THE NEW LARNED HISTORY

FOR READY REFERENCE, READING AND RESEARCH

VOLUME II

BALKH, important ancient city on the Balkh river in Turkestan, and originally termed "Mother of cities."

Its destruction by Jenghiz Khan (1221).—From his conquest of the region beyond the Oxus, Jenghiz Khan moved southward with his vast horde of Mongols, in pursuit of the fugitive Khahrezmian prince, in 1220 or 1221, and invested the great city of Balkh,—which is thought in the east to be the oldest city of the world, and which may not impossibly have been one of the capitals of the primitive Aryan race. "Some idea of its extent and riches [at that time] may possibly be formed from the statement that it contained 1,200 large mosques, without including chapels, and 200 public baths for the use of foreign merchants and travellers—though it has been suggested that the more correct reading would be 200 mosques and 1,200 baths. Anxious to avert the horrors of storm and pillage, the citizens at once offered to capitulate; but Chinghiz, distrusting the sincerity of their submission so long as Sultan Mohammed Shah was yet alive, preferred to carry the place by force of arms—an achievement of no great difficulty. A horrible butchery ensued, and the 'Tabernacle of Islam'—as the pious town was called—was razed to the ground. In the words of the Persian poet, quoted by Major Price, 'The noble city he laid as smooth as the palm of his hand—its spacious and lofty structures he levelled in the dust.'—J. Hutton, *Central Asia*, ch. 4.

Early commercial importance. See **COMMERCE: Medieval: 5th-8th centuries.**

BALL, Albert, British captain, aviator whose exploits in bringing down German airmen during the World War have classed him among the greatest aces (q. v.).

BALL, John (d. 1381), English priest in Wat Tyler insurrection. See **ENGLAND: 1381.**

BALL, Sir Robert Stawell (1840-1913), British astronomer. Lowndean professor of astronomy and geometry, Cambridge; director of Cambridge observatory; royal astronomer of Ireland, 1874-1892. Wrote a number of popular works on astronomy, mathematics and physics.

BALLAD: Definition.—"The popular ballad . . . is a narrative poem without any known author or any marks of individual authorship such as sentiment and reflection, meant, in the first instance, for singing, and connected, as its name implies, with the communal dance, but submitted to a process of oral tradition among people free from literary influences and fairly homogeneous. Conditions favourable to the making of such poetry ceased to be general after the fifteenth century; and, while it was both composed and preserved in isolated rural communities

long after that date, the instinct which produced it and the habit which handed it down by word of mouth were, alike, a heritage of the past. Seen in critical and historical perspective, balladry takes its distinguishing marks mainly from this process of oral tradition. Owing to this process, the ballad has lost its dramatic or mimetic and choral character and become distinctly epic; it has, in many cases, even forfeited its refrain, once indispensable; but it has kept its impersonal note, lacks, last as first, all trace of deliberate composition and appeals to the modern reader with a charm of simplicity quite its own. Nearly all critics are agreed that no verse of this sort is produced under the conditions of modern life; and the three hundred and five individual ballads, represented by some thirteen hundred versions, printed in the great collection of Child, may be regarded, practically, as a closed account in English literature. Diligent gleanings of the field in the ten years following the completion of that work has brought little or nothing that is new; and little more can be expected. Here and there a forgotten manuscript may come to light; but, in all probability, it will contain only a version of some ballad already known. The sources of tradition have, apparently, at last run dry."—F. B. Gummere, *Ballads (Cambridge history of English literature, v. 2, p. 449).*

Distinguished from "ballade."—This should not be confused with the highly technical "ballade" of the Continent which "was a poem of three stanzas. It might have from six to ten lines each, but the last line was always the same, and so were the rhymes in each stanza, while the poem was often finished off with what was called *l'envoy*, an address in four lines to some person, real or imagined, and ending like the other stanzas with the refrain."—G. Saintsbury, *Primer of French literature*, pp. 36-37.

Development.—"English and Scottish ballads as a distinct species of poetry, and as a body, can be followed back through the fifteenth century, occur sporadically, or find chance mention, for a century or so before, and then altogether cease. Owing to the deplorably loose way in which the word 'ballad' is applied, not only the references of early historians, like William of Malmesbury, to the 'popular songs,' the *cantilenae*, the *carmina vulgaria*, from which they draw for occasional narrative, but also the passages of older epic that tell a particular deed or celebrate a popular hero, are, alike, assumed to indicate a body of ballads, similar to those of the collections, extending back to the Norman conquest, back even to the Germanic conquest of Britain, but lost for modern readers by the chances of time and the lack of written record. Such a body of ballads may, indeed, be conjectured; but conjecture should not pass into inference. Not a single specimen is preserved. It

is, to be sure, unlikely that the primary instinct of song, the tendency to celebrate heroes and events in immediate verse, and the habit of epic tradition, main constituents of balladry, should cease as we cross the marches of the Transition period and pass from the modern speech and modern metres, in which our ballads are composed, into that more reflected language, that wholly different form of rhythm, which prevailed in Old English and, with some modifications, in all Germanic verse. To claim for this older period, however, ballads of the kind common since the fifteenth century in England, Scandinavia and Germany, is an assertion impossible to prove. The Old English folk must have had popular ballads of some sort; but it cannot be said what they were. Singing, to be sure, implies a poem in stanzas; and that is precisely what one cannot find in recorded Old English verse—the one exception, Deor's song, being very remote from balladry. It is true that the subject of a popular ballad can often be traced far back; Scandinavian ballads still sing the epic heroes of 'Old Norse.' Community of theme, however, does not imply a common poetical form; and it is the structure, the style, the metrical arrangement, the general spirit of English and Scottish ballads, which must set them apart in our literature and give them their title as an independent species. . . . In the absence of texts, conjecture is useless. The earliest recorded piece of English verse which agrees with balladry in all these important characteristics is the famous song of Canute, preserved in the chronicles of Ely. . . . This desire of the warrior to sing the battles he has fought did not pass away with the lost songs. A passage in Bishop Leslie's *History of Scotland*, used in part by Andrew Lang for the solution of the problem of ballad origins, declares that 'our bordir men,' as Dalrymple translates, delight in their own music and in the songs that they themselves make about their deeds and about the deeds of their forbears. . . . Gaston Paris, on good evidence, has made a similar assertion about the early Germanic and English warriors, who, before the days when the minstrel existed in a professional class, sang their own deeds and furnished the prime material of later epics. Even in *Beowulf* (q.v.) a warrior is described improvising a song on the defeat of Grendel. There is, thus, a presumption that border ballads, like *Cheviot* and *Otterburn*, owed their earliest form to the improvisation of fighting men who could sing their own deeds; and thus, too, one draws a faint line, mainly touching theme and conditions of origin, from the 'old song of Percy and the Douglas' back to those last lays that inspired the poet of *Beowulf*. But this is all. Of the actual structure and form of those old lays nothing is known. . . . All that can be said of material gathered from older chronicles, or suspected in older poems, is that it lends itself to conjecture, not to proof. The one exception is this song of Canute, which may pass as a genuine ballad fragment.

"Short work can be made of other assumptions. In the fourteenth century, 'rimes of Robin Hood and Randolph, earl of Chester,' are mentioned in *Piers the Plowman* as known to the common men of that day. Robin Hood ballads are preserved; the Randolph cycle is lost. But the outlaw literature must have been popular long before that. . . . Ballads of the outlaw, indeed, would be of a popular and traditional type, as the Robin Hood cycle shows; but political songs, which also had their vogue, were doubtless made by the minstrel, who, also, retouched and sang again the rude

verses which warrior or outlaw had improvised, taking them out of their choral conditions, smoothing, adding, connecting, and making them fit for chant and recitation *de longue haleine*, precisely as the *jongleurs* of early France, according to Gaston Paris, remade the improvisations of an age that knew no minstrel class at all into the *chansons de geste* and into the epic itself [See Music: Medieval: 11th-13th centuries]. Such remade poems could again be broken into ballads, popular enough, sung and transmitted by very humble folk. . . . Minstrels, moreover, as actual authors of the ballads recorded at a later day, are utterly out of the question. Barring a few wretched specimens labelled by Child with the minstrel's name, and inserted in the collection because they still may retain some traditional note, that 'rogue by act of parliament' to whom Percy ascribed the making of practically all English and Scottish ballads is responsible for none of them. It has been pointed out by Kittredge as 'capable of practically formal proof that for the last two or three centuries the English and Scottish ballads have not, as a general thing, been sung or transmitted by professional minstrels or their representatives. There is no reason whatever for believing that the state of things between 1300 and 1600 was different, in this regard, from that between 1600 and 1000.' Still stronger proof lies in the fact that we have the poetry which the minstrels did make; and it is far removed from balladry. 'The two categories are distinct.' When, finally, one studies the structure and the elements of the ballad itself as a poetic form, a form demonstrably connected with choral dramatic conditions in its origin but modified by a long epic process in the course of oral and quite popular tradition, one is compelled to dismiss absolutely the theory of minstrel authorship, and to regard ballads as both made and transmitted by the people. . . . Tradition is something more than a confusion of texts; a choral throng, with improvising singers, is not the chance refuge, but, rather, the certain origin, of the ballad as a poetic form; and, while one is not to regard the *corpus* of English and Scottish ballads as directly due to such singing and improvisation, it is thither that one turns for origins, and it is to tradition that one turns for the growth and spread of the versions themselves. Once choral, dramatic, with insistent refrain and constant improvisation, the ballad came to be a convenient form for narrative of every sort which drifted into the ways of tradition. This traditional process has been mainly epic, although oral tradition alone would not and does not force the ballad out of its choral structure, its dramatic and lyric purpose. What slowly reduces the importance and, therefore, the function of these old elements is the tendency of ballads towards the chronicle, the story, the romance. Literary influences worked upon it for these ends.

"A close study of the material demands that we distinguish two general classes. One, demonstrably the older in structure, tends in form to the couplet with alternating refrain or burden, and in matter to the rendering of a single situation. As, however, epic purposes prevailed, this typically oldest ballad was lengthened in plot, scope, details, and was shorn entirely of its refrain. Hence a second class, the long ballad, recited or chanted to a monotonous tune by a singer who now feels it to be his property, a kind of enclosed common. Instead of the short singing piece, steeped in repetition, almost borne down by its refrain, plunging abruptly into a situation, describing no

characters and often not naming them, telling no long story and giving no details, here is a deliberate narrative, long and easy of pace, free of repetitions, bare of refrain, abounding in details and covering considerable stretches of time. By a happy chance, indeed, this epic process can be followed into its final stage. We have a number of ballads which tell different adventures in the life of Robin Hood; and we have an actual epic poem, formed upon these ballads or their very close counterparts, which embodies the adventures in a coherent whole. Between the style of the *Gest of Robyn Hode*, however, and the style of the best Robin Hood ballads, there is almost no difference at all; and these, for all their age of record, may well represent the end of the epic process in balladry. Apart, now, from chronology of the record, this material may be grouped according to its subjects, its age in tradition and its foreign or local origins. Oldest in every way, and quite independent of place, are the riddle-ballads which open Child's first volume. They are far simpler than the Old English riddles and are closely related to those ballads of question and answer made in many countries at the communal dance, and used to determine the choice of a partner or the winning of a garland. . . .

"The epic tendency, always working out of situation into narrative, now takes us to a very large group of ballads, which seldom content themselves with the dramatic crisis, but deal in a more intricate plot, furnish the details and even add a store of romantic incidents. This ballad of domestic complications, the tragedy of kin, looms large in all European tradition; borrowing, however, or a common source, is not always to be assumed even where the story is the same, since certain primary instincts must bring about like results wherever men are set in families or clans and human passions prevail. Still, there is, in many cases, abundant reason for identification, and, even, for alliance with more distant branches of balladry and tales. . . . Complications of kin make up ballads of domestic tragedy, a most important group; and even the inroads of a doggerel poet upon the old material, even the cheap 'literature' of the stalls, cannot hide that ancient dignity. . . . Finally, there is the true-love. . . . Ballads of the funeral, echoes of the old *coronach*, *vocero*, whatever the form of communal grief, are scantily preserved in English. . . . Superstition, the other world, ghost-lore, find limited scope in English balladry. . . . Epic material of every sort was run into the ballad mould. . . . Refusing classification, there stand out those two great ballads, probably on the same fight, *Cheviot* and *Otterburn*. The version of the former known as *Chevy Chase*, 'written over for the broadside press,' as Child remarks, was the object of Addison's well-known praise; what Sidney heard as 'trumpetsound' is not certain, but one would prefer to think it was the old *Cheviot*. One would like, too, the liberty of bringing Shakespeare into the audience, and of regarding that ancient ballad as contributing to his conception of *Hotspur*. . . . Last of all, the greenwood; . . . with these ballads of Robin Hood, balladry itself crossed the marches of the epic, and found itself far from the old choral, dramatic improvisations, though still fairly close to the spirit and motive of traditional verse."—F. B. Gummere, *Ballads (Cambridge history of English literature, v. 2, pp. 450-456, 464-473)*.

Ballad and history.—The ballad, aside from its literary interest, is a primary source for history. "History had its origin in poetry," says the old Danish author, and this is undoubtedly true

as to much of the early history of our own country [England]. . . . In the *Anglo-Saxon Chronicle*, two complete historical ballads, and fragments of eight or ten others, are inserted as integral parts of the *Chronicle*. While some of our earliest writers mix together truth and fiction, without attempting to distinguish between them, others, like William of Malmesbury, divide records for which there was some shew of authority from those which were only derived from ballads sung about the country. In this way we learn the subjects of many of the legends and historical songs which delighted our ancestors for successive centuries. . . . A volume might be filled with the stories which these early chroniclers derived from ballads, and, among them, not a few that have descended to the present day."—W. Chappell, *Old English ditties, Introduction pp. iii-iv*.—"At a very early period in the progress of a people, and long before they are acquainted with the use of letters, they feel the want of some resource, which in peace may amuse their leisure, and in war may stimulate their courage. This is supplied to them by the invention of ballads; which form the groundwork of all historical knowledge, and which, in one shape or another, are found among some of the rudest tribes of the earth. They are, for the most part, sung by a class of men, whose particular business it is thus to preserve the stock of traditions. Indeed, so natural is this curiosity as to past events, that there are few nations to whom these bards or minstrels are unknown. Thus, to select a few instances, it is they who have preserved the popular traditions, not only of Europe, but also of China, Tibet, and Tartary; likewise of India, of Scinde, of Belochistan, of Western Asia, of the islands of the Black Sea, of Egypt, of Western Africa, of North America, of South America, and of the islands in the Pacific. In all these countries, letters were long unknown, and, as a people in that state have no means of perpetuating their history except by oral tradition, they select the form best calculated to assist their memory; and it will, I believe, be found that the first rudiments of knowledge consist always of poetry, and often of rhyme. The jingle pleases the ear of the barbarian, and affords a security that he will hand it down to his children in the unimpaired state in which he received it. This guarantee against error increases still further the value of these ballads; and instead of being considered as a mere amusement, they rise to the dignity of judicial authorities. . . . We therefore find, that the professed reciters and composers of these songs are the recognized judges in all disputed matters; and as they are often priests, and believed to be inspired, it is probably in this way that the notion of the divine origin of poetry first arose. These ballads will, of course, vary according to the customs and temperaments of the different nations, and according to the climate to which they are accustomed. In the south they assume a passionate and voluptuous form; in the north they are rather remarkable for their tragic and warlike character. But, notwithstanding these diversities, all such productions have one feature in common. They are not only founded on truth, but making allowance for the colorings of poetry, they are all strictly true. Men who are constantly repeating songs which they constantly hear, and who appeal to the authorized singers of them as final umpires in disputed questions, are not likely to be mistaken on matters, in the accuracy of which they have so lively an interest."—H. T. Buckle, *History of civilization in England, v. 1, pp. 211-214*.

BALTIC AND WHITE SEA CONFERENCE.—"The Baltic and White Sea Conference, which was created in 1905, is an International Association . . . with a central bureau and a regular organ of government, and an annual conference. It consists of the ship owners of eleven different countries interested in shipping in the North of Europe. It controls [written in 1916] 905 ships of 1,764,603 tons out of 1,816 ships of 2,088,635 tons interested in the trade, and only the smaller ship owners have remained outside. It originated from the realization of owners that competition had cut freights for wood from the Baltic to next to nothing. The object of the Association was to regulate competition and to fix a minimum freight tariff. It must be admitted that a rather similar attempt to regulate international competition during a period of contracting trade had failed. But the Baltic Conference was established during a time of expanding trade, and up to the [World] war had undoubtedly succeeded in its objects. The members met in annual conference, and by a majority vote fix a minimum rate binding upon the members. The formation of the Conference was certainly followed by a rise in freights. The Baltic Conference succeeded through a regular organ of government in limiting international competition between capitalist groups and in fixing an international minimum rate. In other words, the ship owners discovered that their group interests were international rather than national, and could best be served by international regulation and government instead of by competition."—L. S. Woolf, *International government, p. 328.*

BALTIC MYTHS. See MYTHOLOGY: Slav mythology: Baltic myths.

BALTIC PROVINCES.—**Geography.**—**Area and population.**—"The Baltic Provinces consist of Esthonia, Livonia, and Courland. Esthonia faces the Gulf of Finland; Livonia and Courland face the Baltic and are deeply indented by the large Gulf of Riga, which is half closed by the islands of Dagö and Ösel. . . . The glaciers of Scandinavia and Finland have left their mark on these provinces. They are dotted with numerous lakes and even more numerous swamps. They are strewn with erratic boulders and glacial ridges of earth or sand (äsar). They are covered with great coniferous forests; even today, in spite of the areas cleared, forests occupy nearly a third of the total area of the Baltic Provinces, or one-quarter of Esthonia, two-fifths of Livonia, and one-fifth of Courland. These 100,000 square kilometers of inhospitable northern lands contained a population of barely 3,000,000 in 1913, or about 30 to the square kilometer."—*Geographical Review, December, 1918.*—"The prevailing population of the Baltic Provinces is Esthonian, Couronian and Lettish. Numerically they outnumber the Germans in the country, but the Germans are the ennobled class, and in the cities the tradesmen and artisans are German."—*Bellman, Mar. 30, 1918.*—This status of the German population in the cities which had gained a firm foothold on the Baltic through the traders of Lübeck, the first German settlers in the Baltic provinces, who preceded the German missionaries, has existed since the time of the Hanseatic league.

The approximate percentage figures of the population in the three provinces are in Courland, 8.25 per cent Germans, 70 per cent Letts; in Livonia 5.4 per cent Germans, 39.3 per cent Letts, 39.9 per cent Esths; and in Esthonia, 3.8 per cent Germans and 88.6 per cent Esths.

Resources.—**Cities.**—The chief industries in the Baltic provinces are agriculture and dairy farming. The soil is favorable for the production of rye, oats, flax, and potatoes. Fruit and vegetables are also grown. Nearly half of the tilled lands in Courland and Livonia is devoted to the growing of rye which yields the largest crop. All three provinces have a thriving cattle raising industry. In other industries Livonia takes the lead. In its capital, Riga, the greater part of Russia's timber trade was concentrated. It was also the center of the flax trade, the large flax fields of the region being located about fifty miles north of Riga. The chief manufactures of the 393 factories in Livonia are textiles, metal and rubber goods. The principal manufacturing industries in the other two provinces are iron and machinery works, match factories, flour and saw mills in Courland and Esthonia; tanneries, glass and soap works in Courland, and cotton, woolen, paper mills, and distilleries in Esthonia. There is only one trunk line crossing each of these provinces through their principal cities. The chief routes are, in Livonia, from Riga through Dorpat to Petrograd, and in Courland, through Libau, Mitau, Shavli *via* Vilna, Minsk, and by a junction to Moscow and south Russia. "Libau, with nearly seventy thousand population, is the chief city of Courland; Riga, with a population of three hundred and seventy thousand, of Livonia; and Reval, with nearly a hundred thousand people, of Esthonia. The history of these cities, is essentially that of the territory surrounding them."—*Bellman, Mar. 30, 1918.*

Original and existing races.—"Of the original inhabitants, the Cours, Livs, and Esths, all of Ugro-Finnic (Mongolian) stock, speaking languages akin

to modern Finnish, the Esths still inhabit Esthonia and the Northern part of Livonia; the Cours and Livs were displaced by the Letts, a tribe of Lithuanian (Indo-European, but not Slavonic) race, in the early Middle Ages, and have disappeared though the Liv language is said to linger, much corrupted by Lettic, in one or two villages in Livonia. The German Schwertbrüder (*Brothers of the Sword*), later absorbed in the Teutonic Order, conquered the Letts and Esths in the early thirteenth century, took their land, and converted them to Christianity. [See LIVONIA; and PRUSSIA: 13th century.] From these Teutonic knights are descended the present German element in the three provinces. The word 'Balt,' which might be expected to apply to all the races in the provinces, is commonly confined to the German element. . . . The present racial distribution is, (1) Balt in all three provinces: (2) Letts in Courland and South Livonia: (3) Esths in North Livonia and Esthonia. The Russian element before the War consisted almost entirely of officials. The Jews in the three provinces speak German, not Yiddish (as the Russian and Polish Jews do), and are in general supporters of the Balts."—R. Butler, *New Eastern Europe, p. 21.*—See also EUROPE: Ethnology: Migrations: Map showing barbaric migrations; TURANIAN RACES AND LANGUAGES.

1796.—Courland taken by Russia in the third partition of Poland.—Courland at first remained an independent duchy under the suzerainty of Poland; passed under Russian rule in 1796.—See also POLAND: 1793-1796; Russia; 18th century.

1861-1917.—Agrarian situation.—Serfdom.—Peasants' status.—"The Germans, become masters in the thirteenth century in Esthonia, Livonia, and Courland, have remained imperious and absolute masters. For seven hundred years they have dominated and exploited the native population without ever merging with them. During the period of Swedish domination some humane and just measures were put into force which rendered servitude less hard. But the Russian conquest gave back to the German-Baltic barons the full and complete exercise of their ancient feudal rights. The abolition of serfdom (in 1861) was for the unfortunate Baltic populations only an illusory reform, inasmuch as the power and the lands remained in the hands of the landed proprietors and the local laws and taxes were not changed. . . . In the country districts the hardest kind of serfdom has for seven centuries

weighed heavily on the expropriated and exploited natives. In Livonia 67 per cent of the lands belonged to the nobles and 15 per cent to the state. The estates of 823 landed proprietors had an average area of 3,800 hectares. Thus every Livonian landed proprietor in general owned a piece of territory which was as large as three rural communes in France. These domains were divided into large estates (Rittergüter) about which lived in misery the field workers and the peasants (Knechte), who could be dismissed at the owner's will."—J. Brunhes and C. Vallaux, *German colonization in Eastern Europe* (*Geographical Review*, Dec., 1918).—"The Knechte were generally engaged, as throughout Eastern Europe, by a written contract covering a year from winter to winter. Many varieties of contract of course prevailed: they were long documents, drawn up with considerable detail. The following is a summary of a typical specimen, made on an Estate near Libau in the second year of the World War between a Balt Ritter and a Lett Knecht on what is known as a wage and allowance (*Deputat*) basis:—The labourer is to receive wages . . . [\$30]; free lodging; free doctor and chemist; free stabling for a horse and cart; and allowances of 1800 lbs. rye, 1100 lbs. barley, 400 lbs. small rye [used as pig-food]; 80 lbs. oats and groats (peeled barley or oats), 120 lbs. beans; with free milling. The labourer is to have in manured and prepared land, $\frac{1}{2}$ *Lofstelle* [rather over $\frac{1}{2}$ acre] potato land; $\frac{1}{4}$ - $\frac{1}{8}$ acre garden-land; tools and cartage for the labourer's land to be provided by the Estate. The labourer is allowed to keep [his own] sheep and cows to the number of 3 sheep and 2 cows; and receives as allowances of fodder for them, 2-3 cartloads of hay, for each beast: summer and winter straw: one large basket of chaff. The labourer also received $\frac{1}{2}$ Faden [about 4 cubic feet] of wood: 2-3 Faden brushwood. In return the labourer has to give daily work from breakfast till dark for the whole year; and his wife for 70 days in the year. The cattle fodder allowance is treated as wage for the wife: for any days above 70 worked by her she is to receive . . . [26 cents] a day. In the work-day the following rests are allowed, 1 hour breakfast, 1 hour in the afternoon ['teatime'], 1 or in high summer 2 hours midday. The *Wirte* (land-owning peasants or small farmers) paid higher wages than the Ritter; instead of the . . . [\$30] paid in the above case, a *Wirts-Knecht* might get anything from [\$40 to \$60], and a woman labourer . . . [\$20] to . . . [\$30]. On the other hand the *Wirte* did not give free drugs and doctoring; and they made deductions for absence owing to accidents or illness—a practice which was greatly disliked. It was common experience that the Ritter got their labourers more readily than the *Wirte*."—R. Butler, *New Eastern Europe*, pp. 40-41.—Up to 1917 the agrarian situation had changed very little. More than two-thirds of the Lettish lands were still in the hands of the German nobility. In Livonia, only 38.25 per cent of the land was controlled by the Letts and Estonians. In Courland, two-fifths was owned by twenty-five baron families.

1867-1918.—Russification.—German character of the provinces.—Though the treaty by which the provinces passed under Russian rule, guaranteed the Protestant religion and the German language to their inhabitants, the Russification of the provinces already began in the middle of the nineteenth century. "Russian was nominally substituted for German as the official language in 1807; but the officials, being all Balts, made no attempt to introduce it in practice, and for

many years its use was confined to communications between the provincial authorities and the capital. In the 'seventies the Russian Government laid their hands on the Town Councils. The Russian Municipal Constitution . . . was introduced throughout the Provinces; and in the freely elected Municipal Assemblies the proud and wealthy Balt Stadtväter [city fathers] found themselves forced for the first time to admit the despised Letts to their councils. In the large towns they have been able, though not without difficulty, to maintain their ascendancy. . . . In the smaller towns they have for the most part been swamped, or, as the expression runs in Balticum, *verlettet* [Letticized]. The judicial functions of the towns were abolished. It was intended to abolish the more or less obsolete Baltic Law, and the Russian Criminal Code was introduced in the 'eighties; but it was found impossible to replace the Baltic Civil Law without an interim period, owing to the complexities of Baltic shipping transactions. The Russian Government accordingly . . . withdrew all facilities for its study at the University of Dorpat [Yuryev or Yuriev], and it was hoped that in time the supply of lawyers acquainted with its intricacies would die out! At the end of the 'eighties the whole hierarchy of the Russian bureaucracy was introduced in town and country alike. It was the first crushing blow to the Balt domination. . . . Half a century ago, before the Russification began, the Baltic Provinces represented an enclave of Germanism within the borders of the Russian Empire. All told the German element (Balts) constituted less than one-fifteenth of the entire population: but they held under the Russian Governor-General almost the whole of the administration of the country in their hands. . . . The diets representing exclusively the *Ritterschaften*, or Corporations of German Barons, whose ancestors took the land in the thirteenth century, ruled the land, and the Town Councils, representing equally exclusively the German element, ruled the towns. . . . Each appointed a catena of officials, . . . judges who administered German mediæval law, teachers in the schools, and pastors in the Lutheran Church. . . . The Diets survived until the World War, and finally expired painlessly at the hands of the German invader."—R. Butler, *New Eastern Europe*, pp. 22-32.—The Russification of the provinces went on very slowly. "The towns are still German in appearance, and it may be said in atmosphere. The Russian language has never got a foothold in the everyday life of the Provinces, and German is the *lingua franca* from Riga to Reval."—*Ibid.*, p. 41.—"In 1893 Libau, the second largest city in the Baltic provinces, had all the appearance of a transplanted German town. It was most attractively laid out, with charming, well-paved and well-kept streets and parks. Its buildings were tasteful, its residences pretty, and neatness and thrift were everywhere apparent. The churches were Protestant; the people all spoke German, which was taught in the clean-looking schools; the morning paper, and in fact all the publications, of which there were several, were printed in the German language. The mayor's name was Schmidt, and he could not speak Russian. German was the universal language of the shops and streets. There were several excellent hotels kept by Germans, and the food was German. The Russification of Libau had only been under way about eight years, and it was making very slow progress, as was frankly admitted by the Russian colony, which consisted of half a dozen Russian officials and their families, exiles from the capital, who performed certain

functions chiefly in connection with legal matters and the practice of the courts, which were being attempted in Russian and getting nowhere in particular. The chief of police, although a Russian official, bore a German name and was born in the town."—*Bellman, Mar. 30, 1918*.—"The districts that are most completely Germanized are the shores of the Gulf of Riga and the valley of the Dvina, that is to say the historic route followed by the Hanseatic merchants to the black-earth lands. The coast and the rivers are bordered with towns and villages of German aspect. The older parts of Riga recall the glimpses of a Hanseatic Venice which are still to be had in the heart of Hamburg, or of Danzig. . . ."—*Geographical Review, Dec., 1918*.

1905-1906.—Restlessness of the peasants.—Revolution of 1905.—"About the middle of the nineteenth century the Lettish peasants began to show signs of rebellion. Several times they revolted against their oppressors, but were suppressed by Russian troops."—R. Butler, *New Eastern Europe, p. 148*.—"The Baltic provinces took a most prominent part in the Russian revolution of 1905. "Because of the cruel condition of the masses, the outbreak was more sweeping there than in the rest of the empire. It was a rising, not only against Tsarism, but mainly against the Teuton barons."—I. D. Levine, *Resurrected nations, p. 150*.—"The landless labourers, excited by the atmosphere of the Peasants' Congress and the sight of Ritterschaft and Russian alike paralysed, under the leadership of Revolutionary students and other independents, took matters into their own hands. . . . The *Knechte* took to attacking the houses and castles of the *Ritter*; and in the three Provinces in the years 1905-1906 no less than 200 country-houses were sacked and burnt."—R. Butler, *New Eastern Europe, p. 44*.—See also RUSSIA: 1905; (January) to 1905 (November-December).

1905-1914.—Revival of German culture.—Establishment of educational institutions.—German element favors union with Prussia.—The German tendencies, particularly in the educational sphere, which held only a subordinate position during the period of the Russification of the provinces, began to revive with the revolutionary outbreak in Russia. "In the Revolutionary storms of 1905, when the Government lay paralysed and every nationality began to fend for itself, the Balts in Esthonia met together, opened a subscription list, and founded a Union for the defence of German culture. Their example was rapidly followed in Courland and Livonia; and the three Unions concerted operations. Their object was the reestablishment of the German schools, which the inauguration of the Constitutional régime in Russia seemed likely to render again possible. In effect considerable concessions were made to the nationalities after 1906 in the question of the schools. In the Baltic Provinces the authorities agreed to recognise the German secondary schools if reestablished, and to permit German as the language of instruction. It was stipulated, however, that all examinations, to the passing of which civil rights were attached, should continue to be in Russian. The *Landesgymnasia* in Courland and Esthonia were immediately reopened amid great Balt rejoicings. The difficulty of the examinations was met by Recapitulatory Courses in Russian in the different subjects. . . . The three Provinces are now covered with a network of German schools, housed in new buildings, and a good deal more lavishly equipped than were the old historic schools before the Russification. In particular there are now provided beside the *Gymnasia*,

which in the old days stood alone, *Realschulen* and *Realgymnasia*, in which facilities are available for technical and industrial education. In addition to the schools, the Unions have built libraries, theatres, *Kindergarten*, and *Ferienheime* [vacation homes]. They have organised Lectures, Women's Leagues—these were particularly active before the War—Country Holiday Funds, Free Meals for School Children, and the like. More or less at their instigation, or with their financial support, there have sprung up Land Banks, Agricultural Leagues, *Gewerbevereine* [trade unions], and social and literary societies. At the outset of the War, . . . by one of the last administrative acts of the Russian Government the schools were again closed . . . and the unions dissolved."—R. Butler, *New Eastern Europe, pp. 33-34*.—"During the World War the German element of the provinces expressed a desire for a union with Prussia. In 1918 the Courland Diet and the Landesrat of Livonia and Esthonia, both representing mainly the German population, adopted a resolution favoring severance from Russia and submission to the protection of Prussia. At the time of the German occupation under von der Goltz, the Baltic barons organized a militia, called the Baltic "Landwehr" which supported the German occupation army in Courland.

1915-1918.—German raids.—German occupation during the World War.—During the World War, the Baltic provinces, as a border land, suffered a great deal from invasions of the Germans. On April 27, 1915, Courland was raided by a force of one and a half corps of cavalry which proceeded from Tilsit accompanied by a small force of infantry, and occupied Shavli. On May 1 German patrols appeared before Libau on the Baltic, but were repulsed at Mitau, and retreated on the 7th. On May 8, Libau was again invaded by a German column, which was, however, routed at Sejny by Russian cavalry. (See also WORLD WAR: 1915; III. Eastern front: i, 1.) Finally on Sept. 3, 1917, the Germans under General von Hutier captured Riga (see WORLD WAR: 1917; I. Summary: b, 8.) After the armistice between the Bolshevik government and Germany on December 17, 1917, the latter was granted "police power" in the Baltic provinces, and the entire region, but more particularly Courland was occupied by German troops. According to reports, an army of over 100,000 men, under von der Goltz concentrated in Mitau, occupying the entire city. On October 8, 1918, these troops participated in the attack on Riga (from which the Germans had recently withdrawn), led by Avalov-Bermond, a veteran of the Russo-Japanese War and the World War, who pretended to combat Bolshevism. Despite the heroic resistance of the Letts, the troops entered Riga. The next month the Letts succeeded, however, in freeing Riga from the German troops, and they were driven back to their base in Mitau. Finally, upon the threatening demands of the Allies and the arrival of a French-British squadron of more than twenty vessels, the German government had General von Eberhard take up preparations for the evacuation of the German troops, which took place at the end of November, 1918.—See also BALTIC STATES: Esthonia: 1918-1919; Latvia: 1918.

1917-1918.—Revolution of 1917.—Political events between the revolution and Brest-Litovsk peace.—"When the Revolution broke out in March, 1917, it quickly reverberated in the Baltic provinces. The Letts were ardent revolutionists and they were spiritually united with the Russian democracy. They proceeded to organize an autonomous gov-

ernment in those parts of their country that were unoccupied by the Prussian army. Around the Lettish region rallied many Letts that served in Russian regiments and the Lettish force became one of the bulwarks of the Russian Revolution."—I. D. Levine, *Resurrected nations*, p. 151.—"The sequence of events in the three provinces between the Russian Revolution and the Peace of Brest is very confused. The following account will, the writer believes, be found accurate. The particulars given for Esthonia are partly based on a letter to the *Spectator* (July 13, 1918) from Dr. Antonius Piip, a member of the Maanõukogu and its Informal Diplomatic Representative in London. In September 1917 the Courland Diet at the instigation of the occupying authorities called a National Assembly at Mitau. The Assembly appointed a National Council of twenty members to represent the Province until its future constitution should be settled and dissolved. Similar Councils were appointed by National Assemblies called by the other three Diets of Livonia, Esthonia, and the Isle of Oesel, and by the City of Riga, after the German Occupation of Livonia and Esthonia in April, 1918. With these five National Councils the German Government conducted all subsequent negotiations in the three provinces, treating generally with the Courland Council separately and with the other four Councils sitting together as a 'United National Council'."—R. Butler, *New Eastern Europe*, p. 32.—In July, 1917, before the Courland National Assembly met, the Letts declared themselves in favor of a separation from the rest of the Baltic provinces in the form of an autonomous state, composed of territory where the population is at least 75 per cent Lettish. At the same time the Esths, whom the Russian provisional government had granted self-government by an act of April 12, 1917, called an assembly at Riga and declared for the formation of an autonomous state of those parts of the Baltic provinces where the population was 90 per cent Esthonian. (See also BALTIC STATES: Esthonia; and Latvia.) By the Brest-Litovsk treaty, March 3, 1918, and the supplementary treaties concluded August 27, the Russian Soviet government renounced all sovereign claim to the Baltic provinces.

1919.—Answer to proposed peace conference

of Allies at Prince's Islands. See RUSSIA: 1919.

1919.—Germany renounces its claims by Treaty of Versailles. See VERSAILLES, TREATY OF: Part III: Sect. X.

ALSO IN: V. Tornius, *Die Baltischen Provinzen* (1915).

BALTIC SEA (the Mare Suevicum of the ancients; German Ostsee or Baltisches Meer; Russian Baltiiskoye More), a sea of northeastern Europe, covering an area of about 166,000 square miles and enclosed or surrounded by Russia, Sweden, Germany and Denmark. Its greatest length is nearly 1000 miles; greatest breadth, about 4000 miles; estimated length of coastline, about 5000 miles. Inland extensions of the Baltic are: the Gulf of Bothnia, Gulf of Finland, Gulf of Riga, Gulf of Danzig and the Gulf of Lübeck. The Sea is connected with the North Sea by a channel named, in its course, the Skagerrak and the Cattegat or Kattegat, passing between Norway and Sweden on the north and the Jutland Peninsula of Denmark to the south. An artificial line of communication between the Baltic and the North Sea is the famous Kiel Canal, running through the Schleswig-Holstein Peninsula. All the Baltic ports are closed by ice during the winter, and the interruption of navigation from this cause is longer the farther east the port is situated. The Baltic Sea was declared neutral for commerce by a treaty between Russia and Sweden in 1759, to which Denmark acceded in 1760. A "Baltic Convention" for preserving the *status quo* of the Sea was signed at St. Petersburg (Petrograd) in April, 1908, between France, Germany, Great Britain, Russia, Sweden, Holland and Denmark. In 1897 it was proposed to connect the Baltic with the Black Sea, a distance of nearly 1000 miles. This project has since been carried out by the former Imperial Russian government, so that it is now possible to travel by water from the seaport of Riga through a system of canalized rivers to Kherson (Cherson) on the right bank of the Dnieper, less than twenty miles from the mouth of that river, which flows into the Black Sea.—See also POLAND: 1919 (June); 1919-1920: War with Russia; WORLD WAR: Miscellaneous auxiliary services: I. Armistices: f, 4; 1915: IX. Naval operations: c.

BALTIC STATES

Esthonia and Latvia, formed the Baltic provinces after the World War. See RUSSIA: Map of Russia and the new border states.

ESTHONIA

Territory.—Area.—Population.—Education.—The Republic of Esthonia consisted (in 1921) of the former Baltic province of Esthonia, the northern part of Livonia, the northwestern portion of Pskov, and the islands of the Moon sound. It had an area of 23,160 square miles with a population of 1,750,000, 90 per cent or 95 per cent of which were Esths, 2 per cent Germans, 1 per cent Russians, and the rest Letts, Lithuanians, Swedes, and Jews. The majority (about 83 per cent) were Lutherans; the remainder, Greek Orthodox, Roman Catholic, and Jewish. In 1897, 3 per cent of the population was illiterate. At present elementary education is compulsory. On December 1, 1919, the republic reopened the old Dorpat university, founded in 1632, as the Esthonian university.

The history of Esthonia as that of the rest of the Baltic provinces, is a continuous struggle

against oppressions of its rulers and, more particularly, the land-owning nobility. Its revolutionary movement was largely an agrarian movement.—See also BALTIC PROVINCES.—For its Christian conquest see LIVONIA: 12th-13th centuries; and PRUSSIA: 13th century.

1918-1919.—**Creation of the republic.—Recognition.**—The republic of Esthonia came into existence on February 24, 1918, when its National Council, established by the Russian provisional government, declared its independence on the basis of the principle of self-determination of nations as had been accepted by the Allies and Russia. It was recognized by the Soviet government *de jure*, upon its recognition by Great Britain, France, Italy, Japan, Poland, and Sweden. A constituent assembly was elected in April, 1919, and in June a special commission began to draft a constitution on the democratic plan, based on all the paper constitutions of the world, especially that of Switzerland, in which the people have the right to initiate legislation. By this instrument the supreme power is vested in a Constituent As-

sembly, composed of 120 members, whose president is head of the state. Eleven ministers make up the cabinet.

1918-1919.—Struggle against Germans.—Aid from Finland.—Warfare with Bolsheviki.—Estonia was under German occupation in 1918, the severity of which was such that the passive resistance of the Estonians was transformed into open rebellion against the occupation authorities. Before the news of the armistice concluded between the Allies and Germany could reach Reval, the Estonians had taken the supreme power into their own hands under the leadership of Mr. Poska. This took place on 11 November, 1918. The German new government was obliged to accept this act of rebellion as a *fait accompli* in an agreement concluded on 19 November, 1918, between the representative German government and the Estonian Provisional Government, by which the Germans agreed to withdraw the occupation army from Estonia without delay and hand over all the civil institutions to the Estonian authorities. Nevertheless, the Germans did not abide by this agreement, but prevented the Estonians from constituting a national army. Large German forces remained in the country, and destroyed all the war material before being obliged to leave, this in some cases being carried out only after a struggle between the Estonians and Germans. Hating independent Estonia more than ever, they entered into an agreement with the Russian Bolshevists, who thought that the time had now arrived to reunite Estonia with Soviet Russia, which was frankly admitted by a Russian military expert at the Dorpat Peace Conference. By such agreement the Germans handed several towns over to the Bolshevists without any fighting and with all the war material, there being great quantities of the latter in Walk. The Estonian Government was now in a difficult position. They had only succeeded in taking over from the German occupation authorities 20,000 marks, they had neither army nor munitions, and the first detachment sent out to Narva to meet the Bolshevists on 21 November, 1918, consisted of only 150 students and college boys. The mobilisation notices were practically suppressed by the Germans still in the country. Fortunately the Finnish Government came first to the aid of Estonia by supplying her with 5,000 rifles, 20 old guns, and 10,000,000 Finnish marks. In spite of the fact that the Bolshevists advanced thus into a defenceless country, the Provisional Government, under Mr. Paets, recently released from a German prison, seeing the growing enthusiasm of the people, did not lose heart. 'You had your Marne,' said Mr. Paets to the representatives of the Allies, 'before marching to victory; let us also have our Marne,' and, sure enough, victory was soon in sight. On 12 December, 1918, a small British squadron under Admiral Sinclair entered Reval bringing arms and munitions to the Estonian army. On 26 December they captured two destroyers from the Bolshevists and handed them over to the Estonians, which the latter, after effecting in a few days the necessary repairs, sent again to sea against the Bolshevists. The end of 1918 was the most critical period for Estonia. The Bolshevists had occupied two-thirds of the country and had approached within fifteen miles of Reval, the capital; but the first days of 1919 brought a change in the situation. The Estonian army, now led by the young and very able General Laidoner, commenced an offensive against the Bolshevists. The armoured trains, improvised by Captain Pitka in conjunction with landing parties from the young navy led by the same Cap-

tain, rendered valuable assistance. The first Finnish volunteers arrived in the country, as well as some Swedes and Danes, which strengthened the morale and discipline of the new-born Estonian army and caused panic to rise in the ranks of the Bolshevists. In a fortnight's time most of Estonia, with the towns of Dorpat and Narva, was freed from the Bolshevist yoke, and on the first anniversary of the declaration of Estonian independence, 24 February, 1919, the commander-in-chief was able to inform the National Council that there were no foreign troops on Estonian soil. The secret of this rapid clearing of the country from the Bolshevists lies in the unexpected enthusiastic resistance put up by Estonia, as also the new partisan tactics and strategy applied in such an able manner by commanders such as General Toenisson, General Soots, General Poedder, Colonel Puskar, and Colonel Mut, the artistic perfection of which was apparent in the so-called Jacobstadt operations, by which the whole of Latvia was cleared of the Bolshevists in June last [1919]. Certainly the Estonian army, barefooted and badly equipped as it was, took every advantage of outside support. They therefore assembled the remnants of the so-called Russian Northern Corps after their defeat in Pskov by the Bolshevists, and organised them to form a military unit which would become autonomous as soon as it was outside Estonian territory. General Balacovic and General Rodzianko became the conspicuous figures of this army, which later passed under the command of General Judenich on the resignation of the supreme command by General Laidoner in the first advance against Petrograd. The Estonians also organised some Lettish units which rendered great service to Latvia by helping Estonia to clear the Bolshevists out of North Latvia, and later assisted in the defeating of the Landeswehr and overthrowing the rebellious Needra's government established by the Germans, which enabled the legal Government of Ulmanis again to enter into power. The Estonians having already advanced to the suburbs of Riga, the final blow to German enterprise in the Baltic was rendered abortive by the interference of the Allies, who delivered an ultimatum to the Estonians to cease fighting."—A. Piip, *New Europe*, Apr. 15, 1920.—See also RUSSIA: 1919.

1919.—Reconstruction activities in the new states.—"After a long struggle against the Germans and the Bolsheviki, Estonia and Latvia have turned their attention to internal problems. According to the government's program, as presented to the Estonian Constituent Assembly on November 21 by Prime Minister Tormisson, provision was made for reforms affecting agrarian and labor conditions as well as finances; extremist tendencies were to be discouraged as detrimental to the maintenance of public order."—(*Political Science Quarterly*, Sept., 1920, Supplement, p. 130).

1919-1920.—Meeting of the Constituent Assembly.—Negotiations with the Bolsheviki.—Treaty signed Feb. 2, 1920.—Death of Poska, Mar. 9, 1920.—"Estonia having cleared her own country and that of Latvia from the Bolshevists and Germans, the latter, with the permission of the Allies, were allowed to remain in Courland. Meantime the Constituent Assembly was elected in April last [1919], and a democratic government formed with Mr. Strandman as Prime Minister. The war aims having been accomplished, and the people having been at war for five years, the desire for peace began to make itself felt. The peace movement

received support from the unwillingness of the anti-Bolshevist Russian groups under Kolchak, Judenich, and Denikin to recognise the Esthonian national rights, this policy being to some extent agreed to by the Allies despite the fact that it was represented to the Peace Conference in Paris by Esthonia, as also by the other Border States, that a successful campaign against Bolshevist rule could be accomplished solely by a combined attack on the part of the Russian anti-Bolshevist forces and the Border States, but that the latter were only willing to do this after their independence had been recognised by the Russians as also by the Allies. The creation of a new North-Western Russian Government did not effect much improvement, they on the one hand declaring themselves to be favourable to Esthonia, while on the other hand claiming to be the agents of Kolchak, who was obviously hostile to Esthonian liberty, and declining to commit themselves to any definite practical arrangements so far as Esthonian independence was concerned. There therefore existed an irreconcilable difference between the Esthonians and the Russian anti-Bolsheviks, imposing on the former the national obligation of separating themselves from the latter as soon as it was possible to make an honourable peace with their enemies in war, the *de facto* Russian Government, who had already made known their willingness to recognise the right of Esthonia to complete independence. It was therefore quite natural that the Esthonians accepted the peace proposals addressed by Tchichérin to them on 31 August, 1919. But Esthonian policy also inclines to the necessity that a common policy should be pursued by the Baltic States for their mutual interests. For this reason the Esthonian delegation at the first peace meeting at Pskov on 19 September, 1919, laid down as the first condition for peace that such a proposal of peace should be submitted to all the Baltic States, and, receiving a favourable reply, argued the necessity of preliminary common discussions among these States, to which the Soviet Government unwillingly gave their consent. Three Baltic Conferences took place from September to November, the first two being participated in by all the Baltic States and the third by Esthonia, Latvia, and Lithuania. The line of common policy was discussed and in substance agreed, so that a new Peace Conference with the Russians was decided on, to be held before 25 October at Dorpat. The October events in Eastern Europe—namely, the advance of Judenich against Petrograd, supported by simultaneous sea operations by the Esthonian and British navies; and the Bermondts affair in Latvia, when the Esthonian armoured trains helped the Letts to save Riga from Bermondts—naturally made it impossible to hold the October Peace Conference. The idea, however, was not abandoned, but only postponed, the reasons which had guided Esthonia to accept the first peace proposals of Soviet Russia being still existent—the non-recognition of Esthonian independence by the anti-Bolsheviks. To this can be attributed the lack of Esthonian support in the Judenich operations, which Judenich and his generals claimed to be the cause of the collapse of the last offensive against Petrograd. The Bermondts conspiracy obliged the Letts to join forces with the Poles and other Powers whose policy was not peace with Russia, and they therefore did not agree to the necessity of immediate peace with the Soviet Government, the policy held by Esthonia chiefly on the grounds of the very heavy pressure brought to bear on her by the Red Army, which affirmed its readiness to pursue the remnants of the Judenich Army as far

as Reval itself. No active support being rendered by the Finns, Letts, or the Poles in the fierce fighting with the Bolshevists on the Narva front in November and later in December, the Esthonians decided to enter into peace negotiations with Russia on their own account, just as they had fought alone. The Lithuanians, who were willing to join the Esthonians in these negotiations, were unable to do so on account of friction with Poland, as the latter could have made the peace *pourparlers* a pretext for the invasion of Lithuania. Eventually the Peace Conference at Dorpat was opened on 5 December between the Esthonian and Russian Soviet governments only, while the last conference at Dorpat on 16-19 November, to settle the question of the exchange of hostages, consisted of Mr. Litvinov, the Soviet representative on the one part, and the Esthonians, Lithuanians, and Letts on the other. The negotiations, which were presided over on the Russian side first by Mr. Krassin and afterwards by Mr. Joffe, and on the Esthonian side by Mr. Poska, were very strenuous, and were many times on the point of being broken off. Only the desire for peace on both sides helped to surmount the difficulties, so that the armistice was signed on 31 December [1919] and the final peace on February 2 [1920]. The principal terms of the Peace Treaty are well known:—The Russian Government recognises the full independence of the Esthonian State *de jure* for ever, and renounces all rights of sovereignty over the land and people of Esthonia existing under the former State *régime* of Russian and based on International Treaties. Russian property, real and otherwise, formerly belonging to the Russian crown on Esthonian territory or waters, becomes the property of Esthonia. Russia hands over to Esthonia the sum of 15,000,000 roubles in gold, which will stand as security for Esthonian money and foreign credit. Russia grants Esthonia preferential rights for the constructing of the Reval-Moscow railway, and for the exploitation of one million dessiatines [about 2,000,000 acres] of woodland. Esthonia grants Russia free economic access to the sea, all goods in transit being free from transit and import duties, the proper use of Esthonian free harbours, and port and railway tariffs equal to the local tariffs in force in Esthonia. Esthonia renounces any further claim to Russian property as part of the old Russian Empire. The boundaries have been defined and the military guarantees settled. Diplomatic and consular relations will be instituted by special arrangement in accordance with the Allied policy followed in Russia in this regard.—A. Piip (*New Europe*, Apr. 15, 1920).—Jaak Poska, who was President of the Esthonian delegation that concluded peace with Soviet Russia, died in Reval on March 9. The results of his political handiwork in Esthonia have by no means been what he expected of it. Six months after an armistice was declared, and three months after peace was formally made, Esthonia found herself sadly disillusioned. The great profits which were expected to pour into the national treasury from the renewal of trade with the Soviet Government did not materialize, as many reputable firms found on investigation that no certainty existed that the Bolshevist firms could, or would, fulfill their contracts. Esthonia also found that Latvia and Lithuania were preparing to compete with her for the brokerage on such trade as could be arranged. Food raids by Bolshevist bands and a rush of small food traders across the border made it necessary for her to keep armed forces at the frontier to avoid being stripped of all supplies. Food prices went up 100 per cent.

as the result of the Bolshevist demand and the stoppage of trade with the Scandinavian countries and Finland. The Esthonian mark also depreciated fully 20 per cent. The ceaseless Bolshevist propaganda in Esthonia failed of results largely because of these conditions, which showed the Esthonians that Bolshevism as a political credo was undesirable from the point of view of results."—(*New York Times Current History*, Oct., 1920, pp. 92-93.)—See also BALTIC PROVINCES; and RUSSIA: 1920.

1921.—Extent of territory. See EUROPE: Modern: Political map of Europe.

LATVIA

Territory.—Area.—Population.—Education.—Latvia is constituted of the Lettish countries, which until 1561 were united and then became subject either to the Lithuanian-Polish or the Swedish rule until incorporated into Russia in 1795. (See BALTIC PROVINCES). Situated on the southern littoral of the Baltic sea, it comprises the former province of Courland, the southern part of former Livonia, three districts of Vitebsk (called Latgale), and strips of territory of the provinces Pskov and Kovno. It has an area of about 24,440 square miles (and 25,000 square miles including lakes), with an estimated population of 2,508,800. The greater part of the population, numbering about 2,000,000 or 78 per cent, are Letts. "They have lived in their land since time immemorial and are the only rightful masters of it. The Letts are not of Slavonic origin, neither are they related to the Mongolian Finns, dwelling to the north of them. They are, together with the Lithuanians, the only survivors of a distinct branch of the Indo-European family. They speak a language closely related to the Lithuanian. But they are separated from the latter by religion, being Lutherans, while the Lithuanians are Roman Catholics."—J. D. Levine, *Resurrected nations*, 1919, pp. 146-147.—Of the remainder of the population, in 1914, 7 per cent were Jews, 6 per cent or 7 per cent Germans, 5 per cent Russians, and the rest Poles, Lithuanians and others. The majority are protestants; 200,000 Letts are Greek Orthodox, and a number of the people are Roman Catholic. Before the war the Latvian territory had ninety-eight secondary schools with 22,600 pupils. In 1919 the Riga Polytechnic was transformed into the Latvian university, which accommodates at present over 3,000 students. The Musical academy in Riga has also been reopened.

1918.—Formation of an independent state.—**Constitution.**—Following the declaration of the Letts in favor of an independent state in 1917, (see BALTIC PROVINCES: 1917) officially presented to the Russian Constituent Assembly in 1918, the Free State of Latvia, the ancient Livonia, was proclaimed on November 18, 1918, by an organization established for this purpose in Riga. The proposed constitution provides for a Constituent Assembly of 150 members to be elected by universal, equal and direct suffrage of both sexes, twenty-one years of age. Until the Constituent Assembly was convoked, the highest authority of the republic was vested in the State Council, which consisted of 120 members, seventy-eight representing the Letts and the remaining twenty-four, Germans, Russians, Jews and Lithuanians. There was also a cabinet, responsible to the state council, and a ministry consisting of the ministers of the interior, foreign affairs, finance, national defence, trade and industry, public works, public instruction, agriculture, justice, supplies, and the state

controller. The republic was recognized *de facto* by Great Britain, Japan, Italy, and several of the smaller states.—See also LIVONIA: 1917.

1919.—Reconstruction activities in the new states. See above, ESTHONIA.

1920.—Peace with Russia.—A treaty of peace was signed between Latvia and soviet Russia on August 12, under the terms of which Russia unconditionally recognized the independence and sovereignty of Latvia and renounced all sovereign rights which Russia had formerly held over the people and land. Both sides renounced all claims of indemnities or compensation. Russia agreed to restore all property taken from Latvia during the war, or, as an alternative, to pay for such property in the sum of 4,000,000 gold rubles.—The Lettish government had appointed one Alfred Nagel as secretary of the new Latvian legation in Washington. The latter was arrested by the American immigration officials on his arrival, August 21.—"Mr. Nagel protested against his detention, and declared that although a peace agreement had been signed with the government of Lenin, Latvia did not lean toward Bolshevism, against which form of government, he stated, he had written several articles. He admitted that he was married to a German woman. The United States authorities alleged that Nagel had rendered secret service to the Germans during the war, and cabled the Latvian Government asking for his recall. The matter was closed by the announcement from Walter M. Chandler, legal adviser to the new republic, that Nagel's appointment had been cancelled by the Latvian Government, and that he would return to Europe of his own accord."—*New York Times Current History*, Oct., 1920, p. 95.—See also BALTIC PROVINCES; RUSSIA: 1920.

BALTIMORE, George Calvert, 1st baron (c. 1580-1632), British statesman, and member of House of Commons in 1621 and 1624. Became interested in colonization of the New World and obtained a charter to found a colony under the title of the Province of Avalon. He crossed the ocean several times in the interests of this project, which finally failed. In 1632 he obtained a grant of the territory which was called "Maryland" (see also MARYLAND: 1632; and U. S. A.: 1607-1752). Before the title was issued, Sir George died and the grant devolved upon his son Cecil (q.v.).—See also NEWFOUNDLAND: 1610-1655.

BALTIMORE, capital of the state of Maryland.

Area.—Population.—Industries and commerce.—**Port.—Educational center.**—According to the latest census (1920), Baltimore occupies an area of 51,520 acres with a population of 733,826. "It is

one of the country's leading seaports, ranking about fifth in value of exports and imports. This city is an important wholesale and distributing center, and has very good railway facilities. The leading industries are the manufacture of men's clothing, copper, tin and sheet iron products, tobacco manufactures, slaughtering and meat packing, foundry and machine shop products, printing and publishing, steam railroad repair shops, also canning and preserving, bread and other bakery products, confectionery, patent medicines and compounds, and druggists' preparations, lumber and timber products, women's clothes and malt and distilled liquors. The capital investment in manufactures in 1914 amounted to

boats. A two-story recreation pier at the foot of Broadway was completed early in 1914. The lower floor of this structure is used for commercial purposes; the upper section for a recreation center."—*Baltimore Book* (1916), p. 29.

Baltimore is considered an educational center, with such leading institutions as Johns Hopkins University, the Goucher College of Baltimore, and a number of prominent medical and law schools. "The City also boasts of the Peabody Institute, which consists of an art gallery, a library and a conservatory of music which is recognized as one of the leading schools of music in the country; the Maryland Institute of Art and Design, the

\$177,301,000, while the value of manufactured products for the same year was \$215,172,000."—*Moody's Analyses of investments* (1919) p. 264.—"Prior to the fire of 1904 the City owned little wharf property of importance. The fire made it possible to acquire all of the burned district fronting on the harbor. The City purchased the property, removed all buildings, streets, etc., and laid out a system of public wharves and docks along Pratt, President and Albemarle streets. The piers are situated in the upper harbor and are intended for the coastwise and bay trade. The transatlantic steamers, at present, find ample accommodations at the railroad piers in the lower harbor. Along Market Place the City has erected three handsome, commodious buildings, a fish market and wholesale markets, all within a stone's throw of Pier 4, which is set apart for the use of market

Walters Art Gallery, which is far-famed; the Enoch Pratt Free Library, with its multiplicity of branches; the Maryland University, with its various departments of learning, and a score of other institutions devoted to the culture and intellectual pursuits. Aside from these, there are the Baltimore public schools, with their several colleges."—*Ibid.*, p. 105.

1608-1797.—*Settlement*.—"To begin at the very beginning of direct historical information concerning Baltimore, one must go back to the year 1608. June 2nd, 1608, Captain John Smith . . . having settled Jamestown, started from the vicinity of Cape Henry, on the first of his two famous explorations of the Chesapeake Bay. During this expedition, which lasted nineteen days, he visited every inlet on both sides of the Bay, from the Capes to the Patapsco River (named by Smith,

Bolus), sailed up that stream, and from him we get the first information concerning the region, now Baltimore. Smith and his followers were, therefore, the first white men to set eyes on the present site of the City. . . . Following Captain Smith's explorations in this vicinity, there is a lapse of years before the thread of the narrative can be taken up by the historian. In the absence of proof to the contrary it must be assumed that Indians roamed over the site of Baltimore at will, or at least without interference from white men; for it was not until 1661 that history records the second step in the advance of civilization. In 1661 the first surveys were made, pursuant to land grants, and henceforth this section became the permanent habitation of white men. Tract after tract was taken up by settlers, and in 1706 Locust Point, then 'Whetstone Point,' was made a port of entry."—*Baltimore Book* (1916), pp. 143-145.—In August, 1729, an act of the provincial legislature formally laid out the town of Baltimore, named in honor of the Lords Baltimore, founders of the province of Maryland. Its commercial development was rapid after 1750. Baltimore was incorporated as a city in 1797.—See also MARYLAND: 1729-1730.

1861 (May).—Disloyalty put down. See U. S. A.: 1861 (April-May: Maryland).

1864.—Republican convention. See U. S. A.: 1864 (May-November).

1866.—National labor congress. See LABOR ORGANIZATION: 1825-1875.

1871-1915.—Colored population.—Negro segregation ordinance.—"At the close of the eighteenth century the actual number of negroes in Maryland was larger than the number in any of the other states with the exception of Virginia and South Carolina, about one-third of its population being of African descent. At the close of the nineteenth century . . . the percentage of negroes was considerably greater than that in any other of the border States, about the same as that of Texas, and not very much less than that of Tennessee. Moreover, the negro population was very unevenly distributed. In five counties south of the Patapsco, where the negroes in 1860 had outnumbered the whites by about 13,000, the exodus of blacks to the cities had given the white in 1900 a small preponderance. In the Southern counties on the Eastern Shore the negroes in the same year constituted about one-third of the population. In Baltimore City the negro population had risen from 27,898 in 1860 to 79,258 in 1900. According to the figures of the Federal census of that year, the negro inhabitants of the city outnumbered those of any other city in the country with the exception of Washington, and as the area included in the Baltimore count was only thirty square miles, the number of negroes to the square mile in Baltimore was greater than in any other city in the United States, or, in fact, it is probable that no other

thirty square miles on the globe was inhabited by so large a negro population as that of Baltimore."—C. C. Hall, *Baltimore, its history and its people*, p. 326.—Various provisions have been made for the segregation of the negroes. They have had to use separate schools, separate churches, and until 1871, separate coaches in railway cars. On September 25, 1913, was passed "an ordinance to prevent conflict and ill-feeling between the white and colored races in Baltimore City, and to preserve the public peace and promote the general welfare by making reasonable provisions requiring the use of separate blocks for residences by white and colored people, respectively."—*Ordinances and resolutions of the Mayor and City Council*, 1913-14, p. 117.—This ordinance was further supplemented on November 8, 1913, by a provision that "no building or portion of a building in the City of Baltimore shall be used as a church or for the purpose of conducting religious services, or for a school, a dance hall or an assemblage hall, by white persons in a colored block . . . or . . . by colored persons, in a white block."—*Ordinances and resolutions of the Mayor and City Council*, 1913-1914, pp. 143-144.—After the ordinance had been in effect for about a year, a test case was brought before the court of appeals of Maryland, in October, 1915, in which the city administration, representing the people of Baltimore, defended the ordinance against opposition which came both from white and colored people. A prominent part in the opposition was played by Senator Moses E. Clapp, of Minnesota.

1904.—Great fire.—On February 7 and 8, 1904, "the heart of Baltimore was burned out, . . . smoldering ashes and hideous debris stretched over 140 acres. . . . The loss, approximately \$125,000,000, was a staggering blow."—*Baltimore Book* (1916), p. 11.—The fire burned thirty hours and destroyed about 2,600 buildings. But it aroused the spirit of progress and cleared the way for many civic improvements.

1912.—National Democratic convention. See U. S. A.: 1912: Woodrow Wilson and the election.

1914-1915.—Home rule.—The city of Baltimore obtained the right of home rule by an amendment to the Maryland constitution passed by the legislature in 1914, and voted upon for adoption at the general election in 1915.

1917.—Housing improvements.—New housing code.—Octavia Hill association.—A new housing code drafted in 1917 and submitted to the city council provides that dwelling places shall be built with ample cubic air space and light in each room and that water closets shall be within the houses instead of in the yards. The same year a committee on public health and housing was appointed by the mayor. Following its investigations, an Octavia Hill association, on the model of the Philadelphia association, was to be formed, but the plan had to be delayed on account of the war.

1918.—Increase in area.—City planning.—Annexations effective June 1, 1918, doubled both the area and the water front of Baltimore. The topographical survey commission renewed city planning activities.

1919.—Sewage disposal.—Partly as a result of war-time economies, the city changed from reduction to hog feeding as a method of sewage disposal and let a contract which was expected to net the city \$16,500 annually.

1920.—Police department reorganized.—"The Baltimore police department, according to a new law of Maryland, is henceforth to be under control of a single commissioner instead of a board of police. Moreover, the voters of the city are to

determine whether the police force is to continue under state control or is to be made responsible to the mayor."—E. D. Graper and H. J. Carman, *Municipal affairs (Political Science Quarterly, Supplement, Sept., 1920)*.

BALUCHISTAN, or Balochistan: Political divisions.—Area.—Population.—A county in Southern Central Asia, lying to the south of Afghanistan, and extending to the Persian Gulf. "Balochistan, in the modern acceptation of the term may be said, in a general sense, to include all that tract of country which has for its northern and north-eastern boundary the large kingdom of Afghanistan, its eastern frontier being limited by the British province of Sindh, and its western by the Persian State, while the Arabian Sea washes its southern base for a distance of nearly six hundred miles."—A. W. Hughes, *Country of Balochistan*, p. 2.—Much of Baluchistan is under British control. The territory "is politically divided into two main parts: (a) A strip of country on the north (53,821 square miles in extent), which since 1870 has been under direct British control, part of it by cession from Afghanistan after the second Afghan War (see Afghanistan (1869-1881) and part of it acquired by lease from the Khan of Kalat, the large native state to the south; and (b) a much larger area (78,034 square miles) included within the two native states of Kalat (71,500 square miles) and Las Bela (6,441 square miles), which front on the Arabian Sea. In area, the Khanate of Kalat represents over half of Baluchistan; nevertheless, in population and general importance the strictly British territory to the north is worthy of most consideration, and is the only part that shows any signal advancement. While the British government maintains political agents or residents at Kalat town, the capital of Kalat, and at Bela, the capital of Las Bela, their intervention in these States is confined mostly to occasional arbitration of intertribal disputes."—H. D. Baker, *British India (Special consular reports, No. 72, p. 474)*.—"The British territory is administered from Quetta, the headquarters of the Province, by a Chief Commissioner, and the Agency territories and other portions of Baluchistan by the same officer as Agent to the Governor-General. . . . Baluchistan is of great strategic importance, commanding the numerous passes to the south of the great caravan route through the Gomal to Ghazni, Kabul, and Kandahar."—*Hazell's annual and almanack*, 1920.

According to the British "India Office List" the population of British Baluchistan in 1911 was 414,412, and of the Baluchistan States 420,291.

Origin of the name.—Aboriginal races and tribes.—"Professor Rawlinson derives the name of the 'Baloch' from Belus, king of Babylon, who is identified with Nimrod, the son of Cush, and says that 'the names of Belus and Cush, thus brought into juxtaposition have remained attached to some portion or other of the region in question from ancient times to the present day. The country East of Kirman was called Kusem throughout the Sassanian period. The same region is now Beloo-

chistan, the country of the Beloochees or Belus, whilst adjoining it to the East is Cutch or Kooch.' With the name of Cush may be yoked 'Kech' (the capital of Makran), 'Kachi' (a province of Baloochistan) and 'Cashmere'; and, as the Sindhis call the Baloch, 'Baroc', 'Kach and Baroch' (Cutch and Broach of our maps) may be linked together. The country now called Balochistan was called by the Greeks 'Gedrosia' and was inhabited on the seacoast by the 'Ichthyophagi' (fish-eaters) and on the North-West by the Paricanii, Utii, Maki and other tribes. [According to Charles Masson, the Baluchis are divided into three great classes, the Brabus (who are a different race from the true Baluchis), the Rinds, and the Lumris (or Numris)]. One of the tribes or clans now inhabiting it, viz., the Rind tribe (whose name signifies a 'turbulent, reckless, daring man')—which, it may be noted, has never acknowledged the authority of any ruler in the country, and each individual member of which professes to owe obedience to no one, so that the tribe has no recognised head—assert that they originally came from 'Alaf,' which is supposed by themselves . . . to be Haleb or Aleppo in Syria. They say that they are Arabs of the tribe of Quraish and were forced to the number of 40,000 to emigrate from 'Alaf' by Yazid I, for having rendered assistance to Husain 'the martyr,' nephew of the prophet Muhammad, in A. H. 61. . . . These Rinds claim to be the true Baloch, and to one of their ancestors named Jalal Khan, or rather to one of his sons, whose names are made to suit the exigencies of each clan, the pedigree-makers of almost every clan in Makran, claiming to be respectable, are pretty certain to trace their clans' descent. Pottinger records the fact that, in his day the Brahuis (who are Dravidian Cushites) claimed descent from the earliest Muhammadan invaders of Persia, by whom the Rinds are doubtless intended. The Kalmatis of Kalamat (the Kalama of Arian and others) make a man named Kalamat their ancestor, a Rind, and one of the four sons of Jalal Khan. . . . That some families in most of the Baloch clans, in nearly all, perhaps, are related by marriage to the Rinds is quite possible . . . but I doubt if very free intermarriage between many clans and them, has at any time been prevalent. Among the earliest mention of Makran and the Baloch with which I am acquainted are various passages in the Shah-nama of Firdusi (compiled about A.D. 1000 by command of King Mahmud of Ghazni, who is said to have ordered all available resources to be placed at the disposal of the author) in which it is stated that Kai Khusru (about B.C. 550) King of Persia passed through Makran and killed the king of the country."—E. Mockler, *Origin of the Baloch (Journal of the Asiatic Society of Bengal, v. 64, pt. 1, no. 1, pp. 30-31)*.

B.C. 325.—Traversed by Alexander.—"The early history of the country of Balochistan, before the march of Alexander the Great through its two southernmost provinces, Las and Makran, is involved in the greatest obscurity. . . . Arrian's account of the Macedonian monarch's march from India, through the country of the Oritæ and the Gedrosii, clearly shows the former to have comprised the present district of Kolwah, with the tract adjacent to it on the west in the Makran Province, and this has contributed in some degree to invest these poor and wretched places with no small interest and renown. Alexander is, by his historian, said to have left Pattala, in Sindh (presumed to be Tatta, on the Indus), some time either in the months of March or April [B.C. 325], and to have proceeded in the direction of Bela,

crossing in his route the lower ranges of the Brahuik mountains. Thence he marched in the direction of Jau, in Makran, forcing a very difficult pass some distance southeast of the ancient town of Gwajak, and here it was that the natives of the country had assembled in considerable numbers to oppose his progress. He is then supposed to have kept somewhat nearer the coast, traversing the present Kolwah district, where mention is made of the difficulty experienced in procuring water. The great conqueror's admiral, Nearchus, about the same time, under the direction of Alexander and for purposes principally of discovery, coasted along the shores of Balochistan, and his account of the natives he met with, and the difficulty he found in obtaining supplies, is as credible as if the voyage had been carried on under similar circumstances at the present day. The severest privations of fatigue, hunger, and thirst had to be endured by all, from the highest to the lowest, and both the fleet and army suffered extreme hardship, until the latter reached the fertile and cultivated valley on the western border of Gedrosia, the present Banpur; thence it passed into Kermania, now known as the Persian Province of Kerman. It would appear that another detachment of the Greek army marched from India to Persia by a higher route, through Arachosia and Drangiana, the modern Kandahar and Sistan districts. This was the force under Kraterus, which does not seem to have met with so many difficulties and obstructions as that immediately under Alexander's command in the country of Gedrosia (Makran).—A. W. Hughes, *Country of Balochistan*, pp. 177-178.

A.D. 711-1030.—Invasion of Arabs.—Conquests of Musaud.—“In A.D. 711, or about a thousand years after Alexander's march through the country, the army sent by the Governor of Basreh, Hejaj, under the command of the celebrated Arab general, Muhammad Kasim Sakifi, is supposed to have effected the subjugation of Makran on its route; and from this date may no doubt be traced the colonization of much of the country by various tribes of Arabs. Between this period and the early part of the eleventh century little seems to be known of any part of Balochistan; but about A.D. 1030 it is recorded that Musaud, the son of Mahmud of Ghazni, extended his conquests up to Makran, but did not penetrate into the mountainous portion of Balochistan. His inroad seems to have been confined almost entirely to the level districts, and without any attempt at a permanent retention of the country. Nor can this be wondered at, since neither the country nor its people were able to offer sufficient inducements for their conquest, though it would seem to be an ascertained fact that its wilds and fastnesses were often resorted to by defeated or disappointed competitors for the thrones of neighbouring States as places of temporary refuge.”—*Ibid.*, p. 179.

1380-1386.—Conquest by Timur. See TIMUR OR TIMOUR.

17th century.—Brahui conquest.—Sewahs displaced.—Mohammedanism introduced.—“After this there is another great gap in the history of Balochistan, and nothing at all definite is known till the period of the Brahui conquest, under the direction of one Kambar, a chief of the Mirwari tribe, which is believed to have occurred towards the latter end of the seventeenth century. Before this period there is a tradition that a Muhammadan family, the Sehrais, ruled at Kafat, and their burial-ground, says [Charles] Masson [the American explorer], is still shown immediately south of the town walls of the capital of Balochistan. This

reigning family seems to have been displaced by a Hindu caste, the Sewahs, but when they began to wield supreme power in the country, and how long their rule lasted, history does not record. This much, however, is known, that the Sewahs in their turn were ousted by the Brahuik tribe, under the leader already mentioned, and Pottinger thus relates the story of the revolution:—“Kalat had previously been governed by a Hindu dynasty for many centuries, and the last Rajah was either named Sewah, or that had always been the hereditary title assumed by the princes of his race on mounting the *gadi*. This last surmise seems to be the best founded, because the city of Kalat is at this hour very frequently spoken of as Kalati Sewah, an appellation it is more likely to have derived from a line of governors than from one individual. . . . Sewah was at length obliged to invite to his aid the mountain shepherds with their leader, against the encroachments of a horde of depredators from the western parts of Multan, Shikarpur, and Upper Sindh, who, headed by an Afghan chief, with a few of his followers and a Rind Baloch tribe called the Mazaris . . . [once] famous for its robberies, infested the whole country, and had even threatened to attack the seat of government, which was then nothing better than a straggling village. The chief who obeyed the summons was Kambar. . . . On their first ascending the lofty mountains of Jhalawan and Sarawan, these auxiliaries were allowed by Sewah a very small pittance, on which they could scarcely support life; but in a few years, having either extirpated or quelled the robbers against whom they had been called in, and finding themselves and their adherents the only military tribe in the country, and consequently masters of it, Kambar formally deposed the Rajah, and, assuming the government himself, forced numbers of the Hindus to become Musalmans, and, under the cloak of religious zeal, put others to death. Sewah, the Rajah, with a trifling portion of the population, fled towards Zehri, where his son Sangin was still in power; but their new enemies daily acquired fresh strength by the enrolment of other tribes under their banners, and at length succeeded in driving them from that retreat, whence they repaired to the cities of Shikarpur, Bakhar, and Multan, and obtained an asylum among the inhabitants there, who were principally of their own creed. Sewah is said to have died during the latter part of this rebellion, and his son Sangin, being made a prisoner, abjured his faith and embraced Islamism, which example was adopted by a good number of his followers, who still retain evidence of their former religion in the name of their tribe, that of Guruwani.”—*Ibid.*, pp. 180-181.

18th century.—Abdulla Khan.—Conquered by Nadir Shah.—Tyrannical rule of Mohbat Khan.—“The fourth ruler in descent from Kambar was Abdulla Khan, an enterprising chieftain, whose lawless exploits and marauding excursions still form a stirring theme for the wandering minstrels of Balochistan, one to which the Brahui still loves to listen. He is believed to have succeeded to the Khanship about the commencement of the eighteenth century, but, at all events, he was the ruler of Kalat some time before the celebrated Nadir Shah of Persia invaded India in 1739. Abdulla Khan, who was a brave and ambitious man, had about this time occupied himself in subjugating the large province of Kachh Gandava, then held by a number of petty chiefs, the majority of whom paid tribute to the Kalhora princes of Sindh. . . . He also made marauding excursions to Kej and Panjgur, in the Makran Province. Nadir Shah, when at Kandahar, is reported to have sent

a portion of his forces under experienced commanders to effect the reduction of Balochistan, and this seems to have been attended with success, since the two sons of Abdula Khan were forwarded to the Persian monarch as hostages for their father's good behaviour, Abdula Khan being confirmed by Nadir in the government of the Kalati kingdom. In another inroad made by this ruler into Kachh Gandava, he, with but 1500 men, ventured to attack a large Sindhi force of 8000 men at a place between Dadar and Mittri, in that district, and was there slain with 300 of his followers. His son, Mohbat Khan, one of the hostages in the camp of Nadir Shah, having received the usual *khilat*, on honorary dress, from that monarch, at once proceeded to Kalat and assumed the government of Balochistan. . . . Nadir, according to Masson, also appears to have ceded Kachh Gandava to the Baloch ruler as an equivalent or atonement for the blood of his slaughtered father, Abdula Khan; but it is thought that the services rendered by Mohbat Khan to the Persian King by engaging in hostilities with the Ghiljis, the inveterate enemies of the latter, had more to do with this cession than anything else. After Nadir's death in 1747, Mohbat Khan made an incursion towards Kandahar, but the active successor to the Persian throne, Ahmad Shah Durani, soon revenged this insult by invading the Baloch province of Sarawan and taking away with him the two brothers of the Kalat ruler, Eltarz Khan and Nasir Khan, as sureties for his future good behaviour. The tyrannical conduct of Mohbat Khan had incensed the chiefs of the country, and the Sardar of Sarawan put himself in communication with both Nasir and Ahmad Shah Durani, the latter of whom summoned Mohbat to his capital, and kept him captive till his death; his brother, Nasir Khan, being sent to Kalat to rule in his stead."—*Ibid.*, pp. 183-185.

1739-1795.—**Reign of Nasir Khan.**—**Progressive rule.**—"Nasir Khan at all events justified the choice of his subjects, and he soon began to initiate large and enlightened schemes of policy, such as no ruler either before or after him has ever done. He had had the misfortune, when a hostage at Kandahar, to kill *accidentally* his brother Eltarz Khan, from whom the Eltarzai families of Baghwana and Kotri are descended; but on his accession to power he took the best steps to secure both the fidelity and esteem of his subjects. The great desire of this ruler seems to have been the firm union of the Baloch community, and with the view, says Masson, of engaging the hearty co-operation of his tribes, and to secure the recent acquisition of Kachh Gandava, he divided its lands and revenues into four equal portions, making over two shares to the tribes of Sarawan and Jhalawan, assigning another to the Jat population of the country, and retaining the fourth to benefit his own revenue. . . . Nasir Khan, in order to foster trade in Balochistan, is said to have remitted many of the taxes imposed on merchandise by his brother, fixing them at a moderate rate. He was also extremely solicitous to induce Hindus to reside in his towns, and he revived an old grant formerly made by one of his predecessors, which empowered them to levy, for the maintenance of a Hindu temple and its priests at Kalat, one quarter of a rupee on every camel-load of goods entering the bazar. He also recalled a colony of Babis who had been expelled by his brother. It is to Nasir Khan also that may be attributed the planting of the numerous gardens in the valley close to the town of Kalat; he stocked them with fruit-trees brought from Kabul and Persia, and offered re-

wards for the finest specimens of fruit, grain, etc."—*Ibid.*, pp. 185-186.

1839-1841.—**British advance.**—Nasir Khan II recognized.—"Baluchistan, lying on the far side of the Bolan Pass, is well outside the geographical limits of India. [British] political relations with the country began in 1830 [when Khelat, the capital, was taken by the British army on its way through the Bolan Pass to Afghanistan]."—*Oxford survey of the British empire*, v. 2, p. 285.—The ruler, Mehrab Khan, was killed, but in 1841 the British recognized his young son, Nasir Khan II, and evacuated the country.

1854-1874.—**Treaty with British government (1854).**—**Failure.**—In 1854 a treaty was concluded between Nasir Khan II and the British government, in which the ruler of Baluchistan promised to cooperate with the British army against its enemies, and to prevent his subjects from plundering British merchants. In return Nasir Khan II was to receive an annual subsidy of 50,000 rupees. As long as Nasir Khan lived he fulfilled the terms of this treaty, but his successors were either unable or unwilling to do so, and diplomatic relations with the Kalat state were ended in 1874.

1876-1887.—**Foundation of the British province.**—**Treaty of 1876.**—**Incorporation of British Baluchistan with British India.**—"Quetta was permanently occupied in 1876, and the surrounding territory was leased from the Khan of Kalat (Khelat) in 1883. The founder of the province as it now exists was Sir Robert Sandeman [who first entered the province in 1876 and who became agent to the governor general in Baluchistan]."—*Oxford survey of the British empire*, v. 2, p. 285.—The treaty of 1876 renewed the older treaty of 1854 in many particulars, but in the matter of non-intervention the clauses were changed, and Great Britain reserved the right to settle disputes between the Khan and the sirdars (native chiefs). The Quetta district has been administered by British officers since 1877. British Baluchistan was incorporated with British India in 1887 and was divided into two districts, Quetta-Pishin and Thal-Chotiali.

1893-1899.—In 1893 Sir James Browne, who succeeded Sir Robert Sandeman, had serious trouble with Mir Khodadad Khan over the management of his court, which ended in the Khan's deposition. Finally in 1899 the Nushki district was leased in perpetuity to the British government which gave the government control of the highway to Seistan.

1903-1914.—**Lease of territory to Indian government.**—**Rising of tribesmen.**—**Gun-running on Perso-Mekran coast.**—**Measures for suppression.**—In 1903 the Khan of Kalat leased in perpetuity to the Indian government the territory of Nasirabad, about 500 square miles, and the Manjuti lands, about 250 square miles, at an annual rental of 1,17,500 rupees. During 1908 a tribe called the Mengals, dwelling in the Kalat State, numbering about 50,000, refused to accept the chief appointed by the Khan. A military expedition was sent from Quetta by the Indian government, composed of 300 infantry, two guns and a detachment of cavalry during August, but the tribesmen submitted without fighting and acknowledged the new ruler, Hajji Ibrahim Khan. For a considerable time there had been a prevalence of gun-running on the Perso-Mekran coast, most of the guns, revolvers and ammunition being intended for Afghanistan. The Indian government strengthened the naval force in the Persian Gulf and sent warships to the Baluchistan coast on the Arabian Sea. A number of dhows laden with arms and ammunition were captured; troops were landed to

destroy the depots along the coast. There were frequent encounters with the tribesmen who stored the weapons or the Afghans who came to take them into the interior. It was estimated that 16,500 rifles and about 1,250,000 rounds of ammunition, besides many revolvers and pistols were landed on the Mekran coast during 1909-1910. Of this number, over 10,000 were captured. A strict patrolling and blockade of the coast was maintained during 1912-1913. A convention was concluded with the sultan of Muscat in 1912 with a view to checking the traffic, and in 1914 an agreement was concluded between Great Britain and France by which the latter recognized the new arms traffic regulations drawn up in the Muscat agreement, and at the same time surrendered certain privileges and immunities granted by former treaties.

BALUZE, Etienne (1630-1718), seventeenth century historian. Author of "Francorum Capitularia Regum" (1677); "Vies des Papes d'Avignon" (1693); "Historia Tutelensis" (1717), etc. See HISTORY: 24.

BALZAC, Honoré de (1799-1850), French novelist. Destined by his father for the law, he revolted and began his literary career in Paris by writing dramas for which he had little aptitude. His real literary career began in 1829, and continued to his death. His works embrace every phase of fiction, and are coordinated in what Balzac calls the "Comédie humaine," a framework into which he fits varied pictures of life, in Paris, in the country, and even philosophical studies.—See also FRENCH LITERATURE: 1800-1921: Realistic school.

BAMIDUNIYA. See ROOF OF THE WORLD.

BAN.—BANAT.—"A district in southern Hungary between the Danube, Theiss, and Maros rivers, known as the Banat of Temesvar. "Ban is Duke (Dux), and Banat is Duchy. The territory [Hungarian] east of the Carpathians is the Banat of Severin, and that of the west the Banat of Temesvar. . . . The Banat is the cornucopia, not only of Hungary, but of the whole Austrian Empire."—A. A. Paton, *Researches on the Danube and the Adriatic*, v. 2, p. 28.—Among the Croats, "after the king, the most important officers of the state were the bans. At first there was but one ban, who was a kind of lieutenant-general; but later on there were seven of them, each known by the name of the province he governed, as the ban of Sirmia, ban of Dalmatia, etc. To this day [1879] the royal lieutenant of Croatia (or 'governor-general,' if that title be preferred) is called the ban."—L. Leger, *History of Austro-Hungary*, p. 55.—See also FRANKS: 500-768; BALKAN STATES: Map showing distribution of nationalities; HUNGARY: 1847-1849; WORLD WAR: 1914: III. Balkans: d.

1716.—Recovered from Turks. See HUNGARY: 1690-1718.

1919.—At the Peace Conference in 1919 the Banat "was claimed by both Rumanians and Serbs, the former demanding all of it, the latter only the western portion, since the eastern third is admittedly Rumanian. . . . The commission decided to divide the Banat, giving the western third to the Serbs and the eastern two-thirds to the Rumanians."—E. M. House and C. Seymour, *What really happened at Paris*, p. 106.

BAN, Imperial. See SAXONY: 1178-1183.

BANALITE, the right of a feudal lord of France to prohibit his vassals from using a forge, wine-press, oven or mill, etc., other than that of

the over-lord. By this the lord was secured of a dangerous monopoly of the trade but the usage also prevented needless reduplication. *Banalités* were probably not older than the eleventh century and were abolished at the time of the French revolution by a series of laws—1790, 1792 and 1793.

BANBURY, Battle of.—Sometimes called the "battle of Edgecote"; fought July 26, 1469, and with success, by a body of Lancastrian insurgents, in the English "Wars of the Roses," against the forces of the Yorkist king, Edward IV.—Mrs. Hookman, *Life and times of Margaret of Anjou*, v. 2, ch. 5.

BANCO ALEMANA TRANSATLANTICO. See DEUTSCHE BANK.

BANCROFT, George (1800-1891), American historian. Secretary of the navy 1845-1846, minister to England 1846-1849, and to Germany 1867-1874; known chiefly for his great work on American history. Author of minor works on European and American history.—See also HISTORY: 28.

BANCROFT, Hubert Howe (1832-1918), American historian, bookseller and publisher; author of comprehensive histories of the western half of North America, the greatest of which is the "History of the Pacific States of North America."

BANDA ISLANDS, a group of islands in the archipelago of Moluccas, south of Ceram. See MOLUCCAS.

BANDA ORIENTAL.—Signifying the "Eastern Border"; a name applied originally by the Spaniards to the country on the eastern side of Rio de La Plata which afterwards took the name of Uruguay.—See also ARGENTINA: 1580-1777; BRAZIL: 1825-1865.

BANDE-SAPT, a town in eastern France, taken by the Germans in 1915. See WORLD WAR: 1915: II. Western front: f, 2.

BANER (Banner, Banier, Johan (1596-1641), Swedish general in the Thirty Years' War. See GERMANY: 1634-1639; 1640-1645.

BANGALORE, population 189,485, is the seat of government of the progressive state of Mysore in southern India. As a manufacturing town it is noted for its carpets, cotton and woolen manufactures, and tanneries. A large section of the city, known as the "cantonment," is under direct British authority, and contains important military barracks, etc. It is the chief military station of southern India and usually has a garrison of about 10,000 British troops.—H. D. Baker, *British India (Special Consular Reports, No. 72, p. 54)*.

Capture of Bangalore (1790). See INDIA: 1785-1793.

BANGKOK, capital of Siam. It is a port and coaling station on the Menam, and exports tropical products. It has been called the Venice of the East, because until recently canals have been its chief thoroughfares. Its many gorgeously decorated temples make it one of the most picturesque of the Oriental cities. The population is estimated at about 650,000 (1920).—See also SIAM.

BANK CHARTER ACT, England (1844). See BANK OF ENGLAND; MONEY AND BANKING: 1844.

BANK NOTES, Stolen: Law governing. See COMMERCIAL LAW: 1760.

BANK OF AMSTERDAM.—"The bank was founded by an ordinance of the City of Amsterdam of January 31, 1609, and was called the Exchange Bank (*Amsterdamsche Wisselbank*). . . . All bills of exchange were required to be paid through the bank, and the institution was required to sell any kind of specie demanded of it at as low a premium as possible. The transferable deposits or credits came to be known as 'bank money'

and bore this designation throughout the history of the bank. The creation of a means of exchange of fixed and uniform value did much to promote the great commerce of which Amsterdam was becoming the centre. The bank accepted deposits only at their bullion value and granted credit for the amount in lawful money, subject to a proper charge for handling. Deposits were necessarily subject to charges, because the bank was supposed to keep in its vaults every gilder received and to do no loan and discount business. Payments in Amsterdam came to be made universally in bank money, by the presentation of a transfer order at the bank by the payer or his authorized agent, which entitled the payee to the credit on the next day. The bank became so general a medium of payments in Amsterdam that the most extravagant estimates were formed of the gold and silver stored in its vaults. Some put the amount as high as 900,000,000 gulden (\$360,000,000) but the more modest and accurate estimate of Adam Smith was 33,000,000 gulden (\$13,500,000). Direct redemption of bank credits in coin gradually fell into disuse, partly because bank money was so much preferable to coin for nearly all practical purposes and partly because of the acceptance of foreign coins on special deposits. The system of advances upon such deposits was formally put in operation in January, 1683, and the bank issued a receipt to the depositor for the bullion value of the deposit, certifying his right to withdraw it upon returning the bank money with which he had been credited and paying one-eighth of one per cent. interest. The right of withdrawal was forfeited if the charges were not paid and the deposit renewed within six months. It was necessary, therefore, in order to withdraw coin thus deposited, to have both the receipt and the equivalent amount of bank money. The bank money outstanding was in excess of the legal coin in the custody of the bank, but not in excess of the domestic and foreign coin and bullion. The lapsing of receipts protected the bank, therefore, from demands for coin redemption which it could not meet, while another method was adopted to prevent the excess of the bank money in circulation and to provide bullion for those who desired it for export. The method adopted by the bank for controlling the volume of circulation and maintaining its credit was the sale of bank money for specie or specie for bank money in such amounts as the public might require. Regular agents of the bank were charged with these transactions and kept the premium on bank money within narrow limits and its value substantially unchanged. It was supposed until the last half of the eighteenth century that the bank had sacredly fulfilled its obligations to keep in the vaults the exact amount of coin and bullion represented by the bank money outstanding. The affairs of the bank were kept secret by the small committee of the city government which was charged with its administration, and it was not generally known that as early as 1657 individuals had been permitted to overdraw their accounts and that in later years enormous loans of specie had been made to the Dutch East India Company. The truth became public property in the winter of 1780 and 1790. The premium on bank money, which was usually kept above four per cent., then fell two per cent. and in August, 1790, disappeared. The bank failed to protect its credit by purchasing bank money on an adequate scale and it was represented that large purchases would be followed by a heavy export of bullion to the injury of commerce. The possibility of deception came to an end when on November 12, 1790, a notice was

issued that silver would be sold to the holders of bank money at a rate equivalent to ninety per cent. of their claims. It was substantially an admission of insolvency and the debt was assumed in 1791 by the government of the City of Amsterdam. The effort was made to put the bank again on its feet, but time for such banks had passed, the position of Amsterdam as a commercial centre had changed, the bank was closed by a royal decree of December 10, 1819, and the small amount of bank money outstanding was soon after paid off. The Bank of Netherlands (*de Nederlandsche Bank*) was authorized by the government in 1814, after it became evident that the Bank of Amsterdam could not be revived."—C. A. Conant, *History of modern banks of issue*, pp. 260-261.—See also MONEY AND BANKING: Modern: 16th-19th centuries.

BANK OF ENGLAND.—"Is the center of a great system of joint-stock and private banks, whose aggregate business and liabilities are many times greater than its own, and . . . to this system of banks are confided the financial affairs of the city which may almost be said to be the Clearing House of the world. . . . It will be seen that the Bank of England, although a highly privileged establishment, is not a government institution. It has a partial monopoly of the right of issuing notes, which in theory is destined to become complete; it has the distinction of having its notes the only paper legal tender in the United Kingdom; it is the chief depository of a government which maintains no public treasury; it is charged with the duty of keeping the registry of the public debt, and of paying the interest thereon; still it is a private corporation of the familiar type, managed by its own officers, in whose selection the government has no share, and whose responsibility is to their own stockholders alone. The Bank has duties thrown upon it, partly by law and partly by force of circumstances, which make it a highly important member of the body politic, and yet it is in form a corporation intended to earn dividends for the owners of its stock."—C. F. Dunbar, *Theory and history of banking*, pp. 148, 161-162.—"The management of the bank is in the hands of a governor, deputy-governor, and twenty-four directors, elected by stockholders who have held £500 worth of stock for at least six months previous to the election. A director is required to hold £2,000; a deputy-governor £3,000; and a governor £4,000 of the stock. The court, or board of directors meets every Thursday, when the weekly account is presented. The two governors have the chief administration of the institution, and attend daily at the bank. The Bank of England owes its origin to the financial straits to which the government of William and Mary found itself reduced in carrying on the war with Louis the Fourteenth. The revenues of the kingdom were small, the public credit weak, and the very title of the dynasty unsettled. The growing wealth and business of the country had caused private banking houses to spring up. The paper given by these houses to their creditors had acquired a circulation, limited indeed, but sufficient to show its convenience, and projects for the establishment of a public institution on the scale, if not on the model, of the great continental banks had been discussed for many years. Under these circum-

stances, as an expedient for raising a million sterling, for which no other resource could be found, the government in 1604 adopted the scheme proposed by William Paterson, a Scotch adventurer, and proposed to Parliament that a loan should be offered for public subscription and made attractive by a grant of incorporation, with banking privileges to be enjoyed by the subscribers and their successors. The measure seems to have been contested chiefly, although not wholly, on party grounds, and was passed after a severe struggle, and thus the Bank of England came into existence as a Whig corporation. [See also NETHERLANDS: 1648-1665.] The act of 1694 provided for a loan to the government of £1,200,000, bearing interest at eight per cent., and incorporated the subscribers, with this amount of nominal capital, as the Governor and Company of the Bank of England, — a title which has never been changed. The corporation was empowered to deal in coin, bullion, and exchange, and to lend upon security, but was forbidden to deal in merchandise in any form. It could not borrow nor give security by bill, bond, or agreement, for an amount exceeding its capital; no provision was made for the transfer of its bills, 'obligatory or of credit,' except by indorsement; nor was any monopoly created in its favor. In this form the charter of the Bank gave little promise of its future importance. Three years later, however, the necessities of the government and the embarrassments of the Bank, which had been obliged to suspend payment in 1696, led to a revision of the charter, in which the outlines of the great structure begin to appear. The issue of notes payable to bearer on demand was authorized, thus laying the foundation for a true banknote circulation; the monopoly of corporate organization was granted by providing that, during the continuance of the charter, no other bank or corporation in the nature of a bank should be allowed in the kingdom; and, on the other hand, the capital was doubled by a fresh advance from the stockholders to the government, and the interest payable by the latter was reduced to six per cent. From this point the growth of the Bank and the increase of its influence were rapid. The corporation became the chief depository of the public money, and the agent of the Treasury in many financial operations. In 1720 it carried on a mad struggle with the South Sea Company [see SOUTH SEA BUBBLE] for the control of the business of refunding the national debt, and managed, although with difficulty, to save its own credit in the crisis which destroyed its rival. Further loans to the government and additions to the capital of the Bank were made in quick succession. In 1722 its capital stood at nearly nine millions, and it was also able to establish from its profits the surplus [or reserve] fund now called 'the Rest,' and thus to save its dividends from serious fluctuation. [The 'rest' amounts to about £3,000,000.] In 1782 the capital had risen to more than eleven millions and a half, and in 1816 it had risen to £14,553,000, at which figure it has stood ever since. Of the loans to the government, which had risen in nearly the same proportion as the capital, one fourth was repaid in 1834, reducing the total to £11,015,100, which is its present amount [1917]. By the year 1750 the government had succeeded in reducing the interest on most of its debt to the Bank to three per cent., and it has since used the opportunity afforded by the periodical necessity for a renewal of the charter, to lessen still more the burden of its interest, by requiring from the Bank an annual bonus and other pecuniary concessions, in consideration of the extension of its monopoly."

—C. F. Dunbar, *Theory and history of banking*, pp. 132-135.—"The Bank of England had to face serious financial crisis in 1772, 1782, and 1792. Their policy in 1772 and 1782 was to support credit and to make advances to solvent merchants, with the result that the foreign exchanges turned in their favor and general bankruptcy was avoided. Mr. Bosanquet was Governor of the Bank and he adopted the policy of contracting issues while the drain of specie was going on and expanding them when the tide turned. The crisis of 1793 was precipitated by the breaking out of war with France, and was quickly followed by the stoppage of about one hundred country banks and the serious embarrassment of many others. The directors of the bank became alarmed, refused credit to strong houses and created a great scarcity in the circulating medium by the discredit cast on the notes of the country banks. The policy of contracting issues was not justified by the state of the exchanges, for gold and silver were pouring into England from France in consequence of the issue of the *assignates*, which rapidly drove coin out of circulation, and exchange was favorable with both Amsterdam and Hamburg. The absolute refusal of the bank to lend its support to credit compelled the issue of Exchequer bills by the government, which quickly improved the situation."—C. A. Conant, *History of modern banks of issue*, p. 132.—"The Bank Restriction Act, 1797, suspended cash payments by the Bank and established an inconvertible currency with all its attendant dangers. Much has been said of the advantages which England obtained from this creation of credit on a gigantic and unlimited scale. . . . In the years immediately after the passing of the Act, both the Government and the Bank used the privileges conceded by it with the greatest prudence. It was only after 1809 that over-issue was indulged in. Pitt himself, though his previous financial policy had led to the Restriction, is at least free from the charge of having misused an inconvertible currency. But after 1809, the Bank Directors, blind to the effects of their actions, used their exemption from cash payments to over-issue. The result is to be found in the immediate rise in the price of bullion, and the state of the Foreign Exchanges. It was some considerable time before the country realised what was the cause of these phenomena. . . . In 1819, however, a committee appointed to consider the question succeeded in convincing the Government of this fact. Accordingly an Act was passed in this year ordering the Bank to resume Cash Payments in 1823, a date which the Bank anticipated by nearly two years. . . . The successful close of the Napoleonic wars was followed by a period of great commercial and industrial expansion . . . [which] came to its full during the first half of the nineteenth century. . . . Periodic crises occurred—one in 1825, another in 1836. After each of these crises the Government held inquiries into the causes, and it was eventually decided that the unsatisfactory state of the provincial banks, due largely to the unrestricted note issues, was chiefly to blame. . . . During the years after the crises, in 1837-39, a long struggle took place between the supporters of two theories relative to the note issues of the country. One, the Banking theory, held that no limit should be placed to the issue of notes, since over-issue was impossible, as any excess would at once return to the Bank; the other, the Currency theory, considered it necessary that some limit should be imposed on the issue of notes, as otherwise metallic money tended to be driven out of the country. The latter theory triumphed, and the Act of 1844

was the result. . . . In 1834 . . . the Act was passed which gave legal recognition to the principle that all public money should be entrusted to and administered by the Bank, subject of course to the control of the Exchequer. This Act constituted the legal recognition of a principle which had long been adopted in practice. By a process of gradual evolution. . . . The management of the Public Money had been gradually transferred more and more to the Bank, and the Bank had taken the place of the Public Exchequer."—*Journal of Institute of Bankers*, 1915, pp. 412, 413.—"The great events of the second century of the history of the Bank of England have been the resumption of cash payments, the restriction of circulation by the Bank Act of 1844, and the recent accumulation of gold in the custody of the bank. The Act of 1844 has been the turning point of almost infinite discussion of the theory and practice of banking in England, but, whatever its merits or defects, it has not destroyed the character of the Bank of England as the guardian of the cash reserve of the country, nor prevented London from becoming the centre of the exchanges of the world. Freedom from danger of invasion, the development of banking and credit beyond any point attained elsewhere, a market free to the world's commerce, and a single fixed standard of value have raised England to supremacy among commercial countries and linked the history of her financial progress in some degree with that of all other nations."—C. A. Conant, *History of modern banks of issue*, p. 162.—"From 1844 onwards the chief events in the history of the relations between Bank and State have been connected with the working of the Bank Charter Act. In the four crises of 1847, 1857, 1866 and 1890 the evils of the restriction imposed on the free issue of notes by this Act of 1844 have been demonstrated. In the first three of these crises it was found necessary to suspend the Bank Charter Act, and to allow the Bank a temporary freedom of note issue. The fact that in these three cases the effect of such suspension was immediately to restore public confidence goes to prove the contention so often put forward that the Act, by hindering the free action of the Bank at a time of crisis, becomes a positive danger at such a time. Only in 1857 did the Bank actually have to exceed the legal limits of its issue. In the other two cases the mere knowledge that it was free to do so was sufficient to allay the panic. . . . Although the monopoly of note issue has, through the Act of 1844, become more confirmed than ever in the hands of the Bank, that monopoly no longer affects the development or position of the other banks. . . . From 1840 onwards the Joint Stock Banks have steadily grown until to-day some of them overshadow the Bank itself in the amount of their deposits and the extent of their business. . . . In spite of rivalry in normal times the Bank of England has always been ready to lend its powerful support to the other banks in times of crisis. In the four crises of 1847, 1857, 1866 and 1890, it has been the Bank of England, of course supported when necessary by the State, which has pulled the country through. Accordingly, while the competition between the other banks and the Bank of England has become steadily keener, at the same time their dependence on the Bank has also become greater, and both the Bank and the other banks have been drawn mutually closer together, to form one vast structure, of which the Bank of England is the corner stone, and which supports the financial position of the country."—*Journal of Institute of Bankers*, 1915, pp. 414, 417.—"The circumstances immediately surrounding

. . . [the run, which began August 1, 1914, on the Bank of England, were] so peculiar as to render it impossible even now [1916] to say whether the episode was or was not really in line with the usual phenomena of a bank run. During the summer season England sets apart the first Monday of [August] . . . as a business holiday. The news of Germany's ultimatum to France and Russia arrived on the very Saturday when London people, preparing for their two-day midsummer outing, were going to their banks to draw the requisite pocket money. The English currency provided no unit of general circulation of a value between the silver half-crown piece worth slightly over 60 cents and the £5 Bank of England note worth \$25, except the gold sovereign and half-sovereign. Therefore, without any necessary purpose of hoarding gold, the London people, planning for the holiday, brought their five-pound notes to their banks to be exchanged into gold. A few private banks, frightened at the war situation, refused to give out gold (it is usually such action of bankers themselves which starts a panic), and holders of the notes thereupon went to the Bank of England, which could not refuse. All such bank runs grow from the very fact that they have begun. How many of the applicants for gold were merely prospective holiday-makers nobody can know. . . . But a run undoubtedly existed, and we shall never know to what proportions it might have risen but for the fact that the bank was open only for two hours on that Saturday, and that a two-day holiday followed. Even as it was, withdrawal of gold from the Bank of England, both by individual holders of notes and by other banks, was so great that in its next weekly statement the institution had to report the enormous loss of \$52,500,000, and a fall in its ratio of reserve to deposit liabilities to the startlingly low figure of 145/8 per cent, whereas 40 per cent is the bank's traditional minimum of safety. The ratio had been 40 1/4 per cent a week before, and 56 per cent at the same date a year before. No such showing of depleted gold reserve had been made by the bank since the panic of 1866. Nor was this the end of the 'currency panic,' even for the period of English holidays. The warning word that English paper money might possibly be no longer exchangeable for gold spread instantly throughout the community. People with gold coin in their tills or pockets refused to give it up, and within twenty-four hours Englishmen found it impossible to make purchases with Bank of England notes, if the amount of the purchase compelled the seller to make change. . . . On the Continent, for similar reasons, English bank-notes were refused when tendered in payment, and, what was much more disturbing, continental banks refused to cash letters of credit or bankers' drafts made payable at London. During nearly a week after the panic had begun, gold was the only available medium of exchange. For a time, indeed, even gold coin of another country was refused. When business closed for the day at the Bank of England on August 1, 1914, it is perfectly safe to say that no one, however experienced in the course of economic crises, knew what would be the financial case of England, or of Europe as a whole, when the next business day should begin."—A. D. Noyes, *Financial chapters of the war*, pp. 34-36.—"The financial history of the war may be divided into three periods. First, the period of transition from peace to war conditions, which lasted roughly from August, 1914, to April, 1915. Second, a period up to 1917, when the peculiar situation produced by the war in the

money market had fully developed. Third, from 1917 to November, 1918, when the difficulty of financing the war had become more and more acute and all the resources of the money market were concentrated on that end. 1. The first period was marked by unprecedentedly large issues of credit by the Bank of England to meet the crisis caused by the outbreak of the war. Pre-war bills of exchange were freely discounted and renewed, special loans were issued to acceptors of bills, to exporters and to lenders on stock-exchange securities; under the provisions of the first War Loan in November, holders could borrow on it from the Bank of England at 1 per cent below Bank rate. In addition to these issues by the central bank loans were made by other institutions. On the other hand the supply of bills was much restricted by the decline in trade, the reduction in finance bills and acceptances, and the increase in cash transactions. By the beginning of 1915 the effects of this situation were becoming serious. Money-market rates were very low, the American exchange became unfavorable, and suggestions began to be heard that rates ought to be higher. At the same time it was clear that with large supplies of credit and few bills, raising rates would be difficult. The joint-stock banks held greatly increased deposits on which they were paying interest and they were therefore anxious to lend; with the supply of credit so far greater than the demand, which was further limited by the restriction on capital issues promulgated in January, 1915, raising the Bank rate would be entirely useless. . . . On April 13 a step was taken which altered the whole state of affairs. Treasury bills which had hitherto been issued periodically in limited amounts to the highest bidder were now sold daily in unlimited quantities at rates fixed by the Bank of England. As Treasury bills were then the chief opening for investment, these rates tended to set the rates for other borrowers. From this time the government was able to exercise a control proportionate to the limitation in other sources of investment. In consultation with the Bank of England it was in a position to fix such rates as the credit situation required. Its policy was, however, swayed by many considerations besides that of protecting the gold reserve. 2. This brings us to the second period, of which the following were the main characteristics. The government was the chief borrower in the market and market rates tended to keep fairly close to the rate fixed for Treasury bills. The main object of the government was to concentrate all available supplies of credit, both home and foreign, in its hands, and to ensure that the money constantly disbursed by it should be returned as soon as possible. The rates it offered were therefore high. At the same time rates abroad were rising, the supply of cash and credit within the country was increasing, and it was often difficult to prevent lending and discounting at low rates by institutions out of touch with the government policy. Special measures were taken. In November, 1915, the Bank of England offered interest at $4\frac{1}{2}$ per cent on balances deposited with it by the joint-stock banks. This tended to prevent their making loans at lower rates and so to keep up the discount rate while it increased the power of the Bank of England to lend to the government. The success of this policy was seen at the end of the year. . . . In December, 1915, the market was again borrowing from the Bank of England to satisfy the periodic increase in the demand for cash. In the middle of 1916 a rise in rates in neutral countries led to a rise in Bank rate and this to a rise in all other money rates.

But exports of gold were large, and easy monetary conditions at the end of the year showed the incipient dangers of the situation. The great increase in the quantity of Treasury bills issued meant that large quantities of credit were constantly being thrown back on the market as these matured. 3. From 1917 onwards the credit situation developed on the same lines. . . . At the end of 1917 a new device was hit upon. The Bank of England offered a higher rate to clearing banks on balances made up of foreign money than on balances made up of domestic money. This was followed by a general lowering of rates and the extension of the special Bank of England deposit rate to other institutions besides the clearing banks. In January a special regulation under the Defence of the Realm Act forbade the export of capital by persons resident in Great Britain. . . . But though prevented by the stagnation of trade and by special devices from developing their normal results, the essential conditions were full of danger. Rates were low, the supplies of credit were large; the connection between credit issues and the Bank of England's power over the market was gone. For the moment, rates were controlled by the government in the interest of war finance. It remained to be seen what would happen when this control was removed and ordinary economic forces once more had free play. . . . In January, 1919, the special Bank of England rates on allied balances were removed; in October the special rate on foreign balances was done away with altogether. In March, 1919, the control over the American exchange was abandoned, and in August the restrictions on the export of capital and the agreement fixing deposit rates at 3 per cent were given up. The limitation of capital issues was removed in December, 1919. On the other hand the export of gold was forbidden. In pursuance of the Cunliffe committee's recommendations [published in August, 1918] the currency note reserve was strengthened by the addition of Bank of England notes and a limit was fixed to the fiduciary issue. In January, 1920, the government recommended that the joint-stock banks should transfer their gold holdings to the Bank of England, and consequently some thirty to thirty-five millions were transferred. . . . On April 21, 1921, a new policy was adopted with regard to the sale of Treasury bills. The old method of sale in unlimited quantities at fixed rates was abandoned for a weekly sale of fixed amounts at rates determined by competition. The Bank of England's control before the war depended in the last analysis on the fact that during any short period the supply of funds in the money market was constant. Banks could not increase their liabilities beyond a certain proportion of their cash balances; further, when a bank made a loan, funds were liable to be withdrawn from it and deposited with another bank; the consequent depletion of its resources constituted a check on further lending. Hence it used to be said that the Bank of England was the only real creator of credit because funds withdrawn from it were returned in the cash balance of the bank to which they were paid. The balance sheet of the Bank of England still balanced and the other bank was in a position to increase its loans. This situation has altered in several ways. 1. (a) Cash balances can be increased without direct recourse to the Bank of England. First, the banks have large holdings of Treasury bills and by not renewing these at maturity can at any time increase their cash balances. Second, loans made by the Bank of England to the government and paid out by it to private individuals are paid

into the banks as cash deposits. In both these cases, the increase in balances forms a basis for an increase in credit to a much larger amount. . . . (b) In the second place it is no longer true that the Bank of England is the sole creator of credit. . . . With the present elasticity of cash reserves it means that the possibility of the Bank of England's regulating the total supply of credit is very much less than it was before. Credit is more easily increased and it is therefore more difficult for the Bank to obtain control over it. 2. In the next place, it seems likely that the relation between credit issues and cash reserves is more elastic than before. . . . Before the war, banks were habitually lending up to the limit of their resources and a very small reduction in their cash balances was enough to produce a stringency in the market. . . . 3. Thirdly not only is the relation between credit and cash reserves looser than it used to be but the relation between credit issues and gold reserves is looser. So long as currency notes are accepted by the general public, the link with the gold cash is loosened for the banks because they can use notes as cash. 4. The next point is the question of independent reserves. The decentralizing movement was checked in the early part of 1920 when, at the request of the government, large quantities of gold held by the banks were transferred to the Bank of England. The *Economist* remarked at the time however that this could only be considered an emergency measure, and there are still supporters of the separate reserve idea. 5. Another factor to be considered is the effect of recent bank amalgamations. There began in 1917 and proceeded with great vigor during 1918 and 1919 a process of amalgamation in England which reduced the number of large banks to five (generally referred to as the 'Big Five, in London newspapers). This was considered sufficiently serious for a committee of inquiry to be appointed. The report, published in May, 1918, is very guarded in its language, but some of its remarks are worth quoting. The committee said that while they believed that there was at present no idea of a Money Trust, it appeared not altogether improbable that circumstances might produce something approaching it at a comparatively early date. 'The position of the Bank of England would,' they said, 'be seriously undermined by so overwhelming a combination and the Bank might find it extremely difficult to carry out its important duties as supporter and regulator of the money market.' . . . The adoption of the report was followed by legislation making amalgamations illegal without government approval. It is worth noticing that this was immediately followed by three more combinations so that the check thus constituted does not appear to be serious. It is obvious that the difficulty of control is increased if the Bank of England is faced not by a number of competing banks but by five large banks probably working in unison. Further, the concentration of reserves into a few hands means that a larger amount of credit can be issued on the old basis. The smaller the number of banks, the more likely it is that funds withdrawn from one bank will return to the same bank as deposits. . . . Hence, since supplies of credit can be more easily increased, the Bank of England is again in a worse position than before. It looks as though the money market in the future would be controlled by a combination of the joint-stock banks. 6. Finally with regard to the customary link of $1\frac{1}{2}$ per cent between the rate of interest on deposits and the Bank rate, which used to safeguard the position before the war, all that can be said at present is that the

deposit rate has been 2 per cent below Bank rate ever since the special agreement between the government and the banks came to an end in August, 1919."—J. E. Norton, *Bank of England and the money market*, (*Political Science Quarterly*, Sept., 1921, pp. 440-447, 449, 451).—"The fiduciary issue of the Bank has so risen at different periods from 1844 that it now [1920] stands at £18,450,000. Every note issued in excess of this amount must be represented by gold coin or bullion. The annual sum payable by the Bank for its exclusive privileges has been increased from £120,000, as settled in 1833, to £180,000 (of which £60,000 represents composition in lieu of stamp duty), and all profit from the increase of the issue of their notes against securities beyond £14,000,000 is directed to go to the public. As regards what are called *dead bank notes* it is enacted that, when Bank of England notes issued more than forty years have not been presented for payment, the Bank may write off the amount, or any portion of the amount, of these notes from the amount of such issued from the Issue Department, and the Bank Charter Act of 1844 is to apply as if the amount of notes thus written off had not been issued. The Bank will, however, be liable to pay any note so written off if it is presented for payment. The purchase and sale of foreign gold coin and gold bullion affords another source of profit to the Department. The Bank is required by the Act of 1844 to buy at £3.17.9 per oz. standard (being $1\frac{1}{2}$ d. per oz. under mint price) all bar gold offered, subject to the fulfilment by the seller of certain conditions specified in the Act."—*Hazell Annual and Almanack*, 1920.—See also MONEY AND BANKING: Modern; 17th-18th centuries; Banking in Great Britain; 1830-1917; 1914-1916; CAPITALISM: 18th century; England.

BANK OF FRANCE.—The earliest attempt to establish a bank of issue in France dates back to 1716, when John Law, a Scotsman, founded the Banque Générale, which became the Banque Royale in 1718 and closed up in 1721. (See FRANCE: 1717-1720). An attempt was made to revive it in 1767; it lingered until 1793, when it was finally suppressed. Plans for the organization of the present Bank of France were advanced in 1796, but owing to the financial difficulties of the revolution, they were not realized until Napoleon and his minister Mollien organized the bank in 1800; it was placed under state control in 1806. It weathered the difficulties brought about by Louis Philippe in 1848, the Franco-Prussian War of 1870 with its heavy indemnity, and the crisis of the World War, emerging by far the most powerful financial institution in the country. It enjoys the monopoly of issuing bank notes. The privileges of the Bank were renewed on Dec. 17, 1897, for a period of twenty-three years, which would have expired in 1920. (See MONEY AND BANKING: Modern; 1793-1920). The law of 1897 "compelled the Bank to open 14 branches in the principal towns that did not yet possess them, and to transform 18 auxiliary offices into branches; thus instituting 32 new branches in all. Besides this, 30 auxiliary offices were to be opened, and 60 more towns connected with the Bank. . . . When the charter was renewed, the Government also required the limit of bills discounted at the branches to be lowered to fours. The Bank had for years discounted bills

eights in value, and . . . the lowering of the limit met a real business requirement."—*Bankers' Magazine* (London, 1903), p. 137.—During the World War, on Dec. 11, 1917, the privileges were extended for a further term of twenty-five years—till Dec. 31, 1945. The capital is fixed at 182,500,000 francs [normally \$36,500,000]. In August, 1914, the maximum note issue of the bank was 6,800,000,000 francs, which was raised to 12,000,000,000 on the 5th, two days after Germany declared war on France. Several increases were made during the war, and a maximum of forty-thousand million francs was fixed on July 17, 1919. "The Governorship of the Bank of France is an appointment of more permanent character than the Governorship of the Bank of England, which devolves upon each director in turn for a period of two years. The retirement of M. Georges Pallain, who has held the office of Governor of the Bank of France for 23 years, is a matter, therefore, of considerable interest. He is succeeded by M. Robineau, who has for some years been head of the Discount Department of the Bank."—*Bankers' Magazine* (London), Oct., 1920, p. 404.—At a shareholders' meeting on January 27, 1921, the new Governor described the course of Government finance and explained the necessity under which the amount of the advances by the Bank of France to the French Treasury had had to remain at the old figure of twenty-seven milliards francs, in spite of the convention of April 24, 1919, under which the amount was to be reduced to twenty-four milliards out of the next Government Loan. Events had made this reduction an impossibility, and repayments to the Bank were postponed from time to time. The maximum of twenty-seven milliards now remained in force till December 31, 1921. By January 1, 1922, the debt was to be reduced to twenty-five milliards, and annual reductions of two milliards per annum were to be made in each year following. M. Robineau added that the Bank of France had "all the time continued to urge upon the Finance Minister the necessity of repaying these advances by the Bank of France as a step which is essential to the economic restoration of France and the improvement of its foreign credit."

BANK OF GERMANY. See DRESNER BANK.

BANK OF HAMBURG. See MONEY AND BANKING: Modern: 16th-10th centuries.

BANK OF IRELAND.—The Bank of Ireland founded in 1783 is the oldest and most influential bank in Ireland. Until 1825 it enjoyed a monopoly of note issue, and is the only bank in Ireland employed by the Treasury. It manages the government funds without charge, and has never exceeded the limit of authorized circulation set by the Bank Act of 1844.

BANK OF ITALY. See MONEY AND BANKING: Modern: 1806-1910.

BANK OF NORTH AMERICA.—"In 1781, several years before the adoption of the constitution, the Bank of North America had been chartered by the Congress of the Confederation. (Robert Morris was the creator of this bank.) This institution, however, encountered popular opposition and soon surrendered its charter from the Congress, obtaining instead a charter from the state of Pennsylvania."—W. B. Munro, *Government of the United States*, p. 235, footnote.—The bank originally had "a capital of \$400,000 paid in specie. It was enlarged to \$2,000,000 in 1784. [See also MONEY AND BANKING: Modern: 1780-1784.] It had many difficulties, but managed to weather them all, and its notes were received at par. . . . The [Pennsylvania charter] though repealed in 1785 was renewed in 1787. When the old Congress ceased

with the establishment of the new government in 1789, the bank continued under the state charter. It did not receive recognition under the new régime, but its existence was uninterrupted and in 1864 it became a national bank under the acts then recently passed by Congress. In the dark period of 1782-1789 it did good service by lending money to the government at times when no other resource was apparent. Its first president, Thomas Willing, was an old business partner and friend of Robert Morris, and gave him steady support in the many arduous efforts by which the latter as superintendent of finance, supported the struggling Congress."—J. S. Bassett, *Short history of the United States*, p. 228.

BANKRUPTCY.—Early development and general principles.—"In early times systems of bankruptcy laws were unknown, individual creditors being allowed to pursue the remedies afforded by the laws of their community. These were usually drastic so far as the debtor was concerned. Under some his body might be cut to pieces and divided among his creditors. Under others the debtor might be imprisoned or he and his family sold into slavery. The growth of commerce and the development of popular rights has, however, led to a gradual development of systems of bankruptcy until, with hardly an exception, they now [1916] form a part of the administrative systems of all civilized nations. Great Britain, Germany, Russia, France, Italy, Norway, Sweden, Spain, Mexico, Belgium, Denmark, Turkey, and many other nations, have responded to the needs of their people and wisely provided laws governing bankruptcy. The systems in vogue in the several nations show much diversity, varying from that which is found in Russia—where the right of the debtor to resume business is dependent upon the good will of his creditors, and where a single dissatisfied creditor

can, upon making a paltry monthly payment, keep the bankrupt a prisoner until the debt is paid—to the highly advanced system which prevails in England and the United States. Bankruptcy is an ancient English word which has come down to us at least from the time of Elizabeth, bearing all the way a meaning co-extensive with insolvency, and it was especially equivalent to that word when the constitution was adopted. There is no substantial difference between a strictly bankrupt law and an insolvent law except possibly theoretically, and that is in the circumstance that the former affords relief upon the application of the creditor, and the latter upon the application of the debtor. In the general character of the remedy there is no difference, however much the modes by which the remedy may be administered may vary. But, even in the respect named, there is no difference in this instance. The present law is both a bankrupt law and an insolvent law by definition, for it affords relief upon the application of either the debtor or creditor under the heads of voluntary and involuntary bankruptcy. Hence a bankrupt law may contain those regulations which are generally found in insolvent laws, and an insolvent law may contain those which are common to a bankrupt law. Every business transaction involving the giving of credit necessarily implies two classes—a debtor and a creditor. Bankruptcy laws are not designed for one but for both classes, and are beneficial to all but the dishonest debtor. The policy and aim of bankrupt laws are to compel an equal distribution of the assets of the bankrupt among all his creditors. Hence, when a merchant or trader, by any of the tests of insolvency, has shown his inability to meet his engagements, one creditor cannot, by collusion with him, or by a race of diligence, obtain a preference to the injury of others. In the absence of a bankruptcy law, the least suspicion of the insolvency of a debtor, his inability to meet financial obligations or the like, naturally cause the zealous creditor to institute attachment proceedings and perhaps cause liquidation of his debtor, who, left to his own resources and given reasonable time, would be able to avoid a suspension and perhaps ruin. The sole gainer through the absence of such a law, outside of the dishonest debtor, is he who is first on the ground with his attachment process and whose lien operates to defeat other creditors with equally just claims, but who are perhaps more merciful and less anxious to cause the creditor's liquidation. In addition to the value of a bankruptcy law in conducting to a better business understanding between the debtor and creditor, it acts as a preventive and check to overtrading, by largely preventing the giving of preferences by the insolvent. . . . The purpose of a bankrupt law is to place within the possession of the creditor that to which he may be entitled, within the shortest reasonable time, and at the same time, if the bankrupt has made a fair and honest surrender, and complied with the requisites made of him, to give him a speedy release, and let him begin anew to provide an honest living for himself and those dependent upon him and again become a useful and active member of society, the cardinal principle being to grant to creditors those rights which would have been theirs if bankruptcy had not suspended, and to save to the bankrupt and his family every right which would have been theirs as against creditors enforcing their claims by ordinary judicial process. A bankrupt or insolvent law, viewed as operating on the rights of creditors, is a system of remedy. It takes out of the hands of the creditors the ordinary rights which by law belong to creditors,

and substitutes in their place a new and comprehensive remedy designed for the common benefit of all. The rights with which the trustee is clothed as the representative of creditors are to render this great and common remedy effectual.”—W. H. Oppenheimer, ed., *Brandenburg on bankruptcy*, 4th ed., pp. 1-5.

Ancient laws concerning debt: Greek.—Roman. See DEBT, LAWS CONCERNING: Ancient Greek; Ancient Roman.

English bankruptcy statutes.—“As the idea of a National bankruptcy system may be said to have become a part of the Federal constitution by a process of evolution from the English statutory law, it is interesting to note as a matter of history that the earliest statute on the subject of bankruptcy is found in 34 and 35 Henry VIII (chapter 4), which was primarily provided as a protection against the Lombards and fraudulent traders, who, like the dishonest debtors of to-day, incurred obligations and liabilities and then surreptitiously removed themselves beyond the jurisdiction, without having been first discharged therefrom. It was without limit as to the persons who could have become recipients of its provisions, the restriction as to traders first appearing in the statute of 6 George IV. . . . While these early bankruptcy laws went upon the hypothesis that one guilty of bankruptcy was a criminal, this view certainly does not now prevail, and in fact did not at the time of Lord Loughborough, who remarked, with reference to bankrupts, ‘the law, upon the act of bankruptcy being committed, vests his property upon a just consideration; not as a forfeiture; not on a supposition of a crime committed; not as a penalty. The present [1916] English bankruptcy Act was passed in 1914. It repealed either sections or the whole of statutes passed previously. Thus, the acts of 1884, 1885, 1887, 1888 were wholly repealed, while sections of the bills of 1883, 1800 and 1013 were discarded.”—*Ibid.*, pp. 5-6.—See also DEBT, LAWS CONCERNING: England.

Japanese bankruptcy courts. See COURTS: Japan.

American bankruptcy legislation.—“The oppressor's hand resting heavily upon our forefathers in the old world, and causing them to migrate to new and untried fields, naturally inclined them to incorporate liberal and wise provisions for the protection of all classes in the federal constitution. Among them is one evidently suggested by the English bankruptcy statutes, and it is found in section 8 of article 1 of that instrument, which authorizes congress ‘to establish . . . uniform laws on the subject of bankruptcy throughout the United States.’ This section, together with section 10 of the same article, providing that ‘no state shall . . . pass any laws impairing the obligation of contracts,’ are most important factors in the legal and commercial world. Pursuant to the authority contained in section 8, congress has on four different occasions enacted laws providing a uniform system of bankruptcy. All of these acts, excepting the present one, for evident reasons failed of their purpose and early expired. The first was the act of April 4, 1800, and was limited to five years; but it was repealed by the act of December 10, 1803. The fact that it was intended chiefly for the protection of creditors, the sparseness of the settlements, the scarcity of federal courts, and the difficulty and slowness of travel, contributed mainly to its failure. The distance between places where courts were held, by reason of the method of locomotion, made ready relief almost impossible and soon brought about

a demand for the repeal of the law. Under this act only involuntary proceedings were permitted. The second act was approved August 10, 1841, but like its predecessor was short-lived, being repealed March 3, 1843. In addition to some of the causes that contributed to the failure of the prior law, this one was framed so as to greatly favor the debtor; it also became the subject of political contention, and under the combined influence naturally failed. Under this act voluntary proceedings were provided for. The next bankruptcy law was approved March 2, 1867, and after an existence of eleven years was repealed by the act of June 7, 1878, to take effect September 1, 1878. The law was several times amended, the most important modification being that made by the act of June 22, 1874. While this law of 1867 had many imperfections, its provisions were more equitable as between creditor and debtor; but the expenses attending litigation and its administration, together with the lack of uniform rules and regulations governing assignees and registers, more than all else, contributed to its failure and induced its repeal. The law now in force [1916] in the United States was enacted on July 1, 1898, and amended in various respects on February 5, 1903, June 15, 1906, and June 25, 1910 [also March 3, 1911, January 28, 1915, and March 2, 1917]. The amendments made on the latter date are not retroactive, though they apply to every bankruptcy the petition in which was filed after their passage."—*Ibid.*, pp. 6-7.—See also DEBT, LAWS CONCERNING: In the United States; U. S. A.: 1898 (July 1).

Constitutionality in the United States.—Limitations of bankrupt laws.—"Congress is given plenary power over the 'subject of bankruptcy,' as that subject was recognized in the jurisprudence of England and America in 1787, under one limitation only, that the law passed upon that subject shall be uniform throughout the United States, and this power carries with it a right to establish the details of the system if it shall think proper. In this connection a system of bankruptcy national in its character to be uniform in its operation must of necessity be unique in its method of administration, and when one of its provisions involving the very policy of the law is deemed inconsistent with the general law, the special provision must control. . . . The present 'system of bankruptcy' does not pretend to cover the whole field of either voluntary or involuntary bankruptcy and insolvency, and in so far as state insolvency laws deal with cases over which the federal bankruptcy courts have no jurisdiction they remain in full operation. The bankrupt law does not suspend an ordinary law for the collection of debts, or for the arrest of fraudulent or absconding debtors, or to prevent fraudulent assignments in trust for creditors and other fraudulent conveyances, or laws relating to the insolvent estates of persons under legal disability, as lunatics or spendthrifts or a law merely protecting the debtor from imprisonment, or a law to prevent debtors in contemplation of insolvency from preferring one or more creditors' or statutes prescribing the conditions upon which foreign corporations may enter the state for purposes of business. Laws relating to general assignments, and not constituting general insolvency laws, are not suspended, and an assignment made thereunder is voidable only in case bankruptcy proceedings should be begun. The bankruptcy act has not superseded the right and power of a court of equity to take charge of the property of an insolvent corporation for the protection of stockholders and creditors, marshal the same, recognize and enforce valid liens and

priorities, and equitably distribute the surplus proceeds among its creditors."—*Ibid.*, pp. 8-13.

BAPTISM. See BAPTISTS: ORIGIN OF NAME; SACRAMENTS.

In Mythology. See MYTHOLOGY: Greek mythology: Influence of religious ritual on mythology.

BAPTISTERY, a separate building connected with the early Christian church in which the sacrament of baptism was once administered, or that part of a church which was later set apart for the same purpose. In ancient times the word was also applied to a basin, pool or other place for bathing. The baptistery had a well-defined plan: circular or polygonal, it contained in the center the baptismal font in which those to be baptized were immersed three times. A circular ambulatory around the font provided room for the ministers and witnesses; also radiating from the ambulatory were rooms for the preparation of the applicants and sometimes a chapel for service following baptism. The modern baptistery is merely that part of a church set apart for baptism and containing the baptismal font. A number of the most famous baptisteries were those of Pisa, Florence, Padua, Lucca and Parma. The earliest baptistery still in use is the Lateran at Rome.

BAPTISTS: Origin of name.—Various forms.—**Repudiation of these.**—"The name 'Baptist' was not a self-chosen one. In the early Reformation time those who withdrew from the dominant churches because of the failure of these churches to discriminate between the church and the world, between the regenerate and the unregenerate, and who sought to organize churches of believers only, laid much stress on the lack of Scriptural warrant for the baptism of infants and on the incompatibility of infant baptism with regenerate membership. Following what they believed to be apostolic precept and example, they made baptism on a profession of faith a condition of church-fellowship. This rejection of infant baptism and this insistence on believers' baptism were so distinctive of these Christians that they were stigmatized as 'Anabaptists,' 'Catabaptists,' and sometimes as simply 'Baptists'; this is to say, they were declared to be 'rebaptized,' 'perverters of baptism,' or, as unduly magnifying baptism and making it the occasion of schism, simply 'baptizers.' These party names they earnestly repudiated, preferring to call themselves Brethren, Christians, Disciples of Christ, Believers, etc. . . . Baptists have, for the most part, been at one with the Roman Catholic, the Greek Catholic, and most Protestant communions in accepting for substance the so-called Apostles', Nicene, and Athanasian creeds, not, however, because they are venerable or because of the decisions of ecclesiastical councils, but because, and only in so far as, they have appeared to them to be in accord with Scripture. . . . As regards the set of doctrines on which Augustin differed from his theological predecessors, and modern Calvinists from Arminians, Baptists have always been divided. . . . The great majority of the Baptists of today hold to what may be called modern Calvinism, or Calvinism tempered with the evangelical anti-Augustinianism which came through the Moravian Brethren to Wesley and by him was brought powerfully to bear on all bodies of evangelical Christians. Baptists are at one with the great Congregational body and with most of the minor denominations as regards church government."—A. H. Newman, *History of the Baptist churches in the United States, introduction.*

European beginnings.—"The doctrine which came nearest to being a point of uniformity and a possible bond of union among these reformers [those for whom the moderate reforms of Luther, Calvin and Zwingli were not enough] was their objection to infant baptism. To them baptism was the mark of a personally attained relation to Christ, and was, therefore, meaningless when ad-

ministered to an unconscious infant. Certain 'prophets' who came to Wittenberg from Zwickau confronted Luther and Melancthon with this principle as early as 1521; and radical reformers proclaimed it in opposition to Zwingli at Zurich in 1523. Everywhere advocacy of an exact adherence to the verbal teaching of Holy Writ and a rejection of the claims of an established church, were accompanied by opposition to infant baptism. In 1525 for the first time the logical deduction from their premises was made; those baptized only in their infancy were asserted not to have been effectively baptized at all, and were rebaptized as a sign of their conversion. From this time onward rebaptism, or, from the point of view of its advocates, the first valid baptism, became the test and mark of adoption into many communities of true believers. Those who practised this rite were, therefore, called 'Anabaptists'—that is to say, those who baptized a second time—or, more frequently, merely 'Baptists.' The rebaptism of a person who had been already once baptized was not only in the eyes of the established church an impiety, it was in the eyes of the established law a capital crime, and the history of Anabaptism in Germany is the history of a long martyrdom. In Catholic and Protestant countries alike these radicals were persecuted. From Strasburg and Nuremberg they were expelled, in Zurich their leaders were drowned, in Augsburg they were beheaded, in Austria, Wittenberg, Bavaria, and the Palatinate they were burned at the stake. In 1534 their sect was brought into sudden and fatal prominence by the revolt in Münster and its vicinity. Here a body of adherents of radical religious doctrines added to their creed a tenet not common to the general body of Anabaptists—that is to say, the duty of taking up temporal arms to overthrow the existing powers and to introduce the New Jerusalem. The old episcopal city was seized by the Anabaptist leaders, bloody battles were fought, and after a six months' orgy of fanaticism, libertinism, and violence the rebels were defeated by the united troops of Catholic and Lutheran powers and a terrible vengeance taken. [See ANABAPTISTS OF MÜNSTER.] Anabaptists everywhere, no matter how peaceable and moderate their principles, suffered under the imputation of holding such doctrines as had led to the terrible excesses at Münster, as they had long before been held to sympathize with the Peasants' Revolt; and their persecutions became correspondingly harsher. Nevertheless, they continued to form communities and to spread through Germany, the Netherlands, and Switzerland. The attractiveness of the teachings of wandering Anabaptist preachers long continued unabated, and their regularly organized congregations or communities, because of their thrift, honesty, and plainness of life, survived and flourished, wherever they could obtain even the barest and most temporary toleration. They were necessarily a people without a national home. Seldom for a whole generation did any considerable body of Anabaptists or Pietists remain undisturbed in any one locality. Expelled by imperial edict from Bohemia, they made their way to Hungary and Transylvania; fined, imprisoned, and in danger of death in Protestant Switzerland, they migrated to Tyrol, to the Palatinate, and to the south German cities, only soon to be visited there with still worse persecution. During the two great religious wars they suffered especial hardships, and in the midst of the Thirty Years' War they were rigorously expelled by the emperor from all his hereditary dominions, even from Moravia, where

they had been allowed to exist for almost a century. Either from original differences of doctrine and personal influence, or from later divisions and reorganization, grew up those bodies which, although often, as has been seen, grouped under the general head of Anabaptists, have become known in Europe and America as Mennonites, Amish, and Dunkers; and each of these bodies has experienced various divisions. The Schwenkfelders, Bohemists, and other mystics or pietists, are habitually grouped with these sects, rather because of their similar historical origin and attitude to the established churches than of any identity of religious belief."—E. P. Cheyney, *European background of American history*, pp. 172-175.

Beginnings in New England.—"Baptist principles are discoverable in New England from the very earliest colonial settlements. The Puritans of Plymouth had mingled with the Dutch Baptists during the ten years of their sojourn in Holland, and some of them seem to have brought over Baptist tendencies even in the Mayflower. Dutch Baptists had emigrated to England and extended their principles there; and from time to time a persecuted Baptist in England sought refuge in America, and, planted here, brought forth fruit after his kind. But as every offshoot of these principles here was so speedily and vigorously beaten down by persecution, and especially as, after the banishment of Roger Williams, there was an asylum a few miles distant, just over Narraganset Bay, where every persecuted man could find liberty of conscience, Baptist principles made little progress in the New England colonies, except Rhode Island, for the first hundred and twenty years. [On the banishment of Roger Williams from Massachusetts, the founding of Rhode Island, and the organization of the first Baptist Church in that colony, see RHODE ISLAND, 1631-1636 to 1630.] A little church of Welsh Baptists was founded in Rehoboth, near the Rhode Island line, in 1663, and shortly afterwards was compelled by civil force to remove to Swansea, where, as it was distant from the centres of settlement, it was suffered to live without very much molestation. It still exists, the oldest Baptist church in the State. In 1665, the First Baptist Church in Boston was organized, and, alone, for almost a century, withstood the fire of persecution,—ever in the flames, yet never quite consumed. In 1693, a second church was constituted in Swansea, not as a Regular, but as a Six-Principle, Baptist Church. In 1705, a Baptist church was formed in Groton, Connecticut. These four churches, three Regular and one Six-Principle, having in the aggregate probably less than two hundred members, were all the Baptist churches in New England outside of Rhode Island previous to the Great Awakening."—D. Weston, *Early Baptists in Massachusetts (Baptists and the National Centenary)*, pp. 12-13).—"The leader in opposing [William] Coddington's [first governor of colony of Rhode Island] rule in Rhode Island was John Clarke, who had fled from Massachusetts at the time of the Antinomian controversy. At Newport he was the principal member and the minister of an Anabaptist church—to use the name then current—which after a few years was gathered there. The spread of this sect had led the Massachusetts people, in 1644, to promulgate a law making banishment the penalty of the wilful and continued propagating of its tenets. This law was not enforced on those who deported themselves quietly. The President of Harvard College [Henry Dunster, the first president of the college; he eventually left the presidency because of his belief] at the time when the law was

framed was an avowed disbeliever in infant baptism. After keeping away from Massachusetts for fourteen years, Clarke, with two companions, prominent in his sect, came to Lynn to visit a blind man, a Baptist like themselves. On Sunday, as the matter is related in Clarke's own account of it, not being ready to manifest fellowship with the Puritan worshippers by uniting with them in divine service, and not feeling inwardly called to enter their church for the purpose of publicly testifying against them, he discoursed in the house where he was staying, to his companions and three or four others, who came in, he says, unexpectedly. He was interrupted by the appearance of two constables. The Rhode Islanders were arrested; but their fines were paid either by themselves or by others, with the exception of one of the party who received corporal punishment. What ulterior object, if any, Clarke had in paying this visit, and holding his meeting in defiance of the law, it is, perhaps, unsafe to say. But any candid reader of *Ill News from New England*, the publication that he put forth in England, in which the circumstances are recounted, will not fail to see that the opportunity to bear witness to his opinions in the heart of the enemy's country was highly prized, and that his failure to get up a debate with the ministers was a source of disappointment to him. His rival, Coddington, succeeded in setting up his government. But Clarke was a man of talents and energy. He went to England, and, with the aid of Roger Williams, who was also there, he procured, in September, 1652, the revocation of Coddington's commission."—G. P. Fisher, *Colonial era*, pp. 143-144.—In Connecticut in 1792 Baptists as well as Quakers were exempted from taxation for the support of the established Congregational Church, provided that they maintained Church services of their own.—See also UNIVERSITIES AND COLLEGES: 1762-1769.

Principles of faith.—"The representative Baptists of London and vicinity, who in 1689 put forth the Confession of Faith which was afterward adopted by the Philadelphia Association, and is therefore known in this country as the Philadelphia Confession, copied the Westminster Confession word for word, wherever their convictions would permit, and declared that they would thus show wherein they were at one with their brethren, and what convictions of truth made impossible a complete union. And wherever Baptists appeared, however or by whomsoever they were opposed, the ground of complaint against them was their principles. Some of these principles were sharply antagonistic to those of existing churches, and also to those on which the civil governments were administered. They were widely disseminated, especially in Holland, England, and Wales, and there were separate churches formed. From purely doctrinal causes also came divisions among 'the Baptized churches' themselves. The most notable one was that in England between the General or Arminian Baptists, and the Particular or Calvinistic Baptists. With the latter division do the Regular Baptists of America hold lineal connection. . . . The churches of Philadelphia and vicinity kept the closest connection with the mother country, and were most affected by it. In New England, in 'the Great Reformation' under the lead of Jonathan Edwards, there was made from within the Congregational churches a most vigorous assault against their own 'half-way Covenant' in the interest of a pure church. Along his lines of thought he started multitudes who could not stop where he himself remained and would fain

have detained them. They separated from the Congregational churches, and were hence called Separates. A large proportion of them became Baptists, and formed themselves into Baptist churches. Through the labors of earnest men who went from them to Carolina and Virginia, their principles were widely disseminated in those and the neighboring colonies, and, in consequence, many churches came into existence."—G. D. B. Pepper, *Doctrinal history and position (Baptists and the National Centenary, pp. 51-52)*.—"Some few of [the Baptist] . . . Churches have never made a formal declaration of their faith aside from the Bible; while in the main, each separate Church expresses what it thinks the Scriptures require of it as a Church, in a 'Declaration of Faith.' There is substantial agreement in the entire fraternity of our Churches, which it is not difficult to set forth. In common with other orthodox Christians, so-called, we believe the doctrines of the Divine Unity and Trinity; of Christ's incarnation and proper Deity; of man's fall and helplessness, and his redemption by the vicarious sacrifice of our Lord Jesus Christ; of the Personality and Deity of the Holy Spirit, and his plenary inspiration of the Holy Scriptures; of free justification by Christ's mediatorial work; of sanctification by the unwrought agency of the Holy Spirit; of holy living on earth after God's commandments; of a future resurrection of the body, and the day of judgment; and of a state of eternal rewards and punishments in another world. Of course, as in all other bodies of Christians, controversies exist amongst ourselves touching the various modifications of these doctrines; enough, at least, to show that there is and must be diversity of view, where the divine right of interpretation is exercised amongst thoughtful men."—T. Armitage, *History of the Baptists, pp. 150-151*.

Triennial Convention established.—Schism of American Baptists.—Southern Convention organized.—"In response to a call, the churches generally sent delegates to a convention held at Philadelphia, in May, 1814, by which the General Baptist Convention of the Baptist denomination in the United States for Foreign Missions was organized. This title was too cumbersome for ordinary use, and as meetings of the convention were held only once in three years, it became generally known as the Triennial Convention. It was the first enterprise in which practically all the churches were united, and as a bond of union was of inestimable worth to Baptists. The constitution declared its object to be to direct 'the energies of the whole denomination in one sacred effort for sending the glad tidings of salvation to the heathen, and to nations destitute of pure gospel light.' From the first this was given a liberal construction, and home missions were undertaken as well as foreign. . . . When the Triennial Convention was organized [in 1814], there was no little difference of sentiment regarding slavery. It still existed in many of the Northern States, though a date had been fixed after which all children born of slave parents should be free, so that the ultimate extinction of the system was sure. Many of the leading men of the South opposed the system, and hoped for its extinction. But about that time, mainly owing to the invention of the cotton gin, slave labor began to be profitable to individuals in the South, though it was never economically profitable to the region as a whole; and that fact strengthened the pro-slavery sentiment immensely, so that soon all desire for its abolition died out. The South then became the ardent defender of the system and did all in its power for its propagation. In 1832 Wil-

liam Lloyd Garrison established *The Liberator*, a newspaper devoted to immediate and unconditional emancipation of slaves, on the simple moral issue that slavery was a great wrong. In time he gained a great following. With each decade there was an increase of the number of members of Baptist churches in the North who believed that slavery was morally indefensible, and its continued maintenance a sin. This made coöperation difficult with churches at the South, whose members held exactly the opposite opinion. After some years of increasing bitterness of controversy, matters were brought to a crisis by the declaration of the Executive Board of the Triennial Convention that they could not under any circumstances appoint as a missionary one who held slaves. This was, of course, a technical violation of the equal rights of the Southern churches, but a contrary decision would have offended the moral sense of the Northern churches. It was evident that an estrangement had come about that made co-operation on the original terms no longer possible. The Southern churches, therefore, called a convention, which met at Augusta, Ga., in May, 1845, and organized the Southern Baptist Convention, adopting the original articles of the Convention as its statement of object. Instead of establishing also a society for home missions, and another for publication, the Convention appointed a number of Boards for its various enterprises, which it has increased, and can increase indefinitely as circumstances in future may make necessary and wise. The American Baptist Home Mission Society and the Publication Society were not affected by this withdrawal, except in the loss of contributions and co-operation from the Southern States. The Triennial Convention, having been for many years a purely foreign missionary society, was now reincorporated under the laws of Massachusetts as the American Baptist Missionary Union."—H. C. Vedder, *Baptist history (Church history handbooks: Book IV, pp. 72, 80-82)*.—"Since the Civil War there has been no successful effort to unite the northern and southern churches. The Northern and Southern Baptist Conventions meet and act separately. The Baptists' government has always been Congregational. The individual Congregation is a self-governing unity with no control from a superior authority.

Development in Europe, Canada and Australasia.—"The movement for Baptist principles upon the continent of Europe, embracing the German, Scandinavian, Dutch, Hungarian, Slavic, Esthonian and Finnish peoples, had its beginning in Germany in 1834. The leader in this enterprise was Johann Gerhard Oncken, a courageous and devoted man of God, who through study of the Scriptures came to embrace believers' baptism and the New Testament idea of a Christian church. The high qualities of his personality soon drew others to him, who came to share his convictions. The effect of Oncken's work rapidly became international, so that to-day [1919] there are 213 churches with 47,580 members. The influence of these German pioneers spread to Austria-Hungary, where work was begun in 1846, to Roumania, where a church was formed in 1860. In Poland and Russia Baptist work has gone forward amid many difficulties. The Scandinavian countries have witnessed a rapid growth of Baptist principles; this is especially true in Sweden where a beginning was made in 1848 and where now there are 645 churches and 55,219 members. In continental Europe there are upwards of 208,000 members, gathered within the century. The work of the Baptists in Canada began in the Maritime

Provinces in 1752, where they has been steady progress, so that there are 579 churches and 61,198 members; in Ontario and Quebec 517 churches and 59,517 members; in the Western Provinces 241 churches and 17,576 members. The work of the Canadian Baptists has been characterized by an earnest evangelism, organization and co-ordinating of denominational agencies, the development of Christian education, and work in home and foreign missions. In Australasia the work of our denomination has developed wholly during the period we have under review [1819-1919]. The first missionary work began in Tasmania in 1834. In religious relations the population is closely allied to Great Britain, whence the larger number of its ministers have been drawn. This however is changing as the churches become stronger, and as educational facilities have developed. There are now [1919] in this continental island, and including New Zealand, 344 churches and 30,168 members."—A. T. Fowler, *Century of Baptist progress in Great Britain and beyond* (*Watchman-Examiner*, May 8, 1919, p. 647).

Characteristics of development in the United States.—"In the year 1819 the Baptists were one hundred and eighty years old in America. Until the Revolution their increase had been very slow. Religious freedom, affording them an equal chance with others, existed only in Rhode Island and Pennsylvania. Elsewhere they suffered under many disabilities and hardships that were always galling and hurtful to their progress. There are no reliable statistics, but it seems that they did not number more than fifty or sixty thousand at the outbreak of the Revolution. During this struggle they were unanimously and heartily on the side of freedom and the Colonies. This loyal service, together with the greater freedom assured by the national life after the adoption of the Constitution, afforded them a more favorable atmosphere, so that a period of rapid growth began and has continued without serious interruption to the present time. By 1800 there were in the neighborhood of 100,000 Baptists within the present territory of the United States. Extensive revivals during the early years of the new century in Kentucky and various other parts of the country swept multitudes into the churches, so that by 1819 the Baptists probably numbered more than 200,000. This revival was accompanied by extraordinary physical 'exercises,' such as the 'jerks' and 'barks,' but the moral improvement in the communities where these bodily contortions occurred was no less remarkable than the physical manifestations. Baptists were less affected than others by these excrescences, and seem to have profited equally as much as others in moral uplift and in additions to their churches. The year 1819 thus falls within the first period of marked Baptist growth. . . .

"The Baptist preachers, especially in the South and West, were pre-eminently evangelistic. Residing on their farms and earning a living for themselves and their families in the sweat of their brows, like other men they had little time for study or sermon preparation. Indeed many of them believed that sermon preparation was a reflection upon the work of the Holy Spirit who had been promised for the very purpose of teaching preachers what to say in the hour of need. They were men of one book, and kept their minds filled with its verbiage, though they often misinterpreted or misused individual passages. They were apt to fall into one line of thinking and preaching, failing to modify their peculiar views by thorough and sympathetic study of the

whole of the Scriptures. Most of them were Calvinists of a rather high type, and as Methodism with its Arminian theology spread over the country they were prone to spend much time in enforcing their Calvinistic convictions, especially the 'perseverance of the saints.' Not infrequently they employed 'the holy tone' in their preaching with great satisfaction to their rustic hearers. The rhythm of action and utterance, gradually rising into a flood of sound, often concealed the poverty of thought and made a really profound and lasting impression upon the emotional country people who heard them. At places foot washing was practised as an ordinance of God's house with great solemnity and conscientiousness. Few if any churches had organs or other musical instruments or stained glass windows, these things being regarded as 'rags of popery.' Most of the Baptists stood on the platform of the Philadelphia Confession of Faith, but not a few, descendants of the great revival of Whitefield and formerly known as Separate Baptists, rejected all creeds and stood on their interpretation of the Word of God. These were generally moderate Calvinists (q. v.), intensely evangelistic in their preaching. The Arminianism of the earlier General Baptists had largely disappeared and the modern Freewill Baptists had as yet made little impression on the body. In the South the 'camp-meeting' and the 'meeting of days' were the recognized means of evangelism and increase of the membership of the churches. In the New England and Middle Atlantic States the Baptists were generally more cultured, living in the villages and towns and provided with abler and more cultured preachers. Their revivalism was less boisterous and emotional, their ordinary services quieter and more dignified, but on the other hand their preaching was often lacking in the energy and fire shown in the less cultivated parts of the country. Many of the preachers in these older regions were able and cultivated men with college training and great influence in the community. In the South there were fewer men of commanding ability and advanced culture, but some like Furman, Johnson and Mercer were no whit behind their Northern brethren in those qualities of grace, manhood and culture which make great preaching."—W. J. McGlothlin, *Baptists of one hundred years ago* (*Watchman-Examiner*, May 8, 1919, pp. 596-597).

Origin and development of missionary work.—"In 1819 the Baptists were just beginning to feel the pull and uplift of three great tasks that were to transform them from a weak and scattered people without any unified life into an organized denomination responding to all the currents of emotion, aspiration and effort which were moving other religious bodies. These were 'Foreign Missions,' 'Home Missions' and 'Education.' Foreign missions were the earliest, constituting the main impulse to the awakening and unifying of the denomination and its enlargement in all directions. Only twenty-seven years before *The Watchman-Examiner* saw the light William Carey had succeeded in leading a few English Baptists to organize a society to undertake Christian work among the people of India. This society sent him out as their first missionary, thus inaugurating the modern missionary movement among English-speaking people. Other denominations in England had quickly followed the example of the Baptists by organizing other societies and sending out other missionaries. This effort had soon attracted attention in New England where various small societies had been organized among Congregationalists and Baptists to assist in the work

of the English. But in 1810 several young Congregational ministers succeeded in inducing their leaders to organize a board for the sending out of missionaries from this country—the 'American Board of Commissioners for Foreign Missions.' The first group of missionaries went out in 1812. On the way out and soon after landing, three of them—Adoniram Judson and his young and accomplished wife, Anne Hasseltine, and Luther Rice—were converted by their own studies to Baptist views and were baptized before the end of the year. This event touched the Baptists of America like an electric shock. Rice returned to assist in the work of awakening and unifying the denomination in the support of the Judsons who now asked to be accepted as missionaries of the Baptists. . . . The Baptists of the North and East responded at once and heartily. Dr. Thomas Baldwin, of Boston, and Dr. Bolles, of Salem, informed the denomination of the great event and took steps to organize at Boston a society for the support of the important additions. . . . Similar societies sprang up in various parts of the country, notably in the Savannah Association, where Dr. W. B. Johnson and Dr. W. T. Brantly were the leading spirits. But these local societies had no means of communication and were inadequate to the task before the denomination. It was determined, therefore, to unite the entire Baptist people, as far as they were interested, in one general missionary organization for the prosecution of the foreign mission enterprise. Accordingly delegates from local societies in eleven States met in Philadelphia, May 18, 1814, and proceeded to organize the 'General Missionary Convention of the Baptist Denomination in the United States of America for Foreign Missions.' Dr. Richard Furman, of South Carolina, was elected president, Dr. Baldwin, of Boston, secretary. It was not based upon the churches or the associations, but upon the societies composed of people who were really and vitally interested in the cause. Dr. William Staughton, of Philadelphia, was elected secretary of the board which was constituted to carry on the work between the conventions, and which was located in Philadelphia. . . . The work was only five years old when *The Watchman* was founded, but already there were rumblings of that antimission sentiment which was soon to split the denomination in the South and constitute one of the most painful chapters of our history."—W. J. McGlothlin, *Baptists of one hundred years ago* (*Watchman-Examiner*, May 8, 1910, p. 597).—"Directly after its organization the convention sent missionaries to Southern China, and Central and Northern China was entered later. A mission was at once begun in Liberia also, and in 1856 the Missionary Union turned over to the convention its mission there. Work in the Yoruba country was begun in 1872. A Japanese mission was begun in 1860, and missions have been established since 1870 in Brazil, Argentina, and Mexico, while Cuba has been entered yet more recently. In 1890 there were one thousand three hundred and thirty-eight members reported from all the mission stations, which increased in a single decade to five thousand three hundred and forty-seven. . . . In 1900 there were over one hundred thousand members in the missionary churches, and as many more in European Baptist churches that have been more or less aided by Americans. The income of the Missionary Union has, in the same period, doubled three times, while the number of supporters has doubled barely twice."—H. C. Vedder, *Baptist history* (*Church history handbooks: Book IV*, pp. 91, 93).—See also INTERCHURCH WORLD MOVEMENT.

Saratoga Convention, 1883.—Agreement on Bible publication.—"As the years passed it became evident that the denomination was seriously divided by . . . controversies . . . and at times it seemed that the division was hopeless. Some Baptists had continued to co-operate with the American Bible Society; others were warm partisans of the American and Foreign Bible Society; a smaller number, but very conscientious and persistent, were supporters of the American Bible Union. The newspapers were filled with controversial articles, editorial and contributed; the annual meetings of the societies often became scenes of debate in which feeling was roused that reminded the older members of the anti-slavery contest. Various attempts were made for the union of the various societies, but for one reason or another all failed. It was evident that the denominational interest in Bible work was not adequate to the support of a separate Bible society, to say nothing of supporting two. The peace of the denomination required that some solution should be found. Finally a convention was called and held at Saratoga, in May, 1883, a remarkable body in many ways, fairly representing the Baptist churches of the whole country and containing its ablest men. It was unanimously decided to recommend both Bible societies practically to disband; and that the work of the denomination in translating and circulating the Scriptures should be committed to the American Baptist Publication Society, for the home field, and to the Missionary Union for the foreign field. This was felt to be an honorable and happy disposition of the matter; the controversies disappeared and peace has since been maintained."—H. C. Vedder, *Baptist history* (*Church history handbooks: Book IV*, pp. 90-91).

Northern Baptist Convention.—"The Northern Baptist Convention was provisionally organized in Washington, District of Columbia, in accordance with action taken on the evening of May 16, 1907. Next morning provisional by-laws were adopted. The permanent organization occurred in Oklahoma City, Oklahoma, May 21, 1908. For many years previously there had been agitation for the promotion of denominational unity. The denominational societies met annually at anniversaries, each busy with its own concerns, composed largely of the same persons, but with little relation to one another in these meetings. Baptists as a group of Christians had no way of expressing denominational consciousness, or opinions, or of doing work other than that for which the Societies were organized. The organization of the Convention opened the way for the expression and development of denominational consciousness, for the promotion of Baptist unity, for action by the churches in many realms not covered by the Societies, and for the quickening and concentration of denominational energies of all kinds. In the twelve years of its history the Convention has amply justified its existence. The Societies, which were originally organizations of individuals, have become actual denominational agencies, with the same constituency. Their work has been brought before our churches as never before. Some overlapping and infelicities have been straightened out. There is complete feeling of harmony between all these agencies. Our educational institutions have begun to receive expert attention. Their needs have been studied. Appeals have been successfully made for the increase of the endowment and facilities of some of them. Student pastors have been at work in some of the State universities to care for the religious interests of Baptist students.' An

efficient board has been organized and incorporated for the care of ministers and missionaries, their widows and dependent children. Through the agency of this Ministers and Missionaries Benefit Board a large sum of money has been raised. The work of similar agencies in various States is more or less perfectly co-ordinated with that of the board. Religious education has been greatly stimulated. Ideals for the normal unfolding of the moral lives of growing persons have been brought to the notice of those who are active in this essential service, and Sunday School work and Young People's activities have been greatly advanced. The interest of Baptist Christians in social conditions has been increased. Brotherhoods have been organized in churches. Thousands of men have been induced to become active in the affairs of their communities. It is impossible to measure the results of this Christian interest in community welfare.

"The Convention is thoroughly democratic. Any church in the United States can send a delegate, and any delegate is entitled to the floor of the Convention. The committee that nominates Convention officers, and the committees that control its sessions, are selected by the State delegations. The executive committee has charge of the affairs of the Convention between its sessions. From the beginning it has been a policy of this committee not to originate business, but to be faithful in attending to matters referred to it by the Convention and to the discharge of its duties as prescribed in the by-laws. During these twelve years the Convention has met in the East four times—in Washington, District of Columbia, 1907, Philadelphia 1911, Boston 1914, Atlantic City 1918; on the Pacific Coast twice—Portland, Oregon, 1909, and Los Angeles 1915; and in the Middle West six times—Oklahoma City 1908, Chicago 1910, Des Moines 1913, Minneapolis 1916, Cleveland 1917. . . . [The next convention met in Denver, Colorado, May 21-27, 1919, and one was held in Buffalo, N. Y., in 1920.] Omitting the Washington meeting, the Convention has had eight presidents, of whom six have been laymen, and two ministers. Of the eleven Convention preachers since organization, seven have been pastors, two have been connected with institutions of learning and two—Drs. Morehouse and Mabie—were conspicuous, and honored and successful as missionary secretaries. The statistical tables in the *Manual* of the Northern Baptist Convention covering the period 1908-1917, inclusive, show gradual growth in financial receipts. The adoption of a unified budget including items for all organizations of the Convention, and the apportionment of these to the States, has not realized all that was hoped for, but has been an advance upon previous methods. We shall not reach our ideal until every member of every church is contributing regularly and according to his ability for every enterprise we undertake. To work toward this ideal is the present plan. . . . The organization of the Convention [is responsible for] the growing interest of Baptist laymen. . . . Women . . . are delegates to the Convention, serve on its committees, and are participants in all its affairs."—W. C. Bitting, *Northern Baptist convention (Watchman-Examiner, May 8, 1919, p. 621)*.

Conference on fundamentals.—Just before the meeting of the Northern Baptist Convention in Buffalo in 1920 a notable group of the more conservative northern leaders held a preliminary conference on the fundamentals of the Baptist faith. They took a firm stand against the teaching of some of the Baptist clergy who are very

sympathetic with the Higher Criticism. They proposed that the Northern Baptist Convention appoint a board which should make inquiry into the teachings of the theological seminaries with a view to making these institutions more conservative. The opponents of this group usually referred to this proposal as "The Inquisition."

1920.—Recommendations of Convention at Buffalo.—At its meeting in Buffalo, N. Y., January 15, 1920, the Northern Baptist Convention adopted the following recommendations, after the final one had been amended: "(1) That as a denomination we record our acceptance of the conception that the mission of the Christian Church is to establish a civilization, Christian in spirit and in passion, throughout the world. (2) That we announce our purpose to establish independent, self-supporting churches in the non-Christian world, under the direction of native leadership, and to that end we plan to enlarge our educational work in all fields. (3) That we record our belief in all those missionary agencies which will help to make intelligent men and women, and which in the spirit of the Great Physician will help to relieve human suffering. (4) That we declare our intention to increase greatly our missionary staff to the end that we may relieve over-burdened missionaries, and may adequately man our fields. (5) That we send a commission to study the situation in Eastern Europe as soon as possible, and advise us as to the work which should be undertaken there. (6) That we record our readiness to enter some of the great unoccupied fields as soon as we can adequately provide for the fields under our care. (7) That we declare our conviction that the Baptists of the North should not withdraw from the work for the Indians and for the Negroes of the South, but that we should strengthen our schools and make them as efficient as possible. (8) That we declare our determination to lay new emphasis upon our work for the new Americans in all sections, and to make a special effort to redeem our cities. (9) That we approve the plans to increase the work on the frontier, and especially to provide churches for the proposed soldier settlements. (10) That we endeavor to increase our work in Latin America on a large scale, that we may help prepare those Republics for the new day in their land. (11) That we take steps at once, in coöperation with other churches, to study the social situation in America, to the end that we may be in a position to speak with authority and helpfulness in the crisis which now faces the nation. (12) That we make a determined effort to raise sufficient funds so that we may grant pensions to all our ministers and missionaries, and that we request the Ministers and Missionaries Benefit Board to conduct a vigorous campaign this fall to induce the churches to increase their salaries. (13) That we record our conviction of the supreme importance of general and religious education, and approve plans for the extension of education of both types throughout our constituency. (14) That we appoint a committee to continue the survey and bring it to completion. (15) That we establish a denominational weekly paper which shall be of a high grade, and under the ownership and control of the Northern Baptist Convention. (16) That we approve the budgets proposed by the Committee on Survey and declare our determination to raise before April 1, 1924, the sum of \$54,006,833 for the permanent equipment of our institutions and work, and that we accept as the operating budget for the year

1923-1924, the sum of \$8,210,311. Respectfully submitted, THE COMMITTEE ON SURVEY.

"Upon presentation to the Convention, Recommendation 16 was referred back to the Committee with the request for an estimate of the total amount to be raised within five years. The Committee later submitted the following substitute for Recommendation 16: '(16) That in the light of the facts presented in this Survey and of our desire to do a work for the Kingdom that is commensurate with our resources, we declare our determination to raise before April 1, 1924, for all our benevolence, including city, state, national and foreign work, the sum of \$100,000,000.'—*Survey of the fields and work of the Northern Baptist Convention, January 15, 1920, pp. 150-151.*

1920.—*European missions.—Distribution of responsibility.*—Under the auspices of the Executive Committee of the Baptist World Alliance a conference was held in London in July, 1920, attended by representatives of the principal Baptist bodies in the United States and Canada, Great Britain and Ireland, and nearly all the European countries except Portugal, Bulgaria and Russia. "At this conference Baptists representing practically all the belligerent countries came together for the first time after the war, to renew their fellowship. . . . From the standpoint of missionary work, the most important action taken in the conference was the distribution of responsibility for lending assistance to Baptist bodies in various parts of Europe in the conduct of their work. This distribution of responsibility was approved as follows: *Portugal:* To Brazil. The Southern Baptist Convention to be asked to consider this work favorably. *Spain:* To the Southern Baptist Convention. *France, including Belgium* and French-speaking *Switzerland:* To the American Baptist Foreign Mission Society; the Breton work to the British Baptist Missionary Society. *Italy:* To be decided by conference between the Baptist Union of Italy, the Southern Baptist Convention, and the British Baptist Missionary Society. *Jugo-Slavia:* To the Southern Baptist Convention. *Hungary, Roumania, the Ukraine,* and the portions of *Russia* eastward thereof: To the Southern Baptist Convention. *Bulgaria* and *German Austria:* To the German Baptist Union, and the German-speaking Baptists of America. *Czecho-Slovakia:* Co-operative work by the American Baptist Foreign Mission Society, Great Britain, and such others as are willing. It was left an open question whether the Southern Baptist Convention shall join in a theological seminary at Prague for Slav students. *Poland:* To the American Baptist Foreign Mission Society and the German-speaking Baptists in America. The importance of one Union to be emphasized. *Finland:* To Sweden and Great Britain. *Norway:* To the American Baptist Foreign Mission Society. *Latvia, Lithuania, Estonia, and Northern Russia:* To Great Britain, Canada, and the American Baptist Foreign Mission Society. *Denmark:* To the American Baptist Foreign Mission Society. *Holland:* To Great Britain and Australia. . . . One of the most significant actions of the Conference was the election of Rev. J. H. Rushbrooke, D.D., of London, as Baptist Commissioner for Europe. . . . He will give all of his time to the discharge of duties connected with his office."—*American Baptist Foreign Mission Society, Report, 1921, pp. 15-17.*

1922.—*Northern Baptist Convention at Indianapolis.*—For the first time in its history the convention, which opened on June 14, was presided over by a woman, Mrs. Helen Barrett Montgomery, a minister of the church and president of

the Woman's Foreign Mission Society. In the course of the sessions resolutions were offered on the abolition of war, Armenia, Near East Relief, European Relief, obedience to law, industrial relations, child labor, racial justice, denominational schools, the Bible in the life of the people, the Baptist World Alliance, evangelistic advance, and missionary enterprise. In the resolutions, war is declared to be barbarous, futile and contrary to every Christian ideal and teaching as a method of settling international disputes. "We reaffirm our belief that our country should have its part in an association of nations for expressing our common humanity, adjusting difficulties, and outlawing any nation that resorts to arms to further its own interests." The United States government was petitioned to participate in the World Court of Justice, "and to take whatever other steps may be necessary to secure such co-operation on the part of the peoples of the earth as will bring about a stabilizing of world conditions and permanently banish war." Solemn protest was made "against the ruthless starvation and massacre of the first nation to accept the Christian faith. 'We hereby petition our government immediately to adopt measures to secure united action on the part of the United States and European governments looking to the deliverance and security of imperiled Christian peoples in the Near East.' (A committee was appointed, as recommended, to convey these resolutions in person to the President and Secretary of State)." A commission on international peace and good will was also appointed.—Based on *Missions (Convention Number), July, 1922.*

1922.—*Southern Baptist Convention at Jacksonville, Florida.*—*Report on Northern and Southern conference.*—The sixty-seventh annual meeting was held during May in the "Billy" Sunday Tabernacle, and was attended by some four thousand Baptists, under the presidency of Dr. E. Y. Mullins. A report was presented by a committee of about thirty men and women from the Northern and Southern Conventions who had held a three days' conference during January on matters of mutual interest. The report read as follows: "Your committee to which was referred the resolutions from the conference of brethren of Columbia, Missouri, begs leave to submit its report to the Convention. Two requests were submitted through the executive committee to the Southern Baptist Convention from this conference. *First,* that the Southern Baptist Convention appoint a committee of nine to act with a similar committee of the Northern Baptist Convention as a standing joint committee of comity and co-operation, which should be known as a joint committee of conference for matters of particular co-operation. *Second,* another committee of nine to form with a similar committee of the Northern Baptist Convention a joint committee which 'should be charged with the duty of preparing a statement of faith and polity briefly and embodying the basis of fundamental principles and beliefs of Baptists.' Your committee, after full discussion, presents the following report: *First,* that the present relations between the two conventions of American Baptists are wholly fraternal and sympathetic, and there exists no barrier to particular agreements between the accredited agencies of the two conventions in matters of particular co-operation. Therefore we do not recommend the appointment of a standing committee as requested. *Second,* that the Southern Baptist Convention does not desire to take the initiative in the matter of formulating a general doctrinal statement for American Baptists, inasmuch as there exists at

this time on the part of the Southern Baptists neither demand nor necessity for any new statements of Baptist faith and polity."—*Watchman-Examiner*, June 1, 1922.

Recent statistics.—The Baptist denomination is composed of three main groups: The Northern Convention, the Southern Convention, and the National Convention (Colored). According to the 1921 report there were 59,744 churches, 42,088 ordained ministers, and a total membership of 7,943,331. The Northern Convention embraced 8,409 churches, 8,566 ordained ministers, and a membership roll of 1,253,878; besides 7,162 Sunday schools with an attendance of 984,011. The Southern Convention was composed of 29,551 churches, 15,551 ordained ministers, and 3,434,246 members; also 19,267 Sunday schools with 1,872,457 scholars. The National Convention (Colored) return for the same year showed a total of 20,846 churches, 17,103 ministers, 3,116,325 members, and 17,476 Sunday schools attended by 947,116 pupils. For Canada the figures were: 1302 churches, 868 ministers, 138,882 members, 1200 Sunday schools and 109,834 scholars.

BAQUEDANO, Manuel (b. 1826), Chilean general; assumed command of the invasion against Peru (1880) which resulted in the defeat of the Peruvian forces, and the annexation by Chile of the Tacna nitrate regions. Was made generalissimo in the Chilean army.

BAR, an ancient territory in eastern France, the capital of which was Bar-le-Duc. It was a county and later a duchy, was united with the duchy of Lorraine in 1473, was annexed by France in 1659, and was restored to Lorraine in 1661. See FRANCE: 1659-1661, and 1733-1735.

BAR, Confederation of.—A union of Polish noblemen and other patriots formed at Bar (Poland) in 1768. "On February 29, 1768, two score or so of country gentlemen, some hundreds of peasants, and a few priests and monks, assembled at the little fort of Bar [Poland] under the banner of the Blessed Virgin, formed a Confederation to protest against the anti-Catholic resolutions of the lately dissolved Diet. Without any influence or organisation, the Confederation of Bar appeared, at first sight, insignificant enough. It owed its real importance to the fact that it was a genuine popular rising inspired by a patriotism and a devotion utterly unknown to the official classes of Poland. Its consequences were momentous and far-reaching. The original Confederates were, indeed, easily scattered by the Russian troops; but, stamped out in one place, the conflagration quickly burst forth again in half a dozen other places, and, at last, the whole Republic was, as Replin put it 'ablaze with the fire of Bar.'"—R. N. Bain, *Last king of Poland and his contemporaries*, p. 106.—The confederation was dissolved in 1772, though remnants of it lingered until 1776. "The Confederation of Polish patriots at Bar had failed in its object. Its Turkish allies, crushed by land at Choczim (1768-9) and by sea at Tchesmé (1770), were no longer capable of rendering assistance, while the fall of Choiseul extinguished all hope of aid from France. Choiseul's plan for the salvation of Poland had but hastened the disaster. Frederick II had seized the moment when Russia was absorbed in struggles with Turkey, of occupying Prussian Poland. An agreement with Emperor Joseph II at Neisse (in Silesia), Aug. 25, 1769, had the re-

sult of overawing Russia. Already in February of that year Frederick had thrown out hints to Russia of a partition. This dismemberment was upon the Poles at the point of the bayonet, while the acts consecrating it were signed between the three contracting parties at St. Petersburg, July 25, 1772."—E. Reich, *Select documents illustrating mediæval and modern history*, p. 651.—See also POLAND: 1763-1700.

BARADAEUS, James, or Jacob (c. 500-578), leader of Jacobite Church. See CHRISTIANITY: 100-300: Syrian churches; JACOBITE CHURCH.

BARAKLI DZUMA, village in Bulgaria captured by the British in 1916. See WORLD WAR: 1917: V. Balkan theater: e, 1.

BARALONG AFFAIR.—The British decoy ship *Baralong* is alleged to have sunk a German submarine while the latter was in the act of sinking the British cargo steamer *Nicosian*, on August 19, 1915, and to have shot the commander and crew after they had offered to surrender and were struggling in the water. Affidavits to prove this allegation were presented to the British government by the German government through the United States as intermediary, and the demand made that the British government proceed against the captain and crew of the *Baralong* for murder. The British government in answer proposed that the affair be investigated by an impartial tribunal of American naval officers, along with three other incidents, in one of which a German destroyer was alleged, on the day of the *Baralong* affair, to have fired upon a British submarine stranded on the Danish coast, and upon its crew when they attempted to swim ashore. The German government declined the proposal. The incident occurred in the approach to St. George's Channel, and had the effect of keeping submarines away from those waters for six months.

BARANGAYS, groups of fifty or a hundred families in the ancient communal form of government established by the Spanish in the Philippines. See PHILIPPINE ISLANDS: Previous to 1525.

BARANOF, Alexander Andrevich (1746-1819), first governor of Russian America. In 1796 he founded a settlement on Bering strait; in 1799 started a trading post on the large island which bears his name, on which Sitka is situated (see also ALASKA: 1787-1867); extended his operations to the vicinity of San Francisco, near which locality he had a temporary colony.

BARANOVICHI, a railroad junction near the Pripet marshes midway between Vilna and Pinsk. During the World War General Ewerts was forced to give up this strategic junction to the Germans in the fall of 1915 following the capture of Kovno and Grodno. The surrender of Baranovich gave the German army control of the railroad line from Vilna, through the junction, to Rovna, a distance of almost 300 miles. The Russians recaptured this important railroad center in the summer of 1916 at the outset of their offensive.—See also WORLD WAR: 1915: III. Eastern front: i, 6.

BARANY, Robert, otologist of Vienna, noted for discovery of hearing tests. See NOBEL PRIZES: Medicine: 1914.

BARAS, tribal district of Madagascar. See MADAGASCAR.

BARATHRUM.—"The barathrum, or 'pit of punishment' at Athens, was a deep hole like a well into which criminals were precipitated. Iron hooks were inserted in the sides, which tore the body in pieces as it fell. It corresponded to the *Ceadas* of the Lacedæmonians."—G. Rawlinson, *History of Herodotus*, bk. 7, sect. 133, note.

BARATIERI, Oreste (1841-1901), Italian general, commander in Africa. See ITALY: 1895-1896.

BARBADOS, easternmost island of the British West Indies. Its area is 166 square miles. The coast is surrounded by coral reefs. Sugar cane is the chief product of the island; cotton, tobacco and coffee are also raised. In 1921 its estimated population was 200,368.—See also BRITISH EMPIRE: Extent.

Government.—"The constitution of Barbados was first granted by King Charles I, in 1627, and confirmed by the Commonwealth in the Articles of Agreement for the surrender of the island which have been called the Charter of Barbados. The government consists of a nominated legislative council of nine members, and a house of assembly consisting of twenty-four members elected annually by the people on the basis of a moderate franchise. At general elections to the latter body there is frequently no contest, a fact which speaks volumes for the contented state of the inhabitants, who prefer to devote their time to the development of the island rather than to political strife, an example which might with advantage be followed elsewhere. Next to the house of commons and the house of assembly in Bermuda, the Barbados house of assembly is the most ancient legislative body in British oversea dominions. The executive functions of the government are performed by an executive council which consists of the governor, the colonial secretary, and the attorney general *ex officio*, and such other persons as may be nominated by the King, and of an executive committee which consists of the members of the executive council, one member of the legislative council, and four members of the house of assembly nominated by the governor. This executive committee introduces all money votes and government measures and prepares the estimates."—A. E. Aspinall, ed. (*Oxford survey of the British empire, v. on America, p. 334.*)

1605-1685.—"There is no doubt that in the sixteenth century the island was visited by the Spaniards and Portuguese. . . . Some time in July, 1605, the *Olive Blossom* . . . happened to touch at Barbados off the western coast, and the captain . . . finding the island unoccupied by any European nation, took possession of it in the name of James I. . . . In 1624 a ship (belonging to Sir William Courteen, a wealthy London merchant of Dutch lineage) was forced, from stress of weather, to anchor in a bay on the southern coast of Barbados. . . . The sailors took home to Sir William favourable accounts of the island, and his Dutch correspondents having also written favourably of it, he resolved to colonise the place; and, under the patronage of Ley, Earl of Marlborough, Courteen's scheme of colonisation was carried out. . . . In February, 1627 (new style) the *William and John*, a vessel of 100 tons, fitted out by Sir William Courteen, commanded by Captain Henry Powell, and having on board forty white emigrants (men) and eight negroes, anchored at 'The Hole.' . . . The settlers erected a fort, named it 'Plantation Fort,' hoisted the English flag, and elected Captain William Deane as Governor. . . . In 1628 seventy settlers, under the leadership of Charles Wolferstone, a Bermudian, arrived at the island and anchored off the south-western coast in a bay now called 'Cariisle Bay,' St. Michael's. Here they landed, erected houses, fortified the place, and, finding a rude Indian bridge over a stream, called their settlement 'The Bridge' (now Bridgetown [the capital of the colony]). . . . In 1645 a considerable number of Royalists settled in the colony after the defeat of the King at Naseby.

The majority of the colonists, while loyal to the Throne, were, however, men of moderate views. Dissensions arose with the advent of these ultra-Royalists. . . . On receiving the news of the execution of Charles I. the Royalists proclaimed Charles II., and declared the Book of Common Prayer to be the only pattern of true worship. Governor Bell was set aside and Francis Lord Willoughby of Parham (who had fought against the King and was now fighting against the Parliament) was appointed in his stead; and the adherents of the Parliament were heavily fined and banished. . . . On October 3, 1650, Parliament ordered that a strong fleet should be despatched for reducing to submission the island of Barbados and all other English plantations that should persist in opposition to the Commonwealth, and Cromwell, in consequence, despatched a fleet of seven ships, mounting 236 guns, for this 'Barbados business' under Admiral Sir George Ayscue. . . . On January 11, 1652, the Royalists surrendered on the most honourable terms, and the 'Articles of Agreement' for the rendition of the island were confirmed by the Commonwealth on August 18, 1652. These 'Articles' are justly considered 'The Charter of Barbados.' As soon as the Commonwealth became possessed of the island the leading Royalists were expelled. . . . On the death of Cromwell the Committee of Public Safety appointed Colonel Modiford . . . as Governor. . . . Charles II. bestowed a few baronetcies and knight-hoods on Barbadians for their loyalty, but they got little else out of him. He confirmed the Navigation Act of Cromwell which ruined the trade of the island with the Dutch, and he added to its burdens by granting of monopolies, the chief of these being possessed by the 'Royal African Company,' at the head of which was his brother, afterwards James II.; this was a company for the supply of negro slaves."—E. G. Sinckler, *Barbados handbook, pp. 4-10.*

1685-1885.—"In the year 1685 King James the Second came to the British throne. He had already worked ill to Barbados as the head of the Royal African Company, and his accession was accompanied by further taxes on sugar, and by an importation of political prisoners, partisans of Monmouth and victims of the Bloody Assize. War with France followed the Revolution of 1688, which sent the Stuarts over the water to the care of Louis the Fourteenth, and, in the following year, Barbadian troops were mainly instrumental in recovering St. Kitts from the French. . . . In 1700 Labat, who visited Barbados, found it given up to sugar planting, rich, flourishing, and better peopled than any other of the British West Indian colonies; the number of slaves was given to him at 60,000, but he placed it himself at the lower figure of 40,000, and he noticed the danger to the public peace from the Irish element in the community. By the middle of the eighteenth century, in 1757, the number of negroes was returned at nearly 64,000, while the white population was under 17,000. The islanders however were vigorous as ever, for in 1762 they raised a regiment for the expedition which took Martinique, and thus contributed to the British successes which led up to the peace of Paris in the following year. The Stamp Act, which helped to bring about the revolt of the North American

colonies, pressed for a while on Barbados also; and the Barbadians felt the ill effects of the policy embodied in it, for the American War of Independence cut them off from their food supplies, and brought, according to the terms of their address to the king, a population of 12,000 whites and 80,000 blacks within reach of starvation. In 1780 the island was laid desolate by an awful hurricane, and representations of the misery thus caused, led to a grant from the Imperial Parliament of £80,000, to which was added a sum raised by private subscription in England. . . . The embargo placed by the Government of the United States on the trade of Great Britain and her colonies, with the war which followed in 1812, straitened the supplies of the island. At the same time the movement against slavery was gathering strength, and premature reports of emancipation led to a slave insurrection in 1816. In 1805 there were 15,000 white inhabitants to 60,000 slaves, and in 1834, the year of liberty, the number of slaves had risen to nearly 83,000, while the white population was slightly under 13,000. Again at a critical time the island was visited by a hurricane, the storm of the eleventh of August, 1831, being in the words of the Governor 'one of the most dreadful hurricanes ever experienced in the West Indies.' It laid waste the three islands of Barbados, St. Vincent and St. Lucia, and once more the Imperial Parliament voted a grant in aid of the sufferers, supplementing the gift by a loan and by a suspension of the duties levied on the provisions imported into the island. [With respect to] emancipation and free-trade, . . . the lot of Barbados did not materially differ from that of the rest of the West Indies. . . . The Barbadians faced their difficulties manfully and well, although no colony was more dependent on slave labour, and there was none whose fortunes were more bound up with the one product of sugar. In 1833 the Governor of Barbados was constituted also Governor of St. Vincent, Grenada and Tobago. St. Lucia being also included in 1838, and for a short time Trinidad as well. Barbados thus became again the seat of government for the Windward Islands; and the arrangement continued till the year 1885, when it was severed from the other members of the group, and left to be, what it has practically been throughout the history, a separate item in the community of the West Indies."—C. P. Lucas, *Historical geography of the British colonies*, pp. 188-191.—For conditions of sugar industry in Barbados, see WEST INDIES, BRITISH: 1897.

1898.—Destructive tornado.—During the night of September 10 a violent tornado swept the island, destroying 10,000 houses and damaging many hundreds more. Over one hundred lives were lost and three-fourths of the population were rendered homeless. This was the most serious storm which had visited the island since that of August 11, 1831. The home government made a grant of £40,000 to aid in repairing the devastation.

1899-1900.—Reciprocity treaty with United States.—A reciprocity treaty was concluded with the United States on June 16, providing for a twelve per cent. reduction on sugar. The sugar industry of Barbados was not in a thriving condition owing to the backward methods employed; Cuba and Porto Rico, on the other hand, proved formidable competitors, being backed by American capital and improved machinery.

1902-1904.—During 1902 and part of 1903 the island suffered from drought and an epidemic of smallpox. To relieve the economic depression the Imperial Exchequer made a grant of £80,000 to

assist the flagging sugar industry, while attempts were also made to revive the cotton industry.

1905.—Tercentenary of British occupation.—On November 30 the tercentenary of the English occupation of the island was celebrated by services in the cathedral at Bridgetown and other official exercises. An address was dispatched to King Edward relating the historic events of three centuries and expressing the loyalty of the inhabitants during that period.

1905-1910.—Negro labor for Panama Canal.—Period of increased prosperity.—The construction of the Panama Canal by the United States proved to be an important benefit to the overpopulated island of Barbados. In 1905 some 17,000 negroes shipped to the Canal Zone to prepare for the cutting of the canal; of these about 12,000 went on contract service. During 1907 it was estimated that they were sending between £4,000 and £5,000 per month to their homes, besides bringing a considerable sum with them on the expiration of their contracts. During 1908 sporadic cases of yellow fever appeared on the island, a circumstance which interfered with the tourist traffic. By 1909 there were quite 20,000 Barbadian laborers employed in the Canal Zone, and in 1910 the island benefited to the extent of £80,000 from this source.

B. C. 235.—Cisalpine Gaul overrun by the Gætætæ. See CELTS: Early history.

B. C. 113.—Teutones and Cimbri.—"Hitherto, the barbarians of wild Europe whom the Romans had met were either the Aryan Celts, or the non-Aryan tribes found in northern Italy, Spain and Gaul. Now, for the first time, the armies of Rome were challenged by tribes of another grand division of the Aryan stock, coming out of the farther North. These were the Cimbri and the Teutones, wandering hordes of the great Teutonic or Germanic race which has occupied Western Europe north of the Rhine since the beginning of historic time. So far as we can know, these two were the first of the Germanic nations to migrate to the South. They came into collision with Rome in 113 B. C., when they were in Noricum, threatening the frontiers of her Italian dominion. Four years later they were in southern Gaul, where the Romans were now settling colonies and subduing the native Celts. Twice they had beaten the armies opposed to them; two years later they added a third to their victories; and in 105 B. C. they threw Rome into consternation by destroying two great armies on the Rhone. Italy seemed helpless against the invasion for which these terrible barbarians were now preparing, when Marius went against them. In the summer of 102 B. C. he annihilated the Teutones, near Aquæ Sextiæ (modern Aix), and in the following year he destroyed the invading Cimbri, on a bloody field [in Piedmont, northern Italy, near the modern Vercelli]."—J. N. Larned, from the article *Europe*, in former editions.

A. D. 3rd century.—Teutonic nations.—Gothic invasion of Balkan peninsula.—Mediterranean piracy.—"The Germanic nations beyond the Rhine and the Danube had, by this time, improved their organization, and many of the tribes formerly separated and independent were now gathered into powerful confederations. The most formida-

ble of these leagues in the West was that which acquired the common name of the Franks, or Free-men, and which was made up of the peoples occupying territory along the course of the Lower Rhine. Another of nearly equal power, dominating the German side of the Upper Rhine and the headwaters of the Danube, is believed to have absorbed the tribes which had been known in the previous century as Boii, Marcomanni, Quadi, and others. The general name it received was that of the Alemanni. The Alemanni were in intimate association with the Suevi, and little is known of the distinction that existed between the two. They had now begun to make incursions across the Rhine, but were driven back in 238. Farther to the East, on the Lower Danube, a still more dangerous horde was now threatening the flanks of the empire in its European domain. These were Goths, a people akin, without doubt, to the Swedes, Norsemen and Danes; but whence and when they made their way to the neighborhood of the Black sea is a question in dispute. It was in the reign of Caracalla that the Romans became first aware of their presence in the country since known as the Ukraine. A few years later, when Alexander Severus was on the throne, they began to make incursions into Dacia. During the reign of Philip the Arabian (244-249) they passed through Dacia, crossed the Danube, and invaded Mœsia (modern Bulgaria). In their next invasion (251) they passed the Balkans, defeated the Romans in two terrible battles, the last of which cost the reigning Emperor, Decius, his life, and destroyed the city of Philippopolis, with 100,000 of its people. But when, a few years later, they attempted to take possession of even Thrace and Macedonia, they were crushingly defeated by the Emperor Claudius, whose successor Aurelian made peace by surrendering to them the whole province of Dacia (270), where they settled, giving the empire no disturbance for nearly a hundred years. Before this occurred, the Goths, having acquired the little kingdom of Bosphorus (the modern Crimea) had begun to launch a piratical navy, which plundered the coast cities of Asia Minor and Greece, including Athens itself. On the Asiatic side of the [Roman] empire a new power, a revived and regenerated Persian monarchy, had risen out of the ruins of the Parthian kingdom, which it overthrew, and had begun without delay to contest the rule of Rome in the East."—*Ibid.*

4th century.—Goths in the empire.—Raid on Constantinople.—"The death of Valentinian [in 375] was the beginning of the fatal calamities. His brother, Valens, had none of his capability or his vigor, and was unequal to such a crisis as now occurred. The terrible nation of the Huns had entered Europe from the Asiatic steppes, and the Western Goths, or Visigoths, fled before them. These fugitives begged to be permitted to cross the Danube and settle on vacant lands in Mœsia and Thrace. Valens consented, and the whole Visigothic nation, 200,000 warriors, with their women and children, passed the river (376). It is possible that they might, by fair treatment, have been converted into loyal citizens, and useful defenders of the land. But the corrupt officials of the court look advantage of their dependent state, and wrung extortionate prices from them for disgusting food, until they rose in desperation and wasted Thrace with fire and sword. Fresh bodies of Ostrogoths (Eastern Goths) and other barbarians came over to join them (378); the Roman armies were beaten in two great battles, and Valens, the emperor, was slain. The victorious

Goths swept on to the very walls of Constantinople, which they could not surmount, and the whole open country, from the Black Sea to the Adriatic, was ravaged by them at will.

"In the meantime, the western division of the empire had passed, on the death of Valentinian, under the nominal rule of his two young sons, Gratian, aged sixteen, and Valentinian II, aged four. Gratian had made an attempt to bring help to his uncle Valens; but the latter fought his fatal battle while the boy emperor was on the way, and the latter, upon hearing of it, turned back. Then Gratian performed his one great act. He sought a colleague, and called to the throne the most promising young soldier of the day. This was Theodosius, whose father, Count Theodosius, the deliverer of Britain, had been put to death by Valens, on some jealous accusation, only three years before. The new emperor took the East for his realm, having Gratian and Valentinian II for colleagues in the West. He speedily checked the ravages of the Goths and restored the confidence of the Roman soldiers. Then he brought diplomacy to bear upon the dangerous situation and succeeded in arranging a peace with the Gothic chieftains, which enlisted them in the imperial service with forty thousand of their men. But they retained their distinctive organization, under their own chiefs, and were called "fœderati," or allies. This concession of a semi-independence to so great a body of armed barbarians in the heart of the empire was a fatal mistake, as was proved before many years."—*Ibid.*

395-408.—Decay of the Western empire.—Stilicho and Alaric the Goth.—After the death of Theodosius in 395 and the subsequent division of the empire, evil days fell on the older Rome, "while the New Rome lived through them, and endured for a thousand years. No doubt the empire had weakened more on its elder side; had suffered more exhaustion of vital powers. It had little organic vitality now left in it. [Swarms of barbaric invaders were waiting and watching at its doors, and pressing upon it with increasing fierceness.] Population dwindled year by year. Recruiting from the body of citizens for the common needs of the army became more impossible. The state was fully dependent, at last, on barbaric mercenaries of one tribe for its defense against the barbaric invaders of another; and it was no longer able, as of old, to impress its savage servitors with awe of its majesty and its name. Stilicho [who was a Vandal by birth] for a time stoutly breasted the rising flood of disaster. He checked the Picts and Scots of Northern Britain, and the Alemanni and their allies on the frontiers of Gaul. But now there arose again the more dreadful barbarian host which had footing in the empire itself, and which Theodosius had taken into pay. The Visigoths elected a king (395), and were persuaded with ease to carve a kingdom for him out of the domain which seemed waiting to be snatched from one or both of the feeble monarchs [Arcadius and Honorius], who sat in mockery of state at Constantinople and Milan. Alaric, the new Gothic king, moved first against the capital on the Bosphorus; but Rufinus persuaded him to pass on into Greece, where he went pillaging and destroying for a year. Stilicho, the one defender of the empire, came over from Italy with an army to oppose him; but he was stopped on the eve of battle by orders from the Eastern court, which sent him back, as an officious meddler. This act of mischief and malice was the last that Rufinus could do. He was murdered, soon afterwards, and Arcadius, being free from his

influence, then called upon Stilicho for help. The latter came once more to deliver Greece, and did so with success. But Alaric, though expelled from the peninsula, was neither crushed nor disarmed, and the Eastern court had still to make terms with him. It did so for the moment by conferring on him the government of that part of Illyricum which the Serbia and Bosnia of the present day coincide with, very nearly. He rested there in peace for four years, and then (400) he called his people to arms again, and led the whole nation, men, women and children, into Italy. The emperor, Honorius, fled from Milan to Ravenna, which, being a safe shelter behind marshes and streams, became the seat of the court for years thereafter. Stilicho, stripping Britain and Gaul of troops, gathered forces with which, at Eastertide in the year 402, and again in the following year, he defeated the Goths, and forced them to retreat.

