

ECLIPSES FOR 1863.

THE first will be of the Sun, on the 17th of May, at 11h. 15m. A. M., invisible in America.

The second will be a total Eclipse of the Moon, on the bet day of June, partially visible, and is calculated to apparent time, as follows :

			DAY.	H'R.	MIN.	SEC.	
The Eclipse begins on June -	-	Ŋ	1,	4	17	38.	1
Beginning of total darkness	-		"	5	24	36.	
End of total darkness	•	-	46	6	31	18.	
The Moon will rise at Augusta	~		٠.	7	I	0,	Z.
with 7 2-10 digits eclipsed	on	her					7
Western limb.							1 24
The Eclipse will end	~	-	"	7	38	16.	
Duration of visibility -	-	• -		0	37	16.	J

The third will be of the Sun, on the 11th of Nov., at 2h. 36m. A. M., invisible in America.

The fourth will be of the Moon, on the 25th day of November, visible and nearly total throughout the continent of America, and is calculated to apparent time, as follows:

	DAY.	H'R.	MIN.	SEC.	
Beginning at Augusta, Ga., Nov.	25	1	57	14.	٦
. Middle of Eclipse.	"	3	37	53.	
Ecliptic Opposition					A. M
End of Eclipse	"	5	18	32.	
Duration					J

Digits eclipsed 11 1.2, on the Moon's north limb.

At the greatest obscuration, about 1-24 part of the Moon's diameter, will remain uneclipsed.

EQUINOXES AND SOLSTICES.

Vernal Equinox,	(Spring begins)	March	21st.
Summer Solstice,			
Autumnal Equinox,			
Winter Solstice,	(Winter begins),	Dec.	21st.

ASPECTS OF THE PLANETS.

The Planet Venus will be Evening Star till September 29th, then Morning Star till the end of the year.

Jupitor will be in opposition with the Sun, on the 12th of April, when he will shine with his greatest brilliancy.

Sciurn will be in opposition with the Sun, on the 20th of March, when he will be brightest.

Mars will be too near the Sun to afford any favorable opportunity of viewing him this year.

THE TWELVE SIGNS OF THE ZODIAC.

Spring Signs,...... 1. સ Pisces. 2. φ Aries. 3. \aleph Taurus Summer Signs,...... 4. π Geminii. 5. 25 Cancer. 6. Ω Lee. Autumn Signs,...... 7. W Virgo. 8. rachtarrow Libra. 9. M Scorpio, Winter Signs, 10. \pounds Sagitt'us 11. γ9 Capri'us. 12. rachtarrow Aquarius. The first six are called Northern Signs, and the other six Southern Signs.

MEAN AND APPARENT TIME.

MEAN TIME is the time indicated by a well-regulated clock or watch running without variation, so as to make the day, or 24 hours, equal to the Mean Time at which the Sun comes to the meridian during the year. Apparent Time is the time which makes the Sun come to the mendian every day at 12 o'clock. On account of the elipticity of the oarth's orbit, and its inclination to the equator, the sun does not always come to the moniian in exactly the same time; and hence, Apparent Time is irregular, and either gradually falls behind Mean Time, or gains on its sobsetimes to the amount of more than sixteen minntes. When the Sun cours to the moridfan earlier than the Mean Time, it is said to be fast; but when it comes to it later, it is said to be slow; and the amount by which Apparent Tone differs from Mean Time is called the Equation of Time. In order to set a timepiece according to Mean Time, it is necessary to have a dial. or moon mark; and allowance must be made for the Equation of Time. This Almanac is in Mean Time.

EXFLANATION OF THE SIGNS U"ED IN THIS ALMANAC.

Solution, and Moon generally, C First Quarter, 🕑 Fall Moon, 🖉 Last Quarter Q Moon's ascending node, or dra pu's head. or Moon's descending node, or dragon's tail. In APOGEE - about farthest from the IN PERIGEE Moon nearest the earth. 3 Highest-Moou for Earth thest Nor.h B Lon est Moon farthest South. In Saturn. 2 Veurs .d near together. 4 Jupiter. ¥ Mercury 🔲 97 dog apart, 8 Uppesition of 180 degrees apart & Mars. 7* Stars. - Sun. 17 Berscheil Complete Court Calendars, &c. for the States of Alabama, and Tennassee, will be inserted in orders of 10 gross and upwards from dealars ordering for circulation in those states respectively.

NOTE. Any person solving ten of the Problems contained in this Almanac, and sending to me at Americus, Ga., by the 15th of May next, the correct answers to the same, shall have the same acknowledged in the Almanac for 1864.

