1921.—Diplomatic mission from the United States under Secretary of State Colby. See U. S. A.: 1921.

1922.—Budget plan vetoed by President Pessoa.—“President Pessoa’s veto of the budget plan for 1922 as passed by both branches of Congress has created passionate comments in political circles and throughout the country. While some political leaders, like Senator Machada, maintain that the President has no authority to limit appropriations made by the Legislature, public opinion, and especially commercial circles, is outspoken in praise of the Presidential measure. In his message to Congress the President declares that he feels it his duty to oppose an inflation of the financial conditions of the country. Congress, furthermore, had usurped Executive privileges in dictating an increase in salaries for Treasury employes and creating other places for political favorites.”—*New York Times Current History, April, 1922, p. 176.*

BRAZIL, Constitution of.—The following text of the constitution of the United States of Brazil, adopted February 24, 1891 (see also BRAZIL: 1889-1891), is taken from a translation published in Bulletin No. 7 of the Bureau of American republics, Washington:

We, the representatives of the Brazilian people, united in constitutional congress, to organize a free and democratic régime, do establish, decree and promulgate the following constitution of the republic of the United States of Brazil:

Article 1. The Brazilian nation, adopting as a form of government the federal republic proclaimed November 15, 1889, constitutes itself, by the perpetual and indissoluble union of its former provinces, the United States of Brazil.

Art. 2. Each of the former provinces shall constitute a state, and the former municipal district shall form the federal district, continuing to be the capital of the union until the following article shall be carried into effect.

Art. 3. In the center there is allotted as the property of the union a zone of 14,400 square kilometers, which in due time shall be laid off for the establishment of the future federal capital. [After the change of site of the capital, the present federal district shall constitute a state.]

Art. 4. The states shall have the right to incorporate themselves, one with another, subdivide themselves, dismember themselves to join with others or form new states, with the consent of the respective local legislatures in two successive annual sessions and the approval of the national Congress.

Art. 5. It shall be the duty of each state to provide, at its own expense, for the necessities of its government and administration; but the union shall extend assistance to any state which, in case of public calamity, shall demand it.

Art. 6. The federal government shall not interfere in matters pertaining peculiarly to the states, save: (1) To repel foreign invasion, or the invasion of one state by another. (2) To maintain the federative republican form of government. (3) To reestablish order and tranquillity in the states at the request of the respective governments. (4) To assure the execution of the laws and federal decrees.

Art. 7. It is the exclusive prerogative of the union to decree: (1) Duties on imports from for-

eign countries. (2) Duties of entry, departure, and stay of vessels; the coasting trade for national articles being free of duties, as well as for foreign merchandise that has already paid an import duty. (3) Stamp duties, save the restrictions imposed by article 9, § 1, No. 1. (4) Postal and federal telegraphic taxes. § 1. The union alone shall have the power: (1) To establish banks of emission. (2) To create and maintain custom-houses. § 2. The taxes decreed by the union shall be uniform for all the states. § 3. The laws of the union and the acts and decisions of its authorities shall be executed throughout the country by federal officials, except that the enforcement of the former may be committed to the governments of the states, with the consent of the said states.

Art. 8. The federal government is forbidden to make distinctions and preferences in favor of the ports of any of the states against those of others.

Art. 9. The states alone are competent to decree taxes: (1) On the exportation of merchandise of their own production. (2) On landed property. (3) On the transmission of property. (4) On industries and professions. § 1. The states also have the exclusive right to decree: (1) Stamp duties on instruments emanating from their respective governments and business of their internal economy. (2) Contributions touching their own telegraph and postal service. § 2. The products of the other states are exempt from imposts in the state whence they are exported. § 3. It is lawful for a state to levy duties on imports of foreign goods only when intended for consumption in its own territory; but it shall, in such case, cover into the federal treasury the amount of duties collected. § 4. The right is reserved to the states of establishing telegraph lines between the different points of their own territory, and between these and those of other states not served by federal lines; but the union may take possession of them when the general welfare shall require.

Art. 10. The several states are prohibited from taxing the federal property or revenue, or anything in the service of the union, and vice versa.

Art. 11. It is forbidden to the states, as well as to the unions: (1) To impose duties on the products of the other states, or of foreign countries, in transit through the territory of any state, or from one state to another, as also in the vehicles, whether by land or water, by which they are transported. (2) To establish, aid, or embarrass the exercise of religious worship. (3) To enact *ex post facto* laws.

Art. 12. In addition to the sources of revenue set forth in articles 7 and 9, it shall be lawful for the union, as well as for the states, cumulatively or otherwise, to create any others whatsoever which may not be in contravention of the terms of articles 7, 9, and 11, § 1.

Art. 13. The right of the union and of the states to legislate in regard to railways and navigation of internal waters shall be regulated by federal law. [The coastwise trade shall be carried on in national vessels.]

Art. 14. The land and naval forces are permanent national institutions, intended for the defense of the country from foreign attack and the maintenance of the laws of the land. Within the limits of the law, the armed forces are from their nature held to obedience, each rank to its superior, and bound to support all constitutional institutions.

Art. 15. The legislative, executive, and judicial powers are organs of the national sovereignty, harmonious and independent among themselves.

Art. 16. The legislative power is vested in the national Congress, with the sanction of the president of the republic. § 1. The national Congress is composed of two branches: the Chamber of Deputies and the Senate. § 2. The elections for senators and for deputies shall be held simultaneously throughout the country. § 3. No person shall be senator and deputy at the same time.

Art. 17. The Congress shall assemble in the federal capital on the 3d day of May of each year, unless some other day shall be fixed by law, without being convoked, and shall continue in session four months from the date of the opening, and may be prorogued, adjourned, or convoked in extraordinary session. § 1. The Congress alone shall have the power to deliberate on the prorogation or extension of its session. § 2. Each legislature shall last for three years. § 3. The governor of any state in which there shall be a vacancy in the representation, including the case of resignation, shall order a new election to be held at once.

Art. 18. The Chamber and the Senate shall hold their sessions apart and in public, unless otherwise resolved by a majority vote, and shall deliberate only when, in each of the chambers, there shall be present an absolute majority of its members. [To each of the chambers shall belong the right to verify and recognize the powers of its members, to choose its own presiding officers, to organize its internal government, to regulate the service of its own police rules, and to choose its own secretaries.]

Art. 19. The deputies and senators can not be held to account for their opinions, expressions, and votes in the discharge of their mandate.

Art. 20. Deputies and senators, from the time of receiving their certificate of election until a new election, can not be arrested or proceeded against criminally without the permission of their respective chambers, except in the case of a flagrant crime, in which bail is inadmissible. In such case, the prosecution being carried to exclusive decision, the prosecuting authority shall send the court records to the respective chamber for its decision on the prosecution of the charge, unless the accused shall prefer immediately judgment.

Art. 21. The members of the two chambers, on taking their seats, shall take a formal obligation, in public session, to perform their duties faithfully.

Art. 22. During the sessions the senators and deputies shall receive an equal pecuniary salary and mileage, which shall be fixed by Congress at the end of each session for the following one.

Art. 23. No member of the Congress, from the time of his election, can make contracts with the executive power or receive from it any paid commission or employment. § 1. Exceptions to this prohibition are: (1) Diplomatic missions. (2) Commissions or military commands. (3) Advancement in rank and legal promotion. § 2. No deputy or senator, however, can accept an appointment for any mission, commission, or command mentioned in Nos. 1 and 2 of the preceding paragraph, without the consent of the chamber to which he belongs, when such acceptance would prevent the exercise of his legislative duties, except in case of war or such as involve the honor or integrity of the nation.

Art. 24. No deputy or senator can be president or form part of a directory of any bank, company, or enterprise which enjoys the favors of the federal government defined in and by law. [Nonobservance of the provisions of the fore-

going article by any deputy or senator shall involve the loss of his seat.]

Art. 25. The legislative commission shall be incompatible with the exercise of any other functions during the sessions.

Art. 26. The conditions for eligibility to the national Congress are: (1) To be in possession of the rights of Brazilian citizenship and to be registered as a voter. (2) For the Chamber, to have been for more than four years a Brazilian citizen; and for the Senate, for more than six years. This provision does not include those citizens referred to in No. 4, article 60.

Art. 27. The Congress shall by special legislation declare the cases of electoral incompetency.

Art. 28. The Chamber of Deputies shall be composed of the representatives of the people, elected by the states and the federal district by direct suffrage, the representation of the minority being guaranteed. § 1. The number of the deputies shall be fixed by law in such a way as not to exceed one for each 70,000 inhabitants, and that there shall not be less than four for each state. § 2. To this end the federal government shall at once order a census to be taken of the population of the republic, which shall be revised every ten years.

Art. 29. To the Chamber belongs the initiative in the adjournment of the legislative sessions and in all legislation in regard to taxation, to the determination of the size of the army and navy, in the discussion of propositions from the executive power, and in the decision to proceed or not in charges against the president of the republic under the terms of article 53, and against the ministers of state in crimes connected with those of the said president.

Art. 30. The Senate shall be composed of citizens eligible under the terms of article 26 and more than thirty-five years of age, to the number of three senators for each state and three for the federal district, chosen in the same manner as the deputies.

Art. 31. The mandate of a senator shall continue for nine years, and one-third of the Senate shall be renewed every three years. [A senator elected in place of another shall exercise his mandate during the remainder of the term of the latter.]

Art. 32. The vice president of the republic shall be the president of the Senate, where he shall vote only in case of tie, and shall be replaced in case of absence or impediment by the vice president of that body.

Art. 33. The Senate alone shall have the power to try and sentence the president of the republic and the other federal officers designated by the constitution, under the conditions and in the manner which it prescribes. § 1. The Senate, when sitting as a tribunal of justice, shall be presided over by the president of the federal supreme court. § 2. It shall not pass sentence of condemnation unless two-thirds of its members be present. § 3. It shall not impose other penalties than the loss of office and prohibition from holding any other, without prejudice to the action of ordinary justice against the condemned.

Art. 34. The national Congress shall have exclusive power: (1) To estimate the revenue, and fix the expenditures of the federal government annually, and take account of the receipts and expenditures of each financial budget. (2) To authorize the executive to contract loans and make other operations of credit. (3) To legislate in regard to the public debt and furnish means for its payment. (4) To control the collection and dis-

position of the national revenue. (5) To regulate international commerce, as well as that of the states with each other and with the federal district; to establish and regulate the collection of customs duties in the ports, create or abolish warehouses of deposit. (6) To legislate in regard to navigation of rivers running through more than one state, or through foreign territory. (7) To determine the weight, value, inscription, type, and denomination of the currency. (8) To create banks of emission, legislate in regard to this emission and to tax it. (9) To fix the standard of weights and measures. (10) To determine definitely the boundaries of the states between each other, those of the federal district, and those of the national territory with the adjoining nations. (11) To authorize the government to declare war, if there be no recourse to arbitration or in case of failure of this, and to make peace. (12) To decide definitively in regard to treaties and conventions with foreign nations. (13) To remove the capital of the union. (14) To extend aid to the states in the case referred to in article 5. (15) To legislate in regard to federal postal and telegraph service. (16) To adopt the necessary measures for the protection of the frontiers. (17) To fix every year the number of the land and naval forces. (18) To make laws for the organization of the army and navy. (19) To grant or refuse to foreign forces passage through the territory of the country to carry on military operations. (20) To mobilize and make use of the national guard or local militia in the cases designated by the constitution. (21) To declare a state of siege at one or more points in the national territory, in the emergency of an attack by foreign forces, or internal disturbance, and to approve or suspend the state of siege proclaimed by the executive power or its responsible agents in the absence of the Congress. (22) To regulate the conditions and methods of elections for federal offices throughout the country. (23) To legislate upon the civil, criminal, and commercial laws and legal procedures of the federal judiciary. (24) To establish uniform naturalization laws. (25) To create and abolish federal public offices, to fix the duties of the same, and designate their salaries. (26) To organize the federal judiciary according to the terms of article 55 and the succeeding section 3. (27) To grant amnesty. (28) To commute and pardon penalties imposed upon federal officers for offenses arising from their responsibility. (29) To make laws regarding government lands and mines. (30) To legislate in regard to the municipal organization of the federal district, as well as to the police, the superior instruction and other services which in the capital may be reserved for the government of the union. (31) To govern by special legislation those points of the territory of the republic needed for the establishment of arsenals, other establishments or institutions for federal uses. (32) To settle cases of extradition between the states. (33) To enact such laws and resolutions as may be necessary for the exercise of the powers belonging to the union. (34) To enact the organic laws necessary for the complete execution of the requirements of the constitution. (35) To prorogue and adjourn its own sessions.

Art. 35. It shall belong likewise to the Congress, but not exclusively: (1) To watch over the constitution and the laws, and provide for necessities of a federal character. (2) To promote in the country the development of literature, the arts, and sciences, together with immigration, agriculture, manufactures, and commerce, without privileges such as would obstruct the action of the local

governments. (3) To create institutions of higher instruction and of high school education in the states. (4) To provide for high school instruction in the federal district.

Art. 36. Save the exceptions named in article 27, all bills may originate, indifferently, in the Chamber or in the Senate, and may be introduced by any of their members.

Art. 37. A bill, after being passed in one of the chambers, shall be submitted to the other, and, if the latter shall approve the same, it shall send it to the executive, who, if he approve it, shall sanction and promulgate it. § 1. If, however, the president of the republic shall consider it unconstitutional, or contrary to the good of the nation, he shall refuse his sanction to the same within ten working days, counted from that on which he received it (the bill), and shall return it, within the same period, to the chamber in which it originated, with his reasons for his refusal. § 2. The failure of the executive to signify his disapproval within the above-named ten days shall be considered as an approval, and in case his sanction be refused after the close of the session of the Congress, the president shall make public his reasons therefor. § 3. The bill sent back to the chamber where it originated shall be discussed and voted upon by call of names, and shall be considered as passed if it obtain two-thirds of the votes of the members present; and, in this case, it shall be sent to the other chamber, whence, if it receive the same majority, it shall return, as a law, to the executive to be formally promulgated. § 4. The sanction and promulgation shall be effected in the following forms: (1) "The national Congress enacts and I sanction the following law (or resolution)." (2) "The national Congress enacts and I promulgate the following law (or resolution)."

Art. 38. If the law be not promulgated by the president of the republic within forty-eight hours, in the cases provided for in §§ 2 and 3 of the preceding article, the president of the Senate, or the vice president, if the former shall not do so in the same space of time, shall promulgate it, making use of the following formula: "I, president (or vice president) of the Senate, make known to whomsoever these presents may come, that the national Congress enacts and promulgates the following law (or resolution)."

Art. 39. A bill from one chamber, amended in the other, shall return to the former, which, if it accept the amendments, shall send it, changed to conform with the same, to the executive. § 1. In the contrary case, it shall go back to the amending chamber, where the alterations shall be considered as approved, if they receive the vote of two-thirds of the members present; in the latter case, the bill shall return to the chamber where it originated, and there the amendments can be rejected only by a two-thirds vote. § 2. If the alterations be rejected by such vote, the bill shall be submitted without them to the approval of the executive.

Art. 40. Bills finally rejected or not approved, shall not be presented again in the same legislative session.

Art. 41. The executive power shall be exercised by the president of the United States of Brazil, as elective chief of the nation. § 1. The vice president, elected simultaneously with the president, shall serve in place of the latter in case of impediment and succeed him in case of vacancy in the presidency. § 2. In case of impediment or vacancy in the vice presidency, the following officers, in the order named, shall be called to the presidency: The vice president of

the Senate, the president of the Chamber of Deputies, the president of the federal supreme court. § 3. The following are the conditions of eligibility to the presidency or vice presidency of the Republic: (1) Must be a native of Brazil. (2) Must be in the exercise of political rights. (3) Must be more than thirty-five years of age.—See also ELECTIONS, PRESIDENTIAL: South American republics.

Art. 42. In case of vacancy from any cause in the presidency or vice presidency before the expiration of the first two years of the presidential term, a new election shall be held.

Art. 43. The president shall hold his office during four years, and is not eligible for reelection for the next succeeding term. § 1. The vice president who shall fill the presidency during the last year of the presidential term shall not be eligible to the presidency for the next term of that office. § 2. On the same day on which his presidential term shall cease the president shall, without fail, cease to exercise the functions of his office, and the newly elected president shall at once succeed him. § 3. If the latter should be hindered or should fail to do so, the succession shall be effected in accordance with §§ 1 and 2 of article 41. § 4. The first presidential term shall expire on November 15, 1894.

Art. 44. On taking possession of his office, the president, in a session of the Congress, or, if it be not assembled, before the federal supreme court, shall pronounce the following affirmation: "I promise to maintain the federal Constitution and comply with its provisions with perfect loyalty, to promote the general welfare of the Republic, to observe its laws, and support the union, integrity, and independence of the nation."

Art. 45. The president and vice president shall not leave the national territory without the permission of the Congress, under penalty of loss of office.

Art. 46. The president and vice president shall receive the salary fixed by the Congress in the preceding presidential term.

Art. 47. The president and vice president shall be chosen by direct suffrage of the nation and an absolute majority of the votes. § 1. The election shall take place on the first day of March in the last year of the presidential term, and the counting of the votes cast at the different precincts shall at once be made in the respective capitals of the states and in the federal capital. The Congress shall make the count at its first session of the same year, with any number of members present. § 2. If none of those voted for shall have received an absolute majority, the Congress shall elect, by a majority of votes of those present, one of the two who, in the direct election, shall have received the highest number of votes. In case of a tie the older shall be considered elected. § 3. The manner of the election and of the counting of the votes shall be regulated by ordinary legislation. § 4. The relatives, both by consanguinity and by marriage, in the first and second degrees, of the president and vice president shall be ineligible for the offices of president and vice president, provided the said officials are in office at the time of the election or have left the office even six months before.

Art. 48. To the president of the republic shall belong the exclusive right to—(1) Sanction, promulgate, and make public the laws and resolutions of the Congress; issue decrees, instructions, and regulations for their faithful execution. (2) Choose and dismiss at will the cabinet officers. (3) Exercise or appoint some one to exercise supreme com-

mand over the land and naval forces of the United States of Brazil, as well as over the local police, when called to arms for the internal or external defense of the union. (4) Govern and distribute, under the laws of the Congress, according to the necessities of the national government, the land and naval forces. (5) Dispose of the offices, both military and civil, of a federal character, with the exceptions specified in the constitution. (6) Pardon crimes and commute penalties for offenses subject to federal jurisdiction, save in the cases mentioned in article 34, No. 28, and article 52, § 2. (7) Declare war and make peace, under the provisions of article 34, No. 11. (8) Declare war at once in case of foreign invasion or aggression. (9) Give an annual statement to the national Congress of the condition of the country, with a recommendation of pressing provisions and reforms, through a message, which he shall send to the secretary of the Senate on the day of the opening of the legislative session. (10) Convoke the Congress in extra session. (11) Appoint the federal judges when proposed by the supreme court. (12) Appoint the members of the federal supreme court and ministers of the diplomatic corps, with the approval of the senate; and, in the absence of the Congress, appoint them in commission until considered by the senate. (13) Appoint the other members of the diplomatic corps and consular agents. (14) Maintain relations with foreign states. (15) Declare, directly, or through his responsible agents, a state of siege at any point of the national territory, in case of foreign aggression or serious internal disturbance. (Article 6, No. 3; article 34, No. 21; and article 80.) (16) Set on foot international negotiations, celebrate agreements, conventions, and treaties, always ad referendum to the Congress, and approve those made by the states in conformity with article 65, submitting them when necessary to the authority of the Congress.

Art. 49. The president of the republic shall be assisted by the ministers of state (cabinet officers), agents of his confidence, who sign the acts and preside over their respective departments into which the federal administration is divided.

Art. 50. The cabinet ministers shall not exercise any other employment or function of a public nature, be eligible to the presidency or vice presidency of the union, or be elected deputy or senator. [Any deputy or senator, who shall accept the position of cabinet minister, shall lose his seat in the respective chamber, and a new election shall at once be held, in which he shall not be voted for.]

Art. 51. The cabinet ministers shall not appear at the sessions of the Congress, and shall communicate with that body in writing only or by personal conference with the committees of the chambers. The annual report of the ministers shall be addressed to the president of the republic, and distributed to all the members of the Congress.

Art. 52. The cabinet ministers shall not be responsible to the Congress or to the courts for advice given to the president of the republic. § 1. They shall be responsible, nevertheless, with respect to their acts, for crimes defined in the law. § 2. For common crimes and those for which they are responsible they shall be prosecuted and tried by the federal supreme court, and for those committed jointly with the president of the republic, by the authority competent to judge this latter.

Art. 53. The president of the United States of Brazil shall be brought to trial and judgment, after the Chamber of Deputies shall have decided

that he should be tried on the charges made against him, in the federal supreme court, in the case of common crimes, and in those of responsibility, in the Senate. [As soon as it shall be decided to try him on the charges brought, the president shall be suspended in the exercise of the duties of his office.]

Art. 54. Crimes of responsibility on the part of the president of the republic are such as are directed against—(1) The political existence of the union. (2) The constitution and the form of the federal government. (3) The free exercise of the political powers. (4) The legal enjoyment and exercise of political or individual rights. (5) The internal security of the country. (6) The purity of the administration. (7) The constitutional keeping and use of the public funds. (8) The financial legislation enacted by the Congress. § 1. These offenses shall be defined in a special law. § 2. Another law shall provide for the charges, the trial, and the judgment. § 3. Both these laws shall be enacted in the first session of the first Congress.

Art. 55. The judicial power of the union shall be lodged in a federal supreme court, sitting in the capital of the republic, and as many inferior federal courts and tribunals, distributed through the country, as the Congress shall create.

Art. 56. The federal supreme court shall be composed of fifteen justices, appointed under the provisions of article 48, No. 12, from among the oldest thirty citizens of well-known knowledge and reputation who may be eligible to the Senate.

Art. 57. The federal justices shall hold office for life, being removable solely by judicial sentence. § 1. Their salaries shall be fixed by law of the Congress, and can not be diminished. § 2. The Senate shall try the members of the federal supreme court for crimes of responsibility, and this latter the lower federal judges.

Art. 58. The federal courts shall choose their presidents from among their own members, and shall organize their respective clerical corps. § 1. In these corps the appointment and dismissal of the respective clerks, as well as the filling of the judicial offices in the respective judicial districts, shall belong to the presidents of the respective courts. § 2. The president of the republic shall appoint from among the members of the federal supreme court the attorney-general of the republic, whose duties shall be defined by law.

Art. 59. To the federal supreme court shall belong the duty of—(1) Trying and judging by original and exclusive jurisdiction—(a) The president of the republic for common crimes, and the cabinet ministers in the cases specified in article 52. (b) The ministers of the diplomatic corps for common crimes and those of responsibility. (c) Cases and disputes between the states and the union, or between the states one with another. (d) Disputes and claims between foreign states and the union, or between foreign nations and the states. (e) Conflicts between the federal courts one with another, or between these and those of the states, as well as those between the courts of one state and those of another. (2) Deciding, on appeal, questions pronounced upon by the lower federal courts and tribunals, as well as those mentioned in § 1 of the present article and in article 60. (3) Reviewing the proceedings of finished trials, under the provisions of article 81. § 1. Decisions of state courts in last appeal can be carried to the federal supreme court—(a) When the validity or application of the federal laws or treaties is called in question and the decision of the state court shall be against the same. (b)

When the validity of laws or acts of the governments of the states in respect to the constitution or of the federal laws is contested and the state court shall have decided in favor of the validity of the acts or laws in question. § 2. In the cases which involve the application of the laws of the states, the federal court shall consult the jurisprudence of the local tribunals, and vice versa, the state court shall consider that of the federal tribunals when the interpretation of the laws of the union is involved.

Art. 60. It shall belong to the federal courts to decide—(a) Cases in which the plaintiff or the defendant shall rest the case on some provision of the federal constitution. (b) All suits brought against the government of the union or the national treasury based on constitutional provisions, on the laws and regulations of the executive power, or on contracts made with the said government. (c) Suits arising from compensations, claims, indemnification of damages, or any others whatsoever brought by the government of the union against private individuals, and vice versa. (d) Litigations between a state and the citizens of another, or between citizens of different states having differences in their laws. (e) Suits between foreign states and Brazilian citizens. (f) Actions begun by foreigners, and based either on contracts with the federal government or on conventions or treaties of the union with other nations. (g) Questions of maritime law and navigation, whether on the sea or on the rivers and lakes of the country. (h) Questions of international law, whether criminal or civil. (i) Political crimes. § 1. Congress is forbidden to commit any part of the federal jurisdiction to the state courts. § 2. Sentences and orders of the federal judges will be executed by federal court officers, and the local police shall assist them when called upon by the same.

Art. 61. The decisions of the state courts or tribunals in matters within their competence shall put an end to the suits and questions, except as to (1) habeas corpus, or (2) effects of a foreigner deceased in cases not provided for by convention or treaty. In such cases there shall be voluntary recourse to the federal supreme court.

Art. 62. The state courts shall not have the power to intervene in questions submitted to the federal tribunals, or to annul, alter, or suspend the sentences or orders of these latter; and, reciprocally, the federal judiciary can not interfere in questions submitted to the state courts, or annul, alter, or suspend their decisions or orders, except in the cases provided in this constitution.

Art. 63. Each state shall be governed by the constitution and laws which it shall adopt, respect being observed for the constitutional principles of the union.

Art. 64. The unexplored mines and wild lands lying within the states shall belong to these states respectively; and to the union only as much territory as may be necessary for the defense of the frontiers, for fortifications, military works, and federal railways. [The national properties, not necessary for the service of the union, shall pass to the domain of the states in whose territory they may be situated.]

Art. 65. The states shall have the right to—(1) Conclude agreements and conventions among themselves, if such be not of a political character. (Article 48, No. 16.) (2) Exercise in general any and every power or right not denied expressly by the constitution, or implicitly in its express terms.

Art. 66. It is forbidden to the states to—(1) Refuse to recognize public documents of the union, or of any of the states, of a legislative, administra-

tive, or judicial character. (2) Reject the currency or notes issued by banks, which circulate by act of the federal government. (3) Make or declare war, one with another, or make reprisals. (4) Refuse the extradition of criminals demanded by the justice of other states, or of the federal district, in conformity with the laws of Congress which relate to this subject. (Article 41, No. 32.)

Art. 67. Save the restrictions specified in the constitution, and the federal laws, the federal district shall be governed directly by the municipal authorities. [Expenses of a local character in the capital of the Republic must be provided for exclusively by the municipal authorities.]

Art. 68. The states shall organize themselves in such a manner as to assure the autonomy of the municipalities in everything that concerns their peculiar interests.

Art. 69. The following shall be Brazilian citizens: (1) Natives of Brazil, though of foreign parentage (father), provided he be not in the service of his nation. (2) Sons of a Brazilian father, and illegitimate sons of a Brazilian mother, born in foreign parts, if they take up their residence (domicile) in the republic. (3) Sons of a Brazilian father who may be in another country in the service of the republic, although they do not make their domicile in Brazil. (4) Foreigners, who, being in Brazil November 15, 1880, shall not declare, within six months from the time when the constitution enters into force, their desire to preserve their original nationality. (5) Foreigners who possess property (real estate) in Brazil and are married to Brazilian women, or have Brazilian children, provided they reside in Brazil, unless they shall declare their intention of not changing their nationality. (6) Foreigners naturalized in any other way.

Art. 70. Citizens of more than twenty-one years of age, and registered according to law, shall be electors. § 1. The following shall not be registered as electors for federal or state elections: (1) Beggars. (2) Persons ignorant of the alphabet. (3) Soldiers on pay, except alumni of the military schools of higher instruction. (4) Members of monastic orders, companies, congregations, or communities of whatsoever denomination, who are subject to vows of obedience, rule, or statute, which implies the surrender of individual liberty. § 2. Citizens who can not be registered shall not be eligible.

Art. 71. The rights of the Brazilian citizen can be suspended or lost only in the following cases: § 1. The rights may be suspended—(a) For physical or moral incapacity. (b) For criminal conviction, during the operation of the sentence. § 2. They may be lost—(a) By naturalization in a foreign country. (b) By acceptance of employment or pension from a foreign power, without permission of the federal executive. § 3. The means of reacquiring lost rights of the Brazilian citizen shall be specified by federal law.

Art. 72. The constitution secures to Brazilians and foreigners residing in the country the inviolability of their rights touching individual liberty, and security, and property, in the following terms: § 1. No person shall be forced to do, or leave undone, anything whatever, except by virtue of law. § 2. Before the law all persons are equal. The republic does not recognize privileges of birth, or titles of nobility, and abolishes all existing honorary orders, with all their prerogatives and decorations, as well as all hereditary and conciliar titles. § 3. All persons and religious professions may exercise, publicly and freely, the right of worship, and may associate themselves for that purpose, acquire

property, observance being had to the provisions of the common law. § 4. The republic recognizes only the civil marriage, the celebration of which shall be gratuitous. § 5. The cemeteries shall be secular in character, and be managed by the municipal authorities, being free to all religious sects for the exercise of their respective rites as regards their members, provided they do not offend public morals or the laws. § 6. The instruction given in the public institutions shall be secular. § 7. No sect or church shall receive official aid, nor be dependent on, nor connected with, the government of the union or of the states. § 8. All persons have the right of free association and assembly, without arms; and the police force shall not intervene, except to maintain the public order. § 9. Any person whatsoever shall have the right to address, by petition, the public powers, denounce abuses of the authorities, and appeal to the responsibility of the accused. § 10. In time of peace any person may, without passport, enter or leave the territory of the republic, with his fortune and goods, whenever and however he may choose. § 11. The house is the inviolable asylum of the person; no one can enter it at night without the consent of the inhabitant, except to aid the victims of a crime or disaster; nor by day, unless in the cases and in the form prescribed by law. § 12. The expression of opinion shall be free, in respect to whatever subject, through the press or through the tribune, without subjection to censorship, each one being responsible for the abuses he may commit, in the cases and in the form prescribed by law. Anonymous publications are forbidden. § 13. Cases of flagrante delicto alone excepted, no arrest shall be made, unless after declaration of the charge (save in cases determined by law), and by written order of the competent authorities. § 14. No person shall be kept in prison without charge formally made, save the exceptions mentioned in the law, or taken to prison, or detained there, if he give bail, in cases where such is lawful. § 15. No person shall be condemned, except by competent authority, and in virtue of law already existing and in the form prescribed by it. § 16. The law shall secure to the accused the fullest defense by all the recourses and means essential to the same, including the notice of the charge, delivered to the prisoner within twenty-four hours and signed by the proper authority along with the names of the accusers and witnesses. § 17. The rights of property are maintained in all their plenitude, and no disappropriation shall be made, except from necessity or public utility, and indemnity shall, in such cases, be made beforehand. Mines belong to the owners of the soil, under the limitations to be established by the law to encourage the development of this branch of industry. § 18. Correspondence under seal is inviolable. § 19. No penalty shall extend beyond the person of the delinquent. § 20. The penalty of the galleys is abolished, as also judicial banishment. § 21. The death penalty is abolished, except in the cases under military law in time of war. § 22. The habeas corpus shall always be granted when the individual suffers violence or compulsion, through illegality or abuse of power, or considers himself in imminent danger of the same. § 23. There shall be no privileged tribunal, except in such cases as, from their nature, belong to special courts. § 24. The free exercise of any profession, moral, intellectual, or industrial, is guaranteed. § 25. Industrial inventions belong to their authors, to whom the law will grant a temporary privilege, or to whom the Congress will give a reasonable premium, when it is desirable to

make the invention public property. § 26. To authors of literary and artistic works is guaranteed the exclusive right of reproducing them through the press or by any other mechanical process, and their heirs shall enjoy the same right during the space of time determined by the law. § 27. The law shall also secure the rights of property in trade-marks. § 28. No Brazilian can be deprived of his civil and political rights on account of religious belief or duty, nor be exempted from the performance of any civic duty. § 29. Those who shall claim exemption from any burden imposed by the laws of the Republic on its citizens, on account of religious belief, or who shall accept any foreign decoration or title of nobility, shall lose all their political rights. § 30. No tax of any kind shall be collected except in virtue of a law authorizing the same. § 31. The institution of trial by jury is maintained.

Art. 73. Public offices, civil or military, are accessible to all Brazilian citizens, always observing the conditions of particular capacity fixed by the law; but the accumulation of remunerations is forbidden.

Art. 74. Commissions, offices, and positions not subject to removal are guaranteed in all their plenitude.

Art. 75. Only such public officials as have become infirm in the service of the nation shall be retired on pay.

Art. 76. Officers of the army and navy shall lose their commissions only in case of condemnation to more than two years in prison, pronounced in judgment by the competent tribunals.

Art. 77. There shall be a special court for the trial of military offenses committed by soldiers or marines. § 1. This court shall be composed of a supreme military tribunal, whose members shall hold their seats for life, and of the councils necessary for the formulation of the charge and the judgment of the crimes. § 2. The organization and powers of the supreme military tribunal shall be determined by law.

Art. 78. The enumeration of the rights and guaranties expressed in the constitution does not exclude other guaranties and rights, not enumerated, but resulting from the form of government established and principles settled by said constitution.

Art. 79. The citizen vested with the functions of either of these three federal powers shall not exercise those of another.

Art. 80. Any part of the territory of the union may be declared in state of siege, and the constitutional guaranties suspended for a determined period, whenever the security of the republic so demands in case of foreign aggression or intestine disturbance. (Article 34, No. 21.) § 1. The power to execute the above provision may, if the Congress be not in session and the country be in imminent peril, be used by the federal executive. (Article 48, No. 15.) § 2. In the exercise of this power, during the state of siege, the executive shall be restricted to the following measures of repression against persons: (1) To their detention in a place not allotted to persons accused of common crimes. (2) To banishment to other parts of the national territory. § 3. As soon as the Congress shall have assembled, the president of the republic shall make a report to that body of the exceptional measures which may have been taken. § 4. The authorities who shall have ordered such measures shall be responsible for any abuses that may have been committed.

Art. 81. In criminal cases, trials concluded may be reviewed at any time, in favor of the con-

demned parties, by the federal supreme court, for the purpose of correcting or of confirming the sentence. § 1. The law shall determine the cases and the form of such revision, which may be asked for by the condemned, by any one of the people, or by the attorney-general of the republic, ex officio. § 2. In such revision the penalties imposed by the sentence reviewed can not be increased. § 3. The provisions of the present article are applicable to military trials.

Art. 82. Public officers shall be strictly responsible for the abuses and omissions that occur in the exercise of the duties of their offices, as well as for the indulgences and negligences for which they do not hold their subordinates responsible. [They shall all be bound by formal obligation, on taking possession of their offices, to discharge the lawful duties of the same.]

Art. 83. Until revoked, the laws of the ancient régime shall remain in force, in as far as they are not, explicitly or implicitly, contrary to the system of government established by the constitution, and to the principles laid down in the same.

Art. 84. The federal government guaranties the payment of the public debt, both internal and foreign.

Art. 85. The officers of the line and of the annexed classes of the navy shall have the same commissions and advantage as those of the army of corresponding rank.

Art. 86. Every Brazilian shall be bound to military service in defense of the country and the constitution, as provided by the federal laws.

Art. 87. The federal army shall be made up of contingents which the states and the federal district are bound to furnish, constituted in conformity with the annual law regulating the number of the forces. § 1. The general organization of the army shall be determined by a federal law, in accordance with No. 18 of article 34. § 2. The union shall have charge of the military instruction of the troops and of the higher military instruction. § 3. Compulsory recruiting for military purposes is abolished. § 4. The army and navy shall be made up by volunteering without bounties or, if this means be not sufficient, by lot previously determined. The crews for the navy shall be made up from the naval school, the schools of marine apprentices, and the merchant marine, by means of lot.

Art. 88. In no case, either directly or indirectly, alone or in alliance with another nation, shall the United States of Brazil engage in a war of conquest.

Art. 89. A tribunal of accounts shall be instituted for the auditing of the receipt and expense accounts and examining into their legality before their presentation to the Congress. The members of this tribunal shall be appointed by the president of the republic, with the approval of the Senate, and can lose their seats only by sentence.

Art. 90. The constitution may be amended, at the initiative of the national Congress, or of the legislatures of the states. § 1. An amendment shall be considered as proposed, when, having been presented by one-fourth, at least, of the members of either house of the Congress, it shall have been accepted in three readings (discussions) by two-thirds of the votes in both houses of the Congress, or when it shall have been asked for by two-thirds of the states represented, each one by a majority of the votes of its legislature, said votes to be taken in the course of one year. § 2. The proposed amendment shall be considered approved, if, in the following year, after three discussions, it shall have been adopted by a majority of two-thirds of the

votes in the two houses of the Congress. § 3. The amendment adopted shall be published with the signatures of the presidents and clerks of the two chambers, and be incorporated into the constitution as a part of the same. § 4. No project having a tendency to abolish the federative republican form, or the equal representation of the states in the Senate, shall be admitted for consideration in the Congress.

Art. 91. This constitution, after approval, shall be promulgated by the president of the Congress and signed by the members of the same.

Temporary Provisions.

Article 1. After the promulgation of this constitution, the Congress, in joint assembly, shall choose consecutively, by an absolute majority of votes in the first balloting, and, if no candidate shall receive such, by a plurality in the second balloting, the president and vice president of the United States of Brazil. § 1. This election shall be in two distinct ballotings, for the president and vice president respectively, the ballots for president being taken and counted, in the first place, and afterwards for vice president. § 2. The president and vice president, thus elected, shall occupy the presidency and vice presidency of the republic during the first presidential term. § 3. For said election there shall be no incompatibilities admitted. § 4. As soon as said election shall be concluded, the Congress shall consider as terminated its mission in joint session and, separating into Chamber and Senate, shall enter upon the exercise of its functions as defined by law, on June 15, of the present year, and can not in any case be dissolved. § 5. In the first year of the first legislature, among its preparatory measures, the Senate shall designate the first and second third of its members, whose term of office shall cease at the end of the first and second 3-year terms. § 6. The discrimination shall be made in three lists, corresponding to the three classes, allotting to them the senators of each state and of the federal district according to the number of votes received by them respectively, so as to allot to the third for the last three years the one receiving the highest number of votes in the federal district and in each state, and to the other two-thirds the remaining two names in the order of the number of votes received by them respectively. § 7. In case of tie, the oldest shall be preferred, and if the ages are equal, the choice shall be made by lot.

Art. 2. The state which, by the end of the year 1892, shall not have adopted its constitution, shall, by act of the federal legislative power, be placed under that of one of the other states, which it shall judge most suitable, until the state thus subjected to said constitution shall amend it in the manner provided in the same.

Art. 3. As fast as the states shall be organized, the federal government shall deliver to them the administration of the services which belong to them, and shall settle the responsibility of the federal administration in all that relates to said services and to the payment of the respective officials.

Art. 4. While, during the period of organization of their services, the states shall be engaged in regulating their expenses, the federal government shall, for this purpose, open special credits to them, under conditions determined by the Congress.

Art. 5. In the states which shall become organized the classification of the revenues established in the constitution shall enter into force.

Art. 6. In the first appointments for the federal

magistracy and for that of the states, the preference shall be given to the justices and magistrates of the higher courts of the greatest note. Such as are not admitted into the new organization of the judiciary, and have served thirty years, shall be retired on full pay. Those who have served for less than thirty years shall continue to receive their salaries until they shall be employed, or retired with pay corresponding to their length of service. The payment of salaries of magistrates retired or set aside shall be made by the federal government.

Art. 7. To D. Pedro de Alcantara, ex-emperor of Brazil, a pension is granted, to run from November 15, 1889, sufficient to guaranty him a decent subsistence during his lifetime. The Congress, at its first session, shall fix the amount of said pension.

Art. 8. The federal government shall acquire for the nation the house in which Dr. Benjamin Constant Botelho de Magalhães died, and shall have placed on it a memorial slab in memory of that great patriot, the founder of the Republic.—The widow of the said Dr. Benjamin Constant shall have, during her lifetime, the usufruct of the said house. We order, then, all the authorities to whom the recognition and execution of this constitution belongs, to execute it and have it executed and observed faithfully and fully in all its provisions. Let the same be published and observed throughout the territory of the nation. Hall of the sessions of the National Constitutional Congress, in the city of Rio de Janeiro, in the year 1891, and the third of the republic. See BRAZIL: 1889-1891.

BRAZILIAN COFFEE CASE.—“In this suit, which was begun in 1912 in the District Court for the Southern District of New York as *United States v. Herman Sielcken*, but which was afterwards discontinued, the chief point at issue was the power of the Government of the United States to proceed against the property of a foreign state, warehoused in New York, on the ground of violation of the Sherman Anti-Trust Act. The facts were as follows: More than three-fourths of the world's coffee is raised in Brazil, the greater part of it in the state of São Paulo. In 1906 there was an abnormal crop, almost equal to the production of the two preceding years put together, with the result that the coffee market was demoralized and the planters threatened with bankruptcy. To remedy conditions, the Government of São Paulo formed the so-called ‘valorization scheme,’ whereby the state was to take over such part of the surplus coffee as could not otherwise be marketed to advantage, withhold it from the market for the time being, and regulate its sale later. The plan further provided for the limitation of the acreage under coffee cultivation, for the fixation of a minimum price in Brazilian markets, for the checking of exportation of inferior coffee, and for the raising of loans on the security of the coffee purchased. After some temporary financial operations, São Paulo in 1908 borrowed £15,000,000 from London and Paris bankers ‘to liquidate the operations effected for the valorization of coffee.’ This loan was guaranteed by the federal government of Brazil and was secured by the coffee still unsold and by an export tax on coffee of five francs. The agreement with the bankers called for the sale of this coffee within ten years, under the control of a committee of seven, meeting in London, one of whom was a representative of the Government of São Paulo with power to veto all decisions of the committee. Approximately 7,000,000 bags of coffee were delivered to the committee, about a

fourth of which was assigned for sale in the United States. All sales were to be made in the name of the Government of São Paulo, which was under obligation to sell a minimum amount every year, and more if market conditions warranted. On an examination into the facts, the Department of Justice of the United States considered that the operations of the committee were in restraint of trade and suit was entered against the defendant, Herman Sielcken, as the representative of the committee in the United States. As a preliminary step, the Attorney-General sought, under the Sherman Act, to seize 950,000 bags of coffee, stored in New York and controlled by the committee, and to hold this coffee pending the result of the suit, but the temporary injunction was refused. In its petition, the government argued that the facts pleaded constituted a violation of the Anti-Trust Act. Acts and agreements unlawful under statutes of the United States could not become lawful because they were 'not unlawful in Brazil and were participated in by a foreign state.' Though courts would not, in general, exercise jurisdiction over the person or property of a foreign sovereign, such jurisdiction would be assumed if 'the foreign state engages in a business transaction, as its rights then are not superior to those of an individual citizen.' . . . While the case was pending, the government found the scope of the Sherman Act too narrow to admit of a successful prosecution of the suit. However, on the understanding that meanwhile the coffee remain unsold, negotiations were opened with Brazil with the result that by agreement the 'valorized' coffee was put on the market, on condition that the proceedings instituted by the Government of the United States be discontinued."—E. C. Stowell and H. F. Munro, *International cases*, pp. 159-162.

BREHON LAWS: General character of ancient Irish law.—"The portion of the Irish tribe system which has attracted most attention is the mode in which the judicial authority was withdrawn from the chief and appropriated by the hereditary caste of the Brehons, and also the supposed anomalous principles which they applied to the decision of the cases which came before them. The earlier English writers found no terms too strong to express their abhorrence and contempt of these native judges, and their contempt for the principles upon which they proceeded. On the other hand, Irish writers attributed to these professional arbitrators advanced principles of equity wholly foreign to an early community. . . . The translation of the existing vast mass of Brehon law books, and the translation [publication?] of the most important of them by the order of the government, have disposed of the arguments and assertions on both sides. It is now admitted, that the system and principles of the Brehon jurisprudence present no characteristics of any special character, although in them primitive ideas of law were elaborated in a manner not found elsewhere; . . . the laws which existed among the native Irish were in substance those which are found to have prevailed among other Aryan tribes in a similar stage of social progress; as the social development of the nation was prematurely arrested, so also were the legal ideas of the same stage of existence retained after they had disappeared in all other nations of Europe. This legal survival continued for centuries the property of an hereditary caste, who had acquired the knowledge of writing, and some tincture of scholastic philosophy and civil law. . . . The learning of the Brehons consisted (1) in an acquaintance with the minute ceremonies, intelligible now only to an archaeologist, and not always to him, by which the action could be instituted, and without which no Brehon could assume the role of arbitrator; and (2) in a knowledge of the traditions, customs and precedents of the tribe, in accordance with which the dispute should be decided."—A. G. Richey, *Short history of the Irish people*, ch. 3.

Derivation.—**Senchus Mor.**—The ancient Irish customary law was most probably for centuries before Christ greatly influenced by Greek thought, and a great deal of Plato's imaginary Republic might be read to advantage by the side of a study of Irish institutions. There is, I believe, a persistent tradition of Mediterranean origin, that certain tribes crossed Europe to Ireland from Mycenæ, a tradition which it is not safe wholly to ignore. And there are a good many points of likeness between the Greek and the Irish. Though there is every reason to believe that the origin of the writing of Irish customary law as it is finally found in the *Senchus Mor* is correct, that Patrick did correct the local customs by his Theodosian law, and that his scribes did make an abstract of some of the customs, there is no reason whatever to suppose that the whole was at once written down, or that the now existing MSS. represent the state of the law in Patrick's day.

There are frequent references in the oldest text of the *Senchus Mór* to previous declarations of the law. All such writing down of early laws deals only either with procedure, the means of execution of the law and the remedies, the proceedings in distress, or with status, with the question of the capacity to sue. The Irish law continued to expand with the needs of a changing society, the commentaries on the text showing its direction, and it continued to do so with an equitable practice far in advance of the English common law, until, being incompatible with the advantages to the Crown to be gained by the enforcement of the feudal doctrines, it was crushed out and abolished by the Jacobean lawyers, who imagined, as so many English and Scots then and since have imagined, that ideas of law and morals must be evil and unsocial which would not square with the decayed feudalism which culminated in the doctrine of the divine right of kings."—J. W. Jeudwine, *Manufacture of historical material*, p. 50.

Description of the laws.—"In Ireland a judge was called a Brehon, whence the native Irish law is commonly known as the 'Brehon Law': but its proper designation is *Fenechas*, i. e., the law of the *Féine* or *Féne*, or free land-tillers. The brehons had absolutely in their hands the interpretation of the laws and the application of them to individual cases. . . . The legal rules, as set forth in the Law Books, were commonly very complicated and mixed up with a variety of technical terms; and many forms had to be gone through and many circumstances taken into account, all legally essential: so that no outsider could hope to master their intricacies. The brehon had to be very careful; for he was himself liable for damages, besides forfeiting his fee, if he delivered a false or an unjust judgment. . . . The brehons had collections of laws in volumes or tracts, all in the Irish language, by which they regulated their judgments, and which those of them who kept law-schools expounded to their scholars; each tract treating of one subject or group of subjects. Many of these have been preserved, and of late years the most important have been published, with translations, forming five printed volumes (with a sixth consisting of a valuable Glossary to the preceding five). Of the tracts contained in these volumes, the two largest and most important are the *Senchus Mór* [*Shanahus Mór*] and the *Book of Acaill* [*Ackill*]. In the ancient Introduction to the *Senchus Mór* the following account is given of its original compilation. In the year 438 A. D. a collection of the pagan laws was made at the request of St. Patrick; and *Laegaire* [*Laery*], king of Ireland, appointed a committee of nine learned and eminent persons, including himself and St. Patrick, to revise them. At the end of three years these nine produced a new code, from which everything that clashed with the Christian doctrine had been carefully excluded. This was the *Senchus Mór*. . . .

"The Brehon Code forms a great body of civil, military, and criminal law. It regulates the various ranks of society, from the king down to the slave, and enumerates their several rights and privileges. There are minute rules for the management of property, for the several industries—building, brewing, mills, water-courses, fishing-weirs, bees and honey—for distress or seizure of goods, for tithes, trespass, and evidence. The relations of landlord and tenant, the fees of professional men—doctors, judges, teachers, builders, artificers,—the mutual duties of father and son, of foster-parents and foster-children, of master

and servant, are all carefully regulated. In that portion corresponding to what is now known as criminal law, the various offences are minutely distinguished:—murder, manslaughter, assaults, wounding, thefts, and all sorts of wilful damage; and accidental injuries from flails, sledge-hammers, machines, and weapons of all kinds; and the amount of compensation is laid down in detail for almost every possible variety of injury. . . . The lay people were divided into classes, from the king down to the slave, and the Brehon Law took cognizance of all—setting forth their rights, duties and privileges. The leading, though not the sole, qualification to confer rank was property; the rank being, roughly speaking, in proportion to the amount. Under certain conditions, persons could pass from one class to the next above, always provided their character was unimpeachable. There were five main classes of people:—1. Kings of several grades, from the king of the *tuath* or cantred up to the king of Ireland; 2. Nobles, which class indeed included kings; 3. Non-noble Freemen with property; 4. Non-noble Freemen without property, or with some, but not sufficient to place them among the class next above; 5. The non-free classes. The first three—Kings, Nobles, non-noble Freemen with property—were the privileged classes; a person belonging to these was an *Aire* [*arra*] or chief. . . . All three had some part in the government of the country and in the administration of the law, as kings, tanists, nobles, military chiefs, magistrates, and persons otherwise in authority. . . . The non-free people were those who had not the full rights of the free people of the tribe. They had no claim to any part of the tribe-land, though they were permitted, under strict conditions, to till little plots for mere subsistence. This was by far the most serious of their disabilities. Their standing varied, some being absolute slaves, some little removed from slavery, and others far above it. . . . The people were formed into groups of various sizes, from the family upwards. The Family was the group consisting of the living parents and all their descendants. The Sept was a larger group, descended from common parents long since dead: but this is an imported word, brought into use in comparatively late times. All the members of a sept were nearly related, and in later times bore the same surname. The Clan or House was still larger. *Clann* means 'children,' and the word therefore implied descent from one ancestor. The word *finè* [*finna*] usually meant a group of persons related by blood within certain degrees of consanguinity, all residing in the same neighbourhood; but it was often applied in a much wider sense. The Tribe (*tuath*) was made up of several septs, clans, or houses, and usually claimed, like the subordinate groups, to be descended from a common ancestor. . . .

"It would appear that originally—in prehistoric times—the land was all common property, belonging to the tribe, not to individuals, and chief and people were liable to be called on to give up their portions for a new distribution. But as time went on, this custom was gradually broken in upon; and the lands held by some, after long possession, came to be looked upon as private property. As far back as our records go, there was some private ownership in land. . . . It should be observed that the individuals and families who owned land as private property were comparatively few, and their possessions were not extensive. . . . Every tribesman had to pay to his chief certain subsidies according to his means. . . . Every tenant and every tradesman had to give his chief a

yearly or half-yearly tribute, chiefly goods—supplies—cows, pigs, corn, bacon, butter, honey, malt for making ale, &c.—the amount chiefly depending on the quantity of land he held and on the amount of stock he hired. . . .

"In very early times, beyond the reach of history, the Law of Retaliation prevailed, as in most other countries—an eye for an eye, a tooth for a tooth—in other words, every man or every family that was injured might take direct revenge on the offender. But this being found inconsistent with the peace and well-being of the community—especially in cases of homicide, which were frequent enough in those days—gradually gave place to the Law of Compensation, which applied to every form of injury. In Ireland the process was this:—The injured party sued the offender in proper form, and, if the latter responded, the case was referred to the local brehon, who decided according to law. The penalty always took the form of a fine to be paid by the offender to the person or family injured, and the brehon's fee was usually paid out of this fine. . . . The principle of compensation for murder and for unintentional homicide existed among the Anglo-Saxons, as well as among the ancient Greeks, Franks, and Germans. In the laws of the English king Athelstan, there is laid down a detailed scale of prices to be paid in compensation for killing persons of various ranks of society, from an archbishop or duke down to a churl or farmer; and traces of the custom remained in English law till the early part of the last century. There was no such thing as a sentence of death passed by a brehon in a court of law, no matter what the crime was: it was always compensation; and the brehon's business was to determine the amount. Capital punishment was known well enough, however, and practised, outside the courts of law. . . . Courts for the trial of legal cases, as well as meetings of representative people to settle local affairs, were often held in the open air—sometimes on green little hills, and sometimes in buildings. . . . With regard to evidence, various rules were in force, which may be gathered from detached passages in the laws and general literature. In order to prove home a matter of fact in a court of justice, at least two witnesses were required. . . . The Irish delighted in judgments delivered in the form of a sententious maxim, or an apt illustration—some illustration bearing a striking resemblance to the case in question. The jurist who decided a case by the aid of such a parallel was recognised as gifted with great judicial wisdom, and his judgment often passed into a proverb."—P. W. Joyce, *Smaller social history of ancient Ireland*, pp. 71-87.

Second battle of (1642). See GERMANY: 1640-1645.

BREMEN, a state in the northwestern part of Germany about ninety-nine square miles, called, since 1815, the *Freie Hansestadt* (free city) Bremen. There are eighteen communes, including the city of Bremen, situated on both sides of Weser and surrounded by Hanover and the grand duchy of Oldenburg. In 1866 Bremen entered the North

German Confederation and in 1888 the German customs union. Bremen is a free state and, according to the constitution adopted in 1919, the supreme power is vested in the House of Burgesses (*Bürgerschaft*), consisting of 200 members, elected by all the citizens of the state. The House of Burgesses, in turn, elects a senate of eighteen members to act as the executive body. Two men of the Senate are elected as presiding officers. The capital and most important center is the city of Bremen. Due to its harbor and railway connections it has grown to be one of the greatest ports of the world. In Germany it ranks next only to Hamburg. Bremen carries on an extensive commerce with European countries, the United States, West Indies, Africa, East Indies, China and Australia. It imports many raw materials, among them being coffee, tobacco, rice, sugar, cotton, hemp; exporting large quantities of woolen goods, glass, hemp, hides and wooden toys. The city is divided into the old and new town, the latter having broad and well-laid streets lined with tall, handsome buildings. There are public schools and trade schools maintained by the city.

13th-15th centuries.—In the Hanseatic league. See HANSA TOWNS.

1648.—Cadet to Sweden.—Extent of territory. See GERMANY: 1648: Peace of Westphalia; and Map: At peace of Westphalia.

1801-1803.—One of six free cities which survived the peace of Lunéville. See GERMANY: 1801-1803; CITIES, IMPERIAL AND FREE, OF GERMANY.

1806.—Retains imperial freedom. See GERMANY: 1805-1806.

1810.—Annexed to France. See FRANCE: 1810 (February-December).

1813.—Re-assembly of free town republic. See GERMANY: 1813 (October-December).

BREMI, an ancient fortress in the province of Milan.

1635-1638.—Taken by the French.—Recovered by the Spaniards. See ITALY: 1635-1650.

BREMULE, Battle of (1119). See ENGLAND: 1087-1135.

BRENNER PASS, one of the principal historical mountain passes of the central Tyrolean Alps, connecting Austria and Italy. "In this division [the Eastern Alps] of the great Alpine chain, the *Brenner Pass* (4495 ft.) occupies a position of far greater importance than does any single pass in either the Western or the Central Alps. . . . The history of the Brenner Pass is almost co-extensive with that of the Eastern Alps, or of the relations between Germany and Italy, whether they be looked at from a political, a commercial, or military point of view. By far the lowest of all the Alpine passes across the main chain of the Alps, reached on either side by straight-drawn valleys leading up to a single ridge, it forms a natural highway over the Alps. Its authentic recorded history starts with the passage (B. C. 15) of Drusus, the stepson of Augustus, on his way to conquer the northern Barbarians, and among them the tribe of Breones, or Breuni, which gave

its name forever to the pass, and had its name embalmed in the verses of Horace. Later on the Brenner became a great route by means of which the Romans pursued and attained many military and commercial successes. Most probably it was the pass over which the Barbarians poured in the fifth century towards the fertile plains of Italy, and . . . the route per 'Alpes Noricas' . . . was expressly mentioned by Charles the Great when elaborating in 806 his scheme for the division of his Empire among his sons. Still later it was over the Brenner Pass that the vast majority of the Emperors went on their way to or from Rome, so that on at least one-half of these expeditions (dating from the ninth to the fifteenth centuries) the route selected was that over our pass. Gradually as minor feudal lords gave way to the dynasty of the Counts of the Tyrol, the Brenner became more and more a specifically Tyrolese pass, especially when in 1363 the county of the Tyrol passed into the hands of the powerful family of the Hapsburgers. Being thus held by a single dynasty, capable of pushing its interests, this great highway, though it lost in a way its character as a route open to all nations, yet prospered because of the attention that its new owners devoted to improving the means of communication across it. . . . But it was not till much later, in 1772, that a modern carriage road was constructed across the pass. Naturally, after the Hapsburgers secured (1803, finally 1814) the territories of the Bishops of Trent and Brixen, still more attention was paid to our pass, which now became a most important means of communication between Austria proper and the Milanese and the Veneto, held from 1815 onwards by the sovereigns of Austria. Yet when this political convenience had ceased to be of practical interest (the Milanese and the W. Veneto were lost to Austria in 1859, and the E. Veneto in 1866), the commercial advantages of the pass were such that, between 1864 and 1867, a railway was constructed across it, this being the first line carried over the Alps, while the carriage road of 1772 had also been the first of its kind.—W. A. B. Coolidge, *Alps in nature and history*, pp. 187-188, 189.—The railway has continued to be of importance in the commercial relations of Italy with Austria and Germany. By the treaties after the World War the Brenner Pass was made part of the boundary line between Austria and Italy.—See also ADRIATIC QUESTION: Problems of Italy's new frontiers; ALPS: As barriers.

BRENNUS, the name or perhaps, as some historians think, the title of two chiefs of the Celtic Gauls. Brennus defeated the Romans at Allia and conquered Rome about 390 B. C. After receiving a ransom of gold for the capitol, he returned home. Another Gallic leader of the same name forced his way through Macedonia in 279 B. C. and invaded Greece to Delphi, where, after a repulse, he died by his own hand. See **ROME**: Republic: B. C. 390-347.

BRENTA, river in Italy, flowing from the Alps to the gulf of Venice. In 1017, its valley formed one route of the invading Austro-Germans. See **WORLD WAR**: 1918: IV. Austro-Italian theater: b, 1; c, 3; e, 4.

BRENTFORD, Battle of (1016).—Fought and won by Edmund Ironsides in his contest with Cnut, or Canute, for the English throne.

BRESCIA, a city and episcopal see of Lombardy, Italy; capital of the province of Brescia. It contains many interesting medieval and Renaissance buildings and was the seat of a school of painting, born of the Venetian school, and

memorable as having produced the great Moretto (Alessandro Bonvicino), 1498-1555.

1158.—Subdued by Frederick Barbarossa. See **GERMANY**: 1138-1197.

1310.—Siege of. See **GERMANY**: 1308-1313.

1402.—Added to Venice. See **VENICE**: 1406-1447.

1512.—Capture and pillage by the French. See **ITALY**: 1510-1513.

1849.—Bombardment, capture and brutal treatment by the Austrian Haynau. See **ITALY**: 1848-1849.

BRESLAU, one of the chief commercial ports of Germany, capital of the Prussian province of Silesia and situated southwest of Berlin on the Oder river. (See **GERMANY**: Map.) Its estimated population in 1919 was 528,260. Originally a Polish city, it was purchased by John, king of Bohemia, in 1335. The city fell under Austrian suzerainty in 1527; was captured by Frederick the Great in 1741; taken by the Austrians in 1757, and suffered severely from a siege by the French in 1807.—See also **HUNGARY**: 1471-1487; **GERMANY**: 1757 (July-December).

Treaty of (1742). See **AUSTRIA**: 1742 (June).

BRESLAU, German light cruiser which immediately after the outbreak of the World War evaded the English fleet in the Mediterranean and succeeded in escaping with the *Goeben* through the Dardanelles (August, 1914). The two vessels were nominally taken over by the Turkish government and renamed. Apparently without Turkish authority they sank some Russian ships in the Black Sea and bombarded Odessa. Russia declared war on Turkey in consequence, Oct. 30, 1914, followed by France and Great Britain on Nov. 5.—See also **WORLD WAR**: 1914: IV: Turkey: b and c.

BREST, a strongly fortified seaport of Brittany, France, on the northern side of the bay of Brest. The name corresponds to the Breton word "Breiz," "Brittany." The town of Roman Gaul which stood on the site of Brest seems to have been called Gesocribate. The chronicle of Nantes, written in the eleventh century, mentions the château of Brest in 874.

1239.—Ceded to the duke of Brittany.—After the Roman occupation numerous independent counts became established in Brest, the château being included in the domain of the counts of Léon. The rising power of the dukes of Brittany came into conflict with the house of Léon and Comte Hervé IV finally ceded to Jean I of Brittany in 1239, the town château and port of Brest. Annexed to the domains of the dukes, Brest acquired considerable importance. "He is not duke of Brittany who is not lord of Brest," said one of the counsellors of Montfort.

1341-1397.—English occupation.—In 1341 came the struggle between Charles de Blois and Jean de Montfort. The latter took possession of Brest after having besieged the château in which perished its defender, Gauthier de Clisson. The place fell in 1342 to the power of the king of England, Edward III, an ally of de Montfort's. Duguesclin carried on a siege of Brest, but in vain; foreign occupation did not cease until March 28, 1397.

1543.—Spanish defeat at Brest.—Marc de Carné, lieutenant of the château of Brest, in 1543 repelled an attack of the Spaniards.

1593.—Created a commune.—"During the religious wars the city of Brest long resisted the attacks of the Spanish and the Liguers, and, from the beginning of the advent of Henry IV, she remained faithful to the legitimate king. It is for this reason, by letters patent of December 31, 1593, the king, upon the request of the inhabitants, and

in consideration of their fidelity, gave them the rights of the bourgeoisie 'like the inhabitants of Bordeaux.'"—Transl. from the French of M. Bernard, *La municipalité de Brest de 1750 à 1790 (Annales de Bretagne, Jan., 1916, p. 82)*.

1631.—Beginning of Brest's naval importance.—In 1631 was organized the navy of Ponant and a law was passed making Brest the center of naval operations—with Havre and Brouage, which she was not slow in surpassing, thanks to the patronage of Colbert. In 1661 Duquesne was invested with military and administrative powers to execute the various works of defense.

1694.—English and Dutch attack.—In 1694 the combined fleets of England and Holland landed a considerable force in the neighborhood of Brest. The inhabitants, gathering by the water's edge, halted them and surrounded them; then, a storm having forced the vessels to leave, these deserted forces were attacked and practically annihilated. See FRANCE: 1694.

1757.—Last English attack.—In August, 1757, the English appeared again at the narrow entrance to Brest harbor with nineteen ships and a fighting force of 20,000 men ready to land, but the position they had taken forced them to give up their plan and since then no hostile English fleet has entered the harbor of Brest.

18th century.—"The development of Brest is modern, and due largely to the extension of the shipping, from the beginning of the seventeenth century. In spite of the absence of exact documents an examination of the lists of the poll-taxes justifies the approximate fixing of the number of inhabitants at 20,000 in 1750 and at 27,000 in 1789. The population was equally divided by the Penfeld, on whose left bank is Brest proper and on the right, Recouvrance. The river, which at this time formed the naval and commercial port, is a living artery bordered with commercial houses. One notices between Brest and Recouvrance, sister cities, equally populated, united under the same municipality, but often in disagreement, a profound economic and social inequality. Brest, the richer, has the greater number of tax-payers, merchants, stockholders, lawyers, artisans of the most respected crafts; Recouvrance shelters a dense crowd of workers in the arsenal, sailors and humble laborers. . . . There was no other industry in Brest but ship-construction and repair. Commerce was of the most importance, but was not extensive; its only object was to feed the inhabitants, troops and sailors; provisions were imported, also a great deal of wine, and the ships left port either unloaded or loaded with empty barrels (thus indicating the social importance of the great wine merchants). Privateering, either by the arming of corsairs, or by speculation on their takings or on their cargoes, was an accessory of commerce, and contributed to the amassing of several fortunes in Brest. In short, Brest lived by her shipping."—Tr. from the French of M. Bernard, *La municipalité de Brest de 1750 à 1790 (Annales de Bretagne, Nov., 1912, pp. 47-48)*.

19th century.—In the middle of the nineteenth century the commercial projects of Napoleon III gave fresh impetus to Brest's career. But the greatest impetus came with the opening of the transatlantic steamship trade and the consequent rivalries between French and English ports. In 1860 was laid the telegraph cable from Brest to New York. Brest's maritime importance grew apace: of the French shipping budget for 1885, more than one-seventh was allotted to the port of Brest.

1914-1918.—Debarcation port for the American troops in the World War.—"The long established course of trade had developed several great ports on the northern coast of France and in them were the only adequate harbor facilities, as docks, ships' berths, warehouses, and channels and basins for a large number of vessels. These ports had been turned over to Great Britain for the use of her forces early in the war and were now crowded with the transport and cargo ships that supplied the British army in France. . . . General Pershing was left to use the port of Brest, in the extreme peninsula of Brittany, St. Nazaire, at the mouth of the Loire, La Pallice, the port of the ancient town of La Rochelle, and Bordeaux, near the mouth of the Garonne. From these ports railroads led into the interior of France, but they were not in the best condition. . . . The ports also were inadequate to the service that would be required of them. Their docks were small and already crowded with the French business which the use of the northern ports by the British had forced southward. General Pershing lost little time in remodeling these facilities. American engineers were summoned to his aid, most of them drawn from private life. . . . The French placed at our disposal whatever they had of timber, cement, and structural iron, but their supplies were limited and it was necessary eventually to take from the United States the greater portion of such materials. The French turned over to us docks with 67 ship berths. We built others, 10 at Bassens, near Bordeaux, and two at Brest, and had 28 others under construction or projected when the armistice was signed. . . . Brest became the chief port of debarcation for the troop-ships. Of the two millions of men we sent to France practically half were landed at that port. . . . To make Brest more available we deepened the channel, built cantonments, hospitals, and many miles of side tracks for railroads. . . . The improvements at one of the designated ports—it seems to have been Brest—were described by a newspaper correspondent in a manner which indicated great admiration for the achievement of the army engineers. From the rank of a second-class port it was raised until it could be pronounced the equal of Hamburg. Berths were constructed for 40 large ships and 60 small ships, and vast concrete warehouses were built. The intricate system of side tracks contained 228 miles of tracks, and there was space for 2,500 incoming cars and for an equal number of outgoing cars, besides track storage for 3,200 cars. It was said in March, 1918, that 172 American-built locomotives had been assembled in this port and plans were made for assembling 1,100 more."—J. S. Bassett, *Our war with Germany, pp. 194-198*.—"Brest, headquarters of Base Section No. 5, thanks to the depth and excellence of its harbor became the landing place of huge masses of troops transported during the summer of 1918. There it was that the Leviathan which draws forty-two feet, disembarked every month effectives which equalled in number those of a German infantry division."—Chambrun and Marenches, *American army in the European conflict, p. 346*.

BREST-LITOVSK, a strongly fortified Polish town in the district of Grodno, formerly belonging to Russia, on the right bank of the Bug river. It played an important part in the operations of the World War in 1915. From August, 1915, until February, 1918, it was held by the Germans, and here were signed the two treaties which definitely eliminated Russia from the ranks of the Allies. See RUSSIA: Map of Russia and the new

border states; WORLD WAR: 1915: III. Eastern front: i, 3.

Treaties, 1918.—Early in November, 1917, the Russian provisional government under Kerensky (see RUSSIA: 1917 [August-September]) was overthrown and replaced by the Bolshevik *régime* of Lenine and Trotzky. The first task of the Bolsheviks was to stop the war; proposals for an armistice were accepted by Germany on November 28, and on December 2 hostilities ceased on the Eastern front: Russia dropped out of the war. "Following a conference at the army headquarters of Prince Leopold of Bavaria, at Brest-Litovsk, attended by representatives of Russia, Germany, Austria-Hungary, Turkey, and Bulgaria, an armistice between these Powers was signed on December 15, 1917, providing for a truce. . . . [See WORLD WAR: Miscellaneous auxiliary services: I. Armistices: a.] The Peace Conference itself was formally opened at Brest-Litovsk on Saturday, December 22, 1917."—C. J. H. Hayes, *Brief history of the great war*, pp. 253-254.

The first treaty of peace, between Germany, Austria-Hungary, Bulgaria and Turkey on one part and the Ukrainian People's Republic on the other, was signed on February 9, 1918. The PREAMBLE states that "the Ukrainian people, having in the course of the present World War declared itself to be independent and expressed a wish to restore peace between itself and the powers at war, desires 'to take the first step toward a lasting world's peace, honorable to all parties, which shall not only put an end to the horrors of war, but also lead to the restoration of friendly relations of the peoples in political, legal, economic, and intellectual realms.'" The text is as follows:

ARTICLE 1. Germany, Austria-Hungary, Bulgaria, and Turkey on the one hand and the Ukrainian People's Republic on the other declare that the state of war between them is at an end. The contracting parties are resolved henceforth to live in peace and friendship with one another.

ART. 2. Between Austria-Hungary on the one hand and the Ukrainian People's Republic on the other hand, as far as these two powers border one another, those frontiers will exist which existed before the outbreak of the present war between the Austro-Hungarian monarchy and Russia. . . .

ART. 3. The evacuation of occupied territories will begin immediately after the ratification of the present treaty. . . .

ART. 4. The diplomatic and consular relations between the contracting parties will be entered upon immediately after the ratification of the peace treaty. The widest possible admittance of the respective parties to Consuls is to be reserved for a special agreement.

ART. 5. The contracting parties mutually reimburse the reimbursement of their war costs—that is to say, the State expenditure for carrying on the war, as well as indemnification for damages—that is to say, those damages suffered by them and their subjects in the war, as through military measures, including all requisitions made in the enemy's countries.

ART. 6. The respective prisoners of war will be permitted to return home, and, as far as they do not desire, with the approval of the State concerned, to remain in its territories or proceed to another country. . . .

ART. 7. The contracting parties undertake mutually and without delay to enter into economic relations and organize an exchange for goods on the basis of the following prescriptions: [Here follow clauses regulating financial, commercial and traffic relations between the signatories].

ART. 8. Restoration of public and private legal relations, the exchange of prisoners of war and interned civilians, the question of amnesty and the question of the treatment of merchantmen in enemy hands will be regulated in separate treaties [which also were signed] with the Ukrainian People's Republic, to form an essential part of the present peace treaty, which, so far as practicable, will take effect simultaneously therewith.

ART. 9. The agreements made in this peace treaty form an indivisible whole.

ART. 10. For the interpretation of this treaty the German and Ukrainian texts are authoritative in regard to relations between Germany and Ukraine, the German, Hungarian, and Ukrainian texts for relations between Austria-Hungary and Ukraine, the Bulgarian and Ukrainian texts for relations between Bulgaria and Ukraine, the Turkish and Ukrainian texts for relations between Turkey and Ukraine.

The concluding part of the treaty provides: The present peace treaty will be ratified. Ratified documents shall be exchanged as soon as possible. So far as there are no provisions to the contrary, the peace treaty shall come into force on ratification.

The principal treaty of Brest-Litovsk was signed on March 3, 1918, between the *Central Powers and the Bolshevik government of Russia*:

ART. 1. The Central Powers and Russia declare the state of war between them to be terminated and are resolved henceforth to live in peace and friendship with one another.

ART. 2. The contracting nations will refrain from all agitation or provocation against other signatory Governments and undertake to spare the populations of the regions occupied by the powers of the Quadruple Entente.

ART. 3. The regions lying west of the line agreed upon by the contracting parties, and formerly belonging to Russia, shall no longer be under Russian sovereignty. [The territory mapped out to be separated from Russia included Finland, the Baltic Provinces, Ukraine, Poland, Lithuania, and Russian Armenia.] . . . Russia undertakes to refrain from all interference in the internal affairs of these territories and to let Germany and Austria determine the future fate of these territories in agreement with their populations.

ART. 4. Germany and Austria agree, when a general peace is concluded and Russian demobilization is fully completed, to evacuate the regions east of the line designated in Article 3, . . . in so far as Article 6 does not stipulate otherwise. Russia will do everything in her power to complete as soon as possible the evacuation of the Anatolian provinces and their orderly return to Turkey. The districts of Erivan, Kars, and Batum will likewise without delay be evacuated by the Russian troops. Russia will not interfere in the reorganization of the constitutional or international conditions of these districts, but leave it to the populations of the districts to carry out the reorganization, in agreement with the neighboring States, particularly Turkey.

ART. 5. Russia will without delay carry out the complete demobilization of her army, including the forces newly formed by the present Government. Russia will further transfer her warships to Russian harbors and leave them there until a general peace or immediately disarm. Warships of States continuing in a state of war with the Quadruple Alliance will be treated as Russian warships in so far as they are within Russian control. . . .

ART. 6. Russia undertakes immediately to con-

clude peace with the Ukraine People's Republic and to recognize the peace treaty between this State and the powers of the Quadruple Alliance. Ukrainian territory will be immediately evacuated by the Russian troops and the Russian Red Guard. . . . Esthonia and Livonia will likewise be evacuated without delay by the Russian troops and the Russian Red Guard. . . . Esthonia and Livonia will be occupied by a German police force until security is guaranteed by their own national institutions and order in the State is restored. Russia will forthwith release all arrested or deported inhabitants of Esthonia and Livonia and guarantee the safe return of deported Esthonians and Livonians. Finland and the Aland Islands will also forthwith be evacuated by the Russian troops and the Red Guard, and Finnish ports by the Russian fleet and Russian naval forces. . . . The fortifications erected on the Aland Islands are to be removed with all possible dispatch. A special agreement is to be made between Germany, Russia, Finland, and Sweden regarding the permanent non-fortification of these islands, as well as regarding their treatment in military, shipping, and technical respects.

ART. 7. Starting from the fact that Persia and Afghanistan are free and independent states, the contracting parties undertake to respect their political and economic independence and territorial integrity.

ART. 8. Prisoners of war of both sides will be sent home.

ART. 9. The contracting parties mutually renounce indemnification of their war costs, that is to say, state expenditure for carrying on the war, as well as indemnification for war damages, that is to say, those damages which have arisen for them and their subjects in the war regions through military measures, inclusive of all requisitions undertaken in the enemy country.

ART. 10. Diplomatic and Consular relations between the contracting parties will be resumed immediately after ratification of the peace treaty. Special agreements are reserved relative to the admittance of the respective Consuls.

ART. 11. [Has reference to economic relations.]

ART. 12. The restoration of public and private relations, the exchange of prisoners of war, interned civilians, the amnesty question, as well as the treatment of merchant ships which are in enemy hands, will be regulated by separate treaties with Russia, which shall form an essential part of the present peace treaty and so far as is feasible shall enter into force at the same time.

ART. 13. [Refers to the different languages in which this treaty was to be authoritative among the signatories.]

ART. 14. The present peace treaty will be ratified. Instruments of ratification must be exchanged as soon as possible in Berlin. The Russian Government undertakes at the desire of one of the Quadruple Alliance powers to exchange ratifications within two weeks. The peace treaty enters into force on its ratification, in so far as its articles, appendices, or supplementary treaties do not prescribe otherwise. (See also RUSSIA: 1918 [March]).

Both of the foregoing treaties were abrogated by the terms of the German Peace Treaty dictated by the Allies and signed by the German plenipotentiaries at Versailles on June 28, 1919. Article 116 (Section XIV) reads, in part:

"In accordance with the provisions . . . Germany accepts definitively the abrogation of the Brest-Litovsk Treaties and of all treaties, conven-

tions, and agreements entered into by her with the Maximalist [Bolshevik] Government in Russia."

BRETAGNE. See BRITANNY.

BRETHREN, Calendar. See CALENDAR BRETHREN.

BRETHREN, Plymouth, "a religious sect which grew out of the general discontent with church conditions (more especially Anglican) in England and Ireland in the early nineteenth century. Early gatherings of the *malcontents* took place in Dublin, Bristol and Plymouth and the prominence of the Plymouth meeting gave the sect the name by which its adherents are popularly known. Numerous congregations were established in England, Switzerland, France, Germany, the United States and Canada through the efforts of John Darby and other leaders in the movement. The Brethren recognize no creed or ecclesiastical organization and look upon the Scriptures as their only guide. They have no fellowship with other denominations and carry on their mission work by establishing communities rather than distinctive missions. In both England and the United States divisions have arisen. Statistics available . . . report for the six divisions in the United States 470 church organizations and 13,717 members."—United States Census, *Religious bodies*, 1916, pt. 2, p. 160.

BRETHREN, River.—"Those who first constituted the body popularly known as River Brethren came to this country from Switzerland in 1750 and settled near the Susquehanna River in Eastern Pennsylvania. They have no history to which the inquirer can refer, and they are able to give few particulars of the early life of the denomination. They were, it is supposed, Mennonites. As the result of a revival movement, beginning in 1770, many of these people who had been formal in their worship became zealous believers, and organized separate congregations. The first members were baptized in the Susquehanna River, and the denomination thus came to be known as River Brethren. Jacob Eagle was their first minister."—H. K. Carrol, *Religious forces of the United States*, p. 55.—For the three divisions of the River Brethren: the Brethren in Christ, the Old Order of Yorker Brethren and the United Zion's Children, statistics available report 112 church organizations and 5,388 members.—United States Census, *Religious Bodies*, 1916, pt. 2, p. 178.

BRETHREN, United. See MORAVIAN OR BOHEMIAN BRETHREN.

BRETHREN CHURCH, generally known as the "Progressive Dunkers." See DUNKARDS.

BRETHREN IN CHRIST. See BRETHREN, RIVER.

BRETHREN OF THE COMMON LOT, or **Common Life,** a religious community founded at Deventer in 1360. "The Societies of the Beguines, Beghards, and Lollards [See BEGUINES], which from the first laboured under various defects and imperfections, had in course of time degenerated, and by their own fault, either fallen to pieces of themselves, or been suppressed. The two things, however, still existed, viz., the propensity to religious association . . . and, likewise, the outward condition, which required and rendered practicable the efforts of benevolence and charity, strengthened by cooperation. The last was particularly the case in the Netherlands, and most in the northern provinces. . . . Here then (in the Netherlands) the Institute of the Common Lot takes its rise. . . . The first author of this new series of evolutions was Gerhard Groot (Geert Groete or de Groot, Gerhard Magnus), a man of glowing

piety and great zeal in doing good, a powerful popular orator and an affectionate friend of youth [1340-1384]. . . . His affection for Holy Scripture and the ancient Fathers kindled in Gerhard's bosom the liveliest zeal for collecting the records of Christian antiquity. . . . Hence, he had long before employed young men, under his oversight, as copyists, thereby accomplishing the threefold end of multiplying these good theological works, giving profitable employment to the youths, and obtaining an opportunity of influencing their minds. This he continued more and more to do. The circle of his youthful friends, scholars, and transcribers, became from day to day larger, and grew at length into a regular society. Having thus in part owed its origin to the copying of the Scriptures and devotional books, the Society from the outset, and through its whole continuance, made the Holy Scripture and its propagation, the copying, collecting, preserving, and utilizing of good theological and ascetical books, one of its main objects. . . . The members were called 'Brethren of the Common Lot,' [or of the Common Life] or 'Brethren of Good Will,' 'Fratres Collationarii,' 'Jeronymians,' and 'Gregorians.' . . . Imitating the Church at Jerusalem, and prompted by brotherly affection, they mutually shared with each other their earnings and property, or consecrated also their fortune, if they possessed any, to the service of the community. From this source, and from donations and legacies made to them, arose the 'Brother-houses,' in each of which a certain number of members lived together, subjected, it is true, in dress, diet, and general way of life, to an appointed rule, but yet not conventually sequestered from the world, with which they maintained constant intercourse, and in such a way as, in opposition to Monachism, to preserve the principle of individual liberty."—C. Ullmann, *Reformers before the Reformation*, v. 2, pt. 2, ch. 1.—"Through the wonderful activity of that fraternity of teachers, begun about 1360, called the Brethren of the Common Life, the Netherlands had the first system of common schools in Europe. These schools flourished in every large town and almost in every village."—W. E. Griffis, *Influence of the Netherlands*, p. 3.—"The decline of the Community coincided with the rise of Protestantism" and "their schools had to face the competition of similar institutions which sprang up during the fifteenth and sixteenth centuries. . . . The Institutions founded by the Society of Jesus became popular at the expense of the schools of the Brothers of the Common Life."—T. à Kempis, *Founders of the New Devotion*, tr. into English by J. P. Arthur, introduction, page xl.—See also EDUCATION: Modern: 14th-15th centuries; Brethren of Common Life; 15th-16th centuries; Netherlands; and NETHERLANDS: 1521-1555.

BRETWALDA, a title given to some of the early English kings. "Opinions differ as to the meaning of the word Bretwalda. Palgrave and Lappenberg take it as equivalent to 'ruler of Britain': Kemble construes it 'broad-ruling,' and sees in it a dignity without duty, hardly more than an 'accidental predominance.' (*Saxons in England*, ii., 18.) The list of those who obtained this 'ducatus' includes Ethelbert of Kent, who broke the power of the petty kings as far as the Humber, Redbald of East Anglia, who obtained it by some means even in the lifetime of Ethelbert, and the three great Northumbrian kings, Edwin, Oswald and Oswy, whose supremacy however did not extend to Kent."—C. Elton, *Origins of English history*, p. 392, note.—See also ENGLAND: 477-527, and ENGLAND: 7th century.

BRICKWORK, Babyonia. See ASSYRIA: Art and archaeological remains.

BRÏCONNET, Bishop of Meaux. As a pupil of Lefèvre he was prominent in the French Reformation; later condemned the teachings of Luther. See PAPACY: 1521-1535.

BRIDGE, Battle of the.—A serious reverse suffered by the Arab followers of Mahomet in their early movements against the Persians, 634. A force of 9,000 or 10,000 having crossed the Euphrates by a bridge of boats were beaten back, their bridge destroyed and half of them slain or drowned.—G. Rawlinson, *Seventh great oriental monarchy*, ch. 26.—See CALIPHATE: 632-651.

BRIDGE OF SIGHS, bridge in Venice connecting ducal palace with state prisons. See VENICE.

BRIDGEPORT, seaport and county seat of Fairfield County, Conn.; important for its manufactures. During the World War it was the center for munition works.—See also CONNECTICUT: 1880-1920; LABOR PARTIES: 1918-1920; LABOR STRIKES AND BOYCOTTS: 1917-1918: Munition strikes.

BRIDGER, James, early explorer in Utah. See UTAH: 1825-1843.

BRIDGES, George Tom Molesworth (1871-), British general, military member of mission to United States in 1917. See WORLD WAR: 1917: VIII. United States and the war: i, 12.

BRIDGES, Robert Seymour (1844-), English poet and poet-laureate since 1913. See ENGLISH LITERATURE: 1880-1920.

BRIDGET, Saint (c. 452-523), also known as Brigid, one of the patron saints of Ireland, was the daughter of an Ulster prince. Her reputation spread beyond Ireland, and later, under the name of St. Bride, she was adopted as a favorite saint both in England and Scotland.—See also MYTHOLOGY: Celtic mythology: Roman period.

ALSO IN: J. A. Knowles, *Life of St. Brigid, patroness of Ireland*.

BRIDGET OF SWEDEN, Saint (c. 1302-1373), was the daughter of Birger Persson, a Swedish judge and wealthy landowner. At thirteen she married Ulf Gudmarsson. Saint Catherine of Sweden was one of their eight children. After the death of her husband in 1344 she devoted herself to religious undertakings. She founded the congregation of the Brigidines or Order of St. Saviour. She died in Rome and was canonized in 1391.

BRIDGEWATER, or Lundy's Lane, Battle of. See U. S. A.: 1814 (July-September).

BRIEL, Brielle or Brill, a fortified town in the province of South Holland, Netherlands, at the mouth of the New Maas. The scene of a battle in 1572 in which the Dutch under William de la Marck wrested the town from Spain. It was then given to Queen Elizabeth as security for the debt incurred by England's aid in the wars of the Dutch. See NETHERLANDS: 1572.

BRIENNE, Étienne Charles de Loménie de. See LOMÉNIE OF BRIENNE.

BRIENNE, Gauthier de (Walter). See WALTER OF BRIENNE.

BRIENNE, Jean de. See JOHN OF BRIENNE.

BRIENNE, Yolante. See YOLANTE OF BRIENNE.

BRIENNE, Battle of. See FRANCE: 1814 (January-March).

BRIENNE-LE-CHATEAU, town in north-eastern France about twenty-five miles northeast of Troyes. Was the scene of Napoleon's early military studies, 1779-1784, and of a battle in which, on January 29, 1814, he defeated the Allies.

BRIEUX, Eugène (1858-), French dramatist. Elected to the Academy in 1909. Most of his plays attack in a powerful manner some social evil.

BRIEY, town in northwest France, just inside the boundary of 1914, about fifteen miles northwest of Metz; captured in 1914 by the Germans, who exploited the extensive iron mines, greatly to their advantage in the World War. It was occupied by Americans after the armistice. See WORLD WAR: 1918: XI. End of the war: c.

BRIGANTES, one of the strongest and fiercest of the tribes of ancient Britain, believed by some historians to have been the original pre-Celtic inhabitants of the island. At the time of the Roman conquest they held the whole interior northward from the Humber and Mersey to the Forth and Clyde. They were subdued by Agricola.—E. Guest, *Origines Celticae*, v. 1, ch. 1.—See also BRITAIN, CELTIC TRIBES; BRITAIN: 43-53 and 78-84; and IRELAND: TRIBES OF EARLY CELTIC INHABITANTS.

BRIGANTINE or Bergantin. See CARAVELS.

BRIGHT, John (1811-1880), British Liberal statesman and orator. With Richard Cobden he was largely responsible for the repeal of the corn laws, 1846, and, with Gladstone, for the reform bill of 1867 (see also ENGLAND: 1846). He was a factory owner, opposed to factory legislation bills. Supported the Northern cause of the American Civil War though it seriously affected his business. Under the Gladstone ministry, he was president of the board of trade, 1868-1870, and chancellor of the duchy of Lancaster, 1880-1882. He represented a Birmingham constituency in Parliament for over thirty years.

BRIGHT, Timothy (c. 1551-1615), English inventor of modern shorthand. See ABBREVIATIONS: Modern development.

BRIHUEGA, Battle of (1710). See SPAIN: 1707-1710.

BRILL. See BRIEL.

BRINDISI, seaport town in Apulia, Italy; appears frequently in the histories of the Crusades. In 1500 it was pledged to the Catholic monarch Ferdinand by treaty of Cambrai. (See VENICE: 1508-1509.) During the World War, the seaport was reserved as a secondary base by the Italian fleet when Venice was threatened by an Austro-Hungarian offensive (November 10, 1917).

BRINDLEY, James (1716-1772), English engineer. See CANALS: Principal European: British Isles.

BRISBANE, Sir Thomas Makdougall (1773-1860), British soldier and astronomer. Governor of New South Wales, 1821-1825. See AUSTRALIA: 1787-1840; NEW SOUTH WALES: 1821-1831.

BRISBANE, seaport town on the east coast of Australia. See AUSTRALIA: 1859, and Map.

BRISSON, Eugène Henri (1835-1912), French republican statesman. Deputy mayor of Paris, 1870; member of the assembly, 1871; president of the chamber 1881-1885; president of the council (premier) April, 1885-January, 1886; president of the commission investigating the Panama Canal scandals, 1892; president of the chamber, 1894-1899; became president of the council again in 1898; unsuccessful candidate for the presidency,

1895 and 1899; president of the chamber, 1906-1912. See FRANCE: 1875-1889; 1898 (May-November.)

BRISSET DE WARVILLE, Jean Pierre, (1754-1793), French Revolutionary leader and head of the Girondists. As a young man he was falsely accused of writing a seditious pamphlet and was imprisoned. Later he went to England and from there to the United States, where he wrote against slavery. At the outbreak of the Revolution in 1789 he returned to France, became the editor of *Le Patriote Français*, and a member of the Paris commune; soon became a member of the assembly and leader of the Girondists, who, thereafter, were often called "Brissetins." (See FRANCE: 1791, October, to 1793, September-December.) He demanded the deportation of the king after his flight and later voted for his death; was responsible for the declaration of war against Austria, England and Holland; angered Robespierre and his party by holding out against the immediate execution of the king and by the other more moderate policies of the Girondists; was consequently guillotined October 31, 1793.—See also GIRONDINS.

BRISSETINS. See BRISSET DE WARVILLE.

BRISTOE STATION, Battle of. See U. S. A.: 1863 (July-November; Virginia).

BRISTOL, England, a city and county-borough in Somerset and Gloucester. It is a great seaport of south-western England, situated upon the Bristol channel between the confluence of the Avon and the Severn. Bristol was recorded for centuries of English history as second only to London and it is still called the metropolis of the west. The population in 1921 was 377,601. The city is governed by a lord mayor, 48 councillors and 16 aldermen. Bristol returns five members to Parliament, with another for the University of Bristol.

Name and origin.—"The oldest form of the name is Brigstow, and this most probably means the 'stow' or fenced place of the bridge. Before the Norman Conquest there could not have been many bridges in England, for while place-names ending in 'ford' are plentiful, the compounds of 'bridge' are few. The particular form in which 'bridge' appears in Brigstow is said to be early, and so perhaps points to an early settlement at the bridge end. Standing, then, upon the Avon, Bristol, like Bridgenorth on the Severn, and like Innsbruck on the Inn, was probably first known as the place where the river was crossed by a bridge; it was the point of communication between the two kingdoms of Mercia and Wessex, if indeed either Bristol or its bridge was in existence when Mercia and Wessex were separate kingdoms, and afterwards between the two shires of Gloucester and Somerset. . . . On every side Bristol, which was then [eleventh century] no doubt a walled town, was girt by her rivers, save on the east, where a neck of land joined the peninsula to the rest of Gloucestershire. . . . No city probably has so completely changed its physical features, for of the two rivers which then almost encircled it one, after having been turned into a new channel, has disappeared for a considerable extent of its course through the city, which now stretches far beyond it, and the other has also been made to run in an artificial channel, while its natural course now serves the artificial purpose of a floating harbour."—W. Hunt, *Bristol*, pp. 4-6.—"Out of a mass of tradition and conjecture, the few known facts of the earlier history of Bristol appear to be: that the lower Avon valley was inhabited from the earliest times; that . . . there was a British town at Clifton having its citadel at the three camps; that the Romans

had a military station and port, Abona, at Sea Mills, and probably a commercial port at Bristol; that after a period of intense darkness, lasting for some centuries, a Saxon town grew up on the peninsula, whose inhabitants, shut off from the rest of England by the impenetrable forests of Horwood and Kingswood, took little part in the general politics of the kingdom and suffered little by its troubles, but devoted themselves successfully to a foreign trade, chiefly with Ireland and Scandinavia; that already the slave-trade, which in later years was to contribute so much to the wealth of Bristol, had commenced, and that before the beginning of the eleventh century the town had sufficient importance to be the seat of a mint; that at the Norman Conquest the town . . . was a populous place surrounded by a rampart and containing several churches."—A. Harvey, *Bristol*, pp. 14-15.

12th Century.—Its slave trade and other commerce.—"Within its comparatively narrow limits Bristol must have been in general character and aspect not unlike what it is to-day—a busy, bustling, closely-packed city, full of the eager, active, surging life of commercial enterprise. Ostmen from Waterford and Dublin, Northmen from the Western Isles and the more distant Orkneys, and even from Norway itself, had long ago learnt to avoid the shock of the 'Higra,' the mighty current which still kept its heathen name derived from the sea-god of their forefathers, and make it serve to float them into the safe and commodious harbour of Bristol, where a thousand ships could ride at anchor. As the great trading centre of the west Bristol ranked as the third city in the kingdom, surpassed in importance only by Winchester and London. The most lucrative branch of its trade, however, reflects no credit on its burghers. All the eloquence of S. Wulfstan and all the sternness of the Conqueror had barely availed to check for a while their practice of kidnaping men for the Irish slave-market; and that the traffic was in full career in the latter years of Henry I. we learn from the experiences of the canons of Laon."—K. Norgate, *England under the Angevin kings*, v. 1, ch. 1.

1313.—Great insurrection.—In 1313 "occurred the most remarkable event in the annals of Bristol, the 'Great Insurrection' during which the town was for several years in a state of open rebellion, an independent and self-governed town where the king's writ ceased to run. The exact cause . . . seems to have originated in the growing tendency, which Bristol shared with most of the boroughs of the kingdom at this time, for the government of local affairs to pass from the hands of the burgesses at large to those of a narrow and self-elected oligarchy."—A. Harvey, *Bristol*, p. 34.—By 1312 the government of the town was in the hands of fourteen men, headed by William Randolph. The commonalty were led by John Taverner, who declared that all burgesses ought to have an equal share in the privileges of the town. The trouble came to a head over a disputed toll on fish which the townspeople refused to pay. A fierce fight took place, twenty were killed, the Fourteen were soon driven out and the town barricaded against the king's officers. Taverner was elected mayor and held his stand against authority for three years, after which the town was besieged and surrendered. "The result may be considered a victory for the commonalty; but the tendency of the time was not to be resisted, and . . . all municipal power soon passed into the hands of a close corporation of influential families."—A. Harvey, *Bristol*, p. 37.

1349.—**Black Death.**—Sanitary conditions.—“The plague broke out in Bristol in the early part of the summer, probably in the June of 1349. . . . The streets of the town were very narrow; for, as in the busier parts the ground was honeycombed with cellars for storing wine, salt, and other merchandise, no vehicle was allowed to be used in them. All goods were carried by porters or pack-horses, a custom which continued at least to the end of the seventeenth century. . . . The less important streets were little better than deep dark lanes. In all alike the refuse of the dwellings on either side must have streamed down the drain that ran through the middle of them. The one redeeming feature in the sanitary condition of the town was that it had an abundant supply of water conveyed through conduits, for which it was largely indebted to its monasteries. The three lepers’ hospitals . . . are perhaps significant of the prevalence of a disease that was the invariable attendant of dirt. When the plague came there was little power of resistance. Few of those who were seized with it lived as long as three days, many died after one or even half a day’s sickness. ‘The whole strength of the town,’ we are told, ‘perished,’ and grass is said to have grown inches high in the principal streets. The immediate effect of this calamity was a large influx of population from the country; agricultural employments were deserted for the more profitable labour of the craftsman, the dependent condition of the villein for the privileges of the burgess. Up to this time there had been no barrier between the position of the master and that of the workman. Now, however, the immigration of men from the country to take up trades gave rise to a distinct wage-earning class with interests and objects apart from their employers.”—W. Hunt, *Bristol*, pp. 78-79.—See also **BLACK DEATH**; and **ENGLAND, 1348-1349**.

1643.—**Use of fire lances.** See **LIQUID FIRE: Medieval and modern use**.

1645.—**Storming of the city by Fairfax.** See **ENGLAND: 1645 (July-September)**.

1685.—**Commerce and wealth of the city.**—“Next to the capital, but next at an immense distance, stood Bristol, then the first English seaport. . . . Pepys, who visited Bristol eight years after the Restoration, was struck by the splendour of the city. But his standard was not high; for he noted down as a wonder the circumstance that, in Bristol, a man might look round him and see nothing but houses. . . . A few churches of eminent beauty rose out of a labyrinth of narrow lanes built upon vaults of no great solidity. If a coach or cart entered those alleys, there was danger that it would be wedged between the houses, and danger also that it would break in the cellars. Goods were therefore conveyed about the town almost exclusively in trucks drawn by dogs; and the richest inhabitants exhibited their wealth, not by riding in carriages, but by walking the streets with trains of servants in rich liveries and by keeping tables loaded with good cheer. The hospitality of the city was widely renowned, and especially the collations with which the sugar refiners regaled their visitors. . . . This luxury was supported by a thriving trade with the North American Plantations and with the West Indies. The passion for colonial traffic was so strong that there was scarcely a small shopkeeper in Bristol who had not a venture on board of some ship bound for Virginia or the Antilles. Some of these venturers indeed were not of the most honourable kind. There was, in the Transatlantic possessions of the crown,

a great demand for labour; and this demand was partly supplied by a system of crimping and kidnapping at the principal English seaports. Nowhere was this system in such active and extensive operation as at Bristol. . . . The number of houses appears, from the returns of the hearth-money, to have been, in the year 1685, just 5,300. . . . The population of Bristol must therefore have been about 29,000.”—Lord Macaulay, *History of England*, v. 1, ch. 3.

1739.—**Rise of Methodism.**—Whitefield and Wesley.—“Bristol may be said to have been the cradle of Methodism, for there the most important events in the early history of the society took place, and nowhere else was the preaching of its apostles received with such instant enthusiasm as among the largely Celtic population. When Whitefield visited Bristol in 1739, he remembered the words of a friend who . . . had said, ‘If you have a mind to convert Indians, there are colliers enough at Kingswood,’ and one Saturday afternoon preached from ‘his first field-pulpit’ at Rose Green. The Kingswood collieries, from which Bristol drew its chief supply of coal, were worked by a lawless race, which more than once endangered the peace of the city. Dwelling in a district of the outparish of St. Phillip and St. Jacob, and at a distance of three or four miles from the parish church, the colliers lived and died in a state of utter ignorance and brutality, and Whitefield showed no common courage in venturing among them, especially as field-preaching was then wholly unknown. His eloquence soon drew crowds round him, and before long at least ten thousand listened with rapt attention to his sermons. . . . He left his work to be carried on by Wesley. During the early years of Wesley’s preaching the extraordinary excitement of his hearers broke out in various symptoms which appear to have been more prevalent in Bristol than elsewhere. Here the first Methodist meeting-house was built in the Horse-fair, the system of class meetings was first organized, and most of the events connected with the split between Wesley and the Calvinistic Methodists took place, and, lastly, it was by the Bristol Conference that Francis Asbury was sent to America, where he received the title of bishop and founded the American Methodist Episcopal Church.”—W. Hunt, *Bristol*, pp. 181-182.—See also **METHODISTS**.

1800.—**Decline.**—By the end of the 18th century “Bristol no longer held the position of second city in the kingdom, and before long it entered on a period of decline, now happily arrested by the public spirit of the citizens. This decline was due to the general [shifting] . . . of commerce to the north of England, to the rapid rise of Liverpool, to the natural drawbacks of the port, to the ruin of the West India trade, and to a large extent also to the short-sighted policy which drove trade away from the city by the imposition of heavy local rates. . . . The introduction of the use of steam coal for purposes of manufacture had already transferred the preponderance of commercial importance from the south to the north of England, and though Bristol is fairly supplied with fuel, the thin and broken seams of the neighboring coal fields cannot compare with the rich seams of the northern mines.”—W. Hunt, *Bristol*, pp. 208, 210.

1831.—**Reform bill riots.**—The popular excitement produced in England in 1831 by the action of the House of Lords in rejecting the Reform Bill, led to riots in several places, but most seriously at Bristol. “The Bristol mobs have always been noted for their brutality; and the outbreak now

was such as to amaze and confound the whole kingdom. . . . The lower parts of the city were the harbourage of probably a worse seaport populace than any other place in England, while the police was ineffective and demoralised. There was no city in which a greater amount of savagery lay beneath a society proud, exclusive, and mutually repellant, rather than enlightened and accustomed to social co-operation. These are circumstances which go far to account for the Bristol riots being so fearfully bad as they were. Of this city, Sir Charles Wetherell—then at the height of his unpopularity as a vigorous opponent of the Reform Bill—was recorder; and there he had to go, in the last days of October, in his judicial capacity. . . . On Saturday, October 29, Sir Charles Wetherell entered Bristol in pomp; and before he reached the Mansion House at noon, he must have been pretty well convinced, by the hootings and throwing of stones, that he had better have foregone the procession. At night, the Mansion House was attacked, and the Riot Act was read; but the military were not brought down, as they ought to have been, to clear the streets. The mayor had 'religious scruples,' and was 'humane'; and his indecision was not overborne by any aid from his brother-magistrates. When the military were brought in, it was after violence had been committed, and when the passions of the mob were much excited. Sir Charles Wetherell escaped from the city that night. On the Sunday morning, the rioters broke into the Mansion House without opposition; and from the time they got into the cellars, all went wrong. Hungry wretches and boys broke the necks of the bottles, and Queen Square was strewed with the bodies of the dead-drunk. The soldiers were left without orders, and their officers without that sanction of the magistracy in the absence of which they could not act, but only parade; and in this parading, some of the soldiers naturally lost their tempers, and spoke and made gestures on their own account, which did not tend to the soothing of the mob. This mob never consisted of more than five or six hundred. . . . The mob declared openly what they were going to do; and they went to work unchecked—armed with staves and bludgeons from the quays, and with iron palisades from the Mansion House—to break open and burn the bridewell, the jail, the bishop's palace, the custom-house, and Queen Square. They gave half an hour's notice to the inhabitants of each house in the square, which they then set fire to in regular succession, till two sides, each measuring 550 feet, lay in smoking ruins. The bodies of the drunken were seen roasting in the fire. The greater number of the rioters were believed to be under twenty years of age, and some were mere children; some Sunday scholars, hitherto well conducted, and it may be questioned whether one in ten knew anything of the Reform Bill, or the offences of Sir Charles Wetherell. On the Monday morning, after all actual riot seemed to be over, the soldiery at last made two slaughterous charges. More horse arrived, and a considerable body of foot soldiers; and the constabulary became active; and from that time the city was in a more orderly state than the residents were accustomed to see it. . . . The magistrates were brought to trial, and so was Colonel Brereton, who was understood to be in command of the whole of the military. The result of that court-martial caused more emotion throughout the kingdom than all the slaughtering and burning, and the subsequent executions which marked that fearful season. It was a year before the trial of the magistrates was entered upon. The result was the acquittal of the mayor, and the con-

sequent relinquishment of the prosecution of his brother-magistrates."—H. Martineau, *History of the Thirty Years' Peace*, v. 2, bk. 4, ch. 4.

1838.—Revivifying trade with America.—Voyage of the *Great Western*.—"All through her existence Bristol has naturally sought wealth in western commerce. The principal port for trade with the Ostmen of Ireland, the home of the earliest voyages to North America, she became in the present [19th] century the originator of trans-Atlantic steam traffic, and has succeeded in establishing a large and increasing trade with America. The *Great Western* steamship company, formed in 1835, built the first steamer, the *Great Western*, that was expressly intended for trans-Atlantic voyages. She was a wooden ship of 1,340 tons register, with engines of 440 horsepower, and was well designed and splendidly built. She started on her first voyage on April 8, 1838, and reached New York in fifteen days and ten hours, and though one or two steamers had crossed the Atlantic before her, the quickness of her passage, and the small amount of coal she consumed, afforded the first proof that steam traffic with America could be carried on with the assurance of profit."—W. Hunt, *Bristol*, p. 217.

1913.—Pre-war commerce.—Great docks.—The port of Bristol has for many hundreds of years maintained a leading position in connection with the commerce of the world. The report of the Bristol Chamber of Commerce lists the seventy-five principal exported manufactures of the district, notably boots and shoes, chocolate, cocoa, machinery, iron goods, leather, paper, tobacco, glass and pottery. On seventy-six of the principal articles imported, largely provisions; the grain import for 1913 was 4,331,356 quarters. The greatness of Bristol lies in her huge docks which represent an outlay of over six million pounds. The registered tonnage of the ships reported, was 668,863 in 1851, 1,538,254 just fifty years later, and in 1913 was 2,558,628. "From its City Docks, Sebastian Cabot sailed on the voyage which resulted in the discovery of the New World. These also were the docks in which the first steamship to cross the Atlantic was built and whence she sailed. The 'City' Docks [area eighty-three acres], which traverse the City itself, were acquired from a private company by the Bristol Corporation in 1848, and have since been administered by a Committee of the Bristol City Council. The Avonmouth [area nineteen acres] and Portishead [area twelve acres] Docks, situated respectively on the north and south sides of the mouth of the Avon, were purchased by the Corporation of Bristol in 1884. The Docks had been constructed and up to that time worked by private enterprise. At that time the accommodation was equal to the requirements of the shipping using the Port, but with the gradual increase of the size of steamers engaged in over-seas trade, a movement was set on foot to provide accommodation for the largest class of steamers then afloat or even contemplated. The result was the construction of a large dock [area thirty acres] on the north side of the river, alongside the Avonmouth Dock. . . . The first sod [in beginning the construction] of this dock was cut . . . in March, 1902, and [it was] opened by King Edward VII. in person on July 9th, 1908, and with his permission it was named, 'Royal Edward Dock.' . . . For the purpose of Railway Rates all the Docks within the Port are grouped; they are thus uniformly linked up with all the stations on the Great Western, Midland, London and North Western, London and South Western, Somerset and

Dorset, Great Eastern, Great Central and other Railways. By these routes merchandise of all kinds, including fresh and frozen meat and other perishable goods, are dispatched."—Bristol Incorporated Chamber of Commerce and Shipping, *Annual report, 1913-1914*, pp. 5-7.

ALSO IN: Bristol Chamber of Commerce, *Year book, 1914*.

1914-1919.—World War.—Docks, cold storage facilities, industries.—In the World War "Bristol took no mean part. It has been computed that it enlisted something like sixty thousand men for H. M. [His Majesty's] Forces, of whom not fewer than four thousand made the great sacrifice. . . . It had been recognized that with the opening of the Royal Edward Dock in 1908 the modern facilities provided at Avonmouth would be of great advantage if this country ever became involved in war. The capabilities of Avonmouth Docks for embarking troops and loading war materials were duly tested by the authorities and found satisfactory. As soon as war was imminent Avonmouth became the scene of great military activities, and the docks played an important part with regard to transport operations throughout the war. . . . Extensive use was also made by the Government of the Cold Stores which are situated at the dock side. For a long time these stores were monopolised for army purposes to the exclusion of commercial traffic, and large stocks of meat were held at Avonmouth for supplying troops stationed in the South and South-west of England. After the Government took control of meat for civilian requirements the stores were largely used by the Ministry of Food, and the accommodation and facilities which these stores afforded were greatly appreciated. For a long time Bristol has held a prominent position as an importing center for refrigerated produce, and prior to the war this trade had so increased that additional accommodation was necessary. In 1914 Parliamentary sanction had been obtained for the erection of new large cold stores at Avonmouth, but the outbreak of hostilities stopped for a time the construction of these stores. In 1917, however, the demand . . . became imperative, and the Docks Committee were urgently requested to proceed with the completion of the new Avonmouth stores. . . . The work was at once taken in hand, and on completion these stores not only added to the trade of the port, but will be of great national benefit. . . . Portishead Dock also shared in the war activities. For a long time the dock was a main depot for the supply of petrol spirit for mechanical transport and aviation purposes in France. A large canning establishment was installed, and the tankage accommodation was greatly increased. . . . During the war period the imports in bulk amounted to 116,000,000 gallons, and the exports of the case and bulk spirit to 72,000,000 gallons. . . . Bristol made many contributions, but perhaps none more important than the constant stream of aeroplanes which issued from the ancient city. On every battle front the 'Bristol' machines made their mark."—G. F. Stone and C. Wells, *Bristol and the Great War*, pp. 203, 206-207, 246.—Bristol was also a seat of seaplane manufacture, turned out over 25,000 motor cycles, manufactured glycerine, coal tar products, 30,100 tons of toluol, some thousands of mine sinker cases, many thousands of "Nissen" huts and shelters, about 4,000,000 yards of wire netting, about 20,000 tons of galvanized steel sheets, and over 3,000,000 18-pounder H. E. (high explosive) shell cases, an industry for which sixty firms, including engineering, lace, biscuit, chocolate, tobacco,

paperbag works, etc., were pressed into service. The figures of the dock traffic for the four years of the war are: number of ships, 2,167; personnel, 203,337; horses and mules, 339,601; vehicles, 71,977; tonnage of goods, 1,759,055.

BRISTOL, one of the lighter cruisers with which the British admiral Sturdee set out to avenge the defeat of Admiral Cradock in a naval battle with the German admiral von Spee off Coronel, on the coast of Chile, November 1, 1914, during the World War.

BRISTOW, Benjamin Helm (1832-1896), American lawyer and statesman. Served in the Civil War. Kentucky state senator, 1863-1865; solicitor-general of United States, 1870-1872; secretary of the treasury, 1874-1876. While holding the latter office he prosecuted with vigor the so-called "whisky ring" (q. v.), which was composed of internal revenue officers and distillers of St. Louis with official accomplices in Washington. Resigned, 1876, due to friction with President Grant. Was unsuccessful candidate for presidential nomination in 1876.

BRITAIN, English equivalent for the classical name, Britannia, which embraced England, Scotland and Wales. See BRITANNIA.

Celtic tribes.—"It appears that the southeastern part of the island, or the district now occupied by the county of Kent, was occupied by the Cantii, a large and influential tribe, which in Cæsar's time, was divided among four chiefs or kings. To the west, the Regni held the modern counties of Sussex and Surrey, from the sea-coast to the Thames. Still farther west, the Belgæ occupied the country from the southern coast to the Bristol Channel, including nearly the whole of Hampshire, Wiltshire and Somersetshire. The whole of the extensive district extending from the Belgæ to the extreme western point of the island, then called Antivestæum or Bolerium (now the Land's End) including Devonshire and Cornwall, was occupied by the Dumnonii, or Damnonii. On the coast between the Dumnonii and the Belgæ the smaller tribe of the Durotriges held the modern county of Dorset. On the other side of the Thames, extending northwards to the Stour, and including the greater part of Middlesex as well as Essex, lay the Trinobantes. To the north of the Stour dwelt the Iceni, extending over the counties of Suffolk, Norfolk, Cambridge and Huntingdon. The Coritavi possessed the present counties of Northampton, Leicester, Rutland, Derby, Nottingham and Lincoln; and the southeastern part of Yorkshire was held by the Parisi. Between the tribes last enumerated, in the counties of Buckingham, Bedford and Hertford, lay the tribe called by Ptolemy the Catyuechiani, and by others Catuvellani. Another name, apparently, for this tribe, or for a division of it, was the Cassii. West of these were the Atrebates, in Berkshire; and still further west were the Dobuni, in the counties of Oxford and Gloucester. . . . The interior of the island northward was occupied by the Brigantes, who held the extensive districts, difficult of approach on account of their mountains and woods, extending from the Humber and the Mersey to the present borders of Scotland. This extensive tribe appears to have included several smaller ones [the Voluntii, the Sestuntii, the Jugantes and the Cangii]. The Brigantes are believed to have been the original inhabitants of the island, who had been driven northward by successive invasions. . . . Wales, also, was inhabited by a primitive population. The

northern counties . . . was the territory of the Ordovices. The southeastern counties . . . were held by the Demetæ. The still more celebrated tribe of the Silures inhabited the modern counties of Hereford, Radnor, Brecknock, Monmouth and Clamorgan. Between these and the Brigantes lay the Cornabii or Carnabii. The wilder parts of the island of Britain, to the north of the Brigantes, were inhabited by a great number of smaller tribes, some of whom seem to have been raised in the scale of civilization little above savages. Of these we have the names of no less than twenty-one. Bordering on the Brigantes were the Otadeni, inhabiting the coast from the Tyne to the Firth of Forth. . . . Next to them were the Gadeni. . . . The Selgovæ inhabited Annandale, Nithsdale and Eskdale, in Dumfriesshire, with the East of Galloway. The Novantes inhabited the remainder of Galloway. The Damniî, a larger tribe, held the country from the chain of hills separating Galloway from Carrick, northward to the river Ern. These tribes lay to the south of the Forth and Clyde. Beyond the narrow boundary formed by these rivers lay [the Horestii, the Venricones or Vernicomes, the Taixali or Taexali, the Vacomagi, the Albani, the Cantæ, the Logi, the Carnabii, the Catini, the Mertæ, the Carnonacæ, the Creones, the Cerones, and the Epidiî]. The ferocious tribe of the Attacotti inhabited part of Argyleshire, and the greater part of Dumbartonshire. The wild forest country of the interior, known as the Caledonia Sylva (or Forest of Celyddon), extended from the ridge of mountains between Inverness and Perth, northward to the forest of Balnagowan, including the middle parts of Inverness and Ross, was held by the Caledonii, which appears to have been at this time [of the conquests of Agricola] the most important and powerful of all the tribes north of the Brigantes."—T. Wright, *The Celt, Roman and The Saxon*, ch. 2.—See also DRUIDS; ENGLAND: Area.

B. C. 55-54.—Cæsar's invasions.—Having extended his conquests in Gaul to the British channel and the strait of Dover (see GAUL: B. C. 58-51), Cæsar crossed the latter, in August, B. C. 55, and made his first landing in Britain, with two legions, numbering 8,000 to 10,000 men. Portus Itius, from which he sailed, was probably either Wissant or Boulogne, and his landing place on the British coast is believed to have been near Deal. The Britons disputed his landing with great obstinacy; they were driven back, and offered to submit; but when a few days afterwards, Cæsar's fleet suffered greatly from a storm, they reconsidered their submission and opened hostilities again. Routed in a second battle, they once more sued for peace, and gave hostages; whereupon Cæsar reëmbarked his troops and returned to the continent, having remained in Britain not more than three weeks and penetrated the island a short distance only. The following summer he crossed to Britain again, determined on making a thorough conquest of the country. This time he had five legions at his back, with two thousand horse, and the expedition was embarked on more than eight hundred ships. He sailed from and landed at the same points as before. Having established and garrisoned a fortified camp, he advanced into the country, encountering and defeating the Britons, first, at a river, supposed to be the Stour which flows past Canterbury. A storm which damaged his fleet then interrupted his advance, compelling him to return to the coast. When the disaster had been

repaired he marched again, and again found the enemy on the Stour, assembled under the command of Cassivelaunus, whose kingdom was north of the Thames. He dispersed them, after much fighting, with great slaughter, and crossed the Thames, at a point, it is supposed, near the junction of the Wey. Thence he pushed on until he reached the "oppidum" or stronghold of Cassivelaunus, which is believed by some to have been on the site of the modern town of St. Albans,—but the point is a disputed one. On receiving the submission of Cassivelaunus, and of other chiefs, or kings, fixing the tribute they should pay and taking hostages, Cæsar returned to the coast, reëmbarked his army and withdrew. His stay in Britain on this occasion was about sixty days.—Cæsar, *Gallic War*, bk. 4, ch. 20-36, and bk. 7, ch. 7-33.

A. D. 43-53.—Conquests of Claudius.—Nearly a hundred years passed after Cæsar's hasty invasion of Britain before the Romans reappeared on the island, to enforce their claim of tribute. It was under the fourth of the imperial successors of Julius Cæsar, the feeble Claudius, that the work of Roman conquest in Britain was really begun. Aulus Plautius, who commanded in Gaul, was sent over with four legions, A. D. 43, to obtain a footing and to smooth the way for the emperor's personal campaign. With him went one, Vespasian, who began in Britain to win the fame which pushed him into the imperial seat and to a great place in Roman history. Plautius and Vespasian made good their occupation of the country as far as the Thames, and planted their forces strongly on the northern bank of that river, before they summoned the emperor to their aid. Claudius came before the close of the military season, and his vanity was gratified by the nominal leading of an advance on the chief oppidum, or stronghold of the Britons, called Camulodunum, which occupied the site of the modern city of Colchester. The Trinobantes, whose capital it was, were beaten and the place surrendered. Satisfied with this easy victory, the emperor returned to Rome, to enjoy the honors of a triumph; while Vespasian, in command of the second legion, fought his way, foot by foot, into the southwest of the island, and subjugated the obstinate tribes of that region. During the next ten years, under the command of Ostorius Scapula, who succeeded Plautius, and Avitus Didius Gallus, who succeeded Ostorius, the Roman power was firmly settled in southern Britain, from the Stour, at the east, to the Exe and the Severn at the west. The Silures, of south Wales, who had resisted most stubbornly, under Caractacus, the fugitive Trinobantine prince, were subdued and Caractacus made captive. The Icenî (in Suffolk, Norfolk and Cambridgeshire) were reduced from allies to sullen dependents. The Brigantes, most powerful of all the tribes, and who held the greater part of the whole north of modern England, were still independent, but distracted by internal dissensions which Roman influence was active in keeping alive. This, stated briefly, was the extent to which the conquest of Britain was carried during the reign of Claudius.—between A. D. 43 and 54.—C. Merivale, *History of the Romans*, ch. 51.—See also COLCHESTER.

A. D. 61.—Campaigns of Suetonius Paulinus.—From 50 to 61, while Didius Gallus and his suc-

cessor Veranius commanded in Britain, nothing was done to extend the Roman acquisitions. In the latter year, Suetonius Paulinus came to the command, and a stormy period of war ensued. His first movement was to attack the Druids in the isle of Mona, or Anglesey, into which they had retreated from Gaul and Britain, in successive flights, before the implacable hostility of Rome. "In this gloomy lair, secure apparently, though shorn of might and dignity, they still persisted in the practice of their unholy superstition. . . . Here they retained their assemblies, their schools, and their oracles; here was the asylum of the fugitives; here was the sacred grove, the abode of the awful deity, which in the stillest noon of night or day the priest himself scarce ventured to enter lest he should rush unwittingly into the presence of its lord." From Segontium (modern Caernarvon) Suetonius crossed the Menai strait on rafts and boats with one of his legions, the Batavian cavalry swimming their horses. The landing was fiercely disputed by women and men, priests and worshippers; but Roman valor bore down all resistance. "From this moment the Druids disappear from the page of history; they were exterminated, we may believe, upon their own altars; for Suetonius took no half measures." This accomplished, the Roman commander was quickly called upon to meet a terrific outburst of patriotic rage on the part of the powerful nation of the Icenii, who occupied the region now forming the counties of Suffolk, Norfolk, Cambridge, and Huntingdon. They had been allies of the Romans, first; then tributaries, under their own king, and finally subjects, much oppressed. Their last king, Prasutagus, had vainly hoped to win favor for his wife and children, when he died, by bequeathing his kingdom to the Roman state. But the widowed queen, Boudicea, or Boadicea, and her daughters, were only exposed with more helplessness to the insolence and the outrages of a brutal Roman officer. They appealed to their people and maddened them by the exposure of indescribable wrongs. The rising which ensued was fierce and general beyond precedent. "The Roman officials fled, or, if arrested, were slaughtered; and a vast multitude, armed and unarmed, rolled southward to overwhelm and extirpate the intruders. To the Colne, to the Thames, to the sea, the country lay entirely open." The colony at Camulodunum (Colchester), was destroyed; Verulamium (St. Albans), and Londinium (London), were sacked and burned; not fewer than 70,000 of the Romans in Britain were slaughtered without mercy. Suetonius made haste to quit Anglesey when the dreadful news reached him, and pressed, with all speed, along the great highway of Watling street—gathering up his forces in hand as he went—to reach the awful scene of rage and terror. He had collected but 10,000 men when he confronted, at last, the vast swarm of the insurgents, on a favorable piece of ground that he had secured, in the neighborhood of Camulodunum. But, once more, the valor of undisciplined semi-barbarism wrecked itself on the firm shields of the Roman cohorts, and 80,000 Britons are said to have fallen in the merciless fight. The insurrection was crushed and Roman authority in Britain reaffirmed. But the grim Suetonius dealt so harshly with the broken people that even Rome remonstrated, and he was, presently, recalled, to give place to a more pacific commander.—C. Merivale, *History of the Romans*, ch. 51.

—T. Mommsen, *History of Rome*, bk. 8, ch. 5.

A. D. 78-84.—Campaigns of Agricola.—For

seventeen years after the recall of Suetonius Paulinus (61) there was a suspension of Roman conquest in Britain. The military power in the island suffered great demoralization, resulting naturally from the chaos of affairs at Rome, between Nero and Vespasian. These conditions ceased soon after the accession of the Flavian emperor, and he, who had attained first in Britain the footing from which he climbed to the throne, interested himself in the spreading of his sovereignty over the whole of the British island. C. Julius Agricola was the soldier and statesman—a great man in each character—whom he selected for the work. Agricola was made prefect or governor of Britain, A. D. 78. "Even in his first summer, when he had been but a few months in the island, and when none even of his own officers expected active service, Agricola led his forces into the country of the Ordovices, in whose mountain passes the war of independence still lingered, drove the Britons across the Menai Straits and pursued them into Anglesey, as Suetonius had done before him, by boldly crossing the boiling current in the face of the enemy. Another summer saw him advance northward into the territory of the Brigantes, and complete the organization of the district, lately reduced, between the Humber and Tyne. Struck perhaps with the natural defences of the line from the Tyne to the Solway, where the island seems to have broken, as it were, in the middle and soldered unevenly together, he drew a chain of forts from sea to sea. . . . In the third year of his command, Agricola pushed forward along the eastern coast, and, making good with roads and fortresses every inch of his progress, reached, as I imagine, the Firth of Forth. . . . Here he repeated the operations of the preceding winter, planting his camps and stations from hill to hill, and securing a new belt of territory, ninety miles across, for Roman occupation." The next two years were spent in strengthening his position and organizing his conquest. In A. D. 83 and 84 he advanced beyond the Forth, in two campaigns of hard fighting, the latter of which was made memorable by the famous battle of the Grampians, or Graupius, fought with the Caledonian hero Galgacus. At the close of this campaign he sent his fleet northward to explore the unknown coast and to awe the remoter tribes, and it is claimed that the vessels of Agricola circumnavigated the island of Britain, for the first time, and saw the Orkneys and Shetlands. The further plans of the successful prefect were interrupted by his sudden recall. Vespasian, first, then Titus, had died while he pursued his victorious course in Caledonia, and the mean Domitian was envious and afraid of his renown.—C. Merivale, *History of the Romans*, ch. 61.

ALSO IN: Tacitus, *Agricola*.—T. Mommsen, *History of Rome*, bk. 8, ch. 5.

"Having thus displayed his power, the governor now set himself to win the hearts of the natives by reforms in the administration, especially in the financial administration, and redress of grievances. . . . It was not enough to remove causes of complaint. He would also win over the natives to positive affection for the Roman rule. He was constantly urging all the wealthier Britons to come into the towns and to take part in building operations. Everywhere temples, market-places, well-built houses were rising, reared by British natives, and pledges for their future loyalty. He gathered about him the sons of the chiefs, had them instructed in liberal arts, praised their aptness to learn at the expense of their Gaulish contemporaries, listened before long to eloquent declamations, delivered, of course, in the Latin tongue, by young

Britons, gracefully clad in the Roman toga. The bath and the luxurious banquet offered their attractions not in vain to the late hunter of the forests, and as Tacitus sarcastically observes "the simple folk called that civilization (*humanitas*) which was really the beginning of slavery."—T. Hodgkin, *History of England; from the earliest times to the Norman conquest*, pp. 47-48

117-145.—Real subjugation of Britain.—Roman walls.—"It is not until the reign of Hadrian (117-138) that Britain really reappears in history. We find now that Southern Britain . . . has been thoroughly subjugated. Whatever disturbances occur hereafter in this part of the island until the time when the Romans leave it for good come, not from the native tribes, but from the legions themselves. Works of peace were carried on, roads constructed, towns built and enlarged, lands reclaimed from the sea. The main business of the Roman armies was to protect the province from the still unconquered tribes of the north. This was chiefly done by the construction of huge walls across the island at places where its breadth is least. . . . It was here that the first wall was built (with the Solway Firth at the western end, and Newcastle—on Tyne at the eastern)—an enormous work, exceeding in magnitude anything of the kind that the Romans constructed elsewhere, and so showing the value which they set on the province which it was intended to protect. It must not be supposed, however, that this huge fortification was finished at once. The work of completing and strengthening it seems to have been going on for more than eighty years. It was in 120 that the work was begun. In that year the Emperor Hadrian . . . came to Britain. His policy was to contract rather than to extend its boundaries, and he accordingly drew the line of fortification far within the limits to which the Roman conquests had been pushed. It consisted of five parts—a trench, a stone wall, buildings for the troops, a rampart of earth (*Vallum*), roads.

"1. *The trench.*—This keeps close to the northern side of the wall, though it has been discontinued where the wall skirts the edge of a cliff. Its dimensions vary. . . . The average has been given as 'thirty-six feet wide and fifteen feet deep.'

"2. *The wall.*—This was seventy-three miles and a half in length from Wall's End in the east to Bowness on the west. It was carefully constructed of stone, great care having been evidently bestowed on using the most suitable kinds, which have sometimes been brought from a distance. The line which it followed was purposely drawn so as to take in the highest ground. . . . It (the breadth) may be taken on an average, at eight feet, and perhaps we may put the average height, as it was, at eighteen. [See also ROMAN WALLS IN BRITAIN.]

"3. *Buildings for the troops.*—These are of the three kinds: (a) Camps (stations) were constructed at intervals of four miles (on an average) along the line of the wall. They are four-cornered. . . . Each was fortified with a wall and trench of its own. Each has four gates, streets crossing each other at right angles, after the fashion of Roman camps, and, it would seem, suburbs for the camp followers. (b) Mile-castles (*castella*) were built at average intervals of a Roman mile along the wall. . . . These were part of the wall, being of the same masonry, and having it for their northern defence. . . . (c) Between each mile-castle, four turrets or watch-towers were built,

standing therefore about three hundred yards apart. These may be called sentry-boxes. . . .

"4. *The rampart (vallum).*—This fortification consists of a trench and three earthen walls. . . . The *vallum* is not always close to the wall. It follows an easier line of country, whereas, as has been said, the wall takes in by choice the most difficult and steepest spots. . . .

"5. *The roads.*—Of these there were two: (a) A military way ran along the whole length of the wall, between it and the rampart. . . . It was intended, of course, for the rapid and easy transport of troops and stores from one point of the wall to another. . . . (b) A road ran to the south of both wall and rampart, and afforded additional accommodation, available when hostilities were not actually going on.

"This gigantic work . . . constituted one great camp, which might be used against enemies on either side. . . . It must have required at least ten thousand men to garrison it, and doubtless, could have accommodated, on an emergency, many more."—A. J. Church, *Story of Early Britain*, pp. 66-74.—"History distinctly asserts that one line of fortification, be it wall or *vallum*, was executed by Hadrian, and another by Septimius Severus."—J. H. Ramsay, *Foundations of England*, v. 1, p. 70.

2d-3d centuries.—Introduction of Christianity.—"Of Christianity in Roman Britain we have singularly few traces. . . . As to the actual date of the introduction of Christianity into our island we must be contented to confess our ignorance. The story contained in the book of Papal Lives, which was reproduced by Bede, that a certain king Lucius of Britain, about the year 180, sent over to Pope Eleutherius, asking for missionaries to instruct his people in the Christian faith, must be dismissed as the fable of a later age; nor can we speak with much certainty concerning the so-called proto-martyr, St. Alban, who is said to have suffered for the faith in the persecution of Diocletian. There can be no doubt, however, that there were some converts to Christianity in Britain during the second century, and in the third century it must have become the dominant religion here as in the rest of the empire. Towards the end of that century our island, which produced so many rival Cæsars, produced also one of the most famous of heretics, Pelagius, and of course, the existence of his heterodoxy implies also the existence of the orthodoxy out of which it sprang."—T. Hodgkin, *History of England*, pp. 75-76.—See also CHRISTIANITY: 100-300: British or Celtic church; CELTIC CHURCH: 176-507.

3rd-6th centuries.—Growth of the Celtic church.—Relations with Rome. See CELTIC CHURCH: 176-507.

208-211.—Campaigns of Severus.—A fresh inroad of the wild Caledonians of the north upon Roman Britain, in the year 208, caused the emperor Severus to visit the distant island in person, with his two worthless sons, Caracalla and Geta. He desired, it is said, to remove those troublesome youths from Rome and to subject them to the wholesome discipline of military life. The only result, so far as they were concerned, was to give Caracalla opportunities for exciting mutiny among the troops and for making several attempts against his father's life. But Severus persisted in his residence in Britain during more than two years, and till his death, which occurred at Eboracum (York) on February 4, 211. During that time he prosecuted the war against the Caledonians with great vigor, penetrating to the northern extremity of the island, and losing, it is said, above 50,000 men,

more by the hardships of the climate and the march than by the attacks of the skulking enemy. The Caledonians made a pretence of submission, at last, but were soon in arms again. Severus was then preparing to pursue them to extermination, when he died.—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 6.

ALSO IN: T. Mommsen, *History of Rome*, bk. 8, ch. 5.

284-305.—Oppressive taxation under Diocletian.—Trade and labor.—Beginnings of fairs and markets.—“The administrative reforms of Diocletian and Constantine, introduced for political reasons, had added greatly to the efficiency of the government; but they also added to the weight of the *incubus* on the land. . . . The mere enumeration of the taxes as established from the time of Diocletian will speak for itself. Landowners paid a state-rent or land-tax on their estates (tributum); the soil of the conquered provinces being held in theory to have been forfeited to Rome. The amount in early times was a tenth of the annual produce (decumæ); but in later times we are told that it might run from one-fifth to one-seventh, paid either in kind or in money, on the estimated value of the land. . . . Under the Romans the landowner was also liable to find corn for the troops (Annona); he was bound to entertain officials on their journeys; and he had to keep up the roads and bridges. As the landowner paid on the produce of his land, so traders were taxed on their stock-in-trade. Estates above a certain value are liable to a Succession Duty of 5% (*vicesima hereditatum*). Handicraftsmen and laborers paid poll-tax (*capitatio*); artisans were forbidden to change their callings, lest they might evade their poll-tax (*capitatio*); artisans were forbidden to all imports and exports passing in or out of certain fiscal districts, of which Britain must have been one: 12½% (*octava*) was the rate in the latter days. One per cent was paid on all produce sold in the market; 4% being charged on the price of slaves as an article of luxury. It was to facilitate the collection of these imposts that fairs and markets were instituted, on the principle of the medieval Staples [centers of production or distribution]. We need not begin to point out how much the weight of these burdens would be aggravated by the fact that the taxes were collected and the country administered by aliens, irresponsible satraps, armed with irresistible power, and, presumably, anxious to make money and retire. The frequent references to lands at one time under cultivation, but then lying waste, speak forcibly of decay.”—J. H. Ramsay, *Foundations of England*, v. 1, pp. 102-103.

288-297.—Rebellion of Carausius.—“During the reign of Gallienus [260-268] . . . the pirate fleets of the Franks infested the British seas, and it became needful to have a fleet to protect the coast. The command of this fleet had been conferred on Carausius, a Menapian by birth; but he was suspected of conniving at piracy, in order that he might enrich himself by becoming a sharer in their booty, when they returned laden with plunder. To save himself, therefore, from punishment, he usurped the imperial power, 288, and reigned over Britain for seven years. A vast number of his coins struck in Britain have been preserved, so many that the history of Carausius has been written from his medals. He was slain at length by his minister Allectus, who usurped his power. The Franks [as allies of Allectus] had well-nigh established their power over the south portion of Britain when it was broken by Constantius, the father of Constantine the Great, who defeated Allectus in

a decisive battle, in which that usurper was slain . . . Allectus held the government of Britain for three years. Many of his coins are found.”—H. M. Scarth, *Roman Britain*, ch. 10.

ALSO IN: T. Wright, *Celt, Roman and Saxon*, ch. 4.

323-337.—Constantine's organization.—When the scheme of administration treated above was amended by Constantine, “Britain formed part of a vast pro-consulate, extending from Mount Atlas to the Caledonian deserts, and was governed by the Gallic prefect, through a ‘vicar’ or deputy at York. The island was divided into five new provinces. . . . Britain was under the orders of the Count of Britain, assisted by the subordinate officers. The Duke of Britain commanded in the north. The Count of the Saxon Shore, governed the ‘Maritime Tract’ and provided for the defence of the southeastern coast. The Saxon Shore on the coast of Britain must not be mistaken for the Saxon Shore on the opposite coast of France, the headquarters of which were the harbour of Boulogne. The names of the several provinces into which Britain was divided are given in the ‘Notitia,’ viz:—1. Britannia Prima, which included all the south and west of England, from the estuary of the Thames to that of the Severn. 2. Britannia Secunda, which included the Principality of Wales, bounded by the Severn on the east and the Irish Channel on the west. 3. Flavia Cæsariensis, —all the middle portion of Britain, from the Thames to the Humber and the estuary of the Dee. 4. Maxima Cæsariensis,—the Brigantian territory, lying between the estuaries of the Humber and Dee, and the Barrier of the Lower Isthmus. 5. Valentia,—the most northern portion, lying between the barrier of Hadrian and that of Antoninus.”—H. M. Scarth, *Roman Britain*, ch. 10.

367-370.—Deliverance by Theodosius.—The distracted condition of affairs in the Roman empire that soon followed the death of Constantine, which was relieved by Julian for a brief term, and which became worse at his death, proved especially ruinous to Roman Britain. The savage tribes of Caledonia—the Picts, now beginning to be associated with the Scots from Ireland—became bolder from year to year in their incursions, until they marched across the whole extent of Britain. “Their path was marked by cruelties so atrocious, that it was believed at the time and recorded by St. Jerome that they lived on human flesh. London, even, was threatened by them, and the whole island, which, like all the other provinces of the Empire, had lost every spark of military virtue, was incapable of opposing any resistance to them. Theodosius, a Spanish officer, and father of the great man of the same name who was afterwards associated in the Empire, was charged by Valentinian with the defence of Britain. He forced the Scots to fall back (A. D. 367-370), but without having been able to bring them to an engagement.”—J. C. L. de Sismondi, *Fall of the Roman Empire*, ch. 5.—“The splendour of the cities and the security of the fortifications were diligently restored by the paternal care of Theodosius, who with a strong hand confined the trembling Caledonians to the northern angle of the island, and perpetuated, by the name and settlement of the new province of Valentia, the glories of the reign of Valentinian.”—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 25.

383-388.—Revolt of Maximus.—In 383, four years after Theodosius the Great had been associated in the Roman sovereignty by the young emperor Gratian, and placed on the throne of the East, the generous Gratian lost his own throne, and

his life, through a revolt that was organized in Britain. "One Maximus, a Spaniard by birth, occupying a high official position in that province, forced on step by step into insurrection, by a soldiery and a people of whom he appears to have been the idol, raised the standard of revolt in the island, and passed over into Gaul, attended by a large multitude,—130,000 men and 70,000 women, says Zosimus, the Byzantine historian. This colony, settling in the Armorican peninsula, gave it the name of Brittany, which it has since retained. The rebel forces were soon victorious over the two Emperors who had agreed to share the Roman throne [Gratian and his boy-brother Valentinian who divided the sovereignty of the West between them, while Theodosius ruled the East]. Gratian they slew at Lyons; Valentinian they speedily expelled from Italy. . . . Theodosius adopted the cause of his brother Emperor" and overthrew Maximus.—J. G. Sheppard, *Fall of Rome*, lecture 5.—See **ROME: Empire: 379-395.**

5th-6th century.—Traditional history. See **ARTHURIAN LEGEND; MYTHOLOGY: Celtic: Roman period.**

407.—Usurpation of Constantine.—"The Roman soldiers in Britain, seeing that the Empire was falling to pieces under the feeble sway of Honorius, and fearing lest they, too, should soon be ousted from their dominion in the island (part of which was already known as the Saxon Shore) clothed three usurpers successively with the imperial purple [407], falling, as far as social position was concerned, lower and lower in their choice each time. The last and least ephemeral of these rulers was a private soldier named Constantine, and chosen for no other reason but his name, which was accounted lucky, as having been already borne by a general who had been carried by a British army to supreme dominion."—T. Hodgkin, *Italy and her invaders*, bk. 1, ch. 5.—The usurper Constantine soon led his legions across the channel into Gaul, then ravaged by the Vandals, Sueves, Alans and Burgundians who passed the Rhine in 406. He was welcomed with joy by the unhappy people who found themselves abandoned to the barbarians. Some successes which the new Constantine had, in prudent encounters with detached parties of the German invaders, were greatly magnified, and gave prestige to his cause. He was still more successful, for a time, in buying the precarious friendship of some tribes of the enemy, and made, on the whole, a considerable show of dominion in Gaul during two or three years. The seat of his government was established at Arles, to which city the offices and court of the Roman Prefect of Gaul had retreated from Trèves in 402. With the help of a considerable army of barbarian auxiliaries (a curious mixture of Scots, Moors and Marcomanni) he extended his sovereignty over Spain. He even extorted from the pusillanimous court at Ravenna a recognition of his usurped royalty, and promised assistance to Honorius against the Goths. But the tide of fortune presently turned. The lieutenant of Constantine in Spain, Count Gerontius, became for some reason disaffected and crowned a new usurper, named Maximus. In support of the latter he attacked Constantine and shut him up in Arles. At the same time, the emperor Honorius, at Ravenna, having made peace with the Goths, sent his general Constantius against the Gallo-British usurper. Constantius, approaching Arles, found it already besieged by Gerontius. The latter was abandoned by his troops, and fled, to be slain soon afterwards.

Arles capitulated to the representative of the great name which Honorius still bore, as titular *imperator* of Rome. Constantine was sent to Ravenna, and put to death on the way (411).—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 31.

ALSO IN: P. Godwin, *History of France: Ancient Gaul*, bk. 3, ch. 10.

410.—Abandoned by the Romans.—"Up to the moment . . . when the Imperial troops quitted Britain, we see them able easily to repel the attacks of its barbarous assailants. When a renewal of their inroads left Britain weak and exhausted at the accession of the Emperor Honorius, the Roman general Stilicho renewed the triumphs which Theodosius had won. The Piet was driven back afresh, the Saxon boats chased by his galleys as far as the Orkneys, and the Saxon Shore probably strengthened with fresh fortresses. But the campaign of Stilicho was the last triumph of the Empire in its western waters. The struggle Rome had waged so long drew in fact to its end at the opening of the fifth century her resistance suddenly broke down; and the savage mass of barbarism with which she had battled broke in upon the Empire. . . . The strength of the Empire, broken everywhere by military revolts, was nowhere more broken than in Britain, where the two legions which remained quartered at Richborough and York set up more than once their chiefs as Emperors and followed them across the channel in a march upon Rome. The last of these pretenders, Constantine, crossed over to Gaul in 407 with the bulk of the soldiers quartered in Britain, and the province seems to have been left to its own defence; for it was no longer the legionaries, but 'the people of Britain' who, 'taking up arms,' repulsed a new onset of the barbarians. . . . They appealed to Honorius to accept their obedience, and replace the troops. But the legions of the Empire were needed to guard Rome itself: and in 410 a letter of the Emperor bade Britain provide for its own government and its own defence. Few statements are more false than those which picture the British provincials as cowards, or their struggle against the barbarian as a weak and unworthy one. Nowhere, in fact, through the whole circuit of the Roman world, was so long and so desperate a resistance offered to the assailants of the Empire. . . . For some thirty years after the withdrawal of the legions the free province maintained an equal struggle against her foes. Of these she probably counted the Saxons as still the least formidable. . . . It was with this view that Britain turned to what seemed the weakest of her assailants, and strove to find . . . troops whom she could use as mercenaries against the Pict."—J. R. Green, *Making of England*, introduction.

ALSO IN: J. M. Lappenberg, *History of England under the Anglo-Saxon kings*, v. 1, pp. 57-66.

411.—Survivals of Roman occupation.—Character of social organization.—Influence of the conquerors.—Roads.—"For trunk lines of communication the system of roads was complete, extending to the uttermost corners of Cornwall and Wales; the bridges appear to have served the Anglo-Saxons all their time. Latin, as a spoken language, must have lingered on for an indefinite period; but all culture and civilization speedily disappeared, as is proved by the low ebb to which the arts of making pottery and glass, and the art of making or rather imitating coins at once sank after the departure of the Romans. On the other hand the native Fauna and Flora must have

received some valuable additions. Among these we may notice the plane, chestnut, walnut, English elm, lime, and poplar, which are believed to date from Roman times as do the fallow deer and the rabbit; the cherry and the vine; the raddish and the pea. Abiding traces of the Roman occupation may also be found in the customs connected with the tœure and cultivation of the soil, a domain in which use and want exhibit a surprising vitality. Thus along with their bridges and their fortifications the Romans appear to have bequeathed to their successors the principle of making the maintenance of these works a primary burden on land. Lastly, the agricultural serf of later times, attached to the soil and irremovable from it, not a slave, nor yet a freeman, a man who had rights and who could acquire property, looks very like a survival of the Roman *colonus*."—J. H. Ramsay, *Foundations of England*, pp. 104-105.

"It seems probable that the prevailing type of social organization during the Roman period was the villa or great estate owned by a British proprietor and dotted over with the cottages of British serfs or slaves, whose labor was directed for his lord's benefit by a *villicus* or farm bailiff, sometimes himself a slave. . . . The same (doubt) may be said of the larger question, how far the influence exerted by our Roman conquerors during the four centuries of their stay lasted on after the departure of the legions. That Britain was not assimilated as Gaul was, is admitted by all, the mere fact that Welsh is not, like French, an offshoot from Latin, being in itself a sufficient proof of the difference between the two conquests; but why the Romanization of Britain was so much less thorough; how far it did after all extend and what influences modified or destroyed it; these are all questions still unsolved, to which, however, we may, perhaps, some day get an answer from a more thorough and scientific study of Celtic literature, and of Romano-British antiquities."—T. Hodgkin, *History of England: from the earliest times to the Norman conquest*, pp. 77-78.—"On one point we can speak with certainty. The Roman occupation of the island was complete. The remains of their houses, their camps, their worship, their domestic life, literally abound. Nor was this occupation simply military. It is sufficient, for proof of this, to point to the remains of such houses as are to be seen at Bignor, and Chedworth. . . . It is clear that wealthy Romans took up their abode in this island; and wealthy men do not live in a country that is not thoroughly settled. But how far their influence touched the native population remains, and probably must remain, unknown."—A. J. Church, *Story of early Britain*, pp. 90-91.

ALSO IN: G. L. Gomme, *Romano-British remains*.

"Of all the marks made by our imperial conquerors in this island, the most distinct and ineffaceable was that made by them as road-makers. Often indeed their works survive only as boundaries between parishes or counties. . . . The prime object of the officer charged with the work was essentially military, and for watching the movements of barbarian insurgents, or preventing the ravages of marauders, the crests of the hills successively surmounted by the marching legions were invaluable posts of observation. The chief high-ways of the Romans, . . . converging as most of them do, towards the 'town anciently named Londinium,' coincide in a remarkable manner with the main lines of our modern railroad communication. The Watling Street, running from the neighborhood of London to Etoctum (a little north of

Birmingham) and thence to Deva (Chester), corresponds with the London and North-Western Railway; while another road which generally bears the same name and which traverses Yorkshire and Northumberland is less accurately represented by the North-Eastern. . . . The imperfect character of the Roman conquest of the district which we now call Wales is evidenced by the feeble and fragmentary traces of Roman roads now to be found in the principality."—T. Hodgkin, *History of England: from the earliest times to the Norman conquest*, pp. 73-74.—See also ROMAN ROADS OF BRITAIN.

449-633.—Anglo-Saxon conquest. See BARBARIAN INVASIONS: 5th-6th centuries; and ENGLAND: 449-473, to 547-633.

6th century.—Unsubdued Britons.—"The Britons were soon restricted to the western parts of the island, where they maintained themselves in several small states, of which those lying to the east yielded more and more to Germanic influence; the others protected by their mountains, preserved for a considerable time a gradually decreasing independence. . . . In the south-west we meet with the powerful territory of Damnonia, the kingdom of Arthur, which bore also the name of West Wales. Damnonia, at a later period, was limited to Dyvnaint, or Devonshire, by the separation of Cernau, or Cornwall. The districts called by the Saxons those of the Sumorsætas, of the Thorn-sætas (Dorsetshire), and the Wilt-sætas were lost to the kings of Dyvnaint at an early period; though for centuries afterwards a large British population maintained itself in those parts among the Saxon settlers, as well as among the Defnsætas, long after the Saxon conquest of Dyvnaint, who for a considerable time preserved to the natives of that shire the appellation of the 'Welsh kind.' Cambria (Cymru), the country which at the present day we call Wales, was divided into several states." The chief of these early states was Venedotia (Gwynedd), the king of which was supreme over the other states. Among these latter were Dimetia (Dyved), or West Wales; Powys, which was east of Gwynedd and Snowdon mountain; Gwent (Monmouthshire) or southeast Wales, the country of the Silures. "The usages and laws of the Cambrians were in all these states essentially the same. An invaluable and venerable monument of them, although of an age in which the Welsh had long been subject to the Anglo-Saxons, and had adopted many of their institutions and customs, are the laws of the king Howel Dda, who reigned in the early part of the 10th century. . . . The partition of Cambria into several small states is not, as has often been supposed, the consequence of a division made by king Rodri Mawr, or Roderic the Great, among his sons. . . . Of Dyfed, during the first centuries after the coming of the Saxons, we know very little; but with regard to Gwynedd, which was in constant warfare with Northumbria and Mercia, our information is less scanty: of Gwent, also, as the bulwark of Dimetia, frequent mention occurs. On the whole we are less in want of a mass of information respecting the Welsh, than of accuracy and precision in that which we possess. . . . An obscurity still more dense than that over Wales involves the district lying to the north of that country, comprised under the name of Cumbria [see CUMBRIA]."—J. M. Lappenberg, *History of England under the Anglo-Saxon kings*, v. 1, pp. 119-122.

BRITANNI. See **BRITANNIA**: Origin of the name.

BRITANNIA, Origin of the name.—“Many are the speculations which have been started as to the etymology of the word Britannia, and among the later ones have been some of the most extraordinary. Yet surely it is not one of those philological difficulties which we need despair of solving. Few persons will question that the name Britannia is connected with the name Britanni, in the same way as Germania, Gallia, Graecia, &c., with Germani, Galli, Graeci, &c., and it is not unreasonable to assume that Britanni was originally nothing more than the Latinized form of the Welsh word Brython, a name which we find given in the Triads to one of the three tribes who first colonized Britain. . . . From the Welsh ‘brith’ and Irish ‘brit,’ parti-coloured, may have come Brython, which on this hypothesis would signify the painted men. . . . As far then as philology is concerned, there seems to be no objection to our assuming Brython, and therefore also Britanni, to signify the painted men. How this Celtic name first came to denote the inhabitants of these islands is a question, the proper answer to which lies deeper than is generally supposed. . . . The ‘Britannic Isles’ is the oldest name we find given to these islands in the classical writers. Under this title Polybius (3. 57) refers to them in connection with the tin-trade, and the well-known work on the Kosmos (c. 3) mentions ‘The Britannic Isles, Albion and Ierne.’ . . . But in truth neither the authorship nor the age of this last-named work has been satisfactorily settled, and therefore we cannot assert that the phrase ‘The Britannic Isles’ came into use before the second century B. C. The name Britannia first occurs in the works of Cæsar and was not improbably invented by him.”—E. Guest, *Origines Celticae*, v. 2, ch. 1.—The etymology contended for by Dr. Guest is scouted by Mr. Rhys, on principles of Celtic phonology. He, on the contrary, traces relations between the name Brython and “The Welsh vocables ‘brethyn,’ cloth and its coneners,” and concludes that it signified “a clothed or cloth-clad people.”—J. Rhys, *Celtic Britain*, ch. 6.

BRITISH COLUMBIA, the western province of the Dominion of Canada, lying directly north of the state of Washington and bordering on the Pacific ocean. Vancouver island and Queen Charlotte islands belong to the province. The area of British Columbia is placed at 390,000 square miles, with an estimated population of 523,369. During the last twenty years the country has developed rapidly through the discovery of precious metals in the Kootenay, Boundary and Atlin districts. See **CANADA**: Agriculture; **U. S. A.**: Economic Map.

Aboriginal inhabitants. See **ATHAPASCAN FAMILY**.

1577-1846.—**Early settlements**.—**Boundary established**.—“Drake’s freebooting voyage in 1577-1579 for the laudable object of looting the Spanish settlements may be said to be the beginning of the history of our hold on British Columbia. . . . In 1778 Captain Cook . . . established himself in Nootka Sound. . . . Although Captain Vancouver explored the coast, the explorations inland are due to Sir Alexander Mackenzie, who, starting from the settled districts of eastern Canada, made the first overland journey through that part of the Rocky mountains which lies in British territory. . . . In 1825 the Hudson’s Bay Company established their headquarters at Fort Vancouver on the Columbia River, which as a commercial center has been since entirely eclipsed by Portland (Oregon). . . . [A treaty was adopted in 1846 between the United States and Great Britain following a dispute concerning the boundary of British Columbia and the state of Washington.] The result of this compromise was that the forty-ninth parallel was adopted as the International boundary in the South.”—J. B. Thornhill, *British Columbia in the making*, pp. 1, 6, 8.—See also **OREGON**: 1818-1846.

1858-1871.—**Establishment of provincial government**.—**Union with the Dominion of Canada**.—“British Columbia, the largest of the Canadian provinces, cannot be said to have had any existence as a colony until 1858. Previous to that year provision had been made by a series of Acts for extending the Civil and Criminal Laws of the Courts of Lower and Upper Canada over territories not within any province, but otherwise the territory was used as a hunting ground of the Hudson’s Bay Company. The disputes and difficulties that arose from the influx of miners owing to the gold discoveries in 1856, resulted in the revocation of the licence of the Hudson’s Bay Company, and the passing of the Imperial Act 21 & 22 Vic., c. 99, to provide for the government of British Columbia. . . . Sir James Douglas was appointed Governor and by his commission he was authorised to make laws, institutions and ordinances for the peace, order and good government of British Columbia, by proclamation issued under the public seal of the colony. . . . The Governor continued to legislate by proclamation until 1864, when his proclamations gave way to Ordinances passed by the Governor with the advice and consent of the Legislative Council. . . . Up to this time the Governor of British Columbia was also Governor of the neighbouring island of Vancouver. Vancouver’s Island is historically an older colony than British Columbia. Though discovered in 1592 it

remained practically unknown to Europeans for two centuries, and it was not until 1849, when the island was granted to the Hudson's Bay Company, that a Governor was appointed. . . . In 1865 the legislature of the island adopted a series of resolutions in favour of union with British Columbia, and by the Imperial Act 29 & 30 Vic. (i), c. 67, the two colonies were united. . . . By an Order in Council dated the 16th day of May, 1871, British Columbia was declared to be a province of the Dominion from the 20th of July, 1871."—J. E. C. Munro, *Constitution of Canada*, ch. 2.—See also CANADA: 1805-1866; 1867; 1869-1873.

1872.—Settlement of the San Juan water boundary dispute. See SAN JUAN OR NORTH-WESTERN WATER BOUNDARY QUESTION.

1886-1888.—Extension of the Canadian Pacific Railway to Vancouver.—Founding of the city.—"The Canadian Pacific Railway Company entered into a bond for \$250,000 to complete the extension to Vancouver by December 31, 1886. . . . In spite of obstructions the first railway train in charge of Engineer Robert Mee reached Vancouver in May, 1887. . . . With the knowledge that the railway would be extended to Coal Harbour, the villages of Granville and Hastings, which had depended for their existence upon the lumber industry, especially the mills at Moodyville and Granville, and had for years drawn out a sort of 'Sleepy Hollow' existence broken only by the arrival of the lumber-carrying vessels, sprang suddenly into a new life. From the outset great faith was shown in the future of Vancouver—the City of Imperial Destiny. It was incorporated on April 6, 1886. . . . By June, 1886, the population numbered about two thousand. The site was heavily timbered; the work of hewing out a city, enormous. Amidst the jumble of charred logs and blackened stumps the city gradually took shape, elbowing its way steadily and surely into the primeval forest. On Sunday, June 13, 1886, a heavy wind sprang up, which, increasing in velocity, fanned the fires that had been lighted to clear portions of the site. . . . In a few minutes the whole city was ablaze. . . . In less than two hours nothing but ashes covered the terminal city. . . . Nothing daunted, the people, before the ashes were cold, set themselves to the task of erecting a new, a finer, and grander city. . . . Within two years the population numbered eight thousand; eighteen miles of graded streets and twenty-four miles of excellent sidewalk had been laid; sewerage had been installed; wharves, docks, warehouses, foundries, factories, and public institutions had been established; and an excellent waterworks system completed. In 1888 a charter was obtained for a street car service; this was the root from which the British Columbia Electric Railway grew. And in the advancement of the city of Vancouver and the surrounding district no factor has been more potent than the unexcelled service of this company—a service which has kept pace most remarkably with the wonderful development of the district.—F. W. Howay, *British Columbia*, v. 2, pp. 434-436.

BRITISH-DUTCH WAR. See SOUTH AFRICA, UNION OF: 1900 to 1902

BRITISH EAST AFRICA.—British East Africa is composed of a large area on the mainland including the Kenya Colony (q. v.) (the former East African protectorate), the Uganda protectorate, the islands of Zanzibar and Pemba, and what was, until the treaty of Versailles in 1919, German East Africa, now known as the Tanganyika territory. This last named territory is, properly speaking, not an integral part of British East Africa but is administered by Great Britain under a mandate. For the Uganda protectorate, etc., the Zanzibar protectorate, Kenya Colony and the Tanganyika territory refer to their respective names.—See also AFRICA: Modern European occupation: 1884-1899; 1914: Distribution of European sovereignty; and Map; BRITISH EMPIRE: Extent.

1895.—Territory transferred to the British government. See AFRICA: Later 19th century: 1884-1889; and BRITISH EMPIRE: Expansion: 19th century: Africa: East Africa: 1895.

1895-1897.—Its creation and extent.—Existence of slavery.—War in the province of Seyyidieh.—Report of the commissioner.—"The British East Africa Protectorate is bounded on the east by the Indian Ocean, on the west by the Uganda Protectorate, and on the south-west by the Anglo-German frontier, which, starting from the mouth of the River Umba, runs in a generally north-west direction till it strikes the eastern shore of Lake Victoria Nyanza at the point at which it is intersected by the 1st parallel of south latitude. To the north and north-east it is bounded by the Italian sphere of influence from which it is

divided by the River Juba up to parallel 6° of north latitude, and thence by a line running along that parallel until it reaches the Blue Nile. The frontier between the East Africa and Uganda Protectorates is only partially defined: starting from the German frontier, it follows the Guaso Masai River as far as Sosian, thence strikes north-east to the Kedong River, which it follows to its source, and thence runs in a northerly direction along the Likipia escarpment or eastern lip of the great 'meridional rift.' It is, however, still undecided whether or not it should be deflected, for greater convenience in dealing with the Uganda Masai, so as to leave to Uganda the region between the southern portion of the Likipia escarpment and the so-called Aberdare range. In view of the uncertainty existing as to the inland boundaries, it is impossible to give the exact area of the territory, though it may be estimated roughly at 280,000 square miles. It will be sufficient here to state that its coast-line, including in the term the Islands of Lamu, Manda, and Patta, which are separated from the mainland by narrow channels, is 405 miles long, whilst its greatest breadth, measured from the centre of the district of Gosha on the Juba to the Likipia escarpment, is 460 miles.

"The Protectorate in its present form was constituted on the 1st July, 1895. Previous to that date a Protectorate had been declared on the 4th November, 1890, over those portions of the territory which formed part of the Zanzibar Sultanate, and on the 19th November of the same year over Witu and the whole of the coast between the Tana and Juba Rivers. The administration of this second Protectorate was confided in 1893, with the exception of those portions of the coast between the Tana and Juba which belonged to the Zanzibar Sultanate and were rented by the Imperial British East Africa Company from him, to the Sultan of Zanzibar, but without being fused in or united to the Sultanate. In September, 1894, a Protectorate was established under an independent Commissioner over Uganda, and was subsequently defined as extending over the whole of the intervening territory from which the Imperial British East Africa Company had withdrawn its effective control, that is, as far as the western limits of its district of Kikuyu, which still constitutes the frontier between the East Africa and Uganda Protectorates. The remainder of the British sphere between the Zanzibar and Uganda boundaries and the Tana River and German frontier was placed under Her Majesty's protection on the 1st July, 1895, and the whole of the above-described territories to the east of the Uganda Protectorate were at the same time fused into one administrative whole under the title of the 'East Africa Protectorate.'

"British East Africa includes three district sovereignties, i. e.: 1. The mainland territories of the Sultan of Zanzibar. 2. The Sultanate of Witu. 3. The remainder of the Protectorate consisting of the old 'chartered territory' of the Imperial British East Africa Company and of the region between the Tana and the Juba not included either in Zanzibar or Witu. This division, which I propose for the sake of convenience to style British East Africa proper, is not, of course, technically under Her Majesty's sovereignty, and is divided among a number of tribes and races under our Protectorate, but it differs from Zanzibar and Witu in that the status of the Chiefs exercising authority there is not recognized by international law or at least by any international engagement.

"The mainland dominions of the Sultan of Zanzibar included in the Protectorate (for he pos-

sesses certain coast ports to the north of it now leased to Italy) consist—(1.) Of a strip of coast 10 miles deep from high-water mark, extending from the mouth of the River Umha on the south to Kipini on the Ozi on the north; and (2.) Of a series of islands off the coast between the Ozi and the Juba and of the mainland town of Kisimayu with a radius of 10 miles around it. . . . The State of Witu extends along the coast from Kipini to Kwyhoo, its northern boundary being a straight line drawn in 1887 by Commissioners representing the German and Zanzibar Governments due west from Kwyhoo to a point a few miles east of the Ozi River. It was founded, or rather gradually grew up, in the years from 1860 to 1885, round a colony of outlaws. . . . When the German Government first interested itself, about a decade ago, in East African affairs, it recognized the little colony of outlaws and refugees from the coast towns which had grown up in Witu, as an independent State. . . . Accordingly, on transferring this Protectorate by the Treaty of 1890 to Great Britain, it stipulated by Article II of that Agreement, that the sovereignty of the Sultan of Witu over the territory formally defined as his in 1887 should be recognized by the new Protecting Power. . . .

"Beyond the Zanzibar and Witu limits, the territories comprised in the Protectorate are ruled directly under Her Majesty by the British officers in charge of them. All the various tribes, Mahomedan and heathen, retain, however, their respective native Rulers and institutions. . . . For a period of ten months from the transfer from the Imperial British East Africa Company to Her Majesty's Government, the country now forming the Province of Seyyidieh, was the theatre of disturbances, which for a time retarded the development of the territory, and diverted the attention of the Administration from useful schemes of improvement that might otherwise have been immediately set on foot. These disturbances began under the Administration of the Imperial British East Africa Company, their immediate cause being a dispute over the succession to the Chieftainship of Takaungu between Rashid-bin-Salim, the son, and Mubarak-bin-Rashid, the nephew of the former Chief. . . . The Company supported Rashid, who, though younger in years than Mubarak, was friendly to the English. . . . Though the rebellion of the Mazrui Chiefs retarded to some extent the development of the province, and entailed in its suppression considerable expense, its occurrence, under the special circumstances which attended it, has not been an unmixed evil. We have broken once for all the power of several influential Arab potentates, who were never thoroughly subjugated either by the Sultans or the Company, and whose ambitions and semi-independent position would sooner or later have involved us in trouble with them had we attempted to make the authority of our Administration effective, and to interfere with the slavery, and even Slave Trade, which flourished under their protection."—Sir A. Hardinge, *Report (Great Britain, Parliamentary Publications: Papers by Command, Africa, No. 7, 1897, pp. 1-3, and 65.)*

1900-1901.—Rising of Ogaden Somalis.—In the later part of November, 1900, news reached Zanzibar of a rising of the Somali tribe called Ogadens in the Jubaland province of the British East Africa protectorate, and that the British sub-commissioner, Mr. Jenner, had probably been killed. The Somalis are a very warlike race, supposed to be Gallas by descent, with an admixture of Arab blood. In the following February it was

announced that Aff-Madu, the headquarters of the Ogaden Somalis, had been occupied without opposition by the British punitive expedition sent to exact reparation for the murder of Mr. Jenner, and that the Ogaden sultan was a prisoner. See also **MOMBASA**; **SOMALILAND**.

1914-1918.—Part played in World War. See **WORLD WAR**: 1914: VI. Africa: c; 1917: VII. East African campaign: a.

1920.—Reorganization of territories.—Partition of former German colony.—In July the "protectorate" became a Crown Colony and received the name of Kenya Colony. The former German possessions in East Africa were partitioned between Great Britain and Belgium in accordance with the provisions of the Treaty of Versailles. The greater portion was placed under the British mandate, while the northeastern section, embracing the province of Urundi and nearly the whole of the province of Ruanda, was handed over to Belgian administration under the League of Nations. The frontier between the two mandatory spheres runs from the eastern shore of Lake Tanganyika at Megera for about 150 miles north-eastwards, and thence almost due north to the point where the Muvumba River pierced the former border between German East Africa and Uganda. The Belgian sphere runs contiguous to the Belgian Congo. The British mandatory sphere was kept separate from the Kenya Colony and given the name of Tanganyika Territory, as being distinct from a British possession.

1920.—British control of German territory by treaty of Versailles. See **BRITISH EMPIRE**: Treaties promoting expansion: 1920.

BRITISH EAST AFRICA COMPANY, a concern founded in 1888 and granted a royal charter to exploit certain concessions obtained from the sultan of Zanzibar by William Mackinnon, an English merchant and shipping magnate. The company, which was started with a capital of £240,000, soon fell into trouble with the German East Africa Company, which also had acquired concessions from the sultan of Zanzibar. Diplomatic negotiations between Bismarck and Lord Salisbury had led to the expectation that German operations would be confined to the south of Victoria Nyanza. Rivalry between the two companies brought about the intervention of their respective governments and, finally, in 1895, the British East Africa Company surrendered its territorial rights and properties to the British government for the sum of £250,000.—See also **AFRICA**: Modern European occupation: Later 19th century; **BRITISH EMPIRE**: Expansion: 19th century: Africa: East Africa: 1893.

BRITISH EAST AFRICA PROTECTORATE. (See **AFRICA**: Modern European occupation: Later 19th century.) This title ceased to exist in 1920, when it was changed to Kenya colony.

BRITISH EAST INDIA COMPANY. See **EAST INDIA COMPANY**, **BRITISH**; and **INDIA**: 1600-1702.

BRITISH EMPIRE

EXTENT

"Britain had beyond dispute the greatest colonial empire in the world. With the aggregate of her domain there was nothing to compare except the possessions of the United States, the vaster but less valuable territory of Russia, and the immense expanses of China. The empire had been built up easily because England's geographical position gave her advantages over the greatest of her [rivals] and her control of the sea enabled her to add to it in peace and as a result of every great war in which she fought. The area of the British Isles was only 120,000 square miles, that of England less than half as much, and the population of the United Kingdom only about forty-five million souls. But England, which at the beginning of the sixteenth century was one of the less important countries in Europe, was now the greatest, and the empire of which she was the center embraced a fourth of the land surface of the earth. From this vast area came a large part of the world's tin, half of its gold, a third of its coal, a third of its wool, a fifth of its wheat, and other products without number. Its weakness was that it was widely scattered, with the seas of the world separating its principal ports, and great land powers growing ever more powerful near them. It was held together by the thing which had built it up, the most powerful navy in the world. The British Empire was, in some respects, a strange and conglomerate affair. Not only were its parts widely separated and distant, but it embraced peoples of every race and religion in all stages of culture and political progress. Its elements were far more diverse than those which composed Russia or Austria Hungary. Outside of the British Isles there were in this empire some twelve

million of English people, and about three million more of the white race. These people were mostly in Canada, Australia, New Zealand and South Africa. Of the remaining 365,000,000 all but 50,000,000 were in the vast aggregation of races in the Indian domain while in Africa there were 40 million negroes, and in the other lands some millions of Malays, Chinese and others. Most of the Mohammedans of the world were under British rule, as were Brahmans, Buddhists and many others. In holding together these peoples the British showed themselves the ablest colonial administrators the world had ever seen."—E. R. Turner, *Europe since 1870*, pp. 379-380.

The vast agglomeration of self-governing states, dominions, protectorates and colonies which make up what is commonly called the British Empire, and for which the title of "British Commonwealth" has been suggested, forms the largest political entity the world has ever seen. Statistics of its territorial extent and population are difficult to collect and most authorities differ on the subject. As a result of the war immense additions have been made to the territories under British rule. A general census was taken in 1921, of which the figures will not be available for some time. A rough provisional estimate places about 13,000,000 square miles and over 450,000,000 human beings under the aegis of Great Britain. (This includes the mandates.) About 65,000,000 of the population are self-governing citizens, the remainder being subjects. Figures based on the Statesman's Year-Book, 1921, estimate the area, exclusive of mandates, at 12,780,380 square miles and the population at 442,263,996, about "one-fourth of the world's inhabitants" and "more than one-fifth of the total land surface."

The former German colonies assigned to Great

¹ Including area of Protectorate.

² Including South Georgia, 1,000 square miles and population 1,000.

Britain are: Tanganyika Territory (late German East Africa, of which a portion was placed under Belgian control); estimated area: 384,180 square miles; population (1913), 7,659,898. Protectorate of South-West Africa (late German South-West Africa), administered under a mandate by the Union of South Africa: area, 322,200 square miles; population, about 170,000. Togoland (West Africa): area, 33,700 square miles; population, about 1,032,000. Cameroon Protectorate (West Africa): British area, 33,000 square miles; population, 2,540,000 (See also AFRICA: Map). New Guinea, in the Western Pacific, includes (1) Kaiser Wilhelm's Land, 70,000 square miles; population, about 160,000; (2) Bismarck Archipelago, now called New Britain: area, 10,000 square miles; (3) New Mecklenburg (now New Ireland): area, 4,600

square miles; and (4) several smaller groups of islands, area, about 1,150 square miles, with a total population (for the Archipelago) estimated at 188,000. In addition to these territories, it may be said "that the whole of Mesopotamia has been brought under British control, and prosperity is coming to the country after long years of neglect."—*Hazell Annual*, 1920, p. 457.—The area involved is approximately 143,250 square miles, and a population of about 2,000,000, mostly Arabs.—*Ibid.*

When these figures are added to those given in the foregoing table of statistics, the result shows that British dominion extends over 13,797,340 square miles of territory and no fewer than 453,159,898 human beings. "We seem, as it were, to have conquered and peopled half the world in a

fit of absence of mind," wrote Prof. Sir John Seeley nearly forty years ago: "While we were doing it, that is in the eighteenth century, we did not allow it to affect our imaginations or in any degree to change our ways of thinking; nor have we even now ceased to think of ourselves as simply a race inhabiting an island off the northern coast of the Continent of Europe. We constantly betray by our modes of speech that we do not reckon our colonies as really belonging to us; thus if we are asked what the English population is, it does not occur to us to reckon—in the population of Canada and Australia. This fixed way of thinking has influenced our historians. . . . They do not perceive that in that century [the eighteenth] the history of England is not in England but in America and Asia."—J. R. Seeley, *Expansion of England*, 1891, pp. 8-9.

"When Elizabeth came to the throne [1558] the conquests in France had long been lost. In Ireland she ruled, at her accession, over an English colony, surrounded by a wild ring of half-subdued clans. Scotland was an independent kingdom; the trans-Oceanic Empire had not begun to be. In the course of the next three and a half centuries, a space no longer than the lives of old cottages like that where Shakespeare was born, or of oaks still growing in Windsor Forest, Scotland and Ireland have been made integral parts of the English realm; India has been conquered and brought under a great officialdom; self-governing Colonies united to the Crown have arisen in America, Australasia, and Africa; the seas are dotted with islands and military posts belonging to the British Empire, and, last of all, the imperial conception has arisen like a spirit seeking embodiment. This period corresponds to the three centuries in Roman history before the birth of Christ."—B. Holland, *Imperium et libertas*, p. 267.

"In the last years of Queen Elizabeth, England had absolutely no possessions outside Europe, for all schemes of settlement, from that of Hore in Henry VIII's reign to those of Gilbert and Raleigh, had failed alike. Great Britain did not yet exist.

. . . With the accession of the Stuart family commenced at the same time two processes, one of which was brought to completion under the last Stuart, Queen Anne, while the other has continued without interruption ever since. Of these the first is the internal union of the three kingdoms, which, though technically it was not completed till much later, may be said to be substantially the work of the seventeenth century and the Stuart dynasty. The second was the creation of a still larger Britain comprehending vast possessions beyond the sea. This process began with the first Charter given to Virginia in 1606. It made a great advance in the seventeenth century; but not till the eighteenth did Greater Britain in its gigantic dimensions and with its vast politics first stand clearly before the world."—J. R. Seeley, *Expansion of England*, pp. 9-10.

EXPANSION AND FOREIGN RELATIONS

Beginnings of expansion.—"The two factors, race and geography, are fundamental in explaining the expansion of England. . . . In spite of the latent capabilities of maritime adventure which lay deep in Anglo-Saxon nature, geography dictated that these powers must lie dormant until the more modern world should open up a new field of opportunity. As late as the fifteenth century the English were narrowly circumscribed on the frontier of Europe while the cities of the Hanseatic

League and the northern shores of the Mediterranean were more advantageously placed nearer the centers of the world's commerce. The trading activities growing out of the Crusades had deeply stirred many localities on the Continent but it only barely touched the remote British Isles. It was not till the middle of the seventeenth century that the amphibious Blake, once a general, later an admiral, led an English fleet into the Mediterranean. When in the sixteenth century the changed commercial interests of Europe shifted the business center of gravity from the Mediterranean to the Atlantic coast, it was Cadiz and Lisbon, not the English seaports, that took the places of Venice, Genoa and Barcelona. It is not to be assumed, of course, that all maritime life must wait upon and be regarded as identical with colonization and empire. Even in the sixteenth century, life in the British Isles was more maritime, more closely connected with the sea than was that of Spain. The waters which wash the British shores abounded in fish, and the English as well as the Dutch were rearing a hardy population of fishermen and sailors engaged in the local coasting trade, while English ships plied actively on the narrow waters between England and France and the Low Countries. All this was natural enough, but what seems strange to us was the postponement of England's participation in the epic of discovery and exploration. But the early preëminence of the Italians, Portuguese, and Spaniards must not drive us to the other extreme of being too apologetic of the English. In spite of Professor Seeley's modest claims for his countrymen the English were not long behind-hand in the race for dominion over-seas. And if they were belated, they were in good company. The French and the Dutch were likewise late in feeling the new impulse, while the great merchant seamen in the Hansa sphere of influence were hopelessly sluggish in realizing the new opportunities. Moreover, we can now see how the English were becoming fairly launched upon their Atlantic period of history even in the Tudor period although they could make no pretension of taking the lead in the unrivalled explorations of the fifteenth and sixteenth centuries. It was a ship from Bristol which anticipated Columbus in actually reaching the American continent and before the sixteenth century was over the Elizabethan sailors were playing a conspicuous part in opening up the new world. Nor was the defeat of the Armada a mere flash in the pan, an accidental victory, due to the genius of an individual commander. It was primarily a victory of seamanship, of men bred to the life of the sea, of professionals over amateurs. That England did not immediately thereafter become a great naval power in a technical military sense was due to a new tendency in national policy rather than to any incapacity. Conditions of insular life had been at work long enough to endow the English with all the potentialities of maritime supremacy and time only was needed for them to exhibit them on a magnificent scale. . . . It is a well-known fact that one-fifth of the land surface of the globe and something like one-fourth of the earth's population are in the British Empire. Its various shores are washed by the Seven Seas and it enjoys or endures every variety of climate and every degree of fertility and aridity from the polar regions to the tropics. The component parts of the empire are nearly equally divided between the northern and the southern hemispheres and among the various continents so that there is a complete diversification of industry. The settlements of the English-speaking people not only completely encircle the globe but they have taken possession

of the choicest land from the point of view of productivity as well as suitability for the homes of white men. It is a mere truism to say that the British Empire is based upon the sea-power of England and that its highways of communication are the sea. That this Empire has an economic foundation and is knit together by a multiplicity of commercial interests rather than held down by brute force goes without saying. Our question is, then, what geographical factors have entered into the production of this imperial fabric? This question cannot be answered by reference solely to the maritime instincts of the English people, together with their insular position and accessibility to the sea. In a general sense all Europe with its peninsular lands, and its large and intelligent population is peculiarly fitted to expand its commerce, civilization, and political rule over the rest of the earth. This is just what has been happening during the last four centuries and the English have only been in the lead and forefront of this movement. Someone has said that ancient Hellas was 'the most European of European lands.' If this is literally true the British Isles stand next to ancient Greece in the possession of especially European attributes with the further important advantage of possessing extraordinary natural resources. It may be said then that England is Europe only more so, and differs from its continental neighbors only in possessing the European character in a higher degree. If the geographical advantages possessed by the English people in combination with their own good fortune and the ill luck of some of their principal rivals have somehow given them a unique position in the world to-day, this can only be understood in the light of the actual facts of the evolution of the empire. The first step in the territorial evolution of the British Empire was the unification of all the British Isles under one political sovereignty. This in itself was a long, slow process and could not be undertaken until the period of foreign invasions was over. We cannot think of the present imperial domain as based upon England alone. English invasion into extra-European lands could only be safely begun after the solution of the Welsh, Scotch, and Irish question. At the same time it is more than likely that the preservation of distinctive qualities among these junior members of the British family has contributed to the richness as well as variety of the resultant civilization."—D. E. Smith, *Geographic factor in English history (English leadership, pp. 195-205)*.

1667.—Acquisition from Dutch of Cape Coast Castle.

1672.—"But the original Africa Company was not successful; and another took its place in 1672, with a capital of £111,000, and possessed of the sole

rights of trade over the whole of Guinea. The forts were increased and strengthened; and while gold, diamonds, and ivory were exported to England, slaves were sent to the American plantations. In 1698, however, the trade was thrown open to all, on condition of a payment of the Company of an *ad valorem* duty of ten per cent., for the maintenance of the forts in proper condition. But when in 1712 the duty expired and was not renewed by Parliament, the Company soon found itself in difficulties, and in 1720 petitioned that the forts might be maintained 'as marks of the possessions of Great Britain.' The petition was allowed, and for many years an annual vote of £10,000 was granted for the upkeep of the Guinea forts. In 1752 the Company was reconstructed, and continued without change till it was finally abolished in 1821."—A. W. Tilby, *Britain in the tropics, v. 4, p. 85*.

INDIA.—1600.—East India Company chartered.—"It was created for trade, and it remained devoted to trade for a hundred and forty-eight years. . . . It was in 1748 that the disturbances occurred in the Deccan which forced the Company to undertake on a considerable scale the functions of government and war. Then began its second and memorable period, which is nearly as long as the first; it embraces a hundred and ten years and ends with the abolition of the Company by Act of Parliament in 1858."—J. Seeley, *Expansion of England, p. 266*.—See EAST INDIA COMPANY, BRITISH; INDIA: 1600-1702; 1660-1702; 1770-1773; 1823-1833; 1857.

1640.—Acquisition and settlement of Madras. See INDIA: 1600-1702.

1661.—Acquisition of Bombay. See INDIA: 1600-1702.

1688.—Settlement of Burma. See BURMA: Early history.

1608.—Calcutta founded. See INDIA: 1600-1702.

NORTH AMERICA.—1606-1620.—Extent of King James's grants to the London and Plymouth companies in America. See AMERICA: Map of King James's grants.

1607.—"The London Company, or Virginia Company proper, sent out ships with emigrants, who left England on January 1, 1607. Sailing into Chesapeake Bay, in May they found a suitable site for a settlement on a peninsula on the banks of a river, the James River, and gave it the name of Jamestown. This was the first beginning of the State of Virginia and the United States of America."—C. P. Lucas, *British empire, p. 48*.—See VIRGINIA: 1606-1607, and after.

1607-1610.—John Smith and the Jamestown colony. See VIRGINIA: 1607-1610.

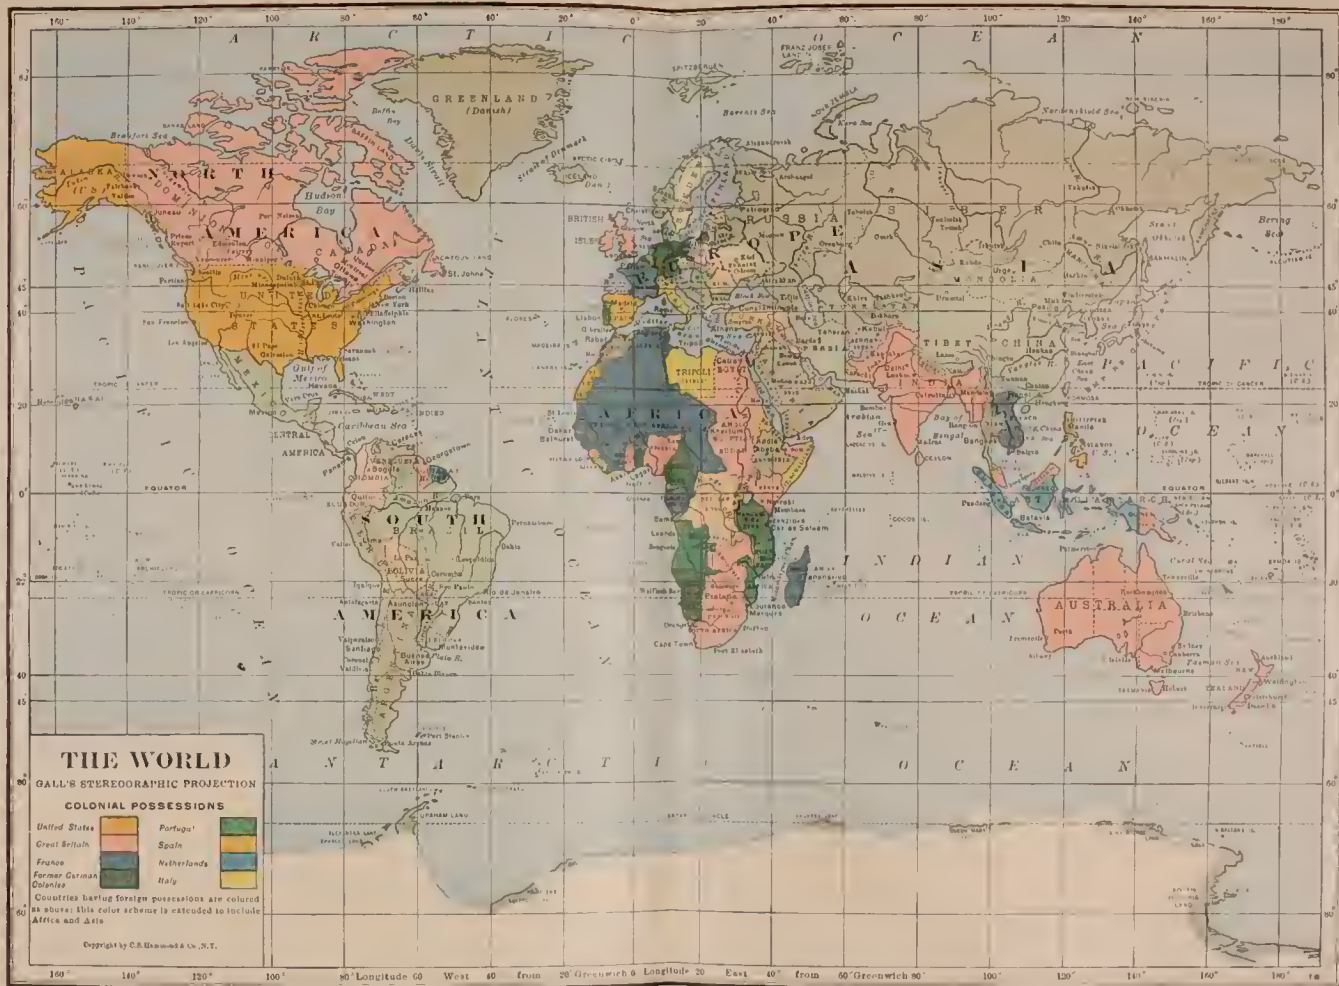

1600-1611.—Route of Hudson's voyages of discovery. See AMERICA: Map showing voyages of discovery.

1620.—Monopoly granted to the Council for New England. See NEW ENGLAND: 1620-1623.

1620.—"After various vicissitudes, in September, 1620, one hundred emigrants left Plymouth in a little ship of 180 tons burden. These were the Pilgrim Fathers, and the ship was the *Mayflower*. They reached Cape Cod, and in the middle of December, on the shores of Cape Cod Bay, they founded the settlement of Plymouth or New Plymouth."—C. P. Lucas, *British empire, p. 50*.—See MASSACHUSETTS: 1620.

1620-1776.—Constitutional relations of the colonies to the English crown and parliament. See U. S. A.: 1620-1776.

1621-1623.—Acadia acquired. This includes Nova Scotia and New Brunswick. See NOVA SCOTIA: 1621-1668; NEW ENGLAND: 1621-1631.

Maps prepared specially for the **NEW LARNED**
under direction of the editors and publishers.

1623-1638.—Grants in Newfoundland to Lord Baltimore and Sir David Kirke. See NEWFOUNDLAND: 1610-1655.

1628-1632.—Conquest and brief occupation of Canada and Nova Scotia. See CANADA: 1628-1635.

1629.—Royal charter to the governor and company of Massachusetts Bay. See MASSACHUSETTS: 1623-1620.

1629.—Carolina grant to Sir Robert Heath. See AMERICA: 1629.

1630.—Emigration of the governor and company of Massachusetts Bay with their royal charter. See MASSACHUSETTS: 1620-1630.

1632.—Cession of Acadia to France. See NOVA SCOTIA: 1621-1668.

1632.—Founding of Maryland by Lord Baltimore. See MARYLAND: 1632; 1633-1637.

1634-1637.—Hostile measures against the Massachusetts company. See MASSACHUSETTS: 1634-1637.

1637.—Pequot war in New England. See NEW ENGLAND: 1637.

1640-1651.—Rule of Cromwell in New England. See MASSACHUSETTS: 1640-1651.

1651-1672.—Navigation acts and the American colonies. Spirit and object of English restrictive commercial system. See U. S. A.: 1651-1672; NAVIGATION LAWS.

1654-1656.—Re-conquest of Acadia. See NOVA SCOTIA: 1621-1668.

1663.—Grant of Carolinas to Monk, Clarendon, Shaftesbury, and others. See NORTH CAROLINA: 1663-1670.

1663.—King's charter to Rhode Island. See RHODE ISLAND: 1660-1663.

1664.—Conquest of New Netherland. See NEW YORK: 1664.

1664-1665.—First refractory symptoms in Massachusetts. See MASSACHUSETTS: 1660-1665.

1665.—Grant of New Jersey to Carteret and Berkeley. See NEW JERSEY: 1664-1667.

1668.—Cession of Acadia to France. See NOVA SCOTIA: 1621-1668.

1670.—"Governor and Company of Adventurers of England trading into Hudson's Bay" brought into being in the reign of Charles II.

1673.—War with the Netherlands. Loss of New York. Recovered from the Dutch the following year by the treaty of Westminster. See NEW YORK: 1673.

1675-1688.—Concessions to France in Newfoundland. See NEWFOUNDLAND: 1660-1688.

1679.—New Hampshire chartered, founded previously by John Mason but the towns were absorbed by Massachusetts. See NEW HAMPSHIRE: 1641-1679.

1681.—Colony of Pennsylvania founded by the Quaker, William Penn. See PENNSYLVANIA: 1681.

1686.—Consolidation of New England under a royal governor-general. See NEW ENGLAND: 1686.

1689-1691.—Effect of English revolution on American colonies. See NEW YORK: 1689-1691.

1689-1697.—King William's war. See CANADA: 1689-1690; 1692-1697; NEWFOUNDLAND: 1694-1697; U. S. A.: 1690.

1692.—New charter to Massachusetts as a royal province. See MASSACHUSETTS: 1689-1692.

1696-1697.—Board of trade for the supervision of colonies. See U. S. A.: 1696-1697.

PANAMA.—1698.—Projects for building the Panama canal. See PANAMA CANAL: Projects for building canal previous to 1800.

WEST INDIES.—1623-1666.—Settlements made in St. Kitts (1623), Barbados (1624), Nevis (1628), Antigua and Montserrat (1632), Anguilla (1650), Virgin islands by driving out the Dutch buc-

caners (1666). See WEST INDIES: BARBADOS: 1605-1685; MONTSERRAT; VIRGIN ISLANDS: Discovery and settlement.

1647.—"From Bermuda came a band of settlers into the Bahamas about the year 1647 under 'The Company of Adventurers for the Plantation of the Islands of Eleutheria, formerly called Buhama in America, and the adjacent islands,' and in 1670 these Bahama islands were granted by Charles II. to Lords Proprietors in England."—C. P. Lucas, *British Empire*, p. 57.—See also BAHAMA ISLANDS: 1492-1783.

1655.—"Jamaica was taken from Spain in 1655 by a somewhat blundering expedition sent out by Cromwell and designed to conquer Hispaniola. But it was a notable addition to the Empire, notable not only in respect of the actual value of the island, but also for the fact that the acquisition was made by the direct action of the state when for the moment a determined man was in control, and that the island was a Spanish island in the centre of what had been Spanish seas."—*Ibid.*, p. 57.—See also JAMAICA: 1655; 1655-1706.

18th century.—AFRICA.—*West Africa*.—1787.—The acquisition of the West African peninsula of Sierra Leone, which was ceded to England by its native owners, and shortly afterwards handed over to a company formed for the purpose of suppressing the slave trade, had no connexion with imperial policy, and was simply an outward and visible sign of the growing antagonism in England to the iniquities of the slave system. See SIERRA LEONE: 1787.

1791.—Sierra Leone Company incorporated. ASIA (not including India).—1762.—English settlement in northern Borneo.

1786.—First firm footing, with the purchase of Penang by East India Company. Name changed to Prince of Wales Island. See STRAITS SETTLEMENTS: Conquest and settlement.

1795-1816.—Temporary rule in Java. See JAVA: 1795-1816.

1795-1818.—Malacca taken from Dutch and restored. See STRAITS SETTLEMENTS: Conquest and settlement.

AUSTRALIA.—1773.—"Australian history really begins with the voyage of Captain Cook. In 1768 George III lent to the Royal Society the *Endeavour* to enable a party of its members to observe the transit of Venus at Tahiti. After the observations had been taken Captain Cook sailed, in accordance with his orders, to New Zealand and thence to New Holland. He landed at Botany Bay, explored the coast to the north, and took possession of the country in the name of his sovereign."—E. Hughes, *Britain and Greater Britain in the nineteenth century*, p. 225.—See also AUSTRALIA: 1601-1800; NEW ZEALAND: 1642-1814.

1788.—"The first batch of convicts was sent out in 1787 and reached Botany Bay on January 18th, 1788."—*Ibid.*—See AUSTRALIA: 1787-1840.

CENTRAL AMERICA.—*British Honduras*.—1798.—English acquire territory by defeating Spanish ships which attempt to dislodge them. See HONDURAS, BRITISH: 1798-1850.

INDIA.—1702.—Union of rival East India Companies. See INDIA: 1600-1702.

1743-1752.—Struggle against France for supremacy in India. Founding of British Empire by Clive. See INDIA: 1743-1752.

1756-1757.—Wars in India. Black Hole of Calcutta. See INDIA: 1755-1757.

1757.—Clive recovered Calcutta and won battle of Plassey, securing Bengal. See INDIA: 1757.

1757-1772.—Beginning of rule in India. See INDIA: 1757-1772.

1758-1761.—Breaking of French power. See INDIA: 1758-1761.

1760.—Signal defeat of French at Wandewash. See INDIA: 1758-1761.

1767-1769.—First war with Hyder Ali, of Mysore. See INDIA: 1767-1769.

1773.—Reconstitution of government of British India. See INDIA: 1770-1773.

1780-1783.—Second war against Hyder Ali, or Second Mysore war. See INDIA: 1780-1783.

1784.—Board of control: placed over East India Company.

1789-1792.—War with Tippoo Saib, Third Mysore war. See INDIA: 1785-1793.

1795-1796.—Ceylon ceded by Holland, and made a separate colony in 1801.

1798-1805.—British power extended under Lord Wellesley. See INDIA: 1798-1805.

MEDITERRANEAN SEA.—1708.—Acquisition of Minorca. See MINORCA: 1708.

1757-1760.—Execution of Admiral Byng. See MINORCA: 1756.

1798.—Capture of Malta. See HOSPITALLERS OF ST. JOHN OF JERUSALEM: 1565-1878.

NORTH AMERICA.—1700-1763.—Trade with Indians in America. See LOUISIANA: 1690-1763.

1702-1711.—Queen Anne's War. See NEW ENGLAND: 1702-1710; CANADA: 1711-1713.

1713.—End of the war. Peace of Utrecht. Acquisitions from France and Spain. See UTRECHT: 1712-1714; CANADA: 1711-1713; 1713; NEWFOUNDLAND: 1713.

1719-1750.—Struggle with France for control of Indian trade in America. See LOUISIANA: 1719-1750.

1720-1734.—Conflicts between governors and colonists. See NEW YORK: 1720-1734.

1720-1744.—English relations with Spain in America. See AMERICA: 1720-1744.

1725.—Final conquest of Nova Scotia. See NOVA SCOTIA: 1713-1730.

1732.—Grant of Georgia to General Oglethorpe. See GEORGIA: 1732-1739.

1738-1743.—Attack on Spanish in Florida. See GEORGIA: 1738-1743.

1744-1748.—King George's War. Results of the war. See NEW ENGLAND: 1744; 1745; 1745-1748.

1748-1754.—Movements to dispute possession of Ohio valley with French. See OHIO: 1748-1754.

1749-1755.—Unsettled boundary disputes with France in America. Preludes of the final contest. See NOVA SCOTIA: 1749-1755; CANADA: 1750-1753; OHIO: 1754; U. S. A.: 1754; also ENGLAND: 1754-1755.

1749-1859.—Vast commercial and political powers granted to Hudson's Bay and Northwest companies. See OREGON: 1749-1859.