"He had scarcely rested from these exertions, when . . . Stilicho was called upon to confront a more savage leader, Radagaisus by name, who came from beyond the lines (405), with a vast swarm of mixed warriors from many tribes pouring after him across the Alps. Again Stilicho, by superior skill, worsted the invaders, entrapping them in the mountains near Fiesole (modern Florence), and starving them there till they yielded themselves to slavery and their chieftain to death. This was the last great service to the dying Roman state which Stilicho was permitted to do. Undermined by the jealousies of the . . . court at Ravenna, he seems to have lost suddenly the power by which he held himself so high. He was accused of treasonable designs and was seized and instantly executed by the emperor's command [in 408]."—*Ibid.*

408-410.—Alaric and his Goths in Rome.—Sack of the city.—"Stilicho dead, there was no one in Italy for Alaric to fear, and he promptly returned across the Alps, with the nation of the Visigoths behind him. There was no resistance to his march, and he advanced straight upon Rome. He did not assail the walls, but sat down before the gates (408), until the starving citizens paid him a great ransom in silver and gold and precious spices and silken robes. With this booty he retired for the winter into Tuscany, where his army was swelled by thousands of fugitive barbarian slaves, and by reinforcements of Goths and Huns. From his camp he opened negotiations with Honorius, demanding the government of Dalmatia, Venetia and Noricum, with certain subsidies of money and corn. The contemptible court, skulking at Ravenna, could neither make war nor make concessions, and it soon exhausted the patience of the barbarian by its puerilities. [Alaric] marched again to Rome (409), seized the port of Ostia, with its supplies of grain, and forced the helpless capital to join him in proclaiming a rival emperor. The prefect of the city, one Attalus, accepted the purple at his hands, and played the puppet for a few months in imperial robes. But the scheme proved unprofitable, Attalus was deposed, and negotiations were reopened with Honorius. Their only result was a fresh provocation which sent Alaric once more against Rome, and this time with wrath and vengeance in his heart. Then the great, august capital of the world, was entered, through treachery or by surprise, on the night of the 24th of August, 410, and suffered all that the lust, the ferocity and the greed of a barbarous army let loose could inflict on an unresisting city. It was her first experience of that supreme catastrophe of war, since Brennus and the Gauls came in; but it was not to be the last. [See also

CHRISTIANITY: 337-476.] From the sack of Rome, Alaric moved southward, intending to conquer Sicily; but a sudden illness brought his career to an end [in 410].

"The empire was now like a dying quarry, pulled down by fierce hunting packs and torn on every side. The Goths were at its throat; the tribes of Germany—Sueves, Vandals, Burgundians, Alans—had leaped the Rhine (406) and swarmed upon its flanks, throughout Gaul and Spain. The inrush began after Stilicho, to defend Italy against Alaric and Radagaisus, had stripped the frontiers of troops. Sueves, Vandals, and Alans passed slowly through the provinces, devouring their wealth and making havoc of their civilization as they went. After three years, they had reached and surmounted the Pyrenees, and were spreading the same destruction through Spain. The confederated tribes of the Franks had already been admitted as allies into northwestern Gaul, and were settled there in peace. At first, they stood faithful to the Roman alliance, and valiantly resisted the new invasion; but its numbers overpowered them, and their fidelity gave way when they saw the pillage of the doomed provinces going on. They presently joined the barbarous mob, and with an energy which secured the lion's share of plunder and domain. The Burgundians did not follow the Vandals and Sueves to the southwest, but took possession of the left bank of the middle Rhine, whence they gradually spread into western Switzerland and Savoy, and down the valleys of the Rhone and Saone, establishing in time an important kingdom, to which they gave their name.

No help from Ravenna or Rome came to the perishing provincials of Gaul in the extremity of their distress; but a pretender arose in Britain, who assumed the imperial title and promised deliverance. He crossed over to Gaul in 407 and was welcomed with eagerness, both there and in Spain, to which he advanced. He gained some success, partly by enlisting and partly by resisting the invaders; but his career was brief. Other pretenders appeared in various provinces of the West; but the anarchy of the time was too great for any authority, legitimate or revolutionary, to establish itself."—*Ibid.*

408-423.—Visigoths in Gaul.—Eastern empire.—"And, now, into the tempting country of the afflicted Gauls, already crowded with rapacious freebooters, the Visigoths made their way. Their new king, Ataulph, or Adolphus, who succeeded Alaric, passed into Gaul, but not commissioned, as sometimes stated, to restore the imperial sovereignty there. He moved with his nation, as Alaric had moved, and Italy, by his departure, was relieved; but Nabonne, Toulouse, Bordeaux, and the Aquitainian country at large, was soon subject to his command (412-410). He passed the Pyrenees and entered Spain, where an assassin took his life. His successor, Wallia, drove the Sueves into the mountains and the Vandals into the South; but did not take possession of the country until a later time. The Visigoths, returning to Aquitaine, found there, at last, the kingdom which Alaric set out from the Danube to seek, and they were established in it with the Roman emperor's consent. It was known as the kingdom of Gothia, or Septimania, but is more commonly called, from its capital, the kingdom of Toulouse. Affairs in the Eastern empire had never arrived at so desperate a state as in the West. With the departure of Alaric, it had been relieved from its most dangerous immediate foe. There had been tumults, disorders, assassinations, court conspiracies, fierce religious strifes, and every

evidence of a government with no settled authority and no title to respect; but yet the empire stood and was not yet seriously shaken. In 408 Arcadius died. His death was no loss, though he left an infant son to take his place; for he also left a daughter, Pulcheria, who proved to be a woman of rare virtue and talents, and who reigned in her brother's name. The imbecile Honorius, with whose name the failing sovereignty of Rome had been so disastrously linked for eight and twenty years, died in 423. An infant nephew was his heir, and Placidia, the mother, ruled at Ravenna for a fourth of a century, in the name of her child. Her reign was far stronger than her wretched brother's had been, because she gave loyal support to a valiant and able man, who stood at her side. Aetius, her minister, did all, perhaps, that man could do to hold some parts of Gaul, and to play barbarian against barbarian—Hun against Goth and Frank—in skilful diplomacy and courageous war. But nothing that he won was any lasting gain."—*Ibid.*

423-455.—Aetius and the Huns in Europe.—Defeat of Attila near Chalons.—Huns threaten Rome.—City sacked by Genseric the Vandal.—“In his youth, Aetius had been a hostage in the camps of both the Goths and the Huns, and had made acquaintances among the chieftains of both which served his policy many times. He had employed the terrible Huns in the early years of his ministry, and perhaps they had learned too much of the weakness of the Roman state. These most fearful of all the barbarian peoples then surging in Europe had been settled, for some years, in the region since called Hungary, under Attila, their most formidable king. He terrorized all the surrounding lands and exercised a lordship from the Caspian to the Baltic and the Rhine. The imperial court at the East stooped to pay him annual tribute for abstaining from the invasion of its domain. But in 450, when the regent Pulcheria became empress of the East, by her brother's death, and married a brave old soldier, Marcian, in order to give him the governing power, a new tone was heard in the voice from Constantinople which answered Attila's demands. The Hun then appears to have seen that the sinking empire of the West offered a more certain victim to his terrors and his arms, and he turned them to that side. First forming an alliance with the Vandals (who had crossed from Spain to Africa in 429, had ravaged and subdued the Roman provinces, and had established a kingdom on the Carthaginian ground, with a naval power in the Carthaginian sea), Attila led his huge army into suffering Gaul. There were Ostrogoths, and warriors from many German tribes, as well as Huns, in the terrific host; for Attila's arm stretched far, and his subjects were forced to follow when he led. His coming into Gaul affrighted Romans and barbarians alike, and united them in a common defense. Aetius formed an alliance with Theodoric, the Visigothic king, and their forces were joined by Burgundians and Franks. They met Attila near Chalons, and there, on a day in June, 451, upon the Catalaunian fields, was fought a battle that is always counted among the few which gave shape to all subsequent history. The Huns were beaten back, and Europe was saved from the hopeless night that must have followed a Tartar conquest in that age. Attila retreated to Germany, foiled but not daunted. The next year (452) he invaded Italy and laid siege to Aquileia, an important city which stood in his path. It resisted for three months and was then utterly destroyed. The few inhabitants who escaped, with

fugitives from neighboring ports, found a refuge in some islands of the Adriatic coast, and formed there a sheltered settlement which grew into the great city and republican state of Venice. Aetius made strenuous exertions to gather forces for another battle with the Huns; but the resources of the empire had sunk very low. While he labored to collect troops, the effect of a pacific embassy was despairingly tried, and it went forth to the camp of Attila, led by the venerable bishop of Rome—the first powerful pope—Leo I., called the Great. The impression which Leo made on the Hunnish king, by his venerable presence, and by the persuasiveness of his words, appears to have been extraordinary. At all events, Attila consented to postpone his designs on Rome; though he demanded and received promise of an annual tribute. The next winter (453), he died, and Rome was troubled by him no more.”—*Ibid.*—See also VENICE: 452.

“But another enemy came, who rivalled Attila in ruthlessness, and who gave a name to barbarity which it has kept to this day. The Vandal king, Genseric, who now swept the Mediterranean with a piratical fleet, made his appearance in the Tiber (455) and found the Roman capital powerless to resist his attack. The venerable Pope Leo again interceded for the city, and obtained a promise that captives should not be tortured nor buildings burned,—which was the utmost stretch of mercy that the Vandal could afford. Once more, then, was Rome given up, for fourteen days and nights, to pillage and the horrors of barbaric debauch. ‘Whatever had survived the former sack,—whatever the luxury of the Roman Patriciate, during the intervening forty-five years, had accumulated in reparation of their loss,—the treasures of the imperial palace, the gold and silver vessels employed in the churches, the statues of pagan divinities and men of Roman renown, the gilded roof of the temple of Capitoline Jove, the plate and ornaments of private individuals, were leisurely conveyed to the Vandal fleet and shipped off to Africa’ (Sheppard). The Vandal invasion had been preceded, in the same year, by a palace revolution which brought the dynasty of Theodosius to an end. Placidia was dead, and her unworthy son, Valentinian III, provoked assassination by dishonoring the wife of a wealthy senator, Maximus, who mounted to his place. Maximus was slain by a mob at Rome, just before the Vandals entered the city. The empire was now without a head, and the throne without an heir. In former times, the Senate or the army would have filled the vacant imperial seat; now, it was a barbarian monarch, Theodoric, the Visigothic king, who made choice of a successor to the Cæsars. He named a Gallic noble, Avitus by name, who had won his esteem, and the nomination was confirmed by Marcian, emperor of the East [in 455].”—*Ibid.*—See also EUROPE: Ancient: Roman civilization: Fall of Rome.

488-526.—Barbarian invasion of Rome. See ROME: medieval city: 488-526.

527-553.—Justinian I.—Repels series of barbarian invasions.—Belisarius campaigns against the Goths.—Totila the Ostrogoth captures Rome.—End of Ostrogoth kingdom.—Exarchate.—“The reign of Justinian, from its length, its glory and its disasters, may be compared to the reign of Louis XIV, which exceeded it in length, and equalled it in glory and disaster. . . . He extended the limits of his empire; but he was unable to defend the territory he had received from his predecessors. Every one of the thirty-eight years of his reign was marked by an invasion of the

barbarians; and it has been said that, reckoning those who fell by the sword, who perished from want, or were led into captivity, each invasion cost 200,000 subjects to the empire. Calamities which human prudence is unable to resist seemed to combine against the Romans, as if to compel them to expiate their ancient glory. . . . So that the very period which gave birth to so many monuments of greatness, may be looked back upon with horror, as that of the widest desolation and the most terrific mortality' (Sismondi). The first and longest of the wars of Justinian was the Persian war, which he inherited from his predecessors, and which scarcely ceased while the Persian monarchy endured. It was in these Asiatic campaigns that Belisarius began his career. But his first great achievement was the overthrow and extinction of the Vandal power in Africa, and the restoration of Roman authority (the empire of the new Rome) in the old Carthaginian province (533-534). He accomplished this with a force of but 10,000 foot and 5,000 horse, and was hastily recalled by his jealous lord on the instant of his success. But the ambition of Justinian was whetted by this marvellous conquest, and he promptly projected an expedition against the kingdom of the Eastern Goths. The death of Theodoric had occurred in 526. His successor was a child of ten years, his grandson, whose mother exercised the regency. Amalsuentha, the queen-regent, was a woman of highly cultivated mind, and she offended her subjects by too marked a Romanization of her ideas. Her son died in his eighteenth year, and she associated with herself on the throne the next heir to it, a worthless nephew of Theodoric, who was able, in a few weeks, to strip all her power from her and consign her to a distant prison, where she was soon put to death (535). She had previously opened negotiations with Justinian for the restoration of his supremacy in Italy, and the ambitious emperor assumed with eagerness a right to avenge her deposition and death. The fate of Amalsuentha was his excuse, the discontent of Roman orthodoxy with the rule of the heretic Goths was his encouragement, to send an army into Italy with Belisarius at its head. First taking possession of Sicily, Belisarius landed in Italy in 536, took Naples and advanced on Rome. An able soldier, Vitiges, had been raised to the Gothic throne, and he evacuated Rome in December; but he returned the following March and laid siege to the ancient capital, which Belisarius had occupied with a moderate force. It was defended against him for an entire year, and the strength of the Gothic nation was consumed on the outer side of the walls, while the inhabitants within were wasted by famine and disease. The Goths invoked the aid of the Franks in Gaul, and those fierce warriors, crossing the Alps (538), assailed both Goths and Greeks, with indiscriminate hostility, destroyed Milan and Genoa, and mostly perished of hunger themselves before they retreated from the wasted Cisalpine country. [See also MILAN: 539.]

"Released from Rome, Belisarius advanced in his turn against Ravenna, and took the Gothic capital, making Vitiges a prisoner (539). His reward for these successes was a recall from command. The jealous emperor could not afford his generals too much glory at a single winning. As a consequence of his folly, the Goths, under a new king, Totila, were allowed to recover so much ground in the next four years that, when, in 544, Belisarius was sent back, almost without an army, the work of conquest had to be done anew. Rome was still being held against Totila, who besieged it, and the great general went by sea to its relief. He forced

the passage of the Tiber, but failed through the misconduct of the commander in the city to accomplish an entry, and once more the great capital was entered and yielded to angry Goths (546). They spared the lives of the few people they found, and the chastity of the women; but they plundered without restraint. Totila commanded the total destruction of the city; but his ruthless hand was stayed by the remonstrances of Belisarius. After demolishing a third of the walls, he withdrew towards the South, dragging the few inhabitants with him, and, during forty days, Rome is said to have been an unpeopled solitude. . . . At the end of that period it was entered by Belisarius, who hastily repaired the walls, collected his forces, and was prepared to defend himself when Totila came back by rapid marches from Apulia. The Goths made three assaults and were bloodily repulsed. But again Belisarius was recalled by a mean and jealous court, and again the Gothic cause was re-animated and restored. Rome was taken again from its feeble garrison (549), and this time it was treated with respect. Most of Italy and Sicily, with Corsica and Sardinia, were subdued by Totila's arms, and that king, now successful, appealed to Justinian for peace. It was refused, and in 552 a vigorous prosecution of the war resumed, under a new commander—the remarkable eunuch Narses, who proved himself to be one of the great masters of war. Totila was defeated and slain in the first battle of the campaign; Rome was again beleaguered and taken; and the last blow needed to extinguish the Gothic kingdom in Italy was given the following year (553), when Totila's successor, Teia, ended his life on another disastrous field of battle. Italy was restored for the moment to the empire, and was placed under the government of an imperial viceroy, called Exarch, which high office the valiant Narses was the first to fill. His successors, known in history as the Exarchs of Ravenna, resided in that capital for a long period, while the arm of their authority was steadily shortened by the conquests of new invaders."—*Ibid.*—See also EUROPE: Ethnology: Migrations: Map.

5th and 6th centuries.—Invasions of Britain. —Picts and Scots.—Teutonic conquest.—"Leaving Italy and Rome, once more in the imperial fold, but mere provinces now of a distant and alienated sovereignty, it is necessary to turn back to the West, and glance over the regions in which . . . the institutions of Roman government and society were being dissolved and broken up by flood upon flood of barbaric invasion from the Teutonic North. If we begin at the farthest West which the Roman dominion reached, we shall find that the island of Britain was abandoned, practically, by the imperial government earlier than the year 410, when Rome was sinking under the blows of Alaric. From that time the inhabitants were left to their own government and their own defense. To the inroads of the savage . . . Picts and . . . Scots, there were added, now, the coast ravages of a swarm of ruthless pirates, which the tribes of north-western Europe had begun to launch upon the German or North sea. The most cruel and terrible of these ocean freebooters were the Saxons, of the Elbe, and they gave their name for a time to the whole. Their destructive raids upon the coasts of Britain and Gaul had commenced more than a century before the Romans withdrew their legions, and that part of the British coast most exposed to their ravages was known as the Saxon Shore. For about thirty years after the Roman and Romanized inhabitants of Britain had been left to defend themselves, they held their ground with good courage,

as appears; but the incessant attacks of the Picts wore out, at last, their confidence in themselves, and they were fatally led to seek help from their other enemies, who scoured them from the sea. Their invitation was given, not to the Saxons, but to a band of Jutes—warriors from that Danish peninsula in which they have left their name. The Jutes landed at Ebbsfleet, in the Isle of Thanet (449 or 450), with two chiefs, Hengest and Horsa, at their head. They came as allies, and fought by the side of the Britons against the Picts with excellent success. Then came quarrels, and presently, in 455, the arms of Hengest and Horsa were turned against their employers. Ten years later the Jutes had secure possession of the part of Britain now called Kent, and Hengest was their king, Horsa having fallen in the war. This was the beginning of the transformation of Roman-Celtic Britain into the Teutonic England of later history. The success of the Jutes drew their cousins and piratical comrades, the Saxons and the Angles, to seek kingdoms in the same rich island. The Saxons came first, landing near Selsey, in 477, and taking gradual possession of a district which became known as the kingdom of the South Saxons, or Sussex. The next invasion was by Saxons under Cedric, and Jutes, who joined to form the kingdom of the West Saxons, or Wessex, covering about the territory of modern Hampshire. So much of their conquest was complete by the year 519. At about the same time, other colonies were established and gave their names, as East Saxons and Middle Saxons, to the Essex and Middlesex of modern English geography. A third tribe from the German shore, the Angles, now came (547) to take their part in the conquest of the island, and these laid their hands upon kingdoms in the East and North of England, so much larger than the modest Jute and Saxon realms in the south that their name fixed itself, at last, upon the whole country, when it lost the name of Britain. Northumberland, which stretched from the Humber to the Firth of Forth, Mercia, which covered at one time the whole middle region of England, and East Anglia, which became divided into the two English counties of Norfolk (North-folk) and Suffolk (South-folk), were the three great kingdoms of the Angles. Before the end of the sixth century, almost the whole of modern England, and part of Scotland, on its eastern side, as far to the north as Edinburgh, was in possession of the German invaders. They had not merely subdued the former possessors—Britons and Roman provincials (if Romans remained in the island after their domination ceased),—but, in the judgment of the best investigators of the subject, they had practically swept them from all the parts of the island in which their own settlements were established. That is to say, the prior population was either exterminated by the merciless swords of these Saxon and English pagans, or was driven into the mountains of Wales, into the peninsula of Cornwall and Devon, or into the Strathclyde corner of Scottish territory,—in all which regions the ancient British race has maintained itself to this day. Scarcely a vestige of its existence remains elsewhere in England,—neither in language, nor in local names, nor in institutions, nor in survivals of any other kind; which shows that the inhabitants were effaced by the conquest, as the inhabitants of Gaul, of Spain, and of Italy, for example, were not. The new society and the new states which now arose on the soil of Britain, and began to shape themselves into the England of the future, were as purely Germanic as if they had grown up in the Jutish peninsula or on the Elbe. The institutions, political

and social, of the immigrant nations, had been modified by changed circumstances, but they had incorporated almost nothing from the institutions which they found existing in their new home and which they supplanted. Broadly speaking, nothing Roman and nothing Celtic entered into them. They were constructed on German lines throughout. The barbarism of the Saxons and their kin when they entered Britain was far more unmitigated than that of most of the Teutonic tribes which overwhelmed the continental provinces of Rome had been. The Goths had been influenced to some extent and for quite a period by Roman civilization, and had nominally accepted Christian precepts and beliefs, before they took arms against the empire. The Franks had been allies of Rome and in contact with the refinements of Roman Gaul, for a century or two before they became masters in that province. Most of the other nations which transplanted themselves in the fifth century from beyond the Rhine to new homes in the provinces of Rome, had been living for generations on the borders of the empire, or near; had acquired some acquaintance, at least, with the civilization which they did not share, and conceded to it a certain respect; while some of them had borne arms for the Emperor and taken his pay. But the Saxons, Angles and Jutes had thus far been remote from every influence or experience of the kind. They knew the Romans only as rich strangers to be plundered and foes to be fought. Christianity represented nothing to them but an insult to their gods. There seems to be little doubt, therefore, that the civilizing work which Rome had done in western Europe was obliterated nowhere else so ruthlessly and so wantonly as in Britain. Christianity, still sheltered and strong in Ireland, was wholly extinguished in England for a century and more, until the memorable mission of Augustine, sent by Pope Gregory the Great (597), began the conversion of the savage islanders.

5th-10th centuries.—**Kingdom of the Franks.**—**Appearance of the Northmen.**—**Danes in England.**—**Normans.**—**Northmen in West and East.**—“In Gaul, meanwhile, and in southwestern Germany, the Franks had become the dominant power. They had moved tardily to the conquest, but when they moved it was with rapid strides. While they dwelt along the Lower Rhine, they were in two divisions: the Salian Franks, who occupied, first, the country near the mouth of the river, and then spread southwards, to the Somme, or beyond; and the Ripuarian, who lived farther up the Rhine, in the neighborhood of Cologne, advancing thence to the Moselle. In the later part of the fifth century a Roman Patrician, Syagrius, still exercised some kind of authority in northern Gaul; but in 486 he was defeated and overthrown by Chlodwig, or Clovis, the chief of the Salian Franks. Ten years later, Clovis, leading both the Salian and the Ripuarian Franks in an attack upon the German Alemanni, beyond the Upper Rhine, subdued that people completely, and took their country. Their name survived, and adhered to the whole people of Germany, whom the Franks and their successors the French have called *Alemanni* to this day. After his conquest of the Alemanni, Clovis, who had married a Christian wife, accepted her faith and was baptized, with three thousand of his chief men. He adopted the Christianity which was that of the Roman Church—the Catholic Christianity of the Athanasian creed—and he stood forth at once as the champion of orthodoxy against the heretic Goths and Burgundians, whose religion had been poisoned by the condemned doctrines of Arius. The blessings,

and the more substantial endeavors, of the Roman Church were, therefore, on his side, when he attacked the Burgundians and made them tributary, and when, a few years later, he expelled the Goths from Aquitaine and drove them into Spain (500-508). Beginning, apparently, as one of several chiefs among the Salian Franks, he ended his career (510) as sole king of the whole Frank nation, and master of all Gaul except a Gothic corner of Provence, with a considerable dominion beyond the Rhine. [Less than three hundred years later] Charlemagne . . . made his dominion imperial in extent, by the magnitude of his conquests. North, south, east, and west, his armies had been everywhere victorious. In eighteen campaigns against the fierce and troublesome Saxons, he subdued those stubborn pagans and forced them to submit to a Christian baptism—with how much of immediate religious effect may be easily surmised. But by opening a way for the more Christ-like missionaries of the cross, who followed him, this missionary of the battle-ax did, no doubt, a very real apostolic work. He checked the ravages of the piratical Danes. He crushed the Avars and took their country, which comprised parts of the Austria and Hungary of the present day. He occupied Bavaria, on the one hand, and Brittany on the other. He crossed the Pyrenees to measure swords with the Saracens, and drove them from the north of Spain, as far as the Ebro. . . . He was unquestionably one of the greatest monarchs of any age, and deserves the title *Magnus*, affixed to his name. . . . There was much more in his character than the mere aggressive energy which subjugated so wide a realm. He was a man of enlightenment far beyond his time; a man who strove after order, in that disorderly age, and who felt oppressed by the ignorance into which the world had sunk. He was a seeker after learning, and the friend and patron of all in his day who groped in the darkness and felt their way towards the light. He organized his empire with a sense of political system which was new among the Teutonic masters of Western Europe (except as shown by Theodoric in Italy); but there were not years enough in his own life for the organism to mature, and his sons brought back chaos again. Before Charlemagne died (814) he saw the western coasts and river valleys of his empire harried by a fresh outpouring of sea-rovers from the far North, and it is said that he had sad forebodings of the affliction they would become to his people thereafter. These new pirates of the North sea, who took up, after several centuries, the abandoned trade of their kinsmen, the Saxons (now retired from their wild courses and respectably settled on one side of the water, while subdued and kept in order on the other), were of the bold and rugged Scandinavian race, which inhabited the countries since known as Denmark, Sweden and Norway. They are more or less confused under the general name of Northmen, or Norsemen—men of the North; but that term appears to have been applied more especially to the freebooters from the Norwegian coast, as distinguished from the "Danes" of the lesser peninsula. It is convenient, in so general a sketch as this, to ignore the distinction, and to speak of the Northmen as inclusive, for that age, of the whole Scandinavian race. Their visitations began to terrify the coasts of England, France and Germany, and the lower valleys of the rivers which they found it possible to ascend, some time in the later half of the eighth century. It is probable that their appearance on the sea at this time, and not before, was due to a revolution which united Norway under a single king and a stronger gov-

ernment, and which, by suppressing independence and disorder among the petty chiefs, drove many of them to their ships and sent them abroad, to lead a life of lawlessness more agreeable to their tastes. It is also probable that the northern countries had become populated beyond their resources, as seemed to have happened before, when the Goths swarmed out, and that the outlet by sea was necessarily and deliberately opened. Whatever the cause, these Norse adventurers, in fleets of long boats, issued with some suddenness from their "vics," or fiords (whence the name "viking"), and began an extraordinary career. For more than half a century their raids had no object but plunder, and what they took they carried home to enjoy. First to the Frisian coast, then to the Rhine—the Seine—the Loire,—they came again and again to pillage and destroy; crossing at the same time to the shores of their nearest kinsmen—but heeding no kinship in their savage and relentless forays along the English coasts—and around to Ireland and the Scottish islands, where their earliest lodgments were made. About the middle of the ninth century they began to seize tracts of land in England and to settle themselves there in permanent homes. The Angles in the northern and eastern parts and the Saxons in the southern part of England had weakened themselves and one another by rivalry and war between their divided kingdoms. There had been for three centuries an unceasing struggle among them for supremacy. At the time of the coming of the Danes (who were prominent in the English invasion and gave their name to it), the West Saxon kings had won a decided ascendancy. The Danes, by degrees, stripped them of what they had gained. Northumberland, Mercia and East Anglia were occupied in succession, and Wessex itself was attacked. King Alfred, the great and admirable hero of early English history, who came to the throne in 871, spent the first eight years of his reign in a deadly struggle with the invaders. He was obliged in the end to concede to them the whole northeastern part of England, from the Thames to the Tyne, which was known thereafter as "the Danelaw"; but they became his vassals, and submitted to Christian baptism. A century later, the Norse rovers resumed their attacks upon England, and a cowardly English king, distrusting the now settled and peaceful Danes, ordered an extensive massacre of them (1002). The rage which this provoked in Denmark led to a great invasion of the country. England was completely conquered, and remained subject to the Danish kings until 1042, when its throne was recovered for a brief space of time by the English line. Meanwhile the Northmen had gained a much firmer and more important footing in the territory of the Western Franks—which had not yet acquired the name of France. The Seine and its valley attracted them again and again, and after repeated expeditions up the river, even to the city of Paris, which they besieged several times [see PARIS: 845 and 857-861], one of their chiefs, Rolf or Rollo, got possession of Ronen and began a permanent settlement in the country. The Frank King, Charles the Simple, now made terms with Rollo and granted him a district at the mouth of the Seine (912), the latter acknowledging the suzerainty or feudal superiority of Charles, and accepting at the same time the doubly new character of a baptised Christian and a Frankish duke. The Northmen on the Seine were known thenceforth as Normans, their dukedom as Normandy, and they played a great part in European history during the next two centuries. The northern sea-rovers who had settled neither

in Ireland, England, nor Frankland, went farther afield into the West and North and had wonderful adventures there. They took possession of the Orkneys, the Shetlands, the Hebrides, and other islands in those seas, including Man, and founded a powerful island-kingdom, which they held for a long period. Thence they passed on to Faroë and Iceland, and in Iceland, where they lived peaceful and quiet lives of necessity, they founded an interesting republic, and developed a very remarkable civilization, adorned by a literature which the world is learning more and more to admire. From Iceland, it was a natural step to the discovery of Greenland, and from Greenland, there is now little doubt that they sailed southwards and saw and touched the continent of America, five centuries before Columbus made his voyage. While the Northmen of the ninth and tenth centuries were exciting and disturbing all Western Europe by their naval exploits, other adventurers from the Swedish side of the Scandinavian country were sallying eastwards under different names. Both as warriors and as merchants, they made their way from the Baltic to the Black Sea and the Bosphorus, and bands of them entered the service of the Eastern Emperor, at Constantinople, where they received the name of Varangians, from the oath by which they bound themselves. One of the Swedish chiefs, Rurik by name, was chosen by certain tribes of the country now called Russia, to be their prince. Rurik's capital was Novgorod, where he formed the nucleus of a kingdom which grew, through many vicissitudes, into the modern empire of Russia. His successors transferred their capital to Kief, and ultimately it was shifted again to Moscow, where the Muscovite princes acquired the title, the power, and the great dominion of the Czars of all the Russias.—*Ibid.*

BARBARIANS.—"The feeling of unity (in ancient Hellas) was intensified by their conflicts with foreigners, whom they called 'barbarians.' This word originally signified a people whose language was unintelligible; but as the Greeks discovered their own superiority to others, they began to attach to the word the meaning which it now has in our own language."—G. W. Botsford, *History of the ancient world*, pp. 155-156.

BARBAROSSA, Frederick. See **FREDERICK I**, "BARBAROSSA," emperor of Germany.

BARBAROSSA, Horuk (d. 1518), and **Khair-ed-Din** (d. 1546), two Mohammedan sea rovers of the sixteenth century. See also **BARBARY STATES: 1516-1535**.

BARBARY PIRATES. See **AIX-LA-CHAPELLE: Congresses of: 1818; BARBARY STATES; and FREEDOM OF THE SEAS: 1815-1914**.

BARBARY STATES.—The expression "Barbary States" has for a long time been applied to the Mediterranean coast of Africa from Morocco to Egypt. The history of this region is dealt with here from the conquest of the Mohammedans to the period of European predominance about the middle of the nineteenth century. For the modern history of these states see **MOROCCO, ALGERIA, TUNIS, and TRIPOLI**.

647-709.—Mohammedan conquest of north Africa. See **CALIPHATE: 647-709**.

908-1171.—Fatimite caliphs. See **CALIPHATE: 908-1171**.

1415.—Siege and capture of Ceuta by the Portuguese. See **PORTUGAL: 1415-1460**.

1505-1510.—Spanish conquests on the coast.—**Oran.**—**Bugia.**—**Algeria.**—**Tripoli.**—In 1505, a Spanish expedition, planned and urged by Cardinal Ximenes, captured Mazarquivar, an "important port, and formidable nest of pirates, on the Bar-

bary coast, nearly opposite Carthagenia." In 1509, the same energetic prelate led personally an expedition of 4,000 horse and 10,000 foot, with a fleet of ten galleys and eighty smaller vessels, for the conquest of Oran. "This place, situated about a league from the former, was one of the most considerable of the Moslem possessions in the Mediterranean, being a principal mart for the trade of the Levant," and maintained a swarm of cruisers, which swept the Mediterranean "and made fearful depredations on its populous borders." Oran was taken by storm. "No mercy was shown; no respect for age or sex; and the soldiery abandoned themselves to all the brutal license and ferocity which seem to stain religious wars above every other. . . . No less than 4,000 Moors were said to have fallen in the battle, and from 5,000 to 8,000 were made prisoners. The loss of the Christians was inconsiderable." Recalled to Spain by King Ferdinand, Ximenes left the army in Africa under the command of Count Pedro Navarro. Navarro's "first enterprise was against Bugia (Jan. 13th, 1510), whose king, at the head of a powerful army, he routed in two pitched battles, and got possession of his flourishing capital (Jan. 31st). Algiers, Tunis, Tremecin, and other cities on the Barbary coast, submitted one after another to the Spanish arms. The inhabitants were received as vassals of the Catholic king. . . . They guaranteed, moreover, the liberation of all Christian captives in their dominions; for which the Algerians, however, took care to indemnify themselves, by extorting the full ransom from their Jewish residents. . . . On the 26th of July, 1510, the ancient city of Tripoli, after a most bloody and desperate defence, surrendered to the arms of the victorious general, whose name had now become terrible along the whole northern borders of Africa. In the following month, however (Aug. 28th), he met with a serious discomfiture in the island of Gelves, [Jerba], where 4,000 of his men were slain or made prisoners. This check in the brilliant career of Count Navarro put a final stop to the progress of the Castilian arms in Africa under Ferdinand. The results obtained, however, were of great importance. . . . Most of the new conquests escaped from the Spanish crown in later times, through the imbecility or indolence of Ferdinand's successors. The conquests of Ximenes, however, were placed in so strong a posture of defence as to resist every attempt for their recovery by the enemy, and to remain permanently incorporated with the Spanish empire."—W. H. Prescott, *History of the reign of Ferdinand and Isabella*, v. 3, ch. 21.

1516-1535.—Piratical dominion of the Barbarossas in Algeria.—Establishment of Turkish sovereignty.—Seizure of Tunis by the Corsairs and its conquest by Charles V.—"About the beginning of the 16th century, a sudden revolution happened, which, by rendering the states of Barbary formidable to the Europeans, hath made their history worthy of more attention. This revolution was brought about by persons born in a rank of life which entitled them to act no such illustrious part. Horuc and Hayradin, the sons of a potter in the isle of Lesbos, prompted by a restless and enterprising spirit, forsook their father's trade, ran to sea, and joined a crew of pirates. They soon distinguished themselves by their valor and activity, and, becoming masters of a small brigantine, carried on their infamous trade with such conduct and success that they assembled a fleet of 12 galleys, besides many vessels of smaller force. Of this fleet Horuc, the elder brother, called Barbarossa from the red color of his beard, was

admiral, and Hayradin second in command, but with almost equal authority. They called themselves the friends of the sea, and the enemies of all who sail upon it; and their names soon became terrible from the Straits of the Dardanelles to those of Gibraltar. . . . They often carried the prizes which they took on the coasts of Spain and Italy into the ports of Barbary, and, enriching the inhabitants by the sale of their booty, and the thoughtless prodigality of their crews, were welcome guests in every place at which they touched. The convenient situation of these harbours, lying so near the greatest commercial states at that time in Christendom, made the brothers wish for an establishment in that country. An opportunity of accomplishing this quickly presented itself [1516], which they did not suffer to pass unimproved." Invited by Entemi, king of Algiers, to assist him in taking a Spanish fort which had been built in his neighbourhood, Barbarossa was able to murder his too confiding employer, master the Algerine kingdom and usurp its crown. "Not satisfied with the throne which he had acquired, he attacked the neighbouring king of Tremecen, and, having vanquished him in battle, added his dominions to those of Algiers. At the same time, he continued to infest the coasts of Spain and Italy with fleets which resembled the armaments of a great monarch, rather than the light squadrons of a corsair. Their frequent cruel devastations obliged Charles [the Fifth—the great emperor and king of Spain: 1519-1555], about the beginning of his reign, to furnish the Marquis de Comares, governor of Oran, with troops sufficient to attack him." Barbarossa was defeated in the ensuing war, driven from Tremecen, and slain [1518]. "His brother Hayradin, known likewise by the name of Barbarossa, assumed the sceptre of Algiers with the same ambition and abilities, but with better fortune. His reign being undisturbed by the arms of the Spaniards, which had full occupation in the wars among the European powers, he regulated with admirable prudence the interior police of his kingdom, carried on his naval operations with great vigour, and extended his conquests on the continent of Africa. But perceiving that the Moors and Arabs submitted to his government with reluctance, and being afraid that his continual depredations would one day draw upon him the arms of the Christians, he put his dominions under the protection of the Grand Seignior [1519], and received from him [with the title of Bey, or Beylerbey] a body of Turkish soldiers sufficient for his domestic as well as foreign enemies. At last, the fame of his exploits daily increasing, Solymán offered him the command of the Turkish fleet. . . . Barbarossa repaired to Constantinople, and . . . gained the entire confidence both of the sultan and his vizier. To them he communicated a scheme which he had formed of making himself master of Tunis, the most flourishing kingdom at that time on the coast of Africa; and this being approved of by them, he obtained whatever he demanded for carrying it into execution. His hopes of success in this undertaking were founded on the intestine divisions in the kingdom of Tunis." The last king of that country, having thirty-four sons by different wives, had established one of the younger sons on the throne as his successor. This young king attempted to put all of his brothers to death; but Alraschid, who was one of the eldest, escaped and fled to Algiers. Barbarossa now proposed to the Turkish sultan to attack Tunis on the pretence of vindicating the rights of Alraschid. His proposal was adopted and carried out; but even before the Turkish expedition sailed, Alraschid

himself disappeared—a prisoner, shut up in the seraglio—and was never heard of again. The use of his name, however, enabled Barbarossa to enter Tunis in triumph, and the betrayed inhabitants discovered too late that he came as a viceroy, to make them the subjects of the sultan. "Being now possessed of such extensive territories, he carried on his depredations against the Christian states to a greater extent and with more destructive violence than ever. Daily complaints of the outrages committed by his cruisers were brought to the emperor by his subjects, both in Spain and Italy. All Christendom seemed to expect from him, as its greatest and most fortunate prince, that he would put an end to this new and odious species of oppression. At the same time Muley-Hascen [Hassan], the exiled king of Tunis, . . . applied to Charles as the only person who could assert his rights in opposition to such a formidable usurper." The emperor, accordingly, in 1535, prepared a great expedition against Tunis, drawing men and ships from every part of his wide dominions—from Spain, Italy, Germany and the Netherlands. "On the 16th of July the fleet, consisting of near 500 vessels, having on board above 30,000 regular troops, set sail from Cagliari, and, after a prosperous navigation, landed within sight of Tunis." The fort of Goletta, commanding the bay, was invested and taken; the corsair's fleet surrendered, and Barbarossa, advancing boldly from Tunis to attack the invaders, was overwhelmingly beaten, and fled, abandoning his capital. Charles's soldiers rushed into the unfortunate town, escaping all restraint, and making it a scene of indescribable horrors. "Above 30,000 of the innocent inhabitants perished on that unhappy day, and 10,000 were carried away as slaves. Muley-Hascen took possession of a throne surrounded with carnage, abhorred by his subjects, on whom he had brought such calamities." Before quitting the country, Charles concluded a treaty with Muley-Hascen, under which the latter acknowledged that he held his kingdom in fee of the crown of Spain, doing homage to the emperor as his liege, and maintaining a Spanish garrison in the Goletta. He also released, without ransom, all the Christian slaves in his dominions, 20,000 in number, and promised to detain in servitude no subject of the emperor thereafter. He opened his kingdom to the Christian religion, and to free trade, and pledged himself to exclude Turkish corsairs from his ports.—W. Robertson, *History of the reign of Charles V.*, v. 2, bk. 5.

1541.—Disastrous expedition of Charles V against Algeria.—Encouraged, and deceived, by his easy success at Tunis, the emperor, Charles V, determined, in 1541, to undertake the reduction of Algiers, and to wholly exterminate the freebooters of the north African coast. Before his preparations were completed, "the season unfortunately was far advanced, on which account the Pope entreated, and Doria conjured him not to expose his whole armament to a destruction almost unavoidable on a wild shore during the violence of the autumnal gales. Adhering, however, to his plan with determined obstinacy, he embarked at Porto Venere. . . . The force . . . which he had collected . . . consisted of 20,000 foot and 2,000 horse, mostly veterans, together with 3,000 volunteers. . . . Besides these there had joined his standard 1,000 soldiers sent by the Order of St. John, and led by 100 of its most valiant knights. Landing near Algiers without opposition, Charles immediately advanced towards the town. To oppose the invaders, Hassan had only 800 Turks, and 5,000 Moors, partly natives of Africa, and partly refu-

gees from Spain. When summoned to surrender he, nevertheless, returned a fierce and haughty answer. But with such a handful of troops, neither his desperate courage nor consummate skill in war could have long resisted forces superior to those which had formerly defeated Barbarossa at the head of 60,000 men." He was speedily relieved from danger, however, by an opportune storm, which burst upon the region during the second day after Charles's debarkation. The Spanish camp was flooded; the soldiers drenched, chilled, sleepless and dispirited. In this condition they were attacked by the Moors at dawn, and narrowly escaped a rout. "But all feeling of this disaster was soon obliterated by a more affecting spectacle. As the tempest continued with unabated violence, the full light of day showed the ships, on which alone their safety depended, driving from their anchors, dashing against one another, and many of them forced on the rocks, or sinking in the waters. In less than an hour, 15 ships of war and 140 transports, with 8,000 men, perished before their eyes; and such of the unhappy sailors as escaped the fury of the sea, were murdered by the Arabs as soon as they reached land." With such ships as he could save, Doria sought shelter behind cape Matakuz, sending a message to the emperor, advising that he follow with the army to that point. Charles could not do otherwise than act according to the suggestion; but his army suffered horribly in the retreat, which occupied three days. "Many perished by famine, as the whole army subsisted chiefly on roots and berries, or on the flesh of horses, killed for that purpose by the emperor's orders; numbers were drowned in the swollen brooks; and not a few were slain by the enemy." Even after the army had regained the fleet, and was reembarked, it was scattered by a second storm, and several weeks passed before the emperor reached his Spanish dominions, a wiser and a sadder man.—M. Russell, *History of the Barbary States*, ch. 8.

1543-1560.—Pirate Dragut and his exploits.—Turkish capture of Tripoli.—Disastrous Christian attempt to recover the place.—Dragut, or Torgud, a native of the Caramanian coast, opposite the island of Rhodes, began his career as a Mediterranean corsair some time before the last of the Barbarossas quitted the scene and was advanced by the favor of the Algerine. In 1540 he fell into the hands of one of the Dorias and was bound to the oar as a galley-slave for three years,—which did not sweeten his temper toward the Christian world. In 1543 he was ransomed, and resumed his piracies, with more energy than before. "Dragut's lair was at the island of Jerba [called Gelves, by the Spaniards]. . . . Not content with the rich spoils of Europe, Dragut took the Spanish outposts in Africa, one by one—Susa, Sfax, Monastir; and finally set forth to conquer 'Africa.' It is not uncommon in Arabic to call a country and its capital by the same name. . . . 'Africa' meant to the Arabs the province of Carthage or Tunis and its capital, which was not at first Tunis but successively Kayrawan and Mahdiya. Throughout the later middle ages the name 'Africa' is applied by Christian writers to the latter city. . . . This was the city which Dragut took without a blow in the spring of 1550. Mahdiya was then in an anarchic state, ruled by a council of chiefs, each ready to betray the other, and none owing the smallest allegiance to any king, least of all the despised king of Tunis, Hamid, who had deposed and blinded his father, Hasan, Charles

V's protégé. One of these chiefs let Dragut and his merry men into the city by night. . . . So easy a triumph roused the emulation of Christendom. . . . Don Garcia de Toledo dreamed of outshining the Corsair's glory. His father, the Viceroy of Naples, the Pope, and others, promised their aid, and old Andrea Doria took the command. After much delay and consultation a large body of troops was conveyed to Mahdiya and disembarked on June 28, 1550. Dragut, though aware of the project, was at sea, devastating the Gulf of Genoa, and paying himself in advance for any loss the Christians might inflict in Africa: his nephew Hisar Reis commanded in the city. When Dragut returned, the siege had gone on for a month," but he failed in attempting to raise it and retired to Jerba. Mahdiya was carried by assault on September 8. "Next year, 1551, Dragut's place was with the Ottoman navy, then commanded by Sinan Pasha. . . . With nearly 150 galleys or galleots, 10,000 soldiers, and numerous siege-guns, Sinan and Dragut sailed out of the Dardanelles—whither bound no Christian could tell. They ravaged, as usual, the Straits of Messina, and then revealed the point of attack by making direct for Malta." But the demonstration made against the strong fortifications of the Knights of St. John was ill-planned and feebly executed; it was easily repelled. To wipe out his defeat, Sinan "sailed straight for Tripoli, some 64 leagues away. Tripoli was the natural antidote to Malta; for Tripoli, too, belonged to the Knights of St. John—much against their will—inasmuch as the Emperor had made their defence of this easternmost Barbary state a condition of their tenure of Malta." But the fortifications of Tripoli were not strong enough to resist the Turkish bombardment, and Gaspard de Villiers, the commandant, was forced to surrender (August 15), "on terms, as he believed, identical with those which Suleyman granted to the Knights of Rhodes. But Sinan was no Suleyman; moreover, he was in a furious rage with the whole Order. He put the garrison—all save a few—in chains and carried them off to grace his triumph at Stambol. Thus did Tripoli fall once more into the hands of the Moslems. . . . The misfortunes of the Christians did not end here. Year after year the Ottoman fleet appeared in Italian waters. . . . Unable as they felt themselves to cope with the Turks at sea, the powers of Southern Europe resolved to strike one more blow on land, and recover Tripoli. A fleet of nearly 100 galleys and ships, gathered from Spain, Genoa, 'the Religion,' the Pope, from all quarters, with the Duke de Medina-Celi at their head, assembled at Messina. . . . Five times the expedition put to sea; five times was it driven back by contrary winds. At last, on February 10, 1560, it was fairly away for the African coast. Here fresh troubles awaited it. Long delays in crowded vessels had produced their disastrous effects: fevers and scurvy and dysentery were working their terrible ravages among the crews, and 2,000 corpses were flung into the sea. It was impossible to lay siege to Tripoli with a diseased army, and when actually in sight of their object the admirals gave orders to return to Jerba. A sudden descent quickly gave them the command of the beautiful island. . . . In two months a strong castle was built, with all scientific earthworks, and the admiral prepared to carry home such troops as were not needed for its defence. Unhappily for him, he had lingered too long. . . . He was about to prepare for departure when news came that the Turkish fleet had been seen at Goza. Instantly all was panic. Valiant gentlemen forgot their valour, forgot their

coolness. . . . Before they could make out of the strait . . . the dread Corsair [Dragut] himself, and Ochiali, and Piali Pasha were upon them. Then ensued a scene of confusion that baffles description. Despairing of weathering the north side of Jerba the panic-stricken Christians ran their ships ashore and deserted them, never stopping even to set them on fire. . . . On rowed the Turks; galleys and galleons to the number of 56 fell into their hands; 18,000 Christians bowed down before their scimitars; the beach on that memorable 11th of May, 1560, was a confused medley of stranded ships, helpless prisoners, Turks busy in looting men and galleys—and a hideous heap of mangled bodies. The fleet and the army which had sailed from Messina . . . were absolutely lost.”—S. Lane-Poole, *Story of the Barbary corsairs*.

1563-1565.—Repulse of the Moors from Oran and Mazarquivier.—Capture of Peñon de Velez.

—In the spring of 1563 a most determined and formidable attempt was made by Hassen, the dey of Algiers, to drive the Spaniards from Oran and Mazarquivier, which they had held since the African conquests of Cardinal Ximenes. The siege was fierce and desperate; the defence most heroic. The beleaguered garrisons held their ground until a relieving expedition from Spain came in sight, on June 8, when the Moors retreated hastily. In the summer of the next year the Spaniards took the strong island fortress of Peñon de Velez, breaking up one more nest of piracy and strengthening their footing on the Barbary coast. In the course of the year following they blocked the mouth of the river Tetuan, which was a place of refuge for the marauders.—W. H. Prescott, *History of the reign of Philip II., v. 2, bk. 4, ch. 1.*

1664-1684.—Wars of France against the piratical powers.—Destructive bombardments of Algeria.—“The ancient alliance of the crown of France with the Ottoman Porte, always unpopular and less necessary since France had become so strong, was at this moment [early in the reign of Louis XIV] well-nigh broken, to the great satisfaction both of the Christian nations of the South and of the Austrian empire. . . . Divers plans were proposed in the King’s council for attacking the Ottoman power on the Moorish coasts, and for repressing the pirates, who were the terror of the merchant-shipping and maritime provinces. Colbert induced the king to attempt a military settlement among the Moors as the best means of holding them in check. A squadron commanded by the Duke de Beaufort . . . landed 5,000 picked soldiers before Jijeli (or Djigelli), a small Algerine port between Boughia and Bona. They took possession of Jijeli without difficulty (July 22, 1664); but discord arose between Beaufort and his officers; they did not work actively enough to fortify themselves,” and before the end of September they were obliged to evacuate the place precipitately. “The success of Beaufort’s squadron, commanded under the duke by the celebrated Chevalier Paul,

ere long effaced the impression of this reverse: two Algerine flotillas were destroyed in the course of 1665.” The dey of Algiers sent one of his French captives, an officer named Du Babinais, to France with proposals of peace, making him swear to return if his mission failed. The proposals were rejected; Du Babinais was loyal to his oath and returned—to suffer death, as he expected, at the hands of the furious barbarian. “The devotion of this Breton Regulus was not lost: despondency soon took the place of anger in the heart of the Moorish chiefs. Tunis yielded first to the guns of the French squadron, brought to bear on it from the Bay of Goletta. The Pacha and the Divan of Tunis obligated themselves to restore all the French slaves they possessed, to respect French ships, and thenceforth to release all Frenchmen whom they should capture on foreign ships. . . . Rights of aubaine, and of admiralty and shipwreck, were suppressed as regarded Frenchmen (November 25, 1665). The station at Cape Negro was restored to France. . . . Algiers submitted, six months after, to nearly the same conditions imposed on it by Louis XIV.: one of the articles stipulated that French merchants should be treated as favorably as any foreign nation, and even more so (May 17, 1666). More than 3,000 French slaves were set at liberty.” Between 1669 and 1672, Louis XIV was seriously meditating a great war of conquest with the Turks and their dependencies, but preferred, finally, to enter upon his war with Holland, which brought the other project to naught. France and the Ottoman empire then remained on tolerably good terms until 1681, when a “squadron of Tripolitan corsairs having carried off a French ship on the coast of Provence, Duquesne, at the head of seven vessels, pursued the pirates into the waters of Greece. They took refuge in the harbor of Scio. Duquesne summoned the Pacha of Scio to expel them. The Pacha refused, and fired on the French squadron, when Duquesne cannonaded both the pirates and the town with such violence that the Pacha, terrified, asked for a truce, in order to refer the matter to the Sultan (July 23, 1681). Duquesne converted the attack into a blockade. At the news of this violation of the Ottoman territory, the Sultan, Mahomet IV., fell into a rage . . . and dispatched the Captain-Pacha to Scio with 32 galleys. Duquesne allowed the Turkish galleys to enter the harbor, then blockaded them with the pirates, and declared that he would burn the whole if satisfaction were not had of the Tripolitans. The Divan hesitated. War was about to recommence with the Emperor; it was not the moment to kindle it against France.” In the end there was a compromise, and the Tripolitans gave up the French vessel and the slaves they had captured, promising, also, to receive a French consul at Tripoli. “During this time another squadron, commanded by Château-Renault, blockaded the coasts of Morocco, the men of Maghreb having rivalled in depredations the vassals of Turkey. The powerful Emperor of Morocco, Muley Ismael, sent the governor of Tetuan to France to solicit peace of Louis XIV. The treaty was signed at Saint-Germain, January 20, 1682, on advantageous conditions,” including restitution of French slaves. “Affairs did not terminate so amicably with Algiers. From this piratical centre had proceeded the gravest offenses. A captain of the royal navy was held in slavery there, with many other Frenchmen. It was resolved to inflict a terrible punishment on the Algerines. The thought of conquering Algeria had more than once presented itself to the king and Colbert, and they appreciated the value of this conquest; the Jijeli

expedition had been formerly a first attempt. They did not, however, deem it incumbent on them to embark in such an enterprise; a descent, a siege, would have required too great preparations; they had recourse to another means of attack. The regenerator of the art of naval construction, Petit-Renau, invented bomb-ketches expressly for the purpose. . . . July 23, 1682, Duquesne anchored before Algiers, with 11 ships, 15 galleys, 5 bomb-ketches, and Petit-Renau to guide them. After five weeks' delay caused by bad weather, then by a fire on one of the bomb-ketches, the thorough trial took place during the night of August 30. The effect was terrible: a part of the great mosque fell on the crowd that had taken refuge there. During the night of September 3-4, the Algerines attempted to capture the bomb-ketches moored at the entrance of their harbor; they were repulsed, and the bombardment continued. The Dey wished to negotiate; the people, exasperated, prevented him. The wind shifting to the northwest presaged the equinoctial storm; Duquesne set sail again, September 12. The expedition had not been decisive. It was begun anew. June 18, 1683, Duquesne reappeared in the road of Algiers; he had, this time, seven bomb-ketches instead of five. These instruments of extermination had been perfected in the interval. The nights of June 26-27 witnessed the overthrow of a great number of houses, several mosques, and the palace of the Dey. A thousand men perished in the harbor and the town." The Dey opened negotiations, giving up 700 French slaves, but was killed by his janizaries, and one Hadgi-Hussein proclaimed in his stead. "The bombardment was resumed with increasing violence. . . . The Algerines avenged themselves by binding to the muzzles of their guns a number of Frenchmen who remained in their hands. . . . The fury of the Algerines drew upon them redoubled calamities. . . . The bombs rained almost without intermission. The harbor was strewn with the wrecks of vessels. The city was . . . a heap of bloody ruins." But "the bomb-ketches had exhausted their ammunition. September was approaching. Duquesne again departed; but a strong blockading force was kept up, during the whole winter, as a standing threat of the return of the 'infernal vessels.' The Algerines finally bowed their heads, and, April 25, 1684, peace was accorded by Tourville, the commander of the blockade, to the Pacha, Dey, Divan, and troops of Algiers. The Algerines restored 320 French slaves remaining in their power, and 180 other Christians claimed by the King; the janizaries only which had been taken from them were restored; they engaged to make no prizes within ten leagues of the coast of France, nor to assist the other Moorish corsairs at war with France; to recognize the precedence of the flag of France over all other flags, &c., &c.; lastly, they sent an embassy to carry their submission to Louis XIV.; they did not, however, pay the damages which Duquesne had wished to exact of them."—H. Martin, *History of France: Age of Louis XIV.*, v. 1, ch. 4 and 7.

1785-1801.—Piratical depredations upon American commerce.—Humiliating treaties and tribute.—Example of resistance given by the United States.—"It is difficult for us to realize that only 70 years ago the Mediterranean was so unsafe that the merchant ships of every nation stood in danger of being captured by pirates, unless they were protected either by an armed convoy or by tribute paid to the petty Barbary powers. Yet we can scarcely open a book of travels during the last century without mention being made of the immense risks to which every one

was exposed who ventured by sea from Marseilles to Naples. . . . The European states, in order to protect their commerce, had the choice either of paying certain sums per head for each captive, which in reality was a premium on capture, or of buying entire freedom for their commerce by the expenditure of large sums yearly. The treaty renewed by France, in 1788, with Algiers, was for fifty years, and it was agreed to pay \$200,000 annually, besides large presents distributed according to custom every ten years, and a great sum given down. The peace of Spain with Algiers is said to have cost from three to five millions of dollars. There is reason to believe that at the same time England was paying an annual tribute of about \$280,000. England was the only power sufficiently strong on the sea to put down these pirates; but in order to keep her own position as mistress of the seas she preferred to leave them in existence in order to be a scourge to the commerce of other European powers, and even to support them by paying a sum so great that other states might find it difficult to make peace with them. When the Revolution broke out, we [of the United States of America] no longer had the safeguards for our commerce that had been given to us by England, and it was therefore that in our very first negotiations for a treaty with France we desired to have an article inserted into the treaty, that the king of France should secure the inhabitants of the United States, and their vessels and effects, against all attacks or depredations from any of the Barbary powers. It was found impossible to insert this article in the treaty of 1778, and instead of that the king agreed to 'employ his good offices and interposition in order to provide as fully and efficaciously as possible for the benefit, conveniency and safety of the United States against the princes and the states of Barbary or their subjects.'" Direct negotiations between the United States and the piratical powers were opened in 1785, by a call which Mr. Adams made upon the Tripolitan ambassador. The latter announced to Mr. Adams that "'Turkey, Tripoli, Tunis, Algiers, and Morocco were the sovereigns of the Mediterranean; and that no nation could navigate that sea without a treaty of peace with them.' . . . The ambassador demanded as the lowest price for a perpetual peace 30,000 guineas for his employers and £3,000 for himself; that Tunis would probably treat on the same terms; but he could not answer for Algiers or Morocco. Peace with all four powers would cost at least \$1,000,000, and Congress had appropriated only \$80,000. . . . Mr. Adams was strongly opposed to war, on account of the expense, and preferred the payment of tribute. . . . Mr. Jefferson quite as decidedly preferred war.'" The opinion in favor of a trial of pacific negotiations prevailed, and a treaty with the emperor of Morocco was concluded in 1787. An attempt at the same time to make terms with the dey of Algiers and to redeem a number of American captives in his hands, came to nothing. "For the sake of saving a few thousand dollars, fourteen men were allowed to remain in imprisonment for ten years. . . . In November, 1793, the number of [American] prisoners at Algiers amounted to 115 men, among whom there remained only ten of the original captives of 1785." At last, the nation began to realize the intolerable shame of the matter, and, "on January 2, 1794, the House of Representatives resolved that a 'naval force adequate for the protection of the commerce of the United States against the Algerine forces ought to be provided.' In the same year authority was given to build six frigates, and to procure ten smaller ves-

sels to be equipped as galleys. Negotiations, however, continued to go on," and in September, 1795, a treaty with the dey was concluded. "In making this treaty, however, we had been obliged to follow the usage of European powers—not only pay a large sum for the purpose of obtaining peace, but an annual tribute, in order to keep our vessels from being captured in the future. The total cost of fulfilling the treaty was estimated at \$992,-463.25."—E. Schuyler, *American diplomacy*, pt. 4.—"The first treaty of 1795, with Algiers, which was negotiated during Washington's administration, cost the United States, for the ransom of American captives, and the Dey's forbearance, a round \$1,000,000, in addition to which an annuity was promised. Treaties with other Barbary States followed, one of which purchased peace from Tripoli by the payment of a gross sum. Nearly \$2,000,000 had been squandered thus far in bribing these powers to respect our flag, and President Adams complained in 1800 that the United States had to pay three times the tribute imposed upon Sweden and Denmark. But this temporizing policy only made matters worse. Captain Bainbridge arrived at Algiers in 1800, bearing the annual tribute money for the Dey in a national frigate, and the Dey ordered him to proceed to Constantinople to deliver Algerine dispatches. 'English, French, and Spanish ships of war have done the same,' said the Dey, insolently, when Bainbridge and the American consul remonstrated. 'You pay me tribute because you are my slaves.' Bainbridge had to obey. . . . The lesser Barbary States were still more exasperating. The Bashaw of Tripoli had threatened to seize American vessels unless President Adams sent him a present like that bestowed upon Algiers. The Bashaw of Tunis made a similar demand upon the new President [Jefferson]. . . . Jefferson had, while in Washington's cabinet, expressed his detestation of the method hitherto favored for pacifying these pests of commerce; and, availing himself of the present favorable opportunity, he sent out Commodore Dale with a squadron of three frigates and a sloop of war, to make a naval demonstration on the coast of Barbary. . . . Commodore Dale, upon arriving at Gibraltar [July, 1801], found two Tripolitan cruisers watching for American vessels; for, as had been suspected, Tripoli already meditated war. The frigate Philadelphia blockaded these vessels, while Bainbridge, with the frigate Essex, convoyed American vessels in the Mediterranean. Dale, in the frigate President, proceeded to cruise off Tripoli, followed by the schooner Experiment, which presently captured a Tripolitan cruiser of 14 guns after a spirited action. The Barbary powers were for a time overawed, and the United States thus set the first example among Christian nations of making reprisals instead of ransom the rule of security against these commercial marauders. In this respect Jefferson's conduct was applauded at home by men of all parties."—J. Schouler, *History of the United States*, ch. 5, sect. 1, v. 2.

1803-1805.—American war with the pirates of Tripoli.—"The war with Tripoli dragged tediously along, and seemed no nearer its end at the close of 1803 than 18 months before. Commodore Morris, whom the President sent to command the Mediterranean squadron, cruised from port to port between May, 1802, and August, 1803, convoying merchant vessels from Gibraltar to Leghorn and Malta, or lay in harbor and repaired his ships, but neither blockaded nor molested Tripoli; until at length, June 21, 1803, the President called him

home and dismissed him from the service. His successor was Commodore Preble, who, Sept. 12, 1803, reached Gibraltar with the relief-squadron which Secretary Gallatin thought unnecessarily strong. . . . He found Morocco taking part with Tripoli. Captain Bainbridge, who reached Gibraltar in the 'Philadelphia' August 24, some three weeks before Preble arrived, caught in the neighborhood a Moorish cruiser of 22 guns with an American brig in its clutches. Another American brig had just been seized at Mogador. Determined to stop this peril at the outset, Preble united to his own squadron the ships which he had come to relieve, and with this combined force, . . . sending the 'Philadelphia' to blockade Tripoli, he crossed to Tangiers October 6, and brought the Emperor of Morocco to reason. On both sides prizes and prisoners were restored, and the old treaty was renewed. This affair consumed time; and when at length Preble got the 'Constitution' under way for the Tripolitan coast, he spoke a British frigate off the Island of Sardinia, which reported that the 'Philadelphia' had been captured October 21, more than three weeks before. Bainbridge, cruising off Tripoli, had chased a Tripolitan cruiser into shoal water, and was hauling off, when the frigate struck on a reef at the mouth of the harbor. Every effort was made without success to float her; but at last she was surrounded by Tripolitan gunboats, and Bainbridge struck his flag. The Tripolitans, after a few days work, floated the frigate, and brought her under the guns of the castle. The officers became prisoners of war, and the crew, in number 300 or more, were put to hard labor. The affair was in no way discreditably to the squadron. . . . The Tripolitans gained nothing except the prisoners; for at Bainbridge's suggestion Preble, some time afterward, ordered Stephen Decatur, a young lieutenant in command of the 'Enterprise,' to take a captured Tripolitan craft renamed the 'Intrepid,' and with a crew of 75 men to sail from Syracuse, enter the harbor of Tripoli by night, board the 'Philadelphia,' and burn her under the castle guns. The order was literally obeyed. Decatur ran into the harbor at ten o'clock in the night of Feb. 16, 1804, boarded the frigate within half gun-shot of the Pacha's castle, drove the Tripolitan crew overboard, set the ship on fire, remained alongside until the flames were beyond control, and then withdrew without losing a man."—H. Adams, *History of the United States: Administration of Jefferson*, v. 2, ch. 7.—"Commodore Preble, in the meantime, hurried his preparations for more serious work, and on July 25th arrived off Tripoli with a squadron, consisting of the frigate Constitution, three brigs, three schooners, six gunboats, and two bomb vessels. Opposed to him were arrayed over a hundred guns mounted on shore batteries, nineteen gunboats, one ten-gun brig, two schooners mounting eight guns each, and twelve galleys. Between August 3rd and September 3rd five attacks were made, and though the town was never reduced, substantial damage was inflicted, and the subsequent satisfactory peace rendered possible. Preble was relieved by Barron in September, not because of any loss of confidence in his ability, but from exigencies of the service, which forbade the Government sending out an officer junior to him in the relief squadron which reinforced his own. Upon his return to the United States he was presented with a gold medal, and the thanks of Congress were tendered him, his officers, and men, for gallant and faithful services. The blockade was maintained vigorously, and in 1805 an attack was made upon the Tripolitan town of Derna, by a combined land and naval force; the

former being under command of Consul-General Eaton, who had been a captain in the American army, and of Lieutenant O'Bannon of the Marines. The enemy made a spirited though disorganized defence, but the shells of the war-ships drove them from point to point, and finally their principal work was carried by the force under O'Bannon and Midshipman Mann. Eaton was eager to press forward, but he was denied reinforcements and military stores, and much of his advantage was lost. All further operations were, however, discontinued in June, 1805, when, after the usual intrigues, delays, and prevarications, a treaty was signed by the Pasha, which provided that no further tribute should be exacted, and that American vessels should be forever free of his rovers. Satisfactory as was this conclusion, the uncomfortable fact remains that tribute entered into the settlement. After all the prisoners had been exchanged man for man, the Tripolitan Government demanded, and the United States paid, the handsome sum of sixty thousand dollars to close the contract. This treaty, however, awakened the conscience of Europe, and from the day it was signed the power of the Barbary Corsairs began to wane. The older countries saw their duty more clearly, and ceased to legalize robbery on the high seas."—S. Lane-Poole, *Story of the Barbary corsairs*, ch. 20.

1815.—Final war of Algeria with the United States.—Death-blow to Algerian piracy.—"Just as the late war with Great Britain broke out, the Dey of Algiers, taking offense at not having received from America the precise articles in the way of tribute demanded, had unceremoniously dismissed Lear, the consul, had declared war, and had since captured an American vessel, and reduced her crew to slavery. Immediately after the ratification of the treaty with England, this declaration had been reciprocated. Efforts had been at once made to fit out ships, new and old, including several small ones lately purchased for the proposed squadrons of Porter and Perry, and before many weeks Decatur sailed from New York with the *Guerrière*, *Macedonian*, and *Constellation* frigates, now released from blockade; the *Ontario*, new sloop of war, four brigs, and two schooners. Two days after passing Gibraltar, he fell in with and captured an Algerine frigate of 44 guns, the largest ship in the Algerine navy, which struck to the *Guerrière* after a running fight of twenty-five minutes. A day or two after, an Algerine brig was chased into shoal water on the Spanish coast, and captured by the smaller vessels. Decatur having appeared off Algiers, the terrified Dey at once consented to a treaty, which he submitted to sign on Decatur's quarter deck, surrendering all prisoners on hand, making certain pecuniary indemnities, renouncing all future claim to any American tribute or presents, and the practice, also, of reducing prisoners of war to slavery. Decatur then proceeded to Tunis and Tripoli, and obtained from both indemnity for certain American vessels captured under the guns of their forts by British cruisers during the late war. The Bey of Tripoli being short of cash, Decatur agreed to accept in part payment the restoration of liberty to eight Danes and two Neapolitans held as slaves."—R. Hildreth, *History of the United States*, *Second Series*, v. 3, ch. 30.

1816.—Bombardment of Algeria by Lord Exmouth.—Relinquishment of Christian slavery in Algeria, Tripoli and Tunis.—"The corsairs of Barbary still scoured the Mediterranean; the captives, whom they had taken from Christian vessels, still languished in captivity in Algiers; and, to the disgrace of the civilized world, a piratical state was suffered to exist in its very centre. . . . The conclusion of the war [of the coalition against Napoleon and France] made the continuance of these ravages utterly intolerable. In the interests of civilization it was essential that piracy should be put down; Britain was mistress of the seas, and it therefore devolved upon her to do the work. . . . Happily for this country the Mediterranean command was held by an officer [Lord Exmouth] whose bravery and skill were fully equal to the dangers before him. . . . Early in 1816 Exmouth was instructed to proceed to the several states of Barbary; to require them to recognize the cession of the Ionian Islands to Britain; to conclude peace with the kingdoms of Sardinia and Naples; and to abolish Christian slavery. The Dey of Algiers readily assented to the two first of these conditions; the Beys of Tripoli and Tunis followed the example of the Dey of Algiers, and in addition consented to refrain in future from treating prisoners of war as slaves. Exmouth thereupon returned to Algiers, and endeavoured to obtain a similar concession from the Dey. The Dey pleaded that Algiers was subject to the Ottoman Porte," and obtained a truce of three months in order to confer with the sultan. But meantime the Algerines made an unprovoked attack upon a neighbouring coral fishery, which was protected by the British flag, massacring the fishermen and destroying the flag. This brought Exmouth back to Algeria in great haste, with an ultimatum which he delivered on August 27. No answer to it was returned, and the fleet (which had been joined by some vessels of the Dutch navy) sailed into battle range that same afternoon. "The Algerines permitted the ships to move into their stations. The British reserved their fire till they could deliver it with good effect. A crowd of spectators watched the ships from the shore; and Exmouth waved his hat to them to move and save themselves from the fire. They had not the prudence to avail themselves of his timely warning. A signal shot was fired by the Algerines from the mole. The *Queen Charlotte* replied by delivering her entire broadside. Five hundred men were struck down by the first discharge. . . . The battle, which had thus begun at two o'clock in the afternoon, continued till ten o'clock in the evening. By that time half Algiers had been destroyed; the whole of the Algerine navy had been burned; and, though a few of the enemy's batteries still maintained a casual fire, their principal fortifications were crumbling ruins; the majority of their guns were dismounted." The dey humbled himself to the terms proposed by the British commander. "On the first day of September Exmouth had the satisfaction of acquainting his government with the liberation of all the slaves in the city of Algiers, and the restitution of the money paid since the commencement of the year by the Neapolitan and Sardinian Governments for the redemption of slaves." He had also extorted from the piratical dey a solemn declaration that he would, in future wars, treat all prisoners according to the usages of European nations. In the battle which won these important results, "128 men were killed and 600 wounded on board the British fleet; the Dutch lost 13 killed and 52 wounded."—S. Walpole, *History of England from 1815*, v. 1, ch. 2.

1830.—French conquest of Algeria.—“During the Napoleonic wars, the Dey of Algiers supplied grain for the use of the French armies; it was bought by merchants of Marseilles, and there was a dispute about the matter which was unsettled as late as 1829. Several instalments had been paid; the dey demanded payment in full according to his own figures, while the French government, believing the demand excessive, required an investigation. In one of the numerous debates on the subject, Hussein Pasha, the reigning dey, became very angry, struck the consul with a fan, and ordered him out of the house. He refused all reparation for the insult, even on the formal demand of the French government, and consequently there was no alternative but war.” The expedition launched from the port of Toulon, for the chastisement of the insolent Algerine, “comprised 37,500 men, 3,000 horses, and 180 pieces of artillery. . . . The sea-forces included 11 ships of the line, 23 frigates, 70 smaller vessels, 377 transports, and 230 boats for landing troops. General Bourmont, Minister of War, commanded the expedition, which appeared in front of Algiers on the 13th of June, 1830.” Hussein Pasha “had previously asked for aid from the Sultan of Turkey, but that wily ruler had blankly refused. The beys of Tunis and Tripoli had also declined to meddle with the affair.” The landing of the French was effected safely and without serious opposition, at Sidi-Ferruch, about sixteen miles west of Algiers. The Algerine army, 40,000 to 50,000 strong, commanded by Aga Ibrahim, son-in-law of the dey, took its position on the table-land of Staoueli, overlooking the French, where it waited while their landing was made. On June 19 General Bourmont was ready to advance. His antagonist, instead of adhering to the waiting attitude, and forcing the French to attack him, on his own ground, now went out to meet them, and flung his disorderly mob against their disciplined battalions, with the result that seldom fails. “The Arab loss in killed and wounded was about 3,000, . . . while the French loss was less than 500. In little more than an hour the battle was over, and the Osmanlis were in full and disorderly retreat.” General Bourmont took possession of the Algerine camp at Staoueli, where he was again attacked on June 24, with a similar disastrous result to the Arabs. He then advanced upon the city of Algiers, established his army in position behind the city, constructed batteries, and opened, on July 4, a bombardment so terrific that the dey hoisted the white flag in a few hours. “Hussein Pasha hoped to the last moment to retain his country and its independence by making liberal concessions in the way of indemnity for the expenses of the war, and offered to liberate all Christian slaves in addition to paying them for their services and sufferings. The English consul tried to mediate on this basis, but his offers of mediation were politely declined. . . . It was finally agreed that the dey should surrender Algiers with all its forts and military stores, and be permitted to retire wherever he chose with his wives, children, and personal belongings, but he was not to remain in the country under any circumstances. On the 5th of July [1830] the French entered Algiers in great pomp and took possession of the city. . . . The spoils of war were such as rarely fall to the lot of a conquering army, when its numbers and the circumstances of the campaign are considered. In the treasury was found a large room filled with gold and silver coins heaped to-

gether indiscriminately, the fruits of three centuries of piracy; they were the coins of all the nations that had suffered from the depredations of the Algerines, and the variety in the dates showed very clearly that the accumulation had been the work of two or three hundred years. How much money was contained in this vast pile is not known; certain it is that nearly 50,000,000 francs, or £2,000,000 sterling, actually reached the French treasury. . . . The cost of the war was much more than covered by the captured property. . . . Many slaves were liberated. . . . The Algerine power was forever broken, and from that day Algeria has been a prosperous colony of France. Hussein Pasha embarked on the 10th of July with a suite of 110 persons, of whom 55 were women. He proceeded to Naples, where he remained for a time, went afterwards to Leghorn, and finally to Egypt.” In Egypt he died, under circumstances which indicated poison.—T. W. Knox, *Decisive battles since Waterloo*, ch. 5.

1830-1846.—French war of subjugation in Algeria with Abd-el-Kader.—“When Louis Philippe ascended the throne [of France, 1830] the generals of his predecessor had overrun the country [of Algeria]—though they did not effectually subdue it; their absolute dominion now extending far round Algiers—from Bona, on the east, in lat. 36° 53' N., long. 7° 46' W., to Oran, on the west—nearly the entire extent of the ancient Libya. . . . There was always a party in the chamber of deputies opposed to the conquest who deprecated the colonisation of Algeria, and who steadily opposed any grants of either men or money to be devoted to the African enterprise. The natural result followed. Ten thousand men could not effect the work for which 40,000 were required; and, whilst the young colony languished, the natives became emboldened, and encouraged to make that resistance which cost the French so dear. Marshal Clausel, when entrusted with the government of the colony, and the supreme command of the troops . . . established a series of fortified posts, which were adequately garrisoned; and roads were opened to enable the garrisons promptly to communicate with each other. These positions, rapidly acquired, he was unable to maintain, in consequence of the home government recalling the greater part of his force. To recruit his army, he resolved to enlist some corps of the natives; and, in October, 1830, the first regiment of zouaves was raised.” . . . In 1833 we “first hear of Abd-el-Kader. This chief was the son of a marabout, or priest, in the province of Oran. He united consummate ability with great valour; was a devout Mohammedan; and when he raised the standard of the prophet, he called the Arabs around him, with the fullest confidence of success. His countrymen obeyed his call in great numbers; and, encouraged by the enthusiasm they displayed, he first, at the close of 1833, proclaimed himself emir of Tlemsen (the former name of Oran), and then seized on the port of Arzeu, on the west side of the gulf of that name; and the port of Mostaganem, on the opposite coast. The province of Mascara, lying at the foot of the Atlas, was also under his rule. At that time general Desmichels commanded at Oran. He had not a very large force, but he acted promptly. Marching against Abd-el-Kader, he defeated him in two pitched battles; retook Arzeu and Mostaganem; and, on the 26th of February, 1834, entered into a treaty with the emir, by which both parties were bound to keep

the peace towards each other. During that year the terms were observed; but, in 1835, the Arab chief again commenced hostilities. He marched to the east, entered the French territories, and took possession of Medeah, being received with the utmost joy by the inhabitants. On the 26th of June, General Trezel, with only 2,300 men, marched against him. Abd-el-Kader had 8,000 Arabs under his command; and a sanguinary combat took place in the defiles of Mouley-Ismael. After a severe combat, the French forced the passage, but with considerable loss. . . . The French general, finding his position untenable, commenced a retrograde movement on the 28th of June. In his retreat he was pursued by the Arabs; and before he reached Oran, on the 4th of July, he lost all his waggons, train, and baggage; besides having ten officers, and 252 sous-officers and rank-and-file killed, and 308 wounded. The heads of many of the killed were displayed in triumph by the victors. This was a severe blow to the French, and the cause of great rejoicing to the Arabs. The former called for Marshal Clausel to be restored to his command, and the government at home complied; at the same time issuing a proclamation, declaring that Algeria should not be abandoned, but that the honour of the French arms should be maintained. The marshal left France on the 28th of July; and as soon as he landed, he organised an expedition against Mascara, which was Abd-el-Kader's capital. . . . The Arab chieftain advanced to meet the enemy; but, being twice defeated, he resolved to abandon his capital, which the French entered on the 6th of December, and found completely deserted. The streets and houses were alike empty and desolate; and the only living creature they encountered was an old woman, lying on some mats, who could not move of herself, and had been either forgotten or abandoned. The French set fire to the deserted houses; and having effected the destruction of Mascara, they marched to Mostaganem, which Clausel determined to make the centre of French power in that district."—T. Wright, *History of France*, v. 3, pp. 633-635.—"A camp was established on the Taafna in April 1836, and an action took place there on the 25th when the Tableau states that 3,000 French engaged 10,000 natives; and some of the enemies being troops of Morocco, an explanation was required of Muley-Abd-er-Rachman, the emperor, who said that the assistance was given to the Algerines without his knowledge. On July 6th, 1836, Abd-el-Kader suffered a disastrous defeat on the river Sikkak, near Tlemsen, at the hands of Marshal Bugeaud. November 1836, the first expedition was formed against Constantina. . . . After the failure of Clauzel, General Darnémont was appointed governor, Feb. 12th, 1837; and on the 30th of May the treaty of the Taafna between General Bugeaud and Abd-el-Kader left the French government at liberty to direct all their attention against Constantina, a camp being formed at Medjoy-el-Ahmar in that direction. An army of 10,000 men set out thence on the 1st of October, 1837, for Constantina. On the 6th it arrived before Constantina; and on the 13th the town was taken with a severe loss, including Darnémont. Marshal Vallée succeeded Darnémont as governor. The fall of Constantina destroyed the last relic of the old Turkish government. . . . By the 27th January, 1838, 100 tribes had submitted to the French. A road was cleared in April by General Négrier from Constantina to Stora on the sea. This road, passing by the camps of Smendou and the Arrouch, was 22 leagues in length. The coast of the Bay of Stora, on the site of the ancient Rusicada, became

covered with French settlers: and Philippeville was founded October, 1838, threatening to supplant Bona. Abd-el-Kader advancing in December, 1837, to the province of Constantina, the French advanced also to observe him; then both retired, without coming to blows. A misunderstanding which arose respecting the second article of the treaty of Taafna was settled in the beginning of 1838. . . . When Abd-el-Kader assumed the royal title of Sultan and the command of a numerous army, the French . . . sought to infringe the Taafna treaty, and embroil the Arab hero, in order to ruin his rising empire, and found their own on its ashes. The Emir had been recognised by the whole country, from the gates of Ouchda to the river Mijerda. . . . The war was resumed, and many French razzias [raids] took place. They once marched a large force from Algiers on Milianah to surprise the sultan's camp. They failed in their chief object, but nearly captured the sultan himself. He was surrounded in the middle of a French square, which thought itself sure of the reward of 100,000 francs (£4,000) offered for him; but uttering his favourite 'enshallah' (with the will of God), he gave his white horse the spur, and came over their bayonets unwounded. He lost, however, thirty of his body-guard and friends, but killed six Frenchmen with his own hand. Still, notwithstanding his successes, Abd-el-Kader had been losing all his former power, as his Arabs, though brave, could not match 80,000 French troops, with artillery and all the other ornaments of civilised warfare. Seven actions were fought at the Col de Mouzaia, where the Arabs were overthrown by the royal dukes, in 1841; and at the Oued Fodhha, where Changarnier, with a handful of troops, defeated a whole population in a frightful gorge. It was on this occasion that, having no guns, he launched his Chasseurs d'Afrique against the fort, saying, 'Voilà mon artillerie!' Abd-el-Kader had then only two chances,—the support of Muley-Abd-er-Rahman, Emperor of Morocco; or the peace that the latter might conclude with France for him. General Bugeaud, who had replaced Marshal Vallée, organised a plan of campaign by movable columns radiating from Algiers, Oran, and Constantina; and having 100,000 excellent soldiers at his disposal, the results as against the Emir were slowly but surely effective. General Négrier at Constantina, Changarnier amongst the Hadjouts about Medeah and Milianah, Cavaignac and Lamoricière in Oran,—carried out the commander-in-chief's instructions with untiring energy and perseverance; and in the spring of 1843 the Duc d'Aumale, in company with General Changarnier, surprised the Emir's camp in the absence of the greatest part of his force, and it was with difficulty that he himself escaped. Not long afterwards he took refuge in Morocco, excited the fanatical passions of the populace of that empire, and thereby forced its ruler, Muley-Abd-er-Rahman, much against his own inclination, into a war with France; a war very speedily terminated by General Bugeaud's victory of Isly, with some slight assistance from the bombardment of Tangier and Mogador by the Prince de Joinville. In 1845 the struggle was maintained amidst the hills by the partisans of Abd-el-Kader; but our limits prevent us from dwelling on its particulars. . . . A taste of French bayonets at Isly, and the booming of French guns at Mogador, had brought Morocco to reason. . . . Morocco sided with France, and threatened Abd-el-Kader, who cut one of their corps to pieces, and was in June on the point of coming to blows with Muley-Abd-er-Rahman, the emperor. But the Emperor of Morocco took vig-

orous measures to oppose him, nearly exterminating the tribes friendly to him; which drew off many partisans from the Emir, who tried to pacify the emperor, but unsuccessfully." In December, 1846, "he asked to negotiate, offered to surrender; and after 24 hours' discussion he came to Sidi Brahim, the scene of his last exploits against the French, where he was received with military honours, and conducted to the Duke of Aumale at Nemours. France has been severely abused for the detention of Abd-el-Kader in Ham."—J. R. Morell, *Algeria*, ch. 22.

BARBECUES.—"In the old days, before the Civil War, political picnics were in vogue, especially in the South, and were known by the name of 'barbecues' (the word 'barbecue,' which means ox, pig, etc., roasted whole, is very probably derived from the French (*barbe à queue*), although a native origin is also assigned to it, from which is supposed to come the Spanish word *barbacôa*, (borrowed from the Aborigines by the first explorers of the New World), because animals roasted whole, at a fire lighted in the open air for the occasion, were often consumed at them. The barbecues were the great social and political rendezvous; the planters came to them with their wives and daughters and accompanied by a number of servants; the best political speakers of the district used them as a practising ground. Their eloquence was lavished as generously as the provisions on the assembled crowd. Often the debates were 'joint' ones; political opponents feasted together and in the intervals indulged in oratorical tourneys. Sometimes this lasted for several days, and invitations were sent out beforehand for a 'protracted barbecue.' In the South and in the West the barbecues still take place; occasionally the programme includes, besides the political speeches and the meals, athletic contests, dances, sports, horse races. In the East the barbecues are less common and not so picturesque; it is more a sort of fair for which the railroad companies consider it a good opportunity to organize excursion trains."—M. Ostrogorski, *Democracy and the organization of political parties*, pp. 335-336.

BARBE-MARBOIS, François, Marquis de (1745-1837), French diplomatist and writer. He was Napoleon's counsellor of state, 1801; minister of the treasury, 1801-1805; negotiating in 1803 the Louisiana Purchase, which ceded the American continental possessions of France to the United States.

BARBERINI, a Roman princely family, which gained prestige through the raising of Maffeo Barberini to the papal throne as Urban VIII in 1623 (see **ROME**: Modern City: 1600-1656); he gave to his nephew, Taddeo, the principality of Palestrina and made two other nephews and his brother cardinals. From the family's way of gathering ancient treasures for their palace and library at Rome, comes the Roman saying "Quod non fecerunt barbari, fecerunt Barberini."

Tapestries, now in Cathedral of St. John the Divine, New York. See **GIFTS AND BEQUESTS**.

BARBERTON, town of the Transvaal, South Africa, from which the Boers were driven out in 1900. See **SOUTH AFRICA**, Union of: 1900 (June-December).

BARBES, **BARBETS**.—The elders among the early Waldenses were called barbes, which signified "Uncle," whence came the nickname Barbets, applied to the Waldensian people generally.—E. Comba, *History of the Waldenses of Italy*, p. 147.

BARBIER, Charles, French officer, who invented the telegraphic and sonographic alphabets. See **EDUCATION**: Modern developments: 20th cen-

tury: Education for the deaf, blind and feeble-minded; Blind.

BARBIZON SCHOOL.—"A group of French artists established themselves at Barbizon, in the Forest of Fontainebleau, face to face with trees and rocks and pools, and produced faithful and impassioned portraits of their native land, such as French art had never yet known. The classicists accused them of representing 'arid landscapes devoid of all charm, the lines of which are poor and the vegetation dry and stunted,' because they took their subjects from France, not from Italy, and renounced the 'adjusted landscape' with a ruined temple in the foreground. These heretics, at least, have triumphed; the Italian landscape is no more."—S. Reinach, *Apollo*, p. 311.—Some of the more prominent representatives of the school were Corot, Rousseau, Millet, Daubigny, Diaz, Dupré, Jacque, Troyon, and Harpignies.—See also **PAINTING**: Europe: 19th century.

BARBON (Barebone or Barebones), Praise-God (c. 1596-1679), English Puritan, who gave the name to the Barebones Parliament of 1653, assembled by Cromwell. See **ENGLAND**: 1653 (June-September).

BARBUDO. See **ANDESIANS**.

BARCA, city and district in Tripoli. See **CYRENAICA**.

BARCELONA, a Mediterranean seaport and chief city of the Spanish province to which it gives its name, and formerly capital of the kingdom of Catalonia. "A great, famous, rich, and well-established city"—so Barcelona seemed to Cervantes three centuries ago. Barcelona has developed much since then; it is not only the greatest city in Spain, almost the largest city of the Mediterranean, it is one of the commercial centres of Europe, the Spanish Manchester, of about the same size and population, but indeed unlike the English Manchester. One might say, indeed, that of all the great commercial cities of Europe Barcelona is that in which amenity of climate and the claims of humane living have been least hidden and crushed by the hurry and ugliness of business. . . . At Barcelona a magnificent site has been wisely and spaciouly planned to the best advantage, while the precious remains of antiquity have been, so far as possible, harmoniously preserved without detriment to the insistent demands of a modern community's life. . . . Barcelona cannot fail to be a revelation of what a great commercial city may be when humanely and harmoniously organized. In a beautiful and exquisitely tempered climate . . . , a robust independent population has here freely expanded itself, loving work and loving play, and combining these two fundamentally human impulses more completely and more admirably than any other equally great city. When it has achieved the highest degree of economic and political freedom compatible with the integrity of Spain, of which it is more than any other region the brain and arm, Barcelona will worthily appear as in some essentials a model city, a place worthy of municipal pilgrimage and urban inspiration."—H. Ellis, *Soul of Spain*, pp. 273, 274, 276, 280, 281.

B. C. 3rd—A. D. 6th centuries.—According to traditionary accounts Barcelona (or as it was called in ancient times, *Barcino*) was founded by the Carthaginian Hamilcar Barca, in the third century B. C., and was the centre of Carthaginian power in the peninsula. After the Roman conquest the city received from Cæsar Augustus the name of Julia Faventia, with the status of a Roman colony. It grew to be the leading trade centre of the western Mediterranean, rivalling even Tarragona and Marseilles. Barcelona was im-

portant under the Visigoths, being their temporary capital in 415 and again in 531. In 540 and 599 church councils were held at Barcelona, which had been a bishopric since 343.

713.—Surrender to the Arab-Moors. See SPAIN: 711-713.

801.—In 801 Barcelona with the rest of Catalonia passed under the dominion of the Franks.

874-1151.—Counts of Barcelona ruled as independent monarchs.—“Wifredo, count of Barcelona, is believed to have established his independence as early as 874, although that event is doubtful; at any rate the separation from the Frankish kingdom was not much longer delayed. Each count was a lord unto himself. By the beginning of the eleventh century they were saluted with the title of prince in recognition of their sovereignty.”—C. E. Chapman, *History of Spain*, pp. 50-65.—“At the time when Ramon Berenguer I (1035-1076) became the count of Barcelona, Catalonia was a federation of counties, acknowledging the ruler of Barcelona as overlord. By the end of his reign he had united five Catalonian counties and many other territories under his rule, including almost as much land in southern France as he possessed in Spain. No further progress was made until the reign of Ramon Berenguer III (1096-1131) who, through inheritance, without civil wars, acquired all the Catalonian counties but two and a great part of southern France. He also waged war against the Moslems, though perhaps the most notable thing about them was that the Pisans fought as his allies. Indeed, he established commercial and diplomatic relations with the various Italian republics. . . . Ramon Berenguer IV (1131-1162) inherited only the Spanish portions of his father's domain, but extended his authority over Tortosa, Lérida, and other Moslem regions. . . . In 1150 he married the daughter of the king of Aragon [see also SPAIN: 1035-1258] and in 1164 his son by this marriage united Aragon and Catalonia under a single rule.”—C. E. Chapman, *A History of Spain*, pp. 77-78.

1151.—The country joined to Aragon. See SPAIN: 1035-1258.

12th-16th centuries.—Commercial prosperity and municipal freedom.—“The city of Barcelona, which originally gave its name to the county of which it was the capital, was distinguished from a very early period by ample municipal privileges. After the union with Aragon in the 12th century, the monarchs of the latter kingdom extended towards it the same liberal legislation; so that, by the 13th, Barcelona had reached a degree of commercial prosperity rivalling that of any of the Italian republics. She divided with them the lucrative commerce with Alexandria; and her port, thronged with foreigners from every nation, became a principal emporium in the Mediterranean for the spices, drugs, perfumes, and other rich commodities of the East, whence they were diffused over the interior of Spain and the European continent. Her consuls, and her commercial factories, were established in every considerable port in the Mediterranean and in the north of Europe. The natural products of her soil, and her various domestic fabrics, supplied her with abundant articles of export. Fine wool was imported by her in considerable quantities from England in the 14th and 15th centuries, and returned there manufactured into cloth; an exchange of commodities the reverse of that existing between the two nations at the present day. Barcelona claims the merit of having established the first bank of exchange and deposit in Europe, in 1491; it was

devoted to the accommodation of foreigners as well as of her own citizens. She claims the glory, too, of having compiled the most ancient written code, among the moderns, of maritime law now extant, digested from the usages of commercial nations, and which formed the basis of the mercantile jurisprudence of Europe during the Middle Ages. The wealth which flowed in upon Barcelona, as the result of her activity and enterprise, was evinced by her numerous public works, her docks, arsenals, warehouses, exchange, hospitals, and other constructions of general utility. Strangers, who visited Spain in the 14th and 15th centuries, expatiate on the magnificence of this city, its commodious private edifices, the cleanliness of its streets and public squares (a virtue by no means usual in that day), and on the amenity of its gardens and cultivated environs. But the peculiar glory of Barcelona was the freedom of her municipal institutions. Her government consisted of a senate or council of one hundred, and a body of regidores or counsellors, as they were styled, varying at times from four to six in number; the former intrusted with the legislative, the latter with the executive functions of administration. A large proportion of these bodies were selected from the merchants, tradesmen, and mechanics of the city. They were invested not merely with municipal authority, but with many of the rights of sovereignty. They entered into commercial treaties with foreign powers; superintended the defence of the city in time of war; provided for the security of trade; granted letters of reprisal against any nation who might violate it; and raised and appropriated the public moneys for the construction of useful works, or the encouragement of such commercial adventures as were too hazardous or expensive for individual enterprise. The counsellors, who presided over the municipality, were complimented with certain honorary privileges, not even accorded to the nobility. They were addressed by the title of magnificos; were seated, with their heads covered, in the presence of royalty; were preceded by mace-bearers, or licitors, in their progress through the country; and deputies from their body to the court were admitted on the footing and received the honors of foreign ambassadors. These, it will be recollected, were plebeians,—merchants and mechanics. Trade never was esteemed a degradation in Catalonia, as it came to be in Castile.”—W. H. Prescott, *History of the reign of Ferdinand and Isabella, introduction*, sect. 2.—See also MONEY AND BANKING: Medieval: 14th-15th centuries.

1450.—Founding of the University of Barcelona.—“The most noteworthy university founded in the period was that of Barcelona, which evolved from an academy in the opening years of the fourteenth century to the rank of a university in 1450 with courses in theology, civil and canon law, philosophy, arts and medicine.”—C. E. Chapman, *History of Spain*, p. 188.

1640.—Insurrection.—In 1640 Barcelona was the centre of the Catalonian rebellion against Philip IV, and called upon France for protection. See SPAIN: 1640-1642.

ALSO IN: M. A. S. Hume, *Spain*, pp. 258-260.

1651-1652.—Siege and capture by the Spaniards.—“The Catalans at this time were heartily tired of their French masters. . . . Mortara, the Spanish commander who was a man of energy and resource, lost no opportunity. He captured Tortosa (November, 1650), and then besieged Barcelona, whilst Don Juan blockaded the front by sea. After fifteen months of siege, and incredible suffering from famine, the place capitulated (Octo-

ber, 1652) and a general amnesty was granted."—M. A. S. Hume, *Spain*, p. 279. See SPAIN: 1648-1652.

1705.—Capture by the earl of Peterborough. See SPAIN: 1705.

1706.—Unsuccessful siege by the French and Spaniards. See SPAIN: 1706.

1713-1714.—Betrayal and desertion by the Allies.—Siege, capture and massacre by French and Spaniards. See CATALONIA: 1713-1714; and SPAIN: 1713-1714.

1842.—Rebellion and bombardment. See SPAIN: 1833-1846.

1857-1864.—Population.—By the census of 1857 the population of the city amounted to 180,014 and by an enumeration in 1864 the city and its suburbs were found to contain 252,000 persons. (In 1921 the population was about 600,000.)

1895.—Student riots. See SPAIN: 1885-1896.

1902.—General strike and battle with soldiery.—Barcelona, the scene of frequent disturbance, both political and industrial, produced in the middle of February, a general strike of 80,000 workmen, between whom and the troops of General Weyler, the minister of war, a week of battle in the streets occurred, with martial law in force.

1903-1919.—Relations with Spain.—Industrial unrest.—Syndicalism.—"It is a city of the North, full of restlessness, an unnatural energy, haunted by a desire for gain, absolutely modern in its expression, that has made of one of the oldest cities in Spain a sort of Manchester, almost without smoke it is true but full of mean streets and the immense tyranny of machinery, that for the most part Spain has escaped so fortunately. Barcelona has nothing in common with any other Mediterranean city, unless indeed it be Marseilles, but it lacks the lucidity of that great French city. . . . It is the one city in Spain that is devoted to commerce and indeed, it is not really Spanish at all. . . . Little by little, in passing up and down Barcelona, Spain falls away from you, and you find yourself in a cosmopolitan city of the modern world."—E. Hutton, *Cities of Spain*, pp. 30-31.—Barcelona has long been the industrial and commercial centre of eastern Spain—a preëminence which dates from the twelfth and thirteenth centuries. It received a temporary check after the discovery of America and again from the disasters of the Spanish-American war (1898) but it soon picked up again and by 1904 was a port of regular call of thirty-five important shipping companies. The historic antagonism between the Catalans and the other inhabitants of Spain was strengthened by the industrial development of Barcelona. The Catalans look upon their rulers as reactionary and reserve all their sympathies for their Provençal neighbors whom they resemble so nearly in race, temperament and language. Republican ideals were abroad and took the form partly of powerful labour and socialist organizations. In 1903 seventy-five strikes occurred and that year is supposed to have been a comparatively quiet one.

"Barcelona is historically turbulent. The Province of Catalonia of which Barcelona is the capital is inhabited by a race that has ethnological variation from the general Spanish type. These people speak a language of their own and think and act differently from the other people of Spain. Politically, Barcelona presents to Spain something of the same problem that Ireland does to Great Britain. Their aspiration is for at least a modified home rule and the answer of the Cortez to that invariably has been measures of stern repression. So there is a political foundation for

unrest in Catalonia that is not found in any other province, but there is also a social phenomenon there far more interesting and significant than anything that has its root in political differences. Barcelona is the great manufacturing center of Spain for almost everything except iron and a great percentage of its population is made up of wage-workers. The provincial characteristics of the Catalonians, their independence, their disregard for authority, their progressiveness, have all found play in creating what to me was the most menacing, the most extraordinary, the most terrifying organization with which I have ever come in contact. General strikes are called merely as a sort of organization gymnastics, without any demands being made and with no one put forward with whom negotiation might be made to end the strike. Such a strike may last a day or a week and as suddenly and mysteriously as work stopped, it will be resumed. All this is done to impress the public and to train the organization. One of the latest phases has been the censorship of newspapers. The newspapers were told they must submit all proofs before publication and that if they published anything unauthorized, they would be fined. Two papers were fined 5,000 pesetas each for printing official orders issued by the Government. If they did not pay the fine so levied, they were told that their presses would be mysteriously destroyed. Even if they did pay the fine, as happened in one case, there still was no relinquishing of the severity of the censorship. The result was that every paper in Barcelona ceased publication and for fifteen days prior to the time I was there, not a single paper had been printed and the only news of the world which the town had came twenty-four hours old in the Madrid papers. The essence of the Syndicalist methods as exhibited in Barcelona is assassination. Up to the time I was there, there had been 72 employers or industrial foremen mysteriously slain. . . . The civil governor, obedient to threats of assassination within twelve hours, threw up his post and went to Madrid. One of the results was the fall of the Romanones Ministry. . . . Opposed to this mysterious organization of workmen, there is growing up what we would term Vigilantes but what is called in Catalonia a Soman. This is now said to embrace 40,000 citizens who are banded together to fight the sort of domination the Syndicate stands for."—F. A. Vanderlip, *What happened to Europe*, pp. 71-76.—See also SPAIN: 1909.

1909.—Revolutionary outbreak.—Hostility to war in Morocco.—Execution of Ferrer. See SPAIN: 1909.

1912.—Prices and cost of living. See SPAIN: 1912.

1915-1919.—Attitude of radicals in Barcelona towards World War.—Demand for home rule.—Barcelona has been and continues to be the hot-bed of radicalism and unrest in Spain. "Early in August [1915] a meeting of Radicals was held at Barcelona to protest against the limitation of public meetings. One of the speakers demanded intervention in favour of the Allies; whereupon the Government delegate immediately suspended the meeting; revolver shots were fired and several persons injured. As the year went on the cleavage of opinion between the Ultra-Montanes and the Interventionist Radicals became still more pronounced."—*Annual Register*, 1915, p. 271.—See also SPAIN: 1914-1918; 1919-1920.—"The most important question before the country at the beginning of January [1919] was the demand of Catalonia to be granted a large measure of Home

Rule. This desire for autonomy was expressed by nearly all the Catalonian Deputies, irrespective of their opinions upon other matters. . . . On January 24 the Catalonian Mancomunidad, or Union, met in Barcelona and formally drew up its scheme for the wisest measure of Home Rule. This Mancomunidad was a voluntary representative body able to speak in the name of the whole Province of Catalonia. . . . At the same time a plebiscite was taken of all the municipalities in Catalonia, and it was stated that of more than a thousand replies which were received all except four were in complete agreement with the ambitious measure drawn up by the Mancomunidad."—*Annual Register*, 1919, p. 245.

BARÈRE DE VIEUZAC, Bertrand (1755-1841), famous French revolutionist statesman. Deputy to States-general, 1789, distinguishing himself in the National assembly whose actions he reported in a journal, *Le point du jour*. He delivered the funeral oration of Mirabeau. Deputy to the Constitutional convention, he was made its president and presided at the trial of Louis XVI, voting for death. Member of the Committee of Public Safety 1793-1795 and its reporter to the convention. [See FRANCE: 1793 (March-June); (September-December); 1794 (June-July): French victory at Fleurus; 1794-1795 (July-April).] Became a secret agent of Napoleon. Banished for life in 1815, he returned to France in 1830 and received a pension from Louis Philippe.

ALSO IN: *Mémoires de B. Barère*.

BARGE CANAL, New York State.—"In 1903, almost ninety years from the date of the beginning of Clinton's canal, the people of the State decided to again enlarge the canal and make it a Barge canal. The Barge canal consists of four branches: the Erie, running across the State from Waterford on the Hudson river to Tonawanda, where the Niagara river is entered and followed to Lake Erie; the Champlain, running northward along the easterly boundary of the State from Waterford to Whitehall at the southern end of Lake Champlain; the Oswego, branching from the Erie canal north of Syracuse and running northward to Oswego on Lake Ontario; and the Cayuga-Seneca canal, leaving the Erie west of the Oswego junction and running southward, connecting with the two large lakes from which it takes its name. The enlargement of this last canal was not decided upon until 1909. The Barge canal is one of the world's greatest feats of engineering. It is about ten times as long as the Panama canal and has many more engineering works and some of the most notable locks in the world. The old canals followed what is called a 'land line' which means an artificial channel constructed by means of excavations and embankments, avoiding the natural streams and lakes wherever possible so as to be above danger of flood. The new system, on the other hand, makes use of all these rivers and lakes, whenever practical; it makes them into a canal ('canalizes them') by the building of dams, locks, and other engineering works and obtains what is known as 'slack water navigation.' In fact, less than thirty per cent. of the Barge canal is built in 'land line.' There will be 446 miles of Barge canals, the Erie being 339 miles long, the Champlain 61, the Oswego 23, and the Cayuga-Seneca 23 miles long. . . . The dimensions of the Barge canal vary according to the locality, but at all places it will be at least 12 feet deep. It is 125 feet wide in earth sections of the land line, 94 feet wide in rock cuts, and has a width of at least 200 feet in the beds of rivers and lakes through which it runs. . . . All the locks (there are 57 in the Barge canal) are built of concrete and operated by electricity. They are filled with water and emptied by means of culverts, one in each of the side walls, opening into the lock chamber through 20 ports or openings located just above the lock floor. The lock gates are massive steel doors swinging on steel pivots. Some of these lock gates weigh more than 200,000 pounds each and are of the so-called 'mitre gate' type. A pair of gates may be opened or closed in about 30 seconds. Their operation, as well as the operation of the valves which control the flow of water in the feed culverts, the operation of the power capstans, the buffer beams and all other lock machinery is controlled by a series of small switches collected together in a small controller box located on one of the lock walls. The Barge canal locks are 328 feet long and 45 feet wide. They will lift at one time from one water level to another six such boats as are at present in use on the canals. The most wonderful of these locks are the five at Waterford, near Troy, which have a combined lift of 169 feet, the greatest series of high lift locks in the world. These locks cost about one-quarter of a million dollars each. The lock at Little Falls has a lift of 40½ feet; this is remarkable because it has a greater lift than any lock on the Panama canal. The siphon lock at Oswego has a lift of 25 feet, is the first lock of this type to be built in the United States and the largest

BARGE CANAL
(New York State)

of its type in the world. Other notable structures connected with the Barge canal are: (1) The movable dams. These dams, unique in this country, retain the waters of the Mohawk river and look like immense truss bridges, heavy steel gates being raised and lowered to govern the depth of water in the canalized river bed. (2) The big dams at Delta and Hinckley. These have created two lakes of about 5 square miles each, and store up water that is to be let into the canal channel during the dry summer months so that the depth of 12 feet can be maintained. (3) The massive steel guard gates which protect the various locks and other works. (4) The curved fixed dam at Crescent which is located just above the Waterford locks. (5) The 300 new bridges which carry the railroads and the highways across the Barge canal. (6) The automatic spillways which help to maintain the water levels in the canal. (7) The 50-foot Taintor gates, the largest in the world. (8) The power houses where electrical power is created for operating the canal structures. In the construction of the Barge canal a greater variety of machinery has been used than ever before used on any engineering undertaking; this machinery represents a cost of about \$10,000,000. This great inland canal will cost \$150,000,000 and is being paid for by the people of New York State without any aid from the United States government. There will be no towpaths on the new canal so that the big barges which will be used must be run by mechanical means. The State is also building Barge canal terminals at all the cities and important towns along the different channels. These will be provided with machinery to load and unload barges. It is quite certain that the Barge canal will serve to attract once more the inland shipping that once passed through the old canals and did so much toward making New York the Empire State, and New York city the greatest metropolis in the American Union. De Witt Clinton's dream will have become a reality.—F. M. Williams, *Story of New York State canals*, pp. 5-11.—See also New York: 1899-1909.

List of prominent facts connected with the Barge canal.—“(A) First canal locks at Little Falls in 1796.
“(B) ‘Clinton’s Big Ditch,’ began 1817, completed 1825.
“(C) What the Barge canal (1903) consists of: (1) Erie—across State from Waterford on Hud-

son to Tonawanda; (2) Champlain—north along east boundary from Waterford to Whitehall; (3) Oswego—branching from Erie north of Syracuse and running north to Oswego; (4) Cayuga-Seneca—leaving Erie west of Oswego canal and running south connecting with Lakes Cayuga and Seneca.

“(D) Length of canals: (1) Erie—339 miles; (2) Champlain—61 miles; (3) Oswego—23 miles; (4) Cayuga-Seneca—23 miles; (5) Total—446 miles.

“(E) Four hundred miles now complete.

“(F) Minimum depth 12 feet.

“(G) Width: (1) 125 feet in earth sections; (2) 94 feet in rock cuts; (3) 200 feet in rivers and lakes.

“(H) Number of locks—57.

“(I) Construction and operation: (1) Built of concrete; (2) operated by electricity; (3) lock gates opened or closed in 30 seconds; (4) uniform length of locks 328 feet; (5) width of locks 45 feet; (6) lift of locks varies from 6 to 40½ feet.

“(J) Notable locks: (1) Five at Waterford—combined lift of 169 feet; (2) one at Little Falls—lift of 40½ feet; (4) one at Oswego—lift of 25 feet: (a) siphon lock; (b) first in United States—largest in world.

“(K) Notable features: (1) Movable dams; (2) dams at Delta and Hinckley; (3) massive steel guard gates; (4) curved fixed dam at Crescent; (5) three hundred railroad and highway bridges; (6) automatic spillways; (7) fifty-foot Taintor gates; (8) power houses.

“(L) Total cost, 150 million dollars.

“(M) Total cost of machinery used in construction, 10 million dollars.—*Ibid.*, pp. 11-13.

Definitions connected with the Barge Canal.
“*Slack water navigation.* Navigation in a pool of water created by a dam.

“*Earth sections.* That part of a land line where the soil is chiefly earth, and little rock is encountered.

“*Tons capacity.* The maximum number of tons which a boat can carry.

“*Feed culverts.* The hollow spaces or tunnels within the lock walls through which the water for filling or ‘feeding’ the locks and for emptying them is carried.

“*Mitre gate type.* A pair of gates which, when

closed, form a definite angle at the point of junction.

"Power capstans. A cleated cylinder revolving around a spindle, built on the lock walls, and operated by electricity. A rope fastened to a barge can be thrown around the capstan, and the barge can thus be towed into a lock.

"Buffer beams. A steel beam resting in a pocket in one of the approach walls to a lock, and swinging on a pivot to meet the other approach wall in front of the lock gates. Buffer beams serve as protection to the lock gates.

"Controller box. A steel box standing on a lock wall containing the switches which, when operated, open and close the lock gates and the valves in the 'feed' culverts.

"Lockage. The passage of a boat or boats through a lock. The raising or lowering of a boat or boats from one water level to another water level, by means of a lock.

"Siphon lock. A lock which can be filled and emptied by means of a series of pipes and without the aid of any mechanical means.

"Movable dams. Dams which can be raised or lowered so as to keep the water in canalized streams at the depth which is necessary for navigation.

"Truss bridge. A bridge supported by a truss. A truss is a structure whose members are collected in the form of a series of triangles so that it cannot be weakened unless the length of one of its members is changed.

"Guard gates. Steel gates built across the canal channel, usually at the head of a series of locks, so that in case of accident to one of the locks, the gate can be lowered and the water supply shut off."—*Ibid.*, p. 13.

BARMECIDES, or Barmekides.—"The Barmecides were the members of one of those powerful Persian families who, during the days of the first Arabian invasions, had abjured their religion, forsworn their loyalty to their king, boldly adopted the language and creed of their conquerors, and by their wealth and intelligence re-

tained their position in the state. The first Moslem of the Barmecide race was a Magian priest who surrendered to Qotaiba, when the latter invaded the province of Balkh. His son, Khaled-ibn-Barmek, had been one of Abu Muslim's supporters during the first years of the revolution which overthrew the House of Omayya; his services in Khorasan ingratiated him in the favours of the first Abbasid Caliph. [See **CALIPHATE**: 715-750.] Thenceforward Ibn Barmek and his descendants took care to remain in close proximity to the person of the Commander of the Faithful, insensibly moulding the Imperial policy on matters of finance, foreign affairs, or internal administration. . . . Harun could have had no other choice than to repose confidence in the Barmecide family. For three generations they had been the subservient slaves, the disinterested advisers, and the principal supporters of his house. During that time they had probed every channel of administration, gathered up every detail of foreign and domestic policy into their hands, had learned the whole financial gamut of the provinces, and acquainted themselves with the records, characters and capacities of the leading public men. . . . At the time of Harun's accession, the chief representatives of the Barmecide family were Yahyah and his sons Fadl, Ja'afar, Musa and Mohammed. The young Caliph decided to accept them all as his ministers and servants. Yahyah, his tutor, he made his chief wazir; to Fadl, his milk-brother, he gave the commissionership of the Eastern Empire, to Ja'afar the West; to Musa and Mohammed, posts in his privy council. During their tenure of office the Barmecides exerted their combined abilities in developing and enriching the Empire of their masters; from a material point of view nothing could have been more successful. In the eastern and western provinces order was restored, justice was formally administered, roads were repaired, caravanserais were built, trackless deserts were made passable for trade by means of wells and cisterns, the armies were more carefully disciplined, taxes were imposed with science and care, and a regular fleet was established on the Mediterranean. Combined with these schemes, developing the financial resources of the Empire, the Barmecides fostered a benevolent policy of tolerance towards the non-Moslems. Christians and Jews were encouraged to make use of their capacities as public servants, to build churches and synagogues, and to celebrate their feasts and religious services in public without fear of shame, while bishops and rabbis were received at court as honoured guests. Besides inspiring the Christians and Jews with a sense of gratitude and loyalty towards the state, the Barmecides conceived an even bolder project of endeavouring to bring about a truce between the followers of Ali and the Sunnis: certain potential leaders of the Alid party were persuaded to surrender, and an era of tolerance was inaugurated. . . . During this period the Barmecides themselves reaped something of the fruits which they had husbanded for their patron. Their audience halls were thronged with clients and suppliants; for their entertainment, philosophers and divines contended in subtle arguments and disputes; in their honour, the greatest poets polished and re-polished the most delicious epigrams and flattering couplets; while the proudest Emirs humbled themselves before them in hopes of favour and promotion. . . . So slowly and so gradually had the canker of disunion introduced itself between the Commander of the Faithful and his ministers, that neither suspected the other of harbouring hostile intentions, both refrained from precipitating

an open breach; Harun-el-Rashid still jested and talked with Ja'afar; Yahyah still gave orders as the chief minister; Musa, Mohammed and Fadl still retained their posts. . . . So matters continued for a full year. At the end of that time Harun-el-Rashid carried the Barmecides with him on the pilgrimage to Mecca. During the outward and return voyage the Caliph had appeared depressed and melancholy; over the whole party brooded a sense of apprehension and foreboding as of some terrible calamity yet to come. When the homeward journey was nearly ended, and the Royal camp was pitched at Anbar, a short distance from Baghdad, Harun-el-Rashid suddenly cast despondency aside, called Yahyah and his son Ja'afar and the rest to him, robed them in dresses of honour, and discoursed with them of the future and on affairs of state. . . . Ja'afar at last withdrew to his own tents and sat down to listen to his singers, to drink wine, and to pass the night in merriment; but his spirits were oppressed with misery, and he found no pleasure either in cup or song. . . . A little later there appeared Mesrur the Eunuch. 'Arise, O Ja'afar,' he cried, 'the Commander of the Faithful calls thee.' . . . When they reached the Imperial tent Mesrur drew his scimitar and bade Ja'afar bare his neck. In despair the luckless Barmecide implored Mesrur to spare his life, reminding the slave of their ancient friendship, and begging him to remember that their master might repent. At last the Eunuch consented to approach Harun-el-Rashid. Mesrur found the Caliph sitting on his prayer-rug, alone. 'Where is the head of Ja'afar?' cried El Rashid. 'O Commander of the Faithful,' cried Mesrur, 'I bring Ja'afar himself'; and drawing aside the curtain of the door showed the Caliph his adopted brother crouched upon the threshold. 'I called not for Ja'afar, but for his head,' replied Harun. Mesrur, seeing it was hopeless, struck off Ja'afar's head with a single blow. Yahyah and Fadl were loaded with chains, Musa and Mohammed were slain by order of the Caliph, their clients and freedmen were imprisoned, their slaves were distributed, their goods confiscated, their nearest and dearest all perished miserably, some falling under the knife of the executioner, some expiring in the dungeons, others dying in misery and want. Thus departed the glories and hopes of the Barmecides, and with them those of the House of Abbas."—M. Sykes, *Caliph's last heritage*, pp. 226-235.

BARNABAS (fl. 38), saint and missionary in Asia Minor. See CHRISTIANITY: A. D. 33-52.

BARNABITES; PAULINES.—"The clerks-regular of St. Paul (Paulines), whose congregation was founded by Antonio Maria Zacharia of Cremona and two Milanese associates in 1532, approved by Clement VII. in 1533, and confirmed as independent by Paul III. in 1534, in 1545 took the name of Barnabites, from the church of St. Barnabas, which was given up to them at Milan. The Barnabites . . . actively engaged in the conversion of heretics."—A. W. Ward, *Counter Reformation*, p. 29.—See also MONASTICISM: Modern orders.

BARNARD, George Grey (1863-), American sculptor. Won the gold medal at the Paris Exposition, 1900, and at Buffalo, 1901. Best known works are "The Two Natures," "Abraham Lincoln," and decorations for the State Capitol at Harrisburg, Pennsylvania.

BARNARD, Henry (1811-1900), American educational reformer, who aided in starting a teachers' institute. See EDUCATION: Modern developments:

20th century: General education: United States: Training teachers.

BARNARD COLLEGE, a college in the educational scheme of Columbia University, founded in 1889, for women undergraduates. See EDUCATION: Modern: 19th century: United States: Secondary education.

BARNAVE, Antoine Pierre Joseph Marie (1761-1793), one of the most distinguished orators of the French revolution. Member of the States-general, 1789; a member, and in 1790, a president of the Constituent assembly, where his policy was one of moderation. [See FRANCE: 1790-1791]. Appointed one of the three commissioners to conduct Louis XIV and Marie Antoinette in the return from Varennes, his sympathies for the king and queen were greatly roused, and he finally joined the monarchist party. Papers found during the burning of the Tuileries were said to implicate him in a conspiracy against the republic. He was arrested, 1792, and guillotined the following year. Barnave's most famous speeches are edited by H. M. Stephens, in *Statesmen and orators of the French revolution*.

BARNBURNERS, one of the two factions of the New York Democrats; made up of radical reformers, who, like the Dutch farmer, would burn the barn to destroy the rats in it. The two factions, Hunkers and Barnburners, could not agree in the Democratic convention of 1848: the Hunkers nominated Cass for president, and made no stand on the Wilmot Proviso, while the Barnburners repudiated Cass and urged the adoption of the Wilmot Proviso. The Barnburners thereupon joined the Free Soil Party, whose nominee was Van Buren. This division of the Democratic vote caused the victory of Taylor, the Whig candidate, in New York State and in the nation. See U. S. A.: 1845-1846; and 1848: Free Soil convention at Buffalo.

BARNES, George Nicoll (1859-), British Labor member of Parliament; member of the War Cabinet, 1917; minister plenipotentiary at Paris Peace Conference. See VERSAILLES, TREATY OF: Conditions of peace.

BARNES, Julius Howland (1873-), American wheat exporter, president of U. S. Food Administration Grain Corporation, 1917-1919. See U. S. A.: 1918-1920.

BARNES, William, jr. (1866-), American publisher and politician. Owner and editor of *Albany Journal* since 1880. Member Republican state committee of New York, 1892-1914; chairman, 1911-1914; member Republican national committee, 1912-1916.

BARNET, Battle of (1471), the decisive battle, and the last but one fought, in the "Wars of the Roses." Edward IV, having been driven out of England and Henry VI reinstated by Warwick, "the King-maker," the former returned before six months had passed and made his way to London. Warwick hastened to meet him with an army of Lancastrians and the two forces came together on Easter Sunday, April 14, 1471, near Barnet, only ten miles from London. The victory, long doubtful, was won for the white rose of York, and it was very bloodily achieved. The Earl of Warwick was among the slain. See E&7. (&4: 1455-1471.

BARNEVELDT, John of. See OLDENBARNEVELDT, JOHAN VAN (1547-1610).

BARODA, a native state of the Indian empire, in the Bombay region. The former rulers (gaekwars) were corrupt and incompetent, but since 1875 British influence has secured enlightened administration. In the World War, the gaekwar heartily supported the Allied cause.

BAROMETER, *Invention of*. See *INVENTIONS*: 16th and 17th centuries; *Instruments*.

BARON.—"The title of baron, unlike that of Earl, is a creation of the [Norman] Conquest. The word, in its origin equivalent to 'homo,' receives under feudal institutions, like 'homo' itself, the meaning of vassal. Homage (hominium) is the ceremony by which the vassal becomes the man of his lord; and the homines of the king are barons. Possibly the king's thegn of Anglo-Saxon times may answer to the Norman baron."—W. Stubbs, *Constitutional history of England*, ch. 11, sect. 124.

BARONET.—"One approaches with reluctance the modern title of baronet. . . . Grammatically, the term is clear enough; it is the diminutive of baron; but baron is emphatically a man, the liege vassal of the king; and baronet, therefore, etymologically would seem to imply a doubt. Degrees of honor admit of no diminution; a 'damoisel' and a 'donzello' are grammatical diminutives, but they do not lessen the rank of the bearer; for, on the contrary, they denote the heir to the larger honor, being attributed to none but the sons of the prince or nobleman, who bore the paramount title. They did not degrade, even in their etymological signification, which baronet appears to do, and no act of parliament can remove this radical defect. . . . Independently of these considerations, the title arose from the expedient of a needy monarch [James I] to raise money, and was offered for sale. Any man, provided he were of good birth, might, 'for a consideration,' canton his family shield with the red hand of Ulster."—R. T. Hampson, *Origines patriciae*, pp. 368-369.

BARONIUS, Cæsar (1538-1607), Italian cardinal and historian. See *HISTORY*: 23.

BARONS' WAR, *The*. See *ENGLAND*: 1216-1274.

BARONY OF LAND.—"Fifteen acres, but in some places twenty acres."—N. H. Nicolas, *Notitia historica*, p. 134. In Ireland it is the equivalent of the English "hundred."

BAROQUE, a term applied chiefly to the more extravagant fashions of design in architecture, common in the first half of the eighteenth century. It is characterized by a profusion of detail, irregularity, grotesqueness as distinct from the purity of the classic style. See *ARCHITECTURE*: Renaissance.—Italy.

BAROTSELAND, a former kingdom of South Central Africa, now composing the northwest portion of Rhodesia, a British protectorate; it extended approximately from the Kuito river in the west to the Kafue river in the east, and in the north, from the Congo-Zambezi watershed to the Linyante or Kwando river and Zambezi in the south. In 1889 the British South Africa Company was permitted to establish its rule in the regions north of the middle Zambezi not included in the Portuguese dominions, and in 1891 by a treaty with Portugal, the Barotse kingdom was declared within the British sphere of influence. After disputes between the two contracting powers as to the western limits of Barotse, the question was submitted to the king of Italy for arbitration in 1905. He fixed the frontier at the Kwando river as far north as 22° E., then that meridian up to 13° S., which parallel it follows as far east as 24° E., and then that meridian to the Belgian Congo frontier. The first agent to penetrate into Barotse was a Frenchman, François Coillard, an admirer of British institutions. It was mainly due to his magnetic personality and purpose that Great Britain was enabled to extend her rule over these dominions.—

BARRACKS, the permanent or temporary quarters of military or naval forces, often consisting of rows of buildings each housing a company or larger unit.

BARRAGE, in military usage, a rain of artillery missiles or a gas curtain, under which troops could advance or retreat. See *ORDNANCE*: 20th century; *WORLD WAR*: Miscellaneous auxiliary services: VI. Military and naval equipment: a, 1.

BARRAGE WORKS, Nile. See *CONSERVATION OF NATURAL RESOURCES*: Egypt; *EGYPT*: 1884-1891; 1898-1901; 1909-1912.

BARRANCAS, Fort, one of the defenses at Pensacola bay which was seized by the Secessionists in 1861. See *U. S. A.*: 1860-1861 (December-February).

BARRANI, or Sidi Barani, town of northwestern Egypt on the Mediterranean coast occupied by the British in 1916. See *WORLD WAR*: 1916: VI. Turkish theater: b, 1.

BARRAS, Paul François Jean Nicholas, Comte de (1755-1829), French statesman, deputy of the French National Assembly, 1792. As commander of the army besieging Toulon, he is judged responsible for the cruelty of the massacres there (see *FRANCE*: 1793-1794: October-April). He took a leading part in the overthrow of Robespierre, 1794 (see *FRANCE*: 1794 [June-July]; French victory at Fleurus), and was made president of the National Assembly in 1795 (see *FRANCE*: 1795 October-December). He commanded the troops in defense of the Convention against the National Guard, selecting Napoleon as general of artillery, and became one of the five Directors (1795-1799) by the Constitution of the year III. Unscrupulous use of office by Barras and the violent Jacobins led to the ease of the overthrow of the directory by Napoleon in the *coup d'état* of the eighteenth Brumaire (q. v.). It is not known to what extent Barras was an accomplice of Napoleon's, but this event marked his retirement from public life.

ALSO IN: *Barras' Memoirs* (M. G. Duruy, ed.).

BARRE, Colonel Isaac (1726-1802), a British officer and politician, who vigorously opposed England's attitude toward the American colonies. See *U. S. A.*: 1765: News of the Stamp act.

BARRÈS, Maurice (1862-), French writer and politician. A strong advocate of individualism, he upheld it in his novels and books of travel, and in politics, which he entered as a supporter of Boulanger; was a deputy, 1889-1893. Admitted to the French Academy in 1906.

BARRETT, Sir Arthur Arnold (1857-), British general in command of the campaign in Mesopotamia during World War. See *WORLD WAR*: 1914: IV. Turkey: i.

BARRETT, John (1866-), American diplomat. Minister to Siam 1898; United States delegate to the second Pan-American conference (Mexico, 1901); United States minister to Argentina (1903-1904), to Panama (1904-1905), to Colombia (1905-1906); director-general of the Pan-American union (1907-1920) secretary-general of Pan-American Scientific Congress (1916); presiding officer of second Pan-American Commercial Conference (1919). See *AMERICAN REPUBLICS*, *INTERNATIONAL UNION OF*: 1906-1908.

BARRICADES, Day of (1588). See *FRANCE*: 1584-1589.

BARRIE, Sir James Matthew (1860-), British novelist and playwright. His stories give a simple, but exceedingly appealing picture of Scottish life. Author of "The Little Minister," "Sentimental Tommy," "Tommy and Grizel." Whim-

sical fancy and gentle satire mark his plays, of which one of the best examples is "Peter Pan."—See also DRAMA: 1888-1921.

BARRIER FORTRESSES.—In 1701 Austria and England had assured the United Provinces of the Netherlands of a barrier against French aggression. "The importance of such a protection to the provinces was of course patent. Nature had done little or nothing for the Low Countries in the way of barrier and boundary. . . . The First Barrier Treaty [was] concluded on October 29, 1709. [See ENGLAND: 1709.] In this compact the British Government undertook to secure to the States General the right of garrisoning nine strong places which belonged or had belonged to the Spanish Netherlands, namely Nieuport, Furnes, Knoque, Ypres, Menin, Lille, Tournay, Condé, and Valenciennes, in addition to ten others (including Charleroi, Namur, and the citadel of Ghent) in case of their being recaptured from the French, in whose hands they at the present remained. A million of *francs* was to be annually paid to the Dutch out of the revenues of the Spanish Netherlands for the maintenance of the fortresses and garrisons aforesaid. . . . The Treaty of Utrecht closed the ensuing war. [See UTRECHT: 1712-1714 and NETHERLANDS (HOLLAND): 1713-1715.] In this Treaty, by which, the First was formally revoked, it was settled that the States General should have the right of keeping garrisons in Knoque, Ypres, Menin, Tournay, Mons, Charleroi, Namur, and Ghent, but Lille, Condé, Valenciennes and Mauberge, which were included as Barrier places in the First Treaty, were not so included in the Second. . . . The Third Barrier Treaty, concluded at Antwerp on November 15, 1715, was more favourable to the claims of the United Provinces than might have seemed possible during the course of the Utrecht negotiations. They obtained the Barrier places desired by them, namely Namur, Tournay, Menin, Furnes, Warneton, Ypres, and Knoque, together with the right of joint garrison at Dendermonde."—C. T. Atkinson, *War of the Spanish succession (Cambridge modern history, ch. 14, pp. 456-459)*.—The barrier fortresses were razed by Joseph II of Austria when an alliance between Austria, including the Austrian Netherlands, and France "made them needless." (See NETHERLANDS (HOLLAND): 1747-1795.) They became a part of Belgium in 1830 and their dismantling was completed when Antwerp was strongly fortified.

BARRIER TREATIES. See BARRIER FORTRESSES.

BARRIOS, José Maria Reina (d. 1898), President of Guatemala. See GUATEMALA: 1885-1898.

BARRIOS, Justo Rufino (1835-1885), President of Guatemala. See CENTRAL AMERICA: 1871-1885.

BARROS LUCO, Ramon, President of Chile. See CHILE: 1910.

BARROT, Camille Hyacinthe Odilon (1791-1873), French statesman, a leader of the constitutional monarchists during the revolutions of 1830 and 1848. In 1830 he became a member of the council of state and was leader of the opposition until 1848. Head of Louis Napoleon's cabinet, 1848-1849, vice-president of the council of state, 1872.

BARROW.—A mound raised over the buried dead. "This form of memorial, . . . as ancient as it has been lasting, is found in almost all parts of the globe. Barrows, under diverse names, line the coasts of the Mediterranean, the seats of ancient empires and civilisations. . . . They abound in Great Britain and Ireland, differing in shape and size and made of various materials; and are known as barrows (mounds of earth) and cairns (mounds

of stone) and popularly in some parts of England as lows, hoes, and tumps."—W. Greenwell, *British barrows, pp. 1-2*.

BARROWS, David Prescott (1873-), American educator. See ACADEMIC FREEDOM: Practical Proposals.

BARRUNDIA INCIDENT. See ASYLUM, RIGHT OF: Right of asylum on merchant ships; and CENTRAL AMERICA: 1886-1894.

BARRY, Sir Charles (1795-1860), English architect. The Houses of Parliament at Westminster occupied him for twenty-four years and constitute his chief claim to fame.

BARRY, Sir Redmond (1813-1880), British judge of Australia. First solicitor general, 1851. Founder of the university of Melbourne, first chancellor, 1854. Fostered volunteer movement.

BARSTOW, William A., governor of Wisconsin, 1856-1858. See WISCONSIN: 1856-1893.

BAR-SUR-AUBE, a town in eastern France, some thirty miles east of Troyes and twenty-five miles northwest of Chaumont. Was the scene of a conference of allied sovereigns on the plan of campaign in 1814, which meeting was shortly followed by a battle in which the allies defeated the French. During the World War, the town was the center of a billeting area for American troops.

BART, or Barth, Jean (1651-1702), French naval hero. His peasant birth barred him from promotion in the navy and he early became famous as captain of a privateer. Louis XIV was forced to recognize his ability, making him lieutenant, then captain, and finally, in 1697, commander of a squadron.

BARTENSTEIN, Treaty of. See GERMANY: 1807 (February-June).

BARTER. See MONEY AND BANKING.

BARTHELEMY, François, Marquis de (1747-1830), minister of France to Switzerland, negotiating the treaty of Basel with Prussia and Spain, 1795, through which success he was made a member of the directory, 1797. (See FRANCE: 1797: September.) He was shortly deported as a royalist, returning to public life in 1800 first as a member, then as vice-president of the senate. In 1814 he became a member of the commission charged by Louis XVIII with drawing up the constitutional charter and in 1815 received the title of marquis.

BARTLETT, Josiah (1720-1795), a signer of Declaration of Independence. See U. S. A.: 1776 (July): Text of Declaration of Independence.

BARTOLUS (1314-1357), famous Italian jurist. See INTERNATIONAL LAW: Private: 14th century.

BARTON, Charles Walter (1876-), British captain in Nyassaland during the World War. See WORLD WAR: 1914: VI. Africa: c, 3.

BARTON, Clara (1821-1912), founder of the American Red Cross and its first president, 1881-1904. Was in charge of hospitals in the Civil War and Franco-Prussian War, becoming an international figure in organized relief work; was at the head of Red Cross activities in the Spanish-American and Boer Wars; also originated and supervised American Red Cross work in times of disaster at home and abroad, whether flood, famine or pestilence. In 1806 organized relief to Armenians. See RED CROSS; TURKEY: 1806 (January-March).

BARTON, Sir Edmund (1840-1920), first premier of Australia. See AUSTRALIA: 1903-1904.

BARUCH, Bernard Mannes, American financier and economist. Member Advisory Committee of Council of National Defense 1916 (see NATIONAL DEFENSE, COUNCIL OF); Chairman Committee on Raw Materials and commissioner in charge of

purchasing for War Industries Board (see PRICE CONTROL: 1917-1919: United States); member commission in charge of all purchases for the Allies; chairman War Industries Board 1918; member of drafting committee on Economic Section of American Commission to Negotiate Peace; chairman raw materials division of Supreme Economic Council; American delegate on economic and reparation clauses and economic advisor for the American Peace Commission; member President Wilson's Conference for Capital and Labor, 1919.—See also PARIS CONFERENCE: Sources of information.

BÄRWALDE, Treaty of. See GERMANY: 1631 (January).

BARZILAI, Salvatore, Italian representative at Peace Conference. See VERSAILLES, TREATY OF: Conditions of peace.

BASE HOSPITALS, in war, those hospitals which receive the wounded from the front line dressing stations, treat their wounds and when necessary pass them on to permanent hospitals and convalescent camps. During the World War the American Red Cross established base hospitals, and later they were conducted for the American expeditionary forces by the United States medical corps aided by the army nurse corps.

BASEDOW, Johann Bernhard (1723-1790), German educator, who, influenced by Rousseau, advocated naturalism in education. See EDUCATION: Modern: 18th century: Basedow, etc., Rousseau.

BASEL, name applied to the most northerly of the Swiss cantons and to its capital. In 1833 the canton of Basel was divided into two half cantons and the city of Basel became the capital of one of these—Basel Stadt or Bâle Ville.

374.—Origin.—The town was founded in 374 by the Emperor Valentinian who established a frontier post, Basilia, near the town of Augusta Rauracorum.

5th-11th centuries.—In the fifth century the Bishop of Augusta Rauracorum moved his see to Basel and from that date the town grew in power and importance. It was successively overrun by the Alemanni and the Franks, and after the break up of Charlemagne's empire it formed a part of the kingdom of Louis the German.

11th-14th centuries.—The growing power of the burghers gradually supplanted that of the principal nobility. Basel continued to be prosperous as a free imperial city, while its control over the surrounding territory was widened.

1356.—Earthquake.—Terrible earthquake nearly destroyed the city.

1444.—Opposition to Hapsburgs.—Basel joined the war of the Swiss confederates against the Hapsburgs.

1460-1500.—Growth of publishing.—Development in book-trade.—Leading publishers.—“The city of Basel secured at an early date an important position among the centres of publishing. The university, founded in 1460, brought to the city men devoted to scholarly pursuits many of whom took an early interest in the work of the printing press and were ready to give coöperation to the publishers. In 1501, Basel broke away from the imperial control. At that time, there were in the city no less than twenty-six important publishing and printing concerns. During the most active period of its publishing interests, Basel had the advantage over the majority of the German towns in its comparative freedom from censorship either ecclesiastical or civil. The authority of Rome was permitted to exert prac-

tically no restrictions upon the productions of the printing-presses; while as a free imperial city, it had the right to claim exemption from any authority other than that of the emperor, whose examiners were too far distant to be able to bring their influence to bear, to any extent, upon the operations of the Basel publishers. It was this freedom that constituted the most important cause of the great development of the book-trade of the city during the 15th and 16th centuries. The leader among the great publishers of Basel, who ranked at the time with Aldus as one of the great publishers of the world, was Johann Froben, the publisher, friend, and close associate of Erasmus. It is the imprint of Froben that is associated with the most important of the volumes of Erasmus, including not only those that secured the approval of Leo X and of other of the Church authorities, but the group which brought the author into sharp criticism with the ecclesiastical censors. During the years between 1460 and 1500, the popes themselves sent to Basel for printing certain books which required more trustworthy work than could be secured in Rome.”—G. H. Putnam, *Censorship of the Church of Rome*, v. II, pp. 352-353.

16th century.—In the Reformation.—During the Reformation Basel became one of the centers for the new doctrines, so that the bishop was forced to move to Porrentruy, where he resided until 1792. The bishopric was finally reestablished 1814.

17th-19th centuries.—Under the guilds.—Struggle for equality of rights.—The government of Basel was in the hands of the guilds during these years, and, although the town itself was ruled democratically, the policy towards the rural districts was decidedly autocratic. Equality of rights was acquired during the French Revolution, and the reaction of 1814 brought on a rebellion two decades later.

1831-1833.—Civil War.—Formation of the cantons.—The civil war which broke out in 1831 resulted in the independence of the rural district the following year. In 1833 the city formed the canton of Basel Stadt and the rural communities the canton of Basel Landschaft. In 1831 there were also reforms granted in the suffrage. See SUFFRAGE, MANHOOD: Switzerland: 1830-1848.

1897.—Poor relief laws. See CHARITIES: Switzerland: 1844-1921.

BASHAN, ancient region east of the Jordan invaded by the Israelites. See JEWS: Israel under the Judges.

BASHI, or Bachi Islands, northernmost group of the Philippines. See U. S. A.: 1898 (July-December).

BASHFORD, Coles, governor of Wisconsin, 1856-1858. See WISCONSIN: 1856-1893.

BASHI BOZOUKS, or Bazouks.—For the suppression of the revolt of 1875-1877 in the Christian provinces of the Turkish dominions (see TURKS: 1861-1876). “besides the regular forces engaged against the Bulgarians, great numbers of the Moslem part of the local population had been armed by the Government and turned loose to fight the insurgents in their own way. These irregular warriors are called Bashi Bozouks, or Rottenheads. The term alludes to their being sent out

without regular organization and without officers at their head."—H. O. Dwight, *Turkish life in war time*, p. 15.—See also GREECE: 1862-1881; WORLD WAR: Causes: Indirect: d, 1.

BASIL, the Great (c. 330-379), bishop of Cæsarea and metropolitan of Cappadocia; introduced reforms in monastic orders; author of numerous theological treatises.

BASIL I. (called the Macedonian), emperor in the East (Byzantine, or Greek), 867-886. See BYZANTINE EMPIRE: 820-1057.

Basil II, emperor in the East (Byzantine, or Greek), 963-1025. See BULGARIA: 10th-11th centuries.

Basil, or **Vassili, I**, grand duke of Volodimir, 1272-1276.

Basil, or **Vassili, II**, grand prince of Moscow, 1389-1425.

Cato, hence called the Basilica Porcia. Then followed the Basilica Fulvia, Basilica Aemilia, and Basilica Julia, the last being the largest of the five which existed during the reign of Augustus. In A.D. 112, Trajan built the great Basilica Ulpia in connection with his forum, and some two hundred years later was erected the vaulted Basilica of Maxentius or Constantine on the Via Sacra. In all there came to be some twenty basilicas in Rome alone. One great interest of the basilica halls consists in the fact that from them were derived the plan and form of the early Christian churches. It has been conjectured that the plan of a basilica was derived from that of a Greek temple, the cella walls being replaced by ranges of columns, opening into the peristyle where in turn the columns were replaced by side walls. The colonnades thus became aisles to the central

Basil IV, tsar of Russia, 1505-1533.

BASILEUS.—"From the earliest period of history, the sovereigns of Asia had been celebrated in the Greek language by the title of Basileus, or King; and since it was considered as the first distinction among men, it was soon employed by the servile provincials to the east in their humble address to the Roman throne."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 13.

BASILIA, frontier post of the Romans. See BASEL: 374.

BASILIAN DYNASTY. See BYZANTINE EMPIRE: 820-1057.

BASILICAS, "structures intended at first to relieve the congestion of business in the various fora and to afford quiet as well as protection from the weather, for the transaction of business. The earliest in Rome were erected B. C. 184 by Porcius

wave; the vestibule being retained at one end and later to be called a *narthex*, while at the opposite end an apse projected. Here in the Roman basilica were the seats of the quaestor and his assessors, occupied in early Christian basilica churches by the bishop and presbyters. [See also CATHEDRALS.] The interiors of the Roman basilicas present two types of treatment. In the Basilica of Constantine, for example, the nave columns were attached to great piers which supported groined vaults, the thrust of which was sustained by walls at right angles to the piers. These walls divided each aisle into three bays, corresponding to the three bays of the nave, and over each aisle-bay was a barrel-vault, which, being at right angles to the nave, served as extra support to the nave-vaults. Light was admitted through windows in the side walls of the aisles and also through windows in the upper part of the nave, above the aisle vaults. On the other hand, in the interior of

the Basilica Ulpia a range of columns, supporting an entablature, took the place of the piers on each side of the nave. On the entablature rested another range of columns, surmounted by another entablature, above which walls, pierced with windows, were carried up to carry the flat coffered ceiling. Both tiers of nave columns opened into the aisle, which correspondingly had two stories, the upper crowned with a flat ceiling."—C. H. Caffin, *How to study architecture*, pp. 177-178.—"Among the buildings appropriated to the public service at Rome, none were more important than the Basilicæ. Although their name is Greek, yet they were essentially a Roman creation, and were used for practical purposes peculiarly Roman,—the administration of law and the transaction of merchants' business. Historically, considerable interest attaches to them from their connection with the first Christian churches. The name of Basilica was applied by the Romans equally to all large buildings intended for the special needs of public business. . . . Generally, however, they took the form most adapted to their purposes—a semi-circular apse or tribunal for legal trials and a central nave, with arcades and galleries on each side for the transaction of business. They existed not only as separate buildings, but also as reception rooms attached to the great mansions of Rome. . . . It is the opinion of some writers that these private basilicæ, and not the public edifices, served as the model for the Christian Basilica."—R. Burn, *Rome and the Campagna*, introduction.—See also FORUMS OF ROME.

BASILIKA, a compilation or codification of the imperial laws of the Byzantine Empire promulgated 884, in the reign of Basil I and afterwards revised and amplified by his son, Leo VI.—G. Finlay, *History of the Byzantine empire*, from 716 to 1057, bk. 2, ch. 1, sect. 1.

BASING HOUSE: *Storming and destruction* 61.—"Basing House [mansion of the marquis of Winchester, near Basingstoke, in Hampshire], an immense fortress, with a feudal castle and a Tudor palace within its ramparts, had long been a thorn in the side of the Parliament. Four years it had held out, with an army within, well provisioned for years, and blocked the road to the west. At last it was resolved to take it; and Cromwell was directly commissioned by Parliament to the work. Its capture is one of the most terrible and stirring incidents of the war. After six days' constant cannonade, the storm began at six o'clock in the morning of the 14th of October [1645]. After some hours of desperate fighting, one after another its defences were taken and its garrison put to the sword or taken. The plunder was prodigious; the destruction of property unsparing. It was gutted, burnt, and the very ruins carted away."—F. Harrison, *Oliver Cromwell*, ch. 5.

BASKS, or **Basques**, in Spain. See **BASQUES**; and **SPAIN**: Aboriginal people.

BASLE. See **BASEL**.

BASOCHE, **BASOCHIENS**.—"The Basoche was an association of the 'clercs du Parlement' [Parliament of Paris]. The etymology of the name is uncertain. . . . The Basoche is supposed to have been instituted in 1302, by Philippe-le-Bel, who gave it the title of 'Royaume de la Basoche,' and ordered that it should form a tribunal for

judging, without appeal, all civil and criminal matters that might arise among the clerks and all actions brought against them. He likewise ordered that the president should be called 'Roi de la Basoche,' and that the king and his subjects should have an annual 'montre' or review. . . . Under the reign of Henry III. the number of subjects of the roi de la Basoche amounted to nearly 10,000. . . . The members of the Basoche took upon themselves to exhibit plays in the 'Palais,' in which they censured the public manners; indeed they may be said to have been the first comic authors and actors that appeared in Paris. . . . At the commencement of the Revolution, the Basochiens formed a troop, the uniform of which was red, with epaulettes and silver buttons; but they were afterwards disbanded by a decree of the National Assembly."—G. B. Whittaker, *History of Paris* (London, 1827), v. 2, p. 106.

BASQUE MUSIC. See **MUSIC**: Folk music and nationalism; **Basque music**.

BASQUE PROVINCES, a division of north-eastern Spain comprising the provinces of Alava, Biscay or Vizcaya, and Guipúzcoa. The total area is 2,730 square miles. Of the three provinces, only Guipúzcoa is wholly Basque, its capital Vitoria having been founded by the Gothic king Leovigild (58). "A number of beliefs exist with regard to the history of these provinces, one of which is that they have never been conquered. . . . It is believed that the Moslem invasion of the eighth century did not extend to these provinces, but at a later time they did suffer from Moslem incursions. With the organization of the kingdom of Asturias, both Alava and Vizcaya seem to have been either dependent on that realm or at least in close relationship with it. At times, from the 8th to the 10th centuries, the counts of Alava were also counts of Castile. Passing into the hands of Sancho the Great of Navarre, Alava was incorporated in that kingdom until the reign of Alfonso VIII of Castile. Alfonso VIII won the battle of Vitoria and conquered the land in 1200. Thenceforth it remained under the sovereignty of the Castilian monarch, although with an assembly, the confederation of Arriaga, of its own. In 1332, in the reign of Alfonso XI, the incorporation with Castile was made complete, although with a retention of the charters and liberties of the province. Vizcaya also vacillated between Navarre and Castile as a more or less independent, protected country, until in 1570 it passed over to the Castilian crown by inheritance of the wife of Henry III. The course of events in Guipúzcoa was very similar. In 1200 the province submitted to the conqueror of Vitoria and from that time forth the external political history of Guipúzcoa was that of Castile."—C. E. Chapman, *History of Spain*, p. 135.—The period from 1833 to 1876 was marked by the Carlist wars, fought by the provinces to maintain their independence and autonomy. The Carlist forces were utterly defeated and left at the mercy of the government, which assimilated them with the rest of the nation.

BASQUES, a race inhabiting the three Basque provinces and Navarre in Spain, and the arrondissement of Bayonne and Mauléon in France. The word is derived from Vascones; the Basques call themselves *Eskuadunak*, i.e. "those who possess the *Eskuara*," and their country *Eskual-Herria*. There are conflicting theories as to their origin. Some authors assign the same ancestors to both the modern Basques of northern Spain and the Berbers of northern Africa, and through the ancient Libyans, from a people depicted on the Egyptian monuments; a second theory makes them the

descendants of the tribes whom the Greeks and Latins called the Iberi; the Atlantic theory, put forth by many represent them as belonging to a lost Atlantic continent, whose inhabitants were represented by the Gauches of the Canary Islands, and by a race on the west coast of Africa; a fourth theory is that they are an indigenous race, who have never had any greater extension than their present quarters. Of their early religion, very little is known beyond that they may have been worshippers of the elements. Their folk-lore too sheds no light on their origin, since it is too modern, the first manuscript dating from the eighteenth century. They are a simple, proud, conservative people, very jealous of any infringement on their independence, rather willing to suffer any amount of hardship than surrender their freedom. No invader ever succeeded in effectually subduing or expelling them. "The western extremity of the Pyrenees, where France and Spain join, gives us a locality . . . where, although the towns, like Bayonne, Pampeluna, and Bilbao, are French or Spanish, the country people are Basques or Biscayans—Basques or Biscayans not only in the provinces of Biscay, but in Alava, Upper Navarre, and the French districts of Labourd and Soule. Their name is Spanish (the word having originated in that of the ancient Vascones), and it is not the one by which they designate themselves; though possibly it is indirectly connected with it. The native name is derived from the root Eusk-; which becomes Euskara when the language, Euskkerria when the country, and Euskaldunac when the people are spoken of."—R. G. Latham, *Ethnology of Europe*, ch. 2.—See also FRANCE: The people; and SPAIN: Aboriginal peoples.

BASRA (Bassorah or Bussorah) AND KUFA, a city of Asiatic Turkey and capital of the vilayet of the same name. Situated on the Shat-el-Arab fifty-five miles from the Persian gulf, Basra serves as the seaport of Bagdad (Baghdad) with which it is commercially connected by steamships plying between the two cities on the Tigris. Basra dates are regarded finest in the world. It also exports wool, horses, and licorice. In the first years of their conquest of Mesopotamia and the delta of the Euphrates and Tigris—as early as 638—the Moslems founded two cities which acquired importance in Mohammedan history. In both cases, these cities appear to have arisen out of the need felt by the Arabs for more salubrious sites of residence than their predecessors in the ancient country had been contented with. Of Bussorah, or Bassorah, the city founded in the Delta, the site is said to have been changed three times. Kufa was built on a plain very near to the neglected city of Hira, on the Euphrates. "Kufa and Bussorah . . . had a singular influence on the destinies of the Caliphate and of Islam itself. The vast majority of the population came from the Peninsula and were of pure Arabian blood. The tribes which, with their families, scented from afar the prey of Persia, kept streaming into Chaldea from every corner of Arabia, settled chiefly in these two cities. At Kufa, the races from Yemen and the south predominated; at Bussorah, from the north. Rapidly they grew into two great and luxurious capitals, with an Arab population each of from 150,000 to 200,000 souls. On the literature, theology, and politics of Islam, these cities had a greater influence than the whole Moslem world besides. . . . The people became petulant and factious, and both cities grew

into hotbeds of turbulence and sedition. The Bedouin element, conscious of its strength, was jealous of the Coreish, and impatient of whatever checked its capricious humour. Thus factions sprang up which, controlled by the strong and wise arm of Omar, broke loose under the weaker Caliphs, eventually rent the unity of Islam, and brought on disastrous days."—Sir W. Muir, *Annals of the early caliphate*, ch. 18.—See also CALIPHATE: 680.—After the downfall of the Abbassid caliphate, Kufa fell into ruins.

In 800 Basra and Kufa were pillaged by the Carmathians. (See CARMATHIANS.) In the year 1668 it was captured by the Turks, following which the city experienced many revolutions. The Persians captured the city in 1777 but it was retaken by the Turks soon after. During the World War Basra assumed military importance by virtue of its strategic position with regard to the Persian gulf and the direct line of communication with Bagdad. It was this fact which led the English to gain control of Basra, and the nearby towns of Kurna and Amara which served as a northern defense of Basra.—See also SEVRES, TREATY OF: 1920: Part XI. BASTILLE.—"The name of Bastille or Bastel was, in ancient times, given to any kind of erection calculated to withstand a military force; and thus, formerly in England and on the borders of Scotland, the term Bastel-house was usually applied to places of strength and fancied security. Of the many Bastilles in France that of Paris, . . . which at first was called the Bastille St-Antoine, from being erected near the suburb of St-Antoine, retained the name longest. This fortress, of melancholy celebrity, was erected under the following circumstances: In the year 1356, when the English, then at war with France, were in the neighbourhood of Paris, it was considered necessary by the inhabitants of the French capital to repair the bulwarks of their city. Stephen Marcel, provost of the merchants, undertook this task, and, amongst other defences, added to the fortifications at the eastern entrance of the town a gate flanked with a tower on each side." This was the beginning of the constructions of the Bastille. They were enlarged in 1369 by Hugh Aubriot, provost of Paris under Charles V. He "added two towers, which, being placed opposite to those already existing on each side of the gate, made of the Bas-

tille a square fort, with a tower at each of the four angles." After the death of Charles V, Aubroix, who had many enemies, was prosecuted for alleged crimes, "was condemned to perpetual confinement, and placed in the Bastille, of which, according to some historians, he was the first prisoner. After some time, he was removed thence to Fort l'Évêque, another prison," from which he was liberated in 1381, by the insurrection of the Maillotins (see PARIS: 1381). "After the insurrection of the Maillotins, in 1382, the young king, Charles VI., still further enlarged the Bastille by adding four towers to it, thus giving it, instead of the square form it formerly possessed, the shape of an oblong or parallelogram. The fortress now consisted of eight towers, each 100 feet high, and like the wall which united them, nine feet thick. Four of these towers looked on the city, and four on the suburb of St-Antoine. To increase its strength, the Bastille was surrounded by a ditch 25 feet deep and 120 feet wide. The road which

withdrawal of the last hereditary stadholder, William V. "On the 22nd of January, 1796, the French army entered the Hague, where, as in the other cities, the people fraternised with their invaders, hailing them as friends. . . . The ancient privileges and monopolies, which so long had rested heavily upon the Dutch people, were, with the guilds and the titles of nobility, abolished, and the Constitution of 1708 and that of 1801 promised stability and freedom. . . . Instead of their deliveries reforming the constitution in the manner thought best by the revolutionary committees and patriots, the Dutch people found they could do nothing except at the bidding of their French masters, who compelled them to lay an embargo on British vessels then in their ports. This . . . brought on a war with Great Britain. . . . So it happened that soon Dutch commerce and fisheries were nearly paralyzed and the colonies lost. The towns and magazines of the Batavian Republic were held by foreigners. The demands of the French

THE BASTILLE, PARIS
(From an old French print)

formerly passed through it was turned on one side. . . . The Bastille was now completed (1383), and though additions were subsequently made to it, the body of the fortress underwent no important change. . . . Both as a place of military defence, and as a state prison of great strength, the Bastille was, even at an early period, very formidable."—*History of the Bastille (Chambers's Miscellany, no. 132, v. 17)*.—For an account of the taking and destruction of the Bastille by the people, in 1789, see FRANCE: 1789 (July).

BATAKS, Malayan tribe. See SUMATRA.

BATAVIA (Java), Origin of. See JAVA: Its geography; and NETHERLANDS: 1504-1620.

BATAVIAN REPUBLIC, the name adopted by the seven united provinces of the Netherlands on May 16, 1795. (See FRANCE: 1794-1795: October-May), on the occasion of the invasion by the French troops under Pichegru, and the forced

army for forage and fuel were insatiable, while in payment the people were compelled to receive that worthless paper money called 'assignats'. . . . The Batavian Republic became virtually a province of France. Various changes in government followed—the Dutch, meanwhile, losing the flower of their young men in fighting the battles of Napoleon, who . . . changed the constitution to suit his whim. He invested [1805] Rutger Jan. Schimmelpenninck, the Dutch ambassador at his court, with the sole government of the Batavian Republic. Although a council of nineteen members, styled their 'High Mightinesses,' formed the law-making body, yet Schimmelpenninck possessed almost monarchical power under the title Pensionary. . . . In 1807 Napoleon declared the country a kingdom, and, calling it 'Holland' made his brother, Louis, king."—W. E. Griffis, (*Motley's Dutch nation*, 1008, ch. vii p. 800-900).—See also NETHERLANDS: 1806-1810.

BATAVIANS, or **Batavi**.—"The Germanic Batavi had been peacefully united with the [Roman] Empire, not by Cæsar, but not long afterwards, perhaps by Drusus. They were settled in the Rhine delta, that is on the left bank of the Rhine and on the islands formed by its arms, upwards as far at least as the Old Rhine, and so

nearly from Antwerp to Utrecht and Leyden in Zealand and southern Holland, on territory originally Celtic—at least the local names are predominantly Celtic; their name is still borne by the Betuwe, the lowland between the Waal and the Leck with the capital Noviomagus, now Nimeguen. They were, especially compared with the restless and refractory Celts, obedient and useful subjects, and hence occupied a distinctive position in the aggregate, and particularly in the military system of the Roman Empire. They remained quite free from taxation, but were on the other hand drawn upon more largely than any other canton in the recruiting; this one canton furnished to the army 1,000 horsemen and 9,000 foot soldiers; besides, the men of the imperial body-guard were taken especially from them. The command of these Batavian divisions was conferred exclusively on native Batavi. The Batavi were accounted indisputably not merely as the best riders and swimmers of the army, but also as the model of true soldiers.”—T. Mommsen, *History of Rome*, bk. 8, ch. 4.—“When the Cimbri and their associates, about a century before our era, made their memorable onslaught upon Rome, the early inhabitants of the Rhine island of Batavia, who were probably Celts, joined in the expedition. A recent and tremendous inundation had swept away their miserable homes. . . . The island was deserted of its population. At about the same period a civil dissension among the Chatti—a powerful German race within the Hercynian forest—resulted in the expatriation of a portion of the people. The exiles sought a new home in the empty Rhine island, called it ‘Bet-auw,’ or ‘good meadow,’ and were themselves called, thenceforward, Batavi, or Batavians.”—J. L. Motley, *Rise of the Dutch republic*, introduction, sect. 2.

69.—**Revolt of Civilis.**—“Galba [Roman emperor], succeeding to the purple upon the suicide of Nero, dismissed the Batavian life-guards to whom he owed his elevation. He is murdered, Otho and Vitellius contend for the succession, while all eyes are turned upon the eight Batavian regiments. In their hands the scales of Empire seem to rest. They declare for Vitellius and the civil war begins. Otho is defeated; Vitellius acknowledged by Senate and people. Fearing, like his predecessors, the imperious turbulence of the Batavian legions, he, too, sends them into Germany. It was the signal for a long and extensive revolt, which had well-nigh overturned the Roman power in Gaul and Lower Germany. Claudius Civilis was a Batavian of noble race, who had served twenty-five years in the Roman armies. His Teutonic name has perished. . . . After a quarter of a century’s service he was sent in chains to Rome and his brother executed, both falsely charged with conspiracy. . . . Desire to avenge his own wrongs was mingled with loftier motives in his breast. He knew that the sceptre was in the gift of the Batavian soldiery. . . . By his courage, eloquence and talent for political combinations, Civilis effected a general confederation of all the Netherland tribes, both Celtic and German. For a brief moment there was a united people, a Batavian commonwealth. . . . The details of the revolt [69] have been carefully preserved by Tacitus, and form one of his grandest and most elaborate pictures. . . . The battles, the sieges, the defeats, the indomitable spirit of Civilis, still flaming most brightly when the clouds were darkest around him, have been described by the great historian in his most powerful manner. . . . The struggle was an unsuccessful one. After many victories and many overthrows, Civilis was left alone. . . . He accepted the offer of negotiation from Cerialis [the Roman

commander]. . . . A colloquy was agreed upon. The bridge across the Nabalía was broken asunder in the middle and Cerialis and Civilis met upon the severed sides. . . . Here the story abruptly terminates. The remainder of the Roman’s narrative is lost, and upon that broken bridge the form of the Batavian hero disappears forever.”—J. L. Motley, *Rise of the Dutch republic*, introduction, sects. 3-4.

BATH, Order of the.—“The present Military Order of the Bath, founded by King George I. in the year 1725, differs so essentially from the Knighthood of the Bath, or the custom of making Knights with various rites and ceremonies, of which one was Bathing, that it may almost be considered a distinct and new fraternity of chivalry. The last Knights of the Bath, made according to the ancient forms, were at the coronation of King Charles II.; and from that period until the reign of the first George, the old institution fell into total oblivion. At the latter epoch, however, it was determined to revive, as it was termed, The Order of the Bath, by erecting it ‘into a regular Military Order’; and on the 25th May, 1725, Letters Patent were issued for that purpose. By the Statutes then promulgated, the number of Knights, independent of the Sovereign, a Prince of the Blood Royal, and a Great Master, was restricted to 35.” It has since been greatly increased, and the order divided into three classes: First class, consisting of “Knights Grand Cross,” not to exceed fifty for military and twenty-five for civil service; second class, consisting of “Knights Commanders,” not to exceed 102 for military and fifty for civil service; third class, “Companions,” not to exceed 525 for military and 200 for civil service.—Sir B. Burke, *Book of orders of knighthood*, p. 104.

BATHS.—“Public baths, *thermæ*, were as necessary a feature of Roman cities as the amphitheatre. Rich citizens, like Mæcenas and Agrippa, set the fashion of building them, and it was followed by emperors seeking to ingratiate themselves with the populace. For the charge for admission was only a quarter of an as—about one quarter of a cent or half a farthing; and even this was waived by certain emperors. The principal *thermæ* in Rome were those of Agrippa, Nero, Titus, Domitian, Commodus, Caracalla, Diocletian, and Constantine. Many of them assumed immense proportions. . . . Besides the actual bathing conveniences, which included hot water baths, vapor baths, cooling chambers and plunges, there were rooms for ball-playing, gymnasiums, colonnades, libraries, theatres, and open courts with shade trees. From two of the sides of the Baths of Caracalla projected long *exhedras*, or semi-circular recesses, furnished with benches, which are supposed to have been the meeting places for the discussion

of philosophy and poetry. In fact, the great *thermæ* were the clubs of the period; the resort of all classes, offering cleanliness to the poor, luxury to the rich, and healthful exercise and opportunity of cultured intercourse between those who desired it."—C. BATS, Parliament of. See **PARLIAMENT: English: 1425**.

BATTALION, an organization of two, or more, generally four companies in the infantry, engineers, and signal corps, and of two or more batteries in the field artillery. Two or more coast artillery companies are usually organized into provisional battalions for other than coast artillery formations. The total strength of a complete infantry battalion in the United States service is 26 officers and 1,000 men; of a machine-gun battalion of 3 companies 20 officers and 550 men, and of 4 companies 26 officers and 728 men; of a battalion of light artillery 17 officers and 579 men; of heavy field artillery 12 officers and 456 men; of a field signal battalion 14 officers and 248 men; and of an engineer battalion 20 officers and 753 men. A trench mortar battalion has 17 officers and 747 men. In the World War the importance of the battalion was greatly increased.

BATTALION OF DEATH, a band of Russian women organized in 1917 to fight in the same manner as male soldiers. They were brave and efficient and achieved both physical and moral successes, inspiring their discouraged countrymen and arousing emulation on the part of women in other lands.

BATTENBURG, Louis Alexander, prince of (1854-), British admiral. Eldest son of Prince Alexander of Hesse; naturalized as a British subject and entered the navy at fourteen; rose to be second sea-lord of the admiralty in 1911, and in 1912 was made admiral of the fleet. In spite of his being related to the British royal family, Prince Louis at the outbreak of the World War considered it wise on account of his German blood to resign his high office.

BATTERY, the smallest administrative and tactical unit in the field artillery of the United States army. A 3-inch gun battery (light artillery) has 5 officers and 103 men; a heavy field artillery (6-inch) has 5 officers and 228 men. The term "battery" includes both the personnel and matériel. It is also used to designate a coast artillery emplacement, the guns mounted therein, and the matériel and supplies necessary for their service. Two batteries of heavy field artillery and three batteries of light usually make up a battalion, under command of a major.

BATTHYÁNYI, Karl Joseph, Prince (1697-1772), Hungarian field-marshal. Was a leader in the War of the Austrian Succession, and in 1745 defeated the French and Bavarians at Pfaffenhofen.

BATTHYÁNYI, Louis or Lajos, Count (1806-1840), Hungarian statesman. Was premier in 1848; became involved in the rebellion and died by his own hand when under sentence of death.—See also **AUSTRIA: 1848-1840**; and **HUNGARY: 1847-1849**.

BATTLE ABBEY, Sussex, England; founded by William the Conqueror in commemoration of his victory over the Saxon king, Harold, on the site of the battle of Senlac or Hastings (1066). (See **ENGLAND: 1066: Norman invasion**.) Although the building was begun in 1067 it was not completed until the reign of Rugus when it was dedicated to the Holy Trinity, St. Mary and St. Martin. The abbey received many favors from the king among which were the right of sanctuary, of inquest and of free warren; also the inmates were exempt from secular and episcopal jurisdiction. There was the roll of Battle Abbey which was supposed to have been a list of William the Conqueror's companions. During the Reformation, May, 1538, the abbey was suppressed and the buildings were presented to Sir Antony Browne, a royal favorite, who pulled them down and erected a mansion on its site.

BAUX, Lords of, Gothic origin of the.—The illustrious Visigothic race of the "Balthi" or "Baltha" ("the bold"), from which sprang Alaric, "continued to flourish in France in the Gothic province of Septimania, or Languedoc, under the corrupted appellation of Baux, and a branch of that family afterwards settled in the kingdom of Naples."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 30, note.

BAVAI, village of France northwest of Mons, occupied by the British in 1914 and again in 1918. See WORLD WAR: 1914: I. Western front: n; 1918: II. Western front: w, 2; x, 3.

BAVARIA (Bayern), a state in the south of Germany; capital, *Munich*. Formerly a kingdom; since Aug. 14, 1919, the Free State of Bavaria. The country is supposed to have derived its name from the Boii, or Boians, a Gallic tribe which settled in that region after their expulsion from Gallia Cisalpina by the Romans.—See also BOIANS, or BOII; GERMANY: Map.

Physical conditions.—Area.—Population.—Education.—Natural resources.—Industry and commerce.—Constituting the southeastern corner of Germany, Bavaria occupies the basin of the Danube, which crosses the entire breadth of the country, receiving in its course numerous tributaries, and the basin of the Main which winds through its northern part. It is separated from other territories by the Alps on the south, the Böhmerwald on the northeast, and the Fichtelgebirge and the Frankenwald on the north, and is bounded by Württemberg, Baden, and Hesse-Darmstadt on the west. Its western part, cut off by the grand duchy of Hesse, is known as the Palatinate. Bavaria was the second largest state of the empire, covering an area of 30,562 square miles with an additional 277 square miles of water. It comprises the districts of Upper Bavaria, Lower Bavaria, the Upper Palatinate, Upper Franconia, Middle Franconia, Lower Franconia, Swabia, the Palatinate, and Coburg which joined Bavaria on February 16, 1920. The principal towns are Munich (q. v.), (München), Nuremberg (Nürnberg), Augsburg, Würzburg, Ludwigshafen a. Rh., Fürth, Kaiserslautern, Ratisbon (Regensburg), and Bamberg. The estimated population of the two largest towns, Munich and Nuremberg, in 1914 was 639,214 and 373,865 respectively. The majority of the population (4,862,233) are Roman Catholics. Of the remainder 1,942,385 are Protestants, and 55,065 are Jews. Education is compulsory from six to sixteen. In 1913-1914 Bavaria had 7,534 elementary schools with 1,001,884 pupils, and two agricultural schools with 320 pupils. Its three universities are located in Munich, Würzburg, and Erlangen. "Bavaria is essentially an agricultural state possessing rich forests, long stretches of grazing lands, lakes and rivers capable of developing 200,000 horsepower, and grain lands that provide in normal times quite

a quantity of wheat and barley for export. . . . It is stated that of a total population of 7,000,000 at least 3,000,000 are engaged in agricultural pursuits."—(*Commerce Reports*, Apr. 24, 1920).—Besides wheat and barley, the chief agricultural products are rye, oats, potatoes, hops, and vines. Of livestock, horses, cattle, sheep, pigs, and goats are raised. Its mineral resources are iron and coal. "At the normal price of the mark and with cheap transportation in German ships it had been possible to build up an enviable position in the export trade. Factories sprang up in all parts of the country. Nuremberg (q. v.) became the center in Bavaria for a variety of industrial enterprises. It is stated that within a small radius there were 500 factories. Exports included toys, bronze powder, metal clip-

Ethnology of.—"Bavaria . . . falls into two divisions; the Bavaria of the Rhine, and the Bavaria of the Danube. In Rhenish Bavaria the descent is from the ancient Vangiones and Nemetes, either Germanized Gauls or Gallicized Germans, with Roman superadditions. Afterwards, an extension of the Alemannic and Suevic populations from the right bank of the Upper Rhine completes the evolution of their present Germanic character. Danubian Bavaria falls into two subdivisions. North of the Danube the valley of the Naab, at least, was originally Slavonic, containing an extension of the Slavonic population of Bohemia. But disturbance and displacement began early. . . . In the third and fourth centuries, the Suevi and Alemanni extended themselves from the

THE CASTLE OF NEUSCHWANSTEIN

Built by Louis I of Bavaria

pings, etc."—(*Commerce Reports*, Apr. 24, 1920).—Its chief industries were art, breweries, locomotive factories, and porcelain works. Plans are now under way to establish plants for the manufacturing of agricultural machinery. The building trade also occupied a great number of the population before the war. At present it is at a standstill due to the lack of raw materials. Catering to tourists was the main source of revenue before the war, about 300,000 tourists passing there annually. In addition to these there will be two new industries. After the lapse of centuries gold mining will be resumed in Upper Franconia, where a scientific analysis shortly before the war showed the gold content in that district to be 52 gr. to 1 ton of ore. Oil shale will be extracted in the Jura mountains of the Bayreuth district, the oil resources of which are estimated at 228 million tons. An area of about 7400 hectares has been acquired for this purpose, and an expensive plant is being erected.

Upper Rhine. . . . The northwestern parts of Bavaria were probably German from the beginning. South of the Danube the ethnology changes. In the first place the Roman elements increase; since Vindelicia was a Roman province. . . . Its present character has arisen from an extension of the Germans of the Upper Rhine."—R. G. Latham, *Ethnology of Europe*, ch. 8.—See also ALEMANNI: 213.

547.—**Subjection of the Bavarians to the Franks.**—"It is about this period [547] that the Bavarians first become known in history as tributaries of the Franks; but at what time they became so is matter of dispute. From the previous silence of the annalists respecting this people, we may perhaps infer that both they and the Suabians remained independent until the fall of the Ostrogothic Empire in Italy. The Gothic dominions were bounded on the north by Rætia and Noricum; and between these countries and the Thuringians, who lived still further to the north, was

the country of the Bavarians and Suabians. Thuringia had long been possessed by the Franks, Rhetia was ceded by Vitisges, king of Italy, and Venetia was conquered by Theudebert [the Austrasian Frank King]. The Bavarians were therefore, at this period, almost surrounded by the Frankish territories. . . . Whenever they may have first submitted to the yoke, it is certain that at the time of Theudebert's death [547], or shortly after that event, both Bavarians and Suabians (or Alemanni), had become subjects of the Merovingian kings."—W. C. Perry, *The Franks*, ch. 3.

the Magyars of Hungary. (See HUNGARY: 934-955). In 1070 it passed into the possession of the family of the Guelphs, but in their fight with the Ghibellines, it was taken away from Henry the Proud by Conrad of Germany, in 1138, and restored again to his son Henry the Lion. (See GUELPHS AND GIBELLINES). With the increase of his territories the latter became a powerful king, but a conflict with the emperor brought the imperial ban upon him. See SAXONY: 1178-1183.

1101.—Disastrous crusade by Duke Welf. See CRUSADES: 1101-1102.

DUKE HENRY (HENRY II) OF THE HOUSE OF WITTELSBACH, DEDICATING (1337) THE BAYERBURG IN LITHUANIA
(From a painting by A. Baumann)

843-1183.—Ancient duchy.—Part of the Austrian march till 1156.—Possession of the house of Guelph; lost in the fight with the Ghibellines; restored to Henry the Lion.—Under imperial ban.—Forming part of Charlemagne's empire in the eighth century, it became one of the duchies of the kingdom of the East-Franks after the division of the empire by the treaty of Verdun in 843. (See GERMANY: 843-962). At that time it probably occupied a territory bounded mainly by the Enns, the Danube, the Lech, and the Alps. In 876 it became united to the Austrian march, but was again separated from it in 1156. In 900 and again in 954 it was invaded and ravaged by

1168-1417.—Claims to Brandenburg. See BRANDENBURG: 1168-1417.

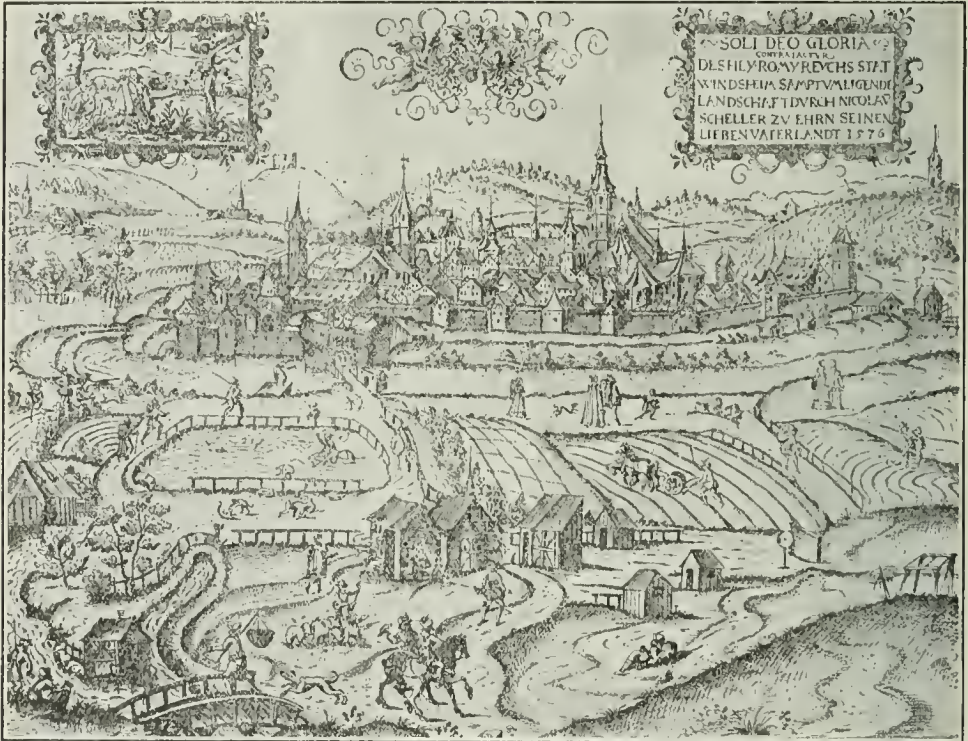

1180-1356.—House of Wittelsbach.—Its acquisition of Bavaria and the Palatinate of the Rhine.—Loss of the electoral vote by Bavaria.—When, in 1180, the dominions of Henry the Lion, under the ban of the empire, were stripped from him (see SAXONY: 1178-1183), by the imperial sentence of forfeiture, and were divided and conferred upon others by Frederick Barbarossa, the duchy of Bavaria was given to Otto, count palatine of Wittelsbach. "As he claimed a descent from an ancient royal family of Bavaria, it was alleged that, in obtaining the sovereignty of that state, he

had only in some measure regained those rights which in former times belonged to his ancestors."—Sir A. Halliday, *Annals of the House of Hanover*, v. 1, p. 276.—"Otto . . . was a descendant of that Duke Luitpold who fell in combat with the Hungarians, and whose sons and grandsons had already worn the ducal cap of Bavaria. No princely race in Europe is of such ancient extraction. . . . Bavaria was as yet destitute of towns: Landshutt and Munich first rose into consideration in the course of the 13th century; Ratisbon, already a flourishing town, was regarded as the capital and residence of the Dukes of Bavaria. . . . A further accession of dignity and power awaited the family in 1214 in the acquisition of the Palatinate of the Rhine (q.v.). Duke Ludwig was

him, and for this Bavaria was punished by the loss of the vote, and of the territory above the Enns." [Afterwards, for a time, the duke of Bavaria and the count palatine exercised the right of the electoral vote alternately; but in 1356 by the Golden Bull of Charles IV [see GERMANY: 1347-1493], the vote was given wholly to the count palatine, and lost to Bavaria for nearly 300 years.]—J. I. von Döllinger, *House of Wittelsbach* (*Studies in European history*, ch. 2).

1291-1349.—Conquests of Louis IV.—Quarrels with papacy. See AUSTRIA: 1291-1340.

1314.—Election of Louis to the imperial throne.—Louis, or Ludowic, duke of Bavaria, was elected German king simultaneously with Frederick of Austria. This led to a battle between Mühl-

A BAVARIAN TOWN IN 1576
(From an old drawing)

now the most powerful prince of Southern Germany. . . . His son Otto the Illustrious, remaining . . . true to the imperial house, died excommunicate, and his dominions were placed for several years under an interdict. . . . Upon the death of Otto a partition of the inheritance took place. This partition became to the family an hereditary evil, a fatal source of quarrel and of secret or open enmity. . . . In [the] dark and dreadful period of interregnum [see GERMANY: 1250-1272], when all men waited for the final dissolution of the empire, nothing appears concerning the Wittelsbach family. . . . Finally in 1273 Rudolf, the first of the Habsburgs, ascended the long-unoccupied throne. . . . He won over the Bavarian princes by bestowing his daughters upon them in marriage. Louis remained faithful and rendered him good service; but the turbulent Henry, who had already made war upon his brother for the possession of the electoral vote [See GERMANY: 1125-1272], deserted

berg and Etingen in Bavaria, in which Louis triumphed. However, his open warfare against the head of the church led to the Pope's interference and Louis's excommunication followed, while Germany was placed under an interdict.—See also GERMANY: 1314-1347.

1327-1330.—Interests in Italy. See ITALY: 1313-1330.

1345.—United with Netherlands. See NETHERLANDS: 880-1345. See also BELGIUM: 1297-1477.

1419-1434.—Battles with Hussites. See BOHEMIA: 1419-1434.

1497-1616.—Relief measures for poor. See CHARITIES: Germany: 1497-1616.

1500.—Formation of the circle. See GERMANY: 1493-1519.

1610-1648.—Participation in the Thirty Years' War: Occupation by Gustavus Adolphus: Acquisition of the Upper Palatinate and the electoral dignity.—As head of the Catholic League,

Duke Maximilian I of Bavaria participated in the Thirty Years' War on the side of the Hapsburgs. [See GERMANY: 1608-1618 to 1618-1620.] During the war Bavaria was occupied by Gustavus Adolphus, and Munich had already submitted to him, when the elector of Bavaria joined General Wallenstein and the Swedes were repelled from Bavaria. Ravaged by the Swedes and French during the war, Bavaria was compensated by the acquisition of the Upper Palatinate in the peace of Westphalia, following the transfer of the Electoral dignity to the duke of Bavaria in 1623.—See also GERMANY: 1621-1623 to 1648; Peace, Map: At peace of Westphalia.

1686-1696.—In the league of Augsburg and in the War of the Grand Alliance.—Bavaria participated in the league of Augsburg, formed to resist the advances of Louis XIV in 1686, and until 1696 fought in the War of the Grand Alliance, into which the league had developed.—See also GERMANY: 1686; FRANCE: 1689-1691; 1695-1696.

1700-1714.—Dissolution of the electorate in the War of the Spanish Succession.—Imperial ban till the treaty of Utrecht.—Following the claims of the electoral duke on the Spanish crown, Bavaria became engaged in the War of the Spanish Succession on the side of the French. After alternate success and defeat, the fight ended with the dissolution of Bavaria. Elector Maximilian was placed under the imperial ban, and only by the treaty of Utrecht was he restored to his dominions with the exception of the Upper Palatinate.—See also GERMANY: 1702; 1703; 1704; 1705; SPAIN: 1698-1700; and UTRECHT: 1712-1714.

1740-1748.—Elector's claim to the crown of Austria.—Elector crowned emperor.—His defeat in the War of the Austrian Succession.—When Charles VI, the last representative of the direct line of the Habsburgs, died in 1740, the duke of Bavaria claimed to be the rightful heir and succeeded in having himself crowned emperor, as Charles VII, in 1742. In the War of the Austrian Succession, which followed, Bavaria joined France, and after a temporary loss and recovery of its possessions, Munich was taken again in 1743 and the emperor-elector Charles VII was obliged to flee. By the Congress of Aix-la-Chapelle (1748), (q. v.), which brought the war to an end, the electoral house of Bavaria not only made no territorial gains, but almost lost its own patrimonial possessions.—See also AUSTRIA: 1740 (October); 1741 (May-June) and (August-November); 1742 (June-December); and 1744-1745.

1768.—Expulsion of the Jesuits. See JESUITS: 1761-1769.

1777-1779.—Succession question.—“With the death of Maximilian Joseph, of Bavaria (30 December, 1777), the younger branch of the house of Wittelsbach became extinct, and the electorate of Bavaria . . . came to an end. By virtue of the original partition in 1310, the duchy of Bavaria ought to pass to the elder branch of the family, represented by Charles Theodore, the Elector Palatine. But Joseph [the Second, the Emperor], saw the possibility of securing valuable additions to Austria which would round off the frontier on the west. The Austrian claims were legally worthless. They were based chiefly upon a gift of the Straubingen territory which Sigismund was said to have made in 1426 to his son-in-law, Albert of Austria, but which had never taken effect and had since been utterly forgotten. It would be impossible to induce the diet to recognise such claims, but it might be possible to come to an understanding with the aged Charles Theodore, who had no legitimate children and was not likely to feel any very keen

interest in his new inheritance. Without much difficulty the elector was half frightened, half induced to sign a treaty (3 January, 1778), by which he recognised the claims put forward by Austria, while the rest of Bavaria was guaranteed to him and his successors. Austrian troops were at once despatched to occupy the ceded districts. The condition of Europe seemed to assure the success of Joseph's bold venture. . . . There was only one quarter from which opposition was to be expected, Prussia. Frederick promptly appealed to the fundamental laws of the Empire, and declared his intention of upholding them with arms. But he could find no supporters except those who were immediately interested, the elector of Saxony, whose mother, as a sister of the late elector of Bavaria, had a legal claim to his allodial property, and Charles of Zweibrücken, the heir apparent of the childless Charles Theodore. . . . Frederick, left to himself, despatched an army into Bohemia, where the Austrian troops had been joined by the emperor in person. But nothing came of the threatened hostilities. Frederick was unable to force on a battle, and the so-called war was little more than an armed negotiation. . . . France and Russia undertook to mediate, and negotiations were opened in 1779 at Teschen, where peace was signed on the 13th of May. Austria withdrew the claims which had been recognised in the treaty with the Elector Palatine, and received the ‘quarter of the Inn,’ i. e., the district from Passau to Wildshut. Frederick's eventual claims to the succession in the Franconian principalities of Anspach and Baireuth, which Austria had every interest in opposing, were recognised by the treaty. The claims of Saxony were bought off by a payment of 4,000,000 thalers. The most unsatisfactory part of the treaty was that it was guaranteed by France and Russia. . . . On the whole, it was a great triumph for Frederick and an equal humiliation for Joseph II. His schemes of aggrandisement had been foiled.”—R. Lodge, *History of modern Europe*, ch. 20, sect. 3.

1789.—One of the German Circles. See GERMANY: 1789.

1798-1806.—Enlarged by Napoleon by his Act of Federation. See AUSTRIA: 1798-1806.

1801-1814.—Aggrandizement.—Created a kingdom.—Joined to the Confederation of the Rhine.—Tyrol.—By the treaty of Lunéville (1801), Bavaria attained Würzburg, Bamberg, Freisingen, Augsburg, and Passau. (See GERMANY: 1801-1803.) By the treaty of Pressburg, its territories were still further enlarged at the expense of Austria. Besides Tyrol, with Brixen and Trent, Bavaria obtained Vorarlberg, the county of Hohenemes, and the town of Lindau. In 1805 it was created a kingdom by Napoleon, and the next year joined the Confederation of the Rhine (see Austria: 1798-1806; GERMANY: 1805-1806). Despite the revolt of Tyrol, Bavaria retained it by the help of the French until the Congress of Vienna, when it was restored to the Austrians in 1814.—See also EUROPE: Modern: Map of central Europe in 1812; FRANCE: 1814 (April-June); GERMANY: 1809-1810 (April-February); 1813 (October-December); VIENNA, CONGRESS OF.

1818.—Constitution granted. See SUFFRAGE, MANHOOD: Germany: 1800-1840.

1848.—Revolution.—Abdication of the king.—In Bavaria the revolution of 1848 took the form of an uprising against the king's provisions for his mistress, Lola Montez, whom he had created Countess of Landsfeldt. He was compelled to

withdraw his grants of property made in her favor and to expel her. This was followed by his abdication.—See also GERMANY: 1848 (March).

1850.—Four Kings' Draft.—Upholds Prussia against Austria. See GERMANY: 1850-1851.

1856.—Relations to European Commission of Navigation of the Danube. See DANUBE: 1850-1916.

1862-1866.—Allied with Austria in war against Prussia. See AUSTRIA: 1862-1866; GERMANY: 1861-1866.

1866.—Surrender of Würzburg to Prussia in the Seven Weeks' War.—Secret treaty with North German confederation. See GERMANY: 1861-1865; 1866-1870.

1870-1871.—Member of the Germanic confederation.—State of the German empire.—In 1870, Bavaria became a member of the Germanic confederation, and with the assumption of the title of emperor by King William in 1871, it became a state [kingdom] of the German empire.—See also GERMANY: 1870 (September-December), and 1871 (January).

1905.—Introduction of direct voting. See SUFFRAGE: Germany: 1906.

1918.—Union of House with Luxemburg. See LUXEMBURG: 1914-1918.

1918.—Economic conditions after the World War.—“The Bavarian State Commissioner for Demobilization, Segitz, publishes an account of the economic situation in Bavaria. One-third of the men on military service have returned home. Employers show a general reluctance to take big risks and place confidence in the traffic authorities with regard to state contracts. The Oberbürgermeister of Nürnberg characterises the industrial situation in that region as absolutely desperate. The scarcity of coal must soon lead to a general economic catastrophe, if matters do not improve. The Bavarian anilin and soda factories in Ludwigshafen are already idle for want of coal. The textile industry also complains of the scarcity and there is already much unemployment. The agricultural situation is reported satisfactory almost everywhere. The food supply is improving somewhat. The most important question is the coal supply.”—*Review of the Foreign Press (Economic Supplement, Jan. 1, 1919, p. 112)*.—To cope with the situation of unemployment, a government regulation has enforced the running of factories on part time or employing laborers in half-day shifts.

1918-1919.—Republic declared.—Constitution.—In November, 1918, the dynasty of the Wittelsbachs was overthrown and Bavaria declared a republic with Kurt Eisner, an Independent Socialist, at the head of the government. In February, 1919, Kurt Eisner was assassinated, and a struggle between the extremists of the Left and the moderate Socialists followed. It ended with the triumph of the moderate party in May, 1919. Conditions were still unsettled, however, and a counter-revolutionary movement of royalists was then reported to be imminent. In 1921 the situation was unchanged. Its present constitution, adopted on August 14, 1919, calls for a diet, consisting of one Chamber to be elected by universal, equal, direct, and secret suffrage for four years, on the basis of one representative for every 40,000 inhabitants. The supreme executive power is exercised by the ministry, which includes the ministers of education, commerce and industry, social welfare, agriculture, interior, finance, and justice.

1918-1920.—Government activities in economic reconstruction.—Socialization of the mines.—Development of hydroelectric power in lakes and rivers.—Formation of a Bavarian peat syn-

dicate.—“In accordance with the resolution of the Socialisation Committee of the Diet, the Minister has ordered the Central Economic Office to hasten the preparation of the preliminaries for the socialisation of the mines. The Government is determined to show themselves in earnest regarding socialisation, and not only to take in hand the systematic organisation and production of dwellings, food, and clothing, but also with this end in view to control directly certain economic spheres in agreement with the workers.”—*Review of the Foreign Press (Economic Supplement, Apr. 30, 1919, p. 475)*.—While Bavaria has sufficient electric power to run its street cars and lighting plants, and a small surplus for industrial uses besides, the state government has begun to develop further the hydroelectric power in the lakes and rivers of southern Bavaria. “It is claimed by German engineers that a proper development of the hydroelectric power in the lakes and rivers of southern Bavaria will produce 200,000 horsepower. This will be sufficient to electrify the entire Bavarian railroad and street car systems and provide enough industrial power for a large number of new enterprises that it is planned to establish in Munich.”—*Commerce Reports, Apr. 24, 1920*.—A Bavarian peat syndicate (Bayerisches Torfsyndikat G. m. b. h.) has been formed for the purpose of a joint regulation of the sale of fuel peat, and the improvement of the process of its production. This syndicate is supported by the government, which has promised to accept for conveyance by rail only peat placed on the market by the syndicate. “The Syndicate may not be dissolved before March 31, 1923, after which date a year's notice may be given by any member.”—*Economic Review, July 6, 1920, p. 101*.

1921-1922.—Herr Gareis, a Socialist leader, was murdered in Munich in June, 1921. The last king of Bavaria, Ludwig III, died in October, which gave rise to monarchial tendencies in favor of the crown prince, Rupprecht. It was reported that Bavaria had lost 5.62 per cent. of its male population in the World War. During 1922 there was considerable friction with the Allies over the disbanding of the Bavarian “Orgesch,” a military force, which was carried out under threat of Allied invasion.

BAXAR, Baksar, or Buxar, Battle of (1764). See INDIA: 1757-1772.

BAYARD, James Asheton (1767-1815), American statesman. Member House of Representatives 1796; prominent in securing choice of Jefferson as against Burr in the indecisive presidential contest of 1800; member senate, 1805-1813; member of American commission which negotiated the treaty of Ghent, 1814.—See also U. S. A.: 1914 (December): Treaty of Peace concluded at Ghent.

BAYARD, Nicholas (1644-1707), Dutch colonial official. See NEW YORK: 1689-1691.

