6. Why treat TB? People who have it are going to die anyway. TRUE or FALSE?
Answer: FALSE. When TB is found early and treated immediately, it usually can be cured.

7. At last there's a wonderful drug that cures tuberculosis. TRUE or FALSE?
Answer: FALSE. Doctors are searching for a safe serum or drug or something that is a sure cure for TB. So far it has not been found. The treatment for TB is bed rest, preferably in a sanitorium or hospital, plus food and fresh air and whatever else the doctor orders. The mainstay is rest in bed.

YOU need a chest X-ray, IF-
YOU have never had a chest X-ray.
YOU have not had a chest X-ray in the last two years.
There has been TB in your home.
YOU have worked with someone who had tuberculosis.
YOU want to know your lungs are well.
SEE your doctor or your local health center.

YOU are in danger and need a chest X-ray, IF-
YOU feel tired all the time for no good reason. If your appetite is poor and you are losing weight.
YOU catch cold easily and it takes a long time to get well. IF you have a cough that persists.
YOU have been told that you have a congestion in the lungs, bronchitis, asthma, heart trouble, pleurisy or sinus infection.
SEE your doctor or go to your local health center.

SUBJECT: Information Plan for Sanitation and Insect Control

TO : See Distribution

1. Transmitted herewith is a suggested information plan to be utilized in accordance with the program chart, "Schedule for Civil Information Activities," previously distributed from this headquarters.

2. This is the first information plan prepared under the new Japan-wide schedule and will be followed periodically by others.

3. It should be noted that the plan dwells principally on background material with broad suggestions for implementing the program. This is to allow the greatest possible latitude for utilizing the most effective local methods in putting the program across.

4. To expedite distribution, the material is being sent directly to all echelons. Supplemental information and instructions may be issued by corps and regions as desired. The material is non-directive in nature.

BY COMMAND OF LIEUTENANT GENERAL EICHELBERGER:

2. THE SITUATION. -- General Sanitary conditions in Japan are far below those of Western nations, with resulting high incidence of diseases caused by unclean home conditions and insects. The cause of much of the disease is lack of knowledge among the Japanese population of simple home sanitation and methods of keeping virus-spreading insects under control.

3. To bring the level of health up to minimum standards, an intensive information campaign of health education should be launched during the summer months when the rate of diseases caused by unsanitary surroundings and insects is increased.

4. The actual diseases produced by these conditions should be brought to the attention of the public along with facts about them, such as rate, method of infection and prevention. The following information may be used as supplementary material to augment themes, which are primary appeals for by all media.

a. Principal diseases caused by unsanitary conditions:

(1) Dysentery -- The lack of effectiveness of sanitation is measured by the number of cases of dysentery. In 1947 the number of cases was 39.253. Of these, 7,434 died. This ratio, which has been constant for years. means that one dies out of every five who contract dysentery. The goal of MG public health officials is to cut in half the number of cases. Called a "filth" disease, dysentery is spread by flies, dirty hands, unclean cooking utensils and polluted drinking water. Transmission is by direct or indirect with human feces. Children are particularly susceptible because of frecuent contacts with floors and ground and because of placing unclean hands and objects in the mouth. An educational program to encourage housewives to protect food from flies,and to see that their families drink only pure water will go far to wipe out the disease.

(2) Typhoid--The number of cases of typhoid in Japan last year was 17,776, of which 2,231 died--one in eight. Typhoid is spread primarily by contaminated food and polluted drinking water. About 75% of the Japanese obtain their water supplies from wells or springs, a high percentage of which are polluted. It is not feasible to chlorinate wells continually. If done only occasionally it gives a false sense of security from the impression that the water is pure. Safe measures are to have manure piles and stagnant pols no closer than 15 maters from wells and to maintain tight covers over them. Another prevention is innoculation, and sufficient serum is in supply. All persons, except the ill, between 5 and 60 should receive the vaccine.

(3) Paratyphoid--Milder than typhoid, but similer, this disease was contracted by 4,721 Japanese last year, of whom 267 died. precautions similar to tthose for typhoid should be undertaken.

b. The principal insect borne diseases are:

(1) Malaria--A total of 11,802 were infected in 1947. Only 24 of that number died but the loss of pro-

ductive power from those incapacitated ran ito millions of man hours. Spread by mosquitoes, the disease can best be controlled by eliminating breeding places and protecting arms and legs with clothing after dark.. Sleeping under nets is important, too, shince mosquitoes feed at daylight as well as in the evening. No practical cure for malaria has been dovised.

(2) Typhus fever-Last year there were 1,115 cases of typhus fever and 86 deaths. Rat fleas and body lice are the principal carriers of the disease. Control methods.include reducing Japan's enormous rat population by poisons and traps, and ridding personal clothing of lice and eggs. Typhus-carrying lice are spread wherever masses congregate--bath houses, theaters, railroad stations. The disease may be controlled somewhat by vaccinations, but the more practical method of reducing the rat population and ridding the populace of lice will produce lasting results by controlling the source of infection.

(3) Japanese B encophalitis -- Of the 252 reported cases in Japan last year, 131 died--a ratio of more than one death out of every two cases. The number infected in recent years has been comparatively small, but the possibility of an epidemic always exists. In past Japanese history an outbroak has occurred every 10 or 15 years, with thousands dying from the disease. The last epidemic was 13 years age. Proof beyond reasonable doubt exists that Japanese B encephalitis is transmitted by mosquitoes; however, some Japanese health officials and physicians have not accepted the proof. Practical means of keeping outbreaks in check are mosquito control and bite provention.

