, it was the custom of the English clergy to travel to Rome for their improvement in it; and masters or teachers from that city frequently visited the churches in England. Many of the sovereigns of Europe, at this time, concurred in encouraging the pious and edifying practice of church music.

B.

BAILEY, THOMAS and DANIEL (sometimes spelled Bayley), of Newburyport, Mass., were publishers, and also composers, of music. In 1755 Thomas republished a portion of an English work, by William Tansur (who composed "St. Martins" and other tunes as early as 1735), entitled "A Complete Melody: in Three Parts." And this abridged work had a great sale, though it contained only about one-third of the music in Tansur's English Singing-Book, comprising a portion of the Psalms with new melodies. Daniel Bailey, in connection with John W. Gilman, an engraver, of Exeter, N.H., published at Newbury, Mass., in 1764, a small work entitled, "A New and Complete Introduction to the Grounds and Rules of Music: in Two Parts." The First Part of this work contained the Introduction to the Art of Singing by Note, taken from the book previously published by Thomas Walter, A.M. The Second Part contained a new and correct Introduction to the Grounds of Music, Rudimental and Practical; from William Tansur's Royal Melody: the whole being a collection of a variety of the choicest tunes from the most approved masters. "Oh, praise ye the Lord; prepare your glad voice, his praise in the great assembly to sing" (Ps. cxlix. 1). Printed for and sold by Bulkly Emerson and Daniel Bailey of Newburyport, 1764. This work contained thirty-four tunes. They were neatly engraved by Gilman, in a diamond-shaped note. The style of the music is nearly that of Mr. Walter's, or the choral style. The only three tunes at all removed from it are "St. Luke's," "St. Martin's," and "Weston Flavel." The others are like "St. David's," "Windsor," "York," &c. The tunes are all arranged in three parts, — bass, treble, and tenor. Some are copied literally from Mr. Walter; while one, at least, bears the mark in the style, as well as the name, of an American composition; but of this we are not certain, as the authors' names are in no instance given. Three editions of this work were published in the same year, 1764. Two were printed at Newburyport, — one for Bulkly Emerson, containing thirty-four tunes; and the other for the author, Mr. Bailey, containing fourteen additional tunes. The third was printed at Salem, Mass., for Mascholl Williams. These were all printed from the same engraved plates; but the titlepages and introductions were typographical, and differed in form. We have seen it stated that Daniel Bailey published in 1774 an English work, entitled "Williams's Collection;" but we have never been able to procure satisfactory evidence of this; and we are led to believe, from such information as we possess, that the collection spoken of was a new edition of the "Universal Harmony," because it is known, that, in 1769, he republished a part of Tansur's "Psalmody," and called it by the name of "Universal Harmony." For this work he largely selected from a work then just published in London, entitled "Psalmodia Evangelica," by Thomas Williams, which contained music arranged in three parts, and figured for the organ. Thus originated the name "Williams's and Tansur's Collection of

Church Music." It is stated in "The History of Newburyport," that William Tansur published there, in 1769, a singing-book entitled "The American Harmony;" but we have never been able to find any copy of the work, or other mention of it, and think it must have been a mistake. Probably the book named was "The Universal Harmony," by Bailey, as that was partly taken from Tansur; and it is possible, since the publishers sometimes changed the title of books in different editions, that one edition might have been called "The American Harmony."

When the publication of music was first commenced in this country, great ignorance of the science prevailed; and no one was considered competent to make corrections, except where, by copying, printing, and reprinting, palpable and gross errors were perceptible. Tunes were taken as they were found, and so published; and this was probably the most judicious course; for the oldest and most experienced dared not expose their ignorance by attempting to correct errors. To show how little was known by the wisest, we will just mention that a committee for publishing a book saw fit to introduce some tunes from a recent English publication, with the figures of the harmony attached; and, when one of their number was asked the use of those figures, he honestly answered that he did not know, but that the committee intended to make the public believe they knew something.

BAKER, BENJAMIN FRANKLIN, was born at Wenham, Mass., July 10, 1811; removed to Salem; studied music, and commenced teaching, 1831; travelled as one of a concert company, 1833; studied with John Paddon, Boston, and became director of music at Dr. Channing's Church, 1839, which position he held eight years; commenced, 1841, holding musical conventions, which were successful; was appointed vice-president of the Handel and Haydn Society, which office he held six years; was superintendent of musical instruction to the grammar schools, 1842, and during six years met eight thousand pupils a week; introduced music into the schools of Lowell and Lawrence; became editor of "The Boston Musical Journal," and principal of the Boston Music School, incorporated 1857.

BALFE, MICHAEL WILLIAM, was born in Dublin, May 15, 1808. He took music-lessons of his father, and violin-lessons, when a mere child, from a bandmaster at Wexford, and at the age of eight years played a concerto on that instrument at a public concert. At the age of nine, he wrote the ballad called "The Lover's Mistake," which was introduced into the play of "Paul Pry," with success, by Madame Vestris. After the death of his father, who died in 1822, he in 1823 went to London with Mr. Charles Horn, with whom he studied seven years; and here he became principal violinist in the Drury Lane orchestra, under Mr. T. Cooke. In 1825 he went on the stage as an opera-singer, but at first made a signal failure on account of timidity. After studying further in Italy, whither he went under the patronage of Count Mazzera, who took an interest in him on account of a fancied resemblance to a lost son, he made a second and successful essay on the stage, first appear-

ing in Paris, and subsequently in Italy, England, and other countries. His Paris *début* was as Figaro in "The Barber of Seville," with Sontag as Rosina, the opera then being under Rossini's own direction. In Italy he had already composed a ballet, "*La Perouse*," which was well received.

In 1835 he returned to London, accompanied by his wife, who had been Mademoiselle Lina Rezer, *prima-donna* of one of the troupes, of which he was the leading barytone, in Sicily. He sang at the Ancient and Philharmonic Concerts, and also appeared at Drury Lane in "The Siege of Rochelle," one of his earliest operas, "The Jewess," and other pieces. His "Maid of Artois" was written for Malibran; and the great cantatrice won in it one of her chief successes. In 1839 he undertook the management of the English Opera House; but the enterprise was unsuccessful, and he abandoned it for the more congenial and profitable work of composition. His "Bohemian Girl" was now produced; and it has been the most successful of any of his operas. His "Daughter of St. Mark," "The Enchantress," "The Bondman," and many other works, followed; "The Puritan's Daughter" (performed by the Parepa-Rosa troupe at the Boston Theatre), and "Blanche de Nevers," being among his latest productions. The "Daughter of St. Mark" ran at Drury Lane for one hundred nights. In the spring of 1857 his daughter, Victoria Balfe, appeared upon the operatic stage. She became the wife of Sir John Crampton, and, after a divorce from him, was married to the Duke of Frias, of Spain.

Balfe was undoubtedly at the head of composers of English opera; and he was also one of a very few composers of the first rank whose talents as a virtuoso lay in vocalism. Like all great writers of music, he was thoroughly acquainted with the powers of various instruments; but, during the greater part of what may be called his public career, he was simply a singer in opera. Curiously enough, his operas were well received in England, and in this country; and they met also the warmest reception in Germany. Balfe's style is not English, but a medley of French, Italian, and frequently of German melodies; though, properly speaking, his model, if he had any, was Anber. He composed music to several beautiful lyrics of the poet Longfellow, which obtained wide popularity in England, as well as in this country.

In 1857 Mr. Balfe published "A New Singing Method," without the use of *solteggi*; presenting the necessary elementary studies in the form of original ballads and songs, — a system substituting an agreeable amusement for disagreeable labor. He died at his country residence in Hertfordshire, Eng., Oct 21, 1870, in his sixty-third year. Previous to his death, Mr. Balfe had made two visits to this country, and was intending to come here in 1871 again.

BALFE, VICTORIA, second daughter of M. W. Balfe, was born in the *Rue de la Victoire*, Paris, Sept. 1, 1837, and in her childhood showed great taste and feeling for music. Her voice, a pure *soprano*, was developed under the instruction of Emmanuel Garcia, and subsequently, in Italy, under her father's care, with the aid of eminent masters.

Her first appearance upon any stage was at the Italian Opera House, London (Mr. Gye's), May 28, 1857, as *Amina* in "*La Sonnambula*," supported by Madame Tagliafico, Signor Ronconi, and Signor Gardoni. Her success was great and real. Her voice ranged from low C to C in *alt*. The same year she sang in Turin. Returning to England, 1859, she made one of her greatest hits in the *rôle* of *Arline*, in "*La Zingara*" (her father's "Bohemian Girl" Italianized). In 1859 Miss Balfe accepted an engagement at the opera, St. Petersburg, where she married Sir John Crampton, formerly English minister at Washington, D.C., then representing Queen Victoria at St. Petersburg. This marriage excited much interest among Sir John's acquaintances in this country; and Lady Crampton was talked about here, and coldly received in court circles in Europe, because, before marriage, she was simply Victoria Balfe, an opera-singer. Miss Balfe had an irreproachable reputation before marriage; but her marriage was rendered unpleasantly conspicuous by persons who made a point of *etiquette*; and in 1863 she became legally divorced, after which she married the Duke de Frias, a Spanish grandee. She died at Madrid Jan. 22, 1865.

BALLAD. This word, now used only to designate the words of a peculiar species of song, is derived from the Italian *ballare*, to dance, and originally signified a dance accompanied by a chant. It was, probably, pantomimic, exhibiting the story of the accompanying verse by that expressive gesticulation in which the Italians of all ages have excelled.

BALLETTO has a similar meaning as the ballad. One, compared by Cavravaggio, 1581, sounds almost like modern music, both as regards melody and harmony. Change a few perfect chords, which injure the modal connection, into chords of the seventh, and you have a little melodious, well cadenced, quite correctly-written chorus of our own time. Its expression, to be sure, is rather ordinary; but it may have been very original two hundred and ninety years ago.

BARD. The profession of *bard* appeared with great lustre in Gaul, Britain, and Ireland. Demodocus is mentioned as a bard by Homer. Alexander the Great had a bard named Cherylus; and we find bards, according to Strabo, among the Romans, before the age of Augustus. The Druids, among the English, were philosophers and priests; and their bards were their poets. They were recorders of heroic actions in Ireland and Scotland, almost down to our times. Ossian flourished in the third century; Merlin, in the fifth. The former speaks of a prince who kept a hundred bards. Irish sonnets are the chief foundations of the ancient history of Ireland.

The favorite songs of the bards are said to have been those celebrating the renown of their ancestors. The praises of great men were accompanied with a sort of religious feeling. It was not only useful to the living to extol the virtues of former heroes as an excitement to their imitation, but was reckoned extremely pleasing to the deceased: it was, indeed, thought the means of assisting the spirit to a state of happiness, and because, con-

sequently, a religious duty. The bardic compositions, commemorating the worth and exploits of heroes, were a sort of national annals, which served the double purpose of preserving the memory of past transactions, and of stimulating the youth to an imitation of their virtuous ancestors.

The practice of animating troops by the chanting of heroic poems is of most ancient origin. Books of war-verses existed 630 years before our era. The Caledonian bards officiated as aids to the chief, communicating his orders to the followers. The bards animated the troops in battle, and amused them by their songs during the hours of darkness.

Music is either mother or daughter of poetry. The manner of the Gaelic bards seems to have been to make the tune, or melody, first, and then to adapt words to it. The original poem was often lost; but the air of a good one seldom shared the same fate, because a tune is easier learned than a song. Many, however, could make a song who could not compose a tune, and, consequently, many were adapted to the same air. We are not precisely informed of the method by which the bards taught music. It is not probable that in ancient times they had the art of communicating their melodies by notation; and, if not, they were given music-lessons individually, and each lesson must have been committed to memory, as were the poems.

BARDS. "According to J. C. Walker in his 'Memoirs of the Irish Bards' (4to, Dublin 1786), Ambergin, brother of Heber, first monarch of Ireland, had the rank of chief of the bards. This dignity imposed on him the triple duty of poet, historian, and legislator. The colleges of the bards were held in the depths of oaken forests. There the Druids taught their disciples the elements of history, the art of oratory, the laws, by means of poetry, in which was contained all the science of those distant ages. Music was always connected with this multiple course of instruction, and was regarded as the most exquisite division of human knowledge. Their teachings were oral, and were continued from twelve to twenty years.

"The word *bard* comes from *bâr* or *barydd*, which signifies the 'fine frenzy' or exaltation of the poet. Famous singers celebrated to the sound of the lyre or harp the acts and deeds of heroes, and preserved the genealogies of all their princes, which they carried back in a direct line to Adam.

"In Ireland, when the student had finished his course, a bonnet called *barred*, and the degree *Ollamh* (or doctor), were conferred upon him. Every profession being hereditary, the candidates for bardism were necessarily of certain families.

"As soon as the young bard had received his degree of *Ollamh*, the choice of his profession was determined by that of the family to which he belonged. He became *Fíola*, *Breithneamh*, or *Seanacha*, according to his birth. These offices, long united in the same person, had become separated, their duties being thought too numerous for a single individual.

"The *Ollamhain-re-dan*, or *Fíliúthe*, were poets. They preserved in verse the traditions of religion; they animated, both before and

during the combat, the soldiery with martial odes and songs of war; they celebrated valorous deeds, and composed verses upon the births, marriages, and deaths of the chiefs and princes who held them in their service. The *Fíliúthe* were also the heralds and faithful followers of their princes. They marched at the head of the armies, clad in long white flowing robes, holding magnificent harps in their hands, and surrounded by the *Ogfidh*, or musicians of the orchestra.

"During battle, they held themselves aloof, and from a safe place (their persons being held sacred) watched the deeds of their chieftain. The Muse animated them, and aided their watchfulness. Some even pretended to the gift of prophecy; and the better instructed among them were admitted into the order of the Druids.

"The *Breithneamhain*, or *Brethons*, promulgated their laws in a sort of recitative, sitting upon an eminence in the open air. They united the double functions of judges and legislators.

"The *Seanachailhe* were antiquaries, genealogists, and historians. Each province, chief, prince, had their own.

"Besides these three orders of bards, there was another of inferior grade, comprehending all players upon instruments. To all classes of these, their profession was also hereditary.

"In Gaul, as in Ireland, the bards immortalized in their verses the action of heroes; moreover, they often interposed in combat; and, through their influence, the sword was often returned to its scabbard. They even censured their chiefs, when their actions were not exempt from reproach.

"Thus viewed, the part which music played becomes really sacerdotal. It added to the majesty of religious rites by giving more of force and harmony to public prayer, appeased the fury of the warriors, taught history, preserved the memory of grand deeds, and reprehended those who did wrong, — truly grand and important functions, whose benefits might in our day be felt, if those who rule in art would will it seriously and perseveringly.

"Under the Roman dominion, Gaul received the influence of Greek civilization; but the Roman emperors were often cruel and sanguinary. A law of Claudius abolished the druidical rites, and ordained the extermination of the priests. The noble profession of the bards degenerated by degrees under the corrupting influence of strange and Pagan manners. According to Atheneus, they became mere courtiers and parasites.

"The principal string-instruments in use in Roman Gaul were the barbiton, or lute; the psaltery of ten strings, which were played with a plectrum; the cithara of two, four, or eight flaxen strings, under powerful tension. Among the wind-instruments were the horn of the Urochs; Pan's pipes; trumpets, straight and curved; the simple flute, straight or curved, long or short; and the double flute, of wood or silver. The bagpipes and shepherd's pipes are curious relics of ancient instruments. The instruments of percussion in use in those times were cymbals, *crotales*, cithern (of Egyptian origin), and the basqua

drum. But soon the invasion by barbarous nations began to pull down the structure of the Roman empire; the Burgundians and Franks successively overran Gaul; and Clovis founded the first united French monarchy.

"A grander cause of civilization had risen in the East. In the time of Augustus, Christianity was born in the stable at Bethlehem. The apostles soon spread the good news in all lands. The church at Lyons was founded by Pothin and Irenæus, coming thither from Smyrna. Christians were multiplied through the influence of eloquent preaching, but more through martyrdom. Clotilde converted Clovis. Martin, Hilaire, and Denis had planted the faith among the Gauls. When the light of the gospel had caused the dark mysteries of Druidism to vanish, the bards no longer sang the praises of false gods, but made their harps to sound in honor of the Trinity. The Christians also spread their doctrines with the aid of hymns and sacred canticles. Thus we see that in all times, under all forms of civilization and religion, music was added to prose and poetry to augment their force, and add to their effects."

If we may judge by the respect and reverence shown to their bards, we may conclude that the ancient Britons were passionate admirers of vocal and instrumental music. "Sometimes," says Bertholinus, "when two armies were standing in order of battle, with their swords drawn, and their lances extended, upon the point of engaging in a most furious conflict, the poets have stepped in between them, and, by their soft and fascinating songs, calmed the fury of the warriors, and prevented the bloodshed." The Scalds were the poets and musicians of all the Northern nations; and, upon the establishment of the Saxons in Britain, the courts of the kings, and the residences of the nobility, afforded a constant asylum to these early minstrels. "In the Anglo-Saxon language, they were distinguished by two appellations, — the one equivalent to the modern term of gleemen, or merry-makers; and the other, harpers, from the instrument they usually played upon. The gleemen added mimicry, and other means of promoting mirth, to their profession, as well as dancing and tumbling, with sleights of hand, and a variety of deceptions, to amuse the spectators."

BASSINI, CARLO, master of singing, was born at Cuneo, Italy, in 1815; was educated in the Conservatory of Naples, where he was compelled to study an instrument in order to be useful in defraying the expenses of the college, by going out to play at concerts or theatres, and giving the profits to the institution. He chose the violin, at the same time studying singing; and remained in this college ten years, when he commenced his career as solo-violinist, by giving concerts in Europe, and then in South America. In 1853 Mr. Bassini found himself involved in the troubles at Rome, and was forcibly compelled to leave France. He came to New York, and immediately, for the first time, published the report of his studies in "The Musical World," and afterwards his system, "The Art of Singing." Since this date, he has published, "Methods for Tenor, Barytone, Soprano, and Mezzo-Soprano;" "Twenty Melodie Exercises;" "Education

of the Voice," &c. Carlo Bassini was pure, noble, charitable, and learned. He died, and was buried from a Roman-Catholic church, in Brooklyn, N. Y., Nov. 25, 1870, aged fifty-five. At his funeral, a choir of three hundred singers sang his last composition, "Light in the Sky."

BELLS. In civilization, the bell has played an important part; and its history is among the most interesting of narratives, whether it be of its rude early state, or of that period when science added to its vibrations the tones and harmonies of music. The ear is to be gratified or displeased by the tone of the bell. History gives us no definite or satisfactory account of the origin of bells. Small tinkling instruments are mentioned by Hebrew writers as having been worn by the high priests and persons of distinction; but of their shape nothing is recorded. The name *bell* is from the Saxon *bellan*, to bawl or bellow. The bell is used to this day in Catholic countries for a similar purpose to that recorded in Scripture. Perhaps no instrument of music (for it is ranked by musicians among the musical instruments of percussion) is more intimately associated with the religious and imaginative, as well as with the most joyous and most sad, feelings of the human heart.

"To call the fold to church in time,
They chime,
When joy and mirth are on the wing,
They ring,
Lamenting a departed soul,
They toll."

Thus they perform their threefold duties. Bells were used in Christian churches about the year 395 of our era. They were consecrated and baptized, washed with water, anointed with oil, and marked with the sign of the cross as early as 787.

William the Conqueror introduced into England, from France, the custom of ringing the curfew; though some say that King Alfred was the first to order the ringing of a bell at nine o'clock in the evening, when the people were commanded to extinguish all lights, and cover up the fires in the house. *Curfew* is from the French words *couvre feu*, "cover fire." This custom became common, and from it came that of New England, still practised in our country villages; and, if it were now enforced, it would serve as a great protection against fires. The use of bells in olden time was to praise the true God, call the people, and convene the clergy, mourn the dead, drive away the pestilence, and grace the feast. In remote times, the bell summoned the people, gave notice of dinner, the hour for bathing, the time of prayer, time of danger, to awaken the sentinels, to give notice of funerals, of the sacrifice, to designate criminals (who wore them on the neck) to find the cattle, and to call the servants.

BELLS, MUSICAL, are still in use in some parts of Europe, and, to some extent, in this country, and are regarded as delightful. They are played upon by means of keys, sometimes not unlike those of the piano-forte. An old painting of King David represents him as playing, with a hammer in each hand, upon five bells, which were hung up before him. The music of the *thirty-three* bells which were

suspended in the tower of the Cathedral of Antwerp is highly celebrated: one of these bells was seven feet in width, and eight feet high. The Swiss bell-ringers, who introduced their peculiar bell-music into this country, were famous for their performances, producing as they did most exquisite melody and harmony from hand-bells. The Peak family, and others, have since imitated the Swiss, and have become celebrated for their bell-music. So skilful are some of these ringers, that they will change the bells used from one to another with the greatest rapidity, using both hands. Musical bells vary in size, from a large cow-bell to the very smallest dinner-bell, each with a tone different from that of the rest; and as many as forty-two are used by a company of seven persons.

