proved decisive for the time. Bonnivet advanced rashly beyond the Tesino. The imperialists, commanded by four able generals, Launoi, Pescara, Bourbon, and Sforza, succeeded in almost cutting off his retreat. They at the same time refused Bonnivet's offer to engage. They hoped to weaken him by famine. The Swiss first murmured against the distress occasioned by want of precaution. They deserted across the river; and Bonnivet, thus abandoned, was obliged to make a precipitate and perilous retreat. A bridge was hastily flung across the Sessia, near Romagnano; and Bonnivet, with his best knights and gensdarmes, undertook to defend the passage of the rest of the army. The imperialists, led on by Bourbon, made a furious attack. Bonnivet was wounded, and he gave his place to Bayard, who, never entrusted with a high command, was always chosen for that of a forlorn hope. The brave Vendeness was soon killed; and Bayard himself received a gun-shot through the reins. The gallant chevalier, feeling his wound mortal, caused himself to be placed in a sitting posture beneath a tree, his face to the enemy, and his sword fixed in guise of a cross before him. The constable Bourbon, who led the imperialists, soon came up to the dying Bayard, and expressed his compassion. 'Weep not for me,' said the chevalier, 'but for thyself. I die in performing my duty; thou art betraying thine.' Nothing marks more strongly the great rise, the sudden sacro-sanctity of the royal authority in those days, than the general horror which the treason of Bourbon excited. . . . The fact is, that this sudden horror of treason was owing, in a great measure, to the revived study of the classics, in which treason to one's country is universally mentioned as an impiety and a crime of the deepest dye. Feudality, with all its oaths, had no such horror of treason. . . . Bonnivet had evacuated Italy after this defeat at Romagnano. Bourbon's animosity stimulated him to push his advantage. He urged the emperor to invade France, and recommended the Bourbonnais and his own patrimonial provinces as those most advisable to invade. Bourbon wanted to raise his friends in insurrection against Francis; but Charles descried selfishness in this scheme of Bourbon, and directed Pescara to march with the constable into the south of France and lay siege to Marseilles. . . . Marseilles made an obstinate resistance," and the siege was ineffectual. "Francis, in the meantime, alarmed by the invasion, had assembled an army. He burned to employ it, and avenge the late affront. The king of England, occupied with the Scotch, gave him respite in the north; and he resolved to employ this by marching, late as the season was, into Italy. His generals, who by this time were sick of warring beyond the Alps, opposed the design; but not even the death of his queen, Claude, could stop Francis. He passed Mount Cenis; marched upon Milan, whose population was spiritless and broken by the plague, and took it without resistance. It was then mooted whether Lodi or Pavia should be besieged. The later, imprudently, as it is said, was preferred. It was at this time that Pope Clement VII., of the house of Medici, who had lately succeeded Adrian, made the most zealous efforts to restore peace between the monarchies. He found Charles and his generals arrogant and unwilling to treat. The French, said they, must on no account be allowed a footing in Italy. Clement, impelled by pique towards the emperor, or generosity to Francis, at once abandoned the prudent policy of his predecessors, and formed a league with the French king, to whom, after all, he brought no accession of force. This step proved afterwards fatal to the city of Rome. The siege of Pavia was formed about the middle of October [1524]. Antonio de Leyva, an

experienced officer, supported by veteran troops, commanded in the town. The fortifications were strong, and were likely to hold for a considerable time. By the month of January the French had made no progress; and the impatient Francis despatched a considerable portion of his army for the invasion of Naples, hearing that the country was drained of troops. This was a gross blunder, which Pescara observing, forbore to send any force to oppose the expedition. He knew that the fate of Italy would be decided before Pavia. Bourbon, in the mean time, disgusted with the jealousies and tardiness of the imperial generals, employed the winter in raising an army of lansquenets [mercenary foot-soldiers] on his own account. From the duke of Savoy he procured funds; and early in the year 1525 the constable joined Pescara at Lodi with a fresh army of 12,000 mercenaries. They had, besides, some 7,000 foot, and not more than 1,500 horse. With these they marched to the relief of Pavia. Francis had a force to oppose to them, not only inferior in numbers, but so harassed with a winter's siege, that all the French generals of experience counselled a retreat. Bonnivet and his young troop of courtiers were for fighting; and the monarch harkened to them. Pavia, to the north of the river, was covered in great part by the chateau and walled park of Mirabel. Adjoining this, and on a rising ground, was the French camp, extending to the Tesino. Through the camp, or through the park, lay the only ways by which the imperialists could reach Pavia. The camp was strongly entrenched and defended by artillery, except on the side of the park of Mirabel, with which it communicated." On the night of February 23, the imperialists made a breach in the park wall, through which they pressed next morning, but were driven back with heavy loss. "This was victory enough, could the French king have been contented with it. But the impatient Francis no sooner beheld his enemies in rout, than he was eager to chase them in person, and complete the victory with his good sword. He rushed forth from his entrenchments at the head of his gendarmes, flinging himself between the enemy and his own artillery, which was thus masked and rendered useless. The imperialists rallied as soon as they found themselves safe from the fire of the cannon," and the French were overwhelmed. "The king . . . behind a heap of slain, defended himself valiantly; so beaten and shattered, so begrimed with blood and dust, as to be scarcely distinguishable, notwithstanding his conspicuous armour. He had received several wounds, one in the forehead; and his horse, struck with a ball in the head, reared, fell back, and crushed him with his weight: still Francis rose, and laid prostrate several of the enemies that rushed upon him." But presently he was recognized and was persuaded to surrender his sword to Lannoy, the viceroy of Naples. "Such was the signal defeat that put an end to all French conquests and claims in Italy."—E. E. Crowe, *History of France*, v. 1, ch. 6.—See also ITALY: 1523-1527.

1525-1526.—Captivity of Francis I and his perfidy in the Treaty of Madrid.—The captive king of France was lodged in the castle at Pizzighitona. "Instead of bearing his captivity with calmness and fortitude, he chafed and fretted under the loss of his wonted pleasures. . . . France, at first stupified by the mishap, soon began to recover hope. The Regent [Louise, the queen-mother], for all her vices and faults, was proud and strong; she gathered what force she could at Lyons, and looked

round for help. . . . Not only were there anxieties at home, but the frontiers were also threatened. On the side of Germany a popular movement [the Peasant War], closely connected with the religious excitement of the time, pushed a fierce and cruel rabble into Lorraine, whence they proposed to enter France. But they were met by the Duke of Guise and the Count of Vaudemont, his brother, at the head of the garrisons of Burgundy and Champagne, and were easily dispersed. It was thought that during these troubles Lannoy would march his army, flushed with victory, from the Po to the Rhone. . . . But Lannoy had no money to pay his men, and could not undertake so large a venture. Meanwhile negotiations began between Charles V. and the King; the Emperor demanding, as ransom, that Bourbon should be invested with Province and Dauphiny, joined to his own lands in Auvergne, and should receive the title of king; and secondly that the Duchy of Burgundy should be given over to the Emperor as the inheritor of the lands and rights of Charles the Bold. But the King of France would not listen for a moment. And now the King of England and most of the Italian states, alarmed at the great power of the Emperor, began to change sides. Henry VIII. came first. He signed a treaty of neutrality with the Regent, in which it was agreed that not even for the sake of the King's deliverance should any part of France be torn from her. The Italians joined in a league to restore the King to liberty, and to secure the independence of Italy: and Turkey was called on for help. . . . The Emperor now felt that Francis was not in secure keeping at Pizzighitona. . . . He therefore gave orders that Francis should at once be removed to Spain." The captive king "was set ashore at Valencia, and received with wonderful welcome: dances, festivals, entertainments of every kind, served to relieve his captivity; it was like a restoration to life. But this did not suit the views of the Emperor, who wished to weary the King into giving up all thought of resistance: he trusted to his impatient and frivolous character; his mistake, as he found to his cost, lay in thinking that a man of such character would keep his word. He therefore had him removed from Valencia to Madrid, where he was kept in close and galling confinement."—G. W. Kitchin, *History of France*, v. 2, bk. 2, ch. 5.—"Charles had an advantage in his prisoner's character. Francis was a bad subject for prison life, even though comfortably lodged and reverently treated. He was too selfish and too sensitive to sacrifice himself for his kingdom. Should, however, he abdicate or die, the fruits of his capture would be lost. France had not been demoralised by her disaster, and the energy of her regent had prepared her against attack. The Emperor's troops in Italy were dwindling, their generals wrangling; every Italian State was heaving restlessly under the incubus of the unpaid soldiery. Ferdinand, who, true to himself, had advised enterprising measures against France, was crippled by the dangerous Tyrolese rebellion. Thus it was that on January 13, 1526, the treaty of Madrid was concluded. By the terms of the famous treaty Francis resigned all claims to Milan, Genoa and Asti; he ceded the suzerainty of Flanders, Artois and Tournai, restoring places taken on the Netherland frontiers; he engaged to persuade the Estates General and the Parliament of Paris to assent to the cession of Burgundy, or, failing this, to return to the prison to which two of his sons should be sent as hostages; a French fleet should escort Charles to Italy for the purpose of his coronation; a French army under the king in person should co-operate in a crusade against the infidel, and in the suppression of Lutheran and other pernicious sects. Francis abandoned

his ally the Duke of Guelders, and renounced the claims of the house of Albret to Navarre. To Bourbon was promised the restoration of his estates, but Charles made no further stipulations in his favour. It was, however, understood that the Constable should receive the duchy of Milan, while Louis XII.'s daughter Renée, poor shuttlecock tossed from prince to prince, was suggested as his bride. On the morrow of the treaty an altar was placed in the king's room. Here, after mass was said, Francis swore upon the Gospel to keep his oath. Lannoy asked him for his word of honour as a knight. Francis with bared head laid his hand in Lannoy's, and promised on his word as a gentleman to return to prison in six weeks, if all the conditions were not fulfilled. Francis lied and he had meant to lie, for on the previous day he had, in the presence of the French ambassadors, renewed a protest made in August, that he was acting under compulsion and vile duress, that the treaty reduced France to slavery, that he would never sacrifice the rights of the French crown. When the last arrangements had been made, Emperor and King spent five days together in true brotherly intercourse. At parting they stood alone man to man before a roadside crucifix. Here Francis renewed his pledges under pain of being held a miserable scoundrel. Charles assured him that he had never hated him, but that if he broke his word to Eleanor, he could never forgive him, and would strive to wreak his vengeance on him, wherever he might be. Every one in Europe knew that the king was on his road to France and perjury. On March 17 Francis leapt from his boat into the French water of the Bidassoa, waded to land, and, springing on his horse, exclaimed, 'Now I am king, I am king once more.' Charles had let slip his chance. He had lost that one August day which Lannoy, in announcing the victory of Pavia, had declared come to a man once and once only in his life."—E. Armstrong, *Emperor Charles V*, v. 1, pp. 154-156.

1536; incessantly troubled, however, by far from pacific symptoms, proceedings and preparations. In October, 1532, Francis I. had, at Calais, an interview with Henry VIII., at which they contracted a private alliance, and undertook 'to raise between them an army of 80,000 men to resist the Turk.'" But when, in 1535, Charles V. attacked the seat of the Barbary pirates, and took Tunis, Francis "entered into negotiations with Soliman II. [sultan of the Turkish empire from 1520 to 1566], and concluded a friendly treaty with him against what was called 'the common enemy.'" Francis had been for some time preparing to resume his projects of conquest in Italy; he had effected an interview at Marseilles, in October, 1533, with Pope Clement VII., who was almost at the point of death, and it was there that the marriage of Prince Henry of France with Catherine de' Medici [daughter of Lorenzo, duke of Urbino, and granddaughter of Piero de' Medici] was settled. Astonishment was expressed that the pope's niece had but a very moderate dowry. 'You don't see, then,' said Clement VII.'s ambassador, 'that she brings France three jewels of great price, Genoa, Milan and Naples? When this language was reported at the court of Charles V., it caused great irritation there. In 1536 all these combustibles of war exploded; in the month of February, a French army entered Piedmont, and occupied Turin; and, in the month of July, Charles V. in person entered Provence at the head of 50,000 men. Anne de Montmorency, having received orders to defend southern France, began by laying it waste in order that the enemy might not be able to live in it. . . . Montmorency made up his mind to defend, on the whole coast of Provence, only Marseilles and Arles; he pulled down the ramparts of the other towns, which were left exposed to the enemy. For two months Charles V. prosecuted this campaign without a fight, marching through the whole of Provence an army which fatigue, shortness of provisions, sickness, and ambuscades were decimating ingloriously. At last he decided upon retreating. . . . On returning from his sorry expedition, Charles V. learned that those of his lieutenants whom he had charged with the conduct of a similar invasion in the north of France, in Picardy, had met with no greater success than he himself in Provence. A truce for three months was soon afterwards arranged, and in June, 1538, through the mediation of Pope Paul III., a treaty was signed at Nice which extended the truce to ten years. Next month the two sovereigns met at Aigues-Mortes and exchanged many assurances of friendship."—F. P. Guizot, *Popular history of France*, v. 4, ch. 28.—In August, 1530, a revolt at Ghent "called Charles V. into Flanders; he was then in Spain, and his shortest route was through France. He requested permission to cross the kingdom, and obtained it, after having promised the Constable Montmorency that he would give the investiture of Milan to the second son of the King. His sojourn in France was a time of expensive fêtes, and cost the treasury four millions; yet, in the midst of his pleasures, the Emperor was not without uneasiness. . . . Francis, however, respected the rights of hospitality; but Charles did not give to his son the investiture of Milan. The King, indignant, exiled the constable for having trusted the word of the Emperor without exacting his signature, and avenged himself by strengthening his alliance with the Turks, the most formidable enemies of the empire. . . . The hatred of the two monarchs was carried to its height by these last events; they mutually outraged each other by injurious libels, and submitted their differences to the Pope. Paul III. refused to decide between them, and they again took up arms [1542]. The King in-

vaded Luxembourg, and the Dauphin Rousillon; and while a third army in concert with the Mussulmans besieged Nice [1542], the last asylum of the dukes of Savoy, by land, the terrible Barbarossa, admiral of Soliman, attacked it by sea. The town was taken, the castle alone resisted, and the siege of it was raised. Barbarossa consoled himself for this check by ravaging the coasts of Italy, where he made 10,000 captives. The horror which he inspired recoiled on Francis I., his ally, whose name became odious in Italy and Germany. He was declared the enemy of the empire, and the Diet raised against him an army of 24,000 men, at the head of which Charles V. penetrated into Champagne, while Henry VIII., coalescing with the Emperor, attacked Picardy with 10,000 English. The battle of Cerisoles, a complete victory, gained during the same year [April 14, 1544], in Piedmont, by Francis of Bourbon, Duke d'Enghien, against Gast, general of the Imperial troops, did not stop this double and formidable invasion. Charles V. advanced almost to Château-Thierry. But discord reigned in his army; he ran short of provisions, and could easily have been surrounded; he then again promised Milan to the Duke of Orleans, the second son of the King. This promise irritated the Dauphin Henry, who was afraid to see his brother become the head of a house as dangerous for France as had been that of Burgundy; he wished to reject the offer of the Emperor and to cut off his retreat. A rivalry among women, it is said, saved Charles V. . . . The war was terminated almost immediately afterwards [1544] by the treaty of Crespy in Valois. The Emperor promised his daughter to the Duke of Orleans, with the Low Countries and Franche-Comté, or one of his nieces, with Milan. Francis restored to the Duke of Savoy the greater part of the places that he held in Piedmont; he renounced all ulterior pretensions to the kingdom of Naples, the duchy of Milan, and likewise to the sovereignty of Flanders and Artois; Charles, on his part, gave up the duchy of Burgundy. This treaty put an end to the rivalry of the two sovereigns, which had ensanguined Europe for 25 years. The death of the Duke of Orleans freed the Emperor from dispossessing himself of Milan or the Low Countries; he refused all compensation to the King, but the peace was not broken. Francis I. profited by it to redouble his severity with regard to the Protestants. A population of many thousands of Waldenses, an unfortunate remnant from the religious persecutions of the 13th century, dwelt upon the confines of Provence, and the County Venaissin, and a short time back had entered into communion with the Calvinists. The King permitted John Mesnier, Baron d'Oppède, first president of the Parliament of Aix, to execute [1546] a sentence delivered against them five years previously by the Parliament. John d'Oppède himself directed this frightful execution. Twenty-two towns or villages were burned and sacked; the inhabitants, surprised during the night, were pursued among the rocks by the glare of the flames which devoured their houses. The men perished by executions, but the women were delivered over to terrible violences. At Cabrières, the principal town of the canton, 700 men were murdered in cold blood, and all the women were burnt; lastly, according to the tenor of the sentence, the houses were rased, the woods cut down, the trees in the gardens torn up, and in a short time this country, so fertile and so thickly peopled, became a desert and a waste. This dreadful massacre was one of the principal causes of the religious wars which desolated France for so long a time. . . . The war continued between [Henry VIII] and Francis I. The English had taken Boulogne, and a French fleet ravaged the coasts of

England, after taking possession of the Isle of Wight [1545]. Hostilities were terminated by the treaty of Guines [1547], which the two kings signed on the edge of their graves, and it was arranged that Boulogne should be restored for the sum of 2,000,000 of gold crowns. . . . Henry VIII and Francis I. died in the same year [1547]."—E. de Bonnechose, *History of France*, v. 1. pp. 363-367.

1534-1560.—Persecution of Protestants.—Their organization.—Their numbers.—"Francis I. had long shrunk from persecution, but having once begun he showed no further hesitation. During the remainder of his reign and the whole of that of his son Henry II. (1534-1559) the cruelty of the sufferings inflicted on the Reformers increased with the number of the victims. At first they were strangled and burnt, then burnt alive, then hung in chains to roast over a slow fire. . . . The Edict of Chateaubriand (1551), taking away all right of appeal from those convicted of heresy, was followed by an attempt to introduce an Inquisition on the model of that of Spain, and when this failed owing to the opposition of the lawyers, the Edict of Compiègne (1557) denounced capital punishment against all who in public or private professed any heterodox doctrine. It is a commonplace that persecution avails nothing against the truth—that the true Church springs from the blood of martyrs. Yet the same cause which triumphed over persecution in France was crushed by it in Spain and in the Walloon Netherlands. Was it therefore not the truth? The fact would rather seem to be, that there is no creed, no sect which cannot be extirpated by force. But that it may prevail, persecution must be without respect of persons, universal, continuous, protracted. Not one of these conditions was fulfilled in France. The opinions of the greater nobles and princes, and of those who were their immediate followers, were not too narrowly scanned, nor was the persecution equally severe at all times and in all places. Some governors and judges and not a few of the higher clergy inclined to toleration. . . . The cheerful constancy of the French martyrs was admirable. Men, women and children walked to execution singing the psalms of Marot and the Song of Simeon. This boldness confounded their enemies. Hawkers distributed in every part of the country the books issued from the press of Geneva and which it was a capital offence even to possess. Preachers taught openly in the streets and market-places. . . . The increasing numbers of their converts and the high position of some among them gave confidence to the Protestants. Delegates from the reformed congregations of France were on their way to Paris to take part in the deliberations of the first national Synod on the very day (April 2, 1559) when the peace of Cateau Cambresis was signed, a peace which was to be the prelude to a vigorous and concerted effort to root out heresy on the part of the kings of France and Spain. The object of the meeting was twofold: first to draw up a detailed profession of faith, which was submitted to Calvin—there was, he said, little to add, less to correct—secondly to determine the 'ecclesiastical discipline' of the new Church. The ministers were to be chosen by the elders and deacons, but approved by the whole congregation. The affairs of each congregation were placed under the control of the Consistory, a court composed of the pastors, elders and deacons; more important matters were reserved for the decision of

the provincial 'colloques' or synods, which were to meet twice a year, and in which each church was represented by its pastor and at least one elder. Above all was the national Synod also composed of the clergy and of representative laymen. This organisation was thoroughly representative and popular, the elected delegates of the congregations, the elders and deacons, preponderated in all the governing bodies, and all ministers and churches were declared equal. The Reformed churches, which, although most numerous in the South, spread over almost the whole country, are said at this time to have counted some 400,000 members (1559). These were of almost all classes, except perhaps the lowest, although even among the peasantry there were some martyrs for the faith." On the accession of Charles IX., in 1560, "a quarter of the inhabitants of France were, it was said, included in the 2,500 reformed congregations. This is certainly an exaggeration, but it is probable that the number of the Protestants was never greater than during the first years of the reign of Charles IX. . . . The most probable estimate is that at the beginning of the wars of religion the Huguenots with women and children amounted to some 1,500,000 souls out of a population of between fifteen and twenty millions. But in this minority were included about one-fourth of the lesser nobility, the country gentlemen, and a smaller proportion of the great nobles, the majority of the better sort of townspeople in many of the most important towns, such as Caen, Dieppe, Havre, Nantes, La Rochelle, Nîmes, Montpellier, Montauban, Châlons, Mâcon, Lyons, Valence, Limoges and Grenoble, and an important minority in other places, such as Rouen, Orleans, Bordeaux and Toulouse. The Protestants were most numerous in the South-west, in Poitou, in the Marche, Limousin, Angoumois and Périgord, because in those districts, which were the seats of long-established and flourishing manufactures, the middle classes were most prosperous, intelligent and educated. It is doubtful whether the Catholics were not in a large majority, even where the superior position, intelligence and vigour of the Huguenots gave them the upper hand. Only in some parts of the South-west and of Dauphiny do the bulk of the population appear to have been decidedly hostile to the old religion. During the course of the Civil War the Protestants came to be more and more concentrated in certain parts of the country, as for instance between the Garonne and the Loire."—P. F. Willert, *Henry of Navarre and the Huguenots in France*, ch. 1.