BAYARD, Pierre Terrail, Seigneur de (1473-1524), the “knight without fear and without reproach,” French national hero and idealized figure of the age of chivalry. He fought valiantly in the Italian campaigns of Charles VIII, Louis XII and Francis I. In 1521 he held Mezières with 1,000 men against Charles V's army of 35,000 and saved France from invasion. See ITALY: 1501-1504, and FRANCE: 1523-1525.

BAYARD, Thomas Francis (1828-1898), American statesman and diplomatist. Succeeded

his father in the senate, 1860-1885; member of electoral commission, 1877; president *pro tempore* of the senate, 1881; secretary of state, 1885-1889; ambassador to Great Britain, 1893-1897.

BAYEUX, Saxons of. See **SAXONS OF BAYEUX.**

BAYEUX TAPESTRY.—A remarkable roll

on the Norman side. That it is a contemporary work I entertain no doubt whatever, and I entertain just as little doubt as to its being a work fully entitled to our general confidence. I believe the tapestry to have been made for Bishop Odo, and to have been most probably designed by him as an ornament for his newly rebuilt cathedral

BAYEUX TAPESTRY

King Edward the Confessor

Death of Harold

of mediæval tapestry, 214 feet long and twenty inches wide, preserved for centuries in the cathedral at Bayeux, Normandy, on which a pictorial history of the Norman invasion and conquest of England is represented, with more or less of names and explanatory inscriptions. Mr. E. A. Freeman, *Norman conquest*, v. 3, note A says: "It will be seen that, throughout this volume, I accept the witness of the Bayeux Tapestry as one of my highest authorities. I do not hesitate to say that I look on it as holding the first place among the authorities

with Poland, Venice, Egypt and Persia. His later years were filled with disputes among his sons. He was forced to abdicate in his youngest son's favour (1513), and died soon after. See **TURKEY**: 1481-1520.

BAYLEN. See **BAILÉN**.

BAYONET, Gradual use of. See **MILITARY ORGANIZATION**: 16, 17.

BAYONNE, a city of south-west France about three miles from the bay of Biscay. In the third century was known as Lapurdum and was a Roman military post. In the Middle Ages was owned by the English. In 1451 it was taken by the French and has ever since been a first-class fortress. In 1565 it was the meeting place of Catherine de Medici, her son, Charles IX, and the Duke of Alva, representing Phillip II of Spain, thought to be for the purpose of conspiring against the Huguenots. (See **France**: 1563-1570). In 1808 Napoleon near here induced Charles IV and his son Ferdinand to renounce their rights to the Spanish throne, which was later occupied by Joseph Bonaparte. In 1814, after a siege, Bayonne was taken by the English. The bayonet took its name from this town, where it was first made.

BAYONVILLE, village of France north-west of Verdun, taken by the Americans in 1918. See **WORLD WAR**: 1918: II. Western front: v, 10.

BAYREUTH, the capital of the province of Upper Franconia, Bavaria. It is the burial place of Richard Wagner, Franz Liszt and Jean Paul Friedrich Richter. It contains the National theater, opened by Wagner in 1876 for the production of his own works, where the famous musical festivals are held. Music lovers from all over the world flock to Bayreuth so that it has been called the "Mecca of the Wagnerites." Connected with the theatre is a school to train young musicians to take part in the festival performances.

Creation of the principality of. See **GERMANY**: 13th century.

Separation from the electorate of Brandenburg. See **BRANDENBURG**: 1417-1640.

1801-1803.—Ceded to Bavaria by treaty of Lunéville. See **GERMANY**: 1801-1803.

BAZAINE, François Achille (1811-1888), marshal of France. Commander of a brigade in the Crimean War, during which he was made governor of Sevastopol. Commander in the Italian War of 1859, he distinguished himself at Solferino. He was the leader of the Mexican expedition with Maximilian, 1862-1867. As commander of the defeated French armies of the Franco-Prussian War, 1870, he engaged in a series of negotiations which may not have been traitorous. However, he has never been cleared of the accusation of intrigue with the enemy just before his surrender of the fortress of Metz. He was tried for treason and condemned to death, but his sentence was later commuted to a term of twenty years' imprisonment, from which he escaped. See **FRANCE**: 1870 (July-August; August-September; and September-October).

BAZAN, Emilia Pardo (b. 1841), Spanish novelist. See **SPANISH LITERATURE**: 19th-20th century.

BAZANCOURT, village of France south-east of Neufchatel, scene of fighting in 1915. See **WORLD WAR**: 1915: II. Western front: j, 6.

BAZENTIN-LE-GRAND, village of France south of Bapaume, captured by the British in 1916. See **WORLD WAR**: 1916: II. Western front: d, 7.

BAZENTIN-LE-PETIT, village and wood in France south of Bapaume, captured by the British in 1916. See **WORLD WAR**: 1916: II. Western front: d, 4, 6, 7.

BAZOUKS, mounted troops employed by Turks. See **BASHI BOZOUKS**.

BEACHY HEAD, Battle of. See **ENGLAND**: 1680-1696.

BEACONSFIELD, Benjamin Disraeli, Earl of (1804-1881), English statesman and novelist. One of the leaders of the Young England party; from 1845 leader of the Protectionist Tories against Peel. Chancellor of the exchequer and leader of the house 1852, 1858-1859; Chancellor of the exchequer 1866; put through Reform bill of 1867. Premier, 1868, resigned 1868; premier 1874-1880. Plenipotentiary at the Congress of Berlin, 1878.—See also **CANALS**: Asiatic: Suez canal; **ENGLAND**: 1846; 1851-1852; 1858-1859; 1865-1868; 1868-1870; 1873-1880; **SUFFRAGE, WOMAN**: England: 1819-1860; **TURKEY**: 1878.

BEAR FLAG WAR, an insurrection against the Mexican government in California in June, 1846. A small group of settlers from the United States were alarmed by reports, apparently false, that the Mexican prefect was planning to drive out the Americans. They gathered about Captain John C. Frémont, seized some government horses, and captured Sonoma. Under the lead of William B. Ide they founded a new republic. Their flag was a piece of white cotton to the bottom of which was sewed a strip of red flannel. A red star was painted in the upper left-hand corner of the white and to the right of it a bear, and under the star and bear the words "California Republic." The Bear Flag forces under Frémont were about to attack the Mexican forces under Castro when a courier arrived with word that war existed between the United States and Mexico. The American flag was raised and the Bear Flag War was merged in the American operations for the conquest of California.—See also **CALIFORNIA**: 1846-1847.

BEARD, Daniel Carter (1850-), American author and artist, founder of first Boy Scout society, in the United States. See **BOY SCOUTS**.

BEARN, formerly a small frontier province of southern France corresponding nearly to the present department of Basse-Pyrénées. Viscounty in the Middle Ages. Became part of France through Henry of Navarre. Formally incorporated, 1620. See **FRANCE**: 1620-1622.

1032.—Rise of the counts. See **BURGUNDY**: 1032.

1563.—Spread of Protestantism. See **NAVARRE**: 1528-1563.

1685.—Dragonnade.—Revocation of the edict of Nantes. See **FRANCE**: 1681-1698.

BEARS, Stock Market. See **STOCK EXCHANGE**.

BEATON, or Bethune, David (c. 1494-1546), Scottish cardinal and archbishop. See **SCOTLAND**: 1546.

BEATTY, David, 1st earl (1871-), British admiral. Served under Jellicoe at the battle of Jutland, 1916; was later in command of the grand fleet; in 1919 was made admiral of the fleet and raised to the peerage. See **WORLD WAR**: 1914: IX. Naval operations: c; 1915: IX. Naval operations: a; 1916: IX. Naval operations: a; a, 7, 9; 1918: IX. Naval operations: h.

BEAUCHAMP, name of a well-known English family, whose most famous branch was the house of Warwick. Henry Beauchamp was created duke of Warwick, 1445. On his death his inheritance passed to his sister Anne, wife of Richard Neville, "the kingmaker" who became Earl of Warwick.

BEAUFORT, a distinguished English family, descendants of John of Gaunt, duke of Lancaster and Catherine, wife of Sir Hugh Swynford. The four children of this union took the name of Beaufort from a castle in Anjou which belonged to their father. They were: John who became Earl of

Somerset and Marquess of Dorset; Henry, bishop of Winchester and cardinal; Thomas, duke of Exeter and chancellor; Joan, wife of Ralph Neville, first Earl of West Moreland. At first illegitimate, their legitimacy was confirmed by Richard II in 1397, and by their half brother Henry IV in 1407. Although they were excluded from succession to the throne, nevertheless, they practically ruled England during the first half of the fifteenth century and by intermarriages were connected with the monarchs of England and Scotland. Margaret Beaufort, daughter of John Beaufort, third Earl of Somerset (1403-1444), married Edmund Tudor, Earl of Richmond, and became the mother of Henry VII.

BEAUFORT, François de Vendôme, Duc de (1616-1669). French commander against Barbary pirates. See **BARBARY STATES**: 1664-1684.

BEAUFORT, seaport of North Carolina, founded in 1670 as Port Royal. In the Civil War it was captured by Union forces. See **NORTH CAROLINA**: 1663-1670; U. S. A.: 1862 (January-April: North Carolina).

BEAUGE, Battle of.—The English commanded by the Duke of Clarence, defeated in Anjou by an army of French and Scots, under the dauphin of France; the Duke of Clarence slain.

BEAUGENCY, town on the Loire, in central France, sixteen miles from Orleans, where Joan of Arc defeated the English in 1429. (See **FRANCE**: 1420-1431). It was destroyed by the Huguenots in 1567, and two centuries later was the scene of the French defeat (Dec., 1870) in the Franco-Prussian War.

BEAUHARNAIS FAMILY, a French family of Orleans nobility, brought into prominence in the nineteenth century.

François, Marquis de Beauharnais, was a member of the estates-general of 1789. A royalist, he served Napoleon as ambassador to Spain and to Etruria.

Alexandre de Beauharnais (1760-1794), brother of François, married Josephine (q. v.) who later became Napoleon's wife and empress. He was a revolutionist member of the estates-general in 1780 and secretary to the commander of the Army of the North in 1793. He was guillotined by the revolutionary tribunal, accused of being responsible for the loss of Mayence. He had two children, Eugène (q. v.) and Hortense who married Napoleon's brother Louis, king of Holland, and became the mother of Napoleon III.

Eugène de Beauharnais (1781-1824), son of the Empress Josephine. Distinguished himself in the military campaigns in Italy and Egypt under Napoleon, who made him viceroy to Italy (see **FRANCE**: 1804-1805) and also heir apparent to the crown of Italy, 1806. Commander of a corps in the Russian campaign, 1812. He had married a Bavarian princess and after Napoleon's downfall retired to Bavaria where he was made a peer.

BEAUHARNOIS CANAL, its extent and location. See **CANALS**: American canals: Great Lakes and St. Lawrence system.

BEAULIEU, Jean Pierre, Baron de (1725-1820), Austrian general. See **FRANCE**: 1796 (April-October).

BEAUMARCHAIS, Pierre Augustin Caron de (1732-1799), leading French dramatist of the eighteenth century, educated to his father's trade of a watchmaker; showed marked ability as a musician and became music-master for the daughters of Louis XV; rose in court favor, assumed the name of Beaumarchais, and acquired a fortune in speculations which ultimately involved him in a number of law-suits; a series of mémoires written during

these court battles were vigorous and witty attacks on the judicial system; gained him wide fame as a pre-revolutionary leader; engaged in secret service of Louis XV and Louis XVI; wrote "Le barbier de Séville," 1775; aided American colonists during the War of Independence; produced "Le mariage de Figaro," 1784; fled to Holland to escape the Terror, but returned to France in 1796 where he died a wealthy man. See also **FRENCH LITERATURE**: 1700-1709; U. S. A.: 1776-1778.

BEAUMETZ, village of France north-west of Amiens, attacked by the Germans in 1918. See **WORLD WAR**: 1918: II. Western front: c, 8.

BEAUMONT, Christophe de (1703-1781), archbishop of Paris, noted for his opposition to the Jansenists. This caused him to clash with the parliament, which was exiled, in 1753. It was later recalled and the archbishop sent into honorable exile (1754). He also condemned Rousseau's writings. See **EDUCATION**: Modern: 18th century: Educational theories of Rousseau; **FRANCE**: 1756-1759.

BEAUMONT, Francis (1584-1616), English dramatist. See **DRAMA**: 1592-1604.

BEAUMONT, a village north of Verdun, the scene of fighting in the Franco-Prussian War and also in the World War. See **FRANCE**: 1870 (August-September); **WORLD WAR**: 1916: II. Western front: b, 7, 13; 1917: II. Western front: f, 2; 1918: II. Western front: d, 2; x, 5.

BEAUMONT-HAMEL, a village in north-east France, figuring in the World War as a German stronghold in the Somme fighting of 1916 and 1918. See **WORLD WAR**: 1916: II. Western front: c, 4; d, 5, 17; e, 2; 1918: II. Western front: g, 7, i.

BEAUNE, a town in eastern France, about twenty-five miles south-west of Dijon. Was the seat of the A. E. F. University, which offered instruction to American soldiers awaiting repatriation after the armistice in the World War.

BEAUREGARD, Pierre Gustav Toutant (1818-1893), Confederate general, graduate of West Point. Engaged in engineering. Served in Mexican War. Superintendent of West Point, November, 1860 to February, 1861. Began the Civil War by bombardment of Fort Sumpter. Assisted in first battle of Bull Run and at Shiloh. See U. S. A.: 1861 (March-April). Defended Charleston 1863. Took command of the department of North Carolina in 1864. Retarded Grant's advance at Petersburg. With Johnston surrendered to Sherman 1865. Adjutant General of Louisiana in 1878.—See also U. S. A.: 1861 (July: Virginia); 1861-1862 (December-April: Virginia); 1862 (February-April: Tennessee); and (April-May: Tennessee-Mississippi); 1863 (August-December: South Carolina); 1864 (May: Virginia): Coöperative movement of Army of the James; 1865 (February-March: The Carolinas).

BEAUREVOIR, a town in northeast France captured by the British in the final allied offensive. See **WORLD WAR**: 1918: II. Western front: o, 3.

BEAUSEJOUR, village of France, southwest of Grandpré, scene of fighting in 1915. See **WORLD WAR**: 1915: II. Western front: i, 8, v.

BEAUVAIS, Origin of. See **BELGÆ**.

BEAUVOIS, village of France northwest of Arras, attacked by the Germans in 1918. See **WORLD WAR**: 1918: II. Western front: c, 9.

BEBEL, Ferdinand August (1840-1913), leader of Social-Democratic party in Germany. See **SOCIALISM**: 1869-1912.

BEBRYKIANS, Thracian race. See **BITHYNIANS**.

BEC, Abbey of.—One of the most famous abbeys and ecclesiastical schools of the Middle

Ages. Its name was derived from the little beck or rivulet of a valley in Normandy, on the banks of which a pious knight, Herlouin, retiring from the world, had fixed his hermitage. The renown of the piety of Herlouin drew others around him and resulted in the formation of a religious community with himself at its head. Among those attracted to Herlouin's retreat were a noble Lombard scholar, Lanfranc of Pavia, who afterwards became the great Norman archbishop of Canterbury, and Anselm of Aosta, another Italian, who succeeded Lanfranc at Canterbury with still more fame. The teaching of Lanfranc at Bec raised it, says Mr. Green in his *Short history of the English people*, into the most famous school of Christendom; it was, in fact, the first wave of the intellectual movement which was spreading from Italy to the ruder countries of the west. The fabric of the canon law and of medieval scholasticism, with the philosophical skepticism which first awoke under its influence, all trace their origin to Bec. "The glory of Bec would have been as transitory as that of other monastic houses, but for the appearance of one illustrious man [Lanfranc] who came to be enrolled as a private member of the brotherhood, and who gave Bec for a while a special and honorable character with which hardly any other monastery in Christendom could compare."—E. A. Freeman, *Norman conquest*.

BECCARIA-BONESANA, Cesare, Marchese di (1735-1794), Italian economist, philanthropist, jurist, professor at Milan. One of the first to oppose the death penalty. Wrote "on Crimes and Punishments" 1764. Chief founder of the classical school of criminology, insisting that no punishment should be greater than the crime warranted and that all men should be equal in the eyes of the law.—See also CRIME AND CRIMINOLOGY: Outline of criminological theories; PRISON REFORM: Howard and Beccaria.

BECHUANALAND, a region of South Africa, west of the Transvaal; British possession since 1885. See AFRICA: Modern European occupation; 1884-1899; Map; BRITISH EMPIRE: Extent; SOUTH AFRICA, UNION OF: 1909.

BECHUANAS, Tribe. See SOUTH AFRICA, UNION OF: Aboriginal inhabitants.

BECKET, Thomas à, (1118-1170), also known as Thomas of London, archbishop of Canterbury. He was chancellor of Henry II in 1155, and while still a deacon was unexpectedly appointed to the highest ecclesiastical office—the archbishopric of Canterbury. He stoutly upheld the rights of the church against the king, was charged with treason and fled to Rome. He was reinstated by the pope and returned to England. Within a month after his return he was murdered before the altar in Canterbury Cathedral by four knights in whose presence the king had petulantly exclaimed, "Is there none who will rid me of this turbulent priest?"—See also CHURCH OF ENGLAND: 1066-1534; ENGLAND: 1162-1170.

BECKMAN, J. C. W., governor of Kentucky, involved in election dispute. See KENTUCKY: 1895-1900.

BECQUEREL, Antoine César (1788-1878), French physicist. Noted for his discoveries in electricity and in electro-chemistry; the result of his investigations of the laws governing the production of electricity by chemical action led to the overthrow of Volta's theory of contact; in the field of physiological chemistry he investigated methods of determining the internal temperature of human and animal bodies, demonstrating a simultaneous development of heat with the contraction of the muscles. He was elected to the Paris Academy of

Sciences and in 1837 to the Royal Society of London at the same time receiving the Copley medal for his work in electro-chemistry.

BECQUEREL, Antoine Henri (1852-1908), French physicist. Distinguished for the discovery of radioactivity, observing in 1896, that uranium at ordinary temperature emits rays which could affect a photographic plate even after passing through thin plates of metal. They have been named Becquerel rays in his honor. For his work, he was awarded the Rumford medal of the Royal Society of England and in 1903, the Nobel prize for physics was divided between him and Monsieur and Madame Curie who also made important discoveries in this field (see NOBEL PRIZES: Physics: 1903). He also did much important work on optical subjects, such as the rotation of polarized light by a magnetic field, phosphorescence, and spectroscopic studies.—See also CHEMISTRY: Radioactivity: Baquerel rays.

BED OF JUSTICE.—"The ceremony by which the French kings compelled the registration of their edicts by the Parliament was called a 'lit de justice' [bed of justice]. The monarch proceeded in state to the Grand Chambre, and the chancellor, having taken his pleasure, announced that the king required such and such a decree to be entered on their records in his presence. It was held that this personal interference of the sovereign suspended for the time being the functions of all inferior magistrates, and the edict was accordingly registered without a word of objection. The form of registration was as follows: 'Le roi séant en son lit de justice a ordonné et ordonne que les présents édits seront enregistrés;' and at the end of the decree, 'Fait en Parlement, le roi y séant en son lit de justice.'"—*Students' history of France, note to ch. 10*.—See also PARLIAMENT OF PARIS.—"The origin of this term ['bed of justice'] has been much discussed. The wits complained it was so styled because there justice was put to sleep. The term was probably derived from the arrangement of the throne on which the king sat. The back and sides were made of bolsters and it was called a bed."—J. B. Perkins, *France under Mazarin, v. 1, p. 388, foot-note*.—An elaborate and entertaining account of a notable bed of justice held under the regency, in the early part of the reign of Louis XV, will be found in the *Memoirs of the Duke de Saint Simon*, abridged translation of James Augustus St. John, v. 4, ch. 5-7.

BEDAWI, Arabian nomads. See ARABIA.

BED-CHAMBER QUESTION. See ENGLAND: 1837-1839.

BEDE, or Beda or Baeda, often called "The Venerable" (c. 673-735), English ecclesiastic and scholar. "He gathered to himself and summed up much that was best in the various streams of culture that met in the England of that day. . . . The treatise *De Natura Rerum*, long used as a text-book in the mediæval schools, shows him to have mastered the entire range of the science of that day. His commentaries on the Bible furnished the material for later work; his *Lives of the Saints* associate him with the beginning of biographical literature in Europe, his great work on the Ecclesiastical History of the English People, still the chief authority for the period of which it treats, has gained for him the title of the 'Father of English History.' . . . His last labor was an English translation of the Gospel of St. John. . . . We trace his influence in the foundation of the Great School at York."—H. S. Pancoast, *Introduction to English literature, p. 40*.—See also BIBLE, ENGLISH: 7th-8th centuries; CHRISTIANITY: 597-

800; ENGLISH LITERATURE: 6th-11th centuries; HISTORY: 19.

BEDFORD, John Plantagenet, Duke of (1389-1435), third son of Henry IV, king of England. He assumed the regency of France on the death of Henry V and also guardianship of his kingdom; prosecuted the war in France; secured the coronation of Henry VI at Paris. See also ENGLAND: 1422-1455; FRANCE: 1429-1431.

BEDOUNS, or **Bedawi**, Arabian nomads. See ARABIA.

BEDR, Battle of. See MOHAMMEDANISM: 609-632.

BEDRIACUM, Battles of. See ROME: Empire: 60.

BEECHER, Catherine Esther (1800-1878), American philanthropist, devoted to the advancement of woman's education. See WOMEN'S RIGHTS: 1644-1852.

BEECHER, Henry Ward (1813-1887), a great pulpit orator of Puritan ancestry; graduate of Amherst; pastor of Plymouth Church, Brooklyn, nearly forty years. Preached to very large audiences. Prominent antislavery leader and lecturer on other public questions. Urged the sending of Sharpe's rifles to antislavery men in Kansas as more effective than bibles, hence the phrase "Beecher's bibles." Was sympathetic with the doctrines of evolution and the higher criticism. Influential during the Civil War in addressing audiences in England where he won over to the side of the Union many who had sympathized with the South. Supported Grover Cleveland for president, 1884.

BEEF EATERS. Certain palace attendants on the English sovereign whose duty is to carry up the royal dinner. See WOMEN OF THE GUARD.

BEEF STEAK CLUB. See CLUBS: BEEF STEAK.

"BEEF TRUST," Investigations and prosecutions by the United States government. See TRUSTS: 1903-1906; 1910-1912.

BEER-LATH, Battle of (B.C. 161). See JEWS: B.C. 166-40.

BEERNAERT, Auguste (1820-1912), Belgian statesman. See NOBEL PRIZES: Peace: 1900.

BEERSHEBA, a village in the southern part of Palestine often mentioned in the Bible as a holy place. On October 31, 1917, the British general Allenby captured the village, which had formed the key of the Turkish position. See WORLD WAR: 1915: VIII. Africa: a, 1; 1917: VI. Turkish theater: c, 2; c, 2, ii; 1918: VI. Turkish theater: c, 9.

BEER-ZATH, Battle of.—The field on which the great Jewish soldier and patriot, Judas Maccabæus, having but 800 men with him, was beset by an army of the Syrians and slain, 161 B.C.—Josephus, *Antiquity of the Jews*, bk. 12, ch. 11.

ALSO IN: H. Ewald, *History of Israel*, bk. 5, sect. 2.

BEEF SUGAR.—"In 1747 the chemist Margraf, after analysis of numerous plants, predicted that beet roots of the same species as the common garden variety would ultimately become the great source of sugar. Based on Margraf's investigations, Achard succeeded in recovering the carbohydrate . . . of the beet in a palatable form. This took place in 1797. A few years later, factories were established in Germany, also in France where the industry received the special attention and encouragement of the great Napoleon. Within a hundred years sugar developed from a luxury of the rich to a common necessity for all. It appears that the per capita consumption of sugar is accordingly large or small, dependent on a

country's degree of advancement. For instance, Italy and Turkey average 7 pounds per capita; Russia, 14 pounds; Germany, 34 pounds; France, 37 pounds; England, 67 pounds; America, 88 pounds. Only in the United States has the production of sugar been backward. We produce less than 20% of what we consume. The money value of sugar amounts to more than one billion dollars yearly."—L. S. Weatherby, *Introduction (Sugar by A. R. Kahn)*.—In 1884 the American consul at Brussels (J. Wilson) commented on the magnitude of the beet sugar manufacture on the continent and the lack of progress in this industry in the United States. "There are now no less than 875,000 hectares, or about 2,000,000 acres of land devoted to the culture of this beet in France, Germany, Austria-Hungary, Russia-Poland, Belgium and Holland, distributed amongst these countries in the following proportions, viz.: In France 220,000 hectares; in Germany 210,000; Austria-Hungary, 200,000; in Russia-Poland, 180,000; in Belgium and Holland, 65,000 hectares."—*Beet sugar industry (Special Consular Reports, 1891)*.—"As recently as 1866 was the first beet root sugar plant erected in our country—this in Wisconsin. In 1870 California people induced its owners to remove it to Alvarado, California, near San Francisco, where it is still [1920] in operation. Up to 1875 it remained a failure when an American by name of Dyer took hold and successfully operated it. The second successfully operated plant was erected by Claus Spreckels in 1888 at Watsonville [Salinas.—Ed.], California. The third successful mill was built by the Oxnards in 1890. In 1898 the Clarks erected a mill at Los Alamitos, California, near Los Angeles, in a locality where the soil was filled with alkali and upon which no crops could apparently be profitably grown. This plant paid for itself in five years despite all drawbacks. The rise of the beet sugar industry in other sections of the country has been equally marked. The chief centers of beet sugar manufacture in the United States are: California, Idaho, Utah, Colorado, Wyoming, Wisconsin, Iowa, Michigan."—L. S. Weatherby, *Introduction (Sugar by A. R. Kahn)*.—See also SUGAR BOUNTIES.

BEETHOVEN, Ludwig van (1770-1827), German composer and supreme master of instrumental music. Studied with Van den Eeden, Neefe, and Haydn; his works marked the culmination of the classical school and opened the doors to the romantic; first period comprises works bearing opus numbers one to fifty; reached climax, of his second and most prolific period, in the opera "Fidelio," and the "Symphony in A"; to the third period belong the greatest works of his career: the "9th Symphony," the "Mass in D," and the last "Pianoforte Sonata" (Op. III). These works are characterized by colossal archtonic outline, minutest elaboration of detail, and rhythm giving thematic life to an inner part without distracting attention from the melodic flow of the surface.—See also MUSIC: Modern: 1650-1827; Later 18th century.

BEGUINES, Beghines or Beghards.—Weaving brothers.—Lollards.—Brethren of the Free Spirit.—Fratricelli.—Bizochi.—Turlupins.—"In the year 1180 there lived in Liege a certain kindly,

stammering priest, known from his infirmity as Lambert le Bègue. This man took pity on the destitute widows of the town. Despite the impediment in his speech, he was, as often happens, a man of a certain power and eloquence in preaching. . . . This Lambert so moved the hearts of his hearers that gold and silver poured in on him, given to relieve such of the destitute women of Liege as were still of good and pious life. With the moneys thus collected, Lambert built a little square of cottages, with a church in the middle and a hospital, and at the side a cemetery. Here he housed these homeless widows, one or two in each little house, and then he drew up a half monastic rule which was to guide their lives. The rule was very simple, quite informal: no vows, no great renunciation bound the 'Swestrones Brod durch Got.' A certain time of the day was set apart for prayer and pious meditation; the other hours they spent in spinning or sewing, in keeping their houses clean, or they went as nurses in time of sickness into the homes of the townspeople. . . . Thus these women, though pious and sequestered, were still in the world and of the world. . . . Soon we find the name 'Swestrones Brod durch Got' set aside for the more usual title of Beguines or Beghines. Different authorities give different origins of this word. . . . Some have thought it was taken in memory of the founder, the charitable Lambert le Bègue. Others think that, even as the Mystics or Mutterers, the Lollards or Hummers, the Popelhardts or Babblers, so the Beguines or Stammerers were thus nicknamed from their continual murmuring in prayer. This is plausible; but not so plausible as the suggestion of Dr. Mosheim and M. Auguste Jundt, who derive the word Beguine from the Flemish word 'beggen,' to beg. For we know that these pious women had been veritable beggars; and beggars should they again become. With surprising swiftness the new order spread through the Netherlands and into France and Germany. . . . Lambert may have lived to see a beguinage in every great town within his ken; but we hear no more of him. The Beguines are no longer for Liege, but for all the world. Each city possessed its quiet congregation; and at any sick-bed you might meet a woman clad in a simple smock and a great veil-like mantle, who lived only to pray and do deeds of mercy. . . . The success of the Beguines had made them an example. . . . Before St. Francis and St. Dominic instituted the mendicant orders, there had silently grown up in every town of the Netherlands a spirit of fraternity, not imposed by any rule, but the natural impulse of a people. The weavers seated all day long at their rattling looms, the armourers beating out their thoughts in iron, the cross-legged tailors and busy cobblers thinking and stitching together—these men silent, pious, thoughtful, joined themselves in a fraternity modelled on that of the Beguines. They were called the Weaving Brothers. Bound by no vows and fettered by no rule, they still lived the worldly life and plied their trade for hire. Only in their leisure they met together and prayed and dreamed and thought. . . . Such were the founders of the great fraternity of 'Fratres Textores' or Beghards as in later years the people more generally called them."—A. M. F. Robinson, *End of the middle ages*, I.—"The Lollards differed from the Beghards less in reality than in name. We are informed respecting them that, at their origin in Antwerp, shortly after 1300, they associated together for the purpose of waiting upon patients dangerously sick, and burying the dead. . . . Very early, however, an element of a different kind be-

gan to work in those fellowships. Even about the close of the 13th century irregularities and extravagances are laid to their charge. . . . The charges brought against the later Beghards and Lollards, in connection, on the one hand, with the fanatical Franciscans, who were violently contending with the Church, and on the other, with the Brethren and Sisters of the Free Spirit, relate to three particulars, viz., an aversion to all useful industry, conjoined with a propensity to mendicancy and idleness, an intemperate spirit of opposition to the Church, and a skeptical and more or less pantheistical mysticism. . . . They . . . declared that the time of Antichrist was come, and on all hands endeavoured to embroil the people with their spiritual guides. Their own professed object was to restore the pure primeval state, the divine life of freedom, innocence, and nature. The idea they formed of that state was, that man, being in and of himself one with God, requires only to act in the consciousness of this unity, and to follow unrestrained the divinely implanted impulses and inclinations of his nature, in order to be good and godly."—C. Ullmann, *Reformers before the Reformation*, v. 2, pp. 14-16.—"The names of beghards and beguines came not unnaturally to be used for devotees who, without being members of any regular monastic society, made a profession of religious strictness; and thus the applications of the names to some kinds of sectaries was easy—more especially as many of these found it convenient to assume the outward appearance of beghards, in the hope of disguising their differences from the church. But on the other hand, this drew on the orthodox beghards frequent persecutions, and many of them, for the sake of safety, were glad to connect themselves as tertiaries with the great mendicant orders. . . . In the 14th century, the popes dealt hardly with the beghards; yet orthodox societies under this name still remained in Germany; and in Belgium, the country of their origin, sisterhoods of beguines flourish to the present day. . . . Matthias of Janow, the Bohemian reformer, in the end of the 14th century, says that all who act differently from the profane vulgar are called beghardi or turlupini, or by other blasphemous names. . . . Among those who were confounded with the beghards—partly because, like them, they abounded along the Rhine—were the brethren and sisters of the Free Spirit. These appear in various places under various names. They wore a peculiarly simple dress, professed to give themselves to contemplation, and, holding that labour is a hindrance to contemplation and to the elevation of the soul to God, they lived by beggary. Their doctrines were mystical and almost pantheistic. . . . The brethren and sisters of the Free Spirit were much persecuted, and probably formed a large proportion of those who were burnt under the name of beghards."—J. C. Robertson, *History of Christian church*, v. 6, bk. 7, ch. 7.—"Near the close of this century [the 13th] originated in Italy the Fratricelli and Bizochi, parties that in Germany and France were denominated Beguards; and which, first Boniface VIII., and afterwards other pontiffs condemned, and wished to see persecuted by the Inquisition and exterminated in every possible way. The Fratricelli, who also called themselves in Latin 'Fratres parvi' (Little Brethren), or 'Fratriculi de paupere vita' (Little Brothers of the Poor Life), were Franciscan monks, but detached from the great family of Franciscans; who wished to observe the regulations prescribed by their founder St. Francis more perfectly than the others, and therefore possessed no property, either individually or collec-

tively, but obtained their necessary food from day to day by begging. . . . They predicted a reformation and purification of the church. . . . They extolled Celestine V. as the legal founder of their sect; but Boniface and the succeeding pontiffs, who opposed the Fratricelli, they denied to be true pontiffs. As the great Franciscan family had its associates and dependents, who observed the third rule prescribed by St. Francis [which required only certain pious observances, such as fasts, prayers, continence, a coarse, cheap dress, gravity of manners, &c., but did not prohibit private property, marriage, public offices, and worldly occupations], and who were usually called Tertiarii, so also the sect of the Fratricelli . . . had numerous Tertiarii of its own. These were called, in Italy, Bizochi and Bocasoti; in France Beguini; and in Germany Beghardi, by which name all the Tertiarii were commonly designated. These differed from the Fratricelli . . . only in their mode of life. The Fratricelli were real monks, living under the rule of St. Francis; but the Bizochi or Beguini lived in the manner of other people. . . . Totally different from these austere Beguini and Beguinae, were the German and Belgic Beguinae, who did not indeed originate in this century, but now first came into notice. . . . Concerning the Turlupins, many have written; but none accurately. . . . The origin of the name, I know not; but I am able to prove from substantial documents, that the Turlupins who were burned at Paris, and in other parts of France were no other than the Brethren of the Free Spirit whom the pontiffs and councils condemned."—J. L. Von Mosheim, *Institutes of ecclesiastical history*, bk. 3, century 13, pt. 2, ch. 2, sect. 39-41, and ch. 5, sect. 9, foot-note.—See also BRETHREN OF THE COMMON LOT; PICARDS.

BEGUMS OF OUDEH, a title applied to women of high rank in India; became well-known on account of their charges against Warren Hastings. See INDIA: 1773-1785.

BEHAGNIES, village of France south of Arras taken by the British in 1918. See WORLD WAR: 1918: II. Western front: c, 18; k, 2.

BEHAIM, Martin (1436?-1507), navigator and cosmographer, born at Nuremberg, lived in Lisbon and at Fayal in the Azores. That he influenced Columbus is doubted by scholars. Constructed a globe in Nuremberg in 1492, which was based on the theory of a round earth, but which was very inaccurate as to West Africa.

BEHISTUN, Rock of.—"This remarkable spot, lying on the direct route between Babylon and Ecbatana, and presenting the unusual combination of a copious fountain, a rich plain and a rock suitable for sculpture, must have early attracted the attention of the great monarchs who marched their armies through the Zagros range, as a place where they might conveniently set up memorials of their exploits. . . . The tablet and inscriptions of Darius, which have made Behistun famous in modern times, are in a recess to the right of the scarped face of the rock, and at a considerable elevation."—G. Rawlinson, *Five great monarchies: Media*, ch. 1.—The mountain or rock of Behistun fixes the location of the district known to the Greeks as Bagistana. "It lies southwest of Elvend, between that mountain and the Zagrus in the valley of the Choaspes, and is the district now known as Kirmenshah."—M. Duncker, *History of antiquity*, bk. 8, ch. 1.—See also PHILLOLOGY: 13.

BEHRING SEA. See BERING SEA QUESTION.

BEILISS CASE, trial for ritual murder, of Mendel Beiliss, a Jewish resident in Kiev, Ukraine, Russia. The discovery of the body of Andrew Yushinski, a schoolboy of thirteen, near the brickyard where Beiliss worked, led to his accusation of the murder, supposed to have been committed for the purpose of obtaining blood to be used by the Jews in their religious passover ceremonies. This accusation was followed by propaganda against the Jews on the part of reactionaries in the antisemitic press and in the Duma. The controversy which arose between the Jews, supported by the liberal press and the enlightened element of the Duma and the Russian people on the one hand, and the various Russian reactionary organizations on the other, lasted over two years. Meanwhile Beiliss was imprisoned and kept in confinement. Due to lack of evidence he was finally acquitted on November 11, 1913, but the "blood accusation" against the Jews was maintained, despite thousands of protests made by Jewish rabbis and prominent citizens and scholars in Russia, as well as by many institutions of learning and by distinguished scholars and statesmen of Europe and the United States. The result was a number of antisemitic outbreaks.—See also JEWS: Russia: 1817-1913; and RUSSIA: 1913.

BEIRUT, or Beyrout (ancient name Berytus q.v.), the most important seaport town of a vilayet of the same name in Syria, on St. George bay (see ARARIA: May); one of the most ancient settlements on the Phœnician coast. Earliest history relates that the town was destroyed by Tryphon in 140 B.C. It soon passed into the hands of the Romans and stayed under their rule until 635 when the Arabs captured it. Baldwin reclaimed the city for Christendom in 1111 (see CRUSADES: 1104-1111). Beirut dwindled in importance, when, for a number of centuries, it became the bone of contention between Saracens, Crusaders, and Turks. (See also TURKEY: 1831-1840). The town has developed since a number of French companies have constructed railways leading to Damascus (1895) and Aleppo (1907) and improved its harbor facilities. Beirut was one of the last of the Turkish towns to fall, in General Allenby's advance during the latter part of the World War. See WORLD WAR: 1918: VI. Turkish theater: c, 13; c, 23.

BEISSEL, Johann Conrad (1600-1768), German mystic, founder of the Dunkards. See DUNKARDS.

BEIT, Alfred (1853-1906), British South African financier associated with Cecil Rhodes. See CAPITALISM: 19th century: Capital empire building; SOUTH AFRICA, UNION OF: 1895-1896; 1897 (February-July).

BEL, Temple of: Exploration of its ruins at Nippur. See BABYLONIA.

BELA I, king of Hungary, 1060-1063.

Bela II, king of Hungary, 1131-1141.

Bela III (d. 1196), Hungarian king of the dynasty of Arpád. Placed by force on the Hungarian throne by Emperor Manuel (1173); adopted Catholicism and sought the assistance of the pope. By crowning his infant son successor he made the hitherto elective throne hereditary. He was only partly successful in his wars to recover Dalmatia but succeeded in assisting the Serbs to throw off the Greek yoke and to establish a native dynasty. See BOSNIA: 12th century; and HUNGARY: 1116-1301.

Bela IV (1206-1270), king of Hungary, 1235-1270. Humiliated the nobles and restored the dignity of the royal power. The great Tatar invasion which reduced three-quarters of Hungary to ashes, occurred during this period. Bela was defeated, and fled and for twelve months Hungary was at the mercy of the Tatar. The last years of his reign were spent in the reconstruction of his kingdom. He repelled a second Mongol invasion. See HUNGARY: 1116-1301.

BELA KUN, or **Kuhn**, Bolshevik dictator of Hungary from March to August, 1919. See HUNGARY: 1918-1919 (December-March); 1919 (March); 1919-1920.

BELASCO, **David** (1859-), American dramatist and theater manager. See DRAMA: 1865-1913.

BELASHITZA MOUNTAINS, a range in south-western Bulgaria attacked by Greek and British forces in the final Balkan offensive of the Allies in 1918.

BELCHER, **Sir Edward** (1799-1877), British admiral and explorer. Commanded search expedition for Sir John Franklin. See ARCTIC EXPLORATION: Chronological summary: 1852-1854.

BELCHITE, **Battle of**. See SPAIN: 1809 (February-June).

BELERION, or **Bolerium**, the Roman name of Land's End, England. See BRITAIN: Celtic Tribes.

BELFAST, a city, county and parliamentary borough; county town of county Antrim, Ireland, capital of the province of Ulster. It is a railway center and a seaport of the first rank, and the most important commercial and manufacturing city in Ireland; stands on both sides of the Lagan river, twelve miles from the Irish sea on the north-eastern coast. The flat part of the city is reclaimed marshland. Compared with Dublin in point of age it is a modern town. As late as 1586 it was not mentioned in lists of villages and counties, and a map printed in 1660 gives only five streets and five rows with 150 houses. The prosperity of the city is due to the linen manufactures (dating from 1637), flour mills, ship-yards, iron foundries and distilleries. Belfast has an area of 16,594 acres and an estimated population in 1917 of 393,000.—See also IRELAND: Historical map.

The nucleus of the town was a castle, which was built about 1177, destroyed by Edward Bruce in 1316, rebuilt and finally destroyed in 1708. Early in the sixteenth century, the place with its castle, the fortress of Carrickfergus, and the country which they dominated were granted to the O'Neills of Clandeboye, but in 1571, as a consequence of the O'Neill rising, the town and castle were granted by Queen Elizabeth to Sir Thomas Smith, who later forfeited them to the deputy, Sir Arthur Chichester. In 1613, the town was incorporated as a borough with a parliamentary representation of two members, although it had but twelve burgesses. In 1688, James II gave a new charter, but in 1690 this was annulled by William III, and the old one restored. Long prior to the reign of James II, however, and especially under the rule of Strafford, in the reign of Charles I, Belfast had become a place of some importance, though still very small. In the early part of the parliamentary war, it sided with Parliament, but later became a strong royalist center. During this time it was fortified with a rampart, which afterwards disappeared. In the course of the eighteenth century, Belfast, aided by its manufactures, progressed rapidly, surpassing most of the other Irish towns. Although it was here that the Society of United Irishmen was founded in 1791 (see ULSTER: 1791-1797), it was little troubled by civil disturbances, and by 1800

ranked as the richest town in the North of Ireland. In 1830, its prosperity received a great impetus by the introduction of linen weaving machinery. In 1880 it became a municipality; in 1888 was incorporated as a city, and by the Local Government (of Ireland) Act of 1898 became the county of the city of Belfast. In 1892 a great convention was held to protest against the Home Rule Act about to be proposed by Gladstone. (See ULSTER: 1892.) In 1908 Queen's College, which was founded in 1849, became Queen's University. The shipping industry dates from 1791, when it was introduced by William Ritchie, a Scotchman. Before the introduction of linen weaving machinery, when the linen trade could not cope with machine-made cotton goods, the shipyards saved the threatened prosperity of the city, and since that time have made it a shipbuilding center of great importance. As the capital of Ulster, and the seat of the new government, Belfast suffered greatly during the disturbances of 1920 to 1922, and for some time constant internal warfare was carried on both by sympathisers with the Irish Free State and by the proponents of a republic in Ireland.

BELFAST, **Battle of** (1900). See SOUTH AFRICA, UNION OF: 1900 (June-December).

BELFORT, a fortress of great strategic importance in eastern France, close to the borders of Alsace and Switzerland. Belfort guards that entrance to France through the valley between the Vosges and Jura mountains known as the "Burgundian Gates." The treaty of Westphalia, 1648, ceded the district to Louis XIV who bestowed it upon Cardinal Mazarin. Belfort was twice besieged during the Thirty Years' War and twice in the war of 1814-1815. It was heroically and successfully defended in the Franco-Prussian conflict when it was besieged from November 4, 1870, to February 15, 1871, only surrendering, with the honors of war, when the armistice went into effect. See FRANCE: 1870-1871; 1871 (January-May).

BELGÆ.—"This Belgian confederation included the people of all the country north of the Seine and Marne, bounded by the Atlantic on the west and the Rhine on the north and east, except the Mediomatrici and Treviri. . . . The old divisions of France before the great revolution of 1789 corresponded in some degree to the divisions of the country in the time of Cæsar, and the names of the people are still retained with little alteration in the names of the chief towns or the names of the ante-revolutionary divisions of France. In the country of the Remi between the Marne and the Aisne there is the town of Reims. In the territory of the Suessiones between the Marne and the Aisne there is Soissons on the Aisne. The Belovaci were west of the Oise (Isara), a branch of the Seine: their chief town, which at some time received the name of Cæsaromagus, is now Beauvais. The Nervii were between and on the Sambre and the Schelde. The Atrebatæ were north of the Belovaci between the Somme and the upper Schelde: their chief place was Nemetacum or Nemetocenna, now Arras in the old division of Artois. The Ambiani were on the Somme (Samara): their name is represented by Amiens (Samarobriua). The Morini, or sea-coast men, extended from Boulogne towards Dunkerque. The Menapii bordered on the northern Morini and were on both sides of the lower Rhine (B. G. iv., 4). The Caleti were north of the lower Seine along the coast in the Pays de Caux. The Velocasses were east of the Caleti on the north side of the Seine as far as the Oise; their chief town was Rotomagus (Rouen) and their country was afterwards Vexin Normand and Vexin Français. The

Veromandui were north of the Suessiones: their chief town under the Roman dominion, Augusta Veromanduorum, is now St. Quentin. The Aduatuci were on the lower Maas. The Condrusi and the others included under the name of Germani were on the Maas, or between the Maas and the Rhine. The Eburones had the country about Tongern and Spa, and were the immediate neighbours of the Menapii on the Rhine."—G. Long, *Decline of the Roman republic*, v. 4, ch. 3.—"Cæsar . . . informs us that, in their own estimation, they [the Belgæ] were principally descended from a German stock, the offspring of some early migration across the Rhine. . . . Strabo . . . by no means concurred in Cæsar's view of the origin of this . . . race, which he believed to be Gaulish and not German, though differing widely from the Galli, or Gauls of the central region."—C. Merivale, *History of the Romans*, ch. 5.—See also GAUL: Cæsar's description.

ALSO IN: E. Guest, *Origines Celticæ*, v. 1, ch. 13. B. C. 57.—Cæsar's campaign against the confederacy.—In the second year of Cæsar's command in Gaul, 57 B. C., he led his legions against the Belgæ, whom he characterized in his commentaries as the bravest of all the people of Gaul. The many tribes of the Belgian country had joined themselves in a great league to oppose the advancing Roman power, and were able to bring into the field no less than 200,000 men. The tribe of the Remi alone refused to join the confederacy and placed themselves on the Roman side. Cæsar who had quartered his army during the winter in the country of the Sequani, marched boldly, with eight legions, into the midst of these swarming enemies. In his first encounter with them on the banks of the Aisne, the Belgic barbarians were terribly cut to pieces and were so disheartened that tribe after tribe made submission to the proconsul as he advanced. But the Nervii, who boasted a Germanic descent, together with the Aduatuci, the Atrebatas and the Veromandui, rallied their forces for a struggle to the death. The Nervii succeeded in surprising the Romans, while the latter were preparing their camp on the banks of the Sambre, and very nearly swept Cæsar and his veterans off the field, by their furious and tremendous charge. But the energy and personal influence of the one, with the steady discipline of the other, prevailed in the end over the untrained valour of the Nervii, and the proud nation was not only defeated but annihilated. "Their eulogy is preserved in the written testimony of their conqueror; and the Romans long remembered, and never failed to signalize their formidable valour. But this recollection of their ancient prowess became from that day the principal monument of their name and history, for the defeat they now sustained well nigh annihilated the nation. Their combatants were cut off almost to a man. The elders and the women, who had been left in secure retreats, came forth of their own accord to solicit the conqueror's clemency. . . . 'Of 600 senators,' they said, 'we have lost all but three; of 60,000 fighting men 500 only remain,' Cæsar treated the survivors with compassion."—C. Merivale, *History of the Romans*, ch. 7.—See also GAUL: B. C. 58-51.

BELGÆ OF BRITAIN.—Supposed to be a colony from the Belgæ of the continent. See BRITAIN: Celtic tribes.

BELGIAN COMMISSION TO THE UNITED STATES, a body sent to lay before the American government the facts regarding the

violation of Belgian neutrality by Germany in 1914. See BELGIUM: 1914.

BELGIAN CONFEDERATION. See BELGÆ. **BELGIAN CONGO.**—1876-1890.—Origin.—"Since Leopold II.'s accession to the throne his great object has been to secure colonial possessions to Belgium for her excess of population and production. To this end he founded, in October, 1876, with the aid of eminent African explorers, the International African Association. Its object was to form committees in several countries, with a view to the collection of funds, and to the establishment of a chain of stations across Africa, passing by Lake Tanganyika, to assist future explorers. Accordingly committees were formed, whose presidents were as follows: in England, the Prince of Wales [Edward VII]; in Germany the Crown Prince [Emperor Frederick III]; in Italy the King's brother; in France, M. de Lesseps; and in Belgium, King Leopold. Sums of money were subscribed, and stations were opened from Bagamoyo (just south of Zanzibar) to Lake Tanganyika; but when toward the close of 1877, Stanley reappeared on the Atlantic coast and revealed the immense length of the marvelous Congo River, King Leopold at once turned his attention in that direction. That he might not put himself forward prematurely, he acted under cover of an association and a committee of exploration, which were in reality formed and entirely supported by the King's energy and by the large sums of money that he lavished upon them. Through this association King Leopold maintained Stanley for five years on the Congo. During this time a road was made from the coast to Stanley Pool, where the navigable portion of the Upper Congo commences; and thus was formed the basis of the future empire. During this period Stanley signed no less than four thousand treaties or concessions of territory, on which upward of two thousand chiefs had placed their marks in sign of adhesion. At a cost of many months of transportation, necessitating the employment of thousands of porters, light steamers were placed on the upper river which was explored as far as Stanley Falls. Its numerous tributaries also were followed up as far as the rapids that interrupt their courses. Many young Belgian officers and other adventurous explorers established themselves on the banks of the Congo and the adjoining river, the Kouliou, and founded a series of stations, each occupied by one or two Europeans and by a few soldiers from Zanzibar. In this way the country was insensibly taken possession of in the most pacific manner, without a struggle and with no bloodshed whatever; for the natives, who are of a very gentle disposition, offered no resistance. The Senate of the United States, which was called upon, in 1884, to give an opinion on the rights of the African Association, made a careful examination of the matter, and recognized the legality of the claims and title deeds submitted to them. A little later, in order to mark the formation of a state, the Congo Association adopted as its flag a gold star on a blue ground. A French lawyer, M. Deloume, in a very well-written pamphlet entitled 'Le Droit des Gens dans l'Afrique Equatoriale,' has proved that this proceeding was not only legitimate, but necessary. The embryo state, however, lacked one essential thing, namely, recognition by the civilized powers. It existed only as a private association, or, as a hostile publicist expressed it, as 'a state in shares, indulging in pretensions of sovereignty.' Great difficulties stood in the way of realizing this essential condition. Disputes, on the one hand with France and on the other with Portugal, appeared inevitable. . . . King

Leopold did not lose heart. In 1882 he obtained from the French government an assurance that, while maintaining its rights to the north of Stanley Pool, it would give support to the International Association of the Congo. With Portugal it seemed very difficult to come to an understanding. . . . Prince Bismarck took part in the matter, and in the German Parliament praised highly the work of the African Association. In April, 1884, he proposed to France to come to an understanding, and to settle all difficulties by general agreement. From this proposition sprang the famous Berlin conference (see BERLIN ACT) the remarkable decisions of which we shall mention later. At the same time, before the conference opened, Germany signed an agreement with the International Association of the Congo, in which she agreed to recognize its flag as that of a state, in exchange for an assurance that her trade should be free, and that German subjects should enjoy all the privileges of the most favored nations. Similar agreements were entered upon with nearly all the other countries of the globe. The delegates of the Association were accepted at the conference on the same footing as those of the different states that were represented there, and on February 26, the day on which the act was signed, Bismarck expressed himself as follows: 'The new State of the Congo is destined to be one of the chief safe-guards of the work we have in view, and I sincerely trust that its development will fulfill the noble aspirations of its august founder.' Thus the Congo International Association, hitherto only a private enterprise, seemed now to be recognized as a sovereign state, without having, however, as yet assumed the title. But where were the limits of its territory? . . . Thanks to the interference of France, after prolonged negotiations an understanding was arrived at on February 15, 1885, by which both parties were satisfied. They agreed that Portugal should take possession of the southern bank of the Congo, up to its junction with the little stream Uango, above Nokki, and also of the district of Kabinda forming a wedge that extends into the French territory on the Atlantic Ocean. The International Congo Association—for such was still its title—was to have access to the sea by a strip of land extending from Manyanga (west of Leopoldville) to the ocean, north of Banana, and comprising in addition to this port, Boma and the important station of Vivi. These treaties granted the association 931,285 square miles of territory, that is to say, a domain eighty times the size of Belgium, with more than 7,500 miles of navigable rivers. The limits fixed were, on the west, the Kuango, an important tributary of the Congo; on the south, the sources of the Zambesi; on the east, the Lakes Bangweolo, Moero, and Tanganyika, and a line passing through Lake Albert Edward to the river Ouelle [Welle]; on the north, a line following the fourth degree of latitude to the Mobangi River on the French frontier. The whole forms one-eleventh part of the African continent. The association became transformed into a state in August, 1885, when King Leopold, with the authorization of the Belgian Chambers, notified the powers that he should assume the title of Sovereign of the Independent State of the Congo, the union of which with Belgium was to be exclusively personal. The Congo is, therefore, not a Belgian colony, but nevertheless the Belgian Chambers have recently given valuable assistance to the King's work; first, in taking, on July 26, 1889, 10,000,000 francs' worth of shares in the railway which is to connect the seaport of Matadi with the riverport

of Leopoldville, on Stanley Pool, and secondly by granting a loan of 25,000,000 francs to the Independent State on August 4, 1890. The King, in a will laid before Parliament, bequeaths all his African possessions to the Belgian nation, authorizing the country to take possession of them after a lapse of ten years."—E. de Laveleye, *Division of Africa* (*The Forum*, Jan., 1891). See AFRICA: Modern European occupation: Later 19th century; and Map.

 1885-1902.—How the natives have been enslaved and oppressed.—The "Domaine Privé."
 —"The Berlin Conference laid it down that no import dues should be established in the mouth of the Congo for twenty years. But in 1890 King Leopold, alleging the heavy expenses to which he had been put by the campaign against the Arabs in the Upper Congo, applied for permission to levy import duties. It was the first disillusionment; and the British Chambers of Commerce began to wonder whether their opposition to the Anglo-Portuguese Convention had not been mistaken. The King's request was granted (the Powers merely reserving to themselves the right to revert to the original arrangement in fifteen years), but not without the bitter opposition of the Dutch, who had very important commercial interests in the Congo, backed by the British Chambers of Commerce and all the traders in the Congo, irrespective of nationality. A representative gathering was held in London on November 4th, 1900, presided over by Sir Albert Rollit, to protest against the imposition of import duties and to denounce the hypocrisy which attributed to philanthropic motives the desire on the part of the Congo State so to impose upon them. . . .
 "They were able to show that . . . King Leopold, notwithstanding his formal assurances to the commercial world that the Congo State would never directly or indirectly itself trade within its dominions, was buying, or rather stealing, ivory from the natives in the Upper Congo and retaining the proceeds of the sale on the European market. They proved that, profiting by the silence of the Berlin Treaty on the subject of export duties, the Congo State had already imposed taxes amounting to 17½ per cent. on ivory, 13 per cent. on rubber and 5 per cent. on palm kernels, palm-oil and ground-nuts, the total taxation amounting to no less than 33 per cent. of the value of the whole of the trade. Finally they had no difficulty in demonstrating that, with all his professed wish to stamp out the slave-raiding carried on by the half-caste Arabs in the Upper Congo, His Majesty was himself tacitly encouraging the slave trade by receiving tribute from conquered Chiefs in the shape of slaves, who were promptly enrolled as soldiers in the State army. . . .
 "Five months after the termination of the Berlin Conference King Leopold issued a decree (July, 1885) whereby the State asserted rights of proprietorship over all *vacant lands* throughout the Congo territory. It was intended that the term *vacant lands* should apply in the broadest sense to lands not *actually occupied* by the natives at the time the decree was issued. By successive decrees, promulgated in 1886, 1887 and 1888, the King reduced the rights of the natives in their land to the narrowest limits, with the result that the whole of the odd 1,000,000 square miles assigned to the Congo State, except such infinitesimal proportions thereof as were covered by native villages or native farms, became *terres domaniales*.' On October 17th, 1889, the King also issued a decree ordering merchants to limit their commercial operations

in rubber to bartering with the natives. This decree was interesting merely as a forewarning of what came later, because at that time the rubber trade was very small. In July, 1890, the same year as the Brussels Conference, the Congo State went a step further. A decree issued in that month confirmed all that was advanced in November of the same year by the speakers at the London Conference held to protest against the imposition of import duties by the State. By its terms King Leopold asserted that the State was entitled to trade on its own account in ivory—the first open violation of his pledges. Moreover the decree imposed sundry extra taxes upon all ivory bought by merchants from the natives, which, since the State had become itself a trading concern, constituted an equally direct violation of the Berlin Act, by establishing differential treatment in matters of trade. Such were the plans King Leopold made, preparatory to obtaining from the Powers the power to impose import duties. Everything was ready for the great *coup*, which should also inaugurate the Fifth Stage of His Majesty's African policy.

"The Brussels Conference met. The Powers with inconceivable fatuity allowed themselves to be completely hoodwinked, and within a year the greatest injury perpetrated upon the unfortunate natives of Africa since the Portuguese in the XVth century conceived the idea of expatriating them for labour purposes had been committed, and committed too by a Monarch who had not ceased for fifteen years to pose as their self-appointed regenerator. On September 21st, 1891, King Leopold drafted, in secret, a decree which he caused to be forwarded to the Commissioners of the State in the Uban-ghi-Welle and Aruwimi-Welle districts, and to the Chiefs of the military expeditions operating in the Upper Ubanghi district. The decree never having been published in the official Bulletin of the State, its exact terms can only be a matter of conjecture, but we know that it instructed the officials to whom it was addressed 'to take urgent and necessary measures to preserve the fruits of the domain to the State, especially ivory and rubber.' By 'fruits of the domain' King Leopold meant the products of the soil throughout the 'vacant lands' which he had attributed to himself, as already explained, by the decree of 1885. The King's instructions were immediately followed, and three circulars, dated respectively Bangala, 15th December, 1891, Basankusu, 8th May, 1892, and Yokoma, 14th February, 1892, were issued by the officials in question. Circular No. 1 forbade the natives to hunt elephants unless they brought the tusks to the State officers. Circular No. 2 forbade the natives to collect rubber unless they brought it to the State's officers. Circular No. 3 forbade the natives to collect either ivory or rubber unless they brought the articles to the State's officers, and added that 'merchants purchasing such articles from the natives, whose right to collect them the State only recognised provided that they were brought to it, would be looked upon as receivers of stolen goods and denounced to the judicial authorities.' Thus did the Sovereign of the Congo State avail himself of the additional prestige conferred upon him by the Brussels Conference. . . .

"In theory, then, the decrees of September, 1891, and October, 1892, made of the native throughout the *Domaine Privé* a serf. In theory a serf he remained, for a little while. But as the grip of Africa's regenerator tightened upon the *Domaine Privé*, as the drilled and officered cannibal army, armed with repeating rifles, gradually grew and

grew until it was larger than the native forces kept up by any of the great Powers of Europe on African soil, as the radius of the rubber taxes was extended, as portions of the country began to be farmed out to so-called 'Companies' whose agents were also officials of the King, the native of the *Domaine Privé* became a serf not in theory only but in fact, ground down, exploited, forced to collect rubber at the bayonet's point, compelled to pay onerous tribute to men whose salaries depend upon the produce returns from their respective stations—the punishment for disobedience, slothfulness or inability to comply with demands ever growing in extortion, being anything from mutilation to death, accompanied by the destruction of villages and crops."—E. D. Morel, *Belgian curse in Africa* (*Contemporary Review*, March, 1902).

1897.—Mutiny of troops of Baron Dhanis's expedition. See AFRICA: Modern European occupation: Chronology.

1899.—Results of the king of Belgium's attempt to found an African empire.—Contradictory representations.—"The opening in the first few days of July [1898] of the railway through the District of the Cataracts, from Matadi to Stanley Pool, has turned public attention to Central Africa, where the genius and courage of the King of the Belgians have created a Black Empire within the short space of twelve years. It is the special pride of its founder that the vast state of the Congo has been formed without bloodshed, except at the cost of the cruel Arab slave-hunters, and of the not less cruel cannibals like Msiri or the Batetelas, that a thousand treaties have been signed without a gunshot, and that from the commencement the highest ideals of modern civilisation have been aimed at, and, considering the stupendous difficulties of the task, practically attained in the administration. The standard of humanity and progress has been firmly planted in the midst of a population of thirty millions, the decadence of those millions has been arrested, peace exists where there was only slaughter and savagery, and prosperity is coming in the train of improved communications, and of the development of the natural resources of a most promising region. In the history of Empires that of the Congo State is unique. . . . The Berlin Conference did nothing for the Congo State beyond giving it a being and a name. On the other hand it imposed upon it some onerous conditions. There was to be freedom of trade—an excellent principle, but not contributory to the State exchequer—it was to employ all its strength in the suppression of the slave trade—a gigantic task, undertaken with the resources of pygmies, as some one has said—and the navigation of the Congo was to be free to all the world without a single toll. The sufficiently ample dimensions marked out for the State in the Conventional limits attached to the Berlin General Act had to be defined and regulated by subsequent negotiation with the neighbouring Powers. France attenuated the northern possessions of the State at every possible opportunity, but at length, in February, 1895, she was induced to waive in favour of Belgium the right of pre-emption which the Congo Association had given her in April, 1884, over its possessions, at the moment when the Anglo-Portuguese Convention threatened that enterprise with extinction. . . . Four years after the meeting at Berlin it was found necessary to convene another conference of the Powers, held on this occasion at Brussels, under

the presidency of Baron Lambert, whose share in the success of the earlier conference had been very marked and brilliant. The chief object set before the new Conference was to devise means for the abolition of the Slave Trade in Central Africa. . . . The Conference lasted more than seven months, and it was not until July, 1890, that the General Act bearing the signatures of the Powers was agreed upon. It increased the obligations resting on the State; its decisions, to which the Independent State was itself a party, made the task more onerous, but at the same time it sanctioned the necessary measures to give the State the revenue needed for the execution of its new programme. . . .

"Fresh from the Brussels Conference the Congo State threw itself into the struggle with the Arabs. . . . Thanks to the skill and energy with which the campaign was conducted the triumph of the State was complete, and the downfall of the Arabs sounded the knell of the slave trade, of which they were the principal, and indeed the sole, promoters. The Arab campaign did not conclude the military perils that beset the nascent State. The Batetela contingent of the Public Force or native army of the Congo mutinied in January, 1897, while on the march to occupy the Lado district of the Upper Nile, and the episode, ushered in in characters of blood by the assassination of many Belgian officers, seemed to shake the recently-constructed edifice to its base. But if the ordeal was severe, the manner in which the authorities have triumphed over their adversaries and surmounted their difficulties, furnishes clear evidence of the stability of their power. The Batetela mutineers have been overthrown in several signal encounters, a mere handful of fugitives still survive, and each mail brings news of their further dispersal. Even at the moment of its occurrence the blow from the Batetela mutiny was tempered by the success of the column under Commandant Chaltin in overthrowing the Dervishes at Redjaf and in establishing the State's authority on the part of the Nile assigned to it by the Anglo-Congolese Convention of 1894. The triumphs of the Congo State have, however, been those of peace and not of war. With the exception of the operations named and the overthrow of the despotism of the savage Msiri, the State's record is one of unbroken tranquillity. These wars, little in magnitude but great in their consequences, were necessary for the suppression of the slave trade as well as for the legitimate assertion of the authority of the Congo Government. But their immediate consequence was the effective carrying out of the clauses in the Penal Code making all participation in the capture of slaves or in cannibalism a capital offence. That was the primary task, the initial step, in the establishment of civilisation in Central Africa, and of the credit for this the Congo State cannot be deprived. When this was done there remained the still more difficult task of saving the black races from the evils which civilisation brings in its train among an ignorant population incapable of self-control. The import of firearms had to be checked in order to prevent an untamed race indulging in internecine strife, or turning their weapons upon the mere handful of Europeans engaged in the task of regenerating the negroes. The necessary measures inspired by the double motives of self-preservation and the welfare of the blacks have been taken, and the State controls in the most complete and effectual manner the importation of all weapons and munitions of war. Nor has the success of the administration been less clear or decisive in its control of the liquor traffic."—D. C.

Boulger, *Twelve years' work on the Congo* (*Fortnightly Review*, Oct., 1898).

To a considerable extent this favorable view of the work of the Belgians in the Congo State is sustained by the report which a British Consul, Mr. Pickersgill, made to his government in 1898. He wrote admiringly of the energy with which the Belgians had overcome enormous difficulties in their undertaking, and then asked: "Has this splendid invasion justified itself by benefiting the aborigines? Equatorial Africa is not a white man's country. He can never prove his claim to sole possession of it by surviving as the fittest; and without the black man's co-operation it can serve no useful purpose to anybody. Has the welfare of the African, then, whose prosperous existence is thus indispensable, been duly cared for in the Congo State?" By way of answer to these questions, his report sets forth, with apparently strict fairness, the conditions produced in the country as he carefully observed them. He found that much good had been done to the natives by restrictions on the liquor trade, by an extensive suppression of inter-tribal wars, and by a diminution of cannibalism. Then comes a rehearsal of facts which have a different look.

"The yoke of the notorious Arab slave-traders has been broken, and traffic in human beings amongst the natives themselves has been diminished to a considerable degree. Eulogy here begins with a spurt and runs out thin at the end. But there is no better way of recording the facts concisely. To hear, amidst the story's wild surroundings, how Dhanis and Hinde, and their intrepid comrades, threw themselves, time after time, upon the strongholds of the banded men stealers, until the Zone Arabe was won in the name of freedom, is to thrill with admiration of a gallant crusade. . . . But it is disappointing to see the outcome of this lofty enterprise sink to a mere modification of the evil that was so righteously attacked. Like the Portuguese in Angola, the Belgians on the Congo have adopted the system of requiring the slave to pay for his freedom by serving a new master during a fixed term of years for wages merely nominal. On this principle is based the 'servical' system of the first-named possession, and the 'libéré' system of the latter; the only difference between the two being that the Portuguese Government permits limited re-enslavement for the benefit of private individuals, but does not purchase on its own account; while the Government of the Independent State retains for itself an advantage which it taboos to everybody else. The State supports this system because labour is more easily obtainable thereby than by enforcing *corvée* amongst the free people, and less expensively than by paying wages. The slave so acquired, however, is supposed to have undergone a change of status, and is baptized officially as a free man. After seven years' service under the new name he is entitled to his liberty complete. In Angola the limit is five years. The natives are being drilled into the habit of regular work. . . . The first Europeans who travelled inland of Matadi had to rely entirely on porters from the coast, and it was not until the missionaries had gained the confidence of the people, and discovered individuals amongst them who could be trusted as gangers, that the employment of local carriers became feasible. The work was paid for, of course, and it is to the credit of the State that the remuneration continued, undiminished, after compulsion was applied. But how, it cannot fail to be asked, did the necessity for compulsion arise? In the same way that it has since arisen in

connection with other forms of labour: the State wished to get on faster than circumstances would permit. Accordingly the Government authorities prohibited the missionaries from recruiting where porters were most easily obtained, and under the direction of their military chief, the late Governor-General Wahis, initiated a rigorous system of *corvée*. In spite of the remuneration this was resisted, at first by the men liable to serve absenting themselves from home, and afterwards, when the State Officers began to seize their women and children as hostages, by preparations for war. Deserting their villages, the people of the caravan route took to the bush, and efforts were made by the chiefs to bring about a general uprising of the entire Cataract district. Things were in so critical a condition that Colonel Wahis had to leave unpunished the destruction of a Government station and the murder of the officer in charge. Mainly through the influence of the missionaries the general conflagration was prevented, but the original outbreak continued to smoulder for months, and transport work of all kinds had to be discontinued until means were devised of equalising the burden of the *corvée*, and of enlisting the co-operation of the chiefs in its management. That was in 1894. Three years later the system appeared to be working with remarkable smoothness. . . . Whatever views may be held respecting the influence of the State at the present stage of its schoolmaster task, there can be no doubt that the condition, a year or two hence, of those sections of the population about to be relieved from the transport service, will afford conclusive evidence, one way or the other, of the Government's civilising ability. . . . It needs no great knowledge of coloured humanity to foresee that such pupils will quickly relapse into good-for-nothingness more than aboriginal, unless their education be continued. . . .

"One of the most obvious duties of an European Government standing in '*loco parentis*' to savage tribes, and exercising '*dominatio parentis*' with an unspared rod, is to educate the juvenile pagan. Since 1892 the Congo State has disbursed, according to the published returns, taking one year with another, about £6,000 per annum, on this department of its enterprise. It cannot be said, therefore, to have neglected the duty entirely. A school for boys has been established at Boma, and another at Nouvelle Anvers; while large numbers of children of both sexes have been placed with the Roman Catholic missionaries, in the same and other districts. Except in one direction, however, the movement has not been very successful. The young Africans thus blessed with a chance of becoming loyal with intelligence are all waifs and strays, who have been picked up by exploring parties and military expeditions. Their homes are at the points of the compass, and their speech is utter hewilderment. . . . A word must be said as to the employment of what are known as '*sentries*.' A '*sentry*' on the Congo is a dare-devil aboriginal, chosen, from troops impressed outside the district in which he serves, for his loyalty and force of character. Armed with a rifle and a pouch of cartridges, he is located in a native village to see that the labour for which its inhabitants are responsible is duly attended to. If they are india-rubber collectors, his duty is to send the men into the forest and take note of those who do not return with the proper quantity. Where food is the tax demanded, his business is to make sure that the women prepare and deliver it; and in every other matter connected with the Government he is the *factotum*, as far as that village is concerned, of the officer of the district, his power being limited

only by the amount of zeal the latter may show in checking oppression. When Governor-General Wahis returned from his tour of inspection he seemed disposed to recommend the abolition of this system, which is open to much abuse. But steps have not yet been taken in that direction."—*Great Britain, Parliamentary Publications (Papers by Command: No. 459, Miscellaneous Series, 1898, pp. 7-12)*.

From this account of things it would seem that Mr. Boulger, in the view quoted above from his article on the work of King Leopold in the Congo country, had chosen to look only at what is best in the results. On the other hand, the writer of the following criticism in the *Spectator* of London may have looked at nothing but the blacker side: "King Leopold II., who, though he inherits some of the Coburg kingcraft, is not a really able man, deceived by confidence in his own great wealth and by the incurable Continental idea that anybody can make money in the tropics if he is only hard enough, undertook an enterprise wholly beyond his resources, and by making revenue instead of good government his end, spoiled the whole effect of his first successes. The Congo Free State, covering a million square miles, that is, as large as India, and containing a population supposed to exceed forty-two millions, was committed by Europe to his charge in absolute sovereignty, and at first there appeared to be no resistance. Steamers and telegraphs and stations are trifles to a millionaire, and there were any number of Belgian engineers and young officers and clerks eager for employment. The weak point of the undertaking, inadequate resources, soon, however, became patent to the world. The King had the disposal of a few white troops, but they were only Belgians, who suffer greatly in tropical warfare, and his agents had to form an acclimatised army 'on the cheap.' They engaged, therefore, the fiercest blacks they could find, most of them cannibals, paid them by tolerating license, and then endeavoured to maintain their own authority by savage discipline. The result was that the men, as events have proved, and as the King seems in his apologia to admit, were always on the verge of mutiny, and that the native tribes, with their advantages of position, numbers, and knowledge of the forest and swamps, proved at least as good fighters as most of the forces of the Congo State. So great, however, is the intellectual superiority of white men, so immeasurable the advantage involved in any tincture of science, that the Belgians might still have prevailed but for the absolute necessity of obtaining money. They could not wait for the growth of resources under scientific taxation such as will follow Mr. Mitchell Innes's financial reforms in Siam, but attempted to obtain them from direct taxation and monopolies, especially that of rubber. Resistance was punished with a savage cruelty, which we are quite ready to believe was not the original intention of the Belgians, but which could not be avoided when the only mode of punishing a village was to let loose black cannibals on it to work their will, and which gradually hardened even the Europeans, and the consequence was universal disloyalty. The braver tribes fought with desperation, the black troops were at once cowed and attracted by their opponents, the black porters and agriculturists became secret enemies, all were kept in order by terror alone, and we all see the result. The Belgians are beaten; their chiefs, Baron Dhanis and Major Lothaire, are believed to be prisoners; and the vast territories of the far interior, whence alone rubber can now be obtained, are already lost. . . . The administration on the

spot is tainted by the history of its cruelties and its failures, and there are not the means in Brussels of replacing it by competent officials, or of supplying them with the considerable means required for what must now be a deliberate reconquest."—*Spectator (London), Feb. 4, 1800.*

1900-1901.—Expiration of Belgian Convention of 1890.—King Leopold's will.—Three days after the close of the year 1900, the Convention of 1890, which regulated for a period of ten years the relations between Belgium and the Congo State, expired by lapse of time, but was renewed Aug. 10, 1901. The chief provisions of the Convention were (1) that Belgium should advance to the Congo State a loan of 25,000,000 f. (£1,000,000), free of interest, of which one-fifth was payable at sight and the balance in ten yearly instalments of 2,000,000 f. each; (2) Belgium acquired within six months of the final payment the option of annexing the Congo State with all the rights and appurtenances of sovereignty attaching thereto; or (3) if Belgium did not avail herself of this right the loan was only redeemable after a further period of ten years, but became subject to interest at the rate of 3½ per cent per annum. The will of King Leopold, executed in 1889, runs as follows: "We bequeath and transmit to Belgium, after our death, all our Sovereign rights to the Congo Free State, such as they have been recognized by the declarations, conventions, and treaties, drawn up since 1884, on the one hand between the International Association of the Congo, and on the other hand the Free State, as well as all the property, rights, and advantages, accruing from such sovereignty. Until such time as the Legislature of Belgium shall have stated its intentions as to the acceptance of these dispositions, the sovereignty shall be exercised collectively by the Council of three administrators of the Free State and by the Governor-General."

1903-1905.—The alleged oppression, barbarity, and rapacity of its administration under King Leopold.—Observations of Lord Cromer on the Nile border.—Reports of a British Consular Officer, and of King Leopold's Belgian commission.—Action of the British government.—Serious accusations of oppression and barbarity in the exploiting of the natural wealth of the so-called Independent Congo State, under the administration of its royal proprietor, King Leopold, of Belgium, were beginning to be made years ago. The King and the companies which operated in the region under his grants were reputed to be taking enormous profits from it. Of one of those concessionaire companies, sometimes referred to as the A. B. I. R. Co. and sometimes as "the Abir," it was stated in 1901 that its £40,000 of shares could have been sold for £2,160,000, and that half of its profits went to Leopold. But, as was said later by a member of the British Parliament, who wrote on the subject in one of the reviews, "meanwhile Europe was becoming aware of the price that was being paid in Africa for these profits in Belgium. Travellers, missionaries of various nationalities, administrators in the neighbouring territories belonging to England and France, sent home graphic reports of the cruel oppression that was being practised on the helpless population. In England especially, through the efforts of Sir Charles Dilke, of Mr. Fox-Bourne, the secretary of the Aborigines Protection Society, of Mr. E. D. Morel and of other disinterested men, public opinion was informed of the truth. In May, 1903, a resolution, which I had the honor of moving in the House of Commons, calling upon the Government to take action with a view to the abatement of the evils

prevalent in the Congo Free State, was accepted by Mr. Balfour and unanimously passed. A diplomatic correspondence ensued between the two governments. The British Consul in the Lower Congo, Mr. Roger Casement, was sent on a tour of inquiry into the interior, and his lengthy and detailed report fully confirmed—in some respects extending—the indictment that had been drawn. A Congo Reform Association was founded, and immediately secured influential support. . . . At last King Leopold, pressed by the despatches of the British Government and bowing to the storm of public opinion, yielded so far as to authorise further inquiry into the charges that had been made. The investigation by an International Commission, which had been proposed, he rejected. He nominated three Commissioners of his selection, one a legal officer in the service of the Belgian Government, one a judge in the service of the Congo State, and the third a Swiss jurist of repute. In October, 1904, the Commission reached the Congo. It stayed for five months and made an extended journey into the interior. After an unexplained delay of eight months its report was published on the 6th of November of this year [1905]. . . .

"Had the report embodied an acquittal of the Congo State it would not, under the circumstances, have been surprising. The Commissioners, however, have to a great degree risen superior to their natural prepossessions. . . . It is most regrettable . . . that they present no minutes of the evidence taken before them—a circumstance which deprives the report of actuality and force, and prevents outside observers from drawing their own conclusions from the facts which had been ascertained. But the inquiry was painstaking. The case was fairly tried. The judgment is an honest judgment.

"Being honest, it is necessarily a condemnation. The Belgian defenders of the Congo Government, who were led by a conception of patriotic duty as profoundly false as that of the anti-Dreyfusards in France to deny everything and to meet the critics merely with unceasing torrents of abuse, now have their answer. A tribunal, not of our choosing, selected by the defendant in their cause, has shown that those who denounced Congo misrule were in the right, that the atrocities were not imaginary, that a cruel oppression of the natives had been proceeding unchecked for years."—H. Samuel, *Congo State (Contemporary Review, Dec., 1905).*

Before this report appeared many witnesses had testified for and against the impeached Government and its commercial monopoly of the Congo State. Atrocities of slaughter, mutilation and flogging, committed by the soldiery, the sentries and other extortioners of a labor tax from the helpless natives, were asserted and denied. It is best, perhaps, to drop these blackest counts from the Congo indictment, because of the controversy over them; and enough remains in the Report of the King's own Commission of Inquiry, and in general conditions which are flagrantly in evidence, to convict King Leopold and his agents of soulless rapacity, in their treatment of the vast African country that was entrusted to him by the Conference of Powers assembled at Berlin in 1884-5.

There is great weight of meaning, for example, in a few words that were written, in January, 1903, by Lord Cromer, while returning from a long trip up the Nile, in which his steamer passed along about eighty miles of Congolese shore. Before reaching that border of Leopold's domain he had traversed 1100 miles of the country lately wrested by the British from dervishes and slave dealers, where, he remarks, "it might well have

been expected that much time would be required to inspire confidence in the intentions of the new Government." But, "except in the uninhabitable 'Sudd' region," he wrote, "numerous villages are dotted along the banks of the river. The people, far from flying at the approach of white men, as was formerly the case, run along the banks, making signs for the steamer to stop. It is clear that the Baris, Shilluks, and Dinkas place the utmost trust and confidence in the British officers with whom they are brought in contact. . . . The contrast when once Congolese territory is entered is remarkable. From the frontier to Gondokoro is about 80 miles. The proper left, or western, bank of the river is Belgian. The opposite bank is either under the Sudanese or the Uganda Government. There are numerous islands, and as all these are under British rule—for the thalweg which, under Treaty, is the Belgian frontier, skirts the western bank of the river—I cannot say that I had an opportunity of seeing a full 80 miles of Belgian territory. At the same time, I saw a good deal, and I noticed that, whereas there were numerous villages and huts on the eastern bank and on the islands, on the Belgian side not a sign of a village existed. Indeed, I do not think that any one of our party saw a single human being in Belgian territory, except the Belgian officers and men and the wives and children of the latter. Moreover not a single native was to be seen either at Kiro or Lado. I asked the Swedish officer at Kiro whether he saw much of the natives. He replied in the negative, adding that the nearest Bari village was situated at some distance in the interior. The Italian officer at Lado, in reply to the same question, stated that the nearest native village was seven hours distant. The reason of all this is obvious enough. The Belgians are disliked. The people fly from them, and it is no wonder they should do so, for I am informed that the soldiers are allowed full liberty to plunder, and that payments are rarely made for supplies. The British officers wander, practically alone, over most parts of the country, either on tours of inspection or on shooting expeditions. I understand that no Belgian officer can move outside the settlements without a strong guard."

This is in line with some parts of the experience of Mr. Casement, the British Consular Officer referred to above, who travelled for about ten weeks on the Upper Congo in 1903, and whose report of what he saw includes such accounts as the following, of conditions around Lake Matumba: "Each village I visited around the lake, save that of Q. and one other, had been abandoned by its inhabitants. To some of these villages the people have only just returned; to others they are only now returning. In one I found the bare and burnt poles of what had been dwellings left standing, and at another—that of R.—the people had fled at the approach of my steamer, and despite the loud cries of my native guides on board, nothing could induce them to return, and it was impossible to hold any intercourse with them. At the three succeeding villages I visited beyond R., in traversing the lake towards the south, the inhabitants all fled at the approach of the steamer, and it was only when they found whose the vessel was that they could be induced to return."

An incident related by Mr. Casement is this: "Steaming up a small tributary of the Lulongo, I arrived, unprecedented by any rumour of my coming, at the village of A. In an open shed I found two sentries of the La Lulanga Company guarding fifteen native women, five of whom had infants at the breast, and three of whom were about to be-

come mothers. The chief of these sentries, a man called S—who was bearing a double-barrelled shot-gun, for which he had a belt of cartridges—at once volunteered an explanation of the reason for these women's detention. Four of them, he said, were hostages who were being held to insure the peaceful settlement of a dispute between two neighbouring towns, which had already cost the life of a man. . . . The remaining eleven women, whom he indicated, he said he had caught and was detaining as prisoners to compel their husbands to bring in the right amount of india-rubber required of them on next market day. When I asked if it was a woman's work to collect india-rubber, he said, 'No; that, of course, it was man's work.' 'Then why do you catch the women and not the men?' I asked. 'Don't you see,' was the answer, 'if I caught and kept the men, who would work the rubber? But if I catch their wives, the husbands are anxious to have them home again, and so the rubber is brought in quickly and quite up to the mark.' When I asked what would become of these women if their husbands failed to bring in the right quantity of rubber on the next market day, he said at once that then they would be kept there until their husbands had redeemed them."—*Parliamentary Papers, Africa, No. 1 (1904), Cd. 1933.*

But the facts which condemn the Congo administration most conclusively are found in the report of the Commission of Inquiry appointed by King Leopold himself,—especially in what it represents of the heartless oppression of the labor tax, or labor imposed on the natives, in their compulsory carrying of goods or collection of rubber, food and wood, for the State and for the companies that operate under the King's grants. As to the labor tax exacted in food, for example, the Commission expresses itself as follows: "The decree fixes at forty hours per month the work which each native owes to the State. This time, considered as a maximum, is certainly not excessive, especially if one takes account of the fact that the work ought to be remunerated; but as in the immense majority of cases . . . it is not precisely the work which is demanded of the native, but rather a quantity of products equivalent to forty hours of work, the criterion of time disappears in reality and is replaced by an equivalent established by the Commissioner of the district after diverse methods. . . . *Chikwangue* (kwanga) is nothing but manioc bread. The preparation of this food requires many operations: the clearing of the forest, the planting of manioc, the digging up of the root and its transformation into *chikwangue*, which comprises the operations of separating the fibers and stripping the bark, pulverizing, washing, making it into bundles, and cooking it. All these operations, except clearing the land, fall to the women. The *chikwangues* so prepared are carried by the natives to the neighboring post and served for the food supply of the personnel of the State—soldiers and laborers. . . . As the *chikwangue* keeps only a few days, the native, even by redoubling his activity, cannot succeed in freeing himself from his obligations for any length of time. The requirement, even if it does not take all his time, oppresses him continually by the weight of its recurrent demands, which deprive the tax of its true character and transform it into an incessant *corvée*. . . . Doubtless the adage, 'time is money,' cannot be applied to the natives of the Congo; . . . it is none the less inadmissible that a taxpayer should be obliged to travel over ninety-three miles to carry to the place of collection a tax which represents about the value of twenty-nine cents. . . . Natives in-

habiting the environs of Lulonga were forced to journey in canoes to Nouvelle-Anvers, which represents a distance of forty to fifty miles, every two weeks, to carry their fish; and taxpayers have been seen to submit to imprisonment for delays which were perhaps not chargeable to them, if we take into account the considerable distances to be covered periodically to satisfy the requirements of the tax."

As applied to the collection of rubber, the so-called labor tax was found by the commission to consume so much of the time of the natives subjected to it that it practically made slaves of them, and nothing less. When the abused native is pretentively paid for his labor or its product, it is by some trifle in metal or flimsy woven stuff, which costs the State and its tributary companies next to nothing and is next to worthless to the recipient. And not only does the State exercise over the unfortunate subjects that were delivered to it an authority of Government which appears to be little else than a power of extortion, but it has taken all their lands from them, substantially, and left them next to nothing on which to perform any labor for themselves. It has decreed to itself the ownership of all land not included in the native villages or not under cultivation. Concerning which decree the Commission remarks:—"As the greater part of the land in the Congo has never been under cultivation, this interpretation gives to the State a proprietary right, absolute and exclusive, to almost all the land, and as a consequence it can grant to itself all the product of the soil and prosecute as robbers those who gather the smallest fruit and as accomplices those who buy the same. . . . It thus happens sometimes that not only have the natives been prohibited from moving their villages, but they have been refused permission to go, even for a time, to a neighboring village without a special permit."

In the summer of 1903 the British Government was moved to address a formal communication to all the Powers which had been parties to the Act of the Berlin Conference of 1884-5, whereby the Congo State was created and entrusted to King Leopold, asking them to consider whether the system of government and of trade monopoly established in that State was in conformity with the provisions of the Act. The British Foreign Secretary, Lord Lansdowne, in his despatch (August 8, 1903), rehearsed at length the charges that were brought against the Congo administration, concerning its extortion of labor from the natives by a method "but little different from that formerly employed to obtain slaves," saying: "His Majesty's Government do not know precisely to what extent these accusations may be true; but they have been so repeatedly made, and have received such wide credence, that it is no longer possible to ignore them, and the question has now arisen, whether the Congo State can be considered to have fulfilled the special pledges, given under the Berlin Act, to watch over the preservation of the native tribes, and to care for their moral and material advancement."—At the same time, the dispatch called the attention of the Powers to the question of rights of trade in the Congo, saying: "Article I of the Berlin Act provides that the trade of all nations shall enjoy complete freedom in the basin of the Congo; and Article V provides that no Power which exercises sovereign rights in the basin shall be allowed to grant therein a monopoly or favour of any kind in matters of trade. In the opinion of His Majesty's Government, the system of trade now existing in the Independent State of the Congo is not in harmony with these provisions. . . . In

these circumstances, His Majesty's Government consider that the time has come when the Powers parties to the Berlin Act should consider whether the system of trade now prevailing in the Independent State is in harmony with the provisions of the Act; and, in particular, whether the system of making grants of vast areas of territory is permissible under the Act if the effect of such grants is in practice to create a monopoly of trade."—*Parliamentary Papers, Africa, No. 14* (1903), Cd. 1800.

1906-1908.—Reform decrees and their small effect.—Continued reports on exploitation.—Concession secured by American capitalists.—Annexation by Belgium.—Apparently the endeavor of the British government to set in motion some action of the Powers which had been parties to the creation of the Congo State, for the purpose of ascertaining whether the provisions of the Berlin Act were being complied with in the administration of that great trust, had no practical result. During the next two years the Congo government was persistent in denying and attempting to refute some parts of the reports sent home by British consular officers in the Congo; but after the publication of the report of its own investigating commission, in 1905, there seems to have been more reticence observed. In June, 1906, a series of new decrees, supposed to embody the recommendations of the Reforms commission, was sanctioned by the King. But the consuls who reported to London from the Congo country do not seem to have found the wretched natives much relieved by these decrees. Vice-Consul Armstrong, writing from Boma December, 1907, after a prolonged journey through rubber-collecting regions, declared his conviction that "the people worked from twenty to twenty-five days a month" to satisfy their labor tax. He added: "The improvement that has been made by the application of the Reform Decrees of June 1906 is solely in the withdrawal of armed sentries, a reform which the serious decimation of the population by the sentries demanded. . . . I saw nothing which led me to view the occupation of this country in the light of an Administration. The undertakings of the Government are solely commercial, with a sufficient administrative power to insure the safety of its personnel and the success of its enterprise." . . . Reports to the same effect were coming to the government of the United States from its consuls in the Congo. Consul-general C. R. Slocum wrote on the 1st of December, 1906, to the Department of State at Washington: "I have the honour to report that I find the Congo Free State, under the present régime, to be nothing but a vast commercial enterprise for the exploitation of the products of the country, particularly that of ivory and rubber. Admitted by Belgian officials and other foreigners here, the State, as I find it, is not open to trade in the intended sense of article 5 of the Berlin Act under which the State was formed." A year later, the succeeding Consul-General of the United States in the Congo State, Mr. James A. Smith, made a similar report: "In excluding the native," he wrote, "from any proprietary right in the only commodities he possessed which would serve as a trade medium—that is, the products of the soil—and in claiming for itself and granting to a few concessionary companies in which it holds an interest exclusive ownership of these products, the Administration, in its commercial capacity, has effectively shut the door to free trade and created a vast monopoly in all articles the freedom of buying and selling of which alone could form a proper basis for legitimate trade transactions between the native and independent

purchasers. Competition, by which alone can a healthy condition of trade be maintained, has been entirely eliminated. The Government is but one tremendous commercial organization; its administrative machinery is worked to bar out all outside trade and to absolutely control for its own benefit and the concessionary companies the natural resources of the country." Before this time, American interest in the Congo State had become more than humanitarian, and more than a commercial interest in the general opportunities of trade; for heavy American capitalists had secured concessions from King Leopold in a large territory for the development of railways, rubber production and mines. The fact was announced in the fall of 1906, and the names of John D. Rockefeller, Jr., Thomas F. Ryan, Harry Payne Whitney, Edward B. Aldrich and the Messrs. Guggenheim were mentioned as prominent in the group to which the grant was made.

Under the Convention of 1890 between King Leopold and the Congo State, as one party, and the Kingdom of Belgium as the other, it became the right of the latter, on the expiration of ten years, in 1900, to annex the Congo State to itself. The right was not then exercised; but the question of taking over the sovereignty of that great African domain came under warm discussion in Belgium before many years, and, finally, in 1908, it reached the point of a keen negotiation of terms with the King, attended by lively conflicts in the Belgian Chambers. While the question was thus pending in Belgium, the British government took occasion to express its views to the Belgian government, as to the obligations which such an annexation would involve. This was done on the 27th of March, 1908, in a despatch from the Foreign Minister, Sir Edward Grey, communicating an extended "Memorandum respecting Taxation and Currency in the Congo Free State." The language of the despatch, in part, was as follows: "His Majesty's Government fully recognize that the choice of the means by which the administration of the Congo may be brought into line by the Berlin Act rests exclusively with Belgium. Nevertheless, while disclaiming all idea of interference, His Majesty's Government feel that in fairness they should leave the Belgian Government in no doubt that in their opinion the existing administration of the Congo State has not fulfilled the objects for which the State was originally recognized, or the conditions of Treaties, and that changes are therefore required, which should effect the following objects: (1) Relief of the natives from excessive taxation. (2) The grant to the natives of sufficient land to ensure their ability to obtain not only the food they require, but also sufficient produce of the soil to enable them to buy and sell as in other European Colonies. (3) The possibility for traders whatever their nationality may be to acquire plots of land of reasonable dimensions in any part of the Congo for the erection of factories so as to enable them to establish direct trade relations with the natives. . . . Taking the three points enumerated above in order, it appears to His Majesty's Government that—(1) As regards the question of taxation in labour, the abuses to which the system has given rise have only been rendered possible by the absence of a proper standard of value. They believe, therefore, that the only sure and efficacious means of precluding the existence of such abuses in the future is the introduction of currency throughout the State at the earliest possible date. Both the Reports of the Commission of Inquiry and the experience of His Majesty's Consular officers agree

in the conclusion that the native has learnt the use of money, and that currency would be welcomed by all classes, native and European alike. (2) The natives in the concessionary areas should not be compelled, by either direct or indirect means, to render their labour to the Companies without remuneration. The introduction of currency should contribute greatly to the protection of the native against the illicit and excessive exactions on the part of private individuals. Such protection, however, cannot be adequately secured unless the latter be compelled to pay the native in specie at a fair rate to be fixed by law. (3) They would urge that a large increase should be made in the land allotted to the natives."

The exceptional failure of the Congo State, among African colonies, to introduce the use of currency in transactions with the natives, and the connection of this failure with the state of things existing there, is discussed at length in the Memorandum, with a practical summing up in these sentences: "The Secretaries-General said the native in the Congo had no specie. True, but why has he no specie? Because, as already explained, during the twenty-three years that the Congo State has been in existence no serious attempt, in spite of all assertions to the contrary, has ever been made by the State to introduce currency on a sufficiently large scale. In every other European Colony in Africa has the native come to learn the practical value of a medium of exchange. What are the reasons that the Congo State should stand in an exceptional position in this respect? They are unfortunately obvious enough. The truth is that it is precisely owing to the absence of a proper standard of value that the Congo Government and the Concessionary Companies have been able to abuse the system of taxation in labour, and realize enormous profits out of the incessant labour wrung from the population in the guise of taxation." This communication from Great Britain to the Belgian government was followed soon (in April) by memoranda from the government of the United States, setting forth the hopes and expectations of administrative reform with which it contemplated the proposed annexation of the Congo State.

A few months later the treaty of annexation was agreed upon, and the annexation consummated by an Act of the Belgian Parliament, promulgated on the 20th of October, 1908.

1909.—United States and Great Britain withhold recognition of annexation.—Recognition by Germany.—Death of Leopold.—To an announcement by the Belgian Minister at Washington that the treaty of annexation had been concluded, Secretary Root replied at considerable length, in a communication which bears the date of June 11, 1909. "The Government of the United States," said the Secretary, "has observed with much interest the progress of the negotiations looking to such a transfer, in the expectation that under the control of Belgium the condition of the natives might be beneficially improved and the engagements of the treaties to which the United States is a party, as well as the high aims set forth in the American memoranda of April 7 and 16, 1908, and declared in the Belgian replies thereto, might be fully realized. The United States would also be gratified by the assurance that the Belgian Government will consider itself specifically bound to discharge the obligations assumed by the Independent State of the Congo in the Brussels Convention of July 2, 1890, an assurance which the expressions already made by the Government of Belgium in regard to its own course as a party to

that convention leave no doubt is in entire accordance with the sentiments of that Government. Among the particular clauses of the Brussels Convention which seem to the United States to be specially relevant to existing conditions in the Congo region are the clauses of Article II, which include among the objects of the convention:—"To diminish intestine wars between tribes by means of arbitration; to initiate them in agricultural labour and in the industrial arts so as to increase their welfare; to raise them to civilization and bring about the extinction of barbarous customs. . . . To give aid and protection to commercial enterprises; to watch over their legality by especially controlling contracts for service with natives; and to prepare the way for the foundation of permanent centres of cultivation and of commercial settlements"—The United States has been forced to the conclusion that in several respects the system inaugurated by the Independent State of the Congo has, in its practical operation, worked out results inconsistent with these conventional obligations and calling for very substantial and even radical changes in order to attain conformity therewith." Moreover, it renders nugatory the provisions of the successive declarations and conventions, cited by the Secretary, which have given such rights in the Congo State to citizens of the United States and others as must be maintained. "It should always be remembered," wrote Mr. Root, "that the basis of the sovereignty of the Independent State of the Congo over all its territory was in the treaties made by the native Sovereigns who ceded the territory for the use and benefit of free States established and being established there under the care and supervision of the International Association, so that the very nature of the title forbids the destruction of the tribal rights upon which it rests without securing to the natives an enjoyment of their land which shall be a full and adequate equivalent for the tribal rights destroyed." Referring to a statement made in the Belgian reply given to his memorandum of April 16, which he quotes as in these words:—"When it annexes the possessions of the Independent State Belgium will inherit its obligations as well as its rights; it will be able to fulfil all the engagements made with the United States by the declarations of April 22, 1884."—Mr. Root closes his letter with these remarks: "It would be gratifying to the United States to know that the last clause of the statement just quoted is not intended to confine the rights of the United States in the Independent State to the declarations of the Commercial Association which preceded the creation of the Congo State as a sovereign power, but includes the conventional rights conferred upon the United States by the treaty concluded with the Independent State immediately after its recognition. In the absence of a fuller understanding on all these points, I confine myself for the present to acknowledging your note of November 4 last and taking note of the announcement therein made."

Thus no recognition was given to the Belgian annexation. Recognition was held in abeyance, awaiting further information and evidence of reform in the administration of the Congo State. And this was also the attitude assumed by the British government, which waited long and with growing impatience for assurances from Belgium, with proceedings that would give sign of making them good. On the 24th of February, 1909, the subject came up in Parliament, with assertions that "oppression of the natives was still going on just as before the annexation," and that "Great Britain had waited for months while the cruelties against which she had protested still continued."

In the debate, Sir Charles Dilke referred to the harmony of action in the matter by the United States and Great Britain, and expressed his conviction that "the coöperation of two such powerful Governments in the cause of humanity would be irresistible." Sir Edward Grey, speaking for the Ministry, said: "I am glad that in the course of the debate it has been emphasized that this attitude is not ours alone, but that the United States has spoken with equal emphasis and taken up the same position. I am sorry that no other Power has taken up the same position so strongly; but as there is only one Power which has declared itself so definitely on the question as ourselves, I should like to say that I am glad it is the United States." Alluding to a remark made by one of the speakers in the debate, that the Government might have prevented the annexation of the State by Belgium, Sir Edward said: "I do not think we should have prevented the annexation, but in any case I should not have tried to prevent the annexation. And for this reason among others—that if Belgium was not going to take the Congo State in hand and put it right, who was? I have never been able to answer that question. Certainly not ourselves, because we have always denied the intention of assuming any responsibility over an enormous tract of land where we have sufficient responsibility already." The Foreign Secretary concluded his speech by saying: "If Belgium makes the administration of the Congo humane and brings it into accord, in practice and spirit, with the administration which exists in our own and neighbouring African colonies, no country will more cordially welcome that state of things than this or more warmly congratulate Belgium. But we cannot commit ourselves to countersign, so to say, by recognition a second time, the system of administration which has existed under the old régime."

"In sharp contrast . . . Germany recognized immediately the transfer. Foreign Secretary von Schoen told the Reichstag on January 23, 1909, that Germany had been the first of all the Powers to recognize the transfer of the Congo to Belgium, and that though her acquiescence to the annexation did not imply approval of existing conditions, Germany assumed, and was convinced, that under Belgian rule a cleansing process would ensue. Herr von Schoen stated explicitly that Germany had not considered herself entitled by treaty to interfere, as Great Britain had asked her to join in doing, to secure the introduction of Congo reforms. He gave an outline of the two treaties (that with the international Congo Association and the Congo Articles in the Berlin Conference Act), and showed that the signatory Powers had no right to a voice in the matter. In Belgium Germany's attitude was deeply appreciated. During 1909 the United States and Great Britain continued to correspond with the Belgian Government, maintaining in common that the annexation could not be recognized until definite guarantees were given on the subject of the exploitation of natives. But Belgium took her cue from Austria-Hungary's recent action in Bosnia and Herzegovina. . . . The transfer was celebrated at Antwerp by a colonial festival. King Leopold made a speech in which he was silent on the native question, but held up glowingly the commercial advantages to Belgium, urged the development of the merchant marine, and invited capitalists to take up concessions in the Congo. At that very moment, the Socialists in the Chamber exposed the fact that one of the first decrees of the new Colonial Minister was to impress twenty-six hundred natives for railway construction. The

Colonial Minister justified forced labor on the ground of urgency and said that the natives had no reason to complain, as the railway would be useful to them as well as to Belgium. His position was endorsed by the Chamber. Belgian promises were still not believed in England. Sir Edward Grey declared that Great Britain would never have recognized the Congo Free State at all, if she had known what it was going to become, and that she would not now recognize it until she was sure that conditions would be radically reformed. But when it was suggested several months later that the British navy blockade the mouth of the Congo as a protest against the annexation, Sir Edward was frank in stating that allowing Belgium to rule the country was the ultimate solution. All the British wanted was a practical expression of willingness on the part of the Belgians to act decently in the Congo. When I say 'the British,' I mean not merely the Government but enlightened public sentiment, which in this matter dictated the Government's policy irrespective of international political consideration. On November 10, 1909, the demonstration at Albert Hall must have been a warning to Belgium that a solution of the Congo question was necessary, if good relations were to be maintained. The Albert Hall demonstration was presided over by the Primate, assisted by nine bishops, leading nonconformists, many peers, and about fifty members of Parliament. The Primate and the Bishop of Oxford expressed faith in the good intentions of the Belgian people, but denounced in most unqualified terms the administration, the ill will, the bad faith, and the atrocities in the Congo, declaring that King Leopold was personally and beyond any doubt responsible for them. The Bishop of London formulated the British demands: ill treatment of natives must cease, land be restored to them, proper soldiers and police substituted for the rubber-collecting bullies and assassins, 'hostage houses' done away with, the methods proposed for abolishing taxes explained, decimation of natives stopped, and the promises made at the time of annexation immediately fulfilled.

"It is well to remind those who [claim] . . . that in continuing the Congo agitation after the Belgian annexation, the British public was imposed upon and misled by prejudiced reports of missionaries and by the report of a now discredited traitor, of the testimony of Casement's successor at Boma. Colonel Thesiger reported officially to the Foreign Office at the beginning of 1909 that the whole system of Belgian taxation was fraudulent, and that the violation of laws and the heart-rending atrocities of the rubber collecting *were due to the wilful blindness, if not to the actual connivance, of the Belgian officials.* During the same year, in October, the native chiefs sent a memorandum to the Belgian Colonial Minister, praying for relief from taxation. They could obtain no rubber, and received no return for the taxes exacted of them. British prospectors and traders were prevented from operating in the Katanga Province. The Belgian Socialist leader, Vandervelde, made a journey to the Congo to defend two American missionaries, who had been arrested on the charge of libeling one of the big rubber companies. M. Vandervelde secured their acquittal, and when he returned to Brussels, he gave testimony on the floor of the Chamber of the arbitrary exploitation, torturing and killing of natives, and the use of armed sentries over rubber-collecting slaves. All the Colonial Minister could answer was that he hoped the charges were exaggerated. The death of Leopold II. on December 7, 1909, brought some ray of hope that the people of Belgium would

have an awakening of conscience, and attempt to do away with the wholesale butchery and slavery in Africa that brought them as a civilized and Christian nation to shame before the whole world. Leopold's successor, the present King Albert, had visited the Colony during the year before his accession. Starting at Katanga, which he reached by way of Cape Town and Rhodesia, Prince Albert had walked fifteen hundred miles through the Congo forests. He was not allowed to see what was going on in the Congo, but he heard enough during his journey to make him dissatisfied with existing conditions. The passing of the Congo's evil genius Leopold gave Belgium a chance."—H. A. Gibbons, *New map of Africa*, pp. 157-161.

1910-1913.—*Reform measures.*—*Recognition by Great Britain.*—*Results of reform movement.*—"The Belgian Government entered earnestly upon the work of reform in its own colony. M. Renkin, the new Colonial Minister, prepared a set of reform measures by which the administration of the country would be materially improved, the principle of free trade established (including the right of the native to traffic in the products of his own land), and the character and methods of taxation completely revised. These improvements were embodied in the law of March 22, 1910, which provided for their gradual introduction. On July 1, 1910, the districts of the Lower Congo, Stanley Pool, Ubangi, Bangala, Kwango, the Kassai, the Katanga, Aruwimi, the southern portion of the Eastern Province and the banks of the Congo River as far as Stanleyville, were thrown open to trade. On July 1, 1911, the former *Domaine de la Couronne*, lying in the center of the colony, was made a free-trade district; and one year later, the remaining region, the *Welle*, was placed on a similar basis. In the same way the new method of taxation has been gradually introduced; and the practice of forced labor abolished. Many material improvements are already noticeable, particularly in the field of public utilities and transportation. The entire course of the Congo River has been opened by rail or by steamer to international trade; numerous distant places have been brought into communication with the world by roads, boats, and the telegraph; and Elizabethville, the capital of the Upper Congo, will ere long be brought a thousand miles nearer Europe by the completion of the Benguela Railway from Portuguese Angola to the Katanga branch of the Cape-to-Cairo Railway (see AFRICA: Modern European occupation: 1914-1920: Obstacles: Lack of railways). The trade of the country has been carefully protected and cultivated, so that the combined imports and exports, which in 1895 were only about \$9,100,000, and at the time of annexation approximately \$31,770,000, reached \$47,508,000 in 1911. Yet the colony is still far from being a financial success. The expenditures for 1912 exceeded the revenue by \$5,215,000; and the total public debt in the same year had already reached \$55,749,440. It is evident, also, from the reports of the Reverend J. H. Harris, Consuls Thursten, Armstrong, Campbell, and others, that the Belgian Government is making a conscientious and progressive effort to ameliorate the condition of the natives and to introduce all the promised reforms affecting their welfare. Conditions have very materially improved in many districts."—N. D. Harris *Intervention and colonization in Africa*, p. 61.—"For the first three years of King Albert's reign, Great Britain still refused to recognize the annexation. In 1910, the Congo Reform Association and the Aborigines Protection Society whose agents were touring extensively, convinced the Foreign

Office that forced labor had not been abolished. In 1911 consular investigation showed that conditions were improved in many districts, but that the Belgian administration was still far from satisfactory. There was the controversy, also, over the question of freedom of trade. Sir Edward Grey doubted the desire of the Congo authorities to observe treaty obligations in this matter. The revocation, however, of the charters of three of the largest concession companies at the beginning of 1912 showed that Belgium was at last awakening to the necessity of abolishing monopolies and throwing the Congo open to free trade. The last outstanding question between Belgium and the public opinion of the world was that of native right to land ownership. In this matter, Germany stood with Great Britain. Concessions to companies gave private individuals rights over large tracts of land which superseded preexisting native rights. This was a violation not only of elementary principles of justice but also of a clearly formulated stipulation of the Berlin Act. . . . In June, 1913, after ten years of constant agitation, the victory appeared to have been won. For Sir Edward Grey announced in June that consular reports from the Congo made it no longer justifiable or expedient to withhold recognition of the annexation. Arrangements were being made to grant free land to natives for cultivation, and Belgium had accomplished much in improving her administration. The personal knowledge and influence of King Albert, the pressure of the Belgian Socialist Party, and the increasing revelation of the richness of the Congo basin were the decisive factors in the work of reform."—H. A. Gibbons, *New map of Africa*, p. 163.—"The whole territory was not freed from the Congo System at once, although the system itself had been officially repudiated. Down to the last the Belgian Government showed itself incapable of a magnanimous gesture of reparation, and between 1910 and 1913 the inhabitants of sections of the Congo continued to be enslaved in the interests of the Belgian taxpayer, notwithstanding the utmost efforts of the reformers. But the area thus subjected to the old régime steadily dwindled, and every year found the Belgian State putting larger and larger sums into the Congo instead of merely plundering the country. During the whole of this period the reformers were continuously active and vigilant. Pressure upon the Belgian Government and upon the Foreign Office was never relaxed. Co-operation with the Belgian reformers was continuous and sustained. By the late spring of 1913 the position attained after twelve years of incessant agitation was this. The Leopoldian policy had been rooted out of the entire Congo territory. The Concessionaire companies had either disappeared with the disappearance of the system, or had been rendered impotent for mischief through the disbandment of the swarms of irregular armed levies in their employ. The rubber 'tax' itself had been abolished. The arming of one tribe to pillage another in the interests of 'revenue' had ceased. That revenue was no longer supplied by slave labour. Instead of Belgium costing the Congo a couple of millions a year expressed in terms of war, massacre and arson, accompanied by a huge loss of life, the Congo was costing Belgium two millions a year. The native of the Congo was again a free man by law. His elementary human rights had been restored to him. He was free once more to gather the natural products of his soil and to dispose of them in legitimate commerce; free once more to cultivate his land, both for his own sustenance and for planting products of commercial value for his own en-

richment. Thousands of natives who had fled to the utmost recesses of the great forests to escape their tormentors, were flocking back to the old settlements on the river banks. The Congo had ceased to be drained of its life-blood in the interests of Belgian capitalists. Both Consular and unofficial reports showed that these changes were real."—E. D. Morel, *Red rubber*, pp. 223-224.—The Congo reform association, a British Society which had been prominent in its efforts to reform abuses, was finally dissolved on June 16, 1913, as having accomplished the objects for which it was started. E. D. Morel, the last authority quoted above, was secretary of the association.

1913.—Discussed in treaty negotiations between England and Germany.—See WORLD WAR: Diplomatic background: 71, xiii.

1914-1916.—Growth of railroads from 1900.—Government supervision of resources.—Colonial problems, domestic and foreign.—Political relations during the World War.—"Fortunately, unchecked exploitation by concession companies and maladministration of officials is not the whole story of the Congo since 1900. As was indicated in the report of the Commission of Inquiry, there is another and brighter side of Belgian activity. In May, 1902, an agreement was signed in Brussels for the extension of the Cape to Cairo railway from the northern border of Rhodesia to Lake Kasala. It was the idea to have the Rhodesian line, which was to pass through Katanga, join in this region a line from Benguela, an Atlantic port in Portuguese West Africa. Rhodesia would then have a much shorter connection with the sea coast, and a northern route would be opened up through the Congo valley across to Lake Albert and up the Nile. At this time the Reichstag had refused to vote the credits for the extension of the line from Dar-es-Salaam to Lake Tanganyika, and it was believed that the German line would not be built. The line from the south into Katanga Province of the Belgian Congo reached, in 1912, Elizabethville, only a few miles from the Rhodesian frontier, but over one hundred and sixty miles from the point in which it enters Belgian territory. It had been surveyed north to Bukama, and construction work was being rapidly pushed in 1914. Progress has been made also in opening up the Congo valley south from Stanleyville, where the river makes its sharp bend, through the heart of Central Africa, into Katanga. In September, 1906, the railway from Stanleyville to Ponthierville, a stretch where the Congo is not navigable, was completed. The Congo from Ponthierville to Kindu is navigable. From Kindu to Kongolo two hundred and twenty miles of railway have been built. A glance at the map will show that these are important sections in the Cape to Cairo railway. From Stanleyville to Lake Albert Edward the survey was completed in 1911, and an agreement reached to connect the Katanga railway with the Portuguese frontier, and the Congo with Lake Tanganyika. The latter line, because of its importance in the campaign against the Germans, was completed in March, 1915. There are also railway lines from Matadi (near Boma) to Leopoldville, and from Boma to Tshela. As the Congo from Leopoldville to Stanleyville is navigable, communication by rail and steamer is now practically complete all the way across the continent, and from the heart of Central Africa south for nearly two thousand three hundred miles to Cape Town. Unstinted credit is due to Belgian engineers and Belgian officials for vision, for energy, and for ability to surmount seemingly unsurmountable difficulties in making these railways possible. There has always been,

on the part of the Belgian authorities, whole-hearted cooperation with British and Germans in opening up Central Africa, and the three states have worked together, without too much thought of selfish advantage, in furthering transportation schemes. In March, 1914, the Colonial Minister, in a remarkable speech presenting the Congo budget, admitted that the completion of the German line from Dar-es-Salaam to Lake Tanganyika was going to modify transport conditions by attracting traffic that would otherwise go west through Belgian territory all the way to the Atlantic. But he believed that there was room for all, and that the influence of German activity on Belgian railway plans was much exaggerated. He thought, on the other hand, that Belgium would ultimately draw advantages from the increased means of transportation in all directions. He submitted new railway projects for over two thousand miles of interior lines. [See also AFRICA: Modern European occupation; 1914: Summary of European occupation.] Aside from slight difficulties with Great Britain over the Bahr-el-Ghazal and Uganda frontiers, and the evacuation of the Lado Enclave, Belgium has worked in harmony and in a friendly spirit with France, Great Britain, Germany, and Portugal in the establishment of frontiers. [See AFRICA: Modern European occupation; 1914: Distribution of European sovereignty.] Too much praise cannot be given to the members of the frontier commissions everywhere in Africa for the completion, without friction, of tasks that are little appreciated and talked about, though arduous and perilous. How often have frontier commissions had to make their own maps, decide on questions that may in the future be of tremendous importance, and at the same time be ever on the alert to defend themselves against hostile savages and keep in check jungle and swamp fevers! Belgium has a rich possession in the Congo, especially since the solving of means of transport has done away with dependence upon native porters and has made possible the development of mining. In the Katanga region, copper and tin and diamonds have been discovered. In many valleys of the Congo tributaries there is gold. The palm oil and palm nut industries are developing encouragingly. In view of the rapid decrease of forest produce, this means economic salvation for the Congo. For concession companies, knowing that they had to make hay while the sun was shining and as indifferent to the future as if they had been American lumber companies, deliberately killed the goose that laid the golden egg. In 1912, forest produce fell off nearly ten per cent., and in 1913, the export of rubber decreased fifty per cent. . . . Belgium in the Congo, like other European nations in their colonial possessions, is waking up to the fact that the State alone feels its responsibility towards unborn generations, and that only by governmental restrictions, enforced by capable governmental supervision, can individuals and corporations be prevented from sacrificing the future for immediate gain. The rubber industry in the Congo illustrates this principle perfectly. Big dividends to-day, for to-morrow our leases may be revoked. The devil take the future. Belgian experiences in administration and finance in the Congo have not been very different from those of Germany and Italy in their early days as colonizing states. An official class, accustomed to deal with colonial problems, cannot be created in a generation. Pioneers make many mistakes. Socialist parties—every Opposition in fact—use colonial blunders and mismanagement, real or fancied, for attacks upon Government, especially in con-

nection with budget estimates. In Belgium as in Germany the Socialists have been the voice of conscience. We have already mentioned Vander-velde's courage in speaking the unwelcome truth after his visit to the Congo. Time and again he and other Socialists criticized in the Chamber what they considered unjust decrees of the Colonial Minister, and exposed abuses. But the Socialists, while performing this useful service, are obstructionists in money matters, and oppose consistently "throwing good money after bad" in colonial enterprises. They oppose also military service abroad. There was a howl when Belgium sent nearly four thousand soldiers for Congo duty in 1909, and the deficit revealed in the 1910 budget added to the complication of the British attitude. As far as revenue goes, things have not been improved. Just before the war the revelation of a deficit of nearly five million dollars in the 1914 estimates made difficult getting the ear of the Chamber for railway grants. The customs yield to the Belgian Congo is not much larger than that of Sierra Leone, with one-thirtieth of the area and one-fiftieth of the Congo population. Although reforms have been sincerely effected, Belgium has still the same great problem of colonial administration that France and Portugal face in Africa. These states possess enormous territories, which are not well administered and developed as they might be *because they have not the surplus population able and willing to undertake the task.* Before the war, the Belgian Congo was run by a staff of Europeans of many nationalities, some of them adventurers of the worst type. Even among the high officials, many were not Belgian. They were in the Congo only because they saw there an opportunity to have influence and to make money that was denied to them in their countries of origin. Belgium has given valuable assistance in the long two years campaign against German East Africa. I have understood, on good authority, that she has been able to train, equip, officer, and put into the field twenty thousand native troops. . . . The Germans have not hesitated [during the war] to insinuate that the great sums loaned to Belgium by the Allies, especially by Great Britain, would be secured by Anglo-French economic, if not political, control of the Congo. In order to make clear the intentions of the Allies, and to set at rest the minds of the Belgians and allay suspicions of neutrals, the French Minister handed to the Belgian Ministry of Foreign Affairs at Havre on April 29, 1916, the following declaration: 'Referring on one hand to the agreements with Belgium of April 23-24, 1884, February 5, 1895, and December 23, 1908, and on the other hand to the note handed on September 10, 1914, to the Belgian Government by the Minister of Great Britain on the subject of the Congo as well as to the declaration of the Powers guarantors of the independence and neutrality of Belgium on February 14, 1916, the Government of the French Republic declares that it will lend its aid to the Belgian Government at the time of the peace negotiations with the view of maintaining the Belgian Congo in its present territorial status and of having attributed to this colony a special indemnity for the losses incurred in the course of the war.' On the same day, the British and Russian representatives at Sainte Adresse stated that their Governments adhered to this declaration, and the Italian and Japanese representatives that Italy and Japan approved the French note."—H. A. Gibbons, *New map of Africa*, pp. 165-171.

1920.—Post-bellum addition of territory.—
"By a decision of the Supreme Council, made public

early in March, German East Africa has been divided between Great Britain and Belgium; of the total area of 384,000 square miles Great Britain received 366,000; the two northwestern provinces of Ruanda and Urundi were assigned to Belgium. Theoretically these assignments were made under the mandatory system."—E. D. Graper and H. J. Carmen (*Political Science Quarterly*, Sept., 1920, p. 16).

1921.—Plans for Belgian Congo at the colonial conference at Brussels.—Maurice Nippens appointed governor.—"A colonial conference was held in Brussels on Dec. 18, at which King Albert made an important speech, urging the improvement of health measures in the Belgian Congo. He referred to 'the extraordinary results which the Americans and Brazilians have achieved by good methods in districts even more unhealthy than Africa.' Belgium must modernize the Congo, he

declared, and develop for the good of the black population and for the benefit of civilized nations all the wealth of its soil and subsoil. King Albert has appointed Maurice Nippens, Governor of East Flanders, to be Governor General of the Congo."—*Times Current History*, February, 1921, p. 316.

BELGIUM

Geographic description.—A kingdom of north-west Europe, "Belgium (La Belgique) is situated between $49\frac{1}{2}^{\circ}$ and $51\frac{1}{2}^{\circ}$ N., that is to say, between the parallels of the island of Guernsey and of London. It is bordered on the west by the North sea which separates it from England, on all other sides there are land frontiers; towards the Netherlands on the north, Germany and the grand duchy of Luxemburg on the east, and France on the south. The short sea-coast, extending for only 42 miles, is washed by a sea so shallow that the depth does not exceed five fathoms until at least five miles from the shore. The shore itself is entirely composed of sand, very low and uniform, but suitable for the establishment of sea-side watering places; it is separated by a line of dunes from the low plain of the interior. From the dunes the land rises gradually towards the south-east, but to the north the surface is absolutely flat throughout the greater part of the provinces of Flanders, Antwerp, and Limburg. In the centre nearly parallel undulations of the ground separate the tributaries of the Scheldt; and the surface exceeds 600 feet in elevation at a few points along the left bank of the Sambre and Meuse. South-east of the line formed by these two rivers the land becomes more broken and picturesque, rising to the high plateau of the Ardennes with a maximum elevation of 2,230 feet, and sinking again on the southern frontier to about 1,000 feet above the sea."—J. du Fief, *Belgium (International geography, pp. 223-224)*.—It has an area of 11,373 sq. miles and (in 1919) a population of 7,577,027.—See also CANALS: Principal European canals: Belgium; NETHERLANDS: Map.

Resources.—Coal is the chief source of wealth in Belgium and the deposits extend over nearly one-twentieth of the land. Other minerals are produced such as iron, lead, copper, zinc, etc., but the output is not large. Agricultural products are of minor importance, though rye and beets are extensively grown. Stock-raising is actively carried on and animals are one of the important exports of the country. Belgium's chief source of prosperity lies in her manufacturing which is large and varied. The textile industries rank first (linen, cotton and woolen); the metal industry follows close behind. Belgium is famous for its carpets, lace, lawn, damask and porcelainware.

Ancient and medieval period (B.C. 6th century—A.D. 13th century).—Early races.—Empire of

Charlemagne.—Treaty of Verdun.—Lack of unity.—Growth of feudalism.—French domination.—Development of the communes.—About five hundred years before Christ the Celts invaded what is today known as Belgium, and subjugated the Ligurians who inhabited the country. The Germanic tribes settled in the country some centuries later (about A.D. 200). Thus, the Belgians of today are descended from Celtic and Germanic tribes. With the departure of the Romans, who, until about the fifth century A.D. held dominion over the country, the Franks spread over Belgium, particularly along the Scheldt and the Lys. In close proximity with the Celts the Germans were soon merged into the population. With no geographical and hardly any other sort of barrier separating them, the difference between the two races is barely perceptible; the two peoples remain face to face, the Walloons of today, designated Walas many centuries ago (about A.D. 600) by the Germans, and the Flemings, the descendants of the Franks. With the beginning of the sixth century (about A.D. 506) the Franks under King Clodovech [Clovis] conquered Northern France and took possession of the country inhabited by the Burgundians and the West Goths, whom they had defeated. The earlier kings of the Merovingian dynasty, such as Clodovech and Clodion, were powerful leaders, but the successors of the same line were unable to combat their intriguing diplomats and ministers with the result that one, Pepin, placed himself upon the throne (751) and founded the new dynasty, the Carolingian line. [See also FRANKS: 481-511.] "The most famous of the Carolingians is Charles the Great, who re-established the old Roman Empire (800) and who, by successful campaigns, succeeded in extending his domination over the territory lying between the river Elbe, the Bohemian Mountains, and the Raab on the east, the sea on the west, and the North Sea, and the Garigliano River in Italy and the Ebro River in Spain on the south."—L. van der Essen, *Short history of Belgium*, p. 12.—With the death of Charles the Great (814) the mighty empire crumbled as a result of internal troubles and the weakness of his son, Emperor Louis. Then followed civil war between the three sons of Louis which led to the famous treaty of Verdun (843) (q.v.).—See also BELGAE; FLANDERS; FRANKS; LIÈGE; LORRAINE; NERVII; NETHERLANDS.

"The empire created by Charles the Great was divided into three parts: the central part, including

the largest portion of Belgium, Holland, Italy, and the eastern part of France, was allotted to Lotharius, together with the title of Emperor; the western part of the empire, embracing the largest part of France, and Flanders to the west of the Scheldt, became the share of Charles; the eastern part, which included nearly the whole of Germany and certain parts of Austria-Hungary, was given to Louis. The Treaty of Verdun [843] practically cut the territory of Belgium into two parts, separated by the Scheldt, and gave each of them to a different ruler. These two sections of Belgium remained separated during the Middle Ages, and were not reunited until six centuries later. After the death of Emperor Lotharius (855) the northern part of his central territory, located between the North Sea and the Jura Mountains, was given to one of his sons, Lotharius II. That section which included the entire eastern part of Belgium to the Scheldt embraced peoples of very different race and origin: Frisians, Franks, Alamans, Walloons. As it was impossible to name the territory after its inhabitants—they were of too many different origins—it was named after its sovereign: *regnum Lotharii* 'Lotharingia,' 'the realm of Lotharius.' In 870 the Treaty of Meerssen [Mersen], whereby Charles, King of France, and Louis, King of Germany, divided between them the realm of Lotharius II, ended the existence of that state. The second Treaty of Verdun in 879 finally settled the status of Lotharingia: the boundary between France and Germany was declared to be the river Scheldt, and the whole of Lotharingia was incorporated in Germany. Of course, all the parts of the former empire of Charles the Great were once again united by the Emperor Charles the Stout, but after all kinds of internal struggles, Lotharingia was again—and this time for many centuries—annexed to Germany in 925. [See VERDUN, TREATY OF; FRANKS; GERMANY: 800 to 881.] Belgium is thus divided into two tracts by the Scheldt: the western part, Flanders, belonging to France and politically influenced by that country; the eastern part, Lotharingia, which was a dependency of Germany. . . . Thus, at the beginning of the feudal system, there existed no political and no linguistic unity in Belgium. Moreover, although Flanders formed a politically united body, Lotharingia was subdivided into several small principalities: the duchy of Brabant, including the actual provinces of Brabant and Antwerp, the county of Limburg, the county of Namur, the duchy of Luxemburg, the county of Hainaut, and two ecclesiastical principalities, Cambrai and Liège. [See ANTWERP; and LUXEMBURG.] The absence of political unity was a consequence of the new political constitution of most of the countries of Western Europe in the tenth century—of feudalism, so called. In place of the former despotic and centralized power of the King there was now to be found the locally asserted rule of dukes, counts, viscounts, etc. These public officers who, in the ninth century, were still subordinate agents of the King, without any other power than that delegated to them by their master, had succeeded, partly through the weakness of the heirs of Charles the Great and partly on account of the invasions of the Normans in the ninth century and the incursion of the Hungarians in the tenth, in grasping more firmly their delegated powers and in making their military, political, and financial perquisites hereditary. Thanks to the custom whereby the King granted them a domain, called *beneficium*, as a reward for their services or to insure their loyalty, they had succeeded in getting a strong political foothold in their respective provinces, and had continuously developed their

possessions and their influence. In the tenth century the dukes and counts, formerly officers of the King, had won for themselves an independent and hereditary position. The kingdom was now everywhere broken up into small principalities, practically autonomous, where the King no longer exercised his power and where the people were now dominated by local dynasties. The new political organization, called feudalism, existed, of course, in Belgium also, and contributed in a large measure to the complete absence of political and national unity throughout the country. . . . From the middle of the twelfth century on, the national life of the eastern part of Belgium displayed more and more cohesion and individuality; little by little it broke down the geographical barrier of the Scheldt that the Treaty of Verdun had erected between Lotharingia and Flanders. Meanwhile the western part of Belgium, the county of Flanders, had developed also in its way. Assigned by the Treaty of Verdun to the kingdom of France, Flanders did not seek a separation from a country to which it was geographically attached and on whose territory were to be found the seats of its bishoprics and most of its monasteries. The political power of the house of Flanders dates from the time of Count Baldwin I, called Baldwin of the Iron Arm (879), an adventurous ruler, who violently took the daughter of the King of France, his lord, and made her his wife, notwithstanding the vehement protest of her royal father. . . . Baldwin II (910) enlarged his domain by conquering the wealthy regions of Walloon-Flanders and Artois and formed an alliance with England by marrying an Anglo-Saxon princess. Count Arnulf (918) took the title of marquis and tried—though vainly—to overpower the Duke of Normandy, who checked his advance in the south and with it the extension of Flemish conquest beyond the river Canche. Effectively blocked in their efforts to extend their power in the south, the Flemish counts next turned their attention to the north and the east. . . . [See FLANDERS: 863.] By the conquest of the county of Alost, Count Baldwin V was enabled to cross the Scheldt and to advance into Lotharingian territory. The marriage of his son with a princess of Hainaut, resulted in uniting both Flanders and Hainaut under the same dynasty. Here again the barrier of the Scheldt, broken by the Treaty of Verdun, was broken down and for the first time political ties were established on both sides of the Scheldt, between the two parts of Belgium. Coincident with the first sign of a tendency to union between Eastern and Western Belgium, Flanders began to come into closer contact with foreign countries and powers. As the son of Baldwin V had married the daughter of William the Conqueror, Duke of Normandy, many Flemish troops took part in the conquest of England by the Normans (1066), and these remained in the British Isles for purposes of colonization. Diplomatic and commercial relations between Flanders and England were the happy result. . . . In the twelfth century, however, the political expansion of Flanders came to a standstill. . . . A new epoch opens with the twelfth century in the history of Belgium. The era is frequently called the 'Time of the Communes,' because the internal political life of the country, from then on, was dominated by the development of the free cities (communes) and of their municipal institutions. And it has been said that 'in the part played by the cities since the twelfth century lies the best of the history of the Netherlands.' Until the rise of the communes, only two classes of people, the noblemen and the priests, were given any recognition. There remained, of

course, the peasant farmers, but they had no political or social power. After the twelfth century, a new class sprang into existence—the burghesses (bourgeois, burgers), the citizens of the free cities—and the rise of that class exerted a tremendous influence on the political and social development of the nation. To the tyranny of feudalism it opposed the spirit of personal and collective freedom, and the social construction of the nation was materially influenced by the introduction of the new elements it represented. The origin and development of the communes was mainly due to economic conditions: the Belgian cities of the Middle Ages were the daughters of trade and industry.

“This remarkable development of trade and industry was mainly responsible for the origin and growth of the communes. . . . In this manner the cities of Bruges, Ghent, Brussels, Louvain, Liège,

soon began to meddle in politics and to become political organizations as well. . . . [See also *GUILDS: Medieval.*] The commune possessed political and judicial autonomy and its inhabitants were personally free. . . . Although the commune owed certain duties to the lord, it had also, as a politically autonomous body, some important rights. . . . As the commune exercised the right of life and death over its members, it erected as symbols of that right the pillory and the gallows, generally at the gate or outside of the city wall. . . . The existence of the communes exerted a powerful influence on the internal politics of the feudal lords of Belgium. The latter were forced to take the communes more and more into account and to change their political attitude in accordance with the wishes of the burghesses. . . . As a matter of fact, war was no longer possible without the consent of the communes, and it resulted, there-

CLOTH HALL, YPRES
Before destruction in 1915

Malines, etc., were born, for it is an interesting point of Belgian history that nearly all the cities originated during the Middle Ages, very few of them dating back to the Roman times. Those colonies of merchants and craftsmen grouped together in professional and religious associations were called 'guilds,' and introduced an entirely new spirit among the people of the growing town. The unfree population dependent upon the convent, the church, or the castle had no means of changing its conditions of life, bound as it was by the numerous ties of feudal and other obligations. But the traders had to secure for themselves a certain degree of liberty, safety, and autonomy. The feudal régime or the rules of the manor were intolerable to them. The operation of the system was too tyrannous; it acted too much as a restraint on private liberty and would have rendered the free development of commercial and industrial enterprises impossible. [See *COMMERCE: Medieval: 8th-16th centuries.*] The guilds, there-

fore, that the burghesses, if in disagreement with their lord, instead of assisting him, appealed to foreign rulers and fought against their own prince. . . . No less important was the influence they exerted—mainly during the thirteenth century—in the development of the economic, industrial, social, intellectual, and artistic life of the country. . . . Toward the middle of the thirteenth century Bruges was enjoying trade relations with England, Normandy, Gascony, Spain, Provence, and the Hanscatic cities. . . . At the time of the communes manufacture was even more important than trade. . . . There remains the city of Liège (q. v.) in Eastern Belgium. This was a city of priests, the residence of the bishop-prince. It was filled with churches, convents, and chapels. The land was owned largely by religious communities. But the priests were more numerous than the burghesses. There was no thought here of industry until the end of the Middle Ages, when this part of the country became the seat of collieries and ironworks. . . . Under the influence of such commercial and indus-

trial conditions as we have recited, the life of the country people and the control of the soil were entirely transformed."—L. van der Essen, *Short history of Belgium*, pp. 17-20, 23-25, 36, 39-48.

1297-1477.—**Hundred Years' War.**—**French loss of influence.**—Added to Austrian possessions by marriage.—"In 1297 a fresh treaty was concluded between Edward and Gui [or Guy, inquisitor of Languedoc], and Edward took the field in Flanders at the head of an English army, but no great fighting followed. The war between France and Flanders was suspended by an armistice, and a treaty of peace concluded between England and France deprived Gui of English support in his final contest with Philippe le Bel. . . . Commercial interests made the citizens of Flanders eager to side with England; but Louis de Nevers, Count of Flanders, remained true to his feudal duty to the French king, and did not hesitate to face ruin in opposing Edward. The first contest of the Hundred Years' War took place on the soil of the Low Countries, on the 11th of November, 1337, when English soldiers flung themselves into the island of Cadzand [Kadzand], and cut in pieces the Flemish troops placed there to defend the coast. In the following July, Edward, escorted by four hundred ships, sailed up the Scheldt, and disembarked at Antwerp. . . . Supported, possibly instigated, by the Flemish burghers, Edward III assumed the title and arms of King of France, in Ghent, on the 26th of January, 1340, on the *Marché du Vendredi*, the city's historic square, where he received the homage of the municipalities of the three great towns of Flanders, and, his hand on the Bible, swore to maintain their rights and independence. Edward III remained faithful to the Flemish, and their country profited by the victories gained by England over France in the Hundred Years' War. . . . The ties which bound Belgium to France grew weaker and more weak as disasters swept over France during the Hundred Years' War [see FRANCE: 1337-1360]. At the same time the lesser principalities in Belgium became merged in the greater ones, and the line of demarcation traced at Verdun was gradually blotted out. In the fourteenth century the older dynasties died out in the direct lines, and their states passed by inheritance to three foreign houses. The House of Luxembourg became ruler of Brabant, while retaining Luxembourg; Bavaria, ruler of Holland, Zealand, Hainaut, and Liège; and Burgundy, of Flanders and Artois. . . . By these changes the work of centuries was completed. A new state appeared on the map between France and Germany, not only precursor, but direct and legitimate ancestor of the modern kingdoms of Belgium and Holland. The political organization created by the Burgundian dukes in Belgium remained the basis of that country's national institutions until the end of the old régime. Amidst the changes of kingdoms and dynasties Belgium was neither absorbed nor annexed, until the French revolution, and then her annexation to France was but momentary. By the marriage of Mary of Burgundy with Maximilian of Austria the sceptre of Belgium passed into the hands of the Hapsburgs. It was as heirs of Burgundy that the Kings and Emperors of Spain and Austria ruled over the Low Countries."—J. de C. MacDonnell, *Belgium, her kings, kingdom and people*, pp. 28-35.—See also BURGUNDY.

1566.—**Riot of image breakers in Antwerp.** See NETHERLANDS: 1566.

17th century.—**Historiography.** See HISTORY: 24.

1647-1648.—**Battle of Lens.**—Gradual loss of territory by France.—Through the negligence and incompetence of the generals in charge, France was losing ground in the Netherlands. Condé relieved Lens which had been besieged by the enemy under the Archduke Leopold. It was, although hard-won, a decisive victory. See NETHERLANDS: 1648.

1648.—**Spanish Netherlands separated from the United Provinces (Netherlands).**—About the year 1648 the history of the Catholic, or Spanish Netherlands became, by the recognition of the independence of the United Provinces, entirely separated from the history of their Protestant neighbors. It has been considered advisable, therefore, to give the Southern Netherlands a separate record, and, in spite of its possession by Spain, Austria and France in turn, to classify this area under the title which the provinces assumed when their own independence was achieved, namely, Belgium. The history of those provinces prior to 1648 will be found under Netherlands.

1667.—**Claims and conquests of Louis XIV.**—**War of the Queen's Rights.**—In 1660 Louis XIV, king of France, was married to the Infanta of Spain, Maria Theresa, daughter of Philip IV, who solemnly renounced at the time, for herself and her posterity, all rights to the Spanish crown. The insincerity and hollowness of the renunciation was proved terribly at a later time by the long "war of the Spanish succession." Meantime Louis discovered other pretended rights in his Spanish wife on which he might found claims for the satisfaction of his territorial greed. These rested on the fact that she was born of her father's first marriage, and that a customary right in certain provinces of the Spanish Netherlands gave daughters of a first marriage priority of inheritance over sons of a second marriage. At the same time, in the laws of Luxemburg and Franche-Comté, which admitted all children to the partition of an inheritance, he found pretext for claiming, on behalf of his wife, one fourth of the former and one third of the principality last named. Philip IV of Spain died in September, 1665, leaving a sickly infant son under the regency of an incapable and priest-ruled mother, and Louis began quickly to press his claims. Having made his preparations on a formidable scale, he sent forth in May, 1667, to all the courts of Europe, an elaborate "Treatise on the Rights of the Most Christian Queen over divers States of the monarchy of Spain," announcing at the same time his intention to make a "journey" in the Catholic Netherlands—the intended journey being a ruthless invasion, in fact, with 50,000 men, under the command of the great marshal-general, Turenne. The army began its march simultaneously with the announcement of its purpose, crossing the frontier on May 24. Town after town was taken, some without resistance and others after a short, sharp siege, directed by Vauban, the most famous among military engineers. Charleroi was occupied on June 2; Tournay surrendered on the 24th; two weeks later Douai fell; Courtrai endured only four days of siege and

Oudenarde but two; Lille was a more difficult prize and held Turenne and the king before it for twenty days. "All Walloon Flanders had again become French at the price of less effort and bloodshed than it had cost, in the Middle Ages, to force one of its places. . . . September 1, the whole French army was found assembled before the walls of Ghent." But Ghent was not assailed, the French army being greatly fatigued and much reduced by the garrisoning of the conquered places. Louis, accordingly, returned to Saint-Germain, and Turenne, after taking Alost, went into winter quarters. Before the winter passed great changes of circumstance had occurred. The Triple Alliance of England, Holland and Sweden had been formed, Louis had made his secret treaty at Vienna with the emperor, for the partitioning of the Spanish dominions, and his further "journey" in the Netherlands was postponed.—H. Martin, *History of France: Age of Louis XIV.* (tr. by M. L. Booth), v. 1, ch. 4.

1745.—War of the Austrian succession; Battle of Fontenoy.—French conquests.—In the spring of 1745, while events in the second Silesian War were still threatening to Frederick the Great (see AUSTRIA: 1744-1745), his allies, the French, though indifferent to his troubles, were doing better for themselves in the Netherlands. They had given to Marshal de Saxe, who commanded there, an army of 76,000 excellent troops. "As to the Allies, England had furnished her full contingent of 28,000 men, but Holland less than half of the 50,000 she had stipulated; there were but eight Austrian squadrons, and the whole body scarcely exceeded 50,000 fighting men. The nominal leader was the young Duke of Cumberland, but subject in a great measure to the control of an Austrian veteran, Marshal Königsegg, and obliged to consult the Dutch commander, Prince de Waldeck. Against these inferior numbers and divided councils the French advanced in full confidence of victory, and, after various movements to distract the attention of the Allies, suddenly, on the 1st of May, invested Tournay. . . . To relieve this important city, immediately became the principal object with the Allies; and the States, usually so cautious, nay, timorous in their suggestions, were now as eager in demanding battle. . . . On the other hand, the Mareschal de Saxe made most

skilful dispositions to receive them. Leaving 15,000 infantry to cover the blockade of Tournay, he drew up the rest of his army, a few miles further, in an excellent position, which he strengthened with numerous works; and his soldiers were inspired by the arrival of the King and Dauphin, who had hastened from Paris to join in the expected action. The three allied generals, on advancing against the French, found them encamped on some gentle heights, with the village of Antoin and the river Scheldt on their right, Fontenoy and a narrow valley in their front, and a small wood named Barré on their left. The passage of the Scheldt, and, if needful, a retreat, were secured by the bridge of Calonne in the rear, by a tête de pont [bridge-head], and by a reserve of the Household Troops. Abbatis were constructed in the wood of Barré; redoubts between Antoin and Fontenoy; and the villages themselves had been carefully fortified and garrisoned. The narrow space between Fontenoy and Barré seemed sufficiently defended by cross fires, and by the natural ruggedness of the ground; in short, as the French officers thought, the strength of the position might bid defiance to the boldest assailant. Nevertheless, the Allied chiefs, who had already resolved on a general engagement, drove in the French pickets and outposts on the 10th of May, New Style [13 days ahead of Old Style], and issued orders for their intended attack at daybreak. . . . At six o'clock on the morning of the 11th, the cannonade began. The Prince of Waldeck, and his Dutch, undertook to carry Antoin and Fontenoy by assault, while the Duke of Cumberland, at the head of the British and Hanoverians, was to advance against the enemy's left. His Royal Highness, at the same time with his own attack, sent General Ingoldsby, with a division, to pierce through the wood of Barré, and storm the redoubt beyond it." Ingoldsby's division and the Dutch troops were both repulsed, and the latter made no further effort. But the British and Hanoverians, leaving their cavalry behind and dragging with them a few field pieces, "plunged down the ravine between Fontenoy and Barré, and marched on against a position which the best Marshals of France had deemed impregnable, and which the best troops of that nation defended. . . . Whole ranks of the British were swept away, at once, by the murderous fire of the batteries on their left and right. Still did their column, diminishing in numbers not in spirit, steadily press forward, repulse several desperate attacks of the French infantry, and gain ground on its position. . . . The battle appeared to be decided: already did Marshal Königsegg offer his congratulations to the Duke of Cumberland; already had Mareschal de Saxe prepared for retreat, and, in repeated messages, urged the King to consult his safety and withdraw, while it was yet time, beyond the Scheldt." The continued inactivity of the Dutch, however, enabled the French commander to gather his last reserves at the one point of danger, while he brought another battery to bear on the head of the advancing British column. "The British, exhausted by their own exertions, mowed down by the artillery in front, and assailed by the fresh troops in flank, were overpowered. Their column wavered—broke—fell back. . . . In this battle of Fontenoy (for such is the name it has borne), the British left behind a few pieces of artillery, but no standards, and scarce any prisoners but the wounded. The loss in these, and in killed, was given out as 4,041 British, 1,762 Hanoverians, and only 1,544 Dutch; while on their part the French likewise acknowledged above 7,000." As the consequence

of the battle of Fontenoy, not only Tournay, but Ghent, likewise, was speedily surrendered to the French. "Equal success crowned similar attempts on Bruges, on Oudenarde, and on Dendermonde, while the allies could only act on the defensive and cover Brussels and Antwerp. The French next directed their arms against Ostend, . . . which . . . yielded in fourteen days. . . . Meanwhile the events in Scotland [the Jacobite rebellion—see SCOTLAND: 1745-1746] were compelling the British government to withdraw the greater part of their force; and it was only the approach of winter, and the retreat of both armies into quarters, that obtained a brief respite for the remaining fortresses of Flanders."—Lord Mahon (Earl Stanhope), *History of England*, 1713-1783, v. 3, ch. 26.

1746-1747.—War of the Austrian Succession: French conquest of the Austrian provinces.—Humiliation of Holland.—Stadtholdership restored.—"In the campaign in Flanders in 1746, the French followed up the successes which they had achieved in the previous year. Brussels, Antwerp, Mons, Charleroi, Namur, and other places successively surrendered to Marshal Saxe and the Prince of Conti. After the capture of Namur in September, Marshal Saxe, reuniting all the French forces, attacked Prince Charles of Lorraine at Raucoux [or Roucoux], between Liège and Viset, and completely defeated him, October 11; after which both sides went into winter quarters. All the country between the Meuse and the sea was now in the power of France, Austria retaining only Luxemburg and Limburg. . . . Ever since the year 1745 some negotiations had been going on between France and the Dutch for the re-establishment of peace. The States-General had proposed the assembling of a Congress to the Cabinet of Vienna, which, however, had been rejected. In September 1746, conferences had been opened at Breda, between France, Great Britain, and the States-General; but as Great Britain had gained some advantages at sea, the negotiations were protracted, and the Cabinets of London and Vienna had endeavoured to induce the Dutch to take a more direct and active part in the war. In this state of things the Court of Versailles took a sudden resolution to coerce the States-General. A manifest was published by Louis XV. April 17th 1747, filled with those pretexts which it is easy to find on such occasions: not, indeed, exactly declaring war against the Dutch Republic, but that he should enter her territories 'without breaking with her'; that he should hold in deposit the places he might conquer, and restore them as soon as the States ceased to succour his enemies. At the same time Count Löwendahl entered Dutch Flanders by Bruges, and seized in less than a month Sluys, Ysendick, Sas de Gand, Hulst, Axel, and other places. Holland had now very much declined from the position she had held a century before. There were indeed many large capitalists in the United Provinces, whose wealth had been amassed during the period of the Republic's commercial prosperity, but the State as a whole was impoverished and steeped in debt. . . . In . . . becoming the capitalists and money-lenders of Europe, they [the Dutch] had ceased to be her brokers and carriers. . . . Holland was no longer the entrepôt of nations. The English, the Swedes, the Danes, and the Hamburgers had appropriated the greater part of her trade. Such was the result of the long wars in which she had been engaged. . . . Her political consideration had

dwindled equally with her commerce. Instead of pretending as formerly to be the arbiter of nations, she had become little more than the satellite of Great Britain; a position forced upon her by fear of France, and her anxiety to maintain her barriers against that encroaching Power. Since the death of William III., the republican or aristocratic party had again seized the ascendancy. William III.'s collateral heir, John William Friso, had not been recognised as Stadtholder, and the Republic was again governed, as in the time of De Witt, by a Grand Pensionary and greffier. The dominant party had, however, become highly unpopular. It had sacrificed the army to maintain the fleet, and the Republic seemed to lie at the mercy of France. At the approach of the French, consternation reigned in the provinces. The Orange party raised its head and demanded the re-establishment of the Stadtholdership. The town of Veere in Zealand gave the example of insurrection, and William IV. of Nassau-Dietz, who was already Stadtholder of Friesland, Gröningen and Gelderland, was ultimately proclaimed hereditary Stadtholder, Captain-General and Admiral of the United Provinces. William IV. was the son of John William Friso, and son-in-law of George II., whose daughter, Anne, he had married. The French threatening to attack Maestricht, the allies under the Duke of Cumberland marched to Lawfeld in order to protect it. Here they were attacked by Marshal Saxe, July 2nd 1747, and after a bloody battle compelled to recross the Meuse. The Duke of Cumberland, however, took up a position which prevented the French from investing Maestricht. On the other hand, Löwendahl [a Swedish general in the French service] carried Bergen-op-Zoom by assault, July 16th." The following spring (1748), the French succeeded in laying siege to Maestricht, notwithstanding the presence of the allies, and it was surrendered to them on May 7. "Negotiations had been going on throughout the winter, and a Congress had been appointed to meet at Aix-la-Chapelle, whose first conference took place April 24th 1748." The taking of Maestricht was intended to stimulate these negotiations for peace, and it undoubtedly had that effect. The treaties which concluded the war were signed the following October.—T. H. Dyer, *History of modern Europe*, v. 3, bk. 6, ch. 4.

1797-1815.—Conditions during the French Revolution and under Napoleon.—Belgium, or the former Austrian provinces and Liège, annexed to Holland, and the kingdom of the Netherlands created (1814).—"For these countries [Austrian Netherlands, Bishopric of Liège, and the old United Provinces] the French occupation had been not a mere episode, but a profound transformation. It had swept clean the ground on which the political edifice of the nineteenth century was to be built. There were in the Low Countries before the Revolution provinces of very unequal importance, governed under old and dissimilar customs, some of them without political rights (the Belgian districts conquered by the Dutch). Society was divided into classes unequal before the law; all political power was in the

hands of certain families or privileged bodies; the central government was weak; religious liberty was not recognised. France had swept away all the privileges, all the customs, all the political bodies of the provinces. She had set up in their stead the French system—equality among the citizens, equality among the provinces, systematic division into departments, each provided with a complete system of public services. The old aristocratic and irregular system was gone; a new democratic society, with a centralized administration had been created in its stead. This new society has made the Netherlands of the nineteenth century. The French revolutionary *regime* has remained firmly rooted in the country; but French rule did survive the fall of Napoleon. The inhabitants had little liking for it, as it came to them in the form of the military blockade—death and ruin. As soon as the French armies withdrew French administration collapsed. The movement began with the arrival of the allied army at The Hague. . . . Belgian provinces and the Bishopric of Liège having no legitimate sovereigns were treated as vacant territory. The Allies being friendly to the Orange family, gave these lands to the kingdom of the Netherlands in order to strengthen it and put it in a position to resist attack until the powers could come to its aid. The kingdom was to serve as a barrier against France.”—C. 1830-1832.—Belgian revolt and acquisition of independence.—Dissolution of the kingdom of the Netherlands.—Creation of the kingdom of Belgium.—Siege of Antwerp citadel.—Constitution and government.—“In one sense the union” of Belgium with Holland, in the kingdom of the Netherlands created by the Congress of Vienna, “was defensible. Holland enjoyed more real freedom than any other Continental monarchy; and the Belgians had a voice in the government of the united territory. But, in another sense, the union was singularly unhappy. The phlegmatic Dutch Protestant was as indisposed to unite with the light-hearted Roman Catholic Belgian as the languid waters of the Saone with the impetuous torrent of the Rhone. Different as were the rivers, they met at last; and diplomatists probably hoped that Dutch and Belgians would similarly combine. These hopes were disappointed, and the two people, incapable of union, endeavoured to find independent courses for themselves in separate channels. The grounds of Belgian dislike to the union were intelligible. Belgium had a population of 3,400,000 souls; Holland of only 2,000,000 persons. Yet both countries had an equal representation in the States-General. Belgium was taxed more heavily than Holland, and the produce of taxation went almost entirely into Dutch pockets. The Court, which was Dutch, resided in Holland. The public offices were in Holland. Four persons out of every five in the public service at home were Dutchmen. The army was almost exclusively commanded by Dutchmen. Dutch professors were appointed to educate the Belgian youths in Belgian schools, and a Dutch director was placed over the Bank of Brussels. The Court even en-

deavoured to change the language of the Belgian race, and to substitute Dutch for French in all judicial proceedings. The Belgians were naturally irritated. . . . On the 2nd of June, the States-General were dissolved; the elections were peacefully concluded; and the closest observers failed to detect any symptoms of the coming storm on the political horizon. The storm which was to overwhelm the union was, in fact, gathering in another country. The events of July [at Paris] were to shake Europe to the centre. ‘On all sides crowns were falling into the gutter,’ and the shock of revolution in Paris was felt perceptibly in Brussels. Nine years before the States-General had imposed a mouture, or tax upon flour. The tax had been carried by a very small majority; and the majority had been almost entirely composed of Dutch members. On the 25th of August, 1830, the lower orders in Brussels engaged in a serious riot, ostensibly directed against this tax. The offices of a newspaper, conducted in the interests of the Dutch, were attacked; the house of the Minister of Justice was set on fire; the wine and spirit shops were forced open; and the mob, maddened by liquor, proceeded to other acts of pillage. On the morning of the 26th of August the troops were called out and instructed to restore order. Various conflicts took place between the soldiers and the people; but the former gained no advantage over the rioters, and were withdrawn into the Place Royale, the central square of the town. Relieved from the interference of the military, the mob continued the work of destruction. Respectable citizens, dreading the destruction of their property, organised a guard for the preservation of order. Order was preserved; but the task of preserving it had converted Brussels into an armed camp. It had placed the entire control of the town in the hands of the inhabitants. Men who had unexpectedly obtained a mastery over the situation could hardly be expected to resign the power which events had given to them. They had taken up their arms to repress a mob; victors over the populace, they turned their arms against the Government, and boldly despatched a deputation to the king urging the concession of reforms and the immediate convocation of the States-General. The king had received the news of the events at Brussels with considerable alarm. Troops had been at once ordered to march on the city; and, on the 28th of August, an army of 6,000 men had encamped under its walls. The citizens, however, represented that the entrance of the troops would be a signal for the renewal of the disturbances; and the officer in command in consequence agreed to remain passively outside the walls. The king sent the Prince of Orange to make terms with his insurgent subjects. The citizens declined to admit the prince into the city unless he came without his soldiers. The prince, unable to obtain any modification of this stipulation, was obliged to trust himself to the people alone. It was already evident that the chief town of Belgium had shaken off the control of the Dutch Government. The king, compelled to submit to the demands of the deputation, summoned the States-General for the 13th of September. But this concession only induced the Belgians to raise their demands. They had hitherto only asked for reforms; they now demanded independence, the dissolution of the union, and the independent administration of Belgium. The revolution had originally been confined to Brussels: it soon extended to other towns. Civic guards were organised in Liège, Tournay, Mons, Verviers, Bruges, and other places. Imitating the example

of Brussels, they demanded the dissolution of the union between Holland and Belgium. The troops, consisting of a mixed force of Dutch and Belgians, could not be depended on; and the restoration of the royal authority was obviously impossible. On the 13th of September the States-General met. The question of separation was referred to them by the king; and the Deputies leisurely applied themselves to its consideration, in conformity with the tedious rules by which their proceedings were regulated. Long before they had completed the preliminary discussions which they thought necessary the march of events had taken the question out of their hands. On the 19th of September fresh disturbances broke out in Brussels. The civic guard, attempting to quell the riot, was overpowered; and the rioters, elated with their success, announced their intention of attacking the troops, who were encamped outside the city walls. Prince Frederick of Orange, concluding that action was inevitable, at last made up his mind to attack the town. Dividing the forces under his command into six columns, he directed them, on the 23rd of September, against the six gates of the city. . . . Three of the columns succeeded, after a serious struggle, in obtaining possession of the higher parts of the city; but they were unable to accomplish any decisive victory. For four days the contest was renewed. On the 27th of September, the troops, unable to advance, were withdrawn from the positions which they had won. On the following day the Lower Chamber of the States-General decided in favour of a dissolution of the union. The crown of Belgium was evidently dropping into the gutter; but the king decided on making one more effort to preserve it in his family. On the 4th of October he sent the Prince of Orange to Antwerp, authorising him to form a separate Administration for the southern provinces of the kingdom, and to place himself at the head of it. . . . Arrangements of this character had, however, already become impossible. On the very day on which the prince reached Antwerp the Provisional Government at Brussels issued an ordinance declaring the independence of Belgium and the immediate convocation of a National Congress. . . . On the 10th of October, the Provisional Government, following up its former ordinance, issued a second decree, regulating the composition of the National Congress and the qualifications of the electors. On the 12th the elections were fixed for the 27th of October. On the 10th of November the Congress was formally opened; and on the 18th the independence of the Belgian people was formally proclaimed by its authority. . . . On the 4th of November the Ministers of the five great Continental powers, assembled in London at the invitation of the King of Holland, declared that an armistice should immediately be concluded, and that the Dutch troops should be withdrawn from Belgium. The signature of this protocol, on the eve of the meeting of the National Congress, virtually led to the independence of the Belgian people, which the Congress immediately proclaimed."—S. Walpole, *History of England from 1815*, v. 2, ch. 11.—It still remained for the Powers to provide a king for Belgium, and to gain the consent of the Dutch and Belgian governments to the territorial arrangements drawn up for them. The first difficulty was overcome in June, 1831, by the choice of Prince Leopold of Saxe-Coburg to be king of Belgium. The second problem was complicated by strong claims on both sides to the grand duchy of Luxemburg. The conference solved it by dividing the disputed territory between Belgium and Holland. The Belgians accepted the arrangement; the

king of Holland rejected it, and was coerced by France and England, who expelled his forces from Antwerp, which he still held. A French army laid siege to the citadel, while an English fleet blockaded the river Scheldt. After a bombardment of twenty-four days, December, 1832, the citadel surrendered; but it was not until April, 1839, the final treaty of peace between Belgium and Holland was signed.—C. A. Fyffe, *History of modern Europe*, v. 2, ch. 5.—"According to the Constitution of 1831 Belgium is 'a constitutional representative, and hereditary monarchy.' The legislative power is vested in the King, the Senate, and the Chamber of Representatives. The royal succession is in the direct male line in the order of primogeniture. By marriage without the King's consent, however, the right of succession is forfeited, but may be restored by the King with the consent of the two Chambers. No act of the King can have effect unless countersigned by one of his ministers, who thus becomes responsible for it. The King convokes, prorogues, and dissolves the Chambers. In default of male heirs, the King may nominate his successor with the consent of the Chambers."—*Statesman's year book*, 1920.—"In the event of a minority, or of the incapacity of the sovereign, the two houses are required to meet in a single assembly for the purpose of making provision for a regency. The powers of regent may not be conferred upon two or more persons jointly, and during the continuance of a regency no changes may be made in the constitution. If by any chance the throne should fall wholly vacant, the choice of a sovereign would devolve upon the legislative chambers, specially selected for the purpose, and deliberating in joint session. The civil list of the crown is fixed at the beginning of a reign. That of Leopold II., as established by law of December 25, 1865, was 3,300,000 francs, and that of the present sovereign, Albert I., is the same. The Council of Ministers consists of ten heads of executive departments. These, together with a variable number of ministers without portfolio, comprise the Council of State, an advisory body convened by the crown as occasion requires. All ministers are appointed, directly or indirectly, and all may be dismissed, by the king. All must be Belgian citizens, and no member of the royal family may be tendered an appointment. Ministers are all but invariably members of one or the other of the legislative houses, principally of the House of Representatives. Whether members or not, they are privileged to attend all sessions and to be heard at their own request. The houses, indeed, possess the right to demand their attendance. But no minister may vote, save in a house of which he is a member.

"Belgium is one of the few continental states in which the parliamentary system is thoroughly operative. At no point is the constitution more explicit than in its stipulation of the responsibility of ministers. Not only is it declared that the king's ministers are responsible; it is stipulated that 'no decree of the king shall take effect unless it is countersigned by a minister, who, by that act alone, renders himself responsible for it'; also that 'in no case shall the verbal or written order of the king relieve a minister of responsibility.' The House of Representatives is vested with the right to accuse ministers and to arraign them before the Court of Cassation; and the king may not pardon a minister who has been sentenced by this tribunal, save upon request of one of the two legislative chambers. A ministry which finds that it cannot command the support of a majority in the House of Representatives has

right to determine upon the dissolution of either of the houses, or of both. If after a general election there is still lack of harmony, the ministry, as would be the procedure in a similar situation in Great Britain, retires from office, the sovereign calls upon an opposition party leader to assume the premiership and to form a cabinet, and the remainder of the ministers are selected from the dominant parties by this official, in consultation with the king. By reason of the multiplicity of party groups in Belgium, the king is apt to be allowed somewhat wider latitude in the choice of a premier than is possible in Great Britain. The powers of the executive, exercised nominally by the king, but actually by the ministry, are closely defined in the constitution; and there is the stipulation, unusual in European constitutions, that the king shall possess no powers other than those which the constitution, and the special laws enacted under the constitution, confer explicitly upon

so explicit that the crown is left small discretion in the matter. The king, finally, is authorized to remit or to reduce the penalties imposed by the tribunals of justice, to coin money, to confer titles of nobility (which must be purely honorary), and to bestow military orders in accordance with provisions of law."—F. A. Ogg, *Governments of Europe*, pp. 535-538.

1830-1884.—Peaceful years of the kingdom of Belgium.—Political and economic progress.—Contest of Catholics and Liberals in Belgium.—“After winning its independence (1830) Belgium has also been free to work out its own career of prosperous development. King Leopold I, during his long reign showed himself the model of a constitutional sovereign in furthering its progress. The first railway on the continent was opened in 1835 between Brussels and Malines, and its railway system is now most complete. Its population between 1830 and 1880 increased by more than one-third, and now is the densest in all Europe, numbering 5,000,000 on an area only twice as large as Yorkshire. . . . When Napoleon III. seized on power in France all Belgians feared that he would imitate his uncle by seizing Belgium and all land up to the Rhine; but the close connection of King Leopold [brother of Prince Albert, the prince consort] with the English royal house and his skilful diplomacy averted the danger from Belgium. The chief internal trouble has been the strife between the liberal and clerical parties. In 1850 there were over 400 monasteries, with some 12,000 monks and nuns, in the land, and the Liberals made strenuous efforts for many years to abolish these and control education; but neither party could command a firm and lasting majority. In the midst of these eager disputes King Leopold I. died (1865), after seeing his kingdom firmly established in spite of ministerial crises every few months. His son Leopold II. has also been a constitutional sovereign. In 1867 the Luxemburg question seemed to threaten the Belgian territory, for Napoleon III. had secretly proposed to Bismarck that France should take Belgium and Luxemburg, as well as all land up to the Rhine, as the price of his friendship to the new German Confederation [see GERMANY: 1870 (Sept.-Dec.)]. . . . Again in 1870 the Franco-German war threw a severe strain on Belgium to guard its neutrality, but after Sedan this danger vanished. The strife between the liberal and clerical parties went on as fiercely in Belgium as in France itself, and after the rise and fall of many ministries the Liberals succeeded in closing the convents and gaining control over State education. . . . The electorate up to 1884 was limited to citizens paying 42 francs a year in direct taxes, but in 1884 it was extended by the clerical party acting for once in connection with the radicals.” (On the revised constitution of 1893 see below: 1892-1019.) “The politico-religious contest between Catholics and Liberals exists to a greater or less degree in all Catholic countries, and even in Protestant ones possessing, like Prussia, Catholic provinces; but nowhere is political life more completely absorbed by this antagonism than in Belgium, nowhere are the lines of the contest more clearly traced. . . . In order thoroughly to grasp the meaning of our politico-religious strife, we must cast a glance at its origin. We find this in the constitution adopted by the Congress after the Revolution of 1830. This constitution enjoins and sanctions all the freedom and liberty which has long been the privilege of England, and of the States she has founded

LEOPOLD II., KING OF THE BELGIANS

him. Under the conditions that have been explained, the king appoints all officials who are attached to the general administrative and foreign services, but other officials only in so far as is expressly authorized by law. He commands the forces by land and sea, declares war, and concludes peace. He negotiates treaties, with the limitation that treaties of commerce and treaties which impose a burden upon the state, or place under obligation individual Belgian citizens, take effect only after receiving the approval of the two houses; and with the further condition that no cession, exchange, or acquisition of territory may be carried through save by warrant of a law. The king promulgates all legislative measures, and he is authorized to issue all regulations and decrees necessary for the execution of the laws. In theory he possesses the power of the veto, but in the Belgian, as in parliamentary governments generally, there is no occasion for the actual exercise of this power. The king convokes, prorogues, and dissolves the chambers; though the provisions of the constitution relating to the legislative sessions are

in America and Australia. A free press, liberty as regards education, freedom to form associations or societies, provincial and communal autonomy, representative administration—all exactly as in England. How was it that the Congress of 1830, the majority of whose members belonged to the Catholic party, came to vote in favour of principles opposed, not only to the traditions, but also the dogmas of the Catholic Church? This singular fact is explained by the writings of the celebrated priest and author, Lamennais, whose opinions of that time exercised the greatest influence. Lamennais's first book, 'L'Essai sur l'indifférence en Matière de Religion,' lowered all human reasoning, and delivered up society to the omnipotent guidance of the Pope. This work, enthusiastically perused by bishops, seminarists, and priests, established the author as an unprecedented authority. When, after the year 1828, he pretended that the Church would regain her former power by separating herself from the State, retaining only her liberty, most of his admirers professed themselves of his opinion. . . . Nearly all Belgian priests were at that time Lamennaisians. They accepted the separation of Church and State, and, in their enthusiastic intoxication, craved but liberty to reconquer the world. It was thus that Catholics and Liberals united to vote for Belgium the constitution still in existence after a half-century. In 1832, Pope Gregory XVI., as Veuillot tells us, 'hurled a thunderbolt at the Belgian constitution in its cradle.' In a famous Encyclical, since incessantly quoted, the Pope declared, *ex cathedra*, that modern liberties were a plague, 'a delirium,' from whence incalculable evils would inevitably flow. Shortly afterwards, the true author of the Belgian constitution, Lamennais, having been to Rome in the vain hope of converting the Pope to his views, was repulsed, and, a little later, cast out from the bosom of the Church. The separation was effected. There was an end to that 'union' of Catholics and Liberals which had overthrown King William and founded a new political order in Belgium. It was not, however, till after 1838 that the two parties distinctly announced their antagonism. . . . The Liberal party is composed of all who, having faith in human reason and in liberty, fear a return to the past, and desire reforms of all sorts. . . . When Catholics are mentioned as opposed to Liberals, it is as regards their political, not their religious opinions. The Liberals are all, or nearly all, Catholics also; at all events by baptism. . . . The Catholic party is guided officially by the bishops. It is composed, in the first place, of all the clergy, of the convents and monasteries, and of those who from a sentiment of religious obedience do as they are directed by the bishop of the diocese and the Pope, and also of genuine Conservatives, otherwise called reactionists—that is to say, of those who consider that liberty leads to anarchy, and progress to communism. This section comprises the great mass of the proprietors and cultivators of the soil and the country populations. . . . We see that in Belgium parties are divided, and fight seriously for an idea; they are separated by no material, but by spiritual interests. The Liberals defend liberty, which they consider menaced by the aims of the Church. The Catholics defend religion, which they look upon as threatened by their adversaries' doctrines. Both desire to fortify themselves against a danger, non-existent yet, but which they foresee. . . . The educational question, which has been the centre of the political life of the country during the last two years [1880-1881] deserves expounding in detail. . . . Primary education was organized here in 1842,

by a law of compromise adopted by the two parties, thanks to M. J. B. Notbomb, one of the founders of the Belgian Constitution. . . . This law enacted that every parish should possess schools sufficient for the number of children needing instruction; but it allowed the 'commune' to adopt private schools. The inspection of the public schools and the control of the religious teaching given by the masters and mistresses, was reserved to the clergy. Advanced Liberals began to clamour for the suppression of this latter clause as soon as they perceived the preponderating influence it gave the priests over the lay teachers. The reform of the law of 1842 became the watchword of the Liberal party, and this was ultimately effected in July, 1879; now each parish or village must provide the schools necessary for the children of its inhabitants, and must not give support to any private school. Ecclesiastical inspection is suppressed. Religious instruction may be given by the ministers of the various denominations, in the school buildings, but out of the regular hours. This system has been in force in Holland since the commencement of the present [19th] century. Lay instruction only is given by the communal masters and mistresses; no dogmas are taught, but the school is open to the clergy of all denominations who choose to enter, as it is evidently their duty to do. This system, now introduced in Belgium, has been accepted, without giving rise to any difficulties, by both Protestants and Jews, but it is most vehemently condemned by the Catholic priesthood. . . . In less than a year they have succeeded in opening a private school in every commune and village not formerly possessing one. In this instance the Catholic party has shown a devotedness really remarkable. . . . At the same time in all the Churches, and nearly every Sunday, the Government schools have been attacked, stigmatized as 'écoles sans Dieu' (schools without God), to be avoided as the plague, and where parents were forbidden to place their children, under pain of committing the greatest sin. Those who disobeyed, and allowed their children still to frequent the communal schools, were deprived of the Sacraments of the Church. They were refused absolution at confession, and the Eucharist, even at Easter. All the schoolmasters and mistresses were placed under the ban of the Church, and the priests often even refused to pronounce a blessing on their marriage."—E. de Lavaley, *Political condition of Belgium* (*Contemporary Review*, Apr., 1882).

1835.—National bank established.—Money and banking system. See MONEY AND BANKING: Modern: 1822-1919.

1839-1914.—Perpetual neutrality.—"There were in 1914 three . . . states which occupied a peculiar position. They were the so called neutralized states, Belgium, Luxemburg and Switzerland. A neutralized state is one whose independence and integrity are guaranteed forever by international agreement. Such states may generally maintain armies but only for defense. They may never make aggressive war; nor may they make treaties or alliances with other states that may lead them into war. The reason why a state may desire to become neutralized is that it is weak, that its independence is guaranteed, that it has no desire or ability to participate in international affairs, in the usual struggles or competitions of states. The reasons why the great powers have consented to the neutralization of such states have differed in different cases. But the chief reason has been connected with the theory of the balance of powers, the desire to keep them as buf-

fers between two or more large neighboring states. . . . A neutralized state may . . . have an army and a navy and may build fortresses, as long as this is done for self-defense only, for a neutralized state is obliged to defend its neutrality if attacked, to the full extent of its powers. . . . Thus in 1914 Belgium and Switzerland had armies and military service, Luxemburg, however, was an anomaly, as the treaty of 1867 neutralizing her provided explicitly that she should not be allowed to keep any armed force. Under the circumstances Luxemburg could do nothing for the defense of her neutrality when invaded in August 1914. Belgium, however, could and did make a spirited, though ineffectual, resistance to the invader."—C. D. Hazen, *Fifty years of Europe, 1870-1919*, pp. 203-204.—"The collective wisdom of Europe at the time the Kingdom of Belgium was born denied it articulation in regard to international politics by prescribing a special and exclusive atmosphere for its orbit. It imposed a state of 'perpetual neutrality' on Belgium as the condition of its existence, and no one can say at this moment [1916] with absolute confidence when or how that fettering restraint is to be shaken off and got rid of. Belgium has never been a free agent. Her sovereignty has always been restricted by the condition imposed at her birth as a nation. . . . No one has been able to state authoritatively who originated the idea of imposing a condition of 'perpetual neutrality' upon Belgium. The London Conference had been six months in session, it had already fulminated its orders in 23 protocols, before the phrase made its first appearance in the Eighteen Articles of June, 1831. Those articles were the draft of a projected treaty which Belgium and Holland were summoned to accept at the command of the Powers. As a matter of fact, the Eighteen Articles were subsequently withdrawn, and replaced by the Twenty-four Articles of November, 1831, which were eventually embodied in the final treaty of April, 1839; but, in regard to the point before us, the substitution of one set of articles for the other made no difference, as both contained the clause declaring that Belgium should form 'a perpetually neutral state.' It was the introduction of a new principle into the constitution of independent self-governing States, and many have been the occasions since when the arguments and representations of the Foreign Offices of the guaranteeing Powers have revealed a very faulty acquaintance with their own handiwork. . . . The condition of neutrality as the ideal existence for a community had been brought prominently before the world at the close of the Napoleonic wars by the 'voluntary' declaration of the revived Swiss Republic that it intended to observe neutrality towards all countries. The Vienna Congress took note of that interesting declaration, but it must be remembered that Switzerland can at any moment repudiate her own declaration and announce to the world that she has changed her mind. She owes no one but herself an explanation, she has no scrupulous or unscrupulous guarantors to take into her account. That is the merit of a voluntary, self-imposed neutrality. But poor Belgium was robbed of her free will. . . . It became the ideal of Belgian statecraft to live up to the standard of 'perpetual neutrality.' No one has ever realised or sympathised with the painful efforts of the Belgian Government to steer a straight course as an impartial and perpetual neutral with regard to its neighbours and the rest of the world. . . . In fact, the Belgian Government had made of its perpetual neutrality a kind of fetich, before which the most evident national interests, and even

the dictates of common sense, had to be waived. Never did it clasp the feet of the false god more tenaciously than during the last forty-eight hours of the old system. Thus it was that the Belgian Government, when the great crisis came in August, 1914, held itself debarred from concerting any measures of co-operation with its friends until after the enemy had committed the first aggression and was advancing in force into the country. In plain words, the loyalty of Belgium to the principle of perpetual neutrality, which had been accepted 83 years before, gave the invader many points to the good at the outbreak of the struggle, and placed not only herself but her friends in a position of corresponding disadvantage and embarrassment. Indeed, that disadvantage at the start of the war would have proved positively disastrous to all but for General Léman's heroic defence of Liège. This peril had long been foreseen. The imposed neutrality of Belgium debarred her Government from taking those measures of timely precaution which an entirely independent state, unfettered in its own right of action, would certainly have done when Germany began to concentrate a large body of troops at Elsenborn at the beginning of July, 1914."—*En Vedette, Imposed neutrality of Belgium (Fortnightly Review, Apr., 1916)*.—By the terms of the peace treaties closing the World War this restraint of perpetual neutrality was removed.—See also NEUTRALITY: Present laws; DIPLOMATIC HISTORY: 35; 36.

1886-1909.—Labor conditions.—Insurance.—"Turning to the laws for the regulation of labour, and leaving the mining industry out of account, it may be said that Belgian labour legislation dates from an enquiry held in 1886, consequent upon industrial disturbances, 'to investigate the conditions of industrial labour in the kingdom, and to study any measures which might be adopted to improve them.' Since 1886 a number of measures have become law, partly by enactment and partly by royal decree, which have aimed at defining the relationship between employer and employed, and establishing public control over the conditions of labour. We need only deal here with a few of these. The truck system [see below for explana-

PALAIS DE JUSTICE, BRUSSELS

tion] and the payment of wages in public houses [saloons] were prohibited in 1887, and in 1889 the employment in factories of children under twelve years was forbidden, and the hours of labour were restricted to twelve per day for boys under sixteen, and for girls and women under twenty-one. It cannot be said that this was a drastic measure; but it had taken fifty years to bring public opinion even up to this level, for a bill having a somewhat similar purpose was introduced unsuccessfully as early as 1843. Since 1889 the hours of children and women under twenty-one years of age in textile factories have been further reduced—to sixty-six hours per week—and other reductions in the length of the working week, affecting particular trades, have been made. The law of 1889 also prohibited the occupation in factories of women for four weeks after confinement, and the night labour of women and young persons. In practice, however, the exceptions allowed to the latter prohibition are numerous, especially in the glass and sugar industries. Women under twenty-one years of age are excluded by this law from underground work in the mines. In 1903 a Workmen's Compensation Act was passed, giving industrial workers the right to claim compensation (not exceeding half the loss incurred) for injuries sustained in the prosecution of their work, from whatever cause. Prior to this no workman could claim any compensation unless he could prove that the injury was due to negligence on the part of the employer—a thing usually very difficult to do. In 1905 two additions were made to factory legislation. The first was a royal decree restricting the hours of work for children under thirteen to six per day, and the second, a law limiting the working days for all operatives to six per week, except where special exemptions are granted. As a matter of fact these exemptions are so numerous that the object of the law has been very largely defeated. This is a brief outline of the principal factory legislation, but there are other Acts dealing with matters of less importance, one, for instance, requiring the conditions of work and the basis of calculating piece wages, etc., to be written out, and put up in the factories, and one which deals with unhealthy or dangerous occupations. An Act may also be mentioned which sets forth the respective rights and duties of masters and employees. It will be seen from this list that there is nothing in the Belgian labour legislation of a very original nature. The legal provision made for the protection of labour and the regulation of industry is of comparatively recent date, and is considerably less than in Britain and certain other industrial countries. Moreover—if one may judge from the complaints heard in different regions—even the few laws which have been enacted are often somewhat laxly administered. Factory inspection, established in 1888, was reorganised in 1895, but there are too few inspectors to do the work efficiently. In 1905 there were only 22 provincial inspectors, in addition to about 6 officers attached to the central staff at Brussels. . . . An attempt must be made to explain why wages in Belgium are so much lower than in Britain. It is a matter which gravely affects the Belgian, since, though the cost of his food is somewhat less and his rent is a good deal less, these advantages do not compensate him for the great difference in the wage. Although he is comparatively well housed, his food is coarser and he has less scope for the satisfaction of individual tastes, and his clothing is both less elaborate and less adequate. He spends less (although a larger

proportion of his wage) on drink than does the British workman, and though his wages are much less, he must work considerably longer to earn them. What is the explanation of the low wages in Belgium? . . . The somewhat low efficiency of the Belgian workman is partly due to the very low level of general education in the country. It will be shown that probably about a quarter of the workmen can neither write nor read, and this illiteracy may be taken as the measure of their intellectual development, since we have no reason to suppose that their mental faculties have been unusually developed in other directions instead. Thus, generally speaking, they are less intelligent than the British workmen, less alert, less able to grasp a point quickly and clearly, more enslaved by routine. This is especially true in the Flemish provinces, where, except in Antwerp and Ghent, the standard of education is much lower than in the Walloon provinces. And this low standard operates against the efficiency of the Belgian workman in another way, by rendering technical instruction much less effective than it otherwise would be. . . . Another cause for the somewhat inferior efficiency of the Belgian is his low standard of living. In the case of families investigated by the writer whose wages were under 16s. 8d. [about \$4] a week, there was, upon the average, a deficiency of 26 per cent in the supply of protein, and of 14 per cent in that of fuel energy. These families, it must be remembered, were, for the most part, thrifty and respectable, spending but little money upon drink or other unnecessary objects. There is no doubt that there are hundreds of thousands of workmen in Belgium who are habitually under-nourished. As a well-known American economist has reminded us:—'What an employer will get out of his workmen will depend very much on what he first gets into him. Not only are bone and muscle to be built up and kept up by food, but every stroke of the arm involves an expenditure of nervous energy which is to be supplied only through the alimentary canal. What a man can do in twenty-four hours will depend very much on what he can have to eat in those twenty-four hours; or perhaps it would be more correct to say, what he has had to eat the twenty-four hours previous. If his diet be liberal, his work may be mighty. If he be under-fed he must under-work.' Another reason for the low wages in Belgium is that the workmen are not strenuous in demanding the full market value of their labour. They have for so long been accustomed to a low standard of comfort, that they have become reconciled to it, and do not strive actively to improve their positions. This is especially true of the Fleming, whose wages are, as a rule, much lower than those of the Walloon. His meagre education had done little or nothing to widen his horizon and general outlook; he lives in a state of inertia; he is willing to plod on as his father did before him, and it is difficult to persuade him to leave the beaten track. Told of the better labour conditions in Britain, of the shorter hours, and the higher pay, such men shrug their shoulders and reply, 'Ah, yes; but for us it is impossible.' Thus it is hard to organise them into strong trade unions. . . . Another cause, which has frequently been mentioned to the writer as in part accounting for the fact that the Belgian workman does not strenuously demand his full economic wage, is that the teaching and influence of the Catholic Church discourage such action. . . . One of the chief reasons why wages in Belgium are so low is that they are still largely fixed by individual instead of by collective bargaining, the

Trade Union movement being yet in its infancy, although it is now growing rapidly, as evidenced by the following figures. In 1891, according to M. Vandervelde's estimate, there were only 65,000 organised workmen in the whole country. In 1901 M. Varlez gave the number as 132,000, and in 1909 it had increased to about 200,000 or 16 per cent of the industrial population."—B. S. Rowntree, *Land and labour: lessons from Belgium*, pp. 81-100.—The "truck system" referred to above signifies the barter or actual exchange of goods for goods. It involves the practice of paying workmen by means of orders on certain stores, or in kind, instead of with money. This has been forbidden in Great Britain by the Truck Acts of 1831, 1887 and 1896. The employee must be paid in full, without reductions or any restriction placed upon his spending. "Public encouragement of workmen's insurance in Belgium began in 1851 with the enactment of a measure, modelled on a French law of the previous year, extending to friendly relief societies the advantages of official recognition. Other acts to stimulate the formation of such societies were passed in 1861 and 1887. The law at present covering the subject was passed June 23, 1894. It made provision for the first time for a state subvention in aid of sickness insurance organisations. Of 'registered' societies, which alone are entitled to share in this subvention, there were, in 1907, 3,300, with an aggregate membership of 400,000. Of unregistered societies, which are independent in their management and receive no public aid, there were at the same time about 800, with a membership of 50,000. In view of the fact that the wage-earners of Belgium number not fewer than 1,200,000, it is apparent that there is yet large room for sickness insurance extension. Since 1868 miners have been subject to compulsory insurance against accidents through special sickness insurance associations to whose funds both employers and employees contribute and the state and the provincial governments allow subsidies. On December 24, 1903, there was enacted a modern employers' liability law whose provisions were made applicable to workmen in all industries, including manufactures, trade, and agriculture, and to apprentices and foremen whose annual earnings amount to less than 2,400 francs. In many quarters there was demand for a thoroughgoing compulsory accident insurance scheme, to be supported by employers and employees. Such a plan failed to be adopted, but under closely regulated conditions employers are held pecuniarily liable for all accidents which take place in their service, save such as can be shown to have been occasioned by the negligence of employees. The maximum of compensation is one-half of the wages received. One of the principal services which the state has rendered the workman in Belgium is the creation of the present system of insurance against invalidity and old age. In 1850 there was established by law a State Annuity Fund (Caisse Générale d'Épargne et de Rétraite) into which any person over eighteen years of age might make payments for himself or others, thus procuring insurance for an immediate or a deferred life annuity. In 1865 the operation of the scheme was extended, and in 1869 the maximum amount of the annuity was fixed (where it remains) at 1,200 francs. In 1891 the government began to grant bounties in aid of annuities, and by an important law of May 10, 1900, amended in 1903, the principle of state subvention was definitely established, and for special appropriations from year to year was substituted a definite and permanent state subscription. The object of the

act of 1900 was to encourage thrift among the working-classes and to contribute in their behalf a fund from which the workman, upon attaining the age of sixty-five, may derive an annuity reaching a maximum of 360 francs, and, in the second place, to assure to workmen or workingwomen special grants of sixty-five francs a year when they are in need. To each franc which the worker lays by the government adds three-fifths of a franc, so that the individual who lays by fifteen francs will possess at the end of the year twenty-four francs. In other words, the state subscription to payments into the Annuity Fund amounts to sixty per cent. of the workman's deposits, up to fifteen francs a year. When the deposits are larger, the government contribution is proportionately smaller. When the depositor has to his credit a fund sufficient to constitute for him an annuity of 360 francs, premiums from the state cease entirely. Toward the expenses of this system the provinces and many communes make grants, and the national budget carries an appropriation of 15,000,000 francs annually. The number of deposits in 1906 was 2,224,727."—F. A. Ogg, *Economic development of modern Europe*, pp. 631-633.—See also SOCIAL INSURANCE: Details for various countries: Belgium: 1900-1904.

1886-1909.—Education.—"The student of a nation's social and economic development instinctively turns for guidance to her educational system. The history of education in Belgium is one of incessant dispute between religious and political parties, the question at issue being whether it should be controlled by the Church or by the State. The solution seems no nearer than it was fifty years ago, and, meanwhile, education itself suffers severely. The English people know something of what is called 'the religious difficulty' in schools, and bitter feelings have sprung up on either side, but they are mild compared with the antagonism roused in Belgium. In order to understand present conditions, the history of elementary education in Belgium must be briefly outlined. In 1830 the Catholics and Liberals united to throw off the Dutch yoke, but when this was done, their ways soon parted. That, no doubt, was inevitable, for the standpoints from which they viewed the question of education were and are fundamentally different. The contention of the Liberals, and in more recent times of the Socialists, is that education in elementary schools should be neutral in character so far as the teaching of religion is concerned, and that when paid for by public money it should be publicly controlled. That of the Catholics is expressed in an encyclical published in 1897 by Pope Leo XIII., according to which 'Not only must religion be taught to the children at certain hours, but all the rest of the instruction must exhale Christian piety as a perfume, and every kind of teaching, whatever may be its specific nature, must be penetrated and dominated by religion.' In the Belgian constitution, framed in 1830, it was enacted that any one should be at liberty to teach without restriction. The Catholics immediately took advantage of this privilege; and so active were they that ten years after Belgium was constituted a separate kingdom, nearly one-half of the schools (2284 out of 5189) were entirely maintained and managed by them, without taking into account the State-aided schools placed under their care. The Liberals, fearing that the clergy would 'monopolise the education of youth,' set on foot an agitation for direct and systematic intervention of the State in the matter of elementary instruction. Eventually, a compromise was agreed on in the law of 1842, by which

the Catholics accorded a large measure of authority to the State, while the Liberals agreed to the official intervention of the clergy. . . . The Education Act which they passed in 1879, called by the Catholics *la Loi de Malheur* [the law of misfortune], declared that public education must depend exclusively on the civil authority. In future no grants were to be given to any schools which did not submit to Government inspection and conform to certain prescribed conditions. . . . With the exception of Russia, Belgium is the only country in Europe which has no system of compulsory education inscribed on its statute books, though in some countries the law is disregarded. The Socialists and Liberals are strongly in favour of introducing a compulsory system, but they are steadfastly opposed by the Catholics, who maintain that such a proceeding would be hostile to the spirit of liberty so dear to the Belgian people. They also fear that to make education compulsory would be to introduce the thin end of the wedge of complete Government control of the schools."—B. S. Rowntree, *Land and labour: lessons from Belgium*, pp. 257-262.—However, each commune must have at least one primary school, for the support of which it is responsible, though subsidies are added by the state and provinces. There are a large number of private or free schools, mostly under ecclesiastical control. The secondary schools include many supported by the government, and higher education is supplied by the four universities, of which Ghent and Liège are state institutions, and Louvain and Brussels are free.—See also EDUCATION: Modern developments: 20th century: General education: Belgium; Workers' education: Belgium.

1891.—Commercial treaty with Germany renewed. See TARIFF: 1870-1900.

1892-1919.—Constitutional revisions.—A great agitation among the Belgian workingmen, ending in a formidable strike, in 1890, was only quieted by the promise from the government of a revision of the constitution and the introduction of universal suffrage. The Constituent Chambers, elected to perform the task of revision, were opened on July 11, 1892. The amended constitution was promulgated on September 7, 1893. It conferred the suffrage on every citizen twenty-five years of age or over, domiciled in the same commune for not less than one year, and not under legal disqualification. The new constitution was made especially interesting by its introduction of a system of cumulative or plural voting. One supplementary vote was conferred on every married citizen (or widower), thirty-five years or more of age, having legitimate issue, and paying at least five francs per annum house tax; also on every citizen not less than twenty-five years old who owned real property to the value of 2,000 francs, or who derived an income of not less than 100 francs a year from an investment in the public debt, or from the savings bank. Two supplementary votes were given to each citizen twenty-five years of age who had received certain diplomas or discharged certain functions which imply the possession of a superior education. The same citizen could accumulate votes on more than one of these qualifications, but none was allowed to cast more than three. On the adoption of the new constitution, the Brussels correspondent of the London *Times* wrote to that journal: "This article, which adds to manhood suffrage as it exists in France, Spain, Germany, Switzerland, the United States, and the Australian colonies, the safeguard of a double and triple suffrage accorded to age, marriage, and paternity, as well as to the possession of money saved

or inherited, or of a profession, will constitute one of the distinguishing marks of the new Belgian Constitution. As it reposes upon the just principle that votes must be considered in reference to their weight rather than to their numbers, it has had the effect of putting an immediate end to the violent political crisis which disturbed the country. It has been accepted without much enthusiasm, indeed, but as a reasonable compromise. The moderates of all classes, who do not go to war for abstract theories, think that it has a prospect of enduring." An attempt to introduce proportional representation along with the plural suffrage was defeated. The constitution of the Senate raised questions hardly less important than those connected with the elective franchise. Says the correspondent quoted above: "The advanced Radical and Socialist parties had proposed to supplement the Chamber, the political representation of the territorial interests of the country, by a Senate representing its economic interests. The great social forces—capital, labour, and science—in their application to agriculture, industry, and commerce, were each to send their representatives. It may be that this formula, which would have made of the Belgian Senate an Assembly *sui generis* in Europe, may become the formula of the future. The Belgian legislators hesitated before the novelty of the idea and the difficulty of its application. This combination rejected, there remained for the Senate only the alternative between two systems—namely, to separate that Assembly from the Chamber by its origin or else by its composition. The Senate and the Government preferred the first of these solutions, that is to say direct elections for the Chamber, an election by two degrees for the Senate, either by the members of the provincial councils or by specially elected delegates of the Communes. But these proposals encountered from all the benches in the Chamber a general resistance." The result was a compromise. The Senate was to consist of seventy-six members elected directly by the people, and twenty-six elected by the provincial councils, the term of each to be eight years. The Senators chosen by the councils were exempted from a property qualification; those popularly elected were required to be owners of real property yielding not less than 12,000 francs of income, or to pay not less than 1,200 francs in direct taxes. The legislature was empowered to restrict the voting for Senators to citizens thirty years of age or more. The members of the Chamber of Representatives were to be apportioned according to population and elected for four years, one half retiring every two years. The Senate and Chamber meet annually in November, and are required to be in session for at least forty days; but the king may convoke extraordinary sessions, and may dissolve the Chambers either separately or together. In case of a dissolution, the constitution requires an election to be held within forty days, and a meeting of the Chambers within two months.

Slight changes were made in the electoral provisions of the constitution during 1912. More important changes, however, were introduced in 1910, when the constitution was again revised. The principle of manhood suffrage with compulsory voting, tempered by the plural vote and proportional representation of minorities, based upon the intricate system devised in 1892-1893, was replaced by manhood suffrage with a six months' residential qualification. The vote on a limited scale was extended to women, namely, unmarried widows or mothers of soldiers killed, or of civilians shot by the enemy, and women imprisoned by the

enemy for patriotic acts. From this electorate both houses of the legislature are chosen, except those senators who are elected indirectly. The Senate, now composed of 120 members, is elected for eight years. The number of members elected directly is equal to half the number of deputies. The indirectly elected senators are chosen by the provincial councils, two for each province with less than 500,000 inhabitants; three for each with more than 500,000 and less than 1,000,000; and four for each with over a million. The 186 deputies are elected for four years, in the proportion of one to every 40,000 inhabitants; one half retire every two years. Senators must be forty years old, and deputies not less than twenty-five. Only the chamber of deputies (representatives) can originate money bills or bills relating to the contingent for the army. The executive consists of seven ministries, namely of finance, of justice, of interior and instruction, of war, of railways, posts and telegraphs, of foreign affairs, of agriculture, industry and public works.—See also EUROPE: Modern period: Revolutionary movement for self-government.