BELLS, LARGE. Russia exceeds all other countries in bells. Moscow alone once had 1,766 large bells. One tower had thirty-seven; one being so large that it took twenty-four men to ring it, and this was done by pulling the clapper. It weighed two hundred and eighty-eight thousand pounds. The *great bell*, cast by order of the Empress Anne, in 1653, weighed 443,772 pounds: it was nineteen feet high, and measured around its margin sixty-three feet and eleven inches. The metal alone cost over three hundred thousand dollars. It now lies broken on the ground. It was never suspended. When the Kremlin was burned, the bell became heated, and the water thrown to extinguish the fire caused the fracture. In 1837 the Czar Nicholas caused the bell to be elevated from the pit in which it lay; and it has since been used as a chapel. The door is in the aperture made by the piece which fell out. The room is twenty-two feet in diameter, and twenty-one feet and three inches in height.

BENDEL, FRANZ, was born in Shoenlinde, Bohemia, March 23, 1833, in which place his father was a teacher. He received a thorough musical education at Prague, in the Music Institute of the blind Joseph Proksch. His higher artistic consecration he received at the hands of Franz Liszt, who watched over his development up to the independent master, along with Carl Tausig, Hans von Bülow, and other afterward brilliant virtuosos.

Released by Liszt, Bendel created a famous name for himself by means of his most successful concert-tours through Germany, Sweden, Denmark, and Russia, and was even called to America to add glory to the great musical festival held at Boston in 1872. In 1861 he began his virtuoso concerts in Berlin. Here, however, he was soon bound by tender bands, and finally concluded to take up his residence in that city. In the year 1867, he was united to his long-chosen bride, Lucie Schroeder; and no dissonance has ever disturbed the pure harmony of their marriage life. Bendel composed with an unusually easy hand, writing down his musical thoughts like fresh heart-springing lyric poems, and was therefore enabled, in addition to his always continued studies, not only to publish a large number of instrumental and vocal compositions, but also to devote several hours in the day to instruction. Continued labor overcame him; and he died at Berlin, July 3, 1874, aged

forty-one; and was considered one of the best pianists in Germany.

BERKELEY, DR. GEORGE, was born at Thomastown, in the county of Kilkenny, Ireland, in 1684. He was distinguished at Dublin University for his proficiency in mathematics, and became a fellow of Trinity College. He was a poet as well as a mathematician and philosopher. One of his poems shadows forth the first accomplishing greatness of the New World, America, —

“ Westward the course of empire takes its way:
The four first acts already past,
The fifth shall close the drama with the day:
Time's noblest offspring is the last.”

Dr. Berkeley became Dean of Derry, and afterwards Bishop of Cloyne. He sailed for America, Sept. 6, 1728, and arrived at Newport, R.I., Jan. 23, 1729. In 1733 Bishop Berkeley presented an organ to the town of Berkeley, Mass., which town had been named after him. The selectmen of the town, however, were not prepared to harbor so dangerous a guest; and after voting, that “*an organ is an instrument of the Devil for the entrapping of the souls of men*,” they politely declined receiving or examining the gift, and desired the donor to take the wicked thing away. This organ was forwarded at great expense, originally, from England to America by the dean, and was surmounted by the crown of the olden time, which bore the inscription that the organ was the gift of Dr. Berkeley, late Lord Bishop of Cloyne. After this splendid gift had been declined by the Puritan town-officers of Berkeley, the dean conferred the instrument on Trinity Church at Newport, R.I., where it is still used (1868), and is shown as among the curiosities of the town, ranking with the antiquities of the place.

A church in Brooklyn, N.Y., claims the honor of owning this ancient organ. The truth of the matter, however, is not favorable to the claim. Once, when the Berkeley organ at Newport became in need of repairs, it was sent to New York to be put in order; and a portion of the pipes were found to be so defective, that it was considered expedient to replace them by new ones, which were provided and forwarded in the old case back to Newport. Some time afterwards one of the workmen, thinking that the old metal should not be thrown away, went to work and restored the old pipes; and they were put into a new organ with other pipes, and set up in a new case in a church at Brooklyn. The original case was of English oak: the one made in New York is in imitation of it, and actually has a portion of the old pipes.

BENKERT, GEORGE F., was born in Germantown, Penn., April 11, 1831, and at the age of nine years was placed under the care of Joseph F. Duggan of Philadelphia, when he composed an overture and an oratorio, which, with some songs, made him known as a writer. He also acquired some fame as a pianist. He next studied with Lindpainter in Germany, who personally directed the performance of a Grand Mass composed by his pupil, and brought out at Stuttgard, which won approbation. The same Mass was performed at Vienna, by an orchestra and chorus of a hundred per-

formers. After this triumph, the young American composer remained in Germany five years, when he returned to Philadelphia, with the intention of pursuing there his profession as composer and instructor.

BENNETT, SIR WILLIAM STERN-DALE, principal of the Royal Academy of Music, is the son of the late Mr. Robert Bennett, who was for many years the organist in the parish church of Sheffield, in Yorkshire, Eng.; and his mother was Elizabeth, daughter of Mr. James Donn, F.L.S., curator of the Royal Botanical Gardens at Cambridge. He was born at Sheffield in the year 1816; and, having lost both his parents in his infancy, he was brought up by his grandfather, Mr. John Bennett, by whom he was entered, when eight years of age, as a chorister in King's College, Cambridge. Two years afterwards, he was placed in the Royal Academy of Music, where he began his regular studies by taking the violin as his instrument; but he shortly abandoned it for the piano-forte, upon which he received instruction. He soon began to turn his mind to composition, and, as a pupil of Dr. Crotch, produced his first symphony in E flat at the Royal Academy, which was followed, at short intervals, by his piano-forte concertos. Having formed an intimate friendship with Mendelssohn, he went, in 1836, to Leipsic, where several of his works (particularly his overture to the "*Naiades*" and his concerto in C minor) were performed at concerts under Mendelssohn's direction. His published works are numerous, including his overtures, the "*Naiades*," the "*Waldnymph*," "*Parisina*," and "*The Merry Wives of Windsor*," concertos, sonatas, and studies for the piano-forte, songs, duets, and other vocal pieces. His charming cantata, "*The May Queen*," is possibly the best known of his vocal works. In 1856 he was appointed professor of music at the University of Cambridge, and received the degree of Doctor of Music in the same year, and M.A. in 1869; and he was also created D.C.L. of the University of Oxford in 1870. From 1856 till 1868 he was conductor of the Philharmonic Concerts; and in the latter year he was appointed principal of the Royal Academy of Music. Professor Sir Sterndale Bennett is as well known for his suavity of manner and kindness of heart as for his musical abilities. He married, in 1844, Miss Mary Ann Wood, daughter of James Wood, Commander, R.N., who resided at Southampton, and was an accomplished pianist. She died in 1866, leaving her husband two sons and a daughter. The honor of knighthood was awarded Professor Bennett by her most gracious Majesty, 1871. Died Feb. 1, 1875, aged fifty-nine, and was buried in Westminster Abbey.

BEZA, THEODORE, in 1545, revised Marot's Psalms, and made additions to them; and, although ten thousand copies of Marot had been previously published and sold, the new work of Beza, it is recorded, sold nearly as well. Theodore Beza was one of the most eminent reformers; and was born at Vezelai, in the Nivernois, in 1519. At the age of twenty, he had gained a high reputation as a poet. In 1559 he removed to Geneva, and became the colleague of John Calvin, through whose in-

fluence he was appointed rector of the academy, and theological professor. In 1563 he succeeded Calvin in his offices and influence, and was thenceforward considered at the head of the Calvinistic Church. After an exceedingly active life, he died on the 13th of October, 1605.

Some writers have asserted that Beza assisted Marot in translating the first thirty Psalms into the French language; but they have no evidence of such assistance. Marot died in 1544; and Beza revised the Psalms in 1545. Beza's version was received with the greatest approbation, and led to some further and very successful measures on the part of Calvin to render psalm-singing acceptable to the church as well as people. From an act of devotion appropriate to the emereh, the use of singing was now carried into the camp and the field of war; and in the frequent acts of resistance made by Protestants against their persecutors, a devotional psalm shouted forth with energy by four or five thousand men in array served as a signal for battle. An example of a similar kind may be found in the One Hundred and Forty-ninth Psalm, which is thought to be an ode sung when David's army was marching out to war against the devoted nations.

Beza's Psalms, some of them, had the advantage of Marot's, inasmuch as they were set to music of a different character; for we are told that they were "admirably fitted to the *violin* and other musical instruments." Taking advantage of the public feeling, Calvin (to whose exertions Beza was indebted for some of the most simple and beautiful airs which were added to the new collection) wisely had engaged the first musical composers then living, to aid by the powers of melody the spread of his opinions, though he was opposed to the use of any other music than such as was published with the Psalms. For the most part, the plainest melody, and the most monotonous, prevailed in the Geneva Church. In other parts of Switzerland, and in France and Flanders, a style more harmonious, with some tunes arranged for several voices, and generally accompanied by musical instruments, was approved and introduced. If Calvin had not made it a point that the Reformers should use his music, and none other; had he not insisted that these Psalms alone should be sung at all his meetings, and been careful to have them appended to his catechism. — the Catholics would, probably, have extensively used them; but they could not, though they liked the music, use the same words which were solacing the Huguenots. Beza's version of the Psalms was published at Strasburg in 1545.

BISHOP, ANNA, mentioned at page 146, vol. i., made a tour through Europe; and between September, 1839, and May, 1843, she visited all the principal cities of the Continent, appearing before the crowned heads, and receiving special and valuable marks of favor and appreciation from them. During this period, Mme. Bishop gave no less than two hundred and sixty concerts. From 1843 to 1846, she remained in Italy, having achieved such astonishing success as to be engaged as *prima-donna* at the Grand Theatre, San Carlo, for twenty-seven months. She returned to

England, and in 1847 sailed for America, and until her departure for Australia, in 1855, met with a succession of continued musical triumphs throughout the entire country. After visiting Australia and South America, she returned to England in 1858, and while there sang at the Crystal Palace to thirty-eight thousand people, — one of the largest audiences, it is believed, that ever greeted any *artiste*.

In 1859 she again sailed for America, where she appeared in opera, oratorio, and concert, in the States and Canada, meeting with the most signal artistic and pecuniary success. Her stay in this country continued until 1865, when she visited Mexico, and, after a concert-season, sailed for Havana, and from thence to New York. Leaving this latter city in September, 1868, she again visited California and the Sandwich Islands, where her reception was both pleasant and gratifying. During the voyage from Honolulu, S. I., to China, in February, 1866, the Bremen bark "Libelle," on which passage had been secured, was shipwrecked on a coral island known as Wake Island; and, after nearly forty days' privation and suffering, she arrived at the Ladrone Islands, and from thence obtained passage to Manilla, which she reached with the loss of her entire wardrobe, jewelry, and music. She left this place for China and India, arriving in the latter country in 1867, and, after an extended tour, sailed in May, 1868, for the Australian colonies, returning to England by the Red Sea to Suez and Alexandria in Egypt, Malta, Gibraltar, thence to London, and back New York. Since her return, her successes are fresh in the minds of musical people.

BISHOP, SIR HENRY, mentioned at page 144, vol. i., was famous for his dramatic productions, and the most voluminous English composer after Purcell. He died May 1, 1855, and was buried (May 5) in the Marylebone Cemetery, Finkly Road. He earned more money than any other English composer; yet he died in a state of great pecuniary embarrassment. No English musician has composed so much; few so well; and probably no one has produced so many things that are likely to endure. In every house where music, more especially vocal music, is a welcome guest, the name of Bishop has long been and must remain a household word.

BLAKE, GEORGE E., born in 1775; died Feb. 24, 1871, aged ninety-six. He commenced the business of publishing and selling music at Philadelphia, Penn., in 1802, at No. 13 South Fifth Street, in what *now* is a small, old-fashioned, yellow brick building, that served him as both store and residence for many years. He was the oldest music-publisher in America.

BLEWITT, JOHN, was born in London, September, 1780; and, from the time when he became known as a composer, continued, till within a few weeks of his death, to throw off the merriest of melodies for the music-publishers; and after having for twenty-five years provided the "Christmas Pantomime" music for the principal London theatres, — a branch of art in which he particularly excelled, — he showed in his last Drury Lane pantomime of "Harlequin Indibras," that his gaiety was exuberant, and his invention as fertile as ever. To John Blewitt the English people are in-

debted for the airs of many of their popular comic songs and Hibernian ditties, amongst which latter "Barney Brallaghan" may be mentioned as having brought a fortune to publisher and singer, without realizing a sixpence for the composer. At the English glee-clubs, Blewitt's compositions generally carried off the prize; and as the musical director of Vauxhall Gardens, and afterwards as a pianist, accompanying Mr. Templeton in his vocal entertainments, his talents were always recognized. As a pupil of the great Haydn, the tutor of many eminent English vocalists, and the composer of upwards of two thousand original pieces of music, John Blewitt *deserved*, at least, a competency for his old age; but he died in London, September, 1853, aged seventy-three, leaving — too often the only legacy of genius — a widow and two daughters without the slightest means of support.

BONAWITZ, JEAN HENRI, "was born at Durkheim, Dec. 4, 1839, at least, so we read in Schubert's 'Musical Lexicon,' printed at Leipzig in 1864. His ancestors are of Polish origin, as might be inferred from his name, and especially from the Slavonic melancholy which pervades all his compositions. He entered the conservatoire of Liege at a very early age, and remained there until his thirteenth year, devoting himself exclusively to the study of the old masters. Nourished by the classics, and fortified by their excellent method, his talents developed to such a degree, that, even at that early age, he was an object of admiration and astonishment; and none hesitated to predict for him a brilliant and triumphant future.

"But it seems that an implacable fatality follows genius, only to throw obstacles in the way of its progress, and to discourage its aspirations. At this tender age, Bonawitz had to encounter the greatest vicissitudes. His parents were compelled, like many of his countrymen at that time, to take refuge in America. But Heaven's blessing at last rewarded the efforts and struggles of the child, and threw a friend in his way, who took an interest in the gifted boy, and aided him in pursuing the development of his genius. It is very touching to read this part of the biography of our artist, written by the hand of his kind protector. Suffice it to say that by incessant work, night and day, his persistent study was at last crowned with success; and the aspiring youth found at an early age the recognition which he felt was his due.

"He remained in America up to the age of citizenship; and at twenty-one he went to London, and made his *début* in two memorable concerts at Exeter Hall and the Artist Club. He was received with enthusiasm, and gave repeated proofs of his pre-eminent abilities. To see his reserved, calm, and self-possessed manner in playing, the *connoisseur vulgaire* might, perhaps, think him cold; but just this seeming coldness is a merit, and shows to great advantage the profoundness of his feeling, the purity of his sentiment, his masterly touch and dazzling mechanism.

"His 'Bride of Messina' was produced for the first time at the Academy of Music, Philadelphia, April 22, 1874.

"Bonawitz spent five years at Wiesbaden

where he won a high degree of esteem and sympathy, both as a man and an artist; and, when he left there, the '*Mittelrheinische Zeitung*' took leave of him with ardent and sincere praise of his natural and artistical qualities, his exquisite affability, and the disinterested zeal with which he made himself acquainted with the works of other composers. Paris opened a wider field for this artist, and he went there and gave concerts, and, while in that city, composed many of his finest works, — his opera, 'The Bride of Messina,' a nonetto, a quartet, a trio, an operetta 'Diogenes,' a sonata for piano and violin, a symphony, and several overtures for orchestra. In Paris, Bonawitz was admitted to the highest circle of composers and poets, with Rossini, Meyerbeer (whose acquaintance he had made in Germany, and with whom he was in constant correspondence), Berlioz, Heller, Wagner, Liszt (by whom his compositions were played at the court at Weimar), Nestor Roqueplan, and Alexandre Dumas the elder, who wrote friendly critiques on Bonawitz in the Paris journals over his own signature.

"Compelled to leave Paris by the breaking-out of the Franco-German war, he determined to return to America. He settled in New York after a short concert-tour, where he became known as a composer, pianist, director, and teacher."

BORCHI MAMO, or, rather, Mlle. Borghi, manifested at a very early age a genius for dramatic singing. She was not twelve years old, when, having taken her to a representation of Rossini's "*Tancredi*," her parents were astonished on the following morning to hear her repeat all the most striking melodies from that opera, among which we may be sure the celebrated "*Di tanti palpiti*" was not forgotten. Nor did the little girl recollect the music alone. Every scene, with the dramatic action appropriate to each, had impressed itself upon her memory; and a few days after this visit to the opera, which must be regarded as one of the most important events in Mlle. Borghi's life, her father and mother, returning home unexpectedly, found their drawing-room converted into a theatre, and their child declaiming and singing on that portion of it which represented the stage.

The youthful Adelaide's passion for the opera was so evident, that her parents, who had no sort of liking for theatrical pursuits, resolved, if they could not restrain it, at least to do nothing in any way that could stimulate it. But Adelaide studied in secret, and, one happy day, succeeded in prevailing upon a friend to take her to the house of Rossini, where the great master heard her sing several of his compositions, himself accompanying her on the piano. The young artist — which by instinct and intelligence she already was — trembled with excitement as she awaited the decision of the illustrious composer respecting her capabilities and chances of success in the career for which she felt so strong a desire. Rossini did not keep her long in suspense, but, embracing her affectionately, said with enthusiasm, "You will one day be a great singer!"

Adelaide Borghi's passion for singing was so strong, and it was so obstinately thwarted by her father and mother, that the consequence

was a nervous fever, beneath which the poor girl was near succumbing. In her delirium, she constantly repeated the name of Rossini, and exclaimed, in accents of despair, that he had told her she never would be a great singer. Adelaide's interview with Rossini appears to have been kept a secret from her relations; but the doctor, finding that her brain was tormented with ideas which Rossini alone could dispel, called upon the composer, who lost no time in returning with him to his patient's bedside. There he repeated to her again and again, that she would indeed be a great singer; and his assurances and general kindness had the effect of allaying the delirium of the sick child. Rossini then convinced the parents of the inutility, not to say cruelty, of ignoring, from a feeling, which, however conscientious, was, after all, but a prejudice, an inclination that was irresistible, and which, properly directed, might lead to the happiest results.

After opposing their daughter's wishes until it was unreasonable to do so any longer, Adelaide's father and mother showed their parental affection by carefully watching over her during the difficult period of her *débuts*. She had been singing, however, only a few years, when she lost them both; and she was already an orphan, then in Malta, where she had a three-years' engagement to fulfil, when she accepted the hand of M. Mamo, a member of one of the most respectable families in the island. Madame Borghi Mamo left the Malta Theatre, where she had very lucrative "appointments," for the Scala at Milan. Here she received a smaller salary, but at once established a reputation which has since become European.

BRADBURY, WILLIAM B., was born in the town of York, Me., 1816. His grandfather was an old Revolutionary soldier, universally respected and esteemed. His parents were noted in York for their musical taste and excellent singing; the father being the leader of a choir and a teacher of music. From them, the son inherited that musical taste, the development of which rendered his name popular, and his life prosperous. His education was received at the village school; and he diligently cultivated his musical talent when not engaged on the farm, or at his father's mechanical business, at which he became a skilful workman. In his native place, out of the family, he had little opportunity of hearing or studying music; but he mastered, after his own fashion, every instrument that came in his way; and the facility with which he accomplished this, combined with other traits of character, clearly foreshadowed the true bent of his mind. In 1830 his family removed to Boston; and up to this time he had never seen or heard an organ or a piano-forte. In Boston he saw and heard both music and musical instruments, and at once decided to become a musician.

Young Bradbury now took lessons upon the organ, and in 1834 was known as a practised organist; and in 1840 he began teaching in New York. He experienced all the trials, perplexities, and labors common to the profession, till at last he became recognized as a teacher, composer, organist, publisher, and manufacturer. That Mr. Bradbury had a genius both

for musical composition and instruction, none will deny. His power of drill was remarkable. His manner was singularly kind, persuasive, and assuring. He was a good musical educator, had great executive ability; and, when he had prepared a book, he pushed it in the market.