1547-1559.—Rise of the Guises.—Alliance with German Protestants.—Acquisition of Toul, Verdun and Metz.—Unsuccessful campaign in Italy.—Battle and siege of St. Quentin.—French take Calais.—Treaty of Cateau-Cambresis.—"The son of Francis I., who in 1547 ascended the throne under the title of Henry II., was told by his dying father to beware of the Guises. . . . The Guises were a branch of the ducal House of Lor-

raine, which, although the dukedom was a fief of the German empire, had long stood in intimate relations with the court and nobility of France. The founder of the family was Claude, a younger son of René II., Duke of Lorraine, who, being naturalised in France in 1505, rendered himself conspicuous in the wars of Francis I., and was created first Duke of Guise. He died in 1550, leaving five daughters and six sons. His eldest daughter, Mary, became the wife of James V. of Scotland, and mother of Mary Queen of Scots. The sons were all men of extraordinary energy and ambition, and their united influence was, for a number of years, more than a match for that of the crown. Francis, second Duke of Guise, acquired, while still a young man, extraordinary renown as a military commander, by carrying out certain ambitious designs of France on a neighbouring territory. . . . As is well known, French statesmen have for many centuries cherished the idea that the natural boundary of France on the east is the Rhine, from its mouth to its source, and thence along the crest of the Alps to the Mediterranean. . . . To begin the realisation of the idea, advantage was taken of the war which broke out between the Emperor Charles V. and his Protestant subjects in North Germany [see GERMANY: 1546-1552]. Although the Protestants of France were persecuted to the death, Henry II., with furtively ambitious designs, offered to defend the Protestants of Germany against their own emperor; and entered into an alliance in 1551 with Maurice of Saxony and other princes, undertaking to send an army to their aid. As bases of his operations, it was agreed that he might take temporary military possession of Toul, Verdun, and Metz, three bishoprics [forming a district called the *Trois Evêchés*], each with a portion of territory lying within the area of the duchy of Lorraine, but held as distinct fiefs of the German empire—such, in fact, being fragments of Lothair's kingdom, which fell to Germany, and had in no shape been incorporated with France. It was stipulated that, in occupying these places, the French were not to interfere with their old connection with the empire. The confidence reposed in the French was grievously abused. All the stipulations went for nothing. In 1552, French troops took possession of Toul and Verdun, also of Nancy, the capital of Lorraine, treating the duchy, generally, as a conquered country. Seeing this, Metz shut her gates and trusted to her fortifications. To procure an entrance and secure possession, there was a resort to stratagems which afford a startling illustration of the tricks that French nobles at that time could be guilty of in order to gain their ends. The French commander, the Constable Montmorency, begged to be allowed to pass through the town with a few attendants, while his army made a wide circuit on its route. The too credulous custodiers of the city opened the gates, and, to their dismay, the whole French forces rushed in, and began to rule in true despotic fashion. . . . Thus was Metz secured for France in a way which modern Frenchmen, we should imagine, can hardly think of without shame. Germany, however, did not relinquish this important fortress without a struggle. Furious at its loss, the Emperor Charles V. proceeded to besiege it with a large army. The defence was undertaken by the Duke of Guise, assisted by a body of French nobility. After an investment of four months, and a loss of 30,000 men, Charles was forced to raise the siege, January 1, 1553, all his attempts at the capture of the place being effectually baffled."—W. Chambers, *France: its history and revolutions*, ch. 6.—"The war continued during the two following years; but both parties were now growing weary of a contest in which neither achieved any decisive superiority";

and the emperor, having negotiated an armistice, resigned all his crowns to his son, Philip II, and his brother Ferdinand (October, 1555). Ferdinand received the Hapsburg possessions, and Philip II, Spain with its vast American colonies, Milan, the two Sicilies, and the Netherlands. "Meantime Pope Paul IV., who detested the Spaniards and longed for the complete subversion of their power in the Peninsula, entered into a league with the French king against Philip; Francis of Guise was encouraged in his favorite project of effecting a restoration of the crown of Naples to his own family, as the descendants of René of Anjou; and in December, 1556, an army of 16,000 men, commanded by the Duke of Guise, crossed the Alps, and, marching direct to Rome, prepared to attack the Spanish viceroy of Naples, the celebrated Duke of Alva. In April, 1557, Guise advanced into the Abruzzi, and besieged Civitella; but here he encountered a determined resistance, and, after sacrificing a great part of his troops, found it necessary to abandon the attempt. He retreated toward Rome, closely pursued by the Duke of Alva; and the result was that the expedition totally failed. Before his army could recover from the fatigues and losses of their fruitless campaign, the French general was suddenly recalled by a dispatch containing tidings of urgent importance from the north of France. The Spanish army in the Netherlands, commanded by the Duke of Savoy, having been joined by a body of English auxiliaries under the Earl of Pembroke, had invaded France and laid siege to St. Quentin. This place was badly fortified, and defended by a feeble garrison under the Admiral de Coligny. Montmorency advanced with the main army to re-enforce it, and on the 10th of August rashly attacked the Spaniards, who outnumbered his own troops in the proportion of more than two to one, and inflicted on him a fatal and irretrievable defeat. The loss of the French amounted, according to most accounts, to 4,000 slain in the field, while at least an equal number remained prisoners, including the Constable himself. The road to Paris lay open to the victors. . . . The Duke of Savoy was eager to advance; but the cautious Philip, happily for France, rejected his advice, and ordered him to press the siege of St. Quentin. That town made a desperate resistance for more than a fortnight longer, and was captured by storm on the 27th of August [1557]. . . . Philip took possession of a few other neighbouring fortresses, but attempted no serious movement in prosecution of his victory. [See also NETHERLANDS: 1555-1558.] . . . The Duke of Guise arrived from Italy early in October, to the great joy of the king and the nation, and was immediately created lieutenant-general of the kingdom, with powers of almost unlimited extent. He applied himself, with his utmost ability and perseverance, to repair the late disasters; and with such success, that in less than two months he was enabled to assemble a fresh and well-appointed army at Compiègne. Resolving to strike a vigorous blow before the enemy could reappear in the field, he detached a division of his army to make a feint in the direction of Luxemburg; and, rapidly marching westward with the remainder, presented himself on the 1st of January, 1558, before the walls of Calais. . . . The French attack was a complete surprise; the two advanced forts commanding the approaches to the town were bombarded, and surrendered on the 3d of January; three days later the castle was carried by assault; and on the 8th, the governor, Lord Wentworth, was forced to capitulate. . . . Guines, no longer tenable after the fall of Calais, shared the same fate on the 21st of January; and thus, within the short space of three weeks, were the last remnants of her ancient dominion on the

Continent snatched from the grasp of England—possessions which she had held for upward of 200 years. . . . This remarkable exploit, so flattering to the national pride, created universal enthusiasm in France, and carried to the highest pitch the reputation and popularity of Guise. From this moment his influence became paramount; and the marriage of the dauphin to the Queen of Scots, which was solemnised on the 24th of April, 1558, seemed to exalt the house of Lorraine to a still more towering pinnacle of greatness. It was stipulated by a secret article of the marriage-contract that the sovereignty of Scotland should be transferred to France, and that the two crowns should remain united forever, in case of the decease of Mary without issue. Toward the end of the year negotiations were opened with a view to peace." They were interrupted, however, in November, 1558, by the death of Queen Mary of England, wife of Philip of Spain. "When the congress assembled at Le Cateau-Cambresis, in February, 1559, the Spanish ministers no longer maintained the interests of England; and Elizabeth, thus abandoned, agreed to an arrangement which virtually ceded Calais to France, though with such nominal qualifications as satisfied the sensitiveness of the national honour. Calais was to be restored to the English at the end of eight years, with a penalty, in case of failure, of 500,000 crowns. At the same time, if any hostile proceedings should take place on the part of England against France within the period specified, the queen was to forgo all claim to the fulfillment of the article." The treaty between France and England was signed April 2, 1559, and that between France and Spain the following day. By the latter, "the two monarchs mutually restored their conquests in Luxemburg, the Netherlands, Picardy, and Artois; France abandoned Savoy and Piedmont, with the exception of Turin and four other fortresses [restoring Philibert Emanuel, duke of Savoy, to his dominions—see SAVOY AND PIEDMONT: 1550-1580]; she evacuated Tuscany, Corsica, and Montserrat, and yielded up no less than 189 towns or fortresses in various parts of Europe. By way of compensation, Henry preserved the district of the 'Trois Evêchés'—Toul, Metz, and Verdun—and made the all-important acquisition of Calais. This pacification was sealed, according to custom, by marriages"—Henry's daughter Elizabeth to Philip of Spain, and his sister Marguerite to the duke of Savoy. In a tournament, at Paris, which celebrated these marriages, Henry received an injury from the lance of Montgomery, captain of his Scottish guards, which caused his death eleven days afterwards—July 10, 1559.—W. H. Jervis, *Student's history of France*, ch. 15.

1559.—Accession of King Francis II.

1559-1561.—Power of the Guises over Francis II.—Opposition of Catherine de' Medici and the Protestants.—Conspiracy of Amboise.—Death of Francis II.—Rise of the Huguenot party.—

**Disputed origin of its name.**—Henry II “had been married from political motives to the niece of Clement VII., Catharine de’ Medici. This ambitious woman came to France conscious that the marriage was a political one, mentally a stranger to her husband; and such she always remained. This placed her from the first in a false position. The King was influenced by any one rather than by his wife; and a by no means charming mistress, Diana of Poitiers, played her part by the side of and above the Queen. . . . Immediately after the death of her husband, in 1550, she [Catharine] greedily grasped at power. The young King, Francis II., was of age when he entered his fourteenth year. There could therefore be no legal regency, though there might be an actual one, for a weakly monarch of sixteen was still incompetent to govern. But she was thwarted in her first grasp at power. Under Francis I., a family [the Guises—see above: 1547-1550] previously unknown in French history had begun to play a prominent part. . . . The brothers succeeded in bringing about a political marriage which promised to throw the King, who was mentally a child, entirely into their hands. Their sister Mary had been married to James V. of Scotland, whose crown was then rather an insignificant one, but was now beginning to gain importance. The issue of this marriage was a charming girl, who was destined for the King’s wife. She was betrothed to him without his consent when still a child. The young Queen was Mary Stuart. Her misfortunes, her beauty, and her connection with European history, have made her a historical personage, more conspicuous indeed for what she suffered than for what she did; her real importance is not commensurate with the position she occupies. This, then, was the position of the brothers Guise at court. The King was the husband of their niece; both were children in age and mind, and therefore doubly required guidance. The brothers, Francis [duke of Guise] and Charles [cardinal of Lorraine], had the government entirely in their hands; the Duke managed the army, the Cardinal the finances and foreign affairs. Two such leaders were the mayors of the palace. The whole constitution of the court reminds us of the ‘rois fainéants’ and the office of major-domo under the Carolingians. Thus, just when Catharine was about to take advantage of a favourable moment, she saw herself once more eclipsed and thrust aside, and that by insolent upstarts of whom one thing only was certain, that they possessed unusual talents, and that their consciences were elastic in the choice of means. It was not only from Catharine that the supremacy of the Guises met with violent opposition, but also from Protestantism, the importance of which was greatly increasing in France. . . . In the time of Henry II., in spite of all the edicts and executions, Protestantism had made great progress. . . . In the spring of 1550, interdicted Protestantism had secretly reviewed its congregations, and at the first national synod drawn up a confession of faith and a constitution for the new Church. Preachers and elders had appeared from every part of France, and their eighty articles of 28th May, 1550, have become the code of laws of French Protestantism. The Calvinistic principle of the Congregational Church, with choice of its own minister, deacons, and elders; a consistory which maintained strict discipline in matters of faith and morals . . . was established upon French soil, and was afterwards publicly accepted by the whole party. The more adherents this party gained in the upper circles, the bolder was its attitude; there was, indeed, no end to the executions, or to the edicts against heresy, but a spirit of opposition, previously unknown, had gradually gained ground.

Prisoners were set free, the condemned were rescued from the hands of the executioners on the way to the scaffold, and a plan was devised among the numerous fugitives in foreign lands for producing a turn in the course of events by violent means. La Rénaudie, a reformed nobleman from Perigord, who had sworn vengeance on the Guises for the execution of his brother, bad, with a number of other persons of his own way of thinking, formed a plan for attacking the Guises, carrying off the King, and placing him under the guardianship of the Bourbon agnates. . . . The project was betrayed; the Guises succeeded in placing the King in security in the Castle of Amboise; a number of the conspirators were seized, another troop overpowered and dispersed on their attack upon the castle, on the 17th of March, 1560; some were killed, some taken prisoners and at once executed. It was then discovered, or pretended, that the youngest of the Bourbon princes [see BOURBON, HOUSE OF], Louis of Condé, was implicated in the conspiracy [known as the Conspiracy or Tumult of Amboise]. . . . The Guises now ventured, in contempt of French historical traditions, to imprison this prince of the blood, this agnate of the reigning house; to summon him before an arbitrary tribunal of partisans, and to condemn him to death. . . . This affair kept all France in ‘suspense. All the nobles, although strongly infected with Huguenot ideas, were on Condé’s side; even those who condemned his religious opinions made his cause their own. They justly thought that if he fell none of them would be safe. In the midst of this ferment, destiny interposed. On the 5th of December, 1560, Francis II. died suddenly, and a complete change took place. His death put an end to a net-work of intrigues, which aimed at knocking the rebellion, political and religious, on the head. . . . During this confusion one individual had been watching the course of events with the eagerness of a beast ready to seize on its prey. Catharine of Medici was convinced that the time of her dominion had at length arrived. . . . Francis II. was scarcely dead when she seized upon the person and the power of Charles IX. He was a boy of ten years old, not more promising than his eldest brother, sickly and weakly like all the sons of Henry II., more attached to his mother than the others, and he had been neglected by the Guises. . . . One of her first acts was to liberate Condé; this was a decided step towards reconciliation with the Bourbons and the Protestants. The whole situation was all at once changed. The court was ruled by Catharine; her feverish thirst for power was satisfied. The Guises and their adherents were, indeed, permitted to remain in their offices and posts of honour, in order not fatally to offend them; but their supremacy was destroyed, and the new power was based upon the Queen’s understanding with the heads of the Huguenot party.”—L. Häusser, *Period of the Reformation, 1517 to 1648, ch. 25*.—“The recent commotion had disclosed the existence of a body of malcontents, in part religious, in part also political, scattered over the whole kingdom and of unascertained numbers. To its adherents the name of Huguenots was now for the first time given. What the origin of this celebrated appellation was, it is now perhaps impossible to discover. . . . It has been traced back to the name of the Eidgenossen or ‘confederates,’ under which the party of freedom figured in Geneva when the authority of the bishop and duke was overthrown; or to the ‘Roy Huguet,’ or ‘Hugon,’ a hobgoblin supposed to haunt the vicinity of Tours, to whom the superstitious attributed the nocturnal assemblies of the Protestants; or to the gate ‘du roy Huguon’ of the same city, near which those gatherings were wont to be made.

Some of their enemies maintained the former existence of a diminutive coin known as a 'huguenot,' and asserted that the appellation, as applied to the reformed, arose from their 'not being worth a huguenot,' or farthing. And some of their friends, with equal confidence and no less improbability, declared that it was invented because the adherents of the house of Guise secretly put forward claims upon the crown of France in behalf of that house as descended from Charlemagne, whereas the Protestants loyally upheld the rights of the Valois sprung from Hugh Capet. In the diversity of contradictory statements, we may perhaps be excused if we suspend our judgment. . . . Not a week had passed after the conspiracy of Amboise before the word was in everybody's mouth. Few knew or cared whence it arose. A powerful party, whatever name it might bear, had sprung up, as it were, in a night. . . . No feature of the rise of the Reformation in France is more remarkable than the sudden impulse which it received during the last year or two of Henry II.'s life, and especially within the brief limits of the reign of his eldest son. . . . There was not a corner of the kingdom where the number of incipient Protestant churches was not considerable. Provence alone contained 60, whose delegates this year met in a synod at the blood-stained village of Mérindol. In large tracts of country the Huguenots had become so numerous that they were no longer able or disposed to conceal their religious sentiments, nor content to celebrate their rites in private or nocturnal assemblies. This was particularly the case in Normandy, in Languedoc, and on the banks of the Rhone."—H. M. Baird, *History of the rise of the Huguenots*, v. 1, bk. 1, ch. 10.

1560.—Accession of King Charles IX.

1560-1563.—Changed policy of Catherine de' Medici.—Delusive favors to the Huguenots.—Guises and Catholics again ascendant.—Massacre of Vassy.—Outbreak of civil war.—Battle of Dreux.—Assassination of Guise.—Peace and the edict of Amboise.—"Catherine de' Medici, now regent, thought it wisest to abandon the policy which had till then prevailed under the influence of the Guises, and while she confirmed the Lorraine princes in the important offices they held, she named, on the other hand, Antoine de Bourbon [king of Navarre] lieutenant-general of the kingdom, and took Michel de l'Hôpital as her chief adviser. . . . Chancellor de l'Hôpital, like the Regent, aimed at the destruction of the parties which were rending the kingdom asunder; but his political programme was that of an honest man and a true liberal. A wise system of religious toleration and of administrative reform would, he thought, restore peace and satisfy all true Frenchmen. 'Let us,' he said, 'do away with the diabolical party-names which cause so many seditions—Lutherans, Huguenots, and Papists; let us not alter the name of Christians.' . . . The edicts of Saint Germain and of January (1562) were favourable to the Huguenots. Religious meetings were allowed in rural districts; all penalties previously decreed against Dissenters were suspended on condition that the old faith should not be interfered with; finally, the Huguenot divines, with Théodore de Bèze at their head, were invited to meet the Roman Catholic prelates and theologians in a conference (colloque) at Poissy, near Paris. Théodore de Bèze, the faithful associate and coadjutor of Calvin in the great work of the Reformation, both at Geneva and in France, is justly and universally regarded as the historian of the early Huguenots. . . . The speech he delivered at the opening of the colloque is an eloquent plea for liberty and mutual forbearance.

Unfortunately, the conciliatory measures he proposed satisfied no one."—G. Mason, *Huguenots*, ch. 2.—"The edict of January . . . gave permission to Protestants to hold meetings for public worship outside the towns, and placed their meetings under the protection of the law. . . . The Parliament of Paris refused to register the edict until after repeated orders from the Queen-mother. The Parliament of Dijon refused to register it. . . . The Parliament of Aix refused. Next, Antoine de Navarre, bribed by a promise of the restoration of the Spanish part of his little kingdom, announced that the colloquy of Poissy had converted him, dismissed Beza and the reformed preachers, sent Jeanne back to Béarn, demanded the dismissal of the Chatillons from the court, and invited the Duke of Guise and his brother, the Cardinal, who were at their château of Joinville, to return to Paris. Then occurred—it was only six weeks after the Edict of January—the massacre of Vassy. Nine hundred out of 3,000—the population of that little town—were Protestants. Rejoicing in the permission granted them by the new law, they were assembled on the Sunday morning, in a barn outside the town, for the purpose of public service. The Duke of Guise and the Cardinal, with their armed escort of gentlemen and soldiers, riding on their way to Paris, heard the bells which summoned the people, and asked what they meant. Being told that it was a Huguenot 'prêche,' the Duke swore that he would Huguenot them to some purpose. He rode straight to the barn and entered the place, threatening to murder them all. The people relying on the law, barred the doors. Then the massacre began. The soldiers burst open the feeble barrier, and began to fire among the perfectly unarmed and inoffensive people. Sixty-four were killed—men, women, and children; 200 were wounded. This was the signal for war. Condé, on the intelligence, immediately retired from the court to Meaux, whence he issued a proclamation calling on all the Protestants of the country to take up arms. Coligny was at Chatillon, whither Catharine addressed him letter after letter, urging upon him, in ambiguous terms, the defence of the King. It seems, though this is obscure, that at one time Condé might have seized the royal family and held them. But if he had the opportunity, he neglected it, and the chance never came again. Henceforward, however, we hear no more talk about Catharine becoming a Protestant. That pretence will serve her no more. Before the clash of arms, there was silence for a space. Men waited till the last man in France who had not spoken should declare himself. The Huguenots looked to the Admiral, and not to Condé. It was on him that the real responsibility lay of declaring civil war. It was a responsibility from which the strongest man might shrink. . . . The Admiral having once made up his mind, hesitated no longer, and, with a heavy heart, set off the next day to join Condé. He wrote to Catharine that he took up arms, not against the King, but against those who held him captive. He wrote also to his old uncle, the Constable [Montmorency]. . . . The Constable replied. There was no bitterness between uncle and nephew. The former was fighting to prevent the 'universal ruin' of his country, and for his 'petits maîtres,' the boys, the sons of his old friend, Henry II. Montmorency joined the Guises in perfect loyalty, and with the firm conviction that it was the right thing for him to do. The Chatillon fought in the name of law and justice, and to prevent the universal massacre of his people. . . . Then the first civil war began with a gallant exploit—the taking of Orleans [April 1562]. Condé rode into it at the head of 2,000 cavalry, all shouting like school-

boys, and racing for six miles who should get into the city first. They pillaged the churches, and turned out the Catholics. 'Those who were that day turned outside the city wept catholically that they were dispossessed of the magazines of the finest wines in France.' Truly a dire misfortune, for the Catholics to lose all the best claret districts! Orleans taken, the Huguenots proceeded to issue protestations and manifestoes, in all of which the hand of the Admiral is visible. They are not fighting against the King, who is a prisoner; the war was begun by the Guises. . . . They might have added, truly enough, that Condé and the Admiral held in their hands letters from Catharine, urging them to carry on the contest for the sake of the young King. The fall of Orleans was quickly followed by that of Rouen, Tours, Blois, Bourges, Vienne, Valence, and Montauban. The civil war was fairly begun. The party was now well organized. Condé was commander-in-chief by right of his birth; Coligny was real leader by right of his reputation and wisdom. It was by him that a Solemn League and Covenant was drawn up, to be signed by every one of the Calvinist chiefs. These were, besides Condé and the Châtillons, La Rochefoucauld, . . . Coligny's nephew and Condé's brother-in-law—he was the greatest seigneur in Poitou; Rohan, from Dauphiné, who was Condé's cousin; the Prince of Porcian, who was the husband of Condé's niece. Each of these lords came with a following worthy of his name. Montgomery, who had slain Henry II., brought his Normans; Genlis, the Picards. . . . With Andelot came a troop of Bretons; with the Count de Grammont came 6,000 Gascons. Good news poured in every day. Not only Rouen, but Havre, Caen, and Dieppe submitted in the North. Angers and Nantes followed. The road was open in the end for bringing troops from Germany. The country in the southwest was altogether in their hands. Meantime, the enemy were not idle. They began with massacres. In Paris they murdered 800 Huguenots in that first summer of the war. From every side fugitives poured into Orleans, which became the city of refuge. There were massacres at Amiens, Senlis, Cahors, Toulouse, Angoulême—everywhere. Coligny advised a march upon Paris, where, he urged, the Guises had but a rabble at their command. His counsels when war was once commenced, were always for vigorous measures. Condé preferred to wait. Andelot was sent to Germany, where he raised 3,000 horse. Calvin despatched letters in every direction, urging on the churches and the Protestant princes to send help to France. Many of Coligny's old soldiers of St. Quentin came to fight under his banner. Elizabeth of England offered to send an army if Calais were restored; when she saw that no Frenchman would give up that place again, she still sent men and money, though with grudging spirit. At length both armies took the field. The Duke of Guise had under him 8,000 men; Condé 7,000. They advanced, and met at the little town of Vassodun, where a conference was held between the Queen-mother and Navarre on the one hand, and Condé and Coligny on the other. Catharine proposed that all the chiefs of both sides—Guise, the Cardinal de Lorraine, St. André, Montmorency, Navarre, Condé, and the Chatillon brothers—should all alike go into voluntary exile. Condé was nearly persuaded to accept this absurd proposal. Another conference was held at Taley. These conferences were only delays. An attempt was made by Catharine to entrap Condé, which was defeated by the Admiral's prompt rescue. The Parliament of Paris issued a decree commanding all Romanists in every parish to rise in arms at

the sound of the bell and to slay every Huguenot. It was said that 50,000 were thus murdered. No doubt the numbers were grossly exaggerated. . . . These cruelties naturally provoked retaliation. . . . An English army occupied Havre. English troops set out for Rouen. Some few managed to get within the walls. The town was taken by the Catholics [October 25, 1562], and, for eight days, plundered. Needless to say that Guise hanged every Huguenot he could find. Here the King of Navarre was killed. The loss of Rouen, together with other disasters, greatly discouraged the Huguenots. Their spirits rose, however, when news came that Andelot, with 4,000 reiters, was on his way to join them. He brought them in safety across France, being himself carried in a litter, sick with ague and fever. The Huguenots advanced upon Paris, but did not attack the city. At Dreux [December 19, 1562], they met the army of Guise. Protestant historians endeavor to show that the battle was drawn. In fact both sides sustained immense losses. St. André was killed, Montmorency and Condé were taken prisoners. Yet Coligny had to retire from the field—his rival had outgeneralled him. It was characteristic of Coligny that he never lost heart. . . . With his German cavalry, a handful of his own infantry, and a small troop of English soldiers, Coligny swept over nearly the whole of Normandy. It is true that Guise was not there to oppose him. Every thing looked well. He was arranging for a 'splendid alliance' with England, when news came which stayed his hand. Guise marched southwards to Orleans. . . . There was in Orleans a young Huguenot soldier named Jean Poltrot de Méré. He was a fanatic. . . . He waited for an opportunity, worked himself into the good graces of the Duke, and then shot him with three balls, in the shoulder. Guise died three days later. . . . Then a peace was signed [and ratified by the Edict of Amboise, March 19, 1563]. Condé, won over and seduced by the sirens of the Court, signed it. It was a humiliating and disastrous peace. Huguenots were to be considered loyal subjects; foreign soldiers should be sent out of the country; churches and temples should be restored to their original uses; the suburbs of one town in every bailiwick were to be used for Protestant worship (this was a great reduction on the Edict of January, which allowed the suburbs of every town); and the nobility and gentry were to hold worship in their own houses after their own opinions. The Admiral was furious at this weakness. 'You have ruined,' he said to Condé, 'more churches by one stroke of the pen than the enemy could have done in ten years of war.'—W. Besant, *Gaspard de Coligny*, ch. 8.