1754-1755.—Collision with French in America. See OHIO: 1754; 1755; CANADA: 1755 (June); (September).

1756-1763.—French and Indian War. Conquest of Canada. See CANADA: 1756-1757; 1758 to 1759; CAPE BRETON ISLAND: 1758-1760; SEVEN YEARS' WAR: Treaties which ended the war.

1763-1774.—Events leading up to the American revolution. See U. S. A.: 1763-1764 to 1774-1775; also BOSTON: 1768; 1770; 1773; 1774.

1775-1783.—American revolution. Campaigns. Declaration of Independence. French alliance. Treaty of peace. See U. S. A.: 1775 (April) to 1783 (September); also CANADA: 1775-1776; MAINE: 1779-1814; NEW HAMPSHIRE: 1775-1776; NEW YORK: 1775; NORTH CAROLINA: 1775-1776; VERMONT: 1781; VIRGINIA: 1775-1776; WISCONSIN: 1776-1783.

1700.—Nootka convention. Spain concedes British rights to Northern Pacific coast. See OREGON: 1790-1805; NOOTKA SOUND CONTROVERSY.

1793-1795.—Threatening relations with United States over western posts in America. Jay treaty. See U. S. A.: 1793-1795; ARBITRATION, INTERNATIONAL: Modern: 1794.

WEST INDIES.—1762-1763.—Capture and occupation of Havana. See CUBA: 1762-1763.

1763.—England gains the Grenadines, St. Vincent, Dominica and Tobago.

1765.—British claims to Turks and Caicos Islands recognized. See TURKS AND CAICOS ISLANDS.

19th century.—AFRICA.—*Central Africa*.—1890.—British Central Africa protectorate since 1907, known as Nyasaland, proclaimed a British protectorate. See NYASALAND PROTECTORATE.

1800.—Control of Central Africa from Germany in exchange for Heligoland. See GERMANY: 1890-1891.

East Africa.—1814.—Acquisition of Seychelles.

1876.—Island of Socotra came under British protection.

1884.—The Somali coast from Lahadu, west of Zaili, to Bandar Ziyada became a British protectorate, known as Somaliland. See AFRICA: Modern European occupation: Later 19th century: Eastern area.

1888.—Imperial British East Africa Company acquired right to administer the coast from the Umba river northward to Kipini for fifty years paying an annual tribute to the sultan. See AFRICA: Modern European occupation: Later 19th century: Upper Nile.

1890.—Sultan recognized protectorate of Great Britain over the island of Zanzibar and Pemba; Anglo-German agreement signed. See ZANZIBAR: 1890-1897; also AFRICA: Modern European occupation: Later 19th century: Upper Nile; also 1884-1899.

1893.—British East Africa Company retires from Uganda which is taken over by the imperial government, 1895. See UGANDA: 1897-1898; AFRICA: Modern European occupation: Later 19th century: Upper Nile.

1894.—Agreement with the Congo Free State. See AFRICA: Modern European occupation: Chronology of European exploration: 1894.

1895-1897.—British East Africa protectorate established. See BRITISH EAST AFRICA: 1895-1897.

Egypt.—1810-1811.—Failure of English attempt to restore the Mamelukes. See EGYPT: 1803-1811.

1870-1882.—Dual control over Egyptian finances established by England and France. See EGYPT: 1870-1882.

1881.—Nationalist uprising. England takes steps to suppress Arabi rebellion, but France refuses to participate. See EGYPT: 1879-1882; 1882-1883.

1882.—France withdraws; England in rôle of "advisor." See EGYPT: 1875-1882.

1883-1907.—Administration of Lord Cromer in Egypt. See EGYPT: 1883-1907.

1884-1895.—Campaign in the Sudan. Fall of Khartoum and the death of Gordon. See EGYPT: 1870-1883; 1884-1885.

1896.—Expedition to Dongola. Anglo-Egyptian movement for the recovery of the Sudan. See EGYPT: 1885-1896.

1897-1898.—Final conquest of the Sudan. See EGYPT: 1897-1898; 1899 (January).

1898.—Fashoda incident. See EGYPT: 1898 (September-November).

1899.—Condominium with Egypt regulating political status of the Sudan. See SUDAN: 1890.

South Africa.—Empire building in South Africa.

See CAPITALISM: 19th century: Capital in empire building.

1806.—Final seizure of Cape Colony from the Dutch. See SOUTH AFRICA, UNION OF: 1806-1806. 1816-1817.—Tristan da Cunha formally annexed. 1836.—Great trek—about 10,000 Boers withdrew from Cape Colony. See SOUTH AFRICA, UNION OF: 1806-1881.

1837.—Natal settled by these emigrants from the coast. See SOUTH AFRICA, UNION OF: 1806-1881. 1843.—Natal annexed, another trek to Orange river. See SOUTH AFRICA, UNION OF: 1806-1881.

1848.—Declaration of Orange river sovereignty. Migration of the Boers across the Vaal. See SOUTH AFRICA, UNION OF: 1806-1881.

1854.—Sand river convention marks beginning of the two Boer republics, South African republic and Orange Free State. See SOUTH AFRICA, UNION OF: 1806-1881.

1856.—Natal made a separate colony.

1868.—British absorption of Kafraria. See SOUTH AFRICA, UNION OF: 1811-1868.

1871.—Griqualand West (including Kimberly diamond fields) English by right of cession. See GRIQUAS.

1877-1881.—Annexation of the Transvaal. Boer uprising. See SOUTH AFRICA, UNION OF: 1806-1881. 1880.—Griqualand West incorporated with Cape Colony.

1881.—Gladstone ministry decides to act on unpopular annexation of Transvaal and does so by the Pretoria convention in spite of the battle of Majuba Hill in which the English suffered a local defeat. Transvaal given self-government though subject to British suzerainty. See SOUTH AFRICA, UNION OF: 1884-1894.

1881-1888.—Organization of the "Africander Bund." See SOUTH AFRICA, UNION OF: 1881-1888.

1884.—Independent colony of Basutoland. See SOUTH AFRICA, UNION OF: 1811-1868.

1884.—London convention restored South African republic. Gold found in the Rand. See SOUTH AFRICA, UNION OF: 1884-1894.

1885.—Territories south of Molopo river and of the Ramathlahama Spruit were declared to be British territory under the name of British Bechuanaland. See AFRICA: Modern European occupation: 1884-1899.

1887.—British protectorate established over Zululand. See ZULULAND: 1887.

1887-1889.—Acquisition of Rhodesia, embracing Matabeleland. See RHODESIA: 1887-1889; SOUTH AFRICA, UNION OF: 1885-1893.

1889.—British South Africa Company incorporated. See AFRICA: Modern European occupation: 1884-1899; also SOUTH AFRICA, UNION OF: 1885-1893.

1895.—British Bechuanaland annexed to Cape Colony. Jameson raid and its results. See SOUTH AFRICA, UNION OF: 1895-1896; 1896 (July).

1897.—Parliamentary investigation of Jameson raid. See SOUTH AFRICA, UNION OF: 1897 (February-July).

1899-1902.—Boer war. See SOUTH AFRICA, UNION OF: 1899 (September-October) to 1901-1902.

West Africa.—1844.—Agreement recognizing English authority signed by the Fantee chiefs of the Gold Coast.

1861.—Port and island and territories of Lagos sold to Great Britain. See NIGERIA.

1870.—Agreement with France makes the northern boundary a line extending from Say on Niger to Barrua on Lake Chad.

1874.—Lagos incorporated with the Gold Coast.

1884.—Niger Coast protectorate formed from Oil

Rivers protectorate in consequence of a series of treaties. See NIGERIA: 1882-1899.

1885.—German agreement to British control of Forcados and St. Lucia. See CAMEROONS: Occupation by Germany.

1885-1893.—Agreement with Germany over African expansion. Protectorate over Niger coast. See NIGERIA: 1882-1899.

1886.—Royal Niger Company chartered. See NIGERIA: 1882-1899.

1887.—Foreign office announces all territory in the Niger basin subject to the government of the company; also that the "British Protectorate of the Niger District comprises the territories between Lagos and the right bank of the Rio del Rey." See NIGERIA: 1882-1899.

1896.—British protectorate over Sierra Leone. See SIERRA LEONE: 1896.

1898.—Agreement with France over African expansion. See NIGERIA: 1882-1899.

1899-1900.—Formation of Nigeria protectorate. See NIGERIA: 1882-1899.

ASIA (not including India).—1800.—Acquisition of what is now province Wellesley, Malay Peninsula, opposite Sumatra.

1805.—Penang raised to presidency. Nucleus of Straits Settlements. See STRAITS SETTLEMENTS: Conquest and settlement.

1819.—Sir T. S. Raffles obtains permission from native owner to plant a settlement on Singapore. See STRAITS SETTLEMENTS: Conquest and settlement.

1824.—Settlement with the Dutch. Dutch retire from peninsula. English from islands. Malacca exchanged for Bencoolen. See STRAITS SETTLEMENTS: Conquest and settlement.

1827.—Ross family takes possession of Cocos or Keeling islands.

1839-1842, 1878-1880.—Wars with Afghanistan as a result of which the British imposed a kind of protectorate. See AFGHANISTAN: 1838-1842; 1842-1869; 1869-1881; also INDIA: 1836-1845.

1840.—Independent state of Sarawak established. See BORNEO: 1521-1846; SARAWAK.

1846.—Acquisition of Labuan. See BORNEO: 1521-1846.

1857.—Cocos or Keeling islands formally declared British.

1866.—Straits Settlements formed into a crown colony and administered directly from colonial office. See STRAITS SETTLEMENTS: Conquest and settlement.

1875.—Control of the Suez canal. See CANALS: Asiatic: Suez canal.

1877.—North Borneo district ceded by sultan of Brunei and Sulu to English and transferred to British North Borneo Company. See BORNEO: 1865-1890.

1888.—Sarawak under British protection with internal self-government. See SARAWAK.

1896.—Federation of Perak Selangor and Negri Sembilan in Malay states. See STRAITS SETTLEMENTS: 1909-1914.

1896-1899.—Agreement with France over Siam. See SIAM: 1896-1899.

1899.—Treaty with Sheik of Koweit against German aggression. See WORLD WAR: Causes: Indirect: c.

AUSTRALIA.—1802.—Settlement of Tasmania. See TASMANIA.

1826.—Settlement in Western Australia. See WESTERN AUSTRALIA.

1834.—Wakefield system of land settlement. See SOUTH AUSTRALIA: 1834-1836.

1851-1852.—Discovery of gold in Australia. Immigration ensued and six colonies gradually grew up: New South Wales, Queensland, Victoria, South

Australia, Western Australia and the neighboring island of Tasmania. See AUSTRALIA: 1839-1855.

CHINA.—1842.—British forced Chinese to open up five treaty ports of foreign trade. See CHINA: 1839-1844.

1842.—Hong Kong ceded to Great Britain by the treaty of Nanking. See HONG KONG.

1898.—Port of Wei-hai-wai leased by British. See WEI-HAI-WAI.

GREECE.—1815.—Protectorate over Ionian Islands. See IONIAN ISLANDS: 1815-1862.

1849-1850.—Enforcement of English claims in Greece. Don Pacifico affair. See GREECE: 1846-1850.

1855.—Gladstone's commission to the Ionian Islands. See IONIAN ISLANDS: 1815-1862.

1864.—Ionian Islands handed to Greece. See IONIAN ISLANDS.

INDIA.—1805-1816.—New acquisitions in India. See INDIA: 1805-1816.

1810.—Capture of the Mauritius. See INDIA: 1805-1816.

1811.—Capture of Java from the Dutch. See INDIA: 1805-1816.

1813-1816.—War with Gburkas of Nepal. See INDIA: 1805-1816.

1816-1818.—Overthrow of the Mahratta confederacy. See INDIA: 1816-1819.

1817.—Acquisition of Rajputana, India. See RAJPUTANA.

1823-1833.—Acquisition of Assam and Arakan. See INDIA: 1823-1833.

1824-1826.—First Burmese War. See INDIA: 1823-1833.

1843.—Annexation of Sind. See SIND.

1845-1849.—Sikh wars in India. Annexation of the Punjab. See INDIA: 1845-1849; KASHMIR.

1848-1856.—Policy in India. Acquisition of native states. See INDIA: 1848-1856.

1852.—War with Burma. Annexation of Pegu. See INDIA: 1852; also BURMA: 1824-1886.

1857.—Indian mutiny. See INDIA: 1857; 1857 (May-August); (June-September); 1857-1868.

1858.—Government transferred from the East India Company to the crown. See INDIA: 1858-1863.

1876.—Control over Baluchistan. See BALUCHISTAN: 1876-1887.

1876.—India declared an empire; 1877, Victoria became empress of India.

1883.—Quetta ceded on quit rent basis. See QUETTA.

1886.—Burma formally proclaimed a province of British India. See BURMA: Under British Empire; also INDIA: 1864-1893.

MEDITERRANEAN SEA.—1814.—Acquisition of the Island of Malta. See MALTA: 1814.

NEW ZEALAND.—1814.—Anglican mission was founded in the Bay of Islands; other denominations followed; and, as the country became better known, Englishmen at home and in Australia began to consider the possibility of its colonization. See NEW ZEALAND: 1815-1840.

1840.—Annexation of New Zealand. See NEW ZEALAND: 1825-1840.

1840.—Captain Hobson concluded treaty with the natives. See NEW ZEALAND: 1837-1851.

1854.—Given responsible government.

1865.—Entirely separated from New South Wales and made a separate colony.

NORTH AMERICA.—1803.—Dispute with the United States over Northwest territory. See LOUISIANA: 1798-1803.

1818.—Treaty with United States providing for joint occupation of Oregon. See OREGON: 1818-1846.

1835.—Treaty with Russia regarding claims in North America. See OREGON: 1741-1836.

1842.—Webster-Ashburton treaty. See U. S. A.: 1842; Treaty with England; also AFRICAN SQUADRON; MAINE: 1841-1842; AROOSTOOK WAR.

1846.—By the settlement of the Oregon dispute, boundary line dividing English possessions from the United States extended. See BRITISH COLUMBIA; OREGON: 1818-1846.

1855.—Arbitration with United States over fisheries question. See ARBITRATION, INTERNATIONAL: Modern period: 1855.

1867.—British North America Act. See CANADA: 1867; CANADA, CONSTITUTION OF: 1867.

1869.—The dominion acquired by purchase vast territories of the Hudson's Bay Company forming the provinces of Alberta and Saskatchewan. See CANADA: 1869-1873.

1871-1872.—Settlement of Alabama claims with United States. See ALABAMA CLAIMS: 1871-1872; ARBITRATION, INTERNATIONAL: Modern period: 1871-1872.

1872.—Settlement of Northwestern water-boundary question. See SAN JUAN.

1879-1881.—Claims to islands in the Arctic transferred to Canada. See CANADA: 1879-1881.

1886-1893.—Bering Sea controversy. See BERING SEA QUESTION; U. S. A.: 1886-1892.

1890.—"Modus Vivendi" agreement with France regarding Newfoundland shore question. See NEWFOUNDLAND: 1899-1901.

1892.—Settlement of Alaskan boundary. See U. S. A.: 1892; Settlement of Alaskan boundary; ALASKAN BOUNDARY QUESTION: 1867-1903.

1898-1899.—Joint High commission for settlement of pending questions with Canada. See CANADA: 1898-1899.

PACIFIC OCEAN.—1874-1914.—Colonial expansion. See PACIFIC OCEAN: 1800-1914.

1874.—Control of Fiji Islands. See FIJI ISLANDS.

1899.—Treaty with Germany and United States regarding Samoa. See SAMOA: 1879-1889; PACIFIC OCEAN: 1800-1914.

1899-1900.—Withdrawal from Samoa. See SAMOA: 1889-1900.

SOUTH AMERICA.—1803.—English acquire a section of Guiana, called British Guiana. Assured by the Vienna settlement.

1806.—Capture of Buenos Aires. See BUENOS AIRES: 1806; ARGENTINA: 1806-1820.

1807.—Capture of Montvideo. Later abandonment. See URUGUAY: 1806-1815.

1832-1833.—British sovereignty upheld in the Falkland islands.

1895-1896.—Venezuela boundary dispute. See U. S. A.: 1895 (December); 1895-1896 (December-January); 1897 (January-May); VENEZUELA: 1896-1899.

20th century.—British colonial policy. Anglo-French and Anglo-German relations. See ENGLAND: 1912.

AFRICA.—Extent of territory. See AFRICA: Map. 1918-1920.—Changes as a result of the World War. See AFRICA: Modern European occupation: 1918-1920; SEVRES, TREATY OF: 1920.

East Africa.—1901.—Control of Somaliland. See BRITISH EAST AFRICA: 1900-1901.

1902.—Disastrous battles in Somali. See SOMALILAND: Troubles with the Mullah.

1905.—Peace with the Mullah. See SOMALILAND: Peace with the Mullah.

1919.—Administration of Tanga. See TANGA.

1919-1920.—Acquisition of part of German East Africa. See BELGIAN CONGO: 1920; TANGANYIKA TERRITORY: British mandate.

Egypt.—1906-1914.—Egyptian affairs. See EGYPT: 1906; 1907-1911; 1911-1914.

1914.—British protectorate declared. New khedive designated a sultan. See EGYPT: 1914; World War.

1915.—Annexation of the state of Darfur to the Sudan. See SUDAN: 1914-1920.

1918-1919.—Affairs in Egypt. See EGYPT: 1918-1919.

1920.—Milner's investigation of Egyptian affairs. See EGYPT: 1920.

1921-1922.—Preludes to recognition of Egyptian independence. Recognition of Egypt as a sovereign state. See EGYPT: 1918-1919; 1921 to 1922 (March).

South Africa.—1900.—Annexation of Orange Free State and the Transvaal. See SOUTH AFRICA, UNION OF: 1900 (May); (October).

1900.—British protectorate proclaimed over Barotsiland in South Africa. See SOUTH AFRICA, UNION OF: 1900 (September).

1901.—Statistics of British military forces in South Africa from beginning of war. Policy of British government in dealing with Boers. See SOUTH AFRICA, UNION OF: 1901 (February).

1901.—Cost of South African war. See SOUTH AFRICA, UNION OF: 1901 (April).

1901-1902.—Last year of Boer War. Treaty of peace. See SOUTH AFRICA, UNION OF: 1901-1902.

1904.—Census statistics of British South Africa. See SOUTH AFRICA, UNION OF: 1904.

1905-1907.—Fulfillment of promises to South African of Vereeniging treaty. Representative government restored to Boer states. See SOUTH AFRICA, UNION OF: 1905-1907.

1906-1907.—Revolt of the Zulus in Natal. See SOUTH AFRICA, UNION OF: 1906-1907.

1909.—South African Union constitution ratified. See SOUTH AFRICA, UNION OF: 1908-1909; also SOUTH AFRICA, CONSTITUTION OF.

1910.—Admission of Orange Free State to the Union of South Africa. See ORANGE FREE STATE: 1902-1920.

Southwest Africa.—1919.—British mandatory over German colony. See SOUTHWEST AFRICA: 1919.

West Africa.—1900.—Transfer of territories of Royal Niger Company to the crown. See NIGERIA: 1900.

1903-1910.—Conquest of Sakoto and Kano. Rivalry with France. Anglo-French agreement. See NIGERIA: 1901-1913.

1907-1909.—Interest in Liberia. See LIBERIA, 1907-1909.

1919.—Togoland divided between France and Great Britain. See TOGOLAND.

ASIA.—1909.—Treaty with Siam. See SIAM: 1909.

ASIA MINOR.—1920.—Mandate for Zionist state. See PALESTINE: 1920; JERUSALEM: 1920; SYRIA: 1908-1921.

AUSTRALIA.—1901.—"Commonwealth of Australia Constitution Act" ratified and passed by the British parliament. See AUSTRALIA: 1900; also AUSTRALIA; CONSTITUTION OF.

INDIA.—1902-1910.—Military reforms in India. Partition of Bengal. See INDIA: 1902-1907; 1905-1910.

1908-1909.—Indian Council bills. See INDIA: 1908-1909.

1911-1914.—Attempts to suppress nationalist agitation in India. See INDIA: 1911-1914.

1918-1921.—Home rule agitation. See INDIA: 1918-1920; 1921.

MEDITERRANEAN SEA.—1903-1920.—Interest

around Mediterranean sea. See MEDITERRANEAN SEA.

1914.—Annexation of Cyprus. See CYPRUS: 1914.

1921.—Grant of self-government to Malta. See MALTA: 1921.

NEW ZEALAND.—1900.—Cook Islands annexed to New Zealand. See NEW ZEALAND: 1900 (October).

1907.—Designation changed to Dominion of New Zealand.

1916-1921.—Place of New Zealand in the empire. Proposals for closer imperial federation and an imperial parliament. See NEW ZEALAND: 1916-1921.

NORTH AMERICA.—1906.—Final decision regarding Alaskan boundary. See ALASKAN BOUNDARY QUESTION: 1906-1914.

1906.—Withdrawal of British garrison from Canada. See CANADA: 1906 (May).

1908.—Convention with United States over fisheries question. See FISHERIES: 1908; CANADA: 1908 (April).

1909.—Waterways treaty with United States concerning waters along Canadian boundary. See CANADA: 1909 (January).

1910.—Decisions of Hague tribunal as regards Newfoundland. See NEWFOUNDLAND: 1910.

1912.—Agreement as to seal fisheries in Bering Sea. See PRIBILOV ISLANDS.

PACIFIC OCEAN.—1900.—Protectorate over Friendly islands. See TONGA.

TREATIES PROMOTING EXPANSION

1713.—Treaty of Utrecht.—"The Treaty of Utrecht gave to England, in addition to Gibraltar, undisputed possession of Newfoundland, with the reservation to the French—a most dangerous and troublesome reservation—of certain fishing rights; the Acadian peninsula, now Nova Scotia (though not Cape Breton Island, which is at the present day included in Nova Scotia); and exclusive sovereignty over the shores of Hudson Bay. It gave her the sole possession of the West Indian island of St. Kitts, which the French had shared; and it gave her the Assiento, the contract for supplying Spanish America with slave labour."—C. P. Lucas, *British Empire*, p. 83.—See also CANADA: 1713.

ALSO IN: H. C. Barnard (ed.), *Expansion of the Anglo-Saxon nations.*—O. Weber, *Der Friede von Utrecht*.

1763.—Peace of Paris.—Great Britain retained Canada and Cape Breton Island. To France she ceded St. Pierre and Miquelon as an unfortified station for her fishermen. St. Vincent, Dominica and Tobago of the neutral islands fell to Great Britain, St. Lucia to France, to whom Great Britain ceded Guadeloupe and Martinique for Granada and the Grenadines; in Africa, the island of Goree for the Senegal protectorate and in Europe Bell Isle for Minorca. Spain and Great Britain exchanged Havana and Florida. The line of the Mississippi from source to mouth, exclusive only of the New Orleans territory, was fixed as the western limit of British dominion in America. France also ceded Natal and Tapanuli in Sumatra to Great Britain.

1783.—Treaty of Versailles.—The independence of the English colonies in America was assured. The colonies extended west to the Mississippi river and north to the English possessions in Canada. Certain provisions were also made regarding fishing rights. Senegal restored to France.

1815.—Results of the Napoleonic wars.—“Outside India the net results of the Napoleonic wars were that England gained from France St. Lucia in the West Indies, Mauritius and the Seychelles in the Indian Ocean, while Malta, given to us eventually by the free voice of the Maltese, had previously been taken from France. From Spain we took Trinidad; from Denmark, Heligoland, to be transferred to Germany in 1890; from Holland, Ceylon, British Guiana, and, most important of all, the Cape of Good Hope. First taken by the English in 1705, the Cape was given back to the Netherlands by the Treaty of Amiens. Taken again in 1806, it was formally ceded to Great Britain in the general settlement of 1814.”—C. P. Lucas, *British empire*, p. 101.

1818-1846.—Disputes with United States over Oregon boundary.—Final agreement. See OREGON: 1818-1846; 1846-1855.

1835.—Treaty with Russia regarding claims in North America. See OREGON: 1741-1836.

1878.—Treaty with Turkey.—In 1878, in return for support against Russia, Turkey handed over to Great Britain the island of Cyprus to be occupied and administered.

1920.—Colonial provisions of the Versailles peace treaty.—The principal allied and associated powers decided that German East Africa should be assigned under mandate to the United Kingdom, except the northwestern corner which was assigned to Belgium; that German southwest Africa should be assigned under mandate to the Union of South Africa; that the governments of the United Kingdom and France should make a joint recommendation as to the future of Cameroons and Togoland; that the mandate for German New Guinea, and the German islands in the Pacific (other than the German Samoan islands and Nauru), south of the equator should be assigned to the commonwealth of Australia; that the mandate for the German Samoan islands should be given to New Zealand; that the mandate for Nauru should be given to the British empire.

GOVERNMENTS: COLONIES AND PROTECTORATES

The British colonies and protectorates may be classified as follows:

I. Colonies possessing responsible government, now known as the self-governing dominions, in which the crown has only reserved the power of disallowing legislation and the secretary of state for the colonies has no control over any public officer except the governor. In all matters affecting the internal affairs of such a colony the governor acts on the advice of ministers who are responsible to the legislature. The self-governing states are:

- (i) Dominion of Canada.
- (ii) Dominion of Canada.
- (iii) Dominion of New Zealand.
- (iv) Union of South Africa.

(v) The Australian Commonwealth and its six component states:—New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania. (The Northern Territory and Papua are administered by the Commonwealth.)

II. Colonies not possessing responsible government, in which the administration is carried on by public officers under the control of the secretary of state for the colonies; and protectorates similarly controlled.

(i) Colonies possessing an elected house of assembly and a nominated legislative council:—

Bahamas | Barbados | Bermuda

(ii) Colonies possessing a partly elected legislative council, the constitution of which does not provide for an official majority:—

British Guiana
Cyprus

(iii) Colonies possessing a partly elected legislative council, the constitution of which provides for an official majority:—

Ceylon | Jamaica | Malta
Fiji | Leeward Islands | Mauritius

(iv) Colonies and protectorates possessing a legislative council nominated by the crown:—

British Honduras | Nigeria
Falkland Islands | Nyasaland Protectorate
Gambia Protectorate | St. Lucia
Gold Coast | St. Vincent
Grenada | Seychelles
Hong Kong | Sierra Leone
Kenya Colony and | Straits Settlements
Protectorate | Trinidad

In all the above councils, except British Honduras, the constitution provides for an official majority.

(v) Colonies and Protectorates without a legislative council:—

Ashanti | St. Helena
Basutoland | Somaliland
Bechuanaland Protectorate | Swaziland
Gibraltar | Uganda
Northern Nigeria | Wei-hai-wei
Northern Territories | Islands included under
of the Gold Coast | the Western Pacific
High Commission

In all these colonies and protectorates, except Bahamas, Barbados, Bermuda, British Honduras, and the Leeward Islands, the crown has the power of legislating by order in council.

The territories in South Africa which are under the control of the British South Africa Company are not included in the above classification.—*Colonial office list*, 1920.—See also COUNCIL, GOVERNOR'S.

CHARACTER

Self-governing rights in British colonies.—Types of colonies.—“It ought never to be forgotten that down to the nineteenth century (that is, during all the earlier part of the process of European expansion) Britain was the only one of the greater European States which possessed self-governing institutions. She has been, in truth (this is not a boast, but a mere statement of indisputable historical fact), the inventor of political liberty on the scale of the great nation-state, as Greece was the inventor of political liberty on the scale of the little city-state. And wherever free institutions exist to-day, they have been derived from Britain, either by inheritance, as in America and the self-governing British colonies, or by imitation, as in all other cases. When the outpouring of Europe into the rest of the world began, the British peoples alone had the habit and instinct of self-government in their very blood and bones. And the result was that, wherever they went, they carried self-government with them. Every colony of British settlers, from the very first, was endowed with self-governing institutions. No colony ever planted by another nation ever obtained corresponding rights. That is one of the outstanding features of British expansion. In the eighteenth century, and even in the middle of the nineteenth century, Britain herself and the

young nations that had sprung from her loins were *almost the only free States existing in the world*. It was because they were free that they thrived so greatly. They expanded on their own account, they threw out fresh settlements into the empty lands, wherein they were planted, often against the wish of the Mother Country. And this spontaneous growth of vigorous free communities has been one of the principal causes of the immense extension of the British Empire. Now one of the results of the universal existence of self-governing rights in British colonies was that the colonists were far more prompt to resent and resist any improper exercise of authority by the Mother Country than were the settlers in the colonies of other countries, which had no self-governing rights at all. It was this independent spirit, nurtured by self-government, which led to the revolt of the American colonies in 1775, and to the foundation of the United States as an independent nation. In that great controversy an immensely important question was raised, which was new to human history. It was the question whether unity could be combined with the highest degree of freedom; whether it was possible to create a sort of fellowship or brotherhood of free communities, in which each should be master of its own destinies, and yet all combine for common interest. But the question (being so new) was not understood on either side of the Atlantic. Naturally, Britain thought most of the need of maintaining unity; she thought it unfair that the whole burden of the common defence should fall upon her, and she committed many foolish blunders in trying to enforce her view. Equally naturally the colonists thought primarily of their own self-governing rights, which they very justly demanded should be increased rather than restricted. The result was the unhappy war which broke up the only family of free peoples that had yet existed in the world, and caused a most unfortunate alienation between them, whereby the cause of liberty in the world was greatly weakened. . . . The vast realms of the British Empire fall naturally into three groups: the great self-governing dominions, Canada, Australia, South Africa, New Zealand, and Newfoundland; the lands of ancient civilisation, India and Egypt; and the wide protectorates (mainly in Africa, but also in Asia and the Pacific) which are inhabited by backward and primitive peoples. There are other regions also, such as the West Indian Islands, or the military posts and calling stations like Gibraltar, Malta, and Aden, which do not fall into any of these three categories. But they are of relatively minor importance, and it will be convenient to concentrate our attention upon each of the three main groups in turn."—R. Muir, *Character of the British empire*, pp. 4-6, 10.

Characteristics of the self-governing colonies.—"Regarding the self-governing dominions, . . . they are to all intents and purposes entirely free States, which remain in association with the Mother Country only by their own free will. If they were to claim complete independence, there would certainly be no attempt made by Britain to force them to remain in partnership. . . . They make their own laws; they appoint all their own officials (except the Governors, who perform almost purely formal functions, corresponding to those performed by the King in the 'crowned republic' of Britain); they levy their own taxes, and both may and do impose any duties they think fit upon imports from Britain equally with those coming from other States. They pay not a farthing of tribute to the Mother Country. They are not

even required to contribute to the cost of the Navy, which protects them all, though some of them make voluntary contributions. The only restriction upon their political independence is that they do not pursue an independent foreign policy or maintain ambassadors or consuls of their own in foreign countries. The responsibility (and the total cost) of this function falls upon Britain. If Britain should be drawn into war, the great dominions are also technically at war, and if Britain were to pursue a warlike or aggressive policy, this would soon alienate some or all of these young democracies. But it is only by their own free will that they take any part in a war in which Britain is involved, and the Mother Country has neither the right nor the power to demand military aid from them. Yet we have seen what whole-hearted and generous aid they have all given. . . . Gradually they are beginning, through their Prime Ministers or other representatives, to take a more and more effective part in the direction of the common policy of the Empire. The meetings of what was called the 'Imperial War Cabinet' in the spring of 1917 marked a definite stage in this development, and incidentally afforded a very striking proof of the elasticity and adaptability of the British system of government. It is certain that this method of co-operation will be carried still further in the future. Clearly, so far as concerns the great dominions, the British Empire is far from being a military domination imposed by force. It is a voluntary partnership, or brotherhood of free peoples, a Commonwealth of Nations. It is a wonderful achievement in the combination of unity and freedom, an experiment in the unforced co-operation of free States such as has never before been seen in human history. . . . Only one series of events has prevented a large part of the world from realising that this was the spirit in which the British Empire was governed. The South African War made Britain appear, in the eyes of most of the world, a vast, greedy, tyrannical power, which, not content with an already immense dominion, must fall upon and devour two tiny, free republics, merely because they contained gold! But the world did not appreciate the real meaning of the South African War. In the British South African colonies (the Cape and Natal) the fullest equality of political rights was enjoyed by Dutch and British residents alike, and their institutions were the same as those of other British dominions. But in the semi-independent Dutch republics of the Transvaal and the Orange Free State (especially the former) no such equality of rights existed. The ideal they aimed at was that of Dutch predominance, and some of their leaders hoped in time to drive the British out of Africa, and to establish there an exclusively Dutch supremacy. This did not matter so long as the inhabitants of these lands were only a few Dutch farmers. But when the discovery of gold and diamonds brought an immense inrush of British and other settlers, who henceforth produced nearly all the wealth of the country, this denial of equality of rights became serious, and the programme of Dutch conquest, prepared for mainly at the cost of the new settlers, began to seem dangerous. This was the real cause of the South African War. It might, perhaps, have been avoided, and, if so, those who precipitated it unnecessarily were much to blame, whether they were Boers or Britons. There were faults on both sides. But essentially the war was, on Britain's side, a war for equality of rights. What were its results? So far as Britain was concerned, the bones of thousands of her

sons lay on the African veldt, and her public debt was vastly increased. She made no direct material gains of any sort: the gold-mines remained in exactly the same hands as before. But so far as South Africa was concerned, the result was that in a very few years the conquered republics were given full self-governing powers, on the basis of equal rights for both races, and a few years later they and the older British colonies combined in the Union of South Africa, a great, free, federal state, in whose affairs Dutch and British have equal rights, and in which a new nation, formed by the blending of the two races, can grow up. . . . And now observe the sequel. When the great war began (scarcely more than a dozen years from the time when Dutch and Britons were fighting bitterly) the Germans tried to bring about a revolt among the more ignorant Dutch. It was put down by the forces of the Union, mainly Dutch, led by Louis Botha, who had once been the commander-in-chief of the Transvaal army, and was now the prime minister of a self-governing dominion within the British Empire. And then, still led by Botha, a combined force of Dutch and Britons proceeded to the conquest of German South-West Africa, suffering casualties which, by a happy chance, were exactly equally divided between the two races. And then a South African contingent was sent to East Africa, and the supreme command over them, and over British regulars and Indian regiments and native levies, was assumed by the Dutch General Smuts, once a formidable leader against the British. And, lastly, General Smuts came to England to join in the deliberations of the Imperial War Cabinet, and to make speeches of profound foresight and political wisdom to the British people, in which he sang the praises of the British Commonwealth of free nations as something that deserved every sacrifice from the peoples enrolled under its sheltering ægis."—*Ibid.*, pp. 10-14.—See also SOUTH AFRICA, UNION OF.

Rule in India and Egypt.—"The second great group of British dominions consists of those ancient and populous lands, notably India and Egypt, which, though they have been able to develop remarkable civilisations, have never in all their history succeeded in establishing the rule of a just and equal law, or known any form of government save arbitrary despotism. It is impossible to trace here, even in the baldest outline, the steps by which Britain acquired the sovereignty over India and Egypt. They form two of the most curious and romantic episodes in history, for the strange thing is that in both cases British intervention was begun with no thought of conquest, and in both cases the responsibility of political control was assumed by Britain with very great reluctance. . . . We must content ourselves with a very brief analysis of the character and results of the British dominion. . . . Until the British power was established, India had in all her long history never known political unity. She had seen nothing but an almost uninterrupted succession of wars, an endless series of conquests and evanescent dominions. Always, Might had been Right; Law had represented only the will of the master, and the law courts only the instruments of his arbitrary authority, so that the lover of righteousness could only pursue it by cutting himself off from all the ties of society and living the life of the ascetic. India was the most deeply divided land in the world—divided not only by differences of race and tongue (there are 38 distinct languages in India to-day, and some of them differ more widely than Russian and Span-

ish), but divided still more deeply by bitter conflicts of creed, and, most sharply of all, by the unchanging, impermeable barriers of caste, which had arisen in the first instance from the determination of conquering peoples to keep themselves free from any intermixture with their subjects. Nowhere in the world are there to be seen, cheek by jowl, such profound contrasts between distinct grades of civilisation as are represented by the difference between (say) the almost savage Bhils or the out-caste sweepers, and the high-bred Brahmin, Rajput or Mahomedan chiefs. One result of these time-worn distinctions is that through all the ages the ruling castes and races have been accustomed to expect, and the mass of humble men to offer, the most abject submission; so that British administrators have often had to complain that the chief difficulty was, not to make laws for the protection of the humble, but rather to persuade those for whose benefit they were made to take advantage of them. To this divided land the British rule has brought three inestimable boons: a firmly organised political unity; the impartial administration of a just and equal system of law, based on a codification of Indian usages; and the maintenance of a long, unbroken peace. To this may be added the introduction not only of the material boons of western civilisation—railways, roads, irrigation, postal facilities, and so forth—but of western learning. This has had to be conveyed through the vehicle of English, because it was impossible to create, in all the 38 vernaculars, a whole literature of modern knowledge. And the consequence is, that all the members of the large and growing class of University-trained students, whose existence for the first time creates an instructed public opinion in India, are able freely to communicate with one another, and to share a common body of ideas, to an extent that has never before been possible in all the earlier history of India. Out of all these causes, due to the British rule, there has begun to arise in this deeply divided land a sentiment of national unity, and an aspiration after self-government. This sentiment and this aspiration are in themselves excellent things; their danger is that they may lead to a demand for a too rapid advance. For national unity *cannot* be created by merely asserting that it exists. It will not be fully established until the deeply-rooted differences which are only beginning to be obliterated have largely ceased to determine men's thought and actions, as they still do in India. And self-government on the amplest scale of modern democracy, cannot be achieved until the traditionally ascendant classes, and the traditionally subject classes, have alike learned to recognise the equality of their rights before the law. But the foundations have been made of advance towards both of these aims; they are the result of British rule. There are discontents in India; there is much sharp criticism of the methods of the supreme Government, especially—almost exclusively—among the new class of western-educated men. But the criticism has not gone so far, except with a very few fanatics, as to assert that British rule is itself unjust or evil; on the contrary, all the best opinion in India desires to see that great land steadily progressing towards greater national unity and greater political liberty under the guidance and protection of British rule; all the best opinion in India recognises that the progress already made has been due to British rule, and that its continuance depends upon the continuance of British rules; all the best opinion in India desires that India, even when she becomes, as she will steadily become, more fully self-governing, should remain a partner

in the British Commonwealth of Nations. It was a real satisfaction of one of the aspirations of India when three representatives of the Indian Government, an Indian prince, an Indian lawyer, and an Anglo-Indian administrator, came to London in the spring of 1917 to take part in the councils of the Empire during the crisis of its destiny. Criticism and discontent exist. But their existence is a sign of life; and the freedom with which they are expressed is a proof that the Government of India does not follow a merely repressive policy, and that the peoples of India have at last been helped to escape, in a large degree, from that complete docility and submissiveness which are the unhappy signs that a people is enslaved body and soul. India does not pay one penny of tribute to Britain. She pays the cost of the small, efficient army which guards her frontiers, but if any part of it is borrowed for service elsewhere, the cost falls upon the British Treasury. This rule was, indeed, broken in regard to the first Indian contingents in the present war, but only at the request of the Indian members of the Viceroy's Legislative Council. India contributes not a penny towards the upkeep of the British fleet, which guards her shores; nor does she defray any part of the cost of the consuls and ambassadors in all parts of the world who protect the interests of her travelling citizens. She is a self-dependent state, all of whose resources are expended on the development of her own prosperity, and expended with the most scrupulous honesty and economy. Her ports are open, of course, to British traders, but they are open on precisely the same terms to the traders of all other countries; there is no special privilege for the British merchant. Recently she has entered upon a policy of fiscal protection, with a view to the development of cotton manufactures. This policy was directed primarily against Lancashire. But because Indian opinion demanded it, it has not been resisted, in spite of the fact that the bulk of British opinion holds such a policy to be economically unsound. Nor have British citizens any special privileges in other respects. It was laid down as long ago as 1833, as an 'indisputable principle,' that 'the interests of the native subjects are to be consulted in preference to those of Europeans, wherever the two come in competition.' . . . India, in short, is governed, under the terms of a code of law based upon Indian custom, by a small number of picked British officials, only about 3,000 in all, among whom highly-trained Indians are increasingly taking their place, and who work in detail through an army of minor officials, nearly all Indians, and selected without respect to race, caste, or creed. She is a self-contained country, whose resources are devoted to her own needs. She is prospering to a degree unexampled in history. She has achieved a political unity never before known to her. She has been given the supreme gift of a just and impartial law, administered without fear or favour. She has enjoyed a long period of peace, unbroken by any attack from external foes. Here, as fully as in the self-governing Colonies, membership of the British Empire does not mean subjection to the selfish dominion of a master, or the subordination to that master's interests of the vital interests of the community. It means the establishment among a vast population of the essential gifts of western civilisation—rational law, and the liberty which exists under its shelter.

"What has been said of India might equally be said of Egypt, *mutatis mutandis*, but space does not permit of any detail on this theme. Enough to say that the achievements of the short period

since 1882, when the British occupation began, in the rescuing of the country from bankruptcy, in the abolition of the hideous tyranny under which the mass of the peasantry had long groaned, in the development of the natural resources of the country, in the introduction of western methods of government and education, in the removal of the peril of returning barbarism which threatened from the Soudan, and in the establishment of a just and equal system of law, is something which it would be hard to match in the records of history. Both in India and Egypt lands of ancient civilisation have been rescued from a state of chaos and set upon the path which leads to unity and freedom."—*Ibid.*, pp. 14-20.—After forty years of British administration, involving a complete reorganization of the financial, economic and political affairs of Egypt, the British Government terminated the protectorate over the country and declared Egypt to be "an independent sovereign state." The new régime of independence was opened on March 6, 1922, when the Sultan Fuad presided over the first council of his cabinet or responsible ministers. On March 16 the sultan issued a rescript, announcing that he would assume the title of King of Egypt. Though granting unqualified independence, the British government issued a warning that it would not permit the intervention of any foreign power in Egyptian affairs or aggression on Egyptian territory.—See also EGYPT: 1922; INDIA: People.

British rule in the backward regions of the world.—"Lastly, we come to the vast regions inhabited wholly or mainly by backward or primitive peoples. Most of these are territories of comparatively recent acquisition. And it is here, and practically here alone, that the British Empire comes into comparison with the recently created empires of other European states, France, Germany, Italy, and Belgium; none of which possess any self-governing colonies, or any extensive lands of ancient civilisation like India, unless the French colonies of Algeria and Annam are to be regarded as falling within the latter category. The establishment of European control over most of the backward regions of the world has been, for the most part, a very recent and a very rapid development. The rush for extra-European territory which has taken place since 1878 is frequently regarded as a merely sordid exhibition of greed and of the lust for power; and indeed, some features of it deserve condemnation. . . . But on the whole, and with exceptions, the establishment of European control has been as beneficial to its primitive subjects as it has been advantageous to the development of modern industry. In spite of the vast extent of her Empire in other regions, Britain has taken a far larger share of this work than any other single power; perhaps, all things considered, she has taken as great a share as all the rest put together. . . . The first reason [for this] is that Britain had begun long before any of the other powers. Both in Africa and in the islands of the Pacific, the work of exploration was mainly done by British travellers; British traders had almost alone been known to the native populations; and British missionaries, who were extraordinarily active during the nineteenth century, had planted themselves everywhere, and played an immensely important part in civilising their simple flocks. Wherever the missionary went, he undertook the defence of the primitive peoples to whom he preached, against the sometimes unscrupulous exploitation of the trader. It was the constant cry of the missionaries that the British Government ought to assume control, in order to keep the traders in order. They, and the power-

ful religious bodies at home which supported them, did much to establish the principle that it was the duty of government to protect the rights of native races, while at the same time putting an end to such barbarous usages as cannibalism, slavery, and human sacrifice, where they survived. Often, too, native chieftains begged to be taken under British protection; while the better type of traders were anxious to see civilised administration set up, because it is only under civilised administration that trade can permanently thrive. Thus the British Government was under continual pressure from all sides, while the governments of other European countries as yet took no interest in colonial questions. The British Government was extremely loth to assume additional responsibilities, and did its best to avoid them. But some annexations it could not avoid. Thus before the great European rush for colonies began, Britain, and Britain alone, had acquired a very wide experience in the government of backward peoples, and had worked out fairly clearly defined principles for the government of such peoples. What is more, in all the regions of this type which she controlled—indeed, throughout her whole Empire, everywhere save in the self-governing Colonies—it had become the practice of Britain to throw open all her ports and markets to the trade of all nations on exactly the same terms as to her own merchants. She is, in fact, the only great colonising Power which has adopted this principle. If a British merchant goes to the Philippines, or to Madagascar, or to Togoland, he finds that he has to compete with his American, French, or German rival on unequal terms, because a tariff discriminates between the citizen of the ruling people and the foreign trader. But if an American, French, or German merchant goes to India, or to any British Crown Colony or protectorate, he is admitted on exactly the same terms as the Briton. That distinction had already been established before 1878, though it has been accentuated since that date. The British method of administering backward regions as worked out before 1878 was therefore based upon two principles, first the protection of native rights, and secondly the open door to all trading nations; and Britain may fairly be said to have learnt to regard herself as being, in these regions, a trustee—a trustee on behalf of her subjects, and on behalf of the civilised world. . . . To-day these principles are being advocated by many earnest men as representing the only mode by which the supremacy of western civilisation throughout the world can be reconciled with the avoidance of bitter rivalry and war between the civilised states; and they are preached as if they were a new doctrine of salvation. Yet they have been consistently practised by Britain during the greater part of the nineteenth century, and they are still practised by her to-day. When the great rush began, the main object of the European states which took part in it was to obtain a monopoly-control of the regions which they annexed. But in all the available regions of the world, British trade had hitherto been preponderant. British traders saw before them the prospect of being absolutely excluded from lines of traffic which had hitherto been mainly in their hands, and they were naturally urgent that the only means of protection available should be taken, and that the areas in which they had been most active should be brought under British administration. If the new colonising Powers had been prepared to follow the policy of the open door, to which Britain had so long adhered, there would have been no reason to fear

their annexations; rather there would have been every reason to rejoice that other nations were taking their share in the work of giving civilised government to these regions. But since their object was monopoly and exclusion, it was inevitable that Britain should undertake great new responsibilities. Her doing so was, indeed, the only practicable way of preserving the trading rights, not merely of her own subjects but also of all the other trading Powers which had not themselves joined in the rush, or had only a small part in it. Yet even now the British Government was extremely unwilling to take action, or to expand still further the already vast domains for whose good governance it was responsible. It had to be forced into action, mainly through the activity of trading companies."—*Ibid.*, pp. 20-24.—See also ASHANTI: BRITISH OCCUPATION; NYASALAND PROTECTORATE; RHODESIA.

COLONIAL FEDERATION

Authority of imperial Parliament.—"While the British Empire arose the powers held and exercised by the Crown in the Tudor days have, by a process of internal change, passed to Ministers who are, through the intermediate agency of the House of Commons, practically chosen and kept in office, or dismissed from it, by the will of the majority of the people of the United Kingdom. . . . The Imperial Parliament has never abandoned its theoretic claim, or reserved right, to legislate in every respect for every portion of the dominions of the Crown, notwithstanding the existence of inferior legislatures. In theory the right exists unabated, and, in practice, the British Parliament has on several occasions passed laws affecting the whole Empire. Of this kind was the Act of 1824 prohibiting slave-trading, and the Act of 1833 emancipating slaves. In the present reign [of Queen Victoria] the Copyright Act (5 & 6 Vict. c. 45) enacts that its provisions shall extend to every part of the British Dominions, and defines that term as including 'all the colonies, settlements, and possessions of the Crown.' A general principle of importance was laid down by the Act 28 & 29 Vict. c. 63, which declares that 'any colonial law repugnant to the provisions of any Act of Parliament extending to the colony to which such law may relate shall, so far as repugnant, be void.' While, on the one hand, no colonial legislation can over-ride any imperial legislation intended to apply to the Colonies; on the other, as Professor Dicey says, 'No lawyer questions that Parliament could legally abolish any colonial constitution, or that Parliament can at any moment legislate for the Colonies, and repeal or over-ride any colonial law whatever.' Nor does the theoretic claim to plenary sovereign power stop short of the right of taxation. The constitutional lawyer has abandoned that impossible attempt to draw a distinction between fiscal and other modes of legislation which was made during the American conflict by many political reasoners in England and America. 'If Parliament,' says Professor Dicey, 'were to-morrow to impose a tax, say on Victoria, or on the Canadian Dominion, the statute imposing it would be a legally valid enactment.' It might, indeed, cause a political revolution, but judges would have no excuse for not recognising its validity in courts of law. . . . It is characteristic of the English, with their blended common-sense and reverence for precedent, that practice should widely diverge from theory. In theory, the monarch can, of his own free will, dismiss and appoint any Minister as he likes, dissolve his Parliament, and rule without one, himself

conduct all the affairs of the Empire; in practice, he 'reigns, but does not govern,' except indirectly by influence and advice. So also, when autonomy has been given to colonies, the Imperial Parliament, with rare exceptions, ceases to pass laws which affect their domestic affairs. The Imperial Parliament in this sphere reigns but governs not. But if the direct guidance and control now exercised by the British Parliament is less than it was to Burke's lofty imagination, yet the metropolitan authority has been turned to one new and dignified purpose. No colonial constitution, when he spoke, was based upon an Act of the British Parliament; they were all founded upon charters emanating directly or indirectly from the royal prerogative. This is so no longer. The Imperial Parliament is the fountain whence flows all legislative authority within the Empire. The great Indian system is derived from Westminster. The supreme legislative and executive power of the Viceroy in Council, subject to the ultimate sanction of the Secretary of State, is so vested by a series of Acts of Parliament. The central and provincial Legislative Councils in India, and the High Courts of Justice in the three Presidencies, rest upon the same foundation. Every colonial constitution, every Legislative Council and Parliament, is founded upon a British Act of Parliament. The Assembly by the Thames is justly called the 'Mother of Parliaments.' It is true, however, that, where the great Colonies are concerned, the Imperial Parliament does but seal, as it were, and give force to, the will of the colonial peoples. The Canadian Constitution of 1867 was passed through Parliament without a division, just as it had been framed by the leading statesmen of the several Canadian provinces, in consultation with each other, and with the Secretary of State. The Australian Commonwealth Bill of 1900 came to Westminster with still greater weight behind it, for its principles had been submitted by a direct reference to the vote of the electorate in the several Colonies concerned. The Australian Premiers desired that it should be passed without alteration, and professed at first that, by reason of the reference to the electorate, they were unable to give their assent to any substantial change whatever. The Premier of one of the federating Colonies even said in a public speech, 'There will be no safety or security for Australian union until it is known that the Bill that Australia has drafted for the Imperial Parliament to pass word for word is passed by that august tribunal word for word.' . . . Burke, bred and living under the old commercial system, had in his mind, as one chief attribute of the Imperial Parliament, the exclusive power to regulate the commercial relations of the different parts of the Empire to the metropolis and to each other. This power has, most of all, fallen into disuse. The United Kingdom has adopted free trade for herself, and has allowed each colony to regulate its commercial policy as it pleases. A colony may either adopt free trade or may shut out as much as it desires the goods of the rest of the Empire. There is no commercial unity of the British Empire, though India, because India is truly subordinate, is practically obliged to keep open ports. Just as there is at present no commercial unity of the British Empire, so there is no formal unity in foreign, naval, or military policy. There is no political machinery for formally ascertaining and expressing in action, in these matters, the united will of the great States which compose the Empire. If the Crown is at war with any foreign Power, it follows that Canada, Australia, South Africa, and all other dominions

are, by their allegiance, engaged in the hostilities. But the policy which leads to the war is solely determined by the Committee of Ministers proceeding from and responsible to the British Parliament; and they also, though they may choose to consult the Colonists, have full power to make peace when and upon what terms they deem advisable."—B. Holland, *Imperium et libertas*, pp. 268-273.

Privy Council as Supreme Court of British Empire.—"There still exists at the present day a very wide right of appeal to the Crown-in-Council from the courts of the oversea Dominions possessing responsible government, and it is perhaps not always realized that the right to appeal is not one which can be taken away at pleasure by the Legislatures of the Dominions. Apart altogether from the question of the exercise of the right of the Crown to withhold assent from a Bill fettering the right of the Judicial Committee of the Privy Council to grant leave to appeal from the decision of a Dominion court, in almost every case such an attempt at legislation would be *ultra vires*, and would therefore not in law hamper the exercise of the discretion of the Judicial Committee in performing their function of considering such appeals. Moreover it must always be borne in mind that the Judicial Committee is a judicial body, and it is bound to deal with any such application in a judicial spirit and to decide it in a judicial manner. The right of the Crown to grant special leave to appeal rests on the royal prerogative in the first instance, but the prerogative can be barred by local legislation in most cases, and it may be held that it could effectively be barred in the case of this prerogative also. There is, however, a certain difficulty in the matter which cannot be wholly ignored. The prerogative is exercised in the United Kingdom, and not in the Dominion, and it may be argued that the effect of a local Act being limited in territorial effect would not bar the possibility of the grant by the Crown of special leave, and that, if on the hearing of the appeal the judgment were reversed, the effects of such a reversal would follow automatically in law, if not in practice. In any case, however, the power to prevent the operation of the prerogative is taken away from nearly all Dominion Legislatures by the provisions of an Act, 7 and 8 Vict. c. 69, which was passed, not for this purpose but merely because it had been found doubtful whether the Crown had power to hear cases brought on appeal, not from the last appellate jurisdiction in a colony, but from an inferior court. It may at first sight seem strange that there should have been any desire to hear appeals direct from the inferior courts, but the explanation is that in several colonies the final court of appeal in the colony itself was the Governor-in-Council, not a judicial body in any very satisfactory sense, and not one which was likely by its deliberations to add much of value to what was said in the highest inferior court. Indeed this anomalous system remained alive in theory in Western Australia until 1911, when the last remnant of it was abolished. The Act, however, while permitting appeals to be brought direct from any inferior court, incidentally abolished all restrictions on the right to bring appeals from the final court in any colony by including that court in its wording. It is not of course to be supposed that the Judicial Committee are indifferent to the views of the Dominion Governments in the matter of what appeals are proper. Of their own motion they have insisted on declining in normal circumstances to hear appeals in criminal cases and have

refused to become a court of criminal review, though they have always held themselves at liberty in any very extraordinary case to grant leave to appeal. The trial of Riel [in Canada] was clearly such a case: not only was the matter one of the utmost political interest in the Dominion, where the people of Quebec were eager to save a man whom most of Canada regarded as no better than a murderer. . . . As in Canada, in the Commonwealth [of Australia] there is the same possibility of elaborate appeals arising from the fact that an appeal lies from every Supreme Court in a State to the Privy Council or alternatively to the Commonwealth High Court, and that from the latter an appeal lies by special leave to the Judicial Committee. The case of the Commonwealth is, however, differentiated greatly from that of Canada by the arrangement made to preserve for the Commonwealth the decision of the interpretation of its own Constitution, a decision based on the American models. The Constitution as finally accepted by the Imperial Government allowed the High Court of the Commonwealth to be the final judge in any case brought before it where the constitutional rights of the States *inter se* or of the Commonwealth and the States were concerned. The High Court proceeded to interpret the constitution of the Commonwealth with such effect that the most wholesale attempts at amendment have been made by the Labour Party to rescue the Commonwealth as they hold from the legalism which has deadened its life and is destroying it. On the other hand the High Court on the occasion when it has allowed the Privy Council to deal with its judgments has not fared altogether very satisfactorily at its hands, and the irony of fate is that while the High Court of the Commonwealth has on the whole distinguished itself by the upholding of the rights of the States and not of the Commonwealth—whereas the tendency of the Supreme Court of Canada has rather leaned to the other side, the Privy Council, with whose decision it quarrelled in the early history of the court on the ground that it was too favourable to the States, has gone in its latest judgment much further than the Commonwealth High Court, by holding that the *Royal Commissions Act, 1912*, of the Commonwealth, on which action against the Colonial Sugar Refining Company was based, was not merely not applicable in that special case, but was in itself *ultra vires* as containing matter which was quite beyond the authority of the Commonwealth. In the ordinary jurisdiction of the High Court of the Commonwealth on appeal from the Supreme Courts of the States, the judgments of the Commonwealth have not received always very respectful handling from the Judicial Committee of the Privy Council. In the case of the Union of South Africa far greater inroads in theory have been made on the royal prerogative than in any other Dominion. The *South Africa Act, 1909*, replaced the old procedure under which appeals came to the Privy Council from a considerable number of colonial courts, three in the Cape, two in the Transvaal, two in Natal, and one in the Orange River Colony, by the establishment of a new régime under which one Supreme Court for the Union was constituted, to which in its appellate division all the appeals which formerly went to the Privy Council as well as others might come. From the divisions of the Supreme Court no appeal was henceforth to lie to the Privy Council, but from the appellate division only might an appeal be brought by special leave to the Judicial Committee. It was also intimated that the occasions on which appeals could be allowed were

expected to be very rare indeed, as it was desired that the appellate division should in effect be the final appeal court for South Africa. It must, however, be remembered that the state of affairs in the Union is somewhat unusual—the law in force there is Roman-Dutch law, and the lawyers of the Union are familiar with the peculiar variety of that law which applies to the Union. Of the two ideals of the Commonwealth view in 1901, the first, that there should be one court only of appeal for the whole Empire, has been left in practically the same position as in 1901. The latter, the question of the addition of Colonial judges, has been dealt with piecemeal, and on the whole rather unsatisfactorily. The first step was taken in 1895, when by the *Judicial Committee Amendment Act, 1895*, it was rendered possible to add to the Privy Council not more than five persons being Privy Councillors who were also, or had been, Judges of the Supreme Court of the Dominion of Canada, or of any of the superior courts of the provinces, or Judges of the Supreme Courts of the Australasian Colonies, and the two South African Colonies, or other Colonies named by the King in Council. The number of five was only gradually made up: the Chief Justices of Canada, of the Cape, and of South Australia were appointed in 1897, and later, in 1904 and 1901, were added Sir H. E. Taschereau, the new Chief Justice of Canada, and Sir S. Griffith, the Chief Justice of Queensland. The places of the two older Canadian judges were taken by the appointment of Sir C. Fitzpatrick, Chief Justice of Canada from 1906, and of Sir E. Barton, of the High Court of Australia. But there was no provision in the Act for the payment of the judges, and as a result, though they might sit occasionally, that could only be on rare visits, when judges came to the United Kingdom on other business at their own expense or at the expense of the Government which they represented.—A. B. Keith, *Imperial unity and the dominions*, pp. 367-369, 372-374, 380-381.

Imperial federation proposals.—18TH CENTURY. There were a number of imperial proposals made in the eighteenth century. "Representation, an American Parliament, commercial union, a permanent arbitration board, and a Pan-British League, were all advanced; but nowhere, not even in the last plan was the principle of federation applied to the solution of the Imperial problem. Though, at the first glance, this may seem strange, yet it is easily explained. This idea, which dominates the Imperialism of the nineteenth century, was entirely absent from the eighteenth century movement, because of two great intervening changes: 1. Though as old as the Achaean League, the principle of federation was languishing in Europe. There were no outstanding examples of its application until it was revived in the American Constitution. Meanwhile the idea of liberty, which had been fermenting in French philosophical writings, was consecrated and desecrated by the Revolution. Men began to realize that liberty could be best secured under a system of federation, and this idea grew with the prosperity of the United States, where the greatest federal experiment in the history of the world was in operation. 2. The great development of the Empire rendered inevitable the concession of responsible self-government to the Colonies. This, together with the growth of the individual Colonies to such a size that they might claim to be regarded as equal members of the Empire rather than distant appendages, seemed to prepare the way for federation."—A. L. Burt, *Imperial architects, etc.*, pp. 101-102.

19TH CENTURY.—Many nineteenth century philosophers and patriots had given thought to a closer union of the empire and had clearly foreseen the advantages to be derived from better understanding and organization. The first step in practical politics was not taken, however, until 1884 when under the leadership of the Rt. Hon. W. E. Forster, former Secretary for Ireland, the *Imperial Federation League* was formed. Under Mr. Forster's influence and that of his successor Lord Rosebery the project grew. The conference of 1887 was summoned as a result of a suggestion made to the imperial government by the league. Lord Salisbury, the prime minister, received a deputation from the league in 1891 but declared it "an insult to summon a conference, and to have no proposition to make to them." A general election and a change of ministry interrupted the progress and in December, 1893, seven months after Mr. Gladstone, the new prime minister, had received a deputation the Imperial Federation League was dissolved on the grounds that it "had reached the limit of effective action." In 1895 the British Empire league took up the work along similar lines. The Imperial Federation League held its inaugural meeting at the Westminster Palace Hotel, London, in July, 1884, W. E. Forster presiding. "At that meeting—which was attended by a large number of members of Parliament of both parties, and representatives of the colonies—it was moved by the Rt. Hon. W. H. Smith: 'That, in order to secure the permanent unity of the Empire, some form of federation is essential.' That resolution was seconded by the Earl of Rosebery, and passed unanimously. In November of the same year the Imperial Federation League was formed to carry out the objects of that resolution; and the subject has received considerable attention since. . . . I believe all are agreed that the leading objects of the Imperial Federation League are to find means by which the colonies, the outlying portions of the Empire, may have a certain voice and weight and influence in reference to the foreign policy of this country, in which they are all deeply interested, and sometimes more deeply interested than the United Kingdom itself. In the next place, that measures may be taken by which all the power and weight and influence that these great British communities in Australasia, in South Africa, and in Canada possess shall be brought into operation for the strengthening and defence of the Empire. The discussion of these questions has led to a great deal of progress. We have got rid of a number of fallacies that obtained in the minds of a good many persons in relation to the means by which those objects are to be attained. Most people have come to the conclusion stated by Lord Rosebery at the Mansion House, that a Parliamentary Federation, if practicable, is so remote, that during the coming century it is not likely to make any very great advance. We have also got rid of the fallacy that it was practicable to have a common tariff throughout the Empire. It is not, in my opinion, consistent with the constitution either of England or of the autonomous colonies. The tariff of a country must rest of necessity mainly with the Government of the day, and involves such continual change and alteration as to make uniformity impracticable. . . . I regard the time as near at hand when the great provinces of Australasia will be confederated under one Government [they were, in 1901]. . . . When that has been done it will be followed, I doubt not, at a very early day, by a similar course on the part of South Africa [this was achieved on May 31, 1910], and then we shall stand in the position of

having three great dominions, commonwealths, or realms, or whatever name is found most desirable on the part of the people who adopt them—three great British communities, each under one central and strong Government. When that is accomplished, the measure which the Marquis of Lorne has suggested, of having the representatives of these colonies during the term of their office here in London, practically Cabinet Ministers, will give to the Government of England an opportunity of learning in the most direct and complete manner the views and sentiments of each of those great British communities in regard to all questions of foreign policy affecting the colonies. I would suggest that the representatives of those three great British communities here in London should be leading members of the Cabinet of the day of the country they represent, going out of office when their Government is changed. In that way they would always represent the country, and necessarily the views of the party in power in Canada, in Australasia, and in South Africa. That would involve no constitutional change; it would simply require that whoever represented those dominions in London should have a seat in their own Parliament, and be a member of the Administration."—C. Tupper, *Federating the empire (Nineteenth Century, Oct., 1891)*.—"Recent expensive wars at the Cape, annexations of groups of islands in the neighbourhood of Australia, the Fishery and other questions that have arisen, and may arise, on the North American continent, have all compelled us to take a review of our responsibilities in connection with our Colonies and to consider how far, in the event of trouble, we may rely upon their assistance to adequately support the commercial interests of our scattered Empire. It is remarkable that, although the matters here indicated are slowly coming to the surface, and have provoked discussion, they have not been forced upon the public attention suddenly, or by any violent injury or catastrophe. The review men are taking of our position, and the debates as to how best we can make our relationships of standing value, have been the natural outcome of slowly developing causes and effects. Politicians belonging to both of the great parties in the State have joined the Federation League. The leaders have expressly declared that they do not desire at the present moment to propound any definite theories, or to push any premature scheme for closer union of the Empire. The society has been formed for the purpose of discussing any plans proposed for such objects. The suggestions actually made have varied in importance from comprehensive projects of universal commercial union and common contributions for a world-wide military and naval organization, to such a trivial proposal as the personal recognition of distinguished colonists by a nomination to the peerage."—The Marquis of Lorne [ninth duke of Argyll], *Imperial federation, ch. 1.*—"Many schemes of federation have been propounded, and many degrees of federal union are possible. Lord Rosebery has not gone further, as yet, than the enunciation of a general principle. 'The federation we aim at (he has said) is the closest possible union of the various self-governing States ruled by the British Crown, consistent with that free development which is the birthright of British subjects all over the world—the closest union in sympathy, in external action, and in defence.' . . . The representation of the Colonies in the Privy Council has been viewed with favour, both by statesmen and by theoretical writers. Earl Grey has proposed [written, 1891] the appointment of a Federal Committee,

selected from the Privy Council, to advise with the Secretary of State for the Colonies. The idea thus shadowed forth has been worked out with greater amplitude of detail by Mr. Creswell, in an essay to which the prize offered by the London Chamber of Commerce was awarded. 'The Imperial assembly which we want,' says Mr. Creswell, 'must be an independent body, constitutional in its origin, representative in its character, and supreme in its decisions. Such a body we have already in existence in the Privy Council. Its members are chosen, irrespective of party considerations, from among the most eminent of those who have done service to the State. To this body colonists of distinguished public service could be elected. In constituting the Imperial Committee of the Privy Council, representation might be given to every part of the empire, in proportion to the several contributions to expenditure for Imperial defence.' The constitution of a great Council of the Empire, with similar functions in relation to foreign affairs to those which are exercised in the United States by a Committee of the Senate, is a step for which public opinion is not yet prepared. In the meanwhile the utmost consideration is being paid at the Foreign Office to Colonial feelings and interests. No commitments or engagements are taken which would not be approved by Colonial opinion. Another proposal which has been warmly advocated, especially by the Protectionists, is that for a customs-union between the Mother-country and the Colonies. It cannot be said that at the present time proposals for a customs-union are ripe for settlement, or even for discussion, at a conference of representatives from all parts of the empire. The Mother-country has been committed for more than a generation to the principle of Free-trade. By our policy of free imports of food and raw materials we have sn cheapened production that we are able to compete successfully with all comers in the neutral markets of the world. . . . It would be impossible to entertain the idea of a reversal of our fiscal policy, in however restricted a sense, without careful and exhaustive inquiry. . . . Lord Rosebery has recently declared that in his opinion it is impracticable to devise a scheme of representation for the Colonies in the House of Commons and House of Lords, or in the Privy Council. The scheme of an Imperial customs-union, ably put forward by Mr. Hofmyer [of South Africa] at the last Colonial Conference [1887], he equally rejects. Lord Rosebery would limit the direct action of the Imperial Government for the present to conferences, summoned at frequent intervals. Our first conference was summoned by the Government at the instance of the Imperial Federation League. It was attended by men of the highest distinction in the Colonies. Its deliberations were guided by Lord Knutsford . . . ; it considered many important questions of common interest to the different countries of the empire; it arrived at several important decisions, and it cleared the air of not a few doubts and delusions. The most tangible, the most important, and the most satisfactory result of that conference was the recognition by the Australian colonies of the necessity for making provision for the naval defence of their own waters by means of ships, provided by the Government of the United Kingdom, but maintained by the Australian Governments. Lord Rosebery holds that the question of Imperial Federation depends for the present on frequent conferences . . . he laid down the conditions essential to the success of conferences in the future. They must be held periodically and at stated intervals.

The Colonies must send the best men to represent them. The Government of the Mother-country must invest these periodical congresses with all the authority and splendour which it is in their power to give. The task to be accomplished will not be the production of statutes, but the production of recommendations. Those who think that a congress that only meets to report and recommend has but a neutral task before it, have a very inadequate idea of the influence which would be exercised by a conference representing a quarter of the human race, and the immeasurable opulence and power that have been garnered up by past centuries of our history. If we have these conferences, if they are allowed to discuss, as they must be allowed to discuss, all topics which any parties to these conferences should recommend to be discussed, Lord Rosebery cannot apprehend that they would be wanting in authority or in weight. Lord Salisbury in his speeches recently delivered [written, 1801] in reply to the Earl of Dunraven in the House of Lords, and in reply to the deputation of the Imperial Federation League at the Foreign Office, has properly insisted on the chief practical obstacle to a policy of frequent conferences. Attendance at conferences involves grave inconvenience to Colonial statesmen. . . . In appealing to the Imperial Federation League for some practical suggestions as to the means by which the several parts of the British Empire may be more closely knit together, Lord Salisbury threw out some pregnant hints. To make a united empire both a Zollverein and a Kriegsverein must be formed. In the existing state of feeling in the Mother-country a Zollverein would be a serious difficulty. The reasons have been already stated. A Kriegsverein was, perhaps, more practicable, and certainly more urgent. The space which separates the Colonies from possible enemies was becoming every year less and less a protection. We may take concerted action for defence without the necessity for constitutional changes which it would be difficult to carry out."—T. Brassey, *Imperial federation: An English view (Nineteenth Century, Sept., 1801)*.—"The late Mr. Forster launched under the high-sounding title of the 'Imperial Federation League,' a scheme by which its authors proposed to solve all the problems attending the administration of our colonial empire. From first to last the authors of this scheme have never condescended on particulars. 'Imperial federation,' we were always told, was the only specific against the disintegration of the Empire, but as to what this specific really was, no information was vouchsafed. . . . It is very natural that the citizens of a vast but fragmentary empire, whose territorial atoms (instead of forming, like those of the United States, a 'ring-fence' domain) are scattered over the surface of the globe, should cast about for some artificial links to bind together the colonies we have planted, and 'the thousand tribes nourished on strange religions and lawless slaveries' which we have gathered under our rule. This anxiety has been naturally augmented by a chronic agitation for the abandonment of all colonies as expensive and useless. For though there may be little to boast of in the fact that Great Britain has in the course of less than three centuries contrived by war, diplomacy, and adventure, to annex about a fifth of the globe, it can hardly be expected that she should relinquish without an effort even the nominal sway she still holds over her colonial empire. Hence it comes to pass that any scheme which seems to supply the needed links is caught up by those who, possessing slight acquaintance with the past history or the present

aspirations of our colonists, are simply looking out for some new contrivance by which they may hope that an enduring bond of union may be provided. 'Imperial federation' is the last new 'notion' which has cropped up in pursuance of this object. . . . Some clue . . . to its objects and aims may be gained by a reference to the earliest exposition by Mr. Forster of his motives contained in his answer five years ago to the question, 'Why was the League formed at all?' 'For this reason,' says Mr. Forster, 'because in giving self-government to our colonies we have introduced a principle which must eventually shake off from Great Britain, Greater Britain, and divide it into separate states, which must, in short, dissolve the union unless counteracting measures be taken to preserve it.' Believing, as we do, that it has only been by conceding to our larger groups of colonies absolute powers of self-government that we have retained them at all, and that the secret of our protracted empire lies in the fact of this abandonment of central arbitrary power, the retention of which has caused the collapse of all the European empires which preceded us in the path of colonisation, we are bound to enter our emphatic protest against an assumption so utterly erroneous as that propounded by Mr. Forster. So far from believing that the permanent union of the British Empire is to be secured by 'measures which may counteract the workings of colonial self-government,' we are convinced that the only safety for our Empire lies in the unfettered action of that self-government which we have ourselves granted to our colonies. It would almost seem that for Lord Rosebery and his fellow workers the history of the colonial empires of Portugal, Spain, Holland, and France had been written in vain. For if we ask why these colonial empires have dwindled and decayed, the answer is simply because that self-government which is the life of British colonies was never granted to their dependencies. There was a time when one hundred and fifty sovereign princes paid tribute to the treasury of Lisbon. For two hundred years, more than half the South American continent was an appanage of Spain. Ceylon, the Cape, Guiana, and a vast cluster of trade factories in the East were at the close of the seventeenth century colonies of Holland; while half North America, comprising the vast and fertile valleys of the St. Lawrence, the Mississippi, and the Ohio, obeyed, a little more than a century ago, the sceptre of France. Neither Portugal, nor Spain, nor Holland, nor France, has lacked able rulers or statesmen, but the colonial empire of all these states has crumbled and decayed. The exceptional position of Great Britain in this respect can only be ascribed to the relinquishment of all the advantages, political and commercial, ordinarily presumed to result to dominant states from the possession of dependencies. . . . The romantic dreams of the Imperial Federation League were in fact dissipated beforehand by the irrevocable grant of independent legislatures to all our most important colonies, and Lord Rosebery may rest assured that, charm he never so wisely, they will not listen to his blandishments at the cost of one iota of the political privileges already conferred on them."—*Imperial federation* (Edinburgh Review, July, 1889).—"Britannic Confederation" is defined to be an union of 'the United Kingdom of Great Britain and Ireland, British North America, British South Africa, and Australasia.' The West Indies and one or two other British Dependencies seem here to be shut out; but, at any rate, with this definition we at least know where we are. The terms of the union we are not told; but, as the

word 'confederation' is used, I conceive that they are meant to be strictly federal. That is to say, first of all, the Parliament of the United Kingdom will give up its right to legislate for British North America, British South Africa, and Australasia. Then the United Kingdom, British North America, British South Africa and Australasia will enter into a federal relation with one another. They may enter either as single members (States or Cantons) or as groups of members. That is, Great Britain and Ireland might enter as a single State of the Confederation, or England, Scotland, Ireland, Wales—or possibly smaller divisions again—might enter as separate States. Or Great Britain, Australia, Canada, &c., might enter as themselves Leagues, members of a greater League, as in the old state of things in Graubünden. I am not arguing for or against any of these arrangements. I am only stating them as possible. But whatever the units are to be—Great Britain and Australia, England and Victoria, or anything larger or smaller—it the confederation is to be a real one, each State must keep some powers to itself, and must yield some powers to a central body. That Central body, in which all the States must be represented in some way or other, will naturally deal with all international matters, all matters that concern the Britannic Confederation as a whole. The legislatures of Great Britain and Australia, England and Victoria, or whatever the units fixed on may be, will deal only with the internal affairs of those several cantons. Now such a scheme as this is theoretically possible. That is, it involves no contradiction in terms, as the talk about Imperial Federation does. It is purely federal; there is nothing 'imperial' about it. It is simply applying to certain political communities a process which has been actually gone through by certain other political communities. It is proposing to reconstruct a certain political constitution after the model of certain other political constitutions which are in actual working. It is therefore something better than mere talk and theory. But, because it is theoretically possible, it does not follow that it is practically possible, that is, that it is possible in this particular case. . . . Of the federations existing at this time the two chief are Switzerland and the United States of America. They differ in this point, that one is very large and the other very small; they agree in this, that the territory of both is continuous. But the proposed Britannic Confederation will be scattered, scattered over every part of the world. I know of no example in any age of a scattered confederation, a scattered Bundesstaat. The Hanse Towns were not a Bundesstaat; they were hardly a Staatenbund. Of the probable working of such a body as that which is now proposed the experience of history can teach us nothing; we can only guess what may be likely. The Britannic Confederation will have its federal congress sitting somewhere, perhaps at Westminster, perhaps at Melbourne, perhaps at some Washington called specially into being at some point more central than either. . . . For a while their representatives will think it grand to sit at Westminster; presently, as the spirit of equality grows, they are not unlikely to ask for some more central place; they may even refuse to stir out of their own territory. That is to say, they will find that the sentiment of national unity, which they undoubtedly have in no small measure, needs some physical and some political basis to stand on. It is hard to believe that States which are united only by a sentiment, which have so much, both political and physical, to keep them asunder, will be kept to-

gether for ever by a sentiment only. And we must further remember that that sentiment is a sentiment for the mother-country, and not for one another. . . . Canada and Australia care a great deal for Great Britain; we may doubt whether, apart from Great Britain, Canada and Australia care very much for one another. There may be American States which care yet less for one another; but in their case mere continuity produces a crowd of interests and relations common to all. We may doubt whether the confederation of States so distant as the existing colonies of Great Britain, whether the bringing them into closer relations with one another as well as with Great Britain, will at all tend to the advance of a common national unity among them. We may doubt whether it will not be likely to bring out some hidden tendencies to disunion among them. . . . In the scattered confederation all questions and parties are likely to be local. It is hard to see what will be the materials for the formation of great national parties among such scattered elements."—E. A. Freeman, *Physical and political bases of national unity, (Britannic Confederation, ed. by A. S. White)*.

20TH CENTURY.—That the federal idea still survives and is gathering strength is evidenced by a meeting of the *Empire Parliamentary Association* held in Westminster Hall, London, on December 15, 1919. The Speaker of the House of Commons, J. W. Lowther, presided over the gathering, which was attended by several colonial statesmen. A. J. Balfour, lord president of the council in the cabinet, delivered the following address:

"There are periods in the life of every individual and of every community in which events seem to hurry so fast that what might normally take a quarter of a century is got through in comparatively a few years or months. That is the case with the British Empire. The five years of war have produced consequences, mostly very bad consequences, in every part of the world. They have touched almost every interest concerned—commercial, domestic, as well as naval and military—and one of the things they have touched is the relation between our Dominions and ourselves. I do not believe there is a single politician or Minister on the Continent who for one moment supposed before the war that in moments of great national crises the Dominions would count themselves as, for every purpose, one with the Mother country, and who would be prepared with public spirit, with enthusiasm, and with a courage unsurpassed in the history of the world to throw themselves into the common cause. That is precisely the sort of event which those who pride themselves on their knowledge of human nature—by which they mean the selfish and unidealistic side of human nature—never can be brought to believe until it comes to pass. So, however, it has been, and if the British Empire, if this group of free democracies had never existed for any other purpose than that of fighting a great war it would not have existed in vain. Now, there can be no question. I think that the result of this common partnership in great perils and sacrifices is going to act as a bond of glorious memory between the different parts of the Empire for all time. But do not let us exaggerate all that we have gained by the unity of a great effort. Let us remember that in national life as well as in individual life moments of prodigious strain are always followed by some discouragement and reaction. Moreover, the difficulty which has constantly been present to the statesmen both in the Dominions and at home for a generation or more is still with us—the difficulty

of finding some organization which shall increase unity of action and unity of sentiment and shall not interfere with the absolute autonomy of the great constitutional elements of this great community of nations. It is inevitable that the difficulty of treating a community of five democracies as though they were one must become accentuated when, as in Paris, for example, or during the war, common action is required for all. It is a miracle of statesmanship on the part of the Prime Ministers of these various communities that this common action has been effectively attained. I have no doubt our friends and colleagues at the Conference have sometimes felt that to deal with five Powers, as if they were one, produced occasionally some difficulties and some delays; but on the whole they have accepted without qualification the situation and have acted upon it, and they are so conscious of all they have gained by the unity of the British Empire that they certainly did their best to help all those members of the Empire when they desired to join in common action. We have this magnificent performance behind us, fresh in our memories, and the question is, How are we to perpetuate all the good that has already accrued to us? How are we to avoid the ills of that period of reaction—of which I see no signs, but which I anticipate on general grounds—when that period of reaction sets in?"—Continuing the discussion, Colonel Amery, M. P., under-secretary for the colonies, said that the ultimate unity of the empire could only rest on the basis of complete equality of status in each truly governed part of it. The solution of that problem would involve great constitutional changes, and he was convinced that they could devise no new constitutional framework unless they got the men to understand how to work it and how to work with each other. The Speaker of the House of Commons then informed the meeting that he had been engaged lately in a task . . . connected with the question of devolution. . . . If that scheme should be adopted there was no doubt it would be the first stage towards the object which many members of the association and of the Oversea Dominion Parliaments had in view—namely, a federation of the Parliaments of the British Empire. That was still a very long way off, but it was an object which, he thought, they should keep before them. The difficulties of solution were very great; they were immense, but it was one at which they should aim.—Based on *The Times (London)*, Dec. 16, 1919.—See also NEW ZEALAND: 1916-1921; SUPFRAGE, MANHOOD: British empire. 1921.

CITIZENSHIP AND NATURALIZATION

It is understood that before long the whole subject of the naturalization of aliens, which is generally considered as unduly lax, is to be reviewed and overhauled. At present the law is laid down in the British Nationality and Status of Aliens Acts, 1914 and 1918, which consolidated and amended the previous laws as from January 1, 1915. It may be pointed out that, as the law now stands, there is no uniform code of naturalization for the British empire. Certificates granted are local in their operation and do not necessarily naturalize the holder in other parts of the dominions, the latter not being bound to recognize a cer-

tificate granted elsewhere.—“It was natural that with a growing sense of nationhood there should arise a growing sense that there should be one common naturalization for the whole Empire. The naturalization law was considered in great detail by a Committee in 1901, and many of its defects were rendered obvious. A district movement towards final agreement with regard to the matter was made at the Colonial Conference of 1907, when the question was dealt with in some detail, and the outlines of the proposed new legislation considered. It was realized on all sides that the fundamental root of the difficulty was the absolute separation of the two kinds of naturalization: The British naturalization could only be obtained either by service under the Crown or by residence in the United Kingdom, while the Dominion naturalization was restricted to cases where the residence had taken place in the Dominion. No length of mere residence in a Dominion, despite naturalization there, as the law stood would be of the slightest aid to a man in becoming naturalized in the United Kingdom, but, like any newly-arrived alien he would have to reside for five years and declare his intention to continue to reside or to serve abroad under the Crown. . . . Finally, agreement was reached, and the Imperial *British Nationality and Status of Aliens Act, 1914*, deals with the question on the agreed basis. It provides for the grant by the Secretary of State of a certificate of naturalization to any alien on proof of five years' residence in the British Dominions in the eight years preceding his application and one year's immediately preceding residence in the United Kingdom, or, in lieu, five years' service under the Crown. An applicant must be of good character and have an adequate knowledge of the English language, and must intend either to reside in the British dominions or to serve under the Crown. In the case of a woman whose alienage is due to marriage, and whose husband is dead or is divorced from her, the period of residence may be dispensed with, and in any special case the rule regarding the limitation of eight years may be relaxed. A person thus naturalized is given all the privileges of a natural-born British subject, the few restrictions on the rights of naturalized aliens preserved by the Act of Settlement being abolished. The name of a minor child may be included in the certificate granted to an alien, but such a child may renounce British nationality within a year of attaining full age, and in any case the Secretary of State may grant a certificate to a minor if he sees fit. Any certificate issued may be revoked if granted on false representations or fraud. The powers of the Secretary of State to grant a certificate may be exercised by the Government of any British possession on the same terms *mutatis mutandis*, and with the addition that, where another language is recognized as being on the same official footing as English, that language may be accepted as an alternative to English, as is the case with French in Quebec, and Dutch in the Union of South Africa. Any certificate so granted shall have the same effect as one granted by the Secretary of State. But the legislative authority of the Dominions is preserved by the enactment that this part of the Act and any certificate of naturalization granted under it shall not have effect within any of the Dominions enjoying self-government unless it is adopted by the Dominion legislature. Such adoption may be rescinded by the legislature, but without prejudice to legal rights existing at the time of rescission, and in adopting the Act the legislature may make provision as to how the powers of the Govern-

ment are to be exercised. The Act further lays down—and this generally and without reference to legislation by the Dominion—rules for the nationality of British subjects. A natural-born British subject includes any person born within His Majesty's dominions and allegiance, but excluding the child of a foreign ambassador who owes no allegiance; and a person born out of His Majesty's dominions whose father was a British subject at the time of his birth and either was born within His Majesty's allegiance, or was a person to whom a certificate of naturalization was granted; and any person born on board a British ship, whether in foreign territorial waters or not. It is expressly provided that the child of a British subject, whether born before or after the passing of the Act, is to be deemed to have been born within the allegiance if born in a place where the Crown exercises extra-territorial jurisdiction, and that a person born on a foreign ship in British territorial waters shall not by that mere fact acquire British nationality. These two provisions are new: the first covers the case of children of British subjects in protectorates and in places like Turkey, where there is a resident British community of old standing. . . . The Act is of great importance for many reasons. It was passed with the full assent of the Dominion Parliaments and Governments, and it is expressed in large measure in terms which show that it applies without adoption by the Dominion Parliaments to the whole Empire. Indeed, it is a little difficult to see why the special case of naturalization should have been selected for Imperial legislation only to have effect with Dominion concurrence, were it not for the fact that British nationality generally had not been the subject of any Dominion legislation, and, as a Dominion is a dependency, it may be that no legislature in a Dominion would have been able to legislate so as to deprive a natural-born British subject of his nationality, though it might deprive him of all civil rights of every kind. . . . While British nationality is in one sense indivisible, there is an inevitable tendency to make a distinction between British subjects in regard to their connexion with the United Kingdom or a Dominion. The term British is often applied in the Dominions to a native of the United Kingdom, and the terms Canadian, Australian, New Zealander, South African, and Newfoundland, are regularly applied to the classes of British subjects born in these Dominions, or identified with them by residence. . . . Nor is this practical distinction of everyday life without a result in law. In the case of the Commonwealth the power of the Parliament is confined to immigration, and, by reason of the division of powers between the States and the Commonwealth, it is not open for the Commonwealth Parliament to make of immigration a term of vague meaning sufficient to cover any person entering a State of the Commonwealth. It has definitely and very properly, it would seem, been held by the High Court of the Commonwealth that a man cannot be an immigrant if he is a native of Australia, so that while an Australian law can shut out from entry an ordinary British subject it cannot shut out an Australian British subject, and this connexion would of course include any person domiciled in Australia, for such a person cannot be held to be an immigrant by any effort of the imagination. It is true that the Privy Council have laid it down that an alien has no right enforceable by law to enter a British Dominion, but the right of the coloured British immigrant is in all the Dominions, save Newfoundland, where he

does not want to go, as nugatory as that of the alien, and in point of fact the alien is admitted in many cases freely where the British Indian is rejected. Even the alien Japanese has a distinct preference *de facto* over the Indian in Canada, though it must be noted that this preference is due to the inability of the Government of India to adopt the same rules of restricting emigration from that country as the Japanese Government finds it possible to do in the case of the emigration of her subjects. While the advantages flowing from British nationality to inhabitants of the Dominions are very considerable, it can hardly be said that British nationality in itself confers upon any British subject in the Dominions any special rights. The express provisions of the *British Nationality and Status of Aliens Act, 1914*, allow any Dominion or State or Provincial Legislature and Government to exercise any rights they choose in the differential treatment of British subjects, and, unless the wording of the Act is strained, seems even to confer on all aliens a right as to personal property which is not conferred on all British subjects. In point of fact, moreover, it is impossible to deny that the Dominions treat various classes of aliens better than they do British subjects. From the unity of British nationality certain advantages are derived by the inhabitants of the oversea Dominions, such as the protection of the British power in the other States of the world, the free right of entry into the United Kingdom, and full political rights in that country. They also derive a somewhat remarkable advantage which has perhaps not always been realized. In the modern treaties of commerce and navigation no less than in older documents it is the custom to make express stipulations for personal rights of various kinds. Thus, to take a modern case, the treaty with Japan of 1911 assures to those entitled to its benefits the same rights as native citizens as regards entry and residence, and the carrying of commerce, manufacture, and trade, most favoured nation treatment in the matter of the pursuit of industries, professions, and trade, permission to own and hire premises and warehouses, and to lease lands, to have full access to the law courts on the same conditions as native subjects, and to enjoy exemption from military service, forced loans, and military requisitions, except such as are imposed on native owners of immovable property. . . . These personal privileges as opposed to such privileges as are directly connected with goods such as the duties to be levied on goods on entry are held to accrue to every British subject, wherever he may have been born or he domiciled, even although the Dominion in which he was born or is domiciled may not have been brought under the operation of the treaty at all, as, in the case of the Japanese treaty, is the position as regards Australia, New Zealand, and the Union of South Africa."—A. B. Keith, *Imperial unity and the Dominions*, pp. 247-248, 251-252.

COLONIAL AND IMPERIAL CONFERENCES, AND EMPIRE PROBLEMS

1887.—Colonial conference at London.—"An imperial conference, composed of delegates from all the self-governing Colonies, was held at the Foreign Office under the presidency of Sir Henry Holland, and was addressed at its first sitting (April 4) by Lord Salisbury. The Prime Minister offered to the delegates the hearty welcome of the Government and of the country. He deprecated 'all ambitious schemes of constitution-making,' though he held the aspiration for federation to be

'the nebulous matter which, in the course of ages, would cool down into material and practical results.' For the present, however, the task was to form neither a general Union nor a Zollverein, but a *Kriegsverein*—a combination for purposes of self-defence. So great was the advance in the power of making distant combinations, owing to the progress of modern science, that even if the Colonies were independent States, they would not be safe. They occupied some of the fairest and most desirable portions of the earth's surface; the desire for colonies had greatly increased, and, unless defended, they might be menaced with sudden attack. Their permanent interest, therefore, was to organise means of defence, to prepare men as well as money, and to the utmost of their means to strengthen the capacity of the Empire for defending them. 'The desire for colonial and foreign possessions,' Lord Salisbury remarked, 'is increasing among the nations of Europe. The power of concentrating military and naval forces is increasing under the influence of scientific progress. Put all those things together and you will see that the colonies have a real and genuine interest in the shield which their Imperial connection throws over them, and that they have a ground for joining with us in making the defences of the Empire secure—a ground which is not purely sentimental, and which does not rest merely on their attachment to this country, but which is based on the most solid and reasonable foundations of self-interest and security.'—*Annual Register, 1887, p. 127*.—"The meeting was summoned for friendly discussion for consulting, not for binding, the different governments in any way, and a large number of subjects were considered, a notable feature being a motion by Mr. Hofmeyr, one of the Cape representatives and 'of Dutch descent 'to discuss the feasibility of promoting a closer union between the various parts of the British Empire by means of Imperial tariff of customs to be levied independently of the duties payable under existing tariffs, on goods entering the Empire from abroad, the revenue derived from such tariff to be devoted to the general defence of the Empire.'"—*Oxford Survey, p. 50*.

1894.—Colonial conference at Ottawa.—On the invitation of the Dominion government a colonial conference was held at Ottawa for the purpose of discussing the question of trade and communication between the colonies and the mother country. Delegates attended from New South Wales, Victoria, Queensland, South Australia, Tasmania, New Zealand and from the Cape Colony. Important resolutions were passed urging the removal of legislative or treaty obstacles to preferential tariff treatment within the empire, the establishment of a mail service between Great Britain and Australasia, via Canada, and the connection of Canada and Australasia by a cable under British control.

1897.—Colonial conference at London.—"Three years after the meeting at Ottawa, the celebration of the sixtieth year of the reign of Queen Victoria brought the third Colonial Conference. The prime ministers of all the self-governing colonies were invited to be present at the celebration as royal guests, and their presence in London was made the occasion for a Conference, presided over by Mr. Joseph Chamberlain, who was Secretary of State for the Colonies. Canada, the six Australian colonies, New Zealand, the Cape Colony, Natal, and Newfoundland were all represented by their prime ministers. Political relations, commercial questions, and defence, all received attention. A resolution was passed in favor of denouncing at

the earliest convenient time any treaties which hampered the freedom of commercial relations between Great Britain and her colonies by conceding to a foreign country most favoured-nation treatment, and this resolution led shortly afterward to the denunciation of the commercial treaties with Germany and Belgium. Another resolution suggested preference to the products of the United Kingdom in the markets of the colonies 'in the hope of improving the trade relations between the mother country and the colonies.' The all-important question of the exclusion of coloured immigrants from the self-governing colonies was discussed; and so was also the question of closer political union between the self-governing colonies and the mother country, involving on the one hand participation by the colonies in the direction of imperial policy and on the other proportionate contribution to imperial expenditure. Federation of colonies geographically coterminous was favoured; which expression of opinion was followed in three years' time by the passing of the Act constituting the Commonwealth of Australia. Much prominence was given to naval matters. The First Lord of the Admiralty attended the Conference and made a statement as to naval defence; while the Prime Minister of the Cape offered on behalf of his government a contribution to the Royal Navy in the form of the cost of a first-class battleship—an offer for which an annual payment was subsequently substituted. This Conference of 1897 more nearly approximated than the previous conferences to the form which the Imperial Conference has now taken, each colony being represented by its Prime Minister, all classes of subjects being discussed and a general agreement being arrived at that similar meetings should be held periodically."—*Oxford Survey*, pp. 52-53.—The colonial premiers also took this opportunity to hold a postal conference which resulted in the establishment of an imperial penny postage.

1898 (December).—Imperial penny postage.—On Christmas Day, 1898, the imperial penny postage came into operation,—i. e., it became possible to send for a penny a letter not above half an ounce in weight to all places in the British empire, except the Australasian colonies and the Cape. "Thousands of small orders and business transactions and millions of questions and answers will fly round the world at a penny which were too heavily weighted at twopence halfpenny. The political effect of the fact that it will not now be necessary to think whether an address is outside the United Kingdom, but only whether it is inside the British Empire, will be by no means insignificant. If people will only let the Empire alone we shall ultimately weave out of many varied strands—some thick, some thin—a rope to join the Motherland and the Daughter States which none will be able to break. Not an unimportant thread in the hawser will be,—letters for a penny wherever the Union Jack is flown."—*Spectator*, London, Dec. 31, 1898.

1902.—Conference at London with the prime ministers of the self-governing colonies.—Address of the colonial secretary, Joseph Chamberlain.—Results of the conference.—Taking advantage of the presence in London of the prime ministers of the various self-governing colonies of Britain, on the occasion of the coronation of King Edward VII, a conference with them, touching questions of general interest, was arranged by the secretary of state for the colonies, Joseph Chamberlain, in meetings which extended from June to August, 1902. The proceedings were confidential, and no report of discussions made public; but the

resulting resolutions, together with the opening address of the colonial secretary, and certain statements on subjects considered, are printed in a parliamentary paper (Cd. 1209) from which the following account of the conference is derived:

Mr. Chamberlain in his address argued strongly and with feeling for a political federation of the empire.

He said: "We have had, within the last few years, a most splendid evidence of the results of a voluntary union without any formal obligations, in the great crisis of the [South African] war through which we have now happily passed. The action of the self-governing Colonies in the time of danger of the motherland has produced here a deep and a lasting impression. . . I feel, therefore, in view of this it would be a fatal mistake to transform the spontaneous enthusiasm which has been so readily shown throughout the Empire into anything in the nature of an obligation which might be at this time unwillingly assumed or only formally accepted. The link which unites us, almost invisible as it is sentimental in its character, is one which we would gladly strengthen, but at the same time it has proved itself to be so strong that certainly we would not wish to substitute for it a chain which might be galling in its incidence. And, therefore, upon this point of the political relations between the Colonies and ourselves, His Majesty's Government, while they would welcome any approach which might be made to a more definite and a closer union, feel that it is not for them to press this upon you. The demand, if it comes, and when it comes, must come from the Colonies. If it comes it will be enthusiastically received in this country.

"And in this connection I would venture to refer to an expression in an eloquent speech of my right honorable friend, the Premier of the Dominion of Canada—an expression which has called forth much appreciation in this country, although I believe that Sir Wilfrid Laurier has himself in subsequent speeches explained that it was not quite correctly understood. But the expression was, 'If you want our aid call us to your councils.' Gentlemen, we do want your aid. We do require your assistance in the administration of the vast Empire, which is yours as well as ours. The weary Titan staggers under the too vast orb of its fate. We have borne the burden for many years. We think it is time our children should assist us to support it, and whenever you make the request to us, be very sure that we shall hasten gladly to call you to our councils. If you are prepared at any time to take any share, any proportionate share, in the burdens of the Empire, we are prepared to meet you with any proposal for giving to you a corresponding voice in the policy of the Empire. . . ." On the subject of imperial defence, the result of the conference was an agreement from Australia and New Zealand to increase their contribution towards an improved Australasian squadron and the establishment of a branch of the royal naval reserve to £200,000 a year for the former and £40,000 for the latter; an agreement from Cape Colony and Natal to contribute £50,000 and £35,000 per annum respectively toward the general maintenance of the navy, and a pledge from Newfoundland of £3000 per annum toward a branch of the royal naval reserve. From Canada no agreement was reported. In a *Memorandum by the First Lord of the Admiralty* of interviews held with the several premiers it is said: "Sir Wilfrid Laurier informed me that His Majesty's Government of the Dominion of Canada are contemplating the establishment of a local Naval force

in the waters of Canada, but that they were not able to make any offer of assistance analogous to those enumerated above."

Concerning preferential trade, the following resolutions were adopted:

"1. That this conference recognises that the principle of preferential trade between the United Kingdom and his majesty's dominions beyond the seas would stimulate and facilitate mutual commercial intercourse, and would, by promoting the development of the resources and industries of the several parts, strengthen the empire.

"2. That this conference recognises that, in the present circumstances of the colonies, it is not practicable to adopt a general system of free trade as between the mother country and the British dominions beyond the seas.

"3. That with a view, however, to promoting the increase of trade within the empire, it is desirable that those colonies which have not already adopted such a policy should, as far as their circumstances permit, give substantial preferential treatment to the products and manufactures of the United Kingdom.

"4. That the prime ministers of the colonies respectfully urge on his majesty's government the expediency of granting in the United Kingdom preferential treatment to the products and manufactures of the colonies either by exemption from or reduction of duties now or hereafter imposed.

"5. That the prime ministers present at the conference undertake to submit to their respective governments at the earliest opportunity the principle of the resolution and to request them to take such measures as may be necessary to give effect to it."

The prime ministers of the colonies also stated the extent to which they were prepared to recommend to their several parliaments a preferential treatment of British goods: The premier of Canada would propose to continue the existing preference of 33 1/3 per cent., and an additional preference on lists of selected articles—(a) by further reducing the duties in favor of the United Kingdom; (b) by raising the duties against foreign imports; (c) by imposing duties on certain foreign imports now on the free list. In New Zealand the recommendation would be of a general preference by 10 per cent., or an equivalent in respect of lists of selected articles on the lines proposed by Canada. At the cape and Natal a preference of 25 per cent. would be advised, or its equivalent given by increasing duties on foreign imports. The recommendation in Australia would also be of a preferential treatment not then defined. A resolution was adopted favoring future conferences at intervals not exceeding four years. Other resolutions recommended that a preference be given to products of the empire in all government contracts, imperial or colonial; that the privileges of coast-wise trade within the empire be refused to countries in which the corresponding trade is confined to ships of their own nationality; that a mutual protection of patents within the empire be devised; that the principle of cheap postage between the different parts of the empire on all newspapers and periodicals published therein be adopted; that the metric system of weights and measures be adopted throughout the empire.—See also ENGLAND: 1903 (May-September).

1907.—Conference of imperial and colonial ministers at London.—Formulation of the constitution of the conference, to be known as the Imperial Conference.—Discussion of preferential trade, imperial defense, and other subjects.—Resolutions adopted.—According to the resolution

adopted by the colonial conference of 1902, the next conference should have been held in 1906, but by agreement of all parties it was deferred until the following year. In the interval, a protracted correspondence occurred between the colonial office and the governments of the several states federated in the commonwealth of Australia, each of which claimed representation in the conference by its own ministers, and protested against the sufficiency of the representation that would be given to it by the general government of the commonwealth. The "state rights" doctrine received no encouragement, however, and only the premier of the commonwealth, Mr. Deakin, and one of the members of his cabinet, took part in the conference, which held its first meeting in London on April 15 and its final one on May 14.

At the first meeting there were present, as representatives of the imperial government, the prime minister, Sir Henry Campbell-Bannerman, the secretary of state for the colonies, the earl of Elgin, in the chair, and several other members of the cabinet and officials of the administration. The premiers of the self-governing colonies, excepting Sir Robert Bond, of Newfoundland, who arrived a few days later, were all in attendance,—namely, Sir Wilfrid Laurier, of Canada, the Hon. Alfred Deakin, of Australia, the Hon. Sir J. G. Ward, of New Zealand, Dr. L. S. Jameson, of Cape Colony, the Hon. F. R. Moor, of Natal, and General Louis Botha, of the Transvaal. At the second session of the conference resolutions brought forward by the governments of Australia and New Zealand, proposing to give the character of an imperial council to the conference, and a resolution from the government of Cape Colony on the subject of imperial defence, together with a draft resolution concerning the constitution of the conference which the chairman, Lord Elgin, submitted, were discussed, without action taken. The discussion was continued at the third and fourth meetings, and the resolution proposed by the secretary of state for the colonies, being amended in some particulars, was adopted at the end, as follows: "That it will be to the advantage of the empire if a conference to be called the Imperial Conference is held every four years at which questions of common interest may be discussed and considered as between his majesty's government and his governments of the self-governing dominions beyond the seas. The prime minister of the United Kingdom will be *ex officio* president, and the prime ministers of the self-governing dominions *ex officio* members of the conference. The secretary of state for the colonies will be an *ex officio* member of the conference and will take the chair in the absence of the president. He will arrange for such Imperial Conferences after communication with the prime ministers of the respective dominions. Such other ministers as the respective governments may appoint will also be members of the conference—it being understood that, except by special permission of the conference, each discussion will be conducted by not more than two representatives from each government, and that each government will have only one vote. That it is desirable to establish a system by which the several government represented shall be kept informed during the periods between the conferences in regard to matters which have been or may be subjects for discussion, by means of a permanent secretarial staff charged under the direction of the secretary of state for the colonies with the duty of obtaining information for the use of the conference, of attending to its resolutions, and of conducting correspondence on matters relating to its affairs. That upon mat-

ters of importance requiring consultation between two or more governments which cannot conveniently be postponed until the next conference, or involving subjects of a minor character or such as call for detailed consideration, subsidiary conferences should be held between representatives of the governments concerned specially chosen for the purpose."

On the subject of imperial defense, which was then taken up, and in the discussion of which the secretary of state for war took part, the following resolutions were approved: "That the colonies be authorized to refer to the Committee of Imperial Defence through the secretary of state for advice and local questions in regard to which expert assistance is deemed desirable. That whenever so desired, a representative of the colony which may wish for advice should be summoned to attend as a member of the committee during the discussion of the questions raised. That this conference welcomes and cordially approves the exposition of general principles embodied in the statement of the secretary of state for war, and, without wishing to commit any of the governments represented, recognizes and affirms the need of developing for the service of the empire a general staff, selected from the forces of the empire as a whole, which shall study military science in all its branches, shall collect and disseminate to the various governments military information and intelligence, shall undertake the preparation of schemes of defence on a common principle, and without in the least interfering in questions connected with command and administration, shall at the request of the respective governments advise as to the training, education, and war organization of the military forces of the crown in every part of the empire." [See WAR, PREPARATION FOR: 1907-1909: British territorial force.] At subsequent meetings the following resolutions were adopted or accepted: On the subject of emigration: "That it is desirable to encourage British emigrants to proceed to British colonies rather than foreign countries. That the imperial government be requested to cooperate with any colonies desiring immigrants in assisting suitable persons to emigrate." On the subject of judicial appeals: The conference "agreed to the following finding: The resolution of the commonwealth of Australia, 'That it is desirable to establish an Imperial Court of Appeal,'" was submitted and fully discussed. The resolution submitted by the government of Cape Colony was accepted, amended as follows: "This conference, recognizing the importance to all parts of the empire of the appellate jurisdiction of his Majesty the King in Council, desires to place upon record its opinion—(1) That in the interests of his majesty's subjects beyond the seas it is expedient that the practice and procedure of the Right Honourable the Lords of the Judicial Committee of the Privy Council be definitely laid down in the form of a code of rules and regulations. (2) That in the codification of the rules regard should be had to the necessity for the removal of anachronisms and anomalies, the possibility of the curtailment of expense, and the desirability of the establishment of courses of procedure which would minimize delays. (3) That, with a view to the extension of uniform rights of appeal to all colonial subjects of his majesty, the various orders in council, instructions to governors, charters of justice, ordinances and proclamations upon the subject of the appellate jurisdiction of the sovereign should be taken into consideration for the purpose of determining the desirability of equaliz-

ing the conditions which gave right of appeal to his majesty. (4) That much uncertainty, expense, and delay would be avoided if some portion of his majesty's prerogative to grant special leave to appeal in cases where there exists no right of appeal were exercised under definite rules and restrictions."

The following resolutions, presented to the conference by General Botha and supported by the representatives of Cape Colony and Natal, were accepted: "(1) That when a Court of Appeals has been established for any group of colonies geographically connected, whether federated or not, to which appeals lie from the decisions of the Supreme Courts of such colonies, it shall be competent for the legislature of each such colony to abolish any existing right of appeal from its Supreme Court to the judicial committee of the Privy Council. (2) That the decisions of such court of appeal shall be final, but leave to appeal from such decisions may be granted by the said court in certain cases prescribed by the statute under which it is established. (3) That the right of any person to apply to the judicial committee of the Privy Council for leave to appeal to it from the decision of such appeal court shall not be curtailed."

On April 30 the conference came to the discussion of the question which had been dominant in all minds from the first,—the question of preferential trade. . . . Other resolutions adopted or accepted during the last two sessions of the conference were as follows: "That it is desirable that the attention of the governments of the colonies and the United Kingdom should be called to the present state of the navigation laws in the empire, and in other countries, and to the advisability of refusing the privileges of coastwise trade, including trade between the mother country and its colonies and possessions, and between one colony or possession and another, to countries in which the corresponding trade is confined to ships of their own nationality, and also to the laws affecting shipping, with a view of seeing whether any other steps should be taken to promote imperial trade in British vessels. [This was voted by the representatives of the colonies only, 'his majesty's government dissenting.'] That it is desirable that his majesty's government, after full consultation with the colonies, should endeavour to provide for such uniformity as may be practicable in the granting and protection of trade marks and patents. That it is desirable, so far as circumstances permit, to secure greater uniformity in the trade statistics of the empire, and that the note prepared on this subject by the imperial government be commended to the consideration of the various governments represented at this conference. That it is desirable, so far as circumstances permit, to secure greater uniformity in company laws of the empire, and that the memorandum and analysis prepared on this subject by the imperial government be commended to the consideration of the various governments represented at this conference. That, in view of the social and political advantages and the material commercial advantages to accrue from a system of international penny postage, this conference recommends to his majesty's government the advisability, if and when a suitable opportunity occurs, of approaching the governments of other states, members of the Universal Postal Union, in order to obtain further reductions of postage rates, with a view to a more general and if possible a universal adoption of the penny rate. That, with a view to attain uniformity so far as practicable, an inquiry should be held to consider further the

question of naturalization, and in particular to consider how far, and under what conditions, naturalization in one part of his majesty's dominions should be effective in other parts of those dominions, a subsidiary conference to be held, if necessary, under the terms of the resolution adopted by this conference on April 20 last. That in the opinion of this conference the interests of the empire demand that in so far as practicable its different portions should be connected by the best possible means of mail communication, travel, and transportation; That to this end it is advisable that Great Britain should be connected with Canada, and through Canada with Australia and New Zealand by the best service available within reasonable cost; That for the purpose of carrying the above project into effect such financial support as may be necessary should be contributed by Great Britain, Canada, Australia, and New Zealand in equitable proportions."

1909 (June).—Imperial press conference in England.—Among the many endeavors of late years in England to draw the distant peoples of the great British empire into closer relations with its sovereign mother country, and into the feeling of stronger ties of unity among themselves and with her, none seems to have been wiser or more surely of effect than that which brought about the imperial press conference of June, 1909. It assembled sixty representatives of the newspaper press of every part of the empire and of every shade of political opinion. . . .

The practical object for which the press conference strove most earnestly was a cheapening of telegraphic communication, by cable or wireless, between the distant parts of the empire, to the end that there may be an ampler publication of news from each division of it in every other. It received strong assurances of coöperation from the imperial government in its efforts to accomplish this end. To a deputation which waited on him, the premier, Herbert H. Asquith, said: "Your conference, if I may venture to say so, has very wisely appointed a standing committee to deal with that matter. The post office and other government departments concerned will be anxious to assist and to keep themselves in touch with this committee by information and intercommunication and in all other ways that may be practicable. I think it will be the solid and substantial result of your deliberations on this very great imperial necessity that in regard to the development of electric communication between different parts of the empire we shall now have on the side of the press a body formally organized and constantly existing with which we can enter into necessary communication, and by mutual discussion and reference, having regard to the various considerations to which I have already adverted, we may accelerate the developments of what we all agree to be one of the first requisites of an empire such as ours—a cheap, a certain, a constant, a convenient, and a universally accessible system of electric communication."

1909 (July-August).—Imperial defense conference. See WAR, PREPARATION FOR: 1909: British imperial defense conference; 1909-1910.

1909 (September).—Congress of empire chambers of commerce.—A congress of chambers of commerce, representing all parts of the empire, which was assembled at Sydney, New South Wales, on September 14, 1909, gave much of its discussion to the proposition that the several parts of the empire should afford preferential treatment to each other in their several markets, on a basis of reciprocity, and adopted resolutions to the effect that

the congress "urges upon the governments of the empire that they should treat this matter as of present practical importance, and that the organizations represented at this congress pledge themselves to press their respective governments to take such action at the next imperial conference as will give effect to the principle advocated in this resolution." This was carried on individual voting, by eighty-one votes to thirty-one. On voting by chambers, the resolution was passed with sixty for, eight against, and eleven neutral. Among the other resolutions of the congress were the following: "That this congress urges upon his majesty's government and upon the governments of the colonies the appointment of an advisory imperial council to consider questions of imperial interest, especially those tending to promote trade between the various parts of the empire. That the settlement in adequate volume of the Anglo-Saxon race in the British dominions is deserving of the constant solicitude of the home and colonial governments, who are hereby urged to consider what further or better steps than those at present existing should be taken to elaborate a general state-aided scheme at reduced rates to encourage emigration of suitable settlers under well-considered conditions. This congress is of opinion that it is desirable to complete the imperial route between the motherland, Canada, Australia and New Zealand by state-owned electric communication across Canada to Great Britain and that the postal departments of the various governments of the empire should be requested to frame a combined scheme of substantial reductions in telegraphic rates."

1910.—Copyright conference.—Subsidiary imperial conference.—In 1910 a subsidiary imperial conference was held to consider the subject of imperial copyright. The conference convened in May and June to discuss the questions of the maintenance of the unity of copyright legislation, and the desirability of the empire's accepting the revised copyright convention of Berlin (1908). The government of every dominion was represented and a resolution was passed favoring (1) the adoption of a uniform copyright law for the empire; (2) the acceptance of the revised copyright convention, subject to certain reservations, and in particular, to the right of any self-governing dominion to limit the obligation imposed upon the convention to works, the authors of which are subjects or citizens of a country of the union or *bona fide* residents of such a country. An imperial copyright act was passed in 1911 in accordance with the resolution.

1911.—Imperial conference.—"In accordance with the resolution of 1907, the first Conference which was officially styled 'Imperial' was held in May and June, 1911. The question of the constitution of the Conference and the reconstruction of the Colonial Office was considered at length but a majority of the representatives were of the opinion that no fundamental change was necessary. The Conference also considered the question how far the Dominion Governments should be consulted with regard to Treaties, with special reference to the fact that the Declaration of London of 1908 [dealing with rights of search by belligerents at sea] was not submitted to the Dominions for approval before it was concluded. The Imperial Government proposed, and the representatives of the Dominions agreed that in future the Dominions should be afforded an opportunity of consultation when the instructions to be given to British delegates at the Hague Conference were to be framed that Conventions affecting the Dominions

ions provisionally assented to at that Conference should be circulated to the Dominion Governments before they were officially signed, and that a similar procedure . . . should, as far as possible, be used when preparing instructions for the negotiation of other international agreements affecting the Dominions. . . . The question of an Imperial Court of Appeal was discussed at length, and the Imperial Government proposed, and the Dominions accepted the proposal, that two Lords of Appeal should be added to the number of four already existing so that their services might be available both for service in the House of Lords and for service on the judicial committee. The question of emigration to the Dominions was discussed at full length. . . . It was agreed that the present policy of encouraging British emigrants to proceed to British Dominions rather than to foreign countries should be continued and that full coöperation should be accorded to any Dominion desiring immigrants. The discussion of the question of naturalisation resulted in an agreement on the main principles on which naturalization in one of the Dominions should be recognized in other parts of the Empire. The question of improved cable communications was considered and the Postmaster-General was able to announce the prospect of important reductions from January 1, 1912, in rates for deferred messages and in Press Cables. It was also agreed that a chain of Wireless Telegraph Stations should be constructed from the United Kingdom, *via* Cyprus, Aden, Bombay and Singapore, to some point in Australia from which there would be communication over the land lines to other parts of Australia and New Zealand. The Governments of Canada and Australia undertook to consider favourably the extension of the Imperial Postal Order system and a resolution in favour of the lowering of the postal rates generally was agreed to. In order to render possible further coöperation in commercial relations it was agreed that a royal commission should be appointed representing the imperial and dominion governments with a view to investigating and reporting upon the natural resources of each part of the Empire represented at the Conference, the development attained and attainable, the facilities for production, manufacture and distribution, the trade of each part with the others and with the outside world, the food and raw material requirements of each and the sources thereof available; the extent, if any, to which the trade between each of the different parts had been affected by existing legislation in each, either beneficially or otherwise, and the methods by which, consistently with the existing fiscal policy of each part, the trade of each part with the others might be improved and extended. It was agreed that all practical steps should be taken to secure uniformity of treatment of British shipping, to prevent unfair competition with British ships by foreign subsidized ships, to secure to British ships equal trading advantages with foreign ships, to promote the employment of British seamen on British ships, and to raise the status and improve the conditions of seamen employed on such ships. Proposals were made by the Dominion of New Zealand with the support of the Dominion of Canada for the grant of wider legislative powers in respect of shipping to the oversea dominions, but the resolution was not accepted by the government of the United Kingdom, the Commonwealth of Australia, the Union of South Africa and Newfoundland. In connection with the question of Merchant Shipping a discussion took place as to the treatment of British Indians in the Self-Gov-

erning Dominions. Lord Crewe made a statement in which he pointed out that, while it was the undoubted right of the self-governing Dominions to determine in what manner their communities should be composed, and therefore to restrict in such way as they thought fit Indian immigration, it was important that this should be done in a way compatible with the comity due to the Indian people, and that in all cases in which Indians were permitted to enter the Dominions or were domiciled therein due respect should be paid to their rights. The principles laid down by Lord Crewe were accepted by the representatives of the dominion Governments. It was agreed to consider how far it was possible to make arrangements with a view to the enforcement in one part of the empire of judgments and orders of the courts of justice in another part. Resolutions were also passed in favour of uniformity in the law of copyright, patents, trade-marks, companies and workmen's compensation. The questions of provision for deserted wives and children, the celebration of his majesty's birthday, and the Suez Canal dues were discussed, and it was agreed that concerted action should be taken by all the Governments of the Empire to promote better trade and postal communications between Great Britain and the oversea dominions, and in particular to discourage shipping conferences or combines in so far as the operations of such conferences were prejudicial to trade. Before separating the conference agreed that it was desirable that between conferences there should be interchange of visits between ministers of the United Kingdom and ministers of the dominions and that the government of the United Kingdom should take into consideration the possibility of holding a meeting of the conference or a subsidiary conference, in one of the oversea dominions. After the termination of the conference of 1911, steps were taken to carry out the several recommendations made. Agreements were made with the Governments of Sweden, Norway, Denmark, France, Costa Rica, and Colombia, authorising his Majesty's Government to terminate on twelve months notice the application of the commercial treaties with those powers with regard to all or any of the self-governing dominions. Similar power has also been obtained in the case of the commercial treaty with Switzerland. An Act was passed by the Imperial Parliament to add two Lords of Appeal, available for service in the House of Lords and on the judicial committee, and to increase to seven the number of judges of the Courts of the Oversea Dominions who may be members of the judicial committee. In accordance with this provision, the Hon. Sir Joshua Williams, senior puisne judge of the Supreme Court of New Zealand, became a member of the judicial committee. The bill on naturalization which it was proposed to introduce into the Imperial Parliament, was re-drafted in accordance with the views of the Imperial Conference, and passed into law under the title of the 'British Nationality and Status of Aliens Act, 1914.' Legislation was also passed in Canada and Newfoundland. Legislation was passed providing for the laying of the cable by the Pacific Cable Board between Australia and New Zealand, and the work was successfully carried out. Reductions were made in cable rates between the United Kingdom and the oversea dominions (including the establishment of week-end telegrams in addition to deferred rates). A Royal Commission was appointed to investigate and report upon the natural resources and trade of the Empire."—*Colonial office list for 1920*, pp. liii.-liv.

1912.—Defense.—Imperial defense committee.

—"Describing the work of the committee . . . [Mr. Asquith] said the whole body met only six or seven times a year; it worked by referring questions to four permanent sub-committees: (1) Home Ports Defence, which had already made twenty-five reports; (2) Oversea Defence, which had made recommendations including India and Egypt; (3) a new committee for the co-ordination of departmental action on the outbreak war, composed of permanent officials, which had compiled a War Book, assigning to each department its responsibility, and the departments had drafted all the proclamations, telegrams, etc., of which the need could be foreseen; (4) the Air Committee, also recent, dealing with all matters of aerial navigation in war. There were also a number of subcommittees dealing with internal and oversea transport, wireless telegraphy throughout the Empire, the control of the Press and its censorship, and the maintenance of oversea commerce. These were only specimen inquiries, and from time to time gentlemen from Lloyd's, the great railway companies and other great commercial organizations were taken into council. . . . In regard to international relations, for at any rate eight years they had been conducted on settled lines, and there had been no change of policy, and matters which would before have caused friction and hostility had been smoothly settled."—*Annual Register*, 1912, p. 188.

1917.—*Imperial war conference*.—"The Members of the Imperial War Conference were received by the King at Windsor on May 3, when they presented a loyal address to which the King made a reply, in the course of which he said that the Conference had met at an historic moment in the Empire's story, and that he was confident that when peace was restored, 'We may be found prepared for the tasks which then await us in the organisation of the resources of the empire with a view to rendering it more self-sustaining and in strengthening the ties which knit together all parts of my dominions.' The speech referred also to the satisfaction felt by his majesty in the fact that India had been a member of the Conference with equal rights with the other dominions. On the same day the secretary of state for the colonies issued a statement in which he said that it was not possible, owing to the confidential character of the business, to publish in full the resolutions or the debates on the subjects before the conference, but he was ready to give such of the resolutions as could now be made public. In every case the decision of the conference had been unanimous. The most important of the resolutions was that dealing with the future constitutional relations of the empire. This, it was stated, was too important a subject to be dealt with during the war, and they had therefore recommended that a special imperial conference to deal with the question should be summoned as soon as possible after the cessation of hostilities. The conference, however, placed on record 'its view that any such readjustment while thoroughly preserving all existing powers of self-government and complete control of existing affairs should be based on the full recognition of the dominions as autonomous nations of an imperial commonwealth, and of India as an important portion of the same; should recognise the rights of the dominions and India to an adequate voice in foreign policy and in foreign relations, and should provide effective arrangements for continuous consultation in all important matters of common Imperial concern, and for such necessary concerted action founded on consultation as the several Governments may determine.'"

The importance of this resolution is that while demanding that the dominions should share in the foreign policy of the empire, they still asserted their right to complete national autonomy, and thus by implication stated their objections to any scheme of imperial federation, which would involve the setting up of an Imperial Legislature or Imperial Executive with power to legislate for the whole empire, and to over-ride the subordinate Parliaments. The meeting of the Conference marked an important step in Imperial development, for its discussions included also the question of Imperial Preference, and other matters of importance.

With regard to the question of defense the following resolutions were adopted: "That the Admiralty be requested to work out immediately after the conclusion of the war what they consider the most effective scheme of naval defence for the empire for the consideration of the several governments summoned to this conference, with such recommendations as the Admiralty consider necessary in that respect for the empire's future security.

"That this conference, in view of the experience of the present war, calls attention to the importance of developing an adequate capacity of production of naval and military material, munitions, and supplies in all important parts of the empire (including the countries bordering on the Pacific and India oceans), where such facilities do not presently exist, and affirms the importance of close cooperation between India, the dominions, and the United Kingdom with this object in view.

"That this conference, recognizing the importance of assimilating as far as possible the military stores and equipment of the imperial forces throughout the empire, recommends that an expert committee, representative of the military authorities of the United Kingdom, the dominions, and India, be appointed as early as possible to consider the various patterns in use with a view to selecting standard patterns for general adoption, as far as the special circumstances of each country admit.

"This conference is of opinion that it is desirable that the ordnance *personnel* of the military organizations of the empire should, as far as possible, be trained on the same methods and according to the same principles, and that to secure this end selected officers of the ordnance service from all parts of the empire should be attached for adequate periods to the Imperial Ordnance Department.

"An interesting sequel to the meetings of the Imperial Conference took place on May 17, when the prime minister announced in the House of Commons that the experiment of an Imperial War Cabinet had been a complete success. Accordingly, at the last session, the prime minister had formally proposed on behalf of the British Government that meetings of an Imperial Cabinet consisting of the prime minister of the United Kingdom, such of his colleagues as dealt specially with Imperial affairs, the prime minister of each of the Dominions, and a representative of the Indian people to be appointed by the government of India, should be held annually or at any intermediate time when matters of urgent Imperial concern had to be settled. These proposals met with cordial approval from the oversea representatives, and the announcement of the decision was received with great satisfaction in the House of Commons."—*Annual Register*, 1917, pp. 117-118.—See also CABINET, ENGLISH: War cabinets; also below, under heading World War, 1917: Imperial war cabinet session.

BRITISH IMPERIAL CONFERENCE AT LONDON, 1921

The leading personages, seated in the first row, are: Sir E. Montagu, Lord Balfour, Mr. Srinivasa-Sastri, Mr. Massey, Premier of New Zealand; Mr. Meighan, Premier of Canada; Premier Lloyd George, W. M. Hughes, Premier of Australia; Jan C. Smuts, Premier of South Africa; Lord Curzon, the Maharao of Cutch.

1918.—Imperial war conference.—“Optimism characterised the proceedings of the Imperial War Conference, at the sittings of which post-war economic policies occupied the chief place. The official summary of the proceedings of this assembly refers specifically to three important resolutions.

“The first subject on which a resolution was passed dealt with the recent Non-ferrous Metal Industry Act of the United Kingdom, and the question of similar legislation in the oversea Dominions. This resolution was to the effect that, in pursuance of the policy of freeing the Empire from dependence on German controlled organisations in respect of non-ferrous metals and ores, the Conference endorsed the principle of the Non-ferrous Metal Industry Act of the United Kingdom, and recommended that the Governments of the Empire should adopt effective measures, in so far as these might be necessary and not already taken, to carry out this policy. The next resolution related to the measures necessary to secure for the British Empire and the belligerent Allies the command of certain essential raw materials to enable them to repair the effects of war as soon as possible and safeguard their industrial requirements. The Conference agreed that this course was necessary, and expressed the opinion that the Governments of the British Empire should make such arrangements among themselves as would ensure that the essential raw materials produced within the Empire should be available for the purposes named above, and should arrange with the Allied countries to utilise for the same purposes the essential raw materials produced in those countries. A further resolution in connexion with the same question recommended that a Committee of members of the conference should first consider the possible methods by which each part of the Empire could obtain command of the essential raw materials referred to in the previous resolution, and that the Governments represented at the conference should, in the light of the information collected by their representatives on this committee, consult with representatives of the producers and trades concerned as to the method of obtaining command best suited to each individual commodity.” The conference held its sixteenth and last meeting on July 26, and on the following day the members were received by the King at Buckingham Palace.”—*Annual Register*, 1918, p. 125.

1920.—Personnel.—Members of the imperial conference are: President, the prime minister of the United Kingdom; chairman (in the absence of the president), the secretary of state for the colonies; the prime minister and other ministers of the Dominion of Canada, the Commonwealth of Australia, the Dominion of New Zealand, the Union of South Africa, and Newfoundland, the secretary of state for India and other representatives of India.

1920.—Imperial defense.—Preference.—Wireless.—Lord Curzon in speaking of coöperating for defense, June, 1920, made the two following statements: first that “no decision will be taken or even attempted till the Imperial Conference meets next year;” second, that “much depends on the League of Nations.”—In his budget speech for 1919-1920 the chancellor of the exchequer (Austen Chamberlain) introduced proposals for preference on certain articles (such as tea, cocoa, sugar and tobacco), subject already to duty when imported into the United Kingdom which were (1) consigned from and (2) grown, produced or manufactured in the British empire. These proposals were accepted by Parliament and were in the Finance

Act 1919, the general rate of preference given being one-sixth of the full rate.

A news item from Toronto in the *Times Weekly Bulletin* of October 1, states that by eighty-five votes to twenty-one the congress of British chambers of commerce declared for preferential trade with the empire and pledged itself to press the policy on all governments of the empire. The British Empire Producers' organization aims to support preference as promoting imperial unity and assisting imperial development. A scheme of imperial wireless was proposed for communications, to be arranged in stages of 2,000 miles and which would link up Great Britain with Egypt, South Africa, East Africa, India, Malay, Hong Kong and Australia. Canada's participation was to be left for the moment to be settled later in conference between the imperial and dominion authorities.

1920 (August).—Imperial press conference at Ottawa.—Delegates from the various parts of the empire and also from the United States representing the press met in Ottawa to consider pertinent questions and reforms. The guests were first welcomed in Montreal where McGill University conferred honorary degrees upon Viscount Burnham, (proprietor of *Daily Telegraph*, London), Sir Harry Brittain, organizer of the Imperial Press Conference, 1909, R. S. Ward Jackson, a Yorkshire newspaper man, and Thomas Wilson Leys of Auckland, New Zealand. The meetings, however, took place in Ottawa. Lord Atholstan, better known as Hugh Graham, greeted the convention but Viscount Burnham was unanimously elected chairman. The delegates were welcomed in turn by the lieutenant-governor, the premier and other well-known speakers. Hon. Mackenzie King explained the fact that it was “up to the press to reverse its war time policy and stimulate the bonds of a common brotherhood and that faith in each other which would give the empire an enduring and ennobling expression.” Resolutions were adopted in regard to the rates of cable communications and news messages. A resolution was carried unanimously: “That as empire interests need a greater dissemination of knowledge concerning the empire, this conference urges the Council of the Empire Press Union to take such action as may be practicable to ensure the interchange and publication of a larger volume of empire news, apart from political propaganda, by the newspapers associated with the empire press than at present pertains.”

Another resolution provided for a conference within the empire every four years.

1920.—Special conferences.—“This year has witnessed the meeting of (1) an Imperial Statistical Conference, which is likely to become a periodic conference served by a permanent joint bureau of officials; (2) an Imperial Entomological Conference (likely also to meet periodically) held in conjunction with an already existing Imperial Bureau of Entomology, which was established as far back as 1909; (3) an Imperial Forestry Conference, which will probably meet regularly in the future and will have organised in connection with it a joint Imperial Forestry Bureau. These are merely examples of the score or more joint bodies set up or authoritatively proposed in the last ten years. These bodies, it will be seen, fall roughly into two complementary groups: (1) subsidiary conferences of ministers (or experts nominated by them) charged with particular functions of government—e. g. education, statistics, agriculture, etc.; (2) inter-imperial joint bodies or bureaus, manned by experts, for the performance of definite pieces of administrative work (e. g. Pacific Cable

Board), or for the collection and dissemination of information, or for research and the coördination of research in relation to particular functions of government (e. g. imperial mineral resources and bureau of entomology, etc.)."—H. D. Hall, *United Empire (Royal Colonial Institute Journal, Sept., 1920, pp. 488-489)*.

1921.—Imperial Conference in London.—Prime ministers and representatives at Downing Street.—Wide range of discussion.—Lloyd George's opening speech.—Foreign policy of the empire.—Imperial problems.—German reparations.—Anglo-Japanese Alliance.—Far East policy.—A conference of prime ministers and representatives of the United Kingdom, the Dominions, and India met at 10 Downing Street, the official residence of the British premier, on June 20. Up till August 5, thirty-four plenary meetings were held, under the presidency of David Lloyd George, prime minister. The following representatives of the British government attended: Austen Chamberlain, lord privy seal, A. J. Balfour, lord president of the council, Lord Curzon, foreign minister, W. S. Churchill, colonial secretary. Canada was represented by A. Meighen, prime minister, and C. C. Ballantyne, minister of naval service. The Commonwealth of Australia was represented by W. M. Hughes, prime minister; New Zealand by W. F. Massey, prime minister; South Africa by General J. C. Smuts, prime minister, Sir Thomas Smartt and H. Mentz, respectively ministers of agriculture and defense; and India by the secretary of state, E. S. Montagu, the Maharao of Cutch and Srinivasa Sastri. Other representatives of the imperial government were the lord chancellor, the chancellor of the exchequer, secretary for war, president of the board of education, the postmaster-general, the chief of the imperial general staff, the first lord of the admiralty and the first sea lord, secretary of state for air, and a number of technical, economic and financial advisers. David Lloyd George, as chairman, opened the proceedings with a comprehensive review of the situation in which the Conference had assembled. He outlined its tasks, stated broadly the principles of policy which commended themselves to the British government, and dwelt upon the significance of the Conference and the importance of its work. He was followed in turn by all the other prime ministers, by Mr. Sastri for India, and by Mr. Churchill for the colonies and protectorates. This preliminary discussion occupied two days, the speeches being published in full immediately afterwards. In his opening address Lloyd George welcomed the delegation and paid high tributes to those statesmen of distant parts of the empire who were absent owing to retirement or other circumstances. He especially eulogized the career and services to the empire of the late General Botha of South African fame (died 1919). The premier covered the whole range of British imperial and foreign policy in his speech; of particular interest were his remarks on the Anglo-Japanese Alliance, relations with United States and the status of the self-governing dominions within the Empire: "I should like to refer very briefly to one of the most urgent and important of foreign questions—the relations of the Empire with the United States and Japan. There is no quarter of the world where we desire more greatly to maintain peace and fair play for all nations and to avoid a competition of armaments than in the Pacific and in the Far East. Our Alliance with Japan has been a valuable factor in that direction in the past. We have found Japan a faithful ally, who rendered us valuable assistance in an

hour of serious and very critical need. The British Empire will not easily forget that Japanese men-of-war escorted the transports which brought the Australian and New Zealand forces to Europe at a time when German cruisers were still at large in the Indian and Pacific Oceans. We desire to preserve that well-tryed friendship which has stood us both in good stead, and to apply it to the solution of all questions in the Far East, where Japan has special interests, and where we ourselves, like the United States, desire equal opportunities and the open door. Not least amongst these questions is the future of China, which looks to us, as to the United States, for sympathetic treatment and fair play. . . . We desire to work with the great Republic in all parts of the world. Like it, we want stability and peace, on the basis of liberty and justice. Like it, we desire to avoid the growth of armaments, whether in the Pacific or elsewhere, and we rejoice that American opinion should be showing so much earnestness in that direction at the present time. We are ready to discuss with American statesmen any proposal for the limitation of armaments which they may wish to set out, and we can undertake that no such overtures will find a lack of willingness on our part to meet them. In the meantime, we cannot forget that the very life of the United Kingdom, as also of Australia and New Zealand, indeed, the whole Empire, has been built upon sea power—and that sea power is necessarily the basis of the whole Empire's existence. We have, therefore, to look to the measures which our security requires; we aim at nothing more; we cannot possibly be content with less. . . . [A] change, which has taken place since the War, is the decision of the Canadian Government to have a Minister of its own at Washington—a very important development. We have cooperated willingly with that, and we shall welcome a Canadian colleague at Washington as soon as the appointment is made. . . . In recognition of their services and achievements in the War the British Dominions have now been accepted fully into the comity of nations by the whole world. They are signatories to the Treaty of Versailles and to all the other Treaties of Peace; they are members of the Assembly of the League of Nations, and their representatives have already attended meetings of the League; in other words, they have achieved full national status."—*Present problems of the commonwealth of British nations (International conciliation, No. 167)*.

The day following that on which Lloyd George made his opening remarks was the occasion of several unusual addresses. The meeting of June 21 was made memorable by speeches from Jan Christian Smuts of South Africa and Premier Hughes of Australia. [See also AUSTRALIA: 1921.] Both urged the conference to invite America and Japan to discuss limitation of naval armaments; the storm centre of the world, they agreed, was now in the Pacific. The two statesmen, however, seemed to be divided on the question of renewal of the Anglo-Japanese Alliance. While Premier Smuts came out strongly against the treaty, and was supported by Premier Meighen of Canada, Premier Hughes was, broadly speaking, in favor of it, finding a sympathetic follower in Premier Massey of New Zealand. But the Australian Premier was not oblivious to difficulties, the chief of which was the attitude of America toward the treaty. . . . Premier Meighen of Canada on June 27 presented to the conference what was in effect a declaration of Dominion rights in relation to foreign affairs of the empire. . . . At the session of

July 1 all the Premiers of the British Dominions again gave their views on the Anglo-Japanese Alliance, but the utmost secrecy enveloped the proceedings. All that the public was allowed to know was that there had been a general agreement of the need of delay in renewing the treaty. The mental fog that enveloped the subject was finally cleared away on July 3 by the announcement of a decision of the Lord Chancellor that the Anglo-Japanese Treaty had not been denounced by the note sent to the League of Nations last July, and that, therefore, even if it were now denounced on July 15, it would run automatically for another year."—*New York Times Current History, August, 1921.*—Under the terms of the Four Power Pacific Treaty of Feb. 6, 1922, Great Britain and Japan agreed to abrogate the Anglo-Japanese Alliance when the Pacific Treaty should be duly ratified.—See also WASHINGTON CONFERENCE.

FOREIGN AFFAIRS DEBATE: PRESIDENT HARDING'S INVITATION TO DISARMAMENT CONFERENCE.—PREMIER'S STATEMENT IN PARLIAMENT.—JAPANESE ALLIANCE.—PACIFIC PROBLEMS AND UNITED STATES.—LEAGUE OF NATIONS.—EGYPT.—"The Conference then addressed itself to a detailed consideration of the Foreign Policy of the British Empire. The discussion on this war opened by the Secretary of State for Foreign Affairs, who made an exhaustive statement upon the course of foreign affairs since the Peace Conference. . . .

"A precedent created by the Imperial War Cabinet was also revived with valuable results. From 1916 till the Armistice, the Prime Ministers of the Dominions and the Representatives of India frequently sat with members of the British Cabinet to determine the measures necessary for the prosecution of the War. This method of procedure was also adopted by the British Empire Delegation during the Peace Conference in Paris, when all cardinal decisions were taken by the delegation as a whole. In accordance with this precedent, the Prime Ministers of the Dominions and the Representatives of India present in London this year were invited to meetings with members of the British Cabinet called to deal with Imperial and foreign questions of immediate urgency which arose in the course of the sittings. . . . The problems of the Western Pacific and the Far East, together with the Anglo-Japanese Agreement, were also fully discussed; and President Harding's invitation to a Conference on Disarmament was warmly welcomed by all the members of the Conference. The following statement, made by the Prime Minister in the House of Commons, on 11th July, represents the general view of all members of the Conference on the main issues of the Pacific, as also on the question of disarmament:

"The broad lines of Imperial policy in the Pacific and the Far East were the very first subjects to which we addressed ourselves at the meetings of the Imperial Cabinet, having a special regard to the Anglo-Japanese Agreement, the future of China, and the bearing of both those questions on the relations of the British Empire with the United States. . . . We had, in the first place, to ascertain our exact position with regard to the Anglo-Japanese Agreement. There had been much doubt as to whether the notification to the League of Nations made last July constituted a denunciation of the Agreement in the sense of clause 6. If it did, it would have been necessary to decide upon some interim measure regarding the Agreement pending fuller discussions with the other Pacific Powers, and negotiations with this object in view were, in point of fact, already in progress. If, on the other hand, it did not, the Agreement

would remain in force until denounced, whether by Japan or by ourselves, and would not be actually determined until twelve months from the date when notice of denunciation was given. The Japanese Government took the view that no notice of denunciation had yet been given. This view was shared by the Secretary of State for Foreign Affairs; but, as considerable doubt existed, we decided, after a preliminary discussion in the Imperial Cabinet, to refer the question to the Lord Chancellor, who considered it with the Law Officers of the Crown, and held that no notice of denunciation had yet been given. It follows that the Anglo-Japanese Agreement remains in force unless it is denounced, and will lapse only at the expiration of twelve months from the time when notice of denunciation is given. It is, however, the desire of both the British Empire and Japan that the Agreement should be brought into complete harmony with the Covenant of the League of Nations, and that wherever the Covenant and the Agreement are inconsistent, the terms of the Covenant shall prevail. Notice to this effect has now been given to the League. . . .

"In addition to these considerations, we desire to safeguard our own vital interests in the Pacific, and to preclude any competition in naval armaments between the Pacific Powers. All the representatives of the Empire agreed that our standpoint on these questions should be communicated with complete frankness to the United States, Japan, and China, with the object of securing an exchange of views which might lead to more formal discussion and conference. The Secretary of State for Foreign Affairs accordingly held conversations last week with the American and Japanese Ambassadors and the Chinese Minister, at which he communicated to them the views of the Imperial Cabinet, and asked in turn for the views of their respective Governments. He expressed at these conversations a very strong hope that this exchange of views might, if their Governments shared our desire in that respect, pave the way for a conference on the problems of the Pacific and the Far East. . . ."

"In accordance with the suggestion which was believed to have been made by the American Government, that the Conference on Disarmament should be preceded by friendly conversations or consultations between the Powers who were principally concerned in the future of the Far East and the Pacific, the Imperial Conference, anxious that for the Anglo-Japanese Agreement should be substituted some larger arrangement between the three Great Powers concerned, namely, the United States of America, Japan, and Great Britain, and holding the firm conviction that the later discussions on disarmament, to which they attached a transcendent importance, could best be made effective by a previous mutual understanding on Pacific questions between those Powers, devoted many hours of examination to the question how such an understanding could best be arrived at, where the proposed conversations could best be held, in what manner the representatives of the British Dominions, who were so vitally affected, could most easily participate in them, and upon what broad principles of policy it was desirable to proceed. It was difficult for the Dominion Prime Ministers, owing to the exigencies of time and space, to attend at Washington late in the autumn. On the other hand, advantage might be taken of their presence in England to exchange views with representatives of the other Great Powers who had been invited to Washington later on. It was in these circumstances that the idea was

mooted that the preliminary conversations or consultations, to which the American Government had in principle agreed, should be held in London. When it transpired a little later that there was some misunderstanding as to the nature of the preliminary conversations which had been suggested, the British Government, in the earnest desire to remove any possible misconception, and to meet what they believed to be the American views at each stage of the impending discussions, volunteered to attend a meeting on the other side of the Atlantic, at which the agenda of the forthcoming Conference at Washington could be discussed, and a friendly interchange of views take place in order to facilitate the work of the main Conference later on. The British Prime Minister and Foreign Secretary, together with the Dominion Prime Ministers, were prepared to attend such a meeting, if invited to do so by the American Government. The Japanese Government signified their willingness, if invited, to take part in the suggested conversations. The American Government, however, did not favour the idea, which was accordingly dropped. This conclusion was viewed with the utmost regret by the members of the Imperial Conference, who had devoted no small portion of time to the working out of an arrangement, which they understood would be equally acceptable to all parties, and the abandonment of which could not, they feared, be otherwise than prejudicial to the great objects which all had in view. At no stage had it been suggested that the results of such a consultation as was contemplated should either anticipate the work or tie the hands of the Washington Conference at a later date. On the contrary, holding, as they do, the firm belief that without a Pacific understanding the Conference on Disarmament will find it less easy to attain the supreme results that are hoped for by all, the Imperial Conference made the proposal before referred to anxious to remove every possible obstacle from the path of the Washington Meeting, which they desire to see attended with complete and triumphant success.

"A discussion took place in regard to the League of Nations during which Mr. Balfour explained at length the work which had been carried out by the League and the special difficulties with which it has to contend. While a more equitable distribution between its members of the cost of the League was considered essential to its future, there was general appreciation of its work and of the League's claim to the support of the British Empire as a step forward in the regulation of international affairs.

"Close consideration was given to the question of British policy in Egypt, and the future status of that country, and general agreement was reached regarding the principles by which His Majesty's Government should be guided in the negotiations with the Egyptian Delegation."—*Present problems of the commonwealth of British nations (International Conciliation, No. 167)*.

IMPERIAL DEFENSE PROBLEMS: NAVAL, MILITARY AND AERIAL. — COMMUNICATIONS. — WIRELESS. — SHIPPING. — WIRELESS TELEPHONY. — PRESS CABLES. — "Several plenary meetings and several meetings of the Prime Ministers alone with the Secretary of State of India, were devoted to considering the Naval Defence of the Empire, and the following Resolution was adopted:

"That, while recognizing the necessity of co-operation among the various portions of the Empire to provide such Naval Defence as may prove to be essential for security, and while holding that equality with the naval strength of any other

Power is a minimum standard for that purpose, this Conference is of opinion that the method and expense of such co-operation are matters for the final determination of the several Parliaments concerned, and that any recommendations thereon should be deferred until after the coming Conference on Disarmament."

"In addition, a number of useful consultations took place between the Admiralty and the Representatives of the several Dominions and India, at which were discussed such matters as the local co-operation of each Dominion in regard to the provision of oil tanks, local naval defence, etc. A discussion took place on the Military and Air Defence of the Empire, and the views of the General and Air Staffs on the principles which should be adhered to in order to ensure co-operation in these matters were laid before Ministers. The question of improved communication throughout the Empire, including Air, Telegraphy, Telephony, and Shipping, was considered, and a special Committee under the chairmanship of the Secretary of State for the Colonies was appointed to go into the whole question. This Committee reported to the main Conference, and eventually the following conclusions were arrived at: 'The Conference, having carefully considered the report of the expert Sub-Committee on Imperial Communications, are of opinion that the proposals contained therein should be submitted for the consideration of the Governments and Parliaments of the different parts of the Empire. On the understanding that the cost involved will be in the region of £1,800 per month they recommend that, pending such consideration, the existing material, so far as useful for the development of Imperial Air Communications, should be retained.'—*Ibid.*— On the Imperial wireless scheme it was "agreed that His Majesty's Government should take steps for the erection of the remaining stations for which they are responsible, as soon as the stations are designed; that the Governments of Australia, the Union of South Africa, and India, should take similar action so far as necessary, and that the Governments of Canada and New Zealand should also co-operate. . . ."

"As regards the Report of the Imperial Shipping Committee on Bills of Lading, it was decided [that] 'the Conference approves the recommendations made in the Report of the Imperial Shipping Committee on the Limitation of Shipowners' Liability by Clauses in Bills of Lading, and recommends the various Governments represented at the Conference to introduce uniform legislation on the lines laid down by the Committee.' A resolution was also adopted to the effect that, pending the constitution of a permanent Committee on Shipping, the existing Imperial Shipping Committee should continue its inquiries. . . ."

"The position regarding the development of Wireless Telephony was explained, and the following Resolution was adopted: 'That the Radio Research Board be asked to investigate the subject of Wireless Telephony and to report on its development, whether Governmental or private. That the Postmaster-General shall supply to the Governments of the Dominions and India technical reports showing its position and possibilities.'

"The Special Committee on Communications received a deputation representing the Empire Press Union and the Newspaper Proprietors' Association, and subsequently . . . the following Resolution was agreed to and thereafter adopted by the main Conference: 'The Committee agrees with the Resolution passed at the Second Imperial Press Conference, held at Ottawa in 1920, that any as-

sistance given by the Governments of the Empire towards the reduction of rates for Press services by wireless and cable should appear specifically in the Estimates of Public Expenditure, and should be so directed as not to affect the quality of the news service supplied or the freedom of the newspapers so served. The Committee is in full sympathy with the object of reducing rates, both by cable and wireless, for press messages, and recommends the most favourable examination by the Governments concerned of any practicable proposals to this end."—*Ibid.*

TREATY OF VERSAILLES: REPARATIONS.—"The Conference agreed that the reparation receipts under the Treaty of Versailles should be apportioned approximately as follows:

United Kingdom.....	86.85
Minor Colonies80
Canada	4.35
Australia	4.35
New Zealand	1.75
South Africa60
Newfoundland10
India	1.20
	<hr/>
	100.00

POSITION OF BRITISH INDIANS IN THE EMPIRE.—"The question of the position of British Indians in the Empire was discussed first at a plenary meeting when the representatives of India fully explained the situation and the views held in India on the subject. The question was then remitted to a special Committee under the chairmanship of the Secretary of State for the Colonies. At a final meeting on the subject the following Resolution was adopted:

"The Conference, while reaffirming the Resolution of the Imperial War Conference of 1918, that each community of the British Commonwealth should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities, recognizes that there is an incongruity between the position of India as an equal member of the British Empire and the existence of disabilities upon British Indians lawfully domiciled in some other parts of the Empire. The Conference accordingly is of the opinion that in the interests of the solidarity of the British Commonwealth, it is desirable that the rights of such Indians to citizenship should be recognized. The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while expressing their appreciation of the acceptance of the resolution recorded above, feel bound to place on record their profound concern at the position of Indians in South Africa, and their hope that by negotiation between the Governments of India and of South Africa, some way can be found, as soon as may be, to reach a more satisfactory position."—*Ibid.*

EMPIRE SETTLEMENT AND MIGRATION.—"The question of Empire Settlement and Migration was considered by a special Committee under the chairmanship of the Secretary of State for the Colonies, and the following Resolution was finally adopted by the Conference:

"The Conference having satisfied itself that the proposals embodied in the Report of the Conference on State-Aided Empire Settlement are sound in principle, and that the several Dominions are prepared, subject to Parliamentary sanction and to the necessary financial arrangements being made, to coöperate effectively with the United

Kingdom in the development of schemes based on these proposals, but adapted to the particular circumstances and conditions of each Dominion, approves the aforesaid Report.

"The South African representatives wish to make it clear that the limited field for white labor in South Africa will preclude coöperation by the Union Government on the lines contemplated by the other Dominions.

"The Conference expresses the hope that the Government of the United Kingdom will, at the earliest possible moment, secure the necessary powers to enable it to carry out its part in any schemes of coöperation which may subsequently be agreed on, preferably in the form of an Act which will make clear that the policy of coöperation now adopted is intended to be permanent.

"The Conference recommends to the Governments of the several Dominions that they should consider how far their existing legislation on the subject of land settlement, soldier settlement and immigration, may require any modification or expansion in order to secure effective coöperation; and should work out, for discussion with the Government of the United Kingdom, such proposals as may appear to them most practicable and best suited to their interests and circumstances."—*Ibid.*

EMPIRE PATENT.—NATIONALITY.—On the question of an Empire Patent Law, "The Committee recommends that a Conference of representatives of the Patent Offices of His Majesty's Dominions shall be held in London at an early date to consider the practicability of instituting a system of granting Patents which should be valid throughout the British Empire." A memorandum prepared in the Home Office with reference to the nationality of children of British parents born abroad was considered by a Special Committee under the Chairmanship of the Secretary of State for the Colonies, and the following resolution, which was finally approved by the main Conference, was adopted: "The Committee, having considered the memorandum prepared in the Home Office regarding the nationality of the children born abroad of British parents, commends the principle of the proposals contained therein to the favourable consideration of the Governments of the Dominions and India."—*Ibid.*

PROPOSED CONFERENCE ON CONSTITUTIONAL RELATIONS.—"Several plenary meetings and meetings of the Prime Ministers were devoted to a consideration of the question of the proposed Conference on the Constitutional relations of the component parts of the Empire, and the following resolution was adopted:

"The Prime Ministers of the United Kingdom and the Dominions, having carefully considered the recommendation of the Imperial War Conference of 1917 that a special Imperial Conference should be summoned as soon as possible after the War to consider the constitutional relations of the component parts of the Empire, have reached the following conclusions:

"(a) Continuous consultation, to which the Prime Ministers attach no less importance than the Imperial War Conference of 1917, can only be secured by a substantial improvement in the communications between the component parts of the Empire. Having regard to the constitutional developments since 1917, no advantage is to be gained by holding a constitutional Conference.

"(b) The Prime Ministers of the United Kingdom and the Dominions and the Representatives of India should aim at meeting annually, or at such longer intervals as may prove feasible.

“(c) The existing practice of direct communication between the Prime Ministers of the United Kingdom and the Dominions, as well as the right of the latter to nominate Cabinet Ministers to represent them in consultation with the Prime Minister of the United Kingdom, are maintained.”—*Ibid.*

WORLD WAR

1914-1918.—British dominions at war.—“Germany largely based her confidence of victory on the belief that, under the strain of war, the far-flung British Empire, with its heterogeneous elements and racial jealousies, would promptly crumble. It was a vital error. Instead of crumbling it hardened into a unity which is adamant. Canada has already [1915] contributed half a million men to the British armies, Australia three hundred thousand. South Africa, by undertaking her own defense, released the imperial regiments stationed there. She not only suppressed the German-fomented rebellion, but she conquered German South-west Africa and German East Africa, thus adding nearly a sixth of the Dark Continent to the Empire, and has sent ten thousand men to the battle-fields of Europe. Indian troops are [1915] fighting in France, in Macedonia, in Mesopotamia, in Palestine, and in Egypt. From the West Indies have come twelve thousand men. The Malay States gave to the Empire a battleship and a battalion. A little island in the Mediterranean raised the King's Own Malta Regiment. Uganda and Nyasaland raised and supported the King's African Rifles—five thousand strong. The British colonies on the other seaboard of the continent increased the West African Field Force to seven thousand men. The fishermen and lumbermen from Newfoundland won imperishable glory on the Somme. From the coral atolls of the Fijis hastened six score volunteers. The Falkland Islands, south of South America, raised 140 men. From the Yukon, Sarawak, Wei-hai-wei, the Seychelles, Hong-Kong, Belize, Saskatchewan, Aden, Tasmania, British Guiana, Sierra Leone, St. Helena, the Gold Coast, poured Europeward, at the summons of the Motherland, an endless stream of fighting men.”—E. A. Powell, *Italy at war and the Allies in the West*, pp. 209-211.

According to official statistics published in 1921, Great Britain passed more than 6,000,000 men through the ranks of her armies between August 4, 1914, and November 11, 1918. The total number of British troops, employed in battle, behind the lines, in training at home and in the colonies, is given as 8,654,467, distributed as follows:

British Isles	5,704,416
Canada	640,886
Australia	416,809
New Zealand	220,009
South Africa	136,070
India	1,401,350
Other Colonies	134,837

8,654,467

The last item in this table includes colored troops recruited from South Africa, West Indies, etc. There were 80,000 British combatant troops in Italy who cooperated in the final defeat of Austria in 1918; while about 400,000 British troops operated in Palestine and Mesopotamia during that year. The casualties suffered by the British forces in all theatres of war, France, Italy, Dardanelles, Salonika, Mesopotamia, Egypt, East Africa, West Africa, South-West Africa, etc., reached a grand total of 3,049,991.—See also WORLD WAR: Mis-

cellaneous auxiliary services: XIV. Cost of war: a; b, 4; b, 8, ii.

1917.—Imperial war cabinet session.—When David Lloyd George assumed office as prime minister in December, 1916, he announced in a speech in the House of Commons that it was proposed to convene an imperial conference in order to place the whole position before the dominions and take counsel with them as to the best means of securing an early and complete triumph. Representatives of India as well as of all the self-governing dominions were invited. All were able to attend but the representatives of Australia, who were prevented from being present by the approach of a general election. Arrangements were made for the meetings to take two forms. The oversea representatives were made temporarily members of the British war cabinet, which thus became an imperial war cabinet. While this was in session oversea members had access to all the information which was at the disposal of his majesty's government and occupied a status of absolute equality with that of the members of the British war cabinet. At the conclusion of the sittings the prime minister proposed on behalf of his majesty's government that meetings of an imperial cabinet should be held annually or at any intermediate time when matters of urgent imperial concern required settlement, and that the imperial cabinet consist of the prime minister of the United Kingdom, his colleagues that deal specially with imperial affairs, the prime minister of each of the dominions, or an accredited alternate possessed of equal authority, and a representative of the Indian people to be appointed by the government of India.—See also above under heading of Colonial and imperial conferences, 1917: Imperial war conference.

1918.—War cabinet session.—In the summer of 1918 sessions of the imperial war cabinet were held again from June to the middle of August. It was announced at the termination of the meetings that every aspect of policy affecting the conduct of the war and the question of peace had been examined. As the meetings had proved of such value it was thought essential that modifications be made in the existing channels of communication so as to make consultations among the different governments of the empire as continuous and intimate as possible. It had, therefore, been decided that for the future the prime ministers of the dominions as members of the imperial war cabinet, should have the right to communicate on matters of cabinet importance directly with the prime minister of the United Kingdom. It had also been decided that each dominion should have the right to nominate a visiting or a resident minister in London to be a member of the imperial war cabinet at meetings other than those attended by prime ministers and that at these meetings, held at regular intervals, arrangements would be made also for the representation of India.

LEAGUE OF NATIONS

New constitutional status of Dominions and India.—“The British Commonwealth is itself a league of nations, though a league without a covenant. It proved its unity of aim and sentiment in the great ordeal of the war, and during that ordeal it established and worked a definite system of united action with historic results. United action was, however, made possible only by united counsels, which took shape in a new constitutional invention of a very elastic character—the Imperial War Cabinet. This system was prolonged into the period of peace negotiations, in which unity was as

obvious a condition of success as during the war itself. By means of it the diplomacy which shaped our course at Paris was representative of the whole British Commonwealth in an altogether unprecedented sense. The climax of this very new and proper constitutional development was reached at the signature of peace. The Dominions and India then definitely established their status as individual nations and members of the League by affixing their separate signatures to the Treaty and the Covenant, which gave them individual votes in the Assembly of the League and the right of individual entry to the Council of the League, should the other signatory Powers consent. Therewith the mechanism by which British unity of action had been secured dropped into the past, and the League of Nations itself became the organ through which the union of British aims and sentiments should in future make itself heard. The motive for this new constitutional theory lay quite as much in the domestic difficulties of the British Empire as in a disinterested desire to make the most of the League. The constitutional position resulting from the new status of the Dominions and India as partner-nations in the British Commonwealth, in no way subordinate to the Government of Great Britain, required elucidation. The new status of the Dominions and India could have no constitutional meaning unless their respective Governments were entitled to advise the King in the same way as the Government of Great Britain, which had hitherto exercised that responsibility alone. A sovereign advised by six different governments cannot act on the advice of all his governments unless they happen to be unanimous. It had been found in Paris that in order to preserve its unity the British delegation must meet frequently as a delegation to discuss its policy before meeting the representatives of foreign nations in conference. How was this unity of action to be maintained after the signature of peace without committing the dominion governments to some new constitutional organisation within the Commonwealth? And if some new constitutional organisation were to be devised for this purpose, how could it fail to limit in some way the full national independence of status which the dominion governments had just achieved by their recognition as individual members of the League of Nations? The answer to these questions was found in co-operation within the League, which was to serve, not only as the link between the British Empire and foreign powers, but as the link also between the constituent nations of the British Empire itself. Imbued with this idea, the Dominion statesmen accepted obligations which they would undertake to their kindred nations within the British Commonwealth. In other words, they mortgaged their freedom of action to a league of foreign States in order to avoid the possibility of mortgaging it to the British Government. . . . It is almost needless to observe that none of the democracies of the British Empire has grasped the extent of its obligations to the League of Nations or would hesitate to repudiate them at once, if put to the test. If England were threatened by invasion, the other British democracies would mobilise at once for her support; but though they have a written obligation to Poland, which they have never dreamed of giving to England, they would not in practice mobilise a single man to defend the integrity of the corridor to Danzig or any other Polish territorial interest. They have drifted into this equivocal situation simply through a desire to establish their new status within the British Commonwealth without admitting the domestic diffi-

culties which that status inevitably entails. That is a dangerous and equivocal situation, which entirely belies our real desire for straight dealing in international affairs. The same moral is pointed with equal force by another significant feature of the present situation. The dominion governments did their full share in the work of the British delegation at Paris which represented the Empire in making the peace with Germany. They have since affixed their signatures to the peace with Austria and the peace with Bulgaria; but they took no part in the negotiation of either of these instruments. This is only another demonstration of the fact that membership of the League of Nations does not of itself, except in form, establish the national status of the British Dominions either in the community of nations or in the British Commonwealth. It shows that something more is needed for full national status, since independent nations cannot be bound by treaties in the negotiation of which they have taken no part. The Dominions might have taken their part, had they chosen to do so, in exactly the same manner as in the negotiation of the peace with Germany. The British Imperial delegation which negotiated the German treaty has, however, ceased to exist; and the Dominions have not yet realised that without it their participation in the League of Nations as individual members is a matter of form without political substance. The negotiation of peace with the Ottoman Empire and the shaping of our policy towards Russia and the Bolshevik Government are even more significant examples of this fact. Among the many changes brought upon the British Empire by the war none is more serious than the great extension of its responsibilities in the Middle East. . . . The settlement which we now adopt, and the lines upon which our future policy is shaped, must vitally affect the peace of the world and our own security. It is essential that our course should be wisely taken and generally understood. It follows that the Dominions are as closely interested as Great Britain and India in the negotiation of the peace with Turkey and in the choice of our policy towards Russia.—*British empire, the league, and the United States (Round Table, March, 1920).*

Mandates under the League of Nations. See LEAGUE OF NATIONS: Plans formulated during the World War.

CONCLUSION

"If I were asked how one could describe in a sentence the general aim of British imperialism . . . I should answer . . . to give all men within its borders an English mind; to give all who come within its sway the power to look at things of man's life, at the past, at the future, from the standpoint of an Englishman; to diffuse within its bound that high tolerance in religion which has marked this Empire from its foundation; that reverence yet boldness before the mysteriousness of life and death, characteristic of our great poets and our great thinkers; that love of free institutions, that pursuit of ever higher justice and a larger freedom, which, rightly or wrongly, we associate with the temper and character of our race wherever it is dominant and secure. To give all men within its bounds an English mind—that has been the purpose of our Empire in the past. He who speaks of England's greatness speaks of this. Her renown, her glory, it is this, undying, imperishable, in the strictest sense of that word. For if, in some cataclysm of nature, these islands and all that they embrace were overwhelmed and sunk in

sea-oblivion, if tomorrow's sun rose upon an Englandless world, still this spirit and this purpose in other lands would fare on untouched amid the wreck."—H. Egerton, *War and the British dominions* (Oxford pamphlet).

BRITISH MUSEUM, London, is situated in Bloomsbury on Great Russell street just off New Oxford street and High Holborn. "This splendid national Institution owes its first establishment to the will of Sir Hans Sloane, an eminent physician and naturalist of his day, who directed that on his death, his books, manuscripts, and collections both of art and natural history, should be offered to Parliament for £20,000. The offer was accepted at his death in 1753; and the Act (26 Geo. II) which directed the purchase, also directed the purchase of the Harleian Library of Manuscripts; and enacted that the Cottonian Library, which had been presented to the nation, in the reign of William III, and deposited in Dean's Yard, Westminster, should, with these, form one general collection; to which at the same time George II added a large library that had been collected by the preceding sovereigns since Henry VIII. To accommodate the national property thus accumulated, the Government raised by lottery, the sum of £100,000, of which £20,000 were devoted to purchase the above collections."—H. G. Clarke, *British museum*, p. 5.—"Montague House was purchased by the Trustees in 1754 for a general repository, and the collections were removed to it. . . . On the 15th of January, 1750, the British Museum was opened for the inspection and use of the public. At first the Museum was divided into three departments, viz., Printed Books, Manuscripts, and Natural History; at the head of each of them was placed an officer designated as 'Under Librarian.' The increase of the collections soon rendered it necessary to provide additional accommodation for them, Montague House proving insufficient. The present by George III of Egyptian Antiquities, and the purchase of the Hamilton and Townley Antiquities, made it moreover imperative to create an additional department—that of Antiquities and Art—to

which were united the Prints and Drawings, as well as the Medals and Coins, previously attached to the library of Printed Books and Manuscripts. The acquisition of the Elgin Marbles in 1816 made the Department of Antiquities of the highest importance, and increased room being indispensable for the exhibition of those marbles, a temporary shelter was prepared for them. This was the last addition to Montague House. When, in 1823, the library collected by George III was presented to the nation by George IV it became necessary to erect a building fit to receive this valuable and extensive collection. It was then decided to have an entirely new edifice to contain the whole of the Museum collection, including the recently-acquired library. Sir R. Smirke was accordingly directed by the Trustees to prepare plans. The eastern side of the present structure was completed in 1828, and the Royal Library was then placed in it. The northern, southern, and western sides of the building were subsequently added, and in 1845 the whole of Montague House and its additions had disappeared; while the increasing collections had rendered it necessary to make various additions to the original design of Sir R. Smirke, some of them even before it had been carried out.—J. W. Jones, *British museum: a guide*, pp. ii-iii.—“The British Museum has, since 1753, been under the government of a Board of Trustees. This body includes certain family Trustees, representing some of the legates to the Museum, and insisted on by the terms of the bequest.”—T. Greenwood, *Museums and art galleries*, p. 225.

Explorations and accessions.—“The year 1772 is noteworthy as the date of the first Parliamentary grant for the augmentation of the Museum collection. The House of Commons in that year voted a sum of £8410 for the purchase of the valuable museum of antiquities which had been formed by Sir William Hamilton (1730-1803), British Ambassador at Naples, 1764-1800. The vases formed the most important section, but the collection also contained several sculptures in the round and in relief. . . . The collection of sculpture which had thus slowly come into existence during the first fifty years of the Museum's history, received its most brilliant accessions during the first quarter of the [nineteenth] century. . . . Thomas Bruce, seventh Earl of Elgin (1766-1841), whose collection was the next and greatest addition to the British Museum, had been appointed British Ambassador to the Porte in 1799. On his appointment, he resolved to make his time of office of service to the cause of art, and accordingly engaged a body of five architects, draughtsmen and formatori, under Lusieri, a Neapolitan portrait painter, to make casts, plans and drawings from the remains in Greece, and more particularly at Athens. While the work was in progress, Lord Elgin became aware of the rapid destruction that was taking place, of the sculptures in Athens. The success of the British arms in Egypt having made the disposition of the Porte favourable to the British Ambassador, a firman was obtained which sanctioned the removal of the sculptures. The whole collection, formed by Lord Elgin's agents, was, after long negotiations, and an enquiry by a Select Committee of the House of Commons, purchased of Lord Elgin for £35,000 in 1816. It consists of sculptures and architectural fragments from the Parthenon, the Erechtheion, and other Athenian buildings; casts, which have now become of great value, from the Parthenon, the Theseion, and the Monument of Lysicrates; a considerable number of Greek reliefs, principally from Athens; fragments from Mycenæ and elsewhere; drawings and

plans. . . . In 1846, permission was given by the Porte to the British Ambassador . . . to remove twelve slabs of the frieze of the Mausoleum from Halicarnassos. These sculptures, long known to travellers, were taken from the walls of the castle of Budrum, and presented by the Ambassador to the British Museum. Ten years later the influence of Lord Stratford de Redcliffe was exerted to support Sir Charles Newton in his explorations in Asia Minor. Sir Charles Newton exchanged his position at the British Museum, in 1856, for the post of British Vice-Consul at Mitylene, which he held till 1859, and in that capacity he was able, on behalf of the Trustees, to excavate the sites of the Mausoleum at Halicarnassos, and of the temple of Demeter at Cnidus. He also removed the archaic statues of Branchidæ, and collected several minor pieces of sculpture. The excavations on the site of the Mausoleum added four slabs to the series presented by Lord Stratford de Redcliffe in 1840. One additional slab was purchased in 1865 of the Marchese Serra, of Genoa. While the excavations of the Mausoleum were in progress, the Crimean campaign afforded an opportunity to Col. Westmacott to form a collection of sculptures from Kertch and the neighbourhood, illustrating the later stages of Greek art on the Euxine. In the years 1860-1861, Captain, [afterward] General Sir R. Murdoch Smith, R. E., and Commander E. A. Porcher, R. N., carried out a series of excavations on the site of Cyrenê, and discovered a considerable number of sculptures in marble, and an admirable bronze portrait head, among the ruins of the temples of Apollo, Dionysos and Aphrodite, and elsewhere. The excavations which were carried on at Ephesus by the late Mr. John Turtle Wood, for the British Museum, began in 1863, and were continued till 1874, the site of the great temple of Artemis not having been determined before the spring of 1870. Besides excavating the site of the temple, Mr. Wood obtained inscriptions and sculptures from the Odeum, the great Theatre, and the road to the temple of Arthemis. The site of Naucratis in the Egyptian Delta was discovered by Mr. W. M. Flinders Petrie, and was excavated, partly by the discoverer, and partly by Mr. E. A. Gardner, at the cost of the Egypt Exploration Fund in the years 1884-6. The most important objects found were fragments of pottery, but there were also some architectural remains, and archaic statuettes of interest.”—A. H. Smith, *British museum (Catalogue of sculpture*, pp. 1-9).

1880-1916.—Library.—Recent history of the library.—Changes in the buildings.—Important bequests.—Size of the library.—“In 1879 the White Wing, on the southeast side, was added to the museum buildings. . . . This wing, when completed, contained newspaper rooms and additions to the Department of Manuscripts, besides other extensions not connected with the library. In 1880-1883 the great step was taken of removing the natural history collections to a new museum in Cromwell Road, South Kensington, where they could obtain the justice they deserve. . . . The galleries at Bloomsbury left vacant by the transfer were immediately filled with antiquities hitherto meanly lodged in the basement. The Reading-room accommodation was now becoming extremely inadequate to the demands made upon it. . . . To relieve the pressure, the newspapers and Parliamentary Papers were removed to the White Wing, and had a reading-room specially allotted to them. Restrictions also were placed on the reading of novels. Novels less than five years old cannot now [1916] be obtained in the Reading-room without special permission from the Superintendent. . . .

The British Museum Act, 1902, authorised the erection of a building there in which might be stored newspapers and other printed matter not in general use, provided that they were made accessible to the public at Bloomsbury on due notice being given. . . . The new library and galleries on the north side recently completed were begun in April, 1906, the late Mr. Vincent Stuckey Lean having in 1899 left £50,000 chiefly for the extension of the library. This sum was augmented by a Treasury grant of £150,000 under the Public Buildings Expenses Act. The new wing is called King Edward the Seventh's Galleries. . . . On 7th May, 1914, the new galleries were opened by King George V., who was accompanied by the Queen and Princess Mary. The ceremony took place in the North Library, when the Archbishop of Canterbury read an address to the King summarising the history of the Museum. In his reply, the King spoke of the pride he felt in the museum, as a former trustee of this great national institution. 'The new galleries which we are met to open today,' said his majesty, 'form a worthy addition to one of the noblest public buildings of my capital. They will enable your ever-growing collections to be displayed to more advantage, and will provide better accommodations for students and for the work of the staff, and will thus, I trust, extend and enhance the influence of the Museum as one of the chief educational agencies of the world. . . . The latter days of the library have been uneventful, though the collections are steadily increasing, being added to yearly, partly by purchase, partly by benefactions from public-spirited persons. . . . Baron Ferdinand Rothschild's bequest of illuminated manuscripts—some exceedingly fine—was received in 1899. In 1910 the Huth Bequest was received. . . . This is the most important addition of manuscripts and printed books acquired by the Museum since the bequest of the Grenville Library in 1847. The Music Department has recently been enriched by the King's loan of the royal Musical Library from Buckingham Palace. This collection numbering about 1000 manuscripts and 3000 printed books is now deposited in the Museum. . . . Happily there has been no catastrophe to chronicle in the history of our national library, save the disastrous fire at Ashburnham House, in 1731, which destroyed part of the Cottonian collection. Fire, War and Neglect are the enemies which have wrought havoc among books in all ages, but from the beginning the authorities of the British Museum have taken such careful precautions against danger of any kind that the Museum collections have never been seriously threatened. . . . At the time of the Gordon Riots, in 1780, troops were stationed in the Museum garden. . . . Cowtan, an assistant in the Library under Panizzi's administration, has left an entertaining account of the precautions taken against an attack by the Chartists in 1848. . . . In 1912 the outrages on public buildings committed by some fanatics for the purpose of influencing public opinion in favor of the political enfranchisement of women, led to the closing of the Museum to the general public. The Reading-room and Library, however, remained available for students. . . . Since the outbreak of the war [World War] precautions have been taken against damage by hostile aircraft, and specially valuable books and other objects have been removed to safes and strong rooms. . . . That the British Museum Library is paramount among all the libraries within the Empire is accepted as a matter of course, but there has always been an inclination . . . to make comparisons between the French national library

and our own, with a view to discovering which is the greater. It must be admitted that in the earliest part of the last century the Bibliothèque Royale was undoubtedly far superior in its number of books to the library of the British Museum. Indeed, it was the first library in the world. But as regards administration, cataloguing, and the facilities afforded readers, the British Museum has always been foremost. . . . According to the enumeration published in 1912 the contents of the Museum Library then occupied forty-six miles of shelves, and stood approximately as follows:—
 Volumes of MSS . . . 50,500; Charters and Rolls . . . 76,000; Greek and Latin Papyri . . . 1,000; Printed Books . . . 3,500,000 to 4,000,000."—G. B. Rawlings, *British Museum library*, pp. 92-97, 99, 101-104.—See also EDUCATION, ART: Modern period: ENGLAND; LIBRARIES: Modern: ENGLAND.

BRITANNY, a province of northwestern France, bordering on the English Channel, and identified with the modern departments of Finistère, Côtes-du-Nord, Morbihan, Loire-Inférieure, and Ille-et-Vilaine.

In the Roman period. See AMORICA; VENETI OF WESTERN GAUL.

383.—British settlement and name. See BRITAIN: 383-388.

409.—Independence asserted.—At the time that the British island practically severed its connection with the expiring Roman Empire (about 409) the Britons of the continent,—of the Armorican province, or modern Brittany,—followed the example. "They expelled the Roman magistrates, who acted under the authority of the usurper Constantine; and a free government was established among a people who had so long been subject to the arbitrary will of a master."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 31.—"From this time, perhaps, we ought to date that isolation of Brittany from the politics of the rest of France which has not entirely disappeared even at the present day."—T. Hodgkin, *Italy and her invaders*, bk. 2, ch. 3.—The Armoricans, however, were found fighting by the side of the Romans and the Goths, against the Huns, on the great day at Chalons. See HUNS: 451.

818-912.—The Breyzad kingdom.—Subjection to the Norman dukes.—"Charlemagne's supremacy over the Armoricans may be compared to the dominion exercised by Imperial Russia amongst the Caucasian tribes—periods during which the vassals dare not claim the rights of independence, intercalated amongst the converse periods when the Emperor cannot assert the rights of authority; yet the Frank would not abandon the prerogative of the Caesars, whilst the mutual antipathy between the races inflamed the desire of dominion on the

one part, and the determination of resistance on the other. Brittany is divided into Bretagne Bretonnante and Bretagne Gallicante, according to the predominance of the Breyzad and the Romane languages respectively. The latter constituted the march-lands, and here the Counts-marchers were placed by Charlemagne and his successors, Franks mostly by lineage; yet one Breyzad, Nominœ, was trusted by Louis-le-débonnaire [818] with a delegated authority. Nominœ deserved his power; he was one of the new men of the era, literally taken from the plough. . . . The dissensions among the Franks enabled Nominœ to increase his authority. Could there be any adversary of the Empire so stupid as not to profit by the battle of Fontenay. . . . Nominœ assumed the royal title, vindicated the independence of his ancient people, and enabled them, in the time of Rollo, to assert with incorrect grandiloquence, pardonable in political argument, that the Frank had never reigned within the proper Armorican boundaries." Nominœ transmitted his crown to his son Herispoë; but the latter reigned briefly, succumbing to a conspiracy which raised his nephew, Salomon, to the throne. Salomon was a vigorous warrior, sometimes fighting the Franks, and sometimes struggling with the Normans, who pressed hard upon his small kingdom. He extended his dominions considerably, in Maine, Anjou, and the future Normandy, and his royal title was sanctioned by Charles the Bald. But he, too, was conspired against, blinded and dethroned, dying in prison; and, about 912, the second duke of Normandy established his lordship over the distracted country.

"Historical Brittany settled into four great counties, which also absorbed the Carolingian march-lands, Rennes, Nantes, Vannes and Cornouailles, rivalling and jealousy, snarling and warring against each other for the royal or ducal dignity, until the supremacy was permanently established in Alafr Fergant's line, the ally, the opponent, the son-in-law of William the Bastard. But the suzerainty or superiority of all Brittany was vested in the Conqueror's and the Plantagenet's lineage, till the forfeiture incurred by King John—an unjust exercise of justice."—Sir F. Palgrave, *History of Normandy and England*, bk. 1, ch. 3.

912-936.—Northmen.—"Brittany at that time was independent and prosperous, and arts and belles-lettres began to make rapid advance. They had progressed but little, however, before they began to wither beneath the ravages of the Northmen. Those pagan pirates from Denmark and Norway sailed up the rivers, burning everything on their way, and generally falling upon the monasteries, whose riches tempted their cupidity. The Bretons were unable to defend themselves successfully, for upon Salomon's death in 847 Brittany was again divided into petty kingdoms, independent of each other and weakened by civil wars. In vain did Alain, Comte de Vannes, win a great victory in 890. At the very beginning of the tenth century, a few years after the settlement of a band of Northmen in the part of the country which, after them, was named Normandy, another band settled at the mouth of the Loire, and from there oppressed the whole of Brittany. Many noble families sought shelter in France and in England. The monks deserted their abbeys, and fled with the relics of their saints to Paris, Picardy, Burgundy, and everywhere where a shelter was offered them. The dominion of the pirates lasted more than twenty-five years. The first attempt at enfranchisement did not succeed. It was only in 936 that emigrants returning to Brittany united their efforts with those of the Bretons who had remained

in their country, and after a war which lasted for some three years the Northmen were completely driven out. Alain Barbe Torte, Comte de Nantes, and Berengier, Comte de Rennes, were the heroes of the deliverance of their country."—Y. Josse, *Outline of Breton history* (from the French of M. de Calan, *Celtic Review*, July, 1909, pp. 43-44).

992-1237.—First dukes, feudal culture.—"After the death of Salomon . . . all these districts or territories merged in the three dominations of Nantes, Rennes, and Cornouaille. Amongst the Celts concord was impossible. In early times Nomoë, the Ruler of Cornouaille, had assumed, by Papal authority, the royal style, but the Counts of Rennes acquired the pre-eminence over the other chieftains. Regality vanished. Geoffrey, son of Conan [992-1008] . . . must be distinguished as the first Duke of Brittany. He constituted himself Duke simply by taking the title. This assumption may possibly have been sanctioned by the successor of Saint Peter; and, by degrees, his rank in the civil hierarchy became ultimately recognized. . . . The Counts of Brittany, and the Dukes in like manner, in later times, rendered homage 'en parage' to Normandy in the first instance, and that same homage was afterwards demanded by the crown of France. But the Capetian monarchs refused to acknowledge the 'Duke,' until the time of Peter Mauclerc, son of Robert, Count of Dreux, Earl of Richmond [1213-1237]."—Sir F. Palgrave, *History of Normandy and England*, v. 3, p. 165.—"Brittany was then a feudal country; that is to say, the land belonged to great lords on whom depended a numerous gentry having free peasants as farmers—for Brittany is one of the provinces of France where villainage was most promptly abolished. Husbandry was the greatest resource of the inhabitants. Manufactures had not as yet been developed very extensively, though several small towns carried on a very considerable trade with foreign countries. After the Northmen had been expelled, many old abbeys rose up from their ruins—Landevennee, Saint Gildas, Redon, etc. Others were founded in the twelfth century, to clear the uncultivated lands, such as those of the Cistercians at Begar, St. Aubin de Bois, etc.; and others to help the secular clergy in the parishes, such as those of the Augustines and Prémontrés at Beauport, Beau-lieu, etc. More than forty abbeys for men and two for women were thus founded. Brittany had then great literary importance. Abelard, the greatest French philosopher of the Middle Ages; Adam de Saint Victor, the greatest poet in the Romance language; and Guillaume le Breton, one of the greatest epic poets in the same language, were all Bretons. The laments our poets had composed for the Armorican bishops, companions of Charles Martel—Amile, Moran, etc.—for the companions in arms of Pépin and Charlemagne—Ogier, Roland, about the heroes of the war of independence—Erispœ, Salomon, etc.—served as topics for the great poems the French call 'Chansons de Geste.' The marvellous tales of King Arthur, his knights and the prophet Merlin, which the Bretons had brought back from their stay in Britain in the tenth century, and made so popular all over France, were the beginning of the 'Romans de la Table Ronde.' [See ARTHURIAN LEGEND.] Brittany thus became a country of legends—the scene of fantastic or edifying stories, but never of those humorous or obscene tales called 'Fabliaux.' That did not prevent the French of that time from laughing at the Bretons, whom they liked to represent as a foolish and clownish people."—Y. Josse, *Outline of Breton history* (from the French of M. de Calan, *Celtic Review*, July, 1909, pp. 36-37).

1154-1360.—Extent of territory. See FRANCE: Maps of Medieval period: 1154-1360.

1341-1365.—The long Civil War.—Montfort against Blois.—Almost simultaneously with the beginning of the Hundred Years War of the English kings in France, there broke out a malignant and destructive civil war in Brittany, which French and English took part in, on the opposing sides. "John III, duke of that province, had died without issue, and two rivals disputed his inheritance. The one was Charles de Blois, husband of one of his nieces and nephew of the King of France; the other, Montfort, . . . younger brother of the last duke and . . . disinherited by him. The Court of Peers, devoted to the king, adjudged the duchy to Charles de Blois, his nephew. Montfort immediately made himself master of the strongest places, and rendered homage for Brittany to king Edward [III. of England], whose assistance he implored. This war, in which Charles de Blois was supported by France and Montfort by England, lasted twenty-four years without interruption, and presented, in the midst of heroic actions, a long course of treacheries and atrocious robberies." The war was ended in 1365 by the battle of Auray, in which Charles de Blois was slain, and Bertrand Du Guesclin, the famous Breton warrior, was taken prisoner. This was soon followed by the treaty of Guérande, which established Montfort in the duchy.—E. de Bonnechose, *History of France*, v. 1, bk. 2, ch. 2 and 4.

Also in: Froissart (Johnes), *Chronicles*, bk. 1, ch. 64-227.

1491.—Joined by marriage to the French crown.—The family of Montfort, having been established in the duchy of Brittany by the arms of the English, were naturally inclined to English connections; "but the Bretons would seldom permit them to be effectual. Two cardinal feelings guided the conduct of this brave and faithful people; the one an attachment to the French nation and monarchy in opposition to foreign enemies; the other, a zeal for their own privileges, and the family of Montfort, in opposition to the encroachments of the crown. In Francis II., the present duke [at the time of the accession of Charles VIII. of France, 1483], the male line of that family was about to be extinguished. His daughter Anne was naturally the object of many suitors, among whom were particularly distinguished the duke of Orleans, who seems to have been preferred by herself; the lord of Albret, a member of the Gascon family of Foix, favoured by the Breton nobility, as most likely to preserve the peace and liberties of their country, but whose age rendered him not very acceptable to a youthful princess; and Maximilian, king of the Romans [whose first wife, Mary of Burgundy, died in 1482]. Brittany was rent by factions and overrun by the armies of the regent of France, who did not lose this opportunity of interfering with its domestic troubles, and of persecuting her private enemy, the duke of Orleans. Anne of Brittany, upon her father's death, finding no other means of escaping the addresses of Albret, was married by proxy to Maximilian. This, however, aggravated the evils of the country, since France was resolved at all events to break off so dangerous a connexion. And as Maximilian himself was unable, or took not sufficient pains to relieve his betrothed wife from her embarrassments, she was ultimately compelled to accept the hand of Charles VIII. He had long been engaged by the treaty of Arras to marry the daughter of Maximilian, and that princess was educated at the French court. But this engagement had not prevented several years of hostilities,

and continual intrigues with the towns of Flanders against Maximilian. The double injury which the latter sustained in the marriage of Charles with the heiress of Brittany seemed likely to excite a protracted contest; but the king of France, who had other objects in view, and perhaps was conscious that he had not acted a fair part, soon came to an accommodation, by which he restored Artois and Franche-comté. . . . France was now consolidated into a great kingdom: the feudal system was at an end."—H. Hallam, *View of the state of Europe during the middle ages, ch. 1, pt. 2*.—In the contract of marriage between Charles VIII and Anne of Brittany, "each party surrendered all separate pretensions upon the Duchy, and one stipulation alone was considered requisite to secure the perpetual union of Brittany with France, namely, that in case the queen should survive her consort, she should not remarry unless either with the future king, or, if that were not possible, with the presumptive heir of the crown."—E. Smedley, *History of France, pt. 1, ch. 18*.

ALSO IN: F. P. Guizot, *Popular history of France, ch. 26*.

1532.—Final reunion with the crown of France.—"Duprat [chancellor of Francis I of France], whose administration was . . . shameful, promoted one measure of high utility. Francis I until then had governed Brittany only in the quality of duke of that province; Duprat counselled him to unite this duchy in an indissoluble manner with the crown, and he prevailed upon the States of Brittany themselves to request this reunion, which alone was capable of preventing the breaking out of civil wars at the death of the king. It was irrevocably voted by the States assembled at Vannes in 1532. The king swore to respect the rights of Brittany, and not to raise any subsidy therein without the consent of the States Provincial."—E. de Bonnechose, *History of France, bk. 1, ch. 2*.

16th century.—Protestantism.—"Protestantism made but few recruits in Brittany—a hundred noble families, a few magistrates, and some gentry. The Catholics were very tolerant towards them, and the Protestants suffered few vexations: they were not the victims of any massacre, even at the feast of Saint Barthélemy, 1572. They consequently revolted only in one or two districts, and for the most part the religious wars that desolated France spared Brittany. Everything changed when Henry III. died in 1589. His successor, Henry IV., was a Protestant. He was helped by his co-religionists and by those among the Catholics who thought a difference of religion was not sufficient to exclude the rightful heir from the throne. The Bretons, however, Catholics before everything else, united to resist the new king, with the Duke of Mercœur, governor of the province, at their head. Some among them, who wanted to be governed only by descendants of their former dukes, and who would not accept Henry IV. for that reason, sought to establish as their duchess the daughter of the King of Spain, niece to Henry III., and great-granddaughter of the Duchess Anne. The war lasted more than nine years. It was a succession of petty battles, of taking and retaking of towns and castles, that did all the more harm to the country because several commanders on both sides, such as the Protestant Du Liscouet and the Catholic La Fontenelle, were sheer brigands, who, under the pretence of religion, sought only to release friends and to hold enemies to ransom. And the foreigners called in to help the two parties—the Spanish by the Catholics and the English by the Protestants—followed their example without

scruple. When Henry IV. renounced Protestantism in 1593 many Ligueurs joined him, but Mercœur and his partisans submitted to him only in 1598."—Y. Josse, *Outline of Breton history* (from the French of M. de Calan, *Celtic Review, July, 1909, pp. 41-42*).—See also FRANCE: 1503-1508.

1793.—Resistance to the French Revolution.—The Vendean War. See FRANCE: 1793 (March-April); (June); (July-December).

1794-1796.—The Chouans. See FRANCE: 1794-1796.

1788.—Break-up of the original Breton states.—"The States of Brittany were strongly imbued with national feeling, and they helped the Benedictine Lobineau to write a history of Brittany which served as a model for those written later on in the different provinces. Up to the end of the eighteenth century the three orders were united for the defence of the privileges of Brittany, but in 1788, when the burst of civil, political and social unrest that ended with the Revolution appeared in France, the Breton townsmen, finding their influence in the States too small, claimed representation according to their proportionate number among the population. It was a throwing over of the old principles by which it was not the men but the general interests, the group, that were represented. The clergy and nobility refused to make any concessions. The townsmen grew excited. Fighting took place in the streets at Rennes, and the Government dissolved the States, never to call them together again. In their place the 'Assemblée Nationale,' made up of all the French deputies, met in Paris, and departments took the place of the provinces. Brittany was divided into five departments: Ille-et-Vilaine, Loire-Inférieure, Côtes-du-Nord, Morbihan, Finistère."—Y. Josse, *Outline of Breton history* (from the French of M. de Calan, *Celtic Review, July, 1909, pp. 43-44*).

Modern Brittany.—"France is by no means a smiling garden in every one of her parts, and the first distinction to be drawn is between the mountainous areas, barren, isolated, unprogressive, and the rich, hospitable plains, where men congregate in great cities. Among the former we should place Brittany—a huge slab of granite, flung as the western bastion of the continent against the Atlantic. The interior of Brittany is a rugged country, savage and sombre without grandeur. It is partly covered with black mountains, worn down to the size of hills by æonial erosion, but still forbidding. Groves of stunted oaks alternate with moors of gorse and broom; rye takes the place of wheat; the very cattle are of an undersized breed; and cider is less sweet than in the neighbouring province, opulent Normandy. The coast, assailed by the age-long fury of the ocean, is, in the north and west, deeply indented with fjords, fringed with islands and sunken reefs. A tragic shore, fertile in shipwrecks: the wild inhabitants were long accused of turning these into a profitable industry, and of bringing them about by means of delusive lights. The land is swathed in ocean mist: hence a mild climate, which allows violets to grow in mid-winter, and makes market-gardening profitable in every coast valley and cove: this forms the Golden Belt of Brittany, a Cimmerian Riveria. Each little fjord shelters a fishing village, like Paimpol and Tréguier, whence a fleet of sturdy brigs starts every year for Iceland or Newfoundland. From afar the returning sailor descries the tall, fretted granite spire, heart and sole pride of the humble city. These eyries of sea-birds alone are truly Breton. Nantes and St. Nazaire, on the Loire, industrial and shipping centres; Rennes, the university seat and old-time capital; Lorient, an ar-

tificial creation and a failure both as a commercial port and as a naval base; Brest [q. v.], the great arsenal, the chief bridgehead of the American Expeditionary Forces all belong to France rather than to Armor. The Bretons are a strange people, short, dark-haired, blue-eyed. Unlike the French, they are still very prolific, and their country, neither fertile nor rich in minerals, is one of the most densely populated in France. Celtic is still the speech of the majority in the western districts; the old costumes have not yet been wholly discarded, nor the old customs, such as the great pilgrimages or Pardons; neither have many decades of centralizing democracy and aggressive anticlericalism been able to root out the old loyalty to King and Church. Isolated in its corner of the land, in its traditions and its language, Brittany offers the pathetic spectacle of a small nation whose soul is relentlessly stifled by the pressure of an alien civilization. Yet France has dealt not unfairly with Brittany. The numbness which has seized its original culture is not the result of persecution; the 'oppression' is well-meaning and almost intangible; the 'victim' is driven to silence and melancholy rather than rebellion; perhaps persecution were kinder. The daughters of Brittany emigrate to Paris as domestic servants; with conscription and the influx of summer tourists, the men are becoming frenchified. The last biniou (bag-pipe) will probably be played for the benefit of American trippers. It is a poignantly attractive soul which is thus dying under our eyes—rugged and misty like the Breton shore: the greatest legends of adventure, mysticism, and passion in the Middle Ages came from the Celtic sources, and the history of religion in the nineteenth-century France could be summed up in three Breton names, Chateaubriand, Lamennais, Renan."—A. L. Guerard, *French civilization—from its origins to the close of the Middle Ages*, pp. 33-35.

BROOK FARM, a communistic experiment to solve the social problem, which was started in 1841 at West Roxbury, Massachusetts. In 1844 the community became reorganized as a Fourieristic community. See **SOCIALISM:** 1840-1847.

BROOKE, Sir Charles Johnson (1829-1917), nephew of Sir James Brooke, whom he succeeded as raja of Sarawak in 1868. See **BORNEO.**

BROOKE, Sir James (1803-1868), first raja of Sarawak who was instrumental in securing control of Borneo and in doing away with piracy. •See **BORNEO:** 1521-1846.

BROOKE, John Rutter (1838-), American general. Served in the Civil War; in 1897 he was in Porto Rico, arranging for its evacuation by Spanish troops; 1898-1899, military governor of Cuba. See **CUBA:** 1898-1899 (December-October); **PORTO RICO:** 1898-1899 (October-October).

BROOKE, Rupert (1887-1915), English poet. See **ENGLISH LITERATURE:** 1880-1920.

BROOKLYN, N. Y., situated on Long Island and separated from Manhattan island by the East river. Until 1898 a separate city, but since then a borough of Greater New York, and constituting

Kings county. (See NEW YORK CITY: 1895-1897). Population over 2,000,000.

1624.—The first settlements by Walloon families.—A few families of Walloons, in 1624, built their cottages on Long Island, and began the cultivation of the lands they had secured; the women working in the fields, while the men were engaged in the service of the Dutch West India Company. These were the first settlers of Brooklyn.—G. W. Schuyler, *Colonial New York*, v. 1, p. 27.

1646.—The town named and organized.—The occupation of land within the limits of the present city of Brooklyn . . . had steadily progressed, until now (1646) nearly the whole water-front, from Newtown Creek to the southerly side of Gowanus Bay, was in the possession of individuals who were engaged in its actual cultivation. . . . The village . . . was called Breuckelen, after the ancient village of the same name in Holland.—H. R. Stiles, *History of the city of Brooklyn*, ch. 1.

1776.—Battle of Long Island. See U. S. A.: 1776 (August).

1883-1911.—Bridges. See NEW YORK CITY: 1867-1915.

1895-1897.—Absorption in Greater New York. See NEW YORK CITY: 1895; 1897.

1903-1922.—Tunnels in and from New York. See NEW YORK CITY: 1860-1922.

City Plan. See CITY PLANNING: United States: Survey of New York.

BROOKLYN BOROUGH, one of the boroughs of New York, but until 1898 a separate city. It is on the west end of Long Island, and is separated from the island and borough of Manhattan by the East river. See NEW YORK CITY: 1895-1897.