A few original problems for 1864, are solicited. They must be thoroughly solved and explained, in order to meet with attention

T. P. ASHMORN.

GOVERNMENT OF LOUISIANA,

Capitol—BATON ROUGE.

Area-41,436 Square Miles; Total Population-666,431 Slaves-312,186.

Thomas O. Moore, Governor; H. M. Hyams, Lieut, Governor; P. D Harely, Secretary of State; Thomas J. Semmez, Attorney General

DOMESTIC RECIPES.

PORK, BEEF OR MUTTON-How TO PRESERVE — Take water, four gallons, coarse sugar, one and a halt pounds, soltpeter, two ounces; common salt, eight pounds; put the whole into a clean pot and let it boil, carefully taking off the soum; and when no more soum will rise, pour it into the vessel you intend to keep it in and when cold, put in your meat This is all that is necessary, if you head up your cask; but if kept as a house pickle in an open vessel, when fresh, is put in weekly, or from time to time; then in that case, the pickle should be reboiled every six weeks.

CURING HAMS AND BACON. -Use equal quantities of common Soda and Saltpeter-one ounce and a nalf of each to the fourteen pounds of Ham or Bacon, using the usual quantity of salt. The Soda prevents that hardness in the lean of the Bacon which is so often found, and keeps it quite mellow all through, besides being a preventive of rust.

SUBSTITUTE FOR SODA. A lady sends the following, which we publish for the information of house-keepers:

To the ashes of corn cobs add a little boiling water After allowing it to stand for a few minutes, pour off the 'ye which can be used at once with an acid [sour milk, or vinegar] It makes the bread as light almost as Soda.

TO SAVE PORK. -- Mr. John H. Taylor, gives through the Co'umbus Enqui rer the following recipe for saving pork in an economical manner. He says several gentlemen have successfully practiced it the just year in Harris county.

• To 5 gallons of water add 7 pounds of salt, 1 plat of syrup, and 1 teaspoonful of pounded saltpots o After the pork is cooled in the usual way, pack in barrels and cover with the above mixture-let it remain four or five weeks, and hang and smoke in the usual manner."

Thus twenty pounds of salt are made to save one thousand pounds of pork.

CONFEDERATE DVE-TO MAKE A BEAUTIFUL BLUE. Take elder berries, mash them and press out the juice To two gallons of juice add about one ounce of copperas and two ounces of alum. Dip the thread in this thoroughly, and air, and the dye is set

SAUSAGE MEAT. -- After several years experience, I have found the following recipe to be the best for preparing sausage meat I have ever seez:

To 50 lbs. of chopped meat, add l_{4}^{+} lbs of salt, 4 oz. of good black pepper, 14 table spoonfulls of sage.

How TO MAKE TALLOW CANDLES HARD.—Take the leaf of the Prickly Pear, say four or five, cut up and boil with one pound of tallow, and your candles will surprise you for bardness.

TO PRESERVE BUTTER.—Take two quarts of best common solt. one ounce of sugar, one ounce saltpetre, all finely pulverized and d.y: then thoroughly mix the whole together, and take one ounce of the mixture for each pound of butter, work well into the mass and close it up for use.

It should be remembered that butter thus prepared requires to stand a month before it is ready for use. If it is sconer opened the salt is not sufficiently blended with it, and sometimes the coolness of the saltpetre will be perceived, which totally disappears afterwards.

Batter being prepared for immediate use, had better be put up without the saltpetre, but the sugar in the prepartions above given, may be used with great advantage, as the sugar gives butter an extra good flavor, and has a tendency to keep it sweet, and prevent its becoming rancid

RECIPES FOR MAKING DIFFERENT KINDS OF BREAD WITH RICE FLOUR.

TO MAKE LOAF RICE BREAD.— Boil a point of rice soft, add a pin of leaven, then three quarts of rice flour, put it to rise in a tin or earthen vessel, until it has risen sufficiently; divide it into three parts and bake it as other broad, and you will have three large loaves. Or scald the flour, and when cold, mix half wheat flour or corn mcal, raised with leaven in the usual way.

Another —One quart of rice flour — make it into a stiff pap, by wetting with water, not so hot as to make it lumpy; when well wet add boiling water, as much as two or three quarts, stir it continually nntil it boils; put in $\frac{1}{2}$ pint of yeast when it cools, add a little salt, knead in as much of wheat flour as will make it a proper dough for bread, put it to rise, and when risen add a little more wheat flour—let it stand in a warm place half an hour, and bake it. This same mixture only made thinner aud baked in rings makes excellent muffins.