ALSO IN: Duc d'Aumale, *History of the Princes of Condé*, v. 1, bk. 1, ch. 3.—E. Bersier, *Earlier life of Coligny*, ch. 21-26.—G. J. G. Masson, *Medieval France*.

1563-1564.—Recovery of Havre from the English.—Treaty of Troyes.—Under the terms on which the Huguenot leaders procured help from Elizabeth, the English queen held Havre, and refused to restore it until after the restoration of Calais to England, and the repayment of a loan of 1,400,000 crowns. The Huguenots, having now made peace with their Catholic fellow countrymen, were not prepared to fulfill the English contract, according to Elizabeth's claims, but demanded that Havre should be given up. The queen refusing, both the parties, lately in arms against each other, joined forces, and laid siege to Havre so vigorously that it was surrendered to them on July 28, 1563. Peace with England was concluded in the April following, by a treaty negotiated at Troyes, and the queen

lost all her rights over Calais.—Duc d'Aumale, *History of the Princes of Condé*, v. 1, ch. 4.

ALSO IN: J. A. Froude, *History of England: Reign of Elizabeth*, v. 1-2, ch. 6 and 8.

1563-1570.—Conference at Bayonne.—Outbreak of second civil war.—Battle of St. Denis.—Peace of Longjumeau.—Third civil war.—Huguenot rally at La Rochelle.—Appearance of the queen of Navarre.—Battle of Jarnac.—Death of Condé.—Henry of Navarre chosen to command.—Battle of Moncontour.—Peace of St. Germain.—The religious peace established under the Edict of Amboise lasted four years. "Not that the Huguenots enjoyed during these years anything like security or repose. The repeated abridgment even of those narrow liberties conferred by the Edict of Amboise, and the frequent outbreaks of popular hatred in which numbers of them perished, kept them in perpetual alarm. Still more alarming was the meeting at Bayonne [of Catherine de' Medici, the young king, her son, and the duke of Alva, representing Philip II of Spain] in the summer of 1565. . . . Amid the Court festivities which took place, it was known that there had been many secret meetings between Alva, Catherine, and Charles. The darkest suspicions as to their objects and results spread over France. It was generally believed—falsely, as from Alva's letters it now appears—that a simultaneous extermination of all heretics in the French and Spanish dominions had been agreed upon. To anticipate this stroke, Coligni proposed that the person of the King should be seized upon. The Court, but slenderly guarded, was then at Monceaux. The project had almost succeeded. Some time, however, was lost. The Court got warning and fled to Meaux. Six thousand Swiss arrived, and by a rapid march carried the King to Paris. After such a failure, nothing was left to the Huguenots but the chances of a second civil war. Condé entered holdly on the campaign. Though he had with him but 1,500 horse and 1,200 infantry, he marched to Paris, and offered battle to the royal troops beneath its walls. The Constable [Montmorency], who had 18,000 men at his command, accepted the challenge, and on the 10th of November 1567, the battle of St. Denis was fought. . . . Neither party could well claim the victory, as both retired from the field. The royal army had to mourn the loss that day of its aged and gallant commander, the Constable. Condé renewed next day the challenge, which was not accepted. The winter months were spent by the Huguenots in effecting a junction with some German auxiliaries, and in the spring they appeared in such force upon the field that, on the 23d March 1568, the Peace of Longjumeau was ratified, which re-established, free from all modifications and restrictions, the Edict of Amboise. It was evident from the first that this treaty was not intended to be kept; that it had been entered into by the government solely to gain time, and to scatter the ranks of the Huguenots. Coligni sought Condé at his château of Noyers in Burgundy. He had scarcely arrived when secret intelligence was given them of a plot upon their lives. They had barely time to fly, making many a singular escape by the way, and reaching Rochelle, which from this time became the head-quarters of the Huguenots, on the 15th September 1568. During the first two religious wars . . . the seat of war was so remote from her dominions that the Queen of Navarre [Jeanne d'Albret,—see NAVARRE: 1528-1563] had satisfied herself with opening her country as an asylum for those Huguenots driven thither out of the southern counties of France. But when she heard that Condé and Coligni . . . were on their way to Rochelle, to

raise there once more the Protestant banner, convinced that the French Court meditated nothing short of the extermination of the Huguenots, she determined openly to cast in her lot with her coreligionists, and to give them all the help she could. Dexterously deceiving Montluc, who had received instructions to watch her movements, and to seize upon her person if she showed any intention of leaving her own dominions, after a flight as precipitous and almost as perilous as that of Condé and Coligni, she reached Rochelle on the 29th September, ten days after their arrival. This town, for nearly a century the citadel of Protestantism in France, having by its own unaided power freed itself from the English dominion [in the period between 1368 and 1380] had had extraordinary municipal privileges bestowed on it in return—among others, that of an entirely independent jurisdiction, both civil and military. Like so many of the great commercial marts of Europe, in which the spirit of freedom was cherished, it had early welcomed the teaching of the Reformers, and at the time now before us nearly the whole of its inhabitants were Huguenots. . . . About the very time that the Queen of Navarre entered Rochelle a royal edict appeared, prohibiting, under pain of death, the exercise of any other than the Roman Catholic religion in France, imposing upon all the observance of its rites and ceremonies; and banishing from the realm all preachers of the doctrine of Calvin, fifteen days only being allowed them to quit the kingdom. It was by the sword that this stern edict was to be enforced or rescinded. Two powerful armies of nearly equal strength mustered speedily. One was nominally under the command of the Duke of Anjou, but really led by Tavannes, Biron, Brissac, and the young Duke of Guise, the last burning to emulate the military glory of his father; the other under the command of Condé and Coligni. The two armies were close upon one another; their generals desired to bring them into action; they were more than once actually in each other's presence; but the unprecedented inclemency of the weather prevented an engagement, and at last, without coming into collision, both had to retire to winter quarters. The delay was fatal to the Huguenots." In the following spring (March 13, 1569), while their forces were still scattered and unprepared, they were forced into battle with the better-generated Royalists, at Jarnac, and were grievously defeated. Condé, wounded and taken prisoner, was treated at first with respect by the officers who received his sword. But "Montesquiou, captain of the Swiss Guard of the Duke of Anjou, galloped up to the spot, and, hearing who the prisoner was, deliberately levelled his pistol at him and shot him through the head. The Duke passed no censure on his officer, and expressed no regret at his deed. The grossest indignities were afterwards, by his orders, heaped upon the dead body of the slain. The defeat of Jarnac, and still more the death of Condé, threw the Huguenot army into despair. . . . The utter dissolution of the army seemed at hand. The Admiral sent a messenger to the Queen of Navarre at Rochelle, entreating her to come to the camp. She was already on her way. On arrival, and after a short consultation with the Admiral, the army was drawn up to receive her. She rode along the ranks—her son Henry on one side, the son of the deceased Condé on the other." Then she addressed to the troops an inspiring speech, concluding with these heroic words: "Soldiers, I offer you everything I have to give,—my dominions, my treasures, my life, and, what is dearer to me than all, my children. I make here solemn oath before you all—I swear to defend to my last sigh the holy cause which now unites us."

"The soldiers crowded around the Queen, and unanimously, as if by sudden impulse, hailed young Henry of Navarre as their future general. The Admiral and La Rochefoucauld were the first to swear fidelity to the Prince; then came the inferior officers and the whole assembled soldiery; and it was thus that, in his fifteenth year, the Prince of Béarn was inaugurated as general-in-chief of the army of the Huguenots." In June the Huguenot army effected a junction at St. Yriex with a division of German auxiliaries, led by the Duc de Deux-Ponts, and including among its chiefs the prince of Orange and his brother Louis of Nassau. They attacked the duke of Anjou at La Roche-Abeille and gained a slight advantage; but wasted their strength during the summer, contrary to the advice of the Admiral Coligny, in besieging Poitiers. The duke of Anjou approached with a superior army, and, again in opposition to the judgment of Coligny, the Huguenots encountered him at Moncontour (October 3, 1569), where they suffered the worst of their defeats, leaving 5,000 dead and wounded on the field. Meanwhile a French army had entered Navarre, had taken the capital and spread destruction everywhere through the small kingdom; but the queen sent Count de Montgomery to rally her people, and the invaders were driven out. Coligny and Prince Henry wintered their troops in the far south, then moved rapidly northwards in the spring, up the valley of the Rhone, across the Cevennes, through Burgundy, approaching the Loire, and were met by the Marshal de Cosse at Arnay-le-Duc, where Henry of Navarre won his first success in arms—Coligny being ill. Though it was but a partial victory it brought about a breathing time of peace. "This happened in the end of June, and on the 8th of August [1570] the Peace of St. Germain-en-Laye was signed, and France had two full years of quiet."—W. Hanna, *Wars of the Huguenots*, ch. 4.

1570-1572.—Coligny at court and his influence with the king.—Projected war with Spain.—Desperate step of Catherine de' Medici, and its consequence.—"After the Peace of 1570, it appeared as if a complete change of policy was about to take place. The Queen pretended to be friendly with the Protestants; her relations with the ambitious Guises were distant and cold, and the project of uniting the Houses of Bourbon and Valois by marriage [the marriage of Henry of Navarre with the king's sister, Marguerite] really looked as if she was in earnest. The most distinguished leader of the Huguenot party was the Admiral Caspar de Coligny. It is quite refreshing at this doleful period to meet with such a character. He was a nobleman of the old French school and of the best stamp; lived upon his estates with his family, his little court, his retainers and subjects, in ancient patriarchal style, and on the best terms, and regularly went with them to the Protestant worship and the communion; a man of unblemished morality and strict Calvinistic views of life. Whatever this man said or did was the result of his inmost convictions; his life was the impersonation of his views and thoughts. In the late turbulent times he had become an important person as leader and organizer of the Protestant armies. At his call, thousands of noblemen and soldiers took up arms, and they submitted under his command to very strict discipline. He could not boast of having won many battles, but he was famous for having kept his resources together after repeated defeats, and for rising up stronger than before after every lost engagement.

... Now that peace was made, 'why,' he asked, 'excite further dissensions for the benefit of our common enemies? Let us direct our undivided forces against the real enemy of France—against Spain, who stirs up intrigues in our civil wars. Let us crush this power, which condemns us to ignominious dependence.' The war against Spain was Coligny's project. It was the idea of a good Huguenot, for it was directed against the most blindly fanatical and dangerous foe of the new doctrines; but it was also that of a good Frenchman, for a victory over Spain would increase the power of France in the direction of Burgundy. . . . From September, 1571, Coligny was at court. On his first arrival he was heartily welcomed by the King, embraced by Catharine, and loaded with honours and favours by both. I am not of opinion that this was a deeply laid scheme to entrap the guileless hero, the more easily to ruin him. Catharine's ideas did not extend so far. Still less do I believe that the young King was trained to play the part of a hypocrite, and regarded Coligny as a victim to be cherished until the fête day. I think, rather, that Catharine, in her changeableness and hatred of the Guises, was now really disposed to make peace with the Protestants, and that the young King was for the time impressed by this superior personage. No youthful mind is so degraded as to be entirely inaccessible to such influence. . . . I believe that the first and only happy day in the life of this unfortunate monarch was when he met Coligny, who raised him above the degradation of vulgar life; and I believe further, that this relation was the main cause of the massacre of St. Bartholomew. A new influence was threatening to surround the King and to take deep root, which Catharine, her son Henry of Anjou, and the strict Catholic party, must do their utmost to avert; and it was quite in accordance with the King's weak character to allow the man to be murdered whom he had just called 'Father.' . . . It appears that about the middle of the year [1572] the matter [of war with Spain and help to the revolting Netherlands] was as good as decided. The King willingly acceded to Coligny's plan . . . [and] privately gave considerable sums for the support of the Flemish patriots, for the equipment of an army of 4,000 men, composed of Catholics and Protestants, who marched towards Mons, to succour Louis of Nassau. When in July this army was beaten, and the majority of the Huguenots were in despair, Coligny succeeded in persuading the King to equip a fresh and still larger army; but the opposition then bestirred itself. . . . The Queen . . . had been absent with her married daughter in Lorraine, and on her return she found everything changed; the Guises without influence, herself thrust on one side. Under the impression of the latest events in Flanders, which made it likely that the war with Spain would be ruinous, she hastened to the King, told him with floods of tears that it would be his ruin; that the Huguenots, through Coligny, had stolen the King's confidence, unfortunately for himself and the country. She made some impression upon him, but it did not last long, and thoughts of war gained the upper hand again. The idea now (August, 1572), must have been matured in Catharine's mind of venturing on a desperate step, in order to save her supremacy and influence. . . . The idea ripened in her mind of getting rid of Coligny by assassination. . . . Entirely of one mind with her son Henry [duke of Anjou, younger brother of Charles IX], she turned to the Guises, with whom she was at enmity when they were in power, but friendly when they were of no more consequence than herself. They breathed vengeance against the Calvinists, and were ready at once to avenge the

murder of Francis of Guise by a murderous attack upon Coligny. An assassin was hired, and established in a house belonging to the Guises, near Coligny's dwelling, and as he came out of the palace, on the 22nd of August, a shot was fired at him, which wounded but did not kill him. Had Coligny died of his wound, Catherine would have been content. . . . But Coligny did not die; the Huguenots defiantly demanded vengeance on the well-known instigator of the deed; their threats reached the Queen and Prince Henry of Anjou, and the personal fascination which Coligny had exercised over King Charles appeared rather to increase than to diminish. Thus doubtless arose, during the anxious hours after the failure of the assassination, the idea of an act of violence on a large scale, which should strike a blow at Coligny and his friends before they had time for revenge. It certainly had not been in preparation for months, not even since the time that Coligny had been at Court; it was conceived in the agony of these hours."—L. Häusser, *Period of the Reformation*, ch. 27.

1572 (August).—Massacre of St. Bartholomew's Day.—"With some proofs, forged or real, in her hand that he was in personal danger, the Queen Mother [August 24] presented herself to her son. She told him that at the moment she was speaking the Huguenots were arming. Sixteen thousand of them intended to assemble in the morning, seize the palace, destroy herself, the Duke of Anjou, and the Catholic noblemen, and carry off Charles. The conspiracy, she said, extended through France. The chiefs of the congregations were waiting for a signal from Coligny to rise in every province and town. The Catholics had discovered the plot, and did not mean to sit still to be murdered. If the King refused to act with them, they would choose another leader; and whatever happened he would be himself destroyed. Unable to say that the story could not be true, Charles looked enquiringly at Tavannas and De Nevers, and they both confirmed the Queen Mother's words. Shaking his incredulity with reminders of Amboise and Meaux, Catherine went on to say that one man was the cause of all the troubles in the realm. The Admiral [Coligny] aspired to rule all France, and she—she admitted, with Anjou and the Guises, had conspired to kill him to save the King and the country. She dropped all disguise. The King, she said, must now assist them or all would be lost. . . . Charles was a weak, passionate boy, alone in the dark conclave of iniquity. He stormed, raved, wept, implored, spoke of his honour, his plighted word; swore at one moment that the Admiral should not be touched, then prayed them to try other means. But clear, cold and venomous, Catherine told him it was too late. If there was a judicial enquiry, the Guises would shield themselves by telling all that they knew. They would betray her; they would betray his brother; and, fairly or unfairly, they would not spare himself. . . . For an hour and a half the King continued to struggle. 'You refuse, then,' Catherine said at last. . . . 'Is it that you are afraid, Sire?' she hissed in his ear. 'By God's death,' he cried, springing to his feet, 'since you will kill the Admiral, kill them all. Kill all the Huguenots in France, that none may be left to reproach me. Mort Dieu! Kill them all.' He dashed out of the cabinet. A list of those who were to die was instantly drawn up. Navarre and Condé were first included; but Catherine prudently reflected that to kill the Bourbons would make the Guises

too strong. Five or six names were added to the Admiral's, and these Catherine afterwards asserted were all that it was intended should suffer. . . . Night had now fallen. Guise and Aumale were still lurking in the city, and came with the Duke of Montpensier at Catherine's summons. The persons who were to be killed were in different parts of the town. Each took charge of a district. Montpensier promised to see to the Palace; Guise and his uncle undertook the Admiral; and below these, the word went out to the leaders of the already organised sections, who had been disappointed once, but whose hour was now come. The Catholics were to recognise one another in the confusion by a white handkerchief on the left arm and a white cross in their caps. The Royal Guard, Catholics to a man, were instruments ready made for the work. Guise assembled the officers: he told them that the Huguenots were preparing to rise, and that the King had ordered their instant punishment. The officers asked no questions, and desired no better service. The business was to begin at dawn. The signal would be the tolling of the great bell at the Palace of Justice, and the first death was to be Coligny's. The soldiers stole to their posts. Twelve hundred lay along the Seine, between the river and the Hôtel de Ville; other companies watched at the Louvre. As the darkness waned, the Queen Mother went down to the gate. The stillness of the dawn was broken by an accidental pistol-shot. Her heart sank, and she sent off a messenger to tell Guise to pause. But it was too late. A minute later the bell boomed out, and the Massacre of St. Bartholomew had commenced." The assassins broke into the admiral's dwelling and killed him as he lay wounded in bed. "The window was open. 'Is it done?' cried Guise from the court below, 'is it done?' Fling him out that we may see him.' Still breathing, the Admiral was hurled upon the pavement. The Bastard of Angoulême wiped the blood from his face to be sure of his identity, and then, kicking him as he lay, shouted, 'So far well. Courage, my brave boys! now for the rest.' One of the Duc de Nevers's people hacked off the head. A rope was knotted about the ankles, and the corpse was dragged out into the street amidst the howling crowd. Teligny, . . . Rochefoucault, and the rest of the Admiral's friends who lodged in the neighbourhood were disposed of in the same way, and so complete was the surprise that there was not the most faint attempt at resistance. Montpensier had been no less successful in the Louvre. The staircases were all beset. The retinues of the King of Navarre and the Prince had been lodged in the palace at Charles's particular desire. Their names were called over, and as they descended unarmed into the quadrangle they were hewn in pieces. There, in heaps, they fell below the Royal window, under the eyes of the miserable King, who was forced forward between his mother and his brother that he might be seen as the accomplice of the massacre. Most of the victims were killed upon the spot. Some fled wounded up the stairs, and were slaughtered in the presence of the Princesses. . . . By seven o'clock the work which Guise and his immediate friends had undertaken was finished with but one failure. The Count Montgomery and the Vidame of Chartres . . . escaped to England. The mob meanwhile was in full enjoyment. . . . While dukes and lords were killing at the Louvre, the bands of the sections imitated them with more than success; men, women, and even children, striving which should be the first in the pious work of murder. All Catholic Paris was at the business, and every Huguenot household had neighbours to know and denounce them. Through street and lane and quay

and causeway, the air rang with yells and curses, pistol-shots and crashing windows; the roadways were strewn with mangled bodies, the doors were blocked by the dead and dying. From garret, closet, roof, or stable, crouching creatures were torn shrieking out, and stabbed and hacked at; boys practised their hands by strangling babies in their cradles, and headless bodies were trailed along the trottoirs. . . . Towards midday some of the quieter people attempted to restore order. A party of the town police made their way to the palace. Charles caught eagerly at their offers of service, and bade them do their utmost to put the people down; but it was all in vain. The soldiers, maddened with plunder and blood, could not be brought to assist, and without them nothing could be done. All that afternoon and night, and the next day and the day after, the horrible scenes continued, till the flames burnt down at last for want of fuel. The number who perished in Paris was computed variously from 2,000 to 10,000. In this, as in all such instances, the lowest estimate is probably the nearest to the truth. The massacre was completed—completed in Paris—only, as it proved, to be continued elsewhere. . . . On the 24th, while the havoc was at its height, circulars went round to the provinces that a quarrel had broken out between the Houses of Guise and Coligny; that the Admiral and many more had been unfortunately killed, and that the King himself had been in danger through his efforts to control the people. The governors of the different towns were commanded to repress at once any symptoms of disorder which might show themselves, and particularly to allow no injury to be done to the Huguenots." But Guise, when he learned of these circulars, which threw upon him the odium of the massacre, forced the king to recall them. "The story of the Huguenot conspiracy was revived. . . . The Protestants of the provinces, finding themselves denounced from the throne, were likely instantly to take arms to defend themselves. Couriers were therefore despatched with second orders that they should be dealt with as they had been dealt with at Paris; and at Lyons, Orleans, Rouen, Bordeaux, Toulon, Meaux, in half the towns and villages of France, the bloody drama was played once again. The King, thrown out into the hideous torrent of blood, became drunk with frenzy, and let slaughter have its way, till even Guise himself affected to be shocked, and interposed to put an end to it; not, however, till, according to the belief of the times, 100,000 men, women and children had been miserably murdered. . . . The number again may be hoped to have been prodigiously exaggerated; with all large figures, when unsupported by exact statistics, it is safe to divide at least by ten."—J. A. Froude, *History of England: Reign of Elizabeth*, v. 4, ch. 23.