BROOKLYN BRIDGE.—The great suspension bridge, spanning East river, between New York and Brooklyn, at a height of 135 feet above high water, was begun in 1870 and opened in 1883. Total length, including approaches, 6,016 feet; river span, 1,595½.—See also NEW YORK CITY: 1867-1915.

BROOKLYN RAPID TRANSIT COMPANY. See NEW YORK CITY: 1860-1920.

BROOKS, James (1810-1873), American journalist and politician. Was in New York state legislature, 1847; U. S. Congress, 1849-1853 and 1863-1873. Censured for his connection with the Crédit Mobilier scandal. See CRÉDIT MOBILIER SCANDAL.

BROOKS, Joseph (1821-1877), candidate for governor of Arkansas in 1872. He was defeated by Eliza Baxter, the regular Republican candidate. See ARKANSAS: 1872-1874.

BROOKS, Preston Smith (1819-1857), American congressman; noted for his assault on Senator Sumner. See U. S. A.: 1856: Senator Sumner's speech.

BROOM, Jacob (1808-1864), American statesman; nominated for presidency, 1852; member of House of Representatives, 1855-1857. See U. S. A.: 1852: Appearance of the Know Nothings.

BROOME, Western Australia, scene of anti-Japanese race riot in 1921. See WESTERN AUSTRALIA: 1921.

BROQUEVILLE, Charles de, Baron (b. 1860), minister of war and later premier of Belgium. See BELGIUM: 1914: World War; WORLD WAR: 1917: XII. Political conditions, etc.: h, 6. On re-education of the maimed. See EDUCATION: Modern developments: 20th century: World War and education: Re-education.

BROTHER JONATHAN.—A title given by Washington to his close friend, Gov. Jonathan Trumbull, of Connecticut; whence came, it is said, the name applied typically to Americans.

BROTHERHOOD OF RAILWAY TRAINMEN. See RAILWAY BROTHERHOODS.

BROTHERS' CLUB. See CLUBS.

BROTHERS OF CHRIST. See CHRISTIAN DELPHIANS.

BROTHERS OF THE CHRISTIAN SCHOOLS, or Christian Doctrine, an order established in 1684 by St. Jean Baptiste de la Salle for the purpose of teaching the poor. See EDUCATION: Modern: 17th-20th centuries: Christian brothers.

BROUGHAM AND VAUX, Henry Peter, 1st Baron (1778-1868), lord chancellor of England, interested in woman suffrage and in the reform of debt laws. See DEBT, LAWS CONCERNING: In England; ENGLAND: 1830-1832; SUFFRAGE, WOMAN; England: 1819-1860.

BROUWER, Hendrik (fl. 1611), Dutch navigator. See AUSTRALIA: 1601-1800.

BROWN, Aaron Vail (1795-1859), American statesman, governor of Tennessee. See TENNESSEE: 1834-1856.

BROWN, Sir Arthur Whitten, British aviator. Made first continuous flight across the Atlantic in an aeroplane. See AVIATION: Important flights since 1900: 1919 (June).

BROWN, Benjamin Gratz (1826-1885), American politician. Member Missouri legislature, 1852-1858; served on the Union side in the Civil War, rising to rank of brigadier general of volunteers, United States senator, 1863-1867; governor of Missouri, 1871; candidate for vice-president on ticket headed by Horace Greeley, 1872.—See also U. S. A.: 1872.

BROWN, Charles Brockden (1771-1810), American novelist. "Wieland," his best book, and the first American novel, is, like much of his work, a study in abnormal psychology, combined with an idealism which he owes to William Godwin. "Brown's mature years came during the period, between the Revolution and the War of 1812, when the nationally independent feeling of America, was most acutely conscious. . . . This impulse—the 'American brag' so frequently remarked by foreigners—is clearly evident in the works of Brown."—B. Wendell, *Literary history of America*, p. 159-160.—See also AMERICAN LITERATURE: 1790-1860.

BROWN, George (1818-1880), Canadian statesman and journalist, one of the leaders of the confederation movement; editor of the Toronto *Globe* and leader of the "Clear Grits." He was nominated for the Senate in 1873, and a year later, together with Sir Edward Thornton, negotiated a reciprocity treaty between the United States and Canada. The treaty, however, did not pass the United States Senate. See CANADA: 1840; 1840-1847; 1869-1873.

BROWN, General Jacob (1775-1828), American soldier, prominent in the War of 1812. See U. S. A.: 1812 (September-November); 1813 (October-November); 1814 (July-September).

BROWN, John (1735-1788), Scottish physician and inventor of Brunonian system of stimulation. See MEDICAL SCIENCE: Modern: 18th century: Brunonian system, etc.

BROWN, John (1800-1859), extreme American abolitionist. Took part in the struggle for Kansas; convicted of treason for seizure of Harper's Ferry, sentenced to death and executed at Charleston, West Virginia, December 2, 1859.—See also U. S. A.: 1859.

BROWN, Preston (1872-), American general in the World War. See WORLD WAR: 1918: II. Western front; g, 2; v, 9.

BROWN, R. E., American engineer who brought suit against the South African republic in the Gold

Mine case. See SOUTH AFRICA, UNION OF: 1897 (January-March).

BROWN BESS, name for flint lock musket. See RIFLES AND REVOLVERS: Origin of small arms.

BROWN UNIVERSITY. See UNIVERSITIES AND COLLEGES: 1762-1769; RHODE ISLAND: 1764.

BROWNE, Charles Farrar (1834-1876), American humorist. Under the name "Artemus Ward" wrote humorous articles that were popular in England and America. His humor is the typical American method of inextricably confusing fact and nonsense.

BROWNE, Robert (1550-1633), English divine and founder of the Brownists. See INDEPENDENTS; SEPARATISTS.

BROWNING, Elizabeth Barrett (1806-1861), English poet. In 1846 married Robert Browning, and removed to Italy where she spent the rest of her life. Her poetry ranks high in the Victorian period, the best being the collection known as "Sonnets from the Portuguese," and "Aurora Leigh."

BROWNING, Robert (1812-1889), English poet, creator of the dramatic monologue. "His work covers more than half a century of almost incessant production (*Pauline*, 1833; *Asolando*, 1880), exhibiting in sheer bulk and intellectual vigor a creative energy hardly surpassed by any poet since Shakespeare. Written while England was passing through a time of spiritual despondency and fluctuating faith, Browning's poetry is independent and often eccentric in style; it is defiant of the prevailing theories of art; it rises solitary, abrupt, rugged, and powerful, from an age of fluent, graceful, and melodious verse."—H. S. Pancoast, *Introduction to England literature*, p. 485.—See also ENGLISH LITERATURE: 1832-1880; DRAMA: 1815-1877.

BROWNING, John M. (1854-), American inventor. See ORDNANCE: 20th century; RIFLES AND REVOLVERS: World War.

BROWNING GUN, invention and use of. See ORDNANCE: 20th century; RIFLES AND REVOLVERS: World War.

BROWNISTS. See ANABAPTISTS; INDEPENDENTS; PURITANS: In distinction from Independents and Separatists.

BROWNLOW, "Parson" William Gannaway (1805-1877), American journalist, strong advocate of slavery but not of secession. Elected governor of Tennessee, 1865, and in the United States Senate, 1860-1875. See TENNESSEE: 1865-1866.

BROWN-SEQUARD, Charles Edouard (1818-1894), French-American neurologist and physiologist. See MEDICAL SCIENCE: Modern: 19th century: Endocrinology.

BROWNSVILLE AFFAIR. See U. S. A.: 1906 (August).

BRUCE, David (1855-), British surgeon, serving in the British armies of Malta and Egypt. He made some important observations on Malta fever and the sleeping-sickness in Uganda. See MEDICAL SCIENCE: Modern: 19th-20th centuries: animals as carriers; SCIENCE: Modern: 20th century: Medicine.

BRUCE, Edward (d. 1318), Scottish prince; headed invasion of Ireland. See IRELAND: 1314-1318.

BRUCE, Frederick (1814-1867), English diplomat; minister to China. See CHINA: 1856-1860.

BRUCE, James, 8th earl of Elgin (1811-1863), British statesman. See EDUCATION, AGRICULTURAL: Canada.

BRUCE, Robert (1274-1329), king of Scotland. See SCOTLAND: 1305-1307; 1306-1314.

BRUCE, William Speirs (1867-), Scottish explorer in the Antarctic. See ANTARCTIC EX-

PLORATION: 1892-1893; and Map of Antarctic regions.

BRUCHEUM, the royal quarter of ancient Alexandria which held the famous library, started by Lagos, the first of the Ptolemies. See ALEXANDRIA; B. C. 282-246; A. D. 260-272, 273; LIBRARIES: Ancient: Alexandria.

BRUCKNER, Anton (1824-1896), Austrian organist and composer. Wrote eight symphonies, three masses, a "Te Deum," and the "One Hundred and Fiftieth Psalm."

BRUCTERI.—"After the Tencteri [on the Rhine] came, in former days, the Bructeri; but the general account now is, that the Chamavi and Angrivarii entered their settlements, drove them out and utterly exterminated them with the common help of the neighbouring tribes, either from hatred of their tyranny, or from the attractions of plunder, or from heaven's favourable regard for us. It did not even grudge us the spectacle of the conflict. More than 60,000 fell, not beneath the Roman arms and weapons, but, grander far, before our delighted eyes."—"The original settlements of the Bructeri, from which they were driven by the Chamavi and Angrivarii, seem to have been between the Rhine and the Ems, on either side of the Lippe. Their destruction could hardly have been so complete as Tacitus represents, as they are subsequently mentioned by Claudian."—Tacitus, *Minor works*, trans. by Church and Brodrick: Germany.—See also FRANKS; GERMANY: 14-16.

BRUEYS, François Paul, French admiral defeated by Nelson in the battle of the Nile. See FRANCE: 1798 (May-August).

BRUGES (Flemish *Brugge*), a town in Belgium and capital of West Flanders. By the seventh century Bruges, often called Flanders, was a city and the capital of the district of Flanders. In 1180 it lost its premier position to Ghent, but remained equal to the latter in wealth and power for several hundred years. The town became extremely prosperous during the fourteenth century when it was the financial center in the north as Venice was in the south.—See also NETHERLANDS: Map.

13th-15th centuries.—Prominence as trading center in the Middle Ages.—"The League [Hanseatic] was so successful that it obtained in the closing centuries of the Middle Ages a predominance in the commerce of northern Europe comparable to that of the Dutch and the English in later times. In the West it had to share its trade with other peoples. In this direction Bruges was the terminus of many of the voyages; at that port the Hanseatics met the Venetians, coming in the Flanders galleys, and secured also many wares from western Europe. . . . In the fourteenth century . . . Bruges . . . [was] the greatest market in northern Europe, vying even with Venice. Here could be found Scandinavians, Germans, French, Portuguese, Spaniards and Italians, exchanging the wares from different sources; a contemporary writer names 30 different countries, both Christian and Mohammedan, which fed the markets of Bruges with their commodities. The natives were content to let foreigners carry on the business of transportation; they stayed at home and grew rich from the wares, money and credit instruments which commerce brought to their doors."—C. Day, *History of Commerce*, pp. 105, 109.—See also FLANDERS: 13th century; HANSA TOWNS.

1302.—Massacre of the French.—"The Bruges Matins." See FLANDERS: 1299-1304.

1341.—Made the staple for English trade. See STAPLE.

1379-1381.—Hostilities with Ghent. See FLANDERS: 1379-1381.

1382.—Taken and plundered by the people of Ghent. See FLANDERS: 1382.

1400-1500—Decline of its commercial greatness.—“Partly because of this passive part which they [the people of Bruges] assumed, partly because of the practice of mediæval countries in diverting their trade from one place to another, the people of Bruges had but a precarious hold on their commerce, and lost it in the fifteenth century. The silting up of its harbors, making these unfit to hold the larger ships now coming into use, explains in part the decline of Bruges, but political forces were at work to divert commerce to another center. In the fifteenth century the place of Bruges as the great market of northern Europe was taken by Antwerp.”—*Ibid.*, p. 109.

1482-1488—At war with Maximilian. See NETHERLANDS: 1482-1493.

1584.—Submission to Philip of Spain. See NETHERLANDS: 1584-1585.

1745-1748.—Taken by the French, and restored. See BELGIUM: 1745; AIX-LA-CHAPELLE: Congresses.

1830.—Demands separation of Belgium and Holland. See BELGIUM: 1830-1832.

1900.—The new canal from the city to the sea.—“On the 25th day of February, the inauguration of the new canal was celebrated at Bruges. . . . The canal runs from Zeebrugge, a port on the North Sea 14.29 miles north of Ostend, to the city of Bruges, a total distance of 7.46 miles. The work is now so far completed that vessels of a draft of 25 feet can enter and pass to the port of Bruges. The locks are fully completed, as well as three-fifths of the wharf wall at Bruges; when finished, the wharf wall will have a total length of 1,575 feet. The canal has a width of 72 feet 6 inches at the bottom and 229 feet 4 inches at the water level and will have, when completed, a depth of 26 feet 3 inches; this will also be the depth of the interior port and of the great basin of Bruges. Bruges is an old, inland deep-water port, having connection with the sea by canal from Ostend, but this only for vessels of every light draft.”—*United States Consular Reports, July, 1900, p. 346.*

1914-1918.—On Oct. 14, 1914, during the World War, the Germans under General von Beseler entered Bruges and held it until Oct. 10, 1918. The strategic position of the town enabled the Germans to hold Ostend and Zeebrugge as their submarine bases and allied efforts to recapture them were unavailing until the opening of the final Foch campaign when the town fell shortly before the armistice. See WORLD WAR: 1916: X. German rule, etc.; 1918: II. Western front: 9, 3; VIII. Aviation.

BRUGES, School of, a school of fifteenth century Flemish painters lead by the brothers Van Eyck. In fact, painting in Flanders began with this school.

BRUGES MATINS. See FLANDERS: 1299-1304.

BRULE INDIANS, a branch of the Dakota tribe. See SIOUAN FAMILY.

BRUM, Balthasar, Uruguayan statesman. See URUGUAY: 1919: Presidential election.

BRUMAIRE, month. See CHRONOLOGY: French revolutionary era and calendar; and FRANCE: 1793 (October).

Eighteenth of Brumaire. See FRANCE: 1799 (November).

BRUN, Johan Nordal (d. 1816), Norwegian writer of tragedies. See SCANDINAVIAN LITERATURE: 1750-1850.

BRUNDISIUM (Modern Brindisi), an important harbor town in what is now Calabria, Italy. It was developed by the Romans after their conquest in 266 B.C. See ROME: Republic: B.C. 282-275.

B.C. 49.—Flight of Pompeius before Cæsar. See ROME: Republic: B.C. 50-49.

B.C. 40.—The peace of Antony and Octavius.—The peace which Antony and Octavius were forced by their own soldiers to make at Brundisium, B.C. 40, postponed for ten years the final struggle between the two chief Triumvirs. For a much longer time it “did at least secure the repose of Italy. For a period of three hundred and fifty years, except one day’s fighting in the streets of Rome, from Rhægium to the Rubicon no swords were again crossed in war.” See MITHRIDATIC WARS; and also ROME: Republic: B.C. 31.

BRUNE, Guillaume Marie Anne (1763-1815), French marshal. In 1796 he fought in Italy; in 1798 he occupied Switzerland; in 1799 successfully defended Amsterdam against the duke of York; served later in Vendee and Italy; in 1807 commanded in North Germany; he was then in retirement until the Hundred Days (1815).—See also FRANCE: 1798-1799 (August-April).

BRUNEI, a portion of northwest Borneo, and a British protectorate. See BORNEO: Country; BRITISH EMPIRE: Extent.

BRUNEL, Isambard Kingdom (1806-1859), English railroad engineer. See RAILROADS: 1759-1881.

BRUNELLESCHI, Filippo (1379 - 1446), Florentine architect and sculptor; inspired by remains found at Rome, revived the Classic style of architecture; planned the dome of Santa Maria del fiore, the Pitti palace, and other famous buildings of his native city.

BRUNETIERE, Ferdinand (1849 - 1906), French man-of-letters and critic. In 1893 became editor of the *Revue des Deux Mondes*, and a member of the Academy. A reactionary in politics and a staunch Roman Catholic, he opposed modern materialism in thoroughly logical and systematic criticism.

BRUNETTO, Latini (c. 1210-1294), Italian poet. See ITALIAN LITERATURE: 12th-14th centuries.

BRUNHILDE.—The heroine of the Volsung-saga and the Nibelungenlied (q. v.), who brings to pass the death of the hero Sigurd or Siegfried, out of revenge for his broken troth.

BRUNKEBURG, Battle of the (1471). See SCANDINAVIAN STATES: 1397-1527.

BRUNNABURGH, or Brunanburb, Battle of. See ENGLAND: 938.

BRUNO, Filippo Giordano (1548-1600), Italian philosopher and scientist. He upheld the Copernican system of astronomy, expounded pantheism, and denounced ecclesiastical abuses (see ASTRONOMY: 130-1600). Having left Italy to avoid persecution, he was treacherously decoyed to Venice, and betrayed to the Inquisition, by whose judgment he was burned at the stake for alleged heresy.

BRUNO, ST. (1030-1101), abbot, founder of Carthusian order. See ABBOT; CARTHUSIAN ORDER.

BRUNO OF TOUL (1002-1054). See LEO IX, pope.

BRUNONIAN STIMULATION. See MEDICAL SCIENCE: Modern: 18th century: Brunonian system of stimulation.

BRUNSWICK, Charles William Ferdinand, duke of (1735-1806), German general. Ruling prince, 1780-1806; commander of the Prussian and Austrian army during its invasion of France in

1792; was commander of the Prussian army in the battle of Auerstädt, and mortally wounded October 14, 1806.—See also FRANCE: 1792 (September-December); GERMANY: 1806 (October), (October-December).

1543.—Expulsion of Duke Henry by the League of Smalcald. See GERMANY: 1533-1546.

1546.—Final separation from the Lüneburg or Hanoverian branch of house. See HANOVER: 1546.

1622.—Union with Baden and Bohemia against Tilly. See GERMANY: 1621-1623.

1806.—The Duke's dominions confiscated by Napoleon. See GERMANY: 1806 (October-December).

1807.—Absorbed in the kingdom of Westphalia. See GERMANY: 1807 (June-July).

1820.—Constitution granted. See SUFFRAGE, MANHOOD: Germany: 1800-1840.

1830.—Deposition of the duke. See GERMANY: 1819-1847.

1833.—Member of Zollverein. See TARIFF: 1833.

BRUNSWICKERS, troops in British army. See U. S. A.: 1776 (January-June): Engagement of hiring Hessians.

BRUZZI, Bruno (c. 1890-), Italian Communist. In 1920 was head of the Metal Workers' Union, and a prominent figure in the Italian labor unrest which involved in some cases the taking over of factories by the workmen.

BRUSA, or Broussa, a city in Asia Minor lying south of the sea of Marmora (see TURKEY: Map of Asia Minor); an ancient capital of the Ottoman Turks and the scene of fighting in many wars. For its fall in 1920, see GREECE: 1920.

BRUSH, Charles Francis (1849-), American inventor. See ELECTRICAL DISCOVERY: Electric lighting: 1876.

BRUSLOFF, General. See BRUSILOV, ALEXIS ALEXIVICH.

BRUSSELS, the capital of Belgium and of the province of Brabant, situated on the Senne, about 70 miles from the sea (see NETHERLANDS: Map). It is the most important city in the kingdom and ranks among the finest cities of Europe by virtue of the remarkable number of splendid ancient buildings and the expansiveness and elegance of its

residential quarters. The city also holds a very prominent position in the commercial world, being famed for its production of lace, linen, leather, and woolen and cotton goods. During the nineteenth century the city went through a complete transformation. An old wall around the city was removed and the *quartier Léopold* was built. Some of the most beautiful boulevards, including the *Avenue de Louise* were constructed on the bed of the Senne, which at one time flowed through the lower part of the town. Brussels became a seaport with the development of its harbor which offers access to vessels drawing twenty-four feet. It enjoyed a very prosperous period under Charles V and Philip II.—See also CIVIC BEAUTY: Brussels; LIBRARIES: Modern: Belgium.

1555.—Abdication of Emperor Charles V. See NETHERLANDS: 1555-1558.

1577.—Union of the patriots. See NETHERLANDS: 1575-1577.

1585.—Surrender to the Spaniards. See NETHERLANDS: 1584-1585.

1695.—Bombardment by the French. See FRANCE: 1695-1696.

1705.—Strategic point in campaign of Marlborough. See NETHERLANDS: 1705.

1706.—Taken by Marlborough and the Allies. See NETHERLANDS: 1706-1707.

1746-1748.—Taken by the French and restored to Austria. See NETHERLANDS: 1746-1747; and AIX-LA-CHAPELLE: Congresses.

1794-1814.—Capital of the French department of Dyle, and alternated with The Hague as the capital of the Netherlands (1815-1830).

1815.—Battle of Waterloo. See FRANCE: 1815 (June).

1830.—Brussels was the center of the Belgian revolution and was made the capital of Belgium.

Dutch attack on city repelled. See BELGIUM: 1830-1832.

1902-1907.—Sugar Bounty Conference and Convention (1902) and Additional Act (1907). See SUGAR BOUNTY CONFERENCE.

1914.—International socialist bureau. See INTERNATIONAL: 1914.

1914-1918.—Brussels in the World War.—On August 10, 1914, the city was evacuated by the Belgian government. The German forces entered it the next day, and within twenty-four hours a burdensome war tax was levied upon the inhabitants. The city was the center of German administration for Belgium during the World War.

General Moritz F. F. von Bissing was at the head of the German military government in Brussels of the years 1914-1916. Edith Cavell, an English nurse and humanitarian who had tended German and Belgian wounded without partiality was executed in Brussels at 2 A. M. on October 12, 1915; by order of a German court martial. She was charged with having facilitated the escape of some of the wounded Belgian prisoners and despite the efforts of neutrals the German military governor of Belgium refused to stay the execution.—See also BELGIUM: 1914: World War; CAVELL, EDITH; WORLD WAR: and 1914: I. BRUSILOV, Alexis Alexeivich (c. 1869-), Russian general. One of the best leaders in the World War; notably successful in 1914 and 1916 in the drive against the Austrians in Galicia; commander-in-chief in 1917 under the Kerensky revolutionary government; resigned when the Russian armies broke down under the influence of Bolshevism (see RUSSIA: 1917: Disintegrating propaganda), later seems to have received important command under the Bolsheviks. See also WORLD WAR: 1914: II. Eastern front: b, c, 1; d, 1; d, 5; 1915: III. Eastern front: c; i, 6; 1916: I. Military situation: d, 2; III. Eastern front: a; a, 1; a, 3; 1917: III. Russia and the eastern front: j. BRUSILOV, lieutenant of the Russian navy. See ARCTIC EXPLORATION: 1910-1916.

BRUSTHEM, Battle of (1467). See NETHERLANDS: 1466-1468.

BRUTII, ancient tribe of lower Italy. See SOMNITES.

BRUTUM FULMEN, a phrase, signifying a blind thrust, which was applied in a contemporary pamphlet by Francis Hotman to the bull of excommunication issued by Pope Sixtus V against Henry of Navarre, in 1585. See FRANCE: 1584-1589.

BRUTUS, Decimus Junius (B.C. 84-43), Roman who served under Julius Cæsar in Gaul and was made governor of Gaul by him. (See ROME: Republic: B.C. 44-42); with his relative Marcus Junius (see below), participated in the assassination of Cæsar (see ROME: Republic: B.C. 44); captured while escaping to Macedonia and put to death by Mark Antony (B.C. 43).

BRUTUS, Lucius Junius, one of first two consuls of Rome who expelled last of the Tarquins. See ROME: Ancient Kingdom: B.C. 753-570.

BRUTUS, Marcus Junius (c. 85-42 B.C.), Roman governor and prætor, and hero of Shakespeare's "Julius Cæsar"; supported Pompey in the Civil Wars; was pardoned by Cæsar and appointed governor of Cis-Alpine Gaul in 46 B.C.; one of the chief conspirators who assassinated Julius Cæsar in 44 B.C. After the death of Cæsar, he fled to the province of Macedonia and held it with Cassius against Mark Antony; was defeated at Philippi by Antony (42 B.C.) and fell by his own sword. ROME: Republic: B.C. 44-42.

BRYAN, Charles Page (1856-1918), American diplomat. Member Colorado house of representatives, 1880; member Illinois house of representatives, 1888-1897; minister to China, Brazil, Switzerland, Portugal and Belgium, 1897-1911; ambassador to Japan, 1911; resigned, 1912.

BRYAN, William Jennings (1860-), American orator and national party leader; member of the House of Representatives, 1891-1895; Democratic

candidate for president, 1896, 1900 and 1908; opposed to protective tariff and "imperialism"; favored free silver and prohibition (see U. S. A.: 1896: Platforms and nomination: National Silver Party, Peoples or Populist, Democratic; 1900: May-November; 1908: April-November). Secretary of state in the early part of President Wilson's administration; resigned in 1915 because he considered the President's notes to Germany too severe (see U. S. A.: 1913 (March); 1915 (May-September)).

Views on Imperialism.—Speech of acceptance of presidential nomination. See U. S. A.: 1900 (May-November).

BRYANT, William Cullen (1794-1878), American poet and man of letters. In 1826 became editor of the *Evening Post* in New York, where he set a high standard of journalism. "As a poet Bryant possesses great excellence within a strictly limited range. He is even more exclusively the poet of nature than Wordsworth; throughout his poetry warmth, human interest, and human passion are almost absent. He wrote but little verse, and never really surpassed his two early efforts, 'Thanatopsis' and the 'Ode to a Water-fowl'; yet though he did not advance, he maintained an exceedingly high standard until the last."—H. S. Pancoast, *Introduction to American literature*, p. 147.—See also AMERICAN LITERATURE: 1790-1860.

BRYCE, James, Viscount (1838-1922), distinguished British diplomat and historian (see HISTORY: 32); studied at Glasgow and Oxford and admitted to the bar in 1867, practised until 1882; 1870-1893 he was regius professor of civil law at Oxford; became a member of Parliament in 1880; represented South Aberdeen, 1885, as a Liberal and Home Ruler; under secretary of foreign affairs, 1886; member of the Liberal Ministry of 1892; chairman of the royal commission on secondary education, 1894; foreign member of Royal academies at Turin, Brussels, Naples (1896), St. Petersburg and Stockholm (1903); chief secretary for Ireland, 1905-1907 (see ENGLAND: 1905-1906); ambassador to the United States, 1907-1913 (see CANADA: 1908 (April); U. S. A.: 1909 (March): End of President Roosevelt's administration); chairman of the committee to investigate the Belgian atrocities, 1914-1915 (see BELGIUM: 1914-1918; WORLD WAR: Miscellaneous auxiliary services: X. Alleged atrocities, etc.: a); British member at the Hague Court. Among his famous publications are: *Holy Roman Empire* (1862); *American Commonwealth* (1888, revised in 1910); *University and Historical Addresses* (1913); *Essays and Addresses on the war*, (June, 1918). BRYENNIUS, Nicephorus (1062-1137), Byzantine general and statesman. See TURKEY: 1063-1073.

BRYN MAWR COLLEGE, a college for higher education of women, located at Bryn Mawr, Pennsylvania. It was founded in 1885. See EDUCATION: Modern: 19th century: United States: Secondary education.

BRYTHONS, Welsh name for Britons. See BRITANNIA; CELTS: Early history.

BU HAMARA (nickname of Jelali Zarhoui), Moroccan pretender and leader of an insurrection. See MOROCCO: 1903-1904; 1909.

BUBASTIS.—"On the eastern side of the Delta [of the Nile], more than half-way from Memphis to Zoan, lay the great city of Pi-beseth, or Bubastis. Vast mounds now mark the site and preserve the name; deep in their midst lie the shattered fragments of the beautiful temple which Herodotus saw, and to which in his days the Egyptians came annually in vast numbers to keep the greatest festival of the year, the Assembly of Bast, the goddess of the place. Here, after the Empire had fallen, Shishak [Sheshonk] set up his throne, and for a short space revived the imperial magnificence of Thebes."—R. S. Poole, *Cities of Egypt*, ch. 10.

BUBBLE ACT. See COMMON LAW: 1710.

BUBONIC PLAGUE. See PLAGUE: Bubonic plague.

BUCCANEERS, a term applied to adventurers who harried the islands of the Caribbean sea, the Spanish main and the coast of North America during the sixteenth and seventeenth centuries. They affectionately termed themselves "brethern of the coast" but to their victims they were the "demons of the sea." "In the sixteenth and seventeenth centuries, the work of policing the seas was given over to the casual attention of the royal navies of Europe. When piracy became so flagrant that it dared enter the very ports, a few men-of-war, generally the older, battered, less sea-worthy vessels, would be detailed to suppress the pirates. These, after a sedate patrol of the coasts and the capture of a chance-met offender or so, would report the seas clear and lie up for repairs. Yet no sooner were they out of commission than the pests were back from the Scilly Isles, or the Orkneys, or the Canaries, or the desolate creeks and coves of Ireland, from any hiding-place or from the open sea, and the merchantmen must protect themselves again as best they could. Under such trifling restraint, piracy continued undiscouraged in European waters. In the West Indies it flourished openly, almost respectably. There the sea was broken by a multitude of islands affording safe anchorage and refuge, with wood, water, even provisions for the taking. There the colonies of the great European powers, grouped within a few days' sail of one another, were forever embroiled in current European wars which gave the stronger of them excuse for preying on the weaker and seemed to make legitimate the constant disorder of those seas. There trade was rich but settlement thin and defense difficult. There the idle, the criminal, and the poverty-stricken were sent to ease society in the Old World. By all these conditions piracy was fostered, and for two centuries throve ruinously, partly as an easy method of individual enrichment, partly as an instrument of practical politics."—V. Barbour, *Privateers and pirates of the West Indies* (*American Historical Review*, Apr., 1911, p. 529).—See also BAHAMA ISLANDS: 1492-1783; JAMAICA: 1655-1706; PACIFIC OCEAN: 1513-1764; and VIRGINIA: 1684-1699.

Privateering caused by rigid restrictions of the Spanish against European trade in the Caribbean sea.—Free granting of letters of marque and reprisal.—"Piracy in the Indies began with the beginnings of Spanish colonization, in the high-handed actions of traders, from all the European states, who ventured into the Caribbean in defiance of Spanish prohibitions. [Tortuga del Mar, a little island off the coast of Santo Domingo was the first headquarters of the buccaneers.] By the middle of the sixteenth century religious and patriotic zeal had become the justification of deliberate robbery of Spanish subjects by the Protestants of other nations. No catch-

word was ever truer than 'No peace beyond the Line' during the sixteenth and seventeenth centuries; in 1684 one finds the translator of *Buccaniers of America* still declaiming it with conviction: 'We know that no Peace could ever be established beyond the Line, since the first possession of the West-Indies by the Spaniards, till the burning of Panama.' It is probable that only a small portion of the violence committed in the Indies would square with the legal theory of piracy: generally speaking, the robbers were not *hostes humani generis* [enemies of the human race], but enemies of Spain; furthermore, the majority of them sailed under letters of marque or reprisal, which legally authorized them to seize Spanish ships and goods. These privateers' commissions were issued freely by belligerent powers to almost any ship-owner that applied for one, and as cruising for prizes was often a profitable speculation, a great many people did apply who were not concerned in the outcome of the war. In peace, letters of marque were an instrument of private redress, whereby a state authorized certain of its subjects who had received injury at the hands of foreigners to obtain compensation at the expense of the subjects of the offending state. Before letters of marque were granted, the injured party was obliged to have petitioned the sovereign of the aggressors for redress, and only in case of a refusal or unreasonable delay of justice was he permitted to take the law into his own hands. As an instrument of justice this system must have been most commonly a failure. The exact amount of the injury could seldom be determined, and, when it could, the measure of indemnity claimed was apt to be in generous excess. The practice was a survival of the medieval treatment of aliens, and flourished in the time when justice between the subjects of one state and those of another was a matter of diplomacy and not of law. In the Indies the last vestige of justice in the reprisal system disappeared, and English and Dutch, French and Portuguese peddled letters of marque freely to one another, and regularly to the disadvantage of Spain, the richest prey in those parts. Privateering became a profession having no necessary connection with the politics, commerce, or religion of those that practised it, though all of these motives continued to be used to disguise individual cupidity. By the Spaniard, since it mattered little by what rope he were hanged, privateers were regarded as pirates, as in act they were; captured privateers were treated no more leniently than the robbers who could show no papers. Letters of marque were desirable as a protection from the interference of neutrals, and because they enabled the holder to bring his prize into port and sell it, not because they minimized the danger to his life."—*Ibid.*, pp. 529-531.—See also AMERICA: 1630-1700.

French buccaneers, the first in the Indies.—Huguenot pirates.—French settlement in Florida destroyed by Menendez.—"The French appear to have been the first piratical invaders of the Indies. It is possible that the close commercial relations between Spain and Portugal first brought the French overseas to trade in Brazil, whence it was no far step, either morally or geographically, to plundering raids in the Indies. As early as 1513, the Casa de Contratacion at Seville was obliged to provide two caravels to protect the coasts of Cuba. In 1521 the necessity of defending the lengthening coast-line of the Spanish colonies on the Main as well as among the islands led to the fitting out of a line of *guarda costas* for constant service in those seas. The interminable

wars of Francis I and Charles V gave French seamen impulse and excuse for a long series of marauding expeditions by land as well as by sea. A Milanese, Girolamo Benzoni, who has left an account of his travels in the Indies between 1541 and 1556, tells a picturesque story of a French corsair who, in 1538, extorted a ransom of seven hundred ducats from the town of Havana, and, being chased by three Spanish ships, made prize of all three, then returned to Havana, and compelled another ransom to atone for the indignity of pursuit. The discovery of the mines of Potosi in 1545 and the astounding rumors of the treasure Spain reaped from them, made the security of ships and towns in the Indies still more precarious. From this time, too, the Huguenot seamen from Rochelle and Dieppe began their piratical cruises along the Main and among the islands. These fanatics were the most ruthless and cruel of all the free-booters that sailed those seas. They cut down their prisoners like dogs or devoted them to a slow torture in which they lingered miserably for days; the towns that fell into their hands were burned after being pillaged. By the middle of the sixteenth century nearly all the important coast settlements of Spanish America had been sacked at least once. Laudonnière's Huguenot colony in Florida was regarded by Menendez, who destroyed it, as an attempt to establish headquarters conveniently close to Spanish dominions, whence their pirates could pounce upon the Mexican fleet before it reached Havana, or even seize upon Cuba. Laudonnière himself tells of the difficulty he had in restraining his soldiers who 'would enterprise somewhat against the King of Spains Subjects.' His soldiers reasoned that 'if their enterprise should bee disliked withall in France, they should bee always able, by reason of the great wealth that they should gaine, to retire themselves into Italy, until the heat were overpassed, and that in the meane season some warre would fall out, which would cause all this to be quite forgotten.'"—*Ibid.*, pp. 531-532.

English buccaneers.—Activities of English privateers against Spain in the Elizabethan period.—Characteristics of the later sixteenth century privateers.—Sir Henry Morgan.—"That the English were not as prompt as the French in collecting a share of the Spanish treasure was not due to a more scrupulous conscience as regards piracy. Throughout the Middle Ages the Cinque Ports had swarmed with pirates who took toll of the commerce that passed through the Narrow Seas, sometimes as free-lance auxiliaries to the royal fleet in time of war, but quite as often in unmitigated piracy, not caring whether the prize were enemy, ally, or Englishman. In the first half of the sixteenth century, however, the English pirates had not the provocation to extend their sphere of activities to the Indies which the wars of Francis I. offered the French corsairs. In these wars England was as a general thing on the side of the Empire and against France. Commercially the relations of England and Spain had been amicably adjusted on the basis of mutual freedom of trade by the treaty of 1515. The first English vessels to enter the Caribbean came with peaceable intentions of trade and discovery, and it was in the effort to break down the Spanish monopoly of trade in the New World that the English finally took up the rougher game already begun by the French. The voyages of John Hawkins in 1562, 1564, and 1567, mark the transition in England's relations with Spain from the peace and alliance of the reigns of Henry VIII and Mary to the almost fanatic enmity of the time of Elizabeth. Hawkins's disregard of the prohibitions from Ma-

drid that met him on his second trading voyage to the Indies, and again and more stringently in 1567, and his warlike methods of forcing trade, brought about a definite rupture of the peace in his battle with a Spanish fleet in the harbour of Vera Cruz, which in turn led to the ample protracted reprisals of Francis Drake [see AMERICA: 1572-1580; CARACAS: 1595] and lesser privateers and pirates, and hastened the inevitable war with Spain. The recognized warfare of 1588 and the defeat of the Armada left the way to the Indies open, and English privateers in large numbers, nobles, courtiers, merchants, and ship-owners, crossed the Atlantic to seek easy fortunes for, themselves, and, more or less incidentally, to win glory in serving their country. The galleons that carried the royal treasure to Spain sailed in fleets, protected from privateers by heavy armament and escorted by specially provided men-of-war, but the luckless islands and coast towns were not valuable enough for such costly protection and continued the prey of every handful of ragamuffins that set upon them. The inhabitants had formed the habit as early as Hawkins's second voyage of scuttling away to the forests whenever a strange sail appeared off their coasts. This inertness of the Spanish colonists, their inability to defend themselves from attack, is a monotonously constant feature in the history of the Indies. Their assailants were usually few and armed baphazard, relying for success on the demoralizing effect of a surprise, and the Spaniards after close on a century of experience were always surprised and always demoralized. The death of Elizabeth and the conclusion of peace with Spain in 1604 closed English ports to Spanish prizes, and they remained closed during the reign of James. Throughout those endless, futile negotiations of the Spanish marriage the king's hand was heavy on such free-booters as fell in the way of his ships, and in final emphasis of his point of view he sent to execution Sir Walter Raleigh, one of the last of the Elizabethan sea-dogs 'flesh'd in Spanish blood and ruine.' In order to find a market for Spanish prizes from the Indies it became necessary for unreconstructed British seamen to seek authorization from some other power. Some asked for letters of marque from James's luckless son-in-law, the King of Bohemia. Perhaps he saw the irony of inviting trouble in the West Indies when so much lay close at hand, for the letters were not forthcoming. In another quarter the English privateers received more encouragement. Spain was still trying to reduce to obedience the revolted Netherlands, and it is probable that many Englishmen served in Dutch privateers or themselves obtained letters of marque from the States General during the reign of James. The Hollanders had made themselves redoubtable in the Indies after the fashion of the Elizabethan privateers in the last decade of the sixteenth century, and until the Peace of Westphalia their freebooters were a menace to Spanish commerce and the royal treasure.

"[A typical buccaneer of this period was Sir Henry Morgan who confined his attacks to Spanish towns and vessels and was given more or less recognition by the enemies of Spain.] Morgan was the son of a Welsh farmer. As a boy he had run away to Bristol and there indentured himself in return for transportation to Barbados. After the expiration of his term of servitude, he went to Jamaica and drifted into privateering. His good fortune was such that in a short time he became captain and part owner of his vessel, and acquired a repu-

tation among his fellows for daring and success. When Mansvelt was assembling the fleet intended for Curaçao, Morgan had just returned from a plundering expedition along the Mexican coast, and at Mansvelt's invitation joined the fleet as vice-admiral, taking part later in the seizure of Providence. In 1668 Morgan received a commission from Governor Modyford 'to draw together the English privateers and take prisoners of the Spanish nation,' the pretext being the ever-current rumors of an intended invasion of Jamaica by the Spaniards. According to Morgan's own report of his adventure, drawn up afterwards at Modyford's request, he and his fleet of ten sail and five hundred men were driven by storms upon the south keys of Cuba, and, being near starvation, landed to buy provisions. Meeting some French in like case, the English privateers joined them in a march across the island after the frightened inhabitants, who seem to have expected the descent. Reaching the north coast, the buccaneers attacked Puerto

SIR HENRY MORGAN

From Esquemeling's book, "The Bucaniers of America"

Principe, and, after an unusually spirited defense by the Spanish, took the town. Morgan's account emphasized the preparations he found in progress there for the conquest of Jamaica, and merely mentions that on the Spaniards' entreaty they forbore to fire the town or bring away prisoners, but on delivery of one thousand beeves released all. Esquemeling [a Dutchman who served with Morgan and to whom we are indebted for a fairly accurate account of buccaneering. His story was translated into English and French and forms the basis for Captain Charles Johnson's histories of pirates written in the eighteenth century], however, describes the way in which the captives were tormented to force them to reveal the whereabouts of the wealth of the town, and places the value of the booty at fifty thousand pieces of eight, which, he adds, was too small a sum to pay the buccaneers' debts at Jamaica, and therefore they were forced to attempt Porto Bello.

"Porto Bello was, next to Panama and Cartagena, the most important town in Spanish America, being the great market where European goods brought over by the fleet were exchanged for the products of the colonies. For the fortnight of the fair it was a great city, but during the rest of the year it was almost deserted, the climate making it

not a desirable place of residence. In size it was nothing more than a village; however, the warehouses where the colonial officials and merchants stored their goods made the town rich prize at any time, and its seizure would be an insult that Spain could not overlook as she had the impertinences of the privateers at sea. The French buccaneers refused to be party to the new enterprise, so the fleet that sailed for the isthmus was entirely English. Landing under cover of darkness they surprised the town at three o'clock in the morning of June 26, 1668, and, as Morgan explains, 'seeing that they could not refresh themselves in quiet,' they stormed and took two of the castles that guarded the entrance to the port, and the third surrendered. This left the town at the mercy of the buccaneers, and they remained in it, plundering and carousing, until early in August. The president of Panama sent a force against them, but the buccaneers were not too demoralized to beat back the Spaniards, and wrung from the wretched citizens the full ransom of one hundred thousand pieces of eight, which they demanded for the town and prisoners before setting sail. Then, according to Esquemeling, occurred an incident that calls to mind some of the adventures of Francis Drake: 'The President of Panama; by these transactions, was brought into an extrem admiration, considering that four hundred men had been able to take such a great City, with so many strong Castles. . . . This astonishment was so great, that it occasion'd him, for to be satisfied herein, to send a Messenger unto Captain Morgan, desiring him to send him some small pattern of those Arms wherewith he had taken with such violence so great a City. Captain Morgan received this Messenger very kindly, and treated him with great civility. Which being done, he gave him a Pistol and a few small Bullets of lead, to carry back unto the President his Master, telling him withal, He desired him to accept that slender pattern of the Arms wherewith he had taken Puerto Velo, and keep them for a twelve month; after which time, he promised to come to Panama and fetch them away. The Governour of Panama returned the Present very soon unto Captain Morgan, giving him thanks for the favour of lending him such Weapons as he needed not, and withal sent him a Ring of Gold, with this Message, That he desired him not to give himself the labour of coming to Panama, as he had done to Puerto Velo; for he did certifie unto him, he should not speed so well as he had done here.'—*Ibid.*, pp. 532-535.—See also COSTA RICA: 1666-1727.

Between the period of the partially legalized privateers of the type of Sir Henry Morgan, and that of the notorious Blackbeard there existed a transition stage represented by men like Captain Kyd. The last pirates acquired the name of "marooners" from their practice of leaving their victims on desert islands.

BUCHAREST, or **Bukharest**, in Rumanian Bucuresci ("city of delight") the important commercial center and capital of Rumania. It is situated in a swampy plain on the banks of the Dimbovitza, a fact which explains the disastrous plagues which visited Bucharest periodically. The most serious plagues occurred in the years 1718, 1738, 1793 and in 1813 when 70,000 inhabitants died in six weeks. In 1866 the sanitary conditions of the city became improved with the installation of a sewerage and a pure water system. Bucharest is one of Europe's important educational centers. The city possesses schools for the study of sciences, commerce and art, training colleges for surgeons and engineers, a university which was founded in 1864, and colleges for the study of theology, philosophy, literature, law, medicine and pharmacy. These schools and colleges encourage scholastic endeavor by requiring students to pay only for their board. Bucharest, during the World War, fell into the hands of the Germans on December 6, 1916. See **RUMANIA**: 1916; **WORLD WAR**: 1916: V. **Balkan theater**: c, 5; c, 6, iv.

BUCHAREST, Treaty of (1918). By the middle of January, 1917, the Austro-German forces under Mackensen and Falkenhayn had conquered most of Rumania. The following treaty was imposed upon that country and signed on May 7, 1918:

"CLAUSE 1.—RE-ESTABLISHMENT OF PEACE AND FRIENDSHIP.

"Article 1.—Germany, Austria-Hungaria, Bulgaria and Turkey, on the one hand, and Rumania on the other, declare the state of war ended and that the contracting parties are determined henceforth to live together in peace and friendship.

"Article 2.—Diplomatic and Consular relations between the contracting parties will be resumed immediately after the ratification of the peace treaty. The admission of Consuls will be reserved for a future agreement.

"CLAUSE 2.—DEMOBILIZATION OF THE RUMANIAN FORCES.

"Article 3.—The demobilization of the Rumanian Army, which is now proceeding, will immediately after peace is signed be carried out according to the prescriptions contained in Articles 4 and 7.

"Article 4.—The regular military bureau, the supreme military authorities and all the military institutions will remain in existence as provided by the last peace budget. The demobilization of divisions Eleven to Fifteen will be continued as stipulated in the treaty of Focsani signed on March 8 last. Of the Rumanian divisions One to Ten, the two infantry divisions now employed in Bessarabia, including the Jaeger battalions which are the remnants of dissolved Jaeger divisions, and including two cavalry divisions of the Rumanian Army, will remain on a war footing until the danger arising from the military preparations now being carried on in the Ukraine by the Central Powers ceases to exist.

"The remaining eight divisions, including the staff, shall be maintained in Moldavia at the reduced peace strength. Each division will be composed of four infantry regiments, two cavalry regiments, two field artillery regiments and one battalion of pioneers, together with the necessary technical and transport troops. The total number of the infantry of the eight divisions shall not exceed 20,000 men; the total number of cavalry shall not exceed 3,200; the entire artillery of the Rumanian Army, apart from the mobile divisions, shall not exceed 9,000 men. The divisions remaining mobilized in Bessarabia must, in case of demobilization, be reduced to the same peace standard as the eight divisions mentioned in Article 4.

"All other Rumanian troops which did not exist in peace time will, at the end of their term of active military service, remain as in peace time. Reservists shall not be called up for training until a general peace has been concluded.

"Article 5.—Guns, machine guns, small arms, horses and cars and ammunition, which are available owing to the reduction or the dissolution of the Rumanian units, shall be given into the custody of the Supreme Command of the Allied (Teutonic) Forces in Rumania until the conclusion of a general peace. They shall be guarded and superintended by Rumanian troops under supervision of the Allied command. The amount of ammunition to be left to the Rumania army in Moldavia is 250 rounds for each rifle, 2,500 for each machine gun and 150 for each gun. The Rumanian army is entitled to exchange unserviceable material at the depots of the occupied region, in agreement with the Allied Supreme Command, and to demand from the depots the equivalent of the ammunition spent. The divisions in Rumania which remain mobilized will receive their ammunition requirements on a war basis.

"Article 6.—The demobilized Rumanian troops to remain in Moldavia until the evacuation of the occupied Rumanian regions. Excepted from this provision are military bureaus and men mentioned in Article 5, who are required for the supervision of the arms and material laid down in these regions. The men and reserve officers who have been demobilized can return to the occupied regions. Active and formerly active officers require, in order to return to these regions, permission of the chief army command of the allied forces.

"Article 7.—A General Staff officer of the allied powers, with staff, will be attached to the Rumanian Commander in Chief in Moldavia, and a Rumanian General Staff officer, with staff, will be at-

tached as liaison officer to the chief command of the allied forces in the occupied Rumanian districts.

"Article 8.—The Rumanian naval forces will be left to their full complement and equipment, in so far as their crews, in accordance with Article 9, are not to be limited until affairs in Bessarabia are cleared, whereupon these forces are to be brought to the usual peace standard. Excepted herefrom are river forces required for the purposes of river police and naval forces on the Black Sea, employed for the protection of maritime traffic and the restoration of mine-free fairways. Immediately after the signing of the peace treaty these river forces will, on a basis of special arrangement, be placed at the disposal of the authorities intrusted with river policing. The Nautical Black Sea Commission will receive the right of disposing of the naval forces on the Black Sea, and a naval officer is to be attached to this commission in order to restore connection therewith.

"Article 9.—All men serving in the army and navy, who in peace time were employed in connection with harbors or shipping, shall, on demobilization, be the first to be dismissed in order that they may find employment in their former occupations.

"CLAUSE 3—CESSIONS OF TERRITORY OUTLINED IN ARTICLES 10, 11, AND 12.

"Article 10.—With regard to the Dobrudja, which, according to Paragraph 1 of the peace preliminaries, is to be added by Rumania, the following stipulations are laid down: (a) Rumania cedes again to Bulgaria, with frontier rectifications, Bulgaria territory that fell to her by virtue of the peace treaty concluded at Bucharest in 1913. . . . A commission composed of representatives of the allied powers shall shortly after the signature of the treaty lay down and demarcate on the spot the new frontier line in the Dobrudja. The Danube frontier between the regions ceded to Bulgaria and Rumania follows the river valley. Directly after the signature of the treaty further particulars shall be decided upon regarding the definition of the valley. Thus the demarcation shall take place in Autumn, 1918, at low water level.

"(b) Rumania cedes to the allied powers that portion of the Dobrudja up to the Danube north of the new frontier line described under Section A; that is to say, between the confluence of the stream and the Black Sea, to the St. George branch of the river. The Danube frontier between the territory ceded to the allied powers and Rumania will be formed by the river valley. The allied powers and Rumania will undertake to see that Rumania shall receive an assured trade route to the Black Sea, by way of Tchernavoda and Constantza (Kustendje)."

"Article 11 says that Rumania agrees that the frontiers shall undergo rectification in favor of Austria-Hungary as indicated on the map, and continues:

"Two mixed commissions, to be composed of equal numbers of representatives of the powers concerned are immediately after the ratification of the peace treaty to fix a new frontier line on the spot.

"Article 12.—Property in the ceded regions of Rumania passes without indemnification to the States which acquire these regions. Those States to which the ceded territories fall shall make agreements with Rumania on the following points: First, with regard to the allegiance of the Rumanian inhabitants of these regions and the manner in which they are to be accorded the right of option;

secondly, with regard to the property of communes split by the new frontier; thirdly and fourthly, with regard to administrative and juridical matters; fifthly, with regard to the effect of the changes of territory on dioceses."

CLAUSE 4 deals with war indemnities, of which Article 13 declares that the contracting parties mutually renounce indemnification of their war costs, and special arrangements are to be made for the settlement of damages caused by the war.

CLAUSE 5 relates to the evacuation of occupied territories, embodied in Articles 14 to 23, summed up as follows:

"The occupied Rumanian territories shall be evacuated at times to be later agreed upon. The strength of the army of occupation shall, apart from the formation employed in economic functions, not surpass six divisions. Until the ratification of the treaty the present occupation administration continues, but immediately after the signature of the treaty the Rumanian Government has the power to supplement the corps of officials by such appointments or dismissals as may seem good to it.

"Up to the time of evacuation, a civil official of the occupation administration shall always be attached to the Rumanian Ministry in order to facilitate so far as possible the transfer of the civil administration to the Rumanian authorities. The Rumanian authorities must follow the directions which the commanders of the army of occupation consider requisite in the interest of the security of the occupied territory, as well as the security, maintenance, and distribution of their troops.

"For the present, railways, posts and telegraphs will remain under military administration and will, in accordance with proper agreements, be at the disposal of the authorities and population. As a general rule, the Rumanian courts will resume jurisdiction in the occupied territories to their full extent. The allied powers will retain jurisdiction, as well as the power of police supervision, over those belonging to the army of occupation. Punishable acts against the army of occupation will be judged by its military tribunals, and also offenses against the orders of the occupation administration. Persons can only return to the occupied territories in proportion as the Rumanian Government provides for their security and maintenance.

"The army of occupation's right to requisition is restricted to corn, peas, beans, fodder, wool, cattle, and meat from the products of 1918, and, further, to timber, oil and oil products, always observing proper regard for an orderly plan of procuring these commodities as well as satisfying the home needs of Rumania.

"From the ratification of the treaty onwards the army of occupation shall be maintained at the expense of Rumania. A separate agreement will be made with regard to the details of the transfer of the civil administration, as well as with regard to the withdrawal of the regulations of the occupation administration. Money spent by the allied powers in the occupied territories on public works, including industrial undertakings, shall be made good on their transfer. Until the evacuation these undertakings shall remain under the military administration.

"CLAUSE 6—REGULATIONS REGARDING NAVIGATION ON THE DANUBE.

"Article 24—Rumania shall conclude a new Danube Navigation Act with Germany, Austria-Hungary, Bulgaria, and Turkey, regulating the legal

position on the Danube from the point where it becomes navigable, with due regard for the prescriptions subsequently set forth under Sections a to d, and on conditions that the prescriptions under Section b shall apply equally for all parties to the Danube act. Negotiations regarding the new Danube Navigation Act shall begin at Munich as soon as possible after the ratification of the treaty.

"The sections follow: (a) Under the name Danube Mouth Commission, the European Danube Commission shall, under conditions subsequently set forth, be maintained as a permanent institution, empowered with the privileges and obligations hitherto appertaining to it for the river from Braila downwards, inclusive of this port. The conditions referred to provide, among other things, that the commission shall henceforth only comprise representatives of States situated on the Danube or the European coasts of the Black Sea. The commission's authority extends from Braila downwards to the whole of the arms and mouth of the Danube and adjoining parts of the Black Sea.

"(b) Rumania guarantees to the ships of the other contracting parties free navigation on the Rumanian Danube, including the harbors. Rumania shall levy no toll on ships or rafts of the contracting parties and their cargoes merely for the navigation of the river. Neither shall Rumania, in the future, levy on the river any tolls, save those permitted by the new Danube Navigation Act."

The collapse of Bulgaria at the end of September and the consequent evacuation of Serbia by the Central Powers heartened the Rumanians. They ignored the above treaty and re-entered the war on the side of the Allies.—See also RUMANIA: 1916-1918.

BUCHNER, Edvard (1860-), German chemist, granted the Nobel prize in 1907. See NOBEL PRIZES: Chemistry: 1907.

BUCHNER, Max (1840-), governor of the Cameroons. See CAMEROONS: Occupation by Germany.

BUCKINGHAM, George Villiers, 1st duke of (1592-1628), English politician and courtier. In 1617, became privy counselor; 1623, accompanied Charles I to Spain; 1624-1628, favorite minister of Charles I, who upheld his policies against popular disapproval. Assassinated by John Felton, 1628.—See ENGLAND: 1628.

BUCKINGHAM, William Alfred (1804-1875), Connecticut's civil war governor. See CONNECTICUT: 1861-1865.

BUCKINGHAM PALACE, the London residence of the English sovereign, situated at the western end of St. James's park. By an act of Parliament in 1775 it was presented to Queen Charlotte, from which it derives its name of the "Queen's house." George IV had it remodeled, and Queen Victoria, who occupied it in 1837, added the eastern façade and ball-room. Of especial note are the grand staircase, the throne-room, and the state ball-room. The picture gallery contains a number of old and modern masterpieces; and a priceless collection of French buhl and other furniture is also to be found there.—See also ST. JAMES, PALACE AND COURT OF.

BUCKLE, Henry Thomas (1821-1862), Eng-

lish historian, author of "History of Civilization." See HISTORY: 3; 33.

BUCKNER, Simon Bolivar (1823-1914), American soldier and politician. Served in the Mexican War under General Scott; served conspicuously in the Civil War as a general in the Confederate army; governor of Kentucky, 1887-1891; candidate for vice-president on National (sound money) Democratic ticket, with J. M. Palmer.

BUCKSHOT WAR, the name given to riots at Harrisburg, Pa., December, 1838, growing out of a contest over the election of certain members to the legislature from Philadelphia. The governor called out the militia, and General Patterson's order to his men provided for "thirteen rounds of buckshot cartridges," hence the name "Buckshot war."

BUCKTAILS, the name from 1818 to 1828 applied to the Tammany Society of New York City, the members of that organization wearing a buck's tail in the hat as a badge. They were opposed to Clinton's canal policy, and the name was finally applied to all anti-Clintonian Democrats. In 1828 they became the Democratic party of the state. See NEW YORK: 1817-1819.

BUCURESCI. See BUCHAREST.

BUZACZ, a town in eastern Galicia about seventy miles southeast of Lemberg; taken by the Russians in their 1916 offensive against the Austrians during World War. See WORLD WAR: 1916: III. Eastern front: a, 2.

BUDA, a city of Hungary, situated on the right bank of the Danube, southeast of Vienna. It was incorporated into a single municipality with O-Buda, Pest and Köbánya in 1872. See BUDAPEST.

BUDAPEST, the capital and largest city of Hungary. In 1872 it was incorporated as a single municipality, being a union of Buda with Pest and two other towns situated on both banks of the Danube, and joined by six bridges. In the second century the Romans founded a colony on the right bank of the river, remaining until 376. After this date the site was successively occupied by Huns, Ostrogoths, Avars, Slavs and Magyars, the last arriving at the end of the tenth century. Christianity was introduced soon after. (See HUNGARY: 896). In 1361 Buda became the capital of Hungary. The growth of Buda and Pest has been remarkable, owing to Pest becoming one of the world's greatest flour-milling centers, with other extensive industries and a large trade. In 1800 the joint population was but 55,000; in 1872, at the time of union, it was about 300,000; in 1921 it was about 1,000,000. As the capital of a greatly diminished Hungary, the commercial prosperity of the city will suffer to some extent, but it will retain its greatness as the center of Magyar culture.

Plan of the city. See CIVIC BEAUTY: Budapest. 1241.—Destruction of Pest by the Mongols. See MONGOLIA: 1229-1294.

1526.—Taken and plundered by the Turks. See HUNGARY: 1487-1526.

1529-1567.—Taken by the Turks.—Besieged by the Austrians.—Occupied by the sultan.—Becomes the seat of a pasha. See HUNGARY: 1526-1567.

1686.—Recovery from the Turks. See HUNGARY: 1683-1687.

1849.—Siege and capture by the Hungarians. See AUSTRIA: 1848-1849; HUNGARY: 1847-1849.

BUDDHA.—"Gautama, surnamed the Buddha, because he claimed to have attained *bodhi*, or supreme knowledge, the secret of existence, was the younger contemporary of Mahavira. His father, Suddhodhana, was a prince or nobleman in the small town of Kapilavastu, situated in the territory of the Sakya clan, which took rank among the Kshatriyas. Hence he is often called Sakya-muni, or the Sakya sage. The land of the Sakyas was the narrow strip of country between the Rapti river and the mountains, now mostly included in the Nepalese Tarai, and lying to the north of the Basti District. The legends dwell with much play of imagination on the manner in which the young prince became oppressed by sadness and lost all desire for the delights of a court. He became convinced that existence is misery, leading to old age, disease, and death, and sought an escape from the endless circle of rebirth. Sitting under a tree near Gaya, he tried to win salvation by the severest penance, but found no peace. At last he saw the light, put away penance as vanity, and, going to Benares, preached to a few disciples his three great principles that 'all the constituents of being are transitory, are misery, and are lacking in an ego, or permanent self (*atman*).' His philosophy was based on those doctrines, but as a moralist he taught a lofty system of practical ethics, impressing on men the necessity for personal striving after holiness, and laying special stress on the virtues of truthfulness, reverence to superiors, and respect for animal life. Like Mahavira, he wandered for the rest of his life with his disciples through Magadha and the neighbouring kingdoms, and, after a ministry of forty-five years, passed away at the age of eighty at Kusinagara, a small town probably situated near Tribeni Ghat, at the confluence of the Little Rapti with the Gandak. The date of his death is uncertain, but there is good reason for believing that the event happened in or about 487 B. C."—V. A. Smith, *Oxford student's history of India*, pp. 32, 33.

Compared to Christ as an historical figure. See **JESUS CHRIST:** Christ and Buddha.

Legend of Buddha's youth.—"The young prince [Gautama] shunned the sports of his playmates, and spent his time alone in nooks of the palace garden. When he reached manhood, however, he showed himself brave and skilful with his weapons. He won his wife by a contest at arms over all rival chiefs. For a time he forgot the religious thoughts of his boyhood in the enjoyment of the world. But in his drives through the city he was struck by the sights of old age, disease, and death which met his eye; and he envied the calm of a holy man, who seemed to have raised his soul above the changes and sorrows of his life. After ten years, his wife bore to him an only son; and Gautama, fearing lest this new tie should bind him too closely to the things of earth, retired about the age of thirty to a cave in the jungles. The story is told how he turned away from the door of his wife's lamp-lit chamber, denying himself even a parting caress of his new-born babe, lest he should wake the sleeping mother, and galloped off into the darkness. After a gloomy night ride, he sent back his one companion, the faithful charioteer, with his horse and jewels to his father. Having cut off his long warrior hair, and exchanged his princely raiment for the rags of a poor passer-by, he went on alone a homeless beggar. This giving up of princely pomp, and of loved wife and new-born son, is the Great Renunciation which forms a favourite theme of the Buddhist Scriptures."—W. W. Hunter, *Brief history of the Indian peoples*, p. 74.

Legend of Buddha's forest life, aet. 29 to 35.—"For a time Gautama studied under two Brahman hermits, in Patna District. They taught him that the peace of the soul was to be reached only by mortifying the body. He then buried himself deeper in the jungles near Gaya, and during six years wasted himself by austerities in company with five disciples. The temple of Buddha-Gaya marks the site of his long penance. But instead of earning peace of mind by fasting and self-torture, he sank into a religious despair, during which the Buddhist Scriptures affirm that the enemy of mankind, Mara, wrestled with him in bodily shape. Torn with doubts as to whether all his penance availed anything, the haggard hermit fell senseless to the earth. When he recovered, the mental agony had passed. He felt that the path to salvation lay not in self-torture in mountain-jungles or caves, but in preaching a higher life to his fellowmen. He gave up penance. His five disciples, shocked by this, forsook him; and he was left alone in the forest. The Buddhist Scriptures depict him as sitting serene under a fig-tree, while demons whirled round him with flaming weapons. From this temptation in the wilderness he came forth with his doubts for ever laid at rest, seeing his way clear, and henceforth to be known as Buddha, literally 'The Enlightened.'—*Ibid.*, p. 75.

Public teaching of Buddha, aet. 35 to 80.—"Buddha began his public teaching in the Deer-Forest, near the great city of Benares. Unlike the Brahmans, he preached, not to one or two disciples of the sacred caste, but to the people. His first converts were common men, and among the earliest were women. After three months he had gathered around him sixty disciples, whom he sent forth to the neighbouring countries with these words: 'Go ye now, and preach the most excellent law.' Two-thirds of each year he spent as a wandering preacher. The remaining four months, or the rainy season, he abode at some fixed place, teaching the people who flocked around his little dwelling in the bamboo grove. His five old disciples, who had forsaken him in the time of his sore temptation in the wilderness, now came back to their master. Princes, merchants, artisans, Brahmans and hermits, husbandmen and serfs, noble ladies and repentant women who had sinned, were added to those who believed. Buddha preached throughout Behar, Oudh, and the adjacent districts in the North-Western Provinces. He had ridden forth from his father's palace as a brilliant young prince. He now [aet. 37] returned to it as a wandering preacher, in dingy yellow robes, with shaven head and the begging bowl in his hand. The old king heard him with reverence. The son, whom Buddha had left as a new-born babe, was converted to the faith; and his beloved wife, from the threshold of whose chamber he had ridden away into the darkness, became one of the first of Buddhist nuns."—*Ibid.*, pp. 75-76.—Narratives from this point are confusing and disconnected, and except for the account of the last few days of his life, it is not yet possible to glean from legend a clear, chronological biography of Buddha.—See also **MYTHOLOGY:** Eastern Asia: Indian and Chinese influences.

Legend of Buddha's death and last words.—"In foretelling his death, he [Buddha] said to his followers: 'Be earnest, be thoughtful, be holy, keep steadfast watch over your own hearts. He who holds fast to the law and discipline, and faints not, he shall cross the ocean of life and make an end of sorrow.' 'The world is fast bound in fetters,' he added; 'I now give it deliverance, as a physician who brings heavenly medicine. Keep

your mind on my teaching: all other things change, this changes not. No more shall I speak to you, I desire to depart. I desire the eternal rest (*Nirvāna*).’ He spent the night in preaching, and in comforting a weeping disciple. His latest words, according to one account, were, ‘Work out your salvation with diligence.’ He died calmly, at the age of eighty, under the shadow of a fig-tree, according to the commonly received tradition in 543 B. C.; or according to later criticism in 478 B. C.”—*Ibid.*, p. 76.—“Gotama died, full of years and

the Buddha’s death, by Vidudubha, King of Kosala.”—T. W. R. Davids, *Early Buddhism*, pp. 46, 47.—See also BUDDHISM: Buddha’s last discourse.

Discovery of his birthplace and his tomb, with personal relics.—“Mr. Vincent Smith, of the Bengal Civil Service, a learned antiquary, has published in the Allahabad ‘Pioneer’ a statement as to the nature and significance of recent discoveries [1808] of Buddhist antiquities in India. The first of these is the home of Gautama Buddha, who lived about 500 B. C., and who is known to have

BUDDHA AT KAMAKURA, JAPAN

held in high esteem by the clansmen, . . . at Kusinara, a site not yet identified, but probably in Nepal. After the cremation, carried out by the clansmen of the Mallas, in whose territory the town lay, the ashes are said to have been divided into eight portions. Of these six were given to the six clans in the neighbourhood, one being the Sakiyas, one was given to the King of Magadha, and one to a Brahmin in Vethadipa near by. Stupas or cairns are said to have been put up over all eight; but only one of these has as yet been rediscovered. This is the one put up by the Sakiyas in the new Kapilavastu, built after the destruction of the older town a few years before

been the son of the Raja of Kapilavastu, a small state in the Nepal Terai, bordering on the modern Oudh. The site of Kapilavastu has long been eagerly sought for, and it is only within the past three years that the accidental discovery of an inscribed pillar erected by the Emperor Asoka, in the third century B. C., fixed with certainty the site of the city. The ruins, which were lately visited by Mr. Smith, are, so far as is yet known, all of brick; they are for the most part buried in jungle, and are so extensive that many years would be required for their exploration. The city was destroyed during the lifetime of Gautama, and when the first of the famous Chinese pilgrims vis-

ited the place, in 410 A. D., it was a mass of desolate ruins, and there is no indication that it has since been occupied. This fact gives exceptional interest to the excavations now in progress, for they are bringing to light buildings more ancient than any previously known in India. More interesting even than Kapilavastu is the discovery of the Lumbini Garden, the traditional birthplace of Gautama. The sacred spot has been found marked by another of Asoka's pillars, on which the inscription is perfect. This is also in Nepalese territory, five miles from the British frontier. The pillar stands on the western edge of a mound of ruins, about a hundred yards in diameter, and on the south side of the mound is the tank in which the child's mother bathed after his birth. Another discovery which was made in a stupa, or brick tumulus, close to the British frontier, is that of relics of Buddha himself. These consist only of fragments of bone, which were deposited in a wooden vessel that stood on the bottom of a massive coffer, more than four feet long and two feet deep, cut out of a solid block of fine sandstone. This coffer was buried under eighteen feet of masonry, composed of huge bricks, each sixteen inches long. The wooden vessel was decayed, and with it was an exquisitely finished bowl of rock crystal, the largest yet discovered in India, and also five small vases of soapstone. All these vessels were partially filled, in honor of the relics, with a marvellous collection of gold stars, pearls, topazes, beryls, and other jewels, and of various objects delicately wrought in crystal, agate, and other substances. An inscription on the lid of one of the soapstone vases declares the relics to be those of Buddha himself, and the characters in which the inscription is written are substantially the same as those of the Asoka inscriptions, and indicate that the tumulus was constructed between 300 and 250 B. C.—*London Times*, May, 1898.—The relics discovered, as described above, were presented by the Indian government to the king of Siam, the only existing Buddhist monarch, with the proviso that he offer a portion of them to Buddhists of Ceylon and Burmah.

BUDDHISM.—Buddha and his mission.—"The Brahmins had firmly established their power 600 years before Christ. But after that date a new religion arose in India, called Buddhism, from the name of its founder, Gautama Buddha. This new religion was a rival to Brahmanism (q. v.) during more than a thousand years. About the ninth century A. D. Buddhism was driven out of India. But it is still professed by 500 millions of people in Asia, and has more followers than any other religion in the world."—W. W. Hunter, *Brief history of the Indian peoples*, p. 74.—"In early India, some 2,500 years ago, there was a general belief that there was an abiding principle, a self or soul, within man which persisted after death. The soul received rewards in heaven and rebirth on earth in ameliorated conditions of life, if the Karma, or action of previous existences, had been good. It was awarded penalties in hell and rebirth in degraded conditions of life if its actions had been evil. Therefore extreme asceticism came to be an ideal whereby man could free his Soul from both good and evil actions. In the midst of such beliefs the Buddha, or Enlightened One, was born about 560 B. C.—He held that the universe was a ceaseless ever-becoming, in which imper-

manence even the gods participated. In such a doctrine there could be no abiding principles such as God and the Soul, or Self. If this were so, it might be well asked why man should weary himself with good deeds or with asceticism. Actions can only lead to new existences, with their sufferings of birth, disease, sorrow, old age, and death. Were it not better to seclude oneself from the world and live a life of concentrated thought, wherein all attachment to fleeting pleasures of the senses might fade away and man gain a haven of rest in quietism? In Benares many seekers after truth abandoned their asceticism and flocked to hear the new solution of the here and hereafter as taught by Buddha. It is recorded that, at Buddha Gaya, one thousand Brahmins joined the middle path of monastic quietude. Throughout Bihar and Oudh the Buddha gathered in the people to listen to his teaching and to wonder at the yellow robes of his followers and at the wealth which was poured at their feet. The people had been accustomed to the proud reserve and vaunted divine knowledge of Brahman priests. They had given alms to Jain ascetics and half-crazed Yogis. Men had worshipped the Brahmins and their gods, they had lived in fear and trembling at the thought that their slightest neglect of reverence towards the Brahmins and their sacrifices might doom their souls to perpetual torments in hells or to rebirth in foul and unclean new forms of life. All these terrors of life were now to be swept away and nothing abiding left of mind or matter, or of God or soul. All humanity was to receive, irrespective of caste distinctions, knowledge of a saddened world wherein there was no hope. Love towards each other and mutual forbearance could alone give some momentary relief from sorrow in a life which had no more permanency than had a quickly passing shadow."—R. W. Frazer, *Indian thought past and present*, pp. 141-143.

"Whether the Buddha was really the son of a king or not, it may be regarded as certain that he did not belong to the caste of the Brahmins. There is equally little reason for doubting that he sought for peace first of all among the Brahmins, then in solitary penance,—yet in both instances in vain,—and attained it only by that contemplation absorbing the soul, which became the characteristic of his followers. His wandering life in the garb of a mendicant, his preaching that all who followed him in this might be delivered from sickness, pain, old age, and death, and should strive after *Nirvana* as the highest goal, the great impression which this doctrine made on men of all classes, if not through the whole of India, yet according to the oldest tradition, in particular districts, the opposition which he encountered from many, the loyal devotion of his disciple Ananda, the few details related of his death—all this cannot belong to the realm of fiction. And this suffices to show us in the Buddha a man, who, whatever may have been the value of his philosophy of life, out of genuine conviction and pity for his fellowmen, chose a life of self-denial and renunciation to realise a great idea and promote the universal salvation."—C. P. Tiele, *Outlines of the history of religion to the spread of the universal religions*, pp. 134, 135.

Buddha's last discourse.—Essentials of Buddhist doctrine.—"The summary of the main features of his system of beliefs which Gotama is said, in our earliest authorities, to have put before his five friends at Benares, gives us what those authorities held to be most important in his teaching. . . .

"Every word is important, and it is a great pity,

that, in popular works on Buddhism, the expressions have been usually further condensed (which they will not bear), or so altered as to misrepresent the meaning. The full text is as follows:—

“There are two extremes which he who has gone forth ought not to follow—habitual devotion on the one hand to the passions, to the pleasures of sensual things, a low and pagan way (of seeking satisfaction), ignoble, unprofitable, fit only for the worldly-minded; and habitual devotion, on the other hand, to self-mortification, which is painful, ignoble, unprofitable. There is a Middle Path discovered by the Tathâgata—a path which opens the eyes, and bestows understanding, which leads to peace, to insight, to the higher wisdom, to Nirvana. Verily! it is this Aryan Eightfold Path; that is to say Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture.

“Now this is the Noble Truth as to suffering. Birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant; and any craving unsatisfied, that, too, is painful. In brief, the five aggregates of clinging (that is, the conditions of individuality) are painful.

“Now this is the noble Truth as to the origin of suffering. Verily! it is the craving thirst that causes the renewal of becomings, that is accompanied by sensual delights, and seeks satisfaction, now here, now there—that is to say, the craving for the gratification of the senses, or the craving for a future life, or the craving for prosperity.

“Now this is the Noble Truth as to the passing away of pain. Verily! it is the passing away so that no passion remains, the giving up, the getting rid of, the emancipation from, the harbouring no longer of this craving thirst.

“Now this is the Noble Truth as to the way that leads to the passing away of pain. Verily! it is this Aryan Eightfold Path, that is to say, Right Views, Right Aspirations, Right Speech, Right Conduct, and Right Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture.”

“A few words follow as to the threefold way in which the speaker claimed to have grasped each of these four truths. That is all. There is not a word about God or the soul, not a word about the Buddha or Buddhism. It seems simple, almost jejune; so thin and weak that one wonders how it can have formed the foundation for a system so mighty in its historical results. But the simple words are pregnant with meaning. Their implications were clear enough to the hearers to whom they were addressed. They were not intended, however, to answer the questionings of a twentieth-century European student, and are liable now to be misunderstood.”—T. W. R. Davids, *Early Buddhism*, pp. 48-53.

“The Buddha essays in these Four Noble Truths no metaphysical speculations over the why or the wherefore of the universe. A fivefold craving after form, sensations, perceptions, conformations, and consciousness is all that Buddha's simple teachings set before his disciples. The Four Noble Truths held in themselves a code of ethics whereby all people, irrespective of caste or religious belief, could become free in this world from the pains and sorrows of life. [See ERRORS: India.] It was ignorance of the path to the cessation of suffering that the Buddha spent forty-five years of his lifetime in efforts to eradicate. To obtain freedom from desire and actions which attached themselves to desires, Buddha preached no doctrine of ex-

treme asceticism so common in India from the earliest times. Monastic middle-life was ordained for those who sought freedom from ignorance, but who might find the allurements of the world too strong for a life of contemplation. By a life of intense concentration of thought and self-culture each man could find for himself the truth of Buddha's contention that when ignorance ceased actions would lose their potency by non-attachment to outside objects and pleasures. For those Buddhists who remained in the world, as lay members of the order, there was given a moral code by the observance of which they rose above the trammels of caste, above priestly superstitions. Further, the lower classes of the people, in accepting Buddhism, gained the proud position of belonging to a saintly, dignified, and widely revered order. The natural disposition of the lay members to store up merit by charity and good deeds was met to the full in the ample opportunities they had of giving of their alms for the support of the wandering Buddhist monks. Buddhism set before the people ideals of charity, chastity, and self-repression—ideals ever revered in the best of Indian belief and in the best of Indian literature. . . . To the simple teachings of the Buddha after ages added learned discussions on every conceivable cosmological, psychological, and even ontological problem that perplexed the thought of their times; the piety, or vanity, of these ages ascribed all their wordy disquisitions to the Buddha, and laid them as tributes of reverence at his feet. The Buddha had ever consistently refused to be drawn by his disciples into any definite statements or metaphysical discussions regarding the nature of the Atman, or Soul, or even respecting the question of the existence or non-existence of a future life after death. It is even suggested that he was not responsible for the first announcement of the principle underlying the grouping of the Four Noble Truths, for ‘those Four Noble Truths are nothing more than the four cardinal principles of Indian medical science applied to the spiritual healing of mankind.’ The Wheel of Life gives the Buddhist conception of life as ever becoming, ever passing on like the rim of a moving wheel. The Four Noble Truths had taught that all the suffering and Sorrow of the world arose from the Desire or Thirst for pleasures, existence, and prosperity. The Wheel of Life, or Chain of Causation, as it has been called, gives twelve divisions of life, or causes of existence (nidanas). Here Desire arises from Ignorance, which produces Karma, or deeds, necessitating a new existence for their reward or punishment. In this new life seven stages of early development of life pass till Desire arises, which leads, through self-assertion, to married life, to family cares, thence to old age and death, ending again in Ignorance necessitating new existences. Thus, ‘Not to know suffering, not to know the cause of suffering, not to know the cessation of suffering, not to know the Path which leads to the cessation of suffering, this is called Ignorance.’”—R. W. Frazer, *Indian thought past and present*, pp. 157-160.

“Buddhism, though it is a reaction against the Brahmanic hierarchy, is, in fact, an outgrowth of Brahmanism. It rests upon the so-called dogma of the transmigration of the soul, and the Buddhist, like the Brahman, seeks for deliverance from the endless succession of re-births. But it pronounces the Brahmanic penances and abstinence inadequate to accomplish this, and aims at attaining, not union with the universal spirit, but Nirvana, non-existence. Without denying the existence of the devas, at any rate at first, it places

each Buddha, as the Brahmins ranked every ascetic, above them, but it goes a step further, and makes even the supreme Brahma subordinate to a perfect saint. It differed from Brahmanism, as primitive Christianity differed from the Jewish hierarchy, by rejecting outward works or theological knowledge as marks of holiness, and seeking it in gentleness, in purity of heart and life, in mercy and self-denying love for a neighbour. Above all, it is distinguished by its relation to castes. The Buddha comes neither to oppose them, nor to level everything. On the other hand, he adopts the doctrine that men are born in lower or higher castes, determined by their sins or good works in a former existence, but he teaches, at the same time, that, by a life of purity and love, by becoming a spiritual man, every one may attain at once the highest salvation. Caste makes no difference to him; he looks for the man, even in the Chandala; the miseries of existence beset all alike, and his law is a law of grace for all. The Buddhist teaching is, therefore, quite popular in its character, its instrument is preaching rather than instruction, it is not esoteric like the Brahmanic, or intended only for individuals. And while the piety of the Brahman aimed at selfishly securing his own redemption, the Buddhist cannot attain salvation without regard to the well-being of all his fellow creatures. The ideal of the first is a hermit striving to save others. Buddhism, in fact, rejected the authority of the veda, the whole dogmatic system of the Brahmins, their worship, penance, and hierarchy, and simply substituted for them a higher moral teaching. It was a purely ethical revolution; but it would certainly have succumbed beneath this one-sided tendency, had it not in the course of time taken up into itself, under another shape, much of what it had first opposed."—C. P. Tiele. *Outlines of the history of religion to the spread of the universal religion*, pp. 135-136.—See also BRAHMANISM.

Law of Karma.—"The secret of Buddha's success was, that he brought spiritual deliverance to the people. He preached that salvation was equally open to all men, and that it must be earned, not by propitiating imaginary deities, but by our own conduct. He thus did away with sacrifices, and with the priestly claims of the Brahmins as mediators between God and man. He taught that the state of a man in this life, in all previous and in all future lives, is the result of his own acts (*Karma*). What a man sows, that he must reap. As no evil remains without punishment, and no good deed without reward, it follows that neither priest nor God can prevent each act from bringing about its own consequences. Misery or happiness in this life is the unavoidable result of our conduct in a past life; and our actions here will determine our happiness or misery in the life to come. When any creature dies, he is born again in some higher or lower state of existence, according to his merit or demerit. His merit or demerit consists of the sum total of his actions in all previous lives. A system like this, in which our whole well-being—past, present, and to come—depends on ourselves, leaves little room for a personal God."—W. W. Hunter, *Brief history of the Indian peoples*, p. 77.

Nirvana.—"Referring to the books, however, we receive definite information as to the early and late belief of northern Buddhists on this subject of Nirvana. It is spoken of as a deliverance consequent on destruction. So Buddha says: 'After my Nirvana, *wo-mie-tu-heu*, that is, after my body has been destroyed, and in consequence deliverance obtained. But what is the 'deliverance'?

The oft-repeated answer is—a deliverance from 'birth and death' (*sing sse*). The truth is, so it would seem at least, that sorrow was regarded as inseparable from organised life, or from life as a separate item in any condition. And, therefore, without defining it, the primitive belief was that the supreme happiness was exemption from rebirth. Does not this contain in it the germ of the later Pantheism or spiritualism into which the system grew? For, if there is to be no birth, we must go back to the condition before birth began; that is, as it seems, to the condition of the 'Eternal One.' Whether this word Nirvana has not some reference to that condition of a non-breathing life, that is, of the Creator ere he began his creative work (as we speak) is not satisfactorily answered. It has been propounded as a possible explanation of the word, and if it could be borne out, the idea, at any rate, of Nirvana would be brought to a determinate issue. For if, as the Buddhists say, we are possessed of the one nature of Buddha, and if by recovering this we reach our goal of perfection, then this perfection consists in going back to that nature ere it became deluded and darkened by ignorance. At least, the definition of destruction as a part of the formula for Nirvana alludes to the destruction of every part of the being called 'man.' Beyond this, however, we find in the developed form of the doctrine the positive assertion that Nirvana consists in joy, permanence, personality, and purity. 'It may be compared,' Buddha is supposed to say, 'to the absence of something different from itself. In the midst of sorrow there is no Nirvana, and in Nirvana there is no sorrow. So we may justly define Nirvana as that sort of existence which consists in the absence of something essentially different from itself.' Again, in another place, Buddha says: 'I do not affirm that the six organs of sense, &c., are permanent, but what I state is that *that* is permanent, full of joy, personal, and pure which is left after the organs of sense and the objects of sense are destroyed. When the world, weary of sorrow, turns away and separates itself from the cause of all this sorrow, then by this rejection of it there remains that which I call the "true self," and it is of this I speak when I say it is permanent, full of joy, personal, and pure.' So in the later speculation this thought is repeatedly brought out, that Nirvana is a positive condition of unfettered bliss."—S. Beal, *Buddhism in China*, pp. 198-199.

Early spread of the teachings.—Work of Asoka.—Persecutions and struggles.—"On the death of Buddha in 543 B. C., [latest authorities accept 488 B. C.] five hundred of his disciples met in a vast cave near Patna, to gather together his sayings. This was the first Council. They chanted the lessons of their master in three great divisions,—the words of Buddha to his disciples; his code of discipline; and his system of doctrine. These became the Three Collections of Buddha's teaching; and the word for a Buddhist Council means literally 'a singing together.' A century afterwards, a Second Council, of seven hundred, was held in 443 B. C., to settle disputes between the more and the less strict followers of Buddhism.

"During the next two hundred years Buddhism spread over Northern India. About 257 B. C., Asoka, the King of Magadha or Behar, became a zealous convert to the faith. He was grandson of Chandra Gupta, whom we shall afterwards hear of in Alexander's camp. Asoka is said to have supported 64,000 Buddhist priests; he founded many religious houses; and his kingdom is called the Land of the Monasteries (Vihara or Behar) to this day. Asoka did for Buddhism what the Em-

peror Constantine afterwards effected for Christianity—he made it a State religion. This he accomplished by five means,—(1) by a Council to settle the faith; (2) by Edicts setting forth its principles; (3) by a State Department to watch over its purity; (4) by Missionaries to spread its doctrines; and (5) by an Authoritative Revision or Canon of the Buddhist Scriptures. In 244 B. C., Asoka convened at Patna the Third Buddhist Council, of one thousand elders. Evil men, taking on them the yellow robe of the Buddhist order, had given forth their own opinions as the teaching of Buddha. Such heresies were now corrected; and the Buddhism of Southern Asia practically dates from Asoka's Council. In a number of edicts, both before and after that Council, he published throughout his empire the grand principles of the faith. Forty of these royal sermons are still found graven upon pillars, caves, and rocks throughout India. Asoka also founded a State department, with a Minister of Justice and Religion at its head, to watch over the purity, and to direct the spread, of the faith. Wells were to be dug and trees planted along the roads for the wearied wayfarers. Hospitals were established for man and beast. Officers were appointed to watch over family life and the morals of the people, and to promote instruction among the women as well as the youth. Asoka thought it his duty to convert all mankind to Buddhism. His rock inscriptions record how he sent forth missionaries 'to the utmost limits of the barbarian countries,' to 'intermingle among all unbelievers' for the spread of religion. They were to mix equally with soldiers, Brahmans, and beggars, with the dreaded and the despised, both within the kingdom 'and in foreign countries, teaching better things.' But conversion was to be effected by persuasion, not by the sword. Buddhism was at once the most intensely missionary religion in the world, and the most tolerant. Asoka, however, not only laboured to spread his religion—he also took steps to keep its doctrines pure. He collected the Buddhist sacred books into an authoritative version, in the Magadhi language of his central kingdom in Behar,—a version which for two thousand years has formed the Southern Canon of the Buddhist Scriptures."—W. W. Hunter, *Brief history of the Indian peoples*, pp. 78-79.—See also INDIA: B. C. 600-327, 312.—"Mahendra, the king's own son, went to Ceylon [see CEYLON], and there founded the Southern Buddhist church, which was destined to remain so much purer than the Northern, and was at a later date to carry Buddhism to Burma and Siam. . . . Under King Pushpamitra, the founder of a new dynasty, a violent persecution was commenced, at the instigation of the Brahmans. . . . The struggle lasted long, and the Brahmans and the Buddhists gained by turns the upper hand. Till the fourth century A. D., the latter seem to have been in the majority. But in the two following centuries, they rapidly declined. . . . It is commonly supposed that the Buddhists were the victims in India of bloody persecutions and were exterminated with violence, but of this supposed fact no satisfactory proofs are forthcoming. On the contrary, Buddhism appears to have pined away slowly. It continued to exist for some centuries in some of the remoter districts. In Kashmir it held its ground at all events till 1102, and in the modern Bengal certainly down to 1036, while it has continued in Nepal till the present day. The majority of believers who remained faithful fled to foreign lands, amongst others to Java, and spread their faith there. Others passed into the sect of the Jainas which was not exposed to per-

secution."—C. P. Tiele, *Outlines of the history of religion to the spread of the universal religion*, pp. 138-140.

ALSO IN: H. Hackmann, *Buddhism as a religion*, pp. 41-44.

Later history.—**Spread of Buddhism.**—"During the last thousand years Buddhism has been a banished religion from its native Indian home. But it has won greater triumphs in its exile than it could have ever achieved in the land of its birth. It created a literature and a religion for nearly one-half of the human race; and it is supposed, by its influence on early Christianity, to have affected the beliefs of a large part of the other half. Five hundred millions of men, or forty per cent. of the inhabitants of the world, still follow the teaching of Buddha. Afghanistan, Nepal, Eastern Turkistan, Tibet, Mongolia, Manchuria, China, Japan, the Eastern Archipelago, Siam, Burma, Ceylon and India, at one time or another marked the magnificent circle of its conquests. Its shrines and monasteries stretched from what are now provinces of the Russian empire, to Japan and the islands of the Malay Sea. During twenty-four centuries, Buddhism has encountered and outlived a series of rival faiths. At this day it forms, with Christianity and Islam, one of the three great religions of the world; and the most numerously followed of the three. . . . Buddhism is still the religion of Burma, and has there over nine millions of followers, or nine-tenths of the population. The Buddhist monasteries have from ancient times been schools for the young as well as religious houses for the monks; and they now form the basis of the British system of Public Instruction throughout Burma. In all the rest of British India there are only about 227,000 pure Buddhists, chiefly in the Bengal Districts adjacent to Burma, and in the remote valleys of the Himalayan ranges. From time to time Buddhism seems to take a new start in Lower Bengal, and Buddhist journals are published in Calcutta and elsewhere. But the noblest survivals of Buddhism in India are to be found not among any peculiar body, but in the religion of the whole Hindu people; in that principle of the brotherhood of man, with the re-assertion of which each new revival of Hinduism starts; in the asylum which the great Hindu sect of Vaishnavs affords to women who have fallen victims to caste rules, to the widow and the outcast; in that gentleness and charity to all men, which take the place of a poor-law in India, and give a high significance to the half-satirical epithet of the 'mild' Hindu."—W. W. Hunter, *Brief history of the Indian peoples*, pp. 82-84.

Different forms of Buddhism.—"In the study of Buddhism, the distinction between the northern and southern form should be always kept in view. It is to Burnouf that we owe the first clear separation of these two chief parties into which the Buddhists are divided. The priests of Ceylon, Birman, and Siam have their sacred books in the Pali language, which is later in age than the Sanscrit. The monks of Nepaul, Tibet, China, and the other northern countries where this religion is professed, either preserve the books of their religion in Sanscrit, or have translations made immediately from Sanscrit (q. v.). Sanscrit is the mother of Pali, and was spoken quite late in some of the mountainous kingdoms of Northern India. Another great distinction is in the books themselves. The fundamental books of both the great Buddhist parties appear to be the same, but the northern Buddhists have added many important works professing to consist of the sayings of Buddha, yet in reality fictitious. They belong to the

school called the Great Development School, which is so denominated to distinguish it from the Lesser Development School, common to the north and the south. In additions made by the northern Buddhists are included the fiction of the Western Paradise and the fable of Amitabha and Kwan-yin, the Goddess of Mercy. These personages are exclusively northern, and are entirely unknown to the south of Nepal. In the south the Hindoo traditions in respect to cosmogony and mythology are adhered to more rigidly; while in the north a completely new and far more extensive universe, with divinities to correspond, is represented to exist in the books, and is believed to exist by the people."—J. Edkins, *Religion in China*, pp. 8, 9.

Tolerant spirit of Buddhism.—"Wherever Buddhism has penetrated, it has abolished human sacrifice, which still prevails in portions of India never yet subjected to its influence. It has constantly discouraged capital punishment; and in many parts of Asia it has succeeded, at various times and for longer or shorter periods, in setting the death penalty aside. 'Buddhism has been violently persecuted at various times and in various countries. It appears never to have dreamed of revenge.' It has been faithful to its principle that truth is not to be imposed by violence; that opinion must be free. Its rejection of bloodshed has been absolute. Beside the history of its peaceful progress, the records of Islam and Christianity are black with tyranny and hate. If it has not prevented civil wars in a colossal empire like China, we must remember that its essential ideas have been a constant restraint on them, and probably contributed, as much as anything, to that social order and national unity through nearly four thousand years, which has been in many respects the most marvellous fact in the political history of mankind. Buddhism reached the conception that all religions have been apprehensions, with greater or less distinctness, of one eternal faith; so that it has felt a kindly yearning towards all of them, sought to find their common good elements, and to give each a place in the theory of its *dharm*a or Law. It assigns one of its highest heavens to the virtuous of other religions. It knows no heathen hated of God, only a common humanity seeking for eternal life. 'When Sakyamuni came to earth,' say the Lamaists, 'he found that all peoples were not equally capable of receiving his whole law. He therefore gave to each what truths it was able to apprehend, and so spread his blessing over all. And of all these, not one that follows its own light, shall be lost.' . . . Towards Christians Buddhism has always shown this broad hospitality. It was among the Mongolian tribes of Central Asia that they found readiest access; with Tschingis-Khan and his successors, who gloried in acknowledging one God, and the many ways in which men might serve Him. Marco Polo records the declaration of Kublai-Khan, that he 'reverenced the four great Prophets,—Jesus, Mahomet, Moses, and Buddha.'"—S. Johnson, *Oriental religions and their relation to universal religion*, pp. 749-751.—See also BUDDHA; BURMA: Religion; CASTE SYSTEM OF INDIA; CHINA: Religion of the people; JAINISM; JAPAN: Religions; LAMAS, LAMAISM; MONGOLIA: 1750-1911; MYTHOLOGY: Eastern Asia: Indian and Chinese influences; RELIGION: B. C. 600.

BUDDHIST SCULPTURE. See SCULPTURE: India, China and Japan.

BUDDHIST TEMPLES (in the United States).—"The influx into this country of numbers of Chinese and Japanese, even for temporary residence has been attended naturally by the establish-

ment of their prevailing forms of religious worship, and their temples or shrines are to be found in many cities. Almost all are Buddhist, though a few Confucian Assemblies appear to have been formed and a single Shinto temple has been included with the Japanese Buddhist temples. . . . Chinese places of worship were established in the United States as early as 1852. . . . At the time of the San Francisco earthquake in 1906, there were not far from 100 places of worship in more than 25 cities scattered over 12 states of the Union. Of the number in California, 40 or 50 were destroyed, but only a few have been replaced. Since the revolution of 1911 in China, the custom of worship has to a considerable degree been discontinued among the Chinese and this has been furthered by the lack of any distinct ecclesiastical organization."—United States Census, *Religious Bodies* 1916, pt. 2, pp. 182-183.—"Japanese Buddhist work in the United States is, on the other hand, in a flourishing condition. The center of administration is in Kyoto, Japan, with a branch office, the 'Buddhist Mission in America' at San Francisco. It is estimated that there are 11 organized churches and 83 meeting places on the Pacific coast. Statistics give the number of members as 5,639, an increase of 78.2 per cent over 1906."—*Ibid.*, p. 185.

BUDGET, "the annual financial statement which the Chancellor of the Exchequer makes in the House of Commons in a Committee of ways and means. In making this statement the minister gives a view of the general financial policy of the government, and at the same time presents an estimate of the probable income and expenditure for the following twelve months, and a statement of what taxes it is intended to reduce or abolish, or what new ones it may be necessary to impose.—To open the budget, to lay before the legislative body the financial estimates and plans of the executive govt."—*Imperial dictionary of the English language*.—See also CHANCELLOR OF THE EXCHEQUER.—Mr. Dowell in his "History of taxation," v. 1, ch. 5, states that the phrase "opening the budget" came into use in England during the reign of George III, and that it bore a reference to the bougette, or little bag, in which the chancellor of the exchequer kept his papers. The French, he adds, adopted the term about 1814. The following, however, is in disagreement with Mr. Dowell's explanation: "In the reign of George II. the word was used with conscious allusion to the celebrated pamphlet which ridiculed Sir R. Walpole as a conjuror opening his budget or 'bag of tricks.' Afterwards, it must, for a time, have been current as slang; but, as it supplied a want, it was soon taken up into the ordinary vocabulary."—*Athenaeum*, Feb. 14. 1891, p. 213.—Russia published her first budget in 1866, and both Egypt and Turkey began to use the budget system in the latter half of the nineteenth century. The fiscal year, however, is not uniform. Germany, Denmark and England begin their fiscal year, April 1 (before 1832 England began Jan. 1); France, Belgium and Austria, January 1; United States, Canada, Italy and Spain, July 1. The budget has had a place of considerable historical importance in English parliamentary history, and frequent contests have been fought around it. Disraeli introduced a budget in 1852 and was defeated. In 1859 a change of administration delayed the budget. In 1860, due to the ratification of a commercial treaty with France a budget was introduced on February 10. In 1880 two budgets were brought in, one by Disraeli in March and another by Gladstone in June. In 1909 a budget contest of great impor-

tance took place. "The Lords encouraged by their easy successes in blocking the Commons blithely took another step forward, a step that, as events were to prove, was to precede a resounding fall. The Lords in 1909 rejected the budget . . . In 1909 Lloyd George, Chancellor of the exchequer, introduced the budget. He announced correctly that two new lines of heavy expenditure, the payment of old age pensions and the rapid enlargement of the navy necessitated new and additional taxation. The new taxes which he proposed would bear mainly on the wealthy classes. . . . This budget aroused the most vehement opposition of the class of landowners, capitalists, bankers, persons of large property interests, etc. . . . The budget passed the House of Commons by a large majority. It then went to the House of Lords. For a long time it had not been supposed that the Lords had any right to reject money bills, as they were a hereditary and not a representative body. . . . After a few days debate they rejected the budget by a vote of 350 to 75 (November 30, 1909). At once this precipitated an exciting and momentous political and constitutional struggle. [See also ENGLAND: 1909 (April-December); 1910]. . . . The question of the budget and the question of the proper position and the future of the upper chamber were thus linked together."—C. D. Hazen, *Fifty years of Europe (1870-1919)*, pp. 158, 159, 160.—After two bitterly fought elections and the formation of a new cabinet, the House of Lords was materially restricted in its activities by the Parliament Act of 1911.—See also ENGLAND: 1914-1918: Taxation policy.

In June, 1921, a bill was passed by the Congress of the United States adopting a budget system. See U. S. A.: 1921 (June); also 1922 (June).

Essentials.—"It is a remarkable fact that great as is the amount of study that has for years been given to the question of the budget in foreign countries, and extensively as the question has been discussed in recent years in this country, no general agreement appears to have been reached as to the precise meaning which should be attached to the term 'budget.' To some of the numerous writers on the subject a budget is a mere statement of estimated revenues and expenditures. Others going to the opposite pole make it synonymous with a revenue and appropriation act. The former conception is most commonly found in American commentators, while the latter, springing naturally from the close relation between the estimates and the legislative acts under European parliamentary systems, is to be found most clearly in European writers, particularly the French. Thus, M. Leroy Beaulieu writes: 'A budget is a statement of the estimated receipts and expenses during a fixed period; it is a comparative table giving the amounts of the receipts to be realized and of the expenses to be incurred; it is, furthermore, an authorization or a command given by the proper authorities to incur the expenses and to collect the revenues.' 'The budget of the state,' says René Stourm, 'is a document containing a preliminary approved plan of public revenues and expenditures.' 'The budget in modern states,' according to M. G. Jéze, 'is a forecast and an estimate of all the public receipts and expenses and, for certain expenses and receipts, an authorization to incur them and to collect them.'"—W. F. Willoughby, *Problem of the national budget*, pp. 2-3.

For a more detailed analysis of the operations involved in the administration of the financial affairs of a government, consult W. F. Willoughby, W. W. Willoughby and S. M. Lindsay, *System of financial administration of Great Britain*, ch. 1

(*Studies in Administration, Institute for Government Research, 1917*).

"As used by the writer throughout the following pages the term corresponds to neither of these conceptions. Were the budget a mere estimate of revenues and expenditures it would be palpably absurd to characterize the simple and relatively unimportant matter of the preparation of such an estimate as the master problem of our public administration. On the other hand, not only does the concept of the budget, as hereafter developed, not include the formal statutory authorization for the collection and expenditure of money, but it is believed that serious consequences result from confounding the budget with the act of revenue and appropriation and attempting to provide for both estimates and statute in the same document. What then is a budget, as the term is here used? On analysis, the administration of the financial affairs of a government will be found to involve a continuous chain of operations, the several links of which are (1) estimates of revenue and expenditure needs; (2) revenue and expenditure acts; (3) accounts; (4) audit; and (5) reports. An estimate is first made of the expenditures that will be required for the due conduct of governmental affairs during a fixed period (this period being almost universally fixed at one year), together with a statement as to the manner in which it is proposed that the money to meet these expenditures shall be raised. On the basis of this estimate, revenue and appropriation acts are passed giving legal authority for taking the action determined upon. Following this the accounting department of the government opens up revenue and appropriation accounts corresponding to the items of the revenue and appropriation acts. The data recorded in these accounts are then subjected to examination and scrutiny by the auditing department for the purpose of ensuring that they are accurately made, and that they correspond to the real facts and represent a full compliance with all provisions of law. The information furnished by these accounts is then summarized for the period to which they relate and is given publicity in the form of reports. Finally, on the basis of the data contained in these reports, new estimates for the next year are made and the circuit is begun again. In this chain of operations the budget finds its place as the instrument through which these several operations are correlated, compared one with the other, and brought under examination at one and the same time. It should be at once a report, an estimate and a proposal. It is the document through which the chief executive, as the authority responsible for the actual conduct of governmental affairs, comes before the fund-raising and fund-granting authority and makes full report regarding the manner in which he and his subordinates have administered affairs during the last completed year; in which he exhibits the present condition of the public treasury; and, on the basis of such information, sets forth his program of work for the year to come and the manner in which he proposes that such work shall be financed. . . . It is obviously imperative that the appropriating authorities, in considering the problem of financing the government, shall know the total revenues that are available. Furthermore, the work of making provision for the financial needs of a government involves the consideration of relative as well as of absolute values. The problem presented is that of allotting or apportioning funds, the total amount of which is more or less fixed, to purposes in proportion to their relative importance or immediate urgency. To do this effectively it is nec-

essary that the whole problem of financing the government should be considered at one time. It is thus of the essence of correct budgetary practice that the general budget of a government should bring together in one all-comprehensive showing a complete statement of all government revenues and expenditures, but it does not follow that use may not be made of special or subordinate budgets for particular services whose operations it is desirable to segregate from those of the government generally considered. . . .

"In the first place, the budget proper should be accompanied by a balance sheet showing the resources and liabilities of the national treasury at the beginning and close of the last completed official year. . . . Lastly, these financial statements should be accompanied by the administrative reports of the chief executive, the heads of departments and other officers in charge of the several services of the government. The writer is aware that this proposition—that the annual reports of administrative officers should be made an integral part of the budgetary statement—is a novel one. At least, he has not seen the suggestion that this be done. A moment's reflection, however, will show that this is a desirable and logical requirement. We have already taken pains to point out that the budget is as much a reporting as an estimating operation. The financial statements contained in the budget proper give, and can give, but the bare figures showing the financial results of these operations. In order that their significance may be seen it is essential that they should be accompanied by statements showing the results in terms of work accomplished, the necessity or utility of such work, the problems that have had to be met, the methods that have been or will have to be employed, etc. The administrative reports thus furnish the means through which the figures contained in the budgetary statements may be understood. Without them it is difficult, if not impossible, for intelligent consideration to be given to them. To recapitulate: As an aid to the understanding of the facts contained in it, the budget proper should be accompanied by supporting documents which, together with the budget proper, constitute what may be designated a budgetary statement, in order to distinguish it from a budget as the term is more usually employed. Of these, the following are the most important: (1) A balance sheet showing the resources and liabilities of the government at the beginning and close of the year reported upon; (2) summary and analytical tables serving to bring out the important features of the showing made from the various viewpoints from which it is desirable to have the revenue and expenditures of a government considered; (3) the report of the chief executive in the form of a general budgetary message, and (4) the administrative reports of the heads of the several administrative departments and services."—*Ibid.*, pp. 3-9.

Government use.—In its Treasury, presided over by the Chancellor of the Exchequer [the English] government has an organ of precisely this character [the treasury as an organ of general administration]. This department, notwithstanding its name, has nothing to do with the actual administration of the financial affairs of the government; all that work is done by the so-called revenue departments, the customs and excise services, the post office, the commissioners of the public debt, etc. Its sole functions are the directing, supervising, and controlling of the manner in which work is done by these services and the so-called spending departments which are charged with the expenditure of

the funds voted, and preparing the budget for submission to Parliament. This department also furnishes the organ through which flexibility in the expenditure of appropriations is secured, as upon it falls the duty of passing upon all requests for the transfer of funds from one appropriation head to another. Finally, it acts as a general bureau of administration since in it is vested large authority in the furnishing of quarters, and other elements entering into the question of the cost and efficiency with which governmental operations are conducted. This is a phase of its duties which is of great importance, but it is one the consideration of which would lead us too far from the particular topic which we now have under consideration. Though the British Treasury offers the best example of a service of general overhead administration possessed by any government, certain of our states [United States] have created excellent organs of this character. Reference is made specifically to the California State Board of Public Affairs established in 1913, and the Illinois Department of Finance established in 1917."—*Ibid.*, 30-31, 36-37.

System of transfers between appropriation heads.—The best example of an appropriation system making large use of the principle of transfers between appropriation heads is that of Great Britain. "It is a matter of no little interest to note that this important feature of the English budgetary system has been adopted by the government of Porto Rico. Under its budgetary system economies effected in the expenditure of appropriations for subheads are available for transfers to other subheads within the same department upon the approval being obtained of the Executive Council, the latter body thus performing, in this respect, the function of the Treasury in the governmental system of Great Britain. The writer, who served for six years as Treasurer of the Island and as a member of the Executive Council, can bear witness to the excellent results flowing from this system. The system under which transfers may be made from one appropriation head to another upon the approval of some authority being had has also been adopted by certain of the states. [See also PORTO RICO: 1898-1899 (October-November).] The New Jersey budget act of 1916 thus provides that 'in order that some degree of flexibility in appropriations may be had, any department or other state agency receiving an appropriation by any future act of the legislature may apply to the State House Commission for leave to transfer a part of any item granted to such department or agency to any other item in such appropriation.' The Tennessee budget act of 1917 contains a similar provision, the approving authority here being the State Budget Commission. Substantially the same system has, as we have seen, been employed by Ohio since 1914. See 'The Movement for Budgetary Reform in the State,' Studies in Administration, Institute for Government Research, 1918. . . . In this system a clear distinction is drawn between appropriation heads proper or 'votes,' subheads, or 'appropriation accounts,' and items under the subheads, in respect to the extent to which the sums carried must be rigidly devoted to the service or purpose indicated. An appropriation proper, which is technically known as a 'vote,' consists of the total sum appropriated for some important branch of the government service or category of work. In the civil branches of the government, the assignment of funds so made is final and cannot be departed from unless the approval of Parliament is first obtained. In the military

and naval branches, however, transfers from one 'vote' to another within the same department may be effected upon the approval of the Treasury being received. It is clearly recognized, however, that resort to this power should not be had except for the purpose of meeting emergencies, and all changes that are made must be specially reported to Parliament for its formal approval. The total carried by each 'vote' is itemized under headings known as Appropriation Accounts to indicate the sums assigned to subdivisions of the services to which the vote relates or to special categories of expenditures. In respect to these, the law authorizes transfers to be made from one to the other within the same vote upon the approval of the Treasury being obtained. The law, however, requires that the account, audit and report of expenditures shall be made according to these subheads, so that Parliament may be placed in possession of full information regarding the extent to which this faculty of 'virement,' as it is called, is used. A double check thus exists upon an improper use or abuse of this power—the requirement that the approval of the Treasury, an organ whose primary function is the protection of the public treasury, must be obtained, and the necessity for reporting all such action to Parliament. The sums appropriated under the several 'appropriation counts' are not further itemized in the appropriation act. It should be noted, however, that in the estimates such a further itemization is presented together with a similar itemization of the manner in which the sums, if any, voted for the corresponding subheads were expended in the preceding year. Parliament can thus see the extent to which past practice has been departed from in the estimates for the year in question. There can be no question about the effectiveness of this system. It should be noted, however, that its successful working depends upon two things: One, the existence of a strong independent organ whose function it is to see that the faculty of making transfers is not abused; and the other, the requirement that a detailed account of expenditures and of all transfers shall be kept and reported to Parliament for its information. Without these two requirements it is certain that the whole system would break down. A fuller account of the English system is to be found in 'The System of Financial Administration of Great Britain,' prepared by the writer in collaboration with W. W. Willoughby and S. M. Lindsay for the Institute for Government Research.—*Ibid.*, pp. 48, 49, 50.

Allotment system.—"The allotment system . . . is, as . . . urged for adoption by the United States, that appropriations should be made under a relatively few heads corresponding to the main divisions of government, that is, the departments and their distinct services; that, immediately upon the passage of the appropriation acts and before the beginning of the year to which they relate, the departments and bureaus proceed to make an allotment of these lump sums to specific subdivisions of the services to which they relate or to particular categories of work or expenditures; that each subdivision to which a specific allotment has been made in turn make a further allotment of the sum granted to it; that these allotments in all cases be formally made in writing, with the result that if these several allotments are assembled, there will be brought into existence an appropriation document differing in no essential feature from, and representing as detailed an assignment of funds as that made by an appropriation act made by Congress; that allotment accounts be opened up in the

accounting offices of the services and departments, and, as far as may be deemed desirable, in the accounting offices of the Treasury Department, corresponding to the appropriation accounts now maintained by the latter department; that changes in the allotment of funds as thus made be made only by formal action in writing on the part of the allotting authority; that the financial reports of the several services clearly set forth the allotment scheme as originally established, all changes subsequently authorized, and the expenditures actually made under each allotment head; and, finally, that a consolidated report of expenditures of the government be made to Congress in accordance with this scheme of accounts. At least one state, Minnesota, has adopted substantially this system. Its budget act, passed in 1915, thus provides that: 'It shall be the duty of each disbursing officer or board, within thirty days after the passage of any appropriation by the state legislature to allot within each appropriation to be expended under his or its direction the amounts, if any, for the several purposes set forth in the "budget" submitted to the legislature, not inconsistent with the terms of the appropriation act. Subject to the restrictions of the appropriation act, allotments may, in case of necessity, be altered by the officer or board charged with the disbursement thereof. All such allotments and any changes thereof shall, as soon as made, be filed with the State Auditor.' (See '*The Movement for Budgetary Reform in the States, Studies in Administration, Institute for Government Research, 1918.*') The writer is aware that this scheme does not possess the same degree of control that is present in the English system, due to the existence in the latter of the requirement that the approval of an organ independent of the spending department must be had as to important changes in the assignment of funds as first made. Until Congress is willing to erect the Treasury Department into such an organ or to create an organ having that special function this defect cannot be remedied. Under this scheme responsibility for the allotment of funds is not only definitely located but located in that authority which is best qualified to perform it. Furthermore, the approval of a superior authority to all changes in suballotments, as originally made and approved, must always be had. Finally, the requirement that the making of allotments and of changes in allotments shall be a formal act, that accounts shall be kept so as to show all allotment transactions, and that full report shall be made to Congress, establishes the maximum of control consistent with flexibility in the expenditure of funds that it is possible to secure under our governmental system as at present organized."—*Ibid.*, pp. 50-52.

Illinois budget system.—"I submitted our first budget to the legislature with some trepidation. I had been freely told that the legislature would not accept it. Other states had had such experience. But the legislature did pass it, substantially in the form in which it was submitted. The results that followed adoption of the administrative code and the budget system are such that no one in Illinois, I am sure, would think of returning to the old methods. The administration of government has become vastly more efficient, and naturally, more economical. The State tax rate for State purposes, even in a period of private and public extravagance, has been reduced one-third within two years. In 1917 the State tax rate was 90 cents; in 1918 we were able to reduce it to 75 cents. In 1919, the rate was fixed at 60 cents. Turning to Federal conditions, it is apparent that what we have undertaken to do in Illinois is ex-

actly what must be done at Washington, if the enormous increase in appropriations is to be checked. Machinery must be set up for a proper budgetary system. The Secretary of the Treasury should be given authority to supervise expenditures, and to make a budget along the lines we have followed in Illinois. Some progress is being made in this direction, both Senate and House have committees at work on the problem. In 1916 we had about 30,000 civil service employees in the executive branch of the government at Washington. So the chairman of the Civil Service Commission testified before the appropriations committee recently. This was a year before the war. During the war the number of employees was necessarily increased. But on October 31, last, a year after the signing of the armistice, there were in these same departments in the District of Columbia, 102,000 employees. I am not charging any one personally with the responsibility for this condition. But what a beautiful illustration it is of the difficulty of getting rid of a public office that has been once created. If there were an officer of government whose duty it was to scrutinize the expenditure of public money this official would speedily find a large number of these 102,000 positions unnecessary. The chairman of the house committee on appropriations said the other day that there are forty-two organizations in Washington, each with its overhead expenses, having to do with the administration of public health. There are eight departments, each with large overhead organizations, engaged in engineering work. There are twelve different organizations for road construction work; sixteen engaged in water power development. These are but a few of the many instances of duplication of work. With a real budget made up by a courageous man who insists that the public when it spends a dollar shall receive a dollar's worth of service, this deplorable and enormous waste would begin to disappear. With the Treasury Department transformed into a real department of finance, with powers of general supervision over the finances of the government, together with budgetary powers, these bureau, divisions and subdivisions of government would require their abolition. Therefore, the creation of machinery for a budget in the Treasury Department, with real power given to the Secretary of the Treasury over the budget, is the first step toward a logical reorganization of the Federal Government to make it conform to business lines. How important it is in these extravagant days that we should begin to apply some of the principles of modern business to the greatest business of all—the business of our government. We are famous the world over for the triumphs and achievements of individuals in private enterprise. It is about time that we gave some attention to the public business."—F. D. Lowden, *Current Opinion*, May, 1920.

BUENA VISTA, Battle of (1847). See MEXICO: 1846-1847.

BUENOS AIRES (area 117,807 sq. m.), the largest and most important province of Argentina, lies west of the La Plata and Atlantic ocean and is separated from Patagonia by the Rio Negro. It is also the most populous, even excluding the federal district. For judicial purposes the province is divided into four districts and for administrative ones into 100. The executive power resides in the governor and vice-governor and the legislative power in a congress. The early history of the province was a struggle for supremacy over the other provinces. In 1820 it became a province of the confederation and in 1880 following an unsuccessful revolt against the federal government, the city of Buenos Aires was federalized and La Plata became the capital of the province. See ARGENTINA.

BUENOS AIRES.—"The city of Buenos Aires (the capital of Argentina and the metropolis of the southern half of the world) is situated on the right bank of the estuary of La Plata. The river is here of great width and the opposite bank is never visible, but though La Plata and the Parana are a magnificent waterway, the harbour has never been very satisfactory, and it is difficult to find channels for vessels drawing 25 feet. The vessels of the Royal Mail Steam Packet used to land their passengers at La Plata, while to this day those of the Pacific Mail Steam Navigation Company only touch at Montevideo and send on their passengers to Buenos Aires by a smaller vessel."—W. A. Hirst, *Argentina*, p. 143.—See also ARGENTINA: Geographic description; LATIN AMERICA: Map of South America.

Population.—Remarkable growth of the city.—"The growth of Buenos Aires for the first two centuries was very slow, but during the past 60 years it has been remarkable. In 1852 the population was but 76,000; in 1864, it had reached 140,000; by 1887 it had grown to 404,000; by 1900 to 800,000; by 1909 to 1,231,698; and on December 31, 1913, it was 1,484,010. The cosmopolitan character of the city is indicated by the census of 1909, which showed that of the population of that enumeration (1,231,698) 561,985 were of foreign birth. Of these the Italian numbered 277,041; Spaniards, 174,291; Uruguayans, 26,784; French, 25,751; Germans, 7,444; and English,

7,113. The chief factors which have caused this rapid increase in population are (1) the constant influx of immigrants from other countries; (2) the high birth rate that prevails in the city; (3) the very low death rate."—*Bulletin of Pan-American Union* (Mar., 1917, p. 283).—The estimated population in 1919 was 1,649,977.

Description of government.—"The municipal government of Buenos Aires is composed of two branches, the legislative and executive. The former is known as the 'concejo deliberante,' corresponding to what is generally called the 'city council' in the United States, and consists of 22 councilors elected by the taxpayers for a period of four years, half of the council retiring by rotation every two years. The members of the council serve gratuitously, and to be eligible to a seat in this important body a citizen must be over 25 years of age, be a registered voter, able to read and write, must have paid into the municipal treasury a direct tax or license for some industrial or commercial business to the amount of not less than 500 pesos paper (about \$212.50 U. S. currency), or be a practitioner of one of the learned professions, and must have been a resident for not less than one year. In the case of a foreigner additional requirements provide that he must know Spanish, have paid not less than 1,000 pesos (\$425 U. S. currency), and have been a resident for not less than five years. To be a qualified voter the citizen must be of lawful age, know how to read and write, have personally presented himself for registration, have paid not less than 100 pesos (\$42.50 U. S. currency) in taxes or license fees, or be a practitioner of one of the learned professions, and have resided in the city for not less than one year prior to his registration. In case he is a foreigner he must have been a resident for not less than two years, and must have paid not less than 200 pesos (\$85 U. S. currency) in taxes or license, or be a practitioner of one of the learned professions. The council meets on January 1 each year and appoints its own president and two vice presidents; it holds two sessions yearly of three months each. The head of the executive branch is the 'intendente municipal,' or mayor, who is appointed by the President of the Republic, subject to the approval of the Senate. He holds office for three years and is eligible for reappointment. The administrative functions of the council relate to finance, public works, public health, and public morality. In its jurisdiction over the financial matters of the city the council determines the taxes to be levied and fixes fines up to 500 pesos for infractions of law. To meet special expenditures the council, with the approval of two-thirds of its members, may contract a loan so long as its indebtedness does not exceed 20 per cent of the assessed valuation of the city's property. Should a loan exceeding that amount be required, the sanction of the National Congress must be obtained. In regard to public works, the council is responsible for the construction of streets, aqueducts, bridges, sewerage systems, parks, and open spaces, and the care and preservation of all municipal works. Under the heading of safety, health, and public morality such matters as lighting, street cleaning, disinfection, approval of plans for the construction of private as well as public buildings, stands for public vehicles, use of streets for tramways and railroads, are included. After an ordinance has been passed by the council it is submitted to the intendente for his approval. Should this not be forthcoming, it is referred back to the council within a period of five working days for reconsideration. Should that body confirm its

previous action, it becomes the duty of the intendente to proclaim it as a municipal ordinance. In case of neglect of duty, malfeasance in office, or other improper conduct on the part of the intendente, the council, by a two-thirds majority, may bring about his dismissal from office. Buenos Aires, in addition to being a municipality, is also the capital of the Argentine Republic, and as such has an intimate connection with the Federal Government. Through the intendente matters pertaining to the welfare of the municipality are presented to the National Congress whenever necessary, and he likewise, as the representative of the National Government is empowered to present to the municipality matters affecting it that have originated in Congress. Other manifestations of this dual character of the city are to be found in the matter of the police and fire departments, which are under the control of the Federal Government, which also meets the expenses of these departments. Certain branches of the educational system, and also the sanitary regulations of the city, carried out by means of a national department of hygiene and a municipal department of public service—the *Asistencia Publica*—are partly national in character."—*Ibid.*, pp. 286-289.

1535-1542.—First and second attempts at founding Buenos Aires unsuccessful.—"Charles V. (of Spain) had too many anxious concerns in Europe to take an active part in organising expeditions to the New World, and he found it convenient to commit the task to wealthy nobles. Pedro de Mendoza obtained a grant of the whole country from the River Plate to the Straits of Magellan, with a salary of 2,000 ducats a year as Governor. . . . In return, he engaged to take out an adequate force and to open up a land route from the Atlantic to the Pacific. In August, 1534, he set sail from Cadiz with eleven ships and 800 men. . . . The fleet entered the River Plate in January, 1535, and Mendoza landed on the right bank and founded the city of Buenos Aires, 'so named in regard of the freshness of the air, and the healthfulness of his men, during their abode there.' . . . the difficulties were insuperable; the Indians were implacably hostile and cut off all foraging parties; the Spaniards had come with inadequate provisions and were frequently in danger of starvation. Many died of their privations, and the site of Buenos Aires was abandoned within a year of its foundation. . . . The estuary of the Plate was subject to sudden storms, and Mendoza, having lost eight ships and being thoroughly wearied by his misfortunes, decided to return home. On the voyage he fell ill and died, and of his large force not more than one hundred and fifty survived their privations and dangers. . . . As successor to Mendoza the Spanish Government appointed Cabeza de Vaca, an experienced adventurer, who sailed from Spain in 1540 with four hundred men. He landed at Santa Catherina in Brazil, and thence made a most adventurous march to Asuncion. . . . He refounded Buenos Aires towards the end of 1542; but the time was not yet ripe for the planting of colonies, and not many months later the city was abandoned for the second time."—*Ibid.*, pp. 26-27.—See also PARAGUAY: 1515-1557.

1580-1650.—Successful settlement.—"The real foundation of the city was effected on June 11, 1580, when Don Juan de Garay reestablished the colony, bringing the settlers with him from Paraguay. The horses that had been abandoned by the first settlers some 40 years before Garay and his companions undertook this second venture had multiplied remarkably in their wild state, thus

demonstrating the existence of rich natural pastures in the vicinity. Assured that in such a region starvation need not be feared, Garay decided to repeople the city. He gave it the name of La Trinidad, and the port he called the Port of Santa Maria de Buenos Aires. The land was systematically divided into lots in the city, the environs being laid off into market gardens and tillage and stock farms; these, after adequate sites for churches, parks and plazas were reserved, were distributed among the settlers. The city plan extended for 16 squares from north to south and nine squares from east to west; beyond this plat came the farms and gardens, bounded on the south by the Riachuelo and on the north by the Rio de la Plata, and farther up by the Parana, where were laid out some of the principal stock farms, all having depth of 1 league. The Querandis again threatened to become troublesome, but before they had time to organize a combination with other tribes in the neighborhood for the purpose of attacking the whites Garay boldly organized a raid on their encampments on the banks of the Riachuelo, some 4 leagues above the city, and the Spaniards killed so many of the natives upon this occasion that this particular portion of the river became known as the Rio de la Mantanza (River of the Massacre). The settlers, however, continued to prosper, and before the close of the sixteenth century Vera y Aragon, while governor, introduced into the colony a number of cattle and sheep imported from Peru. These animals, like the horses, multiplied with extraordinary rapidity, owing to the favorable climate and fine natural pasturage, and thus was laid the foundation of the future pastoral wealth of the great Argentine Republic.—*Bulletin of the Pan-American Union, Mar., 1917, pp. 279-280.*—During the seventeenth century the city grew very slowly due to the short-sighted, selfish colonial policy of the Spanish home government which placed innumerable trade restrictions on it. See ARGENTINA: 1580-1777.

1715.—Opened to the English for slave-trade. See ARGENTINA: 1580-1777.

1776.—Viceroyalty of Rio de la Plata.—In 1776 a viceroyalty was formed from the Rio de la Plata provinces with Buenos Aires as the capital.

1778.—Commercial restrictions relaxed.—Under the old system all intercourse with foreign countries except Great Britain and Portugal had been prohibited. Under the new regulations nine ports in Spain and twenty-four in the colonies were declared ports of entry and trade between them was permitted though under many restrictions. Buenos Aires was made one of these ports.

1806.—Buenos Aires captured by the English, retaken by Liniers (1807).—The English hearing from an American sea-captain that the people of Buenos Aires were oppressed by the Spanish government and would welcome the English as liberators, resolved to make an attempt in that quarter. They were further emboldened by the fact that the Spanish had allied themselves to the French in the Napoleonic struggle. After a feeble resistance, the city surrendered and the viceroy fled. The people, learning that they could not depend upon the Spanish royalists, found in the French officer, Jacques de Liniers, a leader. He attacked the English force in 1807 and regained the city. Reinforcements arriving, the English tried to retake the city, but were unsuccessful, losing seventy officers and 1,130 men, and having 1,500 men taken prisoners. Flushed by his success, Liniers the next day sent a flag of truce to the English proposing to surrender all his prisoners if the English would evacuate the province, adding that he could not

be responsible for the safety of the prisoners if the attack were renewed. The terms of surrender were accepted.—See also ARGENTINA: 1806-1820.

1810.—Provisional junta formed. See ARGENTINA: 1806-1820.

1811.—Defense of Paraguay. See PARAGUAY: 1608-1873.

1816.—City, the capital of the Republic of the United Provinces of the river Plata. See ARGENTINA: 1806-1820; 1819-1874.

1817-1818.—Freedom from Spain. See CHILE: 1810-1818.

1821.—University of Buenos Aires founded. See UNIVERSITIES AND COLLEGES: 1551-1912.

1851-1859.—Secession of the city.—After the struggle between the dictator Rosas and Urquiza in 1851, Buenos Aires seceded from the republic and till 1859 formed, with the surrounding province, a separate state. See ARGENTINA: 1819-1874.

1880.—Buenos Aires, the capital of Argentina.—By a decree of 1880 Buenos Aires came under the jurisdiction of the national government, was divided from the province bearing its name and definitely made the capital of Argentina.

1892.—Drainage system taken over by the government.—Until 1873 when public sewers were put in by English engineers, sanitary conditions in Buenos Aires were indescribably bad. Cholera and yellow fever epidemics between 1867-1871 carried off more than 40,000 victims. When the drainage system was completed in 1892 it was taken over by the government. The cost of the two systems was more than £6,000,000, but they are operated at a profit and Buenos Aires has a water supply and drainage system which compares favorably with that of any other great city.

1905.—Revolutionary movement suppressed. See ARGENTINA: 1905.

1909.—Assassination of Colonel Falcon. See ARGENTINA: 1909.

1910.—Harbor improvement.—The location of city, owing to the shallowness of the river, demanded the construction of an extensive harbor.

"The premier port of the Argentine, and we might add of South America, is Buenos Ayres, which in extent and connections rivals the finest ports of Europe. . . .

"It consists of two harbours, of which one, situated at the mouth of a little river called Riachuelo, is frequented principally by steamers of light draught and sailing-ships; the other is known as the Port of the Capital, or more commonly Port Madero, from the name of the contractor responsible for the harbour works. The port contains, altogether, four basins and 6½ miles of quays, four of which are situated on the flank of the city. [These docks are able to accommodate about 20,000,000 tons of shipping.] Along these quays are disposed immense warehouses, able to contain 20 millions of tons of merchandise, as well as great flourmills and grain-elevators, with a capacity of more than 200,000 tons, which cost more than £1,000,000 sterling.

"This harbour has cost in all some £7,000,000, and every year a sum of nearly 3 millions of paper piastres, or £200,000, is spent upon the work of maintaining the channel of approach at a proper depth. At the season when the traffic is densest, the port holds as many as 1,400 steamers and sailing-vessels, loading and unloading. It is evident that, with the constant increase of commercial activity, further enlargements will soon be necessary. The Government is at the present moment considering a gigantic scheme of improvement, with a view to which several groups of European contractors have already submitted estimates."

A. B. Martinez and M. Lewandowski, *Argentine in the twentieth century*, pp. 83-84.

1910.—Fourth International American congress. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.

BUFFALO, a city in the state of New York, situated at the eastern extremity of Lake Erie.

Area.—Population.—Industries and commerce.—“Out of small beginnings has come the City of Buffalo of to-day, a great municipality surrounded by highly developed smaller cities, as well as by villages and towns. . . . In place of the muddy roads of earlier days Buffalo now has more than 600 miles of paved streets; instead of the two or three churches of 1820, it has 260 churches, representing the widest freedom of religious thought and belief. The city is located at an elevation of from 580 to 690 feet above the level of the sea. Seventeen different railroads, thirteen of them trunk lines, enter the city. It has seven interurban traction lines, and issues annually building permits of a value in excess of \$10,000,000. It has 66 public schools; three colleges and the University of Buffalo. It has more than 40 parochial schools and several private schools. It has nineteen hospitals and six English daily newspapers.”—D. J. Sweeney, *History of Buffalo and Erie County*, 1914-1919.—According to the preliminary counts of the census of 1920, the population of Buffalo has grown to 505,875. Its area approximates 26,880 acres. “Buffalo is the second largest and important city of the state. It . . . carries an extensive lake trade in iron ore, grain and manufactured products. Buffalo is a well-known live-stock and horse market. It is also a leading wholesale and distributing point for manufactured and agricultural products. The capital investment in manufactures in 1914 amounted to \$243,311,000, while the value of manufactured products for the same year was \$251,103,000.”—*Moody's Analyses of investments* (1919), p. 516.

Aboriginal occupants of the site.—The first inhabitants on and around the site of the city of Buffalo, first mentioned by Champlain during his visit to the Hurons in 1615, were the Attiugandaronk, or Neutral Nation, also called Kah-Rwas (Hurons). They were exterminated by the Iroquois before 1651, and no Indians lived there until the Senecas came. “On Buffalo Creek, some three or four miles from its mouth, the first Seneca Indian villages were established during the Revolutionary War, refugees settling there in 1779-1780, after Sullivan's raid had destroyed their old homes in the Genesee Valley. In earlier epochs the Eries had their home in this region, but, as a nation, they were wiped out of existence in the disastrous campaign with the Senecas in a bloody and decisive battle which took place near the head of Honeoye Lake. In the neighborhood of these villages was built a council house, in which councils of national importance were held and treaties of commensurate significance made. Associated with it are the names of Young King, Farmer's Brother, Red Jacket, and other Indian celebrities.”—D. J. Sweeney, *History of Buffalo and Erie County*, p. 13.—The first white settler was Cornelius Winney, an Indian trader, who, approximately in 1788-1789, built a cabin near the mouth of the creek. (See NEW YORK STATE: 1786-1799.) On his Indian campaign in 1764, Colonel Bradstreet had built Fort Erie across the river.

1781-1832.—Founding and naming of the city.—The city of Buffalo was founded in 1803 by

Joseph Ellicott, agent of the Holland Land Company, which had bought a tract of land (the Holland Purchase), including the site of Buffalo. The latter formed part of the grant of James I to the Plymouth Company in 1625 and that of Charles II to the duke of York in 1664. At the foot of Lake Erie and the head of Niagara river, Joseph Ellicott laid out a town on the style of Washington and named it New Amsterdam. By this name it was known until 1810 when the town of Buffalo was incorporated. As a city it was incorporated in 1832. The name of Buffalo dates from 1781 when an English family heard the Indians call the creek by a name which in English means “Buffalo.” In 1784, in the treaty of Fort Stanwix concluded between the English and the Iroquois, the site is referred to as the “village of Buffalo.”—See also NEW YORK STATE: 1786-1799.

1896.—First reception of electric power from Niagara Falls. See ELECTRICAL DISCOVERY: Electric power: 1896-1921.

1901.—Pan-American exposition.—The Columbian exposition was a “World's Fair”; that at Buffalo was “Pan-American,”—an exhibition, that is, of the arts, the industries, and all the achievements in civilization of the peoples of the western hemisphere, from Bering strait to cape Horn. Very nearly every country in North, South and Central America took a warmly interested part in the preparations for the exposition, and many erected special buildings for their exhibits. The states of the union were likewise active, and few of them were unrepresented in the numerous buildings on the grounds. Cuba, Porto Rico, and the West Indies generally, as well as Hawaii and the Philippine islands, in their new character as dependencies of the United States, were brought importantly into the scheme.

The enterprise received official endorsement from the Federal government when Congress in July, 1898, by resolution declared that “A Pan-American Exposition will undoubtedly be of vast benefit to the commercial interests of the countries of North, South and Central America, and it merits the approval of Congress, and of the people of the United States.” In March, 1899, Congress appropriated \$500,000 for this purpose.

The grounds of the exposition were in the northern part of the city of Buffalo, taking in a portion of its most beautiful public park. They extended about one mile in length, from north to south, and about half a mile in width, containing 350 acres. A general plan of landscape and building architecture, with which every detail of form and color should be made to harmonize, was worked out at the beginning by a board of the leading architects of the United States, and was adhered to with beautifully harmonious effects.

In one of the circular announcements of the exposition it was said: “In planning the Exposition the management early decided upon giving to electricity special homage. The progress of the electrical science has been so marked in recent years as to excite the wonderment of the scientific world. Buffalo is, perhaps, more than any other city on

the globe, interested in this science, owing to the nearness of Niagara Falls, where the greatest electric power plants known to this class of engineering have been installed. In fact the electrical displays here contemplated would be impossible except where a large volume of power is available, such as Buffalo receives from the great falls of Niagara. . . . The Pan-American Exposition will far surpass former enterprises of this kind in six important features: First, the electrical effects; second, the hydraulic and fountain effects; third, the horticultural, floral and garden effects; fourth, the original sculptural ornamentation; fifth, the color decorations; sixth, the court settings. Particular attention has been given by the designers in the arrangement of its court settings, to provide unusually large vistas, both for the purpose of providing a memorable picture and for the utility reason of accommodating large crowds of people."

The Pan-American exposition was under the management of a strong company of professional and business men in Buffalo, with Mr. John G. Milburn for its president. The director-general was Hon. William I. Buchanan, former United States minister to the Argentine Republic.

The Pan-American exposition at Buffalo opened on May 1. The following characterization of the exposition by a visitor is supplementary:

"They have staged electricity at Buffalo this summer, and they call it the Pan-American Exposition. It took a rectangle of 350 acres for the stage, and over \$10,000,000 for the settings. The result, baldly stated, is the most glorious night scene the world has ever had the fortune to witness. The staging of Niagara is the one unforgettable thing about the affair. The Pan-American is, however, much more than this. . . .

"It may be well to say that the original generic scheme for the exposition, that of joining the three Americas in a unified attempt to show one another their trade resources, seems to be in results far less prominent than was hoped at first. For one reason or another,—I have heard European influences in South America given as a chief cause,—the Latin Americas did not co-operate as was expected. The great trade idea upon which the Pan-American was originally based gradually faded, and gave place to the idea of an electrical beatification—for which the spectator will perhaps be thankful. There are exhibits, to be sure, from most of the South American countries, but the United States occupies industrially foreground, background, and middle distance. The other countries fill in the odd corners. The ardent patriot will see no lack of proportion in this; and as there is a hint of Mexico and the Argentine, and very creditable exhibits by Chile and Honduras, we have enough of the sister continent to justify the name. Most of the southern republics are represented in one way or another. It is hard, however, to explain the insufficiency of Canada's exhibit. It is upon much too small a scale to do credit to her great resources. It is worthy of note that when the other countries realized the importance and beauty of the Pan-American, they set about vigorously to retrieve themselves.

"So the staging of electricity was undertaken. There was Buffalo to start with, and Buffalo is backed in the great race of American cities by the power of Niagara and the commerce of the Lakes. It is delightfully accessible and pleasing. Here was the psychological place. It was also the psychological moment,—a period of general prosperity, a time when America had set about her great task of making commercial vassals of the Old World countries. The psychological idea came with elec-

tricity, and under this happy triad of influences conspiring for success the work was begun.

"The managers took a big rectangle of unused land to the north of a beautiful park, and welded with it the most attractive portion of that park for their groundwork. Then they chartered an effect. They put millions into an attempt to please, and did more, for they have both pleased and startled,—an effect peculiarly delightful to Americans."—E. R. White, *Aspects of the Pan-American exposition* (*Atlantic Monthly*, July, 1901).

The Pan-American exposition may be said to have been paralyzed in the first week of its fifth month by the wanton murder of President McKinley, while it entertained him as its guest. See **McKINLEY, WILLIAM**: 1901.

1912-1919.—**Exhibits.**—**Fine arts.**—In 1912, a child welfare exhibit took place. It had a special department for infants, which demonstrated the complete proper care of the infant, beginning before birth and continuing during the first two years of life. The leading idea was "it is not the babies who are born, but the babies saved that count." In 1919, the Albright art gallery of Buffalo held its thirteenth annual exhibition of American paintings. Groups of paintings by Whistler, Sargent, Tarbell, and Redfield were exhibited. The same year the Buffalo fine arts academy received a gift of \$100,000 from Colonel Charles Clifton.

1913-1921.—**Adoption of the commission form of government.**—**First election.**—**Work accomplished.**—**Failure of attempt to obtain repeal of charter.** See **COMMISSION GOVERNMENT IN AMERICAN CITIES**: 1013-1021.

BUFFER STATE, a small state between two larger ones diminishing the chance of hostilities between them—or, on the other hand, bearing the brunt of their opposing forces. Belgium and Luxemburg occupy such a position in western Europe, and Persia and Afghanistan in Asia.

BUFFON, George Louis Leclerc, Comte de (1707-1788), French naturalist, the author of "L'histoire naturelle" and "Discours sur le style," etc. He devoted most of his time to the study of the physical sciences, mathematics, physics and agriculture, and was elected member of the French Academy of Sciences in 1730. See **FRENCH LITERATURE**: 1750-1785; **EVOLUTION**: Classification of theories.

BUFORD, Abraham (d. 1833), American colonel opposing the British forces in South Carolina. See **U. S. A.**: 1780 (February-August).

BUKHAREST See BUCHAREST

BUKHARI (Mohammed ibn Isma'il al-Bukhari) (810-872), Arabic historian, the acknowledged authority on traditions from Mohammed. See HISTORY: 21

BUKOVINA, a province of Rumania. Capital, Czernowitz. It is bounded by Galicia on the north, by Bessarabia and Moldavia on the east and south, and by Transylvania and Galicia on the west. It has an area of 4,035 square miles. The leading peoples are Ruthenian and Rumanian. (See BALKAN STATES: Map showing distribution of nationalities; WORLD WAR: 1914: III. Balkans, d.) Its early history is obscure. In 1777, Austria acquired it from Turkey, and it became a crownland in 1849

During the World War of 1914-1918, it was twice conquered and lost again by the Russians. The treaty of St. Germain on December 7, 1919, between Austria and the Allies ceded most of Bukovina to Rumania. The northern portion was left to the Ruthenians and placed under Polish suzerainty. As a step towards the centralization of Greater Rumania, the national council of Bukovina was dissolved, and the province divided into departments with prefects nominated directly from Bucharest.—See also ST. GERMAIN, TREATY OF; WORLD WAR: 1914: II. Eastern front: d, 3; 1915: III. Eastern front: c; i, 9; 1916: III. Eastern front: a; a, 2; a, 3.

BULAIR, a town on the isthmus connecting Gallipoli with the mainland of Thrace. The Germans and Turks expected the Allies to attempt a landing there, but the latter landed at other points.

Battle of Bulair (1913). See TURKEY: 1912-1913.

BULFIN, Sir Edward Stanislaus (1862-), British general commanding a division of the British Expeditionary Forces in France during the World War. See WORLD WAR: 1914: I. Western front: s, 2; s, 5.

BULGARIA

Geographic description.—Bulgaria is a kingdom of southeastern Europe, situated in the northeast of the Balkan peninsula, and on the Black sea. "The kingdom of Bulgaria forms a part of the mountainous Balkan peninsula. The physiography of the country presents a combination of mountain chains encircling broad and fertile mountain valleys. The average elevation of the kingdom is 1,411 feet above sea-level. The character of the country is determined by the mountain systems. Structurally four well defined sections may be noted: the Danubian table-land in the north, the long chain of the Balkan mountains extending west-east the entire length of the country, the high and elevated mass of the Rilo-Rhodope mountains in the south, and the elevated plains between these two great parallel mountain systems. . . . The peculiar manner in which Bulgaria is broken up into mountain ranges makes it impossible for the streams to mingle, hence there are no consequential rivers in the country. . . . There are no lakes in Bulgaria, although on the higher slopes of the Rilo and Rhodope mountains there are more than 100 small lakelets very similar to the 'sea eyes' in the Carpathian mountains. There are more than 200 hot and mineral springs in the country. The climate of Bulgaria is relatively severe as compared with other parts of Europe in the same latitude, due in the main to the general physiography of the Balkan peninsula. North of the Balkan mountains the plain is exposed to the bitter north winds, and the thermometer sometimes falls as low as twenty-four degrees below zero (Fahrenheit). But the summer heat is less intense because the same range shuts out the hot winds from the south. The Sofia tablelands, although covered with snow in the winter, has a more equable climate than most other parts of the kingdom. The air is bracing, the summer nights are cool, and the maximum temperature is seldom higher than eighty-six degrees or the minimum lower than two degrees. The eastern part of the country, however, suffers from both extremes of heat and cold. The Black Sea sometimes freezes over at Varna, and the eastern coastal plain is exposed to violent winds. The sheltered plain of the Maritza has a comparatively mild

winter, although the summers are hot. January is the coldest month in Bulgaria, and July is the hottest month."—W. S. Monroe, *Bulgaria and her people*, pp. 1-10.—See also BALKAN STATES: Geographical position.

Area and population.—The estimated area of Bulgaria in 1920 was 42,000 square miles, and the estimated population 5,000,000. As a result of the treaty of Bucharest in 1913 Bulgaria lost about 273,000 in population with the Dobrudja to Rumania, but gained through cessions from Turkey an added population of about 364,000.—See also BALKAN STATES: Map.

Resources.—**Railroads.**—Bulgaria abounds in natural resources, containing as it does two of the most fertile valleys in the Balkans,—the Danube and the Maritza. In the north it contains extensive forest lands and a great variety of ores; in the south it is the European center for rose-cultivation. While it is primarily an agricultural country with abundant crops, the methods of cultivation are very primitive. The chief products are cereals, grapes, tobacco, fruit and attar of roses. Bulgaria lies on the highroad between Europe and Asia and all the shortest routes must pass through it. Sophia, the capital, is connected by rail with the chief centers of the continent. In 1916 Bulgaria (including Eastern Rumelia) had 1,675 miles of railway belonging to the state and 149 miles belonging to private companies; total 1,824.—See also BALKAN STATES: Map; CONSERVATION OF NATURAL RESOURCES: Bulgaria.

Education.—Bulgaria has a University at Sofia with faculties of medicine, law, physics, mathematics, philology and history. Of the three grades of gymnasias there were in 1920 altogether 476 national and 47 private schools, besides 3601 national and 1382 private, elementary schools, 35 institutions for special training, and three institutes for defective children. Education is free and compulsory in the elementary grades between the ages of seven and fourteen. About sixty per cent of the people are literate. For education the state grants a yearly subvention which provides for half the cost (two thirds in the case of the elementary schools) the remainder being provided in the towns

by the municipalities and in the villages by the communal authorities.

Language. See PHILLOGY: 22.

Earliest inhabitants of Bulgaria.—Ancient Thracian-Illyrians.—Reign of Philip of Macedon.—Country brought under Roman influence.—Coming of the Goths and Huns.—“The country that they (the Bulgars) occupy today was inhabited at the dawn of the Christian era by ancient Thracian-Illyrian tribes. They were an agricultural people, governed by democratic local institutions, without national leaders or central organization, the political unit being the tribe. Herodotus wrote concerning them that ‘if they were only ruled by one man, and could only agree among themselves, they would become the greatest of all nations.’ . . . Philip of Macedon brought the warring tribes of the Balkans under his control and federated them into the Macedonian empire. But the union was short-lived; and upon the death of Alexander the Great they ‘returned to the congenial business of flying at one another’s throats.’ For a century the Thracian and Illyrian warriors struggled with the Roman conquerors but the country was finally brought under Roman influence. Shortly after the Roman conquest, hordes of wild and uncouth warriors began to pour into the peninsula. The Goths first ravaged the country; the terrible Huns followed; and in many parts of the Balkans the entire native population perished at the hands of these barbarians.”—W. S. Monroe, *Bulgaria and her people*, p. 13.—See BALKAN STATES: Races existing; and Map showing distribution of nationalities; BARBARIAN INVASIONS: 3d century.

7th century.—Arrival of the Bulgars in the Balkan peninsula.—“The progress of the Bulgars towards the Balkan peninsula is involved in obscurity. They are first mentioned by name in classical and Armenian sources in 482 as living on steppes to the north of the Black sea amongst other Asiatic tribes, and it has been assumed by some that at the end of the 5th and throughout the 6th century they were associated first with the Huns and later with the Avars and Slavs in the various incursions into and invasions of the eastern empire. [See AVARS: 7th century; SLAVS: Origin.] The Bulgars, like the Huns and Avars who preceded them and like the Magyars and the Turks who followed them, were a tribe from eastern Asia, of the stock known as Mongol or Tartar. The tendency of all these people was to move westwards from Asia into Europe, and this they did at considerable and irregular intervals . . . roughly from the 4th to the 14th centuries. . . . At one time the Bulgars settled in large numbers on the Volga near its confluence with the Kama, and it is presumed that they were well established there in the 5th century. They formed a community of considerable strength and importance, known as Great or White Bulgaria. The Bulgars fused with the later Tartar immigrants from Asia and were consolidated with the powerful kingdom of Kazan. The basins of the rivers Volga and Don and the steppes of eastern Russia proved too confined a space for the legitimate development of Bulgarian energy, and expansion to the west was decided on. A large number of Bulgars therefore detached themselves and began to move south-westward. During the 6th century they seem to have been settled in the country to the north of the Black sea, forming a colony known as Black Bulgaria. During the last quarter of the 6th and the first of the 7th century the various branches of the Bulgar nation, stretching from the Volga to the Danube, were consolidated and kept in control by their prince Kubrat, who fought in be-

half of the Greeks against the Avars. . . . The power of the Bulgars grew as that of the Avars declined, but on the death of Kubrat, in 638, his realm was divided amongst his sons. One of these established himself in Pannonia, where he joined with what was left of the Avars, and there the Bulgars maintained themselves till they were obliterated by the irruption of the Magyars in 893. Another son, Asparukh, settled in Bessarabia, in 640 and some years later passed southward. . . . His successor finally overcame the Greeks . . . captured Varna and definitely established himself between the Danube and the Balkan range in the year 679. From that year the Danube ceased to be the frontier of the eastern empire. The numbers of the Bulgars who settled south of the Danube are not known, but what happened to them is notorious. The well known process, by which the Franks in Gaul were absorbed by the far more numerous indigenous population which they had conquered, was repeated, and the Bulgars became fused with the Slavs. So complete was the fusion, and so preponderating the influence of the subject nationality, that beyond a few personal names no traces of the language of the Bulgars have survived. Modern Bulgarian, except for the Turkish, is purely Slavonic. Not so the Bulgarian nationality; as is so often the case with mongrel products, this race, compared with the Serbs, who are purely Slav, has shown considerably greater virility, cohesion and driving power.”—N. Forbes, *Balkans, a history*, p. 26.—See also DANUBE: B. C. 5th century-A. D. 15th century.

8th-9th centuries.—Early Bulgarian rulers.—Conversion of Bulgaria to Christianity.—“One of the earliest Bulgar rulers, concerning whom we have authentic information, is Krum, who, to borrow Gibbon’s phrase, ‘could boast the honour of having slain in battle one of the successors of Augustus and Constantine.’ He captured Sofia, the present capital of the country, in the year 800, and occupied large parts of what are to-day the kingdoms of Servia and Rumania. [See SOFIA.] The Byzantine emperor, in an attempt to drive Krum out of the Balkans, was himself killed and the entire imperial army was annihilated. The victorious Bulgars then marched into Thrace and laid siege to Constantinople. The Byzantine rulers made terms with Krum, offering him a large yearly tribute, quantities of fine clothing, and a fixed number of Greek maidens. Krum conquered the Struma valley, and when he died his rule extended from Adrianople to the Carpathian mountains. The next Bulgarian ruler concerning whom we have reliable information was Omortag. He made an expedition against the Franks, his neighbours on the northwest, and conquered the Drave and the Save river valleys. An inscription on a pillar in the recently destroyed Church of the Forty Martyrs at Tirnovo tells of his execution of Christian missionaries and of his fruitless efforts to prevent the adoption of Christianity by his people. The Christian religion had been spread throughout Bulgaria by the large number of captives, many of whom were priests and bishops, that Omortag and his successors had brought from the Byzantine empire. Bulgaria was, moreover, surrounded by nations that had been converted by the teachings of the two great Slavic missionaries and scholars, Kyril [Cyril] and Method; hence Prince Boris (852-884), for purely political reasons, decided to adopt the religion that had been proscribed by his predecessors. By a formal edict the Christian re-

ligion was adopted in Bulgaria in 964 and Prince Boris was baptized by the Byzantine emperor Michael III. . . . Boris retired to a monastery in 888. He was succeeded first by his son Vladimir and later by his son Simeon."—W. S. Monroe, *Bulgaria and her people*, pp. 14-16.—See also CHRISTIANITY: 9th century: Bulgarian church.

9th-10th centuries.—Origin of alphabet. See SLAVS: 9th-10th centuries.

10th-11th centuries.—First Bulgarian kingdom and its overthrow by Basil II.—"The glory of the Bulgarians was confined to a narrow scope both of time and place. In the 9th and 10th centuries they reigned to the south of the Danube, but the more powerful nations that had followed their emigration repelled all return to the north and all progress to the west. . . . In the beginning of the 11th century, the Second Basil [Byzantine or Greek Emperor, 976-1025] who was born in the purple, deserved the appellation of conqueror of the Bulgarians [subdued by his predecessor, John Zimisce, but still rebellious]. His avarice was in some measure gratified by a treasure of 400,000 pounds sterling (10,000 pounds' weight of gold) which he found in the palace of Lychnidus. His cruelty inflicted a cool and exquisite vengeance on 15,000 captives who had been guilty of the defence of their country. They were deprived of sight, but to one of each hundred a single eye was left, that he might conduct his blind country to the presence of their king. Their king is said to have expired of grief and horror; the nation was awed by this terrible example; the Bulgarians were swept away from their settlements, and circumscribed within a narrow province; the surviving chiefs bequeathed to their children the advice of patience and the duty of revenge."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 55.—See also CONSTANTINOPLE: 907-1043; ACIRIDA, KINGDOM OF.

1096.—Hostilities with the first Crusaders. See CRUSADES: 1096-1099.

12th century.—Second Bulgarian or Wallachian kingdom.—"The reign of Isaac II. [Byzantine or Greek Emperor, 1185-1195] is filled with a series of revolts, caused by his incapable administration and financial rapacity. The most important of these was the great rebellion of the Wallachian and Bulgarian population which occupied the country between Mount Hæmus and the Danube. The immense population of this extensive country now separated itself finally from the government of the Eastern Empire, and its political destinies ceased to be united with those of the Greeks. A new European monarchy, called the Wallachian, or Second Bulgarian kingdom, was formed, which for some time acted an important part in the affairs of the Byzantine Empire, and contributed powerfully to the depression of the Greek race. The sudden importance assumed by the Wallachian population in this revolution, and the great extent of country then occupied by a people who had previously acted no prominent part in the political events of the East, render it necessary to give some account of their previous history. Four different countries are spoken of under the name of Wallachia by the Byzantine writers: Great Wallachia, which was the country round the plain of Thessaly, particularly the southern and south-west-

ern part. White Wallachia, or the modern Bulgaria, which formed the Wallachio-Bulgarian kingdom that revolted from Isaac II.; Black Wallachia, Mavro-Wallachia, or Karabogdon, which is Moldavia; and Hungarovallachia, or the Wallachia of the present day, comprising a part of Transylvania. . . . The question remains undecided whether these Wallachians are the lineal descendants of the Thracian race, who, Strabo tells us, extended as far south as Thessaly, and as far north as to the borders of Pannonia; for of the Thracian language we know nothing"—G. Finlay, *History of the Byzantine and Greek empires, from 716 to 1453*, bk. 3, ch. 3, sect. 1.—"Whether they were of Slavic origin or of Gaelic or Welsh origin, whether they were the aboriginal inhabitants of the country who had come under the influence of the elder Rome, and had acquired so many Latin words as to overlay their language and to retain little more than the grammatical forms and mould of their own language, or whether they were the descendants of the Latin colonists of Dacia with a large mixture of other peoples, are all questions which have been much controverted. It is remarkable that while no people living on the south of the Balkans appear to be mentioned as Wallachs until the tenth century, when Anna Comnena mentions a village called Ezeban, near Mount Kissavo, occupied by them, almost suddenly we hear of them as a great nation to the south of the Balkans. They spoke a language which differed little from Latin. Thessaly during the twelfth century is usually called Great Wallachia. . . . Besides the Wallachs in Thessaly, whose descendants are now called Kutzo-Wallachs, there were the Wallachs in Dacia, the ancestors of the present Roumanians, and Mavro-Wallachs in Dalmatia. Indeed, according to the Hungarian and Byzantine writers, there were during the twelfth century a series of Wallachian peoples, extending from the Theiss to the Dniester. . . . The word Wallach is used by the Byzantine writers as equivalent to shepherd, and it may be that the common use of a dialect of Latin by all the Wallachs is the only bond of union among the peoples bearing that name. They were all occasionally spoken of by the Byzantine writers as descendants of the Romans."—E. Pears, *Fall of Constantinople*, ch. 3.—"The classical type of feature, so often met with among Roumanian peasants, pleads strongly for the theory of Roman extraction, and . . . the Roumanians . . . often remind me of a type of face chiefly to be seen on cameo ornaments, or ancient signet rings. Take at random a score of individuals from any Roumanian village, and, like a handful of antique gems which have been strewn broadcast over the land, you will there surely find a good choice of classical profiles worthy to be immortalized on agate, onyx, or jasper. An air of plaintive melancholy generally characterizes the Roumanian peasant; it is the melancholy of a long-subjected and oppressed race. . . . Perhaps no other race possesses in such marked degree the blind and immovable sense of nationality which characterizes the Roumanians. They hardly ever mingle with the surrounding races, far less adopt manners and customs foreign to their own. This singular tenacity of the Roumanians to their own dress, manners and customs is probably due to the influence of their religion [the Greek church], which teaches that any divergence from their own established rules is sinful."—E. Gérard, *Transylvania peoples (Contemporary Review, Mar., 1887)*.—See also RUMANIA: B. C. 5th century to 1241.

1203.—Extent of territory. See CRUSADES: Map of Mediterranean lands after 1204.

1258-1872.—Serbian ascendancy.—Subjection to Hungary.—Turkish conquest and rule.—Greek domination in ecclesiastical affairs.—Establishment of Independent church.—“From 1258 onwards Bulgaria may be said to have continued flickering until its final extinction as a state in 1303, but during this period it never had any voice in controlling the destinies of the Balkan peninsula. Owing to the fact that no ruler emerged capable of keeping the distracted country in order, there was a regular *chassé-croisé* of rival princelets, an unceasing tale of political marriages and murders, conspiracies and revolts of feudal nobles all over the country, and perpetual ebb and flow of the boundaries of the warring principalities which tore the fabric of Bulgaria to pieces amongst them. From the point of view of foreign politics this period is characterized generally by the profit of the surrounding states, who enjoyed a sort of rotativist supremacy. It is especially remarkable for the complete ascendancy which Serbia gained in the Balkan peninsula. A Serb, Constantine, grandson of Stephen Nemanja, occupied the Bulgarian throne from 1258 to 1277, and married the granddaughter of John Asen II. After the fall of the Latin Empire of Constantinople in 1261, the Hungarians already masters of Transylvania, combined with the Greeks against Constantine; the latter called the Tartars of southern Russia, at this time at the height of their power, to his help and was victorious, but as a result of his diplomacy the Tartars henceforward played an important part in the Bulgarian welter. Then Constantine married, as his second wife, the daughter of the Greek emperor, and thus again gave Constantinople a voice in his country's affairs. Constantine was followed by a series of upstart rulers, whose activities were cut short by the victories of King Uros II of Serbia (1282-1321), who conquered all Macedonia and wrested it from the Bulgars. In 1285 the Tartars of the Golden Horde swept over Hungary and Bulgaria, but it was from the south that the clouds were rolling up which not much later were to burst over the peninsula. In 1308 the Turks appeared on the Sea of Marmora, and in 1326 established themselves at Brussa. From 1295 to 1322 Bulgaria was presided over by a nobleman of Vidin, Svetoslav, who, unmolested by the Greeks, grown thoughtful in view of the approach of the Turks, was able to maintain rather more order than his subjects were accustomed to. After his death in 1322 chaos again supervened. One of his successors had married the daughter of Uros II of Serbia, but suddenly made an alliance with the Greeks against his brother-in-law Stephen Uros III and despatched his wife to her home. During the war which ensued the unwonted allies were utterly routed by the Serbs at Kustendil in Macedonia in 1330. From 1331 to 1365 Bulgaria was under one John Alexander, a noble of Tartar origin, whose sister became the wife of Serbia's greatest ruler, Stephen Dushan; John Alexander, moreover, recognized Stephen as his suzerain, and from thenceforward Bulgaria was a vassal-state of Serbia. Meanwhile the Turkish storm was gathering fast; Suleiman crossed the Hellespont in 1356, and Murad I made Adrianople his capital in 1361. After the death of John Alexander in 1365 the Hungarians invaded northern Bulgaria [see HUNGARY: 1301-1442], and his successor invoked the help of the Turks against them and also against the Greeks. This was the beginning of the end. The Serbs, during an absence of the Sultan in Asia, undertook an offensive, but were defeated by the Turks near Adrianople in 1371, who captured Sofia in 1382. After this the Serbs formed

a huge southern Slav alliance, in which the Bulgarians refused to join, but, after a temporary success against the Turks in 1387, they were vanquished by them as the result of treachery at the famous battle of Kosovo in 1389. Meanwhile the Turks occupied Nikopolis on the Danube in 1388 and destroyed the Bulgarian capital Tirnovo in 1383, exiling the Patriarch Euthymus to Macedonia. [See TURKEY: 1360-1389.] Thus the state of Bulgaria passed into the hands of the Turks, and its church into those of the Greeks. Many Bulgars adopted Islam, and their descendants are the Pomaks [see also POMAKS] or Bulgarian Mohammedans of the present day. With the subjection of Rumania in 1304 and the defeat of an improvised anti-Turkish crusade from western Europe under Sigismund, King of Hungary, at Nikopolis in 1396 the Turkish conquest was complete, though the battle of Varna was not fought till 1444, nor Constantinople entered until 1453.

From 1303 until 1877 Bulgaria may truthfully be said to have had no history, but nevertheless it could scarcely have been called happy. National life was completely paralysed, and what stood in those days for national consciousness was obliterated. . . . To the races they conquered the Turks offered two alternatives—serfdom or Turkdom; those who could not bring themselves to accept either of these had either to emigrate or take to brigandage and outlawry in the mountains. The Turks literally overlaid the European nationalities of the Balkan peninsula for five hundred years. . . . Of all the Balkan peoples the Bulgarians were the most completely crushed and effaced. . . . Bulgaria was simply annihilated, and its population, already far from homogeneous, was still further varied by numerous Turkish and other Tartar colonies. . . . Bulgaria was the last Balkan state to emancipate itself; it is the least trammelled by prejudices and by what are considered national predilections and racial affinities, while its heterogeneous composition makes it vigorous and enterprising. The treatment of the Christians by the Turks was by no means always the same; generally speaking, it grew worse as the power of the Sultan grew less. During the fifteenth century they were allowed to practice their religion and all their vocations in comparative liberty and peace. But from the sixteenth century onwards the control of the Sultan declined, power became decentralized, the Ottoman Empire grew ever more anarchic and the rule of the provincial governors more despotic. But the Mohammedan conquerors were not the only enemies and oppressors of the Bulgars. The rôle played by the Greeks in Bulgaria during the Turkish dominion was almost as important as that of the Turks themselves. The contempt of the Turks for the Christians, and especially for their religion, was so great that they prudently left the management of it to them, knowing that it would keep them occupied in mutual altercation. From 1303 till 1767 the Bulgarians were under the Greco-Bulgarian Patriarchate of Ohrida, an organization in which all posts, from the highest to the lowest, had to be bought from the Turkish administration at exorbitant and ever-rising prices; the Phanariote Greeks (so called because they originated in the Phanar [lighthouse] quarter at Constantinople) were the only ones who could afford those of the higher posts, with the result that the Church was controlled from Constantinople. In 1767 the independent patriarchates were abolished, and from that date the religious control of the Greeks was as complete as the political control of the Turks. The Greeks did all they could to obliterate the last traces of

Bulgarian nationality which had survived in the Church, and this explains a fact which must never be forgotten, which had its origin in the remotest past, but grew more pronounced at this period, that the individual hatred of Greeks and Bulgars of each other has always been far more intense than their collective hatred of the Turks. . . . Serbia was partially free by 1826, and Greece achieved complete independence in 1830, when the Russian troops, in order to coerce the Turks, occupied part of Bulgaria and advanced as far as Adrianople. Bulgaria, being nearer to and more easily repressed by Constantinople, had to wait, and tentative revolts made about this time were put down with much . . . bloodshed and were followed by wholesale emigrations of Bulgars into Bessarabia and importations of Tartars and Kurds into the vacated districts. . . . During the first half of the nineteenth century there took place a considerable intellectual renaissance in Bulgaria, a movement fostered by wealthy Bulgarian merchants of Bucarest and Odessa. In 1820 a history of Bulgaria was published by a native of that country in Moscow; in 1835 the first school was established in Bulgaria and many others soon followed. It must be remembered that not only was nothing known at that time about Bulgaria and its inhabitants in other countries, but the Bulgars had themselves to be taught who they were. The Bulgarian people in Bulgaria consisted entirely of peasants; there was no Bulgarian upper or middle or 'intelligent' or professional class; those enlightened Bulgars who existed were domiciled in other countries; the Church was in the hands of the Greeks, who vied with the Turks in suppressing Bulgarian nationality. The two committees of Odessa and Bucarest which promoted the enlightenment and emancipation of Bulgaria were dissimilar in composition and in aim; the members of the former were more intent on educational and religious reform, and aimed at the gradual and peaceful regeneration of their country by these means; the latter wished to effect the immediate political emancipation of Bulgaria by violent and, if necessary, warlike means. It was the ecclesiastical question which was solved first. In 1856 the Porte had promised religious reforms tending to the appointment of Bulgarian bishops and the recognition of the Bulgarian language in church and school. But these not being carried through, the Bulgarians took the matter into their own hands, and in 1860 refused any longer to recognize the Patriarch of Constantinople."—N. Forbes, *Balkans*, pp. 44-52.

"On Easter day, 1860, the Bulgarians resident in Constantinople summoned sufficient courage to commit a daring act, and declared the secession of the Bulgarian Church from the control of the Greek patriarchate. So terrified were these ecclesiastical rebels by their own daring that a large number of Bulgarians actually contemplated union with the Roman Church. It was soon evident, however, that they could not carry the mass of their people with them. Already the Pope had named an archbishop from the united Bulgarian Church, but his life was not safe from the moment he began his activities and he finally fled. So extensive were these disturbances that on February 28, 1870, the Porte intervened and founded the Bulgarian exarchate, whose high priest was to be chosen by the people and confirmed by the Sultan. Ecclesiastical was to be followed by civil and political independence."—W. M. Sloane, *Balkans, a laboratory of history*, p. 127.—"The first outstanding event in the recent rise of the Bulgarian race was the acquisition of spiritual independence in

1869-70. Hitherto they, in common with nearly all the Slavs, had belonged to the Greek Church, and had recognized the supremacy of its patriarch at Constantinople, but, as the national idea progressed, the Bulgarians sought to have their own Church. It was in vain that the Greeks protested against this schismatic attempt. The western Powers and Russia favored it; the Porte also was not loth to see the Christians further divided. Early in the year 1870, the Bulgarian Church came into existence, with an Exarch of its own at Constantinople who has survived the numerous attempts of the Greeks to ban him as a schismatic from the Universal Church. The Bulgarians therefore took rank with the other peoples of the Peninsula as a religious entity, the Roumanian and Servian Churches having been constituted early in the century."—J. H. Rose, *Development of the European nations*, pp. 300-301.

1875-1878.—Breaking of the Turkish yoke.—Turkish atrocities.—Russo-Turkish war.—"After the Crimean war many thousands of Moslem Tartars and Circassians from the Crimea were settled on lands belonging to Bulgarian peasants who were not duly compensated for the expropriation of their property. The new settlers were lawless and were the cause of renewed discontent among the Bulgarian peasants with the Turkish government. The discontent of the people found expression in the revolutionary committees organized in Rumania during the dozen years that preceded the Russo-Turkish war. The refusal of the sultan of Turkey to recognize Prince Charles as the rightful ruler of the principalities of Moldavia and Wallachia facilitated the activities of revolutionary bands of Bulgarian emigrants that crossed the Danube and tried to induce the Bulgarian peasants to revolt against the Turkish government. Such agitation with the avowed object of complete emancipation and independence from Turkish rule, gradually extended throughout Bulgaria. Many of the agitators were arrested and executed or sent to prisons in Asia Minor, but their places were quickly filled. The severities practised by the Turks in the suppression of revolutionary movements did not in the least lessen the enthusiasm and spirit of emulation of the members of the revolutionary bands. The year 1876 marks the beginning of the end of Turkish rule. The activities of the patriots in agitating for governmental reforms in their country led the Turks to retaliate with the most oppressive measures. Whole villages were slaughtered; and the Ottoman government justified the actions of its savage soldiers and the brutal bashibozouks on the pretext that they were simply putting down rebellion and restoring peace by armed force."—W. S. Monroe, *Bulgaria and her people*, pp. 36-38.

ALSO IN: C. D. Hazen, *Fifty years of Europe*, pp. 230-232.

The Constantinople correspondent of the London *Daily News* gave the estimates of Bulgarians slain as varying from 18,000 to 30,000, and the number of villages destroyed at about a hundred. That there was much truth in the statements of the newspaper correspondents was demonstrated beyond possibility of denial as soon as Sir Henry Elliot's despatches were made public. "I am satisfied," wrote Sir Henry Elliot, "that, while great atrocities have been committed, both by Turks upon Christians and Christians upon Turks, the former have been by far the greatest, although the Christians were undoubtedly the first to commence them." Meanwhile, the *Daily News* had resolved on sending out a special commissioner to make an investigation independent of official re-

ports. Mr. J. A. MacGahan, an American, who had been one of that journal's correspondents during the Franco-German War, started in company with Mr. Eugene Schuyler, the great authority on the Central Asian question. They arrived at Philippopolis on the 25th of July. The first of MacGahan's letters was dated July 28. Perhaps the passage which was most frequently in men's mouths at the time was that in which he described the appearance of the mountain village of Batak. "We entered the town. On every side were skulls and skeletons charred among the ruins, or lying entire where they fell in their clothing. There were skeletons of girls and women, with long brown hair hanging to their skulls. We approached the church. There these remains were more frequent, until the ground was literally covered by skeletons, skulls, and putrefying bodies in clothing. Between the church and school there were heaps. The stench was fearful. We entered the churchyard. The sight was more dreadful. The whole churchyard, for three feet deep, was festering with dead bodies, partly covered; hands, legs, arms, and heads projecting in ghastly confusion. I saw many little hands, heads, and feet of children three years of age, and girls with heads covered with beautiful hair. The church was still worse. The floor was covered with rotting bodies quite uncovered. I never imagined anything so fearful. . . . The town had 9,000 inhabitants. There now remain 1,200. Many who had escaped had returned recently, weeping and moaning over their ruined homes. Their sorrowful wailing could be heard half a mile off. Some were digging out the skeletons of loved ones. A woman was sitting moaning over three small skulls, with hair clinging to them, which she had in her lap. The man who did this, Achmed Agra, has been promoted, and is still governor of the district." An exceeding bitter cry of horror and disgust arose throughout the country on the receipt of this terrible news. . . . Mr. Schuyler wrote: "In many cases they surrendered their arms on the first demand. No Turkish women or children were killed in cold blood. No Mussulman women were violated. No Mussulmans were tortured. No purely Turkish village was attacked or burnt. No Mosque was desecrated or destroyed. The Bashi-Bazouks, on the other hand, had burnt about 65 villages, and killed at least 15,000 Bulgarians."—See also TURKEY: 1877-1878, and 1878.

1878.—Treaty of Berlin.—Division and semi-independence of Bulgaria.—It was these terrible massacres of Christian villages in Bulgaria that precipitated the Russo-Turkish war of 1877-1878. Adrianople fell on January 16 and the Russian army marched on towards Constantinople. In a panic of fear the Turks sued for peace. The treaty of San Stefano, dictated by Russia and concluded March 3, 1878, was a severe humiliation for Turkey. The first twelve articles of the treaty of San Stefano related to Bulgaria, and by them Russia had made Bulgaria an autonomous principality tributary to Turkey with wide boundaries reaching from the Danube to the Aegean. Great Britain backed by Austria-Hungary (both of whom had Balkan interests) raised such opposition to the treaty of San Stefano that it was revised by the treaty of Berlin. By this treaty the enlarged state of Bulgaria was cut up. Bulgaria north of the Balkans was created an autonomous principality tributary to Turkey, with a prince elected by the people, confirmed by Turkey with the consent of the Powers. Eastern Rumelia in the South Balkans was separated from Bulgaria and administered by a Christian governor.—See also BALKAN STATES:

1879.—Alexander appointed Prince of Bulgaria.—Prince Alexander of Battenberg was appointed Prince of Bulgaria, and under him a constitution was adopted and a parliament established.

1885-1886.—Reunion of the two Bulgarias.—Hostility of Russia.—Victorious war with Serbia.—Abduction and abdication of Prince Alexander.—"The Berlin Treaty, by cutting Bulgaria into three pieces, contrary to the desire of her inhabitants, and with utter disregard of both geographical and ethnical fitness, had prepared the ground from which a crop of never-ending agitation was inevitably bound to spring—a crop which the Treaty of San Stefano would have ended in preventing. On either side of the Balkans, both in Bulgaria and in Roumelia, the same desire for union existed. Both parties were agreed as to this, and only differed as to the means by which the end should be attained. The Liberals were of opinion that the course of events ought to be awaited; the unionists, on the other hand, maintained that they should be challenged. It was a few individuals belonging to the latter party and acting with M. Karaveloff, the head of the Bulgarian Cabinet, who prepared and successfully carried out the revolution of September 18, 1885. So unanimously was this movement supported by the whole population, including even the Mussulmans, that it was accomplished and the union proclaimed without the least resistance being encountered, and without the shedding of one drop of blood! Prince Alexander was in no way made aware of what was in preparation; but he knew very well that it would be his duty to place himself at the head of any national movement, and in a proclamation dated the 10th of September, and addressed from Tirnova, the ancient capital, he recommended union and assumed the title of Prince of North and South Bulgaria. [See also THRACE: 1878-1913.] The Porte protested in a circular, dated the 23rd of September, and called upon the Powers who had signed the Treaty of Berlin, to enforce the observance of its stipulations. On the 13th of October, the Powers collectively declare 'that they condemn this violation of the Treaty, and are sure that the Sultan will do all that he can, consistently with his sovereign rights, before resorting to the force which he has at his disposal.' From the moment when there was opposition to the use of force, which even the Porte did not seem in a hurry to employ, the union of the two Bulgarias necessarily became an accomplished fact. . . . Whilst England and Austria both accepted the union of the two Bulgarias as being rendered necessary by the position of affairs, whilst even the Porte (although protesting) was resigned, the Emperor of Russia displayed a passionate hostility to it, not at all in accord with the feelings of the Russian nation. . . . In Russia they had reckoned upon all the liberties guaranteed by the Constitution of Tirnova becoming so many causes of disorder and anarchy, instead of which the Bulgarians were growing accustomed to freedom. Schools were being endowed, the country was progressing in every way, and thus the Bulgarians were becoming less and less fitted for transformation into Russian subjects. Their lot was a preferable one, by far, to that of the people of Russia—henceforth they would refuse to accept the Russian yoke! . . . If, then, Russia wanted to maintain her high-handed policy in Bulgaria, she must oppose the union and hinder

the consolidation of Bulgarian nationality by every means in her power; this she has done without scruple of any sort or kind, as will be shown by a brief epitome of what has happened. [See also SERBIA: 1875-1878.] . . . Serbia, hoping to extend her territory in the direction of Tru and Widdin, and, pleading regard for the Treaty of Berlin and the theory of the balance of power, attacks Bulgaria. On November 14th [17th to 19th?] 1885, Prince Alexander defends the Slivnitza positions [in a three days' battle] with admirable courage and strategic skill. The Roumelian militia, coming in by forced marches of unheard-of length, perform prodigies of valour in the field. Within eight days, i. e., from the 20th to the 28th of November, the Serbian army, far greater in numbers, is driven back into its own territory; the Dragoman Pass is crossed; Pirot is taken by assault; and Prince Alexander is marching on Nisch, when his victorious progress is arrested by the Austrian Minister, under threats of an armed intervention on the part of that country! On December 21st, an armistice is concluded, afterwards made into a treaty of peace, and signed at Bucharest on March 3rd by M. Miyatovitch on behalf of Serbia, by M. Guechoff on behalf of Bulgaria, and by Madjid Pascha for the Sultan. Prince Alexander did all he could to bring about a reconciliation with the Czar and even went so far as to attribute to Russian instructors all the merit of the victories he had just won. The Czar would not yield. Then the Prince turned to the Sultan, and with him succeeded in coming to a direct understanding. The Prince was to be nominated Governor-General of Roumelia; a mixed Commission was to meet and modify the Roumelian statutes; more than this, the Porte was bound to place troops at his disposal, in the event of his being attacked. . . . From that date the Czar swore that he would cause Prince Alexander's downfall. It was said that Prince Alexander of Battenberg had changed into a sword the sceptre which Russia had given him and was going to turn it against his benefactor. Nothing could be more untrue. Up to the very last moment, he did everything he could to disarm the anger of the Czar, but what was wanted from him was this—that he should make Bulgaria an obedient satellite of Russia, and rather than consent to do so he left Sofia. The story of the Prince's dethronement by Russian influence, or, as Lord Salisbury said, by Russian gold, is well known. A handful of malcontent officers, a few cadets of the Ecole Militaire, and some of Zankoff's adherents, banding themselves together, broke into the palace during the night of the 21st of August, seized the Prince, and had him carried off, without escort, to Rahova on the Danube, from thence to Reni in Bessarabia, where he was handed over to the Russians! The conspirators endeavoured to form a government, but the whole country rose against them, in spite of the support openly given them by M. Bogdanoff, the Russian diplomatic agent. On the 3rd of September, a few days after these occurrences, Prince Alexander returned to his capital, welcomed home by the acclamations of the whole people; but in answer to a respectful, not to say too humble, telegram in which he offered to replace his Crown in the hands of the Czar, that potentate replied that he ceased to have any relations with Bulgaria as long as Prince Alexander remained there. Owing to advice which came, no doubt, from Berlin, Prince Alexander decided to abdicate; he did so because of the demands of the Czar and in the interests of Bulgaria."—E. de Laveleye, *Balkan peninsula, Introduction*.—See also WORLD WAR: Causes: Indirect: d:2.

1887-1894.—Prince Ferdinand of Saxe-Coburg-Gotha chosen to succeed Alexander.—Stambolov made prime minister.—His fall from power in 1894.—After the abdication of Alexander, Sept. 8, 1886, a regency was formed and for ten months Bulgarian envoys scoured the capitals of Europe searching for a ruler. The post had been offered to and refused by several possible candidates when it was finally accepted by Prince Ferdinand of Saxe-Coburg-Gotha, son of the late Prince August and Princess Clementine, daughter of Louis Philippe, the last king of France. Ferdinand was then 26, a lieutenant in an Austrian Hussar regiment. He was unanimously elected by the Bulgarian National Assembly, July 7, 1887. In choosing the Prince the Bulgarians defied the Russian Tsar who promptly declared that Ferdi-

STEPHAN STAMBOLOV

nand was a usurper. One of his first acts was to appoint Stambolov as his prime minister, the strongest man produced by modern Bulgaria. It was he who, more than any other man, had made Bulgaria what she was—maintained her independence, and crushed, with a relentless hand, the machinations of Russian agitators who flooded the country. "He succeeded in keeping Bulgaria self-dependent. During the earlier years of his rule Ferdinand relied upon him, and, indeed, owed to him his continuance on the throne. He won the pretentious title of 'the Bulgarian Bismarck.' His methods resembled those of his Teutonic prototype in more than one respect. For seven years he was practically dictator of Bulgaria. Russian plots continued. He repressed them pitilessly. His one fundamental principle was Bulgaria for the Bulgarians. His rule was one of terror, of suppression of liberties, of unscrupulousness, directed to patriotic ends. His object was to rid Bulgaria of Russian, as of Turkish, control. Bulgaria under him increased in wealth and population. The army received a modern equipment, universal military service was instituted, commerce was encouraged, railroads were built, popular education begun, and the capital, Sofia, a dirty, wretched Turkish village, made over into one of the at-

tractive capitals of Europe. But Stamboloff made a multitude of enemies, and as a result he fell from power in 1894."—C. D. Hazen, *Fifty years of Europe*, p. 238.—From the accession of Prince Ferdinand till 1894 the history of Bulgaria was little more than the life of Stambolov, who ruled the country and the Prince as well. But Prince Ferdinand awaited his time and matured his plans. On May 31, 1894, when the news came out that Stambolov had been relieved of his office, Europe experienced a shock of surprise almost as great as when Bismarck had been dismissed. From that day Prince Ferdinand seized the reins and held them with a firm grip until his abdication, Oct. 4, 1918.

1895-1896.—Assassination of Stambolov.—Influence of Russia in Bulgaria.—Prince Boris baptised into the Orthodox Greek Church.—On the 15th of July, 1895, Stambolov was attacked by four assassins in the streets of Sofia, and received wounds from which he died three days afterwards. He had been the soul of Bulgarian nationalism in his refusal to be subservient to Russia; with Stambolov dead, and Prince Ferdinand anxious to patch up his quarrel with the tsar, the Bulgarian government was able to sue for Russia's friendship with complete success. The increasing influence of Russia in Bulgaria was manifested unmistakably on February 14, 1896, when Prince Boris, the infant son and heir of the reigning Prince Ferdinand, was solemnly baptised into the Orthodox Greek Church, the tsar of Russia, represented by proxy at the ceremony, acting as sponsor. This is understood to have been done in opposition to the most earnest remonstrances of the mother of the child, who is an ardent Roman Catholic, the father being nominally the same.

1900.—Influence of Robert College.—"She (Bulgaria) possessed a double advantage over the other minor states of the Balkans. The founders of the new Bulgaria had been educated in large numbers at Robert College, the American institution of learning at Constantinople, where they had been taught at least the principles of common honesty in public finance, the practise of which had kept her, in marked contrast to both Servia and Greece, mistress of her own purse and independent of foreign financial control. While taxation was not unduly heavy, its proceeds were honestly used to create an efficient army, to improve all the means of transportation throughout the kingdom and to a certain extent, in the up-building of an educational system."—W. 1908-1909.—Independence from Turkey declared and won.—"In the late summer and fall of 1908, a combination of events was readily turned to account at Sofia and made to furnish the desired occasion for putting an end to the theoretical vassalage of the Bulgarian principality. The Young Turk Revolution came on in July, and the restoration of constitutional government in Turkey caused

some doubt among the Bulgarians as to the effect of this movement upon the acquired status of their country."—W. S. Murray, *Making of the Balkan states*, p. 180.—Bulgaria had been hoping for many years that her own orderly and progressive government, which had contrasted so strongly with the evil of Turkish rule, would entitle her to consideration, and perhaps to an accession of territory, when the time arrived for a definite settlement of the Macedonian question. The reforms introduced or foreshadowed by the Young Turk party threatened to deprive her of any pretext for future intervention. There was therefore nothing to be gained by further acquiescence in the conditions laid down by the Treaty of Berlin in 1878. "Early in September [1908] the Sultan's Foreign Minister, Tewfik Pasha, created a stir by omitting to invite the Bulgarian representative at the Porte, M. Gueshoff, to a dinner in honor of the Constantinople diplomats. This omission being quite unusual, a protest followed, and the Porte explained that only representatives of sovereign states had been invited. Although the Turkish authorities proffered other amends for the neglect, M. Gueshoff was not invited, and his government recalled him from the Turkish capital. Some days following this incident a strike was declared on the Eastern Roumelian section of the Oriental Railway, and the Bulgarian government sent troops and employees to look after the operation of the line. Three days later (September 21) the strike was terminated, but Bulgaria continued her military occupation. When the southern province became practically united with the principality of Bulgaria in 1886 no new arrangement was made affecting Turkey's ownership of the railway in Eastern Roumelia; consequently, by the terms of the treaty of Berlin, Bulgaria possessed no proprietary rights in that part of the line. Subjects of Germany and Austria-Hungary being among the principal shareholders in the company that had been operating the line under a lease from Turkey, these two countries, together with Turkey, made strong protests against the continued Bulgarian occupation of the road. Bulgaria contended that her interests rendered it necessary that she should control that section of the railway, and suggested the possibility of some arrangement with the company. This question, however, was soon merged with others of even more serious moment. Two days after the termination of the strike, Prince Ferdinand was received at Budapest by Emperor Francis Joseph, and the prince is said to have been apprised at this time of the Austro-Hungarian plans for the annexation in the near future (December 2) of Bosnia and Herzegovina. There seems to be some reason for believing that this information hastened the action of Prince Ferdinand. However that may be, he surprised Europe somewhat by issuing a declaration from Tirnovo, October 5th, proclaiming the independence of Bulgaria. In the rather brief declaration read by Prince Ferdinand at the old capital, he pointed out that 'practically independent', the nation was impeded by certain illusions and formal limitations which resulted in a coldness of relations between Bulgaria and Turkey. 'Turkey and Bulgaria,' he continued, 'free and entirely independent of each other, may exist under conditions that will allow them to strengthen their friendly relations and to devote themselves to peaceable internal development.' In this declaration he forestalled any question relating to the territory of Eastern Roumelia (Southern Bulgaria) by proclaiming 'Bulgaria, united since September, 1885, as an independent kingdom.' . . . The Turkish authorities

took rather a calm view of the Bulgarian declaration. A general recognition of the independence of the principality appears to have been, almost from the first, a foregone conclusion. Because of the Eastern Roumelian annual tribute due to Turkey, and the Porte's ownership of the railroad through that province, however, there was a necessity for a settlement between the principality and Turkey on the basis of compensation from Bulgaria. Happily, the government at Sofia was ready to discuss the question of compensation to Turkey. Before the end of the month, England, France and Russia joined (October 27) in a communication, which was approved by Italy and Germany, advising Bulgaria to undertake direct negotiations with the Porte. The Sofia government promptly acted on this advice, and sent a representative, M. Dimitroff, to Constantinople. Within another month, the negotiations at the Turkish capital had resulted in an agreement on the principles that were to form the basis of a settlement. The chief difficulty proved now to be the difference of opinion between the two parties respecting the amount of total indemnity due to Turkey. After several weeks, Bulgaria offered to pay about \$16,400,000; but in the fore part of February, 1909, the Turkish government declined to accept that amount, and demanded a lump sum of \$24,000,000. Bulgaria complained, as she had done before, of Turkey's uncompromising attitude, and refused to pay any more than she had already offered. The efforts of the treaty powers to bring about some compromise utterly failed, for a time, and both Turkey and Bulgaria renewed their warlike demonstrations. After about a fortnight, however, the Russian government hit upon a plan for relieving the tension, and made a definite financial proposition to both governments. Turkey was bound by treaty to pay an annual war indemnity to Russia (on account of Russo-Turkish War, 1877-1878) of about \$1,600,000 without interest. Russia now proposed to relieve Turkey of the obligation to make these yearly payments until the total sum remitted should amount to \$24,000,000—Turkey's claim against Bulgaria. Then, as an offset to this, Russia proposed to accept from Bulgaria in annual installments with interest, a sum aggregating \$16,400,000—the amount of Bulgaria's offer to Turkey. Turkey accepted Russia's proposal, and an agreement to that effect was signed by the Constantinople and St. Petersburg governments, on March 16th. [1909] Bulgaria likewise agreed to the proposition and signed protocols accordingly on April 10th, with Russia and Turkey. The signing of these international documents settled all the claims at issue between the parties. King Ferdinand was the recipient of personal congratulations from European rulers; and within a few days the governments of the great powers formally recognized Bulgaria as an independent kingdom."—W. S. Murray, *Making of the Balkan states*, pp. 180-183.

1908-1913.—Relations with Rumania. See RUMANIA: 1912-1913.

1908-1914.—Fundamental provisions of the constitution.—Unique electoral law.—Main political parties.—Bulgarian constitution was voted by the assembly of Notables on April 29, 1879, at Tirnovo, revised by the grand Sobranje on May 27, 1893, and modified by the proclamation of the Bulgarian kingdom on October 5, 1908. "The fundamental principles of the Bulgarian constitution are (1) separation of governmental authorities into legislative, executive, and judicial; (2) perfect equality of citizens as regards civil and political rights; (3) inviolability of person, residence, property, and correspondence; (4) liberty of conscience, press,

and public meetings; (5) direct and secret universal manhood suffrage; and (6) local self-government. The constitution consists of one hundred sixty-nine clauses, grouped into twenty-two chapters. It follows in the main the constitution of Belgium. Bulgaria is a constitutional monarchy. Heredity descends in the direct male line. The king must profess the national Orthodox faith, only the first and second rulers being released from this obligation. Legislative power is vested in the king in conjunction with the national assembly (sobranje). The king of Bulgaria possesses larger powers than those exercised by most of the constitutional sovereigns of Europe. He appoints and dismisses the members of the ministry but he cannot retain permanently a cabinet which is not in harmony with the national assembly. He is the supreme head of the army, supervises the executive power, and represents the nation in its foreign relations. The executive power is vested in a ministry of ten members, representing the following portfolios: Foreign Affairs and Public Worship, Interior and Public Health, Public Instruction, Finance, Justice, War, Commerce and Industry, Agriculture, Public Works and Communications, and Railways, Posts, and Telegraph. The cabinet is responsible only to the king. The national assembly is composed of two hundred forty-five members elected by manhood suffrage in the proportion of one to twenty thousand of the population of the country. Candidates to the national assembly must be thirty years old and able to read and write. The compensation to members of the assembly from the city where it holds its sessions is three dollars a day; to the other members four dollars a day, including holidays and Sundays. Travelling expenses are also paid. The following classes of male citizens are ineligible to membership in the national assembly; all those engaged in actual military service; members of the clergy; individuals having contracts with the government and those having pecuniary interest in such contracts; and all public officials (members of the cabinet excepted), mayors and assistant mayors, and other persons occupying public posts. The electoral law of Bulgaria is unique. It provides for the representation of minorities in the national assembly, which makes the assembly truly representative of the political sentiments of the nation. The country is divided into electoral districts, but a candidate may stand for election in any one district in the kingdom, upon the petition of ten voters in that district. The ballots are on coloured papers, each party having its own colour, and the party colours are duly registered. The ballots contain the names of the candidates of a particular party. There are, however, black spaces on the ticket, so that a voter may cross out the names of such candidates on the ticket of his party for whom he may not care to vote, and may add names from the tickets of other parties. These coloured ballots are placed in envelopes and deposited in the election box. Bulgarians claim that their system makes easier the counting of the votes and more difficult efforts to tamper with the results. The new election law of 1912 (amending article 120 of the election law of 1911) provides that within five days from the date of the election the district electoral colleges shall in public session tabulate the votes cast in their respective electoral districts. This tabulation shall include (1) the number of all voters registered in the district, (2) the number of votes actually cast at this particular election, (3) the number of valid ballots, (4) the number of spoiled or void ballots, (5) the number of votes cast for the ticket of each polit-

ical party, and (6) the number of votes received by each individual candidate. Upon the basis of the results, the respective electoral colleges determine the election of the candidates to the national assembly in the following manner: The total number of valid ballots cast is divided by the number of representatives to be sent from the respective electoral districts, plus one. If, for example, a given electoral district has a population of 425,000 inhabitants, it will be entitled to send twenty-one representatives to the national assembly, the basis of representation being one assemblyman for twenty thousand of the population. The electoral divisor being obtained by dividing the number of representatives from the district plus one by the total number of votes cast. Each party ticket sends as many of its candidates to the national assembly as that divisor is contained times in the total number of votes cast for that particular party's ticket. If, after such distribution, one or more representatives should remain unallotted, then the first undistributed representative is given to the party receiving the highest average number of votes. In the same way any other undistributed representatives that may remain are apportioned. In case two tickets should have the same number of votes, the choice is determined by lot. . . . The duration of the national assembly is four years. It may be dissolved at any time by the king, but new elections must take place within two months from the date of dissolution. All legislative and financial matters must first be discussed and voted by the *sobranje* and sanctioned by the king. Through his ministers the king may initiate legislative measures, and he may issue regulations having the obligatory force of laws whenever the state is threatened with immediate internal or external danger. Such measures, however, must be adopted by the cabinet since they entail the collective responsibility of all the ministers; and they must be approved by the national assembly at its earliest session.

"The national assembly chooses its own officers, consisting of a president, two vice-presidents, and secretaries. Debates and voting are public, but the chamber may decide to sit with closed doors. Any member of the assembly has the right to introduce bills if he is supported by one-fourth the members present. Bulgarian citizens have the right to petition the national assembly. The national assembly consists of only one chamber. There is, however, a grand national assembly that meets by special convocation to decide on matters touching the revision of the constitution, acquisition of territory, election of a ruler, appointment of a regency, and authorization of the sovereign to accept the government of another state. Its members are elected in precisely the same way as the members of the national assembly, save that the electoral unit for twenty thousand inhabitants is two instead of one. The state budget must be submitted annually for the approval of the national assembly, but it may not strike out or modify any feature of the budget without explaining the reasons which have determined its action. State loans may be contracted only with the consent of the *sobranje*. . . . Local government in Bulgaria is under the control of the ministry of the interior. The kingdom is divided into administrative departments. At the head of each department there is a prefect appointed by royal decree upon the recommendation of the minister of the interior. He is the representative of the central government, and as such represents the executive authority of the kingdom. He is entrusted with the control of the towns and villages in his department. . . .

Town government is the smallest unit in the administrative organization of the country. Every Bulgarian subject must belong to a commune and figure in its registers, the laws of the country not tolerating the state of vagrancy. This law has had the effect of forcing upon the gypsies settled abodes. The administrative bodies in the cities, towns, and rural communities are the municipal councils. The members of the municipal councils are elected by universal suffrage in the same way and subject to the same regulations as the members of the national assembly. All members of the commune who are at least thirty years of age and can read and write are eligible to membership in the municipal council. Those electors who have completed a secondary school course may be elected at the age of twenty-five. . . . The judiciary power of Bulgaria is vested in law courts and magistrates who act in the name of the king. The civil and penal codes of the country are largely based on Ottoman law. The lowest civil and criminal court is that of the justice of the peace. . . . The supreme court, or court of cassation, has its seat at Sofia. It has the power to reverse the judgments of all the other courts of the land on points of law or procedure. It is composed of a president judge, two vice-president, and nine other judges. . . . In addition to the law courts, there are in the kingdom certain special tribunals. Matters touching marriage, divorce, and inheritance are under the direction of the Orthodox, the Mohammedan, the Jewish, and other religious organizations. There are consular courts that deal with all civil and commercial disputes arising between foreign subjects and not involving landed property in Bulgaria. Military courts pass upon all criminal cases involving persons in active service in the army. In spite of the fact that Bulgaria officials received their political education in the two worst schools of political pedagogy in Europe—Turkey and Russia—it is the opinion of competent foreign critics that the country has been better governed than any of the other Balkan states. Frequent newspaper charges of graft and corruption of public officials carry little weight when one recalls the violence of the Sofia press and its rancorous abuse of political opponents. The officials who administer the affairs of state have sometimes blundered and blundered grievously; but when one recalls the difficulties which they have had to face during the brief period of national existence, the marvel is that they have done so well in governmental matters. Mr. William Miller, an English writer, well voices the sentiments of the author in the statement: "With all their faults, and in spite of all their trials and temptations, the peasant statesmen have achieved great triumphs during the comparatively brief period of their country's existence as a practically independent state." —W. S. Monroe, *Bulgaria and her people*, pp. 192-205.