1894-1895.—First election under the constitution of 1893.—Victory of the Catholics and surprising Socialist gains.—The singularity of the experiment of cumulative or plural voting caused the elections that were held in Belgium in 1894 and 1895 to be watched with an interest widely felt. Elections for the Chamber of Representatives and the Senate occurred on the same day, Oct. 14, 1894. Previously the Belgian suffrage had been limited to about 130,000 electors. Under the new constitution the electors numbered no less than 1,370,000, and the working of the plural system gave them 2,111,000 votes. The result was a more crushing victory for the Catholics than they had ever won before. Of 152 Representatives they elected no fewer than 104. The Liberal party was almost annihilated, securing but 20 seats in the Chamber; while the Socialists rose to political importance, winning 28 seats. This representation is said to be not at all proportioned to the votes cast by the several parties, and it lent force to the demand for a system of proportional representation, as the needed accompaniment of plural voting, which had been urged when the constitution was revised. In the Senate the Conservatives obtained 52 seats and the Liberals 24. In the next year an electoral law relating to communal councils was passed. In this law, the principle of proportional representation was introduced, along with that of cumulative or plural voting. Compulsory voting, enforced by penalties more or less severe, was also a feature of the law. In November, the first election under it was held, and again the Socialists made surprising gains, at the expense of the Radical party, the Catholics and Liberals generally holding their ground.

1899-1900.—Threatened revolution.—An explosion of discontent with the working of the electoral provisions of the new constitution (see

above) occurred in June, and created for a time an exceedingly dangerous situation. It was precipitated by an attempt on the part of the government to pass a bill providing for proportional representation in certain districts, which was expected to increase the advantage already possessed by the Clerical or Catholic party. Excitement in the Chamber of Deputies reached such a height on June 28 that fighting among the members occurred, and soldiers were called in. That night and the next day there was serious rioting in Brussels; barricades were built; sharp battles between citizens and soldiers were fought, and a general strike of working men was proposed. On the 30th, the government arranged a compromise with the Socialist and Liberal leaders which referred the question of proportional representation to a committee in which all parties were represented. This quieted the disorder. In due time the committee reported against the measure which the government had proposed; whereupon a change of ministry was made, the new ministry being expected to bring forward a more satisfactory plan of proportional representation. It produced a bill for that purpose, the provisions of which failed to give satisfaction, but which was passed, nevertheless, near the end of the year.

Commenting, in July, on the disturbances then just quieted in Belgium, the *Spectator*, of London, remarked: "The recent explosion of political feeling in Belgium was a much more serious event than was quite understood in this country [England]. It might have involved all Europe, as, indeed, it may even yet. There was revolution in the air, and a revolution in Belgium would gravely affect the military position both of France and Germany, would rouse keen suspicions and apprehensions in this country, and would perturb all the dynasties with fears of coming change. The new electoral bill drove the Liberals and Socialists of the little kingdom into one another's arms—both believing that it would give the Clericals a permanent hold on power—and whenever these two parties are united they control the majority of the Belgian people. That majority is a most dangerous one. It controls all the cities, and it includes hundreds of thousands of men who resent their economic condition with justifiable bitterness, and who are penetrated with a tradition of victories achieved by insurrection. At the same time they have no pacific vent for their discontents, for the suffrage gives double votes to the well-to-do, and secures to both Liberals and laborers on all economic or religious questions a certainty of defeat. With the inhabitants of the cities all rioting and killing the officials, the government would have been compelled to resort to force, and it is by no means clear that force was decidedly on their side. The Belgian army is not a caste widely separated in feeling from the people; it has no instinctive devotion to the Clerical party, and it has no great soldier whom it admires or to whom it is attached. The king is distrusted and disliked both personally and politically; and the dynasty, which has no historic connection with Belgium, has never taken root in the soil as the Bernadottes, for example, have done in Sweden. If the revolutionists had been beaten, they would have appealed to France, where Belgium is regarded as a reversionary estate; while if they had been victorious, they might—in our judgment, they certainly would—have proclaimed a republic. . . . The danger has, we suppose, for the moment been smoothed away; but it has not been removed, probably can not be removed, while the conditions which produce it continue to exist. The Belgians,

who are commonly supposed to be so prosperous and pacific, are divided by differences of race, creed, and social condition more violent than exists in Ireland, where at all events, all alike, with insignificant exceptions, speak one tongue. The French-speaking Belgians despise the Flemish-speaking Belgians, and the Flemish-speaking Belgians detest the French-speaking Belgians, with a rancor only concealed by the long habit of living and acting together,—a habit which, remember, has not prevented the same contempts and aversions from continuing to exist in Ireland. The Clericals and the Secularists hate each other as only religious parties can hate; far more than Catholics and Protestants in any of the countries where the two creeds stand side by side. The Secularist seems to the Clerical a blasphemer, against whom almost all devices are justifiable, while the Clerical is held by the Secularist to be a kind of evil fool, from whom nothing is to be expected except cunningly concealed malignity. The possessors of property expect that the 'ugly rush' which used to be talked of in England will occur to-morrow, while the wage receivers declare that they are worked to death for the benefit of others, who will not leave them so much as a living wage. All display when excited a noteworthy fierceness of temper, a readiness to shed blood, and a disposition to push every quarrel into a sort of war,—tendencies visible throughout the history of the country." At the parliamentary election in June, 1900, under the new law providing for proportional representation, the Socialists gained seventeen seats from the Clerical party.—See also **PROPORTIONAL REPRESENTATION: Belgium.**

1902.—Popular opposition to the plural vote.—Demand for constitutional revision defeated.—General strike in the country.—Substantially universal but not equal suffrage was given to the male citizens of Belgium by the constitution of the kingdom as revised in 1893. All had one vote, but certain classes of persons, qualified by property ownership, tax-payments, education, office-holding or professional dignity, were given one or two supplementary votes. Opposition to this political inequality had been growing from the first, until it united the Socialist and Liberal parties in a demand for the revision of the constitution, not only to abolish the plural suffrage, but to introduce proportional representation and compulsory education. The agitation attending this demand brought about, in April, a general strike throughout the country of workmen in all departments of industry, to the extent of 350,000. The government resisted the demand, maintaining that the system of plural voting had not been sufficiently tried, and the bill for constitutional revision was defeated in the Chamber of Representatives, after a bitter debate, by 84 votes to 64. The

situation was described as follows by Mr. Townsend, the American minister to Belgium, in a despatch of April 19: "The struggle between labor and capital in Belgium has become extremely acute in the past few years. A large industrial population, confined to a small superficial area, with long hours of labor and small wages, have combined to produce a feeling of discontent among the working classes, who, perhaps unjustly, blame the existing Government for a condition of affairs which may be due to economic conditions rather than political. This is a factor which may be largely responsible for the rapid growth of Socialism in Belgium during the past few years. Liberals and Socialists have combined to fight for universal suffrage, and have raised the cry 'one man one vote' as a panacea for the existing ills. The Clericals maintain that the existing system of plural voting meets the present requirements of the country; that it places a premium on education, and acts as a check to the power of the ignorant, who are prone to resort to violence and disorder. The more moderate Liberals in the House of Representatives expressed a willingness to accept a compromise in the shape of a total abolition of the triple vote, granting one vote at 25 years and a second vote to married men of 35 or 40 years, with legitimate issue. The Clericals, however, would not consider a compromise and opposed revision in any form. During the past fortnight, while the debates on the subject of revision were being held in the House of Representatives, the socialists and workmen have held nightly meetings at the Maison du Peuple, and have frequently paraded the streets shouting for universal suffrage and 'one man one vote.' The Liberal members, as well as some of the socialist leaders in the House, have cautioned the paraders to be calm, to avoid violence and disorder. But the ranks of the paraders have been swelled by the addition of the representatives of the very lowest and criminal classes of the population, the result being a conflict with the police followed by the breaking of windows and other damages to property. Shots were exchanged between the gendarmes and rioters, several of the latter being killed and wounded. Similar scenes were at the same time enacted in other towns in Belgium, consequently the Government called out the troops. Order has been restored, but the streets of Brussels, as well as the large towns, are lined with soldiers. A general strike has taken place in all the industrial centers of Belgium, with the avowed object of forcing the Government to grant universal suffrage, but without success. The feeling of unrest is very general all over the country."—*Papers relating to the foreign relations of the United States, 1902, p. 85.*—See also **SUFFRAGE, MANHOOD: Belgium.**

1904.—Liberal gains in the elections, at the expense of the Catholics and Socialists.—Belgian elections, in May, reduced the majority by which the Clericals still retained control of the government, and took six seats in the representative chamber from the Socialists, adding in all nine to the representation of the Liberal party. The latter continued, with no success, its demand for a revision of the constitution, especially for the abolition of the plural vote, which gives the Church party its majority in Parliament, while its voters are an actual minority of the nation.

Belgian feeling on the subject of the charges of brutal oppression in the Congo Free State was deeply stirred, and its current ran strongly against the accusers of the king. The public in general appears to have been fully persuaded that interested motives were actuating the whole criticism of Congo administration, and that the stories of inhumanity to the natives were wholly false.

1909 (December).—Death of King Leopold.—Accession of King Albert.—On December 17, 1909, King Leopold died. He was succeeded on the throne by Prince Albert, son of his brother, the Count of Flanders. Of the new king, who was born in 1875, it was said by *The Times*, of London: "The happiest expectations are cherished in Belgium for the new King's reign. He has shown, together with his gracious Consort, that desire to identify himself with the interests of the humblest of his subjects which we are accustomed to admire among the characteristic merits of our own Royal Family. He was naturally precluded by his position from taking any part in the controversies connected with the Congo, but it may reasonably be thought that if his uncle's life had been less prolonged the constitutional difficulties raised by the 'Congo question' would have been avoided. He is known to have been painfully impressed by the need of reform during his recent visit to the colony."

1910-1912.—Elections.—"The elections of May, 1910, were contested with unusual keenness by reason of the fact that the Liberal-Socialist coalition seemed to have, for the first time in a quarter of a century, a distinct chance for victory. The Catholics were notoriously divided upon certain public issues, notably Premier Schollaert's Compulsory Military Service bill, and it was believed in many quarters that their tenure of power was near an end. The Liberal hope, however, was doomed to disappointment; for, although both Liberals and Socialists realized considerable gains in the popular vote in some portions of the kingdom, in only a single constituency was the gain sufficient to carry a new seat. The consequence was that the Catholic majority was reduced, but not below six, and party strength in the Chamber stood: Catholics, 68; Liberals, 45; Socialists, 34; Christian Democrats, 1. Among reasons that may be assigned for the Liberal failure are the fact that the country was prosperous and not disposed to precipitate a change of governments, the alienation of some voters by the working relations that had been established between the Liberals and the Socialists, and the advantage that regularly accrues to the Catholics from the plural vote. During the years 1910-1912 the Catholic tenure of power, prolonged uninterruptedly since 1884, seemed more than once on the point of being broken. Most of the time, however, the legislative machine performed its functions sufficiently well with a majority of but half a dozen seats, and the drift of affairs operated eventually to strengthen the Catholic position. In

March, 1911, Premier Schollaert introduced an education bill looking toward the placing of church schools upon a footing financially with the schools maintained by the communes, and the opposition to this measure acquired such intensity that the author of the bill was forced to retire. But his successor, De Broqueville, a man of conciliatory temperament, formed a new Catholic cabinet which, by falling back upon a policy of 'marking time,' contrived to stave off a genuine defeat. In the municipal elections held throughout the country October 15, 1911, the Liberal-Socialist candidates were very generally successful, but the parliamentary elections which took place June 2, 1912, had the unexpected result of entrenching the Catholic party more securely in power than in upwards of a decade. The combined assault of the Liberals and the Socialists upon 'clericalism' fell flat, and against the Government's contention that the extraordinary and incontestable prosperity of the country merited a continuance of Catholic rule no arguments were forthcoming which carried conviction among the voters. The Catholic vote showed an increase of 130,610, the Liberal and Socialist opposition an increase of 40,402, and the Christian Democrats a decrease of 4,602. The new chamber consists of 101 Catholics, 45 Liberals, 38 Socialists and 2 Christian Democrats, giving the Government a clear majority of sixteen. The elections were marked by grave public unrest, involving widespread strikes and anti-clerical demonstrations, with some loss of life. More clearly than before was exhibited in this campaign the essentially bourgeois and doctrinaire character of the present Liberal party. The intimate touch with the masses which in the days of its ascendancy, prior to 1884, the party enjoyed has been lost, and more and more the proletariat is looking to the Socialists for propagation of the measures required for social and industrial amelioration."—F. A. Ogg, *Governments of Europe*, pp. 546-547.

1913.—General Strike.—"The general strike (*grève générale*, known in Belgium as the G. G.) proved effective for obtaining electoral reform in 1893, and, although it failed in 1902, it was applied again in 1913. On February 5 the committee of the Socialist party decided to continue their preparations for a general strike to be declared on March 31, in consequence of the refusal of M. de Broqueville, the Premier, to appoint a select committee of inquiry into the question of manhood suffrage. Two days later the Chamber of Deputies rejected, by 90 votes to 83, a Bill for the revision of the Constitution, proposed by the Socialist party, but on the 12th, the date for the strike was altered to April 14, in order to permit negotiations with the Government on electoral reform, and on March 6 the Socialist Deputies even decided to postpone it indefinitely. But to the profound disappointment of the working classes M. de Broqueville stated, on March 12, that the solution of the question would depend upon the result of the elections in 1914, and on March 23 the Socialist Congress decided almost unanimously to let the strike begin on April 14. Messrs. Vandervelde and Huysmans did all they could to avert this decision, and the Ghent delegates begged the Congress in vain to take into account the £1,200,000 already spent on the exhibition in that town. The Cham-

ber of Deputies resumed its session on April 16, and M. Lorand, an advanced Liberal, got permission to introduce a Bill for a Referendum on franchise reform. During the discussion on this request M. Vandervelde stated that there were at least 370,000 men on strike. Hence on April 22, the Chamber passed unanimously a motion of M. Masson, approving the appointment of a commission to formulate 'a suffrage system superior to that now in force.' The strike committee considered that thereby the general strike had achieved all that was possible for the present, and urged the immediate resumption of work. On April 24 the strike was practically at an end, although the miners in the Liège and Hainault districts stood out until May 1. Troops had been moved to the affected districts, but the strikers remained perfectly peaceful; the miners' trade unions authorized the continuation of necessary works in the mines; the Wilson line service from Hull to Ghent was temporarily suspended, but the Ghent Exhibition works had been declared neutral territory. On May 26 this special Commission for Electoral Reform was completed. It consists of thirty-one members, among whom are the leaders of the different parties in Chamber and Senate."—*Annual register*, pp. 360-361.—With this promise of complete revision of the electoral system, the strike came to an end after lasting ten days. 1914.—World War.—Invasion of Belgium.—"On the 28th of June, 1914, Archduke Franz Ferdinand of Austria and his wife, the Duchess of Hohenberg, were assassinated at Serajevo. Austria seized upon this as an excellent pretext for commencing the attack of Serbia which had been frustrated the year before by the refusal of Italy to co-operate. On the 23rd July she presented an ultimatum to Serbia, to which the Servian Government replied by a note which, in spite of the great concessions made by it, was considered by Austria as insufficient. Five days later, on the 28th July, the latter Power declared war on Serbia. The Chancelleries realized that Europe was threatened with a war of the nations. As soon as M. Davignon, the Belgian Minister for Foreign Affairs, received, through the Minister of Belgium at Vienna, the text of the Austrian ultimatum, he took all the necessary steps to secure respect for Belgian neutrality in the event of war breaking out. On the 23rd July he sent detailed instructions to the Belgian Ministers at Paris, Berlin, London, Vienna, and St. Petersburg (Petrograd). . . . When the Belgian Government learned of the declaration of war by Austria on Serbia, they at once decided to put the army on a strengthened peace footing. In order that this measure should not be misconstrued abroad, the Belgian Ministers accredited to the different Courts were to explain that there was no question of mobilization, and that the strengthened peace-footing had no other object than to provide the Belgian army with effectives analogous to those of the corps maintained in permanence in frontier areas by neighbouring Powers. Events rapidly developed. On the 31st July the general mobilization decreed by Austria was followed by a proclamation of a 'State of Danger of War' in Germany. At 7 p. m. on the same day the Bel-

gian Government, in its turn, proceeded to a general mobilization. During the course of that day M. Klobukowski, the French Minister at Brussels, came and showed M. Davignon a telegram of the Havas Agency announcing that Germany had proclaimed a state of danger of war, and took the opportunity of declaring that France would not send troops into Belgium, although large forces might be concentrated on the frontiers of that country. This official communication doubtless caused great satisfaction to the Belgian Government, which at that time cherished the hope that Germany would take up the same attitude. They knew that England, in view of the possibility of a European war, had asked the French and German Governments separately whether each of them was prepared to respect the neutrality of Belgium. They awaited a favourable reply from the German Government, being informed that the German Minister at Brussels had that morning made a statement—giving, it is true, his personal opinion—that the friendly sentiments of Germany and her desire to respect Belgian neutrality remained unchanged. On the next day, the 1st August, the French Government announced that it would respect the neutrality of Belgium. The news from Germany was not so satisfactory. Herr von Jagow had, it seemed, said that he could not answer the question whether Germany would respect the neutrality of this country. . . . Next morning the Belgian people could read in their newspapers that the Germans had seized the railways and the capital of the Grand Duchy of Luxemburg, and that Germany had declared war on Russia. . . . The Minister of Germany proceeded to the Foreign Office. He presented himself at seven o'clock, bringing at last an official communication from his Government. It was an ultimatum. . . . This note did not bear the heading 'Very Confidential' without a reason. It proposed to Belgium that she should secretly barter her honour for sounding phrases and a few promises, the intentional vagueness and want of precision of which put little obligation on the Government which formulated them."—L. Van der Essen, *Invasion and war in Belgium*, pp. 24-28.

"The German communication greatly affected the Belgian Minister of Foreign Affairs. There were but twelve hours in which to comply with or deny the proposal. Under the initiative of Baron de Gaiffier, Political Director-General at the Foreign office, the answer to the ultimatum was drawn up and immediately dispatched. The note set forth clearly that France had formally declared on the 1st of August that she would strictly observe the neutrality of Belgium in the event of war with the central powers. The Belgian answer stated that in the instance of a breach of neutrality on the part of France, the Belgian army would offer the most vigorous resistance to the invader. The reply asserted that Belgium had always been faithful to her international obligations and that an attack upon her independence for maintaining her neutrality constituted a flagrant violation of international law. The Belgian government, the note continued, would not betray her duty to Europe and refused to believe that her independence could be held only at the price of violating her neutrality. The reply closed with: 'If this hope is disappointed the Belgian government is firmly resolved to repel, by all the means in their power, every attack upon their rights.'"—*First Belgian grey book*.—"As Germany had not yet committed any act of war, the Belgian Cabinet decided that there was at present no occasion to appeal to the guaranteeing Powers. At midday M. Davignon

made this decision known to the Belgian representatives at the Courts of Paris, Berlin, London, Vienna, and St. Petersburg (Petrograd). Acting in the same way, the King sent a telegram to the King of England in which he contented himself with making a supreme appeal for 'diplomatic' intervention by the English Government to safeguard Belgian neutrality. . . . Next day, the 4th August, was a day full of stirring events. At 6 a. m. the German Minister drew up a letter, bringing to the notice of the Belgian Government that, as Belgium intended to oppose the passage of German troops, 'the latter, to their deep regret, find themselves compelled to take—if necessary by force of arms—those measures of defence already foreshadowed as indispensable, in view of the menace of France.' The die was cast. The powerful German Empire, violating her plighted word and repudiating her signature, was about to fall with all her might upon the small country which refused to forfeit her honour. . . . Brussels was seething with excitement. The hour when the Belgian Parliament was to hold its last sitting was drawing nigh. This sitting was held in the Hall of the Chamber, where the members of the Senate and the Chamber had taken up their position mingled together in a way that the gravity of the situation alone could explain. The streets were filled with an excited crowd, which hastened in huge masses to the Rue de la Loi. The King, accompanied by the Queen and the Royal Family, was to be present at this solemn sitting. The arrival of the Sovereign was awaited with ill-concealed impatience, and people burned with desire to hear the words of a speech, the theme and motive of which every one realized. The noble phrases of the reply to the German ultimatum had aroused feelings unknown a little while before, sentiments of great patriotic pride mingled with and intensified by deep emotion. . . . At Brussels the Place du Palais de la Nation was black with people. Soon the echoes of frantic applause rose above the city—the Royal cortège was arriving. The King advanced through the compact ranks of the crowd, which thrilled at the sight and was overcome by its simple grandeur. He was mounted and wearing service uniform. Behind him, in a carriage, came the Queen and the three Royal children. A wave of enthusiasm swept over the spectators: Flemish and Walloon, Catholics, Socialists, and Liberals, all felt that they had but one soul—the soul of the nation, the Belgian soul which had at last been revealed in her. With the country in danger, all the dispute of the time of peace was hushed. . . . [It was also on this occasion that M. de Broqueville, Minister of War, stepped to the balcony and informed the mass of people waiting outside the Chamber that 'the soil of our country has been polluted.' The Ministry was just then in receipt of a dispatch from the general staff stating that the German troops had crossed the frontier at Gemmenich, thereby flagrantly violating neutral relationship and initiating an avowed invasion which was thrust upon the Belgians with no alternative (to choose) but to resist with all the possible resources available.] Suddenly a profound silence fell. The King was standing there, ready to read his speech. And in the midst of that silence, in which one could almost hear the beating of hearts, there slowly fell these well-scanned words, pronounced in a steady voice:—"Gentlemen,—Never since 1830 has there been so grave an hour for Belgium. The integrity of our land is threatened. The very strength of our right, the sympathy with which Belgium, proud of her free institutions and moral conquests, has always been

regarded by other nations, and the need that the balance of power in Europe has for our independent existence, give us hope that the events which threaten will not happen. But if our hope is vain, if we must resist an invasion of our land and defend our threatened homes, we must, no matter how hard it may be, be found armed and ready for the greatest sacrifices. . . . If the foreigner, disregarding our neutrality, all the demands of which we have always scrupulously fulfilled, violates our territory, he will find all the Belgians ranged round their Sovereign, who will never betray his constitutional oath, and their Government, in whom the whole nation has absolute confidence. I have faith in our destiny. A country defending itself is respected by all. That country will not perish. God be with us and our just cause. Long live Independent Belgium!"—The members of the Assembly and the crowds on the platforms had applauded the most vigorous passages of this speech. Emotion was at its height. . . . On the 3rd of August . . . Germany declared war on France in the evening, and information about the military preparations in Rhenish Prussia showed clearly that Germany was preparing to cross the Belgian frontier. Orders were at once issued for the destruction of all the important works, tunnels, bridges, etc., on the routes open to the invader; the railways of the Provinces of Liège and (Belgian) Luxembourg were cut, and the principal roads were blocked."—L. Vander Essen, *Invasion and war in Belgium*, pp. 32, 34-35, 47.—See also WORLD WAR: 1914: I. Western front; a; Preparation for war: b. 1914.—Germany and Belgian neutrality.—German evidence on the unjustifiability of the invasion of Belgium.—"At the outbreak of the World War, Dr. Muehlon was a member of the Krupp board of directors of Essen. As his letters show, he was in touch with persons well informed of the real course of events. He was, therefore, one of the relatively few Germans who knew, from the outset, that the Central Empires had forced an unnecessary and unjustifiable war upon Europe; and he was one of the far smaller number of Germans whom the conduct of their government stirred to indignation and moral revolt. . . . In one important matter Muehlon's evidence is direct. The dealings of the Belgian government with the Krupp Company were matters of which he had immediate personal knowledge. The German assertion that the Belgian government had arranged to cooperate with Great Britain in aggressive war against Germany has never been substantiated; it has, indeed, been disproved; but Muehlon's testimony that, for years before the war, Belgium had made itself dependent on Germany for military supplies and that, at the outbreak of war, fortress artillery, ordered and fully paid for by the Belgian government and long ready for shipment, was, at the request of the Belgians themselves, still held in storage in the Krupp works at Essen—this testimony reduces the German assertion to an absurdity. It leaves the Belgians at fault in one respect only: they had misplaced their confidence. They believed that the German government would observe its treaty obligations and keep its repeatedly plighted faith."—M. Smith, *Introduction to international conciliation*, Sept., 1918.—In the same issue, pp. 27-37, the following letter is reproduced in the original German with an English translation.—"The forcible occupation of Belgium, as well as that of Holland, was, it is true, often discussed before the war as a possibility; but it remained a military secret that in the event of a simultaneous war against Russia and France, the German authorities had definitely

adopted the plan of overthrowing France in the quickest possible way and with all available forces, before slow-moving Russia was ready to strike, and had therefore decided, whatever might be the situation, to demand passage through Belgium. [See WORLD WAR: Causes: Indirect: i, 6, v.] After the imperial chancellor had taken action in conformity with the military mandate, and after he was aware that Belgium was preparing to defend itself, he appeared before the Reichstag and gave his excuse: 'Necessity knows no law.' Belgium, he said, would be restored and indemnified. His speech showed plainly that Belgium was being maltreated without any fault of its own, solely because of German strategic considerations. Although his plea in justification did not reveal the necessity of choosing precisely this plan of campaign, but rather the boundless brutality of those who framed the plan, his admission of Belgium's innocence was, nevertheless, his greatest moment in the war. . . . It was not long before the now familiar aspersions against Belgian neutrality were started—aspersions which have been sufficiently refuted to satisfy all those who are capable of thinking. Belgium—in the outcome least unfortunate for that country—was to be simply an object of barter at the conclusion of peace. . . . I have myself talked, in Germany, with many men qualified to form an opinion on the subject, but never with one who so much as attempted, with a single word, to hint at any fault on the part of Belgium. Nevertheless, thousands of hirelings were and are still permitted to circulate a constantly growing series of accusations, which are intended to cause that declaration of the imperial chancellor to be forgotten and to harden the hearts of the German people against Belgium. The German people, who, as it is, trouble their leaders with few questions about truth and justice in the war, who above all things desire to roll off upon others the inevitable burden of misery and, in the main, demand from their leaders one thing only—that they encounter no material reverse of fortune! The German people, who, as it is—no matter what the imperial chancellor may have said—are to a certain degree determined to believe that the Belgians got only their deserts when their country was raided, and who do not need any addition to their old stock of fairy tales about Belgium: that the French were in Belgium first; that the English would have come to Belgium anyway; that the Belgians should have behaved themselves and offered no resistance, etc. It may therefore be not altogether useless, if I contribute my modest share towards the establishment of the truth. What I have told every acquaintance of mine orally, may perhaps be more effective if I submit it publicly to those with whom I am unacquainted. And if it does not help, may it at least be a consolation to the friends of truth and, especially, to the Belgians. In any case, my testimony has the advantage that, with a little good will, it may be substantiated and that thousands of witnesses and ample written evidence may be found in Germany.

"Before the war Belgium had ordered from the Krupp Company in Essen four large modern guns (twenty-eight centimeters) for the fortifications of Antwerp. At the beginning of 1914 the guns were completed, accepted, paid in full, and ready for shipment; but the work on the fortifications of Antwerp had not yet been carried so far that the guns could be set up. The debates on this subject in the Belgian Chamber of Deputies will perhaps be recalled. At this point the Belgian government requested Krupp to keep the guns in storage for the time being. Krupp agreed, but not willingly.

Such storage is unusual, and it entails many inconveniences. Krupp repeatedly took steps, both by word of mouth and in writing, to get rid of the guns; the Belgian government continually repeated its request that Krupp be kind enough to keep them, and was even ready to pay for the accommodation. A *modus vivendi* was repeatedly found but the attitude of both parties remained unchanged until the war broke out, when the Prussian Ministry of War at once seized these guns in Essen as booty (value four million marks). From this I draw the following conclusion: Had the Belgian government had any evil intentions whatsoever against Germany, or had it expected a German attack, it would, at the very latest when war threatened, have secured possession of its expensive guns, instead of insisting that they should remain in Krupp's care. My evidence, however, is not confined to this single instance. For many years Belgium kept up active connections with Germany in the matter of its war materials. . . . I have always had the impression that by giving large orders to Germany, which is greedy for business, keen in its pursuit, and quick to take offense, Belgium believed that it could keep that country in good humor, whereas she expected France, whose industry enjoyed little support from the government and was, moreover, less keen as regarded its own development, to understand her reasons for favoring Germany and to be content with general indications of sympathy.

"A few months before the war Belgium established another and particularly important connection between itself and Krupp. For its supply of a new (scarcely tested) ammunition for field artillery it placed itself entirely in the hands of this company. . . . Consider the close dependency of the war-material business on governmental intentions, and then, on the basis of the occurrences I have here recounted, which are matters of public knowledge, pass judgment on the alleged *mala fides* of the Belgian government towards Germany."—W. Muehlon (*Die Freie Zeitung, Bern*, May 4, 1918).—See also MILITARY ORGANIZATION: 24; WORLD WAR: Diplomatic background: 24; 34 to 37; 51 to 54; 57; 58; 61; 73, iii.

1914.—Belgian mission to United States.—"His majesty, the King of the Belgians, appointed a Special Envoy, for the purpose of acquainting the President of the United States of America with the deplorable state of affairs prevailing in Belgium, whose neutrality has been unjustly violated. . . . Mr. Henry Carton de Wiart, Minister of Justice, was chosen for this mission . . . which was received by the President of the United States in Washington, on September 16th, 1914. Mr. Henry Carton de Wiart, in the name of the Mission, made the following address: 'Excellency: His Majesty, the King of the Belgians, has charged us with a special mission to the President of the United States. Let me say to you how much we feel ourselves honored to have been called upon to express the sentiments of our King and of our whole nation to the illustrious statesman whom the American people have called to the highest dignity of the commonwealth. . . . Ever since her independence was first established, Belgium has been declared neutral in perpetuity. This neutrality, guaranteed by the Powers, has recently been violated by one of them. Had we consented to abandon our neutrality for the benefit of one of the belligerents, we would have betrayed our obligations toward the others. And it was the sense of our international obligations as well as that of our dignity and honor that has driven us to resistance. The consequences suffered by the Belgian

Nation were not confined purely to the harm occasioned by the forced march of an invading army. This army not only seized a great portion of our territory, but it committed incredible acts of violence, the nature of which is contrary to the law of Nations. Peaceful inhabitants were massacred, defenseless women and children were outraged, open and undefended towns were destroyed, historical and religious monuments were reduced to dust, and the famous library of the University of Louvain was given to the flames. Our Government has appointed a judicial Commission to make an official investigation, so as to thoroughly and impartially examine the facts and to determine the responsibility thereof, and I will have the honor, Excellency, to hand over to you the Proceedings of the inquiry.

"In this frightful holocaust which is sweeping

Belgian delegates to the United States, pp. v-vii.
—See also *WORLD WAR: 1914: I. Western front: x. 1914-1918.—German occupation.—Atrocities.*
—With the crossing of the Belgian frontier the German armies proceeded to crush resistance. On August 4 (1914), General von Emmich hurled his soldiers against the Belgian forts about Liège and succeeded in entering the city seven days later. It was, thereafter, an easy matter for the Teuton forces to penetrate Belgium up to Louvain, where the main Belgian force established its principal line of defense. On August 19, the Belgian army was again forced to retreat, in the face of overwhelming odds, towards Malines and Antwerp. Brussels fell before General von Kluck on the following day (see *BRUSSELS*), and the fortress of Namur succumbed to General von Bülow's attack on the 22d, leaving the path clear for a German invasion

RUINS OF LOUVAIN, SHOWING RAVAGES OF THE WAR

all over Europe, the United States has adopted a neutral attitude. And it is for this reason that your country, standing apart from either one of the belligerents, is in the best position to judge without bias or partiality, the conditions under which the war is being waged. It is at the request, even at the initiative of the United States, that all civilized nations have formulated and adopted at The Hague a law regulating the laws and usage of war. We refuse to believe that war has abolished the family of Civilized Powers, or the regulations to which they have freely consented. . . . At the very moment we were leaving Belgium, the King recalled to us his trip to the United States and the vivid and strong impression your powerful and virile civilization left upon his mind. Our faith in your fairness, our confidence in your justice, in your spirit of generosity and sympathy, all these have dictated our present mission."—J. Beck, *Case of Belgium in the present war, published for the*

of France. A Franco-British force did make an attempt to stay the German conquest of Belgium (August 20-23) but the effort was unsuccessful when General Castelnau's army was forced to retreat and take up a defensive position at Nancy. With the arrival of the British Expeditionary Force under Field Marshal Sir John French (August 20), a counter offensive was ordered by General Joffre, but when the French armies retreated hastily from the Ardennes towards Sedan, General French abandoned his position at Mons (August 24) and fell back into France. The Germans now had an open road to France. One of the darkest periods in Belgian history set in upon the invaded nation, simultaneous with the conquest of the Germans and the subsequent invasion of France. (See *WORLD WAR: 1914: I. Western front: a to f*). Occasionally, during the four years of warfare the Belgians successfully encountered the Germans, but, in the main, beginning with the loss of Antwerp,

October 10, 1914. (See ANTWERP: 1914.) Belgium's period of suffering lasted until the signing of the armistice on November 11, 1918.

"We may now sum up and endeavour to explain the character and significance of the wrongful acts done by the German army in Belgium. . . . Murder, rape, arson, and pillage began from the moment when the German army crossed the frontier. For the first fortnight of the war the towns and villages near Liège were the chief sufferers. From the 10th of August to the end of the month, outrages spread in the directions of Charleroi and Malines and reach their period of greatest intensity. There is a certain significance in the fact that the outrages round Liège coincide with the unexpected resistance of the Belgian army in that district, and that the slaughter which reigned from the 19th August to the end of the month is contemporaneous with the period when the German army's need for a quick passage through Belgium at all costs was deemed imperative. Here let a distinction be drawn between two classes of outrages. Individual acts of brutality—ill-treatment of civilians, rape, plunder, and the like—were very widely committed. These are more numerous and more shocking than would be expected in warfare between civilised Powers, but they differ rather in extent than in kind from what has happened in previous though not recent wars. In all wars many shocking and outrageous acts must be expected. . . . In the present war, however—and this is the gravest charge against the German army—the evidence shows that the killing of non-combatants was carried out to an extent for which no previous war between nations claiming to be civilised (for such cases as the atrocities perpetrated by the Turks on the Bulgarian Christians in 1876, and on the Armenian Christians in 1895 and 1896, do not belong to that category) furnishes any precedent. That this killing was done as part of a deliberate plan is clear from the facts hereinbefore set forth regarding Louvain, Aerschot, Dinant, and other towns. The killing was done under orders in each place. It began at a certain fixed date, and stopped (with some few exceptions) at another fixed date. Some of the officers who carried out the work did it reluctantly, and said they were obeying directions from their chiefs. The same remarks apply to the destruction of property. House burning was part of the programme; and villages, even large parts of a city, were given to the flames as part of the terrorising policy. Citizens of neutral states who visited Belgium in December and January report that the German authorities do not deny that non-combatants were systematically killed in large numbers during the first weeks of the invasion, and this, so far as we know, has never been officially denied. If it were denied, the flight and continued voluntary exile of thousands of Belgium refugees would go far to contradict a denial, for there is no historical parallel in modern times for the flight of a large part of a nation before an invader. The German Government have, however, sought to justify their severities on the grounds of military necessity, and have excused them as retaliation for cases in which civilians fired on German troops. There may have been cases in which such firing occurred, but no proof has ever been given, or, to our knowledge, attempted to be given, of such cases, nor of the stories of shocking outrages perpetrated by Belgian men and women on German soldiers. . . . One elementary error creeps at once into the German argument, for they were likely to confound, and did in some instances certainly confound,

legitimate military operations with the hostile intervention of civilians. Troops belonging to the same army often fire by mistake upon each other. That the German army was no exception to this rule is proved not only by many Belgian witnesses but by the most irrefragable kind of evidence, the admission of German soldiers themselves recorded in their war diaries. . . . We gladly record the instances where the evidence shows that humanity had not wholly disappeared from some members of the German army, and that they realised that the responsible heads of that organisation were employing them, not in war but in butchery. . . . Two classes of murders in particular require special mention, because one of them is almost new, and the other altogether unprecedented. The former is the seizure of peaceful citizens as so-called hostages to be kept as a pledge for the conduct of the civil population, or as a means to secure some military advantage, or to compel the payment of a contribution, the hostages being shot if the condition imposed by the arbitrary will of the invader is not fulfilled. Such hostage taking, with the penalty of death attached, has now and then happened, the most notable case being the shooting of the Archbishop of Paris and some of his clergy by the Communards of Paris in 1871, but it is opposed both to the rules of war and to every principle of justice and humanity. The latter kind of murder is the killing of the innocent inhabitants of a village because shots have been fired, or are alleged to have been fired, on the troops by someone in the village. For this practice no previous example and no justification have been or can be pleaded. . . . That these acts should have been perpetrated on the peaceful population of an offending country which was not at war with its invaders but merely defending its own neutrality, guaranteed by the invading Power, may excite amazement and even incredulity. It was with amazement and almost with incredulity that the Committee first read the depositions relating to such acts. But when the evidence regarding Liège was followed by that regarding Aerschot, Louvain, Andenne, Dinant, and the other towns and villages, the cumulative effect of such a mass of concurrent testimony became irresistible, and we were driven to the conclusion that the things described had really happened."—Bryce, *Report of the committee on alleged German outrages*, pp. 39-41, 42-44.

On August 14 (1914), the German government sent an official note to the Belgian government threatening that the war would soon assume "a cruel character" because civilians had taken part in the fighting around Liège and had ill-treated the wounded, and also because the civilian population at Antwerp had destroyed the property of Germans and had brutally massacred women and children. Realizing that this attempt to shift the responsibility of the outrages committed in the wake of the invasion was at most based on inaccurate and misleading information received by the German government, the Belgian government, nevertheless, published through the press daily instructions, advising the civilians not to fight the enemy appearing in their district, nor to try to abuse or threaten them, to keep indoors and not to offer any provocative opportunity to the enemy. The civilians were instructed to leave their homes whenever the enemy soldiers occupied them for purposes of defense.

"Then the German army overran Belgium; almost from the outset of the campaign the German newspapers were full of stories of irregular methods of warfare adopted by the Belgian people

and horrible atrocities committed by them on isolated German scouts who fell into their hands, and on the German wounded. German refugees, who left Belgium by the eastern frontier, told of attacks by Belgian mobs on men, women, and children, and there was even one detailed account of how German women had been dragged from a train, stripped naked, and torn to pieces by an excited mob. Then came tales of treacherous attacks on the German troops by Belgian civilians, generally described as 'being led by their curé.' There were accounts of German soldiers being hospitably received by the Belgians on whom they were billeted, and then poisoned, or otherwise murdered. There were tales of Belgian women gouging out the eyes of the wounded, and a story of a number of wounded being murdered in a Belgian hospital. In many cases these stories were told with particulars of times and place, and purported to be related by eye-witnesses. They appeared in letters of soldiers from the front, or they were told by wounded men, or their escorts, coming back over the German frontier. They appeared in newspapers all over Germany—papers of every kind. . . . However, stories of all kinds of atrocities alleged to have been committed by the Belgians were widely believed in the German army and in Germany in the first weeks of the war. There is no doubt the result was that these fictions largely contributed to the outbursts of savagery on the part of the invaders that marked the latter part of August, 1914. The worst of atrocity-mongering is that it leads to reprisals which are themselves atrocities. . . . Again, everyone will remember how, in 1914, stories were freely circulated of Belgian children arriving in England with their hands cut off by German soldiers. At the time, I was told that there were such cases in London. An inquiry of the Belgian Reception Committee brought the reply that they knew of no such case. Precisely the same stories were told in Germany of German families arriving from the Belgian frontier bringing with them their children whose hands had been cut off by the Belgians. Here, too, the story was a fiction. It is hard to understand how it was ever believed anywhere. One might imagine a dead child being shown with its hands cut off, but it is absurd to imagine a child's hands being cut off and the child surviving for many minutes. For even surgical amputation of one hand means that the big artery of the arm must be dealt with skilfully and rapidly unless the subject of the operation is to bleed to death. But the story was believed in Germany of the Belgians, as it was believed in other countries of the Germans. Has not a famous cartoonist drawn a picture which was circulated by thousands, showing the Kaiser's nightmare dream of scores of little children holding up their stumps of arms with the hands gone! There was another story in September, 1914, that there were many cases in the London hospitals of our wounded soldiers who had been blinded, by having their eyes gouged out by fiendish enemies, as they lay helpless on the ground. The story was contradicted by the Press Bureau, on information received from the hospitals. But precisely the same story was widely circulated in Germany, and in this case it was frequently alleged that it was Belgian women who had gouged out the eyes of the unfortunate German wounded. In December, 1914, several German papers published a statement that in the hospitals of Hanover and Berlin there were soldiers who had suffered this cruel outrage. The directors of these hospitals, in reply to an inquiry, said that no such case was known to them. It was stated that at Aachen

[Aix-la-Chapelle] a whole ward in a hospital was full of wounded men whose eyes had been put out. In reply to an inquiry, the chief surgeon of the hospital, who, by the way, was a celebrated oculist, wrote on September 30, 1914: 'In none of the hospitals of Aachen is there "a ward full of wounded men whose eyes have been put out," and to my knowledge there has absolutely been no case of this kind at Aachen.' But it seems almost impossible to kill a lie of this kind once it has been started. . . . An ugly feature of these German stories is that they betray undoubted hostility to the Belgian and French priests, and they certainly were not written to Catholic homes. In all armies soldiers writing home from the front sometimes indulge in what may be called 'romancing.' I heard from an English officer how in censoring the letters of his men he found one in which the writer described how he had taken part in a bayonet charge. He said to the man, 'Why do you write this kind of thing? You know we have never been in a bayonet charge.' And the reply was, 'Of course I know it, Sir, but that is the *kind of thing they like to read at home.*' It would seem that there are some German homes where they like to read about atrocities committed by Catholic priests."—A. H. Atteridge (*The Month*, Jan.-June, 1917, pp. 425-433).—"Into Dutch Limburg the tide of immigration flowed without great variations; but this was not the case with Zeeland or Brabant, where the Belgian refugees arrived, at the time of the siege of Antwerp, at the rate of some hundreds of thousands (600,000, it is believed) in a few days. Zeeland received not only the fugitives from Antwerp, who arrived directly by boat, but also those from Gand, Bruges, Ostend, and other parts of Flanders, who had travelled by road to the Dutch territory lying on the left bank of the Scheldt. Through Fluis, a little frontier town containing only a few hundreds of inhabitants, 60,000 persons passed in October; on certain days the little Zeeland town had its population increased tenfold. At Hontenisse, which contained rather more than five thousand inhabitants, there were, about the 15th of October, 18,000 refugees; certain farmhouses gave shelter to as many as 300. . . . Just as they fled to Holland, so thousands of Belgians who were driven from their homes by the German invasion entered France in the early days of the war. When the soil of France was itself invaded, this migration, which had become more difficult, was considerably lessened. But it rose again, attaining extraordinary figures, when the Germans, after the fall of Antwerp, moved onward to the coast and to the Yser. On the day before the enemy reached Ostend, and even on the same day, there was a formidable exodus, chiefly along the road from Nieuport to Dunkirk, but also by sea. 'At Calais,' writes a correspondent of *Le Temps*, 'one saw them entering the harbour—a host of small fishing-boats from the Belgian coast, from Blankenberghe, Heyst, Nieuport, Ostend, or La Panne. What a heart-breaking spectacle met the eyes when these poor people landed! They were packed together on the narrow decks of the small sailing-boats, unfortunate families who had been able to save and bring away with them only a little linen and the few trifling objects to which they were most attached. . . . In Switzerland also the Belgian refugees are comparatively numerous; there are some 2,500 who are provided with homes by the care of committees which have been formed in the cantons of Vaud, Geneva, Neuchâtel, Fribourg, Le Valais, and Berne, and 1,000 who live upon their own resources. . . . At the time of the great exodus, between the 7th and

the 14th of October, 1914, no less than 26,000 fugitives were landed in Folkestone harbour. A large number arrived at Tilbury also, and on the 14th of October hundreds of fugitives who had embarked upon fishing-boats arrived at Ramsgate and other small harbours of the South-east coast. Finally, England received the surplus of the Dutch immigration. At the present time [1915] more than 180,000 Belgian refugees are awaiting in England the liberation of their national territory; while many thousands of Belgian wounded are being treated in English hospitals."—Gerlache de Gomery, *Belgium in war time*, pp. 133-141.—See also *WORLD WAR: 1914: I. Western front: b; c; d; e; v, 1; and Miscellaneous auxiliary services; X. Alleged atrocities and violations of international law: a, 1; a, 12, ii.*

1914-1918.—National distress.—Relief meas-

rock-bottom basis of Belgium's national existence, was shattered by the shock of the German armies. Within ten weeks from the fourth of August almost the entire country was in the possession of the enemy. With credit destroyed, production came to an instant standstill. Mines and workshops, factories and mills closed, and panic seized the land. The whole of the working population was plunged into the deepest misery. The harvest was being gathered as war broke on the country and the ripe crops were left standing in the fields where they were trampled by the armies or left to rot. Belgium on July thirty-first was a land of intense activity. A week later it was a land of the unemployed. July thirty-first found 1,757,489 men, women, and children occupied in upwards of seven hundred industries; 1,204,810 people were tilling the land. August seventh found practically

REFUGEES FROM ANTWERP, FLEEING BEFORE GERMAN INVASION

ures.—“Few know in detail the situation in which Belgium found herself in the autumn of 1914. The invasion by the German armies overwhelmed the country almost as completely as an avalanche overwhelms a village lying in its path. The superstructure of civilized society was swept away. Belgium had been the most highly industrialized country in the world. It imported seventy-eight per cent of its breadstuffs. Its own agricultural products afforded sustenance to the population for only four months out of the year. For the other eight months the country was dependent upon imported foods; much of them quickly perishable. A peaceable interruption of overseas or overland commerce would have brought the whole country into immediate sight of starvation, even without the horrors of invasion. Forty-nine per cent of the population were salary and wage earners. Almost half the population, then, was dependent on the normal functioning of industry. Credit, which is the basis of modern industrial activity and the

every man, woman, and child on farms, in fields, on canals, on railroads, in every village, town, and city, suddenly idle, without work, and without food, Preceding the westward march of the invaders came a wave of refugees. Uprooted from the soil, flung from villages and cities invaded, often burned and pillaged, they fled westward, carrying with them panic and blind terror. While Belgium's heroic army by its stand at Liège and Namur may have saved Paris and Calais, it could not save its own country. As the Germans advanced they seized every line of communication,—the railroads, street-cars, canals, telegraphs, telephones, and mails. The copper nerves and iron veins which are the life of every modern nation were wrenched from the Belgians. Every village was cut off from its neighbor; every town from the next town. There was no means of transport, except for German troops, so that every commune, from the tiniest village to the greatest city, was suddenly isolated, ignorant of what was hap-

pening a few miles off, and unable to ascertain the most vital news, except through a few hasty words that might fall from the shaking lips of fugitives. As the Germans occupied town after town, province after province, they quartered soldiers upon the Belgians, and these hastened the consumption of what little food was available. General von Emmich's proclamation to the Belgians before Liège ran: 'I give formal guarantee to the Belgian population that it will not have to suffer the horrors of war; that we shall pay in money for the food we must take from the country; that our soldiers will show themselves to be the best friends of a people for whom we entertain the highest esteem, the greatest sympathy.' But the patriotic resistance of the Belgians changed all this. General von Beseler's despatch to the Kaiser following the fall of Antwerp is typical of the psychology of the soldier, and has a curiously medieval ring: 'The war booty taken at Antwerp is enormous: at least 500 cannon and huge quantities of ammunition, sanitation materials, numerous high-power motor-cars, locomotives, wagons, 4,000,000 kilograms of wheat, large quantities of flour, coal, and flax wool, the value of which is estimated at 10,000,000 marks; copper, silver, one armored-train, several hospital trains, and quantities of fish.' There are few of the raw materials of industry which cannot be put to some military use. A great part of the machinery of peace-time can be converted into machinery with which to manufacture implements of war. Above all soldiers need food and consume it in immense quantities. Finding all these things at hand in Belgium the Germans proceeded to commandeer them right and left. Linseed oil, oil-cakes, nitrates, animal and vegetable oils of all sorts, petroleum and mineral oils, wool, copper, rubber, ivory, cocoa, rice, wine, beer—anything and everything that men could consume or that the German factories could utilize—were seized and transported to the Fatherland. In many cases the goods were confiscated; in others they were requisitioned by the conquerors, a price was decided upon, and payment promised at some convenient time in the future. Belgium was gutted. From the isolated communes came frantic appeals for help. The Belgians appealed first to the Germans, who in some cases divided their army rations with the people, although this was unsystematic and utterly useless when seven millions were concerned. They appealed to their neighbor Holland, but the Dutch were eating war bread and anxiously hoarding every bit of food-stuff, for they were as yet unable to import enough for their own uses. They appealed to Brussels, sending purchasing agents with dog-carts to buy a little flour and potatoes in the open market; for Brussels was officially the capital, and they were accustomed to turn to Brussels. But Brussels, like themselves, was isolated and face to face with famine. The sole advantage it possessed over the other communes was a volunteer relief organization, called the Central Relief Committee (*le Comité Central de Secours et d'Alimentation pour l'Agglomération Bruxelloise*), formed on September fifth under the patronage of the American and Spanish Ministers, Mr. Brand Whitlock and the Marquis of Villalobar. In every little village there was a *Bureau de Bienfaisance*; often there was a Society of Saint Vincent de Paul and a *Comité de Secours*. In the larger cities there were sturdy branches of the Red Cross, with committees of charity, cheap restaurants, committees to take charge of the children of soldiers, to provide proper diet for nursing mothers, and a variety

of other relief organizations, secular and religious, such as the Little Sisters of the Poor, mainly under the auspices of the Roman Catholic Church. But though the local machinery was at hand there were first four general problems to face: the re-establishment of order and credit abroad; the right to transport foodstuffs through the British blockade into territory in the hands of the Germans; the right to use the transport facilities of Belgium in the distribution of such imports; and the securing of a guarantee that the Germans would requisition for themselves nothing thus imported for the Belgian population. The Central Relief Committee, which had been formed to care for the wants of Brussels, appealed through its American and Spanish Minister-patrons to Governor-General Kolmar von der Goltz to guarantee the safety of any supplies which might be purchased or donated abroad for the benefit of the Belgian civil population. On October sixteenth the Governor-General gave formal assurance that 'foodstuffs of all sorts imported by the Committee to assist the civil population shall be reserved exclusively for the nourishment of the civil population of Belgium, and that consequently these foodstuffs shall be exempt from requisition on the part of the military authorities and shall rest exclusively at the disposition of the Committee.' Meanwhile Mr. Whitlock had appealed officially to the United States Government. In the London *Times* for Wednesday, October fourteenth, 1914, is the following telegram: 'New York, October 13.—The Administration cannot permit Mr. Page to have food supplies for the starving population of Brussels shipped in his name to Mr. Whitlock until the German Government sanctions this step. Mr. Page's urgent representations concerning the immediate necessity of relieving the wants of Brussels were communicated to Germany last Wednesday, but no reply has yet been received.' [Mr. Page was United States ambassador in London.] Armed with the assurance given by Governor-General von der Goltz that nothing imported by the committee would be requisitioned by the Germans, Emile Francqui and Baron Lambert of the Central Relief Committee, and Hugh Gibson, secretary of the American Legation, went to London to explain to the British Government the desperate situation of the city of Brussels and to request permission to import food. At the same time they appealed personally to American Ambassador Walter Hines Page and were by him referred to an American mining engineer named Herbert Clark Hoover, who had just rendered notable services to the Embassy and to his fellow-countrymen by heading a committee to advance funds to send home to America those of our nationals who had been caught in Europe at the outbreak of war. As a result of conferences between Mr. Hoover and Mr. Francqui a plan was drawn up and submitted to the British Government, which granted permission to Mr. Hoover and to an American Committee which he should organize under the patronage of the Ministers of the United States and of Spain in London, The Hague, and Brussels, the right to purchase and transport through the British blockade to Rotterdam, Holland, cargoes of foodstuffs, destined to be trans-shipped into Belgium, consigned to the American Minister in Brussels, and to be distributed through the Central Relief Committee—now expanded to the Belgian National Relief Committee (*la Comité National de Secours et d'Alimentation*)—under the direction of American citizens, who should certify, as representatives of Mr. Brand Whitlock, that the food was equitably apportioned and consumed

only by the Belgian civil population. This plan was not for the assistance of the city of Brussels alone but was for the whole of Belgium. The *London Times* of October twenty-fourth, 1914, says: 'A Commission has been set up in London under the title of *The American Commission for Relief in Belgium*. The Brussels Committee reports feeding 300,000 daily.' On November fourth it states: 'The Commission for Relief in Belgium yesterday issued their first weekly report, 3 London Wall Buildings. A cargo was received yesterday at Brussels just in time. Estimated monthly requirements: 60,000 tons grain, 15,000 tons maize, 3,000 tons rice and peas.—Approved by the Spanish and American Ministers, Brussels.'—E. E. Hunt, *War bread*, pp. 175-183.—'A change had come about in the attitude of the German authorities toward the Commission for Relief in Belgium and the National Committee. 'I approve with lively satisfaction the work of the Central Relief Committee,' his [von der Goltz's] letter runs, 'and I do not hesitate formally and expressly to give by this letter assurance that foodstuffs of all sorts imported by the Committee to feed the civil population are reserved exclusively for the needs of the population of Belgium, that consequently these foodstuffs are exempt from requisition on the part of the military authorities, and that they remain exclusively at the disposition of the Committee.' Eight months later, on June twenty-sixth, 1915, [the new] Governor-General, von Bissing, wrote to the Minister-patrons of the Committee in a very different strain. . . . [in a communication which] included this ominous paragraph: 'All tendency on the part of the National Committee to monopolize the distribution of charitable assistance in Belgium must be stopped. The principle must be maintained that all other charitable organizations, above all, the Belgian Red Cross, have the right to act side by side with, and outside of, the National Committee.' The National Relief Committee had never claimed, nor could it claim, a monopoly of Belgian relief work. Its policy was federal, not monopolistic. Its aim was relief in Belgium and nothing else. Scores of existing relief organizations had been patronized and subsidized by the Committee, but all were engaged in work which was humanitarian and at bottom neutral. Any other basis was impossible. Mr. Brand Whitlock, the Marquis of Villalobar, and their colleague and new Minister-patron, Jonkheer de Weede, Dutch Minister at Havre, could not have lent their names to any other program. But on the other hand the Belgian Red Cross was no longer Belgian. The German authorities, for reasons which have not been made clear, had taken charge of it and Prince Hatzfeldt was its head. Then as always when we were in great difficulty in Belgium came Herbert C. Hoover. A letter preceded him from the Marquess of Crewe, Lord President of the British Council, demanding that the German Government hand over to the Commission for Relief in Belgium and the National Relief Committee, for distribution to the Belgians, the whole of the indigenous cereal crop for 1915, and add to this the usual guarantees against military requisition. To requisition the crop the German General Government constituted an interesting bit of machinery called the Central Crop Commission on which there were five Germans, one Belgian, and one American. A maximum price was decreed at which the crop was to be purchased of the farmer and a maximum price at which flour was to be sold throughout Belgium. Barley was requisitioned for the Belgian breweries; rye was apportioned between human and animal con-

sumers; and traffic in cereals outside of the channels of the Commission was absolutely prohibited. The function of the Central Crop Commission was to requisition the crop under such circumstances as made it easy for the Belgian National Committee and the Commission for Relief in Belgium to purchase and distribute it to the ultimate consumers. Provincial cooperative societies were instituted with sufficient capital available to buy one-twelfth of the crop each month, and it was then turned over to the committees, and by them distributed as if it were imported grain."—*Ibid.*, I, p. 308.—'The problem of Belgian Relief is not simply one of feeding a population; there is also the broad problem of destitution. In Belgium over fifty per cent of the working population is unemployed; and beyond all this there are the normally poor, the blind, the orphan, and the helpless. Three-and-a-half million people in Belgium, and two millions in France are either wholly or partially destitute. They must have not only the imported supplies, but they must have the supplement of native foodstuffs in potatoes and soup. They must be clothed with millions of garments, they must be warmed with thousands of tons of coal, the homeless must be housed. For security's sake, the babies and mothers of the poor must have their food prepared and served in separate canteens and the older children must have supplementary public meals in the schools. Furthermore the middle and professional classes denuded of income must have considerate and sympathetic treatment. All of this gigantic labor has been accomplished by the creation of hundreds of special committees penetrating horizontally and vertically into the population.'—H. C. Hoover, *America's obligation in Belgian relief (pamphlet)*, p. 7.—See also INTERNATIONAL RELIEF; RED CROSS: 1864-1914.

1914-1918.—The Belgian deportations.—Clandestine journalism.—'On October 3rd, 1916, the German General Headquarters issued a decree that 'Unemployed Belgians able to work may be compelled to work even outside the place where they are living. The German authorities and military courts have the right to enforce the proper execution of this regulation.' The Belgian communal authorities were immediately called upon by the Germans to furnish lists of unemployed. When the communes refused, the Germans made out the lists themselves. In order to swell them they threw men out of employment by fraudulent means, and included men who had never ceased to be employed. When the lists were ready, the victims were called up at twenty-four hours' notice. Many were called upon, under pressure of imprisonment and starvation, to sign a 'voluntary agreement.' Those of means were in some cases invited to buy themselves off by paying blackmail. Otherwise, after being inspected like cattle by representatives of the German 'Industrie-Bureau,' or even by subordinate German officials, they were marched to the station, packed into open cattle-trucks (60 men in a truck), and carried away. . . . The Germans posted soldiers with fixed bayonets to control the desperate women and children whose husbands and fathers were being deported to Germany. . . . We only know that they are being deported there to take the place of German workers in German factories, mines, and quarries, in order that the Germans so released from necessary war-work at home may be drafted into the active German armies at the front. Fifteen thousand Belgians had been deported to Germany for this purpose by October 24th, 1916, 50,000 by November 19th, and nearly 100,000 by

the beginning of December; but there are half-a-million unemployed in Belgium altogether, all of whom are exposed to deportation by the terms of the German decree, and as the Germans have already extended the measure—in practice, though not on paper—to Belgians who are not genuinely out of employment, every able-bodied worker in the Belgian territory under German occupation is a potential victim of the same outrage.”—A. J. Toynbee, *Belgian deportations*, pp. 14-15.—“Nothing could be more shocking than this wholesale carrying away of men from Belgium. I know of no case in European history to surpass it. Not even in the Thirty Years’ War were there such things done by any recognised government as the German Government has done, first and last, in Belgium. This last case is virtual slavery. The act is like that of those Arab slave-raidings in Africa who carried off negroes to the coast to sell. And the severity is the more odious because these Belgians and the work

many’s implicit approval, by Germany’s ally. But the scale of the present deportations in Belgium, though it is appalling already and no limit is in sight, is a less criminal feature than the steps by which the deportations were prepared and the object for which they are being carried out. There are half-a-million unemployed in Belgium today because the German Government, as soon as it had got the country into its power, requisitioned the Belgian stocks of raw materials and carried away the plant from Belgian industry to a standstill and threw Belgian workmen out of employment. . . . Baron von Bissing, the German Governor-General of Belgium since December, 1914, lays the responsibility for the deportations on Belgian idleness and the British Blockade. ‘England,’ he is reported to have said in his recent interview with the correspondent of the *New York Times*, ‘has reduced nearly 500,000 Belgian labourers to a chronic state of demoralising idleness. It is in order to remedy these increasingly intolerable con-

GERMAN DEPORTATION OF BELGIANS FROM MALINES

forcibly extracted from them are going to be used against their own people. Having invaded Belgium and murdered many hundreds, indeed even thousands, among them women and children who could not be accused of ‘sniping,’ the German military Government dislocated the industrial system of the community. They carried off all the raw materials of industry and most of the machinery in factories, and now, having thus deprived the inhabitants of work, the invaders are using this unemployment as a pretext for deporting them in very large numbers to places where nothing will be known of their fate. They have not even been allowed to take leave of their wives and children. . . . Women threw themselves on the rails in front of the locomotive about to haul out the train containing the miserable captives, and the German soldiers forced them off with bayonets.”—Viscount Bryce, quoted in A. J. Toynbee, *Belgian deportations*, p. 5.—“This systematic, wholesale deportation of a people has no precedent since the Assyrian deportations of the eighth century B.C. Its only parallel in contemporary history is the Turkish deportation of the Armenians in 1915—a crime committed, with Ger-

ditions, harmful alike to the Belgian nation and the individual, that I have ordered measures to encourage the voluntary migration of unemployed Belgian labourers to Germany, and to evacuate the congenitally idle who refuse suitable work at good wages.”—*Ibid.*, pp. 16, 20.—Despite the thoroughness with which the Germans ruled Belgium, during the four years ending with the German retreat in the fall of 1918, the Belgians, in some mysterious and unknown manner, although a strict censorship was imposed upon them, managed to acquaint the inhabitants of the invaded sections from time to time with the news of the war, and also succeeded in sustaining their excellent morale. One of the chief purposes of these publications which appeared timely in the people’s mail boxes was to maintain communication with the outside world and with the aid of such information “to destroy the effects of Prussian falsehoods indefatigably repeated.” The influence of these clandestine journals was such upon the population that the German governor-general offered rewards of 100,000 francs for the detection of those responsible, but the offer proved ineffectual in disclosing the patriotic editors and distributors.—See

1914-1918.—Martyrdom of Flanders and the Walloon country.—Its significance.—“It is not my wish that these lines be construed as fit subject of an epitaph for our cities leveled to earth. They are not dead—life survives beneath their ashes like that of returning spring, which descends and reascends to the upper soil, under the snow. Flanders and the Walloon country have, in times past, known as sorrowful days as those through which they are now passing. Burgundy, Spain, and Austria have, turn by turn, torn and dismembered them, but not destroyed, for they were created to arise—always triumphant! But if hope is ever ours and protects from the fatal wind our watch-light at the end of the avenue, it is none the less true that the present hour is strangely sad and terrible. To subdue us, Germany is not satisfied merely to throw against us her soldiers. She sends the incendiary with the torch. She does not limit herself to legitimate warfare but attacks the mother and growing child. Her efforts are directed against our entire civilization. She has wished, not only to attack our future, but our past. Her hate is complete. Our hope is in our future. Not yet realized, it burns, nevertheless, with fervor and confidence. It can not be touched or seen. However, it is as real as our presence upon earth. Our past, on the contrary, is visible and palpable. It is made of rock and it abides in our monuments. From the eleventh or twelfth century is symbolized in the crucial construction of our churches, our ideals, and our faith. We have ornamented our temples with decorations realistic as well as pious, revealing thus the *nuances* [shades] of all our thoughts. Since the thirteenth century our civic pride has been emphasized and united in a thousand towers. From our private residences, as well as our public buildings, they stand dominant, signifying to all that this pride should be above mere selfish interests or the rivalries of society. To satisfy our desire for meditation and silence we have built our convents. Our markets given over to the hands of our fullers, our butchers, our drapers, tell of our zeal for labor, commerce and industry. What we have built has been imposing and beautiful. We have created masterpieces. All the life of our historic past has been ardent and personal. In this it differs from that of other nations. At two periods, the fifteenth and sixteenth century, we have given to the world, thanks to our painters, a lesson in art. Only yesterday our literature, already illustrious though scarcely begun, voiced to the attentive ear of Renown, the names of our great writers. Europe and America know them. They are respected as well as praised. Our greatest names in literature are put along side of Carlyle and Emerson. These aesthetic blossomings have been, each time, the result of material prosperity, wide and sure. Next to England, Germany, and France, it is little Belgium that has taken rank in the commercial battles of the Occident. It is thus with a certain assurance that we celebrate our virtues. We are worthy to be, and to remain free, because we possess the ethical qualities that are suited to our civilization and that serve the various impulses and beauty of the world. We lack, perhaps, the glory of arms, but, thanks to our enemies themselves, we have conquered. ‘We have had the honor—yes, truly! without knowing it—of being the first to defend a past full of splendor and achievement. Greece and Rome attended at our sides, invisible. At Liège, in the dark sky, soared the great wings of

Pallas Athene, while below hovered the monstrous Zeppelins. None of our little Flemish or Walloon soldiers suspected this and we, ourselves, were ignorant of the fact. We only had knowledge when, later, the full moral significance of this war dawned upon us. The German theorists have confessed that they dreamed of an Asiatic civilization where whole nations are held in slavery. They wish to see again the times of Darius, of Xerxes and of Nebuchadnezzar. Fair liberty and organized oppression were again the stakes of the battle, and it was upon Belgium they first made war. If, in the immense unhappiness that has befallen us, there remains, aside from an undying hope, a motive of high exaltation and even of joy, it is to dream that our courage, our fervor and our devotion has served one of the greatest causes humanity has ever known. Let us remember, too, that during the tragic hours of the first days of August we loved, hated, acted, cried, sang and wept with an intensity such as all the existence of our past as a nation can not boast—this sudden and superb moment through which we lived, under the thunderbolt. And were we truly a nation before this magnificent moment? We wasted ourselves in petty quarrels; we were indifferent to great realities; we were even complaisant to reproaches concerning our origins, Flemish or Walloon; we strove to be lawyers, shopkeepers and office holders before being citizens. Danger has united our scattered strength in a single luminous unity. And now we rise from our ruined cities, from our leveled farms, from the immense battle field of our land, and, with victory already in our hearts—we wait!”—E. Verhaeren, *Belgium's agony* (translated from the French by Bergen Applegate).

1914-1918.—German administration by “Special Military Tribunals.”—In his “Petite histoire de l'invasion et de l'occupation allemande en Belgique,” Professor Léon Van der Essen thus describes the administration of justice in Belgium by the Germans: “The written specification of penalties is vague and leaves a free field for caprice; the definition of offences is also vague, and the essential constituent factors of the various crimes are not indicated. The laws and decrees are published, but it is a farce, because they are based on the German Military Penal Code, with which Belgians are not acquainted. When the accused appears before the tribunals he has no guarantees; there is no genuine preparation of the case, and the presence of an advocate is forbidden during the trial. All that a Belgian advocate can do is to bribe one of the (German) clerks of the Court, collect from him a few scraps of information, and finally intervene after judgment has been given by addressing a petition for mercy to the Governor-General through a host of intermediaries. Even this belated intervention (though it must be mentioned that at Brussels the advocate is allowed to say a few words while the trial is in progress) depends entirely on the good will of the provincial military governor.”

1914-1918.—African campaign.—Not a small part of Belgium's military campaign against the German forces took place in Africa, where Belgian troops cooperated with the British and French in the conquest of Germany's East and West African colonies. 1916-1917.—Pan-German ambitions versus the World War.—“From the point of view of general European politics, the significance of Belgium and of her northern neighbor, Holland, from which she separated in 1830, has lain the fact that they have been coveted by those Germans who have desired to increase the boundaries of the German Empire, and who have to that end, advocated the absorption of certain territories lying beyond the boundaries of Germany. Belgium and Holland have been coveted by the Pan-Germans because of their riches, industrial and agricultural, because of their coast-line, abounding in excellent harbors on the Atlantic, fronting England, and also because of their colonies, Belgium possessing a vast African domain now called the Congo Colony, rich in tropical products, and Holland possessing invaluable tropical islands in the East Indies, Java, Sumatra, Borneo, and the Celebes. . . . The Pan-Germans looked with greedy eyes upon these spacious and inviting territories belonging to countries which, in a military sense, were conveniently weak.”—C. D. Hazen, *Fifty years of Europe, 1870-1919*, p. 205.—See also *PAN-GERMANISM*: Pan-German League and its branches.—On April 5, 1916, the German Chancellor, speaking on the aims of the World War gave the following outlines of the future action of Germany concerning Belgium: “We will obtain sure guarantees in order that Belgium should not become a vassal-State of England and France and should not be used as an economic and military bulwark against Germany. Germany cannot abandon to Latin influence the Flemish people which has so long been brought under subjection. We will secure for them a sound development, according to their resources, founded on the Flemish language and character.” During 1917, peace proposals, coupled with an offer to evacuate Belgium, were published by the German government [see also *WORLD WAR*: 1917: XII. Political conditions, etc.: h; h, 1; h, 3; h, 4]. The proposals were rejected alike by Belgium and her allies. The German annexationists, nevertheless, were busy urging the Pan-Germans to adhere to the policy of extending the German political state and influence. Deputy Roessicke, in a speech in the Reichstag (May 15, 1917) strongly advocated permanently claiming Belgium as a German naval state. Governor-general of Belgium, von Bissing, in a letter to deputy Stressemann, wrote (June 3, 1917): “There lies in my house a memorandum composed by me for myself alone, which deals more precisely and exhaustively with the future of Belgium and arrives at the definite result that, if we do not get Belgium into our sphere of power, and if we do not govern it in German fashion and use it in German fashion, the war is lost.” The beginning of 1918 saw a marked change in the attitudes of the governments towards peace proposals. On January 8, 1918, President Wilson enunciated his famous fourteen points as a basis for negotiating peace and terminating the state of war, then in its fourth year.

The seventh point propounded by the President related to Belgium, stipulating that before peace would be acceptable Belgium must be evacuated and restored, without any attempt to limit her sovereignty. Previous to this the Bolsheviks among other proposals to the Central Powers at Brest-Litovsk (December 2, 1917), in an effort to bring together representatives of the Allied Powers to discuss a general peace, also favored “the restoration of Belgium and indemnity through an international fund for damages.”—See also *WORLD WAR*: 1916: XI. 1918.—German grip released.—With the aid of the British fleet the Belgian Army under King Albert participated in the Foch offensive which brought about the collapse of the German armies (September 28, 1918). The hasty retreat of the Germans from western Belgium began October 16. Two days later the Germans evacuated Ostend, Zeebrugge and the submarine bases on the coast. On the morning of October 25, 1918, the king, queen and crown prince of Belgium made a state entry into Bruges. The forced evacuation of Belgian territory continued unabated until the signing of the armistice, November 11, 1918. Two days later the king entered Ghent; Antwerp on the 10th; and on November 22 the royal family were enthusiastically greeted on their return to Brussels.—See also *WORLD WAR*: 1918: XI. 1919.—At the Peace Conference.—Problem of reparations.—“Belgium had suffered more than four years of German occupation, including the systematic spoliation of her farms, her factories,

and her railroads, and the deliberate attempt to divide her people into two separate Walloon and Flemish states; she had barely escaped permanent incorporation with Germany. Yet all this time she had fought as best she could beside the Allies; she had made heavy sacrifices; she had stood for international right. Belgium expected much from the peace, and Belgium was in large measure disappointed. Belgium was disappointed on the economic side, for she was flooded with depreciated German currency which the Allies did not take over, and her hopes for full priority on the account of restoration and reparation were not entirely fulfilled. Indeed, it soon became apparent that the general bill for reparation would far exceed the ability of Germany to pay, and that there were not resources enough in all Germany to meet that restoration of invaded territory upon which President Wilson had declared 'the whole world was agreed.' Belgium had suffered less than France by the destruction of war itself, for her territory, save in the case of the Meuse fortresses and the battle zone in Flanders, had not been fought over; but the German occupation which she had borne in equal measure was relatively far more serious, for it affected the whole country and not merely a part, and it produced stagnation of industry and cessation of commerce on a scale that destroyed enterprise and left idleness as well as poverty in its stead. . . . Finally, Belgium was dissatisfied with her whole position at the Conference. During the war she had acted as one of the Allies and had her representation in the Allied councils. At Paris she was only a small power, limited to three delegates—at first even to two—and excluded from the guiding and deciding group of the Five Great Powers. Even the decisions which directly concerned her were taken by the Council of Ten or the Council of Four. She was outside, while Italy and Japan were inside. Individually her delegates sat on important committees, but there were times when Belgium must have felt far removed from the central tasks of the Conference, in the outer limbo occupied by Liberia, Panama, and Siam. A Belgian told the story of an officer who had lost both legs. 'You will always be a hero,' said a consoling friend. 'No,' replied the officer, 'I shall be a hero for a year and a cripple for the rest of my life.' Belgium felt that the days of her position as a hero were over. . . . The simplest solution of the problem of the Scheldt, would be the elimination of Holland from its southern shore, which she has held for more than three hundred years. This land, called Maritime or Zealand Flanders (Flandre zélandaise, Ryksvlaanderen), has an area of 275 square miles and a population of 78,677, chiefly Catholic. Its economic relations are mainly with Belgium, but it has manifested no desire to change its political affiliations, and has recently been assiduously cultivated by Holland. A less drastic measure would be the admission of Belgium to co-sovereignty on the lower Scheldt, leaving Holland in the possession of its banks. Still another possibility would be the complete internationalization of the river, under the League of Nations. These solutions, especially the first two, have been energetically opposed in Holland as infringements on her sovereignty. The question of her boundaries was not, she declared, a matter for the Peace Conference. . . . If the territorial status of Belgium has not been essentially bettered by the war, her economic status is certainly worse. No share in a problematic indemnity will compensate her for her direct losses, not to speak of her other expenses—the stripping of her resources, the enforced

idleness of her factories, the disappearance of her foreign markets and her transit trade. Dependent in an extraordinary degree on the outside world, Belgium was cut off from it for nearly five years, and it is a question how fully she can recover her previous position. A hero in 1914, is Belgium to remain a cripple for the future? The German is gone, but he left ruin and disillusion behind him. Small wonder that many a Belgian asks whether it was all worth while, as he contrasts his lean and hungry country with the prosperity of neutral Holland. Small wonder that the neutral world, as it looks to the future, is encouraged to imitate the Holland that stood pat, the Luxemburg that succumbed, rather than the Belgium that resisted. The neutral is more prosperous than the ally."—C. H. Haskins and R. H. Lord, *Some problems of the Peace Conference*, pp. 48-50; 65-66; 69-70.—"Before touching upon the formation of the permanent reparations commission and upon its workings I must mention the priority of \$500,000,000 that was arranged for Belgium. A priority, without specifying the amount of it, had, in effect, been pledged to Belgium long before the end of the war, but nobody seemed to be very keen to establish the priority. Colonel E. M. House, however, late in February suggested a plan to Mr. Balfour of the British delegation and M. Klotz of the French delegation, granting Belgium a priority of \$500,000,000 on the German reparation, this sum being sufficient to set Belgium well on her way to recovery. There was, however, great delay in getting final assent to this priority. Mr. Norman Davis, the able and leading United States Treasury representative, and all the American delegation worked hard to bring it about and to push the plan on every occasion, but it still hung fire. The Belgian delegation, finally becoming alarmed, insisted on formally taking up the question with the Council of Four. The Belgian delegation under the leadership of Mr. Hymans, Minister of foreign affairs, made two chief demands: one for priority and one for reimbursement for what the war had cost her. To this latter item there was vigorous objection on the ground that it was inadmissible to provide for Belgium's 'costs of war' and not for those of England, France, Italy and the other Allies. As a compromise to meet the situation a formula was finally proposed in a phrase to the effect that Germany was to be obligated especially to 'reimburse Belgium from the Allies as a necessary consequence of the violation of the treaty of 1839.' Inasmuch as all such sums borrowed by Belgium were used for the prosecution of the war, this phrase was simply a euphemism for granting Belgium the war costs that she demanded. But it was finally agreed to on all hands and the crisis was averted. It should be noted that from the beginning the American delegation had claimed for Belgium full reimbursement of war costs on the ground that irrespective of the armistice agreement, Germany had made herself liable for these through having violated the neutrality of Belgium. Germany in fact herself repeatedly recognized her obligation to indemnify Belgium completely."—E. M. House and C. Seymour, *What really happened at Paris*, pp. 270-281.—See also PARIS, CONFERENCE OF: Outline of work.

1919.—Claims in Luxemburg. See LUXEMBURG: 1919-1921.

1919.—Electoral reform bill.—On April 11, the Belgium Chamber of Deputies unanimously adopted the Electoral Reform bill, preventing a ministerial crisis.—See also SUFFRAGE, MANHOOD: Belgium: 1830-1921.

1919 (June 28).—Treaty of Versailles.—Abrogation of imposed neutrality.—In Article 31, Part III of this historic document the special neutralized status of Belgium is abrogated and Germany “undertakes immediately to recognize and to observe whatever conventions may be entered into by the principal allied and associated powers, or by any of them in concert with the Governments of Belgium and of the Netherlands, to replace the . . . treaties of 1839.” Article 32 extends the full sovereignty of Belgium over the whole of the contested territory of Moresnet (Moresnet Neutre), which “Germany recognizes.” In Article 33 Germany “renounces in favor of Belgium all rights and title over the territory of Prussian Moresnet,” and in Article 34 Germany is called upon to renounce “in favor of Belgium all rights and title over . . . the whole of the Kreise [districts] of Eupen and of Malmédy.” (See *VERSAILLES, TREATY OF*: Part III; Section I.) Article 38 stipulates that “The German Government will likewise restore to the Belgian Government the articles and documents of every kind carried off during the war by the German authorities from the Belgian public administrations, in particular from the Ministry of Foreign Affairs at Brussels.” Furthermore, according to the terms laid down by special provisions, Germany was charged to hand over to the University of Louvain: manuscripts, incunabula, printed books, maps, and objects of collection corresponding to those destroyed in the Library of Louvain; also to restore to Belgium certain Flemish art treasures from the Berlin Museum and the Pinakothek in Munich. Belgium also received a mandate for about 20,000 square miles of territory in the extreme northwest of former German East Africa, adjoining the Belgian Congo. Belgium was disappointed at not acquiring Luxembourg, however, and at failing to secure at the expense of Holland the province of Limburg and the south bank of the Scheldt. For full details of reparations to be exacted from Germany for damage wrought in Belgium, see *PARIS, CONFERENCE OF*: Outline of work; *VERSAILLES, TREATY OF*: Conditions of peace; Part II; *SPA, CONFERENCE OF*: and below: 1920 (June-July).

1919.—Reconstruction.—Considering the population of the country, Belgium's casualty losses are proportionately larger than those of any other of the Allies. Out of a mobilization of 267,000, the total war casualties amounted to 90,000 men, including 20,000 dead, 10,000 prisoners or missing and 60,000 wounded. In addition 30,000 Belgians (civilians) lost their lives during the German occupation. The loss of life for this small nation is indeed a terrific blow, the influence of which will probably never be eradicated, and the whole country stands to suffer many years before the devastated country will assume its former peaceful life. Agricultural pursuits, reconstruction in general, physical reconstruction of the long suffering people will take many years to reach normality again. Almost all Belgium is a mass of irreparable ruins; fine buildings, historic structures, museums, universities and cathedrals have been razed to the ground; towns have been destroyed completely; the country has been devastated from end to end. But despite the tremendous discouragement facing the thrifty Belgians, reports showed (December, 1920) that the reconstruction of Belgium is well on its way. The workmen have set themselves to their trades with no languid attitude of awaiting the favorable moment to strike. Railroads are being rebuilt throughout the country; factories constructed on the devastated sites of former ones; mills are being built up to begin once more the

manufacturing of steel. Immediately following the signing of the armistice (November 11, 1918), a law was passed forbidding alcoholic beverages. With the passing of the law the making of whisky, gin and other alcoholic liquors ceased almost immediately. The same careful scrutiny is not being carried out by the Federal agents in regard to those who sell liquors, as a result of which the larger restaurants, hotels and places of amusements are selling alcoholic drinks freely. “The Belgians to-day have the air of men who have emerged from a period of bitter repression. They speak as though they were newly endowed with the power of speech, freely and joyfully. So long has silence been imposed upon them, so long has the telling of what they felt and thought been forbidden on pain of death, that they are eager to impart the truth to the first-comer. It has been their fate to live and act a lie for four years. . . . When in 1914, they made the supreme choice of war, they knew something of the misery and suffering which war would bring in its train. They might have chosen the easier way of acquiescence with the bully's will. They preferred to accept the burden and the glory of defiance. Their sufferings, then, being of their own seeking, have set upon their country's brow the crown of martyrdom. And if the wearing of the crown lightened through four weary years the weight of the cross, the relief is still far greater than it would have been even if Belgium had not played an heroic part. . . . It is Louvain which leaves upon the mind the deepest impression of German ferocity. For the wanton destruction of this peaceful city there was no military excuse. . . . Ypres and its desolation cannot be set down in words. It is destruction made manifest. The few gaunt ruins that remain of the famous Cloth Hall, once the pride and glory of the country, are the measure by which you may count the cost which Ypres is asked to pay for an imperishable name. You have no standards by which you may measure the punishment inflicted upon the town and upon the country about it. Of the few shreds and patches that are left of it, none has any resemblance to life. Everything is distorted, out of shape, out of colour, out of resemblance. The roads which lead to Ypres are not like roads. They are patched with sleepers, and the holes, which break them in pieces, are hastily filled. The vegetation is not like vegetation. No blade of grass is visible. There are no crops; there are no trees that are not broken, armless, twisted out of the shapes which once were theirs. . . . Belgium, then, has suffered grievously from the war. She meets her sufferings with a quiet resolution. If her factories are still perforce idle, she is already repairing her railways and rebuilding her bridges. On the road between Ostend and Brussels there are many signs of devastation, and as many of a stout determination that men and women shall be hindered as little as possible in coming and going between the two towns. As you travel by train, you hear always the sound of the hammer, you see the busy workmen at their toil. New lines are being laid, rivers are being spanned afresh, and on all hands the hopefulness and industry of the people are evident. Nor are the Belgians content with the work of reparation. Always skilful husbandmen, they are bringing back into their intensive cultivation every inch of the soil that is possible. The country about Ypres and Dixmude, and all that area that is rightly called ‘devastated,’ will defy all the efforts of agriculture for many a year to come. But elsewhere scarce a patch of ground is left uncultivated, and everywhere you may see signs of

the neatness and intensity characteristic of the Belgians. They are a busy folk, and they have made up their minds that the results of the war shall not hamper them for long."—C. Whibley, *Belgium in 1919* (*Blackwood's Magazine*, Oct.-Dec., 1919, pp. 528-529, 533-535).—"To accelerate restoration the government on August 8 (1919) decided to take over all farms in the devastated regions and work them according to the most approved scientific methods; the owners are to be paid five per cent. interest on a pre-war valuation until such time as the properties are returned to them. On August 13 the Labor Party opened an educational campaign in an effort to reduce the cost of living; their proposal included government requisition of wheat, sugar, milk and butter, and government regulation of the prices of coal, shoes, and clothing."—*Political Science Quarterly*, Sept., 1920.—On September 9, 1919, Cardinal Mercier, primate of Belgium, arrived in New York, primarily, the aged prelate said, to express the gratefulness of his nation to those who contributed so much to save it during the country's darkest hours. While in New York Cardinal Mercier made a strong appeal to the Americans that they might continue in their position as benefactors by sending raw material and machinery to the slowly recuperating Belgians. One of the encouraging results of the Cardinal's visit was the pledging by Americans to raise a fund of \$500,000 to help restore the University of Louvain. One of the chief causes for whatever bitterness still exists in Belgium is the Flemish movement, now practically dead. The late German governor Von Bissing attempted to make use of this movement to divide Belgium into two parts. Those who actively supported the Germans in their scheme to drive a wedge between the Flemings and the Walloons are now completely ostracized. Many arrests have been made in Bruges, Brussels and Ghent. M. Cooremans, who during the period of German occupation accepted from Berlin the part of chief secretary to the separatist Flemish ministry was condemned by a court martial to fifteen years' hard labor. Reconstruction in Belgium was actually begun during this period with the acceptance of \$22,000,000 credit from the United States, which was to provide food and clothing for the more than 2,000,000 still destitute. Experts on reconstruction estimate that the reconstruction work in Belgium will take at least five years. Belgium's greatest need is of raw materials, such as leather, rubber, wool, cotton and steel. The factories are still handicapped tremendously by the Germans' removal and destruction of machinery. Another factor which is beginning to deter Belgium from getting back to normal conditions is the exodus of workmen to France, where much higher wages are offered. In France a Belgian workman can earn 11,000 francs a year, while at home he can earn but a third of that. Brussels and Antwerp are steadily recuperating. Antwerp, especially, is exporting considerable quantities of coal to France.—See also *WORLD WAR: Miscellaneous auxiliary services: XII. Reconstruction: b.*

1919 (September 10).—Treaty of St. Germain ending war with Austria. See *ST. GERMAIN, TREATY OF*.

1919.—Visit of royal family to United States.—King Albert, Queen Elizabeth and Crown Prince Leopold (Duke of Brabant) of Belgium arrived in Washington (D. C.) on October 28, 1919. The royal guests were given a hearty welcome by the Senate and the House. King Albert, in a short address before the members of both Houses of Con-

gress, paid a tribute to the American army for its deciding weight in the World War and thanked Brand Whitlock, American ambassador to Belgium, and Herbert C. Hoover, the American food administrator for devastated Belgium, for their sacrifices to the cause of the Belgians during the war.

1919.—Represented at Conference for International Union of Academies. See *INTERNATIONAL UNION OF ACADEMIES: Conference called by French Academy*.

1919-1920.—Internal politics.—"In preparation for general elections an interesting campaign was waged. The program of the Catholic party included maintenance of the *status quo* in questions of church and state, cessation of party politics, solution of the Flemish question and female suffrage in communal elections. The Liberals asked for disestablishment of the church, undenominational education and a referendum with regard to woman suffrage for parliamentary elections. The third main party, the Socialists, stood for universal male suffrage at twenty-one years after six months' residence, the enactment of an 8-hour working day, increased old-age pensions, pay in case of sickness or disablement and reduction of the high cost of living. As a result of the elections held on November 16 the Catholics polled 649,420 votes (73 seats); Socialists, 640,320 (70 seats); Liberals, 310,570 (34 seats); Christian Democrats, 44,386 (4 seats); Front party, 44,426 (3 seats); Renaissance Nationale, 29,028 (1 seat); Middle Class party, 18,516 (1 seat); various other parties, 59,937 (2 seats). The Catholics lost 24 seats, the Socialists gained 30 and the Liberals lost 11. In the Senate the Catholics elected 50 members, the Liberals 36, and the Socialists 25. The new coalition cabinet, again headed by M. Delacroix (Catholic) as Prime Minister and Minister of Finance, was composed as follows: Foreign Affairs, M. Hymans (Liberal); Interior, M. Renkin (Catholic); Colonies, M. Franck (Liberal); Economic Affairs, M. Jaspars (Catholic); Public Works, M. Ansele (Socialist); Agriculture, Baron Ruzette (Catholic); Education, M. Destree (Socialist); Railways, Marine, Post and Telegraph, M. Pouillet (Catholic); Justice, M. Vandervelde (Socialist); War, M. Masson (Liberal). On February 6, 1920, the seats of eight Socialist senators were declared vacant by reason of the failure of the incumbents to meet the income-tax requirement prior to election. As a result of by-elections held to fill these elections, the Socialists lost eight seats. . . . A bill giving women the right to vote in municipal elections on an equality with men passed the Chamber of Deputies on March 10 by a vote of 115 to 22, and the Senate on April 14 by a vote of 60 to 33. A parliamentary committee is at present (July 1) working on a revision of the constitution. The budget for 1920 shows an expenditure of 8,566,410,730 francs, while the revenue totals only 3,331,561,559 francs."—*Political Science Quarterly*, Sept., 1920, pp. 109-110.

1920.—Housing problem. See *HOUSING: Belgium*.

1920 (January).—Boundary agreement with the Dutch.—Annexation of ceded German territory.—Following the speech of Mr. Hymans (Dec. 23) the Belgian foreign minister, in which he explained to Parliament that the negotiations with the Hague in regard to the control of the Scheldt would leave Belgium in a better position but that

the country would be imperiled in a military way, an agreement was finally reached (Jan. 13, 1920) between the Belgian and Dutch governments. Two committees were to be formed. One committee, dealing only with the question of the Scheldt was to sit at Brussels; the other, dealing with the Ghent-Terneuzen canal to sit at Ghent. On January 10 the proclamation was issued stating that the former Prussian regions of Eupen and Malmédy were taken under the sovereignty of Belgium in accordance with the Peace Treaty. The Belgian high commissioner, General Baltia, entered Malmédy on the 22d and read the official proclamation to the populace in German and French, promising the people on behalf of the Belgian government, religious freedom, standardization of labor and educational advantages enjoyed by the rest of Belgium.—See also VERSAILLES, TREATY OF: Part II; Part III, Section I.

1920 (June 4).—Treaty of Trianon with Hungary. See TRIANON, TREATY OF (1920).

1920 (June-July).—Alliance with France.—Bonus for ex-service men.—In July, Belgium, taking advantage of her newly-acquired status, concluded a defensive alliance with France. The terms had been practically agreed upon in a conference in June between Marshal Foch and General Waglinse. According to the terms of this treaty Belgium reserves the right to maintain neutrality in all disputes between France and other nations concerning French colonial possessions. Notwithstanding the conditions laid down in Article XVIII of the Covenant of the League of Nations, that every treaty or international agreement entered into by any member of the League shall be registered and published, the French and Belgian governments indicated that the alliance was of a purely defensive character and that it would destroy the purpose of the alliance if the military terms were made public. Hence the technical details of the agreement were not disclosed. The treaty will be arranged to hold for from five to fifteen years. Among other defensive measures Belgium agrees to maintain a larger army than was maintained before the war and also to restore the fortifications around Antwerp. Belgium promises France full military support in future armed conflicts under the condition that France is not the aggressor. On July 29 the Chamber of Deputies in Brussels was invaded by a mob of soldiers who, in protest at the government's neglect of the men who served in the war, demanding that a cash bonus be paid them, broke doors and windows in an unimpeded march through the Chamber. The demonstrations were finally quelled following the arrest of 150 of their number and the promise that their claims would be considered by the Chamber. Before the adjournment of the Belgian Chambers, a law was unanimously passed providing for a bonus for all Belgian soldiers. The law stipulated that each soldier receive seventy-five francs for every month of service at the front between August 1, 1914, and November 11, 1918, and fifty francs for every month of service at the rear or while interned as a prisoner of war.

1920 (September).—Railway workers' strike.—Early in September Belgium's railway workers, acting similarly with the workers of the other countries throughout the world, refused to transport through Belgium troops or munitions intended for Poland, which was at that time still warring with soviet Russia. As a result of this stand, General Janson, minister of war, and Paul Hymans, the foreign minister, resigned from the cabinet, because, they declared, they differed on this point from their Socialist colleagues. General Jan-

son, however, withdrew his resignation the following day to avert a serious situation during the adjournment of both Chambers.

1920.—Control with Great Britain of German East Africa. See BELGIAN CONGO: 1920.

1920.—Summary of relief work. See WORLD WAR: Miscellaneous auxiliary services: IX. War relief: a.

1920.—Olympic games.—The American athletes, who took part in the Olympic games at Antwerp captured first place, scoring 212 points to Finland's 105, the nearest competitor. Sweden scored ninety-five points, England eighty-five, France thirty-four, Italy twenty-eight, South Africa twenty-four, Canada ten, Norway ten, Denmark nine, Esthonia eight, New Zealand five, Belgium five, Australia five, Czecho-Slovakia three, Holland two, and Luxemburg one.

1920-1921.—Woman suffrage defeated.—Proposed amendment of Belgian constitution.—Constitution under revision.—On July 1, 1920, a bill granting unrestricted suffrage to women was defeated in the Chamber of Deputies by a vote of 80 to 74. Later in the same month the Chamber voted 146 to 4 to amend the constitution so that any future parliament by a two-thirds majority may extend the suffrage without constitutional revision. During May, 1921, the question of revision was again under consideration by Parliament. See BELGIUM, CONSTITUTION OF.

BELGIUM, Constitution of.—Under BELGIUM: 1802-1919, there is given some account of the revision of the constitution of the kingdom in 1893, and the peculiar new features introduced in its provisions, relative to the elective franchise. See also, *Ibid.*, 1830-1832; 1894-1895; 1899-1900; and 1920-1921. The following is a translation of the text of the revised constitution, with a summary of its divisions:

The Territory and Its Divisions (Arts. 1-3)

Belgian Citizens and Their Rights (Arts. 4-24)

Concerning Powers (Arts. 25-31)

The Houses (Arts. 32-46)

The House of Representatives (Arts. 47-52)

The Senate (Arts. 53-59)

The King and the Ministers

The King (Arts. 60-85)

The Ministers (Arts. 86-91)

The Judicial Power (Arts. 92-107)

Provincial and Communal Institutions (Arts. 108, 109)

Finances (Arts. 110-17)

The Army (Arts. 118-24)

General Provisions (Arts. 125-30)

The Revision of the Constitution (Art. 131)

Temporary Provisions (Arts. 132-38)

Supplementary Provision (Art. 139)

Title I

Of the Territory and of its Divisions

ARTICLE 1. Belgium is divided into provinces, these provinces are: Antwerp, Brabant, Western Flanders, Eastern Flanders, Hainaut, Liège, Limburg, Luxemburg, Namur. It is the prerogative of law, if there is any reason, to divide the territory into a larger number of provinces. Colonies, possessions beyond the seas or protectorates which Belgium may acquire, are governed by particular laws. The Belgian forces appointed for their defense can only be recruited by voluntary enlistment.

ARTICLE 2. The subdivisions of the provinces can be established only by law.

ARTICLE 3. The boundaries of the State, of the provinces and of the communes can be changed or rectified only by a law.

Title II

Of the Belgians and their Rights

ARTICLE 4. The title Belgian is acquired, preserved and lost according to the regulations determined by civil law. The present Constitution, and other laws relating to political rights, determine what are, in addition to such title, the conditions necessary for the exercise of these rights.

ARTICLE 5. Naturalization is granted by the legislative power. The great naturalization, alone, assimilates the foreigner to the Belgian for the exercise of political rights.

ARTICLE 6. There is no distinction of orders in the State. Belgians are equal before the law; they alone are admissible to civil and military offices, with such exceptions as may be established by law in particular cases.

ARTICLE 7. Individual liberty is guaranteed. No person can be prosecuted except in the cases provided for by law and in the form which the law prescribes. Except in the case of flagrant misdemeanor, no person can be arrested without the order of a judge, which must be served at the time of the arrest, or, at the latest, within twenty-four hours.

ARTICLE 8. No person can be deprived, against his will, of the judge assigned to him by law.

ARTICLE 9. No punishment can be established or applied except by provision of law.

ARTICLE 10. The domicile is inviolable; no domiciliary visit can be made otherwise than in the cases provided for by law and in the form which it prescribes.

ARTICLE 11. No person can be deprived of his property except for public use, in the cases and in the manner established by law, and with prior indemnity.

ARTICLE 12. The penalty of confiscation of goods cannot be imposed.

ARTICLE 13. Civil death is abolished; it cannot be revived.

ARTICLE 14. Religious liberty, public worship, and freedom of expressed opinion in all matters are guaranteed, with a reserve for the repression of offenses committed in the exercise of these liberties.

ARTICLE 15. No person can be compelled to join, in any manner whatsoever, in the acts and ceremonies of any worship, nor to observe its days of rest.

ARTICLE 16. The State has no right to interfere in the appointment nor in the installation of the ministers of any religion, nor to forbid them to correspond with their superiors and to publish their acts under the ordinary responsibility of publication. Civil marriage shall always precede the nuptial benediction, with the exceptions to be prescribed by law in case of need.

ARTICLE 17. Teaching is free; all preventive measures are forbidden; the repression of offenses is regulated only by law. Public instruction given at the expense of the State is also regulated by law.

ARTICLE 18. The press is free; censorship can never be re-established; caution-money from writers, editors or printers cannot be required. When the author is known and is a resident of Belgium, the editor, the printer or the distributor cannot be prosecuted.

ARTICLE 19. Belgians have the right to meet peaceably and without arms, in conformity with such laws as may regulate the use of their right but without the requirement of a previous authorization. This stipulation does not apply to open air meetings, which remain entirely subject to police regulations.

ARTICLE 20. Belgians have the right of association; this right cannot be subject to any preventive measure.

ARTICLE 21. It is the right of every person to address to the public authorities petitions signed by one or several. The constituted authorities alone have the right to address petitions in a collective name.

ARTICLE 22. The secrecy of correspondence is inviolable. The law determines who are the agents responsible for violation of the secrecy of letters confided to the post.

ARTICLE 23. The use of the languages spoken in Belgium is optional; it can be prescribed only by law, and only for acts of public authority and for judicial transactions.

ARTICLE 24. No previous authorization is necessary for the undertaking of proceedings against public officials, on account of acts in their administration, except that which is enacted concerning ministers.

Title III

Of Powers

ARTICLE 25. All powers are derived from the nation. They are exercised in the manner prescribed by the Constitution.

ARTICLE 26. Legislative power is exercised collectively by the King, the Chamber of Representatives and the Senate.

ARTICLE 27. The initiative belongs to each one of the three branches of the legislative power. Nevertheless, all laws relating to the revenue or to the expenditures of the State, or to the contingent of the army must be voted first by the Chamber of Representatives.

ARTICLE 28. The interpretation of laws by authority belongs only to the legislative power.

ARTICLE 29. The executive power, as regulated by the Constitution, belongs to the King.

ARTICLE 30. The judicial power is exercised by the courts and tribunals. Decrees and judgments are executed in the name of the King.

ARTICLE 31. Interests exclusively communal or

provincial, are regulated by the communal or provincial councils, according to the principles established by the Constitution.

Chapter First.—Of The Chambers

ARTICLE 32. Members of both Chambers represent the nation, and not merely the province or the subdivision of province which has elected them.

ARTICLE 33. The sittings of the Chambers are public. Nevertheless, each Chamber forms itself into a secret committee on the demand of its president or of ten members. It then decides by absolute majority whether the sitting on the same subject shall be resumed publicly.

ARTICLE 34. Each Chamber verifies the powers of its members and decides all contests on the subject that may arise.

ARTICLE 35. No person can be at the same time a member of both Chambers.

ARTICLE 36. A member of one of the two Chambers who is appointed by the government to any salaried office, except that of minister, and who accepts the same, ceases immediately to sit, and resumes his functions only by virtue of a new election.

ARTICLE 37. At every session, each Chamber elects its president and its vice-presidents and forms its bureau.

ARTICLE 38. Every resolution is adopted by the absolute majority of the votes, excepting as may be directed by the rules of the Chambers in regard to elections and presentations. In case of an equal division of votes, the proposition brought under deliberation is rejected. Neither of the two Chambers can adopt a resolution unless the majority of its members is present.

ARTICLE 39. Votes are given by the voice or by sitting and rising; on "l'ensemble des lois" the vote is always taken by the call of the roll of names. Elections and presentations of candidates are made by ballot.

ARTICLE 40. Each Chamber has the right of inquiry [or investigation].

ARTICLE 41. A bill can be passed by one of the Chambers only after having been voted article by article.

ARTICLE 42. The Chambers have the right to amend and to divide the articles and the amendments proposed.

ARTICLE 43. The presenting of petitions in person to the Chambers is forbidden. Each Chamber has the right to refer to ministers the petitions that are addressed to it. Ministers are required to give explanations whenever the Chamber requires them.

ARTICLE 44. No member of either Chamber can be prosecuted or called to account for opinions expressed or votes given by him in the performance of his duties.

ARTICLE 45. No member of either Chamber can be prosecuted or arrested in affairs of repression, during the session, without the authorization of the Chamber of which he is a member, except the case be "de flagrant delit." No bodily constraint can be exercised against a member of either Chamber during the session, except with the same authorization. The detention or the prosecution of a member of either Chamber is suspended during the whole session if the Chamber so requires.

ARTICLE 46. Each Chamber determines by its rules the mode in which it will exercise its powers.

Section I.—Of the Chamber of Representatives

ARTICLE 47. Deputies to the Chamber of Representatives are elected directly under the following conditions. [Until the electoral changes of 1919 this clause ran]: A vote is conferred on citizens who have completed their 25th year [reduced to 21st year, April, 1919], who have resided for at least one year in the same commune, and who are not within one of the cases of exclusion provided for by law. A supplementary vote is conferred on each citizen who fulfills one of the following conditions: 1. To have completed 35 years of age, to be married, or to be a widower having legitimate offspring, and to pay to the State a tax of not less than 5 francs on account of dwelling-houses or buildings occupied, unless exempted by reason of his profession. 2. To have completed the age of 25 years and to be owner: Either of real property, valued at not less than 2,000 francs to be rated on the basis of the "revenu cadastral," or of a "revenu cadastral" proportioned to that value; Or of an inscription in the great book of the public debt, or of a "carnet de rente Belge" at the savings bank of at least 100 francs of "rente." The inscriptions and bank books must have belonged to the incumbent for at least two years and a half. The property of the wife is assigned to the husband; that of children under age, to the father. Two supplementary votes are assigned to citizens fully 25 years of age who are included in one of the following cases: A. To be the holder of a diploma of higher instruction or of a similar certificate of attendance on a complete course of medium instruction of the higher degree, without distinction between public and private establishments. B. To fill or to have filled a public office, to occupy or to have occupied a position, to practise or to have practised a private profession, which implies the supposition that the titulary has at least an average education of the higher degree. The law determines these functions, positions and professions, as well as, in given cases, the time during which they shall have been occupied or practised. No person can accumulate more than three votes [reduced to one vote only for each man over twenty-one, and given also to specified classes of women, April, 1919].

ARTICLE 48. The constitution of the electoral colleges is regulated by law for each province. The vote is obligatory and takes place in the commune with exceptions to be determined by law.

ARTICLE 49. The electoral law fixes the number of deputies according to the population; this number cannot exceed the proportion of a deputy for 40,000 inhabitants. It determines also the qualifications of an elector and the mode of the electoral operations.

ARTICLE 50. To be eligible, it is necessary: 1. To be a Belgian by birth or to have received the "grand naturalization"; 2. To enjoy civil and political rights; 3. To have completed 25 years of age; 4. To reside in Belgium. No other condition of eligibility can be required.

ARTICLE 51. The members of the Chamber of Representatives are elected for four years. Half of them are changed every two years, according to the order of the series determined by the electoral law. In case of dissolution, the Chamber is entirely renewed.

ARTICLE 52. Each member of the Chamber of Representatives receives a yearly indemnity of 4,000 francs. [This has been considerably increased since the close of the World War.] He is, besides, entitled to free travel on the State railways and

on the "conceded" railways, from his residence to the city where the session is held.

Section II.—Of the Senate

ARTICLE 53. The Senate is composed: 1. Of members elected in proportion to the population of each province, conformably to Art. 47; though the law may require that the electors shall be 30 years of age, the provisions of Art. 48 are applicable to the election of these senators. 2. Of members elected by the provincial councils, to the number of two from each province having less than 500,000 inhabitants, of three from each province having from 500,000 to 1,000,000 of inhabitants, and of four from each province having more than one million of inhabitants.

ARTICLE 54. The number of senators elected directly by the electoral body is equal to half the number of the members of the Chamber of Representatives.

ARTICLE 55. Senators are elected for eight years; half of them are changed every four years, according to the order of the series determined by the electoral law. In case of dissolution, the Senate is entirely renewed.

ARTICLE 56. To be eligible for election and to remain a senator, it is necessary: 1. To be a Belgian by birth or to have received the "grande naturalization"; 2. To enjoy civil and political rights; 3. To reside in Belgium; 4. To be at least 40 years of age; 5. To pay into the treasury of the State at least 1,200 francs of direct taxes, patents included; Or to be either proprietor or usufructuary of real property situated in Belgium, the cadastral revenue from which is at least 12,000 francs. In the provinces where the number of those eligible does not attain the proportion of one in 5,000 inhabitants, the list is completed by adding the heaviest tax-payers of the province to the extent of that proportion. Citizens whose names are inscribed on the complementary list are eligible only in the province where they reside.

ARTICLE 56 BIS. Senators elected by the provincial councils are exempted from all conditions of census; they cannot belong to the assembly which elects them, nor can they have been a member of it during the year of the election, nor during the two previous years.

ARTICLE 57. Senators receive neither salary nor indemnity.

ARTICLE 58. The King's sons, or in their absence the Belgian Princes of the branch of the Royal family called to reign, are by right senators at 18 years of age. They have a deliberative voice only at 25 years of age.

ARTICLE 59. Any assembly of the Senate which may be held outside the time of the session of the Chamber of Representatives is null and void.

Chapter II.—Of the King and his Ministers

Section I.—Of the King

ARTICLE 60. The constitutional powers of the King are hereditary in the direct, natural and legitimate descent from His Majesty Leopold-George-Christian-Frederick of Saxe-Coburg, from male to male, by order of primogeniture, and to the perpetual exclusion of the females of their line. The prince who marries without the consent of the King or of those who, in his absence, exercise his powers, in the cases provided for by the Constitution, shall forfeit his rights. Nevertheless he can be restored to his rights by the King or by those who, in his absence, exercise his authority in the cases provided for by the Constitution, with the consent of both Chambers.

ARTICLE 61. In default of male descendants of his Majesty Leopold-George-Christian-Frederick of Saxe-Coburg, the King can name his successor, with the assent of the Chambers, expressed in the manner prescribed by the following article. If no nomination has been made according to the proceeding here stated, the throne will be vacant.

ARTICLE 62. The King cannot be, at the same time, the chief of another State, without the consent of both Chambers. Neither of the two Chambers can deliberate on this subject if two-thirds at least of the members who compose it are not present, and the resolution is adopted only if it receives two-thirds at least of the votes cast.

ARTICLE 63. The person of the King is inviolable; his ministers are responsible.

ARTICLE 64. No act of the King can have effect if it is not countersigned by a minister, who, thereby, makes himself responsible.

ARTICLE 65. The King appoints and dismisses his ministers.

ARTICLE 66. He confers the grades in the army. He appoints to the offices of general administration and of foreign relations, with the exceptions determined by law. He appoints to other offices only by virtue of express provisions of a law.

ARTICLE 67. He makes the regulations and decrees necessary to the execution of the laws, without power to suspend the laws themselves, nor to exempt from their execution.

ARTICLE 68. The King commands the land and naval forces, declares war, makes treaties of peace, of alliance, and of commerce. He announces them to the Chambers as soon as the interest and the safety of the State admit of it, adding to them appropriate communications. Treaties of commerce and those which might burden the State or bind Belgians individually become effective only after having received the approval of the Chambers. No cession, nor exchange, nor addition of territory can take place without authority of a law. In no case can the secret articles of a treaty be destructive to the open articles.

ARTICLE 69. The King sanctions and promulgates the laws.

ARTICLE 70. The Chambers meet by right every year, on the 2d Tuesday in November, unless previously summoned by the King. The Chambers must remain in session at least 40 days in each year. The King declares the closing of the session. The King has the right to call extra sessions of the Chambers.

ARTICLE 71. The King has the right to dissolve the Chambers, either simultaneously or separately; the act of dissolution to contain a convocation of the electors within forty days and of the Chambers within two months.

ARTICLE 72. The King may adjourn the Chambers. The adjournment, however, cannot exceed the term of one month, nor be renewed in the same session, without the consent of the Chambers.

ARTICLE 73. He has the right to remit or to reduce penalties pronounced by the judges, except those which are enacted concerning the ministers.

ARTICLE 74. He has the right to coin money, in execution of the law.

ARTICLE 75. He has the right to confer titles of nobility, without power to attach any privilege to them.

ARTICLE 76. He confers the military orders, observing in that regard what the law prescribes.

ARTICLE 77. The law fixes the civil list for the duration of each reign.

ARTICLE 78. The King has no other powers than those formally conferred on him by the Consti-

stitution, and by laws enacted pursuant to the Constitution.

ARTICLE 79. On the death of the King, the Chambers meet without convocation, not later than the tenth day after that of his decease. If the Chambers had been previously dissolved, and if the convocation had been fixed in the act of dissolution for a later date than the tenth day, the old Chambers resume their functions until the meeting of those which are to take their place. If one Chamber only had been dissolved, the same rule is followed with regard to that Chamber. From the death of the King and until his successor on the throne or the regent has taken the oath, the constitutional powers of the King are exercised, in the name of the Belgian nation, by the ministers assembled in council and under their responsibility.

ARTICLE 80. The King is of age when he has completed his 18th year. He takes possession of the throne only after having solemnly taken, in the midst of the Chambers assembled together, the following oath: "I swear to observe the Constitution and the laws of the Belgian people, to maintain the national independence and to preserve the integrity of the territory."

ARTICLE 81. If, on the death of the King, his successor is a minor, both Chambers meet in one body for the purpose of providing for the regency and the guardianship.

ARTICLE 82. If it is impossible for the King to reign, the ministers, after having caused that inability to be established, convoke the Chambers immediately. Guardianship and regency are to be provided for by the Chambers convened.

ARTICLE 83. The regency can be conferred on one person only. The regent enters upon his duties only after he has taken the oath prescribed by Article 80.

ARTICLE 84. No change can be made in the Constitution during a regency.

ARTICLE 85. In case of a vacancy on the throne, the Chambers deliberating together, arrange provisionally for the regency until the meeting of new Chambers, that meeting to take place within two months, at the latest. The new Chambers deliberating together provide definitely for the vacancy.

Section II.—Of the Ministers

ARTICLE 86. No person can be a minister who is not a Belgian by birth, or who has not received the "grande naturalization."

ARTICLE 87. No member of the royal family can be a minister.

ARTICLE 88. Ministers have a deliberative voice in either Chamber only when they are members of it. They have free admission into each Chamber and must have a hearing when they ask for it. The Chambers may require the presence of ministers.

ARTICLE 89. In no case, can the order of the King, verbal or written, relieve a minister of responsibility.

ARTICLE 90. The Chamber of Representatives has the right to accuse ministers and to arraign them before the Court of Cassation [Appeal], which alone has the right to judge them, the united Chambers reserving what may be enacted by law concerning civil action by a party wronged, and as to crimes and misdemeanors which ministers may have committed outside of the performance of their duties. A law shall determine the cases of responsibility, the penalties to be inflicted on the ministers, and the manner of proceeding against them, either upon the accusation admitted by the

Chamber of Representatives, or upon prosecution by parties wronged.

ARTICLE 91. The King may pardon a minister sentenced by the Court of Cassation only upon the request of one of the two Chambers.

Chapter III.—Of the Judiciary Power

ARTICLE 92. Contests concerning civil rights are exclusively within the jurisdiction of the tribunals.

ARTICLE 93. Contests concerning political rights are within the jurisdiction of the tribunals, with exceptions determined by law.

ARTICLE 94. No tribunal can be established otherwise than by law. Neither commissions nor extraordinary tribunals, under any denomination whatever, can be created.

ARTICLE 95. There is for the whole of Belgium one Court of Cassation. This Court does not consider the ground of causes, except in the judgment of ministers.

ARTICLE 96. Sittings of the tribunals are public, unless such publicity be dangerous to order or morals, and in that case the tribunal declares it by a judgment. In the matter of political or press offenses, the exclusion of the public must be voted unanimously.

ARTICLE 97. The ground of every judgment is to be stated. It is pronounced in public sitting.

ARTICLE 98. The jury is established in all criminal cases, and for political and press offenses.

ARTICLE 99. The judges of the peace and judges of the tribunals are appointed directly by the King. Councillors of the Courts of appeal and presidents and vice-presidents of the courts of original jurisdiction are appointed by the King, from two double lists, presented, one by those courts and the other by the provincial Councils. Councillors of the Court of Cassation are appointed by the King from two double lists, one presented by the Senate and the other by the Court of Cassation. In these two cases the candidates whose names are on one list may also be inscribed on the other. All presentations are made public at least fifteen days before the appointment. The courts choose their presidents and vice-presidents from among their members.

ARTICLE 100. Judges are appointed for life. No judge can be deprived of his position or suspended, except by a judgment. The displacement of a judge can take place only through a new appointment and with his consent.

ARTICLE 101. The King appoints and dismisses the public prosecutors to the courts and tribunals.

ARTICLE 102. The salaries of the members of the judicial order are fixed by law.

ARTICLE 103. No judge may accept salaried offices from the government unless he exercises them gratuitously, and excluding the cases of incompatibility defined by law.

ARTICLE 104. There are three courts of appeal in Belgium. The law determines their jurisdiction and the places in which they shall be established.

ARTICLE 105. Special enactments regulate the organization of military courts, their powers, the rights and obligations of the members of such courts, and the duration of their functions. There are tribunals of commerce in the places determined by law, which regulate their organization, their powers, the mode of appointment of their members and the term of the latter's duties.

ARTICLE 106. Conflicts of jurisdiction are settled by the Court of Cassation, according to proceedings regulated by law.

ARTICLE 107. Courts and tribunals shall apply general, provincial and local decisions and regu-

lations only so far as they are conformable to the laws.

Chapter IV.—Of Provincial and Communal Institutions

ARTICLE 108. Provincial and communal institutions are regulated by the laws. These laws sanction the application of the following principles: 1. Direct election, with the exceptions which the law may establish in regard to the chiefs of communal administration and the government commissioners to the provincial councils; 2. The assigning to provincial and communal councils of all which is of provincial and communal interest without prejudice to the approval of their acts in the cases and according to the proceedings which law determines; 3. The publicity of the sittings of the provincial and communal councils within the limits established by law; 4. The publicity of budgets and accounts; 5. The intervention of the King or of the legislative power to prevent the provincial and communal councils from going beyond their powers and injuring the general welfare.

ARTICLE 109. The drawing up of certificates of birth, marriage and death, and the keeping of the registers, are the exclusive prerogatives of communal authorities.

Title IV

Of the Finances

ARTICLE 110. No tax for the profit of the State can be imposed otherwise than by a law. No charge or provincial assessment can be imposed without the consent of the provincial council. No charge or communal assessment can be imposed, without the consent of the communal council. The law must determine those exceptions of which experience will show the necessity in the matter of provincial and communal impositions.

ARTICLE 111. Taxes for the profit of the State are voted annually. The laws which impose them are valid for one year only, unless renewed.

ARTICLE 112. There can be no creation of privilege in the matter of taxes. No exemption from nor diminution of taxes can be established otherwise than by a law.

ARTICLE 113. Beyond the cases expressly excepted by law, no payment can be exacted from citizens, otherwise than in taxes levied for the profit of the State, of the province, or of the commune. No innovation is made on the actually existing system of the polders and the wateringens, which remains subject to the ordinary legislation.

ARTICLE 114. No pension, nor gratuity at the expense of the public treasury can be granted without authority of law.

ARTICLE 115. Each year, the Chambers determine the law of accounts and vote the budget. All the receipts and expenditures of the State must be entered in the budget and in the accounts.

ARTICLE 116. The members of the court of accounts are appointed by the Chamber of Representatives and for the term fixed by law. That court is intrusted with the examination and the settlement of the accounts of the general administration and of all the accountants for the public treasury. It sees that no article of the expenses of the budget has been exceeded and that no transfer has taken place. It determines the accounts of the different administrations of the State and is required for that purpose to gather all information, and all documents that may be necessary. The general account of the State is sub-

mitted to the Chambers with the observations of the court of accounts. This court is organized by law.

ARTICLE 117. The salaries and pensions of the ministers of religion are paid by the State; the sums required to meet these expenses are entered annually in the budget.

Title V

Of the Army

ARTICLE 118. The mode of recruiting the army is determined by law. The law also regulates promotions, and the rights and obligations of the military.

ARTICLE 119. The contingent of the army is voted annually. The law that fixes it is of force for one year only, unless renewed.

ARTICLE 120. The organization and the powers of the gendarmerie are the subject of a law.

ARTICLE 121. No foreign troops can be admitted to the service of the State, nor to occupy or pass through its territory, except by provision of law.

ARTICLE 122. There is a civic guard; its organization is regulated by law. The officers of all ranks, up to that of captain at least, are appointed by the guards with exceptions judged necessary for the accountants.

ARTICLE 123. The mobilization of the civic guard can occur only by direction of law.

ARTICLE 124. Military men can be deprived of their grades, honors, and pensions only in the manner determined by law.

Title VI

General Provisions

ARTICLE 125. The Belgian nation adopts the colors red, yellow and black, and for the arms of the kingdom the Belgic lion with the motto: "L'Union fait la Force" ["Union is Strength"].

ARTICLE 126. The city of Brussels is the capital of Belgium and the seat of its government.

ARTICLE 127. No oath can be imposed except by law. The law also determines its formula.

ARTICLE 128. Any foreigner who is within the territory of Belgium enjoys the protection accorded to persons and goods, with the exceptions defined by law.

ARTICLE 129. No law, decree, or administrative regulation, general, provincial, or communal, is obligatory until it has been published in the form prescribed by law.

ARTICLE 130. The Constitution cannot be suspended, either wholly or in part.

Title VII

Of the Revision of the Constitution

ARTICLE 131. The legislative power has the right to declare that there is occasion for revising such constitutional provision as it designates. After such declaration, the two Chambers are dissolved. Two new Chambers shall then be convoked, in conformity with Article 71. These Chambers act, in concurrence with the King, on the points submitted for revision. In such case, the Chambers cannot deliberate unless two-thirds at least of the members composing each one of them are present, and no change which does not receive at least two-thirds of the votes in its favor shall be adopted.

[The remaining Articles—132-130—are "Temporary Provisions" and "Supplementary Provisions," the latter specifying certain subjects on which it is declared to be "necessary to provide

by separate laws and with the least possible delay.]"

BELGRADE, formerly the capital of Serbia; since Nov. 24, 1918, the capital of Jugo- (or Yugo-) Slavia. Population in 1919 about 120,000. In Roman days it was known as Singidunum, a fortification at the confluence of the Danube and the Save. During the attacks of the Avars upon the territory of the Eastern Empire, in the last years of the sixth century, the city was taken and totally destroyed. The advantageous site of the extinct town soon attracted a colony of Slavonians, who raised out of the ruins a new and strongly fortified city—the Belgrade, or the White City of later times. "The Slavonic name of Belgrade is mentioned in the 10th century by Constantine Porphyrogenitus: the Latin appellation of Alba Græca is used by the Franks in the beginning of the 9th."—E. Gibbon, *Decline and fall of the Roman empire*, ch. 46, note.—See also BALKAN STATES: Map.

1425.—Acquired by Hungary and fortified against Turks. See HUNGARY: 1301-1442.

1442.—First repulse of the Turks. See TURKEY: 1402-1451.

1456.—Second repulse of the Turks. See HUNGARY: 1442-1458; and TURKEY: 1451-1481.

1521.—Siege and capture by Solyman the Magnificent. See HUNGARY: 1487-1526.

1688-1690.—Taken by Austrians and recovered by Turks. See HUNGARY: 1683-1699.

1717.—Recovery from Turks. See HUNGARY: 1699-1718.

1739.—Restored to Turks. See RUSSIA: 1725-1739.

1789-1791.—Taken by Austrians and restored to Turks. See TURKEY: 1776-1792.

1806.—Surprised and taken by Serbians. See SERBIA: 1804-1817.

1903.—Murder of King Alexander.—On June 15, 1903, King Alexander and Queen Draga were murdered by military conspirators. See SERBIA: 1885-1903.

1914-1918.—Strategic position of Belgrade.—Austrian occupation.—The capital of Serbia commands the Danube River at the Austro-Serbian frontier. It was shelled by the Austrians as early as July 29, 1914, withstanding, however, all attacks until December 1, when the Serbians evacuated the city. The Austrians entered on December 2, being forced to conduct the bombardment from across the Danube, and reduce the city to ruins. The rally of the Serbians on December 5 enabled them to reoccupy Belgrade, December 13, 1914. The final fall of Belgrade took place on October 9, 1915. (See WORLD WAR: 1915: V. Balkans: a, 1.) The Austrian occupation was maintained until November 3, 1918, when the Serbians reoccupied their capital under the command of Franchet d'Esperey, the allied generalissimo in the Balkans. (See WORLD WAR: 1918: V. Balkan theater: a.) The significance of Belgrade during the World War as well as in the diplomatic struggle which preceded it was due not only to its military strength but also to its strategic position on the great natural highway between Austro-Hungary and Constantinople.—See also SERBIA: 1914-1918; and WORLD WAR, 1914: III. Balkans: a, 1.

BELGRADE, Peace of. See RUSSIA: 1734-1740.

BELGRANO, Manuel (1770-1820), Argentine general. Joined the movement of independence; went with an army to free Paraguay (1810) but was unsuccessful; led an army against the Spaniards in upper Peru; defeated them at Tucumán (1812), Salta (1813). He was defeated by the

Spaniards at Vilcapujio and Ayouma (1813); was superseded by San Martin; restored to his command (1815) but took little part in later movements.

BELLENGLISE, a village of northeastern France between Cambrai and St. Quentin, captured in the Allied counter-offensive of 1918, the Scheldt canal being crossed by means of rafts and life belts. See **WORLD WAR: 1918: II. Western front: o, 2.**

BELLECOURT, a village in northeastern France, near Cambrai, taken by the Allies in 1918.

BELLIGERENCY.—"Internal dissensions in a state, affecting the government, will tend to disturb the international relations of the state since the government is the organ for those relations. Among autocratic governments any revolt is suppressed with an iron hand and is generally an attempt to subvert the existing dynasty and establish a new one. Controversies of this kind were frequent in western Europe, and the neighboring potentates, when such a revolt arose, took such attitude as best suited their own interests, rendering assistance to the usurper or recognizing him accordingly. A revolt among the people in establishment of popular rights was regarded as being especially dangerous and common cause was generally made in such a case. With the rise of democracies and limited governments, the voice of the people was heard with different effect, the stigma of treason became less applicable, and the power of the people to govern themselves and choose their own government could not be denied. A body of people revolting from the parent state became of importance in international relations and consequently presented a state of facts of which account must be taken by neighboring independent states. The principle was not realized until the opening of the nineteenth century. The revolts in western Europe, of the Swiss Cantons, and the United Provinces, while having all the elements of a popular uprising, do not seem to have presented any question of belligerency. The revolt of the thirteen British Colonies in North America, followed by the revolt of the Spanish Colonies in South America, of Greece, Belgium, and others since, have presented facts which call for a new vocabulary in the science of international law. The term 'belligerent' had long been used in international law to describe independent states engaged in war, and such states were engaged in international violence which was more or less regulated by certain principles called the laws of war. The revolting community, by making itself felt in international life, acquired the status of an independent state engaged in war, and therefore was described as a belligerent state or community. The international status of the community is only for the war and does not necessarily extend to other international functions which only attach when the revolution is successful. The recognition of such a body as a belligerent will bring it within the international horizon, and accordingly subject to the external factors determining independent state conduct. The recognizing state may therefore expect such a body to conduct itself accordingly, and the desire of the latter for independent state life will powerfully impel a recognition of those factors. If they are regarded only as traitors the outside independent state will, as to interests within the political control of the revolting body, be compelled to look to the parent state, which will in fact be unable to fulfill its international obligations as to the interests existing

within that territory."—R. R. Foulke, *International law*, v. 1, pp. 71-73.—See HAGUE CONFERENCES: 1899: Convention with respect to the laws and customs of war on land.—"The recognition by England of the Confederate States as belligerents in 1861 affords an example of the recognition of belligerent character, interesting both because the case presents a strongly marked instance of the circumstances which compel recognition on the part of a foreign power, and because of the controversy which arose between the governments of the United States and of Great Britain with reference to the propriety and opportuneness of recognition on the occasion in question."—W. E. Hall, *International law*, p. 39.—In addition to its international significance, the status of belligerency is important in that it assures to members of the belligerent forces treatment as prisoners of war, not as traitors, in case of capture.—See also BLOCKADE: Meaning; CONTRABAND: Origin; INSURGENCY; INTERNATIONAL LAW; NEUTRALITY.

BELLINGSHAUSEN, Fabian Gottlieb von (Russian, Faddei Fadeyevitch), (1778-1852), Russian explorer. See ANTARCTIC EXPLORATION: 1819-1838; and PACIFIC OCEAN: 1764-1850.

BELLINI, Jacopo, Gentile, and Giovanni, a famous family of Venetian painters consisting of a father and two sons. (I) The father, Jacopo (1400-1470), was an important Renaissance painter and draughtsman; student of antique, perspective and physiognomy. Had a strong influence on the development of Venetian art both through his own work and through that of his two sons and son-in-law (Mantegna), pupil of Gentile da Fabriano; active as a painter in Verona, Padua, and Venice; principal works have been lost, but among those extant are: "Crucifixion" in the Verona Gallery, "Madonnas" at the Louvre, "Annunciation" in Sant' Alessandro, Venice. (II) Gentile (c. 1428-1507), painted much in his father's manner; 1466, commissioned to decorate the doors of the great organ at Venice; 1474, contracted with the Senate to restore decorations on the walls of the Hall of the Great Council in the ducal palace; 1479, at request of the Sultan for an excellent painter the Venetian government sent him to Constantinople where he gave marked satisfaction; spent the next 30 years on historic decorations for the ducal palace; greatest surviving works are: three drawings in Venetian Academy of miracles wrought by a relic of the cross. (III) Giovanni (1430-1516), the younger son of Jacopo was the most important Venetian painter of the fifteenth century. Became a more celebrated portrait painter than his brother and gave the beautiful color to Venetian painting. Worked on the paintings in the ducal palace; acquired great skill in art of oil painting introduced in 1473 by Antonella da Messina; principal works of his later period are: "Baptism of Christ," at Santa Corona, Vicenza, altar pieces of San Zaccaria, and "Madonna and Child" at Brera. Among his famous pupils who surpassed him were Giorgione and Titian.

BELLINI, Vincenzo (1801-1835), Italian operatic composer; one of the lights of Italian opera whose operas, "Il Pirata," "La Sonnambula," "Norma," "I Puritani," have raised him to the position of one of the favorite composers of the day. See MUSIC: Modern: 1818-1868.

BELLOVACI, Gallic tribe of the Belgian confederation. See BELGAE.

BELLOWS-SYSTEM, player machine. See INVENTIONS: 20th century player piano.

BELLOY, a village in northeastern France south of the Somme, captured by the French in the

allied counter-offensive of 1916. See WORLD WAR: 1916: Western front: c, 2.

BELLUNO, Claude Perrin Victor, Duke of (1764-1841), French marshal. Gained notice of Napoleon at siege of Toulon 1793; served in Italy, distinguished himself at Marengo; fought against Prussia; commanded a corps in Spain, where after some successes he was defeated at Talavera by Wellington; fought in Russia at the passage of the Beresina; later accepted office under the Bourbons; minister of war, 1821-1823.—See also SPAIN: 1808-1809 (December-March); and 1809 (February-July).

BELLUNO, city of northern Italy on the Piave, occupied by Italians in 1918. See WORLD WAR: 1918: IV. Austro-Italian theater: c, 9.

BELSHAZZAR (d. 538 B.C.) Babylonian general and co-regent of Babylonia. According to the Book of Daniel, he was the son of Nebuchadnezzar (Nebuchadrezzar) and the last of the Babylonian kings, who was warned of his doom by a handwriting on the wall which was interpreted by Daniel. Since the decipherment of cuneiform inscriptions found at Babylon, it has been discovered that he was not the king of Babylon but governor of south Babylonia and the eldest son of Nabonidos, king of Babylonia who owed his accession to a revolution and was not related to the family of Nebuchadnezzar. Belshazzar was more powerful than his father, with whom he was co-regent, and was chief of the army of Babylon. When Nabonidos was defeated by Cyrus and fled, Belshazzar assumed full command and was finally killed in the sacking of the city.—See also BABYLONIA: Invasion of Cyrus the Persian.

BELUS, ancient king of Babylon, gave name to Baluchistan. See BALUCHISTAN: Origin of name.

BELVEDERE COURT. See VATICAN MUSEUMS.

BEM, Joseph (1795-1850), Polish patriot. See AUSTRIA: 1848-1849; and HUNGARY: 1847-1849.

BEMINI, or **Bimini**, small group of the Bahamas. See AMERICA: 1512.

BEMIS HEIGHTS, Battle of. See U. S. A.: 1777 (July-October).

BENARES.—This city with a population of 203,604, in the United Provinces, is located on the Ganges River, 300 miles northwest of Calcutta. "It is the great holy city of India and the chief center of Brahmanical learning. Enormous numbers of wealthy pilgrims come here every year to bathe in and drink of the waters of the 'Holy Mother Ganges.' Many die here and have their ashes thrown into the river."—H. D. Baker, *British India*, pp. 53-54.—Benares "may even date from the time when the Aryan race first spread itself over Northern India. . . . It is certain that the city is regarded by all Hindus as coeval

with the birth of Hinduism, a notion derived both from tradition and from their own writings. Allusions to Benares are exceedingly abundant in ancient Sanskrit literature; and perhaps there is no city in all Hindustan more frequently referred to. By reason of some subtle and mysterious charm, it has linked itself with the religious sympathies of the Hindus through every century of its existence. For the sanctity of its inhabitants—of its temples and reservoirs—of its wells and streams—of the very soil that is trodden—of the very air that is breathed—and of everything in and around it, Benares has been famed for thousands of years. . . . Previously to the introduction of the Buddhist faith into India, she was already the sacred city of the land,—the centre of Hinduism, and chief seat of its authority. Judg-

BENCKENDORFF, Alexandre, Count (1849-1917), Russian Ambassador in London. See **WORLD WAR**: Diplomatic background: 20.

BENCOOLEN, capital city of Sumatra. It was settled by the British about 1685 and ruled by them until 1825 when it was ceded to the Dutch in exchange for control on the Malay peninsula. See **STRAITS SETTLEMENTS**: Conquest and settlement.

BENDER, or Bendery, a town in Bessarabia (q. v.) now belonging to Rumania. Situated on the Dniester, the town is an important commercial center. After his defeat at Poltava, Charles XII established his troops here in a camp called New Stockholm, remaining from 1709 to 1713. Bender was long a bone of contention between Turkey and Russia, the latter capturing it in 1770,

THE BURNING GHATS ON THE GANGES RIVER AT BENARES

The bodies of the dead are dipped into the sacred Ganges, and then burned on pires

ing from the strong feelings of veneration and affection with which the native community regard her in the present day, and bearing in mind that the founder of Buddhism commenced his ministry at this spot, it seems indisputable that, in those early times preceding the Buddhist reformation, the city must have exerted a powerful and widespread religious influence over the land. Throughout the Buddhist period in India—a period extending from 700 to 1,000 years—she gave the same support to Buddhism which she had previously given to the Hindu faith. Buddhist works of that era . . . clearly establish the fact that the Buddhists of those days regarded the city with much the same kind of veneration as the Hindu does now.”—M. A. Sherring, *Sacred city of the Hindus*, ch. 1.—For an account of the English annexation of Benares during the Mahratta War, see **INDIA**: 1773-1785.

1789, 1806 and 1811 and obtaining it permanently in 1812. As a result of the World War, it has passed with all Bessarabia to Rumania.

BENEDICTINE AGE.—Learning confined to church. See EUROPE: Middle Ages: Roman civilization inherited in part by Christian church.

BENEDICTINE ORDERS.—Rule of St. Benedict.—“There were many monasteries in the West before the time of St. Benedict of Nursia (A. D. 480); but he has been rightly considered the father of Western monasticism; for he not only founded an order to which many religious houses became attached, but he established a rule for their government which, in its main features, was adopted as the rule of monastic life by all the orders for more than five centuries, or until the time of St. Dominic and St. Francis of Assisi. Benedict was first a hermit, living in the mountains of Southern Italy, and in that region he afterwards established in succession twelve monasteries, each with twelve monks and a superior. In the year 520 he founded the great monastery of Monte Casino as the mother-house of his order, a house which became the most celebrated and powerful monastery, according to Montalembert, in the Catholic universe, celebrated especially because there Benedict prepared his rule and formed the type which was to serve as a model to the innumerable communities submitting to that sovereign code. . . . Neither in the East nor in the West were the monks originally ecclesiastics; and it was not until the eighth century that they became priests, called regulars, in contrast with the ordinary parish clergy, who were called seculars. . . . As missionaries, they proved the most powerful instruments in extending the authority and the boundaries of the church. The monk had no individual property: even his dress belonged to the monastery. . . . To enable him to work efficiently, it was necessary to feed

him well; and such was the injunction of Benedict, as opposed to the former practice of strict asceticism.”—C. J. Stillé, *Studies in mediæval history*, ch. 12.—“Benedict would not have the monks limit themselves to spiritual labour, to the action of the soul upon itself; he made external labour, manual or literary, a strict obligation of his rule. . . . In order to banish indolence, which he called the enemy of the soul, he regulated minutely the employment of every hour of the day according to the seasons, and ordained that, after having celebrated the praises of God seven times a-day, seven hours a-day should be given to manual labour, and two hours to reading. . . . Those who are skilled in the practice of an art or trade, could only exercise it by the permission of the abbot, in all humility; and if any one prided himself on his talent, or the profit which resulted from it to the house, he was to have his occupation changed until he had humbled himself. . . . Obedience is also to his eyes a work, obedientiam laborem, the most meritorious and essential of all. A monk entered into monastic life only to make the sacrifice of self. This sacrifice implied especially that of the will. . . . Thus the rule pursued pride into its most secret hiding-place. Submission had to be prompt, perfect, and absolute. The monk must obey always, without reserve, and without murmur, even in those things which seemed impossible and above his strength, trusting in the succour of God, if a humble and reasonable remonstrance, the only thing permitted to him, was not accepted by his superiors.”—Count de Montalembert, *Monks of the west*, bk. 4, sect. 2, v. 2.—See also CAPUCHINS; CARTHUSIAN ORDER; EINSIEDELN, ABBEY OF; HISTORY: 24; LINDISFARNE: 7th-10th centuries; MEDICAL SCIENCE: Medieval: 10th-12th centuries; MONASTICISM: 6th century; 9th-13th centuries.

BENEFICE. See BENEFICIUM; FEUDALISM.

BENEFICIUM and COMMENDATION.—Feudalism “had grown up from two great sources—the beneficium, and the practice of commendation, and had been specially fostered on Gallic soil by the existence of a subject population which admitted of any amount of extension in the methods of dependence. The beneficiary system originated partly in gifts of land made by the kings out of their own estates to their kinsmen and servants, with a special undertaking to be faithful; partly in the surrender by landowners of their estates to churches or powerful men, to be received back again and held by them as tenants for rent or service. By the latter arrangement the weaker man obtained the protection of the stronger, and he who felt himself insecure placed his title under the defence of the Church. By the practice of commendation, on the other hand, the inferior put himself under the personal care of a lord, but without altering his title or divesting himself of his right to his estate; he became a vassal and did homage. The placing of his hands between those of his lord was the typical act by which the connexion was formed.”—W. Stubbs, *Constitutional History of England*, ch. 9, sect. 93.—See also BEL-

GIUM: Ancient and medieval history; SCOTLAND: 10th-11th centuries.

ALSO IN: H. Hallam, *View of the state of Europe during the middle ages*, ch. 2, pt. 1.

BENEFIT OF CLERGY.—"Among the most important and dearly-prized privileges of the church was that which conferred on its members immunity from the operation of secular law, and relieved them from the jurisdiction of secular tribunals. . . . So priceless a prerogative was not obtained without a long and resolute struggle. . . . To ask that a monk or priest guilty of crime should not be subject to the ordinary tribunals, and that civil suits between laymen and ecclesiastics should be referred exclusively to courts composed of the latter, was a claim too repugnant to the common sense of mankind to be lightly accorded. . . . The persistence of the church, backed up by the unflinching resource of excommunication, finally triumphed, and the sacred immunity of the priesthood was acknowledged, sooner or later, in the laws of every nation of Europe." In England, when Henry II. in 1164, "endeavored, in the Constitutions of Clarendon, to set bounds to the privileges of the church, he therefore especially attacked the benefit of clergy. . . . The disastrous result of the quarrel between the King and the archbishop [Becket] rendered it necessary to abandon all such schemes of reform. . . . As time passed on, the benefit of clergy gradually extended itself. That the laity were illiterate and the clergy educated was taken for granted, and the test of churchmanship came to be the ability to read, so that the privilege became in fact a free pardon on a first offence for all who knew their letters. . . . Under Elizabeth, certain heinous offences were declared felonies without benefit of clergy. . . . Much legislation ensued from time to time, effecting the limitation of the privilege in various offences. . . . Early in the reign of Anne the benefit of clergy was extended to all malefactors by abrogating the reading test, thus placing the unlettered felon on a par with his better educated fellows, and it was not until the present century was well advanced that this remnant of mediæval ecclesiastical prerogative was abolished by 7 and 8 Geo. iv. c. 28."—H. C. Lea, *Studies in church history*, pt. 2. —See also ENGLAND: 1162-1170; ECCLESIASTICAL LAW: 1285-1660.

BENEVENTO, or **Grandella**, Battle of (1266). See ITALY (SOUTHERN): 1250-1268.

BENEVENTUM: **Lombard duchy**. — The duchy of Beneventum was a Lombard fief of the eighth and ninth centuries, in southern Italy, which survived the fall of the Lombard kingdom in northern Italy. It covered nearly the territory of the modern kingdom of Naples. Charlemagne reduced the duchy to submission with considerable difficulty, after he had extinguished the Lombard kingdom. It was afterwards divided into the minor principalities of Benevento, Salerno and Capua, and became part of the Norman conquest. See ITALY (SOUTHERN): 800-1016.

BENEVENTUM, Battle of (275 B.C.). See ROME: Republic: B. C. 281-272.

BENEVOLENCES.—"The collection of benevolences, regarded even at the time [England,

reign of Edward IV.] as an innovation, was perhaps a resuscitated form of some of the worst measures of Edward II. and Richard II., but the attention which it aroused under Edward IV. shows how strange it had become under the intervening kings. . . . Such evidence as exists shows us Edward IV. canvassing by word of mouth or by letter for direct gifts of money from his subjects. Henry III. had thus begged for new year's gifts. Edward IV. requested and extorted 'free-will offerings' from every one who could not say no to the pleadings of such a king."—W. Stubbs, *Constitutional History of England*, ch. 18, sect. 696. See ENGLAND: 1628.

BENGAL.—"Bengal [India] lies to the east of Behar and Choto Nagpur, and stretches from the Himalaya mountains to the sea. The inhabitants are partly Mahomedans and partly Hindus, and speak the Bengali language. . . . It will appear from the figures given above that the Province of Bengal contains, according to the census of 1901, a population of nearly 80 millions of inhabitants. But, in ancient times, the country was mostly covered with swamps and jungles. Cultivation was little known, and the population was small. . . . When the Aryan Hindus came from the west, some three thousand years ago, they settled in different parts of this Province, and introduced cultivation and the arts of civilized life. . . . In ancient times, Western Bengal was known as *Anga*, Eastern Bengal was known as *Vanga*, and South-Bengal and Orissa were known as *Kalinga*. When the Greeks visited Bengal in the fourth century before Christ, the Kalingas were a powerful nation with a great capital at Parthalis. And their king had 60,000 foot soldiers, 1,000 horse, and 700 elephants. Another race, called the Madhya-Kalingas, lived on an island in the Ganges. A third race whom the Greeks called the Gangerides or the Ganetic Race, lived near the mouths of that river. Various other races peopled different parts of Bengal in that age, and had separate kings and kingdoms of their own. In the third century before Christ, Asoka the Great of Magadha conquered a part of Bengal, and introduced Buddhism into that province. Buddhism flourished side by side with Hinduism in Bengal for over a thousand years. . . . After the decay of the ancient races, the Rajputs, a modern race, became masters of all parts of India. A race of Rajputs conquered Bengal, and founded the Pala dynasty in the ninth century after Christ. . . . The Musalmans under Muhammad Ghori conquered Northern India in 1194. Muhammad Ghori was succeeded by Kutbuddin as king of Delhi; and his lieutenant Bakhtiyar Khilji conquered Bengal about 1200. The feeble old king Lakshmaneya fled from Navadwip as the Musalmans entered and took possession of it [see also INDIA: 1200-1308]. Northern and Western Bengal thus passed under the rule of the Mahomedans. The Hindus remained independent at Saptagram in South Bengal, and at Suvarnagram in East Bengal, for a century longer. After that, they too were conquered by the Mahomedans. . . . When the Afghan chiefs conquered Bengal in the thirteenth century, they divided the country among themselves for the support of their troops. Bakhtiyar Khilji and his successors made a choice of some districts as their own domains, and the other districts were assigned to the inferior chiefs. These

chiefs and Jaigirdars again subdivided the lands among petty commanders, each of whom maintained a certain number of soldiers, and was bound to serve his chief and the Ruler of Bengal. Under this system of Feudal Government, the Afghan conquerors retained in their hands the military power in the country. . . . Towards the close of the sixteenth century, Bengal was wrested from the Afghans by the Moguls. The administration of these new conquerors was more thorough than that of their predecessors. Mogul Jaigirdars were moved about from place to place, and this policy led to a great rebellion in 1580, as we have seen before. Shortly after 1700, almost all the Jaigirdars of Bengal lost their Jaigirs, and were allowed to have such grants in the unsettled province of Orissa. . . . We should not forget, however, that local wars and invasions sometimes desolated portions of this delightful country. . . . In spite of these occasional disturbances, however, the Mogul Rule of nearly two centuries may be said to be a period of general peace and prosperity."—R. C. Dutt, *Brief history of ancient and modern Bengal*, pp. 2-4; 18-20; 21; 64-70.

BEOTHUKAN FAMILY.—The Beothuk were a tribe of Indians, now extinct, which is believed to have occupied the whole of Newfoundland at the time of its discovery. What is known of the language of the Beothuk indicates no relationship to any other American tongue.—J. W. Powell, *Seventh annual report of the Bureau of ethnology*, p. 57.

BEOWULF, the hero of the one famous Old English epic. The poem, written not later than the eighth century, is represented by a single tenth century manuscript in the British Museum. The hero, a prince of the Geats in south Sweden, performs great deeds of valor in battle, as well as in slaying huge monsters, and finally perishes in the act of killing a fiery dragon. At least a portion of the epic is founded on historic facts.—See also **BALLAD**: Development; **ENGLAND**: 825-880; and **ENGLISH LITERATURE**: 6th-11th centuries.

BERCHTOLD, Count Leopold (1863-), Austro-Hungarian foreign minister, succeeding to that office on the death of Baron Aehrenthal in 1912. He had served in the diplomatic service in Paris, London and St. Petersburg, and was Austro-Hungarian ambassador to Russia in 1906. On August 16, 1912, during the Balkan crisis, he invited the Great Powers to engage in "conversations" with a view to "co-ordinating their several efforts in the interest of Balkan peace." (See **BALKAN STATES**: 1912: Balkan League.) Nothing came of this so-called "Berchtold proposal," and the first Balkan War broke out in October. To Count Berchtold belongs the unenviable distinction of being the actual instigator of the World War by his unacceptable ultimatum to Serbia on July 23, 1914. He resigned in January, 1915.—See also **WORLD WAR**: Diplomatic background: 8, 13, 14, 28, 32, 33, 68.

BERENGAR (c. 1000-1088), medieval theologian. Opposed transubstantiation, but recanted several times, under pressure.

BERENGAR I (d. 924), king of Lombardy and Roman Emperor. See **HUNGARY**: 934-955; and **ITALY**: 843-951.

BERENICE, Cities of.—There were three cities of this name (given in honor of Berenice, mother of the second of the Ptolemies) on the Egyptian coast of the Red Sea, and a fourth in Cyrenaica.

BERESFORD, Charles William de la Poer Beresford, Baron (1846-1919), British admiral. Distinguished himself in the bombardment of Alexandria, 1882, and the ensuing Nile campaign; was commander-in-chief, respectively of the Channel, Mediterranean and Home Fleets. Served twenty years in parliament and was a strenuous advocate of British naval supremacy. See **WAR, PREPARATION FOR**: 1906-1909.

BERESFORD, William Carr Beresford, Viscount (1768-1854), British general. After service in several countries, he successfully reorganized the Portuguese army, and showed bravery in the Peninsular war, but was less successful as a tactician.

BERESINA, Passage of the.—The Beresina is a branch of the Dnieper river, Russia, over which Napoleon's army passed on the retreat from Moscow, Nov. 26-29, 1812. Many of his army were slain and taken prisoners. See **RUSSIA**: 1812 (October-December).

BERG, Friedrich Wilhelm Rembert (Feodor Feodorovitch) (1793-1874), Russian general, lieu-

tenant-general of Poland, 1863-1874. See **POLAND**: 1865-1869.

BERG, formerly a duchy in the Westphalian district of the old German empire, situated on the right bank of the Rhine, now a part of the Prussian province of the Rhine in the administrative districts of Düsseldorf and Cologne. From 1108 it was a countship and in 1380 it became a duchy. With the extinction of the male lines of the houses of Jülich-Berg-Ravenberg and Cleves, into whose possession it had successively passed, it was joined to Neuburg by the treaty of Dortmund, in 1666. In 1742, it became the possession of the Sultzbach branch of the house of Wittelsbach, and upon the extinction of this line, it passed over to Maximilian Joseph of Zweibrücken (Maximilian I of Bavaria), who ceded it to Napoleon in 1806. Napoleon made it a grand-duchy (see **GERMANY**: 1813: October-December), and bestowed it upon Joachim Murat. From him it went to the son of the king of Holland, and in 1815 it was definitely transferred to Prussia by the Congress of Vienna (q. v.).

BERING SEA QUESTION.—A controversy arose in 1886 through the seizure by United States vessels of Canadian vessels engaged in the taking of seals in waters not far distant from the Aleutian islands. The claim of the United States was that it had acquired from Russia exclusive rights in Bering sea, at least with regard to seal fishing. The British government representing the Canadians denied that there could be any exclusive rights outside three miles off shore. By an agreement of February 29, 1892, the question has been sub-

mitted to arbitration, the arbitrators to give "a distinct decision" upon each of the following five points: "(1) What exclusive jurisdiction in the sea now known as the Behring's Sea, and what exclusive rights in the seal fisheries therein, did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States? (2) How far were these claims of jurisdiction as to the seal fisheries recognized and conceded by Great Britain? (3) Was the body of water now known as the Behring's Sea included in the phrase 'Pacific Ocean,' as used in the treaty of 1825 between Great Britain and Russia, and what rights, if any, in the Behring's Sea, were held and exclusively exercised by Russia after said treaty? (4) Did not all the rights of Russia as to the jurisdiction and as to the seal fisheries in Behring's Sea east of the water boundary, in the treaty between the United States and Russia of the 30th of March, 1867, pass unimpaired to the United States under that treaty? (5) Has the United States any right, and if so, what right, of protection or property in the fur-seals frequenting the islands of the United States in Behring's Sea, when such seals are found outside the ordinary three-mile limit?"—*American history leaflets, no. 6.*—The arbitrators to whom these points of the question were submitted under the treaty were seven in number, as follows: Justice John M. Harlan, of the Supreme Court of the United States, and Senator John T. Morgan, of Alabama, appointed by the United States; Rt. Hon. Lord Hannan, and Sir John S. D. Thompson, prime minister of Canada, appointed by Great Britain; Senator Baron Alphonse de Courcelles, formerly French ambassador at Berlin, appointed by the French government; Senator Marquis E. Visconti Venosta, appointed by the Italian government; and Judge Mons. Gregers Gram, minister of state, appointed by the government of Sweden. The court of arbitration met at Paris, beginning its sessions on March 23, 1893. The award of the tribunal, signed on August 15, 1893, decided the five points submitted to it, as follows: (1) That Russia did not, after 1825, assert or exercise any exclusive jurisdiction in Bering sea, or any exclusive rights in the seal fisheries; (2) that no such claims on the part of Russia were recognized or conceded by England; (3) that the body of water now known as Bering sea was included in the phrase "Pacific ocean," as used in the treaty of 1825 between Great Britain and Russia, and that no exclusive rights of jurisdiction in Bering sea or as to the seal fisheries there were held or exercised by Russia after the treaty of 1825; (4) that all the rights of Russia as to jurisdiction and the seal fisheries in Bering sea east of the water boundary did pass unimpaired to the United States under the treaty of March 30, 1867; (5) that the United States has not any right of protection or property in the fur seals frequenting the islands of the United States in Bering sea, when such seals are found outside the ordinary three-mile limit. Mr. Morgan alone dissented from the decision rendered on the first and second points, and on the second division of the third point. Justice Harlan and Mr. Morgan both dissented on the fifth point. On the fourth point, and on the first division of the third, the decision was unanimous. These points of controversy disposed of, the arbitrators proceeded to prescribe the regulations which the governments of the United States and Great Britain shall enforce for the preservation of the fur seal. The regulations prescribed prohibit the killing, capture or pursuit of fur seals, at any time or in any manner, within a zone of sixty miles around the

Pribilov islands (q.v.); prohibit the same from May 1 to July 31 in all the part of the Pacific ocean, inclusive of Bering sea, which is north of 35° north latitude and eastward of the 180th degree of longitude from Greenwich till it strikes the water boundary described in article one of the treaty of 1867 between the United States and Russia; and following that line up to Bering straits; allow only sailing vessels, with licenses, to take part in fur seal fishing operations, and forbid the use of nets, firearms and explosives, except as to shot guns outside of Bering sea. As promulgated, the award bore the signatures of all the arbitrators.—*Behring sea arbitration: Letters, Times* (London).—"Several vexatious questions were left undetermined by the . . . Bering Sea Arbitration Tribunal. [See U. S. A.: 1886-1893; 1889-1892]. The application of the principles laid down by that august body has not been followed by the results they were intended to accomplish, either because the principles themselves lacked in breadth and definiteness or because their execution has been more or less imperfect. Much correspondence has been exchanged between the two Governments [of Great Britain and the United States] on the subject of preventing the exterminating slaughter of seals. The insufficiency of the British patrol of Bering Sea under the regulations agreed on by the two Governments has been pointed out, and yet only two British ships have been on police duty during this season in those waters. The need of a more effective enforcement of existing regulations as well as the adoption of such additional regulations as experience has shown to be absolutely necessary to carry out the intent of the award have been earnestly urged upon the British Government, but thus far without effective results. In the meantime the depletion of the seal herds by means of pelagic hunting [that is, in the open sea] has so alarmingly progressed that unless their slaughter is at once effectively checked their extinction within a few years seems to be a matter of absolute certainty. The understanding by which the United States was to pay and Great Britain to receive a lump sum of \$425,000 in full settlement of all British claims for damages arising from our seizure of British sealing vessels unauthorized under the award of the Paris Tribunal of Arbitration was not confirmed by the last Congress, which declined to make the necessary appropriation. I am still of the opinion that this arrangement was a judicious and advantageous one for the Government, and I earnestly recommend that it be again considered and sanctioned. If, however, this does not meet with the favor of Congress, it certainly will hardly dissent from the proposition that the Government is bound by every consideration of honor and good faith to provide for the speedy adjustment of these claims by arbitration as the only other alternative. A treaty of arbitration has therefore been agreed upon, and will be immediately laid before the Senate, so that in one of the modes suggested a final settlement may be reached."—*Message of the President of the United States to congress, Dec., 1895.*

The treaty thus referred to by the president was signed at Washington, February 8, 1896, and ratifications were exchanged at London on June 3 following. Its preamble set forth that, whereas the two governments had submitted certain questions to a tribunal of arbitration, and "whereas the High Contracting Parties having found themselves unable to agree upon a reference which should include the question of the liability of each for the injuries alleged to have been sustained by the other, or by its citizens, in connection with the

claims presented and urged by it, did, by Article VIII of the said Treaty, agree that either party might submit to the Arbitrators any questions of fact involved in said claims, and ask for a finding thereon, the question of the liability of either Government on the facts found to be the subject of further negotiation: And whereas the Agent of Great Britain did, in accordance with the provisions of said Article VIII, submit to the Tribunal of Arbitration certain findings of fact which were agreed to as proved by the Agent of the United States, and the Arbitrators did unanimously find the facts so set forth to be true, as appears by the Award of the Tribunal rendered on the 15th day of August, 1893: And whereas, in view of the said findings of fact and of the decision of the Tribunal of Arbitration concerning the jurisdictional rights of the United States in Behring Sea, and the right of protection of property of the United States in the fur-seals frequenting the islands of the United States in Behring Sea, the Government of the United States is desirous that, in so far as its liability is not already fixed and determined by the findings of fact and the decision of said Tribunal of Arbitration, the question of such liability should be definitely and fully settled and determined, and compensation made, for any injuries for which, in the contemplation of the Treaty aforesaid, and the Award and findings of the Tribunal of Arbitration, compensation may be due to Great Britain from the United States: And whereas it is claimed by Great Britain, though not admitted by the United States, that prior to the said Award certain other claims against the United States accrued in favour of Great Britain on account of seizures of or interference with the following named British sealing-vessels, to wit: the *Wanderer*, the *Winifred*, the *Henrietta*, and the *Oscar* and *Hattie*, and it is for the mutual interest and convenience of both the High Contracting Parties that the liability of the United States, if any, and the amount of compensation to be paid, if any, in respect to such claims, and each of them should also be determined under the provisions of this Convention—all claims by Great Britain under Article V of the *modus vivendi* of the 18th April, 1892, for the abstention from fishing of British sealers during the pendency of said arbitration having been definitely waived before the Tribunal of Arbitration"—therefore the two nations have concluded the convention referred to, which provides that "all claims on account of injuries sustained by persons in whose behalf Great Britain is entitled to claim compensation from the United States, and arising by virtue of the Treaty aforesaid, the Award and the findings of the said Tribunal of Arbitration, as also the additional claims specified in the 5th paragraph of the preamble hereto, shall be referred to two Commissioners, one of whom shall be appointed by Her Britannic Majesty, and the other by the President of the United States, and each of whom shall be learned in the law."—*Great Britain, parliamentary publications (papers by command: treaty series, No. 10, 1896)*.

Judges William L. Putnam, of the United States, and George E. King, of Canada, were subsequently appointed to be the two commissioners provided for in the treaty. Meantime each government had appointed a number of men of science to investigate the condition of the herds of fur-seals on Pribilof islands, President David S. Jordan, of Leland Stanford Junior University, being director of the American investigation and Professor D'Arcy W. Thompson having charge of the British. The two bodies of investigators

reached quite different conclusions. Professor Jordan, in a preliminary statement, announced: "There is still a vast body of fur seals on the islands, more than the commissioners were at first led to expect, but the number is steadily declining. The only cause of this decline is the killing of females through pelagic sealing. The females are never molested on the islands, but three-fourths of those killed in Bering sea are nursing females. The death of the mother causes the death of the young on shore, so that for every four fur seals killed at sea three pups starve to death on shore. As each of those females is also pregnant, a like number of unborn pups is likewise destroyed." His formal report, made in January, 1897, was to the same effect, and led to the following conclusion: "The ultimate end in view should be an international arrangement whereby all skins of female fur seals should be seized and destroyed by the customs authorities of civilized nations, whether taken on land or sea, from the Pribilof herd, the Asiatic herds, or in the lawless raiding of the Antarctic rookeries. In the destruction of the fur seal rookeries of the Antarctic, as well as those of the Japanese islands and of Bering sea, American enterprise has taken a leading part. It would be well for America to lead the way in stopping pelagic sealing by restraining her own citizens without waiting for the other nations. We can ask for protection with better grace when we have accorded, unasked, protection to others." The report of Professor Thompson, made three months later, agreed but partially with that of the American experts. He admitted the extensive starving of the young seals, caused by the killing of the mothers, but contended that the herd was diminishing slightly, if at all, and he did not favor drastic measures for the suppression of pelagic sealing.

The government of the United States adopted measures in accordance with the views of Professor Jordan, looking to an international regulation of the killing of seals. Hon. John W. Foster was appointed a special ambassador to negotiate arrangements to that effect. Through the efforts of Mr. Foster, an international conference on the subject was agreed to on the part of Russia and Japan, but Great Britain declined to take part. While these arrangements were pending, the American secretary of state, Mr. Sherman, addressed a letter to the American ambassador at London, Mr. Hay, criticising the conduct of the British government and its agents in terms that are not usual among diplomats, and which excited much feeling when the latter was published in July. This called out a reply from the British colonial secretary, Mr. Chamberlain, in which he wrote: "When Her Majesty's government sent their agents to inquire into the actual facts in 1896, it was found that, in spite of the large catch of 1895, the herd actually numbered more than twice as many cows as it had been officially asserted to contain in 1895. The result of these investigations, as pointed out in Lord Salisbury's dispatch of May 7, has further been to show that pelagic sealing is much less injurious than the practice pursued by the United States' lessees of killing on land every male whose skin was worth taking. If the seal herd to-day is, as Professor Jordan estimates, but one-fifth of what it was in 1872-74, that result must be, in great measure, due to the fact that, while the islands were under the control of Russia, that power was satisfied with an average catch of 33,000 seals; subsequently under the United States' control more than three times that number have been taken every year, until the

catch was, perforce, reduced because that number of males could no longer be found.

"Last year, while the United States government were pressing Her Majesty's government to place further restrictions on pelagic sealing, they found it possible to kill 30,000 seals on the islands, of which Professor Jordan says (in one place in his report) 22,000 were, to the best of his information, three-year-olds, though (in another place) he estimated the total number of three-year-old males on the islands as 15,000 to 20,000. If such exhaustive slaughter is continued, it will, in the light of the past history of the herd, very quickly bring about the commercial extermination which has been declared in the United States to be imminent every year for the last twelve years. Enough has perhaps been said to justify the refusal of Her Majesty's government to enter on a precipitate revision of the regulations." The two countries were thus being carried into serious opposition, on a matter that looks contemptible when compared with the great common interests which ought to bind them in firm friendship together. But, while the government of Great Britain declined to enter into conference with those of Russia, Japan and the United States, on general questions relating to the seals, it assented at length to a new conference with the United States and Canada, relative to the carrying out of the regulations prescribed by the Paris tribunal of 1893. Both conferences were held at Washington in October and November of 1897. The first resulted in a treaty (November 6) between Russia, Japan, and the United States, providing for a suspension of pelagic sealing during such time as might be determined by experts. The other conference led, after some interval, to the creation of a joint high commission for the settlement of all questions in dispute between the United States and Canada, the sealing question included. See CANADA: 1898-1899.

So far as concerned its own citizens, the American government adopted vigorous measures for the suppression of pelagic sealing. An act of Congress, approved by the President on December 29, 1897, forbade the killing of seals, by any citizen of the United States, in any part of the Pacific ocean north of 35 degrees north latitude. The same act prohibited the importation into the United States of sealskins taken elsewhere than in the Pribilof islands, and very strict regulations for its enforcement were issued by the treasury department. No sealskins, either in the raw or the manufactured state, might be admitted to the country, even among the personal effects of a traveller, unless accompanied by an invoice, signed by an United States consul, certifying that they were not from seals killed at sea. Skins not thus certified were seized and destroyed.

In his annual report for 1898, the United States secretary of the treasury stated that no pelagic sealing whatever had been carried on by citizens of the United States during the season past; but that thirty British vessels had been engaged in the work, against thirty-two in the previous year, and that their total catch had been 10,581, against 6,100 taken by the same fleet in 1897. The number of seals found on the islands was reported to be greatly reduced. Between 1901 and 1902 matters came to such a pass that Congress even discussed killing the entire herd at once, and thus ending the controversy. Ten years later, however, (December, 1911) a convention was held between United States, Great Britain, Russia and Japan prohibiting pelagic sealing north of thirty degrees north latitude for fifteen years.—See also FISH-

ERIES: 1910-1911; FREEDOM OF THE SEAS: 1815-1914.

BERKELEY, George (1685-1753), Irish bishop and philosopher. He is chiefly famous on account of his treatise, *Principles of Human Knowledge*, in which he expounded the subjective nature of all existence and of all seemingly external phenomena. He was appointed bishop of Cloyne in 1734.

BERKELEY, John, 1st baron of Stratton (d. 1678), British soldier and courtier granted proprietary rights in New Jersey and the Carolinas. See NEW JERSEY: 1664-1667; NORTH CAROLINA: 1663-1670; U. S. A.: 1607-1752.

BERKELEY, Sir William (c. 1608-1677), English courtier, an original member of the London Company of 1606, one of the royal commissioners of Canada. Appointed governor of Virginia in 1642 and continued in that office until 1677 except for an interval under Cromwell. Punished the leaders of Bacon's rebellion with great cruelty. Recalled in 1677. See VIRGINIA: 1650-1660; 1660-1677; NORTH CAROLINA: 1663-1670.

BERKELEY, California, city in Alameda county near the bay of San Francisco, the seat of the University of California. In 1909 it adopted the commission plan of government. In 1911, the socialist party was in administrative control. See SOCIALISM: 1901-1913.

BERLANGA, Thomas de, third bishop of Panama, first European to sight the islands of Galápagos. See GALÁPAGOS ISLANDS.

BERLIN.—The capital city of Prussia; capital of the German empire from 1871 to 1918; of the German republic since Nov. 9, 1918. Some historians derive the name *Berlin* from Wehr (dam), others from a Wend word, meaning *free or open space*, and still others from the Celtic roots *ber* (small or short) and *lyn* (lake).—"Berlin . . . is the center of a late-developed, naturally unattractive plain, poor alike in material and spiritual inheritance. The forested swamp of the North German Plain fell without the sphere of Roman influence, bounded effectively by the line of the Rhine-Danube, a line roughly coincident with the southern limits of a frozen January. . . . From Holland at the western edge of the plain came important influences working in a variety of ways; from the introduction of personal factors—notably the alliance of the Electorate of Brandenburg with the House of Orange—to Dutch help in the construction of canals. To the latter is directly due the rise of Berlin: the city is essentially a route center of the plain."—*Geographical Review*, May, 1917.—"On the whole Berlin is less representative of Germany than are most capitals of their respective countries. . . . One sees here the worst results of the demoralization caused by prosperity. . . . To some extent Berlin is also representative of the best in Germany, though less so than some other capitals . . . it absorbs less of the intellectual life of the nation than they do, and it has no traditions; neither is it the seat of such a strenuous commercial activity as great sea-ports, like New York and London. But it does represent the most complete application of science, order and method—preeminently German qualities—to public life. It is a marvel of civic administration, the most modern and the most perfectly organized city that there is."—A. Shadwell, *Industrial efficiency*, pp. 158-159.

General survey.—Area.—Population.—Industries.—Commercial equipment.—Terminals.—Industrial schools.—Berlin occupies an area of about 29 square miles, and in 1919 had a population of 1,902,509. "The city is thoroughly modern and cosmopolitan. Over half of her population are engaged in industries embracing almost all branches. Among these the metal-working industries are very important, especially the manufacture of machinery and electrical goods. The breweries rival those of Munich in extent."—*United States Bureau of Education Bulletin, No. 19, 1913, p. 96.*—"Terminal arrangements at Berlin are magnificent; and the whole movement of traffic, both freight and passenger, is facilitated to a remarkable degree by the *stadtbahn* or municipal railroad, crossing the city from east to west, and the *ringbahn*, an encircling railway operated in conjunction with the *stadtbahn*. These connect with all the lines that come to Berlin, and assist in the collection, distribution, and transfer of freightage. . . . At Berlin, the most casual observer can hardly fail to notice the marvelous use that is made for purposes of commercial navigation of the narrow river Spree. It has been well dredged out, is held in a controllable channel by magnificent stone embankments extending for a number of miles on both sides of the river, and has, below the high quays, broad and convenient stone landings all along the water-edge. The quantity of freight barged at cheap rates from point to point in the city by means of the Spree is enormous; and the city streets are thus greatly relieved. Moreover, the Spree connects with a system of canals penetrating the country in every direction, and carrying enormous quantities of heavy ware such as building materials."—A. Shaw, *Municipal government in continental Europe* (1903), pp. 303-304.—"The city possesses an elaborate system of industrial schools, many of them having attained their present form in comparatively recent years. In 1905 the administration of all the industrial and improvement schools was placed under a newly established commission for the city trade and improvement schools. The city system of industrial schools includes: (1) Voluntary improvement schools (chiefly commercial); (2) compulsory improvement schools; (3) trade schools for apprentices; and (4) middle (*höhere*) trade schools. The great Royal Technical High School is located in Charlottenburg, a suburb contiguous with Berlin. This great institution, specializing in research in applied science, and attended in 1909-10 by some 5,300 students from all parts of the civilized world, represents, with its fellows in other parts of Germany, the pinnacle of German industrial education. . . . The voluntary improvement schools, of which there were 33 in 1909-10, are open, some to boys, some to girls, and some to those of both sexes. They are chiefly commercial in nature, and some wholly so. A few have industrial and housekeeping courses for girls, such as design drawing for tailors and for lingerie sewing, repairing, ironing, machine sewing and machine embroidery, tailoring, and millinery. Attendance on these voluntary improvement schools does not free from the obligation to attend a compulsory improvement school, where such obligation exists. The compulsory improvement schools (*Pflichtfortbildungsschulen*) are 10 in number and have their headquarters in as many chief buildings scattered through the city, though spreading over freely into the common school and other buildings where necessary. . . . The subjects of instruction are three: German, arithmetic, and drawing. There are no

workshops in these schools. The pupils, all of whom are apprentices or unskilled boy workers, are grouped in classes according to their trades. . . . As a concession or adaptation to practical needs, the German and arithmetic were specialized, and applied to industrial needs, and drawing was introduced. . . . More closely adapted to specific industrial needs in different trades is a large group of trade schools for apprentices. These schools are quite various in their nature and the sources from which they are supported. Eight of those existing in 1909-10 were supported by the city, the State, and by guilds, associations, and others interested. . . . The largest of these apprentice trade schools is the Trade School for Book Printers (*Die Fachschule für Buchdrucker*), founded in 1875. . . . Another group of trade schools are the higher trade schools with classes for both journeymen and apprentices. These include: the Hall of Industries (*Der Gewerbesaal*) and the Second Handworkers' School (*Die Zweite Handwerkerschule*), supported wholly by the city; the First Handworkers' School (*Die Erste Handwerkerschule*), and the Building Trades School (*Die Baugewerkschule*), supported by the city and State jointly; the City Higher Textile School (*Die Städtische Höhere Webeschule*), supported by city, State, guilds, associations, and interested individuals; and the Berlin Cabinetmakers' School (*Die Berliner Tischlerschule*), supported by the city and by two guilds. Of these schools, two, the Hall of Industries and the Berlin Cabinetmakers' School, have, besides day classes for journeymen, seven branch Sunday and evening schools each throughout the city. . . . The chamber of industry has established a number of both theoretical and practical master courses for its district of Berlin and environs. Twenty-four bookkeeping courses were held in 1900-10, of 30 hours total length each. A course was opened whenever 20 participants offered themselves; masters and journeymen and also wives and daughters of masters were admitted. . . . Looking over the Berlin industrial schools as a whole, we see that here, as elsewhere in Germany, industrial education does not shorten the period of apprenticeship, except in so far as (chiefly from the standpoint of the employer) the taking out of time for the school work may be said to do so. Generally speaking, the schools increase the interest of the pupils in their work, but this does not apply to all pupils, for in the compulsory-improvement schools many of the pupils are not there from choice and are lazy and indifferent."—*United States Bureau of Education Bulletin, No. 19 (1913), pp. 96-106.*—See also EDUCATION: Modern developments; Vocational education: Trade school development in Europe.

13th-16th centuries.—Origin and early history.—The time of Berlin's foundation has not been definitely established. The predominant opinion seems to be that its existence dates from the days of Otto III and John I. Originally it consisted of two towns, Kölln and Berlin, which are first mentioned in documents of the thirteenth century. After two unsuccessful attempts, one in 1307 and another in 1432, the two towns were definitely united in 1448 into one city, which became the residence of the ruling margraves of Brandenburg. Since the year 1530, the history of Berlin is bound up with that of the house of Hohenzollern.

1631.—Forcible entry of Gustavus Adolphus. See GERMANY: 1630-1631.

1675.—Threatened by the Swedes. See BRANDENBURG: 1630-1688.

1693-1699.—Public charities. See CHARITIES: Germany: 1693-1699.

1757-1806.—Austrian and Russian attacks.—French occupation.—During the Seven Years' War Berlin was attacked and plundered by the Austrians in 1757, and by the Russians in 1760, and in both cases it had to pay a heavy ransom. After the battle of Jena in 1806, when the whole of the Brandenburg possessions were conquered by Napoleon, Berlin was occupied by the French.—See also GERMANY: 1757 (July-December; 1760); and 1806 (October).

1848.—Disorders during the reform movement.—The reform movement which swept over Germany led to a riot in Berlin, which lasted a week, and was finally suppressed by troops on March 15. Three days later, when the cheers of the people, responding to the announcement of the demanded reforms, were mistaken for rioting, another encounter between the people and soldiers took place. The disorders still continued during the election of the Prussian National Assembly, which was dissolved on December 15.—See also GERMANY: 1848 (March); 1848-1850.

1861-1903.—Municipal progress under Emperor William I.—Expansion after 1870.—Municipal improvements.—The foreign attacks and invasions retarded considerably the growth of Berlin. Its "new era of municipal progress may be said to date from 1861. In that year it annexed considerable suburban territory. The old city walls were torn down to give free communication with the new quarters. The Emperor William [I] came to the Prussian throne in 1861, and his accession marked the beginning of a liberal policy on the part of the State toward the city of Berlin. The new *Rathhaus* (City Hall) was begun in that year. . . . The successive wars and Prussian victories of 1864, 1866, and 1870-71, ending with the formation of the German Empire and the designation of Berlin as its capital, enormously stimulated the municipal life. A policy of bold initiative was entered upon. Boulevards were constructed, and the new suburbs were handsomely laid out. . . . The . . . municipality acquired from the general government in 1874 the control of the streets, and set about reforming them. It entered upon projects of widening and straightening lines of main thoroughfare, and of laying good pavements. The process has gone on steadily to this day, with magnificent results. The city acquired control of the shallow and sluggish Spree, embanked it with massive walls, flanked it with broad stone quays, dredged it for heavy traffic, and replaced its old wooden bridges with modern structures of stone and steel. In 1873 the municipality had acquired control of the water-supply, and had at once proceeded to create a new and improved system. It . . . also proceeded in the interest of public health to create a great series of sanitary institutions, including municipal slaughter-houses and market halls, hospitals for infectious diseases, unified arrangements for public and private cleansing, and systematic inspection of food, houses, and all conditions affecting the public health (q.v.) The beginning of the municipal gas manufacture had dated from about 1870, and the success of the experiment had led to very great enlargements in 1875. Meanwhile, education had been municipalized with an energy and thoroughness perhaps unprecedented anywhere. Manufactures and railways had been encouraged, and technical and practical education had been so arranged as to promote Berlin's development as a center of industry. Parks, recreation-grounds, and gymnastic establishments were provided for the people. Housing was at length brought under municipal regulations of a very strict character,

in the interest of the working masses; and an excellent and comprehensive system of street-railways was devised,—under municipal inspiration, though under private management,—for the better facilitation of local transit and the wider distribution of the rapidly growing population. . . . When the Berlin authorities decided to establish a metropolitan water-supply, they also determined upon another and still greater undertaking. . . . Good drainage was as necessary as good water, and the discharge of unpurified sewage into the Spree as a permanent system was out of the question. . . . Berlin wisely adopted the better plan of natural purification by the irrigating of land. Immense research was bestowed upon the subject, with the result that the Berlin drainage is the most perfect in the world and is unquestionably that city's most notable achievement in municipal housekeeping, so far as physical forms and conditions are concerned. . . . Excepting for some thinly populated outskirts . . . all the houses of Berlin are now connected with the new drainage-works, which are carrying annually from 60,000,000 to 70,000,000 cubic meters of sewage to be distributed by scientific irrigation over the surface of the municipal farms having an aggregate extent of more than twenty thousand acres, or upwards of thirty square miles. Additional land has been bought from time to time."—A. Shaw, *Municipal government in continental Europe* (1903), excerpts from pp. 333-338.—See also CITY PLANNING; and MUNICIPAL GOVERNMENT: German municipal ownership.

1870-1919.—Growth shown by the census of 1871, 1895, 1900, 1905 and 1912.—Decline during the World War.—"One hundred years ago, Berlin had 160,000 inhabitants. . . . The first census taken under the Empire, December 1, 1871, found Berlin with 825,380 inhabitants." . . . In 1900 its population amounted to 1,884,345; "so that its increase during the past thirty years has been 1,058,956, or considerably more than 100 per cent." The figures for 1900 do not include the population of the suburbs, which "are inhabited by people who do business exclusively in Berlin. Including these suburbs, Berlin would have a population of more than 2,500,000 souls," as against 1,677,304 in 1895.—Based upon *Consular Reports*, No. 246, Mar., 1901.—In 1905, Berlin had "a population of about two millions, which in 1912 had been increased by the annexation of suburbs to three and one-half millions."—*United States Bureau of Education Bulletin*, No. 10, 1913.—The official figures for the population of Berlin in 1919, given as 1,902,509 as against 2,071,257 in 1910, show a decline during the World War.

1884.—Conference of Great Powers over affairs in Africa. See BERLIN ACT.

1896.—Industrial exposition.—An exposition of German industries and products was opened at Berlin, May 1, 1896, which excited wide interest and had an important stimulating effect in Germany.

1901.—The Berlin and Stettin Ship Canal. See GERMANY: 1001 (January).

1910-1912.—International exhibition.—Museum of German industry.—In connection with Berlin's studies of city housing, in 1910 an international exhibition took place, at which architects, artists, and city experts of a number of countries presented plans for a comprehensive street and building system. In 1912, a museum of German industry was founded in Berlin for the purpose of keeping the general public informed of the trend and achievements of engineering. By means of photographs, cinematograph films, and artistic reproductions, various phases of modern industry, such as operations in ship-yards, textile mills,

CONGRESS OF BERLIN, 1878

(From a painting by Anton von Werner)

The above figures, from left to right, are: Baron Haymerle, Count Karolyi, Count Launay, Prince Gortschakoff, Waddington, Lord Beaconsfield, von Radowitz, Prince Hohenlohe, Count Corti, Count Mouy, Count St. Vallier, Baron Ouhri, Desprez, Count Andrassy, Lothar Buchar, Prince Bismarck, von Holstein, Dr. Busch, Count Herbert Bismarck, Count Schawaloff, Sadullah Bey, Lord Odo Russell, von Bulow, Lord Salisbury, Karatheodori Pasha, Mehemet Ali Pasha. The dominating figures were Beaconsfield and Salisbury (British), Bismarck, Hohenlohe, and von Bulow (German), Andrassy and Karolyi (Austrian), Gortschakoff (Russian), St. Vallier (French), and Mehemet Ali Pasha (Turkish).

ceramic and metallurgical works, or the latest mechanical installations on farms, are exhibited.

1910-1917.—**Housing conditions.**—"Despite the proclamations issued on this side of the Atlantic that German cities have no slums, German cities apparently do have slums, or slum conditions, such as lack of light and air, overcrowding and utterly inadequate toilet facilities. A committee of the Berlin Sick Insurance Fund for 'merchants, tradesmen and pharmacists' publishes reports which give a distressing picture of the housing of what is far from being the poorest or worst-paid class of Berlin's population. . . . In 1910, the committee reports . . . , 115 persons of both sexes lived in rooms which had no window, 443 lived in damp rooms, and 1,452 had to share their conveniences with more than fifteen persons in each case."—J. Ihlder, *Slums in Berlin (Survey, Dec. 17, 1910)*.—"The report on the investigations for 1917 . . . gives a number of statistics, showing clearly the congested state of living conditions in Berlin, the consequent increase in deaths from tuberculosis, the inadequate sanitary conditions, and the lack of beds, it having been found that in many cases sick people were obliged to share a bed with others."—*Vorwärts*, Sept. 11, 1918 (quoted by the *Economic Supplement to the Review of the Foreign Press*, Oct. 15, 1918).—According to the *Sociale Praxis* of March 28, 1918, Dr. Kuczynski, director of the statistical office at Schöneberg, expected a shortage of at least 60,000 houses during the first peace years.—See also HOUSING: Germany.

1914.—**Effect of British declaration of war.** See WORLD WAR: Diplomatic background: 64.

1915.—**Municipalization of the Berlin electric works.**—"On April 18th of this year the city council of Berlin voted a sum of not to exceed one hundred and thirty million marks for the purchase of the Berlin Electric Works. . . . According to the franchise under which the electric company operated, the city was empowered to purchase the plant on October 15th of the present year. . . . During the thirty years of private operation . . . no fewer than four important franchise changes were made. Yet in spite of all the concessions granted by the company the conviction constantly gained ground at the Rathaus that only by municipal ownership and operation could the best results for the city be secured." For the management of the acquired electric works "the usual *deputation* is provided, consisting in this case of four members of the *magistrat*, six councilmen, and two citizen deputies. It is to have supervision over the operations of a *direktion* [management], but the latter, which is composed of experts, is to have full administration power over the plant under all ordinary conditions. . . . As an administrative proposition the whole matter resolves itself into this, that in undertaking the operation of its new property the city of Berlin has decided to entrust an unusual amount of power to an expert organ, and to curtail accordingly the powers of local self-governing organs. Owing to this novel method of control, the financial and technical magnitude of the experiment . . . the future experience of Berlin as a producer and seller of electricity should be of unusual interest."—*Quarterly Journal of Economics*, Nov., 1915, pp. 188-194.

1916.—**Construction of a new subway.**—To relieve traffic congestion on the Friedrichstrasse, a north-to-south subway transit line is under construction. The length of the main road, which will extend from the Müllerstrasse, at the intersection of the Ungarnstrasse, to the Gneisenaustrasse, will be about four and three-quarters miles. It will

run underground for its entire length, passing through a tunnel under the Spree river and the Landwehr canal. By a later project, the line is to be extended another mile and three-quarters in a southerly direction. It will further be connected with the underground railway to be constructed in Neuköln, a suburb south of Berlin.

1919.—**Labor unrest.— Strikes.— Unemployment.—Government relief measures.**—The year was marked by general labor unrest. On April 2, a strike of about 30,000 mechanics and clerks in a number of works connected with the metal industry, was announced. On April 9, the employees of all the Berlin banks, except two, went on strike. On June 27, 3000 or 4000 railway workers of the Grünewald workshops quit work. It was also a time of unemployment. Due to the shortage of coal and general unfavorable conditions, factories closed down, and the number of persons out of work in greater Berlin was estimated at nearly 400,000. To ameliorate conditions the Berlin city council made an appropriation of 160,000,000 marks and was spending about 1,000,000 marks a day. ". . . The Ministry of Agriculture . . . created a Labour Exchange for the Board of Agriculture, which will deal with the absorption of this superfluous labour in agriculture and forestry without undue delay, and under suitable conditions."—*Kölnische Zeitung*, Dec. 27, 1918 (quoted by *Economic Supplement to the Review of the Foreign Press*, Jan. 29, 1919).

BERLIN, Congress of.—Held June 13, 1878.—Treaty signed July 13.—"The Congress of Berlin was called to regulate the thorniest and most dangerous question in the whole range of European politics—the Eastern Question; and that at the end of the worst cataclysm which that question had yet produced. Its task was the more delicate because, unlike the preceding congresses, it was not convoked at the close of a general European war, which left one or more of the great Powers defeated and begging for peace, and the rest of them exhausted by their exertions and therefore inclined to compromise. In 1878 the only one of the great Powers that had just been at war, emerged from the contest flushed with triumph; the other great Powers appeared at the Congress with their strength fresh and unimpaired, and several of them were armed and in no mood for tame submission. The Congress of Berlin was called,

therefore, not so much to end one war as to avert another. Its office was to dictate terms to the victors rather than to the vanquished. It is notable as the only occasion in the nineteenth century when the Concert of the Powers has been strong enough to bring a victorious belligerent to the bar of Europe and oblige him to submit the results of his victory to the judgment and revision of a congress [see also CONCERT OF EUROPE]. As an affirmation of the solidarity of Europe, of the principle that important changes in Europe are matters of European concern and not to be effected without the sanction of Europe, the Congress of Berlin is a unique and striking phenomenon. But as a demonstration that the councils of united Europe are inspired with wisdom, justice, or even common sense, the events of 1878 are not so gratifying. Even more than its predecessors, the Congress of Berlin has left a dubious reputation. On the one hand, its work has been lauded as the wisest diplomatic transaction of modern times; but, on the other hand, it has been said that 'no diplomatic performance has ever resulted in such general dissatisfaction. . . .' Even before the Treaty of San Stefano—before the outbreak of the war, in fact—Russia had repeatedly promised that the definitive settlement of all questions of general European interest arising out of the war should be effected with the participation of all the Powers. When Austria, in February, 1878, proposed that this participation should take the form of a conference, the Tsar readily assented. Soon afterwards it was agreed that in order to lend greater solemnity to the proceedings, the assembly should be raised to the dignity of a congress; all the Powers were to be represented by their leading ministers; and the place of meeting was fixed at Berlin, as the seat of a government assumed to be disinterested and impartial. But it was impossible to go into the Congress without a preliminary agreement among the Powers as to the basis and nature of the work to be done there. . . . In 1878 the meeting of the Congress was very nearly prevented by the difficulties that arose in the way of such a preliminary understanding. The fundamental question was whether the task of the future Congress should be to confirm and complete the solution of the Eastern Question outlined at San Stefano, or whether it should undertake to tear up that treaty and to 'annihilate the results of the war.' The latter course would doubtless have suited the wishes of England and Austria. For, unfortunately, the British government was still obsessed with the traditional chimæra of maintaining the independence and integrity of Turkey, not, indeed, for love of the Turks, but because the vital needs of the British empire were supposed to require it. The court of Vienna was eager to make acquisitions without having done anything to deserve them, and also ambitious to substitute itself for Russia as the dominant Power in the Balkans. Hence for three months the meeting of the Congress was postponed, and the peace of Europe seemed to tremble in the balance, while England, Austria, and Russia were diplomatically fencing, trying each other out to see how far each would go in defence of his particular standpoint. How serious the danger of war was, it is difficult to estimate, for undoubtedly there was a good deal of 'bluffing' on all sides. At any rate, it was Russia who first showed signs of weakening. Exhausted by the unexpectedly arduous struggle she had just undergone, ill-prepared to risk a new war in which she would presumably have found England, Austria, Turkey, and Rumania arrayed against her, disappointed, too, in the hope of re-

ceiving any effective support from Germany—despite the assurances of undying gratitude and unstinted devotion which Bismarck and his master had so often lavished upon the Tsar—Russia at length turned to her principal opponent, England, with the offer to sacrifice a large part of the Treaty of San Stefano. The outcome of the negotiation was the three secret Anglo-Russian conventions, signed at London on May 30, which contained the most important features of the latter Treaty of Berlin. It was to the credit of both sides that each had made large concessions; it was not so creditable, however, that they sought to keep their agreements from the knowledge of the other cabinets (save Germany). If it was essential to the success of the Congress that the two states principally interested should come to a working agreement in advance, it was at least highly desirable that the discussions of the Congress should not be turned into a farce, and the other Powers led into grave miscalculations or suspicions, by sham debates over questions already clandestinely decided. But this did not exhaust the precautions of Lord Beaconsfield's secret diplomacy. As a corrective to the concessions just made to Russia, the London cabinet pushed through the secret convention of Constantinople (June 4), which provided for a perpetual Anglo-Turkish alliance for the defence of the Asiatic possessions of the Porte, assigned to England the island of Cyprus as an immediate reward for her future services, and bound the Sultan, in agreement with England, to make the necessary reforms in his Asiatic provinces. On June 6 another secret convention was concluded between Great Britain and Austria, by which the latter promised to support England at the Congress in the Bulgarian question, while England, in return, agreed to uphold any proposition Austria might make with regard to Bosnia and the Herzegovina. The court of Vienna had also taken its precautions in other quarters. It had made sure that neither France nor Russia would oppose its designs upon these two provinces; and as for Bismarck, if he did not originally suggest this acquisition to Austria, at least, for two years back, he had never ceased to urge her to seize these provinces without ceremony.

"The main obstacles having been cleared away by this extraordinary series of ententes and conventions, early in June Bismarck sent out to the Powers who had signed the Treaty of Paris the invitation to meet in congress to submit the work of San Stefano to free discussion and the necessary revision. France had already laid down the condition, which had been accepted by the other Powers, that the Congress should take up only those questions which arose directly and naturally out of the late war. The object of this reservation, of course, was to exclude from discussion questions regarding certain outlying provinces of Turkey, such as Egypt, Syria, or Tunis, whose status France did not desire to see altered at that time. The Congress met at Berlin on June 13. None of its predecessors, not even the Congress of Vienna, had brought together a more illustrious company of statesmen. Turkey, indeed, was unfortunate in her spokesmen—a Greek, a renegade, and an imbecile,' Bismarck rudely characterized them—but it made little difference, for they had been summoned to the Congress only to sign away provinces. M. Waddington and Count Corti, the first plenipotentiaries of France and Italy respectively, earned general respect and confidence by their reasonableness, tact, and a perhaps undiplomatic honesty. A much more important rôle was reserved for Count Andrassy, the Austrian foreign

minister; a striking figure and a master of the more occult arts of diplomacy. The leading antagonists in the impending battles, however, were the representatives of Russia and England. The first plenipotentiary of Russia was the octogenarian chancellor, Prince Gorchakov. . . . The hardest part of the work of the Russian mission naturally devolved upon the second plenipotentiary, Count Shuvalov, a handsome, brilliant, and immensely active diplomatist, whose conciliatory spirit and readiness to make concessions were largely responsible for the success of the Congress. On the English side, Lord Salisbury played much the same rôle as Shuvalov: Lord Beaconsfield was the worthy counterpart of Gorchakov. . . . But the dominating figure at the Congress was Bismarck, its president. . . . He drove the Congress along by strokes of the whip, as the brow-beaten Turks related. Doubtless a slower procedure would have led to a less superficial settlement. . . . The assembly of 1878 passed off almost unnoticed by the Berliners; and the only visitors who came, apart from the tribe of 'special correspondents,' were the representatives of the downtrodden or the newly emancipated races of the East and the agents of various other deserving 'causes.' Among the latter one may note the delegates of the *Alliance israélite*, who had come to plead the cause of their oppressed kinsmen in the Balkans, and to whose exertions the so-called 'Liberty of Conscience' articles in the Treaty of Berlin were largely due. A committee of the Peace Society also appeared to lay before the Congress the question of international arbitration. Bismarck decorously promised to bring their petition to the attention of the high assembly—and, of course, nothing more was heard of the matter. . . . Although the most elementary rules of justice would seem to have required that the representatives of those Christian states whose vital interests were at stake should participate in the Congress with at least deliberative voice, nevertheless that privilege was denied to them. The delegates of Serbia and Montenegro were not even allowed to enter the assembly to state their case. The Greek and Rumanian envoys were privileged to set forth their national aspirations briefly before the Congress; but it was understood that they were to be 'entendus, mais pas écoutés,' and it is recorded that while the Greeks were pleading the cause of their country, 'Beaconsfield, Salisbury, and Waddington slept the sleep of the just.' . . . The Treaty of San Stefano served as the basis of the discussions. All the more contentious questions were settled outside the Congress at private meetings—usually meetings between the plenipotentiaries of England, Russia, and Austria, with whom Bismarck kept in close touch. Ordinarily the formal sessions of the Congress served chiefly to register and sanction what had been decided upon outside. . . . Most of the Powers were sincerely anxious for peace. Europe was wearied of the incessant wars of the past generation, and in this respect, if in no other, the assembly admirably reflected the wishes of the public. But keeping peace meant that the Congress had to proceed by what the newspapers called 'courageous compromises,' i. e., bargains in which the rights of the various races of the East were regularly sacrificed to the ambitions or the alleged interests of the great Powers. In the midst of these sordid transactions, considerations of principle, justice, and consistency were lost from sight. Although the expediency of reconstructing the map of the Balkans along national lines was admitted by everyone when it suited his purpose, still that principle had to give way whenever 'po-

litical' or 'strategic' or 'commercial' interests of the great Powers could be adduced against it. Lord Beaconsfield and Count Andrassy insisted on splitting the Bulgarian nation into three parts in order to ensure the existence of a strong Turkey. The same statesmen then tore away from the Porte three provinces (Cyprus, Bosnia, and the Herzegovina) which the Peace of San Stefano had left to it, with the brazen explanation that they hoped thereby to strengthen Turkey by assisting her to 'concentrate and condense' her resources. But when the Greeks presented themselves with the request that they too might be allowed to help in this new method of invigorating Turkey, Lord Beaconsfield informed them that they had utterly mistaken the purpose of the Congress: they seemed to imagine that it was to partition the Ottoman empire, while nothing was further from the thoughts of the high assembly. In short, the principles invoked varied incessantly with the needs of the moment. At this Congress, as at earlier ones, it was the interests of the great Powers that took precedence over every other consideration. . . . The treaty which crowned the labors of the Congress was signed on July 13. . . . In the numerous and sometimes extravagant eulogies that have been showered upon this assembly, its claims to the gratitude of the world are usually based upon the following arguments. (1) The Congress averted a disastrous European war. (2) By sanctioning the independence of Rumania, Serbia, and Montenegro, and the autonomy of Bulgaria, and by according appropriate extensions of territory to all the Christian Balkan states, the Congress gave recognition to the principle of nationality as none of its predecessors had done; it satisfied the essential interests of all the states and races of the peninsula, and opened up a bright new era in their history. (3) Forsaking the traditions of most previous treaties, the Congress embodied in the public law of Europe the principle that the Sultan was under pledge to the great Powers in respect to the good government of all the dominions that remained to him. (4) By imposing the principle of complete religious freedom and religious equality upon the Balkan states, the assembly performed a great act of justice, and earned the title of 'the Liberty of Conscience Congress.' All of this is in a measure true, but for a correct appreciation of the Congress it is necessary to point out that nearly all the commendable provisions of the Treaty of Berlin come straight from the Treaty of San Stefano. The diplomats at Berlin improved upon the Russian treaty in only two important respects: (1) in securing for all the Powers, instead of for Russia alone, the right of watching over, and assisting in, the execution of the new arrangements in the Balkans; (2) in imposing, with greater emphasis and with stronger guarantees, the principle of religious liberty."—R. H. Lord, *Congress of Berlin*, pp. 47-64.—See also BALKAN STATES: 1866-1914; BOSNIA-HERZEGOVINA: 1878; BRITISH EMPIRE: Treaties promoting expansion: 1878; BULGARIA: 1875-1878; 1878-1886; CRETE: 10th-20th centuries; EUROPE: Modern Period: Wars of the Great Powers: (1848-1876); GREECE: 1862-1881; JUGOSLAVIA: 1868-1917; RUMANIA: 1866-1914; 1875-1881; SERBIA: 1875-1878; TURKEY: 1878.