1572 (August-October).—King's avowal of responsibility for the massacre, and celebration of his "victory."—Rejoicings at Rome and Madrid.—General horror of Europe.—Effects in France.—Changed character of the Protestant party.—"On the morning of the 26th of August, Charles IX. went to hold a 'bed of justice' in the parliament, carrying with him the king of Navarre, and he then openly avowed that the massacre had been perpetrated by his orders, made . . . excuse for it, grounded on a pretended conspiracy of the Huguenots against his person, and then directed the parliament to commence judicial proceedings against Coligny and his accomplices, dead or alive, on the charge of high treason. The parliament obeyed,

and, after a process of two months, which was a mere tissue of falsehoods, they not only found all the dead guilty, but they included in the sentence two of the principal men who had escaped—the old captain Briquemaut, and Arnaud de Cavaignes. . . . Both were hanged at the Place de Grève, in the presence of the king, who compelled the king of Navarre also to be a witness of their execution. Having once assumed the responsibility of the massacre of the protestants, Charles IX. began to glory in the deed. On the 27th of August, he went with the whole court to Montfaucon, to contemplate the mutilated remains of the admiral. . . . Next day, a grand jubilee procession was headed by the king in celebration of his so-called victory. . . . The 'victory' was also celebrated by two medals. . . . Nevertheless, the minds of Charles and his mother were evidently ill at ease, and their misgivings as to the effect which would be produced at foreign courts by the news of these proceedings are very evident in the varying and often contradictory orders which they dispatched into the provinces. . . . The news of these terrible events caused an extreme agitation in all the courts throughout christian Europe. Philip of Spain, informed of the massacres by a letter from the king and the queen-mother, written on the 29th of August, replied by warm congratulations and expressions of joy. The cardinal of Lorraine, who was . . . at Rome, gave a reward of 1,000 écus of gold to the courier who brought the despatches, and the news was celebrated at Rome by the firing of the cannons of the castle of St. Angelo, and by the lighting of bon-fires in the streets. The pope (Gregory XIII.) and the sacred college went in grand procession to the churches to offer their thanks to God. . . . Not content with these demonstrations, the pope caused a medal to be struck. . . . Gregory dispatched immediately to the court of France the legate Fabio d'Orsini, with a commission to congratulate the king and his mother for the vigour they had shown in the repression of heresy, to demand the reception in France of the council of Trent, and the establishment of the Inquisition. . . . But the papal legate found the court of France in a different temper from that which he anticipated. Catherine, alarmed at the effect which these great outrages had produced on the protestant sovereigns, found it necessary to give him private intimations that the congratulations of the pontiff were untimely, and could not be publicly accepted. . . . The policy of the French court at home was no less distasteful to the papal legate than its relations abroad. The old edicts against the public exercise of the protestant worship were gradually revived, and the Huguenots were deprived of the offices which they had obtained during the short period of toleration, but strict orders were sent round to forbid any further massacres, with threats of punishment against those who had already offended. On the 8th of October, the king published a declaration, inviting such of the protestants as had quitted the kingdom in consequence of the massacres to return, and promising them safety; but this was soon followed by letters to the governors of the provinces, directing them to exhort the Huguenot gentry and others to conform to the catholic faith, and declaring that he would tolerate only one religion in his kingdom. Many, believing that the protestant cause was entirely ruined in France, complied, and this defection was encouraged by the example of the two princes of Bourbon [Henry, now king of Navarre, his mother, Jeanne d'Albret, having died June 9, 1572, and Henry, the young prince of Condé], who, after some weeks of violent resistance, submitted at the end of September, and, at least in outward form,

became catholics. It has been remarked that the massacre of St. Bartholomew's-day produced an entire change in the character of the protestant party in France. The Huguenots had hitherto been entirely ruled by their aristocracy, who took the lead and direction in every movement; but now the great mass of the protestant nobility had perished or deserted the cause, and from this moment the latter depended for support upon the inhabitants of some of the great towns and upon the un-noble class of the people; and with this change it took a more popular character, in some cases showing even a tendency to republicanism. In the towns where the protestants were strong enough to offer serious resistance, such as La Rochelle, Nimes, Sancerre, and Montauban, the richer burghers, and a part at least of the municipal officers, were in favour of submission, and they were restrained only by the resolution and devotion of the less wealthy portion of the population."—T. Wright, *History of France*, v. 1, bk. 3, ch. 7.

ALSO IN: H. M. Baird, *History of the rise of the Huguenots*, v. 2, ch. 10.—A. de Montor, *Lives and times of the Roman pontiffs*, v. 1, pp. 810-812.

1572-1573.—Fourth religious war.—Siege and successful defence of La Rochelle.—Favorable peace.—"The two Reformer-princes, Henry of Navarre and Henry de Condé, attended mass on the 20th of September, and, on the 3d of October, wrote to the pope, deploring their errors and giving hopes of their conversion. Far away from Paris, in the mountains of the Pyrenees and of Languedoc, in the towns where the Reformers were numerous and confident . . . the spirit of resistance carried the day. An assembly, meeting at Milhau, drew up a provisional ordinance for the government of the Reformed church, 'until it please God, who has the hearts of kings in His keeping, to change that of King Charles IX. and restore the state of France to good order, or to raise up such neighboring prince as is manifestly marked out, by his virtue and by distinguishing signs, for to be the liberator of this poor afflicted people.' In November, 1572, the fourth religious war broke out. The siege of La Rochelle was its only important event. Charles IX. and his councillors exerted themselves in vain to avoid it. There was everything to disquiet them in this enterprise; so sudden a revival of the religious war after the grand blow they had just struck, the passionate energy manifested by the Protestants in asylum at La Rochelle, and the help they had been led to hope for from Queen Elizabeth, whom England would never have forgiven for indifference in this cause. . . . The king heard that one of the bravest Protestant chiefs, La Noue, 'Ironarm,' had retired to Mons with Prince Louis of Nassau. The Duke of Longueville . . . induced him to go to Paris. The king received him with great favor . . . and pressed him to go to La Rochelle and prevail upon the inhabitants to keep the peace. . . . La Noue at last consented, and repaired, about the end of November, 1572, to a village close by La Rochelle, whither it was arranged that deputies from the town would come and confer with him. . . . After hearing him, the senate rejected the pacific overtures made to them by La Noue. 'We have no mind [they said] to treat specially and for ourselves alone; our cause is that of God and of all the churches of France; we will accept nothing but what shall seem proper to all our brethren.' They then offered to trust themselves under La Noue's command, notwithstanding the commission by which he was acting for the king. "La Noue did not hesitate; he became, under the authority of the mayor, Jacques Henri, the military head of La Rochelle, whither Charles IX. had sent him to make peace. The king authorized him

to accept this singular position. La Noue conducted himself so honorably in it, and everybody was so convinced of his good faith as well as bravery, that for three months he commanded inside La Rochelle, and superintended the preparations for defence, all the while trying to make the chances of peace prevail. At the end of February, 1573, he recognized the impossibility of his double commission, and he went away from La Rochelle, leaving the place in better condition than that in which he had found it, without either king or Rochellese considering that they had any right to complain of him. Biron first and then the Duke of Anjou in person took the command of the siege. They brought up, it is said, 40,000 men and 60 pieces of artillery. The Rochellese, for defensive strength, had but 22 companies of refugees or inhabitants, making in all 3,100 men. The siege lasted from the 26th of February to the 13th of June, 1573; six assaults were made on the place. . . . La Rochelle was saved. Charles IX. was more and more desirous of peace; his brother, the Duke of Anjou, had just been elected King of Poland; Charles IX. was anxious for him to leave France and go to take possession of his new kingdom. Thanks to these complications, the peace of La Rochelle was signed on the 6th of July, 1573. Liberty of creed and worship was recognized in the three towns of La Rochelle, Montauban, and Nimes. They were not obliged to receive any royal garrison, on condition of giving hostages to be kept by the king for two years. Liberty of worship throughout the extent of their jurisdiction continued to be recognized in the case of lords high-justiciary. Everywhere else the Reformers had promises of not being persecuted for their creed, under the obligation of never holding an assembly of more than ten persons at a time. These were the most favorable conditions they had yet obtained. Certainly this was not what Charles IX. had calculated upon when he consented to the massacre of the Protestants."—F. P. Guizot, *Popular history of France*, ch. 33.

1573-1576.—Escape of Condé and Navarre.—Death of Charles IX.—Accession of Henry III.—Fifth civil war.—Navarre's repudiation of Catholicism.—Peace of Monsieur.—King's misgivings and the nation's disgust.—"Catherine . . . had the address to procure the crown of Poland for the son of her predilection, Henry duke of Anjou. She had lavished her wealth upon the electors for this purpose. No sooner was the point gained than she regretted it. The health of Charles was now manifestly on the decline, and Catherine would fain have retained Henry; but the jealousy of the king forbade. After conducting the duke on his way to Poland the court returned to St. Germain, and Charles sunk, without hope or consolation, on his couch of sickness. Even here he was not allowed to repose. The young king of Navarre formed a project of escape with the prince of Condé. The duc d'Alençon, youngest brother of the king, joined in it. . . . The vigilance of the queen-mother discovered the enterprise, which, for her own purposes, she magnified into a serious plot. Charles was informed that a huguenot army was coming to surprise him, and he was obliged to be removed into a litter, in order to escape. . . . Condé was the only prince that succeeded in making his escape. The king of Navarre and the duc d'Alençon were imprisoned." The young king of Navarre "had already succeeded by his address, his frankness, and high character, in rallying to his interests the most honourable of the noblesse, who dreaded at once the perfidious Catherine and her children; who had renounced their good opinion of young Guise after the day of St. Bartholomew;

and who, at the same time professing catholicism, were averse to huguenot principles and zeal. This party, called the Politiques, professed to follow the middle or neutral course, which at one time had been that of Catherine of Medicis; but she had long since deserted it, and had joined in all the sanguinary and extreme measures of her son and of the Guises. Hence she was especially odious to the new and moderate party of the Politiques, among whom the family of Montmorency held the lead [Francis of Montmorency, marshal of France and governor of Paris]. Catherine feared their interference at the moment of the king's death, whilst his successor was absent in a remote kingdom; and she swelled the project of the princes' escape into a serious conspiracy, in order to be mistress of those whom she feared. . . . In this state of the court Charles IX expired on the 30th of May, 1574, after having nominated the queen-mother to be regent during his successor's absence. . . . The career of the new king [Henry III], while duke of Anjou, had been glorious. Raised to the command of armies at the age of 15, he displayed extreme courage as well as generalship. He had defeated the veteran leader of the protestants at Jarnac and at Moncontour; and the fame of his exploits had contributed to place him on the elective throne of Poland, which he now occupied. Auguring from his past life, a brilliant epoch might be anticipated; and yet we enter upon the most contemptible reign, perhaps, in the annals of France. . . . Henry was obliged to run away by stealth from his Polish subjects [see POLAND: 1574-1590]. When overtaken by one of the nobles of that kingdom, the monarch, instead of pleading his natural anxiety to visit France and secure his inheritance, excused himself by drawing forth the portrait of his mistress. . . . and declared that it was love which hastened his return. At Vienna, however, Henry forgot both crown and mistress amidst the feasts that were given him; and he turned aside to Venice, to enjoy a similar reception from that rich republic. . . . The hostile parties were in the meantime arming. The Politiques, or neutral catholics, for the first time showed themselves in the field. They demanded the freedom of Cossé and of Montmorency, and at length formed a treaty of alliance with the huguenots. Henry, after indulging in the ceremony of being crowned, was obliged to lead an army into the field. Sieges were undertaken on both sides, and what is called the fifth civil war raged openly. It became more serious when the king's brother joined it. This was the duke of Alençon, a vain and fickle personage, of whom it pleased the king to become jealous. Alençon fled and joined the malcontents. The reformers, however, warred but languidly. Both parties were without active and zealous leaders; and the only notable event of this war was a skirmish in Champagne [the battle of Dormans, in which both sides lost heavily], where the duke of Guise received a slight wound in the cheek. From hence came his surname of 'Le Balafré.' In February, 1576, the king of Navarre made his escape from court. "He bent his course towards Guienne, and at Niort publicly avowed his adherence to the reformed religion, declaring that force alone had made him conform to the mass. It was about this time that the king, in lieu of leading an army against the malcontents, despatched the queen-mother, with her gay and licentious court, to win back his brother. She succeeded, though not without making large concessions [in a treaty called the 'Peace of Monsieur']. The duke of Alençon obtained Anjou, and other provinces in appanage, and henceforth was styled duke of Anjou. More favourable terms were granted to the huguenots: they were allowed

ten towns of surety in lieu of six, and the appointment of a certain number of judges in the parliament. Such weakness in Henry disgusted the body of the catholics; and the private habits of his life contributed still more, if possible, than his public measures, to render him contemptible. He was continually surrounded by a set of young and idle favourites, whose affectation it was to unite ferocity with frivolity. The king showed them such tender affection as he might evince towards woman; they even had the unblushing impudence to adopt feminine habits of dress; and the monarch passed his time in adorning them and himself with robes and ear-rings. . . . The indescribable tastes and amusements of Henry and his mignons, as his favourites were called, . . . raised up throughout the nation one universal cry of abhorrence and contempt."—E. E. Crowe, *History of France*, v. 1, ch. 8-9.

1576-1585.—Rise of the League.—Secret objects and aims.—Alliance with Philip II of Spain.—Pope's bull against Navarre and Condé.—"The famous association known as the 'Catholic League' or 'Holy Union,' took its rise from the strangely indulgent terms granted to the Huguenots by the 'Peace of Monsieur,' in April, 1576. Four years had scarcely elapsed since the blood-stained Eve of St. Bartholomew. It had been hoped that by means of that execrable crime the Reformation would have been finally crushed and extinguished in France; but instead of this, a treaty was concluded with the heretics, which placed them in a more favourable situation than they had ever occupied before. . . . It was regarded by the majority of Catholics as a wicked and cowardly betrayal of their most sacred interests. They ascribed it to its true source, namely, the hopeless incapacity of the reigning monarch, Henry III.; a prince whose monstrous vices and gross misgovernment were destined to reduce France to a state of disorganization bordering on national ruin. The idea of a general confederation of Catholics for the defence of the Faith against the inroads of heresy had been suggested by the Cardinal of Lorraine during the Council of Trent [see PAPACY: 1537-1563], and had been favourably entertained at the Court of Rome. The Duke of Guise was to have been placed at the head of this alliance; but his sudden death changed the face of affairs, and the project fell into abeyance. The Cardinal of Lorraine was now no more; he died at Avignon, at the age of 50, in December, 1574. . . . Henry, the third Duke of Guise, inherited in their fullest extent the ambition, the religious ardour, the lofty political aspirations, the enterprising spirit, the personal popularity, of his predecessors. The League of 1576 was conceived entirely in his interest. He was the leader naturally pointed out for such a movement;—a movement which, although its ulterior objects were at first studiously concealed, aimed in reality at substituting the family of Lorraine for that of Valois on the throne of France. The designs of the confederates, as set forth in the original manifesto which was circulated for signature, seemed at first sight highly commendable, both with regard to religion and politics. According to this document, the Union was formed for three great purposes: to uphold the Catholic Church; to suppress heresy; and to maintain the honour, the authority and prerogatives of the Most Christian king and his successors. On closer examination, however, expressions were detected which hinted at less constitutional projects. . . . Their secret aims became incontestably manifest soon afterwards, when one of their confidential agents, an advocate

named David, happened to die suddenly on his return from Rome, and his papers fell into the hands of the Huguenots, who immediately made them public. . . . A change of dynasty in France was the avowed object of the scheme thus disclosed. It set forth, in substance, that the Capetian monarchs were usurpers,—the throne belonging rightfully to the house of Lorraine as the lineal descendants of Charlemagne. . . . The Duke of Guise, with the advice and permission of the Pope, was to imprison Henry for the rest of his days in a monastery, after the example of his ancestor Pepin when he de-throned the Merovingian Childeric. Lastly, the heir of the Carolingians was to be proclaimed King of France; and, on assuming the crown, was to make such arrangements with his Holiness as would secure the complete recognition of the sovereignty of the Vicar of Christ, by abrogating for ever the so-called 'liberties of the Gallican Church.' . . . This revolutionary plot . . . unhappily, was viewed with cordial sympathy, and supported with enthusiastic zeal, by many of the prelates, and a large majority of the parochial clergy, of France. . . . The death of the Duke of Anjou, presumptive heir to the throne, in 1584, determined the League to immediate action. In the event of the king's dying without issue, which was most probable,—the crown would now devolve upon Henry of Bourbon [the king of Navarre], the acknowledged leader of the Huguenots. . . . In January, 1585, the chiefs of the League signed a secret treaty at Joinville with the King of Spain, by which the contracting parties made common cause for the extirpation of all sects and heresies in France and the Netherlands, and for excluding from the French throne princes who were heretics, or who 'treated heretics with public impunity.' . . . Liberal supplies of men and money were to be furnished to the insurgents by Philip from the moment that war should break out. . . . The Leaguers lost no time in seeking for their enterprise the all-important sanction of the Holy See. For this purpose they despatched as their envoy to Rome a Jesuit named Claude Matthieu. . . . The Jesuit fraternity in France had embraced with passionate ardour the anti-royalist cause. . . . His Holiness [Gregory XIII], however, was cautious and reserved. He expressed in general terms his consent to the project of taking up arms against the heretics, and granted a plenary indulgence to those who should aid in the holy work. But he declined to countenance the deposition of the king by violence. . . . At length, however [September 9, 1585], Sixtus [V] was persuaded to fulminate a bull against the King of Navarre and the Prince of Condé, in which . . . both culprits, together with their heirs and posterity were pronounced for ever incapable of succeeding to the throne of France or any other dignity; their subjects and vassals were released from their oath of homage, and forbidden to obey them."—W. H. Jervis, *History of the Church of France*, v. 1, ch. 3.

1577-1578.—Rapid spread of the League.—Sixth civil war and the peace of Bergerac.—Anjou in the Netherlands.—The League "spread like lightning over the whole face of France; Condé could find no footing in Picardy or even in Poitou; Henry of Navarre was refused entrance into Bordeaux itself; the heads of the League, the family-party of the Dukes of Guise, Mayenne and Nemours, seemed to carry all before them; the weak King leant towards them; the Queen Mother, intriguing ever, succeeded in separating Anjou from the Politiques, and began to seduce Damville [Henry Damville, who by the death of his brother

had become duke of Montmorency and marshal of France]. She hoped once more to isolate the Huguenots and to use the League to weaken and depress them. . . . The Court and the League seemed to be in perfect harmony, the King . . . in a way, subscribed to the League, though the twelve articles were considerably modified before they were shown to him. . . . The Leaguers had succeeded in making war [called the Sixth Civil War—1577], and winning some successes: but on their heels came the Court with fresh negotiations for peace. The heart's desire of the King was to crush the stubborn Huguenots and to destroy the moderates, but he was afraid to act; and so it came about that, though Anjou was won away from them, and compromised on the other side, and though Damville also deserted them, and though the whole party was in the utmost disorder and seemed likely to disperse, still the Court offered them such terms that in the end they seemed to have even recovered ground. Under the walls of Montpellier, Damville, the King's general, and Châtillon, the Admiral's son, at the head of the Huguenots, were actually manœuvring to begin a battle, when La Noue came up bearing tidings of peace, and at the imminent risk of being shot placed himself between the two armies, and stayed their uplifted hands. It was the Peace of Bergerac [confirmed by the Edict of Poitiers—September 17, 1577], another ineffectual truce, which once more granted in the main what that of Chastenoy [or the 'Peace of Monsieur'] had already promised: it is needless to say that the League would have none of it; and partisan-warfare, almost objectless, however oppressive to the country, went on without a break: the land was overrun by adventurers and bandits, sure sign of political death. Nothing could be more brutalising or more brutal: but the savage traits of civil war are less revolting than the ghastly revelries of the Court. All the chiefs were alike—neither the King, nor Henry of Navarre, nor Anjou, nor even the strict Catholic Guise, disdained to wallow in debauch." Having quarreled with his brother, the king, "Anjou fled, in the beginning of 1578, to Angers, where, finding that there was a prospect of amusement in the Netherlands, he turned his back on the high Catholics, and renewed friendship with the Huguenot chiefs. He was invited to come to the rescue of the distressed Calvinists in their struggle against Philip, and appeared in the Netherlands in July, 1578."—G. W. Kitchin, *History of France*, v. 2, pp. 370-373.—See also NETHERLANDS: 1577-1581; 1581-1584.