SECTION II
THEMES

5. The following themes and supplementary material may be adapted for use by any local media and for visual displays:

a. "Boil all your family's drinking water" -- Seepage from toilets, manure piles and stagnant surfece water has polluted a great many of the wells in Japan. The only safe measure is to boil all drinking water. However, chlorination, if done continuously, with periodic bacteriological checks, offers the next bost measure of protection. The disease spread by impure water include dysentery, typhoid and paratyphoid.

b. "Keep your food covered and protected from disease-ridden flies" -- Flies are carriers of "filth" diseases such as dysentery, typhoid and paratyphoid. Contaminated flies commute

freely from filthy areas in the neighborhood to houses and thus to unprotected food, continuing the cycle of infection from human beings to feces and back again.

c. "Clean premises make for healthy families" -- Most of the disease in Japan is caused directly or indirectly by unsanitary conditions about the house and yard. Until home areas are imaculate, disease control in Japan cannot be effective. Toilets should be screened to prevent flies from having access to feces. Stagnant water pools about the yard should be drained to eliminate breeding places for mosquitoes. Any drainage or clean-up project too large for the indicidual should be referred to the district health officer. Garbage, trash and night soil should be disposed of frequently to lesson the chance of diseases being spread. After collection, night soil should stored for 90 days to break the cycle of intestinal parasites, which chainspread from infected human beings to night soil to vegetables fertilized by night soil and back to persons. Four out of five persons in Japan have intestinal parasites.

d. "Sleep under mosquito netting and keep your arms and legs covered after dark" -- The two periods of the day when nosquitoes are most likely to bite are just after dark and just before dawn. Mosquitoes are vectors of malaria and Japanese B encephalitis, and transmission occurs when an infected mosquito bites an uninfected person.

e. "Rat fleas carry deadly typhus fever -- Let's rid our community of rats" -- It is estimated by Ministry of Welfare health officials that there is one rat for every person in Japan, or about five rats per family. Besides the food these 78,000,000 rats eat- the equivalent of 35 10,000-ton shiploads each year - the fleas they carry transmit typhus fever. Since there is no practical cure for the disease, prevention measures are inoculation and keeping the rat population in check. Household measures of poisoning and arapping should continue year-round.

f. "Body lice spread typhus fever" -- Body lice reach their peak of density during the latter part of the summer after each female has laid about 3,000 eggs Thus, the most effective time of control is before eggs are laid. These are proven measures in destroying lice:

(1) Pour boiling water over clothing.
(2) Inspect seams carefully for lice and eggs.
(3) Comb hair frequently with fine-tooth comb dipped in kerosene.
(4) Press clothing carefully with a bot iron.
(5) Bathe as often as possible and wrap clothing in a furoshiki before bathing in a public place.

SECTION III
METHODS

6. Since the program is primarily an education campaign to be conducted in conjunction with prefectural health activities, a committee of local citizens could be formed to organiza and

carry out the plan. An important target group for information activities should be housewives, Included on the committee should be the prefectural or district public health officer, a newspaperman, the radio station manager, a prominent physician and a leader in women's affairs. (It is to be stressed that the health program is a responsibility of local and prefectural goverments. While voluntary, non-political neighborhood associations, such as the Eisei Kumiai of the Tonari Gumi, are not illegal, their use in conducting public health activities should be discouraged).

7. Newspaper editorial support is necessary as well as straight news about the opening of the campaign and new features as they develop. A public statement from high quarters giving to the program is important.

8. Posters depicting one or more of the various themes should be slanted toward housewives or heads of households.

9. Exhibits for display in department stores or railway stations could be prepared on control of insects or a feature of home sanitation.

10. One of the best result-producers in a campaign of this type is public meetings, especially if accompanied by visual aids. Presentations could be best accomplished by physicians, nurses and public health officials and should be made mostly before women's groups. As far as practicable, efforts should be made to work through the new public health centers, where they are established.

11. A 16mm movie on mesquito control,"Winged Scourge," has recently been sent to each MG region, An additional print (35mm) is being made for each region and is scheduled to arrive the first part of June. The 35mm print is not to be considered part of the permanent film library, but is to be returned to SCAP, CI&E Educational Film Exchange, on 1 Sept. 1948. A filmstrip entitled "Parental Love" on control of typhoid has been published by a private concern, Okuda Company, No. 4, 3 chome, Kyobashi, Chuoka, Yokyo, Several of these filmstrips could be purchased by the prefectural government for lectures by physicians and nurses. The cost per strip is about 85 yen. A filmstrip titled "Tuphoid Control" is available through the Welfare Ministry.

12. To keep the program before the public during the summer months, newspapers could report periodic figures of disease indicence as compared with recent years. Violations of sanitation laws should be given wide play with emphasis on convictions. In addition, the public health officer could report progress with statistics, coupled with suggestions for improvement, through a newsletter to village heads for posting on local bulletin boards.

13. Along with specific facts about sanitation and insect control modia could include general information about the services of public health centers and how citizens may use them. The duties of the prefectural public health officer and sanitary teams could be brought to the attention of the public.

Knowing the scope of responsibilities these officials have, the public can better supervise their activities and make use of their services. Wherever possible -- in this campaign and in future ones as well -- the responsibilities of citizenship should be pointed out as part of the over-all program of political reorientation.

14. The proposed schedule for the Public Health Train appears below, Stops of this excellent three-car exhibit should be given wide advance publicity, and best use should be made of the train as a tie-in with this plan.

Schedule of stops are:

Hakodate	20-22 July	:	Morioka	10-13 Sept.
Otaru	24-26 July	:	Aomori	15-18 Sept.
Sapporo	27-30 July	:	Hirosaki	19-21 Sept.
Obihiro	1-3 Aug	:	Sendai	23-26 Sept.
Kushiro	5-7 Aug	:	Fukushima	27-30 Sept.
Muroran	8-10 Aug.	:	Koriyama	1-3 Oct.
Return to Shinagawa 12 Aug			Return to Shinagawa 4 Oct.