JOURNEY OR JOHNNY CAKES.--To three spoonsful of soft boiled rice, add a small tea cup of water or milk, then add six spoonsful of the rice flour, which will make a Johnny cake, or six waffles.

RICE CAKES.—Take a pint of soft builed rice, a half pint, of milk or water, to which add twelve spoonsful of rice flour, divide into small cakes and bake them in a brick oven.

RICE CAKES LIKE BUCKWHEAT CAKES. - Mix one-fourth wheat flour to three-fourths superfine rice flour, and raise it as buckwheat flour; bako it like buckwheat cakes.

TO MAKE WAFERS.—Take a pint of warm water, a teaspoonful of salt, add a pint of the flour, and it will give you two dozen wafers,

TO MAKE RICE PUFFS — To a pint of the flour add a teaspoonful of salt, a pint of boiling water, beat up four eggs, stir them well together, put from 2 to 3 spoonsful of lard in a pan, make it boiling hot, and fry as you do common fritters.

TO MAKE A KICE PUDDING.--Take a quart of milk, add a pint of the flour, boil them to a pap, beat up six oggs, to which add six sponsful of Havana sugar, and a spoonful of hutter, which, when well beaten together, add to the milk and flour, grease the pan it is to baked in, grate nutmeg over the mixture and bake it.

RICE FLOUR BLANC MANGE -- Boil one quart of milk, secon it to your taste with sugar and rose-water, take 4 table-spoonsful of the rice flour, mix it very smooth with cold milk, add this to the othen milk while it is boiling, stirring it well. Let all boil together about fifteen minutes, stirring occasionally, then pour it into mou'ds and put it by to cool. This is a very favor tie article for invalids.

, RICE GRIDDLE CAKES.--Boil one large cup of whole rice quite soft, in milk, and while hot stir in a little wheat flour or rice flour, when cold add 2 eggs and a little salt, bake in small thin cakes on the griddle.

In every ease in making rice flour bread, cake or pudding, a well boiled pap should be first made of all the milk and water and half the flour and allowed to get perfectly cold before the other ingredients are added. It forms a sup port for them and prevents the flour from settling at the bottom, stir the whole a moment before it is sot to cook.

PRESERVING MEAT.—To preserve meat for a few days fresh in warm weather, wash it lightly over with a brush or sponge, with a mixture composed of two-thirds of pyroligneous acid and one-third water. The seid, which is a kind of vinegar, gives it no flavor, and the meat requires no washing before being cooked.

TO MAKE MUITON SUET CANDLES. IN IMITATION OF WAX.-1. Throw quick-lime in melted mutton-suct; the lime will fall to the bottom, and carry along with it all the dirt of the suet, so as to leave it as pure and as fine as wax itself.

2. Now, if to one part of the suet you mix three of real wax, you will have a very fine, and to appearance, a real wax candle; at least the mixture could never be discovered, nor even in the moulding ways of ornaments.

To MAKE SOAP.—The following recipe for making soap, has been tried and approved of by several persons:

Take one gallon of strong lye-add a half pound of shucks, cut up fine. Let the shucks boil in the lye until they are reduced to shreds. Then fish the shreds ont and put a half a pound of crakling grease in, or six ounces of lard, and boil until it is sufficiently thick to make good soap.

To SWEETEN RANCID BUTTER.—An agriculturist, near Brussels, in Europe, having sneceeded in removing the bad smell and the disagreeable taste of some butter by beating or mixing it with chloride of lime, he was encouraged by this happy result to continue his experiments by trying them upon butter so rancid as to be past use; and he has restored to butter, the odor and taste of which was insupportable to all, the sweetness of fresh butter. This operation is extremely simple and practicable for all. It consists in beating the lutter in a sufficient quantity of water, into which had been mixed 25 or 30 drops of chloride of lime to two pounds of butter. After having broight all its parts in contact with the water, it may be left for an hour or two; afterwards withdrawn and washed anew in fresh water. The chloride of lime used, having nothing injurious in it, can safely be increased : but after having verified the experiment, it was found that 25 or 30 drops to two and a half pounds of butter, were sufficient.

COBN BEER - A GOOD DRINK. - Boil a small teacupful of Corn till soft and string it like beads to prevent pouring it out of the bottle. Put this into a thick, strong bottle, which fill with molasses-sweetened water-rather sweet to drink. With a long smooth cork of soft white pine, cork air [gas] tight.