"Following the alienation of Prince Alexander from Russia in 1885, Dragan Zankoff, hitherto a leader in the liberal party, turned against the prince and cast his lot with Russia. This was the origin of the liberal Russophil or Zankovist party, which is to-day represented by Danef and Ludskanoff under the name of the progressive liberal party. The traitorous conduct of Petko Karaveloff during the *coup d'état* of 1886, and the regency that followed caused the breach with Stamboloff and the formation of a new liberal party that is represented to-day by the democratic party under the leadership of Malinoff and Takeff. When Dr. Radoslavoff . . . [afterwards] prime minister, became active in Bulgarian politics, differences be-

tween the other liberal leaders and himself caused a division in the party into liberals (Radoslavist) and national liberals (Stambolovists), the latter now led by Dr. Ghuenadieff. Tontcheff later withdrew from the Radoslavist party and established the young liberal party. Recently the more radical members of the old Karavelist (democratic) party, together with men from other parties, have formed a party called the radical democratic. It will thus be seen that most of the political parties in Bulgaria are the result of splits in the liberal party. There are two sections of the socialist party in Bulgaria—the broad socialist party (shiroki), led by Sakuzoff, and the strict party (tessni), under the leadership of Blagoeff. The most recent political party is the agrarian, organized in consequence of an agitation among the peasant farmers, and under the leadership of Stamboliski and Dragieff.”

—*Ibid.*, p. 206.

1909-1913.—Formation of the Balkan league. See SERBIA: 1909-1913.

1912.—Serbo-Bulgarian pact.—“The Serbo-Bulgarian pact, in the shape of a treaty of alliance and a secret annex, was signed on March 14, 1912 (N. S.), as a conclusion of a series of negotiations following the outbreak of the Turco-Italian war. The treaty, which is published together with other documents by M. Guechoff, former Bulgarian Premier, in his book on the Balkan league, was defensive in character. It definitely guaranteed the support of each party to the other in the event of an attack by one or more states or in the event of any Great Power attempting to invade or annex any part of the then Turkey in Europe in a manner contrary to the vital interests of either party, and it bound the two countries not to conclude peace independently. The secret annex, which turned out to be more important than the actual treaty, foresaw the probability that internal or external difficulties in Turkey itself might render the maintenance of the *status quo* impossible and fixed the terms upon which action might then be taken. In addition it definitely decided the future distribution of any areas acquired either as a result of the defensive treaty or of what may be called the offensive annex. While all territorial gains were to constitute common property, Serbia recognized the right of Bulgaria to the territory east of the Rhodope Mountains and the Struma River, while Bulgaria recognized a similar right of Serbia to the territory north and west of the Shar Dagh. With regard to the area lying between these two boundaries, if the two parties became convinced that the formation of an autonomous province was impossible, then Serbia undertook to ask for nothing beyond a line drawn from Mount Golem on the northeast to Lake Okhrida on the southwest. Bulgaria promised to accept this line if His Majesty the Czar, who was to be requested to arbitrate, decided in its favor. While tentative negotiations between Bulgaria and Greece had taken place as early as May, 1911, these, as also the subsequent conversations, failed to materialize until after the signature of the Serbo-Bulgarian treaty. However, in May, 1912, the Hellenic Government agreed to the Bulgarian proposals, and a definite treaty was signed at Sofia on the 29th of that month. That treaty guaranteed to each of its signatories the support of the other in case of war with Turkey but it is important to remember that it made no arrangement whatever as to the future distribution of the territories to be acquired in a common war. With regard to Montenegro's position, an oral understanding was concluded between that country and Bulgaria in September, 1912.”—*Geographical*

1912.—First Balkan War.—States involved.—“In August, 1912, the twenty-fifth anniversary of King Ferdinand's arrival in Bulgaria was celebrated with much rejoicing at the ancient capital of Tirnovo, and was marred only by the news of the terrible massacre of Bulgars by Turks at Kochana in Macedonia; this event, however, opportune though mournful, tended considerably to increase the volume of the wave of patriotism which swept through the country. Later in the same month Count Berchtold startled Europe with his ‘progressive decentralization’ scheme of reform for Macedonia. The manner in which this event led to the final arrangements for the declaration of war on Turkey by the four Balkan States is given in full elsewhere. [See TURKEY: 1912-1913.] . . . The Bulgarian army was fully prepared for the fray, and the autumn manoeuvres had permitted the concentration unobserved of a considerable portion of it, ready to strike when the time came. Mobilization was ordered on September 30, 1912. On October 8 Montenegro declared war on Turkey. On October 13, Bulgaria, with the other Balkan States, replied to the remonstrances of Russia and Austria by declaring that its patience was at length exhausted, and that the sword alone was able to enforce proper treatment of the Christian populations in European Turkey. On October 17, Turkey, encouraged by the sudden and unexpected conclusion of peace with Italy after the Libyan war, declared war on Bulgaria and Serbia, and on October 18 King Ferdinand addressed a sentimental exhortation to his people to liberate their fellow-countrymen who were still groaning under the Crescent.”—N. Forbes, *Balkans*, p. 73.—See also BALKAN STATES: 1912: First Balkan war.

1913.—Conference of London.—Treaty.—Indignation of Bulgaria.—“The Conference of London, which took place during the spring of that year [1913], fixed the new Turco-Bulgarian boundary by drawing the famous Enos-Midia line, running between these two places situated on the shores respectively of the Ægean and the Black Sea. This delimitation would have given Bulgaria possession of Adrianople. But meanwhile Greece and especially Serbia, which latter country had been compelled to withdraw from the Adriatic coast by Austria, and was further precluded from ever returning there by the creation of the independent state of Albania, determined to retain possession of all that part of Macedonia, including the whole valley of the Vardar with its important railway, which they had conquered, and thus secure their common frontier. In May, 1913, a military convention was concluded between them, and the Balkan League, the relations between the members of which had been becoming more strained ever since January, finally dissolved. Bulgaria, outraged by this callous disregard of the agreements as to the partition of Macedonia signed a year previously by itself and its ex-allies, did not wait for the result of the arbitration which was actually proceeding in Russia, but in an access of indignation rushed to arms.”—N. Forbes, *Balkans*, pp. 73-74.—See also BALKAN STATES: 1912: Balkan league; and 1912-1913; GREECE: 1912; SALONIKA: 1912-1913.

1913.—Second Balkan War.—Treaty of Bucharest.—Treaty of Constantinople.—“This second Balkan war, begun by Bulgaria during the night of June 30, 1913, by a sudden attack on the Serbian army in Macedonia, resulted in its undoing. In

order to defeat the Serbs and Greeks the south-eastern and northern frontiers were denuded of troops. But the totally unforeseen happened. The Serbs were victorious, defeating the Bulgars in Macedonia; the Turks, seeing Thrace empty of Bulgarian troops, re-occupied Adrianople, and the Rumanian army, determined to see fair play before it was too late, invaded Bulgaria from the north and marched on Sofia. By the end of July the campaign was over and Bulgaria had to submit to fate. By the terms of the Treaty of Bucarest, which was concluded on August 10, 1913, Bulgaria obtained a considerable part of Thrace and eastern Macedonia, including a portion of the Ægean coast with the seaport of Dedeağach, but it was forced to 'compensate' Rumania with a slice of its richest province (the districts of Dobrich and Silistria in north-eastern Bulgaria), and it lost central Macedonia, a great part of which it would certainly have been awarded by Russia's arbitration. On September 22, 1913, the Treaty of Constantinople was signed by Bulgaria and Turkey; by its terms Turkey retained possession of Adrianople and of a far larger part of Thrace than its series of ignominious defeats in the autumn of 1912 entitled it to."—N. Forbes, *Balkans*, pp. 76-77.—See also BALKAN STATES: 1913; RUMANIA: 1912-1913; SALONIKA: 1913; SERBIA: 1909-1913.

1913.—Attempted conversion of the Pomaks.—"In the spring of 1913, after the Turks had lost this region [Rhodope mountains] in the Balkan war, Orthodox priests visited the Pomak villages and forcibly 'converted' the inhabitants to the religion of the national church. After the recent war among the allies, upon the strong representation of the Moslem inhabitants of Bulgaria and Turkey, the Bulgarian government was compelled to repudiate the action of the Orthodox priests, and to forbid any further attempts by force to reconvert the Pomaks to the faith of the national church. This stupid blunder is responsible for the charge of intolerance against the Bulgarians. Rather it should be credited to the clerical Russophil Gueshoff-Daneff ministries and to certain leading ecclesiastics in the Bulgarian Orthodox church. Liberal-minded Bulgars denounced the efforts to forcibly reconvert the Pomaks to the faith of the national church as an outrage on humanity and a grave political error. Witness this published protest from the pen of Anton Strashimiroff, one of the leading Bulgarian men of letters: "Those who stand for the thought and the honour of our country ought to know that our authorities have, in the countries on the frontier inhabited by the Pomaks and recently liberated, acted in a way which is a disgrace to their country and to humanity. One aim alone was kept in sight—that of personal enrichment. Conversion was only a pretext. It did not save the poor Pomaks from atrocious treatment except where the priests with whom they had to deal were conscientious men. Such cases, however, were rare. The ecclesiastical mission was beneath criticism. High rewards were paid, but the priests sent to carry out this task in the Pomak villages were drunkards and criminals who could not be kept in Bulgaria. The behaviour of the police was monstrous. In Bulgaria no one has and no one can have any idea of the atrocities committed by prefects, heads of police, and priests."—W. S. Monroe, *Bulgaria and her people*, p. 213-217.

1913-1914.—Invasion of Albania. See ALBANIA: 1908-1914.

1914.—World War.—Importance of Bulgaria's

geographical position.—"The enormous war importance of Bulgaria was bound up largely with her geographical position. As a result of the Balkan campaigns she became the only state with a frontier contiguous to that of Turkey in Europe and, therefore, the sole country which could attack or through which a land attack could be made upon the European dominions of the Sultan. Equally well, it was by way of Bulgaria alone that officers, technical experts, and supplies could be sent, as they were sent, from Central Europe to Constantinople. Owing to her central, or interior, position the value of Bulgaria was, therefore, out of all proportion even to the high fighting efficiency of her military machine. The position was important to both groups of Powers, but it was Germany who, realizing the necessity of preparing the way for action from the first, left no stone unturned to develop an already advantageous situation in order at least to maintain the neutrality and, if possible, to secure the support of Bulgaria and in the end wrung from Turkey concessions of the greatest value to the Government of King Ferdinand."—*Geographical Review*, July, 1918.—See also BALKAN STATES: 1914.—"It was already apparent to the Bulgarian government that the offer of Macedonia, if made by the Entente, would not be concurred in by the parties most vitally concerned, Serbia and Greece, and could not be carried out by a France and Great Britain impotent to defeat the Turks, or by a Russia incapable of defending Warsaw. On the other hand, the Central Empires promised Bulgaria not only larger Serbian spoils than the Entente had ever contemplated but also a rectification of her Turkish boundary, a liberal financial loan, and immediate military aid by veterans of Mackensen's and Hindenburg's Drives. Ferdinand and Radoslavoff hesitated no longer. On September 6, 1915, they signed at Sofia a secret convention with representatives of the Dual Monarchy, providing for a joint attack upon Serbia and for the territorial rewards to Bulgaria. Bulgaria, in accordance with the secret convention, speedily concluded arrangements with German bankers for an advance of fifty million dollars, of which about half was to be paid forthwith in cash and the remainder applied to outstanding obligations. Likewise, in September, a treaty was signed with the Ottoman Empire, whereby Bulgaria was to receive the corner of European Turkey marked off by the line of the Maritza and Tunja rivers, including the railway station at Karagatch though not Adrianople, and in return was to maintain 'armed neutrality.'"—C. J. Hayes, *Brief history of the great war*, p. 125.—The Bulgarian army was immediately mobilized, ostensibly to maintain the promised "armed neutrality." On Sept. 27, 1915, Serbia informed the British government that it would be wise to attack Bulgaria at once. The next day Sir Edward Grey made the following Statement in the House of Commons: "My official information from the Bulgarian Government is that they have taken up a position of armed neutrality to defend their rights and independence, and that they have no aggressive intentions whatever against Bulgaria's neighbours. It would, perhaps, be well that I should, with the leave of the House, explain quite shortly our view of the Balkan situation. Not only is there no hostility in this country to Bulgaria, but there is traditionally a warm feeling of sympathy for the Bulgarian people. As long, therefore, as Bulgaria does not side with the enemies of Great Britain and her Allies there can be no question of British influence or forces being used in a sense hostile to Bulgarian interests; and, as long as the Bulgarian attitude is

unaggressive, there should be no disturbance of friendly relations. If, on the other hand, the Bulgarian mobilization were to result in Bulgaria assuming an aggressive attitude on the side of our enemies, we are prepared to give to our friends in the Balkans all the support in our power in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification. . . . Our policy has been to secure agreement between the Balkan States, which would assure to each of them not only independence, but a brilliant future, based as a general principle on the territorial and political union of kindred nationalities. To secure this agreement we have recognized that the legitimate aspirations of all Balkan States must find satisfaction. The policy of Germany, on the other hand, has been to create for her own purposes disunion and war between the Balkan States. She first made use of Austria-Hungary to precipitate a European war, with the result that that Empire is now completely subordinated to Germany and dependent upon her. Turkey, whose interests would have been preserved by remaining neutral, was gratuitously forced by Germany into this war, and, having been used, is now being subordinated and made dependent upon Germany, in order to realize the German aspiration of German influence from Berlin to Bagdad."—*Nelson's history of the war*, v. xi, pp. 18-19.—See also WORLD WAR: 1915: V. Balkans: c, 2.

1914-1915.—Attitude of Bulgaria.—"From the moment of the outbreak of the war, and particularly during this second stage in Balkan developments, that is the stage intervening between the entries of Turkey and of Bulgaria, the key to the situation in the latter country lay in the fact that King Ferdinand and his Government were determined to utilize the present conflagration in order to try to regain at least some of the losses suffered in 1913. For them this was not so much a European as a third Balkan War for the independence of Macedonia and of the Bulgars, subject to alien, this time principally Serbian and Greek, rule. It was certain, therefore, that they would give no support without the promise of a large section of southern Macedonia and also as a secondary condition the restoration of a section of the Dobrudja and at least part of the then Turkish Thrace. The bitter antagonism felt by Bulgaria towards Serbia, Greece, and Rumania and particularly towards the first-mentioned country, outweighed the traditional hostility towards Turkey. So long as her future was not adequately secured elsewhere, Bulgaria was unlikely to take up arms against Turkey because her only access to the sea was by way of her Black Sea ports, rendered useless owing to the closing of the Dardanelles, and through Dedeagatch, the railway to which port, according to the Treaty of Constantinople, ran for some miles through Ottoman territory. The great question, therefore, was whether Serbia, Greece, and Rumania would or could be persuaded to restore to Bulgaria areas of territory which she considered should be hers, and whether the Allies would guarantee her possession of districts of now Ottoman territory which they agreed should be allotted to her during the negotiations of the year 1913. . . . The conditions required by Bulgaria soon became pretty clear. On the west the Government of King Ferdinand was intent upon the recognition of the Serho-Bulgarian treaty

of March, 1912, as a basis for discussion. On the south, while claims were made to all the district lying between the Greco-Bulgarian frontier, the Struma valley, and the Aegean, satisfaction would probably have been provided by a rectification of that frontier in such a manner as to give to Bulgaria at least the whole of the Mesta valley and the port of Kavala. On the north, where in 1913 Rumania had claimed, secured, and afterwards seized territory on the south of the Dobrudja, the Bulgarian Government would undoubtedly have agreed to leave to that country the territory, including the town of Silistra, ceded to her by the Protocol of Petrograd in May, 1913, provided the more southerly area, actually seized by Rumania during the second Balkan War, had been restored to its former owners. With regard to the East and in Turkey, as there was obviously no question of negotiation with the Allies, the only feasible arrangement with Bulgaria would have been the giving of a free hand to occupy and retain a part of Thrace, say that situated northwest of the Enos-Midia line, and this I believe was done. . . . Consequently, when tardily and too late the Allies recognized the importance of Bulgaria, the ground for negotiation was extremely unfavorable, and that country had already set a price upon herself which it was far from easy to pay."—*Geographical Review*, July, 1918, pp. 26-29.—See also SERBIA: 1914-1918; WORLD WAR: 1914: III. Balkans: c.

In 1914 "the population numbered about four and one quarter millions of whom more than seventy-five per cent are Bulgarians. Some half-million are Turks, and the remainder are chiefly Rumanians, Greeks, Gypsies and Jews. But what is the Bulgarian himself? He is partly of Slavonic origin mixed with Finnish or Ugrian and Turkish blood but with a pronounced nationality of his own. Nationality is to him a more powerful incentive than racial affinity. He had no inconsiderable number of compatriots under Serbia and Greece, occupying territory adjoining his own and forming a majority of the population there, and for that reason he coveted the districts *they* inhabit. This was so all the more that Bulgaria was stripped of her possessions in the Dobrudscha, and of that portion of Macedonia which was secured to her in a solemn treaty with Greece and Serbia, in the Second Balkan War of 1913. It is not so much race as nationality and a sense of wrong that in 1914 made the Bulgarians hostile to Rumania, Serbia, and Greece."—Earl Loreburn, *How the war came*, p. 36.—In 1915 "Russia took up the tale. On 3rd October the Russian Minister at Sofia, M. Savinsky, was instructed to hand to M. Radoslavov the following note:—'Events which are taking place in Bulgaria at this moment give evidence of the definite decision of King Ferdinand's Government to place the fate of its country in the hands of Germany. The presence of German and Austrian officers at the Ministry of War and on the staffs of the Army, the concentration of troops in the zone bordering on Serbia, and the extensive financial support accepted from our enemies by the Sofia Cabinet no longer leave any doubt as to the object of the present military preparations of Bulgaria. The Powers of the Entente, who have at heart the realization of the aspirations of the Bulgarian people, have on many occasions warned M. Radoslavov that any hostile act against Serbia would be considered as directed against themselves. The assurances given by the head of the Bulgarian Cabinet in reply to these warnings are contradicted by facts. . . . The Russian Minister has therefore received orders to leave

Bulgaria with all the staffs of the Legation and the Consulates if the Bulgarian Government does not within twenty-four hours openly break with the enemies of the Slav cause and of Russia, and does not at once proceed to send away the officers belonging to the armies of States who are at war with the Powers of the Entente.' . . . The reply was unsatisfactory, and the Russian Minister notified M. Radoslavov that diplomatic relations were at an end, a step in which he was presently followed by his French and British colleagues. From this day, 5th October, [1915] we may date Bulgaria's formal entrance into the war. She took some pains to justify her course in a long official pamphlet of which she distributed copies broadcast throughout her towns and villages. It is a curious document. Russia, she declared, was fighting for Constantinople and the Dardanelles; France for Alsace-Lorraine; Britain to ruin Germany; Italy, Serbia, and Montenegro for plunder. The Teutonic Alliance, on the other hand, fought only to maintain the *status quo*, and to ensure peace and progress for the world. Neutrality in the early stages had been advisable. 'Neutrality has enabled us to bring the military and material preparedness of our army to such a pitch as has never before been reached.' The document then embarked on economics. Bulgaria's trade interests were inseparably bound up with Turkey, Germany, and Austro-Hungary. Germany had lent Bulgaria money after the Treaty of Bucharest, and would in future give her financial support. She would be faced with economic collapse unless she took the part of the Central Powers. Serbia was . . . the eternal enemy, and, since she was Russia's darling, Russian and Bulgarian policy must stand in conflict. The Western Allies had offered no real advantages. They had demanded that Bulgaria should place her army unreservedly at their disposal in order to take Constantinople and hand it over to Russia. In return she was to receive some paltry territories in Thrace, and some vague compensations in Macedonia—these latter only on the understanding that Serbia got all she wanted from Austria. . . . On Oct. 19, 1915, an Imperial manifesto issued in Petrograd announced: 'We hereby make known to all our loyal subjects that the treason of Bulgaria to the Slav cause, prepared with perfidy since the beginning of the war, has now, although it seemed to be impossible, become an accomplished fact. The Bulgarian troops have attacked our loyal Ally Serbia, already bleeding in a struggle against a stronger enemy. Russia and the Great Powers our Allies tried to dissuade the Government of Ferdinand of Coburg from taking this fatal step. The realization of the ancient aspirations of the Bulgarian people regarding the annexation of Macedonia was assured to Bulgaria by other means, in conformity with the Slav interests. But underhand methods, prompted by the Germans and fratricidal hatred of the Serbians, triumphed. Bulgaria, our co-religionist, liberated but a short time ago from the yoke of the Turk by the fraternal love of the Russian people, openly took sides with the enemies of the Christian faith, of Slavism, and of Russia. The Russian people regards with sorrow the treason of Bulgaria, which was so near to it until within the last few days, and, with a bleeding heart, it drew its sword against her, leaving the fate of the betrayer of the Slav cause to the just punishment of God.'"—*Nelson's history of the war*, v. xi., pp. 21-23.

1918 (May).—Treaty of Bucharest signed. See BUCHAREST, TREATY OF.

1918 (September).—Surrender of Bulgaria.—Armistice granted.—Bulgaria was the first of the Central Powers to surrender to allied arms. Her surrender was the direct result of a brilliant offensive carried out by French, British, Italian, Greek, Serbian, Czechoslovak and Jugoslav forces under the leadership of General Franchet d'Esperey. The capitulation of Bulgaria meant the isolation of Turkey. The Bulgarians sued for a separate armistice. One containing terms of unconditional surrender was granted on September 30. Bulgaria was to evacuate all allied territory, demobilize her army and turn over to the Allies all means of transport. The Allies were allowed to pass through Bulgaria if necessary to future military operations. Control of the Danube and Bulgarian merchant marine on that river was to be given up. All important strategic points to be occupied by the Allies if they wished. If any part of Bulgaria was taken over it was to be occupied by British, French and Italian troops. The armistice was to remain in operation until a general peace was concluded.—See also WORLD WAR: 1918: V. Balkan theater: a; c; c, 5; c, 6; c, 8, iv; c, 10; and Miscellaneous auxiliary services: I. Armistices: c.

1918.—Abdication of Ferdinand I, in favor of his eldest son, Prince Boris.—"Bulgarians, on account of the situation that has developed in the kingdom . . . I have decided to renounce the royal Bulgarian crown in favor of my eldest son, His Highness, the Prince Royal Boris of Tirnova. . . . I call upon all faithful subjects and true patriots to unite as one man around the throne of the Czar Boris. . . . In withdrawing from my dear Bulgaria, . . . I express to all the Bulgarian people my gratitude for the support they have given in the course of my reign. May the Most High watch with vigilant eyes over the destinies of the Bulgarian people and direct it toward a brilliant future."—See also WORLD WAR: 1918: V. Balkan theater: c, 11.

Boris III (born Jan. 30, 1894) succeeded to the throne October 4, 1918.

1919.—Treaty signed at Neuilly.—Terms.—Settlement of boundaries.—Loss of Ægean littoral.—"The treaty of the allied and associated powers with Bulgaria was signed on Nov. 27 [1919] at Neuilly just outside of Paris. The ceremony was wholly lacking in the pomp that attended the

signing of the treaties of Versailles and St. Germain. The commissioner who signed for Bulgaria was M. Stambuliski. It was this Bulgarian statesman, a man of peasant origin and the leader of the peasant party in Bulgaria, who, when Bulgaria turned on her allies and joined her fortunes with the Central Powers, warned King Ferdinand that he was signing his death warrant. . . . The representatives of two of the allied powers, Serbia and Rumania, were missing though both powers were highly important for the restoration of order in the Balkan peninsula, which the Bulgarian treaty was intended to establish. Both Serbia and Rumania, themselves enemies, had refused to sign the Austrian treaty because of their objection to the provisions for the protection of racial minorities, and the signature of the treaty with Austria was made a condition of the signing of the Bulgarian treaty by the allied powers."—*New York Times Current History*, Jan., 1920.—See also BALKAN STATES: 1921: Bulgaria.

"The terms presented to Bulgaria follow closely the lines laid down in the treaties with Germany and Austria. The parts containing the League of Nations Covenant and those dealing with aerial navigation, trial of offenders against the laws of war, labor, prisoners, and graves are the same in all important respects. Safeguards for minorities are included as in the Polish and Austrian treaties. The army is to be reduced to 20,000 within three months, and the gendarmarie is limited to 10,000. Voluntary enlistment for long terms replaces universal military service. Details of military organization are fixed, the amount of munitions limited, and trade in munitions is prohibited. There may be only one military academy and one munitions factory. The navy, which never amounted to much, is surrendered. Like Germany and Austria, Bulgaria is asked to admit responsibility for all losses and expenses of her enemies, but in view of the inadequacy of her resources, a lump sum of 2,250,000,000 francs (gold) is named as the total reparation to be demanded. An Interallied Commission is to supervise the working out of a plan of half-yearly payments beginning in 1920. . . . Toward Rumania the boundary is to be that of 1914. This leaves to Rumania the 2,960 square miles of the Dobrudja seized for strategic purposes in the Second Balkan War, 1913. During the Great War Bulgaria had occupied all of the Dobrudja to the Danube. The whole of the district is claimed by the Bulgars on historical and nationalistic grounds. . . . The disposition of . . . [Thrace] was one of the most disturbing questions which came before the Conference. The Greeks claimed the entire area of Thrace to the Black Sea, including the portion left to Turkey in 1913, and even Constantinople itself. Their arguments were clearly and temperately set forth in a memorandum submitted by Premier Venizelos to the Peace Conference. He insisted that the attitude of Greece toward Bulgaria had always been conciliatory; but the pretensions of Bulgaria to a Balkan hegemony had been a constant source of trouble. By attacking her allies in 1913, by joining the Central Powers in 1915, by persistent and systematic persecutions and deportations of Greeks in territory under her control, and by atrocious methods of warfare, Bulgaria has forfeited all claims to lenient or generous treatment. Bulgaria had a seacoast on the Black Sea, which, with the neutralization of the Straits, would give a free passage to the Mediterranean. Furthermore, Greece was willing to grant economic access to the Mediterranean across Greek territory in a manner to be guaranteed by the League of Nations.

For the rest, the principle of nationality should govern, and on that basis the Premier declared that the Greeks had the best claim. The Greeks are much more numerous in Thrace than the Bulgars, and they constitute the most progressive and intelligent element in the population. 'There is therefore no reason,' concludes Venizelos, 'why a benevolent disposition should be shown to Bulgaria. She should content herself with the strict justice of the Allies, and nothing more. It would be a flagrant injustice to sacrifice to her the legitimate interests of other peoples. . . . Above all, this would be an act of bad policy. . . . Bulgaria seeks to play in the Balkan Peninsula the part that Prussia has played on the vast European stage.' On the other hand the Bulgarians, who were allowed a much greater freedom in carrying on propaganda than had been accorded Germany or Austria, pleaded to be allowed to keep western Thrace. On nationalistic grounds they even asked for parts of Macedonia held by Serbia and Greece, and for the Dobrudja, held by Rumania. They questioned the accuracy of the figures cited by the Greeks, and the conclusions drawn from them by the Greeks. They claimed as really Bulgarian in nationality the Pomaks, who had become Moslems in the seventeenth century. By transferring these 'Moslem Bulgarians' from the Turkish to the Bulgarian column, and considering only western Thrace, the Bulgar delegates proved to their own satisfaction that there were in the contested district 177,925 Bulgarians as against 107,780 Greeks. They therefore invoked the principle of self-determination, and at the very least demanded a plebiscite. The need of Bulgaria for an economic outlet on the Ægean was also strongly urged."—A. P. Scott, *Introduction to the peace treaties*, pp. 224-233.—See also THRACE: 1918-1921.—Nevertheless, in signing the treaty the Bulgarians lost Thrace and materially changed the boundary line between themselves and Greece. "The Treaty of Neuilly changes Bulgaria's boundaries for the ninth time in half a century. By that treaty the Peasant Kingdom is deprived of its Ægean littoral [Thrace] which goes to Greece; it still has commercial access to the Mediterranean, under certain conditions, through Dedeagatch, but that port has only a poor roadstead where all goods have to be landed or embarked in lighters. . . . Three strips on the west, which are assigned to Serbia, formed part of Bulgaria even under Turkish administration, and are now taken from her for strategic rather than ethnological reasons. [These were given to Serbia in order that she might control the mountain passes and thus prevent in the future such a flank movement as was made by the Bulgarians in 1915 when they cut the Nish-Saloniki railroad down the Vardar valley.] The same may be said of Strumnitza (now also allotted to Serbia), which brought the Bulgarian frontier uncomfortably near the railway running north from Saloniki. The territories lost in the South had been predominantly Greek or Turkish; the proportion of Bulgarians in this area had never been considerable, even after the departure of many coast-dwelling Greeks from 1913 on. To the northwest of Adrianople, a small strip of territory yielded by Turkey in 1915 is retained by Bulgaria; the remainder of her 1915 acquisitions are again lost."—*N. Y. Part III: Political clauses: The Straits; CONSTANTINOPLE: 1920.

1920-1921.—**Reconstruction.**—Admitted to the League of Nations.—Parliament of 1921.—“As by the Treaty of Neuilly, Bulgaria is prevented from having military conscription and maintaining a large army, a law for Labor conscription has been enacted. . . . The law provides that all Bulgarian citizens of both sexes, who have completed, the men twenty, the women eighteen years of age, are subject to obligatory labor. Men will work sixteen and women ten months. No substitutes are allowed, but everybody who is not physically or mentally incapable must do his bit of work. For religious reasons, which prescribe the seclusion of Mohammedan women, the latter are exempt from this obligatory labor. . . . The aim is: (1) To organize and utilize the social forces in order to increase production and general welfare; (2) To stimulate in all citizens, irrespective of their social and material condition, devotion to public things and love for physical labor; (3) To elevate the people morally and economically by cultivating among the citizens the sentiment of duty to themselves and society, and by teaching them rational methods of work in all the domains of national economy.—This labor conscription, as well as the project of expropriating the surplus land of individuals who cannot cultivate it themselves, is dictated not only by the necessity of increasing production, but also by that of providing the many thousands of refugees with homesteads and land. Owing to the cession of Eastern and Western Thrace to Greece, of Macedonia to Serbia and Greece, and of Dobrudja to Rumania, thousands of Bulgarians have been forced to abandon their homes and seek refuge in Bulgaria. The number of these unfortunate exiles may be safely estimated at between 250,000 and 300,000.”—T. Vladimiroff, *Bulgaria's novel methods of reconstruction*, (*N. Y. Times Current History*, Nov., 1920).

“The law of labor, he [Premier Stambolisky] said, recently voted by the Bulgarian Parliament, which made it compulsory for all Bulgarians to render their services to the state during a period of one year, would enable the government to develop and cultivate large areas of valuable land, which, for the lack of labor, had not been touched in the past; to build up roads between towns and villages, to help in undertaking large state enterprises, and in general to cure all war wounds. Every facility, he added, would be given foreign capital and foreign industrial enterprises for exploitation.”—*N. Y. Times Current History*, Dec., 1920, p. 435.—“Jugoslavia on Feb. 15 formally complained to the Supreme Council that Bulgaria was not carrying out the terms of the Treaty of Neuilly, particularly those clauses relating to restitutions to be made to Serbia. It was also pointed out, in a note to the Council of the League of Nations, that no sooner had Bulgaria's position as a member of the League been assured than, by a new application of the Law for Compulsory Labor, she had repudiated Article 65 of the treaty, which abolished compulsory military training, and by a ministerial decree issued Dec. 29, 1920, had transgressed Articles 66 and 67, which stipulated respectively that the Bulgar army should be limited to 20,000 men and that the largest military unit should be the division. Belgrade alleged that the army had grown to 45,000 men, that the country had been divided into three military regions, each of which contained a division, officially scheduled as a ‘regiment.’ It was also alleged that Article 78, which limits fortified places, had been violated. Bulgaria never had any for-

tified places, but hastened, it is said, to create five, now armed by heavy field and mountain artillery, which, according to Article 77, should have been handed over to the Allies. In the same way 10,000 rifles were retained when the treaty permits only 37,950.”—*Jugo-Slavia complains about Bulgaria* (*N. Y. Times Current History*, April, 1921).

“Bulgaria was admitted to the League of Nations at the session of December 9, 1920. A factor which influenced this result was the receipt of a report from Marshall Foch declaring that Bulgaria had done more than any other of the Central powers to fulfill the terms of the treaty.”—*League assembly* (*N. Y. Times Current History*, Jan., 1921).—See also LEAGUE OF NATIONS: First meeting of the assembly.—“The fifty avowed communists in the Sobranje out of 230 deputies fought against a project of law introduced by Premier Stambolisky for the drastic suppression of all local or foreign propagandists who aim at the overthrow of the existing constitutional and social order. As Bulgaria possesses no considerable urban industries and is a country of small peasant holdings with few large landed properties, there was little ground on which Bolshevism could take permanent root.”—*N. Y. Times Current History*, November, 1920.—“The present Sobranje, or Parliament, is made up of 216 Deputies, ranged as follows: Peasants, 120; Communists, 42; Democrats, 21; Popular Progressives, 21; Radical Democrats, 8; Social Democrats, 8, and National Liberals, 6. The rural representation is not astonishing when it is considered that 80 per cent. of the present Bulgar population of 5,001,000 are peasants, but that the urban population of the remaining 20 per cent. should have returned so large a representation of communists has been of grave concern to the Government.”—*Bulgaria counts on a new Sèvres treaty* (*N. Y. Times Current History*, April, 1921).

“According to advices reaching Sophia from Warsaw, M. Stambolisky spent the Christmas holidays at Zakopane with the Polish prime minister, M. Witos and proposed an *entente* between the peasant organizations of central and eastern Europe as the best mode of obstruction to the spread of Bolshevism on the one hand and reactionism on the other. His idea was called a ‘Green Internationale.’”—*N. Y. Times Current History*, February, 1921.

“**BULGARIAN BISMARCK.**” See STAMBOLSKY, STEFAN.

BULGARIAN CHURCH.—The Bulgarian people were converted to Christianity in the ninth century, being of the same communion as the Greek Orthodox church. Until 1870 the Bulgarians recognized the supremacy of the patriarch at Constantinople, but at that time, after some years of restlessness they seceded from the control of the patriarch and the Bulgarian church as such came into existence. See BULGARIA: 1258-1872; CHRISTIANITY: 9th century; Bulgarian church.

BULGARIANS: Ancient peoples. See BALKAN STATES: Races existing.

7th century.—Settle Bulgaria. See BULGARIA: 7th century.

National characteristics. See BALKAN STATES: 19th century.

BULKELEY, Morgan G., governor of Connecticut, 1880-1893, Republican. See CONNECTICUT: 1890-1892.

BULL, John (1562-1628), one of the great English musicians of the Elizabethan period. In 1591 he became organist of the Chapel Royal; 1596, appointed first professor of music at Gresham

College. He was a remarkable performer, a thorough contrapuntist and a prolific composer.

BULL, Golden, of Charles IV (1356). See **GERMANY**: 1347-1493.

BULL MOOSE.—This name was applied to Theodore Roosevelt in the campaign of 1912. Some of his friends had been a bit worried about his health. One of them asked him one morning how he was feeling. He is said to have replied, "I feel as fit as a three year old bull moose." Cartoonists and newspaper reporters took up the phrase, and the Roosevelt faction, later the Progressive party, became known as the Bull Moose party. The head of a moose took place along side the Republican elephant and the Democratic donkey as a recognized political emblem.—See also **U. S. A.**: 1912; Woodrow Wilson and the election.

BULL RING RIOTS. See **BIRMINGHAM**: 1839.

BULL RUN, or **Manassas, First Battle of**. See **U. S. A.**: 1861 (July; Virginia).

Second Battle of. See **U. S. A.**: 1862 (August-September; Virginia): End of General Pope's campaign.

BULLARD, Robert Lee (1861-), American general. Successively commander of brigade, division, army corps and army in the American Expeditionary Forces; one of Pershing's principal generals in 1918 during World War. See **WORLD WAR**: 1918: II. Western front: g, 9, iii; v, 1.

BULLECOURT, a village near Arras, north-eastern France, where in 1917, German trenches were taken by the Australians during World War. See **WORLD WAR**: 1917: II. Western front: c, 17; g, 5; 1918: II. Western front: c; k, 3.

BULLEN, Anne. See **BOLEYN**, Anne.

BULLETS, Expanding, use in warfare a violation of international law. See **DUM-DUM BULLET**; **HAGUE CONFERENCES**: 1899: Conference, Convention with respect to the laws and customs of war on land.

BULLITT, William C., American journalist. Entered state department to work in the division of Western European affairs; 1918, went to Paris as a member of the staff of the peace commission; 1919, left for Russia at the request of the Secretary of State to study conditions there. See **U. S. A.**: 1920 (December).

BULLS (in stock market). See **STOCK EXCHANGE**.

BULLS, Papal.—The name is derived from the Latin word *bullā*, meaning a circular plate or boss of metal. In the Middle Ages, it was applied to the seals of papal and royal documents, and later to the documents themselves, which is the present use. Since the fifteenth century, the term has been restricted to a special type of papal documents, authenticated by leaden seals, in which the pope invariably takes the title of *episcopus, servus servorum Dei* (overseer, servant of the servants of God). Bulls are distinguished from briefs, which dispense with certain formalities and are sealed in wax with the ring of the fisherman. Since the development of the international postal system, the leaden seal is often replaced by a seal bearing the same device in red ink. The various types of papal documents, such as constitutions, encyclicals, decretals, rescripts, privileges and apostolic letters of different sorts, technically distinguished from one another, all apparently took the form of bulls down to the fifteenth century. The use of the bull has now become less common. The rules governing its issuance are so intricate, and the process so cumbersome and expensive, that the less formally prepared documents are employed, except where an unusual amount of ceremony is

considered necessary. (See also **GERMANY**: 1347-1493; **JESUITS**: 1761-1769; 1769-1871; **PAPACY**: 1294-1348.) Of the many papal bulls that have been issued, the following are among the most noteworthy:

1155.—"Laudabiliter."—Published by Pope Adrian IV in 1155 authorizing the subjugation of Ireland by King Henry II of England.

1296.—*Clericis Laicos*.—Published by Pope Boniface VIII, February 24, 1296, forbidding "the clergy to pay and the secular powers to exact, under penalty of excommunication, contributions or taxes, tenths, twentieths, hundreds, or the like, from the revenues or the goods of the churches or their ministers."—W. Stubbs, *Constitutional history of England*, ch. 14.—See also **PAPACY**: 1294-1348.

ALSO IN: E. F. Henderson, *Select historical documents of the Middle Ages*, bk. 4, no. 6.

1301.—*Ausculata Fili and Salvator Mundi*. See **PAPACY**: 1294-1348.

1492.—*Demarcation of Alexander VI*. See **AMERICA**: 1492.

1520.—*Exurge Domine*.—Published by Leo X in 1520 against Luther's propositions. See **PAPACY**: 1517-1521.

1713.—*Unigenitus*.—Published by Pope Clement XI in 1713, condemning the work of Pasquier Quesnel who in 1671 published a book containing the four gospels with Jansenistic notes.—See also **CONVULSIONISTS**; **PORT ROYAL AND THE JANSENISTS**: 1702-1715.

1765.—*Apostolicum*. See **JESUITS**: 1761-1769.

1773.—*Dominus ac Redemptor Noster*. See **JESUITS**: 1760-1871.

1814.—*Solicitudo Omnium*.—Published by Pope Pius VIII, restoring the order of the Jesuits which had been abolished by the papal bull of 1773. See **JESUITS**: 1769-1871.

1854.—*Ineffabilis*.—Published by Pope Pius IX in 1854. It proclaimed the doctrine of the Immaculate Conception of Mary, the mother of Jesus. See **PAPACY**: 1854.

1869.—*Apostolicæ sedis*.—Published by Pope Pius IX in 1869, regulating censures and reservations. It is practically the present penal code of the Roman Catholic church. See **PAPACY**: 1869-1870.

1870.—*Pastor Aeternus*.—Published by Pope Pius IX in 1870, declaring and defining the doctrine of papal infallibility. See **PAPACY**: 1869-1870.

BULOW, Bernhard Heinrich Karl Martin, Prince von (1849-), German statesman. Was chancellor, 1900-1909; vainly tried by diplomacy to avert Italy's entry into the World War (1915).—See also **ENGLAND**: 1912; **GERMANY**: 1900 (October 18); 1900-1909; **PAN-GERMANISM**: German presentation of; **WAR, PREPARATION FOR**: 1909: German side of navy building.

BULOW, Friedrich Wilhelm, Freiherr von (1755-1816), Prussian general. In 1813 he defeated Oudinot at Luckau and at Grossbeeren and Ney, at Dennewitz; also fought at Leipsic; in 1814 served at Laon and Montmartre; at capitulation of Soissons; in 1815 took part in the final struggle at Waterloo.—See also **GERMANY**: 1813 (October-December); **NETHERLANDS**: 1813; **FRANCE**: 1814 (January-March).

BULOW, Fritz von, German general in the World War. Took active part in the 1914 invasion of France, commanding the army on the left of von Kluck at the Marne.—See also **BELGIUM**: 1914-1918; **WORLD WAR**: 1914: I. BUND, German: Framed by Congress of Vienna (1815). See *SUFFRAGE, MANHOOD: Germany: 1800-1840.*

BUNDES-RAT.—The laws that governed the German empire were made by two bodies—the Bundesrat and the Reichstag. The Bundesrat was a kind of diplomatic assembly. It represented the rulers of the 25 states of which the empire consisted, being composed of delegates appointed by the rulers. The states of Germany were not represented equally in the Bundesrat. Of 61 members, Prussia had 17, and the 3 votes allotted to Alsace-Lorraine since 1911 were "instructed" by the emperor. Thus Prussia had 20, Bavaria had 6, Saxony and Württemberg 4 each, others 3 or 2 and 17 of the states had only 1 apiece. Inasmuch as each state delegation voted as a unit as the ruler ordered, the Bundesrat was in reality an assembly of the sovereigns of Germany, responsible only to themselves. It was the most important element of the legislature, as most legislation began in it; and every bill passed by the Reichstag was, after that, submitted to it for ratification or rejection. Thus the princes of Germany had an absolute veto upon the only popular element in the government, the Reichstag. Representing the princes of Germany, the Bundesrat was a thoroughly monarchical institution, a bulwark of the monarchical order. The proceedings of this princely assembly were secret. After the revolution of 1910, the Bundesrat became the National Council or Reichsrat. See *GERMANY: 1885; GERMANY: CONSTITUTION OF THE REPUBLIC; also CHANCELLOR, German Imperial.*

BUNSEN, Sir Maurice de (William Ernest) (1851-), British statesman. Reports on conditions in Austria. See *WORLD WAR: Diplomatic background: 68.*

BUNSEN, Robert Wilhelm (1811-1899), a distinguished German teacher and chemist; in joint research with Kirchhoff, he introduced a system of spectrum analysis by means of which he discovered caesium and rubidium; his flame tests have also introduced a new method in analytical chemistry; his burner, bearing his name, is only one of his many simple and efficient laboratory devices which are in use to-day, the principle of the burner having also been utilized for household cooking purposes. His researches led to the acceptance of the idea of radicals existing in compounds, one of the fundamental principles of modern organic chemistry; he is also generally regarded as the founder of modern gas analysis; his invention of the ice calorimeter is among the greatest of his contributions, for it is found almost indispensable in thermo-chemical determinations.—See also *CHEMISTRY: Inventions: Modern: Lavoisier; INVENTIONS: 19th century: Artificial light, Instruments.*

BUNYAN, John (1628-1688), English writer. He enlisted in the Parliamentary army in 1645. "After the Restoration he attempted to continue his preaching, notwithstanding the laws against Dissenters, and as a result was imprisoned for a long time in Bedford jail. From his prison he sent out a series of religious tracts and other works. In 1678 appeared his *Pilgrim's Progress*, the most popular allegorical work ever written."—*E. P. BURGENLAND.—"The other territorial clause [in the Treaty of Versailles] to be put into effect—as stipulated also in the Treaty of St. Germain—was the cession of Burgenland, or the three westernmost counties of Hungary, inhabited by Germans, to the Austrian Republic. This should have taken place on Aug. 22 [1921], but when, after several postponements, an Austrian force entered the district, on Aug. 28, it was met with violent resistance by armed bands of Hungarians. Skirmishing continued for several days; the Hungarian irregulars, besides fighting the Austrian gendarmerie, committed a series of atrocities against the peaceable German population. This led to energetic protests on the part of the Austrian Government, which accused the Magyar Government of bad faith, and demanded that the transfer be

enforced and Burgenland cleared of Magyar soldiers by Entente troops, as Austria had fulfilled her obligations under the treaty of peace and disarmed, whereas Hungary still maintains a large army. The situation was rendered more serious on Sept. 11, when Burgenland was occupied, not by Entente troops, but by a detachment of the regular Hungarian Army. The territory in dispute has an area of 1,700 square miles and a population under 350,000. The proximity of Burgenland to Vienna, with the remarkable productivity of this small strip in respect to milk, fruit, vegetables, poultry, eggs, cereals, potatoes, sugar and wine, gives it especial importance to the Viennese, and as it now belongs to the Austrians by treaty rights, they are determined to hold it at all hazards."—*New York Times Current History, October, 1921, p. 160.*—On Jan. 1, 1922, Oedenburg, principal city of Burgenland, was handed over to Hungary by the Interallied commission which had conducted a plebiscite there. In April, 1922, Hungarian troops were still invading Austrian territory in Burgenland and the Hungarian government was making claims before the Interallied Boundary Commission for more than one-fourth of the disputed territory.

BURGESSES, House of, the legislative body in certain of the American colonies, notably influential in Virginia. See VIRGINIA: 1660-1769.

BURGGRAF, a lieutenant appointed to the command of a burg. In the Middle Ages, particularly in Germany, he was more like a feudal lord or prince. See SUFFRAGE, MANHOOD: 1000-1300.

BURGH, Hubert de (d. 1243), English statesman, chief justiciar and regent for Henry III. See ENGLAND: 1216-1272.

BURGH, or **BURGI**, or **BURH**. See BOROUGH.

BURGHLEY, William Cecil, 1st Baron (1520-1598), English statesman and chief councillor of Queen Elizabeth for forty years; in 1571 created baron. See ENGLAND: 1558-1598.

BURGOS, Antonio, Panaman representative at Peace conference. See VERSAILLES, TREATY OF: Conditions of peace.

BURGOS, city in Spain, formerly the capital of old Castile, 130 miles north of Madrid; was the scene of severe fighting in the Peninsular War. See SPAIN: 1808 (September-December).

BURGOYNE, John (1722-1792), English general and dramatist. In 1759 introduced light cavalry into the British army; in 1761 was a member of parliament; in 1762 fought as a brigadier-general in Portugal; in 1768 again served in parliament and began to write plays; in 1777 led a force from Canada through northern New York, and after initial successes, was defeated by the Americans at the decisive battle of Saratoga and forced to surrender; spent his later years as a successful dramatist; father of Field Marshal Sir John Fox Burgoyne.—See also U. S. A.: 1775 (April-May); 1775 (June); 1777 (July-October).

BURGOYNE, Sir John Fox (1782-1871), British field marshal. Was an illegitimate son of General John Burgoyne; won distinction as a military engineer, serving in Egypt, Sweden, Portugal and America (at New Orleans, 1815); in charge of engineering operations at the siege of Sebastopol (1854-1855); became field marshal in 1868.

BURGUNDIANS: Origin and early history.—"About the middle of the fourth century, the countries, perhaps of Lusace and Thuringia, on either side of the Elbe, were occupied by the vague dominion of the Burgundians—a warlike and numerous people of the Vandal race, whose obscure name insensibly swelled into a powerful kingdom,

and has finally settled on a flourishing province. . . . The disputed possession of some salt-pits engaged the Alemanni and the Burgundians in frequent contests. The latter were easily tempted by the secret solicitations and liberal offers of the emperor [Valentinian, A. D. 371]; and their fabulous descent from the Roman soldiers who had formerly been left to garrison the fortresses of Drusus was admitted with mutual credulity, as it was conducive to mutual interest. An army of fourscore thousand Burgundians soon appeared on the banks of the Rhine, and impatiently required the support and subsidies which Valentinian had promised; but they were amused with excuses and delays, till at length, after a fruitless expectation, they were compelled to retire. The arms and fortifications of the Gallic frontier checked the fury of their just resentment."—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 25.*—"We first hear of them [the Burgundians] as a tribe of Teutonic stock, located between the Oder and the Vistula, on either bank of the river Warta. When the Gepidæ descended southward with the Goths, the Burgundians were compelled to recoil before the advance of the former tribe: one portion of them took refuge in Bornholm, an island of the Baltic; the remainder turned westward, and made an attempt to enter Gaul. They were repulsed by Probus, but permitted to settle near the sources of the Main. Jovian showed them favour, and gave them lands in the Germania Secunda. This was in the latter part of the fourth century. Just at its close, they adopted Christianity, but under an Arian form. Ammianus tells us that they were a most warlike race."—J. G. Sheppard, *Fall of Rome, lecture 8.*—"The other Teutonic people had very little regard for the Burgundians; they accused them of having degenerated from the valor of their ancestors, by taking in petty towns (bourgades), whence their name Burgundii sprang; and they looked upon them as being more suitable for the professions of mechanics, smiths, and carpenters, than for a military life."—J. C. L. de Sismondi, *French under the Merovingians, ch. 3.*—"A document of A. D. 786, in noticing the high tract of lands between Ellwangen and Anspach, has the following expression.—'in Waldo, qui vocatur Virginnia.' Grimm looks for the derivation of this word in the Mæso-Gothic word 'fairguni,' Old High German 'fergund'—woody hill-range. . . . I have little doubt but that this is the name of the tract of land from which the name Burgundi arose; and that it is the one which fixes their locality. If so, between the Burgundian and Suevic Germans, the difference, such as it was, was probably almost wholly political."—R. G. Latham, *Germania of Tacitus; Epilegomena, sect. 12.*—See also EUROPE: Ethnology; Migrations: Map showing barbaric migrations; SWITZERLAND: 1st-3rd centuries.

BURGUNDY.—During the Middle Ages the kingdom, duchy and county of Burgundy occupied territory in the eastern part of present France. 277.—Vanquished by Probus. See GAUL:

277
406-409.—Invasion of Gaul. See GAUL: 406-409.

443-451.—Savoyan kingdom.—"In the south-east of Gaul, the Burgundians had, after many wars and some reverses, established themselves (443) with the consent of the Romans in the district then called Sapaudia and now Savoy. Their territory was somewhat more extensive than the province which was the cradle of the present royal house of Italy, since it stretched northwards beyond the lake of Neufchatel and southwards as far as Gren-

oble. Here the Burgundian immigrants under their king Gundiok, were busy settling themselves in their new possession, cultivating the lands which they had divided by lot, each one receiving half the estate of a Roman host or 'hospes' (for under such gentle names the spoliation was veiled), when the news came that the terrible Hun had crossed the Rhine [451], and that all hosts and guests in Gaul must unite for its defence"—T. Hodgkin, *Italy and her invaders*, bk. 2, ch. 3.

451.—At the battle of Chalons. See HUNS: 451.

500.—Extension of kingdom.—"Their [the Burgundians'] domain, considerably more extensive than when we last viewed it on the eve of Attila's invasion, now included the later provinces of Burgundy, Franche-Comté and Dauphiné, besides Savoy and the greater part of Switzerland—in fact the whole of the valleys of the Saone and the Rhone, save that for the last hundred miles of its course, the Visigoths barred them from the right bank and from the mouths of the latter river." At the time now spoken of (500), the Burgundian kingdom was divided between two brother-kings, Gundobad reigning at Lyons and Vienne, and Godegisel at Geneva. Godegisel, the younger, had conspired with Clovis, the king of the Franks, against Gundobad, and in this year 500 the two confederates defeated the latter, at Dijon, driving him from the most part of his kingdom. But Gundobad presently recovered his footing, besieged and captured his treacherous brother at Vienne and promptly put him to death—thereby reuniting the kingdom.—T. Hodgkin, *Italy and her invaders*, bk. 4, ch. 9.

534.—Conquest by the Franks.—"I am impatient to pursue the final ruin of that kingdom [the Burgundian] which was accomplished under the reign of Sigismund, the son of Gundobad [or Gundobad]. The Catholic Sigismund has acquired the honours of a saint and martyr; but the hands of the royal saint were stained with the blood of his innocent son. . . . It was his humble prayer that Heaven would inflict in this world the punishment of his sins. His prayer was heard; the avengers were at hand; and the provinces of Burgundy were overwhelmed by an army of victorious Franks. After the event of an unsuccessful battle, Sigismund . . . with his wife and two children, was transported to Orleans and buried alive in a deep well by the stern command of the sons of Clovis, whose cruelty might derive some excuse from the maxims and examples of their barbarous age. . . . The rebellious Burgundians, for they attempted to break their chains, were still permitted to enjoy their national laws under the obligation of tribute and military service; and the Merovingian princes peaceably reigned over a kingdom whose glory and greatness had been first overthrown by the arms of Clovis."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 38.—See also FRANKS: 511-752.

ALSO IN: W. C. Perry, *Franks*, ch. 3.

534-752.—Merovingian kingdom.—After the overthrow of the Burgundian monarchy by the sons of Clovis, the territory of the Burgundians, with part of the neighboring Frank territory added to it, became, under the name of Burgundia or Burgundy, one of the three Frank kingdoms (Austria and Neustria being the other two), into which the Merovingian princes divided their dominion. It occupied "the east of the country, between the Loire and the Alps, from Provence on the south to the hill-ranges of the Vosges on the north."—P. Godwin, *History of France: Ancient Gaul*, ch. 13.

687-800.—Carolingian kingdom. See GERMAN: 687-800.

843-933.—Divisions of early kingdom.—Later kingdoms of the south and the French dukedom of the northwest.—By the treaty of Verdun, 843, which formally divided the empire of Charlemagne among his three grandsons, a part of Burgundy was taken to form, with Italy and Lorraine, the kingdom of the emperor Lothar, or Lothaire. In the further dissolutions which followed, a kingdom of Burgundy or Provence was founded in 877 by one Boso, a prince who had married Irmingard, daughter of the emperor Louis II, son of Lothaire. It "included Provence, Dauphiné, the southern part of Savoy, and the country between the Saone and the Jura," and is sometimes called the kingdom of Cis-Jurane Burgundy. "The kingdom of Trans-Jurane Burgundy, . . . founded by Rudolf in 888, recognized in the same year by the Emperor Arnulf, included the northern part of Savoy, and all Switzerland between the Reuss and the Jura."—J. Bryce, *Holy Roman empire*, ch. 6, and *app.*, note A.—"The kingdoms of Provence and Transjuran Burgundy were united, in 933, by Raoul II., King of Transjuran Burgundy, and formed the kingdom of Arles, governed, from 937 to 993, by Conrad le Pacifique."—F. Guizot, *History of civilization*, lecture 24.—F. Palgrave, *History of Normandy and England*, bk. 1, ch. 4.—"Several of the greater and more commercial towns of France, such as Lyons, Vienne, Geneva, Besançon, Avignon, Arles, Marseilles and Grenoble were situated within the bounds of his [Conrad the Pacific's] states."—J. C. L. de Sismondi, *France under the feudal system*, ch. 2.—"Of the older Burgundian kingdom, the northwestern part, forming the land best known as the Duchy of Burgundy, was, in the divisions of the ninth century, a fief of Karolingia or the Western Kingdom. This is the Burgundy which has Dijon for its capital, and which was held by more than one dynasty of dukes as vassals of the Western kings, first at Laon, and then at Paris. This Burgundy, which, as the name of France came to bear its modern sense may be distinguished as the French Duchy, must be carefully distinguished from the Royal Burgundy" of the Cis-Jurane and Trans-Jurane kingdoms mentioned above.—E. A. Freeman, *Historical geography of Europe*, ch. 6, sect. 1.

888-1032.—French dukedom.—Founding of the first Capetian house.—Of the earliest princes of this northwestern fragment of the old kingdom of Burgundy little seems to have been discoverable. The fief and its title do not seem to have become hereditary until they fell into the grasping hands of the Capetian family, which happened just at the time when the aspiring counts of Paris were rising to royal rank. In the early years of the tenth century the reigning count or duke was Richard-le-Justicier, whose distinguishing princely virtue is recorded in his name. This Richard-le-Justicier was a brother of that Boso, or Boson, son-in-law of the emperor Louis II, who took advantage of the confusions of the time to fashion for himself a kingdom of Burgundy in the south (Cis-Jurane Burgundy, or Provence,—see above). Richard's son Raoul, or Rudolph, married Emma, the daughter of Robert, count of Paris and duke of France, who was soon afterwards chosen king, by the nobles who tired of Carolingian misrule. King Robert's reign was short; he fell in battle with the Carolingians, at Soissons, the next year (923). His son Hugh, called le Grand, or the Great, found it more to his taste to be king-maker than to be king. He declined the proffered crown, and brought about the coronation of his brother-in-

law, the Burgundian Rudolph, who reigned for eleven years. When he died, in 934, Hugh the Great still held the crown at his disposal and still refused to wear it himself. It now pleased this king-maker to set a Carolingian prince on the throne, in the person of Louis d'Outre Mer, a young son of Charles the Simple, who had been reared in England by his English mother. But, if Duke Hugh cared nothing for the name, he cared much for the substance, of power. He grasped dominion wherever it fell within his reach, and the Burgundian duchy was among the states which he clutched. King Rudolph left no son to inherit either his dukedom or his kingdom. He had a brother, Hugh, who claimed the duchy; but the greater Hugh was too strong for him and secured, with the authority of the young king, his protégé, the title of duke of Burgundy and the larger part of the domain. "In the Duchy of France or the County of Paris Hugh-le-Grand had nothing beyond the regalities to desire, and both in Burgundy and the Duchy he now became an irremovable Viceroy. But the privileges so obtained by Hugh-le-Grand produced very important political results, both present and future. Hugh assumed even a loftier bearing than before; Burgundy was annexed to the Duchy of France, and passed with the Duchy; and the grant thereof made by Hugh Capet to his son [brother?] Henri-le-Grand, severing the same from the crown, created the premier Duchy of Christendom, the most splendid appanage which a prince of the third race [the Capetians] could enjoy—the rival of the throne."—Sir F. Palgrave, *History of Normandy and England*, bk. 1, pt. 2, ch. 1-4.—Hugh-le-Grand died in 956. "His power, which, more than his talents or exploits, had given him the name of Great, was divided between his children, who were yet very young. . . . There is some doubt as to their number and the order of their birth. It appears, however, that Otho was the eldest of his three sons. He had given him his part of the duchy of Burgundy, and had made him marry the daughter and heir of Gislebert, duke of another part of Burgundy, to which Otho succeeded the same year. The latter dying in 963 or 965, the duchy of Burgundy passed to his third brother, sometimes named Henry, sometimes Eudes. Hugues [Hugh], surnamed Capet, who succeeded to the county of Paris and the duchy of France, was but the second son."—J. C. L. de Sismondi, *French under the Carolingians*, ch. 15.—In 987 Hugh Capet became king of France and founded the lasting dynasty which bears his name. His elder brother Henry remained duke of Burgundy until his death, in 1002, when his royal nephew, Robert, son and successor of Hugh, annexed the duchy to the crown. It so remained until 1032. Then King Henry I, son of Robert, granted it as an appanage to his brother Robert, who founded the first Capetian house of Burgundy.—E. de Bonnechose, *History of France*, bk. 1, ch. 2.

954.—Ravaged by Magyars. See HUNGARY: 934-955.

1032.—Last kingdom.—Union with Germany, and dissolution.—The last kingdom which bore the name of Burgundy—though more often called the kingdom of Arles—formed, as stated above, by the union of the short-lived kingdoms of Provence and Transjuran Burgundy, became in 1032 nominally united to the dominions of the emperor-king of Germany. Its last independent king was Rudolf III, son of Conrad the Pacific, who was uncle to the emperor Henry II. Being childless, he named Henry his heir. The latter, however, died first, in 1024, and Rudolf attempted to cancel his bequest,

claiming that it was made to Henry personally, not as king of the Germans. When, however, the Burgundian king died, in 1032, the then reigning emperor, Conrad the Salic, or the Franconian, formally proclaimed the union of Burgundy with Germany. "But since Burgundy was ruled almost exclusively by the great nobility, the sovereignty of the German Emperors there was never much more than nominal. Besides, the country, from the Bernese Oberland to the Mediterranean, except that part of Allemannia which is now German Switzerland, was inhabited by a Romance people, too distinct in language, customs and laws from the German empire ever really to form a part of it. . . . Yet Switzerland was thenceforth connected forever with the development of Germany, and for 500 years remained a part of the empire."—C. T. Lewis, *History of Germany*, bk. 2, ch. 6-7.—"The weakness of Rodolph-le-Fainéant (Rodolph II), who made Henry II of Germany his heir, as stated above), gave the great lords of the kingdom of Arles an opportunity of consolidating their independence. Among these one begins to remark Berchtold and his son, Humbert-aux-Blanches-Mains (the White-handed), Counts of Maurienne, and founders of the House of Savoy; Otto William, who it is pretended was the son of Adalbert, King of Italy, and heir by right of his mother to the county of Burgundy, was the founder of the sovereign house of Franche-Comté [county Palatine of Burgundy]; Guigue, Count of Albon, founder of the sovereign house of the dauphins of Viennois; and William, who it is pretended was the issue of a brother of Rodolph of Burgundy, King of France, and who was sovereign count of Provence. These four lords had, throughout the reign of Rodolph, much more power than he in the kingdom of Arles; and when at his death his crown was united to that of the Empire, the feudatories who had grown great at his expense became almost absolutely independent. On the other hand, their vassals began on their side to acquire importance under them; and in Provence can be traced at this period the succession of the counts of Forcalquier and of Venaissin, of the princes of Orange, of the viscounts of Marseille, of the barons of Baux, of Sault, of Grignau, and of Castellane. We can still follow the formation of a great number of other feudatory or rather sovereign houses. Thus the counts of Toulouse, those of Rouergue, the dukes of Gascony, the counts of Foix, of Béarn, and of Carcassone, date at least from this epoch; but their existence is announced to us only by their diplomas and their wills."—J. C. L. de Sismondi, *France under the feudal system*, ch. 2.

1127-1378.—Franco-Germanic contest for the valley of the Rhone.—End of the kingdom of Arles.—"As soon as the Capetian monarchs had acquired enough strength at home to be able to look with safety abroad, they began to make aggressions on the tempting and wealthy dependencies of the distant emperors. But the Rhone valley was too important in itself, and of too great strategical value as securing an easy road to Italy, to make it possible for the emperors to acquiesce easily in its loss. Hence a long conflict, which soon became a national conflict of French and Germans, to maintain the Imperial position in the 'middle kingdom' of the Rhone valley. M. Fournier's book [*Le Royaume d'Arles et de Vienne (1138-1178)*]; par Paul Fournier] aims at giving an adequate account of this struggle. . . . From the times of the mighty Barbarossa to the times of the pretentious and cunning Charles of Luxemburg nearly every emperor sought by constant

acts of sovereignty to uphold his precarious powers in the Arelate. Unable to effect much with their own resources, the emperors exhausted their ingenuity in finding allies and inventing brilliant schemes for reviving the Arelate, which invariably came to nothing. Barbarossa won the hand of the heiress of the county of Burgundy, and sought to put in place of the local dynasties princes on whom he could rely, like Berthold of Züringen, whose father had received in 1127 from Conrad III. the high-sounding but meaningless title of Rector of the Burgundies. But his quarrel with the church soon set the clergy against Frederick, and, led by the Carthusian and Cistercian orders, the Churchmen of the Arelate began to look upon the orthodox king of the French as their truest protector from a schismatic emperor. But the French kings of the period saw in the power of Henry of Anjou [Henry II, of England—see ENGLAND: 1154-1189] a more real and pressing danger than the Empire of the Hohenstaufen. The result was an alliance between Philip Augustus and his successors and the Swabian emperors, which gave Frederick and his successors a new term in which they could strive to win back a real hold over Burgundy. Frederick II never lost sight of this object. His investiture of the great feudal lord William of Baux with the kingdom of Arles in 1215; his long struggle with the wealthy merchant city of Marseilles; his alliance with Raymond of Toulouse and the heretical elements in Provence against the Pope and the French; his efforts to lead an army against Innocent IV. at Lyons, were among the chief phases of his constant efforts to make the Imperial influence really felt in the valley of the Rhone. But he had so little success that the French crusaders against the Albigenses waged open war within its limits, and destroyed the heretic city of Avignon while Innocent in his exile could find no surer protection against the emperor than in the Imperial city of Lyons. After Frederick's death the policy of St. Louis of France was a complete triumph. His brother, Charles of Anjou, established himself in Provence, though in later times the Angevin lords of Provence and Naples became so strong that their local interests made them enemies rather than friends of the extension of French power on their borders. The subsequent efforts of the emperors were the merest shams and unrealities. Rudolf of Hapsburg acquiesced without a murmur in the progress of Philip the Fair, who made himself master of Lyons, and secured the Free County of Burgundy for his son. . . . The residence of the Popes at Avignon was a further help to the French advance. . . . Weak as were the early Valois kings, they were strong enough to push still further the advantage won by their greater predecessors. The rivalry of the leading states of the Rhone valley, Savoy and Dauphiny, facilitated their task. Philip VI. aspired to take Vienne as Philip IV. had obtained Lyons. The Dauphin, Humbert II., struggled in vain against him, and at last accepted the inevitable by ceding to the French king the succession to all his rights in Dauphiny, henceforth to become the appanage of the eldest sons of the French kings. At last, Charles of Luxemburg, in 1378, gave the French aggressions a legal basis by conferring the Vicariat of Arles on the Dauphin Charles, subsequently the mad Charles VI. of France. From this grant Savoy only was excepted. Henceforth the power of France in the Rhone valley became so great that it soon became the fashion to despise and ignore the theoretical claims of the Empire."—*Athenæum*, Oct. 3, 1891 (reviewing "*Le Royaume d'Arles et de Vienne*," by P. Fournier).

1207-1401.—Advance of the dominions of the house of Savoy beyond Lake Geneva. See SAVOY AND PIEDMONT: 11th-15th centuries.

1364.—French dukedom.—Planting of the Burgundian branch of the house of Valois.—The last duke of Burgundy of the Capetian house which descended from Robert, son of King Robert, died in December, 1361. He was called Philip de Rouvre, because the Château de Rouvre, near Dijon, had been his birth-place and his residence. He was still in his youth when he died, although he had borne the ducal title for twelve years. It fell to him at the age of four, when his father died. From his mother and his grandmother he inherited, additionally, the county of Burgundy (Franche Comté) and the counties of Boulogne, Auvergne and Artois. His tender years had not prevented the marriage of the young duke to Margaret, daughter and heiress of the count of Flanders. John II, king of France, whose mother was a Burgundian princess, claimed to be the nearest relative of the young duke, when the latter died, in 1361, and, although his claim was disputed by the king of Navarre, Charles the Bad, King John took possession of the dukedom. He took it by right of succession, and not as a fief which had lapsed, the original grant of King Robert having contained no reversionary provision. Franche Comté, or the county of Burgundy, together with Artois, remained to the young widow, Margaret of Flanders, while the counties of Boulogne and Auvergne passed to John of Boulogne, count de Montfort. A great opportunity for strengthening the crown of France, by annexing to it the powerful Burgundian dukedom, was now offered to King John; but he lacked the wisdom to improve it. He preferred to grant it away as a splendid appanage for his favorite son—the fourth—the spirited lad Philip, called the Fearless, who had stood by his father's side in the disastrous battle of Poitiers, and who had shared his captivity in England. By a deed which took effect on King John's death, in 1364, the great duchy of Burgundy was conferred on Philip the Fearless and on his heirs. Soon afterward's Philip's marriage with the young widow of his predecessor, Philip de Rouvre, was brought about, which restored to their former union with the dukedom the Burgundian county (Franche Comté) and the county of Artois, while it gave to the new duke prospectively the rich county of Flanders, to which Margaret was the heiress. Thus was raised up anew the most formidable rival which the royal power in France had ever to contend with, and the magnitude of the blunder of King John was revealed before half a century had passed.—Froissart (Johnes) *Chronicles*, bk. 1, ch. 216.

1467.—Charles the Bold.—His position, between Germany and France.—His antagonism to Louis XI.—The “middle kingdom” of his aims.—Charles, known commonly in history as Charles the Bold, became duke of Burgundy in 1467, succeeding his father Philip, misnamed “The Good.” “His position was a very peculiar one; it requires a successful shaking-off of modern notions fully to take in what it was. Charles held the rank of one of the first princes in Europe without being a King, and without possessing an inch of ground for which he did not owe service to some superior lord. And, more than this, he did not owe service to one lord only. The phrase of ‘Great Powers’ had not been invented in the 15th century; but there can be no doubt that, if it had been, the Duke of Burgundy would have ranked among the foremost of them. He was, in actual strength, the equal of his royal neighbour to the west, and far more than the equal of his imperial neighbour to the east. Yet for every inch of his territories he owed a vassal’s duty to one or other of them. Placed on the borders of France and the Empire, some of his territories were held of the Empire and some of the French crown. Charles, Duke of Burgundy, Count of Flanders and Artois, was a vassal of France; but Charles, Duke of Brabant, Count of Burgundy, Holland, and a dozen other duchies and counties, held his dominions as a vassal of Cæsar. His dominions were large in positive extent, and they were valuable out of all proportion to their extent. No other prince in Europe was the direct sovereign of so many rich and flourishing cities, rendered still more rich and flourishing through the long and, in the main, peaceful administration of his father. The cities of the Netherlands were incomparably greater and more prosperous than those of France or England; and, though they enjoyed large municipal privileges, they were not, like those of Germany, independent commonwealths, acknowledging only an external suzerain in their nominal lord. Other parts of his dominions, the Duchy of Burgundy especially, were as rich in men as Flanders was rich in money. So far the Duke of Burgundy had some great advantages over every other prince of his time. But, on the other hand, his dominions were further removed than those of any prince in Europe from forming a compact whole. He was not King of one kingdom, but Duke, Count, and Lord of innumerable duchies, counties, and lordships, acquired by different means, held by different titles and of different overlords, speaking different languages, subject to different laws, transmitted according to different rules of succession. . . . They lay in two large masses, the two Burgundies forming one and the Low Countries forming the other, so that their common master could not go from one capital to another without passing through a foreign territory. And, even within these two great masses, there were portions of territory intersecting the ducal dominions which there was no hope of annexing by fair means. . . . The career of Charles the Bold . . . divides itself into a French and a German portion. In both alike he is exposed to the restless rivalry of Lewis of France; but in the one period that rivalry is carried on openly within the French territory, while in the second period the crafty king finds the means to deal far more effectual blows through the agency of Teutonic hands. . . . As a French prince, he joined with other French princes to put limits on the power of the Crown, and to divide the kingdom into great feudal holdings, as nearly independent as might be of the common overlord. As a French

prince, he played his part in the War of the Public Weal [see FRANCE: 1461-1468], and insisted, as a main object of his policy, on the establishment of the King’s brother as an all but independent Duke of Normandy. The object of Lewis was to make France a compact monarchy; the object of Charles and his fellows was to keep France as nearly as might be in the same state as Germany. But, when the other French princes had been gradually conquered, won over, or got rid of in some way or other by the crafty policy of Lewis, Charles remained no longer the chief of a coalition of French princes, but the personal rival, the deadly enemy, of the French King. . . . Chronologically and geographically alike, Charles and his Duchy form the great barrier, or the great connecting link, whichever we choose to call it, between the main divisions of European history and European geography. The Dukes of Burgundy of the House of

CHARLES THE BOLD

Valois form a sort of bridge between the later Middle Age and the period of the Renaissance and the Reformation. They connect those two periods by forming the kernel of the vast dominion of that Austrian House which became their heir, and which, mainly by virtue of that heirship fills such a space in the history of the 16th and 17th centuries. But the dominions of the Burgundian Dukes hold a still higher historical position. They may be said to bind together the whole of European history for the last thousand years. From the 9th century to the 10th, the politics of Europe have largely gathered round the rivalry between the Eastern and the Western Kingdoms—in modern language, between Germany and France. From the 9th century to the 10th, a succession of efforts have been made to establish, in one shape or another, a middle state between the two. Over and over again during that long period have men striven to make the whole or some portion of the frontier lands stretching from the mouth of the Rhine to the mouth of the Rhone into an independent barrier state. . . . That object was never more distinctly aimed at, and it never seemed nearer to its accomplishment, than when Charles the Bold

actually reigned from the Zuyder Zee to the Lake of Neufchâtel, and was not without hopes of extending his frontier to the Gulf of Lyons. . . . Holding, as he did, parts of old Lotharingia and parts of old Burgundy, there can be no doubt that he aimed at the re-establishment of a great Middle Kingdom, which should take in all that had ever been Burgundian or Lotharingian ground. He aimed, in short, as others have aimed before and since, at the formation of a state which should hold a central position between France, Germany and Italy—a state which should discharge, with infinitely greater strength, all the duties which our own age has endeavoured to throw on Switzerland, Belgium and Savoy. . . . Undoubtedly it would have been for the permanent interest of Europe if he had succeeded in his attempt.”—E. A. Freeman, *Charles the Bold* (*Historical essays, 1st series, no. 11*).—See also ALSACE-LORRAINE: 842-1477.

1467-1468.—War of Charles the Bold with the Liegeois and his troubles with Louis XI.—“Soon after the pacification of the troubles of France the Duke of Burgundy began a war against the Liegeois, which lasted for several years; and whenever the king of France [Louis XI] had a mind to interrupt him, he attempted some new action against the Bretons, and, in the meantime, supported the Liegeois underhand; upon which the Duke of Burgundy turned against him to succour his allies, or else they came to some treaty or truce among themselves. . . . During these wars, and ever since, secret and fresh intrigues were carried on by the princes. The king was so exceedingly exasperated against the Dukes of Bretagne and Burgundy that it was wonderful. . . . The king of France’s aim, in the meantime, was chiefly to carry his design against the province of Bretagne, and he looked upon it as a more feasible attempt, and likelier to give him less resistance than the house of Burgundy. Besides, the Bretons were the people who protected and entertained all his malcontents; as his brother, and others, whose interest and intelligence were great in his kingdom; for this cause he endeavoured very earnestly with Charles, Duke of Burgundy, by several advantageous offers and proposals, to prevail with him to desert them, promising that upon those terms he also would abandon the Liegeois, and give no further protection to his malcontents. The Duke of Burgundy would by no means consent to it, but again made preparations for war against the Liegeois, who had broken the peace.” This was in October, 1467. The duke (Charles the Bold) attacked St. Tron, which was held by a garrison of 3,000 of the men of Liège. The Liegeois, 30,000 strong, came to the relief of the besieged town, and were routed, leaving 6,000 slain on the field. St. Tron and Tongres were both surrendered, and Liège itself, after considerable strife among its citizens, opened its gates to the duke, who entered in triumph (November 17, 1467) and hanged half-a-dozen for his moderate satisfaction. In the course of the next summer the French king opened war afresh upon the duke of Bretagne and forced him into a treaty, before the duke of Burgundy, his ally, could take the field. The king, then being extremely anxious to pacify the duke of Burgundy, took the extraordinary step of visiting the latter at Peronne, without any guard, trusting himself wholly to the honor of his enemy. But it happened unfortunately, during the king’s stay at Peronne, that a ferocious revolt occurred at Liège, which was traced beyond denial to the intrigues of two agents whom King Louis had sent thither not long before, for mischief-making purposes. The duke, in his wrath, was not easily restrained

from doing some violence to the king; but the royal trickster escaped from his grave predicament by giving up the unhappy Liegeois to the vengeance of Duke Charles and personally assisting the latter to inflict it. “After the conclusion of the peace [dictated by Charles at Peronne and signed submissively by Louis] the King and the Duke of Burgundy set out the next morning [Oct. 15, 1468] for Cambray, and from thence towards the country of Liège: it was the beginning of winter and the weather was very bad. The king had with him only his Scotch guards and a small body of his standing forces; but he ordered 300 of his men-at-arms to join him.” Liège was invested, and, notwithstanding its walls had been thrown down the previous year, it made a stubborn defense. During a siege of a fortnight, several desperate sallies were made, by the last one of which both the duke and the king were brought into great personal peril. Exhausted by this final effort, the Liegeois were unprepared to repel a grand assault which the besieging forces made upon the town the next morning—Sunday, October 30. Liège was taken that day almost without resistance, the miserable inhabitants flying across the Maes into the forest of Ardennes, abandoning their homes to pillage. The duke of Burgundy now permitted King Louis to return home, while he remained a few days longer in desolate Liège, which his fierce hatred had doomed. “Before the Duke left the city, a great number of those poor creatures who had hid themselves in the houses when the town was taken, and were afterwards made prisoners, were drowned. He also resolved to burn the city, which had always been very populous; and orders were given for firing it in three different places, and 3,000 or 4,000 foot of the country of Limbourg (who were their neighbours, and used the same habit and language) were commanded to effect this desolation, but to secure the churches. . . . All things being thus ordered, the Duke began his march into the country of Franchemont; he was no sooner out of town, but immediately we saw a great number of houses on fire beyond the river; the duke lay that night four leagues from the city, yet we could hear the noise as distinctly as if we had been upon the spot; but whether it was the wind which lay that way, or our quartering upon the river, that was the cause of it, I know not. The next day the Duke marched on, and those who were left in the town continued the conflagration according to his orders; but all the churches (except some few) were preserved, and above 300 houses belonging to the priests and officers of the churches, which was the reason it was so soon reinhabited, for many flocked thither to live with the priests.”—P. de Commines, *Memoirs, bk. 2*.—See also NETHERLANDS: 1466-1468.

1473.—Acquisition of Guelderland. See GUELDERLAND.

1476-1477.—Charles the Bold and the Swiss.—His defeats and death.—Effects of his fall.—“Sovereign of the duchy of Burgundy, of the Free County [Franche-Comté], of Hainaut, of Flanders, of Holland, and of Gueldre, Charles wished, by joining to it Lorraine, a portion of Switzerland, and the inheritance of old King René, Count of Provence, to recombine the ancient kingdom of Lorraine, such as it had existed under the Carolingian dynasty; and flattered himself that by offering his daughter to Maximilian, son of Frederick III., he would obtain the title of king.

POSSESSIONS OF
CHARLES THE BOLD,
 DUKE OF
BURGUNDY,

ABOUT 1475,
 WITH THE DATES OF THEIR ACQUISITION
 BY THE DUKES OF THE HOUSE OF VALOIS.

The division between France and the
 Empire is shown thus ————

3793

The M. N. Co., Buffalo, N. Y.

Deceived in his hopes, the Duke of Burgundy tried means to take away Lorraine from the young René. That province was necessary to him, in order to join his northern states with those in the south. The conquest was rapid, and Nancy opened its gates to Charles the Rash; but it was reserved for a small people, already celebrated for their heroic valour and by their love of liberty, to beat this powerful man. Irritated against the Swiss, who had braved him, Charles crossed over the Jura, besieged the little town of Granson, and, in despite of a capitulation, caused all the defenders to be hanged or drowned. At this news the eight cantons which then composed the Helvetic republic arose, and under the very walls of the town which had been the theatre of his cruelty they attacked the Duke and dispersed his troops [March 3, 1476]. Some months later [June 21], supported by young René of Lorraine, despoiled of his inheritance, they exterminated a second Burgundian army before Morat. Charles, vanquished, reassembled a third army, and marched in the midst of winter against Nancy, which had fallen into the hands of the Swiss and Lorrainers. It was there that he perished [January 5, 1477] betrayed by his mercenary soldiers, and overpowered by numbers.—E. de Bonnechose, *History of France*, v. 1, bk. 3, ch. 2.—“And what was the cause of this war? A miserable cart-load of sheep skins that the Count of Romont had taken from the Swiss, in his passage through his estates. If God Almighty had not forsaken the Duke of Burgundy it is scarce conceivable he would have exposed himself to such great dangers upon so small and trivial an occasion; especially considering the offers the Swiss had made him, and that his conquest of such enemies would yield him neither profit nor honour; for at that time the Swiss were not in such esteem as now, and no people in the world could be poorer.” At Granson, “the poor Swiss were mightily enriched by the plunder of his [the duke of Burgundy’s] camp. At first they did not understand the value of the treasure they were masters of, especially the common soldiers. One of the richest and most magnificent tents in the world was cut into pieces. There were some of them that sold quantities of dishes and plates of silver for about two sous of our money, supposing they had been pewter. His great diamond, . . . with a large pearl fixed to it, was taken up by a Swiss, put up again into the case, thrown under a wagon, taken up again by the same soldier, and after all offered to a priest for a florin, who bought it, and sent it to the magistrates of that country, who returned him three francs as a sufficient reward. [This was long supposed to be the famous Sancy diamond; but Mr. Streeter thinks that the tradition which so connects it is totally disproved.] They also took three very rich jewels called the Three Brothers, another large ruby called La Hatte, and another called the Ball of Flanders, which were the fairest and richest in the world; besides a prodigious quantity of other goods.” In his last battle, near Nancy, the duke had fewer than 4,000 men, “and of that number not above 1,200 were in a condition to fight.” He encountered on this occasion a powerful army of Swiss and Germans, which the duke of Lorraine had been able to collect, with the help of the king of France and others. It was against the advice of all his counsellors that the headstrong, half-mad Duke Charles dashed his little army upon this greater one, and he paid the penalty. It was broken at the first shock, and the duke was killed in the confused rout without being known. His body, stripped naked by the pillagers and mangled by wolves or

dogs, was found frozen fast in a ditch. “I cannot easily determine towards whom God Almighty showed his anger most, whether towards him who died suddenly, without pain or sickness in the field of battle, or towards his subjects, who never enjoyed peace after his death, but were continually involved in wars against which they were not able to maintain themselves, upon account of the civil dissensions and cruel animosities that arose among them. . . . As I had seen these princes puissant, rich and honourable, so it fared with their subjects: for I think I have seen and known the greatest part of Europe, yet I never knew any province or country, though of a larger extent, so abounding in money, so extravagantly fine in their furniture, so sumptuous in their buildings, so profuse in their expenses, so luxurious in their feasts and entertainments, and so prodigal in all respects, as the subjects of these princes in my time; and if any think I have exaggerated, others who lived in my time will be of opinion that I have rather said too little. . . . In short, I have seen this family in all respects the most flourishing and celebrated of any in Christendom: and then, in a short space of time, it was quite ruined and turned upside down, and left the most desolate and miserable of any house in Europe, as regards both prince and subjects.”—P. de Commynes, *Memoirs*, bk. 5, ch. 1-9.—“The popular conception of this war [between Charles the Bold and the Swiss] is simply that Charles, a powerful and encroaching prince, was overthrown in three great battles by the petty commonwealths which he had expected easily to attach to his dominion. Grandson and Morat are placed side by side with Morgarten and Sempach. Such a view as this implies complete ignorance of the history; it implies ignorance of the fact that it was the Swiss who made war upon Charles, and not Charles who made war upon the Swiss; it implies ignorance of the fact that Charles’s army never set foot on proper Swiss territory at all, that Grandson and Morat were at the beginning of the war no part of the possessions of the Confederation. . . . The mere political accident that the country which formed the chief seat of war now forms part of the Swiss Confederation has been with many people enough to determine their estimate of the quarrel. Grandson and Morat are in Switzerland; Burgundian troops appeared and were defeated at Grandson and Morat; therefore Charles must have been an invader of Switzerland, and the warfare on the Swiss side must have been a warfare of purely defensive heroism. The simple fact that it was only through the result of the Burgundian war that Grandson and Morat ever became Swiss territory at once disposes of this line of argument. . . . The plain facts of the case are that the Burgundian war was a war declared by Switzerland against Burgundy . . . and that in the campaigns of Grandson and Morat the Duke of Burgundy was simply repelling and avenging Swiss invasions of his own territory and the territory of his allies.”—E. A. Freeman, *Historical essays*, v. 1, no. 11.

1477.—Particularly restored to the French crown.—Louis XI of France, who had been eagerly watching while Charles the Bold shattered his armies and exhausted his strength in Switzerland, received early news of the death of the self-willed duke. While the panic and confusion which it caused still prevailed, the king lost no time in taking possession of the duchy of Burgundy, as an appanage which had reverted to the crown, through

default of male heirs. The legality of his claim has been much in dispute. "Charles left an only daughter, undoubted heiress of Flanders and Artois, as well as of his dominions out of France, but whose right of succession to the duchy of Burgundy was more questionable. Originally the great fiefs of the crown descended to females, and this was the case with respect to the two first mentioned. But John had granted Burgundy to his son Philip by way of appanage; and it was contended that the appanages revert to the crown in default of male heirs. In the form of Philip's investiture, the duchy was granted to him and his lawful heirs, without designation of sex. The construction, therefore, must be left to the established course of law. This, however, was by no means acknowledged by Mary, Charles's daughter, who maintained both that no general law restricted appanages to male heirs, and that Burgundy had always been considered as a feminine fief, John himself having possessed it, not by reversion as king (for descendants of the first dukes were then living), but by inheritance derived through females. Such was this question of succession between Louis XI. and Mary of Burgundy, upon the merits of whose pretensions I will not pretend altogether to decide, but shall only observe that, if Charles had conceived his daughter to be excluded from this part of his inheritance, he would probably, at Conflans or Peronne, where he treated upon the vantage ground, have attempted at least to obtain a renunciation of Louis's claim. There was one obvious mode of preventing all further contest, and of aggrandizing the French monarchy far more than by the reunion of Burgundy. This was the marriage of Mary with the dauphin, which was ardently wished in France." The dauphin was a child of seven years; Mary of Burgundy a masculine-minded young woman of twenty. Probably Louis despaired of reconciling the latter to such a marriage. At all events, while he talked of it occasionally, he proceeded actively in despoiling the young duchess, seizing Artois and Franche Comté, and laying hands upon the frontier towns which were exposed to his arms. He embittered her natural enmity to him by various acts of meanness and treachery. "Thus the French alliance becoming odious in Flanders, this princess married Maximilian of Austria, son of the Emperor Frederic [see NETHERLANDS: 1477: Austrian marriage]—a connexion which Louis strove to prevent, though it was impossible then to foresee that it was ordained to retard the growth and to bias the fate of Europe during three hundred years. This war lasted till after the death of Mary, who left one son Philip and one daughter Margaret."—H. Hallam, *View of the state of Europe during the Middle Ages*, ch. 1, pt. 2.—"The king [Louis XI] had reason to be more than ordinarily pleased at the death of that duke [of Burgundy], and he triumphed more in his ruin than in that of all the rest of his enemies, as he thought that nobody, for the future, either of his own subjects, or his neighbours, would be able to oppose him, or disturb the tranquillity of his reign. . . . Although God Almighty has shown, and does still show, that his determination is to punish the family of Burgundy severely, not only in the person of the duke, but in their subjects and estates; yet I think the king our master did not take right measures to that end. For, if he had acted prudently, instead of pretending to conquer them, he should rather have endeavoured to annex all those large territories, to which he had no just title, to the crown of France by some treaty of marriage; or to have gained the hearts and affections of the people, and

so have brought them over to his interest, which he might, without any great difficulty, have effected, considering how their late afflictions had impoverished and dejected them. If he had acted after that manner, he would not only have prevented their ruin and destruction, but extended and strengthened his own kingdom, and established them all in a firm and lasting peace."—P. de Commines, *Memoirs*, bk. 5, ch. 12.—"He [Louis XI] reassured, caressed, comforted the duchy of Burgundy, gave it a parliament, visited his good city of Dijon, swore in St. Benignus' church to respect all the old privileges and customs that could be sworn to, and bound his successors to do the same on their accession. Burgundy was a land of nobles; and the king raised a bridge of gold for all the great lords to come over to him."—J. Michelet, *History of France*, bk. 17, ch. 3-4.

BURMA: Geographical characteristics.—Resources.—"The Province of Burma [in south-eastern Asia] stretches along the whole sea-line of the eastern side of the Bay of Bengal, and covers a range of country which reaches from the 10th degree of north latitude, where the mouth of the Pakchan River forms its southernmost boundary with the Malay Peninsula, to the 28th degree of north latitude, where the dependent State of Hkamti Lông and the Northern Kachin hills reach a boundary still undefined, and circumscribed in parts at least only by wild border tribes. The eastern boundary of the Province touches Yünnan, the Chinese Shan States, the French Province of Indo-China, the Siamese Tai States, and Siam proper, and finally follows the Pakchan River down to the Bay of Bengal. The area thus enclosed includes, besides Burma proper, the Northern and Southern Shan States, the States of Mông, Mît and its dependency Mông Lang, the States of Hkamti Lông, Hsawng Hsup, Sinkaling Hkamti, and the Chin and Kachin hill tracts, all of which are under the administration of the Government of Burma. The total area of the Province is estimated at 238,700 square miles, of which Burma proper occupies 168,573 square miles, the Chin Hills some 10,250 square miles, and the Shan States, which comprise the whole of the eastern portion of the Province, some 59,915 square miles."—A. Ireland, *Province of Burma*, pp. 1, 2.—Rice is the staple crop of Burma and agriculture its chief industry. The country contains the finest forests of British India and its teak wood is in special demand. The chief mineral resources are gold, coal and oil.—See also CONSERVATION OF NATURAL RESOURCES: India: 1805-1921.

Ancient mythology. See MYTHOLOGY: Eastern Asia: Indian and Chinese influences.

Religion.—"The Burmese may, . . . claim to be the strongest body of professing Buddhists in the world. It may also be claimed by them, or for them, that they most nearly follow the teaching of the Buddha. And yet they are far from doing so unreservedly. But that is as much as to say that human nature is weak and easily led astray. The precepts of Buddhism are household words with high and low. No Burman is considered a human being till he has put on the yellow robe for a longer or shorter period. Before that he is an animal. The ideas and language of the whole race are pervaded by Buddhism. And yet there Buddhism is a mere layer; in some cases, in remote parts and among the subordinate races, such as the Shans, not much more than a mere veneer. But true and fervent Buddhism is the religion of the thinker; it is a system of philosophy, or a code of morality rather than a religion, and cold, hard thinking is not conspicuous in the insouciant Burman."—J. G. Scott, *Burma*, pp. 358, 359.—See also BUDDHISM.

Language. See PHILOLOGY: 16.

Early history (B. C. 483-A. D. 1757).—It appears "that the Burmese came southwards from Tibet to the basin of the Irrawaddy and settled there, at the same time amalgamating with other immigrants who came direct from India. Thus the Burman is a cross between the Mongol and the Aryan, and the first kings of Burma given in the lists of the Maha Yazawin, the Book of National Annals, all have Hindu names. These kings are, however, all legendary, and details about them are lost in the night of time. The first reasonably accurate history is not earlier than about 483 B. C., and it treats of the Burmese kings who reigned at Tharekettara, the Prome of modern days, and at Pagān, which now only exists in its ruins. Tharekettara does not quite correspond with the modern Prome. The ancient city site is really some miles east of the modern port of call on the Irrawaddy. It ceased to be a capital in 108 A. D., and Pagān became the residence of the princes of Burma from this date and continued to be so until 1279. In that year began the invasions of the Tai, commonly called Shans in Burma, who came from the high tablelands of Yunnan, whence they were driven by the Chinese. They conquered Burma and established a Tai dynasty in Pagān, from which they moved first to Myinsaing and Panya and afterwards to Sagaing (1208-1364). In the latter year King Thadominbya, whose father was a Burman, while his mother was a Shan, founded the famous city of Ava. It was situated in the great Myohaung plain, to the south of the present Mandalay, and of all its glories there now only remain here and there a few ruins, whose crumbling bricks barely show through the rank vegetation of the tropics, and of all its multitudes only a few communities of monks with no companions but the cobras and the pythons."—J. Dautremer, *Burma under British rule*, pp. 35, 36.—"The early history of Burma, so far as it can be gathered from the native records, shows that in former days several distinct races and dynasties occupied different parts of the country. The Burman dynasties of Tagaung and Pagan, Ava, Prome, and Toungoo, and the Talaing kings of Pegu and Martahan, and the Shan rulers of Ava and Sagaing exercised control over a more or less extended sphere, at times succeeding in subverting the whole tract of Burma proper and overrunning the neighbouring kingdoms of Arakan, Siam, and the Shan States, and at times dwindling in power before the uprising of rival

kingdoms previously subjected or the inroads of Mongols, Shans, and Chinese from beyond the border. The earliest European connection with Burma was in 1510, when the Portuguese concluded a treaty with the King of Pegu, and established factories at Martaban and Syriam. Towards the close of the sixteenth century the Dutch obtained possession of the island of Negrais, and about the year 1612 the English East India Company had agents and factories at Syriam, Prome, and Ava. About the middle of the seventeenth century all European merchants were expelled from the country, owing to a dispute between the Burmese Governor of Pegu and the Dutch. The Dutch never returned. In 1688 the Burmese Governor of Syriam wrote to the English Governor of Madras, inviting British mer-

by Great Britain (Feb. 26, 1886).—"The absorption of Burma by the British Indian Empire occupied sixty years. It commenced with the war of 1824, which was brought about by frontier troubles between Bengal and the Burmese district of Arakan. The next step was the war of 1852, which arose out of the refusal of the Burmese King to make reparation for repeated outrages on British subjects. By these two wars the territory now known as Lower Burma passed under British rule."—A. Ireland, *Far eastern tropics*, p. 81.—See also INDIA: 1823-1833; 1852.—"Throughout the reign of King Mindôn relations between Britain and Burma were quite cordial [1852-1878]. . . . The twenty-six years of his reign were a period of tranquillity such as Upper Burma had not known for long years. It was also a period of British commercial

THE SHWE DAGON PAGODA IN RANGOON

chants to settle in Pegu and in 1608 a commercial Resident was sent to Syriam, and a factory was built there, and others at Negrais and Bassein. The French also had a settlement at Syriam. Meanwhile the Burmese dynasty of Ava, which had obtained supremacy throughout Burma under Bayinhang, was harassed by inroads from China and Manipur, and was finally destroyed by the rebellion of the Talaing kingdom of Pegu. After some years of Talaing supremacy a new Burmese dynasty was established by Alaung Payâ (or Alompra, as he is generally called in the English records), a capable and wise ruler, who brought practically the whole of what we now call Burma under his rule, united his countrymen as they had never been united before, and finally crushed the Talaing power. The dynasty of Alaung Payâ held the Burmese throne until the final destruction of native rule in the Third Burmese War with England."—A. Ireland, *Province of Burma*, pp. 22, 23.

1824-1886.—Wars with the English.—Annexed

development, carried on with the most complete confidence. This state of affairs was not destined to outlast the reign of King Mindôn. When he died, in 1878, no successor had been named, and there were several princes who might be considered to have the right to succeed. As the result of a plot organized by one of the queens, Prince Thibaw was chosen by the Great Council, and he ascended the throne a few days after his election, which had been decided on when King Mindôn's state became hopeless. Prince Thibaw was a person of no great power of will, but the Queen who had thrust him on the throne had plenty of ideas and abundant energy. She had married her daughter, the Supaya-lat, to Thibaw. . . . The Supaya-lat—which is a title, not a name, and means the 'middle princess'—was clever, cruel, and arbitrary. She began the scheme of getting rid of the other princes and their families, so as to have no more possible obstacles in her way. In February, 1879, therefore, she had all the princes who were broth-

ers of the King put to death, and with them forty other persons. It was 1884, however, before she was able to carry out all her intended executions. She took advantage of the presence at Pondicherry of the Myingôn Prince, who, according to Western ideas of rights of succession, was the legitimate heir, as eldest son of King Mindôn, to accuse a great number of persons about the Court, as well as actual officials, of carrying on negotiations with him with a view of putting him on the throne of Burma. . . . There was such a massacre at Mandalay that even the Burmese themselves were filled with horror. From that time on there were throughout all the kingdom signs of disaffection against the King, and the British began to consider whether it was possible to endure a neighbour who was so cruel and so unpopular. They were all the more disposed to this attitude because of the extravagance of King Thibaw. He squandered money with both hands without troubling to inquire whether there was money in the treasury, and he impoverished the country by establishing a sort of royal lottery to raise funds. The country was ruined and the royal treasury remained empty. It was a question how it was to be filled. It was then that it occurred to the Taingda Mingyi, the Finance Minister, to get it out of the Bombay-Burma Trading Corporation. This firm had a contract for the King for the working of teak forests. The Corporation was accused of breaking its contract, and was condemned to pay a fine of Rs. 2,300,000 (£153,333) into the royal coffers. The Corporation appealed to the Government of India, which forthwith sent the following ultimatum to King Thibaw:—1. The disputes between the Government of Burma and the Bombay-Burma Trading Corporation shall be submitted to arbitration by a joint Commission of British and Burmese officers. 2. A British Resident shall be stationed at the Burmese Court. 3. The external relations of Burma shall be controlled by the British Resident.' This was delivered in November, 1885. King Thibaw sent a reply which seemed unsatisfactory, and was, in fact, a flat defiance, and the extinction of the kingdom of Burma was decided on by the Governor-General in Council.—J. Dautremere, *Burma under British rule*, pp. 66-70.—“On the 20th of November Mandalay was occupied and the King a prisoner on his way down the river to Rangoon. The waterway from Mandalay to the sea was under our [British] control. A few of the principal places on the banks of the river had been held by small garrisons as the expedition came up, and the ultimate subjugation of the Burman people was assured. The trouble, however, was to come. To a loosely organized nation like the Burmese, the occupation of the capital and the removal of the King meant nothing. They were still free to resist and fight. It was to be five years before the last of the large gangs was dispersed, the leaders captured, and peace and security established. . . . The King's rule ended on the 20th of November, 1885. On the 1st of January, 1886, the Viceroy's proclamation included Upper Burma in Her Majesty's dominions. . . . From the 26th of February, 1886, Upper Burma became a province of British India.”—C. H. T. Crosthwaite, *Pacification of Burma*, pp. 2-8.

1886-1890.—Pacification.—Improved administration.—Increased revenue.—“During the first year after the annexation the crushing of organized rebellion and of armed resistance occupied the attention of Government so fully that it was not possible to introduce regular methods and systematic administration, but in the succeeding four years every district

in Upper Burma was gradually reduced to order, and organized crime had entirely disappeared from any part of the whole province. The only remaining elements of disturbance were the wild tribes inhabiting the forest-clad hills of the northern frontier districts. Before the end of 1890 no pretender, no rebel, or no dacoit *Bo* having any considerable following was to be found throughout what had formerly been the kingdom of Ava. . . . While purifying corrupt methods and removing barbarous enormities, the maintenance of the spirit of the Burmese administration was desired; the customs and prejudices of the new subjects were interfered with as little as possible; and particular care was taken not to attempt to force upon them a brand-new system of administration, inconsistent with their national genius or habits. Special attention was given to the maintenance of the village community system, which was at the earliest possible opportunity placed on a secure legal basis. In training the necessary subordinate staff to provide for the administration of justice and the collection of revenue, full use was made of loyal Burmese officers, many of whom rendered conspicuous service. Government public offices had been erected at the headquarters of districts, and suitable jails were constructed; while the judicial administration was under the control of an experienced officer. In the larger towns a simple system of municipal government was introduced, but no attempt was made to extend the principle of self-government beyond the limits which the circumstances of the newly-acquired province rendered necessary. The educational needs of the country were examined, and steps were being gradually taken to strengthen and improve, while abstaining from needless interference with, the simple elementary tuition in reading, writing, and arithmetic at monasteries by the gradual introduction of a sound and practical scheme of public instruction. Dispensaries were open at the headquarters of every district, and during 1890 medical relief was afforded to nearly 100,000 patients, representing more than one-thirty-fifth of the total population. The revenue system had been examined and put on a satisfactory footing, with the result that it had increased to about 113 lacs of rupees (£753,333) during 1890, or some 8 lacs (£53,333) more than the largest revenue which had ever found its way in any year into the royal treasury at Mandalay; and this increase was effected without imposing any fresh taxation or burden on the people, although during the same time some obnoxious and oppressive imposts had been abolished.”—J. Nisbet, *Burma under British rule—and before*, pp. 144-146.—See also INDIA: 1864-1803.

1897.—Raised in status as British dependency.—Burma was raised in status as a British dependency, under the government of India, by royal proclamation in 1897. The chief commissioner became lieutenant-governor, and a local legislative council was created.

BURNE-JONES, Sir Edward Burne (1833-1898), one of the Pre-Raphaelite school of painters. See PAINTING: 19th century.

BURNELL, Robert (d. 1292), Lord chancellor of England.

Reforms in English law. See COMMON LAW: 1275.

BURNET, Gilbert (1643-1715), British historian and churchman, member of the Liberal party and broad ecclesiastic; 1669, professor of divinity at Glasgow University; resigned in 1674;

acquired St. Clement lectureship in 1676, of which he was deprived by the king in 1683 for his defense of Lord William Russell; travelled abroad extensively and won the confidence of William of Orange who appointed him Bishop of Salisbury in 1680; had great influence with William III but was harshly criticized by the high church party. Among his numerous writings mention must be made of his "History of the Reformation of the Church of England" and "History of his own own time."—See also HISTORY: 24.

BURNEY, Sir Cecil (1858-), British admiral at the battle of Jutland. See WORLD WAR: 1916: IX. Naval operations: a, 3; a, 5; a, 9.

BURNHAM, Daniel Hudson (1846-1912), American architect. See CHICAGO: 1909.

Burnham Library of Architecture. See ART INSTITUTE, Chicago.

BURNS, John (1858-), chief leader and organizer of the London dock strike. See LABOR STRIKES AND BOYCOTTS: 1889.

BURNS, Robert (1759-1796), Scottish poet. "By his birth right and heritage of poverty and labor, Burns spoke not about, but for, the poor. The young democracy hurrying on the day through the labors of Brindley, the mechanic; Hargraves, the poor weaver, or Watt, the mathematical instrument maker's apprentice, finds its poet-prophet in a farmer's boy of the Scotch lowlands. The natural music, the irresistible melody of Burns' songs, was learned not from the principles of literary lawgivers, but from the songs of the people. In their captivating *lilt*, their rich humor, their note of elemental passion, is revealed the soul of the peasant class."—H. Pancoast, *Introduction to English literature*, p. 301.—See also ENGLISH LITERATURE: 1780-1830.

BURNSIDE, Ambrose Everett (1824-1881), American brigadier general who served in the Civil War.

Expedition to Roanoke. See U. S. A.: 1862 (January-April: North Carolina).

Command of the army of the Potomac. See U. S. A.: 1862 (October-December: Virginia).

Retirement from command of the army of the Potomac. See U. S. A.: 1863 (January-April: Virginia).

Arrest of Vallandigham for speech at Copperhead meeting. See CENSORSHIP: United States.

Deliverance of East Tennessee. See U. S. A.: 1863 (August-September: Tennessee).

Defense of Knoxville. See U. S. A.: 1863 (October-December: Tennessee).

Siege of Petersburg. See U. S. A.: 1864 (June: Virginia), (July: Virginia).

Wilderness campaign. See U. S. A.: 1864 (May: Virginia); Grant's Movement on Richmond.

BURR, Aaron (1756-1836), American politician. Served in Continental army; member New York assembly, 1784-1785, 1797-1799, 1800-1801; attorney-general of the state, 1780-1791; member United States Senate, 1791-1797; chairman, constitutional convention, New York, 1801; elected vice-president, 1800; defeated for governor of New York, 1804; tried for treason, 1807; abroad, 1808-1812; practiced law in New York, 1812-1836.—See also NEW YORK CITY: 1740-1862; U. S. A.: 1800-1801; 1806-1807; UNIVERSITIES AND COLLEGES: 1746-1766.

BURRITT, Elihu (1810-1870), American philanthropist. See PEACE MOVEMENT: Peace organizations.

BURRUS, Afranius, Prefect and advisor to Nero. See ROME: Empire: 54-64.

BURSCHENSCHAFT, an organization of students in the German universities whose aim it

was to promote patriotism, morality, and love of liberty; first organized at Jena in 1815 and made up chiefly of those who had fought in the War of Liberation. Movement spread to other universities and in 1818 an inter-collegiate association with a constitution was promulgated; the Carlsbad decrees suppressed them until 1827 when a reorganization took place; due to its participation in the attempted revolution at Frankfurt in 1833, it was broken up by the civil authorities. See GERMANY: 1817-1820.

BURTON, Joseph R., United States senator. Convicted of having received \$2500 from a fraudulent concern, which had been debarred from using the United States mails, in return for his efforts to have embargo removed; sentenced to a fine of \$2500 and nine months' imprisonment, May, 1903.

BURTON, Theodore Elijah (1851-), American legislator. Member of Congress 1889-1891, 1895-1915; 1921; chairman inland waterways commission 1907-1909; chairman national waterways commission 1909-1912.

BURTON, William, governor of Delaware, 1859-1863. See U. S. A.: 1861 (April): President Lincoln's call to arms.

BURY ST. EDMUNDS, Abbey of, a religious community founded by Siegebert, king of the East Angles, in 637. With the building of a new church in 1005, the abbey grew in fame, wealth and beauty, so that early in the fifteenth century it was second only to Glastonbury. The abbey owed a great deal of its fame to the influence of its abbots who were not only members of Parliament but also had complete jurisdiction over the town and neighborhood. It was in this abbey that the proposed charter of liberties, which a year later was signed by King John as the Magna Charta, was first read. The abbey of Bury St. Edmunds, along with many others of the time, was dissolved by Henry VIII.

BUSACO, Battle of (1810). See SPAIN: 1810-1812.

BUSHIDO.—"It is universally thought that the term *Bushido* is one that best expresses the Japanese characteristics, but it should be remembered that its significance has not been the same through all ages. Of course such virtues as loyalty, patriotism, and bravery have always constituted essential elements of the Japanese spirit, but other elements were gradually imported into it during feudal ages. *Bushido* was influenced and modified by a long succession of terrible wars, by the teaching of Confucius, who encouraged practice and disdained theory, and, lastly, by the doctrine of the Zen sect of Buddhism, which teaches that 'the Three Worlds exist only in the mind.' and that 'life and death are but one and the same thing.' To this were added many more qualities, such as self-control, self-renunciation, and contentment with a simple life. Hence it was the duty of a *samurai* to equip himself with all chivalrous accomplishments and to study the art of governing a country and a house, and it was considered unbecoming for him to indulge in the drama, fiction, or singing. He also thought it beneath his dignity to weep or laugh, and he tried to prevent his sorrow or joy from showing in his face. Nay more, he must not grieve or rejoice. Life is like a dic; which side turns up one knows not. If one attains to wisdom one may live in tranquillity, leaving all the rest to destiny. But he must guard against extravagance, as it is the source of all evils. Since much treasure is the cause of much anxiety, the best way to live is to put up with want and restrain one's desires.

"That is the gist of the doctrine of modern

Bushido. But, as may easily be seen, it was fatal to the flowery life of the Nara age, whose traces were completely wiped out in time. Thus the making of butter was given up; the spoon was supplanted by a pair of chop-sticks; hats and shoes were put out of use; the long pendant sleeves of the *hitataré* (robe) were cut down; and the women's rich long hair was tied up to facilitate work. Furthermore, women's *hakama* (skirt) was abolished, all gorgeous colours were despised, and clothing, furniture, and house decoration assumed the dark rusty tints we now see in them to-day."—Count Okuma, *Fifty years of New Japan*, p. 454.—See also ETHICS: Japan; JAPAN: Religion.

BUSHMEN, or *Bošnjemans*, primitive race of Africa. See AFRICA: Races of Africa; Modern peoples: ART: Distribution; PHILOLOGY: 25.

BUTLER, Benjamin Franklin (1818-1893), American lawyer, political figure and general; admitted to the bar, 1840; began his political career as a Democrat; elected to Massachusetts senate, 1859; member of National Democratic convention, 1860; 1861, in command at Baltimore (see U. S. A.: 1861: April-May: Maryland), in command at Fortress Monroe (see U. S. A.: 1861: May: General Butler at Fortress Monroe, Fight at Big Bethel (see U. S. A.: 1861 (June-Virginia)), in command of the Hatteras Expedition (see U. S. A.: 1861: August: North Carolina); 1862, in command of New Orleans (see U. S. A.: 1862: May-December: Louisiana); 1864, in command of the army of the James (see U. S. A.: 1864: May: Virginia: cooperative movement of Army of the James); Republican member of Congress, 1866, where for ten years he was a radical reconstructionist; advocated payment of government debts by "greenbacks"; 1880, elected as Democratic governor of Massachusetts; 1884, presidential nominee of Greenback and Anti-monopolist parties.—See also MARYLAND: 1860-1864.

At siege of Fort Fisher. See U. S. A.: 1864-1865 (December-January: North Carolina).

BUTLER, Charles Henry (1859-), lawyer, at second Hague Peace Conference. See HAGUE CONFERENCE: 1907.

BUTLER, John (d. 1794), American soldier. See U. S. A.: 1779 (August-September).

BUTLER, Joseph (1692-1752), Bishop of Durham and philosopher. See ETHICS: 18th-19th centuries.

BUTLER, Nicholas Murray (1862-), American educator, president of Columbia University since 1902.

BUTLER, Walter N. (d. 1781), Tory who aided in the Indian massacres at Cherry Valley. See U. S. A.: 1778 (June-November); 1779 (August-September).

BUTLER, Zebulon (1731-1795), American soldier. Commanded the garrison of Forty Fort at the time of the Wyoming Valley (Pa.) massacre by the Indians. See U. S. A.: 1778 (July).

BUTT, Isaac (1813-1879), Irish lawyer and politician. See IRELAND: 1873-1879.

BUTTE, Montana, county seat of Silverbow county, and center of the great copper mining region of Montana.

1912.—Socialist control. See SOCIALISM: 1901-1913.

1914. Labor agitations.—I. W. W. See INDUSTRIAL WORKERS OF THE WORLD: Recent tendencies.

BUTTERFIELD, Daniel (1831-1901), American soldier. Took part in many battles during the Civil War, rising from rank of colonel to that of major-general. Resigned in 1869 and was for some time head of the sub-treasury in New York City.

BUTTERNUTS, nickname for Confederate soldiers. See BOYS IN BLUE, BOYS IN GRAY; U. S. A.: 1864 (October): Report on secret disloyal associations in the north.

BUTTI, Enrico Annibale (1868-1915), Italian dramatist and psychological novelist. See ITALIAN LITERATURE: 1880-1920.

BUTNER, Christian Wilhelm (1716-1801), German philologist. See PHILOLOGY: 24.

BUTTRESS, "a mass of masonry, projecting from the face of the wall to resist the thrust of an arch or vault. When the mass is separated from the wall and connected with it by an arch, the arch and mass form a flying buttress."—C. H. Caffin, *How to study architecture*, p. 481.—Medieval structures. The buttress and Gothic architecture was greatly forwarded by the invention of the flying buttress. A notable example of the latter is found in the Nôtre Dame de Paris.

BUYD DYNASTY, in Bagdad. See CALIPHATE: 815-945.

BUZANCY, (1) a village about eight miles south of Soissons, France, captured by the Allies in 1918 during the World War; (2) a village in eastern France about twenty miles south of Sedan; taken by the Americans in 1918 in their Meuse-Argonne drive during the World War. See WORLD WAR: 1918: II. Western front: v, 10; x, 1.

BUZOT, François Nicolas Léonard (1760-1794), French revolutionist. Deputy to the Convention, 1792; became an active Girondist leader; proscribed with the Girondists, 1793; escaped to Normandy, where he attempted to organize armed opposition to the Convention; committed suicide, probably in the belief that he was discovered.

BUZOTINS, a branch of the Girondist party in France, named for François Nicolas Léonard Buzot, after his death. See GIRONOINS.

BY, John (1781-1836), Canadian military engineer. See OTTAWA, CANADA.

BYLINES, Epic songs of Russia. See RUSSIAN LITERATURE: 9th-14th centuries.

BYNG, John (1704-1757), British admiral. Executed for neglect of duty in his unsuccessful attempt to relieve Minorca. See MINORCA: 1756.

BYNG, Julian (Hedworth George), 1st Baron (1862-), British general; served in the Sudan expedition in 1884 and in the South African War,

1890-1902; commanded a corps at the Dardanelles just before the Allies' withdrawal; was in charge of the Canadian corps at the battle of the Somme and in the capture of Vimy Ridge in the battle of Arras; led the surprise attack on Cambrai, November 20, 1917; made first Baron of Vimy in 1919; appointed governor-general of Canada, 1921.—See also **WORLD WAR**: 1914: I. Western front: w, 5; w, 17; 1917: II. Western front: g; 1918: II. Western front: a, 1; c, 2; k, 1.

BYNKERSHOEK, Cornelius van (1673-1743), Dutch jurist; member, and later president of supreme council; exerted profound influence, both through his judicial opinions and through his many voluminous treatises, in the revision and Romanization of the common law and the formulation of international law.—See also **INTERNATIONAL LAW**: Grotius and the early jurists.

BYRD, William (1543-1623), English composer and organist. Organist in Lincoln cathedral in 1563 and later organist to Queen Elizabeth; celebrated for his church music and madrigals.—See also **MUSIC**: Modern: 1540-1672.

BYRON, George Gordon Noel Byron, 6th baron (1788-1824), English poet. In the House of Lords, 1812, where he achieved brilliant success in his first speech; enlisted in the Greek army against the Turks in 1823, but died before he could go into battle. (See **GREECE**: 1821-1829.) "The life and work of Lord Byron were an immense force not only in the history of England but throughout Europe. His generation hailed him as the voice of their aspirations and complaints. Probably no other English poet ever won such admiration from contemporary Europe; he gave English literature a larger place on the Continent, and in Mazzini's words, 'led the genius of Britain on a pilgrimage throughout all Europe.'"—H. S. Pancoast, *Introduction to English literature*, p. 365.—See also **DRAMA**: 1815-1877; **ENGLISH LITERATURE**: 1780-1830; **RUSSIAN LITERATURE**: 1814-1841.

BYZANTINE ART: Christian. See **PAINTING**: Early Christian and Byzantine art; also **PAINTING**: Roman.

BYZANTINE EMPIRE.—The Eastern Roman empire, having its capital at Byzantium (modern Constantinople), the earlier history of which will be found sketched under the caption **ROME**: 394-395, to 717-800, has been given, in its later years, the name of the Byzantine empire. The propriety of this designation is questioned by some historians, and the time when it begins to be appropriate is likewise a subject of debate. For some discussion of these questions, see **CONSTANTINOPLE**; **ROME**: Medieval city: 717-800.

Part in history.—Defense of Europe.—Civilizing influence.—"The later Roman Empire was the bulwark of Europe against the oriental danger; Maurice and Heraclius, Constantine IV. and Leo the Isaurian were the successors of Themistocles and Africanus. . . . Until the days of the crusades, the German nations did not combine with the Empire against the common foe. Nor did the Teutons, by themselves, achieve any success of ecumenical importance against non-Aryan races. I

may be reminded that Charles the Great exterminated the Avars; but that was after they had ceased to be really dangerous. When there existed a truly formidable Avar monarchy it was the Roman Empire that bore the brunt; and yet while most people who read history know of the Avar war of Charles, how few there are who have ever heard of Priscus, the general who so bravely warred against the Avars in the reign of Maurice. I may be reminded that Charles Martel won a great name by victories in southern Gaul over the Saracens; yet those successes sink into insignificance by the side of the achievement of his contemporary, the third Leo, who held the gate of eastern Europe against all the forces which the Saracen power, then at its height, could muster. Every one knows about the exploits of the Frank; it is almost incredible how little is known of the Roman Emperor's defence of the greatest city of Christian Europe, in the quarter where the real danger lay. . . . The Empire was much more than the military guard of the Asiatic frontier; it not only defended but also kept alive the traditions of Greek and Roman culture. We cannot over-estimate the importance of the presence of a highly civilised state for a system of nations which were as yet only beginning to be civilised. The constant intercourse of the Empire with Italy, which until the eleventh century was partly imperial, and with southern Gaul and Spain, had an incalculable influence on the development of the West. Venice, which contributed so much to the growth of western culture, was for a long time actually, and for a much longer time nominally, a city of the Roman Empire and learned what it taught from Byzantium. The Byzantine was the mother of the Italian school of painting, as Greece in the old days had been the mistress of Rome in the fine arts; and the Byzantine style of architecture has had perhaps a wider influence than any other. It was to New Rome that the Teutonic kings applied when they needed men of learning and thither students from western countries, who desired a university education, repaired. . . . It was, moreover, in the lands ruled by New Rome that old Hellenic culture and the monuments of Hellenic literature were preserved, as in a secure storehouse, to be given at length to the 'wild nations' when they had been sufficiently tamed. And in their taming New Rome played an indispensable part. The Justinian law, which still interpenetrates European civilisation, was a product of New Rome. In the third place the Roman Empire for many centuries entirely maintained European commerce. This was a circumstance of the greatest importance; but unfortunately it is one of those facts concerning which contemporary historians did not think of leaving records to posterity. The fact that the coins of the Roman Emperors were used throughout Europe in the Middle Ages speaks for itself. [See also **COMMERCE**: Medieval: 11th-16th centuries.] . . . In the fourth place, the Roman Empire preserved a great idea which influenced the whole course of western European history down to the present day—the idea of the Roman Empire itself. If we look at the ecumenical event of 800 from a wide point of view, it really resolves itself into this: New Rome bestowed upon the western nations a great idea, which moulded and ordered their future history; she gave back to Old Rome the idea which Old Rome bestowed upon her five centuries before. . . . If Constantinople and the Empire had fallen, the imperial idea would have been lost in the whirl of the 'wild nations.' It is to New Rome that Europeans really owe thanks for the establishment of the principle and the system which brought law

GOLD BYZANTINE MEDALLIONS

- (1) Gold Medallion of Flavius Julius Constantinus. Struck at Antioch to commemorate the victory against the Persians. Of particular interest is the halo around the Emperor's head.
- (2) Gold Medallion of Emperor Honorius (324 A. D.) Discovered in 1715 at Arnheim. On the reverse side is the figure of Roma, and the mark of the mint—R V (Ravenna).
- (3) Gold Medal of the Emperor Theodosius (d. 395 A. D.). On the reverse side is the Emperor holding the Imperial banner (Lavaron).

and order into the political relations of the West.” —J. B. Bury, *History of the later Roman empire*.—“Western Europe, no doubt, bore within its bosom the seeds of a far greater world to come, a more virile youth, greater heroes and chiefs. But wealth, organisation, knowledge, for the time were safeguarded behind the walls of Byzantium—to speak roughly, from the age of Justinian to that of the Crusades. Not only did this empire of New Rome possess the wealth, industry, and knowledge, but it had almost exclusive control of Mediterranean commerce, undisputed supremacy of the seas, paramount financial power, and the monopoly of all the more refined manufactures and arts. In the middle of the tenth century, the contrast between the kingdom of Otto the Great and the empire of Constantine Porphyrogenitus was as great as that between Russia under Peter the Great and France in the days of the Orleans Regency. From the seventh to the thirteenth century Constantinople was far the largest, wealthiest, most splendid city in Europe. It was in every sense a new Rome. And, if it were at all inferior as a whole to what its mother was in the palmy age of Trajan and Hadrian, it far surpassed the old Rome in its exquisite situation, in its mighty fortifications, and in the beauty of its central palace and church. A long succession of poets and topographers have recounted the glories of the great city—its churches, palaces, baths, forum, hippodrome, columns, porticoes, statues, theatres, hospitals, reservoirs, aqueducts, monasteries, and cemeteries. All accounts of early travellers from the West relate with wonder the splendour and wealth of the imperial city. ‘These riches and buildings were equalled nowhere in the world,’ says the Jew Benjamin of Tudela in the twelfth century. ‘Over all the land there are burghs, castles, and country towns, the one upon the other without interval,’ says the Saga of King Sigurd, fifty years earlier. The Crusaders, who despised the Greeks of the now decayed empire, were awed at the sight of their city; and as the pirates of the Fifth Crusade sailed up the Propontis they began to wonder at their own temerity in attacking so vast a fortress. . . .

“The most signal evidence of the superior civilisation of Byzantium down to the tenth century, is found in the fact that alone of all states it maintained a continuous, scientific, and even progressive system of law. Whilst the *Corpus Iuris* died down in the West under the successive invasions of the Northern nations, at least so far as governments and official study was concerned, it continued under the Emperors in the East to be the law of the State, to be expounded in translations, commentaries, and handbooks, to be regularly taught in schools of law, and still more to be developed in a Christian and modern sense. . . . Now, there was no revival of Roman Law in Byzantium, because there it never was extinct. Justinian’s later legislation was promulgated in Greek, and his *Corpus Iuris* was at once translated, summarised, and abridged in the East. Although schools of law existed in Constantinople and elsewhere, the seventh century, in its disasters and confusion, let the civil law fall to a low ebb. But the Isaurian dynasty, in the age of the Frank King Pippin, made efforts to restore and to develop the law. The *Ecloga* of Leo III. and Constantine V. was promulgated to revise the law of persons in a Christian sense. It was part of the attempt of the Iconoclasts to form a moral reform in a Puritan spirit. This was followed by three special codes—(1) A maritime code, of the Rhodian law, as to loss at sea and commercial risks; (2) a military code or law martial; (3),

a rural code to regulate the police of country populations. And a register of births for males was instituted throughout the Empire at the same time. . . .

“Turn to the history of Art. Here, again, it must be said that from the fifth to the eleventh century the Byzantine and Eastern world preserved the traditions, and led the development of art in all its modes. We are now free of the ancient fallacy that Art was drowned beneath the waves of the Teutonic invaders, until many centuries later it slowly came to life in Italy and then north of the Alps. The truth is that the noblest and most essential of the arts—that of building—some of the minor arts of decoration and ornament, and the art of music, down to the invention of Guido of Arezzo in the eleventh century, lived on and made new departures, whilst most of the arts of form died down under the combined forces of barbarian convulsions and religious asceticism. And it was Byzantium which was the centre of the new architecture and the new decoration, whilst it kept alive such seeds of the arts of form as could be saved through the rudeness and the fanaticism of the early Middle Ages. To the age of Justinian we owe one of the greatest steps ever taken by man in the art of building. The great Church of the Holy Wisdom exerted over architecture a wider influence than can be positively claimed for any single edifice in the history of the arts. We trace enormous ramifications of its example in the whole East and the whole of the West, at Ravenna, Kief, Venice, Aachen, Palermo, Thessalonica, Cairo, Syria, Persia and Delhi. And with all the enthusiasm we must feel for the Parthenon and the Pantheon, for Amiens and Chartres, I must profess my personal conviction that the interior of Agia Sophia is the grandest in the world, and certainly that one which offers the soundest basis for the architecture of the future. [See SCULPTURE: Romanesque sculpture.] . . . The people who evolved a noble and creative type of architecture could not be dead to art. But even in the arts of form we rate the Byzantines too low. From the sixth to the eleventh century Western Europe drew from Byzantium its type of ornament in every kind. This was often indirectly and perhaps unconsciously done, and usually with great modifications. But all careful study of the mosaics, the metal work, the ivories, the embroideries, the carvings, the coins, the paintings, and the manuscripts of these ages establishes the priority and the originality of the Byzantine arts of decoration. It is undoubted that the art of mosaic ornament had its source there. Mosaic, with its Greek name, was introduced into the ancient world from the East by Greece. But the exquisite art of wall decoration by glass mosaic which we are now reviving was a strictly Byzantine art, and from the fifth to the twelfth century was carried into Europe by the direct assistance of the Byzantine school. The rigid conservatism of the Church, and the gradual decline of taste, stereotyped and at last destroyed the art; but there still exist in Constantinople and in Greece glass mosaic figures as grand as anything in the decorative art of any age. [See ART: Relation of art and history; PAINTING: Early Christian and Byzantine.] . . . It is the same in the art of illuminating manuscripts. Painting, no doubt, declined more rapidly than any other art under the combined forces of barbarism and the gospel. But from the fifth to the eleventh century the paintings in Greek manuscripts are far superior to those of Western Europe. The Irish and Caroline schools developed a style of fine calligraphy and

ingenious borders and initials. But their figures are curiously inferior to those of the Byzantine painters, who evidently kept their borderings subdued so as not to interfere with their figures. Conservatism and superstition smothered and eventually killed the art of painting, as it did the art of sculpture, in the East. But there are a few rare manuscripts in Venice, in the Vatican, the French Bibliothèque Nationale—all certainly executed for Basil I., Nicephorus, and Basil II. in the ninth and tenth centuries—which in drawing, even of the nude, in composition, in expression, in grandeur of colour and effect, are not equalled until we reach the fourteenth century in Europe. The Vatican, the Venice, and the Paris examples, in my opinion, have never been surpassed. The manufacture of silks and embroidered satins was almost a Greek monopoly all through the Middle Ages. Mediæval literature is full of the splendid silks of Constantinople, of the robes and exquisite

Showing the Empress Theodora and her escort

brocades which kings and princes were eager to obtain. We hear of the robe of a Greek senator which had 600 figures picturing the entire life of Christ. Costly stuffs and utensils bore Greek names and lettering down to the middle of the fifteenth century. And some exquisite fragments of embroidered robes of Greek work are preserved in the Vatican and many Northern museums and sacristies. The diadems, sceptres, thrones, robes, coins, and jewels of the early Mediæval princes were all Greek in type, and usually Byzantine in origin. So that Mr. Frothingham, in the *American Journal of Archæology* (1894), does not hesitate to write: “The debt to Byzantium is undoubtedly immense; the difficulty consists in ascertaining what amount of originality can properly be claimed for the Western arts, industries, and institutions during the early Middle Ages.”—F. Harrison, *Byzantine history in the early middle ages*, pp. 12-13; 24-25, 28-29, 31-33. See also EDUCATION, ART: Mediæval and Renaissance.

III. was proclaimed emperor [717], it seemed as if no human power could save Constantinople from falling as Rome had fallen. The Saracens considered the sovereignty of every land, in which any remains of Roman civilization survived, as within their grasp. Leo, an Isaurian, and an Iconoclast, consequently a foreigner and a heretic, ascended the throne of Constantine and arrested the victorious career of the Mohammedans. He then reorganized the whole administration so completely in accordance with the new exigencies of Eastern society that the reformed empire outlived for many centuries every government contemporary with its establishment. The Eastern Roman Empire, thus reformed, is called by modern historians the Byzantine Empire; and the term is well devised to mark the changes effected in the government, after the extinction of the last traces of the military monarchy of ancient Rome. . . . The provincial divisions of the Roman Empire had fallen into oblivion. A new geographical arrangement into Themes appears to have been established by Heraclius, when he recovered the Asiatic provinces from the Persians; it was reorganized by Leo, and

endured as long as the Byzantine government. The number of themes varied at different periods. The Emperor Constantine Porphyrogenitus, writing writing about the middle of the tenth century, counts sixteen in the Asiatic portion of the Empire and twelve in the European. . . . The European provinces were divided into eight continental and five insular or transmarine themes, until the loss of the exarchate of Ravenna reduced the number to twelve. Venice and Naples, though they acknowledged the suzerainty of the Eastern Empire, acted generally as independent cities. . . . When Leo was raised to the throne the Empire was threatened with immediate ruin. . . . Every army assembled to encounter the Saracens broke out into rebellion. The Bulgarians and Slavonians wasted Europe up to the walls of Constantinople; the Saracens ravaged the whole of Asia Minor to the shores of the Bosphorus."—G. Finlay, *History of the Byzantine empire*, bk. 1, pp. 716-1057, ch. 1.

717-797.—Isaurian dynasty.—The dynasty founded by Leo the Isaurian held the throne until the dethronement of Constantine VI by his mother, Irene, 797, and her dethronement, in turn by Nicephorus I, 802. It embraced the following reigns: Constantine V, called Copronymus, 741-775; Leo IV, 775-780; Constantine VI, 780-797; Irene, 797-802.

802-820.—Emperors: Nicephorus I, 802-811; Stauracius, 811; Michael I, 811-813; Leo V, 813-820.

803.—Treaty with Charlemagne, fixing boundaries. See VENICE: 697-810.

820-1057.—Amorian and Basilian or Macedonian dynasties.—Michael, the Amorian (820-829) so named from his birth-place, Amorium, in Phrygia, was a soldier, raised to the throne by a revolution which deposed and assassinated his friend and patron, the Emperor Leo V. Michael transmitted the crown to his son (Theophilus, 829-842) and grandson. The latter, called Michael the Drunkard, was conspired against and killed by one of the companions of his drunken orgies (867), Basil the Macedonian, who had been in early life a groom. Basil founded a dynasty which reigned, with several interruptions, from 867 to 1057—a period covering the following reigns: Basil I, 867-886; Leo VI, 886-911; Constantine VII (Porphyrogenitus), 911-950; Romanus I (Colleague), 919-944; Constantine VIII (Colleague), 944; Romanus II, 950-963; Nicephorus II, 963-969; John Zimisce, 969-976; Basil II, 963-1025; Constantine IX, 963-1028; Romanus III, 1028-1034; Michael IV, 1034-1041; Michael V, 1041-1042; Zoe and Theodora, 1042-1056; Constantine X, 1042-1054; Michael VI, 1056-1057.

961-963.—Recovery of Crete. See CRETE: 961-963.

963-1025.—Recovery of prestige and territory.—"Amidst all the crimes and revolutions of the Byzantine government—and its history is but a series of crimes and revolutions—it was never dismembered by intestine war. A sedition in the army, a tumult in the theatre, a conspiracy in the palace, precipitated a monarch from the throne; but the allegiance of Constantinople was instantly transferred to his successor, and the provinces implicitly obeyed the voice of the capital. The custom, too, of partition, so baneful to the Latin kingdoms, and which was not altogether unknown to the Saracens, never prevailed in the Greek Empire. It stood in the middle of the tenth century, as vicious indeed and cowardly, but more wealthy, more enlightened, and far more secure from its enemies than under the first successors of Heraclius. For about one hundred years preceding there had been only partial wars with the Mohammedan potentates; and in these the emperors seem gradually to have gained the advantage, and to have become more frequently the aggressors. But the increasing distractions of the East encouraged two brave usurpers, Nicephorus Phocas and John Zimisce, to attempt the actual recovery of the lost provinces. They carried the Roman arms (one may use the term with less reluctance than usual) over Syria; Antioch and Aleppo were taken by storm; Damascus submitted; even the cities of Mesopotamia, beyond the ancient boundary of the Euphrates, were added to the trophies of Zimisce, who unwillingly spared the capital of the Khalifate. From such distant conquest it was expedient, and indeed necessary to withdraw; but Cilicia and Antioch were permanently restored to the Empire. At the close of the tenth century the emperors of Constantinople possessed the best and greatest portion of the modern kingdom of Naples, a part of Sicily, the whole [present] European dominions of the Ottomans, the province of Anatolia or Asia Minor, with some part of Syria and Armenia."—H. Hallam, *View of the state of Europe during the Middle Ages*, ch. 6.

1057-1081.—Between the Basilian and the Comnenian dynasties.—Dark period.—"The moment that the last of the Macedonian dynasty was gone, the elements of discord seemed unchained, and the double scourge of civil war and foreign invasion began to afflict the empire. In the twenty-four years between 1057 and 1081 were pressed more disasters than had been seen in any other period of East Roman history, save perhaps the reign of Heraclius. . . . The aged Theodora had named as her successor on the throne Michael Stratiocus, a contemporary of her own who had been an able soldier 25 years back. But Michael VI. was grown aged and incompetent, and the empire was full of ambitious generals, who would not tolerate a dotard on the throne. Before a year had passed a band of great Asiatic nobles entered into a conspiracy to overturn Michael, and replace him by Isaac Comnenus, the chief of one of the ancient Cappadocian houses, and the most popular general of the East. Isaac Comnenus and his friends took arms, and dispossessed the aged Michael of his throne with little difficulty. But a curse seemed to rest upon the usurpation; Isaac was stricken down by disease when he had been little more than a year on the throne, and retired to a

monastery to die. His crown was transferred to Constantine Ducas, another Cappadocian noble," who reigned for seven troubled years. His three immediate successors were Romanus IV., 1067-1071; Michael VII., 1071-1078; Nicephorus III., 1078-1081.—C. W. C. Oman, *Story of the Byzantine empire*, ch. 20.

1081-1085.—Attempted Norman conquest from Southern Italy.—Robert Guiscard, the Norman adventurer who had carved for himself a principality in southern Italy and acquired the title of duke of Apulia,—his duchy coinciding with the subsequent Norman kingdom of Naples—conceived the ambitious design of adding the Byzantine empire to his estate. His conquests in Italy had been mostly at the expense of the Byzantine dominions, and he believed that he had measured the strength of the degenerate Roman-Greeks. He was encouraged, moreover, by the successive revolutions which tossed the imperial crown from hand to hand, and which had just given it to the Comnenian, Alexius I. Beyond all, he had a claim of right to interfere in the affairs of the empire; for his young daughter was betrothed to the heir-expectant whose expectations were now vanishing, and had actually been sent to Constantinople to receive her education for the throne. To promote his bold undertaking, Robert obtained the approval of the pope, and an absolution for all who would join his ranks. Thus spiritually equipped, the Norman duke invaded Greece, in the summer of 1081, with 150 ships and 30,000 men. Making himself master, on the way, of the island of Corcyra (Corfu), and taking several ports on the mainland, he laid siege to Dyrrachium, and found it a most obstinate fortification to reduce. Its massive ancient walls defied the Norman engine, and it was not until February, 1082, that Robert Guiscard gained possession of the town, by the treachery of one of its defenders. Meantime the Normans had routed and scattered one large army, which the emperor Alexius led in person to the relief of Dyrrachium; but the fortified towns in Illyria and Epirus delayed their advance toward Constantinople. Robert was called home to Italy by important affairs and left his son Bohemund (the subsequent Crusader and prince of Antioch), in command. Bohemund defeated Alexius again in the spring of 1083, and still a third time the following autumn. All Epirus was overrun and Macedonia and Thessaly invaded; but the Normans, while besieging Larissa, were undone by a stratagem, lost their camp and found it necessary to retreat. Robert was then just reëntering the field, in person, and had won an important naval battle at Corfu, over the combined Greeks and Venetians, when he died (July, 1085), and his project of conquest in Greece ended with him. Twenty years afterwards, his son Bohemund, when prince of Antioch, and quarreling with the Byzantines, gathered a crusading army in France and Italy to lead it against Constantinople; but it was stopped by stubborn Dyrrachium, and never got beyond. Alexius had recovered that strong coast defence shortly after Robert Guiscard's death, with the help of the Venetians and Amalfians. By way of reward, those merchant allies received important commercial privileges, and the title of Venice to the sovereignty of Dalmatia and Croatia was recognized. "From this time the doge appears to have styled himself lord of the kingdoms of Dalmatia and Croatia."—G. Finlay, *History of the*

Byzantine and Greek empires, bk. 3, ch. 2, sect. 1.

1146.—Destructive invasion of Roger, king of Sicily.—Sack of Thebes and Corinth.—When Roger, king of Sicily, united the Norman possessions in southern Italy to his Sicilian realm he became ambitious, in his turn, to acquire some part of the Byzantine possessions. His single attack, however, made simultaneously with the second crusading movement (1146), amounted to no more than a great and destructive plundering raid in Greece. An insurrection in Corfu gave that island to him, after which his fleet ravaged the coasts of Eubœa and Attica, Acarnania and Ætolia. "It then entered the gulf of Corinth, and debarked a body of troops at Crissa. This force marched through the country to Thebes, plundering every town and village on the way. Thebes offered no resistance, and was plundered in the most deliberate and barbarous manner. The inhabitants were numerous and wealthy. The soil of Bœotia is extremely productive, and numerous manufactures established in the city of Thebes gave additional value to the abundant produce of agricultural industry. . . . All military spirit was now dead, and the Thebans had so long lived without any fear of invasion that they had not even adopted any effectual measures to secure or conceal their movable property. The conquerors, secure against all danger of interruption, plundered Thebes at their leisure. . . . When all ordinary means of collecting booty were exhausted, the citizens were compelled to take an oath on the Holy Scriptures that they had not concealed any portion of their property, yet many of the wealthiest were dragged away captive, in order to profit by their ransom; and many of the most skilful workmen in the silk-manufactories, for which Thebes had long been famous, were pressed on board the fleet to labour at the oar. . . . Benjamin of Tudela, who visited Thebes about twenty years later, or perhaps in 1161, speaks of it as then a large city, with two thousand Jewish inhabitants, who were the most eminent manufacturers of silk and purple cloth in all Greece. The silks of Thebes continued to be celebrated as of superior quality after this invasion. . . . From Bœotia the army passed to Corinth. . . . Corinth was sacked as cruelly as Thebes; men of rank, beautiful women, and skilful artisans, with their wives and families, were carried away into captivity. . . . This invasion of Greece was conducted entirely as a plundering expedition. . . . Corfu was the only conquest of which Roger retained possession; yet this passing invasion is the period from which the decline of Byzantine Greece is to be dated. The century-and-a-half which preceded this disaster had passed in uninterrupted tranquillity, and the Greek people had increased rapidly in numbers and wealth. The power of the Slavonian population sank with the ruin of the kingdom of Achrida; and the Slavonians who now dwell in Greece were peaceable cultivators of the soil, or graziers. The Greek population, on the other hand, was in possession of an extensive commerce and

many flourishing manufactures. The ruin of this commerce and of these manufactures has been ascribed to the transference of the silk trade from Thebes and Corinth to Palermo, under the judicious protection it received from Roger; but it would be more correct to say that the injudicious and oppressive financial administration of the Byzantine Emperors destroyed the commercial prosperity and manufacturing industry of the Greeks; while the wise liberality and intelligent protection of the Norman kings extended the commerce and increased the industry of the Sicilians. When the Sicilian fleet returned to Palermo, Roger determined to employ all the silk-manufacturers in their original occupations. He consequently collected all their families together, and settled them at Palermo, supplying them with the means of exercising their industry with profit to themselves, and inducing them to teach his own subjects to manufacture the

throne, deprived of sight and shut up in a dungeon, by a brother of equal worthlessness, who styled himself Alexius III. The latter neglected, however, to secure the person of Isaac's son, Alexius, who escaped from Constantinople and made his way to his sister, wife of Philip, the German king and claimant of the western imperial crown. Philip thereupon plotted with the Venetians to divert the great crusading expedition, then assembling to take ship at Venice, and to employ it for the restoration of young Alexius and his father Isaac to the Byzantine throne. The cunning and perfidious means by which that diversion was brought about are related in another place (see CRUSADES: 1201-1203). The great fleet of the crusading filibusters arrived in the Bosphorus near the end of June, 1203. The army which it bore was landed first on the Asiatic side of the strait, opposite the imperial city. After ten days of

RUINS OF A BYZANTINE CITADEL

richest brocades, and to rival the rarest productions of the East. . . . It is not remarkable that the commerce and manufactures of Greece were transferred in the course of another century to Sicily and Italy."—G. Finlay, *History of Byzantine and Greek empires, from 716 to 1453, bk. 3, ch. 2, sect. 3*.—See also CRUSADES: 1147-1149.

1185-1204.—**The Angeli:** Isaac II, 1185-1195; Alexius III, 1195-1203; Alexius IV, 1203-1204.

1203-1204.—**Overthrow by the Venetians and Crusaders.—Sack of Constantinople.**—The last of the Comnenian emperors in the male line—the brutal Andronicus I—perished horribly in a wild insurrection at Constantinople which his tyranny provoked, 1185. His successor, Isaac Angelus, collaterally related to the imperial house, had been a contemptible creature before his coronation, and received no tincture of manliness or virtue from that ceremony. In the second year of his reign, the empire was shorn of its Bulgarian and Wallachian provinces by a successful revolt of the Bulgarians (see BULGARIA: 12th century). In the tenth year (1195), Isaac was pushed from his

parley and preparation it was conveyed across the water and began its attack. The towers guarding the entrance to the Golden Horn—the harbor of Constantinople—were captured, the chain removed, the harbor occupied, and the imperial fleet seized or destroyed. On July 17 a combined assault by land and water was made on the walls of the city, at their northwest corner, near the Blachern palace, where they presented one face to the Horn and another to the land. The land attack failed. The Venetians, from their ships, stormed twenty-five towers, gained possession of a long stretch of the wall, and pushed into the city far enough to start a conflagration which spread ruin over an extensive district. They could not hold their ground, and withdrew; but the result was a victory. The cowardly emperor, Alexius III, fled from the city that night, and blind old Isaac Angelus was restored to the throne. He was ready to associate his son in the sovereignty, and to fulfill, if he could, the contracts which the latter had made with Venetians and Crusaders. These invaders had now no present excuse for making war on Constantinople

RECONSTRUCTION OF BYZANTINE CITADEL AT HAIDRA, TUNIS

(After M. Saladin)

any further. But the excuse was soon found. Money to pay their heavy claims could not be raised, and their hatefulness to the Greeks was increased by the insolence of their demeanor. A serious collision occurred at length, provoked by the plundering of a Mohammedan mosque which the Byzantines had tolerated in their capital. Once more, on this occasion, the splendid city was fired by the ruthless invaders, and an immense district in the richest and most populous part was destroyed, while many of the inhabitants perished. The fire lasted two days and nights, sweeping a wide belt from the harbor to the Marmora. The suburbs of Constantinople were pillaged and ruined by the Latin soldiery, and more and more it became impossible for the two restored emperors to raise money for paying the claims of the Crusaders who had championed them. Their subjects hated them and were desperate. At last, in January, 1204, the public feeling of Constantinople flamed out in a revolution which crowned a new emperor, one Alexis Ducas, nicknamed Mourt-zophlos, on account of his eyebrows, which met. A few days afterwards, with suspicious opportuneness, Isaac and Alexius died. Then both sides entered upon active preparations for serious war; but it was not until April 9 that the Crusaders and Venetians were ready to assail the walls once more. The first assault was repelled, with heavy loss to the besiegers. They rested two days and repeated the attack on the 12th with irresistible resolution and fury. The towers were taken, the gates were broken down, knights and soldiers poured into the fated city, killing without mercy, burning without scruple—starting a third appalling conflagration which laid another wide district in ruins. The new emperor fled, the troops laid down their arms,—Constantinople was conquered and prostrate. "Then began the plunder of the city. The imperial treasury and the arsenal were placed under guard; but with these exceptions the right to plunder was given indiscriminately to the troops and sailors. Never in Europe was a work of pillage more systematically and shamelessly carried out. Never by the army of a Christian state was there a more barbarous sack of a city than that perpetrated by these soldiers of Christ, sworn to chastity, pledged before God not to shed Christian blood, and bearing upon them the emblem of the Prince of Peace. . . . 'Never since the world was created,' says the Marshal [Villehardouin] 'was there so much booty gained in one city. Each man took the house which pleased him, and there were enough for all. Those who were poor found themselves suddenly rich. There was captured an immense supply of gold and silver, of plate and of precious stones, of satins and of silk, of furs and of every kind of wealth ever found upon the earth.' . . . The Greek eye-witness [Nicetas] gives the complement of the picture of Villehardouin. The lust of the army spared neither maiden nor the virgin dedicated to God. Violence and debauchery were everywhere present; cries and lamentations and the groans of the victims were heard throughout the city; for everywhere pillage was unrestrained and lust unbridled. . . . A large part of the booty had been collected in the three churches designated for that purpose. . . . The distribution was made during the latter end of April. Many works of art in bronze were sent to the melting-pot to be coined. Many statues were broken up in order to obtain the metals with which they were adorned. The conquerors knew nothing and cared nothing for the art which had added value to the metal."—E. Pears, *Fall of Constantinople*, ch. 14-15.

1204.—Reign of Alexius V.

1204-1205.—Partitioning of the empire by the Crusaders and the Venetians.—"Before the crusaders made their last successful attack on Constantinople, they concluded a treaty partitioning the Byzantine empire and dividing the plunder of the capital. . . . This treaty was entered into by the Frank crusaders on the one part, and the citizens of the Venetian republic on the other, for the purpose of preventing disputes and preserving unity in the expedition." The treaty further provided for the creation of an Empire of Romania, to take the place of the Byzantine Empire, and for the election of an Emperor to reign over it. The arrangements of the treaty in this latter respect were carried out, not long after the taking of the city by the election of Baldwin, count of Flanders, the most esteemed and the most popular among the princes of the crusade, and he received the imperial crown of the new Empire of Romania at the hands of the legate of the pope. "Measures were immediately taken after the coronation of Baldwin to carry into execution the act of partition as arranged by the joint consent of the Frank and Venetian commissioners. But their ignorance of geography, and the resistance offered by the Greeks in Asia Minor, and by the Vallachians and Albanians in Europe, throw innumerable difficulties in the way of the proposed distribution of fiefs. The quarter of the Empire that formed the portion of Baldwin consisted of the city of Constantinople, with the country in its immediate vicinity, as far as Bizya and Tzouroulos in Europe and Nicomedia in Asia. Beyond the territory around Constantinople, Baldwin possessed districts extending as far as the Strymon in Europe and the Sangarius in Asia; but his possessions were intermingled with those of the Venetians and the vassals of the Empire. Prokonnesos, Lesbos, Chios, Lemnos, Skyros, and several smaller islands, also fell to his share."—G. Finlay, *History of Greece from its conquest by the crusaders, ch. 4, sect. 1-2.*—"In the division of the Greek provinces the share of the Venetians was more ample than that of the Latin emperor. No more than one fourth was appropriated to his domain; a clear moiety of the remainder was reserved for Venice and the other moiety was distributed among the adventurers of France and Lombardy. The venerable Dandolo was proclaimed Despot of Romania, and was invested, after the Greek fashion, with the purple buskins. He ended at Constantinople his long and glorious life; and if the prerogative was personal, the title was used by his successors till the middle of the fourteenth century, with the singular, though true, addition of 'Lords of one fourth and a half of the Roman Empire.' . . . They possessed three of the eight quarters of the city. . . . They had rashly accepted the dominion and defence of Adrianople; but it was the more reasonable aim of their policy to form a chain of factories and cities and islands along the maritime coast, from the neighbourhood of Ragusa to the Hellespont and the Bosphorus. . . . For the price of 10,000 marks the republic purchased of the marquis of Montferrat the fertile island of Crete or Candia with the ruins of a hundred cities. . . . In the moiety of the adventurers the Marquis Boniface [of Montferrat] might claim the most liberal reward; and, besides the isle of Crete, his exclusion from the throne [for which he had been a candidate against Baldwin of Flanders] was compensated by the royal title and the provinces beyond the Hellespont. But he prudently

exchanged that distant and difficult conquest for the kingdom of Thessalonica or Macedonia, twelve days' journey from the capital, where he might be supported by the neighbouring powers of his brother-in-law, the king of Hungary. . . . The lots of the Latin pilgrims were regulated by chance or choice or subsequent exchange. . . . At the head of his knights and archers each baron mounted on horseback to secure the possession of his share, and their first efforts were generally successful. But the public force was weakened by their dispersion; and a thousand quarrels must arise under a law and among men whose sole umpire was the sword."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 61.—See also CRUSADES: Map of Mediterranean lands after 1204; ROMANIA; TREBIZOND: 1204-1461.

1261-1453.—Greek restoration.—Last struggle with the Turks and final overthrow.—The story of the shadowy restoration of a Greek empire at Constantinople, its last struggle with the Turks, and its fall is told elsewhere. (See CONSTANTINOPLE: 1261-1453, to 1453.) "From the hour of her foundation to that in which her sun finally sank in blood, Christian Constantinople was engaged in constant struggles against successive hordes of barbarians. She did not always triumph in the strife, but, even when she was beaten she did not succumb, but carried on the contest still; and the fact that she was able to do so is alone a sufficient proof of the strength and vitality of her organization. . . . Of the seventy-six emperors and five empresses who occupied the Byzantine throne, 15 were put to death, 7 were blinded or otherwise mutilated, 4 were deposed and imprisoned in monasteries, and 10 were compelled to abdicate. This list, comprising nearly half of the whole number, is sufficient indication of the horrors by which the history of the empire is only too often marked, and it may be frankly admitted that these dark stains, disfiguring pages which but for them would be bright with the things which were beautiful and glorious, go some way to excuse, if not to justify, the obloquy which Western writers have been so prone to cast upon the East. But it is not by considering the evil only, any more than the good only, that it is possible to form a just judgment upon an historic epoch. To judge the Byzantine Empire only by the crimes which defiled the palace would be as unjust as if the French people were to be estimated by nothing but the Massacre of St. Bartholomew, the Reign of Terror, and the Commune of 1871. The dynastic crimes and revolutions of New Rome were not a constant feature

in her history. On the contrary, the times of trouble and anarchy were episodes between long periods of peace. They arose either from quarrels in the imperial family itself, which degraded the dignity of the crown, or from the contentions of pretenders struggling among themselves till one or other had worsted his rivals and was able to become the founder of a long dynasty. . . . The most deplorable epoch in the history of the Byzantine Empire, the period in which assassination and mutilation most abounded, was that in which it was exposed to the influence of the Crusaders, and thus brought into contact with Western Europe. . . . The Byzantine people, although in every respect the superiors of their contemporaries, were unable entirely to escape the influence of their neighborhood. As the guardians of classical civilization, they strove to keep above the deluge of barbarism by which the rest of the world was then inundated. But it was a flood whose waters prevailed exceedingly upon the earth, and sometimes all the high hills were covered, even where might have rested the ark in which the traditions of ancient culture were being preserved. . . . The Byzantine Empire was predestinated to perform in especial one great work in human history. That work was to preserve civilization during the period of barbarism which we call the Middle Ages. . . . Constantinople fell, and the whole Hellenic world passed into Turkish slavery. Western Europe looked on with unconcern at the appalling catastrophe. It was in vain that the last of the Palaiologoi cried to them for help. 'Christendom,' says Gibbon, 'beheld with indifference the fall of Constantinople.' . . . Up to her last hour she had never ceased, for more than a thousand years, to fight. In the fourth century she fought the Goths; in the fifth, the Huns and Vandals; in the sixth, the Slavs; in the seventh, the Persians, the Avars, and the Arabs; in the eighth, ninth, and tenth, the Bulgars, the Magyars, and the Russians; in the eleventh, the Koumanoi, the Petzenegoi, and the Seljoukian Turks; in the twelfth, thirteenth, fourteenth, and fifteenth, the Ottomans, the Normans, the Crusaders, the Venetians, and the Genoese. No wonder that at last she fell exhausted. The wonder is, how she could keep herself alive so long. But it was by this long battle that she succeeded in saving from destruction, amid the universal cataclysm which overwhelmed the classical world, the civilization of the ancients, modified by the Christian religion. The moral and intellectual development of modern Europe are owing to the Byzantine Empire, if it be true that this development is the common offspring of antiquity upon the one hand and of Christianity upon the other."—D. Bikelas, *Byzantine empire* (*Scottish Review*, 1886, v. 8).

BYZANTIUM: Beginnings of.—The ancient Greek city of Byzantium, which occupied part of the site of the modern city of Constantinople, was founded, according to tradition, by Megarians, 657 B. C. Its situation on the Bosphorus enabled the possessors of the city to control the important corn supply which came from the Euxine, while its tunny fisheries were renowned sources of wealth. It was to the latter that the bay called the Golden Horn was said to owe its name. The Persians, the Lacedæmonians, the Athenians and the Macedonians were successive masters of Byzantium, before the Roman day, Athens and Sparta having taken and retaken the city from one another many times during their wars.

B. C. 478.—Taken by the Greeks from the Persians. See GREECE: B. C. 478-477.

B.C. 440.—Unsuccessful revolt against Athens. Byzantium joined the revolt of Samos against Athens. This was stamped out by the Athenian fleets under Pericles.

CABAL. See CABINET: English.

CABALA.—"The term Cabala is usually applied to that wild system of Oriental philosophy which was introduced, it is uncertain at what period, into the Jewish schools; in a wider sense it comprehended all the decisions of the Rabbinical courts or schools, whether on religious or civil points."—H. H. Milman, *History of the Jews*, v. 2, bk. 18.—"The philosophic Cabala aspired to be a more sublime and transcendental Rabbinism. It was a mystery not exclusive of, but above their more common mysteries; a secret more profound than their profoundest secrets. It claimed the same guaranty of antiquity, of revelation, of tradition; it was the true, occult, to few intelligible sense of the sacred writings and of the sayings of the most renowned Wise Men; the inward interpretation of the genuine interpretation of the Law and the Prophets. Men went on; they advanced, they rose from the most full and perfect study of the Talmuds to the higher doctrines, to the more divine contemplations of the Cabala. And the Zohar was the Book of the Cabala which soared almost above the comprehension of the wisest. . . . In its traditional, no doubt unwritten form, the Cabala, at least a Cabala, ascends to a very early date, the Captivity; in its proper and more mature form, it belongs to the first century, and reaches down to the end of the seventh century of our era. The Sepher Yetzira, the Book of Creation, which boasts itself to be derived from Moses, from Abraham, if not from Adam, or even aspires higher, belongs to the earlier period; the Zohar, the Light, to the later. The remote origin of the Cabala belongs to that period when the Jewish mind, during the Captivity, became so deeply impregnated with Oriental notions, those of the Persian or Zoroastrian religion. Some of the first principles of the Cabala, as well as many of the tenets, still more of the superstitions, of the Talmud, coincide so exactly with the Zendavesta . . . as to leave no doubt of their kindred and affiliation."—*Ibid.*, bk. 30.

CABINDA. See KABINDA.

CABINET.—Although of recent development, the Cabinet was an institution of gradual growth.

It first appeared in England, and next in the United States. The continental countries, British self-governing colonies, and Japan have developed the British form, while Switzerland and the new world republics have taken the United States type. See LANCASTER, CHANCELLORSHIP OF THE DUCHY OF.

English.—ORIGIN OF TERM.—DEVELOPMENT IN THE 18TH CENTURY.—During the reign of Charles II what is known as the cabinet first showed signs of taking shape. "The first period, 1660-1667, was the period during which Clarendon was the dominant figure. But he was not the only minister. There was a little group whom the king specially consulted, since the Privy Council was now too big and too varied in character to deal with confidential business; but, as there was no real agreement among the members of this group, some of whom were perpetually intriguing against Clarendon, they can at most be described as the rudiments or outline of a 'Cabinet.' . . . In the next period (1667-1673), sick of the High Church Cavaliers, who had proved so much less submissive than he hoped, Charles entrusted the main conduct of affairs to a group of men of quite a different character: the change was so great as almost to resemble a modern change of ministry. By a curious coincidence, the initials of the five chief members of the group spelt the word 'Cabal' for which reason the name has always been specially attached to this ministry."—R. Muir, *Short history of the British Commonwealth*, v. i., pp. 542-544.—"While such Cabals, even under that name were not unknown in English history long before the body in question came into existence, some have derived the word from the initial letters of the names of its leading members—Clifford, Ashley, Buckingham, Arlington and Landerdale. In reality it is derived from a Hebrew word *cabala* which meant 'secret,' hence it came to be applied to a party or faction engaged in a secret design, and later, to a group of secret councilors. Charles's body, however, is the most famous of them all."—A. L. Cross, *Shorter history of England and Greater Britain*, p. 372.—See ENGLAND: 1671-1673.

"Walpole's work, . . . the effect of his policy, when it was finally carried through, was to establish the Cabinet on a definite footing, as the seat and centre of the executive government, to maintain the executive in the closest relation with the legislature, to govern through the legislature, and to transfer the power and authority of the Crown to the House of Commons. Some writers have held that the first Ministry in the modern sense was that combination of Whigs whom William called to aid him in government in 1695. Others contend that the second administration of Lord Rockingham, which came into power in 1732, after the triumph of the American colonists, the fall of

Lord North, and the defeat of George III., was the earliest Ministry of the type of to-day. At whatever date we choose first to see all the decisive marks of that remarkable system which combines unity, steadfastness, and initiative in the executive, with the possession of supreme authority alike over men and measures by the House of Commons, it is certain that it was under Walpole that its ruling principles were first fixed in parliamentary government, and that the Cabinet system received the impression that it bears in our own time. . . . Perhaps the most important of all the distinctions between the Cabinet in its rudimentary stage at the beginning of the century and its later practice, remains to be noticed. Queen Anne held a Cabinet every Sunday, at which she was herself present, just as we have seen that she was present at debates in the House of Lords. With a doubtful exception in the time of George III., no sovereign has been present at a meeting of the Cabinet since Anne. . . . This vital change was probably due to the accident that Anne's successor did not understand the language in which its deliberations were carried on. The withdrawal of the sovereign from Cabinet Councils was essential to the momentous change which has transferred the whole substance of authority and power from the Crown, to a committee chosen by one member of the two Houses of Parliament, from among other members. . . . The Prime Minister is the keystone of the Cabinet arch. Although in Cabinet all its members stand on an equal footing, speak with equal voice, and, on the rare occasions when a division is taken, are counted on the fraternal principle of one man, one vote, yet the head of the Cabinet is 'primus inter pares,' and occupies a position which, so long as it lasts, is one of exceptional and peculiar authority. It is true that he is in form chosen by the Crown, but in practice the choice of the Crown is pretty strictly confined to the man who is designated by the acclamation of a party majority. . . . The Prime Minister, once appointed, chooses his own colleagues, and assigns them to their respective offices. . . . The flexibility of the Cabinet system allows the Prime Minister in an emergency to take upon himself a power not inferior to that of a dictator, provided always that the House of Commons will stand by him. In ordinary circumstances, he leaves the heads of departments to do their own work in their own way. . . . Just as the Cabinet has been described as being the regulator of relations between Queen, Lords and Commons, so is the Prime Minister the regulator of relations between the Queen and her servants. . . . Walpole was in practice able to invest himself with more of the functions and powers of a Prime Minister than any of his successors, and yet was compelled by the feeling of the time earnestly and profusely to repudiate both the name and title, and every one of the pretensions that it involves. The earliest instance in which I have found the head of the government designated as the Premier is in a letter to the Duke of Newcastle from the Duke of Cumberland in 1746."—J. Morley, *Walpole*, ch. 7.—"In theory the Cabinet is nothing but a committee of the Privy Council, yet with the Council it has in reality no dealings; and thus the extraordinary result has taken place, that the Government of England is in the hands of men whose position is legally undefined: that while the Cabinet is a word of every-day use, no lawyer can say what a Cabinet is; that while no ordinary Englishman knows who the Lords of the Council are, the Church of England prays, Sunday by Sunday, that these Lords may be 'endued with wisdom and under-

standing,' that while the collective responsibility of Ministers is a doctrine appealed to by members of the Government, no less than by their opponents, it is more than doubtful whether such responsibility could be enforced by any legal penalties: that, to sum up this catalogue of contradictions, the Privy Council has the same political powers which it had when Henry VIII. ascended the throne, whilst it is in reality composed of persons many of whom never have taken part or wished to take part in the contests of political life."—A. V. Dicey, *Privy Council*, p. 143.

POSITION DURING 19TH CENTURY.—"The position of the cabinet during the nineteenth century both in ordinary action and in times of crisis is illustrated with equal fulness in the passage of the reform bill. This date, 1832, is the earliest to which we can assign with certainty the completion of the cabinet system in all its working details, though it is very likely true that a somewhat earlier test, had it been applied, would have found its practical operation as fully understood. The reform bill was a government measure. That is, it was framed by the ministry, introduced by one of its members, and remained in his charge during its passage. If it should be defeated in the house of commons, or if an amendment upon a vital point should be carried against the ministry, then the cabinet must either resign or appeal to the country for its support upon the issue by dissolving parliament and bringing on a general election. A new election can be the cabinet's choice only under a heavy responsibility. An appeal to the country upon insufficient grounds, without some evidence of general support, or merely to save the ministry time, would be sure to be followed in the election by severe condemnation, but in this case the government had every reason to believe that the country was behind it, and the event proved the opinion correct. A greatly increased majority for the cabinet was returned by the electors, and the vote was considered a mandate from the country to go on with the measure. On the defeat of the second bill in the house of lords, the case was different. An election had lately been held and the government had still a large majority in the commons. An appeal to the country was unnecessary and would have been improper. Instead the cabinet prorogued parliament to permit a reintroduction of the bill in a new session. When the government was again defeated on an amendment in the Lords, matters came to a crisis which illustrates the action of the cabinet at such a time. In asking the king to take a step, the creation of peers, which it was known that he was very reluctant to take, the prime minister offered him at the same time the alternative of the cabinet's resignation. At that time, whatever might be done today, the king chose that alternative, but while the attempt to form a cabinet of the opposite party was made, the old cabinet remained in office and carried on the routine business of the government. When the king was obliged to admit that his attempt had failed, it resumed its position as cabinet with reference to parliament, but now with the certainty that its advice would be accepted by the king. The crisis reveals also what it is in the British system which keeps a cabinet in power or turns it out of office. It is its ability or inability at any given time to determine and direct the policy of the government. If the house of commons will do business with the cabinet, then it goes on; if the house of commons will not do business with it, no other power can maintain it in office. If a ministry should attempt to retain power in the teeth of a hostile

house of commons, the business of government would shortly fall into chaos and the attempt would mean revolution. But with the house of commons and the opinion of the nation against it, no ministry would ever make the experiment. This is the whole theory of government by a responsible ministry. The house of commons reflects the opinion of the people in regard to the policy proposed by the government and its judgment, which is the judgment of the nation, is final in the question before it."—G. B. Adams, *Constitutional history of England*, pp. 445-446.—"The cabinet not merely inherited, during the nineteenth century, the executive power of the crown and the legislative power of parliament, it was also itself directly affected by the currents of change which then prevailed. For one thing, it steadily increased in size. The cabinets of the opening century numbered barely a dozen members; by the middle of the century the number had risen to fourteen or fifteen; at the end there were nineteen or twenty members. The increase was not due primarily to wish to have the advice of a larger number of political leaders. Such a wish is disproved by the tendency, which has been particularly marked of recent years, to form an inner circle of especially influential ministers, like the *conciliabulum* of the eighteenth century. The increase has been due chiefly to the growth of new administrative departments, charged with work of so great importance, that the head of the department seemed necessarily of cabinet rank, or to a corresponding increase of the importance of the work of older departments. The growth of the business of these departments, old and new, and the character of the work they have had to supervise, are significant signs of the expansion which government has undergone in the past two or three generations. The two secretaries of state of Elizabeth's time grew into five in the nineteenth century. During most of the eighteenth century there had been three, the third a part of the time for Scotland, a part of the time for the colonies; but the third did not become permanent until 1794, when a secretary for war was appointed. In 1801 he was given charge also of the colonies. In 1854 these two departments were separated and a secretary of state for the colonies appointed, and in 1858, when India was transferred from the East India company to the crown, a secretary of state for India. Since 1782 the two original secretaries have been, the one at the head of the home department, the other of the foreign. The office of the secretary at war, never a secretary of state, and generally occupied with subordinate duties only, was not continued after 1863. In strict legal theory, the five secretaries of state are one, that is, they perform the duties of one office. In most things any one of them can do the work of any other, and most statutes, in conferring powers upon 'the secretary of state,' do not distinguish any one of them specifically. The home secretary is technically the first secretary of state."—*Ibid.*, pp. 475-476.—See also HOME OFFICE.—"The Cabinet in its existing shape, is a committee not of Parliament, but of one party in Parliament, which while it is in office has the control of legislation, administration, policy and finance."—S. Low, *Governance of England*, pp. 15-16.—"The Cabinet varies in number at the pleasure of the Prime Minister. It always contains the First Lord of the Treasury, the chancellor of the Exchequer, the [five] Secretaries of State . . . the First Lord of the Admiralty, the Lord High Chancellor, the Lord Privy Seal, and the Lord President of the Council. . . . Lord Beaconsfield thought that the number should

be limited to twelve. But of late years the tendency has been for the membership to increase."—M. T. Blauvelt, *Development of cabinet government in England*, pp. 297-298.—"If the predominance of the House of Commons has been lessened by a delegation of authority to the cabinet, it has been weakened also by the transfer of power directly to the electorate. The two tendencies are not, indeed, unconnected. The transfer of power to the electorate is due in part to the growing influence of the ministers, to the recognition that policy is mainly directed, not by Parliament, but by them. The cabinet now rules the nation by and with the advice and consent of Parliament; and for that very reason the nation wishes to decide what cabinet it shall be that rules. No doubt the ministry depends for its existence upon the good pleasure of the House of Commons; but it really gets its commission from the country as the result of a general election."—A. L. Lowell, *Greater European government*, p. 61.—See also PARLIAMENT: English: 1911-1921.

WAR CABINETS.—"It goes without saying that the outbreak of the Great War in 1914 brought upon the cabinet, as upon all parts of the governmental system, an unexpected and terrific strain. By degrees the national administration was transformed almost beyond recognition. . . . New governmental agencies sprang up on all sides, including the war trade department, the ministry of munitions, and the board of control for the liquor traffic in 1915, the ministries of food control, shipping control, pensions, labor, and blockade in 1916, and the departments of national service and reconstruction in 1917. But the most remarkable changes that took place were those by which the cabinet and the cabinet system were made, temporarily at all events, something totally different from what they had been. The first great step was the formation, in 1915, of a 'coalition' cabinet, which got away from the usual party basis and brought together representatives of all parties, who undertook to sink personal and party differences in a common leadership of the nation in its great crisis. [See ENGLAND: 1915: Novel legislative and administrative measures.] The coalition served many useful purposes. But experience showed that a cabinet composed, as the present one was, of twenty-three members was far too cumbersome for the most successful management of a nation's affairs under war conditions, and the upshot was a drastic and spectacular reorganization in December, 1916, whereby the 'coalition' cabinet was replaced by a non-partisan 'war cabinet' of five members, headed by Mr. Lloyd George as prime minister. [See ENGLAND: 1916 (December); PARLIAMENT, ENGLISH: 1916.] With a membership increased to six, and with a few other minor changes, this war cabinet has since continued at the head of the government. The object chiefly aimed at in the reorganization was, of course, promptness of decision and of action. Hence the cabinet group was made very small. . . . Furthermore, in 1917 the prime ministers of the self-governing British colonies, together with representatives of India and of other dependencies, were invited to attend a series of special meetings of the war cabinet; and thus arose the novel and interesting body known as the Imperial war cabinet, which held a second series of meetings in 1918. All of these radical reconstructions were accomplished, in characteristic English fashion, by entirely informal and extra-legal processes. No act of Parliament was passed, and no proclamation or order in council was issued, establishing or even announcing the new machinery. How permanent the arrangements

will prove is, of course, uncertain. But they are too important to be left out of account by any one who would understand the English governmental system and the processes by which it grows; and one can hardly doubt that their lasting effects will be great."—F. A. Ogg, *National governments and the World War*, pp. 217-219.—See also ENGLAND: 1919-1920: Ministerial changes.—"There has been in recent years considerable agitation for a Public Health Office, and, with the beginnings of a general reconstruction of the Cabinet following the armistice of November 11, 1918, this has been one of the first reforms to be enacted into law. The Ministry of Health Act of 1919 provides for the appointment of a minister and the transfer to him of most of the functions of the President of the Local Government Board. It will be his duty 'to take all steps that may be desirable to secure the effective carrying out and coordination of measures conducive to the health of the people,' including the prevention and cure of disease, the collection and preparation of information and statistics, and the training of persons engaged in health service. It is now believed that this minister will have authority over the administration of the poor laws, and some concern is felt in many circles lest the old system be entirely supplanted and transformed. It is possible, however, that subsequent legislation will make definite provision for the care of the poor."—A. P. Usher, *Industrial history of England*, p. 403.

American.—"The practice of consulting his principal officers together in a council was begun by President Washington in the early part of his first term. . . . To characterize Washington's department heads as a body of advisers, the English term 'cabinet' came into use in 1783. It was well enough known at the time as applicable to the important source of directive power in the English government, the Cabinet Committee. It had been used by Charles Pinckney as early as 1787 to characterize what he, almost alone among his contemporaries, seems to have foreseen as a probable development—an advisory committee to the American chief magistrate. . . . Not before Jefferson's administration were there any notable refer-

ences to the Cabinet in Congress. The term 'cabinet' may be found used in debate on February 27, 1802, in the House. It can be shown that the method of cabinet meetings which Washington had first suggested as far back as 1791, Jefferson for the most part followed. Of it he said: 'I practiced this method, because the harmony was so cordial among us all, that we never failed by a contribution of mutual views on the subject, to form an opinion acceptable to the whole. . . .' It was not a method sanctioned by a strict interpretation of the Constitution, as Jefferson was well enough aware. However, it accomplished things quickly and, in view of the many difficult problems before a President, it was inevitably the most satisfactory and natural method. [See U. S. A.: 1789-1792.] It is not necessary to follow the term farther in much detail. As early as 1803 it was used by Chief-Justice Marshall in the Supreme Court decision of *Marbury vs. Madison*. Jackson was the first President, as one might expect, to use the term in an annual message. [See U. S. A.: 1845: Polk's cabinet meetings.] . . . There was some further discussion of the term [in Congress in 1870]. But it amounted to nothing but the distinct recognition of the fact of the well-known existence of the institution. The law had as yet taken no notice of it. That the term *cabinet* has at last gained a place in the language of the federal statute law is remarkable enough to call for a brief explanation. In an act approved and signed by President Roosevelt on February 26, 1907, provision was made for increasing the salaries of the Secretaries, Attorney-General, and Postmaster-General from \$8,000—the sum at which they were fixed by law in 1874—to \$12,000. The part of the act with which we are concerned read as follows: 'Sec. 4. That on and after March fourth, nineteen hundred and seven, the compensation of the Speaker of the House of Representatives, the Vice-President of the United States and the heads of Executive Departments who are members of the President's Cabinet shall be at the rate of twelve thousand dollars per annum each.' . . . The significant result was this—that the term *cabinet* went consciously into the statute law of the United States."—H. B. Learned, *President's cabinet*, pp. 135-157.—"There is in the government of the United States no such thing as a Cabinet in the English sense of the term. But I use the term, not only because it is current in America to describe the chief ministers of the President, but also because it calls attention to the remarkable difference which exists between the great officers of State in America and the similar officers in the free countries of Europe. Almost the only reference in the Constitution to the ministers of the President is that contained in the power given him to 'require the opinion in writing of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices.' All these departments have been created by Acts of Congress. Washington began in 1789 with four only, at the head of whom were the following four officials: Secretary of State, Secretary of the Treasury, Secretary of War, Attorney General. In 1798 there was added a Secretary of the Navy, in 1829 a Postmaster General, and in 1840 a Secretary of the Interior."—J. Bryce, *American commonwealth*, ch. 9.—See INTERIOR, DEPARTMENT OF.—"In 1862 a separate Department of Agriculture was established. . . . In 1880 the head of the Department became Secretary of the Department of Agriculture and a Cabinet officer. A Bureau of Labor under the Interior Department was created in 1884. In 1888 Congress

constituted it a separate department, but did not make its head a Secretary, and therefore not a Cabinet officer."—W. W. and W. F. Willoughby, *Government and administration of the United States* (Johns Hopkins University Studies, Series ix, Nos. 1-2, ch. 10).—See U. S. A.: 1860 (December).—The Cabinet, as now constituted, consists of ten men. Two positions have been added since the beginning of this century, "in 1903 a Secretary of Commerce and Labour, and in 1913 a Secretary of Labour. [See INTERIOR, DEPARTMENT OF THE, UNITED STATES; JUSTICE, DEPARTMENT OF; LABOR, DEPARTMENT OF; TREASURY DEPARTMENT; POST OFFICE DEPARTMENT: Founding of American post office department.] These ten now make up what is called the Cabinet. Each receives a salary of \$12,000 (£2,400). All are appointed by the President, subject to the consent of the Senate (which is practically never refused), and may be removed by the President alone. Nothing marks them off from any other officials who might be placed in charge of a department, except that they are summoned by the President to his private council. None of them can vote in Congress, Art. xi. 6 of the Constitution providing that 'no person holding any office under the United States shall be a member of either House during his continuance in office.' . . . The creation of the Department of Commerce and Labour was an evidence of that extension of the functions of government into new fields which is no less remarkable in the United States than it is in Europe. Among its duties are the supervision of corporations (other than railroads), doing interstate business, lighthouses, the coast and geodetic survey, merchant shipping, the census, trade and labour statistics, and the administration of the immigration laws. It will be observed that from this list of ministerial offices several are wanting which exist in Europe. Thus there is no minister of education, because that department of business belongs to the several States; no minister of public worship, because the United States Government has nothing to do with any particular form of religion; no minister of public works, because grants made for this purpose come direct from Congress without the intervention of the executive, and are applied as Congress directs. Neither was there, till the Philippine Isles and Puerto Rico were acquired, any Colonial Office. Since that date (1899) a Bureau of Insular Affairs has been established, and placed under the War department, to take charge of these dependencies."—J. Bryce, *American commonwealth*, pp. 85-86, 89-90.—See also STATE DEPARTMENT OF THE UNITED STATES; WAR DEPARTMENT.

Hunt, *Department of state*.—*Yale review*, v. 15, pp. 160 ff.—F. A. Ogg, *National progress*, pp. 131-134.

French.—"Unlike the President of the United States, the French President is not free to use his powers according to his own judgment, for in order to make him independent of the fate of cabinets, and at the same time to prevent his personal power from becoming too great, the constitutional laws declare that he shall not be responsible for his official conduct, except in case of high treason, and that all his acts of every kind, to be valid, must be counter-signed by one of the ministers. . . . The President, indeed, is not usually present at the cabinet consultations (*conseils de cabinet*) in which the real policy of the government is discussed, and as a rule he presides only over the

formal meetings (*conseils des ministres*) held for certain purposes specified by law. He has power, it is true, to select the ministers, and in this matter he can use his own discretion to some extent, but in fact he generally intrusts some one with the formation of a cabinet, and appoints the ministers this man suggests. . . . In a parliamentary system the ministers have two distinct functions. One of these is the same as that of the members of the President's Cabinet in the United States, and consists of the management of the departments of the administration. The other is the duty of representing the government in the Chambers, urging the adoption of its measures, and defending its policy against the attacks of its adversaries. These two functions are not necessarily united, and in fact it has been a common habit in some countries to appoint ministers without portfolios, as it is called, that is, without any executive duties at all, in order that they may devote their whole energy to the battles in Parliament. Although there is nothing to prevent such a practice in France, it is not followed to-day, each minister being at the head of a particular branch of the administration. The number of departments, however, and the distribution of the public business among them is not fixed by law, but is regulated from time to time by decree of the President of the Republic. The number of ministers is, therefore, constantly liable to change according to the immediate needs of the public service. At present there are twelve departments or ministries: those of the Interior; of Justice; of Foreign Affairs; of Finance; of War; of the Navy; of Education and the Fine Arts; of Public Works; of Labor; of Commerce, Industry, and Posts and Telegraphs; of Agriculture; and of the Colonies. The constitutional law of February 25, 1875 (Art. 6), declares that the ministers are collectively responsible to the Chambers for the general policy of the government, and individually for their personal acts. The object of this clause was, of course, to establish the parliamentary system, and in fact the French ministry is responsible to the Chamber of Deputies, as the English is to the House of Commons, and resigns on a hostile vote on any matter of importance. Except, indeed, for the Ministers of War and of the Navy, who are usually military men, the cabinet officers are almost always selected from among the members of Parliament, although the reason for this practice in England does not apply in France, because the ministers have a right to be present and speak in either Chamber, whether members of it, or not. . . . When we consider the paternal character of the government, the centralization of the state, and the large share of the authority vested in the executive department, we cannot fail to see that the ministers in whose hands this vast power is lodged must be either very strong or very weak. If they are able to wield it as they please, and are really free to carry out their own policy, they must be far stronger than any officer or body in Great Britain, and immeasurably stronger than any in our federal republic. But, on the other hand, the very immensity and pervasiveness of their power, the fact that it touches closely every interest in the country, renders them liable to pressure from all sides. It becomes important for every one to influence their action, provided he can get a standpoint from which to bring a pressure to bear. This standpoint is furnished by the Chamber of Deputies, for the existence of the ministry depends on the votes of that body. The greater, therefore, the power of the minister, and the more numerous the favors he is able to bestow, the fiercer will be the struggle for them, and the less will he

be free to pursue his own policy, untrammelled by deputies, whose votes he must win if he would remain in office."—A. L. Lowell, *Governments of France, Italy and Germany*, pp. 28-29, 32-33, 64-65.

Italian.—"He [the Italian King] is, indeed, seldom present at cabinet meetings, and has little or no direct influence over current domestic politics, although it is said that his personal opinion has a good deal of weight on the relations with foreign states. When, however, a cabinet crisis occurs and the ministry resigns, the King has a great deal of latitude in the appointment of its successor; for the Chamber is not divided into two parties, one of which naturally comes into power when the other goes out, but, as in France, it is split up into a number of small groups, so that every ministry is based upon a coalition. The King can, therefore, send for almost any one he pleases and allow him to attempt to form a cabinet. It often happens, moreover, that the man selected feels that he cannot get the support of a majority in the existing Chamber, but, hoping for a favorable result from a new election, is willing to undertake to form a cabinet if allowed to dissolve Parliament. In such cases the King exercises his own discretion, and grants permission or not as he thinks best; for, contrary to the habit in France, dissolutions in Italy are by no means rare. Thus the Italian King, although strictly a constitutional monarch tied up in a parliamentary system, is not quite so powerless as the French President or the English King. In the selection of his ministers the King is not limited by law to members of Parliament, but if a man is appointed who is not a member of either House, he is obliged by custom to become a candidate for the next vacant seat in the Chamber of Deputies, unless he is created a Senator. As in other parliamentary government on the Continent, however, the ministers and their under-secretaries have a right to be present and speak in either Chamber, although they can vote only in the one of which they happen to be members. The work of the Parliament is, indeed, chiefly directed by them; for, while individual members have a right to introduce bills, the power is used only for matters of small importance. As a rule, each minister has charge of a department of the administration; but it is allowable, and was at one time not uncommon, to appoint additional ministers without portfolios, whose duties consisted solely in helping to shape the policy of the government, and defending it in the Chambers."—*Ibid.*, pp. 126-128.

Cabinet system of government.—FRENCH AND ENGLISH SYSTEMS CONTRASTED.—The cabinet system of government is a system of government which originated in England, the essential feature of which is the union of the supreme direction in both legislation and administration in a ministry taken from the legislature. The smooth working of the cabinet system in England is secured by the unquestioned right of Parliament to control the Crown, the equally unquestioned predominance of the House of Commons over the House of Lords, and the two-party system. In France a modified form of the system operates on a basis of equal responsibility to both chambers. "The Cabinet system involves a division of the executive into partisan and non-partisan elements. It places the non-partisan functions in the hands of a monarch or, as in the case of France, a president, while the partisan functions pass into the hands of the chief ministers of state. The body of chief ministers constitutes the Cabinet. They are usually members of the legislature and as party leaders, whether members of it or not, they con-

trol the legislature. Separately each member of the Cabinet, with an occasional exception, administers a department of the executive, but they are jointly responsible for the conduct of the government. At the head of the Cabinet is the Prime Minister who presides at its meetings and is its chief spokesman in the legislature and before the country. The system thus requires two official heads. The King or President is the nominal head, or ruler of the entire people, and his duties are non-partisan. The Prime Minister speaks with authority on all matters of disputed party politics. 'Parliamentary government' is a term often used as a synonym for Cabinet government. . . . There is a sense in which it may be said that the Cabinet controls the legislature, because it must command the continuous support of a majority of the legislature. The legislature also in a sense controls the Cabinet, because at any time the majority may be changed to a minority, thus forcing the Cabinet to resign. The term 'Cabinet government' is suggestive of the control of the Cabinet over both administrative and legislative business. The term 'Parliamentary government' emphasizes the authority of the legislature. . . . The chief advisers of the President are, as a body, called a Cabinet, but they are not a Cabinet in the English sense of the term. They advise the President on matters of general executive policy, but he may entirely disregard their advice. Each member of the President's Cabinet is responsible to his chief for the administration of a separate department as, for example, the war, navy, or post-office department; but there is no such thing as joint cabinet responsibility. The English Cabinet is itself a sort of corporate personality. As a body it is held responsible both to the legislature and to the people. The Cabinet and not a chief person rules and governs. It is true that most members of the Cabinet are the heads of separate departments of the executive; but this fact is obscured by the emphasis given to the joint responsibility of the body as a whole, for both legislative and executive policies. . . . Again, the two systems of government are contrasted in respect to origin and nature. One is derived from a process of evolution; the other is a product of logical analysis and artificial construction. Bagehot is surely correct in saying that a Cabinet government could never have been the result of deliberate plan and intention. It could have originated only through a long process of adjustment of forces to solve temporary difficulties. The system as known to-day is of recent origin. The distinctive features of the presidential system are the result of conscious logical analysis. The system could never have come into existence except as the result of a deliberate plan. Each of the systems stands for certain well-known and enduring qualities found in all governments, the artificial and the natural. The English . . . Cabinet developed unconsciously as a by-product of continuous striving for limitations on the Crown. Only the English type of Cabinet government identifies government with a party. On the Continent of Europe cabinets are composed of combinations of leaders of various parties. The cabinet is not itself the organ of a party, it usually represents a number of party groups. No single party commands a majority in the legislature. Temporary majorities are made by coalitions of parties. The Cabinets are, indeed, made up of party leaders, but leaders of different parties. The parties influence government, but they do not govern. No 'Shadow Cabinet' confronts the government ready to take office as soon as the ruling Cabinet is defeated. After a cabinet

crisis often a number of the same party leaders will reappear in the newly organized Cabinet."—J. Macy and J. W. Gannaway, *Comparative free government*, pp. 395-401.—See also MUNICIPAL GOVERNMENT: Development of the city as a local business unit.

CABINET, KITCHEN (1820-1837), a group of President Jackson's friends who had more influence over him than the members of his official cabinet. See U. S. A.: 1820.

CABIRI, a group of Greek deities, the nature of whose cult is obscure. See SAMOTHRACE.

CABLES, Submarine. See ELECTRICAL DISCOVERY: Telegraphy and telephony; TELEGRAPH: 1754-1866; 1855-1917; TELEGRAPHS AND TELEPHONES: 1908: United States.

CABOCHIENS, French political faction. See FRANCE: 1380-1415.

CABOT, George (1751-1823), American politician. Senator from Massachusetts, 1791-1796; president of the Hartford Convention, 1814.

CABOT, John (1450-1498), Italian navigator and explorer in the service of England. His native name was Giovanni Caboto. First voyage, 1497; took possession of Cape Breton island, passed Cape Ray, St. Pierre, Miquelon, Cape Race, 1498, sailed to Labrador, Greenland through Davis strait reaching the modern Baffin land; mistook Newfoundland for the main shore.

CABOT, Sebastian (1475-1557), English navigator, one of the three sons of John Cabot. 1526, Charles V gave him the command of an expedition, which proved disastrous, intended to promote trade with the Spice Islands; 1548, returned to England, and was pensioned for services as a pilot; 1553-1556, governor of the Company of Merchant Adventurers. See AMERICA: Map showing voyage of discovery; 1497; 1498; PARAGUAY: 1515-1557.

CABRAL, Pedro Alvarez (c. 1460-1526), Portuguese navigator. Received command of fleet bound for the East Indies, 1500; sailed too far to the west and was carried to the coast of Brazil, took possession in the name of Portugal, and called it Santa Cruz; continued his voyage and reached India where he established a trading post at Calicut. On his return to Europe he sank into obscurity. See AMERICA: Map showing voyages of discovery; 1500-1514.

CABRERA, Manuel Estrada (1857-), President of Guatemala, 1898-1911.—See also GUATEMALA: 1898-1920; 1907-1917; 1920; 1921; 1922.

CABRERA, Ramon (1806-1877), Carlist general. Joined a small band of Carlist guerrillas in the civil war of 1833; captured Valencia, 1837, and Morella, 1839; created count of Morella and lieutenant-general, 1839; fled to Paris, 1840; instigated an unsuccessful Carlist rebellion, 1848-1849; finally recognized Alfonso as king of Spain, 1875. See SPAIN: 1833-1846.

CABRERA BOBADILLA CERDA Y MENDOZA, Luis Gerónimo (1590-1647), Spanish administrator and viceroys of Peru, 1629-1639. He suppressed revolt among Uru Indians.

CABRILLO, Juan Rodríguez (d. 1543), Portuguese navigator who entered the service of Spain. In 1542 he made discoveries in Lower California and later in the same year he entered San Diego harbor, thus becoming the discoverer of Alta California. He discovered the islands of San Clemente and Santa Catalina, the Bay of Pueblo de las Ca-

noas, the islands of Santa Cruz, Santa Rosa, and San Miguel, Point Pinos, Point Conception, Monterey Bay and Point Año Nuevo. He died on San Miguel Island.

CABUL. See KABUL.

CACCINI, Giulio, or Giulio Romano (about 1558-1615), Italian composer. Studied with Scipione della Palla; collaborated with Peri in the first operas, *Dafne* and *Euridice*, given in 1597 and 1600 respectively. See MUSIC: Modern: 1575-1676.

CACERES, Andrés Avelino (1836-1911), Peruvian soldier and statesman, president of Peru. See PERU: 1884-1908.

"CADETS," members of the Russian Constitutional Democratic party. See RUSSIA: 1905-1907; 1917.

CADILLAC, Antoine de la Mothe (d. c. 1720), French soldier, founder of Detroit. See DETROIT: 1686-1701.

CADIZ: Location.—Cadiz (ancient Gades or Gadeira), a seaport of Andalusian Spain and the capital of the province of Cadiz, is ninety-five miles south-southwest of Seville. It is situated on a narrow neck of land on the Atlantic ocean. "It was originally founded, like so many other commercial settlements in the neighbourhood of more or less hostile populations, on a small island, and was not connected with the mainland till later Roman times when the severing channel was no longer required for security. Since then the town has been crowded on a long narrow peninsula between the Atlantic and its own spacious bay. Owing to the narrowness of the space on the peninsula a large number of daughter towns have grouped themselves round the shores of the bay."—*Stanford's compendium of geography and travel*, v. 1, p. 328.—"In the Heracleæ, the island on which Gades was situated was called *Erythea*, and the ancients say that it consisted of two islands, a circumstance which has caused much difficulty to modern geographers, as it was impossible to find the two islands. But no Andalusian would be puzzled by it. Cadiz, together with Leon, now certainly forms one island, but originally Cadiz was an island by itself, and its present union with Isla de Leon is the consequence of a causeway, which was made at a time unknown to us, from Gades to the larger island; this artificial causeway is discernible even at the present day."—B. G. Niebuhr, *Lectures on ancient ethnography and geography*, v. 1, p. 287.—The estimated population of the city in 1918 was 65,362.

B. C. 1130.—City founded by the Phœnicians.—"The Phœnicians of Tyre, sailing westward in search of gain, founded, according to tradition, some eleven hundred and thirty years before Christ, the city of Gadesor Gadeira [perhaps derived from

Gadir, in Hebrew and Phœnician—a fence, i. e., a fenced city) on the site of the modern Cadiz.”—U. R. Burke, *History of Spain*, v. 1, p. 7.—See also PHœNICIANS: Origin.

B. C. 6th century.—Called on Carthage for aid against native tribes.—Center of trade.—In the sixth century B. C. “the people of Cadiz are said to have been engaged in a dangerous war with certain native tribes, wherefore they invited the Carthaginians to help them. The latter came, and as has so often occurred in history took over for themselves the land which they had entered as allies.”—C. E. Chapman, *History of Spain*, p. 10.—“In Phœnician and Carthaginian times Cadiz was a great center of trade in the mineral wealth of Spain, including the copper of the lower Guadiana region, probably also the lead and silver of Linares, the tin of the now exhausted mines of Galicia, as well as iron and other minerals.”—*Stanford's compendium of geography and travel*, v. 1, p. 328.—See also COMMERCE: Ancient: B. C. 1000-600; UTICA.

ALSO IN: G. Rawlinson, *Phœnicia*, p. 67.

B. C. 206.—Hostility of Cadiz to Carthage.—Became ally of Rome.—“Gades was a Phœnician settlement, independent of Carthage, and as truly Punic as the latter city itself. But when the prosperity of Carthage rose higher and higher, and when, at the same time, that of the other Phœnician colonies was sinking more and more, then Gades also was obliged to acknowledge the supremacy of Carthage. Nothing is more natural and more in accordance with human passions and feelings, than that this Punic city was more hostile to the Carthaginians than any other place that had been subdued by them; we cannot, therefore, be surprised at finding that, in the course of the second Punic war, its hatred of Carthage led it to declare in favour of the Romans. . . . Hence Gades obtained very favourable terms from the Romans, and remained a privileged city until the time of the emperors, afterwards it received the Roman franchise.”—B. G. Niebuhr, *Lectures on ancient ethnography and geography*, v. 2, pp. 287-288.

B. C. 49.—Admitted to full Roman franchise.—“Gades became a favoured ally of Rome and was admitted [by C. Julius Caesar in 49 B. C.] to the full Roman franchise.”—E. A. Freeman, *Historical geography*, p. 56.

A. D. 5th-8th centuries.—Occupied by Visigoths.—From the overthrow of the Roman dominion in Spain (402) to the battle of Guadalete (711) when the Moors took possession of the southern peninsula, Cadiz was occupied by the Visigoths.