BERLIN ACT.—International Conference at Berlin (1884-1885).—General Act signed Feb. 26, 1885.—"The Berlin Act was drawn up by the International Conference which met at Berlin under the presidency of Prince Bismarck, November 15, 1884. What then was the genesis of the Conference and its object? Its object is

clearly set out in the invitations sent out by Germany and France to the other Powers—to discuss (1) freedom of commerce in the basin and mouths of the Congo; (2) the application to the Congo and the Niger of the principles adopted by the Congress of Vienna with a view to preserving freedom of navigation on certain international rivers, principles applied later to the Danube; and (3) a definition of the formalities necessary to be observed so that new occupations on the African coast should be deemed effective. The summoning of the Conference was due to the jealousies and disputes among the Powers interested in the development and colonization of the vast regions in Central Africa, and notably in the immense basin watered by the Congo and its affluents, which recent geographical discoveries had made known to the world. By far the largest part of these discoveries had been made by British explorers. Baker, Burton, Speke, Grant and Livingstone, were the discoverers of the Great Lakes; Livingstone, Cameron, and the Anglo-American Stanley, of the basin of the Congo. The estuary and lower reaches of the Congo had previously been surveyed and explored by British naval officers under instructions from the Admiralty. On the ground of discovery Great Britain, therefore, had the first claim to territorial occupation of the Congo basin. But the British Government turned a deaf ear to Stanley's letters urging the importance of the Congo, politically and commercially, as the future highway of trade in West Central Africa. The British Government had no desire for further territorial expansions in the tropics at a time when it had to deal with a succession of troublesome questions in the Near East, in Egypt and in Afghanistan. The international situation in Europe was far too critical for running any risk of West African entanglements. It was in these circumstances that Stanley entered the service of the King of the Belgians, whose cherished ambition for some colonial aggrandisement saw a prospect of realization in the Congo basin. He had to step warily, but his cleverness, tact and shrewdness were more than equal to the task, which he had set before him of outwitting the ablest and most astute statesmen of Europe. Dr. Keith has given an admirable and unprejudiced narrative of the tortuous diplomacy by which, under the cover of humanitarian sentiments and enlightened philanthropy, Leopold II. achieved his purpose. Dr. Keith does not believe it possible that he should have had the prescience to foresee from the beginning the ultimate results of his daring policy of African adventure; but he is probably right in his deliberate opinion that personal ambition, not necessarily an unworthy one, to play a more leading part in the politics of the world than was possible for the constitutional Sovereign of a small neutralized State, dominated the King's actions from the time of the formation of the African International Association, at Brussels, in 1876, under his presidency, until the meeting of the Berlin Conference in November, 1884. Twelve European States sent representatives to the Conference, as did also the United States of America. The result of the Conference was the drawing up of the General Act [Feb. 26, 1885], which Dr. Keith wishes to see revised, and the recognition by the signatory Powers of the formation of a Congo Independent State under the flag of the Association. The King, on his part, notified the accession of the Association to the Act, acting in his personal capacity as founder of the Association. The United States, it should be noted, though its representatives took a leading part in drawing up the Berlin Act, did not ratify it. Dr. Keith

rightly points out, however, that the new State did not obtain in law its sovereign position by international agreement at Berlin, but that its juristic existence was due to the subsequent separate recognition accorded by each of the Powers, including America. Great Britain made the special reservation in its recognition of the Association that British Consular Officers should be entitled to hold Consular Courts and to exercise civil and criminal jurisdiction over British subjects in the Congo according to English law. By the most-favoured-nation clause all the other States acquired the same privilege of jurisdiction over their nationals.

"The Berlin Act has practically been a dead letter from 1885 to the present day. This is clearly brought out in Dr. Keith's narrative. The Association is never mentioned after the assumption by the King of absolute sovereignty in his own person of the Congo territory, covering 900,000 square miles. Free trade was never established; no International Commission to watch over the execution of the provisions of the Act was ever appointed; the neutralization of the State never took place; monopolies in matters of trade were freely granted to concessionary companies; Protestant missions were not placed on a footing of equality with Catholic missions; large areas, under the names of *domaine privé* and *domaine de la Couronne*, were closed to foreigners. One of the chief objects for which the Congo Independent State was founded—(Berlin Act, Art. VI.) 'to watch over the preservation of the native tribes and to care for the improvement of their moral and material well-being'—was not merely neglected, but was replaced by a deliberate policy of exploitation of the natives in the interests of commercial gain. The missionary and explorer, George Grenfell, and the findings of the Belgian Committee appointed by the King himself to investigate the truth of the accusations that were made against the character of his administration of the vast territory over which he exercised arbitrary rule substantiated the accusations in many respects. Such being the history of the foundation and early development of the Congo State, according to the clear and admirable account given by Dr. Keith in this volume, it seems idle to suggest that the Berlin Act is still alive or capable of amendment. The greater part of the provisions of that Act were actually still-born, and others such as Article XXV, which declares—'the provisions of the present Act of Navigation shall remain in force in time of war. Consequently all nations, whether neutral or belligerent, shall be always free, for the purposes of trade, to navigate the Congo, its branches, affluents, &c.,' are, on the face of them, unrealizable and impossible. It must be said, however, for Dr. Keith that, although his preface is dated September, 1918, he has written about the future of Central Africa from a point of view that is already obsolete. In his introduction he is still doubtful, as to whether Germany will not issue victoriously from the war and still ignorant as to whether her former colonial possessions will not be restored to German rule. He has confessed this for he has added a note, page 301, in which he says, 'Since this work was written the Peace Conference has decided upon the application of the system of mandate to the territorial possessions of Germany outside Europe, but the fundamental question of the revision and extension of the Berlin Act remains untouched, and its solution will be one of the most pressing duties of any League of Nations!' Ought it not rather to be said that a new set of regulations for

the government and administration of native races in Central Africa and other tropical and sub-tropical colonies should be drawn up by the general assent of the Powers who form the League of Nations, but that in doing so the Berlin Act should be regarded, not as a model, but rather as a conspicuous example of the futility of provisions which, however irreproachable in sentiment, cannot be enforced in practice? Dr. Keith, in his strong condemnation of the abuses of King Leopold's autocratic rule, has not failed to do full justice to that monarch's extraordinary energy and strength of will, versatile capacity for affairs, and financial skill. Explorations have been pressed forward, communications opened out, and the necessary funds provided for carrying them out. Perhaps the most striking proof of the King's remarkable personal influence has been shown in his success in converting Belgian indifference to his colonial enterprise into active interest and financial support. The Belgians had never been a maritime people, had never possessed a colony and had no colonizing instincts; and yet we find them accepting willingly the King's bequest of the great Congo dominion which he had created, and whose administrative reform and material development, as a Belgian colony, have been since 1908 carried on with notable ardour and no small measure of success. Whether legally the King had any right to hand over the Congo to Belgium is very doubtful. But as Dr. Keith remarks, "amid grave error and crime there is a record of achievement which vindicates the right of Belgium to claim that the transformation of the Congo territory into a Belgian colony is morally justifiable."—*Times Literary Supplement*, July, 1910.—See also AFRICA: Modern European occupation: 1884-1899; and BELGIAN CONGO: 1876-1890.

BERLIOZ, Hector (1803-1869), French composer and one of the greatest masters of the orchestra that ever lived. As a man of literature, a critic, and poet he had few equals; a marked individuality, original, puissant, bizarre, violently one-sided; if he had been as great in musical invention as he was in conception and construction he would have ranked as one of the world's greatest masters; subsequent progress in the art of instrumentation made by Liszt, Wagner, and Richard Strauss has been entirely on the foundation laid by Berlioz.—See also **MUSIC**: Modern: 1830-1921.

BERMUDA HUNDRED, a settlement in Virginia situated on the James river near City Point. See **HUNDRED**.

Butler's army at. See U. S. A.: 1864 (May: Virginia): Army of the James.

BERMUDAS, or **Somers islands**, group of small islands, situated in the western Atlantic belonging to Great Britain. "Seven hundred miles southeast of New York but only 600 east of Charleston, lies the group or rather cluster of isles and islets known as the Bermudas. . . . To many they are as little known as in the time of Shakespeare who took the motif of his play *The Tem-*

pest from the name the Spaniards gave them: Los Diablos, or the 'Isles of Devils'. . . . There are about half a dozen of good size; but in aggregate, big and little—islets, cays and rocks—they number more than 300, the total area of which is only 20 square miles."—F. A. Ober, *Guide to the West Indies and Bermudas*, p. 21.—Although only 20 of these are inhabited, their position is on the route from Europe to the West Indies, and of great strategic importance. They are strongly fortified and are the winter naval station of the British North Atlantic and West Indies Squadron. Their total area equals 12,360 acres. With a mild temperature, luxuriant vegetation and beautiful scenery they are a favorite summer and winter resort for Americans. Their chief products are sweet potatoes, onions, bananas, arrowroot, corn and lily bulbs. Bermudas are governed by a governor and two councils appointed by the crown, by an assembly elected by the inhabitants. The total population in 1920 was 21,987.—See also **BRITISH EMPIRE**: Extent.

1515.—Juan Bermudez on a voyage from Spain to Cuba with a cargo of hogs discovered this group of islands.

1543.—In this year Ferdinand Camelo, a Portuguese mariner, touched the "Bermoothes."

1593.—The ship of Captain Henry May was wrecked here, while on its way to England from a piratical expedition to the East and West Indies. The crew remained on the islands five months.

1609.—"The next visit to the islands had its origin in an expedition sent out from England to the Jamestown settlement in Virginia. One of the ships, the *Sea Venture*, containing 150 mariners and passengers, including . . . Sir George Somers, . . . sprang a leak not far from the Bermudas and was run ashore in order to save her. They arrived the last week in July, 1609. . . . The next May . . . having constructed two vessels from cedar, they set sail for Jamestown which was safely reached on the 23rd of that month. As the settlement was in a destitute condition, Sir George Somers volunteered to return to the Bermudas for supplies, and set out in his cedar vessel. The voyage was protracted by storms and the aged leader succumbed soon after reaching the islands."—*Ibid.*, pp. 39-40.—See also **VIRGINIA**: 1600-1616.

1612-1620.—First colonization from England.—Rigorous rule of Governor Tucker.—"The first ship load of colonists were sent out [from England] in April 1612. They found on arrival there three men who had been left two years before. . . . A settlement was commenced at the present port of St. George's (named in honor of Sir George Somers, as the islands had also been called after him, the 'Somers Island') and before the end of 1615 at least six vessels had arrived bringing more than 300 colonists. About this time an official survey was made of the islands by one Richard Norwood, and the lands divided into 'tribes' or parishes. 'These shires form the foundation of the land tenure of the islands even to this day, the divisional lines in many cases yet remaining intact.' Under Governor Daniel Tucker, who had been sent out by the chartered company the laws were rigorously enforced . . . and a local currency was provided by stamping pieces of brass with the figure of a wild hog ["hog money"]. . . . Governor Tucker introduced the first tropical fruits. . . . Tobacco came later but was abandoned early in the eighteenth century. The potato was probably introduced about this time, as it was then well known in England. . . . Slaves too from the West Indies began to come

in, brought by the buccaneering craft sent out from the Bermudas; and, in fact, under stern Governor Tucker the colonists themselves were little better than slaves for he maltreated many and hanged not a few."—*Ibid.*, pp. 40-41.

1620-1700.—General assembly.—Progress of colony.—Piratical ventures from the Bermudas.—"The first general assembly convened in 1620 and during the next decade many forts, bridges, private and public buildings were constructed, as shown in Captain John Smith's wonderful map published in his *General Historie of Virginia, New England and the Summer Iles*, 1624.—At this time while the English were struggling for a foothold on the North American coast . . . the Bermudas were exceedingly flourishing. Then settlers, however, seem to have obtained more from the sea than from the land, not only by fishing and wrecking, but by piracy which they conveniently called privateering. In 1665, for example Captain Wentworth, of the Bermudas, descended suddenly upon Tortola of the Virgin Islands, and stole ninety negroes belonging to the governor. He claimed that he held a commission from the governor and council of the Bermudas. In fact a certain governor himself in the last decade of that century, earned the reputation of being a 'pirate at sea and brigand on land' from the free-and-easy manner in which he deprived other people of their properties."—*Ibid.*, p. 41.

1710-1783.—Relations with the pirates of the Bahamas.—Sympathy with the American colonists in the war of the Revolution.—"While wreckers and privateers swarmed in Bermudian waters, those rival coral islands the Bahamas from their greater extent and opportunities (being as they were in the track of Spanish treasure-ships homeward bound from Peru and Panama) became the haunts of such real pirates as the redoubtable Blackbeard [see BAHAMA ISLANDS]. In 1701 the governor of the Bermudas sent an armed sloop against them and induced more than a hundred of the 'Sea Brothers' to settle within his dominions. The 'Mudians' were a warlike people . . . and 1710 attacked and captured a band of Spaniards who had invaded Turk Island in the Bahamas, where they had settled for the purpose of gathering salt. The Bermudas possessed, towards the end of the eighteenth century a composite population. Its basis was English, but during the years of its existence it had drawn to itself diverse elements, especially seafarers from all quarters of the Western Hemisphere. When therefore the quarrel broke out between Great Britain and her colonies in America it is not strange that the 'Mudians' should feel inclined to side with the colonists. Though the American patriots had intended to secure the Bermudas for their own . . . yet the distance separating the islands from the main was too great as well as British men-of-war too formidable, to give promise of success."—*Ibid.*, pp. 41-42.

1861-1865.—Effect of the Civil War in the United States on Bermuda.—Influx of tourists.—"Isolated in their vast immensity of ocean, they were rarely disturbed by doings in the outside world; but when the American States were rent by civil war—1861-64—the 'Mudians' found their opportunity. It was in gathering the golden harvest, brought to their harbors as to a granary, by the blockade-runners. The ports of St. George's and Hamilton woke from their century-long quiescence, and there was once more wealth for everybody, as in the golden days of buccaneer and wrecker. The advent of the winter tourist was, we may say, coincident with the advent of a

profitable market in the States for Bermudian products. The great Hamilton Hotel was erected in 1852 and with that as a landmark we trace the extension of tourist travel thitherward."—*Ibid.*, p. 42-43.

1890-1902.—Laying of the submarine cable.—Floating dock.—"Next to laying of the submarine cable in 1890 probably no event has moved the Bermudians as the arrival of the great floating dock [for the naval station] . . . in the early summer of 1902."—*Ibid.*, p. 43.

1901-1902.—Exile Boers.—"The Bermudas had received many an immigrant with a welcome, but it is doubtful if they altogether approved of the sending thither of the exiled Boers in 1901. The first shipments arrived the last of June that year and were disposed on various islands in Great Sound, as Darrell's, Morgan's, and Tucker's, where, to the number of 4000, toward the last, they encamped until the close of the war."—*Ibid.*

1914-1918.—World War.—During the World War "Bermuda renewed her importance as a naval base. From Bermuda to Halifax cruisers maintained . . . till the armistice a vigilant control of the West Atlantic upon the entry of the United States. Bermuda was selected as a station for overseas-bound submarine chasers. . . . [The United States had an oil and coal depot for homeward bound transports, on islands in the Great Sound, while a detention camp for Germans] was maintained."—F. A. Ober, *Guide to the West Indies, Bermuda and Panama*, p. 44.

1919.—Prohibition of motor cars.—The legislation again refused to permit use of motor cars. "In the early days one was imported, but the Legislature declared it to be dangerous . . . passed a law forbidding the importation of any more, bought the machine . . . and deported it."—*New York Times, Current History, June, 1919*, p. 541.

1921.—Law against smuggling liquor.—On July 12, 1921, the government passed a law prohibiting the smuggling of liquor into the United States.

BERN, Dietrich of. See DIETRICH OF BERN.

BERN (French, Berne), a canton and city of Switzerland. The canton is situated in the north-western part of the country and has a population (1920) of 669,966 to an area of 2,657 square miles. Its capital is the city of the same name, about eighty miles northeast of Geneva. The city was founded as a military post in 1191 by Berthold V, duke of Zähringen, in a district which a century before had become part of the German empire. By a charter granted by Frederick II, German emperor, it was made a free imperial city in 1218. Bern joined the Swiss Confederacy or Old League of High Germany in 1353. (See SWITZERLAND: 1332-1460.) "The Canton of Berne, which included the Pays de Vaud, was second in rank among the 13 composing the Helvetic body. This canton occupied 1/3 of what was then Switzerland; it was great, rich and powerful. Its northern portion was called the German country, because that language was spoken there. This included 300 parishes and extended from Morat to the Rhine. In the southern part, called the Roman country, or Pays de Vaud which stretched from Morat to Geneva and contained more than 150 parishes—the French language prevailed."—M. Read, *Historical studies in Vaud, Berne, and Savoy*, v. 1, p. 287. The early government was democratic, vesting the legislative and executive authority in councils, elected by the burghers, but the wealth of the aristocratic families and the privileges exacted by the prosperous guilds gradually evolved an aristocratic domination. By 1528 "the Reformation had

penetrated into Berne, and at the close of a public discussion, the Council of the Two Hundred, inspired by the reformer Haller, abolished mass, adopted the reform, and seized the property of the clergy. But Lucerne, Uri, Schwytz, Unterwald, and Zug remained faithful to the Roman Church and hastened to take up arms. At Cappel they encountered the Protestant forces of Zurich and Berne, to which Lausanne, though still Catholic, had contributed a corps of arquebusiers in virtue of its treaty with Berne. The shock was terrific. Zurich lost her best warriors. Zwinglius fell pierced with mortal wounds, and the Protestants were put to flight. Nevertheless the Catholic Cantons after their victory offered terms of peace which were quickly accepted, and the Protestants and Catholics retained their faiths and preserved their respective rights."—*Ibid.*, v. 1, p. 112 [see SWITZERLAND: 1528-1531].—After two centuries of domination the Bernese aristocracy fell before the advance of Napoleon in the invasion and occupation of 1798. "The French invasion of 1798 had been directed simply against the treasury of Berne. Napoleon had projected a descent upon England, but as France had no money, and likewise lacked credit, Bonaparte thought that by taking advantage of the discontent of the Swiss, who were under the domination of Berne, and who, though well governed, were galled by their subject position, he might secure money from the Bernese Treasury. The idea was, no doubt, in part suggested to him by the visit to Paris of M. de la Harpe, who prayed the Directory to liberate the Pays de Vaud."—*Ibid.*, v. 1, p. 287.—The amount received from the Bernese treasury was said, upon the investigation of a commission, to equal thirty-two million francs. [See SWITZERLAND: 1792-1798.] The early nineteenth century saw the usual European struggle between Liberal and Conservative from which the Liberals emerged victorious, limiting the power of church and aristocracy by the constitution of 1848 [see also SUFFRAGE, MANHOOD: Switzerland: 1830-1848.] The city of Bern, head of the canton of Bern, was made the capital of the Swiss Confederacy in 1848. The university of Bern was founded in 1834. The headquarters of numerous international associations and the presence of the embassies augment Bern's political importance, while there is markedly little industrial activity. During the World War much political intrigue and many delicate diplomatic maneuverings developed and centered in Bern, due to the peculiarity of its position as a neutral almost submerged in the surrounding war elements.

Bern conferences.—The international Telegraphic union opened headquarters January 1, 1869, and as a result of the postal congress held at Bern on September 15, 1874, headquarters for the international postal union of sixty nations were established. A convention met in 1883 to standardize the patent laws and in 1887 twenty nations agreed in conference to practically uniform copyright laws. Headquarters have been established for the international bureau for the protection of artistic and literary property, formed January 1, 1888, and the international transport, opened January 1, 1893. In 1906 the international conference on labor regulation met at Bern. "In the summer of 1914 a national exposition was held . . . to celebrate and exploit the progress of the nation. An important feature of the exposition was the educational exhibit which set forth in a very striking manner the chief elements of national strength in the confederation. Deprived of great natural resources, this country has succeeded by

its determination and ingenuity in creating national industries which have secured for it an important place in the world's trade. These industries have been fostered and developed by the aid of industrial and technical schools. More important yet are the social institutions for mutual aid and succor and the labor legislation and bureaus which are worthy of imitation by all other countries. In few countries of the world is public education so highly developed, but the dangers of official routine have been avoided by the encouragement everywhere given to private initiative."—*Report of Commissioner of Education, United States Government, 1916, p. 703.*—See also SWITZERLAND: 1909-1913.—Concurrent conferences of Socialists and trade unionists were held in Bern opening February 2, 1919, delegates representing twenty-seven countries, and including the Central and several neutral powers as well as most of the Allied nations. The labor conference drafted a plan for international labor standards, called the labor charter, which was later accepted by the Socialists and which was offered to the framers of the peace treaty.—See also INTERNATIONAL: 1919 (February).—In May, 1919, the international conference of women was held. The world Socialists were invited to meet in Bern in 1921 to consider the Socialist movement with respect to international affiliation.

BERNADOTTE, the family name of the royal house of Sweden, from General Jean Baptiste Jules Bernadotte, one of Napoleon's marshals, 1763 (1764?)-1844, who was elected crown prince of Sweden in 1810 taking the name of Charles John, and succeeded Charles XIII in 1818, under the name of Charles XIV. See SWEDEN: 1810; FRANCE: 1798-1799 (August-April); 1806 (January-October); 1814 (January-March); GERMANY: 1806-1807; 1812-1813; 1813 (August-October); (October-December). For genealogical table, see SWEDEN: 1720-1792.

BERNAFAY WOOD, a small forest in France, northwest of Peronne, occupied by the Allies in the Somme counter-offensive of 1916. See WORLD WAR: 1916: II. Western front: cl, 5.

BERNARD, Saint, Abbot of Clairvaux, (1000-1153), most famous preacher and monk of the Middle Ages, who preached a second crusade. See CLAIRVAUX, MONASTERY OF; CRUSADES. 1147-1149; FRANCE: 1108-1180; MONASTICISM: 11th-13th centuries.

BERNARD I (d. 1397) Margrave of Baden. BERNARD, Claude (1813-1878), French physiologist, discoverer of the digestive function of the pancreas. See MEDICAL SCIENCE: Modern: 19th century: Endocrinology; Revolutionary experiments and discoveries.

BERNARD, Sir Francis (1714-1770), Governor of Massachusetts. See BOSTON: 1768: quartering, etc.; U. S. A.: 1761.

BERNARD, Sir Thomas (1750-1818), English philanthropist. See CHARITIES: England: 1706.

BERNARD PASSES. See ALPS: As barriers; GREAT ST. BERNARD PASS; LITTLE ST. BERNARD PASS.

BERNE. See BERN.

BERNHARD OF SAXE-WEIMAR, Duke (1604-1639), German general in the Thirty Years' War. See GERMANY: 1632-1634; 1634-1639.

BERNHARDI, Friedrich Adam Julius von (1849-), German general. Achieved world-wide prominence because of his book "Germany and the Next War" published in 1911, in which he forecast accurately the methods to be used by Germany; the book frankly upholding disregard of treaties, frightfulness and the necessity of German "world

power or downfall."—See also PAN-GERMANISM: German presentation of Pan-Germanism; WORLD WAR: Causes: Indirect: h, 1.

BERNICIA, a kingdom of the Angles, founded by Ida in the sixth century. It was united with Deira in the seventh century, thus forming the kingdom of Northumbria. See CATRALL; England: 547-633; Scotland: 7th century.

BERNO, Count (fl. c. 910), influential abbot. See CLUNY, MONASTERY OF.

BERNSTEIN, Eduard (1850-), one of the leaders of the Minority Socialists of Germany; leader of the Revisionalists; prominent in the years following the World War. See SOCIALISM: 1860-1912.

BERNSTORFF, Andreas Peter, Count von (1735-1797), Danish statesman, Minister of foreign affairs, 1772-1780 and 1784-1797.

BERNSTORFF, Christian Günther, Count von (1769-1835), Danish statesman, later in the service of Prussia. Ambassador at Stockholm, 1794-1797; succeeded his father as secretary of state in 1797; Danish representative at the Congress of Vienna; appointed ambassador at Berlin in 1817 and at the request of Prince Hardenberg entered into the service of Prussia. In 1818 he acted as Prussian representative at the Congress of Aix-la-Chapelle and in the same year became minister of state at Berlin. He held this post until ill health forced him to resign in 1832.

BERNSTORFF, Johann Hartwig Ernst, Count von (1712-1772), Danish statesman, called the "Oracle of Denmark" by Frederick the Great. He was minister of foreign affairs from 1751 to 1770.

BERNSTORFF, Count Johann Heinrich von (1862-), German ambassador to the United States, 1908-1917. On February 3, 1917, after diplomatic relations were broken between United States and Germany, he was handed his passports. He was later appointed ambassador to Turkey. See U. S. A.: 1914-1917; 1915 (June): Protests by Central Powers against trade with allies, 1917 (January): Germany declares unrestricted submarine warfare; 1917 (February-April); VIII. United States and the war: a, 1.

BERNY-EN-SANTERRE, France, near Peronne. Captured by French in 1916. See WORLD WAR: 1916: II. Western front: c. 3.

BEROSSUS, Babylonian priest and historian. Translated into Greek the authoritative Babylonian books on astronomy and astrology, and wrote a history of his country (published about 250 B. C.). Only a few parts of this work are extant, containing the cosmology and antediluvian kings of Babylon, and exactly reproducing the Chaldean story of the flood. See BABYLONIA: Historical sources. See HISTORY: 14.

BERRANGE, Christian Anthony Lawson (1864-), British South African general. See WORLD WAR: 1915: VIII. Africa: a, 1; b, 1; 1916: VII. African theater: a, 13; a, 7.

BERRI, Duke de, granted duchy of Normandy by Louis XI; grant cancelled by states-general. See FRANCE: 1461-1468.

BERRY, Charles Ferdinand de Bourbon, Duc de (1778-1820), second son of the Comte d'Artois (later Charles X of France). An emigré of 1780, he served with Condé, 1792-1797, and later in the Russian army; general in command of the army at Paris upon Napoleon's return from Elba; married Princess Caroline of Naples and their son, the Comte de Chambord (q. v.), became the Bourbon heir to the throne.—See also BOURBONS, HOUSE OF.

BERRY, Jean de France, Duc de (1340-1416),

third son of John II of France. He fought in the Hundred Years' War and was held in England, 1360-1367, as hostage for the fulfilment of the treaty of Bretigny. His reputation for extreme cruelty was gained while governor of Languedoc, 1380-1388. The peasants of Poitou and Aquitaine revolted and upon investigation by his nephew, Charles VI, Berry was recalled.

BERRY-AU-BAC, a village in France east of Soissons on the Aisne. Falling into German hands early in the World War, it was not until 1918 that this river crossing was recaptured by the French under General Berthelot in the last counter-offensive. See WORLD WAR: 1918: II. Western front: g. 6.

BERSAGLIERI, Italian sharpshooters. See WORLD WAR: 1917: IV. Austro-Italian front: e, 6.

BERSERKER, **BÆRSÆRK**.—"The word *Bærsærk* is variously spelt, and stated to be derived from 'bar' and 'særk,' or 'bareshirt.' The men to whom the title was applied [among the Northmen] . . . were stated to be in the habit of fighting without armour, and wearing only a shirt of skins, or at times naked. In Iceland they were sometimes called *Ulfhrædin*, i. e., wolfskin. The derivation of *Bærsærk* has been questioned, as in philology is not uncommon. The habit of their wearing bear (*björn*) skins, is said to afford the meaning of the word. In philology, to agree to differ is best. The *Bærsærks*, according to the sagas, appear to have been men of unusual physical development and savagery. They were, moreover, liable to what was called *Bærsærkegang*, or a state of excitement in which they exhibited superhuman strength, and then spared neither friend nor foe. . . . After an attack of *Bærsærk* frenzy, it was believed that the superhuman influence or spirit left the *Bærsærk's* body as a 'ham,' or cast-off shape or form, with the result that the *Bærsærk* suffered great exhaustion, his natural forces being used up."—J. F. Vicary, *Saga time*, ch. 3.—"The aim of every champion was to become a 'Berserk' (so called, probably, because they fought without serk [shirt]), who was regarded as the bravest of men. When within sight of their foe Berserks wrought themselves into such a state of frenzy, that they bit their shields and rushed forward to the attack, throwing away their arms of defence, reckless of every danger, sometimes having nothing but a club, which carried with it death and destruction. . . . The Berserk-fury was not only utilised in war, but for the performance of hard feats which were held to be out of the power of ordinary people. In some cases this fury seems to have come over the Berserks apparently without cause, when they trembled and gnashed their teeth. 'The Berserk Arngrim of Bólm had twelve sons; . . . they were all great Berserks. They went on warfare when they were quite young and ravaged far and wide, but met with no equal in strength and courage; thereby they got renown and victory. The twelve brothers went together on one ship with no others; but they often had more ships. . . . It was their custom if they were only with their own men when they found the *berserks-gang* (berserk-fury) coming over them, to go ashore and wrestle with large stones or trees, otherwise they would have slain their friends in their rage. Never did they engage in battle without gaining the victory; therefore great sayings were told of them. There was no king who would not give them what they wanted rather than suffer their overbearing. They were on warfare during the summer, but during the winter they remained at home in Bólmey with their father,' (*Hervarar*

Saga, c. 3).”—P. B. Du Chaillu, *Viking age*, pp. 423-424.

ALSO IN: M. W. Williams, *Social Scandinavia in the Viking age*, pp. 253-254.

BERTHELOT, Henri, French general. In July, 1918, with the aid of British and Italian divisions resisted the last German offensive at Vrigny, southwest of Rheims; on July 25 drove the Germans from the forest of Fère and from Oulchy on the north of Ourcq; on Gouraud's left, pressing north from Rheims, Berthelot, at the end of September, captured several villages and forced the passages of the Suippe and of the Aisne at Berry-au-Bac.

BERTHELOT, Marcellin Pierre Eugène (1827-1907), French chemist. One of the pioneers of organic synthesis; elected to Academy of Sciences in 1873, and in 1876 appointed minister of higher education; made life member of Senate in 1881; minister of public instruction, 1886-87, and in 1895-06 minister of foreign affairs. His experiments on explosives and dyestuffs are the foundations of the modern industries, while his experimental data concerning the heat phenomena accompanying chemical reactions form the basis of modern thermo-chemistry.—See also CHEMISTRY: Practical application: Drugs.

BERTHIER, Alexandre (1753-1815), prince of Neufchâtel and Wagram, duc de Valengin, French general. Fought as colonel in the American revolution. Appointed chief of staff to the army of Italy, 1796; proclaimed and organized the republic of Rome, 1798 (see FRANCE: 1797-1798: December-May). Acted in the successive campaigns as Bonaparte's chief of staff and was made marshal of the empire in 1804 (see also FRANCE: 1800-1801: May-February). Won favor of Louis XVIII in 1814 and upon Napoleon's return from Elba, retired to Bavaria.

BERTHOLLET, Count Claude Louis (1748-1822), noted French chemist; physician to the duke of Orleans; admitted to Academy of Sciences, 1780; was adherent of Lavoisierian school but did not accept their view that oxygen was the acidifying principle; also participated in the reform of chemical nomenclature carried out by Lavoisier and his associates in 1787; investigated composition of ammonia and prussic acid, while his work with chlorine led to its advocacy as a bleaching agent; prepared potassium chlorate which he attempted to use in manufacturing gun powder as a saltpetre substitute; also introduced improvements in smelting process and conversion of iron into steel. In 1701 appeared his "Éléments de l'art de la teinture," a systematic exposition of the principles of dyeing; was the first to introduce the idea of equilibrium into chemical thought, i. e., that the relative masses of the reacting substances and of the products of reactions determine a reaction. The development of this idea forms the basis of modern chemical theory and has thrown much light on chemical combination. His chief work was his *Essai de statique chimique* which appeared in 1803.—See also CHEMISTRY: Practical application: Explosives: Gunpowder.

BERTIE OF THAME, Francis Leveson Bertie, 1st viscount (1844-1919), British diplomat. As ambassador at Paris, 1905-1918, Lord Bertie held an important post during the troubled period culminating in the World War. See WORLD WAR: Diplomatic background: 56.

BERTILLON, Alphonse (1853-1914), French criminologist and student of anthropology; worked out methods of identification and became the head of that department of the Prefecture of Police at Paris. In 1880 he founded the famous Ber-

tillon system of mensuration. See CRIME AND CRIMINOLOGY: Methods of identifying criminals.

BERTRAND, Don Francisco, President of Honduras, 1916-1920. See HONDURAS: 1910-1920.

BERTRAND, Henri Gratien, Comte (1773-1844), French general, aide-de-camp of Napoleon during the Egyptian campaign, accompanying him on all later campaigns; grand marshal of the palace, 1813. He was Napoleon's companion at Elba and St. Helena, where he wrote, under dictation, the memoirs of Napoleon. After Napoleon's death he returned to France where he was restored to his rank by Louis XVIII.

BERUKIN, place in Palestine, taken by British in 1918. See WORLD WAR: 1918: VI. Turkish theater: c, 8.

BERWICK, James Fitz-James (1670-1734), natural son of James II of England. Educated in France as a Catholic. Fleeing the English revolution he fought for France in Flanders and against the Camisards. In 1706 he was created Marshal of France and in 1707 established the throne of Philip V of Spain by the victory of Almansa.—See also FRANCE: 1733-1735; SPAIN: 1706; 1707.

BERWICK, Pacification of, or Treaty of (signed June 18, 1639). See SCOTLAND: 1638-1640.

BERWICK, Treaty of (January, 1500). See SCOTLAND: 1558-1560.

BERWICK-UPON-TWEED: 1293-1333.—**Conquest by the English.**—At the beginning, in 1293, of the struggle of the Scottish nation to cast off the feudal yoke which Edward I had laid upon it, the English king, marching angrily northwards, made his first assault upon Berwick. The citizens, whose only rampart was a wooden stockade, foolishly aggravated his wrath by gibes and taunts. "The stockade was stormed with the loss of a single knight, and nearly 8,000 of the citizens were mown down in a ruthless carnage, while a handful of Flemish traders who held the town-hall stoutly against all assailants were burned alive in it. . . . The town was ruined forever, and the great merchant city of the North sank from that time into a petty seaport." Subsequently recovered by the Scotch, Berwick was held by them in 1333 when Edward III attempted to seat Edward Balliol, as his vassal, on the Scottish throne. The English laid siege to the place, and an army under the regent Douglas came to its relief. The battle of Halidon Hill, in which the Scotch were utterly routed, decided the fate of Berwick. "From that time the town remained the one part of Edward's conquest which was preserved by the English crown. Fragment as it was, it was viewed as legally representing the realm of which it had once formed a part. As Scotland, it had its chancellor, chamberlain, and other officers of state; and the peculiar heading of acts of Parliament enacted for England 'and the town of Berwick-upon-Tweed' still preserves the memory of its peculiar position."—J. R. Green, *Short history of the English people*, ch. 4, sect. 3 and 6.—See also SCOTLAND: 1290-1305; 1332-1333.

ALSO IN: J. H. Burton, *History of Scotland*, ch. 17.

BERYTUS.—The colony of Berytus (modern Beirut) was founded by Agrippa, 15 B. C., and made a station for two legions.—See also BEIRUT.

551.—Its schools.—Its destruction by earthquake.—The city of Berytus, modern Beirut, was destroyed by earthquake on July 9, 551. "That city, on the coast of Phœnicia, was illustrated by the study of the civil law, which opened the surest

road to wealth and dignity: the schools of Berytus were filled with the rising spirits of the age, and many a youth was lost in the earthquake who might have lived to be the scourge or the guardian of his country."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 43.

1111.—Taken by the Crusaders. See CRUSADES: 1104-1111.

BERZELIUS, Jöns Jakob, Baron (1779-1848) Swedish chemist; became secretary of Academy of Sciences at Stockholm in 1818, and was created baron in 1835; introduced a new chemical nomenclature; discovered selenium, thorium, and cerium; first exhibited borium, calcium, Columbium, strontium, sibiolum and zirconium as elements; aided in perfection of atomic theory, making determinations of atomic weights. See CHEMISTRY: Modern: Lavoisier; also Organic: Defined.

BERZY-LE-SEC, in France near Soissons; taken by allies in 1918. See WORLD WAR: 1918: II. Western front: g, 9, ii; g, 11.

BESANÇON, city of eastern France; is an important fortress and military post.

Origin. See VESONTIO.

10th century.—In kingdom of Arles. See BURGUNDY: 843-933.

1152-1648.—Free city of the empire. See FRANCIE COMTÉ.

1674.—Siege and capture by Vauban. See NETHERLANDS: 1674-1678.

1814.—It was besieged by the Austrians.

BESANT, Annie (1847-), British author and lecturer. See THEOSOPHY; INDIA: 1918-1920.

BESLER, General Ivan von, German commander in the World War. First prominent on the western front where he captured Antwerp; repeated his successes in the east, where with his giant howitzers he reduced strong Russian fortresses such as Novo Georgievsk, Ossowic and Brest-Litovsk and compelled the evacuation of others; became governor-general of Poland.—See also BELGIUM: 1914-1918; POLAND: 1915-1918.

BESINVAL DE BRONSTATT, Pierre Victor, Baron de (1722-1794), French soldier, in command of the troops at Paris in 1789. He withdrew his forces while the Bastille was stormed, after which he attempted flight, was tried by the tribunal of Châtelet and declared innocent. He is most famous for his memoirs published by the vicomte de Ségur, 1805-1807, their authenticity and accuracy being less assured than the spicy interest of the accounts.

BESKID, Carpathian mountain pass, scene of battle during World War. See WORLD WAR: 1915: II. Eastern front: f, 6.

BESNARD, Paul Albert (1849-), French mural painter. See PAINTING: Europe: 19th century.

BESSARABIA, government of southwest Russia, lying northwest of the Black Sea. The Pruth and Dniester form its southwestern and northeastern boundaries respectively. The northern section is mountainous, but the valleys are fertile and the chief occupation is agriculture. The principal products are: wheat, maize, barley, flax, tobacco, melons, fruit; and the supply of salt-petre and marble are plentiful. In the south, stock-breeding and wool-raising are predominant industries. It has an area of 17,143 square miles, and in 1915 the population was 2,686,000, consisting of various races. Nearly one half the people were Moldavians, the rest were Little Russians, Jews, Bulgarians, Germans, Greeks, Armenians, Gipsies, Tartars and Abanians.

Original inhabitants and important position.—The original inhabitants of Bessarabia were

Cimmerians, who were gradually driven out by the Scythians. As the Byzantine empire grew in importance, Bessarabia held a strategic position as an approach to the Eastern Roman dominions and was consequently continuously overrun by warlike nations.

4th and 5th centuries.—It was conquered successively by Goths, Huns, Avars and Bulgarians.

7th century.—It was settled by the Bessi, a Thracian tribe from whom it derived its name.

9th century.—The Ugrians appeared who were the ancestors of the Magyars of Hungary.

10th-11th centuries.—The Petchenegs and Kumans, Turkish tribes, poured into the land.

13th century.—The Mongols under Batu descended upon the people of Bessarabia. During the same century the Genoese founded trading companies in the valley of the Dniester.

1367.—The ruling prince of Moldavia conquered and annexed it.

16th century.—Turks and Crimean Tatars contended for its possession.

1648.—Union with Cossacks against Poles. See POLAND: 1648-1654.

1711-1812.—During this period the Turks and Russians fought tenaciously for the land which passed into Russian hands in 1812.

1856.—By the treaty of Paris after the Crimean war certain districts were ceded by the Russians to Moldavia.

1878.—By the treaty of Berlin, however, Russia received these districts back. See also BALKAN STATES: 1878; and 1878-1891.

1914-1921.—The eagerness of Rumania to possess Bessarabia and Russia's purpose to frustrate this ambition was probably the cause of Rumania's early collapse during the World War. As a result of the Peace treaties, Bessarabia is definitely a part of Rumania. See BALKAN STATES: 1921: Rumania; RUMANIA: 1919; WORLD WAR: 1918: V. Balkan theater; b.

BESSEMER, Sir Henry (1813-1898), an English inventor who originated and developed the process for the manufacture of steel known by his name; knighted in 1879; received the Telford medal of the Institute of Engineers in 1859 and in 1872 received the Albert medal of the Society of Arts; made fellow of the Royal Society in 1879. For Bessemer Process see EUROPE: Modern period: Mechanical revolution.

BESSI, an ancient Thracian tribe who occupied the mountain range of Hæmus (the Balkan) and the upper valley of the Hebrus. They were subdued by Lucullus, brother of the conqueror of Mithradates.—E. H. Bunbury, *History of ancient geography*, ch. 18, sect. 6.—See also BESSARABIA: 7th century.

BESSIERES, Jean Baptiste, Duke of Istria (1768-1813), one of Napoleon's marshals, who early distinguished himself in the battles of Roveredo and Rivoli. He played a prominent part at Saint Jean d'Acre and Abukir in Egypt, at Marango, Austerlitz, Jena, Friedland, Eckmühl, Aspern and Wagram. He performed invaluable service in the retreat from Moscow, and Napoleon suffered a serious loss when he was killed at Lützen.

BESSIN, the district of Bayeux. See SAXONS OF BAYEUX.

BEST-EVIDENCE RULE. See COMMON LAW: 1650-1700; 1702.

BETELGEUSE (meteor). See ASTRONOMY: Measuring the size of stars.

BETHEL (ancient Luz; modern Beitin), a town in Palestine situated about twelve miles north of Jerusalem. See JEWS: Conquest of Canaan.

BETHEL, town in Germany founded for the poor and unfortunate. See CHARITIES: Germany: 1872-1914.

BETHENCOURT, Jean de (d. 1425), French adventurer and conqueror of the Canary islands. See AFRICA: Modern European occupation: Beginning of European explorations.

BETH-HORON, Battles of, the victory of Joshua over "the five kings of the Amorites" who laid siege to Gibeon; the decisive battle of the Jewish conquest of Canaan. "The battle of Beth-horon or Gibeon is one of the most important in the history of the world; and yet so profound has been the indifference, first of the religious world and then (through their example or influence) of the common world, to the historical study of the Hebrew annals, that the very name of this great battle is far less known to most of us than that of Marathon or Cannæ."—Dean Stanley, *Lectures on the history of the Jewish church, lecture 11*.—In the Maccabean war, Beth-horon was the scene of two of the brilliant victories of Judas Maccabæus, in B. C. 167 and 162.—Josephus, *Antiquities of the Jews*, bk. 12.—Later, at the time of the Jewish revolt against the Romans, it witnessed the disastrous retreat of the Roman general Cestius. See also JEWS: Conquest of Canaan.

BETHINCOURT, French village situated in the outer line of defense at Verdun in the World War; evacuated by the French April 7, 1916, after which the line ran just north of Mort Homme.

BETHLEHEM, a small town in Palestine, some five miles south of Jerusalem. The birthplace of Jesus of Nazareth; has a long history under Jews, Romans and Turks; captured by the Crusaders in the 11th century; taken in 1917 by the British general Allenby.—See also HOLY LAND; JESUS CHRIST: Chronology of birth.

BETHLEHEM, town in the Orange River Colony, South Africa. During the Boer War it was captured by the British. See SOUTH AFRICA, UNION OF: 1900 (June-December).

BETHLEN, Gabriel (Gábor) (1580-1629), prince of Transylvania, King of Hungary who led revolts against the Emperor Ferdinand. See GERMANY: 1621-1623; HUNGARY: 1606-1660.

BETHMANN-HOLLWEG, Theobald Theodore Frederick Alfred von (1856-1921), German chancellor under William II, 1909-1917. Admitted Germany's invasion of Belgium to be a "wrong," but spoke of the treaty guaranteeing the neutrality of Belgium as a "scrap of paper"; was a liberal in politics; was defeated July, 1917, when the Socialists and the Catholic party combined in favor of a peace without annexations or indemnities.—See also GERMANY: 1908-1909; 1909 (October-December); ENGLAND: 1912-1913; 1917 (July-October); WORLD WAR: Diplomatic background: 16; 34; 38; 63; 76; 77; 1917: XII. Political conditions, etc.: b; e.

BETHSHEMESH, Battle of.—Fought by Joash, king of Israel, with Amaziah, king of Judah, defeating the latter and causing part of the walls of Jerusalem to be thrown down.—2 *Chronicles*, xxv.—See also ON.

BETHUNE, the capital of an arrondissement in the department of Pas-de-Calais in northern France. The town is situated in the center of the country's richest coal mines. Held by France since 1678 Bèthune was taken by the Allied armies in 1710 (see NETHERLANDS: 1710-1712) but restored once more by the Treaty of Utrecht. The town was the strategic defense the German General von Buelow aimed to break through in the fall of 1915 in order to drive the British army into the sea. It was also one of the objects of the last offensive

of the German armies (April 18, 1918). The attack was repulsed at Givenchy, five miles outside of Bethune. See WORLD WAR: 1914: I. Western front: u, 1; w, 2; 1918: II. Western front: d, 16.

BETH-ZACHARIAH, Battle of (B. C. 163), a defeat suffered 163 B. C. by the Jewish patriot, Judas Maccabæus, at the hands of the Syrian monarch Antiochus Eupator; the youngest of the Maccabees being slain.—Josephus, *Antiquities of the Jews*, bk. 12, ch. 9.

BETHZUR, Battle of (B. C. 165), defeat of an army sent by Antiochus, against Judas Maccabæus, the Jewish patriot, 165 B. C.—Josephus, *Antiquities of the Jews*, bk. 12, ch. 7.

BETSILEOS, or Betsimisarakas, important tribe in Madagascar. See MADAGASCAR; Introduction; 1804-1809.

BETUWE, Germanic tribe, anciently termed Batavi. See BATAVIANS, OR BATAVI.

BEUGNOT, Jacques Claude, Comte (1761-1835), French administrator. Deputy to legislative assembly, 1791; imprisoned during the terror; after Napoleon's *coup d'état* in 1799, he became councillor of state, organized the new kingdom of Westphalia, 1807; administrator of grand duchy of Berg, 1808. Minister of the interior under the provisional government of 1814; minister of marine under Louis XVIII.

BEUGNY, town in France, northeast of Baume, which was attacked and captured by the Germans in 1918. See WORLD WAR: 1918: II. Western front: c, 12.

BEUST, Friedrich Ferdinand Freiherr von (1806-1896); Austrian Statesman, active in formation of Ausgleich. See AUSTRIA: 1866-1867; AUSTRIA-HUNGARY: 1866; and HUNGARY: 1856-1868.

BEVERHOLT, Battle of (1381). See FLANDERS: 1370-1381.

BEVERIDGE, Albert Jeremiah (1862-), American politician. Member of the senate, 1899-1911; chairman Progressive national convention, 1912. See U. S. A.: 1912: Formation of Progressive party.

BEY, BEYLERBEY, PASHA, PADISHAH.—"The administration of the [Turkish] provinces was in the time of Mahomet II. [the Sultan, 1451-1481, whose legislation organized the Ottoman government] principally intrusted to the Beys and Beylerbeys. These were the natural chiefs of the class of feudatories [Spabis], whom their tenure of office obliged to serve on horseback in time of war. They mustered under the Sanjak, the banner of the chief of their district, and the districts themselves were thence called Sanjaks, and their rulers Sanjak-beys. The title of Pacha, so familiar to us when speaking of a Turkish provincial ruler, is not strictly a term implying territorial jurisdiction, or even military authority. It is a title of honour, meaning literally the Shah's or sovereign's foot, and implying that the person to whom that title was given was one whom the sovereign employed. . . . The title of Pacha was not at first applied among the Ottomans exclusively to those officers who commanded armies or ruled provinces or cities. Of the five first Pachas, that are mentioned by Ottoman writers, three were literary men. By degrees this honorary title was appropriated to those whom the Sultan employed in war and set over districts and important towns; so that the word Pacha became almost synonymous with the word governor. The title Padischah, which the Sultan himself bears, and which the Turkish diplomatists have been very jealous in allowing to Christian Sovereigns, is an entirely different word, and means the great, the imperial Schah or Sovereign. In the time of Mahomet II.

the Ottoman Empire contained in Europe alone thirty-six Sanjaks, or banners, around each of which assembled about 400 cavaliers."—Sir E. S. Creasy, *History of the Ottoman Turks*, ch. 6.

BEYERS, Christian Frederick (1869-1914); Boer general. In the Boer-British war of 1899-1902, he rose from private to assistant commandant-general, North District, Transvaal; captured British camp at Nooitgedacht; became after the war a brigadier-general of citizen forces; with De Wet rebelled against British rule at the outset of the World War; resigned, 1914.—See also SOUTH AFRICA, UNION OF: 1914; WORLD WAR: 1914: VI. Africa: b, 1.

BEYLAN, Battle of (1832). See TURKEY: 1831-1840.

BEYLE, Marie Henri (Stendhal) (1783-1842), French novelist, famous for his character analysis. See FRENCH LITERATURE: 1800-1921: Realistic school.

BEYLERBEY, Turkish chief. See BEY.

BEYROUT. See BEIRUT.

BEZANT, a Byzantine gold coin (whence its name), worth a little less than ten English shillings—\$2.50.

BEZETHA, Mount of. See JERUSALEM: A. D. 33; CHRISTIANITY: Map of Jerusalem.

BEZIERS, a city of southern France, situated at the confluence of the river Orb and the Canal du Midi. Historically memorable as the scene of a frightful massacre executed by Simon de Montfort in 1209 in his crusade against the Albigenses. See ALBIGENSES: 1209.

BEZONVAUX, a town in France, five miles northeast of Verdun. The French withdrew from the town February 25, 1916, to establish themselves more securely before Verdun where the German's July offensive was stopped. It was recaptured on the 15th of December when the French staged an attack extending from Vacherauville on the Meuse to Bezonvaux.

BEZUIDENHOUT AFFAIR. See SOUTH AFRICA, UNION OF: 1806-1881.

BEZZECA, town northwest of Riva in the Alps of Austria-Hungary. During 1915, in the World War, it was occupied by the Italians. See WORLD WAR: 1915: IV. Italy: d.

BHAGAVAD-GITA.—"The real author of this work is unknown. It was at an early date dignified by a place in the Mahabharata, in which poem it lies imbedded, or rather inlaid like a pearl, contributing with other numerous episodes to the mosaic-like character of that immense epic. The Bhagavadgita, however, is quite independent of the great epic; and it cannot be questioned that its proper place in any arrangement of Sanskrit literature framed with regard to the continuous development and progress of Hindu thought and knowledge should be at the close of the subject of philosophy. The author was probably a Brahman and nominally a Vaishnava, but really a philosopher whose mind was cast in a broad and comprehensive mould. He is supposed to have lived in India during the first or second century of our era. Finding no rest for his spirit in any one system of philosophy, as commonly taught in his own time, much less in the corrupt Brahmanism which surrounded him, he was led to make a selection from the various schools of rationalistic and dogmatic thought, so as to construct a composite theory of his own. This he did with great perspicuity and beauty of language, interweaving various opinions into one system of taking, so to speak, threads from the Sankhya, Yoga, and Vedanta, as well as from the later theory of Bhakti or 'faith in a supreme Being.' With these

threads he weaves, as it were, a woof of many coloured hues of thought, which are shot across a stiff warp of stern uncompromising pantheistic doctrines, worthy of the most decided adherent of the Vedanta school. The whole composition is skilfully thrown into the form of a dramatic poem or dialogue, something after the manner of the book of Job or a dialogue of Plato. The speakers are the two most important personages in the Mahabharata, Arjuna and Krisbna."—M. Williams, *Indian wisdom*, pp. 136-138.

BHARADARS, native council of India. See INDIA: 1805-1814.

BHONSLA RAJA (d. 1816), Indian ruler of Nagpur, instrumental in starting Mahratta wars with British. See INDIA: 1798-1805.

BHURTPORE, Siege of (1805). See INDIA: 1798-1805.

BHUTAN, an independent state in the eastern Himalayas, lying between Tibet and India. This rugged country, with extremes of temperature, is devoted to intensive agriculture, by means of terraces and irrigation channels. The people are largely of Tibetan origin, and primitive in religion and customs. With the British government of India, relations were formerly unfriendly, and even today little is known of the country. In 1865 certain boundary districts in dispute were ceded to India, which granted Bhutan an annual subsidy now amounting to £3333. Relations have been friendly since 1865.

BIACHE-ST. VAAST, town in France, southwest of Douai; taken by the allies in 1918. See WORLD WAR: 1918: II. Western front: r, 1.

BIAC-NA-BATO, Treaty of. See PHILIPPINE ISLANDS: 1896-1898.

BIAFRA, Bight of, an inlet of the eastern part of the Gulf of Guinea. See AFRICA: Modern European occupation: 1884-1899.

BIALA, a river in Galicia east of the Dunajec into which it flows just before the latter empties into the Vistula; the scene of Russian and Austro-German operations during the World War.

BIALYSTOK, or Byelostok, a city in Poland, fifty-three miles south-west of Grodno on the road to Warsaw. In August, 1915, was captured from the Russians by the Germans in their great offensive on the eastern front.

BIANCA NAZIONALE, Italy. See MONEY AND BANKING. Modern: 1806-1910.

BIANCHI (Whites), a fourteenth century political faction of Florence. See FLORENCE: 1295-1300, and 1301-1313.

BIANCHI, or White Penitents. See WHITE PENITENTS.

BIARRITZ,—a fashionable watering-place in the department of Basses-Pyrénées, France, situated on the Bay of Biscay, 5 miles southwest of Bayonne; first attracted Emperor Napoleon III and Eugénie by its situation and became their summer residence; has since been a fashionable resort both in summer and winter; the scene of a famous interview in 1865 between Napoleon III and Bismarck over the Schleswig-Holstein question, Bismarck being successful in obtaining the neutrality of France in the coming war between Prussia and Austria.

BIBARS I (d. 1277), one of the most competent of the Bahrimameluke sultans of Egypt. By his re-establishing in theory the Abbasid caliphate, he made Egypt the center of the Moslem World. Through his conquests he gained control over Syria and Armenia. See CALIPHATE: 1262-1543.

BIBERACH, Battles of (1706 and 1800). See FRANCE: 1706 (April-October); and 1800-1801 (May-February).

BIBESCU, George Demetrius (1804-1873), Prince of Wallachia, 1842-1848. See RUMANIA: 1828-1858.

BIBLE, English.—Sources.—Bible of the apostles.—Jewish scriptures.—Law, prophecy, philosophy and poetry.—Manuscripts of ancient Versions.—“So long have English-speaking peoples been accustomed to a Bible in a single volume, and to regard it as one book, made up of a series or more or less closely connected parts, following each other in an established order, that comparatively few persons realize that our Scriptures have ever existed in any other forms, or that our so-called Authorized Version is itself the result of a great number of previous revisions. In his recent work, the ‘Canon and Text of the New Testament,’ Professor Casper René Gregory, of the University of Leipzig, says: ‘As a general rule the mass of people take things as they are. They are also likely to think, or at least to go on the supposition, that things have always been as they are now. They can buy a New Testament, a nicely bound one, for a mere trifle. It rarely occurs to them that six centuries ago that would not have been possible. Perhaps there are men who would be surprised to learn that Paul, and even Peter and John and James, did not each carry a little New Testament in his girdle.’ And Bishop Wordsworth tells of the curate who, while public feeling was deeply stirred over a proposed revision, that of 1880, declared that ‘if the authorized version was good enough for St. Paul, it was good enough for him.’ But Jesus and his immediate followers knew no Bible literature save the Hebrew writings which constitute our Old Testament and the Apocrypha; and when the Master bade the Jews ‘Search the Scriptures,’ it was to those writings alone that He referred them. It is equally true, of course, that neither Paul nor Peter ever saw or heard of one of our gospels; and their own letters, with the Epistle of James, were the only books of our New Testament that had been written up to the time of their martyrdom. It was not until the fourth century after Christ that the books constituting our Old and New Testaments were brought together in one volume; and it was a thousand years later before such a combination of the Hebrew and Christian sacred books became common,—each of the individual books still circulating and being read, copied, and revised, independently of any of the others. The Old Testament was the ‘library’ of the Jews, as it, with the writings of the Apostles, became the ‘library’ of the early church and Christians,—a library consisting of separate books, or rolls, of history, law, prophecy, philosophy, and letters.

“We are prone to forget that Jesus and his disciples were Jews and remained to the end of their lives regular attendants upon the services of the Jewish, synagogues. Without exception, too, Paul on his missionary journeyings undertook first to preach his new Gospel of a Risen Christ to the Jews and in the Jewish synagogues of every place he visited; and it was only when he and his teachings were rejected by the Jews in their synagogues, that he established his separate Gentile and Christian churches. It is, then, to the Jewish synagogues that we naturally turn to learn of the form and character of the earliest books, upon which a large part of our Bible has been built up. The synagogue, as an important factor in Jewish life, only goes back to the destruction of the Temple, and the captivity in Babylon, in the sixth century before Christ. From that time on the Jews became more dispersed over the civilized world, and at the time of Christ there was

hardly a city or town of any size or importance where a synagogue would not be found. Separated as the people were from the fountain of their national life, and from their Temple worship, the local synagogue stood in the place of both, and was the center of all the religious, educational, and social life and activity of each exiled community. In those little Jerusalems the Jew was ever reminded of the greater city of his God; and here all the greater events of the Hebrew national life were rehearsed, the law studied and taught, and the prophets searched for the signs of His coming who should restore to the nation its former glory, and redeem its people. In those worshiping groups, far from their home-land, perhaps, and possibly few in numbers, we may almost hear the oft-repeated lament of their fathers in exile,—‘By the rivers of Babylon, there we sat down, yea we wept when we remembered Zion’; while the pious vow was oft repeated: ‘If I forget thee, O Jerusalem, let my right hand forget her cunning; if I do not remember thee, let the tongue cleave to the roof of my mouth; if I prefer not Jerusalem above my chief joy.’

“Each synagogue had a ruler who directed the general affairs of the religious body, and an attendant, or Chazzam, who looked after the church property and building, and had charge of its sacred books. These were kept in a ‘press,’ or chest, usually in a separate corner of the audience room, and the chest was generally hidden from public view by a curtain. It corresponded to the *Ark of the Covenant*, which contained the law in the great Temple at Jerusalem. When the service was opened, it was the duty of the ‘Chazzam’ to hand to the reader the roll containing the lessons of the day from the law and from the prophets; and after the reading of each, the leader handed back each roll to the ‘Chazzam,’ who, after rolling it up behind the curtain, returned it to its proper division in the chest library. In Luke iv: 16, and following verses, we read that Jesus ‘came to Nazareth, where he had been brought up, and, as his custom was, he went to the synagogue on the Sabbath Day, and stood up for to read. And there was delivered unto him (from the chest) the book of the prophet Esaias . . . and he closed the book and gave it again to the minister.’ Had we followed the minister as he went behind the curtain to return the roll to its proper place, and with his permission, perhaps, examined the chest, we should have found that it was separated into three main compartments,—one each for the law, for the historical books (among which were included some of the prophets), and for the ‘writings,’ as they were generally called, or *Hagiographa*, covering the poetical works, the wisdom books, and the remainder of the prophets. Examining any one of the rolls, we should have found it mounted at the end upon a wooden roller, or if the congregation was an important and wealthy one, upon two rollers, made probably of more costly material and, perhaps, with considerable ornamentation. Opening one of the rolls to examine it, we should see that the matter was written by hand upon a rather stiff and somewhat brittle material known as ‘papyrus.’ Printing and paper were yet centuries away. . . . The longest roll known is Egyptian, and measures one hundred and forty-four feet; but the usual extreme length of Greek rolls was about thirty feet. The height, or width, varied from five to fifteen inches. Of course this material was costly, and various economies, such as running words and sentences together and the contraction of words, were exercised in its use; and sometimes, though not often, the scribe would

write upon the reverse side as well as on the front, if his sheet was not long enough,—as is mentioned in Ezekiel xi: 10, where a 'roll of a book' was spread before the prophet '*written without and within.*' Having prepared his papyrus of the right dimensions the scribe would commence to write his matter on the extreme left of his long sheet,—unless it was Hebrew,—arranging it on the papyrus in columns of from two to three and a half inches in width, which was considered the best literary form, though of course if the matter was poetry the length of the line determined the width of the column. Reed pens were used, and ink, for the making of which there were several well-known formulæ. Having carefully written out the entire matter which he was copying, as for example, the roll of the prophet Isaiah, the scribe would attach the end section or right edge of his sheet to a roller, over which the whole manuscript would be wound. So that when Jesus, as referred to above, was handed the 'roll of the prophet Esaias,' he commenced unrolling from right to left until he came to the passage he wished to speak upon, or the lesson for the day. As the papyrus was easily broken, however, and became more brittle with age, the double roll became the more common; and in using it, the reader simply unrolled from the right roller on to the left as he went along. On the back of the roll a thin strip of papyrus was pasted which bore the title of the work. The older and original manuscripts of the Jewish sacred books were written in Hebrew; but in the greater number of the churches of the dispersion, that is, of the exiled Jews, the Septuagint translation of these books was used. This is one of the great basic versions for all later revisions, it being a complete translation of all the Jewish Scriptures into Greek, and derives its name from the fact that the translation was attributed to seventy of the most learned Jewish Rabbis. One of the most familiar legends regarding this translation is that Ptolemy Philadelphus sent to the Jews of Jerusalem for a Greek version of their Scriptures for his great library at Alexandria. Accordingly, seventy elders skilled in the Scriptures and in languages were sent to him, whom he separated in seventy different cells while they were prosecuting their work. When all had completed their translations and appeared before the King, 'God was glorified,' as the legend recites, 'for they all agreed exactly, word for word.' The generally accepted theory is that the work was done by learned Alexandrian Jews at different periods during the third and second centuries before Christ. This Septuagint version is of especial interest to us because it was the form of the Jewish Scriptures with which Jesus and the early Christians were familiar; and the slight difference between their quotations from those Scriptures and the form with which we are familiar in the authorized version is accounted for by the fact that the Old Testament of that version was another translation from the original Hebrew, and not from the Septuagint, which Jesus and his followers used.

"Within one hundred years after the Ascension of Christ the Christians throughout Western Asia and Southern Europe had separated themselves from the synagogue connection, and had organized their churches and erected their church buildings. If we could have visited one of their more influential churches, say that of Rome, or of Ephesus, or Alexandria, we should still have found, as one of the most important of the church furnishings, the 'chest' for the sacred books; and upon looking into it we should have discovered the same

rolls which we have described as constituting the library of the synagogues. But in addition to those works we should also have found rolls of nearly all, perhaps all, of the books which now make up our New Testament,—some originals, others copies from originals,—all of which had been written within the century that had passed since the Crucifixion. Not every church for another hundred years yet would have all these new rolls; but one would have one or two gospels, another a different one; nearly all would probably have Paul's four great Epistles,—to the Galatians, Romans, and Corinthians,—as well as the Acts; while some congregations cherished as priceless treasures the Apostle's personal letters to them individually. *But the important fact is that a search through the chests of all the churches at about this period would have revealed to us in the Christian libraries original manuscripts of all the books of our Bible; and that those early manuscripts constitute the only sources from which we have obtained that Bible.* These later manuscripts were all written out by hand in the same manner, and upon the same material, as those which made up the library of the synagogues, already described. If anyone of these collections had been preserved intact to modern times the work of revisers would be simple and easy; but, unfortunately, the libraries of the early churches—the Christian writings,—were more recklessly destroyed than were the Christians themselves during the persecutions of the first three centuries, with the result that not a single manuscript of any book of the Bible belonging to that period has been preserved. The question, therefore, how we get our Bible, and upon what basis the revisers and translators of different ages have worked, becomes an exceedingly important one.

"Taking the position of the learned revisers of 1880, we should have before us three classes of material to work upon, a very large proportion of which was unknown to the revisers who produced our Authorized Version, in 1611. This matter has been discovered from time to time, chiefly during the last five hundred years, often in the rubbish heaps of the old monasteries of Europe and Asia, and is now scattered among the great libraries of Europe,—those of the Vatican, of the British Museum, of St. Petersburg, and of Paris, especially, possessing documents of inestimable value. Of this material, the *first class* consists of *Manuscripts*, by which is technically meant copies in the original language of the different Scriptures. The *second class* is made up of a great number of ancient *Versions*, a version technically meaning a *translation of the Bible*, or any of its books, into the languages of early *Christendom*. Some of these, like the Syriac, Egyptian, Latin, and Gothic Versions, are very ancient and of supreme importance. The *third class* consists of the writings of the Early Church Fathers, which make an extensive library. These men were generally earnest controversialists, and quoted Scripture so freely that it has been said if all other sources of our Bible were lost, we could recover the greater part of it from their writings alone. The most important of these three sources is, of course, the Manuscripts, the copies of the *Scriptures* in the *original tongue*. Of these there are now a great number in existence, some of them having originally been translations of the whole Christian library, that is, of the entire Bible, others of single books or groups, as the Psalter, the Gospels, the Epistles, etc. The manuscripts vary greatly in age and so in value, as it is evident that the nearer in point of time a manu-

script belongs to the original text, the nearer will be its approach to a perfect copy. It must be remembered that all copies were made by hand from other copies; and when one considers how difficult it is even to transcribe a page of printed matter *exactly*, it is easy to see that errors must have crept into the successive copies as made, even though the most loving and conscientious effort was made to avoid any mistakes. Irenæus, Bishop of Lyons in the second century, wrote as follows on a copy he had made of one of the sacred books: 'Whosoever thou art who shalt transcribe this book, I charge thee with an oath by our Lord Jesus Christ, and by His glorious appearing, in which He cometh to judge the quick and the dead, that thou carefully compare what thou hast transcribed, and correct it according to this copy when thou hast transcribed it; and thou transcribe this oath in like manner and place it in thy copy.'

"Three of these manuscripts, which are nearly complete copies of the whole Bible, go back to the fourth and fifth centuries, and so are the most ancient of the sacred documents, as well as the most priceless treasures of the Christian church. Curiously one of them belongs to each branch of the church,—the Greek, Roman, and Reformed. All of them were before the revisers of 1880, though none of them were known to those of the Authorized Version. The most ancient of these is the *Vatican Manuscript*, which has lain in the Vatican library for several hundred years, but has been of no use to scholars, as access to it was forbidden until the latter part of the nineteenth century, when Pope Pius IX. allowed excellent facsimiles of it to be made, which can now be studied in all the larger libraries of the world. This manuscript is written on vellum, which began to take the place of papyrus for sacred writings about the end of the third century, and is in book form instead of on rollers, a change that was made about the same time, and partially because of the use of a different writing material. This 'Codex Vaticanus' as it is known among scholars ('codex' meaning simply the book form in distinction from the roll) has about seven hundred leaves of the finest vellum, is about a foot square, and bound. It lacks the first forty-six chapters of Genesis, Psalms 105 to 138, and all of the New Testament after the fourteenth verse of the ninth chapter of Hebrews. Each page has three columns, the writing is all in capital letters, and there is no spacing between the words nor any punctuation or division into sentences, all of which makes it very difficult to read. This form of writing was one of the economies practiced when writing material was very expensive. It is also one of the best proofs of the age of a manuscript, as a few centuries later modern forms of writing were adopted in copying. These old, capital-letter manuscripts are known as '*Uncials*,' in distinction from those written in the modern or running form, which are called '*Cursives*.' The value of a manuscript depends chiefly, as a general proposition, upon its age, which places the Uncials far above the Cursives in that regard. Yet it is quite possible that a Cursive of the fifteenth century should have been copied directly from an early Uncial, like the Codex Vaticanus of the fourth century, and so have a greater value than an Uncial of the eighth century; and several of such Cursives have been found which are highly esteemed."—F. Kirkland (pseud. for R. M. Devens) and C. W. Chase, *Glory of our youth*, ch. XLII, pp. 401-406.

Modern Biblical research.—Work of Tischendorf.—Ancient codex discovered.—"Foremost

among the distinguished group of scholars of the last century who devoted their time, energy, and study to the manuscripts and texts of the Bible books, was Dr. Constantin Tischendorf, Professor of Theology at the University of Leipzig from 1845 until the time of his death in 1874. For many years he made frequent visits to old Greek monasteries in southeastern Europe and western Asia, eagerly searching for new material. In 1844, when only twenty-nine years of age, he arrived at the ancient convent of St. Catherine, on the range of Mt. Sinai. While quietly conducting his investigations he came upon a large basket filled with worn and damaged manuscripts, which had been set aside to be burned, as two similar baskets-full had already been. Here he found a considerable number of vellum leaves of a Greek manuscript, which his practiced eye at once recognized as one of the oldest in existence. He obtained possession of forty-three sheets, about one-third of the number he had rescued, but was not permitted to take the remainder. Unfortunately his enthusiasm had betrayed the value of the treasures in the basket to the unconscious monks. For fifteen years he made repeated but unsuccessful attempts to get possession of the remaining sheets, working through various influential channels. In 1850 he determined again to visit the convent himself, and was happily able to go armed with a strong personal letter from the head of the Eastern Church, the Emperor Alexander II. of Russia. After five days of fruitless search through the library and among all the papers of the convent, he was about to take his departure. While walking with the steward the evening before he had planned to leave, their conversation turned upon the text of the Old Testament; and returning at twilight to the convent, he was invited by the steward to partake of a luncheon with him in his cell. While they were eating the host said that he had there a copy of that Septuagint, at the same time bringing from the corner of the room a large manuscript wrapped in a red cloth. Glancing at the pile of vellum, Tischendorf quickly recognized it as belonging to the same codex of which he had rescued some leaves from the waste basket fifteen years before. Concealing his emotion, he obtained the privilege of taking the manuscript to his chamber, where, to his unspeakable joy, he found it contained the New Testament entire. Then began the long and weary efforts to get possession of the entire manuscript, or proper conveniences for copying it; and, though these were eventually granted, the work could not be done under such circumstances as to guarantee the perfect accuracy which alone would satisfy Tischendorf. As a last resort he made the happy proposal that the monks should make a gift of the entire material to the great defender of their church, the Emperor Alexander; with the result that about eight months after reaching the convent, the precious treasure was placed in his hands to bear to the emperor at St. Petersburg. This codex is written upon vellum of extreme fineness and beauty, and has 346 leaves, of which 100 contain twenty-two books of the Old Testament, while the remaining 147 have the whole of the New Testament, the 'Epistle of Barnabas,' and part of the 'Shepherd of Hermas.' The whole work has many points of similarity with the Vatican Codex, though the latter has three columns on a page, while the former has four. This is known as the *Codex Sinaiticus*, and it is believed that it goes back to before 350 A. D. The early church historian, Eusebius, who was also secretary to the Emperor Constantine after his conversion, states that the Emperor ordered him to

have fifty of the most perfect and beautiful copies of the Bible made and delivered to him; and many learned scholars, including Tischendorf, are confident that the Sinaitic manuscript is one of those fifty copies. Facsimiles of this codex have also been made, and in this form it is accessible to all scholars.

"The third in antiquity of the great Uncial manuscripts of the Bible in the Greek language is the *Codex Alexandrinus*. This codex was presented to Charles I. of England, in 1628, only seventeen years after the revisers had completed their work on our Authorized Version, by Cyril Lucar, Patriarch of Alexandria, from whence he had brought the manuscript, which is named after the city of its origin. It is in quarto form, about thirteen inches high and ten wide, each page being divided into two columns of fifty lines each. Like the others it is written on thin, fine, and very beautiful vellum, with an elegant though simple Uncial, and without spacing the words. Ten leaves are missing from the Psalms, and the first twenty-four chapters of Matthew, the seventh and eighth chapters of St. John, and eight chapters of First Corinthians. But there is added to this the one genuine letter of Clement of Rome to the Corinthians. The trustees of the British Museum have published a beautiful photographic facsimile of this, one of the greatest treasures of their library. Another curious and valuable manuscript is in the National Library of France, and is known as the *Codex Ephraemi*. It was brought from the East by Andrew Lascar, a learned Greek patronized by Lorenzo de' Medici, and was carried to Paris by Catherine de' Medici when she became Queen of Henry II. of France. This codex illustrates a custom among the monks of the Middle Ages which is doubtless responsible for the loss of many valuable manuscripts. As vellum was very expensive, if a monk wished to transcribe any new matter he would often take an old book and clean its pages as far as possible of its written matter by rubbing them with pumice stone. As this could never be perfectly done, the old matter always appeared indistinctly under the new writing. Such manuscripts are called *Palimpsests*, and the *Codex Ephraemi* was one of them. During the seventeenth century a scholar discovered the importance of the first writing, and for two hundred years various attempts were made to remove the later matter. But it remained for Tischendorf, after nearly a year's hard labor, to succeed in the work, and in 1840 to disclose a very rare and ancient Uncial which unquestionably belongs to the fifth century, and is esteemed by many critics as only second in importance to the Vatican and Sinaitic manuscripts. These four codices are the chief manuscripts which have preserved the Greek text for nearly the whole Bible; but there are scattered through the libraries of Europe manuscripts of groups of books, or single books, or parts of each, which are usually classed as *Fragments*; and of these there are now known about 100 Uncials, while in 1800 Dr. Gregory counted up 3,553 Cursives,—all of which, as has been said, are more or less complete parts of the Bible in the original Greek language. Of the Hebrew manuscripts of the Old Testament it is only necessary to say that none are in existence dating earlier than the tenth century. The lack of old manuscripts here, however, is of little importance; for about a thousand years ago all the old ones were collected and compared for the purpose of a grand revision, so that at that early date the Hebrew of the Old Testament was made as nearly perfect as the best scholars of the Jewish academies could make it. After that the older

manuscripts gradually disappeared. The work of revision was done with the most scrupulous care, and every mechanical device was used in addition to clerical skill to prevent errors from creeping in. And the reason that in the latest English revision there are so few changes in the Old Testament compared with those in the New is that there was less need, as well as fewer means, of making any correction."—*Ibid.*, pp. 406-409.

7th-8th centuries.—Vellum and parchment.—Old Latin Bible.—St. Jerome's Version.—Beginnings of English Bible.—Caedmon and Bede.—"Before taking up the second class of sources of our Bible, the Versions, a few words may be said in reference to the change from the use of the roll to the book. Vellum had been in use in the ancient world since about 180 B. C., when King Ptolemy of Egypt, jealous of the great library that the King of Pergamus was building up, undertook to cripple him in his work by forbidding the export of papyrus. The King of Pergamus, therefore, was forced to find another material for writing, and hit upon skins; and the other name for vellum—parchment—is simply a derivative from 'Pergamine.' For this purpose the skins of sheep, calves, and of asses were chiefly used, the hair being carefully scraped from one side and the flesh from the other. The skin was then stretched and dried, and, before using, the surfaces were carefully smoothed and polished with pumice stone. At a later date a very fine quality of vellum was made from antelope skins. Strictly speaking vellum denotes material made from calves' and antelopes' skins, while parchment was applied to skins of sheep, asses, and even swine; but practically no distinction was made, and the term vellum came to be applied to all kinds of dressed skins used for purposes of writing. In the first and second centuries it was used only for note books, rough drafts, and inferior classes of literary work. But its use for note books, shaped according to the form of the wax tablets, the kind of note books previously existing, naturally led to the evolution of the codex, or modern book form, and together they gradually displaced papyrus and the roll for literary productions, during the early part of the fourth century. One demand which greatly stimulated this movement was that for complete collections of the Scriptures in a usable form both for reading and reference. It was not until towards the close of the second century that anything like an accepted canon of the New Testament writings was recognized; but as soon as tradition and usage had determined what books should be accepted and read by all Christians as the Scriptures, a more convenient form than the old rolls was imperatively demanded. And as it was recognized that some twenty or thirty rolls were needed for the New Testament alone, while the whole could be gathered into one codex of not immoderate size, the latter quickly came into general use.

"The second class of material for Bible revision, next in importance to the manuscripts, consists of 'Versions,' that is, of translations from the original language of the Scriptures into the languages of the various peoples who from time to time became converted to Christianity. Of these versions a great number are in existence, some of which bear evidence of great care in translation, others more carelessly done and from corrupt originals. Many versions are very ancient, the early Christians in their missionary work among the Egyptians, Armenians, Syrians, and Latin peoples of North Africa and Southern Europe, from the first endeavoring to give those peoples at least the principal books of the New Testament and the Psalms

in their own tongues, the complete Bibles following in due course. As some of these translations go back to the early part of the second century, they become of the greatest value as aids in verifying and correcting the texts of the early New Testament Scriptures.

"The church at Rome of the first century was more Greek in its character than Roman; and not only did Paul write his Epistle to its members in Greek, about 60 A. D., but its earlier bishops all appear to have been Greeks, one of whom, Clement, at the end of the century, wrote an important letter to the Corinthian church in Greek which, as we have seen, was bound up with the New Testament books in the *Codex Alexandrinus*. There was not, therefore, the same necessity for a Latin translation of the Scriptures for the Italian churches as for those of the Roman province of North Africa, where many important churches were early established, and from whence came many of the most noted of the church fathers, including the great St. Augustine; and it was chiefly for these outlying churches that the first Latin Bible was made. This is known as the *Old Latin Version*, to distinguish it from the later work of Jerome. This Old Latin Bible has great value for the New Testament, as it was probably the first translation made from the original Greek texts, but the Old Testament was only a translation of a translation, that is, of the Septuagint. As the Church spread, this Bible would necessarily have to be made in large numbers, and owing to the fragile character of the papyrus, earlier copies would have to be replaced by newly made ones. It naturally resulted, therefore, that in the process of these many translations the original text soon became very much corrupted, so that by the middle of the fourth century, as one has said, 'the Latin speaking churches were in danger of losing the pure Scripture of the Apostolic days.' Fortunately, just at this period the great Eusebius Hieronymus, better known as St. Jerome, returned to Rome after several years of travel, study, and ascetic life in the East. Reputed to be the best Bible scholar in the church, and nearly the only one who was thoroughly familiar with Hebrew, Damasus, Bishop of Rome, in 382 urged him to undertake a revision of the Latin Scriptures. This work Jerome at once began, and in 385 had finished the New Testament. He then began work upon the Old Testament, making first two or three separate translations of the Psalter from the Septuagint. But being dissatisfied with this, he turned to the original Hebrew text and made an entirely new translation, which was completed in 404. This final translation of Jerome has become one of the most important factors in all later Biblical revision. It is known as the 'Vulgate,' which means simply the 'commonly received translation.' This became the officially accepted Bible of the Western churches, and holds that position in the Roman Catholic church to-day, as it did in England until the Reformation; and the Septuagint and Vulgate are the two great versions in the immense library of Biblical literature [see also PAPACY: 1007-1000.] Human nature, however, changes but little through the ages, and Jerome's great work met with the same determined opposition, as well as bitter criticism and abuse, that later greeted the work of the revisers of 1880. All over the world, that is the Western world, Christians had become familiar with and loved the Old Latin version; and as, owing to the corruptions of the latter, Jerome's changes were many and marked, a storm of hostile criticism broke over him. This he fought vigorously and with considerable temper,

insisting that no amount of sentiment could be a plea for a faulty Bible, and that the most venerated translation must give way, if found to disagree with the original texts. . . . Nevertheless the Old Latin held a conspicuous place, and was highly esteemed by the churchmen for centuries, both versions being used and existing side by side, much as the Revised Version and the King James Version exist in our own religious life to-day, until the Council of Trent gave to the Vulgate the official recognition of the Roman church [see also EDUCATION: Medieval; 6th-16th centuries: Latin language].

"It was not until late in the seventh century that any attempt was made to give our English ancestors any portion of the Bible in their own tongue; and even then, so low was the mental state of the people, anything like a written Gospel would have been of little use. As hardly any, either of the nobility or the peasantry, could read their own tongue, there was little demand for a translation of the Scriptures. These were truly the 'Dark Ages.' Religious interest could only be aroused with any measure of success by appeals to the senses, and it was by the ministry of art and song that the sacred story first touched the popular heart, or caught the popular ear. Like all primitive peoples, the Saxons were most susceptible to the emotional songs of their bards, and no festivities were complete without the minstrel's lays in which they delighted. One of the foremost centers of religious life and light at this period was the famous Abbey of Whitby. High up on the cliffs in the north of England, looking out over the North Sea, the Princess Hild had established her religious houses; and about her were gathered a goodly number of monks, and many lay helpers. Among the latter was Caedmon, the earliest of English singers, with whom English literature and the English Bible alike have their beginning, and to the 'music of whose native harp,' as one has said, 'the Bible story, in the form of poetic paraphrase, begins to pass out of its old Latin into its new English dress, out of the dim seclusion of cell and school to the open sunlight of the countryside, and from the narrow limits of the parchment-scroll to the wandering minstrelsy of the vernacular poetry.' . . . 'By his verses the minds of many were often excited to despise the world, and to aspire to heaven. Others after him attempted, in the English nation, to compose religious poems, but none could ever compare with him, for he did not learn the art of poetry from man, but from God; for which reason he could never compose any trivial or vain poems, but only those which relate to religion suited his religious tongue.' But this minstrelsy was not confined to monastic circles; its songs were sung before kings and warriors, and among the peasantry in the villages and in their homes. Through these channels the Scripture narratives circulated for generations, and the common people acquired in a form which fixed itself in their memories a rudimentary Bible knowledge to which, otherwise, they must long have remained strangers; just as, fifteen centuries earlier the ancient Greeks first learned the stories of gods and men which later made the Greek Bible,—the *Iliad*,—through the songs of their minstrels in royal halls and at public festivals. But the sacred songs of Caedmon were not translations into the Saxon tongue, but merely free paraphrases of the Scripture narrative, and so may be regarded as a prologue of the long drama of the evolution of the English Bible, whose first act calls us to the renowned monastery and school at Jarrow, near the mouth of the Wear. Here one of the world's great scholars had built up one of the

most famous schools of the age. Bede, or as he is more familiarly known, the 'Venerable Bede,' was born close to the monastic halls at Jarrow in the year 673; and he never left the cloister's shades until he sweetly breathed out his life in prayer on Ascension Eve in the year 735. His entire life was devoted to study, teaching, and writing; and little by little he made himself master of the whole range of the knowledge of his day, so that he became, as Burke justly styled him, 'the father of English learning.' Six hundred monks, besides strangers, gathered at Yarrow to enjoy Bede's instructions; and in treatises prepared as text-books for his scholars he brought together all the knowledge that the world had then accumulated in astronomy, physics, philosophy, rhetoric, grammar, music, arithmetic, and medicine. The best known of all these works was his 'Ecclesiastical History of the English Nation,' from which all that is really known of the century and a half following the landing of Augustine must be learned. As the historian Green has said, 'Bede was at once the founder of mediæval history and the first English historian.' But notwithstanding his commanding position and great learning, he remained to the last the simple, unaffected, loving and beloved master, whose personal influence upon his students worked greater results even than his secular and religious teachings; and there is hardly in all literature more tender and loving tribute to the memory of a great teacher than the letter in which Cuthbert, one of his disciples, writes to his fellow students, Cuthwin, of the passing of the master. . . . [On his deathbed Bede completed his translation of the Gospel of St. John.] Of the character of this translation, the dying gift of the great teacher to his spiritual children, nothing can now be known, as no copy of the work has come down to our day. Still, the Venerable Bede stands as the first link in the chain of translators which, through Wyclif, Tyndale, Coverdale, and their successors in the continuous work of revision, binds the eighth to the nineteenth century in the history of the English Bible."—*Ibid.*, pp. 409-413.

8th-11th centuries.—King Alfred's Dooms.—Translation from Saxon to modern English.—**Effects of Norman invasion.**—"From the middle of the eighth to the close of the thirteenth century was a barren period in Saxon intellectual and religious life. For more than two hundred years the country was repeatedly laid waste by Danish invaders, only to be followed, before peace had brought any lasting results, by the more complete conquests by the Normans in the eleventh century. . . . The success of the Norman invasion resulted in a more complete subjugation than had attended the inroads of the Danes; and a strange language and a religion that seemed hardly less strange to them were forced upon the people. The Saxon clergy were turned out of their churches and livings and were replaced by priests from Normandy, who despised both the native language and the people who spoke it; and as the whole spirit of the Church on the continent was adverse to any translations of the Scriptures into vulgar tongues, not only was nothing done to enlighten the people, but even the few versions that existed in the Saxon tongue were contemptuously cast aside and destroyed. During the intervals of peace previous to the Norman conquest, sporadic attempts at translation of parts of the Bible, especially of the Gospels and the Psalter, had been made; but the whole life of the people had become that of the camp and not of the home, and so afforded no congenial soil for the propagation of the graces of literature and religion. The great, shining figure of the entire period was that of the most noble and Christian king, Alfred, who

accomplished marvelous things considering the conditions under which he labored. One of the great monuments of his reign was his collection into one body of all the laws of the Saxon realm, which he entitled 'Alfred's Dooms.' . . . [This] was followed by the king's own translation of the Ten Commandments into the native tongue, which thus became the first part of the most ancient law of England.

"Although the thoroughness of William the Conqueror's plan contemplated the complete obliteration of the native language, as well as the supplanting of all national customs by the more refined modes of Norman French life, yet the sturdy patriotism of the conquered race frustrated his purposes. The Saxon priests, driven from their churches, became wandering friars, and, going from hamlet to hamlet, kept alive the fires of nationalism and became the inspirers of new hopes in the subjugated, but not subdued people. So that, though Norman French was the only language of the court, the church, the school, and for the transaction of all public affairs, yet the native tongue was cherished with all the sentiment of nationality and fellowship that its use inspired, in the halls of the old Saxon nobles, and in the rude homes of the people. What this double life of the people meant is most interestingly portrayed in Scott's great novel, 'Ivanhoe.' But the result of the friction between the two languages was the gradual formation of a new one which was to become the medium of expansion for all the thought and action of the great English-speaking nations. Just when the change occurred cannot be marked, any more than one can say when a child becomes a youth, or the youth a man. But the important point is that when the pent-up forces of national and religious life and thought broke through the barriers that had so long restrained them, the immortal verse of Chaucer, as well as the noble and dignified prose of Wyclif, found a language rich enough in its vocabulary, and flexible enough in its form, to give full expression to the glowing fancy of the poet, and to the exalted protests and passionate denunciations of the great reformer. There have been certain great periods in the evolution of the Divine plans as manifested in the world's history, which no expression seems so well to describe as Paul's pregnant one,—'the fullness of time'; and the era of the thirteenth, fourteenth, and fifteenth centuries appeared most forcefully to mark such a 'fullness of time.' It was the breaking of the morning light of a new and more glorious day for all mankind. In its earlier years a spirit of unrest and discontent had become well-nigh universal that bodied ill for all the forces of tyranny and despotism that enslaved the minds, as well as the bodies, of the mass of the people; and there is no more interesting study than to trace the influence of the English Bible in arousing, stimulating, and directing the course of these uplifting movements."—*Ibid.*, pp. 413-414.—See also PHILOLOGY: 100.

14th-16th centuries.—Wyclif's translation of the Bible.—Purvey's Revision.—Invention of printing.—First printed book the Mazarin Bible.—Luther's translation.—Greek Testament edited by Erasmus.—"The most notable of all the heralds of the new day, the most intelligent and determined of all 'Reformers before the Reformation,' was John Wyclif. The date of his birth is uncertain, but was previous to 1320; and the period of his life covers a time of grievous distress throughout Europe. The most terrible plague the world has ever known, the so-called 'Black Death,' advancing from the East, devastated all Europe, and in 1348 invaded England;

and of the population, then estimated at between three and four millions, more than one half succumbed to its dread power. No words can describe the effects of its ravages upon the social life of the kingdom. All industry was paralyzed, and famine stalked in the steps of the pestilence. The land was untilled, and even where crops came to maturity, no one could be found to harvest them and they rotted in the fields. Down to the thirteenth century, the great mass of the people was made up of peasants attached to the soil, mere serfs,—a little higher in the scale of life than the cattle, but not much. As a result of the great scarcity of laborers, those whom the plague had passed by recognized the opportunity that was placed in their hands and made bold and determined strikes for freedom. The line of demarcation between the rich and the poor was painfully distinct, with the result that the same social and industrial questions that agitate the life of to-day sprang fully developed into existence in Wyclif's time. . . . Space forbids any reference in detail to the events by which Wyclif was led, step by step, to his final break with the church; but when it came, it was decisive, and marked the birth of new forces, and doctrines that were to result later in the religious reformation of the sixteenth century, and in the establishment of political and civil liberty in the seventeenth. . . . Just when Wyclif began his translation of the Bible into English cannot be determined, though the entire work was completed in 1382. It is certain that part of the Old Testament was translated by Nicholas of Hereford, one of Wyclif's Balliol scholars. The translation was made from the Latin Vulgate, which had already become very corrupt as the result of constant copying, without reference to Hebrew or Greek manuscripts; and so has the many defects of a translation from a translation. But the great truths of the Gospels and of the New Testament Wyclif wrote out not for scholars or nobles, but for the common people, and he suited his style to those for whom he wrote. Plain, vigorous, and homely were his expressions, yet of such dignity and solemn grace as to fix the attention of all readers. . . . The unfinished work of revision was taken up by Wyclif's friend and curate at Lutterworth, Richard Purvey, and was completed in 1388. Purvey's Preface to his great work is hardly less interesting than the work itself, manifesting as it does the spirit and purpose that had animated him in his labors. He says: 'A simpel creature hath translated the scripture out of Latin into Engliche. First, this simpel creature had much travalye [labor] with divers fellows and helpers to gather many old Bibles and other doctours and glosses to make *one Latin Bible some deal true and then study it anew*, the texte and any other help he might get, especially Lyra on the Old Testament, which helped him much with his work. The third time to counsel with the olde grammarians and olde divines of hard words and hard sentences, how they might best be understood and translated, the fourth time to translate as clearly as he could to the sense, and to have many good fellows and cunnynge at the correcting of the translation. . . . A translator hath great nede to studie well the sense both before and after, *and then also he hath nede to live a clene life and be full devout in preiers, and have not his wit occupied about the worldi things, that the Holy Spyrut, author of all wisdom and cunnynge and truthe, dresse him for his work, and suffer him not to err.*' These two versions are generally classed together as the Wyclif Bible and rightly so, if one understands their history. Purvey's work was done in no spirit critical or envious of his master's, but in

the most loving sympathy, and all that gave to Wyclif's translation its distinctive strength and charm was retained. Notwithstanding the great expense of this work, its circulation must have been very extensive, as, in spite of all the penal acts of the few years following whose purpose was to utterly destroy every vestige or line of the books, there are now in existence one hundred and seventy copies of the Wyclif Bible. The hunger of the people for the Word becomes strikingly manifest when we realize that, as an old writer has stated, 'the readers of the book were burned with the copies around their necks; that men and women were executed for teaching their children the Lord's prayer and the commandments in English; that husbands were made to witness against their wives, and children forced to light the death fires of their parents; and possessors of the banned Wyclif's Bible were hunted down as if they were wild beasts.' 'Certes,' says old John Fox, 'the zeal of those Christian days seems superior to this of our careless times.'

"That 'God moves in a mysterious way His wonders to perform' is recognized as a truism; nor is it less marvelous how He uses the most untoward and unrelated events, apparently, to further His vast designs. About twenty-five years after Wyclif had fallen asleep, little Johann Gooseflesh [Gensfleisch] was having a dull morning in his German home. Left to amuse himself he began to cut the letters of his name out of bark, and to put them together in their proper order. Accidentally dropping the last one into a pot of purple dye that stood beside the stove, he thoughtlessly thrust his hand into the boiling liquid and pulled the letter out, only to drop it again as quickly. But this time it fell upon a white dressed skin that was lying close at hand, and lo! he had a beautiful purple 'h' printed on a rich yellowish ground of vellum. It was a trifling matter, but evidently impressed itself upon little Johann's mind; for about forty years later Johann Gutenberg—he has dropped his father's name and taken his mother's more euphonious one—is turning out the first book ever printed from movable type, in 1456. And what could be more fitting than that it should be a copy of the Latin Vulgate Bible [see PRINTING AND THE PRESS: Before 14th century; 1430-1456], which is now known as the 'Mazarin Bible,' and has become one of the rarest and most costly books in the world—the last copy sold a few years ago, from the library of Lord Ashburnham, having brought £4,000, or \$20,000. A few years before the invention of printing and the publication of the first printed book, the detestable Turk had begun to close in upon Constantinople with his armies. Happily there had been living in that city many very learned Greek scholars, whose worldly goods consisted chiefly of old manuscripts of the works of Homer, and of Plato and Aristotle, of Aeschylus, Sophocles, and Euripides; and far more interesting for our purposes were the many copies they had of very old manuscripts of the Bible in Greek. Fearing the excesses of the Turks they began to migrate into western Europe, bearing their sacred treasures with them. They found friendly shelter at the courts of some of the patrons of learning, like the Medici in Florence, and at the great universities. And for the first time all the glories of Greek literature and philosophy illuminated the intellectual world of western Europe. Hungry Bible students became possessed of ancient texts of the Bible books in their original language and so became familiar with readings by which it was possible to correct the corrupt texts of the Vulgate. The effect of all this was electrical, and the light of the new

learning soon banished the shadows of the Dark Ages, stirring enthusiasm and arousing such a larger thirst for knowledge as never had been known before. So little Johann Gooseflesh and the unspeakable Turk became the moving forces in events the most beneficent for all mankind that have occurred since the Saviour walked the earth. With this broadening of the intellectual vision came the impulse to test everything; and all existing institutions,—political, religious, social,—all were put on trial. This awakening was one phase of the great change called the Renaissance which came over the Western world, starting at an undefined period towards the close of the Middle Ages, and whose influence is still potent among all civilized peoples. As has been well said: 'Expressed in terms of literature, we call it the revival of letters. Expressed in terms of religion, we call it the Reformation. Contrasted with mediævalism the Renaissance is like a bright fresh morning after a close and sultry night. It represents the change in men's views of life from asceticism to freedom and humanism; from the monastery to the college; from a civilization based on Feudalism and educated by the Latin Church to a civilization educated by science and based, within the restrictions of nationality, in a spiritual inter-community of ideas and interest.' An interesting fact regarding this great movement on its religious side is that it has been confined, almost without exception, to races of Teutonic descent; while all the Latin races, and those that have come under their conquering influence, have clung to the old Church. Among these Teutonic races the Bible has been the teacher and guide in their continued advance toward civil and religious liberty. Luther posted his famous 'Theses' on the door of the church at Wittenberg in 1517, which was the first definite step in the great religious reformation; and the smoke of the initial battle had hardly cleared away before he was at work upon his translation of the Bible into the popular German tongue; he, like all the great reformers, being convinced that neither civil nor ecclesiastical absolutism could long hold in their fetters peoples familiar with the great, essential truths of the Bible, all of which make for freedom. Luther's translation of the New Testament, with pertinent commentary, was published in 1522; and his completed Bible in 1534 [see GERMAN LITERATURE: 1350-1700; PAPACY: 1521-1522]. The New Testament, with many of Luther's tracts, soon found their way into England, and were somewhat important there; while, with the first printed edition of the Greek Testament, edited by the foremost Greek scholar of the age, Erasmus, they spurred on the impulse which was constantly becoming more imperative for an English Bible, translated directly from the new-old manuscripts which had only recently come to the knowledge of Western scholars."—*Ibid.*, pp. 414-410.—See also SCANDINAVIAN LITERATURE: 9th-14th centuries:

16th century.—Tyndale's translation of the Bible.—First division into chapters.—Final revision in 1534.—"In 1484, the year after the birth of Luther, and one hundred years after the death of Wyclif, William Tyndale was born, the most important personality connected with the whole history of our English Bible. Distinguished at a very early age for his remarkable scholarship, he was entered at Oxford, where he took high rank. Changing to Cambridge University later he fell in with Erasmus, who had recently completed his Greek Testament. Tyndale quickly made himself familiar with this, and his spirit was stirred to its depths by this wonderful revelation of Divine love. It had all the force of a new revelation, and

aroused a spirit of earnest study and discussion among the priests at the universities. . . . As has been said, the first printed book was the Mazarin Bible, published in 1456; and the impulse given to the new learning came largely as the result of the capture of Constantinople by the Turks in 1453. England, however, was more backward in appropriating the benefits resulting from those epochal events than were the nations on the Continent. Before the end of the fifteenth century about eighty editions of the Latin Bible had been published in different parts of Europe, and national versions of the entire Bible were circulating in the German, Italian, French, Dutch, Danish, and Spanish languages. In his most excellent work on the 'Evolution of the English Bible,' Mr. H. W. Hoare has collected some data showing how limited had been the facilities for the study of the original texts of the Scriptures, even if the scholars had possessed them. The public teaching of Greek was not introduced into the University of Paris until 1458, and its earliest teacher at Oxford was Grocyn, who went to the University in 1492. The first Greek grammar was published in 1476, the first Greek lexicon in 1480; while the earliest Hebrew grammar was printed in 1503, which was followed by the Hebrew lexicon three years later. The first printed Hebrew Bible appeared in 1486; and the first printed New Testament in Greek, by Erasmus, was published in 1516. Printing was first introduced into England by Caxton, in 1470. So that, even if the clergy had been animated by a desire to study any subjects other than those connected with ecclesiastical Latin and the scholastic theology, the 'tools' at their command could have afforded them but little aid in their work. But as a matter of fact there was an utter paralysis of moral and intellectual purpose among the clergy, which means, of course, among nearly all the so-called learned men of Europe, as the Church, as a general proposition, embraced within its fold all the scholars, as well as all the learning of the age. But this fact did not exalt the scholarship of the clergy to a high plane. Writing about the end of the fifteenth century the distinguished Cardinal Bellarmine, no unfriendly critic, said: 'Some years before the rise of the Lutheran heresy there was almost an entire abandonment of equity in the ecclesiastical judgments; in morals, no discipline; in sacred literature, no erudition; in divine things, no reverence. *Religion was almost extinct.*' And a few years later, in the preface to his work entitled 'The Obedience of a Christian Man,' Tyndale wrote: 'Alas! the curates themselves, for the most part, wot no more what the New or Old Testament meaneth than do the Turks, neither care they but to mumble so much every day as the pie and poppinjay speak, they wot not what, to fill their bellies withal. If they will not let the layman have the word of God in his mother's tongue, yet let the priests have it, which for the greater part of them do understand no Latin at all, but sing and patten all day with the lips only, that which the heart understandeth not.' Still a little later, Hooper, Bishop of Gloucester, made a visitation in his diocese, and examined three hundred and eleven clergy. Of these, he reported, *one hundred and sixty-eight were unable to repeat the Ten Commandments; thirty-one were ignorant from whence the Decalogue came; forty could not repeat the Lord's prayer, and about the same number did not even know to whom it should be ascribed.* If such were the shepherds, what of the sheep? . . . Before leaving the university Tyndale had already begun his work of translation; and having heard that Tunstall, the Bishop of London, was a patron

of the new learning, he asked for permission to carry on the work in the episcopal palace under the bishop's patronage. But it was in the study of classical authors only that Tunstall was interested, and Tyndale's proposal received a very cold reception. Through the generosity of a wealthy merchant who had heard him preach, however, and who had become interested in him, Tyndale was able to continue his study and his work of translation during the greater part of the year 1523 under his patron's roof, and with his generous support. But what he saw of the life of the clergy in London during the year proved to him that no mercy would be shown to one who should undertake to give to the people the Bible in their own tongue. Already many of Luther's writings were finding their way into England, and he saw men led to prison and even to execution for possessing and reading such works. 'Wherefore,' as he sadly said, 'I perceived that not only in my Lord [Bishop] of London's palace but in all England there was no room for attempting a translation of the Scriptures.' So in 1524 he sorrowfully left his native land never to see it again; and at Hamburg, in poverty and in distress and in constant danger, he most diligently prosecuted the work of translation, with the result that in 1525 he was able to go to Cologne, the most famous center of printing at that time, and place the copy of the translation in the printer's hands. It was arranged that three thousand copies should be issued in a small quarto edition, with a prologue, references, marginal notes, and with divisions into chapters,—*the division of chapters into verses came much later*. But the spies of the Inquisition were everywhere through Europe; and one of its agents, Cochlaeus, . . . was then in Cologne looking after the publication of a book of his own. . . . [Here] he gradually learned the facts regarding Tyndale's translation, Cochlaeus at once applied to the magistrates, demanding that the sheets be seized and the work stopped; and also dispatched a messenger to the English bishops warning them of their unexpected danger. But, bappily, Tyndale was informed at his lodgings of what had happened; and with a friend rushed to the printer's, seized all the sheets that were printed, and hurriedly fled to Worms, where the enthusiasm for Luther and the Reformation was then at its height. There he at length succeeded in his noble purpose, *producing for the first time in modern English a complete New Testament*. Knowing that as a result of the disclosures of Cochlaeus the greatest vigilance would be exercised to prevent the entry of the books into England, they were dispatched secretly, packed in all kinds of merchandise, in barrels, in bales of cloth, in sacks of flour, and in every covert way that could be devised. Thousands of copies were, however, seized and burned with solemn ceremony at the old cross of St. Paul's 'as a burnt offering pleasing most to Almighty God'; but other thousands supplied their place. The Church had not now to contend with the slow methods of production that attended the distribution of Wyclif's New Testament; the printing press could defy the utmost diligence of the opponents of the work. 'In burning the book,' wrote Tyndale, 'they did none other thing than I looked for; no more shall they do if they burn me also, if it be God's will that it should be so.'

"Seeing that they could not keep the books out of the country, Bishop Tunstall conceived the brilliant scheme of buying up the whole edition in Germany. He accordingly sought out a merchant having extended connections with

German business houses, Augustine Pakington. 'Deeming,' as the old chronicle has it, 'that he hadde God by the toe, whanne in truthe he hadde, as after he thought, the devyl by the fiste,' the bishop urged Pakington to use all diligence and get the books for him, and he would gladly give him whatever they might cost; as he intended 'surely to destroy them all and to burn them at Paul's Cross.' A short time after, Pakington, who was friendly toward Tyndale and knew that his funds were low, sought him out and said: 'Master Tyndale, I have found you a good purchaser for your books.' 'Who is he?' asked Tyndale. 'My Lord of London.' 'But if the Bishop of London wants the books it must be only to burn them.' 'Well, what of that? The Bishop will burn them anyway, and it is best that you should have the money to enable you to imprint others instead.' 'So,' as the chronicle continues, 'the Bishop had the books, Pakington had the thanks, and Tyndale had the money.' 'I am the gladder,' quoth Tyndale, 'for these two benefits that shall come thereof. I shall get money to bring myself out of debt, and the whole world will cry out against the burning of God's word; and the overplus of the money that shall remain with me shall make me more studious to correct the said New Testament, and so to imprint the same once again, and I trust the second will be much better than ever was the first.' Finding that burning Tyndale's books could not prevent their distribution, a vigorous denunciation of them was made from all the pulpits of the land, which was more effective, as only one side of the question was presented. In 1520, however, one of the most powerful preachers of the time, Hugh Latimer, who fortunately enjoyed the favor of the King, preached at Cambridge his celebrated 'Sermons on the Card,' in which he fearlessly championed the translation and universal reading of the Holy Scriptures. The rage of the friars knew no bounds, and it was especially quickened by the realization of the fact that his reasoning was so unanswerable. After many conferences, however, they decided that an opposition sermon must be preached. Friar Buckingham was chosen as their champion, and a Sunday was selected on which he should answer Latimer. On the Sunday named, a great audience assembled; and to illustrate the character of the arguments of the opponents of biblical translation, we quote a few sentences from the sermon. 'Thus,' asked the preacher triumphantly, 'where Scripture saith, no man that layeth his hand to the plough and looking back is fit for the Kingdom of God, will not the ploughman when he readeth these words be apt to forthwith cease from his plough, and then where will be the sowing and the harvest? Likewise, also, whereas the haker readeth, 'A little leaven eneneth the whole lump,' will he not forthwith be too sparing in the use of leaven to the great injury of our health? And so, also, when the simple man reads the words, 'If thine eye offend thee, pluck it out, and cast it from thee,' incontinent he will pluck out his eyes and so the whole realm will be full of blind men, to the great decay of the nation and the manifest loss of the King's grace. And thus, by reading of the Holy Scripture, will the whole realm come into confusion.' . . . In spite of all opposition Tyndale's books were everywhere bought, talked about, and read. . . . But Tyndale had not rested after the completion of his earlier work. He soon began the great task of translating the Old Testament from the original Hebrew into English; and as the first fruit of this labor

appeared his translation of the Pentateuch in 1530. In 1531 he published his translation of the book of Jonah, with a lengthy prologue, reviewing the condition of ecclesiastical affairs in England. After this for some time he seems to have devoted himself to revision, as he expressed his purpose of doing when Pakington's deal with the Bishop of London was consummated; *with the result that in 1534 he published a thorough revision of his New Testament of 1525. This revision has always been regarded as the crowning glory of the great scholar's work.* He had carried into it the same pious enthusiasm which had characterized his labors in translation. The first edition had appeared anonymously for several reasons; but the revision of 1534 had Tyndale's name on the title page, and the preface is headed, 'William Tindale yet once more to the Christen reader.' Prefaces were also written for each book excepting Acts and Revelation, and the original marginal notes were all rewritten.

"But Tyndale's enemies were many and powerful in England, and they were not inactive. For years the weary, hunted, hungry, poverty-stricken exile in German towns had eluded emissaries, though all the subtle craft of the state as well as of the Church had been exercised to get him into their power. But he 'was simple, and inexpert in the wily subtleties of the world'; and through the influence of Sir Thomas More a villainous clergyman, of the most plausible appearance and character however, was sent to Antwerp, where Tyndale was then working, to gain the friendship and confidence of the lonely exile. The scheme worked only too well. Tyndale became deeply attached to this man Phillips, and confided in him, even loaning him money from his ill-lined purse, and caring for him in sickness. His friend Poyntz, with whom Tyndale was lodging in Antwerp, was suspicious of Phillips and warned his lodger to be on his guard. Unfortunately, however, Phillips one day succeeded in leading him some distance from his lodgings, when confederates attacked them, and Tyndale was carried off to the Castle of Vilvorde, near Brussels, where he was cast into a dungeon, which he was never to leave again. . . . After a confinement of about eighteen months, of which but few particulars are obtained, on the 6th of October, 1536, the great, good man was strangled at the stake, and then his body burned to ashes,—his last words being, 'Lord, open the King of England's eyes.' All previous English Versions of the Bible, or parts of it, were simply translations of translations, being taken from some edition of the Vulgate, or older Latin Versions. Tyndale's translation is distinguished not only by the fact that he went back for the first time to the original Hebrew and Greek texts, seeking the true meaning of Scriptures in the original language, but also because of the wonderful character of the translation itself. He fixed for all subsequent time the mold in which the Scripture translations should run, and all later versions, including our so-called Authorized Version, are in reality little more than revisions of Tyndale's work; and all the simplicity, the beauty, the majesty of language and style that have made our Bible the crowning glory of the English language,—all belong to Tyndale. As Froude has well said: 'The peculiar genius which breathes through the English Bible, the mingled tenderness and majesty, the Saxon simplicity, the grandeur, unequalled, unapproached in the attempted improvement of modern scholars, all are here, and bear the impress of the mind of one man, and that man, William Tyndale.'—*Ibid.*, pp. 419-424.

16th-17th centuries.—Coverdale's, Matthew's and Taverner's Bible.—The "Great Bible."—Influence on language and literature.—"After Tyndale, the name most frequently and most closely connected with Bible revision was that of Myles Coverdale. Born in 1488, he was as a young man, attached to the monastery of the Augustine friars at Cambridge; and later was a member of the 'Club of Lutherans' in the University. Though little is known of his early life, he seems to have been an occasional visitor at the house of Sir Thomas More, and to have become intimately acquainted with [Thomas] Cromwell, who was rapidly rising in power and was to succeed his master, Wolsey, in his influence with Henry VIII. About the year 1526 Coverdale became a secular priest, and in 1528 worked in the county of Suffolk. In 1529 he is said to have met Tyndale at Hamburg, and to have worked with him on his translation of the Pentateuch. Though there is no reliable account of Coverdale's movements between 1529 and 1535, it has been surmised that Cromwell, who had become Secretary of State, seeing the course affairs were taking, determined to be ready with a new Bible to introduce at the opportune moment. Knowing Henry's hatred of Tyndale and the consequent impossibility of using his translation, the supposition is that the Secretary communicated with his old friend Coverdale, encouraging him to be ready with a version of his own. However this may be, it is certain that in 1536, while Tyndale still languished in the Vilvorde dungeon, a new Bible appeared in England, printed in black letter, and of small folio size, containing an elaborate and obsequious dedication to King Henry, which was signed by his 'humble subjecte and dayle oratour, Myles Coverdale.' This Bible makes no pretense to being a new and original translation; it is, as its title page states, 'translated out of Douche and Latyn into Englishe, with the help of five sundry interpreters.' That is, translators; and the chief of these was evidently Tyndale, whom he practically copies in the New Testament. This Coverdale Bible is sometimes called 'The Treacle Bible,' because of its rendering of Jeremiah viii. 22: 'Is there no treacle in Gilead?' The exigencies of the obsequious editors are well illustrated by the reference to the King's 'dearest, juste wyfe, and most virtuous princesse,' who is named in the first edition as *Ane*. Dr. Smythe tells us that the copy now in the British Museum has the same inscription, but *Ane* has been changed to *Jane*,—thus, *JANE*. Other copies have some *Ane* and some *Jane*, while some leave the space blank, the editors apparently being unable to keep pace with Henry's rapid matrimonial ventures.

"The version known as 'Matthew's Bible' appeared in 1537. This was really the work of John Rogers, one of the noted early reformers and the literary executor of Tyndale, who suffered martyrdom during Mary's reign. The suppression of his name is easily accounted for by his well-known close connection with Tyndale, as well as on account of his liberal opinions. This version was Tyndale's work pure and simple, excepting the latter half of the Old Testament, which the latter did not live to complete; that matter was taken chiefly from Coverdale's Bible. The peculiar thing about the reception of Matthew's Bible was the fact that Tyndale's work was not recognized at the time, though all his anti-papal marginal notes were reproduced exactly as in the original edition. Archbishop Cranmer, one of the Tyndale's bitterest opponents, declared the Matthew's 'better than any translation heretofore made,' and he would 'rather see it licensed by the King than

receive £1,000.' Moreover he thought 'if they waited till the bishops should set forth a better translation they would wait till the day after doomsday.'

"In 1539 what is known as 'Taverner's Bible' appeared; but this was little more than a revision of 'Matthew's Bible,' by a private scholar. But there were several reasons, mostly political, why none of these versions were entirely satisfactory. Cromwell and others high in authority were determined to have the Scriptures in a form that should really be worthy to stand as a National Bible. Again Coverdale was appealed to and he took charge of the work. Apparently thinking that there was virtue in bigness, it was arranged that this should be the largest Bible ever made, and that it should be produced in the most perfect form mechanically. Accordingly, it was arranged that the printing should be done by Regnault of Paris, one of the most famous book-makers of the period; and Coverdale went to Paris in 1538 to supervise the work. Although Regnault had a special license from the King of France to prosecute this work, they labored in constant fear of the interference of the Inquisitor General of the Inquisition; and before the work was completed in December, an order for confiscation was issued, and Regnault was cited. By some peculiar business transaction, however, in which bribery was understood to be an important factor, a large proportion of the sheets were soon recovered; and then Regnault's entire outfit for this work was moved to London,—compositors, type, presses, and all,—where the work was completed. This 'Great Bible' as it has always been called, was first published in April, 1539, and *'was authorized to be read and frequented in every Church in the Kingdom.'* It was a very large folio, in black letter, and was regarded as the finest specimen of the printer's art extant. One of its distinctive features was a marvelous allegorical frontispiece said to have been designed by Hans Holbein. In anticipation of the appearance of this work Cromwell had prepared an injunction, issued in September, 1538, by which all the clergy were ordered to provide before a specified date *'one boke of the whole bible, in the largest volume, in Englyshe, sett up in summe convenient place within the church that ye have cure of, whereat your parishoners may most commodiously resort to the same and read yt.'* This injunction had the full authority of a royal command; and thus within thirteen years of the burning of Tyndale's New Testament at St. Paul's cross, the battle for the free use of the English Bible had been fought and won. First, forbidden; then, silently tolerated; and next licensed, it was now commanded by the King's highness to be set up for the benefit of each one of the many thousand parishes of the land. This meant that in every church at least one of these 'Great Bibles' should be placed on a stand, or attached to the pillars or wall of the church in such a way that any person who was so inclined could have free access to it at any time. Bishop Bonner had six of the Bibles set up in St. Paul's; and we are told that 'many well disposed people used much to resort to the hearing thereof, especially when they could get any that had an audible voice to read to them.' And the name of one young man, otherwise unknown to fame, John Porter, has become historic, because he was large of body and lusty of voice, 'a fresh young man of big stature,' who delighted many by his reading of the Word. As the old chronicle has it: 'One John Porter used sometimes to be occupied

in that goodly exercise, to the edifying of himself as well as others; and great multitudes would resort thither to hear him, because he could read well and had an audible voice.' And the old annalist, Strype, in his life of Archbishop Cranmer, said: 'It is wonderful to see with what joy this book of God was received, not only among the learned sort, but generally, all England over, among all the vulgar and common people, and with what greediness God's word was read. Everybody that could bought the book, or busily read it, or got others to read it to them.' But what was this 'Great Bible'? It has been variously described as a compilation from Matthew's and Coverdale's Bibles, and as a revision of Matthew's, Coverdale acting as editor, with reference to some other versions. But the interesting fact is that it is, like its predecessors, in reality only another version of Tyndale's great work; and that the noble martyr 'though dead, yet speaketh.' A second edition, in which parts of the Old Testament were revised, appeared in April, 1540, which was followed by two more editions that year, and three the next year, 1541. The edition of November, 1540, bore on its title page an authorization by Tunstall, Bishop of London, who thus gave official sanction to the work of Tyndale, which fourteen years before he had proscribed and burned at the cross of St. Paul's.

"But a reaction now set in, which temporarily checked the continued publication of the Scriptures, though it did not quench the zeal of the people. Henry was no more pleased with the spirit to which the teachings of the Bible were giving life, than he had been with the overbearing claims of the Papacy; and after the execution of Cromwell he became distinctly hostile to the principles and practices of the Protestant leaders. In 1543 it was ordered that all translations of Scriptures bearing the name of Tyndale should be destroyed; that all notes and comments in other Bibles should be obliterated; and the common people were forbidden to read any part of the Bible either in public or private. In 1546 Coverdale's New Testament was joined in the same condemnation as Tyndale's, and a great destruction of the earlier Testaments took place. So that not only was the making of new translations suspended for several years, but the very existence of all that had been made was endangered. But the common people had already caught clear visions of a realm of light and freedom, and no royal command could quench their thirst for further knowledge. When the Great Bibles were set up in the churches to be read by all men, the gates had been opened, and no earthly power could close them again. It is difficult for us of the twentieth century to appreciate what this change meant. Accustomed as the English speaking peoples of to-day are to the issue of a score of thousand of new books every year, on every conceivable subject, and to the daily, weekly, and monthly ministrations of a like number of papers and periodicals of every character, we can with difficulty place ourselves in the position of our English ancestors of the early days of Elizabeth, when the Bible was practically the only literature with which they were familiar. As [John Richard] Green has said: 'The whole moral effect which is produced now-a-days by the religious newspapers, the tract, the essay, the missionary report, the sermon, was then produced by the Bible alone; and its effect in this way, however dispassionately we examine it, was simply amazing. The whole nation became a church.' The English people have, in a very true sense, been the people of one book;

and to form any definite and proper estimate of the value of that book, one must realize how it has entered into, given direction to, and affected the trend of all the literary, social, political, and religious thought and activities of that people from the days of the new birth, or Renaissance, down to what we are pleased to consider the full-orbed day of civil and religious liberty, and of general enlightenment, in which we live. That this has been so, is the result of conditions that attended the first presentation of the Bible to the people; and as it would be idle for another to try to improve upon the account of those conditions which Green has so superbly and interestingly elaborated in his 'History of the English People,' we shall quote a few sentences from his account to illustrate our position. 'All the prose literature of England,' he says, 'save the forgotten tracts of Wycliff, has grown up since the translation of the Scriptures by Tyndale and Coverdale. So far as the nation at large was concerned, no history, no romance, hardly any poetry, save the little-known verse of Chaucer, existed in the English tongue, when the Bible was ordered to be set up within the churches. Sunday after Sunday, day after day, the crowds that gathered round the Bibles in the nave of St. Paul's, or the family group that hung on its words in the doctrinal exercises at home, were leavened with a new literature. Legend and annal, war-song and psalm. State-roll and biography, the mighty voices of prophets, the parables of Evangelists, stories of mission journeys, of perils by sea and among the heathen, philosophic arguments, apocalyptic visions, all were flung broadcast over minds unoccupied for the most part by any rival learning. . . . The power of the book over the mass of Englishmen showed itself in a thousand superficial ways, and in none more conspicuously than in the influence it exerted on ordinary speech. It formed, we must repeat, the whole literature which was practically accessible to ordinary Englishmen; and when we recall the number of common phrases which we owe to great authors, the bits of Shakespeare, of Milton, of Dickens, of Thackeray, which unconsciously interweave themselves in our ordinary talk, we shall better understand the strange mosaic of biblical words and phrases which colored English talk three hundred years ago. The mass of picturesque allusion and illustration which we borrow from a thousand books our fathers were forced to borrow from one. When Spenser poured forth his warmest love-notes in the "Epithalamion," he adopted the very words of the Psalmist, as he bade the gates open for the entrance of his bride. When Cromwell saw the mists break over the hills of Dunbar, he hailed the sunburst with the cry of David, "Let God arise, and let his enemies be scattered. Like as the smoke vanisheth, so shalt thou drive them away." Even to common minds this familiarity with grand poetic imagery in prophet and apocalypse gave a loftiness and ardor of expression that, with all its tendency to exaggeration and bombast, we may prefer to the slipshod vulgarisms of today.'—*Ibid.*, pp. 424-428.

16th-18th centuries.—Geneva or "Breeches" Bible.—First division into verses.—Modern type first used.—The Bishop's Bible.—"The brief freedom that was accorded the people in the use of the Bible by Edward VI., who succeeded Henry VIII. in 1547, was again restricted under Mary, who came to the throne in 1553. . . . Although her reign lasted but five years, about three hundred Protestants were burned at the stake, including Cranmer and John Rogers, the real

author, as we have seen, of Matthew's Bible, and the friend of Tyndale. Prominent among the other prelates who witnessed to their faith at the stake, were Ridley, Bishop of London, and Latimer, Bishop of Worcester, celebrated alike for their great learning and virtue. . . . But our immediate interest lies with the little band of fugitives from the Marian persecutions which found a safe refuge in Geneva, where Calvin had already become firmly established, and which was a stronghold of the whole reform movement. Besides Calvin and Knox there was then in Geneva Theodore Beza, recognized as the foremost biblical scholar of that day. A distinguished body of French scholars was also assembled there, engaged in making a translation of the Bible into their language for the use of French Protestants. Into this congenial atmosphere came several of the leading English Bible scholars who had fled across the channel, including Coverdale; and they immediately began to work upon a revision of the 'Great Bible.' A New Testament was first issued in 1557 by Whittingham, a fellow of All Saints College, Oxford, and a relative of Calvin by marriage. But this was very soon superseded by a more comprehensive and complete revision of the whole Bible, in which work Coverdale, Beza, and others took part in addition to Whittingham. The bases used for revision were the 'Great Bible' for the Old Testament, and Tyndale's revision of 1534 of the New Testament. This 'Geneva Bible' as it has always been called, published in 1560, was notable in many respects. It was the first Bible printed in modern roman type instead of the old black letter which had always been used before. It was also the first Bible in which the modern division of chapters into verses occurs. In all previous translations only a division into chapters or paragraphs had been made, a form to which the Revisers of 1880 reverted. In the making of versions of the Bible, or New Testament, the custom of writing comments in the margin had been universal from very early times. Beginning with Wyclif these became of a polemical character, not merely explanations or illustrations of the matter of the text; and Tyndale and others followed the steps of Wyclif. The 'Geneva Bible' was not only richly supplied with marginal notes of this character, but also added a large number proclaiming the Calvinistic and Protestant teaching against the divine right of kings and all forms of absolutism,—an innovation which, we shall see later, played an important part in determining the form of our Authorized Version. The 'Geneva' was for a long time familiarly known as the 'Breeches' Bible, from its rendering of Gen. iii. 7, where Adam and Eve were said to have 'sewed fig-tree leaves together, and made themselves breeches.' Though it was never authorized for use in churches, its convenient form, a small quarto, its legible type, and its intelligent and sensible commentary immediately gained for it the popular approval, so that it became the Bible of the home and for all general reading; and during the half century that intervened between its publication and the completion of the King James version in 1611, more than one hundred and twenty distinct editions came from the press. Not the least interesting fact about this Geneva Bible, to American readers, is that it was the Bible used by our Puritan ancestors, and the one which the Pilgrims brought with them to Plymouth in 1620.

"With the accession of Elizabeth in 1558, a brighter day dawned for the English Bible, as with the death of Mary had closed the final chapter in the history of the supremacy of the Catholic

Church in England and Scotland. The public reading of the Bible in the churches was at once restored and the clergy were again required to have a copy of the 'Great Bible' publicly displayed in the churches to which all should have free access. The publication of the Geneva Bible, however, at once weakened the position of its rival, even churchmen recognizing the great superiority of the former. But the partisan character of its notes made its acceptance for use in the public service of the churches out of the question. Consequently Parker, Archbishop of Canterbury, conceived the idea of a revision of the Great Bible to be made by a number of scholars working separately. Portions of the Bible were assigned to each of the divines selected for the revision, and the whole work then passed through the hands of the archbishop as editor. This was known as the 'Bishop's Bible,' and was published in 1568. It at once superseded the 'Great Bible' for use in the churches, no edition of the latter having been printed later than 1569. As a whole, however, the work was far from satisfactory, and the Geneva Bible still easily held its place in popular favor, the Bishop's having practically no sale except for use in the churches. During the last third of the sixteenth century, therefore, there were three different Bibles in more or less common use; the 'Geneva,' in the homes and the familiar use of the people; the Bishop's, the translation supported by ecclesiastical authority; and the 'Great Bible,' which was still to be found chained to the walls or pillars of many churches throughout the kingdom."—*Ibid.*, pp. 428-431.

17th century.—King James and the Authorized Version of 1611.—"Upon the death of Elizabeth the crown passed from the Tudors to the Stuarts, and James VI. of Scotland became James I. of England. One of the most peculiar and uninteresting kings that ever sat on any throne, it seems passing strange that we owe to one of his pronounced peculiarities,—his inordinate love of theological disputation,—the most admired of the English versions of the Bible. . . . His reading, especially in theology, was exhaustive; and he was a voluminous author on subjects which ranged from predestination to tobacco. But his shrewdness and learning only left him, in the phrase of Henry IV. of France, 'the wisest fool in Christendom.' Very early in his reign grievances from the Puritan wing of the church were pressed upon the King, and in 1604 he held a conference at Hampton Court to consider the subject of toleration, to which bishops and Puritan clergy were alike invited. In the course of a lengthy discussion of religious affairs, Dr. Reynolds, a Puritan, and the head of Corpus Christi College, Oxford, urged the need of a new revision of the Bible, which should be such as could be accepted by all, and so become a bond of union between rival religious communities. Coming from a Puritan the proposition seemed likely to fail of serious consideration, Bancroft, Bishop of London, remarking 'if every man had his humor about new versions, there would be no end of translating.' But the proposal appealed to James, and he quickly saw that such a work well done would confer great distinction on his reign, while having, in a sense, the supervision of it would afford him many opportunities for the display of his theological learning, of which he was inordinately proud. Moreover he had had many and irritating controversies with the Calvinists of Scotland, Andrew Melvil, for instance, once having snapped his fingers in the King's face, and called him 'God's silly vassal.' He had, therefore, conceived a violent hatred of

the 'Geneva Bible,' whose whole atmosphere was hostile to the cardinal doctrine of the Stuarts,—'the divine right of kings.' It is not surprising, therefore, that James shortly after suggested a scheme for the prosecution of the work, along the general lines that the revision should be executed mainly by the universities; that it should be approved by the bishops and most learned men of the whole church, by the privy council, and by the King himself, so that the whole church should be concerned in it; and especially important, in view of the results, was the absolute prohibition of the usual marginal commentaries which might tend to make it a Bible of one party only,—marginal notes only to be used for the purpose of explaining, when deemed necessary, any Hebrew or Greek words. The scheme of revision was drawn up in 1604, though the work was not formally begun until 1607. The body of revisers was a very able one, including the professors of Hebrew and Greek at both universities, with practically all the leading scholars of the day. Their number varied from forty-eight to fifty; and they were divided into six groups, of which two sat at Westminster, two at Oxford, and two at Cambridge. In the first instance each group worked separately on a special part of the Bible assigned to it, and when any group had finished the revision of its allotted portion, the matter was sent to all the others for their criticism or suggestions; while ultimate differences of opinion were to be settled at a general meeting of the chief members of each company. Two years and nine months of arduous labor were consumed in the work, the last nine months being devoted to the final revision; and in 1611 the results of their labors were published. *This has always been known as the 'King James Version,' or as the 'Authorized Version,' by which title it is most frequently designated and cited;* yet, strangely, apart from the appearance on the title page of the words 'appointed to be read in the churches,' *there is no record whatever of any decree of King, parliament, or convocation, ordaining its use.* As against the Bishop's Bible it quickly established its superiority; but the struggle between it and the Geneva Bible was long and somewhat heated, and for more than fifty years they existed side by side, just as the Authorized Version and the Revised have existed since 1885. But the recognized superior merit of the King James Version, and its freedom from any party or sectarian spirit, eventually won the day for it, so that by the middle of the seventeenth century it had taken its undisputed place as the Bible of the English nation. All learned and serious-minded people realized that in its preparation the translation had passed out of the sphere of controversy; that it had been made a national undertaking in which no one had any interest at heart save that of producing the best possible version of the Scriptures. But another important element that contributed to the excellence of the translation was the constant improvement of literary expression and taste during the fifty years preceding the revision. We have already referred to the absolute lack of books and of literary culture when the 'Great Bible' was published; but in the intervening period some of the most noted poets and prose writers of English literature,—Spenser, Sidney, Hooker, Marlowe, Shakespeare, to name only a few of the greatest,—had combined to establish and cultivate a literary style and to fix a high standard of literary taste. *And it was under such influences that the revisers wrought out the fine material left them by Tyndale and his successors into that grandest monument of Elizabethan prose,*

the version of 1611. As one has well said: 'The English of the Authorized Version is the finest specimen of our prose literature at a time when English prose wore its stateliest and most majestic form.'—*Ibid.*, pp. 431-432.

Bible used in Roman Catholic Churches.—“As the history of the Bible as used in the Roman Catholic churches, and the measure of its agreement with the one used in the Protestant churches is not generally understood, it seems desirable to describe the origin and development of the former, as we have already done of the latter. In 1903 Miss Helen Gould, having had some controversial correspondence with Father Early of Hastings-on-the-Hudson, offered through Dr. White, president of the Bible Teachers' Training School, prizes for the three best essays upon the accepted Catholic Bible and the American revision of 1901. These prizes were respectively one thousand, five hundred, and two hundred and fifty dollars. Two hundred and sixty-five essays were submitted. A competent and scholarly board of seven judges unanimously agreed upon three of these as most completely and learnedly covering the ground specified. These have since been published in a volume entitled 'Roman Catholic and Protestant Bibles Compared. The Gould Prize Essays' (Charles Scribner's Sons). They give an amount of reliable information upon the subjects discussed—all buttressed by an array of references to and quotations from Catholic and Protestant Bible students, decrees of councils, and ecclesiastical authorities,—such as has never before been accessible to the general reader in a single volume in the English language. It is a work that every Bible student should be familiar with; and we gratefully acknowledge an indebtedness to it for many facts, and especially for the translations of church decrees, and similar documents. The Bible in use in the Roman Catholic Church has for its basic version the Vulgate of St. Jerome. An account of his preparation of that version has already been given above. In 1545 the Council of Trent, after a prolonged debate, decreed: 'The same old and Vulgate edition, which has been approved by long use for so many ages in the Church itself, is to be regarded as authentic in public readings, controversies, discourses, and expositions, and nobody may dare or presume to reject it on any pretense.' And it was further declared to be unlawful 'for anyone to print or cause to be printed any books whatsoever on sacred matters without the name of the author; nor to sell them in future, or even to keep them by them, unless they shall have been first examined and approved by the ordinary.' But the chief source of confusion in the church arose from the fact that there were so many and variant editions of the Vulgate in existence, scores of them differing one from another so that there could not be said to be any commonly received text. This point, however, was not touched upon by the Council of Trent. The oldest extant manuscript of the Vulgate, known as the *Codex Amiatinus*, as it came from the convent of Monte Amiata, near Sienna, Italy, is now the most valued treasure of the Mediceo-Laurentian library at Florence. It was originally made in England by order of Ceolfrid, and by him presented to Pope Gregory II. about 715 A. D. Even when this was made the texts must have been very corrupt, as copies had been made constantly during three hundred years; and as we have before shown, early scribes rarely hesitated to take liberties with the texts they were copying, adding or omitting words or phrases if such additions or omissions seemed to them to improve the text. As Gigot, the learned Professor of

Sacred Scriptures at St. Mary's Seminary, Baltimore, Md., says in his 'General Introduction to the Study of the Holy Scriptures': 'During the course of the two centuries which elapsed between the time of St. Jerome and the general reception of his work, corruptions of a very extensive character crept naturally into the text of the Latin Vulgate. Not only the ordinary mistakes of transcription . . . were made . . . but the peculiar relation in which our Vulgate stood to the old Latin Version . . . led to a strange mixture of texts. From sheer familiarity with the words of the older version the transcribers of the Vulgate wrote down its words instead of those of St. Jerome. Another fertile source of corruption . . . consisted in the lack of critical sense in most of the transcribers and owners of manuscripts during the Middle Ages; time and again they inserted in their copies of Holy Writ glosses drawn from other manuscripts, from parallel passages, from the sacred liturgy, from the writings of St. Jerome, or even of Josephus, and thought that they had thereby secured what they were pleased to call *pleniores codices* (more complete texts), while they had simply added to the corruptions already existing.'

"Even when the Council of Trent convened more than seventy different editions of the Vulgate had been published since the invention of printing; and generally the printer used the most available copy without regard to its authenticity or accuracy. In view of these facts an appeal was made to the Pope shortly after the close of the Council to determine upon a text that should be deemed and recognized as authoritative. It was some years, however, before the subject received serious consideration. But toward the end of the sixteenth century one of the noted scholars of the church became Pope, as Sixtus V. In 1587 he appointed a committee of six scholars to revise the Vulgate, reserving for himself the decisive voice in the revision. As Pope, he prefaced this revision with a Bull giving it the approval of his 'apostolic authority transmitted from the Lord,' and decreeing that it should be used 'as true, legitimate, authentic, and undoubted in all public and private debates, readings, preachings, and explanations'; and anyone who ventured to change it without Papal authority would 'incur the wrath of God Almighty and of the blessed Apostles Peter and Paul.' Reserving a copyright for ten years, he ordered that all future editions must conform with it, and that all existing copies should be corrected by it and be officially certified by inquisitor or bishop. Sixtus dying in 1590 his revision was held for further scrutiny, as something like two thousand of his personal corrections of the committee's work had been proved erroneous. In 1592 a revision of the revision of Sixtus was issued under the authority of Clement VIII. This revision was also preceded by a Bull of Clement similar in terms to that of Sixtus. Corrected editions followed in 1592, 1593, and 1598, all of which are credited to Sixtus instead of Clement. . . . The Clementine Vulgate in the edition of 1598 became the authorized text of that version for use in the Roman Catholic Church, and is to-day the standard for all Catholic versions of the Scriptures, from which, according to the Bull of Clement, none may vary. The many translations of the Bible into the English tongue during the sixteenth century had excited a popular enthusiasm which affected Catholics as well as Protestants; and the apprehended danger to Catholic readers from contact with the marginal notes of the Protestant Bibles forced the authorities of the Roman Church to yield an unwilling assent to a translation for their own people. The reign of

Elizabeth was not a propitious one for the Catholic Church in England. Many of its priests and scholars, therefore, took refuge on the Continent; and among them was a distinguished and learned graduate of Oxford, William Allen. With the approval of the Pope he established, in 1568, a seminary at Douay, in France, for the training of English Catholics. Ten years later the school was removed to Rheims, where the translation of the Bible was begun. That it was not undertaken with good grace the preface to the work clearly shows. The translators there declare that they have not taken the step from an 'erroneous opinion of necessity that the Holy Scriptures should always be in the mother tongue, or that they ought to be read indifferently by all. Not for these causes do we translate this sacred book.' But they consider that some things are 'medicineable now that otherwise in the peace of the church were neither much requisite, nor perchance wholly tolerable.' Moreover Allen, in a letter, expressed his aversion to the work. 'Perhaps indeed it would have been more desirable,' he wrote, 'that the Scriptures had never been translated into barbarous tongues; nevertheless at the present day, when either from heresy or other causes, the curiosity of men, even of those who are not bad, is so great, and there is often also such need of reading the Scriptures in order to confute our opponents, it is better that there should be a faithful and Catholic translation than that men should use a corrupt version to their peril or destruction; the more so since the dangers which arise from reading certain more difficult passages may be obviated by suitable notes.' Associated with Allen in this undertaking were Gregory Martin, reputed to be one of the most learned Hebrew and Greek scholars of his time, Richard Bristow, and Dr. Worthington, all distinguished Oxford scholars. Martin translating, his co-laborers revised his work, with the result that in 1582 the New Testament, with notes by Allen and Bristow, was published at Rheims. As the standard Clementine Vulgate was published in 1598, a new edition of the Rheims New Testament was issued in 1600 at Antwerp. In 1609 the Old Testament, with notes by Worthington, was published at Douay, forming, with the New Testament described above, the Rheims and Douay Bible, or, as it is commonly called, the 'Douay Bible.' Though this has since been accepted as the authorized version of the Holy Scriptures to be used in the Catholic Church, it has never received Papal indorsement. As Cardinal Newman has said: 'It has never had any episcopal imprimatur, much less has it received any formal approbation from the Holy See. It comes to us on the authority of certain divines of the Cathedral and College of Rheims and of the University of Douay, confirmed by the subsequent indirect recognition of English, Scotch, and Irish bishops and its general reception by the faithful.' In making their translation Allen and his associates worked upon what they considered the best texts of the Vulgate. 'It must be said,' declares Professor Gigot, 'that, since the Douay version was made very closely from Latin manuscripts, or editions of the sixteenth century, anterior to the official texts published by the Popes Sixtus V. and Clement VIII., it may and does in several cases point to Latin readings no longer found in our editions of the Latin Vulgate.' The translators also followed closely in many places the English translations of Wyclif, Tyndale, and Coverdale. In fact it is only when these early translations are more or less closely adhered to that the Douay version is generally intelligible to the average English reader. A literal translation

of Latin words produced a hard and often incomprehensible literary work. That this fact was recognized by the translators is made evident by their reference to it in their preface. 'We have,' they say, 'kept ourselves as near as possible to our text and to the *very words and phrases made venerable . . . though to some profane or delicate ears they may seem more hard or barbarous.*' And it was this course, with the results it produced, which led the English revisers in publishing the King James version to suggest in their preface that the Douay translators had retained Latin words 'of purpose to darken the sense, that since they must needs translate the Bible, yet by the language thereof it may be kept from being understood.' This unintelligible character of much of the English of the Douay translation and the success of the King James version created a demand for a revision of the former, with the result that such works followed in frequent succession. The most noted of these was the translation of Challoner, Vicar Apostolic of London. In 1749 he brought out an edition of the Rheims New Testament and later of the Douay Bible, 'newly revised and corrected according to the Clementine edition of the Scriptures.' The changes from the language of the Douay version were so many that Challoner's was practically a new translation; and in this translation the King James Version was evidently his guide. So evident is this that Cardinal Newman wrote; 'Looking at Dr. Challoner's labors on the Old Testament as a whole, we may pronounce that they issue in little short of a new translation. They can as little be said to be made on the basis of the Douay as on the basis of the Protestant Version. Of course, there must be a certain resemblance between any two Catholic Versions whatever; because they are both translations of the same Vulgate. But, this connection between the Douay and Challoner being allowed for, Challoner's version is even nearer to the Protestant than it is to the Douay; nearer, that is, not in grammatical structure, but in phraseology and diction.' And further he says: 'After all allowances for the accident of selection (of passages for comparison) it is difficult to avoid the conclusion that at this day the Douay Old Testament no longer exists as a received version of the Authorized Vulgate.' Referring to the same author's revision of the New Testament, Newman says: 'The second Challoner edition of 1750 differs from the first, according to the collations which Dr. Cotton has printed, in about one hundred and twenty-four passages; the third, 1752, in more than two thousand. These alterations, Dr. Cotton tells us, are all in the direction of the Protestant Version.' And Cardinal Wiseman says: 'To call it any longer the Douay or Rhemish version is an abuse of terms. It has been altered and modified till scarcely any verse remains as originally published.'

'In 1783 the Rev. Bernard McMahon, of Dublin, published another revision of the Douay Bible, which is commonly known as the Troy Bible, from the prelate who gave his approbation to the translation. Though this work claims descent from the Challoner version, it differs from it materially, there being more than five hundred variations in the New Testament. These two revisions, however,—Challoner's and Troy's—have become the accepted authorities in the Church, though many other translations have since been made. In 1870 the Vatican Council restated the position of the Church in these words: 'The complete books of the Old and New Testaments with all their parts, as they are received in the decrees of the same Council (of Trent) and contained in

the old Latin Vulgate edition, must be received as sacred and canonical. The Church, moreover, holds these books as sacred and canonical not only because collected by man's industry, since they have been approved by its authority, nor for the reason only that they contain revelation without error, but because, by the inspiration of the Holy Spirit, the collections have God as their author, and as such the churches have handed them down.' The authority for the use of this version in the United States comes from the decrees of the Second Council of Baltimore, held in 1866. After charging that the clergy should take care that their flocks do not 'select the pure food of the word of God unless from approved versions and editions,' the Council declares its position as follows: 'We order, therefore, that the Douay Version, which is received in all churches where the faithful speak English, and which has been justly set forth for the use of the faithful by our predecessors, be altogether retained. Moreover the bishops will take care that the most approved copy should be designated by them, and all editions, both of the Old and New Testaments of the Douay Version be most perfectly made, with such notes as might be selected from the holy Fathers of the Church, or from learned Catholics.' It is evident, therefore, that no translation of the Bible into English has ever received the official approval of the Holy See. While the translation in general use is known as the Douay Bible, it is, nevertheless, Challoner's or Troy's revision of that text, which, as has been shown, amounted to practically new translations. Any of the many revisions that have been made may be used by members of the Catholic Church provided it has received the approval of a bishop or higher prelate. But the only version that has received ecumenical or papal authorization is the Vulgate itself. The position generally maintained by the clergy and laity of the Church was undoubtedly clearly expressed by Father Early in his letter to Miss Gould. 'The Catholic Church,' he wrote, 'has never prohibited any of her members reading the Scriptures or Bible. In every family whose means will permit the buying of a copy, there you will find the authentic version of God's words as authorized by the Church, and which has come down to us, unchanged, from the time of Christ himself. But the Catholic Church does object to the reading of the Protestant Version, which goes back only to the days of Henry VIII. of England, and was then gotten up for obvious reasons.'—*Ibid.*, pp. 432-437.

Curious misprints in old Bibles.—"Ever since the invention of printing the vagaries of compositors have bowed low the heads of publishers and excited the most profane sentiments of authors. That frequent errors should have been made in the earliest days of printing, and that they should have passed inspection and survived to enliven the printed page is hardly to be wondered at. Composition and proof-reading were not then the specialized arts they have since become. Holy writ and secular literature have alike suffered from the lapses of type-setters, many of which have produced a racy humor beyond the conscious wit of man to devise. Collectors of rare and curious books have long since fixed a great value upon certain editions of the Bible which, upon publication, were found to contain gems of the compositor's fancy. These have all been given distinctive titles, suggestive of the character of the blunder they have perpetuated. The *Breeches Bible* and the *Treacle Bible* have already been mentioned; and a brief description of the most valued of the

others may not be without interest. The *Printer's Bible* is so called because where in Psalm cxix. 161, the Psalmist declares that 'Princes have persecuted me without a cause,' he is made by the type-setter to say that, even at that early day, 'printers,' not princes, were the source of his troubles. The *Vinegar Bible* takes its name from an edition of the Authorized Version published in 1717, in which the head-line over Luke xx. calls attention to the 'Parable of the Vinegar,' instead of the Vineyard. The sixteenth verse of Jude reads: 'There are murderers, complainers,' etc. But the luckless compositor thought 'murderers' better expressed the author's meaning, and so became responsible for the *Murderer's Bible*. It would almost seem that the days of Elizabeth were more akin to the twentieth century than we are apt to appreciate; and that political bosses were then the sources of patronage as now. The one who set up the type for the Sermon on the Mount in the Geneva Bible of 1562 was unquestionably an office-seeker, and so naturally declared 'Blessed are the Place-makers' instead of Peacemakers; thus giving birth to the *Place Maker's Bible*. The evil-minded who would annul the Ten Commandments belong to all ages. It is not surprising, therefore, to find a compositor of the time of Charles I. immortalizing himself by producing the *Wicked Bible*, for which it was only necessary to omit the 'not' from the seventh commandment. All pure-minded people, however, will sympathize with the righteous indignation of Archbishop Laud, who promptly fined the offender in the sum of £300 sterling for his indiscretion.

"If St. Paul was conscious of events of the sixteenth century he must have felt that he had just occasion for the application of his injunction, 'Be ye angry and sin not.' For while he had sedulously labored to confirm the Corinthian Christians in righteousness, in I. Cor. vi. 9, urging 'Know ye not that the unrighteous shall not inherit the Kingdom of God?' another absent-minded compositor overlooked the negative, and thus knocked out one of the corner-stones of the great Apostle's theology by declaring that the unrighteous should inherit the Kingdom. And so we have the *Unrighteous Bible*. The *Bug Bible* is of particular interest because of the different use of words at different periods rather than from a printer's error. This edition of Coverdale's Bible made Psalm xci. 5, read: 'Thou shalt not need to be affrayed for eny *bugges* by night.' To the modern ear this has an unpleasant sound. But all disagreeable suggestions vanish when one remembers that the word 'bogy,' which we still use, was in the sixteenth century the common term for anything frightful or fearful, either in its present form, or as 'bug.' The latter is used in the same sense in Purvey's and Matthew's Bibles, though not there in the Psalm quoted. Shakespeare, also, in III. Henry VI., has: 'Warwicke was a *bugge* that fear'd (affrighted) us all'; and in another place: 'The *bug* which you would fright me with, I seek.' Coverdale's translation thus becomes more natural, though none the less amusing to modern readers.

Others, though less interesting and sought after, are the *Goose Bible*, the *Leda Bible*, the *He and She Bibles*, the *Standing Fishes Bible*, etc. Of course but few copies of these Bibles got into circulation, as the errors were quickly noted by some reader. The further issue was then delayed until the objectionable passages had been corrected."—*Ibid.*, pp. 437-438.

Revisions and new interpretations.—For more than two hundred and fifty years the grand old version of 1611 has been the word of God for all

English-speaking Protestant peoples, in all parts of the world. And when, during the latter part of the nineteenth century, urgent calls for a revision of it were made by scholars, the great mass of Christian people protested, and the question naturally was asked on all sides, 'Why do we need a revision?' . . . There are few who were children of Christian families of a half a century ago who were not taught that every individual word of the Bible they used was directly inspired by God,—a teaching that has worked more harm in the world, and made more skeptics, than all heretical teachings combined. The whole beauty and purpose of God's wonderful revelations of Himself, and His purposes, were missed and instead of seeking above all things to learn the will of the Father and then to develop a life in harmony with that will, all the energy of the great majority of Christians has been expended in well-nigh fruitless endeavors to minutely observe the mere letter of the law, while its spirit was too often entirely missed. . . . We have endeavored to show that our English Bible has been evolved, and that the form in which we know and love it is the result of a long series of revisions. Every devout Christian believes that God spake to Holy men of old, and the essential thing for His followers to know is just what He said, regardless of the form in which the message comes to us. For the New Testament we know that the message was written out some eighteen centuries ago in the form of original manuscripts in the Greek language; and for the Old Testament very ancient documents existed which were the written form of traditions that had been accumulated for centuries,—traditions handed down from generation to generation with an exactness of form that could not be made more perfect by the modern form of the printed book. But as we have shown, owing to the persecution of the early church and Christians everyone of such manuscripts had been lost before the fourth century; and for fifteen hundred years the only available form in which their message existed was the Latin Vulgate, itself Jerome's revision of the early Latin versions which in turn were translated from the original Greek Scriptures of the first and second centuries. From about 400 A. D. to 1500 A. D. the only standard to which all translations could be referred was the Vulgate; and as, during that long period, thousands of copies of it had been made, and its original was early lost, it hardly needs any argument to prove that many and perhaps important changes and corruptions must have crept in, and errors and omissions, or additions have been made to the original text. Consequently ever since the awakening of the Christian consciousness in the fourteenth century, the supreme desire of devout scholars has been to find that plumb line of Divine Truth, and to straighten their warped and ill-shaped forms of it by that standard. For the New Testament the imperative need was a reliable Greek text, one that could be relied upon as an essentially corrupt reproduction of the original form of the Gospels, Epistles, and other books. But it was not until 1516, when Erasmus published his Greek Testament, that any approximately accurate guide was obtained; and the material upon which he had to build was of doubtful authority, and unquestionably imperfect; yet it was upon such uncertain foundations that the revisers of 1611 had to build. But during the last century the situation has entirely changed. Not only have three very ancient texts of nearly the whole Bible been discovered (the codices described above), but thousands of other manuscripts, versions, and documents have

come to light, which were entirely unknown to the makers of the Authorized Version. Moreover during the last century a large body of the world's most learned men have devoted their entire study to the comparison and collating of all this material, that is, to textual criticism, with the result that forty or fifty years ago these scholars became assured that they were in a position to determine with great exactness just what the original texts of the Scriptures were; and men like Tischendorf, Tregelles, Westcott, and Hort, were able to practically agree upon a Greek Text for the New Testament which has proved acceptable to all men learned in textual criticism. Their researches had proved beyond question that many readings of our King James Version were erroneous; and the question became a dominant one whether as Christians we should have and teach the word as Christ and the Apostles spoke and wrote it, or whether we should still be content with a superb and grand literary production irrespective of the relation of its contents to the exact truth. Happily the desire to know the truth prevailed; with the result that on the 10th of February, 1870, Bishop Wilberforce proposed in the upper house of the Southern Convocation 'that a committee of both houses be appointed to confer with any committee that may be appointed by the convocation of the northern province, to report on the desirableness of a revision of the Authorized Version of the New Testament, whether by marginal notes or otherwise, in all those passages where plain and clear errors, whether in the Greek text adopted by the translators, or in the translations made from the same, shall on due investigation be found to exist.'

"In our classification of the material upon which revision must be based, we spoke of manuscripts, ancient versions, and the writings of the early fathers. As was then said, the early fathers were voluminous writers and pronounced controversialists, and nearly one half of their works are made up of quotations from the Scriptures as they existed in their time, only a century or two after the Apostolic days. Hence these very profuse quotations become of supreme value in textual criticism, corroborating the texts of the manuscripts or versions that were before the revisers of 1880, who were the first scholars engaged in any such work, practically, to whom this great mass of material was available. Another consideration that made revision seem desirable was the natural growth of the English language since the days of Elizabeth, and the consequent change in the meaning and use of many words. Many an earnest Christian has stumbled over Christ's injunction 'Take no thought for your life, what ye shall eat or what ye shall drink; nor yet for your body, what ye shall put on,' not knowing that when the Authorized Version was made the word 'thought' was used in the sense of worry, anxious thought, fret,—a sense which it has now entirely lost. So what the Master really said was, 'Do not worry, or fret yourself about such matters,' gently assuring his followers that their Heavenly Father knew that they had need of all these things. In the same sense an early chronicler used the word when he wrote that '*Soto died of thought in Florida*,' and Chaucer wrote, 'Which cause is of my death for *sorrowe and thought*.' Another illustration is in the use of the verb 'to let,' which in earlier times had the meaning 'to hinder' and 'prevent.' The Authorized Version makes Paul write to the Thessalonians (II. Th. xi. 7), 'Only he who now *letteth will let*, until he be taken out of the way,' which is evidently the opposite of his meaning. Shakespeare used this word in the same sense, when he

made Hamlet, who would follow his father's ghost, say, 'By Heaven! I'll make a ghost of him that *lets me*'; and in Tennyson's Lancelot and Elaine we read:

"Sir King, mine ancient wound
is hardly whole
And *lets me* from the saddle."

"The work of revision was undertaken by a carefully selected committee of fifty-four members, who were divided into two companies of twenty-seven members each, one company to undertake the revision of the Old and one the revision of the New Testament. These committees were made up of the most noted biblical scholars of Great Britain, the leading professors of the Hebrew and Greek languages in the great universities, with many special students of textual criticism. Sectarian lines were ignored in making up the committees, the leading men of the Church of England, and the noted scholars of the Presbyterian, Methodist, and Baptist Churches sitting side by side in the prosecution of their great work. The first meeting of the revisers was held in June, 1870, in the renowned Jerusalem Chamber of Westminster Abbey. The work of revising the New Testament occupied the attention of its company for ten years, during which time the average number of meetings was forty each year; and in May, 1881, the Revised Version of the New Testament was published, which was followed by the Old Testament in July, 1884, and a complete Revised Version of the entire Bible was published in May, 1885. As a very complete account is given in the preface to the Revised Version of all the conditions attending its preparation, we shall not recite the details here. Christian people all over the world had followed the reports of the work of the committees with deep interest and the result was anxiously looked for. More than three million copies of the Revised New Testament were sold within one year after its issue, and the complete Bible received a cordial welcome when it appeared later. Shortly after the beginning of their work the English revisers solicited the co-operation of American Bible scholars, and two companies were organized in the United States similar to the companies in England, who worked together harmoniously during the remainder of the revision period. Some of the suggestions of the American committees that were not accepted by the English revisers were added to the completed Bible as an appendix. By the mutual agreement under which the work of the two national committees was prosecuted, the American revisers had bound themselves not to publish any American revision for fourteen years. During this period, however, they had kept up their organization and a great deal of critical study had been devoted to the English version of 1885. And at the expiration of the fourteen years' period the American revision committee decided to publish a standard Revised Version for the United States, which came from the press of Thomas Nelson & Sons in 1901. This embodies all the suggestions of the American revisers which were not accepted by the English companies, and in other ways materially differs from the English Revised Version. This American revision has become the standard in this country and is unquestionably as near a true rendering of the Holy Scriptures as can be made.

"As we have seen, loud protests have been made by those to whom old versions have become familiar and dear, whenever revisions have been proposed. When Jerome made the Vulgate, which

superseded the Old Latin Bible; when the King James Version came into competition with the home Bible of the people, the 'Geneva'; and recently again, when the Revised Version was offered in preference to the Authorized Version, the same cry has in every instance been raised, 'They are taking away our Bible.' But just as the 'Geneva' and 'King James' Versions existed side by side for more than half a century, so the later revision is living harmoniously with the beloved Authorized Version; and after twenty-five years of such friendly rivalry Christian people have come to realize that in the work of revision nothing rightly tending to subvert the faith of any believer has been set up. Many readings and expressions which had become as familiar to us as household words in the Authorized Version, have been changed in the revised, and we cannot help feeling that something has been lost. But the essential fact is that after from ten to fifteen years of the most critical study and deliberation of the foremost biblical scholars of England and America, during which time thousands of manuscripts, versions, and translations covering a period of more than fifteen hundred years, have been studied and compared, it has not been found necessary to change or materially restate any essential truth as set forth in the King James Version. So that we have not lost our Bible; but we have gained the priceless assurance that we have, essentially correct, the Scriptures as they were known to the Christians of the first and second centuries. . . . Some time after the appearance of the Revised Version, a well-known clergyman published a book entitled, 'What is left of the Bible?' Much better might it be asked, 'What has been lost from our Bible?' and a truthful answer would be 'Nothing.' Not one of the grand truths that have placed these sacred books so far above all other books of religious or philosophical thought has been assailed; and for nearly all, the same exalted statement remains. The old Bible, dear to millions of people both for its simple expression of the thoughts of every human heart and for the beauty and majesty of its literary form, holds a more exalted position to-day than ever before. The esteem in which any great work has been held by the most learned, serious-minded, and eminently experienced men of the past naturally interests their readers of following generations. We cannot, therefore, better bring this story of the evolution of our English Bible to a close than by quoting the opinions regarding it of many of the distinguished statesmen, prose-writers and poets of the recent and more remote past. Rev. R. Heber Newton, in his book, 'The Right and Wrong Uses of the Bible,' and Professor T. H. Pattison in his 'History of the English Bible,' in particular, have brought together a great number of these testimonies from a wide range of sources; and we gladly acknowledge our indebtedness to them for several of the sentiments which follow."—*Ibid*, pp. 438-442.

Modern estimates of the Bible.—"Emerson wrote: 'Europe has always owed to Oriental genius its divine impulses. What these holy bards said, all sane men found agreeable and true. And the unique impression of Jesus upon mankind, whose name is not so much *written* as *ploughed into the history of the world*, is proof of the subtle virtue of this infusion.' And in the same manner that the name of Jesus has been 'ploughed' into history, the noble and soul-satisfying teachings of the Bible have been 'ploughed' into the human consciousness of English-speaking peoples. What a blank would most of our best literature be, could the Bible and its influences be withdrawn

from it! Poets, orators, statesmen, novelists have, one and all, drawn from its pages their highest inspiration and a large proportion of their most impressive thought, as well as the standard of form for its expression. 'The English Bible,' says Macaulay; 'a book which if everything else in our language should perish, would alone suffice to show the full extent of its beauty and power.' Along the same line John Stuart Mill wrote: 'The Bible and Shakespeare have done more than any other books for the English language, introducing into the soul of it such grand ideas expressed with such sublime simplicity.' But 'Shakespeare,' says Emerson, 'the first literary genius of the world, the highest in whom the moral is not the predominating element, leans on the Bible; his poetry presupposes it.' And Bishop Wordsworth has cited five hundred and forty passages from Shakespeare, where the poet uses the exact words of the Bible, or uses its image or thought with a slightly varied form of expression.

"As a mere literary monument," wrote J. R. Green, 'the English Bible remains the noblest example of the English tongue, while its perpetual use made it from the instant of its appearance, the standard of our language.' 'People imagine,' says Emerson, 'that the place which the Bible holds in the world, it owes to miracles; it owes it simply to the fact that it came out of a profounder depth of thought than any other book.' Milton and Dante lived, moved, and had their intellectual being in the atmosphere of the Bible; while Tennyson, Browning, Wordsworth, Coleridge, Pope, Dryden, Addison, drank at the same fountain of exalted wisdom and sublime expression, and gladly witnessed to their obligation. 'There can be no songs comparable to the songs of Zion,' wrote Milton; 'no orations equal to those of the prophets; and no politics like those the Scriptures teach.' It is said to have been Edmund Burke's habit to read a chapter in Isaiah before going to speak in the House of Commons. 'Isaiah,' said he, 'possessed both the blaze of eloquence and the light of truth'; and Washington Irving declared: 'I think I have waked a good many sleeping fancies by the reading of a chapter in Isaiah.' Matthew Arnold, easily the most distinguished literary critic of his time, edited Isaiah as a text book for the culture of the imagination in English schools; and in his preface to that work exclaims with enthusiasm: 'What a source of eloquence and poetry is the Bible in our schools!' In another place the same writer says: 'Of conduct, which is more than three-fourths of life, the Bible, whatever people may think or say, is the great inspirer.' In his conversation with Eckermann, Goethe said: 'Let mental culture go on advancing, let the natural sciences go on gaining in depth and breadth and the human mind expand as it may, it will never go beyond the elevation and moral culture of Christianity, as it glistens and shines in the Gospel.' And Thomas Jefferson wrote: 'Of all the systems of morality, ancient and modern, which have come under my observation, none appear to me so pure as that of Jesus.' Daniel Webster was an habitual reader of the Bible and attributed his wonderful vocabulary of the simplest yet most forceful language to the influence of the Scriptures, while he held its moral standards as far superior to those of any other religion. In one of his remarkable orations he says: 'If we abide by the principles taught in the Bible, our country will go on prospering and to prosper; but if we and our posterity neglect its instruction and authority, no man can tell how sudden a catastrophe may overwhelm us, and bury all our glory in profound obscurity.' One of his most admired passages was the reference to the

besetting force of 'duty,' which closed his argument in the famous White murder case. 'A sense of duty,' he said, 'pursues us ever. It is omnipresent like the Deity. If we take to ourselves the wings of the morning and dwell in the uttermost parts of the sea, duty performed or duty violated, is still with us for our happiness or our misery. If we say surely the darkness shall cover us, in the darkness as in the light our obligations are yet with us. We cannot escape their power, nor fly from their presence,'—all of which is merely the most literal paraphrase of the Psalmist's sense of the omnipresence of God, as expressed in the 130th Psalm. In his 'History of the Jewish Church,' Dean Stanley recalls reminiscences of the great historian of Israel, Ewald, saying: 'It is impossible to forget the noble enthusiasm with which this dangerous heretic, as he was regarded in England, grasped the small Greek Testament which he had in his hand as we entered, and said '*In this little book is contained all the wisdom of the world.*' Carlyle read his Bible continually, insisting that it was the greatest work in the world; and the book of Job, which was his closest friend, he considered 'one of the grandest things ever written with pen.' Indeed, it is related of him that once visiting at a country house he was asked to conduct the family worship; and starting to read that immortal poem he forgot his surroundings, and did not stop until he had read all of its forty-two chapters. Ruskin and Cardinal Newman have generally been considered as masters of the purest and choicest English; yet both attributed their skill in its use to the fact that they were led to commit large portions of the Bible to memory, when young. From his earliest boyhood, Scott was a devout admirer and constant student of the Bible; and his greatest romances are filled with Scriptural references, and many direct quotations occur. In describing the great man's last illness, his son-in-law and biographer, Lockhart, says: 'Here he expressed a wish that I should read to him, and when asked from what book, he said, "*Need you ask? There is but one.*"'

"In reply to a critic Dickens once wrote: 'I have always striven to express veneration for the life and lessons of our Saviour, because I feel it.' But had he left no written testimony of his reverence for the Gospel, one would not read far in his works without realizing the atmosphere of Christ's teachings; and no one can read that superb, crowning scene in the 'Tale of Two Cities,' without realizing that its author had dwelt long on the meaning of Calvary. Professor Pattison has said: 'The Castaway Sydney Carton, by his voluntary death, better than any other character in English fiction, illustrates the Master's words "Greater love hath no man than this, that a man lay down his life for his friends." . . . Nor was Thackeray less indebted to the Bible, and no writer treats its sacred themes more reverently. Many illustrations might be given, but the author's whole spirit is so manifest in his description of the last moments of the noblest character in the whole range of English fiction,—Colonel Newcome,—that we shall quote it alone. 'At the usual evening hour the chapel bell began to toll, and Thomas Newcome's hands outside the bed beat time. And just as the last bell struck, a peculiar sweet smile shone over his face, and he lifted up his head a little and quickly said, "*Adsum,*" and fell back. It was the word we used at school when names were called; and lo! he whose heart was as that of a little child, had answered to his name and stood in the presence of the Master.' Truly we may say of the Bible, as the Psalmist declared of the Glory of the Lord, 'there is no speech nor language where

its voice is not heard.' In an address to young journalists, delivered at Union College in 1893, the late Charles A. Dana, one of the most distinguished editors this country has produced, said: 'There are some books that are absolutely indispensable to the kind of education that we are considering; and of these the most indispensable, the most useful, the one whose language is most effective, is the Bible. There is no book from which more valuable lessons can be learned. I am considering it now, not as a religious book, but as a manual of utility, of professional preparation and professional use for a journalist. There is, perhaps, no book whose style is more suggestive and more instructive, from which you learn more directly that sublime simplicity which never exaggerates, which recounts the greatest event with solemnity, of course, but without sentimentality or affectation,—none which you can open with such confidence, and lay down with such reverence; *there is no book like the Bible.*'—*Ibid.*, pp. 442-444.

BIBROCI, tribe of ancient Britons who dwelt near the Thames.

BICAMERAL SYSTEM.—This term was applied by Jeremy Bentham to the division of a legislative body into two chambers—such as the House of Lords and House of Commons. "It has become almost an axiom in political science that legislative bodies should consist of two chambers. At the present time [1910] those constructed on the unicameral principle (q. v.) are found only in Greece, Luxembourg, Servia, the Canadian provinces of British Columbia, Manitoba, and Ontario, a few of the smaller German states, and some of the Swiss cantons. Formerly, however, the unicameral idea found more favor than now. In America, in the eighteenth century, it had an influential advocate in Benjamin Franklin, who is said to have compared a double-chambered legislative assembly to a cart with a horse hitched to each end, both pulling in opposite directions. Largely through his influence the legislature of Pennsylvania under its first constitution was constructed on the unicameral principle, and we have the testimony of John Adams that the question of whether the early American legislatures generally should consist of one or two chambers was one of transcendent importance at the time of the adoption of the first state constitutions. In France, at the time of the Revolution, the unicameral idea had many supporters, and the principle was incorporated in the constitution of 1791 by an almost unanimous vote of the National Assembly, and was continued in the constitution of 1793. The constitution of the year III (1795), however, established the bicameral system; and it was continued until 1848, when the single chamber was again reverted to, though for only a brief interval. Among the powerful advocates of the unicameral principle in 1848 was Lamartine, as Turgot had been its ablest defender at the time of the Revolution. The experience of France with single-chambered legislative assemblies, however, was not satisfactory; and their proceedings, it is said, 'were marked by violence, instability, and excesses of the worst kind.' With remarkably few exceptions the states which have experimented with the single chamber system have abandoned it for the bicameral system. In England, during the Commonwealth, it was tried for a brief period, but without success; and the House of Lords, which had been abolished, was soon restored. The lack of a second chamber in the national congress was one of the causes of dissatisfaction with the Articles of Confederation in the United States, and, with the exception of Benjamin Franklin, none of the framers of the constitution favored retaining the unicameral system. In Pennsylvania, where it existed for a time, we are told that it was marked by a 'want of stability' and resulted in 'extremely impulsive and variable legislation.' It was soon abandoned in Pennsylvania and in the few other states where it had been introduced. Other countries, notably Spain, Portugal, Naples, Mexico, Bolivia, Ecuador, and Peru, have all abandoned it, after a fair trial, for the double-chambered system. The chief argument advanced in favor of the unicameral system by the French statesmen and political writers in 1789 and again in 1848 was that it secured 'unity' instead of 'duality' in the organization of the legislative branch of the government. Two or three chambers, it was argued, meant two or three sovereignties. 'The law,' said Siéyès, 'is the will of the people; the people cannot at the same time have two different wills on the same subject; therefore, the legislative body which represents the people ought to be essentially one. Where there are two chambers, discord and division will be inevitable and the will of the people

will be paralyzed by inaction.' The same view was expressed by Lamartine, who maintained that the double chamber sacrificed the great principle of unity by dividing the sovereignty of the state. A similar line of reasoning was pursued by Condorcet, Robespierre, and other leaders in France at the time of the Revolution. In America, likewise, the same kind of argument was advanced by Franklin and others against the bicameral theory. Legislation being merely the expression of the common will, the necessity of committing it to two separate assemblies, each having a veto upon the action of the other, was not apparent. 'All the arguments,' says Judge Story, 'derived from the analogy between the movements of political bodies and the operations of physical nature, all the impulses of political parsimony, all the prejudices against a second coördinate legislative assembly stimulated by the exemplification of it in the British Parliament, were against a division of the legislative power.' In short, a double-chambered legislature was an assembly divided against itself. In America, John Adams combated the doctrines of Franklin, Turgot, and the other French critics of the bicameral system, in a rather remarkable essay entitled 'A Defense of the Constitutions of Government of the United States,' in which, among other things, he defended with ability and learning the principle of the division of the legislative power between two coördinate assemblies. He reviewed the history of free governments and undertook to show that government by single assemblies had 'generally been visionary if not corrupt and violent and had usually ended in despotism. . . . 'Of all possible forms of government, a sovereignty in a single assembly, successively chosen by the people, is,' he said, 'perhaps the best calculated to facilitate the gratification of self-love, and the pursuit of the private interests of a few individuals—in one word, the whole system of affairs and every conceivable motive of hope or fear will be employed to promote the private interests of a few of their obsequious majority; and there is no remedy but in arms.' Notwithstanding all the objections raised against the bicameral system, experience has apparently established its advantages over the single chamber scheme. 'It accompanies the Anglican race,' observes Francis Lieber, 'like the common law, and everywhere it succeeds.' 'Of all the forms of government that are possible among mankind,' says Lecky, 'I do not know any which is likely to be worse than the government of a single omnipotent democratic chamber. It is at least as susceptible as an individual despot to the temptations that grow out of the possession of an uncontrolled power, and it is likely to act with much less sense of responsibility and much less real deliberation.' The advantages of a second chamber may be summarized as follows: First, it serves as a check upon hasty, rash, and ill-considered legislation. Legislative assemblies are often subject to strong passions and excitements and are sometimes impatient, impetuous, and careless. The function of a second chamber is to restrain such tendencies and to compel careful consideration of legislative projects. It interposes delay between the introduction and final adoption of a measure and thus permits time for reflection and deliberation. . . . In the second place, the bicameral principle not only serves to protect the legislature against its own errors of haste and impulse, but it also affords a protection to the individual against the despotism of a single chamber. The existence of a second chamber is thus a guarantee of liberty as well as to some extent a safeguard against tyranny. . . .

'The necessity of two chambers,' says Bryce, 'is based on the belief that the innate tendency of an assembly to become hateful, tyrannical, and corrupt, needs to be checked by the coexistence of another house of equal authority. The Americans restrain their legislatures by dividing them, just as the Romans restrained their executives by substituting two consuls for one king.' A third advantage of the bicameral system is that it affords a convenient means of giving representation to special interests or classes in the state and particularly to the aristocratic portion of society, in order to counterbalance the undue preponderance of the popular element in one of the chambers, thus introducing into the legislature a conservative force to curb the radicalism of the popular chamber. . . . John Stuart Mill advocated a second chamber constructed on the principle of political experience and training without reference to considerations of birth or wealth. If one chamber, said Mill, represents popular feeling, the other should represent personal merit, tested and guaranteed by actual public service and fortified by practical experience. If one is the people's chamber, the other should be a chamber of statesmen, a council composed of all living public men who have passed through important political offices or employments. Such a chamber, Mill argued, would be not merely a moderating body, or a simple check, but also an impelling force. It would be a body of natural leaders and would guide the people forward in the path of progress. The best constitution of the second chamber, he declared, is that which embodies the greatest number of elements exempt from the class interests and prejudices of the majority, but having in themselves nothing offensive to democratic feeling. . . . Finally, the bicameral system affords an opportunity, in states having the federal form of government, of giving representation to the political units composing the federation. In order to maintain the proper equilibrium between the component members and the federation as a whole, the former ought to be represented in one chamber of the legislature without regard to population, that is, represented as distinct political organizations. This, in fact, is the principle upon which the legislatures of most states having the federal form of government are at present constructed. The eighteenth century French doctrine that the bicameral system is incompatible with the principle of the unity of sovereignty will, upon examination, be seen to be untenable. Division of the legislative body into two chambers does not involve a division of the sovereignty of the state any more than the distribution of governmental power between legislative, executive, and judicial organs means a division of sovereignty. So long as the concurrence of both chambers is necessary to legislate, that is, so long as legislation emanates from the assembly as a whole, there is not duality, but unity. Law is the will of the people, observes Laboulaye, whatever may be the mode employed for enacting it. . . . What is required in order to realize the full value of the bicameral principle is that the two chambers should be differently composed and should rest on dissimilar bases. The members of one chamber ought to enjoy longer tenures, they ought to represent a larger constituency, higher membership qualifications ought to be required of them, and they might well be chosen in a different manner and by a differently constituted electorate. Where these requirements exist there will always be one chamber smaller in size than the other, possessing a higher degree of experience and perhaps of ability, more conservatism of spirit, and representing more fully the

higher property and intellectual interests of the state. Thus the high age qualifications (the attainment of the fortieth year) required of senators in Belgium, France, and Italy has had the effect of securing more experienced statesmen in the legislatures of those countries. The longer tenure, the larger constituency, and the [former] method of indirect election for members of the United States Senate tend to secure a more experienced, more conservative, and, on the whole, an abler body of legislators than is found in the House of Representatives. The same is true of the upper chambers of the Australian Commonwealth, and the republics of Brazil, Mexico, and Switzerland. The hereditary principle which prevails almost wholly in the structure of the upper chamber in Great Britain and to a less degree in Austria, Hungary, and Spain diminishes rather than increases the efficiency of the legislature; yet under restrictions which it has been proposed to introduce into the English system the principle would not be without its advantages, since it would provide a means of introducing into the legislature a class of educated and leisured men who have had exceptional opportunities for acquiring political information and for imbibing the result of political experience, without at the same time bringing into the legislature large numbers of men who add little or no strength. The appointive principle which prevails in Italy for the constitution of the upper chamber, and to a less degree in several other European states, is out of harmony with modern notions of representation, yet it has the advantage of insuring a place in the legislature for distinguished men who have held public office and also for men who have attained eminence in science, art, and the learned professions. Perhaps the ideal mode of determining the membership of the upper chamber lies in a combination of some or all of the above systems, if we eliminate the Norwegian method of cooptation and the British hereditary principle, neither of which commends itself to us. A certain number of members of whom high qualifications are required might very properly be elected upon the basis of a restricted suffrage from the larger administrative subdivisions into which the state is divided; a certain number might be elected by the local governments, such as the provincial legislatures or municipal councils; a limited number might be appointed by the executive from those who have achieved eminence in the state or who have held certain high offices, etc. [See *Parliament: English.*] With regard to the constitution of the lower house, there is a substantial unanimity of opinion and of practice that it should rest upon a popular basis, that is, its members should be chosen by direct election, upon the basis of a wide suffrage and for short terms. Finally, the experience of the past demonstrates the wisdom of the principle of inequality of powers as between the two chambers. Nearly everywhere the upper chamber is intrusted with a share, negative or positive, in the administration of the government, often a certain participation in the control of the foreign policy of the state, and sometimes is vested with important judicial functions. This has a tendency to increase the dignity and prestige of membership therein and thus secure legislators of higher ability and added conservatism. The scheme of partial renewal common in the organization of the upper chambers is likewise a valuable principle, in that it tends to secure the element of experience and preserve continuity of membership."—J. W. Garner, *Introduction to political science*, pp. 427-440.

BICHÂT, Marie François Xavier (1771-1802), French anatomist and physiologist. Considered the founder of scientific histology and pathological anatomy; was the first to show that different organs have tissues and membranes in common, a discovery which led to the simplification and systematizing of both anatomy and physiology. His most important works are "Traité des membranes" (1800), "Recherches sur la vie et la mort" (1800), and "Anatomie générale" (1801).—See also BIOLOGY: History; MEDICAL SCIENCE: Modern; 18th century: Physiological views of Bichât.

BIG FIVE, a coalition of the principal packing firms of the United States: Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co., accused by the fed-

eral trade commission in 1918 of profiteering. On December 4, 1919, the trade commission charged the Big Five with violation of the Clayton anti-trust act through the purchase and control of thirty-one corporations handling food and other products. Action was brought against them by Attorney-General Palmer, but the firms agreed to accept without contest the injunction requiring them to surrender control of stock yards, to use refrigerating cars for meat and meat products only and to give up control of non-related industries.

BIG FOUR, the popular name for the Cleveland, Cincinnati, Chicago and St. Louis railroad.

BIG FOUR, name applied to the nations of England, France, Italy and the United States. See also COUNCIL OF FOUR; FRUME: 1919: Attitude of President Wilson of the United States.

BIG SIX, popular name for the beef trust. (See TRUSTS: 1903-1906).

BIG SIX, New York Typographical Union No. 6, probably the most powerful typographical union in the world, having had in 1920 a membership of 9,040 men and women engaged in the composing rooms of the newspaper and book and job printing offices of Greater New York. It was founded in 1850, its first president being Horace Greeley, founder of the New York *Tribune*.

BIG SIX, political gang of Pittsburgh. See PITTSBURGH: 1900.

BIG STICK, a term associated with President Roosevelt. In favoring the policy of a large navy, he said that a nation, like a man, should "speak softly, but carry a big stick." Later the term was applied to his methods of coercing Congress into accepting his legislative program and of securing domination in shaping the policies of his party and influencing the selection of his successor. During the presidential campaign of 1912, the Progressive party had a street-car advertisement consisting of a photograph of Roosevelt and a picture of a big stick under the heading, "Let's put them both to work again."

BIG SWORD, or Big Knife Society (other name for Boxers). See CHINA: 1900.

BIG THREE, in Great Britain, the triple industrial alliance of the miners' federation, the national union of railwaymen and the national transport workers' federation, formed in December, 1915.

BIGELOW, John (1817-1911), American diplomat, journalist and author. Inspector of Sing Sing prison 1845-1846; editor of New York *Evening Post* 1849-1861; consul at Paris 1861-1864; minister to France 1864-1867; secretary of state of New York state, 1875-1877.

BILL OF RIGHTS, English (1689).—"The Convention [which met January 22, 1689, after the flight of James II] . . . defined in a formal document the fundamental principles of the English Constitution. This document was the famous *Declaration of Right*, which was accepted by Wil-

liam and Mary on February 19, 1689; and later, as the *Bill of Rights*, was made a part of the law of the land by act of parliament, on December 16, 1689. By this memorable document, the Bill of Rights, certain constitutional privileges of parliament and people were exactly stated, and declared to be the unchangeable law of the kingdom. The provisions of the bill summed up the chief issues which had been in dispute since 1660. The rights that James had claimed, to dispense with the laws, to levy money in any form without the consent of parliament, to maintain a standing army dependent on the king instead of on parliament, were declared illegal. [See also TAXATION: Parliamentary taxation in England.] The right of the people to petition, as the bishops had done, the right of electors to choose members of parliament without interference, the right of freedom of speech in parliament, and the necessity of frequent meetings of parliament for the amending, strengthening, and preserving of the laws, were all declared inalienable parts of the ancient rights and liberties of the English people. Lastly, a clause was inserted, stating that no Roman Catholic could possess the crown, and that after the death of William and Mary the succession should go to their children, or, in default of issue, to Anne and her children, or, in default of such, to the children of William by any other wife. After Mary's death, in 1694, and the death of Anne's only surviving son, the duke of Gloucester, in 1701, a further clause was added, settling the succession upon the granddaughter of James I, Sophia of Hanover, on the ground that she was the nearest Protestant heir. [The Revolution of 1688] . . . was the 'great and glorious' revolution. Won without bloodshed, it marked a new era in England's history; for it overthrew the doctrine of the divine right of kings and the passive obedience of the people and substituted therefor the right of the people to resist their rulers. Furthermore, it established the supremacy of statute law over the king's will and pleasure. It did not affect the right of hereditary succession, but it handed over to parliament full power to limit the prerogative of the king and to take in the actual government of the kingdom."—C. M. Andrews, *Short history of England*, pp. 305-306.—See also ENGLAND: 1689 (January-February).

Text of the document.—"Whereas the Lords Spiritual and Temporal, and Commons, assembled at Westminster, lawfully, fully, and freely representing all the estates of the people of this realm, did upon the Thirteenth day of February, in the year of our Lord One Thousand Six Hundred Eighty-eight [o. s.], present unto their Majesties, then called and known by the names and style of William and Mary, Prince and Princess of Orange, being present in their proper persons, a certain Declaration in writing, made by the said Lords and Commons, in the words following, viz.: 'Whereas the late King James II., by the assistance of divers evil counselors, judges, and ministers employed by him, did endeavour to subvert and extirpate the Protestant religion, and the laws and liberties of this kingdom: 1. By assuming and exercising a power of dispensing with and suspending of laws, and the execution of laws, without consent of Parliament. 2. By committing and prosecuting divers worthy prelates for humbly petitioning to be excused from concurring to the said assumed power. 3. By issuing and causing to be executed a commission under the Great Seal for erecting a court, called the Court of Commissioners for Ecclesiastical Causes. 4. By levying money for and to the use of the Crown by pretence of prerogative, for other time

and in other manner than the same was granted by Parliament. 5. By raising and keeping a standing army within this kingdom in time of peace, without consent of Parliament, and quartering soldiers contrary to law. 6. By causing several good subjects, being Protestants, to be disarmed, at the same time when Papists were both armed and employed contrary to law. 7. By violating the freedom of election of members to serve in Parliament. 8. By prosecutions in the Court of King's Bench for matters and causes cognisable only in Parliament, and by divers other arbitrary and illegal causes. 9. And whereas of late years, partial, corrupt, and unqualified persons have been returned, and served on juries in trials, and particularly divers jurors in trials for high treason, which were not freeholders. 10. And excessive bail hath been required of persons committed in criminal cases, to elude the benefit of the laws made for the liberty of the subjects. 11. And excessive fines have been imposed; and illegal and cruel punishments inflicted. 12. And several grants and promises made of fines and forfeitures before any conviction or judgment against the persons upon whom the same were to be levied. All which are utterly and directly contrary to the known laws and statutes, and freedom of this realm. And whereas the said late King James II having abdicated the government, and the throne being thereby vacant, his Highness the Prince of Orange (whom it hath pleased Almighty God to make the glorious instrument of delivering this kingdom from Popery and arbitrary power) did (by the advice of the Lords Spiritual and Temporal, and divers principal persons of the Commons) cause letters to be written to the Lords Spiritual and Temporal, being Protestants, and other letters to the several counties, cities, universities, boroughs, and cinque ports, for the choosing of such persons to represent them as were of right to be sent to Parliament, to meet and sit at Westminster upon the two-and-twentieth day of January, in this year One Thousand Six Hundred Eighty and Eight, in order to such an establishment, as that their religion, laws, and liberties might not again be in danger of being subverted; upon which letters elections have been accordingly made. And thereupon the said Lords Spiritual and Temporal, and Commons, pursuant to their respective letters and elections, being now assembled in a full and free representation of this nation, taking into their most serious consideration the best means for attaining the ends aforesaid, do in the first place (as their ancestors in like case have usually done) for the vindicating and asserting their ancient rights and liberties, I. declare: 1. That the pretended power of suspending of laws, or the execution of laws, by regal authority, without consent of Parliament, is illegal. 2. That the pretended power of dispensing with laws, or the execution of laws by regal authority, as it hath been assumed and exercised of late, is illegal. 3. That the commission for erecting the late Court of Commissioners for Ecclesiastical Causes, and all other commissions and courts of like nature, are illegal and pernicious. 4. That levying money for or to the use of the Crown by pretence and prerogative, without grant of Parliament, for longer time or in other manner than the same is or shall be granted, is illegal. 5. That it is the right of the subjects to petition the King, and all commitments and prosecutions for such petitioning are illegal. 6. That the raising or keeping a standing army within the kingdom in time of peace, unless it be with consent of Parliament, is against law. 7. That the subjects which are Protestants may have arms for

their defence suitable to their conditions, and as allowed by law. 8. That election of members of Parliament ought to be free. 9. That the freedom of speech, and debates or proceedings in Parliament, ought not to be impeached or questioned in any court or place out of Parliament. 10. That excessive bail ought not to be required, nor excessive fines imposed; nor cruel and unusual punishments inflicted. 11. That jurors ought to be duly impanelled and returned, and jurors which pass upon men in trials for high treason ought to be freeholders. 12. That all grants and promises of fines and forfeitures of particular persons before conviction are illegal and void. 13. And that for redress of all grievances, and for the amending, strengthening, and preserving of the laws, Parliament ought to be held frequently. And they do claim, demand, and insist upon all and singular the premises, as their undoubted rights and liberties; and that no declarations, judgments, doings or proceedings, to the prejudice of the people in any of the said premises, ought in any wise to be drawn hereafter into consequence or example. To which demand of their rights they are particularly encouraged by the declaration of his Highness the Prince of Orange, as being the only means for obtaining a full redress and remedy therein. Having therefore an entire confidence that his said Highness the Prince of Orange will perfect the deliverance so far advanced by him, and will still preserve them from the violation of their rights, which they have here asserted, and from all other attempts upon their religion, rights, and liberties. II. The said Lords Spiritual and Temporal, and Commons, assembled at Westminster, do resolve, that William and Mary, Prince and Princess of Orange, be, and be declared, King and Queen of England, France, and Ireland, and the dominions thereunto belonging, to hold the crown and royal dignity of the said kingdoms and dominions to them the said Prince and Princess during their lives, and the life of the survivor of them; and that the sole and full exercise of the regal power be only in, and executed by, the said Prince of Orange, in the names of the said Prince and Princess, during their joint lives; and after their deceases, the said crown and royal dignity of the said kingdoms and dominions to be to the heirs of the body of the said Princess; and for default of such issue to the Princess Anne of Denmark, and the heirs of her body; and for default of such issue to the heirs of the body of the said Prince of Orange. And the Lords Spiritual and Temporal, and Commons, do pray the said Prince and Princess to accept the same accordingly. III. And that the oaths hereafter mentioned be taken by all persons of whom the oaths of allegiance and supremacy might be required by law instead of them; and that the said oaths of allegiance and supremacy be abrogated. "I, A. B., do sincerely promise and swear, That I will be faithful and bear true allegiance to their Majesties King William and Queen Mary: So help me God." "I, A. B., do swear, That I do from my heart abhor, detest, and abjure as impious and heretical that damnable doctrine and position, that princes excommunicated or deprived by the Pope, or any authority of the See of Rome, may be deposed or murdered by their subjects, or any other whatsoever. And I do declare, that no foreign prince, person, prelate, state, or potentate hath, or ought to have, any jurisdiction, power, superiority preeminence or authority, ecclesiastical or spiritual, within this realm: So help me God." IV. Upon which their said Majesties did accept the crown and royal dignity of the kingdoms of England, France, and Ire-

land, and the dominions thereunto belonging, according to the resolution and desire of the said Lords and Commons contained in the said declaration. V. And thereupon their Majesties were pleased, that the said Lords Spiritual and Temporal, and Commons, being the two Houses of Parliament, should continue to sit, and with their Majesties' royal concurrence make effectual provision for the settlement of the religion, laws and liberties of this kingdom, so that the same for the future might not be in danger again of being subverted; to which the said Lords Spiritual and Temporal, and Commons, did agree and proceed to act accordingly. VI. Now in pursuance of the premises, the said Lords Spiritual and Temporal, and Commons, in Parliament assembled, for the ratifying, confirming, and establishing the said declaration, and the articles, clauses, matters, and things therein contained, by the force of a law made in due form by authority of Parliament, do pray that it may be declared and enacted, That all and singular the rights and liberties asserted and claimed in the said declaration are the true, ancient, and indubitable rights and liberties of the people of this kingdom, and so shall be esteemed, allowed, adjudged, deemed, and taken to be, and that all and every the particulars aforesaid shall be firmly and strictly holden and observed, as they are expressed in the said declaration; and all officers and ministers whatsoever shall serve their Majesties and their successors according to the same in all times to come. VII. And the said Lords Spiritual and Temporal, and Commons, seriously considering how it hath pleased Almighty God, in his marvellous providence, and merciful goodness to this nation, to provide and preserve their said Majesties' royal persons most happily to reign over us upon the throne of their ancestors, for which they render unto Him from the bottom of their hearts their humblest thanks and praises, do truly, firmly, assuredly, and in the sincerity of their hearts, think, and do hereby recognise, acknowledge, and declare, that King James II having abdicated the Government, and their Majesties having accepted the Crown and royal dignity as aforesaid, their said Majesties did become, were, are, and of right ought to be, by the laws of this realm, our sovereign liege Lord and Lady, King and Queen of England, France, and Ireland, and the dominions thereunto belonging, in and to whose princely persons the royal state, crown, and dignity of the said realms, with all honours, styles, titles, regalities, prerogatives, powers, jurisdictions, and authorities to the same belonging and appertaining, are most fully, rightfully, and entirely invested and incorporated, united, and annexed. VIII. And for preventing all questions and divisions in this realm, by reason of any pretended titles to the Crown, and for preserving a certainty in the succession thereof, in and upon which the unity, peace, tranquillity, and safety of this nation doth, under God, wholly consist and depend, the said Lords Spiritual and Temporal, and Commons, do beseech their Majesties that it may be enacted, established, and declared, that the Crown and regal government of the said kingdoms and dominions, with all and singular the premises thereunto belonging and appertaining, shall be and continue to their said Majesties, and the survivor of them, during their lives, and the life of the survivor of them. And that the entire, perfect, and full exercise of the regal power and government be only in, and executed by, his Majesty, in the names of both their Majesties, during their joint lives; and after their deceases the said Crown and premises shall be and remain to the heirs of the body of her Majesty:

and for default of such issue, to her Royal Highness the Princess Anne of Denmark, and the heirs of her body; and for default of such issue, to the heirs of the body of his said Majesty: And thereunto the said Lords Spiritual and Temporal, and Commons, do, in the name of all the people aforesaid, most humbly and faithfully submit themselves, their heirs and posterities, for ever: and do faithfully promise, that they will stand to, maintain, and defend their said Majesties, and also the limitation and succession of the Crown herein specified and contained, to the utmost of their powers, with their lives and estates, against all persons whatsoever that shall attempt anything to the contrary. IX. And whereas it hath been found by experience, that it is inconsistent with the safety and welfare of this Protestant kingdom to be governed by a Popish prince, or by any king or queen marrying a Papist, the said Lords Spiritual and Temporal, and Commons, do further pray that it may be enacted, That all and every person and persons that is, are, or shall be reconciled to, or shall hold communion with, the See or Church of Rome, or shall profess the Popish religion, or shall marry a Papist, shall be excluded, and be for ever incapable to inherit, possess, or enjoy the Crown and Government of this realm, and Ireland, and the dominions thereunto belonging, or any part of the same, or to have, use, or exercise, any regal power, authority, or jurisdiction within the same; and in all and every such case or cases the people of these realms shall be and are hereby absolved of their allegiance, and the said Crown and government shall from time to time descend to, and be enjoyed by, such person or persons, being Protestants, as should have inherited and enjoyed the same, in case the said person or persons so reconciled, holding communion, or professing, or marrying, as aforesaid, were naturally dead. X. And that every King and Queen of this realm, who at any time hereafter shall come to and succeed in the Imperial Crown of this kingdom, shall, on the first day of the meeting of the first Parliament, next after his or her coming to the Crown, sitting in his or her throne in the House of Peers, in the presence of the Lords and Commons therein assembled, or at his or her coronation, before such person or persons who shall administer the coronation oath to him or her, at the time of his or her taking the said oath (which shall first happen), make, subscribe, and audibly repeat the declaration mentioned in the statute made in the thirteenth year of the reign of King Charles II, intituled "An Act for the more effectual preserving the King's person and Government, by disabling Papists from sitting in either House of Parliament." But if it shall happen that such King or Queen, upon his or her succession to the Crown of this realm, shall be under the age of twelve years, then every such King or Queen shall make, subscribe, and audibly repeat the said declaration at his or her coronation, or the first day of meeting of the first Parliament as aforesaid, which shall first happen after such King or Queen shall have attained the said age of twelve years. XI. All which their Majesties are contented and pleased shall be declared, enacted, and established by authority of this present Parliament, and shall stand, remain, and be the law of this realm for ever; and the same are by their said Majesties, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in Parliament assembled, and by the authority of the same, declared, enacted, or established accordingly. XII. And be it further declared and enacted by the authority aforesaid, That

from and after this present session of Parliament, no dispensation by "non obstante" of or to any statute, or any part thereof, shall be allowed, but that the same shall be held void and of no effect, except a dispensation be allowed of in such statute, and except in such cases as shall be specially provided for by one or more bill or bills to be passed during this present session of Parliament. XIII. Provided that no charter, or grant, or pardon granted before the three-and-twentieth day of October, in the year of our Lord One Thousand Six Hundred Eighty-nine, shall be any ways impeached or invalidated by this Act, but that the same shall be and remain of the same force and effect in law, and no other, than as if this Act had never been made."