SUBJECT: Screening of Cement Allocation for Water Works Projects

TO: Commanding General, I Corps
APO 301

1. Attached is a list of cement allocations for water works for the second quarter. This list has been approved by the Ministry of Welfare and the Construction Board. It is recommended that this list be checked by the Sanitary Engineer of the Regional Military Government to ascertain that the requirements have been properly estimated and arranged in order of priority desired for Public Health needs.

2. If changes are desired the information should be submitted to this headquarters, (ATTENTION: Military Government Section). Allocation tickets will be issued o/a 1 June 1948.

3. Request that reply be expedited.

Kure	Chugoku MG Reg	Hiroshima MG Team
Tokyo-Yokohama	Kanagawa MG Team	Kanagawa MG Team

AG 200.3 Gen (MG-X)

Minor Ports	Responsible Agency	Operating Agency
Nagasaki	I Corps	Nagasaki MG Team
Sasebo	I Corps	Nagasaki MG Team
Miike	I Corps	Fukuoka MG Team
Shimizu	I Corps	Shizuoka MG Team
Hakodate	IX Corps	Hokkaido MG Dist
Otaru	IX Corps	Hokkaido MG Dist

4. It is desired that exit and entry controls be maintained at the above listed ports as provided in reference 2 a, above.

5. Personnel:

a. Officer personnel:

(1) This headquarters will provide one medical officer for duty at each repatriation center and at such designated ports of entry as are deemed necessary. Where repatriation centers are located at or near designated ports of entry, the medical officer on duty at the repatriation center will perform theduties of port quarantine officer. In the case of other ports of entry which have no medical officer assigned, the public health officer assigned to the operating agency (the MG team concerned) will perform the duties of port quarantine officer in addition to his other duties. Initially, medical officers will be provided as follows:

Activity	Officer to be assgd to
Maizuru Repatriation Center	Kyoto MG Team
Sasebo Repatriation Center	Nagasaki MG Team
Hakodate Repatriation Center	Hokkaido MG Dist
Kobe-Osaka Port	Hyogo MG Team
Moji-Wakamatsu and Miike Ports	Fukuoka MG Team

(2) Other officer personnel, as indicated below, are authorized the appropriate military government team on an overstrength basis only and do not increase the allotment of theatre overhead grades or strength allotted the various MG teams by reference 2c, above. This overstrength will not be reflected in the authorized strength sections of the strength status report, FEC AGO Form 82. The overstrength will be reflected in the actual strength columns of this report.

AG 200.3 Gen (NG-X)

Major Port - 1 Captain, MOS 2120
1 1st Lieut, MOS 2120 (not authorized for those major ports provided with a medical officer)
Minor Port - 1 1st Lieut, MOS 2120

b. Enlisted personnel have been provided by reference 2c, above.

6. From time to time appropriate authority will direct allied shipping to Japanese ports not covered by this letter. In such cases, exit and entry controls will be performed by the military government team located in the prefecture concerned. Prior notification of arrival of such shipping will be furnished by this headquarters.

7. In addition to the ports listed in par 3, above, the following ports in your zone of responsibility are open for Japanese shipping only:

Hakata
Kagoshima

Routine surveillance of Japanese quarantine procedures only by the appropriate military government teams is required in the case of these two ports.

BY COMMAND OF LIEUTENANT GENERAL EICHELBERGER:

/s/ Hubert H. Landus Jr. Capt
for /t/ R. SCHAFER
Lt Col, AGD
Asst Adj Gen

STANDING OPERATING PROCEDURE
FOR
PRODUCTION AND DISTRIBUTION OF CEMENT

20 February 1948

1. Production. Manufacturing Branch of Industrial Division, Economic and Scientific Section will be responsible for the production of cement which is manufactured in Japanese cement mills.

a. The Engineer, Eighth Army, will carry out supervision over custody and quality of cement produced for export and for essential Japanese Government projects in addition to that produced for the Occupation Forces.

b. This supervision and surveillance will also be carried out whenever cement is to be produced for export from fuel obtained from sources outside of Japan. Cement produced under this plan will not be subject to allocation to Occupation Forces, nor to the Japanese national economy.

c. After Manufacturing Branch of Industrial Division, ESS, obtains an estimate of the quantity of cement that will be produced in a given quarter, they will notify Construction Branch of Industrial Division, ESS, who will contact the Engineer, Eighth Army, and ascertain his requirements by types of cement and quantities in metric tons. Construction Branch, Industrial Division, ESS, will ascertain the amount of cement required for essential Japanese projects. Foreign Trade Division, ESS, will notify Manufacturing Branch, Industrial Division, ESS, of the quantity in metric tons, and type of cement required for export. After consultation between Manufacturing Branch and Construction Branch, Industrial Division, ESS, the quantities in metric tons and types of cement for the three categories mentioned above, will be made available to the Engineer, Eighth Army, in order that technical and custodial system of control by the Engineer, Eighth Army, be exercised and maintained over cement produced in these three categories.

d. Technical control of cement produced for the Japanese national economy, other than the cement mentioned in the three categories in 1 a above, and custodial control of cement produced for the Japanese national economy, other than the three types mentioned above, will be the responsibility of Manufacturing Branch, Industrial Division, ESS, and the Ministry of Commerce and Industry, Japanese Government.

(1) Note:

(a) Specifications listed under reference "AG 475(Engr) LD-24, Hq. Eighth Army, dated 29 July 1946" are to be made applicable to all cement produced for Occupation Forces, for export, and for essential Japanese construction.

(b) Specifications listed under reference, "Japanese Standard Specifications 149", are to be made applicable to all cement produced for the Japanese Government.

e. Determination of the requirements of coal in regard to quantity and calorific content for the production of cement manufactured in Japanese mills will be the responsibility of Manufacturing Branch, Industrial Division, ESS.

f. Determination of the requirements of paper bags for cement produced in Japanese mills is the staff responsibility of Manufacturing Branch, Industrial Division, ESS, and the Engineer, Eighth Army. The manufacturing of paper bags for all types of cement, is the staff responsibility of Manufacturing Branch, Industrial Division, ESS.