Keep the bottle at a temperature of 60 to 80 dog., and before using set the bottle in cold water.

The first preparation may require several days, before fit for use. If it sours, replenish the sweetened water. The corn will last for several months without change, and even then a few of the old grains should be retained for a nucleus.

It does not require to be warmed ; and if warmed loses the fine flavor.

When once it is under way [which sometimes requires a new beginner a week or two] it can be made in three or six hours.

This Beer is superior to any Cider or Beer I have ever drank; innocent for a child, if taken so soon as the gas forms and not permitted to sour

From some cause, I cannot tell what, when the old corn is lost and you begin entirely new with new corn, it may be days and perhaps weeks till it gets right, and then no trouble.

It can be flavored with ginger, sassafres, &c. Don't allow it to acidify, or it affects the head as does hard cider or vinegar.

A SUBSTITUTE FOR FOREIGN TEA.—MESSIS. EDITORS: Absent 'from the city for some days, I have taken occasiou again to test t.e. New Jerrey tea tree, [Ceanothus Americana] as a substitute for foreign tea. I had before reported it as an indifferent substitute. On this occasion, I am glad to report it as a most excellent article, to be used in war times, in place of a high priced commodity, which, in every respect it closely resembles, if it does not equal. All of us find the flavor of the indigenous plant to be most excellent, and without that peculiar taste peculiar to most teas made of herbs.

Without any desire to exaggerate, I commend the substitute. It grows abundantly in our pine lands. The tea prepared from this shrub, drawn as common tea, is certainly a good substitute for indifferent black tea. Properly deied and prepared, it is certainly better than none.

ST. JOHNS, S. C. Ostober 9th, 1861.

A SUBSTITUTE FOR HYSON TEA.—DELICIOUS TEA.—Ladies, gather your respherry leaves, and you will have the finest substitute for hyson tea in the world—and when you can't get raspherries—take the blackberry—it will do. I have tried it. You have yet several days before frost to gather them—see to it! Tea is \$12 a pound—save your money.

This recipe I obtained from an old doctor, a resident practitioner in Southwestern Texas.

SHORT PROCESS OF TANNING.—Some time ago we promised to procurp and publish this matheal of tanning, which is the shortest and cheapest we know, and having tested it, know it to be good. Having at length procured the recipe we redeem our promise. The drugs can be procured at almost any drug store at trifling cost, and pork barrels will answer as well on the plantation as anything else. We give for fifteen large hides, and for twenty calf, deer or sheep skins—of course the same proportion will answer for a smaller or larger number.

For 15 large hides-50 lbs. gum catechu, 15 lbs. sumac, (ground is the best,) 8 lbs. common salt, 6 lbs glauher saults, 2 lbs. alum, 8 oz. sal. nitre. For 20 calf or other skins-32-lbs. gum catechu, 10 lbs sumac, 4 lbs. com

For 20 calf or other skins—32 lbs. gum catechu, 10 lbs sumac, 4 lbs. com mon salt, $3\frac{1}{2}$ lbs. glauber salts, $1\frac{3}{4}$ alum, 6 oz. sal. nitre.

When you use bark, only half the above quantity of cateehu is necessary DIRECTIONS .- 1. Sock your hides well and work them over a a beam until they are soft. 2d Dissolve thoroughly three bushels of lime in a sufficient quantity of water to cover the hides; draw them up every day until the hair slips, work off the hair over the beam; rinse them in clear water: work over the beam. 3d. Put them in the drench. To make the drench, take 6 or 8 gallons of wheat or moal bran, (scalded,) $\frac{1}{2}$ bucket of salt, $1\frac{1}{2}$ pints of oil of viriol to a barrel of water, or to cover the hides; leave them three or four days--kins half that time-work them well over the beam, and when the drench is well worked out put them in the tan. 4th. The Ten-Dissolve half the quantity of drugs in water (warm is best) sufficient to cover the hides. Cn the 6th or 8th day add the remainder. H ndle twice a day when in tan, scour twice during the process of tanning and when half tanned curry your leather A smaller quantity of oil of vitriol may be used in the drench when you are not anxious to hasten the process, and a small quantity in the tan will baston the process. By taking your knife and cutting the edge of the hide one can tell how far it is tanned. If you wish to produce softnets add p little salt; if hardness three to five ounces borax to ten hides. When is drench handle every day. By not handling and rubbing over the beam often the process is slower, and by following directions strictly, the process is hastened.