In 1847 Mr. Bradbury, with his family, went to Europe, and travelled through Germany and Switzerland. At Leipsic he received instruction from the best masters. From the time of his return home, in 1849, until he commenced the business of manufacturing piano-fortes, he devoted his entire attention to teaching, and to composing and publishing church music-books, glee-books, and other musical works, to the number of some twenty volumes. He was also constantly called to conduct large musical conventions in all sections of the country, — a duty which still further increased his reputation, and added greatly to his popularity. His last work, published in 1858, was called "The Jubilee." He had bestowed extra care upon this book; and his labor was well rewarded, for the sale not only exceeded that of all his previous works, but of any work by any other author. More than two hundred thousand copies were sold in an extraordinary brief space of time.

In 1854 William B. Bradbury, in connection with his brother E. G. Bradbury, commenced the piano business with a well-known firm which had been gradually growing into popularity.

As a composer, Mr. Bradbury filled the chasm between the artistic and the popular music. His books have generally sold well. The following list comprises his most important works down to 1857, with the date of their publication. Quite a number of juvenile singing-books we have omitted to notice, though some of them are popular: they are of every size and shape.

JUVENILE, OR SCHOOL SINGING-BOOKS.

The Young Choir	1841
The School Singer	1843
The Young Melodist	1845
Flora's Festival	1847
Musical Gems for School and Home	1849
Sabbath School Melodies	1850
"Summer" — one part of "The Seasons"	1852
The Singing Bird	1852
The Young Shavian	1853
Sabbath School Choir	1856
Musical Bouquet	1857

GLEE-BOOKS.

The Social Singing-Book	1844
The Alpine Glee-Singer	1850
Metropolitan Glee-Book	1852
New-York Glee and Chorus Book	1855

COLLECTIONS OF CHURCH MUSIC.

The Psalmodist	1844
The Choralist	1847
The Mendelssohn Collection	1849
Psalinista	1851
The Shavian	1853
"Esther," a Cantata	1856
The Jubilee	1857

Mr. Bradbury died at his residence in Montclair, N.J., on Wednesday evening, Jan. 8, 1868, passing peacefully away, surrounded by his family, who had for several days expected his decease. His age was fifty-two years. He left a widow, four daughters, and a younger son. Two of the daughters are married, one only a few weeks before the death of her father.

He was buried on the hillside in the Bloomfield Cemetery, beside his mother, whom he so much loved, and in the place of burial which he had himself chosen.

BRADY, NICHOLAS, the well-known versifier of the Psalms of David, was born at Bandon, Ireland, Oct. 28, 1659. His father was an officer in the king's army; and Nicholas was sent to Westminster school when twelve years of age, where he was chosen king's scholar, and whence he was afterwards elected a student of Christ Church. After remaining at Oxford four years, he removed to Dublin, where his father resided, and from whose university he obtained successively the degrees of B.A., M.A., and D.D. Soon after his ordination, he was appointed a prebend of Cork, and obtained other Irish preferment. In 1690, troubles having broken out in Ireland, Dr. Brady thrice, by his intervention with the royalist, Gen. MacCarthy, saved his native town, Bandon, from destruction; the king having thrice ordered it to be razed to the ground. The same year he was deputed by the people of Bandon to go over to England to petition parliament for a redress of Irish grievances, which in those days were more than imaginary. He settled in England, and, during the whole of his life, was held in the highest esteem as a man and a minister.

In 1692 Mr. Brady wrote an "Ode for the Feast of St. Cecilia," which was set to music by Purcell, and was performed on the 22d November, 1852, by the Purcell Club of London. Brady is chiefly known in this country from his connection with Nahum Tate in versifying the psalms. He died in London, May 20, 1726.

BRAINARD, SILAS, was born at Lempster, N.H., Feb. 14, 1814, but, except as an excellent *flute-player*, was not known as a musician until 1836. He was educated at New Hampton, and with his parents went to reside in Cleveland, O., 1834. Here he became a leading member of a musical society, formed in 1835, and became useful by arranging music for an orchestra and chorals. In 1836 he opened a store for the sale of music, and in 1845 became a music-publisher, establishing the house of S. Brainard & Sons, one of four or five of the largest music-houses in the country. He became an accomplished theoretical and practical musician, and the author of several musical works, such as his *Flute and Violin Instruction Books*. He died from an attack of inflammatory rheumatism, April 8, 1871, aged fifty-seven years. He was quiet and unobtrusive in manners; a gentleman of refined tastes and habits, worthy of esteem and confidence.

BRISTOW, GEORGE F., a talented pianist, violinist, and composer, born in Brooklyn, N. Y., 1825. When quite young, he exhibited remarkable musical ability; and his father, being an accomplished professor, gave him a thorough education in every branch of the art. His first classical composition which attracted attention was a symphony first brought out by the New-York Philharmonic Society, of which he was a member; and since that time he has produced a number of compositions which have received high commendations. Jullien, when in this country, was so much pleased with Mr. Bristow's compositions, that he took

two of them (both symphonies) with him on his return to Europe, and brought them out in London, and engaged the American composer to write others for his orchestra. He is one of the best composers the country has produced: the works of few others have crossed the Atlantic. For this reason, he should be famous, instead of remaining comparatively obscure. The "Pyne and Harrison Troupe" secured an opera from Mr. Bristow, "Rip Van Winkle," which enjoyed considerable popularity. In addition to what Mr. Bristow had previously accomplished, in 1860 he composed an oratorio, entitled "Praise to God," which, as a classical composition, compares well with older works; and his orchestral accompaniments show a knowledge of the best effects which can be produced by the various orchestral instruments. [We do not know why the composer gave to this composition the title of "Oratorio;" for a sacred drama or an oratorio must have action, or at least a dramatic contrast of emotions; and this can hardly be the characteristic of the Song of Praise in the Episcopal service. Perhaps the word "oratorio" is here used simply to describe an entertainment of a sacred character.]

BROWNE, AUGUSTA, or *Mrs. Augusta Browne Garrett*, late of New York, now residing in Washington, D.C., a composer of note. Her productions, which are in all styles—fantasies, *airs variés*, waltzes, songs sacred and secular.—number about two hundred; and many of them, such as the brilliant romance "*La Brise dans Les Feuillage*," "*Air à la Russe*," "National Bouquets," and various songs, have gained great popularity.

Besides occupations in music, Mrs. Garrett has long had literary pursuits, contributing to many magazines and other periodicals, and has published two books. One of these is "Hamilton, the Young Artist" (memoirs of her brother); and the other, "The Precious Stones of the Heavenly Foundation." Many of her articles on church-music have elicited much interest.

BÜLOW, HANS GUIDO VON, was born in Dresden, Saxony, Jan. 8, 1830, and did not display any peculiar talent for music until his ninth year, when he was dangerously ill of brain-fever; and, immediately after his recovery, he showed a wonderful power of reading music at sight. He studied under Wieck and Litoff, and, later, under Eberwein and Hauptmann. In 1846 he went to the Lyceum at Stuttgart, in 1848 to the Leipsic University, and in 1850 to Berlin, with the intention of studying law. Later, in 1850, Bülow went to Weimar, and witnessed the first representation of Wagner's "*Lohengrin*," given under Liszt's direction. For the next few years, Bülow was the *protégé* of Liszt and Wagner; the latter giving him very often pecuniary support, which his parents were unwilling to do on account of their dislike to his newly-chosen profession, to which they became reconciled after a few years. He made several musical tours in Europe, and was enthusiastically received. He became, in 1854, head professor of the piano department in the Berlin Conservatorium. In 1857 he was naturalized as a Prussian citizen; and in the same year he married Liszt's youngest daughter, Cosima, the child of the Count-

ess d'Agout. In the following year, he was appointed court pianist at Berlin. In 1864 he created a great sensation in Russia, both as an orchestra director and as pianist. In the same year, Bülow went to Munich, and was appointed pianist to the King of Bavaria. In 1866 Bülow followed Wagner to Lucerne, but returned in 1867 to take the position of court chapel-master, director of the opera, in which position he gained fresh laurels in bringing out Wagner's "*Meistersinger*," and many other operas. In 1869 Mme. Von Bülow concluded that she would like to change husbands: so she left Munich, and went to live with Richard Wagner at Lucerne. Soon after, a divorce was pronounced by the Bavarian courts; and Von Bülow came to Florence, where he has been ever since, and now is. Besides the honors already mentioned, he has been decorated Knight of the Order of St. Michael (Bavarian), Member of the Prussian Order of the Crown, Member of the Order of the House of Hohenzollern, Receiver of the Mecklenburg Gold Medal, Doctor of the Faculty of the Jena University, Corresponding Member of the Dutch Musical Society, &c.

As a man of society, Von Bülow is genial and pleasant, often striving to be witty, and succeeding occasionally. He has much affected modesty, and is seldom capricious about performing in private. His personal appearance is not peculiarly prepossessing. He is below the average height, and of rather a slight figure. His head is proportionately large, and his face an egg-shaped oval, being immensely broad behind the eyes, and sloping inward toward the forehead and chin. His features are regular; and his eyes, which are rather small, but prominent, have a most laughing expression. He is slightly bald, and wears a mustache and goatee. His movements are all quick and nervous.

As a composer, Von Bülow has not published very many works. They number only between twenty and thirty. The most celebrated of them are the "Overture and Music to Shakspeare's Julius Cæsar," "The Singer's Curse" for orchestra, "*Nirvana*," numerous piano pieces, songs for single voices and for chorus, besides two concert duos for piano and violin. He is, however, better known for his arrangements and transcriptions, among which we should mention the piano arrangement of Wagner's "*Tristan und Isolde*," Glück's "*Iphigenia in Aulis*," and many other productions of Wagner, Liszt, Handel, Bach, and Berlioz.

C.

CALLOPE. This is an invention by which steam whistles are made to discourse very loud, if not sweet music. It is a simple but ingenious machine, consisting of a steam cylinder, along the top of which valve chambers are arranged, having double, steam-tight, metallic valves. By means of a stem or rod passing from each of the valves through the steam chamber, they may be opened by a slight pressure; when the pressure ceases, the valves instantly close. A steam whistle having its own peculiar tone, is placed over each valve.

The instrument is double in its construction, and can be played by striking keys similar to those of an organ; or, by means of a cog-wheel, may be set to a particular tune, like a common music-box. Its musical strains, in well-expressed tunes, may be heard five miles on land, and much farther on water.

The Calliope was invented and introduced to the public by Mr. I. C. Stoddard, of Worcester, Mass. When first heard, the people of that city, as well as those residing within five miles of the place, were surprised by familiar strains of music, very loud, very clear, and very singular. Everybody wondered what band it was, or what combination of instruments it could be; and one old lady thought the Angel Gabriel had come with the last trump.

A dozen or two of steam whistles of common locomotives, with the screaming element materially softened; a hand-organ or two, without their usual grating sensation; a few clarinets, through which every tone is clearly and distinctly *lingued*; and a very slight piano-forte accompaniment, all acting in perfect accord as to time, will give a good idea, expressed in words, of the Calliope. If this instrument could be generally adopted where steam-whistles are now used, which, like the hinges of Milton's "infernal doors, grate harsh thunder," a great nuisance would be replaced by this not altogether disagreeable steam musical engine.

The first appearance of one of the Muses, under the inspiration of *steam*, secured a poetical record, in which Calliope is thus represented:—

"O'er fields and seas she takes her airy flight,
Until on fair Columbia's soil they light;
Here to achieve, by nobler deeds sublime,
What had been lost in the Ægean elime;
And first, the railroad horse's lungs she stole,
And next, by wood, or Pennsylvania coal,
Expands her giant voice, so loud, so great,
It shook all round, throughout the town and State.
Such music, loud, was never heard before,
No, not in Greece or Rome, in days of yore."

CALVIN, JOHN, one of the apostles of the reformation, was born at Noyon, in Picardy, on the 10th of July, 1509. His family name was Cauvin, which he latinized into Calvinus. He was a man of eminent talents, but of an arrogant and persecuting spirit, if we credit some historical accounts; and his conduct to Servetus, whom he brought to the stake, has fixed an indelible stain upon his character. It has been recorded, and has been generally understood, that Calvin was *opposed* to the culture and elevation of music. History says, that the gloomy views adopted by this great French divine, led him to pursue a course very different from that of Luther; and to mark his hostility to the pretensions of Rome by an entire rejection of all the usages of her church, not a musical instrument was suffered within the walls of Geneva for more than a century after the Reformation; and music, except Calvin's own *plain psalmody*, was prescribed wherever the doctrines of this man were received.

The curiosities of history sometimes startle us. When we begin to examine for ourselves we feel that too often histories have been

written rather to conceal, or pervert, than to record the truth. In studying musical history nothing has surprised us more than its perversions and fallacies, arising from prejudices and preconceived notions. For instance, an early historian of Martin Luther gravely says, that he could not pollute the French language by expressing in it much of the history of his life; therefore, he records it in Latin, and it is a mercy that such a record can only be found in the libraries of the curious, and in a language which comparatively few can read. In one particular, however, all historians agree; namely, that he was a great musician, and in this respect a perfect contrast to his contemporary, John Calvin. Hullah's History, page 73, says:—

"Calvin seems never to have recognized music as a means of religious expression, and scarcely even to have appreciated it as an aid to devotion; and the music of his followers has suffered accordingly."

The Rev. Henry Allen, an English divine, said, at Exeter Hall, in 1862: "Calvin was utterly destitute of musical sensibility, as every page of his works and every element of his character indicate. He was too much of a theological formula to have much of the genius of song. And this unhappy defect has deprived his writings of the broad human sympathy which so characterized Luther's, and has entailed upon all the churches that bear his name such musical asceticism and poverty. In no Calvinistic country—American, Scotch, Dutch, and, in so far as it is Calvinistic, English, is there a church song. The musical Luther has filled Germany with rich church hymnody; the unmusical Calvin has impoverished Puritan and Presbyterian worship; that its rugged, inartistic, slovenly psalmody has become a by-word and a needless repulsion; for surely there is no piety in discord, or any especial devoutness in slovenliness. Our nature craves something better than the traditional psalm-singing of the inharmonious 'meeting-house.' Our affinities are with whatever is best, whether in eloquence, poetry, or music.

"And yet, strange to say, it is to Calvin that we owe the introduction of metrical psalmody into the reformed churches of France."

Strange indeed; but let Calvin answer for himself, first by his labors for psalmody, next by his preface to the Psalter.

In 1538-40 Calvin, Miles Coverdale, and the Wedderburns met in exile in Saxony, and sat at the feet of Luther. The German singing of praise surprised them all, and each set to work to do for his own countrymen what Luther had done for the German speaking people. Calvin began by putting into French metre the Twenty-fifth and Forty-sixth Psalms. He got them set to music at Strasbourg (presumably by Guillaume Franc) and printed a number of copies which he brought to his own congregation on his return to Geneva. They became so popular, that he, through a friend in Paris, induced Clement Marot to apply his poetical powers to the rendering of David's psalms into French metre. Marot completed fifty-one before his death, and the remaining ninety-nine were, at Calvin's urgent request,

supplied by Beza. Luther had only rendered sixteen into German metre, so that Calvin belongs the honor of being the first man at whose instance the whole book of Psalms was rendered into metre for praise in any living language.

Again as to the music. While the psalms of Luther, Coverdale, and the Wedderburns were sung to the most popular ballad tunes of Germany, England, and Scotland, Calvin's soul revolted from such words being so desecrated, and he set to work to get music supplied suitable for, and worthy of, them. He employed first, for this work, Guillaume Franc of Strasbourg, and next Claude Goudimel of Rome. So in music, as well as in words, he was the first who ever supplied a true and distinctive psalmody. His Psalter is a monument of beauty, which all ages following have used as a mine and a model. The old 1, old 44, 46, 68, old 100, old 113, 119, 124, 134, 137, 148, and others are familiarly known to all lovers of psalmody as unsurpassed for simplicity, beauty, and grandeur in any country or in any age.

But Calvin not only produced the first French psalter, he also produced the first English one. The title-page bears his name and his express sanction. It was printed at Geneva in 1556, for the use of the English-speaking congregation, of which, at that time, John Knox was minister. This psalter was brought to England and Scotland on the return of the exiles; and was the foundation of Knox's psalter, published in Edinburgh, 1565; and of the English psalter, published in London in the same year.

Calvin's labors in this work began in 1538, and did not cease till his "fully HARMONIZED psalter for use in public worship" appeared in 1561. Thus he labored during twenty-three years of his life in this cause.

The first edition, containing fifty-one psalms with music, appeared at Geneva in 1543, bearing a remarkable preface which appeared with all the numberless future editions of this work; but which, surely, historians and critics have either shut their eyes to, or been unable to read.

Let it speak for itself. No more thorough, hearty, comprehensive, and exalted views of psalmody have ever been expressed. Let historians and critics reconcile them with their own expressed statements as they best can.

For the following extract from Calvin's preface to the Geneva Psalter, we are indebted to the Lecturer on Music, Andersonian University, Glasgow, July, 1870:—

"To all Christians, lovers of the word of God, greeting: As for public prayers, there are two kinds of them—the one is expressed in words only, the other with song; and this is no recent invention, for from the first origin of the church, this has been the case, as appears in history. And even St. Paul does not speak of verbal prayer alone, but also of singing. And in truth, we know by experience that song has great force and power in moving and inflaming the heart of man to invoke and praise God with more vehement and ardent zeal.

"It should always be seen to that the song should not be light and frivolous, but that it have weight and majesty, as saith St. August-

tine; and also that there is a great difference between the music that is employed for the enjoyment of men at table, and in their houses, and the psalms which they sing in church in the presence of God and his angels. But when the form here given is rightly judged of, we hope that it will be found holy and pure; seeing that it is simply constructed for the edification of which we have spoken, as well as that the use of singing may be greatly extended. So that even in the houses and in the fields it may be to us an incitement and an instrument or means to praise God and raise our hearts to him; and to console us in meditating on his power, goodness, wisdom, and justice, which is more necessary for us than we know how to express.

"For the first, it is not without cause that the Holy Spirit exhorts us so carefully, by the holy Scripture, to rejoice ourselves in God, and that all our joy should rest there as its true end. For he knows how truly we are inclined to please ourselves in vanity. Thus while our nature draws and leads us to seek all means of foolish and vicious enjoyment—on the contrary, our Lord, to separate and draw us from the allurements of the flesh and of the world, presents to us every possible means to fill us with that spiritual joy which he commends so much to us.

"But amongst other things which are suitable for the recreation of men, and for yielding them pleasure, music is either the first, or one of the chief, and we must esteem it a gift of God bestowed for that end. Therefore, by so much the more, we ought to see that it is not abused, for fear of soiling and contaminating it; turning that to our condemnation which was given for our profit and good. Even were there no other consideration than this alone, it ought to move us to regulate the use of music, so as to make it subservient to all good morals, and that it should not give occasion for loosing the bridle of dissoluteness, that it should not lead to voluptuousness, nor be the instrument of immodesty and impurity.

"But further, there is scarcely any thing in this world which can more powerfully turn or bend hither and thither the manners of men, as Plato has wisely remarked. And in fact we experimentally feel that it has a secret and incredible power over our hearts to move them one way or other. Therefore, we ought to be so much the more careful to regulate it in such a manner that it may be useful to us, and in no way pernicious. For this reason the ancient doctors of the church often complained that the people of their time were addicted to disgraceful and immodest songs, which, not without cause, they esteemed and called a deadly and satanic poison for corrupting the world.

"But in speaking of music I include two parts, to wit, the words, or subject and matter; secondly, the song and melody. It is true that all evil words, as saith St. Paul, corrupt good manners, but when melody is united to them, they much more powerfully pierce the heart, and enter in: just as when by a funnel wine is poured into a vessel, so poison and corruption is infused into the depth of the heart by the melody.

"What, then, is to be done? It is to have

songs not only pure, but also holy, that they may be incitements to stir us up to pray to and praise God, and to meditate on his works, in order to love him, fear him, honor, and glorify him. But what St. Augustine says is true, that none can sing things worthy of God but he who has received the power from himself. Wherefore when we have sought all round, searching here and there, we shall find no songs better or more suitable for this end than the Psalms of David, which the Holy Spirit dictated and gave him. And therefore, when we sing them, we are as certain that God has put words into our mouths as if he himself sang within us to exalt his glory. Wherefore Chrysostom exhorts all men and women and little children to accustom themselves to sing them as a means of associating themselves with the company of angels; further, we must remember what St. Paul says, that spiritual songs cannot be sung well but with the heart. But the heart requires the understanding; and in that, saith St. Augustine, lies the difference between the song of man and that of birds, for a linnet, a nightingale, and a jay (*papejay*) may sing well, but it will be without understanding.

"But the peculiar gift of man is to sing knowing what he says. Further, the understanding ought to accompany the heart and affections, which cannot be unless we have the song imprinted in our memory, that we may be ever singing it.