2. Advanced screening of requirements for cement used in Japanese Government sponsored projects.

Sixty days prior to the quarter, designated representatives of various SCAP Sections responsible for surveillance over Japanese Government projects will screen the cement requirements for these projects with responsible Japanese Government officials designated by the various Japanese governmental agencies sponsoring these projects. They will evaluate the essential needs of the various projects, in operation, or contemplated for operation, in the coming quarter. They will consider the finance plan, the labor plan, the engineering plan, and the transportation plan for cement to be allocated to these projects. In determining the amount of cement required, careful consideration will be given to policies and criteria for arriving at the priority of projects. After the total cement requirements are determined by metric tons, by types, and by Prefectures, they will be forwarded by the Japanese Ministry concerned to Economic Stabilization Board for review and consolidation. A check note of the amounts of cement by metric tons, by types, and Prefecture, arrived at by the SCAP representative and the Japanese Government representatives will be forwarded to the Cement Coordinator of Construction Branch, Industrial Division, ESS, one month prior to the quarter. Requirements by types, metric tons, and by Prefectures for essential Japanese Government projects will be forwarded as a separate item to Cement Coordinator of Construction Branch, Industrial Division, ESS, for review. Cement requirements for disaster repair will also be treated as a separate item when forwarded by the Japanese Ministries to Economic Stabilization Board for consolidation, and in turn sent to ESS. For cement, other than essential projects and flood control requirements, it is recommended that tickets be cut for only two-thirds of the full amount and one-third held in reserve to be allocated in the middle of the quarter provided coal and other factors affecting estimated production are made available. This system will guard against an accumulation of surplus cement tickets in a given quarter and provide a reserve.

3. Advance Planning for Requirements of cement.

a. For the requirements of Occupation Forces, the Engineer, Eighth Army, will advise Construction Branch and Manufacturing Branch of Industrial Division, ESS, jointly of the estimated requirements of cement in metric tons and by types, one month in advance of the quarter.

b. Construction Branch, Industrial Division, ESS, will notify Manufacturing Branch, Industrial Division, ESS, of the estimated requirements of cement by metric tons, by types, and by Prefectures, for Japanese Government essential projects one month in advance of the quarter.

c. Foreign Trade Division, ESS, will notify Manufacturing Branch, Industrial Division, ESS, of the estimated requirements of cement by metric tons and type to be exported, one month in advance of the quarter.

d. Construction Branch, Industrial Division, ESS, will notify Manufacturing Branch, Industrial Division, ESS, of the estimated requirements of cement by metric tons, by types, and by Prefecture, for projects sponsored by the Japanese Government, one month in advance of the quarter.

e. Manufacturing Branch, Industrial Division, ESS, will consolidate the estimates mentioned in 3a, b, c, and d, above and submit this information to the Japanese Ministry of Commerce and Industry for necessary action. A copy of this information will be forwarded to Construction Branch, Industrial Division, ESS, and to the Engineer, Eighth Army, for information.

4. Consolidation of Cement Requirements by Economic Stabilization Board.

Economic Stabilization Board, one month prior to the quarter will receive cement requirements by metric tons, by types, and by Prefecture, from the various Japanese Government Ministries after they are screened as described in paragraph two. Economic Stabilization Board will review the cement requirements and consolidate them into the Allocation Table of Materials for the coming quarter. Should any major change be made by Economic Stabilization Board in the requirements of the various Japanese Ministries, it will be done after consultation between Economic Stabilization Board and the Ministry concerned. The Allocation Table of Materials for the coming quarter containing the item of cement, will be forwarded to the Industrial Planning Board, Industrial Division, ESS, fifteen days prior to the beginning of the quarter. The Industrial Planning Board, Industrial Division, ESS, will forward copies of Allocation Table of Materials to Cement Coordinator, Construction Branch, Industrial Division, ESS, and Manufacturing Branch, Industrial Division, ESS, for review. Provided the cement item in the Allocation Table conforms in general with the plan arrived at in the advance screening between the SCAP representatives and the Japanese Government Ministry representatives, the Economic and Scientific Section will approve the plan, through the Industrial Planning Board, Industrial Division, ESS, to Economic Stabilization Board. Any major alteration of the basic plan will be reconciled between the Deputy Director, Economic Stabilization Board and Cement Coordinator, Construction Branch, Industrial Division, ESS.

5. Cutting of tickets for cement for Japanese Government sponsored Projects.

After Economic and Scientific Section and Economic Stabilization Board have agreed to the cement allocation plan, Economic Stabilization Board and the various Ministries of the Japanese Government concerned will certify and issue cement tickets. The cutting of these tickets will be completed within the first fifteen days of the quarter. Cement tickets for disaster repair and essential Japanese Government projects will be cut for the entire amount of the allocation at this time. For all other cement requirements, it is recommended that tickets be cut for only two-thirds of the full amount, holding one-third in reserve to be allocated the middle of the quarter, providing coal and other factors affecting estimated production are made available. This system will guard against an accumulation of surplus cement tickets in a given quarter and provide a reserve.

6. Handling of the cement that might become surplus to Occupation Forces Needs.

The Engineer, Eighth Army will notify Industrial Division, Manufacturing Branch, ESS, when cement in excess of his requirements become available through rescheduling of his construction program. Accordingly, a plan was developed between the Engineer, Eighth Army, Manufacturing Branch, and Construction Branch, Industrial Division, ESS, whereby such cement could either be used for essential Japanese Government projects, emergencies arising on Japanese Government projects, or extra quotas for the Foreign Trade Division, ESS, for export. The plan is as follows: The Engineer, Eighth Army, notifies Manufacturing Branch, Industrial Division, ESS, of the quantity in metric tons, type and location of cement. Chief of Industrial Division, ESS, after consultation with Manufacturing Branch, Construction Branch, Industrial Division, ESS, and Foreign Trade Division, ESS, will make a determination as to where this surplus cement will be utilized.