1578-1580.—Treaty of Nérac.—Seventh civil war, known as the War of the Lovers.—Peace of Fleix.—"The King, instead of availing himself of this interval of repose [after the Peace of Bergerac] to fortify himself against his enemies, only sank deeper and deeper into vice and infamy. . . . The court resembled at once a slaughter-house and a brothel, although, amid all this corruption, the King was the slave of monks and Jesuits whom he implicitly obeyed. It was about this time (December, 1578) that he instituted the military order of the Holy Ghost, that of St. Michael having fallen into contempt through being prostituted to unworthy objects. Meanwhile the Guises were using every effort to rekindle the war, which Catherine, on the other hand, was endeavouring to prevent. With this view she travelled, in August, into the southern provinces, and had an interview with Henry of Navarre at Nérac, bringing with her Henry's wife, her daughter Margaret; a circumstance, however, which did not add to the pleasure of their meeting. Henry received the ladies coldly, and they retired into Languedoc, where they passed

the remainder of the year. Nevertheless the negotiations were sedulously pursued; for a peace with the Hugonots was, at this time, indispensable to the Court. . . . In February, 1579, a secret treaty was signed at Nérac, by which the concessions granted to the Protestants by the peace of Bergerac were much extended. . . . Catherine spent nearly the whole of the year 1579 in the south, endeavouring to avert a renewal of the war by her intrigues, rather than by a faithful observance of the peace. But the King of Navarre saw through her Italian artifices, and was prepared to summon his friends and captains at the shortest notice. The hostilities which he foresaw were not long in breaking out, and in a way that would seem impossible in any other country than France. When the King of Navarre fled from Court in 1576, he expressed his indifference for two things he had left behind, the mass and his wife; Margaret, the heroine of a thousand amours, was equally indifferent, and though they now contrived to cohabit together, it was because each connived at the infidelities of the other. Henry was in love with Mademoiselle Fosseuse, a girl of fourteen, while Margaret had taken for her gallant the young Viscount of Turenne, who had lately turned Hugonot. . . . The Duke of Anjou being at this time disposed to renew his connection with the Hugonots, Margaret served as the medium of communication between her brother and her husband; while Henry III., with a view to interrupt this good understanding, wrote to the King of Navarre to acquaint him of the intrigues of his wife with Turenne. Henry was neither surprised nor afflicted at this intelligence; but he laid the letter before the guilty parties, who both denied the charge, and Henry affected to believe their protestations. The ladies of the Court of Nérac were indignant at this act of Henry III., 'the enemy of women'; they pressed their lovers to renew hostilities against that discourteous monarch; Anjou added his instances to those of the ladies; and in 1580 ensued the war called from its origin 'la guerre des amoureux,' or war of the lovers: the seventh of what are sometimes styled the wars of 'religion'! The Prince of Condé, who lived on bad terms with his cousin, had already taken the field on his own account, and in November 1579 had seized on the little town of La Fère in Picardy. In the spring of 1580 the Protestant chiefs in the south unfurled their banners. The King of Navarre laid the foundation of his military fame by the bravery he displayed at the capture of Cahors; but on the whole the movement proved a failure. Henry III. had no fewer than three armies in the field, which were generally victorious, and the King of Navarre found himself menaced in his capital of Nérac by Marshal Biron. But Henry III., for fear of the Guises, did not wish to press the Hugonots too hard, and at length accepted the proffered mediation of the Duke of Anjou, who was at this time anxious to enter on the protectorate offered to him by the Flemings. Anjou set off for the south, accompanied by his mother and her 'flying squadron' [of seductive nymphs]; conferences were opened at the castle of Fleix in Périgord, and on November 26th, 1850 a treaty was concluded which was almost a literal renewal of that of Bergerac. Thus an equivocal peace, or rather truce, was re-established, which proved of some duration."—T. H. Dyer, *History of modern Europe*, v. 2, bk. 3, ch. 8.

1584-1589.—Henry of Navarre heir apparent to the throne.—Fresh hostility of the League.—Edict of Nemours.—Pope's *Brutum Fulmen*.—War of the Three Henrys.—Battle of Coutras.—Day of barricades at Paris.—Assassination of

Guise.—Assassination of Henry III.—"The Duc d'Anjou . . . died in 1584; Henri III. was a worn-out and feeble invalid; the reports of the doctors and the known virtue of the Queen forbade the hope of direct heirs. The King of Navarre was the eldest of the legitimate male descendants of Hugues Capet and of Saint-Louis [see BOURBON, HOUSE OF]. But on the one hand he was a relaxed heretic; on the other, his relationship to the King was so distant that he could never have been served heir to him in any civil suit. This last objection was of small account; the stringent rules which govern decisions in private affairs cannot be made applicable to matters affecting the tranquillity and well-being of nations. . . . His religion was the only pretext on which Navarre could be excluded. France was, and wished to remain, Catholic; she could not submit to a Protestant King. The managers of the League understood that this very wide-spread and even strongly cherished feeling might some day become a powerful lever, but that, in order to use it, it was very needful for them to avoid offending the national amour-propre; and they thought that they had succeeded in finding the means of effecting their object. Next to Navarre, the eldest of the Royal House was his uncle the Cardinal de Bourbon; the Guises acknowledged him as heir to the throne and first Prince of the Blood, under the protection of the Pope and of the King of Spain. . . . The feeble-minded old man, whom no one respected, was a mere phantom, and could offer no serious resistance, when it should be convenient to set him aside. . . . In every class throughout the nation the majority were anxious to maintain at once French unity and Catholic unity, disliking the Reformation, but equally opposed to ultramontane pretensions and to Spanish ambition. . . . But . . . this great party, already named the 'parti politique,' hung loosely together without a leader, and without a policy. For the present it was paralyzed by the contempt in which the King was held; while the dislike which was entertained for the religious opinions of the rightful heir to the throne seemed to deprive it of all hope for the future. Henry III. stood in need of the assistance of the King of Navarre; he would willingly have cleared away the obstacle which kept them apart, and he made an overture with a view to bring back that Prince to the Catholic religion. But these efforts could not be successful. The change of creed on the part of the Béarnais was to be a satisfaction offered to France, the pledge of a fresh agreement between the nation and his race, and not a concession to the threats of enemies. He was not an unbeliever; still less was he a hypocrite; but he was placed between two fanatical parties, and repelled by the excesses of both; so he doubted, honestly doubted, and as his religious indecision was no secret, his conversion at the time of which we are now speaking would have been ascribed to the worst motives." As it was, he found it necessary to quiet disturbing rumors with regard to the proposals of the King by permitting a plain account of what had occurred to be made public. "Henry III., having no other answer to make to this publication, which justified all the complaints of the Catholics, replied to it by the treaty of Nemours and by the edict of July [1585]. These two acts annulled all the edicts in favour of toleration; and placed at the disposal of the League all the resources and all the forces of the monarchy." Soon afterwards the Pope issued against Navarre and Condé his bull of excommunication. By this "the Pontiff did not deprive the Bourbons of a single friend, and did not give the slightest fresh ardour to their opponents; but he produced a powerful reaction among a portion of the clergy, among the magistracy, among all the

Royalists; wounded the national sensibility, consolidated that union between the two Princes which he wished to break off, and rallied the whole of the Reformed party round their leaders. The Protestant pamphleteers replied with no less vehemence, and gave to the Pontiff's bull that name of 'Brutum fulmen' by which it is still known. . . . Still the sentence launched from the Vatican had one very decided result—it had fired the train of powder; war broke out at once."—Duc d'Aumale, *History of the princes of Condé, bk. 2, ch. 1*.—"The war, called from the three leading actors in it [Henry of Valois, Henry of Navarre, and Henry of Guise] the War of the Three Henrys, now opened in earnest. Seven powerful armies were marshalled on the part of the King of France and the League. The Huguenots were weak in numbers, but strong in the quality of their troops. An immense body of German 'Reiter' had been enrolled to act as an auxiliary force, and for some time had been hovering on the frontiers. Hearing that at last they had entered France, Henry of Navarre set out from Rochelle to effect a junction with them. The Duke of Joyeuse, one of the French King's chief favourites, who had the charge of the army that occupied the midland counties, resolved to prevent their junction. By a rapid movement he succeeded in crossing the line of Henry's march and forcing him into action. The two armies came in front of each other on a plain near the village of Coutras, on the 10th of October, 1587. The Royalist army numbered from 10,000 to 12,000, the Huguenot from 6,000 to 7,000—the usual disparity in numbers; but Henry's skilful disposition did more than compensate for his numerical inferiority. . . . The struggle lasted but an hour, yet within that hour the Catholic army lost 3,000 men, more than 400 of whom were members of the first families in the kingdom; 3,000 men were made prisoners. Not more than a third part of their entire army escaped. The Huguenots lost only about 200 men. . . . Before night fell he [Navarre] wrote a few lines to the French King, which run thus: 'Sire, my Lord and Brother,—Thank God, I have beaten your enemies and your army.' It was but too true that the poor King's worst enemies were to be found in the very armies that were marshalled in his name."—W. Hanna, *Wars of the Huguenots, ch. 6*.—"The victory [at Coutras] had only a moral effect. Henry lost time by going to lay at the feet of the Countess of Grammont the flags taken from the enemy. Meantime the Duke of Guise, north of the Loire, triumphed over the Germans under the Baron of Dohna at Vimory, near Montargis, and again near Auneau (1587). Henry III. was unskilful enough to leave to his rival the glory of driving them out of the country. Henry III. re-entered Paris. As he passed along, the populace cried out, 'Saul has killed his thousands, and David his ten thousands'; and a few days after, the Sorbonne decided that 'the government could be taken out of the hands of princes who were found incapable.' Henry III., alarmed, forbade the Duke of Guise to come to Paris, and quartered in the faubourgs 4,000 Swiss and several companies of the guards. The Sixteen [chiefs of sixteen sections of Paris, who controlled the League in that city] feared that all was over; they summoned the 'Balafré' and he came [May 9, 1588]. Cries of 'Hosannah to the Son of David!' resounded throughout Paris, and followed him to the Louvre. . . . The king and the chief of the League fortified themselves, one in the Louvre, the other in the Hôtel Guise. Negotiations were carried on for two days. On the morning of the 11th the duke, well attended, returned to the Louvre, and in loud tones demanded of the king that he should send away his counsellors, establish the Inquisition,

and push to the utmost the war against the heretics. That evening the king ordered the companies of the city guards to hold several positions, and the next morning he introduced into the city the Swiss and 2,000 men of the French guards. But the city guards failed him. In two hours all Paris was under arms, all the streets were rendered impassable, and the advancing barricades soon reached the positions occupied by the troops [whence the insurrection became known as 'the Day of Barricades']. At this juncture Guise came out of his hôtel, dressed in a white doublet, with a small cane in his hand; saved the Swiss, who were on the point of being massacred, sent them back to the king with insulting scorn, and quieted everything as if by magic. He demanded the office of lieutenant-general of the kingdom for himself, the convocation of the States at Paris, the forfeiture of the Bourbons, and, for his friends, provincial governments and all the other offices. The queen-mother debated these conditions for three hours. During this time the attack was suspended, and Henry III. was thus enabled to leave the Louvre and make his escape. The Duke of Guise had made a mistake; but if he did not have the king, he had Paris. There was now a king of Paris and a king of France; negotiations were carried on, and to the astonishment of all, Henry III. at length granted what two months before he had refused in front of the barricades. He swore that he would not lay down his arms until the heretics were entirely exterminated; declared that any non-Catholic prince forfeited his rights to the throne, appointed the Duke of Guise lieutenant-general, and convoked the States of Blois [October, 1588]. The States of Blois were composed entirely of Leaguers," and were wholly controlled by the duke of Guise. The latter despised the king too much to give heed to repeated warnings which he received of a plot against his life. Summoned to a private interview in the royal cabinet, at an early hour on the morning of December 23, he did not hesitate to present himself, boldly, alone, and was murdered as he entered, by eight of the king's body-guard, whom Henry III had personally ordered to commit the crime. "Killing the Duke of Guise was not killing the League. At the news of his death Paris was stunned for a moment; then its fury broke forth. . . . The Sorbonne decreed 'that the French people were set free from the oath of allegiance taken to Henry III.' . . . Henry III. had gained nothing by the murder; . . . but he had helped the fortunes of the king of Navarre, into whose arms he was forced to cast himself. . . . The junction of the Protestant and the royal armies under the same standard completely changed the nature of the war. It was no longer feudal Protestantism, but the democratic League, which threatened royalty; monarchy entered into a struggle with the Catholic masses in revolt against it. Henry III. called together, at Tours, his useless Parliament, and issued a manifesto against Mayenne and the chiefs of the League. Henry of Navarre carried on the war energetically. In two months he was master of the territory between the Loire and the Seine, and 15,000 Swiss and lanzknechts joined him. On the evening of July 30th, 1580, the two kings, with 40,000 men, appeared before Paris. The Parisians could see the long line of the enemies' fires gleaming in a vast semicircle on the left bank of the Seine. The king of Navarre established his headquarters at Meudon; Henry III. at Saint-Cloud. The great city was astounded; the people had lost energy; but the fury was concentrated in the hearts of the chiefs and in the depths of the cloisters. . . . The arm of a fanatic became the instrument of the general fury, and put into practice the doctrine of tyrannicide more than once asserted in the schools

and the pulpit. The assault was to be made on August 2d. On the morning of the previous day a young friar from the convent of the Dominicans, Jacques Clément, came out from Paris," obtained access to the king by means of a forged letter, and stabbed him in the abdomen, being, himself, slain on the spot by the royal guards. Henry III "died the same night, and with him the race of Valois became extinct. The aged Catherine de' Medici had died six months before."—V. Duruy, *History of France (abridged)*, ch. 45.

1589-1590.—Henry of Navarre as Henry IV of France.—Difficulties as king of Catholic France and his retreat.—Battle of Arques.—Battle of Ivry.—"There was a moment of singular confusion in Monsieur de Gondî's 'red house' at Saint-Cloud on the morning of August 1, 1589, when the death of Henry III left the nation to face the inevitable fact that France had a new King and that this King was a Protestant. The prevailing sentiment in the monarch's immediate circle, which was chiefly composed of Catholics, was that of rage. . . . On the night of the 2nd, the chief Catholics of the Court met together to consider the situation. . . . Finally, at the instigation of d'Épernon, it was decided that a deputation should be sent to explain to Henry IV, that if he would immediately abjure the Protestant faith, he should be proclaimed without further delay. The new King of France was a man of five-and-thirty, of medium height, wiry, vigorous, and nervous, the most intelligent of all the French Kings, endowed with one of those lively and supple intellects which see all the shades of a question and make prompt decisions. . . . He possessed too lofty a conception of his own personal dignity and that of his position to accept the terms offered him, though he was fully conscious of his precarious situation. The army by which he was surrounded contained barely 2000 Huguenots, encamped apart at Meudon, the butt of the rest of the troops, who mockingly dubbed them 'the highwaymen.' At the very first moment he had despatched Biron to administer the oath of allegiance to the Swiss, foreigners, mercenaries, and Protestants, who would obey him. But outside these groups he had no supporters. A few Catholics might follow him; the rest might go; he would remain a King without a country, and a general without an army. He was a proud man, and held his ground firmly against the deputation which came to bid him be converted. . . . He promised to give the Catholics every possible guarantee and was ready to receive instruction by means of a national council. Let those who did not wish to stay take their departure. 'My supporters among the Catholics,' he said nobly at the end of his speech, 'will be those who love France and who love honour!' This determined attitude disconcerted the Catholic leaders, and they held another meeting. . . . Some one . . . proposed that Henry IV should be provisionally recognized, and given six months in which to be converted; a resolution to this effect was carried. Henry IV accepted the terms. An agreement was signed on

August 4, by which it was arranged that the King should be instructed, that during the course of the six months he should summon a national council, and that in the meanwhile no alteration should be made in the position of the Catholics and the Huguenots respectively. . . . Unfortunately, a number of stubborn Catholics refused to accept the compromise. They collected their baggage and left the army, one man taking his departure with the whole contingent under his command—a body of 7000 men. And, on the other hand, the Protestants, discouraged by the promises Henry IV had just made, also retired. La Trémoille broke up his camp and left with nine battalions. The royal army was thus thoroughly disorganized, and Henry IV, who, to add to his misfortunes, had no money, finding it impossible to carry on the siege, retreated from the banks of the Seine and fell back in the direction of Normandy. . . . The League regained confidence. It was no longer a question of defending themselves against the possible accession of a Reformer; the heretic was actually King. 'A second rebellion,' said Palma Cayet, 'almost took place.' Mayenne, realizing that he could not himself lay claim to the Crown, made up his mind to abide by the decision of the States-General at Blois, and to proclaim Cardinal Bourbon King with the title of Charles X. Cardinal Bourbon was shut up in the Château de Loches. He let Mayenne proceed and wrote to Vergnètes: 'I have embarked on the enterprise and nobody knows why. They (the League) have a grudge against the House of Bourbon. As long as I side with them they will be obliged to recognize the Bourbons. Meanwhile, the King of Navarre, my nephew, will make his own way. What I am doing is merely to preserve my nephew's rights.' . . . Notification of the accession of Charles X was sent to all the towns in France, and Mayenne assumed the title of Lieutenant-General of the kingdom. Fortified by the knowledge of his rights and penetrated by a sense of duty, inspired, not by any personal ambition, but by a strong and admirable conviction of what he owed to France, Henry IV realized that he would have to conquer his kingdom step by step. . . . He had 10,000 men at his disposal, and with them he marched upon Rouen. The fall of that important town would have had a considerable effect. Mayenne hastened from Paris with a much more powerful army to force him to raise the siege. As it was impossible to await him in such a disadvantageous position Henry IV retreated towards Dieppe. . . . He entrenched himself strongly at Arques, whither Mayenne came with 32,000 men [the army of the League] to attack him. . . . The army of the League endeavoured to force the lines of the Royalists. . . . Henry IV, however, collecting his soldiers, threw them against the enemy so vigorously that the latter was obliged to give way after suffering severe losses. Mayenne tried to turn the tables, but failed. . . . This success at Arques produced an extremely favourable impression. Supporters hastened to Henry IV's side, and Longueville with his troops joined him. . . . In a short time, . . . he had mustered a force of some 23,000 men about him. They were miserably equipped, it is true, and in rags, but they were fairly well in hand and confident of success. Few French generals before Henry IV were more clear-headed and resolute than he. He immediately made up his mind to march to Paris, 'the bull's-eye of the target,' as he called it. He was fully aware that if he held Paris the rest would follow. On November 1 he attempted an assault on the city at three different points on the left bank, more particularly at the Porte de Nesle. Unfortunately for him, however, the League made a strong defence and repulsed him. The news that Mayenne was

advancing swiftly against him made him fall back, and, not wishing to be caught between two fires, he retreated to Tours. Still attracted by the 'target,' however, he soon set out again, and occupied Le Mans, Alençon, Falaise, and Honfleur, always hovering round Paris. . . . In that quick incisive style, which makes him one of the great writers of France, he ordered: 'To horse, Fervagues, I want to see at once of what feather are the geese of Normandy. Come straight to Alençon.' People followed readily. . . . In Paris, Mayenne's cause was far from prosperous. The tyranny of the faction controlled by the Sixteen was increasing. Exasperated by their humiliating and demagogic conduct, the nobility had adopted the attitude of holding aloof. . . . Mayenne, deprived of the swords of the nobility, was obliged to get troops where he could, that is to say, from abroad. . . . [The Duc de Mayenne, reinforced by Spanish troops from the Low Countries] left Paris and marched against Henry IV, hoping to reduce him by force of arms. Henry IV had retreated towards Dreux, to which he had laid siege. He had at this moment an army of 11,000 men including 3000 cavalry. The army of the League amounted to 16,000. At the approach of this force, which outnumbered his own, the King decamped from Dreux and descended the valley of the Eure. Mayenne followed cautiously. Then, suddenly, Henry IV made up his mind to attack his adversary. On March 14, 1590, he arranged his army on the plain of Ivry with six cannon in the centre surrounded by cavalry and flanked by companies of infantry. His own battered helmet adorned, according to du Bartas, 'with a horrible plume' he galloped along the front of his troops, who were miserably clad and poorly armed, repeating the famous words: 'Rally round my white plume; you will always find it on the road to honour and victory!' Mayenne would have preferred not to fight, but he was obliged to accept the encounter. After a few cannon shots his cavalry broke up. Their retreat was badly managed, however, for the horsemen, fleeing in haste, hustled each other, and confusion prevailed. The King of Navarre seized the opportunity to charge right through them, and carried along by his vigorous onslaught, his cavalry wrought havoc in the enemy's lines. Henry IV fought like an ordinary carabineer, bravely and heroically. Galvanized by his example his men followed him shouting, 'Long live the King!' As soon as the cavalry was beaten they hurled themselves upon the infantry. The Swiss contingents belonging to the League laid down their arms, and Mayenne, seeing that the battle was lost, took to flight, leaving 6000 men and eighty standards on the field. 'God has shown,' Henry IV wrote that evening, 'that he loves right better than might.' He invited all the chiefs of the victorious army to dinner at the Château de Rosny."—L. Batiffol, *Century of the Renaissance*, v. 2, pp. 286-293.