"This present book, for this cause, besides what otherwise has been said, ought to be particularly acceptable to every one who desires, without reproach, and according to God, to rejoice in seeing his own salvation, and the good of his neighbors; and thus has no need to be much recommended by me, as it carries in itself its own value and praise. Only let the world be well advised that instead of songs partly vain and frivolous, partly foolish and dull, partly filthy and vile, and consequently wicked and hurtful, which it has heretofore used, it should accustom itself hereafter to sing these heavenly and divine songs, with good king David.

"Touching the music, it appeared best that it should be simple in the way we have put it, to carry weight and majesty suitable to the subject, and even to be sung in church as has been said." — *Geneva*, 10th June, 1543.

The salient points of Calvin's life may be easily traced. He adopted the reform doctrines about the year 1539; and published the first edition of his "Institutes" in 1535. He was first settled in Geneva in the year 1536; and expelled along with William Farel, his colleague, by the licentiousness of the Genevese in 1538. After a residence of about two years at Strasbourg, he was recalled to Geneva, as the only man capable of saving it amid the turbulence and agitations which raged within the city. There he continued to labor as a reformer, an author, an ecclesiastic, a pastor, and a legislator, till the 27th of May, 1564, when he died.

Calvin undoubtedly gave a great impulse to general dissent, among his followers, from the choral service of the Romish church, with which, on many accounts, it is well known he had but little sympathy. Then, with the as-

sistance that he was able to command, he introduced a version of the Psalms, instead of the choral service; and these Psalms being set to music, soon became popular through all the reformed churches. For this cause it was recorded that he opposed music.

CAMPANINI, ITALIO, was born at Parma, in 1846; was a soldier in the army of Garibaldi, with which he remained until Oct. 1, 1860, when he received a wound which prevented continued service. From this time he devoted his energies to the cultivation of his remarkable musical ability, studying with untiring perseverance. A mere accident had induced him to cultivate his voice. While singing with some friends at a social gathering, a musical authority who happened to be present, remarked on the special excellence and power of his voice, and strongly advised him to study. Campanini was, naturally, much impressed by these remarks, and manifested an earnest desire to become a proficient in the art of song. His parents were wise enough to offer no opposition to his wishes, and he studied with the industry that springs from enthusiasm. At eighteen years of age he was received into the Conservatory of Music of Parma, where he soon made himself a name as the most promising pupil of the institution. For two years he remained there, working steadfastly from six to eight hours every day, and taking especial care not to tire his voice. When he was twenty years of age, an *impresario* offered him an engagement for Russia. For some time Campanini questioned the wisdom of interrupting his studies; but the temptation was too great, and he consequently made his appearance in the small towns of Russia, Odessa, Karkoff, Tiflis, &c., as second tenor. The musical experiences of these unimportant Russian towns must be of a curious and unsatisfactory character. Every singer, whether good or bad, opens his or her career in these provincial opera-houses. Those who subsequently succeed in the great capitals of Europe, and principally in London and Paris, never return to the scene of their original triumphs, while second and third rate singers, finding themselves in the background, on great stages, return to Odessa, Tiflis, &c., as stars.

Campanini, as we have said, made his *début* as second tenor, but was soon promoted to the dignity of first. He remained some three years in Russia, singing at night and studying by day, with praiseworthy perseverance and indomitable energy. He was not content with the success his fine voice had procured him; he was ever anxious to improve; and this is a very rare feature in genius, and especially in musical genius, men are so apt to think themselves finished artists when they have hardly mastered the rudiments of their calling. On leaving Russia, Campanini made his way to Milan, where he studied arduously under the celebrated *Maestra* Lamerti (who taught Mlle. La Jeunesse — known in the operatic world as Mlle. Albani), reputed to be the first professor of singing in Italy. Mapleson, of course, heard of the new tenor who was achieving the most signal successes on the Continent, and he stole a march upon Gye, and secured the rising star for Her Majesty's Opera, Drury lane, where Campanini appeared in 1872, for the first time,

in "Lucrezia Borgia." His success was undoubted, and his hold on the English public as one of the finest tenors — if not the finest — became nearly established. He came to this country in 1873, and sang in the principal cities, but with moderate success.

CARMAIGNOLE. The name of a song and dance, which became popular during the terrible days of the French Revolution. Expressive of a quick-spirited and animating air was a prodigious favorite with the Parisian mobs of that time, who used to call for it from military bands and the orchestras of theatres, and join in dancing to it, singing at the same time the doggerel verses which had been composed for it, some of which bear reference to the first triumphs over the royal family, and their friends, in August and September, 1792. The singing and dancing of the *Carmaignole* became the signal of ferocious attacks on authority. At length Fashion appropriated the word, and applied it to a peculiar form of blouse, with wide sleeves, worn by the revolutionists, and all those who wished to make a show of their patriotism. The song and the new-fashioned garment both disappeared with the reign of terror.

CARRENO, TERESA, pianist, was born in Caracas, Venezuela, on the 23d of December, 1853. Her family is one of the most distinguished Spanish families in that country. Her musical talent first manifested itself when she was about two years old, but previous to that time, even while she was a mere infant, it was observed that she took great pleasure in listening to music. At the early age of two years she sang with singular correctness various operatic airs, and when five years old commenced playing upon the piano-forte. Although entirely untaught, she readily played several Spanish dances, performing a plain but correct accompaniment with her left hand. About a year and a half later, her father, Don Manuel Antonio Carreno, commenced giving her lessons upon the instrument, and the only other instructor she had in Venezuela was Mr. Julius Hoheni, a distinguished German Professor. Mr. Hoheni had her under his care only four months before she left her native country.

Her progress was very rapid. She obtained a perfect mastery over Thalberg's fantasia on "Norma," when only seven years old, and soon after learned many other compositions of the classic and modern composers. Shortly after her arrival in New York, she had an interview with Gottschalk, and played a piece with him for four hands. In six days she learned by heart his "Jerusalem," and the "Banquet," and upon Gottschalk's return from giving some concerts in Boston, he gave her instructions for their more finished execution. She improvises with great facility, and her compositions are of remarkable beauty. She came to this country and appeared in New York in the autumn of 1872, and in Boston soon after, where she created a sensation. Here she was the sole performer, and only nine years of age.

CAROLS. It was a happy thought to mingle music so largely with the festivities of the Christmas season. Throughout Christendom, both in Protestant and Catholic countries,

music enters into the observance of the joyful anniversary more fully than into that of any other festal day of the year. Elaborate musical services are held in many of the churches, and the greatest composers have contributed some of their noblest works in celebration of the event dear to every Christian heart, — the nativity of Christ. Telesphorus, a Pope in the reign of Antoninus Pius, who died A.D. 138, and who is credited with instituting Christmas as a regular festival of the church, ordered that an Angelical Hymn be sung as a part of divine service the night before Christmas — on Christmas Eve — for our Saviour is supposed to have been born about the middle of the night.

The good old custom of singing "Christmas Carols" had its origin in the continued observance of Christmas Eve by the church, and in the mingling of the cheerful element in the holy commemoration of the nativity. The carols date from the time when the common people ceased to understand Latin. The bishops and lower clergy often joined with the populace in caroling and songs, and in the dances which accompanied the singing. Tambours, organs, and various stringed instruments were used to accompany the songs. There are probably none of those early carols yet preserved, although many old compositions of this class are still in existence. Many collections of them have been made from time to time, the oldest of which, bearing the title of "*Christmass Carolles*," was printed by Wynkin de Worde, in 1521. Davies Gilbert published a volume of "*Ancient Christmas Carols*," with tunes to which they were formerly sung in England, and William Sandys made a still more complete collection. Carols exist in other languages as well as English, and there are two books extant containing ancient Welsh compositions of this class, the one called "*Llyfr Carolan*" Book of Carols, and the other "*Bloedd gerdd Cymru*." The former contains sixty-six specimens, and the latter forty-eight. A collection of German carols was published in 1853, and a book of French carols, or noels, at Poitiers in 1824. It is still the custom for the Calabrian minstrels to descend from the mountains to Naples and Rome, to salute the shrines of the Virgin mother with their wild music, under the poetic idea of cheering her until the birth of the infant Jesus. In a picture of the nativity by Raphael, a shepherd is represented standing at the door with a bagpipe. The same idea which now animates the feeble imitators of the bards and minstrels of old, doubtless inspired the early celebration of Christmas Eve. The joyous melodies were supposed to recall the glad songs of the shepherds as they were sung on Bethlehem's plains. Notwithstanding the preservation of many of the endearing Christmas customs of foreign lands, which throw about this festal day such indescribable charms for old and young, comparatively little is known among our people at large about Christmas Carols. In England, the singing of Christmas Carols, or "Christmas Waits," as the custom of peripatetic carolling on the eve before Christmas is termed, is inseparably connected with the happy season.

CARY, ANNIE LOUISE, was born in the town of Wayne, Kennebec County, Me., in

1842. Her ancestors lived in North Bridgewater, Mass., and were noted for some generations for their musical attainments. Her grandfather moved to Massachusetts in 1815. Her father was bred to the profession of medicine, to which he brought sound sense, good habits, winning manners, and enthusiasm which insured success. Her mother was Maria Stockbridge of Yarmouth, long deceased, but warmly remembered for her many virtues. In 1842 Dr. Cary was living in Wayne, Me.; he removed some years later to Gorham, where he has ever since resided. It was a musical family; and Annie's true ear and voice were marked at a very early period. She could sing before she could talk plainly, often chiming in with the older members of the household when singing. Though early recognized as a charming singer, she had no musical instruction except what she received at home, until 1850, when, having completed her education at the Gorham Seminary, she went into her brother's family in Boston. There her rich contralto voice appears to have attracted immediate attention, and early in 1860 she was engaged to sing in the quartet choir at Dr. Stowe's Church in Bedford Street. After two years in Bedford Street, she sang for an equal time at Dr. Lowell's Church, and for two years more at Dr. Huntington's. During these six years Miss Cary was a pupil of Mr. Wheeler, and received instruction from other teachers in Boston. More and more the possibility of her future opened before her. She began to sing at concerts in the cities and larger towns of New England, and learned to trust her powers. In 1866 she fully determined to visit Europe, in order to get herself under the training of the best masters, and to learn thoroughly the French and Italian languages. At Milan Miss Cary met a countrywoman, Miss Whitten of Boston, since deceased. Together these two ladies devoted eighteen months in unintermitting study to the language of the country and the art of music. Afterward they visited in company, Florence, Rome, Naples, and other Italian cities, travelling leisurely, and returning after their vacation to Milan and music. In the ensuing winter, Miss Cary was engaged with an Italian troupe to sing in Copenhagen, where she made her *début* upon the operatic stage. Her reception here was very flattering, and, attracted by the glowing comments of the press, one of the Strakosch brothers presently sent for her to meet him in Stockholm, where she sang for the remainder of the season. At Stockholm she was presented to the King of Sweden by the American Minister, and was received with extraordinary courtesy and attention. The next eighteen months were spent by Miss Cary in Germany, in study, except that during the opera season she returned to Copenhagen. Her services were also in request from time to time at concerts in Hamburg, Brussels, and other German cities, and she sang also at Christiania in Norway. In 1869 Miss Cary was in Paris, still studying her profession, and in February, through the influence of Mr. Strakosch, she was persuaded to appear in London. Her success there was the crowning triumph of her career, and led to the engagement with Stra-

kosch to return to this country with Mademoiselle Nilsson. Her first appearance in New York was on the 19th of September, 1870; and since that time she has shared the honors of the fair Swede, whose soaring soprano was well supported by Miss Cary's rich contralto.

CATHEDRAL MUSIC. The Catholic Church has for centuries possessed the finest service music of any denomination; her many and varied ceremonies call to her assistance the perfections of science and of art. No ornamentation can be too beautiful, no music too sweet, no accompaniment too grand, to give proper expression to the utterances of the Church in its homage to its Divine founder. The greatest masters of painting and of music have exerted themselves to the utmost to assist the Church in rendering the services and surroundings beautiful and sublime. The cathedrals and churches of the Old World have long been noted for the grandeur and magnificence of the musical portions of their ceremonies; but not until within a few years past have the people of the New World given sufficient attention to the subject. This apathy was occasioned, not by the want of inclination, or of taste, on the part of the devotees in this country, but rather by want of proper training. But now, that music has taken a leading position in the education of the people here, there has been a marked improvement in the rendering of church music; and artists and authors have sprung up, many of whom have, within a very short time, acquired a just and enviable notoriety.

England is entitled to boast that her cathedral music is superior to that of any other country, and that, while the music of the church in Italy, and even in Germany, has degenerated, hers retains the solemn grandeur of the olden time. The English services and anthems, too, are more *vocal* than the masses and motets of the Romish church; for in these the voices are very frequently subordinate to the rich and powerful instrumental symphony which accompanies them. English cathedral music is accompanied by the organ only; a kind of accompaniment that is not liable to the changes which orchestral music is constantly undergoing, and, from its grave and solid style, is calculated to support and enrich the vocal harmony without withdrawing the attention from it. The more independent vocal music is of instrumental accompaniment the less it will be subject to the mutability of taste and fashion; and this is one cause of the durability of English cathedral music. Its choral harmony, too, is of surpassing grandeur, when performed with sufficient vocal strength; though, unfortunately, this is seldom the case. The cathedrals and churches are large, and the vocal sound consequently too feeble to fill the edifice. This defect cannot be remedied by the loudness of organ playing. By doubling the quantity of *vocal* sound, the greatness of its effect may be doubled; but not so when the added quantity of sound is *instrumental*. This addition, indeed, frequently subtracts from the effect of the whole; for the listener is painfully exercised in straining his ear to separate the tones and words of the chorister from the mass of instrumental sounds in which they are smothered. The choral estab-

lishments of cathedrals must be numerous, or the singers will be unable to do justice to the grand and solemn music which they have to perform.

CHICKERING, JONAS, was born in New Ipswich, N.H., April, 1797; received a common-school education, and, at the age of seventeen, became an apprentice to a cabinet-maker, in his native town. He had a natural love for music, and spent much of his leisure in learning to sing and to play upon such instruments as were most in use. There was one solitary piano-forte in the place, and one maiden that could play upon it. In course of time, this instrument got out of tune, and Jonas Chickering undertook not only to tune, but to repair it; and was successful. He was then nineteen years of age; and here was the germ of the great piano-forte manufacturing business that now bears his name. He went to Boston, Feb. 15, 1818, and entered the workshop of Mr O-born, then the only piano-forte manufacturer in that city. In 1823 he commenced the business for himself, introduced many improvements, and soon became known. He now identified himself with the musical interests of Boston; played instruments in street-bands; sang *alto* in the church-choirs, and, finally, his establishment became the centre of musical art and artists in the city. In December, 1852, his establishment was totally destroyed by fire; but was soon rebuilt, and upon a more extensive plan. Mr. Chickering was an active member of many of the musical societies, a liberal patron of art, and President of the Mechanics' Charitable Society. He died of apoplexy, at Boston, Dec. 9, 1853, aged fifty-six years, leaving four children.

CHINESE MUSIC. The invention of Chinese music is given in the following legend: About or in the year 2700, B.C., Chr Hoang-ty conquered the celestial empire. He gave orders to Lyng-lun to establish rules for music. The philosopher went to the country called Si-young, where the bamboo grows. Here he cut a bamboo, blew into it, and it produced sounds like the murmuring of the river Hoang-ho, which passes by. While thus engaged in making attempts at finding a system for music, Lyng-lun heard the tones of the wonderful birds called Fung-hoang, the male producing six, and the female answering with six other tones. Only one tone was found to correspond with the tone of Lyng-lun's bamboo. By shorter and longer bamboos, he succeeded in producing all the tones he heard by the birds, and gave thus to the Chinese the six perfect and six imperfect tones. The scale consists of F G A C D. The first tone, F, was called "Kung," or emperor; G is "Ttchang," or minister of state; A is "Kio," the people; C is "Tschu," affairs of state; and D is "Yu," the emblem of all things.

Some of their instruments are very curious. The Yuh-Kin is flat, and its body is round and much like a thin lid of a cheese-box, closed on both sides. It is not varnished, the Chinese believing, and justly so, that unvarnished wood vibrates better. The neck is short, the strings are of silk, the screws consist of long pegs, thick at one end. Its four strings are so arranged that two and two are close together, and are tuned alike: so that two tones can be

produced by the four empty strings. They are tuned in fifths. The instrument has frets like a guitar. It is played with remarkable skill, the strings being struck by the aid of a small piece of wood. Its sounds are harsh, and the rapid succession and long repetition of one tone produces very ludicrous, and at times even offensive effects. This instrument is used for solo playing, as well as for the accompaniment of songs.

The San-Hiin has three strings, and is shaped much like our banjo. The body is of very heavy wood, solid, and covered with the skin of the striped snake. This is done with the object of softening its sounds, and with the belief that there is a charm in the snake-skin. The sounds of this instrument are low and at times dull. It is evidently about an octave lower than the Yuh-Kin. Its strings are tuned in fourths.

The Urh-Hiin, or Chinese fiddle, is the mother of all violins. The base of this instrument is an empty, round piece of wood, much like a reversed tumbler. It also is covered with snake-skin. Two strings are fastened as if it were on the bottom of the tumbler, and run along the neck, which is simply a stick, at the end of which they are fastened. The bow runs between the strings, and the slightest elevation or sinking of the hand will cause thy bow to strike the one or the other string or both, it will be readily seen that it is not easily played. Its strings are tuned in fifths.

CHORLEY, HENRY FOTHERGILL, was born of a good old Lancashire family, 1808; when a boy, went to reside in London, where he diligently studied music, and secured a position in connection with the "Athenæum," and for thirty-five years conducted the musical department of that publication. He was above fear and favor; a warm advocate of what he held to be true, and a bitter opponent of what he deemed the false in art. He published many valuable musical works, among which we mention, "Modern G. Music," "Modern Opera," "Thirty Years' Musical Recollections;" many songs, librettos, and essays; the "Amber Witch," "May Queen," "Kenilworth," "Sapphire Necklace," "Faust," and other librettos. He died Feb. 1872, aged 64.

CRUVELLI, MDLLE. SOPHIE, was born at Bielefeld, in 1828 (some say Dusseldorf), in Prussia. Her name was FRAULEIN CRUVEL; but, after spending some time in Italy, she assumed the name of Sophie Cruvelli. One of her sisters, celebrated for her beauty, and for the fact that she sang successfully at Her Majesty's Theatre, was brought to this country by Strakosch, October, 1859, to sing at the Academy in New York.

D.

DAPONTE, or D'APONTE, LORENZO, was born at Creda, a city of Venetia, 1748; was the composer of the *libretto* of "Don Giovanni," and "Le Nozze di Figaro;" was professor in the seminary of Porto Guaro, and afterwards a resident of Venice; but in 1792, some political reason, or, as he himself supposed, the publication of a satirical sonnet upon Count Pisarl, occasioned his banishment; but we

soon hear of him as Latin Secretary to the Emperor Joseph II., and as a writer of librettos for some of the operas of Mozart, Martini, and Salieri. A green-room quarrel, and consequent exile, sent him to London, where he remained several years as poet and secretary of the Italian opera. He came to this country in 1805; and lived many years in New York City, where he died, August, 1838, aged ninety years.

DAVID, FERDINAND, was an eminent violinist, composer, and concert-master. He was born at Hamburg, on the 19th of June, 1810. David displayed at an early age a decided aptitude for music, and even while a boy, obtained unusual mastery over the violin. Scarcely had he completed his thirteenth year, before he was sent to Cassel, where, under Spohr's guidance, he made rapid progress in his art. As far back as 1825, he undertook a long professional tour, which served to introduce him honorably to the world of music. From his industry as a teacher sprang a long series, comprising admirable editions of ancient and modern classical *Concertstücke*, Bach's Violin Sonatas, and other things, but above all, the model "Violin School," in which he poured the rich stores of his experience and observation. He came forward, also, as a composer, writing especially for his own instrument many well-conceived and effective concertos, variations, and etudes. He entered, too, the sphere of the stage, with his comic opera, "*Hans Wacht*," produced in 1852. He died at Kloster, in Switzerland, July 19, 1873.

DE BERIOT, CHARLES AUGUST, was born at Louvain, Belg., Feb. 20, 1802, and from early youth studied music with great industry. At nine years of age he became an orphan; but found a second father in M. Tiby, and for ten years he practised incessantly, improving upon the school of Jacotot, which was held in high estimation. At the age of nineteen, he left Louvain for Paris, where he enjoyed the tutorage of Baillot, and was advised by Viotti, musical director of the opera. Here he made the acquaintance of Paganini, at whose concerts he made his first public appearance; thus meeting with success, he proceeded to England, and there increased his reputation. While conductor of the opera in 1830, he became acquainted with Malibran, and with her travelled in Italy, deriving great advantage from her advice. She had been married in early life, but had for some time been separated from her husband, and on obtaining a divorce, married De Beriot, March 29, 1836. Their union was happy, but brief: Malibran expiring on the following September. After her death, De Beriot settled at Brussels, where, in 1842, he became professor at the conservatoire. He erected to her memory a beautiful chapel, at Laeken, with her statue in the character of "Norma." In 1842 his former teacher, Baillot, having died, De Beriot became principal of the Paris Conservatory. He gave one or two concerts after this; but in the latter days of his life he became totally blind, and was partially paralyzed; but to the last, his instrument was his constant companion and solace, though his playing was past. He composed much for his instrument, and was the author of a work on the study of the violin. He died at Brussels, Feb. 12, 1870, aged sixty-eight.