This procedure prepared by
Economic and Scientific Section
(Industrial Division).

HEADQUARTERS EIGHTH ARMY
United States Army
Office of the Commanding General
APO 343

AG 726.1 (D) 4 February 1948

SUBJECT: Venereal Disease Control

TO : See Distribution

Department of the Army letter AGAF-PM 726.1 (12 Jan 48), dated 15 January 1948, subject: "Venereal disease control", is quoted for your information and guidance.

"1. It has long been recognized that education on matters pertaining to individual conduct and responsibility are best presented by individual contact among enlisted personnel, and where opportunity for questions and answers on general problems of leave, alcoholic abuses, venereal disease, absence without leave, and other problems can be openly and informally discussed.

"2. The Department of the Army venereal disease control council has observed closely an experimental rogram utilizing the above approach at Camp Lee, Virginia, for the past 8 months. This program was designed to reduce the incidence of venereal infection in Negro troops and so far has proven successful. The program is operated entirely by enlisted men under supervision of the local venereal disease control council. It is very similar to the present indoctrination system now in effect for all noncommissioned officers with the exception that all grades of enlisted personnel have active participation in the program.

"3. In addition to the participation of all concerned, the following additional features are being included in the experiment:

"a. Monthly programs of 'swing music' interspersed with shorttalks by selected enlisted men representing all grades, covering the following subjects:

"(1) The venereal diseases and their complications and the dangers inherent on neglect, self treatment, or improper treatment.

(2) Prevention of venereal disease stressing continence as the only sure method of preventing the venereal disease.
(3) Rewards of good behavior, and the possible effects of venereal disease on one's future family happiness.
(4) High standards of the military service.
(5) Self control, self discipline, and the worth of clean living.
(6) The obligation of the soldier to his unit, family, church, and nation.
(7) Wearing of the uniform.
(8) Absence without leave.
(9) Articles of War and related subjects.

"b. Utilization of a noncommissioned officer as a battalion 'Morale NCO' as enlisted counselor, whose duties are to have complete charge of the enlisted men's portion of the local venereal disease control program and to act as liaison noncommissioned officer between the local venereal disease control council and the Negro enlisted personnel. In this position he works closely with the commanding officer, chaplain, special services officer, Troop Information and Education officer, provost marshal, and the surgeon, to further reduce the incidence of venereal disease.

"c. Provision of increased Negro enlisted men's social activities on the post. It is a proven fact that a soldier engaged in recreations, athletics, or other desirable leisure time activities is less likely to seek entertainment in an environment conducive to exposure to venereal disease.

"d. Emphasis upon the importance of individual responsibility and self discipline by having enlisted personnel take an active part in the program.

"4. The above experimental program is published for the information of all concerned and may be used to implement the present program as outlined in Secretary of War's letter and section IV, Circular 227, War Department, 1947. This program is recommended especially for implementation when the interest and cooperation of one or more outstanding key noncommissioned officers can be secured."

HEADQUARTERS EIGHTH ARMY
United States Army
Office of the Commanding General
APO 343

AG 230.145 (NO) 13 January 1948

SUBJECT: Training of Japanese Nationals as Nurses' Aides

TO: See Distribution

1. In view of the recent reduction in manning level of Army Nurse Corps Officers (including Medical Department dietitians and physical therapists) effective 31 December 1947 and 30 June 1948, and of the anticipated inability of the Department of the Army to fill this reduced manning level, timely corrective action will be necessary to alleviate inadequacies of nursing personnel.

2. In order to cope with this, the following action will be taken:

a. Japanese National attendants (Japanese nurses who have had nursing education), will be trained for nurses' aides duties at the following Medical Department installations in the numbers indicated:

49th General Hospital	20
5th Station Hospital	12
28th Station Hospital	40
35th Station Hospital	10
118th Station Hospital	20
128th Station Hospital	10
155th Station Hospital	15
161st Station Hospital	10
172nd Station Hospital	10
361st Station Hospital	25
376th Station Hospital	15
395th Station Hospital	10
407th Med Gen Dispensary	7

3. Commanding Officers of units listed will apply to the following agencies in the area in which they are located for assistance in the procurement of qualified personnel for this training.

a. Military Government Agencies.

b. Branch organizations, Japanese Nursing Association.

c. Nursing Section, Japanese Prefectural Health Departments.

The above agencies have been notifies of this plan by the Public Health and Welfare Section, SCAP, and their assistance in procurement of personnel has been requested.

4. Such personnel will be employed by the hospital or dispensary in the same manner as any other Japanese National. If necessary, request for increase in the established ceiling for Japanese Nationals will be forwarded in accordance with current directives.

5. Personnel employed for this purpose who fail to satisfactorily complete the course of instruction will be discharged.

6. Training in Nurses' Aides duties will be conducted in accordance with the inclosed Training Program.

7. A graduate Japanese nurse now employed at the 49th General Hospital will be assigned to temporary duty at each of the above mentioned installations as instructor. Billeting for this instructor will be provided.

8. Cotton wash dress uniforms will be issued without requisition to each hospital and dispensary on the basis of two (2) for each nurses' aide. Each nurses' aide will wear the cap of her nursing school.

9. Procedure manuals for the course of instruction and attendant material will be forwarded to each hospital and dispensary under separate cover.

10. Commanding officers will take aggressive action in this matter in order that the procurement of personnel may be completed and th program of instruction started not later than 1 February 1948.

TRAINING PROGRAM OF JAPANESE NURSES AND NURSE AIDES

The following program of instruction will be inaugurated for on-the-job training of Japanese nurses who are to act as and be called Nurse Aides in Army hospitals.