1590.—Siege of Paris and its horrors.—Relief at hands of the Spaniards under Parma.—Readiness of League to give crown to Philip II.—"The king, yielding to the councils of Biron and other catholics, declined attacking the capital, and preferred waiting the slow, and in his circumstances eminently hazardous, operations of a regular siege. . . . Whatever may have been the cause of the delay, it is certain that the golden fruit of victory was not plucked, and that although the confederate

army had rapidly dissolved, in consequence of their defeat, the king's own forces manifested as little cohesion. And now began that slow and painful siege, the details of which are as terrible, but as universally known, as those of any chapters in the blood-stained history of the century. Henry seized upon the towns guarding the rivers Seine and Marne, twin nurses of Paris. By controlling the course of those streams as well as that of the Yonne and Oise—especially by taking firm possession of Lagny on the Marne, whence a bridge led from the Isle of France to the Brie country—great thoroughfare of wine and corn—and of Corbeil at the junction of the little river Essonne with the Seine—it was easy in that age to stop the vital circulation of the imperial city. By midsummer, Paris, unquestionably the first city of Europe at that day, was in extremities. . . . Rarely have men at any epoch defended their fatherland against foreign oppression with more heroism than that which was manifested by the Parisians of 1590 in resisting religious toleration, and in obeying a foreign and priestly despotism. Men, women, and children cheerfully laid down their lives by thousands in order that the papal legate and the king of Spain might trample upon that legitimate sovereign of France who was one day to become the idol of Paris and of the whole kingdom. A census taken at the beginning of the siege had showed a population of 200,000 souls with a sufficiency of provisions, it was thought, to last one month. But before the terrible summer was over—so completely had the city been invested—the bushel of wheat was worth 360 crowns. . . . The flesh of horses, asses, dogs, cats, rats, had become rare luxuries. There was nothing cheap, said a citizen bitterly, but sermons. And the priests and monks of every order went daily about the streets, preaching fortitude in that great resistance to heresy. . . . Trustworthy eye-witnesses of those dreadful days have placed the number of the dead during the summer at 30,000. . . . The hideous details of the most dreadful sieges recorded in ancient or modern times were now reproduced in Paris. . . . The priests . . . persuaded the populace that it was far more righteous to kill their own children, if they had no food to give them, than to obtain food by recognizing a heretic king. It was related, too, and believed, that in some instances mothers had salted the bodies of their dead children and fed upon them, day by day, until the hideous repast would no longer support their own life. . . . The bones of the dead were taken in considerable quantities from the cemeteries, ground into flour, baked into bread, and consumed. It was called Madame Montpensier's cake, because the duchess earnestly proclaimed its merits to the poor Parisians. 'She was never known to taste it herself, however,' bitterly observed one who lived in Paris through that horrible summer. She was right to abstain, for all who ate of it died. . . . Lansquenets and other soldiers, mad with hunger and rage, when they could no longer find dogs to feed on, chased children through the streets, and were known in several instances to kill and devour them on the spot. . . . Such then was the condition of Paris during that memorable summer of tortures. What now were its hopes of deliverance out of this Gehenna? The trust of Frenchmen was in Philip of Spain, whose legions, under command of the great Italian chief-tain [Alexander Farnese, duke of Parma, commander of the Spanish forces in the Netherlands], were daily longed for to save them from rendering obedience to their lawful prince. For even the king of straw—the imprisoned cardinal [Cardinal de

Bourbon, whom the League had proclaimed king, under the title of Charles X, on the death of Henry III—was now dead, and there was not even the effigy of any other sovereign than Henry of Bourbon to claim authority in France. Mayenne, in the course of long interviews with the Duke of Parma at Condé and Brussels, had expressed his desire to see Philip king of France, and had promised his best efforts to bring about such a result." Parma, who was struggling hard with the obstinate revolt in the Netherlands, having few troops and little money to pay them with, received orders from his Spanish master to relieve Paris and conquer France. He obeyed the command to the best of his abilities. He left the Netherlands at the beginning of August, with 12,000 foot and 3,000 horse; effected a junction with Mayenne at Meaux, ten leagues from Paris, on the 22d, and the united armies—5,000 cavalry and 18,000 foot—arrived at Chelles on the last day of summer. "The two great captains of the age had at last met face to face. . . . The scientific duel which was now to take place was likely to task the genius and to bring into full display the peculiar powers and defects of the two." The winner in the duel was the duke of Parma, who foiled Henry's attempts to bring him to battle, while he captured Lagny under the king's eyes. "The bridges of Charenton and St. Maur now fell into Farnese's hands without a contest. In an incredibly short space of time provisions and munitions were poured into the starving city, 2,000 boat-loads arriving in a single day. Paris was relieved. Alexander had made his demonstration and solved the problem. . . . The king was now in worse plight than ever. His army fell to pieces. His cavaliers, cheated of their battle, and having neither food nor forage, rode off by hundreds every day." He made one last attempt, by a midnight assault on the city, but it failed. Then he followed the Spaniards—whom Parma led back to the Netherlands early in November—but could not bring about a battle or gain any important advantage. But Paris, without the genius of Alexander Farnese in its defence, was soon reduced to as complete a blockade as before. Lagny was recovered by the besieging royalists, the Seine and the Marne were again fast-locked, and the rebellious capital deprived of supplies.—J. L. Motley, *History of the united Netherlands*, v. 3, ch. 23.

1591-1593.—Siege of Rouen and Parma's second interference.—General advancement of Henry's cause.—Restiveness of the Catholics.—King's abjuration of Protestantism.—"It seemed as if Henri IV. had undertaken the work of Penelope. After each success, fresh difficulties arose to render it fruitless. . . . Now it was the Swiss who refused to go on without their pay; or Elizabeth who exacted seaports in return for fresh supplies; or the Catholics who demanded the conversion of the King; or the Protestants who complained of not being protected. Depressed spirits had to be cheered, some to be satisfied, others to be reassured or restrained, allies to be managed, and all to be done with very little money and without any sacrifice of the national interests. Henri was equal to all, both to war and to diplomacy, to great concerns and to small. . . . His pen was as active as his sword. The collection of his letters is full of the most charming notes. . . . Public opinion, which was already influential and thirsting for news, was not neglected. Every two or three months a little publication entitled 'A Discourse,' or

'An Authentic Narrative,' or 'Account of all that has occurred in the King's Army,' was circulated widely. . . . Thus it was that by means of activity, patience, and tact, Henri IV. was enabled to retrieve his fortunes and to rally his party; so that by the end of the year 1591, he found himself in a position to undertake an important operation. . . . The King laid siege to Rouen in December, 1591. He was at the head of the most splendid army he had ever commanded; it numbered upwards of 25,000 men. This was not too great a number; for the fortifications were strong, the garrison numerous, well commanded by Villars, and warmly supported by the townspeople. The siege had lasted for some months when the King learned that Mayenne had at last made the Duke of Parma to understand the necessity of saving Rouen at all hazards. Thirty thousand Spanish and French Leaguers had just arrived on the Somme. Rouen, however, was at the last gasp; Henri could not make up his mind to throw away the fruits of so much toil and trouble; he left all his infantry under the walls, under the command of Biron, and marched off with his splendid cavalry." He attacked the enemy imprudently, near Aumale, February 5, met with a repulse, was wounded and just missed being taken prisoner in a precipitate retreat. But both armies were half paralyzed at this time by dissensions among their chiefs. That of the Leaguers fell back to the Somme; but in April it approached Rouen again, and Parma was able, despite all Henry's efforts, to enter the town. This last check to the King "was the signal for a general desertion. Henri, left with only a small corps of regular troops and a few gentlemen, was obliged to retire rapidly upon Pont de l'Arche. The Duke of Parma did not follow him. Always vigilant, he wished before everything to establish himself on the Lower Seine, and laid siege to Caudebec, which was not likely to detain him long. But he received during that operation a severe wound, which compelled him to hand over the command to Mayenne." The incompetence of the latter soon lost all the advantages which Parma had gained. Henry's supporters rallied around him again almost as quickly as they had dispersed. "The Leaguers were pushed back upon the Seine and confined in the heart of the Pays de Caux. They were without provisions; Mayenne was at his wits' end; he had to resort to suggestions and for orders to the bed of suffering on which the Duke of Parma was held down by his wound." The great Italian soldier, dying though he was, as the event soon proved, directed operations which baffled the keen watchfulness and penetration of his antagonist, and extricated his army without giving to Henry the chance for battle which he sought. The Spanish army retired to Flemish territory. In the meantime, Henry's cause was being advanced in the northeast of his kingdom by the skill and valor of Turenne, then beginning his great career, and experiencing vicissitudes in the southeast, where Lesdiguières was contending with the mercenaries of the pope and the duke of Savoy, as well as with his countrymen of the League. He had defeated them with awful slaughter at Pontcharra, September 10, 1591, and he carried the war next year into the territories of the duke of Savoy, seeking help from the Italian Waldenses which he does not seem to have obtained. "Nevertheless the king had still some formidable obstacles to overcome. Three years had run their course since he had promised to become instructed in the Catholic religion, and there were no signs as yet that he was preparing to fulfil this undertaking. The position in which he found him-

self, and the importance and activity of his military operations, had hitherto been a sufficient explanation of his delay. But the war had now changed its character. The King had gained brilliant successes. There was no longer any large army in the field against him. Nothing seemed to be now in the way to hinder him from fulfilling his promise. And yet he always evaded it. He had to keep on good terms with Elizabeth and the Protestants; he wished to make his abjuration the occasion for an agreement with the Court of Rome, which took no steps to smooth over his difficulties; and lastly, he shrank from taking a step which is always painful when it is not the fruit of honest conviction. This indecision doubled the ardour of his enemies, prevented fresh adhesions, discouraged and divided his old followers. . . . A third party, composed of bishops and Royalist noblemen, drew around the cousins of Henri IV., the Cardinal de Vendôme and the Comte de Soissons. . . . The avowed object of this third party was to raise one of these two Princes to the throne, if the Head of their House did not forthwith enter the bosom of the Catholic Church. And finally, the deputies of the cities and provinces who had been called to Paris by Mayenne were assembling there for the election of a king. 'The Satire of Ménippée' has handed down the States of the League to immortal ridicule; but however decried that assembly has been, and deserved to be, it decided the conversion of Henri IV.: he does not attempt in his despatches to deny this. . . . In order to take away every excuse for such an election, he entered at once into conference with the Catholic theologians. After some very serious discussion, much deeper than a certain saying which has become a proverb [that 'Paris is certainly worth a mass'] would seem to imply, he abjured the Protestant religion on the 25th of July, 1593, before the Archbishop of Bourges. The League had received its death-blow."—Duc d'Aumale, *History of the princes of Condé*, v. 2, bk. 2, ch. 2.—"The news of the abjuration produced in the minds of honest men, far and near, the most painful impression. Politicians might applaud an act intended to conciliate the favor of the great majority of the nation, and extol the astuteness of the king in choosing the most opportune moment for his change of religion—the moment when he would secure the support of the Roman Catholics, fatigued by the length of the war and too eager for peace to question very closely the sincerity of the king's motives, without forfeiting the support of the Huguenots. But men of conscience, judging Henry's conduct by a standard of morality immutable and eternal, passed a severe sentence of condemnation upon the most flagrant instance of a betrayal of moral convictions which the age had known."—H. M. Baird, *Huguenots and Henry of Navarre*, v. 2, ch. 13.—"What the future history of France would have been if Henry had clung to his integrity, is known only to the Omniscient; but, with the annals of France in our hands, we have no difficulty in perceiving that the day of his impious, because pretended conversion, was among the 'dies nefasti' of his country. It restored peace indeed to that bleeding land, and it gave to himself an undisputed reign of seventeen years; but he found them years replete with cares and terrors, and disgraced by many shameful vices, and at last abruptly terminated by the dagger of an assassin. It rescued France, indeed, from the evils of a disputed succession, but it consigned her to two centuries of despotism and misgovernment. It transmitted the crown, indeed, to seven in succession of the posterity of Henry; but of them one died on the scaffold, three were deposed by insurrections of

their subjects, one has left a name pursued by unmitigated and undying infamy, and another lived and died in a monastic melancholy, the feeble slave of his own minister."—J. Stephen, *Lectures on the history of France*, lect. 16.

1593-1598.—Henry's winning of Paris.—First attempt upon his life.—Expulsion of Jesuits from Paris.—War with Spain.—Peace of Verbins.—"A truce of three months had been agreed upon [August 1, 1593], during which many nobles and several important towns made their submissions to the King. Many, however, still held out for the League, and among them Paris, as well as Rheims, by ancient usage the city appropriated to the coronation of the kings of France. Henry IV. deemed that ceremony indispensable to sanctify his cause in the eyes of the people, and he therefore

HENRY IV

Founder of the House of Bourbon

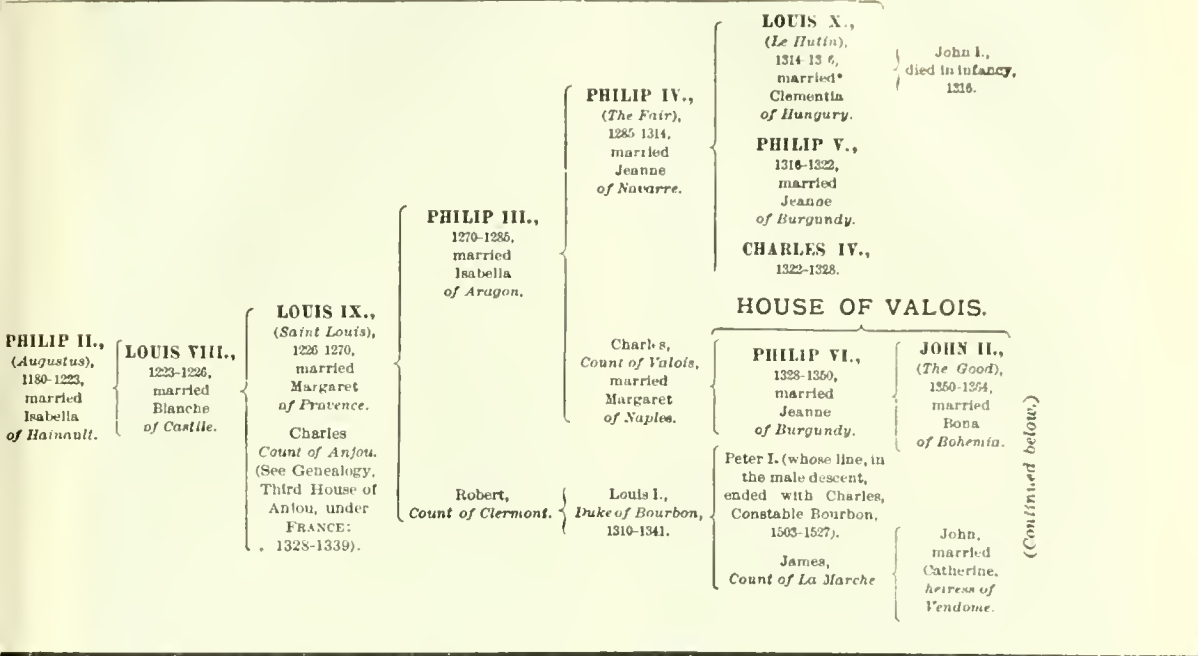

caused it to be performed at Chartres by the bishop of that place, February 27th 1594. But he could hardly look upon himself as King of France so long as Paris remained in the hands of a faction which disputed his right, and he therefore strained every nerve to get possession of that capital. . . . As he wished to get possession of the city without bloodshed, he determined to attempt it by corrupting the commandant. This was Charles de Cossé, Count of Brissac. . . . Henry promised Brissac, as the price of his admission into Paris, the sum of 200,000 crowns and an annual pension of 20,000 together with the governments of Corbeil and Mantes, and the continuance to him of his marshal's bâton. To the Parisians was offered an amnesty from which only criminals were to be excepted; the confirmation of all their privileges; and the prohibition of the Protestant worship within a radius of ten leagues. . . . Before day-break on the morning of the 22nd March, 1594, Brissac opened the gates of Paris to Henry's troops, who took possession of the city without resistance, except at one of the Spanish guard-houses, where a

## BOURBON FAMILY.

\* First married to Eleanor of Aquitaine (afterward wife of Henry II., king of England); secondly, to Constance of Castile.  
 \*\* First married to Margaret of Scotland.  
 \*\*\* First married to Jeanne, daughter of Louis XI.; thirdly, to Mary, daughter of Henry VII., king of England.  
 \*\*\*\* First married to Margaret of Valois, daughter of Henry II., king of France.

few soldiers were killed. When all appeared quiet, Henry himself entered, and was astonished at being greeted with joyous cheers. . . . He gave manifold proofs of forbearance and good temper, fulfilled all the conditions of his agreement, and allowed the Spaniards [4,000] to withdraw unmolested." In May, 1594, Henry laid siege to Laon, which surrendered in August. "Its example was soon followed by Château-Thierry, Amiens, Cambrai and Noyon. The success of the King induced the Duke of Lorraine and the Duke of Guise to make their peace with him." In November, an attempt to kill the king was made by a young man named Jean Chatel, who confessed that he attended the schools of the Jesuits. "All the members of that order were arrested, and their papers examined. One of them, named Jean Guignard, on whom was found a treatise approving the murder of Henry III., and maintaining that his successor deserved a like fate, was condemned to the gallows; and the remainder of the order were banished from Paris, January 8th 1595, as corrupters of youth and enemies of the state. This example, however, was followed only by a few of the provincial cities. The irritation caused by this event seems to have precipitated Henry IV. into a step which he had been some time meditating: a declaration of war against his ancient and most bitter enemy Philip II. (January 17th 1595). The King of Spain, whom the want of money had prevented from giving the League much assistance during the two preceding years, was stung into fury by this challenge; and he immediately ordered Don Fernando de Velasco, constable of Castile, to join Mayenne in Franche Comté with 10,000 men. Velasco, however, was no great captain, and little of importance was done. The only action worth mentioning is an affair of cavalry at Fontaine Française (June 6th 1595), in which Henry displayed his usual bravery, or rather rashness, but came off victorious. He then overran nearly all Franche Comté without meeting with any impediment from Velasco, but retired at the instance of the Swiss, who entreated him to respect the neutrality of that province. Meanwhile Henry had made advances to Mayenne, who was disgusted with Velasco and the Spaniards, and on the 25th September Mayenne, in the name of the League, signed with the King a truce of three months, with a view to regulate the conditions of future submission. An event had already occurred which placed Henry in a much more favourable position with his Roman Catholic subjects; he had succeeded [September, 1595] in effecting his reconciliation with the Pope. . . . The war on the northern frontiers had not been going on so favourably for the King." In January, 1595, "Philip II. ordered the Spaniard Fuentés, who, till the arrival of Albert [the archduke], conducted the government of the Netherlands, to invade the north of France; and Fuentés . . . having left Mondragone with sufficient forces to keep Prince Maurice in check, set off with 15,000 men, with the design of recovering Cambrai. Catelet and Doullens yielded to his arms; Ham was betrayed to him by the treachery of the governor, and in August Fuentés sat down before Cambrai. . . . The Duke of Anjou had made over that place to his mother, Catherine de' Medici, who had appointed Balagni to be governor of it. During the civil wars of France, Balagni had established himself there as a little independent sovereign, and called himself Prince of Cambrai; but after the discomfiture of the League he had been compelled to declare himself, and had acknowledged his allegiance to the King of France. His extortion and tyranny having rendered him

detested by the inhabitants, they . . . delivered Cambrai to the Spaniards, October 2nd. Fuentés then returned into the Netherlands. . . . The Cardinal Archduke Albert arrived at Brussels in February 1596, when Fuentés resigned his command. . . . Henry IV. had been engaged since the winter in the siege of La Fère, a little town in a strong situation at the junction of the Serre and Oise. He had received reinforcements from England as well as from Germany and Holland. . . . Albert marched to Valenciennes with about 20,000 men, with the avowed intention of relieving La Fère; but instead of attempting that enterprise, he despatched De Rosen, a French renegade . . . with the greater part of the forces, to surprise Calais; and that important place was taken by assault, April 17th, before Henry could arrive for its defence. La Fère surrendered May 22nd; and Henry then marched with his army towards the coast of Picardy, where he endeavoured, but in vain, to provoke the Spaniards to give him battle. After fortifying Calais and Ardres, Albert withdrew again into the Netherlands. . . . Elizabeth, alarmed at the occupation by the Spaniards of a port which afforded such facilities for the invasion of England, soon afterwards concluded another offensive and defensive alliance with Henry IV. (May 24th), in which the contracting parties pledged themselves to make no separate peace or truce with Philip II." The Dutch joined in this treaty; but the Protestant princes of Germany refused to become parties to it. "The treaty, however, had little effect." Early in 1597, the Spaniards dealt Henry an alarming blow, by surprising and capturing the city of Amiens, gaining access to it by an ingenious stratagem. But Henry recovered the place in September, after a vigorous siege. He also put down a rising, under the Duc de Mercœur, in Brittany, defeating the rebels at Dinan, while his lieutenant, Lesdiguières, in the southeast, invaded Savoy once more, taking Maurienne, and paralyzing the hostile designs of its duke. The malignant Spanish king, suffering and near his end, discouraged and tired of the war, now sought to make peace. Both the Dutch and the English refused to treat with him; but Henry IV, notwithstanding the pledges given in 1596 to his allies, entered into negotiations which resulted in the Treaty of Vervins, signed May 2, 1598. "By the Peace of Vervins the Spaniards restored to France Calais, Ardres, Doullens, La Capelle, and Le Câtelet in Picardy, and Blavet (Port Louis) in Brittany, of all their conquests retaining only the citadel of Cambrai. The rest of the conditions were referred to the treaty of Câteau-Cambrésis, which Henry had stipulated should form the basis of the negotiations. The Duke of Savoy was included in the peace." While this important treaty was pending, in April, 1598, Henry quieted the anxieties of his Huguenot subjects by the famous Edict of Nantes.—T. H. Dyer, *History of modern Europe*, v. 2, bk. 3, ch. 10-11.

ALSO IN: C. H. C. Jackson, *First of the Bourbons*, v. 1, ch. 14-18; v. 2, ch. 1-7.—J. L. Motley, *History of the united Netherlands*, v. 3, ch. 29-35.—R. Watson, *History of the reign of Philip II*, bk. 23-24.

1598-1599.—Edict of Nantes.—For the purpose of receiving the submission of the duke of Mercœur and the Breton insurgents, the king proceeded down the Loire, and "reached the capital of Brittany, the commercial city of Nantes, on the 11th of April, 1598. Two days later he signed the edict which has come to be known as the Edict of Nantes [and which had been under discussion for some months with representatives of a Protestant

assembly in session at Châtellerault]. . . . The Edict of Nantes is a long and somewhat complicated document. Besides the edict proper, contained in 95 public articles, there is a further series of 56 'secret' articles, and a 'brevet' or patent of the king, all of which were signed on the 13th of April; and these documents are supplemented by a second set of 23 'secret' articles, dated on the last day of the same month. The first of these four papers is expressly declared to be a 'perpetual and irrevocable edict.' . . . Our chief concern being with the fortunes of the Huguenots, the provisions for the re-establishment of the Roman Catholic worship, wherever in the course of the events of the last 30 years that worship had been interfered with or banished, need not claim our attention. For the benefit of the Protestants the cardinal concession was liberty to dwell anywhere in the royal dominions, without being subjected to inquiry, vexed, molested, or constrained to do anything contrary to their conscience. As respects public worship, while perfect equality was not established, the dispositions were such as to bring it within the power of a Protestant in any part of the kingdom to meet his fellow-believers for the holiest of acts, at least from time to time. To every Protestant nobleman enjoying that extensive authority known as 'haute justice,' and to noblemen in Normandy distinguished as possessors of 'fiefs de haubert,' the permission was granted to have religious services on all occasions and for all comers at their principal residence, as well as on other lands whenever they themselves were present. Noblemen of inferior jurisdiction were allowed to have worship on their estates, but only for themselves and their families. In addition to these seigniorial rights, the Protestant 'people' received considerable accessions to the cities where they might meet for public religious purposes. The exercise of their worship was authorized in all cities and places where such worship had been held on several occasions in the years 1596 and 1597, up to the month of August; and in all places in which worship had been, or ought to have been, established in accordance with the Edict of 1577 [the Edict of Poitiers—see above: 1577-1578], as interpreted by the Conference of Nérac and the Peace of Fleix [see above: 1578-1580]. But in addition to these, a fresh gift of a second city in every bailiwick and sénéchaussée of the kingdom greatly increased the facilities enjoyed by the scattered Huguenots for reaching the assemblies of their fellow-believers. . . . Scholars of both religions were to be admitted without distinction of religion to all universities, colleges, and schools throughout France. The same impartiality was to extend to the reception of the sick in the hospitals, and to the poor in the provision made for their relief. More than this, the Protestants were permitted to establish schools of their own in all places where their worship was authorized. . . . The scandal and inhumanity exhibited in the refusal of burial to the Protestant dead, as well in the disinterment of such bodies as had been placed in consecrated ground, was henceforth precluded by the assignment of portions of the public cemeteries or of new cemeteries of their own to the Protestants. The civil equality of the Protestants was assured by an article which declared them to be admissible to all public positions, dignities, offices, and charges, and forbade any other examination into their qualifications, conduct, and morals than those to which their Roman Catholic brethren were subjected. . . . Provision was made for the establishment of a 'chamber of the edict,' as it was styled, in the Par-

liament of Paris, with six Protestants among its sixteen counsellors, to take cognizance of cases in which Protestants were concerned. A similar chamber was promised in each of the parliaments of Rouen and Rennes. In Southern France three 'chambres mi-parties' were either continued or created, with an equal number of Roman Catholic and Protestant judges." In the "brevet" or patent which accompanied the edict, the king made a secret provision of 45,000 crowns annually from the royal treasury, which was understood to be for the support of Protestant ministers, although that purpose was concealed. In the second series of secret articles, the Protestants were authorized to retain possession for eight years of the "cautionary cities" which they held under former treaties, and provision was made for paying the garrisons. "Such are the main features of a law whose enactment marks an important epoch in the history of jurisprudence. . . . The Edict of Nantes was not at once presented to the parliaments; nor was it, indeed, until early in the following year that the Parliament of Paris formally entered the document upon its registers. . . . There were obstacles from many different quarters to be overcome. The clergy, the parliaments, the university, raised up difficulty after difficulty." But the masterful will of the king bore down all opposition, and the Edict was finally accepted as the law of the land. "On the 17th of March [1599] Henry took steps for its complete execution throughout France, by the appointment of commissioners—a nobleman and a magistrate from each province—to attend to the work."—H. M. Baird, *Huguenots and Henry of Navarre*, v. 2, ch. 14.