DESTRUCTION OF MUSIC-BOOKS, ORGANS, &c. The civil dissensions during the Commonwealth, which ended in the subversion of monarchy and the death of the king, put an entire stop, for a long time, to the improvement of the fine arts in England. The liturgy of the Church of England and the Cathedral service were abolished in 1643; the church-books were destroyed, the organs taken down, and the organists and singers belonging to the churches turned out of their places. Nothing was allowed in the churches but the psalmody of the Presbyterians; and, as the gloomy fanaticism of the Puritans proscribed every sort of light and profane music as a pastime or amusement, the art, for a time, may be said to have been banished from the land. Cromwell himself, however, was fond of music, and frequently indulged himself in hearing it.

The gossiping analyst, Anthony à Wood, tells a story of a student of Christ Church, James Quin, who had been turned out of his place, and restored to it in consequence of Cromwell hearing him sing. "Being well acquainted," says Wood, "with some great men of those times that loved music, they introduced him into the company of Oliver Cromwell, the Protector, who loved a good voice and instrumental music well. He heard him sing with very great delight; liquored him with sack, and in conclusion, said, 'Mr. Quin, you have done very well, — what shall I do for you?' To which Quin made answer, with great compliments, of which he had command, with a great grace, that his highness would be pleased to restore him to his student's place; which he did accordingly, and so kept it to his dying day."

"DETTINGEN TE DEUM." This is, perhaps, the noblest piece of Protestant church-music extant, and derives a special interest from the fact of its having been written to commemorate the last occasion recorded in history of an English king commanding an army in the field. It seems probable that Handel composed it, not to order, but in compliment to his steady patron, George II., inasmuch as it was begun, July, 1743, almost immediately after the news of the victory was known, and completed before the king returned from the battle-field to England. That some of the themes of the choruses were borrowed from a forgotten anthem by Francesco Urio, chapel-master at Venice, and a composer of note, detracts nothing from the merits of Handel, who, like Shakspeare, turned every thing he touched into gold.

This "Te Deum" was written in honor of the victory gained by the British, Hanoverian, and Hessian troops over the French; and was first performed before the King and Court, in the Royal Chapel of St. James, Nov. 27, 1743 (the year of the victory).

King George II. set the example, never since departed from by English audiences, of standing up during the performance of the "Hallelujah Chorus." He was a man of deep musical sympathies, and also a sturdy warrior on horseback and on foot; yet the very name of Dettingen and the record of the victory have been preserved through the instrumentality of this "Te Deum," by Handel.

E.

EICHBERG, JULIUS, the son of a clergyman, was born at Dusseldorf, June 13, 1825. He first attended the musical academy of Wurtberg, Bavaria; then he studied at the college in Meutz, where, at the age of nine years, he played a concerto by Rode. He studied composition with Rietz of Dresden, and afterwards, at the age of fourteen, he became director of the opera at Elberfeld, and then, at the age of sixteen, went to the Brussels Conservatory, upon the recommendation of Mendelssohn, where he studied the violin, under De Beriot and Fétis. Here he took the two first prizes for violin-playing and composition. He then went to Basel, Berne, and Geneva, in Switzerland, as musical director of the opera, and in the latter city remained some time as professor of the violin in the Conservatory, and as director of church-music, appointed by the Consistory of the Church of Geneva. In 1856 he came to this country, and, after remaining one year in New York, removed to Boston, Mass., where he has resided most of the time since. For several years Mr. Eichberg was director of the music at the Boston Museum, and, in 1867, he became director of the Boston Conservatory of Music. He also succeeded Mr. Zerrahn as teacher and director of the music in the High and Normal schools of Boston, upon the resignation of the latter, and, in 1868, he was sent abroad by the School Committee to inquire into the condition of music in the German schools. He is also vice-conductor at the Harvard concerts.

Mr. Eichberg has composed four very successful American operas, the first of which, "The Doctor of Alcantara," was first produced at the Boston Museum in 1868. The other works are, "A Night in Rome," produced in 1865; "The Rose of Tyrol," also brought out in 1865; and "The Two Cadis," first given in March, 1868. All these works had their first representation in Boston, and all except the last at the Boston Museum. "The Doctor of Alcantara" has been given in all the important cities of the Union. Many of his published compositions are of a high order of merit, and among them are symphonies, overtures, quartets, a school for the violin, and some sacred music. His works have been published in Leipsic, Hamburg, Frankfort, Paris, and lately in this country. His career from youth has been marked by an enthusiastic devotion to the art of which he is so brilliant an ornament, and by successes which it is vouchsafed to few to achieve. He studies and thinks and feels the sublimities and sweets of music, regarding it in the light of a sacred message to the hearts and hopes of mortals.

ELECTRIC PIANO. This was one of the great curiosities at a late meeting of a technological society in Paris, in which much interest was manifested. The music produced is said to be brilliant and effective, is automatic, and entirely independent of the skill of the operator. On the interior of this there is a series of electro-magnets, which act upon the ordinary hammers that strike the tones;

these hammers communicate with the key-board in the usual way; but in their opposite end they have small wooden rods terminating with armatures, which are attracted to the electro-magnets whenever they become active. The music to be performed is arranged on a continuous strip of paper, perforated with holes in such a way as to represent the different notes. This long strip, by means of clock-work, is rolled off from one cylinder to another, the two being separated by an intermediate cylinder of metal. There is also a small key-board with small movable copper hammers, which is placed above the intermediate cylinder, so that the small heads of the hammers rest upon the continuous strip of perforated paper. The battery is so arranged that one pull communicates with the small key-board, and the other with the metallic roller. As the sheet of paper is rolled from one wooden cylinder to the other it presses on the metallic cylinder, and whenever a hole in the paper comes under the key-board, the hammer makes contact, and a current passes through to the electro-magnet, which attracts the hammer, and the required note is then struck.

ELECTRIC ORGAN. An instrument of this name was, in 1868, erected at Her Majesty's Opera, London; the body of the instrument being behind the scenes, and the manuals in the orchestra close by the conductor's seat. The performer can sit anywhere away from his instrument, at the opposite end of the house if he likes, the connection between the two being an insulated cable. The effect is good for echoes and strong sensations.

EMERSON, LUTHER ORLANDO, teacher, composer, and director, was born at Parsonsfeld, Me., Aug. 3, 1820; began the study of music at the age of twenty-four, and published his first book of church-music, the "Romberg Collection," 1853; and in 1857, his "Golden Wreath," a school song-book, was published, of which three hundred thousand copies were soon sold; and Mr. Emerson, encouraged by such success, commenced the business of book-making, issuing, in 1858, the "Golden Harp;" 1860, "The Sabbath Harmony;" in 1863, "The Harp of Judah;" in 1865, "Merry Chimes;" in 1866, "Jubilate," followed by the "Chorus Wreath;" "Greeting," a glee book; "Choral Tribute," church-music book; "Glad Tidings," Sabbath-school song-book; "Sabbath Guest," anthem book; "Emerson's Singing School;" "National Chorus Book;" "Chants and Responses;" "Episcopal Chants;" "Cheerful Voices," school song book; and in connection with H. R. Palmer of Chicago, "The Song Monarch," for singing schools, "The Standard," and "The Leader," church-music books.

He has also, with the assistance of Mr. W. S. Tilden, brought out "The Hour of Singing," and "The High School Choir," for High Schools, and "The American School Music Readers," in three volumes, which are graded music readers for common schools.

He has been known as a conductor of more than one hundred musical conventions and festivals in the principal towns and cities of New England, and in the South and West. His published works and his success as a

teacher and conductor have given him great popularity. He is a hard worker, and has a happy faculty of imparting instruction, and has done much to improve the standard of church-music. His vocal and instrumental compositions, published in the form of sheet-music, are numerous and popular.

F.

FELTRE, A. DE, of Nantes, France, was passionately fond of music, which he cultivated with great assiduity; he studied under Reicha and Boieldieu, and composed some pieces much praised by M. Fétis. He subsequently produced a comic opera, "*Les Fils du Prince*," which was successful; and composed the "*Incendio di Babylonia*." His third opera was nearly completed, in 1854, when he died. His brother, Duke Edgard de Feltre, a musician and patron of the arts, died soon after, bequeathing his library to the municipal authorities, who opened it in 1856, with a grand musical festival, at which the works of Count Alphonse were executed by the principal artists of the city.

FLOTOW, VON FRIEDRICH, a nobleman, a son of a wealthy lord of the manor; born in Meeklenburg, north of Germany, 1812. He early went to Paris, where he studied music, opera, ballet, and soon became known as a musician and composer. Flotow learned first how to write little romances in the French style, then he tried larger forms, until, at last, he accomplished the short opera comique. Paris has been, in a musical sense, the cradle, nursery, and school-room of Flotow; he learned there to creep, to walk; to spell, to write, and to produce. Had Flotow continued to walk in the same path, — to compose only for the Opera Comique in Paris, — the desired full success would not have failed to appear at last; but, at that time, he made the acquaintance of a German author, who spent a portion of each year in Paris, to look out for pieces to translate and arrange for the German stage; and it is this acquaintance which changed the course of the composer, and had the greatest influence upon his further career. The public name of that author is W. Friedrich, of a wealthy merchant family in Hamburg. This man has obtained a reputation in Germany for being the best translator of French pieces, for his great knowledge of the stage, and the ability to write gentle verses, especially for opera purposes. Flotow required a libretto; Friedrich proposed one for the German stage, based upon the principles of the French Opera Comique; Flotow agreed, and both men began to work. The first sign of this new partnership was the opera, "*Alessandro Stradella*." It is almost the same plot which inspired Niedermeyer to make a grand opera for the French Academy of Music. The next opera was "*The Sailors*," a more severe undertaking, and for this very reason unsuccessful. Flotow was, in consequence of this, rather dissatisfied with his partner; still he agreed for a third trial together. The result was "*The Forester*." Again no success; decidedly Mr. Friedrich was not worth any thing. Flotow resolved upon dissolution of the partnership; but first,

he would try once more the ability of the librettist. "*Martha*" was the result of their labors, and this time a successful one. "*Martha*" gave the composer a position and reputation in Germany, which his later operas, "*Indra*" and "*Rubezahl*," although they were very feeble reproductions of his powers, could not shake! The music to "*Martha*" is spiritual, light, and brilliant, grateful to the ear, the singers, and also, as experience has taught us, to the composer himself. Flotow married at Vienna, 1849, but his wife died in 1850; he afterwards became manager of a theatre, but soon resigned in disgust; afterwards married a second wife, and took up his abode at Vienna. The opera of "*Martha*" was introduced to the American public by Madame Bishop, when she was in this country with Boehsa, the harpist.

FORMES, CARL JEAN, was born in the little village of Muhlheim, on the Rhine, Aug. 7, 1818. He received instruction in music early in life, and displayed great love for the art; but his father, being a practical man, proposed that he should follow some other occupation. The course of life decided upon for him became extremely distasteful to the young artist, and he took the only way in his power to free himself from it — he enlisted in the Austrian service. This step fortunately brought him to Vienna, where his intelligence and fine musical organization soon attracted the attention of Bassadone, who at once offered to direct his musical studies. He pursued his art with enthusiasm and such rapid strides, that on the 6th of January, 1842, he made his *début* in Cologne in the character of Sarastro in Mozart's opera of "*Die Zauberflöte*." His success was unequivocal, and he was admitted into the community of artists from that night. In 1843 he was chosen a member of the Court Opera at Manheim, and in 1844 he became a primo basso assoluto at the Imperial Opera House in Vienna, where he receives the largest salary ever given to a German artist. Formes made his first appearance in this country at the New York Academy, Dec. 2, 1857, where the great volume of his voice excited general admiration.

FOSTER, STEPHEN C., was born in Pittsburg, Penn., July 4, 1826. His father was a farmer, and laid out on his property a town, which he intended to call Fosterville, but which he concluded to name Lawrenceville, in honor of the gallant Capt. Lawrence, adopting as the motto on the corporation seal the dying words of Lawrence, "Don't give up the ship." Stephen C. Foster, when young, learned, unaided, to play several instruments, but was never eminent as a performer. He was fond of singing his own songs, and of making accompaniments with the piano-forte or guitar, and he resided on his father's farm all his life, excepting three years in Cincinnati, O., and two years in New York City. He enjoyed but limited opportunities for musical instruction; but when nineteen years of age, he composed for a social quartet club, of which he was a member, his first successful song, the popular favorite, "*Uncle Ned*;" this was followed by "*Susanna*," "*Old Folks at Home*," and a long catalogue of similar songs, known all over the world. The reason of the popularity

of Mr. Foster's songs lies in their easy, flowing melody, the adherence to plain chords in the accompaniments, and the avoidance of intricacy in the harmony, or embarrassing accidents in the melody. He was "the finder of many melodies," and his compositions, if not his name, are familiar everywhere. He was, in his time, the ballad-writer of America. He died and was buried at Pittsburg, Jan. 18, 1864; and, at his grave, a band of music performed his "Old Folks at Home" and "Come where my love lies dreaming."

FRANZ, ROBERT, the song-writer, was born at Halle, on the Saale, June 28, 1815; his parents belonged to the middle class, and could sing chorals and church music, but were insensible to all other musical impressions. Robert grew up unconscious of the musical capacities slumbering within him; but he heard music in church, and at school practised singing one hour each week. At length a piano-forte was purchased; and the boy, then fourteen years of age, soon learned to play accompaniments for the music class at the gymnasium. He next was admitted into the musical circle of Schröner, "Landgerichts director," at Halle, and this event exercised an important influence upon his future development. Principally compositions of the old Italian masters, and works of Bach and Handel were practised in this circle. Franz, at first one of the chorus, soon became the accompanist, and thus the direction of the whole fell into his hands. He, after this, gave a direction and important artistic meaning to music at Halle; his firm yet modest character exercised an important influence, and he ever after enjoyed the universal esteem of friends and acquaintances.

FRY, WILLIAM HENRY, of Philadelphia, Penn., enjoyed rare musical opportunities; in 1849 went to Paris, with the intention of collecting antique specimens of music, illustrative of the progress of the art; returned in 1854, and, having been a correspondent of newspapers, he now became connected with "The New York Tribune," as musical critic. Previous, in 1840, he composed some "Concert Overtures," which were performed in New York by Jullien's orchestra, then giving concerts in this country, and also an opera, "Leonora," which was performed in Philadelphia: some of the melodies from this work won considerable popularity. Later, Mr. Fry composed a "Stabat Mater" and some "Violin quartets," eleven in number. In 1855, in a series of papers, he undertook to prove that "all that is good, great, or novel in the art of music comes from Italy;" and was opposed by those who claimed "that, wherever the musical art has entered upon a new phase, and made new steps in its progress, it has originated from German genius and from German inspirations." This controversy proved unfavorable to Mr. Fry, and his works could not gain a hearing. In 1853 he delivered a course of lectures in New York, illustrating them by practical performances; he employed Italian vocalists, a chorus of one hundred singers, an orchestra of eighty performers, and a military band of fifty performers; it did not pay, and, having expended many thousand dollars, the lectures closed. His second opera, "Notre

Dame," was a failure in New York, but well received in Philadelphia, May, 1864. Mr. Fry died at Santa Cruz, Dec. 21, 1864.

G.

GARDINER, WILLIAM, was born at Leicester, Eng., 1766; well known as the author of "Gardiner's Music of Nature," "Music and Friends," "Sights in Italy," and other musical works, died at his residence in Leicester, Nov. 16, 1853, aged eighty-seven. His "Sacred Melodies" contain some of the most popular choruses — such as "Now elevate the Sign of Judah," and others first adapted to English words, and published by him. Old Dedham was composed by him.

GÉVAËRT, M. CHARLES, born near Ghent, of Belgian parents, 1820; made his *début* in Paris as a composer, with success; his first attempts at writing being performed by setting upon the ground and tracing figures in the sand, which were musically intelligible to him. Self-taught, he composed an air with variations, a mass for three voices, motets, trios for instruments, &c., which spread his fame among the neighboring villages. He now entered the Conservatoire at Ghent, gained the prize for harmony and counterpoint; in 1847, at Brussels, he gained the prize which entitled him to visit Rome; before going there, however, he composed several operas, performed at Ghent. In 1849 he visited Paris, Italy, Germany, and Spain, at the expense of the Belgian government; returned to Ghent, 1852; again visited Paris, 1853, and produced there a comic opera, "Georgette," 1854. In 1858, still at Paris, he produced at the Opera Comique "Quentin Durward," based on the novel of Walter Scott.

GEWANDHAUS CONCERTS IN LEIPZIG. These concerts, so justly celebrated for their production of a vast amount of the good music of all times, and the admirable performance of it by one of the best-trained orchestras in the world, date as far back as March 11, 1743. At least, on this day, sixteen persons, citizens as well as noblemen, resolved to pay yearly twenty dollars each, for the purpose of having every year one concert in which also sixteen performers should take part. Four weeks after this meeting this concert took place; and in 1744 we find in the "Continuatio Annalium," Lip. Vogelii, p. 565, the following: "March 9th, the anniversary of the 'great musical concert' was held, with trumpets and cymbals, by a cantata composed by Mr. Dohles."

These concerts were repeated every year, with only a short interruption at the critical period of the Napoleonic war, 1813-14. It was Nov. 15, 1781, when they were given for the first time at the Gewandhaus, a large building at Leipzig, where they have ever since been held. In 1781 Adam Hiller, a distinguished musician, who, as early as 1766, had commenced editing a periodical work on music, conducted the vocal part of the concert. The instrumental part was left to the care of the first violin, that is, to the same person who in our day is called leader. Cantor Schicht conducted from 1785 to 1810, and after

this, until 1827, came Cantor Schultz. When Schumann came to Leipzig, Pohlentz and Matthæi, both leaders, conducted the concerts; and in 1835 Mendelssohn appeared for the first time at the head of this orchestra, conducting with a *baton*. With instrumental compositions this had never before been done in Leipzig. After Mendelssohn, came Gade, and after him, Julius Rietz.

GILLIERS, JEAN CLAUDE, composer, was born in Paris, 1667; began his career at the Comédie Française, as a violinist, where he wrote music for the dances. He became known as the founder or creator of that national French form of the musical drama, the comic opera. The list of his works, which are distinguished by frank gaiety, neatness of rhythm, and a melody easy to fix in the memory, is large; fifteen of them are dated between the year 1711 and 1736, some of them being published a short time before his death, which took place at Paris, 1737, when he was seventy years of age.

GIRAC, EM, for several years after he came to this country a professor in one of the Western colleges, was esteemed as an accomplished scholar; in 1853 became assistant editor of "The New York Musical World and Times;" was a graduate of the Paris Conservatoire, and known not only as a choir-master, musician, critic, and composer, but as the author of the "Appendix and Notes" to the American edition of "Marx's Musical Composition." Soon after the publication of that work, returned to Paris, and died there, on Christmas evening, 1869. He was one of the Faculty of Notre Dame.

GODDARD, ARABELLA, born at St. Servan, Brittany, Jan. 12, 1836; appeared in public at the age of five years, as a pianist, at a charity concert in her native village; studied in Paris, and performed at Buckingham Palace, London, 1848. She now studied the works of the great masters with untiring zeal, and in 1854 took rank with the first pianists, playing at the concerts of the quartet association in 1856, at which time she was considered as one of the best pianists in London, and was afterwards called "Queen of the piano-forte." She married W. J. Davison, musical critic of "The London Times;" made a successful concert-tour through the principal cities of Germany, through Europe, and her services were in constant demand at the grand concerts; she came to America in 1872, performed at the Peace Jubilee, in Boston, and retired from the stage, bidding her English friends adieu, in 1873, at the most brilliant point of her career, intending to travel round the world, to Australia, California, and Canada on the way.