BILL OF RIGHTS, in United States.—The Constitution of Virginia, adopted in 1776, contained a Declaration of Rights. (See VIRGINIA: 1776). This was the first bill of rights in America and its language was largely followed in the constitutions of other states. George Mason, who prepared it, based it largely on the English Bill of Rights of 1680. In the struggle over the ratification of the federal constitution, opponents of the instrument made much capital of the fact that it contained no bill of rights, defining and safeguarding the rights of the citizen as against his government. The framers of the constitution had taken for granted such rights as religious freedom, jury trial and freedom of speech and press; and had thought an express guarantee of such rights unnecessary. Leading Federalists who were urging adoption promised that they would present amendments to provide a bill of rights. In the first Congress several amendments were presented and ten of them were promptly submitted and ratified. For the text of the amendments, commonly called the American Bill of Rights, see U. S. A.: CONSTITUTION OF.—"In the constitution of almost every State it is declared:

"(1) That all men have the right of enjoying and defending life and liberty, of acquiring, possessing and protecting property and reputation, and of pursuing their own happiness:

"(2) That men have a right to worship God according to the dictates of their own conscience, and that no preference by law should be given to any religion, and that no person should be disqualified for office on account of his religious belief:

"(3) That trial by jury is a right inviolate:

"(4) That the printing-press shall be free, and that every citizen may freely print, write and speak on any subject, being responsible for the abuse of this privilege:

"(5) That people shall be secure in their persons, houses, papers and possessions against unreasonable searches and seizures, and that no warrant to search any place or seize any person shall issue without probable cause:

"(6) That in all criminal prosecutions the accused has a right to be heard by himself and his counsel, to meet witnesses face to face, to compel witnesses who are in favor to come to court and testify, and to a speedy trial by an impartial jury:

"(7) That no person can be compelled to give evidence against himself, nor be deprived of his life, liberty or property unless by the law of the land:

"(8) That no person for the same offense shall be twice put in jeopardy of life and limb:

"(9) That all courts shall be open and that every man shall have justice without sale, denial, or delay:

"(10) That excessive bail shall not be required,

nor excessive fines be imposed, nor cruel punishment inflicted:

"(11) That all prisoners shall be bailable by sufficient sureties, unless for capital offenses:

"(12) That the writ of habeas corpus shall not be suspended unless in time of rebellion or invasion:

"(13) That there shall be no imprisonment for debt, unless in cases of fraud:

"(14) That citizens have a right to assemble in a peaceable manner and to apply to the rulers for a redress of grievances:

"(15) That the military shall at all times be kept in strict subordination to the civil power:

"(16) That no soldier in time of peace be quartered in any house without the consent of the owner."—S. E. Forman, *Advanced civics*, pp. 97-98.—"As our Federal bill of rights is embodied in a written constitution which it is the function of the Courts to interpret and enforce in cases brought before it, even as against an act of Congress, it has had more judicial exposition by our Supreme Court than these same guarantees had in English Courts. In England Parliament is omnipotent and can violate the Bill of Rights at will. Not so Congress whose law-making is limited by the Constitution. This circumstance has given at least one of our guarantees a wilder effect than it had at common law. The declaration that 'no man shall be deprived of life, liberty or property without due process of law' meant in the Magna Carta and means in English Courts that the process must be one sanctioned by custom, i.e., by the common law or by act of Parliament. It is directed only against executive abuses of individual rights. In our Constitution, in its 5th and 14th amendments, it means more than this. It is directed against both executive and legislative abuses of individual right, against abuses by Congress and state legislatures as well as against those of a President or a Governor. Therefore, the Supreme Court has not hesitated to ignore as invalid any law of Congress or a state which does not secure to an individual the procedure in defending his rights which shall prevent his deprivation of them arbitrarily and without a full hearing by some kind of a tribunal."—W. H. Taft, *English political genius (English leadership)*, pp. 9-10).

BILLAUD-VARENNE, Jacques Nicolas (1756-1819), French revolutionist; member of the National Convention, also of the committee of public safety, 1793-1795. See FRANCE: 1793 (June-October), (September-December) to 1794-1795 (July-April).

BILLBOARDS: Court decisions.—"We now have the authority of the courts behind us on a perfectly sound legal basis, for regulating and prohibiting boards under the police power, where there are practical objections to them. These practical objections must be made clear to the court, to show that an ordinance is reasonable, if it is contested. Some years ago the city of St. Louis made a great advance in billboard protection by passing an ordinance which laid down definite rules for the safety of construction of such boards, defining their location on lots, and requiring them to be built free from other structures, so as to minimize the fire risk, as well as requiring a clear space under them, to lessen the danger of their becoming a nuisance. This ordinance was attacked and sustained, in a vigorous opinion. The next step was that taken by the city of Chicago, in an ordinance passed in 1911, wherein signs on roofs of buildings were prohibited and majority consents were required for construction of boards in resi-

dence districts. The roof prohibition has never been attacked, but the consent requirement in residence districts, when it was finally enforced by the city of Chicago, was contested by the billboard companies. The Supreme Court of Illinois upheld the right, and this decision was affirmed in 1917 in the case of *Cusack vs. City of Chicago* (242 U. S. 426). This decision is of the greatest importance, in that it holds constitutional an enactment absolutely forbidding billboards in residence districts. . . . The full fruit of the Cusack decision has not been taken advantage of by the city of Chicago, in that the city has not yet absolutely prohibited boards in residence districts, and the administration is, to say the least, not vigorous in enforcing the ordinance as it stands. Los Angeles, however, and some small communities that I know of, have employed it in prohibiting boards in their residence sections."—E. L. Millard, *Billboard Nuisance* (*American City, Mar., 1920*).—See also CITY PLANNING.

BIMETALISM.—"Bimetallism is the use of two metals as standard moneys. . . . It is legally complete when both metals are admitted to the mints for free coinage at an established ratio of weight; it is halting or limping when one of the metals is not freely coined. Bimetallism may be legally authorized, but not actually working. As soon as the legal ratio varies appreciably from the market value, only one of the metals will in fact be brought to the mint. National bimetallism is confined to a single country, as that in the United States before the Civil War, or in France before 1867. International bimetallism is an agreement among several nations to use two metals on the same terms, the only case in history being that

of the Latin Union, which included France, Italy, Switzerland and other countries. The discussion of international bimetallism in recent years has been on the proposal to make a much larger league of states than the Latin Union, embracing all the leading countries. The main object of international bimetallism is to prevent the fluctuation of the standard of deferred payments. . . . Despite many efforts it has failed by adoption."—F. A. Fetter, *Principles of economics*, pp. 457-459.

"In France, where up to 1850 the mint ratio of 15½ to 1 was slightly below the market ratio, gold gradually disappeared, leaving the country to all intents on a silver basis. From 1850 on, however, the market ratio fell below 15½ to 1. Gold began to be imported, and France was slowly being drained of its silver. The difficulty finally became so serious that France formed, in 1865, together with Belgium, Italy, and Switzerland, the Latin Union. Greece joined in 1868, and at various later dates Spain, Roumania, Servia, and Bulgaria patterned their systems on that of the Union. This agreement . . . reduced the fineness of the subsidiary silver coins, and made them legal tender only to fifty francs between individuals and to one hundred francs in payments to the government, their coinage by the respective states being limited to six francs *per capita*. The coins circulated interchangeably and each state bound itself to redeem its own coins in gold or five-franc pieces for a period of two years beyond the termination of the Union. In the other countries the unrest grew. Portugal followed England in adopting the gold standard in 1854, and the first international monetary congress, held in Paris in 1867, pronounced itself in favor of the same scheme. Germany also took advantage of the victory over France to adopt the gold standard in 1871-1873. The new silver mark was to be legal tender only to 20 marks, although the old *Vereinsthaler* still remained legal tender. Free coinage of silver, however, was discontinued. . . . The Scandinavian monetary union also adopted the gold standard in 1873. These measures, coupled with the discovery of the Comstock lode, combined to depress the price of silver and to bring the difficulties of bimetallism to a head in the other countries.

"The Latin Union was now flooded with silver under the free coinage provision and was threatened with a loss of its gold. Belgium had already provisionally suspended free coinage in 1873, and France followed in 1876. Finally, in 1878 the Latin Union definitely abrogated the free coinage of the five-franc pieces. Thus was introduced the 'limping' or 'halting' standard, so called because silver now lost one of the two supports—legal tender and free coinage—which are essential to real bimetallism. . . . The Latin Union has been on a gold basis since 1878 because, although the silver five-franc coins are still full legal tender, there is no free coinage, and the value of what is virtually a token money is kept at parity with that of the gold-standard money by a limitation of the quantity coined and by its acceptance at the treasury for public dues.—See also MONEY AND BANKING: Modern: 1853-1874; 1867-1893; 1870-1890; and 20th century.

"In the United States the agitation did not begin until the fall in the price of silver had become marked in 1875. The act of 1873 omitted the silver dollar from the list of American coins, largely because of the fact that for years no such dollars had been coined; the few outstanding dollars, however, retained their full legal tender quality until 1874, when the revised statutes, reenacting the subsidiary silver law of 1853, provided that

'the silver coins' of the United States should be legal tender only to five dollars. The American silver producers now thought that the fall in the price of silver could be arrested by an artificial increase of the demand and the Bland-Allison act of 1878. [See U. S. A.: 1878.] . . . Neither this act nor the suspension in 1878 of the sales of the old *Thaler* by Germany served to arrest the fall in the price of silver. . . . The Western farmers now began to ascribe the low price of wheat to the competition in the silver-standard countries, and demanded the remonetization of silver in the belief that this would increase prices. The union of the farmers with the mine owners led to a renewed agitation for free silver, the result being a compromise measure known as the Sherman law of 1890 [repealed 1893]. [See U. S. A.: 1890-1893.] . . . A fierce presidential campaign was waged in 1890 for the complete remonetization of silver at the old ratio of 16 to 1. [See U. S. A.: 1896: Party platforms, etc.] The defeat of the silver agitation was followed by the act of 1900, which defined as the standard the gold dollar."—E. R. A. Seligman, *Principles of economics*, pp. 479-483.

BIOLOGY: Definition.—"Biology is defined as the science which treats of matter in the living state. . . . Those properties of living matter which, taken together, distinguish it absolutely from every form of lifeless matter, are: (1) Its chemical composition. (2) Its power of waste and repair and of growth. (3) Its power of reproduction."—W. T. Sedgwick and E. B. Wilson, *General biology*, pp. 2-3.—See also SCIENCE.

History.—"The foundations of biology were laid by Aristotle (384-322 B.C.). He collected and classified, dissected and pondered, and the prevision of his insight reached forward to generalizations which were not established till two thousand years had passed. Aristotle laid firm foundations, but for fifteen centuries they remained unbuild upon, and were indeed in great part obscured by accumulations of rubbish. Apart from a few exceptions, such as Pliny (23-79 A.D.), a diligent but uncritical collector of facts, and the physician Galen (130-200 A.D.), who had the courage to dissect monkeys, men were preoccupied with the practical tasks of civilization, alike in peace and war, and science slumbered."—J. A. Thomson, *Science of life*, p. 2.—"Vesalius (1514-

1564) must also be mentioned here, although of a much later epoch, for due to his efforts the authority of Galen was overthrown and the organization of the human body studied at first hand. . . . It would be a difficult task to state in due proportion all the factors which contributed to the scientific renaissance. . . . As far as biology was concerned the direct result of the scientific renaissance . . . [was] a return to nature. It began to be perceived that Aristotle [see SCIENCE: Ancient: Greek] had not quite finished the subject, and that every man might be his own observer. With enthusiasm men turned to the task of seeing for themselves, and there began the period of the Encyclopædists. . . . Although Buffon was a thinker, it seems almost fair to say that the best aims of the Encyclopædists were realized in his 'Histoire Naturelle,' which appeared in fifteen volumes between 1749 and 1767. He may be taken as the centre of a strong enthusiasm for natural history which char-

LINNAEUS

acterized a great part of the eighteenth century, and found expression in the brilliant discoveries of workers like Réaumur, Roesel, De Geer, Schäffer, and Bonnet. . . . There is (since the time of Buffon) a marked division between the investigators of form and structure (morphologists) and the investigators of habit and function (physiologists). There have been, and are, many who may be cited as both, but the moods and methods of the two disciplines are quite different. The morphologist asks the question, 'What is this?' and analyses, anatomizes, the dead; the physiologist asks the question, 'How is this?' and analyses the living. The parallelism of these two inquiries, from Buffon to Darwin, has been luminously expounded by Prof. Patrick Geddes, and we follow his exposition. . . . The *morphologist* naturally begins by describing the external characters of the intact creature—its symmetry, shape, architectural plan, and the like; and with the beginning of this we must associate the work of Ray (1628-1705) and Linnaeus ('Systemae Naturae,' 1735-1768, twelve editions). . . . The description of superficial characters is, however, only the beginning of

morphology; an analysis of organs is the next step. This may be especially associated with the name of Cuvier (1769[-1832] author of 'La Règne Animal,' 1816) as zoologist, and Jussieu as botanist. . . . The next logical step was taken in 1801 by Bichat, who in his 'Anatomie Générale' analysed the body into its component tissues. This was the beginning of histology, which has now so many devotees. [Bichat's successors have been Koellier, Schultze, Leydig, Ramon y Cajal, Virchow and Schwann.] . . . Minute analysis could not remain long at the level of tissues; these were soon analysed into their component or originative cells, the nucleated corpuscles of living matter which form the basis of all organic structure. This step must be particularly associated with Schwann and Schleiden, who formulated the 'Cell Theory' in 1838-1839. [The foundation of the cell-theory is marked by the "Microscopische Untersuchung," 1839, of Schwann.] . . . The fifth and last step in morphological analysis, within the limits of biology, is that which passes from the cell as such to a study of the living matter and other substances which compose it. With this, the work of Dujardin, von Mohl and Max Schultze may be associated. [Protoplasm was first clearly described by Dujardin in 1835 and distinguished from other viscid substance; the doctrine was first propounded in 1861 by Max Schultze, "the father of modern biology."] . . . The early *physiology* was largely concerned with the ways and habits of the intact creature, sometimes rising to invaluable studies in 'Natural History' or 'Bionomics,' but again falling into verbal disquisitions on 'spirits' and 'temperaments.' . . . As the anatomists, scalpel in hand, disclosed the intricate mechanism of the living engine, the physiologists were bound to follow, and the study of the functions of organs began. Harvey's investigation of the heart was an early type of this kind of work, and Johannes Miller may be noted as one of the first to broaden the study by making it comparative. [Harvey's "De Motu Cordis et Sanguinis," 1628, laid the foundations of the scientific method in biology and Miller's "Hand-book," 1846, still remains unsurpassed in execution and plan.] . . . Bichat was physiologist as well as morphologist, and sought to express the functions of an organ, like the heart, in terms of the properties of its component tissues. . . . What has been said of Bichat may also be said of Schwann, for there was a physiological side to his cell-theory, namely, the idea, as Prof. E. Ray Lankester states it, 'that the differences in the properties of the different tissues and organs of animals and plants depend on a difference in the chemical and physical activity of the constituent cells, resulting in a difference in the form of the cells, and in a concomitant difference of function.' The same idea was suggested by Goodsir, and developed in relation to a pathology by Virchow. . . . But even in Schwann's mind the early preoccupation with the cell as such gave place to a proper estimate of the protoplasm itself. Herein the history of physiology shows . . . a change of front. The riddle of life has henceforth to be read, as far as may be, in terms of the chemical changes (metabolism) associated with the living matter."—J. A. Thomson, *Science of life*, pp. 2-5.—For rise of evolutionary thought and nineteenth century development, see EVOLUTION.

Applications.—"The practical application of biology to the benefit of mankind is a striking feature of present-day tendencies. The activity set on foot by the researches of Pasteur, Koch, and others has created a department of technical biology of the greatest importance to the human

race. Under the general heading should be included the demonstration of the connection between insects and the propagation of yellow fever, malaria, and other disorders; and as an illustration of activity in 1907, we think of the commission . . . appointed to investigate the terrible scourge of the sleeping-sickness which has been prevalent in Africa. Here also we would group studies of a pathological character on blood-immunity, toxin and antitoxin, also studies on the inoculation for the prevention of various diseases that affect animals and mankind. Very much benefit has already accrued from the practical application of biological researches of this nature, which, in reality, are still in their infancy. We find the application of biological facts to agriculture in the form of soil-inoculation, in the tracing of the sources of nitrates in the soil, and studies of the insects injurious to vegetation; their further application to practical forestry, and in sanitary science. [See CHEMISTRY, AGRICULTURAL.] This kind of research is also applied to the study of food-supply for fishes, as in the case of Plankton studies. . . . The organization of laboratories in our great universities and their product exercise a wide influence on the progress of biology, that science having within twenty-five years come to occupy a position of great importance among the subjects of general education. . . . In brief, the chief tendencies in current biological researches are mainly included under the following headings: Experimental studies in heredity, evolution, and animal behavior; more exact anatomical investigations, especially in cytology and neurology, the promotion and dissemination of knowledge through biological periodicals; the provision of better facilities in specially equipped laboratories, in the application of results to the benefit of mankind, and in the investigation of the fossil records. The atmosphere of thought engendered by the progress of biology is beneficial in every way. While its progress has dealt the death-blow to many superstitions and changed materially views regarding the universe, it is gratifying to think that it has not been iconoclastic in its influence, but that it has substituted something better for that which was taken away. It has given a broader and more wholesome basis for religion and theories of ethics; it has taught greater respect for truth and morality."—W. A. Lacy, *Biology and its makers*, pp. 443-448.—See also EVOLUTION; MEDICAL SCIENCE; SCIENCE.

BIRMINGHAM, Alabama, county seat of Jefferson county and largest city in the state, is situated in a rich coal, iron, and limestone region. It "lies a little north of the center of the state of Alabama in the middle portion of the Birmingham Valley, which extends northeast and southwest for a distance of about 35 miles from the city of Birmingham. The district includes not only the Birmingham Valley but also small areas on each side of the valley, giving a total area of about 700 square miles. Birmingham Valley . . . is at the southern end of the Appalachian Mountains. . . . With respect to the general region, the Birmingham Valley acts as a watershed, the streams flowing east and west having cut gaps in the ridges bounding the valley. Thus it is evident that the Birmingham Valley is both a drainage basin and a watershed. . . . The gaps through the ridges which bound the valley therefore give ready access to Birmingham from the outside world, and a down-grade haul to the sea coast. This has probably been an important factor in locating the city of Birmingham."—C. W. Cook, *Importance of geographic factors in the Birmingham, Ala., iron district* (*Journal of Geography*, January, 1918). In 1870, it was a cotton field. Following the discovery of coal and iron, Birmingham was laid out by the Elyton Land Company, and named after the steel manufacturing city of England. The town was incorporated in 1871. In 1879, the Pratt mines were opened and from that period onward there followed a rapid growth. In the next decade the population jumped from 3000 to 26,000, and in 1920 it had reached 178,270. Besides coal mining and iron and steel manufacture, the city has important cotton and lumber plants. Among its smaller industries must be included the manufacture of automobiles, furniture, boxes, and mattresses. It also has flour, grain and cottonseed-oil mills. Under the Greater Birmingham law (Jan. 1, 1910), the city was enlarged by the addition of the following suburbs: Avondale, East Lake, East Birmingham, Elyton, Eusley, North Birmingham, Pratt City, West End, Woodlawn, and Wylam. In 1911, Birmingham adopted the commission plan of city government. The commission consists of three members, one of whom is elected each year (see **COMMISSION GOVERNMENT IN AMERICAN CITIES: 1911**).

"As an industrial centre, . . . Birmingham is

largely the result of Northern initiative and Northern capital, and while local capital and initiative have come, in time, to supplement the investment of ability and money from other sources, and now to supply the smaller local needs, the chief industrial influences are still external. . . . [The] mixture of cheap and well-built structures, the relative scarcity of large business buildings and apartment houses, the numerous vacant lots in all parts of the city, and the extension of the corporate municipal limits far beyond the area of compact settlement, combine to give the city something of the external appearance of a quickly-grown Western town."—W. MacDonald, *New United States* (*Nation*, Mar. 1, 1919).

BIRMINGHAM, England, "is situated nearly in the center of England, in the northwest of Warwickshire, with suburbs extending into Staffordshire and Worcestershire, 112 miles northwest of London. It is a city and municipal county and parliamentary borough and the chief seat of metallic manufacturers of Great Britain and one of the leading hardware centers of the world. Birmingham, the largest town of Warwickshire, does not lie within the basin of the Severn, for it is built upon the undulating ground extending on both sides of the river Rea, a tributary of the Tame, which discharges its waters through the Humber into the German Ocean. In Domesday Book the city was called Bermingeham. This afterwards became corrupted into Bromwychem or Brummagem meaning the 'town of brooms,' but popularly associated with pinchbeck and base metals fraudulently used to make articles glitter like gold."—*Universal Geography, British Isles*, v. 4, p. 109.—The area of Birmingham is 43,601 acres and its population in 1921 was 919,438.

1166-1250.—Grant of market charters.—"The earliest and most important historical fact in connection with the town of Birmingham is the grant of a market charter. It is the first step in that long chain of events which have gradually raised Birmingham from the little hamlet of herdsman on the fertile banks of the rippling Rea to one of the foremost cities of the British Empire. . . . The Birmingham grant was well in advance of that of most English towns, as it dates back to the year 1166 . . . (by King Henry II). . . . The next market charter was granted by Richard Cœur de Lion 23 years later in 1189. It was merely a renewal or confirmation of the first charter. . . . In 1250 . . . William de Birmingham obtained a charter from the king which among other privileges granted him the right to hold a fair in his manor of Birmingham for four days."—*Birmingham markets and fairs* (*Birmingham Archaeological Society Transactions*, 1912, p. 12).

1265-1266.—William de Birmingham killed in battle of Evesham and manor of Birmingham seized by the king.—"William de Birmingham was one of the reforming Barons and joined the forces of Simon de Montfort. In 1265 he was killed in the dreadful slaughter of the Battle of Evesham when Simon and his troops were cut to pieces. The manor of Birmingham was seized by the king [Henry III], who granted it to Roger de Clifford. The writ *de intendo* of 18th January, 1266, addressed to the tenants of the Manor of Birmingham in favour of Roger de Clifford refers to the manor as formerly of William de Birmingham, the king's enemy and rebel. However, under the Statute of Kenilworth, William's son William recovered the manor by paying a fine to the crown."—W. Barrow, *Birmingham markets and fairs* (*Birmingham Archaeological Society Transactions*, 1912, pp. 13-14).—See also **ENGLAND: 1216-1272**.

1527.—Edward de Birmingham deprived of his property by means of John Dudley.—Manor later passed to the crown.—Granted to Thomas Marrow.—“The owner of the Manor in 1536 was the ill-fated Edward de Birmingham, who succeeded to the estates when a child of the age of three, on the death of his grandfather in 1500. We all know the story . . . how by connivance of John Dudley, Earl of Northumberland, Edward de Birmingham was accused of felony . . . on the night before Christmas Eve, 1527. . . . Edward de Birmingham does not seem to have been arrested until 1532. In 1536 he was detained in the tower when a special Act of Parliament . . . was passed. This recited that Edward de Birmingham was indebted to the king, in ‘diverse great summs of money,’ that he had, moreover, been convicted of felony, and that the king had been pleased to accept the Manor and Lordship of Birmingham in satisfaction of the sums of money. It was therefore enacted that, subject to the reservations therewith of an annuity of £40 per annum to Edward and his wife, Elizabeth, the Manor and Lordship of Birmingham should be held by the king as his own property. Nine years later (1545) the De Birmingham estates were granted by King Henry VIII to John Dudley now Duke of Northumberland. But on King Henry VIII’s death, Northumberland being involved in the Lady Jane Grey conspiracy was attainted of high treason, and his estates forfeited to the Crown in the 1st year of the reign of Mary, and her Spanish husband, Philip. . . . The Manor of Birmingham did not long remain the property of the Crown.”—*Birmingham markets and fairs (Birmingham Archaeological Society Transactions, 1912, p. 16)*.—In the fourth year of their reign it was granted to Thomas Marrow, of Berkswell, from whom by marriage and descent it went to Christopher Musgrave.

1643.—Battle of Birmingham.—In the Civil War under Charles I, the town sided actively with the Parliamentarians. “Prince Rupert, the nephew of the king, with nine troop of horse and about 300 men, was marching with Charles towards London when the latter broke his journey at Aston Hall and having separated from the king was met on the 17th of October (1642) by a Parliamentary general ‘near Brumegun in Warwickshire,’ who ‘gave him battle, which was very fierce, and cruell on either side, but at length the Prince’s souldiers retreated and fled.’ In the next year (1643) Prince Rupert came again to Birmingham, this time with about 2,000 men. . . . He sent word to the people of Birmingham ‘that if they would quietly receive his Highnesse and his forces they should suffer no injury, but otherwise they must expect to be forced to it.’ . . . It was decided by the majority of the inhabitants that they should resist the Prince. . . . But theirs was a hopeless task. Not only were they many times outnumbered, but Prince Rupert’s forces were better armed and many of them were mounted.”—Jones J. Ernest, *Short History of Birmingham, p. 71*.—The town was attacked, plundered and many houses burned and a fine levied. The town was quiet during the rest of the Civil War.

1665.—Birmingham and the plague.—In 1665 Birmingham suffered heavy losses by the plague, the dead being buried in the pest field, at Ladywood, then far outside of the town.

1660-1820.—Expansion and economic progress.—“As if they wished to atone for the part they had taken in resisting Charles I, and in siding with the Parliament, they were in the reigns of the Georges, and especially in that of the third of that name, as violent and uncompromising Tories

as could be found in England. The town grew in extent and population quietly and soberly, and industry made an equally quiet and sober progress until the days of Boulton and Watt revolutionised the trade of the country. Thus we need not be surprised at the evidences we meet of the length of time it took Birmingham to grow out of a quiet, pretty country town to the hive of industry which it is now. Writing of the Birmingham of Charles the Second’s days, Macaulay says, ‘Birmingham had not been thought of sufficient importance to send a member to Oliver’s Parliament. Yet the manufacturers of Birmingham were already a busy and thriving race. They boasted that their hardware was highly esteemed . . . in London and even as far off as Ireland. Yet in 1685 the population, which in 1840 was little less than two hundred thousand, did not amount to four thousand. Birmingham buttons were just beginning to be known; of Birmingham guns nobody had yet heard; and the place whence two generations after, the magnificent editions of Baskerville went forth to astonish the librarians of Europe, did not contain a single regular shop where a Bible or an almanack could be bought.’—Compiled and edited by J. Alfred and Langford, *Century of Birmingham life, v. 1, pp. 163-164*.

1791.—Birmingham and the “Church and King” riots.—“In 1791 Birmingham was in many ways a typical industrial town of the new order. The metal trades were making vast strides, Boulton’s Soho Works growing alongside the industry of small masters. Population was swelling, and new districts straggled out along the canals. The town had no representative in Parliament, no real municipal government, and no effective police. There was scarcely any civilizing influence among the teeming population of artisans, and the city, as it appeared, was abundantly furnished with professional ruffians and prostitutes. One centre of intellectual life existed in the public library, chiefly used by a small group of educated manufacturers and professional men, who read books and met to discuss scientific and speculative questions. Some of them were members of dissenting congregations which flourished in the town, and were regarded with much jealousy by churchmen. Feeling ran especially high since Dr. Priestley, celebrated for his Unitarian theology and scientific discoveries, had settled in Birmingham to take charge of the new meeting-house. In 1780 Birmingham society was convulsed by the controversy over the Test Act. . . . Dissent and political reform were everywhere allied, and nowhere more closely than in Birmingham. When the anniversary of the fall of the Bastille came round and the ‘Friends of Freedom’ were invited to a public dinner, the *Birmingham Gazette* contained an announcement that their names would be published next day in a halfpenny pamphlet. Then a handbill was discovered in which tyrants were bidden beware; the crown of ‘a certain Great Personage’ was growing too heavy for the head that wore it. It was seized on by the Conservative party, and the cry of ‘Church and King’ was raised, while the Radicals denounced it as the work of an enemy.”—P. A. Brown, *French Revolution in English history, pp. 77-78*.—“It began with an attack on the hotel where the members of the society were assembled, but before the day was closed, the mob had totally destroyed two of the principal meeting houses in Birmingham as well as the house of Priestley. . . . On Friday the magistrates enrolled a large body of special constables, but they proved too weak to restrain the mob. For three days the houses of prominent dissenters or democrats of Birmingham

ham . . . were wrecked or burned. Many lives were lost . . . and the rioters were often too intoxicated to escape from the flames they had kindled. . . . It was not until Monday morning that the arrival of a troop of cavalry from Nottingham restored order."—W. E. H. Lecky, *England in the eighteenth century*, v. 5, pp. 528-529.

1801-1811.—Population.—In 1801 the population was 60,822; in 1811, 74,037.

1824.—Purchase of market rights and tolls.—"In 1824, with a wise foresight abundantly justified by the result, the Commissioners purchased from Mr. Christopher Musgrave, then lord of the manor, the market rights and tolls for the sum of £12,500."—J. T. Bunce, *History of the corporation of Birmingham*, v. 2, p. 174.

1832.—Birmingham enfranchised.—"The part which Birmingham took in promoting and carrying the Reform Act is matter of history. The force of the Political Union, and of the principles upon which it was based, and of the desires to which it gave expression, continued to exert itself locally after the immediate purpose of the Union had been accomplished. By the Reform Act, Birmingham was erected into a Parliamentary Borough, and had two representatives in the House of Commons assigned to it. But while the political rights of the town were thus admitted and established, the local government was left untouched. This remained as it was constituted more than sixty years previously. The powers of the manorial officers were still exercised; justice was administered by county magistrates, holding their petty sessions in the town; the lighting, paving, sewerage, and other sanitary work was still vested in the Commissioners of the Street Act, a self-elected body."—J. T. Bunce, *History of the Corporation of Birmingham*, v. 1, pp. 96-97.

1835-1838.—Passage of Lord John Russell's municipal corporation bill. — Birmingham granted a charter.—"Birmingham had tried to get a charter of incorporation more than a hundred years before—in 1716—but had failed. After the passing of the Reform Act of 1832, when it was made a Parliamentary Borough and sent two members to the House of Commons, the granting of one could only be a matter of time. In 1833, a Bill was introduced into Parliament by the Lord Chancellor, Lord Brougham, to incorporate Birmingham, Manchester, Sheffield, Wolverhampton and other large towns, but it did not meet with much favour, and was withdrawn. Two years afterwards (in 1835) Lord John Russell brought in his Municipal Corporations Bill. This Bill, unlike Lord Brougham's, did not incorporate certain towns, but it gave power to the Crown to grant charters on the petition of the inhabitants. It was passed and received the Royal Assent on September 15, 1835. Even then, however, although many men in Birmingham were very anxious to get the town incorporated, months passed before anything was done. On the first day of March in the memorable year 1837, a meeting was held, 'to make the necessary arrangements for obtaining an incorporation of the borough.' Unfortunately, from the first the question of incorporation was a party one. The Tories were against it, for they knew that the power which was in their own hands would be lost to their party if it was granted. It was therefore a Liberal or a Radical movement, and this led to a great deal of trouble in the succeeding years. It caused also a good deal of delay before the Charter was granted. Petitions for and against the Charter were presented, the petitioners in favour being as three to one against. Immediately, these figures were disputed. The

Tories declared that of ratepayers alone there was a majority *against* the Charter. This caused a Government inquiry to be held—two Commissioners coming down to Birmingham in the February of 1838. Their report must have been in favour of incorporation, for it was announced a few weeks later that the Privy Council was 'disposed to recommend it to the Queen to grant a Charter.' The majority of ratepayers alone, however, was not very largely in favour of the change. Although 8,707 persons had signed the petition for a Charter, only 1,788 of these actually paid rates. The number of names to the petition *against* the Charter was 2,841—of whom 1,188 paid rates. But the ratepayers against the Charter paid more in rates—although they were fewer—than those who were in favour. However, the Charter was granted, and it was read in the Birmingham Town Hall on November 5, 1838, by Mr. Wm. Scholefield, who was to become the first Mayor of the town. The first elections of Councillors for the newly-formed Town Council of a Mayor, forty-eight Councillors and sixteen Aldermen took place almost immediately, the day after Christmas Day, and their first meeting took place on December 27. The most remarkable feature of the election was that all the Councillors were Liberals, though there were a few who had been proposed by both Radicals and Tories! The Aldermen were chosen by the Councillors from among themselves—with the exception of two who had not been elected as members of the Council. This caused fourteen vacancies, and that number of new Councillors had to be elected, all of them being, as before, Liberals. Then when the different officers of the new Corporation came to be elected they were all chosen from the Radical party. The Town Clerk, the Registrar of the Mayor's Court (a Court something like the County Court now, for the recovery of small debts), and the Clerk of the Peace, each of whom had a good salary, were Liberals. This was perhaps only natural, for the Tories had done everything they could to prevent Birmingham becoming incorporated, but it was nevertheless unfortunate for the town."—J. E. Jones, *Short history of Birmingham*, pp. 123-126.

1839.—Town incorporated, and Police Act passed.

1839.—Chartist agitation.—Bull Ring riots.—"The Chartists—a body of advanced politicians who demanded, among other things, annual Parliaments, vote by ballot, and payment of Members of Parliament—had been holding meetings every night for months in the Bull Ring. Unfortunately, they had amongst them many men, who, thinking they could get what they wanted if they only showed they were determined, advocated as a sure means of forcing the hands of government the resort to arms. The Birmingham magistrates saw the danger, and they forbade these meetings as early as May 10. They threatened to prosecute all persons holding them, but the meetings continued. Hundreds of the citizens of Birmingham were sworn in as special constables, that is, they assisted in keeping order as voluntary 'policemen.' But even then the magistrates knew that there was grave danger, and only four days before the Town Council had passed the resolution as to the police, they had brought into the town a large body of men from the London Police Force. This made the Chartists very angry, and they vented their displeasure on the men themselves. They stoned and, in one or two cases, even stabbed them. Then ten days after the coming of the London Police—less than a week after the Council Meeting—came the Bull Ring Riots."—J. E. Jones, *Short history*

of Birmingham, p. 131.—On the fifteenth of the same month another meeting took place, and a mob numbering many thousands and well armed set fire to many houses in the Bull Ring. The military again interfered, and order was restored. Several of the ringleaders were tried and imprisoned.—See also ENGLAND: 1838-1842: Chartist agitation.

1857.—John Bright elected M. P. for Birmingham.

1858.—Queen Victoria pays first visit to Birmingham, accompanied by the Prince Consort.

1861-1879.—Library opened (1861).—Destroyed (1879).—"On the 3rd of April, 1861, the Constitution Hill Library was formally opened by Mr. Arthur Ryland, then Mayor. . . . The Central Lending Library and the Art Gallery were opened on the 6th of September, 1865, on the occasion of the meeting of the British Association in Birmingham. . . . [In] 1879, the Library buildings, together with nearly the whole contents of the Reference Library, including the Shakespeare Library, the Cervantes Library and the Staunton Collection and a part of the books in the Lending Library (about 2,000 volumes out of the 20,000 in that collection), were destroyed by fire."—J. T. Bunce, *History of the corporation of Birmingham*, v. 2, pp. 209-211, 224.

1867: Use of caucus to control seat in Parliament.—The Four Hundred. See CAUCUS: England: Development.

1884.—Completion of judicial system of Birmingham.—"The judicial system of Birmingham was completed in 1884 by the grant of Assizes to the Borough, an object which had been steadily kept in view by the Town Council for nearly thirty years. The first endeavour to obtain Assizes was made in January, 1857; a second effort was made in 1859, another in 1863, and a fourth in 1864. . . . The negotiations with the Government were continued in the three following years, and it seemed likely that they would prove successful. Indeed in December, 1866, the Home Office informed the Corporation that a grant of Assizes would be made, and that the first sittings could take place in the ensuing Spring. But the corporation were not prepared for such an immediate development, as the courts could not be got ready, and so the matter went over until May, 1867. The Corporation then endeavoured to obtain a formal grant of Assizes, conditional upon the proposed alterations being made in the Public Office; but the Home Office declined to make a conditional order, intimating, however, that on receiving a certificate that adequate courts and proper lodgings for the judges had been provided, an order for Assizes would be made. Here the negotiations broke down, the Corporation were unwilling to spend money upon the courts until the order in Council for a grant of Assizes had been made; and the Home Office refused to obtain the order until the courts had been provided. A further step, however, was taken at the end of 1867, by the Estate and Buildings Committee presenting a report including plans for Assize Courts upon two acres of land, in Ann Street, Congreve Street, and Edmund Street, purchased in 1864 for the erection of Corporate Offices and Assize Courts—the site now occupied by the Council House, the Art Gallery, and the offices of the Gas Department. The consideration of this report was deferred for twelve months. In the same year a Royal Commission was appointed to enquire into the arrangements for the Superior Courts of Law, Assize Circuits, etc., and the Corporation put the case of Birmingham before the Commission, asking that Birmingham might be made the centre of an Assize

district. In 1869 the Commission reported in favour of Assize districts, and selected Birmingham as the sole place for holding Assizes for the Midland district—consisting of the counties of Warwick, Worcester, and Stafford. The proposal to erect Assize Courts on the Corporation land in Ann Street (now Colmore Row) and Edmund Street was then revived, and the Estates Committee were authorised to obtain designs for Corporate Buildings, Assize Courts, and Judges' Lodgings. In April, 1870, however, the Corporation were informed that the Government did not intend to give effect to the recommendations of the Royal Commission, and so the grant of Assizes, seemingly so probable, once more receded. Nevertheless the Council resolved to proceed with the project of obtaining designs for the necessary buildings, but so to arrange them that the Corporate Offices (the present Council House) could be separately erected; the Assize Courts and Judges' Lodgings being left to wait the course of events. In 1871 the designs were received, and those of Mr. H. R. Yeoville Thomason were accepted. At the end of 1871 another abortive effort was made to obtain Assizes, and then the matter remained in abeyance until 1874, when a further endeavour was made to induce the Government to constitute a Midland Assize district, with Birmingham as its centre. The answer was that the district could not be granted, but that as soon as proper courts were provided, Birmingham might be made an Assize town. In 1875 another endeavour was made to obtain an Assize district, but nothing was effected. On the 7th of March, 1876, a further step was taken. Upon a statement submitted by the Mayor (Mr. Joseph Chamberlain), the Council resolved 'that it is desirable to proceed at once with the erection of proper courts, and other buildings to be used in connection therewith, for the purpose of holding Assizes in this Borough.' Again the subject was deferred until 1880, when, on the 3rd of August, the Council rescinded all their resolutions appropriating land near the Town Hall for Assize Courts, and directed the Improvement Committee to retain possession of a piece of land in Corporation Street, between the County Court and the Old Square, as a probable site for Assize Courts. Nothing further was done until 1883, when, on the 2nd of October, the General Purposes Committee were instructed 'to consider the whole question of the steps to be taken for constituting Birmingham a town for the holding of Assizes, or for the establishment of periodical sittings in the Borough of the High Court of Justice,' and authorising the Committee to communicate with the Government on the subject. On the 1st of July, 1884, the General Purposes Committee were enabled to report that the negotiations for a grant of Assizes to Birmingham had been successful, and that, having ascertained that temporary accommodation could be provided, it was proposed by Order in Council to constitute Birmingham an Assize town, and that the Judges would hold their first Assize in this Borough on the 2nd of August. 'Your Committee,' the report proceeded, 'think it desirable to state that this determination was only arrived at upon an understanding that provision will be made for the holding of the Courts, and the accommodation of the Judges, in a manner worthy of the reputation of the town.' The General Purposes Committee were then directed to 'take all necessary steps to provide temporary accommodation for the holding of Assizes,' and the provision of Judges' Lodgings, and also to 'consider what accommodation it will be necessary to provide for the permanent holding

of Assizes,' and what steps should be taken 'with a view to the erection of suitable buildings on the land reserved by the Corporation for that purpose.'—J. T. Bunce, *History of the corporation of Birmingham*, pp. 269-272.

1889.—Birmingham created a city, Jan. 14.

1896.—Title of mayor raised to "Lord Mayor."

1900.—University established.—The University of Birmingham, incorporated by royal charter on March 24, 1900, grew out of Mason University College, founded in the city of Sir Josiah Mason in 1875. The university includes faculties of science, arts, medicine and commerce, with 184 professors and 1,000 students.

1901.—Riot against Lloyd George.—On Dec. 18, a violent riot broke out in Victoria Square against David Lloyd George, who attempted to deliver a speech opposing the Boer war.

1912.—Industrial growth and municipal progress.—Birmingham has grown into a great city and a very important railway centre, but, although the modern methods of large establishments have been introduced, many small family workshops still remain turning out articles of a special kind. Jewellery of all sorts, watches, coins for foreign governments, buttons, beads, and small metal work of every description, are its characteristic trades. The making of firearms is also very important, from flintlocks for African trade to magazine rifles. Bedsteads employ many hands, bicycle making and the construction of steam-engines are largely carried on. Birmingham is a progressive and enterprising town; its municipality has taken a lead in introducing modern improvements, from steam-engines and gas-lighting in the early days of the great firm of Boulton and Watt, to electric traction at the present time. The public buildings are very fine, the pictures in the corporation galleries are exceptionally good, and the new university with its modern faculty of commerce educates one of the most alert and intelligent populations in the country.—H. R. Mill, ed., *International geography*, pp. 175-176.

1914-1918.—Munitions center.—During the World War Birmingham was one of the greatest munitions manufacturing centers in the United Kingdom. Three Zeppelin raids were carried out on the city, in 1916, 1917 and 1918. Birmingham gave nearly 150,000 fighting men.

1919.—Housing and town-planning act.—This act provides for the Housing and Estates Committee, which is responsible not only for the city properties, but also for the erection of houses to meet the growing needs of the industrial population.

1920.—Post-war development.—Important post-war developments have taken place in electrical engineering, housing and town-planning, railway connection, canal service, industrial organization, and scientific processes.

BISHOP, Henry Rowley (1786-1855), English composer of ballad operas and songs. See **Music: Modern: 1750-1870.**

BISHOP, ecclesiastic of the highest order in Christian churches, with oversight over the lower clergy and generally with a specified diocese.

Early development.—"During the 1st and 2nd centuries . . . various apostles and wandering missionaries like Paul had founded numerous scattered churches, of whose local organization we know little, except that they had officials called overseers or *episcopi* or bishops, elders or *presbyters* or priests, and deacons."—L. Thorndike, *History of medieval Europe*, p. 100.—See also **CHRISTIANITY: 100-300: Church organization.**—"The supremacy of the bishops, which had been founded on the necessity for unity of doctrine, was consolidated by the necessity for unity of discipline. It was a natural effect of the same causes . . . that a rule should grow up that there should be only one bishop in a community. . . . When discipline as well as doctrine found its center in the bishops, it began to be argued that they had succeeded not only to the seats which the Apostles had filled, but also to the powers which the Apostles possessed."—E. Hatch, *Organization of the early Christian churches*, pp. 103-7.—"The clergy were given many privileges by the Christian successors of Constantine, as their edicts in the Theodosian Code show. They were in large measure personally exempted from state duties and taxes; and in most criminal and in some civil cases were to be tried by their own bishops rather than by the imperial courts. Before Christianity had been recognized by the State, it was often the practice for the laity as well as the clergy to settle their disputes privately before their bishop instead of in the public courts, and the Emperors now allowed the bishops to continue this jurisdiction to a certain extent. The emperors would not permit rich men to escape paying taxes by becoming clergymen, but they did allow the Church as a corporation to receive bequests, and themselves endowed it freely. Such church lands were subject to taxation, but this did not prevent the Church and many individuals from growing very wealthy, and by the 5th century the Church is estimated to have become the greatest landholder in the Empire. . . . Councils were now held with increasing frequency and at the same time the Bishop of Rome appears to have increased in importance and power. One would naturally expect, especially after the fall of Jerusalem in 70 A. D. [see **JEWS: A. D. 66-70**], that the leading early Christian community would develop at Rome, the center and the greatest city of the Empire. Moreover, it was believed from an early date that both Peter and Paul had suffered martyrdom there. In the Gospels Jesus often addresses Peter as the leader among the disciples, and in one passage says: 'Thou art Peter and upon this rock I will build my church. . . . And I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven: and whatsoever thou shalt loose on earth shall be loosed in heaven.' [*Matthew*, xvi: 18, 19.] The Bishops of Rome have therefore argued that Peter was the first Bishop of Rome and that they are his successors as chief of the

apostles and as head of the Church [see PAPACY]. . . . In 747 Boniface secured from the Frankish bishops a declaration of their fidelity to Rome. . . . In France to-day the sees of Bishops still correspond closely to the sites of Roman municipalities, where, before Christianity became the state religion, there had been a pagan *flamen* for the cult of the emperor. . . . By the time of Charlemagne there is no question that the diocesan bishop had become distinctly the central figure of clerical life. . . . With the progress of feudalism the bishop had gone on gaining in dignity and authority until we find him . . . ranking in every respect with the highest in the land."—L. Thorndike, *History of mediæval Europe*, pp. 105-107, 114, 169, 546.—See also CHRISTIANITY: 553-800; ECCLESIASTICAL LAW: 400-1000.

His character in the Middle Ages.—"The bishop was the executive and responsible head of a diocese, *i. e.*, of a territory, larger or smaller, in which there might be any number of parish churches, each under the immediate charge of a priest (*presbyter*). As a clerical personage his function was to oversee the conduct of public service and the administration of charity in his whole diocese, to secure proper persons for his subordinates and to see that they did their duty. . . . He did not receive with his higher office any higher consecration, but it seemed specially fitting that, as the executive office of a diocese, he should have especial charge of admissions to membership both in the lay and clerical elements of the religious society, and hence he was regularly entrusted with the performance of the rites of confirmation and of holy orders. . . . By far the most interesting aspect of the bishop's office is its dual character. The mediæval bishop was not merely a clerical personage. He was at the same time the administrator of vast temporal interests. The mediæval church was not, in any modern sense, a state institution. It was protected by the state, but not supported by it. Like all other officials, the clergy were supported by the income of definite parcels of land, and the mediæval idea did not separate sharply the possession or even the use of land and the exercise of jurisdiction over the inhabitants of that land. Thus the bishop, as the chief administrator of a great landed possession, was drawn into all the complicated business of a secular government. As far back as Charlemagne's time we have bishops actually invested with the functions of the count, and, as the feudal system developed, such cases became so frequent as to be, in many parts of Europe, almost the rule [See CONSISTORY COURTS OF THE BISHOPS]. The bishop became, by virtue of his office, a vassal of the seignior in whose territory his lands might lie, and he also became in his turn a seignior, often on a great scale, with vassals and sub-vassals, ruling over a very wide extent of country. Everything that we have said about the rights and duties of feudal princes [see FEUDALISM] applies with equal truth to the bishop—with one great exception. The lay fief was, from an early day, hereditary; the ecclesiastical fief passed from one hand to another by virtue of an election. As to how a bishop was properly to be elected there was never a doubt in any one's mind. '*Clero et populo*' was a canonical phrase, easily enough understood, and plainly enough intended to exclude every form of influence through the government or from any source whatever except the body of persons over whom the new bishop was to have authority. As time went on, however, it became more and more impossible to keep the episcopal election within such narrow lines. It became involved with every

form of seigniorial interest both from above and from below. The filling of a vacant bishopric with the right man was a matter of immense importance to every landholder in the vicinity, especially so the direct lord of the land, and most of all to the overlord, the king."—E. Emerton, *Mediæval Europe*, pp. 546-548.

Investiture.—Authority of archbishop.—"Lay investiture was the power exercised by kings and feudal lords of investing with his office and fiefs the new incumbent of a bishopric or abbey. . . . The new bishop or abbot must do homage to his king or feud lord and receive from him, not only the church lands as a fief, but also the symbols of his religious functions, the ring and the staff, with the words, '*Accipe ecclesiam*' ('Take this church') . . . It was finally agreed by the Concordat at Worms in 1122 that nowhere should the clergy any longer receive the symbols of their spiritual functions from the bands of secular rulers; but that in Germany ecclesiastical elections should take place in the royal presence and that the bishop, before he could be consecrated, must be invested with his temporal fiefs by the king or emperor. . . . For England the question was compromised in about the same way as Germany, but in France the Church came nearest to settling the questions of ecclesiastical elections and investitures to suit itself. . . . [For the struggle over Investiture see GERMANY: 1056-1122; and PAPACY: 1056-1122.] The archbishop had a certain authority over a number of bishops . . . but some bishops were practically independent of archiepiscopal control and the authority of different archbishops was very unequal. In England there were 17 bishops under the Archbishop of Canterbury and 2 under the Archbishop of York. . . . Each bishop had his own cathedral church, usually located in a town; in fact, in England no place was called a city unless it had a cathedral. . . . The priest, although nominated by some lay or ecclesiastical patron of the parish church, must be approved and ordained by his bishop, who was also supposed to visit and superintend the activities of all the priests within his diocese. . . . The mass was the central feature of the church service. Often the only preaching was done by the bishop when he paid a visit."—L. Thorndike, *History of mediæval Europe*, pp. 284, 291-2, 436, 439.

Since the Reformation.—At the time of the Reformation, the episcopal office practically disappeared from the Protestant communities of the continent of Europe, although the title has been retained in Denmark, Norway and Sweden. The establishment of the Reformation church of England put the bishops under the control of the king of England (in the first case, Henry VIII) and all connection with the Roman see was severed. The bishops had been included in the membership of the Saxon witenagemote and in the parliament of Simon de Montfort and are recognized as peers entitled to seats in the House of Lords. The law of the Puritans during the commonwealth abolished episcopacy, but the bishops returned to their positions in church and state with the restoration of Charles II. The English bishops are theoretically chosen by the chapter of each cathedral church on receipt of a license from the crown, but as a nomination is included in the license (called *congé d'élire*) and no chapter disregards such a nomination, the appointment may be said to come from the king and the prime minister. One factor contributing to the final break between the thirteen American colonies and England had its origin in religious, ecclesiastical, and sectarian differences. "Certain devoted Episcopalians (q. v.) on

both sides of the water wanted to see Church of England (q.v.) bishops established in the Colonies. The Government made no attempt to comply with the request; but the fear that it would, became real and general; the ministers of the opposing sects, together with the patriot leaders among the laymen, played upon this fear, and the prejudice and apprehension thus excited became a potent cause of estrangement. . . . The religious and moral enthusiasm inspired by the Wesleyan revival began to spend its force early in the 19th century at least so far as the upper classes were concerned, and the Establishment, except for the Evangelicals, hardly warmed by the fervor of the movement, relapsed into its customary state of chilly conservatism. Its bishops were pompous, dignified figures who had secured their high offices through family connection, personal influence, or reputation for learning, who enjoyed ample incomes and extensive powers, and who, with little regard for purely religious work, devoted themselves to politics, to the administration of their estates, to society and scholarly leisure. . . . While the bishops and a few favored clergy were in receipt of rich revenues, the rank and file of the country parsons drew only meager stipends. . . . The attempt to meet the threatened dangers resulted in the Oxford Movement, so called because it was started largely by a group of young Oxford scholars."—A. L. Cross, *History of England and Greater Britain*, p. 750, n. 3, pp. 1039-1040.—Among the leaders of the Oxford movement were John Henry Newman and John Keble, and at their stimulus a new type of high churchman developed, resembling the Laudian divines of the seventeenth century, who emphasized the Catholic, apostolic traditions of the Church of England. In 1919 there were in England and Wales forty-three Anglican bishops and three archbishops. Including the colonial bishops there are now 229 in the Anglican communion.

In the Protestant Episcopal church and Methodist Episcopal church of the United States the functions of the bishops are similar to those of the Anglican but the Methodist Episcopal bishops have no dioceses and are all itinerant. In the Roman Catholic church the bishops appointed by the pope are still essential as conveyors of the Apostolic succession. In the Greek church they are chosen exclusively from the unmarried clergy.

BISMARCK, Otto Eduard Leopold, Prince von (1815-1898), famous Prussian statesman. Became a member of the Prussian diet in 1847; ambassador to Russia, 1858-1862; Prussian premier and minister for foreign affairs in 1862, chancellor of the North-German Confederation in 1867, and first chancellor of the German empire in 1871. Advocate of strictly reactionary measures and upholder of the Prussian prestige; strongly opposed German colonial policy. Was made a count after the Schleswig-Holstein war of 1864, a prince in 1871, and duke of Lauenburg on his retirement in 1890. See also ALSACE-LORRAINE: 1879-1894; EUROPE: Modern Period: Wars of the Great Powers: (1848-1878); FRANCE: 1870 (June-July); GERMANY: 1850; 1871-1879; 1898 (July); WORLD WAR: Causes: Indirect: a, 1; c; f; j.

BISMARCK ARCHIPELAGO, a part of what was until the treaty of Versailles in 1919 German New Guinea; was occupied on September 12, 1914, by an Australian force and assigned in 1919, under mandate to Australia, came into German possession in 1884 when a protectorate over the New Britain archipelago and several adjacent groups of islands was declared; in 1885 renamed the Bismarck archipelago. The chief islands are Neu Pommern, now again called New Britain, area 10,000 square miles; Neu Mecklenburg, now New Ireland, area 4,600 square miles; Neu Hannover, area 530 square miles; Neu Lauenburg or Duke of York islands, area twenty-two square miles; the Admiralty islands (principal island, Manus), area 600 square miles. The location of the archipelago is between 141° and 154° east longitude, and the equator and 8° south latitude.—See also ADMIRALTY ISLANDS; MELANESIA.

BISSEXTILE YEAR. See CHRONOLOGY: Julian era.

BISSING, Moritz Ferdinand, Freiherr von (1844-1917), German general. Was military governor of Belgium, 1914-1916, and frankly defended his policy of reprisals and deportations.—See BELGIUM: 1914-1918: Belgian deportations; and 1914-1918: National distress; WORLD WAR: 1914: I. BITHYNIANS, or Thynians.—"Along the coast of the Euxine, from the Thracian Bosphorus eastward to the river Halys, dwelt Bithynians or Thynians, Mariandynians and Paphlagonians,—all recognized branches of the widely extended Thracian race. The Bithynians especially, in the northwestern portion of this territory, and reaching from the Euxine to the Propontis, are often spoken of as Asiatic Thracians,—while on the other hand various tribes among the Thracians of Europe are denominated Thyni or Thynians,—so little difference was there in the population on the two sides of the Bosphorus, alike brave, predatory, and sanguinary. The Bithynians of Asia are also sometimes called Bebyrkians, under which denomination they extend as far southward as the gulf of Kios in the Propontis."—G. Grote, *History of Greece*, pt. 2, ch. 16.—The Bithynians were among the people in Asia Minor subjugated by Cræsus, king of Lydia, and fell, with his fall, under the Persian rule. But, in some way not clearly understood, an independent kingdom of Bithynia was formed, about the middle of the fifth century B.C. which resisted the Persians, successfully resisted Alexander the Great and his successors in Asia Minor,

resisted Mithradates of Pontus, and existed until 74 B. C., when its last king, Nicomedes III bequeathed his kingdom to Rome and it was made a Roman province.—See also THRACE: People.

BITLIS, or *Beſlis*, the chief town of a vilayet of the same name in Asiatic Turkey; situated on the Bitlis Chai, an affluent of the Tigris. The town still preserves an old castle which, according to tradition, occupies the site of a fortress built by Alexander the Great. Kurdish beys and sheiks have had much influence in the affairs of the town. The Russian army twice captured Bitlis in 1916 during the Caucasus campaign of the Grand Duke Nicholas and General Yudenich. (See also ARMENIA: 1910-1920; WORLD WAR: 1915: VI. Turkey: d, 1; 1916: VI. Turkish theater: d, 3; d, 6). During 1920 it figured in the Armenia-Turkish boundary settlement. (See SÈVRES, TREATY OF: 1920: Part III. Political clauses: Armenia.)

BITOLIA, city in Serbia. See MONASTIR.

BITONTO, Battle of (1734). See FRANCE: 1733-1735.

BITTO, István (Stefan) (1822-), Hungarian statesman; in Hungarian revolution, 1848-1849; vice-president, chamber of deputies, 1869-1872; premier, 1874-1875; member of Upper House, 1899. See HUNGARY: 1868.

BITURIGES, Gallic tribe. See AEDUI; BOURGES, ORIGIN OF.

BIXSCHOOOTE, a village in Belgium about five miles north of Ypres. During the World War was for a time in German hands, but was reoccupied by the allies in their Flanders advance of June-November, 1917.—See also WORLD WAR: 1914: I. Western front: w, 19.

BIZET, Georges (1838-1875), French composer. Studied at the Paris Conservatoire with Marmontel, Zimmermann, Benoist, and Halévy; won the Prix de Rome; "Carmen," his masterpiece and one of the most famous of all operas, was brought out at the Opéra Comique in 1875. One of the features of this opera is the peculiar use of the flute and the lowest notes of the harp. See MUSIC: Modern: 1830-1921.

BIZOCHI, a branch of the Fratricelli party of the Franciscan order. See BEGUINES, etc.

BJERREGAARD, Henrik Anker (1792-1842), Norwegian poet and dramatist. See SCANDINAVIAN LITERATURE: 1814-1900.

BJÖRNSSON, Björnstjerne (1832-1910), Norwegian poet, novelist and dramatist. His extremely nationalistic writings give us excellent examples of peasant tales, some beautiful poetry, and for the stage, social, polemical, and satirical plays. In addition to his violent nationalism, he was a Pan-German enthusiast. In 1903 received the Nobel prize for literature. See NOBEL PRIZES: Literature: 1903; SCANDINAVIAN LITERATURE: 1857-1910.

BLACK, Jeremiah Sullivan (1810-1883), American jurist. Judge of Pennsylvania supreme court, 1851-1857; attorney-general under Buchanan, 1857-1860; secretary of state, 1860-1861.

BLACK, Joseph (1728-1799), Scottish professor of chemistry who experimented with carbon dioxide. See CHEMISTRY: General: Phlogiston period.

BLACK ACTS. See SCOTLAND: 1584.

BLACK AND TAN CONVENTIONS, a name given to the reconstruction conventions in the Southern states after the Civil War. They were also called "Black Crook Conventions." The most notable were those of Alabama and South Carolina. That of Alabama met in November, 1867. The delegates elected to the convention were a motley crew—white, yellow and black. . . . The disgusted Conservatives designated the aggregation

by various epithets, such as 'The Unconstitutional Convention,' . . . 'Black and Tan,' 'Black Crook,' etc. . . . The colored delegates brought up the negro question in several forms. . . . The negroes were placated with numerous promises. . . . The debates on the question of suffrage were the most extended and showed the most violent spirit on the part of most of the members. . . . Peck, the president of the convention, still spoke out for the test oath and disfranchisement. . . . The oath finally adopted which had to be taken by all who would vote or hold office, was the usual oath to support the Constitution and laws with the following additions: 'I accept the civil and political equality of all men; and agree not to attempt to deprive any person or persons, on account of race, color or previous condition, of any political or civil right.' . . . The Constitution was adopted by a vote of sixty-six to eight."—W. L. Fleming, *Civil War and reconstruction in Alabama*, pp. 517, 519, 521, 524, 527, 529.—"In obedience to General Order No. 160 of Brevet Maj.-Gen. E. R. S. Canby, U. S. A., dated December 28, 1867, the delegates elected to the 'convention of the people of South Carolina' assembled in Charleston on January 14, 1868, 'for the purpose of framing a constitution and civil government' according to the provisions of the Reconstruction acts of Congress. . . . Of the 124 delegates elected, forty-eight were white and seventy-six colored. The white men classed as 'Republicans' were about equally divided as natives or newcomers—in the vernacular of the times, 'scalawags' or 'carpet baggers.' . . . A commission was appointed to frame and submit to the Legislature a scheme of 'financial relief' for the people of the State. The Convention adjourned *sine die* on March 18—after a session of fifty-three working days. . . . The new Constitution contained many provisions which made that instrument materially different from the one adopted in 1865."—J. S. Reynolds, *Reconstruction in South Carolina*, pp. 76, 78, 81.—See also SOUTH CAROLINA: 1865-1872; Reconstruction.

BLACK AND TANS, the name applied (in 1920) to the new auxiliary recruits of the Royal Irish Constabulary, who were recruited at a salary reported to be one pound a day and perquisites. The appellation was derived from their soldiers' khaki uniforms and constables' black caps.—See also IRELAND: 1920: State of the country.

BLACK ART. See ALCHEMY.

BLACK BELT, a term at first applied to central Alabama, but later to all the Gulf states. At first it referred to the soil of this region which is black in color, and especially adapted to the production of cotton. Because of the extensive employment of negroes on the cotton plantations and the tendency of the negroes greatly to outnumber the white men through all this district, the term has gained a second connotation. The special problem of the Black Belt is the predominance of negroes among the population. "The Black Belt of Alabama stretches across the south central portion of the state, from east to west and comprises twenty-one counties. The northern part of the Belt embraces a country somewhat rolling, of metamorphic soils, and the southern extends into the upper part of the coastal uplands, but the greater part of the Belt embraces the central prairie region that runs diagonally across the state, with a width of thirty-five or forty miles. By fact of physiographic features the soils of the Black Belt are the most fertile of the state and better adapted to the cultivation of the staples than the other regions. . . . The distinguishing characteristics of the ante-bellum Black Belt was its agri-

cultural supremacy in Alabama. Its industrial system was made up of the big plantations as the industrial units and the dominant feature of these units was organization and management which made this the region of supremacy. In the confusions and disorder of society that followed the Civil War, the Black Belt lost many of the men who had given dignity and strength to its former civilization. Many planters in the unsettled conditions of labor did not care to attempt farming and moved out of the state; others unable to realize on their holding gave up farming and went to the towns and cities; and still others, seeking better educational and social advantages went to the places where these were to be found. . . . The white planters who remained on the plantation after the war employed largely the share system, sometimes a combination of sharing and renting. Under this system close supervision was necessary, else failure and ruin were certain. Consequently these men, even though their abilities were great, had their time and energies consumed in this atrophying routine of drudgery. To the woes of supervising listless negroes' labor were added the distresses of the iniquitous credit system. The life of the post-bellum Black Belt planter therefore was a struggle for dire economic existence."—C. E. Allen, *Greater agricultural efficiency for the Black Belt of Alabama (Annals of the American Academy of Political and Social Science, Sept., 1915, pp. 187-198)*.

"The most striking contrast between the white and black counties is in the important matter of land tenure. In addition to ownership, there are two widespread systems of tenure, known as the 'cropping' system and the 'standing rent' system. The Census groups together as 'cash tenants' those tenants who pay a cash rental for the use of the soil and those who pay a fixed amount of the crop. In Georgia practically no tenants pay actual cash, so that in this state the term 'cash tenants' means 'standing renters.' . . . Statistics show that the cash-tenancy system is spreading in Georgia and that the cropping system is declining. This tendency has usually been interpreted as indicating economic progress, the emergence of the blacks from 'what was virtually the old slavery system under another name,' as the cropping system has been described, to a higher position. Under the cropping system the landlord furnishes everything—land, house, stock, seed—and takes half the product of the year as rent. He also commonly feeds the cropper and deducts the charge for supplies from the negro's share; or in lieu of furnishing him from a commissary, the employer 'stands' for the cropper at the neighboring merchant's store. The characteristic feature of this system of farming is strict supervision by the landlord over the operations of the farmer. In reality, the cropper is a day laborer, without responsibility except for the day's work. If through adverse seasons his crop is a total failure, he remains under no obligation to the landlord. The employer takes all the risk. The profits depend on the seasons, the prices, and the amount and character of the supervision the landlord exercises. In point of organization, this system resembles the ante-bellum plantation. Usually, almost invariably, indeed, croppers are found settled on small farms surrounding the residence of the landlord, the cabins close enough to permit the croppers to come in the morning for the stock without undue waste of time. The outlying portions of the plantations, situated at such distance as to make close supervision impracticable, are commonly occupied by standing renters. Under the standing rent system,

the farmer pays a definite amount of the crop as rental, say one thousand pounds of lint cotton per house farm of thirty acres. The landlord furnishes only the land and house. The negro supplies his own mule and feeds himself, if he can get credit. In this matter custom varies. Very often the landlord is obliged to 'stand' for the renter before the merchant will extend credit; in other cases, the negro is considered as good a risk as a white man—all depending on the individual. Competition among the county merchants is becoming so strong that credit is frequently extended to the average negro without the personal endorsement of the landlord. In such cases the merchant takes a second lien on the crop, as well as a mortgage on any chattels possessed by the tenant. There is a large element of risk in such business, and the merchants exact from the tenants a high rate of insurance. The theoretical advantage of renting is that, after providing for the payment of rent by planting a certain proportion of the farm in cotton, the farmer is free from the control of the landlord and becomes an *entrepreneur* instead of a laborer. If the white or black standing renter be a man of exceptional intelligence and judgment, he has an opportunity to diversify his farming, and by producing food-stuffs he can be independent in large measure of the merchant. Unfortunately, the common run of negroes lack the qualities that would enable them to use advantageously the freedom of the renting system. They do not diversify crops. . . . It is also doubtless true that the systems of farming already described make for discontent in the country. Under both systems, landlords are inclined to insist on the planting of cotton to the exclusion of other crops. To this rule there are gratifying exceptions; but in general the tenant is not sufficiently encouraged to produce corn, hay, hogs, cattle or poultry. All his energies are expended in making cotton. Food-stuffs come from the merchant. The credit system and the lack of diversification in farming are fatal to the negro, and, indeed, to the white farmer. While such forces as these are at work, the migrations of the masses of negroes are not by any means entirely in response to such stimuli. It has been shown time and again that negro tenants will, wholly without grievance, leave places in which they have advanced from poverty to comparative comfort, simply because they 'jest want a change.' The blacks are naturally easy-going and improvident. They need the stress of competition and the presence of examples of industry. One of the ablest leaders of the race says: 'In nine cases out of ten where a negro in the South is found owning property, he has had an individual white man or a group of southern white men to help guide and encourage him in this respect.' The black man's powers of imitation are great; and where his energies are properly guided and he is encouraged to practice self-restraint and prudence—taught to defer present enjoyment for future good—many a black man has become a prosperous and upright citizen. But the population of the southern states is so small and the proportion of blacks to whites so great that, under the present conditions, it is not surprising that the progress of the negroes is slow and that in some sections there appears to be no progress. The greatest need seems to be the increasing of the proportion of whites to blacks. This end might be reached in two ways: first, by the emigration of negroes to other and predominantly white sections; second, by attracting white immigration to the South. The first of these modes of remedying the situation seems unlikely to affect the masses of the negroes; the second holds out

promise of greater influence. The profound industrial and agricultural revolution through which the South is now passing will inevitably draw immigrants. The movement has, in fact, already begun; and while some southerners are at present unconvinced of the desirability of immigrants, the advantage of an abundant labor supply will doubtless in time overcome their objections, which are superficial and, in some instances, unreasonable. The establishment of a small proprietor class should prove a great incentive to the negro, pointing out to him the goal to be reached as the reward of industry."—R. P. Brooks, *Local study of the race problem* (*Political Science Quarterly*, June, 1911).

BLACK CODES.—"Between October, 1865, and March, 1866, the several Southern State legislatures passed enactments in respect to the freedmen which seemed to the North a grudging bestowal on them of certain civil rights nearly counterbalanced by the application to them of harsh criminal legislation. In all the States the negroes were given the power to sue and be sued, and to testify in the courts when coloured persons were concerned. The relationship of man and wife and the responsibility for their children were recognized. The privilege of serving on juries or in the militia was not bestowed nor of course the right to vote or to hold office. They were not always subject to the same proceedings and punishment as the whites. For the negro the penalty for the rape of a white woman and for certain other offenses was death where on the white man a lesser punishment was imposed. The apprentice, vagrant and contract labour laws bore hardly on numbers of coloured men and in some States tended to a system of peonage. The negroes were virtually forbidden to assemble, their freedom of movement was restricted and by some legislatures they were deprived of the means of defence. In short they were not made equal with the whites before the law. These laws were not passed in a spirit of defiance to the North . . . but many good people believed they were; and this and other misconstructions of them had a powerful effect on Northern sentiment. The difficulties of the problem were not generally comprehended at the North. Three and a half million persons of one of the most inferior races of mankind had through the agency of their superiors been transformed from slavery to freedom. It was a race the children of which might with favouring circumstances show an intellectual development equal to white children 'up to the age of thirteen or fourteen; but then there comes a diminution, often a cessation, of their mental development. The physical overshadows the psychical and they turn away from the pursuit of culture.' (Note.—Brinton, *Races and peoples*, p. 192. This I am informed is a pretty general view of ethnologists, although many put the age of arrest earlier.) 'The infernal laws of slavery,' declared Thaddeus Stevens, 'have prevented negroes from acquiring an education, understanding the commonest laws of contract or of managing the ordinary business of life.' (Note.—Speech, Dec. 18, *Globe*, p. 74.) 'I met,' wrote Sidney Andrews, 'many negroes whose jargon was so utterly unintelligible that I could scarcely comprehend the ideas they tried to convey.' (Note.—*South since the War*, p. 227.) . . . In my judgment it would

have been safe to permit the States to work out this problem under the restrictions naturally arising from the operation of the Freedmen's Bureau and the military occupation which was conceded by the President and all the Republicans at the North must continue for a while longer. The temper of the officers of the army was for the most part excellent, forbearance and decision being shown as each was needed. 'We can't undertake to run State Governments in all these Southern States,' said Lincoln during the last cabinet meeting at which he presided. 'Their people must do that though I reckon that at first they may do it badly.' (Note.—Account of F. W. Seward, who was present as acting Secretary of State because of his father's disability. *Life of Seward*, vol. iii, p. 275.) Henry Ward Beecher said in a sermon October, 1865: 'All measures instituted under the act of emancipation for the blacks in order to be permanently useful must have the cordial consent of the wise and good citizens of the South . . . the kindness of the white man in the South is more important to the negroes than all the policies of the nation put together.' (*Life*, by Lyman Abbott, p. 278.)"—J. F. Rhodes, *History of the United States*, v. 5, pp. 555-559.—The following contemporary testimony is taken from the *Journal of the Louisiana House of Representatives*, Governor Hahn's message, Oct. 3, 1864: "The great duty of the legislature will be to provide a system of laws applicable to the new condition of things. . . . The obliteration of an interest so extended as that of slavery, necessarily makes great changes in the events, opinions and business of the people, and the highest wisdom is required to adapt the state to its new condition. The change from servile to compensated labor, requires careful, liberal and humane legislation, in order to secure the rights of those people who have not been accustomed to provide for and protect themselves. Inasmuch as Louisiana is the first state that makes this change on an extended scale, so it ought to be the first to establish a system of government which shall meet all the exigencies of the case, securing to the public the products upon which the wealth of the state and the people depend, and to laborers their full rights. . . . My own ambition in accepting office was to aid the cause of the union and to give slavery its death blow."

Louisiana slave-code.—"Louisiana has followed the example of South Carolina and Mississippi and enacted a code which she presents to the country as her idea as to how much freedom it will do to allow the emancipated blacks. The code comprises four separate statutes, but they all relate to the same subject, and may be considered as parts of one law, designed to impose upon the freedmen involuntary servitude. It is enacted—"That all persons engaged as laborers in agricultural pursuits shall be required, during the first 10 days of the month of January of each year, to make contracts for labor for the then ensuing year, or for the year next ensuing the termination of their present contracts.' There is no liberty to make contracts for six months, or for three, or to make none, but the laborer is bound by law to make a contract of some sort during the first ten days of January for the whole year. He may not be offered a dollar a month for his labor—he is bound by this law to take the best offer he can get during those ten days. The planters may make what agreement they choose as to price; they have only to hold out ten days, and the laborers must either assent to their terms or take the consequence of violating the law. [This was forced labor on public works.] It is further provided that the la-

borer may choose his own employer, but once choosing shall not leave him except by consent or for breach of contract, and if he leaves, shall forfeit his whole wages. The employes shall have a lien on the crops for wages, and employers failing to comply with their contracts shall be fined double the amount due the laborers, but the fine appears to go into the public treasury and not into the laborer's pocket. The ninth section enacts that laborers shall be responsible for all damage to mules, horses, cattle or implements; and that leaving home without permission shall be deemed disobedience, for which the fine is in each case a dollar. 'Impudence, swearing or indecent language' incur the same penalty, a Louisiana Justice of the Peace and two other whites being judges of what constitutes impudence. Lost time brings a fine of twenty-five cents an hour, and two dollars a day. Labor on Sunday cannot be required except to take the necessary care of stock or 'other property,' which we presume the white Justice of the Peace will construe to include sugar cane and cotton as in the good old days of slavery. The statute is limited to laborers engaged in agriculture and the trades necessary thereto when carried on, on plantations—in plain English—to the freedmen. The Apprentice Act authorizes and requires certain specified officials to apprentice all minors who are orphans, or whose parents do not maintain them, to some employer; and if there is any doubt whether the person to be apprenticed be young enough, the white officials shall determine that point. Being once apprenticed, they seem likely to remain so. The third act, nominally to punish, in certain cases, employers of laborers, is, in reality, an act to prevent any person from employing any apprentice or any laborer who has made a contract before the term of apprenticeship or contract has expired. To the same end it is ordained by a fourth law that whoever shall entice away, feed or harbor any person who leaves his employer, or any apprentice shall be liable in damages to the employer, and shall also be subject to a fine of \$500 or imprisonment for a year or both."—*New York Tribune*, Dec. 20, 1865.

Objections in the North.—"President Johnson is handing over the states one by one to the state authorities, and delivering to them the management of their own affairs. This gives them the control of the negro within certain limits, it is true, but wide limits. It enables them by vagrant laws and labor laws, such as all the states are passing, to 'keep the negro down' and 'make him feel his inferiority' and to build upon, in short, the ruin of the old social system a new one, very much better, no doubt, but still marked by features repugnant to the spirit of our institutions, and likely to prove a fertile source of trouble in the future."—*Nation*, Jan. 4, 1866.—"Most of them (the states lately in rebellion) proceeded immediately to enact codes of laws on the topics of labor, contract, crime, etc., of which the effect was to deprive the freedman of almost every civil right beyond the nominal ownership of himself. The codes contained as much of the spirit and substance of slavery as was possible without its name. The North recognized at once that the effect of this would be to defeat one of the great ends for which it had fought—universal freedom."—G. S. Merriam, *Life of Samuel Bowles*, v. 2, p. 18.—In its issue of Jan. 5, 1865, the *New York Herald* comments on the New Hampshire Republican convention of Jan. 3: "The 4th resolution boldly breaks ground on the living issues of the present crisis. It declares that while the Republicans of New Hampshire 'rejoice that chattel slav-

ery no longer receives the sanction of law or constitution in our broad domain,' they 'cannot be blind to the fact that many of the states lately in rebellion have already adopted codes manifestly tending to the reestablishment of other forms of involuntary servitude, little less oppressive than that which has just been abolished,' and that 'it is the sacred duty of the President and of Congress to see that the ordinance of universal emancipation, written in the blood of our brothers and sons, be not by any subterfuge made null and of no effect.' This is 'a sop to Cerberus,' a little buncombe for the radicals, and nothing more, because the constitutional amendment provides that Congress shall have power to enforce it by appropriate legislation. This secures the freedom of the emancipated blacks in all the states, by placing them, as freemen, under the supreme protection of Congress. Moreover any court of the United States will protect them against unconstitutional 'involuntary servitude.' Upon this matter therefore, there need be no delay in southern restoration."—See also MISSISSIPPI: 1866; SOUTH CAROLINA: 1873-1877; U. S. A.: 1865 (July-December).

BLACK CROOK CONVENTIONS. See BLACK AND TAN CONVENTIONS.

BLACK DEATH.—"The Black Death appears to have had its origin in the centre of China, in or about the year 1333. It is said that it was accompanied at its outbreak by various terrestrial and atmospheric phenomena of a novel and most destructive character, phenomena similar to those which characterized the first appearance of the Asiatic Cholera, of the Influenza, and even in more remote times of the Athenian Plague. It is a singular fact that all epidemics of an unusually destructive character have had their homes in the farthest East, and have travelled slowly from those regions towards Europe. It appears, too, that the disease exhausted itself in the place of its origin at about the same time in which it made its appearance in Europe. . . . The disease still exists under the name of the Levant or Oriental Plague, and is endemic in Asia Minor, in parts of Turkey, and in Egypt. It is specifically a disease in which the blood is poisoned, in which the system seeks to relieve itself by suppuration of the glands, and in which, the tissues becoming disorganized, and the blood thereupon being infiltrated into them, dark blotches appear on the skin. Hence the earliest name by which the Plague was described. The storm burst on the Island of Cyprus at the end of the year 1347, and was accompanied, we are told, by remarkable physical phenomena, as convulsions of the earth, and a total change in the atmosphere. Many persons affected died instantly. The Black Death seemed, not only to the frightened imagination of the people, but even to the more sober observation of the few men of science of the time, to move forward with measured steps from the desolated East, under the form of a dark and fetid mist. It is very likely that consequent upon the great physical convulsions which had rent the earth and preceded the disease, foreign substances of a deleterious character had been projected into the atmosphere. . . . The Black Death appeared at Avignon in January 1348, visited Florence by the middle of April, and had thoroughly penetrated France and Germany by August. It entered Poland in 1349, reached Sweden in the

winter of that year, and Norway by infection from England at about the same time. It spread even to Iceland and Greenland. . . . It made its appearance in Russia in 1351, after it had well-nigh exhausted itself in Europe. It thus took the circuit of the Mediterranean, and unlike most plagues which have penetrated from the Eastern to the Western world, was checked, it would seem, by the barrier of the Caucasus. . . . Hecker calculates the loss to Europe as amounting to 25,000,000.—J. E. T. Rogers, *History of agriculture and prices in England*, v. 1, ch. 15.—See also BRISTOL: 1349; ENGLAND: 1348-1349; FRANCE: 1347-1348; FLORANCE: 1348; JEWS: 1348-1349.

BLACK GUNPOWDER. See CHEMISTRY: Practical application: Explosives: Black gunpowder.

BLACK HAND, Italian criminal society; appeared in Turin 1868, made a specialty of safe-robbing, and large organized crimes. At its height the Black Hand was composed of about 200 members. Public opinion was finally aroused against them and many were supposed to have fled to the United States. They were especially active in that country between 1905 and 1909, and were responsible for the assassination (March, 1909) of Joseph Petrosino, a New York detective who had been successfully tracking them down. "Toward the end of the last century the Sicilian gangs which made their living by blackmail became aware that not a few Italians who had left their home country as peasants had acquired wealth across the Atlantic. Even the ordinary workman, they learnt, who could gain only 40 cents a day in Sicily, could make about four times that wage in New York. Accordingly they hastened to exploit by their familiar methods the rich field of the Italian colony in that city. It was not long before the American police found themselves faced by an elaborate machinery of crime far more ingenious and complicated than anything with which they had previously had to deal. The Black Hand, as the society called itself, proceeded normally to extort what it wanted by frank demands and threats, and it did not hesitate at kidnapping, outrage, and murder when these means seemed necessary to its ends."—*The Times (London)*, March 16, 1909.—See also CAMORRA; and NEW YORK CITY: 1894-1895.

BLACK ROBE COUNCILLORS, Venetian political body. See VENICE: 1032-1319.

BLACK ROD, "the gentleman whose duty it is to preserve decorum in the House of Lords, just as it is the duty of the Sergeant-at-Arms to maintain order in the House of Commons. These officials are bound to execute the commands of their respective chambers, even though the task involves the forcible ejection of an obstreperous member. . . . His [Black Rod's] most disturbing occupation, now-a-days, is when he conveys a message from the Lords to the Commons. . . . No sooner do the policemen herald his approach from the lobbies than the doors of the Lower Chamber are closed against him, and he is compelled to ask for admission with becoming humility and humbleness. After this has been granted, he advances to the bar, bows to the chair, and then—with repeated acts of obeisance—walks slowly to the table, where his request is made for the Speaker's attendance in the Upper House. The object may be to listen to the Queen's speech, or it may simply be to hear the Royal assent given to various bills. . . . The consequence is nearly always the same. The Sergeant-at-Arms shoulders the mace, the Speaker joins Black Rod, the members fall in behind, and a more or less orderly procession then starts on its way to the Peer's Chamber. . . . No matter what the subject under consideration, Black Rod's appearance necessitates a check . . . till the journey to the Lords has been completed. The annoyance thus caused has often found expression during recent sessions."—*Popular account of parliamentary procedure*, p. 11.

BLACK SATURDAY, Battle of. See SCOTLAND: 1544-1548.

BLACK SEA, the ancient Pontus Euxinus (q.v.), an inland sea of southeastern Europe, bounded by Russia, Asia Minor, Turkey, Rumania and Bulgaria. It is connected with the Mediterranean by way of the Dardanelles, through the Sea of Marmora and the Bosphorus—all Turkish territory. The sea covers an area of nearly 170,000 square miles; its greatest length being 740 miles, and greatest width 400 miles. By the Treaty of Paris, 1856, after the close of the Crimean war, the Black Sea was neutralized, no warships were to be permitted on its waters nor military or naval arsenals on its surrounding coasts (see RUSSIA: 1854-1856). In 1870 Russia abrogated the treaty so far as regarded her own military and naval establishments. At the close of the World War the Black Sea was controlled by the allies, through the armistice with Germany. See EASTERN QUESTION; WORLD WAR: Miscellaneous auxiliary services: I. Armistices: f, 4.

BLACK TOM ISLAND EXPLOSION.—

Shortly after 2 a. m., July 30, 1916, about \$5,000,000 worth of munitions exploded on Black Tom island, on the New Jersey side, in New York harbor. Loss of life, so far as it could be ascertained, was comparatively small. Property losses reached a total of not less than \$20,000,000 and included \$3,400,000 worth of sugar and much

plate and window glass in lower Manhattan and other near-by sections. The cause was claimed to be some rubbish burning on Black Tom pier, near Communipaw, for more than a year the main shipping-point of war munitions to the Allies. The great extent of the disaster was apparently due to failure to observe regulations governing the loading of munitions, particularly failure to keep the loaded barges apart from one another.

BLACK WARRIOR, an American merchant vessel, seized and confiscated by Cuban customs officers in May, 1854, her captain being heavily fined. The seizure caused much excitement in the United States, particularly in the South, which would have used it as a pretext for a war of conquest with Spain. After five years' spirited negotiation, Spain made compensation for the seizure. See CUBA: 1854.

BLACKBURN'S FORD, Engagement at. See U. S. A.: 1861 (July: Virginia).

BLACKFEET, **Sisika**, or **Siksika**, **INDIANS**.—"The tribe that wandered the furthest from the primitive home of the stock [the Algonquian] were the Blackfeet, or Sisika, which word has this signification. It is derived from their earlier habitat in the valley of the Red river of the north, where the soil was dark and blackened their moccasins. Their bands include the Blood or Kenai and the Piegan Indians. Half a century ago they were at the head of a confederacy which embraced these and also the Sarcee (Tinné) and the Atsina (Caddo) nations, and numbered about 30,000 souls. They have an interesting mythology and an unusual knowledge of the constellations."—D. G. Brinton, *American race*, p. 79.—See also ALGONQUAN FAMILY; FLATHEADS; INDIANS, AMERICAN: Cultural areas in North America: Plains area.

War against Americans. See U. S. A.: 1866-1876.

BLACKLIST, **Commercial**.—**BRITISH**.—"On July 18, 1916, . . . [Great Britain] made public a 'blacklist' of eighty-three firms and individuals of enemy nationality of associations, resident in [the United States], and forbade British subjects to trade with them under the same penalties as if trading with the enemy. This prohibition it was explained applied to German firms with head offices in Germany; to German firms incorporated in the United States and technically American; and those that made use of a secret code or cloak to cover the fact that they were using the cables in the interest of the enemy. Mr. Lansing [Secretary of State] at once instructed Mr. Page [ambassador to Great Britain] to protest. British steamships would not accept cargoes from the persons and firms proscribed; neutral bankers refused them loans; neutral merchants would not contract for their goods, fearing a like proscription, and steamship lines under neutral ownership were given to understand that if they accepted freight from the 'blacklisted,' coal could not be had at British ports and they might themselves be put on the list. Among the proscribed were American firms, importers of foreign products or distributors in foreign lands of American products. These foreign connections, fostered during many years, when once broken, could not easily be resumed. All such citizens of the United States [then a neutral nation], the Government begged to remind the Government of His Britannic Majesty, were quite within their rights in trading with the people of any of the nations now at war, subject to the well-known and well-defined rules of international law. For breaches of blockade when the blockade is real and effective, for every unneutral act by whomsoever attempted there were well-established

remedies and penalties, which the Government of the United States could not consent to see altered or extended at the will of a single Power or group of Powers. That neutrals must not be condemned nor their goods confiscated, save on fair adjudication and full opportunity to be heard in prize court or elsewhere, was a just and honorable principle accepted by all civilized nations as a safeguard of the rights of neutrals. This the blacklist brushed aside. It condemned without notice, without hearing and in advance. Manifestly the United States could not acquiesce in such methods of punishment of its citizens. The Government of the United States had no intention, no inclination to shield its citizens from the just consequences of unneutral acts. It was quite willing they should suffer the penalties which international law has sanctioned. . . . In course of time the names of seven firms were removed from the blacklist; but vessels were blacklisted and British subjects forbidden to furnish them with bunker coal or handle the goods they transported. October 10, 1916, the British Government made a long reply. 'The trading with the enemy (extension of powers) act, 1915,' Viscount Grey said, 'is a piece of purely municipal legislation which provides that His Majesty, by proclamation, may prohibit persons in the United Kingdom from trading with any persons in foreign countries who might be named in that proclamation or subsequent order. That is all.' The Government neither attempted nor claimed to lay penalties on neutral individuals or neutral commerce. The measure simply bade those owing allegiance to Great Britain to cease trading with persons found to be assisting or rendering service to the enemy. 'Neither the rights nor property of the persons specified is interfered with, condemned or confiscated; they are as free as before to carry on their business.' The right of the Government to prohibit British subjects to trade with such firms as it saw fit was held to be beyond dispute. The measure in question was justified as a military necessity. The modern means of transport and communication, opening new, easy methods for an enemy subject residing in a neutral country to render aid to his Government, was cited as another justifying reason. That German business houses in foreign lands had been not merely agents active in spreading espionage was common knowledge. They had been used as bases to supply German cruisers, they were paymasters of miscreants hired 'to destroy by foul means factories engaged in making, or ships engaged in carrying, supplies required by the Allies. Such operations have been carried out even in the territory of the United States itself,' and His Majesty's Government was bound to say 'that no adequate action has yet been taken by the Government of the United States to suppress breaches of neutrality of this particularly criminal kind.' And so the matter stood when we entered the war."—J. B. McMaster, *United States in the World War*, pp. 274-276.—"For the time American feeling against Great Britain was strong, but the continued wrongs we sustained from Germany, were even more resented, and the feeling against the British had no opportunity to develop normally. It disappeared so far as this matter was concerned, when we prepared a blacklist of our own after we entered the war. . . . We limited trade with the northern neutrals as serenely as Great Britain had limited it before 1917; we had a 'blacklist' of our own, and we sent our navy to help keep the cordon blockade of the North Sea side by side with the navies of Britain and France."—J. S. Bassett, *Our war with Germany*, p. 29.—The British in April 27, 1917, and

during 1917 the other Allied governments which had promulgated blacklists, removed the names of all persons and firms in the United States.—See also **BLOCKADE**; and **BOYCOTT**: 1880-1892.

AMERICAN.—"On December 4, 1917, the War Trade Board made public a list . . . of more than 1,600 German controlled banks and industries in South America, Cuba, and Mexico which are accused of aiding and fomenting uprisings and spreading propaganda and otherwise aiding the Central Powers. Henceforth all shipments from the United States to these concerns will be stopped entirely, and imports from them will be allowed to enter the United States only to liquidate American-held debts. In the list are included the great banks, manufactories, and public utilities of Argentina, representing the most powerful and dangerous combination of German capital in Latin America."—*War cyclopedia*, pp. 38-39.

BLACKLIST, Industrial.—"The Blacklist . . . may be defined as an agreement of employers to refuse employment to certain workmen obnoxious to them, generally on account of their activities in behalf of labor. In organizing a system of blacklisting, a list of names of workmen is prepared by the employers, accompanied by a number of statements regarding their personal appearance, qualifications, the reasons for their discharge—if they have been dismissed—and other information deemed desirable, which list is open to the inspection of certain other employers. At times a central bureau is maintained where this information is placed on file by all of the business men within the agreement. By means of this list manufacturers and others can readily discover whether or not applicants for work are likely to prove 'dangerous labor agitators.' Many are the cases in which workers have been refused employment or have been suddenly discharged as a result of the secret use of this weapon. . . . Since 1832, when a group of merchants and ship owners of Boston resolved to employ no journeymen who belonged to a labor union, or to deal with any master mechanic who gave work to such journeyman, this weapon has been used with great effect in many parts of the country. Prof. Ely cites an instance a score of years ago in which thirty-three men were blacklisted in Fall River for asking for an increase of wages, and were compelled to seek work under assumed names. . . . Much evidence of blacklisting, especially in the mining regions and on the railroads, was adduced by the Industrial Commission in their hearings of 1890. Before this commission, D. C. Coates, president of the Colorado Federation of Labor, testified that, in spite of prohibitory laws, wage earners were blacklisted from one end of the state to the other. . . . In several instances during the nineties, railroads were held guilty of this practice. Workers prominent in the 1894 strike of the American Railway Union declare that for years numbers of them were victims of the blacklist. To what extent this device has been used during the last ten years, it is extremely difficult to state, because of the secrecy surrounding its employment. In an effort to gain a more adequate idea of its use, the writer communicated with a number of prominent officers of the national and international unions. Of the twenty who replied, twelve, or more than one-half, stated that blacklists were used more or less effectively, while eight replied that they could not cite particular instances. . . . One of the most recent charges of the extensive use of this weapon was made in 1912, in connection with the Steel Trust investigation, by Mr. H. H. Eagle, city editor of the *Pittsburgh Leader*. Mr. Eagle testi-

fied that he had in his possession a list of 3,000 former employees of the Carnegie Steel Company, who had caused disturbance in the ranks of labor. . . . Again, in a recent strike against lumber firms of Louisiana, in the summer of 1912, the strikers accused the Operators' Association of blacklisting over a thousand men, and of forcing every man applying for a job in the lumber industry to take an anti-union labor oath. . . . In view of the many proved instances of the use of the blacklist, the blacklisting possibilities of many of the publications and employment bureaus of the employers' associations have special significance."—H. W. Laidler, *Boycotts and the labor struggle*, pp. 39-46.

"The blacklist is a weapon used by employers corresponding to the boycott used by labor. Contrary to the boycott, however, the blacklist is generally most effective when its use is secret. Laws have been passed against the blacklist in twenty-six states as follows: Connecticut . . . Alabama, Florida, Mississippi, North Carolina and Virginia . . . Arizona, Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Montana, Nevada, New Mexico, North Dakota, Oklahoma, Texas, Utah and Wisconsin . . . California, Oregon and Washington."—*American labor year book*, 1916, *Blacklist*, p. 88.

BLACKLOCK, Thomas (1721-1791), blind Scottish poet, of humble birth. Lost his sight by smallpox before he was six months old. Because of his poetic ability, special care was taken of his education at grammar-school and later at the divinity school at the University of Edinburgh. The degree of Doctor of Divinity was conferred on him by Marischal College, Aberdeen. His work influenced education for the blind in Scotland. See **EDUCATION**: Modern developments: 20th century: Education for the deaf, blind and feeble-minded: Blind.

BLACKS, Austrian parliament. See **AUSTRIA**: 1906-1909.

BLACKS AND WHITES (Bianchi and Neri), divisions of the Gueff political party in Florence. See **FLORENCE**: 1295-1300.

BLACKSTONE, Sir William (1723-1780), English jurist. His "Commentaries," while not free from technical imperfections, have long been regarded in England and America as an excellent compendium of the common law (see **DEMOCRACY**: Genesis of modern democracy). Now in large part out of date, the work is still interesting for its literary qualities and details of legal history.

BLADENSBURG, Battle of (1814). See **U. S. A.**: 1814 (August-September).

BLAINE, James Gillespie (1830-1893), American statesman and party leader. Member Maine legislature, 1859-1862, speaker, 1861-1862; chairman Republican state committee, 1859-1881; member House of Representatives, 1862-1877; speaker, 1869-1875; member United States senate, 1876-1880; secretary of state under Garfield, 1881; unsuccessful Republican candidate for president, 1884; secretary of state under Harrison, 1888-1892. For his criticism of the McKinley Tariff Bill, see **TARIFF**: 1890.—See also **U. S. A.**: 1884: Twenty-fifth presidential election; and **CONGRESS OF THE U. S.**: House of Representatives: The speaker and committee system.

BLAIR, Albion Zelophehad (1861-1919), American judge, who attempted political reforms in Ohio. See **OHIO**: 1900-1911.

BLAIR, Francis Preston (1791-1876), American journalist and politician. In the "kitchen cabinet" of President Jackson. See

U. S. A. 1829. Editor of *Washington Globe*, recognized organ of the Jackson party, 1830-1845; presided over Pennsylvania Republican convention, 1856.

BLAIR, Francis Preston, Jr. (1821-1875), American soldier and politician. Served as private in Mexican War; member Missouri legislature, 1852-1856; member House of Representatives, 1857-1859. Helped to control St. Louis for the Union cause in 1861. (See *MISSOURI*: 1861.) For his difficulties with General Fremont, see U. S. A.: 1861 (August-October: *MISSOURI*). Served in Federal army during Civil War, rising to rank of major general; unsuccessful candidate for vice president on Democratic ticket, 1868; member United States senate, 1871-1873.

BLAKE, Robert (1599-1657), British admiral; leader of successful expeditions against the Dutch and Spanish. See *ENGLAND*: 1652-1654; 1655-1658.

BLAKE, William (1757-1827), English poet. See *ENGLISH LITERATURE*: 1780-1830.

BLAKENEY, William (1672-1761), British general and governor of Minorca who surrendered it to the French in 1756. See *MINORCA*: 1756.

BLANC, Jean Joseph Charles Louis (1811-1882), French politician and writer. Was prominent in the revolution of 1848; wrote many historical works and socialistic articles; was in exile in England during the Second Empire.—See also *FRANCE*: 1848; *SOCIALISM*: 1840-1848.

BLANCHARD, Thomas (1788-1864), American automobile pioneer. See *AUTOMOBILE*: 1826-1895.

BLANCHE OF CASTILE (1188-1252), wife of Louis VIII of France who laid claim to English crown in her right (1216) and invaded England. Blanche established herself at Calais and organized two fleets, but her efforts were in vain. On the death of Louis in 1226 she became regent (1226-1236). She broke up league of barons, 1226; repelled attack of English king, 1230.—See also *ALBIGENSES*: 1217-1229; *FRANCE*: 1226-1270.

BLANCHE OF CASTILE (d. 1404), divorced wife of Henry IV of Castile and daughter of Blanche of Navarre, was prevented by intrigue of her father and sister from succeeding to the crown of Navarre; finally poisoned about 1464. See *NAVARRÉ*: 1442-1521.

BLANCO, Antonio Guzman (1829-1899), Liberal party leader and later dictator in Venezuela. See *VENEZUELA*: 1829-1886; 1869-1892.

BLANCO, Ramon (1831-1906), Spanish general and colonial governor of Cuba. See *CUBA*: 1896-1897.

BLANCOS, political party in Uruguay, active in the civil war of 1904. See *URUGUAY*: 1896-1899; 1904.

BLAND, Richard (1710-1776), delegate to first Continental Congress. See U. S. A.: 1774 (September).

BLAND, Richard Parks (1835-1899), American legislator; member House of Representatives, 1872-1895 and 1897-1899. Connected with free-silver movement; introduced the Bland silver bill in 1878.

BLAND-ALLISON ACT (1878), often termed Bland silver bill, which provided for the free coinage of silver. See *MONEY AND BANKING*: Modern: 1848-1893, 1870-1890; U. S. A.: 1878.

BLANGY, a village a mile east of Arras, north-eastern France; captured from the Germans by the British in their 1917 offensive during the World War.

BLANKETEERS, nickname applied to a group of laborers, who in 1817 met near Manchester to march to London (each carrying a blanket), and

lay their grievances before the prince-regent. See *ENGLAND*: 1816-1820.

BLANQUI, Louis Auguste (1805-1881), French revolutionist and socialist leader. See *SOCIALISM*: 1871-1904.

BLASCO IBÁÑEZ, Vincente (1867-), Spanish novelist. In his newspaper, *El Pueblo*, as well as his novels, he has emphasized the rôle of labor in modern life. He is generally recognized as the foremost of the Spanish novelists, and the publication of "Four Horsemen of the Apocalypse" in 1918 gained him world-wide fame.—See also *SPANISH LITERATURE*: 19th-20th centuries.

BLASHFIELD, Edwin Howland (1848-), American mural painter. See *PAINTING*: American.

BLASPHEMY ACT (1697). See *DEISM*: English Deism.

BLASPHEMY LAWS.—"Spinoza had laid down the principle that Scripture must be interpreted like any other book (1670), and with the deists this principle was fundamental. In order to avoid persecution they generally veiled their conclusions under sufficiently thin disguises. Hitherto the Press Licensing Act (1662) had very effectively prevented the publication of heterodox works, and it is from orthodox works denouncing idol opinions that we know how rationalism was spreading. But in 1695, the Press Law was allowed to drop, and immediately deistic literature began to appear. There was, however, the danger of prosecution under the Blasphemy laws. There were three legal weapons for coercing those who attacked Christianity: (1) The Ecclesiastical Courts had and have the power of imprisoning for a maximum term of six months, for atheism, blasphemy, heresy, and damnable opinions. (2) The common law as interpreted by Lord Chief Justice Hale in 1676, when a certain Taylor was charged with having said that religion was a cheat and blasphemed against Christ. The accused was condemned to a fine and the pillory by the Judge, who ruled that the Court of King's Bench has jurisdiction in such a case, inasmuch as blasphemous words of the kind are an offence against the laws and the State, and to speak against Christianity is to speak in subversion of the law, since Christianity is 'parcel of the laws of England.' (3) The statute of 1698 enacts that if any person educated in the Christian religion 'shall by writing, printing, teaching, or advised speaking deny any one of the persons in the Holy Trinity to be God, or shall assert or maintain there are more gods than one, or shall deny the Christian religion to be true, or shall deny the Holy Scriptures of the Old and New Testament to be of divine authority,' is convicted, he shall for the first offence be adjudged incapable to hold any public offices or employments, and on the second shall lose his civil rights and be imprisoned for three years. This Statute expressly states as its motive the fact that 'many persons have of late years openly avowed and published many blasphemous and impious opinions contrary to the doctrine and principles of the Christian religion.' As a matter of fact, most trials for blasphemy during the past two hundred years [written in 1913] fall under the second head. But the new Statute of 1698 was very intimidating, and we can easily understand how it drove heterodox writers to ambiguous disguises. One of these disguises was allegorical interpretation of Scripture. They showed that literal interpretation led to absurdities or to inconsistencies with the wisdom and justice of God, and pretended to infer that allegorical interpretation must be substituted. But they meant the reader to reject their pretended solution and draw a conclusion damaging to Revelation."—

J. B. Bury, *History of freedom of thought*, pp. 138-141.—In England an act of 1812-1813 has been the only statutory modification of the blasphemy act of 1607-1608. The law in recent years has very seldom been enforced. In 1841 Edward Moxon was convicted of the publication of a blasphemous libel, in having published Shelley's "Queen Mab."

BLAVATSKY, Helena P. (1831-1891), a student of occult science. She was born in Russia, and spent a long period in India and Tibet, returning to Europe with esoteric teachings derived from eastern mystics. Founder of the Theosophical Society.—See also THEOSOPHY.

BLEASE, Colman Livingston (1868-), governor of South Carolina. See SOUTH CAROLINA: 1910-1915.

BLECOURT, a village in France, north of Cambrai; captured from the Germans by the Canadians, October 1, 1918, during the World War.

BLEEK, Wilhelm Heinrich Immanuel (1827-1875), African linguist, working on the Bushmen languages. See PHILLOLOGY: 24.

BLEGNY TREMBLEUR, town in France which in 1914 was the scene of German atrocities. See WORLD WAR: Miscellaneous auxiliary services: X. Alleged atrocities, etc.: a, 2.

BLEKINGE, province in Sweden, gained from Denmark in 1658. See SWEDEN: 1644-1697.

BLENEAU, Battle of (1652). See FRANCE: 1651-1653.

BLENHEIM, a village of Bavaria on the Danube, thirty miles northeast of Ulm. Here in 1704 the duke of Marlborough with English troops and Prince Eugene with the Austrians defeated the French and Bavarians under Tallard and Marsin. The battle is also known as the battle of Höchstädt. (See GERMANY: 1704.) Near here also in 1800 the French defeated the Austrians.

BLENNERHASSETT'S ISLAND, an island in the Ohio, near Marietta, on which Harman Blennerhassett, a gentleman from Ireland, had created a charming home, at the beginning of the nineteenth century. He was drawn into Aaron Burr's mysterious scheme (see U. S. A.: 1806-1807); his island became the rendezvous of the expedition, and he was involved in the ruin of the treasonable project.

BLÉRIOT, Louis (1872-), French aviator. Made the first trans-Channel flight from Calais to Dover, in 1909, winning the *Daily Mail* £10,000 prize. For his airplane experiments and flights, see AVIATION: Development of airplanes and air service: 1806-1910.

BLIGNIÈRES, M. de, French controller in the Egyptian cabinet, 1878-1882, to administer the debt. See EGYPT: 1875-1882.

BLIGNY, a village in France southwest of Rheims, captured by the Germans in their last offensive and recaptured by the British, June 6, 1918, during the World War.

BLIMP AIRSHIPS. See AVIATION: Development of balloons and dirigibles: 1806-1914.

BLIND, Education of. See EDUCATION: Modern developments: 20th century: Education for the deaf, blind and feeble-minded: Blind.

BLISS, Cornelius Newton (1833-1911), American merchant and politician. Organizer and for many years president of American protective tariff league. Chairman New York Republican state committee, 1887-1888; treasurer of Republican national committee, 1892-1904. Secretary of the interior, 1897-1899. See U. S. A.: 1897 (March).

BLISS, Tasker Howard (1853-), American general. Served in Porto Rico campaign, 1898; served in the Philippines, 1905-1909; commanded

brigade on Mexican border, 1911; made major-general, 1915; chief of staff and commanding general of the army, 1917; retired, 1917; member of the allied conference, 1917; member supreme war council in France, 1918; member of American commission to negotiate peace, Paris, 1918-1919.—See also AMERICAN COMMISSION TO NEGOTIATE PEACE; U. S. A.: 1917 (November); VERSAILLES, TREATY OF: Conditions of peace; WORLD WAR: 1918: II. Western front: e, 1.

BLOC, a coalition of minority parties to form a working majority; the word was coined in France by M. Waldeck-Rousseau in 1899.

French bloc.—The place of a Center party was for a long time held by a remarkable coalition of parties, called the *Bloc*. The group was welded together [in 1899] by the heat of the Dreyfus trial (see FRANCE: 1897-1899) in order to protect the Republic, and was the first sign in France of a party in the Anglo-American sense, with a definite program and a strong organization. Its ministries ruled France for upwards of fifteen years. Like all coalitions the *Bloc* suffers from organic weaknesses in the diversity of its component parts. The more conservative part of the *Bloc* opposes social legislation, on the plea that it contravenes the sacred principles of the Revolution, which maintained the rights of individualism, not of communism, in property. In the center of the *Bloc*, and numerically its strongest part, were the Radicals, the earliest and most zealous Republicans. On its left the *Bloc* attracted a certain faction of the Socialists, led by Briand, Millerand, and Viviani, who called themselves Socialist Radicals. So far as concerns social legislation, they are the motor of the machine of which the conservative members are the brake. The Radical Socialists desire a readjustment of the doctrines of the Revolution to fit the social needs of the present; they distinctly favor some of the features of the Socialist program, such as Government ownership of public utilities and monopolies. One sees the justice of Ferdinand Buisson's definition of the *Bloc*: 'A bourgeois party with a Radical soul.' It has been called, too, 'capitalism touched with social emotion.' Its ambiguous attitude towards socialism was a great source of weakness to the *Bloc*, after its *raison d'être* had ceased to be vital because of the decay of royalism. Timid and rent within itself, it has been during the later years of its existence continually on the verge of a break-up. In truth the *Bloc* has exhausted the reservoir of its ideas, watchwords, and other stock in trade, which it appropriated from the Revolution-royalism, the Church, the republicanism of the army, the schools, and the democratization of the suffrage. It has been struck with sterility, and its three ministries since 1910 were absolutely stagnant. It is perhaps too early [1918] to pronounce the *Bloc* dead, but it has at any rate lost a great part of its former adherents and its ability to expand and to adapt itself.—C. Seymour and D. P. Frary, *How the world votes*, pp. 388-389.—"Anti-Clericalism was the issue which held the *bloc* together from 1900 to 1910 and enabled it to expel the religious orders from France, to separate church and state, and to strengthen non-religious education. But by 1913 other questions had arisen which tended to produce a different alignment of political groups. There was first the question of an income tax and further social reform, which was urged by the Socialists, Radical Socialists, and *Action Libérale*, and resisted by many Radicals and Moderates. There was secondly the question of militarism, for many Radicals joined with the Socialists in offering a wordy, though vain, opposition to the enact-

ment and enforcement of a new army bill (1913), which this time, in view of particularly troubled international relations, lengthened the term of active service in the French army from two to three years. Thirdly, there was still the question of Anti-Clericalism in its various phases: many Radical Socialists felt that the dangers of Clericalism were now sufficiently remote to allow the Republic to turn its attention and energy elsewhere; many Radicals thought otherwise and were resolved to maintain against the Catholic Church a fight which was already proving advantageous to them in distracting public attention from grave economic ills; while the *Action Libérale* was growing more vehement in its demand for the repeal of past Anti-Clerical legislation. Finally, there was the newly raised political question of electoral reform: proposals for the revival of the *scrutin de liste*, with provisions for proportional representation of minorities, received powerful support from the *Action Libérale*, the Moderates, and the Radical Socialists, who believed them more fundamentally democratic than the existing system of elections to the Chamber of Deputies; on the other hand, many Radicals and most Socialists denounced them as tending to increase the strength of the Right and to imperil the Anti-Clerical legislation of the preceding decade. . . . Differences of opinion among members of the *bloc* upon the three other questions were quite apparent in the elections of April-May, 1914. Of the bourgeois groups formerly included in the *bloc*, the Progressists (Federated Republicans) adhered to their earlier principles and maintained their strength practically unimpaired. But the Radicals and Radical Socialists were split up into a number of groups, which tended, both in the parliament and in the country at large, to gravitate toward one or other of two new and rival combinations. The first was the Unified Radicals, including such men as Caillaux, Combes, and Clémenceau, bent upon the vigorous prosecution of more extreme Anti-Clerical legislation, especially legislation against private church schools, generally hostile to electoral reform, and lukewarm in the cause of labor legislation. The second new coalition was the Federation of the Left, whose principles were championed by Briand and by Poincaré, who had been elected to the presidency in January, 1913; it urged both labor legislation and parliamentary reform, and while not favoring any repeal of Anti-Clerical legislation, it was unwilling further to open the breach between Catholics and non-Catholics."—C. J. H. Hayes, *Political and social history of modern Europe*, v. 2, pp. 365-367.—See also FRANCE: 1000.

German bloc.—"Germany has no bi-party system, but rather a multiplicity of parties and party groups, so that, as in France and Italy, no one party is ever able to command a majority in the Reichstag. Practically, of course, the Government must have sufficient support there to insure the enactment of its budgets and of its legislative proposals. To be effective and trustworthy, this support must be organized, and hence, in practice, there is always a recognized 'government majority.' Party division, however, is carried so far that this majority must at all times be composed of two or three groups, more or less precariously united in a *bloc*. Thus Bismarck at one time governed with the combined aid of the Conservatives, Free Conservatives and National Liberals, and von Bülow worked first with a 'Blue-Black' (Conservative-Center) *bloc*, and later with a similar affiliation

of Conservatives and Liberals."—F. A. Ogg and C. A. Beard, *National governments and the World War*, p. 513.—See also GERMANY: 1900-1909.

Russian progressive bloc (1915). See RUSSIA: 1915-1916.

United States agricultural bloc.—"The first real bloc . . . [in the United States] was the Agricultural bloc. It began operations soon after this [68th] Congress went into session (in the spring of 1921). Those who know of its origin say that it had its beginnings in a Senate smoking-room conversation between two or three senators who were of the opinion that the needs of the farmers were not adequately cared for in the organization legislative program for the session, nor the needs of these senators, either, in a political way. . . . The Agricultural bloc developed into a formidable political and legislative agency. . . . They put through this program of legislation for the benefit of the farmers:

"The Emergency Tariff Act, in which duties on importations of agricultural products are increased and the farmer is protected from competition from abroad, where costs of production are much less;

"The act providing for a credit of a billion dollars for farm exports;

"The act that gives the Secretary of Agriculture supervision over the packing houses and the stockyards of the country;

"The Kenyon Bill, which provides for an increased rate of interest for bonds issued by farm-loan banks but without increase of interest rate to the farmers, thus affording a better market for the farm-bank loans;

"The Copper-Tincher Bill, for the regulation of all the grain exchanges in the country;

"The Curtis Bill, which authorizes the appropriation of twenty-five million dollars to be used as a revolving fund by the farm-loan banks."—S. C. Blythe, *En Bloc*, *Saturday Evening Post*, Nov. 5, 1921.

BLOCK ISLAND, an island in the Atlantic ocean, about ten miles off the Rhode Island coast. See NEW YORK: 1610-1614.

BLOCKADE.—Meaning and ancient usage.—Blockades in the Napoleonic wars.—Lord Stowell's decision.—Blockade of the Confederate ports, 1861.—"The right of a nation at war to close the ports of its enemy so as to prevent him securing food or military supplies is as old as war itself. This is known as a blockade. It was practised by the Greeks and the Romans. . . . International law sanctions blockade and provides a penalty for its violation. When a port is blockaded and a neutral vessel attempts to enter, it may be seized and the vessel and cargo become 'lawful prize.' . . . If the coast has not been blockaded neutrals may trade, provided their ships do not carry contraband, which may be roughly defined . . . as anything that can be used to carry on war. . . . International law requires that a blockade to be recognised by neutrals must be physically effective, that is it must not be a mere declaration for blockade ["paper blockade"], but the blockading nation must have enough ships to prevent ingress and egress from the enemy's port. This requirement . . . was the outcome of that

long conflict between England and France in the early years of the last [19th century]. Napoleon did not have a navy powerful enough to blockade England and her colonial possessions so he promulgated various decrees interdicting trade between England and neutrals [see BERLIN AND MILAN DECREES]; England retorted by Orders in Council, which interfered with American commerce and aroused bitter resentment in this country. The injustice was obvious but it was not until 1856 that international law crystallized this sentiment into principle. Following the Crimean War, an International Congress was held in Paris, and it was agreed that: 'Blockades, in order to be binding must be effective; that is to say, maintained by forces really sufficient to prevent access to the coast of the enemy.' In the opening years of the last century Lord Stowell, a great English jurist and Judge of the Court of Admiralty delivered a momentous decision. . . . Lord Stowell's decision, which has had the most far reaching consequences in England and America, and revolutionized the English and American maritime code of war, was that when a vessel merely touched at an American port it was simply an incident in the voyage; that the voyage began when the cargo was originally loaded and ended only when the cargo was discharged at the place of sale. . . . This is known to lawyers as the doctrine of continuous voyage. . . . In 1861 United States was at war and President Lincoln proclaimed a blockade of the Confederate ports. To circumvent the North England merchants resorted to the same device which more than half a century earlier made Lord Stowell promulgate his historical doctrine of the continuous voyage. [English ships sailing to Bermuda were seized on the high seas] . . . In legal proceedings that followed the Supreme Court of the United States upheld the legality of capture, basing its decision on the doctrine enunciated by Lord Stowell, . . . and to the English doctrine of the continuous voyage it added the American invention of 'ultimate destination.'—A. M. Low, *Law of Blockade*, pp. 3, 4-5, 6.—See also CONTINUOUS VOYAGE; Origin; ENGLAND: 1861-1865.

Extent of.—Conditions during its continuance.—Laws of the Declaration of London (1909).—"The conditions of a blockade are treated in one phase or another by the first seven articles of the declaration of London [see LONDON, DECLARATION OF], though amplifications also follow later. It is provided, first, that a blockade must not extend beyond the ports and coasts belonging to or occupied by the enemy, which Article 18 amplifies by stating that the blockading forces must not bar access to neutral ports or coasts. Ports of a neutral and belligerent may easily be so placed geographically that without care a blockade may interfere with the entry to and trade of a neutral port; in fact, such proximity may compel a limitation in blockading operations affecting it in both area and efficiency. The neutral rights to innocent free trade and passage compels, in case of this kind, such limitations. There is another reason for the ruling just given, and that is that a neutral port may be a port of departure and supplies of blockade-runners and yet within the zone of blockading operations. In this case too close supervision of such a port may be beyond belligerent rights and injurious to the commerce of the port. [See BELLIGERENCY; and NEUTRALITY.] A blockade must be impartially applied to the ships of all nations. The commander of a blockading force may, however, give permission to a neutral war vessel to enter and subsequently to leave a blockaded port. Although the senior officer of

the blockading force must act impartially, as just stated, the accompanying report of the declaration of London states that, 'nevertheless, the mere fact that he has let a war-ship pass does not oblige him to let pass all neutral war-ships which may desire to enter. It is a question of judgment. The presence of a neutral war-ship in a blockaded port may not have the same consequences at all stages of the blockade, and the blockading commander must be left free to judge whether he can be courteous without making any sacrifice of his military interests.' This question has been at times a seriously disputed one. During the Spanish-American War of 1898 it was a source of considerable irritation and friction at Manila by the assumption on the part of the German naval forces of a right to entry and stay within the blockading lines in Manila Bay. One of the best opinions upon the matter which was quoted authoritatively at that time is that of Ferguson, a Dutch authority. He says: 'During the continuance of the state of blockade, no vessels are allowed to enter or leave the blockaded place without special license or consent of the blockading authority. Public vessels or vessels of war of neutral powers are equally bound by the same obligation to respect the blockade. When the public vessel of a neutral state is allowed to have communication with a blockaded place, the neutral commanding officer is obliged to observe strict neutrality and to comply with the conditions under which such permission has been granted to cross the lines of the blockading belligerent. The impartiality which must be the prevailing feature of an effective blockade prohibits, except to public vessels, permission to enter the blockaded place to be given except in extreme cases of positive necessity. Diplomatic agents and consular officers of a neutral state are also allowed the amount of communication necessary for the fulfilment of their official duties.' (Ferguson, 1884, v. 2, pp. 486, 487.) In case of distress, which must be verified by an officer of the blockading force, a neutral vessel may enter a place under blockade and subsequently leave it, provided that she has neither discharged nor shipped any cargo there. (*Declaration of London, Art. 7, Appendix IV.*) . . . The final article (No. 21) of the chapter on blockade of the declaration states that 'a vessel found guilty of breach of blockade is liable to condemnation. The cargo is also condemned unless it is proved that at the time of shipment of the goods the shipper neither knew nor could have known of the intention to break the blockade.' The vessel is condemned in all cases. [See ADMIRALTY LAW.] Doctor James Brown Scott, in reviewing this chapter on blockade of the declaration of London, says: 'The provisions of the chapter dealing with blockade seem to be reasonable in their terms and effects, fair to belligerents and neutrals, supposing that enemy ports are to be blockaded and neutrals prevented from trading with them as in times of peace, and so clear and precise, except perhaps in the matter of the area of pursuit and capture of blockade-runners, as to make the rights and duties alike of belligerents and neutrals certain and known in advance of hostilities. No serious or insurmountable objection to their acceptance has been stated.'—C. H. Stockton, *Outlines of international law*, pp. 418-421; 425-426.

Effectiveness.—Rules (English) covering the World War.—"The manner in which a blockade shall be made physically effective is optional with the blockader. He may post his ships at the entrance of a port or place them a thousand miles off shore. The penalty for attempting to violate a blockade is the condemnation of ship and cargo.

Absolute proof that a vessel contemplates running the blockade is not necessary. Presumption may be inferred. Neutrals may trade with a belligerent, but at their own risk. Contraband intended for the enemy is lawful prize wherever found and under any circumstances. Non-contraband neutral goods to any enemy port not under blockade are free from seizure."—A. M. Low, *Law of blockade*, p. 9.—See also CONTRABAND: Origin; EMBARGO: During World War. "Effectiveness is a matter of conclusion from facts. 'Only such blockades as shall be duly proclaimed and maintained by adequate force, in conformity with the law of nations, will be observed and respected by the United States,' wrote Mr. Seward, United States Secretary of State, to Mr. Sullivan, Minister to Colombia, in 1867 (June 13). If the neutral and belligerent States in question do not agree about the facts, or do not agree as to whether the admitted facts constitute 'effectiveness,' an international difference at once arises. As regards the requisite notice, the following provisions in the instructions given to the United States blockading vessels and cruisers in June, 1808, sum up the latest Anglo-Saxon practice: 'Neutral vessels are entitled to notification of a blockade before they can be made prize for its attempted violation. The character of this notification is not material. It may be actual, as by a vessel of the blockading force, or *constructive*, as by a proclamation of the Government maintaining the blockade, or by common notoriety. If a neutral vessel can be shown to have had notice of the blockade *in any way*, she is good prize, and should be sent in for adjudication; but should formal notice not have been given, *the rule of constructive knowledge arising from notoriety* should be construed in a manner liberal to the neutral. . . . The subject of the international regulation of blockade was brought up at the second Hague Conference. The Italian and Mexican delegates submitted projects, but after a declaration by the British delegate in charge of the subject (Sir E. Satow) that blockade not having been one of the subjects included in the Russian programme, his Government had given him no instructions upon it, the subject, at his request, was dropped. [See HAGUE CONFERENCES.] It was taken up again, however, at the Conference of London, 1908-09, and the rules adopted at that Conference . . . [see LONDON, DECLARATION OF], have now been made operative for the duration of the war of 1914 by an Order in Council, dated August 20, 1914, subject to certain modifications as regards blockade, which are evidently intended to bring the London Rules as much as possible into harmony with both British and French practice. The addition made as regards blockade, is explanatory of the British rule of constructive notice. It leaves the Continental practice as set out in Art. 16, respecting individual notice, intact, and mere notoriety will not be regarded as sufficient to support a presumption of knowledge. The penalty for breach of the blockade is confiscation of the ship and of the cargo, unless the consignor 'was not or could not be aware of the intention to break the blockade.' The rules as to blockade as settled by Order in Council for the war of 1914 are as follows:

"ART. 1. A blockade must not extend beyond the ports and coasts belonging to or occupied by the enemy. ART. 2. In accordance with the Declaration of Paris of 1856 a blockade, in order to be binding, must be effective—that is to say, it must be maintained by a force sufficient really to prevent access to the enemy coast-line. ART. 3. The question whether a blockade is effective is a ques-

tion of fact. ART. 4. A blockade is not regarded as raised if the blockading force is temporarily withdrawn on account of stress of weather. ART. 5. A blockade must be applied impartially to the ships of all nations. ART. 6. The commander of a blockading force may give permission to a warship to enter, and subsequently to leave, a blockaded port. ART. 7. In circumstances of distress, acknowledged by an officer of the blockading force, a neutral vessel may enter a place under blockade and subsequently leave it, provided that she has neither discharged nor shipped any cargo there. ART. 8. A blockade in order to be binding, must be declared in accordance with Article 9, and notified in accordance with Articles 11 and 16. ART. 9. A declaration of blockade is made either by the blockading Power or by the naval authorities acting in its name. It specifies—(1) The date when the blockade begins; (2) The geographical limits of the coast-line under blockade; (3) The period within which neutral vessels may come out. ART. 10. If the operations of the blockading Power, or of the naval authorities acting in its name, do not tally with the particulars, which in accordance with Article 9 (1) and (2), must be inserted in the declaration of blockade, the declaration is void, and a new declaration is necessary in order to make the blockade operative. ART. 11. A declaration of the blockade is notified—(1) To neutral Powers, by the blockading Power by means of a communication addressed to the Governments direct, or to their representatives accredited to it; (2) To the local authorities, by the officer commanding the blockading force. The local authorities will in turn inform the foreign consular officers at the port or on the coast-line under blockade as soon as possible. ART. 12. The rules as to declaration and notification of blockade apply to cases where the limits of a blockade are extended, or where a blockade is reestablished after having been raised. ART. 13. The voluntary raising of a blockade, as also any restriction in the limits of a blockade, must be notified in the manner prescribed by Article 2. ART. 14. The liability of a neutral vessel to capture for breach of blockade is contingent on her knowledge, actual or presumptive, of the blockade. ART. 15. Failing proof to the contrary, knowledge of the blockade is presumed if the vessel left a neutral port subsequently to the notification of the blockade to the Power to which such port belongs, provided that such notification was made in sufficient time. *The existence of a blockade shall be presumed to be known:—(a) To all ships which sailed from or touched at an enemy port a sufficient time after the notification of the blockade to the local authorities to have enabled the enemy Government to make known the existence of the blockade. (b) To all ships which sailed from or touched at a British or allied port after the publication of the declaration of blockade.* (Note.—This is the clause which has been added by the Order on Council to the articles of the DECLARATION OF LONDON.) ART. 16. If a vessel approaching a blockaded port has no knowledge, actual or presumptive, of the blockade, the notification must be made to the vessel itself by an officer of one of the ships of the blockading force. This notification should be entered in the vessel's logbook, and must state the day and hour, and the geographical position of the vessel at the time. If through the negligence of the officer commanding the blockading force no declaration of blockade has been notified to the local authorities, or if in the declaration, as notified, no period has been mentioned within which neu-

tral vessels may come out, a neutral vessel coming out of the blockaded port must be allowed to pass free. ART. 17. Neutral vessels may not be captured for breach of blockade except within the area of operations of the warships detailed to render the blockade effective. ART. 18. The blockading forces must not bar access to neutral ports or coasts. ART. 19. Whatever may be the ulterior destination of a vessel or of her cargo she cannot be captured for breach of blockade if, at the moment, she is on her way to a non-blockaded port. ART. 20. A vessel which has broken blockade outwards, or which has attempted to break blockade inwards, is liable to capture so long as she is pursued by a ship of the blockading force. If the pursuit is abandoned, or if the blockade is raised, her capture can no longer be effected. ART. 21. A vessel found guilty of breach of blockade is liable to condemnation. The cargo is also condemned, unless it is proved that at the time of the shipment of the goods the shipper neither knew nor could have known of the intention to break the blockade."—T. Barclay, *Law and usages of war*, pp. 11-13.—See also ADMIRALTY LAW; BLACKLIST; FREEDOM OF THE SEAS; and INTERNATIONAL LAW.

BLOIS, Charles de. See CHARLES DE BLOIS.

BLOIS, a town on the Loire in central France, capital of the department of Loir-et-cher.

9th century.—The town had very little historical importance until it became the seat of a countship in the 9th century.

1196.—Privileges were granted to the townsmen by Count Louis of Blois.

13th century.—During this century the famous castle was built which was the scene of many historical events.

1429.—Joan of Arc used the town as a base for her attacks on the English who were besieging Orleans.

1444-1588.—Charles of Orleans lived here after leaving England and Louis XII was born in Blois. The sixteenth century saw the French court frequently established here. Francis I, Henry II, Charles IX and Henry III held their courts in Blois. Henry III called the Estates general to meet here, and it was during his reign that Henry of Guise and his brother were murdered in the castle.

1504.—Treaty of Blois. See ITALY: 1504-1506.

1617-1619.—Marie de' Medici (wife of Henry IV) lived for a time in the old chateau.

17th century.—At the close of the seventeenth century, it became the seat of a bishopric.

1814.—Blois was the residence of Marie Louise (wife of Napoleon I) after Paris surrendered.

BLONIE, a village on the line of defense west of Warsaw, Poland; captured from the Russians by the Germans, 1915, during the World War. See WORLD WAR: 1915: III. Eastern front: g, 7.

BLOOD, study of its circulation and transfusion. See MEDICAL SCIENCE: Modern: 17th century: Harvey and the discovery, etc.; 19th century: Opsonins; 20th century: Advance in surgical methods.

BLOODY MARY, name applied by Protestants to Mary of England (1553-1558) because of her persecutions of non-Catholics. See ENGLAND: 1553-1558.

BLOODY MONDAY. See U. S. A.: 1829-1832.

BLOODY SHIRT.—"Waving the bloody shirt" was an expression commonly used about 1880;

it meant reviving the sectional spirit of Civil War days, usually by impassioned allusions in Congress.

BLOODY SUNDAY.—"If the intention of Nicholas the Second and his advisers had been to terrorize the working classes, the effect of the January [22, 1905] slaughter was entirely in the opposite direction. It gave a new force to the labour movement all over Russia. Five days after the terrible 'Vladimir' Sunday, a mass strike broke out at Warsaw, and was followed by mass strikes at Lodz and in all the industrial and mining centers of Poland. In a day or two the Warsaw strike was joined by 100,000 operatives and became general. All factories were closed, no tramways were running, no papers were published. The students joined the movement, and were followed by the pupils of the secondary schools. The shop assistants, the clerks in the banks and in all public and private commercial establishments, the waiters in the restaurants—all gradually came out to support the strikers."—P. A. Kropotkin *Nineteenth Century*, Dec., 1905.—See also RUSSIA: 1905 (January.)

BLOODY TRIBUNAL OF ALVA, Netherlands. See NETHERLANDS: 1567-1573.

BLOREHEATH, Battle of (1450).—Fought on a plain called Bloreheath, near Drayton, in Staffordshire, England, Sept. 23, 1459, between 10,000 Lancastrians, commanded by Lord Audley, and about half that number of Yorkists under the earl of Salisbury. See also ENGLAND: 1455-1471.

BLOUNT, Charles, Lord Mountjoy (1563-1606), military commander at defeat of Ulster in 1601. See ULSTER: 1585-1608.

BLOUNT, James H. (1837-1903), American politician. Member of House of Representatives 1873-1893. Special commissioner to investigate affairs in Hawaii and the connection of American officials with the revolution there, 1893. His report that the revolution had been effected by the aid of the United States minister and the landing of United States marines caused President Cleveland to reject the pleas of the annexationists, and leave Hawaii alone. Held for a short time the position of minister to the Hawaiian islands.—See also HAWAIIAN ISLANDS: Discovery and early history.

BLUCHER, Gebhard Leberecht von, Prince of Wahlstadt (1742-1819), Prussian field-marshal. Showed great energy in the Napoleonic campaigns, and struck the deciding blows at Waterloo (1815). See FRANCE: 1814 (January-March); 1815 (June); GERMANY: 1806 (October); 1812-1813; 1813 (April-May) to (October-December).

BLUCHER, the German battle-cruiser which was reduced to a wreck and torpedoed by the British in the battle off Dogger bank in the North sea, January 24, 1915, during World War.

BLUE, Boys in, name for Federal soldiers in Civil War, also nicknamed "Blue Bellies" and "Blue Birds." See BOYS IN BLUE.

BLUE AND GRAY. See BOYS IN BLUE.

BLUE BOOKS, named from the color of the covers, are generally government reports and other papers. In England, the official reports of Parliament and the Privy Council, and in the United States, the register of all persons holding office under the government are known as "blue books." The Serbian diplomatic correspondence of the World War is also known by this term. See WORLD WAR: Diplomatic background: 3.

BLUE FLAG WAR. See CALIFORNIA: 1846-1847: American conquest.

BLUE LAWS, a popular term applied first to certain laws, alleged or real, of the Connecticut colonists, either because the laws seemed to be a genuine, "true blue" reflection of their austere religion or because blue has often been associated

with a melancholy feeling; more recently the term has been applied to any laws imposing vexatious or unreasonable restrictions in regulation of the personal habits or private morals of people. In 1781 the Rev. Samuel Peters, a Tory minister who had been in Connecticut, published in England a "General history of Connecticut," which was obviously exaggerated and spiteful. A little later a small book appeared, ostensibly giving the colony's laws; actually these regulations were taken from Peters' book. That, however, need not entirely discredit them, since later research has discovered that almost all of the forty-five laws given appeared either in earlier, more dependable authorities or among the statutes of other New England colonies. They had to do with Sabbath observance, attendance at church, profanity and blasphemy, and similar subjects, and prescribed very harsh penalties. The laws of Virginia under the rule of Sir Thomas Dale were also quite severe in the matter of church attendance. After the United States prohibition amendment went into effect in 1920, certain reform organizations inaugurated campaigns for further restrictive legislation of such a nature as to revive the popular cry of "blue laws." See CONNECTICUT: 1639-1662; SUNDAY OBSERVANCES: UNITED STATES.

BLUELIGHT FEDERALISTS.—This term arose from an incident in the harbor of New London, Conn., during the War of 1812. With a blockading squadron Sir Thomas Hardy had hemmed in the United States frigates. Decatur had prepared secretly to run these frigates out of the harbor on a dark Sunday night. He saw blue lights burning in sight of the British blockaders near the mouth of the river and abandoned his project, as he believed these signals to be concerted with the enemy to betray his plans. He complained to the navy department, but in the absence of positive information, Congress thought the matter too trivial for action. Public suspicion was strong against the New England peace faction and the term "blue-light Federalists," like "British faction" earlier and "Hartford convention Federalist" later, was one of reproach that injured the party.

BLUE PARTY (of Venezuela). See VENEZUELA: 1820-1886.

"BLUE RIBBON," Order of. See SERAPHIM, or "BLUE RIBBON."

BLUE SKY LAWS.—"Laws regulating the issuance of securities, the so-called 'Blue Sky Laws,' are of very recent origin, and constitute an important addition to the statutory law of the United States. These laws were made necessary by the greed of the unscrupulous promoter, whose activity they are designed to curb. . . . The intent of the statute is to protect . . . people, under the police power, from fraud and imposition by irresponsible, non-resident parties. These instances have been so frequent that the United States Post Office Department has estimated that the people of this country have been losing annually more than one hundred millions of dollars by speculative schemes which have no more substantial basis than so many feet of 'blue sky.' Experience has demonstrated the fact that some of the grossest frauds have been

perpetrated on the public by investment companies by extravagant expenditures for salaries, agents' commissions, and other apparently legitimate purposes, through officers who had practically nothing invested in the association and whose character and reputation stamped them as adventurers and cheats. Such regulations are proper and wholesome. The dockets of the national courts have been crowded for the last few years with criminal prosecutions of persons charged with use of mails of the United States in carrying out fraudulent schemes, by so-called investment companies and persons offering allurements to get rich quick. But those courts are only clothed with jurisdiction to prosecute those who, in carrying out their fraudulent schemes, make use of the mails, and only after the commission of the offense. This necessarily affects only a small portion of those engaged in such schemes, and can in no wise act as a preventative. The state alone can provide for the prevention and punishment of all who commit frauds, although the mails are not used for their accomplishment, and enact laws to prevent the commission of these crimes. The Postmaster General in his report for 1913 says, 'The stock selling proposition appears to appeal to the public more than any other one fraud scheme conducted and the amount of money taken in by promoters operating this class of schemes is enormous.' In the report of the Postmaster General for 1914 it is said, 'the conditions of business in this country have been revolutionized in the past few years. The old common law rule of *caveat emptor* [Latin, *let the buyer beware*] cannot apply to mail order sales. At the present time sales are being made at a great distance from the purchaser who must pay out his money upon the faith of representations found in advertisements, catalogs and other literature with no opportunity to examine the article before purchase.'—J. M. Elliott, *Annotated blue sky laws of the United States*, pp. 1, 2, 3.

Ohio Law.—"The Attorney General of Ohio in an opinion says: 'The sole purpose of the Blue Sky Law is the protection of the prospective investor. The enactment of such a law in Ohio and other states grew out of pressing necessity. The vulturous tribe, whose members have come to be known as "Wallingsfords," had so successfully preyed upon society that the checking of their activities became imperative. Hence the State of Ohio stepped in and for the protection of its citizens said:

"(1) That, excepting public service company securities authorized by some public service commission, securities purchased in good faith by an underwriter at not less than ninety per cent of the price afterwards to be charged the public, or the securities of a going manufacturing, coal-mining or quarrying concern in this state, the sale of all securities is prohibited, even by a licensed dealer, until a certificate has been obtained from the state; that before such certificate may issue full detailed information concerning the institution must be furnished and it must affirmatively appear that the law has been complied with, that the business is not fraudulently conducted, that the issuer or vendor is solvent, and that the disposal is not on grossly unfair terms. Inquisitorial powers are given the 'commissioner' to insure his possession of the necessary information, and the right is reserved the state to revoke the certificate.

"(2) That, with certain exceptions, no person may dispose of securities evidencing title to or interest in property without being first licensed.

"(3) That, before such license to a dealer in securities may issue:

"(a) The applicant must furnish full information concerning not only his business, but himself and his agents.

"(b) The state, however, is not bound to be satisfied with the claims of the applicant in this respect but the legislature went further and placed the positive duty upon the "commissioner" to confirm, by such investigation as may be necessary to establish good repute in business of all concerned.

"(c) The notice of the application for a license must be published and no action taken by the "commissioner" until a definite time thereafter has elapsed.

"(d) If, after all this, the "commissioner" be satisfied of the good repute in business of the applicant and his agents, a license to sell securities may issue.

"(4) That any person who, without disclosing that he is to profit thereby, advises or procures any person to purchase any security shall be liable in damages to the person so purchasing such security.'

"The controlling purpose of the 'commissioner' should be to protect the investors of the state by driving out of business every person, firm, or corporation that conducts the business of selling securities unfairly or fraudulently, to the end that when the citizens of this state deal with persons or concerns holding a license from your department to sell securities, they may rely upon the truth of the representations made as to existing facts and the promises made as to what shall obtain in the future in concerns whose securities are being offered."—Foot note, *Opinions Ohio Attorney General*, 1915, v. 3, 2074.

"Almost from the dates of their enactment the constitutionality of the laws regulating the disposal of securities has been assailed. These attacks have generally been based on the grounds that they are violative of the commerce clause of the federal constitution; that they deprive one of property without due process of law; that they deny the equal protection of the laws; that they delegate legislative and judicial power to an executive officer; that they are laws of a general nature but do not operate uniformly; that they are not within the police power of the state, being unnecessary for the protection of health, safety, morals or the welfare of the people; or that they grant to citizens of one state rights, privileges or immunities not granted to the citizens of another state."—J. M. Elliott, *Annotated blue sky laws of the United States*, pp. 3, 4, 8.

Illinois law.—"The passage of the Illinois Securities Law, June 11, 1919, marks the advent of a new principle in American effort to solve the problem of misrepresentation and fraud in the handling of securities—the principle of classification. At the same time it represents an attempt to approach the problem from a somewhat new angle. Previous to the passage of the act, the thirty-nine states which had enacted blue sky legislation had largely contented themselves with supervising, in rather half-hearted fashion, merely the dealers themselves. This they had attempted to accomplish by various systems of inspection and through the exercise of a modicum of discretionary executive control in the granting of licenses. Illinois itself had such an act, passed in 1918. Taken as a whole, these measures were far from effective. In the first place the wide variations between the laws of the several states left many loopholes for evasion and fraud; and in the second place the laws all approached the problem from its most complex and difficult side. The new Illinois law, however, attempts to remedy this second difficulty. It considers not only the dealers

but also the issuers of the securities, and makes them to some extent responsible for compliance with the law. England has for many years had an effective law of this general type, designed primarily to enforce publicity, and Illinois has followed a part at least of its provisions. In general terms, classification simply means that the government arbitrarily divides the securities handled within its jurisdiction into various broadly defined groups, basing the division largely on the speculative or non-speculative character of the securities themselves. Having done this, it then contents itself with the effort to make sure that the purchaser knows beyond mistake into what particular group his proposed investment falls. The government's function is thus essentially that of information; it makes no attempt to restrict the sale of even the most doubtful and highly speculative security, provided that there is no actual evidence of fraud and that the speculative character of the investment has been adequately presented to the public. The Illinois act is quite long, and to the layman not over-lucid. Its general scheme and main provisions can perhaps be most clearly presented in the form of a summarized outline. For the purposes of the act, securities are divided into four classes, alphabetically designated:

"A. Securities, the inherent qualities of which ensure their sale and disposition without fraud. Within this group are included: (1) Securities issued by a government or governmental agency. (2) Securities issued by any national or state bank or trust company, building or loan association, or insurance company of the state. (3) Securities issued by any corporation operating any public utility, in any state where the issues of such utilities are regulated by law. (4) Securities dealt in on the New York, Chicago, Boston, Baltimore, Philadelphia, Pittsburgh, or Detroit stock exchanges. (5) Securities whose prices have been quoted from time to time for at least a year in tabulated market reports published as news items, and not as advertising, in a daily newspaper of general circulation, published in Illinois or an adjoining state, including Michigan. (6) Securities issued by any corporation organized for non-profit-making purposes.

"B. Securities, where the inherent qualities are such or the nature of one or both parties to the sale thereof such that their sale and disposition without fraud are assured. This comprises the following types of securities: 1. Those sold by the owner for the owner's account exclusively, when not in the course of continued and repeated transactions of a similar nature. 2. Increased capital stock of a corporation, distributed directly among its stockholders, without the payment of any commission or expense to agents, brokers, etc. 3. Those sold by or to any bank, trust company, or insurance company or association, organized under the laws of Illinois, of the United States, or under the supervision of the Department of Trade and Commerce or the Auditor of Public Accounts of Illinois; or by or to any building or loan association of the state; or any public sinking fund, trustees, or to any corporation or dealer or broker in securities. 4. Those sold or offered for sale at any judicial, executor's, or administrator's sale or any bankruptcy or public sale or auction held at any advertised time or place.

"C. Securities based on an established income. This class includes the securities issued by any business which has been in continuous operation not less than two years and which has shown net profits, exclusive of all prior charges, as follows: 1. One and one-half times the annual interest

charges upon all outstanding interest-bearing obligations. 2. In the case of preferred stock, not less than one and one-half times the annual dividend. 3. In the case of common stock, not less than 3 per cent per annum.

"D. All securities not falling within Classes A, B, and C. The main provisions of the law may be summarized as follows:

"I. Provisions governing the offer of securities for sale: Securities in Classes A and B are exempt from the provisions of the Blue Sky Law. Securities in Class C may be sold only after filing a sworn statement in the office of the Secretary of State describing the securities to be sold, stating the law under which, and the time when, the corporation or business was organized, giving a balance sheet of assets and liabilities, an income or profit-and-loss statement, and an analysis of the surplus account, together with the names and addresses of its principal officers, directors, or trustees and other pertinent facts, data, and information, establishing the character of such securities. Before any Class D securities may be offered for sale, there must be filed, in the office of the Secretary of State, statements and documents as follows: (1) A description and the amount of the securities intended to be offered for sale. (2) If the issuer is a corporation, a certified copy of the charter or articles of incorporation and by-laws. (3) If the issuer is a firm, trust, partnership, or unincorporated association, a copy of the articles of partnership, association, or trust agreement. (4) The names, addresses, and prior occupations during a period of not less than ten years prior to filing such statement (giving details as to time, place, and address of employer and reasons for discontinuance of employment) of the officers, directors, or trustees of the issuer, if it be a corporation, or of the persons composing the issuer, if the issuer be a non-incorporated association. (5) A description of the nature of the industry engaged in or intended to be engaged in and the approximate time when such industry was or will be established. (6) An inventory showing the assets of the issuer. (7) An appraisal of the assets of the issuer. (8) A statement in detail of the gross income of the issuer and the source or sources thereof, and of its operating and other expenses, for a period of twelve months prior to the date of filing such statement; or for the period of the existence of the issuer if less than two years prior to the date of filing. (9) A copy of the most recent balance sheet of the issuer, showing the financial condition of the issuer at a date not more than thirty days prior to the date of filing, and giving an analysis of surplus account from inception of such issuer. (10) A copy of the mortgage, trust deed, indenture, or writing securing the securities, whereunder the same are issued, if any such instruments there be. (11) A copy of the form of the securities intended to be offered. (12) A copy of any and all subscription blanks to be used in the sale thereof, which subscription blanks shall have printed thereon, "These are speculative securities." (13) A statement as to the manner in which the securities are to be offered and sold. At any time, either before or after the filing of such statements, the Secretary of State may designate a certified public accountant to make an examination of the books, records, and documents of the issuer, and make a report thereof. If the statement discloses that any of such securities are intended to be issued for any patent right, copyright, trade-mark, process, or good-will, or for promotion fees or expenses, or for other intangible assets, the amount and nature thereof should be

fully set forth and the securities issued in payment therefor should be delivered in escrow to a bank or trust company designated by the Secretary of State, under an escrow agreement that the owners of such securities shall in the case of dissolution or insolvency not participate in the assets of the corporation until after the owners of all other securities have been paid in full. In case any statement or document filed in the office of the Secretary of State shall in his judgment be inadequate or not in compliance with the act, or in case the plan disclosed by such documents would in his judgment tend to work a fraud upon the people, or if it appears that the documents are false in any material particular, the Secretary of State shall apply for an injunction to restrain the further sale of such securities.

"II. Provisions affecting dealers in securities: When Class D securities are to be sold through a solicitor, agent, or broker, a statement must be rendered giving the names, residences, qualifications, occupations, and business experience of such solicitor, agent, or broker for the preceding ten years. The signatures of each and every solicitor, agent, or broker shall be attached to such statement. Any dealer, or owner, may sell Class D securities only after filing in the office of the Secretary of State a statement of the amount and description of the securities to be sold by him, the maximum price for which they are to be sold, and giving his address by street and number, qualifications, occupations, and business experience for the preceding ten years. An irrevocable contract must be executed by such solicitor, agent, and broker authorized to offer or sell such securities, to the effect that the issuer will receive in cash not less than 80 per cent of the proceeds of the sale of the securities without liability for any further expenses or commission. So long as any security continues to be offered for sale, new and supplementary statements must be filed at the expiration of each six months' period, showing (1) the amount of securities sold, sale price, the amount of cash proceeds received therefor, (2) all changes in the financial conditions of the issuer or in its management of property, accompanied by a copy of the most recent balance sheet, which must be not more than thirty days prior to the date of filing. Each financial statement, prospectus, advertisement, etc., published or distributed for the purpose of selling securities in Class D shall contain the following words in bold-face type: 'Securities in Class "D" under Illinois Securities Law. These are speculative securities.' But it shall be unlawful to make any other reference to the fact that the provisions of the law have been complied with. Furthermore, all such advertising literature shall contain a statement of the assets, liabilities, income, and expenses of the issuer, the law under which the issuer was incorporated or organized, and the names and addresses of all officers, directors, and trustees of the company. A copy of such financial prospectus, etc., shall be filed in the office of the Secretary of State within ten days after the first circulation, publication, or distribution. It shall be unlawful to publish or circulate therewith a statement of the earnings of other companies engaged in a similar business. Under a recent ruling by the Secretary of State, dealers may offer and provisionally sell all classes of securities before they have been accepted by the Secretary as properly qualified, actual delivery of the securities themselves not being made until after qualification.

"III. Penalties: The penalties attached to the act are severe. Attempts to sell securities without

full compliance with the provisions of the act are punishable, in the case of dealers, with fines as high as \$10,000, or one year's imprisonment, or both; and for sale of securities in case the issuer is known to be insolvent, when the purchaser loses by such sale, \$10,000, or five years, or both. In addition, dealers who sell in violation of any provision are liable for the full purchase price to the purchaser, plus reasonable attorney's fees; and for misrepresentation of the facts contained in the filed statements, to a maximum fine of \$5,000, or one year's imprisonment, or both. These are the more important provisions of the new law. In theory, it combines the principle of classification with an attempt to prevent the sale of securities that show evidence of fraud or misrepresentation. In practice, it appears to do little more than group securities, and to secure some measure of publicity for the grouping established. The actual effect of this publicity on the purchase of securities is very doubtful. According to the law, twenty-five copies of all statements, documents, etc., must be filed with the Secretary, and are theoretically accessible to the public; but in point of fact the investing class does not seem to be aware of this, and makes no attempt to use this information in passing judgment on issues. Moreover, it is only for Class D that a statement is required on advertisements and prospectuses, giving the state classification of the issue; and, as we shall show later, evasion of even this provision is easy. As to prohibition of sale, relatively few issues have been forbidden, perhaps because most of the questionable securities of the state never come up for judgment by the Secretary."—J. W. Angell, *Journal of Political Economy*, April, 1920.

BÆOTARCHS. See BÆOTIAN LEAGUE; GREECE: B. C. 432-431.

BÆOTIA, BÆOTIANS.—"Between Phokis and Lokris on one side, and Attica (from which it is divided by the mountains Kitharôn and Parnes) on the other, we find the important territory called Bæotia, with its ten or twelve autonomous cities, forming a sort of confederacy under the presidency of Thebes, the most powerful among them. Even of this territory, destined during the second period of this history to play a part so conspicuous and effective, we know nothing during the first two centuries after 776 B. C. We first acquire some insight into it on occasion of the disputes between Thebes and Plataea, about the year 520 B. C."—G. Grote, *History of Greece*, pt. 2, ch. 3.—In the Greek legendary period one part of this territory, subsequently Bæotian—the Copaic valley in the north—was occupied by the enterprising people called the Minyi, whose chief city was Orchomenus. Their neighbors were the Cadmeians of Thebes, who are "rich," as Grote expresses it, "in legendary antiquities." The reputed founder of Thebes was Cadmus, bringer of letters to Hellas, from Phœnicia or from Egypt, according to different representations. Dionysus (Bacchus) and Hēraklēs were both supposed to recognize the Cadmeian city as their birth-place. The terrible legends of Œdipus and his unhappy family connect themselves with the same place, and the incident wars between Thebes and Argos—the assaults of the seven Argive chiefs and of their sons, the Epigoni—were, perhaps, real causes of a real destruction of the power of some race for whom the Cadmeians stand. They and their neighbors, the Minyi of Orchomenus, appear to have given way before another people, from Thessaly, who gave the name Bæotia to the country of both and who were the inhabitants of the Thebes of historic times.—G. Grote, *History of Greece*, pt. 1, ch. 14.—E. Curtius, *History of Greece*, bk. 1, ch. 4.—"That the Bæotia of history should never have attained to a significance corresponding to the natural advantages of the locality, and to the prosperity of the district in the pre-Homeric age, is due above all to one principal cause. The immigration of the Thessalian Bæotians, from which the country derived its name and the beginnings of its connected history, destroyed the earlier civilization of the land, without succeeding in establishing a new civilization capable of conducting the entire district to a prosperous and harmonious development. It cannot be said that the ancient germs of culture were suppressed, or that barbarous times supervened. The ancient seats of the gods and oracles continued to be honoured and the ancient festivals of the Muses on Mount Helicon, and of the Charities at Orchomenus, to be celebrated. In Bæotia too the beneficent influence of Delphi was at work, and the poetic school of Hesiod, connected as it was with Delphi, long maintained itself here. And a yet stronger inclination was displayed by the Æolian immigrants towards music and lyric poetry. The cultivation of the music of the flute was encouraged by the excellent reeds of the Copaic morasses. This was the genuinely national species of music in Bæotia. . . . And yet the Bæotians lacked the capacity for attracting to themselves the earlier elements of population in such a way as to bring about a happy amalgamation. . . . The Bæotian lords were not much preferable to the Thessalian; nor was there any region far or near, inhabited by Greek tribes, which presented a harsher contrast in culture or manners, than the

district where the road led from the Attic side of Mount Parnes across to the Bœotian."—E. Curtius, *History of Greece*, bk. 6, ch. 1.—See also GREECE: Migrations.

BŒOTIAN LEAGUE.—"The old Bœotian League, as far as its outward forms went, seems to have been fairly entitled to the name of a Federal Government, but in its whole history we trace little more than the gradual advance of Thebes to a practical supremacy over the other cities. . . . The common government was carried on in the name of the whole Bœotian nation. Its most important magistrates bore the title of Bœotarchs; their exact number, eleven or thirteen, is a disputed point. . . . Thebes chose two Bœotarchs and each of the other cities one."—E. A. Freeman, *History of federal government*, ch. 4, sect. 2.

BOER (Dutch, *boer*, a farmer; German, *bauer*, a peasant), the name given to the descendants of the Dutch settlers of the Cape of Good Hope. "The original stock of the Boer or Dutch Afrikaner people contained a considerable admixture of French blood. The foundation of the predominant white population . . . laid almost exclusively between the years 1052 and 1090 . . . was composed as follows: (1) The discharged soldiers, sailors and other servants of the company . . . (2) parties of young women from the public orphanages of Holland . . . (3) a community of Huguenot refugees (1688-1699) . . . (4) Dutch families sent out from Holland concurrently with the French. . . . In the compulsory abandonment of French . . . [is] found the origin of the clipped and broken Dutch dialect known as the *Taal* . . . which for two centuries has been the national tongue of the South African Dutch. The barrier of the *Taal* and the Liberal and monopolist system of the Dutch East India Co., under which all external trade was carried on by the officials of the company, together cut off the settlers almost completely from social and intellectual intercourse with Europe, and at the close of the Company's regime, when Britain temporarily occupied the Cape Colony (1795), the white inhabitants formed to all intents and purposes a 17th century community."—W. B. Worsfold, *Africa*, ch. vii, pp. 158-159. (*Oxford survey of the British empire*.)

"The English came back to stay in 1806 and . . . in the Boers [they] had to deal with a strong, tenacious race, suspicious of newcomers, inheriting traditions of successful rivalry to England, sore at being severed from their mother country, minded, whether under the Dutch or the English flag, to go their own ways and live their own lives. Governors were not always wise. . . . Missionaries from England preached doctrines with regard to the treatment of natives which did not

harmonize with Boer views. Slave emancipation impoverished the slave owners, who received inadequate compensation for the value of their slaves. The climax of discontent was reached at the conclusion of one of the many Kaffir wars in which South Africa and the 19th century abounded. . . . The South African Boers found their remedy in emigration. In 1836 began the Great Trek, . . . out into the land between the Orange and the Vaal River and beyond the Vaal. They founded little republics, the nuclei of the Orange Free State and the Transvaal Republic [also founding Natal (q. v.)]."—C. P. Lucas, *British empire*, pp. 125-127.—"For many years the Boers of the Free State and the South African Republic remained isolated from the rest of the world, until the discovery of diamonds and gold brought in a new and alien element. They led a different life from that of their brethren in the Cape Colony, who were in a settled country, where they were able to attend peacefully to their agricultural and pastoral avocations. For many years the Free States and the Transvaalers carried their lives in their hands. . . . They developed an entirely different outlook, communing with nature alone in its wildest forms, learning self-reliance in the isolation of the bush, far removed from neighbors or softening or enervating influence, knowing the trail and the ways of wild beast and the wilder savage with unerring acuteness. . . . The Boer of the *Voortrekker* era and thereafter became somewhat self-assertive, regarding himself as the chosen instrument of Providence for the settlement of the interior. Such a man was sure to be deeply religious . . . his spiritual leaders had great influence over him. The piety of the Doppers, to which body many of the *Voortrekkers* belonged, was of a severely ascetic cast. . . . On the whole, however, the Dutch have remained faithful to Orthodox Calvinism."—M. Nathan, *South African commonwealth*, pp. 384-385.—"The individual Boer, in short, has been well described by a friend of his people as, according to his lights, a citizen pioneer, and a rough, God-fearing, honest, homely, uneducated Philistine. His indubitable cruelty to the natives is, perhaps, the fault of his needs and upbringing, as his political shiftiness is that of the demagogues and adventurers who have too often meddled with his national affairs."—W. E. G. Fisher, *Transvaal and the Boers*, p. 50.—"With the discovery of gold and the great increase in population the Boers became more steadfastly national and "believed that the only way to maintain the government in their own hands was to exclude the British settlers, the Uitlanders, from the suffrage. . . . War began in October of 1899 . . . against Great Britain."—L. H. Holt and S. W. Chilton, *History of Europe*, pp. 330-340.—See also SOUTH AFRICA, UNION OF: 1899 (October-December); 1900 (January-February), to 1901 (April); U. S. A.: 1900 (June-August).

In spite of the general progress in education and the continued European immigration, the Boers have preserved much of their exclusiveness and provincial outlook. However, the introduction of new political issues growing out of the struggle between capital and labor has somewhat broken the solidarity of the Boer vote and many of the most influential leaders in the Boer War, like Botha and Smuts, were able later to reconcile themselves to their conquerors and advocate the continuance of the Union of South Africa within the British Empire.—See also BRITISH EMPIRE: Characteristics of self-governing colonies; ORANGE FREE STATE: 1902-1920; SOUTH AFRICA, UNION OF: 1806-1881, and 1914.

BOGOMILIANS, a religious sect which arose among the Slavs of Thrace and Bulgaria, in the eleventh century, and suffered persecution from the orthodox of the Greek church. They sympathized with the Iconoclasts of former times, were hostile to the adoration of the Virgin and saints, and took more or less from the heretical doctrines of the Paulicians. Their name is derived by some from the two Slavic words, *Bog*, signifying God, and *milui*, "have mercy." Others say that *Bogumil*, meaning "one beloved by God," was the correct designation. Basilios, the leader of the Bogomilians, was burned by the emperor Alexius Comnenus, in the hippodrome, at Constantinople, 1118.—G. Finlay, *History of the Byzantine and Greek empires*, 716-1453, bk. 3, ch. 2, sect. 1.—See also **BOSNIA: 12th century; 1453-1528; 1528-1875 and SERBIA: 1200-1321.**

BOGOTÁ or Santa Fé de Bogotá.—**Location and character.**—Capital of the republic of Colombia, of the department of Cundinamarca and the province of Bogotá, is situated 8,679 feet above sea-level, "in the midst of rolling plains on a high plateau surrounded by great mountains. . . . Served by several railways, it has an excellent network of municipal tramways, is lit by electricity, possesses two of the best theatres on the Continent (the Teatro Colón and the Teatro Municipal), large bull ring, hippodrome [and] polo club grounds. . . . Bogotá, besides being the political centre of the country, is also a busy mart where much of the imports for distribution as well as goods for exports are gathered."—V. Lévine, *Colombia*, pp. 151, 152.—See also **LATIN AMERICA: Map.**

Population.—In 1673 curiosity led the president, Melchor Leñan y Cisneros, to have a census taken of the city, which was found to contain 3,000 inhabitants. In 1850 it had 35,000 inhabitants; in 1884, it showed 95,761 inhabitants. In 1912 its population was 139,277. The chief racial element is white; negro blood is rarely evident. The original stocks are represented, together with many intermediate cross-breeds.

Commerce and industry.—"Economically Bogotá is on a sound footing, being a commercial and banking center of constantly growing importance. There are five banks of large capital, the American Mercantile Bank (Banco Mercantil Americano) having been established last year, and at present [written in 1910] the establishment of another is under consideration. Several insurance companies contribute to the success of financial enterprises. Large export houses have founded headquarters there and importation is conducted on rather a

large scale. Foreign credit companies in the United States and Europe are an added factor in Bogotá's development. Industry also is being exploited. Thread and textile industries compete with foreign establishments in the production of fabrics and cloth. Stock raising is increasing considerably on the plain, the strains having been carefully selected from stock brought from England, and the wool market is plentiful. Tanneries and shoe manufactories have grown up; tobacco is made into cigarettes which rival those of Habana."—*Bulletin of Pan-American Union (Jan-June, 1919)*, p. 303.—"Bogotá and its suburbs possess a goodly number of factories; matches, plate-glass, clay-tubing, beer, flour, candles made here have dislodged their foreign competitors. Many other articles are manufactured which compete favourably in price and quality with imported goods—glassware, cotton goods, silks, linens, biscuits [and] mineral waters. . . . The largest industrial establishment in the city is [1013] the *Bavaria* brewery, employing 300 labourers, an up-to-date concern, founded in 1890. . . . The ordinary arts and crafts are well represented, supplying the town with everything for the complete comfort of life as known in European capitals, though, of course, for ultra luxuriant resort is had abroad."—P. J. Eder, *Colombia*, pp. 210-220.

Education.—"Santa Fé [Bogotá] developed rapidly. It became an intellectual center; college after college was founded. Aristotle and Plato, having traversed thorny ground, navigated fabulous rivers and ascended abrupt peaks, had at last become the patrons of the creoles of the New World. The primary academy (Seminario Menor) was opened in 1585; the College of St. Bartholomew in 1597; and Santo Domingo in 1605. The first Muisca grammar was printed by the order and at the expense of the president, Francisco de Borja. The College of San Francisco Javier was opened under the Jesuits, and eager auditors filled the lecture halls devoted to the mystic philosopher of the 'Suma Teológica' at St. Thomas College. The influential Rosario College was established by Archbishop Cristóbal de Torres in 1653. . . . [It] has had extraordinary success, and through [it] . . . some of those Colombians most famous in science, in literature and in politics have passed. This College is still in existence [1014] and flourishing, giving courses in literature and philosophy. The National University of Bogotá, founded in 1867, has Faculties of Medicine, Law and Political Science, and [with] . . . this institution are associated the Schools of Engineering and of National Sciences. The National Library, Astronomical Observatory, School of Fine Arts and the Academy of Music are also incorporated in the University. There is also in the capital a Seminary in which youths destined for the priesthood are educated. The Colegio de San Bartolomé, of ancient foundation, to-day under the direction of the Jesuit Fathers, imparts instruction to young boys. A free institute of learning, enjoying a good name in the country, and in which courses of Literature and Philosophy are held, and comprising Faculties of Law and Political Science, is the Universidad Republicana, which has withstood the assaults of political enemies, and throughout a difficult period has kept pace with the official seat of learning."—V. Lévine, *Colombia*, pp. 64-65.

Origin and early history.—"The name with which Gonzalo Ximénes de Quesada and his warring hosts christened the Andean plateau was Santa Fé. To that nobleman nothing seemed more fitting than to give to the land he had discovered the name of his birthplace—that classic Santa Fé

founded upon the royal command of Ferdinand and Isabella opposite the opulent Granada."—*Bulletin of Pan-American Union* (Jan.-June, 1919), p. 373. See COLOMBIA: 1536-1731.—"Granada he commemorated in the name of the new kingdom. The site for the capital was chosen with much care, where stood the little Indian village of Tensaquillo. . . . He commenced [in 1538] with the building of twelve houses, in honour of the twelve Apostles; and, of course, a church was amongst the first requisites. [In 1540 the emperor Charles V made the settlement a city and gave it a coat of arms]. . . . Quesada died of leprosy at Mariquita, beyond the Magdalena, in 1597, and his monument is in the cathedral at the capital. The city has now lost its name of Santa Fé, being universally known by that of Bogotá, the Chibcha metropolis, which occupied a site on the river Funza, about six miles west of the modern city."—F. Petre, *Republic of Colombia*, p. 118.—"Its first lieutenant governor was Herman Pérez de Quesada, brother of the founder. . . . Following Pérez de Quesada five captains governed in quick succession; but as the Court of Spain was at variance with these governors, in 1564 it was resolved to name as president, invested with extraordinary power, Don Andrés Díaz Venero de Leiva, the founder of the Colombian nationality. Twenty-two governors later governed at intervals, administrations now lost in the shadows of time, although among the group shines the name of the noble Knight Don Francisco de Borja, nephew of the Duke of Gandia, who governed for 23 years."—*Bulletin of the Pan-American Union* (Jan.-June, 1919), p. 377.—See also COLOMBIA: 1536-1731.

1740.—Elevation of New Granada to a viceroyalty.—"A political transformation, the result of the importance of New Granada and its fiscal situation, . . . took place, adding prestige to the proud blason of New Granada—the bud which was to produce dangerous fruit for the Spanish Crown. New Granada was elevated to a viceroyalty by a decree of King Philip V, and although the chimerical attempt of former years and his Viceroy Villalonga had failed, in 1740 it was an accomplished fact, and His Excellency Don Sebastian de Esclava regally began his governorship, invested with the title of viceroy. Peaceful Santa Fé, accustomed to her simple, democratic President, bore the change in resignation, though she found herself involved in the turmoil of the court, and beheld the viceroy driven through her tortuous streets, after his customary siesta, in a coach of state drawn by mules in gay trappings."—*Bulletin of Pan-American Union* (Jan.-June, 1919), p. 381.—See also COLOMBIA: 1536-1731.

1810 (July).—Junta at Bogotá declared the government of New Granada transferred from Spanish authorities to themselves.—"Of the acts of independence, that of Bogotá, the seat of the Viceroy, was the most consequential. The struggle for freedom in New Granada may be said to have had its definite beginning on the 20th day of July, 1810, when the junta at the capital, called together by the insistence of the populace . . . after an all-night session, backed up by a mob of six or seven thousand patriots assembled throughout the night in the public square, declared the supreme government of New Granada transferred from the Spanish authorities to themselves as representing the Sovereignty of the People, and further resolved that a call for the election of deputies from the several provinces be sent out to join the junta in adopting a constitution for a federation of free and independent sovereign states. . . . Not all the provinces responded to the call sent out by

the Bogotá junta. Many, like Cartagena, in their local pride, preferred their own undisturbed sway; a few, like Pasto, under the domination of a fanatical clergy, stubbornly remained loyal to the Spanish authorities. The remnants of ultra-marine rule could have been readily extinguished, but there was unhappily initiated a period, bordering on anarchy, of impotent civil strife, aptly dubbed by Colombian historians 'la patria boba'—'foolish'—in that, neglecting the opportunity to cement the foundations of the nation against the inevitable future attempt of Spain to regain her power, the country's energies were misspent in civil life."—P. J. Eder, *Colombia*, pp. 33-34.

1816-1819.—City seized by the Spanish and later delivered by Bolivar.—New republic formed.—In 1816 Bogotá was seized by the Spanish forces and subjected to a severe military rule for the next three years, until the victory of Bolivar's forces at Boyara relieved the city. On the proclamation of the independence of the viceroyalty, Bogotá became the capital of the republic of Colombia, which later split up into three states—Venezuela, Ecuador and New Granada (later Colombia). See COLOMBIA: 1819-1830.

1855.—Rule over Panama. See PANAMA: 1840-1900.

1859-1861.—Civil war in New Granada.—Bogotá captured by ex-President Mosquera.—Congress at Bogotá established a republic with the name of the United States of Colombia. See COLOMBIA: 1830-1886.

1909.—Communication with the coast established.—"In the days of Quesada and until recently [written in 1909] the route has been by boat from Barranquilla up to Magdalena to the rapids at Honda. This is about 600 miles. From here the way was by horse or mule back, or in the early days by the Silla, a chair strapped to a man's back, to Bogotá. Three high mountain ranges and as many deep valleys made the journey interesting but tedious. The trip took about 30 days at the least. Gradually this time was shortened as the steamboat service improved and connecting links of railway were built. In January of 1909 the last iron link was forged when the Girardot Railway joined the Sabana Railway at Facatativa, thus establishing direct communication with the coast. The time now is about eight days from Bogotá to Barranquilla."—*Pan American* (Bureau of American Republics, July-Dec., 1909).

1921.—Transportation.—In spite of the completion of a railroad in 1909, transportation is still extremely difficult. "Seven trans-shipments are necessary before a shipment ultimately reaches Bogotá, Colombia [from the United States]. . . . Another difficulty in connection with shipments . . . may also be of interest at this time. Consignments 'to order' are not recognized by the laws of that country [Colombia] and the only manner in which complete protection can be secured is by consigning the merchandise under previous agreement to a bank or import agent."—*Pan-American Magazine* (Jan., 1921).

BOHAIN, town in France, northeast of St. Quentin which was taken by the Allies in 1918. See WORLD WAR: 1918: II. Western front: r.

BOHEMIA.—General location.—Area.—Physical conditions.—Agricultural and mineral resources.—Population.—Cities and industries.—The physical and economic conditions of Bohemia have been outlined (1915) as follows: "Bohemia lies almost exactly half way between the Adriatic Sea and the Baltic. . . . Its area (20,065 sq. miles) is less than half that of New York State. . . . It is not, however, so nearly a plain. Almost the en-

tire surface possesses considerable relief. Only along the southeastern boundary line is the otherwise continuous mountain girdle broken. The Riesengebirge along the northeast boundary, the Erzgebirge along the northwest, and the Bohemian Forest along the southwest, are well defined ranges with a maximum altitude in the Riesengebirge of about 5,300 feet (the Schneekoppe). The Bohemian-Moravian hills along the southeast include a considerably dissected upland of approximately

BRIDGE TOWER AT PRAGUE

1000 feet elevation."—E. Van Cleef, *Overlooked Bohemia* (*Journal of Geography*, October, 1915, pp. 30-40).—These elevations slope down towards the interior, which is an undulating plain, drained by the Elbe and its tributaries. The longest of them in Bohemia is the Moldau, which is navigable and is connected by canal with the Danube and the Black sea. Besides the Elbe, the Vistula and the Oder take their rise within the limits of Bohemia. A "continental climate combined with the remarkable fertility of the soil gives to Bohemia an agricultural resource that many a country would gladly cherish. Among the numerous crops are hops, potatoes, sugar-

beets; small fruits, such as grapes, cherries, apples, and plums. Most of the grains are represented, principally wheat, rye, and flax. Geese, cattle, and swine are the most important farm animals. . . . Bohemia's mineral resources also rank high. With the exception of salt, probably no mineral is lacking in her numerous hills. Coal, particularly lignite (Braunkohle), is in abundance, especially in the Eger valley near its junction with the Elbe. Iron and coal (mostly anthracite) occur in quantity in the region about Pilsen. Silver, lead, garnets, copper, nickel, cobalt, kaolin, quartz from which glass sand is derived, tungsten, tin, and alum make a rather formidable array of minerals, a complete list of which would be too long to detail here. . . . About one-third of the 6,769,548 people is German and the remainder Czech. Along the west bank of the Elbe for considerable distances north of Prague, Czech towns predominate; along the east bank German towns. In nearly all of the cities both German and Czech schools are represented. . . . The industrial centers of the mountain areas, with the exception of the southeastern districts, are occupied by the Germans. Mining at the foot of the Erzgebirge and cotton, wool, linen, and glass manufacturing are very largely under German control. The culmination of German industry in this foreign land is perhaps best appreciated in Reichenberg (pop. 35,000) located on the Neiss River where it controls the important pass leading to Saxony and Silesia. . . . Prague (pop. 541,000), the capital city and a growing industrial center, . . . is a . . . Czech town today, although 50 years ago it was not so. Now only one-sixth of its population is German. Other towns of importance that might be mentioned in passing are Aussig (pop. 40,000), a river harbor on the Elbe for the distribution of lignite and a limited quantity of lumber; Pilsen (pop. 80,000), in the west on the Beraun River, the city which has given the world-renowned name to 'Pilsener' beer. In the southern part of the country on the upper Moldau, in control of the important road to Linz on the Danube, lies the rival city of Budweis (pop. 45,000), whose name also is well-known. Large cities are generally absent. On the other hand the many small cities give a relatively even distribution of population."—E. Van Cleef, *Overlooked Bohemia* (*Journal of Geography*, Oct., 1915, pp. 40-41).

STATUS of art and education.—"In matter of art . . . Bohemia was early in the field. The Prague school of painting that came into prominence during the reign of Charles IV. (1316-1378) took favorable rank with similar early art movements in Italy. Painters, sculptors, and architects trained in Bohemia are represented to-day at most of the great cities in Europe where art treasures are preserved. The zealous and promising artistic movement inaugurated in the country by the followers of the Prague school, like most of the other culture movements in the kingdom, was well-nigh extinguished by the attempted Teutonization of the country by the Hapsburg rulers after the fatal *Bilá Hora* [battle of the White Hill, 1620]. The political and literary activity in Bohemia during the opening years of the last century reacted favorably on the art life of the nation. A society of the fine arts, that was distinctly Bohemian and national in character, was organized at Prague in 1848; and this was followed by annual expositions of the chief productions of Bohemia and foreign artists. As an immediate result of these activities, Bohemia produced an astonishingly large number of painters who took high rank in their art, artists of the rare talent of Hellich,

Manes, Cermák, Schwaiger, Ales, Brozik, Mucha, Uprka. In sculpture, too, modern Bohemia has taken a place of distinction in the works of Myslík, Simek, Seidan, Sucharda, and Saloun. Bohemia's music is probably better known throughout the civilized world than any other branch of her creative art. This is largely due to the universal character of the language of music and to the eminence of her great tone poets, Smetana and Dvorák. Not that the history of music in the country begins with these two modern composers, but because they spoke in such musical forms and with such musical force that they arrested the attention of the world. . . . Bohemia's position in the matter of education is likewise distinctive. Education of an elementary and secondary character was general in Bohemia several centuries in advance of Austria and Germany. The University of Prague antedated similar institutions in Germany by more than half a century. John Amos Komenský (known in America and England by the Latinized form of his name, Comenius) was a Bohemian, and in the judgment of competent historians of education he was the real evangelist of modern pedagogy. Most of the school systems of progressive and cultivated European peoples are based directly upon ideas that he formulated."—T. Capek, *Bohemia under Hapsburg misrule*, pp. 157-159.—See also MUSIC: Folk Music and nationalism: Bohemia.

Derivation of the name.—Bohemia is thought to have derived its name from the Boians or Boii, who occupied that region after they were driven by the Romans from Gallia Cisalpina early in the second century.—See also BOIANS.

Its people and their early history.—"Whatever may be the inferences from the fact of Bohemia having been politically connected with the empire of the Germanic Marcomanni, whatever may be those from the element Boio-'as connecting its population with the Boii of Gaul and Bavaria (Baiovarii), the doctrine that the present Slavonic population of that kingdom—Tshekhs [or Czechs] as they call themselves—is either recent in origin or secondary to any German or Celtic aborigines, is wholly unsupported by history. In other words, at the beginning of the historical period Bohemia was as Slavonic as it is now. From 526 to 550, Bohemia belonged to the great Thuringian Empire. The notion that it was then Germanic (except in its political relations) is gratuitous. Nevertheless, Schaffarik's account is, that the ancestors of the present Tshekhs came, probably, from White Croatia: which was either north of the Carpathians, or each side of them. According to other writers, however, the parts above the river Kulpa in Croatia sent them forth. In Bohemian the verb 'ceti'='to begin,' from which Debrowsky derives the name Czekhs—the beginners, the foremost, i.e., the first Slavonians who passed westwards. The powerful Samo, the just Krok, and his daughter, the wise Libussa, the founder of Prague, begin the uncertain list of Bohemian kings, 624-700. About 722, a number of petty chiefs became united under Přemysl the husband of Libussa. Under his son Nezamysl occurs the first Constitutional Assembly at Vysehrad; and in 845, Christianity was introduced. But it took no sure footing till about 966. Till 1471 the names of the Bohemian kings and heroes are Tshekhs—Wenceslaus, Ottokar, Ziska, Podiebrad. In 1564, the Austrian connexion and the process of Germanizing began. . . . The history and ethnology of Moravia is nearly that of Bohemia, except that the Marcomannic Germans, the Turks, Huns, Avars and other less important populations may have effected a greater amount of in-

termixture. Both populations are Tshekhs, speaking the Tshekhs language—the language, probably, of the ancient Quadi."—R. G. Latham, *Ethnology of Europe*, ch. 11.—See also AVARS: 7th century; CZECHS; HISTORY: 29; PHILOLOGY: 21.

9th century-13th century.—Part of the Moravian kingdom.—Created a kingdom.—A Germanic electorate.—War of King Ottakar with the emperor Rudolph of Hapsburg.—His defeat and death.—In the ninth century Bohemia was a part of the Moravian kingdom (see MORAVIA: 9th century), but soon threw off its yoke (see also HUNGARY: 934-955). In 1088 it became a kingdom, and in the thirteenth century the king of Bohemia was made one of the seven electors of the Holy Roman Empire. When Rudolph, count of Hapsburg, became king of the Romans, he claimed most of Bohemia's possessions, and Ottakar under necessity surrendered his lands, except Bohemia and Moravia, and recognized the sovereignty of Rudolph. (See GERMANY: 1125-1272.) Supported by the duke of Bavaria, he soon revolted, however, and was defeated and killed in the ensuing battle at Marchfeld, in 1278.—See also AUSTRIA: 1246-1282.

1310-1410.—Acquisition of the crown by the Luxemburg family.—Election of Charles IV to the imperial throne.—Upon the death of Wenceslaus III, the crown of Bohemia passed into the hands of the Luxemburg family for more than a century, through the marriage of John of Luxemburg to the deceased king's daughter. (See GERMANY: 1308-1313.) John's son, Charles IV, was elected king of the Romans in 1347 (see GERMANY: 1317-1347). During his reign the Germanization of Bohemia was begun and the University of Prague founded. Charles IV exerted himself in every way to advance the fortunes of the country. His work, however, was partially undone by his incompetent son, and the progress of Germanization was checked by the Hussite movement. (See below, 1405-1415.) After the deposition from the imperial throne of Charles's son, Wenceslaus, the imperial crown reverted to the house of Luxemburg with the election of King Sigismund in 1410.—See also GERMANY: 1347-1403.

1355.—Succession fixed in the Luxemburg dynasty.—Incorporation of Moravia, Silesia, &c.—The diet of the nobles, in 1355, joined Charles IV in "fixing the order of succession in the dynasty of Luxemburg, and in definitely establishing that principle of primogeniture which had already been the custom in the Premyslide dynasty. Moravia, Silesia, Upper Lusatia, Brandenburg, which had been acquired from the margrave Otto, and the county of Glatz (Kladsko), with the consent of the diets of these provinces, were declared integral and inalienable portions of the kingdom of Bohemia."—L. Leger, *History of Austro-Hungary*, ch. 11.

1364.—Reversion of the crown guaranteed to the house of Austria.—Following a dispute about the possessions of Tyrol, Carinthia, and Carniola, Charles IV of Bohemia and Rudolph of Austria concluded a treaty by which the two houses of Luxemburg, in Bohemia, and of Hapsburg, in Austria, guaranteed each other the inheritance of their lands in case of the extinction of either one of the families.—See also AUSTRIA: 1330-1364.

1378.—Wenzel elected king.—Territory joined to Brandenburg. See BRANDENBURG: 1168-1417.

1405-1415.—John Hus, and the movement of religious reformation.—"Some sparks of the fire which Wiclif had lighted [see ENGLAND: 1360-1414], blown over half Europe, as far as remote Bohemia, quickened into stronger activity a flame

which for long years burned and scorched and consumed, defying all efforts to extinguish it. But for all this, it was not Wiclif who kindled the Bohemian fires. His writing did much to fan and feed them; while the assumed and in part erroneously assumed, identity of his teaching with that of Hus contributed not a little to shape the tragic issues of the Bohemian reformer's life. But the Bohemian movement was an independent and eminently a national one. If we look for the proper forerunners of Hus, his true spiritual ancestors, we shall find them in his own land, in a succession of earnest and faithful preachers. . . . John Hus (b. 1369, d. 1415), the central figure of the Bohemian Reformation, took in the year 1394 his degree as Bachelor of Theology in that University of Prague, upon the fortunes of which he was destined to exercise so lasting an influence; and four years later, in 1398, he began to deliver lectures there. . . . He soon signalized himself by his diligence in breaking the bread of life to hungering souls, and his boldness in rebuking vice in high places as in low. So long as he confined himself to reproving the sins of the laity, leaving those of the Clergy and monks unassailed, he found little opposition, nay, rather support and applause from these. But when [1405] he brought them also within the circle of his condemnation, and began to upbraid them for their covetousness, their ambition, their luxury, their sloth, and for other vices, they turned angrily upon him, and sought to undermine his authority, everywhere spreading reports of the unsoundness of his teaching. . . . While matters were in this strained condition, events took place at Prague which are too closely connected with the story that we are telling, exercised too great an influence in bringing about the issues that lie before us, to allow us to pass them by. . . . The University of Prague, though recently founded—it only dated back to the year 1348—was now, next after those of Paris and Oxford, the most illustrious in Europe. . . . This University, like that of Paris, on the pattern of which it had been modelled, was divided into four 'nations'—four groups, that is, or families of scholars—each of these having in academical affairs a single collective vote. These nations were the Bavarian, the Saxon, the Polish, and the Bohemian. This does not appear at first an unfair division—two German and two Slavonic; but in practical working the Polish was so largely recruited from Silesia, and other German or half-German lands, that its vote was in fact German also. The Teutonic votes were thus as three to one, and the Bohemians in their own land and their own University on every important matter hopelessly outvoted. When, by aid of this preponderance, the University was made to condemn the teaching of Wiclif . . . matters came to a crisis. Urged by Hus, who as a stout patriot, and an earnest lover of the Bohemian language and literature, had more than a theological interest in the matter,—by Jerome [of Prague],—by a large number of the Bohemian nobility,—King Wenzel published an edict whereby the relations of natives and foreigners were completely reversed. There should be henceforth three votes for the Bohemian nation, and only one for the three others. Such a shifting of the weights certainly appears as a redressing of one inequality by creating another. At all events it was so earnestly resented by the Germans, by professors and students alike, that they quitted the University in a body, some say of five, and some of thirty thousand, and founded the rival University of Leipsic, leaving no more than two thousand students at Prague. Full of indigna-

tion against Hus, whom they regarded as the prime author of this affront and wrong, they spread throughout all Germany the most unfavourable reports of him and of his teaching. This exodus of the foreigners had left Hus, who was now Rector of the University, with a freer field than before. But Church matters at Prague did not mend; they became more confused and threatening every day; until presently the shameful outrage against all Christian morality which a century later did a still more effectual work, served to put Hus into open opposition to the corrupt hierarchy of his time. Pope John XXIII., having a quarrel with the King of Naples, proclaimed a crusade against him, with what had become a constant accompaniment of this.—Indulgences to match. But to denounce Indulgences, as Hus with fierce and righteous indignation did now, was to wound Rome in her most sensitive part. He was excommunicated at once, and every place which should harbour him stricken with an interdict. While matters were in this frame the Council of Constance [see PAPACY: 1414-1418] was opened, which should appease all the troubles of Christendom, and correct whatever was amiss. The Bohemian difficulty could not be omitted, and Hus was summoned to make answer at Constance for himself. He had not been there four weeks when he was required to appear before the Pope and Cardinals (Nov. 18, 1414). After a brief informal hearing he was committed to harsh durance from which he never issued as a free man again. Sigismund, the German King and Emperor Elect, who had furnished Hus with a safe-conduct which should protect him, 'going to the Council, tarrying at the Council, returning from the Council,' was absent from Constance at the time, and heard with real displeasure how lightly regarded this promise and pledge of his had been. Some big words too he spoke, threatening to come himself and release the prisoner by force; but, being waited on by a deputation from the Council, who represented to him that he, as a layman, in giving such a safe-conduct had exceeded his powers, and intruded into a region which was not his, Sigismund was convinced, or affected to be convinced. . . . More than seven months elapsed before Hus could obtain a hearing before the Council. This was granted to him at last. Thrice heard (June 5, 7, 8, 1415),—if indeed such tumultuary sittings, where the man speaking for his life, and for much more than his life, was continually interrupted and overborne by hostile voices, by loud cries of 'Recant,' 'Recant,' may be reckoned as hearings at all,—he bore himself, by the confession of all, with courage, meekness and dignity." He refused to recant. Some of the articles brought against him, he said, "charged him with teaching things which he had never taught, and he could not, by this formal act of retraction, admit that he had taught them." He was condemned, sentenced to the stake, and burned, on July 6, 1415. His friend, Jerome, of Prague, suffered the same fate in the following May.—R. C. Trench, *Lectures on mediæval church history*, lecture 22.

1409.—Represented at Council of Pisa. See PAPACY: 1377-1417.

1419-1434. — Hussite Wars. — Reformation checked.—"The fate of Huss and Jerome created an instant and fierce excitement among the Bohemians. An address, defending them against the charge of heresy and protesting against the injustice and barbarity of the Council, was signed

by 400 or 500 nobles and forwarded to Constance. The only result was that the Council decreed that no safe-conduct could be allowed to protect a heretic, that the University of Prague must be reorganized, and the strongest measures applied to suppress the Hussite doctrines in Bohemia. This was a defiance which the Bohemians courageously accepted. Men of all classes united in proclaiming that the doctrines of Huss should be freely taught, and that no Interdict of the Church should be enforced: the University, and even Wenzel's queen, Sophia, favored this movement, which soon became so powerful that all priests who refused to administer the sacrament 'in both forms' were driven from the churches. . . . When the Council of Constance was dissolved [1418], Sigismund [the Emperor] hastened to Hungary to carry on a new war with the Turks, who were already extending their conquests along the Danube. The Hussites in Bohemia employed this opportunity to organize themselves for resistance; 40,000 of them, in July, 1410, assembled on a mountain to which they gave the name of Tabor, and chose as their leader a nobleman who was surnamed Ziska, 'the one-eyed.' The excitement soon rose to such a pitch that several monasteries were stormed and plundered. King Wenzel arrested some of the ringleaders, but this only inflamed the spirit of the people. They formed a procession in Prague, marched through the city, carrying the sacramental cup at their head, and took forcible possession of several churches. When they halted before the city-hall, to demand the release of their imprisoned brethren, stones were thrown at them from the windows, whereupon they broke into the building and hurled the Burgomaster and six other officials upon the upheld spears of those below. . . . The Hussites were already divided into two parties, one moderate in its demands, called the Calixtines, from the Latin 'calix,' a chalice, which was their symbol [referring to their demand for the administration of the eucharistic cup to the laity, or communion 'sub utraque specie'—whence they were also called 'Utraquists']; the other radical and fanatic, called the 'Taborites,' who proclaimed their separation from the Church of Rome and a new system of brotherly equality through which they expected to establish the Millennium upon earth. The exigencies of their situation obliged these two parties to unite in common defence against the forces of the Church and the Empire, during the sixteen years of war, which followed; but they always remained separated in their religious views, and mutually intolerant. Ziska, who called himself 'John Ziska of the Chalice, commander in the hope of God of the Taborites,' had been a friend and was an ardent follower of Huss. . . . In his genius for military operations, he ranks among the great commanders of the world; his quickness, energy and inventive talent were marvellous, but at the same time he knew neither tolerance nor mercy. . . . Sigismund does not seem to have been aware of the formidable character of the movement, until the end of his war with the Turks, some months afterwards, and he then persuaded the Pope to summon all Christendom to a crusade against Bohemia. During the year 1420 a force of 100,000 soldiers was collected, and Sigismund marched at their head to Prague. The Hussites met him with the demand for the acceptance of the following articles: 1.—The word of God to be freely preached; 2.—The sacrament to be administered in both forms; 3.—The clergy to possess no property or temporal authority; 4.—All sins to be punished by the proper authorities. Sigismund was

ready to accept these articles as the price of their submission, but the Papal Legate forbade the agreement, and war followed. On the 1st of November, 1420, the Crusaders were totally defeated by Ziska, and all Bohemia was soon relieved of their presence. The dispute between the moderates and the radicals broke out again; the idea of a community of property began to prevail among the Taborites, and most of the Bohemian nobles refused to act with them. Ziska left Prague with his troops and for a time devoted himself to the task of suppressing all opposition through the country, with fire and sword. He burned no less than 550 convents and monasteries, slaying the priests and monks who refused to accept the new doctrines. . . . While besieging the town of Raby, an arrow destroyed his remaining eye, yet he continued to plan battles and sieges as before. The very name of the blind warrior became a terror throughout Germany. In September, 1421, a second Crusade of 200,000 men, commanded by five German Electors, entered Bohemia from the west. . . . But the blind Ziska, nothing daunted, led his wagons, his flail-men, and mace-wielders against the Electors, whose troops began to fly before them. No battle was fought; the 200,000 Crusaders were scattered in all directions, and lost heavily during their retreat. Then Ziska wheeled about and marched against Sigismund, who was late in making his appearance. The two armies met on the 8th of January, 1422 [at Deutschbrod], and the Hussite victory was so complete that the Emperor narrowly escaped falling into their hands. . . . A third Crusade was arranged and Frederick of Brandenburg (the Hohenzollern) selected to command it, but the plan failed from lack of support. The dissensions among the Hussites became fiercer than ever; Ziska was at one time on the point of attacking Prague, but the leaders of the moderate party succeeded in coming to an understanding with him, and he entered the city in triumph. In October, 1424, while marching against Duke Albert of Austria, who had invaded Moravia, he fell a victim to the plague. . . . A majority of the Taborites elected a priest, called Procopius the Great, as their commander in Ziska's stead; the others who thenceforth styled themselves 'Orphans,' united under another priest, Procopius the Little. The approach of another Imperial army, in 1426, compelled them to forget their differences, and the result was a splendid victory over their enemies. Procopius the Great then invaded Austria and Silesia, which he laid waste without mercy. The Pope called a fourth Crusade, which met the same fate as the former ones: the united armies of the Archbishop of Treves, the Elector Frederick of Brandenburg and the Duke of Saxony, 200,000 strong, were utterly defeated, and fled in disorder, leaving an enormous quantity of stores and munitions of war in the hands of the Bohemians. Procopius, who was almost the equal of Ziska as a military leader, made several unsuccessful attempts to unite the Hussites in one religious body. In order to prevent their dissensions from becoming dangerous to the common cause, he kept the soldiers of all sects under his command, and undertook fierce invasions into Bavaria, Saxony and Brandenburg, which made the Hussite name a terror to all Germany. During these expeditions one hundred towns were destroyed, more than 1,500 villages burned, tens of thousands of the inhabitants slain, and such quantities of plunder collected that it was impossible to transport the whole of it to Bohemia. Frederick of Brandenburg and several other princes were compelled to pay heavy tributes to the Hussites: the Empire was thor-

oughly humiliated, the people weary of slaughter, yet the Pope refused even to call a Council for the discussion of the difficulty. . . . The German princes made a last and desperate effort: an army of 130,000 men, 40,000 of whom were cavalry, was brought together, under the command of Frederick of Brandenburg, while Albert of Austria was to support it by invading Bohemia from the south. Procopius and his dauntless Hussites met the Crusaders on the 14th of August, 1431, at a place called Thauss, and won another of their marvellous victories. The Imperial army was literally cut to pieces, 8,000 wagons, filled with provisions and munitions of war, and 150 cannons, were left upon the field. The Hussites marched northward to the Baltic, and eastward into Hungary, burning, slaying, and plundering as they went. Even the Pope now yielded, and the Hussites were invited to attend the Council at Basel, with the most solemn stipulations in regard to personal safety and a fair discussion of their demands. . . . In 1433, finally 300 Hussites, headed by Procopius, appeared in Basel. They demanded nothing more than the acceptance of the four articles upon which they had united in 1420; but after seven weeks of talk, during which the Council agreed upon nothing and promised nothing, they marched away, after stating that any further negotiation must be carried on in Prague. This course compelled the Council to act; an embassy was appointed, which proceeded to Prague, and on the 30th of November, the same year, concluded a treaty with the Hussites. The four demands were granted, but each with a condition attached which gave the Church a chance to regain its lost power. For this reason, the Taborites and 'Orphans' refused to accept the compact; the moderate party united with the nobles and undertook to suppress the former by force. A fierce internal war followed, but it was of short duration. In 1434, the Taborites were defeated [at Lipan, May 30], their fortified mountain taken, Procopius the Great and the Little were both slain, and the members of the sect dispersed. The Bohemian Reformation was never again dangerous to the Church of Rome."—B. Taylor, *History of Germany*, ch. 22.—See also TABORITES.