The teaching of nursing techniques and demonstrations, together with the supervised return demonstrations, should be delegated to an ANC officer. It is recommended that, where possible, the services of an AND officer who has had previous preparation and experience as an instructor in the nursing arts be utilized in this assignment and that she also give classes.

In order to insure the success of such a program and to derive the fullest cooperation and participation of all ward officers and nurses, it is recommended that the hospital staff be oriented as to the provisions and aims of such a training program and that supplementary classes in minimum English essential to ward duties be given in addition to the hours indicated in paragraph 3 below.

1. Length of Course:

   160 hours of 4 weeks - classes to be held 4 hours daily, 5 days a week. Students will spend the remaining hours daily, 5 days each week on the ward in observation and return demonstrations. A 40 hour week will be maintained.

2. Purpose of Course:

   To teach Japanese nurses approved Army techniques in certain phases of nursing so that they may be utilized as nurse aides.

3. Subjects:

	Hours:
a. Orientation	4
b. Ward duties and routine	8
c. Ward property and records	4
d. Ward nursing procedures and demonstrations	60
e. Return demonstrations, ward and individual conferences	84

4. Requisites:

   Japanese nurses who have had nursing education.

INCLOSURE NO. 1

5. Classroom:

Should be set up similar to a unit on a ward and/or a ward may be designated for classes and return demonstration practice.

6. Return demonstration:

Is a part of the classroom achievement and credit is given as such. As the student demonstrates the ability to perform the procedure as given in the classroom, she is assigned to the ward to practice it as on-the-job training.

7. Weekly schedules of classes and assignments by day and hour will be made available to students and ward personnel.

Continuous supervision will be necessary to insure the proper orientation and training of newly assigned Japanese nurse aides.

8. Texbooks and References for Instructor's Use:

Harmer and Henderson - Principles and Practice of Nursing

Emerson - Medical Nursing

Tracy - The Art and Science of Nursing

M. R. Smith - Principles of Nursing Care

Eliason et al - Surgical Nursing

American Journal of Nursing

Hospital Ward Manual of Nursing Procedures

Young - Nursing Principles

9. Program:

a. Subject: Orientation 4 hours

(1) Scope: Professional adjustments, principles involving the psychological aspects in caring for patients, orientation to ward personnel and duties (position and definition of each group, ward attendants, ward technicians, ward masters, civilian employees, nurses, ward officer). The plan and organization of the hospital, relation of the various departments.

(2) (a) Understanding of guiding principles related to professional adjustments.

(b) Understanding of ward personnel duties and relation to one another.

b. Subject: Ward duties and Routine 8 hours.

(1) Scope: Importance of cleanliness and order on the ward; cleaning methods and work organization; cleaning a unit with patient and after hs discharge. Heating and ventilation, care of flowers, day and night routine on wards; visitors.

(2) Minimum Standards of Achievement:

(a) Ability to clean and maintain cleanliness and order in ward.

(b) Ability to ventilate ward properly.

(c) Ability to care for patient's flowers.

(d) Knowledge of importance of maintaining visiting hours.

c. Subject: Ward and patient's property and records 4 hours.

(1) Scope: Property accountability and responsibility; reporting of lost, destroyed, or damaged property. Expendable and non-expendable items; standard and non-standard items. Care of clean linen and the linen room; care of soiled linen, care and cleaning of equipment; care and arrangement of supplies. Care of rubber gloves, rubber sheets and rubber tubing. Care of enamel ware.

(2) Minimum Standards of Achievement:

(a) Ability to care for and account for ward and patient's property.

(b) Understanding of value of property.

(c) Knowledge of maintenance of equipment to get maximum use.

d. Subject: Ward Nursing Procedures 60 hours.

(1) Scope: The kinds of hospital beds, making an unoccupied and occupied bed. Hospital diets and serving them. Technique of giving and revoving bedpan and urinal. Observation for unusual characteristics of specimens, collection of stool and urine specimens; cleaning and sterilizing bedpan and urinal; cleansing of hands. Fluid intake and output. Technique of lifting and turning patients. Transfer to and from litter; helping patient up in chair; assisting patient to dress and undress. Preparing and escorting patients for x-ray; BMR, EKG, etc. Various methods to make bed patients comfortable. Care of teeth. mouth, hair, nails, skin. Morning and evening care. Back care. Bed, bath and bed shampoo. Care of incontinent patient. Admission and discharge of patient. Preparation of ice caps and ice collars. Japanese nurse aides will not prepare nor place hot water bottles under any circumstances. Care of orthopedic patient, fracture bed, pre-and-post-operative care of patient. Making post-operative bed. Basic principles of aseptic technique, surgical dressings and sterilization. Care of seriously ill patient, care of the dying, care of the body after death. Tidal drainage, suction siphonage drainage. The care and feeding and play of children in the Pediatric Ward. (In as much as nurse aides will not care for communicable diseases, only the principles of communicable ward sanitation will be incorporated.)

(2) Minimum Standards of Achievement:

(a) Ability to carry out all nursing procedures taught.

(b) Ability to recognize and carry out patient needs.

(c) Ability to adjust to and care for the pediatric patient.

e. Subject: Return demonstrations - ward and individual conferences 84 hours.

(1) Scope: Individual conferences with student concerning work, ward conferences for group, discussion of problems, techniques and procedures. Return demonstrations in classroom and on the ward of procedures taught.

(2) Minimum Standards of Achievement:

(a) Ability to demonstrate all procedures taught.

(b) Ability to participate in group conferences.

10. Efficiency Rating.

a. An efficiency rating will be made on each student at the end of the first two (2) weeks of the training program and in the final week of the course of instruction. Sufficient rating forms will be furnished.

b. A check list for rating each procedure will be maintained on each nurse aide throughout the course of instruction. Sufficient rating forms will be furnished.

c. Only students with ratings of average or above will be considered or ratained for indefinite employment in the hospital or dispensary.