GOTTSCHALK, LOUIS MOREAU, a Creole, born in New Orleans, La., 1829. At the age of twelve years (1841), went to Paris for musical instruction, and appeared in concerts there in 1845; returned to the United States, January, 1853; was assisted by Jonas Chickering of Boston, in commencing his musical career in that city, and by Francis G. Hill; afterwards made a professional tour through South America; gave concerts in the United States, and published compositions for his instrument; became generally known as a pianist, and finally settled in Brazil, receiving many

attentions from the emperor. At a public concert, while performing one of his own compositions, "*La Mort*," he was seized with sudden illness from which he never recovered. This was at Rio Janeiro, his disease being a cancerous affection of the stomach. He died at Tijuca, where he had been taken, in the hope that a change of air would benefit him, Dec. 18, 1869. He was a Roman Catholic, and the funeral exercises were conducted with the usual rites of that church; was buried in the cemetery of San Joas Baptista, in Boto Fogo. He left several unpublished works, including three operas; was a man of genius, and his career as a pianist was one of great brilliancy.

GOUNOD, CHARLES F. F., was born at Paris, June 17, 1818; studied harmony under Reicha, Lesneur, and Halevy; gained a second prize in 1837, afterward the first prize for musical composition in 1839, and lived until 1843 in Italy. His passion for sacred music induced him to quit the villa Medicis, for the seminary at Rouen, and for some time he even thought of taking holy orders.

On his return to Paris, he was for six years attached as chapel-master to the church of foreign missions; had some of his early compositions performed there, and gained a genuine success by "Solemn Mass of St. Cecilia" ("*Messe solennelle de Ste. Cecile*"), sung at St. Eustache in 1849.

The following year the field of the opera was opened to him by "Sappho," a lyric drama in three acts. A great artist, Mad. Viardot-Garcia, had obtained this poem for him. She took the principal part in it, and was as worthy an interpreter as she had been faithful patroness. The critics were unanimous in hailing the new master. The grandeur of the recitatives, the fullness of the melodies, the steady power of the *orchestration*, revealed a composition of high character, a composer of rare excellence. It was a happy protest against the instrumental uproar by which so much abuse had been effected, and which is still so fruitful of mischief. The difference between power and noise was soon thoroughly recognized. In spite of the sympathetic welcome of the public, notwithstanding the transcendent merit of the work, "Sappho" had at Paris only nine representations. In it there was no *ballet*, and the ballet is a *sine qua non* to the success of an opera.

On the 18th of June, 1852, at the French Theatre, was played "Ulysses," a tragedy in five acts, by François Ponsard. The music of the choruses was by Gounod. This music displays a masterly movement, a vigor of invention, a profound appreciation of situation and color. The composer has thrown over the barren and colorless verses of Ponsard the splendid vestment of harmony.

"The Bloody Nun" ("*La Nonne Sanglante*,") an opera in five acts, was produced in 1854. The libretto had already been intrusted to several composers, among them Hector Berlioz. All had rejected it. Gounod, to whom it was then offered, accepted it. There are fine passages, grand qualities in this work; but it lacks unity.

Gounod, who, by a singular fortune, had risen in proportion to the inferiority of his

poets, or his *paroliers*, as Castil Blaze called them, reached his popularity by the choice of a piece which might have crushed him. We mean "The Physician in Spite of Himself" ("*Le Médecin malgré lui*"), a comic opera in three acts, brought out at the Lyric Theatre for the first time, Jan. 15, 1858. Instead, however, of overpowering him, the genius of Molière sustained, relieved, and inspired him. His music is wonderfully appropriate to this master-piece, and has all its fine healthy qualities, — clearness, elegance, correctness, vigor.

In March, 1859, the first representation of "Faust," a lyric drama in five acts, was given at the same theatre.

A first symphony, entitled "The Queen of the Apostles," ("*La Reine des Apôtres*") 1850, two other symphonies executed by the Society of Young Artists (1855 and 1856), and a cantata, on occasion of the visit of the Queen of England to Paris, complete, thus far, the list of the compositions of Gounod. The symphonies, conceived in the form consecrated by Haydn, Mozart, and Beethoven, are especially remarkable for their ample melody and scientific orchestration. A fervent worshipper of the masters, a passionate disciple of Bach, Handel, and Mozart, Gounod devoted himself to the constant study of their works, and apprehended and appreciated them to a wonderful degree.

In 1852 Gounod was appointed director of the Normal course of singing of the city of Paris, known under the name of, *Orphéon*, and has since then labored constantly to improve the *Méthode Wilhelm*, so as to secure the concurrence of the rival methods. In 1847 he married the daughter of the piano-composer, Zimmerman, and was decorated with the Legion of Honor, Aug. 15, 1857.

GRISI, JULIA, mentioned in vol. i. p. 347, visited this country in 1854, in company with her second husband, Mario, and sang in the principal cities of the United States with the highest success. In 1855 they returned to Europe. In her day, Grisi was the queen of the realm of acting and music; she drank the cup of pleasure to its dregs, and was crowned with the laurel of the world's admiration. She died at Berlin, Nov. 29, 1869, aged fifty-eight years. In her the lyric stage lost an artist who was great in natural talent and inspiration, and splendid in achievement. For more than twenty years she held supremacy in the same capital, London. She possessed a strong, sonorous, sweet, extensive voice, a legitimate dramatic soprano, ready at its owner's call, and capable of conveying almost every emotion of the imagination.

GROBE, CHARLES, the son of a Lutheran clergyman, is a native of Sax Weimar, Germany; born 1817; came to this country 1839, and was appointed, 1841, professor of music in the Wesleyan Female College, Wilmington, Del., which situation he held several years. In 1842 his piano-forte publications became known, which are very numerous. His "New Method" for the piano-forte is among the most important of his works, published in 1859. He is known as a contributor to different musical publications, as a composer of variations more than as a performer.

H.

HAGEN, THEODORE, was born in Hamburg, April 15, 1823. He was a pupil of Jaquez Schmitt in piano-forte playing; went to Paris in 1841, and studied harmony for two years, under George Kastner, and in 1843 commenced his career as a writer under the name of Joachim Fels. He wrote articles for the leading papers of Germany, especially for Schumann's "*Neu Zeitschrift für Musik*." Returning to Hamburg, he there gave concerts, in which he introduced several pieces for voices and orchestra, and other music of his own composition. He now became musical editor of the leading daily paper of Hamburg, and wrote his first book, "Civilization and Music," which had a great success, and was published in Rome. In 1848 his "Musical Novels" were published, which have been translated into French and English. Mr. Hagen came to New York in 1854, and, renewing here the acquaintance of William Mason, whom he had met at Liszt's in Weimar, he was introduced to Mason Brothers, at that time publishing a fortnightly paper, "The Musical Review and Choral Advocate," who offered him the editorship of a new musical journal, which they were about to start under the name of "The Musical Gazette." This paper, published weekly, Mr. Hagen edited for about six months, when it was merged into the "New York Musical Review and Gazette," which he edited to June, 1862, when he became the proprietor. In January, 1865, he enlarged it to a double folio of large size, weekly, including literature and the fine arts, but giving prominence to musical matters. Died in New York, Dec. 27, 1871, aged forty-eight. He was greatly beloved by those who knew him, for his manliness, his goodness, his generosity, his wide range of sympathies, and the happy and winning compound of refinement and joviality that he diffused in the every-day business of life. His career as a journalist extended over a period of more than thirty years.

HASTINGS, DR. THOMAS, was born in Litchfield, Conn., on the 15th of October, 1784; but his parents, during the winter of 1796-7, removed to Oneida County, N. Y., then one of the border settlements of the West. In 1819 he published "Musica Sacra, or Springfield and Utica Collections United," assisted by Solomon Warriuer, at Utica, N. Y.; which implies that the two collections had before been published separately. In 1822 he published his "Dissertation on Musical Taste;" which excited much interest, but he was declared to be a generation ahead of the time. After a year spent in Albany, in charge of a choir, he removed to Utica, N. Y., in 1823, to become the editor of a religious journal. Here he spent nine years, never, during his editorial life, losing sight of the interests of sacred music. His articles in this paper created much interest, and invitations to lecture on the subject came from various Eastern towns and cities. In 1832 he was invited by twelve churches of New York to take up his residence there, and thenceforth, for almost forty years, with unflagging zeal and industry, and with great singleness of purpose, pursued his ap-

pointed work. He wrote much for the press, lectured frequently, and published many volumes of sacred music. In 1831 he issued at Utica, "The Spiritual Songs," with music; in 1836, in connection with Dr. William Patton, a church hymn-book, "The Christian Psalmist." This was followed, in 1837, by the "Manhattan Collection" of church music. In 1838 he edited a musical magazine; in 1840 published the "Sacred Lyre," and also about this time a volume of juvenile and nursery songs, with music, and a collection of hymns for maternal associations. A few years later, he formed a connection with William B. Bradbury; and together they issued "The Psalmist," in 1844; in 1847, "The Choralist;" in 1849, "The Mendelssohn Collection;" in 1851, "The Psalmista." He also published a history of forty choirs, and a new revised edition of his work on musical taste, and a collection of his own "Devotional Hymns and Poems." His late works, after separating from Mr. Bradbury, were "Schah," issued in 1856, and "The Church Melodies," a book of hymns and tunes for congregational singing, in which he had the assistance of his son, the Rev. Dr. T. S. Hastings. In addition, he edited two collections of hymns and tunes for the American Tract Society and the Presbyterian Board of Publication. During his life he wrote no less than six hundred hymns. Died May 15, 1872, aged eighty-eight.

HAYTER, A. U., was born in Gillingham, England, on the 16th of December, 1799. He was the eldest son of Samuel Hayter of More, England, an organist of eminence in the Established Church of that town. At the age of six years he was placed in the collegiate school connected with Salisbury Cathedral, England, where he was educated. While there, he received his musical instruction from Mr. Corfe, the celebrated composer, and organist of Salisbury Cathedral. When Mr. Corfe was compelled, by advancing years, to relinquish active duties as organist, he was succeeded by Mr. Hayter, who retained this important position for a number of years. During this time he achieved eminence, and was offered the situation of organist at the Cathedral of Hereford, which he accepted. In 1835 he left Hereford, and came to New York, where, at the solicitation of his devoted friend, Rev. Dr. Wainwright, then rector of Grace Church, he accepted the position of organist.

Shortly after, Dr. Wainwright received a call to the Trinity Church Society of Boston, Mass., and was commissioned by the wardens and vestry of the church to visit England for the purpose of procuring an organ, which was completed and ready for use in March, 1837. At the solicitation of Dr. Wainwright, Mr. Hayter resigned his situation at Grace Church, New York, and came to Boston as organist of Trinity Church, which position he held for more than a quarter of a century. In July, 1862, while playing the morning service, he was suddenly stricken with paralysis, from which he never recovered. In 1839 Mr. Hayter was elected organist and conductor of the Handel and Haydn Society, during which year he visited Europe for the purpose of selecting new oratorios. He achieved great success for the society, bringing out nearly all the ora-

torios ever given by it. He died in Boston, July 28, 1873.

HERVÉ, whose real name is Florimond Rouger, a French composer, was born at Hon-dain, near Arras, in 1825, and was brought up in Paris among the music pupils of the Church of St. Roch. He was afterward, for eight years, organist at St. Eustache, and at the same time leader of the orchestra at the Palais Royal. He then sang at the Théâtre de l'Opéra National, where, in 1842, his "*Don Quixote*," the first specimen of opera bouffe ever presented to a French audience, was produced. It was well received, and one of the principal airs, the "*Ronde de Sancho*," obtained popularity. As a protégé of M. de Morny, Hervé became connected with various theatres, where he continued to produce similar entertainments, and thus paved the way for Offenbach, who, in fact, managed to eclipse him in popularity, and for several years kept him from the stage. In 1853 Hervé founded the Folies Concertantes, where he produced several *bouffonneries*, among them "*La fine Fleur de l'Andalousie*;" but a condemnation by the Police Correctionnelle at length put an end to this phase of his musical career. Since 1865, when he became leader of the orchestra at the Eldorado, he has again appeared frequently before the public as a rival of Offenbach. Among his later productions are "*L'Œil Crevé*," "*Chilperic*," "*La Petit Faust*," and "*Les Turcs*." These compositions have achieved a popularity scarcely second to that of Offenbach's works.

HODGES, DR. EDWARD, was born in Bristol, England, in 1796. He spent the earliest years of his life in his native city, holding the post of organist of St. James' and St. Nicholas' Churches, and director of music in the Parish Church of Clifton. At that time he produced many works for the service of the sanctuary. He is remembered by the older inhabitants of Bristol as a very fine instrumental accompanist. It was said that it was as good as a sermon to hear him play a psalm-tune. In 1827 he received the degree of Doctor of Music from Cambridge. In 1828 he came to the United States, intending to settle in Canada as director of the music of the Cathedral Church of Toronto. But the destruction of that church by fire, shortly after his arrival, left him at liberty to accept the position of organist at Trinity Church, New York. Died at Bristol, England, Nov. 1, 1867, aged seventy-two.

K.

KELLOGG, CLARA LOUISE, was born at Charleston, S. C., of New England parents, 1840. Removed to Connecticut when quite young, and made her first appearance, in opera, at New York, 1861. After singing in the large cities of the United States, she made her appearance in London, at Her Majesty's Theatre, Nov. 1867. One of her great charms is her perfect enunciation. Her voice is a soprano, extremely agreeable, and astonishingly flexible. Her phrasing is finished; her cadences are so rounded as to satisfy the most exacting ear; and her acting is that of a highly

bred artist. Her evenings in London were always attended by crowds of the most refined and cultivated persons. Miss Kellogg's career in Europe was brilliant and successful, and she may properly be numbered among the Americans whose genius has won the warm praise of European scholars and connoisseurs.

KREBS, MARIE, was born in Germany, in 1850. Her father is known as a composer and leader of the Dresden Court theatre and opera house, and her mother as one of the finest *contraltos* of the German operatic stage.

KELLER, MATTHIAS, born at Uhn, Wurttemberg, March 20, 1813; early became a bandmaster. He came to this country in 1846, and became a violinist in Philadelphia, Penn., and then a conductor of English opera in New York. He afterwards removed to Boston, Mass., where he became celebrated as a songwriter, but chiefly as the author of the "*American Hymn*," which was performed at the Peace Jubilee by a chorus of ten thousand five hundred voices and an orchestra of eleven hundred.

KULLAK, THEODORE, court pianist to the King of Prussia, was born Sept. 12, 1818, at Krotogee, a village in the duchy of Posen (Russian Poland). His talents for music attracted the notice of Prince Radziwill, who gave him the means of study. In 1850 he joined with Stern and Marx in founding the Conservatorium of Music, from which, however, he separated, in 1854 (or 1855) to establish another with Dehn, Haupt, and others, which is in very successful operation.

He has written a good deal of music, published many "transcriptions," &c. His "School for Octave-playing," and another work of instruction "Materials for Piano-forte playing," are held to be in the very first rank of works of the kind.

I.

LAW, ANDREW, born at Cheshire, Conn., 1748, was a well educated gentleman, possessing rare attainments, varied talent, and good moral character. Early in life he became somewhat celebrated as a teacher of vocal and instrumental music, and was much better informed, in regard to the science of sounds, than any teacher of his time in this country. He taught music in the New England States and in the South, for many years, with success, and also in some of the academies and colleges; and in these, where the officers and students of those days were accustomed to investigate every subject connected with education, his fine talents were appreciated. In 1782 he published, at Cheshire, Conn., "A Collection of the best and most approved Tunes and Anthems known to exist;" a second volume was afterwards published containing sixty-four pages, the whole neatly engraved, called "Christian Harmony." It has been asserted that Mr. Law published a singing book, entitled "Sacred Hymns," as early as 1779, but we have never seen the book: the first of his works that has come to our notice is the "Musical Primer," 1780. In 1786 he published, at Baltimore, Md., an "Original Collection of Music," and in 1792 he published the fourth edition of a work

entitled "The Rudiments of Musick," 76 pages, engraved plates. The copy of this work before us was owned by Timothy Swan, author of "China," "Poland," and other living church tunes, and was presented by him to the Harvard Musical Association. "The Musical Magazine," by Mr. Law, was the first musical periodical ever published in this country, and formed the third part of his "Art of Singing" in three parts, to wit: I. The Musical Primer; or, the first part of the art of singing; containing the rules of psalmody newly revised and improved, together with a number of practical lessons and plain tunes; designed expressly for the use of learners. II. The Christian Harmony; and III. The Musical Magazine. These three works were sometimes bound in one volume and sometimes separately, each part containing 96 pages. But it seems that the second part was published last of all, for a bound book before us contains the Primer and the Magazine: only it is called the "Art of Singing," and is the fourth edition, with additions and improvements, printed upon a new plan, and published according to act of congress. The Primer having been printed at Cambridge, Mass., by W. Hilliard, 1803, and the Magazine by E. Lincoln, Boston, 1805; and thus it appears that these two parts, 1st and 3d, were issued before the second part. This edition is in the new notation, without lines, and was sold by John West, No. 75, Cornhill, Boston, Mass. In an advertisement of this work, the author says, "Additional numbers may be printed upon this plan, as often as the public mind shall be prepared to receive them. The second part, or 'Christian Harmony,' will soon be printed in this way." This was afterwards published, and contained 64 pages, engraved music. In his preface to this work, Mr. Law says, "The art of singing will consist of three leading parts: the Musical Primer, the Christian Harmony, and the Musical Magazine; the second part, or the 'Christian Harmony,' will be further divided into two volumes; and the third part, or 'Magazine,' into a course of numbers. It is to comprise the elements or rules of the science, together with a regular gradation of the best sacred music, from the plainest tunes up to the nicest airs and anthems."

Mr. Law composed a number of excellent church tunes, which have had a wide celebrity, and are still in use; one of his compositions, the tune "Archdale," is familiar to every singer acquainted with the singing-books which have been published within the last fifty years; but he was principally celebrated as a teacher, and as the inventor of the patent note system, which characterized all his publications. He died at Cheshire, Conn., July, 1821, aged 73.

LECOCQ, CHARLES, a distinguished composer of opera bouffe, was the son of an employé of the Tribunal de Commerce. He was born at Paris, on the 3d of June, 1834. At a very early age he displayed an astonishing talent for music, and could play the flageolet when only three years old. He commenced the study of harmony in 1850, at the Paris Conservatoire de Musique, and made such rapid and excellent progress that he carried off several prizes, among others, when only twenty-one years old, the second prize for fugue and

counterpoint. His first composition was "*Le Docteur Miracle*," which was represented in 1857. This was speedily followed by "*Le Baiser de la Porte*," "*Liliane et Valentin*," "*Les Ondines*," and "*Le Cabaret de Ramponcaui*." In January of the following year Leocq produced "*L'Amour et son Carquois*," which proved a great success, and had a long run when first brought out; in March, "*La Fleur de Thé*," which has been represented with a success only second to that of "*La Grande Duchesse*." Other operas of the same general character followed in rapid succession, the most popular being "*Le Cent Vierges*." In 1872 appeared his most successful effort, "*La Fille de Madame Angot*," which has been received with great favor in all the large cities of Europe and America. Leocq's latest production is "*Giroflée Girofla*." It was first represented in Brussels at the Théâtre des Fantaisies Parisiennes, in March, 1874, and soon after on the boards of one of the London theatres.

LOEWE, JOHANN KARL GOTTFRIED, was born on the 30th of November, 1796, in Lobejan, near Halle; and he received from his father, who was Cantor, not only a severely pious bringing up, but also the foundation of his musical education, which he continued from his tenth year as choir-boy in Koethen, and completed in the orphan house at Halle as a pupil of the celebrated old Türk, who took a fond interest in the talented boy. After the prospect of a purely musical career — with a salary from the King of Westphalia — was cut off for him by the revolution in political affairs, he accommodated himself to the favorite wish of his father, and studied theology in Halle, where he was matriculated at Michelmas, 1817. As his clear, but somewhat sharp soprano had done for the boy, so now his exceedingly delicate tenor, of great compass, and his pure intelligent delivery, won for the youth a great many friends. Moreover, the composition of his best ballads, "*Treuroschen*," "*Waltheide*," "*Erlkönig*," &c., falls within this student period. Loewe's published compositions number more than one hundred. He wrote also symphonies, overtures and sonatas. Besides being one of the most prolific composers of recent times, he was also active in a literary way. He wrote a vocal method for high schools, which appeared in 1826, and a commentary on the second part of Goethe's "*Faust*." He died April 20, 1874, at Kiel, aged 73.

LUCCA, PAULINE, the daughter of poor but worthy parents, who, on account of reduced circumstances, were unable to educate their children, was born at Vienna, April 25, 1840. A professional singer named Erl, who accidentally discovered that she possessed a most promising voice, very generously undertook to give her instruction; and when fifteen years of age, she obtained an engagement at the Karlsruher Thor Theatre, and assisted in the Sunday services at the Karl Kirche. At the latter place, the unavoidable absence of a leading vocalist, in 1856, gave the youthful aspirant an opportunity for distinguishing herself; and the sensation she created was so great that means were devised by the principal musicians in Vienna to enable her to complete her training. Her improvement was

rapid and decided; and having accepted an engagement to sing Italian parts at the Olmutz Theatre, she appeared in September, 1859, for the first time, as Elvira in Verdi's "*Ernani*," with such success that brilliant offers were immediately made her from many parts of Germany. She afterwards sang with immense success in Berlin, Paris, and London, and more recently in this country.