711-1262.—Moorish rule in Cadiz.—Renamed Jezirat-Kadis.—For more than five centuries Cadiz was ruled by the Moorish conquerors, by whom it was renamed Jezirat-Kadis.

1262.—Taken and rebuilt by Alfonso X of Castile.—“Under Saint Ferdinand began [1236] the recovery of the great cities along the Guadalquivir. . . . Cadiz, eldest of Western cities passed again, as when she first entered the Roman world, from Semitic into Aryan hands [1262].”—E. A. Freeman, *Historical geography of Europe* p. 538.—It was rebuilt and re-peopled by Alfonso X of Castile, by whom it had been delivered from Moorish hands.

1493-1496.—Expedition of Columbus.—“On May 23, 1493, it was announced that a new and much larger expedition to the Indies would be sent out. . . . The adventurers set sail from Cadiz on September 25, 1493. . . . In the spring of 1496 things were in such evil case that Columbus determined that he must go back to Spain to seek help and

advice. Leaving his brother Bartholomew, who had come out in 1494, in command at Isabella in his absence, he set sail with two caravels, bearing about thirty Indians and upwards of two hundred homesick and discontented colonists and reached Cadiz on June 11.”—R. B. Merriman, *Rise of Spanish empire*, v. 2, pp. 205-207.

1587.—Shipping in harbor burned by English under Sir Francis Drake.—“Mary Stuart was persuaded to disinherit her son, who was a Protestant (the later James I of England), and to make Philip [II of Spain] her heir. The pope was induced to lend both financial and moral support to the undertaking, although it was necessary to deceive him as to Philip's intentions to acquire England for himself; the pope was told that Philip's daughter was to be made queen of England. The proposed descent upon England was no secret to Elizabeth, who made ready to resist. With a view to delaying Philip's preparations, Drake made an attack upon Cadiz in 1587, on which occasion he burned all the shipping in the bay.”—C. E. Chapman, *History of Spain*, pp. 254-255.

1596.—Taken and sacked by English and Dutch.—“The intrigues continued between the English Catholics who wanted the Infanta for Queen on Elizabeth's death, and the Scots-Catholics who hoped to gain the crown for James; but with an exhausted treasury and depleted forces Philip could do no more than hamper Elizabeth by encouraging rebellion in Ireland. Tyrone and O'Donnell had sought his aid some time before they made an attempt to rise, and he had sent more than one little mission to report their position. He could not do much for them, and his aid was always scanty, tardy, and ineffective. But Perez was busy in England, and magnified it as much as possible. Essex was ambitious and warlike, as usual, and between them they made the Queen believe that a really dangerous expedition was fitting out in Spanish ports. The result was the raising of the fleet under Essex, which, after much misgiving on the part of the Queen, sailed from Plymouth on the 3rd June, 1596. It consisted of 17 royal ships, 76 freighted ships and a Dutch squadron of 24 sail. What was left of Philip's strength was concentrated in Cadiz, and before that port Essex's fleet suddenly appeared on the 20th June. The city was panic-stricken. No strength or resource was to be expected from Philip's officers, and the war-ships were withdrawn after the loss of two of them to the end of the bay (Puerto Real), where there were 40 rich galleons loading for the Indies. The city was taken almost without resistance. For 15 days the richest port in Spain was subjected to a systematic sack, and was left a heap of smoking ruin. The whole of the fleet and the 40 galleons were burnt by the Spaniards, with 11,000,000 ducats' worth of merchandise and Essex sailed out again practically un-molested.”—M. A. S. Hume, *Spain: its greatness and decay*, p. 103.—See also SPAIN: 1596.

1702.—Abortive English and Dutch expedition.—“In July, 1702, fifty ships under Sir George Rooke, with 12,000 men commanded by the Duke of Ormond, suddenly sailed into the bay and summoned the city to submit to King Charles III. As had happened in 1587 and 1586, the place, and indeed all the coast of Andalusia, were practically defenceless: 300 men only were in the garrison and the walls were crumbling beneath the rusty guns. There were no munitions of war and no naval force, and the whole south of Spain was apparently at the mercy of the enemy. But fortunately for the Spaniards there was no Drake, or Howard, or Raleigh [Raleigh] on the English fleet this time.

Whilst the commanders were wrangling over the plan of attack and sacking coast villages, the brave heart of the little 'Savoyarde' in Madrid was shaming the slothful Spaniards into action. . . . Her jewels and valuables were offered for the national defence, and her eloquence spurred . . . others to make similar sacrifices. Archbishops gave their revenues, nobles their lands, the people their poor savings, and soon Andaluca was in arms. A great silver fleet of 13 galleons with a convoy of 23 Spanish and French ships on its way to Spain heard that Cadiz was threatened by enemies and took refuge in Vigo. Whilst Andaluca was arming the English before Cadiz learnt the news and sailed away to Vigo. There they forced the harbour, and Château Renaud, the French admiral, was overpowered. Nine of the galleons were captured and the rest sunk, and all the convoy captured or destroyed."—*Ibid.*, pp. 325, 326.—See also SPAIN: 1702.

1718-1791.—Relation to Spanish trade.—Cadiz "entered upon a second period of pronounced prosperity after the discovery and settlement of the Spanish American states, and continued prosperous in spite of the English devastations in the end of the sixteenth century."—*Stanford's compendium of geography and travel*, v. 1, p. 320.—"The later Spanish colonization of the Americas passed almost wholly through the ports of Seville and Cadiz."—C. E. Chapman, *History of Spain*, p. 38.—"In 1718 the *Casa*, including the consulado, was transferred to Cadiz, which had been since 1680, the actual port of sailing."—*Cambridge modern history*, v. 10, p. 265.—"The transfer of the *Casa de Contratacion* (which handled Spain's commerce with the Americas) from Seville to Cádiz occasioned a decline of the former and a corresponding prosperity of the latter [see CASA DE CONTRATACION]. . . . The intervention of foreigners in the commerce of Spain . . . was [a great] . . . problem under the Bourbons. . . . In the Americas the English were the most prominent element, but in Spain the French were. The leading French merchants established themselves at Cádiz, the gateway of the Americas, whence they proceeded to absorb a great part of Spain's profits from the new world. In 1772 there were seventy-nine French houses in Cádiz, making an estimated annual profit of 4,600,000 *reales* (nearly \$300,000). In 1791 there were 2701 Frenchmen in that city out of a total foreign population of 8734. Numerically, the Italians were more in evidence, for there were 5018 of them, mostly Genoese. There were some Englishmen, too, whose aggregate capital made up for their small number."—C. E. Chapman, *History of Spain*, pp. 328, 469-470.—"The emancipation of the South American states from the yoke of Spain in the first half of the nineteenth century struck another blow at the well-being of the town; but once again she began to recover when the railways reached her."—*Stanford's compendium of geography and travel*, v. 1, p. 320.

1805.—Port of Concentration of French and Spanish fleets under Villeneuve. See FRANCE: 1805 (March-December).

1809.—Seat of the central junta.—In 1809 Cadiz became the seat of the central junta and afterwards of the Cortes.

1810-1812.—Besieged by the French. See SPAIN: 1810-1812.

1819-1823.—Revolt.—Siege, bombardment and capture by the French.—"Danger of war with the United States, before the cession of Florida, had caused King Ferdinand of Spain to assemble an army at Cadiz to embark for America. It was now proposed to send these troops to South Amer-

ica to quell the revolutionary movements there. The return of a number of soldiers stricken with yellow fever in the colonies filled the troops at Cadiz with consternation. The common soldiers, lying in squalor and inaction at their barracks, came to regard their expected order of embarkation as a sentence of death. Their officers plotted with the secret societies in Cadiz. . . . Abisbas, the commandant of Cadiz, to safeguard his own interests pretended to encourage these plots. Then, convinced of their ultimate failure, he arrested the principal leaders by a stratagem and hurried to Madrid to reveal all and claim credit for saving the crown. The ringleaders were imprisoned and the troops were distributed into cantonments. . . . New Year's day was fixed for the outbreak of revolt by the revolutionists of Spain. The chosen leaders were Riego, Cabazes, and Quiroga. It was arranged that Quiroga, who was held in light confinement at Medina, east of Cadiz, should gather the battalions outside of Cadiz, throw himself into the city, and there await the co-operation of his fellow conspirators. . . . Riego on the first day of January [1820], proclaimed the Constitution of 1812, and falling upon headquarters, seized the general officers, and rallied the men to his standard. Quiroga was less successful. After gaining possession of San Fernando at the eastern point of the peninsula of Leon, he failed to get into Cadiz. . . . By the time Riego arrived, there were but 5,000 insurgents wherewith to overcome the strong garrison and fortifications of Cadiz. Leaving Quiroga before Cadiz, Riego set himself to raise the people of the surrounding towns. . . . Strong forces were sent in pursuit. . . . He had only some two hundred followers left. The little band took to the mountains and there dispersed."—E. Emerson, *History of the 19th century year by year*, v. 2, pp. 653-655.—The revolution spread throughout Spain. The king, Ferdinand VII, was imprisoned at Cadiz, which again became the seat of the Cortes. In 1823 the duc d'Angoulême, with his French troops, besieged, bombarded and captured Cadiz, and released Ferdinand. See SPAIN: 1814-1827.

ALSO IN: H. B. Clarke, *Modern Spain*, 1815-1898.

1868.—Center of revolution.—The Spanish revolution of 1868 which effected the dethronement of Queen Isabella originated in Cadiz. "In December, serious conflicts occurred at Cadiz, where the people declared for a Republic, and organized a militia, who styled themselves 'Volunteers of Freedom.' They refused to disarm, and, after a contest in the streets, government troops marched upon the town from Madrid under General Caballero de Rodas. The government troops took peaceable possession."—E. Emerson, *History of the 19th century year by year*, v. 3, p. 1472.—See also SPAIN: 1814-1827.

CADMEA, Cadmean citadel. See BEOTIA; GREECE: B. C. 399-387; B. C. 383; THEBES, GREECE.

CADMUS, a semi-historic Bœotian hero of the prehistoric period, who is fabled to have been a colonist from Phœnicia, to have introduced the alphabet into Greece, and to have founded the famous city of Thebes. See BEOTIA.

CADORNA, Count Luigi (1851-), Italian general. Until replaced in November, 1917, by General Diaz, he was commander-in-chief of the Italian armies in the World War. See WORLD WAR: 1915: IV. Italy: c; d; 1916: IV. Austro-Italian front: b, 2; 1917: I. Summary: b, 9; 1917: IV. Austro-Italian front: a, 2; c; d, 3, 6.

CADURCI.—The Cadurci were one of the tribes of ancient Gaul whose chief place was Di-

vona, now Cahors on the Lot.—G. Long, *Decline of the Roman republic*, v. 4, ch. 17.

CADUSIANS.—An ancient people so-called by the Greeks, whose territory was on the southwestern border of the Caspian sea,—the district of modern Persians called Ghilan or Ghulan. Their native name was "Gæls."—M. Duncker, *History of antiquity*, bk. 8, ch. 1.

CADWALLAWN, Cadwallow, or Cædwalla (d. 634), king of North Wales. In 629 his invasion of Northumbria, then the most powerful of the Anglo-Saxon Kingdoms, was checked at Morpeth, but in 633 in alliance with Penda, king of Mercia, he was victorious over them at Hatfield Chase. Defeated and killed in the battle of Hefenfeld. See HEFENFELD, BATTLE OF.

CÆDMON (d. c. 680), early English poet. Bede portrays him as an unlettered herdsman, who by divine inspiration transcribed incidents of the Scripture into verse. His work is the first Christian poem native to English soil. See BIBLE, ENGLISH: 7th-8th centuries; ENGLISH LITERATURE: 6th-11th centuries.

CÆLIAN HILL. See SEVEN HILLS OF ROME.

CAEN, a city of northwestern France. The date of its founding is not known, but it was in existence as early as the 9th century; it became the capital of Normandy, and was besieged and captured in 1346 by Edward III of England; in 1417 it was again taken by England, in 1450 capitulated to the French; in 1793 the Girondist movement centered in Caen. See FRANCE: 1793 (July-December): Civil war.

CAER GWENT. See WINCHESTER.

CAER WISC. See EXETER: Origin of.

CAERLAVEROCK, Siege of.—Famous siege and reduction of the Scottish castle of Caerlaverock, in Dumfriesshire, by Edward I, 1300.

CAERLEON.—"Caer," like the "Caester" of the Saxons, is a corruption by Celtic tongues of the Roman "Castrum." "In memory of the second legion, which had been so long established at the Silurian Isea, they [the Welsh] gave to the ruins of that city the name of Caer-Legion, the city of the legion, now softened to Caerleon."—T. Wright, *Celt, Roman and Saxon*, ch. 5.

CAERWAN. See KAIRWAN.

CAERVORDEN, Battle of (1590). See NETHERLANDS: 1588-1593.

CAESALPINUS (Cesalpino), Andreas (1519-1603), Italian natural philosopher, the most distinguished botanist of his day. His book "De Plantis libri xvi" (1583), was acknowledged by Linnaeus as the source of much of his knowledge. See SCIENCE: Middle Ages and the Renaissance: 16th century.

CÆSALPINA BRAZILIENSIS. See BRAZIL: Origin of name.

CÆSAR, Augustus (63 B. C.-14 A. D.), Roman emperor. See AUGUSTUS; SPAIN: B. C. 31-A. D. 180.

CÆSAR, Caius (Caligula). See GAIVS CÆSAR (CALIGULA); Rome: Empire: 37-41.

CÆSAR, Gaius Julius (102-44 B. C.), Roman statesman and soldier. In 63 B. C. elected *pontifex maximus*; in 60, returning from Spain, formed the so-called first triumvirate with Pompey and Crassus; as consul, went into Gaul in 59 to subdue the tribes across the Alps (see VENITI OF WESTERN GAUL; SUEVI; B. C. 58; GAUL: 58-51; POMPEIUS, GNAEVS MAGNVS: Cæsar in Gaul), and after pursuing them through what is now France (see HELVETII; USIPETES AND TENCHERI), made two expeditions (55 and 54) to Britain. (See BRITAIN: B. C.: 55-54.) Finding that Pompey was attempting to cut off his political power, he invaded Italy,

driving Pompey to the east; defeated his opponents in Spain (see ROME, REPUBLIC: B. C. 49; SPAIN: B. C. 61), and in Asia Minor, and was declared dictator, 46. (See IMPERATOR.) Murdered in 44, in the senate. (See ROME, REPUBLIC: B. C. 44: Assassination of Cæsar.) "From early youth Cæsar was a statesman in the deepest sense of the term, and his aim was the highest which man is allowed to propose to himself—the political, military, intellectual, and moral regeneration of his own deeply decayed nation, and of the still more deeply decayed Hellenic nation intimately akin to his own."—T. Mommsen, *History of Rome*, v. iv, p. 453.—See also BELGE: B. C. 57; CARTHAGE: B. C. 44; CORINTH: B. C. 44; EGYPT: B. C. 48-30; MILITARY ORGANIZATION: 9; 10; ROME, REPUBLIC: B. C. 60-63; 63-58; 57-52; 54-44; 52-50; 50-49; 48; 47-46; 45, 44: Genius and character of Cæsar; MYTHOLOGY: Celtic mythology: Roman period; CHRONOLOGY: Julian era; HISTORY: 17.

CÆSAR, Title.—"Octavius was the adopted heir of Julius Cæsar; from the moment of his adoption the surname Cæsar became appropriated to him, and it was by this name accordingly that he was most familiarly known to his own contemporaries. Modern writers for the sake of distinction have agreed for the most part to confine this illustrious title to the first of the Cæsarian dynasty; but we should doubtless gain a clearer conception of the gradual process by which the idea of a dynastic succession fixed itself in the minds of the Romans, if we followed their own practice in this particular, and applied the name of Cæsar, not to Augustus only, but also to his adopted son Tiberius, to the scions of the same lineage who succeeded him, and even to those of later and independent dynasties. As late indeed as the reign of Diocletian, the Roman monarch was still eminently the Cæsar. It was not till the close of the third century of our era that that illustrious title was deposed from its preeminence, and restricted to a secondary and deputed authority. Its older use was however revived and perpetuated, though less exclusively, through the declining ages of the empire, and has survived with perhaps unbroken continuity even to our own days."—C. Merivale, *History of the Romans*, ch. 31.—See also ROME: B. C. 31-A. D. 14.—The word *tsar* which was formerly thought to have been derived from Cæsar is now considered to have come from a word of Tartar origin.—See also FLAVIAN FAMILY; JULIAN FAMILY.

CÆSAR AUGUSTA.—One of the fortified posts established in Spain by the emperor Augustus, 27 B. C., and in which the veterans of the legions were settled. The place and its name (corrupted) survive in modern Saragossa.—C. Merivale, *History of the Romans*, ch. 34.

CÆSAREA, in Cappadocia, ancient city in Cappadocia, formerly called Mazaca (q. v.), now the modern city of Kaisariyeh.

260.—Capture, massacre and pillage by Sapor, king of Persia. See PERSIA: 226-627.

CÆSAREA PALAESTINA, ancient seaport of Palestine, built by Herod I about the beginning of the Christian era. See CHRISTIANITY: Map of Palestine in the time of Christ.

Massacre of Jews. See JEWS: 66-70.

Capital of Palestine. See CHRISTIANITY: 33-70.

CÆSARION, son of Cleopatra and Julius Cæsar. See EGYPT: B. C. 48-30.

CÆSAROMAGUS, in Britain, a Roman town identified, generally, with modern Chelmsford.—T. Wright, *Celt, Roman and Saxon*, ch. 5.

CÆSAROMAGUS, in Gaul, modern Beauvais, France. See BELGÆ.

CÆSAR'S TOWER. See TOWER OF LONDON.

CAETANI, Gelasio, Italian-American mining engineer. See WORLD WAR: 1916: IV. Austro-Italian front: 2.

CAFFA, ancient name of the town Theodosia, in the Crimea. See GENOA: 1261-1299.

CAGAYAN, or **Kagayan**, a northern province of Luzon, Philippine islands. See PHILIPPINE ISLANDS: Native inhabitants; U. S. A.: 1898 (July-December).

CAGNI, Umberto, Italian explorer and soldier. He was in charge of the sledge party, in the 1899 Arctic expedition of the Duke of Abruzzi, which attained a latitude of $86^{\circ} 33'$, or 239.15 statute miles from the Pole. In 1911 he was in command of sailors at Tripoli. See ITALY: 1911-1913.

CAGNICOURT, small town in France in region between Arras and Cambrai, taken by British in 1918. See WORLD WAR: 1918: II. Western front: 1, 1.

CAHIERS, lists of grievances or reports made by legislative bodies of the villages and towns of France just before the Revolution of 1789. See FRANCE: 1787-1789.

CAHOKIA, town in Illinois, originally in the Northwest Territory. It was taken by George Rogers Clark in his conquest of the Northwest. See U. S. A.: 1778-1779: Clarke's conquest.

CAHORS, city of southwestern France, capital of the department of Lot.

Origin. See CADURCI.

Capture by Henry of Navarre. See FRANCE: 1578-1580.

CAHROC TRIBE. See MODOCS (KLAMATHS).

CAICOS ISLANDS, a group of small islands at the southeastern extremity of the Bahamas. See BAHAMA ISLANDS: 1492-1783; TURKS AND CAICOS ISLANDS.

CAILLAUX, Joseph (1863-), French statesman. Entered Chamber of Deputies, 1898; minister of finance 1899-1902, 1906-1909, 1911, establishing the income tax; president of the council (premier), July, 1911-January, 1912, resigning on account of the Moroccan crisis (see MOROCCO). In 1913 became minister of finance, resigning March, 1914, after his wife had killed Gaston Calmette, his political opponent, editor of the *Figaro*; acquitted of any connection with the murder (see FRANCE: 1910-1914, 1913-1914). Re-elected to Chamber of Deputies, 1914; January, 1918, accused of defeatism (see BOLOISM; FRANCE: 1918: Defeatism); later imprisoned without trial until January, 1920; convicted of "commerce and correspondence with the enemy" and deprived for ten years of the right to hold office. (See FRANCE: 1918.)

CAILLETET, Louis Paul (1832-1913), French chemist and ironmaster. In 1877 his experiments resulted in the liquefaction of both oxygen and nitrogen. See INVENTIONS: 19th century: Liquefaction of gases.

CAILLOUX FAMILY. See WAILLATPUAN FAMILY.

CAINITES.—A gnostic sect of the second century. "Probably these heretics were one of those many early sects of Asia Minor which were so adulterated, first with the dualism, and secondly,

with the licentious theories and practices of Oriental heathenism, that what Christian elements of belief had been originally current among them became all but obliterated in the course of a few years. Such were the Sethites, the Ophites, and the Nicolaitanes, with all three of which sects the Cainites are vaguely associated by ancient writers. . . . Like the Gnostic sects in general they evidently professed to have some special revelation respecting their religion which had not been communicated to other Christians, and their practical antichristianism is very evident."—J. H. Blunt, *Dictionary of sects*, pp. 94-95.—"The Ophites with . . . kindred sects . . . were hostile to the Old Testament religion. This hostility was carried so far by another sect, that they called themselves Cainites, and pronounced the evil characters of the Old Testament to be those who were really deserving of honor."—G. P. Fisher, *History of the Christian church*, pp. 76-77.

ÇA IRA: Origin of the cry and the song.—"When the news of the disastrous retreat [of Washington, in 1776] through the Jerseys and the miseries of Valley Forge reached France, many good friends to America began to think that now indeed all was lost. But the stout heart of Franklin never flinched. 'This is indeed bad news,' said he, 'but ça ira, ça ira [literally, 'this will go, this will go'], it will all come right in the end.' Old diplomats and courtiers, amazed at his confidence, passed about his cheering words. They were taken up by the newspapers; they were remembered by the people, and, in the dark days of the French Revolution, were repeated over and over again on every side, and made the subject of a stirring song which, till the Marseillaise Hymn appeared, had no equal in France."—J. B. McMaster, *History of the people of the United States*, v. 2, p. 80.—L. Rosenthal, *America and France*, p. 263.—"The original words (afterward much changed) were by Ladré, a street singer; and the music was a popular dance tune of the time composed by Bécourt, a drummer of the Grand Opera."—*Century dictionary*.—"The original name of the tune to which the words were written is 'Le Carillon National,' and it is a remarkable circumstance that it was a great favourite with the unfortunate Marie Antoinette, who used to play it on the harpsichord."—J. Oxenford, *Book of French songs* (note to "Ça ira").—See also MUSIC: Folk music and nationalism: France.

CAIRNS, or Mounds of stone. See BARROW.

CAIRO, the capital of modern Egypt, "is situated on the right bank of the Nile, 131 miles by railway from Alexandria and near the apex of the Delta—in the figurative language of the East, it is the brightest gem in the handle of the green fan of Egypt. In the present day (1900) it covers about 11 square miles of the sandy plain, and extends from Mount Mukattam to the port of Boulak (Bûlâk); but only a small part of the modern city belongs to the Cairo of history, which consisted originally of little more than an immense palace with its attendant buildings. Modern Cairo is . . . situated about twenty miles from the Delta on the east bank of the Nile, and contains [1917] a population of about [700,939], some 40,000 of which are Europeans of different nationalities. Cairo may be said to be the most cosmopolitan city, next to Constantinople: and at every step the observer is entertained by the variety of the scenes he gazes at and by the wonderful medley of human life pouring along its thoroughfares."—H. J. Kemeid, *Cairo and Egypt and life in the land of the Pharaohs*, pp. 42-45.—"The history of the City of Cairo, as distinct from that of Egypt, is simple and

easily mastered, being confined within reasonable limits. It does not go back further than mediæval times. Unlike the history of Egypt, which is concerned mainly with the rise and fall of alien states, Cairo, whether Arabic or Turkish, is a wholly Mohammedan creation. . . . The history of Cairo, then, falls naturally into two periods: that of Arab rule when it was virtually the seat of the Caliphate; and the period of Turkish dominion, from its capture by the Ottoman Turks in 1517 down to the present time. In short, we need consider it under two aspects merely,—first as the capital of the Caliphs, and next as the chief city of a Turkish pachalic [pashalic, the jurisdiction of, or territory under, a pasha].—E. A. Reynolds-Ball, *City of the caliphs*, p. 5.—“If Cairo should ever indulge in the taste for historical pageants which is so characteristic of our country at this time, it would not be difficult to find a number of scenes worth reproducing, some of them graced with figures that loom large in the vista of the centuries. Ahmad Ibn Tulun’s architect summoned from his prison to solve the problem of the mosque; Jauhar drawing the lines of his city at an auspicious moment; Saladdin rejecting the splendours of the Fatimide Palace; Shajar al-durr receiving the homage of the Emirs behind her curtain; Baibars receiving his investiture from the Caliph of his own appointment; Kala’un’s Hospital inaugurated by a disloyal preacher; Cairo decorated to celebrate the fall of Constantinople, and presently itself entered in triumph by the Ottoman Sultan; al-Azhar, stormed by Bonaparte’s soldiers; the Mamelukes surrendering to Mohammed Ali in the Baruk Mosque—these might be suggested as a characteristic and not wholly uninteresting selection. And if scenes from yet later times were included, there might be a few in which great Englishmen figured also: Baker, sent by Isma’il Pasha to suppress the slave-trade in the Soudan; Gordon, hastening to his heroic defence of Khartoum; and last, but not least, the farewell address of the statesman [the late Lord Cromer] to whom the present financial and administrative prosperity of Cairo is due.”—D. S. Margoliouth, *Cairo, Jerusalem and Damascus*, p. 174.

Medieval commercial importance. See COMMERCE: Medieval: 5th-8th centuries; 12-16th centuries.

641.—Origin. See CALIPHATE: 640-646.

Transfer of the name.—“After the loss of the true Calabria [to the Lombards] the vanity of the Greeks substituted that name instead of the more ignoble appellation of Bruttium; and the change appears to have taken place before the time of Charlemagne.”—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 45, note.

1808-1809.—Civil War. See ITALY (Southern): 1808-1809.

CALAIS, seaport of northern France; a manufacturing center and strongly fortified passage port between France and England. It was originally a fishing village, but its situation on the English channel opposite Dover, England, did much to give it its present importance. Its population in 1911 was 72,322.

1346-1347.—Siege and capture by Edward III.—Immediately after his great victory won at Crecy, the English king, Edward III, laid siege to the strong city of Calais. He built a town of huts round the city, “which he called ‘Newtown the Bold,’ and laid it out with a market, regular streets and shops, and all the necessary accommodation for an army, and hither were carried in vast stores of victuals and other necessaries, obtained by ravaging the country round and by shipment from England.” Calais held out for a year, and angered the king so by its obstinacy that when, in August, 1347, starvation forced its people to surrender, he required that six of the chief burgesses should be given up to him, with halters round their necks, for execution. Eustache St. Pierre and five others nobly offered themselves for the sacrifice, and it was only by the weeping intercession of Queen Philippa that Edward was induced to spare their lives. He expelled all the inhabitants who refused to take an oath of fealty to him and repopulated the town with Englishmen.—W. Warburton, *Edward III, second decade*, ch. 3.—See also FRANCE: 1337-1360.

1596-1598.—Surprise and capture by the Spaniards.—Restoration to France. See FRANCE: 1593-1598.

1875-1911.—**Modern changes.**—"Calais is nevertheless to be warmly congratulated on what it has accomplished since 1875, when the scheme of harbour improvement . . . received the sanction and support of the French Government. An examination of the plan of the port will show that it is practically surrounded by water. The channel gives direct access to the Eastern Tidal Basin, whence the largest floating dock—named after the late President Carnot—is reached by means of a pair of capacious locks. At the end of the Carnot Dock there is a dry dock 500 ft. long and 60 ft. wide; and at the south-westerly angle an inner basin leads to a canal dock, possessing a superficial area of ten acres and 5,250 ft. of quay frontage. To this dock lighters can come from all the internal waterways of France and Belgium, and therein wait, without causing any obstruction to navigation, until called upon to deliver the goods which they may bring for shipment in outgoing vessels. The Calais Canal enters the dock at the south, and by a series of basins and channels, intended to be useful for military as well as for commercial purposes, runs between the Esplanade and the Citadelle, connecting with the Western Tidal Basin, in immediate proximity to the West Dock. The Crabes Canal appears in the port near the goods depot of the Central Railway Station, and the Asfeld Canal forms on the west another means of barge communication which might, if necessary, be turned to good account. East and west of the entrance channel of the port are extensive sluicing basins. That to the east—the construction of which necessitated a diversion of the Marck Canal—covers an area of 220 acres, and extends parallel to the shore, while the four sluicing basins to the south-west together cover an area of 186 acres. A very extensive system of navigation is here represented. Indeed, the internal arrangement of the port is excellent, and had its deep water capacity been correspondingly satisfactory years ago Calais would unquestionably to-day have been one of the busiest and most successful ports on the Continent."—*Nautical Magazine and Journal of the Naval Reserves*, Oct., 1898, pp. 672-673.—"Calais is much altered, and not altogether for the better, but it has still a delightfully French aspect, paradoxically heightened by some few surviving traces of English rule. The great warehouse of the English merchants of the Staple has been let out in tenement dwellings, but its courtyard is still entered by a fine Tudor gateway, which a few trifling repairs would convert into a worthy entrance to an Oxford quadrangle. The Musée possesses the Tudor tower of the old Justice of the Staple of the English time, the wooden belfry of which has a pretty carillon. Close to this, in the Rue de la Citadelle, are ancient gabled houses with jutting upper storeys which would not be out of place in Norwich or Cambridge, and were probably built by Englishmen. But the most important survival of English rule is the curious Perpendicular Church of Our Lady, perhaps the only church of that style in which the Roman worship is still performed. It has little of the elegance and lightness which mark the latest development of English Gothic. Its grim central tower has something of the aspect of a mediæval keep, and the transepts are buttressed at the corners with loopholed turrets which tell eloquently that the English citizens of Calais went armed even at their devotions, and held their post across the Channel by a precarious tenure. Of the subsequent French period is a gorgeous Renaissance reded, splendid with painting and rococo alabaster pillars and allegorical statues in the taste of the eighteenth century. The

great west window, with its fine Perpendicular tracery, is blocked by an organ whose music is well worth hearing on Sundays and feast days. The streets of the old town are not much changed since Thackeray's time, and have all the pleasant picturesqueness that almost any old French town presents to English eyes. North of the ancient English 'petitparadis' a new boulevard goes right through the great Risban—the fort built by the English to guard the harbour mouth—to the plage and casino. The beach runs, all hard smooth sand, westwards to Sangatte, known to most of us by the exploits of aviators and as the point where the projected tunnel to Dover begins. Calais might well become a famous watering-place but for the numerous forts which lurk behind the sand dunes which line the beach and prevent the growth of the town towards the sea. Calais has become a great place of arms and the headquarters of one of the most novel developments of French naval enterprises. . . . In Calais, as elsewhere, there is industrial civil war, and military patrols warn the inquisitive traveller, good-naturedly enough, away from the great warehouses lest he should perchance to be a *saboteur* in disguise. But most of the citizens of Calais seem to take life easily enough, perhaps because the commercial and military importance of their town has brought them a modest prosperity."—*Spectator*, Oct. 7, 1911, pp. 542-543.

1914-1918.—**Importance of the city during the World War.**—During the World War Calais was a principal port of debarkation for the British Expeditionary Force and one of their main French supply bases. For this reason it was a constant object of German ambition. The German drive for Calais and the other two channel ports, Dunkirk and Boulogne, in 1914 and 1918 was checked by the Allies.—See also CHANNEL PORTS; WORLD WAR: 1914: I. Western front: u, 7; v, 1.

CALASIRIES, ancient Egyptian cavalry corps. See MILITARY ORGANIZATION: 2.

CALATRAVA AND SANTIAGO DE COMPOSTELLA, Knights of.—"It was to repress the never-ceasing incursions of the Mohammedans, as well as to return these incursions with interest, that, in the time of Fernando [Fernando II of the early Spanish kingdom of Leon], two military orders, those of Calatrava and Santiago [or St. Jago—or St. James of Compostella], were instituted. The origin of the former order was owing to the devotion of two Cistercian monks; St. Raymond, abbot of Fitero, and his companion, the friar Diego Velasquez. These intrepid men, who had both borne arms previous to their monastic profession, indignant at the cowardice of the Templars, who resigned into the king of Castile's hands the fortress of Calatrava, which had been confided to their defense by the emperor Alfonso, proposed, in 1158, to the regency of that kingdom, to preserve that position against the assailants. The proposal was readily accepted. The preaching of the warlike abbot was so efficacious, that in a short time he assembled 20,000 men, whom he conducted to Calatrava, and among whom were not a few of his own monks. There he drew up the institutions of

the order, which took its name from the place, and which in its religious government long followed the Cistercian rule, and wore the same monastic habit,—a white robe and scapulary. [By pope Benedict XIII the habit was dispensed with, and the knights allowed to marry 'once.'—*Foot-note.*] The other order commenced in 1161. Some robbers of Leon, touched with their past enormities, resolved to make reparation for them, by defending the frontiers against the incursions of the Mohammedans. Don Pedro Fernandez—if the 'don' has not been added to give something like respectability to the origin—was the chief founder of the order. He engaged the brethren to assume the rule of St. Augustine, in addition to the ordinary obligations of knighthood. His military and monastic fraternity was approved by king Fernando; at whose suggestion the knights chose Santiago as their patron, whose bloody sword, in form of a cross, became their professional symbol. These two orders were richly endowed by successive kings of Leon and Castile, until their possessions became immense.—S. A. Dunham, *History of Spain and Portugal, bk. 3, sect. 2, ch. 1, div. 2.*—In 1396 the knights of the order of St. James of Compostella "received permission to marry. In 1493, the Grand Mastership was united to the crown of Spain." In 1523 the right of nomination to the grand mastership of the order of Calatrava was transferred from the pope to the crown of Spain, "and since that time the order has gradually merged into a court institution. The state dress is a white robe, with a red cross on the left breast. The permission to marry has been enjoyed since 1540."—F. C. Woodhouse, *Military religious orders, pt. 4.*—See also AVIS, KNIGHTS OF.

CALAURIA, Confederation of.—A naval confederation, formed at a very early period of Greek history, by the seven maritime cities of Orchomenus, Athens, Ægina, Epidaurus, Hermione, Prasia and Nauplia against the kings of Argos. The island of Calauria, off the eastern point of Argolis, was the center of the confederacy.—E. Curtius, *History of Greece, v. 1, bk. 1, ch. 3.*

CALCINATO, Battle of (1706). See ITALY: 1701-1713.

CALCUTTA, capital of Bengal and until 1912 of British India; population in 1911 was 1,222,313; one of the greatest shipping ports in the world. It was founded by a representative of the British East India Company in 1690 (see BRITISH EMPIRE: Chronology of colonial expansion: 17th century), and has remained continuously in English possession, except for a few months in 1756-1757, when it was captured and sacked by the then ruling native prince of Bengal.—See also INDIA: Map; 1600-1702; 1755-1757.

1911.—Transfer of the capital to Delhi. See DELHI: 1911.

CALDER, Sir Robert, Bart. (1745-1818), British admiral. Commander of British fleet in battle off Cape St. Vincent, 1797; was knighted by George III; in 1805 was in the blockade of the ports of Ferrol and Corunna, against Napoleon.

CALDER, William M. (1869-), American legislator, member of Congress, 1905-1915; entered United States Senate, 1917, from New York, for a term of six years. As chairman of a Senate committee, he was active during the fall of 1920 in investigating coal prices and supply.

CALDWELL vs. SIOUX FALLS COMPANY, United States Supreme Court case in which the blue sky law of South Dakota was upheld. The Sioux Falls Stock Yards Company was a Colorado corporation, engaged at the time of the case in constructing a stock yard in Sioux Falls, S. D., and in selling a certain amount of its capital stock in order to raise sufficient funds for that purpose. Clarence C. Caldwell, as attorney general of the state of South Dakota and ex officio member of the state securities commission, brought action against the dealers in this stock for violation of the law of the state regulating the sale of securities. It was alleged that the statute was an infraction of the fourteenth amendment of the constitution and imposed a burden upon and practically amounted to a prohibition of interstate commerce and that it attempted to vest in and delegate to the state securities commission judicial powers unauthorized by law. In a decision handed down January 22, 1917, the supreme court held the law to be constitutional. The opinion was delivered by Justice McKenna, Justice McReynolds dissenting. The decision was somewhat similar to that in the case of Hall vs. Geiger-Jones Company upholding the blue sky law of Ohio, and that in the Merrick vs. Halsey & Co. case upholding the Michigan law.

CALGARY, one of the most important towns of western Canada, oldest in the province of Alberta. It is the main railway center and chief distributing point between Winnipeg and the west coast. It was founded in 1883 near the site of an old French trading post. Situated as it is near extensive coal beds and wide stock-raising regions, it has become a large industrial city. Population in 1916 was 56,514.

CALHOUN, John Caldwell (1782-1850), American statesman, foremost champion of the South; 1807, admitted to bar; 1808-1809, member of South Carolina legislature; 1811-1817, member of Congress, active with Henry Clay in bringing about war with Great Britain (see **U. S. A.: 1810-1812**); 1817-1825, secretary of war in Monroe's cabinet where he showed unusual administrative abilities (see **U. S. A.: 1816**); 1824, elected Vice-President under John Quincy Adams (see **U. S. A.: 1824**); 1828, chosen vice-president under Andrew Jackson; wrote the South Carolina Exposition advocating nullification in opposition to the Tariff of Abominations (see **U. S. A.: 1828; 1828-1833**); 1832, resigned from Vice-Presidency and entered Senate from South Carolina; defended slavery and assailed the abolitionists (see **U. S. A.: 1837-1840; 1847**); 1844-1845, secretary of state under Tyler, secured annexation of Texas; active in movement for secession in South Carolina (see **SOUTH CAROLINA: 1847-1852**); opposed Mexican war, Wilmot Proviso, doctrine of squatter sovereignty, compromise of 1850, and the fugitive slave law. See **U. S. A.: 1850 (March).**

CALICO ACT (1721). See **TARIFF: 1689-1721.**

CALICUT, seaport in the southwestern part of British India and a town of some antiquity. When Portuguese travellers arrived there in the fifteenth century it was a city of considerable commercial importance, and for many years the word "Calicut" was used to indicate "India." Attempts of the Portuguese to establish a factory were repeatedly repulsed by the inhabitants between 1498 and 1500. A factory was finally built in 1510 only to be abandoned in 1525. In 1615 the first English expedition visited Calicut, and in 1664 the British East India Company established a trading settlement. During the native wars with England, it was twice destroyed by Hyder Ali (1765) and Tippu Sahib (1788), but later rebuilt. The population in 1911 was 78,417.

CALIFORNIA, state comprising almost the entire Pacific coast of the United States, with an area of 155,652 square miles and a population of 3,426,536.

Resources and industries.—California is a state rich in natural wealth. Although minerals were formerly its most important asset, its fertile soil has gradually made agriculture more important than mining. The state now produces hay, wheat, barley, beans, potatoes, rice, oats and beet sugar, together with fruits of many varieties, in great quantities. Stock-raising is still an important industry, while fisheries and forest regions yield abundant returns. There are seventeen national forests in California covering 20,339,337 acres. The state ranks fifth in the value of its mineral products and in 1919 the value of mining was over one hundred and fifty per cent greater than it was ten years earlier. After mining and agriculture, manufacturing is the next most important industry, and it is increasing steadily. The most important outputs are petroleum, dairy, and

lumber products, and canned and preserved goods.

1543-1781.—Origin of the name.—Early Spanish exploration and settlement.—**Founding of the Franciscan missions.**—"The settlements of the Spanish missionaries within the present limits of the State of California date from the first foundation of San Diego in 1769. The missions that were later founded north of San Diego were, with the original establishment itself, for a time known merely by some collective name, such as the Northern Missions. But later the name California, already long since applied to the country of the peninsular missions to the Southward, was extended to the new land, with various prefixes or qualifying phrases; and out of these the definitive name Alta [or Upper] California at last came, being applied to our present country during the whole period of the Mexican Republican ownership. As to the origin of the name California, no serious question remains that this name, as first applied, between 1535 and 1539 to a portion of Lower California, was derived from an old printed romance, the one which Mr. Edward Everett Hale rediscovered in 1862, and from which he drew this now accepted conclusion. For, in this romance, the name California was already before 1520 applied to a fabulous island, described as near the Indies and also 'very near the Terrestrial Paradise.' Colonists whom Cortes brought to the newly discovered peninsula in 1535, and who returned the next year, may have been the first to apply the name to this supposed island, on which they had been for a time resident. The coast of Upper California was first visited during the voyage of the explorer Juan Cabrillo in 1542-43. Several landings were then made on the coast and on the islands, in the Santa Barbara region. . . . In 1579 Drake's famous visit took place [see **AMERICA: 1572-1580**]. . . . It is . . . almost perfectly sure that he did not enter or observe the Golden Gate, and that he got no sort of idea of the existence of the Great Bay. . . . This result of the examination of the evidence about Drake's voyage is now fairly well accepted, although some people will always try to insist that Drake discovered our Bay of San Francisco. The name San Francisco was probably applied to a port on this coast for the first time by Cermeñon, who, in a voyage from the Philippines in 1595, ran ashore, while exploring the coast near Point Reyes. It is now, however, perfectly sure that neither he nor any other Spanish navigator before 1769 applied this name to our present bay, which remained utterly unknown to Europeans during all this period. . . . In 1602-1603, Sebastian Vizcaino conducted a Spanish exploring expedition along the California coast. . . . From this voyage a little more knowledge of the character of the coast was gained; and thenceforth geographical researches in the region of California ceased for over a century and a half. With only this meagre result we reach the era of the first settlement of Upper California. The missions of the peninsula of Lower California passed, in 1767, by the expulsion of the Jesuits, into the hands of the Franciscans; and the Spanish government, whose attention was attracted in this direction by the changed conditions, ordered the immediate prosecution of a long-cherished plan to provide the

Manilla ships, on their return voyage, with good ports of supply and repairs, and to occupy the northwest land as a safeguard against Russian or other aggressions. . . . Thus began the career of Spanish discovery and settlement in California. The early years show a generally rapid progress, only one great disaster occurring,—the destruction of San Diego Mission in 1775, by assailing Indians. But this loss was quickly repaired. In 1770 the Mission of San Carlos was founded at Monterey. In 1772, a land expedition, under Fages and Crespi, first explored the eastern shore of our San Francisco Bay, in an effort to reach by land the old Port of San Francisco [the evidence now shows that Fages made an expedition previous to this one, in 1770. See below: 1760-1770]. . . . After 1775, the old name began to be generally applied

matter according to his temperament and the mood affecting him. Some, seeing things in a favorable light, expected to find there every comfort and help; others grieved considering its weak state and the few resources we had left it. In truth, all of us were returning with a misgiving lest, through the continued force of the maladies, and the mortality among the people, the settlement had become a place of solitude. On the other hand, there was every reason to fear the evil disposition of the natives of San Diego, whose greediness to rob can only be restrained by superior power and authority, and we feared lest they had dared to commit some outrage against the mission and its small garrison. As we had obtained no news whatever along the coast concerning the ships, notwithstanding our efforts in that direction, we had fears in

SANTA BARBARA MISSION, CALIFORNIA

One of the best preserved missions in California, showing a view from the gardens

to the new Bay, and so, thenceforth, the name Port of San Francisco means what we now mean thereby. In 1775, Lieutenant Ayala entered the new harbor by water. In the following year the Mission at San Francisco was founded, and in October its church was dedicated. Not only missions, however, but pueblos, inhabited by Spanish colonists, lay in the official plan of the new undertakings. The first of these to be established was San José, founded in November, 1777. The next was Los Angeles, founded in September, 1781."—J. Royce, *California*, ch. 1, sect. 2.

1769.—Mission at San Diego.—Official visit.—Camino del Rey.—“We were nearing San Diego and varied were the opinions among us about the condition in which we should find the new settlement that we had left at its very beginning more than six months ago. Each one discussed the

anticipation that in San Diego we should meet with a like disappointment. While we were still engaged with these thoughts and discussions, which for days had been wearying us, we received an unexpected pleasure at the sight of fresh tracks of men and horses, at more than half a league from the presidio which we saw soon afterwards. As soon as we saw the palisade inclosure and the humble buildings which it contained, we gave a salute, discharging our arms—the first announcement to its occupants of our arrival. They immediately came out with the greatest joy to receive us in their arms. We found the missionary fathers, Fray Junipero Serra, president of the missions, Fray Juan Viscaino, and Fray Fernando Parron, in good health; the first and the last mentioned were still convalescing from the common sickness of scurvy which, even now, afflicted various soldiers—the veterans we had left behind as well as those of the presidio—and christianized Californian Indians. We learned from them how

a few weeks after our departure, God had taken to Himself all those we had left sick in their beds; but that, through the charitable and tireless devotion of the surgeon, Don Pedro Prat, those in whom the disease had not taken such a firm hold during the sea-voyage, had recovered. We also learned that those who had subsequently fallen sick, which included everyone, as the disease spared none, had been restored to health. Experience thus proved in this instance how opportune was the wise decision of him who sent a man of this profession and of such commendable ability (with the expedition), and how useful such persons are in any colony or new settlement."—*Academy of Pacific coast history, v. 2, pp. 323-325.*—"It is generally taken for granted that the original plan of Padre Serra was to establish a chain of Missions in California a day's journey apart. The number of the Indians and their location seemed peculiarly adapted to this plan. In travelling to and fro, prior to, and during their establishment, a trail, and eventually a road, would necessarily be made. It is claimed by Don Antonio Coronel that this road or highway became the 'recognized highway of official travel,' and that it commenced in Guatemala and ended first in Monterey; then, as the Missions reached San Francisco and Sonoma, it was extended thither. He says: 'it was called either the *Camino del Rey* or the *Camino Real* in our Spanish,' which being interpreted is 'the King's Highway.' It was never much of a road from the road-maker's standpoint, but to the historian, the romancer, the artist, it is one of the most fascinating highways in the world. It did not always stick exactly to the same narrow boundaries; when a tree fell across it, a slight detour was made; when rain fell and made a large puddle it branched off to right and left. Occasionally some one discovered a 'short cut,' and then a new road took the place of the old; but, in the main, it remained a king's highway, connecting the Missions one with another, and linking together the little picturesque settlements of Spaniards and Indians that clustered around them. When the Americans came it was necessarily their main line of travel; and though slight changes have been made in it by the rectangular system of denoting form and other boundaries, here and there compelling it to a more straight and rigid plan, it is still the *Camino Real* of the Mission days. And what a history it has had! Though less than a century and a half old, what changes it has seen! First the crude trail, doubtless, of the original aborigines, who in their skin costumes, with their simple gifts slung by means of rawhide bands from their foreheads, went on errands of friendship to neighboring rancherias. Now and again a band of deer or antelope would course upon it, having discovered that they were in danger from hunters. Occasionally a mountain lion, a black bear, or a grizzly, and often a coyote, a fox, a badger . . . would stroll leisurely on this man-made path, each and all sniffing significantly at the footprints of the upright animal whose 'scent' so often meant danger to them. Then came the padres, with their military escort. Aye, but prior to that, perhaps, in spots, this that was ultimately to be the *Camino Real* had felt the pressure of the feet of Cabrillo or Viscaino or Drake or Cavendish,—so that these new feet were not the first of white men to walk upon its length. But they soon became the most familiar. Serra, Crespi, Portolá, Fages, Rivera,—what a list of names of the earliest travellers, the real explorers who gave our California to the world. . . . From the beginning of its real history, over this King's Highway, again and again, back and forth, happily or wearily, ac-

ording as his extensive plans prospered or dragged, walked the sainted Serra. Here he sang aloud; there he sunk upon his knees in prayer; yonder he wept in anguish as the news of some delay in his beloved work, or some Indian outburst reached him. This road saw the coming of the colonists from Mexico; heard their openly expressed hopes, fears, expectations. As the years rolled on it heard the squeak and rattle of the lumbering carreta as elderly señoras rode, accompanied by gay *caballeros* clad in zarape and sombrero, riding on saddles of price, carved in exquisite design and skilfully inlaid with silver. And the señoritas, did they stay at home? No! the historic road saw them ride also, always, of course, accompanied by their duennas, but by no means the less happy and joyous, though perhaps somewhat less exuberant. Indeed to know the history of the *Camino Real* is to know the history of the California of those days. Don Antonio Coronel might well say he had a separate legend of this highway for every day in the year."—G. W. James, *In and out of the old missions of California, pp. 379-381.*

1769-1770.—Portolá's discovery of San Francisco bay.—Monterey expedition.—Fages' expedition along the eastern shore of San Francisco bay (1770).—To effect the occupation of Alta California, "in 1769, five expeditions were despatched [from Mexico], two by land up the peninsula, and three by sea. A junction of four of them was effected at San Diego, one of the ships having been lost. From there the commander-in-chief, Gaspar de Portolá, proceeded northward in search of Monterey, and actually visited that port but failed to recognize it from the description of González Cabrera Bueno. Pushing on he reached and discovered San Francisco Bay."—C. E. Chapman, *Founding of Spanish California, p. 84.*—"The Puerto of San Francisco had long been known to the Spaniards, but by that name they meant the modern Drake's Bay. What we now call San Francisco Bay was discovered by Portolá in 1769, taking the name of the *Estero* of San Francisco. For several years thereafter, expeditions in that direction aimed to get around the *Estero* in order to reach the Puerto. The distinction seems to have been lost sight of in Mexico, possibly because the name and location were so nearly the same. Very soon the name San Francisco became understood as connecting the site of the present city and bay of that name. Scarcity of provisions and the consequent necessity of returning to San Diego had prevented an exploration of the bay by Portolá. Thenceforth, however, the project of exploring and occupying the new port was constantly in the minds of the authorities and missionaries, until it was achieved in 1776 by the founding of San Francisco. Rivera, who had accompanied the Portolá expedition, wrote to Croix [Viceroy of Mexico], March 2, 1770, that the newly discovered port, if deep enough, might prove better than that of San Diego. Moreover, it was a good site for settlement, as it had timber and firewood, running water, good lands, and numerous Indians. Doubtless, he was considering the availability of the Indians as laborers in referring to their numbers as an advantage. News of the achievements of the 1769 expeditions had hardly been received in Mexico, when orders were sent by Croix, November 12, 1770, to explore the port of San Francisco and to found a mission there to secure it from foreign occupation. This order was not received until May, 1771. Meanwhile, Fages had paid a brief visit to San Francisco Bay in November, 1770, but had made no extensive exploration. From the first, Serra [head of the Franciscan mission at San Diego] was

most eager to establish a mission there, but Fages regarded it as impossible, owing to his lack of troops for mission guards. Serra would not be satisfied, and voiced his complaint in a long letter to the viceroy, who had ordered an exploration of its port beforehand, but Fages and Perez, the latter being captain of the *San Antonio*, had decided that there were not enough people for the attempt to be made by land, and that it would occasion too great a delay to the *San Antonio*, if made by sea. Serra wished to see the mission placed there as soon as possible; there would be no delay on his part. This letter must have reached Mexico at about the time that Bucarely became viceroy, or only shortly before. Its statements are confirmed by Fages, who wrote to Croix that he could not find the mission at San Francisco until he got more soldiers. Exploration of the port of San Francisco was also urged by Father Verger in his petition of December, 1771. 'They say that Monterey is not a port, and that San Francisco may be a very good one; but there is need of exploring its entrance and (ascertaining) its depth.' Knowing Verger's objections to making new settlements, we may conclude that he was recommending exploration rather than a too early attempt at settlement. At length, in March and April, 1772, Fages made an overland expedition to explore the *Puerto* of San Francisco, but failing to get around the *Estero* returned. He made no examination of San Francisco Bay, and its merits remained unknown."—*Ibid.*, pp. 113-114.

In the spring of 1770 another attempt was made to reach and locate Monterey. Portolá and Fages, travelling by land, left San Diego on April 17, while Perez, in the *San Antonio*, departed the day before. The following extract from the diary of Costansó gives a description of the bay of Monterey before the Spaniards settled the country. "The engineer, Don Miguel Costansó, in accordance with his orders, embarked in the packet *San Antonio*, which also carried Father Junipero Serra [and Perez]. This ship put to sea on the 16th of April of the same year. They all reached Monterey—the land-expedition on the 23rd of May, and the *San Antonio* on the 31st of the same month cast anchor in the same port and anchoring ground, where one hundred and sixty-eight years before had anchored the squadron of General Vizcayno, sent by the Count of Monterey for the discovery of these coasts, by order of Philip III. As has been said, this port lies in 36 degrees 40 north latitude, at the foot of the northern slope of the Sierra de Santa Lucia. Its principal shelter is the Punta de Pinos extending, not as the pilot Cabrera Bueno puts it, from northeast to southwest, but from northwest to southeast. On the northeast side of it is the anchorage, where any vessel can anchor in four, six, or eight fathoms, with a bottom of fine sand, and good holding, according as it is more or less close to the shore. The Punta de Pinos, which protects the anchorage to the northwest, is entirely surrounded by rocks and cliffs, but behind the rocks there extends a beautiful beach, bordered on the east by sand-banks, which soon turns to the northeast and north as far as a very large estuary with several arms, at a distance of over three leagues from the beginning of the beach. Thence the coast turns to the northwest and west as far as the Punta de Año Nuevo, which terminates in the ocean at 37 degrees 3 latitude (north). The soil is rather heavy and covered with trees and steep in places. In this manner the anchorage is on all sides surrounded by land, except on the northwest, where alone it lacks shelter. The land surrounding this immense bay offers,

when seen from the sea, a very pleasing view. For, looking South, one sees the Sierra de Santa Lucia, sending out its foothills which grow lower as they approach the shore and whose ridges, crowned with pines and covered with pasturage, form a magnificent amphitheatre. Its beauty is enhanced by the verdure of the different canyons which intersect the country, presenting an admirable variety and harmony to the eyes. This port has no running water but enough of it is found in a bottom or low place to the southeast of the landing, where the beach begins. . . . The natives of Monterey live in the hills, the nearest about one and a half leagues from the beach. They come down sometimes and go out fishing in little rafts of reeds. It seems, however, that fishing does not furnish their chief means of subsistence, and they have recourse to it only when hunting has yielded little. Game is very plentiful in the mountains, especially antelopes and deer. These mountaineers are very numerous, extremely gentle and tractable. They never came to visit the Spaniards without bringing them a substantial present of game, which as a rule consisted of two or three deer or antelopes, which they offered without demanding or (even) asking for anything (in return). Their good disposition has given the missionary fathers well-founded hopes of speedily winning them over to the faith of Christ. . . . In compliance with the order, a military post and a mission under the protection of San Carlos were established in that country. Everybody—soldiers, sailors and their respective officers—co-operated with equal effort and devotion in the humble beginnings of so important a settlement. Having finished the provisional work which was most necessary for the missionary fathers and the garrison, and having planned the other work which was to follow, the cargo of the packet was stored away. The commander, Don Gaspar de Portolá, then determined to embark in the packet with the engineer, Don Miguel Costansó, leaving in command the lieutenant of infantry, Don Pedro Fages, according to his instructions; and, in order to assist the soldiers in their tasks, nine sailors remained in Monterey as a reinforcement."—*Academy of Pacific coast history*, v. 1, pp. 63-67.

"It has been thought hitherto that the first inland exploration of the country between Monterey and the head of the bay of San Francisco, and of the eastern shore—except for the short distance which may have been traversed by the reconnoitering party sent out in 1766 by Portolá—was that made by Pedro Fages in March, 1772. But the diary here published shows that in November, 1770, Fages led a party of explorers northwestward from Monterey to the Santa Clara Valley ('La Canada del Puerto de San Francisco'), down that valley to the head of the bay, thence along the eastern shore two days' journey to a point not far from Alameda, the course to this place being much the same as that followed in 1772. Before turning back the party ascended a hill and described the north arm of the bay projecting far to the east and communicating with that at their left. Fages' statement in the letter of transmittal of the diary to the viceroy, to the effect that his men went about seven leagues farther than the explorers had gone in the previous year, helps to fix the limit of the exploration of 1769 on the eastern shore. The expedition of 1770 was undertaken independently of the viceroy's order of November 12 of the same year, requiring that the port of the bay of San Francisco should be explored (that order did not reach Monterey until May 21, 1771), and appears to have been made at Fages's own initiative. It seems strange that, in their diaries of the expedi-

tion of 1772, over much the same ground as that traversed in 1770, neither Crespi nor Fages mentions the earlier journey. Aside from the references to it in the two letters of transmittal herein mentioned, one contemporary allusion to the 1770 diary has been noted by the present writer. This is in an unsigned manuscript description of the bay of San Francisco made in the year 1776 and now preserved in the archives of the College of Santa Cruz, of Querétaro."—*Ibid.*, v. 2, pp. 143-144.—The following document is a translation of the report sent by commander Pedro Fages to Croix, the viceroy of Mexico:

"JUNE 20, 1771.

"MOST EXCELLENT SIR,—

"SIR:

"On the 27th of November of last year I decided to explore, with six soldiers and one muleteer, the country surrounding this royal presidio, leaving the camp, which could be locked up, entirely secure. I did this on the day mentioned, going northeast, and after two days' travel we struck the valley of the port of San Francisco. Following this for five days we succeeded in going about seven leagues beyond the place where the explorers of the expedition of the previous year were. From the top of a hill at this place there was seen a large estuary mouth, which as it appeared to me and to the soldiers, was about three hundred yards (wide) and reached about the same distance inland, and another a little narrower. Through these mouths ran a great quantity of water from the sea, forming two large estuaries. The one which we had at our left must have turned south about fifteen leagues. Of the course of the other to the east, we saw about twenty (leagues). From all this we inferred that it was the estuary of the port of San Francisco of which the itinerary of Cabrera Bueno speaks. Of it we could not see the end, which made it necessary for us to turn back, for it lay across our path. Fourteen days after setting out we arrived at camp, finding that nothing whatever had happened. I enclose for Your Excellency a diagram of the works of the camp, which does not include the house of the gardener or that of the guard of the powder store, both of which, and each one separately, are being made four yards square. All of the houses are plastered and white-washed inside and outside. I enclose also a statement of the progress which has been made in the cultivation of wheat, together with a report of what the master black-smith, Juan Chacon, has done, and the diary of the (expedition to) the port of San Francisco.

"May God preserve the important life of Your Excellency the many years which I desire. Royal Presidio of San Carlos de Monterey, June 20, 1771. Most Excellent Sir, at the feet of Your Excellency your most attentive servant and subject.

"PEDRO FAGES. (Rubric)"

—*Ibid.*, v. 2, pp. 157-159.

1806-1846.—Russian expedition.—American consulate in Mexican California.—Attitude of the government towards Americans.—"In 1806 the first Russian ship came to the port of San Francisco, from Sitka, under the direction of Rezánof, an official of high position, who had gone to Sitka as inspector of the establishments there. His purpose at the moment was to purchase supplies for the now nearly starving colony at Sitka. Although such transactions with foreigners were forbidden to the Californians, still, after long and vain negotiations with Governor Arrillaga, and with the commandant of the presidio, Argüello, Rezánof at last gained his commercial purpose by

dint of making successful love to the beautiful daughter of Argüello, the Doña Concepcion of the well-known and highly romantic tale that has since grown up out of this incident. Rezánof was actually betrothed, in the end, to the fair young daughter: and when he set out, with his purchases made, it was under the solemn promise to return and marry his new beloved as soon as possible. He died, however, while on the way across Siberia, during his return to St. Petersburg. The story, told in several versions, and immortalized in . . . Bret Harte's best poem, has won many tears. Rezánof himself describes the affair, in his reports, as a purely business-like stroke of diplomacy, whereby he gained the decisive official help of the Argüello family. Whether he was sincere in his love or not, Doña Concepcion undoubtedly was in hers. She died, as nun, at Benicia, in 1857.

"The first Russian visit was followed, in 1812, by the founding of a Russian colony under the auspices of the Fur Company at 'Ross,' as the newcomers named their own settlement, which was on the coast, about eighteen miles above Bodega Bay, and a little north of the mouth of Russian River. Here the company built a fort, negotiated and traded with the natives, secured from the latter what the Russians later affected to consider a title to the land, and remained in the place for some thirty years, until 1841. The colony was especially useful as a trading and supply station for the Fur Company. Its inhabitants numbered, as time went on, from 150 to 400, of mixed Russian, Aleutian, and, later, California Indian blood; the force was always under the control of military officers, and was kept in strict discipline. Notwithstanding the numerous official obstacles in their way, the Russians managed to get a good deal of grain and provisions, by trade, from the Spaniards, and, later, raised some grain themselves. These supplies were sent to various Russian northern stations. But in the end the settlement proved a failure for its purposes, and was abandoned. A colony, in the strict sense, this establishment never became, and such plans of territorial acquisition as originally had to do with its foundation were never developed to any noteworthy result. The establishment excited, from the first, just indignation and considerable apprehension on the part of the Spanish authorities, and later, of the Mexican authorities; but there was never an open collision."

—J. Royce, *California*, pp. 17-10.—See also OREGON: 1741-1836.—"It is impossible to study the documents of the period without being struck by the generous concessions often made to Americans and other foreigners by the officials of the California government. Of course there were times when a temporary show of rigor toward foreigners was necessary to satisfy the demands of the supreme government of Mexico. Again, some personal matter would make the way of the foreigners in the department less smooth. But, as a rule, law and custom might bend or give way entirely at almost any point by the official courtesy of the local government. Of course the motive of personal gain often entered into the granting of such concessions, but that does not alter the facts of the case. Perhaps various motives at different times combined to affect the result, but certain it is that these motives, fused with the natural politeness of the Spanish people, often brought about an extreme of courtesy in the attitude of the Californian officials toward foreign citizens and especially toward the official representatives of other governments. This fact is amply illustrated in Larkin's dealings with the officials of California, especially in the matter of securing justice for citizens of the United

States who were traveling or residing in the department. Larkin's official activities in this respect fall under two headings that of his own judicial authority as consul and that of his influence on the proceedings of the departmental courts. His activities in trying seamen for crimes committed on shipboard have been discussed. Aside from this Larkin states, in a despatch to the State Department, that Alcaldes from every part of California send cases involving Americans to him for confirmation, sometimes even asking him to decide the case. This, he adds, he was unable to do. If Larkin's statement in this matter is strictly correct, he was offered powers of extra territoriality. However, no confirmatory evidence has been found as to how these cases were brought to him. It is possible that Governor Micheltorena, or other departmental officials to whom cases were appealed, merely talked them over with him in an informal way, asking his advice. However, with the evidence at hand, it cannot be said that the United States consul in California ever exercised powers of extra territoriality."—R. W. Kelsey, *United States consulate in California (Academy of Pacific coast history, v. 1, pp. 163-267)*.

1846.—President Polk and the conquest of California.—"It has long been charged that Polk brought on the Mexican war in order to obtain California, and also, for the same purpose, engaged in an intrigue; and these accusations have been pressed with as much zeal as if patriotism required us to prove or at all events proclaim them. Now in the first place it must be remembered that Polk was unpopular, and that anything said against an unpopular man—no matter how honorable the real facts of the case may be—is believed if it has the least show of plausibility. Secondly, the Mexican war, for reasons that have not yet been fully made known, was detested by many people, especially in New England; and any statement regarding the motive behind it was hailed as proven if calculated to make the affair odious. We should, therefore, be carefully on our guard, in approaching the subject before us, against inherited prejudices. One thing is doubtless true. Polk, as President of the United States, desired strongly to acquire California. But so did the country in general. Indeed our people were profoundly interested in the matter. As early as 1839 a congressional report on Oregon said enough about the territory farther south to excite attention; and Forbes's history of California, published the same year, did much to fix it and create the fear that European powers might encroach there. The seizure of American residents in 1840, the appearance of Dana's *Two Years Before the Mast* and the incidents connected with Jones's landing at Monterey deepened the impressions. By 1842 glowing letters from American settlers began to appear in our newspapers, and the suspected purposes of England received ample notice. Gold existed there, it was reported; the country was attractive, salubrious and rich; the port of San Francisco had a value that words could not represent, and the British already held a mortgage on the country. Our Pacific whaling fleet was said by the New Bedford member of Congress to include before the end of 1844, 650 vessels, which had cost twenty millions and employed 17,000 men; and not only was this harbor most important, since the bar at the Columbia River hampered navigation, but American control was needed there, since the uncertain and vexatious Mexican regulations caused great annoyance. Besides, it was pointed out, we required a fortified port on that coast, else in case of war with England the whalers would be unable

to avoid capture. All these ideas took root, and in the spring of 1845—about the time Polk was inaugurated—the press from New York to St. Louis and New Orleans broke into quite a furor about California. Its value was dwelt upon; that English holders of Mexican bonds had their eyes upon it was truthfully stated; the designs of the English government seemed to be made clear; and annexation was not only urged, but represented as near at hand. Our government was even in advance of the people. In 1835 an attempt was made to purchase the Bay of San Francisco. The next year Powhattan Ellis expressed the opinion that northern California would be of 'immense importance to us.' In 1842 while Daniel Webster was Secretary of State, our minister at Mexico not only expatiated on the value of the territory, but reported that England was endeavoring to forestall us, and he was instructed to ascertain whether an offer from this country would be acceptable. Our strained relations with Mexico and especially Jones's occupation of Monterey, which occurred in that year, made it unwise to follow up the matter; but after an interval Tyler and Webster planned an arrangement which, had it been carried through, would have given us the port of San Francisco. The record of England, remarks from British writers, numerous warnings received from our diplomatic and consular agents at Mexico and the consensus of opinion in California, Mexico, France and the United States were quite enough to warrant suspicions of Great Britain, and the circumstances connected with the visit of Duflot de Mofras, attaché of the French legation at Mexico, to California and the publication of his book by order of the king hinted at danger from another quarter; but neither country took any positive action, and our government—doubtless noting that a tide of emigration to the far west had begun—refrained from every move that could excite the jealousy of Mexico or Europe. In short, the sentiment of the nation and the policy of the government had for years been focussing upon California, and Polk entertained the same feeling and the same design."—J. H. Smith, *Polk and California (Massachusetts Historical Society, v. 50, p. 83-85)*.

1846-1847.—Conquest of California.—"As early as 1835 President Jackson had ordered Butler, *chargé d'affaires* in Mexico, to purchase the Bay of San Francisco as a port for the numerous United States vessels engaged in the whaling business on the Pacific coast. The price to be paid, according to one authority, was \$5,000,000. There is some indication that the proposition might have been favorably received had it not been for the opposition of the British. A few years later, when the diplomatic relations between the United States and Mexico were becoming more complicated over Texas, Commodore Thomas Catesby Jones was sent to take command of the Pacific squadron. His instructions ordered him to 'afford . . . every aid, protection and security consistent with the law of nations,' to Americans and American interests on the Pacific coast. Doubtless he also had verbal instructions from the secretary of war which were to govern his actions provided certain contingencies should arise. Anyway, under the impression that war had begun between the United States and Mexico, Jones entered the harbor of Monterey on the 10th of October, 1842, and took possession of the town. Two days later, having been convinced that the relations between his country and Mexico were peaceable, he restored the Mexican flag, withdrew his troops, fired a salute and, after a brief delay, sailed away. On March 4th, 1845, James K. Polk became President. His policy of territorial

acquisition was determined when he came into power. The minister, sent to Mexico to adjust the boundary between the United States and that country, was further authorized 'to purchase for a pecuniary consideration Upper California and New Mexico.' The amount to be paid was of secondary importance. The President thought these two territories might be had for fifteen or twenty million dollars, but he was ready to pay forty million if necessary. The relations between the two governments became even more strained during the first months of Polk's term, and in May, 1846, war began. By June the President had expressed a desire to get possession of all the territory north of the twenty-sixth degree of north latitude in the treaty of peace with Mexico. At the suggestion of Benton a regiment of volunteers was raised to go from New York to California with the understanding that they should be mustered out of service in the latter place after the war was over. According to orders sent out from Washington to Colonel Stevenson of New York City, the regiment was to consist of men of various pursuits and regular habits. The object is obvious."—C. Goodwin, *Establishment of state government in California*, pp. 15-16.—"Early in 1846, the Americans in California numbered about 200, mostly able-bodied men, and who in their activity, enterprise, and audacity, constituted quite a formidable element in this sparsely inhabited region. The population of California at this time was 6,000 Mexicans and 200,000 Indians. We now come to a period in the history of California that has never been made clear, and respecting which there are conflicting statements and opinions. The following facts were obtained by careful inquiry of intelligent parties who lived in California during the period mentioned, and who participated in the scenes narrated. The native Californians appear to have entertained no very strong affection for their own government, or, rather, they felt that under the influences at work they would inevitably, and at no very distant period, become a dismembered branch of the Mexican nation; and the matter was finally narrowed down to this contested point, namely, whether this state surgery should be performed by Americans or English, the real struggle being between these two nationalities. In the northern part of the territory, such native Californians as the Vallejos, Castros, etc., with the old American settlers, Leese, Larkin, and others, sympathized with the United States, and desired annexation to the American republic. In the south, Pio Pico, then governor of the territory, and other prominent native Californians, with James Alexander Forbes, the English consul, who settled in Santa Clara in 1828, were exerting themselves to bring the country under English domination. . . . This was the state of affairs for two or three years previous to the Mexican War. For some months before the news that hostilities between the United States and Mexico had commenced [see MEXICO: 1846-1847] reached California, the belief that such an event would certainly occur was universal throughout the territory. This quickened the impulses of all parties, and stimulated the two rivals—the American and English—in their efforts to be the first to obtain a permanent hold of the country. The United States government had sent Colonel Fremont to the Pacific on an exploring expedition. Colonel Fremont had passed through California, and was on his way to Oregon, when, in March, 1846, Lieutenant Gillespie, of the United States marine service, was sent from Washington with dispatches to Colonel Fremont. Lieutenant Gillespie went across Mexico to Mazatlan, and from thence by sea to California. He finally overtook

Fremont early in June, 1846, a short distance on the road to Oregon, and communicated to him the purport of his dispatches, they having been committed to memory and the papers destroyed before he entered Mexico. What these instructions authorized Colonel Fremont to do has never been promulgated, but it is said they directed him to remain in California, and hold himself in readiness to cooperate with the United States fleet, in case war with Mexico should occur. Fremont immediately returned to California, and camped a short time on Feather River, and then took up his headquarters at Sutter's Fort. A few days after, on Sunday, June 14th, 1846, a party of fourteen Americans, under no apparent command, appeared in Sonoma, captured the place, raised the Bear flag, proclaimed the independence of California, and carried off to Fremont's headquarters four prominent citizens, namely, the two Vallejos, J. P. Leese, and Colonel Prudhon. On the consummation of these achievements, one Merritt was elected captain. This was a rough party of revolutionists, and the manner in which they improvised the famous Bear flag shows upon what slender means nations and kingdoms are sometimes started. From an estimable old lady they obtained a fragmentary portion of her white skirt, on which they painted what was intended to represent a grizzly bear, but not being artistic in their work . . . the Mexicans, with their usual happy faculty on such occasions, called it the 'Bandera Colchis,' or 'Hog Flag.' This flag now ornaments the rooms of the Pioneer Society in San Francisco. On the 18th of June, 1846, William B. Ide, a native of New England, who had emigrated to California the year previous, issued a proclamation as commander-in-chief of the fortress of Sonoma. This proclamation declared the purpose to overthrow the existing government, and establish in its place the republican form. . . . General Castro now proposed to attack the feebly manned post at Sonoma, but he was frustrated by a rapid movement of Fremont, who, on the 4th of July, 1846, called a meeting of Americans at Sonoma; and this assembly, acting under his advice, proclaimed the independence of the country, appointed Fremont Governor, and declared war against Mexico. During these proceedings at Sonoma, a flag with one star floated over the headquarters of Fremont at Sutter's Fort. The meaning of this lone-star flag no one seems to have understood [see also BEAR FLAG WAR]. . . . Just as Fremont, with his company, had started for the coast to confront Castro, and act on the aggressive generally, he was suddenly brought to a stand by the astounding intelligence that Commodore Sloat had arrived at Monterey, and that, on the 7th of July, 1846, he had raised the American flag and taken possession of the place; also, that, by command of Commodore Sloat, Commander Montgomery, of the United States sloop-of-war *Portsmouth*, then lying in San Francisco Bay, had, on the 8th of July, taken possession of Yerba Buena and raised the American flag on the plaza. This of course settled the business for all parties. The Mexican flag and the Bear flag were lowered, and in due time, *nolens volens*, all acquiesced in the flying of the Stars and Stripes. . . . Commodore Sloat . . . had heard of the commencement of hostilities on the Rio Grande, . . . sailed from Mazatlan for California, took possession of the country and raised the American flag on his own responsibility. These decisive steps on the part of Commodore Sloat were not taken a moment too soon, as on the 14th of July the British man-of-war *Colingwood*, Sir George Seymour commanding, arrived at Monterey," intending, as Sir George ac-

knowledge, "to take possession of that portion of the country." In August, Commodore Sloat relinquished the command of the Pacific squadron to Commodore Stockton, who "immediately instituted bold and vigorous measures for the subjugation of the territory. All his available force for land operations was 350 men—sailors and marines. But so rapid and skilful were Stockton's movements, and so efficient was the coöperation of Fremont with his small troop, that California was effectually conquered in January, 1847. During all this period the people of the United States were ignorant of what was transpiring in California and vice versa. But the action of Commodore Sloat . . . and . . . Commodore Stockton . . . did but anticipate the wishes of the United States Government, which had, in June, 1846, dispatched General Kearny across the country from Fort Leavenworth [see NEW MEXICO: 1846], at the head of 1,600 men, with orders to conquer California, and when conquered to assume the governorship of the territory."—E. E. Dunbar, *Romance of the age*, pp. 29-42.—"He [General Kearny] arrived at Warner's ranch on the 2nd of December, 1846. As already indicated the conquest was deemed complete the previous August. Later developments showed, however, that so far as war affected the subjugation of California, the real struggle did not begin until September. On the 24th of that month Gillespie, whom Stockton left in command of the south with orders to maintain martial law, suddenly found that his indiscretionary measures had stirred up a revolt, which rapidly spread over the southern part of the territory. On September 30th, Gillespie was forced to accept the terms Flores offered him and withdraw from the south. Meantime the messenger sent northward by the besieged commander reached Commodore Stockton, and the latter moved southward, arriving at San Diego by November. While here he received a letter from General Kearny. To meet the General and conduct him to San Diego, Stockton sent Gillespie (Gillespie had joined Stockton at San Pedro) with thirty men. On December 6th, after the union of these troops with Kearny's, the battle of San Pascual was fought, an engagement that came near proving disastrous to the Americans. A few other minor skirmishes resulted in the triumph of the American cause, and on the 10th of January, 1847, the stars and stripes were permanently raised at Los Angeles."—C. Goodwin, *Establishment of state government in California*, p. 16.

1848.—Cession to the United States. See MEXICO: 1848.

1848-1849.—Discovery of gold and the immigration of the gold-hunters.—"In the summer of 1847 the American residents of California, numbering perhaps 2,000, and mostly established near San Francisco Bay, looked forward with hope and confidence to the future. Their government held secure possession of the whole territory, and had announced its purpose to hold it permanently. . . . It so happened that at this time one of the leading representatives of American interests in California was John A. Sutter, a Swiss by his parentage; a German by the place of his birth in Baden; an American by residence and naturalization in Missouri; and a Mexican by subsequent residence and naturalization in California. In 1839 he had settled at the junction of the Sacramento and American rivers, near the site of the present city of Sacramento." His rancho became known as Sutter's

Fort. In the summer of 1847 he planned the building of a flour-mill, and "partly to get lumber for it, he determined to build a saw-mill also. Since there was no good timber in the valley, the saw-mill must be in the mountains. The site for it was selected by James W. Marshall, a native of New Jersey, a skilful wheelwright by occupation, industrious, honest, generous, but 'cranky,' full of wild fancies, and defective in some kinds of business sense. . . . The place for his mill was in the small valley of Coloma, 1,500 feet above the level of the sea, and 45 miles from Sutter's Fort, from which it was accessible by wagon without expense for roadmaking." Early in 1848 the saw-mill was nearly completed; "the water had been turned into the race to carry away some of the loose dirt and gravel, and then had been turned off again. On the afternoon of Monday, the 24th of January, Marshall was walking in the tail-race, when on its rotten granite bed-rock he saw some yellow particles and picked up several of them. The largest were about the size of grains of wheat. . . . He thought they were gold, and went to the mill, where he told the men that he had found a gold mine. At the time, little importance was attached to his statement. It was regarded as a proper subject for ridicule. Marshall hammered his new metal and found it malleable; he put it into the kitchen fire, and observed that it did not readily melt or become discolored; he compared its color with gold coin; and the more he examined it the more he was convinced that it was gold." He soon found an opportunity to show his discovery to Sutter, who tested the metal with acid and by careful weighing, and satisfied himself that Marshall's conclusion was correct. "In the spring of 1848 San Francisco, a village of about 700 inhabitants, had two newspapers, the 'Californian' and the 'California Star,' both weeklies. The first printed mention of the gold discovery was a short paragraph in the former, under date of the 15th of March, stating that a gold mine had been found at Sutter's Mill, and that a package of the metal worth \$30 had been received at New Helvetia. . . . Before the middle of June the whole territory resounded with the cry of 'gold!' . . . Nearly all the men hurried off to the mines. Workshops, stores, dwellings, wives, and even ripe fields of grain, were left for a time to take care of themselves. . . . The reports of the discovery, which began to reach the Atlantic States in September, 1848, commanded little credence there before January; but the news of the arrival of large amounts of gold at Mazatlan, Valparaiso, Panama, and New York, in the latter part of the winter, put an end to all doubt, and in the spring there was such a rush of peaceful migration as the world had never seen. In 1849, 25,000—according to one authority 50,000—immigrants went by land, and 23,000 by sea from the region east of the Rocky Mountains, and by sea perhaps 40,000 from other parts of the world. . . . The gold yield of 1848 was estimated at \$5,000,000; that of 1849 at \$23,000,000; that of 1850 at \$50,000,000; that of 1853 at \$65,000,000; and then came the decline which has continued until the present time [1890] when the yield is about \$12,000,000."—J. S. Hittell, *Discovery of gold in California* (*Century Magazine*, Feb., 1891).—The gold output for 1918 was valued at \$16,520,162.

1848-1849.—Trouble over water rights. See RIPARIAN RIGHTS: Theories of water law.

1849.—**Constitutional convention.—Origin of the constitution.**—“On the third day of the session, Wednesday, September 5th, McCarver offered a resolution that the Convention resolve itself into a committee of the whole and take the constitution of Iowa into consideration as a basis for that of California. He was immediately followed by Gwin, who explained that he had exerted himself to have a printing press there, but found it impracticable. After consulting with various members of the Convention, he had done the next best thing; he had provided copies of the constitution of Iowa so that each member might have one and write in the margin any amendments which should occur to him. He had selected that particular constitution because it was one of the latest and shortest. Sherwood thought there would be enough to do in discussing propositions consolidated by a committee without bringing the whole of any single constitution before the entire convention. Furthermore he opposed following any single state constitution; ‘It was desirable to have the cream of the whole—the best material of the constitution of the thirty states.’ This was also Gilbert’s opinion. He opposed adopting any one constitution as a basis unless it came through the hands of the Committee. The best thing to do would be to let the Committee ‘take all the constitutions and report what they deemed best.’ It was a mere matter of convenience, Gwin explained. ‘He wanted nothing better than to form a constitution from the thirty constitutions of the Union.’ He had lived in three of the old states and had carefully examined all the state constitutions. He preferred the constitution of Iowa to that of any other. No vote seems to have been taken on McCarver’s resolution, but doubtless the Committee on the Constitution made use of the various copies of the Iowa constitution prepared by Gwin. That they also used other constitutions appears equally true. Certainly they did not pretend to originate one. The document completed at Monterey was practically a compilation of articles and sections from other state constitutions. The suggestions of Sherwood and Gilbert appear to have been adopted, but the labors of Gwin were not exercised in vain as we shall see.

“The Convention was admirably suited for compiling just such a document as it finally submitted. Thirty-eight of the forty-eight delegates had been citizens of twenty-one different states in the Union. Of the total number fourteen were lawyers who were natives of eleven of the twenty-one states represented. Of the twenty members of the Committee on the Constitution five were lawyers, two of whom came from New York, and one each from Missouri, Wisconsin, and Vermont. Gwin had taken part in the convention that drew up the constitution of Iowa in 1846, and came to Monterey supplied with printed copies of that document which, it has been said, he hoped to have the Convention adopt, after introducing slight changes, as the constitution for the new state of California. While the Convention did not adopt the Constitution of Iowa, the one completed resembled that document more than any other. There are, however, traces of half a dozen different state constitutions in the California constitution of 1849, and references show that the constitutions of the thirty states of the Union were doubtless available and that they were probably used. Both Ord and Tefft, during the first week of the Convention, while the bill of rights was under discussion, imply that they had used them. The former says distinctly that he ‘had looked over the whole thirty constitutions.’ On September 8th Shannon pro-

posed two additional sections to be placed at the beginning of the bill of rights. In connection with these, he said that he ‘had carefully examined the constitutions of the different states’ before making his selection. And during the third week of the Convention, September 25th, Halleck states clearly that the Committee appointed to draw up the constitution was doing its work with the constitutions of every state in the Union before it. There can be little doubt therefore, that the Convention that drew up the constitution of California had available for making their compilation the constitutions of practically all the states in the Union.”—C. Goodwin, *State government in California*, pp. 230-231.

1850.—**Admission to Union as a free state.—The Compromise.** See U. S. A.: 1850 (April-September).

1856.—**San Francisco vigilance committee.**—“The association of citizens known as the vigilance committee, which was organized in San Francisco on the 15th of May, 1856, has had such an influence on the growth and prosperity of that city that now [1877], at the end of 21 years, a true account of the origin and subsequent action of that association will be read with interest. For some time the corruption in the courts of law, the insecurity of the ballot-box at elections, and the infamous character of many of the public officials, had been the subject of complaint, not only in San Francisco, but throughout the State of California. It was evident to the honest and respectable citizens of San Francisco that . . . it would become the duty of the people to protect themselves by reforming the courts of law, and by taking the ballot-box from the hands of greedy and unprincipled politicians.” The latter were represented by a newspaper called the *Sunday Times*, edited by one James P. Casey. The opinion of the better classes of citizens was voiced by the *Evening Bulletin*, whose editor was James King. On May 14, 1856, King was shot by Casey, in the public street, receiving a wound from which he died six days later, and intense excitement of feeling in the city was produced. Casey surrendered himself and was lodged in jail. During the evening of the 14th some of the members of a vigilance committee which had been formed in 1851, and which had then checked a free riot of crime in the suddenly populated and unorganized city, by trying and executing a few desperadoes, came together and determined the organization of another committee for the same purpose. “The next day (the 15th) a set of rules and regulations were drawn up which each member was obliged to sign. The committee took spacious rooms, and all citizens of San Francisco having the welfare of the city at heart were invited to join the association. Several thousands enrolled themselves in a few days. . . . The members of the vigilance committee were divided into companies of 100, each company having a captain. Early on Sunday (the 18th) orders were sent to the different captains to appear with their companies ready for duty at the headquarters of the committee, in Sacramento Street, at nine o’clock. When all the companies had arrived, they were formed into one body, in all about 2,000 men. Sixty picked men were selected as a guard for the executive committee. At half-past eleven the whole force moved in the direction of the jail. A large number of spectators had collected, but there was no confusion, no noise. They marched through the city to Broadway, and there formed in the open space before the jail. . . . The houses opposite the jail were searched for men and arms secreted there, the committee wishing to prevent any chance of a

collision which might lead to bloodshed. A cannon was then brought forward and placed in front of the jail, the muzzle pointed at the door." The jailer was now called upon to deliver Casey to the committee, and complied, being unable to resist. One Charles Cora, who had killed a United States marshal the November previous, was taken from the jail at the same time. The two prisoners were escorted to the quarters of the vigilance committee and there confined under guard. Two days afterwards (May 20) Mr. King died. Casey and Cora were put on trial before a tribunal which the committee had organized, were condemned to death, and were hanged, with solemnity, on the 22d, from a platform erected in front of the building on Sacramento street. "The executive committee, finding that the power they held was perfectly under control, and that there was no danger of any popular excesses, determined to continue their work and rid the country of the gang of ruffians which had for so long a time managed elections in San Francisco and its vicinity. These men were all well known, and were ordered to leave San Francisco. Many went away. Those who refused to go were arrested and taken to the rooms of the committee, where they were confined until opportunities offered for shipping them out of the country. . . . The governor of California at this time was Mr. J. Neely Johnson. . . . The major-general of the second division of state militia (which included the city and county of San Francisco) was Mr. William T. Sherman [afterwards well known in the world as General Sherman] who had resigned his commission in the United States army and had become a partner in the banking house of Lucas, Turner & Co., in San Francisco. . . . Toward the end of May, Governor Johnson . . . appealed to General Sherman for advice and assistance in putting a stop to the vigilance committee. At this time General Wool was in command of the United States troops, and Commodore Farragut had charge of the navy yard." General Wool was applied to for arms, and Commodore Fairagut was asked to station a vessel of war at anchor off San Francisco. Both officers declined to act as requested, having no authority to do so. "When Governor Johnson returned to Sacramento, a writ was issued, at his request, by Judge Terry of the supreme court, commanding the sheriff of San Francisco to bring before him one William Mulligan, who was then in the hands of the vigilance committee." The vigilance committee refused to surrender their prisoner to the sheriff, and General Sherman was ordered to call out the militia of his division to support that officer. At the same time the governor issued a proclamation declaring the city of San Francisco in a state of insurrection. General Sherman found it impossible to arm his militia for service, and resigned the command. The governor sought and obtained arms elsewhere; but the schooner which brought them was seized and the arms possessed by the committee. On attempting to arrest the person who had charge of the schooner, one of the vigilance committee's policemen, named Hopkins, was stabbed by the afterwards notorious Judge Terry, who, with some others, had undertaken to protect the man. "The signal for a general meeting under arms was sounded, and in a short time 1,500 men were reported ready for duty. In an hour 4,000 men were under arms and prepared to act against the so-called law-and-order party, who were collected in force at the different armories. These armories were surrounded." Judge Terry was demanded and delivered up, and all the arms and ammunition in the armories were removed. "In this way

was settled the question of power between the vigilance committee, who wished to restore order and were working to establish an honest judiciary and a pure ballot, and their opponents, the law-and-order party, who wished to uphold the dignity of the law by means of a butcher's knife in the hands of a judge of the supreme court. Although the committee were masters in San Francisco, their position was made more precarious by the very fact of their having disarmed their opponents. The attention of the whole Union was attracted to the state of things in California, and it was rumored that instructions had been sent from Washington to all the United States vessels in the Pacific to proceed at once to San Francisco; and that orders were on the way, placing the United States military force in California at the disposal of Governor Johnson. The committee went on steadily with their work. . . . All the important changes which they had undertaken had been carried out successfully, and they would gladly have given up the responsibility they had assumed had it not been for the case of Judge Terry. . . . At last the physicians announced that Hopkins was out of danger, and on the 7th of August Judge Terry was released. . . . Having got rid of Judge Terry the committee prepared to bring their labours to a close, and on the 18th of August the whole association, numbering over 5,000 men, after marching through the principal streets of San Francisco, returned to their headquarters in Sacramento Street, where after delivering up their arms they were relieved from duty. . . . In the following November there was an election of city and county officers. Every thing went off very quietly. A 'people's ticket', bearing the names of thoroughly trustworthy citizens, irrespective of party, was elected by a large majority, and for the last 20 years San Francisco has had the reputation of being one of the best governed cities in the United States."—T. G. Cary, *San Francisco vigilance committee* (*Atlantic Monthly*, Dec. 1877).

1860-1861.—Communication with the East. See PONY EXPRESS.

1861.—Attitude toward the Civil War.—"The record of all the California troops, in fact, is one of which her sons and daughters can well be proud. In northern California the First Battalion of Mountaineers kept down the hostile Indians. The Second Cavalry guarded the Overland mail route in Utah, and kept down the Snake and Shoshone Indians. Part of the Third Infantry, sent to Humboldt county, settled Indian troubles there. And Colonel Connor, sent with his regiment to Salt Lake City, kept the Mormons from causing the Union trouble. The California 'Hundred' and 'Battalion' troops raised in California, which became a part of the Second Massachusetts Cavalry, left a brave record after them in their active service in the East. And the troops stationed throughout California during the entire war, rendered great service to the State, and to the Union in keeping down secessionists at home. To sum up the work of the Pacific Coast troops, and especially of the California troops, in the words of Bancroft: "The population of the whole Pacific Coast, including Utah and Colorado, was not equal to one-fourth of the single State of Pennsylvania. Yet to the volunteers of this sparse population was entrusted the labor of awing avowed secession at home, guarding against foreign

interference and fighting numerous Indians from Oregon in New Mexico.' In conclusion, we may say that the loyal attitude which California as a State took towards the Civil War, although a profound disappointment to the Confederacy, had a powerful effect upon the whole country. Nothing could have been more opportune or more effective. Although the furthest off of all the states, the heartiness and readiness with which California responded to all requisitions made on her, her unhesitating and determined language in reference to the Union cause, the important services rendered by California troops,—in short, her whole attitude to the Civil War was as praiseworthy and of as much value to the Union as that of many a Northern State closer to the scene of action. . . . Throughout the winter of 1860-61, the establishment of a Pacific Republic was talked about in a threatening manner. And when the Southern States seceded and the Civil War had actually begun, and it became evident that California could not by any possibility be carried over to join the seceded states, an extra effort was made to have California assume an attitude of neutrality between the North and South, although this meant, of course, resistance to Lincoln's administration, and virtual secession. The inside workings of the conspiracy to form a Pacific Republic, however, were not divulged. It is known that the 'Knights of the Golden Circle,' one of the secret pro-slavery organizations, helped carry on the idea. And enough came to be known of this movement at Washington to cause the President to recall Brigadier-General A. S. Johnston (a Southern man with pronounced sympathy for the Pacific), and to dispatch General Sumner to relieve him (April 25, 1861). Overt acts on the part of advocates of a Pacific Republic were few and inconsequential—due usually to individual enthusiasm. A Pacific Republic flag was hoisted on board a surveying schooner at Stockton, January 16, 1861, creating much excitement and demonstrating the fact that 'it was not safe to trifle with the loyal sentiment of the people.' The *Alta California* in commenting on this fiasco said, 'A few dozen men, all of them repudiated as leaders by the public opinion of the street, and most of them unknown and without influence, will hardly succeed in establishing a Pacific Republic! Any fool can buy a flag and burn powder.' In San Francisco, the palmetto flag was raised in February and hauled down. In May, the Bear Flag was raised at Los Angeles, and also for a short time, at Sonoma and San Bernardino. Rumors were afloat that the presidio and fort on Alcatraz island would be captured, and the custom house, mint, post-office, and all United States property, after which the rebels would proceed to invade Sonora and add that territory to the Pacific Republic. If such a plot there was, it was revealed and nothing came of it."—*Historical Society of Southern California publications*, p. 130.

1877-1880.—Denis Kearney and the Sand Lot party.—New state constitution.—"Late in 1877 a meeting was called in San Francisco to express sympathy with the men then on strike at Pittsburg in Pennsylvania. . . . Some strong language used at this meeting, and exaggerated by the newspapers, frightened the business men into forming a sort of committee of public safety. . . . The chief result of the incident was further irritation of the poorer classes, who perceived that the rich were afraid of them, and therefore disposed to deal harshly with them. Shortly after came an election of municipal officers and members of the State legislature. The contest, as is the custom in America, brought into life a number of clubs and

other organizations, purporting to represent various parties or sections of a party, and among others a body calling itself 'The Working men's Trade and Labor Union,' the Secretary of which was a certain Denis Kearney. When the election was over, Kearney declared that he would keep his union going, and form a working man's party. He was a drayman by trade, Irish by birth, brought up a Roman Catholic, but accustomed to include his religion among the established institutions he reviled. He had borne a good character for industry and steadiness till some friend 'put him into stocks,' and the loss of what he hoped to gain is said to have first turned him to agitation. He had gained some faculty in speaking by practice at a Sunday debating club called the Lyceum of Self Culture. . . . Kearney's tongue, loud and abusive, soon gathered an audience. On the west side of San Francisco, as you cross the peninsula from the harbor towards the ocean, there is (or then was) a large open space, laid out for building, but not yet built on, covered with sand, and hence called the Sand Lot. Here the mob had been wont to gather for meetings; here Kearney formed his party. At first he had merely vagabonds to listen, but one of the two great newspapers took him up. These two, the *Chronicle* and the *Morning Call*, were in keen rivalry, and the former seeing in this new movement a chance of going ahead, filling its columns with sensational matter and increasing its sale among working men, went in hot and strong for the Sand Lot party. . . . The advertisement which the *Chronicle* gave him by its reports and articles, and which he repaid by advising working men to take it, soon made him a personage; and his position was finally assured by his being, along with several other speakers, arrested and prosecuted on a charge of riot, in respect of inflammatory speeches delivered at a meeting on the top of Nob Hill, one of the steep heights which make San Francisco the most picturesque of American cities. The prosecution failed, and Kearney was a popular hero. Clerks and the better class of citizens now began to attend his meetings, though many went from mere curiosity, as they would have gone to a circus; the W. P. C. (Working man's Party of California) was organized as a regular party, embracing the whole State of California, with Kearney for its President. . . . The Sand Lot party drew its support chiefly from the Democrats. . . . hence its rise was not unwelcome to the Republicans, because it promised to divide and weaken their old opponents; while the Democrats, hoping ultimately to capture it, gave a feeble resistance. Thus it grew the faster, and soon began to run a ticket of its own at city and State elections. It carried most of the city offices, and when the question was submitted to the people whether a new Constitution should be framed for California, it threw its vote in favor of having one and prevailed. . . . Next came, in the summer of 1878, the choice of delegates to the convention which was to frame the new Constitution. The Working man's Party obtained a substantial representation in the convention, but its nominees were ignorant men, without experience or constructive ideas. . . . However the working men's delegates, together with the more numerous and less corruptible delegates of the farmers, got their way in many things and produced that surprising instrument by which California is now (with amendments) governed. . . . 1. It restricts and limits in every possible way the powers of the State legislature, leaving it little authority except to carry out by statutes the provisions of the Constitution. It makes 'lobbying,' i. e., the attempt to

corrupt a legislator, and the corrupt action of a legislator, felony. 2. It forbids the State legislature or local authorities to incur debts beyond a certain limit, taxes uncultivated land equally with cultivated, makes sums due on mortgage taxable in the district where the mortgaged property lies, authorizes an income tax, and directs a highly inquisitorial scrutiny of everybody's property for the purposes of taxation. 3. It forbids the 'watering of stock,' declares that the State has power to prevent corporations from conducting their business so as to 'infringe the general well-being of the State'; directs the charges of telegraph and gas companies, and of water-supplying bodies, to be regulated and limited by law; institutes a railroad commission with power to fix the transportation rates on all railroads and examine the books and accounts of all transportation companies. 4. It forbids all corporations to employ any Chinese, debars them from the suffrage, forbids their employment on any public works, annuls all contracts for 'coolie labour,' directs the legislature to provide for the punishment of any company which shall import Chinese, to impose conditions on the residence of Chinese, and to cause their removal if they fail to observe these conditions. It also declares that eight hours shall constitute a legal day's work on all public works. When the Constitution came to be submitted to the vote of the people, in May 1879, it was vehemently opposed by the monied men. . . . The struggle was severe, but the Granger party commanded so many rural votes, and the Sand Lot party so many in San Francisco (whose population was nearly a third of that of the entire State) that the Constitution was carried, though by a small majority, only 11,000 out of a total of 145,000 citizens voting. . . . The next thing was to choose a legislature to carry out the Constitution. Had the same influences prevailed in this election as prevailed in that of the Constitutional Convention, the results might have been serious. But fortunately there was a slight reaction. . . . A series of statutes was passed which gave effect to the provisions of the Constitution in a form perhaps as little harmful as could be contrived, and certainly less harmful than had been feared when the Constitution was put to the vote. Many bad bills, particularly those aimed at the Chinese, were defeated, and one may say generally that the expectations of the Sand Lot men were grievously disappointed. While all this was passing, Kearney had more and more declined in fame and power. He did not sit either in the Constitutional Convention or in the legislature of 1880. The mob had tired of his harangues, especially as little seemed to come of them, and as the candidates of the W. P. C. had behaved no better in office than those of the old parties. He had quarreled with the Chronicle. He was, moreover, quite unfitted by knowledge or training to argue the legal, economical, and political questions involved in the new Constitution so that the prominence of these questions threw him into the background. . . . Since 1880 he has played no part in Californian politics."—J. Bryce, *American commonwealth*, v. 2, ch. 90, and *app. to v. 1 (containing the text of the Constitution of California)*.

1900.—Industrial development in the early twentieth century.—"In pre-American days the

chief and in fact the only industry was the production of hides and tallow. Hundreds of thousands of cattle grazed the hills, receiving practically no care and worthless for meat, but yielding vast quantities of hides and tallow. These were disposed of to the American trading vessels. Only enough planting and cultivating was done to sustain the inhabitants. The mission and pueblo lands were the centers of this limited agricultural development, the ranches being smaller oases in the otherwise desert country. Incoming foreigners began production on a larger scale. Sutter in 1840 started an extensive agricultural development in the Sacramento Valley. With the increasing difficulty of obtaining gold when surface mining passed, more and more men turned to agriculture, which promised large returns at the then current prices. By 1854 the state had become practically self-supporting so far as foodstuffs were concerned. This was for the most part in the line of staple cereals and garden truck. While orchards and vineyards were early understood to be a possibility, the rather indifferent success at the missions with both oranges and grapes had discouraged any large effort in that direction. In the later fifties, however, began a widespread experimentation in what could be done in California. Every country in the world was levied upon for seeds and experience. The climatic conditions were ideal; the ground fairly level and in many instances ready for the plow; the farmers of the state boldly experimented in every direction. It was soon discovered that wheat could be raised in the great interior valleys which had hitherto been condemned as arid. This discovery gave a tremendous impetus to agricultural development in all parts of the state. But it was found that for other products than the grains, water in addition to the annual rainfall was a necessity. This difficulty was overcome by irrigation. Once introduced, the use of this method of watering spread rapidly. It had been used in a small way at the missions but never much developed. In 1871 the great San Joaquin and Kings River canal was commenced. When finished this canal was seventy miles long and carried water to 190,000 acres of land. Many such irrigating canals have since been built, the most noted system being that in the Imperial Valley which carries the waters of the Colorado River to thousands of acres of land. Irrigation projects are constantly in course of construction in all parts of the state. . . . The cereals are the great staple product of California. They are grown in all parts of the state under the process known as "dry-farming," without irrigation. . . . A more recent crop is alfalfa. It has been extensively planted of late years especially in the irrigated districts of the southern part of the state. . . . Gardening became prominent during the first reaction from the gold excitement. The high prices prevalent during the early fifties led many into it with a consequent lowering of the price level. There was still a large yield, however, and the recent growth of the large cities has caused the acreage given over to truck farming to increase steadily. Cotton was first planted in 1865, but was confined to a small area in Merced and Kern counties. . . . Fruit and grapes are among the greatest of California products. The yield per acre is about twice that of other countries. . . . Oranges and lemons are by far the best known crops of California. These fruits were first planted by the missionaries, but they never met with much success in their cultivation. The real development of the modern orange industry began in 1873 with the introduction of two seedless orange trees from Brazil. . . . All parts of the

world have been levied upon to furnish varieties of grapes, and all varieties flourish in California. . . . [See also AGRICULTURE: Modern: United States: 1886-1910.] Cattle-raising was an important industry in the early days but later declined to an adjunct of ranching. Latterly the cultivation of pasture has been introduced and cattle are raised more and more for dairying instead of for their hides. There are still many thousand head upon the ranges of the more mountainous districts. California horses, while not raised in great numbers, are among the finest in the country. The raising of sheep for wool was introduced by Americans in 1853 and has since become an important industry. Hogs are raised on the tule lands of the San Joaquin and Sacramento Valleys and of late years on the irrigated lands of the Imperial Valley, where they are allowed to run loose in immense fields of alfalfa and barley. Poultry-raising has never assumed a very prominent place though it is at present on the increase. . . . In the northern part of the state the production of lumber is an important industry. The red-wood and sequoia forests have furnished millions of feet. . . . Other native growths are the Douglas fir, the sugar pine, and the Oregon pine. In the south planting of eucalyptus has received much attention in recent years. It takes from six to ten years to grow a tree of marketable size, and after cutting new trunks will spring from the same stump. The principal use of this wood in the past has been for firewood but it is now used to some extent for furniture and cabinet work. Ever since the gold days California has retained her pre-eminent position in the production of the precious metals. Up to the year 1910 she had added over two billion dollars to the world's gold supply. She has also been a large producer of silver. All the quicksilver produced in the United States comes from this state and one mine in Oregon. Iron ore is present in large quantities in various parts of the state. . . . There is a small output of copper, borax and salt. Coal is mined in several of the coast counties but not in large quantities. Oil promises to become the most important mineral product of the state if the recent enormous development is continued. The first attempts to secure oil were made by Andres Pico in Pico Cañon near Los Angeles in 1856. But the real growth of the industry has taken place in the last twenty years and in 1907 the production exceeded that of gold for that year. Los Angeles county was for many years the chief producer but is now giving way before Kern and Fresno counties in the San Joaquin Valley. California oil differs in general from the eastern product in that it has an asphaltum instead of a paraffin base. It is not good for illuminating, nor where rapid combustion is necessary as in automobile engines. It is, however, a splendid fuel and is extensively used not only in the household but almost exclusively in locomotives and steamships. . . . Manufacturing development has been much hampered by the scarcity of raw materials and the extremely high cost of labor. Fuel has also been difficult to obtain in the past but the recent development of petroleum and the utilization of water power for the generation of electricity have overcome this obstacle. The first manufacturing enterprises arose from the need of repairs to machinery and equipment during the mining days. Special needs at the mines developed local industries and the general growth of the country led to the establishment of larger manufactories in and about San Francisco. The large production of wheat has resulted in the erection of mills, which

export most of their product. The Civil War gave an added impulse to California manufactures. It caused a large immigration to the Pacific Coast and influenced many people to remain here who otherwise would have returned to the East. By cutting off other sources of supply it greatly increased the demand for local products. This new impulse centered in San Francisco and gave that city a lead in manufactures which it has since maintained. One of her shipyards has constructed eight vessels for the United States navy. The present [1913] outlook for manufacturers is of the brightest. The rapidly increasing population is creating a large home market. To this is added the force of the local sentiment in favor of using home products wherever possible. The large acreage which has within the last few years been planted to eucalyptus promises to remedy in time the lack of hard and elastic woods. The 'homeseeker' immigration is bringing in more and more laborers. . . . With more and cheaper labor, and a large and growing home market, the manufactures of California will soon surpass in value both the mineral and agricultural products.

"The first foreign commerce of California was represented by the supply ships from Mexico. After these came the trading and smuggling vessels, and barter with the Russians in the north. The gold rush with its high prices became a magnet for the surplus goods of the entire world. Anything was considered good enough to send to California. Hundreds of vessels sailed into San Francisco harbor with absurd and unusable cargoes which were left to rot on the wharves. Many of the ships were never even unloaded for they were without a single deckhand within a few hours after arriving. The high prices sent up the cost of doing business to almost prohibitive figures. The few warehouses were quickly filled. Auction sales were the only remedy, and goods sold for little or nothing in huge quantities. The result was failure after failure which brought on a widespread commercial panic. The gold rush of course practically put an end to what little export trade there was for the time being. The vast herds of cattle which had formerly been raised for their hides and tallow only, suddenly became extremely valuable for their meagre supply of meat. California was wholly unable to support the enormous numbers of newcomers and great quantities of foodstuffs were imported for several years. Most of the imports came by sea. The completion of the Central Pacific or other railroads has never decreased the volume of this traffic. The increase in population has been sufficient to keep it on the increase. . . .

"More than one half of the people of California live in the cities about San Francisco Bay, Los Angeles, San Diego, and Sacramento. While the development of the agricultural districts of the state has been phenomenal, the greatest growth in population [since 1880] has been in these centers. This may be ascribed in part to the tendency toward city life which is perceptible all over the country but in greater measure to the development of California's commercial side as distinguished from the increase of production. In order to understand the California of today it is desirable therefore to review the growth of the cities. There are a number of smaller cities which are worthy of mention but to which much space cannot be given here. El Centro is the growing center of the great Imperial Valley in the southern orange-growing districts. San Bernardino is a large interior railroad center. Pasadena is one of the most beautiful residence cities in the world. Bakersfield, the

largest city in the great oilfields of the San Joaquin Valley, is one of the busiest cities in the state. Fresno is the center of a vast fertile agricultural area. Stockton and Marysville are the interior distributing centers for the river traffic of California's two great rivers. San Jose is the commercial center of the beautiful and exceedingly fertile Santa Clara Valley. Eureka, on Humboldt Bay in the northern part of the state, is one of the largest lumber shipping ports in the world."—H. K. Norton, *Story of California*, pp. 333-345.—See also EDUCATION, AGRICULTURAL: Statistics of agricultural colleges; BEET SUGAR; and U. S. A.: Economic map.

1900-1920.—Japanese question.—“Anti-Japanese agitation in California has been virtually constant since 1900, in which year Japanese immigration, which totalled only 2844 in 1899, suddenly leaped to the alarming total of 12,635. But it was in 1907, when Japanese immigration reached the staggering figure of 30,645, that Californians began to feel the full import of the Asiatic flood. Since that time the story of the Japanese in California has grown increasingly serious. Let us summarize the history of these fifteen years, indicating the year-to-year change in the number of Japanese immigrants entering the United States (about four fifths of whom, it is estimated, live in California), suggesting the activities of the Japanese in California, stating the reaction of Californians in general agitation, municipal regulations, and state legislation, together with a record of Federal action. Such a summary may best be made chronologically. The period of 1900-1905 may be roughly described as a period of general awakening to the seriousness of the problem. Until 1900, Japanese immigration had not attained menacing proportions. In 1882 only five Japanese entered this country. Not until 1891 did the figure pass 1000. When 12,635 Japanese came in 1900, California began to sense danger. For the five years following, general agitation, mass-meeting protests, and demands for restrictions upon Japanese immigration were the order of the day. In 1905 the agitation began to express itself more concretely. In that year the Asiatic Exclusion League was organized. Its particular purpose was to urge the extension of the Chinese Exclusion Act of 1882 to apply to the Japanese. It was about this time also that the San Francisco Board of Education issued an order segregating Asiatic students from white students, placing the Asiatic children in schools of their own. At this time the initiating force in the anti-Japanese agitation was union-labor, which resented Asiatic competition. It was a labor-unionist mayor and an anti-Japanese school board appointed by him who were responsible for this segregation order and for the ‘Jim Crow’ schools for Japanese [see also RACE PROBLEMS: 1904-1909]. There were 11,021 Japanese arrivals in the United States in 1905. The period of 1905-1907 was marked by a rapid increase in Japanese immigration; 14,243 Japanese arrived in 1906, and 30,645 in 1907. . . . Two specific moves were made by the Federal Government in 1907. First, President Roosevelt, having been empowered by Congress to act, issued an executive order under which ‘Japanese or Korean laborers, skilled and unskilled, who have received passports to go to Mexico, Canada, or Hawaii, and come therefrom’ were to be denied admission to the United States. This was to checkmate the many Japanese who were getting into the United States in these round-about ways. Second, the American and Japanese governments arrived at the ‘Gentlemen’s Agreement.’ This agreement was not made in the form of a treaty, resting rather upon a number of in-

formal notes which passed between our State Department and the Japanese ambassador at the time. Under this agreement the Japanese Government pledged itself to refuse passports to Japanese laborers desiring to come to the United States, but the agreement did not forbid the entrance into the United States of Japanese who were (1) former residents in the United States, (2) parents, wives, or children of residents, (3) settled agriculturists, (4) transients who could be classified as non-laborers. The idea of the American Government was to restrict Japanese immigration, as we had restricted Chinese immigration, to travelers, teachers, students, scientists, trades-folk, and the like. The Japanese Government, by concurrence in the agreement, avoided a Federal exclusion law such as applied to Chinese. . . . The year following the conclusion of this agreement, Japanese immigration dropped from 30,645 to 18,238, and in 1909 it dropped still further to 3295. . . . During the period of 1909-1913 . . . Japanese immigration began to swell again. Japanese came in increasing numbers: 4125 in 1910; 6441 in 1911; 8580 in 1912; 11,672 in 1913. . . . The agreement had not resulted in more than a passing reduction of Japanese incomers. Charges flew thick and fast that the Japanese were evading the terms of the agreement. These charges were probably false,—to a great degree, at any rate,—and whatever of truth there may have been in the charges was bent to the services of the Jingo element. The trouble lay not in the infraction of the ‘Gentlemen’s Agreement,’ but in its inadequacy. At the time the agreement was concluded California’s great fear was a union-labor fear of Japanese laborers. By 1913 California’s fear had become a farmer fear of Japanese landowners, for, by the terms of the agreement, farmers as distinguished from farm-laborers did not come under the ban. Whereas earlier Japanese immigrants had ‘hired out’ to work under white employers on railroads, fruit-ranches, truck-farms, and in lumber-mills, mines, and canneries, the later Japanese immigrants had begun to buy up lands, whole districts being turned into Japanese agricultural colonies. To strike at this menace, California passed the Heney-Webb land law in 1913. This law prohibited the purchase and ownership of land by any alien ‘ineligible to citizenship’ and, to such, limited the right to lease land to three years. This covered the Japanese, at whom it was aimed, since our citizenship laws recognize white men and ‘Africans’ as eligible to citizenship, but do not mention ‘Mongolians.’ This law was easily evaded by the Japanese in two ways: first, Japanese parents, who were themselves ineligible to land-ownership, contrived to reap all the benefits of ownership by deeding land to their children who had been born in this country, and were therefore citizens and eligible to land-ownership, and then assuming guardianship of the children; second, Japanese evaded the restriction of leases to three years by taking stock in corporations that could legally lease land for unrestricted periods [see also RACE PROBLEMS: 1913-1921]. It is the land situation that has brought the Japanese question in California to the present inflamed state. There are 27,931,444 acres of farm-land in California. Of this, 11,389,804 acres are improved; 3,803,500 acres of this improved part are irrigated. Japanese land holdings are mostly in this irrigated part; 623,752 good acres are in the hands of Orientals—Japanese, Chinese, and Hindus. The total acreage operated by the Japanese is 458,056, of which 74,700 acres are owned, and about 383,287 acres are under lease or crop contract.”—G. Frank, *Century Magazine*,

1900-1909.—Constitutional changes.—“Amendments to the state constitution originate with the legislature, and are placed before the voters of the state at the biennial state elections. Dissatisfaction with parts of the state constitution is manifested by an increasing number of proposed amendments. So long as property interests are not antagonized, the voters show a willingness to make changes by ratifying a large majority of the amendments proposed. Among the important subjects upon which amendments have been adopted within the past ten years are the following: authorization of legislation for the control of primary elections; providing for the use of voting machines; the establishment of a system of state highways; increasing the salaries of judges and of state executive officers; changing the pay of members of the legislature from \$8.00 per diem for a period not to exceed 60 days to the sum of \$1000 for the regular session; authorizing the legislature to provide a state tax for the support of high schools; permitting exemption from taxation of various forms of property, such as buildings used exclusively for religious purposes and the endowments of the Leland Stanford Junior University, the California School of Mechanical Arts, and the Cogswell Polytechnical College,—also personal property at the will of the owner to the amount of \$100; eight hours made a legal day’s work on all public work throughout the state; authorization for the depositing of public funds in banks. An important change in the state judiciary was made in 1904 by the creation of district courts of appeal for the relief of the congested condition of the business of the State Supreme Court. The state was divided into three judicial districts, in each of which was established a court of appeal consisting of three judges elected from within the district for a term of twelve years.

“A plan for the reorganization of the revenue system of the state was placed before the voters in 1908, but failed of adoption. The proposed amendment was the outcome of a movement that began in 1905 with the appointment of a special commission on taxation. This commission employed expert assistance and made a thorough study of the subject of public revenues. Its work was placed before the next meeting of the legislature from which came the proposed amendment. Its central object was to discover new sources of revenue for the state treasury, leaving the direct property tax for the maintenance of local government alone.”—F. H. Clark, *History Department, Lowell High School, San Francisco, 1909.*

1906-1909.—Rebuilding of San Francisco after earthquake. See SAN FRANCISCO: 1906-1909.

1908.—Outdoor poor relief developed. See CHARITIES: United States: 1853-1908.

1910.—Times building in Los Angeles dynamited.—This led to a series of legal proceedings and several convictions. There was much bitter feeling aroused.

1910-1911.—Short ballot reform. See SHORT BALLOT: 1908-1921.

1911.—Tax Reform in California.—“The State outgrew the old general property tax twenty years ago. For ten years ‘the people’ suffered in silence. Sometimes the suffering farmers growled, but then—they also growled about the weather, with just as much effect. Slowly the dissatisfaction spread. For the past ten years the farmers in their ‘Grange’ meetings, the county assessors in their annual conventions, and other bodies have been ‘whereasing’ and ‘resolving’ on tax reform with somewhat more concrete purposes in mind. In 1899 a special committee of the Senate reported that: ‘From Maine to Texas and from Florida to California there is but one opinion as to the workings of the present system of taxation. That is, that it is inequitable, unfair, and positively unjust.’ . . . A definite campaign for tax reform began, which was crowned with success. This campaign had none of the picturesque, riotous features of the movement which gave birth to the constitution. It was a sober, serious upheaval, an orderly legal revolution. The army of tax reform was manned by the overtaxed farmers and real estate owners, led and officered by two successive Governors—George C. Pardee and James N. Gillett—and by the most experienced tax officials of the State. The measure eventually adopted was carefully prepared by a commission composed of the Governor, members of the legislature, and the Professor of Finance in the State University, which had been created by one legislature; it was debated and unanimously proposed to the people by a second legislature; it was freely discussed and voted down by the people; then it was revised again to meet the specific objections raised, and again formally proposed by a third legislature, and eventually approved by the people by a majority of 40,000 out of a total of 160,000 votes cast. At the very eve of the . . . election a special session of the legislature was called to make certain minor corrections, and at that same special session certain features, to which popular objection had been made, were amended. It was discussed at length and in detail by all the leading papers of the State, and every voter received by mail lengthy printed arguments pro and con. Large display advertisements, mostly in opposition, were run in all the papers of the State, and innumerable posters, ‘stickers,’ and hand bills called attention to its merits. The farmers and real estate men used for the most part the direct and simple appeal:—The forces against the amendment were, naturally, those corporations whose taxes would be raised. For the most part they worked in the dark, because it is generally believed that the voters of California have ‘corporation-phobia’ and will vote against anything the ‘interests’ are known to favor. But some of the national bankers came more or less into the open and through the large display advertisements above mentioned advanced certain ‘reasons’ against the amendment and certain alleged statistics, both without strict regard to the truth. Their main endeavor was to ‘throw a scare’ into the mercantile and financial interests by claiming that such ‘excessive’ taxation would drive away capital, and they even went so far as to claim that the new system of taxation would jeopardize the school system and the State University. The special cause of the opposition of these bankers appears to have been the action of the legislature, at the last moment, in restoring the tax on bank capital to one per cent as recommended by the commission, although it had been at one time fixed at six-tenths of one per cent. But they had stulti-

fied themselves by favoring the amendment when the rate was low. The evils that were complained of were much the same as those that are felt in all other states which continue the general property tax as a means for raising revenue for the support of all the different divisions of government, central and local. They are: (1) the over-taxation of real estate and especially of agricultural real estate; (2) grave inequalities between localities due largely to the effort of each county (in California the county is the local assessment district) to evade the State tax by under valuation of its taxable property; (3) inequalities and unfairness in the apportionment, under the 'where located' rule, of the revenues derived from enterprises of a general character, like the railroads; and (4) the evasion of taxation by the banks and Public service corporations. The remedies provided in the amendment are: (1) the abolition of the State tax on property in general, which was held to be the main cause of the inequalities between localities; (2) the taxation of public service corporations, whose property is of a general character by, and for the support of, the State alone, and that on the basis of gross receipts; also (3) the taxation of the banks by and for the State but on the basis of the book value of the stock. In short, it is the plan of 'separation' that has been so largely agitated as the first necessary step in tax reform."—C. C. Plehn, *Tax reform in California (Review of Reviews, Jan., 1911, pp. 86-87)*.

1911.—Divided legislature.—This was a unique plan by which the state legislature was to sit a period of thirty days, then adjourn and resume its sitting later. All bills were to be proposed in the first session and all discussion and voting was to be in the second session.

1911.—Direct election of senators.—This measure anticipated the Federal amendment and followed the plan originated in Oregon.

1912-1913.—Important legislation.—The Railroad Commission was created by act of legislature. Special measures were taken to protect fruit orchards against harmful insects, diseases, and animals destructive to trees. The Seventeenth Federal amendment, providing for direct election of senators, was ratified. Acts were passed providing for "blue sky laws," Mothers' pensions, the creation of a commission on minimum wages for women and children (see LABOR REMUNERATION: 1910-1920), and the conservation of water supply.

1914.—Eruption of Mount Lassen. See LASSEN PEAK.

1914.—Public defender in Los Angeles county.—The appointment of such an officer is unique. It will be his duty to defend citizens, in cases brought against them.

1915.—Panama-Pacific international exposition, February 20-December 4.—The occasion for this exposition was the opening of the Panama canal. The grounds set aside by San Francisco for the exposition consisted of 635 acres along the water front inside the Golden Gate. Much effort was expended on beautifying the grounds and the best architects and artists were employed on the buildings. The expense was met by the state, the federal government and private contributions. Many foreign nations were represented but the war interfered somewhat with outside exhibits.

1915.—San Francisco and San Diego expositions. See U. S. A.: 1915 (January-December).

1916.—Presidential campaign.—The defeat of Charles E. Hughes, the Republican candidate for president and the election of Hiram Johnson as senator constituted a unique feature of the campaign.

1916.—Women granted suffrage. See SUFFRAGE, WOMAN: United States: 1851-1920.

1916.—County Home Rule in California.—"Officially, the movement for county home rule in California had its inception in the initial message of Governor Hiram W. Johnson to the legislature, in January, 1911. . . . An amendment closely following the suggestions of the Governor was adopted by the legislature and was submitted to the people at the special election of October 10, 1911. The amendment was approved and at once went into effect. Under the new amendment a charter for a given county is to be prepared by a board of fifteen freeholders, themselves first elected by the people of the county at a special election called for the purpose. The election may be held pursuant to ordinance passed by the board of supervisors, a body which is the counterpart of the board of county commissioners in other states, or by initiative petition signed by fifteen per cent of the qualified electors. It is required that the free holders shall complete and file a draft of a charter within one hundred and twenty days after the official declaration of their election. The proposed charter must then go through a ten days' publication and must be submitted to the electorate of the County not less than thirty nor more than sixty days after the completion of publication. It must then be adopted by a majority of the votes cast. Before it becomes finally operative it must go to the legislature, at the next session after its adoption by the electors, for ratification. It is made mandatory upon the people, by the constitutional provision, to incorporate certain features in their county charters. The movement for a charter for the county of Los Angeles was inaugurated by the county board of supervisors. A resolution was passed by that body in March, 1912, requesting the Los Angeles Chamber of Commerce, the leading unpartisan civic organization of the county, to take measures for the nomination of fifteen candidates for freeholders. The chamber accordingly issued a call for a convention to be composed of delegates from the various civic bodies of the county. The response was immediate and the convention speedily held. The convention named a committee of twenty-five to circulate petitions among the people for the formal nomination of the fifteen persons selected. Their names were thus placed upon the ballot and they were elected as a board of freeholders at a special election held May 14."—L. R. Works, *County government. (Annals of American Academy of Political and Social Science, May, 1913, pp. 229-232)*.

"The final circumstance upon which California may lay claim to be the farthest outpost of advancing democracy is the extraordinary decision of Governor Johnson and the Legislature to make of her a completely non-partisan State. The new non-partisan Election Bill strikes from the ballot all party designations, so that the ballot will contain nothing but the title of the office and the list of the candidates running for election. Any one may compete at the primary, but the two highest will go on the ballot at the general election. In case any candidate receives a majority at the primary, his name will be the only one to be printed on the ballot for the general election. This system had already been adopted by the smaller cities in 1909, by San Francisco in 1911, and for counties and judicial offices in 1913. Now it will be supplied to the entire State. This complete revolt against the party system for State purposes, which is a development and not a sudden irrational impulse in California, is another bit of evidence of the independent character of the population, and of the

gigantic steps which the State feels itself able to take. The argument for party efficiency and responsibility, so strong in most of the States, no longer appeals to California. California has never known genuine party responsibility. For forty years she has had to go outside the reigning machine organizations to get either efficiency or responsibility or justice. She has always found herself under the necessity of forming vigilance committees, or societies for the prosecution of grafters, or Lincoln-Roosevelt leagues, or something of a similar nature."—F. M. Davenport, *Farthest outpost of advancing democracy* (*Outlook*, Aug. 4, 1915).

1917.—**Breed Bill.**—"It is . . . a matter of pride and satisfaction that California has taken the leadership in this fundamental agrarian reform. It has been accomplished through the passage by the legislature of Senate Bill No. 584, popularly known as the 'Breed Bill.' This land legislation is the outcome of the report of the Commission on Colonization and Rural Credits. Its aim is to substitute carefully thought out plans of community development for the unorganized development of the individual settler. The reasons for this legislation are given in the first section of the act: 'The legislature believes that land settlement is a problem of great importance to the welfare of all people of the state of California and for that reason through this particular act endeavors to improve the general economic and social conditions of agricultural settlers within the state and the people of the state in general.' This act is intended to provide a demonstration of the value of scientific land settlement, which will show to the state and to the owners of great landed properties what can be accomplished through its use. It provides for the purchase by the state of 10,000 acres of land, which will furnish homes for about 250 families. . . . Under the Land Settlement Act, plans for farm buildings and estimates of cost will be secured in advance of settlement. Through the purchase of material at wholesale and supervision by competent builders . . . houses will be of better design and built at far less cost than would be possible under unorganized, unplanned development. . . . It makes possible the introduction at the outset of cooperative methods in buying and selling."—Mead, *Farming his own* (*Sunset*, Sept., 1917).

1918.—**Part played in the World War.**—The state furnished 102,000 men to the American forces and created a Council of Defense to cooperate with the National Council. There were two National Guard camps in California, Camp Fremont and Camp Kearney.

ALSO IN: *California in the war*, by the War History Committee of the California Council of Defense (*Bulletin No. 34a*).

1919.—**New child labor law.**—In 1919 a new child labor law was passed coordinating educational features with those of child labor legislation. "Briefly, the compulsory school law has been amended by adding to it all sections relating to work permits. The enforcing power is now vested in the authority which has always issued working permits, the educational department of the state. A new child labor law has been enacted covering the subjects of places, hours, occupations, and conditions of children's work. The subject matter, in ten sections, is arranged in logical sequence and in this respect is a great improvement over the old law in which related subjects were often widely separated. Reports are to be interchanged semi-annually between the state educational group and the bureau of labor statistics. This dovetailing

of the laws will bring about an understanding which must result in cooperation. . . . The following is a digest of California's 1919 child labor law: Sec. 1. No minor under 16 years shall work. Exemptions: (1) with work permit. (2) Street trades. See Sec. 3½. *Gain*; Age raised from 15 to 16. Sec. 2. No minor under 18 years shall work more than 8 hours a day or 48 hours a week, or before 5 a.m. or after 10 p.m. Exemptions: See Sec. 5. *Gain*; The straight 8-hour day. The old law permitted a different apportionment of hours to make a shorter day's work one day a week. In other words a half holiday was no holiday, as extra time could be added to the 8 hours on other days. Sec. 3. Covers messenger, telegraph and telephone service. No boy under 16 years may work during the day. No boy under 18 years may work after 9 p.m. or before 6 a.m. No girl under 18 years may work day or night. *Gain*; For boys and girls in day service. With shortage of labor during the last two years, the number of girls entering this work caused apprehension. We have always had the night regulation. Sec. 3½. Street Trades. No boy under 10 years and no girl under 18 years may work in cities of more than 23,000 population. This is the old law. Here we did the expedient thing. The public must help solve this problem by refusing to patronize children engaged in selling on the street. The work can be efficiently done by cripples, old persons, and those who need to work in the open air. In Oakland the newsboys themselves have established a union with a 15-year minimum for membership. We hope that the slogan 'Children in the streets need your protection, not your patronage,' will soon be regarded as a survival of the dark ages. Sec. 4. Specified trades dangerous to life, limb, health or morals are forbidden to minors under 16 years. The Bureau of Labor Statistics may make additional listings. Same as the old law. Sec. 5. This may be called the exemption section. In agriculture and domestic service minors of 16 years may work more than 8 hours a day and more than 48 hours a week during the time the public schools are not in session. Child actors with the written consent of the commissioners of the Bureau of Labor Statistics are exempted from hour and age regulations. Sec. 6. Provides that employers shall keep a separate register for minors under 18 years. *Gain*; 'Separate.' Permits are to be returned to the issuing authority five days after employment ceases. Under the old law permits were returned by the minor. Interchange of semi-annual reports between Board of Education and Bureau of Labor Statistics. Sec. 7. Penalties. Fine, \$50 to \$200, 60 days' imprisonment in county jail, or both. Provisions concerning distribution of funds between the departments. Sec. 8. Enforcement. Bureau of Labor Statistics shall enforce provisions of the act. Sec. 9 and 10. Assure validity of other sections of the law if any one section is declared invalid."—B. Schlesinger, *What California did in 1919 for child protection* (*American Child*, Aug., 1919, pp. 145, 147-148).

1920.—**General election.**—**Anti-alien land law.**—**Other measures.**—**Defeat of the community property law amendment.**—"California voters used the initiative and referendum for the sixth time at the November general election. Twenty propositions were before the people, ten of which were submitted by initiative petition, five were legislative acts passed in 1919 and suspended by the referendum, and five were constitutional amendments submitted by the legislature. Out of this number the voters gave their approval to eight measures and voted down twelve. The initiative

anti-alien land law carried by a majority of nearly 400,000. The law was in part a reënactment of the alien land law passed by the legislature in 1913, with added provisions withdrawing the present privilege of short leases of land and closing loopholes in the present law by which its objects were evaded."—*California*, 1920 (*Survey*, Nov. 27, 1920). "The chief surprise in California on November 2 was the strong opposition to the anti-Japanese referendum. Telegraphic reports state that 163,731 voted against it, while those for it numbered 481,015. This is really amazing because both principal parties, papers and candidates were avowedly anti-Japanese and for the referendum. . . . The new law not only rigidly forbids aliens ineligible to become citizens (Japanese and Chinese) from purchasing agricultural land, but also from leasing it, even for a single year. It also forbids their purchase of stock in any company, association or corporation that is entitled to possess or acquire agricultural land. Minor American-born children [who hold land] are denied the right to have their parents as guardians. This drastic land law inaugurated a new period in American-Japanese relations."—S. L. Gulick, *California's anti-Japanese laws* (*Independent*, Nov. 20, 1920, p. 267).—"The other propositions approved by the voters were those providing for the extension of the state mothers' pension law to families in which the father is incapacitated for gainful work or is suffering from tuberculosis, exempting orphanages from taxation, increasing the state apportionment for elementary and high schools to permit salary raises for teachers and aid for rural schools, tightening the provisions of the state narcotic drug law to prevent its abuse, levying a poll tax on aliens, raising the rate of interest on highway bonds to facilitate their sale and changing the procedure for the organization of irrigation districts. Of the measures which were defeated, the community property law, the state prohibition enforcement act and the University of California and valorem tax measure provoked the more widespread interest. The community property law amendment sought to give the wife equal power with the husband in the disposition by will of the community property. The California community property law rests on the theory that all property acquired after marriage is community property—a theory inherited from the old civil law of the Spanish occupation. The present law provides that upon the death of the wife all the community property shall pass to the husband, but upon the death of the husband only one-half of the community shall pass to the wife. The proposed law provided that upon the death of either spouse, one-half of the community property should go to the survivor and one-half was subject to the testamentary disposition of the deceased."—*California*, 1920 (*Survey*, Nov. 27, 1920).

CALIGULA, Gaius Cæsar Augustus Germanicus (12-41 A. D.), Roman emperor and nicknamed Caligula for the military shoes he wore as a soldier. As emperor he was willfully cruel, extravagant and barbarous.—See also **ROME**: **Republic**: A. D. 37-41, 41.

CALIPH, a title borne by the original civil and religious rulers of the post-Mohammedan state. It is used in the Koran as applied to Adam and David as vicegerents of God, and was adopted by Abu Bekr, who, on the death of Mohammed, was chosen

as leader of the hosts of Islam.—See also **CALIPHATE**: Origin and meaning of the term; **VIZIR**.

CALIPHATE.—Origin and meaning of term.—"The only succession for which provision had to be made, after the death of Mahomet, was that of the *sovereignty* over the whole Mussulman State, which, based on a common religion, had foundations radically different from those on which, before Islam, the various politico-social constructions of that part of Arabia were raised up. Should one consider the political work of the Prophet finished with his death, thus returning to the old particularism of the tribe? Or, should the State that had risen at Medina remain in vigor without changes? And if so, who should rule over it?—Neither the Koran (which for Mussulmans is the 'word of God,' not the word or work of the Prophet), nor Mahomet had given any instructions on the matter. On the very evening of the day on which the Prophet breathed his last, after many hours of violent discussion and tumult, the prevailing opinion was that the political unity of the Mussulmans should be maintained, and so Abu Bekr was elected as *head of the Mussulman State*; it seems that to him was then given the title of *Caliph* (*khalifa*), an Arab word that signifies both 'successor' in a public office and 'representative' or 'vicar' of a superior authority in a more restricted post. It seems not improbable that the choice of the word was influenced by two verses of the Koran referring to Adam and King David respectively. Historically then, the Caliphs are the successors of Mahomet in the *government of the whole Mussulman State, that is, of the entire body of Mussulmans*; presupposing (as was indeed the fact for several centuries) the non-existence of any Islamic peoples under a non-Islamic rule. But here one comes on a fact inexplicable at first sight to a European; while these universal Monarchs of Islam possessed, like any other Mussulman sovereign, limitless executive and judicial powers, they were *destitute of legislative powers*; legislation in the proper sense of the word could be nothing less than the divine law itself, the *sceria*, of which the only interpreters are the *ulama* or doctors.—In the religious field the only duty belonging to the Caliph, as to every other Islamic sovereign, is to defend the faith with the power of his secular arm against enemies within or without, and to see to it that public worship, consisting in the common prayers on Fridays, is regularly celebrated. . . . The Sunnite Islamism *has never admitted a supreme Head of the Islamic Church*. A Church, in the sense of a sacerdotal hierarchical organisation, does not exist. Religious unity is maintained, not by the Caliph, but by the *doctors* (the *ulama*), who are 'the heirs of the prophets'; they alone in the past have elaborated the *dogma*, the *ritual*, the *canon law*, without any interference from the Caliphs or other Sovereigns; to them alone it now belongs to preserve unaltered the traditional doctrine, and to decide on the orthodoxy or heterodoxy of new teachings and new usages. In all these matters, it is not the will of the Caliph that counts, but the consent of the Doctors; a consent that was naturally in certain cases the fruit of bitter disputes drawn out through several generations, from which a final common opinion was at last formed. . . . The Caliph is distinguished from other Mussulman sovereigns (Sultans, Kings, Emirs, etc.) only by the fact that his sovereignty extends, or at least should extend, over the whole Islamic world, and that his mission is to conserve the *political and territorial unity of all the Mussulmans*, and to bring to submission all the States of the Infidels as soon as he has the means to do so. Hence it comes that the

position of the Caliph in the Islamic world corresponds almost exactly to that of the *Emperor* or universal Monarch of Christendom, according to the conception of the mediæval Ghibelline jurists. And as, according to these last, Kings, Princes, Dukes, etc., are rightful sovereigns of a given region only when the Emperor has conferred on them the feudal investiture for that region, thus, according to Islamic public law, only those *Sultans, Kings or Emirs* are legitimate to whom the reigning Caliph has delegated his own authority over a determined region, that is, has granted the temporal or feudal investiture."—C. S. Nallino, *Notes on the nature of the "caliphate" in general and on the alleged "Ottoman caliphate,"* pp. 6, 7, 9-11.—See also MOHAMMEDANISM; SENUSSIA.

632-639.—Abu Bekr.—Omar.—Founding of the caliphate.—Conquest of Syria.—The death of Mohammed left Islam without a head. The Prophet had neither named a successor (khalif or caliph), nor had he instituted a mode in which the choice of one should be made. His nephew and son-in-law—"the Bayard of Islam," the lion-hearted Ali—seemed the natural heir of that strangely born sovereignty of the Arab world. But its elders and chiefs were averse to Ali, and the assembly which they convened preferred, instead, the Prophet's faithful friend, the venerable Abu Bekr. This first of the caliphs reigned modestly but two years, and on his death, July, 634, the stern soldier Omar was raised to the more than royal place. By this time the armies of the Crescent were already far advanced beyond the frontiers of Arabia in their fierce career of conquest. No sooner had Abu Bekr, in 632, set his heel on some rebellious movements, which threatened his authority, than he made haste to open fields in which the military spirit and ambitions of his unquiet people might find full exercise. With bold impartiality he challenged, at once, and alike, the two dominant powers of the eastern world, sending armies to invade the soil of Persia, on one hand, and the Syrian provinces of the Roman empire, on the other. The invincible Khaled, or Caled, led the former, at first, but was soon transferred to the more critical field, which the latter proved to be. "One of the fifteen provinces of Syria, the cultivated lands to the eastward of the Jordan, had been decorated by Roman vanity with the name of 'Arabia'; and the first arms of the Saracens were justified by the semblance of a national right." The strong city of Bosra was taken, partly through the treachery of its commander, Romanus, who renounced Christianity and embraced the faith of Islam. From Bosra the Moslems advanced on Damascus, but suspended the siege of the city until they had encountered the army which the emperor Heraclius sent to its relief. This they did on the field of Ainzadin, in the south of Palestine, July 30, 634, when 50,000 of the Roman-Greeks and Syrians are said to have perished, while but 470 Arabs fell. Damascus was immediately invested and taken after a protracted siege, which Voltaire has likened to the siege of Troy, on account of the many combats and stratagems—the many incidents of tragedy and romance—which poets and historians have handed down, in some connection with its progress or its end. The ferocity of Khaled was only half restrained by his milder colleague in command, Abu Obeidah, and

the wretched inhabitants of Damascus suffered terribly at his hands. The city, itself, was spared and highly favored, becoming the Syrian capital of the Arabs. Heliopolis (Baalbec) was besieged and taken in January, 636; Emessa surrendered soon after. In November, 636, a great and decisive battle was fought with the forces of Heraclius at Yermuk, or Yermouk, on the borders of Palestine and Arabia. The Christians fought obstinately and well, but they were overwhelmed with fearful slaughter. "After the battle of Yermuk the Roman army no longer appeared in the field; and the Saracens might securely choose, among the fortified towns of Syria, the first object of their attack. They consulted the caliph whether they should march to Cæsarea or Jerusalem; and the advice of Ali determined the immediate siege of the latter. . . . After Mecca and Medina, it was revered and visited by the devout Moslems as the temple of the Holy Land, which had been sanctified by the revelation of Moses, of Jesus, and of Mahomet himself." The defense of Jerusalem, notwithstanding its great strength, was maintained with less stubbornness than that of Damascus had been. After a siege of four months, in the winter of 637, the Christian patriarch or bishop of Jerusalem, who seems to have been first in authority, proposed to give up the Holy City, if Omar, the caliph, would come in person from Medina to settle and sign the terms of surrender. Omar deemed the prize worthy of this concession and made the long journey, travelling as simply as the humblest pilgrim and entering Jerusalem on foot. After this, little remained to make the conquest of all Syria complete. Aleppp was taken, but not easily, after a siege, and Antioch, the splendid seat of eastern luxury and wealth, was abandoned by the emperor and submitted, paying a great ransom for its escape from spoliation and the sword. The year 639 saw Syria at the feet of the Arabs whom it had despised six years before, and the armies of the caliph were ready to advance to new fields, east, northwards, and west.—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 51.—See also JERUSALEM: 637; TYRE: 638.

ALSO IN: W. IRVING, *Mahomet and his successors*, v. 2, ch. 3-23.—S. Ockley, *History of the Saracens: Abubeker*.—W. Muir, *Annals of the early caliphate*, ch. 2, II, 19-21.

632-651.—Conquest of Persia.—During the invasion of Syria, Abu Bekr, the first of the caliphs, sent an expedition towards the Euphrates, under command of the redoubtable Khaled (633). The first object of its attack was Hira, a city on the western branch of the Euphrates, not far from modern Kufa. Hira was the seat of a small kingdom of Christian Arabs tributary to Persia and under Persian protection and control. Its domain embraced the northern part of that fertile tract between the desert and the Euphrates which the Arab writers call Sawad; the southern part being a Persian province of which the capital, Obolla, was the great emporium of the Indian trade. Hira and Obolla were speedily taken and this whole region subdued. But, Khaled being then transferred to the army in Syria, the Persians regained courage, while the energy of the Moslems was relaxed. In an encounter called the battle of the Bridge, 635, the latter experienced a disastrous check; but the next year found them more victorious than ever (see also BRIDGE, BATTLE OF). The great battle of Cadesia (Kadisijeh) ended all hope in Persia of doing more than defend the Euphrates as a western frontier. Within two years even that hope disappeared. The new Arab general, Sa'ad Ibn Abi Wakas, having spent the interval in strength-

ening his forces, and in founding the city of Busrah, or Bassora, below the junction of the Euphrates and Tigris, as well as that of Kufa, which became the Moslem capital, advanced into Mesopotamia, 637, crossing the river without opposition. The Persian capital, Ctesiphon, was abandoned to him so precipitately that most of its vast treasures fell into his hands. It was not until six months later that the Persians and Arabs met in battle, at Jalula, and the encounter was fatal to the former, 100,000 having perished on the field. "By the close of the year 637 the banner of the Prophet waved over the whole tract west of Zagros, from Nineveh almost to Susa." Then a brief pause ensued. In 641 the Persian king Isdigerd—last of the Sassanian house—made a great, heroic effort to recover his lost dominions and save what remained. He staked all and lost, in the final battle of Nehavend, which the Arabs called "Fattah-ul-Futuh," or "victory of victories." "The defeat of Nehavend terminated the Sassanian power. Isdigerd indeed, escaping from Rei, and flying continually from place to place, prolonged an inglorious existence for the space of ten more years—from 641 to 651; but he had no longer a kingdom. Persia fell to pieces on the occasion of 'the victory of victories,' and made no other united effort against the Arabs. Province after province was occupied by the fierce invaders; and, at length, in 651, their arms penetrated to Merv, where the last scion of the house of Babek had for some years found a refuge. . . . The order of conquest seems to have been the following:—Media, Northern Persia, Rhagiana, Azerbaijan, Gurgan, Tabaristan, and Khorassan in 642; Southern Persia, Kerman, Seistan, Mekran, and Kurdistan in 643; Merv, Balkh, Herat, and Kharezmi in 650 or 652."—G. Rawlinson, *Seventh great oriental monarchy*, ch. 26, and foot-notes.

640-646.—**Conquest of Egypt.**—"It was in the nineteenth or twentieth year of the Hegira [640 or 641] that Amru, having obtained the hesitating consent of the Caliph, set out from Palestine for Egypt. His army, though joined on its march by bands of Bedouins lured by the hope of plunder; did not at the first exceed 4,000 men. Soon after he had left, Omar, concerned at the smallness of his force, would have recalled him; but finding that he had already gone too far to be stopped, he sent heavy reinforcements, under Zobeir, one of the chief Companions, after him. The army of Amru was thus swelled to an imposing array of from 12,000 to 16,000 men, some of them warriors of renown. Amru entered Egypt by Arish, and overcoming the garrison at Farama [ancient Pelusium], turned to the left and so passed onward through the desert, reaching thus the easternmost of the seven estuaries of the Nile. Along this branch of the river he marched by Bubastis towards Upper Egypt,"—and, so, to Heliopolis, near to the great ancient city of Misr, or Memphis. Here, and throughout their conquest of Egypt, the Moslem invaders appear to have found some goodwill towards them prevailing among the Christians of the Jacobite sect, who had never become reconciled to the Orthodox Greeks. Heliopolis and Memphis were surrendered to their arms after some hard fighting and a siege of no long duration. "Amru lost no time in marching upon Alexandria so as to reach it before the Greek troops, hastily called in from the outlying garrisons, could rally there for its defence. On the way he put to flight several columns which sought to hinder his

advance; and at last presented himself before the walls of the great city, which, offering (as it still does) on the land side a narrow and well-fortified front, was capable of an obstinate resistance. Towards the sea also it was open to succour at the pleasure of the Byzantine Court. But during the siege Heraclius died, and the opportunity of relief was supinely allowed to slip away." In the end Alexandria capitulated and was protected from plunder (see LIBRARIES: Ancient: Alexandria), paying tribute to the conquerors. "Amru, it is said, wished to fix his seat of government at Alexandria, but Omar would not allow him to remain so far away from his camp, with so many branches of the Nile between. So he returned to Upper Egypt. A body of the Arabs crossed the Nile and settled in Ghizeh, on the western bank—a movement which Omar permitted only on condition that a strong fortress was constructed there to prevent the possibility of their being surprised and cut off. The headquarters of the army were pitched near Memphis. Around them grew up a military station, called from its origin Fostat, or 'the Encampment.' It expanded rapidly into the capital of Egypt, the modern Cairo. . . . This name 'Cahira,' or City of the Victory, is of later date [see CALIPHATE: 908-1171]. . . . Zobeir urged Amru to enforce the right of conquest, and divide the land among his followers. But Amru refused; and the Caliph, as might have been expected, confirmed the judgment. 'Leave the land of Egypt,' was his wise reply, 'in the people's hands to nurse and fructify.' As elsewhere, Omar would not allow the Arabs to become proprietors of a single acre. Even Amru was refused ground whereupon to build a mansion for himself. . . . So the land of Egypt, left in the hands of its ancestral occupants, became a rich granary for the Hejaz, even as in bygone times it had been the granary of Italy and the Byzantine empire. . . . Amru, with the restless spirit of his faith, soon pushed his conquests westward beyond the limits of Egypt, established himself in Barca, and reached even to Tripoli. . . . Early in the Caliphate of Othman [646] a desperate attempt was made to regain possession of Alexandria. The Moslems, busy with their conquests elsewhere, had left the city insufficiently protected. The Greek inhabitants conspired with the Court; and a fleet of 300 ships was sent under command of Manuel, who drove out the garrison and took possession of the city. Amru hastened to its rescue. A great battle was fought outside the walls: the Greeks were defeated, and the unhappy town was subjected to the miseries of a second and a longer siege. It was at last taken by storm and given up to plunder. . . . The city, though still maintaining its commercial import, fell now from its high estate. The pomp and circumstance of the Moslem Court were transferred to Fostat, and Alexandria ceased to be the capital of Egypt."—W. Muir, *Annals of the early caliphate*, ch. 24, with foot-note.

644.—**Assassination of Caliph Omar.**—The death of Omar, the second of the caliphs, was a violent one. "It occurred in November, 644. One day a slave who worked for his master at the carpenter's bench came to see the Commander of the Faithful, and complained to him of being overworked, and badly treated by the citizen that owned him. Omar listened attentively, but arriving at the conclusion that the charges were false, sternly dismissed the carpenter to his bench. The man retired, vowing to be revenged. The follow-

ing day was Friday, 'the day of the Assembly.' Omar, as usual, went to lead the prayers of the assembly in the great mosque. He opened his mouth to speak. He had just said 'Allah,' when the keen dagger of the offended slave was thrust into his back, and the Commander of the Faithful fell on the sacred floor, fatally wounded. The people, in a perfect frenzy of horror and rage, fell upon the assassin, but with superhuman strength he threw them off, and rushing about in the madness of despair he killed some and wounded others, and finally turning the point of his dagger to his own breast, fell dead. Omar lingered several days in great agony, but he was brave to the end. His dying words were, 'Give to my successor this parting bequest, that he be kind to the men of this city, Medina, which gave a home to us, and to the Faith. Tell him to make much of their virtues, and to pass lightly over their faults. 'Bid him also treat well the Arab tribes, for verily they are the backbone of Islam. Moreover, let him faithfully fulfil the covenants made with the Christians and the Jews! O Allah! I have finished my course! To him that cometh after me, I leave the kingdom firmly established and at peace!' Thus perished one of the greatest Princes the Mohammedans were ever to know. Omar was truly a great and good man, of whom any country and any creed might be proud."—J. J. Pool, *Studies in Mohammedanism*, pp. 58-59.

647-709.—Conquest of northern Africa.—"While Egypt was won almost without a blow, Latin Africa [northern Africa beyond Egypt] took sixty years to conquer. It was first invaded under Othman in 647, but Carthage was not subdued till 698, nor was the province fully reduced for eleven years longer. And why? Doubtless because Africa contained two classes of inhabitants, not over-friendly to each other, but both of whom had something to lose by a Saracenic conquest. The citizens of Carthage were Roman in every sense, their language was Latin, their faith was orthodox; they had no wrongs beyond those which always afflict provincials under a despotism; wrongs not likely to be alleviated by exchanging a Christian despot at Constantinople for an infidel one at Medina or Damascus. Beyond them, in the inland provinces, were the native Moors, barbarians, and many of them pagans; they had fought for their rude liberty against the Cæsars, and they had no intention of surrendering it to the Caliphs. Romans and Moors alike long preferred the chances of the sword to either Koran or tribute; but their ultimate fate was different. Latin civilization and Latin Christianity gradually disappeared by the decay and extermination of their votaries. The Moors, a people not unlike the Arabs in their unconverted state, were at last content to embrace their religion, and to share their destinies and their triumphs. Arabs and Moors intermingled went on to further conquests; and the name of the barbarian converts was more familiarly used in Western Europe to denote the united nation than the terrible name of the original compatriots of the Prophet."—E. A. Freeman, *History and conquests of the Saracens*, lecture 3.—"In their climate and government, their diet and habitation, the wandering Moors resembled the Bedouens [Beduins] of the desert. With the religion they were proud to adopt the language, name, and origin of Arabs; the blood of the strangers and natives was insensibly mingled; and from the Euphrates to the Atlantic the same nation might seem to be diffused over the sandy plains of Asia and Africa. Yet I will not deny that 50,000 tents [families] of pure Arabians might be transported

over the Nile and scattered through the Libyan desert; and I am not ignorant that five of the Moorish tribes still retain their barbarious idiom, with the appellation and character of 'white' Africans."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 51.—"By 647 the Barbary coast was overrun up to the gates of Roman Carthage; but the wild Berber population was more difficult to subdue than the luxurious subjects of the Sasanids of Persia or the Greeks of Syria and Egypt. Kayrawan was founded as the African capital in 670; Carthage fell in 693, and the Arabs pushed their arms as far as the Atlantic. From Tangier they crossed into Spain in 710."—S. Lane-Poole, *Mohammedan dynasties*, p. 5.—See also CARTHAGE: 698; MOROCCO: 647-1860.

657.—Organization of the Kharijite party by Ali. See KHARIJITES.

661.—Omayyad usurpation.—Omar, on his deathbed, appointed a council of six persons to elect his successor. The choice of the council fell upon Othman, who had been the secretary of the Prophet. The caliphate of Othman was troubled by many plots and increasing disaffection, which ended in his assassination, 656. It was not until then that Ali, the nephew and son-in-law of Mohammed, was permitted to take the Prophet's seat. But the dissensions in the Moslem world had grown more bitter as the fields of ambitious rivalry were widened, and the factions opposed to Ali were implacable. "Now begins the tragic tale of the wrongs and martyrdoms of the immediate family of the Prophet. The province of Syria was now ruled by the crafty Moawiyah, whose father was Abu-Sofian, so long the bitterest enemy of Mahomet, and at last a tardy and unwilling proselyte. . . . Such was the parentage of the man who was to deprive the descendants of the Apostle of their heritage. Moawiyah gave himself out as the avenger of Othman; Ali was represented as his murderer, although his sons, the grandsons of the Prophet, had fought, and one of them received a wound, in the defence of that Caliph. . . . Ayesha, too, the Mother of the Faithful, Telha and Zobeir, the Prophet's old companions, revolted on their own account, and the whole of the brief reign of Ali was one constant succession of civil war." Syria adhered to Moawiyah. Ayesha, Zobeir and Telha gained possession of Bussorah and made that city their headquarters of rebellion. They were defeated there by Ali in a great battle, 656, called the battle of the Camel, because the litter which bore Ayesha on the back of a camel became the center of the fight. But he gained little from the success; nor more from a long, indecisive battle fought with Moawiyah at Siffin, in July, 657. Amru, the conqueror of Egypt, had now joined Moawiyah, and his influence enlisted that great province in the revolt. At last, in 661, the civil war was ended by the assassination of Ali. His eldest son, Hassan, who seems to have been a spiritless youth, bargained away his claims to Moawiyah, and the latter became undisputed caliph, founding a dynasty called that of the Ommyades, or Omeyyads (from Ommiah, or Omeyya, the great grandfather of Moawiyah), which occupied the throne for almost a century—not at Medina, but at Damascus [see also DAMASCUS], to which city the caliphate was now transferred. "In thus converting the Caliphate into an hereditary monarchy he utterly changed its character. It soon assumed the character of a common oriental empire. . . . The Ommyads were masters of slaves instead of lead-

ers of freemen; the public will was no longer consulted, and the public good as little; the Commander of the Faithful sank into a earthly despot, ruling by force, like any Assyrian conqueror of old. The early caliphs dwelt in the sacred city of Medina, and directed the counsels of the Empire from beside the tomb of the Prophet. Moawiyah transferred his throne to the conquered splendours of Damascus; and Mecca and Medina became tributary cities to the ruler of Syria. At one time a rival caliph, Abdallah, established himself in Arabia; twice were the holy cities taken by storm, and the Kaaba itself was battered down by the engines of the invaders. . . . Such a revolution however did not effect itself without considerable opposition. The partizans of the house of Ali continued to form a formidable sect. In their ideas the Vicarship of the Prophet was not to be, like an earthly kingdom, the mere prize of craft or of valour. It was the inalienable heritage of the sacred descendants of the Prophet himself. . . . This was the origin of the Shiah sect, the assertors of the rights of Ali and his house."—E. A. Freeman, *History and conquest of the Saracens*, lecture 3.

680.—Tragedy at Kerbela.—When Ali, or Aly, the nephew and son-in-law of Mohammed, had been slain, 661, and the caliphate had been seized by Moawiyah, the first of the Omniades, "the followers of 'Aly proclaimed his elder son, Hasan, Khalif; but this poor-spirited youth was contented to sell his pretensions to the throne. . . . On his death, his brother Hoseyn became the lawful Khalif in the eyes of the partisans of the House of 'Aly who ignored the general admission of the authority of the 'Omniades.' . . . For a time Hoseyn remained quietly at Medina, leading a life of devotion, and declining to push his claims. But at length an opportunity for striking a blow at the rival House presented itself, and Hoseyn did not hesitate to avail himself of it. He was invited to join an insurrection which had broken out at Kufa [680], the most mutinous and fickle of all the cities of the empire; and he set out with his family and friends, to the number of 100 souls, and an escort of 500 horsemen, to join the insurgents. As he drew nigh to Kufa, he discovered that the rising had been suppressed by the 'Omniade' governor of the city, and that the country round him was hostile instead of loyal to him. And now there came out from Kufa an army of 4,000 horse, who surrounded the little body of travellers [on the plain of Kerbela], and cut them off alike from the city and the river. . . . A series of single combats, in which Hoseyn and his followers displayed heroic courage, ended in the death of the Imam and the men who were with him, and the enslaving of the women and children."—S. Lane-Poole, *Studies in a Mosque*, ch. 7.—"The scene [of the massacre of Hoseyn and his band] . . . is still fresh as yesterday in the mind of every Believer, and is commemorated with wild grief and frenzy as often as the fatal day, the Tenth of the first month of the year [tenth of Mobarram—October 10], comes round. . . . The tragedy of Kerbela decided not only the fate of the Caliphate, but of Mahometan kingdoms long after the Caliphate had waned and disappeared. . . . The tragedy is yearly represented on the stage as a religious ceremony"—in the "Passion Play" of the Mobarram festival.—

W. Muir, *Annals of the early caliphate*, ch. 49, with foot-note.—See also MOHAMMEDANISM.—"The first three *de facto* Caliphs, though they are regarded as legitimate by the Sunni majority of the Moslem world, are rejected by the Shia minority, who begin with the fourth actual Caliph, Ali, recognise his descendants (who mostly lived as fugitives from Ali's *de facto* successors) as lawful Caliphs through twelve generations, and believe that the twelfth 'Imam' disappeared mysteriously and, though now invisible, has never ceased to reign. Since his disappearance, no living man can be an orthodox Caliph in the eyes of the Shia, and the Shia denomination, though a minority in the Moslem world, is after all the state religion of Persia, and is followed by perhaps hardly less than 20 per cent. of the Moslems of India."—A. J. Toynbee, *Question of the caliphate* (*Contemporary Review*, Feb., 1920, p. 102).

710.—Subjugation of the Turks.—"After the fall of the Persian kingdom, the river Oxus divided the territories of the Saracens and of the Turks. This narrow boundary was soon overleaped by the spirit of the Arabs; the governors of Chorassan extended their successive inroads; and one of their triumphs was adorned with the buskin of a Turkish queen, which she dropped in her precipitate flight beyond the hills of Bochara. But the final conquest of Transoxiana, as well as of Spain, was reserved for the glorious reign of the inactive Waiid; and the name of Catibah, the camel-driver, declares the origin and merit of his successful lieutenant. While one of his colleagues displayed the first Mahometan banner on the banks of the Indus, the spacious regions between the Oxus, the Jaxartes, and the Caspian sea were reduced by the arms of Catibah to the obedience of the prophet and of the caliph. A tribute of two millions of pieces of gold was imposed on the infidels; their idols were burned or broken; the Mussulman chief pronounced a sermon in the new mosch [mosque] of Carizme; after several battles the Turkish hordes were driven back to the desert; and the emperors of China solicited the friendship of the victorious Arabs. To their industry the prosperity of the province, the Sogdiana of the ancients, may in a great measure be ascribed; but the advantages of the soil and climate had been understood and cultivated since the reign of the Macedonian kings. Before the invasion of the Saracens, Carizme, Bochara, and Samarcand were rich and populous under the yoke of the shepherds of the North."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 51.

715-732.—Repulse from Gaul.—"The deeds of Musa [in Africa and Spain] had been performed 'in the evening of his life,' but, to borrow the words of Gibbon, 'his breast was still fired with the ardor of youth, and the possession of Spain was considered as only the first step to the monarchy of Europe. With a powerful armament by sea and

land, he was preparing to pass the Pyrenees, to extinguish in Gaul the declining kingdoms of the Franks and Lombards, and to preach the unity of God on the altar of the Vatican. Thence, subduing the barbarians of Germany, he proposed to follow the course of the Danube from its source to the Euxine Sea, to overthrow the Greek or Roman empire of Constantinople, and, returning from Europe to Asia, to unite his new acquisitions with Antioch and the provinces of Syria.' This vast enterprise . . . was freely revolved by the successors of Musa. In pursuance of it, El Haur, the new lieutenant of the califs, assailed the fugitive Goths in their retreats in Septimania (715-718). El Zamah, who succeeded him, crossed the mountains, and, seizing Narbonne, expelled the inhabitants and settled there a colony of Saracens (719). The following year they passed the Rhone, in order to extend their dominion over Provence, but, repelled by the dukes and the militia of the country, turned their forces toward Toulouse (721). Eudo, Duke of Aquitaine, bravely defending his capital, brought on a decisive combat. . . . El Zamah fell. The carnage among his retreating men then became so great that the Arabs named the passage from Toulouse to Carcassone the Road of Martyrs (Balat al Chouda). Supporting their terrible reverses with the characteristic resignation of their race and faith, the Arabs were still able to retain a hold of Narbonne and of other fortresses of the south, and, after a respite of four years, spent in recruiting their troops from Spain and Africa, to resume their projects of invasion and pillage in Gaul (725). Under the Wali Anbessa, they ascended the Rhone as far as the city of Lyons, devastating the towns and the fields. . . . When, . . . at the close of his expeditions, Anbessa perished by the hands of the Infidels, all the fanaticism of the Mussulman heart was aroused into an eager desire for revenge. His successor, Abd-el-Rahman, a tried and experienced general, energetic and heroic as he was just and prudent, . . . entered into elaborate preparations for the final conquest of Gaul. For two years the ports of Syria, Egypt, and Africa swarmed with departing soldiery, and Spain resounded with the calls and cries to arms (727-729)." The storm broke first on Aquitaine, and its valiant duke Eudes, or Eudo, rashly meeting the enemy in the open field, in front of Bordeaux, suffered an irretrievable defeat (May, 731). Bordeaux was stormed and sacked, and all Aquitaine was given up to the ravages of the unsparing Moslem host. Eudes fled, a helpless fugitive, to his enemies the Franks, and besought the aid of the great palace-mayor, Karl Martel, practical sovereign of the Frankish kingdoms, and father of the Pepin who would soon become king in name as well as in fact. But, not for Aquitaine, only, but for all Gaul, all Germany, —all Christendom in Europe,—Karl and his Franks were called on to rally and do battle against the sons of the desert, whose fateful march of conquest seemed never to end. "During all the rest of the summer, the Roman clarions and the German horns sounded and groaned through all the cities of Neustria and Austrasia, through the rustic palaces of the Frankish leudes, and in the woody gaus of western Germany.' . . . Meanwhile, Abd-el-Rahman, laden with plunder and satiated with blood, had bent his steps toward the southwest, where he concentrated his troops on the banks of the Charente. Enriched and victorious as he was, there was still an object in Gaul which provoked alike the cupidity and the zeal of his followers. This was the Basilica of St. Martin of Tours, the shrine of the Gallic Christians, where the richest

treasures of the Church were collected, and in which the profoundest veneration of its members centred. He yearned for the pillage and the overthrow of this illustrious sanctuary, and, taking the road from Poitiers, he encountered the giants of the North in the same valley of the Vienne and Clain where, nearly three hundred years before, the Franks and the Wisigoths had disputed the supremacy of Gaul. There, on those autumn fields, the Koran and the Bible—Islamism and Christianity—Asia and Europe—stood face to face, ready to grapple in a deadly and decisive conflict. . . . Trivial skirmishes from time to time kept alive the ardor of both hosts, till at length, at dawn on Saturday, the 11th of October [732], the signal for a general onset was given. With one loud shout of Allah-Akbar (God is great), the Arab horsemen charged like a tempest upon their foe, but the deep columns of the Franks did not bend before the blast. 'Like a wall of iron,' says the chronicler, 'like a rampart of ice, the men of the North stood unmoved by the frightful shock.' All day long the charges were renewed." Still the stout Franks held their ground, and still the indomitable warriors of Islam pressed upon them, until late in the afternoon, when the latter were thrown into confusion by an attack on their rear. Then Karl and his men charged on them and their lines were broken—their rout was bloody and complete. When night put an end to the slaughter, the Franks slept upon their arms, expecting that the dreaded Saracens would rally and resume the fight. But they vanished in the darkness. Their leader, the brave Abd-el-Rahman had fallen in the wild mêlée and no courage was left in their hearts. Abandoning everything but their horses and their arms, they fled to Narbonne. "Europe was rescued, Christianity triumphant, Karl the hero forever of Christian civilization."—P. Godwin, *History of France: Ancient Gaul*, ch. 14.—The booty found by the Franks in the Moslem camp "was enormous; hard-money, ingots of the precious metals, melted from jewels and shrines; precious vases, rich stuffs, subsistence stores, flocks and herds gathered and parked in the camp. Most of this booty had been taken by the Moslemah from the Aquitanians, who now had the sorrow of seeing it greedily divided among the Franks."—H. Coppée, *Conquest of Spain by the Arab-Moors*, bk. 6, ch. 1 (v. 2).

ALSO IN: E. S. Creasy, *Fifteen decisive battles of the world*, ch. 7.

715-750.—Omayyads and Abbasids.—Dividing of the caliphate.—The tragic death of Hosen and his companions at Kerbela kindled a passion which time would not extinguish in the hearts of one great party among the Moslems. The first ambitious leader to take advantage of the excitement of it, as a means of overthrowing the Omayyads, was Abdallah ibn Zobeir, who, posing first as the "Protector of the Holy House" of Ali, soon proclaimed himself caliph and maintained for thirteen years a rival court at Mecca. In the war which raged during a great part of those years, Medina was taken by storm and given over to pillage, while the holy city of Mecca withstood a siege of forty days, during which the sacred Caaba was destroyed. Zobeir fell, at last, in a final battle fought under the walls of Mecca. Meantime, several changes in the caliphate at Damascus had taken place and the throne was soon afterwards [705] occupied by the caliph Welid, whose reign proved more glorious than that of any other prince of his house. "Elements of disorder still remained, but under the wise and firm sceptre of Welid they were held in check. The arts of peace prevailed;

schools were founded, learning cultivated, and poets royally rewarded; public works of every useful kind were promoted, and even hospitals established for the aged, lame, and blind [see MEDICAL SCIENCE: Ancient: 7th-11th centuries: Medical art of the Arabs]. Such, indeed, at this era, was the glory of the court of Damascus that Weil, of all the Caliphs both before and after, gives the precedence to Welid. It is the fashion for the Arabian historians to abuse the Omeyyads as a dissolute, intemperate, and godless race; but we must not forget that these all wrote more or less under Abbasside inspiration. . . . After Welid, the Omeyyad dynasty lasted six-and-thirty years. But it began to rest on a precarious basis. For now the agents of the house of Hashim, descendants of the Prophet and of his uncle Abbas, commenced to ply secretly, but with vigour and persistency, their task of canvass and intrigue in distant cities, and especially in the provinces of the East. For a long time, the endeavour of these agitators was directed to the advocacy of the Shiya right; that is to say, it was based upon the Divine claim of Aly, and his descendants in the Prophet's line, to the Imamate or leadership over the empire of Islam. . . . The discomfiture of the Shiyas paved the way for the designing advocates of the other Hashimite branch, namely, that of the house of Abbas, the uncle of the Prophet. These had all along been plotting in the background, and watching their opportunity. They now vaunted the claims of this line, and were barefaced enough to urge that, being descended from the uncle of Mahomet through male representatives, they took precedence over the direct descendants of the Prophet himself, because these came through Fatima in the female line. About the year 130 of the Hegira, Abul Abbas, of Abbasside descent, was put forward in Persia, as the candidate of this party, and his claim was supported by the famous general Abu Muslim. Successful in the East, Abu Muslim turned his arms to the West. A great battle, one of those which decide the fate of empires, was fought on the banks of the Zab [750]; and, through the defection of certain Kharejite and Yemen levies, was lost by the Omeyyad army. Merwan II., the last of his dynasty, was driven to Egypt, and there killed in the church of Bussir, whither he had fled for refuge. At the close of the year 132 [Aug. 5, 750], the black flag, emblem of the Abbassides, floated over the battlements of Damascus. The Omeyyad dynasty, after ruling the vast Moslem empire for a century, now disappeared in cruelty and bloodshed. . . . So perished the royal house of the Omeyyads. But one escaped. He fled to Spain, which had never favoured the overweening pretensions of the Prophet's family, whether in the line of Aly or Abbas. Accepted by the Arab tribes, whose influence in the West was paramount, Abd-el-Rahman now laid the foundation of a new Dynasty and perpetuated the Omeyyad name at the magnificent court of Cordova. . . . Thus, with the rise of the Abbassides, the unity of the Caliphate came to an end. Never after, either in theory or in fact, was there a successor to the Prophet, acknowledged as such over all Islam. Other provinces followed in the wake of Spain. The Aghlabite dynasty in the east of Africa, and, west of it, the Edrisites in Fez, both of Alyite descent; Egypt and Sicily under independent rulers; the Tahirite kings in Persia, their native soil; these and others, breaking away from the central government, established kingdoms of their own. The name of Caliph, however it might survive in the Abbasside lineage, or be assumed by less legitimate pretenders, had now altogether lost its virtue and significance."

752-759.—Final expulsion from southern Gaul.—During the year of his coronation (752) Pepin the Short—the first of the Carolingians to assume the Frankish crown—having taken measures to reduce Aquitaine to obedience, was diverted, on his march towards that country, into Septimania. The discord prevailing among the Moslems, who had occupied this region of Gaul for more than thirty years, "opened the prospect of an easy conquest. With little fighting, and through the treachery of a Goth named Ansemond, who commanded at Beziers, Agde, Maguelonne, and Nismes, under an Arabian wali, he was enabled to seize those strongholds, and to leave a part of his troops to besiege Narbonne, as the first step toward future success." Then Pepin was called away by war with the Saxons and in Brittany, and was occupied with other cares and conflicts, until 759, when he took up and finished the task of expelling the Saracens from Gaul. "His troops left in occupation of Septimania (752) had steadily prosecuted the siege of Narbonne. . . . Not till after a blockade of seven years was the city surrendered, and then through the treason of the Christians and Goths who were inside the walls, and made secret terms with the beleaguers. They rose upon the Arabs, cut them in pieces, and opened the gates to the Franks. A reduction of Elne, Caucoliberis, and Carcassone followed hard upon that of Narbonne. . . . In a little while the entire Arab population was driven out of Septimania, after an occupation of forty years; and a large and important province, equivalent nearly to the whole of Languedoc, held during the time of the Merovingians by the Wisigoths, was secured to the possession of the Franks. The Arabs, however, though expelled, left many traces of their long residence on the manners and customs of Southern Gaul."—P. Godwin, *History of France: Ancient Gaul*, ch. 15.

756-1031.—Omayyad caliphs of Cordova.—When the struggle of the house of Abbas with the house of Omayya, for the throne of the caliphate at Damascus, was ended by the overthrow of the Omayyads (750), the wretched members of the fallen family were hunted down with unsparing ferocity. "A single youth of the doomed race escaped from destruction. After a long series of romantic adventures, he found his way into Spain [756]; he there found partizans, by whose aid he was enabled to establish himself as sovereign of the country, and to resist all the attempts of the Abbassides to regain, or rather to obtain, possession of the distant province. From this Abderrahman [or Abdalrahman] the Ommiad proceeded the line of Emirs and Caliphs of Cordova, who reigned in splendour in the West for three centuries after their house had been exterminated in their original possessions. . . . When the Ommiad Abdalrahman escaped into Spain . . . the peninsula was in a very disordered state. The authority of the Caliphs of the East was nearly nominal, and governors rose and fell with very little reference to their distant sovereign. . . . The elevation of Abdalrahman may have been the result, not so much of any blind preference of Ommiads to Abbassides, as of a conviction that nature designed the Iberian peninsula to form an independent state. But at that early

period of Mahometan history an independent Mahometan state could hardly be founded, except under the guise of a rival Caliphate. . . . And undoubtedly nothing is more certain than that the Ommiads of Cordova were in every sense a rival dynasty to the Abbassides of Bagdad. The race of Moawiyah seem to have decidedly improved by their migration westward. The Caliphs of Spain must be allowed one of the highest places among Mahometan dynasties. In the duration of their house and in the abundance of able princes which it produced, they yield only to the Ottoman Sultans, while they rise incomparably above them in every estimable quality. . . . The most splendid period of the Saracen empire in Spain was during the tenth century. The great Caliph Abdalrahman Annasir Ledinallah raised the magnificence of the Cordovan monarchy to its highest pitch. . . . The last thirty years of the Ommiad dynasty are a mere wearisome series of usurpations and civil wars. In 1031 the line became extinct, and the Ommiad empire was cut up into numerous petty states. From this moment the Christians advance, no more to retreat, and the cause of Islam is only sustained by repeated African immigrations."—E. A. Freeman, *History and conquest of the Saracens*, lecture 4-5.—See also EDUCATION: Medieval: 9th-15th centuries: Saracen and Moorish learning.

763.—Caliphate transferred to Bagdad.—"The city of Damascus, full as it was of memorials of the pride and greatness of the Ommiad dynasty, was naturally distasteful to the Abbassides. The Caliph Mansur had commenced the building of a new capital in the neighbourhood of Kufa, to be called after the founder of his family, Hashimiyeh. The Kufans, however, were devoted partisans of the descendants of Ali. . . . The growing jealousy and distrust between the two houses made it inadvisable for the Beni Abbas to plant the seat of their empire in immediate propinquity to the headquarters of the Ali faction, and Mansur therefore selected another site [about 763]. This was Bagdad, on the western bank of the Tigris [fifteen miles above Medain, which was the ancient Seleucia and Ctesiphon]. It was well suited by nature for a great capital. The Tigris brought commerce from Diyar Bekr on the north, and through the Persian Gulf from India and China on the east; while the Euphrates, which here approaches the Tigris at the nearest point, and is reached by a good road, communicated directly with Syria and the west. The name Bagdad is a very ancient one, signifying 'given or founded by the deity,' and testifies to the importance of the site. The new city rapidly increased in extent and magnificence, the founder and his next two successors expending fabulous sums upon its embellishment, and the ancient palaces of the Sassanian kings, as well as the other principal cities of Asia, were robbed of their works of art for its adornment."—E. H. Palmer, *Haroun Alraschid, caliph of Bagdad*, ch. 2.—"Baghdad, answering to its proud name of 'Dar es-Salam,' 'The City of Peace,' became for a time the capital of the world, the centre of luxury, the emporium of commerce, and the seat of learning."—W. Muir, *Annals of the early caliphate*, ch. 50. 815-945.—Decline and temporal fall of the caliphate at Bagdad.—"It was not until nearly the close of the first century after the Hejira that the banners of Islam were carried into the regions beyond the Oxus, and only after a great deal of hard fighting that the oases of Bokhara and Samarkand were annexed to the dominions of the

khalif. In these struggles, a large number of Turks—men, women, and children—fell into the power of the Moslems, and were scattered over Asia as slaves. . . . The khalif Mamoun [son of Haroun Alraschid—815-834] was the first sovereign who conceived the idea of basing the royal power on a foundation of regularly drilled Turkish soldiers."—R. D. Osborn, *Islam under the khalifs of Bagdad*, pt. 3, ch. 1.—"The Caliphs from this time leaned for support on great bands of foreign mercenaries, chiefly Turks, and their captains became the real lords of the empire as soon as they realised their own strength. How thoroughly the Abbásid caliphate had been undermined was shown all at once in a shocking manner, when the Caliph Mutawakkil was murdered by his own servants at the command of his son, and the parricide Muntasir set upon the throne in his stead (Dec., 861). The power of the Caliphs was now at an end; they became the mere playthings of their own savage warriors. The remoter, sometimes even the nearer, provinces were practically independent. The princes formally recognised the Caliph as their sovereign, stamped his name upon their coins, and gave it precedence in public prayer, but these were honours without any solid value. Some Caliphs, indeed, recovered a measure of real power, but only as rulers of a much diminished State. Theoretically the fiction of an undivided empire of Islam was maintained, but it had long ceased to be a reality. The names of Caliph, Commander of the Faithful, Imám, continued still to inspire some reverence; the theological doctors of law insisted that the Caliph, in spiritual things at least, must everywhere bear rule, and control all judicial posts; but even theoretically his position was far behind that of a pope, and in practice was not for a moment to be compared to it. . . . In the tenth century the Buids, three brothers who had left the hardly converted Gilán (the mountainous district at the southwest angle of the Caspian Sea) as poor adventurers, succeeded in conquering for themselves the sovereign command over wide domains, and over Bagdad itself [establishing what is known as the dynasty of the Buids or Bouides, or Bowides, or Dilemites]. They even proposed to themselves to displace the Abbásids and set descendants of Ali upon the throne, and abandoned the idea only because they feared that a Caliph of the house of Ali might exercise too great an authority over their Shiite soldiers, and so become independent; while, on the other hand, they could make use of these troops for any violence they chose against the Abbásid puppet who sat in Mansúr's seat."—T. 908-1171.—Fatimite caliphs.—"Egypt, during the ninth and tenth centuries, was the theatre of several revolutions. Two dynasties of Turkish slaves, the Tolumides and the Ilkshidites, established themselves in that country, which was only reunited to the Caliphate of Bagdad for a brief period between their usurpations. But early in the ninth century a singular power had been growing

up on its western border. . . . A schism arose among the followers of Ali [the shi'ahs, who recognized no succession to the Prophet, or Imamate—leadership in Islam—except in the line of descent from Ali, nephew of Mahomet and husband of Mahomet's daughter, Fatima] regarding the legitimate succession to the sixth Imam, Jaffer. His eldest son, Ismail or Ishmael, dying before him, Jaffer appointed another son, Moussa or Moses, his heir. But a large body of the sect denied that Jaffer had the right to make a new nomination; they affirmed the Imamate to be strictly hereditary, and formed a new party of Ishmaelians, who seem to have made something very like a deity of their hero. A chief of this sect, Mahomet, surnamed Al Mehdi, or the Leader, a title given by the Shi'ahs to their Imams, revolted in Africa in 908. He professed himself, though his claims were bitterly derided by his enemies, to be a descendant of Ishmael, and consequently to be the legitimate Imam. Armed with this claim, it was of course his business to acquire, if he could, the temporal power of a Caliph; and as he soon obtained the sovereignty of a considerable portion of Africa, a rival Caliphate was consequently established in that country. This dynasty assumed the name of Fatimites, in honour of their famous ancestress Fatima, the daughter of the Prophet. The fourth in succession, Muezzeddin by name, obtained possession of Egypt about 967. . . . The Ikshidites and their nominal sovereigns, the Abbassides, lost Egypt with great rapidity. Al Muezzeddin transferred his residence thither, and founded [at Fostat—see CALIPHATE: 640-646] the city of Cairo, which he made his capital. Egypt thus, from a tributary province, became again, as in the days of its Pharaohs and Ptolemies, the seat of a powerful kingdom. The claims of the Egyptian Caliphs were diligently preached throughout all Islam, and their temporal power was rapidly extended into the adjoining provinces of Syria and Arabia. Palestine became again . . . the battlefield for the lords of Egypt and of the East. Jerusalem, the holy city of so many creeds, was conquered and reconquered. . . . The Egyptian Caliphate . . . played an important part in the history of the Crusades. At last, in 1171, it was abolished by the famous Saladin. He himself became the founder of a new dynasty; but the formal aspect of the change was that Egypt, so long schismatic, was again restored to the obedience of Bagdad. Saladin was lord of Egypt, but the titles of the Abbassid Caliph, the true Commander of the Faithful, appeared again on the coin and in the public prayers, instead of that of his Fatimite rival."—E. 1262-1543.—Alleged Abbassid caliphate in Egypt.—Circumstances and nature of Ottoman claim to the caliphate.—"The Caliphate died out definitively in 1258 A. D., when the Tartars under Hulagu Khan sacked Bagdad, putting an end to the Caliphate of the Abbassids, whose race was destroyed. In name and in fact the Caliphs then ceased to exist. None the less, four years later, in 1262, a black man appeared in Egypt, who asserted that he was a member of the Abbassid family who had escaped from the Tartar slaughter. The Egyptian Sultan Baibars I (al-Bundukdari), of the dynasty of the Circassian or Bahrite Mamelukes, thought it would serve his own ends to believe the story, despite its unlikelihood; he solemnly recognised him as Caliph and received from his hands the investiture of Sultan of Egypt. In this way Baibars sought to be pardoned by public opinion for having mounted the throne through the slaughter of his predecessor by his own hand; he also counted on increasing his dignity before the other Mussulman princes, who now no longer derived their power from a supreme authority. Thus arose a new ephemeral Abbassid Caliphate of Egypt; a Caliphate purely nominal, because, besides the fact that it was not recognised by the majority of the Islamic Sovereigns, it delegated all its powers to others, renounced the right of coining money in its own name (this being one of the chief emblems of sovereignty among the Mussulmans), and only reserved for itself the office of drawing rich allowances and granting the investiture to every new Egyptian sultan. It appears also that in course of time some Princes outside of Egypt requested investiture from these caricatures of the Caliphs who, in any case, had never any religious powers, nor any moral or material authority whatsoever before the *ülama*. In 1517 the Ottoman Selim I conquered Egypt and broke the dominion of the Mameluke Sultans (see TURKEY: 1481-1520). The Abbassid pseudo-Caliph al-Mutawakkil was brought to Constantinople as a private person; after the death of Selim (1520 A. D.) he was able to return to Egypt, where he died in 1543, or, according to others, in 1538. And with him disappeared for ever this artificial resurrection of the Abbassid Caliphate. The Ottoman Sultans meantime reached the summit of their power and made Europe tremble before them. Then it was that the flattery of learned men about the court, in dedications of books, smuggled in the name of Caliph or some allusion to the Caliphate among the long list of official titles of the Ottoman Sultans; nothing but literary flattery this in complete opposition to the Islamic doctrine that the Caliph must be of Koreishite origin. And in fact Caliph titles do not appear in diplomas, moneys, or official inscriptions emanating directly from the Sultan, in that pompous Turkish heaping-up of titles, where, only exceptionally, there appears, among numerous other epithets, that of *khilafet-penahi*, 'asylum of the Caliphate.'"—C. 1919-1920.—Question of the caliphate in connection with the Turkish peace treaty.—"Among the many problems connected with the Turkish Peace Treaty none presents greater difficulty than the problem of Constantinople. In the main the problem is political and strategic, but over and above such considerations the highly controversial religious issue is involved. For 1,100 years Constantinople was the seat of the East Roman Emperor, and as such the capital of Orthodox Christendom, while for the last 477 years it has been the capital of the Ottoman Empire, whose sovereign has for exactly the last 400 years united with his temporal sovereignty the Sunni Khalifate of Islam. Some historians allege that Mutawakil made a formal transfer of his hereditary office to the Sultan of Turkey, some say to Selim the Grim, some to the latter's successor, Suleiman the Magnificent, who added Mesopotamia and much of Europe to his dominions. Suffice it that Mutawakil left no Abbasid to succeed him in his high office, and that we find the title of Khalif used by Suleiman the Magnificent soon after Mutawakil's death in Constantinople. Thus the Ottoman sovereigns, who have no Arab blood in their veins, acquired from the last of the Abbasids the great titles of Khalif and Emir el Moumenin by right of conquest. . . . As the temporal power of Mahommedan princes has been declining there is a profound sentiment that the spiritual authority of the *de facto* khalif should receive increasing recognition as the final authority in the interpretation of the Prophet's religion. In a word, as the 'Emir el Moumenin' has lost temporal power, the other aspect of his office, the Immamat, has grown in importance. Except during the Cairo period from 1260 to 1516, the khalifate has always been held by an independent Mahommedan sovereign with considerable temporal authority. In fact, in the modern conception of the khalifate, the khalif must be an independent ruling sovereign, although his title is derived from the house of Abbas that for two hundred and sixty odd years had no temporal authority. The other conception of the khalifate now current is the right of the khalif to be regarded as the guardian of the holy cities of Medina and Mecca. This guardianship has been lost to the Sultan of Turkey by the revolt of the descendants of the prophet at Mecca and the *de facto* reassertion of their independence by the Mahommedan Arabs. Constantinople is no more a holy city than Damascus, Bagdad, and Cairo, the previous seats of the Eastern Khalifate, from which the Sultan of Turkey derives his claim; but the fact that the Eastern Khalif has had his capital in Constantinople for 400 years has invested the city with a sentiment in Sunni Mahommedan minds which places it not merely high in their regard, but above all cities other than the two holy cities of the Prophet Mahomet. Above all, the khalifate can only be re-transferred from the Turkish House in one of three ways, viz., by surrender to some other Mahommedan ruler, by conquest by another

Mahommedan ruler, or by the assent of the Sunni Mahommedans throughout the world. None but Mahommedans can effect such a transfer, and if anyone else attempted it, it would not only not be recognized by Sunni Mahommedans, but would create among them the most deep-seated opposition and resentment. . . . [Their] sentiment unquestionably is at present that the Sultan of Turkey is the *de facto* successor of the Arab Khalifate and that as such he must be assured an independent sovereignty."—W. O. CALPURNIAN LAW.—"In this year, B. C. 149, the tribune L. Calpurnius Piso Frugi, who was one of the Roman writers of annals, proposed and carried a Lex Calpurnia, which made a great change in the Roman criminal procedure. Before this time and to the third Punic war, when a magistratus had misconducted himself in his foreign administration by oppressive acts and spoliation, there were several ways of inquiring into his offence. . . . But these modes of procedure were insufficient to protect the subjects of Rome against had magistratus. . . . The remedy for these evils was the establishment of a court under the name of *Quaestio Perpetua de pecuniis repetundis*, the first regular criminal court that existed at Rome. Courts similarly constituted were afterwards established for the trial of persons charged with other offences. The Lex Calpurnia defined the offence of *Repetundæ*, as it was briefly named, to be the taking of money by irregular means for the use of a governor. The name *Repetundæ* was given to this offence, because the object of the procedure was to compel the governor to make restitution. . . . The court consisted of a presiding judge . . . and of a body of judges or jurymen annually appointed. The number of this body of judges is not known, but they were all senators. The judge and a jury taken from the body of the judges tried all the cases which came before them during one year; and hence came the name *Quaestio Perpetua* or standing court, in opposition to the extraordinary commissions which had hitherto been appointed as the occasion arose. We do not know that the Lex Calpurnia contained any penalties. As far as the evidence shows, it simply enabled the complainants to obtain satisfaction."—G. Long, *Decline of the Roman republic*, ch. 2.

CAMALDOLITES (Camaldolese, Camaldulensians), a religious order taking its name from the monastery of Camaldoli near Arezzo, Italy, established by St. Romuald in 1012, and advocating hermit life. In 1922 it was still in existence with a small membership. The forest of the Camaldolites is deservedly famous. See CONSERVATION OF NATURAL RESOURCES: Italy: 1213-1921.

CAMARA DE CASTILLA. See SPAIN: 16th century: Machinery of absolutism.

CAMARCUM, the ancient name of the town of Cambrai.

CAMARILLA, a circle of irresponsible chamber counsellors—courtiers—surrounding a sovereign with influences superior to those of his responsible ministers. *Camarilla* is the Spanish diminutive of *cámara* (chamber). It is thought by some to have been originally the inner group of the *Cámara de Castilla*, but is now used generally for any unofficial group controlling the policies of the government. The word first became current during the reign of Ferdinand VII. When this monarch returned to Spain in 1814 he proceeded to crush liberalism in every form. The power back of the throne was the "camarilla," an unofficial cabinet of the king's closest friends. Similarly during the reign of devout and unscrupulous Isabella II (1843-1868) her ministers were powerless against the dictates of the *camarilla* made up of the Queen's many lovers and favorite confessors.

CAMBACERES, Jean Jacques Régis de (1753-1824), French jurist and statesman. In 1792, was member of the convention and its president; member of committee of public safety, 1794, and of the Five Hundred, 1796; minister of justice, 1799; second consul, 1799. Under the empire he was Napoleon's adviser; became arch-chancellor, 1804; president of the senate, prince, duke of Parma; largely responsible for the drafting of the "Code Civil." See FRANCE: 1793 (February-April); 1799 (November-December); 1801-1803; 1804-1805; 1806 (January-October).

CAMBALU, or **Cambalec**, ancient name of Peking, China. See CHINA: 1259-1294.

CAMBAS, **Campa**, **Campo**, or **Antis**, a tribe of South American Indians. See ANDESAINS; BOLIVIA: Aboriginal inhabitants.

CAMBODIA, **Kamboja** or **Cambodge**, a French protectorate since 1863, is included in the territory of French Indo-China and situated in the Annamite Peninsula, southeastern Asia. Its area, 57,900 square miles in 1922, was increased in 1907 by the cession on the part of Siam of the provinces of Battambang and Siamrap. Population, 1,634,252; capital, Phnompne; reigning monarch since 1904, King Sisowath, who is advised by a French resident stationed in the capital. Cambodia is rich in ancient monuments, among the chief of which is the great lost city of Angkor-Thom, built by the Brahmins in the ninth century and now lying deserted and almost submerged by tropical vegetation.—See also INDO-CHINA.

CAMBOJAN EMPIRE. See CAMBODIA; INDO-CHINA.

CAMBON, **Jules Martin** (1845-), French diplomat; 1878-1887, prefect of various departments of France; 1891, governor-general of Algeria; 1897-1902 ambassador to the United States, representing Spain in 1898 when the Spanish-American protocol was drawn up (see U. S. A.: 1898 [July-December]); 1902-1907, ambassador to Spain; 1907-1913, ambassador to Germany where he was active in bringing about a peaceful solution of the Agadir crisis; one of the French plenipotentiaries to the Paris peace conference, holding position of senior member on many important committees.—See also ACADEMY, FRENCH; VERSAILLES, TREATY OF: Conditions of peace; WORLD WAR: Diplomatic background: 4, 12; 1916: X. German rule in northern France and Belgium: a, 3.

CAMBON, **Pierre Joseph** (1754-1820), French statesman and revolutionist, member of the legislative assembly 1789, and later of the convention; sponsor of numerous able measures in the cause of democracy, some of which are the basis for the modern financial system of France; voted for the death of Louis XVI but opposed the Revolutionary Tribunal; 1793, member of committee of Public Safety; defended Girondists from mob violence; 1794, made a brilliant report on the financial state of France and presented an able plan for the registration of the public debt; opposed Robespierre but was forced to flee upon his downfall to escape arrest; 1815, member of the Chamber of Deputies; exiled on the return of the Bourbons.

CAMBON, **Pierre Paul** (1843-), French diplomat, brother of Jules; served successively as secretary to Jules Ferry, as prefect of various departments of France, and as resident-general of Tunis (see TUNIS: 1881-1898); 1886, ambassador to Spain; 1890, ambassador to Turkey; 1898, ambassador to England, where he was instrumental in bringing about the Anglo-French entente.

CAMBORITUM, a Roman town in Britain. "Camboricum was without doubt a very important town, which commanded the southern fens. It had three forts or citadels, the principal of which occupied the district called the Castleend, in the modern town of Cambridge, and appears to have had a bridge over the Cam, or Granta; of the others, one stood below the town, at Chesterton, and the other above it, at Granchester. Numerous roads branched off from this town. . . . Bede calls the representative of Camboricum, in his time, a 'little deserted city,' and tells us how, when the nuns of Ely wanted a coffin for their saintly abbess, Etheldreda, they found a beautiful sculptured sarcophagus of white marble outside the city

walls of the Roman town."—T. Wright, *Celt, Roman and Saxon*, ch. 5.—See also UNIVERSITIES AND COLLEGES: 912-1257; England: Cambridge.

CAMBRIA, the early name of Wales. See BRITAIN: 6th century; CUMBRIA; KYMRV.

CAMBRIDGE, parliamentary and municipal borough and county town of Cambridgeshire on the river Cam, England. Cambridge has long been famous as the seat of a university (see UNIVERSITIES AND COLLEGES: 912-1257; England: Cambridge). Its trade is derived from the university and from its being the center of an agricultural district. It has no manufactures.

Name.—"The name of the town was Grantanbryge in 875 and in Domesday Book it is Grentebryge. About 1142, we first meet with the violent change to Cantebruggescir (for the county), the change from Gr- to C- being due to the Normans. This form lasted, with slight changes, down to the fifteenth century. Grantbrige (also spelt Cauntbrige in the name of the same person) survived as a surname till 1401. After 1142 the form Cantebrige is common; it occurs in Chaucer as a word of four syllables and was Latinised as Cantabrigia in the thirteenth century. . . . Then the *b* turned the *n* to *m* giving Cambrige (after 1400) and Cambrige (1458). . . . In the sixteenth century the river is spoken of as 'the Canta, now called the Rhee.' . . . Cam, which appears in Speed's map of 1610, was suggested by the written form Cam-bridge."—T. Atkinson and J. W. Clark, *Cambridge described and illustrated*, pp. 4-5.—See also CAMBORITUM.

Early history.—Probably Castle hill, an ancient earth work, "was constructed in the ninth century as a defence against the incursions of the Danes; . . . during that and the following century Cambridge is said to have been sacked more than once. . . . After the battle [of Ringmere, near Ipswich] the conquerors advanced and reduced Thetford and Cambridge to ashes. . . . With the amalgamation of conquerors and conquered, however, comes the dawn of definite history. . . . It is with this new chapter that Cambridge emerges from obscurity, it was one of the first to develop into an English town. Under new conditions which allowed advantage to be taken of its excellent situation as a commercial town, it begins to grow into a place of importance. Its position at the head of

a waterway communicating with the sea, is a factor in the history of Cambridge, the importance of which it is impossible to exaggerate. . . . Cambridge became an important distributing centre, and the seat of one of the largest fairs in Europe,—for it was probably at this early period that the fame of the Stourbridge Fair began to spread and to bring prosperity to the town.”—*Ibid.*, pp. 5-6.—“In the turbulent days when King John was in arms against his Barons, . . . Cambridge was a place of strategic importance. . . . The Castle was alternately in the hands of the king and of his opponents; John was at Cambridge in the spring of 1216 and again in December of the same year. . . . But the Barons soon afterward retook the Castle and town of Cambridge, where a little later Louis the dauphin of France, whom they had invited as their leader, held a council. . . . The years 1266 and 1267 find Cambridge again a centre in another struggle between King and Barons. In the latter year Henry III was at the University town, taking active steps for its fortification.”—H. P. Stokes, *Outside the Barrwell gate*, p. 1.