11. Final examination.

A practical test will be given at the end of the hour (4) weeks course of instruction. The nurse aide will be advised at the beginning of the course and throughout that she will be tested on any or several of the procedures given during the course and that she must give at least an average response to the test to satisfactorily pass the course of instruction.

12. Procedure Manual.

a. Two (2) English Procedure Manuals and a ratio of one (1) Japanese manual to five (5) nurse aides will be furnished each hospital and dispensary for use during the course of instruction.

b. Only the procedures outlined in the manual will be taught in the course of instruction.

8 June 1950

Dr. Richard Brown
Public Health Officer
Kyushu Civil Affairs Region
APO 24-5

Dear Dr. Brown:

According to our phone conversation the other day, I will be in Fukuoka on 19 June. I regret that I cannot take time to visit all seven of the prefectures on Kyushu on this visit and I think your idea of having a large meeting in Fukuoka is excellent, however, I am going to continue my program of meeting with representatives of the groups I mentioned, i.e., chiefs of hospitals, sanatoria and health centers, public health nurses and midwives, representatives from the educational groups, both primary and ~~secondary~~ schools and colleges, and representatives of womens' organizations in each of the prefectures visited, with the idea that these meetings will differ from the main meeting in Fukuoka in that they will be given over to discussion on local problems that exist in both tuberculosis control and maternal and child health. In the latter case, with particular emphasis upon the control of the dysentery diseases and Ekiri, so-called. The afternoons will be spent in visiting such places locally which will give us the information we need on control of tuberculosis. This may include mining communities, sanatoria, preventoria, health centers and/or anti-tuberculosis associations.

I am also planning to attempt to get some rest at Unzen, over the week-end following the visit to Nagasaki, and proceed to Kumamoto late that Sunday afternoon.

Dr. Kotani of the Ministry of Welfare, has told me that there will be a short training course for representatives of the doctors in tuberculosis control who are working in the health centers in the Kyushu area. This course will be held in Fukuoka beginning on the 28th of June and he has asked me to be present for one lecture during this course on that date. This will mean that we are planning to leave Fukuoka the evening of 28 June and arrive in Tokyo 29 June. My thought in explaining this to you is that you might be of assistance in planning my return transportation on the night of the 28th.

Looking forward to meeting you in Fukuoka, I am,

Very sincerely,

/ albert P. Knight

Public Health Branch
APO 343

28 November 1949

Dr. Richard Brown
Public Health Section
Kyushu Civil Affairs Region
APO 24

Dear Dr. Brown:

It is contemplated that I (accompanied by Mrs. Shellenberger) will travel south and arrive at your office on the morning of 8 December. A routine official notice is being sent to the region. Dr. Luke has kindly asked us to stay with him and stated he would meet us so that there will no transportation difficulty involved.

The purpose of the visit is to discuss, in general, programming for the first quarter of 1950. It is believed that it would be helpful if a general program were outlined in advance, showing a vertical column of all the major subjects of the mission and the appropriate breakdown of each subject; parallel vertical columns (one for each prefecture) would then permit horizontal entries reflecting required emphasis by prefectures according to their present status of achievement. Such a program could likewise serve as a progress check sheet.

If you concur, it is believed it would be desirable to meet with Fukuoka prefectural public health officer and his assistants for about one to two hours conference concerning general administration and planning. A visit to one or two public health installations of your selection would be appropriate, unless you consider some other activity more desirable.

In connection with the developing regional meeting for American and Japanese participation, Kinki Region has been requested to put on such a meeting in February. It is probable that some personnel from your office and Japanese public health officers of your region will be asked to present papers. Practical demonstrations are also contemplated that should be of interest and value. Kinki Region will handle the details and issue invitations, but it is important that the Japanese sense a feeling of "belonging to" and participating in the public health program.

It is presumed that you will have quarters soon in Fukuoka. From all that I have heard, Fukuoka is an interesting place in which to live and work.

Very truly yours,

L.C. SHELLENBERGER

UX 84007 JM Subject is "Passenger Transportation by Rail-Changes in Procedure."

1. Reference.

Circular 7, this headquarters, 26 January 1949, subject: "Passenger Transportation by Rail," as amended.

2. Purpose.

a. To establish changes in procedure prescribed by the Supreme Commander for the Allied Powers.

b. Effective 0001, 21 October 1949, to establish charges, payable in yen, for railway transportation in Japan for all non-official travel in Allied trains, military cars, Japanese trains, and interurban service.

c. To establish procedure by which commanders may issue travel orders to individuals authorized railway transportation at government expense (par 3b).

3. Official travel will be limited to that essential and directly contributing to the Occupation Forces mission.

a. Definitions of official travel.

(1) That authorized by competent authority in official orders.

(2) That directed by oral orders by commanders now authorized to issue travel orders.

(3) That performed between domicile and place of work

xxxxxxxxxx

(4) That performed between:

(a) Domicile and sales commissaries.

(b) Domicile and hospital or dispensary for medical treatment.

(c) Domicile and schools for regularly enrolled dependent children.

(5) Persons authorized rail transportation at government expense when traveling in official status:

(a) Military personnel of the Allied Occupation Forces.

(b) Red Cross personnel of the Allied Occupation Forces.

(c) Civil Service employees of the United States, Civil Servants of the British Commonwealth Occupation Forces, other bona-fide employees of the Occupation Forces except domestic servants or manual labor.

(d) Dependents of Occupation Force personnel when performing travel incident to permanent change of station as defined in paragraph 3a (4) above.

(6) Military or civilian personnel authorized to visit, during off-duty hours, their dependents billeted in areas other than those in which such individuals are on duty.

b. Acting Transportation Officer.