M.

MARETZKE, MAX, born in Austria, 1828; came to this country in 1848, and has been more or less engaged since in conducting Italian opera here.

MARIO, GIUSEPPE (Marquis of Candia), was born at Cagliari, in Sardinia, Oct. 18, 1810. His visit to this country, in company with Grisi, 1854, and his return here in 1873, will be well remembered. As a singer, he is distinguished for a voice of rare sweetness and purity, graceful vocalization, excellent method, and fair dramatic ability. He has rarely or never been without a good engagement; and if not rich, it is because of his great liberality to his countrymen, whom, as political exiles and artists, he has ever been ready to relieve. His repertoire embraces the great works of Rossini, Bellini, Donizetti, and Verdi. Nearly all the great artists contemporary with him have passed away, and he is left, almost the "last leaf upon the tree."

MAROT, CLEMENT, was a valet of the bedchamber to Francis I., and the favorite poet of the country at that time, about the year 1540. His amorous ditties were the delight of the French court, and when his "*Saintes Chansonnettes*" was first published, his thirty psalms acquired such favor, that, in spite of the censures of Sorbonne, they were sung by the king, queen, and chief personages of the court. In fact, so great was the favor with which his "holy song-book" was received, that, for a time, nothing was heard but the Psalms of Clement Marot in all France, and at the splendid court of the gay French monarch. Calvin, finding these Psalms so popular, introduced them into the celebrated "Genevan Psalter," and probably they were accompanied by the same old and familiar melodies. In this Psalter, Old Hundred is one of the tunes; and as Guillaume Franc was the person who arranged the music for the "Genevan Psalter," the same claim, that he composed Old Hundred, has been established for him as was made for Claude Goudimel, who also arranged some of Marot's Psalms to music. Luther's example of publishing metrical versions of the Psalms seems to have spread rapidly, and was followed in several countries with great success, until the Roman Catholic doctors, who had at first made no opposition to the introduction of these metrical versions of the Psalms in the vernacular tongue, became alarmed at their rapid spread among the Protestants, and consequently forbid their use, threw Marot into prison, and only consented to his release on condition that he should leave the country; which, fearing persecution for heresy, he gladly consented to do, and went to Geneva, where he added

twenty more Psalms; and these, with the thirty which had been published at Paris, in all making sixty, were printed at Geneva, in 1543, with a preface written by Calvin himself. Such was the commencement of the system of popular participation in the service of song for the house of the Lord in the Reformed Church,—a participation which the people admired because the Psalms were set to such popular songs as they were familiar with, could well understand, and delighted to sing, not only at public meetings, but at their homes and at their daily toils.

MASON, DR. LOWELL, was born in Medfield, Mass., Jan. 8, 1792, and from childhood manifested great fondness for music. In his twentieth year, he removed to Savannah, Ga., where, in connection with other pursuits, he devoted much time to giving instruction in music and leading choirs and musical associations. In 1821 the "Boston Handel and Haydn Collection," his first essay in the compilation of church music, was published, and was favorably received. He was induced, in 1827, to leave Savannah for Boston, where he began the instruction of classes in vocal music, devoting special attention to the training of children to the performance of the alto part in choral music, and to the introduction of vocal music into the public schools. About 1828 William C. Woodbridge called his attention to the Pestalozzian method of teaching music, and especially to the various improvements upon it; and, after due examination, Mr. Mason became a champion of the new method. Juvenile classes were now established and taught gratuitously by him; and he was soon compelled, by the extent of his labors, to take G. J. Webb as an associate. Under his influence vocal music received a new and extraordinary impulse in Boston and throughout New England. Eminent teachers were introduced into the schools; the Boston Academy of Music was established; music was prescribed as a regular branch of instruction in the public schools of Boston, and subsequently very generally throughout the entire country; permanent musical classes, lectures on music, concerts, schools for instrumental music, and teachers' institutes, were also widely established.

In 1837 Mr. Mason visited Europe, and made himself acquainted with all the improvements in music-teaching in the Continental cities. The growing taste for music which he had inspired incited him to prepare about this time numerous text-books for juvenile classes, glee-books, and collections of church music. In 1855 Mr. Mason received from the New York University the degree of doctor in music, the first instance of the conferring of such a degree by an American college.

Dr. Mason died at his residence in South Orange, N. J., Aug. 11, 1872, aged 80 years.

MITCHELL, NAHUM, was born at Bridgewater, Mass., in 1769. His love of music, and desire for knowledge in its mysteries, began in early life, and never left him. His early productions were written in the style of the day, but his later compositions were very popular. In 1809, in conjunction with Rev. Mr. Buekminster of Boston, he compiled a small volume

of church music, entitled the "Brattle Street Collection," which was published in 1810. In 1812 he published the "*Templi Carnina*,"—Songs of the Temple, or Bridgewater Collection of Sacred Music. This was very popular, and exerted a great influence in promoting a reform in the style of the church music in New England, though this first attempt at reform was made and received with caution. In the preparation of this work he was assisted by Brown and Holt, music teachers, and in it the compilers ventured an improvement in the harmony of some of the common tunes.

Mr. Mitchell descended from ancestry that arrived at Plymouth in the third ship, in 1623. He was one of Nature's noblemen, a gentleman of the old school; he was courteous, compassionate, unselfish, honorable, and industrious. He was many years chief justice of the circuit courts, and was in Congress at a most important period of our history. He wrote and published, probably, as large an amount of useful matter as any man of his generation in his native State. He prepared a "Grammar of Music," and wrote and published in the Boston "*Euterpeiad*" a series of articles on the "History of Music." As a composer of music, he was a connecting link between the old dynasty and the new; and though not celebrated as a singer, he was leader of the church choir in his native town and a teacher of music. His collection of music was the most valuable that had appeared in this country, and, in 1833, had passed through twenty-three editions. Judge Mitchell, Aug. 1, 1853 (while witnessing, from the steps of Pilgrim Hall, Plymouth, Mass., the pageant, on the occasion of celebrating the embarkation of the Pilgrims from Delft Haven for America), having missed his pocket-book, while in the act of stooping down to look for it, fell to the ground senseless. He lived, however, to reach his home in Bridgewater, where he died early in September, at the age of 84 years, being at the time the oldest of the American composers of note.

N.

NIEDERMEYER, LOUIS was born, April 27, 1802, at Nyon, Switzerland. He composed several operas, also many smaller vocal pieces. Died April 14, 1861.

NILSSON, CHRISTINE, was born in one of the principal cantons, near the town of Wexio, Sweden, Aug. 3, 1843; but her parents, honest peasants, paid but little attention to the precocious taste for music the child possessed, and certainly never thought of making an artist of her. When about ten or twelve years old, a *notable* of the village proposed to attend to her musical education, and placed her under the care of the Baroness de Leulhasen, formerly an artist of renown, and who was so pleased with her young *protégée's* latent talent, that she herself gave her instructions in singing. A year later she was sent to Stockholm, and lived in the family of Frederic Bernald, a violoncellist and highly esteemed composer, ex-court kapellmeister, and whose three daughters are well known and esteemed in their own country and in Germany as *cantatrices* of the first order. Thanks to Bernald's

lessons, Christine was soon fit to appear in public; and her first *début* took place in a grand concert, at which the royal family was present, when she obtained the most favorable reception both as singer and violinist. It was then determined to send her to Paris.

At Paris, Christine was placed under the care of M. Wartel, an ex-tenor of the Grand Opera; and, after three years, he secured for her a three years' engagement at the Théâtre Lyrique; and on the 27th of October, 1860, the young Swede made her first appearance on the French stage, and before a Parisian audience. In 1867 she made her appearance in London, at Her Majesty's Theatre, where her triumph was fully equal to any she had gained in Paris. She came to America in the autumn of 1870, and, after singing in the principal cities of this country, returned to England, where she married M. A. Rouzeaud, a French stock-broker, July 27, 1872, and went directly to Switzerland. Christine Nilsson never forgot her family nor her friends. On arriving in her own country, she was literally covered with flowers by those of her friends assembled to receive her. But a few years back her family was almost in want; and now her parents inhabit a charming residence, which the happy daughter purchased for them at Malnöö.

NOVELLO, CLARA ANASTASIA, a daughter of Vincent Novello, was born June 15, 1818.

NOVELLO, VINCENT, a sterling musician of the old school, mentioned at page 662, vol. i. was born Sept. 6, 1781, and died Aug. 9, 1861, at Nice, aged 80. By descent an Italian, the larger part of his life and his professional career were passed in London, where his sound musical knowledge and his command over the organ (then not common in England) enabled him to do valuable service to his art. Especially was this rendered in the naturalization of sacred music of the great Italian and German writers belonging to the Roman Catholic Church. The Masses of Mozart, Haydn, and Hummel owe the largest share of their introduction in a complete form to Mr. Novello's editorship.

O.

OFFENBACH, JAQUESE was born at Cologne, June 21, 1819. He went to Paris in 1842, as a violoncello player, and, though he failed in that department, succeeded in becoming leader of the orchestra at the Théâtre Français in five years. It was not long before his taste for the peculiar line of composition in which he was to become famous was developed. His first efforts were the setting of some fables of La Fontaine, — which, if not very deep, were at least gay and sparkling. Having once struck the vein, the stream of his pieces began to flow in a full and rapid current. In 1855 Offenbach undertook the directorship of the new theatre, "Les Bouffes Parisiens," and it was there that the operas were produced which have made his name celebrated. Within sixteen years he wrote more than thirty of these operas, some of them very short, some quite puerile, and some of them associated with scenes and language characteristic of the low moral tone of the

Second Empire, but all sparkling and merry. The best known among them are "*Orphée aux Enfers*," "*La Belle Hélène*," "*La Barbe Bleue*," "*La Grande Duchesse*," "*La Perichole*," and "*Les Brigands*."

OLIVER, HENRY KEMBLE, now of Salem, Mass., was born Nov. 24, 1800, at Beverley, Mass. He did not attempt composition till 1832, when he wrote "Federal Street," a widely-known hymn-tune. In 1849 he edited, with Dr. S. P. Tuckerman, a collection of church music, called the "National Lyre," an admirable volume, and in 1860 he published "Oliver's Collection of Church Music," which was succeeded in 1875 by "Oliver's Original Hymn Times."

OUSLEY, REV. SIR F. A. GORE, born in England, in 1827, was early distinguished as a musical wonder.

P.

PALMO, FERDINAND, who introduced Italian opera into New York, in 1844, and built Palmo's Opera House, in Chambers street, in that city, came to this country in 1834; and one of the artists who came with him was Salvatore, the father of Adalina and Carlotta Patti. He was at length forgotten by his friends, and served as a cook at the Waverly, corner of Broadway and Fourth street, where he died, Sept. 1869.

PANTHARMONICO. An instrument invented by Signor G. Briganti of Italy, is composed of six instruments united in one case, and forming a most beautiful drawing-room orchestra.

PAPANTI, LORENZO, was born in Florence, Italy, in 1799; and, in early life, became a musician. His connection with the orchestra was of short duration; for he gave his attention to dancing, a profession which he afterwards followed for a period of nearly fifty years, thirty-four years of which were passed in Boston. Died May 7, 1872.

PAREPA, EUPHROSINE, known as MADAME PAREPA-ROSA, was born in Edinburgh, May 7, 1836. Although her life commenced on Scottish soil, it is to eastern Europe she owes her paternal, and to western Europe her maternal lineage. Her mother was a Miss Seguin, sister to the great basso, the elder Mr. E. Seguin; her father, Demetrius Parepa, was a scion of the brave Wallachian *noblesse*, Baron Georgiades de Boyesku of Bucharest, whose early death after this union left the Baroness, then twenty-one years old, a widow, and her infant Euphrosyne an orphan.

As a mere girl, in 1855, she made her first public appearance in opera, at Malta, making her *début* as *Amina*, in the "*Sonnambula*," with a success most brilliant and flattering. This was followed by her appearance in succession in grand opera at Naples, Genoa, Rome, Florence, Madrid, and Lisbon. Her remarkable compass of voice, wonderful execution, and astonishing power, created quite a flutter in the musical world, and not only conquered criticism, but caused presents innumerable to be strewed in the path of her extended tour.

From 1859 to 1866 she remained in London, during which period she was married to a

captain in the British army, but became a widow sixteen months after. Subsequent to this event she was induced to accept one of the numerous offers which had been made to her to visit the United States, giving the preference to Mr. H. L. Bateman, with whom she arrived in the autumn of 1866, with Levy, the famous cornet player, Carl Rosa, the eminent violinist, and other artists.

Her first appearance in Boston, Mass., was Sept. 26, 1866; her first operatic appearance here was in Feb. 1867. She married Carl Rosa Feb. 26, 1867, in New York. In 1869 she sang at the first National Peace Jubilee, and soon after, with her husband, formed the Parepa-Rosa English Opera Troupe. She died Jan. 21, 1874.

PATTI, ADELINA, who has had the given names ADELA JUANA MARIA CLORINDA, was born at Madrid, Spain, April 9, 1843. Her mother, Madame Barilli-Patti, was the *prima donna* of the Grand Theatre at Madrid.

The Patti family emigrated to this country in 1844. Adelina was what is called a precocious child. She could sing almost before she could speak. She caught up, at the age of four, all the gems of the operas, and sang them correctly. Her first public appearance was made at the age of nine years, when Mr. Strakosch, Ole Bull, and the infantile *prima donna* made a tour in the provinces, where Adelina sang all the great pieces made familiar by Jenny Lind, Sontag, Bosio, and others. The little lady created great enthusiasm, and her share of the profits amounted to twenty thousand dollars, which her father invested in a country seat, and the summer residence of the family.

At this time Miss Patti received the highest compliments from Sontag, who told her that she would be one of the greatest singers in the world; and from Alboni, who said if she went to Paris she would make such a *furor* as is seldom seen there.

After the concert tour with Strakosch, Miss Patti went to the West Indies with Gottschalk, the pianist. In Havana, she sang in costume the duet in the "Barber of Seville," with her brother Barilli. The enthusiastic Havanese made such a noise in recalling her that she ran away frightened, and could not be persuaded to go upon the stage again. Throughout the Indies she divided the honors with Gottschalk, and at Porto Rico had an offer of marriage (she was then only fourteen) from the richest proprietor in the place. Afterward she visited Europe, and for some years has been the leading *prima donna* at all the principal cities and royal courts, amassing honors and wealth by her musical genius.

The mother of the Patti family died in 1859. Her eldest daughter, CLOTILDA BARILLI, was eminently successful as a singer in Europe and in this country. Of the sons, ETTORE was a *barytone*; ANTONIO, a *basso profundo*; and NICOLÒ a *basso*. These were the children of the marriage with SIGNOR BARILLI. The PATTI children were, AMALIA, who married MAURICE STRAKOSCH; ADELINA, the famous vocalist; CARLOTTA, now greatly celebrated, and CARLO, the violinist.

Adelina Patti re-appeared in New York, Nov. 24, 1859, and early in 1862 she sailed for Europe, and has appeared in the principal

cities with the highest success. On July 29, 1868, she was married to the Marquis de Caux, but the union has not proved too happy. Adelina Patti is probably the greatest living *cantatrice*. In 1867 she was creating a great sensation in the French provinces.

PATTI, CARLOTTA, a sister of Adelina, made her *début* at the Academy of Music, in New York, 1861; but, as the war disconcerted her plans, she sailed for Europe. Arriving in London, she at once obtained an engagement, for two months, at the Covent Garden Theatre, during which she sang in a series of concerts over fifty nights in London, and with great success.

In France, Belgium, and Holland she was equally successful as in England.

Rossini and Auber, Gounod and Ambroise Thomas, manifested the warmest esteem and sympathy for her; and thus encouraged by the *souvenirs* and hearty approbation of the Parisians, she started for Russia. Constantinople, Moldavia, and Wallachia. Her success was immense; and in the two latter places she created a perfect *furor*, driving the rich men and nobles into a sort of musical frenzy.

After this most successful tour through Europe, she returned to the United States, crowned with unfading laurels.

PHILLIPPS, ADELAIDE, was born in Bristol, England, where her father was a druggist and chemist, and her mother a professor of dancing. When Adelaide was about seven years of age, Mr. Phillipps, hoping, like many before him, to better his position in life, came to America, and, by way of Canada, to Boston, Mass.

Young Adelaide, at a very early age, displayed great aptitude for the stage, and gave unmistakable signs of possessing a fine *contralto* voice. She commenced the study of music under Thomas Comer of Boston, to whose sound and well-directed instruction, in a large measure, she is indebted for her success. Her voice was found to reach the compass of two octaves and five tones, and was mellow and musical to B₂. Her father obtained engagements for her at the Boston Museum, at Philadelphia, and in other cities; and she played a variety of characters, from "Little Pickle" (as she grew older and her vocal powers developed themselves) up to Lucy's English version of "La Cenerentola." She continued at the Boston Museum nearly up to the time of her first return to England, being constantly on the stage, and always a favorite with the public.

When Madame Lind-Goldschmidt came to Boston, Adelaide sang before her, and Miss Lind was much pleased with the voice, and strongly recommended the father to send his young daughter to Europe for instruction. Mr. Phillipps candidly confessed his inability to meet so heavy an expense; upon which Miss Lind suggested the getting up of a benefit for the purpose of raising the necessary funds. This resulted in raising, with a contribution of Miss Lind, something more than a thousand dollars; and several merchants and gentlemen afterwards added handsome subscriptions to the fund. Thus armed, Miss Phillipps, with her father, started for London, where they arrived in March, 1852. She at once placed

herself under the able tuition of Signor E. Garcia for the voice, and of W. Chahners Masters as instructor in harmony and upon the piano-forte.

After remaining a year and a half in London, Mr. Jonas Chickering of Boston provided the funds necessary for her to proceed to Italy, where she received further instruction from eminent masters, and sung at Brescia and other small towns; but upon her arrival at Milan she found great difficulty in obtaining engagements, owing to the number of artists, from various countries, who were waiting to pay the managers at the opera for the privilege of singing! She played "*Arsace*" one night, with great success, when Mr. Phillipps, tired of being so long away from the country of his adoption, and anxious to rejoin his family, left Italy with his daughter, and passing through London, in August, 1855, reached Boston, where a sad blow awaited them,—the mother, Mrs. Phillipps, dying almost immediately after their arrival home.

Miss Phillipps has had an uninterrupted career of success; and, in various tours through the States, has sung with the late lamented Bosio, Mile. Patti, Ronconi, Formes, Gassier, and others. In 1861, the theatrical interest being the first to suffer from the effects of the Rebellion and war, Miss Phillipps re-visited Europe, being well received in London and Paris, where she made a successful *début* in "*Azucena*." Returning, she has made frequent tours through the States, and constantly gained in reputation. Her father, Alfred Phillipps, died at Marshfield, Mass., Oct. 16, 1870.

PICCOLOMINI, MARIA, was born at Sienna, Tuscany, in 1835.

Maria early evinced great love for music, and made her *début* at Florence, in 1852, in Donizetti's opera "*Lucretia Borgia*." Shortly after, she appeared in Sienna, her native town; then at Rome, at Paris, and in London, England, where, in 1857, she married Lord Ward, the owner of Covent Garden and other London theatres. Few artists had acquired public esteem so rapidly, and few became more popular. She left England, Oct. 1858, and in the same month made her appearance at the Academy of Music in New York, creating a sensation, though not considered a great singer. Her voice, though sympathetic, was not powerful; and her success arose from her acting.

PLANTADE, CHARLES M., was born at Paris, 1786, and was eminent as a musician. He died in Paris, May, 1870, aged 84.

PONIATOWSKI, JOSEPH. The career of this man was remarkable for its vicissitudes. He was the grand-nephew of Stanislaus the Second, the last King of Poland, and was born in Rome, on the 20th of Feb. 1816. His musical talent was developed at an early age, for before he was six years of age he was a good pianist. His family took up their residence in Tuscany, in 1823; the Prince studied at the college of the "*Padri Scolopi*," where he gained the first prize for mathematics when seventeen years old; but following up his musical studies, and being gifted with a fine tenor voice, he made his *début* at Lucca, on the lyric stage, and followed up his success by

appearing at the Pergola, in Florence. In that city, at twenty-three, the Prince produced his first three-act opera, "*Giocanni da Procida*," which was succeeded by many well-known works. He died at Paris, July 3, 1873, and was buried at Chisellhurst.

PYNE, LOUISA, known in this country as connected with the famous Pyne and Harrison Opera Troupe, was born in England in 1834. She, with a younger sister, commenced singing in public at the Surrey Chapel, in London.