TO FINISH LEATHER. — Work the water out on the beam or table; oil them on the grain side with tanner's oil, and hang in the shade; when two-thirds dry, oil again on the flesh side with oil and tallow mixed; when dry, work them on the beam or table and they are ready for use. By this process every min can have his leather mide at home in his pork barels.

PRACTICAL DIRECTIONS FOR MAKING BREAD.—As most of the ingredients for raising bread, as yeast powders, &c., arc becoming scarce, I think a good recipe given to house cepers not out of the way.

Take about eight or ten middling sized Irish potatoes, pare and cut them very fine, then set them on to cook with about three times as much water as will cover them. When done, much them fine in the same water, then add flour enough to make a thick batter. Remember the flour must be put in while the water is boiling bet, let it then cool off until about lukewarm, and then adl a little piece of sour dough, say a teaspoonfal to start with. Of course, after the housekeeper has once made this yeast, she can alwayskeep a little of the old to add to the new. If kept in a warm place, it will be fit for use in about six heurs. Add plenty of this to your flour, and you will have the lightest and best tasted bread that you would wish far.

PRESERVING BUTTER —A notent has been seeved by W Clark, of London, for the following method of preserving butter. The butter is first well beaten in the usual manner after charming,' then placed between linen cloths, and submitted to severe pressure for removing whey and water. It is now completely enveloped or covered with clean wellse paper, which is conted on both sides with a preparation of the white baller, in which fitteen grains of salt is used for each egg. This prepared piper is first dried, then heated before a fire, or with a hot iron, just drive to wrapping it ound the butter. It is stated that butter may be kept percently sweet without any salt for two months, when thus treated, it placed in a cool, dry cellar. The submitting of buttertb pressure as described, is a gool plan, and one which we recommend to all our farmers. They can easily practice it with a small cheese press.

STARCH OF HOME MANUFACTURE.—Ta're a peck of unground wheat of the best quality pick and soak it carefully. Next put into a tub; pour on sufficient clear, soft water to cover it, and then set it in the sun. Be sure to change the water every day, keeping it in tac sun as much as possible, or an equally warm place in the house, should the weather prove unfavorable. When all the grains of wheat have become quite soft, rub it well in your hands, and separate it from the husks, which must be thrown into another tub. Let the soft wheat settle in a mass, and then pour off the water and put on fresh; surit well, and let it settle again. Repeat this every day, till the last water comes eff clear and colorless. Then pour the water finally off. Take the starch out of the tub, collect it in a thin bag. and hong it for a few days in the sun; after which spread on dishes or a sheet to dry.

SALTING ARD SMOKING MEAT.—The following method, which requires only forty-eight hours, muy be adopted for salting and smoking meat: A quantity of saltpetre, equal to the common salt that would be required for the ment in the usual way, must be dissolved in water. Into this theomeat to be smoked must be put, and kept over a slow fire till all the water is evaporated. It must then be hung up in a thick smoke for twenty-four hours; when it will be found equal in flavor to the best Hamburg smoked meat that has been kept several weeks in salt, as red throughout and equally firm.

INDIAN SLAP-JACKS.—Scald a quart of Indian meal—when luke-warm, stir in a half a pint of flour, half a tea-cup of yeast and a little salt. When light, fry them in just fat enough to prevent their sticking to the frying pan. Another method of making them, which is very nice, is to turn boiling milk or water on the Indian meal, in the proportion of a quart of the former to a pint of the latter - stir in three table-spoonfuls of flour, three eggs well beat en, and a couple of tea-copoonfuls of salt.

GARDENER'S CHRONICL'E.

JANUARY. -- Sow peas, spinach, lettuce, cabbages, radishes, parsley, beets, carrots, salsafy, parsnips, turaips, asparagus. Plant horse radish, Irish Potatoes. Transplant eabbages and lettice.

¹¹ FEBEUARY--Sow peus, spinnch, lettuce, cabbage, radishes, corn, beets, carrots, saisafy parsnips, turnips, thyme, sage, and other plants. Plant Irish potatoes Transplant cabbage and lettuce.

Remerks.- The same varieties of pease may be sown this month as were directed for the ast. The principal crop of beets and carrots should now be sown. The common varieties of pinach should be sown in small-quantities once in ten days, as it soon runs to seed.