1434-1457.—Organization of the Utraquist national church.—Minority of Ladislaus Posthumus.—Regency of George Podiebrad.—Origin of the Unitas Fratrum.—"The battle of Lipan was a turning point in the history of the Hussites. It put Bohemia and Moravia into the hands of the Utraquists, and enabled them to carry out their plans unhindered. The man who was foremost in shaping events and who became more and more prominent, until he exercised a commanding influence, was John of Rokycana. . . . At the diet of 1435 he was unanimously elected archbishop. . . . Meantime Sigismund endeavored to regain his kingdom. The Diet made demands which were stringent and humiliating; but he pledged himself to fulfill them, and on the 5th of July, 1436, at a meeting held with great pomp and solemnity, in the market-place of Iglau, was formally acknowledged as King of Bohemia. On the same occasion, the Compactata were anew ratified and the Bohemians readmitted to the fellowship of the mother church. But scarcely had Sigismund reached his capital

when he began so serious a reaction in favor of Rome that Rokycana secretly left the city and retired to a castle near Pardubie (1437). The king's treachery was, however, cut short by the hand of death, on the 6th of December, of the same year, at Znaim, while on his way to Hungary; and his successor and son-in-law, Albert of Austria, followed him to the grave in 1439, in the midst of a campaign against the Turks. Bohemia was left without a ruler, for Albert had no children except a posthumous son [Ladislaus Posthumus. See HUNGARY: 1301-1442, and 1442-1458]. A time of anarchy began and various leagues arose, the most powerful of which stood under Baron Ptacek. . . . He. . . called an ecclesiastical convention at Kuttenberg (October 4th). This convention brought about far-reaching results. . . . Rokycana was acknowledged as Archbishop elect, the supreme direction of ecclesiastical affairs was committed into his hands, the priests promised him obedience, and 24 doctrinal and constitutional articles were adopted which laid the foundation of the Utraquist Church as the National Church of Bohemia. But the Taborites stood aloof. . . . At last a disputation was agreed upon," as the result of which the Taborites were condemned by the Diet. "They lost all prestige; their towns, with the exception of Tabor, passed out of their hands; their membership was scattered and a large part of it joined the National Church. In the following summer Ptacek died and George Podiebrad succeeded him as the head of the league. Although a young man of only 24 years, he displayed the sagacity of an experienced statesman and was distinguished by the virtues of a patriot. In 1448 a bold stroke made him master of Prague and constituted him practically Regent of all Bohemia; four years later his regency was formally acknowledged. He was a warm friend of Rokycana, whose consecration he endeavored to bring about." When it was found that Rome could not be reconciled, there were thoughts of cutting loose altogether from the Roman Catholic and uniting with the Greek church. "Negotiations were actually begun in 1452, but came to an abrupt close in the following year, in consequence of the fall of Constantinople. About the same time Ladislaus Posthumus, Albert's son, assumed the crown, Podiebrad remaining Regent. The latter continued the friend of Rokycana; the former, who was a Catholic, conceived a strong dislike to him. As soon as Rokycana had given up the hope of conciliating Rome, he began to preach, with great power and eloquence, against its corruptions." It was at this time that a movement arose among certain of his followers which resulted in the formation of the remarkable religious body which called itself Unitas Fratrum. The leading spirit in this movement was Rokycana's nephew, commonly called Gregory the Patriarch. The teaching and influence which shaped it was that of Peter Chelcicky. Gregory and his companions, wishing to dwell together, in the Christian unity of which they had formed an ideal in their minds, found a retreat at the secluded village of Kunwald, on the estate of George Podiebrad. "The name which they chose was 'Brethren of the Law of Christ'—'Fratres Legis Christi'; inasmuch, however, as this name gave rise to the idea that they were a new order of Monks, they changed it simply into 'Brethren.' When the organization of their Church had been completed, they assumed the additional title of 'Jednota Bratrska,' or Unitas Fratrum, that is, the Unity of the Brethren, which has remained the official and significant appellation of the Church to the present day. . . . It was often abbreviated

into 'The Unity.' Another name by which the Church called itself was 'The Bohemian Brethren.' It related to all the Brethren, whether they belonged to Bohemia, Moravia, Prussia or Poland. To call them The Bohemian-Moravian Brethren, or the Moravian Brethren, is historically incorrect. The name Moravian arose in the time of the Renewed Brethren's Church, because the men by whom it was renewed came from Moravia. . . . The organization of the *Unitas Fratrum* took place in the year 1457."—E. De Schweinitz, *History of the church known as Unitas Fratrum*, ch. 10-12.—See also AUSTRIA: 1438-1493.

1458-1471.—Accession of George Podiebrad to the throne.—His deposition and papal excommunication.—A crusade.—War with the emperor and Matthias of Hungary.—Death of Podiebrad and election of Ladislaus of Poland.—"George Podiebrad had scarcely ascended the throne [see HUNGARY: 1442-1458] before the Catholics, at the instigation of the pope, required him to fulfil his coronation oath, by expelling all heretics from the kingdom. He complied with their request, banished the Taborites, Picards, Adamites, and all other religious sects who did not profess the Catholic doctrines, and issued a decree that all his subjects should become members of the Catholic church, as communicants under one or both kinds. The Catholics, however, were not satisfied; considering the Calixtins as heretics, they entreated him to annul the compacts, or to obtain a new ratification of them from the new pope. To gratify their wishes he sent an embassy to Rome, requesting a confirmation of the compacts; but Pius, under the pretence that the compacts gave occasion to heresy, refused his ratification, and sent Fantino della Valle, as legate, to Prague, for the purpose of persuading the king to prohibit the administration of the communion under both kinds. In consequence of this legation the king called a diet, at which the legate and the bishops of Olmutz and Breslau were present. The ill success of the embassy to Rome having been announced, he said, 'I am astonished, and cannot divine the intentions of the pope. The compacts were the only means of terminating the dreadful commotions in Bohemia, and if they are annulled, the kingdom will again relapse into the former disorders. The council of Basle, which was composed of the most learned men in Europe, approved and granted them to the Bohemians, and pope Eugenius confirmed them. They contain no heresy, and are in all respects conformable to the doctrines of the holy church. I and my wife have followed them from our childhood, and I am determined to maintain them till my death.' . . . Fantino replying in a long and virulent invective, the king ordered him to quit the assembly, and imprisoned him in the castle of Podiebrad, allowing him no other sustenance except bread and water. The pope, irritated by this insult, annulled the compacts, in 1463, and fulminated a sentence of excommunication against the king, unless he appeared at Rome within a certain time to justify his conduct. This bull occasioned a great ferment among the Catholics; Podiebrad was induced to liberate the legate, and made an apology to the offended pontiff; while Frederic, grateful for the assistance which he had recently received from the king of Bohemia, when besieged by his brother Albert, interposed his mediation with the pope, and procured the suspension of the sentence of excommunication. Pius dying on the 14th of August, 1464, the new pope, Paul II., persecuted the king of Bohemia with increasing acrimony. He sent his legate to Breslau to excite commotions among the Catholics, en-

deavoured without effect to gain Casimir, king of Poland, by the offer of the Bohemian crown, and applied with the same ill success to the states of Germany. He at length overcame the gratitude of the emperor by threats and promises, and at the diet of Nuremberg in 1467, the proposal of his legate Fantino, to form a crusade against the heretic king of Bohemia, was supported by the imperial ambassadors. Although this proposal was rejected by the diet, the pope published a sentence of deposition against Podiebrad, and his emissaries were allowed to preach the crusade throughout Germany, and in every part of the Austrian territories. The conduct of Frederic drew from the king of Bohemia, in 1468, a violent invective against his ingratitude, and a formal declaration of war; he followed this declaration by an irruption into Austria, spreading devastation as far as

GEORGE PODIEBRAD
King of Bohemia

the Danube. Frederic in vain applied to the princes of the empire for assistance: and at length excited Matthias king of Hungary against his father-in-law, by offering to invest him with the kingdom of Bohemia. Matthias, forgetting his obligations to Podiebrad, to whom he owed his life and crown, was dazzled by the offer, and being assisted by bodies of German marauders, who had assumed the cross, invaded Bohemia. At the same time the intrigues of the pope exciting the Catholics to insurrection, the country again became a prey to the dreadful evils of a civil and religious war. The vigour and activity of George Podiebrad suppressed the internal commotions, and repelled the invasion of the Hungarians; an armistice was concluded, and the two kings, on the 4th of April, 1469, held an amicable conference at Sternberg, in Moravia, where they entered into a treaty of peace. But Matthias, influenced by the perfidious maxim, that no compact should be kept with heretics, was persuaded by the papal legate to resume hostilities. After overrunning Moravia and Silesia, he held a mock diet at Olmutz with some of the Catholic party, where he was chosen king of Bohemia, and solemnly crowned by the legate. . . . Podiebrad, in order to baffle the de-

signs both of the emperor and Matthias, summoned a diet at Prague, and proposed to the states, as his successor, Ladislaus, eldest son of Casimir, king of Poland, by Elizabeth, second daughter of the emperor Albert. The proposal was warmly approved by the nation, . . . as the Catholics were desirous of living under a prince of their own communion, and the Calixtines anxious to prevent the accession of Frederic or Matthias, both of whom were hostile to their doctrines. The states accordingly assented without hesitation, and Ladislaus was unanimously nominated successor to the throne. The indignation of Matthias was inflamed by his disappointment, and hostilities were continued with increasing fury. The two armies, conducted by their respective sovereigns, the ablest generals of the age, for some time kept each other in check; till at length both parties, wearied by the devastation of their respective countries, concluded a kind of armistice, on the 22nd of July, 1470, which put a period to hostilities. On the death of Podiebrad, in the ensuing year, Frederic again presenting himself as a candidate, was supported by still fewer adherents than on the former occasion; a more numerous party espoused the interests of Matthias; but the majority declaring for Ladislaus, he was re-elected, and proclaimed king. Frederic supported Ladislaus in preference to Matthias, and by fomenting the troubles in Hungary, as well as by his intrigues with the king of Poland, endeavoured not only to disappoint Matthias of the throne of Bohemia, but even to drive him from that of Hungary."—W. Coxe, *History of the house of Austria*, v. 1, ch. 18.

1471-1490.—War with Matthias of Hungary.—Surrender of Moravia and Silesia.—Election of King Ladislaus to the throne of Hungary.—See also AUSTRIA: 1437-1516; HUNGARY: 1471-1487.

1516-1576.—Accession of the house of Austria.—Reformation and its strength.—Alternating toleration and persecution.—In 1489 Vladislav "was elected to the throne of Hungary after the death of Mathias Corvinus. He died in 1516, and was succeeded on the throne of Bohemia and Hungary by his minor son, Louis, who perished in 1526 at the battle of Mohacz against the Turks [see HUNGARY: 1487-1526]. An equality of rights was maintained between the Hussites and the Roman Catholics during these two reigns. Louis left no children, and was succeeded on the throne of Hungary and Bohemia by Ferdinand of Austria [see also AUSTRIA: 1496-1526], brother of the Emperor Charles V., and married to the sister of Louis, a prince of a bigoted and despotic character. The doctrines of Luther had already found a speedy echo amongst the Calixtines under the preceding reign; and Protestantism gained so much ground under that of Ferdinand, that the Bohemians refused to take part in the war against the Protestant league of Smalkalden, and formed a union for the defence of the national and religious liberties, which were menaced by Ferdinand. The defeat of the Protestants at the battle of Muhlberg in 1547, by Charles V., which laid prostrate their cause in Germany, produced a severe reaction in Bohemia. Several leaders of the union were executed, others imprisoned or banished; the property of many nobles was confiscated, the towns were heavily fined, deprived of several privileges, and subjected to new taxes. These measures were carried into execution with the assistance of German, Spanish, and Hungarian soldiers, and legalized by an assembly known under the name of the Bloody Diet. . . . The Jesuits were also introduced during that reign into Bohemia. The privileges of the Calixtine, or, as it was officially called, the

Utraquist Church, were not abolished; and Ferdinand, who had succeeded to the imperial crown after the abdication of his brother Charles V., softened, during the latter years of his reign, his harsh and despotic character. . . . He died in 1564, sincerely regretting, it is said, the acts of oppression which he had committed against his Bohemian subjects. He was succeeded by his son, the Emperor Maximilian II., a man of noble character and tolerant disposition, which led to the belief that he himself inclined towards the doctrines of the Reformation. He died in 1576, leaving a name venerated by all parties. . . . Maximilian's son, the Emperor Rudolph, was educated at the court of his cousin, Philip II. of Spain, and could not be but adverse to Protestantism, which had, however, become too strong, not only in Bohemia, but also in Austria proper, to be easily suppressed; but several indirect means were adopted, in order gradually to effect this object."—V. Krasinski, *Lectures on the religious history of the Slavonic nations*, lecture 2.—See also AUSTRIA: Introduction; and Map showing Hapsburg possessions; HUNGARY: 1567-1604.—In spite of the energies expended by the Hapsburg monarchs to crush the Reformation in Bohemia, and the ultimate loss of Bohemian independence, Protestantism grew steadily from the time of Ferdinand I to Rudolf. During this period Prague reached a high state of culture and the university became one of the greatest seats of learning in the Empire. Rudolf made the Bohemian capital his favorite place of residence and the center of his vast dominions. He contributed extensively to its embellishment, and the decades following his reign saw the golden age of Czech literature.

1611-1618.—Letter of Majesty, or royal charter, and Matthias's violation of it.—Ferdinand of Styria forced upon the nation as king by hereditary right.—Throwing of the royal counsellors from the window.—Beginning of the Thirty Years' War.—In 1611, the emperor Rodolph was forced to surrender the crown of Bohemia to his brother Matthias. The next year he died, and Matthias succeeded him as emperor also. "The tranquillity which Rodolph II.'s Letter of Majesty [see GERMANY: 1608-1618] had established in Bohemia lasted for some time, under the administration of Matthias, till the nomination of a new heir to this kingdom in the person of Ferdinand of Gratz [Styria]. This prince, whom we shall afterwards become better acquainted with under the title of Ferdinand II., Emperor of Germany, . . . was . . . looked upon by the Roman Catholic part of Bohemia as the future pillar of their church. The declining health of the Emperor brought on this hour rapidly; and, relying on so powerful a supporter, the Bohemian Papists began to treat the Protestants with little moderation. The Protestant vassals of Roman Catholic nobles, in particular, experienced the harshest treatment. At length several of the former were incautious enough to speak somewhat loudly of their hopes, and by threatening hints to awaken among the Protestants a suspicion of their future sovereign. But this mistrust would never have broken out into actual violence, had the Roman Catholics confined themselves to general expressions, and not by attacks on individuals furnished the discontent of the people with enterprising leaders. Henry Matthias, Count Thurn, not a native of Bohemia, but proprietor of some estates in that kingdom, had, by his zeal for the Protestant cause, and an enthusiastic attachment to his newly adopted country, gained the entire confidence of the Utraquists, which opened him the way to the most important

posts. . . He had already taken an active part in the troubles under Rodolph's administration; and the Letter of Majesty which the States had extorted from that Emperor, was chiefly to be laid to his merit. The court had intrusted to him, as burgrave or castellan of Calstein, the custody of the Bohemian crown, and of the national charter. But the nation had placed in his hands something far more important—itself—with the office of defender or protector of the faith. The aristocracy by which the Emperor was ruled, imprudently deprived him of this harmless guardianship of the dead, to leave him his full influence over the living. They took from him his office of burgrave, or constable of the castle, which had rendered him dependent on the court, thereby opening his eyes to the importance of the other which remained, and wounded his vanity, which yet was the thing that made his ambition harmless. From this moment he was actuated solely by a desire of revenge; and the opportunity of gratifying it was not long wanting. In the Royal Letter which the Bohemians had extorted from Rodolph II., as well as in the German religious treaty, one material article remained undetermined. All the privileges granted by the latter to the Protestants, were conceived in favour of the Estates or governing bodies, not of the subjects; for only to those of ecclesiastical states had a toleration, and that precarious, been conceded. The Bohemian Letter of Majesty, in the same manner, spoke only of the Estates and the imperial towns, the magistrates of which had contrived to obtain equal privileges with the former. These alone were free to erect churches and schools, and openly to celebrate their Protestant worship: in all other towns, it was left entirely to the government to which they belonged, to determine the religion of the inhabitants. The Estates of the Empire had availed themselves of this privilege in its fullest extent; the secular indeed without opposition; while the ecclesiastical, in whose case the declaration of Ferdinand had limited this privilege, disputed, not without reason, the validity of that limitation. What was a disputed point in the religious treaty, was left still more doubtful in the Letter of Majesty. . . . In the little town of Klostergrab, subject to the Archbishop of Prague; and in Braunau, which belonged to the abbot of that monastery, churches were founded by the Protestants, and completed notwithstanding the opposition of their superiors, and the disapprobation of the Emperor. . . . By the Emperor's orders, the church at Klostergrab was pulled down; that at Braunau forcibly shut up, and the most turbulent of the citizens thrown into prison. A general commotion among the Protestants was the consequence of this measure; a loud outcry was everywhere raised at this violation of the Letter of Majesty; and Count Thurn, animated by revenge, and particularly called upon by his office of defender, showed himself not a little busy in inflaming the minds of the people. At his instigation deputies were summoned to Prague from every circle in the empire, to concert the necessary measures against the common danger. It was resolved to petition the Emperor to press for the liberation of the prisoners. The answer of the Emperor, already offensive to the states, from its being addressed, not to them, but to his viceroy, denounced their conduct as illegal and rebellious, justified what had been done at Klostergrab and Braunau as the result of an imperial mandate, and contained some passages that might be construed into threats. Count Thurn did not fail to augment the unfavourable impression which this imperial edict made upon the assem-

bled Estates. . . . He held it . . . advisable first to direct their indignation against the Emperor's counsellors; and for that purpose circulated a report, that the imperial proclamation had been drawn up by the government at Prague and only signed in Vienna. Among the imperial delegates, the chief objects of the popular hatred, were the President of the Chamber, Slawata, and Baron Martinitz, who had been elected in place of Count Thurn, Burgrave of Calstein. . . . Against two characters so unpopular the public indignation was easily excited, and they were marked out for a sacrifice to the general indignation. On the 23rd of May, 1618, the deputies appeared armed, and in great numbers, at the royal palace, and forced their way into the hall where the Commissioners Sternberg, Martinitz, Lobkowitz, and Slawata were assembled. In a threatening tone they demanded to know from each of them, whether he had taken any part, or had consented to, the imperial proclamation. Sternberg received them with composure, Martinitz and Slawata with defiance. This decided their fate; Sternberg and Lobkowitz, less hated, and more feared, were led by the arm out of the room; Martinitz and Slawata were seized, dragged to a window, and precipitated from a height of 80 feet, into the castle trench. Their creature, the secretary Fabricius, was thrown after them. This singular mode of execution naturally excited the surprise of civilized nations. The Bohemians justified it as a national custom, and saw nothing remarkable in the whole affair, excepting that any one should have got up again safe and sound after such a fall. A dunghill, on which the imperial commissioners chanced to be deposited, had saved them from injury. [The incident of the flinging of the obnoxious ministers from the window is often referred to as 'the defenestration at Prague.'] . . . By this brutal act of self-redress, no room was left for irresolution or repentance. . . . As the deed itself could not be undone, nothing was left but to disarm the hand of punishment. Thirty directors were appointed to organize a regular insurrection. They seized upon all the offices of state, and all the imperial revenues, took into their own service the royal functionaries and the soldiers, and summoned the whole Bohemian nation to avenge the common cause."—F. Schiller, *History of the Thirty Years' War*, bk. 1, pp. 51-55.

1618-1620.—Rebellion.—Deposition of the newly elected emperor Ferdinand in Bohemia.—Coronation of Frederick, the palatine elector.—Suppression of the revolt.—Annulling of the royal charter.—During the insurrection the Bohemians deposed the newly elected emperor Ferdinand from the kingship of their country and elected to the throne of Bohemia Frederick, the palatine elector. By the help of the duke of Bavaria, Ferdinand forced the Bohemians into submission. Abandoned by the Evangelical Union, on whose support they relied, Frederick was defeated in the battle of the White Mountain before Prague, and fled. The leaders of the rebellion were executed, and the royal charter of Bohemia declared forfeited.—See also GERMANY: 1618-1620; 1620; and HUNGARY: 1606-1660.

1621-1623.—Revenge of Ferdinand.—Union with Baden and Brunswick against Austria. See GERMANY: 1621-1623.

1621-1648.—Reign of terror.—Death, banishment, confiscation, dragoonades.—Country a desert.—Protestantism crushed, but not slain.—"In June, 1621, a fearful reign of terror began

in Bohemia, with the execution of 27 of the most distinguished heretics. For years the unhappy people bled under it; thousands were banished, and yet Protestantism was not fully exterminated. The charter was cut into shreds by the Emperor himself; there could be no forbearance towards 'such acknowledged rebels.' As a matter of course, the Lutheran preaching was forbidden under the heaviest penalties; heretical works, Bibles especially, were taken away in heaps. Jesuit colleges, churches, and schools came into power; but this was not all. A large number of distinguished Protestant families were deprived of their property, and, as if that were not enough, it was decreed that no non-Catholic could be a citizen, nor carry on a trade, enter into a marriage, nor make a will; any one who harboured a Protestant preacher forfeited his property; whoever permitted Protestant instruction to be given was to be fined, and whipped out of town; the Protestant poor who were not converted were to be driven out of the hospitals, and to be replaced by Catholic poor; he who gave free expression to his opinions about religion was to be executed. In 1624 an order was issued to all preachers and teachers to leave the country within eight days under pain of death; and finally, it was ordained that whoever had not become Catholic by Easter, 1626, must emigrate. . . . But the real conversions were few; thousands quietly remained true to the faith; other thousands wandered as beggars into foreign lands, more than 30,000 Bohemian families, and among them 500 belonging to the aristocracy, went into banishment. Exiled Bohemians were to be found in every country of Europe, and were not wanting in any of the armies that fought against Austria. Those who could not or would not emigrate, held to their faith in secret. Against them dragoonades were employed. Detachments of soldiers were sent into the various districts to torment the heretics till they were converted. The 'Converters' (Seligmacher) went thus throughout all Bohemia, plundering and murdering. . . . No succour reached the unfortunate people; but neither did the victors attain their end. Protestantism and the Hussite memories could not be slain, and only outward submission was extorted. . . . A respectable Protestant party exists to this day in Bohemia and Moravia. But a desert was created; the land was crushed for a generation. Before the war Bohemia had 4,000,000 inhabitants, and in 1648 there were but 700,000 or 800,000. These figures appear preposterous, but they are certified by Bohemian historians. In some parts of the country the population has not attained the standard of 1620 to this day."—L. Häusser, *Period of the Reformation*, ch. 32.

1627-1629.—Thirty Years' War.—Campaign of Wallenstein. See GERMANY: 1627-1629.

1631-1757.—Temporary occupation by the Saxons and siege of Prague in the Thirty Years' War.—Brief conquest by the French.—Prussian invasion and defeat in the Seven Years' War.—During the Thirty Years' War Bohemia became temporarily occupied by the Saxons (see GERMANY: 1631-1632), and in the last campaign of the war Prague was unsuccessfully besieged by the Swedes. (See GERMANY: 1640-1645; 1646-1648.) In 1741, Bohemia was again occupied by the French, assisted by the Bavarians and Saxons. (See AUSTRIA: 1741: August-November; October.) They were, however, expelled by the

Austrians, and Maria Theresa was crowned at Prague, in 1742 (see AUSTRIA: 1742: June-December). The invasions of the Prussians in 1742 (see AUSTRIA: 1743-1744), and during the Seven Years' War in 1757 resulted in their defeat. [See GERMANY: 1757 (April-June).] During the reigns of Maria Theresa and Joseph II the process of Germanization was vigorously carried on. In 1749 Bohemian law courts were abolished and an Austrian chancellor was appointed to control the administration of Bohemia. The burgrave of Prague, the chief representative of that city, was ordered to accept his instructions from Vienna. Joseph II refused to be crowned at Prague, limited the jurisdiction of the diet and introduced German into the upper schools. The struggle of the Bohemians and Germans over the language question was a factor of great importance in Bohemian and Austrian history. (See AUSTRIA: 1893-1900, and below, 1848-1897.)

1780-1848.—Unrest under Joseph II.—Partial relief given by Leopold.—Growth of nationalistic sentiment after the Napoleonic wars.—Between 1780 and 1790, Joseph II, son and successor of Maria Theresa, brought into effect various centralizing and ostensibly reforming measures which stirred the Bohemians to a state of rebellious unrest (see HUNGARY: 1780-1790). Though religious toleration was granted, the introduction of German into the higher schools of Bohemia aroused much Czech opposition. In 1790, Leopold, Joseph's successor, suspended some of the reforming edicts and relieved the Hapsburg pressure on Bohemia. During the Napoleonic wars, little occurred to stimulate Bohemian nationalism, but after the Congress of Vienna, in 1815, the prospect of continued European peace revived Bohemian aspirations, the revival taking at first a literary form.—See also GERMANY: Map after the Congress of Vienna.

1812.—Extent of dominions in Europe. See EUROPE: Modern: Map of central Europe in 1812.

1848-1897.—Demands for recognition of the Czech language.—Insurrection.—Austrian language decrees.—In 1848, influenced by the February revolution in Paris, the Bohemians increased their attempts to have the Czech language recognized by Vienna as equal to German (see AUSTRIA: 1848-1849). A Pan-Slavic congress met in Prague in June, 1848, but accomplished little. As it was closing, street riots broke out against General Windischgrätz, Austrian commander of the troops at Prague; he bombarded the city and the revolutionary movement was crushed. By the end of the following year reaction had a firm hold on Bohemia and the rest of the Hapsburg territory. In 1860 a diet with limited powers was promised, but in the next few years the central government at Vienna greatly extended its own powers. The Austro-Prussian War, in 1866, diminished German influence in Bohemia. During the Austrian premiership of Count Eduard Taaffe (1870-1893), the Czechs were given greater consideration in the Austrian empire; the Bohemians made several political and educational gains. In 1897, Austria attempted to solve the language question by a compromise. Its language decrees were to divide the country into three districts, one with German, the other with Czech, and the third with both tongues as the official language. This measure, however, failed because of the opposition of the Germans in the empire. For the language decrees of Count Badeni, Austrian premier, and the situation of Bohemia in

the Austro-Hungarian empire, see also AUSTRIA: 1893-1900.

BOHEMIAN LITERATURE:—Its significance.—Literary decadence under Hapsburg rule.—Literary revival in the modern period.—Dobrovsky, Jungmann, Kollár, Safarik, Palacky.—General characteristics.—“In the matter of literature, Bohemia occupies a place of distinction and priority. The development of the vulgar tongue took place at a comparatively early period. Some of the most ancient of the poetic documents date back to very early times. Indeed, the prose literature of Bohemia, after the Greek and Latin, is one of the oldest in Europe. The three centuries from the time of Charles IV. to the outbreak of the Thirty Years' War cover the early brilliant period in literature. Two centuries of intellectual barrenness followed the fatal battle of the White Mountain and the usurpation of the Bohemian Crown by the House of Hapsburg. . . . Not only was there a complete arrest in the remarkable literary movement that intervened between the Middle Ages and the beginning of the Thirty Years' War, but most of the literary treasures of the previous centuries were destroyed by the royal edicts of the reactionary Hapsburg rulers. . . . Many works were carried by the Bohemian exiles to Saxony, Slavakland, and other countries, and preserved; and these, together with others that escaped the fury of pillaging soldiers during the Thirty Years' War, constitute the fragments out of which the literary history before the seventeenth century must be constructed. . . . The modern Bohemian literary movement dates back only one hundred years. Joseph Dobrovsky (1753-1829), the patriarch of Slavic philology, initiated the literary movement at the beginning of the nineteenth century. The few other Bohemian scholars of the day—Jungmann, Palacky, Kollár, Safarik, and the incomparable publicist Charles Havlicek—lent their services to the rehabilitation of a national language that was long supposed to be dead. The letters of Jungmann give us our most intimate accounts of the struggles of himself and his co-patriots during the early day of the modern Bohemian literary renaissance.”—T. Capek, *Bohemia under Hapsburg misrule*, pp. 153-156.—“Jan Kollár

(1793-1852), a scholar and poet, was the first to seek to inculcate in the Slavs the sentiment of Pan-Slavism. He compared the Slavonic culture to dawn; the German culture, to day; the English, to midday; the French, to afternoon; and the Spanish, to night. His collection of poems ‘Daughter of the Slavs’ (Slávy Dcera) inspired the Slavonic race with great hope and confidence. It is regarded as the gospel of Pan-Slavism. Another Slovak who played a great rôle in the revival of Bohemia was Paul Josef Safarik (1795-1861), author of ‘Slavic Antiquities’ (*Starozitnosti Slovanské*), Slavic Ethnography (*Slovansky Národopis*), and numerous philological works. The third member of the triumvirate of the Bohemian renaissance is Frantisek Palacky (1798-1876), author of ‘History of the Bohemian people’ (*Dejiny Narodu Ceskeho*), a work based on wide research into original sources. He is the greatest of the Bohemian historians, and the Czechs call him ‘Otec Naroda’ (Father of the people).”—*Geographical Review*, July, 1919, p. 34.—“During the seventeenth and eighteenth centuries the Austrian Government had penalized the publication of books in the Bohemian language and the teaching of the vernacular in the schools of the kingdom. But in spite of prohibitions of the Hapsburg rulers, the vernacular continued to be spoken in country districts. This fact facilitated the extraordinary progress made in the fields of poetry, drama, fiction, criticism, and historical works during the last fourscore years. The satirical writings of Jan Neruda, the historical dramas of Alois Jirásek, the rich lyrical poetry of Jaroslav Vrchlicky (Frida), the bold imaginative compositions of Julius Zeyer, the modernist poetry of J. S. Machar, the great national epics of Svatopluk Cech, the historical works of Francis Palacky, and the political and sociological writings of Thomas G. Masaryk have made notable contributions to the literary history of modern Bohemia. . . . From the humble beginnings in the first part of the nineteenth century Bohemian literature has developed in a remarkable manner, borrowing what is best in all literatures, and to a considerable extent falling under the influence of the great-Russian writers. It is eminently cosmopolitan in compass and subject-matter, but at the same time has preserved many national characteristics. . . . Its poetry is especially attractive and varied, and the poets have reveled in the discussion of those social problems which elsewhere have been relegated to the field of prose.”—T. Capek, *Bohemia under Hapsburg misrule*, pp. 156-174.

Rôle in Slavic philology.—Dobrovsky.—“Bohemia is the keystone in the Slavic arch. Without it the proto-history of the Eastern nations in Europe has no meaning and no coherency. Unfortunately even the most profound scholars have as yet overlooked the important rôle which Bohemia has played in forwarding that Carolingian civilization which the Visigoths, expelled by the Arabs from Spain and settled by Charlemagne in southern and central France, caused to radiate to the whole Germanic world and, through Bavaria, grafted on the neighboring Cechs. It is well known that the first Christian activity in Bohemia proceeded from German missionaries, but it is only a recent discovery [relating to] . . . the origin of the so-called Gothic Bible which has revealed to me the extraordinary extent of the Visigothic literary and cultural influences upon the Bavarians and the Cechs. In the light of this discovery, which I am now subjecting to a close scrutiny, it appears that a tremendous proportion of the Slavic vocabularies, from Russia to Dalmatia, from Po-

land to Bulgaria, has been borrowed from the religious works of the Bohemians, of the early period, now entirely lost to science. Bohemia was the intellectual mistress of what may be called the proto-Slavic world. Without Bohemia, the greater part of the Slavic vocabularies remains irreducible as regards origins and distribution. . . . Again it was a Bohemian who, at the end of the eighteenth and in the beginning of the nineteenth century, became the founder of Slavic philology and the new Slavic literary movements throughout Europe. Jagić begins his stupendous "Encyclopedia of Slavic philology" with a definition of Slavic philology, after which he says: 'Only at the end of the eighteenth century did the whole volume of Slavic philology, as an independent science, assume shape. The chief desert [credit] in this matter belongs to Joseph Dobrovský. He laid the foundation for a scientific grammar of the Slavic languages, centering it on its most ancient type, the Church-Slavic. He was the first to attempt a determination of the degree of relationship between the separate Slavic dialects by means of a scientific classification. It was he who introduced into the circle of scientific interests the questions from the literary and cultural history of the Slavs, for example, the question of the educational activity of Cyril and Methodius, and finally also from social history, such as archeological and ethnographical questions. . . . The critical spirit of Dobrovský with his broad views has created Slavic philology. He is the father of this science.'—T. Chapck, *Bohemia under Hapsburg misrule*, pp. 161-167.—See also PAN-SLAVISM.

BOIANS, or Boii.—Some passages in the earlier history and movements of the powerful Gallic tribe known as the Boii will be found touched upon under **ROME**: 390-347 B.C., and 205-101 B.C., in accounts given of the destruction of Rome by the Gauls, and of the subsequent wars of the Romans with the Cisalpine Gauls. After the final conquest of the Boians in Gallia Cisalpina, early in the second century, B.C., the Romans seem to have expelled them, wholly or partly, from that country, forcing them to cross the Alps. They afterwards occupied a region embraced in modern Bavaria and Bohemia, both of which countries are thought to have derived their names from these Boian people. Some part of the nation, however, associated itself with the Helvetii and joined in the migration which Caesar arrested. He settled these Boians in Gaul, within the Eduan territory, between the Loire and the Allier. Their capital city was Gergovia, which was also the name of a city of the Arverni. The Gergovia of the Boians is conjectured to have been modern Moulins. Their territory was the modern Bourbonnais, which probably derived its name from them. Three important names, therefore, in European geography and history, viz.—Gaul, Bavaria and Bohemia, are traced to the Gallic nation of the Boii.—Tacitus, *Germany*, trans. by Church and Brodribb, notes.—See also **BAVARIA**; **BOHEMIA**; Derivation of

name; **GERMANY**: B. C. 8—A. D. 11; **ROME**: Republic: B. C. 295-191.

BOKHARA (ancient Transoxania), a khanate in central Asia, also a city, capital. (See **ASIA**: Map). "Taken literally, the name [Transoxania] is a translation of the Arabic *Mavera-unnehr* (that which lies beyond or across the river), and it might therefore be supposed that Transoxania meant the country lying beyond or on the right shore of the Oxus. But this is not strictly speaking the case. . . . From the period of the Samanides down to modern times, the districts of Talkan, Tokharistan and Zem, although lying partly or entirely on the left bank of the Oxus, have been looked on as integral portions of Bokhara. Our historical researches seem to prove that this arrangement dates from the Samanides, who were themselves originally natives of that part of Khorassan. . . . It is almost impossible in dealing geographically with Transoxania to assign definitely an accurate frontier. We can and will therefore comprehend in our definition of Transoxania solely Bokhara, or the khanate of Bokhara; for although it has only been known by the latter name since

the time of Sheibani and of the Ozbegs [1500], the shores of the Zerefshan and the tract of country stretching southwards to the Oxus and northwards to the desert of Kizil Kum, represent the only parts of the territory which have remained uninterruptedly portions of the original undivided state of Transoxania from the earliest historical times. . . . Bokhara, the capital from the time of the Samanides, and at the date of the very earliest geographical reports concerning Transoxania is said, during its prosperity, to have been the largest city of the Islamite world. . . . Bokhara was not, however, merely a luxurious city, distinguished by great natural advantages; it was also the principal emporium for the trade between China and Western Asia; in addition to the vast warehouses for silks, brocades, and cotton stuffs, for the finest carpets, and all kinds of gold and silversmiths' work, it boasted of a great money-market, being in fact the Exchange of all the population of Eastern and Western Asia. . . . Sogd . . . comprised the mountainous part of Transoxania (which may be described as the extreme western spurs of the Thien-Shan). . . . The capital was Samarkand, undoubtedly the Maracanda of the Greeks, which they specify as the capital of Sogdia. The city has, throughout the history of Transoxania been the rival of Bokhara. Before the time of the Samanides, Samarkand was the largest city beyond the Oxus, and only began to decline from its former importance when Ismail chose Bokhara for his own residence. Under the Khahrezmians it is said to have raised itself again, and become much larger than its rival, and under Timour to have reached the culminating point of its prosperity."—A. Vambéry, *History of Bokhara, introduction*.

1219.—Destruction of the city by Jenghiz Khan.—Bokhara was taken by Jenghiz Khan in the summer of 1219. "It was then a very large and magnificent city. Its name, according to the historian Alai-ud-din, is derived from Bokhar, which in the Magian language means the Centre of Science." The city surrendered after a siege of a few days. Jenghiz Khan, on entering the town, saw the great mosque and asked if it was the sultan's palace. "Being told it was the house of God, he dismounted, climbed the steps, and said in a loud voice to his followers, 'The hay is cut, give your horses fodder.' They easily understood this cynical invitation to plunder. . . . The inhabitants were ordered to leave the town in a body, with only their clothes, so that it might be more easily pillaged, after which the spoil was divided among the victors. 'It was a fearful day,' says Ibn al Ithir; 'one only heard the sobs and weeping of men, women and children, who were separated forever; women were ravished, while men died rather than survive the dishonour of their wives and daughters.' The Mongols ended by setting fire to all the wooden portion of the town, and only the great mosque and certain palaces which were built of brick remained standing."

H. H. Howorth, *History of the Mongols, v. 1, ch. 3*.—"The flourishing city on the Zerefshan had become a heap of rubbish, but the garrison in the citadel, commanded by Kok Khan, continued to hold out with a bravery which deserves our admiration. The Mongols used every imaginable effort to reduce this last refuge of the enemy; the Bokhariots themselves were forced on to the scaling-ladders; but all in vain, and it was not until the moat had been literally choked with corpses of men and animals that the stronghold was taken and its brave defenders put to death. The peaceable portion of the population was also made to suffer for this heroic resistance. More than 30,000 men were executed, and the remainder were, with the exception of the very old people among them, reduced to slavery, without any distinction of rank whatever; and thus the inhabitants of Bokhara, lately so celebrated for their learning, their love of art, and their general refinement, were brought down to a dead level of misery and degradation and scattered to all quarters."—A. Vambéry, *History of Bokhara, ch. 8*. See MONGOLS: 1153-1227.

1868.—Subjection to Russia. See RUSSIA: 1859-1881.

1917.—Massacre by the Russian Red Army. See TURKESAN: 1917-1920.

BOKLAND. See BOCLAND; FOLCLAND.

BOLAK, an attempt at an international language, named for its originator, Léon Bollak. See INTERNATIONAL LANGUAGE.

BOLERIUM, Roman name for Land's End, England. See BELERION; BRITAIN: Celtic tribes.

BOLESLAUS I, king of Poland, 1000-1025.

Boleslaus II, king of Poland, 1058-1083.

Boleslaus III, duke of Poland, 1102-1138. See POLAND: Beginnings of national existence.

Boleslaus IV, duke of Poland, 1146-1173.

Boleslaus V, king of Poland, 1227-1279.

BOLEYN, Anne (1507-1536), second wife of Henry VIII of England, and mother of Queen Elizabeth. She was condemned to death on the charge of adultery, and beheaded. See ENGLAND: 1527-1534, 1536-1543.

BOLINGBROKE, Henry St. John, 1st Viscount (1678-1751), English statesman and writer. He held cabinet office as a Tory, and opposed the coming of the house of Hanover; was a friend of Swift and Pope. See ENGLAND: 1710-1712, 1714-1721; also DLISM: English deism.

BOLÍVAR, Simón (1783-1830), hero of South American independence. Took part in the insurrection at Caracas (1810); fought several successful engagements under General Miranda; proclaimed the abolition of slavery and for two years fought against the Spanish General Morillo. His victories culminated in the capture of Angostura (1817). At the congress opened at Angostura (February, 1819) Bolívar was chosen president of Colombia and given almost supreme power (see BOGOTÁ: 1816-1819; COLOMBIA: 1810-1830, 1819-1830, 1826). In 1819 Bolívar crossed the Andes, descended upon the royalists of New Granada and destroyed their forces. Seconded by Sucre, he delivered Ecuador in the battle of Pichincha, and Peru in the battles of Junín and Ayacucho (1821-1824). Thus he sealed the independence of South America. Chosen dictator of Peru, he succeeded in expelling the Spaniards by 1825 (see PERU: 1820-1826; 1825-1826; 1826-1876). In 1826 Bolívar drafted a constitution for Bolívar which was adopted. At this time he was president of Colombia, dictator of Peru and perpetual protector of Bolivia (see LATIN AMERICA: 1778-1824). Scarcely

were the Spaniards expelled when factional strife and political intrigue began to undermine his work. He died without realizing his dream of uniting all Spanish America into one vast federation.—See also BOLIVIA: 1809-1825; LATIN AMERICA: 1822-1830; 1823; and VENEZUELA: 1810-1820, 1829.

BOLIVIA: Geographic description.—Bolivia, named in honor of Simon Bolívar, the hero of South American independence, is the third largest of the South American republics and is one of the two countries of the American continents which possess no sea coast. Bolivia is bounded by Chile, Peru, Brazil, Argentina and Paraguay (LATIN AMERICA: Map). The chief physical characteristics are an immense interior plateau practically at an elevation of 12,000 feet, on which are the wonderful mineral resources of the country, and the larger portion of the population; and the great slopes eastward towards the Amazon and La Plata watersheds very scarcely populated but capable of immense agricultural production. Bolivia lies wholly within the tropics, but the ruggedness of its surface from the high table-lands to the far eastern jungle provides a great variety of temperatures. Rapid variations are striking in La Paz and Potosí, which are about 12,500 and 14,000 feet, respectively, above sea level: the midday sun is quite warm and often hot; with the coming of night the air quickly cools and wraps are comfortable from December to May. "Bolivia, whose present area is 530,000 square miles, [and whose population in 1921 was 2,889,970] forms a parallelogram extending over 13 degrees from north to south and a little over 10 degrees from east to west. At the moment of the Declaration of Independence the country had an area of nearly 1,155,000 square miles, but as a result of treaties and conventions concluded with Brazil (in 1867 and 1903), the Argentine (in 1889), Chile (in 1866-74 and 1904), and Peru (in 1909) its territory has been reduced to its present extent. By the treaty of 1867 alone Bolivia ceded to Brazil no less than 50,138 square miles, and 5,680 square miles to Chile in 1866 and 1874, without speaking of the final cession of the coast, concluded in 1904, and that of the territory of Acre to Brazil in 1903."—P. Walle, *Bolivia*, p. 68.—See also ACRÉ DISPUTES; LATIN AMERICA: Map.

Education.—"Public education has long been neglected in Bolivia, and is still far from being as general as it is in the neighbouring republics, notably in Chile and the Argentine. Until a recent period Bolivia was among those countries which expended least upon public education. During recent Ministries—those of Saracho, Bustamante, Saavedra, etc.—all branches of education have received a powerful impulse which has placed the Republic in a better situation, but there is still much to be done. Public instruction is official, free, or private; primary, secondary, superior, or professional. Primary education is gratuitous and in theory compulsory. There are at present [written in 1914] 166 official primary schools and 737 municipal schools, with about 1,400 teachers and 51,000 pupils. In Bolivia the authorities have [confided] . . . primary education to the municipalities, which in most cases are ill-prepared for the task, or incapable, or ignorant. The lack of scholastic buildings is very perceptible in the majority of the departments, where appropriate but modest premises, belonging directly to the State, are badly needed. In this particular secondary education is more fortunate, having proper buildings set apart for it. Like primary education, it

is gratuitous. It is given in eight colleges or national lycées, five free educational establishments, four seminaries, and one religious college, and all together number some 1,800 pupils. The secondary schools are available only for pupils at least eleven years of age who have followed the elementary and middle classes of the primary schools."—P. Walle, *Bolivia*, pp. 91-92. In 1919, about 60,000 pupils attended primary, secondary and normal schools.—See also UNIVERSITIES AND COLLEGES: 1551-1912.

Aboriginal inhabitants.—"With the Toromonos tribe, who occupied, as Orbigny tells us, a district of from 11° to 13° of South latitude, it was an established rule for every man to build his house, with his own hands alone, and if he did otherwise he lost the title of man, as well as became the laughing-stock of his fellow citizens. The only clothing worn by these people was a turban on the head, composed of feathers, the rest of the body being perfectly naked; whilst the women used a garment, manufactured out of cotton, that only partially covered their persons. . . . The ornament in which the soft sex took most pride was a necklace made of the teeth of enemies, killed by their husbands in battle. Amongst the Moxos polygamy was tolerated, and woman's infidelity severely punished. . . . The Moxos cultivated the land with ploughs, and other implements of agriculture, made of wood. They fabricated canoes, fought and fished with bows and arrows. In the province of the Moxos lived also a tribe called Itonomos, who, besides these last named instruments of war, used two-edged wooden scimitars. . . . The Canichanas, who lived near Machupo, between 13° and 14° S. lat. and 67° to 68° W. long., are reputed by M. d'Orbigny as the bravest of the Bolivian Indians. They are accredited to have been cannibals. . . . Where Jujuy—the most northern province of the Argentine Republic—joins Bolivia, we have in the present day the Mataguaya and Cambas Indians. The latter are represented to me by Dr. Matienzo, of Rosario, as intelligent and devoted to agricultural labor. They have fixed *tolderias* [villages], the houses of which are clean and neat. Each town is commanded by a capitán, whose sovereignty is hereditary to his male descendants only."—T. J. Hutchinson, *Parana*, ch. 4.—See also ANDESANS; RACE PROBLEMS: Previous to 1000; TUPI.

To 1533.—In empire of the Incas. See PERU: EMPIRE OF THE INCAS.

1524-1528.—Discovery by the Spaniards. See AMERICA: 1524-1528.

1528-1533.—Spanish conquest by Pizarro. See PERU: 1528-1531; 1531-1533.

1533-1809.—Spanish domination.—At the time of the Spanish conquest, Bolivia, under the name of Audiencia of Charcas, constituted part of the vicerealty of Peru. After 1776 it was annexed to the government of La Plata, but was still known as Upper Peru. "The Spanish domination was perpetuated under ten monarchs, from Charles V to Ferdinand VII (1810). It was a long and terrible oppression; the native population was decimated by ill-treatment and forced labour in the mines; the exploitation of the mines was the only industry which the Spanish were willing to promote; and the number of natives who must have perished during the Colonial period to satisfy the cupidity of the conquerors and the metropolitan State is estimated at eight millions. The influence of the Spanish colonial policy, tyrannical and exclusive as it was, and inspired by the narrowest egoism, was here, as everywhere, as disastrous to the general progress of the country as to the individual interests of the creole or half-breed inhabitants. All favours were reserved for Span-

iards, who had been sent out from the mother-country to profit by some tax, monopoly, or privilege; and as early as the eighteenth century history begins to record acts of rebellion against the metropolitan authorities. In 1780 the natives, terribly oppressed, rose and began a war of extermination against the Spaniards, under the leadership of Tupac-Amaru II, a descendant of the Incas; a war which was terminated by the barbarous execution of the chief and his family. But it was not until 1809 that a general movement of the populations of Upper Peru to conquer their independence was inaugurated."—P. Walle, *Bolivia*, pp. 66, 67.—See also PERU: 1550-1816.

1559.—Establishment of the *audiencia* of Charcas. See *AUDIENCIAS*; and *CHARCAS, LAS*.

1809-1825.—War of Independence.—"For more than fifteen years the country was the theatre of a desperate and bloody war; it ended only in 1825, after the battle of Tumusla, when the armies which had been recruited in Colombia, under the command of Bolivar, routed the Spanish army at Junin. The independence of Bolivia dates from the battle of Ayacucho, which was won, toward the end of the year 1824, by General Sucre, Bolivar's lieutenant, and that of Tumusla, won in April, 1825. It was in gratitude to the liberator of a great part of South America that the Republic took the name of Bolivar, later changed to Bolivia, and for similar reasons the Congress which met [at Chuquisaca] on the 6th of August, 1825, decided to give the name of Sucre to the capital of the new state."—P. Walle, *Bolivia*, p. 67.—See also LATIN AMERICA: 1778-1824; and PERU: 1820-1826.

1825-1826.—Independent republic founded and named in upper Peru.—Bolivian constitution.—"Upper Peru [or Las Charcas, as it was more specifically known] . . . had been detached [in 1776—see ARGENTINA: 1580-1777] from the government of Lima . . . to form part of the newly constituted Viceroyalty of Buenos Ayres. . . . [After] the Spanish army . . . succumbed to that of the independents of Peru . . . Upper Peru gained, not indeed liberty, but independence under the rule of a republican army. This vast province was incapable of governing itself. The Argentines laid claim to it as a province of the confederation; but they already exercised too great a preponderance in the South American system, and the Colombian generals obtained the relinquishment of these pretensions. Sucre [Bolivar's Chief of Staff] assumed the government until a congress could be assembled: and under the influence of the Colombian soldiery Upper Peru was erected into an independent state."—E. J. Payne, *History of European colonies*, p. 290.—The constitution, which was drafted by Bolivar, was adopted with some amendments and formally proclaimed on November 19, 1826, General Sucre being elected president for a term of two years. For an account of the adoption and description of the Bolivian constitution by Upper Peru, see PERU: 1825-1826.

1894-1900.—Dispute with Chile concerning Atacama, Tacna, and Arica. See CHILE: 1894-1900.

1895-1919.—Tin mining.—"The beginnings of tin-mining in Bolivia date only from 1895. Even

at that period the metal was not valued in Bolivia. The world's consumption of tin was then sufficiently supplied by the different mining centres, relatively few in number, situated in various parts of the globe. But in Europe the lodes were impoverished, the Cornish mines producing only 4,000 or 5,000 tons a year, while in Saxony and Bohemia the tin mines were almost completely abandoned. . . . Of all countries Bolivia to-day [written in 1914] possesses the priority in the production of tin where the output of this metal is concerned; the Bolivian lodes are of exceptional extent and richness, and their number is so great that it will be long indeed before they can be exhausted. The development of the tin-plate industry [and of new uses for tin] . . . and the diminished output of the ancient tin-mining centres, has sent up the price of the metal from £71 per ton in 1898 to £192 in 1912. . . . At the time of the Spanish domination the mines of Bolivia were worked only for gold, silver, and, in a less degree, copper, but only the very rich lodes were worked. . . . The old Spanish miners rejected the ores of tin as rubbish; they used them to fill cavities and crevices and depressions in the soil; so that modern miners are recovering this debris, and are deriving enormous profits from it; for instance, in the San José de Oruro mines, where the dump-heaps yield large quantities of tin. In many other localities the dumps or tailings have been worked with success and found to be rich in tin. From mines now working and provided with the means of concentration the output in 1912 was 37,700 tons of barilla, containing 60 per cent. of metal, and valued at £4,789,661. In 1897 the Bolivian output was only 3,749 tons, valued at £238,920. . . . Tin, which has become the principal product of the extractive industry in Bolivia, and one of the chief factors of the industrial progress of the Republic, is found in all parts of the country, from the whole of the eastern portion of the high table-land and the shores of Lake Titicaca to the southern frontier, in thick and unbroken lodes. . . . In many mines, and chiefly in those of Potosi and Oruro, lodes which contain tin on the surface are found to contain silver as the workings advance in depth, passing as a rule through a pyritic transition. In others pure cassiterite is found in the form of crystals to a depth of 900 feet (which is the greatest depth so far attained by tin mines in Bolivia). In the Cerro of Potosi veins of tin have been found on the surface, penetrating the mountain parallel with the veins of silver. In many places the veins are united; and in other lodes tin, silver, and copper alternate or are found in union. Veins of tin ores are also found in groups—that is, in parallel series."—P. Walle, *Bolivia*, pp. 328-332.—Bolivia's production of tin in 1919 was about 30,000 metric tons.

1899.—Revolution.—The government of President Alonzo (elected in 1896) was overthrown in April, 1899, by a revolutionary movement conducted by General José Manuel Pando, who was elected president by the legislative chambers in the following October.

20th century.—Educational status. See EDUCATION: Modern developments: 20th century: General education: Latin America.

1902.—Compulsory arbitration treaty with other Latin American states. See ARBITRATION, INTERNATIONAL: Modern: 1902.

1903-1909.—Boundary disputes in the Acre region with Brazil and Peru. See ACRE DISPUTES.

1906.—Third international American congress at Rio de Janeiro. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906.

1909.—Arica-La Paz railway building with Chile. See RAILROADS: 1872-1912.

1910.—Creation of new department.—For administrative purposes Bolivia is divided into departments which are subdivided into provinces and cantons. In 1910 the government authorized the creation of a new department on the upper Paraguay river. It was to be known as the "Department de los Chiquites," its capital being Puerto Suarez, a prosperous city on that river. In 1920 Bolivia was made up of eight departments and three territories.

1910.—Fourth international American congress at Buenos Aires. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.

1911-1914.—Banking reforms.—"A law proclaimed on the 5th of January, 1911, created the Banco de la Nacion. Its purposes were to better the economic conditions of the republic, to control the finances of the country so that its credit did not depend upon a group of speculators; to give equilibrium to the fiduciary circulation, and finally to establish a firm rate of exchange with foreign nations. . . . In May, 1911, the Banco de la Nacion started in business with a paid-up capital of £1,275,000 (English pounds sterling). . . . The new institution assumed the assets and liabilities of the Banco de Bolivia y Londres; in 1912 it also acquired part of the assets of the Banco Agricola, in order to deprive this bank of its previous rights of issue. In March, 1913, the Banco de la Nacion took over the assets and liabilities of the Banco Industrial. . . . After some hard fights in other banking institutions of the country, the government finally decreed that only this one bank should issue notes and the others were obliged to withdraw their paper. The law to this effect was passed after bitter discussion, on the first of January, 1914."—*Economic conditions in Bolivia (Pan-American Magazine, June, 1917)*.—The banking law of February, 1914, provided that all banks should have a capital amounting to \$250,000 or over. Another law increased the capital of the bank of the nation to \$20,000,000 and provided that it must have deposited gold coins equal to 40 per cent of its notes.

1911-1915.—Army reorganization.—In 1911 continued the reorganization of the army which had been started in 1907; the government arranged for the employment of five officers, and thirteen subordinates from the German army to give instruction for three years to the Bolivian army service. Although obligatory for all, the burden of military service falls almost entirely upon the natives and the poorer classes. The wealthy and comfortable classes have too many means at their disposal of eluding their military duties; the simulation of maladies or infirmities which are mentioned in positively prodigal fashion by the present law [written in 1914], which affords every facility to the fraudulent; travelling abroad, in Europe or the neighbouring republics, on the pretext of attending courses at the universities; or postponement, which becomes final exemption, without the payment of any tax whatever. All these tricks are encouraged by the facility with which young men with influential relatives can obtain a letter of exemption or discharge when the contingent selected by lot is called to arms. This attitude affords the worst possible example to the labouring classes, composed of half-breeds of various degrees, who regard the law of conscription as imperative only in the case of the proletariat. This

class in turn employs all the means of evasion at its disposal: sometimes the simulation of maladies, but more particularly the facilities offered by the railway companies; for a man has only to get accepted as a railway employee and he can at once claim his exemption by virtue of Article 20 of the general law concerning railways. . . . However, we must admit that those detachments of conscripts which we happened to observe appeared to be perfectly trained. Doubtless the ruder German methods seemed to the Bolivian Government necessary to overcome the passive resistance of the natives who form the bulk of the troops."—P. Walle, *Bolivia*, pp. 101-104.—On December 15, 1915, a law was passed providing for a permanent force of 3,577 men. The army is a militia, service being compulsory between the ages of 19 and 50 and including 6 years in the first line, 5 in the ordinary reserve, 10 in the extraordinary reserve, and 10 in the territorial guard.

1913 (May).—Opening of Arica-La Paz railway.—Signing of protocol.—On May 13, 1913, the Arica-La Paz railway was formally opened; this railway connects the Chilean seaport, Arica, and the Bolivian capital. Also in May representatives of these two countries signed a protocol by which May 3, 1913, was to be the beginning of the term of fifteen years for the transfer of the Bolivian section of the Arica-La Paz railway by the government of Chile to that of Bolivia.—See also RAILROADS: 1872-1912.

1913 (August).—Presidential election.—Ismael Montes elected to succeed Eliodora Villazón.

1914 (February).—Destruction of mining town of Challapata.—On February 21 the mining town of Challapata was completely destroyed and many persons were killed by the explosion of 3,500 cases of dynamite.

1915.—Pan-American conference. See U. S. A.: 1915 (August-October).

1915.—Organization of institute of criminology.—An institute of criminology was organized at La Paz for the purpose of making a scientific study of the criminal and his surroundings and recommending the enactment of corrective laws.

1917.—Note on Germany and rupture of diplomatic relations.—Presidential election.—In a note made public in the United States on February 14, the Bolivian government declared that neutrals were in effect being forced to enter the war against Germany because of that nation's attitude toward neutral trade. It was announced on April 13 that the Bolivian government had handed the German minister his passports and a note breaking off diplomatic relations; in the note reference was made to the sinking by a German submarine of a Bolivian vessel, the *Tubantia*, in neutral waters when the Bolivian minister was on board. On May 2 José Nestor Gutierrez Guerra was elected president for the term 1917-1921.

1919.—Railway development.—During 1919 Bolivia and Argentina completed arrangements expediting the construction of the railway between Cochabamba, Bolivia, and Formosa, Argentina. Plans were prepared for the construction of the last sections of the Potosi-Sucre railway.

1919.—At conference in Paris and Versailles treaty. See PARIS, CONFERENCE OF: Outline of work; and VERSAILLES, TREATY OF: Conditions of peace.

1920-1921.—Re-opening of the seaport dispute with Chile.—Revolution and fall of President Guerra.—The old quarrel of thirty-five years with Chile over the question of an outlet to the Pacific for Bolivia broke out afresh early in 1920. Bolivia, like Paraguay, is an entirely in-

land state; of all the South American republics these are the only two which possess no seaboard. Chile had paid Bolivia an indemnity of \$4,000,000 in 1904 and built for the latter a railroad from La Paz to Arica, thus providing the desired outlet to the sea, though not on Bolivian territory. But Bolivia demanded a more extensive coast line and claimed the former Peruvian province of Tacna, now included in Chile, and long a subject of dispute between that country and Peru. A Bolivian commissioner was appointed in March, 1920, to bring the matter before the League of Nations. Bolivia did not lay claim, as she might more justly have done, to her former possessions, the province and town of Antofagasta. Her claim to what is technically though not actually Peruvian territory raised a storm of protest in Peru, which found vent in riots in both republics during March, 1920. The United States government intervened with a warning to Bolivia against disturbing the peace. Considerable excitement was aroused in all the republics concerned, including Argentina, at the prospect of American active intervention, which was allayed by assurances from Secretary of State Colby disclaiming any such intention on the part of the United States. During May, Bolivian demands were modified; the claim to Arica was dropped and Chile was requested to restore to Bolivia an outlet anywhere on the former Bolivian littoral, the latter country expressing its willingness to construct the necessary port works. By a swift, sudden revolution on Sunday, July 11, the Guerra government was overthrown by the Republican party, which favored the Antofagasta claim. The president and some of his supporters were deported on July 13, and Bautista Saavedra, leader of the revolt, became, first minister of the interior and subsequently provisional president. He resigned from the latter post on Jan. 24, 1921, but was elected president two days later by a national convention. Early in February the new government was formally recognized by the United States, Argentina, Brazil and Chile.—See also LATIN AMERICA.

1922 (February).—Bolivia excluded from conference between Chili and Peru at Washington. See CHILI: 1921-1922.

BOLIVIA, Constitution of.—1825.—Code Boliviar. See PERU: 1825-1826; 1826-1876.

1880.—Description of present constitution of the republic.—By the provisions of this constitution the executive power is vested in a president who is elected by popular vote for a term of four years, and not eligible for re-election. The legislative branch of the government is made up of a Congress composed of two houses, a Senate and a Chamber of Deputies. The Senate is made up of sixteen senators (two for each department), elected by direct vote for a term of six years and the House of seventy deputies elected by direct vote for four years. One-third of the senators and one-half the deputies retire every two years. There are two vice-presidents and a ministry of six departments: Foreign Relations and Worship; Finance; Government and Justice; Public Works and Industry; War and Colonization; Education and Agriculture. The Republic is divided into eight departments, three territories and seventy-two provinces, which are respectively governed by prefects, sub-prefects and corregidores. The prefect who is appointed by the President has supreme political, administrative and military authority in his department. The constitution grants the suf-

frage to all male citizens over 21 years of age who can read and write, and who have a fixed income.

11th century.—School of law.—Glossators.—“Just at this time [end of the eleventh century] we find a famous school of law established in Bologna, and frequented by multitudes of pupils, not only from all parts of Italy, but from Germany, France, and other countries. The basis of all its instructions was the *Corpus Juris Civilis*. Its teachers, who constitute a series of distinguished jurists extending over a century and a half, devoted themselves to the work of expounding the text and elucidating the principles of the *Corpus Juris*, and especially the Digest. From the form in which they recorded and handed down the results of their studies, they have obtained the name of glossators. On their copies of the *Corpus Juris* they were accustomed to write glosses, i. e., brief marginal explanations and remarks.”—J. Hadley, *Introduction to Roman law, lecture 2.*—See also UNIVERSITIES AND COLLEGES: 800-1345: University of Bologna.

1831.—Revolt suppressed by Austrian troops. See ITALY: 1830-1832.

1832.—Occupied by Austria. See AUSTRIA: 1815-1846.

1860.—Part of the kingdom of Italy.—By a vote of the people of Bologna the city was annexed to Italy in 1860. This was after the Austrians were defeated by France in the preceding year.

BOLOGNA, University of. See EDUCATION: Medieval: 11th-12th centuries; MEDICAL SCIENCE: Ancient: 10th century; UNIVERSITIES AND COLLEGES: Nature of medieval universities; 800-1345: Other universities; 1231-1330.

BOLOISM, popular term for defeatism, derived from the activities of Bolo Pasha, whose name was linked in Paris with propaganda for a peace in 1916 and 1917 which would serve well Germany's purposes but could not fail to be dishonorable for France. “During the autumn of 1917 public opinion had been much perturbed by the evidence of treasonable conspiracies which had been unearthed by the Government, and more particularly by M. Clémenceau himself. The persons implicated were, in the first instance, a certain notorious Bolo Pasha and the managers of a

paper named the *Bonnet Rouge*. . . A tremendous sensation was caused by an official accusation of treason against M. Joseph Caillaux, the well-known statesman who had formerly been Prime Minister of France and who had always been reputed to be favourable to the idea of a *rapprochement* with Germany. On December 22 M. Caillaux's *Parliamentary Immunity* was suspended, and he was arrested at his house in Paris on January 14. . . A series of sensational trials followed these arrests. The first trial was that of Bolo Pasha, which commenced on February 4. Bolo was a remarkable, if wholly unscrupulous, man. He had lived by his wits, quite untroubled by conscience, from his earliest years. He first practised as a Dental Surgeon in Marseilles, he then kept different kinds of shops, and at one time was the proprietor of a restaurant. He carried out various ingenious swindles, for the most part escaping without punishment. He had been twice married, the second ceremony taking place whilst the first wife was yet alive, and without the formality of a divorce. His second wife had been extremely wealthy, and it was with her money that he had first engaged in business on a large scale. Most of his enterprises were unsuccessful, however, and at the beginning of the war he was in serious financial difficulties. In these circumstances he was quite ready to listen to proposals from agents of the German Government. At various times Bolo had travelled all over the world, and the case against him, which was based upon discoveries made by the American Secret Service, was that whilst he was in the United States he had received large sums, totalling altogether over £336,000, from the emissaries of Count Bernstorff, then German Ambassador to the United States. The trial attracted a great deal of attention in Paris, and during the proceedings Bolo proved that he lacked neither resource nor courage. The Counsel for the prosecution was a certain Lieut. Mornet. In the opinion of the Court Martial, Lieut. Mornet was able to substantiate the charges that Bolo had entered into communication with the enemy through the Ex-Khedive of Egypt [Abbas Hilmi], a certain Signor Cavallini, and other persons, and had conspired to create a defeatist movement in France, more particularly by purchasing the *Journal*, and by attempting to obtain control of the *Figaro*. It is worth noting that these secret proceedings appeared to have been controlled by Herr von Jagow himself, then German Foreign Secretary. On February 9 M. Caillaux was brought from prison to give evidence for the defence, but that statesman was not able to make any disclosures which seriously influenced the proceedings. The most dramatic moment in the trial was, however, two days later when the accused's brother Mgr. Bolo (who was a well-known preacher in Paris) gave evidence in his brother's defence. Considerable sympathy was expressed for Mgr. Bolo, but he was unable to destroy the case made out by Lieut. Mornet, and on February 14 the Court Martial (which consisted of seven judges, Colonel Voyer being the president) found the prisoner guilty and condemned him to death. His associate Cavallini was also condemned to death. Bolo was shot at Vincennes on April 17.—*Annual Register*, 1918.—See also FRANCE: 1918: Defeatism.

BOLSHEVIKI: Origin of name.—This is a Russian word meaning "belonging to the majority"; originally the left or radical wing of the Russian Socialist Democratic party. When the split in the party occurred in 1903 the radicals, led by Nikolai Lenine, were in the majority, or *Bolshinstvo*, and from 1903 called themselves *Bolsheviki*, meaning

the majority faction. The popular impression that the term springs from "extreme" is therefore erroneous. The moderates, similarly, are called . . . *Mensheviki* from *Menshinstvo*—minority. The Social Democratic party is composed mainly of industrial workers. The other great Socialist party of Russia, the Social Revolutionary party, is made up chiefly of peasants. In this party also a division occurred into a more and a less radical wing, and in the summer of 1917 the more radical faction, finding themselves in agreement with Lenine on all points except agrarian policy, adopted the name *Bolsheviki*, and began to work for the most part in alliance with their radical brethren of the Social Democratic party against the moderates of both old parties. The two factions are also known as Maximalists and Minimalists respectively.

Development and political form in Russia.—"The 'Russian Communist Party (Bolsheviks)' is the outgrowth of an extreme radical fraction of the 'Russian Social-Democrat Workmen's Party' founded in 1897. The split took place in 1903 at a congress held abroad at which the radical delegates were in the majority. For this reason this fraction came to be known as the *Bolsheviks*, which meant simply those of the majority, that is, the majority at this particular congress. Until the summer of 1917 the official title of this fraction was 'Russian Social-Democrat Workmen's Party (Bolsheviks)'. At that time the leaders of this group, now organized as a distinct party, were already discussing the formal adoption of the name 'Communist' (N. Lenin, *First Letter on Tactics*, May, 1917). They continued, however, to use the name 'Bolshevik,' by which they had come popularly to be known abroad as well as in Russia. In official documents and writings the term 'Bolshevik' was used as late as July, 1918. . . . Since about that date there has been a tendency to substitute the word 'Communist' in official documents and writings, though the word 'Bolshevik' has generally been added in parentheses as indicated above. . . . During the revolution of 1905 the *Bolsheviks* represented the radical minority in the workmen's councils of that period. The Russian word for council is *soviet*. They opposed bitterly the more moderate fraction of the Russian Social-Democrats, the *Mensheviks*. The Social-Democrats as a party boycotted the elections to the first Duma in 1906, but individual Social-Democrats were elected to this first Russian parliament, particularly from the Caucasus. During 1906 the *Mensheviks* secured the majority in the party councils and Russian Social-Democrats participated more actively in the elections to the second Duma, securing a large number of seats. The explanation given for the dissolution of the second Duma was its refusal to unseat 55 Social-Democratic members whom the government charged with revolutionary conspiracy. There was, nevertheless, a small group of Social-Democrats in both the third and fourth Dumas. Among these there were members who, though not specifically elected as such, were generally recognized as adherents of the *Bolshevist* fraction of the party. It was, for example, these individual *Bolshevist* members within the Social-Democratic group of the fourth Duma that came out in public condemnation of the war at the special session of the Duma called in August, 1914.

"In the Petrograd Soviet of Workmen's and Soldiers' Deputies, organized during the first days of the revolution of 1917, party alignment at the beginning was not particularly emphasized. Very shortly, however, particularly after Lenin's arrival, a sharp differentiation took place, and the *Bolshe-*

viks, as a separate party, became the most energetic and compact, though minority, group in the Petrograd Soviet. In the first All-Russian Congress of Soviets the Bolsheviks had a minority and therefore a minority on the first All-Russian Central Executive Committee of Soviets elected by that Congress. During the summer of 1917 frequent conflict developed between the Petrograd Soviet and the All-Russian Central Executive Committee, for the former was more radical than the latter, containing a larger percentage of Bolsheviks. By September, 1917, the Bolsheviks had obtained a clear majority in the Petrograd Soviet, Trotsky being elected its president. Against the wish of the All-Russian Central Executive Committee, the Petrograd Soviet sent out a call for a Second All-Russian Congress of Soviets, which was announced for November 7. It was on the eve of the opening of this Congress that the Bolsheviks executed their coup d'état. In this Second All-Russian Congress of Soviets, the Bolsheviks had a majority. In view of the refusal of the more moderate Socialist parties, particularly the Mensheviks, to accept the Bolshevik coup d'état, the Central Executive Committee selected by the second Congress was composed largely of Bolsheviks, as was the first Council of People's Commissaries, although a few Left Socialist-Revolutionaries were given places on the Executive Committee and on the Council. No analyses of the Third and Fourth All-Russian Congresses of Soviets of January and March, 1918, are at hand. At the Fifth All-Russian Congress of Soviets of July, 1918, the Bolsheviks had a majority, the Left Socialist-Revolutionaries having about 30 per cent of the total membership and other parties being represented in very small numbers. . . . It was at this Congress that Socialist-Revolutionaries of the Right and Center, and the Mensheviks—all anti-Bolshevist but Socialist parties—were excluded from the Central Executive Committee and all local Soviets were urged to do the same. The Sixth All-Russian Congress, held in November, 1918, showed an overwhelming majority for the Bolsheviks; in fact one can say that they were the only party really represented, having 900 (including 71 sympathizers) out of 914 members. . . . In the Seventh Congress, held more than 13 months later, in December, 1919, the Bolsheviks were equally dominant, having 970 out of 1,002 members. The Bolsheviks have been less completely in control of local Soviets. However, an analysis made by the Bolsheviks themselves shows the gradual elimination of all other parties, and particularly of so-called non-party members, the explanation being given that the latter were formally joining the Communist Party. There were frequent references to 'sympathizers with communists' or 'candidates for communists.' These official Bolshevik figures also indicate that the percentage of Communists or Bolsheviks increased as one went up the scale of Soviet institutions. There were more Bolsheviks in the provincial executive committees and provincial congresses than in the district and cantonal executive committees and congresses. . . . A detailed analysis of the composition of the Petrograd Soviet which was elected in July, 1919, and statistics on the elections of last December [1920] also show the elimination of other parties and even of so-called non-party members. . . . From such accounts as have been found in Bolshevik newspapers it appears that in the first stage the elections are by acclamation, at meetings held in factories, barracks, or executive departments and on party lists presented to the meeting. Delegates to higher units would seem to

be elected in proportion to party strength. But even so, the party with a bare majority increases its majority as the elections pass through the various grades. The Bolsheviks admit that plenary sessions of Soviets have been irregular during the last year and therefore, the Executive Committees must have elected the delegates to higher units. This last fact would, of course, guarantee to the majority party practically complete control over the higher units, whose functions have increased with the development of extreme centralization, which the Soviet leaders have insisted was made necessary by the extraordinary conditions of foreign and civil war. . . . Special attention is called to the manner in which the Central Executive Committee is elected by the All-Russian Congress of Soviets. . . . The members of the Congress meet by parties and draw up lists of their candidates in proportion to the numerical strength of the party in the Congress. Then 'each faction presents a list which the Congress in advance confirms.' Therefore, the Central Executive Committee of the All-Russian Congress, and also the Executive Committee's of all Soviets, are elected on strictly party lines. An interesting statement bearing on the general character of the last All-Russian Congress (December, 1919) and emphasizing particularly the 'overwhelming predominance of Communists, at the Congress and in Soviets' is the signed leading article by the responsible editor of the *Izvestia*, Steklov (December 11, 1919), entitled 'After the Congress.' . . . It is not very clear on what basis delegates to All-Russian Congresses are selected, though it would seem that they also are selected on the basis of party. The list of the delegates elected by the Petrograd Soviet to the Seventh All-Russian Congress was headed by the three names 'Kalinin, Lenin, Trotsky,' none of whom takes an active part in the work of the Petrograd Soviet. Lenin also headed the list of delegates to the Seventh All-Russian Congress from the Moscow Soviet."—*International Conciliation*, Jan., 1921.—See also SOCIALISM.

BOLTERS, the name applied to members of a political party who assert their independence either by deserting a party convention or by refusing to support the ticket of their party at election. The name originated during the campaign of 1884, when great numbers of Republicans "bolted" their party and became, for the time, Democrats.

"BOMBA," surname of Ferdinand II (1810-1850), king of the two Sicilies, 1830-1859. See ITALY: 1848-1849; VIENNA, CONGRESS OF.

BOMBAY, city, principal seaport of western India and the capital of the presidency of Bombay. It was first visited in 1509 by the Portuguese and acquired by them in 1534. In 1661 through his marriage to the Spanish princess, Catherine, it came into the possession of Charles II who granted it to the East India Company seven years later. The modern city was founded by Augier (1669-1677). "Bombay, often known as the gateway of India, is on the west coast. It is built upon the small island of Bombay, which is shaped much like Manhattan Island, N. Y. The chief industrial features are cotton textile mills, about 80 in number. Bombay has nearly 1,000,000 inhabitants; during the year 1900 it lost about one-tenth of its population through the plague. . . . The city does a large export trade in raw cotton, grain, seeds, cotton twist and yarn, condiments, myrobalans, goat-skins, and manganese ore, and has an immense interior distributing business in merchandise of all sorts suitable to the country. It has gas and electric-lighting facilities and cheap power from a big hydro-electric plant near by. It has one hotel, the Taj Mahal, which is the largest in India, and many other fine buildings. Through the greater part of the city the sanitation is bad and malaria is especially prevalent. A splendid work, however, is being done by the Bombay Improvement Trust, which is gradually improving conditions in the slum areas. The hottest months in Bombay are May and October. In June the southwest monsoon breaks and heavy rains continue until the end of September. There are not the great extremes of heat or cold found in the interior of India, but the climate is oppressive, owing to the moisture in the air. No city in the world has a greater variety of race types than Bombay. Besides the dominant element—the Mahratta race—there is an influential section of Parsi merchants, Arab traders from the Gulf, Afghans and Sikhs from northern India, Bengalis, Rajputs, Chinese, Japanese, Malays, Negroes, Tibetans, Singhalese, and Siamese. Among religions are the Hindu, Mohammedan, Parsi, Jain, and Christian. The Hindus constitute nearly two-thirds of the total, the Mohammedans one-fifth. Sixty-two different languages or dialects are said to be spoken within the city limits. Marathi and Gujarati are the most widely used. English is spoken by many natives, especially in the Parsi merchant community. These Parsis hold high rank among the natives because of their wealth, intelligence, and natural bent for trade."—H. D. Baker, *British India (Special Consular Reports, No. 72, pp. 48-49)*.—See also INDIA: 1600-1702; 1919; also Map of India; PLAGUE: Bubonic.

ALSO IN: S. M. Edwardes, *Rise of Bombay*.

BOMBAY PRESIDENCY.—"Bombay Presidency is a geographical or administrative expression, comprising a long strip of the coast of India, extending for 15 degrees from Baluchistan on the north to the Madras district of Kanara on the south. Its area, 122,984 square miles, with a population of 18,500,000, is divided into four divisions, under Commissioners, known as Sind, the northern division or Gujarat, the central division or the Dekhan, and the southern or Karnatic division. The number of its districts or collectorates, excluding the island of Bombay, is twenty-four. Six in Sind—Karachi, Hyderabad, Sukkur, Larkhana, Thar and Parker, and the Frontier district; six in the northern division—Ahmedabad, Kaira, Panch Mahals, Broach, Surat [seat of the British

East India Company's authority until 1687] . . . and Thana; six in the central division—Ahmednagar, Khandesh, Nasik, Poona, Satara, and Sholapur; and six in the southern divisions—Belgaum, Dharwar, Bijapur (known as Kaladgi until 1885), Kanara, Ratnagiri, and Kolaba. The utmost variety of races, tongues, and physical conditions is thus united in the Presidency of Bombay. . . . Bombay, with its 123,000 of square miles of British territory, stands only fourth in the list of Indian provinces, Burma covering 236,000, Bengal 151,000, and Madras about 142,000, the United Province of Agra and Oudh following close upon its heels with 107,000 square miles. In population it also stands fourth, having about a quarter of that of Bengal, about two-fifths of that of Madras, and not quite twice that of Burma. Yet the results of British administration for a century, notwithstanding physical and racial difficulties unequalled in any other province of India, have made it the most educated, progressive, and liberal contributor to the imperial revenues of any province in the Empire."—W. L. Warner, *Presidency of Bombay (Journal of the Society of Arts, v. 52, pp. 200-201)*.—See also SIND.

BONAPARTE FAMILY, Origin of the.—"About four miles to the south of Florence, on an eminence overlooking the valley of the little river Greve, and the then bridge-path leading towards Siena and Rome, there was a very strong castle, called Monte Boni, Mons Boni, as it is styled in sundry deeds of gift executed within its walls in the years 1041, 1085, and 1100, by which its lords made their peace with the Church, in the usual way, by sharing with churchmen the proceeds of a course of life such as needed a whitewashing stroke of the Church's office. A strong castle on the road to Rome, and just at a point where the path ascended a steep hill, offered advantages and temptations not to be resisted; and the lords of Monte Boni 'took toll' of passengers. But, as Villani very naively says, 'the Florentines could not endure that another should do what they abstained from doing.' So as usual they sallied forth from their gates one fine morning, attacked the strong fortress, and razed it to the ground. All this was, as we have seen, an ordinary occurrence enough in the history of young Florence. This was a way the burghers had. They were clearing their land of these vestiges of feudalism, much as an American settler clears his ground of the stumps remaining from the primeval forest. But a special interest will be admitted to belong to this instance of the clearing process, when we discover who those noble old freebooters of Monte Boni were. The lords of Monte Boni were called, by an easy, but it might be fancied ironical, derivation from the name of their castle 'Bouni del Monte,'—the Good Men of the Mountain;—and by abbreviation, Buondelmonte. . . . But when, after the destruction of their fortress, these Good Men of the Mountain became Florentine citizens, they increased and multiplied; and in the next generation, dividing off into two branches, they assumed, as was the frequent practice, two distinctive appellations; the one branch remaining Buondelmonte, and the other calling themselves Bu-

naparte. This latter branch shortly afterwards again divided itself into two, of which one settled at San Miniato al Tedesco, and became extinct there in the person of an aged canon of the name within this century; while the other first established itself at Sarzana, a little town on the coast about half-way between Florence and Genoa, and from thence at a later period transplanted itself to Corsica; and has since been heard of."—T. A. Trollope, *History of the commonwealth of Florence*, v. 1, pp. 50-51.—For genealogical table, see FRANCE: 1804-1805.

BONIFACE, Saint (680-754), the apostle of Germany, was born in Devonshire, England. His real name was Wynfrith. In 719 he was commissioned by Pope Gregory II to carry out a program of Christianization in Germany. Under the protection of Charles Martel his mission was highly successful, and in recognition of his services he was made archbishop in 732. Some years later he became bishop of Mainz. He also made visits to France to spread the gospel. He founded the famous Monastery of Fulda, which became a great center of monastic culture. In 754 he resigned his bishopric to undertake the conversion of the Frisians. With a number of his companions he was massacred by heathen near Dookum (Dokkum), in Holland.—See also CHRISTIANITY: 100-300: Conversion of the Goths; 406-800.

BOOK OF HOURS, compilation of prayers, Psalms, litanies, etc., designed for the use of the laity, and very popular in the Catholic church from the fourteenth to the sixteenth centuries.

BOOK OF KELLS. See BOOKS: Medieval times.

BOOK OF ST. CUTHBERT. See BOOKS: Books in Medieval times.

BOOK OF THE DEAD.—"A collection (ancient Egyptian) of prayers and exorcisms composed at various periods for the benefit of the pil-

grim soul in his journey through Amenti (the Egyptian Hades); and it was in order to provide him with a safe conduct through the perils of that terrible valley that copies of this work, or portions of it, were buried with the mummy in his tomb. Of the many thousands of papyri which have been preserved to this day, it is perhaps scarcely too much to say that one half, if not two thirds, are copies more or less complete of the Book of the Dead."—A. B. Edwards, *Academy*, Sept. 10, 1887.—M. Naville published in 1887 a collation of the numerous differing texts of the Book of the Dead, on the preparation of which he had been engaged for ten years.

BOOKS: Writing materials.—"The writing materials in use in different places and at different times have varied greatly. Obviously anything capable of receiving an impression or bearing a mark of any kind may be used as material for receiving records or bearing communications. The surface of a stone, a bone, or a shell, a flat piece of wood, bark or leaf of a tree, a plate of metal, the facet of a gem, any one of a thousand things can be used and has been used for this purpose. The Egyptians and Greeks were in the habit of using the fragments of broken pottery for their less important records. The materials which have been most used, however, have been the Assyrian clay tablet [see also EGYPT: About B. C. 1500-1400], . . . papyrus, vellum, and paper. . . . From very early ages, leather was more or less used as writing material, but in the 2d century B. C., owing, it is said, to the scarcity and high price of papyrus, Eumenes II, King of Pergamus, a city of Asia Minor, invented or caused to be invented, a writing material made of dressed skins. These skins were not tanned but were dressed by another method which left them flexible but gave them a smooth hard surface which could be easily written on. This material was called, from the name of the city, *pergamena*, from which we get our 'parchment.' This term is now practically reserved for sheepskins which are harder than other skins used for the purpose. Parchment was long used for legal documents and is still used for college diplomas and other similar purposes. The general term, however, for this type of writing material, which was made from a variety of skins, is vellum. Vellum, of course, came in sheets, and while a single sheet might be rolled as diplomas are to this day rolled for delivery, it was ordinarily used in the sheet form and played an important part in the development of the book. In the manufacture of vellum the skins of a variety of the smaller animals were used. For example, the famous Alexandrian codex, one of the oldest known copies of the Bible, is written on antelope skin. . . . Paper is said to have been invented by the Chinese at an unknown but very early date. It was introduced to Europe by the Arabs about the 10th century A. D. It was made of linen or rags and did not vary greatly from the rag paper of to-day. . . . Paper was not much used in Europe until the invention of printing. Being much less substantial than vellum it did not commend itself for the making of manuscript books. Paper was, however, immediately found to be much better suited to printing than any other material, and with the advent of the printed book it very quickly drove other writing materials out of common use. Owing to its having some resemblance to papyrus it was given the old name, the word paper being derived from papyrus. Late in the 10th century a new writing material made of wood or other flexible fibre treated with chemicals and loaded with clay was invented, to which we also

give the name paper. This new material has almost entirely driven the old rag paper out of the field and is now the paper of commerce. Much of this material is far inferior to rag paper. . . . A 15th-century book on rag paper is as good to-day as the day it was printed. Most of the paper now in use possesses no such lasting qualities. In addition to these three leading materials, much use has been made of tablets (Latin *tabella*). The commonest form of tablet was a thin board with one or both sides slightly cut away in such a way as to leave a narrow rim all around. The shallow depression inside this rim was then filled with wax sufficiently stiff to hold its position in ordinary temperatures but sufficiently soft to be easily marked with a sharp instrument called a stylus. The writing could be easily erased by rubbing with a hard smooth object, perhaps a ball at the reverse end of the stylus, and the wax was then ready for another impression. . . . Two or more tablets could be put together with the wooden sides out, bound, and sealed. In this way the writing was secure from observation or interference and the tablets were less liable to injury than papyrus or vellum. Tablets were used at a very early period and continued to be used, especially for correspondence, all through the middle ages and into the 16th century. Sometimes a considerable number of them would be fastened with thongs by one edge so as to form a continuous document which was one of the precursors of the modern book. The British Museum has a document of this sort consisting of nine leaves about 7x9 inches. The writing on it is in shorthand, which is by no means a modern contrivance [see ABBREVIATIONS]. This particular document is of Greek origin and dates from about the 3d century A. D. The ancient Egyptians, Chinese, and other peoples of remote antiquity used inks made of charcoal or soot mixed with gum, glue, or varnish. Similar compositions were used to a late date. The Romans made extensive use of sepia, the coloring substance obtained from the cuttlefish. Iron-gall inks, inks that consist of an iron salt and tannin, were invented by an 11th century monk named Theophilus. Of course these inks were mixed with coloring matter, and other paints and pigments were used in the preparation of manuscripts. The earlier printing inks were made of lampblack and linseed oil. . . . The mediæval scribe, or copyist, had in addition to his quill, ink, and vellum, a pair of compasses to prick off the spacing of his lines, a ruler and a sharpened instrument or pencil with which to draw the lines upon which he was to write, a penknife for mending his pens, an erasing knife for corrections, and pumice and agate, or other smooth substance, for smoothing the scratched surface."—F. W. Hamilton, *Books before typography*, pp. 9-14.

Evolution of the book.—"Ancient books were written on rolls of papyrus. The technical name of such a roll of papyrus was *volumen* from which we get our word volume. With the increasing use of vellum as writing material came the book as we know it, originally called in Latin the codex, from *caudex*, meaning a pile of boards such as may be seen in any lumberyard. The other Latin word for book, *liber*, from which we get our word library and other allied terms, originally meant 'bark' and is a curious preservation of the record of the use of bark as a writing material, a use, by the way, of which we have very little other knowledge. The origin of the book is rather interesting. One of its ancestors . . . is the group of tablets bound together with thongs. Another was probably the roll itself. When the manuscript roll was read

it was necessary in order to handle it properly and save it from damage to reroll the part of the roll which had been read as the student proceeded. The consequence was that when the reading was finished, the volume was left rolled up in reverse order. Consequently, before being replaced, the volume, if treated properly, had to be rolled back into its original position, a necessity which careless or lazy people found somewhat burdensome. It was discovered, however, that this could be avoided by folding the roll back and forth, creasing it in the spaces between the columns, which were written at right angles to the length of the roll, the result being something like a book printed only on one side of the paper and with the edges uncut, like many Chinese and Japanese books of to-day. The real impulse, however, to the construction of books as distinguished from rolls came with the use of the sheets of vellum. These could not be attached easily to make long rolls as could be done with the papyrus sheets, while even the single sheets were large enough to be unwieldy when spread out. Therefore, when long compositions were to be written, the vellum sheets were folded over and laid inside each other just as ordinary note paper is prepared for sale at the present time. In order to provide against the scattering of these leaves they were sewed together through the crease at the back. The result was called a *quire*. When the composition filled more than one quire, the quires were originally fastened together in a manner derived, probably, from the method of fastening tablets. That is to say, holes were stabbed through the margin and thongs were passed through the holes and tied at the back. This method of binding, however, had obvious disadvantages and it shortly occurred to some one that thongs, or strips of vellum, could be laid across the backs of the quires at right angles to their length and the stitches by which the quires were held together could be passed over these thongs. This method of binding the quires together is still used in making the best bindings. At this stage of proceedings the loosely fastened bundle of quires was not firmly held together and the unprotected folds of the sheets were exposed to wear. This was remedied by covering the backs with a strip of leather running lengthwise of the sheets. Vellum, however, is particularly liable to warp and twist. This was prevented by putting the sheets between boards. The next step was to fasten the boards to the package of leaves by extending the edges of the leather strip on the back and fastening them to the edges of the boards, which were then fastened at the opposite edges by clasps. The bound book was then complete so far as utility was concerned. It was soon seen, however, that the extension of the leather back to cover the boards entirely added to the beauty and durability of the book and opened a wide field for the exercise of the decorator's art and taste. . . . The book as distinguished from the roll began to be popular in the first Christian century. It had certain very great advantages. The rolls were never very long and long compositions or collections of compositions necessarily ran to many volumes. They were not easy to refer to as they had to be unrolled and then rolled up again whenever any passage was to be consulted. They were made of a material which was not durable in any but the very driest of climates. The book on the other hand, while heavy, could contain a very great amount of material in a single volume, could be easily referred to, and was made of much more durable material. For this reason the book form was used for legal documents and other purposes where ease of ref-

erence was particularly desired. The growth of the Christian church especially stimulated the substitution of the book for the roll. Christianity, unlike any of the religions with which it came into contact, except Judaism, was a book religion. The Christian was constantly referring to his scriptures for argument with his adversary as well as for his own edification and he wanted to be able to find his favorite passages readily. The conservatism of the Jew prevented his changing the roll form of his scriptures. The Pagan adhered to the rolls with their associations of classic culture. The final passing out of the roll and victory of the book are contemporary with the victory of Christianity over Paganism and its adoption as the religion of the empire."—F. W. Hamilton, *Books before typography*, pp. 15-19.—See also ALEXANDRIA: B. C. 282-241; AZTEC AND MAYA PICTURE WRITING; BYZANTINE EMPIRE: Part in history.

Books in medieval times.—"The books of the Middle Ages are a special subject in themselves, since they include all the illuminating manuscripts of Ireland, England and the Continent. . . . It is probable that the custom of ornamenting books with drawings was derived from the Egyptians by the Greeks, and from the Greeks by the Romans, among whom decorated books were common, although they are known to us chiefly by means of copies preserved in Byzantine and Italian manuscripts of a more recent period. [See also BYZANTINE EMPIRE: Part in history.] These, and a few examples dating from the time of Constantine, exhibit a style evidently derived from classical models. A survey of mediæval books properly begins with the early Irish manuscripts, which stand at the head of a long and glorious line stretching, chronologically, from the seventh century of our era to the fifteenth. Although it is not known where the art was born to which these wonderful productions of Celtic pen-craft owe their origin, it is Ireland, nevertheless, which has provided us with the earliest and finest examples of this work, the marvels of skill and beauty which, summed up, as it were, in the Book of Kells, the Book of Durrow, and others, set the Irish manuscripts beyond imitation or rivalry. Most of these books are Psalters, or Gospels, in Latin, while the remainder consist of missals and other religious compilations, and of them all the Book of Kells is the most famous. It was written in the seventh century, and probably indicates the highest point of skill reached by the Irish artist-scribes, or as regards its own particular style of ornamentation, by any artist-scribes whatever. It is a book of the Gospels written (in Latin) on vellum, and the size of the volume, of the writing, and of the initial letters is unusually large. The leaves measure 13x9 inches. The illustrations represent various incidents in the life of Christ, and portraits of the Evangelists, accompanied by formal designs. Ornamentation is largely introduced into the text, and the first few words of each Gospel are so lavishly decorated and have initial letters of such size that in each case they occupy the whole of a page. The book just described was preserved at Kells until the early part of the seventeenth century. It then passed into Archbishop Ussher's possession, and finally into the library of Trinity College, Dublin, where it is now treasured. The prevailing feature of Celtic ornament as shown in illuminated manuscripts is the geometrical nature of the designs. The human figure when introduced into the native Irish books is absurdly grotesque, for its delineation seems to have been beyond the artist's skill, or, more correctly, to have lain in another category, and to have belonged

to a style distinct from that in which he excelled. At a later period, figure drawing became a marked characteristic of English decorated manuscripts, and English artists attained to a high degree of skill in this branch of their art. Bright colours were employed in the Irish manuscripts, but gold and silver are conspicuous by their absence, and did not appear in the manuscripts of these islands until Celtic art had been touched by continental influence. The tradition that the Book of Kells was written by the great St. Columba himself, reminds us that at this period nearly all books were the handiwork of monks and ecclesiastics, and in all monasteries the transcribing of the Scriptures and devotional works was part of the established order of things. Columba, we know, was a famous scribe, and took great pleasure in copying books. He is said to have transcribed no less than three hundred volumes, and all books written by him were believed to be miraculously preserved from danger by water.

"By Irish missionaries the art of book writing was taught to Britain, chiefly through the school of Lindisfarne, where was produced the famous Lindisfarne Gospels, or book of St. Cuthbert. . . . This notable volume is an excellent example of Celtic book art in the beginning of its transition stage, a stage which marks the approach to the two schools which were the result of the combination of Celtic and continental influences in the hands of intelligent and skilful Anglo-Saxon scribes—the Hiberno-Saxon and the English schools. It contains the four Gospels written in Latin, and arranged in double columns, each Gospel being preceded by a full-page formal design of Celtic work and a full-page portrait of the Evangelist. The conjunction of these two distinct styles of ornament forms one of the chief points of interest in the book. The formal designs of interlaced, spiral, and key patterns so characteristic of Celtic work, show its near kinship to the Irish books, while the portraits prove an almost equally close connection with Roman and Byzantine models. There is a reason to believe that the classical element is due to the influence of an Italian or Byzantine book or books brought to Lindisfarne by Theodore, Archbishop of Canterbury, and his friend Adrian, an Italian abbot, when the archbishop visited the island for the purpose of consecrating Aidan's church. The Lindisfarne Gospels accompanied St. Cuthbert's body to Durham in 1005, but rather more than a century later was restored to Lindisfarne, and remained there until the monastery which had replaced St. Aidan's foundation was dissolved at the Reformation. It is then lost sight of until it reappears in the famous Cotton Library, with which it is now possessed by the nation. The English school of illumination had its chief seat at Winchester. Its work is characterised by its figure drawing, and while the foliage ornament introduced, together with the gold which was largely used in the Winchester manuscripts, indicate continental influence, the interlaced and other patterns are derived from the Irish school. Of this class of manuscript the Benedictinal of Æthelwold, in the Duke of Devonshire's library, may serve as a typical example. It was written for Æthelwold, Bishop of Winchester, by his chaplain Godemann, towards the end of the tenth century. . . . The Norman Conquest opened up the English school of art more widely to continental influence, with the result that towards the end of the thirteenth and beginning of the fourteenth centuries the English manuscripts were unsurpassed by any in Europe. As a typical specimen of the illuminations of this period, we may with propriety select

one which has been described by Sir Edward Maunde Thompson as 'the very finest of its kind,' and 'probably unique in its combination of excellence of drawing, brilliance of illumination and variety and extent of subjects.' It is a Psalter dating from the fourteenth century, and known as Queen Mary's Psalter, because a customs officer of the port of London, who intercepted it as it was about to be taken out of the country, presented it to the Queen in 1553. This magnificent book is now in the British Museum. During the twelfth and thirteenth centuries a large number of Bibles and Psalters were written, and made up the greater part of the book output of the larger monasteries, to which we are indebted for all our fine pieces of manuscript work. Indeed, most of the decorated manuscripts of this period are occupied with the Scriptures, services, liturgies, and other matters of the kind, and on such the best work was lavished. Later, however, the growing taste for romances and stories induced a corresponding tendency to decorate these secular manuscripts too, and some very fine work of this class was produced, especially in France. The books of the chronicles of England and of France, written in the fourteenth and fifteenth centuries, were also largely adorned with painted miniatures.

"Nearly all the writing of Europe was done in the religious houses. In most of the larger monasteries there was a scriptorium, or writing room, where Bibles, Psalters, and service books, and patristic and classical writings were transcribed, chronicles and histories compiled, and beautiful specimens of the illuminator's art carefully, skilfully, and lovingly executed. . . . Although the greater part of the book-writing of this time was done in the monasteries and by monks and ecclesiastics, there were also secular professional writers, a class who had followed this occupation from very early days. . . . They were employed chiefly by the religious houses, to assist in the transcription and restoration of their books, and by the lawyers, for whom they transcribed legal documents. . . . Books of a great size were frequently monuments of patience and industry, and sometimes half a lifetime was devoted to a single volume. Books therefore fetched high prices, though they were not always paid for in money. In 1174 the Prior of St. Swithun's, Winchester, gave the Canons of Dorchester in Oxfordshire, for Bede's Homilies and St. Augustine's Psalter, twelve measures of barley, and a pall on which was embroidered in silver the history of St. Birinus' conversion of the Saxon King Cynegils. A hundred years later a Bible 'fairly written,' that is, finely written, was sold in this country for fifty marks, or about £33. At this period a sheep cost one shilling. In the time of Richard de Bury a common scribe earned a halfpenny a day. About 1380 some of the expenses attending the production of an *Evangelarium*, or book of the liturgical Gospels, included thirteen and fourpence for the writing, four and threepence for the illuminating, three and fourpence for the binding, and tenpence a day for eighteen weeks, in all fifteen shillings, for the writer's 'commons,' or food. [See also BIBLE, ENGLISH: Sources.]

"The book-writers or copyists became, later, the booksellers, very much as they did in old Rome. Sometimes they both wrote and sold the books, and sometimes the sellers employed the writers to write for them, or the writers employed the sellers to sell for them. Publishers as yet did not exist. Practically the only method of publication known consisted of the reading of a work on three days in succession before the heads of the Uni-

versity, or other public judges, and the sanctioning of its transcription and reproduction. . . . As early as 1403 there was already formed in London a society or brotherhood 'of the Craft of Writers of Text-letter,' and those commonly called 'Limners,' or Illuminators, for in that year they petitioned the Lord Mayor for permission to elect Wardens empowered to see that the trades were honourably pursued and to punish those of the craft who dealt disloyally or who rebelled against the Warden's authority. This petition was granted. By 1501 the Company of Stations was established, and it is highly probable that this was only the Brotherhood of Text-writers and Limners under the more general designation. . . . The mediæval booksellers were not all permitted to ply their trade in their own way. Since the supply of books for the students depended on them, the Universities of Paris, Oxford, and elsewhere deemed it their duty to keep them under control, having in view the maintenance of pure texts and the interests of the students, at whose expense the booksellers were not to be permitted to fatten. By the rules of the University of Paris the bookseller was required to be a man of wide learning and high character, and to bind himself to observe the laws regarding books laid down by the University. He was forbidden to offer any transcript for sale until it had been examined and found correct; and were any inaccuracy detected in it by the examiner, he was liable to a fine or the burning of the book, according to the magnitude of his error. The price of books was also fixed by the University, and the vendor forbidden to make more than a certain rate of profit on each volume. Again, the bookseller could not purchase any books without the sanction of the University, for fear that he might be the means of disseminating heretical or immoral literature. Later, it was made obligatory on him to lend out books on hire to those who could not afford to buy them, and to expose in his shop a list of these books and the charges at which they were to be had. The poor booksellers, thus hedged about with restrictions, often joined some other occupation to that of selling manuscripts in order to make both ends meet, but when this practice came to the notice of the University they were censured for degrading their noble profession by mixing with it 'vile trades.' But presumably no such rules as the above hampered the booksellers of non-university towns, such as London. The control assumed by the Universities over the book trade presently extended to interference with original writings and a censorship of literature. With the introduction of printing and the consequent increase of books and of the facilities for reproducing them this censorship was taken up by the church [see PRINTING AND THE PRESS: 1430-1456]. Ecclesiastical censorship, however, was not the outcome of the Universities' assumption of control over the book trade. It sprang from the jealousy of the clergy, who opposed the spread of knowledge among the people—some, perhaps, because they knew that knowledge in ignorant hands is dangerous, and others because they feared their own prestige might suffer. This feeling existed before printing, though printing brought it to a head. . . . As early as 1470 Conrad de Homborch, a Cologne printer, had issued a Bible accompanied by canon, etc., which was 'allowed and approved by the University of Cologne,' and in 1486 the Archbishop of Mentz issued a mandate forbidding the translation into the vulgar tongue of Greek, Latin, and other books, without the previous approbation of the University. Fi-

nally, in 1515, a bull of Leo X required Bishops and Inquisitors to examine all books before they came to be printed, and to suppress any heretical matter. . . . But an ecclesiastical censorship over the English press was not established until 1559, when an Injunction passed by Queen Elizabeth provides that, because of the publication of unfruitful, vain, and infamous books and papers, 'no manner of person shall print any manner of booke or paper . . . except the same be first licensed by her maiestie . . . or by advice of her privy counsel, or be perused and licensed by the archbysshops of Cantorbury and Yorke, the bishop of London,' etc. The Injunction extended also to 'pamphletes, playes, and balletes,' so that 'nothing therein should be either heretical, sedicious, or vnseemly for Christian eares.' Classical authors, however, and works hitherto commonly received in universities and school were not touched by the Injunction."—G. B. Rawlings, *Story of books*, pp. 35-53.

The end of the fifteenth century marks the beginning of modern book-making. It was then that the Gutenberg press at Mainz was completed and movable type came into use. Since that time the general appearance of books has gradually changed and the large sizes used so exclusively during the middle ages were supplanted by the octavo and duodecimo volumes. BORDEAUX, city of France situated in the department of Gironde, the southwestern section of the country. Bordeaux is located on the Garonne river, sixty miles from the sea. The city was originally the chief town of the Bituriges Vivisci. 3rd-6th centuries.—**Commercial importance**. See **COMMERCE**: Ancient: 200-600.

731.—Stormed and sacked by the Moslems. See **CALIPHATE**: 715-732.

1650.—Revolt of the Frondeurs.—Siege of the city.—Treaty of peace. See **FRANCE**: 1650-1651.

1652-1653.—Last phase of the Fronde.—Rebellion of the society of the *Ormée*.—Cromwell's help invoked.—Siege and submission of the city.—“The peace of Bordeaux in October, 1650, had left the city tranquil, but not intimidated, and its citizens were neither attached to the government nor afraid of it. . . . There, as at Paris, a violent element obtained control, ready for disturbance, and not alarmed by the possibility of radical changes in the government. . . . During the popular emotion against Epernon, meetings, mostly of the lower classes, had been held under some great elms near the city, and from this circumstance a party had taken the name of the *Ormée*. It now assumed a more definite form, and began to protest against the slackness of the officers and magistrates, who, it was charged, were ready to abandon the popular cause. The Parliament was itself divided into two factions,” known as the Little Fronde and the Great Fronde—the latter of which was devoted to the prince of Condé. “The *Ormée* was a society composed originally of a small number of active and violent men; and in its organization not wholly unlike the society of the Jacobins. . . . Troubles increased between this society and the Parliament, and on June 3d [1652] it held a meeting attended by 3,000 armed men, and decided on the exile of fourteen of the judges who were regarded as traitors to the cause. . . . The offending judges were obliged to leave the city, but in a few days the Parliament again obtained control, and the exiles were recalled and received with great solemnity. But the *Ormée* was not thus to be overcome. On June 25th these contests resulted in a battle in the streets, in which the society had the advantage. Many of the judges abandoned the conflict and left the city. The *Ormée* established itself at the Hotel de Ville, and succeeded in controlling for the most part the affairs of the city. . . . Condé decided that he would recognize the *Ormée* as a political organization, and strengthen it by his approval. . . . The restoration of the King's authority at Paris [see **FRANCE**: 1651-1653] strengthened the party at Bordeaux that desired peace, and increased the violence of the party that was opposed to it. Plots were laid for the overthrow of the local authorities, but they were wholly unsuccessful. . . . The desire of the people, the nobility, and the clergy was for peace. Only by speedy aid from Spain could the city be kept in hostility to its King and in allegiance to Condé. Spain was asked

to send assistance and prevent this important loss, but the Spanish delayed any vigorous action, partly from remissness and partly from lack of troops and money. The most of the province of Guienne was gradually lost to the insurgents. . . . Condé seems to have left Guienne to itself. . . . In this condition, the people of Bordeaux turned to Cromwell as the only person who had the power to help them. . . . The envoys were received by Cromwell, but he took no steps to send aid to Bordeaux. Hopes were held out which encouraged the city and alarmed the French minister, but no ships were sent.” Meantime, the king's forces in Guienne advanced with steady success, and early in the summer of 1653 they began the siege of the city. The peace party within, thus encouraged, soon overthrew the *Ormée* and arranged terms for the submission of the town. “The government proceeded at once to erect the castles of Trompette and Hô, and they were made powerful enough to check any future turbulence.”—J. B. Perkins, *France under Mazarin*, v. 2, ch. 15.

BORDEN, Sir Frederick William (1847-1917), Canadian minister of militia and defence in the Laurier cabinet, 1896-1911. In 1899 he was active in sending a Canadian contingent to take part in the Boer War.—See also **WAR**, **PREPARATION FOR**: 1909: British imperial defense conference.

BORDEN, Sir Robert Laird (1854-), Canadian statesman. Member from Halifax in Canadian Parliament, 1878, later returned from Carlton; leader of the Conservative opposition, 1901-1911. Premier from 1911 till his resignation, July 10, 1920. Represented Canada in the imperial war cabinet, 1917 and 1918; Canadian representative at the peace conference, 1910.—See also **CANADA**: 1906-1907; 1917: Coalition government, compulsory service bill; 1919: Treaty of Versailles; 1920 (July).

BORDER RUFFIANS, proslavery agitators who crossed from Missouri into Kansas for the purpose of carrying the elections. See **KANSAS**: 1854-1859.

BORDER STATES, a term generally applied to Missouri, Kentucky, Virginia and Maryland, the states on the border between the proslavery

South and the antislavery North. They were slave states, but with the exception of Virginia they did not secede from the Union. Their commercial interests were more like those of the North, whereas socially they were more like those of the Southern states. When the Civil War broke out public opinion in these states was about evenly divided in the matter of secession. President Lincoln's tactful dealing with these states kept them loyal to the Union. If the war at the outset had been made a war against slavery, these states would have seceded. They had favored the Crittenden amendments and during the war they opposed the enlistment of negro troops. In 1862 they sent Republican members to Congress, thus saving the party majority in that body. The northwestern counties of Virginia remained loyal and were admitted as a separate state, West Virginia. Missouri had a governor who favored secession, Governor Jackson, but through the efforts of F. P. Blair, Jr., four regiments of loyal troops were raised and placed under the command of General Lyon. Prompt action of this sort saved Missouri from falling into the hands of secessionists. In all the border states, men enlisted in both armies, Confederate and Union. Sometimes young men from the same family joined opposing armies. Two bodies of Maryland troops, one Union and the other Confederate, contested in an important part of the battlefield at Gettysburg. The military control of the border states after the war was one of the most disagreeable conditions of reconstruction times.—See also U. S. A.: 1861 (March-April); VIRGINIA: 1861 (July).

Boris III, king of Bulgaria (b. Jan. 30, 1894),

eldest son of Ferdinand of Bulgaria. Baptized into Greek Orthodox church. (See BULGARIA: 1895-1896.) Succeeded to the throne, Oct. 4, 1918, on the abdication of his father. (See BULGARIA: 1918.)

BORIS FEDOROVITCH GODUNOV (1552-1605), Russian tsar, descended from an ancient Russo-Tartar family. As a youth he served in the army of Ivan the Terrible and became a favorite at the latter's court. His sister, Irene, was married to the tsar's son Theodore in 1580, and four years later Ivan, on his deathbed, appointed Boris and Nikita Romanovitch as guardians of Theodore, a proceeding rendered necessary by the latter's feeble mentality. Theodore duly became tsar, but throughout his reign of fourteen years Boris was the actual ruler of Russia. On the death of Theodore in 1598, no heir being left to the throne, Boris was unanimously elected by a national assembly to succeed him. He introduced foreign teachers to educate his subjects, founded settlements which have since become important towns and centers, and encouraged migration to Siberia, which territory had not yet developed into a convict land for political and criminal exiles. The romantic career of Boris inspired Pushkin, "the Russian Shakespeare" to write a tragedy entitled "Boris Godunov"; Lope de Vega (1562-1635) also wrote a play on this subject, "El Gran Duque de Muscovia," and Mussorgsky (1839-1881) composed an opera, "Boris Godunov."—See also RUSSIA: 1533-1682.

BORNEO: Country.—"If we consider Australia to be more properly a continent, Borneo is undoubtedly the second island in the world in point of magnitude, for New Guinea alone surpasses it [the inclusion of Greenland would make Borneo the third largest]. Its extreme length is about 850 miles, and its greatest breadth 600. Its compact mass is somewhat pear-shaped, lying in a north-east and south-west direction. It has a coast line of about 3000 miles, without measuring the smaller bays and inlets, and its area is about 290,000 square miles, being nearly three and a half times as large as Great Britain. Extending from 7° 3' N. to 4° 10' S. latitude, and being nearly bisected by the Equator, Borneo occupies a central position amid the greater Malay islands, being, roughly speaking, equally distant from the Philippines on the north-west, from Celebes on the east, from Java on the south, and from Sumatra and the Malay Peninsula on the west. . . . The coast of Borneo is very little indented with bays, and nowhere by deep inlets. The few bays it possesses are towards the north-eastern extremity, where the coast is somewhat higher and more abrupt. As a rule the island is bordered throughout by a considerable width of swamp and lowland, except at a few points where there are high promontories or a small extent of hilly country. . . . Politically, Borneo is divided into four separate territories—British North Borneo or Saba occupying the northern portion, Sarawak the greater part of the north-western, and between them the Sultanate of Brunei, the last two being British protectorates since 1888. The rest of the island belongs to the Dutch, and is over twice as large as the aggregate of the other three territories. The island is, on the whole, very sparsely inhabited. [In 1917 its estimated population was 1,514,503.]"—F. H. H. Guillemard, *Stanford's compendium of geography and travel (Australasia)*, v. 2, pp. 213-214). (See also BRITISH EMPIRE: Extent.) The chief productions of the island of Borneo are: rice, coffee, timber, tobacco, sago, spices and gum. The vegetation of the island

is very luxuriant, and there are over fifty varieties of trees from which timber is obtained.—See also MALAY ARCHIPELAGO: Land.

518-1374.—**Early history.**—"The Pagan tribes of Borneo have no written records of their history and only very vague traditions concerning events in the lives of their ancestors of more than five or six generations ago. But the written records of more cultured peoples of the Far East contain references to Borneo which throw some small rays of light upon the past history and present condition of its population. . . . The coasts of Borneo have long been occupied by a Mohammedan population of Malay culture; this population is partly descended from Malay and Arab immigrants, and partly from indigenous individuals and communities that have adopted the Malay faith and culture in recent centuries. . . . In spite of all the work done on the

Indian potentates became less humble. In the thirteenth and the early part of the fourteenth centuries Bruni owed allegiance alternately to two powers much younger than herself, Majapahit in Java, and Malacca on the west coast of the Malay Peninsula. . . . In the earliest years of the fourteenth century Bruni was a dependency of Majapahit, but seems to have recovered its independence during the minority of the Javan king. . . . In 1368 Javanese soldiers drove from Bruni the Sulu marauders who had sacked the town. A few years later the ungrateful king transferred his allegiance to China, and not long afterwards, with calculating humility, paid tribute to Mansur Shah, who had succeeded to the throne of Malacca in 1374."—C. Hose and W. McDougall, *Pagan tribes of Borneo*, v. 1, pp. 8-16.

1521-1846.—**Dutch and English annexations.**—

BRITISH ENVOY ARRIVING AT THE COURT OF THE SULTAN OF BORNEO TO
NEGOTIATE A TREATY

(From an old print)

history of the East Indies, most of what occurred before and much that followed the arrival of Europeans remains obscure. . . . The first account we have been able to find referring to Borneo is a description of the kingdom of Poli from the Chinese annals of the sixth century. Poli was said to be on an island in the sea southeast of Cambodia, and two months south-east of Canton. The journey thither was made by way of the Malay Peninsula, a devious route still followed by Chinese junks. Envoys were sent to the Imperial Court in A. D. 518, 523, and 616. . . . In the year 977, we are told, Hianzta, king of Puni, sent envoys to China, who presented tribute with the following words: 'May the emperor live thousands and tens of thousands of years, and may he not disapprove of the poor civilities of my little country.' . . . In 1082, a hundred years later, Sri Maja, king of Puni, sent tribute again, but the promise of yearly homage was not kept. Gradually the Sung dynasty declined in power, and the East

Sarawak founded by James Brooke.—**Later history.**—"Sighted by the Portuguese probably in the first years of the sixteenth century, Borneo remained unknown to history till 1521, when the survivors of Magellan's expedition round the globe presented themselves before Bruni. Soon after this event, Jorge de Menezes established a factory on the west coast; the Dutch made their appearance in 1598, and they were soon followed by the English. But all attempts at exploration were successively abandoned. . . . Permanent European settlements on the coast were first made in 1812, when the English occupied Pontianac and Banjermassin, which were two years later surrendered to the Dutch. . . . The Dutch, masters of all the rest of Indonesia, except the eastern half of Timor, have not had time to establish their rule over the whole of Borneo. They have, however, gradually reduced or annexed all the section lying south of the equator, as well as about half of the northern districts.

But possession of the north-west and northern parts has been secured by the English, through various treaties with the Sultan of Brunei, former suzerain of the whole of this region. In 1846 the British government obtained the absolute cession of the island of Labuan, at the entrance of Brunei Bay, despite the protests of the Netherlands. But the sultan had already granted to James Brooke the principality of Sarawak, comprising the southern part of his kingdom."—E. Reclus, *Earth and its inhabitants: Oceanica*, ch. 3.—"Sir James Brooke visited Borneo in 1839, to succeed in carrying out, by his own personal energy, what the great East India Company had failed to accomplish. He founded Sarawak. With the aid of Admiral Keppel he annihilated the dangerous hordes of pirates that infested the western coasts. He successfully stamped out a rising of Chinese, in which operation the native tribes loyally came to his assistance; and he . . . demonstrated, financially and politically, the wisdom of those early Dutch and British adventurers who saw a splendid property in the island of Borneo. [See SARAWAK.] . . . The Dutch claim suzerainty over all the other portions of Borneo that are not occupied by Rajah Brooke in Sarawak, the British North Borneo Company in Sabah and the Sultanate of Brunei. They have established something like a regular government over the coast districts of the west and south. They have Residents in the southern and eastern districts, and their chief town is Pontianak. A native sultan is nominal ruler. They have as yet, however, done nothing in the way of developing this colony compared with their working of other possessions."—J. Hatton, *New Ceylon*, ch. 2.

1865-1890.—**American Ventures.**—**British North Borneo Company.**—**British protectorate.**—"In the year 1865 the American Consul then resident in Brunei obtained certain land concessions from the Sultan, which, though not actually co-extensive with the territory now known as British North Borneo, comprised a very large portion of it. The result was the formation of the American Trading Company of Borneo, and a large number of Chinese having been imported, a settlement was founded on the Kimanis river. The venture was a failure, the Chinese settlement was soon abandoned, and the Company practically ceased to exist. In December, 1877, Mr. Alfred Dent and Baron von Overbeck concluded negotiations with the Sultans of Brunei and Sulu, by which certain territories were granted to them by the latter in fee simple. A provisional company was formed, and a Royal Charter petitioned for. It was granted, and on the 1st of November, 1881, the British North Borneo Company, with an available capital of about £400,000, commenced its existence. Various inland districts and the small Mantanani Islands were acquired later; in 1880 the British Colony of Labuan was placed under the administration of the Company, and finally a British Protectorate, established in 1888, has materially strengthened the position of the country. Brunei and Sarawak being also under British protection, many difficulties with regard to external politics are removed, and trade having steadily improved, the new colony may be said to have a fair chance of ultimately succeeding. The territory thus acquired has, including the islands, an estimated area of 31,000 square miles. It extends from the Sipitong river in Brunei Bay to Sta. Lucia Bay on the east coast, and its coast-line measures about 000 miles. It is thus slightly larger than Ceylon. The Government is administered by a Governor, whose appointment is subject to the approval of the Secretary of State.

There are two Residents and several Assistant Residents. The mode of administration is somewhat similar to that of a British Colony, but the Government require the native chiefs to maintain order and further justice, and with the example of Sarawak before them, have instituted a Legislative Council, composed of the higher European officials and the leading native chiefs. . . . Although British North Borneo as a colony dates only from the year 1882, its growth has, so far, been fairly promising."—F. H. Guillemard, *Stanford's Compendium of geography and travel (Australasia)*, v. 2, pp. 248-250. But a frontier question still remains to be settled between the Dutch government and the North Borneo Company, arising out of a misunderstanding as to the identity of the river Sebuka, which is accepted by both sides as the boundary line. . . . Borneo still harbours many absolutely savage peoples. . . . The great bulk of the inland populations are collectively known as Dayaks [or Dyaks], a term . . . which, for the Malays, has simply the sense of 'wild' or 'heathen.'"

BORNHOVED, Battle of (1227). See SCANDINAVIAN STATES: 1018-1307.

BORNU, a former African sultanate, of which a small portion is included in the Central Sudan and French Equatorial Africa. The greater part is now situated in the British protectorate of Nigeria. The natives, chiefly of Arab and negro blood, are mostly Mohammedans. In the Middle Ages Bornu formed a part of the Kanem monarchy, but became an independent kingdom in the 15th century. Internal disorders broke up the state in the 10th century, and in 1808 the French government incorporated the tributary state of Zinder into a sphere of influence. A British and a German military expedition arrived in 1902. A descendant of the former sultan's was installed as ruler, with Kuka as his capital. The country was divided into East and West Bornu, and a British resident was appointed to advise the chief, who governs under an oath of allegiance to the British crown. The capital was transferred to Maidugari in 1908.—See also NIGERIA, PROTECTORATE OF SUDAN: Development of Sudanese empire.

BORODIN, Alexander Porfyrievich (1834-1887), Russian composer and chemist. He chose the medical profession and was appointed assistant professor of chemistry at the Academy of Medicine, St. Petersburg; became a foremost exponent of the neo-Russian school of music; among his works the opera "Prince Igor" and "In Central Asia" are the most famous. See MUSIC: Folk music and nationalism: Russia.

BORODINO, a village of Russia, seventy miles west of Moscow. On Sept. 7, 1812, Napoleon here defeated the Russians under Kutusov, paving the way to the unopposed occupation of Moscow. See RUSSIA: 1812 (June-September).

BOREVIC or Boroevich.—See BOJNA, BOROEVICH VON.

BOROUGH, CITY, TOWN, VILLE.—"The burh of the Anglo-Saxon period was simply a more strictly organized form of the township. It was probably in a more defensible position; had a ditch and mound instead of the quickset hedge or 'tun' from which the township took its name; and as the 'tun' originally was the fenced homestead of the cultivator, the burh was the fortified house and

court-yard of the mighty man—the king, the magistrate, or the noble.”—W. Stubbs, *Constitutional history of England*, ch. 5.—“I must freely confess that I do not know what difference, except a difference in rank, there is in England between a city and a borough. . . . A city does not seem to have any rights or powers as a city which are not equally shared by every other corporate town. The only corporate towns which have any special powers above others are those which are counties of themselves; and all cities are not counties of themselves, while some towns which are not cities are. The city in England is not so easily defined as the city in the United States. There, every corporate town is a city. This makes a great many cities, and it leads to an use of the word city in common talk which seems a little strange in British ears. In England, even in speaking of a real city, the word city is seldom used, except in language a little formal or rhetorical; in America it is used whenever a city is mentioned. But the American rule has the advantage of being perfectly clear and avoiding all doubt. And it agrees very well with the origin of the word: a corporate town is a ‘civitas,’ a commonwealth; any lesser collection of men hardly is a commonwealth, or is such only in a much less perfect degree. This brings us to the historical use of the word. It is clear at starting that the word is not English. It has no Old-English equivalent; burh, burgh, borough, in its various spellings and various shades of meaning, is our native word for urbes of every kind from Rome downward. It is curious that this word should in ordinary speech have been so largely displaced by the vaguer word tun, town, which means an enclosure of any kind, and in some English dialects is still applied to a single house and its surroundings. . . . In common talk we use the word borough hardly oftener than the word city; when the word is used, it has commonly some direct reference to the parliamentary or municipal characters of the town. Many people, I suspect, would define a borough as a town which sends members to Parliament, and such a definition, though still not accurate, has, by late changes, been brought nearer to accuracy than it used to be. City and borough, then, are both rather formal words; town is the word which comes most naturally to the lips when there is no special reason for using one of the others. Of the two formal words, borough is English; city is Latin; it comes to us from Gaul and Italy by some road or other. It is in Domesday that we find, by no means its first use in England, but its first clearly formal use, the first use of it to distinguish a certain class of towns, to mark those towns which are ‘civitates’ as well as burgi from those which are burgi only. Now in Gaul the ‘civitas’ in formal Roman language was the tribe and its territory, the whole land of the Arverni, Parisii, or any other tribe. In a secondary sense it meant the head town of the tribe. . . . When Christianity was established, the ‘civitas’ in the wider sense marked the extent of the bishop’s diocese; the ‘civitas’ in the narrower sense became the immediate seat of his bishopstool. Thus we cannot say that in Gaul a town became a city because it was a bishop’s see; but we may say that a certain class of towns became bishops’ sees because they were already cities. But in modern French use no distinction is made between these ancient capitals which became bishoprics and other towns of less temporal and spiritual honour. The seat of the bishopric, the head of the ancient province, the head of the modern department, the smaller town which has never risen to any of those dignities,

are all alike ville. Lyons, Rheims, Paris, are in no way distinguished from meaner places. The word cité is common enough, but it has a purely local meaning. It often distinguishes the old part of a town, the ancient ‘civitas,’ from later additions. In Italy on the other hand, città is both the familiar and the formal name for towns great and small. It is used just like ville in French.”—E. A. Freeman, *City and borough* (*Macmillan’s Mag.*, May, 1880).

BOROUGH-ENGLISH, a system prevailing in ancient English boroughs by which the burgage tenement goes to the youngest instead of the eldest son. See FEUDAL TENURES.

BOROUGH-MONGERS.—“By the close of the eighteenth century the practice of bartering influence in boroughs for political favor or money, or the selling of borough seats outright, had become habitual. Commerce in boroughs was an established trade. The ‘borough-mongers,’ as they were called, would buy a seat or a borough with its two seats, to hold for investments as they would stock. They would cultivate the boroughs for sale, buy up all the holdings which gave qualifications and extinguish any rival or independent interest. When they had finally secured complete control of all the franchises in the borough, they would put it on the market, certain of a good price and a handsome advance on what they had paid.”—C. Seymour and D. P. Frary, *How the world votes*, v. 1. p. 88.

BOROUGHBRIDGE, Battle of.—Fought March 16, 1322, in the civil war which arose in England during the reign of Edward II on account of the King’s favorites, the Despencers. Thomas, Earl of Lancaster, the leader of opposition, was defeated, captured, summarily tried and beheaded.

BOSNIA: Geographic description.—Resources.—Bosnia (area 16,206 square miles), is situated in the northwest of the Balkan peninsula. It is bounded on the north by the Save, on the east by the Drina, on the south by Herzegovina and by the main range of the Dinaric Alps along the greater part of its southwest and west borders.

"Bosnia . . . is the Switzerland of the European Orient, but it is a Switzerland whose mountains do not reach the perennial snow and ice. In many respects the mountain ranges of Bosnia . . . resemble those of the Jura. They too are composed principally of limestone, and rise in parallel ridges surmounted here and there by sharp crests. Like the successive ridges of the Jura, they are of unequal height, and taken as a whole, assume the appearance of a plateau traversed by parallel furrows, and gently sloping one direction. . . . The rivers of Bosnia . . . flow between parallel mountain ranges towards the north-east along the furrows traced out for them by nature. But these calcareous mountain ramparts of Bosnia . . . are broken up by narrow gorges, . . . through which the pent up waters find a way from furrow to furrow. . . . Only one river, the Narenta, finds its way into the Adriatic; all others in accordance with the general slope of the country flow in the direction of the Danube. . . . 'Where the rocks finish and the trees appear, there begins Bosnia.' So said the Dalmatians formerly. But many parts of Bosnia have now lost their clothing of verdure . . . yet Bosnia still remains a country of woods. Nearly one-half its area is covered with forests. In the valleys trees have almost disappeared, . . . but in the virgin forests of the mountains trees still abound. . . . Taken as a whole Bosnia ranks among the fertile countries of Europe, and few regions surpass it in the beauty of its rural scenery."—E. Reclus, *Universal geography*, v. 1, pp. 126-129.—Bosnia is rich in natural resources which as yet have been only slightly developed. The mountain ranges contain silver, lead, copper and iron, while the valleys produce various kinds of cereals.—See also BALKAN STATES: Geographic position.

ALSO IN: *Stanford's compendium of geography, Europe*, v. 1, pp. 273-277.

Origin of the name.—Early inhabitants.—Slavonic settlement.—Formation of the banat.—"Bosnia takes its name from Bosna, a tributary of the Save which flows into the Danube at Belgrade. . . . The name of Bosnia first emerges in the seventh century in the midst of the irruption of the Serbs into the countries south of the Danube. . . . So far as the obscure history of those times can be trusted the present Bosnia seems to have been occupied by Croats in the eighth century, and to have formed part of the possessions of the Archbishopric of Spalato. . . . [For the racial composition of Bosnia see BALKAN STATES: Races existing; 7th century; also Map showing distribution of nationalities.] It fluctuated, however, for many years under Croatian and Servian dominion, but in the eleventh century we find a Ban of Bosnia as one of the seven Electors with whom rested the election of a king of Croatia. After the extinction of that dynasty, the king of Hungary in 1102 assumed the crown of Dalmatia and Croatia, and he also called himself King of Rama, which name properly belonged to the present district of Herzegovina, and was derived from the river Rama which flows in it. But it was used indifferently for Bosnia, and we find in old charters the expression *Rex Rhamæ seu Bosniaæ*. For several centuries Bosnia remained a Banat under the dominion of Hungary, and one of the

Bans named Kulin in the twelfth century described himself as *Fiduciarius Regni Hungarie*. He is said to have been the first who coined money in Bosnia, and introduced foreign artificers into the territory. His name is still remembered among the people as marking the era of a distant golden age."—W. Forsyth, *Slavonic provinces south of the Danube*, pp. 75-77.—See also HUNGARY: 1116-1301.

ALSO IN: M. E. Durham, *Twenty years of Balkan tangle*, pp. 135-138.

12th century.—Ban Kulin.—Religious controversies.—During the reign of Ban Kulin (1180-1204) Bosnia enjoyed extended peace and great prosperity. Her silver and iron mines were worked extensively and commerce and agriculture flourished. It was at this time that the supreme influence of religion was first felt in Bosnia. Bosnia had been divided between the Greek and Latin churches. A new religion, destined to play an important rôle in the history of the country, was introduced early in the 12th century. "About this time (1180) some Albigenses came to Bosnia, who converted to their beliefs a large number of the people who were called Catare, in German Patavener. In Bosnia they received and adopted the name of Bogomile, which means 'loving God.' Nothing is more tragic than the history of this heresy. . . . They [the Bogomiles] became in Bosnia a chief factor, both in its history and its present situation. . . . The Hungarian kings, in obedience to the Pope, ceaselessly endeavored to exterminate them, and their frequent wars of extermination provoked the hatred of the Bosnians. . . . In 1238 the first great crusade was organized by Bela IV of Hungary, in obedience to Pope Gregory VII. The whole country was devastated, and the Bogomiles nearly all massacred, except a number who escaped to the forests and mountains.—E. de Laveleye, *Balkan peninsula*, ch. 3.—"They [Bogomils] called themselves Christians, but rejected marriage as an impure institution, forbade intercourse with the members of other religions, prohibited homicide, and in consequence, war, refused to take oaths, professed contempt of riches and obeyed no one but God. It was to this religion, persecuted by the Christians as heresy, because it shook the strong institution of the family and loosened the social bonds in weakening the established power; it was to this abject belief that the ban of Bosnia (Kulin) had the imprudence to be converted. . . . All his family and more than ten thousand of his subjects followed his example and renounced the cult of their ancestors."—P. Coquelle, *Historie du Monténégro and de la Bosnie, depuis les origines*, pp. 80-81 (Translated from French). He was compelled to recant under pressure from the Pope (Innocent III) and from Béla III of Hungary. In 1232 Stephen, successor of Kulin, was dethroned by the native magnates, who chose instead Ninoslav, a Bogomil. Threatened by the Pope he was baptised but returned again to his former faith in 1233. For six years he resisted the Hungarian crusaders.—See also BOCOMILIANS; and HUNGARY: 1116-1301.

1242.—Invaded by Mongols of the Golden Horde. See SERBIA: 1200-1321.

1250-1322.—Period of Hungarian supremacy.—Rule of Croatian princes.—"After the close of Ninoslav's reign (1250), a new period commenced in Bosnia, which may be described as 'the Era of the Hungarian Bans.' The Hungarian kings, having learnt by experience, henceforth entrusted the country to trustworthy men, members of their own house or Hungarian magnates, and abandoned the violent persecution of the Bogomiles. For a

century it was in vain that the Popes urged the renewal of the crusades, until then so common. This epoch of a hundred years' duration, which attained to the zenith of its glory when, by the side of Ludwig the Great, there sat on the throne of Hungary the daughter of the Banus of Bosnia, may be fitly called the period of Bosnia's greatest splendour. Internal peace and prosperity, brilliant feats of arms and an extension of the territory as far as the furthest boundaries of Bosnia, added during this era to the growth of the country, whilst it formed a natural protection to Hungary against the Servian czars, and the powerful Venetian Republic, as well as against the incessant seditions of the Croatian magnates, and constituted a most important pivot to the Hungarian Anjous for all their undertakings upon the Balkan Peninsula."—J. de Asbóth, *Bosnia and Herzegovina*, p. 48.—Direct Hungarian suzerainty lasted until 1299, the bans preserving only a shadow of their former power. From 1299 to 1322 the country was ruled by Croatian princes, who, though vassals of Hungary, united the provinces of upper and lower Bosnia, created by the Hungarians in order to prevent national unity. A rising of the native magnates in 1322 resulted in the election of the Bogomil Stephen Kotromanic.

1322-1353.—Stephen Kotromanic.—"The Banus Kotromanic was already, through his mother, related to the house of Arpad, and therefore also to the Anjous. The king drew this relationship closer by giving him in 1323 a relative, Elizabeth, daughter of the Polish Waywode Kasimir, as wife. During the Wars of Succession, the Servians had succeeded in conquering Chlum. In the year 1325, Banus Stefan again took possession of this place. Moreover, he not only restored his country to its former boundaries, but even enlarged it. To the north of Chlum and the Narenta river, the Venetians owned territory in the Littorale, which reached as far as the river Cetina, the Kraina of those days. . . . Whilst the Venetians were utilising the revolt of the Croats for the conquest of a few coast towns, Stefan seized upon these territories and at once added Kraina, together with her capital, Makarska, to his Banate. Banus Stefan extended his domain still further. In 1326 Charles Robert was again compelled to despatch an army against the mutinous Croats. Banus Stefan joined his forces to those of Hungary. . . . The allied forces pressed on as far as Zara, and conquered the fortresses of the insurgents. . . . Banus Stefan seized the Zupas of Dumno, . . . Hlivno . . . , and Dlamoty from the Croatian rebels, and these were incorporated by Charles Robert with Bosnia. Thus the whole coast from Ragusa nearly as far as Spalato, and the whole of the district lying behind, now formed part of the Bosnian Banate."—J. de Asbóth, *Bosnia and Herzegovina*, pp. 51, 52.

1342-1442.—Conquest by Hungary. See HUNGARY: 1301-1442.

1376-1391.—Establishment of the kingdom.—"Stephen Kotromanic died in 1353, and his nephew Tvrtko succeeded him. Tvrtko is the greatest name in Bosnian history, and his long reign of nearly forty years, first as *ban* and then as first king of Bosnia, marks the zenith of that country's power. Beginning his career under circumstances of great difficulty, and even driven at one moment from his throne, he lived to make himself king not merely of Bosnia, but of Servia, Croatia, and Dalmatia as well, and to unite beneath his sceptre a vast agglomeration of territory, such as no other Bosnian ruler had ever governed. The first seventeen years of his reign

were spent in a desperate but successful struggle for the mastery of his own house. He was a mere boy at the death of his uncle, and his mother, who acted as regent, was too weak to cope with the disorders of the time. The magnates, many of whom were zealous Bogomiles, were contemptuous of one who was both a child and a catholic, while they would have welcomed the great Czar Dusan, had he found time to repeat his invasion of Bosnia. But the death of that monarch . . . in 1355 broke up the Servian empire for ever, and removed all fear of a Servian occupation of Bosnia. Louis the Great of Hungary had welcomed the growth and independence of Bosnia so long as the Servian empire existed as a menace to his own dominions, but, as soon as the empire fell, he revived the ambitious designs of his predecessors upon the Bosnian realm. . . . He compelled him (Tvrtko) to surrender Herzegovina and to take a solemn oath that he would persecute the Bogomiles, that he would support Hungary in war. . . . In return he allowed him to remain Bosnian *ban*—a mere puppet without power. . . . Determined to be doubly sure of his vassal, he incited the Bosnian nobles to revolt against their chief. . . . Aided by his brother (Vuk), they deposed and drove out Tvrtko in 1365, and it cost him a desperate struggle to recover his power. . . . At last Tvrtko prevailed and in 1370 he was undisputed master of the country. . . . Freed from all fear of Louis, . . . and master of his rebellious barons, Tvrtko began to extend his dominions. The decline of the Servian empire gave him the opportunity which he sought. Lazar, . . . governed a remnant of that realm. Tvrtko aided him against his domestic rivals and received in return large portions of Servian territory. . . . In virtue of this territory he considered himself the legitimate successor of the Servian monarchs, and . . . had himself crowned in 1376 . . . with two diadems, that of Bosnia, and that of Servia. Henceforth he styled himself 'Stephen Tvrtko, king of the Serbs and of Bosnia and of the Coast.' All his successors invariably adopted the Servian title, and like the Servian monarchs, invariably adopted, as Tvrtko had done, the royal name of Stephen."—*Bosnia before the Turkish conquest* (*English Historical Review*, v. 13, 1898, pp. 658-660).

ALSO IN: J. Asbóth, *Bosnia and Herzegovina*, pp. 61-66.

In 1382 Louis died and his widow Elizabeth became regent. This together, with an outbreak in Croatia, was the opportunity Tvrtko needed to fulfil his design of establishing a maritime state. Aided by Venetia, he took from Hungary the entire Adriatic littoral between Fiume and Cattaro, except Zara. The battle of Kossovo (1389) (see TURKEY: 1360-1389) did not react at once on Bosnia itself and on Tvrtko's death (1391) Bosnia was still at the summit of its prosperity.

1391-1444.—Decline of the Bosnian kingdom.—"The evil effects of Tvrtko's death were soon felt. His younger brother, Stephen Dabisa (Stephen II., 1391-1398), who succeeded him, felt himself too feeble to govern so large a kingdom, and in 1393 ceded the newly won lands of Dalmatia and Croatia to King Sigismund of Hungary. The two monarchs met in Slavonia, and concluded an agreement by which Sigismund recognized Dabisa as king of Bosnia while Dabisa bequeathed the Bosnian crown after his death to Sigismund. . . . Dabisa broke the treaty. . . . An Hungarian invasion of his kingdom . . . at once reduced him to submission, and a battle before the walls of Knin, in Dalmatia, finally severed the brief connexion between that country and the Bos-

nian throne. . . . The Turks . . . invaded Bosnia for the first time in 1392, and gave that country a foretaste of what was to come. On Dabisa's death in 1395 the all powerful magnates, disregarding the treaty, made his widow, Helena Gruba, regent for his son. But they retained for themselves all real power. . . . One of their number, Hrvoje Vukcic, towered above his fellows. . . . For the next quarter of a century Bosnian history is little else than the story of his intrigues. . . . The great Turkish invasion, which took place in 1398 and almost ruined Bosnia, convinced the great nobles that a woman was unfitted to rule. . . . They deposed Helena Gruba and elected Stephen Ostoja (illegitimate son of Tvrtko) as their king."—*Bosnia before the Turkish conquest* (*English Historical Review*, v. 13, 1898, pp. 662-663).

ALSO IN: J. Asbóth, *Bosnia and Herzegovina*, pp. 66-81.

As long as he obeyed the nobles, Stephen Ostoja kept his throne. Some of the nobles upheld Tvrtkovic, legitimate son of Tvrtko and all took sides in an incessant feud between Bogomiles and Roman Catholics. During the reigns of Ostojic (Stephen IV, 1418-1421) and Tvrtkovic (Stephen V, 1421-1444) Bosnia was left an easy prey to the Turks who ravaged the country, carried off a vast amount of plunder, and many thousands of slaves and exacted a yearly tribute.

1453-1528.—Turkish conquest.—"Muhammed II. had, on May 29th, 1453, to the terror of all Christendom, taken Constantinople by storm. Passing from triumph to triumph, he had within a year overthrown all the Grecian, Albanian, and Servian States, and in 1454 called upon George Brankovitch to surrender his entire country to him. The Despot saw no alternative but to hand over Servia without striking a blow for it, and to flee to Hungary and petition John Hunyady for help. The result of this was, that Muhammed's troops, who had until then proved irresistible, were in 1455 compelled by the Hungarians under Hunyady to retreat from Servia. Mad with rage, Muhammed, in 1456, advanced against Hungary . . . but was again, and this time completely, beaten by Hunyady and the Monk Capistran, under the walls of Belgrade. . . . Possessed by the enthusiasm which this victory of the Hungarian arms called forth throughout Christendom, Thomas Ostojitsh (Stephen VI, 1444-1461) not only declined to surrender his fortresses, but also withheld the stipulated tribute from the Porte, and proclaimed a crusade against the Turks. The Pope instructed his legate to forward a third of the moneys collected for the crusade to the King of Bosnia. King Thomas did in 1458 conquer a few of the districts lying on the borders of Bosnia and Servia; but as the action of Hungary was crippled by the intervening death of John Hunyady and of King Ladislaus, and as King Thomas's emissaries, whom he sent to the Venetian Republic, to Milan, Burgundy, and Naples in succession, brought him no assurances of assistance, Thomas concluded a peace with Muhammed, and even renewed his promises of tribute. [See TURKEY: 1451-1481.] King Thomas's position had meanwhile steadily improved. He had punished the Bogomilian barons; he had made peace with Turkey; the matters in dispute with Croatia were drawing to a close, whilst he relinquished his ideas of a Croatian marriage; Duke Stefan kept quiet, if not exactly in obedience to a command from the Pope, yet under the impression produced by Hunyady's victory. Thomas had, however, gained most in Servia. True, he was still at war with Brankovitch in

1455; but the Despot died in the course of the following year, and Thomas, in view of their common danger from Turkey, entered into such a close alliance with his son, that his own son Stefan Tomashevitch betrothed himself to Jelatsha, daughter of the Despot Lazar, and thereby not only succeeded to the reversion of the provinces that had been torn away from Bosnia, but also acquired land in the Servian Despotate, and the whole of the Despot's Hungarian possessions. . . . [See also HUNGARY: 1442-1458.] Semendria, the most important fortress on Servian-Hungarian borders, was wrenched from the weak hands of Stefan Tomashevitch (Stephen VII, 1461-1463) by Muhammed II, hardly a blow having been struck for it, and by its fall . . . Servia fell into the hands of the Turks. The whole of Christendom . . . accused Thomas and his son of treachery. The King of Bosnia sent in his own justification a deputation to the Pope, which was, however, tampered with by Mathias (King of Hungary), as he believed that the Bosnian embassy had been sent to Rome to solicit a crown. . . .

"Meanwhile, the Turks were pressing more and more heavily upon the King of Bosnia. Whilst Mathias was carrying on a correspondence with the Pope, and was waging war with the German Emperor Frederick III., the Bosnian king was compelled to grant a passage through to Hungary to Hassan Pasha, who appeared at the head of a Turkish army. Thomas renewed his offer to Venice of the whole of his kingdom, if it would only send him aid; but in spite of this, Venice confined itself to expressing the hope that Thomas would, after the example of his ancestors, be himself in a position to maintain the integrity of his kingdom through his own wisdom and with the help of God. . . . Finally, in the year 1460, the new Croatian Ban Paul Sperantsevitch attacked the arraigned King of Bosnia, and in this war Thomas met with his death on July 10th, 1461. According to the Croatian chronicler he died by the hand of his own son, and of Knez Radivoj. And now we come to the last king, and to the final catastrophe. One of Stefan Tomashevitch's [Stephen VII, 1461-1463] first acts as a ruler was the utterance of a cry of despair to the Pope. . . . Muhammed now, in order to obtain an opinion of the situation at first hand, at once despatched a special messenger to Bosnia to gather in the tribute, and his envoy being abruptly dismissed, Muhammed began to prepare for war. . . . This much appears certain, that King Stefan had been terrified by the Sultan's preparations for war, and that, seeing he must not count too much upon any friendly support, had petitioned for a longer truce, which, according to the chronicles, was to be of fifteen years' duration. . . . The Sultan . . . pressed forward with one hundred and fifty thousand cavalry, and innumerable foot soldiers and auxiliaries. One portion of the army, under the command of Ali Beg Pasha of Servia, took the direct road towards Hungary, whereby the King of Bosnia was still deceived, and his fears to a certain extent allayed. But Mahomed Pasha fell, with a body of twenty thousand light cavalry, upon the Bosnian Drina territory, and the Sultan followed up this opening attack with the main army. Muhammed conquered the Podrinje, and caused the Waywode there to be beheaded; he then drew up before the walls of Bobovatz, and on the 10th of May commenced the siege of this stronghold. Bobovatz, which had survived so many sieges, would have proved defensible on this occasion too, had not the commandant . . . been, in secret, a Bogomile, who had only embraced the Catholic faith under

compulsion, and he surrendered the fortress on the third day of the siege. . . . King Stefan, who had relied upon the resistance of Bobovatz, had intended to await the junction of his own forces with those urgently solicited from abroad, in Jajzta. But, after the terrible news of the fall of Bobovatz, together with the news that most of his magnates were offering no resistance whatever to the Sultan, he quitted Jajzta in haste . . . and endeavoured to escape to Hungary. In the midst of his flight, . . . Mahomed Pasha's light horse overtook him. . . . On the fourth day, Stefan Tomashevitch surrendered himself, after having received an undertaking in writing from Mahomed Pasha in which he swore, in the name of the Sultan, that the king should not be subjected to ill-treatment. With this ended all resistance to Muhammed. Within a single week the Sultan took seventy towns and fortresses. . . . He condemned one hundred thousand prisoners to slavery, and thirty thousand youths he placed among the Janizaries. In spite of their letters of indemnity, he commanded that King Stefan Tomashevitch and Radivoj and his son should be beheaded. . . . Queen Maria, many of the magnates, and a large number of the people—their descendants, are still called 'Dalmatians' (q.v.) . . . fled into Hungary."—J. de Asbóth, *Bosnia and Herzegovina*, pp. 89-95.—The greater number of the magnates, however, who had left the Bogomilian faith only under compulsion, now willingly abandoned the Catholic religion and went over to Mohammedanism, a change of belief which was to them all the easier from the fact that they could find in their new belief many points of resemblance to their old religious convictions, which had also rejected the cross, baptism, ecclesiastical pomp, ceremonial, the hierarchy, and the sacrament of marriage. The Queen-Dowager Katharina, stepmother to King Stefan, fled to Rome. She bequeathed the kingdom of Bosnia to the Pope, should her children not return to the arms of the Church; for these, too, had fallen into the hands of Muhammed, and had embraced the Mohammedan faith.

"A Turkish Vizier was appointed to administer the government and he took up his residence at Bosnia Sarai, now generally called Serajevo. But the Kings of Hungary had never given up their pretension to be considered lords of Bosnia, and almost immediately after the Sultan had quitted the country which he had so cruelly ravaged, Matthias Corvinus, King of Hungary, marched into Bosnia and made himself master of many of the towns and fortresses in spite of the strong opposition of the Turks. From this time forward for upwards of sixty years Bosnia was divided between two contending powers of Hungary and the Ottoman Porte, and was the scene of constant struggles between the hostile camps. But the Crescent prevailed against the Cross, for the King of Hungary was too weak to defend the extremities of his kingdom. In the year 1527, the whole of Bosnia had fallen into the hands of the Turks. [See TURKEY: 1402-1451.] One remarkable effect of the conquest of Bosnia by the Turks was, that a considerable part of the population embraced the Mussulman religion. We must never forget this when speaking, not only of the Bosnians, but also of other Mussulmans in Turkey in Europe. They are not Osmanlis—not of the same race as those fierce Orientals who crossed the Bosphorus, and made subject to their sway some of the fairest regions of the earth."—W. Forsyth, *Slavonic provinces south of the Danube*, pp. 70-80.

1528-1875.—Turkish rule.—"After the fall of Jajzta, the great families who owed allegiance to

the Hungarian crown . . . left the country. With them fled a great part of the population, especially the Catholics. . . . That part of the population which had not fled was partly destroyed in the wars, partly dragged into slavery; the boys were led away in troops to be retained as eunuchs and janizaries;—the residue, however, those, who remained true to the Christian faith, . . . deprived of all their goods and chattels, rapidly sank into the poverty-stricken ranks of the serfs. The Bogomils, however, with the old Bogomilian aristocracy at their heads, . . . went over to Islam in a body, and were received with open arms by the new rulers."—J. de Asbóth, *Bosnia and Herzegovina*, p. 135.—This Turkish triumph was the opportunity of the Bogomils, who controlled the destinies of their country for nearly three centuries. The prospect of a brilliant military career, and the desire for vengeance against the Hungarians (hatred of the Hungarians and their religion was hereditary among the Bogomils) caused many of the native nobility to go over to Islam. The vali (Turkish governor) was the nominal ruler of the country. He rarely interfered in local affairs. This newly converted Moslem aristocracy ranked below him. "The governing classes had, through centuries of Turkish rule, and through constant war, fruitful in renown and booty, undertaken in behalf of the Koran, become absolutely Mohammedan, and deeply impregnated with that pride of Islamic worship which gazes down with contempt upon Christians. . . . Yet in spite of all this, the nobility remained true to its heirloom of national and family traditions, as to its speech; and in local importance not only took precedence of the Turkish strangers who had settled in their midst, were these never so equipped with absolute power and riches—for country folk universally prize the old lord, even when ruined, far above the new upstart—but with the peculiar strength of the national aristocracy it forthwith even assimilated the Turkish families who were permanently settling there."—J. de Asbóth, *Bosnia and Herzegovina*, p. 140.—The Bosnian Bogomilian barons dwelt in fortified towns or castles (the vali was only admitted on sufferance for a few days), and formed a separate military caste, headed by forty-eight *kapetans*—landholders exercising unfettered authority over their retainers and Christian serfs—but were bound in return to provide a company of mounted troops for the service of their sovereign. "We see the feudal system: a chivalrous noble, always prepared for battle, living partly in the capital, where he tolerates no outside authority, no, not even that of the governing vizier, besides him; partly in his castle, always fortified against attack, and where he exercises an undisputed regal authority, and divides his life between the chase, and carousing . . . whilst the *misera contribuens plebs* battle against life's miseries in dull subjection. . . . Thus it came to pass that the aristocracy of the Bosnian Bogomilian barons, who had gone over to Islam, were maintained intact and unharmed. Ceaseless conquest kept the Sultans too fully occupied for it to be possible for them to pay much attention to internal organization. Accordingly they, like the Romans, accepted the institutions which they found in force . . . , provided that, and for as long as, they agreed to their plans of a world-wide conquest. . . . The central government was thus relieved of all local trouble."—J. de Asbóth, *Bosnia and Herzegovina*, pp. 132-134.

ALSO IN: E. de Laveleye, *Balkan Peninsula*, pp. 103-107.

We have these conditions existing until the nine-

teenth century. The Turks in the meantime had involved Bosnia in a series of wars against Venice, Austria and Hungary. In 1683 the Turkish army was defeated at Vienna. Zornik fell before the Austro-Hungarian army in 1688. Serajevo was burned in 1697 by Eugene of Savoy. By the treaty of Passarowitz (1718) (see HUNGARY: 1699-1718) a part of Bosnia was ceded to Austria by the Turks. In 1739 this territory was restored to the Turks at the peace of Belgrade (see RUSSIA: 1734-1740), but in 1790 the Austrian troops re-occupied it. The treaty of Sistova (1791) again fixed the line of the Save and Una as the frontier of Bosnia.

1849-1875.—Christian uprisings.—“The ebb tide of the Turk had begun. Austria and Russia in the eighteenth century had already decided upon the partition of his lands. Russia thought and cared only for Constantinople and the way there. Bosnia was recognized as Austria's sphere. The long wars and the liberation of the Serbs had effect in Bosnia and Herzegovina. Revolts, largely agrarian, of the Christians began to take place. The big landowners, though Slavs, were Moslems. Their peasants were largely Christian. In 1849 a great rising [occurred] followed by the flight of thousands of Christian peasants into Austria, who in time of stress has often been the South Slav's only friend. The Herzegovinians, encouraged and incited by the Montenegrins on their borders, rose frequently, and it was their great rising of 1875 which started the Russo-Turkish War of 1877. Before declaring war, however, Russia came to an agreement with Austria about Bosnia. It was understood that Austria should receive Bosnia on condition that she took no part in the war.”—M. E. Durham, *Twenty years of Balkan tangle*, pp. 144-145.

1875-1878.—Breaking of Turkish yoke.—Russo-Turkish war. See TURKEY: 1861-1877; 1877-1878; 1878.

1878.—Treaty of Berlin.—Austro-Hungarian occupation of Bosnia. See BOSNIA-HERZEGOVINA: 1878; TURKEY: 1878.

1878-1920. See BOSNIA-HERZEGOVINA.

BOSNIA-HERZEGOVINA. —“Bosnia and Herzegovina are situated in the northwest corner of the Balkan Peninsula, bounded on the north by the Slavonian province of Austro-Hungary [1908], on the east by Serbia, Turkey and Montenegro, and on the south and west by Dalmatia and the Adriatic Sea. The country is mountainous, being broken by high peaks, deep glens, and rich alluvial basins, which yield large crops of grain—wheat, barley, rye, oats and other cereals—and are especially adapted to fruit. The landscape is a series of terraces which slope gradually in a southwestward direction and finally disappear in the Adriatic, which coast is broken into an archipelago of lovely islands.”—W. E. Curtis, *Turk and his lost provinces*, pp. 276-277.—In 1920 the population was estimated at 1,931,802 to an area of 20,709 square miles.

ALSO IN: J. de Asbóth, *Bosnia and Herzegovina*, pp. vii-viii.

Originally part of the Turkish empire, the two provinces were placed under Austrian administration by the Congress of Berlin and in 1908 were definitely annexed by Austria, contrary to the agreement made at that Congress. Together they cover about 19,700 square miles. For history before Austro-Hungarian occupation see article on BOSNIA and article on HERZEGOVINA.

1878.—Treaty of Berlin.—Turkish loss.—Significance of the Austro-Hungarian occupation.—By the Treaty of Berlin . . . “Bosnia, including Her-

zegovina, was assigned to Austria for permanent occupation. Thus Turkey lost a great province of nearly 1,250,000 inhabitants. Of these about 500,000 were Christians of the Greek Church, 450,000 were Mohammedans, mainly in the towns, who offered a stout resistance to the Austrian troops, and 200,000 Roman Catholics. By the occupation of the Novi-Bazar district Austria wedged in her forces between Montenegro and Serbia, and was also able to keep watch over the turbulent province of Macedonia.”—J. H. Rose, *Century of continental history*, ch. 42. See TURKEY: 1878.

ALSO IN: E. Hertslot, *The map of Europe by treaty*, v. 4, nos. 518, 524-532.

1878-1908.—Austro-Hungarian occupation.—“The situation with which Austria had to cope in 1878 was one of immense difficulty. The country was in a state of anarchy and insurrection, and although the latter came to an end after a few months of desperate resistance, yet the work of pacification was far from completed. At this time, according to the *Vicomte de Caix*, nothing was secure—neither ‘the fruits of labour, nor property, nor persons.’ After four years of occupation order was established in a country which had never been fully quelled by four centuries of Turkish rule. A slight insurrection occurred in 1882, attributed by Miller to the Mussulman dislike of serving under Christians, but acknowledged by Herr von Kallay to have been aggravated by undue exactions by the lower officials. This proved to be the last flare of the revolutionary spirit, and from that time public security has remained undisturbed. Brigandage and crimes of violence, before a daily occurrence, sank to zero. . . . On their arrival the Austrians were besieged by Christians, who demanded the restitution of the lands alleged to have been seized by the Mussulmans, and even urged a general division of the soil. Investigation, however, proved that, if this robbery had ever taken place, it dated centuries back, and the authorities therefore resolved to make the best they could of the existing law, without risking one of those agrarian revolutions which redress an old wrong by committing a new one.

“Another complication lay in the fact that, in addition to the Mussulman element, there were two distinct parties among the Christians to be reckoned with—the Orthodox and the Roman Catholics. The settlement of the religious question occupied the immediate attention of the administration. In 1879 a convention was concluded between Austria and the Sultan, declaring that all those who shall be domiciled in Bosnia and the Herzegovina shall enjoy complete liberty in the exercise of their religion. Following up this edict of toleration, a concordat was drawn up between Austria and the Patriarch at Constantinople as regards that Greek or Serb Church which is so identified with the nation that it is true to say that ‘*en Bosnie, qui dit Orthodoxe, dit Serbe, et réciproquement* [in Bosnia to be Orthodox is to be Serbian, and vice versa].’ It was arranged that in the future nominations to the Bosnian bishoprics should first be submitted to the Emperor for ratification; further, that the remuneration of the Bishops should be placed on a different footing. The old casual donation—the *Vladitcharina*—which fluctuated according to the popularity of the recipient, was abolished, and the offering was levied as a tax, the Bishops receiving a definite revenue.”—G. Drage, *Austria-Hungary*, pp. 603-604.—See also BALKAN STATES: 1878; and AUSTRIA: Map showing Hapsburg possessions.

“The agrarian question is one of paramount importance in Bosnia-Herzegovina, where, accord-

ing to the last census (1895), 88 per cent. of the whole population are engaged in agriculture. The present agrarian system is based upon the Turkish law of Sefer 14, 1270 (September 12, 1859)—a land reform Act forced upon the Ottoman Government by popular insurrection and Austrian pressure. It has much in common with the metayer system. The landlord, or *Aga*, and the cultivator, or *Kmet*, share between them the produce of the soil in a proportion fixed by the custom of the village. The *Kmet* further pays one tithe to the Government, but in cash instead of in kind, as formerly under the Turkish Government. The unlimited *corvée* and the *don des femmes* was abolished with the advent of the Austrian Government. In Turkish times the administration was bad, and the collection of the tithe depended, in fact, on the presence of a military force, as otherwise it was refused. When the Austrian converted the payment in kind into a payment in money, the landlord took the Government assessment as the basis for calculating what was due to him. In this respect the *Kmet* doubtless was worse off. The tithe due to the Government had to be paid regularly, and the landlord's due, whether a third (*Tretina*) or a fourth or a fifth, had also to be paid regularly. Recently, by an Act of 1907, the Government converted the tithe into a tax levied on the basis of ten years' harvest. This was a great advantage to the tenant, who often lost part of his harvest by waiting for the arrival of the Government assessor. But the landlord was not obliged to accept the basis of assessment, and therefore still levies his dues on each individual crop, and the dues have to be calculated before harvest. The result is an enormous increase in disputes between landlord and tenant. In 1881 there were 4,555 agrarian disputes, in 1904 there were 10,784, but in 1907 there were 17,000—almost, as Dr. Baernreither says, a state of civil war. The fact is that the tenant has become more progressive, and payment in kind is always a hindrance to intensive agriculture. The solution lies, undoubtedly, in the conversion of the tenant into the owner, a process which has been in progress for some time, and which is supported by loans from the Government; but so far the permission of the landlord is necessary, and that, of course, is not always given. At present [1909] there are in Bosnia-Herzegovina 88,070 tenants pure and simple who have only land subject to dues. There are 22,655 'mixed' tenants, who not only hold land subject to dues, but also land which is freehold. The total number of tenants is 101,625, and of these 23,477 have bought their property out and out. At the rate at which this process is working out, two more generations will be required to complete it. Hitherto there have been two obstacles to accelerating purchase. The first is the want of economic training of tenant and landlord alike. The former would not have known how to manage the property, and the landlord, being not only ignorant of business, but also forbidden by Mohammedan law to put out money at interest, would have wasted the purchase-money. The other obstacle lay in the question where the money was to be found, which was decisive. At the present time, then, the questions which have to be settled by fresh legislation are these: When the landlord refuses to sell to a tenant perfectly well able to buy, shall he be compelled by law to do so? and if so, who is to determine the price? Dr. Baernreither proposes that the example of the Irish Land Act of 1881 shall be followed. In any case, the solution of the land problem is a matter of most pressing urgency, even if one does not go so far as Dr. Baernreither, and call the land prob-

lem 'that Bosnian question *par excellence*.' It is to be added that one of the ablest and most liberal-minded Austrian administrators that I met in Bosnia in 1908 informed me that for this purpose alone annexation of the provinces to Austria-Hungary was necessary, because a Government which was to solve the difficulty must do so without the possibility of appeal to Powers outside. The reform must come from within, and the Bosnians must themselves have a share in the responsibilities of making it by means of proper representative institutions. The preparatory work required to fit the tenant for entering on his work as a freeholder has been going on from the time of the occupation. Better methods of cultivation have been taught, model farms have been erected, the cattle plague has been stamped out, and the breed of cattle has been improved. In fact, the Government has been active in every measure that could tend to improving the position of the agriculturist, as the British Foreign Office Reports abundantly show. Moreover, help has been given to meet unexpected disasters. . . .

"Bosnia is famous for the cultivation of the plum in districts where the climatic conditions essential to success—namely, cool moist nights, a warm temperature by day, and a chalky soil—are to be found. Plums were, indeed, for long the article of commerce which brought the most money into the country. The plum harvest is spoken of as affecting the whole population, 'as everyone who has but a few yards of ground grows plums, if nothing else.' Now, however, according to Barre, the Government have taken up the manufacture of plum brandy, and the right to manufacture brandy, 'one of the chief sources of revenue of the peasant, has been withdrawn.' Tobacco is to the inhabitants of the Herzegovina what the plum is to the peasants of Bosnia—the one all-important crop and article of commerce. Tobacco is a Government monopoly, but a monopoly which has proved a boon, and has given a great impetus to this branch of agriculture. The peasants know they have a certain market for all the tobacco they can grow, and, although the price paid to growers had diminished by 1904, the peasants still find it worth while to grow a crop, and the cultivation is actually increasing. At the date of the occupation, cattle of all kinds had decreased greatly both in number and in quality. Years of war and insurrection had exhausted the once famous breed of horses. The administration began by stamping out the cattle plague; after 1886 special attention was paid to the breeding of cattle, and some very successful crosses were made. The Government has also instituted studs for horse-breeding, and there are horse-shows to encourage this industry. 'Everything,' says the Foreign Office Report, 'is done to improve the breed of horses in the provinces.' In consequence of the isolated condition of Bosnia and the Herzegovina, and the disturbed state of the provinces before 1878, industry and commerce were carried on there under great difficulties. Since the occupation, however, the improved administration, greater security, and development of communication, have effected a remarkable revolution in the trade of the provinces, and have brought them into close touch with the commerce of the world in general. The construction of roads, the steady annual extension of the railway net, the establishment of factories, and the consequent increased demand for raw produce, tend to develop agriculture.

"The trade of the provinces largely depends upon agrarian conditions—upon the harvest and the health of the cattle—but in recent years new fac-

tors begin to appear, and in 1904 the improvement in commerce generally was attributed partly to briskness in the timber trade. Three salient features have to be noted with regard to the commerce of Bosnia and the Herzegovina; first, the great preponderance of manufactured goods in the imports, and of raw materials in the exports; secondly, the increase in the total exports of both categories; and, finally the increase in the import of manufactures, and the decline in the export of raw material. In recent years a rapid increase has taken place in the volume of certain imports, among which are sugar, petroleum, and beer, all articles which in 1897 were produced in sufficient quantities in the country to all but cover the home demand. The exports which show the greatest expansion in recent years are timber, iron, chemicals, skins, spirituous liquors, meat, eggs, lubricating oil, and ores. Direct trade with foreign countries is still very small, and statistics with regard to the countries of origin and destination are vague and scanty. With little variation from year to year, 80 per cent. in quantity of the imports enter by Slavonia and Croatia, and the remainder by Dalmatia. The exports by way of Croatia-Slavonia have gradually fallen in eight years from 87 to 71 per cent., while the proportion by way of Dalmatia has risen from 13 to 29 per cent., this last increase being largely due to the railway recently built to Gravosa, the inclusion of Bosnia and the Herzegovina in the Austro-Hungarian trade, but Great Britain lost thereby an annual trade of more than £100,000, the importation from the United Kingdom of cloth, woolen goods, and copper, having almost entirely ceased. The development of communications which have such an important influence upon trade may be judged from the fact that there were in 1906 1,014 miles of railway, 1,908 miles of telegraph-lines, and 4,580 miles of wire. There were 156 telegraph-offices and 708,253 messages were transmitted. The telephone service had 56 miles of line and 305 miles of wire. In 1906 there were transmitted 16,742,330 letters and postcards, and 5,400,000 packets of printed matter, samples, and newspapers. Bosnia-Herzegovina is, as we have seen, largely agricultural, yet the wealth of the country in forests and minerals gives promise of industrial development which the Austrian administration has done its best to forward. Salt-mining, now a profitable Government monopoly, was never properly administered by the Turks, as the officials in charge of the salt works found it more profitable to themselves to keep the output low, and to eke out their salaries at the expense of the Government. All this was changed under Austrian management, and Bosnia no longer requires to import salt from the Dalmatian sea-coast. Salt production rose from 18,576 quintals in 1885 to 226,710 quintals in 1906. The mining of iron, copper, manganese, chromium, quicksilver, and coal, is also carried on. In 1906 the output of coal was 594,172 tons, of iron ore 136,513 tons, of manganese 7,651 tons, and 2,626 miners were employed. The timber trade, too, has been developed, and several large and small sawmills are now flourishing. There were already in 1894 the following factories at work, all of which were founded after the occupation: at Serajevo factories for brick, carpet, gold lace, inlaid wood, and encrusted metal work, nails, and brewing; at Zeniko, iron and steel, and paper works; at Brod, a petroleum refinery; at Tuzla, a distillery; at Usora, sugar factories. There were steam-sawmills at Podwitz, Hadzici, Doberlin, etc.; iron works and foundry at Vares; and there were tobacco factories at Mostar, Travnik, and

Banialuka. Many of these enterprises were started by the Government; in others the Government is pecuniarily interested. In 1902 a commencement was made with regulations of factory labour, and also with a system of insurance against sickness and accident. Some of the factories and industrial enterprises have not proved successful, but some, and especially the breweries, have made good profits. Not the least successful part of the activity of the government has been that connected with the revival of native industries. With this object the Government has set up an art workshop and school at Serajevo (q. v.) where beautiful work in metals and wood is turned out. The Government carpet factory, which gives employment to 600 women, also produces fabrics of great beauty, comparing favourably with those of Brusa and Constantinople. The Bosnian native products, indeed, made a very good show at the Millennial Exhibition at Buda-Pest (1897), and at the Industrial Exhibition at Brunn. The detractors of the Austrian administration have three grievances with regard to the development of commerce and industry, and bitter complaints are made with regard to the predominance of Austrians, and especially of Jews, in these new fields of activity, to the detriment of the Serbian race. There is some show of reason for these complaints as far as the Jews are concerned, for they have poured into the country since the occupation, and are as much detested here as elsewhere in Austria-Hungary. Moreover, out of 679 scholars of the nine commercial schools in Bosnia-Herzegovina, no less than sixty-four are Jews. The industrial ring, or *Kon-sortium*, which controls the brewing and other industries, is also an object of attack, and it is alleged that unfair favouritism is shown to this association. The reply of the Government is, obviously, that the Bosnia nationality is not yet competent to undertake the work, that competent natives always receive equality of opportunity, and that the Government is doing its best, by technical education, to develop the business capacity of the native population."—G. Drage, *Austria-Hungary*, pp. 616-626.

1908.—Annexation by Austria-Hungary.—“On October, 3, 1908, Emperor Francis Joseph of Austria-Hungary announced, through autograph letters to various rulers, his decision to incorporate Bosnia and Herzegovina definitely within his empire. These were Turkish provinces, handed over by the Congress of Berlin in 1878 to Austria-Hungary for ‘occupation,’ and administration, though they still remained officially under the suzerainty of the Porte. On October 5, 1908 Prince Ferdinand of Bulgaria proclaimed, amid great ceremony, the complete independence of Bulgaria from Turkish suzerainty, and assumed the title of Czar. Two days later the Greek population of the island of Crete repudiated all connection with Turkey and declared for union with Greece. On the same day, October 7, Francis Joseph issued a proclamation to the people of Bosnia and Herzegovina announcing the annexation of those provinces. Against this action Serbia protested vigorously to the powers, her parliament were immediately convoked, and the war spirit flamed up and threatened to get beyond control.”—C. D. Hazen, *Fifty years of Europe, 1870-1910*, p. 299. See AUSTRIA-HUNGARY: 1908-1909; JUGO-SLAVIA: 1868-1917; and TURKEY: 1908.—The great majority of the inhabitants are Slav and wished to join with the neighboring and racially allied kingdom of Serbia. This feeling resulted in numerous attempts on the lives of Austrian officials together with a more or less open state of insurrection on the part of the

people, which Austrian officials claimed was aided and abetted by Serbia. (For Triple monarchy question, see AUSTRIA-HUNGARY: 1900, December.) Finally, after the assassination of the Archduke Francis Ferdinand, at Serajevo, the Bosnian capital, Austria-Hungary addressed to Serbia the ultimatum which brought about the World War. See WORLD WAR: Causes: Indirect: e.

1909-1913.—In Formation of Balkan League. See SERBIA: 1909-1913.

1914-1918.—Attitude during World War. See JUGO-SLAVIA: 1914-1918: During World War.

1918-1921.—In the kingdom of Jugo-Slavia. See AUSTRIA-HUNGARY: 1918; JUGO-SLAVIA; SERBIA.

BOSPORUS.—The word means literally an 'ox-ford,' and the Greeks derived it as a name from the legend of Io, who, turned into a heifer by Jupiter to escape the wrath of Juno, was tormented

shores and have wedged themselves tightly into the population. . . . The Turk has camped on this tip of the peninsula since the fourteenth century without ever settling. He failed to endow the region with nationality because, nomad that he was, he had none to confer. He failed to assimilate the conquered populations because the bleak and sandy steppes of his Asiatic homelands never gave birth to national institutions and he was forced to model a semblance of political organization after what he found on conquered soil."—L. Dominian, *Nationality map of Europe (League of Nations, December, 1917, pp. 74-75)*.—Owing to the commercial and strategic importance from earliest times of a body of water forming, with the sea of Marmora and the Dardanelles, an outlet to the peoples of the Black sea (q. v.) region, the question of possession of the straits has offered one of the most persistent problems. Russia's only ice-

Remains of an old Turkish fort are seen on the heights, in the rear of which are the buildings of Robert College

by a gad-fly sent by the jealous Juno, swam across the straits from Europe into Asia. They gave the name particularly to that channel, on which Constantinople lies, but applied it also to other similar straits, such as the Cimmerian Bosphorus, opening the Sea of Azov.—See also CONSTANTINOPLE: Map of the Dardanelles, etc.

Thracian Bosphorus (Strait of Constantinople).—Nationalities of.—Importance.—“To ascribe nationality to the shores of the straits is impossible from the standpoint of population. The coastland stretching from the Dardanelles [q.v.] to the Black sea entrance of the Bosphorus is inhabited by a motley population in which the most important elements are represented in almost equal numbers. Greeks mingle with Bulgarians, Turks and Armenians. The Bulgarians are mainly farmers while the Greeks are fishermen and sailors who control the petty coastline traffic. The Turk still rules as lord of the land and imposes himself by means of strong garrisons. Armenians are found everywhere especially in and around Constantinople. The Jews too are ancient dwellers on these

free ports lie on the Black sea, for the Baltic coasts are ice-bound during half the year. The narrowness of the straits (800 yds. to 2¾ mi.) brings to the city of Constantinople, the ancient Byzantium, not only the riches of the water trade but also the dominant position in the overland routes that cross at this narrowest point between Europe and Asia.

Ancient and medieval periods.—Greek, Roman, Byzantine and Turkish control.—The straits were formerly controlled from the western outlet as is shown by the eminence of Troy's position, where the ruins of nine cities have been recently been uncovered. The grain of the Black sea regions was of such vital importance to the Greeks that they destroyed their rival by the Trojan War. Athenian colonies were planted on the shores of Marmora (Propontis) and the Athenian navy secured for Athens the grain trade until Sparta overcame the Athenian fleet in the battle of Aegospotami. (For the battle, see GREECE: B. C. 405.) There was no problem when Rome was in control, for she had no rivals and she

looked to Egypt and Syria rather than to the north for her best trade. When Constantinople was created by the enlargement of the ancient city of Byzantium about A. D. 328 and the eastern capital of the empire established, a new era began. With the rise of the Mohammedans in the seventh century, which closed all other trade routes between Europe and Asia, the city of the Bosphorus held a unique position. She developed that mixture of Greek, Roman and oriental culture called Byzantine and prospered in spite of the degeneracy that luxury brought her. Beginning with the eleventh century the Italian trading cities inaugurated a period of destructive rivalry for the sole control of the eastern trade, which meant the sole control of the Bosphorus and Constantinople. There would have been enough for all, if all had been willing to share commercial privilege, yet trade monopoly was insistently sought and jealously guarded. The result was continual and suicidal warfare. The Turkish advance chose the line of least resistance and crossed the straits first at the Dardanelles, seizing Gallipoli in 1356. The Genoese and Venetian merchant fleets were for some time more powerful than the short ranged Turkish land guns and only with the taking of Constantinople in 1453, was Turkish control finally established. (See CONSTANTINOPLE: 1453.) By 1475 the Black sea had become a Turkish lake and so it remained until the arrival of Russia upon its shores in 1774. The only resource open to the European traders lay in obtaining from Turkey concessions called capitulations. The first of the capitulations was obtained in 1535 by Francis I of France, then England was granted one in 1579, the Netherlands in 1598, Austria in 1718. These capitulations allowed trade with Constantinople but the Bosphorus and the Black sea remained closed to all but Turkish ships, which, however, might be chartered by foreign merchants.

1774-1807.—Beginning of modern problem.—Treaty of Kuchuk Kainarji.—Napoleon in the east.—English interests.—Treaty of Adrianople.—The Bosphorus was finally forced open from the east instead of from the west. Catherine II of Russia conquered the Turkish coastlands of the Black sea and the era of Turko-Russian rivalry opened. The treaty of Kuchuk-Kainarji in 1774 marked the establishing of Russia on the Black sea. (See TURKEY: 1768-1774.) This treaty inaugurated a series of nineteenth century treaties, and in its recognition of Russia's rights to protect Greek Christians in Turkey was made a basis for the Russian interference in Turkish affairs that challenged other powers and led to the Crimean War. Catherine's attempts to gain Constantinople failed though she waged a new war on Turkey in 1789 with Austria as an ally. After Russia had made the opening wedge in Turkish control of the straits, Austria gained free passage in 1784, England in 1799, France in 1802 and Prussia in 1806. So far the straits were a commercial rather than a naval problem, except for Russia, but Napoleon's Egyptian campaign definitely opened the modern phase. England began to realize the importance of the near-eastern route to India, France became an invader of the domains of her former friend Turkey, and since Constantinople and the Bosphorus mark the cross roads of the route to India and the route to Odessa, English, Napoleonic and Russian interests met. Napoleon in Egypt frightened Turkey and Russia, traditional enemies, into an alliance that brought Russian warships to guard the Bosphorus. With the accession of Alexander I, Russian policy urged not the partition of Turkey, but the preservation of a weak, easily-coerced

Turkish control at Constantinople. Napoleon's ambassador Sebastiani was successful in breaking the Russo-Turkish agreement and Turkey and France fought England and Russia in the Napoleonic wars. (See also TURKEY: 1806-1807.) The British fleet coming to support Russia even reached Constantinople, forcing the Dardanelles in March, 1807. After Napoleon's fall, England signed with Turkey the treaty of Constantinople, known as the peace of the Dardanelles, which agreed to the closing of the straits to ships of war. The treaty was so worded that England, though she recognized Turkish sovereignty, became guardian to the straits almost as much as Turkey. When Turkish outrages in the Balkans stirred Europe, Russia marched across the Balkan peninsula with such success that she was able to dictate the peace of Adrianople, September, 1829. (See TURKEY: 1826-1829.) In 1826 Nicholas I had forced Turkey to grant Russia the freedom of the straits, this Adrianople reiterated with the additional proviso that any interference by the Turk with Russia's absolute freedom would be met by "reprisals against the Ottoman Empire."

1832-1878.—Mehemet Ali and the treaty of Unkiar-Skelessi.—Crimean War.—In 1832 the revolt of Mehemet Ali threatened Turkey's existence. "To save himself from Mehemet Ali the Sultan appealed to the Powers. Russia alone responded to the appeal, and as a reward for her services imposed upon the Porte the humiliating treaty of Unkiar-Skelessi (1833). By the terms of the treaty Russia became virtual mistress of the Bosphorus and the Dardanelles. The Tsar bound himself to render unlimited assistance to the Porte by land and sea, and in return the Sultan undertook to close the Straits to the ships of war of all nations, while permitting free egress to the Russian fleet. To all intents and purposes the Sultan had become the vassal of the Tsar. . . . The Treaty of Unkiar-Skelessi inaugurates yet another phase in the evolution of the Eastern Question. From that time down to the Treaty of Berlin (1878) the primary factor in the problem is found in the increasing mistrust and antagonism between Great Britain and Russia."—J. A. R. Marriott, *Eastern question*, p. 11.—In 1839 Mehemet Ali defeated the sultan and the breakup of the Ottoman empire was awaited by Russia, with her grasp extended on the north, and by France, eager for Egypt. Finally in 1840 the treaty of London was signed by the powers (including Russia who had objected strenuously), returning the sultan to power and closing the straits to the warships of all nations. This was altered, however, by the Straits convention of 1841 of which the significant phrase is: "So long as the Porte is at peace, His Highness will admit no foreign ships of war into the said straits." Russian predominance had been dealt a hard blow and Holy Russia, as protector of Greek orthodoxy against the Turk invaded Turkey in 1853. Napoleon III entered the conflict as protector of Roman Catholicism and its holy places of the east and England joined France to defend Turkey. The allied fleets of England, France and Turkey besieged and conquered Sevastopol, the Russian Black sea fortress on the Crimean peninsula. The Crimean War was closed by the treaty of Paris, 1856, reaffirming the convention of the Straits and declaring the Black sea neutral water, forbidding warships to use it with the exception of two light war vessels of each of the powers to secure the mouth of the Danube. (See RUSSIA: 1854-1856.) Russia was denied not only a Black sea fleet but even arsenals on the coast. The neutralization scheme was

scarcely a sincere peace move on the part of the powers since warships were denied passage of the Bosphorus only "so long as the Porte is at peace." If Turkey might be drawn into the conflict by an enemy of Russia, warships could be passed to the defenseless Russian coast. The disarmament of Russia alone was secured. The chance for Russia to make good her losses came when the Franco-Prussian War distracted France and when Bismarck desired to purchase Russian friendship. The treaty of London, 1871, recognized the right of Russia to maintain a fleet upon the Black sea which was to be no longer neutral. This treaty remained in force until the World War. It was approved by the congress of Berlin, 1878.—See also **TURKEY: 1878.**

1878-1914.—Influence of the Central Powers.—**Drang nach Osten.**—"Since 1878, new defenders of Ottoman integrity against the Russians have arisen. The Central European Powers, Italy, Austria and Germany, achieved their national unity in the two decades preceding the treaty of Berlin. Hemmed in on the west by Great Britain and France and on the east by Russia, born too late to extend their political sovereignty over vast colonial domains, and unable (if only for lack of coaling-stations) to develop sea power greater than that of their rivals, nothing was more natural than the German and Austro-Hungarian conception of a *Drang nach Osten* through the Balkan peninsula, over the bridge of Constantinople, into the markets of Asia. . . . The integrity of the Ottoman Empire became of secondary interest to the British from the moment they gained control of Egypt and realized what the Suez Canal meant to them."—H. A. Gibbons, *Reconstruction of Poland and the Near East*, pp. 57-58.—"By means of this alliance with the Kalif and Sultan, the Kaiser hoped to cut the line of communications between Great Britain and her Eastern Empire. From the Bosphorus he could threaten Egypt and the Canal. Constantinople was all-important as a station on the trunk line between Bremen and Basra. Just as in the fifteenth century the Sea-Powers of Western Europe turned the flank of the Ottoman Turks by the discovery of the Cape Route to India, so in the twentieth should Germany turn the flank of the Mistress of the Seas by the construction of the Bagdad railway."—J. A. R. Marriott, *European commonwealth*, p. 308.—See also **BAGDAD RAILWAY; GERMANY: 1890-1914.**

1887.—Regarded as international by Russia and Germany in secret treaty. See **GERMANY: 1887.**

1914-1918.—World War.—Failure of Dardanelles campaign.—"In February [1915] the world learned that an English fleet, assisted by a French squadron, was bombarding the forts of the Dardanelles, and high hopes were entertained in the allied countries that the passage of the Straits would be quickly forced. Nothing would have done so much to frustrate German diplomacy in southeastern Europe as a successful blow at Constantinople. But the hopes roused by the initiation of the enterprise were not destined to fulfilment. How far the expedition to the Dardanelles may have averted dangers in other directions it is impossible to say; but, as regards the accomplishment of its immediate aims, the enterprise was a ghastly, though a gallant failure."—J. A. R. Marriott, *Eastern question*, pp. 16-17, 434-435.—See also **DARDANELLES: 1915.**—"By virtue of the agreement made between France, Russia, and Britain, following the Turks' entrance into the struggle on the German side, the division of the Turkish Empire, after victory, was at last set down in definite terms.

Russia was to have Constantinople. . . . But Russia fell and with the revolution Russian claims disappeared. The whole Eastern Question was thus thrown in the melting pot again. . . . In this situation the British increased their garrisons in Constantinople until they dominated the situation. . . . With the manifest approval in London and undisguised criticism in Paris and Rome, Greek troops have begun a very considerable offensive, both from Smyrna eastward and from Panderma on the Sea of Marmora southward, scoring initial victories and pushing inland toward the Anatolian section of the Bagdad Railway, possession of which would pretty thoroughly smash Turkish power to conduct a campaign, either against Smyrna or Constantinople. . . . Coincident with the Greek land operations, the British fleet has been in action on the Marmora coast and British troops on the Asiatic side of the Bosphorus near Ismid have been fighting with the Turks. . . . [See **TURKEY: 1920.**] To put the thing bluntly, then, Britain seems to have decided to back the Greek in the Near East, just as Russia backed the Serbian, Germany, the Bulgarian, and exactly as the British backed the Turk in the last century. . . . Now what the British want in the Near East is not so much power as protection. The Germans used to speak of the Suez Canal, as the 'Heel of Achilles of the British Empire.' . . . In 1915, as a war necessity, the British did consent to the Russian annexation of Constantinople as one of the fruits of victory. But the consent was given reluctantly and represented a break with the whole of British policy in the preceding century. With Russia eliminated British policy returns to old channels. But for the British public the Turk has become impossible. In this situation Greece offers an attractive alternative."—F. H. Simonds, *Greek versus Turk (American Review of Reviews, August, 1920, pp. 161-162).*—See also **WORLD WAR: 1915: VI. TURKEY: a.**

1918.—Turkey yields the Bosphorus to the Allies. See **WORLD WAR: Miscellaneous auxiliary services: I. Armistices: d.**

1920.—Turkish peace treaty.—"The Turkish peace treaty, work on which began early in February [1920], was not ready for presentation to Tewfik Pasha, head of the Ottoman peace delegation, until May 11. By the terms of this treaty Constantinople, while left under the sovereignty of the Sultan, is to be permanently occupied by a small international force of Allied troops; similar control of the coastal areas, waters and navigation of the Dardanelles, the Sea of Marmora and the Bosphorus, with their approaches and the islands guarding the same, is to be placed under a Straits Commission appointed by the League of Nations and composed of British, French, Italian and Japanese representatives with two votes each, and of Greek and Rumanian representatives with one vote each. Provision is made for the future representation of Russia and the United States with two votes each and of Bulgaria with one vote. An international guard is provided to garrison the straits, which are to be open in times of peace and war alike to all vessels of commerce or war without distinction of flag. These waters are not to be subject to blockade, and no act of war may be committed in them except in enforcing the decisions of the League of Nations. . . . and all fortifications along the straits are to be destroyed. . . . The Turks have expressed keen dissatisfaction with

the treaty, but all pleas for concessions have thus far been rejected; the Nationalists under Mustapha Kemal Pasha have refused to submit to it in its present form. During May and early in June the Nationalists, in control of Asiatic Turkey, drove the French to the coast of Cilicia and then marched to attack the Straits zone. . . . Greece was given a free hand to deal with the Turkish Nationalists."—E. D. Graper and H. J. Carman, *Record of political events (Political Science Quarterly, Sept., 1910, pp. 8-12)*.—See also DARDANELLES: 1900; SÈVRES, TREATY OF: 1920: Part III. Political clauses: The Straits; TURKEY: 1921 (March-April): Secret treaties.

BOSPORUS, Cimmerian.—The Cimmerian Bosphorus is the ancient name of the strait connecting the Black Sea with the Sea of Azov (now called the Straits of Kerch or Yenikale).

The city and kingdom.—"Respecting Bosphorus, or Pantikapæum (for both names denote the same city, though the former name often comprehends the whole annexed dominion) founded by Milesian settlers on the European side of the Kimmerian Bosphorus (near Kertsch) we first hear, about the period when Xerxes was repulsed from Greece (480-479 B.C.) It was the centre of a dominion including Phanagoria, Kepi, Hermonassa, and other Greek cities on the Asiatic side of the strait; and it is said to have been governed by what seems to have been an oligarchy—called the Archæanaktidæ—for forty-two years (480-438 B.C.). After them we have a series of princes standing out individually by name, and succeeding each other in the same family [438-284 B.C.] . . . During the reigns of these princes, a connexion of some intimacy subsisted between Athens and Bosphorus; a connexion not political, since the Bosphoric princes had little interest in the contentions about Hellenic hegemony—but of private intercourse, commercial exchange and reciprocal good offices. The eastern corner of the Tauric Chersonesus, between Pantikapæum and Theodosia, was well suited for the production of corn; while plenty of fish, as well as salt, was to be had in or near the Palus Mæotis. Corn, salted fish and meat, hides and barbaric slaves in considerable numbers, were in demand among all Greeks round the Ægean, and not least at Athens, where Scythian slaves were numerous; while oil and wine, and other products of more southern regions, were acceptable in Bosphorus and the other Pontic ports. This important traffic seems to have been mainly carried on in ships and by capital belonging to Athens and other Ægean maritime towns, and must have been greatly under the protection and regulation of the Athenians, so long as their maritime empire subsisted. Enterprising citizens of Athens went to Bosphorus (as to Thrace and the Thracian Chersonesus), to push their fortunes. . . . We have no means of following [the fortunes of the Bosphoric princes] in detail; but we know that, about a century B.C., the then reigning prince, Parisades IV. found himself so pressed and squeezed by the Scythians, that he was forced (like Olbia and the Pentapolis) to forego his independence, and to call in, as auxiliary or master, the formidable Mithridates Eupator of Pontus; from whom a new dynasty of Bosphoric kings began—subject, however, after no long interval, to the dominion and interference of Rome."—G. Grote, *History of Greece, pt. 2, ch. 98*.—See also MITHRADATIC WARS; ROME: Republic: B. C. 47-46.

ALSO IN: T. Mommsen, *History of Rome, bk. 8, ch. 7*.

A. D. 255.—Acquisition by the Goths. See GOTHs: Acquisition of the Bosphorus.

565-574.—Capture by the Turks.—"During the reign of Justin [565-574] the city of Bosphorus, in Tauris, had been captured by the Turks, who then occupied a considerable portion of the Tauric Chersonesus. The city of Cherson alone continued to maintain its independence in the northern regions of the Black Sea."—G. Finlay, *Greece under the Romans, ch. 4, sect. 8*. See TURKEY: 6th century.