Later history.—“The wholesale confiscations by Henry VIII, the rise in the price of provisions in consequence of his debasement of the coinage, and the inclosure of some of the open fields and commons, gave rise to disturbances at Cambridge, as in many parts of the country, in 1549. . . . Robert Kett of Wymondham was . . . heading a formidable insurrection in Norfolk and no doubt gave the people of Cambridge good cause of uneasiness.” But the Earl of Warwick in command of an army marched through Cambridge and defeated Kett and his followers. “The reign of Queen Mary opens with the plot of the Duke of Northumberland. . . . He had hoped to assemble at Cambridge the army which was to place on the throne his daughter-in-law, the Lady Jane Grey.” News of Mary’s having been proclaimed queen reached him “and calling for an Heraldt, himself proclaimed Queen Mary. . . . The part played by Cambridge in the Civil War was less conspicuous than that taken by Oxford but none the less honourable. . . . It contributed most of the men and after London, most of the funds for the Parliament army. . . . By a lively chance the member for Cambridge was, Cromwell himself. . . . We must now pass over a period of a hundred and fifty years. During that time Cambridge has no history. . . . The parliamentary Reform act was passed in 1832; early in the following year began the agitation for municipal reform.” An act was passed in 1835 which received royal assent. “The franchise was extended to all householders within the borough or within seven miles thereof. The governing power was vested in a Council consisting of ten aldermen and thirty councillors, who were to choose one of their number as Mayor.”—T. Atkinson and J. W. Clark, *Cambridge described and illustrated*, pp. 96-120.

CAMERON, Simon (1799-1889), American politician. Member of Senate from Pennsylvania, 1845-1850, 1857-1861, 1867-1877; secretary of war under Lincoln, 1861; resigned, 1862; appointed minister to Russia, 1862.

CAMERONIAN REGIMENT.—In 1680, when Claverhouse was raising the Highland clans in favor of James II, “William Cleland, who had fought with distinguished bravery at Bothwell, and was one of the few men whom Claverhouse feared, made an offer to the [Scottish] Estates to raise a regiment among the Cameronians, under the colonelcy of the Earl of Angus, and the offer was accepted. Such was the origin of the Cameronian regiment. Its first lieutenant-colonel was Cleland; its first chaplain was Shields. Its courage was first tried at Dunkeld, where these 800 Covenanted warriors rolled back the tide of Celtic invasion; and since that, undegenerate though changed, it has won trophies in every quarter of the world.”—J. Cunningham, *Church history of Scotland*, v. 2, ch. 7.

CAMERONIANS, an organization of Scottish Covenanters, the followers of Richard Cameron, which took the title of Reformed Presbyterians in 1743. It was from this group that the famous Cameronian regiment was formed. See SCOTLAND: 1681-1689; 1680 (August).

CAMEROONS, or Kamerun, former German colony (1884-1919) on the bight of Biafra; situated between Nigeria and French Congo, running north to the southern shores of Lake Chad. “The large bay or estuary in the Gulf of Guinea, lying south of Nigeria and facing the island of Fernando-Po, was discovered by Portuguese navigators in the fifteenth or sixteenth century and christened the Rio dos Camaroes (the River of Prawns), from the abundance of crustacea that infested its waters. The name was also used to designate the neighbouring mountains, which rise to the north-west of the bay. The English usage, until the end of the nineteenth century, was to confine the term, the Cameroons, to the mountain range, and to speak of the estuary as the Cameroon River. It was left to the acquisitive Germans to extend the use of the name in its Teutonic form—Kamerun—to the whole Protectorate.”—A. T. Calvert, *German African empire*, pp. 285-286.—See also AFRICA: Map.

Exploration of the interior.—“Although the commercial activities of the tribes inhabiting the African Mohammedan empires, and the construction of trade routes connecting Senegal with the Red Sea, had opened up the Soudan to Europeans,

the territory which since 1884 has been known as German Cameroon was practically unexplored at the beginning of the nineteenth century. In 1822 an English expedition succeeded in reaching Lake Chad and exploring its western and southern boundaries. This discovery was supplemented in 1851-52 by Barth and Overweg. Barth went from Kuka to Yola, and discovered the upper course of the Benue. He penetrated further, through the country south of Lake Chad to Bagirmi. . . . But all efforts to penetrate into the interior were frustrated by the impracticable condition of the roads, the unhealthiness of the coast district—which was for the greater part uninhabited virgin forest—and by the hostile attitude of the natives. . . . The effort to reach the Cameroon estuary was frustrated by the opposition of the Bakoko; and after a journey of much difficulty the expedition returned to the coast. In 1899 a station was established and a foothold secured. In the same year the region of Duala was explored, and the forest district traversed, the plateau of Baliland was ascended, and the grassy lands reached. With indescribable difficulty the districts from Ibi on the Benue to Yola were penetrated. In 1902-4 an Anglo-German expedition, after a very minute survey, fixed the boundary line between Yola and Lake Chad, and in 1908 an agreement was made between Germany and France regarding the south and east boundaries. In 1907-8 the frontier between Cameroon and the Nigerias was surveyed by the British and German representatives, and the approximate line of demarcation subsequently settled between the two Governments was fixed and marked by an Anglo-German commission in 1912-13.—*Ibid.*, pp. 288-290.

Occupation by Germany.—"The establishment of German trading firms and factories at various places on the West African coast suggested to the Imperial Chancellor the practicability of laying the foundations of his projected German Colonial Empire in the Cameroon region of the Dark Continent. On March 19th, 1884, Dr. Nachtigal, a former Consul at Tunis, was instructed to proceed on this civilising mission, and on July 5th and 6th he hoisted the German flag at Bayida and Lome, in Togoland. On the 10th of that month the English gunboat *Goshawk* entered the Cameroon River, and the mission's hope of further extending the sphere of German influence on the coast of West Africa appeared doomed to extinction. But the *Goshawk* departed on the following day, leaving the field clear for Nachtigal, who rushed through some agreements with the chiefs Deido, Bell and Akva, declared the country to be under the protection of Germany on July 14th, and appointed [Dr. Max] Buchner Provisional Governor of the newly acquired territory. The new Governor acknowledged the protest against German occupation, which was formally made by the British Consul on July 19th, and proceeded to hoist the German flag at Bimbia, Maliba, and Batanga. . . . On May 7th, 1885, a treaty was concluded by which the British waived their claims in favour of Germany, who reciprocated by renouncing their nominal claims to Forcados, at the mouth of the Niger, and to St. Lucia. In the same year the French ceded Great Batanga and the island west of Kwakwa-Kriek in exchange for the German possessions in the Cameroons, under the Governorship of Baron von Goden. In July, 1911, the German cruiser *Panther* appeared off the coast of Morocco, at Agadir, for the alleged purpose of protecting German interests. . . . The incident was ultimately closed by the cession to Germany of the French territory to the south of their Cameroon colony, which was subsequently

incorporated with it under the name of New Cameroon. The transfer was made in June, 1913. . . . In the twenty-eight years of their occupation the Germans had established courts of justice at Buea [the seat of the government], Duala, Kribi, and Lomie, custom houses at Duala and Buea, thirty-eight post offices throughout the territory, and had maintained order among the natives by means of twelve companies of imperial troops. [They had constructed railroads and telegraph lines, and increased the trade of the colony nearly 37,000,000 marks.]. . . . The want of means of communication was found a hindrance in the economic development of the territory, which was admittedly possessed of 'unlimited liabilities.' . . . Vast tracts in the interior were proved to be suited for cotton cultivation; oil palms, cocoa, and rubber were ascertained to be of 'incalculable wealth,' and the Cameroons were described by Dr. Grotewold as among the most productive countries in the world. But the administration, or the critics of the administration of the Protectorate, had discovered that the lack of proper means of communication was not the only factor that retarded the progress of this richly endowed country. The unrest among the natives had revealed on the part of the authorities the lack of that sympathetic understanding of their native subjects which makes for successful colonisation. Their treatment of the natives was culpably injudicious, and their mistakes in dealing with them were so frequent and serious that the relations between the Government and the native population were constantly strained, and the services of the Imperial troops were in great demand."—*Ibid.*, pp. 286-295.—See also AFRICA: Modern European occupation: Later 19th century; FRANCE: 1910-1912.

Operations during the World War. See WORLD WAR: 1914: VI. Africa: a; 1915: VIII. AFRICA: c; c, 2.

Status after the World War.—In 1916 French and British troops occupied the Cameroons, which was later divided between them by the treaty of Versailles. The larger portion, 166,489 square miles, was assigned to France as a mandate. The British acquired a strip of 33,000 square miles from the sea to Lake Chad along the Nigerian frontier, which is administered by the governor of Nigeria.

CAMINO REAL, California. See CALIFORNIA: 1760.

CAMISARDS, French Protestants who fought in the reign of Louis XIV to restore their church. In England they were known as the French prophets.—See also FRANCE: 1702-1710.

CAMOENS (CAMOES), Luis Vaz de (c. 1524-1580), greatest of the Portuguese poets. Served under John III in the expedition against Morocco, and in India. Spent several years in the East Indies amid great vicissitudes. His great epic poem, the "Lusiad (Os Lusíadas)" celebrated the history of Portugal; also developed the Portuguese lyric to its greatest perfection.

CAMORRA, CAMORRISTI, CAMORRISTS, a Neapolitan secret society which practically controlled Naples during the nineteenth century. Its origin is obscure, but it probably came from a similar organization in Spain. "This was 'La Garduna'—the mother of the Camorra. As early as 1417 it had rules, customs, and officers identical with those of the Camorra of the nineteenth century, and, like it, flourished in the jails, which were practically under its control. Undoubtedly this organization found its way into Sicily and Naples in the wake of the Spanish occupation of the thirteenth century, and germinated in the loathsome prisons of the period until it was ready to

burst forth into open activity under the Bourbons."—A. Train, *Courts, criminals and the Camorra*, p. 147.—"It was not easy to obtain exact proof of the operation of this authority [camorra], for it was impatient of question, its vengeance was prompt, and the instrument of that vengeance was the knife. In speaking of it as one authority it is possible to err, for different forms or branches of this secret institution at times revealed their existence by the orders which they issued. This secret influence was that of the Camorra, or Camorristi, a sort of combination of the violence of the middle ages, of the trades union tyranny of Sheffield, and of the blackmail levy of the borders. The Camorristi were a body of unknown individuals who subsisted on the public, especially on the smaller tradespeople. A man effected a sale of his ware; as the customer left his shop a man of the people would enter and demand the tax on the sale for the Camorra. None could escape from the odious tyranny. It was impalpable to the police. It did not confine itself to the industry of illicit taxation. It issued its orders. When the Italian Parliament imposed stamp duties, that sensibly increased the cost of litigation, that indispensable luxury of the Neapolitans, the advocates received letters warning them to cease all practice in the courts so long as these stamp duties were enforced. 'Otherwise,' continued the mandate, 'we shall take an early opportunity of arranging your affairs.' Signed by 'the Camorra of the avvocati.' The arraignment hinted at was to be made by the knife."—*Trinity of Italy; by an English civilian*, p. 70.

1820-1860.—Bourbon persecutions.—Rise of the Camorra.—"But the continuance of the Camorra in Italy to-day is directly due to the succession of tyrants who about a century ago allowed the patriots of Naples and Sicily to rot in prison or hung them up on scaffolds in the public squares. The Bourbon rule in the 'Kingdom of the Two Sicilies' was one of the most despicable in history. In eleven days in 1793 one hundred and twenty professors, physicians, and priests were executed by the public hangman in Naples. This was a mere foretaste of what was coming. When Napoleon dethroned the Bourbons in 1805 and made his brother Joseph 'King of Naples,' there dawned an era of enlightenment and reform which continued when Joseph was succeeded by Joachim Murat in 1808; but the Congress of Vienna in 1815 reinstated the old dynasty and recalled Ferdinand I, who had been lurking in Sardinia, to the throne. Then the horrors began again. A period of retrogression, of wholesale persecutions and executions, followed. Never was there anything like the nightmare of bloody politics which lasted through the reigns of Ferdinand I (1825), of Francis I (1830), of Ferdinand II (1850), and of Francis II, until the entry of Garibaldi into Naples in 1860. The oppressions of the Bourbons and the struggle of the patriots of Italy for freedom and the Risorgimento stimulated secret organization. No other means to combat tyranny was, in fact, possible. . . . It is said on excellent authority that in 1820 there were seventy thousand persons in the city of Naples alone who belonged to secret societies. In this year we first hear of the Camorra by name, and for the next forty years it spread and flourished until it became so powerful that the government of the 'Two Sicilies' had perforce to enter into treaty with it and finally (in 1860) to turn over to it the policing of the city of Naples. Indeed, it may be that some such extra-legal organization was a practical necessity if existence were to be tolerable at all. . . . In the days from 1820 to 1860, to be a Camorrist was a

matter of pride and a rare distinction among the baser sort. So far from concealing his membership in it, the Camorrista vaunted it abroad, even affecting a peculiar costume which rendered him unmistakable. A red necktie, the loose ends of which floated over either shoulder, a parti-colored sash, and a cane heavily loaded with brass rings, marked him as a 'bad man' during this romantic period. But, however picturesque it may have been, the Camorra soon became the most dreaded and loathsome secret society in the world."—A. Train, *Courts, criminals and the Camorra*, pp. 144-146, 148.

1860-1900.—Camorra bassa and Camorra alta.—Power of Camorra in politics.—Casalet trial.—"From 1860 on the Camorra entered upon a new phase, a sort of duplex existence, having on the one hand its old criminal organization (otherwise known as the *Camorra bassa*) and on the other a group of politicians or ring with wide-spread ramifications. . . . This 'smart set' and the ring connected with it was known as the *Camorra alta* or *Camorra elegante*, and from the advent of Garibaldi to the present time the strictly criminal operations of the society have been secondary in importance to its political significance. . . . As early as 1862 a raid was conducted by the government upon the organization—Sparenta, the Minister of Police, arresting three hundred Camorristi in one day. But he accomplished little. From this time on until 1900 the history of the Camorra is that of a corrupt political ring having a standing army of crooks and rascals by means of which to carry out its bargains. During this period many serious attempts were made to exterminate it, but practically to no purpose. In 1863 another fruitless series of raids filled the jails of Naples, and even of Florence and Turin, with its members; but the society continued to flourish—less openly. The resignation of Nicotera as Prime Minister in 1876 was followed by a burst of activity among the Camorristi, but in 1877 the government made a serious effort to put down the Mafia in Sicily, while in 1880 the murder of Bonelli in a foul dive of the Camorra in Naples resulted in the prosecution of five Camorristi for his murder. The trial, like that of 1911-12, took place, for reasons of safety, at Viterbo. The witnesses testified freely upon every subject save the Camorra, and could not be induced to suggest that the assassination had been the result of a conspiracy. 'The word Camorra seemed to burn their tongues.' The jury were so impressed by the obvious terror which the society inspired in the Neapolitans that they found all the five—Esposito, Romano, Tiniscalchi, Langella, and Trombetta—guilty, and they were sentenced to forced labor in the galleys. Apparently there was a sort of renaissance of the Camorra about 1880, at the death of Victor Emmanuel II, and under the new administration of Humbert it began to be increasingly active in political affairs. . . . The 'Ring,' affiliated as it is with the leaders of the society, is still the most dangerous manifestation of the Camorra. Historically, it is true, it was known as the *alta Camorra* or *Camorra elegante*, but in ordinary parlance these terms are generally used to describe Camorristi more closely related to the actual district organizations, yet of a superior social order. . . . They also furnish the influence when it is needed to get Camorristi out of trouble, and mix freely in the fast life of Naples and elsewhere. The power of the Ring reached its climax in 1900. In return for the services of the *Camorra bassa* in electing its deputies to office, the government saw to it that the criminal activities of the society were not interfered with.

... Upon the assassination of King Humbert, in 1900, the situation in Naples was as bad as that of New York City in the days of the Tweed Ring. The ignorant Neapolitans sympathized with the Camorristas as against the police, and voted as they were directed. . . . At this crisis the Socialist newspaper, *La Propaganda*, courageously sprang to the attack of the communal administration, in the persons of the Syndic Summonte and the Deputy Casale, who, smarting under the lash of its excommunication, brought an action of libel against its editor. . . . The trial and exposures created a furore all over Italy. The Prime Minister refused to continue the Royal Commission and announced a general election, and, amid the greatest excitement, the Camorra rallied all its forces for its final struggle in politics. But the citizens of Naples had had enough of the Ring for the time being, and buried all the society's candidates under an avalanche of votes. This was the severest blow ever dealt to the political influence of the Camorra."—*Ibid.*, pp. 160-164, 166.

1906-1912.—Cuocolo murder.—Viterbo trial.—“On June 6, 1906, at Torre del Greco, near Naples, Gennaro Cuocolo, a man of the criminal classes of Naples, was murdered, and about an hour and a half later, at his home, in Naples, his wife, Maria Cuocolo Cutinelli, called *la bella Sorrentina*—the beautiful woman from Sorrento—met with the same fate. According to the story told by the informer Abbatemaggio at the trial . . . at Viterbo, these murders were in execution of a death sentence pronounced against the Cuocolos by the Supreme Tribunal of the Camorra at a banquet held in Bagnoli, a suburb of Naples, ten days before. Cuocolo, a *basista*, or planner of burglaries, forty-five years of age, was the son of a respectable and well-to-do industrial family. . . . For some time, it is said, Cuocolo had been distrusted and hated by the leaders of the Camorra because they believed he was taking too large a share of the booty in the burglaries which he planned, because of his overbearing manner, and because of their suspicions of his good faith. . . . In consequence of Abbatemaggios revelations sixty orders of arrest were sent forth in 1907 and several of the culprits fled. Rapi escaped to Paris; Erricone, after having been concealed for a few weeks near Naples, fled to New York under an assumed name and with a forged passport, where he was finally discovered, together with other Camorristas, by Police Lieutenant Petrosino, who brought about his deportation to Havre. There, by arrangement between the Italian and French Governments, he was arrested. Rapi was seized on the 25th of July, 1908, on a train between Rome and Naples, by Marshal Capuzzuti.”—E. Scrao, *Truth about the Camorra*, (*Outlook*, July 29, 1911, pp. 717, 719).—“At Viterbo, Italy, a trial began [Mar. 11, 1911] of upwards of thirty Neapolitan Camorristas, charged with the murder of Gennaro Cuocolo and his wife on June 5, 1906. The prisoners were in an iron cage in court, the informer Abbatemaggio being protected by another cage. Great difficulty was found in empanelling a jury.”—*Annual Register*, 1911, p. 9 (*Chronicle*).—“At Viterbo, Italy, the Camorra trial closed [July 8, 1912] after about 300 sittings. Four persons were found guilty of the murder of Signor Cuocolo in Naples on June 5, 1906, two of that of his wife, and four others of plotting and commanding the crime. Eight of these prisoners were sentenced to thirty years' imprisonment and others associated with the crime (one a priest) were convicted and sentenced to shorter terms.”—*Annual Register*, 1912, p. 24 (*Chronicle*).

CAMP FIRE GIRLS.—“Camp Fire is an organized effort to find romance, beauty, and adventure in every day life. It seeks to make the homely task contribute to the joy of every day living. . . . It seeks to develop the home spirit, and make it dominate the life of the entire community. . . . Fire is the symbol of the organization, for around it the first homes were built. Camp Fire stands not only for the home, but also for the genuineness and simplicity of the out-of-doors.”—*Manual of activities for the girls of America*, pp. 3, 6.—Camping, outdoor athletics, and nature lore are prominent features of the program, as well as the care of little children, hygiene and first aid, and the various crafts and graces of the home. The latter group of activities distinguishes the organization from a mere feminine version of Boy Scouts. Lady Baden-Powell's Girl Scouts of England are a similar group, but in no way connected. The American organization was founded in 1912 by Dr. and Mrs. Luther Halsey Gulick. Local groups are under the guidance of an older guardian, usually a woman of special training. The total membership is now (January, 1921) 125,000 girls, plus 7,000 guardians; and in addition to the national headquarters at New York there are local headquarters, with an executive secretary in charge, in twelve of the leading cities of the United States.

CAMPAGNA, or Campania, a district of Italy lying in classical times between Latium and Samnium along the Tyrrhenian sea known to the Romans as Campani and to later Greek writers (first century A. D.) as Campania. It was considerably smaller than modern Campania and varied in size during different periods of Roman history, reaching its greatest extent under Diocletian. Its earliest inhabitants, the Ausones and Osci were overcome by the Etruscans who in turn were conquered by the Romans. Capua, the chief city of Campania, was destroyed by the Romans in 211 B. C. for deserting to Hannibal. It is a land of remarkable fertility and beauty of scenery, in consequence of which it was known to the ancients as *felix*. The Romans covered it with a network of roads which reached out to all the important towns, and its chief harbor Puteoli was of considerable commercial importance during the second and first century B. C. The attractiveness of its climate made it a favorite summer resort of Roman nobles, whose villas lined its shores especially in the neighborhood of Baiae. “The name of Campania,” says Pelligrini, ‘which was first applied to the territory of Capua alone, extended itself by successive re-arrangements of the Italian provinces over a great part of Central Italy, and then gradually shrank back again into its birth-place, and at last became restricted to the limits of one city only, Naples, and that one of the least importance in Italy. What naturally followed was the total disuse of the name.’ . . . The term Campania, therefore, became obsolete except in the writings of a few mediaeval authors, whose statements created some confusion by their ignorance of the different senses in which it had at different times been used. An impression seems, however, to have prevailed that the district of Capua had been so named on account of its flat and fertile nature, and hence every similar tract of plain country came to be called a *campagna* in the Italian language. The exact time when the name,

which had thus become a mere appellative, was applied to the Roman Campagna is not accurately ascertained. . . . It will be seen that the term Roman Campagna is not a geographical definition of any district or province with clearly fixed limits, but that it is a name loosely employed in speaking of the tract which lies round the city of Rome."—R. Burn, *Rome and the Campagna*, ch. 14, note at end.—See also CUMAE: ROME: Map of ancient Italy; SABINES; SAMNITES.

CAMPUS MARTIUS, Rome.—"The history of the Campus Martius presents us with a series of striking contrasts. It has been covered in successive ages, first by the cornfields of the Tarquinian dynasty, then by the parade ground of the great military republic, next by a forest of marble colonnades and porticoes, and, lastly, by a confused mass of mean and filthy streets, clustering round vast mansions, and innumerable churches of every size and description. . . . During the time of the Republic, the whole Campus seems to have been considered state property and was used as a military and athletic exercise ground and a place of meeting for the comitia centuriata."—R. Burn, *Rome and the Campagna*, ch. 13, pt. 1.—"We have hitherto employed this name to designate the whole of the meadow land bounded by the Tiber on one side, and on the other by the Collis Hortulorum, the Quirinal and the Capitoline. . . . But the Campus Martius, strictly speaking, was that portion only of the flat ground which lies in the angle formed by the bend of the stream. According to the narrative of Livy, it was the property of the Tarquins, and upon their expulsion was confiscated, and then consecrated to Mars; but Dionysius asserts that it had been previously set apart to the god and sacrilegiously appropriated by the tyrant. . . . During the republic the Campus Martius was employed specially for two purposes. (1) As a place for holding the constitutional assemblies (comitia) especially the Comitia Centuriata, and also for ordinary public meetings (conciones). (2) For gymnastic and warlike sports. For seven centuries it remained almost entirely open. . . . In

the Comitia, the citizens, when their votes were taken, passed into enclosures termed septa, or ovilia, which were, for a long period, temporary wooden erections."—W. Ramsay, *Manual of Roman antiquities*, ch. 1.—See also **ROME**: Map of ancient Italy.

CAMULODUNUM, modern Colchester. It was a stronghold of the Britons in antiquity. See **BRITAIN**: 43-53; 61; **COLCHESTER**.

CANAAN, CANAANITES.—"Canaan signifies 'the lowlands,' and was primarily the name of the coast on which the great cities of Phœnicia were built. As, however, the inland parts of the country were inhabited by a kindred population, the name came to be extended to designate the whole of Palestine, just as Palestine itself meant originally only the small territory of the Philistines."—A. H. Sayce, *Fresh light from the ancient monuments*, ch. 2.

"The meaning of the name Canaan is uncertain. It has commonly been supposed to denote 'lowland' and to stand in contrast to 'Amor,' 'Highland'; but this is very doubtful. The root *can* means 'to be humbled,' not 'to be low,' and, in view of the use of 'Amurru' in Babylonian as a racial name, it is improbable that 'Amor' has anything to do with 'highland.' Neither in Egyptian sources nor in the Old Testament is the name Canaan limited to the low plain along the coast. It is possible that the Hebrews, or even the Canaanites before them, accepted the etymologies 'lowland' and 'highland' for Canaan and 'Amor'; but it does not follow from this that these were the primitive meanings of the words. Canaan is probably originally a racial rather than a geographical name. [Who the original inhabitants of Canaan were is not clear, but they are supposed to have been overrun successively by Amorites, Hyksos, Canaanites and Hebrews.] The relation of the Hyksos-Canaanites to the Amorites is a disputed question. . . . Evidence is abundant that the language of the Hyksos-Canaanites did not differ materially from that of the Amorites. . . . In the cuneiform Amarna letters numerous Hebraisms have been detected, which prove that about 1400 B. C. Hebrew was spoken in Palestine. . . . In the time of the first dynasty of Babylon, *i. e.*, during the period of the great Amoritic migration, proper names of a pure Hebraic type appear simultaneously in Babylonia, Egypt and Canaan. This shows that the language of the Amorites cannot have differed widely from that of the Hyksos-Canaanites.

"I conclude, accordingly, that the Hyksos-Canaanites are to be regarded as one of the later waves of the Amoritic invasion rather than as an independent migration, such as the Babylonian, the Aramæan, or the Arabian, all of which are distinguished by marked linguistic peculiarities. Presumably they were Amoritic tribes of Mesopotamia who were dislodged by the advancing hordes of the Kassites and Mitanni and were compelled to seek new homes. In Mesopotamia they had come under the influence of Babylonian civilization; and when they entered Canaan, they amalgamated with the kindred Amoritic population and maintained its civilization unchanged. The common opinion that the Hyksos were barbarians rests upon no good evidence. On the contrary, their kings patronized

art and literature, and a more extended commerce sprang up under their rule than had existed at any previous period of Egyptian history. Neither in Egypt nor in Palestine is there any sign of an overturning of civilization."—L. B. Paton, *Early history of Syria and Palestine*, pp. 68-70.—"In the geographical table in the tenth chapter of Genesis Canaan is stated to be the son of Ham and the brother of Mizraim or Egypt. The statement indicates the age to which the account must go back. There was only one period of history in which Canaan could be geographically described as a brother of Egypt, and that was the period of the eighteenth and nineteenth dynasties, when for a while it was a province of the Pharaohs. At no other time was it closely connected with the sons of Ham. At an earlier epoch its relations had been with Babylonia rather than with the valley of the Nile, and with the fall of the nineteenth dynasty the Asiatic empire of Egypt came finally to an end. The city of Sidon, we are further told, was the firstborn of Canaan. It claimed to be the oldest of the Phœnician cities in the 'lowlands' of the coast. It had grown out of an assemblage of 'fishermen's' huts, and Said, the god of the fishermen, continued to preside over it to the last. The fishermen became in time sailors and merchant-princes, and the fish for which they sought was the murex with its precious purple dye. Tyre, the city of the 'rock,' which in later days disputed the supremacy over Phœnicia with Sidon, was of younger foundation. . . . The wider extension of the name of Canaan brought with it other geographical relationships besides those of the sea-coast. Hittites and Amorites, Jebusites and Gishgashites, Hivites and the peoples of the southern Lebanon, were all settled within the limits of the larger Canaan, and were therefore accounted his sons. Even Hamath claimed the right to be included in the brotherhood. It is said with truth that 'afterwards were the families of the Canaanites spread abroad'. . . . In entering Canaan, Abraham would have found himself still surrounded by all the signs of a familiar civilization. The long-continued influence and government of Babylonia had carried to 'the land of the Amorites' all the elements of Chaldæan culture. Migration from Ur of the Chaldees to the distant west meant a change only in climate and population, not in the civilization to which the patriarch had been accustomed. Even the Babylonian language was known and used in the cities of Canaan, and the literature of Babylonia was studied by the Canaanitish people. This is one of the facts which we have learnt from the discovery of the Tel el-Amarna tablets. The cuneiform system of writing and the Babylonian language had spread all over western Asia, and nowhere had they taken deeper root than in Canaan. Here there were schools and teachers for instruction in the foreign language and script and record-chambers and libraries in which the letters and books of clay could be copied and preserved."—A. H. Sayce, *Patriarchal Palestine*, pp. 36-37, 60.—See also **HAMITES**; under **Jews**: Early Hebrew history, Conquest of Canaan, Early Semitic migrations; **PHœNICIANS**: Origin; **SEMITES**; **CHRISTIANITY**; Map of Canaan.

CANADA

Geographical description.—"In area and population Canada is the largest of the dominions. Politically and economically it is, with the possible exception of India, the most interesting of the British oversea possessions. It embraces the northern half of the North American continent, with its adjacent islands in the Arctic Ocean, but exclusive of Alaska in the extreme northwest, the island of Newfoundland, and the small islands of St. Pierre and Miquelon which are colonies of the French republic. The total area of the Dominion is 3,729,665 square miles. Of this, 309,000 square miles are comprised in the arctic islands. Newfoundland, the oldest of the British oversea possessions in the New World, has an area of 42,000 square miles; and the aggregate area of these two dominions—Canada and Newfoundland—is 3,771,665 square miles. This is a little more than the area of the United States; larger by 640,333 square miles than the combined area of the commonwealth of Australia and the dominion of New Zealand, and not much smaller than the aggregate area of all the countries of Europe. The Atlantic and Pacific coasts of the United States are much straighter than those of the Dominion. The Canadian coastline on both oceans is much indented with gulfs and bays—particularly the Atlantic coast. These gulfs and bays are good feeding and breeding grounds for fish. They also afford many harbors and havens for fishermen, thus giving Canada the most extensive sea-fisheries in the world. Hudson Bay, a sea 800 miles from north to south, and 600 miles in width—is wholly within the Dominion. For two centuries Hudson Bay had great influence on exploration and trade in Canada. With the enormous development of grain growing in what are now the provinces of Manitoba, Saskatchewan, and Alberta, between 1898 and 1916, and with the construction by the Dominion government in the years from 1910 to 1916 of a harbor, with wharfs and elevators for the grain trade, at Port Nelson, and a railway 410 miles long from Le Pas, Manitoba, to this new port, Hudson Bay is again of importance in the trade and transport economy of the large area of Canada that lies between the Great Lakes and the Rocky Mountains. Canada has a common use with the United States of all the Great Lakes—Ontario, Erie, Huron, Michigan, and Superior; and also a common use of the St. Lawrence from its source in Lake Ontario to the Atlantic Ocean. Since 1854, when by treaty the United States conceded the privilege of free navigation of Lake Michigan to Canada, and Great Britain conceded to the United States the navigation of the St. Lawrence, both countries have had joint use of the series of magnificent canals—Canadian and American—that make navigation possible from Lake Superior to tidewater below Montreal. The St. Lawrence occupies an even larger place than Hudson Bay in the history of Canada, particularly as regards exploration and trade, and incidentally as regards diplomatic relations with the United States. In the sixteenth century it opened a route for exploration, colonization, and trade. It led Cartier, the explorer, in 1535 to the sites now occupied by the cities of Quebec and Montreal. . . . As the Dominion embraces almost half the North American continent, it has a diversified climate. On the Pacific coast, with the ocean on one side and lofty mountain ranges on the other, the climate is moist and temperate. East of the Rocky Mountains, on the high

level plateaus of Alberta, Saskatchewan, Manitoba, and the northwest territories, the climate is characterized by extremes of temperature, but is bright, dry, bracing, and healthy. East of Manitoba the extremes of heat and cold are modified by the Great Lakes. In the valleys of the Ottawa and St. Lawrence a cold but bright and exhilarating winter is followed by a long and warm summer. The maritime provinces, lying between the same parallels of latitude as France, and with shores washed by the Atlantic, are equally favored in climate. The opening of spring in the maritime provinces is usually a little later than in Ontario or in the prairie provinces, and a little earlier than in the lower St. Lawrence valley. On the other hand summer lingers longer, especially in the Annapolis valley. Summer in the Maritime Provinces is not as a rule quite so warm as in western Canada. Great heat is seldom experienced, except very occasionally at inland places in New Brunswick. From Alberta to the Maritime Provinces there is in the winter much snow. It lies deep over this area from November or December until March. But the value of this covering of snow cannot be overestimated. It protects the roots of trees and herbage during the severe weather, and east of the Lakes it also greatly facilitates the lumber industry. The Great Lakes never freeze over, but ice closes the harbors from the middle of December until the beginning of April. The average date of the closing of navigation on the St. Lawrence at Montreal is December 16, and of its opening April 21. Harbors in the Gulf of St. Lawrence are likewise closed by ice during the winter months. On the Bay of Fundy and the coast of Nova Scotia, harbors are open all the year round. Halifax and St. John, by this freedom from ice, obtain their importance as the Atlantic winter ports of the Dominion. In particular they owe to this great advantage over the St. Lawrence ports their constantly increasing importance on the national grain route—lake, canal, and rail—which stretches from Port Arthur and Fort William on Lake Superior to the Atlantic seaboard. The coal fields and coal deposits of the Dominion are the most extensive and best known of its mineral resources. The known area underlain by workable coal beds is nearly 30,000 square miles. Notwithstanding the vastness of these deposits, the total quantity of coal annually mined in Canada is less than half of the country's consumption. The coal fields are found principally in the coast provinces—Nova Scotia, New Brunswick, and British Columbia—and in Alberta. The central provinces, Ontario and Quebec,—in which in 1916, four sevenths of the total population was concentrated,—are without coal. They are nearer to Pennsylvania, Ohio, and Indiana than to any of the coal-producing provinces; and consequently they find it more economical to draw their supplies of coal—bituminous as well as anthracite—from these American coal fields. American coal in large quantities is also imported by the prairie provinces. Anthracite, and some special bituminous coals from Pennsylvania, are used as far west of Lake Superior as Winnipeg and Brandon."—E. Porritt, *Evolution of the Dominion of Canada*, ch. 2, pp. 13-20.—See also CONSERVATION OF NATURAL RESOURCES: Canada: 1879-1921; BRITISH EMPIRE: extent.

Also in: C. Lucas, *Historical geography of the British colonies*, v. 5.—*Oxford survey of the British Empire*, v. 4.

Agriculture.—When all is said, the fact remains that Canada is essentially an agricultural country and that, with the exception of New Brunswick, a large proportion of the wealth of all the provinces is produced by the farming community. "In Nova Scotia, agriculture is important in the lowland areas especially. Hay and clover form the principal crops . . . while the potatoes are the best grown in Canada. The average production of apples is about 1,000,000 barrels. [Turnips, wheat, and barley are also extensively grown. Dairy products—creamery butter and cheese—and wool are also important items in connection with agriculture. In New Brunswick hay and cereals grow abundantly in the fertile dyked land at the head of the Bay of Fundy, and along the St. John River and its tributary the Tobique. Stock raising is also practised but New Brunswick is still chiefly a forest province.]—L. W. Lyde, *Commercial and Statistical Survey, in New World of Today* (A. R. H. Moncrieff, ed.), v. iii, pp. 249, 250.—Oats and potatoes are the staple crops of Prince Edward Island. "The farmers of recent years are commencing to grow maize for fodder; barley is also a favorite crop and is extensively grown. . . . A Provincial Government Experimental Farm has been maintained for nearly half a century in which dairy, stock, and horticultural experiments are made and applied. . . . The St. Lawrence provinces of Canada have, from their first discovery, been noted for their agricultural wealth. . . . The valleys of the Richelieu, the Ottawa, and St. Lawrence are now renewing their youth with mixed farming, and, while it is impossible to compete in wheat growing with the new Northwest, the proximity to a market gives the Quebec farmer an advantage in other crops. . . . All the ordinary crops are produced—wheat, barley, rye, oats, maize, peas, together with pumpkins, melons, tomatoes, potatoes, and other vegetables grown in temperate climates. Fruits, such as apples, plums, cherries, and pears are raised in large quantity. There are no experimental fruit stations in the province. Grapes are grown in the open air near Montreal, and . . . [large quantities of tobacco are also raised]. Much attention is given to stock raising and dairying."—*Stanford's Compendium of Geography, (H. M. Ami, ed.), North America, v. 1, pp. 341, 343.*—Ontario produces wheat, barley, oats, rye, buckwheat, mixed grains (corn), potatoes, turnips, hay, clover. "The making of butter and cheese forms one of the chief industries of Ontario. Nearly 92 per cent of the total manufacture of Canadian cheese is from Quebec and Ontario, but Ontario produces nearly twice as much cheese as Quebec. Nearly 71 per cent of the total production of butter in Canada is from Quebec and Ontario, but in this Quebec leads."—L. W. Lyde, *Commercial and Statistical Survey in New World of Today* (A. R. H. Moncrieff, ed.), v. iii, p. 254.—"In the more southern part of Ontario grapes are extensively grown for the manufacture of wine, and the business of grape-growing . . . has increased very rapidly [in recent years]. . . . In the same province peach-growing gives a livelihood to a number of people. . . . Ontario is, above all, the province where agriculture has been most scientifically carried on, and, where the climate and conditions are suitable, the greatest results have been achieved." Wheat is a staple crop in the southern part of the province, which grows the finest barley on the continent, and raises the finest cattle. All the productions of temperate regions grow throughout its extent and even beyond the watershed of Hudson Bay in the great fertile 'Clay Belt' at the north.—*Stanford's Compendium*

of Geography (H. M. Ami, ed.), North America, v. 1, pp. 68, 498.

The history of agriculture in the Canadian North West is dramatic in its interest. When Ontario was settled, after the American Revolution, it was believed that the great plain north of Lake Superior was fit only for a fur preserve. When the Canadian Pacific Railway was built, as a bridge to connect British Columbia with the East, its opponents declared that "it would not pay for axle grease." As late as 1885 emigrants were warned against going as far as Winnipeg. Up to the close of the nineteenth century, Saskatchewan was spoken of as a "frozen and barren wilderness." In 1900 dwellers in the south of Alberta scoffed at the idea of grain being grown north of Edmonton. Yet, in spite of climatic drawbacks, agriculture is being carried on successfully in every one of these provinces. "Melons, maize, pumpkins, beans, and tomatoes are crops in Manitoba, and may be grown even in latitude 53° north, on the North Saskatchewan. . . . Seeding usually begins the first week in April, and the summer season is of ample length and warmth to ripen the crops of wheat, oats, barley, rye, flax, besides garden and orchard products. . . . The soil of Manitoba . . . is for the most part a deep rich mould or loam, inexhaustible in its elements of fertility and productiveness, especially in the center belt of the southern part of the province. . . . Though especially adapted for wheat growing—'Manitoba No. 1 hard wheat' being reputed by highest authorities to be second to none in the world—the soil of the province produces other field crops bountifully, as the harvest returns for the past 40 years have shown."—*Stanford's Compendium of Geography, (H. M. Ami, ed.) North America, v. 1, pp. 68, 584, 595, 596, 597.*—"The remarkable fertility of the soil, the favorable climate, and the levelness of the country, have contributed to make Saskatchewan one of the best and largest grain-producing areas in the world. The acreage under crops in 1919 was said to be three times as great as the area in Manitoba. Hard spring wheat is the principal crop, but oats, barley . . . are also grown. Although Alberta began its career as a ranching province, it is now a great agricultural area. It grows wheat, oats, barley, rye and potatoes, and also produces a great and increasing quantity of dairy produce."—L. W. Lyde, *Commercial and Statistical Survey in New World of Today* (A. R. H. Moncrieff, v. 3, p. 254.—"Part of the most fertile region of this province requires to be irrigated. Mixed farming has come into favor in the province, which is well sheltered by the Rocky Mountains. Although the province of British Columbia will always be thought of first as a country of minerals, lumber, and productive fisheries, it contains many areas of fertile land. . . . Professor Macoun has stated that 'the whole of British Columbia south of 52°, east of the Coast Range, is a grazing country up to 3500 feet elevation, and a farming country up to 2500 feet, wherever irrigation is possible or the precipitation sufficient.' Wheat is grown in the Fraser, Okanagan, and Spillimacheen valleys, and in the Kamloops country. Barley and oats, potatoes, . . . [and] roots grow in profusion wherever cultivation has been attempted. Hop culture is carried on in . . . some districts. Sugar-beets, tobacco, and celery are also cultivated. West of the mountains in the deltas of the Fraser and other rivers, . . . on the lower reaches of the Fraser [and in Queen Charlotte Islands and on Vancouver Island, as well as in the river valleys] there is a large area of productive land. Southern British Columbia is one of the finest fruit countries in the world. . . .

Apples especially do very well. . . . Peaches grow well in all the valleys south of the main line of the Canadian Pacific Railway; whilst grape-growing in the same areas is proving successful."—*Stanford's Compendium of Geography* (H. M. Ami, ed.), *North America*, v. 1, pp. 58, 66, 341-343, 263, 584, 595, 596, 597, 633, 635, 795-799.

"The estimated capital invested in Canadian agriculture was, in 1918, as follows: \$2,792,229,000 in Improved lands, \$927,548,000 in Buildings, \$387,979,000 in Implements and \$1,102,261,000 in Live-Stock or a total of \$5,209,117,000; the average increase in the value of farm lands, including farm buildings, was 36.8 per cent. in the five years of 1914-19 or from \$38.00 per acre in 1914 to \$40.00 in 1915, \$41.00 in 1916, \$44.00 in 1917, \$46.00 in 1918, to \$52.00 in 1919. The values of Canadian Field crops were \$638,580,300 in the year the War commenced, 1914, and after that they steadily increased in totals as follows: \$825,370,600 in 1915, \$886,494,900 in 1916, \$1,144,636,450 in 1917, \$1,367,909,970 in 1918 and \$1,452,787,900 in 1919."—J. Castell Hopkins, *Canadian Annual Review*, 1919, pp. 321, 325.—"In 1920 [the value of all field crops grown in Canada was] . . . 1,455,244,050, [and that of the wheat crop] \$427,357,300. In 1920 the Dominion obtained for the first time in her history a billion dollar crop, more than trebling the value of the crop grown a decade previously. . . . A striking feature of the 1921 harvest in the Canadian Western provinces is the quantity of corn to be seen on every hand."—*Agricultural and industrial progress in Canada*, v. 3, No. 11, Nov., 1921, pp. 201, 203.—"The Dominion achieved a new record in dairy production in 1920 with an output valued at \$144,483,188 which was nine million dollars in excess of the previous year's production. . . . Cheese made in factories during the year aggregated 149,521,008 pounds. In addition to those two products condenseries turned out 53,980,993 pounds of condensed milk; 39,360,642 pounds of evaporated milk, and 7,574,668 pounds of milk powder."—*Agricultural and industrial progress in Canada*, v. 3, No. 8, Aug., 1921, p. 144.

Names.—"The year after the failure of Verrazano's last enterprise, 1525, Stefano Gomez sailed from Spain for Cuba and Florida; thence he steered northward in search of the long hoped-for passage to India, till he reached Cape Race, on the south-eastern extremity of Newfoundland. The further details of his voyage remain unknown, but there is reason to suppose that he entered the Gulf of St. Lawrence and traded upon its shores. An ancient Castilian tradition existed that the Spaniards visited these coasts before the French, and having perceived no appearance of mines or riches, they exclaimed frequently 'Aca nada' [signifying 'here is nothing']; the natives caught up the sound, and when other Europeans arrived, repeated it to them. The strangers concluded that these words were a designation, and from that time this magnificent country bore the name of Canada. . . . Father Hennepin asserts that the Spaniards were the first discoverers of Canada, and that, finding nothing there to gratify their extensive desires for gold, they bestowed upon it the appellation of Capo di Nada, 'Cape Nothing,' whence by corruption its present name. . . . La Potherie gives the same derivation. . . . This derivation would reconcile the different assertions of the early dis-

coverers, some of whom give the name of Canada to the whole valley of the St. Lawrence; others, equally worthy of credit, confine it to a small district in the neighbourhood of Stadacona (now Quebec) . . . Duponceau, in the Transactions of the [American] Philosophical Society, of Philadelphia, founds his conjecture of the Indian origin of the name of Canada upon the fact that, in the translation of the Gospel of St. Matthew into the Mohawk tongue, made by Brandt, the Indian chief, the word Canada is always used to signify a village. The mistake of the early discoverers, in taking the name of a part for that of the whole, is very pardonable in persons ignorant of the Indian language. . . . The natural conclusion . . . is, that the word Canada was a mere local appellation, without reference to the country; that each tribe had their own Canada, or collection of huts, which shifted its position according to their migrations."

—E. Warburton, *Conquest of Canada*, v. 1, ch. 1, and foot-note.—"Canada was the name which Cartier found attached to the land and there is no evidence that he attempted to displace it. . . . Nor did Roberval attempt to name the country, while the commission given him by the king does not associate the name of Francis or any new name therewith. . . . There seems to have been a belief in New England, at a later day, that Canada was derived from William and Emery de Caen (Cane, as the English spelled it), who were in New France in 1621, and later."—B. F. De Costa, *Jacques Cartier and his successors* (*Narrative and critical history of America*, v. 4, ch. 2), and Editor's foot-note.—"Cartier calls the St. Lawrence the 'River of Hochelaga,' or 'the great river of Canada.' He confines the name of Canada to a district extending from the Isle aux Coudres in the St. Lawrence to a point at some distance above the site of Quebec. The country below, he adds, was called by the Indians Saguenay, and that above, Hochelaga. In the map of Gerard Mercator (1569) the name Canada is given to a town, with an adjacent district, on the river Stadin (St. Charles). Lescarbot, a later writer, insists that the country on both sides of the St. Lawrence, from Hochelaga to its mouth, bore the name of Canada. In the second map of Ortelius, published about the year 1572, New France, Nova Francia is thus divided:—"Canada," a district on the St. Lawrence above the River Saguenay; 'Chilaga' (Hochelaga), the angle between the Ottawa and the St. Lawrence; 'Saguenai,' a district below the river of that name; 'Moscosa,' south of the St. Lawrence and east of the River Richelieu; 'Avacal,' west and south of Moscosa; 'Norumbega,' Maine and New Brunswick; 'Apalachen,' Virginia, Pennsylvania, etc.; 'Terra Corterealis,' Labrador; 'Florida,' Mississippi, Alabama, Florida. Mercator confines the name of New France to districts bordering on the St. Lawrence. Others give it a much broader application. The use of this name, or the nearly allied names of Francisca and La Franciscane, dates back, to say the least, as far as 1525, and the Dutch geographers are especially free in their use of it, out of spite to the Spaniards. The derivation of the name of Canada has been a point of discussion. It is, without doubt, not Spanish, but Indian. . . . Lescarbot affirms that Canada is simply an Indian proper name, of which it is vain to seek a meaning. Belleforest also calls it an Indian word, but translates it 'Terre,' as does also Thevet."—F. Parkman, *Pioneers of France in the New World: Champlain*, ch. 1, foot-note.

1592-1603.—Early attempts at colonization.—“As the sixteenth century drew to a close, a patent was issued by the French King to a Breton nobleman, the Marquis de la Roche, to colonize in North America. The terms of the patent were preposterously wide, conferring sovereignty over Canada, together with a monopoly of trade. The results were proportionately small. La Roche set sail in 1598, in a single ship with a cargo of convicts. He landed them at Sable Island, off the coast of Nova Scotia, and sailed back to France, leaving them to their fate. Five years later, in 1603, eleven of the number, who had survived, were rescued and brought home again. About a year after La Roche's fruitless voyage, in 1599 or 1600, two other Frenchmen, Chauvin, a sea captain, and Pontgrivé, a St. Malo merchant, also obtained a patent to colonize in Canada. Their object was to monopolize the fur trade, and they attempted a settlement at Tadoussac, where the Saguenay river flows into the St. Lawrence. During a whole winter a small party was left at the station, but no permanent colony was formed; and a second and third voyage had no lasting results. Chauvin died, and in 1602 or 1603 a new patent was granted to De Chastes, a man of rank and station, who associated with himself Pontgrivé, and secured the services of Samuel Champlain.”—C. P. Lucas, *Historical geography of the British colonies*, pp. 39-40.

1603-1605.—Beginning of Champlain's career in the New World.—Colonization at Port Royal.—Exploration of the New England coast.—In Pontgrivé's expedition of 1603 to New France “Samuel de Champlain, a captain in the navy, accepted a command . . . at the request of De Chatte [or De Chastes]; he was a native of Saintonge, and had lately returned to France from the West Indies, where he had gained a high name for boldness and skill. Under the direction of this wise and energetic man the first successful efforts were made to found a permanent settlement in the magnificent province of Canada, and the stain of the errors and disasters of more than seventy years was at length wiped away. Pontgrivé and Champlain sailed for the St. Lawrence in 1603,” explored it as far as the rapids of St. Louis, and then returned to France. They found that the patron of their undertaking, De Chastes, was dead. “Pierre du Guast, Sieur de Monts, had succeeded to the powers and privileges of the deceased, with even a more extensive commission. De Monts was a Calvinist, and had obtained from the king the

freedom of religious faith for himself and his followers in America, but under the engagement that the Roman Catholic worship should be established among the natives. . . . The trading company established by De Chatte was continued and increased by his successor. With this additional aid De Monts was enabled to fit out a more complete armament than had ever hitherto been engaged in Canadian commerce. He sailed from Havre on the 7th of March, 1604, with four vessels. Of these, two under his immediate command were destined for Acadia. Champlain, Poutrincourt, and many other volunteers, embarked their fortunes with him, purposing to cast their future lot in the New World. A third vessel was dispatched under Pontgrivé to the Strait of Canso, to protect the exclusive trading privileges of the company. The fourth steered for Tadoussac, to barter for the rich furs brought by the Indian hunters from the dreary wilds of the Saguenay. On the 6th of May De Monts reached a harbor on the coast of Acadia.”—E. Warburton, *Conquest of Canada*, v. 1, ch. 3.—For some reason not to be understood, his projected colony was quartered on the little islet of St. Croix, near the mouth of the river of that name, which became subsequently the boundary between Maine and New Brunswick. Meantime, the fine harbor, now Annapolis, then named Port Royal, had been discovered, and was granted, with a large surrounding territory, by De Monts to De Poutrincourt, who proposed to settle upon it as its feudal proprietor and lord. The colony at St. Croix having been housed and put in order, De Poutrincourt sailed for France, intending to bring his family and establish himself at Port Royal. De Monts, Champlain, and those who remained, suffered a winter of terrible hardships, and thirty-five died before spring. De Monts now resolved to seek a better site for his infant settlement, and, finding no other situation so good he resumed possession of that most desirable Port Royal which he had granted away to Poutrincourt and removed his colony thither. Champlain, meanwhile, in the summer of 1605, had explored the coast southward far down the future home of the English Puritans, looking into Massachusetts Bay, taking shelter in Plymouth harbor and naming it Port St. Louis, doubling Cape Cod (which he called Cap Blanc), turning back at Nausett Harbor, and gaining on the whole a remarkable knowledge of the country and its coast. Soon after Champlain's return from this coasting voyage, De Monts was called home to France, by news of machinations that were threatening to extinguish his patent, and Pontgrivé was left in command of the colony at Port Royal. In De Monts' petition to the king for leave to colonize Acadia that region was defined “as extending from the 40th to the 46th degree of north latitude, or from Philadelphia to beyond Montreal.”—F. Parkman, *Pioneers of France in the New World: Champlain*, ch. 3.

1606-1608.—Fortunes of the Acadian colony.—“In the following summer, ships came back from France just in time to prevent the settlement at Port Royal from being broken up in despair. They brought with them the advocate Lescarbot, the historian of New France. Again there was exploring down the American coast, and again Champlain and his associates held their own through the winter. The outlook of the little colony was promising. The season was mild, the natives were friendly, supplies were plentiful, gardens were laid out and corn was sown. But in the late spring of

1607 news came from home that the patent had been cancelled, and before the summer ended Port Royal was abandoned. For nearly three years the place was left desolate, and then, in 1610, one of De Monts' associates came back again. It was the Baron de Poutrincourt, to whom the harbour, when first discovered, had been granted by De Monts. The Jesuits were at the time strong at the French court, stronger still after the assassination of King Henry IV in this same year. They, or the ladies of the court, who were their tools, bought shares in the venture, and Jesuit priests went out to Acadia, thwarting and quarrelling with Poutrincourt and his son. Both the two great dangers which always threatened and finally ruined the French power in North America came into being at this date, the exclusive influence of the Jesuits and English competition."—C. 1608-1611.—Champlain's third and fourth expeditions.—Settlement at Quebec, discovery of Lake Champlain, and first wars with the Iroquois.—"De Monts in no way lost heart, and he resolved to continue in the career of exploration for settlement. A new expedition was determined on, and De Monts selected the Saint Lawrence as the spot where the effort should be made. Champlain counseled the change. In Nova Scotia and on the coast of New Brunswick and Maine he had been struck by the number of ports affording protection to vessels from sea, and by the small number of Indians whom he had met. In Nova Scotia he would be exposed to rival attempts at settlement, and at the same time he could not see the possibility of obtaining Indian allies. In Canada the full control would remain with those who first made a settlement on the Saint Lawrence, and Champlain counted the native tribes as powerful

instruments in carrying out his policy. We have the key here to his conduct in assisting the Hurons in their wars. . . . In 1608 Champlain started for the St. Lawrence. Pontgravé was with the expedition. A settlement was made at Quebec, as the most suitable place. . . . The summer was passed in completing the 'Abitation de Quebec,' of which Champlain has left us a sketch. . . . It was here Champlain laid the foundation for the future city. . . . With the view of making explorations beyond the points then known by Europeans, Champlain in the middle of June ascended the St. Lawrence. . . . With his Indian allies he ascended the Richelieu and reached Lake Champlain [July, 1600], the first white man who saw its waters: subsequently for 165 years to be the scene of contest between the Indian and white man, the French and English, the revolted Colonies and the Mother Country."—W. Kingsford, *History of Canada, bk. 1, ch. 3-4.*—"On June 18, 1609, Champlain ascended the St. Lawrence with a party of French and savages, and found two or three hundred Hurons and Algonquins encamped not far from the river that led to a southern lake. These Indians were preparing to proceed with the Montagnais on a war-path towards the Iroquois. It was a hopeful meeting. The Indian chief, at a council which was held, gave Champlain to understand that he must needs cement the alliance which their friendly intercourse in 1603 and his recent promises to the Montagnais, had foreshadowed. He did not hesitate to do so by agreeing to join in their enterprise. . . . Champlain and his savage allies sped up the river and along the lake, and at a point identified as the modern Ticonderoga they met in the night a war party of the Iroquois. Waiting till daylight, they began the battle. Champlain describes the fight, and shows how the apparition of the Frenchmen, with their arquebuses, leveling their enemies with unseen bolts amid deadly noises, struck terror into the ranks of the adversary and secured an easy victory for the invaders. . . . [The resulting hatred of the Iroquois for the French was one of the chief obstacles to the later attempts of the French to expand southwards.] Returned to Quebec, Champlain prepared to depart for France, leaving Pierre Chauvin in charge; and on October 13, 1609, he landed at Honfleur. Though De Monts's privileges had expired, the governor found him by no means discouraged, and quite ready for another venture. . . . With such prestige as Champlain had acquired, increased possibly by Les-carbot's account of him, it was not surprising that he was again selected to take recruits to the colony. Pontgravé went with him, and their two vessels, after some misfortunes in working off the coast,—for the spring was a boisterous one,—finally reached Tadoussac on April 26, 1610. Champlain had laid out plans for new explorations, for the secrets of the Saguenay and the Ottawa were still undivulged. He found, however, the Indians too intent on their yearly invasion of the Iroquois country to be diverted from it, and without their aid exploration was not to be thought of. He joined their camp near the mouth of the Richelieu River, and led them to an attack on an Iroquois barricade, which had been hastily constructed, not far up the river. The attack was so successful that not a hostile savage escaped. . . . A few weeks later, a ship brought news of the assassination of Henry IV. The death of the king was a calamity to the colony. Having invested the Sieur du Parc with the command, and leaving sixteen men to hold the post, Champlain, with some feelings of uncertainty as to the effect in France of a change in the monarch, sailed from

Maps prepared specially for the NEW LARNED
under direction of the editors and publishers.

Tadoussac on August 13, and reached Honfleur on September 27."—J. Winsor, *Cartier to Frontenac*, pp. 95-100.—The death of Henry IV. exercised great influence on the fortunes of Canada. He had personally taken interest in Champlain's voyages, and his energetic mind was well qualified to direct the fortunes of a growing colony. Louis XIII. was not then ten years old. Mary of Medecis was under the control of her favorites, Leonora Galigai, and her husband, Concino Concini. Richelieu had not then appeared on the scene. . . . The Jesuits were becoming all-powerful at Court. . . . France was unsettled and disordered. The Protestants, not without provocation, were acting with passion and without judgment. The assassination of the King had alarmed them. The whole kingdom was threatened with convulsion and anarchy, and Canada was to pass out of the notice of those in power: and, in the sense of giving aid, half a century was to elapse before the French Government could comprehend the duty of taking part in the defence of the country, and of protecting the persons of those living in New France. The ground was to be regarded simply as a field for the active trader, side by side with the devoted missionary. Thus the Government fell virtually under the control of the Jesuits, who, impatient of contradiction, aimed only at the establishment of their authority, which was to bring the colony to the verge of destruction."—W. Kingsford, *History of Canada*, v. 1, bk. 1, ch. 3-4.

ALSO IN: E. B. O'Callaghan, ed., *Documentary history of New York*, v. 3, pp. 1-9.

1610-1613.—Acadian colony revived, but destroyed by the English of Virginia.—Port Royal was left uninhabited till 1610, when Poutrincourt returned at the instance of the king to make the new settlement a central station for the conversion of the Indians,—a work which made some Jesuit missionaries prominent in the history of the New World. His son followed in 1611, with Fathers Pierre Biard, and Enemond Masse. Madame la Marquise de Guercheville, a pious Catholic, to whom De Monts had ceded his title to Acadia, and to whom afterwards the French king granted the whole territory now covered by the United States, was the chief patroness of these voyages. Desiring to make another settlement, she despatched a vessel in 1613 with two more Jesuits, Father Quentin and Gilbert Du Thet, and forty-eight men under La Saussaye. "When they arrived at Port Royal, they only found five persons—Fathers Biard and Masse, their servant, the apothecary Hébert, and another. All the rest were absent, either hunting or trading. They showed the Queen's letter to Hébert, who represented Biencourt, in his absence, and taking the two Jesuits, with their servant and luggage aboard, again set sail. It was their intention to establish the colony at Pentagoet, which Father Biard had visited the year previous, but when off Grand Manan a thick fog came on, which lasted for two days, and when it became clear, they put into a harbor on the eastern side of Mount Desert Island, in Maine. The harbor was deep, secure and commodious, and they judged this would be a favorable site for the colony, and named the place St. Sauveur. . . . La Saussaye was advised by the principal colonists to erect a sufficient fortification before commencing to cultivate the soil, but he disregarded this advice, and nothing was completed in the way of defence, except the raising of a small palisaded structure, when a storm burst upon the colony, which was little expected by its founders."—J. Hannay, *History of Acadia*, ch. 5.—"Hardly had their tents been set up on the shore, when an English ship

came in sight, captured the French vessel, which was lying at anchor, uprooted the would-be colony, and took all the Frenchmen prisoners. The invaders hailed from Jamestown; they were commanded by Samuel Argall, an unscrupulous freebooter. His pretext was that the Frenchmen were taking up ground within the limits of the patents granted by the English King to his subjects, but his act was little more than piracy. Some of the Frenchmen were set adrift in an open boat, and eventually reached France in safety; the rest were carried prisoners to Jamestown, whence Argall set sail again, commissioned by the governor of Virginia to attack Port Royal. He reached, plundered, and burnt the fort, its commander, Biencourt, with the rest of the settlers, being absent in the fields, for it was harvest time; but the colony was not finally blotted out, and the French still kept a foothold in Acadia."—C. P. Lucas, *Historical geography of the British colonies*, pp. 42-43.

ALSO IN: W. C. Bryant and S. H. Gay, *Popular history of the United States*, v. 1, ch. 12.

1611.—Founding of Montreal.—"In 1611 Champlain again returned to America . . . and on the 28th of May proceeded in search of his allies, whom he was to meet by appointment. Not finding them he employed his time in choosing a site for a new settlement, higher up the river than Quebec. After a careful survey, he fixed upon an eligible spot in the vicinity of Mont Royal. His choice has been amply justified by the great prosperity to which this place, under the name of Montreal, has subsequently risen."—J. MacMullen, *History of Canada*, ch. 1.

1611-1612.—Champlain organizes enterprise for fur trading.—"His [Champlain's] barter for furs made him more familiar with the traders. He found their pursuits a competition which diminished their own profits, and hampered his efforts for discovery. It was evident that the trade in peltries, if to be worth pursuing, must be put on a different basis. On his return to France in September, 1611, he undertook the organizing of the Canadian experiment on a better commercial basis, and with this task he was occupied for the greater part of the following year. . . . The distractions which had followed upon the death of the king had begun to subside. Champlain found that a renewal of political quiet conducted to draw more attention to his plans, despite the opposition that their first promulgation had raised. One feature that he insisted upon was to give dignity to the enterprise by putting it under a viceroy of enlarged powers, and on October 8 the Count de Soissons was appointed to that position. He commissioned Champlain as his deputy, a few days later. With a newly awakened zeal Soissons set about the task of familiarizing himself with the project. Champlain had hardly begun to show and explain his maps when the viceroy suddenly died. The Prince de Condé was soon selected to succeed as viceroy, and more authority was assigned to him than had been before given to any royal representative in the Canadian region. There was little in respect to civil, military, and religious administration that his instructions did not permit him to undertake. His letters-patent were signed at Paris, November 13, 1612, and they were registered at Rouen, a few months later. Under these instructions the viceroy was commanded to prevent the selling of European weapons to the natives and he was expected to do his utmost to find and open a way to China. He was enjoined also to discover the mineral resources of the country. As a compensation for the considerable outlay which he might be called upon to make in furthering the

equipment and business of the new expedition, the prince was to be allowed a twelve years' lease of the trade and mines of the country, with ample powers to manage it by deputy and to prevent intruders. A new commission was issued to Champlain on November 22."—J. Winsor, *Cartier to Frontenac*, pp. 101-103.

ALSO IN: C. S. D. Roberts, *History of Canada*, ch. 3.

1612.—Arrival of Champlain and the Récollets.—"The Prince of Condé retained his influence at Court, and no difficulty was consequently found in equipping a small fleet, to carry out settlers and supplies from Rouen and St. Malo. On board of this fleet came four fathers of the order of the Récollets, whose benevolence induced them to desire the conversion of the Indians to Christianity. These were the first priests who settled in Canada. Champlain arrived safely, on the 25th of May, at Tadoussac, whence he immediately pushed forward to Quebec, and subsequently to the usual place of Indian rendezvous, at the Lachine Rapids."—J. MacMullen, *History of Canada*, ch. 1.

ALSO IN: F. Parkman, *Pioneers of France in the New World*, ch. 4.

1615-1616.—Champlain's invasion of the Iroquois in, New York.—"Champlain found the Hurons and their allies preparing for an expedition against their ancient enemies, the Iroquois. Anxious to reconnoitre the hostile territory, and also to secure the friendship of the Canadian savages, the gallant Frenchman resolved to accompany their warriors." After five days, "the expedition arrived before the fortified village of the Iroquois, on the northern bank of the Onondaga Lake, near the site of the present town of Liverpool." In the siege which followed the Iroquois were dismayed by the firearms of Champlain and his men, and by the operation of a moveable tower with which he advanced to their stockade and set fire to it. But his Indian allies proved incapable of acting in any rational or efficient way, or to submit to the least direction, and the attack was abortive. After a few days the invading force retreated, carrying Champlain with them and forcing him to remain in the Huron country until the following spring (1616), when he made his way back to Montreal.—J. R. Brodhead, *History of the state of New York*, v. 1, ch. 3.

ALSO IN: O. H. Marshall, *Champlain's expedition against the Onondagas*.—E. F. Slafter, *Memoir preface to Voyages and explorations of Samuel de Champlain* (*Prince Society*, 1880).—E. B. O'Callaghan, ed., *Documentary history of New York*, v. 3, pp. 10-24.

1616-1628.—Champlain and the fur traders.—First Jesuit mission.—Creation of the company of the Hundred Associates.—"The exploration in the distant Indian territories which we have just described in the preceding pages was the last made by Champlain. He had plans for the survey of other regions yet unexplored, but the favorable opportunity did not occur. Henceforth he directed his attention more exclusively than he had hitherto done to the enlargement and strengthening of his colonial plantation, without such success, we regret to say, as his zeal, devotion and labors fitly deserved. The obstacles that lay in his way were insurmountable. The establishment or factory, we can hardly call it a plantation, at Quebec, was the creature of a company of merchants. They had invested considerable sums in shipping, buildings, and in the employment of men, in order to carry on a trade in furs and peltry with the Indians, and they naturally desired remunerative returns. This was the limit of their purpose in making the in-

vestment. . . . Under these circumstances, Champlain struggled on for years against a current which he could barely direct, but by no means control. . . . He succeeded at length in extorting from the company a promise to enlarge the establishment to 80 persons, with suitable equipments, farming implements, all kinds of seeds, and domestic animals, including cattle and sheep. But when the time came, this promise was not fulfilled. Differences, bickerings and feuds sprang up in the company. Some wanted one thing, and some wanted another. The Catholics wished to extend the faith of their church into the wilds of Canada, while the Huguenots desired to prevent it, or at least not to promote it by their own contributions. The company, inspired by avarice and a desire to restrict the establishment to a mere trading post, raised an issue to discredit Champlain. It was gravely proposed that he should devote himself exclusively to exploration, and that the government and trade should henceforth be under the direction and control of Pont Gravé. But Champlain . . . obtained a decree ordering that he should have the command at Quebec, and at all other settlements in New France, and that the company should abstain from any interference with him in the discharge of the duties of his office." In 1620 the Prince de Condé sold his viceroyalty to the Duke de Montmorency, then high-admiral of France, who commissioned Champlain anew, as his lieutenant, and supported him vigorously. Champlain had made voyages to Canada in 1617 and 1618, and now, in 1620, he proceeded to his post again. At Quebec he began immediately the building of a fort, which he called fort St. Louis. The company of associates opposed this work, and so provoked the Duke of Montmorency by their conduct that "in the spring of 1621, he summarily dissolved the association of merchants, which he denominated the 'Company of Rouen and St. Malo,' and established another in its place."—E. F. Slafter, *Memoir preface to Voyages and explorations of Samuel de Champlain* (*Prince Society*, 1880, v. 1, ch. 9).—"In a short time the Associated Merchants lost their privileges for failure to fulfil their pledges. Their monopoly was handed over to Guillaume and Emery de Caen, two Huguenot gentlemen, on condition that they should settle none but Roman Catholics in the colony. The peace of the little settlement was not promoted by this change, and noisy were the disputes between Catholic settler and Huguenot sailor, as well as between the old and new monopolists. Champlain had need of all his vigour and all his fortitude. He was sorely tempted at times to throw up his high ambitions, and leave his rapacious charges to prey upon the savages and each other. . . . The patronage of Canada now again changed hands. It was purchased by a religious enthusiast, the Duke de Ventadour. Champlain remained a year or two in France, leaving Emery de Caen in command of the colony. De Ventadour cared neither for trade nor settlement. His one concern was to save souls. To this end he sent out three Jesuit priests, Fathers Lalemant, Massé, and Bréboeuf. . . . Their coming was little to the taste of the hardy Huguenot, de Caen; but the Récollets made them welcome in their convent on the St. Charles. A year later came Fathers Noirot and de la Nouë; and before long the Jesuits had a convent of their own. . . . And now Richelieu, the crafty and masterful, having made the monarchy supreme in France and himself the resistless power behind the throne, turned his keen eyes on Canada and saw the evils with which Champlain was wrestling. He strengthened Champlain's hands. He abolished the mo-

nopoly of the de Caens. He organized what is known as the 'New Company of the Hundred Associates,' with himself at its head. The vice-regal authority of de Ventadour came to an end, and again a new power was felt shaping the destiny of Canada. The charter of Richelieu's company gave it possession of all New France (Canada, Acadie, Newfoundland, and Florida), on the simple tenure of fealty and homage. Religious discord was abolished by the decree that New France should be all Roman Catholic. No Huguenot was to set foot on its soil. The company was bound under penalty to send out three hundred colonists in its first year (1628), and to increase the number to six thousand within the next fifteen years. It was given a perpetual monopoly of the fur-trade, with a monopoly for fifteen years of all other trade but that of the whale and cod fisheries. Further, as a personal gift from the King, it received two well-armed battle-ships. Champlain was made one of the Associates, and confirmed in his command of Quebec."—C. G. D. Roberts, *History of Canada*, pp. 40-43.

1628-1635.—Conquest and brief occupation by the English.—Restoration to France.—"The first care of the new Company was to succor Quebec, whose inmates were on the verge of starvation. Four armed vessels, with a fleet of transports commanded by Roquemont, one of the associates, sailed from Dieppe with colonists and supplies in April, 1628; but nearly at the same time another squadron, destined also for Quebec, was sailing from an English port. War had at length broken out in France. The Huguenot revolt had come to a head. Rochelle was in arms against the king; and Richelieu, with his royal ward, was beleaguering it with the whole strength of the kingdom. Charles I. of England, urged by the heated passions of Buckingham, had declared himself for the rebels, and sent a fleet to their aid. . . . The attempts of Sir William Alexander to colonize Acadia had of late turned attention in England towards the New World; and, on the breaking out of the war, an expedition was set on foot, under the auspices of that singular personage, to seize on the French possessions in North America. It was a private enterprise, undertaken by London merchants, prominent among whom was Gervase Kirke, an Englishman of Derbyshire, who had long lived at Dieppe, and had there married a Frenchwoman. Gervase Kirke and his associates fitted out three small armed ships, commanded respectively by his sons David, Lewis and Thomas. Letters of marque were obtained from the king, and the adventurers were authorized to drive out the French from Acadia and Canada. Many Huguenot refugees were among the crews. Having been expelled from New France as settlers, the persecuted sect were returning as enemies." The Kirkes reached the St. Lawrence in advance of Roquemont's supply ships, intercepted the latter and captured or sank the whole. They then sailed back to England with their spoils, and it was not until the following summer that they returned to complete their conquest. Meantime, the small garrison and population at Quebec were reduced to starvation, and were subsisting on acorns and roots when, in July 1629, Admiral David Kirke, with his three ships, appeared before the place. Champlain could do nothing but arrange a dignified surrender. For three years following, Quebec and New France remained under the control of the English. They were then

restored, under a treaty stipulation to France. "It long remained a mystery why Charles consented to a stipulation which pledged him to resign so important a conquest. The mystery is explained by the recent discovery of a letter from the king to Sir Isaac Wake, his ambassador at Paris. The promised dowry of Queen Henrietta Maria, amounting to 800,000 crowns, had been but half paid by the French government, and Charles, then at issue with his Parliament and in desperate need of money, instructs his ambassador that, when he receives the balance due, and not before, he is to give up to the French both Quebec and Port Royal, which had also been captured by Kirke. The letter was accompanied by 'solemn instruments under our hand and seal' to make good the transfer on fulfilment of the condition. It was for a sum equal to about \$240,000 that Charles entailed on Great Britain and her colonies a century of bloody wars. The Kirkes and their associates, who had made the conquest at their own cost, under the royal authority, were never reimbursed, though David Kirke received the honor of knighthood, which cost the king nothing,"—and also the grant of Newfoundland. On July 5, 1632, Quebec was delivered up by Thomas Kirke to Emery de Caen, commissioned by the French king to reclaim the place. The latter held command for one year, with a monopoly of the fur trade; then Champlain resumed the government, on behalf of the Hundred Associates, continuing in it until his death, which occurred on Christmas Day, 1635.—F. Parkman, *Pioneers of France in the New World: Champlain*, ch. 16-17.—See also NEWFOUNDLAND: 1610-1655.

1634-1652.—Jesuit missions and their fate.—The first of the Jesuit missionaries came to Quebec in 1625, as stated above, but it was not until nearly seven years later that they made their way into the heart of the Indian country and began there their devoted work. "The glowing accounts sent home to France by Father le Jeune stirred up the zeal of the devout, and it was now that the chief colleges and hospitals of Quebec were founded. A Jesuit college was endowed by the Marquis de Gamache, in 1636. Another nobleman, Noël de Silléri, established a sort of home for Indian converts, above Quebec, at a spot whose name now commemorates his pious action. The Hotel Dieu was endowed by the Duchess d'Aiguillon, and the task of caring for its inmates was undertaken by three devoted hospital nuns of Dieppe. A seminary for the instruction of young girls was the next thing called for by the spiritual directors of the colony; and this was presently founded by a wealthy young widow, Madame de la Peltrie, who brought her fortune and her services to Canada. While the Jesuits worked in every direction, enduring great hardships of hunger, cold, and filth among the Montagnais and other tribes of the harsh north-east, their greatest work was done in the Huron country. The Hurons were by far the most progressive of the Canadian Indians. The first efforts of Father Brébœuf to reach the Hurons were not successful: but his zeal grew till no obstacle could restrain it. At length, with Fathers Daniel and Davoust, he accomplished his object. A mission was established at Thonaticira on Georgian Bay, near Penetanguishene. . . . While the Iroquois were threatening Quebec and attacking Ville-Marie, the Huron Missions, . . . were enjoying a success which lulled them into false security. Early in the summer of 1648 a party of Huron

braves from the Mission of St. Joseph descended the Ottawa and the St. Lawrence with furs of their winter's hunt. At Three Rivers they were attacked by the Iroquois and won a victory. Meanwhile another band of Iroquois had fallen on the all but defenceless village. While service was being held in the little chapel the painted butchers broke through the palisades and fell with their hatchets upon the children and old men. The priest in charge was Father Daniel, a resolute and fearless man, who strove to organize some resistance on the part of his terror-stricken flock. But he fell, riddled with arrows, early in the fight. Seven hundred prisoners were taken. A few of the villagers fled to the woods; and by sunset the station of St. Joseph was a waste of smoking ashes. The following spring witnessed the finish of the

to whom they had been a bulwark, were involved with them in a common ruin. . . . In a measure, the occupation of the Jesuits was gone. Some of them went home, 'well resolved,' writes the Father Superior, 'to return to the combat at the first sound of the trumpet'; while of those who remained, about twenty in number, several soon fell victims to famine, hardship and the Iroquois. A few years more, and Canada ceased to be a mission, political and commercial interests gradually became ascendant, and the story of Jesuit propagandism was interwoven with her civil and military annals."—F. Parkman, *Jesuits in North America*, ch. 34.

OLD QUEBEC, FROM AN EARLY DRAWING

bloody work. The decree of the Iroquois sachems was that the Hurons should be wiped out. A war party of 1200 men entered the Huron region. First St. Ignace was surprised, and the inhabitants, save those reserved for torture, brained in their sleep. Thirteen other villages were burnt, either taken by storm or abandoned by the horror-stricken people. Then, in the gray of dawn, St. Louis fell; and the devoted priests Bréboeuf and Lalemant were made prisoners. Enraged by their indomitable courage, the savages exhausted the last resources of atrocity in torturing them."—C. G. D. Roberts, *History of Canada*, pp. 50-60, 65.

"With the fall of the Hurons, fell the best hope of the Canadian mission. They, and the stable and populous communities around them, had been the rude material from which the Jesuit would have formed his Christian empire in the wilderness; but, one by one, these kindred peoples were uprooted and swept away, while the neighboring Algonquins,

1634-1673.—Nicolet.—Marquette.—Joliet.—Pioneer exploration in the west and discovery of the Mississippi.—When Champlain gave up his work, the map of New France was blank beyond lake Ontario and Georgian bay. The first of the French explorers who widened it far westward was a Norman named Jean Nicolet, who came to America in 1618, and who was trained for many years in Champlain's service. "After dwelling some time among the Nipissings, he visited the Far West; seemingly between the years 1634 and 1640. In a birch-bark canoe, the brave Norman voyager crossed or coasted Lake Huron, entered the St. Mary's River, and, first of white men, stood at the strait now called Sault Ste Marie. He does not seem to have known of Lake Superior, but returned down the St. Mary's River, passed from Lake Huron through the western detour to Michilimackinac, and entered another fresh-water sea, Mitchigannon or Michigan, also afterwards known

as the Lake of the Illinois, Lake St. Joseph, Lake Dauphin, or even Algonquin Lake. Here he visited the Menomonee tribe of Indians, and after them the Winnibagoes. . . . The fierce wrath of the Iroquois had driven numbers of the Hurons, Ottawaes, and several minor Algonquin tribes westward. The Iroquois, like a wedge, had split the northern tribes into east and west. Sault Ste Marie became a central point for the refugees. . . . Another gathering place for the fugitives had been found very near the south-west corner of this great lake. This was La Pointe, one of the Apostle Islands, near the present town of Ashland in Wisconsin. The Jesuits took up these two points as mission centres. . . . In 1669 the Fathers Dablon and Marquette, with their men, had erected a palisaded fort, enclosing a chapel and house, at Sault Ste Marie. In the same year Father Allouez had begun a mission at Green Bay. In 1670 an intrepid explorer, St. Luson, under orders from Intendant Talon, came west searching for copper-mines. He was accompanied by the afterwards well-known Joliet. When this party arrived at Sault Ste Marie, the Indians were gathered together in great numbers, and with imposing ceremonies St. Luson took possession of 'Sainte Marie du Saut, as also of Lakes Huron and Superior, the island of Manetoulin, and all countries, rivers, lakes, and streams contiguous and adjacent thereunto.' . . . It was undoubtedly the pressing desire of the Jesuit fathers to visit the country of the Illinois and their great river that led to the discovery of the 'Father of Waters.' Father Allouez indeed had already ascended the Fox River from Lake Michigan, and seen the marshy lake which is the head of a tributary of the Mississippi. At last on June 4th, 1672, the French minister, Colbert, wrote to Talon: 'As after the increase of the colony there is nothing more important for the colony than the discovery of a passage to the South Sea, his Majesty wishes you to give it your attention.' This message to the Intendant came as he was leaving for France, and he recommended the scheme and the explorer he had in view for carrying it out to the notice of the Governor, Frontenac, who had just arrived. Governor Frontenac approved and the explorer started. The man chosen for the enterprise was Louis Joliet, who had already been at Sault Ste Marie. He was of humble birth, and was a native of New France. . . . The French Canadian explorer was acceptable to the missionaries, and immediately journeyed west to meet Marquette, who was to accompany him. . . . M. Joliet met the priest Marquette at St. Ignace Mission, Michilimackinac. Jacques Marquette, of whom we have already heard, was born in 1637 at Laon, Champagne, in France. He sprang of an ancient and distinguished family. . . . On May 17th, 1673, with deepest religious emotion, the trader and missionary launched forth on Lake Michigan their two canoes, containing seven Frenchmen in all, to make the greatest discovery of the time. They hastened to Green Bay, followed the course of Father Allouez up the Fox River, and reached the tribe of the Mascoutins or Fire Nation on this river. These were new Indians to the explorers. They were peaceful, and helped the voyagers on their way. With guides furnished, the two canoes were transported for 2,700 paces, and the head waters of the Wisconsin were reached. After an easy descent of 30 or 40 leagues, on June 17th, 1673, the feat was accomplished, the Mississippi was discovered by white men, and the canoes shot out upon its surface in latitude 43°. Sailing down the great river for a month, the party reached the village of Akansa, on the Arkansas River, in latitude 34°,

and on July 17th began their return journey. It is but just to say that some of the Récollet fathers, between whom and the Jesuits jealousy existed, have disputed the fact of Joliet and Marquette ever reaching this point. The evidence here seems entirely in favour of the explorers. On their return journey the party turned from the Mississippi into a tributary river in latitude 38°. This was the Illinois. Ascending this, the Indian town of Kaskaskia was reached, and here for a time Father Marquette remained. Joliet and his party passed on," arriving at Montreal in due time, but losing all their papers in the rapids of the St. Lawrence. Father Marquette established a mission among the Illinois Indians, but his labors were cut short. He died while on a journey to Green Bay, May 18, 1675. "High encomiums of Father Marquette fill—and deservedly so—the 'Jesuit Relations.' We have his autograph map of the Mississippi. This great stream he desired to call 'Conception River,' but the name, like those of 'Colbert' and 'Buade' [the family name of Count Frontenac], which were both bestowed upon it, have failed to take the place of the musical Indian name."—G. Bryce, *Short history of the Canadian people*, ch. 5, sect. 3.

1637-1657.—Sulpician settlement of Montreal and religious activity at Quebec.—Champlain was succeeded as governor of New France by M. de Châteaufort, of whose brief administration little is known, and the latter was followed by M. de Montmagny, out of the translation of whose name the Indians formed the title Onontio, signifying "Great Mountain," which they afterwards applied to all the French governors. Montmagny entered with zeal into the plans of Champlain, "but difficulties accumulated on all sides. Men and money were wanting, trade languished, and the Associated Company in France were daily becoming indifferent to the success of the colony. Some few merchants and inhabitants of the outposts, indeed, were enriched by the profitable dealings of the fur-trade, but their suddenly-acquired wealth excited the jealousy rather than increased the general prosperity of the settlers. The work of religious institutions was alone pursued with vigor and success in those times of failure and discouragement. At Sillery, one league from Quebec, an establishment was founded for the instruction of the savages and the diffusion of Christian light [1637]. The Hotel Dieu owed its existence to the Duchesse d'Aiguillon two years afterward, and the convent of the Ursulines was founded by the pious and high-born Madame de la Peltrie. The partial success and subsequent failure of Champlain and his Indian allies in their encounters with the Iroquois had emboldened these brave and politic savages. They now captured several canoes belonging to the Hurons, laden with furs, which that friendly people were conveying to Quebec. Montmagny's military force was too small to allow of his avenging this insult; he, however, zealously promoted an enterprise to build a fort and effect a settlement on the island of Montreal, which he fondly hoped would curb the audacity of his savage foes. The Associated Company would render no aid whatever to this important plan, but the religious zeal of the Abbé Olivier overcame all difficulties. He obtained a grant of Montreal from the king, and dispatched the Sieur de Maisonneuve and others

to take possession. On the 17th of May, 1641, the place destined for the settlement was consecrated by the superior of the Jesuits. At the same time the governor erected a fort at the entrance of the River Richelieu," which so far checked the Iroquois that they entered into a treaty of peace and respected it for a brief period.—E. Warburton, *Conquest of Canada*, v. 1, ch. 12.—The settlement of Montreal was undertaken by an association of thirty-five rich and influential persons in France, among whom was the Duke de Liancourt de la Roche Guyon. "This company obtained a concession of the island in 1640, and a member of the association arrived at Quebec from France with several immigrating families, some soldiers, and an armament valued at 25,000 piastres." In 1642 "a reinforcement of colonists arrived, led by M. d'Ailleboust de Musseau. During the following year, a second party came. At this time the European population resident in Canada did not exceed 200 souls. The immigrants who now entered it had been selected with the utmost care."—A. Bell, *History of Canada*, v. 1, bk. 3, ch. 1.—In 1657 the seigniority of Montreal was ceded to the Seminary of St. Sulpice in Paris, where the reins of its government were held until 1692.—Père Charlevoix, *History of New France*, tr. by Shea, v. 3, p. 23.

ALSO IN: F. Parkman, *Jesuits in North America*, ch. 13-15.

1640-1700.—Wars with the Iroquois.—"From about the year 1640 to the year 1700, a constant warfare was maintained between the Iroquois and the French, interrupted occasionally by negotiations and brief intervals of peace. As the former possessed both banks of the St. Lawrence, and the circuits of lakes Erie and Ontario, they intercepted the fur trade, which the French were anxious to maintain with the western nations. . . . The war parties of the League ranged through these territories so constantly that it was impossible for the French to pass in safety through the lakes, or even up the St. Lawrence above Montreal. . . . So great was the fear of these sudden attacks, that both the traders and the missionaries were obliged to ascend the Ottawa river to near its source, and from thence to cross over to the Sault Ste. Marie, and the shores of Lake Superior. . . . To retaliate for these frequent inroads, and to prevent their recurrence, the country of the Iroquois was often invaded by the French. . . . In July of the ensuing year the French were made to feel still more sensibly the power of their revenge. A band of 1,200 warriors, animated with the fiercest resentment, made a descent upon the island of Montreal. . . . Overwhelmed by this sudden disaster, the French destroyed their forts at Niagara and Frontenac, and thus yielded the whole country west of Montreal to the possession of the Iroquois. At this critical period Count Frontenac again became governor of Canada, and during the short residue of his life devoted himself, with untiring energy, to restore its declining prosperity."—L. H. Morgan, *League of the Iroquois*, bk. 1, ch. 1.

1660-1688.—French encroachments and English concessions in Newfoundland. See NEWFOUNDLAND: 1660-1688.

1663-1664.—Erected by Colbert into a royal province.—"In 1663 the proceedings of the com-

pany [of the hundred associates] became so obnoxious that the king of France decided upon the immediate resumption of his rights, and the erecting of Canada into a royal government: Monsieur de Mézy was appointed governor, and proceeded from France to Quebec with 400 regular troops, and 100 families as settlers, with cattle, horses and implements of agriculture. Under the royal jurisdiction, the governor, a king's commissioner, an apostolical vicar, and four other gentlemen, were formed into a sovereign council, to whom were confided the powers of cognizance in all causes, civil and criminal, to judge in the last resort according to the laws and ordinances of France, and the practice of the Parliament of Paris, reserving the general legislative powers of the Crown, to be applied according to circumstances. This Council was further invested with the regulation of commerce, the expenditure of the public monies, and the establishment of inferior courts at Three Rivers and Montreal. This change of Canada from an ecclesiastical mission to a secular government was owing to the great Colbert, who was animated by the example of Great Britain, to improve the navigation and commerce of his country by colonial establishments. The enlightened policy of this renowned financial minister of Louis XIV. was followed by the success which it deserved. To a regulated civil government was added increased military protection against the Iroquois Indians; the emigration of French settlers to New France was promoted by every possible means, and a martial spirit was imparted to the population, by the location in the colony of the disbanded soldiers of the Carignan regiment. . . . and other troops, whose officers became the principal Seigneurs of the colony, on condition of making cessions of land under the feudal tenure, as it still exists to the soldiers and other inhabitants."—R. M. Martin, *History of Upper and Lower Canada*, ch. 1.

1664-1674.—Brief history of the French West India Company.—"At the same time (1664) the West India Company was formed, with all the trading privileges of Canada and Acadie, of the French colonies in Florida, Africa, South America, and of the West Indies. This company was under the same pledges in regard to colonizing the land and converting the natives as those which its predecessor, the New Company of the Hundred Associates, had so lamentably failed to perform. The monopoly of the fur-trade thus granted to the West India Company excited vehement protest in Canada, where all the colonists were more or less interested in that profitable pursuit. A few years later, on Talon's urgent plea to Colbert, these restrictions were removed as far as Canada was concerned, the company being compensated by a fourth of all the beaver skins and a twelfth of all the buffalo skins exported. The West India Company proved, however, of no more benefit to the colonies than the New Company had been, and in 1674 its charter was revoked."—C. G. D. Roberts, *History of Canada*, p. 76.

ALSO IN: C. Lucas, *Historical geography of the British colonies*, v. 5.—A. Bell, *History of Canada*, v. 1, bk. 3, ch. 3.—F. Parkman, *Old regime in Canada*, ch. 10-17.

1669-1687.—La Salle and the acquisition of Louisiana.—"Second only to Champlain among the heroes of Canadian history stands Robert Cavalier de la Salle. . . . He did more than any other man to extend the dominion of France in the New World. As Champlain had founded the colony of Canada and opened the way to the great lakes, so La Salle completed the discovery of the Mississippi, and added to the French possessions the vast prov-

ince of Louisiana. . . . In 1669 La Salle made his first journey to the west, hoping to find a north-west passage to China, but very little is known about this expedition, except that the Ohio River was discovered, and perhaps also the Illinois. La Salle's feudal domain of St. Sulpice, some eight miles from Montreal, bears to-day the name of La Chine, or China, which is said to have been applied to it in derision of this fruitless expedition. In 1673 the priest Marquette and the fur-trader Joliet actually reached the Mississippi by way of the Wisconsin, and sailed down the great river as far as the mouth of the Arkansas; and now the life-work of La Salle began in earnest. He formed a grand project for exploring the Mississippi to its mouth, and determining whether it flowed into the Gulf of California or the Gulf of Mexico. The advance of Spain on the side of Mexico was to be checked forever, the English were to be confined to the east of the Alleghanies, and such military posts were to be established as would effectually confirm the authority of Louis XIV. throughout the centre of this continent. La Salle had but little ready money, and was surrounded by rivals and enemies; but he had a powerful friend in Count Frontenac, the Viceroy of Canada. . . . At length, after surmounting innumerable difficulties, a vessel [the Griffon or Griffin] was built and launched on the Niagara River [1679], a small party of 30 or 40 men were gathered together, and La Salle, having just recovered from a treacherous dose of poison, embarked on his great enterprise. His departure was clouded by the news that his impatient creditors had laid hands upon his Canadian estates; but, nothing daunted, he pushed on through Lakes Erie and Huron, and after many disasters reached the southern extremity of Lake Michigan. The vessel was now sent back, with half the party, to Niagara, carrying furs to appease the creditors and purchase additional supplies for the remainder of the journey, while La Salle with his diminished company pushed on to the Illinois, where a fort was built, and appropriately named Fort Crèvecœur, or, as we might translate it, the 'fort of the breaking heart.' Here, amid perils of famine, mutiny, and Indian attack, and exposed to death from the wintry cold, they waited until it became evident to all that their vessel must have perished. She never was heard from again, and most likely had foundered on her perilous voyage. To add to the trouble, La Salle was again poisoned; but his iron constitution, aided by some lucky antidote, again carried him safely through the ordeal, and about the 1st of March, 1680, he started on foot for Montreal. Leaving Fort Crèvecœur and its tiny garrison under command of his faithful lieutenant, Tonty, he set out with four Frenchmen and one Mohegan guide. . . . They made their way for a thousand miles across Michigan and Western Canada to Niagara, and so on to Montreal. . . . At Niagara La Salle learned that a ship from France, freighted for him with a cargo worth more than 20,000 livres, had been wrecked in the Gulf of St. Lawrence, and nothing had been saved. In spite of this dreadful blow he contrived to get together supplies and reinforcements at Montreal, and had returned to Fort Frontenac, at the lower end of Lake Ontario, when still more woful tidings were received. Here, toward the end of July, a message came from the fortress so well named Crèvecœur. The garrison had mutinied and destroyed the fort, and made their way back through Michigan." The indomitable La Salle promptly hunted down the deserters, and sent them in chains to Quebec. He then "proceeded again to the Illinois to reconstruct his fort, and rescue,

if possible, his lieutenant Tonty and the few faithful followers who had survived the mutiny. This little party, abandoned in the wilderness, had found shelter among the Illinois Indians; but during the summer of 1680 the great village or town of the Illinois was destroyed by the Iroquois, and the hard-pressed Frenchmen retreated up the western shore of Lake Michigan to Green Bay. On arriving at the Illinois, therefore, La Salle found nothing but the terrible traces of fire and massacre and cannibal orgies; but he spent the following winter to good purpose in securing the friendship of the western Indians, and in making an alliance with them against the Iroquois. Then, in May, 1681, he set out again for Canada, to look after his creditors and obtain new resources. On the way home, at the outlet of Lake Michigan, he met his friend Tonty, and together they paddled their canoes a thousand miles and came to Fort Frontenac. So, after all this hardship and disaster, the work was to be begun anew; and the enemies of the great explorer were exulting in what they imagined must be his despair. But that was a word of which La Salle knew not the meaning, and now his fortunes began to change. In Mr. Parkman's words, 'Fate at length seemed tired of the conflict with so stubborn an adversary.' At this third venture everything went smoothly. The little fleet passed up the great lakes, from the outlet of Ontario to the head of Michigan, and gained the Chicago River. Crossing the narrow portage, they descended the Illinois and the Mississippi, till they came out upon the Gulf of Mexico; and on the 9th of April, 1682, the fleurs-de-lis were planted at the mouth of the great river, and all the country drained by its tributaries, from the Alleghanies to the Rocky Mountains, was formally declared to be the property of the king of France, and named after him Louisiana. Returning up the river after his triumph, La Salle founded a station or small colony on the Illinois, which he called St. Louis, and leaving Tonty in command, kept on to Canada, and crossed to France for means to circumvent his enemies and complete his far-reaching schemes. A colony was to be founded at the mouth of the Mississippi, and military stations were to connect this with the French settlements in Canada. At the French court La Salle was treated like a hero, and a fine expedition was soon fitted out, but everything was ruined by jealousy and ill-will between La Salle and the naval commander, Beaujeu. The fleet sailed beyond the mouth of the Mississippi, the colony was thrown upon the coast of Texas, some of the vessels were wrecked, and Beaujeu—though apparently without sinister design—sailed away with the rest, and two years of terrible suffering followed. At last, in March, 1687, La Salle started to find the Mississippi, hoping to ascend it to Tonty's fort on the Illinois, and obtain relief for his followers. But he had scarcely set out on this desperate enterprise when two or three mutinous wretches of his party laid an ambush for him in the forest, and shot him dead. Thus, at the early age of forty-three, perished this extraordinary man, with his life-work but half accomplished. Yet his labors had done much towards building up the imposing dominion with which New France confronted New England in the following century."—J. Fiske, *Romance of the Spanish and French explorers* (*Harper's Magazine*, v. 64, pp. 446-448).

1670.—Hudson's Bay Company chartered.—In "1670, certain English traders had received from Charles II. a charter of incorporation as 'The Governor and Company of Merchants Adventurers of England trading into Hudson Bay.' By the terms of this charter the new organization was given not alone full and exclusive trading rights, but actual proprietorship in all the regions watered by the rivers flowing into Hudson Bay and adjoining waters."—W. B. Munro, *Canada and British North America*, p. 437.

1673-1682.—Frontenac's policy conciliates Iroquois.—Incurs enmity.—Causes his removal.—"Frontenac was chiefly notable for his ability in dealing with the Iroquois. In 1673 he made a treaty with them and built a fort where Kingston now stands. He said that with a vessel on Lake Erie and a fort on Niagara he could now control the upper lakes. The ship, the Griffon, was built by La Salle but was wrecked on her first voyage. Frontenac supported La Salle's trading enterprise and thus incurred the opposition of the Quebec traders, whose profits were affected. He also incurred the hostility of the Jesuits whose power by this time was overwhelming. Combining their efforts, his enemies secured his removal in 1682. His successors renewed the war with the Iroquois who were thus thrown back on the English for support."—J. S. Bassett, *Short history of the United States*, p. 116.

1689-1690.—First Inter-colonial war (King William's War).—Schenectady massacre.—Montreal threatened, Quebec attacked, and Port Royal taken by the English.—The revolution of 1688, in England, which drove James II from the throne, and called to it his daughter Mary with her able husband, William of Orange, produced war between England and France (see FRANCE: 1689-1690). The French and English colonies in America were soon involved in the contest, and so far as it troubled American history, it bears in New England annals the name of King William's War. "If the issue had depended on the condition of the colonies, it could hardly have seemed doubtful. The French census for the North American continent, in 1688, showed but 11,240 persons, scarcely a tenth part of the English population on its frontiers; about a twentieth part of English North America. West of Montreal, the principal French posts, and those but inconsiderable ones, were at Frontenac, at Mackinaw, and on the Illinois. At Niagara, there was a wavering purpose of maintaining a post, but no permanent occupation. So weak were the garrisons that English traders, with an escort of Indians, had ventured even to Mackinaw. . . . France, bounding its territory next New England by the Kennebec, claimed the whole eastern coast, Nova Scotia, Cape Breton, Newfoundland, Labrador, and Hudson's Bay; and to assert and defend this boundless region, Acadia and its dependencies counted but 900 French inhabitants."—G. Bancroft, *History of the United States*, v. 3, ch. 21 (v. 2, pt. 3, ch. 11, in the "Author's last revision").—"Her [France's] first care was to send Frontenac back to Canada as governor, and he immediately turned his attention to winning over the Iroquois. In order to impress them with French prowess he sent three expeditions against the English frontier. February 9, 1690, a force of Frenchmen and Indians surprised Schenectady, near Albany, slew 60

whites and led away 27 captives. The second force attacked and destroyed the village of Salmon Falls, New Hampshire, and the third took Fort Loyal where Portland, Maine, now stands. Each of these affairs was conducted with much cruelty, and cries for vengeance arose from all the northern colonies. A congress of delegates from the New England states planning retaliation decided that New York and Connecticut should attack Montreal by way of Lake Champlain, and urged Massachusetts to send a naval force against Quebec. A fleet of her merchantmen under the command of Sir William Phips engaged in an expedition against Port Royal. A nest of privateers soon appeared in Boston with booty reporting complete success. In a burst of enthusiasm the colony resolved to send a force against Quebec to end the French peril definitely. While Massachusetts made ready her attack, the army of the other colonies had assembled and set out for Montreal. Dissension appeared, smallpox was discovered, the Iroquois allies did not keep their promises and the expedition was abandoned at Lake Champlain. . . . Phips started for Quebec August 9, 1690. He had no pilot who knew the St. Lawrence, and as he groped his way through its course news of his movements was carried to Frontenac who barely had time to collect his forces at Quebec, most of them having been drawn off to Montreal to meet the expected attack there. The Massachusetts men landed 1200 strong and laid siege to the town. Cold weather now approached and it was decided to return to Boston. Had Phips acted vigorously at first it is probable that the town would have been taken. The expedition cost the colony dearly both in money and in the men who died from disease."—J. S. Bassett, *Short history of the United States*, pp. 116-117.—See also U. S. A.: 1690.

ALSO IN: G. M. Wrong, *Conquest of New France*, ch. 1.

1692-1697.—First inter-colonial war (King William's War).—Abortive plans of invasion on both sides.—French recovery of Acadia.—"The defeat of the expedition of 1690 was probably attributable to the want of concert on the part of the troops from Connecticut and New York and those from Massachusetts, and the failure of the supplies which were sought from England. . . . But there was mismanagement on all hands in the conduct of the expedition; and it seems to have been predestinated that New England should not be delivered from the presence of the French at the north, until time had wrought the necessary changes which were to render the conquest of that country available for the promotion of still more important ends. Hence a new expedition, projected two years later, and resolved to be prosecuted in the following year [1693], was attended with the like circumstances of mortification and defeat. England herself participated in this enterprise, and . . . the government was informed that it had 'pleased the king, out of his great goodness and disposition for the welfare of all his subjects, to send a considerable strength of ships and men into the West Indies, and to direct Sir Francis Wheeler, the admiral, to sail to New England from the Caribbee Islands, so as to be there by the last of May or the middle of June at furthest, with a strength sufficient to overcome the enemy, if joined and seconded by the forces of New England.' . . . Unfortunately for the success of these plans, the letter, which should have reached Boston by the first of April, did not arrive until July; and the mortality which prevailed in the fleet during its stay in the West Indies was so great that, when the commander-in-chief, Sir Francis Wheeler, an-

chored off Nantasket,—bringing himself the news of the projected invasion,—he had lost 1,300 out of 2,100 sailors, and 1,800 out of 2,400 soldiers. All thoughts of reducing Canada were therefore abandoned; but a plan for another year was settled with the governor, the details of which were that 2,000 land forces should be sent from England to Cansau by the first of June, to be joined by 2,000 from the colonies, and that the whole force should go up the St. Lawrence, divide and simultaneously attack Montreal and Quebec. Changes in the government of the province, however, and other causes, prevented the execution of this plan, whose success was problematical even if it had been attempted. But if the plans of the English for the reduction of Canada were doomed to disappointment, the plans of the French for the recovery of Acadia were more successful. For the first year after the conquest of that country, indeed, the French were as little concerned to regain, as the English were to retain, the possession of its territory; nor was Massachusetts able to bear the charge of a sufficient military force to keep its inhabitants in subjection, though she issued commissions to judges and other officers, and required the administration of the oath of fidelity. In the course of that year [1691], authority was given to Mr. John Nelson, of Boston, who had taken an active part in the overthrow of Andros, and who was bound thither on a trading voyage, to be commander-in-chief of Acadia; but as he neared the mouth of the St. John's, he was taken by Monsieur Villebon, who, under a commission from the French king, had touched at Port Royal, and ordered the English flag to be struck, and the French flag to be raised in its place. The next year an attempt was made to dislodge Villebon, but without success. . . . In the summer of 1696, Pemaquid was taken by the French, under D'Iberville and Castine, and the frontier of the dominion of France was extended into Maine; and by the treaty of the following year Acadia was ceded to France, and the English relinquished their claims to the country. The last year of King William's War, as it was long termed in New England, was a year of especial alarm to the province [Massachusetts] and rumors were rife that the French were on the eve of fitting out a formidable fleet for the invasion of the colonies and the conquest of New York." According to the plan of the French undertaking, a powerful fleet from France was to be joined by a force of 1,500 men, raised by Count Frontenac, in Canada, and make, first, a conquest of Boston. "When that town was taken, they were to range the coast to Piscataqua, destroying the settlements as far back into the country as possible. Should there be time for further acquisitions, they were next to go to New York, and upon its reduction the Canadian troops were to march overland to Quebec, laying waste the country as they proceeded."—J. S. Barry, *History of Massachusetts*, v. 2, ch. 4.—This project was frustrated by happenings much the same in kind as those which thwarted the designs of the English against Quebec. The fleet was delayed by contrary winds, and by certain bootless undertakings in Newfoundland, until the season was too far advanced for the enterprise contemplated.—See also NEWFOUNDLAND: 1694-1697.

1696.—Frontenac's expedition against the Iroquois.—The war with the "Bastonnais" or "Bostonnais," as he called the New Englanders, did not divert Frontenac's attention from "the grand

castigation which at last he was planning for the Iroquois. He had succeeded, in 1694, in inducing them to meet him in general council at Quebec, and had framed the conditions of a truce; but the English at Albany intrigued to prevent the fulfilment, and war was again imminent. Both sides were endeavoring to secure the alliance of the tribes of the upper lakes. These wavered, and Frontenac saw the peril and the remedy. His recourse was to attack the Iroquois in their villages at once, and conquer on the Mohawk the peace he needed at Michilimackinac. It was Frontenac's last campaign. Eight or nine miles and a day's work brought them to the Onondaga village; but its inhabitants had burned it and fled. Vaudreuil was sent with a detachment which destroyed the town of the Oneidas. After committing all the devastation of crops that he could, in hopes that famine would help him, Frontenac began his homeward march before the English at Albany were aroused at all. The effect was what Frontenac wished. The Iroquois ceased their negotiations with the western tribes, and sued for peace."—G. Stewart, Jr., *Frontenac and his times (Narrative and critical history of America*, v. 4, ch. 7).

1697.—Peace of Ryswick.—"In 1697, the Peace of Ryswick closed the war between France and England, and each nation restored its conquests in America."—W. B. Munro, *Canada and British North America*, p. 121.

1698-1710.—Colonization of Louisiana and the organization of its separate government. See LOUISIANA: 1698-1712.

1700-1735.—Spread of French occupation in the Mississippi valley and on the lakes.—"From the time of La Salle's visit in 1679, we can trace a continuous French occupation of Illinois. . . . He planted his citadel of St. Louis on the summit of 'Starved Rock,' proposing to make that the centre of his colony. . . . At first his colony was exceedingly feeble, but it was never discontinued. 'Joutel found a garrison at Fort St. Louis . . . in 1687, and in 1689 La Hontan bears testimony that it still continued. In 1696 a public document proves its existence; and when Tonty, in 1700, again descended the Mississippi, he was attended by twenty Canadians, residents on the Illinois.' Even while the wars named after King William and Queen Anne were going on, the French settlements were growing in numbers and increasing in size; those wars over, they made still more rapid progress. Missions grew into settlements and parishes. Old Kaskaskia was begun in what La Salle called the 'terrestrial paradise' before the close of the seventeenth century. The Wabash Valley was occupied about 1700, the first settlers entering it by the portage leading from the Kankakee. Later the voyageurs found a shorter route to the fertile valley. . . . The French located their principal missions and posts with admirable judgment. There is not one of them in which we cannot see the wisdom of the priest, of the soldier, and the trader combined. The triple alliance worked for an immediate end, but the sites that they chose are as important to-day as they were when they chose them. . . . La Salle's colony of St. Louis was planted in one of the gardens of the world, in the midst of a numerous Indian population, on the great line of travel between Lake Michigan and the Mississippi River. Kaskaskia and the neighboring settlements held the centre of the long line extending from Canada to Louisiana. The Wabash colony commanded that valley and the Lower Ohio. Detroit was a position so important that,

securely held by the French, it practically banished from the English mind for fifty years the thought of acquiring the Northwest. . . . Then how unerringly were the French guided to the carrying places between the Northern and the Southern waters, viz., Green Bay, Fox River, and the Wisconsin; the Chicago River and the Illinois; the St. Joseph and the Kankakee; the St. Joseph and the Wabash; the Maumee and the Wabash; and, later, on the eve of the war that gave New France to England, the Chautauqua and French Creek routes from Lake Erie to the Ohio. . . . In due time the French began to establish themselves on the Northern frontier of the British colonies. They built Fort Niagara in 1726, four years after the English built Fort Oswego. Following the early footsteps of Champlain, they ascended to the head of the lake that bears his name, where they fortified Crown Point in 1727, and Ticonderoga in 1731. Presque Isle, the present site of the city of Erie, was occupied about the time that Vincennes was founded in the Wabash Valley [1735]. Finally, just on the eve of the last struggle between England and France, the French pressed into the valleys of the Alleghany and the Ohio, at the same time that the English also began to enter them."—B. A. Hinsdale, *Old northwest*, ch. 4.

1702-1710.—Second inter-colonial war (Queen Anne's War): Border ravages in New England and Acadia.—English conquest of Acadia. See NEW ENGLAND: 1702-1710.

1711-1713.—Second inter-colonial war.—Walker's expedition against Quebec.—After the reduction of Port Royal, which was practically the conquest of Acadia, Colonel Nicholson, who bore the honors of that achievement, repaired to England and prevailed with the government to fit out an adequate expedition for the conquest of Canada. "The expedition against Quebec was on a scale adequate for the time. Britain dispatched seven regiments of regulars, numbering in all five thousand five hundred men, and there were besides in the fleet some thousands of sailors and marines. Never before had the English sent to North America a force so great. On June 24, 1711, Admiral Walker arrived at Boston with his great array. Boston was impressed, but Boston was also a little hurt, for the British leaders were very lofty and superior in their tone towards colonials and gave orders as if Boston were a provincial city of England which must learn respect and obedience to his Majesty's officers 'vested with the Queen's Royal Power and Authority.' More than seventy ships, led by nine men-of-war, sailed from Boston for the attack on Canada. On board were nearly twelve thousand men. Compared with this imposing fleet, that of Phips, twenty-one years earlier, seems feeble. Phips had set out too late. This fleet was in good time, for it sailed on the 30th of July. . . . It is a long journey from Boston to Quebec by water. For three weeks, however, all went well. On the 22d of August, Walker was out of sight of land in the Gulf where it is about seventy miles wide above the Island of Anticosti. A strong east wind with thick fog is dreaded in those waters even now, and on the evening of that day a storm of this kind blew up. In the fog Walker lost his bearings. When in fact he was near the north shore he thought he was not far from the south shore. . . . A French pilot, captured in the Gulf, had taken pains to give what he could of alarming information. He now declared that the ships were off the north shore. Walker turned his own ship sharply and succeeded in beating out into deep water and safety. For the fleet the night was terrible. Some ships dropped anchor which held,

for happily the storm abated. Fog guns and lights as signals of distress availed little to the ships in difficulty. Eight British transports laden with troops and two ships carrying supplies were dashed to pieces on the rocks."—G. M. Wrong, *Conquest of New France*, pp. 57-60.

Also in: E. Greene, *Provincial America*, ch. 10.
1713.—Peace of Utrecht.—"In the meantime, the preliminaries of a treaty had been signed between France and England; and the war . . . was suspended by negotiations that were soon followed by the uncertain peace of Utrecht [April 11, 1713]. . . . England, by the peace of Utrecht, obtained from France large concessions of territory in America. The assembly of New York had addressed the queen against French settlements in the West; William Penn advised to establish the St. Lawrence as the boundary on the north, and to include in our colonies the valley of the Mississippi. 'It will make a glorious country'; such were his prophetic words. . . . The colony of Louisiana excited in Saint-John 'apprehensions of the future undertakings of the French in North America.' The occupation of the Mississippi valley had been proposed to Queen Anne; yet, at the peace, that immense region remained to France. But England obtained the bay of Hudson and its borders; Newfoundland, subject to the rights of France in its fisheries; and all Nova Scotia, or Acadia, according to its ancient boundaries. It was agreed that 'France should never molest the Five Nations subject to the dominion of Great Britain.' But Louisiana, according to French ideas, included both banks of the Mississippi. Did the treaty of Utrecht assent to such an extension of French territory? And what were the ancient limits of Acadia? Did it include all that is now New Brunswick? or had France still a large territory on the Atlantic between Acadia and Maine? And what were the bounds of the territory of the Five Nations, which the treaty appeared to recognize as a part of the English dominions? These were questions which were never to be adjusted amicably."—G. 1750-1753.—Boundary disputes with England.—Futile negotiations at Paris.—"For the past three years [1750-1753] the commissioners appointed under the treaty of Aix-la-Chapelle to settle the question of boundaries between France and England in America had been in session at Paris, waging interminable war on paper; La Galissonière and Silhouette for France, Shirley and Milder for England. By the treaty of Utrecht, Acadia belonged to England; but what was Acadia? . . . When the French owned Acadia, they gave it boundaries as comprehensive as those claimed for it by the English commissioners; now that it

belonged to a rival, they cut it down to a paring of its former self. . . . Four censuses of Acadia while it belonged to the French had recognized the mainland as included in it; and so do also the early French maps. Its prodigious shrinkage was simply the consequence of its possession by an alien. Other questions of limits, more important and equally perilous, called loudly for solution. What line should separate Canada and her western dependencies from the British colonies? Various principles of demarcation were suggested, of which the most prominent was a geographical one. All countries watered by streams falling into the St. Lawrence, the Great Lakes, and the Mississippi were to belong to her. This would have planted her in the heart of New York and along the crests of the Alleghanias, giving her all the interior of the continent, and leaving nothing to England but a strip of sea-coast. Yet in view of what France had achieved; of the patient gallantry of her explorers, the zeal of her missionaries, the adventurous hardihood of her bushrangers, revealing to civilized mankind the existence of this wilderness world, while her rivals plodded at their workshops, their farms, or their fisheries,—in view of all this, her pretensions were moderate and reasonable compared with those of England. The treaty of Utrecht had declared the Iroquois, or Five Nations, to be British subjects; therefore it was insisted that all countries conquered by them belonged to the British Crown. But what was an Iroquois conquest? The Iroquois rarely occupied the countries they overran. . . . But the range of their war-parties was prodigious; and the English laid claim to every mountain, forest or prairie where an Iroquois had taken a scalp. This would give them not only the country between the Alleghanias and the Mississippi, but also that between Lake Huron and the Ottawa, thus reducing Canada to the patch on the American map now represented by the province of Quebec,—or rather by a part of it, since the extension of Acadia to the St. Lawrence would cut off the present counties of Gaspé, Rimouski and Bonaventure. Indeed, among the advocates of British claims there were those who denied that France had any rights whatever on the south side of the St. Lawrence. Such being the attitude of the two contestants, it was plain there was no resort but the last argument of kings. Peace must be won with the sword.”—F. Parkman, *Montcalm and Wolfe*, v. 1, ch. 5.—See also NOVA SCOTIA: 1749-1755; NEW YORK: 1684; and 1726.

1755 (April).—Plans of the English against the French.—“While the negotiations [between England and France, at Paris] were pending, Braddock arrived in the Chesapeake. In March [1755] he reached Williamsburgh, and visited Annapolis; on the 14th of April, he, with Commodore Keppel, held a congress at Alexandria. There were present, of the American governors, Shirley, next to Braddock in military rank; Delancey, of New York; Morris, of Pennsylvania; Sharpe, of Maryland; and Dinwiddie, of Virginia. . . . Between England and France peace existed under ratified treaties; it was proposed not to invade Canada, but to repel encroachments on the frontier. For this end, four expeditions were concerted by Braddock at Alexandria. Lawrence, the lieutenant-governor of Nova Scotia, was to reduce that province according to the English interpretation of its boundaries; Johnson [afterwards Sir William Johnson, of New

York] from his long acquaintance with the Six Nations, was selected to enroll Mohawk warriors in British pay and lead them with provincial militia against Crown Point; Shirley proposed to drive the French from Niagara; the commander-in-chief was to recover the Ohio valley.”—G. Bancroft, *History of the United States (Author's last revision)*, v. 2, pp. 416-419.

1755 (June).—French disaster at sea.—Frustrated attempt against Nova Scotia.—“In 1754, France fully awakened to the fact that England not only intended to maintain her position in the wilds of America, but likewise by sea. She equipped an armament under the command of admirals Macnamara and Bois de la Mothe, of 18 ships of the line and 9 frigates, having on board, ostensibly for Canada, eleven battalions of troops under General Dieskau, an ‘élève’ of Marshal Saxe. England, apprised of this force being sent, despatched Vice-Admiral Boscawen with 11 ships of the line and one frigate to intercept it en route. Both sailed about the same time, the 22d of April, 1755. The French ambassador at London being duly notified, replied: ‘That his royal master would consider the first gun fired at sea in a hostile manner to be a declaration of war.’ The esoteric instructions of the French fleet were to rendezvous at Chebucton Harbour, destroy Halifax, and then proceed to Annapolis for the same purpose. While the instructions were of necessity secret, it was well known in Acadia that an attempt would be made by France to recover possession of the province. It was this fleet, so eagerly expected by the Acadians, that gave rise to the insolent manner in which they addressed the Council at Halifax, and which led to an immediate removal of their arms and subsequent dispersal. Owing to misadventure, some of the French fleet under Macnamara had to put back to Brest; the remainder met the English off the coast of Newfoundland [June 8] in a dense fog; avoiding an engagement, several of them escaped by taking the northern route via Belleisle . . . successfully reaching their ‘harbour of refuge,’ Louisbourg. The ‘Lys’ and the ‘Alcyde’ were sufficiently unfortunate to be compelled to face the guns of the English frigates ‘Dunkirk’ and ‘Defiance,’ and after five hours close engagement the ‘Lys’ struck its colors . . . followed by the ‘Alcyde,’ when Hocquart in command became Boscawen’s prisoner by sea for the third time, together with £76,000 sterling in money, eight companies of soldiers and several officers and engineers. The unexpected rencontre with Boscawen’s fleet, the loss of two of their vessels, and the knowledge that the garrison at Halifax was considerably reinforced by the forces brought out by Boscawen, caused the abandonment of all attempts to recover Acadia.”—G. E. Hart, *Fall of New France*, pp. 51-54.

1755 (July).—Defeat of Braddock’s expedition against Fort Duquesne. See OHIO: 1755.

1755 (August-October).—Abortive expedition against Niagara.—According to the English plan of campaign, concerted with Braddock at Alexandria, Governor Shirley was to lead an army for the conquest of Niagara; but his march westward ended at Oswego. “Colonel Philip Schuyler led the first regiment of the expedition. Boats were built at Oswego to convey 600 men by lake. Shirley followed by way of the Mohawk, and reached Oswego August 21. He was delayed from various causes, and in October a council of war decided that the attack on Niagara should be postponed for a year. Shirley was to have met

Braddock in victory at Niagara. Both branches of the plan had been shattered. The great western scheme sank to a mere strengthening of the defences of Oswego. Colonel Mercer was left in command of a garrison of 700 men, with instructions to build two new forts, and General Shirley took the remainder of his force back to Albany. The pitiful failure led to recriminations relative to the causes of the fatal delays.—E. H. Roberts, *New York*, v. 1, ch. 20.

ALSO IN: R. Hildreth, *History of the United States*, v. 2, ch. 26.

1755 (September).—**Battle of Lake George and defeat of Dieskau.**—"Meanwhile Dieskau had arrived at Quebec. In the colony of New York Sir William Johnson, the rough and cheery Irishman, much loved of the Iroquois, was gathering forces to attack Canada. Early in July, 1755, Johnson had more than three thousand provincial troops at Albany, a motley horde of embattled farmers, most of them with no uniforms, dressed in their own homespun, carrying their own muskets, electing their own officers, and altogether, from the strict soldier's point of view, a rabble rather than an army. To meet this force and destroy it if he could, Dieskau took to the French fort at Crown Point, on Lake Champlain, and southward from there to Ticonderoga at the head of this lake, some three thousand five hundred men, including his French regulars, some Canadians and Indians. Johnson's force lay at Fort George, later Fort William Henry, the most southerly point on Lake George. . . . The two armies met on the shores of Lake George early in September and there was an all-day fight. Each side lost some two hundred men. . . . The honors of the day seem to have been with Johnson, for the French were driven off and Dieskau himself, badly wounded, was taken prisoner. . . . There was small gain to the English from Johnson's success. He was too cautious to advance towards Canada; and, as winter came on, he broke up his camp and sent his men to their homes. The colonies had no permanent military equipment. Each autumn their forces were dissolved to be reorganized again in the following spring, a lame method of waging war."—G. M. Wrong, *Conquest of New France*, pp. 161-162.

1755 (October-November).—**Removal and dispersion in exile of the French Acadians.** See NOVA SCOTIA: 1755.

1756.—**Formal declarations of war.**—"Seven Years' War" of Europe, called the "French and Indian War" in British America.—Montcalm sent from France.—"On the 18th of May, 1756, England, after a year of open hostility, at length declared war. She had attacked France by land and sea, turned loose her ships to prey on French commerce, and brought some 300 prizes into her ports. It was the act of a weak government, supplying by spasms of violence what it lacked in considerate resolution. France, no match for her amphibious enemy in the game of marine depredation, cried out in horror; and to emphasize her complaints and signalize a pretended good faith which her acts had belied, ostentatiously released a British frigate captured by her cruisers. She in her turn declared war on the 9th of June: and now began the most terrible conflict of the 18th century; one that convulsed Europe and shook America, India, the coasts of Africa, and the islands of the sea [see ENGLAND: 1754-1755; GERMANY: 1755-1756] . . . Henceforth France was to turn her strength against her European foes; and

the American war, the occasion of the universal outbreak, was to hold in her eyes a second place. . . . Still, something must be done for the American war; at least there must be a new general to replace Dieskau. None of the court favorites wanted a command in the backwoods, and the minister of war was free to choose whom he would. His choice fell on Louis Joseph, Marquis de Montcalm-Gozon de Saint Vêran. . . . The Chevalier de Lévis, afterwards Marshal of France, was named as his second in command. . . . The troops destined for Canada were only two battalions, one belonging to the regiment of La Sarre, and the other to that of Royal Roussillon. Louis XV. and Pompadour sent 100,000 men to fight the battles of Austria, and could spare but 1,200 to reinforce New France." Montcalm, who reached Quebec in May, was placed in difficult relations with the governor-general, Vaudreuil, by the fact that the latter held command of the colonial troops. . . . The military situation was somewhat perplexing. Iroquois spies had brought reports of great preparations on the part of the English. As neither party dared offend these wavering tribes, their warriors could pass with impunity from one to the other, and were paid by each for bringing information, not always trustworthy. They declared that the English were gathering in force to renew the attempt made by Johnson the year before against Crown Point and Ticonderoga, as well as that made by Shirley against Forts Frontenac and Niagara. Vaudreuil had spared no effort to meet the double danger. Lotbinière, a Canadian engineer, had been busied during the winter in fortifying Ticonderoga, while Pouchot, a captain in the battalion of Béarn, had rebuilt Niagara, and two French engineers were at work in strengthening the defences of Frontenac. . . . Indians presently brought word that 10,000 English were coming to attack Ticonderoga." Both Montcalm and Lévis, with troops, "hastened to the supposed scene of danger . . . and reached Ticonderoga at the end of June. They found the fort . . . advanced towards completion. It stood on the crown of the promontory. . . . The rampart consisted of two parallel walls ten feet apart, built of the trunks of trees, and held together by transverse logs dovetailed at both ends, the space between being filled with earth and gravel well packed. Such was the first Fort Ticonderoga, or Carillon,—a structure quite distinct from the later fort of which the ruins still stand on the same spot. . . . Ticonderoga was now the most advanced position of the French, and Crown Point, which had before held that perilous honor, was in the second line. . . . The danger from the English proved to be still remote. . . . Meanwhile, at the head of Lake George, the raw bands of ever-active New England, were mustering for the fray."—F. Parkman, *Montcalm and Wolfe*, v. 1, ch. 11.

ALSO IN: W. Kingsford, *History of Canada*, v. 3, bk. 11, ch. 9.

1756-1757.—**French successes.—Capture of Oswego and Fort William Henry.**—On the death of Braddock, Governor Shirley became commander-in-chief of the British forces in America, "a position for which he was not adapted by military knowledge. . . . His military schemes for the season of 1756 were grand in conception and theory, but disastrous failures in practice. . . . While Shirley was preparing, Montcalm advanced against the three forts at Oswego, the terror of the French in the Iroquois country and which it had been their desire to destroy for many years back; they likewise commanded the entrance to Lake Ontario. The English had a garrison of 1,800 men in these divided between Fort Ontario . . . Fort Oswego

... and Fort George, or Rascal . . . about a mile distant from each other." Montcalm took all three of the forts without much difficulty, and demolished them. Finding himself free from attack, he penetrated with his army of 7,606 men to Fort William Henry, at the head of Lake George.

"On the 3d of August the fort was invested and, after a summons to surrender was rejected, the attack was begun and continued with undiminished fervor until the 9th at noon, when a capitulation was signed. . . . An incident of the war which has given rise to a great deal of controversy and ill-feeling up to the present moment, was the so-called massacre at Fort William Henry, the outcome of the numerous horde of savages the French allies had in the engagement. . . . On the morning following the surrender, the garrison was to march out under a proper escort to protect them from injury at the hands of the Indians. The evacuation had barely commenced, when a repetition of the looting of the day previous, which ensued immediately after the capitulation had been signed, was attempted. . . . Fort George, or William Henry, as it was indifferently called, like its compeer Fort Oswego, was razed to the ground and the army retreated into their winter quarters at Montreal."—G. E. Hart, *Fall of New France*, pp. 70-79.

1758.—Loss of Louisburg and Fort Duquesne.—Defeat of the English at Ticonderoga.—"The affairs of Great Britain in North America wore a more gloomy aspect, at the close of the campaign of 1757, than at any former period. By the acquisition of fort William Henry, the French had obtained complete possession of the lakes Champlain, and George. By the destruction of Oswego, they had acquired the dominion of those lakes which connect the St. Lawrence with the waters of the Mississippi, and unite Canada to Louisiana. By means of fort Du Quêne, they maintained their ascendancy over the Indians, and held undisturbed possession of the country west of the Allegheny mountains; while the English settlers were driven to the Blue Ridge. The great object of the war in that quarter was gained, and France held the country for which hostilities had been commenced. . . . But this inglorious scene was about to be succeeded by one of unrivalled brilliancy. . . . The brightest era of British history was to commence. . . . The public voice had, at length, made its way to the throne, and had forced, on the unwilling monarch, a minister who has been justly deemed one of the greatest men of the age in which he lived. . . . In the summer of 1757, an administration was formed, which conciliated the great contending interests in parliament; and Mr. Pitt was placed at its head. . . . Possessing the public confidence without limitation, he commanded all the resources of the nation, and drew liberally from the public purse. . . . In no part of his majesty's dominions was the new administration more popular than in his American colonies. . . . The circular letter of Mr. Pitt assured the several governors that, to repair the losses and disappointments of the last inactive campaign, the cabinet was determined to send a formidable force, to operate by sea and land, against the French in America; and he called upon them to raise as large bodies of men, within their respective governments, as the number of inhabitants might allow. . . . The legislature of Massachusetts agreed to furnish 7,000 men; Connecticut 5,000; and New Hampshire 3,000. . . . Three expeditions were proposed. The first was against Louisbourg; the second

against Ticonderoga and Crown Point; and the third against fort Du Quêne. The army destined against Louisbourg, consisting of 14,000 men, was commanded by major general Amherst. [The expedition was successful and Louisburg fell, July 26, 1758].—Abercrombie was general of the attacking British force at Ticonderoga with Lord Howe, second in command. After a terrific battle in which the British outnumbered Montcalm's forces four to one, the small garrison succeeded in holding its position and repelling the invaders. (See CAPE BRETON ISLAND: 1758-1760.) "Searching however for the means of repairing the misfortune, if not the disgrace, sustained by his arms, he readily acceded to a proposition made by colonel Bradstreet, for an expedition against fort Frontignac. This fortress stands on the north side of Ontario. . . . Colonel Bradstreet embarked on the Ontario at Oswego, and on the 25th of August, landed within one mile of the fort. In two days, his batteries were opened at so short a distance that almost every shell took effect; and the governor, finding the place absolutely untenable, surrendered at discretion. . . . After destroying the fort and vessels, and such stores as could not be brought off, colonel Bradstreet returned to the army which undertook nothing farther during the campaign. The demolition of fort Frontignac and of the stores which had been collected there, contributed materially to the success of the expedition against fort Du Quêne."—J. Marshall, *Life of George Washington*, v. 1, ch. 13.

"During the summer of 1758, while Wolfe and Boscawen were pounding the walls of Louisbourg, seven thousand troops led by General Forbes, Colonel George Washington, and Colonel Henry Bouquet, pushed their way through the wilds beyond the Alleghanies and took possession of the Ohio. The French destroyed Fort Duquesne and fled. On the 25th of November the English occupied the place and named it 'Pitts-Bourgh' in honor of their great war minister."—G. M. Wrong, *Conquest of New France*, p. 163.

1759 (July-August).—Fall of Niagara, Ticonderoga and Crown Point.—"For the campaign of 1759 the British Parliament voted liberal supplies of men and money, and the American colonies, encouraged by the successes of the preceding year, raised large numbers of troops. Amherst superseded Abercrombie as commander-in-chief. The plan for the year embraced three expeditions: Fort Niagara was to be attacked by Prideaux, assisted by Sir William Johnson; Amherst was to march his force against Ticonderoga and Crown Point; and Quebec was to be assailed by an army under Wolfe and a fleet under Saunders. Prideaux and Amherst, after the capture of the Forts, were to descend the St. Lawrence, take Montreal, and join the army before Quebec." Prideaux landed six miles east of the mouth of Niagara and was advancing the work of fortification when he was killed by the bursting of a shell. "Amherst appointed General Gage to succeed him but before the arrival of Gage the command devolved upon General Johnson." A considerable force of French and Indians, sent by the French to the relief of the beleaguered fort, was intercepted and routed. This took from Pouchot his last hope, and he surrendered the following day. "Presqu Isle, Venango, and Le Boeuf were easily taken by Colonel Bou-

quet, who had been sent to summon them to surrender." The French, learning of the concentration of English forces and the proposed attacks, abandoned Ticonderoga and Crown Point. "Amherst spent his time in fortifying Crown Point and building boats and rafts" until "it was too late to descend to Montreal and go to the help of Wolfe; the time for that had been passed in elaborate and useless preparations."—R. Johnson, *History of the French war*, ch. 18.

1759 (July-September).—The Fall of Quebec.—"Wolfe's name stood high in the esteem of all who were qualified to judge, but, at the same time, it stood low in the column of colonels in the Army List. The great minister [Pitt] thought that the former counterbalanced the latter. . . . One of the last gazettes in the year 1758 announced the promotion of Colonel James Wolfe to the rank of major-general, and his appointment to the chief command of the expedition against Quebec. About the middle of February, 1759, the squadron sailed from England to Louisbourg, where the whole of the British force destined for the River St. Lawrence was ordered to assemble. . . . Twenty-two ships of the line, five frigates, and nineteen smaller vessels of war, with a crowd of transports, were mustered under the orders of the admiral [Saunders], and a detachment of artillery and engineers, and ten battalions of infantry, with six companies of Rangers, formed Wolfe's command; the right flank companies of the three regiments which still garrisoned Louisbourg soon after joined the army, and were formed into a corps called the Louisbourg Grenadiers. The total of the land forces embarked were somewhat under 8,000."—E. Warburton, *Conquest of Canada*, v. 2, ch. 9.—"Wolfe, with his 8,000 men, ascended the St. Lawrence in the fleet in the month of June. . . . The Grenadiers of the army were commanded by Colonel Guy Carleton, and part of the light infantry by Lieutenant-Colonel William Howe, both destined to celebrity in after years, in the annals of the American revolution. Colonel Howe was brother of the gallant Lord Howe, whose fall in the preceding year was so generally lamented. Among the officers of the fleet was Jervis, the future admiral, and ultimately Earl St. Vincent; and the master of one of the ships was James Cook, afterwards renowned as a discoverer. About the end of June, the troops debarked on the large, populous, and well-cultivated Isle of Orleans, a little below Quebec, and encamped in its fertile fields. Quebec, the citadel of Canada, was strong by nature. It was built round the point of a rocky promontory, and flanked by precipices. . . . The place was tolerably fortified, but art had not yet rendered it, as at the present day, impregnable. Montcalm commanded the post. His troops were more numerous than the assailants; but the greater part of them were Canadians, many of them inhabitants of Quebec; and he had a host of savages. His forces were drawn out along the northern shore below the city, from the River St. Charles to the Falls of Montmorency, and their position was secured by deep intrenchments. . . . After much resistance, Wolfe established batteries at the west point of the Isle of Orleans, and at Point Levi, on the right (or south) bank of the St. Lawrence, within cannon range of the city. . . . Many houses were set on fire in the upper town, the lower town was reduced to rubbish; the main fort, however, remained unharmed. Anxious for a decisive action, Wolfe, on the 9th of July, crossed over in boats

from the Isle of Orleans to the north bank of the St. Lawrence, and encamped below the Montmorency. It was an ill-judged position. . . . On the 18th of July, Wolfe made a reconnoitering expedition up the river, with two armed sloops, and two transports with troops. He passed Quebec unharmed and carefully noted the shores above it. Rugged cliffs rose almost from the water's edge. . . . He returned to Montmorency disappointed, and resolved to attack Montcalm in his camp, however difficult to be approached, and however strongly posted. Townshend and Murray, with their brigades, were to cross the Montmorency at low tide, below the falls, and storm the redoubt thrown up in front of the ford. Monckton, at the same time, was to cross, with part of his brigade in boats from Point Levi. . . . As usual in complicated orders, part were misunderstood, or neglected, and confusion was the consequence." The assault was repelled and Wolfe fell back across the river, having lost four hundred men, with two vessels, which ran aground and were burned. He felt the failure deeply, and his chagrin was increased by news of the successes of his coadjutors at Ticonderoga and Niagara. "The difficulties multiplying around him, and the delay of General Amherst in hastening to his aid, preyed incessantly on his spirits. . . . The agitation of his mind, and his acute sensibility, brought on a fever, which for some time incapacitated him from taking the field. In the midst of his illness he called a council of war, in which the whole plan of operations was altered. It was determined to convey troops above the town, and endeavor to make a diversion in that direction, or draw Montcalm into the open field. . . . The brief Canadian summer was over; they were in the month of September. The camp at Montmorency was broken up. The troops were transported to Point Levi, leaving a sufficient number to man the batteries on the Isle of Orleans. On the 5th and 6th of September the embarkation took place above Point Levi, in transports which had been sent for the purpose. Montcalm detached De Bougainville with 1,500 men to keep along the north shore above the town, watch the movements of the squadron, and prevent a landing. To deceive him, Admiral Holmes moved with the ships of war three leagues beyond the place where the landing was to be attempted. He was to drop down, however, in the night, and protect the landing. . . . The descent was made in flat-bottomed boats, past midnight, on the 13th of September. They dropped down silently, with the swift current. 'Qui va la?' (who goes there?) cried a sentinel from the shore. 'La France,' replied a captain in the first boat, who understood the French language. 'A quel regiment?' was the demand. 'De la Reine' (the queen's) replied the captain, knowing that regiment was in De Bougainville's detachment. Fortunately, a convoy of provisions was expected down from De Bougainville's, which the sentinel supposed this to be. 'Passe,' cried he, and the boats glided on without further challenge. The landing took place in a cove near Cape Diamond, which still bears Wolfe's name. He had marked it in reconnoitering, and saw that a cragged path straggled up from it to the Heights of Abraham, which might be climbed, though with difficulty, and that it appeared to be slightly guarded at top. Wolfe was among the first that landed and ascended up the steep and narrow path, where not more than two could go abreast, and which had been broken up by cross ditches. Colonel Howe, at the same time, with the light infantry and Highlanders, scrambled up the woody precipices, helping themselves by the roots and

branches, and putting to flight a sergeant's guard posted at the summit. Wolfe drew up the men in order as they mounted; and by the break of day found himself in possession of the fateful Plains of Abraham. Montcalm was thunderstruck when word was brought to him in his camp that the English were on the heights threatening the weakest part of the town. Abandoning his intrenchments, he hastened across the river St. Charles and ascended the heights, which slope up gradually from its banks. His force was equal in number to that of the English, but a great part was made up of colony troops and savages. When he saw the formidable host of regulars he had to contend with, he sent off swift messengers to summon De Bougainville with his detachment to his aid; and De Vaudreil to reinforce him with 1,500 men from the camp. In the meantime he prepared to flank the left of the English line and force them to the opposite precipices." In the memorable battle which ensued, Wolfe, who led the English line, received, first, a musket ball in his wrist, and soon afterward was struck by a second in the breast. He was borne mortally wounded to the rear, and lived just long enough to hear a cry from those around him that the enemy ran. . . . In the meantime the French commander, Montcalm, had received his death-wound, while striving to rally his flying troops. The victory of the English was complete, and they hastened to fortify their position on the Plains of Abraham, preparing to attack the citadel. It was surrendered on September 17, to General Townshend, who had succeeded to the command."—W. Irving, *Life of Washington*, v. 1, ch. 25.

ALSO IN: F. Parkman, *Montcalm and Wolfe*, v. 2, ch. 27-28.—R. Wright, *Life of Wolfe*, ch. 21-23.—Lord Mahon (Earl Stanhope), *History of England, 1713-1783*, v. 4, ch. 35.—W. Smith, *History of Canada*, v. 1, ch. 6.—J. Knox, *Historical Journal*, v. 1, pp. 255-360; v. 2, pp. 1-132.

1759.—Passing of New France.—"Wolfe's victory on the Plains of Abraham proved decisive in the end; but it was not the last of the great struggle for the Key of Canada. After Wolfe had died on the field of battle, and Monckton had been disabled by his wounds, Townshend took command, received the surrender of Quebec on the 18th, and waited till the French field army had retired towards Montreal. Then he sailed home with Saunders, leaving Murray to hold what Wolfe had won. Saunders left Lord Colville in charge of a strong squadron, with orders to wait at Halifax till the spring. . . . Montcalm's successor, Lévis, now made a skilful, bold, and gallant attempt to retake Quebec before navigation opened. Calling the whole remaining strength of New France to his aid, he took his army down in April, mostly by way of the St. Lawrence. . . . After a journey of less than ten days, the whole French army appeared before Quebec. . . . The two armies met at Ste. Foy, a mile and a half beyond the walls; and a desperate battle ensued. . . . At last a British battalion was fairly caught in flank by overwhelming numbers and driven across the front of Murray's guns, whose protecting fire it thus completely masked at a most critical time. Murray thereupon ordered up his last reserve. But even so he could no longer stand his ground. Slowly and sullenly his exhausted men fell back before the French, who put the very last ounce of their own failing strength into a charge that took the guns. Then the beaten British staggered in behind their walls, while the victorious French stood fast, worn out by the hardships of their march and fought to a standstill in the battle. . . . That night Lévis raised

the siege in despair and retired on Montreal. Next morning Lord Colville arrived with the main body of the fleet, having made the earliest ascent of the St. Lawrence ever known to naval history, before that time or since. Then came the final scene of all this moving drama. Step by step overpowering British forces closed in on the doomed and dwindling army of New France. They closed in from east and west and south, each one of their converging columns more than a match for all that was left of the French. Whichever way he looked, Lévis could see no loophole of escape. There was nothing but certain defeat in front and on both flanks, and starvation in the rear. So when the advancing British met, all together, at the island of Montreal, he and his faithful regulars laid down their arms without dishonour, in the fully justifiable belief that no further use of them could possibly retrieve the great lost cause of France in Canada."—W. Wood, *Winning of Canada*, pp. 140-145.

ALSO IN: W. Smith, *History of Canada*, v. 1, ch. 7 (giving the articles of capitulation in full).—F. Parkman, *Montcalm and Wolfe*, v. 2, ch. 29-30.

1759.—New France at the time of the Conquest.—"At the time of the Conquest, the condition of Canada was substantially that of a Province of France; so far as the government was concerned, New France was almost a transcript of the old France across the sea. The King of France was represented by a Governor appointed by the King—usually a noble who desired to replenish his coffers from the wealth of the new land; he had in Canada much the same powers as the King in France; but he had always with him a watchful guardian of the interests of the King and of France—the Intendant—and the Intendant had also very large powers indeed, particularly in respect of finance, police and justice. Then there was a Council, not elected but appointed, who acted as a combination of judge, lawyer and administrator—the King however could disapprove and thereby nullify any act of theirs. There was no such body as a Parliament in the English sense, but the country was governed on feudal principles. In the country were the nobility—the *noblesse*—the seigniors who owned the land—every Canadian noble was a seignior though some seigniors were not noble. The seigniors paid homage to the King or some intermediate superior, for subinfeudation was by no means unknown; they had under them the peasants, 'habitants' (or rather 'habitans') as they called themselves, to whom they leased land to be held on much the same terms as the lands were held by the peasantry in France. This seigniorial tenure was introduced substantially by Richelieu in 1627, and remained in great measure practically unchanged in Lower Canada till 1854. The commonality called themselves 'habitants,' as they did not like the word 'censitaires' or 'roturiers' used in old France to denote those in a similar condition there. These terms were considered to imply a greater degree of dependence upon the feudal lord than the free Canadians were willing to acknowledge themselves to be subject to. We have no English word an exact equivalent of either 'censitaire' or 'roturier' or 'habitant,' but 'tenant' perhaps comes nearest in meaning. Not only did a seignior when he succeeded to his estate pay homage to the King or other feudal superior, but when the seigniorial changed ownership by sale or gift or by inheritance other than in the direct line, a part of its value, usually (at least in theory) a fifth part, had to be paid to such superior. It was the custom to remit one-third of this amount so paid,

but this custom does not seem to have been enforceable at law. The seignior, if an individual and not, as sometimes happened, a religious order, also had the privilege of being eligible to be appointed a member of the Superior Council—if the authorities saw fit, he might also have a commission in the militia; for in time of war all the inhabitants of Canada might be called upon to do service in the army under the Governor or other commander. In all but a very few instances, he did not own his land in the fullest sense—the Crown reserved mines, minerals, oak-timber and masts for ship-building, such lands as might be required for military purposes, and the like. In France, as a rule, the seignior had, as an incident to the ownership of property, the right of exercising judicial powers—in Canada the mere ownership of a seigniorship did not carry with it such right. It could be obtained only by express grant. Most of those who had seigniorships granted after 1633 received such grant, and some exercised the powers given. Sometimes the judicial power extended to all grades of jurisdiction, high, mesne and low (*haute, moyenne ou basse justice*), sometimes only the mesne and low, and sometimes only the low justice. The seigniors whatever their powers very rarely exercised the right of *haute justice*; cases of any importance were generally left to the royal courts to dispose of, whether civil or criminal. There is no record of the death penalty having been inflicted by any seignior, although very many had the power in law to inflict capital punishment. The habitant as 'censitaire' (tenant)—I have pointed out that the words are not precisely synonymous—was under many feudal obligations. . . . If a habitant, being the feudal inferior, desired to dispose of the land which he held, he was obliged to pay a substantial part of the purchase money to the seignior; and worse, the seignior might himself take the land within forty days of the sale. He was liable to the *corvée*, or forced labour, for his seignior, as in France; he must in some instances give the seignior one fish out of every eleven of those caught in seigniorial waters; wood and stone might be taken from his land by the seignior to build or repair manor-house, church or mill. But while the peasants had no part in the government of the country, and were inferiors, their lot was immensely superior to that of their brethren in the old land, as they themselves were essentially superior to the peasants of old France in intelligence and manners. They were free, bold and adventurous, frugal, industrious and moral; and made the very best of soldiers for the kind of country in which they were called upon to fight. Next to, if not sometimes above, the seignior, was the Curé—sometimes the only one in the seigniorship except (or possibly not excepting) the seignior, who could read and write. The essentially religious character of the French-Canadian is seen in the high place the Curé is held in his regard—a place which is but little, if any, lower now than it was a century and a half ago. Indeed it has been said that the Canadian Curé exercised in Canada the power in France of the King, the noble and the priest. The members of the priesthood—in large measure from old France—were devoted sons of the Church, their love for France not clashing with or excelling their love for their spiritual mother. But neither priest nor peasant had any part in making the laws by which they both were governed; their government was arbitrary and military; they were accustomed to obey their superiors—and anything more unlike a constitution in our latter-day sense than was the mode of government of that happy, fearless, primitive people

it would be hard to find."—W. R. Riddell, *Constitution of Canada*, pp. 3-4.

1763.—Ceded to England by the treaty of Paris. See SEVEN YEARS' WAR: Treaties which ended the war.

1763-1774.—Province of Quebec created.—Eleven years of military rule.—Quebec Act of 1774.—Extension of Quebec province to the Ohio and the Mississippi.—"For three years after the conquest, the government of Canada was entrusted to military chiefs, stationed at Quebec, Montreal and Three Rivers, the headquarters of the three departments into which General Amherst divided the country. Military councils were established to administer law, though, as a rule, the people did not resort to such tribunals, but settled their difficulties among themselves. In 1763, the king, George III., issued a proclamation establishing four new governments, of which Quebec was one. Labrador, from St. John's River to Hudson's Bay, Anticosti, and the Magdalen Islands, were placed under the jurisdiction of Newfoundland, and the islands of St. John (or Prince Edward Island, as it was afterwards called), and Cape Breton (Ile Royale) with the smaller islands adjacent thereto, were added to the government of Nova Scotia. Express power was given to the governors, in the letters-patent by which these governments were constituted, to summon general assemblies, with the advice and consent of His Majesty's Council, 'in such manner and form as was usual in those colonies and provinces which were under the King's immediate government.' . . . No assembly, however, ever met, as the French-Canadian population were unwilling to take the test oath, and the government of the province was carried on solely by the governor general, with the assistance of an executive council, composed in the first instance of the two lieutenant-governors of Montreal and Three Rivers, the chief justice, the surveyor general of customs, and eight others chosen from the leading residents in the colony. From 1763 to 1774 the province remained in a very unsettled state, chiefly on account of the uncertainty that prevailed as to the laws actually in force. . . . The province of Quebec remained for eleven years under the system of government established by the proclamation of 1763. In 1774, Parliament intervened for the first time in Canadian affairs and made important constitutional changes. The previous constitution had been created by letters-patent under the great seal of Great Britain, in the exercise of an unquestionable and undisputed prerogative of the Crown. The colonial institutions of the old possessions of Great Britain, now known as the United States of America, had their origin in the same way. But in 1774, a system of government was granted to Canada by the express authority of Parliament. This constitution was known as the Quebec Act, and greatly extended the boundaries of the province of Quebec, as defined in the proclamation of 1763. On one side, the province extended to the frontiers of New England, Pennsylvania, New York province, the Ohio, and the left bank of the Mississippi; on the other, to the Hudson's Bay Territory. Labrador, and the islands annexed to Newfoundland by the proclamation of 1763, were made part of the province of Quebec. . . . The Act of 1774 was exceedingly unpopular in England and in the English-speaking colonies, then at the commencement of the Revolution. Parliament, however, appears to have been influenced by a desire to adjust the government of the province so as to conciliate the majority of the people. . . . The new constitution came into force in October, 1774. The Act sets forth among the reasons for legislation that the

provisions made by the proclamation of 1763 were 'inapplicable to the state and circumstances of the said province, the inhabitants whereof amounted at the conquest, to above 65,000 persons professing the religion of the Church of Rome, and enjoying an established form of constitution and system of laws, by which their persons and property had been protected, governed, and ordered for a long series of years, from the first establishment of the province.' Consequently, it is provided that Roman Catholics should be no longer obliged to take the test oath, but only the oath of allegiance. The government of the province was entrusted to a governor and a legislative council, appointed by the Crown, inasmuch as it was 'inexpedient to call an assembly.' This council was to comprise not more than twenty-three, and not less than seventeen members, and had the power, with the consent of the governor or commander-in-chief for the time being, to make ordinances for the peace, welfare, and good government of the province. They had no authority, however, to lay on any taxes or duties except such as the inhabitants of any town or district might be authorized to assess or levy within its precincts for roads and ordinary local services. No ordinance could be passed, except by a majority of the council, and every one had to be transmitted within six months after its enactment to His Majesty for approval or disallowance. It was also enacted that in all matters of controversy, relative to property and civil rights, recourse should be had to the French civil procedure, whilst the criminal law of England should obtain to the exclusion of every other criminal code which might have prevailed before 1764. . . . Roman Catholics were permitted to observe their religion with perfect freedom, and their clergy were to enjoy their 'accustomed dues and rights' with respect to such persons as professed that creed. Consequently, the Roman Catholic population of Canada were relieved of their disabilities many years before people of the same belief in Great Britain and Ireland received similar privileges. The new constitution was inaugurated by Major General Carleton, afterwards Lord Dorchester, who nominated a legislative council of twenty-three members, of whom eight were Roman Catholics.—J. G. Bourinot, *Manual of constitutional history of Canada*, ch. 2-3. See U. S. A.: 1774 (March-April).

ALSO IN: W. Houston, *Documents illustrative of the Canadian constitution*, pp. 90-96.

1775-1776.—Invasion by the revolting American colonists.—Successful defense of Quebec.—“The wisdom of his [Washington's] refusal to allow his army to be broken up, and to run the danger of defeat in small detachments, was shown in the result of an expedition to Quebec. Richard Montgomery, with about fifteen hundred men, moved down Lake Champlain, took St. John after a long siege, and entered Montreal November 12, 1775. Arnold, meanwhile, had made a terrible march through the Maine forests, starting up the Kennebec with eleven hundred men and coming down the Chaudière to the St. Lawrence with about five hundred survivors. After making an ineffectual attack on Quebec, Arnold awaited Montgomery, who arrived December 3 with a small body of men. Taking a desperate hazard, they attacked Quebec in a blinding snow-storm, December 31, 1775. Montgomery, leading the main attack, was killed, while Arnold, wounded, was succeeded by Morgan, who was overpowered, and the attack was repulsed. [See U. S. A.: 1755 (August-December).] In failing to take Quebec, Canada was virtually lost. It seems hardly possible, how-

ever, that the city could have been held, if captured, for the Americans had no naval power adequate to its defence. . . . By the capture of New York City, Howe had gained part of the object of his campaign, but he hoped daily, and in vain, that Carleton would report the seizure of Ticonderoga, thus placing in British control the two ends of the coveted line of the Hudson. Carleton was delayed by the stubborn and desperate Benedict Arnold, who, after the stormy night of December 31, 1775, when his little army was repulsed before Quebec, grimly fought, step by step, all the dreary way out of Canada. After the first repulse Arnold received reinforcements enough to keep Quebec in a state of blockade; but small-pox, and desertion because of the terrors of a winter camp, depleted his force, until Carleton drove the little army from the Plains of Abraham, with the aid of British vessels arriving when navigation opened. Carleton, reinforced by Hessians until his army numbered thirteen thousand men, pushed Arnold back and back until he reached Sorel and was reinforced. General John Thomas, assigned to the command in Canada, reached the army late in April, but died soon, so that Arnold was in actual control of the whole retreat. Montreal was now retaken by Carleton, and then the pursuit of Arnold was resumed, until the Americans, after a loss of five thousand men, were driven wholly out of Canada, and in June, 1776, stood at bay, determined to prevent the British gaining control of Lake Champlain. All of Arnold's fierce energy and courage were aroused. While Carleton was gathering a fleet of overpowering strength Arnold constructed, out of the standing timber of the forest, a flotilla of some sixteen vessels, with which he meant to harass and delay Carleton until it should be too late in the season to capture Ticonderoga. He took his stand at Valcour's Island early in October, and when Carleton with an overwhelming fleet bore down upon him, Arnold gave the British seven hours of desperate fighting. The American fleet was almost destroyed, but in the mists of the night Arnold slipped away towards Crown Point. Mending leaks, saving sinking crews, and sailing or rowing as he could, he neared the fort before the enemy overhauled him. Another four hours of furious combat saved the remnant of Arnold's force, and after landing at Crown Point he led his men safely through the woods to Ticonderoga. Carleton came up before that fortress, but thought it too strong to be taken, and led his army back into Canada, to the surprise of his foes and the chagrin of his friends. This strange conduct delayed the campaign of the following year.”—C. H. Van Tyne, *American Revolution, 1776-1783*, v. 9, pp. 46-47, 116-118.—See also U. S. A.: 1776-1777.

1782-1784.—Influx of United Empire Loyalists.—“A large immigration of United Empire Loyalists from the United States to the British North American provinces, and the Quebec Act of

1791, were the developments in the solution of the second of these problems arising directly out of the war of 1776-1783. The United Empire Loyalists became the wards of the British government after the treaties of Versailles and Paris; and they remained the peculiar care of the British government for a decade after the revolution. The British government arranged for and financed the transportation to Canada of all the United Empire Loyalists who wished to leave the United States. It offered them houses and lands in Nova Scotia and Quebec. It maintained many of them while they were reestablishing themselves; and it also appointed a royal commission to award compensation to them for the material loss they had incurred in the American revolution. Most of the United Empire Loyalists were too poor to go to England. Canada seemed to them the most hopeful country of refuge. The exodus to Canada—an exodus regarded by Canadian historians as comparable with the exodus of the Huguenots from France—had begun before the treaty of peace was signed at Versailles. Nine transports sailed from New York for Annapolis Royal, Nova Scotia, in April, 1782. Another company of 7000 men, women, and children sailed from New York in April, 1783. Half of them went to what is now St. John, New Brunswick, and the other half to Port Roseway, Shelburne County, Nova Scotia. By the end of September, 1783, 18,000 of the loyalists had reached Nova Scotia; and as late as January, 1784, they were still arriving at St. John. Canadian historians compute that the total immigration of 1782-1783 into what are now the Maritime Provinces was about 35,000. There was an immigration of loyalists into Quebec as early as 1776. A stream of immigration began after the defeat of Burgoyne, at Saratoga, in 1777. By the end of that year 3000 loyalists were in the province—most of them in the neighborhood of Three Rivers, where 'everything in reason was done to make the unfortunates comfortable.' After the treaty of peace had been concluded, the stream of immigration overland to Quebec greatly increased in volume. There were nearly 7000 United Empire Loyalists in the French province in the winter of 1783-1784; and the resources of the British government were strained to the utmost to provide for the necessities of the thousands who had thus flocked over the border line from the United States."—E. Porritt, *Evolution of the Dominion of Canada*, pp. 62-63.—See also *Nova Scotia: 1782-1860*.

1783.—Settlement of boundaries in the treaty of peace between Great Britain and the United States. See U. S. A.: 1783 (September).

1783-1821.—North West Company organized.—Subsequent history.—Amalgamation.—Hudson's Bay Company, endeavoring to secure a monopoly of the whole fur trade of the northwest, encountered opposition from an unexpected quarter. "A number of Scotch traders began to make their way to the Red River regions, and in 1783 several of these organized the North West Company, with headquarters at Fort William, on Lake Superior. From this point the new company spread its posts and into the valleys of the great rivers flowing toward Hudson Bay, displaying a degree of enterprise which greatly alarmed the authorities of the older company. The traders of the respective companies developed a mutual bitterness and frequently came to blows. It was in an endeavor to put an end to armed collisions between rival bodies of traders and boatmen that the British authorities undertook, in 1821, to mediate between the two organizations. The result was that the two companies were amalgamated, and the North West

Company came to an end as a separate organization."—W. B. Munro, *Canada and British North America*, pp. 437-438.

1791.—Constitutional Act.—Division of the province into Upper and Lower Canada.—"In 1791 a bill was introduced by Pitt dividing the Province into Upper and Lower Canada, the line of division being so drawn as to give a great majority to the British element in Upper Canada and a great majority to the French settlers in Lower Canada. The measure was strongly opposed by Fox, who urged that the separation of the English and French inhabitants was most undesirable. . . . The act was passed, and is known as the Constitutional Act of 1791. . . . In each province the legislature was to consist of the Governor, a Legislative Council and a Legislative Assembly. The Governor had power to give or withhold the royal assent to bills or to reserve them for consideration by the Crown. He could summon, prorogue, or dissolve the legislature, but was required to convene the legislature at least once a year. The Legislative Council in Upper Canada consisted of not less than 7, and in Lower Canada of not less than 15 members, chosen by the King for life, the Speaker being appointed by the Governor-General. The Legislative Assembly was in counties elected by 40s. freeholders, and in towns by owners of houses of £5 yearly value and by resident inhabitants paying £10 yearly rent. The number and limits of electoral districts were fixed by the Governor-General. Lower Canada had 50 members, Upper Canada 16 members, assigned to their respective legislatures. The new Constitution did not prove a success. Serious differences arose between the Legislative Council and the Legislative Assembly in regard to the control of the revenue and supplies, differences which were aggravated by the conflict that still went on between the French and English races. . . . The discontent resulted in the rebellion of 1837-8."—J. E. C. Munro, *Constitution of Canada*, ch. 2.

1805-1866.—Early History of British Columbia.—"Far away across the Rockies, a solitary little settlement had struggled into being. In 1805 the North-West Company . . . sent Simon Fraser to Glangarry across the Peace River Pass to open up trade with the Indians. The tree-clad heights and crags and rocky torrents recalled to the Scot the land of his sires, and he named it New Caledonia, a name which it retained till 1858. In 1807 he undertook a journey down the turbulent stream which bears his name. Even for Mackenzie this journey had been too much. After a few days of river work he had preferred to strike across the country. Fraser kept on till at last the rapids

proved impassable even to his daring; then with a thousand difficulties he and his men portaged the canoes over the lofty canyons into the short stretches of navigable water, and at last, on July 1st, reached the river's mouth. Here they took the latitude, and were bitterly disappointed to find that this proved that the river which they had descended was not the Columbia. On the way they discovered the Thompson, which they named after the Company's astronomer, David Thompson, a Welshman, who carried on the work of Fraser. In 1807-8 he established Kootenay House, and for many years, while he made no striking journey, he was the great organizer of routes. . . . After the union of 1821, the reinforced Hudson's Bay Company was given a monopoly of trade, not only in Rupert's Land but in all British territory to the south and west of it. The Act of the British Par-

United States of all the mainland south of the forty-ninth parallel. In 1845, in order to be ready for the division, the Company founded Fort Victoria at the foot of Vancouver Island, and put it under the charge of James (afterwards Sir James) Douglas who had long been MacLoughlin's assistant at Fort Vancouver. In 1849 it was made the headquarters, and from it for the next ten years the doughty Douglas, a fine, honourable, hard-headed, plain-spoken Scot, ruled British Columbia as autocratically as any Czar.

"In 1849 coal was discovered on Vancouver Island, which in the same year was handed over to the Hudson's Bay Company on their promise to aid and encourage settlers. Many have accused the Company of having taken over the Island not to aid but to hinder colonists, and in proof of this have pointed to the rule which refused land

HUDSON'S BAY COMPANY'S POST AT MINGAN
(From a drawing by William Hind)

liament also said that owing to 'the state of continued disturbance,' which had existed, this Indian Territory, as it was named, should be subject to the civil and criminal jurisdiction of Upper Canada; but Upper Canada was in no condition to maintain law and order in a country separated from her by two thousand miles of prairie and mountain, and such order as was kept was due to the Hudson's Bay Company. The Company made its head-quarters in the Valley of the Columbia, at the mouth of which river they had a fort named Astoria, which they had bought from John Jacob Astor. . . . Another, named Fort Vancouver, was built at the mouth of the Willamette. Here for twenty years Dr. John MacLoughlin was in charge and made it a place of some importance, building up a trade not only in furs but in salmon, attracting a few settlers, and even exporting a little grain. It is possible that his energy did something to attract the American settlers who came flocking in in 1842-5, and whose presence forced on the division of the country and the giving up to the

settlers at a lower price than one pound (\$4.86) an acre; but this regulation was really made by the Colonial Office, which had taken from Gibbon Wakefield the theory that waste land should be sold, and the money used to bring in more settlers. With land at such a price, very few settlers came in, and these were soon at strife with the Hudson's Bay Company, which had the monopoly of stores and provisions and charged higher prices than the settlers thought fair. In 1851 fifteen of them—it is doubtful if there were any more—petitioned for representative government. Douglas was made Governor by Great Britain and given power to call an Assembly, which he did in 1856, when seven representatives constituted at Victoria the first Canadian Parliament west of the Rockies. . . . Meanwhile on the mainland there were only trading posts till 1857-1858, when gold was discovered in the bed of the Fraser, and at the Forks the name given to its junction with the Thompson . . . and thousands of red-shirted miners flocked into the new field. Some struggled up by land

through the Okanagan Valley to Kamloops, but as a permit could be obtained only at Victoria, most came by sea. In the summer of 1858, over 30,000 poured in. Yale, Hell Bar Camp, and all the Fraser up to the Forks were soon alive with miners. . . . But the diggings were not long a success; by 1860 most of the 30,000 had disappeared. . . . In that year more gold was found . . . in the Cariboo District, and a . . . smaller rush began, which in its turn died away. Still, . . . some remained, and formed the nucleus of a permanent colony. As a result of this inrush of settlers the British Government established the mainland as a separate colony, under the name of British Columbia (1858). The monopoly of the Hudson's Bay Company was taken away. . . . The seat of government was still at Victoria, but in 1859 the town of New Westminster was founded, and the officials soon began to make it the centre for their work on the mainland. To reach the little colony from Canada one had to go by the Grand Trunk Railway to the frontier, then cross to Detroit, and go by rail to Chicago, thence by rail to St. Paul, thence by wagon across half a continent; from England one had to go round Cape Horn or across the Isthmus of Panama. . . . Order was kept in the rough mining camps by the Chief-justice, Sir Matthew Begbie. . . . The miners of Cariboo protested against the 'dictatorial methods' by which he protected the Indians against them, but in their protest bore unconscious testimony to his worth by pointing out the 'absence of crime in the district'. . . . Soon representative government was demanded, and a Legislative Council was granted, in which some of the members were appointed by the Governor and some were elected. This body first met in 1864. . . . Two years later, British Columbia and Vancouver Island, which by this time had a population of about 8,000 apiece, were joined, and in 1866 the first parliament of the united province met."—W. L. Grant, *History of Canada*, pp. 279-283.—See also OREGON: 1749-1850.

1811-1816.—Selkirk settlement in the Northwest.—"In spite of its fine record in dealing with the Indians, the Hudson's Bay Company proved a hindrance to settlement. Settlers drive the fur-bearing animals further and further afield; the farmer is the worst foe of the hunter and trapper. It was thus to the advantage of the Company to keep the West locked up as long as possible, and they did not hesitate to paint it in the blackest terms to any intending settlers. . . . Thus the only settlements which grew up were on the eastern and the western edges of the great lone land. In 1811 Lord Selkirk, a Scotch nobleman, who had already (1803) founded colonies in Prince Edward Island and at Baldoon near Lake St. Clair, struck by the miserable state of the Scotch labourers and the Highland crofters, conceived the great idea that by emigration to the new and wider lands of the West, the problem of the old world misery might be solved. It was a real vision of empire in the days when the revolt of the American colonies was still in men's minds, and the vision and the dream was vouchsafed to few. Selkirk succeeded in getting control of the majority of the shares of the Hudson's Bay Company, was granted by the Company over 70,000 square miles in which to found a colony, bought out the rights of the Indians, and in 1812-1813 established a number of colonists, at Forts Douglas and Baer (one near Winnipeg, the other near Pembina). But neither the partners in the North-West Company nor their employees had any intention of giving up their hunting grounds, and a small war broke out, in which the hardy

half-breeds had the better of the more peaceful settlers. In 1814 Miles Macdonnell, Governor of the new colony, issued a proclamation taking possession of the soil for Selkirk, and forbidding for a year the export of provisions. Acts of violence on both sides followed, and at last, in June, 1816, in a massacre, known as the battle of Seven Oaks, Governor Semple, who had succeeded Macdonnell, and twenty-one others were killed. In the same year Selkirk sent out a number of old settlers, who captured and plundered the chief post of the North-West Company at Fort William on Lake Superior, and re-established his colony at Kildonan, near Winnipeg. A series of trials and of law suits followed, Selkirk accusing the North-West Company of the murder of Semple, and they accusing him of conspiracy to ruin their trade. The trials were a mere farce—lawyers, judges and juries alike being under the control of the fur-traders. The murderers were acquitted, and Selkirk was heavily fined, retiring at last to Scotland to die of a broken heart."—*Ibid.*, pp. 273-275.

1820-1837.—Family compact.—"The Family Compact manifestly grew out of the principles of the U. E. [United Empire] Loyalists. It was the union of the leaders of the loyalists with others of kindred spirit, to rule Upper Canada, heedless of the rights or wishes of its people. We have admired the patriotic, heroic and sentimental side of U. E. loyalism; but plainly, as related to civil government, its political doctrines and practices were tyrannical. Its prominent members belonged to the class which in the American colonies, in the persons of Governors Bernard and Hutchinson, and many others of high office and standing, had plotted to destroy the liberties of the people and had hastened the American revolution. . . . By the years 1818 or 1820 a junto or cabal had been formed, definite in its aims and firmly combined together, known as the Family Compact, not to its best leaders seeming an embodiment of selfishness, but rather set for patriotic defence and hallowed with the name of religion."—G. Bryce, *Short history of the Canadian people*, ch. 10, sect. 2.—"Upper Canada . . . has long been entirely governed by a party commonly designated throughout the Province as the 'Family Compact,' a name not much more appropriate than party designations usually are, inasmuch as there is, in truth, very little of family connection among the persons thus united. For a long time this body of men, receiving at times accessions to its members, possessed almost all the highest public offices, by means of which, and of its influence in the Executive Council, it wielded all the powers of government; it maintained influence in the legislature by means of its predominance in the Legislative Council; and it disposed of a large number of petty posts which are in the patronage of the Government all over the Province. Successive Governors, as they came in their turn, are said to have either submitted quietly to its influence, or, after a short and unavailing struggle, to have yielded to this well-organized party the real conduct of affairs. The bench, the magistracy, the

high offices of the Episcopal Church, and a great part of the legal profession, are filled by the adherents of this party: by grant or purchase, they have acquired nearly the whole of the waste lands of the Province; they are all powerful in the chartered banks, and, till lately, shared among themselves almost exclusively all offices of trust and profit. The bulk of this party consists, for the most part, of native-born inhabitants of the colony, or of emigrants who settled in it before the last war with the United States; the principal members of it belong to the church of England, and the maintenance of the claims of that church has always been one of its distinguishing characteristics."

—Earl of Durham, *Report on the affairs of British North America*, p. 105.—"The influences which produced the Family Compact were not confined to Upper Canada. In the Lower Province, as well as in Nova Scotia and New Brunswick, similar causes led to similar results, and the term Family Compact has at one time or another been a familiar one in all the British North American colonies. . . . The designation Family Compact, however, did not owe its origin to any combination of North American colonists, but was borrowed from the diplomatic history of Europe."—J. C. Dent, *Story of the Upper Canadian rebellion*, ch. 3.

1837.—Causes of discontent which produced rebellion.—"It was in Lower Canada that the greatest difficulties arose. A constant antagonism grew up between the majority of the legislative council, who were nominees of the Crown, and the majority of the representative assembly, who were elected by the population of the province [see above: 1791]. The home Government encouraged and indeed kept up that most odious and dangerous of all instruments for the supposed management of a colony—a 'British party' devoted to the so-called interests of the mother country, and obedient to the word of command from their masters and patrons at home. The majority in the legislative council constantly thwarted the resolutions of the vast majority of the popular assembly. Disputes arose as to the voting of supplies. The Government retained in their service officials whom the representative assembly had condemned, and insisted on the right to pay them their salaries out of certain funds of the colony. The representative assembly took to stopping the supplies, and the Government claimed the right to counteract this measure by appropriating to the purpose such public moneys as happened to be within their reach at the time. The colony—for indeed on these subjects the population of Lower Canada, right or wrong, was so near to being of one mind that we may take the declarations of public meetings as representing the colony—demanded that the legislative council should be made elective, and that the colonial government should not be allowed to dispose of the moneys of the colony at their pleasure. The House of Commons and the Government here replied by refusing to listen to the proposal. . . . It is not necessary to suppose that in all these disputes the popular majority were in the right and the officials in the wrong. No one can doubt that there was much bitterness of feeling arising out of the mere differences of race. . . . At last the representative assembly refused to vote any further supplies or to

carry on any further business. They formulated their grievances against the home Government. Their complaints were of arbitrary conduct on the part of the governors; intolerable composition of the legislative council, which they insisted ought to be elective; illegal appropriation of the public money, and violent prorogation of the provincial parliament. One of the leading men in the movement which afterwards became rebellion in Lower Canada was Mr. Louis Joseph Papineau. This man had risen to high position by his talents, his energy, and his undoubtedly honourable character. He had represented Montreal in the representative Assembly of Lower Canada, and he afterwards became Speaker of the House. He made himself leader of the movement to protest against the policy of the governors, and that of the Government by whom they were sustained. He held a series of meetings, at some of which undoubtedly rather strong language was used. . . . Lord Gosford, the governor, began by dismissing several militia officers who had taken part in some of these demonstrations; Mr. Papineau himself was an officer of this force. Then the governor issued warrants for the apprehension of many members of the popular Assembly on the charge of high treason. Some of these at once left the country; others against whom warrants were issued were arrested, and a sudden resistance was made by their friends and supporters. Then, in a manner familiar to all who have read anything of the history of revolutionary movements, the resistance to a capture of prisoners suddenly transformed itself into open rebellion."—J. McCarthy, *History of our own times*, v. 1, ch. 3.—Among the grievances which gave rise to discontent in both Upper and Lower Canada, "first of all there was the chronic grievance of the Clergy Reserves [which were public lands set apart by the act of 1791 for the support of the Protestant clergy], common both to British and French, to Upper and to Lower Canada. In Upper Canada these reserves amounted to 2,500,000 acres, being one-seventh of the lands in the Province. Three objections were made against continuing these Reserves for the purpose for which they had been set apart. The first objection arose from the way in which the Executive Council wished to apply the revenues accruing from these lands. According to the Act they were to be applied for 'maintaining the Protestant religion in Canada'; and the Executive Council interpreted this as meaning too exclusively the Church of England, which was established by law in the mother-country. But the objectors claimed a right for all Protestant denominations to share in the Reserves. The second objection was that the amount of these lands was too large for the purpose in view: and the third referred to the way in which the Reserves were selected. These 2,500,000 acres did not lie in a block, but, when the early surveys were made, every seventh lot was reserved; and as these lots were not cleared for years the people complained that they were not utilized, and so became inconvenient barriers to uniform civilization. With the Roman Catholics, both priests and people, the Clergy Reserves were naturally unpopular. . . . An additional source of complaint was found in the fact that the government of Upper and Lower Canada had found its way into the hands of a few powerful families banded together by a Family Compact [see above: 1820-1837]. . . . But the Constitutional difficulty was, after all, the great one, and it lay at the bottom of the whole dispute. . . . Altogether the issues were very complicated in the St. Lawrence Valley Provinces and the Maritime Provinces . . . and so it is not to be won-

dered at that some should interpret the rebellion as a class, and perhaps semi-religious, contest rather than a race-conflict. The constitutional dead-lock, however, was tolerably clear to those who looked beneath the surface. . . . The main desire of all was to be freed of the burden of Executive Councils, nominated at home and kept in office with or without the wish of the people. In Upper Canada, William Lyon Mackenzie, and in Lower Canada, Louis Papineau and Dr. Wolfred Nelson, agitated for independence."—W. P. Greswell, *History of the Dominion of Canada*, ch. 16.

ALSO IN: J. McMullen, *History of Canada*, ch. 19-20.—Earl of Durham, *Report and dispatches*.—Sir F. B. Head, *Narrative*.—*Report of Commissioners appointed to inquire into the grievances complained of in Lower Canada (House of Commons, Feb. 20, 1837)*.

1837-1838.—Rebellion under Papineau and Mackenzie.—Defeat of the rebels.—Burning of the *Caroline*.—End of the rebellion.—Immediately on the breaking out of the rebellion, the constitution of Lower Canada was suspended; the revolt was put down at once, and with little difficulty. Though the outbreak in Upper Canada showed that a comparatively small portion of the population was disaffected to the government, there were some sharp skirmishes before the smouldering fire was completely trodden out. . . . On the night of the 4th of December, 1837, when all Toronto was asleep, except the policemen who stood sentries over the arms in the city hall, and a few gentlemen who sat up to watch out the night with the Adjutant-General of Militia in the Parliament House, the alarm came that the rebels were upon the city. They were under the command of a newspaper editor named Mackenzie, whose grotesque figure was until lately [this was published in 1865] familiar to the frequenters of the Canadian House of Assembly. Rumours had been rife for some days past of arming and drilling among the disaffected in the Home and London districts. . . . The alarm threw Toronto into commotion. . . . The volunteers were formed in the market square during the night and well armed. In point of discipline, even in the first instance, they were not wholly deficient, many of them being retired officers and discharged men from both the naval and military services. . . . Towards morning news came of a smart skirmish which had occurred during the night, in which a party of the rebels were driven back and their leader killed. During the succeeding day and night, loyal yeomen kept pouring in to act in defence of the crown. Sir Allan, then Colonel, Macnab, the Speaker of the House of Assembly . . . raised a body of his friends and adherents in the course of the night and following day, and, seizing a vessel in the harbour at Hamilton, hurried to Toronto. . . . The rebels were defeated and dispersed next day, at a place some two miles from Toronto. In this action, the Speaker took the command of the Volunteers, which he kept during the subsequent campaign on the Niagara frontier, and till all danger was over. . . . Mackenzie soon rallied his scattered adherents, and seized Navy Island, just above Niagara Falls, where he was joined by large numbers of American 'sympathizers,' who came to the spot on the chance of a quarrel with the English. On receipt of this intelligence, the Speaker hastened from the neighbourhood of Brantford (where he had just dispersed a band of insurgents under the command of a doctor named Duncombe) to reinforce Colonel Cameron, formerly of the 79th, who had taken up a position at Chippewa. Navy Island, an eyott [island] some quarter of a mile

in length, lies in the Niagara River within musket-shot of the Canadian bank. The current runs past the island on both sides with great velocity, and, immediately below it, hurries over the two miles of rocks and rapids that precede its tremendous leap. The rebels threw up works on the side facing the Canadians. They drew their supplies from Fort Schlosser, an American work nearly opposite the village of Chippewa."—Viscount Bury, *Exodus of the western nations*, v. 2, ch. 12.

A small American steamboat, named the *Caroline*, had been secured by the insurgents and was plying between Fort Schlosser and Navy island. She "had brought over several field-pieces and other military stores; [but] Great Britain was not at war with the United States, and to cut out an American steamer from an American port was to incur a heavy responsibility. Nevertheless Colonel Macnab determined to assume it." A party sent over in boats at night to Fort Schlosser surprised the *Caroline* at her wharf, fired her and sent her adrift in the river, to be carried over the falls.—Viscount Bury, *Exodus of the western nations*, v. 2, ch. 12.—"On all sides the insurgents were crushed, jails were filled with their leaders, and 180 were sentenced to be hanged. Some of them were executed and some were banished to Van Dieman's Land, while others were pardoned on account of their youth. But there was a great revulsion of feeling in England, and after a few years, pardons were extended to almost all. Even Papineau and Mackenzie, the leaders of the rebellion, were allowed to come back, and, strange to say, both were elected to seats in the Canadian Assembly."—W. P. Greswell, *History of the dominion of Canada*, ch. 16, sect. 15.—On the American border the Canadian rebellion of 1837-1838 was very commonly called "the Patriot War."

1838-1843—Questions at issue in rebellion.—Crown colonies.—Suspension of Constitution.—Durham's report.—Sydenham and Bagot.—"The questions at issue in the decade which preceded the rebellions of 1837 were (1) the clergy reserves; (2) responsible government—the demand for an executive dependent upon a majority in the assembly, as was the constitutional usage in England; (3) full control by the assembly over taxation and appropriations; (4) an elected instead of a nominated legislative council; (5) the exclusion of judges from the legislature; (6) the system under which judges held office at the will of the government; and (7) the abolition of the system of plural office holding. Cartier, the best-equipped statesman the French province ever gave to the Dominion, was, in his youth, associated with Papineau in the rebellion in Quebec. He always insisted that it was a rebellion, not against British authority, or against the British connection, but against the vicious system of government which existed in Lower and Upper Canada for a generation before 1837. It was a rebellion against governments at Quebec and Toronto that were Bourbon in outlook, oligarchic, and corrupt. 'Narrow-minded and tyrannical,' is Egerton's characterization of the government at Toronto. These governments bore down ruthlessly on all attempts at reform from outside; and the colonial office in London made no attempt either to check or to reform them. From the American revolution until responsible government was conceded to all the British North American provinces in the forties of the nineteenth century, Quebec and Ontario, Nova Scotia, New

Brunswick, and Prince Edward Island were under what would be described today as Crown colony rule; and from 1820 to 1837 Crown colony government was seen at its worst in Toronto and Quebec. . . . William IV's conception of colonies, and of the relation of the sovereign to them, was very similar to that of George III. When Lord Gosford was sent out to Quebec as governor-general in 1835, the king told him that he would never consent to the establishment of an elective legislative council. The king held that control of the legislative council, by nomination, was one of the prerogatives of the crown. 'It was,' he said, 'a safeguard for the preservation of the wise and happy connection between the mother country and the colonies, which it was both his duty and his inclination to maintain.' The development of the British cabinet had not reached its present stage in 1835. William IV was the last sovereign to assume an attitude of this kind towards his ministers; and for the United Kingdom, as well as for the colonies, an era of less monarchical rule began with the advent of Queen Victoria.

"The rebellions necessitated immediate legislation at Westminster. Accordingly on January 16, 1838, a bill was introduced in the House of Commons suspending the constitution of Lower Canada for four years, and authorizing Durham, the new governor-general, in concert with an executive council of five members, to frame ordinances for the province. Durham was further authorized to investigate and report on conditions in all the British North American provinces, and his commission constituted him governor-general of all the provinces except Newfoundland. Durham was in his forty-sixth year when he was intrusted with this mission to Canada. He was a man of great wealth, derived largely from coal mines in the county of Durham; and he was son-in-law to Grey, the Whig premier of reform bill fame. He was one of the most aggressive members of the cabinet during the crises over the reform bill of 1830-1832; always ready to force the struggle with William IV; always ready to fight for the bill either in the cabinet or in parliament; and the politically courageous part Durham had in framing and carrying the reform bill would have given him a conspicuous place in British history even if his achievements of 1830-1832 had not been overshadowed by his contribution of 1838 to the inauguration of the new era in British colonial policy. Durham's famous report has been more frequently reprinted, more frequently edited and annotated, and more widely read over the English-speaking world than any other British state paper of the nineteenth century. He was in Canada only from May 29 to November 1, 1838. He resigned and returned to England, because the Melbourne government, holding that he had exceeded his powers, disallowed an ordinance of June 28, 1838, banishing eight rebels to Bermuda. He was succeeded in August, 1839, by Poulett Thomson, afterwards Lord Sydenham, who as a colonial governor ranks second only to Durham in the history of the establishment of responsible government in the dominions. . . .

"Sir Charles Bagot . . . succeeded Sydenham as governor-general in 1841. He was appointed by the Peel government—a Conservative administration that had come into power in September, 1841. Bagot, who in British politics was a Tory, continued Sydenham's policy. At a crisis in Quebec, he formed his government 'in unison with the known will of the majority of the popular assembly.' Bagot, in fact, was so situated that he had to adopt Sydenham's principles of government. Acting on the broad principle that the con-

stitutional majority had the right to rule under the constitution, he appointed Louis Hyppolite Lafontaine to the executive council, in association with Robert Baldwin, the leader of the Liberals of Ontario. Lafontaine had succeeded Papineau as leader of the French-Canadian Liberals; and with Lafontaine's appointment to the executive council there was also the appointment to office of several French-Canadians who had been concerned in the rebellion. . . . This action brought down on him the censure of the home government. Thereafter it was hopeless for him to attempt to continue as governor-general. He asked for his recall. His request was complied with; and he died in Canada soon after the arrival of his successor, Sir Charles T. Metcalfe."—E. Porritt, *Evolution of the Dominion of Canada*, pp. 86-87, 95-97, 116-118.

1840.—Reunion of the provinces.—Opposition of races.—Clear Grits and Conservatives.—"The reunion of the two Provinces had been projected before: it was greatly desired by the British of the Lower Province; and in 1822 a bill for the purpose had actually been brought into the Imperial Parliament, but the French being bitterly opposed to it, the Bill had been dropped. The French were as much opposed to reunion as ever, clearly seeing, what the author of the policy [Lord Durham] had avowed, that the measure was directed against their nationality. But since the Rebellion they were prostrate. Their Constitution had been superseded by a Provisional Council sitting under the protection of Imperial bayonets, and this Council consented to the union. The two Provinces were now [July, 1840] placed under a Governor-General with a single legislature, consisting, like the legislatures of the two Provinces before, of an Upper House nominated by the Crown and a Lower House elected by the people. Each province was to have the same number of representatives, although the population of the French Province was at that time much larger than that of the British Province. The French language was proscribed in official proceedings. French nationality was thus sent, constitutionally, under the yoke. But to leave it its votes, necessary and right as that might be, was to leave it the only weapon which puts the weak on a level with the strong and even gives them the advantage, since the weak are the most likely to hold together and to submit to the discipline of organised party. The French . . . 'had the wisdom,' as their manual of history . . . complacently observes, 'to remain united among themselves, and by that union were able to exercise a happy influence on the Legislature and the Government.' Instead of being politically suppressed, they soon, thanks to their compactness as an interest and their docile obedience to their leaders, became politically dominant. The British factions began to bid against each other for their support, and were presently at their feet. . . . The statute proscribing the use of the French language in official proceedings was repealed, and the Canadian Legislature was made bilingual. The Premiership was divided between the English and the French leader, and the Ministries were designated by the double name—'the Lafontaine-Baldwin,' or 'the Macdonald-Taché.' The French got their full share of seats in the Cabinet and of patronage; of public funds they got more than their full share, especially as being small consumers of imported goods they contributed far less than their quota to the public revenue. By their aid the Roman Catholics of the Upper Province obtained the privilege of Separate Schools in contravention of the principle of religious equality and severance of the Church from the State. In time

it was recognized as a rule that a Ministry to retain power must have a majority from each section of the Province. This practically almost reduced the Union to a federation, under which French nationality was more securely entrenched than ever. Gradually the French and their clergy became, as they have ever since been, the basis of what styles itself a Conservative party, playing for French support, by defending clerical privilege, by protecting French nationality, and, not least, by allowing the French Province to dip her hand deep in the common treasury. On the other hand, a secession of thorough-going Reformers from the Moderates . . . gave birth to the party of the 'Clear Grits,' the leader of which was Mr. George Brown, a Scotch Presbyterian, and which having first insisted on the secularization of the Clergy Reserves, became, when that question was out of the way, a party of general opposition to French and Roman Catholic influence. . . . A change had thus come over the character and relations of parties. French Canada, so lately the seat of disaffection, became the basis of the Conservative party. British Canada became the stronghold of the Liberals. . . . A period of tricky combinations, perfidious alliances, and selfish intrigues now commenced, and a series of weak and ephemeral governments was its fruit."—G. Smith, *Canada and the Canadian question*, ch. 7.

1840-1841.—International imbroglio consequent on the burning of the *Caroline*.—McLeod case.—The burning of the steamer *Caroline* (see above: 1838) gave rise to a serious question between Great Britain and the United States. "In the fray which occurred, an American named Duffree was killed. The British government avowed this invasion to be a public act and a necessary measure of self-defence; but it was a question when Mr. Van Buren [president of the United States] went out of office whether this avowal had been made in an authentic manner. . . . In November, 1840, one Alexander McLeod came from Canada to New York, where he boasted that he was the slayer of Duffree, and thereupon was at once arrested on a charge of murder and thrown into prison. This aroused great anger in England, and the conviction of McLeod was all that was needed to cause immediate war. . . . Our [the American] government was, of course, greatly hampered in action . . . by the fact that McLeod was within the jurisdiction and in the power of the New York courts, and wholly out of reach of those of the United States. . . . Mr. Webster [who became secretary of state under President Taylor] . . . was hardly in office before he received a demand from Mr. Fox for the release of McLeod, in which full avowal was made that the burning of the *Caroline* was a public act. Mr. Webster determined that . . . the only way to dispose of McLeod was to get him out of prison, separate him, diplomatically speaking, from the affair of the *Caroline*, and then take that up as a distinct matter for negotiation with the British government. . . . His first step was to instruct the Attorney-General to proceed to Lockport, where McLeod was imprisoned, and communicate with the counsel for the defence, furnishing them with authentic information that the destruction of the *Caroline* was a public act, and that therefore McLeod could not be held responsible. . . . This threw the responsibility for McLeod, and for consequent peace or war, where it belonged, on the New York authorities, who seemed, however, but little inclined to assist the general government. McLeod

came before the Supreme Court of New York in July, on a writ of habeas corpus, but they refused to release him on the grounds set forth in Mr. Webster's instructions to the Attorney-General, and he was remanded for trial in October, which was highly embarrassing to our government, as it kept this dangerous affair open." But when McLeod came to trial in October, 1841, it appeared that he was a mere braggart who had not even been present when Duffree was killed. His acquittal happily ended the case, and smoothed the way to the negotiation of the Ashburton treaty, which opened at Washington soon afterwards and which settled all questions between England and the United States.—H. C. Lodge, *Daniel Webster*, ch. 8.

1842.—Settlement of boundary disputes with the United States by the Ashburton treaty. See AROOSTOOK WAR; U. S. A.: 1842: Treaty with England.

1843-1849.—Lafontaine-Baldwin ministry.—Metcalf's governorship.—Attempt to stay responsible government.—Lord Elgin's views on the subject.—Draper-Viger ministry.—Rebellion losses bill.—Montreal riots.—Appeal to imperial parliament.—Triumph of responsible government.—"Unlike Durham, Sydenham, and Bagot, Metcalf, who was created a peer in 1845, had had a varied experience of governorships before he reached Canada in 1843. . . . Metcalf did not follow the policy of Sydenham and Bagot. He refused recognition of the principle of responsible government—any recognition that would satisfy Canadian political leaders. At the time Bagot resigned, the Lafontaine-Baldwin ministry was in power. This was the ministry whose formation had been the cause of Bagot's loss of prestige in Downing Street. Kingston was then the seat of government of the United Provinces; and Metcalf, soon after he had established himself in that city as governor-general, undertook to make himself practically minister of the colony. He refused to accept the recommendations of the executive council in regard to public appointments. He 'refused to follow the advice of his ministers in matters which were within their absolute province.' Furthermore, when he was interviewed by a deputation of electors from Upper Canada, who asked that he follow the constitutional practice initiated by Sydenham, Metcalf made a speech, much more suited to the political atmosphere of India than to that of any British North American province after the rebellion. . . . 'If you mean,' said Metcalf, 'that the governor is to have no exercise of his own judgment in the administration of the government, and is to be a mere tool in the hands of the council, I totally disagree with you. That is a condition to which I never can submit, and which her majesty's government, in my opinion, can never sanction. If you mean that every word and deed of the governor is to be previously submitted for the advice of the council then you propose what, besides being unnecessary, is utterly impossible, consistent with the due despatch of business.' . . . His attempt in 1843-1845 to stay the progress towards responsible government was as useless as it would have been for him to command the waters of Lake Erie to cease flowing over Niagara Falls. Racial divisions existed in the legislature of the United Provinces from 1841 to 1866. But party lines were not identical with race lines. All the members from Quebec were not Liberal, nor all the members from Ontario Conservative. Combinations of groups from each province were necessary to secure a party majority in the assembly.

It was by a combination of this kind that the Lafontaine-Baldwin administration was formed when Bagot was governor-general. Such an administration was known as a double-majority and double-headed cabinet, because a British and a French party leader—of equal rank in the cabinet, and each with his regimented following in the assembly—were necessary to keep the administration in power. Robert Baldwin, who with Lafontaine was at the head of the government when Metcalfe attempted to restore the old régime and enforce his old crown colony ideal of colonial government, was the leader of the Liberals in Ontario. He had been in the political life of the upper province since 1829, when association with radicals and reformers meant a boycott for a professional man—he was a lawyer—and meant also social ostracism. With Baldwin from 1820 to 1849, responsible government was the alpha and omega of political reform. He was the author of the municipal code of 1849, a democratic measure of much value in the domestic history of Ontario.

"But his fame today, like that of Lafontaine, rests chiefly on his part in the successful struggle for responsible government under the constitution of 1840. The Lafontaine-Baldwin government resigned in September, 1844. It was succeeded by the Draper-Viger government, which had as its following members of the assembly from both Quebec and Ontario, who were willing to accede to Metcalfe's views of responsible government. But these members were not numerous enough to give the Draper-Viger administration a majority in the assembly. Without a majority there could be no votes in supply—no money with which to carry on the government. Under the constitution a session of the legislature had to be held each year, and a legislature might continue in existence for four years. But, as under the British constitution, the governor-general had power, as he has today, to dissolve the legislature at a crisis which seemed to make expedient a new appeal to the electorate. Metcalfe, under the conditions which confronted him in the autumn of 1844—with Lafontaine and Baldwin out of office, but with their followers still compact and hostile to the new government—was compelled to dissolve the legislature. He was compelled to take this step, or to yield to the demand for responsible government, as the radicals conceived it. The new ministers, Draper and Viger—were Conservatives—Tories, as Conservatives in Canada were called until 1855. Metcalfe had had no experience in the management of elections. Elections were unknown in India. But he threw himself into the election of 1844 with all the vigor that had characterized Head's intervention in the election in Upper Canada in 1836, and with such success that a majority was secured in the assembly for Draper and Viger. As Metcalfe was the last governor-general to assume what today would be regarded as a distinctly unconstitutional position towards an administration, so also was he the last governor who was openly partisan. He was the last to interfere in a general election in the interest of either party. Within less than a year of his success at the election of 1844, Metcalfe died. . . .

"During the whole of her sixty-four years' reign the Queen can scarcely have done what are now the dominions a more valuable service than when she suggested the appointment of Elgin to Stanley. . . . Today Elgin ranks with Durham and Sydenham among the great colonial administrators of the nineteenth century. Had he followed in Metcalfe's footsteps—made speeches like that of Metcalfe to the advocates of responsible government, and interfered in elections—his name would have been

of interest only to colonial antiquaries. . . . At the time that Elgin was governor-general of Canada, and for at least a quarter of a century afterwards, the attitude of many statesmen in England—Conservatives as well as Liberals—was that colonies such as Canada, Australia, and New Zealand would end the connection with Great Britain as soon as they were strong enough to stand alone. Many English statesmen were convinced that the constitutions framed by parliament after 1840 for colonies with representative government were only provisional—only preliminary to constitutions in which these colonies would assert their complete independence. . . . Elgin never held this view of the temporary character of the connection between the dominions and Great Britain. He did not go to Canada with the idea that he was to aid in perfecting a system of government that was to be only provisional, or with the conviction that the British North American colonies would follow the example of the American colonies, and end the connection with Great Britain. As Elgin conceived it, his mission was to convince Canadians that, without severing the bonds that united them with Great Britain, 'they might attain the degree of perfection and of social and political development to which organized communities of freemen had the right to aspire.' The principles on which Elgin based his policy as governor were identical with those that had guided Sydenham in 1841. He would identify himself with no party, but would make himself a moderator between the influential of all parties. He would have no ministers who did not enjoy the confidence of the Canadian people; and he would not refuse his consent to any measure, proposed by the ministry, unless it were of an extreme party character, such as the assembly or the electors would be sure to disapprove. Elgin arrived at Montreal at the end of December, 1847. On the day that he took oath as governor-general, he received an address of welcome from the municipality of Montreal. In reply he intimated that he had frankly and unequivocally adopted Durham's view of colonial governorship—an intimation that caused no little astonishment to the Family Compact and its partisans, who had scarcely more sympathy with Durham's principles of colonial government than they had with republicanism in the United States. The Draper-Viger government was at this time still in office. The leaders and their partisans were in good humor, as they were in enjoyment of the offices to which as Tories of the Family Compact group they were convinced they had a prescriptive right. The Liberals were in a hopeful mood, as they were convinced—rightly, as it developed—that with the end of the Metcalfe régime a better era would open for the advocates of responsible government. A dissolution of the legislature came at the end of 1847. As soon as the newly elected assembly convened, early in 1848, the Draper-Viger ministry was again in the position in which it was when it was first organized. It was in a minority, and unable to carry on the government. A new ministry—again a Lafontaine-Baldwin administration—was formed from the opposition; and at this juncture the members of the two parties observed a truce long enough to concur in an expression of admiration of the perfect fairness and impartiality with which Elgin had conducted himself during the election and the formation of the new ministry. Within a year of his assuming the governor-generalship, Elgin thus succeeded in carrying into effect the second of the principles on which his administration was to be based—that he would have no ministers, no members of the executive council,

who could not command a majority in the legislative assembly. He had still to make a fight, in the end successful, for his third principle, that he would not refuse his consent to any measure proposed by the cabinet, unless it were of an extreme party character, such as the assembly or the electors would disapprove.