1599-1610.—Invasion of Savoy.—Acquisition of the department of Aisne.—Ten years of peace and prosperity.—Great works of Henry IV.—Foreign policy.—Assassination.—"One thing only the peace of Vervins left unsettled. In the preceding troubles a small Italian appanage, the Marquisate of Saluces, had been seized by Charles Emmanuel, Duke of Savoy, and remained still in his possession. The right of France to it was not disputed, did not admit indeed of dispute; but the Duke was unwilling to part with what constituted one of the keys of Italy. He came to Paris in December, 1599, to negotiate the affair in person," but employed his opportunity to intrigue, with certain disaffected nobles, including the duke of Biron, marshal of France and governor of Burgundy. "Wearied with delays, whose object was transparent, Henry at last had recourse to arms. Savoy was speedily overrun with French troops, and its chief strongholds taken. Spain was not prepared to back her ally, and the affair terminated by Henry's accepting in lieu of the Marquisate that part of Savoy which now constitutes the Department of Aisne in France." Biron, whom the king tried hard to save by repeated warnings which were not heeded, paid the penalty of his treasonable schemes at last by losing his head. "The ten years from 1600 to 1610 were years of tranquillity, and gave to Henry the opportunity he had so ardently longed for of restoring and regenerating France." Henry's internal policy was worked out largely by his admirable minister the duc de Sully (1560-1641). He applied his energies and his active mind

to the establishment of absolutism, to the reorganization of the disordered finances of the kingdom, to the improvement of agriculture, to the extending of commerce.—W. Hanna, *Wars of the Huguenots*, ch. 8.—“To make the taxes bring in as much as could be raised with little incidental expense; to institute rigid economies; . . . to pay off most of the debts or diminish them by every kind of contrivance; and, finally, to put money aside, was the programme that Rosny [duc de Sully] traced out for himself. He conceived no new ideas in financial matters, he merely utilized methods already existing. It is incorrect to say that the keeping of public accounts at this period was in an embryonic condition, and that any individual connected with them could enrich himself at his leisure in the dark jungle of taxation. There were regulations, the observance of which was controlled by the Court of the Exchequer more strictly than is generally imagined. As a matter of fact, if we leave out of the reckoning the bad returns of the *taille*, it was owing to a thousand and one decisions which were correct enough, but ruinous in their results, that the money produced by the taxes found its way into the pockets of clever agents. The taxes, like the aids, were farmed out separately on relatively low terms. Rosny sold them by auction to a single tax-farmer, Monsieur Jean de Moisset, for a much more advantageous sum; and in the same way he increased the amount paid by the five great farmers-general. In cases where a given annual sum was due to a man, he had hitherto simply been exempted from the payment of some State claim upon him, and this exempted claim always represented a far larger sum than the one to which he had a right. Rosny had these alienated dues restored to the State. There were quantities of them, and the property of the Crown had been dismembered by this process. The persons concerned, who were chiefly great nobles, remonstrated; but the surly minister took no notice and merely told them that they would be paid in a different way. The debts, above all, were overwhelming. On every side money was owing to all manner of people both at home and abroad, for Henry IV had inherited liabilities incurred by the kings his predecessors during the civil wars. To the Duke of Tuscany alone a sum of 1,100,000 crowns was owing, and the Grand-Duke, in default of payment, had seized the Chateau d'If opposite Marseilles, as security, a humiliation to which Henry IV had been obliged to submit. Arrangements were made whereby these debts were to be paid off in regular yearly instalments. In the case of the King's own subjects Rosny made use of more expeditious methods. Amongst other liabilities, sixty millions of arrears in interest on state securities were due. The minister declared that as the titles of these creditors were not very clear, he wished to revise them. He then lowered the interest from 8½ per cent. to 6¼ per cent. An outcry was immediately raised that he was acting arbitrarily and that the State was bankrupt; whereupon Henry IV, threatened by an insurrection among the investors, was obliged to ask Rosny to be less drastic. This, however, did not prevent the latter from reducing the royal debts by 100 millions of capital. By a series of similar measures, and above all by opposing largesse of any sort, and by severe economy in expenditure, a method which the minister called ‘wonderful housekeeping,’ the Government in the end not only succeeded in balancing its budget, but put aside enough money to stock the Arsenal with provisions for war, and placed a surplus of thirteen millions in the Bastille. When once the financial

difficulties had been overcome, Henry IV and Rosny, who had been made Duke of Sully in 1606, set to work to ameliorate the condition of the people. The importance of the reforms they carried out in the domain of agriculture, commerce, and public works must not be exaggerated. Their chief merit lay in the fact that they put an end to war, and allowed the people to work in peace. Sully said, ‘Husbandry and the care of cattle are the two udders of France.’ But, as a matter of fact, he did not do much to alter the conditions of agriculture.”—L. Batiffol, *Century of the Renaissance*, v. 2, pp. 316-318.—Henry himself was deeply interested in increasing manufacturing and industry. He gave the first impulse to silk culture and silk manufacture in France; he founded the great Gobelin manufactory of tapestry at Paris; he built roads and bridges, and encouraged canal projects; he began the creation of a navy; he promoted the colonization of Canada. “It was, however, in the domain of foreign politics that Henry exhibited the acuteness and comprehensiveness of his genius, and his marvellous powers of contrivance, combination, execution. . . . The great political project, to the maturing of which Henry IV. devoted his untiring energies for the last years of his life, was the bringing of the . . . half of Europe into close political alliance, and arming it against the house of Austria, and striking when the fit time came, such a blow at the ambition and intolerance of that house that it might never be able to recover [“Grand Design”]. After innumerable negotiations . . . he had succeeded in forming a coalition of twenty separate States, embracing England, the United Provinces, Denmark, Sweden, Northern Germany, Switzerland. At last the time for action came. The Duke of Cleves died, 25th March, 1609. The succession was disputed. One of the claimants of the Dukedom was supported by the Emperor, another by the Protestant Princes of Germany [see GERMANY: 1608-1618]. The contest about a small German Duchy presented the opportunity for bringing into action that alliance which Henry had planned and perfected. In the great military movements that were projected he was himself to take the lead. Four French armies, numbering 100,000, were to be launched against the great enemy of European liberty. One of these Henry was to command; even our young Prince of Wales was to bring 6,000 English with him, and make his first essay in arms under the French King. By the end of April, 1610, 35,000 men and 50 pieces of cannon had assembled at Chalons. The 20th May was fixed as the day on which Henry was to place himself at its head.” But on the 16th of May (1610) he was struck down by the hand of an assassin (François Ravaillac), and the whole combination fell to pieces.—W. Hanna, *Wars of the Huguenots*, ch. 8.—“The Emperor, the King of Spain, the Queen of France, the Duke d'Épernon, the Jesuits, were all in turn suspected of having instigated the crime, because they all profited by it; but the assassin declared that he had no accomplices. . . . He believed that the King was at heart a Huguenot, and thought that in ridding France of this monarch he was rendering a great service to his country.”—A. de Bonnechose, *History of France*, v. 1, p. 450.

1610.—Accession of King Louis XIII.

1610-1619.—Regency of Marie de Medicis.—Reign of favorites and riot of factions.—Distractions of the kingdom.—Rise of Richelieu.—“After the death of Henry IV it was seen how much the power, credit, manners, and spirit of a nation frequently depend upon a single man. This prince had by a vigorous, yet gentle administration, kept all orders of the state in union, lulled all factions to sleep, maintained peace between the two religions, and kept his people in plenty. He held the balance of Europe in his hands by his alliance, his riches, and his arms. All these advantages were lost in the very first year of the regency of his widow, Mary of Medicis [whom Henry had married in 1600, the pope granting a divorce from his first wife, Margaret of Valois]. . . . Mary of Medicis . . . appointed regent [during the minority of her son, Louis XIII], though not mistress of the kingdom, lavished in making of creatures all that Henry the Great had amassed to render his nation powerful. The army he had raised to carry the war into Germany was disbanded, the princes he had taken under his protection were abandoned. Charles Emanuel, duke of Savoy, the new ally of Henry IV., was obliged to ask pardon of Philip III. of Spain for having entered into a treaty with the French king, and sent his son to Madrid to implore the mercy of the Spanish court, and to humble himself as a subject in his father's name. The princes of Germany, whom Henry had protected with an army of 40,000 men, now found themselves almost without assistance. The state lost all its credit abroad, and was distracted at home. The princes of the blood and the great nobles filled France with factions, as in the times of Francis II., Charles IX. and Henry III., and as afterwards, during the minority of Lewis XIV. At length [1614] an assembly of the general estates was called at Paris, the last that was held in France [prior to the States General which assembled on the eve of the Revolution of 1789]. . . . The result of this assembly was the laying open all the grievances of the kingdom, without being able to redress one. France remained in confusion, and governed by one Concini, a Florentine, who rose to be marshal of France without ever having drawn a sword, and prime minister without knowing anything of the laws. It was sufficient that he was a foreigner for the princes to be displeased with him. Mary of Medicis was in a very unhappy situation, for she could not share her authority with the prince of Condé, chief of the malecontents, without being deprived of it altogether; nor trust it in the hands of Concini, without displeasing the whole kingdom. Henry prince of Condé, father of the great Condé, and son to him who had gained the battle of Coutras in conjunction with Henry IV., put himself at the head of a party, and took up arms. The court made a dissembled peace with him, and afterwards clapt him up in the Bastille. This had been the fate of

his father and grandfather, and was afterwards that of his son. His confinement increased the number of the malecontents. The Guises, who had formerly been implacable enemies to the Condé family, now joined with them. The duke of Vendome, son to Henry IV., the duke of Nevers, of the house of Gonzaga, the marshal de Bouillon, and all the rest of the malecontents, fortified themselves in the provinces, protesting that they continued true to their king, and made war only against the prime minister. Concini, marshal d'Ancre, secure of the queen regent's protection, braved them all. He raised 7,000 men at his own expence, to support the royal authority. . . . A young man of whom he had not the least apprehension, and who was a stranger like himself, caused his ruin, and all the misfortunes of Mary of Medicis. Charles Albert of Luines, born in the county of Avignon, had, with his two brothers, been taken into the number of gentlemen in ordinary to the king, and the companions of his education. He had insinuated himself into the good graces and confidence of the young monarch, by his dexterity in bird-catching. It was never supposed that these childish amusements would end in a bloody revolution. The marshal d'Ancre had given him the government of Amboise, thinking by that to make him his creature; but this young man conceived the design of murdering his benefactor, banishing the queen, and governing himself; all which he accomplished without meeting with any obstacle. He soon found means of persuading the king that he was capable of reigning alone, though he was not then quite 17 years old, and told him that the queen-mother and Concini kept him in confinement. The young king, to whom in his childhood they had given the name of Just, consented to the murder of his prime minister; the marquis of Vitri, captain of the king's guards, du Hallier his brother, Persan, and others, were sent to dispatch him, who, finding him in the court of the Louvre, shot him dead with their pistols [April 24, 1617]: upon this they cried out, 'Vive le roi,' as if they had gained a battle, and Lewis XIII., appearing at a window, cried out, 'Now I am king.' The queen-mother had her guards take from her, and was confined to her own apartment, and afterwards banished to Blois. The place of marshal of France, held by Concini, was given to the marquis of Vitri, his murderer." Concini's wife, Eleanor Galigai, was tried on a charge of sorcery and burned, "and the king's favorite, Luines, had the confiscated estates. This unfortunate Galigai was the first promoter of cardinal Richelieu's fortune; while he was yet very young, and called the abbot of Chillon, she procured him the bishopric of Lucan [1607], and at length got him made secretary of state in 1616. He was involved in the disgrace of his protectors, and . . . was now banished . . . to a little priory at the farther end of Anjou. . . . The duke of Epemon, who had caused the queen to be declared regent, went to the castle of Blois [February 22, 1610], whither she had been banished, and carried her to his estate in Angoulême, like a sovereign who rescues his ally. This was manifestly an act of high treason; but a crime that was approved by the whole kingdom." The king presently "sought an opportunity of reconciliation with his mother, and entered into a treaty with the duke of Epemon, as between prince and prince. . . . But the treaty of reconciliation was hardly signed when it was broken again; this was the true spirit of the times. New parties took up arms in favour of the queen, and always to oppose the duke of Luines, as before it had been to oppose the marshal d'Ancre, but never against the king. Every favourite at that

time drew after him a civil war. Lewis and his mother in fact made war upon each other. Mary was in Anjou at the head of a small army against her son; they engaged each other on the bridge of C e, and the kingdom was on the point of ruin. This confusion made the fortune of the famous Richelieu. He was comptroller of the queen-mother's household, and had supplanted all that princess's confidants, as he afterwards did all the king's ministers. His pliable temper and bold disposition must necessarily have acquired for him the first rank everywhere, or have proved his ruin. He brought about the accommodation between the mother and son; and a nomination to the purple, which the queen asked of the king for him, was the reward of his services. The duke of Ep ernon was the first to lay down arms without making any demands, whilst the rest made the king pay them for having taken up arms against him. The queen-mother and the king her son had an interview at Brisac, where they embraced with a flood of tears, only to quarrel again more violently than ever. The weakness, intrigues, and divisions of the court spread anarchy through the kingdom. All the internal defects with which the state had for a long time been attacked were now increased, and those which Henry IV. had removed were revived anew."—Voltaire, *Ancient and modern history*, tr. by Smollet, v. 5, ch. 145.

1620-1622.—Renewed jealousy of the Huguenots.—Their formidable organization and its political pretensions.—Restoration of Catholicism in Navarre and B earn.—Their incorporation with France.—Huguenot revolt.—Treaty of Montpellier.—"The Huguenot question had become a very serious one, and the bigotry of some of the Catholics found its opportunity in the insubordination of many of the Protestants. The Huguenots had undoubtedly many minor causes for discontent. . . . But on the whole the government and the majority of the people were willing to carry out in good faith the provision of the edict of Nantes. The Protestants, within the limits there laid down, could have worshipped after their own conscience, free from persecution and subject to little molestation. It was, perhaps, all that could be expected in a country where the mass of the population were Catholic, and where religious fanaticism had recently supported the League and fostered the wars of religion. But the Protestant party seem to have desired a separate political power, which almost justifies the charge made against them, that they sought to establish a state within a state, or even to form a separate republic. Their territorial position afforded a certain facility for such endeavors. In the northern provinces their numbers were insignificant. They were found chiefly in the southwestern provinces—Poitou, Saintonge, Guienne, Province, and Languedoc—while in B earn and Navarre they constituted the great majority of the population, and they held for their protection a large number of strongly fortified cities. . . . Though there is nothing to show that a plan for a separate republic was seriously considered, the Huguenots had adopted an

organization which naturally excited the jealousy and ill-will of the general government. They had long maintained a system of provincial and general synods for the regulation of their faith and discipline. . . . The assembly which met at Saumur immediately after Henry's death, had carried still further the organization of the members of their faith. From consistories composed of the pastors and certain of the laity, delegates were chosen who formed local consistories. These again chose delegates who met in provincial synods, and from them delegates were sent to the national synod, or general assembly of the church. Here not only matters of faith, but of state, were regulated, and the general assembly finally assumed to declare war, levy taxes, choose generals, and act both as a convocation and a parliament. The assembly of Saumur added a system of division into eight great circles, covering the territory where the Protestants were sufficiently numerous to be important. All but two of these were south of the Loire. They were subsequently organized as military departments, each under the command of some great nobleman. . . . The Huguenots had also shown a willingness to assist those who were in arms against the state, had joined Cond e, and contemplated a union with Mary de Medici in the brief insurrection of 1620. A question had now arisen which was regarded by the majority of the party as one of vital importance. The edict of Nantes, which granted privileges to the Huguenots, had granted also to the Catholics the right to the public profession of their religion in all parts of France. This had formerly been prohibited in Navarre and B earn, and the population of those provinces had become very largely Protestant. The Catholic clergy had long petitioned the king to enforce the rights which they claimed the edict gave them in B earn, and to compel also a restitution of some portion of the property, formerly held by their church, which had been taken by Jeanne d'Albret, and the revenues of which the Huguenot clergy still assumed to appropriate entirely to themselves. On July 25, 1617, Louis finally issued an edict directing the free exercise of the Catholic worship in B earn and the restitution to the clergy of the property that had been taken from them. The edict met with bitter opposition in B earn and from all the Huguenot party. The Protestants were as unwilling to allow the rites of the Catholic Church in a province which they controlled, as the Catholics to suffer a Huguenot conventicle within the walls of Paris. The persecutions which the Huguenots suffered distressed them less than the toleration which they were obliged to grant. . . . In the wars of religion the Huguenots had been controlled, not always wisely or unselfishly, by the nobles who had espoused their faith, but these were slowly drifting back to Catholicism. . . . The Cond es were already Catholics. Lesdigui eres was only waiting till the bribe for his conversion should be sufficiently glittering. [He was received into the Church and was made Constable of France in July, 1622.] Bouillon's religion was but a catch-weight in his political intrigues. The grandson of Coligni was soon to receive a marshal's baton for consenting to a peace which was disastrous to his party. Sully, Rohan, Soubise, and La Force still remained; but La Force's zeal moderated when he also was made a marshal, and one hundred years later Rohans and the descendants of Sully wore cardinal's hats. The party, slowly deserted by the great nobles, came more under the leadership of the clergy . . . and under their guidance the party now assumed a political activity which brought on the siege of La Rochelle and which made possible the

revocation of the edict of Nantes. Béarn was not only strongly Protestant, but it claimed, with Navarre, to form no part of France, and to be governed only by its own laws. Its States met and declared their local rights were violated by the king's edict; the Parliament of Pau refused to register it, and it was not enforced in the province. . . . The disturbances caused by Mary de Medici had delayed any steps for the enforcement of the edict, but these troubles were ended by the peace of Ponts-de-Cé in 1620. . . . In October, 1620, Louis led his army in Béarn, removed various Huguenot officials, and reestablished the Catholic clergy. . . . On October 20th, an edict was issued by which Navarre and Béarn were declared to be united to France, and a parliament was established for the two provinces on the same model as the other parliaments of the kingdom. . . . A general assembly of Protestants, sympathizing with their brethren of these provinces, was called for November 26, 1620, at La Rochelle. The king declared those guilty of high treason who should join in that meeting. . . . The meeting was held in defiance of the prohibition, and it was there resolved to take up arms. . . . The assembly proceeded in all respects like the legislative body of a separate state. The king prepared for the war with vigor. . . . He now led his forces into southern France, and after some minor engagements he laid siege to Montauban. A three months' siege resulted disastrously; the campaign closed, and the king returned to Paris. The encouragement that the Huguenots drew from this success proved very brief. The king's armies proceeded again into the south of France in 1622, and met only an irregular and inefficient opposition. . . . Chatillon and La Force each made a separate peace, and each was rewarded by the baton of marshal from the king and by charges of treachery from his associates. . . . The siege of Montpellier led to the peace called by that name, but on terms that were unfavorable to the Huguenots. They abandoned all the fortified cities which they had held for their security except La Rochelle and Montauban; no assemblies could meet without permission of the king, except the local synods for ecclesiastical matters alone, and the interests of Béarn and Navarre were abandoned. In return the edict of Nantes was again confirmed, and their religious privileges left undisturbed. Rohan accepted 800,000 livres for his expenses and governments, and the king agreed that the Fort of St. Louis, which had been built to overawe the turbulence of La Rochelle, should be dismantled. La Rochelle, the great Huguenot stronghold, continued hostilities for some time longer, but at last it made terms. The party was fast losing its power and its overthrow could be easily foretold. La Rochelle was now the only place capable of making a formidable resistance. . . . In the meantime the career of Luines reached its end." He had taken the great office of Constable to himself, incurring much ridicule thereby. "The exposures of the campaign and its disasters had worn upon him; a fever attacked him at the little town of Monheur, and on December 14, 1621, he died."—J. B. Perkins, *France under Mazarin, with a review of the administration of Richelieu*, v. 1, ch. 3.