(1) An officer or warrant officer will be appointed "Acting Transportation Officer" by commanders now authorized to issue travel

XXXXXXXXXX

orders. The Acting Transportation Officer will:

(a) Issue as directed by competent authority, "Transportation Order" (Inclosure 1) or "Military Railway Tickets" (Inclosure 2) to personnel entitled to rail transportation at government expense.

(b) Maintain record of all persons to whom Transportation Order or Military Railway Tickets have been furnished, together with copy of authority upon which transportation was issued. Unless otherwise directed by this headquarters, records will be retained on file for not less than six months and will be available for inspection by an Inspector General or other designated authority.

(2) Forward immediately to this headquarters, attention: Transportation Officer, a facsimile signature on a 3 x 5 card showing his name, grade, and organization. Copy of appointing order will be attached to facsimile signature card.

c. "Transportation Order" (SA Form 61).

(1) Form is designed for purpose similar to that of "Transportation Request" (TR) used for obtaining commercial transportation in the United States. Initial distribution will be made by this headquarters to headquarters of Allied Occupation Forces prior to 19 October 1949.

(2) Acting Transportation Officers will anticipate requirements and requisition through normal publication supply channels on WD AGO Form 17.

XXXXXXXXXXX

(3) Special or letter orders authorizing travel at government expense will be presented to Acting Transportation Officer in exchange for "Transportation Order (s)," prepared in sufficient copies to furnish 1 to each NTO or Japanese ticket agent where change of train is necessary. Round trip tickets are not provided in Japan.

(4) "Transportation Order" will be presented to NTO or Japanese ticket agent in exchange for railway ticket. When sleeping car accommodations are required, berth space will be assigned by NTO and so indicated on the ticket.

4. "Military Railway Tickets" (AA Form 62).

(1) Military Railway Ticket books containing sixty (60) tickets may be issued to persons authorized to make daily, frequent, or occasional official trips (see par 3a). They are valid on Allied (white striped) cars, in regularly scheduled interurban service, or on Japanese trains operated on lines over which Allied cars are not operated. They are not valid on the Dixie Limited, Allied Limited, Yankee Limited or on branch line trains in which Allied sleeping cars are operated.

(2) Initially, ticket books will be supplied to Acting Transportation Officers in the same manner as "Transportation Orders."

(3) Issue will be made to authorized personnel by Acting Transportation Officers upon request by individual in writing, on form similar to inclosure 3

(4) Ticket books will be valid for thirty (30) day periods, only between stations indicated thereon. Sufficient tickets will be issued for not more than one round trip per day for travel

xxxxxxxxxx

between domicile and authorized destination. Acting Transportation Officers will remove from book and destroy tickets in excess of stated requirements, including those furnished dependents of Occupation personnel for travel to and from sales commissaries, or for medical treatment, or for school attendance.

(5) Loose tickets will not be accepted for transportation.

(6) Use of Military Railway Tickets for other than official travel, as defined in paragraph 3a, is prohibited.

4. Nonofficial Travel.

a. Definition.

(1) Travel performed for other than those purposes listed in 3a above, at the expense of the individual, for which payment in yen currency is made. "Yellow Ball" (free) service is hereby abolished.

b. Procedure.

(2) The procedure for travel on military trains and on unattended military coaches on Japanese trains will be as follows:

(a) An individual desiring to travel on a nonofficial basis will purchase a second-class ticket to destination according to tarriff to be established.

(b) Where sleeping car accommodations are required, the individual will make necessary reservations through the RTO, and purchase transportation and berth tickets.

xxxxxxxxxx

(c) Passengers will board the car or train and present his ticket to the conductor. Usually this conductor will be Japanese. Passenger will retain the ticket stub during his trip as it is his authority for being aboard the car when and if the car is spot-checked by Military Police or 3d Transportation Military Railway Service patrols. At the termination of the trip, the passengers will surrender ticket stub.

(d) Individuals who perform travel over rail lines where Allied cars are not operated will purchase Japanese tickets and be governed by the same customs and regulations as the Japanese public.

c. Fares.

(1) Effective 0001, 21 October 1949, Railway coupons will be invalid. Unused Railway coupons will be presented to any Army Exchange branch for refund prior to 1700, 15 November 1949.

(2) Rate of fare will be based upon Japanese tariffs. Rates will be available at local RTO's. Rate for nonofficial or recreational travel when performed in "special" or "private" cars will be 50% greater than in regular service. Berth fare will be ¥ 720 per night for a compartment berth lower or upper, ¥ 360 per night for standard lower or upper berth.

d. Yen currency cannot be secured from the RTO.

5. Travel Authority.

a. Personnel desiring to travel on Allied trains or Allied cars on branch lines will be present to RTO either:

XXXXXXXXX

(1) One copy of "Transportation Order," when transportation is authorized at government expense, or

(2) One copy of competent leave orders, or "Absence and Travel Authority" (inclosure 4), when cost of transportation is to be borne by the individual.

6. Passes.

a. Railway passes issued by this headquarters and Headquarters 3d Transportation Military Railway Service will remain valid until further notice.

7. Portions of the reference in conflict with this directive are suspended.

4 Incls:
1. Transportation Order
2. Military Railway Ticket
3. Request for Military Railway Tickets
4. Absence and Travel Authority

The following radiogram from CINCFE Tokyo is quoted for information and guidance of responsible commanders and medical officers concerned.

"Increase in reported incidence Japanese B encephalitis among Japanese with laboratory confirmations in scattered cases, indicates presence of limited outbreak this disease. Principal foci appear to be in Aichi, Mie and Shizuoka Prefectures. Some cases also reported from Kanagawa Prefecture and from Tokyo. Recommend responsible commanders and medical officers be notified of situation without undue publicity and that preventive measures including mosquito control be intensified where indicated. To date there are no known cases among occupation personnel."