BOSS: In politics.—Tammany Hall as an example of boss control.—"The Boss is often a man of humble birth, who has gathered the reins of party as the reward of long and faithful work in the wards of a city. He has gained control of the primaries in his district by free spending and unflagging attentions to doubtful voters. He has stood bail in the courts, attended fires and furnished quarters for the refugees, secured jobs for men out of work, bought hundreds of lottery tickets at church picnics, and has been an assiduous attendant at weddings and funerals. His ability to handle men is of vastly more importance than his principles. If he is able to wield several primary districts he gains access to the Ring and his progress to the head of the Machine is measured in direct ratio to the number of districts which he carries in his pocket. A full-fledged Boss is an autocrat in his own sphere, so long as he can produce the votes. Power cleaves to him who takes it. He enslaves the liquor interests through his control over the excise [written in 1918]. Through his possession of votes he fortifies his position by the control of a large number of city offices, some 40,000 in New York City. His entrenchments are thrown around the City Council, the Bench, and even into the State and National Legislatures. The *locus classicus* of Boss control of a city Machine is Tammany Hall, the Democratic organization in New York City. The Democratic voters in each assembly district elect delegates to the County General Committee in the ratio of one delegate for every twenty-five Democratic votes cast in the last gubernatorial election. The 'leaders' of the thirty-five districts, who are always members of this General Committee of 5,000, constitute the Executive Committee, the actual sovereign power in Tammany. In each assembly district is also maintained a District Committee, which appoints a Captain for every voting precinct in the district. The eleven hundred captains have control of some patronage and much money, and are usually closely allied to the liquor interests. Each is responsible for the vote of his precinct. This powerful mechanism, controlling upwards of 200,000 votes, is manipulated by a Boss who can guarantee the votes of a sufficient number of districts, so that he holds the whip hand in the executive committee. He may seek office for himself, as did W. M. Tweed, who had himself elected to the State Legislature and to Congress; quite as likely he rules, like Lorenzo di Medici, without a title."—C. Seymour and D. P. Frary, *How the world votes, v. 1, pp. 268-270*.—See also NEW YORK CITY: 1863-1871.

Bossism and democracy.—"The evils so prevalent in the elections of democracies are not inherent in democracy, but are due to the neglect of fundamental principles; interests are not properly represented, large numbers of the electorate are often illiterate and ignorant of political issues, and party managers too often violate every law of political ethics in their eagerness for victory. Yet 'bossism' in politics is, after all, merely a passing phase of a period of transition. The so-called practical politician is often the veriest tyro in actual knowledge of political principles. His policy is crude and

short-sighted and based on the Machiavellian principle that the end justifies the means. Permanent success is based only on a fostering of economic interests of all the people and on a strengthening of their intelligence and morality. Corrupt politicians may seem to succeed for a time, but they ultimately earn for themselves only contempt and dishonor. All experience shows that permanent honor in the political annals of any country is paid only to those men who despise trickery and dishonesty and who labor intelligently for the larger interests of their fellow-citizens. Obviously, therefore, the true policy of government should be to encourage by its laws intelligence and honesty in government. Political corruption and betrayal of trust should be sternly punished and electional systems should be so adjusted as to favor honest voters and to encourage free expression of intelligent opinion. No wise democracy can afford to allow the primary, the convention, the ballot, and the count to be so manipulated as to thwart the will of the electorate. The machinery of government should not be adjusted for incompetency and dishonesty but for the accomplishment of the best work in the most economical manner. An intelligently educated citizen body with guaranteed civil and political rights and with proper facilities for the expression of its will, may always be depended on to assert its privileges and express its will. Democracy demands energy, intelligence, and aggressiveness for its maintenance, and these must be purposively fostered by the state as an indispensable condition of its own prosperity."—J. Q. Dealey, *State and government*, pp. 323-324.

BOSTON, capital and largest city of the state of Massachusetts, Suffolk county. It is situated at the mouths of the Charles and Mystic rivers, on Massachusetts bay.

"When Boston was first settled, there were 780 acres of land area. To-day [1919], with the acquisition of surrounding territory and filled-in land, the acreage is over 30,000, of which 1,137 acres are water." Its population in 1920 was 747,923. "The city maintains 450 schools, of which 15 are high and Latin, one normal, 254 elementary, 143 kindergarten and 12 industrial. Besides these there are 35 evening schools. Besides these there are over 100 other schools and colleges located in the city. In 1918 there was a registration of nearly 160,000 pupils in the schools maintained by the city. The New England Conservatory of Music is the largest college of music in the United States. Harvard Medical School has the finest group of medical buildings in the country. . . . Among the many museums of the country the New England Historical Genealogical Society has the most extensive genealogical collection known. The Natural History Museums, the Naval Museum at the Government Navy Yard, the various collections owned by Harvard University and the relics preserved in several of the historical buildings of the city are varied and are inspected annually by hundreds of thousands of visitors."—*Current Affairs* (*Boston Chamber of Commerce*), June 30, 1919.

1628-1630.—Founding and naming of the city.—"As a town of the Massachusetts Bay Colony, Boston dates back to 1630. In that year Governor Winthrop arrived and selected as his official residence the spot called by the Indians 'Shawmut,' naming it 'Boston.' Boston continued under a town meeting government until 1822, when it was incorporated as a city."—See also MASSACHUSETTS: 1630.

1657-1669.—Halfway Covenant and the founding of the Old South Church.—"In Massachusetts after 1650 the opinion rapidly gained ground that all baptised persons of upright and decorous lives ought to be considered, for practical purposes, as members of the church, and therefore entitled to the exercise of political rights, even though unqualified for participation in the Lord's Supper. This theory of church-membership, based on what was at that time stigmatized as the Halfway Covenant, aroused intense opposition. It was the great question of the day. In 1657 a council was held in Boston, which approved the principle of the Halfway Covenant; and as this decision was far from satisfying the churches, a synod of all the clergymen in Massachusetts was held five years later, to reconsider the great question. The decision of the synod substantially confirmed the decision of the council, but there were some dissenting voices. Foremost among the dissenters, who wished to retain the old theocratic régime in all its strictness, was Charles Chauncy, the president of Harvard College, and Increase Mather agreed with him at the time, though he afterward saw reason to change his opinion and published two tracts in favour of the Halfway Covenant. Most bitter of all toward the new theory of church-membership was, naturally enough, Mr. Davenport of New Haven. This burning question was the source of angry contentions in the First Church of Boston. Its teacher, the learned and melancholy Norton, died in 1663, and four years later the aged pastor, John Wilson, followed him. In choosing a successor to Wilson the church decided to declare itself in opposition to the liberal decision of the synod, and in token thereof invited Davenport to come from New Haven to take charge of it. Davenport, who was then seventy years old, was disgusted at the recent annexation of his colony to Connecticut. He accepted the invitation and came to Boston, against the wishes of nearly half of the Boston congregation, who did not like the illiberal principle which he represented. In little more than a year his ministry at Boston was ended by death; but the opposition to his call had already proceeded so far that a secession from the old church had become inevitable. In 1669 the advocates of the Halfway Covenant organized themselves into a new society under the title of the 'Third Church in Boston.' A wooden meeting-house was built on a lot which had once belonged to the late Governor Winthrop, in what was then the south part of the town, so that the society and its meeting-house became known as the South Church; and after a new church founded in Summer Street in 1717 took the name of the New South, the church of 1669 came to be further distinguished as the Old South. As this church represented a liberal idea which was growing in favour with the people, it soon became

the most flourishing church in America. After sixty years its numbers had increased so that the old meeting-house could not contain them; and in 1729 the famous building which still stands was erected on the same spot,—a building with a grander history than any other on the American continent, unless it be that other plain brick building in Philadelphia where the Declaration of Independence was adopted and the Federal Constitution framed."—J. Fiske, *Beginnings of New England*, ch. 6.

1768.—Seizure of the sloop "Liberty."—Riotous patriotism.—"For some years these officers [of the customs] had been resisted in making seizures of uncustomed goods, which were frequently rescued from their possession by interested parties, and the determination of the commissioners of customs to break up this practice frequently led to collisions; but no flagrant outbreak occurred until the seizure of John Hancock's sloop 'Liberty' (June 10, 1768), laden with a cargo of Madeira wine. The officer in charge, refusing a bribe, was forcibly locked up in the cabin, the greater part of the cargo was removed, and the remainder entered at the custom-house as the whole cargo. This led to seizure of the vessel, said to have been the first made by the commissioners, and for security she was placed under the guns of the 'Romney,' a man-of-war in the harbor. For this the revenue officers were roughly handled by the mob. Their boat was burned, their houses threatened, and they, with their alarmed families, took refuge on board the 'Romney,' and finally in the Castle. These proceedings undoubtedly led to the sending of additional military forces to Boston in September. The General Court was in session at the time, but no effectual proceedings were taken against the rioters. Public sympathy was with them in their purposes if not in their measures."—M. Chamberlain, *Revolution impending (Narrative and critical history of America, v. 6, ch. 1)*.

1768.—Quartering of British troops.—"Before news had reached England of the late riot in Boston, two regiments from Halifax had been ordered thither. When news of that riot arrived, two additional regiments were ordered from Ireland. The arrival of an officer, sent by Gage from New York, to provide quarters for these troops, occasioned a town meeting in Boston, by which the governor was requested to summon a new General Court, which he peremptorily refused to do. The meeting then recommended a convention

of delegates from all the towns in the province to assemble at Boston in ten days; 'in consequence of prevailing apprehensions of a war with France'—such was the pretence—they advised all persons not already provided with fire-arms to procure them at once; they also appointed a day of fasting and prayer, to be observed by all the Congregational societies. Delegates from more than a hundred towns met accordingly at the day appointed [Sept. 22], chose Cushing, speaker of the late House, as their chairman, and petitioned Bernard to summon a General Court. The governor not only refused to receive their petition, but denounced the meeting as treasonable. In view of this charge, the proceedings were exceedingly cautious and moderate. All pretensions to political authority were expressly disclaimed. In the course of a four days' session a petition to the King was agreed to, and a letter to the agent, De Berdt, of which the chief burden was to defend the province against the charge of a rebellious spirit. Such was the first of those popular conventions, destined within a few years to assume the whole political authority of the colonies. The day after the adjournment the troops from Halifax arrived. There was room in the barracks at the castle, but Gage, alarmed at the accounts from Massachusetts, had sent orders from New York to have the two regiments quartered in the town. The council were called upon to find quarters, but, by the very terms of the Quartering Act, as they alleged, till the barracks were full there was no necessity to provide quarters elsewhere. Bernard insisted that the barracks had been reserved for the two regiments expected from Ireland, and must, therefore, be considered as already full. The council replied, that, even allowing that to be the case, by the terms of the act, the provisions of quarters belonged not to them, but to the local magistrates. . . . One of the regiments encamped on the common; for a part of the other regiment, which had no tents, the temporary use of Faneuil Hall was reluctantly yielded; to the rest of it, the Town House, used also as a State House, all except the council chamber, was thrown open by the governor's order. . . . Presently Gage came to Boston to urge the provision of quarters. The council directed his attention to the terms of the act, and referred him to the selectmen. As the act spoke only of justices of the peace, the selectmen declined to take any steps in the matter. Bernard then constituted what he called a Board of Justices, and required them to find quarters; but they did not choose to exercise a doubtful and unpopular authority. Gage was finally obliged to quarter the troops in houses which he hired for the purpose, and to procure out of his own military chest the firing, bedding, and other articles mentioned in the Quartering Act, the council having declined to order any expenditure for those purposes, on the ground that the appropriation of money belonged exclusively to the General Court."—R. 1770.—Soldiers and citizens in collision.—The "massacre."—Removal of the troops.—"As the spring of the year 1770 appeared, the 14th and 20th regiments had been in Boston about seventeen months. The 14th was in barracks near the Brattle Street Church; the 20th was quartered just south of King Street; about midway between them, in

King Street, and close at hand to the town-house, was the main guard, whose nearness to the public buildings had been a subject of great annoyance to the people. . . . One is forced to admit . . . that a good degree of discipline was maintained; no blood had as yet been shed by the soldiers, although provocations were constant, the rude element in the town growing gradually more aggressive as the soldiers were never allowed to use their arms. Insults and blows with fists were frequently taken and given, and cudgels also came into fashion in the brawls. Whatever awe the regiments had inspired at their first coming had long worn off. In particular the workmen of the rope-walks and ship-yards allowed their tongues the largest license and were foremost in the encounters. About the 1st of March fights of unusual bitterness had occurred near Grey's rope-walk, not far from the quarters of the 29th, between the hands of the rope-walk and soldiers of that regiment, which had a particularly bad reputation. The soldiers had got the worst of it, and were much irritated. Threats of revenge had been made, which had called out arrogant replies, and signs abounded that serious trouble was not far off. From an early hour on the evening of the 5th of March the symptoms were very ominous. . . . At length an altercation began in King Street between a company of lawless boys and a few older brawlers on the one side, and the sentinel, who paced his beat before the custom-house, on the other. . . . The soldier retreated up the steps of the custom-house and called out for help. A file of soldiers was at once despatched from the main guard, across the street, by Captain Preston, officer of the guard, who himself soon followed to the scene of trouble. A coating of ice covered the ground, upon which shortly before had fallen a light snow. A young moon was shining; the whole transaction, therefore, was plainly visible. The soldiers, with the sentinel, nine in number, drew up in line before the people, who greatly outnumbered them. The pieces were loaded and held ready, but the mob, believing that the troops would not use their arms except upon requisition of a civil magistrate, shouted coarse insults, pressed upon the very muzzles of the pieces, struck them with sticks, and assaulted the soldiers with balls of ice. In the tumult precisely what was said and done cannot be known. Many affidavits were taken in the investigation that followed, and, as always at such times, the testimony was most contradictory. Henry Knox, afterwards the artillery general, at this time a bookseller, was on the spot and used his influence with Preston to prevent a command to fire. Preston declared that he never gave the command. The air, however, was full of shouts, daring the soldiers to fire, some of which may have been easily understood as commands, and at last the discharge came. If it had failed to come, indeed, the forbearance would have been quite miraculous. Three were killed outright, and eight were wounded, only one of whom, Crispus Attucks, a tall mulatto who faced the soldiers, leaning on a stick of cordwood, had really taken any part in the disturbance. The rest were bystanders or were hurrying into the street, not knowing the cause of the tumult. . . . A wild confusion . . . took possession of the town. The alarm-bells rang frantically; on the other hand the drums of the regiments thundered to arms. . . . What averted a fearful battle in the streets was the excellent conduct of Hutchinson—the lieutenant-governor, who made his way promptly to the scene, caused the troops to be sent back to their barracks, ordered the arrest of Captain Preston and the nine sol-

diers who had done the firing, and began an investigation of the affair the same night. The next day a great town meeting was held, and, as crowds from the surrounding towns pressed in, it was adjourned from Faneuil hall [see FANEUIL HALL] to the Old South church, and overflowed in the neighboring streets. A formal demand for the removal of the troops was sent to the governor and council by a committee which had Samuel Adams at its head. Governor Hutchinson disclaimed authority over the troops; but their commanding officer, Colonel Dalrymple, proposed to compromise by sending away the 29th regiment and retaining the 14th. As the committee returned to the meeting with this proposal, through the crowd, Adams dropped right and left the words, "Both regiments or none."—"Both regiments or none." So he put into the mouths of the people their reply, which they shouted as with one voice when the report of the committee was made to them. There was a determination in the cry which overcame even the obstinacy of Governor Hutchinson, and the departure of both regiments was ordered that same day. "In England the affair was regarded as a 'successful bully' of the whole power of the government by the little town, and when Lord North received details of these events he always referred to the 14th and 29th as the 'Sam Adams regiments.'"—J. K. Hosmer, *Samuel Adams*, ch. 11.

Kedder, *History of the Boston massacre*.

1770.—Fair trial of the soldiers.—"The episode [of the affray of March 5] had . . . a sequel which is extremely creditable to the American people. It was determined to try the soldiers for their lives, and public feeling ran so fiercely against them that it seemed as if their fate was sealed. The trial, however, was delayed for seven months, till the excitement had in some degree subsided. Captain Preston very judiciously appealed to John Adams, who was rapidly rising to the first place both among the lawyers and the popular patriots of Boston, to undertake his defence. Adams knew well how much he was risking by espousing so unpopular a cause, but he knew also his professional duty, and, though violently opposed to the British government, he was an eminently honest, brave, and humane man. In conjunction with Josiah Quincy, a young lawyer who was also of the patriotic party, he undertook the invidious task, and he discharged it with consummate ability. . . . There was abundant evidence that the soldiers had endured gross provocation and some violence. If the trial had been the prosecution of a smuggler or a seditious writer, the jury would probably have decided against evidence, but they had no disposition to shed innocent blood. Judges, counsel, and jurymen acted bravely and honourably. All the soldiers were acquitted, except two, who were found guilty of manslaughter, and who escaped with very slight punishment. It is very remarkable that after Adams had accepted the task of defending the incriminated soldiers, he was elected by the people of Boston as their representative in the Assembly, and the public opinion of the province appears to have fully acquiesced in the verdict. In truth, although no people have indulged more largely than the Americans in vio-

lent, reckless, and unscrupulous language, no people have at every period of their history been more signally free from the thirst for blood, which in moments of great political excitement has been often shown both in England and France."—W. E. H. Lecky, *History of England in the 18th century*, v. 3, ch. 12.

ALSO IN: J. Adams, *Autobiography* (*Works*, v. 2, p. 230).—Lord Mahon (*Earl Stanhope*), *History of England, 1713-1783*, v. 5, p. 269.

1773.—Boston tea party.—"News reached Boston in the spring of this year [1773] that the East India Company, which was embarrassed by the accumulation of tea in England, owing to the refusal of the Americans to buy it, had induced parliament to permit its exportation to America without the payment of the usual duty [see U. S. A. 1772-1773]. This was intended to bribe the colonists to buy; for there had been a duty both in England and in America. That in England was six pence a pound, that in America three pence. Ships were laden and sent to Boston, New York, Philadelphia, and Charleston, and they were now expected to arrive in a short time. . . . On the 28th of November, 1773, which was Sunday, the first tea-ship (the 'Dartmouth') entered the harbor [of Boston]. The following morning the citizens were informed by placard that the 'worst of plagues, the detested tea,' had actually arrived, and that a meeting was to be held at nine in the morning, at Faneuil Hall, for the purpose of making 'a united and successful resistance to this last, worst, and most destructive measure of administration.' The Cradle of Liberty was not large enough to contain the crowd that was called together. Adams rose and made a stirring motion expressing determination that the tea should not be landed, and it was unanimously agreed to. The meeting then adjourned to the Old South meeting-house, where the motion was repeated, and again adopted without an opposing voice. The owner of the ship protested in vain that the proceedings were illegal; a watch of twenty-five persons was set, to see that the intentions of the citizens were not evaded, and the meeting adjourned to the following morning. The throng at that time was as great as usual, and while the deliberations were going on, a message was received from the governor, through the sheriff, ordering them to cease their proceedings. It was voted not to follow the advice, and the sheriff was hissed and obliged to retreat discomfited. It was formally resolved that any person importing tea from England should be deemed an enemy to his country, and it was declared that at the risk of their lives and properties the landing of the tea should be prevented, and its return effected. It was necessary that some positive action should be taken in regard to the tea within twenty days from its arrival, or the collector of customs would confiscate ships and cargoes. . . . The twenty days would expire on the 16th of December. On the fourteenth a crowded meeting was held at the Old South, and the importer was enjoined to apply for a clearance to allow his vessel to return with its cargo. He applied, but the collector refused to give an answer until the following day. The meeting therefore adjourned to the 16th, the last day before confiscation would be legal, and before the tea would be placed under protection of the ships of war in the harbor. There was another early morning meeting, and 7,000 people thronged about the meeting-house, all filled with a sense of the fact that something notable was to occur. The importer appeared and reported that the collector refused a clearance. He was then directed to

ask the governor for a pass to enable him to sail by the Castle. Hutchinson had retreated to his mansion at Milton, and it would take some time to make the demand. The importer started out in the cold of a New England winter, apologized to his Excellency for his visit, but assured him that it was involuntary. He received a reply that no pass could be given him. . . . It was six o'clock before the importer returned, and a few candles were brought in to relieve the fast-increasing darkness. He reported the governor's reply, and Samuel Adams rose and exclaimed: 'This meeting can do nothing more to save the country!' In an instant there was a shout on the porch; there was a war-whoop in response, and forty or fifty of the men disguised as Indians rushed out of the doors, down Milk Street towards Griffin's (afterwards Liverpool) Wharf, where the vessels lay. The meeting was declared dissolved, and the throng followed their leaders, forming a determined guard about the wharf. The 'Mohawks' entered the vessel; there was tugging at the ropes; there was breaking of light boxes; there was pouring of precious tea into the waters of the harbor. For two or three hours the work went on, and three hundred and forty-two chests were emptied. Then, under the light of the moon, the Indians marched to the sound of fife and drum to their homes, and the vast throng melted away, until not a man remained to tell of the deed. The committee of correspondence held a meeting next day, and Samuel Adams and four others were appointed to prepare an account of the affair to be posted to other places. Paul Revere, who is said to have been one of the 'Mohawks,' was sent express to Philadelphia with the news, which was received at that place on the 26th. It was announced by ringing of bells, and there was every sign of joy. . . . The continent was universally stirred at last."—A. Gilman, *Story of Boston*, ch. 23.

1773-1774: Agitation over tea tax; Port Act. See NEW YORK: 1773-1774.

1774.—Port bill and the Massachusetts act.—Commerce interdicted.—Town meetings forbidden. See U. S. A.: 1774 (March-April).

1774.—Enforcement of the port bill and its effects.—Military occupation of the city by General Gage.—"The execution of this measure in [the port bill] devolved on Thomas Gage, who arrived at Boston May 13, 1774, as Captain General and Governor of Massachusetts. He was not a stranger in the colonies. He had exhibited gallantry in Braddock's defeat. . . . He had married in one of the most respectable families in New York, and had partaken of the hospitalities of the people of Boston. His manners were pleasing. Hence he entered upon his public duties with a large measure of popularity. But he took a narrow view of men and things about him. . . . General Gage, on the 17th of May, landed at the Long Wharf and was received with much parade. . . . On the first day of June the act went into effect. It met with no opposition from the people, and hence, there was no difficulty in carrying it into rigorous execution. 'I hear from many,' the governor writes, 'that the act has

staggered the most presumptuous; the violent party men seem to break, and people to fall off from them.' Hence he looked for submission; but Boston asked assistance from other colonies, and the General Court requested him to appoint a day of fasting and prayer. The loyalists felt uneasy at the absence of the army. . . . Hence a respectable force was soon concentrated in Boston. [Five regiments arrived between June 4 and August 6 and additional troops were ordered from New York, the Jerseys and Quebec.] . . . The Boston Port Bill went into operation amid the tolling of bells, fasting and prayer. . . . It bore severely upon two towns, Boston and Charlestown, which had been long connected by a common patriotism. Their laborers were thrown out of employment, their poor were deprived of bread, and gloom pervaded their streets. But they were cheered and

chusetts? This was the turning-point of the Revolution. It did not find the patriots unprepared. They had an organization beyond the reach alike of proclamations from the governors, or of circulars from the ministry. This was the Committees of Correspondence, chosen in most of the towns in legal town-meetings, or by the various colonial assemblies, and extending throughout the colonies. . . . The crisis called for all the wisdom of these committees. A remarkable circular from Boston addressed to the towns (July, 1774), dwelt upon the duty of opposing the new laws; the towns, in their answers, were bold, spirited, and firm and echoed the necessity of resistance. Nor was this all. The people promptly thwarted the first attempts to exercise authority under them. Such councillors as accepted their appointments were compelled to resign, or, to avoid compulsion,

BEACON HILL, BOSTON, IN 1811
(From a drawing made by J. R. Smith)

sustained by the large contributions sent from every quarter for their relief, and by the noble words that accompanied them. . . . The excitement of the public mind was intense; and the months of June, July, and August, were characterized by varied political activity. Multitudes signed a solemn league and covenant against the use of British goods. The breach between the whigs and loyalists daily became wider. Patriotic donations from every colony were on their way to the suffering towns. Supplies for the British troops were refused. . . . It was while the public mind was in this state of excitement that other acts arrived which General Gage was instructed to carry into effect." These were the acts which virtually annulled the Massachusetts charter, which forbade town meetings, and which provided for the sending of accused persons to England or to other colonies for trial. "Should Massachusetts submit to the new acts? Would the other colonies see, without increased alarm, the humiliation of Massa-

retired into Boston." General Gage now began (in September) movements to secure the cannon and powder in the neighborhood. Some 250 barrels of powder belonging to the province were stealthily removed by his orders from a magazine at Charlestown and two field-pieces were carried away from Cambridge. "The report of this affair, spreading rapidly, excited great indignation. The people collected in large numbers, and many were in favor of attempting to recapture the powder and cannon. Influential patriots, however, succeeded in turning their attention in another direction. . . . Meantime the fact of the removal of the powder became magnified into a report that the British had cannonaded Boston, when the bells rang, beacon-fires blazed on the hills, the neighbor colonies were alarmed, and the roads were filled with armed men hastening to the point of supposed danger. These demonstrations opened the eyes of the governor to the extent of the popular movement. . . . General Gage saw no hope of procur-

ing obedience but by the power of arms; and the patriot party saw no safety in anything short of military preparation. Resistance to the acts continued to be manifested in every form. On the 9th of September the memorable Suffolk resolves [drawn by Joseph Warren] were adopted [by a convention of Suffolk county, which embraced Boston] . . . and these were succeeded by others in other counties equally bold and spirited. These resolves were approved by the Continental Congress, then in session. Everywhere the people either compelled the unconstitutional officers to resign, or opposed every attempt to exercise authority, whether by the governor or constable. They also made every effort to transport ammunition and stores to places of security. Cannon and muskets were carried secretly out of Boston. The guns were taken from an old battery at Charlestown, where the navy yard is, . . . silently, at night. . . . General Gage immediately began to fortify Boston Neck. This added intensity to the excitement. The inhabitants became alarmed at so ominous a movement; and, on the 5th of September, the selectmen waited on the general, rep-

1870.—Boston Museum of fine arts incorporated. See EDUCATION, ART: Modern Period: United States.

1872.—Great Fire.—A fire which broke out Nov. 9, 1872, swept over sixty-five acres in the business heart of the city. Loss \$80,000,000. Within two years the area was solidly built.

1873.—Massachusetts Normal School established. See EDUCATION, ART: Modern Period: United States.

1879-1922.—Organization and growth of Christian Science.—First Church of Christ, Scientist. See CHRISTIAN SCIENCE: Definition.

1895-1899.—Municipal experiments of Mayor Quincy.—First elected mayor of Boston in 1895, and reelected in 1897, the two terms of the administration of Mayor Josiah Quincy were made remarkable by the number, the originality and the boldness of the experiments which he introduced in extension of the functions of municipal government. They consisted on the one hand of the substitution, in certain branches of public work, of direct labor for the contract system, and on the other of the provision of new facilities for pro-

BIRD'S-EYE VIEW OF BOSTON COMMON, ABOUT 1850

resented the public feeling, and requested him to explain his object. The governor stated in reply that his object was to protect his majesty's troops and his majesty's subjects; and that he had no intention to stop up the avenue, or to obstruct the free passage over it, or to do anything hostile against the inhabitants. He went on with the works and soon mounted on them two twenty-four pounders and eight nine pounders."—R. Frothingham, *History of the siege of Boston*, ch. 1.

moting popular health, recreation, and instruction. He established a municipal printing office, a municipal department of electrical construction, and another municipal department to conduct whatever repairing work that the city required; all of these to supersede the old system of contracts and jobs. He instituted a great number of public baths,—floating baths, beach baths, river baths and swimming pools. He opened playgrounds and gymnasiums, both outdoor and indoor. He carried the city into the work of the fresh air missions for poor children. He reorganized the administration of public charities. He placed the artistic undertakings of the city under the supervision of a competent board. He instituted cheap concerts of a high order, as well as popular lectures. Boston at length took alarm at the extent of the ventures of Mayor Quincy, complained of the cost, and refused him reelection for a third term. But the Boston correspondent of a New York journal opposed in politics to Mayor Quincy, writing on December 15, 1900, testified that "most of the experiments are working well, and a study of them cannot fail to be beneficial to those who have the government of other cities in their hands. . . . The madness of Mayor Quincy had evidently a method. It seems to have made permanent a good many excellent institutions."

1899.—Completion of the first subway.—In this year the city of Boston completed an important public improvement, undertaken in 1895, and carried out under the direction of a commission appointed that year. This was the construction of a subway under Boylston and Tremont streets, and under various streets in the northern district, for the transit of electric cars through the crowded central parts of the city. The section of subway from Park square to Park street was finished in the fall of 1897; the remainder in 1899. The entire length of underground road was one and two-thirds miles. The cost of work done was \$4,686,000; cost of real estate taken, \$1,100,000. The legislative act authorizing the work provided further for the construction of a tunnel to East Boston, and for the purchase of rights of way for an elevated road to Franklin park, with new bridges to Charlestown and West Boston.

1909.—New plan of city government chosen by popular vote.—“In 1909 the legislature submitted to the voters of Boston two alternative amendments to the city charter and what was designated as Plan II was adopted at the polls. This plan made very radical changes, the chief of which were a small one-chambered council and a mayor elected at large and possessing very great powers. This was the Short ballot idea, with the distinctive feature that the Mayor, besides having control of all the administrative departments, also largely dominates the course of legislation in the City Council. But unlike any of the larger cities so far considered, Boston has the Recall, but in a somewhat unusual and unworkable form. Another feature of Boston's plan of government, to which especial attention should be drawn, is the unusual amount of direct power of appointment exercised by the Governor of the state. The elective officers of Boston are as follows:

“The Mayor—Elected at large.

“9 Councilmen—Elected at large.

“5 School committee men—Elected at large.”

—*Equity*, Jan., 1918.

1911-1919.—Opening of a vocational bureau.—Boston Trade Union College.—In 1911, a vocational bureau was established; its central office collects and classifies information pertaining to occupations in the community, and endeavors to impress upon parents and children the need of a vocational training. It also acts as counsellor in personal vocational needs, and provides a meeting-ground for consultation between employers and those seeking employment. The bureau works in closest relation with the committee on vocational direction of the Boston school board, the Boston home and school association, the girls' trade education league, and the woman's municipal league. The committee on vocational direction of the Boston school board was formed to begin the work of guidance within the grammar schools. “During the spring of 1910 the Trade Union College, under the auspices of the Boston Central Labor Union, was organized, and its first course of instruction opened on April 7. The committee in charge was made up of 11 representatives from the Boston Central Labor Union and five representatives of the instructors giving courses in the college. The courses were open to all trade unionists of the American Federation of Labor and to members of their immediate families. . . . The courses given during the spring were the following: English, Masterpieces of Literature, Shop Committees and Collective Bargaining, Introduction to American Law, Representative Government, Economics, Physics, Psychology and Logic. Among the instructors in the various courses were several mem-

bers of the faculty of Harvard, . . . Yale, and a number of publicists and students of labor problems.”—H. W. L. Dana, *American labor year book*, 1910-1920, p. 206.—See also EDUCATION: Modern developments: 20th century: Workers' education: United States.

1911-1920.—Government work in developing Boston's port.—By a bill passed by the Massachusetts state legislature in 1911, \$25,000,000 was appropriated for the development of the port of Boston, and a board of port directors was appointed. The improvements began by the remodeling of the commonwealth docks in the heart of the city. The work done up to 1920 consumed about \$75,000,000. “The most recent addition to the facilities of the port is the Boston Army Supply Base, built during the war by the Federal Government. This is the second largest combined waterfront and storage terminal in the country. Its berthing space, over a mile in length, will accommodate nine ocean steamers. . . . In addition to the government owned facilities, the three railroads serving the port have each developed extensive and well equipped terminals.”—*Current Affairs (Boston Chamber of Commerce)*, Feb. 23, 1920.—The new marginal wharf, projected on April 3, 1918, was completed on January 1, 1919. Its length is 1,638 feet, and its two-story concrete and steel transit shed is 137 by 1,638 feet. It has five elevators of 16,000 lb. capacity to take tractor trailers. Five bridges across the driveway connect the second story of the wharf shed with a warehouse containing twenty-four elevators of 10,000 lb. capacity each. The extensive work of deepening the Weymouth Fore river, carried on by the government, was practically completed in 1917.

1912.—Opening of the Cambridge subway section.—“On March 23, 1912, the Cambridge section of the Boston subway was opened. This line extends from a terminal station under the Park Street Station of the old subway to Harvard Square, Cambridge, in a double-track tunnel in Boston, over the Cambridge Bridge across the Charles River, through a 2-mile two-track tunnel in Cambridge. The total length of the new line is 3.2 miles, and brings Harvard Square within eight minutes of Boston Common. It is operated by a private company.”—*American year book* 1912, p. 557.—The Boston end of this subway has since been extended beyond the South Station, through part of South Boston, into Dorchester.

1912-1919.—Art, exhibits, museums.—In May, 1913, the Boston Society of Landscape Architects was organized for the purpose of increasing the efficiency of the profession and promoting its influence on public education. Its exhibition of works of landscape architecture, held February 16 - March 2, 1915, was the first of its kind in the United States. In 1915, the Boston Museum of Fine Arts was enlarged by the addition of the Evans Memorial Galleries for Paintings, which were opened in February. They consist of twelve picture galleries, a tapestry hall, a lecture hall, a gallery for water colors, and a department of prints, occupying eleven rooms with 80,000 engravings, affording the opportunity to study prints from their beginning to contemporary times. In 1910, Harvey Wetzel, of Detroit, bequeathed to the Boston Museum of Fine Arts half of his art collections, and Henry C. Angell, of the city of Boston, left it a collection of paintings, including forty modern productions, chiefly French and Dutch. In the same year two mural panels by John S. Sargent were added to the series illustrating the history of religion in the Boston public library. One of these panels symbolizes the church

and the other the synagogue.—See also EDUCATION, ART: United States: Museums used for art education.

1914-1921.—Social center. See RECREATION: 1914-1921: Rapid development of municipal recreation.

1916-1919.—Housing improvements.—“The housing problem in Boston today is largely a question of improving tenement house conditions or encouraging the decentralization of population by proper suburban development.”—*North End: A survey and a comprehensive plan, Boston city planning board, 1919, p. 46.*—“Housing conditions in the North End have afforded a fruitful field for investigation and reports for years, but the recommendations contained in the recent report of the City Planning Board constitute the first attempt on the part of any agency to solve the problem as a whole, and to restore the North End to its rightful place among residential communities.”—*American City, Aug., 1919, p. 108.*—In this report, the Boston City Planning Board shows the district's usefulness as a tenement section and suggests providing the district with a reasonable amount of air and light by means of extending, widening, and relocating its streets and alleys, and creating a number of neighborhood outing places. It also proposes to build a thoroughfare connecting the wholesale market and cold storage plant with the Charlestown Bridge. “In the meantime Boston has not been idle. . . . During the year 1917, 521 dilapidated and unsafe buildings were ordered taken down, 172 repaired and 57 houses ordered vacated as being in a generally unsanitary condition. A great deal of work has also been done by the Health Department in regard to basement rooms. It is their intention to continue this work until the entire ground is covered and the illegal occupancy of such rooms for living and sleeping purposes entirely abolished. Up to December 1, 1916, 855 basements were examined, 280 approved, 340 vacated and notices served on 235 others.”—*North End: a survey and a comprehensive plan, Boston city planning board, 1919, p. 42.*

1917.—Election and reform victory.—“In the Boston mayoralty election on December 18, the reform element won, ex-Congressman Andrew J. Peters, formerly assistant secretary of the treasury, being elected mayor by a plurality of about 10,000 votes over Mayor Curley, his nearest opponent in a bitter three-cornered fight. The victory of Mr. Peters, regarded as a representative of the Back Bay and business elements of the city, was due in large measure to the strong run made by Congressman James A. Gallivan, who by his vigorous ‘anti-gang’ campaign against Mayor Curley drew from the latter many votes which doubtless could not have been attracted to any candidate regarded as ‘high-brow;’ he ran only 10,000 votes behind Mayor Curley. Ex-Mayor Fitzgerald also took active part in the campaign, as speaker, against Mr. Curley. Peters, Curley, and Gallivan are Democrats, the Boston ballot being nonpartisan. There were two other candidates in the field—Congressman Tague, also a Democrat, who received slightly over 1500 votes, and the Socialist candidate who received only 345 votes.”—*F. W. Coker, Municipal affairs (American Political Science Review, Feb., 1918, p. 123).*

1919.—Police strike.—On September 9, following the suspension of nineteen officers for activities connected with their affiliation with the American Federation of Labor, the Boston policemen went on strike to enforce the recognition of their newly formed union. Their other grievances were: overwork, underpay, and insanitary conditions in the

station houses. The strike was, however, quickly suppressed. Though at the suggestion of Samuel Gompers, president of the American Federation of Labor, the policemen were willing to return on the 13th to the *status quo* until after the industrial conference, Governor Coolidge declared their positions vacant, and a new body of policemen was formed. This was the first police strike in the United States and raised the issue as to whether public servants have a right to strike.—See also MUNICIPAL GOVERNMENT; Police defined.

1919-1920.—Commercial status.—Among American cities Boston in 1919 claimed to be “first in value of property per capita, second in municipal assets per capita, the first shoe and leather center, the first wool market, the first fresh fish market, the second importing seaport (third in 1918), the second textile center, fourth (fifth in 1918) in total foreign trade, fourth in amount of bank clearings, fifth in Federal Reserve Bank System (but fourth as to surplus, earnings and discounts), the fourth postal district, fourth (close to third) in total assessed valuation, fourth (probably) in population [but was sixth, in 1920] the fifth exporting seaport, and eighth in value of its manufactures.”—*Boston Statistics, 1919, City of Boston Statistics Department.*—“The year ending April 30, 1919, was the biggest commercially in the history of the Boston District. The total trade was \$501,565,030. . . . Boston has the distinction of possessing the largest dry dock in the world, just completed [1920], and first used for the docking of the battleship Virginia on December 22, 1919. The dimensions of this dry dock are: length, 1,200 feet; breadth 120 feet with 45 feet of water over the sill at high water. The length of the dock is sufficient to dock two ordinary ocean steamships at one time. . . . The port is supplied with other dry docks and costly marine railways.”—*Current Affairs (Boston Chamber of Commerce), Feb. 23, 1920.*—The railroads entering the terminal of Boston are the New York, New Haven & Hartford, the Boston & Maine, and the Boston & Albany.

1921 (November-December).—Election and recount of ballots.—“Former Mayor James M. Curley was elected Mayor of Boston today by a margin of 2,315 votes, according to the unofficial count, over John R. Murphy, the ‘good government candidate.’ The winner had every newspaper in Boston, except one, against him. . . . It was one of the bitterest campaigns in Boston history, and the election was the most closely contested election. . . . The exceptionally heavy vote cast by the women, who voted this year for Mayor for the first time, decided the result. They flocked to the polls, outvoting the men 2 to 1 in the early balloting. . . . Out of a total registration of 207,000, 160,478 ballots were cast. Of this total Curley had 73,860 votes, Murphy 71,554. Charles S. Baxter, ex-Mayor of Medford, running as a straight Republican without any endorsement, 4,243, and Charles O’Connor, a member of the School Committee, running as a straight Democrat without any endorsement, 10,812. The campaign was supposed to be waged on nonpartisan lines, as Boston dropped the Republican-Democratic line-up in city politics four years ago, when the Mayor’s term of office was extended to four years and he was barred by law from succeeding himself. . . . The Election Commission, after a recount of ballots cast in the city election . . . sustained the election as mayor of James M. Curley. His official plurality over John R. Murphy was placed at 2,470, a net loss of 228 votes as compared with the unofficial returns. The official

figures were: Curley, 74,261; Murphy, 71,794. Curley gained one vote by recount; Murphy gained 229."—*New York Times*, Dec. 14, 23, 1921.

BOTTICELLI, Sandro (1444-1510) (properly Alessandro di Mariano dei Filipepi), Florentine painter; pupil of Fra Filippo Lippi; employed chiefly by members of the Medici family, until he became a follower of Savonarola (1498); his works include many mythical and allegorical pieces

(*Spring, Birth of Venus*) as well as a number of exquisite Madonnas and various scenes from the life of the Virgin.—See also PAINTING: Italian: Early renaissance.

BOUCHAIN, town in France, on the Scheldt. Captured by Marlborough in 1711. See NETHERLANDS: 1710-1712.

BOUCHAVESNES, a village of northeastern France, on the road between Bapaume and Peronne; in 1916 was captured from the Germans by the French in the battle of the Somme. See WORLD WAR: 1918: II. Western front: k, 3.

BOUCHER, François (1703-1770), French painter. See PAINTING: French.

BOUCICAUT, Jean Le Maingre (c. 1366-1421), Marshal of France. In command of an army which was sent by France in 1309 to aid Manuel II against the Turks; sent to Genoa in 1401, which was at the time under French dominion, forced to retire in 1409 when Genoa freed herself from France. See GENOA: 1381-1422.

BOUFFLERS, Louis François, Duc de (1644-1711), distinguished French soldier who served in Germany, the Netherlands and on the Spanish frontiers. Made marshal of France in 1692; duke in 1694; and a peer in 1708. See NETHERLANDS: 1702-1704.

BOUGAINVILLE, Louis Antoine de (1729-1811), French explorer in Pacific. See PACIFIC OCEAN: 1764-1850.

BOUGIE, Bugiah or Bujayah, a seaport of Algeria in the department of Constantine. In ancient times it was a city of considerable importance, being the capital of Genseric the Vandal in the fifth century. In the tenth century it was the greatest commercial port of northern Africa. It was later (15th century) the stronghold of the Barbary pirates, and was captured by the Spaniards in 1510. Although the town was strongly fortified, it was seized in 1555 by Salah Rais, then pasha of Algiers, and has since fallen into decay. It was acquired by France in 1833. See BARBARY STATES: 1505-1510.

BOUGUEREAU, Adolphe William (1825-1905), French painter. See PAINTING: Europe (19th century).

BOUIDES, Buids, Bowides or Dilemites, a tenth century Mohammedan dynasty. See CALYPHATE: 815-945; TURKEY: 1004-1063.

BOULANGER, Georges Ernest Jean Marie (1837-1891), French general and politician. Served with distinction in the Franco-Prussian War, 1870-1871; 1886-1887 minister of war; formed secret alliances with the anarchists and monarchists and upon a platform demanding reform of the constitution, was elected to the Chamber of Deputies, 1888. His popularity and the strength of the movement grew to such an extent that in fear of his grasping the dictatorship, the Tirard cabinet was formed for the express purpose of combating *boulangisme*. Boulanger fled, was sentenced to exile, and committed suicide.—See also FRANCE: 1875-1880.

BOULANGISM, or boulangisme, term applied to doctrines of Boulanger. See BOULANGER; WORLD WAR: Causes: Indirect: f.

BOULE, the single chamber of the Greek legislative body, created by the constitution of 1864, consisting in 1921 of 184 representatives. In 1922, the number of deputies, including the new territories is 316. See GREECE, CONSTITUTION OF; WORLD WAR: 1915: V. Balkans: c, 2.

Ancient Athenian boulé. See AREOPAGUS.

BOULMOFF, Bulgarian general. See WORLD WAR: Miscellaneous auxiliary services: X. Alleged atrocities, etc.: d.

BOULOGNE, a fortified seaport in the department of Pas-de-Calais, northern France; situated on the shore of the English channel at the mouth of the Liane. [For its origin, see *GESORACUM*]. It was destroyed by the Normans in 882; was in the possession of the house of Brabant and descendants of that family until seized by the duke of Burgundy (1419). Henry VIII succeeded in taking the town (1544), but it was soon restored to France (1550).

1801.—Bonaparte's preparations for the invasion of England.—Nelson's attack. See FRANCE: 1801-1802.

1914-1918.—Channel port.—It played an important part in the World War, being one of the English ports of debarkation. Like the other channel ports of Calais and Dunkirk, it was threatened by the Germans in 1914 and again in 1918.—See also CHANNEL PORTS.

BOULON, Battle of. See FRANCE: 1793 (July-December): Progress of war of coalition.

BOUNTIES.—A fiscal bounty is a sum of money paid direct by the government to the producer or exporter of certain articles, or paid indirectly by some favor granted by the government, such as a drawback on transportation rates where the government owns the railroads. The purpose of the bounty is to encourage the production or export of the article. It enables the producer to sell his goods at a lower price than he otherwise could and to do this at the expense of the treasury. In this respect it differs from the protective tariff. In some cases the justification of the bounty is other than economic. Bounties on ship-building, for example, may be justified in the interests of national defence or to encourage mail lines. The bounty harmonizes with the mercantile theory of trade. When the British Parliament passed the navigation acts it established direct bounties on certain articles produced in the American colonies; indigo, for example. See NAVIGATION ACTS; TARIFF: 1846-1879 (Abolition of Navigation Acts).

Bounties by the United States Government.—By an act of 1790, the United States gave a bounty of ten cents a barrel on pickled fish and twenty cents a quintal on dried fish. This was really a drawback on the salt which was subject to duty. (See also TARIFF: 1789-1792.) It was repealed in 1807. The McKinley tariff act of 1890 provided a bounty on sugar. The treasury was to pay "to producers of sugar testing not less than 90 degrees by the polariscope, from beet, sorghum, or cane sugar grown within the United States, or from maple sap produced within the United States, a bounty of 2c per lb." For sugar testing between eighty and ninety degrees, a bounty of one and three-fourth cents per pound was offered. This bounty was repealed in 1894. The amount paid was received largely by producers of Louisiana cane sugar.

Since colonial times it has been a common practice to reward soldiers with land grants. Virginia in ceding her claims to the Northwest territory reserved a large tract of land which she gave mostly to revolutionary soldiers. These were known as bounty lands. Since the Civil War soldiers have had more advantageous terms than other citizens under the Homestead law.

A number of states have paid a cash bounty for the killing of certain animals, as wolves, coyotes and mountain lions.

The sharp competition for recruits between federal and state officers, following the enactment of the conscription law of 1863, led many to enlist simply to secure the bounty and then desert. This

was known as "bounty jumping" and was punished with the full rigor of military law.

BOUQUET, Dom (1685-1754), French antiquarian. See HISTORY: 25.

BOUQUET, Henry (1719-1765), British soldier serving in America from 1756 until his death. Leader of the expedition which relieved Fort Pitt from the siege of the Ottawa Indians under Pontiac. See CANADA: 1759 (July-August); PONTIAC'S WAR.

BOURBAKI, Charles Denis Sauter (1816-1897), French general of Greek origin. He fought with distinction in the Crimean War, at Alma, Inkermann and Sevastopol and in the Italian campaign of 1859. Commander of the Imperial Guard in the Franco-Prussian War, stationed first under Bazaine at Metz from which he was sent on a secret mission to ex-Empress Eugénie in England. On his return in command of the army of the east he attempted to relieve Belfort, was defeated by General Werder, and driven across the Swiss frontier.—See also FRANCE: 1870-1871.

BOURBON, Cardinal (Charles X), proclaimed king of France. See FRANCE: 1589-1590.

BOURBON, Charles, Duke of (1490-1527), French general. Made constable of France as compensation for his services at the battle of Marignano (1515). According to French historians, he abandoned the French army and made an alliance with Charles V and Henry VIII of England for the conquest and partition of France. In 1524 he led an imperial army into Italy, forced the French across the Sesia and expelled Sforza from Milan. He attacked Rome in 1527. See FRANCE: 1520-1523; 1523-1525; ITALY: 1523-1527; 1527; ROME; Modern city: 1450-1527.

BOURBON: Origin of the name. See BOANS.

BOURBON, House of (French): Its origin.—From King Louis IX of France, "through his last male child, Robert de France, Comte de Clermont, sprang the House of Bourbon. An ancient barony, the inheritance of Béatrix, wife of this prince, was erected into a dukedom in favour of Louis, his son, and gave to his descendants the name which they have retained, that of France being reserved for the Royal branch. . . . The House which had the honour of supplying sovereigns to our country was called 'France.' But our kings, jealous of that great name, reserved it for their own sons and grandsons. Hence the designation 'fils' and 'petit-fils de France.' The posterity of each 'fils de France' formed a cadet branch which took its name from the title borne by its head, Valois, Artois, Bourbon, &c. At the time of the accession of Henry IV, the name of Bourbon remained with those younger branches of Condé and Montpensier, which had sprung from the main branch before the death of Henry III. But Henry IV's children, those of Louis XIII., and those of their successors in the throne, were surnamed 'de France'; whilst in conformity with the law the descendants of Louis XIII's second son received the surname d'Orléans, from the title borne by their grandfather. . . . Possessors of vast territories which they [the Bourbons] owed more to family alliances than to the generosity of kings, they had known how to win the affection of their vassals. Their magnificent hospitality drew around them a

numerous and brilliant nobility. Thus the 'hôtel' of those brave and august princes, the 'gracieux ducs de Bourbon,' as our ancient poet called them, was considered the best school in which a young nobleman could learn the profession of arms. The order of the Écu, instituted by one of them, had been coveted and worn by the bravest warriors of France. Sufficiently powerful to outshine the rank and file of the nobility, they had at the same time neither the large estates nor the immense power which enabled the Dukes of Bourgogne, of Bretagne, and other great vassals, to become the rivals or the enemies of the royal authority." The example of the treason of the Constable Bourbon [see FRANCE: 1520-1523] "was not followed by any of the princes of his House. . . . The property of the Connétable was definitely alienated from his House, and Vendôme [his brother] did not receive the hereditary possessions of the Dukes d'Alençon, to which his wife was entitled. He died on the 25th of March, 1538, leaving but a scanty patrimony to his numerous descendants. . . . Five only of his sons obtained their majority. . . . Two of these princes founded families: Antoine [duc de Vendôme and afterwards king of Navarre through his marriage with Jeanne d'Albret, see NAVARRE: 1528-1563], father of Henry IV., who was the ancestor of all the Bourbons now living, and Louis [prince de Condé, born 1530], who was the root of the House of Condé and all its branches."—Duc d'Aumale, *History of the princes of the house of Condé*, bk. 1, ch. 1, and foot-note.—See also FRANCE: 1814-1815.

BOURG. See BOURGEOIS.

BOURGEOIS, Léon Vietor Auguste (b. 1841), French statesman. Entered French parliament 1888; held various ministerial offices; premier, 1895-1896; minister of public instruction, 1898; French plenipotentiary to The Hague peace conferences of 1899 and 1907; 1902 and 1903, president of Chamber of Deputies; 1903, member of Permanent Court of Arbitration; 1905, entered the Senate; 1906, became minister of foreign affairs, being responsible for direction of French diplomacy at Algeçiras; minister of labor in three war cabinets, twice refused the presidency of the council or premiership; member of the Allied commission which drafted the covenant of the League of Nations; Chairman of Council of the League of Nations, 1920, representing France. (See LEAGUE OF NATIONS: First meeting of the assembly). Received Nobel prize for peace, 1920. (See NOBEL PRIZES: Peace: 1920.)

BOURGEOIS, BOURG.—In France, "the word Bourg originally meant any aggregation of houses, from the greatest city to the smallest hamlet. But . . . the word shifted its meaning, and came to signify an assemblage of houses surrounded with walls. Secondly, the word Bourgeois also was at first, used as synonymous with the inhabi-

tant of a bourg. Afterward, when corporate franchises were bestowed on particular bourgs, the word acquired a sense corresponding with that of the English designation Burgess; that is a person entitled to the privileges of a municipal corporation. Finally, the word Bourgeoisie, in its primitive sense, was the description of the bourgeois when spoken of collectively. But, in its later use, the word would be best rendered into English by our term citizenship; that is, the privilege or franchise of being a Burgess."—Sir J. Stephen, *Lectures, history of France, lecture 5*.—See also BELGIUM: Ancient and Medieval history; and FRANCE: 12th-13th centuries.—"It is, indeed, not surprising to discover that there was no equality in privilege between the *bourgeoisie* and the other elements of the Third Estate. The relations of the two were those of superiors and inferiors. The *bourgeoisie* clearly constituted an untitled aristocracy, quite as conscious of its social position as was the real nobility. Nothing shows this plainer than the difference in the two elements of municipal government, the *commune* and the municipality. The *commune*—never to be confused with anything like economic communism—was the armed association of all the Third Estate in a town or village; the municipality was the governing body of the town, and was composed exclusively of the *bourgeoisie*. By such an arrangement danger was shared by all commoners alike, but the perquisites and honors of office went to the *bourgeoisie* alone. In many if not all parts of France the *bourgeoisie* was free from one or more forms of taxation. The very right of labor was safe only in their hands, and they, quite as much as the aristocracy of the court, were ready to oppress the masses, while the mayors of the towns were notoriously venal, buying office and being bought themselves apparently with small sense of official honesty. It is to this extension of class inequality and consequent class hatred that one must look for the origin of that suspicion of the *bourgeois* displayed by the masses during certain periods of the Revolution [see FRANCE: 1780-1790]. That conservative spirit which, in the Constitution of 1791, set a property qualification for suffrage, was to be followed by a fierce determination on the part of the Jacobin leaders to rid the Revolution of all bourgeois control. Their brief success but deepened the class hatred, and to this day the proletariat of France regards all property holders from the small shopkeepers to the millionaire, as hereditary enemies."—S. Mathews, *French revolution*, pp. 25-26.

BOURGES: Origin of.—The city of Bourges, France, was originally the capital city of the Gallic tribe of the Bituriges, and was called Avaricum. "As with many other Gaulish towns, the original name became exchanged for that of the people, i. e., Bituriges, and thence the modern Bourges and the name of the province, Berri."—C. Merivale, *History of the Romans*, ch. 12.—See also ÆDUI, and GAUL: B. C., 58-51.

BOUVINES, Battle of (1214).—The battle of Bouvines, fought at Bouvines, in Flanders, not far from Tournay, on July 27, 1214, was one of the important battles of European history. On one side were the French, led by their king Philip Augustus, and fighting ostensibly as the champions of the pope and the church. On the other side was an allied army of English, under King John, of Germans, under Otho, the Guelph—one of two rival claimants of the imperial crown—and of Flemings and Lotharingians, led by their several lords. Philip Augustus had expelled the English king from his Norman dukedom and caused a court of the peers of France to declare the title forfeit. From that success his ambition rose so high that he had aspired to the conquest of the English crown. Innocent III—perhaps the greatest of all popes—had approved his ambition and encouraged it; for John, the miserable English king, had given provocations to the church which had brought the thunders of the Vatican upon his head. Excommunicated, himself, his kingdom under interdict,—the latter offered itself a tempting prey to the vigorous French king, who posed as the champion of the pope. He had prepared a strong army and a fleet for the invasion of England; but fate and papal diplomacy had baffled his schemes. At the last moment, John had made a base submission, had meekly surrendered his kingdom to the pope and had received it back as a papal fief. Whereupon the victorious pope commanded his French champion to forego his intended attack. Philip, under these circumstances, determined to use the army he had assembled against a troublesome and contumacious vassal, the count of Flanders. The pope approved, and Flanders was overrun. King John led an English force across the channel to the help of the Flemish count, and Otho, the German king or emperor, who was King John's nephew, joined the coalition, to antagonize France and the pope. The battle of Bouvines was the decisive conflict of the war. It humbled, for the time, the independent spirit of Flanders, and several remoter

consequences can be traced to it. It was "the first real French victory. It roused the national spirit as nothing else could have roused it; it was the nation's first taste of glory, dear above all things to the French heart. . . . The battle somewhat broke the high spirit of the barons: the lesser barons and churches grouped themselves round the king; the greater lords came to feel their weakness in the presence of royalty. Among the incidental consequences of the day of Bouvines was the ruin of Otho's ambition. He fled from the field into utter obscurity. He retired to the Hartz mountains, and there spent the remaining years of his life in private. King John, too, was utterly discredited by his share in the year's campaign. To it may partly be traced his humiliation before his barons, and the signing of the Great Charter in the following year at Runnymede."—G. W. Kitchen, *History of France, bk. 3, ch. 7, sect. 4*.—"The battle of Bouvines was not the victory of Philip Augustus alone, over a coalition of foreign princes; the victory was the work of king and people, barons, burghers and peasants, of Ile de France, of Orleanness, of Picardy, of Normandy, of Champagne, and of Burgundy. . . . The victory of Bouvines marked the commencement of the time at which men might speak, and indeed did speak, by one single name, of 'the French.' The nation in France and the kingship in France on that day rose out of and above the feudal system."—F. P. Guizot, *Popular history of France, ch. 18*.—See also **FRANCE: 1213; and ITALY: 1183-1250.**

BOVATE, or Oxxgang.—"Originally as much as an ox-team could plough in a year. Eight Bovates are usually said to have made a Carucate, but the number of acres which made a Bovate are variously stated in different records from 8 to 24."—N. H. Nicolas, *Notitia historica, p. 134*.—Other authorities state that the number of acres in a bovaté ranged from seven to thirty-two.

BOX BILL, to check immigration. See **IMMIGRATION AND EMIGRATION: United States: 1920-1921: Efforts to check immigration.**

BOXER RISING AND THE "OPEN DOOR."—"In the middle of the summer [1900], there suddenly flared up in China a tragedy which fastened the world's attention. The Boxers [The Righteous Harmony Fists, or Big Knife Society], a Chinese association whose aim it was to rid China of foreigners, started, with the apparent collusion of high officials, a campaign of extermination. [See **CHINA: 1900 (Boxer outbreak).**] On June 14 they assailed the foreign Legations at Peking, and during the next eight weeks they blocked the relief of the beleaguered Occidentals, who defended themselves with unflinching endurance and valor in the British compound. These numbered in all only about five hundred persons, including the women and children. Their ammuni-

tion was scanty, their provisions insufficient. About June 20 the outside world ceased to have news of them. An appalling silence brooded over the Legations week after week. On June 15 Secretary Hay, little suspecting that the crisis had already come, telegraphed to General Conger, the American Minister: 'Do you need more force? Communicate with the Admiral and report.' No answer. In vain did Mr. Hay try to get tidings through Mr. Wu, the Chinese Minister in Washington. Foreign Governments were equally unsuccessful. Then Mr. Hay appealed to Li Hung Chang, the Chinese Viceroy of greatest influence,

the Legation, they might have discovered the cipher book also. Accordingly, Secretary Hay hit upon a clever device, and telegraphed on July 21: 'Despatch received. Authenticity doubted. Answer this giving your sister's name. Report attitude and position of Chinese Government.' In due course a reply came, with the name of Mr. Conger's sister, which it was hardly probable that the wildest Boxer could know. Convinced that the besieged were still alive, Mr. Hay now urged Li Hung Chang that the Ministers be allowed to communicate freely with their governments. Li answered that he and the other Viceroys had peti-

AMERICAN FLAG RAISED OVER BATTERED REMNANTS OF THE SOUTH GATE OF THE CITY OF PEKING, AFTER ITS CAPTURE BY THE ALLIED TROOPS

to send the following message through the Boxer lines to Conger in the Legations: 'July 2. Communicate tidings bearer.' Days passed, but brought no reply. The world began to believe the rumors which had been circulating for weeks, that the Boxers had captured the Legations, and slaughtered all the foreigners.

"At last on July 20, Secretary Hay received a despatch, dated July 16: 'For one month we have been besieged in British Legation under continued shot and shell from Chinese troops. Quick relief only can prevent general massacre.—CONGER.' Although this despatch came in the State Department's cipher, many persons doubted its genuineness, for they argued that if the Boxers had taken

tioned the Imperial Government either to do this or to deliver the Ministers, under safe escort, at Tien-Tsin.

"'I told him' (Minister Wu), Hay wrote President McKinley on July 20, 'that we could not consent to any such arrangement as the latter alternative; that if the Chinese Government was able to send them safely to Tien-Tsin, it was able to put us into free communication with them; that if the Chinese Government undertook without previous arrangement to deliver them and failed by any accident, nothing would convince the foreign Governments that the Chinese had acted in good faith. He (Wu) finally consented to telegraph Li again to-day. . . . He is greatly perturbed in

spirit, but seems to be acting squarely with us. He admits there are many things he cannot explain. He does not attempt to account for the silence of the Legations, but believes the Ministers, except Ketteler, are alive.' On August 14, Conger cabled Hay: 'Do not put trust in Li Hung Chang. He is an unscrupulous tool of the cruel Dowager. There can be no adequate negotiation with Peking until the high authors of this great crime have surrendered. Imperial troops firing on us daily. Our losses 60 killed, 120 wounded. We have reached half rations horse-flesh. Have food only for a fortnight. Six children have died. Many others sick.'

"That same day the relief expedition entered Peking and saved the Legationers. . . . To him [Hay] more than to any one else, was due the saving of the Legations. Almost alone he believed that they were still alive and so spared no effort to reach them. His trust kept Secretary Root on the alert, so that when the first telegram came from Peking, Mr. Root, without a day's delay, ordered General Chaffee to proceed to China and command the American relief expedition.

"The Boxer upheaval interrupted and made more difficult Hay's endeavor to preserve the Chinese Empire. After the Japanese defeated the Chinese in 1894, China lay like a stranded whale, apparently dead, or dying, and the chief Powers of Europe came, like fishermen after blubber, and took here a province and there a harbor, and were callous to the fact that their victim was not dead. They not only seized territory, but forced from the Chinese concessions for mines, railways, commercial privileges, and spheres of influence. From the time that Hay became Secretary, he strove to keep intact the political integrity of China and to persuade all the Powers to maintain there the policy of the Open Door.

"As early as March 16, 1899, Hay wrote confidentially to [Paul Dana] a New York editor, who was anxious for the protection of American interests, '. . . We are, of course, opposed to the dismemberment of that Empire, and we do not think that the public opinion of the United States would justify this Government in taking part in the great game of spoliation now going on. At the same time we are keenly alive to the importance of safeguarding our great commercial interests in that Empire and our representatives there have orders to watch closely everything that may seem calculated to injure us, and to prevent it by energetic and timely representations. We declined to support the demand of Italy for a lodgment there, and at the same time we were not prepared to assure China that we would join her in repelling that demand by armed force. We do not consider our hands tied for future eventualities, but for the present we think our best policy is one of vigilant protection of our commercial interests, without formal alliances with other Powers interested.' During the summer the Secretary's instructions to Mr. Conger bore the same burden. But as the European Powers continued making mutual bargains for the partition of the Empire, on September 6, 1899, Mr. Hay finally addressed to London, Berlin, and St. Petersburg his famous note on the Open Door. He did not originate the phrase, and the fact of free commercial intercourse with all nations had existed here and there in Europe during many centuries. But in applying the word to China, Hay defined a policy which would affect the political not less than the commercial status of four hundred millions of Chinese, and of the rest of the world which had relations with them.

"The American circular requested each of the

European Governments to respect the existing treaty ports and vested interests; to allow the Chinese tariff to be maintained and be collected in the respective spheres of influence; and not to discriminate against other foreigners in port and railroad rates. The powers addressed did not reply promptly. England was the first to accede; the others, which stated that they sympathized with the principle, refrained from formally endorsing it. Mr. Hay, after sufficient delay, sent word to each that in view of the favorable replies from the others, he regarded that Power's acceptance as 'final and definitive.' And he subsequently addressed France, Italy, and Japan. Next to England, Hay regarded Russia as the most important party to the agreement. Russia would sign no paper, but her Foreign Minister, Count Mouravieff, gave an oral promise to do what France did. Later, he 'flew into a passion' and insisted upon it that Russia would never bind herself in that way; that whatever she did she would do alone and without the concurrence of France. 'Still,' Hay adds, 'he did say it, he did promise, and he did enter into just that engagement. It is possible that he did so thinking that France would not come in, and that other Powers would not. If now they choose to take a stand in opposition to the entire civilized world, we shall then make up our mind what to do about it. At present I am not bothering much.' (To Henry White, April 2, 1900.) By what was one of the most adroit strokes of modern diplomacy, Hay thus accustomed the world to accept the Open Door as the only decent policy for it to adopt toward China. Not one of the Governments concerned wished to agree to it; each saw more profit to itself in exploiting what it had already secured and in joining in the scramble for more; but not one of them, after Hay had declared for the Open Door, dared openly to oppose the doctrine. It was as if, in a meeting, he had asked all those who believed in telling the truth to stand up; the liars would not have kept their seats.

"Hardly, however, had the world begun to accustom itself to the ideal of the Open Door, before the Boxer Rising intervened, and before this was put down demands for vengeance on the Chinese rose from many quarters. The German Emperor, whose Minister Ketteler had been shot in Peking, sent out a 'punitive' expedition under Count Waldersee, bidding his soldiers to give no quarter and to comport themselves so like Huns that for a thousand years to come no Chinese would dare to look a German in the face. Other Powers uttered their wrath more guardedly; but they all suspected, and probably hoped, that the new situation would justify them in dismembering China. To prevent this Hay worked indefatigably. He sent Mr. W. W. Rockhill—whom he regarded as being, next to Mr. Henry White, the best diplomat in the service—to China. He made his note of July 3 the basis of American action. As Russia occupied Niu-chwang, he sent to her a serious inquiry, to which he 'received a reply, most positive and satisfactory, that their occupation was military and temporary and that our commercial interests should not in any case be limited or injured. Russia,' he adds, 'has been more outspoken than before in her adhesion to the Open Door.' (September 8, 1900.)

"The approach of the much-prepared Waldersee,' wrote one of Hay's colleagues, 'seemed a peril. There was the danger that after all the Emperor's windy eloquence he might feel the necessity of kicking up a row to justify the appointment of Waldersee. I was very glad therefore that

the Russians gave us an opportunity to say that we would stay under a definite understanding and not otherwise. It begins to look as if there was some chance for the Open Door after all.' This was Hay's view also. He wished to hold the other Powers to their adherence to the Open Door, and at the same time to avoid the semblance of organizing an Anti-Russian coalition. To exact from the Chinese indemnities and the punishment of the chief culprits appeared to the Secretary the best sort of retribution; but the Germans went much further. Indeed, Count Waldersee's army obeyed with relish the Kaiser's command and played the congenial rôle of Huns in several districts. 'Everything appeared to be going well until this promenade of Waldersee's to Tao Ping,' Hay writes on October 16, 'which I fear will have very unfavorable results upon the rest of China. The Great Viceroys, to secure whose assistance was our first

cal moment, to wring other exactions from China. It came out later, however, that their mutual purpose was to check Russian aggression in Manchuria, and that Germany wished to prevent England from enjoying a monopoly of the Yangtze Valley trade. Before the end of the year the Powers were sufficiently agreed among themselves to join in drawing up a note in which they laid their demand before the Emperor of China, who perforce yielded to them.

"The negotiations went on for a long time yet but this was the culmination of the diplomatic battle, in which Secretary Hay won the most brilliant triumph of his career. Into the intricacies of the efforts to prevent China from being visected after the Boxer troubles, I will not enter. Hay's part in saving that Empire alive was greater than that of any other statesman. He made a magnificent bluff—which the United States could not

BREACH MADE IN THE CITY WALLS OF PEKING BY THE ALLIED ENGINEERS
DURING THE BOXER REBELLION

effort and our success, have been standing by us splendidly for the last four months. How much longer they can hold their turbulent populations quiet in the face of constant incitements to disturbance which Germany and Russia are giving is hard to conjecture. . . . The success we had in stopping that first preposterous German movement when the whole world seemed likely to join in it, when the entire press of the Continent and a great many on this side were in favor of it, will always be a source of gratification,' he confides in the same letter to an intimate friend. 'The moment we acted, the rest of the world paused, and finally came over to our ground; and the German Government, which is generally brutal but seldom silly, recovered its senses, climbed down off its perch, and presented another proposition which was exactly in line with our position.' In spite of his having warded off the worst danger, the Secretary was both puzzled and somewhat troubled by the drawing together of England and Germany, because he feared that they intended, at the criti-

cal moment, to wring other exactions from China. Two quotations will bring before the reader the Secretary's state of mind in the autumn of 1900. First, as to the policy he upheld:—

"About China, it is the devil's own mess. We cannot possibly publish all the facts without breaking off relations with several Powers. We shall have to do the best we can, and take the consequences, which will be pretty serious. I do not doubt. "Give and take"—the axiom of diplomacy to the rest of the world—is positively forbidden to us, by both the Senate and public opinion. We must take what we can and give nothing—which greatly narrows our possibilities. . . . I take it, you agree with us that we are to limit as far as possible our military operations in China, to withdraw our troops at the earliest day consistent with our obligations, and in the final adjustment to do everything we can for the integrity and reform of China, and to hold on like grim death to the Open Door. . . ." (September 20, 1900.)

"From the next most confidential outpouring

to Mr. Adams, we have Hay's private opinion of the other nations with whom he had to deal in the Chinese imbroglio. '... What a business this has been in China! So far we have got on by being honest and naïf—I do not clearly see where we are to come the delayed cropper? But it will come. At least we are spared the infamy of an alliance with Germany. I would rather, I think, be the dupe of China, than the chum of the Kaiser. Have you noticed how the world will take anything nowadays from a German? Bülow said yesterday in substance—"We have demanded of China everything we can think of. If we think of anything else we will demand that, and be d—d to you"—and not a man in the world kicks. My heart is heavy about John Bull. Do you twig his attitude to Germany? When the Anglo-German pact came out, I took a day or two to find out what it meant. I soon learned from Berlin that it meant a horrible practical joke on England. From London I found out what I had suspected, but what it astounded me, after all, to be assured of—that they did not know! Germany proposed it, they saw no harm in it, and signed. When Japan joined the pact, I asked them why. They said, "We don't know, only if there is any fun going on, we want to be in." Cassini is furious—which may be because he has not been let into the joke.' (To Henry Adams, Nov. 21, 1900.)

"Hay's achievement in this Chinese contest gave him an immense prestige. Throughout the world he was now looked upon as a statesman honest, disinterested, resourceful, and brilliant. His advocacy of arbitration which was preached at the first Hague Peace Conference in 1899, had already singled him out. [See Hague Conferences.] By his work in China Secretary Hay carried out in practice what he had professed at The Hague."—W. R. Thayer, *Life and letters of John Hay*, pp. 231-249.—See also CHINA: 1900-1908; 1901-1902; 1901-1908; 1902; MANCHURIA: 1900-1901.

BOY SCOUTS: Origin.—"When the English Army invaded South Africa during the Boer War it discovered a very valuable auxiliary organization of boys under military age. This force known as boy scouts were thoroughly organized and performing all manner of messenger service and non-military duty in filling the places of those who had joined the Boer Army. General Baden-Powell carried the idea back to England and organized the Boy Scouts of England. During the first eight months of the European War 5,000 medals were given to Boy Scouts of England who had performed no fewer than twenty-eight days' service. About 50,000 boys had served a shorter time. Some served as Coast Guardsmen taking the place of men recalled to the fleet. In 1910 General Baden-Powell visited Canada and the United States appearing in various parts of the country advocating a similar organization here as a means of development of the potentialities of the American boys. There were in the United States at that time two similar organizations, the Woodcraft Indians founded by Ernest Thompson Seton, and the Sons of Daniel Boone founded by Dan C. Beard. These were united in 1910 under the title Boy Scouts of America and incorporated under the laws of the District of Columbia. In June,

1916, Congress granted them a special charter. The Boy Scouts of America are wielding a potent influence in the health, education, morality and business training and leadership of young America. As a Scout the boy willingly adopts as real and vital the universally accepted principles of life as set forth in the Scout Oath and Law. This effectively influences the boy's nature and character so as better to prepare him for that

SIR ROBERT S. S. BADEN-POWELL,
FATHER OF THE BOY SCOUTS

work which the church can best do. The church plays a leading rôle in the Boy Scout movement since it offers a common and free place of meeting under the inspiring environment of Christian endeavor and leadership. The Scout movement is not seeking to displace established educational institutions, for the value of school instruction is indisputable. It does, however, aim to supplement by engaging the boy's leisure energies in outdoor games and activities of culture and practical value."—H. S. Kerrick, *Military and naval America*, pp. 347-348.—The Boy Scout movement has spread to many other countries.

Purpose.—"The purpose of the corporation is 'to promote, through organization, and coöperation with other agencies, the ability of boys to do things for themselves and others, to train them in scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues, . . . by placing emphasis upon the Scout Oath and Law for character development, citizenship, training and physical fitness.' (C. Art. II.)"—*Boy Scouts of America, General Information Bulletin, p. 5.*—"The Boy Scout idea is a movement rather than an organization. It aims to supplement existing organizations such as the home, church and school by engaging the boys' leisure energies in outdoor games and activities of cultural and practical value. The aim of the Scout Movement is to inculcate character, which, though essential to success in life, is not taught within the school, and being largely a matter of environment is too generally left to chance, often with deplorable results. The Scout Movement endeavors to supply the required environment and ambitions through games and outdoor activities, which lead a boy to become a better man, a good citizen. . . . The Boy Scout Movement takes the boy at that time of life when he is beset with the new and bewildering experiences of adolescence and diverts his thoughts therefrom to wholesome and worth while activities. In this manner the movement has done much in numerous cities to diminish the problem of juvenile delinquency."—*Our aims and ideals (Scouting, Apr. 8, 1920, p. 4).*

Non-military spirit.—"As an organization the Scout Movement is not military in thought, form or spirit, although it does instil in boys the military virtues, such as honor, loyalty, obedience and patriotism. The uniform, the patrol, the troop, and the drill are not for military tactics; they are for the unity, the harmony and the rhythm of spirit that boys learn in Scouting. It is in the wearing of the uniform and doing of things together as scouts that they absorb the force and truth of the Scout Law, which states: 'A scout is a friend of all, and a brother to every other scout.'—*Scouting, Apr. 8, 1920, p. 6.*

Numbers and leaders.—In 1922 the Boy Scouts of America showed the highest membership since the organization of the movement. It numbers at present 528,119 men and boys actively engaged in Scouting. In addition to this, there are probably twice as many more boys who are more or less actively following out the Scout Program because they have at some time come within the influence of scout training. They pay their own expenses, but must be directed, taught and helped. Over 32,000 clean men—largely college bred—are scoutmasters and assistants, while some 70,000 men act as councilmen and troop committeemen. They receive no pay, but they must be carefully selected and stimulated by helpful publications and field work.

Motto and pledge.—"The motto of the Boy Scouts is *Be Prepared*. This means that the scout is always in a state of readiness in mind and body to do his duty. . . . Before he becomes a scout a boy must make the following promise. *On My Honor I Will Do My Best:* (1) To do my duty to God and my country, and to obey the Scout Laws; (2) To help other people at all times; (3) To keep myself physically strong, mentally awake, and morally straight."—*Ibid., p. 9.*

Scoutcraft and classes.—"Scoutcraft includes instruction in First Aid, Life Saving, Tracking, Signaling, Cycling, Nature Study, Seamanship, Campcraft, Woodcraft, Chivalry, and all of the handicrafts. . . . The Boy Scouts of America after meeting certain requirements are first enrolled as

tenderfoot scouts. Other examinations must be passed before they can be promoted to second-class scouts, and still harder tests must be met before they can graduate into first-class scouts. Then comes an opportunity for further broadening their usefulness through preparation to meet the requirements for securing each of the sixty merit badges."—*Scouting, Apr. 8, 1920, pp. 5, 8.*

1917-1918.—Work during World War.—"Two thousand Boy Scouts, gathered on the plaza before the Department of Agriculture in Washington [April 21, 1917], and carrying garden tools of all sorts, the Assistant Secretary of Agriculture said: 'Arm yourselves with pick and hoe. Till every scrap of vacant lawn. Raise tomatoes, beans and peas, and you will do an immeasurable service to your country, and the promise was given that the message would be sent to all Boy Scout organizations in the country. The day, April 21, had been called 'National Planting Day' and the boys marched to a three hundred acre plot donated by the Government for farming purposes. In New York City a mass meeting of Boy Scouts received a telegram from Mr. Hoover telling them that 'America will have to feed the world for the next two or three years, even if the war should end this year,' and Mr. Roosevelt urged them to 'start a garden and thereby help to feed the soldiers.'"—*J. B. McMaster, United States in the World War, p. 368.*—"The Government called upon the scouts for many forms of service. When the shortage of black walnut for gunstocks and aeroplane propellers became alarming, scouts located 20,758,660 board feet of standing walnut, or 5,200 carloads. There were also over 100 carloads of fruit pits collected for gas masks, and many thousand war gardens and war farms were conducted by scouts throughout the country. They are likewise recorded as having distributed 30,000,000 pieces of Government literature. Scouts rendered invaluable services to the Red Cross, United War Work Committee, and other national organizations."—*Scouting, Apr. 8, 1920, p. 20.*—"During the World War over 100,000 of the British Boy Scouts were employed in war work, over 100,000 joined the colors and about 35,000 were of service in coast-guard work under the admiralty.

1919.—Work with American Legion.—"One of the . . . developments of the year 1919 was the action taken by the American Legion to substantially contribute to the solution of the problem of leadership of the Boy Scouts of America. At their national convention held in Minneapolis in November, 1919, the following resolution was passed: 'Resolved, That the American Legion heartily commends the principles and achievements of the Boy Scouts of America and recommends that each post assist the boy scout troops in its community in whatever manner practicable.' . . . Plans have been developed whereby each Post will be requested to organize a committee for coöperation with the Boy Scouts of America. The principal responsibility of this committee will be the selection from the membership of the Post of those men who are especially adapted to become leaders of groups of boys as scoutmasters or expert instructors. These men are to be grouped in different cities for special training and then enlisted for active service. Already in the organization of new troops in churches, schools or elsewhere, the leadership has been secured from among the membership of the American Legion."—*Scouting, Apr. 8, 1920, pp. 39-42.*—See also AMERICAN LEGION.

1920.—First International Jamboree.—"The First International Boy Scout Jamboree was held

in the Olympia, London, from July 31st to August 7th, 1920. 301 Picked Boy Scouts from over two hundred representative communities of the United States comprised the delegation under the leadership of Colonel L. R. Gignilliat, Superintendent of the Culver Military Academy, assisted by fifty-six expert adult leaders in boys' work. After the contests in England, the Jamboree party crossed the Channel on August 8th to France and were the guests of the French Government for the next ten days, and after that time, were guests of the Belgian Government. The party officially visited the chief cities and principal battlefields of France and Belgium. An international conference of Scout Leaders occurred August 26-30 with President Livingstone, Vice-President Mortimer Schiff, John M. Phillips and Bolton Smith, members of the Executive Board, and Chief Scout Executive West, as [American] . . . delegates."—*Catalogue of the international Scout Jamboree and educational tour*, p. 1.

1922.—World statistics.—"According to the latest figures available from the International Scout Bureau at London, the Boy Scouts of America exceed in numbers the total membership of Scouts in all the rest of the world put together. The total membership of all other countries affiliated with the International Bureau is 460,089. There are several other active scout associations which are not yet affiliated with the Bureau and whose numbers are therefore not at present available. These unaffiliated countries are Armenia, Argentine, Brazil, Chile, China, Greece, Japan, Panama, Roumania and Uruguay.

Name of Organization	Numbers
Boy Scouts of America	528,119
Austria	1,794

BOYARS.—"The old Muscovite Tsars had always governed their Empire with the aid of their boyars who had been a well-organized body, permeated with the aristocratic spirit, and thoroughly inured to power. True the political status of that body had rested on no direct legal warranty, but on age long custom."—V. O. Kluchevsky, *History of Russia*, translated by Hogarth, v. 3, p. 69.—"In the old times, when Russia was merely a collection of independent principalities, each reigning prince was surrounded by a group of armed men, composed partly of Boyars, or large landed proprietors, and partly of knights, or soldiers of fortune. These men were to a certain extent under the authority of the Prince, but they were by no means mere obedient, silent executors of his will. The Boyars might refuse to take part in his military expeditions. . . . With the formation of cities, the boyars were appointed by their princes to the highest military and civil posts. They also formed a council of the ruling princes called the 'boyarskaya дума. Under the Tartar domination this political equilibrium was destroyed. [See RUSSIA: 17th century: Parliamentary institutions.] When the country had been conquered, the princes became servile vassals of the Khan, and arbitrary rulers towards their own subjects. The political significance of the nobles was thereby greatly diminished."—D. M. Wallace, *Russia*, ch. 17.—"With the middle of the fifteenth century a profound change took place in their composition. . . . In proportion as the strict *miestnichestoo* ranks of the boyars order gradually grew thinner and thinner, there stepped into the resultant vacancies new families of obscure origin. . . . Consequently, we cease to see the new Tsars surrounded by unbroken ranks of the old aristocratic families who had formerly stood at the head of the community."—V. O. Kluchevsky, *History of Russia*, v. 2, p. 39.—"In all their relations with the Suzerain Prince the boyars of this period retained the same character of free, uncovenanted councillors and covenanted retainers as had distinguished the boyars under the princes of the twelfth century."—*Ibid.*, v. 3, p. 69-70.—"With Peter the Great the class of boyars ceased to exist. The boyars as a class failed to retain their privileges because (1) the rank was not hereditary and varied in dignity, (2) a boyar could migrate from one prince to another at will. Boyar is supposed to be a derivative from the Scandinavian *boljar*, the Russian rendering of which was *Kniaz Mooj* (princely man). The name of "boyars" was adopted by Rumania, where to this day it designates land owners.—See also RUSSIA: 16th century: Economic revolution.

BOYCOTT: Origin of term.—"Few words can boast of as curious and interesting an introduction into the English language as . . . the boycott. 'I was dining with Father John O'Malley,' writes James Redpath, in his 'Talks of Ireland,' 1881, 'and he asked me why I was not eating. I said "I am bothered about a word." "What is it?" asked Father John. "Well," said I, "when a people ostracise a landgrabber we call it social excommunication, but we ought to have an entirely different word to signify ostracism applied to a landlord or land agent like Boycott. Ostracism won't do." . . . "No," said Father John, "ostracism won't do." He looked down, tapped his big forehead, and said, "How would it do to call it 'to boycott him'?" Then I was delighted, and I said, "Tell your people to call it boycotting, so that when the reporters come down from Dublin and London they will hear the word. Use it yourself in the Castlebar *Telegraph*. I'm going to Dublin, and will ask the young orators of the land

league to give it that name. I will use it in my correspondence, and between us we will make it famous" . . . Incidentally also the infamies of Captain Boycott were immortalized. . . . For years the Irish peasantry had been heavily burdened by the British landlord class. Lands had been confiscated, homes of the peasants destroyed, starvation wages paid. As the year 1880 approached, evictions became more numerous and their causes more trivial. . . . Among the most hated of the retainers of the landlord class was Captain Boycott, an agent of Lord Erne in County Mayo, in the district of Connemara. In the summer of 1880 he sent his tenants to the fields to cut oats, offering the men and women 32 and 24 cents a day respectively, instead of 62 and 37 cents, the regular wages. They refused to serve, and Boycott, his wife, nieces, nephews and servants undertook to harvest the crop, but desisted, thoroughly exhausted after a few hours' labor. The tenants were finally induced by the pleas of Mrs. Boycott to return to work, but on rent day were confronted by a formidable array of 18 constables equipped with eviction papers. Three papers were served, whereupon the outraged workers called a mass meeting, induced the servants, herders and drivers to desert Boycott, and secured the pledges of those present to cease all relations with the captain and his family. At the call of Boycott, a relief expedition, consisting of seven regiments and fifty hired men, was soon rushed to the estate, and the potatoes and other commodities were finally gathered at an expense of between \$35,000 and \$50,000—many times the value of the crop. Three days later after the decree of social ostracism was pronounced, the word 'boycott' was invented. It was first used publicly by Redpath, August, 1880, in the village of Deeanane."—H. W. Laidler, *Boycotts and the labor struggle*, pp. 23, 24, 25.—There are two forms of boycott, primary and secondary. The former is a combination directly employed against a firm, while the latter is a combination employed against a group, who in turn are compelled to refrain from dealing with a firm against whom the original combination is really formed. (See below: DUPLEX PRINTERS' CASE.)

Use in Asia.—The boycott has been employed in China, against American goods, as a tangible form of protest against the exclusion of Chinese from the United States, and, more effectively, against everything Japanese, as an expression of hostility to the occupation of Shantung by Japan. In India, *Swadeshi*, or the boycott of imported goods, and especially of British goods, has been a marked feature of the nationalist movement.—See also CHINA: 1905; 1919-1920.

Status in Europe.—The boycott has been effectively used as an economic weapon in Europe, especially in Ireland, also in England, France and Germany, where it has played a prominent part in labor struggles and in correcting abuses. From 1097 to the middle of the nineteenth century the farmer-tenants of northern France claimed the right to perpetual enjoyment of their land. Since this right was in conflict with the French law, the farmers paid the landlord a premium which he dared not refuse for fear of being boycotted. English courts recognized the legality of the boycott and punished only acts of violence or intimidation. The boycott as it exists in the United States was never felt to any great extent in England. In Germany the law is similar to that in England, and imposes penalties on those who coerce others by violence. But persuading the general public to cease dealings with a party was decided in 1906 as not actionable for damages. In none of the

European countries is there a specific law against boycotting, although the laws against intimidation might be used, if necessary, against the employment of the boycott. In England and Germany, however, the boycott is virtually legalized.—See also LABOR STRIKES AND BOYCOTTS: 1881-1916; POLAND: 1872-1910.

See also GUILDS; Modern times; RACE PROBLEMS: 1880-1906.

1809-1850.—Early development in the United States. See LABOR STRIKES AND BOYCOTTS: 1809-1850.

1880-1892.—Frequent use of, in the United States.—Gradual opposition to.—"At one time in the development of labor's policy, the boycott seemed a very hopeful weapon. Between 1880 and 1890 the Knights of Labor, as a nation-wide organization, reached the height of its power. [See LABOR STRIKES AND BOYCOTTS: 1880-1900.] During the same period the American Federation of Labor came into being. [See LABOR STRIKES AND BOYCOTTS: 1881-1916.] Both organizations were enthusiastic and saw labor's millennium just ahead. With eagerness the boycott was seized as a convenient weapon for fighting. While there is no complete information available as to the number of boycotts that were instituted during this period, the facts that have been collected show that its use touched a wide variety of trades, and that the outcome in a large proportion of cases was successful to the workers. Especially favorable did the method of attack prove against the newspapers, publishers, manufacturers of cigars, hats, clothing, stoves, against flour mills, hotels and theaters. A very complete record of boycotting was published by the New York Bureau of Statistics of Labor during the eight years, 1885 to 1892 inclusive. Covering that time records were compiled of 1,352 boycotts. In the first year there were 50. The year following the number increased to 163. . . . An analysis of the data of boycotts during the eighties and nineties of the last century shows some interesting conclusions. Of those that were brought to a final termination, from two-thirds to three-fourths were successful, and, generally speaking, the greatest successes came to boycotts against primary necessities. It also appears that 'the success of boycotts is likely to be in inverse ratio to their frequency; that those boycotts which do not act effectively within the first few months are much less likely to succeed than those vigorously pushed from the very beginning; also that the causes underlying the boycott are among the determining factors in its success.' Further it appears that while boycotts are subject to abuse, such abuse is liable to prove a 'boomerang against labor.' With its continued use, the abuse tends to become less. The facts of the period indicate also a growing conservatism on the part of unions in the use of the boycott."—G. G. Groat, *Introduction to the study of organized labor in America*, pp. 257-258.—See also LABOR STRIKES AND BOYCOTTS: 1881-1916.

1892.—Factors affecting its success.—Decrease in numbers of, in the United States.—"Several factors appear as of leading significance in determining the success of a boycott when no appeal is made to the court for legal interference. The following list is suggested by Laidler: the character of the market for the commodities boycotted; the strength of the boycotting organization; the frequency and regularity with which the article is purchased; the location of the boycotted firm; its capital; nation-wide extent of its trade; the degree of monopoly; the manner in which the unionists concentrate on one firm; the publicity

secured; the ease with which the boycotted goods are distinguished; the character of the competition against the firm; the directness of the boycotting attacks; the causes leading to the institution of the boycott; the vigor with which it is pushed at the very outset; and the care used in its inauguration. . . . In 1892 the New York Commissioner reports the decrease in the number of boycotts. One reason he assigns is that organized labor has attained a development where it finds it necessary to wield the 'potent weapon' with caution. Doubtless the success of indictments in court had its effect also in securing caution. The newer and more radical the union, generally the more readily the boycott was used in its more offensive form, often continuing the boycott after the demands had been granted, and driving the victim out of business as an example to others, or demanding payments of money as a most open form of blackmail."—*Ibid.*, pp. 258-261.

1894.—Pullman strike. See LABOR STRIKES AND BOYCOTTS: 1880-1900.

1897-1920.—Hatters' boycott.—Buck Stove and Range boycott.—Recent judicial decisions in the United States.—State anti-boycott laws.—"Recent years have witnessed two great contests in which the boycott has figured as the leading if not the sole means adopted by the unions to secure their ends. These two are what are known as the Hatters' Boycott and the Buck Stove and Range Boycott. The latter began in 1906. The former was a part of a campaign for a closed shop begun by the Brotherhood of United Hatters of America in 1897. This campaign had been successful in a majority of shops. But when the shop of Daniel Loewe was attacked, he made a firm resistance and the machinery of a well-organized boycotting system was turned against it in 1902. Both of these cases were taken to court and made the cause of a desperate legal fight. Opinions went steadily against the boycotters. The Buck Stove and Range Case assumed the form of a struggle between the company of that name and the American Federation of Labor officials. Injunctions were issued forbidding the continuance of the boycott, the injunction was appealed and sentences that had been pronounced for its violation suspended pending the appeal. The case was finally brought to a settlement in the United States Supreme Court in accordance with which the accused were not required to serve sentence that had been imposed by lower courts nor were the principles in the case authoritatively decided. [See also LABOR STRIKES AND BOYCOTTS: 1881-1916.] The Loewe Case was brought under the Sherman Anti-Trust Act. The final decision of the United States Supreme Court in this case, after many years of trial and appeal, holds the boycotters, the individual members of the local union, individually liable for three times the damages sustained by the Loewe firm.

"In 1903 Alabama enacted the first state law in the United States in which boycotting is dealt with by name, declaring it to be illegal and subject to fine or imprisonment. The provisions of this statute are very rigid, making it a misdemeanor for any one to have printed or circulated any notice that a boycott 'exists or has existed or is contemplated.' Colorado, Illinois, Indiana and Texas have also placed anti-boycott laws on their statute books. These laws are similar in their general provisions. As to the legality of boycotts there can be but one opinion. 'As simple strikes are nearly always lawful, so boycotts are nearly always unlawful.' Boycott has come to mean

generally in law 'an unlawful conspiracy.' What the law is admits of no discussion from laymen. It is simply a fact, enacted by a legislature or declared by a court and a fact, of course, to be accepted. But what the law ought to be is certainly a topic open to discussion."—*Ibid.*, pp. 262-264.

1921.—Duplex printers' case.—United States Supreme Court decision interpreting the Clayton law.—"In a far-reaching decision affecting the rights of labor organizations to employ the secondary boycott against employers, the Supreme Court of the United States today [Jan. 3, 1921] held that the Clayton law amendatory of the Sherman anti-trust act did not make labor unions immune from prosecution and judicial restraint in their interference with the interstate trade of employers. This decision ranks in importance with the action of the Supreme Court in convicting the Danbury Hatters' Union of unfair practices, and is, in fact, an overturning of the contention of organized labor that the Clayton law exempted labor unions from the operations of those sections of the Sherman act which had been held to apply to them in the Danbury hatters' case. The Clayton law was enacted subsequent to the Danbury hatters' decision and the view had been asserted that part of its intent was to relieve labor organizations of liability under the Sherman act provisions forbidding combinations in restraint of trade. Six Justices of the Court, including Chief Justice White, voted to uphold the opinion rendered. Justices Holmes, Brandeis and Clarke dissented. The decision overrules the United States District Court for the Southern District of New York (Manhattan) and the United States Circuit Court of Appeals, which had held that the Clayton act rendered labor unions immune from prosecution for employing the secondary boycott. This was described by the court as 'a combination not merely to refrain from dealing with complainant or to advise or by peaceful means to persuade complainant's customers to refrain (primary boycott) but to exercise coercive pressure upon such customers, actual and prospective, in order to cause them to withhold or withdraw patronage from complainant through fear of loss or damage to themselves should they deal with it.' [See COPPAGE VS. KANSAS.]

"The case on which yesterday's decision was made began in 1913, when employees of the Duplex-Printing Press Company, which conducted an open shop, endeavored to start a strike. Of the two hundred men employed in the factory only about ten walked out. The strike being unsuccessful, the union attempted to break up the sale and distribution of the company's product by an interstate boycott, calling on all unions, affiliated with the American Federation of Labor, to prevent the hauling, assembling, repairing and operation of all printing presses made by it. A temporary injunction was obtained by the company in 1914, when the unions threatened to boycott all of the exhibitors in an exposition at the Grand Central Palace if the Duplex company was allowed to exhibit its presses. When the case came up in the United States District Court for a permanent injunction it was held that the Clayton act forbade the issuance of an injunction in such cases. This decision was upheld in the United States Circuit Court of Appeals. A year ago it was placed in the United States Supreme Court.

"The dissenting opinion of Justices Holmes, Brandeis and Clarke, delivered by Justice Brandeis, makes the contention that the court's decision renders futile an effort of more than twenty years to place employers and employees on an equal

basis before the law. These three Justices held that the action of the International Association was not a secondary boycott but, 'an instance of a strike of those who have a common interest to protect themselves by preventing use of products which part of them have tried to prevent manufacture of by a strike.' The point was made that it was clearly a case of self-defense. This contention was supported by citing that manufacturers refused to sell their products to customers employing union labor exclusively. The question is, said Justice Brandeis in the dissenting opinion, whether 60,000 laborers may not say that they would not let their men work on products manufactured in shops against which the laborers were striking."—*N. Y. Times*, Jan. 4, 1921.

BOYS IN BLUE; **BOYS IN GRAY**.—Soldier nicknames of the American Civil War.—"During the first year of the war [of the rebellion, in the United States] the Union soldiers commonly called their opponents, 'Rebs' and 'Secesh'; in 1862, 'Confeds'; in 1863, 'Graybacks' and 'Butternuts'; and in 1864, 'Johnnies.' The nickname 'Butternuts' was given the Confederates on account of their homespun clothes, dyed reddish-brown with a dye made of butternut bark. The last name, 'Johnnies,' is said to have originated in a quarrel between two pickets, which began by the Union man's saying that the Confederates depended on England to get them out of their scrape. . . . The Union man . . . said that a 'Reb' was no better than a Johnny Bull, anyhow. . . . The name stuck, and in the last part of the war the Confederate soldiers were almost universally called 'Johnnies.' Throughout the war the Confederates dubbed all the Union soldiers 'Yankees' and 'Yanks,' without any reference to the part of the country they came from. . . . Other nicknames for Union soldiers, occasionally used, were 'Feds,' 'Blue Birds' and 'Blue Bellies.' Since the war the opponents have been commonly called

'Boys in Blue' and 'Boys in Gray.'—J. D. Champlin, Jr., *Young folks' history of the war for the Union*, p. 137.

BRAHMA.—"Brahmanism grew out of Vedism. It teaches the identification of all the forces of phenomena of Nature with one spiritual Being—the only real Entity—which, when unmanifested and impersonal, is called *Brahmā* (neut.); when manifested as a creator, is called *Brahmā* (masc.); as a disintegrator, *Śiva*; as a preserver, *Vishnu*; and when manifested in the highest order of men, is called *Brahmana* ('the Brahmins'). Brahmanism is rather a philosophy than a religion. Its fundamental doctrine is spiritual Pantheism. Hence *Brahmā* is only a creator in the sense of being the first Evolution out of the one Spirit, the evolution out of which all other evolutions have proceeded. He is not a creator in the sense of creating the world out of nothing. The only Creator or, more correctly, Evolver, is the neuter entity called *Brahmā*, the source of all created things."—M. Monier-Williams, *Brahmanism and Hinduism*, p. 2.—See also BRAHMANISM: Essential features; HINDU LITERATURE; MYTHOLOGY: India: Unparalleled length of life.

BRAHMA SAMAJ.—"The impact of Christianity and Western civilization upon India has led to at least two noteworthy efforts to adjust Hinduism to modern conditions. The earliest of these efforts is the Brahma Samaj (Society of God), founded in 1828 by Ram Mohan Ray, a

distinguished, broad-minded Brahman. It has had since his death two other distinguished leaders, Debendra Nath Tagore and Keshab Chandra Sen. As each of these leaders stood for a somewhat different religious position, and as there were some members of the society who, at each new departure, preferred the older view, the Brahma Samaj is now composed of three wings. All branches of it agree that God is a personal being, that he never became incarnate, that he hears and answers prayer, that he is to be worshiped only in spiritual ways, that men of all castes may worship him acceptably, that repentance and cessation from sin are the only way to forgiveness and salvation, and that nature and intuition are the sources of the knowledge of God, no book being authoritative. The branch of it led by Keshab Chandra Sen is known as the 'New Dispensation Samaj.' It adds to the articles already mentioned belief that the soul is immortal; that God is a Trinity, Father, Son, and Spirit; that God is Mother as well as Father; that God speaks through inspired men as well as through nature and intuition; that Brahmanism is a universal religion; and that the Brahma Samaj is God's latest dispensation and its missionaries his apostles. In 1901 there were but 4,050 members in all three branches of the society."—G. A. Barton, *Religions of the world*, pp. 197-198.—See also BRAHMANISM.

BRAHMANISM: Essential features.—"Although Brahmanism has exercised a vast influence over the beliefs and worships of Asia during many centuries, and still numbers, at the lowest calculation, more than two hundred million votaries, it is not a Faith that can itself be traced back to an epoch or a founder. . . . In the first place, it is neither militant nor aggressively missionary; it does not openly attempt to make proselytes, in the sense of persuading them or compelling them to come in. Secondly, it is not historic; it has sacred books, but no sacred history. And, thirdly, it has never been defined by formal creeds, nor has it ever accepted a single personal Deity. The general character of Indian religion is that it is a boundless sea of divine beliefs and practices; it encourages the worship of innumerable gods by an infinite variety of rites; it permits every doctrine to be taught, every kind of mystery to be imagined, any sort of theory to be held as to the inner nature and visible operation of the divine power. . . .

"But the Indian philosophy does not ignore or hold aloof from the religion of the masses; it underlies, supports, and interprets their polytheism. This may be accounted the keystone of the fabric of Brahmanism, which accepts and even encourages the rudest forms of idolatry, explaining everything by giving it a higher meaning. It treats all the worships as outward, visible signs of some spiritual truth, and is ready to show how each particular image or rite is the symbol of some aspect of universal divinity. The Hindus, like the pagans of antiquity, adore natural objects, and forces—a mountain, a river, or an animal. The Brahman holds all Nature to be the vesture or cloak of indwelling, divine energy, which inspires everything that produces awe or passes man's understanding. Again, it is very common in India, as it was in Greece and Rome, to deify extraordinary men, and the Brahman does not tell his disciples that this is absurd; he agrees that such persons must have been special embodiments of all-pervading divine power. In short, he accepts every variety of cult and objective worships as symbolical; it is merely the expression or emblem, suited to the common intelligence, of mys-

terious truths known to the philosophic theologian. In this manner, the gross idolatry of the people is defended, and connected with the loftier ideas. It is maintained that God is a Pure Spirit, but to make Him wholly impersonal is to place Him beyond the reach of ordinary human interest and imagination; so it is well for the less advanced minds to be encouraged by forms and signs of His presence. All worship, it is said, is expressed through the senses symbolically. A temple or church is a visible mark of our belief that the divinity abides among us; an image is the mystical token of the indwelling spirit; while prayer and sacrifices are the preparatory training toward more intelligent devotion. What we can conceive in our minds we may well picture to our eyes; and, by this method, the innumerable shapes and sacred places of Hindu polytheism are consecrated and adopted into the higher theology. . . . Above and beyond the miscellaneous crowd of things and persons, living or inanimate, unœen or embodied, that are worshipped as possessed by divine power, we have the great deities of Brahmanism, from whom all this divine power proceeds, and in whom

sacrifices; they have innumerable temples, images, and personified attributes. Yet to all the more intellectual worshippers, Vishnu and Siva represent the course and constitution of Nature. And, if you inquire further about these things, you will learn all phenomenal existence is a kind of illusion, to be gradually dissipated by the acquisition of knowledge; for the reality becomes intelligible only to those whose souls have been strengthened and clarified by long meditation, by ascetic exercises, by casting out all worldly thoughts and desires. . . .

"But all Hindus worship directly the high gods of Brahmanism. Brahma, having accomplished once for all his work of creation, has retired into the background of the popular Pantheon; he has very few temples or images; Vishnu and Siva divide the allegiance of devout and orthodox people. It is impossible here to give the diverse names or emblems under which they are worshipped; yet some mention must be made of the Sakhtis—that is, of the divine forces of preservation and destruction, especially the female principle of productiveness, as personified by goddesses, the mates or consorts of Vishnu and Siva. Thus,

THE GODS OF THE INDIAN TRIAD

the principal energies and the fundamental laws of nature are personified. Brahma, Vishnu, and Siva are the realistic abstractions of the understanding from objects of sense. They denote Creation, Preservation, and Destruction, the constant succession of birth and death throughout all existence, the process of destroying to produce, and of producing to destroy. Here we perceive that, as soon as we pass upward through the disorderly mass of ordinary paganism, we come upon polytheism backed by philosophy; we may scatter the irregular levies, and are confronted by the outworks of disciplined theology. The great Brahmanic Trinity are adored with various rites and

Vishnu and Siva, with their consorts, are the pinnacles of the visible Brahmanic edifice; they are different manifestations of the Supreme Being; they represent among educated men separate systems of worship, which, again, are founded on separate schools or opinions regarding the relations between God and man, and the proper ways and means of attaining to spiritual emancipation. For, the whole purpose of the higher Brahmanism is to find and show the path which leads upward, from the simple unvarnished popular superstitions to the true and pure knowledge of the Supreme Being, by laying out a connection between the upper and lower aspects of religion. . . . This, then, is the

philosophic religion at the back of the popular worship, to which it gives an explanation and a final purpose. For Brahmanism holds out to all men, as its scheme of salvation, the hope of escape from the pain and weariness of sensitive existence in any shape or stage. . . .

"In regard to the Sacred Books, they contain, partly, the sayings, precepts, and mystic utterances of the ancient sages; partly, prayers and psalms; and, partly, abstruse speculations on the divine nature, with scholastic dissertations and commentaries. The modern students and teachers of the various schools or sects of Brahmanism treat these books as authoritative, and are constantly discussing, expounding, or adapting them

matic backbone has left the religion elastic and tolerant, has enabled its teachers to assimilate and adapt the lower forms of worship, instead of endeavoring to destroy them."—A. C. Lyall, *Brahmanism* (*North American Review*, Dec., 1900, pp. 920-928).—See also EDUCATION: Ancient: B. C. 15th-5th centuries: India.

"The first general impression produced by a perusal of the law-books is that the popular religion has remained unaffected by philosophy. And this is correct in so far as that it must be put first in describing the codes, which, in the main, in keeping the ancient observances, reflect the inherited faith. When, therefore, one says that pantheism succeeded polytheism in India, he must

Showing ancient sculptures of Hindu deities, including the great image formerly thought to be the Hindu Triad, but now held to be a triform representation of Siva alone

to the ideas and circumstances of a people that is becoming profoundly affected by European modes of thought. One thing must be noticed in these Books, that they are not historical: they give no account of the rise of spreading of the religion, they do not trace it back to a founder, as in Christianity, Mohammedanism, or even Buddhism. [See INDIA: B. C. 312.] The Hindu would say, in the words of an early Christian Father, that the objects of religious knowledge are not historical, that such things in their essence can only be comprehended intellectually, or through divine inspiration. And the fact that Brahmanism has no authentic and universally accepted sacred narrative, that it is not concentrated round the life and acts of a personal founder is, I think, one reason why it has remained diffuse, incoherent, without a central figure or dominant plan. On the other hand, this very want, so to speak, of dog-

qualify the assertion. The philosophers are pantheists, but what of the vulgar? Do they give up polytheism; are they inclined to do so, or are they taught to do so? No. For there is no formal abatement in the rigor of the older creed. Whatever the wise man thought, and whatever in his philosophy was the instruction which he imparted to his peers, when he dealt with the world about him he taught his intellectual inferiors a scarcely modified form of the creed of their fathers. . . . With rare exceptions it was only the grosser religion that the vulgar could understand; it was only this that they were taught and believed. Thus the old Vedic gods are revered and worshipped by name. The Sun, Indra, and all the divinities embalmed in ritual, are placated and 'satiated' with offerings, just as they had been satiated from time immemorial. But no hint is given that this is a form; or that the Vedic gods

are of less account than they had been. Moreover, it is not in the inherited formulæ of the ritual alone that this view is upheld. To be sure, when philosophical speculation is introduced, the Father-god comes to the fore; Brahmā sits aloft, indulgently advising his children, as he does in the intermediate stage of the Brahmanas; and *atma* (*brahmā*) [the impersonal aspect of the Supreme Soul] too is recognized to be the real being of Brahmā, as in the Upanishads. But none of this touches the practice of the common law, where the ordinary man is admonished to fear Yama's hell and Varuna's bonds, as he would have been admonished before the philosopher grew wiser than the Vedic seers. Only personified Right, Dharma, takes his seat with shadowy Brahmā among the other gods."—E. W. Hopkins, *Religions of India*, pp. 247-249.—See also BRAHMA; UPANISHADS; VE-DANTISM.

Modern Hindu view.—"The one thing that comes out most prominently when we study the history of the progress of all religions, great or small, known to man is that anything like a wooden uniformity in religious matters is both unnatural and impossible. Whether your religion is merely historic, or higher than historic including as a part of it the historic manifestation of divinity within its wide embrace, whether again your religion is defined by formal creeds or not so defined, the limitation of uniformity imposed by force upon that religion cannot but make it unsuited to the ever growing spiritual capacity of the human soul. In Brahminism, for instance, the *Avatar* of Sri Krishna is positively historic, and Sri Krishna is well-known to have been a great religious teacher. Indeed it is chiefly to Him that Brahminism owes its universality and comprehensiveness. It is He who first proclaimed to humanity the great truth that any form of religion is better than irreligion, and that in religious endeavours the human mind rises gradually from the lower to the higher, and that in man's effort to realise the divine in his every day life even the lowest forms of religion are, when suitably adopted, more or less productive of good. The idea that Brahminism has not accepted a single personal deity can be attributed only to ignorance. Brahminism is absolutely monotheistic and believes only in one God who is however worshipped under many names. . . . Do the names Lord, Christ, God, Jehovah, Heavenly Father—all mean the same thing, or do they imply that the Christian does not worship a single deity? We have no doubt that there is nothing wrong in calling the one God of the Christians by these many names. Only in Saivism and Vaishnavism the similar existence of many names to denote the God, that the followers of these religions worship, leads the critics of Brahminism to assert that this religion does not accept a single deity. . . . Even an ardent Christian mystic like Novalis has declared that if God can be seen in flesh and blood he can be seen also in stalks and stones.

"Thus what appears as gross idolatry to the unphilosophic fanatic becomes in the eye of the Brahmin a source of great helpfulness to the weak worshipper in the conduct of his devotions and prayers. Is the Brahmin really wrong in supposing that God is apprehended only symbolically by man and worshipped also only symbolically? The relation of symbols to worship and to the apprehension of religious philosophy and final religious truths is a question of perennial interest to man. Man can never do without symbols in these matters, and his progress herein consists simply in his rejecting one set of symbols to rely

more and more upon another set, human language itself being nothing other than such a symbol. Brahminism is high and true philosophy expressed in accurate language and concretised into visible symbols and practices, and the worth of such a religion is to be judged more from the philosophy which forms the life of it than from the symbols which form its external embodiment."—*Brahmavadin*, May, 1901, pp. 460-466.—See also BUD-DHISM; ETHICS: India; INDIA: People; B. C. 2000-600; MYTHOLOGY: India: Primitive elements in mythology of India; CASTE SYSTEM OF INDIA; RELIGION: B. C. 1,000.

BRAHMS, Johannes (1833-1897), German composer, and called the last of the great classical masters. Studied with Cossel, and later with Marxsen; 1854, given the post of choir-master and music master to the prince of Lippe-Detmold; 1863, appointed director of the Singakademie, Vienna; 1871-1874, conducted concerts of the Gesellschaft der Musikfreunde; 1877, wrote his first symphony upon the study of which von Bülow called it the "tenth symphony" and originated his famous phrase of "the three B's" (Bach, Beethoven, Brahms). His style is the ideal combination of the older polyphonic with the later homophonic, as an instrumental composer he stands with Beethoven, with his great choral works he ranks with Bach, and his "German Requiem" induced Hanslick to write: "since Bach's 'Mass in B minor', and Beethoven's 'Missa Solemnis' nothing has been written in this field that can be placed by the side of Brahms' 'German Requiem.'"—See also MUSIC: Modern: 1843-1897.

BRANDENBURG: Area.—Population.—Resources.—As a Prussian province Brandenburg comprises the two governments of Potsdam and

Frankfurt-on-Oder, and the capital Berlin, which forms a separate jurisdiction. It occupies an area of 15,376 square miles, bounded by Mecklenburg, Pomerania, Posen, Silesia, and Prussian Saxony. (See GERMANY: Map.) Its population in 1919 was 2,445,627. It has 600 or 700 lakes, some of which are connected by canal with its greatest rivers, the Elbe and the Oder. The chief agricultural products are barley and rye, fruits, vegetables, hemp, flax, hops, and tobacco. Sheep are also raised extensively, and wool constitutes an article of export. Its extensive forests, mainly pine and fir, abound in game and its rivers and lakes supply fish. Its mineral resources are lignite, limestone, gypsum, alum, and potter's earth. Its various industries include the manufacture of cigars and cigarettes, machinery, glass articles, chemicals, spinning and weaving silk, wool, linen, and cotton, dyeing, distilling of brandy, and brewing. Before the World War in 1914, it was an active trade center of manufactured articles.

928-1142.—Beginnings of the margravate.—In "928, Henry the Fowler, marching across the frozen bogs, took Brannibor, a chief fortress of the Wends; first mention in human speech of the place now called Brandenburg; Bor or 'Burg of the Brenns' (if there ever was any Tribe of Brenns,—Brennus, there as elsewhere, being name for King or Leader); 'Burg of the Woods,' say others,—who as little know. Probably, at that time, a town of clay huts, with ditch and palisaded sod-wall round it; certainly 'a chief fortress of the Wends.' . . . That Henry appointed due Wardenship in Brannibor was in the common course. Sure enough, some Markgraf must take charge of Brannibor,—he of the Lausitz eastward, for example, or he of Salzwedel westward:—that Brannibor, in time, will itself be found the fit place, and have its own Markgraf of Brandenburg; this, and what in the next nine centuries Brandenburg will grow to, Henry is far from surmising. . . . In old books are lists of the primitive Margraves of Brandenburg, from Henry's time downward; two sets, 'Markgraves of the Witekind race,' and of another; but they are altogether uncertain, a shadowy intermittent set of Markgraves, both the Witekind set and the Non-Witekind; and truly, for a couple of centuries, seem none of them to have been other than subaltern Deputies, belonging mostly to Lausitz or Salzwedel; of whom therefore we can say nothing here, but must leave the first two hundred years in their natural gray state,—perhaps sufficiently conceivable by the reader. . . . The Ditmarsch-Stade kindred, much slain in battle with the Heathen, and otherwise beaten upon, died out, about the year 1130 (earlier perhaps, perhaps later, for all is shadowy still); and were succeeded in the Salzwedel part of their function by a kindred called 'of Ascanien and Ballenstädt'; the Ascanier or Anhalt Margraves; whose History, and that of Brandenburg, becomes henceforth articulate to us. . . . This Ascanien, happily, has nothing to do with Brute of Troy or the pious Æneas's son; it is simply the name of a most ancient Castle (etymology unknown to me, ruins still dimly traceable) on the north slope of the Hartz Mountains; short way from Aschersleben,—the Castle and Town of Aschersleben are, so to speak, a second edition of Ascanien. . . . The kindred, called Grafs and ultimately Herzogs (Dukes) of 'Ascanien and Ballenstädt,' are very famous in old German History, especially down from this date. Some reckon that they had intermittently been Markgrafs, in their region, long before this; which is conceivable enough; at all events it is very plain they did now attain the

Office in Salzwedel (straightway shifting it to Brandenburg); and held it continuously, it and much else that lay adjacent, for centuries, in a highly conspicuous manner. In Brandenburg they lasted for about two-hundred years."—T. Carlyle, *Frederick the Great*, bk. 2; ch. 3-4.

1142-1152.—Electorate.—"He they call 'Albert the Bear (Albrecht der Bär),' first of the Ascanien Markgraves of Brandenburg;—first wholly definite Markgrave of Brandenburg that there is; once a very shining figure in the world, though now fallen dim enough again, . . . got the Northern part of what is still called Saxony, and kept it in his family; got the Brandenburg Countries withal, got the Lausitz; was the shining figure and great man of the North in his day. The Markgraftom of Salzwedel (which soon became of Brandenburg) he very naturally acquired (1142 or earlier); very naturally, considering what Saxon and other honours and possessions he had already got hold of. We can only say, it was the luckiest of events for Brandenburg, and the beginning of all the better destinies it has had. A conspicuous Country ever since in the world, and which grows ever more so in our late times. . . . He transferred the Markgraftom to Brandenburg, probably as more central in his wide lands; Salzwedel is henceforth the led Markgraftom or Marck, and soon falls out of notice in the world. Salzwedel is called henceforth ever since the 'Old Marck (Alte Marck, Altmarck)'; the Brandenburg countries getting the name of 'New Marck.' . . . Under Albert the Markgraftom had risen to be an Electorate withal. The Markgraf of Brandenburg was now furthermore the Kurfürst of Brandenburg; officially 'Arch-treasurer of the Holy Roman Empire'; and one of the Seven who have a right (which became about this time an exclusive one for those Seven) to choose, to 'kieren' the Romish Kaiser; and who are therefore called 'Kur-Princes,' 'Kurfürste or Electors, as the highest dignity except the Kaiser's own.'"—T. Carlyle, *Frederick the Great*, bk. 2, ch. 4.—See also GERMANY: 1125-1272.

1168-1417.—Under the Ascanian, the Bavarian and the Luxemburg lines, to the first of the Hohenzollern.—Albert the Bear was succeeded in 1168 by his son Otho. "In 1170, as it would appear, the name of Brandenburg was substituted for that of North Mark, which had ceased to describe more than the original nucleus of the colony, now one of the several districts into which it was divided. The city and territory of Brandenburg were not probably included in the imperial grant, but were inherited from the Wendish prince, Pribislaw, whom Albert had converted to Christianity. . . . Under Otho II., brother of the preceding, the family inheritance was sorely mismanaged. The Margrave becoming involved in some quarrel with the See of Magdeburg, the Archbishop placed him under the ban; and as the price of release Otho was required to accept the Suzerainty of the prelate for the older and better part of his dominions. His brother and successor, Albert II., was also unfortunate in the beginning of his career; but recovered the favor of the Emperor, and restored the prestige of his house before his death. . . . Very important acquisitions were made during the reign of these two princes. The preoccupations of the King of Denmark gave them a secure foothold in Pomerania, which the native nobility acknowledged; the frontiers were pushed eastward to the Oder, where the New Mark was organized, and the town of Frankfort was laid out; purchase put them in possession of the district of Lebus; and the bride of Otho III., a

Bohemian princess, brought him as her dowry an extensive region on the Upper Spree with several thriving villages—all this in spite of the division of power and authority. . . . Otho III. died in 1267, John one year later; and a new partition of the estate was made between their several sons, the oldest, Otho IV., receiving, however, the title and prerogatives of head of the house." The last margrave of the Ascanian line, Waldemar, died in 1310. "His cousin and only heir, Henry, was a minor, and survived him but a year." Then "a host of claimants arose for the whole or parts of the Mark. The estates showed at first a gallant devotion to the widow, and intrusted the reins of authority to her; but she repaid this fidelity by hastily espousing the Duke of Brunswick, and transferring her rights to him. The transaction was not, however, ratified by the estates, and the Duke failed to enforce it by arms. Pomerania threw off the yoke which it had once unwillingly accepted; Bohemia reclaimed the wedding portion of Otho's bride; the Duke of Liegnitz sought to recover Lebus, although it had once been regularly sold; and in the general scramble the Church, through its local representatives, fought with all the energy of mere worldly robbers. But in this crisis the Emperor forgot neither the duties of his station nor the interests of his house. Louis II. of Bavaria then wore the purple. By feudal law a vacant fief reverted to its suzerain. . . . It was not therefore contrary to law, nor did it shock the moral sense of the age, when Louis drew the Mark practically into his own possession by conferring it nominally upon his minor son. . . . During the minority of Louis the Margrave, the province was administered by Louis the Emperor, and with some show of vigor." But troubles so thickened about the emperor, in his conflict with the house of Austria, on the one hand, and with the pope on the other [see GERMANY: 1314-1347], that he could not continue the protection of his son. The mark of Brandenburg was invaded by the king of Poland, and its margrave "watched the devastation in helpless dismay." The people defended themselves. "The young city of Frankfurt was the leader in the tardy but successful uprising. The Poles were expelled; the citizens had for the time saved the Mark. . . . The Margrave finally wearied even of the forms of authority, and sold his unhappy dominions to his two brothers, another Louis and Otho. In the meantime his father had died. The Electors—or five of them—had already deposed him and chosen in his place Charles of Moravia, a prince of the house of Luxemburg, as his successor. He became respectably and even creditably known in history as Charles IV. . . . Although he failed in the attempt to subdue by arms the Margrave of Brandenburg, who had naturally espoused his father's cause, he was persistent and ingenious in diplomatic schemes for overthrowing the House of Bavaria and bringing the Mark under his own sceptre. . . . From Louis he procured . . . a treaty of succession, by which he should acquire Brandenburg in case of the death of that Margrave and his brother Otho without heirs. [See GERMANY: 1347-1403.] His intrigues were finally crowned with complete success. Louis died suddenly in 1365. Otho, thenceforth alone in the charge, vacillated between weak submission to the Emperor's will, and spurts of petulant but feeble resistance; until Charles put an end to the farce by invading the Mark, crushing the army of the Margrave, and forcing him to an abject capitulation. In 1371, after a nominal rule of half a century, and for the price of a meagre annuity, the

Bavarian line transferred all its rights to the family of Charles IV." Charles died in 1378. His son Wenzel, "for whom the Mark had been destined in the plans of Charles, acquired, meanwhile, the crown of Bohemia, a richer prize, and Brandenburg passed to the next son, Sigismund. The change was a disastrous one." Sigismund pawned the mark to his kinsman, Jobst, of Moravia, and it fell into great disorder. "Imperial affairs during" this period were in scarcely less confusion. Wenzel of Bohemia had been chosen emperor, and then deposed for obvious unfitness. Rupert, Count Palatine, had next been elected, and had died. Again the post was vacant, and Sigismund, still the real Elector of Brandenburg, . . . issued successfully from the contest. His good fortune was due in a conspicuous degree to the influence and the money of Frederic, Burgrave of Nuremberg; and it is to the credit of Sigismund that he did not add ingratitude to his other vices, but on his election as emperor hastened [1411] to make his patron statthalter, or viceroy of the Mark." Six years later, in 1417, Frederic was formally invested with the sovereignty of the mark, as margrave and elector.—H. Tuttle, *History of Prussia to the accession of Frederic the Great*, ch. 1 and 3.

1180.—Control of Lauenburg. See SAXONY: 1180-1553.

1355.—Declared an integral part of the kingdom of Bohemia. See BOHEMIA: 1355.

1417-1640.—Rising importance of the Hohenzollern family.—Acquisition of the duchy of Prussia.—On being invested with the electorate of Brandenburg, Frederick of Nuremberg sold the office of burgrave to the Nurembergers and devoted himself to his new province. [See GERMANY: 1417.] "Temperate, just, and firm in his dealings, he succeeded in reducing Brandenburg from anarchy to order. Already as deputy for Sigismund he had begun the task. . . . During the reign of his son and successor, characteristically known as Frederick Iron-teeth [1430-1472], the strong hand was not relaxed; and Brandenburg became thenceforward tamed to law and order. The Electorate, which during the preceding century had been curtailed by losses in war and by sales, began again to enlarge its borders. The New March, which had been sold in the days of Sigismund to the Teutonic Knights, was now [1455] bought back from them in their need. . . . Albert Achilles, the brother and successor of Frederick II., was a man as powerful and as able as his predecessor. By his accession the principalities of Baireuth and Anspach, which had been separated from the Electorate for the younger sons of Frederick I., were reunited to it; and by a scheme of cross-remainders new plans were laid for the acquisition of territory. . . . It was already understood that the Electorate was to descend according to the law of primogeniture; but Anspach and Baireuth were still reserved as appanages for younger sons; and upon the death of Albert Achilles, in 1484, his territories were again divided, and remained so for more than a hundred years. The result of the division, however, was to multiply and not to weaken the strength of the House. The earlier years of the 16th century saw the Hohenzollerns rising everywhere to power. Albert Achilles had been succeeded [1486] by John, of whom little is known except his eloquence, and by Joachim [1400], who was preparing to bear his part against the Reformation. A brother of Joachim had become, in 1514, Elector of Mentz; and the double vote of the family at the election of Charles V. had increased their importance.

The younger branch was rising also to eminence. George of Brandenburg, Margrave of Anspach, and grandson of Albert Achilles, was able in 1524 to purchase the Duchy of Jagerndorf in Silesia, and with it the reversions to the principalities of Opehn and Ratibor, which eventually fell to him. His younger brother, Albert, had been chosen in 1511 Grand Master of the Teutonic Order, and was already converting his office into the hereditary Dukedom of Prussia," which it became in 1525 (see POLAND: 1333-1572). "The Elector Joachim I. of Brandenburg is perhaps the least prominent, but was not the least prudent, of his family. Throughout his life he adhered to the old faith, and preserved his dominions in tranquillity. His son and successor, Joachim II., to the joy of his people, adopted the new religion [1539]; and found in the secularized bishoprics of Brandenburg, Havelburg, and Lebus, some compensation for the ecclesiastical Electorate which was about to pass, upon the death of Albert of Mentz, from his family. But he also was able to secure the continuance of peace. Distrustful of the success of the League of Smalkald he refused to join in it, and became chiefly known as a mediator in the struggles of the time. The Electors John George [1571-1598] and Joachim Frederick [1598-1608] followed the same policy of peace. . . . Peace and internal progress had characterized the 16th century; war and external acquisitions were to mark the 17th. The failure of the younger line in 1603 caused Bayreuth, Anspach, and Jagerndorf to fall to the Elector Joachim Frederick; but as they were re-granted almost at once to younger sons, and never again reverted to the Electorate, their acquisition became of little importance. The Margrave, George Frederick, however, had held, in addition to his own territories, the office of administrator for Albert Frederick, second Duke of Prussia, who had become imbecile; and, by his death, the Elector of Brandenburg became next of kin, and claimed to succeed to the office. The admission of this claim placed the Electors in virtual possession of the Duchy. By a deed of co-infeoffment, which Joachim II. had obtained in 1568 from his father-in-law the King of Poland, they were heirs to the Duchy upon failure of the younger line. . . . Duke Albert died in 1618, and Brandenburg and Prussia were then united under the Elector John Sigismund. It was well that the Duchy had been secured before the storm which was already gathering over the Empire had burst. . . . During the long struggle of the Thirty Years' War, the history of Brandenburg is that of a sufferer rather than an actor. . . . George William, who died in 1640, bequeathed a desert to his successor. That successor was Frederick William, to be known in history as the Great Elector."—C. F. Johnstone, *Historical abstracts*, ch. 5.

1630-1634.—Compulsory alliance with Gustavus Adolphus.—Alliance with the emperor.—In 1630 during the Thirty Years' War the Elector of Brandenburg was forced to join Gustavus Adolphus against Ferdinand, but abandoned the

Swedes (1634) and deserted the Protestant cause, when all the princes of Northern Germany subscribed to the treaty of alliance concluded between Saxony and the emperor in 1635.—See GERMANY: 1630-1631; 1631; 1632-1634; and 1634-1639.

1640-1688.—Great Elector.—His development of the strength of the Electorate.—His successful wars.—His acquisition of the complete sovereignty of Prussia.—Battle of Fehrbellin.—"Frederic William, known in history as the Great Elector, was only twenty years old when he succeeded his father. He found everything in disorder: his country desolate, his fortresses garrisoned by troops under a solemn order to obey only the mandates of the Emperor, his army to be counted almost on the fingers. His first care was to conclude a truce with the Swedes; his second to secure his western borders by an alliance with Holland; his third—not in order of action, for in that respect it took first place—to raise the nucleus of an army; his fourth, to cause the evacuation of his fortresses. . . . To allay the wrath of the Emperor, he temporised until his armed force had attained the number of 8,000. That force once under arms, he boldly asserted his position, and with so much effect that in the discussions preceding the Peace of Westphalia he could exercise a considerable influence. By the terms of that treaty, the part of Pomerania known as Hinter Pommern, the principalities of Magdeburg and Halberstadt, and the bishoprics of Minden and Kammin were ceded to Brandenburg. . . . [See GERMANY: 1648; Map: At peace of Westphalia; WESTPHALIA, PEACE OF (1648).] The Peace once signed, Frederic William set diligently to work to heal the disorders and to repair the mischief which the long war had caused in his dominions. . . . He specially cherished his army. We have seen its small beginning in 1640-42. Fifteen years later, in 1655, or seven years after the conclusion of the Peace of Westphalia, it amounted to 25,000 men, well drilled and well disciplined, disposing of seventy-two pieces of cannon. [See also MILITARY ORGANIZATION: 27.] In the times in which he lived he had need of such an army. In 1654, Christina, the wayward and gifted daughter of Gustavus Adolphus, had abdicated. Her successor on the throne of Sweden was her cousin, Charles Gustavus, Duke of Zweibrücken. . . . The right of Charles Gustavus to the succession was, however, contested by John Casimir, King of Poland. . . . War ensued. In that war the star of Charles Gustavus was in the ascendant, and the unfortunate John Casimir was forced to abandon his own dominions and to flee into Silesia. The vicinity of the two rivals to his own outlying territories was, however, too near not to render anxious Frederic William of Brandenburg. To protect Prussia, then held in fief from the King of Poland, he marched with 8,000 men to its borders. But even with such a force he was unable, or perhaps, more correctly, he was prudently unwilling, to resist the insistence put upon him at Königsberg by the victorious King of Sweden (1656) to transfer to him the feudal overlordship of that province. Great results followed from this compliance. Hardly had the treaty been signed, when John Casimir, returning from Silesia with an Imperial army at his back, drove the Swedes from Poland, and recovered his dominions. He did not evidently intend to stop there. Then it was that the opportunity arrived to the Great Elector. Earnestly solicited by the King of Sweden to aid him in a contest which had assumed dimensions so formidable, Frederic William consented, but only on the condition that he should

receive the Polish palatinates (Woiwodshafthen) of Posen and Kalisch as the price of a victorious campaign. He then joined the King with his army, met the enemy at Warsaw, fought with him close to that city a great battle, which lasted three days (28th to 30th July 1656), and which terminated then, thanks mainly to the pertinacity of the Brandenburgers—in the complete defeat of the Poles. The victory gained, Frederic William with-

Labian. There the Elector halted and there, joined the next day, 20th November 1656, by King Charles Gustavus, he signed a treaty, by which, on condition of his material aid in the war, the latter renounced his feudal overlordship over Prussia, and agreed to acknowledge the Elector and his male descendants as sovereign dukes of that province. In the war which followed, the enemies of Sweden and Brandenburg multiplied on

FREDERICK WILLIAM, THE GREAT ELECTOR OF BRANDENBURG
(From a painting by Camphausen)

drew his troops. . . . Again did John Casimir recover from his defeat; again, aided by the Imperialists, did he march to the front, reoccupy Warsaw, and take up a threatening position opposite to the Swedish camp. The King of Sweden beheld in this action on the part of his enemy the prelude to his own certain destruction, unless by any means he could induce the Elector of Brandenburg once more to save him. He sent, then, urgent messengers after him to beg him to return. The messengers found Frederic William at

every side. The Danes and Lithuanians espoused the cause of John Casimir. Its issue seemed to Frederic William more than doubtful. He asked himself, then, whether—the new enemies who had arisen being the enemies of Sweden and not of himself—he had not more to gain by sharing in the victories of the Poles than in the defeats of the Swedes. Replying to himself affirmatively, he concluded, 20th September 1657, through the intermediation of the Emperor, with the Poles, at Wehlau, a treaty whereby the dukedom of Prus-

sia was ceded in absolute sovereignty to the Elector of Brandenburg and his male issue, with reversion to Poland in case of the extinction of the family of the Franconian Hohenzollerns; in return, Frederic William engaged himself to support the Poles in their war against Sweden with a corps of 4,000 men. But before this convention could be acted upon, fortune had again smiled upon Charles Gustavus. Turning in the height of winter against the Danes, the King of Sweden had defeated them in the open field, pursued them across the frozen waters of the Belt to Fünen and Seeland, and had imposed upon their king the humiliating peace of Roeskilde (1658). He seemed inclined to proceed still further in the destruction of the ancient rival of his country, when a combined army of Poles and Brandenburgers suddenly poured through Mecklenburg into Holstein, drove thence the Swedes, and gave them no rest till they had evacuated likewise Schleswig and Jutland (1659). In a battle which took place shortly afterwards on the island of Fünen, at Nyborg, the Swedes suffered a defeat. This defeat made Charles Gustavus despair of success, and he had already begun to treat for peace, when death snatched him from the scene (January 1660). The negotiations which had begun, however, continued, and finally peace was signed on the 1st May 1660, in the monastery of Oliva, close to Danzig. This peace confirmed to the Elector of Brandenburg his sovereign rights over the duchy of Prussia. From this epoch dates the complete union of Brandenburg and Prussia—a union upon which a great man was able to lay the foundation of a powerful North German Kingdom! During the next dozen years, the Great Elector was chiefly busied in establishing his authority in his dominions and curbing the power of the nobles, particularly in Prussia. In 1674, when Louis XIV of France provoked war with the German princes by his attack on the Dutch, Frederic William led 20,000 men into Alsace to join the imperial forces. Louis then called upon his allies, the Swedes, to invade Brandenburg, which they did, under General Wrangel, in January, 1675. "Plundering and burning as they advanced, they entered Havelland, the granary of Berlin, and carried their devastations up to the very gates of that capital." The elector was retreating from Alsace before Turenne when he heard of the invasion. He paused for some weeks, to put his army in good condition, and then he hurried northwards, by forced marches. The enemy was taken by surprise, and attacked while attempting to retreat, near Fehrbellin, on June 18. After two hours of a tremendous hand-to-hand conflict, "the right wing of the Swedes was crushed and broken; the centre and left wing were in full retreat towards Fehrbellin. The victors, utterly exhausted—they had scarcely quitted their saddles for eleven days—were too worn out to pursue. It was not till the following morning that, refreshed and recovered, they followed the retreating foe to the borders of Mecklenburg. . . . The Great Elector promptly followed up his victory till he had compelled the Swedes to evacuate all Pomerania. Three years later, when they once more crossed the border from Livonia, he forced them again to retreat; and although in the treaty signed at St. Germain in 1679 he was forced to renounce his Pomeranian conquests, he did not the less establish the ultimate right of the State of which he was the real founder to those lands on the Baltic for which he had so hardly struggled at the negotiations which preceded the Peace of Westphalia. When he died (9th May 1688) he left the Kingdom already made

in a position of prosperity sufficient to justify his son and successor in assuming, thirteen years later, on the anniversary of the victory of Fehrbellin, the title of King."—G. B. Malleson, *Battle fields of Germany*, ch. 8.—At the time of his accession "self-government prevailed in his scattered dominions. As the nobility and the Estates jealously defended their privileges and refused to vote the necessary funds [with which to create an army], the Elector resolved to break their power and to place taxation on a compulsory basis. He gradually destroyed popular representation, such as it was, and made the Estates a mere tool. At last they were called together exclusively for the purpose of voting money. They were allowed to sit only for a fortnight, and to discuss nothing except the proposals which the Elector put before them. At the same time, they were informed that any funds which they failed to vote would be collected from them by force, by 'military execution.' . . . The Great Elector ruthlessly and tyrannously suppressed existing self-government in his possessions, and gave to his scattered and parochially minded subjects a strong sense of unity. Relying upon his powerful army, he enforced his will upon the nobility, the Estates, and the citizens, and made himself the absolute master of the country. He ruled the State with savage energy and with great ability. To enable the people to bear the cost of a large army, he strove to increase their wealth by promoting agriculture, commerce, and the manufacturing industries. He imported from Holland skilled engineers who reclaimed swamps, and able farmers and gardeners who improved cultivation. Every peasant had to lay out a garden, and none might marry unless he had planted at least six oak trees, and had planted and grafted at least six fruit trees. To improve industry and commerce, he constructed the Frederick William Canal, connecting the Oder with the Spree and the Elbe, and numerous high roads, and introduced a modern system of posts and mails. As his country had been depopulated by the Thirty Years' War, he wished to attract to it new inhabitants. By an Edict of October 29, 1685, he promised to the Huguenots who fled from France owing to the revocation of the Edict of Nantes assistance for defraying their travelling expenses, permission to settle where they liked, freedom to bring in their goods and chattels free of all charges. The needy were to receive empty houses which the Elector would buy from their owners. They were to be given building material of every kind for repairing these houses, and to be freed from all imposts for six years. The well-to-do who wished to build houses for themselves were to be given land and building materials, and to be free from all imposts for ten years. The rights of citizenship were to be given gratis. . . . By the policy outlined the Great Elector greatly increased the population, the wealth, and the military power of his country. By a skilful and daring diplomacy, and by the energetic use of his excellent army, which he had been able to create only by destroying the power of the Estates and by greatly increasing the wealth of the people, he vastly enlarged his territories and gave to the State a great prestige throughout Europe."—J. E. Barker, *Foundations of Germany*, pp. 4-7.

1672-1697.—Withdrawal from the coalition against Louis XIV; in the War of the Grand Alliance.—In 1673, the elector of Brandenburg withdrew from the coalition formed by him and the emperor Leopold, in 1672, to check the aggressions of Louis XIV. [See NETHERLANDS: 1672-1674.] He fought, however, once more against

Louis XIV in the War of the Grand Alliance, and by the treaty of Ryswick (1697) had certain restitutions made to Brandenburg.

1700-1701.—Elector made king of Prussia.—When, by a treaty of Nov. 16, 1700, ducal Prussia was erected into a kingdom by the emperor, Elector Frederick III caused himself to be proclaimed king in Königsberg on Jan. 18, 1701.

BRAZIL: Geographic description.—“The immense and rich Brazilian territory which occupies the most eastern part of South America is situated in Lat. 5° 10' North to 33° 46' 10" South, and between 8° 21' 24" Eastern Longitude to 32°

Western Longitude of the Meridian of Rio de Janeiro. The extension of its coasts from the Orange Cape to the Barra Chuy is approximately 7,000 kilometres, counting from the beginning of the Cotinco River in the Roraima Mountains to the mouth of the Chuy, and it is, more or less, 4,360 kilometres from the Stony Point in Pernambuco to the starting of the Jaquirana River which forms the Yavari. Its area is calculated to be 8,650,959 square kilometres. The boundaries of Brazil are: On the north, the Guianas (French, Dutch and British) and the Republics of Venezuela and the Colombia; on the northeast, east and southeast, the Atlantic Ocean; on the south, the Republic of Uruguay; on the southwest, the Argentine Republic; on the west the Republics of Paraguay, Bolivia and Peru, and on the northwest, the Republic of Colombia. . . . Brazil is the largest of the countries of Latin America [see also LATIN AMERICA], its area being sixteen times that of France and practically equal to that of the United States, excluding Alaska, and, although much of its extensive territory is still uncultivated and its immense natural resources for the most part undeveloped, its great national industries, the growth of its foreign trade, its large and beautiful cities, its admirable systems of education and government, together with its general progress in everything pertaining to modern civilisation, give to Brazil the justifiable claim to be regarded as a truly great nation.”—R. Reyes, *Two Americas*, pp. 84, 102. See LATIN AMERICA: Map of South America.

“Within her wide area Brazil encloses a great variety of soils and climates. She has no snow line, because she has no great mountain heights; a peak less than three thousand metres high, Itatiaia, in the Mantiqueiras, is the point of greatest altitude. But she has almost every other climatic gift that can be included within the fifth degree of North and thirty-third of South Latitude; between the eighth degree East and thirtieth West Longitude of the meridian of Rio de Janeiro. Brazil is a vast plateau with a steep descent to the sea along half her coast and a flat hot sea margin of varying widths; this plateau, scored by great rivers, sweeps away in undulating prairies, sloping in two principal directions—inland, in the centre and south, to the great Paraná valley; and in the upper regions, northward to the immense Amazon basin. [See AMAZON RIVER: Discovery and naming of.] This is not a basin so much as a wide plate, for not only is the course of the huge *rio-mar* almost flat for the last thousand miles of its journey to the sea (Manáos is only 85 feet above sea-level) but this practically level ground extends northward all the way to the confines of Venezuela and the three Guianas, and southward until the Cordilheiras of Matto Grosso are encountered. Great expanses of this plate are filled with sweltering forests of tropical tradition, forests containing a thousand kinds of strange orchids, immense and curious trees, insects, reptiles and animals. . . . There is a remarkable contrast between this humid forestal area of the north and the cool, high cattle-lands of the centre, the pine and matte woods and wheat lands of the south and the hot coastal belt of the great promontory with its deep fringe of coconuts, its sugar country, tobacco fields and cacao plantations; between the coffee country of São Paulo and the regions of the carnauba palm and the babassú. No physical contrast could be more acute than that of the flat tropic swamps of Pará and the austere, fantastic and beautiful granite peaks of the Serra do Mar near Rio—the slender Finger of God in the Orgao

Mountains, the curved up-rearing of the Corcovado, the cloud-wreathed head of Tijuca. Nor is there less contrast in the different industries resulting from the different products of the widely diversified regions, and the population inhabiting them. The extreme north exists largely upon the rubber business, where independent individuals extract gum from wild trees in regions that are sometimes scarcely charted; in the south an imported Italian population performs routine tasks on the highly organized coffee plantations. In between these two sharply marked divisions there are many industries and many grades of labour, from the *caboclo* half-Indian of the north to the negro of the centre and the Japanese, Syrian and Pole of the southerly colonies, as well as the de-

He has, however, been modified by intermixture with two other races. The first of these is the native Indian. [See GUCK or COCO GROUP.] The settlers . . . intermarried freely with the Indian women. In the south this mixed race as well as the pure Indian race has been absorbed in the rest of the population. The second modifying influence is that of the imported Africans. . . . The intermingling of Indians and negroes which is supposed to produce an especially undesirable class of citizens was comparatively small. The intermarriage of blacks and whites has grown apace and the negroes constitute a large, the mulattoes, and quadroons still larger, percentage of the population. The intermixture continues as no sentiment of race opposes it. Brazil is distinguished

scendant of the Portuguese. There is in some parts of Brazil such a mixture of races and tongues that it seems as if the Jesuits were needed again to invent a new *lingua geral*. Contrasts in personality, as well as in soil and climate in Brazil, and the difference in accessibility between an open seaboard and a deep and roadless interior, have all aided to bring about the marked diversity of interests which have more than once proved the salvation of the country."—L. E. Elliott, *Brazil to-day and to-morrow*, pp. 3-5.—See LATIN AMERICA: Agriculture; also 1918-1921: Effect of natural resources.

Aboriginal inhabitants.—See TUPI.

Racial elements.—"But what of the Brazilian people itself? The influences that tend to make it vary from its original type are counterworked by the steady immigration from Portugal and Spain. . . . The Brazilian is primarily a Portuguese in the outlines of his mind and character.

from the other republics by the fact that in addition to her small mestizo population and her pure Indian population . . . she has a great mass of negroes and a still larger mass of mulattoes and quadroons. . . . They do not feel toward it that repulsion which marks the attitude of the whites to the negroes in North America and South Africa. The Brazilian lower class intermarries freely with the black people, the Brazilian middle class intermarries with the mulattoes and quadroons. Brazil is the one country in the world, besides Portuguese colonies on the east and west coasts of Africa, in which a fusion of the European and African races is proceeding unchecked by law or customs."—*Hispanic American Historical Review*, Aug., 1919, pp. 407-408, 414.—See also LATIN AMERICA: 1867-1900; RACE PROBLEMS: Previous to 1900.

Population.—According to a census taken in September, 1920, the results of which were an-

nounced by the Brazilian embassy in Washington on Jan. 13, 1921, the population of Brazil was 30,553,509. Minas Geraes, the largest state, had a population of 5,788,837; the state of Rio de Janeiro, 1,501,069, and the capital city of that name, 1,157,873.

Origin of the name.—"As the most valuable part of the cargo which Americus Vespuceus carried back to Europe was the well-known dyewood, 'Cæsalpina Braziliensis,'—called in the Portuguese language 'pau brazil,' on account of its resemblance to 'brazas,' 'coals of fire,'—the land whence it came was termed the 'land of the brazil-wood'; and finally this appellation was shortened to Brazil, and completely usurped the names Vera Cruz, or Santa Cruz."—J. C. Fletcher and D. P. Kidder, *Brazil and the Brazilians*, ch. 3.

1498-1504.—Discovery, exploration of the coast and first settlement. See AMERICA: 1490-1500, 1500-1514, and 1503-1504, and map showing voyages of discovery.

1510-1661.—Portuguese colonization and agriculture.—Introduction of slavery.—Coming of the Jesuits.—Conquests of the Dutch, and the Portuguese recovery of them.—"Brazil, on which the Portuguese ships had been cast by accident, had been found to unite in itself the capabilities of every part of the world in which Europeans have settled, though happily gold and silver had not yet been discovered, and the colonists betook themselves from the first to agriculture. The first permanent settlements on this coast were made by Jews, exiled by the persecution of the Inquisition; and the government supplemented these by sending out criminals of all kinds. But gradually the consequence of Brazil became recognized, and, as afterwards happened in New England, the nobility at home asked to share the land among themselves. Emmanuel would not countenance such a claim, but this great prince died in 1521, and his successor, John III., extended to Brazil the same system which had been adopted in Madeira and the Azores. The whole sea-coast of Brazil was parcelled out by feudal grants. It was divided into captaincies, each 50 leagues in length, with no limits in the interior; and these were granted out as male fiefs, with absolute power over the natives, such as at that time existed over the serfs who tilled the soil in Europe. But the native Brazilians were neither so easy a conquest as the Peruvians, nor so easily induced to labour; and the Portuguese now began to bring negroes from the Guinea coast. This traffic in human flesh had long been vigorously pursued in various parts of Europe; the Portuguese now introduced it to America. The settlers of Brazil were, properly speaking, the first European colonists. For they sold their own possessions at home, and brought their households with them to the new country. Thus they gradually formed the heart of a new nation, whereas the chief Spaniards always returned home after a certain tenure of their offices, and those who remained in the colony descended to the rank of the conquered natives. Many of those who came to Brazil had already served in the expeditions to the East; and they naturally perceived that the coast of America might raise the productions of India. Hence Brazil early became a plantation colony, and its prosperity is very much due to the culture of the sugar cane. The Portuguese were greatly assisted, both in the East and the West, by the efforts of the newly founded order of the Jesuits. . . . John III. in [1549] sent out six of the order with the first governor of Brazil. . . . The Dutch, made bold by their great successes in the East, now sought to win

the trade of Brazil by force of arms, and the success of the East India Company encouraged the adventurers who subscribed the funds for that of the West Indies, incorporated in 1621. The Dutch Admiral, Jacob Willekens, successfully assaulted San Salvador [Bahia] in 1624, and though the capital was afterwards retaken by the intrepid Archbishop Texeira, one half of the coast of Brazil submitted to the Dutch. Here, as in the East, the profit of the company was the whole aim of the Dutch, and the spirit in which they executed their design was a main cause of its failure. . . . But . . . the profits of the company . . . rose at one time to cent per cent. The visions of the speculators of Amsterdam became greater; and they resolved to become masters of all Brazil. . . . The man whom they despatched [1637] to execute this design was Prince John Maurice of Nassau. . . . In a short time he had greatly extended the Dutch possessions. But the Stad-houder was subject, not to the wise and learned men who sat in the States-General, but to the merchants who composed the courts of the company. They thought of nothing but their dividends; they considered that Maurice kept up more troops and built more fortresses than were necessary for a mercantile community, and that he lived in too princely a fashion for one in their service. Perhaps they suspected him of an intention of slipping into that royal dignity which the feudal frame of Brazilian society seemed to offer him. At any rate, in 1643, they forced him to resign. A recent revolution had terminated the subjection of Portugal to Spain, and the new king of Portugal concluded a truce for ten years with Holland. War was therefore supposed to be out of the question. . . . But the recall of Maurice was the signal for an independent revolt in Brazil. Though the mother countries were at peace, war broke out between the Dutch and the Portuguese of Brazil in 1645. The Jesuits had long preached a crusade against the heretic Dutch. . . . John Ferdinand de Vieyra, a wealthy merchant of Pernambuco, led a general uprising of the Brazilians, and although the Dutch made a stubborn resistance, they received no assistance from home; they were driven from one post after another, until, in 1654, the last of the company's servants quitted Brazil. The Dutch declared war against Portugal; but in 1661 peace was made, and the Dutch sold their claims for 8,000,000 florins, the right of trading being secured to them. But after the expulsion of the Dutch, the trade of Brazil came more and more into the hands of the English."—E. J. Payne, *History of European colonies*, ch. 2-3.

1531-1641.—Republic of St. Paul.—Paulistas or Mamelukes.—"The celebrated republic of St. Paul, as it is usually denominated, had its rise about the year 1531, from a very inconsiderable beginning. A mariner of the name of Ramalho, having been shipwrecked on this part of the coast, was received among a small Indian tribe called the Piratinga, after the name of their chief. Here he was found by De Sousa some years afterwards, and, contrary to the established policy of permitting no settlement excepting immediately on the seacoast, he allowed this man to remain, on account of his having intermarried and having a family. The advantages of this establishment were such, that permission was soon after given to others to settle here, and as the adventurers in-

termarried with the natives, their numbers increased rapidly. . . . A mixed race was formed, possessing a compound of civilized and uncivilized manners and customs. The Jesuits soon after established themselves with a number of Indians they had reclaimed, and exerted a salutary influence in softening and harmonizing the growing colony. In 1581, the seat of government was removed from St. Vincent on the coast to St. Pauls; but its subjection to Portugal was little more than nominal. . . . The mixture produced an improved race, 'the European spirit of enterprise,' says Southey, 'developed itself in constitutions adapted to the country.' But it is much more likely that the free and popular government which they enjoyed produced the same fruits here as in every other country. . . . They soon quarreled with the Jesuits [1581], on account of the Indians whom they had reduced to slavery. The Jesuits declaimed against the practice; but as there were now many wealthy families among the Paulistas, the greater part of whose fortunes consisted in their Indians, it was not heard with patience. The Paulistas first engaged in war against the enemies of their allies and afterwards on their own account, on finding it advantageous. They established a regular trade with the other provinces whom they supplied with Indian slaves. They by this time acquired the name of Mamelukes, from the peculiar military discipline they adopted, bearing some resemblance to the Mamelukes of Egypt. The revolution in Portugal, when Philip II. of Spain placed himself on its throne, cast the Paulistas in a state of independence, as they were the only settlers in Brazil which did not acknowledge the new dynasty. From the year 1580 until the middle of the following century, they may be regarded as a republic, and it was during this period they displayed that active and enterprising character for which they were so much celebrated. . . . While a Spanish king occupied the throne of Portugal, they attacked the Spanish settlements on the Paraguay, alleging that the Spaniards were encroaching on their territory. . . . They attacked the Jesuit missions [1620] . . . As they had fixed themselves east of the Parana, the Paulistas laid hold of this as a pretext. They carried away upwards of 2,000 of their Indians into captivity, the greater part of whom were sold and distributed as slaves. The Jesuits complained to the king of Spain and to the pope; the latter fulminated his excommunication. The Paulistas attacked the Jesuits in their college, and put their principal to death, expelled the remainder, and set up a religion of their own; at least no longer acknowledged the supremacy of the pope. In consequence of the interruption of the African trade during the Dutch war, the demand for Indian slaves was very much increased. The Paulistas redoubled their exertions, and traversed every part of the Brazils in armed troops. . . . The foundation was laid of enmity to the Portuguese, which continues to this day, although a complete stop was put to the infamous practice in the year 1756. . . . When the house of Braganza, in 1640, ascended the throne, the Paulistas, instead of acknowledging him, conceived the idea of electing a king for themselves. They actually elected a distinguished citizen of the name of Bueno, who persisted in refusing to accept, upon which they were induced to acknowledge Joam IV. [1641]. It was not until long afterwards that they came under the Portuguese government."—H. M. Brackenridge, *Voyage to South America*, v. 1, ch. 2.

1654-1777.—Portuguese policy of exclusion and restriction.—Boundary disputes with Spain.—"The period of peace which followed these victories [over the Dutch] . . . was used by the Portuguese government only to get up a kind of old Japanese system of isolation, by which it was intended to keep the colony in perpetual tutelage. In consequence of this even now, after the lapse of half a century since it violently separated itself, Brazilians generally entertain a bitter grudge against the mother country. All the trade to and from Brazil was engrossed by Portugal; every functionary, down to the last clerk, was Portuguese. Any other European of scientific education was looked at with suspicion; and particularly they sought to prevent by all means the exploration of the interior, as they feared not only that the eyes of the natives might be opened to their mode of administration, but also, that such travellers might side with the Spaniards in their long dispute regarding the boundaries of the two nations, as the French astronomer, La Condamine, had done. This question, which arose shortly after the discovery, and was hushed up only during the short union of both crowns (from 1581-1640), broke out with renewed vigor now and then, maugre the Treaty of Tordesilhas in 1494 [see AMERICA: 1494]. . . . By the Treaty of São Ildefonso, in 1777, both parties having long felt how impracticable the old arrangements were—at least, for their American colonies—the boundaries were fixed upon the principle of the 'uti possidetis,' at any rate so far as the imperfect knowledge of the interior allowed; but this effort also proved to be vain. . . . The unsolved question descended as an evil heritage to their respective heirs, Brazil and the South American Republics. A few years ago it gave rise to the terrible war with Paraguay; and it will lead to fresh conflicts between Brazil and the Argentine Republic."—F. Keller, *Amazon and Madeira rivers*, pp. 23-24.

1808-1822.—Becomes the asylum of Portuguese royalty.—Founding of the independent empire.—"While anarchy and ruin . . . overspread the greater part of the beautiful continent of South America, the Empire of Brazil won an independent existence without bloodshed, and kept it with credit. The Dutch conquest of Brazil, and its reconquest by the Portuguese, has been mentioned in a former chapter. The country long remained under the close and oppressive monopoly imposed upon it by the Portuguese; but in 1808 [1807] when Napoleon invaded Portugal, the regent embarked [see PORTUGAL: 1807], with the royal insignia, for Brazil, which at once assumed the dignity of an integral part of the kingdom. The ports were opened to the commerce of the world; the printing-press was introduced; learning was encouraged; the enormous resources of the country were explored; foreign settlers were invited to establish themselves; embassies were sent to European powers of the first rank, and diplomatic agents received. New towns and harbours were planned; new life was breathed into every department of the state. After a few years, the

state of affairs in Europe compelled King John VI. to return to Europe, as the only chance of preserving the integrity of the monarchy. The Cortes of Lisbon invited their sovereign to revisit his ancient capital, and deputies from Brazil were summoned to attend the sittings of the National Assembly. But before the deputies could arrive, the Cortes had resolved that Brazil should be again reduced to absolute dependence on Portugal. A resolution more senseless or more impracticable can hardly be imagined. The territory of Brazil was as large as all Europe put together; Portugal was a little kingdom, isolated and without influence among the monarchies of the Old World; yet it was deliberately decreed that all the monopolies of the exploded colonial system should be revived, and that England should be deprived of her free trade to Brazil. The king appointed his eldest son, Dom Pedro, Regent of the new kingdom, and soon after took his departure for Lisbon, with many of the emigrant nobility. Dom Pedro assumed the government under the perplexing circumstances of an empty treasury, a heavy public debt, and the provinces almost in revolt. Bahia disavowed his authority, and the Cortes withheld their support from him. The regent reduced his expenditure to the monthly sum allowed to his princess for pin money; he retired to a country house, and observed the most rigid economy. By great exertions he reduced the public expenditure from \$50,000,000 to \$15,000,000; but the northern and internal provinces still withheld their taxes; the army became mutinous, and the ministers of his father, who still remained in power, were unpopular; the regent in despair demanded his recall. But the Brazilians were at length disarmed by his noble conduct; they recognized his activity, his beneficence, his assiduity in the affairs of government, and the habitual feelings of affection and respect for the House of Braganza, which had for a moment been laid asleep by distrust, were re-awakened with renewed strength. It was fortunate that the quarrels which disturbed Brazil were accommodated before the arrival of intelligence from Portugal. Hardly had the king arrived in Lisbon when he found himself obliged to assent to a constitution which treated his Brazilian subjects as mere colonists; succeeding mails brought orders more and more humiliating to the Brazilians. The design of declaring Brazil an independent kingdom, grew more and more in public favour; but the prince was unwilling to place himself in direct rebellion to the crown of Portugal, and steadily adhered to his determination to leave America. At length, it is related, a despatch was delivered to the regent, which he declined to show to any of his ministers, but which evidently excited in his mind no ordinary emotions of anger: he crushed the paper in his hand, and moved away to a window, where he stood for a few moments in thought; at length he turned to his council with the words '*Independencia ou morte*':—the exclamation was received with tumultuous cheers, and was adopted as the watchword of the Revolution. The Portuguese troops were sent back to Europe. The Cortes of Lisbon were now anxious to recall their obnoxious decrees; to admit the deputies from Brazil; to make any concession that might be demanded. But it was too late: the independence of Brazil was formally proclaimed in August, 1822, and in December of the same year, Dom Pedro was crowned Emperor of Brazil. This is the first, and as yet the only instance of a modern colony achieving its independence, and separating itself completely from its metropolis without bloodshed."—Viscount Bury, *Exodus of the west-*

1825-1865.—Wars with the Argentines.—Abdication of Dom Pedro I.—*Guerra dos Cabanos*.—"In 1825, chiefly through the mediation of England, Brazil was acknowledged as an independent empire. But the inner commotions continued, and were not even soothed by a new Constitution, drawn up in 1823, and sworn to by the Emperor in 1824. New revolts in Pernambuco, and some of the other Northern provinces, and a war of three years with the Argentine Republic, which ended in 1828 by Brazil giving up Banda Oriental, annexed only eleven years before, disturbed and weakened the land. The foreign soldiers, enlisted for this war, and retained after its conclusion to keep down the Opposition, and the extravagant private life of the Emperor, who recklessly trampled down the honour of respectable families, provoked dissatisfaction and murmurs, which rose to the highest pitch when he insisted upon carrying on a most unpopular war in Portugal to defend the rights of his daughter, Dona Maria da Gloria (in whose favour he had abdicated the Portuguese Crown), against his brother, Don Miguel [see PORTUGAL: 1824-1889]. In April, 1831, Dom Pedro I., so enthusiastically raised to the Brazilian throne only nine years before, was forced to abdicate it, deserted and betrayed by every one, in behalf of his younger son, Pedro. The next period was the most disturbed one that the young Empire had yet witnessed. Slave revolts at Bahia, a civil war in the South, which almost cost it the province of Rio Grande do Sul, and the bloody rebellion known as the *Guerra dos Cabanos*, in Pará and Amazon, from 1835 to 1837, followed each other quickly. In this last revolt, the Brazilians had stirred up the Indians and mestizoes against the abhorred Portuguese, without considering that they should not be able to quench the fire they had themselves kindled. In a short time, the fury of the whole colored population turned against all whites, Brazilians and Portuguese alike, without any distinction. More than 10,000 persons are said to have perished in this *Guerra dos Cabanos*; and, to the present day, those terrible times and the barbarous cruelties committed by the Indians, half-castes, and mulattoes, continue to be talked of with awe in the two provinces. A revolution in Minas, got up by the personal ambitions of a few political leaders, rather than emanating from the spirit of the people, and the war against Rosas, the Dictator of the Argentine Republic, passed over Brazil without leaving deep traces, at least when compared with the last war against Paraguay; which, besides the stimulus of the old differences about boundaries, was occasioned by the endless vexations and restrictions with which the Dictator Lopez strove to ruin the Brazilian trade on the Paraguay, and to prejudice the province of Mato Grosso."—F. 1871-1888.—Emancipation of slaves.—The Brazilian act of emancipation, known as the law of Rio Branco (taking that name from the minister who carried it through) was passed on September 28, 1871, "and from that date it was enacted 'that children henceforth born of slave women shall be considered of free condition.' . . . Such children are not to be actually free, but are bound to serve the owners of their mothers for a term of 21 years, under the name of 'apprentices.' These must work, under severe penalties, for their hereditary masters; but if the latter inflict on them excessive bodily punishment, they are allowed to bring suit in a criminal court, which may declare their freedom. A provision was also made for the emancipation of government slaves; and there was a clause which insured a certain sum, to be annually set aside from fines, which was to aid each province in emancipating by purchase a certain number of slaves. . . . The passage of this law did not prove merely prospective in its effects. In a very short time the sums placed aside for emancipating slaves by purchase resulted in the freedom of many bondmen. And more than this, there seemed to be a generous private rivalry in the good work, from motives of benevolence and from religious influence. Many persons in various parts of Brazil liberated their slaves without compensation. . . . I am happy to say that the number liberated, either by the provisions of the State or by private individuals, is always in an increasing ratio. When the writer first went to Brazil [1852] . . . it was estimated that there were 3,000,000 in slavery. . . . There were at the beginning of 1875, when the law of emancipation had been but a little more than three years in operation, 1,476,567 slaves."—J. C. Fletcher and D. P. Kidder, *Brazil and the Brazilians*, ch. 28.—"On the 25th of March, 1884, slavery was abolished in the province of Ceará. The Rio News says, 'The movement began only 15 months ago, the first municipality liberating its slaves on the 1st of January, 1883. The new tax law of last November greatly accelerated this progress, because it made slave-holding impossible, the value of the slave being less than the tax.' " On September 28, 1885, the impatience of the Brazilians to rid themselves of slavery expressed itself in a new emancipation act, known as the Saraiva law. It provided for facilitating and hastening the extension of freedom, by increasing the public fund appropriated to it, by defining the valuation of slaves, and by other effective provisions, so that "within ten years [from its date] it is supposed that slavery will have ceased to exist in Brazil."—H. C. Dent, *Year in Brazil*, pp. 281-266.—"On March 30, 1887, the official return gave the number of slaves in Brazil as 723,419, of the legal value of \$485,225,212. On May 13, 1888, the Crown Princess, as regent, gave the royal assent to a short measure of two clauses, the first declaring that slavery was abolished in Brazil from the day of the promulgation of the law, and the second repealing all former Acts on the subject. Both Chambers refused to consider the claim for compensation made by the slave owners."—*Statesman's year-book*, 1890, p. 301.

1872-1912.—Development of railroads in South America. See RAILROADS: 1872-1912.

1889-1891.—Revolution.—Overthrow of the empire.—Establishment of the republic of the United States of Brazil.—Religious freedom declared.—"The sudden collapse of the Imperial Government in November [1889], resulting in the downfall of Dom Pedro and his banishment, caused universal surprise. For some time the Government had been credited by the Republican jour-

nals with the wish and intention to disperse the army throughout the provinces and along the frontier, so that, with the assistance of the newly organised National Guard, the succession of the Princess Imperial to the throne might be secured in the event of the death or incapacity through old age of the Emperor Dom Pedro. An infantry battalion, ordered to embark for a distant province, mutinied and refused to go. The War Department resolved to compel them by force to depart." The result was a general mutiny (November 15, 1889), which soon became a revolution. "The organiser of the mutiny was Colonel Benjamin Constant Botelho de Magalhaes, an officer of exceptional ability and Professor in the Military Academy. The movement seemed directed at first only against the obnoxious Ouro Preto Ministry; but the enthusiasm of the Republicans, under the

DOM PEDRO II, EMPEROR OF BRAZIL

leadership of a popular agitator, Jose de Patrocinio, was so very pronounced, that at a meeting held in the city hall, in the afternoon of Nov. 15, a resolution proclaiming the Republic was passed by acclamation. About the same hour, a self-constituted committee, consisting of General Deodoro [da Fonseca], Benjamin Constant, and Quintino Bocayuva, met and organised a Provisional Government," with Marshal Deodoro da Fonseca for its chief, Colonel Botelho de Magalhaes for minister of war. "A formal decree was issued declaring a federal Republic, the several provinces of the late Empire constituting the States and each State arranging its own constitution and electing its deliberative bodies and local governments. On the morning of the 16th the deposed Emperor received intimation that he and his family must leave the country within twenty-four hours:—'Between 2 and 3 o'clock on the morning of the 17th an officer appeared at the palace and informed the Emperor that he must at once embark, with all the members of his family. The wretched old man protested that he was not a fugitive, and that he preferred to embark by day; but after listening to the officer's explanation that a conflict might occur and blood might be shed, he finally yielded, protesting that in such a crisis his old grey head was the only one that was cool. And so at the dead hour of

night, with no one to say a farewell and bid him God-speed, the aged Emperor, with his devoted wife and children, went down to the Caes Pharonx, where a launch was waiting to convey them out to the small gunboat Parnahyba. About 10 o'clock the gunboat steamed out of the harbour and went down to Ilha Grande to wait for the merchant steamer Alagoas, which had been chartered to convey the exiles to Europe'. . . It was said that the Imperial Ministry, principally through the instrumentality of Ouro Preto, had arranged with Dom Pedro to abdicate at the end of January, 1890, in favour of his daughter, the Countess d'Eu. But the Countess, with her husband, was extremely unpopular with the army and navy, and from these the feeling of disloyalty spread rapidly among the people. By decree of the Provisional Government, the provinces of Brazil, united by the tie of federation, were to be styled the 'United States of Brazil,' and general elections were to take place in August, 1890, to confirm the establishment of the Republic. A counter-revolution broke out in Rio on Dec. 18. A number of soldiers, sailors, and civilians took part in it, and troops had to be ordered out to disperse them. It was not until the 20th that the disturbance was finally quelled."—*Annual Register*, 1889, pt. 1, pp. 444-448.—"The revolution was the work of leaders who were not only conscious of their power, but also confident that the nation would inevitably condone their temporary acts of usurpation. There were no signs of weakness, vacillation or uncertainty in their action. . . . A coalition of the army officers and the constitution-makers and political dreamers of the League would have been impracticable if the leaders had not known that the 20 provinces of the Empire were profoundly disaffected and would readily acquiesce in a radical change of government. . . . The Emperor of Brazil has enjoyed the reputation of being one of the most enlightened and progressive sovereigns of his time. . . . He was a ruler with many fascinating and estimable traits, who endeared himself to his people. This and much more may be said in praise of the deposed and banished Emperor; but when the record of his public services and of his private virtues is complete, the fact remains that he stood for a system of centralization that practically deprived the great series of federated provinces of their autonomy and his subjects of the privileges of self-government. Dom Pedro II. was not a constitutional reformer. The charter which he had received from his father was not modified in any essential respect during his long reign."—*N. Y. Tribune Extra*, v. 1, no. 12 (188a).—"A new Constitution . . . was ratified by the first National Congress, convened on Nov. 15, 1890. By this instrument the Brazilian nation constituted itself into a federal republic, under the name of the United States of Brazil. Each of the old provinces was declared a self-governing state, to be administered under a republican form of government, with power to impose taxes, and subject to no interference from the Central Government, except for purposes of national defense or the preservation of internal order or for the execution of Federal laws. Legislation relating to customs, paper currency, and postal communications is reserved to the Federal Government. The right of suffrage is secured to all male citizens over 21 years old, with the exception of beggars, persons ignorant of the alphabet, soldiers in actual service, and persons under monastic vows, registration being the only prerequisite. The executive authority is vested in the President . . . elected by the people directly for the term of six years, and . . . not eligible for

the succeeding term. . . . Senators are elected by the Legislatures of the States for nine years, three from each State, one retiring and his successor being chosen every three years. . . . The Chamber of Deputies has the initiative in all laws relating to taxation. Deputies are elected for three years by direct popular vote in the proportion of one to every 70,000 inhabitants. . . . It is declared that no sect or church shall receive aid from the National or State governments." In 1891, differences arose between the president and Congress, at first over financial measures passed by the Chambers and vetoed by the president and schemes recommended by the president that were voted down by Congress. In November the president published a decree dissolving Congress, closed the Chambers by force, proclaimed himself dictator on the invitation of officers of the army, and convoked a new congress, to be charged with the revision of the constitution. The state of Rio Grande do Sul led off in a revolt against this usurpation, and on November 23, after some shots had been fired into the city of Rio de Janeiro by a naval squadron acting against him, President Fonseca resigned. "Floriano Peixoto was immediately installed by the revolutionary committee as President in his stead."—*Appleton's annual cyclopædia* 1891, pp. 91-96.—See also FEDERAL GOVERNMENT: Modern federations.

1890.—First International American Congress at Washington, D. C. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1893-1894.—Triumph of the Peixoto government.—Presidential election.—For a time, the government under President Peixoto was maintained with considerable success; but in 1893 a serious rebellion, in which the navy took the lead, broke out. The naval insurgents held the harbor of Rio de Janeiro for some months, but gradually lost support. On March 1, 1894, a presidential election was held, which resulted in the choice of Prudente Moraes, a civilian. This removed the leading grievance of the rebels, that Peixoto was perpetuating a régime of pure militarism. On March 11, the fleet which the government had been fitting out in the United States and Europe appeared at the entrance to the harbor of Rio. The insurgent commander offered to surrender on conditions, which being refused, he and his officers sought asylum on first a French and later a Portuguese war vessel. Thus deserted, the crews of the insurgent vessels surrendered without resistance when the government batteries opened fire. In the first part of April the government forces totally defeated the rebels in Rio Grande do Sul.

1897.—Conflict with the "Fanatics."—A religious enthusiast, called Conselheiro (Counselor), who had made his appearance in the state of Bahia and gathered a great number of followers, began in 1897 to become dangerous to the government, which he denounced as atheistic; his following grew disorderly, and political malcontents were taking advantage of the disturbance which he caused. Attempts on the part of the government to stop the disorder were fiercely resisted, and its conflict with "the Fanatics," as Conselheiro and his followers were known, soon became a very serious war, demanding many thousands of troops, and spreading over wide regions of the country. Amazonian bands of women fought with "the Fanatics," and were among the most dreaded forces on their side. The headquarters and stronghold of the movement were finally taken in July, after an obstinate defense, and in October Conselheiro was killed; after which the rebellion came to an end.

1898.—Election of Dr. Campos Salles to the presidency.—The nomination and election of Dr. M. F. de Campos Salles, who was inaugurated president of the United States of Brazil on November 15, 1898, "marks the decided distinction of parties in Brazil. Previously, there had been various divergencies among the Republicans, but no distinct party differences. But at that time there arose a party advocating the selection of a candidate who would favor the national against the foreign (naturalized) element; one who would have influence with the few remaining advocates of the monarchical government; who would give preference to a military over a civil government; finally, one who would introduce into the government the system called 'Jacobinism,' a designation which the new party did not refuse to accept. Dr. Campos Salles was the candidate of the moderate Republicans or Conservatives, who were organized under the name of the Republican party, with a platform demanding respect for the constitution and declaring for the institution of such reforms as only reason and time should dictate. The sympathies of the conservative element and of foreigners who had interests in the country were with the candidate of this party and gave him their support. The election of Dr. Campos Salles inspired renewed confidence in the stability of Brazil, a confidence which was at once manifested by the higher quotation of the national bonds, by an advance in the rate of exchange, and by greater activity in business throughout the country. Brazil, in spite of all hindrances, has prospered since 1889."—*Bulletin of the bureau of American republics, Dec., 1898.*

1900.—Arbitration of the French Guiana boundary dispute.—Award of the Swiss government.—A dispute with France concerning the boundary of the French possessions in Guiana, which Brazil inherited from Portugal, and which dates back to the seventeenth century, was submitted at last to the Swiss federal council, as a tribunal of arbitration, and settled by the award of the council on December 1, 1900. The decision fixes the river Oyapok and the watershed of the Tumuc Humac mountains as the boundary. It is practically in favor of Brazil, for France had claimed, a year before, a territory of not less than 400,000 square kilometres, ten times the area of Switzerland itself. Even after a large abatement had been made, the claim was still for 260,000 square kilometres, or 100,000 square miles, much more than the area of Great Britain. The actual territory allotted to France by the federal government of Switzerland is about 3,000 square miles. The arbitrators had no excuse for saying that the case was not brought before them in all its length and breadth. The documents presented by France formed four large volumes, supplemented by an atlas of 35 maps, while Brazil, not to be outdone, put in 13 volumes of documents and three atlases, with about 200 maps.

1903.—Settlement of boundary dispute with Bolivia. See ACRÉ DISPUTES.

1904.—Impromptu revolt that became a comedy of errors.—"To the American who is under the impression that all South America is continually in the throes of one or another revolution it will come as a surprise to learn that this vast district, comprising one half the territory and almost two thirds the population of the whole continent, has known no revolution since the founding of the Republic. The revolts of 1803, 1897, and 1904, menacing in varying degree, were outbursts fostered by a centralization of national vitality which inspired the belief in each insurrectionist that it was but necessary to strike the head,—the body would lie dormant. The justification of this belief lay in the historical fact that the vast majority of successful revolts throughout South America have consisted merely in *coups d'état*. The masses have lain dormant, and the fighting, if any, has generally come after the somersault.

"The revolt of November of last year in Brazil was so typical of South American revolutions, and so elementary, that it affords a lucid illustration. Owing to the prompt and efficient measures taken by the government to suppress true reports of the disturbance, and owing, too, to its signal failure, this revolt was scarcely mentioned by the American press. Nevertheless, it missed by little causing international commotion. . . .

"A great epidemic of smallpox led the government to require of Congress a law making vaccination compulsory. Long and heated debate on the constitutionality of the measure went on, while the epidemic assumed alarming proportions. The Executive's patience being worn out, arbitrary pressure was brought to bear, and the law passed. This intervention brought down the general censure of the press, and the opposition seized the handle with disproportionate avidity. On the eleventh of November a mass meeting was held in one of the central squares of Rio Janeiro. . . . The mounted police broke up the meeting with the flat of the sword: no lives were lost. On the following day the scene was duplicated, several people injured, and a life lost. By night riots had broken out in various parts of the city.

"Up to the fourteenth of November, revolution was not even rumored. . . . Toward evening city and government were genuinely surprised by the news that General Travassos, who was to have commanded a battalion in the review, immediately upon the announcement of its postponement had proceeded to the Military Academy on the outskirts of the city, and, before the student body, had demanded of the officer in charge transfer of his command. Frightened by the attitude of the cadets, the commanding officer made a puerile protest, and surrendered. He and his staff were allowed to withdraw, and carried the news of the revolt to the city. It was soon confirmed: the cadets were advancing on the President's palace, under the leadership of General Travassos. . . .

"The shortest line of march was along the bay front, and to repulse the attack were sent by land a battalion of the line reinforced by police, and by sea two gunboats under the play of searchlights from an armored cruiser. The cadets marched under the assurance that no soldier of the line would fire on them, as the army was back of the movement. . . . They were met by an armed force, indistinguishable owing to the destruction of all the lamps by rioters. The force was the advancing battalion, and it is generally believed that it fired on the cadets, mistaking them for the returning body of police which had followed the water front. Brisk fighting ensued, when suddenly the cry arose among the cadets that they had been betrayed,

and were attacked by soldiers of the line. They broke and made a disorderly retreat to the Academy. Almost simultaneously the soldiers learned their mistake, and that they had opposed a commanding officer; and they turned in precipitous flight. General Travassos was mortally wounded in the engagement. . . .

"Meanwhile the detachment of police dispatched from the city had advanced along the bay front to the stone quarry, where they awaited the rebels. Drawn up at this spot under close formation, they were mistaken by the gunboats for the cadets, and were made the target of a disastrous hail of bullets from quick-firing guns. Their retreat also was precipitous.

"Such was the comedy of errors which will be known as the Revolt of 1904. Its net results were a rude but salutary recall of the government to watchfulness; added prestige abroad for the government, vouched by a rise in its bonds; and, most significant of all, spontaneous and immediate support of the Chief Executive from neighboring states. And yet the credit was not due to the government, which avowedly had been caught napping, but to the Goddess of Chance, the arbiter of every *coup d'état*."—G. A. Chamberlain, *Cause of South American revolution (Atlantic Monthly, June, 1905)*.

1904.—Settlement of boundary between Brazil and British Guiana.—By the decision of the king of Italy, to whom the boundary question in dispute between Brazil and British Guiana had been referred, the line separating the territories of the two states was defined, as drawn by Nature, along the watershed, starting from mount Yakontipu and running easterly to the source of the river Mahu, thence down that river to the Tacuta and up the latter to its source, where it touches the boundary already determined. Both countries to have free navigation of the rivers in question.

1906.—Presidential election.—The quadrennial presidential election occurring in Brazil in the spring of 1906 raised Dr. Alfonso Moreira Penna from the vice-presidency to the presidency of the republic, with no disturbance of its quiet.

1906.—Status of the German colonists.—"Already 500,000 Germans, emigrants and their offspring, are resident in Brazil. The great majority of them, it is true, have embraced Brazilian citizenship, but their ideals and ties are essentially and inviolably German. In the south, where they are thickest, they have become the ruling element. German factories, warehouses, shops, farms, schools and churches dot the country everywhere. German has superseded Portuguese, the official language of Brazil, in scores of communities. Twenty million pounds of vested interests—banking, street railroads, electric works, mines, coffee-plantations, and a great variety of business undertakings—claim the protection of the Kaiser's flag. A cross-country railway and a still more extensive projected system are in the hands of German capitalists. The country's vast ocean traffic, the Amazon river shipping, and much of the coasting trade are dominated by Germans.

"Over and above this purely commercial conquest, however, looms a factor of more vital importance to North American susceptibilities—namely, the creation of a nation of Germans in Brazil. That is the avowed purpose of three German colonising concerns, which have become lords and masters over 8,000 square miles of Brazilian territory, an area considerably larger than the kingdom of Saxony, and capable of dwarfing half-a-dozen German Grand Duchies. It is the object of these territorial syndicates to people

their lands with immigrants willing to be 'kept German'—a race of transplanted men and women who will find themselves amid conditions deliberately designed to perpetuate 'Deutschthum,' which means the German language, German customs, and unyielding loyalty to German economic hopes."—F. W. Wile, *German colonisation in Brazil (Fortnightly Review, Jan., 1906)*.—See also LATIN AMERICA: 1910: European and American invasion.

1907.—Adoption of obligatory military service.—By a law enacted in 1907 military service was made obligatory.

1908.—Relations with United States. See BRAZILIAN COFFEE CASE.

1909.—Frontier agreements and demarcations.—The message of President Penna to Congress, May 3, 1909, contained the following announcements: "On September 15 last, a treaty between Brazil and Holland was finally approved at The Hague, to determine the limits of our frontier with the Colony of Surinam or Dutch Guiana. The demarcation of the new frontier line between Brazil and Bolivia in Matto Grosso is now completed, and awaits only the approval of the two Governments interested. The same mixed commission to which was intrusted this survey will now proceed to reconnoitre the head-waters of the Rio Verde. The Government of the French Republic proposes the appointment of a mixed commission for the demarcation of the common boundary established on December 1, 1900, by arbitration of the Swiss Federal Council. An agreement will shortly be arrived at with Great Britain to determine the frontier of Brazil with British Guiana."

1909-1910.—Death of President Penna.—Accession of the vice-president.—Presidential election.—Dr. Alfonso Penna, president of Brazil, died suddenly on June 14, 1909, and was succeeded in the office by the vice-president, Señor Nilo Peçanha, who filled out the presidential term, ending Nov. 15, 1910. Meantime an active canvass of candidates for the succeeding term had been in progress, the names most discussed being those of General Hermes de Fonseca, Baron Rio Branco, minister of foreign affairs, and Señor Ruy Barbosa, a prominent advocate. General Hermes da Fonseca was elected on March 1, 1910, and inaugurated on November 15 of the same year.

1909-1914.—Agricultural legislation.—"Brazil is essentially an agricultural country, although only a fraction of its soil has been brought under cultivation. It furnishes 75 per cent of the entire coffee crop of the world and a very large proportion of the rubber crop. The exports of cacao are worth annually about \$10,000,000. The main resources of the country—dye-woods, hardwoods, and minerals—are as yet scarcely touched. The fertility of the soil and the ease with which the natural products are grown explain in some measure the indifference to scientific agriculture and agricultural training which prevailed up to a very recent time. It was not until 1900 that the Government manifested a serious purpose to develop and direct this industry by appointing a secretary of agriculture. In October of the following year a decree was issued providing for the establishment of a superior school of agriculture and veterinary medicine at Rio de Janeiro, and the institution was formally inaugurated July 4, 1913. By a decree of April 15, 1914, there was created a class of practical schools of agriculture, and in

accordance with successive decrees preparatory schools of agriculture were established in several places and experimental stations were created. Thus legal provision was made for a great system of agricultural education under Government control."—*Report of the Commissioner of Education*, 1915, v. 1, pp. 655-656.

1910.—**Marine mutiny at Rio de Janeiro.**—The crews, almost entirely negroes, of the two great dreadnoughts, *Minas Geraes* and *São Paulo*, revolted November 22. The captain of the *Minas Geraes* was murdered by his crew as he stepped on board. Some of the other officers were killed and the rest put on shore. The crews of a cruiser and two smaller vessels joined in the revolt. All the ships flew the red flag. The grievances alleged were overwork, small pay and too frequent corporal punishment. A message was sent to the president and no reply being received, the bombardment of the city began. A member of the Chamber of Deputies went out to them with a flag of truce. The Senate yielded to the mutineers' demand but the Chamber of Deputies hesitated. To overcome this hesitancy the *Minas Geraes* took a post opposite the government palace and started to drop shells near the naval arsenal. The Chamber voted an amnesty and promised to redress the grievances. The mutineers had in the meantime put out to sea but returned on November 27 and gave the ships back to the government.

1910.—**Fourth International American Conference**, at Buenos Aires. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.

1911.—**New educational legislation.**—"The educational system in Brazil differs somewhat from most of the other states, in that the federal government provides the higher education, while the primary education is left to the several states. Naturally there is a difference among the states in the way they maintain their schools. The most progressive states, Minas Geraes, Rio Grande do Sul, and São Paulo, have over half of the public schools. Brazil has no universities, but maintains separate schools of medicine, law, engineering, etc. Neither has it any central educational organization, which leaves much to be desired. The government has recently (1911) passed a new educational law abolishing the degree of doctor, maintaining that such a degree is undemocratic."—W. W. Sweet, *History of Latin America*, pp. 220-230.—"Professional education in Brazil is at present in a most interesting stage. The new law promulgated in 1911 has theoretically made a complete revolution in the professional schools, and the outcome of the change is still so uncertain that it offers an inviting field for prophetic speculation. Heretofore the national schools of law, medicine, and engineering have enjoyed rights and privileges not unlike the universities of the middle ages. Other schools not supported by the nation might be granted, by special enactment, certain privileges and prerogatives, but such privileges could be revoked by the same power that granted them. The national schools of medicine at Bahia and Rio de Janeiro; of law at São Paulo and Recife; of engineering at Rio de Janeiro, enjoyed a prestige that could not nearly be attained by private or local schools. Their degrees had national rights, and the conferring of the doctorate was attended by all the pomp and solemnity of an ancient university. The new law, called a 'reforma de ensino,' abolished by a stroke of the pen the rights, privileges, and prerogatives of these ancient and aristocratic faculties. Their degrees have no longer any more virtue than those of the newest and humblest school. In fact all degrees

have been abolished as unsuited to a democratic society. Instead of the coveted doctorate, conferred with cap and gown in an elaborate ceremony, the graduate now receives a simple certificate of having finished the presented course of study. This statement entitles him to the right to practice his profession. Any school, therefore, whether Federal, State, or private, may prepare physicians, lawyers, dentists, pharmacists, and engineers. The federal monopoly is gone. For this reason the reforma is said to grant 'freedom of instruction.' Theoretically, any sect, society, city, or State may found a professional school or university, and all certificates of graduation will have equal force in all parts of the Republic.

"One might suppose that the result would be the foundation of a large number of nonstate universities, untrammelled by national regulations. But there is a paragraph in the law that may tend to make professional training more national than heretofore. If a faculty or university is self-supporting, it has, under the new law, complete freedom. It can regulate the length of its course, the age of its students, the number of its professors, and system of instruction. If, on the other hand, it asks and receives a subvention from Congress, it must conform in the essentials to the standards presented by the law, such as length of term and order of studies, and the professors must be appointed by the Government from a list submitted by the faculty. This last clause especially puts all the federal-aided schools under the direct control of the Federal Government, and as it is easier to receive a subvention from Congress than to raise an endowment, it seems probable that instead of loosing the professional schools from the control of the central Government, the new law will bring them into more direct subjection, and instead of a very limited number of national faculties there may arise many more in different centers, but all equally national. Where the law really works for absolute freedom is in the matter of secondary education. These schools are now completely divorced from the professional faculties. A certificate of graduation from a collegio will no longer admit to a professional school. All students must pass an entrance examination fixed and administered by the particular faculty. This policy is theoretically correct considering actual conditions in Brazil, but it may result in the evil of young men studying only to pass the entrance examination, and not with the aim of acquiring a real education. Already there is appearing the special preparatory-to-examination school, and the race of skillful tutors who 'insure' their pupils against the risks and dangers of the examining board."—*Bulletin of the Pan-American Union*, May, 1912, p. 638.—See also UNIVERSITIES AND COLLEGES: 1551-1912.

1913-1914.—**Relations with Mexico.** See MEXICO: 1913-1914.

1915-1919.—Immigration.—From the year 1820 there has been considerable immigration from other countries. In 1915 the estimate of the number of immigrants entering up to that time was found to be as follows:

Italians	1,361,266
Portuguese	976,386
Spaniards	468,583
Germans	122,830
Russians	103,683
Austrians	78,545
Turk-Arabs	52,434
French	28,072
English	22,005
Japanese	15,608
Swiss	10,713
Swedes	5,435
Belgians	4,727
Others	200,000

See also IMMIGRATION AND EMIGRATION: Brazil; LATIN AMERICA: 1910-1914.

1917-1920.—Part played in World War.—“Brazil was the only one of the larger states of Latin America that actually entered the war. The relations between Brazil and the United States have almost always been peculiarly close and friendly. From the outbreak of the European war strong sympathy for the allied cause was manifested in Brazil, and a league for aiding the Allies through the agency of the Red Cross was organized under the presidency of Ruy Barbosa, the most distinguished statesman of Brazil and one of the most brilliant orators of Latin America. Brazil's experience during the period of neutrality was very similar to that of the United States. Her commerce was interfered with and her ships were sunk by German submarines. A few weeks after the United States entered the war, Brazil severed relations with Germany (because of the torpedoing of the Brazilian steamer *Paraná* off Cherbourg) and seized the forty-six German ships interned in Brazilian harbors. In a circular note of June 2 the Brazilian government declared to the world that it had taken this step because the Republic of Brazil was bound to the United States ‘by a traditional friendship and by a similarity of political opinion in the defense of the vital interests of America and the principles accepted by international law,’ and because it wished to give to its foreign policy, in this critical moment of the world's history, ‘a practical form of continental solidarity—a policy indeed which was that of the old régime on every occasion on which any of the other friendly sister nations of the American continent were in jeopardy.’ President Wilson's reply to this note expressed the deep appreciation of the United States and the hope that the act of the Brazilian Congress was ‘the forerunner of the attitude to be assumed by the rest of the American states.’ On October 26, 1917, on the receipt of the news of the torpedoing of another Brazilian ship by a German submarine, a resolution recognizing ‘the state of war initiated by the German Empire against Brazil’ was adopted by the unanimous vote of the Brazilian Senate and by a vote of 149 to 1 in the Chamber of Deputies. At the request of the British government in December, 1917, Brazil sent two cruisers and four destroyers to European waters to cooperate with the Brit-

ish navy, and a few months later a group of Brazilian aviators took their place on the Western front. A number of physicians and several Red Cross units from Brazil also cooperated with the Allies. Brazil's enthusiastic support of the United States and of the allied cause has been recognized by those powers in giving her representation on the Council of the League of Nations. In fact at the first meeting of the Council in London in February, 1920, Brazil was the sole American power represented.”—J. H. Latané, *United States and Latin America*, pp. 313-314.—See also LATIN AMERICA: 1914.

1918.—Presidential election.—In March, 1918, the presidential election was held and Rodriguez Alves (president from 1902 to 1906) was chosen. On January 15, 1919, he died without assuming office and Vice President Delfim Moreira administered the affairs during the next month. An election to fill the unexpired term of Alves was held on April 13, and Epitácio Pessoa was chosen for the balance of the term. He varied the practice of the Latin-American republics by filling all the posts in his cabinet with civilians. Pessoa was interested in developing the commercial and economic relations of Brazil and the United States and in bringing closer together the countries of North and South America and solidifying their interests without antagonizing the European countries.

1918 (October).—Settlement of Uruguay's debt to Brazil.—“On December 10, 1918, the Uruguayan Legislature approved the treaty signed on July 22, 1918, at Rio de Janeiro by the Uruguayan and Brazilian Governments for the purpose of determining, liquidating and applying Uruguay's debt to Brazil. The origin of this debt is to be found in a series of eight conventions entered into from 1851 to 1868 by which Brazil advanced to Uruguay amounts which had by 1868 reached a total of slightly over \$4,000,000. As expressed in the treaty of July 22, 1918, the moneys thus loaned were expended in the common struggle for liberty. . . . Brazil proved itself a most tolerant creditor and failed to demand payment of capital or interest. On several occasions the Uruguayan Foreign Office opened negotiations looking to the liquidation of the debt; the first definite proposal being made in 1896. The debt and the interest then amounted to \$12,000,000 and a project was drawn up providing for its reduction to \$5,170,000 which amount was to be paid in 4 per cent bonds guaranteed by all direct and indirect taxes. This last clause led to the withdrawal of the project and although further negotiations took place particularly in 1906 and 1910, no definite agreement was reached until July, 1918. The treaty which has now been approved fixes its amount of Uruguay's debt to Brazil at \$5,170,000 and provides for the expenditures of this sum by Uruguay in works of mutual benefit on the frontier between the two countries. The sum of \$1,034,000 is to be devoted for and the construction of, an international bridge over the Yaguaron River. The further sum of \$1,757,000 is to be expended for an Institute of Labor to be founded on the frontier. . . . In addition to this an equal number of Uruguayans and Brazilians will receive in Spanish and Portuguese scientific and professional instruction in agricultural industries as well as in allied industries.”—*Hispanic American Historical Review*, Aug., 1919, pp. 481-482.