MARCH-Sow carrots, beets, Swiss chard, parsnips, salsafy, cabbages, spinach, turnips esk, tomatoes pappers, Guinea squask. Plant cucumbers, okra, squashes, snap beans cushaw, sewee heans, New Zealand spinuch. Transplant fomatoes, peppers, Guinea squash cabbages and lettree. Remarks-All the above vegetables should be got in at as early a period as possible. Car-

Remarks.- All the above vegetables should be got in at as early a period as possible. Carots should not be sown for a full crop, and from English seed. Lettice should remain where t is sown. New Zenland spinach should be sown in hills, three feet apart each way. Rad hes should be sown every three weeks. All Irish potatoes should be planted this month.

APRIL.-Sow carrots, beets. al.afy, turnips, cabbages, cauliflowers, broceli, tematees, peppers, radishes, bethice, celery, leeks. Plant okra, snap beans, squashes, sewee beans, epcumbers, cush awe melous. Transplant cabbages, tematoes, peppers, Guinea squashes. Pick out celerv.

Remarks. - The sowing of the main crop of carrots for summer and autumn, ought not to be delayed longer than this month, as they will be easily killed when np. The seed should be from Europe, or they will run to seed in the fall. Cncumbers, squashes, and melons, do not succeed well if delayed until now, but a few=nay be sown.

MAY.---Sow cabbages, savoys. carrots, beets, tornips, cauliflowers, brocoli, celery, radishe Plant snap beans. Transplant cabbages. Pick out celerv. Remarks.-- There is little probability of either beets, parsnips, carrots, or turnips succeed-.

Remarks.- There is little probability of either beets, parsnips, carrots, or turnips succeedng at this search, especially the last; yet if wanted, a few may be ventured---nnder very -avorable circumstances, they may succeed. If carrots be sown, the ground should be shaded nd kept moist and this continued to the plants sometime after they are up, or they will be killed by the hot sun.

JUNE.- Sow cauliflowers, becoli, cabbages, carrots, tomatoes. Plant snap beans, okr Transplant celery, cabbages, leeks. Pick out cauliflowers, hrocoli, and celery.

Remarks—This month is generally very dry and hot, and all the crops recommended to be sown now, must be protected from the sun: most of them should have been sown in April, and it is only in case of failure or omission that they should now be sown: the month may be considered had for the sowing of seeds generally.

JULY.—Sowearly Dutch turs.ips, ruta baga, carrots, parsnips, cabbages, cauliflowers, brocoli endive, radishes, spinach. Plant snap beaus, Irish potatoes, melons. Transplant cabbages, celery, cauliflowers, brocoli, tomatoes, and leeks.

Remarks—A few only of carots, parsings, spinach, or rådishes, should be sown as it is not very probable that they will succeed, unless well protected from the sun forsome length of time, while young. The early Dutch turnips should also be sown rowards the middle and last of the month, in smal quantities. The frish potatoes will be fit for use in October, and the tomatoes, will furnish a supply when the pring-grown crop has ceased to bear, and then continue till killed by a frost

AUGUS F --Sew peas, early Outeh and other varieties of turnips, rnta baga, onious, cabbaness, caulidowers brocoli, black Spanish radishes, carrots, beets, parsuips, salsafy, lettuce, and endere Plant snap beans. Transplant cabbages, cauliflowers, brocoli, celery, ruta baga, endive.

Remarks —Not much can be expected from peas sown this month, as they will be much orippled by the high winds and rain which we usually have; but if much wanted a few may be ventured. The beets and spinach are liable to the attacks of the worms, which destroy their leaves: should they escape these they will be fine.

SEPTEMBER.—Sow oarly Dutch and other varieties of turnips, ruta baga, beets. Swischard, mangle wurzle, currots. parsnips, salsafy, lettuce, spinach, cabbages, onions, radisher, endive. Plant snap beans. T ansplant ruta baga, cabbages, cauliflowers, brocoli, celery, letnuce, leeks, endive

OCTOBER.-Sow cabhages, lettuce, carrots, beets, turnips, radishes, spinach, saisafy, parnips, ruta baga. Transplant cabbages, caulfflowers, brocoli, onions, lettuce, leeks, and endive.

NOVEVICEA. -- Sow peas cabbages, radishes, carrots, spinach, turnipe, parsnips, lettnce, beets, salsafy. Plant mazaron and Windsor beans. Transplant cabbages, lestace, onions, and leeks.

DECEMBER.---Sow peas, spinach, adishes, lettnce, cabbages, salsafy, carrots, beets, part snips, Plant Irish Potatoes, magagon and Windsor beaus. Transplant eabbages, lettnce and ouions