"The test came on the measure known in Canadian history as the rebellion losses bill—a bill almost as important in the constitutional history of Canada as the act of union of 1840, and quite as important as the tariff acts of 1858-1859, out of which developed the right of British colonies, with representative and responsible governments, to frame their own tariffs without interference from the colonial office or parliament at Westminster. The object of the rebellion losses bill was to provide for the indemnification of men in Lower Canada whose property had been destroyed during the rebellion. Elgin regarded the bill as a questionable measure; 'but,' to use his own words, 'one which the preceding administration had rendered almost inevitable by certain proceedings adopted by them' during Metcalfe's term of office. Some compensation had been paid to persons who had suffered loss of property in the rebellion. In the last session of the old legislature of Upper Canada a compensation bill was enacted; and by an ordinance, passed by the council that was in existence in Lower Canada during the suspension of the constitution from 1838 to the union in 1840, some compensation was also paid in Lower Canada. In both provinces the payments made were deemed inadequate; and in the first session of the legislature of the United Provinces—1841—a bill was enacted for further compensation for sufferers in Upper Canada. In 1845 there was an appeal on behalf of sufferers in Lower Canada. It was addressed to Metcalfe, who responded by appointing a commission of inquiry. The commission reported in April, 1846, that there were losses for which compensation should be paid. . . . The bill that was introduced into the legislature in 1848 by the Lafontaine-Baldwin government appropriated \$90,000 for this purpose. There was a provision in the bill that no person who had been convicted, or who had pleaded guilty of treason, during the rebellion, should be entitled to any compensation. The Tories in both provinces raised a great commotion against the bill. There was much hard language from the loyalists against Elgin, who was urged to dissolve the legislature, though little more than a year had elapsed since the general election. The bill, however, was persisted in by the Lafontaine-Baldwin administration. In all British legislatures money bills originate in the lower house. They are based on resolutions. If the resolutions are carried they are embodied in a bill which is introduced, and goes through all its stages in both houses like any other measure. The resolutions on which the rebellion losses bill was based—resolutions which, by constitutional usage, could not have been submitted to the legislative assembly had the governor-general not signified his assent to them by message to the house—were carried by fifty to twenty-five votes. The bill was carried by forty-seven to eighteen votes. The reasons which induced Elgin to give his assent to the resolutions were explained in a letter which he wrote from Montreal to Grey, who was secretary for the colonies in the Russell administration of 1846-1852. 'The measure itself,' he wrote, 'is not indeed altogether free from objection; and I very much regret that an addition should be made to our debt for such an object at this time. Nevertheless, I must say, I do not see how my present government could have taken any

other course in this matter than that which they have followed. . . . From the assembly the rebellion losses bill went to the legislative council; and here it should be noted that Elgin in appointing members to the council had acted on the advice of his ministers. By so doing, he had accepted another demand of the protagonists of responsible government, and established the usage which has continued at Ottawa and at Quebec and Halifax to the present day. It is in accordance with this usage that appointments to the senate, and to the legislative councils in the provinces where these exist, are made by the governor-general, or the lieutenant-governors, as representatives of the crown, but invariably on the advice of the cabinet at Ottawa or the provincial executives at Quebec and Halifax. The bill, having passed the assembly and the council, was ready for the royal assent on April 25, 1849. It received the royal assent from Elgin on that day. As Elgin left the parliament house in Montreal he was received with mingled cheers and hooting, and his carriage was pelted with rotten eggs, thrown by a 'small knot of individuals consisting of persons of a respectable class in society.' An open-air demonstration in the Champs de Mars followed the outbreak at the parliament building. Inflammatory speeches were made; and on a sudden the mob proceeded to the house of parliament, where the members were still sitting. After breaking the windows, the mob set fire to the building, and burned it to the ground. The crowd then dispersing, members of the legislature were permitted to leave without molestation; and no resistance was offered by the riotous loyalists to the soldiers who came on the scene to assist in extinguishing the fire. At the next sitting of the assembly an address was voted to the governor-general. It expressed abhorrence of the outrage of April 25, and approval of Elgin's 'just and impartial administration of the government.' It also commended his attitude towards the Draper-Viger ministry as well as towards the Lafontaine-Baldwin cabinet. Elgin went into the city on April 30 to receive this address. He was escorted by a troop of volunteer dragoons. On his way through the streets he was greeted with a shower of stones. Returning from the parliament house to Monklands, his residence on Mount Royal, Elgin varied his route to avoid further hostile demonstrations. But the mob, discovering his purpose, rushed in pursuit. They again assailed his carriage with stones, rotten eggs, and other missiles; and it was only by furious driving that the governor-general reached Monklands unhurt. . . . Grey would not hear of Elgin's resignation. Were he to resign it would be a most serious loss to her majesty's service and to the province. Moreover, with conditions as they were in Montreal, it would be 'most injurious to the public welfare, from the encouragement which it would give to those who had been concerned in the violent and illegal opposition' to Elgin's government. . . . The loyalists then appealed to England. Petitions were sent from Montreal to Westminster for the disallowance of the rebellion losses bill. Gladstone, who, it will be recalled, was not of the Liberal party until 1859, denounced the bill in the house of commons as a measure for the rewarding of rebels; and Herries, who had been a member of the Wellington and Peel administration, moved for an address to the Queen for its disallowance. There was a debate on this motion extending over two nights. In the course of it Elgin's policy was defended by Peel, almost as strongly as by Russell. Russell stoutly contended that under the constitution of 1840 the majority in the United Provinces

must rule. The premier's speech was remarkable, in view of his dread in 1837, and again in 1840, of responsible government in Canada. 'Not only,' he said, 'has Canada self-government, but responsible government, which has never been enjoyed to such an extent as it has been since the time of the Earl of Elgin. If the present ministry in Canada are sustained by popular opinion and by the assembly, they will remain in office. If, on the contrary the opinion of the province is adverse to them, the governor-general will take other advisers, and will act strictly in accordance with the rule that has been adopted here.' There was a majority of 141 against the motion to disallow. In the house of lords a majority also supported the position that Russell had taken in the house of commons; and by these two epoch-making divisions at Westminster in June, 1849, a struggle that had been going on in Canada since 1828 was brought to a triumphant conclusion. Thereafter there was no more discussion of Canadian grievances in parliament at Westminster. There were no more petitions from Conservatives in Canada who objected to responsible government. Thenceforward a new principle governed the colonial office in its relations with colonies with representative and responsible government. This principle was that the imperial government had no interest whatever in exercising any greater influence in the internal affairs of the colonies than was indispensable, either for the purpose of preventing any one colony from adopting measures injurious to another, or to the empire at large.—E. Porritt, *Evolution of the Dominion of Canada*, pp. 119-125, 127-129, 131-140, 142-145.

1846.—Settlement of boundary between British Columbia and Oregon. See BRITISH COLUMBIA; OREGON: 1818-1846.

1851.—Grand Trunk railway built by British capital.—'The Grand Trunk Railway, which dates its charter from 1851, came into existence almost entirely as the result of the investment of private capital, largely British.'—H. E. Fiske, *Dominion of Canada*, p. 113.—See also RAILROADS: 1830-1853; 1853-1919.

1853.—Beginning of Inter-Colonial railway. See RAILROADS: 1853-1918.

1854.—Reciprocity tariff treaty with U. S. See TARIFF: 1854-1866.

1854.—Seigniorial tenure in Lower Canada abolished.—'In Quebec [as we have seen], the land was at first held in seigniority, the seignor (generally a noble) had under him the *censitaires* or tenants, "habitans" they called themselves, who were bound to render certain services, pay certain rents, etc. . . . In 1854, the United Province of Canada directed the value of all these rights to the seignor to be determined by commissioners appointed by the Governor, and upon their report being filed, and notice thereof published in the *Official Gazette*, the habitant was relieved of all duties, etc., except the fixed yearly rent, and thereafter held his land in *france-à-leu roturier*—at his option he might pay a lump sum once for all.

'In this instance all the feudal duties were turned into a money payment—yearly, indeed, unless the tenant paid a lump sum. No one doubts that when the Legislature said that a lump sum might be paid instead of the *rente constituée*, it was perfectly valid legislation.'—W. R. Riddell, *Constitution of Canada*, p. 132.

1866-1871.—Fenian invasions.—The Fenian movement had its most serious outcome in an attempted invasion of Canada from the United States, which took place in 1866. "Canadian volunteers were under arms all day on the 17th of March,

1866, expecting a Fenian invasion, but it was not made: in April an insignificant attack was made upon New Brunswick. About 900 men, under Col. O'Neil, crossed from Buffalo to Fort Erie on the night of May 31st. Moving westward, this body aimed at destroying the Welland Canal, when they were met by the Queen's Own Volunteer Regiment of Toronto, and the 13th battalion of Hamilton Militia, near the village of Ridgeway. Here, after a conflict of two hours, in which for a time the Volunteers drove the enemy before them, the Canadian forces retired to Ridgeway, and thence to Port Colborne, with a loss of nine killed and 30 wounded. Col. Peacock, in charge of a body of regulars, was marching to meet the volunteers, so that O'Neil was compelled to flee to Fort Erie, and, crossing to the United States with his men, was arrested, but afterwards liberated. The day after the skirmish the regulars and volunteers encamped at Fort Erie, and the danger on the Niagara Frontier was past. A Fenian expedition threatened Prescott, aiming at reaching the capital at Ottawa, and another band of marauders crossed the border from St. Albans, Vermont, but both were easily driven back. The Fenian troubles roused strong feeling in Canada against the American authorities. . . . A Fenian attack was led by Col. O'Neil on the Lower Canadian frontier, in 1870, but it was easily met, and the United States authorities were moved to arrest the repulsed fugitives. A foolish movement was again made in 1871 by the same leader, through Minnesota, against Manitoba. Through the prompt action of the friendly American commander at Fort Pembina, the United States troops followed the Fenians across the border, arrested their leader, and, though he was liberated after a trial at St. Paul, Minnesota, the expedition ended as a miserable and laughable failure. These movements of the Fenian Society, though trifling in effect, yet involved Canada in a considerable expense upon the maintenance of bodies of the Active Militia at different points along the frontier. The training of a useful force of citizen soldiery however resulted.'—G. Bryce, *Short history of the Canadian people*, pp. 468-470.

1867.—Federation of the provinces of British North America in the Dominion of Canada.—Constitution of the Dominion.—'The Union between Upper and Lower Canada lasted until 1867, when the provinces of British North America were brought more closely together in a federation and entered on a new era in their constitutional history. For many years previous to 1865, the administration of government in Canada had become surrounded with political difficulties of a very perplexing character. . . . Parties at last were so equally balanced on account of the antagonism between the two sections, that the vote of one member might decide the fate of an administration, and the course of legislation for a year or a series of years. From the 21st of May, 1862, to the end of June, 1864, there were no less than five different ministries in charge of the public business. Legislation, in fact, was at last practically at a dead-lock. . . . It was at this critical juncture of affairs that the leaders of the government and opposition, in the session of 1864, came to a mutual understanding, after the most mature consideration of the whole question. A coalition government was formed on the basis of a federal union of all

the British American provinces, or of the two Canadas, in case of the failure of the larger scheme. . . . It was a happy coincidence that the legislatures of the lower provinces were about considering a maritime union at the time the leading statesmen of Canada had combined to mature a plan of settling their political difficulties. The Canadian ministry at once availed themselves of this fact to meet the maritime delegates at their convention in Charlottetown, and the result was the decision to consider the question of the larger union at Quebec. Accordingly, on the 10th of October, 1864, delegates from all the British North American provinces assembled in conference, in 'the ancient capital,' and after very ample deliberations during eighteen days, agreed to 72 resolutions, which form the basis of the Act of Union. These resolutions were formally submitted to the legislature of Canada in January, 1865, and after an elaborate debate, which extended from the 3d of February to the 14th of March, both houses agreed by very large majorities to an address to her Majesty praying her to submit a measure to the Imperial Parliament 'for the purpose of uniting the provinces in accordance with the provisions of the Quebec resolutions.' Some time, however, had to elapse before the Union could be consummated, in consequence of the strong opposition that very soon exhibited itself in the maritime provinces, more especially to the financial terms of the scheme." Certain modifications of the terms of the Quebec resolutions were accordingly made, and "the provinces of Canada, Nova Scotia, and New Brunswick, being at last in full accord, through the action of their respective legislatures, the plan of union was submitted on the 12th of February, 1867, to the Imperial Parliament, where it met with the warm support of the statesmen of all parties, and passed without amendment in the course of a few weeks, the royal assent being given on the 20th of March. The new constitution came into force on the First of July [annually celebrated since, as 'Dominion Day'] 1867, and the first parliament of the united provinces met on November of the same year. . . . The confederation, as inaugurated in 1867, consisted only of the four provinces of Ontario [Upper Canada], Quebec [Lower Canada], Nova Scotia, and New Brunswick. By the 146th section of the Act of Union, provision was made for the admission of other colonies on addresses from the parliament of Canada, and from the respective legislatures of Newfoundland, Prince Edward Island, and British Columbia. Rupert's Land and the North-west Territory might also at any time be admitted into the Union on the address of the Canadian Parliament. . . . The title of Dominion did not appear in the Quebec resolutions. The 71st Res. is to the effect that 'Her Majesty be solicited to determine the rank and name of the federated Provinces.' The name ['the Dominion of Canada'] was arranged at the conference held in London in 1866, when the union bill was finally drafted."—J. G. Bourinot, *Manual of constitutional history of Canada*, ch. 6-7 (with foot-note).—"The Federal Constitution of the Dominion of Canada is contained in the British North America Act, 1867, a statute of the British Parliament (36 Vict., c. 3). I note a few of the many points in which it deserves to be compared with that of the United States. The Federal or Dominion Government is conducted on the so-called 'Cabinet system' of England, i. e., the Ministry sit in Parliament, and hold office at the pleasure of the House of Commons. The Governor-General [appointed by the crown] is in the position of an irresponsible and permanent executive similar to

that of the Crown of Great Britain, acting on the advice of responsible ministers. He can dissolve Parliament. The Upper House or Senate, is composed of 78 persons, nominated for life by the Governor-General, i. e., the Ministry. The House of Commons has at present 210 members, who are elected for five years. Both senators and members receive salaries. The Senate has very little power or influence. The Governor-General has a veto but rarely exercises it, and may reserve a bill for the Queen's pleasure. The judges, not only of the Federal or Dominion Courts, but also of the provinces, are appointed by the Crown, i. e., by the Dominion Ministry, and hold for good behaviour. Each of the Provinces, at present [1888] seven in number, has a legislature of its own, which, however, consists in Ontario, British Columbia, and Manitoba, of one House only, and a Lieutenant-Governor, with a right of veto on the acts of the legislature, which he seldom exercises. Members of the Dominion Parliament cannot sit in a Provincial legislature. The Governor-General has a right of disallowing acts of a Provincial legislature, and sometimes exerts it, especially when a legislature is deemed to have exceeded its constitutional competence. In each of the Provinces there is a responsible Ministry, working on the Cabinet system of England. The distribution of matters within the competence of the Dominion Parliament and of the Provincial legislatures respectively, bears a general resemblance to that existing in the United States; but there is this remarkable distinction, that whereas in the United States, Congress has only the powers actually granted to it, the State legislatures retaining all such powers as have not been taken from them, the Dominion Parliament has a general power of legislation, restricted only by the grant of certain specific and exclusive powers to the Provincial legislatures. Criminal law is reserved for the Dominion Parliament; and no Province has the right to maintain a military force. Questions as to the constitutionality of a statute, whether of the Dominion Parliament or of a Provincial legislature, come before the courts in the ordinary way, and if appealed, before the Judicial Committee of the Privy Council in England. The Constitution of the Dominion was never submitted to a popular vote, and can be altered only by the British Parliament, except as regards certain points left to its own legislature. . . . There exists no power of amending the Provincial constitutions by popular vote similar to that which the peoples of the several States exercise in the United States."—J. Bryce, *American commonwealth*, v. 1, app., note (B) to ch. 30.—See also BRITISH NORTH AMERICA ACT; CANADA, CONSTITUTION OF: 1867; 1871; FEDERAL GOVERNMENT; Modern federations.

1868.—Postal savings banks established. See POSTAL SAVINGS BANKS.

1869-1873.—Acquisition of the Hudson Bay Territory.—First Riel rebellion.—Admission of Manitoba, British Columbia, Prince Edward Island.—Selkirk's "soldier settlers remained at Kildonan, and in the Red River Valley there gradually grew up a settlement composed mainly of Scotch and French half-breeds, living by hunting and trapping, and occasionally rebelling against even the mild rule of the [Hudson's Bay Company] Company. . . . But the West was destined for bet-

ter things than to remain for ever a hunting ground. Once Upper and Lower Canada had begun to settle down and to find that it was possible to live together in peace, if not in harmony, the wider vision and the larger hope began to dawn. In 1857 the Conservative Government sent Chief-Justice Draper to England to try to negotiate with the Hudson's Bay Company. Although his mission failed, the Canadian hope did not die and was fostered by the great men of both parties. The liberal leader, George Brown, and his lieutenant, William MacDougall, were instant in season and out of season for the acquisition by Canada of this great domain. Once Canada had become federated, and had thus obtained the power and the resources necessary to govern so vast a territory, the negotiations were renewed. . . . In 1868 Sir Georges Cartier and Mr. Macdougall were sent to London to negotiate. There the British Government co-operated with them, and as a result the Hudson's Bay Company, while retaining its trading rights, gave up all its powers of government on condition of receiving one-twentieth of the land [two sections in every township], certain small areas around its own forts, and \$1,500,000. This seems to us now a small price to pay for the great western heritage of Canada, yet so little was the greatness then realized that many men attacked the Government for its wanton extravagance. . . . But the West was not to yield up her treasures without a struggle. The half-breeds around the Hudson's Bay Company post of Fort Garry (now Winnipeg) had no desire to leave the mild rule of the Company, and a series of mistakes and mishaps drove them into armed rebellion."—W. L. Grant, *History of Canada*, p. 276.—"The Canadian Government, . . . not as efficient in administration as it should have been, overlooked the necessity of consulting the wishes and the prejudices of the men on the spot. It was not merely land and buffalo herds which were being transferred but also sovereignty over a people. In the valley of the Red River there were some twelve thousand *métis*, or half-breeds, descendants of Indian mothers and French or Scottish fathers. The Dominion authorities intended to give them a large share in their own government but neglected to arrange for a formal conference. The *métis* were left to gather their impression of the character and intentions of the new rulers from indiscreet and sometimes overbearing surveyors and land seekers. In 1869, under the leadership of Louis Riel, the one man of education in the settlement, able but vain and unbalanced, and with the Hudson's Bay officials looking on unconcerned, the *métis* decided to oppose being made 'the colony of a colony.' The Governor sent out from Ottawa was refused entrance, and a provisional Government under Riel assumed control. The Ottawa authorities first tried persuasion and sent a commission of three, . . . when the act of Riel in shooting Thomas Scott, an Ontario settler and a member of the powerful Orange order, set passions flaring. Mgr. Taché, the Catholic bishop of the diocese, on his return aided in quieting the *métis*. Delegates were sent by the Provisional Government to Ottawa, and, although not officially recognized, they influenced the terms of settlement. An expedition under Colonel Wolsley marched through the wilderness north of Lake Superior only to find that Riel and his lieutenants had fled. By the Manitoba Act the Red River country was admitted to Confederation as a self-governing province, under the name of Manitoba while the country west to the Rockies was given territorial status. The Indian tribes were handled with tact and

justice, but though for the time the danger of armed resistance had passed, the embers of discontent were not wholly quenched."—O. D. Skelton, *Canadian Dominion*, p. 155.—"On the formation of the Dominion of Canada, the provincial legislature [of British Columbia] passed a unanimous motion in favor of union with it. This was delayed for a year or two by the Governor and some of the officials, who disliked the union, but the Governor was replaced, the British Government used its influence with the officials, and on July 1st, 1871, British Columbia became part of the Dominion. [See BRITISH COLUMBIA: 1858-1871.] Of the terms of the union the chief was that Canada should within two years begin, and within ten years complete, a railway binding the Pacific province to Lake Huron and the east. Canada now stretched from the Atlantic to the Pacific. On

DONALD A. SMITH (LORD STRATHCONA)

Last resident governor of the Hudson's Bay Company. One of the builders of the Canadian Pacific Railway. High Commissioner to London for Canada from 1896 to 1911.

the one side she looked out to the old world of Europe, on the other to the still older world of China and Japan. But she was still length without breadth. Her enemies contemptuously likened her to 'a bundle of fishing-rods tied together by the ends.' Her westward expansion was ended; her northward expansion was to begin."—W. L. Grant, *History of Canada*, pp. 283-284.—Prince Edward Island, which declined to join the confederation in 1866, was admitted in 1873.—See also NORTH-WEST TERRITORIES OF CANADA.

1890-1896.—Manitoba school question.—"The Manitoba school question was an echo of the racial and religious strife which followed the execution of Riel and in which the Jesuits' Estates controversy was an episode. In the early days of the province, when it was still uncertain which religion would be dominant among the settlers, a system of state-aided denominational schools had been established. In 1890 the Manitoba Government swept this system away and replaced it by a single system of non-sectarian and state-supported schools which were practically the same as the old Protestant schools. Any Roman Catholic who did not wish to send his children to such a school was thus compelled to pay for the maintenance of a parochial school as well as to pay taxes for the public schools. A provision of the Confederation Act, inserted at the wish of the Protestant minority in Quebec, safeguarded the educational privileges of religious minorities. A somewhat similar clause had been inserted in the Manitoba Act of 1870. To this pro-

tection the Manitoba minority now appealed. The courts held that the province had the right to pass the law but also that the Dominion Government had the constitutional right to pass remedial legislation restoring in some measure the privileges taken away. The issue was thus forced into federal politics. A curious situation then developed. The leader of the Government, Sir Mackenzie Bowell, was a prominent Orangeman. The leader of the Opposition, Wilfrid Laurier, was a Roman Catholic. The Government, after a vain attempt to induce the province to amend its measure, decided to pass a remedial act compelling it to restore to the Roman Catholics their rights. The policy of the Opposition leader was awaited with keen expectancy. Strong pressure was brought upon Laurier by the Roman Catholic hierarchy of Quebec. Most men expected a temporizing compromise. Yet the leader of the Opposition came out strongly and flatly against the Government's measure. He agreed that a wrong had been done but insisted that compulsion could not right it and promised that, if in power, he would follow the path of conciliation. At once all the wrath of the hierarchy was unloosed upon him, and all its influence was thrown to the support of the Government. Yet when the liberals blocked the Remedial Bill by obstructing debate until the term of Parliament expired, and forced an election on this issue in the summer of 1896, Quebec gave a big majority to Laurier, while Manitoba stood behind the party which had tried to coerce it. The country over, the Liberals had gained a decisive majority. The day of new leaders and a new policy had dawned at last."—O. D. Skelton, *Canadian Dominion*, pp. 197-199.

1895.—Northern territories formed into provisional districts.—"The unorganized and unnamed portion of the Dominion this year was set apart into provisional districts. The territory east of Hudson's Bay, having the province of Quebec on the south and the Atlantic on the east, was to be hereafter known as Ungava. The territory embraced in the islands of the Arctic Sea was to be known as Franklin, the Mackenzie River region as Mackenzie, and the Pacific coast territory lying north of British Columbia and west of Mackenzie as Yukon. The extent of Ungava and Franklin was undefined. Mackenzie would cover 538,000 square miles, and Yukon 225,000 square miles, in addition to 143,500 square miles added to Athabasca and 470,000 to Keewatin. The total area of the Dominion was estimated at 3,456,383 square miles."—*Annual Register*, 1895, p. 391.

1895.—Judicial Committee Amendment Act. See BRITISH EMPIRE: Colonial federation: Privy Council as Supreme Court.

1895.—Union with Newfoundland refused. See NEWFOUNDLAND: 1895.

1896 (June-July).—Liberal triumph in parliamentary elections.—Formation of ministry by Sir Wilfrid Laurier.—General elections held in Canada on June 23, 1896, gave the Liberal party 113 seats out of 213 in the Dominion House of Commons; the Conservatives securing eighty-eight, and the Patrons of Industry and other Independents twelve. The effect of the election was to call the Liberal leader, Sir Wilfrid Laurier, of Quebec, to the head of the government, the Conservative ministry, under Sir Charles Tupper, retiring on July 8.

1896-1897.—Policy of the Liberal government.—Revision of the tariff.—"The position of the Canadian Liberals, when they came into power after the General Election of 1896, was not unlike that of the English Liberals after the General Election of 1892. Both Liberal parties had lists of reforms to which they were committed. The English measures were in the Newcastle Programme. Those of the Canadian Liberals were embodied in the Ottawa Programme, which was formulated at a convention held at the Dominion Capital in 1893. . . . A large part of the Ottawa Programme was set out in the speech which the Governor-General read in the Senate when the session of 1897 commenced. There was then promised a measure for the revision of the tariff; a bill providing for the extension of the Intercolonial railway from Levis to Montreal; a bill repealing the Dominion Franchise Act and abolishing the costly system of registration which goes with it; and a measure providing for the plebiscite on the Prohibition question. Neither of these last two measures was carried through Parliament. Both had to be postponed to another session; and the session of 1897 was devoted, so far as legislation went, chiefly to the tariff, and to bills, none of which were promised in the Speech from the Throne, in retaliation for the United States Contract Labor Laws, and the new United States tariff."—E. Porritt, *New administration in Canada* (*Yale Review*, Aug., 1897).—The tariff revision took the direction of discriminating duties in favor of Great Britain, and reciprocity with those nations entitled thereto by virtue of a treaty with Great Britain. For the details of this tariff, see TARIFF: 1897-1898.

1897.—Colonial conference at London. See BRITISH EMPIRE: Colonial and imperial conferences: 1897.

1897 (October).—Self-government for the Northwestern territories.—By an Act passed in October, a system of self-government, going far towards the full powers of a provincial government, but having some limitations, was provided for the Northwest Territories.

1898 (January).—Encyclical letter of the pope on the Manitoba school question.—On the report made by his delegate, Monsignor Merry del Val, Pope Leo XIII addressed an encyclical letter to the Roman church in Canada, concerning the duty of Catholics in the matter of the Manitoba schools (see above: 1890-1896), which was made public at Quebec on January 9, 1898. The letter has great general importance as defining with precision the attitude of the church towards all secular school systems: "For the Catholic there is but one true religion, the Catholic religion; hence in all that concerns doctrine, or morality, or religion, he cannot accept or recognize anything which is not drawn from the very sources of Catholic teaching. Justice and reason demand, then, that our children have in their schools not only scientific instruction but also moral teachings in harmony, as we have already said, with the principles of their religion, teachings without which all education will be not only fruitless but absolutely pernicious. Hence the necessity of having Catholic teachers, reading books, and text-books approved of by the bishops, and liberty to organize the schools, that the teaching therein shall be in full accord with Catholic faith as well as with all the duties that flow therefrom. For the rest, to decide in what institutions their children shall be instructed, who shall be their teachers of morality, is a right inherent to parental authority. When, then, Catholics demand,

and it is their duty to demand, and to strive to obtain, that the teaching of the masters shall be in conformity with the religion of their children, they are only making use of their right; and there can be nothing more unjust than to force on them the alternative of allowing their children to grow up in ignorance, or to expose them to manifest danger in what concerns the supreme interests of their souls. It is not right to call in doubt or to abandon in any way these principles of judging and acting which are founded on truth and justice, and which are the safe-guards both of public and private interests. Therefore, when the new law in Manitoba struck a blow at Catholic education, it was your duty, venerable brothers, to freely protest against the injury and disaster inflicted."

1898 (September).—Popular vote on the question of prohibition.—Pursuant to a law passed by the Dominion Parliament the previous June, a vote of the people in all the provinces of the dominion was taken, on September 29, 1898, upon the following question: "Are you in favor of the passing of an act prohibiting the importation, manufacture or sale of spirits, wine, ale, beer, cider, and all other alcoholic liquors for use as beverages?" The result of the voting was a majority for prohibition in every province except Quebec, Ontario pronouncing for it by more than 30,000, Nova Scotia by more than 29,000, New Brunswick by more than 17,000, Manitoba by more than 9,000, Prince Edward Island by more than 8,000, and the Northwest Territories by more than 3,000, while British Columbia gave a small majority of less than 600 on the same side. Quebec, on the other hand, shouted a loud "No" to the question, by 93,000 majority. The net majority in favor of prohibition was 107,000. The total of votes polled on the question was 540,000. This was less than 44 per cent of the total registration of voters; hence the vote for prohibition represented only about 23 per cent of the electorate, which the government considered to offer too little support for the measure proposed.

1898-1899.—Joint high commission for settlement of all unsettled questions between Canada and the United States.—"A Joint High Commission was constituted in 1898. The members from the United States were Senator Fairbanks, Senator Gray, Representative Nelson Dingley, General Foster, J. A. Kasson, and T. J. Coolidge of the State Department. Great Britain was represented by Lord Herschell, who acted as chairman, Newfoundland by Sir James Winter, and Canada by Sir Wilfrid Laurier, Sir Richard Cartwright, Sir Louis Davies, and John Charlton, M. P. The Commission held prolonged sittings, first at Quebec and later at Washington, and reached tentative agreement on nearly all of the troublesome questions at issue. The bonding privileges on both sides the border were to be given an assured basis; the unneighborly alien labor laws were to be relaxed; the Rush-Bagot Convention regarding armament on the Great Lakes was to be revised; Canadian vessels were to abandon pelagic sealing in Bering Sea for a money compensation; and a reciprocity treaty covering natural products and some manufacturers was sketched out. Yet no agreement followed. One issue, the Alaska boundary, proved insoluble, and as no agreement was acceptable which did not cover every difference, the Commission never again assembled after its adjournment in February, 1899."—O. D. Skelton, *Canadian Dominion*, pp. 231-232.

1898-1910.—Tariff war with Germany.—Final agreement. See TARIFF: 1898-1910.

1899-1902.—Canada's part in the Boer War.—

"In addition to the first contribution (of 10,169 men who had sailed October 31) were the Canadian Mounted Rifles, 398 officers and men; the Royal Canadian Dragoons, 379 officers and men; the Royal Canadian Artillery, 530 officers and men; Lord Strathcona's special corps, 597 officers and men—all these sent out in 1899-1900, and making a force of 3,092 officers and men. In 1901 a second force of Canadian Mounted Rifles of 900 men and 1,200 men for the South African Constabulary were sent out. Early in the year 1902 the Second Regiment, Canadian Mounted Rifles, were despatched, 900 men strong. They returned in July. In April, four regiments, the Third, Fourth, Fifth, and Sixth Regiments Canadian Mounted Rifles, comprising over 2,000 men, went to the front, but saw no service, were on land only a week or so, and returned home in September. These, together with the 1,004 who volunteered for special garrison duty at Halifax, in order to permit the Imperial troops stationed there to go to the front, make an aggregate of 9,200 officers and men. . . . The total cost of the war to Canada was about \$2,000,000, which was borne cheerfully by the country. The service was not a deadly one, for the number of deaths from action and disease up to October 1, 1901, was only 176."—F. B. Tracy, *Tercentenary history of Canada*, pp. 1028-1029.

1899-1919.—Growth of Canadian northern railway system. See RAILROADS: 1809-1919.

20th century.—Status of education.—Growth of consolidated school movement. See EDUCATION: Modern developments: 20th century: General education: Canada.

1900 (November).—General election.—The general election of members of the Dominion House of Commons was held November 7, resulting as follows:

PROVINCES	Liberal	Conservative	Independent	Total
Nova Scotia	15	5	—	20
New-Brunswick	9	5	—	14
Prince Edward Island	3	2	—	5
Quebec	57	8	—	65
Ontario	33	54	5	92
Manitoba	2	3	2	7
Northwest Territories	2	—	2	4
British Columbia	3	2	1	6
Totals	124	79	10	213

As in the election of 1896, the Liberal ministry of Sir Wilfrid Laurier found its strong support in the province of Quebec. Its party suffered unexpected losses in Ontario.

1900-1918.—Labor legislation. See ARBITRATION AND CONCILIATION, INDUSTRIAL: Canada: 1900-1918.

1901-1902.—New apportionment of parliamentary representation.—The new distribution of parliamentary representation, determined this year by the census of the Dominion, gave the House of Commons a total membership of 214, apportioned as follows: Quebec 65 (as guaranteed by the Confederation Act); Ontario, 86; Nova Scotia, 18; New Brunswick, 13; Manitoba, 10; British Columbia, 7; Northwest Territories, 10; Prince Edward Island, 4; the Yukon, 1. The basis was one repre-

representative for each 2500 people. Ontario lost 6 seats, Nova Scotia 2, New Brunswick and Prince Edward Island 1 each; all the other provinces gained, British Columbia to the extent of 7 seats, the Northwest Territories 4, and Manitoba, 3.

1902.—Colonial conference at London.—Preferential trade agreement. See BRITISH EMPIRE: Colonial and imperial conferences; 1902.

1903.—Adoption of empire day in Great Britain. See ENGLAND: 1903 (June).

1903.—Discovery of cobalt-silver mines in Ontario.—Ore bodies carrying values in silver, cobalt, nickel, and arsenic were discovered in 1903, during the building of the Temiskaming and North Ontario railway near the town of Haileybury, at a distance of about 103 miles from North bay. The railway line ran over the most important vein that has been found, and signs of the latter were noticed in the spring of the year named. Prospecting was begun in the fall with quick results of important discovery, and the rapid attraction of a large mining population to what has become famous as the Cobalt District. The production of silver in the district increased from \$111,887 in 1904 to \$9,500,000 in 1908. The ores are said to be unique among those of North America.—*Sixteenth Annual Report of Ontario Bureau of Mines.*

1903-1905.—Attitude of the Canadian Manufacturers' Association toward Great Britain and the United States on the tariff question.—“The attitude of the Canadian Manufacturers' Association toward both the United States and Britain has been very frequently misrepresented by opponents of tariff reform in Canada and England. . . . The views of the Association were clearly set forth in the recommendations made by the Tariff Committee at the annual meeting in September, 1903, and adopted by the Association after full discussion. The attendance was very large, and the meeting was practically unanimous, only one member dissenting. The resolutions were as follows: (1) That we reaffirm the tariff resolution passed at the last annual meeting in Halifax, as follows: Resolved, That in the opinion of this Association, the changed conditions which now obtain in Canada demand the immediate and thorough revision of the tariff, upon lines which will more effectually transfer to the workshops of our Dominion the manufacture of many of the goods which we now import from other countries; that, in any such revision, the interests of all sections of the community, whether of agriculture, mining, fishing, or manufacturing, should be fully considered, with a view, not only to the preservation, but to the further development, of all these great natural industries; that, while such a tariff should primarily be framed for Canadian interests, it should nevertheless give a substantial preference to the Mother Country, and also to any other part of the British Empire with which reciprocal preferential trade can be arranged, recognizing always that under any conditions the minimum tariff must afford adequate protection to all Canadian producers. (2) That, except in very special cases, we are opposed to the granting of bounties in Canada as a substitute for a policy of reasonable and permanent protection. (3) That we are strongly opposed to any reciprocity treaty with the United States affecting the manufacturing industries of Canada. (4) We recommend that the Dominion Government establish in Canada a permanent tariff commission of experts, who shall have constant supervision of tariff policy and changes, and shall follow closely the workings of the Canadian tariff with a view to making such recommendations to the Government as will best conserve and ad-

vance the interests of the Dominion.’ These resolutions were reaffirmed at the annual conventions in 1904 and 1905, meeting with no opposition.”—W. Griffin, *Canadian manufacturers' tariff campaign*, (*North American Review*, Aug., 1906).

1903-1908.—Anti-Indian agitation. See RACE PROBLEMS: 1903-1908.

1904.—General election.—Continuance of the Laurier ministry.—Earl of Minto succeeded as governor-general by Earl Grey.—The general election in 1904 resulted in a parliamentary majority of sixty-four for the Liberals, thus firmly reseating the Laurier ministry. The Conservatives carried Ontario, but were beaten heavily in the maritime provinces, in Quebec, and in the west. The general prosperity of the country gave a backing to the Liberals which no political criticism could overcome. The earl of Minto was succeeded as governor-general, in 1904, by Earl Grey, who held office until 1910.

1904.—Operation of Board of Railway Commissioners. See RAILROADS: 1904-1909.

1904.—Temiskaming and Northern Ontario railway in Ontario. See RAILROADS: 1904-1921.

1904-1909.—Race problems.—Restriction of Chinese immigration.—Labor hostility.—Riotous attacks on Japanese, Chinese, and Hindu laborers. See RACE PROBLEMS: 1880-1906.

1905.—New provinces created.—Alberta and Saskatchewan.—Revival of the separate school controversy.—Compromise settlement.—By bills brought into the Dominion Parliament by the premier, Sir Wilfrid Laurier, on February 21, 1905, and subsequently passed, the four Northwest Territories ceded to the Dominion by Great Britain in 1870 (see NORTHWEST TERRITORIES OF CANADA), were reorganized as two provinces, and admitted to membership in the Canadian Federal Union, bearing the names of Alberta and Saskatchewan, with Edmonton for the capital of the former and Regina for the latter. Saskatchewan includes the territories of Saskatchewan, Assiniboia, and one-half of Athabasca; and Alberta, the territory of Alberta and the remainder of Athabasca. The entire area of the two provinces is 550,345 square miles, and it extends from Manitoba west to the 110th meridian, and from the United States boundary to 60 north latitude. The population of each province was reckoned at 250,000, and was rapidly increasing. The dominion government retains control of the public lands. Each of the new provinces received at the beginning five representatives in the Dominion House of Commons and four in the Senate. A single legislative chamber of twenty-five members was provided for each; each has a lieutenant-governor, with a cabinet of responsible ministers. The dominion treasury contributes \$250,000 yearly to the revenue of each.

A provision in these bills for conceding separate schools to religious minorities revived the controversy which raged in Canada for many years, after the province of Manitoba, in 1890, had abolished denominational schools and established a free compulsory, unsectarian school system [see CANADA: 1890-1896, and 1898 (January)]. The government was forced to amend the provision, devising a compromise which cannot be said to have satisfied either party to the dispute, but which saved the government from a probable defeat. As explained at the time by a writer in *The Outlook*, the working of the system is as follows: “The half-hour is the only noteworthy feature of the separate schools. They are liable for no other school taxation than that which is necessary to support those schools. In all other respects, in every detail of government control and oversight,

they are exactly like the schools of the majority. From nine o'clock in the morning until three o'clock in the afternoon the order of lessons is the same for all; so are the text-books, the standards of efficiency, and the qualifications of the teachers. There cannot be any control of the school by any clerical or sectarian body. There cannot be any sectarian teaching between nine o'clock in the morning and three o'clock in the afternoon. The Normal schools of the new provinces will give a uniform normal training for all teachers, and there will be uniform curricula and courses of study for all schools of the same grade. There will be complete and absolute control of all schools as to their government and conduct by the central school authority created by the new provincial Legislature. The distribution of the legislative grant to all schools will be according to educational efficiency, a wise provision which did not apply to separate schools of the old type. To recapitulate, all the schools are alike, except that where the trustees are Protestant there is Protestant religious teaching from half-past three to four, and where the trustees are Roman Catholic there is Roman Catholic teaching during the half-hour. That is the only distinction, and neither Protestant nor Roman Catholic children, when they are in the minority, need remain to bear any religious teaching against their parents' wishes."

1906.—Lord's Day Act. See SUNDAY OBSERVANCES: Legal institution of a weekly rest day.

1906 (May)—Departure of the last British garrison.—On May 1, 1906, the last British garrison in the dominion was withdrawn from Esquimaux, in British Columbia, under an arrangement which leaves the Canadian government in undivided control of all military posts.

1906-1907.—Political experiments in Ontario.—Broadening the functions of government.—The Canadians of their Middle West, who used to be the most conservative of Britons, have manifested lately a new spirit, wafted, perhaps, from adventuresome New Zealand, and are trying governmental experiments that would stagger Oklahoma,—trying them, too, with what looks like success. For the development of the rich cobalt and silver mining region on its eastern border, and for the encouragement of colonization farther northward on the same border, the Ontario government has not hesitated to construct and own and operate officially an important line of railway, the Temiskaming and Northern Ontario, which is reported to have been profitable from the start. The road may possibly be extended to James Bay, the southward projection of Hudson bay. The progressive government of Ontario has also undertaken to work for its own benefit the mines in a large lately opened block of the Cobalt mining territory, covering about 100 square miles. In somewhat the same line of economic policy, it determined in 1906 to control the development and transmission of electric power at and from Niagara Falls, and accomplished its purpose by a contract with the Ontario Power Company, which secures power to municipalities in Ontario at an extremely reasonable rate.

This adventurous policy in economic directions is less surprising, however, than an absolutely novel experiment in the officializing of political parties, as agencies in representative government, which has been put on trial in Ontario during two parliamentary sessions. For the first time in constitutional history, the opposition leader in a legislature has been made a recognized functionary and salaried by the government to the extent of \$7,000 a year. Theoretically, the importance of an ef-

fectively critical opposition to the majority party in a legislature is always acknowledged. Is there not good sense, then, theoretically at least, in a policy of government which aims to increase the efficiency of that criticism and give it a responsible character, in the mode which the Ontarians are trying?

After between two and three years' trial of this last named experiment, with a salaried leader of the Opposition, the Toronto correspondent of the *London Times* wrote, in June, 1909, to that paper as follows: "This is an experiment in Parliamentary government which has not been attempted elsewhere. It has both advantages and disadvantages. There are few men of wealth or leisure in Canadian public life, and generally a private party fund has been provided for the support of the leader of the Opposition. The charge was commonly made that as this fund was likely to be provided by the few wealthy men of the party they would exact compensation in the form of official appointment or legislative favour when the Opposition leader became the head of the Government. It was decided, therefore, to give a salary, equal to the emoluments of a Minister of the Crown, to the leader of the Opposition. Mr. Borden [leader of the opposition in Ontario for some time past] sanctioned this legislation and accepted the remuneration provided. It was argued that he thus became a pensioner on the Government, and that a servile consideration for his salary would affect his independence and restrain his criticism of the paymasters on the Treasury benches. Mr. Borden, while disposed more than once to relinquish the salary, felt that this criticism was unjust, and, knowing the grave financial distresses which some of his predecessors had experienced, waited patiently for the attack to exhaust itself and for opportunity to prove that he was not a dependent of the Treasury. At length his course seems to be justified, and the appropriation of a salary for the leader of the Opposition seems likely to become a settled feature of the Canadian Parliamentary system. The real test will come, however, if the system of Parliamentary groups should ever replace the established two-party system in Canada. But for the time the experiment has been justified, and under the conditions which so often obtain in Canada it may even be said that the official salary enhances the independence and dignity of the Opposition leader in Parliament."

1907.—Imperial conference at London.—Formation of constitution.—Discussions of defense of privy council. See BRITISH EMPIRE: Colonial and imperial conferences: 1907.

1907.—Tariff revision. See TARIFF: 1907.

1907-1909.—Convention respecting commercial relations with France and its amendment.—A convention which greatly liberalized the tariff regulations affecting trade between Canada and France was concluded between the British and French governments and signed at Paris on September 19, 1907. It gave "the benefit of the minimum tariff and of the lowest rates of customs duty applicable to like products of other foreign origin," reciprocally, in each country to certain enumerated products of the other; with mutual pledges that every reduction granted by either to any foreign country should apply to similar products of the other. In January, 1909, an amended convention was nego-

tiated which liberalized still further this commercial agreement, enlarging the schedules of favored products, especially the agricultural schedules, giving important advantages to Canada in the French market. The amended convention was ratified in France on July 13, and in Canada early in December.

1908.—General election.—The Liberals were again victorious in 1908. Two chief causes contributed to this: the Conservatives were still disorganized, and it was felt that Sir Wilfrid Laurier merited another term.

1908 (April).—Convention for the preservation and propagation of food fishes in waters contiguous to the United States and Canada. See FISHERIES: 1908.

1908 (April).—Treaty respecting the demarcation of the international boundary between the United States and Canada.—A treaty "providing for the more complete definition and demarcation of the international boundary between the United States and the Dominion of Canada," negotiated by Ambassador Bryce and Secretary Root, appointed plenipotentiaries of the Governments of Great Britain and the United States, respectively, was signed at Washington on June 4, 1908. The treaty provides for parcelling the boundary line in eight sections, for the determination in each of which each government "shall appoint, without delay, an expert geographer or surveyor to serve as Commissioner." Its first article prescribes with minuteness the procedure to be followed and the consideration to be given to former surveys and determinations of the boundary line "in the waters of Passamaquoddy Bay from the mouth of the St. Croix River to the Bay of Fundy." The second article defines similarly the task appointed to the commissioners who shall determine the "line drawn along the middle of the River St. Croix from its mouth in the Bay of Fundy to its sources." The third article instructs the commissioners who shall fix the line from the source of the St. Croix to the St. Lawrence. The fourth deals in like manner with the next section of the line, from "the point of its intersection with the St. Lawrence River near the forty-fifth parallel of north latitude, as determined under articles I and VI of the Treaty of August 9, 1842, between Great Britain and the United States, and thence through the Great Lakes and communicating waterways to the mouth of Pigeon River, at the western shore of Lake Superior." The fifth pursues the line from "the mouth of Pigeon River to the north-westernmost point of the Lake of the Woods." The sixth traces the work to be done on the line from that point of the Lake of the Woods to the summit of the Rocky mountains. The seventh relates to the section of boundary "along the forty-ninth parallel of north latitude, from the summit of the Rocky Mountains westward to the eastern shore of the Gulf of Georgia, as defined in article I. of the Treaty of June 15, 1846, between Great Britain and the United States and as marked by monuments along its course,"—for the renewing and completing of which monuments commissioners were appointed by concurrent action of the two governments in 1902 and 1903. The eighth article has to do with the western terminal section of the task, carrying the boundary line from the forty-ninth parallel of north latitude along the middle of the channel which separates Vancouver Island from the mainland and through the Haro channel and the middle of Fuca's straits to the Pacific ocean, as defined in article one of the treaty of June 15, 1846, between Great Britain and the United States, and as determined by the award made on October 21, 1872, by the German emperor

as arbitrator. In articles one and two there are provisions for the arbitration of disagreements; and the concluding article contains the following: "If a dispute or difference should arise about the location or demarcation of any portion of the boundary covered by the provisions of this Treaty and an agreement with respect thereto is not reached by the Commissioners charged herein with locating and marking such portion of the line, they shall make a report in writing jointly to both Governments, or severally each to his own Government, setting out fully the questions in dispute and the differences between them, but such Commissioners shall, nevertheless, proceed to carry on and complete as far as possible the work herein assigned to them with respect to the remaining portions of the line. In case of such a disagreement between the Commissioners, the two Governments shall endeavor to agree upon an adjustment of the questions in dispute, and if an agreement is reached between the two Governments it shall be reduced to writing in the form of a protocol, and shall be communicated to the said Commissioners, who shall proceed to lay down and mark the boundary in accordance therewith, and as herein provided, but without prejudice to the special provisions contained in Articles I and II regarding arbitration. It is understood that under the foregoing articles the same persons will be appointed to carry out the delimitation of boundaries in the several sections aforesaid, other than the section covered by Article IV, unless either of the Contracting Powers finds it expedient for some reason which it may think sufficient to appoint some other person to be Commissioner for any one of the above-mentioned sections."

Also in: *Treaties affecting Canada*, 1867.

1908 (July).—Tercentenary celebration of the founding of Quebec.—The three hundredth anniversary of the founding of Quebec by Champlain was celebrated at that city in July, 1908, with remarkable spirit and success. The government of the dominion took an active and important part in the preparations, nationalizing the battle-field of Wolfe's victory over Montcalm, on the Plains of Abraham, and converting it into a park, where the principal pageants and ceremonies of the occasion were performed. The imperial government interested itself warmly in the undertaking, the prince of Wales, Lord Roberts, the duke of Norfolk, and other distinguished personages from Great Britain coming as guests of the festivity and to bear a part. Living descendants of Wolfe and Montcalm were also invited guests, and the governments of France and the United States were officially represented. Battleships from the fleets of these nations and from Germany, Italy, Spain, Japan and Argentina were brought to a friendly concourse in the harbor of Quebec, for participation in the brilliant spectacles of the fête. These included a military representation of the armies of Wolfe and Montcalm, on the field where they fought; a representation of the landing of Champlain, from a ship which duplicated the structure and equipment of his own, and a number of other historical pageants, all admirably planned and executed, and offering a rare entertainment to the many thousands of visitors who were attracted to Quebec from all parts of the Dominion and the United States. The celebration began on the 10th of July and continued through two weeks.

1908 (September).—Act to amend Civil Service Act.—Merit system introduced. See CIVIL SERVICE REFORM: Canada: 1908.

1908-1919.—Immigration facts.—The immigration figures for the years 1908-1919 are as follows:

Year.	British Isles.	From U. S. A.	Other Countries.	Total.
Fiscal year ending March 31.....1908	120,182	58,312	83,975	262,469
" " " ".....1909	52,901	59,832	34,175	145,908
" " " ".....1910	50,790	103,798	45,206	208,794
" " " ".....1911	123,014	121,451	66,620	311,084
" " " ".....1912	138,121	133,710	82,406	354,237

" " " ".....1918	3,178	71,314	4,582	79,074
" " " ".....1919	9,194	40,715	7,073	57,702

Canada's total immigration represents 53 nationalities.

Of total immigration, July 1, 1900, to March 31, 1919, of 3,311,498, 1,188,946 were British; United States 1,268,793; Continental, 853,039.—F. Yeigh, 5,000 facts about Canada.

1909 (January).—Waterways treaty between the United States and Great Britain, concerning the waters between the former and Canada.—“In 1905 a temporary waterways commission was appointed, and four years later [1909] the Boundary Waters treaty provided for the establishment of a permanent Joint High commission, consisting of three representatives from each country, and with authority over all cases of use, obstruction, or diversion of border waters. Individual citizens of either country were allowed to present their case directly before the commission, an innovation in international practice. Still more significant of the new spirit was the inclusion to this treaty of a clause providing for reference to the Commission, with the consent of the United States Senate and the Dominion Cabinet, of any matter whatever at issue between the two countries. With little discussion and as a matter of course, the two democracies, in the closing years of a full century of peace, thus made provision for the sane and friendly settlement of future line-fence disputes.”—O. D. Skelton, *Canadian Dominion*, p. 238.

1909.—Great Mackenzie basin.—Newest Canadian west.—A report on the agricultural possibilities of the great Mackenzie basin, prepared by a select committee of the dominion senate, was made public in the summer of 1909. “Basing their calculations upon the testimony of witnesses, the Committee calculate that some two million square miles between the northern limits of Saskatchewan and Alberta and the Arctic Circle can be used for pasturage and for the cultivation of wheat, barley, potatoes, and other vegetables. Until a few years ago not only the Mackenzie basin but the valley of Peace rivers were on account of their high latitudes considered to be unfit for cultivation. The comparatively mild climate, which, as the report shows, they in reality enjoy, is said to be due to the proximity of large bodies of water such as the Great Slave and Great Bear lakes and to the *chinook* wind, the warm current of air that blows across the Rocky Mountains from the Pacific. The shortness of the sub-Arctic summer appears to be offset by the proportionate length of the days and by the clearness of the air. In regard to the future of the district with which it deals the report points out that in 1870 the representatives of the people of Eastern Canada were anxious to obtain in regard to what is now the prosperous province of Manitoba exactly the same information as the Committee has been engaged in collecting about Canada's ‘newest west.’”

1909 (July-August).—Imperial Defense conference at London. See WAR, PREPARATION FOR: 1909: British Imperial Defense conference.

1909-1910.—Share of undertakings of British Imperial defense. See WAR, PREPARATION FOR: 1909-1910.

1910.—Canadian naval policy.—“When the Canadian parliament met in January 1910 Sir Wilfrid Laurier submitted the Naval Service Bill, which provided for the establishment of fleets according to the plan finally approved by the Admiralty. The ships were to be under the control of the Dominion Government which might, in case of emergency, place them at the disposal of the Admiralty, summoning parliament to ratify such action. The bill was passed in March. In the autumn the cruiser *Niobe* (11,000 tons) and the *Rainbow* (3600 tons), purchased from the Admiralty, reached Canadian waters, where they were to serve as training-ships. Recruiting for these ships was begun and, while not speedy, was reported by the department as satisfactory. The Halifax and Esquimalt dockyards were taken over. Early in 1911 a Naval College was opened at Halifax; and in May tenders were received, ranging from eleven to thirteen millions, from six British and Canadian firms, for the construction, in Canada, of four Bristol cruisers, one Boadicea cruiser, and six destroyers.”—O. D. Skelton, *Day of Sir Wilfrid Laurier*, p. 308.

1910.—Combine Investigation Act.—“The Combine Investigation Act, providing for the investigation of combines, monopolies, trusts and mergers, is modelled in principle upon the Industrial Disputes Investigation Act 1907 and similarly will be administered by the Department of Labour.” Provisions are made for the appointment of Boards of investigation and any person reported “as continuing to offend against the act is rendered liable to a daily penalty not exceeding \$1,000 and costs.”—*Canadian Year Book*, 1910, p. 17. See TRUSTS: Canada: 1910-1912.

1910.—Agreements with Belgium, Holland and Italy.—“As a result of correspondence between the Minister of Finance and other consular representatives in Canada, Orders of Council were passed on June 7 by which the benefit of the Ca-

nadian intermediate tariff was extended to specified goods, the produce or manufacture of Belgium, Holland and Italy."—*Canadian Year Book*: 1910, p. xxxi.

1910.—Statistics of trade unions. See LABOR ORGANIZATION: 1910-1919.

1910-1911.—Proposed reciprocity with the United States.—"The revival of the tariff issue was the most spectacular and most important episode in the new relationship. The revival started in the Republic. For some years a steadily growing agitation in favour of reciprocity with Canada had been carried on in the New England and Northwest states. Nothing might have come of the agitation, however, had not the Payne-Aldrich tariff of 1909 compelled official negotiation and opened up the whole broad issue. Under that tariff the system of maximum and minimum schedules was adopted, the maximum designed to serve as a club to compel other nations to yield their lowest rates. The president was directed to enforce these higher duties against all countries which had not agreed by April, 1910, to grant the concessions demanded. The proposal partook of the highwayman's methods and ethics even more than is usual in protectionist warfare; and it was with wry faces that one by one the nations with maximum and minimum tariffs consented to give the United States their lower rates. France and Germany were the last of European nations to accept. Canada alone remained. It was admitted that the preference granted other parts of the Empire did not constitute discrimination against the United States, but it was contended that the concessions made to France should be given to the United States. Canada resented this demand, in view of the fact that the minimum tariff of the United States stood much higher than the maximum of Canada, and it was proposed to retaliate by a surtax on American goods. . . . President Taft proposed a conference at Albany; the Dominion Government accepted, and an agreement was reached on the 30th of March, the last day of grace but one. Canada conceded to the United States its intermediate rates on a few articles of minor importance—china-ware, window-glass, feathers, nuts, prunes, and other goods—and the United States accepted these as equivalent to the French concessions. Then, to complete the comedy, Canada at once made these lower rates part of its general tariff, applying to any country, so that the United States in the end was where it started—enjoying no special concessions whatever. Canada had gone through the motions of making a concession, and that sufficed. This agreement, however, was only the beginning. President Taft, who recognized too late that he had antagonized the growing low-tariff sentiment in the United States by his support of the Payne-Aldrich tariff, decided to attempt a stroke for freer trade. He proposed a broad revision of trade relations with Canada. In negotiations which began at Ottawa and were concluded at Washington in January, 1911, an agreement for a wide measure of reciprocal free trade was effected. It was nearly as broad as the treaty of 1854. Grain, fruit and vegetables, dairy products, live stock, fish, hewn lumber and sawn boards, and many minerals were put on the free list. Meats, flour, coal and other articles free in the earlier agreement were subjected to reduced rates, a limited number of manufactured articles were included, some of them Canadian and some of them American specialties. The agreement was to be effected, not by treaty but by concurrent legislation for an indefinite period. The Canadian Government announced that the same terms would be granted all parts of the British Empire. . . .

On the economic issues concerned the advocates of the agreement apparently had a good case. The farmer, the miner, the fisherman stood to gain from it, not so notably as they would have done twenty years before, but yet undoubtedly to gain. It was contended that the United States was itself a rival producer of most of the commodities in question, and that Canada would be exposed to the competition of the British Dominions and the most-favoured nations. These arguments had force, but could not balance the advantages of the arrangement, especially to the western farmer. That this gain would accrue and a large trade north and south be created, to the destruction of trade east and west, was in fact made by the opponents of the treaty the chief corner-stone of their economic argument. It was held, too, that the raw products of farm and sea and forest and mine ought not to be shipped out of the country, but ought to be kept at home as the basis of manufacturing industries. And though the arrangement scarcely touched the manufacturers, the thin end of the wedge argument had much weight with them and their workmen. It would lead, they thought, to a still wider measure of trade freedom which would expose them to the competition of American manufacturers. But it was the political aspect of the pact that the Conservatives most emphasized. Once more, as in 1891, they declared Canadian nationality and British connection to be at stake. Reciprocity would prove the first long step towards annexation. Such was the intention, they urged, of its American upholders, a claim given some colour by President Taft's maladroit 'parting of the ways' speech and by Speaker Clark's misplacedly humorous remark, 'we are preparing to annex Canada.' And while in Canada there might be as yet few annexationists, the tendency of a vast and intimate trade north and south would be to make many. Where the treasure was, there would the heart be also. The movement for imperial preferential trade, then strong in the United Kingdom, would be for ever defeated if the American offer should be accepted. Canada must not sell her birthright for a mess of Yankee pottage. The advocates of reciprocity denounced these arguments as the sheerest buncombe. Annexation sentiment in the United States they declared to be rapidly disappearing, and in any case it was Canada's views, not those of the United States, that mattered. Reciprocity from 1854 to 1866 had killed, not fostered, annexation sentiment in Canada. And, if the doubling and trebling of imports from the United States in recent years had not kept national and imperial sentiment from rising to flood-tide, why now should an increase of exports breed disloyalty? Canadian financiers and railway operators were entering into ever closer relations with the United States; why should the farmer be denied the same right? The reciprocity proposed in 1911, unlike the programme of twenty years earlier, did not involve discrimination against Great Britain, but in fact went along with a still greater preference to the mother country. The claim that reciprocity would kill imperial preference was meaningless in face of this actual fact. Moreover, the British tariff reformers proclaimed their intention, if Mr. Chamberlain's policy prevailed, of making reciprocity treaties with foreign countries as well as preferential arrangements with the Dominions, so why should not Canada exercise the same freedom? . . . The result of the elections, which were held on the 21st of September, was the overwhelming defeat of Sir Wilfrid Laurier's Ministry. In Ontario the Liberals saved only thirteen seats out of eighty-six. In the rest of the country they

had a majority, but not sufficient to reduce substantially this adverse Ontario vote. The complete returns gave 133 Conservatives to 88 Liberals. As usual, the popular vote was more equally divided than the parliamentary seats, for the Liberals secured 625,000 and the Conservatives 669,000 votes. The Liberal majority of only 5000 in Quebec, 3000 in the maritime provinces, and 20,000 in the prairie provinces was overcome by the Conservative majority of 63,000 in Ontario and 9000 in British Columbia. A fortnight later Sir Wilfrid Laurier tendered his resignation to the governor-general and Mr. Borden formed his Government." Thus the reciprocity movement was definitely closed.—O. D. Skelton. *Day of Sir Wilfrid Laurier*, p. 260-266, 268-269.

1911 (October).—Appointment of the duke of Connaught as governor general.—"In January official notice was received by the Government that H. R. H. Duke of Connaught would be appointed to succeed Lord Grey as Governor-General of Canada upon the expiration of His Excellency's term of office later in the year. On October 13th Duke and Duchess of Connaught were welcomed at Quebec where the new Governor-General was duly sworn in."—*Canadian Year Book*, 1911, p. xxiii.

1911-1913.—Customs agreement with Japan.—The existing customs tariff upon importations into Canada from Japan was continued for two years from July 17, 1911 (when the act came into force by order of the governor in council) "with a view to the negotiation within that period of a new commercial treaty between Canada and Japan, the Dominion Government having decided not to adhere to the new commercial treaty concluded between Great Britain and Japan. A condition precedent to the coming in force of the act was that Canadian imports into Japan should not be liable to duties or restrictions different from those imposed by Japan upon imports from other countries."—*Canadian Year Book*, 1911, p. 15.

"On April 10, 1913, the Japanese Treaty Act was assented to. Under this Act the treaty of April 3, 1911, between the United Kingdom and Japan was sanctioned and declared to have the force of law in Canada, subject to two provisos: (1) that the treaty or act should not repeal or affect any of the provisions of the Immigration Act and (2) that Article VIII of the treaty relating to the products of the United Kingdom and Japan respectively should be deemed not to apply to Canada."—*Ibid.*, 1913.

1912.—Extension of boundaries.—"By the Boundary Extension Acts passed by the Dominion Parliament in 1912 the provinces of Manitoba, Ontario and Quebec were enlarged by the addition of areas that were previously part of the Northwest Territories. The boundaries of Manitoba were thus extended northwards to the 60th parallel of

north latitude between the eastern boundary of Saskatchewan and the western shore of Hudson Bay; and from the point where the northern boundaries of Manitoba and Ontario formerly coincided the boundary of Manitoba was extended due north to a point defined and thence northeasterly to the point where the 89th meridian of west longitude intersects the southern shore of Hudson Bay. The northern boundaries of Ontario were extended to the southern shores of Hudson Bay, the new western boundary of Ontario coinciding with the new eastern boundary of Manitoba. To the province of Quebec were added the whole of the territory of Ungava and that part of Labrador which is within the Dominion of Canada. . . . By the revision of the boundaries Manitoba received about 178,000, Ontario 146,400 and Quebec 354,961 square miles of additional territory. Quebec, instead of British Columbia, is now the largest province of the Dominion, Ontario being second, and British Columbia third in point of size."—*Canadian Year Book*, 1912, p. 1.

1912-1916.—Bi-lingual school question in Ottawa.—"When the bi-lingual question became acute the French committee at Ottawa resented the provision in the Ontario law that all pupils must be taught English. As a matter of fact, in some of the schools of Ottawa, English, if taught at all, was taught in a manner so perfunctory that it had no value. The French committee disliked inspection by the government at Toronto. When, by an accident of circumstances, the inspector was a Protestant, they declared it to be insulting that a Protestant inspector should be sent to Roman Catholic schools. When, however, a Roman Catholic inspector was appointed, they refused to admit him to the schools, since he was certain to find that they were not complying with the law in respect to the teaching of English. On October 12, 1912, the pupils of the Garneau school walked out when an English-speaking inspector entered. When Instruction 17, requiring that English should be taught in all schools in Ontario, was issued in 1912, the Ottawa Board definitely refused to obey it and remained obstinate in this decision. It appointed its own inspector, proceeded to get rid of all lay teachers and to replace them by the less costly service of members of religious orders, some of whom, under the regulations in force in Ontario, were not qualified to teach in the schools. At the same time the Board proceeded with the plan for building new schools and for borrowing large sums of money for this purpose. The English-speaking element on the Board protested against these acts of defiance and, in the end, brought an action at law to restrain the Board dominated by their French-speaking colleagues. Before judgment was given a dramatic crisis was reached. On April 29, 1914, an injunction was issued forbidding, until the case was tried, the Ottawa Board to employ or pay teachers without legal qualifications or to pass by-laws for borrowing money, so long as the provincial regulations were not obeyed. The answer of the Ottawa Board was to turn out the whole staff of teachers and to close for a time every French-English school in Ottawa and leave seven or eight thousand boys and girls without any means of instruction. Thus, in obeying the letter of the injunction, the Board committed a new act of defiance. A preliminary judgment in the case was given on September 11, 1914, ordering the trustees to reopen the schools and to employ only legally qualified teachers. When the case was appealed, the Ontario Court of Appeal in July, 1915, confirmed the original judgment.

"The Ottawa Separate School Board based their

right to defy the authority of the Provincial Government on the ground that the rights of the separate schools in Ontario were guaranteed by an Imperial Act of Parliament, the British North America Act, that the rights of trustees included the authority to determine what language might be used in the schools, and that no merely provincial regulations had any authority to modify such rights. Believing itself strong in this legal argument the Board persistently refused to obey Instruction 17. At last, in 1915, the Legislature of Ontario passed a bill authorizing the Department of Education to hand over to a commission the powers of the Ottawa Separate School Board in conducting the schools. On August 4, 1915, three Commissioners were appointed. They assumed authority over the Ottawa schools and refused to accept any teachers not qualified to teach under the regulations of the Province of Ontario. The testing came in the case of the Misses Deloges, whom the Ottawa Board had appointed, but who had not the necessary legal qualifications. When the Commission required them to withdraw from the school where they had taught they did so but their pupils retired with them. There were some stormy scenes in Ottawa. Mobs composed largely of women refused to permit entry to the schools of the teachers named by the Commission. Racial passions were all aflame. Happily, however, there was no religious passion as the struggle was between persons of the same faith. . . . It was inevitable that appeal should be made to the highest court in the British Empire, the Privy Council, and the final decision was given on November 2, 1916. The result was looked for with keen expectancy. On the whole the Privy Council confirmed the action of the Government of Ontario. It declared, indeed, that the appointment of the special Commission to control the Ottawa Separate Schools was *ultra vires*. The law, it pointed out, gives to the electors who support the schools the power to name trustees to control them. To put a special commission in charge of the schools would unjustly deprive those who supported the schools of the right of control. On the general question, however, of the right of the government of Ontario to determine to what extent French, or any other language, might be taught or used in the schools the Privy Council was emphatic. The rights guaranteed by the British North America Act, which could not be altered by a provincial measure, were rights in respect to religious teaching, not in respect to race or language. This pronouncement of the Privy Council will be found finally to have settled the bi-lingual question in Ontario.

"It is of happy augury that both Pope Benedict XV and the Roman Catholic Bishops, French-speaking and English-speaking, in the dioceses affected have united to insist that the law governing questions of language in the schools must be respected, and at the same time to urge the opposing elements to show mutual consideration and forbearance. Another effort at conciliation brings the comforting reflection that special dangers arouse special efforts to counteract them. The strained relations between Quebec and Ontario led to a movement which has come to be known by the promising name of the *Bonne Entente*. In the autumn of 1916 a group of nearly a hundred men of affairs from Ontario visited important centres in Quebec and were received with marked cordiality. At banquets and public meetings messages of good-will passed from one side to the other. In January, 1917, the men of Quebec made a return visit to Ontario. At a banquet in Toronto,

the Lieutenant-Governor of Ontario, the prime ministers of the two provinces, the leader of the Liberal Party in Ontario, and many others in influential positions, dwelt upon the vital need of unity. Frank statement of the causes of strife and misunderstanding was not wanting, but the desire for coöperation dominated all the utterances. Business men find that peace is advantageous to trade, and even the politician has learned that to stir up racial strife is to use a two-edged sword which may injure him who carries it."—J. O. Miller, *New era in Canada*, pp. 251-254.

1913-1919.—Canadian Immigration Act.—Trend of immigration.—Immigration Amendment Act 1919.—"The Canadian Government immigration regulations require that immigrants arriving between the first day of March and the thirty-first day of October shall have in actual and personal possession at time of arrival, money belonging to themselves to the amount of at least \$25 (£5), in addition to ticket to destination in Canada. If arriving between the first of November and the last day of February the amount of landing money required is \$50. Asiatics (except Chinese and Japanese) are required to have \$200 at time of arrival. Chinese pay a head-tax of \$500, and Japanese immigration is restricted by an Agreement between the Governments of Japan and of Canada. Certain persons are exempt from the money regulation, the classes being as follows: (1) immigrants going to assured employment at farm work; (2) female immigrants going to employment as domestic servants; (3) immigrants, whether male or female, going to a relative as follows: (a) wife going to husband, (b) child going to parent, (c) brother or sister going to brother, (d) minor going to married or independent sister, (e) parent going to son or daughter, provided always that the relative in Canada is in a position to receive and care for the immigrant. The exemption from money regulation does not apply to immigrants belonging to any Asiatic race. The Canadian Immigration Act absolutely prohibits the landing in Canada of (i) idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane within five years previous, (ii) persons afflicted with any loathsome disease or with a disease which is contagious or infectious, or which may become dangerous to the public health; (iii) immigrants who are dumb, blind, or otherwise physically defective, unless they belong to a family accompanying which gives satisfactory security or are going to relatives in Canada which give security or unless they have sufficient money, occupation, trade or employment to guarantee that they will not become a public charge, (iv) persons coming into Canada for any immoral purpose, and prostitutes and persons living on the avails of prostitution, (v) professional beggars, vagrants or persons likely to become a public charge. The Canadian Immigration Act provides for the deportation of undesirable immigrants within three years from the date of their landing in Canada. A bonus of £1 on persons 18 years of age and over, and 10s. on persons between 1 and 18 years of age, is paid to selected steamship booking agents in Great Britain and Ireland, and in France, Belgium, Holland, Switzerland, Denmark, Norway, Sweden, and Finland, on agriculturists and domestic servants, induced by them to come to Canada to engage in farm work or domestic service."—M. Keith, *Anglo-Canadian Year Book*, 1915-1916, p. 106.—The following review of Canadian immigration appeared

as an editorial in the *Montreal Gazette* of August 27, 1913: "The total immigration into Canada in the fiscal year which ended with March 31 last, according to a recent publication of the Department of the Interior, numbered 402,432 persons. These figures were fully 48,000 greater than those of 1911-12; and those of 1911-12 exceeded the record of 1910-11 by some 43,000. There is no question now about the stream of home and work seekers having been turned toward this country. The story is one full of interest. It took many years and much work on varied lines to convince the people of countries where the land is too narrow for those who have to live on it that in the new regions which in 1870 were added to the Canadian Federation, there were opportunities for the home maker not surpassed anywhere in the world. People came in the earlier years but only in comparatively small numbers. In 1900-1901 almost 50,000 arrivals from abroad were recorded, and the fact was counted one of great promise. In 1902-3 the arrivals numbered 128,000. From that year onward there was fairly steady progress, till last year the result above noted was achieved. The efforts of the department are specially directed to the United Kingdom, the United States, the Scandinavian countries, France, Belgium, Holland, Switzerland, and Germany. In the past advertising campaigns were conducted in Finland, Russia, and Austria-Hungary, but for sufficient reasons it was lately dropped. The Finns and Russians and the Galicians and other peoples from the Austrian Empire who figure in the returns of the past year came as the result of earlier propaganda, or are induced to move by that most effective of immigration literature, the reports of relatives, friends, and acquaintances who started earlier and found they had gone to a land of promise where promise turned to fulfillment. Naturally the chief source of immigration to Canada is Great Britain, which as a whole is able to send away a constant stream of its active and enterprising peoples and still grow stronger at home. The division of peoples entering Canada last year by main source of origin was as follows: British, 150,542; United States, 130,009; other countries, 112,881; total, 402,432. It has been said in some parts of Great Britain that the emigration of the people, and largely to Canada, is becoming of serious consequence. The figures of the returns have a direct bearing upon this. They indicate that from 1900 to the close of 1912-13 British immigrants arrived in Canada in the following numbers: From England and Wales, 712,064; from Scotland, 202,632; from Ireland, 59,034; total, 973,730.

"The figures as regards Scotland are the most remarkable. By the census of 1911 Scotland had a population of 4,759,000, and England and Wales one of 36,075,000. From England and Wales last year there came to Canada 108,082 people and from Scotland 30,735. The ratio of population moving from Scotland is vastly greater than that from England, and suggests that there is a real ground for the complaint from the northern kingdom that its industries are beginning to suffer from lack of workers. It is indicative of the intention of the newcomers to stay that 10 per cent, or almost one-fifth, of the English and Welsh arrivals became homesteaders in the western provinces, with 20 per cent of the Irish and 16 per cent of the Scotch. When those who are not heads of families are excluded from the total of the immigrants the meaning of these figures will be better understood. They are excelled, however, in the case of immigrants from the continent of Europe, 29 per cent of whom become homesteaders, and in the case of those from the United States, 33 per cent of whom made

entry. Next to the countries named above the chief contributors to Canada's population since 1900 have been: Austria-Hungary, 164,527; Italy, 88,000; Russia, 67,378; Jewish lands, 61,384; Germany, 30,762; Poland, 24,396; Finland, 17,535; China, 25,016; Sweden, 24,220; Norway, 17,332; Newfoundland, 17,130; Japan, 14,617; Bulgaria, 12,395; Belgium, 12,010. Smaller numbers came from other countries, European, Asiatic, African, and American. Some came to stay, some only to work for a while and then return to their native lands. In this latter regard, however, Canada is only repeating the experience of that other great land of hope for emigrating peoples, the United States. The number of immigrants in a given number of years does not indicate the increase in population in the stated time from immigration. The number who come may exceed the number who stay by 25 or 30 per cent and in the case of countries from which many unskilled laborers come the figure may reach 50 per cent or over. What is noted, however, shows that as the result of long-continued, intelligent, and persistent work by officers of the department concerned Canada now gets a full share of the best emigrating peoples of the northern countries of the world."

Acts passed in 1919 to amend the Immigration Act "provide for the exclusion from Canada of persons not being born or naturalized in Canada who believe in or advocate the overthrow, by force, of constituted authority, or who disbelieve in or are opposed to organized government, who advocate the destruction of public officials or who advocate or teach the unlawful destruction of property, or who are members of or affiliated to societies advocating any of such things. Enemy aliens, persons guilty of espionage, persons guilty of high treason are also excluded. Furthermore, persons over fifteen years of age unable to read in some language or dialect designated by such persons are excluded, except in cases where such exclusion would break up family ties by excluding the relatives of persons already resident in Canada."

—*Canadian Year Book*, 1919, p. 647.

1914.—Summary of concessions obtained by the Dominion since 1867.—"The fullness of the concessions to the old British North American provinces was made obvious by half a century's experience of the working of the British North America act. From 1867 to the outbreak of the war in 1914, the imperial government was even more ready to make concessions than it had been from 1840 to Confederation. The growth and development of Canada created new needs, needs which had not existed when there were not more than two or three million people in all the British North American provinces. But in these forty-seven years—1867 to 1914—the Dominion had sought, had had bestowed on her, or had asserted, only six rights or powers which had not been enjoyed by the United Provinces and the Maritime Provinces between 1859 and 1867. The rights thus obtained by the Dominion between 1867 and 1914 were (1) the right to make her own tidewater coastwise navigation laws—a right first exercised in 1870; (2) the right of the Dominion cabinet to veto a nomination to the office of governor-general—a right that has existed at least since 1882; (3) the right of the Dominion to direct representation on the judicial committee of the privy council at Whitehall—a right first exercised in 1897, when Sir Henry Strong, then chief justice of Canada, took his seat on the judicial committee; (4) the right of the Dominion to decide whether it will be a party to treaties made by Great Britain, a right enjoyed since 1872; (5) the right of the

CANADA

2. Moose Jaw, Saskatchewan.
3. A wheatfield in western Canada.

Dominion to make her own immigration laws, and to exclude paupers and other undesirables from the United Kingdom or elsewhere in the British Empire—a right first asserted and exercised in 1904; and (6) the right of the Dominion to appoint her own plenipotentiaries for the negotiation of commercial treaties and conventions—a right partially conceded as early as 1870, and fully conceded by the imperial government in 1907.”—E. Porritt, *Evolution of the Dominion of Canada*, p. 215.

1914.—Representation Act.—As a result of the census of 1911 which necessitated a redistribution of seats an act was passed styled the “Representation Act, 1914.” This provided that “the House of Commons . . . shall consist of 234 members of whom 3 shall be elected from Prince Edward Island, 16 from Nova Scotia, 11 from New Brunswick, 65 from Quebec, 82 from Ontario, 15 from Manitoba, 16 from Saskatchewan, 12 from Alberta, 13 from British Columbia and one from Yukon Territory.”—*Canadian Year Book*, 1914, pp. 5-6.

1914.—Railway lines completed to west.—Percentage controlled by government. See RAILROADS: 1853-1919; 1917-1919.

1914 (July).—Eve of the World War.—“The week preceding the declaration of war was one of subdued and tense emotion. It gave the Canadian people the necessary breathing-spell in which to take national stock and decide what course Canada would pursue should the worst come. Throughout those days of anxious waiting the country remained stoically calm, no jingoes clamoring for war, no public demonstrations such as preceded the outbreak of hostilities in Italy. The idol of the hour was Sir Edward Grey, who made such strenuous efforts to avert the calamity. And even after Germany had declared war against Russia and France, Canadians persisted in the hope that Great Britain might not be dragged into the struggle. In the meantime, however, the Government took preparatory steps; and public opinion became united in support of Great Britain in anticipation of war. As Parliament was not in session at the time, the outlining of the Dominion’s policy fell to the Premier and his Cabinet in consultation with the Governor-General. On Aug. 2, 1914, the following message was sent to Great Britain: ‘If unhappily war should ensue, the Canadian people will be united in a common resolve to put forth every effort and to make every sacrifice necessary to ensure the integrity and maintain the honor of our Empire.’ Although this message was sent by the Premier and his Cabinet in consultation with the leader of the Opposition, without the sanction of Parliament, it voiced Canadian sentiment as truly as if it had been the outcome of a national election. A ‘political truce’ was declared, ‘there is but one mind.’ All the problems discussed at the conferences on imperial federation and in the debates on imperial defense were laid aside. No demand was made that Canada should be given ‘representation,’ a voice in declaring war and making peace, before she could participate. By mutual consent of all parties Canadians felt the only honorable thing to do was to give their hearty support. Thousands of Canadians, however, who are making great sacrifices for this war, are not necessarily committing themselves to support every war in which the Empire may become involved. When the war is over there will be imperial problems to settle which no Britisher is discussing today. When the crisis came Canada forgot that there were any problems. One thing was needful and that at once—men at the front. That was the one problem which the Canadian

Government grappled at the time and which has received the undivided attention of Canadians ever since. In the face of an Empire-crisis such as exists today any other policy would be mad. When the Empire is in safety there will be ample time to make the adjustments which may be found necessary. What they will be, Canadians are not now discussing; and whatever may be Canada’s attitude toward Empire wars in the future, for the present at least the Canadian standpoint is that which the ‘Toronto Globe,’ on the day before war was declared, expressed in no uncertain terms: ‘When Britain is at war Canada is at war.’—*Living Age*, 1916, pp. 388-389.—See also WORLD WAR: 1914: VIII. Canada.

1914 (September-October).—First contingent sails.—“The great fleet of liners, one by one, left the harbour for the voyage across the broad Atlantic. Troops commenced to flow from Valcartier on September 22nd; by October 1st the last of the transports had sailed from Quebec, proceeding to Gaspé Bay, to be formed into lines. In all they numbered thirty-two steamers, with several warships acting as escorts, and it is said that, with a space of about one and a half miles between them, they covered an area of fifteen square miles. The fleet, which sailed under sealed orders, could advance but slowly—as fast only as the slowest among them, for it included not only some of the most modern and ‘crack’ liners in the British-Canadian passenger service, but also several older cargo vessels of low speed. In England the public were under the impression that the disembarkation would take place at Southampton, and among the troops it was not known that they were making for Plymouth until only a few hours before their arrival. As in the case of the transporting of the Indian contingent, so again was the coming of the Canadians another triumph of organisation, another memorable feat safely achieved, notwithstanding all the activities of a relentless enemy. But this modern Armada steamed into Plymouth a fleet intact, and the Canadian contingent landed in England on October 14th. Not a single life had been lost, not an accident had occurred; in fact, the voyage was accomplished without anything in the nature of excitement.”—W. Haydon, *Canada and the war*, pp. 75-77.

1914 (October).—Defense conference at Ottawa.—“In October an important conference took place at Ottawa to consider, among other matters, the defence of Canada against any possible raid or attack, and with regard to the organising, training, equipment, and dispatch of further expeditionary forces. It was then pointed out that two considerations must be taken into account: first, the provision of rifles, guns, ammunition and other equipment; and second, the ability of the British Government to receive further expeditionary forces, and give them the necessary final training, having regard to the enormous number of troops then being organised and trained in the British Isles. The conclusion arrived at provided for the maintenance under arms of about 8,000 men of the Canadian Militia, to be employed in garrison and outpost duty. According to the military advisers of the Government this force could be rapidly increased at a few hours’ notice, and it was considered that every reasonable safeguard had been made for Canada’s defence of her own territory. It also provided that whenever any force was dispatched to the British Isles, further enlistment should take place, so that 30,000 men would be continuously under training in Canada, in addition to the 8,000 already referred to.”—W. Haydon, *Canada and the war*, pp. 48-49.

1914-1918.—Canadian military and naval activities.—“It is the proud boast of the Canadians that they were in the war from the very first. Canada raised and equipped at her own expense an army of 595,441 men, whose bravery is attested by the words of many witnesses and by the mute testimony of the white crosses standing ‘row on row’ in Flanders fields. Of the total number enrolled, nearly 80 per cent., or 465,984 men, were obtained by voluntary enlistment. The first division of Canada’s expeditionary forces landed on the other side of the Atlantic in the late Summer and early Autumn of 1914 and after three months additional training in England arrived in France on February 11, 1915. The total number of men that served overseas was 418,052. The casualties amounted to 218,433. One cannot use round numbers when speaking of casualties. Of the total, 35,684 were killed in action, 12,437 died of wounds and 155,839 were wounded, the remainder having died of disease, died in Canada, or been posted as missing. The more notable engagements in which the Canadian troops fought were, in 1915, in the second battle of Ypres on April 22. [See *WORLD WAR: 1915: II. Western front: c, 13*], and again in Festubert and Givenchy in May and June. In 1916 the Canadians were heavily engaged at St. Eloi and at Sanctuary Wood and Hooze. In September, October and November the four Canadian divisions fought in the Battle of the Somme [see *WORLD WAR: 1916: II. Western front: d, 20*] and Courcellette, Moquet Farm and the Kenora, Regina and Desire trenches. In 1917 the Canadian troops bore the largest part in taking Vimy Ridge [see *WORLD WAR: 1917: II. Western front: c, 4, 5 and 18*] and Arleux and Fresnoy, on April 28 and May 3, and fought with great success in the advance on Lens and the taking of Hill 70 in August. In 1918 the Canadian corps was in the center of the western front in the second battle of Amiens, August 8 to 17, advancing fourteen thousand yards on the first day, the deepest advance made in one day during the war. In the battle of Cambrai, which lasted from September 27 to October 9, the Canadians after heavy losses took Cambrai, making large captures of men and material.

“While the military achievements of the sons of Canada were notable, the services rendered by Canada’s little navy were also an important factor in bringing the war to a successful conclusion. At the beginning of the war the naval organization of the dominion consisted of one seagoing cruiser on the Pacific coast and one on the Atlantic. The staff of experienced naval officers was small. It immediately became necessary to develop from this insignificant organization a staff capable of superintending the transportation overseas of troops and supplies, and to provide a coast patrol service to protect commerce from the marauding German vessels and submarines, and also to maintain in cooperation with the British Admiralty an efficient naval intelligence department. The organization to accomplish this work, with one or two exceptions, was effected by the efforts of the original staff supplemented by the assistance of a few retired naval officers and many recruits from mercantile life and from among Royal Naval Reserve officers available in Canada. The best tribute to the efficiency of the organization so formed is the fact that many hundreds of thousands of men and great quantities of supplies were transported overseas without the loss of one life through marine accident.”—H. E. Fisk, *Dominion of Canada*, pp. 5-7.—See also *BRITISH EMPIRE: World War: 1914-1918; WORLD WAR: 1915: II. Western front: c, 3, 11, 13; 1917: II. Western front: d, 24; 1918:*

1914-1918.—War time prohibition.—“Amongst the many-sided problems of the war, Prohibition of the liquor traffic was one of the most complex and curious. It was claimed to be a great moral issue, it was said to be essential as a physical factor in the improvement of the race, it was supported strenuously as an economic element in the enforcement of public economy and the consequent increase in private and national resources available for war work. All the provinces adopted it in some form or another during 1914-18, and it proved, in fact, to be one of the most extraordinary popular movements on record. In every province of Canada except British Columbia and Ontario the legislation was permanent in character and could hardly be called war measures, though no doubt influenced and aided by war conditions. In Alberta, Saskatchewan, Manitoba and Prince Edward Island it was adopted by a vote of the electors without any qualification as to the future. In Nova Scotia, New Brunswick and Quebec it was made law by legislative action. In each of these provinces, however, the greater portion of the territory was ‘dry’ by Local Option before the provincial law had been passed. In Ontario a plebiscite was to be taken on the issue when the soldiers had returned. Whether economic, or moral, or an indirect result, as in the United States, of war psychology, there was no doubt of the powerful effect of this wave of sentiment which swept away an institution of centuries, an industry of a hundred millions of dollars, a habit engrained in private life and character, an individual right or liberty which was almost fundamental in its nature. During 1917-18, also, the Dominion Government issued a series of regulations controlling the liquor traffic wherever existing—in order to prevent waste, promote thrift, conserve financial resources and increase natural efficiency. Provincial Prohibition laws were strengthened by the prohibition of import into the Dominion, and in March, 1918, by the prohibition of manufacture and of traffic in liquor between the provinces.”—J. C. Hopkins, *Canada at war: 1914-1918*, pp. 237-238.—In 1920, the war time prohibition was repealed.

1915-1918.—War emergency financial measures.—“To meet these enormous demands special taxation was of course necessary, and Sir Thomas White was not afraid to tax everything except the more essential supplies. Higher customs duties were imposed in 1915 through an *ad valorem* increase of 7½ per cent. to the general tariff and 5 per cent. to the British preferential tariff on all commodities except certain food-stuffs, coal, harvesting machinery, etc.; in 1918 a special duty was put on tea and coffee. Excise duties on liquors and tobacco were greatly increased; war taxes were imposed on transportation tickets, telegrams, money orders, cheques, letters, patent medicines, etc. Under the Business Profits tax the Government, in the case of all business concerns having a capital of \$50,000 and over, took 25 per cent. of the net profits over 7 per cent. and not exceeding 15 per cent., and 50 per cent. of the profits over 15 per cent. and not exceeding 20 per cent. In the case of a business having a capital of \$25,000 or under \$50,000 the Government took 25 per cent. of all profits in excess of 10 per cent. on the capital employed. Companies employing capital of less than \$25,000 were exempted, with the exception of

those dealing in munitions or war supplies. An Income tax was inaugurated for the first time in Canadian history and came into effect in 1918 with a scale which provided for \$1,000 exemption of income in the case of unmarried persons, \$2,000 in the case of married people with \$200 exemption for each child. An issue of \$50,000,000 of War Savings Stamps was announced in 1918 with a view to increasing Government revenue and encouraging individual thrift. . . . Prior to the War the total wealth of the whole Dominion in lands, buildings, live-stock, fisheries, manufactures, railways, canals, shipping, telegraphs, telephones, real estate, coin and bullion, merchandise in store, and current production, was put at \$11,000,000,000. In 1918 the Dominion Census Bureau officially estimated the total at \$19,002,788,125. To this great increase in wealth was due, no doubt, the facility with which money in this one-time borrowing community was obtained from the people for War purposes through National loans—totalling a Government call in the five Loans issued of \$950,000,000 and a general subscription of \$137,729,500 to the first Loan in 1915, \$201,444,800 to the second in 1916, \$260,768,000 to the third in 1917, \$419,280,000 to the fourth in 1917, and \$695,380,277 to the fifth in 1918, or a total of \$1,690,000,000.”—J. C. Hopkins, *Canada at war, 1914-1918*, pp. 213-214.

1916.—Act amending British North America Act.—“In 1916, at the instance of the Dominion parliament, the section of the British North America Act that determines the number of senators, and their distribution among the provinces, was amended by parliament at Westminster; and the senate has since consisted of ninety-six members. There are now four geographical divisions:

Ontario	24
Quebec	24
Maritime Provinces	24
Nova Scotia	10
New Brunswick	10
Prince Edward Island	4
Canada beyond the Great Lakes.....	24
Manitoba	6
Saskatchewan	6
Alberta	6
British Columbia	6

1916 (November).—The governor general.—The duke of Devonshire was sworn in as governor general and commander in chief of Canada, November, 1916. The duke of Connaught whom he succeeded had completed five years' service because of the extraordinary situation created by the war.

1917.—Imperial war conference at London. See BRITISH EMPIRE: Colonial and imperial conferences: 1917: Imperial War conference.

1917.—Compulsory service bill.—“For many months the Prime Minister [Sir Robert Laird Borden] saw that conscription probably would become inevitable and that only a Coalition or National Government could make the draft system effective. . . . When he got back from London

he knew that the hour for the decision had come . . . He had learned the desperate need for reinforcements for the Canadian army. . . . Hence a few days after he reached Ottawa he induced the Cabinet to agree upon a measure of compulsion and in a comprehensive and luminous statement of the deliberations and recommendations of the War Conference and conditions at the front he announced the momentous decision.” This announcement called forth a storm of protest as well as some expressions of relief. In Quebec, the stronghold of opposition, rioting occurred, but of no serious nature. The subject was hotly debated in Parliament. But “the second reading of the Compulsory Service Bill was carried by the House of Commons by 118 to 55. Sir Wilfrid Laurier's motion in favor of a referendum was lost by 111 to 62. The Majorities for the Government on both divisions were even greater than was expected.”—*Round Table, June-September, 1917*, pp. 776-779.

1917.—Coalition government formed under Sir Robert Borden.—“Just when the prospects of a Union Government seemed hopeless, the negotiations between Sir Robert Borden and the Western Liberal leaders were quietly resumed. Indeed, there is reason to think that the negotiations were never wholly abandoned. It was difficult to make headway under the immediate shadow of the Western Liberal Convention. In early August this great gathering of Western Liberals assembled at Winnipeg. It was expected that the leadership of Sir Wilfrid Laurier would be repudiated and resolutions in favour of conscription and union government adopted. Instead, the position of the veteran Liberal leader was endorsed, and a war resolution accepted which carefully evaded any declaration for or against the draft. An amendment to the resolution, declaring that, if necessary, reinforcements for the army should be secured by compulsion, was rejected by an overwhelming majority. Devotion to Sir Wilfrid Laurier and confidence in his wisdom and patriotism were expressed by the chief spokesmen for the Convention, while the Borden Administration was described as incapable and corrupt, the agent of corporate interests and the ally and champion of Eastern protectionists.

“Following the Convention the Western Liberal leaders announced that they could not enter a coalition under Sir Robert Borden, but that they were in favour of a national as distinguished from a party Government, and would take office under Sir George Foster, Sir William Mulock, Sir Adam Beck or Hon. Lyman P. Duff. Sir William Mulock, now Chief Justice of Ontario, was a member of the Laurier Government; Mr. Duff was active in the Liberal party of British Columbia before he was appointed to the Supreme Court of Canada, where he has achieved a position of exceptional distinction and authority. Sir George Foster and Sir Adam Beck are Conservatives of reputation and standing in Canadian affairs. It has to be said, however, that none of these four names excited the imagination of the country or by contrast gave force to the demand for the Prime Minister's removal. This is a tribute to the Conservative leader rather than a reflection upon the nominees of the Western Liberal group. Sir Robert, however, called a caucus of the Conservative parliamentary party and offered to resign in favour of Sir George Foster. Foster himself firmly opposed the resignation, as did all his associates in caucus. Indeed, the occasion will be memorable in Canadian parliamentary history. Not only was there complete unanimity in the declaration of allegiance to the Prime Minister, but there were striking manifestations of affection and confidence

It was made clear that, if the Liberals would not enter a Union Government under Sir Robert Borden, there could be no union. The Prime Minister was authorised by caucus to continue the negotiations in complete assurance that he would have their undivided support as leader of a national Government or a Conservative Government, but with equal assurance that, as he had borne the heavy burden of war from the beginning and had sought with great patience and persistence to effect a coalition with the Liberal party, Conserva-

to party registered at the Winnipeg Convention. For this reason they hesitated, took counsel with their followers, and smoothed the way to decision. Finally, national overcame personal, party, and provincial considerations, and coalition was effected."—*Round Table*, no. 29, Dec., 1917, pp. 166-168.

1917.—Policy of the union government.—"The country looked to the new Government for leadership, and the initial period was therefore critical because of the very breadth of the charter which

FOUR GREAT CANADIAN STATESMEN

Sir John Alexander MacDonal
Sir Wilfrid Laurier

Sir Charles Tupper
Sir Robert Laird Borden

tives would have no other leader nor support coalition under any other leader. It is understood that most of the Western Liberal leaders did not differ greatly from the Conservative caucus. They believed that Sir Robert Borden was the necessary and inevitable head of any national Government. Only a fringe of Liberal support for such a Government could be obtained, and therefore, if a majority of the constituencies were to be carried, the Conservative party must not be divided. The Western leaders, however, doubted if they could hold their followers against Sir Wilfrid Laurier, particularly in consideration of the fresh pledges

the Government received. The approbation won in the election by the principle of Union was, of course, overwhelming; but the implied mandate was embarrassing in its very insistence. The Government was returned with definite instructions to govern. Its friends and its enemies, from different motives, set before it a utopian ideal. On October 18 the Prime Minister had given his new Cabinet an extensive programme. He pledged them to further taxation of war profits and private incomes, the reduction of Government expenditure, the grant of the franchise to women, the improvement of means of transportation, better provision

for the care of returned soldiers, reform of the civil service, the abolition of political patronage, and, above all, the vigorous prosecution of the war. The broadest interpretation was placed by the country on this statement of Unionist policy, and the programme, it may be said, was accepted by the electorate as the very minimum of what might be expected."—*Round Table*, no. 31, June, 1918, pp. 611-612.

1917 (June).—Winnipeg strike.—"The first ominous symptom of a revolutionary temper in Labour appeared in Western Canada. In March a Convention of Western Unionists was held at Calgary which resolved to separate from the American Federation of Labour, to undertake the organisation of One Big Union and practically to supersede the Dominion Trades and Labour Congress. The Convention expressed sympathy with Russian Bolsheviks and German Spartacists, denounced deportation of aliens, demanded cancellation of all sentences imposed upon defaulters and repeal of all Orders-in-Council affecting freedom of Press or platform, and appointed an Executive Committee of Five to extend the organisation throughout Canada. Two of these were concerned in the one-day strike at Vancouver a year ago in honour of a defaulter under the Military Service Act who was shot while resisting arrest, the third is an active organiser among Western miners and an advocate of the release of interned Germans, the fourth frankly challenges the existing industrial and political system, while the fifth, at Winnipeg in 1917, urged a general strike of workers against conscription and national registration. These, designated as the 'Red Five,' have long been active in the councils of Western Labour, and with other agitators of like character have moulded a great body of the workers into the temper of revolt. With the single exception of the Typographical Union, all sections of organised Labour in the four Western Provinces voted in favour of identification with the One Big Union, and many of the Western leaders of Labour refused to appear before the Royal Industrial Commission which has just submitted its report to Parliament, on the ground that since their object was to seize the tools of industry, they were not concerned in any movement to improve relations between employers and workers or to maintain industrial relations between employers and workers or to maintain industrial stability under the existing system.

"The conflict at Winnipeg began in demands by the employees of three iron foundries for shorter hours and higher wages. Simultaneously the building trades demanded very substantial increases in wages and changes in conditions of service. The maximum demand of the builders was for \$1.00 per hour, but the employers contended that to give the wages required would render building prohibitive and increase unemployment. They submitted a counter schedule with a maximum of 90 cents an hour and other proportionate advances over the old scale of remuneration. The strike, however, occurred over the demand of the unions for recognition of collective bargaining rather than in any dispute over wages. The iron manufacturers agreed to negotiate with their workmen, but would not bargain through the Metal Trades Council, which is a combination of unions and was regarded by the employers as an extraneous body with which they had no natural or necessary relation. In support of the position of the Metal Trades Council a general strike was ordered. It is stated, although the evidence is not conclusive, that only 8,000 ballots were cast in favour of the general strike, although 35,000 ceased work at the call of the

Strike Committee. In all, the members of 95 unions went out. Not only were the industries of Winnipeg vitally affected, but the firemen, the staff of the waterworks, the police, the telephone and telegraph operators and the postal employees joined the revolt. Milk and bread deliveries were suspended. Waiters in hotels and restaurants responded to the call of the strike leaders. Moving-picture theatres were closed and the street railway service abandoned. Even the newspapers were not allowed to publish, and for five or six days no issue of any of the three Winnipeg dailies appeared. . . . The trouble spread to Brandon, Saskatoon, Moose Jaw, Regina, Calgary, Edmonton, Prince Albert, Vancouver and Victoria. In none of these places, however, was the strike of such long duration as in Winnipeg, and nowhere, except perhaps in Vancouver, was Labour so generally involved. . . .

"In the third week of June the situation, which had been steadily growing more acute, culminated in a riot in which three lives were lost, and 25 or 30 persons injured. Owing to the danger of conflict between strikers and citizens, all parades and processions were forbidden by proclamation. Despite this, however, strikers and sympathisers among the soldiers determined to hold 'a silent massed parade.' Mounted police who undertook to maintain authority and order were attacked and forced to fire upon the mobs in the streets. According to the official statement in Parliament, 'the first shots were fired by the strikers, and the mounted police fired in self protection.' Convinced by this incident that decisive action was imperative, the federal authorities had the strike leaders arrested and lodged in Stony Mountain Penitentiary. They also seized the books and literature at the Labour Temple at Winnipeg and at the strike headquarters in all other Western centres. . . . With the leaders removed the strike collapsed. Possibly the end was near in any event. Certainly the Citizens' Committee was confident of complete victory without federal intervention. But there was perhaps danger that rioting would be renewed, and possibly the Government acted upon evidence which has not been disclosed."—*Round Table*, no. 36, Sept., 1919, pp. 785-786, 789, 781.

1918.—Canadian war mission at Washington.—"An important piece of new machinery has developed out of war conditions—the Canadian War Mission at Washington. In time of peace we have felt the need of a Canadian representative at the American capital. Technically the British Embassy is there to serve Canadian as well as British interests, but in practice its personnel is necessarily out of touch with affairs in the Dominion. For Canada to use this avenue of approach to the United States Government often causes delay, and this, of course, in time of war is a serious matter. The Canadian War Mission has been erected primarily to deal with questions of war trade, many of them in the form of triangular problems affecting Canada, the United States and our European allies. It was established with the full consent of the British government. Inasmuch as the appointment of an accredited representative of the Dominion at a foreign capital, however, is beyond our powers as a State within the Empire, the instrument giving the mission its authority is careful to save the situation by empowering the Chairman 'to represent the Cabinet and the heads of the various Departments' at Ottawa and to conduct negotiations 'with the heads of the Departments or other administrative branches, committees or commissions or other officials of the Government of the United States.' The Chairman,

therefore, is not officially regarded as representing his own *Government*, nor, technically, is he permitted to treat with the *Government* of a foreign State."—*Round Table*, no. 31, June, 1918, pp. 606, 616-617.

1918.—**General elections.**—The General Election resulted in a decisive majority for the Union Government. The first results gave Sir Wilfrid Laurier ninety seats; but it was estimated that the soldier vote would give the government a majority of fifty-five or sixty, and it was looked upon as doubtful that the Western Provinces would return more than one liberal member. Ontario returned seventy-five members for the Administration. In New Brunswick seven out of eleven and in Nova Scotia six out of sixteen constituencies elected Unionists. On the other hand Prince Edward Island returned four Liberals, and in Quebec only three Unionists were elected. The soldier vote altered these figures even more than was at first

yet general grant of voting rights to women. Most of the provinces fell into line, including Alberta, Saskatchewan, Manitoba and Ontario; the Dominion gave the vote to soldiers' wives and near relations, and finally, in 1918, a full and equal franchise to all women; Quebec remained firm in its opposition."—J. C. Hopkins, *Canada at war*, 1914-1918, p. 238.

1918.—**Survey of organized labor.**—**Organized labor and the war.**—"The growth of Unionism in Canada had been steady and the membership of organized Labour increased from 133,132 in 1911 to 166,163 in 1914 and then, owing to war conditions and partly to recruiting, fell to 143,343 in 1915—rising again to 160,407 in 1916. In this latter year there were 1,842 local Trades Union branches and, up to its close, 22,102 enlistments of members. The proportion of organized to unorganized Labour appears in the fact shown in the 1910 Census that there were 987,302 male workers in the building

THE NEW PARLIAMENT HOUSES AT OTTAWA
After the destruction of the original buildings by fire in February, 1916

expected. "In the early months of the year election returns coming in from the 1917 Soldiers' vote abroad continued to change the membership of the House and to increase the Government majority; in Halifax Hon. A. K. MacLean and Mayor P. F. Martin were returned by acclamation. Final local returns had elected Hon. Frank Oliver in Edmonton but the soldiers' vote later on defeated him by 2,700 and elected Brig.-Gen. W. A. Griesbach; the same vote defeated G. W. Kyte, L. H. Martell, H. J. Logan and other Liberals in Nova Scotia and elected Hon. E. N. Rhodes (Cons.) in Cumberland; changes were made in other constituencies including two in P. E. Island and one in South Perth and in Nipissing, Ontario; in many cases majorities were greatly altered with 88 per cent. of the military and naval vote, overseas, finally shown as in favour of the Union Government which faced Parliament with a majority of 69."—*Canadian Annual Review of Public Affairs*, 1918, pp. 560, 561.

1918.—**Woman suffrage.**—"Another development of a different nature but of essentially wartime character was the sudden and uncalled-for

trades, domestic service, manufacturing establishments, mining, and transportation interests of Canada; there were many more mixed and merged in other occupations and the membership of Labour Unions was about one in eight of the total male workers of the country. So, in the United States, where in 1910 the Census showed 27,194,914 engaged in manual labour, with 7.7 per cent members of labour organizations. Upon the whole, organized labour stood by the country and its Government in this period; it aided in the Compulsory Registration of 1918, and, though opposed to Conscription through its chief officials, fell in, finally, with the popular decision both as workmen and as Canadians; it held disputes and strikes to a minimum which in three years of war included only 162, with 38,075 men involved, as compared with 361 and 110,000 men in the preceding three years—though in the fourth year (1917) there was an increase to 148 disputes and 48,320 men; it sent altogether about 30,000 men to the front in voluntary enlistment, though unorganized labour showed a total estimated at 130,000 in 1917, and totalling for both elements 200,000 before the end

of the war. As an organization, and led by the men already mentioned, the Trades and Labour Congress opposed military or industrial conscription, or war regulation of labour, denounced the War-time Election Act or alien disfranchisement, favoured the formation of an independent Labour party of the British pacifist type, demanded pensions for mothers and old age, urged the 'conscription of wealth.' Eventually organized Labour took part in a Conference with the Government in January, 1918, and discussed the organization of manpower for the prosecution of the war, national registration, the conscription of alien labour and the representation of labour on Government Commissions. It may be added that such strikes as did occur in these years were largely in mines such as those of Alberta District No. 17 of the United Mine Workers of America, the British Columbia mines and those of Northern Ontario, where I. W. W. and alien workmen caused most of the trouble."—J. C. Hopkins, *Canada at war, 1914-1918*, pp. 234-235.—See also ARBITRATION and CONCILIATION, INDUSTRIAL: Canada: 1900-1918; LABOR PARTIES: 1868-1919.

1918.—Imperial War Conference at London.—Decisions on questions of industry and raw materials. See BRITISH EMPIRE: Colonial and imperial conferences: 1918; Imperial War Conference.

1919.—Trades and labor congress.—"Immediately following upon the National Industrial Conference at Ottawa, the thirty-fifth annual convention of the Trades and Labor was held at Hamilton, Ontario September 22-27. The executive council . . . made a number of recommendations to the congress, most significant of these being the condemnation of the political strike as essentially 'a strike against the public at large' and of the 'One Big Union as an organization whose leaders preached class hatred throughout the country and staked their existence upon sympathetic and national strikes. Fortunately, their methods had been discredited, and the International Trade Union movement was once more established in the centres which had for a time gone over to the 'One Big Union.' This report was adopted and a further motion that the question of the 'One Big Union' should not again be introduced in the convention was approved with but one dissenting voice."—*Canadian year book, 1919*, p. 671.

1919.—Public health enactment. See PUBLIC HEALTH: Canada.

1919 (July).—Treaty of Versailles.—"Sir Robert Borden did not play any meteoric part at Paris, but on one or two occasions he intervened with effect. The British delegation raised some objection to the appointment of a Canadian representative to the board which will supervise the labor convention, but were forced to waive it. Sir Robert Borden and his colleagues retorted with a strong memorandum of protest against the famous Article X in which they took exception first to the idea of committing every nation in the League to participation in every other nation's quarrels, and second to the offhand guarantee of all the territorial adjustments made at Paris. Mr. Doherty, the Canadian Minister of Justice, filed a separate memorandum on his own account suggesting that the fabric of the League might be strengthened by the creation of a world parliament of delegates from the parliaments of each member. The Canadians contented themselves with these steps, and Mr. Doherty and Mr. Sifton attached their signatures to the peace treaty on behalf of Canada, Sir Robert having left Paris. Great parade was at

once made by the Government press of Canada of the fact that Canada had at last fulfilled its destiny and taken its rightful place as an independent unit in the family of nations. But when Mr. Doherty asserted that 'Canada is a nation in the sense as Belgium or Italy or the United States of America is a nation,' and Mr. Rowell in the debate on the peace treaty made a great point of 'the formal recognition of Canada's national status,' it was obvious that some education in constitutional realities was needed at Ottawa. International law has never taken cognizance of nationhood. In its eyes there are only two kinds of states: sovereignties (monarchies or republics) and dependencies (colonies, protectorates, etc.). The government of a sovereign state has absolute and unlimited control over all matters external and internal. Only sovereign states send and receive diplomatic representatives. There has so far been no improvement upon Lincoln's definition of a sovereign state as 'a political community without a political superior.' To this definition Canada fails to conform, for in strict political theory it is a subordinate community whose powers are delegated and limited by the British Parliament according to the terms of the British North America Act of 1867. Although theoretically subject to Great Britain, Canada has for some years assumed save in the matter of foreign affairs all the prerogatives of an independent nation. Even in that exception it had assumed certain rights; for its own plenipotentiaries negotiated the reciprocity treaty in 1911 as well as an earlier commercial treaty with France. But the fact remains that Canada was not a party to the Treaty of Versailles, which according to the preamble was made by five "Principal and Associated Powers," the United States, France, Italy, Japan, and the British Empire, and twenty-two other Powers among whom Canada was not included. Therefore the nationalist school in Canada regard the affixing of Canada's signature to the treaty as merely an honorary function. Lord Milner, now Colonial Secretary in Britain, took the same view, for the correspondence tabled last session and above referred to shows that he thought the ratification of the Canadian Parliament quite superfluous. Sir Robert Borden insisted that the Canadian Parliament was entitled to as much deference as the British, and summoned a special session to ratify the pact. The debate revealed a general desire that the question of the country's status should be clarified. . . . The fact is that while Canada is not technically a sovereign state it is gradually assuming all the characteristics of a sovereign state."—*Nation (N. Y.)*, Dec. 13, 1919.—"The Canadian Parliament ratified the Peace Treaty without amendment. The motion for approval was submitted by Sir Robert Borden in a speech adequate to the occasion and to the subject. He reviewed at length the deliberations at Paris and the relations of the Dominions to the League of Nations. Naturally he put the chief emphasis upon the recognition of Canada as a partner nation in the Empire, which is substantially conceded by the representation accorded to the Dominion Parliaments. There was some conflict of opinion in the criticisms of the Opposition."—*Round Table, December, 1919*, p. 147.—See also PARIS, CONFERENCE OF: Outline of work; VERSAILLES, TREATY OF: Conditions of peace.

1919 (September).—Industrial conference at Ottawa.—"The Industrial Conference, which was held at Ottawa in September, produced a clearer understanding between employers and leaders of labour. Upon the eight-hour day and recognition of unions there was disagreement, but also mutual

concessions. The employers would not accept the system of Whitley Councils, as developed in Great Britain, but declared in favour of plant councils, and agreed not to challenge the right of unionist organisation in factories, nor to discriminate against unionists. On the other hand the labour leaders conceded that recognition of a union 'does not mean the closed shop unless it is part of the agreement entered into.' In the debate on the eight-hour day employers contended that with the shorter day production could not be maintained, that any such arbitrary regulation could not be applied to fishing, lumbering, or farming, and that there were industries in Canada in which the eight-hour day could not be adopted unless a like regulation prevailed in competitive industries in the United States and other countries. It was shown that the eight-hour day now obtains in 43 per cent. of the factories of Canada, and it was stated by employers that in certain industries in which the eight-hour day was conceded the workers had suggested restoration of the nine or ten-hour day with overtime for the hour or two hours added. The Conference finally agreed to ask the Government to appoint a Commission to report upon the situation of industries in which the eight-hour day has not been established, and to determine in what callings fixed hours of work are impracticable owing to seasonal and climatic conditions.

"The Conference approved minimum wages for women and children, and suggested further inquiry into the probable effects of minimum wages for unskilled labour. Resolutions were adopted in favour of a Speakers' Conference to investigate the merits of proportional representation and of a Bureau in the Department of Labour to assist organisations of employers or employees who may desire by joint voluntary action to establish industrial councils; emphasising the necessity for continuous and active co-operation by the Dominion and Provincial Governments to improve housing; opposing restrictions upon freedom of speech or liberty of the Press "intended to prevent criticism of legislative or governmental action"; recommending co-ordination of the Labour laws of the various provinces; urging equal opportunities in education and compulsory schooling to the fifteenth year, and of part time for the two ensuing years in towns and cities; and asking that boards be appointed to inquire into the subjects of widows' pensions and State insurance against unemployment, old age, sickness, and invalidity. It was significant of the temper of the Conference that no ballot was taken upon any resolution submitted. There was agreement upon so many proposals that it was determined not to emphasise disagreement upon other questions."—*Round Table, December, 1919, pp. 162-163.*—See also COÖPERATION: Canada.

1920.—Canadian national railroad.—Review of development.—"The third period of railway development was that which had to do with the construction of the lines heretofore owned by the Canadian Northern and Grand Trunk Pacific Railway Companies. These were nominally private companies, but the construction of their lines was made possible by dominion and provincial subsidies and guarantees. Their common stock was chiefly issued for services to promoters and contractors and represented no actual cash investment and the roads never were profitable undertakings, although up to 1914 Canadian Northern was able to meet its obligations from its own resources.

While the aid rendered to the Canadian Northern was largely in the form of subsidies and guarantees, a larger amount of direct aid was given to the Grand Trunk Pacific, but the financial scheme for this undertaking mainly relied on guarantees, first, by the government, and second, by the Grand Trunk Railway Company. The Grand Trunk Railway is strongly entrenched in the eastern part of Canada and has many United States connections. Its western terminus is on Lake Huron. In 1903 it was planned to extend the Grand Trunk System right across the continent to Prince Rupert and eastwardly to Quebec. The portion of the line west of Winnipeg was to be built by the Grand Trunk Pacific Company with large government assistance, while the line east of Winnipeg was to be built by the government and leased to the Grand Trunk, the Grand Trunk Railway proper holding the entire share capital of the Grand Trunk Pacific.

"The Canadian Northern system was started as a local line in Manitoba in 1896 and built up in the prairie provinces a system which by 1906 comprised more than 2,400 miles. The Canadian Northern had to depend for westbound rail traffic on what the companies in the east handed to it. On the traffic which it had in the west it lost the long haul to the east. It was natural, therefore, that the company should reach out to the east. It was equally natural that the Grand Trunk Company should reach out to the west. There was an opportunity here for coöperation between these two companies which, however, was not availed of, with the result that by 1916 Canada had three transcontinental systems, the Canadian Pacific, the Canadian Northern and its connections, and the Grand Trunk-Government System. Under the war conditions existing the new lines were unprofitable and there was imminent danger that the private investors in these enterprises would suffer great loss through the inability of the companies to meet their charges. In this emergency the dominion government stepped in and took over these new lines. In December of 1918 the Canadian government owned lines were merged with the Canadian Northern for unified control and operation. The year ending December 31, 1919, was therefore the first complete year of operation of this greatly enlarged government system of roads. As the Grand Trunk Railway Company had declined to carry out its agreement to operate the eastern section of the Grand Trunk Pacific and, in March, 1919, also notified the government that it could not continue the operation of the Grand Trunk Pacific, the government declined to relieve the Grand Trunk of its obligations in regard to the Grand Trunk Pacific unless the Grand Trunk lines were included in the national system. This was arranged for in 1919. The amount to be paid for the capital stock is to be fixed by arbitration. Pending this the Grand Trunk will be operated by a committee of management of five, two to be appointed by the government, two by the Grand Trunk and the fifth to be chosen by the four so appointed. On the completion of the transaction the Grand Trunk and allied lines will be merged with the Canadian National System. When this is accomplished the Canadian National System will own upward of 20,000 miles of road or more than half of the entire Canadian railway mileage. The greater part of the other half will be owned by the Canadian Pacific and allied lines."—H. E. Fiske, *Dominion of Canada, pp. 114-116.*—See also RAILROADS: 1920: Canadian government railway operation.

1920.—Construction of railroads in British Columbia. See RAILROADS: 1920: British Columbia.

1920.—Canadian tariff.—Agreements with West Indies.—Rejection of French treaty.—“Canada has a protective tariff which figures out at a slightly higher rate on dutiable goods than in the United States. During the war Canada added a 7½ per cent. war tax on her customs duties on many articles, and so long as this was in force, it raised Canada's average rate about 5½ per cent. above the present rates. This war tax was first imposed late in 1915 and continued in force until May, 1920. Canada's tariff is now back to its pre-war level. . . . The Canadian tariff is of a threefold character. There is the ‘general tariff,’ a ‘preferential tariff’ with Great Britain and certain of the British dominions and colonies, and an ‘intermediate tariff,’ of which several nations have the benefit in part. For some time Canada has had reciprocal trade agreements with the United Kingdom, New Zealand, South Africa and British Guiana. Australia does not extend any tariff preference to Canada. Reciprocal trade agreements have been in force between Canada and the British West Indies since 1913, and by the trade agreement concluded at Ottawa in July, 1920, the existing mutual preference is, in certain cases, increased, while the free list is also extended. Under the terms of this agreement, Canada grants a preference on all goods imported into Canada being the produce or manufacture of any of the British West Indies, which are now subject to duty or which may be made subject to duty at any future time. . . . In 1907 a commercial treaty with France brought most French imports under a special intermediate tariff. This tariff was automatically extended to ‘favored nations,’ including Argentina, Denmark, Japan, Norway, Russia, Spain, Sweden, Switzerland and Venezuela. This French treaty was denounced by Canada and France in June of this year, but the favored nations continued to enjoy the benefits of another intermediate tariff which was originally arranged and is still effective with Belgium and the Netherlands and which is only slightly higher than the intermediate tariff with France.”—H. E. Fisk, *Dominion of Canada*, pp. 91-93.

1920.—Arrangements for a Canadian minister at Washington.—“The announcement made in May, 1920, that . . . an agreement had been reached with regard to the appointment of a Canadian Ambassador at Washington shows that the problem has been faced . . . in a bold and statesmanlike way. The Ambassador, Mr. Bonar Law announced, is to be appointed by the King ‘on the advice of his Canadian Ministers’ is to have charge of ‘Canadian affairs’, and is to be in absolute control of the Canadian Government. Just as the British Ambassador remained in the past at all times responsible to the British Government even although Canadian business made up three-fourths of the work of the Embassy, so, it may be assumed the absolute responsibility of the Canadian Ambassador to his government will not be affected by the provision that in the absence of his colleague ‘he will take charge of the whole Embassy and of the representation of Imperial as well as Canadian interests.’”—H. D. Hall, *British commonwealth of nations*, pp. 256-257.—To date no appointment has been made.

1920 (July).—Sir Robert Laird Borden, prime minister of Canada since 1911, retired from office because of ill-health. The Hon. Arthur Meighen was called upon to form a cabinet.

1920 (August).—Press conference at Ottawa. See BRITISH EMPIRE: Colonial and imperial conferences: 1920 (August).

1920 (November).—The Dominion of Canada

was represented at the League of Nations conference by Sir George Foster, N. Rowell, and C. J. Dougherty.

1920.—Trade.—“Canada closes 1920 with the knowledge that she has set up a new high mark in the grand total of her external trade with the world and it is practically certain that when final figures are available the \$2,640,000,000 mark will be reached. This will exceed by over \$40,000,000 the hitherto record figure, \$2,599,499,000 set up in 1917, and will exceed 1919 by approximately \$400,000,000. Her total trade thus exceeded her net national debt by \$350,000,000, while the value of her exports alone was within 60 per cent of the net national debt. Canada was the United States' second best customer during 1920 while Canada sold more to the United States in the year than she did to any other country. The United States replaced Britain as Canada's best customer buying products to the value of about \$600,000,000 as compared with about \$350,000,000 by the latter. Canada's purchases from the United States, however, exceeded her total exports thereto by approximately \$350,000,000.

“Based on the returns for the eleven months ending November Canada's total imports will be approximately \$1,350,000,000 and the exports \$1,290,000,000. The large field crops which at a conservative valuation are worth \$145,000,000 more than those of 1919, provide a larger surplus for export than was available at the beginning of 1921 and which should cut down the excess of imports between now and the end of the fiscal year, March 31st, 1921. The most outstanding feature of the trade year is the strength shown by exports, at a time when the rate of exchange cut so deeply into her overseas trade with Britain and the states of Europe generally and when government credits, which had so substantially sustained her exports during the war and for a year after the armistice, had been reduced to a very low point. It is true trade with Roumania, Belgium and Greece was increased by credits, but these made themselves felt only during the first part of the year. That with such strong factors to contend against the total exports were within fifteen or twenty millions of 1919, speaks volumes for the inherent strength of Canada's export trade. Indeed taking into account domestic produce only the 1920 exports exceeded those of the preceding year, the exports of foreign produce having declined to the extent of \$20,000,000 as compared with 1919. This was due to the exports of agricultural products and of lumber, pulp and paper. The pulp and paper industry was a very important factor, the value of its exports being approximately \$175,000,000, or double that of 1919. Vegetable products represented one-third of the exports, and lumber, pulp and paper about 23 per cent.

“Imports into Canada from the United States increased by approximately 28 per cent during the year, having gone from \$720,000,000 to approximately \$925,000,000. The mere increase in these imports during the year was within \$17,000,000 of the value of all imports from the United States into Canada which is indicative of the rapid development of Canadian United States trade. Iron and its products represented 23 per cent of these imports, fibres and textile products represented about 10 per cent. Imports from the United Kingdom increased by about 105 per cent during the year, or from \$87,651,000 in 1919 to approximately \$250,000,000. The rate of increase was not nearly as well maintained during the latter part of the year, due partly to the new practice of valuing at

the rate of exchange imports from countries whose currency is depreciated, and to the reduced demand for certain British products. Imports from France increased \$15,000,000; those from Cuba \$25,000,000; British West Indies approximately \$6,000,000; British East Indies \$7,500,000; Netherlands \$2,500,000; Belgium \$4,000,000. Canada's export trade to the United States received a decided impetus, but that with Britain and France declined materially. In the case of the United States the increase was approximately \$100,000,000 while in respect to Britain the decline was in the neighborhood of \$160,000,000. The premium on United States funds had much to do with the growth of exports to the Republic, to which should be added the strong demand for pulp and paper and the much higher prices which these products commanded in 1920. Exports to France declined to the extent of about \$25,000,000 and with Australia, the decrease was \$4,500,000. There were notable increases in exports to the Netherlands, Italy, Greece, Cuba, Belgium, New Zealand, British South Africa and the British West Indies."—*Supplied by the Dominion of Canada bureau of information, New York City.*

1921.—Movement towards complete autonomy.—Possibility of Canadian minister at Washington still discussed.—"Even a casual observer of Canadian public affairs cannot fail to be struck with the strength of the tide toward more complete autonomy during the last five years. Self-government is, of course, an old story in Canada. . . . In the Imperial War Cabinet, which came into being as a piece of emergency war machinery, the Canadian Prime Minister, Sir Robert Borden, took his place, not as a subordinate, but as an equal. And about this time his speeches began to contain frequent references to the 'full nationhood' of the dominions, 'equality of status,' an equal voice in the decisions of peace and war and similar phrases. The culmination was reached when dominion delegates took their place in the Peace Conference, when they became signatories to the Treaty of Versailles and were admitted to independent membership in the League of Nations."—J. R. Bone, *Canada and the British Empire (New York Times Current History, Nov., 1921, pp. 264-265)*.—"An effort to have a Canadian Ambassador sent to Washington was begun about three years ago, but no action has yet been taken, though the Ottawa Government has declared at intervals that an appointment would be made. Premier Meighen has stated unofficially, since his return from London, that the Dominion will before long be represented at the United States capital."—J. V. McKenzie, *Canada as a nation (New York Times Current History, Dec., 1921, p. 461)*.

1921.—Canadian Railway award.—On September 7, the Canadian railway arbitration, composed of Mr. Justice Cassels, Sir Thomas White and Mr. William Howard Taft completed its work. The

majority report stated that the first, second and third preference and the common stock of the Grand Trunk Railway were valueless, and that "any question of compassionate consideration of the shareholders must be a matter for the government and Parliament of the Dominion to deal with and not the board." Mr. Taft filed a minority report in which he held that evidence regarding the replacement value of the system should be admitted and contended that the government's estimate of needed delayed maintenance and capital improvement was too high, and he also declared that "the tragedy in the history of a company which deserves the gratitude of the Canadian people for its pioneer efforts is undoubtedly its association with the Grand Trunk Pacific undertaking."—*Christian Science Monitor, Sept. 8, 1921.*

1921-1922.—Liberal landslide.—William Lyon Mackenzie King elected prime minister.—"By the Liberal landslide which characterized the Canadian general elections of Dec. 6 [1921], William Lyon Mackenzie King of North York, Ontario, who was made the Liberal standard-bearer when Sir Wilfrid Laurier died, was designated to succeed the defeated Arthur Meighen as Prime Minister, and to command the votes of the largest party in the new Parliament. Premier Meighen was defeated even in his home constituency, Portage La Prairie, Manitoba, and his protection policy was repudiated. . . . Figures available on Nov. 13 gave the Liberal Party 117 seats in the new Parliament, the Progressives 65, the Conservatives 51 (the party of the outgoing anti-reciprocity Ministry), and the Labor Party 2. For the first time there was full woman suffrage. The first woman to hold a seat in the Canadian House of Commons is Miss Agnes McPhail, Progressive, elected from the Southeast Grey District of Ontario. The election is considered a victory for tariff reform, looking toward reciprocity with the United States. The Liberal and Progressive platforms were agreed upon reciprocity in natural products with the United States, and upon free trade with Great Britain for five years."—*New York Times Current History, Jan., 1922, pp. 666-667*.—"From a résumé of the new political parties it was gathered that though the Liberal party had been restored to office with an uncertain support in the House of Commons, in the Senate there was a Conservative majority of 30. The desire of Mr. King to form a strictly National Government failed, it was believed, through the inability of Mr. Crerar, leader of the Progressives, and Mr. Drury, leader of the Farm-Labor Coalition in Ontario, to obtain the sanction of their followers to enter the King Cabinet. They were not prepared for the virtual disappearance of the Progressives as a separate party. . . . As the closing climax of the first day's session of the Fourteenth Canadian Parliament on March 9, the Prime Minister, W. L. Mackenzie King, introduced into the House of Commons the treaties drawn at the Washington Arms conference and signed by Sir Robert Borden."—*Ibid., April, p. 157.*

1840.—Union Act. See CANADA: 1840-1867.

1867.—British North America Act.—The history of the confederation of the provinces of British North America, forming the Dominion of Canada, is given briefly under CANADA: 1867. The following is the text of the act of the Parliament of Great Britain by which the confederation was formed and its constitution established:

An Act for the Union of Canada, Nova Scotia, and New Brunswick, and the Government thereof; and for purposes connected therewith. [29TH MARCH, 1867.]

WHEREAS the Provinces of Canada, Nova Scotia, and New Brunswick have expressed their desire to be federally united into one Dominion under the Crown of the United Kingdom of Great Britain and Ireland, with a constitution similar in principle to that of the United Kingdom: And whereas such a Union would conduce to the welfare of the Provinces and promote the interests of the British Empire; And whereas on the establishment of the Union by authority of Parliament it is expedient, not only that the Constitution of the Legislative Authority in the Dominion be provided for, but also that the nature of the Executive Government therein be declared: And whereas it is expedient that provision be made for the eventual admission into the Union of other parts of British North America: Be it therefore enacted and declared by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. This Act may be cited as The British North America Act, 1867.

2. The provisions of this Act referring to Her Majesty the Queen extend also to the heirs and successors of Her Majesty, Kings and Queens of the United Kingdom of Great Britain and Ireland.

3. It shall be lawful for the Queen, by and with the advice of Her Majesty's Most Honourable Privy Council, to declare by Proclamation that, on and after a day therein appointed, not being more than six months after the passing of this Act, the Provinces of Canada, Nova Scotia, and New Brunswick shall form and be one Dominion under the name of Canada; and on and after that day those three Provinces shall form and be one Dominion under that name accordingly.

4. The subsequent provisions of this Act shall, unless it is otherwise expressed or implied, commence and have effect on and after the Union, that is to say, on and after the day appointed for the Union taking effect in the Queen's Proclamation; and in the same provisions, unless it is otherwise expressed or implied, the name Canada shall be taken to mean Canada as constituted under this Act.

5. Canada shall be divided into four Provinces, named Ontario, Quebec, Nova Scotia, and New Brunswick.

6. The parts of the Province of Canada (as it exists at the passing of this Act) which formerly constituted respectively the Provinces of Upper Canada and Lower Canada shall be deemed to be severed, and shall form two separate Provinces. The part which formerly constituted the Province of Upper Canada shall constitute the Province of Ontario; and the part which formerly constituted the Province of Lower Canada shall constitute the Province of Quebec.

7. The Provinces of Nova Scotia and New Brunswick shall have the same limits as at the passing of this Act.

8. In the general census of the population of Canada, which is hereby required to be taken in the year one thousand eight hundred and seventy-one, and in every tenth year thereafter, the respective populations of the four Provinces shall be distinguished.

9. The Executive Government and authority of and over Canada is hereby declared to continue and be vested in the Queen.

10. The provisions of this Act referring to the Governor General extend and apply to the Governor General for the time being of Canada, or other the Chief Executive Officer or Administrator, for the time being carrying on the Government of Canada on behalf and in the name of the Queen, by whatever title he is designated.

11. There shall be a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada; and the persons who are to be members of that Council shall be from time to time chosen and summoned by the Governor General and sworn in as Privy Counsellors, and members thereof may be from time to time removed by the Governor General.

12. All powers, authorities, and functions which under any Act of the Parliament of Great Britain, or of the Parliament of the United Kingdom of Great Britain and Ireland, or of the Legislature of Upper Canada, Lower Canada, Canada, Nova Scotia, or New Brunswick, are at the Union vested in or exercisable by the respective Governors or Lieutenant Governors of those Provinces, with the advice, or with the advice and consent, of the respective Executive Councils thereof, or in conjunction with those Councils, or with any number of members thereof, or by those Governors or Lieutenant Governors individually, shall, as far as the same continue in existence and capable of being exercised after the Union in relation to the Government of Canada, be vested in and exercisable by the Governor General, with the advice or with the advice and consent of or in conjunction with the Queen's Privy Council for Canada, or any members thereof, or by the Governor General individually, as the case requires, subject nevertheless (except with respect to such as exist under Acts of the Parliament of Great Britain or of the Parliament of the United Kingdom of Great Britain and Ireland) to be abolished or altered by the Parliament of Canada.

13. The provisions of this Act referring to the Governor General in Council shall be construed as referring to the Governor General acting by and with the advice of the Queen's Privy Council for Canada.

14. It shall be lawful for the Queen, if Her Majesty thinks fit, to authorize the Governor General from time to time to appoint any person or any persons, jointly or severally, to be his Deputy or Deputies within any part or parts of Canada, and in that capacity to exercise during the pleasure of the Governor General such of the powers, authorities, and functions of the Governor General as the Governor General deems it necessary and expedient to assign to him or them, subject to any limitations or directions expressed or given by the Queen; but the appointment of such a Deputy or Deputies shall not affect the exercise by the Governor General himself of any power, authority or function.

15. The Command-in-Chief of the Land and Naval Militia, and of all Naval and Military Forces, of and in Canada, is hereby declared to continue and be vested in the Queen.

16. Until the Queen otherwise directs, the seat of Government of Canada shall be Ottawa.

17. There shall be one Parliament for Canada, consisting of the Queen, an Upper House styled the Senate, and the House of Commons.

18. The privileges, immunities, and powers to be held, enjoyed, and exercised by the Senate and by the House of Commons, and by the members thereof respectively, shall be such as are from time to time defined by Act of the Parliament of Canada, but so that the same shall never exceed those

at the passing of this Act held, enjoyed, and exercised by the Commons House of Parliament of the United Kingdom of Great Britain and Ireland and by the members thereof.

19. The Parliament of Canada shall be called together not later than six months after the Union.

20. There shall be a Session of the Parliament of Canada once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one Session and its first sitting in the next Session.

21. The Senate shall, subject to the provisions of this Act, consist of seventy-two members, who shall be styled Senators.

22. In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—1. Ontario; 2. Quebec; 3. The Maritime Provinces, Nova Scotia and New Brunswick; which three divisions shall (subject to the provisions of this Act) be equally represented in the Senate as follows: Ontario by twenty-four Senators; Quebec by twenty-four Senators; and the Maritime Provinces by twenty-four Senators, twelve thereof representing Nova Scotia, and twelve thereof representing New Brunswick. In the case of Quebec each of the twenty-four Senators representing that Province shall be appointed for one of the twenty-four Electoral Divisions of Lower Canada specified in Schedule A. to chapter one of the Consolidated Statutes of Canada.

23. The qualification of a Senator shall be as follows:—(1) He shall be of the full age of thirty years: (2) He shall be either a natural born subject of the Queen, or a subject of the Queen naturalized by an Act of the Parliament of Great Britain, or of the Parliament of the United Kingdom of Great Britain and Ireland, or of the Legislature of one of the Provinces of Upper Canada, Lower Canada, Canada, Nova Scotia, or New Brunswick, before the Union, or of the Parliament of Canada after the Union: (3) He shall be legally or equitably seised as of freehold for his own use and benefit of lands or tenements held in free and common socage, or seised or possessed for his own use and benefit of lands or tenements held in franc-alleu or in roture, within the Province for which he is appointed, of the value of four thousand dollars, over and above all rents, dues, debts, charges, mortgages, and incumbrances due or payable out of or charged on or affecting the same: (4) His real and personal property shall be together worth \$4,000 over and above his debts and liabilities: (5) He shall be resident in the Province for which he is appointed: (6) In the case of Quebec he shall have his real property qualification in the Electoral Division for which he is appointed, or shall be resident in that Division.

24. The Governor General shall from time to time, in the Queen's name, by instrument under the Great Seal of Canada, summon qualified persons to the Senate; and, subject to the provisions of this Act, every person so summoned shall become and be a member of the Senate and a Senator.

25. Such persons shall be first summoned to the Senate as the Queen by warrant under Her Majesty's Royal Sign Manual thinks fit to approve, and their names shall be inserted in the Queen's Proclamation of Union.

26. If at any time on the recommendation of the Governor General the Queen thinks fit to direct that three or six members be added to the Senate, the Governor General may by summons to three or six qualified persons (as the case may be), representing equally the three divisions of Canada, add to the Senate accordingly.

27. In case of such addition being at any time

made the Governor General shall not summon any person to the Senate, except on a further like direction by the Queen on the like recommendation, until each of the three divisions of Canada is represented by twenty-four Senators and no more.

28. The number of Senators shall not at any time exceed seventy-eight.

29. A Senator shall, subject to the provisions of this Act, hold his place in the Senate for life.

30. A Senator may by writing under his hand addressed to the Governor General resign his place in the Senate, and thereupon the same shall be vacant.

31. The place of a Senator shall become vacant in any of the following cases: (1) If for two consecutive Sessions of the Parliament he fails to give his attendance in the Senate: (2) If he takes an oath or makes a declaration or acknowledgment of allegiance, obedience, or adherence to a foreign power, or does an act whereby he becomes a subject or citizen, or entitled to the rights or privileges of a subject or citizen of a foreign power: (3) If he is adjudged bankrupt or insolvent, or applies for the benefit of any law relating to insolvent debtors, or becomes a public defaulter: (4) If he is attainted of treason or convicted of felony or of any infamous crime: (5) If he ceases to be qualified in respect of property or of residence; provided, that a Senator shall not be deemed to have ceased to be qualified in respect of residence by reason only of his residing at the seat of the Government of Canada while holding an office under that Government requiring his presence there.

32. When a vacancy happens in the Senate by resignation, death, or otherwise, the Governor General shall by summons to a fit and qualified person fill the vacancy.

33. If any question arises respecting the qualification of a Senator or a vacancy in the Senate the same shall be heard and determined by the Senate.

34. The Governor General may from time to time, by instrument under the Great Seal of Canada, appoint a Senator to be Speaker of the Senate, and may remove him and appoint another in his stead.

35. Until the Parliament of Canada otherwise provides, the presence of at least fifteen Senators, including the Speaker, shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

36. Questions arising in the Senate shall be decided by a majority of voices, and the Speaker shall in all cases have a vote, and when the voices are equal the decision shall be deemed to be in the negative.

37. The House of Commons shall, subject to the provisions of this Act, consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick.

38. The Governor General shall from time to time, in the Queen's name, by instrument under the Great Seal of Canada, summon and call together the House of Commons.

39. A Senator shall not be capable of being elected or of sitting or voting as a member of the House of Commons.

40. Until the Parliament of Canada otherwise provides, Ontario, Quebec, Nova Scotia, and New Brunswick shall, for the purposes of the election of members to serve in the House of Commons, be divided into Electoral Districts as follows:—(1) Ontario shall be divided into the Counties, Ridings of Counties, Cities, parts of Cities, and Towns enumerated in the first Schedule to this

Act, each whereof shall be an Electoral District, each such District as numbered in that Schedule being entitled to return one member. (2) Quebec shall be divided into sixty-five Electoral Districts, composed of the sixty-five Electoral Divisions into which Lower Canada is at the passing of this Act divided under chapter two of the Consolidated Statutes of Canada, chapter seventy-five of the Consolidated Statutes for Lower Canada, and the Act of the Province of Canada of the twenty-third year of the Queen, chapter one, or any other Act amending the same in force at the Union, so that each such Electoral Division shall be for the purposes of this Act an Electoral District entitled to return one member. (3) Each of the eighteen Counties of Nova Scotia shall be an Electoral District. The County of Halifax shall be entitled to return two members, and each of the other Counties one member. (4) Each of the fourteen Counties into which New Brunswick is divided, including the City and County of St. John, shall be an Electoral District; the City of St. John shall also be a separate Electoral District. Each of those fifteen Electoral Districts shall be entitled to return one member.

41. Until the Parliament of Canada otherwise provides, all laws in force in the several Provinces at the Union relative to the following matters or any of them, namely,—the qualifications and disqualifications of persons to be elected or to sit or vote as members of the House of Assembly or Legislative Assembly in the several Provinces, the voters at elections of such members, the oaths to be taken by voters, the returning officers, their powers and duties, the proceedings at elections, the periods during which elections may be continued, the trial of controverted elections, and proceedings incident thereto, the vacating of seats of members, and the execution of new writs in case of seats vacated otherwise than by dissolution,—shall respectively apply to elections of members to serve in the House of Commons for the same several Provinces. Provided that, until the Parliament of Canada otherwise provides, at any election for a Member of the House of Commons for the District of Algoma, in addition to persons qualified by the law of the Province of Canada to vote, every male British subject aged twenty-one years or upwards, being a householder, shall have a vote.

42. For the first election of members to serve in the House of Commons the Governor General shall cause writs to be issued by such person, in such form, and addressed to such returning officers as he thinks fit. The person issuing writs under this section shall have the like powers as are possessed at the Union by the officers charged with the issuing of writs for the election of members to serve in the respective House of Assembly or Legislative Assembly of the Province of Canada, Nova Scotia, or New Brunswick; and the Returning Officers to whom writs are directed under this section shall have the like powers as are possessed at the Union by the officers with the returning of writs for the election of members to serve in the same respective House of Assembly or Legislative Assembly.

43. In case of vacancy in the representation in the House of Commons of any Electoral District happens before the meeting of the Parliament, or after the meeting of the Parliament before provision is made by the Parliament in this behalf, the provisions of the last foregoing section of this Act shall extend and apply to the issuing and returning of a writ in respect of such vacant District.

44. The House of Commons on its first assembling after a general election shall proceed with all

practicable speed to elect one of its members to be Speaker.

45. In case of a vacancy happening in the office of Speaker by death, resignation or otherwise, the House of Commons shall with all practicable speed proceed to elect another of its members to be Speaker.

46. The Speaker shall preside at all meetings of the House of Commons.

47. Until the Parliament of Canada otherwise provides, in case of the absence for any reason of the Speaker from the chair of the House of Commons for a period of forty-eight consecutive hours, the House may elect another of its members to act as Speaker, and the member so elected shall during the continuance of such absence of the Speaker have and execute all the powers, privileges, and duties of Speaker.

48. The presence of at least twenty members of the House of Commons shall be necessary to constitute a meeting of the House for the exercise of its powers, and for that purpose the Speaker shall be reckoned as a member.

49. Questions arising in the House of Commons shall be decided by a majority of voices other than that of the Speaker, and when the voices are equal, but not otherwise, the Speaker shall have a vote.

50. Every House of Commons shall continue for five years from the day of the return of the writs for choosing the House (subject to be sooner dissolved by the Governor General), and no longer.

51. On the completion of the census in the year one thousand eight hundred and seventy-one, and of each subsequent decennial census, the representation of the four Provinces shall be re-adjusted by such authority, in such manner and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—(1) Quebec shall have the fixed number of sixty-five members: (2) There shall be assigned to each of the other Provinces such a number of members as will bear the same proportion to the number of its population (ascertained at such census) as the number sixty-five bears to the number of the population of Quebec (so ascertained): (3) In the computation of the number of members for a Province a fractional part not exceeding one-half of the whole number requisite for entitling the Province to a member shall be disregarded; but a fractional part exceeding one-half of that number shall be equivalent to the whole number: (4) On any such re-adjustment the number of members for a Province shall not be reduced unless the proportion which the number of the population of the Province bore to the number of the aggregate population of Canada at the then last preceding re-adjustment of the number of members for the Province is ascertained at the then latest census to be diminished by one-twentieth part or upwards: (5) Such re-adjustment shall not take effect until the termination of the then existing Parliament.

52. The number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed.

53. Bills for appropriating any part of the public revenue, or for imposing any tax or impost, shall originate in the House of Commons.

54. It shall not be lawful for the House of Commons to adopt or pass any vote, resolution, address, or bill for the appropriation of any part of the public revenue, or of any tax or impost, to any purpose that has not been first recommended to that House by message of the Governor Gen-

eral in the Session in which such vote, resolution, address, or bill is proposed.

55. Where a bill passed by the Houses of the Parliament is presented to the Governor General for the Queen's assent, he shall declare according to his discretion, but subject to the provisions of this Act and to Her Majesty's instructions, either that he assents thereto in the Queen's name, or that he withholds the Queen's assent, or that he reserves the bill for the signification of the Queen's pleasure.

56. Where the Governor General assents to a bill in the Queen's name, he shall by the first convenient opportunity send an authentic copy of the Act to one of Her Majesty's Principal Secretaries of State, and if the Queen in Council within two years after receipt thereof by the Secretary of State thinks fit to disallow the Act, such disallowance (with a certificate of the Secretary of State of the day on which the Act was received by him) being signified by the Governor General, by speech or message to each of the Houses of the Parliament, or by proclamation, shall annul the Act from and after the day of such signification.

57. A bill reserved for the signification of the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor General for the Queen's assent, the Governor General signifies, by speech or message to each of the Houses of the Parliament or by proclamation, that it has received the assent of the Queen in Council. An entry of every such speech, message, or proclamation shall be made in the Journal of each House, and a duplicate thereof duly attested shall be delivered to the proper officer to be kept among the Records of Canada.

58. For each Province there shall be an officer, styled the Lieutenant Governor, appointed by the Governor General in Council by instrument under the Great Seal of Canada.

59. A Lieutenant Governor shall hold office during the pleasure of the Governor General; but any Lieutenant Governor appointed after the commencement of the first Session of the Parliament of Canada shall not be removable within five years from his appointment, except for cause assigned, which shall be communicated to him in writing within one month after the order for his removal is made, and shall be communicated by message to the Senate and to the House of Commons within one week thereafter if the Parliament is then sitting, and if not then within one week after the commencement of the next Session of the Parliament.

60. The salaries of the Lieutenant Governors shall be fixed and provided by the Parliament of Canada.

61. Every Lieutenant Governor shall, before assuming the duties of his office, make and subscribe before the Governor General, or some person authorized by him, oaths of allegiance and office similar to those taken by the Governor General.

62. The provisions of this Act referring to the Lieutenant Governor extend and apply to the Lieutenant Governor for the time being of each Province or other the chief executive officer or administrator for the time being carrying on the government of the Province, by whatever title he is designated.

63. The Executive Council of Ontario and of Quebec shall be composed of such persons as the Lieutenant Governor from time to time thinks fit, and in the first instance of the following officers, namely:—The Attorney-General, the Secretary and Registrar of the Province, the Treasurer of the Province, the Commissioner of Crown Lands, and

the Commissioner of Agriculture and Public Works, with in Quebec the Speaker of the Legislative Council and the Solicitor General.

64. The Constitution of the Executive Authority in each of the Provinces of Nova Scotia and New Brunswick shall, subject to the provisions of this Act, continue as it exists at the Union until altered under the authority of this Act.

65. All powers, authorities, and functions which under any Act of the Parliament of Great Britain, or of the Parliament of the United Kingdom of Great Britain and Ireland, or of the Legislature of Upper Canada, Lower Canada, or Canada, were or are before or at the Union vested in or exercisable by the respective Governors or Lieutenant Governors of those Provinces, with the advice, or with the advice and consent, of the respective Executive Councils thereof, or in conjunction with those Councils, or with any number of members thereof, or by those Governors or Lieutenant Governors individually, shall, as far as the same are capable of being exercised after the Union in relation to the Government of Ontario and Quebec, respectively, be vested in, and shall or may be exercised by the Lieutenant Governor of Ontario and Quebec respectively, with the advice or with the advice and consent of or in conjunction with the respective Executive Councils, or any members thereof, or by the Lieutenant Governor individually, as the case requires, subject nevertheless (except with respect to such as exist under Acts of the Parliament of Great Britain, or of the Parliament of the United Kingdom of Great Britain and Ireland), to be abolished or altered by the respective Legislatures of Ontario and Quebec.

66. The provisions of this Act, referring to the Lieutenant Governor in Council shall be construed as referring to the Lieutenant Governor of the Province acting by and with the advice of the Executive Council thereof.

67. The Governor General in Council may from time to time appoint an administrator to execute the office and functions of Lieutenant Governor during his absence, illness, or other inability.

68. Unless and until the Executive Government of any Province otherwise directs with respect to that Province, the seats of Government of the Provinces shall be as follows, namely—of Ontario, the City of Toronto; of Quebec, the City of Quebec; of Nova Scotia, the City of Halifax; and of New Brunswick, the City of Fredericton.

69. There shall be a Legislature for Ontario consisting of the Lieutenant Governor and of one House, styled the Legislative Assembly of Ontario.

70. The Legislative Assembly of Ontario shall be composed of eighty-two members, to be elected to represent the eighty-two Electoral Districts set forth in the first Schedule to this Act.

71. There shall be a Legislature for Quebec consisting of the Lieutenant Governor and of two Houses, styled the Legislative Council of Quebec and the Legislative Assembly of Quebec.

72. The Legislative Council of Quebec shall be composed of twenty-four members, to be appointed by the Lieutenant Governor in the Queen's name, by instrument under the Great Seal of Quebec, one being appointed to represent each of the twenty-four Electoral Divisions of Lower Canada in this Act referred to, and each holding office for the term of his life, unless the Legislature of Quebec otherwise provides under the provisions of this Act.

73. The qualifications of the Legislative Councillors of Quebec shall be the same as those of the Senators for Quebec.

74. The place of a Legislative Councillor of Quebec shall become vacant in the cases, 'mutatis mutandis' in which the place of Senator becomes vacant.

75. When a vacancy happens in the Legislative Council of Quebec, by resignation, death, or otherwise, the Lieutenant Governor, in the Queen's name, by instrument under the Great Seal of Quebec, shall appoint a fit and qualified person to fill the vacancy.

76. If any question arises respecting the qualification of a Legislative Councillor of Quebec, or a vacancy in the Legislative Council of Quebec, the same shall be heard and determined by the Legislative Council.

77. The Lieutenant Governor may from time to time, by instrument under the Great Seal of Quebec, appoint a member of the Legislative Council of Quebec to be Speaker thereof, and may remove him and appoint another in his stead.

78. Until the Legislature of Quebec otherwise provides, the presence of at least ten members of the Legislative Council, including the Speaker, shall be necessary to constitute a meeting for the exercise of its powers.

79. Questions arising in the Legislative Council of Quebec shall be decided by a majority of voices, and the Speaker shall in all cases have a vote, and when the voices are equal the decision shall be deemed to be in the negative.

80. The Legislative Assembly of Quebec shall be composed of sixty-five members, to be elected to represent the sixty-five Electoral Divisions or Districts of Lower Canada in this Act referred to, subject to alteration thereof by the Legislature of Quebec: Provided that it shall not be lawful to present to the Lieutenant Governor of Quebec for assent any bill for altering the limits of any of the Electoral Divisions or Districts mentioned in the second Schedule to this Act, unless the second and third readings of such bill have been passed in the Legislative Assembly with the concurrence of the majority of the members representing all those Electoral Divisions or Districts, and the assent shall not be given to such bills unless an address has been presented by the Legislative Assembly to the Lieutenant Governor stating that it has been so passed.

81. The Legislatures of Ontario and Quebec respectively shall be called together not later than six months after the Union.

82. The Lieutenant Governor of Ontario and of Quebec shall from time to time, in the Queen's name, by instrument under the Great Seal of the Province, summon and call together the Legislative Assembly of the Province.

83. Until the Legislature of Ontario or of Quebec otherwise provides, a person accepting or holding in Ontario or in Quebec any office, commission, or employment, permanent or temporary, at the nomination of the Lieutenant Governor, to which an annual salary, or any fee, allowance, emolument, or profit of any kind or amount whatever from the Province is attached, shall not be eligible as a member of the Legislative Assembly of the respective Province, nor shall he sit or vote as such; but nothing in this section shall make ineligible any person being a member of the Executive Council of the respective Province, or holding any of the following offices, that is to say, the offices of Attorney-General, Secretary and Registrar of the Province, Treasurer of the Province, Commissioner of Crown Lands, and Commissioner of Agriculture and Public Works and, in Quebec, Solicitor-General, or shall disqualify him to sit or vote in the

House for which he is elected, provided he is elected while holding such office.

84. Until the Legislatures of Ontario and Quebec respectively otherwise provide, all laws which at the Union are in force in those Provinces respectively, relative to the following matters, or any of them, namely,—the qualifications and disqualifications of persons to be elected or to sit or vote as members of the Assembly of Canada, the qualifications or disqualifications of voters, the oaths to be taken by voters, the Returning Officers, their powers and duties, the proceedings at elections, the periods during which such elections may be continued, and the trial of controverted elections and the proceedings incident thereto, the vacating of the seats of members and the issuing and execution of new writs in case of seats vacated otherwise than by dissolution, shall respectively apply to elections of members to serve in the respective Legislative Assemblies of Ontario and Quebec. Provided that until the Legislature of Ontario otherwise provides, at any election for a member of the Legislative Assembly of Ontario for the District of Algoma, in addition to persons qualified by the law of the Province of Canada to vote, every male British subject, aged twenty-one years or upwards, being a householder, shall have a vote.

85. Every Legislative Assembly of Ontario and every Legislative Assembly of Quebec shall continue for four years from the day of the return of the writs for choosing the same (subject nevertheless to either the Legislative Assembly of Ontario or the Legislative Assembly of Quebec being sooner dissolved by the Lieutenant Governor of the Province), and no longer.

86. There shall be a session of the Legislature of Ontario and of that of Quebec once at least in every year, so that twelve months shall not intervene between the last sitting of the Legislature in each Province in one session and its first sitting in the next session.

87. The following provisions of this Act respecting the House of Commons of Canada, shall extend and apply to the Legislative Assemblies of Ontario and Quebec, that is to say,—the provisions relating to the election of a Speaker originally and on vacancies, the duties of the Speaker, the absence of the Speaker, the quorum, and the mode of voting, as if those provisions were here re-enacted and made applicable in terms to each such Legislative Assembly.

88. The constitution of the Legislature of each of the Provinces of Nova Scotia and New Brunswick shall, subject to the provisions of this Act, continue as it exists at the Union until altered under the authority of this Act; and the House of Assembly of New Brunswick existing at the passing of this Act shall, unless sooner dissolved, continue for the period for which it was elected.

89. Each of the Lieutenant Governors of Ontario, Quebec, and Nova Scotia shall cause writs to be issued for the first election of members of the Legislative Assembly thereof in such form and by such person as he thinks fit, and at such time and addressed to such Returning Officer as the Governor General directs, and so that the first election of member of Assembly for any Electoral District or any subdivision thereof shall be held at the same time and at the same places as the election for a member to serve in the House of Commons of Canada for that Electoral District.

90. The following provisions of this Act respecting the Parliament of Canada, namely,—the provisions relating to appropriation and tax bills, the recommendation of money votes, the assent to bills, the disallowance of Acts, and the signification of

pleasure on bills reserved,—shall extend and apply to the Legislatures of the several Provinces as if those provisions were here re-enacted and made applicable in terms to the respective Provinces and the Legislatures thereof, with the substitution of the Lieutenant Governor of the Province for the Governor General, of the Governor General for the Queen and for a Secretary of State, of one year for two years, and of the Province for Canada.

91. It shall be lawful for the Queen, by and with the advice and consent of the Senate and House of Commons, to make laws for the peace, order, and good government of Canada, in relation to all matters not coming within the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces; and for greater certainty, but not so as to restrict the generality of the foregoing terms of this section, it is hereby declared that (notwithstanding anything in this Act) the exclusive legislative authority of the Parliament of Canada extends to all matters coming within the classes of subjects next hereinafter enumerated, that is to say,—1. The Public Debt and Property. 2. The regulation of Trade and Commerce. 3. The raising of money by any mode or system of Taxation. 4. The borrowing of money on the public credit. 5. Postal service. 6. The Census and Statistics. 7. Militia, Military and Naval Service, and Defence. 8. The fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada. 9. Beacons, Buoys, Lighthouses, and Sable Island. 10. Navigation and Shipping. 11. Quarantine and the establishment and maintenance of Marine Hospitals. 12. Sea coast and inland Fisheries. 13. Ferries between a Province and any British or Foreign country, or between two Provinces. 14. Currency and Coinage. 15. Banking, incorporation of banks, and the issue of paper money. 16. Savings Banks. 17. Weights and Measures. 18. Bills of Exchange and Promissory Notes. 19. Interest. 20. Legal tender. 21. Bankruptcy and Insolvency. 22. Patents of invention and discovery. 23. Copyrights. 24. Indians, and lands reserved for the Indians. 25. Naturalization and Aliens. 26. Marriage and Divorce. 27. The Criminal Law, except the Constitution of Courts of Criminal Jurisdiction, but including the Procedure in Criminal Matters. 28. The Establishment, Maintenance, and Management of Penitentiaries. 29. Such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces. And any matter coming within any of the classes of subjects enumerated in this section shall not be deemed to come within the class of matters of a local or private nature comprised in the enumeration of the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces.

92. In each Province the Legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated; that is to say,—1. The amendment from time to time, notwithstanding anything in this Act, of the Constitution of the Province, except as regards the office of Lieutenant Governor. 2. Direct Taxation within the Province in order to the raising of a Revenue for Provincial purposes. 3. The borrowing of money on the sole credit of the Province. 4. The establishment and tenure of Provincial offices and the appointment and payment of Provincial officers. 5. The management and sale of the Public Lands belonging to the Province and of the timber and wood thereon. 6. The establishment, maintenance, and management of public and reformatory prisons in and for the Province. 7.

The establishment, maintenance, and management of hospitals, asylums, charities, and eleemosynary institutions in and for the Province, other than marine hospitals. 8. Municipal institutions in the Province. 9. Shop, saloon, tavern, auctioneer, and other licenses in order to the raising of a revenue for Provincial, local, or municipal purposes. 10. Local works and undertakings other than such as are of the following classes,—*a.* Lines of steam or other ships, railways, canals, telegraphs, and other works and undertakings connecting the Province with any other or others of the Provinces, or extending beyond the limits of the Province. *b.* Lines of steamships between the Province and any British or foreign country. *c.* Such works as, although wholly situate within the Province, are before or after their execution declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the Provinces. 11. The incorporation of companies with Provincial objects. 12. The solemnization of marriage in the Province. 13. Property and civil rights in the Province. 14. The administration of justice in the Province, including the constitution, maintenance, and organization of Provincial Courts, both of civil and of criminal jurisdiction, and including procedure in Civil matters in those Courts. 15. The imposition of punishment by fine, penalty, or imprisonment for enforcing any law of the Province made in relation to any matter coming within any of the classes of subjects enumerated in this section. 16. Generally all matters of a merely local or private nature in the Province.

93. In and for each Province the Legislature may exclusively make laws in relation to education, subject and according to the following provisions: (1) Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the Province at the Union. (2) All the powers, privileges, and duties at the Union by law conferred and imposed in Upper Canada on the separate schools and school trustees of the Queen's Roman Catholic subjects shall be and the same are hereby extended to the dissentient schools of the Queen's Protestant and Roman Catholic subjects in Quebec. (3) Where in any Province a system of separate or dissentient schools exists by law at the Union or is thereafter established by the Legislature of the Province, an appeal shall lie to the Governor General in Council from any Act or decision of any Provincial authority affecting any right or privilege of the Protestant or Roman Catholic minority of the Queen's subjects in relation to education. (4) In case any such Provincial law as from time to time seems to the Governor General in Council requisite for the due execution of the provisions of this section is not made, or in case any decision of the Governor General in Council on any appeal under this section is not duly executed by the proper Provincial authority in that behalf, then and in every such case, and as far only as the circumstances of each case require, the Parliament of Canada may make remedial laws for the due execution of the provisions of this section and of any decision of the Governor General in Council under this section.

94. Notwithstanding anything in this Act, the Parliament of Canada may make provision for the uniformity of all or any of the laws relative to property and civil rights in Ontario, Nova Scotia, and New Brunswick, and of the procedure of all or any of the Courts in those three Provinces; and from and after the passing of any Act in that behalf the power of the Parliament of Canada to make laws in relation to any matter comprised in

any such Act shall, notwithstanding anything in this Act, be unrestricted; but any Act of the Parliament of Canada making provision for such uniformity shall not have effect in any Province unless and until it is adopted and enacted as law by the Legislature thereof.

95. In each Province the Legislature may make laws in relation to Agriculture in the Province, and to Immigration into the Province; and it is hereby declared that the Parliament of Canada may from time to time make laws in relation to Agriculture in all or any of the Provinces, and to Immigration into all or any of the Provinces; and any law of the Legislature of a Province relative to Agriculture or to Immigration shall have effect in and for the Province as long and as far only as it is not repugnant to any Act of the Parliament of Canada.

96. The Governor General shall appoint the Judges of the Superior, District, and County Courts in each Province, except those of the Courts of Probate in Nova Scotia and New Brunswick.

97. Until the laws relative to property and civil rights in Ontario, Nova Scotia, and New Brunswick, and the procedure of the Courts in those Provinces, are made uniform, the Judges of the Courts of those Provinces appointed by the Governor General shall be selected from the respective Bars of those Provinces.

98. The Judges of the Courts of Quebec shall be selected from the Bar of that Province.

99. The Judges of the Superior Courts shall hold office during good behaviour, but shall be removable by the Governor General on address of the Senate and House of Commons.

100. The salaries, allowances, and pensions of the Judges of the Superior, District, and County Courts (except the Courts of Probate in Nova Scotia and New Brunswick), and of the Admiralty Courts in cases where the Judges thereof are for the time being paid by salary, shall be fixed and provided by the Parliament of Canada.

101. The Parliament of Canada may, notwithstanding anything in this Act, from time to time, provide for the constitution, maintenance, and organization of a general Court of Appeal for Canada, and for the establishment of any additional Courts for the better administration of the Laws of Canada.

102. All duties and revenues over which the respective Legislatures of Canada, Nova Scotia, and New Brunswick before and at the Union had and have power of appropriation, except such portions thereof as are by this Act reserved to the respective Legislatures of the Provinces, or are raised by them in accordance with the special powers conferred on them by this Act, shall form one Consolidated Revenue Fund, to be appropriated for the public service of Canada in the manner and subject to the charges in this Act provided.

103. The Consolidated Revenue Fund of Canada shall be permanently charged with the costs, charges, and expenses incident to the collection, management, and receipt thereof, and the same shall form the first charge thereon, subject to be reviewed and audited in such manner as shall be ordered by the Governor General in Council until the Parliament otherwise provides.

104. The annual interest of the public debts of the several Provinces of Canada, Nova Scotia, and New Brunswick at the Union shall form the second charge on the Consolidated Revenue Fund of Canada.

105. Unless altered by the Parliament of Canada, the salary of the Governor General shall be ten thousand pounds sterling money of the United

Kingdom of Great Britain and Ireland, payable out of the Consolidated Revenue Fund of Canada, and the same shall form the third charge thereon.

106. Subject to the several payments by this Act charged on the Consolidated Revenue Fund of Canada, the same shall be appropriated by the Parliament of Canada for the public service.

107. All stocks, cash, banker's balances, and securities for money belonging to each Province at the time of the Union, except as in this Act mentioned, shall be the property of Canada, and shall be taken in reduction of the amount of the respective debts of the Provinces at the Union.

108. The public works and property of each Province, enumerated in the third schedule to this Act, shall be the property of Canada.

109. All lands, mines, minerals, and royalties belonging to the several Provinces of Canada, Nova Scotia and New Brunswick at the Union, and all sums then due or payable for such lands, mines, minerals, or royalties, shall belong to the several Provinces of Ontario, Quebec, Nova Scotia and New Brunswick in which the same are situate or arise, subject to any trusts existing in respect thereof, and to any interest other than that of the Province in the same.

110. All assets connected with such portions of the public debt of each Province as are assumed by that Province shall belong to that Province.

111. Canada shall be liable for the debts and liabilities of each Province existing at the Union.

112. Ontario and Quebec conjointly shall be liable to Canada for the amount (if any) by which the debt of the Province of Canada exceeds at the Union sixty-two million five hundred thousand dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

113. The assets enumerated in the fourth Schedule to this Act belonging at the Union to the Province of Canada shall be the property of Ontario and Quebec conjointly.

114. Nova Scotia shall be liable to Canada for the amount (if any) by which its public debt exceeds at the Union eight million dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

115. New Brunswick shall be liable to Canada for the amount (if any) by which its public debt exceeds at the Union seven million dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

116. In case the public debt of Nova Scotia and New Brunswick do not at the Union amount to eight million dollars and seven million dollars respectively, they shall respectively receive by half-yearly payments in advance from the Government of Canada interest at five per centum per annum on the difference between the actual amounts of their respective debts and such stipulated amounts.

117. The several provinces shall retain all their respective public property not otherwise disposed of in this Act, subject to the right of Canada to assume any lands or public property required for fortifications or for the defence of the country.

118. The following sums shall be paid yearly by Canada to the several Provinces for the support of their Governments and Legislatures: Ontario, eighty thousand dollars; Quebec, seventy thousand dollars; Nova Scotia, sixty thousand dollars; New Brunswick, fifty thousand dollars; [total] two hundred and sixty thousand dollars; and an annual grant in aid of each Province shall be made, equal to eighty cents per head, of the population as ascertained by the census of one thousand eight hundred and sixty-one, and in the case of Nova Scotia and New Brunswick, by each subsequent decennial

census until the population of each of those two Provinces amounts to four hundred thousand souls, at which rate such grant shall thereafter remain. Such grant shall be in full Settlement of all future demands on Canada, and shall be paid half-yearly in advance to each Province; but the Government of Canada shall deduct from such grants, as against any Province, all sums chargeable as interest on the Public Debt of that Province in excess of the several amounts stipulated in this Act.

119. New Brunswick shall receive by half-yearly payments in advance from Canada, for the period of ten years from the Union, an additional allowance of sixty-three thousand dollars per annum; but as long as the Public Debt of that Province remains under seven million dollars a deduction equal to the interest at five per centum per annum on such deficiency shall be made from that allowance of sixty-three thousand dollars.

120. All payments to be made under this Act, or in discharge of liabilities created under any Act of the Provinces of Canada, Nova Scotia and New Brunswick respectively, and assumed by Canada, shall, until the Parliament of Canada otherwise directs, be made in such form and manner as may from time to time be ordered by the Governor General in Council.

121. All articles of the growth, produce, or manufacture of any one of the Provinces shall, from and after the Union, be admitted free into each of the other Provinces.

122. The Customs and Excise Laws of each Province shall, subject to the provisions of this Act, continue in force until altered by the Parliament of Canada.

123. Where Customs duties are, at the Union, leviable on any goods, wares or merchandises in any two Provinces, those goods, wares and merchandises may, from and after the Union, be imported from one of those Provinces into the other of them on proof of payment of the Customs duty leviable thereon in the Province of exportation, and on payment of such further amount (if any) of Customs duty as is leviable thereon in the Province of importation.

124. Nothing in this Act shall affect the right of New Brunswick to levy the lumber dues provided in chapter fifteen, of title three, of the Revised Statutes of New Brunswick, or in any Act amending that act before or after the Union, and not increasing the amount of such dues; but the lumber of any of the Provinces other than New Brunswick shall not be subjected to such dues.

125. No lands or property belonging to Canada or any Province shall be liable to taxation.

126. Such portions of the duties and revenues over which the respective Legislatures of Canada, Nova Scotia, and New Brunswick had before the Union power of appropriation as are by this Act reserved to the respective Governments or Legislatures of the Provinces, and all duties and revenues raised by them in accordance with the special powers conferred upon them by this act, shall in each Province form one Consolidated Revenue Fund to be appropriated for the public service of the Province.

127. If any person being at the passing of this Act a member of the Legislature Council of Canada, Nova Scotia, or New Brunswick, to whom a place in the Senate is offered, does not within thirty days thereafter, by writing under his hand, addressed to the Governor General of the Province of Canada, or to the Lieutenant Governor of Nova Scotia or New Brunswick (as the case may be), accept the same, he shall be deemed to have declined the same; and any person who, being at the

passing of this Act a member of the Legislative Council of Nova Scotia or New Brunswick, accepts a place in the Senate, shall thereby vacate his seat in such Legislative Council.

128. Every member of the Senate or House of Commons of Canada shall before taking his seat therein, take and subscribe before the Governor General or some person authorized by him, and every member of a Legislative Council or Legislative Assembly of any Province shall before taking his seat therein, take and subscribe before the Lieutenant Governor of the Province, or some person authorized by him, the oath of allegiance contained in the fifth Schedule to this Act; and every member of the Senate of Canada and every member of the Legislative Council of Quebec shall also, before taking his seat therein, take and subscribe before the Governor General, or some person authorized by him, the declaration of qualification contained in the same Schedule.

129. Except as otherwise provided by this Act, all laws in force in Canada, Nova Scotia, or New Brunswick at the Union, and all courts of civil and criminal jurisdiction, and all legal commissions, powers and authorities, and all officers, judicial, administrative, and ministerial, existing therein at the Union, shall continue in Ontario, Quebec, Nova Scotia, and New Brunswick respectively, as if the Union had not been made, subject nevertheless (except with respect to such as are enacted by or exist under Acts of the Parliament of Great Britain or of the Parliament of the United Kingdom of Great Britain and Ireland), to be repealed, abolished or altered by the Parliament of Canada, or by the Legislature of the respective Province, according to the authority of the Parliament or of that Legislature under this Act.

130. Until the Parliament of Canada otherwise provides, all officers of the several Provinces having duties to discharge in relation to matters other than those coming within the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces shall be officers of Canada, and shall continue to discharge the duties of their respective offices under the same liabilities, responsibilities and penalties as if the Union had not been made.

131. Until the Parliament of Canada otherwise provides, the Governor General in Council may from time to time appoint such officers as the Governor General in Council deems necessary or proper for the effectual execution of this Act.

132. The Parliament and Government of Canada shall have all powers necessary or proper for performing the obligations of Canada or of any Province thereof, as part of the British Empire towards foreign countries, arising under treaties between the Empire and such foreign countries.

133. Either the English or the French language may be used by any person in the debates of the Houses of Parliament of Canada and of the Houses of the Legislature of Quebec; and both those languages shall be used in the respective records and journals of those Houses; and either of those languages may be used by any person or in any pleading or process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec. The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those languages.

134. Until the Legislature of Ontario or of Quebec otherwise provides, the Lieutenant Governors of Ontario and Quebec may each appoint under the Great Seal of the Province the following officers, to hold office during pleasure, that is to

say,—the Attorney General, the Secretary and Registrar of the Province, the Treasurer of the Province, the Commissioner of Crown Lands and the Commissioner of Agriculture and Public Works, and, in the case of Quebec, the Solicitor General; and may, by order of the Lieutenant Governor in Council from time to time prescribe the duties of those officers and of the several departments over which they shall preside or to which they shall belong, and of the officers and clerks thereof; and may also appoint other and additional officers to hold office during pleasure, and may from time to time prescribe the duties of those officers, and of the several departments over which they shall preside or to which they shall belong, and of the officers and clerks thereof.

135. Until the Legislature of Ontario or Quebec otherwise provides, all rights, powers, duties, functions, responsibilities or authorities at the passing of this Act vested in or imposed on the Attorney General, Solicitor General, Secretary and Registrar of the Province of Canada, Minister of Finance, Commissioner of Crown Lands, Commissioner of Public Works, and Minister of Agriculture and Receiver General, by any law, statute or ordinance of Upper Canada, Lower Canada, or Canada, and not repugnant to this Act, shall be vested in or imposed on any officer to be appointed by the Lieutenant Governor for the discharge of the same or any of them; and the Commissioner of Agriculture and Public Works shall perform the duties and functions of the office of Minister of Agriculture at the passing of this Act imposed by the law of the Province of Canada as well as those of the Commissioner of Public Works.

136. Until altered by the Lieutenant Governor in Council, the Great Seals of Ontario and Quebec respectively, shall be the same or of the same design, as those used in the Provinces of Upper Canada and Lower Canada respectively before their Union as the Province of Canada.

137. The words "and from thence to the end of the then next ensuing Session of the Legislature," or words to the same effect, used in any temporary Act of the Province of Canada not expired before the Union shall be construed to extend and apply to the next Session of Parliament of Canada, if the subject matter of the Act is within the powers of the same as defined by this Act, or to the next Sessions of the Legislatures of Ontario and Quebec respectively, if the subject matter of the Act is within the powers of the same as defined by this Act.

138. From and after the Union, the use of the words "Upper Canada," instead of "Ontario," or "Lower Canada" instead of "Quebec," in any deed, writ, process, pleading, document, matter or thing, shall not invalidate the same.

139. Any Proclamation under the Great Seal of the Province of Canada, issued before the Union to take effect at a time which is subsequent to the Union, whether relating to that Province or to Upper Canada, or to Lower Canada, and the several matters and things therein proclaimed shall be and continue of like force and effect as if the Union had not been made.

140. Any proclamation which is authorized by any Act of the Legislature of the Province of Canada to be issued under the Great Seal of the Province of Canada, whether relating to that Province or to Upper Canada, or to Lower Canada, and which is not issued before the Union, may be issued by the Lieutenant Governor of Ontario or of Quebec, as its subject matter requires, under the Great Seal thereof; and from and after the issue of such Proclamation the same and the sev-

eral matters and things therein proclaimed shall be and continue of the like force and effect in Ontario or Quebec as if the Union had not been made.

141. The Penitentiary of the Province of Canada shall, until the Parliament of Canada otherwise provides, be and continue the Penitentiary of Ontario and of Quebec.

142. The division and adjustment of the debts, credits, liabilities, properties and assets of Upper Canada and Lower Canada shall be referred to the arbitrament of three arbitrators, one chosen by the Government of Ontario, one by the Government of Quebec, and one by the Government of Canada; and the selection of the Arbitrators shall not be made until the Parliament of Canada and the Legislatures of Ontario and Quebec have met; and the arbitrator chosen by the Government of Canada shall not be a resident either in Ontario or in Quebec.

143. The Governor General in Council may from time to time order that such and so many of the records, books, and documents of the Province of Canada as he thinks fit shall be appropriated and delivered either to Ontario or to Quebec, and the same shall henceforth be the property of that Province; and any copy thereof or extract therefrom, duly certified by the officer having charge of the original thereof shall be admitted as evidence.

144. The Lieutenant Governor of Quebec may from time to time, by Proclamation under the Great Seal of the Province, to take effect from a day to be appointed therein, constitute townships in those parts of the Province of Quebec in which townships are not then already constituted, and fix the metes and bounds thereof.

145. Inasmuch as the Provinces of Canada, Nova Scotia, and New Brunswick have joined in a declaration that the construction of the Intercolonial Railway is essential to the consolidation of the Union of British North America, and to the assent thereto of Nova Scotia and New Brunswick, and have consequently agreed that provision should be made for its immediate construction by the Government of Canada: Therefore, in order to give effect to that agreement, it shall be the duty of the Government and Parliament of Canada to provide for the commencement, within six months after the Union, of a railway connecting the River St. Lawrence with the City of Halifax in Nova Scotia, and for the construction thereof without intermission, and the completion thereof with all practicable speed.

146. It shall be lawful for the Queen, by and with the advice of Her Majesty's Most Honourable Privy Council, on Addresses from the Houses of the Parliament of Canada, and from the Houses of the respective Legislatures of the Colonies or Provinces of Newfoundland, Prince Edward Island, and British Columbia, to admit those Colonies or Provinces, or any of them, into the Union, and on Address from the Houses of the Parliament of Canada to admit Rupert's Land and the North-western Territory, or either of them, into the Union, on such terms and conditions in each case as are in the Addresses expressed and as the Queen thinks fit to approve, subject to the provisions of this Act, and the provisions of any Order in Council in that behalf shall have effect as if they had been enacted by the Parliament of the United Kingdom of Great Britain and Ireland.

147. In case of the admission of Newfoundland and Prince Edward Island, or either of them, each shall be entitled to a representation in the Senate of Canada of four members, and (notwithstanding anything in this Act) in case of the admission of

Newfoundland the normal number of Senators shall be seventy-six and their maximum number shall be eighty-two; but Prince Edward Island when admitted shall be deemed to be comprised in the third of the three divisions into which Canada is, in relation to the constitution of the Senate, divided by this Act, and accordingly, after the admission of Prince Edward Island, whether Newfoundland is admitted or not, the representation of Nova Scotia and New Brunswick in the Senate shall, as vacancies occur, be reduced from twelve to ten members respectively, and the representation of each of those Provinces shall not be increased at any time beyond ten, except under the provisions of this Act for the appointment of three or six additional Senators under the direction of the Queen.

1871.—British North America Act, 1871.—An Act respecting the Establishment of Provinces in the Dominion of Canada. [20TH JUNE, 1871.]

WHEREAS doubts have been entertained respecting the powers of the Parliament of Canada to establish Provinces in territories admitted, or which may hereafter be admitted, into the Dominion of Canada, and to provide for the representation of such Provinces in the said Parliament, and it is expedient to remove such doubts, and to vest such powers in the said Parliament: Be it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords, Spiritual and Temporal, and Commons in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited for all purposes as The British North America Act, 1871.

2. The Parliament of Canada may from time to time establish new Provinces in any territories forming for the time being part of the Dominion of Canada, but not included in any Province thereof, and may, at the time of such establishment, make provision for the constitution and administration of any such Province, and for the passing of laws for the peace, order and good government of such Province, and for its representation in the said Parliament.

3. The Parliament of Canada may from time to time, with the consent of the Legislature of any Province of the said Dominion, increase, diminish, or otherwise alter the limits of such Province, upon such terms and conditions as may be agreed to by the said Legislature, and may, with the like consent, make provision respecting the effect and operation of any such increase or diminution or alteration of territory in relation to any Province affected thereby.

4. The Parliament of Canada may from time to time make provision for the administration, peace, order, and good government of any territory not for the time being included in any Province.

5. The following Acts passed by the said Parliament of Canada, and intitled respectively: "An Act for the temporary government of Rupert's Land and the North-Western Territory when united with Canada;" and "An Act to amend and continue the Act thirty-two and thirty-three Victoria, chapter three, and to establish and provide for the government of the Province of Manitoba," shall be and be deemed to have been valid and effectual for all purposes whatsoever from the date at which they respectively received the assent, in the Queen's name, of the Governor General of the said Dominion of Canada.

6. Except as provided by the third section of this Act, it shall not be competent for the Parliament of Canada to alter the provisions of the last

mentioned Act of the said Parliament in so far as it relates to the Province of Manitoba, or of any other Act hereafter establishing new Provinces in the said Dominion, subject always to the right of the Legislature of the Province of Manitoba to alter from time to time the provisions of any law respecting the qualification of electors and members of the Legislative Assembly, and to make laws respecting elections in the said Province.

1875.—Parliament of Canada Act, 1875.—An Act to remove certain doubts with respect to the powers of the Parliament of Canada, under Section 18 of the British North America Act, 1867. [19TH JULY, 1875.]

WHEREAS by section 18 of The British North America Act, 1867, it is provided as follows:—"The privileges, immunities, and powers to be held, enjoyed, and exercised by the Senate and by the House of Commons, and by the members thereof respectively, shall be such as are from time to time defined by Act of the Parliament of Canada, but so that the same shall never exceed those at the passing of this Act held, enjoyed, and exercised by the Commons House of Parliament of the United Kingdom of Great Britain and Ireland, and by the members thereof." And whereas doubts have arisen with regard to the power of defining by an Act of the Parliament of Canada, in pursuance of the said section, the said privileges, powers or immunities; and it is expedient to remove such doubts: Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. Section 18 of The British North America Act, 1867, is hereby repealed, without prejudice to anything done under that section, and the following section shall be substituted for the section so repealed:—The privileges, immunities, and powers to be held, enjoyed and exercised by the Senate and by the House of Commons, and by the members thereof respectively, shall be such as are from time to time defined by Act of the Parliament of Canada, but so that any Act of the Parliament of Canada defining such privileges, immunities and powers shall not confer any privileges, immunities, or powers exceeding those at the passing of such Act held, enjoyed, and exercised by the Commons House of Parliament of the United Kingdom of Great Britain and Ireland, and by the members thereof.

2. The Act of the Parliament of Canada passed in the thirty-first year of the reign of her present Majesty, chapter twenty-four, intitled An Act to provide for oaths to witnesses being administered in certain cases for the purposes of either House of Parliament, shall be deemed to be valid, and to have been valid as from the date at which the royal assent was given thereto by the Governor General of the Dominion of Canada.

3. This Act may be cited as The Parliament of Canada Act, 1875.

1886.—British North America Act, 1886.—An Act respecting the Representation in the Parliament of Canada of Territories which for the time being form part of the Dominion of Canada, but are not included in any Province. [25TH JUNE, 1886.]

WHEREAS it is expedient to empower the Parliament of Canada to provide for the representation in the Senate and House of Commons of Canada, or either of them, of any territory which for the time being forms part of the Dominion of Canada, but is not included in any Province: Be it therefore enacted by the Queen's Most Excellent Maj-

esty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in the present Parliament assembled, and by the authority of the same, as follows:—

1. The Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any Province thereof.

2. Any Act passed by the Parliament of Canada before the passing of this Act for the purpose mentioned in this Act shall, if not disallowed by the Queen, be, and shall be deemed to have been, valid and effectual from the date at which it received the assent, in Her Majesty's name, of the Governor-General of Canada. It is hereby declared that any Act passed by the Parliament of Canada, whether before or after the passing of this Act, for the purpose mentioned in this Act, or in The British North America Act, 1871, has effect, notwithstanding anything in The British North America Act, 1867, and the number of Senators or the number of Members of the House of Commons specified in the last-mentioned Act is increased by the number of Senators or of Members, as the case may be, provided by any such Act of the Parliament of Canada for the representation of any provinces or territories of Canada.

3. This Act may be cited as The British North America Act, 1886. This Act and The British North America Act, 1867, and The British North America Act, 1871, shall be construed together, and may be cited together as The British North America Acts, 1867 to 1886.

Comparison with constitution of the United States.—“The British North America Act differed from the United States Constitution . . . in that the governments whose powers were enumerated were the state or provincial governments, while the government whose powers were presumed was the central or Dominion government. It is, of course, true that the British North America Act, in addition to enumerating the subjects as to which a provincial legislature ‘may exclusively make laws,’ also enumerates a series of subjects with regard to which the Dominion Parliament may legislate. The act specifically says, however, that this enumerating is made ‘for greater certainty, but not so as to restrict the generality’ of the legislative power granted to that body ‘to make laws for the peace, order and good government of Canada with regard to all matters not coming within the classes of subjects by this Act assigned exclusively to the Legislatures of the Provinces.’ The main difference between the American Constitution and the British North America Act, so far as concerns the position of the two governments for which provision is made and their reciprocal relations, is then that the presumption in Canada is in favor of the central government, and that the provinces have only those powers expressly granted; while in the United States Constitution it is the powers of the national government which are enumerated, and the powers of the states which are reserved and therefore presumed. A glance at the enumerated powers of the provincial governments will show that the intention of the framers of the British North America Act was to confine the provinces to the exercise of powers, for the most part of a local administrative character. It is to be noticed that among these powers was not included the regulation of the private law governing the relations of individuals, one with another, except with regard to the ‘solemnization of marriage within the province,’ and with regard to ‘property and civil rights in

the province.’ The legislative power of the province with regard to the private law and the relations of individuals is not, however, so great as it would at first appear to be, since the British North America Act specifically mentions, as included within the legislative power of the Dominion Parliament, the subjects of banking, interest, bills of exchange, promissory notes, trade and commerce, and the entire field of the criminal law.—A comparison of the American Constitution and of the British North America Act, as they have been interpreted by the courts, would seem to produce the impression that: The American Constitution attempted to give to the central government only those powers which experience was believed to have shown must be given to that government in order to permit the efficient management of what at the time were considered to be interests common to all the states; but that the British North America Act intended to confer all powers of government on the Dominion government which did not have reference to: *first*—matters of purely local administration, such as provincial taxes, provincial debts, provincial charities, provincial works; and, *second*—the peculiar provincial laws and customs with regard to such matters as the solemnization of marriage and property and civil rights, which found their origin in provincial history and traditions. The Roman Catholic religion and the French race and law, which are such important characteristics of Canadian life, as we have seen, would seem to have made necessary this concession to local feeling. The attempts made both in the United States Constitution and the British North America Act to determine the position of the two governments, established by the process of enumerating the powers which one or the other of the governments was to exercise, has had the same result in both countries. . . . This method of enumerating has made it necessary to grant to some judicial tribunal the power to determine whether an act of either the central or the state legislatures is in accordance with the constitution, whenever it is alleged in an action arising in the courts that a legislative act which it is attempted to apply, has been passed in excess of the powers of the legislative authority passing it. In the United States, as has already been said, this tribunal is the Supreme Court, which itself was established by the Constitution. In the case of Canada the British North America Act makes no provision for such a tribunal, but an act of the Dominion Parliament, as interpreted by the courts, provides that the judgments of the Dominion Supreme Court established by it shall be appealable to the Judicial Committee of the British Privy Council, if permitted by that body. In the United States the final authority for constitutional interpretation is thus an authority of the central government, one of the governments established by the Constitution. In the case of the Dominion of Canada that authority is an outside authority. The British North America Act provides also that the Governor-General may disallow the acts of the provincial parliaments. This power is frequently used in the case of legislation, which is regarded as illegal, or as not in harmony with the legislation of the Dominion Parliament, where there is concurrent power, or as affecting unfavorably the interests of the Dominion. Both in the United States and in Canada, in the latter country notwithstanding the power of the Governor-General to disallow provincial acts, this method of enumeration has seemed to necessitate the grant to a judicial authority, the power to interpret the fundamental constitution act, and has led to an enormous amount of litigation and

to the continual raising of extremely perplexing questions. It is a matter of great difficulty for any one who is not technically qualified, and who has not made an exhaustive examination of the decisions of the courts, to say whether either the central government or the local government may constitutionally exercise specific powers of government.

"In the United States the difficulties which have arisen have been perhaps greater than those which have presented themselves in Canada. This is probably due to the facts that the line of decisions is longer there than in Canada, and that greater changes in economic and social conditions have taken place in the United States than in Canada since the adoption of the constitution. The Canadian constitution is, partly at any rate, because it was adopted only fifty years ago, more closely in accord with existing conditions than the Constitution of the United States, as it was originally interpreted, may be said to be. The changes in conditions in the United States have been so great that the American Supreme Court has been obliged on several occasions to reverse or refuse to follow decisions which it once made, and which when made were in all probability suited to existing conditions. Although such action may have been, and probably was, necessary, it was nevertheless unfortunate. For it is difficult for the ordinary man in the street to understand how the same words meant one thing before 1860 and mean another thing now. Many of the questions which under the method of enumerating powers combined with judicial interpretation must be settled by the courts are, further, really more political than legal in character. In so far as this is the case their decision by a body which is primarily a court is unfortunate, since it gives a political complexion to a body which is and should be primarily judicial in character. Canada has been saved much embarrassment in this respect, since the grant of the power of the final determination of these questions to a body like the Judicial Committee of the British Privy Council, which is in no way connected with either of the governments concerned, prevents decisions with regard to constitutional questions from becoming questions of practical partisan politics as has sometimes happened in the United States. It is hardly the case, however, that a thoroughly independent and sovereign country will be so situated that it will be either able or willing to refer its constitutional questions to an authority which is not a part of its own governmental system. If it adopts the American principle of the constitutional enumeration of governmental powers and their interpretation by the courts, it will be obliged in the nature of things to vest in some national domestic court the power to determine in specific

cases whether the action of the different legislative bodies provided by the constitution is in accord with the provisions of that instrument. The exercise of such a power subjects the courts which have it to the strongest sort of political influences."—F. J. Goodnow, *Principles of constitutional government*, pp. 54-58.—See also BRITISH EMPIRE: Character: Characteristics of self governing colonies.

CANAL RAYS, in physical and chemical experiments, produced when a discharge is passed through a vacuum tube, having a perforated cathode. They were discovered in 1866. See CHEMISTRY: Radioactivity: Positive or canal rays.

CANAL ZONE. See PANAMA CANAL.

CANALE S. BOVO, town in Austria northwest of Feltre, Italy, which was occupied by the Italians in 1918 during the World War. See WORLD WAR: 1918: IV, Austro-Italian theater: c, 12.

CANALEJAS Y MENDES, José (1854-1912), Spanish statesman. 1881, represented Soria in the Cortes; 1887, represented Algeciras in the Cortes, chairman of military reform commission; 1873-1874, sub-secretary to the president of the council of ministers during the republic; 1888, minister of agriculture; 1889-1890, minister of justice; 1894-1895, minister of finance; 1902, minister of agriculture; 1906, president of the Cortes; 1910-1912, premier; 1912, assassinated. See SPAIN: 1910-1914.

CANALIZO, Valentin (1767-c. 1847), Mexican soldier. Acting president during absence of Santa Anna, 1843-June, 1844, and again in September, 1844; impeached and banished, 1845; returned and served in war with United States.

CANALS

Origin.—With the advance of the industrial world came a simultaneous demand for better, quicker, and less costly systems of transportation. The first improvement was brought about by utilizing rivers, which were later supplemented by canals, as thoroughfares for boats and barges. Until the advent of the locomotive engines these canals determined all commercial routes; then the railways replaced them, canals falling into disrepute generally, but at the present time, they are coming into their own again. (See COMMERCE: Commercial age: 1770-1921.) Canals were utilized very early in the history of mankind. Egyptologists as-

sert that the predecessors of the Pharaohs created a canal system as far back as 7000 B. C. While it is probably true that these were at first merely for irrigation purposes, it is practically certain that they were soon utilized in the transportation of products from one place to another. About 600 B. C. according to Herodotus, we learn of the restoration of the great canal at Babylon, making it available for the merchant vessels of his day. (See BABYLONIA: Hammurabi: Character and achievements.) At about the same time the predecessor of the present Suez Canal was begun, but it was destroyed by the Mohammedans in A. D.

767 after they gained ascendancy in Egypt. The Romans were noted for their aqueducts but built few real canals. Charlemagne conceived the plan of connecting the Danube and the Main, but it was not carried out until the reign of Louis I of Bavaria in the 19th century. However, the origin of Europe's system of canals is generally placed in the twelfth century, the Dutch being generally considered as the inaugurators. The Low Countries were naturally adapted to a system of canals. The aggregate mileage of canals in the areas included in Holland and Belgium is estimated at 3,400 within an area of 24,000 square miles.

The greatest boom which canal construction received came at about 1481 with the construction of locks, which enabled engineers to overcome the obstacles made by elevations. Both the Dutch and the Italians claim credit for this innovation, the Dutch claiming to have used it nearly one hundred years earlier than the Italians. The lock is a device by means of which a vessel is raised directly from a lower to a higher level, or vice versa. It consists of a prism protected by walls on either side and water-tight gates at the ends. When a boat ascends, the upper gates and sluices commanding the flow of water from the upper level are closed. The sluices at the lower end of the lock are then opened and the boat enters the prism when the level of water in the lock has reached that of the lower surface. The lower sluices and gates are now closed and the upper sluices opened. The incoming water floats the boat up to the higher level, the upper gates are opened and the vessel passes out. For a descending boat, the process is reversed.

Where differences in level occur in a short length of canal, vertical lifts can be used to advantage. Double lifts are ordinarily used, the change in level being effected while the vessel is floating in water contained in a wrought iron caisson. A hydraulic ram supports each caisson. The descending caisson falls since it contains a greater depth of water than the ascending one, the weight on the rams being constant. To overcome the loss of weight in the descending caisson when it becomes immersed in the lower level of the stream, a hydraulic accumulator is used. Before the introduction of locks, inclines were used in the attempt to overcome the problem of different levels. The vessels were hauled up by means of capstans in some cases, or as in others, the cargoes removed and the boats run up on trucks which were then propelled up or down the incline by means of a windlass. Until a few years ago traffic on the smaller canals was conducted by the horse or mule walking along a tow-path and drawing a boat or barge by means of a towing rope. This method is of necessity extremely slow, so that efforts were made not only to quicken transit but to accommodate heavier loads. Little was accomplished until 1802 when steam towage was first employed on the Forth and Clyde canal, a tug boat fitted with steam engines drawing two barges 19½ miles in 6 hours. Various devices have been originated in the application of steam power to canals, but they are now rapidly being replaced in the newer canals by electricity. Thus, the Panama canal is operated entirely by means of electricity. The early canals were mostly of the class known as barge or boat canals and, due to their limited depths, were available only for vessels of small size. With the rapid advance of commerce, however, it was found both necessary and advantageous to cut canals of such depth and breadth as to accommodate sea-going vessels. The difference between the two types of canals is merely one in magnitude of work involved.

In the construction of a canal, the engineer must of necessity take several factors into consideration, the two most important of which are the topography of the country and the continuity of a water supply.

Canal construction.—Two factors usually decide the cross section of a canal—its dimensions and its form. The former would be determined by the size of vessel with which the canal is to be navigated, while the width must be sufficient to permit two vessels to pass simultaneously without fouling. In general a width of bottom is constructed equal to twice the beam of the largest vessel which will navigate the canal, and the depth of water should be at least two feet greater than the draft of these vessels. In the more recently constructed canals, the depths are made much greater. The bottom of the canal is always a flat surface, but the construction of the sides is dependent upon the hardness of material through which the channel is to be cut. Where the material is rock, the sides are invariably made vertical, in soft ground the sides are made sloping, the angle of slope being dependent upon the stability of the material. In general, the cross section is made to approach the rectangle as a limit as nearly as is possible to expedite the construction and reduce the cost.