R.

ROOT, GEORGE F., was born in Sheffield, Mass., 1820; removed to Boston, 1838, to New York in 1844, and to Chicago in 1860. He early became known by some published songs and as a music-teacher and conductor of conventions. After spending a few months in Paris, France, he went largely into church-music writing and convention work, which latter took him throughout the entire North and part of the South. He also conceived an idea for the education of music-teachers, which has since grown into the system of normal music schools, so well known of late, and engaging Dr. Mason's interest in the enterprise, announced a school for music teachers, to be held in New York during those months when teachers have their vacation. This was an important move, and at the present day hardly a successful worker in the field of popular musical education can be found who has not been educated wholly or in part at these schools under the teaching of Dr. Mason, Mr. Bradbury, Mr. Webb, and Mr. Root. His next move was to Chicago. He had now given up all teaching, and was devoting himself to authorship, occasional convention tours, and normal institutes each summer, at which he still continues the work of educating those who are to be the successful teachers and writers of popular music in this country.

Mr. Root is also the author of many musical works, which have had an extended popularity, including the "*Flower Queen*," "*Shawn*," "*Sabbath Bell*," and "*Triumph*," the last-named having already paid him a profit of over forty thousand dollars. His cantatas of "*Daniel*," "*Pilgrim Fathers*," and "*Bel-hazzar's Feast*" are also among the best in that department of music. "*The Haymakers*," an opera of much merit, and containing many exquisite gems, was written by him about ten years ago, and has been performed in nearly all the leading cities of the country with flattering success. But evidently neither operas nor oratorios are his *forte*. He is "*a child of song*" in the fullest sense of the term,—a Foster rather than a Haydn.—sweet, natural, melodious, and plaintive, singing to the heart rather than to the mind.

He was of the firm of Root & Cady, Chicago; their musical establishment was entirely destroyed by the great fire, in which their loss was estimated at \$200,000.

ROSA, CARL, was born in Hamburg, March 22, 1842; he began the study of the violin when he was six years old. Lindenau was his first teacher. He made his first appearance in public in 1850, at the age of

eight, playing a concertino by Jansa. From that time the boy played frequently in concerts; went on a concert-tour to Scotland in 1854, and returned there three successive seasons. In 1858 he went to the Conservatory at Leipsic, where for about three years he studied the violin under David and Dreysehoek, counterpoint under Hauptmann and Richter, &c. It was in 1865 that he went to London for the season, and there played in a concert where Mlle. Parepa sang. With her he was engaged by Mr. Bateman for the concert-tour in America, which led to their happy union by the most intimate of all ties, they being married in New York, Feb. 26, 1867; and after a concert-tour through the States, they returned to Europe, and organized an English opera company in London.

RUBINSTEIN, ANTON GREGORY, pianist, was born on the 30th of November, 1830, at Veehwotynetz, a village in Russian Bessarabia, near Jassy in Moldavia. His parents were wealthy. They owned large estates in Wallachia, and lived handsomely. But they were unfortunately involved in lawsuits with the government, and lost their whole fortune, an event to which the music of this age is indebted for one of its most noted representatives. The mother of young Anton Rubinstein, herself a woman of uncommon intelligence and an excellent pianist, gave the first instruction to her two sons,—Anton and Nicholas,—and was so successful, especially in her music lessons, that the family resolved to remove to Moscow. In that city Madame Rubinstein herself took a situation as teacher in the Imperial Institute of Education, while the further musical instruction of her two sons was intrusted to the excellent maestro, Alexander Willoung. At the end of two years, Anton, whose genius even then was apparent, had advanced so far that he was able to perform solos at a concert in Moscow. In 1839 he gave concerts at Paris, and remained there two years, being assisted in his studies by Liszt. He then made a three-years' tour through France, England, Holland, Sweden, and Germany, and in 1844 went to Berlin. In 1858, having returned to Russia, he founded at St. Petersburg the Russian Musical Association and the St. Petersburg Conservatory, of which he was appointed president, and which he managed for the following ten years so successfully that the institution has now become one of the best known in the Old World.

Since 1868 he has travelled as a virtuoso, in Germany, Austria, and other countries, and has visited this country, appearing in the principal cities with success.

RUDERSDORF, MADAME, was born in December, 1822, at Ivanowsky in Russia; but at the age of three years she was taken to Hamburg, where her father was engaged as concert-master. Her beautiful voice was formed at an early age through Marianne Sessi; afterwards, Banderali and Bordogni became her teachers. After appearing in England and Germany as a concert-singer, she made her *début* in opera at Carlsruhe in 1841, and was then engaged at Frankfort-on-the-Main, where she was married in 1844 to Dr. Kuchenmeister, a professor of mathematics. She renounced the stage for a time, but accepted an engage-

ment at Breslan in 1846; afterwards in Berlin from 1852 to 1854, when she removed to London, and became distinguished in opera, oratorio, and at concerts, as a singer; at the Birmingham Festival of 1861, she shared the leading soprano honors with Tietjens, Lemmens, Sherrington, &c. She came to this country and sang at the May Festival in Boston, 1867.

S.

SEGUIN, ELIZABETH, the mother of the distinguished operatic artist, Madame Parepa-Rosa, was born in London, England, 1815. Madame Parepa (Elizabeth Seguin) died at the house of her daughter (Parepa-Rosa), at Maida Hill, London, 1870. There was a very strong attachment between mother and daughter. The mother was the last of the elder generation of Seguins, who gained reputation in this country.

SERVAIS, ADRIEN FRANCOIS, one of the most notable violoncello performers of his time, was born at a village near Brussels, on the 7th of June, 1807. He did not discover his real vocation until he heard Platel, the violoncellist, perform a solo; but from that moment he devoted himself with ardor to this his chosen instrument. Servais was married in 1842, at St. Petersburg; he died at Brussels, Nov. 26, 1872, aged 65.

SMART, SIR GEORGE, was born in London, England, May 10, 1776. He early manifested a taste for music, and a correct ear; and his father, who was connected with the musical profession, sent George to the Royal St. James' Music School, where he was instructed by Dr. Ayrton. He was taught the use of the organ by Dr. Dupais, and the piano-forte by John Baptist Cramer.

In 1811 he went to Dublin to conduct a series of musical performances, where he was knighted, and became known as Sir George Smart. On returning to London, he assumed the highest grade in the musical profession. For thirteen years he conducted music at the Drury Lane and Covent Garden theatres. In 1834 he had the entire management of the seventy-fifth anniversary of the Handel celebration, which insured his metropolitan reputation. During his life he conducted festivals and concerts in no less than twenty-three provinces, cities, and towns.

He was present at the Handel Commemorative of 1784, 1785, 1786, and 1791, and directed the music at the coronation of William IV. and Queen Victoria. He was one of the founders of the London Philharmonic Society, 1813. The renowned composer, Von Weber, died in his house in 1826. In 1827 he was chairman of the banquet to the celebrated pianist and composer, Clementi, the teacher of Meyerbeer. In 1836 he conducted the Manchester Festival, during the progress of which Malibran died. He gave lessons both upon the piano-forte and in singing, but had the greatest repute in the latter. Among his pupils were Sontag and Jenny Lind. He continued giving instructions till he was eighty, and died in London, April, 1867, full of honors, at the age of ninety-one years.

SMITH, DR. WILLIAM, born in Scotland,

1754; came to this country from Aberdeen, 1755; officiated at several churches, and among them at the Bishop Berkeley church, Newport, R.I.; devoted much of his time to church music; published a "Book of Chants," 1814, and sought to introduce chanting and singing of anthems in the churches of America, but the matter was looked upon as an innovation, and the change was not encouraged. Dr. Smith built several small organs; they had wooden pipes, made of cedar, and generally ranged about four octaves. Thomas Hall, one of the old organ-builders in America, said that the Doctor's organs were made in a most finished manner; he died at the house of Peter Erben, in New York, April 6, 1821, aged 67.

SONNLEITHNER, LEOPOLD VON, was born in 1797, and died at Vienna, March 4, 1873.

STRAUSS, JOHANN, eldest of the three sons of Johann Strauss, was born in Vienna, 1825. His father prepared him for the military profession, but the feeble health of the boy and the wonderful musical talents which he displayed at an early age, decided his father to make a musician of him. He had excellent instructors, and already in his sixteenth year had become a virtuoso on the violin, and thoroughly familiarized himself with the art of composition and counterpoint. Several of his compositions were published and became very popular, and in his nineteenth year he resolved to form an orchestra like the one over which his father had presided so long and so creditably. The undertaking was successful, and before long young Strauss' orchestra became as popular as that of his father. In 1846 he set out upon a two years' tour through the countries on the lower Danube, and was well received everywhere. In 1848 he published his famous "Radetzky March," which is now a national air in Austria, and for which he received a title and an honorable decoration.

During the following fifteen years he visited nearly every capital in Europe with his orchestra, and received as many decorations as adorn the breast of a field-marshal. His greatest triumph he achieved with his band at the Paris Exhibition of 1867, where Strauss' concerts were one of the principal attractions. He had meanwhile published a great many compositions, and the number of his works is now upward of six hundred. Some of his productions have had an extraordinary sale. Of his "Radetzky March," "Blue Danube Waltz," and "Annen Polka," upwards of half a million copies were sold. Strauss receives from the copyright of his compositions fifty thousand florins annually, and is looked upon as by far the richest of the living composers of Europe. Strauss was married to Henrietta Treffz, an eminent opera singer, and has four children. He came to this country in 1872, and led the orchestra in the performance of his most famous compositions, at the Peace Jubilee, Boston.

T.

THOMAS, THEODORE, was born in the kingdom of Hanover in 1835, and received his

first musical instruction from his father, who was a violinist. He acquired skill upon the violin at a very early age, playing in public with *eclat* when only six years old. The family emigrated to New York in 1845, and for two years he was heard at various concerts during the season. For the few years following he travelled, visiting the most prominent cities of the United States, and gathering up knowledge and information for future use. For the next few years he occupied the position of first violin in the engagements of Soutag, Jenny Lind, Grisi, Mario, &c., and finally became conductor at both the Italian and German Operas. He also formed one of the parties of eminent artists who successfully travelled through the United States — such as Labarde, Thalberg, Piccolomini, &c. During this period, however, he stole a year from public duty to pursue the study of musical science. He established his famous quartet *soirées*, in conjunction with Wm. Mason and others. These *soirées* were maintained for years, purely in the interest of art.

In 1861 Mr. Theodore Thomas abandoned his connection with the opera altogether. The position was profitable, but its scope was not in the direction of his feelings. As an old and prominent member of the New York Philharmonic Society, he had taken to his heart the great symphonic works of the classical authors. He felt that the field was not fully occupied; that five concerts a year were altogether too few to develop the great works of the dead and the living masters; one or the other must be neglected in some degree. This conviction led him to establish his famous symphony *soirées*, which he has, all unaided, continued during the past five years. To these concerts we owe a vast repertory of classical music, ancient and modern, which would otherwise have remained sealed. The variety and rare excellence of his programmes have been the subject of admiring comment, both here and in Europe. Theodore Thomas's orchestra, since 1869, has acquired great reputation, and has been heard in all parts of the country.

TITIENS, or TIETJENS, TERESA, is of Hungarian extraction, and was born at Hamburg, June, 1824. Like most great lyric artists, she displayed an early taste for music, as well as a strong disposition to study. Belonging to very humble parents, she received little instruction in the art until a neighboring teacher, skilled in judging of the voice, happened to hear her sing, and, being struck with the promising character of her vocal powers, offered to take her entirely under his charge, and to educate her for the profession of music. A course of preliminary lessons established the fact that the young girl, at this time scarcely fourteen years of age, possessed an organ of great power and marvellous sweetness. As it became developed, it was found to be a high soprano of unparalleled register, ranging from C below the line to D in *alt*. Such a voice only required cultivation to yield a fortune and reputation. She made her first appearance at the Hamburg theatre, 1849, and here her reputation as a gifted artist was established. From Hamburg she went to Vienna, where she was enthusiastically received. From Vienna she went to London, and there,

in 1858, made her *début* on the stage of Her Majesty's Theatre in April. Mlle. Titiens returned to Vienna in the autumn of 1858, and completed her three years' engagement at the Imperial Theatre. She then travelled to Italy, where she was met by Mr. E. T. Smith, and secured by that gentleman for his operatic campaign at Drury Lane Theatre. She commenced her second season in London, on May 3, 1859, as Lucrezia, sustaining the character of the haughty Duchess even better than before; a year's close study of the Italian school of singing, and a rapidly acquired proficiency in the language of Italy, had given her advantages to which, hitherto, she had been a stranger. This improvement was equally manifested in her *Leonora* in "*Il Trovatore*." Her greatest success, however, was in "*Les Huguenots*." Mlle. Titiens is engaged for a series of concerts in the United States, commencing in October, 1875.

TORRIANI, OSTAVA, whose real name is TORNQUIST, was born in Hamburg, Germany, in 1850; her father was a Swede, and held, for some years, a position as consul from Hamburg to this country; he died at Rio Janeiro, in 1859. When but six years old, Mlle. Torriani began the study of music, and at the age of ten she gave her first concert in Dresden, where the family had removed after the death of her father. She then continued her musical studies in Paris, under the famous master Delle Sedie, and soon evinced such rare talent, that, acting upon the advice of Rossini, she went to Italy to prepare herself for the stage. Her first appearance was made in Milan, when but seventeen years of age, "*Rigoletto*" being chosen for her *début*. In this opera she achieved a brilliant success. Since then she has sung in all the principal cities of Europe, meeting everywhere with the commendation she so justly merits. She came to this country, 1873, with the Strakosch Italian opera company, and sang here in "*Trovatore*," "*Traviata*," "*Martha*," "*Lucia di Lammermoor*," "*Ernani*," "*Mignon*," "*Sonnambula*," "*Huguenots*," "*Don Juan*," "*Rigoletto*," and "*Aida*," previous to her return to Europe. She made her *début* in opera at the Scala, in Milan, in "*Rigoletto*," and was remarkably successful. She received marked appreciation from the critical audiences of that city, who were charmed by her well-cultivated and sympathetic voice, and King Victor Emanuel took great pleasure in her performances, and presented several costly gifts to the young *artiste*. Mlle. Torriani also sang with marked success in Turin, Rome, Venice, Genoa, Barcelona, Madrid, Seville, Grenada, Cadiz, Paris, and lastly in London.

TREBELLI, ZELIA, is of French descent, born in Paris, where her father holds a high government office. Her real name is *Gilbert*. Her musical talent manifested itself early; she therefore received instruction in piano-playing when she was only six years old, her first teacher being a German, which circumstance has greatly influenced the direction of her musical taste. In the fall of 1859, Signora Trebelli left her teacher, Wartel, and made her *début* in Madrid with an Italian troupe. During the whole winter season she had such a success as beginners rarely attain. She first

appeared as Rosina in the "*Barbiere*," with Mario for the count. Her second essay was the page in the "*Huguenots*." Her engagement in Madrid terminating in April, 1860, she returned to Paris and resumed her studies with Mr. Wartel until July, 1860, when Merelli engaged her for his Berlin troupe. She made her first appearance in Germany in the old city of Cologne, as Arsace in "*Semiramide*," with the most decided success. She then went to Hamburg, and finally to Berlin, where she became a great favorite.

W.

WOLLENHAUPT, HERMANN A., was born at Schkenditz, Province of Prussia, Sept. 27, 1827. His rare musical talents brought him early before the public, and he achieved signal successes wherever he appeared. In 1845 he came to New York, where his piano performances at the Philharmonic, and other concerts, rapidly gained for him a brilliant teaching connection, so that in two years he was enabled to send for his parents and his brothers and sisters. These he educated and maintained, devoting all his energies and means to their comfort and advancement. Observing great talent in his brother Bruno, violinist, he sent him to Germany to study, keeping him there seven years, until he had achieved the position of a first-class artist. During the years of his residence in New York, Hermann Wollenhaupt produced a large number of brilliant piano compositions, which have become famous, not only in this country, but throughout all Europe. They have become standard works, and have made his name respected wherever they are known. He died in New York, 1863.

WOOD, MRS. MARY, formerly MISS PATON, was born at Edinburgh in 1802. Many people in this country remember Mrs. Wood with delight as one of the very finest vocalists and artists of her time. She, with her husband, Joseph Wood, a popular tenor, sang in this country in English opera, and we believe their last engagement here was the last they ever fulfilled. They had acquired a handsome fortune by their professional efforts, and retired to private life while they were in the full maturity of their powers. In 1856 they were living on a farm near Wakefield, and about that time became residents of Manchester, England, where they were both engaged in giving vocal instruction. Mrs. Wood died at Manchester in 1863. Her career was marked by many romantic incidents, but we have not been able to obtain more than this meagre sketch of her life.

WOODBURY, ISAAC B., was born at Beverly, Mass., Oct. 18, 1819. At an early age he was thrown almost entirely upon his own resources, and became an apprentice at the blacksmith's trade in Boston, where he attended the public schools, and devoted his spare time to music, learning the violin. In 1839 he became a member of a travelling company, the *Bay State Glee Club*, and, appearing at Bellows Falls, Vermont, was invited by John W. Moore to remain with them there, and attempt the formation of a musical society;

he did so, and organized the New Hampshire and Vermont Musieal Association, which he was called to conduct for several years. He now became known among the teachers of music in Boston, and soon after went to Europe for instruction. In 1849 he went to reside in New York, where he commenced publishing books of psalmody, having become known as a composer associated with B. F. Baker and A. N. Johnson of Boston. He edited several musical works, published some popular songs and several collections of sacred music; he also became known as a conductor of conventions. He visited Europe for the second time, in 1850, and returning, died at Columbia, S. C., Oct. 26, 1858, aged 39.

Mr. Woodbury was editor and assistant editor of "The Timbrel," and some fifteen other collections of sacred and secular music, and was connected with several musical periodicals. For several years he held, with Messrs. Baker, Johnson, Hastings, and others, musical conventions and teachers' classes, in Boston and elsewhere. Resting from earthly labors, he left an example of what may be acquired by persevering diligence, even under unfavorable circumstances.

Z.

ZELLINGER, a celebrated pianist, residing at Vienna in 1800, published there several works for his instrument, and died there, at an advanced age, very poor.

ZEUNER, CHARLES, a distinguished organist and composer, was born at Eisleben, near Gotha, Saxony, Sept. 20, 1795, and was baptized *Heinrich Christopher Zeuner*. We have no means of knowing why, on coming to this country, he took the name of Charles. He came here about 1824, and took up his residence in Boston, Mass. In early life he was a court musician, near his native place. When Mr. Zeuner became a resident of Boston, Mass., he was considered one of the best educated musicians and organists then in this country; and while residing there he published several musical works, which had extensive sales. In 1839 he published "The American Harp," 400 pages. His oratorio, "Feast of Tabernacles," was well worthy of celebrity. The first edition of this work was published in

1832, at which time Mr. Zeuner was organist at Park Street Church, president of the Musical Professional Society, and organist for the Handel and Haydn Society. In the "American Harp," every piece of music, except five, was composed by Mr. Zeuner. In 1848 he published the "Ancient Lyre," 304 pages. He wrote a large number of the tunes which appeared in the various collections published by Lowell Mason, the latest of which were published in the "Psaltery," and the "New Carmina Saera." He removed from Boston to Philadelphia, Penn., in 1854, and was organist at St. Andrew's Episcopal Church, and afterwards held the same position in the Arch Street Presbyterian Church, Philadelphia. For several years before his death his friends had noticed in him a peculiarity of demeanor, indicating, at times, slight aberration of mind. On Saturday, Nov. 7, 1857, he left his boarding-house and proceeded to West Philadelphia, crossing the Delaware river by steambot, and walking over the bridge at the Schuylkill river. On the afternoon of the same day, some gunners, passing through Smith's woods, discovered a body, with the head entirely shattered by a gun. This proved to be the body of Mr. Zeuner. Upon subsequent examination, it was plainly evident that he had been his own murderer.

It is said that while organist in Philadelphia, upon a certain Sunday, allowing his fancy to assume the shape of a masterly impromptu fugue, he astounded the few appreciative and knowing members of the congregation with his wonderful performance—while he simultaneously shocked many with what seemed to them music totally incomprehensible and devoid of beauty. At the conclusion of the service, one of the prominent members of the church, meeting the great organist in the vestibule, put the following query to him: "Mr. Zeuner, pray, is our organ out of order? There was such an unaccountable jolting and rumbling in the pedals this morning, that altogether it sounded very strangely indeed." This lamentable display of musical ignorance entirely overcame the testy and sensitive harmonist; and with a contemptuous hiss between his teeth, he strode from his interrogator and never went near that stately church again, professionally or otherwise.
