(o) RESULTS: (For all hits claimed on ship targets and for land targets of special interest, draw diagram, top or side view or both, as appropriate, showing type and location of hits. For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary).

Target #1. Thirty of 39 100-pound bombs, armed with 8-15 second delay tail fuse and dropped after glide from 3500 to 750 feet, hit the grass landing strip but made relatively small craters because of their size. However, the strip, was made temporarily non-operational. (Reconnasiance the next day showed the craters still present).

Target #2. The two Gima radic towers, apparently already non-operational were damaged further. One pilot hit the base of each with rocket; a second scored two hits in one, knocking it over.

Target #3. A variety of targets buildings, houses, caves and tombs, were targets for the remainder of the pilots rockets and ammunition. (a). One rocket exploded inside a cave at 8087 "0", five AR's hit close to the mouth. (b). Two of six rockets damaged a tomb at 7884 AF. (c). A corrigated type building 35ft square, set in side of hill, at 8087 M, blow up when hit by two of 4 AR's. (d). A grass-covered concrete dugout, one of three buildings at 7591 P/U which resembled a weather station, was burned out by two rocket hits. (e). Two houses in Higa (7886) and two in Janado (7986) were blown up two rocket hits. (e). Two houses in Higa (7886) and two in Janado (7986) were blown up two rocket hits. (f). A large number of house fires, including two large fires in the M village of Une (TA 7987-7988), were started by numerous strafing runs.

At 1400 on 6 May four TEM's from VC-91 from the MAKIN ISLAND, led by Lt.(jg) Howard, took off for Kume Shima on a special strike with orders to knock out the grass landing strip on the southeast coast and to eliminate any other areas they found of possible use by enemy aircraft to eliminate any other areas they found of possible use by enemy aircraft They carried eight rockets and ten 100-pound GP Bombs, armed with 8 to 12 second delay tail fuses.

The bombs were dropped from low altitude, about 750 feet from 40 degree glides started at 3500 feet, and at about 50% feet from low-level runs. Visibility was good and the pilots took their time, reporting at least 30 of their 39 bombs hit the strip. The bombs made only smal craters, but made the field temperarily non-operational; these craters were still present the next day when one of the pilots returned on a recommaisance flight. No operational aircraft were seen about the field, and there was no sign of Jap ground activity.

The pilots then flew around the island looking for other targets, but found none outstanding, so they selected the best they could find, and had a field day, strafing from as low as 50 feet. As reportedyby Lt. (jg) Younglove, "Targets consisted mainly of tombs, buildings and caves. Five direct rocket hits were observed in and close to a deep cave just north of the east end of the runway. Two rocket hits were secured on a concrete structure deep inside the hill area above the landing strip. blowing it up. Four houses were blasted by rockets.

on the base of some already damaged radio towers, two of them knocking over one of the towers. One rocket hit was observed on a weather station near the center of Kume Shima, the building being sort of a concrete dugout covered with grass, which was set afire. All solid looking buildings throughout the island were thoroughly strafed by wing, turret and tail machine gums; many fires were started, notably in the village of Une where two very large fires were still burning when the planes left for base after expending all their assumition".

Two VT's from FANSHAW BAY accompanied the VC-91 pilots to the island; but separated there to attack a possible landing strip on the mx west coast.

Pilots participating were:

Lt. (jg) M. O. Howard Lt. (jg) E. E. Younglove Ens. W. F. Hancock Ens. L. L. Lundquist.