AMERICAN CANALS

Santee canal (1802): first important American canal.—American canals were constructed before the nineteenth century, but the first work of any importance was the Santee canal, in South Carolina, which was opened in 1802. The one outstanding feature in all American canal construction during the entire century was the great length of many of the canals, in which respect they easily surpassed the European canals of this period. In cross section, however, they were much smaller than those of the continent, a circumstance which is explained by the fact that at the time of the introduction of canals, the trade of the country was small, and did not warrant the expenditure of great sums of money in construction, the main purpose being to complete the communication as quickly and with as little an expenditure of capital as was possible. With an increase in traffic, came the discovery that many of the canals were too small to meet the required demands. While the Americans used the same general designs in construction as were used by English engineers, the materials employed were different. Instead of the well-finished stone structures that one found in Europe, the American canals were undressed slopes of cuttings and embankments, roughly built rubble arches, stone parapet-walls coped with timber, and canal locks entirely constructed by wood. This liberal use of wood in construction was decried by many foreign engineers, but the curse later proved to be a blessing, for when the wooden locks on any of the canals showed symptoms of decay, stone structure could easily be substituted, the materials for the improved construction being conveyed inexpensively by the canal itself. Thus the less substantial work ultimately became the means of facilitating its own improvement.

Erie canal (1825).—"When a man living in New York State, about a hundred years ago, wished to travel in any direction, he went by some river and lake route as much as he could, riding in a canoe or boat. Naturally the first forts were built on waterways so that they would be protected from the enemy.

"There were few roads, and these were had, and in early spring and rainy weather could not be used. Logs, placed across the road in low and marshy places, formed a rough and bumpy highway called a corduroy road. Plank roads were the best that existed. It was much pleasanter to travel by water and to carry goods that way. Few people lived west of the Genesee Valley, not because there was any lack of people anxious to live there, but because there was no way to bring their products to a market without heavy expense and great risk. In order to open the western country to settlers, and to offer a cheap and safe way to carry their produce to a market, improvements in the natural waterways were made. The first canal locks were constructed in 1796 at Little Falls by a private

Waters' between the Great Lakes and the Atlantic Ocean. The Erie proved to be the world's greatest canal. Its effect was soon felt, not only through the State but throughout the east and the Great Lakes region. Settlers flocked westward, forests gave way to sawmills and villages replaced these. Prosperous towns were established on the Great Lakes and the splendid chain of cities, which has won for New York the title of Empire State, sprang up along the line of the Erie canal.

"The shipping which once went to Philadelphia, the nation's biggest seaport before the Erie canal, came to New York; the city grew by leaps and bounds and became the commercial center of the American Union. Sixteen years after the opening of the canal, the exports of New York were

OLD ERIE CANAL IN 1826

(From an old print)

company acting under a charter from the State. These made people eager for Governor De Witt Clinton's plan for the state-owned Erie canal. This canal, begun in 1817, was laughed at by many who called it 'Clinton's Big Ditch.' Governor Clinton, however, foreseeing its great use to the State, called it 'The Grand Canal.' The route of this waterway had been gone over and approved by President Washington, himself an engineer and surveyor. The Erie canal was opened October 25, 1825. It was 4 feet deep and about 42 feet wide and could float a boat carrying 30 tons of freight. The first boat to travel its full length was the Seneca Chief; its start from Buffalo was announced by the firing of a cannon, and this was echoed by the booming of a line of cannon all the way across the State to Albany and down the Hudson to New York city. The Seneca Chief carried two barrels of water from Lake Erie, which Governor Clinton emptied into the ocean at New York, the first 'Marriage of

valued at three times those of Massachusetts, the value of real estate had increased more rapidly than the population, while personal property was nearly four times its former value, and manufacturing three times as great. There were five times as many people following commercial pursuits in New York as there were before the completion of the Erie canal. Many other canals were built after people saw the success of the Erie, and for many years canals formed the principal trade routes in the State. However, the invention of the steam engine and the building of railroads struck them a severe blow. Some of them failed and were closed; the Chenango canal, connecting Utica and Binghamton, is an example of an abandoned canal. The Erie and main branches of the canal system were enlarged from time to time but still failed to hold their old popularity; and yet in 1882 it was found that the Erie had earned forty-two million dollars, over and above its origi-

nal cost, expense of enlargement, maintenance and operation."—F. M. Williams, *Story of the New York State canals*, pp. 3-5.—In 1903 the state made plans for increasing the capacity of the Erie, Champlain and Oswego canals to accommodate barges of 1000 tons. This system became known as the Barge canal. See BARGE CANAL, New York State.

Great Lakes and St. Lawrence system (1825-1899).—"The Canadian canal around the rapids of St. Mary's river, between Lakes Huron and Superior, is usually called the Sault Ste. Marie, and the American canal, the St. Mary's, so as to distinguish them. The first canal on the Canadian side was built in 1796-8 by the Hudson's Bay Company in about the same location as occupied by the present canal. There was but one lock, 38 feet long, 8 feet 9 inches wide and with a 9-foot lift. There was a tow-path at the side and oxen were used to tow bateaux through the lock. This lock was destroyed in 1814 by United States troops."—*Canals of Canada (Suppl. Annual report of state engineer and surveyor, v. 2, p. 1446)*.—On the American side, the construction was undertaken at a much later period. The canal built during the years 1853 to 1855 was 1 1/12 miles long, 64 feet wide at the bottom, and 100 feet wide at the surface. The two locks were each 350 feet long and 70 feet wide, having a lift of 9 feet. On Sept. 18, 1919, the fourth lock of the American canal was opened to traffic.

In 1870 the Weitzel lock, 515 feet long, 80 feet wide in the chamber, and 17 feet of water on the sills, was constructed by the United States government. This was the first of the series of modern locks to be constructed on the canal. During the years 1877 to 1896 a second lock, known as the Poe lock, was constructed. It is 800 feet long, 100 feet wide, with 22 feet of water on the sills. During this time the Canadians had built their second canal, a canal 1 1/8 miles long, 150 feet wide, and 23 feet deep, with a lock 900 feet long, 60 feet wide and 22 feet of water on the sills. This lock was, at the time of its construction, the largest in the world. Due to the tremendous traffic, the United States built (1908-1914) a third lock, known as the Davis lock, 1350 feet long, 80 feet wide, having 24.6 feet of water on its sills. In 1914 the channel leading to old locks was deepened to 24.6 feet in the upper level or reach, while a new canal was constructed to the third and fourth locks, the latter put under construction by authorization of Congress, July 25, 1912, and opened to traffic on Sept. 18, 1919. This fourth lock is known as the Sabin lock and is operated by electricity. These canals are especially noted for carrying the largest amount of water-borne traffic of all the artificial waterways of the world.

"The first Welland [Canada] canal was started Nov. 30, 1824, and was completed 5 years later, being constructed with 40 wooden locks, 110 ft. long, 22 ft. wide and 8 ft. depth of water. This was owned by the Welland Canal Co. In 1831 the Government loaned the company money to complete the canal to Port Colborne [Ontario], and in 1834 it purchased the canal. In 1841 the 40 wooden locks were replaced with 27 masonry locks, 150 ft. long, 26 1/2 ft. wide and 9 ft. depth of water, which work was completed in 1850, 2 years after the completion of the first St. Lawrence canal system. The second enlargement called for 25 locks 270 ft. long, 45 ft. wide with a depth of 12 ft. of water, but Parliament ordered the depth increased to 14 ft. The canal was opened to 12 ft. navigation in 1882 and to 14 ft. in 1887. That is

the canal as it now stands. It is 26 3/4 miles long and vessels can pass through in from 15 to 18 hours. . . . Alex. J. Grant, M. E. I. C., engineer in charge of the Welland Ship Canal, in a paper published in the Journal of the Engineering Institute of Canada, has this to say of the general features of the canal. The ship canal, as finally located, follows the valley of the Ten Mile creek between its mouth, about 3 miles east of Port Dalhousie and Thorold, crossing the present canal below Lock No. 11. Between Thorold and Allenburg [Ontario] a new cut will be made for the purpose of straightening the alignment of the canal between these points. The ship canal will again cross the present one below Lock No. 25, where the water levels of both are at elevation 568, the extreme low water level of Lake Erie above sea level. From Allenburg to Port Colborne, on Lake Erie, it will follow closely the course of the present canal. The total length of the canal will be 25 miles, and for all practicable purposes of navigation, it is a straight line throughout. The canal is 2 1/2 miles shorter than the present canal. The fall of 325 1/2 ft. between the lakes is to be overcome by seven locks of 46 1/2 ft. lift each. The direct line of the canal down the face of the escarpment and the topography of the lower plateau permitted the adoption of these high lifts which constitute a peculiar feature in the design of the canal and has no precedent in actual construction for locks of their size. The few locks required permit a rapid descent into Lake Ontario and diminish the time required for vessels to pass through the canal. The usable dimensions of the locks are 800 ft. long, 80 ft. wide with 30 ft. depth on the sills. The canal will be 200 ft. wide on the bottom, with 1 to 2 slopes, and for the present will be excavated to a depth of 25 ft. only. All structures, however, will be built for 30 ft. depth, so that the canal at some future date can be enlarged by simply dredging out the canal prism and harbor entrances. . . . At the Ontario end of the canal Port Weller harbor is being formed by two earth embankments extending 1 1/2 miles out into the lake, where the depth is 30 ft. at extreme low water. The banks are being formed from materials excavated from the canal prism and will be protected on their inner and outer slopes with rock. The banks are parallel with one another and provide a channel 800 ft. wide and 5000 ft. long which, at the entrance, is narrowed to 400 ft. wide by two converging lines of reinforced concrete crib work. From the shore the harbor extends inland about one-half mile, gradually narrowing from 800 to 200 ft. in width to Lock No. 1, 9500 ft. from the harbor entrance. . . . As lockage requires about 70 acre-feet, it is essential that there be a large pondage area above each lock. For this purpose the configuration of the valley east of the canal was fully made use of in creating regulating ponds above the locks. That above Lock No. 1 has an area of 107 acres; No. 2, 200 acres; No. 3, 150 acres. The service flow through the canal will be regulated by weirs at the side of the locks. Locks Nos. 4, 5 and 6 are twin locks in flight. One will be used for up-bound vessels and the other for down-bound, a double flight being necessary in order to save long delays to vessels passing through these locks. They are situated on the face of the escarpment and in order to create a regulating basin of 84 acres above Lock No. 6, an earthen dam with a maximum height of 75 ft. and about 3300 ft. long, extending from the head of Lock No. 6 across the present canal above Lock No. 19 to the high ground east of it, will be built with a concrete core wall of selected materials

from the canal excavation. The head of Lock No. 7 is opposite Peter Street, Thorold, or opposite Lock No. 24 of the present canal, the distance from the foot of the lock and the head of Lock No. 6 being only about 2000 ft. It is fed from a small pond of 27 acres formed by flooding the upper end of the Ten Mile creek valley lying east of the canal. This pond, however, will have direct communication through the channel of the present canal with the summit level of the Ship Canal above the twin Guard Gates, which are located about a quarter of a mile above Lock No. 7, where the main line of the Niagara, St. Catharines & Toronto railway crosses the canal. . . . The ship channel has cost to date a little over \$20,000,000 and is estimated to be, roughly, about 30% complete. . . . This enterprise has not attracted the attention in this country its importance warrants. When completed, . . . it will afford a straight way for lake vessels between Lake Ontario and Lake Erie."—*Largest undertaking in North America—Welland Ship Canal (Engineering World, Oct., 1920, pp. 257-260).*

"The Lachine canal was built for the purpose of enabling vessels to pass the rapids of St. Louis, better known as the Lachine rapids, situated just above Montreal, the head of ocean navigation on the Saint Lawrence River. . . . A bill was passed in 1821 which repealed the act of incorporation and authorized the construction of the canal by the Government, which at once commenced construction. The British Government contributed £10,000 toward the accomplishment of this work. The canal was opened for navigation in 1825 and completed in 1826. . . . [It] was built with a depth of four and one-half feet. The width at the water-surface was forty-eight feet and at the bottom twenty-eight. The locks were one hundred feet long and twenty feet wide. These dimensions were found inadequate and enlargement of the canal was begun in 1840 [and completed in 1862]. . . . The dimensions of the canal were then one hundred and twenty feet at water-surface and eighty feet at the bottom, with a navigable depth of nine feet. . . . In the year 1871 it was decided to further enlarge this canal. . . . The prism was enlarged, first to a depth of twelve feet throughout, and then to fourteen feet. Two of the locks have a depth of eighteen feet on the miter-sills, and three, a depth of fourteen feet. The canal prism was not available for boats drawing fourteen feet of water until 1890. The old locks with nine feet of water on the sills are still available at the side of the new locks. . . . The Beauharnois canal, built to overcome the 'Cascades,' 'Cedar' and 'Coteau' rapids, is, in its entirety, 12 miles long and affords safe navigation between Lakes St. Francis and St. Louis. . . . The largest canal of the St. Lawrence system, and the most modern in its design and execution, is the Soulanges canal. This canal is on the north side of the river and serves the same purpose as the Beauharnois canal, which to a large extent it replaces. The canal is 14 miles long and the five locks in that distance have a total lift of 82 feet. The locks are of concrete, faced with cut stone, and are filled and emptied through culverts communicating with the lock-chamber through twenty cast iron pipes arranged ten on each side of the chamber. These pipes are each 2½ feet in diameter. The gates and the sluices are operated by electricity and a lockage can be accomplished in fifteen minutes or less. The canal opened to traffic in 1899. . . . The Cornwall canal, located west of the Beauharnois, was built with a depth of nine feet and was the first canal constructed of this depth, which afterwards was

adopted as the standard. It is designed to furnish a passage around the Long Sault rapids, being on the north shore of the river. It is about 11 miles long and has a lockage of 48 feet. In order to make this canal navigable for vessels of the same class as those passing through the Welland canal, its enlargement was begun in 1876. This improvement was a part of a general plan to extend 14-foot navigation from the Great Lakes to the sea. The new locks, begun at this time, are 270 feet long, 45 feet wide and have a depth of 14 feet on the miter-sills at low water. The work of improving the channel between the locks has been continuous since 1876. . . . The Farrans Point, the Rapide Plat and the Galops canals are all on the north side of the river and complete the list of canals leading to Lake Ontario. These canals were built between the years 1843 and 1856. The object of these, as of the other St. Lawrence canals, was to provide a route around rapids in the river. The Farrans Point canal is situated about five miles west of the town of Dickinson's Landing—the head of the Cornwall canal. . . . The enlargement of the canal, to accommodate vessels drawing 14 feet of water, was contracted for in 1897 and was wholly completed in 1901. By this enlargement the length of the canal was increased to 1 mile and the lockage to four feet. A 'flotilla lock,' 800 feet long and 45 feet wide, with 14 feet of water on the miter-sill, was built at the side of the old nine-foot lock, which was retained and repaired. The Rapide Plat or Morrisburg canal, situated about 9½ miles west of Farrans Point canal, is designed to overcome the rapids of Rapide Plat by a lock of 11½ feet lift. It extends from the village of Morrisburg to Flags Bay, a distance of 3 2/3 miles. The work of enlarging this canal from the original nine-foot depth to the present depth of 14 feet was begun in 1884. The work on all portions was completed in 1905. The new lock is 270 feet long, 45 feet wide, with 14 feet of water on miter-sills. . . . Between the head of the Rapide Plat canal and the foot of the Galops canal there are 4½ miles of river navigation. What is now known as the Galops canal was originally built in two sections. . . . About ten years after these canals were built they were connected by an embankment in the river called the 'Junction canal.' All of these are now included under the one name of Galops canal, having a total length of 7 1/3 miles and a lockage of 15½ feet. In 1888 the upper entrance was improved and in 1897 the enlargement of the remainder of the canal was commenced. This enlargement furnishes 14-foot navigation and [has] only one lift-lock at Iroquois."—*Canals of Canada (Supplement to Annual Report of State Engineer and Surveyor, v. 2, pp. 1441-1444).*

Morris canal (1836).—The only American canal which moved boats from different levels of water by other means than locks was the old Morris canal (opened in 1836). Here inclined planes were used instead of locks. The canal extended from Jersey City on the Hudson to Easton on the Delaware, connecting these two rivers. It was 101 miles long. The total rise and fall was 1557 feet of which 223 were overcome by locks, and 1334 feet by means of twenty-three inclined planes, each having an approximate lift of fifty-eight feet. Boat-cars were used to transfer the vessels to the various elevations. They were constructed by a strong wooden crib or cradle on which the boat rested, supported on two iron wagons running on

four wheels. When supported on the inclined plane, the four axles of the wagons are in the same plane. To guard against the tendency to rock the cradle which occurred in other types of boat cars when the axles were not on the same level, the American engineers introduced two axles which supported the entire weight of crib and boat, and on which the wagons turned as a centre. The cars were run on rails laid on the inclined planes, and were raised and lowered, by means of various devices driven by water wheels. The railway extended along the bottom of the canal. In raising a boat, the car was first lowered into the water, and the boat floated over it. It was fastened to part of the framework projecting above the gunwale. The machinery was then started and the boat drawn to the top of the plane by a chain. Here gates at both extremities of the incline were built, the gates next to the top of the inclined plane being closed after the car entered it. The other gate was then opened, the intruding water floated the boat off the car, and it continued on its journey.

Delaware and Raritan canal (1838).—As early as 1804 a company was chartered to build a canal connecting the Raritan and Delaware rivers, and by 1816 a route had been surveyed. The main channel was opened to traffic in 1838. It is forty-four miles long, extending from Bordentown on the Delaware to New Brunswick on the Raritan. The canal is now controlled by the Pennsylvania railroad and is used to transport coal to New York.

Illinois and Michigan canal (1848).—"The Illinois and Michigan canal connects lake Michigan with the waters of the Illinois river, permitting the passage of medium-sized vessels from the gulf of Mexico to the gulf of St. Lawrence by means of the Welland canal which extends from lake Erie to lake Ontario. The construction of the canal was begun in June, 1836, but was discontinued after March, 1841, due to lack of funds. In 1845 construction was resumed, the canal opening in April, 1848. The modern canal traverses the valley of the Illinois river to its terminus, La Salle, the whole length being 96 miles. From this point traffic can proceed to Grafton on the Mississippi from the Illinois river, the state government of Illinois and the national government having improved the passage with the construction of locks and dams. At La Salle the water is 145 feet lower than at lake Michigan, the descent being accomplished by 17 locks, each 110 feet long and 18 feet wide. During the World War, President Wilson allotted \$150,000 of the War Emergency Fund under his personal control with which to restore to its original depth of six feet the Illinois and Michigan canal, which constitutes the only water connection between the Chicago Drainage Canal and the navigable channel of the Illinois River."—*Review of Reviews*, Sept., 1918.

Cape Cod canal (1914).—"A source of strength to the United States . . . [in war and in peace] is that great intracoastal system of canals and rivers just back of the Atlantic, and extending to an almost unbroken line from Boston, Mass., to Beaufort, S. C. It also connects with other channels as far south as the Everglades. . . . The engineers of the War Department have recommended the spending of \$115,000,000 for the deepening of such canals

as the Raritan and the dredging of bays and rivers. . . . The Government has taken over the Cape Cod canal, a protected channel dredged by private enterprise, which affords a calm and safe passage for many vessels which hitherto were in peril of leaving their bones in that marine graveyard off the treacherous promontory. Great ditches of this type would afford shelter for large war craft, just as the Kaiser Wilhelm canal at Kiel served to shield the German battleships from attack. In the shallower canals could be assembled destroyers, swift submarine chasers, and patrol boats. These auxiliaries could operate effectively against a superior high-seas fleet, especially if working under the protection of coast artillery and mobile ordnance mounted on railroad platform cars. The project for the Cape Cod canal was proposed as early as 1697 but nothing came of it until 1780 when General Knox made estimates for the construction of the canal. In 1781, surveys were made of the land by Winthrop and Hill. The project was dropped until 1890 when a company was formed and actual work on it begun. In 1909, the construction of the breakwater at Barnstable bay was undertaken and the rest of the work began to be prosecuted in earnest. The canal, excavated across Cape Cod, connects Buzzards' bay with Barnstable bay at Sandwich, Mass., and was opened to traffic July 29, 1914. It is 13 miles long, 8 miles being cut through the land and 5 miles constituting the channels cut in the waters of the bays. This route cuts by 70 miles the old passage around Cape Cod. The canal is practically straight."—*Review of Reviews*, Sept., 1918.

Panama canal (1915). See PANAMA CANAL; COMMERCE: Commercial age: 1770-1921.

Lake Washington canal (1917).—The recommendation for the construction of this canal was first made in 1856 by General George B. McClellan who suggested the connection of Lake Washington with Puget sound. A survey was made and presented to the government in 1890, but work was not actually started until 1911. The official opening of the canal to traffic took place on July 4, 1917. The total cost is estimated at \$5,000,000. The canal extends from Puget sound, runs through Shilshole and Salmon bays, and Lake Union to Union bay, a distance of about eight miles. The most noteworthy feature of the canal is the construction of the Fremont avenue bridge which is 242 feet long, between trunnions, and is operated by four hundred horse-power motors.

Rehabilitated canals (1918).—During the World War, there occurred a great shortage in transportation facilities. To meet the increased transportation demands and relieve the already overtaxed railroads, plans were considered for the rehabilitation of some of the old abandoned canals. "One of the first of the old sluices to be rehabilitated was the Chesapeake and Ohio, the building of which was pushed by General George Washington, who was the first president of the construction company which called it into being. The Father of His Country was so convinced that the future prosperity of the nation had much to do with water transportation by canal, that he obtained a leave of absence while he was still commander of the Revolutionary Army, that he might start the survey for the waterway with which he hoped to connect the waters of the Chesapeake Bay with the unsalted Ohio. The project was never realized, even in part, until long after his death, but today the canal is a carrier of trade between Cumber-

land, Maryland, and Georgetown, in the District of Columbia. It derives its water partly from the Potomac, and if deepened would be of much importance to the national capital. It has for years been under railroad control. The Government has now placed additional boats upon it and the lock crews are working night and day. The channel is becoming as busy as it was in Civil War days, when eight hundred boats, ten times the number which it had when the Federal authorities took charge, were in constant operation. Another of the old-time ditches, the Albemarle and Chesapeake, has been bought by the Government and is being enlarged. . . . All through the Middle West there is a demand for the giving back of the canals. Ohio, Michigan, Illinois, and in fact all those States created from the old Northwest Territory which General Washington hoped to benefit by the system he had conceived, are bitterly regretting the arrested development of their artificial waterways. Although the canals in these regions had been much neglected, and some of them damaged by floods, there is no reason why they should not be dredged and extended. The impounding of waters in the Buckeye State, for instance, has made it necessary to build large reservoirs which could be made to serve the purpose of a revived canal system. All those channels could be used in the transportation of food, coal, and bulky merchandise. Originally conceived by the Father of His Country and often called 'The Washington Highway,' the proposed Lake Erie and Ohio River Canal would be an important line of communication should the Federal authorities decide to construct it, as provided by a bill introduced in the United States House of Representatives. The channel would extend from the Ohio River, at the mouth of the Beaver, about twenty-eight miles from Pittsburgh, thence by way of the Beaver and Mahoning Rivers, the valley of the Mosquito Creek and the Valley of the Grand River to the mouth of Indian Creek, which discharges into Lake Erie six miles from Ashtabula. Its length would be 101 miles. This canal, on account of the important territory which it would tap, would be of great value to the State of Ohio, which formerly had a canal system that was an asset to the commonwealth. It would open the way for the rehabilitation of the important sluice which once ran down the middle of the land of Buckeyes. It would give a new lease of life to even the slumbering Hocking and make Logan and Athens again ports of the inland straits. The people of Pennsylvania would also welcome such a plan, for they well know the worth of canals in days like these. The canalized Monongahela River alone transported millions of tons of coal which kept the great munition plants of Pittsburgh, as well as the industries of peace, on full time and more, when the glut of traffic by rail would have stopped the supply of fuel. The commerce of the Mississippi and Ohio Valleys has long been in need of better inland waterways to supplement the wonderful facilities afforded by the Father of Waters and the Great Lakes. James J. Hill, astute railroad man and master builder of the Empire of the Northwest, years before his death favored the canals and the rivers as aids—not foes—of the railroad."—*Review of Reviews, Sept., 1918, pp. 298-302.*—In 1919 the old Chesapeake and Delaware canal was taken over by the United States government. It is fifteen miles long and connects Delaware City on the Delaware with Chesapeake City, Maryland. When enlarged it will form a link in the great inland waterway extending from Philadelphia to Norfolk, Virginia.

New Orleans' canal (1918-1922).—"New Or-

leans has for more than a century been planning to build a ship canal to connect the Mississippi River with the Gulf. It would cut the distance to the Gulf in half, would enable cheaper wharf construction, and furnish a fixed-level waterway for the development of industries. New Orleans finally began the work on May, 1918. The immediate cause was the Government's call for ships, more ships, yet more ships. Two (ship) yards were begun alone; the right of way of the canal before actual work on the latter had itself got started. Both have launched ships—the largest built in the South. . . . The Board of Port Commissioners of New Orleans, a state body, is building the Industrial Canal or Inner Harbor as it is called. The bonds are guaranteed by the state of Louisiana; the interest by the Levee Board and the Public Belt Railway of New Orleans. The George W. Goethals organization of New York, consulting engineers, have charge of the work. . . . Twelve million dollars have been spent on the work to date (March, 1920). The job is about 85 per cent complete, though the character of what remains to be done is such that the Canal cannot be finished before the middle of 1921. . . . The Industrial Canal when completed will be 300 feet wide, 30 feet deep and six miles long. Twenty-six feet deep now and reaching from the lake to the lock-site, just half a mile from the river, the canal itself is nearly finished. The building of the lock is the big work ahead. This is an engineering problem relatively more hazardous than the Panama Canal locks, according to engineers on both big jobs. Soil conditions thought unconquerable had to be met. This region of Louisiana is underlaid by quicksands and natural gas. The threefold pressure of the earth, the river and gas forces the sands into the cut wherever a deep excavation is made. The deeper the excavation, the greater the flow of sand. To accommodate modern tonnage, a lock had to be designed 1020 feet long, 150 feet wide, and 68 feet deep. The floor of the lock had to be laid 45 feet below the surface of the ground. Such an excavation had never been made in this region. Many engineers said it was impossible—or could only be done at a cost that would frighten the Government. Goethals began an excavation 1500 feet long by 750 feet wide. He sloped the cut towards the center gradually, to prevent slides. At the beginning of the cut, he drove a ring of sheet piling, to stop the flow of the first stratum of quicksands. A hundred and fifty feet farther in, he drove another ring of sheet piling, to stop the flow of the second stratum of quicksands. Then he addressed himself to the serious task of sinking the excavation for the lock itself. Ground conditions proved more difficult than had been anticipated. The sides of the excavation began to cave in, the quickstands ran through the cracks in the sheet piling as fast as the dredge could pump them out, and the gas pressure threatened to blow in the bottom. Thirty feet of water was pumped into the excavation. Its weight balanced the pressures. This was in May, 1919. Then a number of 10-inch artesian wells with gravel filters to hold back quickstands, were driven to relieve the gas pressure; a ring of steel sheet piling was put down, and a remarkable series of braces, composed of 10-inch timbers running in both directions, was constructed to hold the steel piling in place. On top of these braces the pile drivers were erected, and they proceeded to drive the 14,000 60-foot foundation piles into the water, as deep as they could. In January, 1920, the lock site was unwatered very gradually, A corps of engineers and experts watched every

timber. Everything held; the gas pressure was relieved, the flow of quicksands stopped; the problem was solved. Piledrivers are now following down the foundation piles, and the work of pouring the 100,000 yards of concrete that will be needed to build the lock begun. Three railroad trestles have been thrown over the lock site, and over them the concrete trains pass, dropping their four cubic yards each. It is estimated that the concrete will be put in at the average rate of 400 cubic yards a day. The floor of the lock will be 10-12 feet thick, and laid in 15-foot sections, because only a few of the braces can be removed at a time. The walls will be 13 feet thick at the bottom sloping to a thickness of two feet at the top. Six thousand tons of reinforcing steel will be needed and 125,000 barrels of cement. Two and a half million feet of lumber will be used in building the forms. The total cost of the concrete will be about \$2,225,000."—T. E. Dabney, *New Orleans industrial canal* (*Scientific American*, March 20, 1920, pp. 304, 314). —At the close of 1921 it was estimated that the canal would be opened for traffic in July, 1922.

PRINCIPAL EUROPEAN CANALS

Belgium.—"Among the countries of Europe in which inland navigation plays an active part in the commercial and industrial enterprise of the nation Belgium occupies a foremost place, the total length of its navigable waterways amounting to 1,360 miles. As the total area of the country is only 11,373 square miles, there is the high proportion of 1 mile of waterway to every 8 1/3 square miles of territory. . . . The great port and distributing centre, Antwerp, may well be considered as the heart of this system, since it is on this point that all the main arteries and their subsidiary channels converge. It is from Antwerp that the elements of industrial life, namely, raw materials, received from all parts of the world, are sent forth by canal to be distributed throughout the country, and the same canal system serves in due course for the redistribution of the materials as manufactured articles of commerce. . . . Not content with the great advantages provided by Nature for internal communication by water, the people of Belgium saw in their rivers a basis whereon to found a far-reaching network of canals. . . . About 85 per cent. of the navigable waterways are under the direct control of the State, and it is in addition a large shareholder in the canals conceded to private companies. The remainder of the canals are locally administered. . . . Taking the system as a whole, it can be divided into two parts. First, the eastern division, the west boundary of which is formed by the Brussels-Rupel and Brussels-Charleroi Canals. These canals, together with the Rupel and Lower Scheldt, the Canal de Jonction de la Meuse à l'Escaut, the Maastricht - Bois - le - Duc and Maastricht - Liège Canals, the Meuse and the Sambre, form a complete circle, and bind together the important centres of Brussels, Charleroi, Namur, Liège, Maastricht (Holland) and Antwerp. They also place in communication by water the central coal fields of Charleroi, the lead and zinc mines in the neighbourhood of Liège and Namur, the stone quarries in the province of Liège and in the district between the Sambre and Meuse. This circle has two offshoots, the Louvain-Rupel and Hasselt branch canals, which run in towards the centre and traverse industrial and agricultural districts."—C. Hertset, *Report on the canals and other navigable waterways of Belgium* (*Diplomatic and consular re-*

ports, Belgium, Misc. Series No. 604, Apr., 1904, pp. 3, 4, 17). The Louvain Canal is a ship canal, navigable by vessels of 500 tons. It connects the busy manufacturing towns of Louvain and Malines on the Dyle, and serves as an exit for agricultural produce.

British Isles.—There are indications of a great revival of canal usage in Great Britain. Since 1905, there has been practically no change in the traffic, but the World War has again pointed out the advantages of canals, a royal commission on canals and waterways having reported favorably on the modernizing and nationalizing of the British canal systems. In England the principal canals are:

Manchester ship canal	mileage	37½
Birmingham canal	"	159
Grand Junction canal	"	189
Leeds and Liverpool canal	"	145
Thames River (London bridge to Inglesham)	"	144
Trent and Mersey canal	"	119
Aire and Calder navigation	"	85

The Trent and Mersey canal was built in the middle of the eighteenth century through the efforts of James Brindley, an engineer, whose lack of education was more than compensated by his intuitive genius. He first came into prominence by overcoming almost unsurmountable difficulties in the construction of the Worsley Manchester canal, carrying the canal at an elevation of thirty-nine feet over the river Irwell at Barton by means of an aqueduct. In Scotland, interest in improved waterways is reviving, especially in the long debated project of a canal connecting the firth of Forth and the firth of Clyde, thus eliminating practically a 400-mile route around the rough north coast of Scotland. The largest canal in Scotland is the Caledonian, extending from Inverness to Fort William. In Ireland there is the Grand canal connecting Dublin with the river Shannon. It is 165 miles long. The most important of the British canals, however, is the Manchester ship canal promoted in 1757 by the duke of Bridgewater and then from time to time enlarged and improved.

The Manchester canal running from the Mersey at Eastham, to Manchester, is thirty-five and a half miles long, twenty-eight feet deep (old depth twenty-six feet), and has a bottom width of 120 feet. It was begun in 1887 and opened for traffic in 1894. It is built in four reaches and connected by three sets of locks at Latchford, Islam, and Barton. The canal is one of the most remarkable of artificial waterway achievements in existence. Its most notable structure is the swing aqueduct by which the Bridgewater canal is carried over the Manchester canal. The aqueduct opens like a swing-span drawbridge, permitting vessels with masts to pass through.

Finland. See CONSERVATION OF NATURAL RESOURCES: Finland.

France.—France early began to add to her natural waterways. The greatest of her earlier canals was the Languedoc, connecting the bay of Biscay with the Mediterranean sea. It was 148 miles long and first opened in 1668. In later centuries it was extended and improved, until the present canal du Midi is 255 miles long. Of the 3,030 miles of canals in France, the state owns and operates 2,860 miles, no tolls having been charged since 1888. "Although engaged in a gigantic conflict which has called forth every military and practically every industrial resource at her command, [France] found time to bring to a successful con-

summation a great engineering undertaking, namely, the Rhone-Marseilles Canal. . . . Marseilles is France's great port of entry for the Mediterranean Sea, although Nature caused it to be walled off from Central France by a mountainous range that sweeps around the northern side of the city. Before the advent of railroads the question of providing a waterway between the port of Marseilles and the important industrial cities in the interior was a much mooted one. As early as 1820 a canal was officially proposed by Becquey, the then director of bridges and roads. With the appearance of railroads the project was momentarily forgotten, although in the intervening years it was constantly before the French Government. But it was not until 1904 that the proposals gave way to actual work on the canal. On May 7th, 1916, in the presence of a distinguished gathering of members of the Cabinet and other officials, the Rhone-Marseilles Canal was officially opened. The total length of the canal is 60 miles, and it has for its main feature a five-mile tunnel through a mountain. Leaving the port of Marseilles, the canal follows the coast line up to the point where the tunnel is entered. Emerging at the other end of the tunnel, the canal utilizes two salt-water lakes, the larger being the Etang de Berre, finally debouching into the Rhone at Arles. The canal in the sections on a straight line is 82 feet in width, with a depth of water of 6 feet 6 inches; the normal depth, however, is 8 feet 2 inches. Between Marseilles and the Etang de Berre it is 9 feet 10 inches, the reason for the greater depth in this section being that larger craft, such as sea-going barges, will pass through it because of the prospective development of a number of industrial establishments on the salt-water lake. From this fact it may be assumed that goods in many instances will be transhipped from the larger barges to smaller craft that ply the Rhone River. The locks of the canal are 52 feet 6 inches in width at the entrance and 525 feet in useful length. Throughout, the canal has been constructed to accommodate barges up to 600 tons capacity, and it is believed that these craft will be able to travel up the Rhone, Saône and Doubs rivers, or a total distance of 335 miles, without breaking bulk. That portion of the canal which pierces the mountain range and is known as the tunnel of the Rove was first designed for a width of 50 feet at the springing of the arch, and was to have a towing path 4 feet 11 inches in width, forming a bracket, over the whole length. Fearing that difficulty might arise when two barges passed each other, the Marseilles Chamber of Commerce requested that the tunnel should be wider, with the result that it has been given a span of 72 feet 2 inches, with two side paths, 6 feet 6 inches in width each, leaving 50 feet for the canal width."

—*Scientific American*, May 20, 1916, p. 524.

Germany.—Kiel Canal.—Waterway across Europe.—Link between North and Black Seas.—Connections between Rhine and Danube.—“In 1805, after eight years of hard work, the great canal running from the mouth of the Elbe, in the North Sea, to the Fjord of Kiel, in the Baltic, a distance of about sixty miles, was thrown open to commerce. [See GERMANY: 1805 (June).] It had a normal width of 72 feet at the bottom and 220 at the water level, with a depth of 29½ feet. Although a sea-level canal, twin locks were built at each end, those at the western entrance to take care of the large tide variations, and those at the eastern end to take care of variations of water level, in the practically tideless Baltic, due to gales. The locks were 492 feet long, 82 feet wide, and 32 feet deep. The locks at Kiel re-

mained open most of the time, while those at the mouth of the Elbe did not need to be used at certain tides. The canal proved wonderfully valuable to commerce, because it saved the long, hazardous trip around the stormy coasts of Denmark. But its strategic value to the German navy was of even greater importance. Although the locks, when built, were large enough to take almost all vessels, they were outgrown in time, even by warships, and finally it was decided [1907] to reconstruct the canal, making it broader and providing locks that could take the largest vessel afloat, with plenty of room to spare. This work was completed [1914] in time to be of incalculable value to Germany in the . . . [World War]. The normal width of the canal is now 335 feet at the surface and 144 at the bottom, with a depth of 36 feet. New twin locks have been built alongside the old ones at each end. They have an available length of 1,082.6 feet and width of 147.6 feet. Intermediate gates may be used to cut off a chamber 328 feet long. The locks at Panama, it will be recalled, are only 1,000 feet long by 110 feet wide.”—*Reconstruction of the Kiel Canal (Scientific American, v. 117, Sept. 19, 1914, p. 232)*.—In 1900 another route connecting the Baltic and North seas was completed, this time joining the Elbe and Trave rivers. This route, however, is suited for smaller craft only. The Main canal, begun in 1883 was completed in 1886, while the Spree-Oder canal was opened in 1891. See GERMANY: 1900 (June).

“Instinctively one links the Mississippi and the Missouri rivers; years to come may find us regarding the Danube and the Rhine in the same way,” is the comment of a National Geographic Society bulletin upon a plan to cut a steamship waterway from the North Sea to the Black Sea. A ‘waterway across Europe’ . . . already exists, though travelers through a small section of it might have to resort to very small craft. . . . [This route] lies along the Rhine to Mainz, up the . . . Main, to Bamberg, thence through the Regnitz, into the Ludwig Canal to the Altmühl, which empties into the Danube at Kelheim. Vessels of more than 1,000 tons can go up the Rhine and Main to Frankfort; and vessels between 400 and 1,000 tons can go up the Danube as far as Ratisbon. Kelheim, the Danube end of the small river-canal link with the Rhine, is only twelve miles southwest of Ratisbon. Above Frankfort, to Würzburg, vessels between 400 and 1,000 tons can traverse the Main. The trouble with this route . . . is the extremely circuitous course between the Rhine and the Danube. A projected shortening . . . contemplates passing the confluence of the Rhine and the Main, continuing up the Rhine to Mannheim, thence into the Neckar and into the proposed canal from that point to connect with the Danube near Offingen.

“Completion of the project for this deep waterway across Europe would make the Rhine-Danube route one of the most important commercial highways of the world—ranking in economic importance with the Panama and Suez canals, and in extent with the Mississippi-Missouri channel and the tremendous navigable length of the Amazon.”—*New York Globe, Mar., 1922*.

Greece.—The Corinth ship canal was first undertaken by Nero in 67 A. D. In 1881 a French company undertook work on the same canal. Subsequently the Greeks managed to obtain control of it and it was completed under the Hungarian engineer Gerster and opened to traffic in 1893. The canal cuts the isthmus of Corinth, connecting the gulf of Corinth with the Saronic gulf. It is

four miles long; 70 feet wide and 26 feet deep.

Holland.—In Holland one finds the greatest system of canals in existence. Canalization was begun at a very early date and been carried on, down through the centuries. The great sea canals, however, date from the nineteenth century. "When it was discovered after the great Peace . . . [of 1815] that commerce would be carried in ships too large for navigating the Zuyder Zee, the merchants of Amsterdam were confronted with the prospect of finding themselves cut off from the outer world. To obviate this calamity, King William I sanctioned and encouraged the construction of the North Canal, which commences at Tolhuis (the

canal of larger dimensions through the narrow isthmus west of Amsterdam. . . . The new [Amsterdam canal] is called the North Sea Canal, and has a length of 25 kilometres (or 15½ miles) from Amsterdam to the sea at Ymuiden. The breadth of the canal ranges from 65 to 110 yards, and its depth from 23 to 26 feet. . . . The entrance to the canal from the sea is protected by three powerful locks, and two piers projecting over 1,500 yards out to sea guard the approach and afford a further barrier against silting and corrosion. Powerful dredges are also more or less continuously at work to keep the navigable channel clear. Two lighthouses stand at the extremities

SHIP GOING THROUGH CORINTH CANAL

Toll House), opposite Amsterdam, and traverses North Holland from south to north. At Tolhuis is the great lock called Willemsslus, and at Wormerveer the canal takes a western bend to utilise the old lake of Alkmaar, whence the canal may be traced due northwards to the Helder. Alkmaar is also connected by water with Zaandam through the Marker Vaart canal and the Zaan stream. The construction of this canal was commenced in 1819, and completed in 1825. . . . Its breadth varies from 40 to 45 yards, and it has a uniform depth of 20 feet. Its surface is throughout below the level of the sea, at some places as much as 10 feet. The total length of the canal is 75 kilometers, or nearly 47 miles. But after thirty years had passed it was found that the North Canal did not suffice for the requirements of one of the greatest ports in the world. It was decided to pierce a new

of the piers. The cost of the undertaking was borne by the city of Amsterdam and the State, but the sale of the reclaimed land reduced the burden by about ten million florins. Remarkable as the North Sea Canal was at the time of its construction, and confident as people were in 1876 that a depth of 26 feet would suffice for the requirements of the largest ships indefinitely, the development of large steamers has falsified these anticipations, and the North Sea Canal requires deepening and widening. A scheme was accordingly drawn up and approved [in 1908], and work was commenced."—D. C. Boulger, *Holland of the Dutch*, pp. 53, 54, 55.—"A new lock is being built, and this will be: long 400 meters, wide 45 meters, deep 11.5 meters."—J. J. Feith, *Modern Holland*, p. 162.—In other words, the lock will be even larger than those at Panama, while its depth is

even greater than the average depth of the North Sea. "These are the two principal sea-canals in Holland. There is a third of minor importance in the Reitdiep, which gives access to Groningen from the Lauwer Zee. The canalisation of the different waterways between the islands forming the Zeeland archipelago comes under the same head. Among the more important may be named the South Beveland Canal, which connects as it were the western and eastern arms of the Scheldt; the Keete Canal separating the islands of Tholen and Duiveland; the Dordsche Kil and the Noord channels of the Meuse forming the approaches to Dordrecht and Rotterdam from the south. These

with the dredging of the river a start was made with the construction of the foundation of the guiding dam along the whole projected length of 700 metres. It consists of fascines which as far as possible [were] covered with sand during the course of construction. The dam was at first built up to a height of $3\frac{1}{2}$ metres. . . . Altogether 180,000 square metres of mattress of brushwood and 00,000 tons of stone were employed in constructing the foundation. The expenditure incurred was about fl. 640,000.—In the spring of 1911 the building of the superstructure was commenced. When a length of 120 metres had been completed a great storm destroyed it on September 30th, 1911. In

BANDACK-NORDSJO CANAL, NORWAY

canals are flanked by very high embankments which completely cut off all view of the surrounding country."—D. C. Boulger, *Holland of the Dutch*, p. 55.—"By the Act of May 25th, 1908, the required funds were voted by which Rotterdam was ensured of a waterway with a continuous fairway at least 100 metres wide and with a depth of 8 metres at low water, or $9\frac{1}{2}$ at high water. . . . Immediately the bill was passed, large masses of earth were removed so that already in 1900 a fairway 8 metres in depth at low water and 10 at high water had been secured from end to end of the Waterway. Submerged dams and longitudinal dams with a total length of $2\frac{1}{2}$ kilometres were also constructed. . . . From 1909 to 1913 7,500,000 cubic metres of earth were dredged in the river between Krimpen and the extremity of the cutting at the Hook of Holland. . . . Simultaneously

the following spring the completion of the guiding dam was once more taken in hand, but with some alteration in the profile. . . . The superstructure of the dam for a length of 370 metres was completed in the autumn of 1914. . . . Dredging of the 'Zuidwal' was carried out on a large scale simultaneously with the execution of the works just mentioned."—A. T. De Groot, *Waterway from Rotterdam to the Sea*, 1914, pp. 47, 48, 49, 50.—"The larger number of Dutch canals, however, are not sea or salt-water canals. . . . They were made first of all to control and turn into distinct channels the great volume of water coming from the overflow of the rivers Rhine and Meuse. The accumulation of canals at Amsterdam where there are six lines of water circumvallation, one ring within the other, is a striking instance of the way in which the flood waters have been regulated and

made amenable to human direction. But the bulk of them were constructed from the motive of providing the country with the cheapest form of transport. In much of Holland roads could only have been laid down with great difficulty and at much cost, and they would have left the great problem of dealing with an excess of water untouched and unsolved. The Dutch realised that canals accomplished the double purpose of providing routes and diminishing the volume of water that had to be dealt with. . . . The most important of these canals—the arteries of Dutch activity—are those called the South William, the Orange, the Dieren, the Drenthe, and the Terneuzen. The first of these . . . connects with the Noorden Canal near Weert, and through it effects a junction with the canal de la Campine, in Belgium. The last-named canal is more correctly designated that of the Scheldt-Meuse, and reaches the Meuse at Maastricht. The eastern branch of the William Canal reaches the Meuse at Roermond. The Orange and the Drenthe Canals connect with the Reiddiep and the Yssel, thus giving Groningen direct communication by water with the Rhine. The Dieren Canal connects that place with Apeldoorn and Zwolle. The Terneuzen Canal flows between the Scheldt and Ghent, half of it being in Belgian and the other in Dutch territory. The canal is less than 30 miles in length. . . . Terneuzen is in Dutch Flanders, rather nearer Flushing than Antwerp.”—D. C. Boulger, *Holland of the Dutch*, pp. 55, 57.—“The principal communication between Amsterdam, the south of the country and Germany is formed by the Meriwede Canal, which is navigable by the largest Rhine vessels.” [This canal unites with both the Rhine river and the North Sea canal.]—J. J. Feith, *Modern Holland*, p. 164.—The total mileage of Holland’s canal system is 2,408, the whole country being described as a network of waterways, natural and artificial.

Italy. See CONSERVATION OF NATURAL RESOURCES: Italy: B. C. 800-A. D. 1915.

Norway.—“On account of her numerous rivers and lakes, Norway affords considerable opportunity for boat communication. Owing to the large waterfalls and numerous rapids, however, . . . not only are continuous navigable lengths seldom found, but the difficulties in making improvements are very great. . . . Of the canals that have been built the more important are the Frederikshald, the Nordsjo-Skein, and the Bandak-Nordsjo. Of these, the Frederikshald (opened in 1877), provides a waterway of 47 miles long, [from Frederikshald on Lake Femsjoen to the most northerly part of Skulerend Lake in Holland. This canal, which has twelve locks, admits boats of 5.6 ft. draught]. The Nordsjo-Skien canal connects the Lake Nordsjo and the Hiterdal Lake, which is connected with it by means of a navigable river—with the head of the Skien Fjord. A fall of 50 feet is overcome by means of two locks in Skien and four at Loveids. The canal was opened for traffic in 1861. . . . The Bandak-Nordsjo canal [opened in 1802] connects Nordsjo with the Bandak Lakes, and thereby opens up an inland waterway 65 miles in length, from the sea at Skien into the very heart of the mountains at Dalen at the end of Lake Bandak . . . [187 feet] above the level of Lake Nordsjo. . . . Five of the locks built to overcome this height are at Vrangfos.”—S. Konow and K. Fischer, *Norway*, pp. 458, 459.

Russia.—Peter the Great was the builder of the first important Russian canals. He connected his capital on the Neva with the Caspian sea by way of the Volga in order to effect an easier and quicker passage to the caravan trade of Asia. In later years

connection was made with ports situated on the Arctic ocean, between the Black and Caspian seas, and the Dniester was connected with the Vistula river, the latter project involving 461 miles of waterway. In 1884 there was constructed the Cronstadt-St. Petersburg (now Petrograd) canal 18¾ miles long and 22 feet deep. It was later dredged to a depth of 28 feet. In 1912 the reconstruction of the Moriinsky canal was decided upon, it being planned to construct five new locks on the Sheksna river.

Sweden.—West Göta Canal.—The West Göta canal unites the Cattegat with the Baltic through lakes Venner and Vetter. Between Lake Venner and the Cattegat the river Göta is navigable, except for the falls of Trolhätten which are passed by a series of locks. For the passage between Lakes Venner and Vetter, twenty locks are necessary to raise the canal 300 feet over the height of land, and lower it 289 feet to the level of lake Vetter.

ASIATIC CANALS

Suez canal.—“The construction of the famous ‘ditch in sand’ known as the Suez Canal marked a triumph of diplomacy rather than of engineering skill. Before its promoter, Ferdinand de Lesseps, could have the work of excavation started he had to secure the consent of the Viceroy of Egypt, and this had to be given against the wishes of the Egyptian people. In addition he had to overcome the obstacles placed in his way by the British and had to persuade prospective stockholders that the accounts of difficulties existing in the canal zone were unfounded. The work of digging the Suez Canal [about 100 miles in length, crossing the Isthmus of Suez from Port Said on the Mediterranean to Port Thewick on the Red Sea] began in 1859 and was completed in 1869. Nearly all of the material to be removed was soft, and the line of the canal extended through an extremely flat region; excavation was, therefore, not a difficult matter. Under the original agreement the Egyptian government was to supply 80% of the labor. This led to a system of forced employment, and when about one third of the work was completed the Viceroy interfered, and the use of forced labor was abolished. This was a very fortunate occurrence for the canal company since it led to the introduction of power dredges and other machinery, and hastened the work greatly. Previous to this the material had been scooped by hand into the baskets in which it was carried away. The total cost of construction was about \$100,000,000, or \$1,000,000 per mile. The canal has a width of 328 feet at the water line and 100 feet at the base and has an average depth of 26 feet. Since there is no appreciable difference between the levels of the two bodies of water which it connects, there are no locks. It has been widened and deepened since it was first constructed so that now ships may pass at any point. In 1887 electric lights were installed so that ships might use the canal at night. Retaining walls have been built in some places and it is planned to have them along the entire length of the canal. So unstable are the sandy banks that vessels have to reduce their speed greatly in order to prevent the sides from being washed away. There are no slides to interfere with the passage of vessels but the wind carries so much sand into the channel that dredges are at work constantly to prevent its being filled. From 14 to 18 hours are required for the passage through the 100 miles of the canal. . . . The canal was opened at about the time that sailing vessels were being generally re-

placed by steam ships. The great saving in distance which it effected caused it to be used by the large vessels and resulted in a decline in the use of sailing ships. It reduces the distance from England to Bombay over 6,000 miles, and the distance from New York to Bombay 2,500 miles. During the first years in which the canal was used it did not pay expenses but by 1876 it was being used by over 1,400 vessels. At the present time [1916], under normal conditions, about 10 vessels per day pass through it, and two-thirds of them are British owned. Of the separate lines the Peninsular and Oriental is the largest user."—G. Loft, *Suez canal* (*Journal of Geography*, October, 1916, pp. 64-65).—“In November, 1869, [the canal] was opened in the presence of the Emperor and Empress of the French and representatives from every power in the commercial world, and England's old rival in India, flushed with a just pride in the courage and skill of De Lesseps, seemed installed as the patron and guardian of this gateway to the East. It was a gateway infinitely more valuable to England than to France, but its possession was none the less welcome to the proud nation whose triumphs over its island neighbor had been so few since the days of Montcalm or even since Louis XIV. England had had her opportunity, but the caution which so often has been her safety had this time betrayed her, and she apparently had to accept the consequences. Yet it is never safe in politics to accept a foregone conclusion. The emperor who so proudly presided over the ceremonies at Suez was twelve months later a broken and powerless exile. France, smitten and humiliated by the German invasion, by the Commune of '71, by the years of doubt that saw the launching of the Third Republic, was little able to watch over her interests in the East. At Cairo the spendthrift, irresponsible and picturesque Ismail, aided and encouraged by a joyous crew of officials who plundered and reveled at will in a carnival of prodigality, dazzled the astonished world by his splendor, his enterprise, his modern spirit, while he drove his helpless country full tilt toward an abyss of bankruptcy. All went cheerily until ready money began to fail. It became difficult to find capitalists who had a proper spirit of confidence in the Khedive's ability to pay his debts. And so it came about that the embarrassed prince bethought him of the market value of his shares in the Suez Canal, nearly half of which he had secured when the company was first organized. They were offered for sale. . . . Benjamin Disraeli, Earl of Beaconsfield, was Prime Minister of Great Britain, and before France had begun to realize what was going on England had remedied her mistake of a few years before and had become the controlling shareholder in the Suez Canal.”—C. F. Lavell and C. E. Payne, *Imperial England*, pp. 276-277.—“In 1875, through the strategy of Disraeli, the majority of the shares of the canal company passed from the hands of the Viceroy [khedive] of Egypt into the control of . . . [the British government]. This has led to the extension of British authority in Egypt so that it is now virtually a part of the British Empire. In 1888 an international convention stipulated that it should be always open, in time of war as well as in time of peace, to all ships of all nations. Great Britain at first concurred with reservations, but in 1904 agreed to accept the stipulations of the convention. England does not police the zone nor does she possess any privileges not enjoyed by other countries, and there are no preferential tolls for British ships. The greatest benefit which the canal has given Great Britain is the connection which it affords with India. Together with Gibraltar, Malta and

Aden, it enables Britain to dominate the Suez-Mediterranean route. This route offers an outlet for the products of India and allows her to enjoy the benefits of the railroads and other improvements which have resulted, from the British regime. As a result of the improvement in communication between England and India the influence of England is more effective and the bond between the two has been greatly strengthened. The importance of the canal to Indian commerce is shown by the fact that about 50% of the traffic is accounted for by that country. . . . By strengthening the commercial ties between the Occident and the Orient the Suez Canal has benefited practically all nations. It has been to the advantage of all interested in the canal that it has been, since 1875, under the control of a nation whose power is so respected that no disturbance or interference with shipping have been possible.”—G. Loft, *Suez canal* (*Journal of Geography*, October, 1916, p. 65).—See also EGYPT: 1808-1001.—During the World War Great Britain violated the stipulations of the convention of Constantinople signed October 28, 1888. In the winter of 1914 the canal was fortified on both sides and 12,000 men brought from Australia, New Zealand, and India to defend it. In February and March, 1915, it was attacked by Turkish forces, but the onslaughts were repulsed.

China.—Grand canal.—The Grand Canal of China, 1,000 miles long, extending from Hang-chow to Peking and including hundreds of miles of subsidiary canals, is not only the largest canal in the world, but the oldest as well. It is estimated that most of the canal was constructed about 2,500 years ago, extensions having been made in the fifth, and again in the seventh centuries. The canal was completed towards the close of the thirteenth century, after being 600 years in construction. The locks are mechanically extremely crude in construction, the design antedating the doubt-gate lock chamber of Leonardo da Vinci. They consist of a set of single stop logs extending across the lock chamber from wall to wall, their ends being embedded in the granite masonry at either side. In 1918 American engineers undertook the project of modernizing the canal with the construction of modern locks for the crude old ones, at the same time effecting a consolidation of several old lifts into one, where topographical conditions permit.—See also CONSERVATION OF NATURAL RESOURCES: China: B. C. 2207-A. D. 1915.

CANARIAN INDIANS. See INDIANS, AMERICAN: Cultural areas in South America: Inca area.

CANARY ISLANDS, a group of islands off the northwest coast of Africa, and constituting a province of Spain. Supposed by some to be the Elysian fields of the Greeks, a supposition which is strongly disputed by many authorities. (See ELYSIAN FIELDS.) The first step in African exploration “was the discovery of the Canary Islands. These were the ‘Elysian fields’ and ‘Fortunate islands’ of antiquity. Perhaps there is no country in the world that has been so many times discovered, conquered, and invaded, or so much fabled about, as these islands. There is scarcely a nation upon earth of any maritime repute that has not had to do with them. Phœnicians, Carthaginians, Romans, Moors, Genoese, Normans, Portuguese, and Spaniards of every province (Aragonese, Castilians, Gallicians, Biscayans, Andalucians) have all made their appearance in these islands. The Carthaginians are said to have discovered them, and to have reserved them

as an asylum in case of extreme danger to the state. Sertorius, the Roman general who partook the fallen fortunes of Marius is said to have meditated retreat to these 'islands of the blessed,' and by some writers is supposed to have gone there. Juba, the Mauritanian prince, son of the Juba celebrated by Sallust, sent ships to examine them, and has left a description of them. Then came the death of empires, and darkness fell upon the human race, at least upon the records of their history. When the world revived, and especially when the use of the loadstone began to be known among mariners, the Canary Islands were again discovered. Petrarch is referred to by Viera to prove that the Genoese sent out an expedition to these islands. Las Casas mentions that an English or French vessel bound from France or England to Spain was driven by contrary winds to the Canary Islands, and on its return spread abroad in France an account of the voyage.—A. Helps, *Spanish conquest in America*, bk. 1, ch. 1.—The Canaries have an area of 3,342 square miles, and a population of about 506,000. The capital is Santa Cruz in Teneriffe, but the court of appeal is in Las Palmas.

CANNES CONFERENCE (1919). See RED CROSS: 1919-1920: International activities.

CANNES CONFERENCE (1922).—At a meeting between the British and French premiers, Lloyd George and Aristide Briand, the questions of German reparations, European economic rehabilitation and disarmament were discussed, and a decision arrived at to convene a session of the Supreme Council, which subsequently met at Cannes, France, on January 6, 1922. Present were the premiers of Great Britain, France, Italy, Belgium, the Japanese ambassador to France, and Colonel Harvey, United States ambassador to Great Britain. The last-named attended as an official observer on behalf of his government and took no part in the proceedings. The Allied Reparations Committee and large official delegations from the Allied countries were also present. On the first day of the session it was resolved to call the Genoa Conference. (See GENOA CONFERENCE.) Lloyd George reviewed the European situation; a treaty of alliance between France and Great Britain was agreed upon, and plans laid for the formation of an international finance corporation, to be styled the Central International Corporation, and to consist of representatives of France, Great Britain, Italy, Japan, Belgium and, if willing, the United States. In negotiating the treaty with Great Britain guaranteeing France against German aggression, Premier Briand found it necessary to make some concessions on German reparations. This yielding attitude raised considerable protest in France and stern warnings reached Briand from Paris, with the result that he broke off the conference and returned to Paris for the purpose of consulting with his government. On January 12, after a stormy meeting with his cabinet, Briand resigned and was succeeded by Raymond Poincaré, former President of France. "At the final session of the council formal invitations were issued summoning the nations to the Genoa Conference, regardless of what happened at Paris. . . . The Reparations Commission at this same meeting made its final report of an adjustment of the German payments. The decision stated that the Reparations Commission had decided to grant the German Government a provisional delay for payment of the sums due Jan. 15 and Feb. 15, so far as these payments were not covered by payments in cash or in kind, on certain conditions."—*New York Times Current History*, Feb., 1922, p. 879.

CANNING, George (1770-1827), British statesman. Entered Parliament in 1793. Under-secretary for the foreign office, 1796; left the foreign office and was named one of twelve commissioners

to India, 1799; treasurer of the navy in Pitt's second cabinet, 1804; secretary of state for foreign affairs in the administration of the duke of Portland, 1807-1809; member of bullion committee, 1810; president of the board of control in Lord Liverpool's cabinet, 1816; after death of Castlereagh, foreign secretary and leader of the House of Commons, 1822-1827; 1827, became prime minister. His foreign policy which proved so successful was non-intervention and at least moral support of national and liberal movements in Europe.—See also ENGLAND: 1820-1827; 1830: Reform movement: Rise of popular opinion; INDIA: 1858-1863; U. S. A.: 1823; VERONA, CONGRESS OF.

CANNON, Joseph Gurney (1836-), American legislator. Member House of Representatives 1873-1891, 1893-1913, 1915-1922; speaker 1903-11. See CONGRESS OF THE UNITED STATES: House: Speaker and the committee system; U. S. A.: 1910 (March-June).

CANNON, a heavy artillery weapon which is fired from a fixed mounting. It was developed through succeeding centuries, and during the World War further perfected, one of the German long range guns bombarding Paris from a distance of seventy-five miles.—See also BIG BERTHA; ORD-NANCE: 14th-18th centuries; RIFLES AND REVOLV-ERS: Origin of small arms.

CANO, Juan Sebastian del (c. 1460-1526), Spanish navigator. He was captain of a vessel trading with Africa and the Levant, and was commander of one of the five vessels in Magellan's expedition. After Magellan's death in 1521 he became chief of the expedition, and, reaching Spain in 1522 with one vessel, was thus the first to circumnavigate the globe. See AMERICA: 1510-1524.

CANON LAW.—"The Canon Law in its widest sense consists of Holy Scripture, the customary laws and usages of the Church, and of constitutions comprising the decrees and decretals of the Popes, the canons of councils, and, to a limited extent, the writings of the Fathers."—J. Dodd, *History of canon law*, p. 161.—In a more restricted sense it is described by Blackstone as being "a body of Roman ecclesiastical law, relative to such matters as that church either has, or pretends to have, the proper jurisdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, and the decretal epistles and bulls of the Holy See."—See also ECCLESIASTICAL LAW: 400-1000; 1915; PAPACY: 1917 (May); VATICAN: Present-day papal administration.

Effect on woman's position. See WOMAN'S RIGHTS: 300-1400.

CANONS OF PTOLEMY. See HISTORY: 14. **CANOODAGTOH**, Indian chief of Conestoga tribe, who in 1701 made a treaty with William Penn. See SUSQUEHANNA.

CANOPUS, British battleship which belonged to Admiral Cradock's squadron, but took no part in the sea fight off Coronel, on the Chilean coast, Nov. 1, 1914; later in the battle off the Falkland Islands, Dec. 7, 1914. See WORLD WAR: 1914: IX. Naval operations: e; f, 1.

CANOPUS, Decree of, an important inscribed stone found in 1865 at San, or Tanis, in Egypt,

which is a monument of the reign of Ptolemy Evergetes, who ascended the throne in 246 B. C. It gives "in hieroglyphics and Greek (the demotic version is on the edge) a decree of the priests assembled at Canopus for their yearly salutation of the king. When they were so assembled, in his ninth year. His infant daughter Berenice, fell sick and died, and there was great lamentation over her. The decree first recounts the generous conduct and prowess of the king, who had conquered all his enemies abroad, and had brought back from Persia all the statues of the gods carried off in old time from Egypt by foreign kings. He had also, in a great threatening of famine, when the Nile had failed to rise to its full amount, imported vast quantities of corn from Cyprus, Phœnicia, &c., and fed his people. Consequently divine honours are to be paid to him and his queen as 'Benefactor-Gods' in all the temples of Egypt, and feasts are to be held in their honour. . . . This great inscription, far more perfect and considerably older than the Rosetta Stone, can now be cited as the clearest proof of Champollion's reading of the hieroglyphics."—J. P. Mahaffy, *Story of Alexander's empire*, ch. 15, note.—See also HIEROGLYPHICS, Egyptian.

CANOSSA, Henry IV at.—In the conflict which arose between the German emperor, Henry IV (then crowned only as king of the Romans) and Pope Gregory VII (the inflexible Hildebrand), the former was placed at a great disadvantage by revolts and discontents in his own Germanic dominions. When, therefore, on February 22, 1076, the audacious pontiff pronounced against the king his tremendous sentence, not only of excommunication, but of deposition, releasing all Christians from allegiance to him, he addressed a large party, both in Germany and Italy, who were more than willing to accept an excuse for depriving Henry of his crown. This party controlled a diet held at Tribur, in October, which declared that his forfeiture of the throne would be made irrevocable if he did not procure from the pope a release from his excommunication before the coming anniversary of its pronouncement, in February. A diet to be held then at Augsburg, under the presidency of the pope, would determine the affairs of the empire. With characteristic energy, Henry resolved to make his way to the pope, in person, and to become reconciled with him, before the Augsburg meeting. Accompanied by the queen, her child, and a few attendants, he crossed the Alps, with great hardship and danger, in the midst of an uncommonly cold and snowy winter. Meantime, the pope had started upon his journey to Augsburg. Hearing on the way of Henry's movement to meet him, not desiring the encounter, and distrusting, moreover, the intentions of his enemy, he took refuge in the strong fortress of Canossa, high up in the rocky recesses of the Apennines. To that mountain retreat the desperate king pressed his way. "It was January 21, 1077, when Henry arrived at Canossa; the cold was severe and the snow lay deep. He was lodged at the foot of the castle-steep, and had an interview with the countess Matilda [mistress of the castle, and devoted friend of the pope], Hugh, abbot of Clugny, and others, in the Chapel of St. Nicolas, of which no traces now remain. Three days were spent in debating terms of reconciliation; Matilda and Hugh interceded with the pope on the king's behalf, but Gregory was inexorable; unless Henry surrendered the crown into the pope's hands the ban should not be taken off. Henry could not stoop so low as this, but he made up his mind to play the part of a penitent suppliant. Early on the morning of January 25 he mounted

the winding, rocky path, until he reached the uppermost of the three walls, the one which enclosed the castle yard. And here, before the gateway which still exists, and perpetuates in its name, 'Porta di penitenza,' the memory of this strange event, the king, barefoot, and clad in a coarse woolen shirt, stood knocking for admittance. But he knocked in vain: from morning till evening the heir of the Roman Empire stood shivering outside the fast-closed door. Two more days he climbed the rugged path and stood weeping and imploring to be admitted." At last, the iron-willed pontiff consented to a parley, and an agreement was brought about by which Henry was released from excommunication, but the question of his crown was left for future settlement. In the end he gained nothing by his extraordinary abasement of himself. Many of his supporters were alienated by it; a rival king was elected. Gathering all his energies, Henry then stood his ground and made a fight in which even Gregory fled before him; but it was all to no avail. The triumph remained with the priests.—W. R. W. Stephens, *Hildebrand and his times*, ch. 11-15.—See also GERMANY: 1056-1122; PAPACY: 1056-1122; ROME: Medieval city: 1081-1084.

CANOVAS DEL CASTILLO, Antonio (1828-1897), Spanish statesman, 1858-1861, director general of the administration; 1861, under-secretary of state; 1864, minister of the interior; 1865, minister of finance and the colonies; 1868, banished because of his liberal principles; 1869, returned to active life as leader of the moderate Conservatives, opposed in the Cortes the proposed democratic constitution, and was a leader of the movement which placed Alfonso XII on the throne; 1874, president of the council and chief of provisional cabinet; 1875, at the head of the Liberal-Conservative ministry, the 'Cabinet of Conciliation'; September of the same year, withdrew, but was recalled in December; remained premier until 1879; 1880-1881, 1884-1885, 1890-1892, 1895-1897, again premier. Cánovas changed, in the course of his career, from radical to conservative. August 8, 1897, he was assassinated by an anarchist. See SPAIN: 1874-1875; 1885-1896; 1897 (August-October).

CANSO, Battle at (1744). See NEW ENGLAND: 1744.

CANTABRIANS AND ASTURIANS.—The Cantabrians were an ancient people in the north of Spain, inhabiting a region to the west of the Asturias. They were not conquered by the Romans until the reign of Augustus, who led an expedition against them in person, 27 B. C., but was forced by illness to commit the campaign to his lieutenants. The Cantabrians submitted soon after being defeated in a great battle at Vellica, near the sources of the Ebro; but in 22 B. C. they joined the Asturias in a desperate revolt, which was not subdued until three years later.—C. Merivale, *History of the Romans*, ch. 34.

ALSO IN: T. Mommsen, *History of Rome*, bk. 8, ch. 2.

CANTEBRIDGE, ancient name for Cambridge. See CAMBRIDGE: Name.

CANTEEN, a place in an army post or encampment for the use of enlisted men, supplying food and refreshments, and serving as reading room and place of recreation. In the United States army, the official name is "post exchange." During the World War the several organizations for relief and welfare established canteens in all parts of France, wherever troops were encamped.—See also WORLD WAR: Miscellaneous auxiliary services:

IX, War relief: g, 8; Y. M. C. A.: World War activities: 1917-1919.

CANTERAC, José (c. 1775-1835), Spanish viceroy of Peru. 1818, went to Peru to quell revolt; 1821-1824, lieutenant general and commander-in-chief of Royalist forces which maintained Spanish authority; 1824, defeated by Bolívar; 1835, after return to Spain, captain general of Castille. See PERU: 1820-1826.

CANTERBURY, a city and county in the borough of Kent, England, on the river Stour. It is the seat of an archdiocese of the church of England, and the city is built about the famous Canterbury cathedral, which existed as a Roman basilica before the coming of St. Augustine. After that time the cathedral was built in part and destroyed by fire, but was really completed about 1495. The Saxon name of the city was Cantwara-byrig, and in the Roman period it was called Durovernum. See CHURCH OF ENGLAND: 19th century; and DUROVERNUM.

597.—St. Augustine's work.—Origin of the primacy. See ENGLAND: 597-685.

1170.—Murder of Thomas à Becket. See ENGLAND: 1162-1170.

1205.—Disputed archiepiscopal election.—Choice of Stephen Langton. See ENGLAND: 1205-1213.

1558.—End of the Catholic archbishopric.—Upon the death of Cardinal Pole, who held office from 1556 to 1558, the Catholic archbishopric closed.

CANTERBURY, Convocation of, assembly of the clergy. See CONVOCATION.

CANTERBURY TALES (1385-1389).—A series of narrative poems, written by Geoffrey Chaucer, in the form of tales related by a company of pilgrims on the road from Southwark to the Shrine of Thomas à Beckett at Canterbury. The pilgrims are introduced in the prologue, and tales and prologue give a valuable description of life in England at the close of the Plantagenet period. The tales established the supremacy of the English tongue over Norman-French, which had been growing for some time, and aided in emancipating the lower classes from monasterial domination. See ENGLISH LITERATURE: 14th century.

CANTIGNY, a village near Montdidier, about 55 miles north of Paris; captured during World War from the Germans by the Americans, May 28, 1918. See WORLD WAR: 1918: II: Western front: a, 3; f.

CANTII, a tribe of ancient Britons which occupied the region of Kent. See BRITAIN: Celtic tribes.

CANTON, capital of the province of Kwangtung in China, one of the leading cities of that country. (See CHINA: Map.) Its estimated population in 1918 was 900,000. It is one of the chief centers of foreign trade in China.

7th-9th centuries.—Early commercial importance. See COMMERCE: Medieval: 7th-9th centuries.

10th century.—Arab navigators traded with city.

1662-1838.—Commerce with European nations. See CHINA: 1662-1838.

1839-1842.—Opium war.—City captured by the British.—Its port opened to British trade. See CHINA: 1839-1842; OPIUM PROBLEM: 1840.

1856-1857.—Bombardment by the English.—Capture by the English and French. See CHINA: 1856-1860.

CANULEIAN LAW. See ROME: Republic: 445-400.

CANUTE (c. 905-1035), king of Denmark and England. See ENGLAND: 979-1016; 1016-1042; SCANDINAVIAN STATES: 1018-1397.

Canute II, king of Denmark, 1080-1086.

Canute III, king of Denmark, 1147-1156.

Canute IV, king of Denmark, 1182-1202.

CANZACA, or Shiz, Battle of.—A battle fought 591, by the Romans, under Narses, supporting the cause of Chosroës II, king of Persia, against a usurper Bahram, who had driven him from his

throne. Bahram was defeated and Chosroës restored.—G. Rawlinson, *Seventh great oriental monarchy*, ch. 23.

CAOUTCHOUC, name for india rubber. For its discovery and first manufacture, see INVENTIONS: 10th century; Industry.

CAP OF LIBERTY. See LIBERTY CAP.

CAP TRAFALGAR, German sea-raider. September 14, 1914, in a brisk action off the coast of Brazil, she was defeated and sunk by the converted Cunarder, *Carmania*.

CAPE BRETON ISLAND, a rocky island in British North America, off Newfoundland. See CANADA: Map.

1497.—Discovery by John Cabot. See AMERICA: 1497.

1504.—Named by fishermen from Brittany. See NEWFOUNDLAND: 1501-1578.

1713.—Possession confirmed to France. See NEWFOUNDLAND: 1713.

1720.—Hostilities with English in Nova Scotia. See NOVA SCOTIA: 1713-1730.

1720-1745.—Fortification of Louisbourg.—After the surrender of Placentia or Plaisance, in Newfoundland, to England, under the treaty of Utrecht (see NEWFOUNDLAND: 1713), the French government determined to fortify strongly some suitable harbor on the island of Cape Breton for a naval station, and especially for the protection of the fisheries of France on the neighboring coasts. The harbor known previously as Havre à l'Anglois was chosen for the purpose. "When the French government decided in favour of Havre à l'Anglois its name was changed to Louisbourg, in honour of the king; and, to mark the value set upon Cape Breton it was called Isle Royale, which it retained until its final conquest in 1758, when its ancient name was resumed." In 1720 the fortifications were commenced, and the work of their construction was prosecuted with energy and with unstinted liberality for more than twenty years. "Even the English colonies contributed a great proportion of the materials used in their construction. When Messrs. Newton and Bradstreet, who were sent to confer with M. de St. Ovide [to remonstrate against the supplying of arms to the Indians in Nova Scotia] . . . returned to Annapolis, they reported that during their short stay at Louisbourg, in 1725, fourteen colonial vessels, belonging chiefly to New England, arrived there with cargoes of boards, timber and bricks. . . . Louisbourg [described, with a plan, in the work here quoted] . . . had, between the years 1720 and 1745, cost the French nation the enormous sum of 30,000,000 livres, or £1,200,000 sterling; nevertheless, as Dussieux informs us, the fortifications were still unfinished, and likely to remain so, because the cost had far exceeded the estimates; and it was found such a large garrison would be required for their defence that the government had abandoned the idea of completing them according to the original design."

—R. Brown, *History of the Island of Cape Breton, letters 9-11.*—"The fort was built of stone, with walls more than 30 feet high, and a ditch 80 feet wide, over which was a communication with the town by a drawbridge. It had six bastions and three batteries, with platforms for 148 cannon and six mortars. On an islet, which was flanked on one side by a shoal, a battery of 30 guns, 28 pounders, defended the entrance of the harbor, which was about 400 yards wide, and was also commanded from within by the Grand or Royal Battery, mounting as many guns, of the calibre of 42 pounds. The fort . . . was a safe rendezvous and refuge for French fleets and privateers, sailing in the Western Hemisphere. It commanded

the maritime way into Canada, and it watched the English settlements all along the coast. It was a standing threat to the great business of New England seamen, which was the fishery on the banks."—J. G. Palfrey, *History of New England*, v. 5, bk. 5, ch. 9.—"So great was its strength that it was called the Dunkirk of America. It had nunneries and palaces, terraces and gardens. That such a city rose upon a low and desolate island in the infancy of American colonization appears incredible; explanation is alone found in the fishing enthusiasm of the period."—C. B. Elliott, *United States and the Northeast fisheries*, p. 18.

1744.—Outbreak of the Third Inter-Colonial war. See NEW ENGLAND: 1744.

1745.—Conquest by New Englanders.—Fall of Louisburg. See NEW ENGLAND: 1745; ENGLAND: 1745-1747.

1748.—Restored to France. See NEW ENGLAND: 1745-1748.

1758-1760.—Final capture and destruction of Louisburg, by the English.—"In May, 1758 [during the Seven Years' War], a powerful fleet, under command of Admiral Boscawen, arrived at Halifax for the purpose of recapturing a place [Louisbourg] which ought never to have been given up. The fleet consisted of 23 ships of the line and 18 frigates, besides transports, and when it left Halifax it numbered 157 vessels. With it was a land force, under Jeffery Amherst, of upward of 12,000 men. The French forces at Louisbourg were much inferior, and consisted of only 8 ships of the line and 3 frigates, and of about 4,000 soldiers. The English fleet set sail from Halifax on the 28th of May, and on the 8th of June a landing was effected in Gabarus Bay. The next day the attack began, and after a sharp conflict the French abandoned and destroyed two important batteries. The siege was then pushed by regular approaches; but it was not until the 26th of July that the garrison capitulated. By the terms of surrender the whole garrison were to become prisoners of war and to be sent to England, and the English acquired 218 cannon and 18 mortars, beside great quantities of ammunition and military stores. All the vessels of war had been captured or destroyed; but their crews, to the number of upwards of 2,600 men, were included in the capitulation. Two years later, at the beginning of 1760, orders were sent from England to demolish the fortress, render the harbor impracticable, and transport the garrison and stores to Halifax. These orders were carried out so effectually that few traces of its fortifications remain, and the place is inhabited only by fishermen."—C. C. Smith, *Wars on the seaboard (Narrative and Critical History of America)*, v. 5, ch. 7).

CAPE OF GOOD HOPE, a promontory of South Africa, the southern extremity of Table

Mountain. It was discovered about 1488 by Bartholomeu Diaz, the Portuguese navigator.

CAPE OF GOOD HOPE, formerly Cape Colony. It is the southernmost province of the Union of South Africa with which it was merged on May 31, 1910. The province embraces East Griqualand, Tembuland, Transkei, Wallfish Bay, Pondoland and Buchanaland, in all covering an area of 276,966 square miles. Its estimated population in 1911 was 1,982,588. The region was colonized by the Dutch in 1651 and formally proclaimed British territory in 1814. It suffered severely from the Kafir wars, the war with the Zulus in 1879, and with the Boers in 1880-1881.

CAPE-TO-CAIRO RAILWAY.—During the years 1897-1900, a young Englishman, a Cambridge student, named Ewart Scott Grogan journeyed on foot from Cape Town to the Mediterranean by way of the Zambezi. This was the first time the Black Continent had been traversed in its entire length; all other "crossings" had been from east to west or *vice versa*. Grogan wrote the story of his remarkable tramp and invited Cecil Rhodes to honor him with a preface for his book. The great South African statesman and financier heartily agreed, and wrote under date of Sept. 7, 1900: "It [Grogan's feat] makes me the more certain that we shall complete the telegraph and railway, for surely I am not going to be beaten by the legs of a Cambridge undergraduate. . . . As to the commercial aspect, every one supposes that the railway is being built with the only object that a human being may be able to get in at Cairo, and get out at Cape Town. This is, of course, ridiculous. The object is to cut Africa through the centre, and the railway will pick up trade all along the route. The junctions to the East and West coasts, which will occur in the future, will be outlets for the traffic obtained along the route of the line as it passes through the centre of Africa. . . . We propose now to go on and cross the Zambezi just below the Victoria Falls. I should like to have the spray of the water over the carriages."—L. Mitchell, *Life of Cecil John Rhodes*, v. II, pp. 287-288.—Rhodes did not live to see the completion of this important link in the pet scheme of his life. He died, March 26, 1902, and in April, 1905, the two spans of the gigantic bridge, begun from opposite shores across the gorge of the Victoria Falls, met in mid-air 420 feet above low-water level and were riveted together. In March, 1899, Rhodes was received by the German Emperor in Berlin, when the latter "was in favour of according Rhodes hearty support in his scheme for carrying his Cape to Cairo line across German territory, but his Ministers could not rely on the Reichstag, 'which was not yet permeated by an imperial spirit.' . . . Finally, however, later in the year, an agreement was arrived at between Germany and the British South Africa Company, dated Berlin, 28th October, 1899, and signed by von Bülow," which stipulated that "(1) In the event of the Company constructing a line across its western boundary or through Bechuanaland at any

point south of 14th degree S. Latitude, such crossing of the boundary shall only take place at a point of the British-German boundary S. of the degree of latitude agreed upon: so that the continuation of the Company's railway system to the West African coast, S. of the 14th degree, shall always pass through German territory. (2) Germany to be bound to link up the rails, in default of which the Company to have the right to build on German territory to the coast. (3) The B. S. A. Company not to connect with the coast north of the 14th degree S. latitude before the other connection is carried out."—*Ibid.*, p. 251.—"The weak point of the proposal to build the Cape to Cairo Railway is that so few people want to go from the Cape to Cairo, and in any case the difficulties of constructing a railway through the swamps of the southern Sudan would be extreme. But the prospects of building the southern portion of the line will be greatly increased if the European colony in East Africa have commercial and other connections with the British possessions in the south. British territory touches the southern end of Lake Tanganyika, and the distance from its northern end to Uganda is not long, though the territory through which the future road or railway would pass is not British."—C. Eliot, *East Africa Protectorate*, pp. 314-315.—See also BELGIAN CONGO: 1914-1916.—As a result of the World War the whole of the route, by land and inland waterways, now lies in British territory. "We have heard much of the 'Cape to Cairo Railway,' a phrase which, after all, when the question is carefully studied, does not mean much. There is little doubt that some day in the future it will be possible to travel by rail from the Cape to Cairo, but for some years to come the needs of Africa in the matter of railways are not so much a north and south through line, as railways going from the interior to the east and west coasts. The present so-called 'Cape to Cairo' railway, starting from Cape Town, has reached Bukama on the navigable upper waters of the River Lualaba, whence there is water communication for some distance towards the north. This railway has tapped the rich copper districts of Katanga, and all traffic to and from that country at present goes as far as Bulawayo, thence to the Portuguese port of Beira on the East Coast. It is evident that the southern stretch of the Cape to Cairo railway has reached its present useful limit; not only does Katanga produce find its way out to the nearest point on the East Coast, Beira, but when the Benguela railway is finished a much quicker and cheaper route will be available for Katanga direct to Lobito Bay on the Atlantic Ocean, and the Cape to Cairo line will probably then be little used by this district. The same may be said for the countries surrounding Tanganyika, which are now tapped by the railway to Dar-es-Salaam and by the Belgian railway from Kabalo to Albertville. The regions north of Nyasa will be tapped by the line I have already spoken of from Kilossa. Lake Mweru trade will probably find its way by the Lobito Bay line. Traffic to and from Uganda and the regions surrounding Lake Victoria already goes to the east coast, to Mombasa. It is only when Lake Albert is passed and the Upper Nile reached that a railway running north will be the best line of communication, and even in this case most goods for the Upper Nile will not go *via* Alexandria, Cairo, or Port Said, but by the existing railway from Port Sudan on the western shores of the Red Sea. Sir Henry Birchenough, in the discussion which followed a paper read before this Society last year, said very truly, 'A railway has to live,

and must go in search of traffic.' There you have the whole matter in a few words. The line from Port Sudan (and Egypt) running to Khartoum and beyond has already reached its limit of usefulness as a north and south railway at Kosti, whence it turns to the west to El Obeid. As I have already mentioned, this line will probably soon be carried on to El Fasher in Darfur; and here we have the possibility of a transcontinental railway east and west. It may possibly be found a reasonable commercial proposition some day to carry on this line from El Fasher through Wadai to Lake Chad, thence to join on to one of the Nigerian railways reaching the Atlantic at Lagos."—A. Sharpe, *Backbone of Africa* (*Royal Geographical Journal*, Sept., 1918).—"Now that the Great War is over and the control of the territory which is still known as German East Africa has passed out of German hands . . . renewed interest will certainly be taken in the realization of Cecil Rhodes' dream—the Cape-to-Cairo Railway. No definite route for it has hitherto been laid out, and, broadly speaking, there is considerable choice of alternatives over the greater part of the distance which still separates the railways of South Africa from those of the Egyptian and Sudan systems. . . . The distance from Capetown to Cairo, as the crow flies, is about 4200 miles. In the popular imagination the Cape-to-Cairo railway of the future no doubt presents itself as a continuous line of railway running more or less straight between these points, with branches connecting the central trunk line with the various ports upon the east and west coasts of the continent. In days to come, I think it far more probable that over the greater portion of this distance it will be more correct to speak of the Cape-to-Cairo system, than of the Cape-to-Cairo line, because there will certainly be a large number of alternative routes over which passengers proceeding between the two terminals will be able to travel. The railway map of South and Central Africa illustrates this point very clearly. As far north as Bulawayo, to which in no very distant future there will certainly be two alternative routes from the south, there is a regular network of railways connecting the chief centres of South Africa, and although the western line to the Cape, running *via* Mafeking and Kimberley, will probably always be somewhat shorter in time from Bulawayo, there can be no doubt that large numbers of passengers coming from the north will proceed south *via* Pietersburg, Pretoria, and Johannesburg, from which in turn they will have a choice of routes to the Cape. There will, moreover, probably be nodal points on the Cape-to-Cairo system through which every traveller will pass, of which one will probably be Bulawayo, and another Khartoum. If the whole route be regarded for convenience as divided into three zones, Bulawayo may be taken as the northern limit of the southern zone, and the north end of Victoria Nyanza as the northern limit of the central zone. In the northern zone, which comprises the country lying to the north of Lake Albert, and so includes Egypt and the Sudan, the geographical conditions are such that there are unlikely to be any large number of alternative routes, such as already exist in the southern zone, and, as I shall show, will probably be established in the central zone. . . . Looking into the future, I am ready to admit that the Cape-to-Cairo system, when constructed, will never be a through route for goods on any considerable scale. It is obvious that sea freight must always be cheaper than railway freight over such a long distance as 4000 miles, and also over much shorter distances. This fact, however, does not

necessarily mean that the commercial usefulness of the various sections of the central system may not be very considerable, nor does it furnish any conclusive reason why the system as a whole should not pay. On the other hand, I question very much whether, in what I have called the central zone, there would be any distinct commercial advantage in providing additional means of communication with the east coast. In this region, all the ports are disadvantageously situated for trade with Europe, because the traffic has to pass *viâ* either the Suez Canal or the Cape of Good Hope. In its southern half a longer haul by land and lake to Beira may quite conceivably be more economical than a shorter journey by land to say Dar-es-Salaam or Kilindini. Similarly in the northern section it is quite possible that, notwithstanding the longer haul, a considerable portion of the Uganda traffic will be able to be dealt with more economically *viâ* Port Sudan than by Kilindini. Again, on the west coast, I doubt whether any considerable traffic from the regions which I have been discussing will ever flow to any west-coast ports to the north of Boma and Lobito Bay, because the geographical position of any port situated further to the north will always handicap it very heavily in comparison with the nearer eastern ports. It may be laid down as an invariable general rule in these matters, that, while passenger traffic will, other things being equal, tend to follow the quickest route, goods traffic will flow by the cheapest."—H. W. Fox, *Cape-to-Cairo Railway* (*Royal Geographical Journal*, Feb., 1920, pp. 73, 76-77, 95).

"Since the word 'Cape' is given precedence in the title bestowed on this proposed railway, which is rapidly progressing towards the point of accomplishment, it seems quite proper to begin at Cape Town in hastily considering the line and its probable bearing upon the permanent development of the whole continent. This last expression is chosen deliberately because it is believed that when the direct connections with other railways that shall act as feeders and the transverse lines with which it will exchange business are considered later, it must be made manifest that the Cape to Cairo Railway is to exert a tremendous influence for good on the whole of Africa. Already the line has been extended so far beyond Bulawayo, in Matabeleland of British South Africa, that passengers can readily go to any part of Rhodesia, and the construction reaches so near the southern end of Lake Tanganyika that already one-third of the lower part is now operated. With the Nile Valley Railway included, fully two-thirds of the Cape to Cairo is completed. While the construction work on this completed southern one-third has not been an easy matter at all, the difficulties are not to be compared with those which face the constructors through the central one-third. Some idea of what must be undertaken by the engineers who are to build a railway along the eastern shore of Lake Tanganyika, and—better yet for the general reader—some hint as to the scenery which is to greet the traveller, may be had from a brief description of this lake. It is the longest known body of fresh water in the world, being four hundred and twenty miles long, or one hundred miles longer than our Lake Michigan (three hundred and twenty miles), and seventy miles longer than Lake Superior; but inasmuch as its breadth ranges only from ten to fifty miles, its area, twelve thousand six hundred and fifty square miles, is much less than those American lakes. . . . From Ujiji, on Tanganyika, where the proposed railway is to leave that lake, to the approximate point

where it is to strike Lake Victoria Nyanza is a distance, as the crow flies, of about four hundred miles. Yet when we remember that the former is twenty-seven hundred feet above sea-level, while the latter is somewhere about four thousand feet, and that the intervening distance forms the watershed between the Nile and the Kongo basins, it need not be said that those four hundred miles present some very pretty problems for engineers in surveying the line and for contractors in building it. It is probable that the traveller by train on the Cape to Cairo Railway will mark a distinct difference in the scenery along the shores of these two great bodies of water, Tanganyika and Victoria Nyanza. Both will be declared rugged and grand, but the latter will be remarked for the richest examples of tropical vegetation to be seen anywhere. The many islands along the coast are said to be clothed with forests and fringed along the shore with papyrus or low jungle. Its surface is quite twice that of Tanganyika, although it is some two hundred miles less in length; its average breadth is two hundred and twenty miles."—J. K. Goodrich, *Africa of to-day*, pp. 292-293.—See also AFRICA: Modern European occupation; 1914: Summary of European occupation; Modern railway and industrial development.

Air route established.—"With the dawn of the year 1920 the British government, through its Air Ministry, stood ready to begin a regular aviation service from Cairo to Cape Town. The total flying distance is about 5,200 miles, most of it over the trackless jungle of equatorial Africa, yet the official announcement of the enterprise places the actual flying time at fifty-two hours, or, say, a week flying eight hours a day. Throughout the year 1919 three British exploring parties were at work surveying and preparing the route, building aerodromes, acquiring landing fields from local chiefs—a year of hard and dangerous work of which the world knew little or nothing. . . . As a result of a year's hard work by these pioneers in the African wilderness, the most uninviting region for airmen in the whole world is now traversed by a fully equipped route, with aerodromes or landing grounds at intervals of 200 miles or less from the mouth of the Nile to the Cape of Good Hope."—*New York Times Current History*, Mar., 1920, p. 487.—See also AVIATION: Development of airplanes and air service; 1918-1921: Air service after World War.

CAPE TOWN, capital of Cape Colony and seat of the legislature of the union of South Africa. It was founded by the Dutch under Jan van Riebeck in 1652, and was the base from which the colonists spread to other lands of South Africa. See CAPE-TO-CAIRO RAILWAY.

CAPE VERDE, or Verde Islands, a group of islands, lying in the Atlantic off the coast of West Africa, west of Cape Verde (see AFRICA: Map). The islands, fourteen in number, belong to Portugal and are under the command of a governor-in-chief. The islands were discovered by Alvise Cadamosto in 1456. In the sixteenth century the islands increased in importance; the first bishop was appointed in 1532, and the first governor-general was appointed at the end of that century. In more recent times the islands' progress has been retarded by famine and disease, particularly the famines of 1730-1733 and 1831-1833. Praia is the capital.

CAPELLE, Eduard K. von (1855-), German vice-admiral. In 1916 he succeeded Tirpitz as secretary of state for the navy; tried to soften submarine policy to meet American views.

CAPELLO, General, in command of the second Italian army in the Isonzo-Caporetto campaign of

1917. See WORLD WAR: 1917: IV. Austro-Italian front: d, 1.

CAPHARSALAMA, Battle of.—One of the victories of the Jewish patriot, Judas Maccabæus

over the Syrian general Nicanor, 162 B. C.—Josephus, *Antiquity of the Jews*, bk. 12, ch. 10.

CAPHTOR, an ancient Phœnician settlement on the coast of the Nile delta. "From an early period the whole of this district had been colonised by the Phœnicians, and as Phœnicia itself was called Keft by the Egyptians, the part of Egypt in which they had settled went by the name of Keft-ur, or 'Greater Phœnicia.'"—A. H. Sayce, *Fresh light from the ancient monuments*, ch. 2.—On the other hand, Ewald and other writers say that "the Philistines came from Caphtor," and that "this now obsolete name probably designated either the whole or a part of Crete."

CAPHYÆ, Battle of.—Fought 220 B. C. between the Achæan and Ætolian leagues.

CAPITAL, defined. See CAPITALISM.

CAPITAL AND LABOR. See SOCIALISM.

CAPITAL PUNISHMENT, the extreme penalty of death for offences against the law. It has been practised in almost every country from the earliest times down to the present, in spite of a strong movement for its abolition. See CRIMINAL LAW: c. 1600; 1660-1820; PRISON REFORM: United States.

CAPITALISM

Definition of the term.—Forms of capital.—"Capitalism may provisionally be defined as the organisation of business upon a large scale by an employer or company of employers possessing an accumulated stock of wealth wherewith to acquire raw materials and tools, and hire labour, so as to produce an increased quantity of wealth which shall constitute profit. Wherever in the course of history a conjunction of certain essential economic and moral forces has appeared, capitalist industry in some form and size has existed. These essential conditions may be thus enumerated:—First, a production of wealth not required to satisfy the current wants of its owners, and therefore saved. Second, the existence of a proletariat or labouring class deprived of the means of earning an independent livelihood by putting their productive labour-power into materials which they can freely appropriate, purchase, or hire, consuming or selling the product for their own advantage. Third, such a development of the industrial arts as enables indirect methods of production to afford profitable employment to organised group-labour using tools or machinery. Fourth, the existence of large, accessible markets with populations willing and economically able to consume the products of capitalist industry. Fifth, the capitalist spirit, or the desire and the capacity to apply accumulated wealth to profit-making by the organisation of industrial enterprise. There are, of course, no series of wholly independent conditions. On the contrary, they are closely inter-related. The causes which favour an accumulation of wealth in one class of a nation, or other social aggregate, will commonly assist the formation of a proletariat labour class. The existence of a population capable of generating new wants will help not only to stimulate accumulation, by offering the possibility of large profitable sales, but will also arouse the development of industrial arts, which in their turn will re-act upon the consuming public by provoking new wants. Such an atmosphere of technical progress, alike in the arts of production and consumption, will educate the desire and the capacity of capitalist organisation."—J. A. Hobson, *Evolution of modern capitalism*, pp. 1-2.

"The word capital is commonly current in a restricted sense when the questions of labour and capital are under discussion; but it is important to notice that . . . we must use the word in a wider sense as including commercial capital, and as meaning the fund of wealth which is employed with a view to obtaining an income. Capital may be sunk in land, as it was by men who acquired a hoard in the Middle Ages and used it to buy a rent charge, or in more modern times since the knowledge of agriculture has increased, in sinking money in permanent improvements by which the land may be rendered more productive. It is of course convenient for many purposes to treat the land, and questions connected with the land, apart from capital, but it is important that we should remember that cultivated land is what it is because capital has been sunk in it. There is also commercial capital, from which an income is derived by what were known in the Middle Ages as successful 'ventures'; and the aim of the merchant is to turn over his capital as rapidly as possible. Industrial capital, and all the developments of machinery and organisation which it has rendered possible, may for convenience be classed as a department of commercial capital and as belonging to monied men. There is also the capital of those who do not use their wealth themselves, but lend it to other people in return for the promise to pay a regular income. All these forms of capital, and different social groupings have arisen which would not have been possible unless capital had come into play in these various ways. There are of course forms of social organisation which are appropriate to conditions in which capital does not exist at all; the formation of capital implies the existence of money economy. In countries and in circumstances where natural economy prevails, capital is unknown; but this helps us to notice what is on the whole the characteristic feature of capital; it is the factor which makes for progress. It is of supreme importance in all progressive societies; by the gradual introduction of capital in one or other department of economic life communities have, for good or for evil, been drawn out of contentment with a stationary state and led to enter on a path

of material progress. In the study of early institutions it is of great interest to notice the precise points at which capital effected an entrance and undermined the social arrangements which were based on natural economy. In more advanced communities the amount of capital available and the methods in which it is used, are limiting conditions which control the development of social institutions. The fact that capital has been the main instrument in material progress, enables us to distinguish its beneficial side clearly, from the incidental evils which have arisen in connection with its growth. Capital has enormously increased the power of man over nature; it has enabled him to wring far more from the soil, to introduce extraordinary aids in the manufacture of natural products for human use, and to provide the most wonderful facilities for intercommunication. By doing so it has greatly developed the wealth of communities and their opportunities of using that wealth for encouraging cultured human life; but at every stage of material progress there has been social hardship. The introduction of motors has been prejudicial to grooms and coachmen; and numberless illustrations could be given to show that in the march of progress individuals and classes have been sacrificed. This does not prove that progress is necessarily a bad thing, or that it should have been held back; but it does give us cause to consider, the cost and sacrifice, through which every stage in progress has been attained. It is thus that every age has had its own social problem, in the effort to reconcile the progress of the community with the fair treatment of individuals."—W. Cunningham, *Progress of capitalism in England*, pp. 19-22.—See also SOCIALISM.

In antiquity.—Greece.—Rome.—St. Thomas Aquinas on usury.—Greece is generally mentioned as the classic example of a civilisation based on slavery, chiefly on the strength of Aristotle's argument that some are born to rule and others to be ruled. But he qualifies the theory, admits that there is a contrary one, to which he allows some weight. The Greeks therefore contemplated the possibility of a society without slavery, and as a matter of fact there were in Greece other classes of workers employed in money-making concerns. The father of Isocrates, the famous Athenian orator, moralist, and teacher, was a citizen of moderate standing, but he acquired sufficient wealth to give his sons the most expensive education . . . by the business of making musical instruments in which he employed a number of workmen. The word used both by Dionysius Halicarnassus, and in the biography attributed to Plutarch . . . signified persons serving in a free and honourable capacity as contrasted with . . . either slaves or serfs. . . . The father of Isocrates was in fact a rich manufacturer. . . . Aristotle's own analysis of economic principles and practice recognises hired labour . . . as one of the means of acquiring wealth, co-ordinate with commerce; and shows that capitalist finance, trade, and production were all highly developed in Greece. The plays of Aristophanes contain much indirect evidence to the same effect. The regular rate of interest in money loans was 12 per cent., but on money put into commercial enterprises it was from 20 to 30 per cent., no doubt because of the greater risk. The attacks of philosophers and poets on money-making and business does not mean that they were not carried on, but just the contrary. In the Roman republic capitalist enterprise became still more developed and on a far larger scale. The chief capitalists were the great landowners, who kept their own merchant fleets and exported their own produce. They were

'from ancient times simultaneously traders and capitalists, and combined in their hands lending on security, trafficking on a great scale, the undertaking of contracts, and the executing of works for the State' (Mommsen). The urban industries were carried on either by slaves for their owners or 'by freedmen, in whose case the master not only frequently furnished the capital, but also regularly stipulated for a share, often the half, of the profits' (Mommsen). This form of capitalist production was found more profitable than the employment of slaves, no doubt because the free men worked much harder; and it consequently developed so rapidly that manumission was taxed in 357 B. C. and the political rights of freedmen were curtailed in 304 B. C. The rate of interest on money lent was limited to 10 per cent. by the law of the Twelve Tables (450 B. C.), and later reduced to 5 per cent.; eventually (342 B. C.) interest was forbidden altogether, as in the Middle Ages, and with no more effect. Gradually Roman society became more and more immersed in the acquisition of wealth until it was fairly given up to money-making. 'The spirit of the capitalist,' writes Mommsen, 'now (about 200 B. C.) penetrated and pervaded all aspects and stations of life. The preservation and increase of wealth positively formed a part of public and private morality.' Cato, who had a reputation for austerity, laid it down in the instructions he composed for his son that 'a man must augment his substance, and he is deserving of praise and full of a divine spirit whose account books at his death show that he has gained more than he inherited.' The whole plutological apparatus was developed—banking, investment, partnership, joint stock companies, and even trusts. The chief sources of wealth were trading, sheep farming, stock raising, wine, oil, and corn growing, but the last mentioned decayed under the system of importing corn at very low prices, encouraged by the State to keep the populace in good humour. Manufactures were much less developed, but were still on a considerable scale and highly lucrative. The great aim was to become rich through the labour of others; work was thought discreditable. Surely this is the essence of Capitalism. It is not surprising that Marx says of Mommsen, who had dissected the economic life of Rome with equal learning and acumen, that he 'commits blunder after blunder.' Poor Mommsen! He actually had the audacity to say things which did not suit Marx's book, so he must be put in his place with a wave of the hand, for Marx discreetly refrains from specifying. But the spectacle of Marx correcting Mommsen in Roman history is delightful. [See MONEY AND BANKING: Rome.] . . . Let us pass on to the Middle Ages with which detailed comparisons are now frequently made to the great disadvantage of the present. We are constantly told that the origin of Capitalism dates from the sixteenth century. This date is given by Marx and repeated with that uncritical docility which is one of the most striking features of latter-day enlightenment. But what was new in the sixteenth century? It was not private ownership, or money-making without work, or the investment of capital in commerce and industry, or production for profit, or the employment of hired labour, for all these existed centuries before. On a comparatively small scale, it is true; but population and all activities were on a comparatively small scale then, and we are speaking of origins. Scale does not affect the essential character of processes; it only conditions their effects. A guildsman none the less employed hired workmen for wages and got the 'surplus value' or their work out of them because they

were few. Goods were none the less produced for sale and profit because the market was limited. What else were the people doing, who attended the fairs and markets that played such an important part in medieval economic life, but seeking to sell at the highest and buy at the lowest price? What else were the merchants and traders doing, who bought to sell again, but carrying out the Marxian formula M—C—M and making a profit thereby? What else was the pure capitalist doing, who invested in commercial and industrial enterprise as a sleeping partner, but seeking to gain an income without work? It will perhaps be objected that there were no such capitalists before the sixteenth or at least the fifteenth century. But that belief rests on inadequate research. If there were no other evidence economic discussion in the thirteenth century is alone quite sufficient. Like all other abstract studies, economic theory was at that time a branch of theology, but it was handled none the less—perhaps all the more—with extreme ability. The schoolmen discussed private property, communism, usury, investment, interest, and prices with an acumen which has never been surpassed. The master mind was St. Thomas Aquinas, who for comprehensive range of thought, logical power, and balanced judgment can be matched only by Aristotle. In addition to the *Summa Theologica* he wrote a special treatise on 'Usury' in which he discusses the investment of capital in the clearest manner. He distinguishes it from mere money lending, which he condemns, and justifies the expectation of profit from capital invested in commercial or industrial enterprise on the ground that he is risking his own property in the venture. . . . The case of the money capitalist has never been more clearly stated, and Aquinas died in 1274. But he went much further. He recognised other kinds of capital besides money, and argued that profit derived from gainful investment was not *numisma ex numismate* . . . but the product of the investor's own property lawfully acquired. After this it is perhaps unnecessary to prove the existence of the other attributes of Capitalism in the same period, but something must be said about the hired workman and production for use, not profit, under the guilds; for the facts are constantly misrepresented by one-sided statements. No doubt the original organisation of the guilds contemplated the step from journeyman to master as a regular thing, but the masters soon began to depart from it. Even in the twelfth century the journeymen already appeared as a class; they began to form their own associations in opposition to the masters and to go on strike for better conditions. These, and not the guilds, were the precursors of trade unions, and the survival of the word 'chapel' proves the connexion. The guilds became steadily more and more exclusive; entrance was made easy for relatives, but difficult for ordinary workmen. The 'masterpiece' was invented for that purpose. At the same time the practice arose and grew of the masters retiring from the work-shop and contenting themselves with supervision. In the small handicrafts the necessary outfit represented little capital, but other industries required a considerable outlay on plant and were always capitalistic. The theory that use, not profit, was the motive of production means presumably that things were made to order, not for the open market. So they are now, and we have recently had a striking example in the orders for motor cars for future delivery. Many industries are indeed choked with orders long in advance of production. Making to customers' orders may have been more prevalent than speculative production in the Middle Ages, but it is

evident from the practice of hawking goods, such as boots, in the streets, and from markets and fairs that the latter was carried on extensively also; and the supposed absence of profit-seeking is quite incompatible with the innumerable regulations, usually abortive, against fraudulent dealing and the attempts to suppress competition."—A. Shadwell, *Capitalism* (*Edinburgh Review*, July, 1920, pp. 79-83).

12th and 13th centuries.—Early beginnings of capitalism in France.—"As early as the twelfth century, perhaps before, merchants in France traded beyond their own boundaries, sought protection, united in corporations. Thus we read that Philippe II (Augustus) gave large privileges to the principal merchants (*commerçants*) united in corporations or *hanse*. In 1192 he regulated the commerce in wine and conferred on the merchants of Paris the sole right to sell the wines brought by water. In 1200, Pierre de Courtenai, comte d'Auxerre, contested with the bourgeois of Paris the right to go to Auxerre to discharge their cargoes of salt. Philippe compelled him to recognize by solemn charter that he had committed an abuse of power. In 1204, the king renewed the monopoly of the *hanse*, already conceded by Louis VII. In 1214, he gave it a new port on the Seine (at the *quai d'École*). Finally in 1220 he ceded to them the right of public crying in Paris, until then leased for the profit of royalty. The *hanse* had the privilege of naming and dismissing their criers, of fixing tariffs, and verifying weights and measures. It obtained even the 'low justice,' that is to say the right to pass judgment on infractions of its privileges, and offences committed by its members, short of theft, personal injury, or murder. The difficulty for the king was to conciliate the monopoly of the merchants with the interests of other ship owners (*marchands d'eau*) on the Seine. Thus to the merchants of the Yonne he gave the right of trading above Paris, as far as Villeneuve-St. Georges, and below it as far as Argenteuil, beyond these points they had to associate themselves with a merchant of Paris. The Norman merchants made formal agreements with the Parisians. The merchants of Rouen could sell their salt in the port of Paris, on condition of using one of the measures patented by the *hanse*."—E. Lavisse, *Histoire de France*, v. 3, pp. 223-224.

12th to 16th centuries.—Capitalism in Italian cities.—Nobles in commerce.—Prosperity of German towns.—Official speculation.—Medieval "banking houses."—Influence of Crusaders.—Money lending in England and on continent.—Influence of slave trade.—"The rise of the great mercantile power of the Italian cities clearly indicates one origin—the entrance of members of the landed aristocracy into city life and burgher occupations. With the growth of more settled order in the country, and of a softer, more luxurious habit of life, some of the landed nobility came to settle in the cities, bringing with them their rents and buying more city lands. Especially the younger branches of the nobility, no longer wholly occupied with war, came into town life. This merging of the landed nobility with city life was earlier and freer in the Italian and Flemish states than in France or Germany, and the larger quantity of money thus brought into the cities by the 'monetisation' of the rents of their estates contributed not a little to the earlier development of large commercial undertakings by Italian and Flemish merchant-houses. In England also from the thirteenth century the lower nobles began to mix more easily with burgher life, and 'the younger sons of the country knight sought wife, occupation, and estate

in the towns.' 'A large proportion of the London apprentices were drawn from the houses of rural gentry' in the time of Elizabeth, the cleavage between the landed and the moneyed interests not having yet begun to display itself. So, too, in Germany the early commercial prosperity of such towns as Augsburg, Nürnberg, Basel, and Köln was fed from a similar source. Unfortunately, the history of Germany in the later Middle Ages tended more and more to estrange the landed nobility from the peaceful life and pursuits of towns, a fact which greatly contributed to retard the commercial and industrial development of that country. While many of the great business men of the Middle Ages in Italy, Flanders, Germany thus sprang from the landed aristocracy, possessing agricultural rents, tolls, and fines as their commercial nest-egg, the smaller owners of city-grounds, the original burgher-families, played an equally important part in cases where the town-lands were not closely held by noble or by church. These original settlers, small farmers at the start, extending their holdings, often encroaching on or dividing by agreement common lands, formed strong local oligarchies, sucking the rising land values to form the capital which they afterwards employed in commerce. To these nobles or small land-holders who passed into commerce with accumulations directly derived from ground-rents, must be added the officials who, under the feudal system, were quartered upon the public resources in lucrative offices of state, or were entrusted with the collection and farming of taxes and tolls. Not only were the salaries of chancellors, marshals, and other high officers extremely large, but all officials connected with the raising and expenditure of public moneys had opportunities for speculation which were freely exercised. The ruling families in the cities could thus add to their private ground-rents a share of the city funds. So large shares of the original accumulations of royal and papal treasuries, and of the rents and endowments of monasteries and cities passed into the hands of the business men, who were agents for these great public sources of income. The management of the estates and the finances of the private land-owners, lay and spiritual, was largely entrusted to a class of business officials, who, as rent collectors, stewards, bailiffs, reeves, intendants, came to share the riches of the landlords. But it must be remembered that in whatever form incomes came to these public or private officers and agents, as salaries, fees, profit, or speculation, land-rents were the almost exclusive origin. Given a class of business-men with such sources of accumulation in their hands, it is not difficult to perceive the chief profitable use to which they could put this 'capital.' The most important branch of primitive capitalism is 'usury' or 'money-lending,' and the part this played in converting feudal into burgher wealth was noteworthy. The great spiritual landlords were driven to borrowing money in order to forward to Rome the increasing monetary contributions which the 'age of faith' called forth; the temporal lords, embarrassed by the growing expenses of war and of building (the two chief uses of money), were drawn more and more into debt to the 'banking-houses' in Italy, Flanders, and Germany. The Crusades form a chief landmark in this growing power of the new business class, compelling the Crusaders to borrow for their expenses of equipment and travel, giving increased power to their stewards and agents, and bringing back a new influx of luxurious habits of life from the East which led them into further extravagances. In Italy and elsewhere increasing quantities of land

were thus alienated from their aristocratic owners, forfeited for debt. When the period of the Renaissance brought the fuller influence of the East to bear upon 'barbarous' Europe, and cities began to assume an air of luxury and to exercise influence as 'social centres,' the country nobility and gentry wishing to enter this new life, found themselves short of money and compelled to borrow from the rich burghers. Beginning in Italy as early as the thirteenth century, this movement reached Germany in the fifteenth, and England in Elizabeth's reign showed that the 'money-lending' business was so large and profitable as to tempt not only Continental capital but Dutch settlers from Amsterdam and elsewhere to compete with the Jewish and Lombard houses in London. . . . But all these modes by which capital has passed from the ownership of landlords into that of business men furnish an inadequate explanation of the rapid increase of wealth in Western Europe. Without far larger access to monetary treasures as instruments of concentrated accumulation, without larger opportunities of gathering the various material resources for the development of the industrial arts, modern capitalism would have been impossible in its existing dimensions. Western Europe supplied no adequate output of precious metals from the mines: her agricultural population afforded no increase of production in the form of rents large enough to furnish a great stream of accumulating wealth, nor could the productiveness of the industrial arts of the towns yield a rapid growth of profit. The economy of mediæval Europe did not expose a large landless proletarian population to the free exploitation of profit-seeking masters. The labour basis of modern capitalism was lacking. . . . The Italian republics were the first to take this work in hand. The close of the Crusades saw them in virtual control of numerous cities in Syria, Palestine, the Ægean, and the Black Sea. From the beginning of the twelfth century, Genoa, Pisa, and Venice fastened their economic fangs into the towns of Arsuf, Cæsarea, Acre, Sidon, Tyre, etc. The break up of the Eastern empire gave Venice a vast colonial power, not less than three-eighths of that empire falling under her single sway; while her rival, Genoa, also acquired large possessions among the Ionian islands and on the mainland. Asia Minor and the Ægean islands were full of rich natural resources, with large civilised populations inheriting arts of skilled industry as yet unknown to the Western world. The Italian cities did not pretend to colonise in any modern sense this vast empire, but established trading centres in the chief towns and took rich toll of the manufactures. They found in Antioch, Tripolis, Tyre, a flourishing silk industry; cotton in Armenia; glass and pottery in Syria; and considerable mining operations in Phocis and elsewhere. Their mode of exploitation seems to have been an adaptation of the feudal system, by which as overlords they exacted a large portion, usually one-third, of the total produce of the soil, mines, and industry. This form of infeudation, which later on the Spaniards introduced into America under the title of *Encomiendas*, existed long before in these Italian colonies of the Levant. Later on the feudal form dropped off, giving place to the sway of privileged companies wielding a royal or state monopoly. The real significance of this early 'colonisation' for the rise of modern capitalism was that it afforded the first opportunity of profit on a large scale, by placing at the disposal of the Italian masters a large supply of skilled serf labour. Not only was the property of whole provinces confiscated to the conquerors, but the condition of large masses of

the inhabitants was, from old usage, one of virtual slavery, 'all rights and possessions in men, women, and children' passing to the new feudal superiors. The Italian conquerors found also a most profitable inheritance in the slave-trade, which Byzantines and Arabs had carried on from ancient times. This slave-trade they greatly extended by means of a premium system, bringing in great numbers of captive Mussulmans, so that, for example, the increase of population in Crete alone under their rule was from 50,000 to 102,725. Thus early was laid the foundation of the profitable trade which furnished to Western Europe the accumulations of wealth required for the later development of capitalistic methods of production at home. . . . The profits of the European companies embarking in early colonial trade were very large, for slave economy is not in itself and under all circumstances bad. Merivale clearly points out the main condition of its profitable use. * 'When the pressure of population induces the freeman to offer his services, as he does in all old countries, for little more than the natural minimum of wages, those services are very certain to be more productive and less expensive than those of bondsmen. This being the case, it is obvious that the limit of the profitable duration of slavery is attained whenever the population has become so dense that it is cheaper to employ the free labour for hire.' In other words, Western Europe until the nineteenth century did not present the large supply of landless labourers required as one condition of great profitable capitalism. It is for this reason that colonial economy must be regarded as one of the necessary conditions of modern capitalism."—J. A. Hobson, *Evolution of modern capitalism*, pp. 7-13.

13th to 16th centuries.—Development of capitalism in England.—Foreign trade in thirteenth and fourteenth centuries.—English shipping.—Merchant-adventurers.—Growth of industry.—Cloth trade.—"The history of English towns in the thirteenth and fourteenth centuries is to a large extent the story of a struggle against the encroachment of the alien capitalist in internal trade, and especially in trade within the towns themselves. Englishmen of the thirteenth century could not pretend to any considerable part, either in the export of native productions, or in the import of foreign wares. Foreign trade was entirely in the hands of aliens, especially in those of the great Italian houses; but the townsmen were anxious to keep the profits of retail trade entirely in their own hands. The importers from abroad were necessary as wholesale dealers, but there seemed to be no occasion for them to compete in retailing goods. . . . The end of the fourteenth, and the beginning of the fifteenth century marked a further step of progress, as Englishmen had become ambitious of competing with the alien in foreign trade. In the time of Edward III Parliament had been content that English wool should be shipped abroad in foreign bottoms, and that imports should be brought by foreign fleets; but in the subsequent reigns there was a change, and deliberate efforts were made to encourage English shipping at the expense of foreigners. The founding of the Merchant Adventurers marks one stage in the progress; and the rise of great ship-owners, like William Canynge, shows that there were English capitalists who were ready to take advantage of their opportunities. The Venetian galleys ceased to visit England in the early sixteenth century, and the trade was eventually taken up by the Turkey Company. The struggle with German rivals was long and embittered; the Hanseatic League ob-

tained a new status under Edward IV, and it was not till the reign of Elizabeth that they were really ousted from their importance in the carrying trade, and that the foreign trade of England came to be done in English ships. . . . The whole of [the guild] system served admirably for the regulation of industry under suitable conditions, but it made no allowance for growth; and in the fourteenth and fifteenth centuries there appears to have been a rapid growth, especially in connection with the manufacture of cloth for distant markets. . . . The capitalist system in the cloth trade appears to be as old as the incursion or Flemish weavers under Edward III, and it certainly had reached a high stage of development in the sixteenth century, when men like Jack of Winchomb and Stump of Marlborough flourished. These men did not manufacture with reference to a market on the spot, but with reference to the requirements of a distant market, sometimes a market in foreign countries. They had an interest in manufacturing on as large a scale as possible, and turning over their capital rapidly so as to enable them to push their trade and get the command of a larger market. It is obvious that institutions which were built up by small craftsmen, each with his stock in trade, to meet a known market were unsuited to the industry as developed by large capitalists."—W. Cunningham, *Progress of capitalism in England*, pp. 70-71, 75-76, 79.

14th century.—Financiers in Paris.—Capitalism in the provinces.—Way-bills.—Great fairs.—Commercial jurisdiction.—"Under Philip VI, the financiers in Paris were numerous. The Jews, who had been expelled, returned in 1315, but the last persecutions and the coming of the Lombards had done them great injury. The Lombards—the name given to Italians who came from Milan, Genoa, Lucca, Pisa, Florence—people of affairs, great capitalists, shrewd and daring, formed a powerful little group. They contributed to the commercial prosperity of Paris, but their riches excited the covetousness of the kings, and the hatred of the people. Confiscation, banishment, or the gibbet menaced them."—E. Lavisse, *Histoire de France*, v. 4, pp. 23-24.—"Certain families had made large fortunes in industries of luxe, or in great commerce. The money-changers, jewelers, sword-makers, furriers, cloth-merchants, haberdashers were the corporations where most riches were found. The principal merchants formed the powerful society of the *Hanse* of the Water Merchants (*Marchands d'Eau*—spoken of as early as the XII century, when Philip II gave them important privileges). It was from among these great bourgeois merchants that the kings ordinarily chose their officers of finance. . . . A great number of rich Parisians were ennobled by the kings in the first half of the XIV century."—*Ibid.*, v. 4, pp. 24-25.—"Paris, however, was not the only centre of industry and commerce. . . . At Montauban the house of Frères Bonis gives a good idea of the great merchants in a town of France. The eldest brother, Bartholomew Bonis, was a great personage; he was consul at Montauban; he was often at Montpellier, at Avignon, and was seen even at Paris and at Rome; he had his chapel and his chaplain. The house possessed great store houses; a laboratory for pharmacy. The brothers were bankers; lenders of money on securities or on hypothecations; liquidators of successions; collectors of taxes; farmers of ecclesiastical revenues; cloth merchants; haberdashers; commissioners in cloth and shoes; apothecaries; wax candle makers; confectioners; sword makers; hatters; lenders on state funerals. They sold everything from jewels to hair. The sales

were made on account or on credit; accounting being of the most minute character. The greatest precautions were taken to evade depreciation of money. The Bonis possessed in the environs of the town lands, farms and cellars."—*Ibid.*, p. 26.—"It was in the XIV century that one can probably trace the institution of the great *merciers*, great merchants who went from fair to fair to sell all sorts of goods from spices of the Orient to silks of Lyons. At the same period we have examples of way-bills, indicating the conditions of transportation contracts. Towards 1330 terms sales were known. The institution of international fairs was a source of progress. At these fairs was seen the first commercial jurisdictions known in France. . . . At the fairs in Champagne, the merchants, not to lose time in payments, regulated their accounts on the last day, by writing."—*Ibid.*

15th-19th centuries.—Landlord capitalists.—Fifteenth century forge.—Mine owners.—Silesian mines.—Iron and brass works.—Silk and woolen textile manufacturers.—Colonial land capitalists.—"There is nothing in landlordism that is inherently capitalistic, any more than there is in warlike undertakings. The manorial system, as such, does not aim at gain; for a very long period it remained an economic organization for the satisfying of wants, no more and no less. But in the process of time a change set in. The domestic economy of the landlord was narrowed, and, side by side with it, there sprang up an economic order bent on profit, which slowly but surely became capitalistic in its nature. What happened was that the overlord organized the labour at his disposal for the purpose of getting gain. The land was his and he became a corn-grower; the treasures of the earth—its minerals and metals—were his also; he claimed the ownership of woodlands and meadows; and he disposed of the labour of the human beings on his estates. He combined all these factors in production, and the result was varying forms of capitalist undertakings, all of them filled with the spirit of their master-mind, and therefore all of them semi-feudal in their nature. Semi-feudal? I mean that all these undertakings had not yet thrown off the character of enterprises for the production of just so much wealth as would satisfy the wants of the community. One reason for this was their limited scope. They were bounded by the property of the landlord. This has been recognized as a check on the free expansion of capitalist undertakings. Thus, we are told of the Silesian mines at the beginning of the 10th century, 'The landlord owns the iron ore; he mines annually no more than will use up his surplus timber, which he cannot utilize in any other profitable way.' These undertakings were semi-feudal also in the means they chose for their end. The conception still prevailed in them that the power of the state was the almighty influence that was to be looked to for one's interests, whether for the disposal of men or commodities; or an indirect influence which aided in a sale or a bargain—say, the granting of a concession, privilege, or monopoly. This gave birth to an important sub-species of undertaking, partly capitalistic, partly feudal. Influential members of the nobility associated themselves with the moneyed sections of the middle classes, or with impoverished inventors, for the purpose of common gain. The lordship provided the necessary privileges or liberties, the other partner the money or the brains. Partnerships of this sort abounded in scores, both in France and England, throughout the 17th and 18th centuries. But the undertakings of the landlords, and of the nobility and gentry generally,

played a more important rôle in the early capitalist age than has been commonly assumed. Their influence in the development of capitalist undertaking cannot of course be exactly demonstrated, lacking as we do any statistical information on the point. But a general notion of their influence is undoubtedly possible, if we glance at some of the cases of capitalist enterprise in which the nobility took part. Let us begin with capitalist farming, which certainly in its earliest forms was carried on by the landed interests.

"From the 16th to the 18th centuries, England and Germany both have numerous instances. But industry was by no means neglected. Mining was a favourite undertaking in which the nobility engaged. They not merely received the royalties from others; they participated in the industries themselves. As royalty-receivers they do not interest us in this place; what we are concerned with is their activity as undertakers; and it is surprising to find how extended that was. A comprehensive consideration of this strongly marked aspect of capitalist enterprise is undoubtedly a desideratum. Here we can touch on but a few examples. In England, in the 15th century, we have information of the Bishop of Durham's forge at Bedburn, in Weardale. This appears to have been organized on a capitalist basis; certainly the number of employees seems great. In 1616, a courtier entered into an agreement with the pen-makers' company to supply them with wire, which, seemingly, he produced on his estates. Again, in 1627, Lord Dacre received a patent granting him the monopoly of steel production, according to new methods. Or, to take yet another instance. From the 16th century landlords set up tin-works on their estates, the so-called clash mills, for the preparation of the tin from their own mines. In 1690 a number of lords and gentlemen helped in the foundation of the Mine Adventurers' Company. It was the same with the earliest enterprises for coal-mining; many a nobleman was interested in this industry likewise, and the conditions of labour in English, and especially in Scottish, mines in the 18th century smacked of feudalism. If we turn from this country to France, the same phenomenon may be observed. The mines in the province of Nevers, one of the centres of the industry, were owned by the local landed gentry until well into the 18th century. Villemanant was in the hands of the Arnault de Langes; their neighbour, the Seigneur de Bizy, conducted on his estate not only mining operations, but smelting as well. All these establishments passed in the 18th century into the possession of the rich Paris banker Masson.

"In the Franche-Comté likewise there were numerous mines, all owned by the ancient nobility. Of the manufacture of iron the same story may be told. The landowners participated in iron-making. The cases were numerous, and we need only mention two. Seigneur F. E. de Blumenstein erected an ironworks near his castle, in 1715; and the Duc de Choiseul about the same time was manufacturing steel. But it was the coal industry that specially interested the French nobility. Henry II had granted the sole right to exploit coal-mines to François de la Rocque, Seigneur de Roberval; it passed from him to Claude Grizon de Guillien, Seigneur de St. Julien, and another nobleman. At a later date Louis XIV granted a monopoly of 40 years' duration to the Duke of Montauzier for the sole working of all coal-mines in France, excepting only those of Nevers. In the following reign, the Regent issued a similar privilege to a company which included, among others, the names of Jean Gobel and Sieur de Jonquier. But the

nobility possessed not only the right of working mines; the actual work was carried out under their direction. Thus, in Louis XIV's reign, the Duc de Noailles opened a mine in the Duchy of Bourbonville; the Duc d'Aumont another; the Count d'Uzès a third; and the Duc de la Meilleraye a fourth. Instances of this kind, where the nobility obtained monopolies to work coal, either on their own estates or elsewhere, became more and more abundant in the second half of the 18th century. The same tale comes from Germany and Austria. In both these countries the earliest mining undertakings were conducted by the nobility. In a document entitled 'Masters and Establishments on the Imperial Estate of St. Kathrein' (the mercury-mines of Idria) for the period 1520-26, we come across an exceptionally large number of names of noblemen, e. g. Gabriel Count Ortenburg, Bernard von Cles, the Lord Cardinal-Bishop of Trent, to name but three. The lists of the years 1536, 1557, 1550 and 1574 bear the same character. Gradually the names of traders crept in too. But it must be remembered that, often enough, even though no nobleman was mentioned in connection with the undertakings, these were still dominated by the feudal spirit, and the influence of the landlord made itself felt in a thousand ways.

The iron industry in Germany had likewise to thank the nobility for its capitalist spirit. Count Stolberg became famous in the 16th century for his interest in iron-works; Count Wolfgang established the foundry of Koenigshof, made Ilseburg a centre for iron-casting, and erected the first brass-works there. His neighbour, Count Julius von Braunschweig-Lüneburg, was a strong competitor. In the case of another iron-foundry, that of Gitteld, in the Harz Mountains, the income and expenditure accounts from 1573 to 1848 are extant, and from these it is evident how strongly marked was the influence of the nobility here also. The same was true of the iron industry in Styria; and as for the Silesian mines, have they not remained in the hands of the local landowners down to this very day? Finally, let me instance Sweden, where iron-mining was a subsidiary industry of agriculture. The lords of the land employed miners as well as their agricultural labourers on the work. And to-day, when mining and agriculture are independent industries, the old conditions still continue in Danmorra. So much for mining. In the textile trades the influence of the noble families was no less marked. The most competent historian of the woollen industry in England sums up the position there by saying that the great sheep farmers were very often cloth-weavers, using the wool they themselves grew. Silk-making likewise was in their hands. Thus, in 1680, we find 'a grant to Walter, Lord Ashton, of the keeping of the garden, mulberry-trees, and silkworms near St. James in the county of Middlesex.' Again it was the same in France. There also the landowners had spinning-wheels on their estates for wool or silk.

"In the 18th century the Marquis de Caulaincourt erected a factory for muslin and silk veilings; the Marquis de Louvencourt one for linen; the Duchesse de Choiseul-Gouffier a cotton-spinning establishment, and so forth. Indeed, the number of noblemen engaged in the textile industry in France in the 18th century was very large indeed. Bohemia serves as an excellent instance of the influence of the aristocracy on industrial development in the 18th century. Fired by the example of Duke Josef Kinsky, a number of them established factories on their estates. By 1762 Kinsky was able to report to the Empress the 'joyful news' that many a nobleman in Bohemia,

including among others Count Waldstein, Prince Lobkowitz and Earl Bolza, was inclined to aid the growth of manufactures on his lands. 'But the majority of these nobles' establishments,' such was the view of a man of the people, 'lacked the necessary energy and vitality. Things changed, however, with the appearance of John Josef Leit-emberger (1730-1802), the son of a small Bohemian master dyer.' Another industry much favoured by the nobility and gentry was glass-making, probably because it provided such excellent opportunities for the utilization of the abundant supplies of timber on the estates. In France the nobility practically held a monopoly of glass-blowing, hence the term *verriers gentilshommes*. Commoners might erect glass factories only by special permission, or they were allowed to participate in the existing establishments. What applied to France held good equally for other countries also. Finally, the manufacture of porcelain, eorn and paper mills, and such industries as gave opportunities for burning peat, must also be mentioned. In a word, there are many points in the economic history of Europe where the landed gentry may be seen contributing to the development of capitalism. We are justified in regarding the landlord, therefore, as a type of an early capitalist undertaker. And our conviction of this can only be strengthened as we remember that capitalism in colonial foundations was for the most part of a feudal nature.

"The Italians in their settlements in the Levant established an economic order modelled on the feudal system. In many cases the change was merely a change of masters; the Turkish landlord was replaced by a 'Frank.' As for the towns, they were expropriated just like the country districts; the Italian conquerors divided the craftsmen among themselves like so many serfs. The whole structure rested on enslaved labour. The Spaniards and Portuguese did exactly the same in their treatment of the American Indians. The newcomers regarded themselves as feudal landlords, with sway over the inhabitants. The Spaniard spoke of *encomiendas* and *repartimientos*; the Portuguese of *Kapitanien* and *Sesmarias*. Labour, at first on a feudal basis, later developed into slavery. The mine-owners and planters who worked their possessions in a capitalist spirit were feudal lords of the old type. The same may be asserted of the earliest undertakers in the Southern States of the American Union. We need only call to mind Lord Delaware, the principal participant in the Virginia Company of London, established in 1606; or Lord Baltimore, the 'founder' of Maryland, whose desire for profits is no longer doubted; or of the eight landowners, among whom we find the Duke of Albemarle, the Earl of Clarendon, Sir William Berkeley and Lord Shaftesbury, who in 1663 took possession of the land between Virginia and Florida—Carolina. All of these founded feudal undertakings based on slave labour, and the semi-feudal character of the capitalist plantations in the 'Negro' States right down to the Civil War bore testimony to the fact. Only after the war did the commercial spirit carry the day over 'the Southern gentlemen'; only then was ended the attempt to found, 'in an environment of farmers and traders, industrialists and free wage-earners, a plantation system of *grands seigneurs* and their petty imitators, based on force and customary dues.'"—W. Som-bart, *Quintessence of capitalism*, pp. 76-83.

16th century.—In England.—Elizabethan capitalism.—Turning-point in economic history.—"The beginning of the reign of Elizabeth, when Burghley came into power, marks a great turning point in the economic history of England; since

this was the beginning of an endeavour to treat the whole realm as a unit for economic purposes and to organise and stimulate the economic activities of the nation. . . . National organisation may be contrasted on the economic side with the institutions which preceded it. . . . Everywhere the main responsibility for the economic life of the country lay in the hands of private capitalists; and the problem of any government, which desire to devise a system for the whole realm, was that of controlling and directing private capitalists. It is on this account that we may feel in the Elizabethan era that we are at last in sight of modern habits of thought and modern problems; the age of invention gave us immensely increased power over the mechanical forces, but it did not introduce much that was wholly new in regard to personal relationships. The scale on which business was conducted in Elizabethan times was different from that with which we are familiar, it was mostly in the hands of quite small men. The wealthy capitalist was exceptional; the combination of many industrial capitalists into one great association with a joint stock was only beginning. But despite these differences the practical problems of extending the market, and the disputes between capital and labour, were similar to those which have recently taken such gigantic proportions."—W. Cunningham, *Progress of capitalism in England*, p. 82.

16th-18th centuries.—Agriculture in English capitalism.—"The Elizabethan period was a time of revival of trade and industry in many ways, and this . . . reacted on agriculture. There were facilities for export of which Burghley was anxious that the realm should take advantage; but even more striking is the increase of internal communication and the regulation of a corn trade within the realm. Towns in their earlier days had obtained their main supplies from their own fields, but this was no longer possible for London at any rate; and the demand of London ramified for a considerable distance. Farnham became a local centre where corn was sold, which ultimately found its way to the London market; and the building of corn exchanges and new market halls in such towns as Shrewsbury shows that the business was at least being conducted on a larger scale. The regulations, which were made by the Council for the clerks of the market for corn hodgers, and other persons engaged in the trade, show how widely it was diffused; and it is probably true to say that in England generally agriculture passed, in Elizabeth's time, from being an occupation which was mainly pursued for the sake of subsistence and became a trade which was carried on by capitalists who looked for their profit to prices in the market. Dymock, an agricultural expert of the seventeenth century, looked back to the time of Elizabeth as the beginning of improved husbandry; and the capitalists, who farmed land in severalty apart from the common custom, were not only able to do better than their neighbours with their corn growing and their stock, but they were also able to introduce any new crops that seemed likely to answer well. Intercourse with the Low Countries led to the adoption of many improvements from Flanders. Experiments were made in root crops; though clover and artificial grasses were strongly recommended, they did not come into general use till a much later period. The process of improvement which had been noticeable in the sixteenth and seventeenth centuries was carried on with great enthusiasm in the eighteenth, by Townsend and Jethro Tull. Bakewell improved the breeds of cattle; and more attention was given to the rotation of crops and the cultivation of the special

varieties which were suitable to each soil. King George III, the Duke of Bedford, and Mr. Coke of Holkham, were all great enthusiasts in regard to practical farming and set an example which found many imitators among the members of the Royal Agricultural Society. All these steps were taken by men who had capital to invest, and none of them were possible so long as the customary tillage and customary neglect of the common waste were allowed to go on. Arthur Young and the agricultural writers of the times felt strongly that common fields and common custom were a bar to improvement of any kind, and that no real advance in agriculture could be expected until there was a general enclosure. There can be no doubt whatever that, through these successive changes, an extraordinary economic gain has come about, and that infinitely more is made of the landed resources of the country than was the case at the time of the Norman Conquest. This is true both as regards the production of corn and the feeding of sheep or of cattle; through the exertions of these generations of improvers there has been an enormous increase of national wealth. This plain fact is sometimes ignored or forgotten by those who look at the story from the other side, and lay stress on the incidental loss which has accompanied these changes. That incidental loss has been a real thing; it is well that we should face it and see clearly the price we have paid for these economic improvements; we shall then be in a position to estimate whether we have paid too dearly for them or not. . . . In many parts of the country in the eighteenth century, changes of occupation of a less striking character were very frequent. The progress of enclosure was forced on from a desire to increase the corn supply of the country and corn growing. The small farmers were for the most part occupied, so far as the markets were concerned, in dairy farming and stock raising, though they might do a little subsistence farming for themselves. The tendency was for corn growing to be developed, and those who had maintained themselves as small farmers in the old days had neither the capital nor the skill to adapt themselves to the new conditions except by being merged in the ranks of the labourers. This was the most serious of all the social changes; it seems to have taken place in connection with enclosing as the line between the capitalist farmer and the labourer who worked for wages was drawn more definitely than before, and the rural labourer was not only deprived of independence as his own master, but also of the opportunities which he had had for rising in the world. Just because the introduction of capitalism in land management was so gradual and so long continued, it is specially instructive. The introduction of new machinery and the organisation and the re-organisation of textile or other industries proceed very rapidly and almost by a series of crises. The gain to the nation and to the capitalist, by the introduction of machinery, is more obvious than it was in the case of enclosing, while the loss can be represented as merely transitory and something that is soon defrayed by the expansion of business. But the gain from the intervention of capital in the management of land was less obvious and the loss of status to certain classes of the community has been permanent. It is not wise to try to stop the march of progress, but it is important that we should see as clearly as possible what the march of progress costs."—*Ibid.*, pp. 48-51, 50-60.

16th-18th centuries.—State capitalism.—"It is possible to conceive the modern state as a huge capitalist undertaking, seeing that its aim is more

and more to get gold and money. Such indeed has been the case ever since the discoveries and conquests of the Spaniards cultivated in ruling princes the taste for a share of the booty, and when India also came within their horizon, that taste became even more marked. But even when conquering expeditions in the Dorado were not uppermost in their minds, statesmen were constantly occupied with the problem of amassing gold. How to get money?—that was the alpha and omega of their thoughts. Sometimes it was for the expenses of the state; sometimes for economic progress. But the problem was the same. Recall Colbert's reason for the policy of Mercantilism. 'I believe,' he said, 'that most people would be agreed that the quantity of gold in a state alone determines the degree of its greatness and power.' Put 'profits' instead of 'gold' in this dictum, and you have the first principle of every capitalist undertaking. But in calling the civil servant an early type of the capitalist undertaker, I am thinking neither of the goal which mercantilism set itself nor of the policy which modern states pursued to reach it. . . . My object here is to call attention to the fact that ruling princes and their servants, the state officials, were among those who kept alive the spirit of capitalist undertaking; and that both played a rôle of no small significance among the earliest representatives of the modern economic outlook. What a reliable authority says of Gustavus Vasa [sixteenth century] holds good for all the important princes of the *ancien régime*. 'He was the chief undertaker of his nation. Not only did he know how to discover and utilize for the crown the mineral wealth of Sweden, but by commercial treaties and protective duties, and last but not least, by engaging himself in foreign trade on a large scale, he acted as an example to his merchants. Everything was due to his initiative.' It would require a whole treatise were we to attempt to chronicle all those activities of monarchs in modern times that stamped them as founders of capitalist industries. There is the less need to do so, seeing that the facts are pretty generally known. The mere reference to them must therefore suffice. But what I will do is to consider the peculiar importance of these state enterprises, and demonstrate the special qualities of civil servants which mark them as capitalist undertakers. First and foremost, state enterprises appeared as activities on a large scale where before there had been no activities whatsoever. Often enough it was the initiative of the monarch himself that was responsible for the undertakings. Consequently, in many cases it may be said that the monarch was the fount wherein the first beginnings of the undertaking spirit lay hidden.

"A German mercantilist writer points out what is appropriate for private initiative and what for public; and the opinion may be regarded as classical. To improve manufactures, says this worthy, you need cleverness, thought, and money; and concludes, 'These things are for the state; the merchant continues in his work just as he learned it and is accustomed to it. The general advantage of his native land is no concern of his.' These simple words speak volumes. True, they were written down in a Germany which was as yet in a backward condition. They hold good nevertheless (possibly in a weaker form) for all cases of early capitalist economic activities. How, for instance, would mining have fared, in more places than one, if the ruling prince had not stepped in at the right moment and dragged the disused carts out of the mire? You need only refer to the history of the mining industry in what is to-day the Ruhr district. 'With a system of mining that was without

plan (and such it had been for centuries, until about the middle of the 18th), it was hardly possible to expect a far-sighted policy. In the mining regulations issued in the Mark of Cleves in 1766, the state took over the technical and commercial management of the concern. The guardians brought up the neglected child.' It was the same in a thousand other cases. Now while the undertakings of the state were of great importance for the development of capitalism, their quality was of no less significance. State enterprises were always on a large scale; there was something big about them. In an age when the accumulation of capital was not extensive, the state was able to devote considerable sums of money to its undertakings, and often enough the state was the only agency with sufficient means to commence an undertaking. As illustrations we need only recall the transport enterprises both by land and sea, which even into the 19th century were made possible because the state was behind them. Similarly, the state had at its disposal the necessary organization for these undertakings. To appreciate the full value of the civil service let us call to mind that earlier ages lacked trained intelligence for administrative work of all sorts. The advantage in this respect which the state possessed over the private undertaker goes without saying. The state had the administrative machine ready; the private undertaker had first to provide it. Nor is this all. State undertakings had a large prospectiveness about them. Who so well as a reigning monarch could make plans for the future? And so, the characteristic marks of all capitalist undertaking, that your schemes should be far-sighted and your energy continuously active, both sprang from the very nature of state enterprise. In the same way, for creative ideas, extensive knowledge, and scientific training, who so well situated as the ruler of the state? Where else could you find so much capacity as in the council chamber? In those days, gifted citizens placed their capabilities at the disposal of the state. Of course, a good many princes were nonentities. But I am thinking rather of the competent ones, and of them and of their equally competent ministers, history has a fairly long list. Was any one more capable as a capitalist undertaker, in the France of those days [of the eighteenth century], than Colbert? And in the Prussia of Frederick the Great, who was more distinguished in the same way than Freiherr von Heinitz, the founder of the state's mining works in Upper Silesia? In the process of time, state undertakings began to manifest certain weaknesses—slow and cautious movement, red-tape, and so on. But these things were not yet in the earliest stages of capitalist development. On the contrary, in those days the civil servant represented a most important type of subsidiary capitalist undertaker, who by his special gifts made a lasting impression on the history of capitalism."—W. Sombart, *Quintessence of capitalism*, pp. 83-87.

17th-18th centuries.—Evolutionary survey.—"The exuberance of capitalism which reached its height in the second half of the sixteenth century was not maintained. Even as the regulative spirit characteristic of the urban economy followed upon the freedom of the twelfth century, so mercantilism imposed itself upon commerce and industry in the seventeenth and eighteenth centuries. By protective duties and bounties on exportation, by subsidies of all sorts to manufactures and national navigation, by the acquiring of transmarine colonies, by the creation of privileged commercial companies, by the inspection of manufacturing processes, by the perfecting of means of transportation

and the suppression of interior custom-houses, every state strives to increase its means of production, to close its market to its competitors, and to make the balance of trade incline in its favor. Doubtless the idea that 'liberty is the soul of commerce' does not wholly disappear, but the endeavor is to regulate that liberty henceforward in conformity to the interest of the public weal. It is put under the control of intendants, of consuls, of chambers of commerce. We are entering into the period of national economy. This was destined to last, as is familiar, until the moment when, in England at the end of the eighteenth century, on the Continent in the first years of the nineteenth, the invention of machinery and the application of steam to manufacturing completely disorganized the conditions of economic activity. The phenomena of the sixteenth century are reproduced, but with tenfold intensity. Merchants accustomed to the routine of mercantilism and to state protection are pushed aside. We do not see them pushing forward into the career which opens itself before them, unless as lenders of money. In their turn, and as we have seen it at each great crisis of economic history, they retire from business and transform themselves into an aristocracy. Of the powerful houses which are established on all hands and which give the impetus to the modern industries of metallurgy, of the spinning and weaving of wool, linen, and cotton, hardly one is connected with the establishments existing before the end of the eighteenth century. Once again, it is new men, enterprising spirits, and sturdy characters which profit by the circumstances. At most, the old capitalists, transformed into landed proprietors, play still an active rôle in the exploitation of the mines, because of the necessary dependence of that industry upon the possessors of the soil, but it can be safely affirmed that those who have presided over the gigantic progress of international economy, of the exuberant activity which now affects the whole world, were, as at the time of the Renaissance, parvenus, self-made men. As at the time of the Renaissance, again, their belief is in individualism and liberalism alone. Breaking with the traditions of the old régime, they take for their motto *'laissez faire laissez passer.'* They carry the consequences of the principle to an extreme. Unrestrained competition sets them to struggling with each other and soon arouses resistance in the form of socialism, among the proletariat that they are exploiting. And at the same time that that resistance arises to confront capital, the latter, itself suffering from the abuses of that freedom which had enabled it to rise, compels itself to discipline its affairs. Cartels [see CARTELS], trusts, syndicates of producers, are organized, while states, perceiving that it is impossible to leave employers and employees longer to contend in anarchy, elaborate a social legislation; and international regulations, transcending the frontiers of the various countries, begin to be applied to working men. . . . It may be stated . . . that every class of capitalists is at the beginning animated by a clearly progressive and innovating spirit but becomes conservative as its activities become regulated. To convince one's self of this truth it is sufficient to recall that the merchants of the eleventh and twelfth centuries are the ancestors of the bourgeoisie and the creators of the first urban institutions; that the business men of the Renaissance struggled as energetically as the humanists against the social traditions of the Middle Ages; and finally, that those of the nineteenth century have been among the most ardent upholders of liberalism. This would suffice to prove to us, if we did not know it otherwise, that all these have at

the beginning been nothing else than parvenus brought into action by the transformations of society, embarrassed neither by custom nor by routine, having nothing to lose and therefore the bolder in their race toward profit. But soon the primitive energy relaxes. The descendants of the new rich wish to preserve the situation which they have acquired, provided public authority will guarantee it to them, even at the price of a troublesome surveillance; they do not hesitate to place their influence at its service, and wait for the moment when, pushed aside by new men, they shall demand of the state that it recognize officially the rank to which they have raised their families, shall on their entrance into the nobility become a legal class and no longer a social group, and shall consider it beneath them to carry on that commerce which in the beginning made their fortunes."—H. Pirenne, *Stages in the social history of capitalism* (*American Historical Review*, Apr., 1914, pp. 513-515).—See also TRUSTS.

17th-18th centuries.—Foreign trade of France.—Spanish-American trade.—Capitalism in Holland.—Franco-Dutch trade.—England and Spain.—Assiento treaty.—England and Portugal.—Influence of American mines.—"France in the 17th century was filled with silver and gold by reason of its foreign trade. We have no reliable statistics for the extent of this trade, but indications are available of its immensity. Between 1716 and 1720, the period, be it noted, of the greatest bubbles and swindles, France exported 30 million francs' worth of goods more than it imported. The lion's share of available cash was due to Spanish-American trade, and the surplus from this quarter was utilized in paying debts to other countries. When the French East India Company was criticized for taking money out of the land, Seignelay defended its action by informing the King that the Indian imports were paid for in Spanish silver. Many ships there were that carried more than 300 million francs on board. Tiepolo, the Venetian ambassador, bears testimony to the great profitability of the Spanish-American trade, and English writers calculated that from this source alone France obtained some hundreds of millions, and so would be enabled to continue the war. Indeed, the weightiest criticism of the Whigs by the Tories was that they had done nothing to undermine that trade. Another source whence money flowed into France was Holland. In the 17th century Holland simply abounded in ready cash. In 1684, for instance, money was so plentiful that the city of Amsterdam reduced the rate of interest on its loans from 3½ to 3 per cent. For the large supplies of cash Holland was indebted to the French refugees, and, doubtless, also to the Jews. But the trade with Spain, as all authorities agree, must have produced by far the largest portion. From Holland France drew a good deal of money all through the period in which Franco-Dutch trade continued. In 1658 French exports to Holland were valued at 72 million francs, of which 52 millions were for manufactured articles. These goods were paid for mostly in cash; indeed, it was calculated that in those times France received from Holland more than 30 million gulden annually. But the sums of money that flowed into England towards the end of the 17th and the beginning of the 18th centuries must have been larger still. They came from three sources. The French immigrants brought their fortunes with them, and if those who settled in Holland were rich, those who came here [to England] were richer. Then there were the Jews, who were likewise wealthy. Some had come from Portugal, in the suite of Catherine of

Braganza; others from Holland with William of Orange. Thirdly, English export trade was so far above the import trade that in the first decades of the 18th century it yielded an annual surplus of between two and three millions. Four tributaries fed this stream. The Dutch trade was one. The second was the trade with Spain. In the 17th century Englishmen had managed to obtain a number of commercial privileges in Spain; and in the Assiento Treaty of the Utrecht settlement England reserved the right of sending to Spanish America a ship of 500 tons (later 650 tons) of English goods to compete freely at the fairs of Porto Bello and Vera Cruz. The third channel of commerce was with Portugal. By the middle of the 17th century, when the wave of prosperity commenced in Portugal, England entered into close relations with that country. In 1642 a commercial treaty was signed which gave the English a more favoured position than the Dutch in trading with Portuguese Colonies. Then came Charles II's marriage with Catherine of Braganza; and by the Methuen Treaty, concluded in 1703, no less a sum than 50,000 pounds sterling was said to flow every week from Portugal into England. The figure is probably not too high, for a Portuguese authority is of opinion that in the first year of the treaty England exported goods to Portugal to the value of 13 million crusados (1 crusados equals about two shillings [or, roughly speaking, fifty cents]). Finally there was the stream of commerce with Brazil, whither a large part of the exports from England to Portugal were re-exported. But there was a fair amount of direct trade too, more especially in English woollen goods, which were much favoured by the rich Brazilians. These facts, it seems to me, showing as they do that England and France, when the 17th century ended and the 18th began, were simply flooded with cash, are of very great significance, and should not be overlooked in forming a proper estimate of economic activities in those days. I have already pointed out that reliable contemporary authorities described the period as 'an age of projecting'—quite generally, and apart from the South Sea and the Law bubbles which burst towards the end of it. The evidence we have adduced goes to prove that the contemporary views were correct. Did we not see how much money flowed into France and England? And is the conclusion not justifiable that these vast sums both produced and nourished the speculating fever? We have here standing out with perfect clearness a most important fact in economic history. Increase the available quantity of money in a country and you prepare the ground for a development of the capitalist spirit. Where did all the money come from? The answer to this question takes us a step further. But it has already been given in the course of our considerations. It was American silver and Brazilian gold that fructified the economic life of England and France. Holland gathered the bullion of the New World in its markets. From there it was carried directly (by emigration) and indirectly (by trade) to England and France. Commercial intercourse between these two countries and the source of supply only added to the stores already obtained. This was the case in the 16th century; in the course of the 17th the system became perfected. Spain and Portugal were merely canals through which the precious metals of their colonies were distributed. To obtain some idea of the quantities produced, let me give a few figures, generally accepted as reliable. Silver came from Mexico, Peru, and Bolivia. The rich mines of Guanaxuato and Potosi were first opened about the middle of the 16th century, and the output in-

creased from an average of some 30,067,000 ounces, between 1521 and 1544, to 103,900,000 ounces, between 1545 and 1560. In the 17th century the supply varied between 100,000,000 and 140,000,000 ounces. In that century Brazilian gold was discovered, and the silver age of capitalism ended, to give place to the age of gold. Between 1701 and 1720 Brazil yielded gold to the value of 7½ millions sterling. Here we have the key to the proper appreciation of the economic life of Europe from 1680 to 1720. We may now realize the connection between the expansion of the capitalist spirit and the supply of the precious metals. . . . German commercial enterprise in the 16th century was not unconnected with silver-mining in Schwarz and Joachimstal; the feverish speculation of the 'fifties in the last century may be similarly traced to the Californian gold-mines. . . . Money is the medium through which gold and silver can influence economic activities. We see this in the early capitalist period, that is, in the 15th and 16th centuries, to say nothing of the Italian city states before the 15th century. About their supply of metallic currency we know hardly anything; we can only assume that the precious metals, which made the rise and progress of capitalism possible, they must have obtained from Germany (silver), and from the Byzantine Empire and North Africa (gold). But, when all is said, it is obvious that modern economic activities and the people who participate in them cannot be wholly explained by a reference to the discoveries of gold and silver. These could have had only a limited influence. Nay, more, in order to effect even this influence many other conditions were necessary. And they were operative in Western Europe all through the centuries with which we are concerned. Had they not been in existence, the results of the opening of the gold and silver mines in America might have been very different. Spain and Portugal bear witness to that. On the other hand, even if all the other circumstances necessary for the evolution of the capitalist spirit had been present, without the American supplies of the precious metals the capitalist spirit might have grown into something very different from what it actually is. Just think of it. If the miners on the Cordilleras and in the Brazilian valleys had not chanced upon gold and silver veins—quite by accident too—the modern business man might never have come into existence."—W. Sombart, *Quintessence of capitalism*, pp. 313-318.

17th-18th centuries.—France.—Establishment of factories.—Suppression of corporations.—"One of the most important events in social history of the 18th century is the progress of great industries, if one can so call by that modern term work in factories as opposed to work in ateliers of corporations. The regime of the *métiers* (artisan corporations) had been organized in feudal times. It provided for the needs of local life. The seigneur had his artisans, as he had his court, his judges and his men-at-arms. The commune was a collective seigneur, having its council, its judges and its artisans. The corporation was [collectively] a person who had received a handicraft in fief, on certain conditions ruled by a statute. At the end of the fifteenth century the world tripled, the nations disputed for the enlarged commerce. It became necessary to produce in large quantities and quickly. Then commenced the manufactures, which became so considerable in the time of Colbert. With the manufactures, the great capital came on the scene. In the old *métiers* the capital, always small, belonged to the master. Proprietor and owner of the tools, he possessed all the means

of work, and received all the proceeds. The intervention of capital which furnished the tools and collected the profit was a revolution."—E. Lavisse, *Histoire de la France*, v. 7, pp. 331-332.—"In the middle of the [eighteenth] century, under pressure of the economists, a regime of liberty was commenced in industry. Too hastily Turgot undertook to destroy the corporations. Clugny, his successor, restored the ancient rules, but not in entirety. An edict of 1777 interdicted the corporate organization of work outside of cities and suburbs, and even in that limited zone he restrained the numbers of corporations."—*Ibid.*, v. 9, p. 220.

18th century.—England.—Bank of England.—Use of credit.—"The eighteenth century was marked by the continuance of the scheme of national policy which had been devised at the time of Elizabeth, but it showed some very marked differences. . . . We hear much, in the seventeenth and eighteenth centuries, of the political importance of the monied men and they came to be a much more striking factor than formerly in economic life. The foundation of the Bank of England, and of the numerous Provincial Banks which followed its lead, gave an immense impulse to the forming of capital, . . . enabled the private person to obtain an interest on his money while the money could be still more remuneratively employed in loans to government or to private persons who were in need of capital. By opening up opportunities for obtaining an income, the eighteenth century did a very great deal for the investment of hoards as capital. Still greater prominence came to the owners of capital through the recognition of the power of credit. By means of its credit the government was able to obtain funds to be used for special emergencies. By means of their credit, as the recipients of a large income from government, the Bank of England was able to obtain command of large sums of money, and lend them to those who had the prospects of trading successfully; and hence during the eighteenth century the practice of borrowing money to meet emergencies and of trading on borrowed capital came to be general, not only by merchants and manufacturers, but by agriculturists as well. The question of the direction of this capital into the most profitable channels, so that the country might prosper as much as possible, was the main economic problem of the eighteenth century in England."—W. Cunningham, *Progress of capitalism in England*, pp. 100, 102-103.

18th-19th centuries.—Capital in international finance.—Landgrave of Hesse.—Rothschilds.—Barings.—"The German capitalists were a later growth; even at Frankfort, the cradle of the race, its founder, Mayer Amschel [or Anselm] (1743-1812), only took the Rothschild name in 1780. More than a century earlier the Berliners, the Frankfurters, the Pragers, the Wieners, the Fugers and the Oppenheims had been controlling figures in German finance. The last of these families gave Mayer Amschel those peeps into a realm of gold where he knew that his powers, his ambition, and the courage and industry supporting it, would place him beyond all rivals in the struggle for wealth . . . While hawking his goods at the great fairs in the town of his birth, he showed an expertness in all matters concerned with gold and silver that reached the ears of the Landgrave of Hesse, a prince who swelled his revenues by raising and letting out, at a heavy charge, mercenary troops to the British Government. Those transactions secured Mayer Amschel the chance of becoming the Landgrave's right-hand man and, eventually, his chief adviser. In and after 1785 the

Landgrave's purchases of British stock, always conducted by his agent, brought the first Rothschild into relations with the London money market. His position resembled that in a modern stock-broking firm occupied by an "Authorised Clerk," strictly responsible to his employers but so trusted by them as to have something of a free hand in laying out their capital. The Landgrave combined the title of a prince with the spirit of a pawnbroker, trusted no one even so far as he could see him, seasoned alike his few open-air recreations and the functions of his petty state with a mixture of buying, selling, and bargaining; always on the lookout for a little better percentage, and fearful only lest his neighbour should have a chance which he himself had missed. His court had been turned into a counting-house; the chief duty of his gentlemen-in-waiting was to calculate rates of exchange and to advance their royal master's interests by keeping a sharp outlook for the main chance. The Gentile principal could not but be the teacher as well; the pupil bettered the instruction, and so impressed on his sons the lessons that had been taught him that he lived to see all the five prosperously established at the different places assigned them for the display of the family gift. The eldest, Anselm Mayer, continued to manage the parent business at Frankfort; the second son, Solomon, opened his offices at Vienna; the fourth, James, achieved a purely intellectual distinction, scarcely second to his financial fame, at Paris; the youngest, Charles, conducted the short-lived department of his house at Naples. The third son, Nathan, with whom we are now concerned, concentrated in himself, in their highest form, all the family faculties. Migrating to the British Isles in 1708, he first initiated himself into the mysteries of the cotton trade at Manchester. With the dawn of the 19th century, he went to London and started the great business still flourishing in New Court. Once satisfied as to his son's capacity and prospects, the Frankfort patriarch induced the Landgrave to appoint him his sole agent in London. Shortly afterwards (1806) Nathan Rothschild carried through the first great international transaction, bringing forward the family name as that of the principals, and securing for New Court, as well as for its kindred establishments abroad, the cosmopolitan distinction and influence indicated by the name ever since. During the first decade of the 19th century Denmark had been compelled by her domestic necessities to be a frequent borrower. In 1801 Mayer Amschel had secured her an advance from the Landgrave. Five years later Nathan Rothschild had prospered to such an extent in London that he had no difficulty in obtaining his father's co-operation for supplying the Copenhagen government with a million or so immediately required. This operation is memorable for two reasons: first, as has been said, it brought forward the first of the English Rothschids as a power in the world-finance; secondly, London, already the largest of European money centres, now began to take the place of 18th century Amsterdam, and to become the emporium of the markets of the world. So began the creation of that Rothschild fortune, amounting in a century after Nathan's death to four hundred millions. The chief contributions to that vast capital, made by the ancestor of the English Rothschids, may now be briefly traced. Soon after his arrival here this founder of the London dynasty made a valuable acquaintance in Nicholas Vansittart, a man of Dutch extraction, and a future Chancellor of the Exchequer, with much actual experience of Treasury employments. Through him Rothschild heard

that the East India Company wished to sell a hundred thousand pounds of gold then in its Lead-hall Street cellars. Rothschild not only bought it but a little later conveyed it to the British Commander in Portugal, Sir Arthur Wellesley, the future Duke of Wellington, whose requirements were urgent. Meanwhile the English General had paid his troops from bills which he drew on the Treasury and which were discounted largely but not exclusively by a group of Maltese, Sicilian, and Spanish bankers. It had now become an object with Downing Street to ascertain the whereabouts of all this paper, and to redeem it without the publicity that might cause an inconvenient disturbance of the money market. The Duke's Treasury paper was floating, often in unsuspected corners, over the whole continent. It needed a man of Rothschild's extraordinary gifts first to conduct a thoroughly exhaustive quest and then to take up the bills at the comparatively small outlay of seven hundred thousand pounds. Two years later Wellington's decisive victory over Napoleon gave Rothschild the opportunity of surpassing all his earlier financial strokes. . . . All reports to the contrary notwithstanding, Napoleon had fallen; and Nathan Rothschild, with this priceless knowledge, returned to London [from Ghent] with all the speed that courage and capital could secure. There he took his usual corner in the Royal Exchange (the building with which Jerman had replaced Gresham's structure and which was itself destroyed in 1838). Alarming war news had produced a depression that gradually became a panic; nothing of reassurance or hope was to be gathered from the appearance of Nathan Mayer Rothschild, who alone in the city of London knew the facts. As a consequence every one began to sell Consols, the only Government stock then dealt in, except the lottery with their tickets. As fast as the public sold, Rothschild, through his agents, bought. Gradually the truth began to leak out; the price of the securities rebounded; and Rothschild readily found good customers for the stock bought by him on the falling market. In the course of some hours he thus realised sums the exact total of which has never been published and was perhaps never certainly known. The whole Napoleonic period stimulated Nathan Rothschild to that succession of far-reaching schemes that first won for him the description the 'Napoleon of Finance.' 'Rothschild and I,' the Duke of Wellington is reported, perhaps fabled, to have said, 'both owe something of our success to the gift of knowing what is in progress on the other side of a wall.' Not only England but our chief ally, Prussia, must need—Rothschild foresaw—large supplies before their decisive triumph could follow the escape from Elba in March, 1815. In London, Vansittart, still Chancellor of the Exchequer, was in daily communication with New Court. Berlin had decided that the only thing to do was to send the Finance Minister, Bülow, loan-hunting in London. In this way began the earliest direct relations between the Prussian capital and New Court. A transaction so momentous called for the united action of all the brothers. During the first quarter of the 19th century the official records, digested in Mr. Balla's book, give eighteen million as the amount of Rothschild advances to continental States in the war with France. Reviewing these operations in 1827, Herries, as Chancellor of the Exchequer, estimated at half a million the saving effected by the Rothschilds for England by preventing a fall in the value of public securities; 'the brothers,' said Herries, 'deserve the highest praise for their efforts in the public service. Their consequent profit was se-

cured honestly and openly gained.' . . . 'I trade in pennies and in millions,' is a description of the Rothschild methods closely resembling that given by Gentz, whose account of Nathan's rise includes the smaller miscellaneous transactions that had first engaged him when hovering between the Lancashire cotton capital and the metropolis of the Empire. Before his death on the eve of the Victorian Era, Nathan Rothschild had laid the foundations of the family fame and power with other materials than wealth alone. Fidelity to the paternal tradition of family union in all great enterprises, caution and foresight, a readiness to give financial advice to smaller States even when they had no occasion to be borrowers, and an avoidance of merely sensational strokes whatever the potential profit—such is Gentz's epitome of the secret of New Court success. The family caution showed itself in a general refusal to deal with States considered financially unsound, like Spain and the South American Republics, though it did not prevent Nathan's extensive transactions with the Brazilian Government in 1824. In that year Brazil had applied for a loan to another banking house, but the interest asked was so high as abruptly to end the negotiations. Rothschild then came to the rescue with £2,200,000 at once; and five years later another £800,000 were forthcoming, on the condition that part of it should be reserved for the unpaid interest on the earlier loan. . . . The London house passed entirely to Nathan's firstborn, Lionel, and the two other sons Antony and Mayer. Nothing is more noticeable in the record of this remarkable line than the uniformity with which, in each generation, the family instinct and genius descended from father to son. Nathan's strong brains and illimitable resources had made him a national institution in his adopted country. In 1854 that position was emphasised by a sixteen million loan which the Crimean War forced on the English Government, and which the banking house in St. Swithin's Lane provided. In short, during the greater part of the 19th century, from the Liverpool Government onward to that of Disraeli, the house of Rothschild remained continuously in closer relations with the British Cabinet than those ever occupied by any private business house before or since."—T. H. S. Scott, *House of Rothschild* (*Quarterly Review*, April, 1919, pp. 430-438).

"Although the Barings played a considerable rôle in England, during the middle and latter portion of the eighteenth century. John Baring having represented the city of Exeter for nearly thirty years in Parliament while his son, Sir Francis Baring, was chairman of the East India Company . . . when the great Sultan Tippo was being conquered . . . the real founder of the family fortune was Alexander Baring, second son of Sir Francis." He married "the elder daughter of . . . Senator William Bingham" whose dowry, "estimated at \$5,000,000 was invested in the house of Baring . . . and enabled it to branch out on a huge scale. . . . The firm was able about fifteen or sixteen years later, to loan 40,000,000 francs to the French government at short notice for the war payments, at the time when France was occupied by the allied armies in 1815. It was with reference to this enterprise that . . . Marshal Soult is said to have remarked that there were six great powers in Europe, namely, England, France, Russia, Austria, Prussia and Baring Bros."—Marquise de Fontenoy (*N. Y. Tribune*, April 3, 1906).

19th century.—Capital in empire building.—Cecil Rhodes in South Africa.—Mining as a source of capital.—Struggles between capitalists. —"The lad of seventeen [Cecil John Rhodes] who

was to set his mark on South Africa, and who died there a millionaire and the owner of 300,000 acres of its finest land, came out as an immigrant entitled to a free grant of 50 acres to be paid for in five years. This land he took up, but he had no capital. The allowance he received from his father was a trifling one, and he was destined frequently to feel the pinch of poverty. . . . Under what was called 'Mann's Emigration Scheme,' [his brother] Herbert Rhodes had obtained a grant of 200 acres in the Umkomaas Valley . . . and was experimenting there with cotton. . . . Cecil joined him in an informal partnership, and in a few months they had 100 acres under cultivation. . . . Herbert, who was of a restless disposition, was often away, and Cecil practically 'ran' the plantation."—L. Mitchell, *Life of the Rt. Hon. Cecil John Rhodes, 1853-1902*, pp. 25, 27, 29.—"The discovery of the Diamond Fields opened a new chapter in South African history, in which the eighteen-year-old cotton planter of the Umkomanzi valley was destined to play a principal part. . . . In October 1871 Rhodes left his Natal farm, never to return. His luggage comprised a few digger's tools, some volumes of the classics and a Greek lexicon; heaping these into a Scotch cart drawn by oxen he started on his 400-mile journey to the Diamond Fields. . . . A serious illness, when he was alone in Kimberley, had warned Rhodes that he must not presume on his delicate constitution. . . . To complete his recovery he went off with Herbert some time in 1872 for a long trek into the Transvaal, Frank being left to look after the claims. . . . During that long trek the great love he bore to the country, the people and even the animals of South Africa became rooted in his being. . . . For the immediate present the trek seems to have confirmed him in his cherished design of going to Oxford, 'to help himself in his career,' a career which he always intended to be something more than that of amassing money. Not that he objected to money: on that he was quite frank. He desired it partly to pay for Oxford and for other ambitions, but also because he liked and was amused by the game of winning it. . . . Rhodes then went into partnership with C. D. Rudd, who was to stay out to look after their properties: . . . and began to buy up claims in Old De Beers, which he used to speak of as 'a nice little mine,' and which soon became the mainstay of his fortunes. . . . But he did not keep his last term or take his degree till 1881, when he was twenty-eight, had earned a large fortune for himself and was a rising member of the Cape Parliament."—B. Williams, *Life of the Rt. Hon. Cecil John Rhodes, 1853-1902*, pp. 17, 25, 35-37.—During these years Rhodes had had difficulties and setbacks, but "his mould was that of the great merchant adventurers of an earlier age, who laid the foundations of [the British] dominion beyond the seas."—L. Mitchell, *Life of the Rt. Hon. Cecil John Rhodes, 1853-1902*, p. 60.—He "was one of those who never despaired, because he was long-sighted enough to see remedies for . . . difficulties. Both he and Barnato were convinced that the prosperity of the Fields would not cease with the exhaustion of the 'yellow ground' [which showed signs of giving out]; without any scientific knowledge to guide them, they believed that the blue ground also contained diamonds, and they were confirmed in their instinct by the Cape mineralogist. With regard to the other difficulties, fall of reef, flooding and the haulage of ground from the mines he had one panacea, economy of working by an amalgamation of interests. . . . Barnato saw it as clearly as Rhodes. It could be effected in two ways: by a combination of claim-holders in a mine to work

for objects of common interest, such as pumping out the water or removing blocks of reef; or by an absorption of all claims in a mine or even of the various mines into as few hands as possible. Rhodes took his share in promoting both methods of united action. When the Mining Boards were established, with his partners Rudd and Alderson he tendered in 1874 for the contract to pump out the Kimberley, De Beers and Dutoitspan mines. By cutting the price very fine they got the contract over the head of some formidable rivals. . . . He and Rudd stuck to their Old De Beers mine and rapidly extended their holding in it. . . . They acquired the valuable block known as Baxter's Gully and might once have bought the whole mine for a mere song, some £6000; but after discussing the offer for a whole day they reluctantly decided that they could not afford the capital as well as the licence fees, no doubt one of the occasions missed by Rhodes for 'want of pluck.' . . . And though he did not buy up the mine for £6000 he was gradually working to that end by more expensive methods. By 1880 R. Graham, Dunsmore, Alderson, Stow and English and other less known De Beers claim-holders had joined the Rhodes-Rudd partnership, which on April 1 was floated as a company with the modest capital of £200,000. Some important groups were still outstanding at De Beers, but Rhodes's company already held the chief place. . . . 'Put money in thy purse. . . . Put money in thy purse. . . . Make all the money thou canst': this seems to have been the chief lesson learned by Rhodes after the comparative failure of his first great adventure in politics. . . . During the five years that he had been devoting his energies chiefly to affairs of state in Basutoland and Bechuanaland or at Cape Town, he had not lost sight of his De Beers Mining Company. . . . Since its incorporation in 1880 with a capital of only £200,000 it had prospered exceedingly, largely owing to the vigilance of Rhodes himself, who was secretary of the Company till 1883 and then chairman. . . . By 1885 the De Beers Company was already the chief owner in that mine, and its capital had increased from the original £200,000 to £841,550. But this was not enough: he was determined to clear out all rivals and make his company the sole proprietor of his 'nice little mine.' . . . By 1887 he had bought up all the remaining claims at De Beers and thus made his company the sole owner of the mine. . . . The De Beers Mining Company, which had paid only 3 per cent on the original £200,000 in 1882, in 1888 paid 25 per cent on a capital of no less than £2,332,170. . . . But owing to over-production, the price of diamonds had sunk and was still sinking; if it came to a cut-throat competition between the two mines, profits would disappear altogether, and then the weaker mine would have to succumb. . . . The problem to his mind, therefore, was how to limit the annual output of diamonds for the market. . . . The amalgamation of interests in one mine only was no remedy for this state of things as long as there were rival companies elsewhere. The only solution he saw was to amalgamate all the diamond mines under one control, and so regulate production and prices to suit the interests of the industry. Others before him, his friend Merriman for one, had conceived this idea of one gigantic diamond corporation, but had failed to bring it off. But this did not daunt Rhodes, he remembered the Umkomanzi valley and the cotton: so he resolved to make one more attempt. This resolution brought him into direct antagonism with Barney Barnato. Before 1887 there had been no such rivalry; each had been too busy looking after his own mine. But on

this question of fixing prices and eliminating competition the two kings of the diamond industry took diametrically opposite views. Rhodes's idea of a huge corporation, of which he would naturally be the guiding spirit, to control the four mines and regulate prices, did not suit [Barney] Barnato at all. He was equally convinced that over-production must be checked, but he proposed to secure that end either by a working agreement between equals, or by breaking all his competitors, including De Beers, and so making the Kimberley Mine supreme. On one thing he was quite determined, not to allow his holdings to be sunk in the gulf of De Beers; and, if it came to a fight, he was quite prepared for it, for he had an immense belief in the Kimberley Mine as capable of producing diamonds of better quality, in larger numbers, and more cheaply than De Beers. When, therefore, in May 1887 Rhodes opened the offensive, he readily took up the challenge. [As the result of the contest Barnato] saw that the game was up. He had fought well and gallantly and, when he saw himself beaten, surrendered in a generous spirit. In March 1888 he loyally accepted terms which gave Rhodes complete control of the Kimberley Mine. . . . Rhodes could be ruthless and unscrupulous for an object, but no doubt he excused the means to himself by the importance he attached to the object. As soon as he had secured his victory for amalgamation, he reverted, in the deed of association, to his underlying purpose of securing means to carry out his Imperial policy. A corporation entitled the De Beers Consolidated Mines was formed with the modest capital of £100,000 in £5 shares. All these shares, except twenty-five, were held by four men, Rhodes, Barnato, Beit, and Philipson Stow, who constituted themselves life-governors of the Corporation. . . . [In the gold fields, Rhodes'] principal venture was The Gold Fields of South Africa, Limited, founded in 1887 with a capital of £125,000. . . . The capital was eagerly taken up and had been increased to £1,250,000 by 1892, when it was renamed The Consolidated Gold Fields of South Africa. By that time it had given up the direct working of nearly all its properties and become a huge share trust company in Rand mines, especially deep-levels, to which Rhodes, at first incredulous, had become thoroughly converted. Its shareholders' interests were guarded by the full control it exercised over the gold-mining companies subsidiary to it; and the management, for which Rhodes was largely responsible, gave excellent results. . . . By the enterprises he had thus set going, both at Kimberley and at Johannesburg, during the three years 1885 to 1888, Rhodes was now master of the financial resources he thought necessary for his political aims. How rich he actually was it is impossible to tell and, probably, he himself hardly knew. . . . At first, when he was in his full vigour, he was the absolute dictator of De Beers and the Gold Fields, with all their ramifications throughout South Africa, even, one may say, throughout the world. He could and did make them spend their money on such various objects as securing large tracts of Africa for the Empire, promoting fruit farms, breeding horses or encouraging education. His position at the head of the diamond industry gave him even the excuse for interfering in the politics of the United States. . . . Rhodes had now obtained what in mining practice might be termed an option on Matabeleland. His next business was to convert this option into firm possession. Neither the Cape nor the Home Government could be looked to for further assistance at this stage; the Cape was not yet ready to absorb even Bechuana-

land, while the High Commissioner had gone to the utmost limits of his power. Private enterprise was the only resource left: so Rhodes determined on private enterprise; and, if he could obtain the sanction of the state for his private enterprise, so much the better. . . . His own main object was to preserve as much as possible of Africa for British civilization, to his mind the greatest blessing in the world; but to make converts he did not rely on this lure alone. 'Pure philanthropy is all very well in its way,' as he said, 'but philanthropy plus 5 per cent is a good deal better.' . . . By the beginning of 1888 all things were ready: he had founded the Gold Fields and was on the eve of amalgamating the diamond mines; so he had no anxiety about finance and was prepared to start forthwith. . . . On April 30, 1889, Lord Gifford on behalf of the Exploring Company, and Rhodes, Rudd and Beit representing the Gold Fields of South Africa, jointly applied for a Charter to a company prepared to carry out the following objects: (1) To extend the railway and telegraph northwards towards the Zambesi. (2) To encourage emigration and colonization. (3) To promote trade and commerce. (4) To develop minerals and other concessions under one powerful organization, so as to avoid conflicts between competing interests. . . . The power granted by Charter to the British South Africa Company was, as Rhodes had said of the Rudd concession, 'gigantic.' Certain clauses were inserted for the protection of native rights, freedom of religion, trade and previous concessions; the Secretary of State had limited rights of supervising the Company's operations; and after twenty-five years, or earlier, if the Company's privileges were misused, the Charter might be revoked. Otherwise they had almost unfettered freedom of action. The Company's 'principal field of operations' was all South Africa north of the new Crown Colony and the Transvaal and west of the Portuguese possessions in East Africa: thus it included the Bechuanaland Protectorate and had no limit northwards. for Rhodes, 'not satisfied with the Zambesi as a boundary,' had had his way. In this vast territory the Company was given power to make treaties, promulgate laws, preserve the peace, maintain a police force, and acquire new concessions: it could make roads, railways, harbours, or undertake other public works, own or charter ships, engage in mining or any other industry, establish banks, make land grants and carry on any lawful commerce, trade, pursuit or business. . . . By 1895 Rhodes was at the pinnacle of success and glory. . . . Over a large part of this great dominion, 750,000 square miles in extent, larger than Spain, France and the former German Empire put together, order and settled government had been established; no internal or external danger to its peace gave cause for apprehension. The railway was being pushed on towards Salisbury from Mafeking and from Beira; Salisbury, Buluwayo and other townships had been put in touch by the telegraph line with the outside world. The even more ambitious scheme of the African Transcontinental Telegraph Company, almost entirely a creation of Rhodes's forethought and private capital, had begun linking up the whole of Africa from Cape to Cairo and had already reached Blantyre in the distant Shire Highlands. To secure the through route he had begun negotiations with the German Government for way-leaves through German East Africa, and as a second string had obtained from Lord Rosebery's Government a treaty with the Congo State allowing him to run the telegraph along the western shore of Lake Tanganyika in exchange for the lease of the

Lado Enclave. In Southern Rhodesia farming, stimulated by Rhodes's encouragement and his practical help, was already giving promise, and gold production had at last taken a favourable turn. The public finances were improving and confidence in the country was shown by the rapid development of its chief centres, Salisbury, Buluwayo, Gwelo and Umtali. The climate had been proved healthy and fit for white men to work in and rear families. Already Rhodes's wish, 'Homes, more homes, that is what I want,' formulated as he looked over the uplands of Rhodesia and thought of the squalid tenements General Booth and others had shown him in London, was being realized. Rhodes's great wealth was no doubt a large factor in his success; and there was an element of truth in the critic's envious comment that it was easy for him to attain his objects 'with your armies and your gold and with all the quiet, majestic, resistless advance of an elephant through brushwood.' He himself never underestimated this factor. 'If we have imaginative ideas, we must have pounds, shillings and pence to carry them out,' he said to Gordon. But something more was needed. Earl Grey, the friend who more than any other could pierce through Rhodes's crust of cynicism to the noblest elements in him, put his finger on one essential: public spirit. . . .

"After the failure of the Jameson raid and imprisonment of the leaders, Rhodes made it his business to provide for their legal expenses, and to ensure them every comfort it was within his power to give, and he wrote saying that he was prepared to stand his trial also, if the Government wished to prosecute. The Reform prisoners were put on trial in the Transvaal, and Frank Rhodes and the other leaders were sentenced to death." The sentences, however, were commuted for fines of £25,000 apiece, "which Rhodes cheerfully paid . . . as part of the expenses of the Raid. These expenses, which included the cost of all the agents employed in the plot, a press fund to secure a favourable public opinion, compensation to sufferers, arms smuggled into Johannesburg, and pay and equipment for the raiders, amounted to considerably over a quarter of a million sterling, a debt which was promptly settled by Rhodes and Beit between them."—B. Williams, *Cecil Rhodes*, pp. 45-47, 91-92, 94-96, 102, 111, 113-114, 121, 122-123, 135, 137-138, 181-182, 277.—See also **COMMERCE**: Commercial age: 1766-1921.

19th century.—France.—Increased manufacturing.—International commerce.—Second empire.—Third republic.—Small investors.—"It is probable that if the corporations had not been abolished in 1791, they would have disappeared in 1830 by the logic of events. . . . At that time high finance and capitalism took in hand the destinies of the new industries. They carried to its organization, and to its development the resources of their activity without scruple, and their audacity of speculation, making all converge to their essential end, that is to say the maximum of return for the greatest profit possible. It was during the reign of Louis Philippe . . . that commerce and industry took a magnificent flight. Territories until then purely agricultural covered themselves with factories . . . commerce became international, . . . [by the new means of transportation]. That industrial transformation of the country in fifteen years could naturally not be made without injury, false movements, partial crises, ruin to some. But the aristocracy of money, the modern barons of finance professed absolute scorn for all that was not to their personal interest. They went straight for their end without care for crashes. So much the

worse for the feeble and the powerless, small employers ruined, famished artisans. The law of competition exacted their disappearance or their servitude. From that epoch (1830-1848) the essential characters of the element of capital are crystallized. The Second Empire was, as the July monarchy, a land of choice for capitalism, which was truly then at its apogee. It increased still more its radius of business by speculations in land, and the gigantic construction of buildings in all Paris. . . . It was encouraged by the megalomania of Napoleon III, by a fury of borrowing from foreigners. . . . The Third Republic appeared first to be bound to continue the same course; but it soon perceived a little fact, which passed almost unperceived but which perhaps will have the greatest consequences for our future destinies, and for that of capitalism. Up to that time the privilege of making speculations on the Bourse and mixing in financial affairs remained in the hands of high and powerful seigneurs, who defended it jealously, forming a sort of international free masonry of which they were the masters. From 1880 all that changed, not that more clients were initiated into the arcanas, on the contrary, the shadows were thickened; but an army of small depositors was recruited, which deposited several milliards [of francs] by the year."—E. Amanieux, *Capital and production (La Revue, Revue des revues, v. 24, pp. 1-17)*.—See also **SOCIALISM**: 1840-1848.

19th century.—United States.—Origin of Wall Street houses.—Merchant princes.—Private bankers in England.—Importation of foreign capital.—New American companies and financiers.—Bond dealers.—Civil War debt.—United States bonds abroad.—French loan.—Railroad financing.—Panics.—Entrance of steel.—Andrew Carnegie, Frick and the coke industry.—Mesaba Range.—Growth of steel business.—Rise of oil corporations.—"The old meaning of the word 'capital'—that is, an accumulation of wealth, either money or substantial property, for use in the production of more wealth—has been greatly enlarged within recent times. In earlier days, under the crude methods then prevailing, a given manufacturing plant might earn, say, ten per cent on its invested capital; but when power machinery and improved processes came into use and earnings increased, say, to twenty-five or forty per cent, the practice began of putting a valuation on this increased earning power, and the 'value' of a given property, instead of being based on its original or replacement cost, came to be measured by its capacity to earn profits. Upon this new basis, 'capital,' as expressed through the issue of corporate stocks and bonds, was created by leaps and bounds. . . . In the quarter century from 1890 to 1915, the total capitalization in the form of stocks and bonds of public service corporations in the United States grew from less than two hundred million to nearly twenty billion dollars. This new capitalism is a phenomenon of far-reaching magnitude in modern society. . . . The great financial houses of Wall Street, which are today most closely identified with the organization and control of the great corporate enterprises of the country, nearly all started as firms engaged in the dry-goods or clothing business. Not only the Morgans, but the Brown Brothers, Kuhn, Loeb and Company, the Seligmans, and other old private banking houses of New York, began in this way. It was a natural beginning, for prior to the period of modern machinery capital in large masses was employed chiefly by merchants, and the wholesale handling of merchandise was among the most profitable of undertakings. Before the idea of capitalizing potential

possibilities took possession of the minds of men, the purely competitive commercial business, such as the wholesale merchandising of goods, still held the center of the stage, both in this country and Europe. Even Nathan Rothschild, the most famous financier of the early nineteenth century, had made his start by financing the materials and products of the early English cotton mills. So also in America, the capital of the day tended to gather in the hands of great merchants whose stock in trade was very largely cloth or manufactures from cloth. Most Americans have forgotten all this early history. Our 'merchant princes' . . . have passed out of mind. The business of security making and selling . . . now looms so large that it seems to have been always important. In England they remember better. The men whom we in this country call 'private bankers,' such as the Rothschilds, the Barings, and the Morgans, are not, even today, known as bankers over there, but as 'merchants.' They are the lineal business descendants of the great East India Company of olden times. In the United States one particular section developed the international merchant. . . . In 1837, at the age of forty-two, [George Peabody] went to London and founded there the merchant banking house of George Peabody and Company, which latter became J. S. Morgan and Company. George Peabody's departure for London was not in itself notably interesting at the time. In London he continued to be a 'merchant' just as he had been in this country, but in establishing himself in the greatest mercantile and banking center in the world he was really making an advance along unusual lines. The kind of enterprise he founded is excellently described by his biographer, Fox-Bourne: In London and in parts of England, he bought British manufactures for shipment to the United States; and the ships came back freighted with every kind of American produce for sale in England. To that lucrative account, however, was added one far more lucrative. The merchants and manufacturers on both sides of the Atlantic, who transmitted their goods through him, sometimes procured from him advances on account of the goods in his possession long before they were sold. At other times they found it convenient to leave large sums in his hands long after the goods were disposed of, knowing that they could draw whenever they needed, and that in the meantime their money was being so profitably invested that they were certain of a proper interest on their loans. Thus he became a banker as well as a great merchant, and ultimately much more of a banker than a merchant. In London, the chief financial center of the world, George Peabody represented the greatest and most profitable field for the investment of capital—the American continent, as yet practically unscratched. Literally millions of square miles of the richest farming and mineral lands were there to be had for the asking; valueless it is true until populated, but potentially of vast value. The men who acquired or preëmpted this vast El Dorado, equipped it with power machinery, and the means of transportation, thus setting labor to work, would create values which would mount for generations to come. Untold wealth would continuously flow into their coffers. . . . When Peabody took up his residence in London, European capitalists were already competing for the opportunity to exploit American enterprises. Strong foreign houses were forming financial connections between London and New York. The Rothschilds had sent August Belmont to represent them in New York in the same year that Peabody had settled in London. . . . Peabody's

. . . business was that of the financier, a 'master of capital.' In this field his success was enormous for the times, and his name grew constantly in English favor. . . . When Peabody retired, in 1864, Junius S. Morgan became the head of the business. Morgan was another Yankee dry-goods trader—a member of the firm of J. M. Beebe and Company of Boston—who had been taken into partnership by Peabody ten years before. He was now about fifty-one and was fully capable of carrying on the high traditions of the Peabody firm—doing international commercial banking, holding deposits of customers, and buying and selling securities. The firm placed considerable issues of American railroad bonds in London and negotiated a loan to Chile.

"The name of George Peabody and Company ended with the death of Peabody, according to his own wish. But the business was carried out without interruption under the name of J. S. Morgan and Company. Junius Morgan had a son, John Pierpont by name, born in Hartford, Connecticut, in 1837, when his father was in the dry-goods business there. . . . It was in 1857, the year of a great financial panic in the United States, that John Pierpont Morgan, a tall, taciturn young man of twenty, stepped on the stage of American business. At that time the house of George Peabody and Company . . . had to appeal to the Bank of England for assistance. This experience impressed the London house with the vital importance of closer control of its American business, and it was decided to send young Pierpont Morgan to represent the firm in New York as cashier of Duncan, Sherman and Company. In the offices of Duncan, Sherman and Company, Pierpont Morgan met Charles H. Dabney. . . . In 1864, the year in which George Peabody retired and was succeeded by Junius S. Morgan, Pierpont Morgan and Dabney formed a new firm under the name of Dabney, Morgan and Company, with offices in Exchange Place, New York. This new firm became the correspondents of J. S. Morgan and Company of London. A few years later, Duncan, Sherman and Company failed and faded from view. The house of Dabney, Morgan and Company built up an excellent business in foreign exchange and in the sale of miscellaneous securities. . . . But the house had done nothing spectacular or striking. . . . and its main prestige seems to have been based simply on its connection with the strong London firm of J. S. Morgan and Company. But in the year 1871 a change came. Dabney retired, the firm was dissolved, and young Morgan became a partner with the Drexels of Philadelphia, under the firm name of Drexel, Morgan and Company. Anthony J. Drexel, the senior partner, then personally bought the southeastern corner of Wall and Broad streets and built the Drexel Building, in which the new firm began its great career. . . . John Pierpont Morgan was thirty-four years old in 1871; Anthony Drexel, his principal partner, was forty-five—a conservative, intelligent, and popular man. There were four other members in the new firm, all from the Drexel house in Philadelphia. The new firm had advantageous alliances: on one side of the Atlantic, one of the richest financial houses in America; on the other, the great English house of J. S. Morgan and Company, in close touch with English capital—the greatest body of capital in the world. Its advantages were clear; but it also had its disadvantages. In the chief business of the day—the funding of the government debt—it came into a field already pretty well occupied. Some years before the combination of the Drexels and the Morgans had taken place . . . a financial operation of

vast magnitude had been carried on in America. It was the flotation of the American Civil War debt. This debt had been placed very largely through Jay Cooke, a Philadelphia banker and promoter. . . . Thus, the house of Jay Cooke and Company had forged well to the front, and had built up very strong connections abroad. . . . Jay Cooke estimated that by 1869 at least a billion dollars' worth of United States bonds were held abroad, of which a large proportion were held in South Germany. This large investment had established a new and powerful business interest in America—the Jewish bond dealers, with foreign connections in the great European money center of Frankfurt. With this new group of financial merchants Cooke had naturally allied himself, since the greatest source of English capital was only to be tapped through the Drexel-Morgan interests. A keen contest arose between the Cooke interests . . . and the Drexel-Morgan interests to secure the contracts for the government financing. In this contest Cooke and his party won and then carried through an extraordinarily difficult operation so successfully that the Rothschilds offered themselves as Cooke's associates in future enterprises. But the Morgan interests kept after the business, and subsequently, in combination with Levi P. Morton, secured a half interest in the government refunding operation of 1873, involving a sale of \$300,000,000 of bonds—an enormous transaction for those days. Later, in the fall of the same year, Jay Cooke and Company failed and this left the field in the United States for great financial operations entirely in the hands of the Drexel-Morgan-Morton associates. . . . A year before the formation of the Drexel-Morgan firm, an event of great importance had contributed vastly to the fame and standing of J. S. Morgan and Company. Toward the end of October, 1870, the city of London had been stirred by the news that J. S. Morgan and Company had taken a French loan of 250,000,000 francs. It was a syndicate operation and one of the largest and boldest ever known. In the previous month the Germans had crushed the French army at Sedan, had taken the Emperor Louis Napoleon prisoner, and had besieged Paris. The only authority for the loan was a provisional government at Tours. To take such a loan, even at the low price of about eighty, was undergoing some risk in view of the circumstances. One thing, however, was very clear: the hand of a strong, bold man was at the helm. The bonds were offered to the public at eighty-five; they advanced at once in price and within a year were selling fifteen points above what they cost the Morgan firm. And the syndicate was believed to have cleared \$5,000,000 by the transaction. The reputation of the house of Morgan was thus well established among European bankers just at the moment when Pierpont Morgan, the son of Junius, came to the front in combination with the powerful Drexel interests, and just at the moment when foreign capital was ready to pour into America more freely than ever before. This was the opportunity of the house of Morgan. As the first big organizers of capital, the Morgans—father and son—were to wield a mighty influence in American finance. . . . By 1879, with the financing of the war debt accomplished, American bankers were ready to turn to a new field of activity. But leadership in the dawning financial era was to fall to the younger men. . . . The younger Morgan was then forty-two, just about the age of George Peabody and Junius Morgan when they began their great careers in London. . . . Pierpont Morgan had watched the expansion of the railroads

for many years. . . . But he had taken little part in the battle of the railroads. . . . The Morgan firm had not been active in railroad financing and were not in any sense known as railroad bankers.

"In 1879, however, an incident occurred which brought Morgan directly into the field of railroad finance. William H. Vanderbilt, president and chief stockholder of the New York Central and Hudson River system, was then being harassed beyond endurance. Popular suspicion had been excited by his accumulation of a fortune of one hundred millions in ten years; and the New York Legislature, reflecting public indignation, was investigating the management of the New York Central and was proposing radical control of railroad management. Besides, the rate wars between New York and Chicago were then raging. . . . Vanderbilt's friends advised him strongly to dispose of a substantial portion of his stock in New York Central and thus avert the legislation that was aimed at him. But how to unload his vast holdings was a problem. To throw half of them on the market would result only in a panic; to distribute the stock by private sale in Wall Street would also greatly disturb values. . . . Vanderbilt consulted J. Pierpont Morgan, and Morgan devised a scheme whereby a large block of New York Central stock could be sold secretly in England without in any way disturbing the American security markets. This plan was adopted. The Morgan firm, through its London house, formed a syndicate and distributed 250,000 shares of the stock to permanent investors abroad. The transaction was kept secret for a time, but after a few months the details were all published in the New York and the London papers. Vanderbilt then announced that a large part of the great sum of money he had received had been reinvested in United States government bonds. Thus, at one stroke, J. Pierpont Morgan not only solved Vanderbilt's difficult problem and allayed public criticism, but incidentally, it was said, he made a profit for his syndicate, it more than three million dollars. . . . Carnegie's first money was made in an oil speculation, without the investment of a cent of his own. He gave his note for a block of stock in one of the smaller Pennsylvania oil companies and then paid the note out of dividends received on the stock within a single year. . . . While the Civil War was drawing to a close, the country about Pittsburgh was being agitated not only by the petroleum boom, but by another type of industry, which, like the oil business, was also to leave its stamp on the economic life of America. This was the manufacture of malleable steel by the newly developed Bessemer process. . . . Steel had been made for many years in small quantities, but the cost was far too great to bring it into general use. Moreover, the demand, even for iron, had not developed far enough to attract capital in any great amount. . . . The best furnaces in those days did not produce a thousand tons of iron a year; and, because of the fluctuations in demand, most iron makers were without capital and constantly in debt. The panics of 1837 and 1857 had caused the failure of scores of iron founders. Nobody with capital wanted to put money into so precarious a business. But, as railroad building expanded, the demand for more durable iron began to increase steadily. Steel was recognized as the ideal substance for rails, but the cost of making it was prohibitive. . . .

"During the latter days of the Civil War, with big plans pending for the construction of the Pacific railroads, the demand for railroad iron was taxing all the plants in the country. And, as the cost of production was falling to a point where