1624-1626.—Richelieu's policy and the Thirty Years' War.—Combinations against the Austro-Spanish ascendancy.—Valtelline War.—Huguenots again in revolt.—Second Treaty of Montpellier.—Treaty of Monzon with Spain.—"When

Richelieu in 1624 took the reins of government into his hands in France [supplanting La Vieuville], the Thirty Years' War was first about to envelope the whole of Germany in its fell embraces. The princes of the lower Saxon circle had begun to arm, the king of Denmark was about to take the lead of the Protestant forces, England had already taken active steps for the recovery of the Palatinate, and the reduction of the power of Spain. There was every probability that the whole energies of the Austro-Spanish House would be absorbed in the affairs of Germany for many years. The necessity of Spain and the Empire was ever in the seventeenth century the opportunity of France, and Richelieu realised by a flash of genius that the hour had arrived, which was to make or mar the influence of France in the World. Three things were necessary to the establishment of French supremacy in Europe,—national unity, monarchical centralisation, and the extension and security of the frontiers. To attain these three objects, Richelieu devoted his life, and he was sensible enough to see that complete success in foreign affairs must do much to render success in the other two inevitable. If the crown of France by military and diplomatic conquest could push back the French frontier towards the Rhine, the Scheldt, and the Pyrenees, it need have little fear from its internal foes. So Richelieu took up again the threads of policy, which had dropped from the lifeless hands of Henry IV., and directed all his energies to the resumption of the attack upon the Empire and upon Spain. But there was this difference between the two men. Henry IV had dreamed of establishing the peace and good order of the world upon the ruin of the Habsburgs. Richelieu cherished no such illusions. Nakedly and avowedly he sought but the supremacy of France."—H. O. Wakeman, *Europe, 1598-1715*, pp. 105-106.

ALSO IN: J. Boulenger, *Seventeenth century*.—J. B. Perkins, *France under Mazarin*.

"The Austro-Spanish power had greatly increased during these years: its successes had enabled it to knit together all the provinces which owed it allegiance. The Palatinate and the Lower Rhine secured their connexion with the Spanish Netherlands, as we may now begin to call them, and threatened the very existence of the Dutch: the Valtelline forts [commanding the valley east of Lake Como, from which one pass communicates with the Engadine and the Grisons, and another with the Tyrol] . . . were the roadway between the Spanish power at Milan and the Austrians on the Danube and in the Tyrol. Richelieu now resolved to attack this threatening combination at both critical points. In the North he did not propose to interfere in arms: there others should fight, and France support them with quiet subsidies and good will. He pressed matters on with the English, the Dutch, the North German Princes; he negotiated with Maximilian of Bavaria and the League [Catholic League formed in 1608 under Maximilian after the formation of Protestant Union in 1607 under the Elector of the Palatinate], hoping to keep the South German Princes clear of the Imperial policy. . . . The French ambassador at Copenhagen, well supported by the English envoy, Sir Robert Anstruther, at this time organised a Northern League, headed by Christian IV. of Denmark [see GERMANY: 1624-1626]. . . . The Lutheran Princes, alarmed at the threatening aspect of affairs, were beginning to think that they had made a mistake in leaving the Palatinate to be conquered; and turned a more willing ear to the French and English proposals for this Northern League. . . . By 1625 the

Cardinal's plans in the North seemed to be going well; the North-Saxon Princes, though with little heart and much difference of opinion, specially in the cities, had accepted Christian IV. as their leader; and the progress of the Spaniards in the United Provinces was checked. In the other point to which Richelieu's attention was directed, matters had gone still better. [The inhabitants of the Valtelline were mostly Catholics and Italians. They had long been subject to the Protestant Grisons or Graubunden. In 1620 they had risen in revolt, massacred the Protestants of the valley, and formed an independent republic, supported by the Spaniards and Austrians. Spanish and German troops occupied the four strong Valtelline forts, and controlled the important passes above referred to. The Grisons resisted and secured the support of Savoy, Venice and finally France. In 1623 an agreement had been reached, to hand over the Valtelline forts to the pope, in deposit, until some terms could be settled. But in 1625 this agreement had not been carried out, and Richelieu took the affair in hand.] . . . Richelieu, never attacking in full face if he could carry his point by a side-attack, allied himself with Charles Emmanuel, Duke of Savoy, and with Venice; he easily persuaded the Savoyard to threaten Genoa, the port by which Spain could penetrate into Italy, and her financial mainstay. Meanwhile, the Marquis of Cœuvres had been sent to Switzerland, and, late in 1624, had persuaded the Cantons to arm for the recovery of the Valtelline; then, heading a small army of Swiss and French, he had marched into the Grisons. The upper districts held by the Austrians revolted; the three Leagues declared their freedom, the Austrian troops hastily withdrew. Cœuvres at once secured the Tyrolese passes, and descending from the Engadine by Poschiavo, entered the Valtelline: in a few weeks the Papal and Spanish troops were swept out of the whole valley, abandoning all their forts, though the French general had no siege-artillery with which to reduce them. . . . Early in 1625, the Valtelline being secured to the Grisons and French, the aged Lesdiguières was sent forward to undertake the rest of the plan, the reduction of Genoa. But just as things were going well for the party in Europe opposed to Spain and Austria, an unlucky outburst of Huguenot dissatisfaction marred all: Soubise in the heart of winter had seized the Isle of Ré, and had captured in Blavet harbour on the Breton coast six royal ships; he failed however to take the castle which commanded the place, and was himself blockaded, escaping only with heavy loss. Thence he seized the Isle of Oléron: in May the Huguenots were in revolt in Upper Languedoc, Querci, and the Cevennes, led by Rohan on land, and Soubise by sea. Their rash outbreak [provoked by alleged breaches of the Treaty of Montpellier, especially in the failure of the king to demolish Fort Louis at La Rochelle] came opportunely to the aid of the distressed Austrian power, their true enemy. Although very many of the Huguenots stood aloof and refused to embarrass the government, still enough revolted to cause great uneasiness. The war in the Ligurian mountains was not pushed on with vigour; for Richelieu could not now think of carrying out the large plans which, by his own account, he had already formed, for the erection of an independent Italy. . . . He was for the present content to menace Genoa, without a serious siege. At this time James I. of England died, and the marriage of the young king [Charles I] with Henriette Marie [daughter of Henry IV] was pushed on. In May

Buckingham went to Paris to carry her over to England; he tried in vain to persuade Richelieu to couple the Palatinate [Frederick, Elector of the Palatinate, was a brother-in-law of Charles I] with the Valtelline question. . . . After this the tide of affairs turned sharply against the Cardinal; while Tilly with the troops of the Catholic League, and Wallenstein, the new general of the Emperor, who begins at this moment his brief and marvellous career, easily kept in check the Danes and their halfhearted German allies, Lesdiguières and the Duke of Savoy were forced by the Austrians and Spaniards to give up all thoughts of success in the Genocse country, and the French were even threatened in Piedmont and the Valtelline. But the old Constable of France was worthy of his ancient fame; he drove the Duke of Feria out of Piedmont, and in the Valtelline the Spaniards only succeeded in securing the fortress of Riva. Richelieu felt that the war was more than France could bear, harassed as she was within and without. . . . He was determined to free his hands in Italy, to leave the war to work itself out in Germany, and to bring the Huguenots to reason. . . . The joint fleets of Soubise and of La Rochelle had driven back the king's ships, and had taken Ré and Oléron; but in their attempt to force an entrance into the harbour of La Rochelle they were defeated by Montmorency, who now commanded the royal fleet: the islands were retaken, and the Huguenots sued for peace. It must be remembered that the bulk of them did not agree with the Rochellois, and were quiet through this time. Early in 1626 the treaty of Montpellier granted a hollow peace on tolerable terms to the reformed churches; and soon after . . . peace was signed with Spain at Monzon in May, 1626. All was done so silently that the interested parties, Savoy, the Venetians, the Grisons, knew nothing of it till all was settled: on Buckingham . . . the news fell like a thunder-clap. . . . The Valtelline remained under the Grisons, with guarantees for Catholic worship; France and Spain would jointly see that the inhabitants of the valleys were fairly treated: the Pope was entrusted with the duty of razing the fortresses: Genoa and Savoy were ordered to make peace. It was a treacherous affair; and Richelieu comes out of it but ill. We are bound, however, to remember . . . the desperate straits into which the Cardinal had come. . . . He did but fall back in order to make that wonderful leap forward which changed the whole face of European politics."—G. W. Kitchen, *History of France*, v. 2-3, bk. 4, ch. 3-4.—See also AUSTRIA: 1618-1648.

1627-1628.—War with England, and Huguenot revolt.—Richelieu's siege and capture of La Rochelle.—Example of magnanimity and toleration.—End of political Huguenotism.—"Richelieu now found himself dragged into a war against his will, and that with the very power with which, for the furtherance of his other designs, he most desired to continue at peace. James I of England had been as unable to live except under the dominion of a favourite as Louis. Charles . . . had the same unfortunate weakness; and the Duke of Buckingham, who had long been paramount at the court of the father, retained the same mischievous influence as that of the son. . . . In passing through France in 1623 he [Buckingham] had

been presented to the queen [Anne of Austria], and had presumed to address her in the language of love. When sent to Paris to conduct the young Princess Henrietta Maria to England, he had repeated this conduct. . . . There had been some little unpleasantness between the two Courts shortly after the marriage . . . owing to the imprudence of Henrietta," who paraded her popery too much in the eyes of Protestant England; and there was talk of a renewed treaty, which Buckingham sought to make the pretext for another visit to Paris. But his motives were understood; Louis "refused to receive him as an ambassador, and Buckingham, full of disappointed rage, instigated the Duke de Soubise, who was still in London, to rouse the Huguenots to a fresh outbreak, promising to send an English fleet to Rochelle to assist them. Rochelle was at this time the general headquarters not only of the Huguenots, but of all those who, on any account, were discontented with the Government. . . . Soubise . . . embraced the duke's offer with eagerness; and in July, 1627, without any previous declaration of war, an English fleet, with 16,000 men on board, suddenly appeared off Rochelle, and prepared to attack the Isle of Rhé. The Rochellois were very unwilling to co-operate with it"; but they were persuaded, "against their judgment, to connect themselves with what each, individually, felt to be a desperate enterprise; and Richelieu, to whom the prospect thus afforded him of having a fair pretence for crushing the Huguenot party made amends for the disappointment of being wantonly dragged into a war with England, gladly received the intelligence that Rochelle was in rebellion. At first the Duke d'Anjou was sent down to command the army, Louis being detained in Paris by illness; but by October he had recovered, his fondness for military operations revived, and he hastened to the scene of action, accompanied by Richelieu, whose early education had been of a military kind. . . . He at once threw across reinforcements into the Isle of Rhé, where M. Thoiras was holding out a fort known as St. Martin with great resolution, though it was unfinished and incompletely armed. In the beginning of November, Buckingham raised the siege, and returned home, leaving guns, standards and prisoners behind him; and Richelieu, anticipating a renewal of the attack the next year . . . undertook a work designed at once to baffle foreign enemies and to place the city at his mercy. Along the whole front of the port he began to construct a vast wall . . . having only one small opening in the centre which was commanded by small batteries. The work was commenced in November, 1627; and, in spite of a rather severe winter, was carried on with such ceaseless diligence, under the superintending eye of the cardinal himself, that before the return of spring a great portion of it was completed. . . . When, in May, 1628, the British fleet, under Lord Denbigh, the brother-in-law of Buckingham, returned to the attack, they found it unassailable, and returned without striking a blow."—C. D. Yonge, *History of France under the Bourbons*, v. 1, ch. 7.—"Richelieu . . . was his own engineer, general, admiral, prime-minister. While he urged on the army to work upon the dike, he organized a French navy, and in due time brought it around to that coast and anchored it so as to guard the dike and be guarded by it. Yet, daring as all this work was, it was but the smallest part of his work. Richelieu found that his officers were cheating his soldiers in their pay and disheartening them; in face of the enemy he had to reorganize the army

and to create a new military system. . . . He found, also, as he afterward said, that he had to conquer not only the Kings of England and Spain, but also the King of France. At the most critical moment of the siege Louis deserted him,—went back to Paris,—allowed courtiers to fill him with suspicions. Not only Richelieu's place, but his life, was in danger, and he well knew it; yet he never left his dike and siege-works, but wrought on steadily until they were done; and then the King, of his own will, in very shame, broke away from his courtiers, and went back to his master. And now a Royal Herald summoned the people of La Rochelle to surrender. But they were not yet half conquered. Even when they had seen two English fleets, sent to aid them, driven back from Richelieu's dike, they still held out manfully. . . . They were reduced to feed on their horses,—then on bits of filthy shell-fish,—then on

CARDINAL RICHELIEU

(After a painting by Ph. de Champagne)

stewed leather. They died in multitudes. Guiton, the Mayor, kept a dagger on the city council-table to stab any man who should speak of surrender. . . . But at last even Guiton had to yield. After the siege had lasted more than a year, after 5,000 were found remaining out of 15,000, after a mother had been seen to feed her child with her own blood, the Cardinal's policy became too strong for him. The people yielded [October 27, 1628], and Richelieu entered the city as master. And now the victorious statesman showed a greatness of soul to which all the rest of his life was as nothing. . . . All Europe . . . looked for a retribution more terrible than any in history. Richelieu allowed nothing of the sort. He destroyed the old franchises of the city, for they were incompatible with that royal authority which he so earnestly strove to build. But this was all. He took no vengeance,—he allowed the Protestants to worship as before,—he took many of them into the public service,—and to Guiton he showed marks of respect. He stretched forth that strong

arm of his over the city, and warded off all harm. . . . For his leniency Richelieu received the titles of Pope of the Protestants and Patriarch of the Atheists. But he had gained the first great object of his policy, and he would not abuse it: he had crushed the political power of the Huguenots forever."—A. D. White, *Statesmanship of Richelieu* (*Atlantic Monthly*, May, 1862).

1630-1632.—Day of Dupes, and after.—On the return of Richelieu and the king from their Italian expedition, in the beginning of August, 1630, "both the monarch and his minister had passed in safety through a whole tract infected with the plague; but, shortly after their arrival at Lyons, Louis XIII. fell ill, and in a few days his physicians pronounced his case hopeless. It was now that all the hatred which his power had caused to hide its head, rose up openly against Richelieu; and the two queens [Marie de Medicis, the queen-mother, and Anne of Austria, the king's wife], united only in their enmity towards the minister, never quitted the bedside of the king but to form and cement the party which was intended to work the cardinal's destruction as soon as the monarch should be no more. . . . The bold and the rash joined the faction of the queens; and the prudent waited with wise doubt till they saw the result they hoped for. Happy was it for those who did conceal their feelings; for suddenly the internal abscess, which had nearly reduced the king to the tomb, broke, passed away, and in a very few days he appeared perfectly convalescent. Richelieu might now have triumphed securely; . . . but he acted more prudently. He remembered that the queen-mother, the great mover of the cabal against him, had formerly been his benefactress; and though probably his gratitude was of no very sensitive nature, yet he was wise enough to affect a virtue that he did not possess, and to suffer the offence to be given by her. . . . At Paris [after the return of the court] . . . the queen-mother herself, unable to restrain any longer the violent passions that struggled in her bosom, seemed resolved to keep no terms with the cardinal." At an interview with him, in the king's presence, "the queen forgot the dignity of her station and the softness of her sex, and, in language more fit for the markets than the court, called him rogue, and traitor, and perturber of the public peace; and, turning to the king, she endeavoured to persuade him that Richelieu wished to take the crown from his head, in order to place it on that of the count de Soissons. Had Richelieu been as sure of the king's firmness as he was of his regard, this would have been exactly the conduct which he could have desired the queen to hold; but he knew Louis to be weak and timid, and easily ruled by those who took a tone of authority towards him; and when at length he retired at the command of the monarch . . . he seems to have been so uncertain how the whole would end, that he ordered his papers and most valuable effects to be secured, and preparations to be made

for immediate departure. All these proceedings had been watched by the courtiers: Richelieu had been seen to quit the queen's cabinet troubled and gloomy, his niece in tears; and, some time after, the king himself followed in a state of excessive agitation, and . . . left Paris for Versailles without seeing his minister. The whole court thought the rule of Richelieu at an end, and the saloons of the Luxembourg were crowded with eager nobles ready to worship the rising authority of the queen-mother." But the king, when he reached Versailles, sent this message to his minister: "Tell the cardinal de Richelieu that he has a good master, and bid him come hither to me without delay." Richelieu felt that the real power of France was still in his hands; and setting off for Versailles, he found Louis full of expressions of regard and confidence. Rumours every moment reached Versailles of the immense concourse that was flocking to pay court to the queen-mother: the king found himself nearly deserted, and all that Richelieu had said of her ambition was confirmed in the monarch's mind; while his natural good sense told him that a minister who depended solely upon him, and who under him exercised the greatest power in the realm, was not likely to wish his fall. . . . In the mean time, the news of these . . . events spread to Paris: the halls of the Luxembourg, which the day before had been crowded to suffocation, were instantly deserted; and the queen-mother found herself abandoned by all those fawning sycophants whose confidence and disappointment procured for the day of St. Martin, 1630, the title in French history of The Day of Dupes."—G. P. R. James, *Eminent foreign statesmen*, v. 2, pp. 88-92.—The ultimate outcome of the "Day of Dupes" was the flight of Marie de Medicis, who spent the remainder of her life in the Netherlands and in England; the trial and execution of Marshal de Marillac; the imprisonment or exile and disgrace of Bassompierre and other nobles; a senseless revolt, headed by Gaston, duke of Orleans, the king's brother, which was crushed in one battle at Castelnaudari, September 1, 1632, and which brought the duc de Montmorency to the block.—C. D. Yonge, *History of France under the Bourbons*, v. 1, ch. 7-8.

1641-1642.—Conspiracies of Count de Soissons and Cinq Mars.—Extinction of the principality of Sedan.—“There were revolts in various quarters to resist [the yoke of Richelieu], but they were quelled with uniform success. Once, and once only, the fate of the Cardinal seemed finally sealed. The Count de Soissons, a prince of the blood, headed the discontented gentry in open war in 1641, and established the headquarters of revolt in the town of Sedan. The Empire and Spain came to his support with promises and money. Twelve thousand men were under his orders, all influenced with rage against Richelieu, and determined to deliver the king from his degrading tutelage. Richelieu was taken unprepared; but delay would have been ruin. He sent the Marshal Chatillon to the borders of Sedan, to watch the proceedings of the confederates, and requested the king to summon fresh troops and go down to the scene of war. While his obedient Majesty was busied in the commission, Chatillon advanced too far. Soissons assaulted him near the banks of the Meuse, at a place called Marfée, and gave him a total and irremediable overthrow. The cavalry on the royalist side retreated at an early part of the fight, and forced their way through the infantry, not without strong suspicions of collusion with their opponents. Paris itself was in dismay. The King and Cardinal expected to hear every hour of the advance of the rebels; but no step was taken. It was found, when the hurry of battle was over, that Soissons was among the slain. The force of the expedition was in that one man; and the defeat was as useful to the Cardinal as a victory would have been. The malcontents had no leaders of sufficient rank and authority to keep the inferiors in check; for the scaffold had thinned the ranks of the great hereditary chiefs, and no man could take his first open move against the Court without imminent risk to his head. Great men, indeed, were rising into fame, but of a totally different character from their predecessors. Their minds were cast in a monarchical mould from their earliest years. . . . From this time subserviency to the king became a sign of noble birth. . . . Richelieu has the boast, if boast it can be called, of having crushed out the last spark of popular independence and patrician pride. . . . One more effort was made [1642] to shake off the trammels of the hated Cardinal. A conspiracy was entered into to deliver the land by the old Roman method of putting the tyrant to death; and the curious part of the design is, that it was formed almost in presence of the king. His favourite friend, young Cinq Mars, son of the Marshal d'Effiat, his brother Gaston of Orleans, and his kinsman the Duke de Bouillon, who were round his person at all hours of the day, were the chief agents of the perilous undertaking. Others, and with them de Thou, the son of the great French historian, entered into the plan, but wished the assassination to be left out. They would arrest and imprison him; but this was evidently not enough. While Richelieu lived, no man could be safe, though the Cardinal were in the deepest dungeon of the Bastille. Death, however, was busy with their victim, without their aid. He was sinking under some deep but partially-concealed illness when the threads of the plot came into his skilful hands. He made the last use of his strength and intelligence in unravelling [it] and punishing the rebels, as he called them, against the king's authority. The paltry and perfidious Gaston was as usual penitent and pardoned, but on Cinq Mars and de Thou the vengeance of the law and the Car-

dinal had its full force. The triumphant but failing minister reclined in a state barge upon the Rhone, towing his prisoners behind him to certain death. On their arrival at Lyons the process was short and fatal. The young men were executed together, and the account of their behaviour at the block is one of the most affecting narratives in the annals of France.”—J. White, *History of France*, ch. 12.—The duke de Bouillon, implicated in both these conspiracies—that of the count de Soissons and that of Cinq Mars—saved his life on the latter occasion by surrendering to the crown the sovereignty of Sedan, which belonged to him, and which had been the headquarters of the Soissons revolt. This small independent principality—the town and a little territory around it—had formerly been in the possession of the powerful and troublesome family of La Marck, the last heiress of whom brought it, together with the duchy of Bouillon, into the family of La Tour d'Auvergne. The prince and duke who lost it was the second of that family who bore the titles. He was the elder brother of the great soldier, Turenne. The principality of Sedan was extinguished from that time.—T. O. Cockayne, *Life of Turenne*.

ALSO IN: W. Robson, *Life of Richelieu*, ch. 11-12.—M. W. Freer, *Married life of Anne of Austria*, v. 2, ch. 3.—J. Pardoe, *Life of Marie de Medicis*, v. 3, bk. 3, ch. 13.

1642-1643.—Death of Richelieu and of Louis XIII.—Regency of Anne of Austria.—Cardinal Mazarin and the party of the Importants.—Victory at Rocroi.—Cardinal Richelieu died December 4, 1642. “He was dead, but his work survived him. On the very evening of the 3d of December, Louis XIII. called to his council Cardinal Mazarin [whom Richelieu had commended to him]. . . . Scarcely had the most powerful kings yielded up their last breath when their wishes had been at once forgotten: Cardinal Richelieu still governed in his grave.” But now, after two and a half centuries, “the castle of Richelieu is well-nigh destroyed; his family, after falling into poverty, is extinct; [the Palais-Cardinal [his splendid residence, which he built, and which he gave to the crown] has assumed the name of the Palais-Royal; and pure monarchy, the aim of all his efforts and the work of his whole life, has been swept away by the blast of revolution. Of the cardinal there remains nothing but the great memory of his power and of the services he rendered his country. . . . Richelieu had no conception of that noblest ambition on which a human soul can feed, that of governing a free country, but he was one of the greatest, the most effective, and the boldest, as well as the most prudent servants that France ever had.” Louis XIII. survived his great minister less than half a year, dying May 14, 1643. He had never had confidence in Anne of Austria, his wife, and had provided, by a declaration which she had signed and sworn to, for a council (which included Mazarin) to control the queen's regency during the minority of their son, Louis XIV. But the queen contrived very soon to break from this obligation, and she made Cardinal Mazarin her one counsellor and supreme minister. “Continuing to humor all parties, and displaying foresight and prudence, the new minister was even now master. Louis XIII., without any personal liking, had been faithful to Richelieu to the death. With different feelings, Anne of Austria was to testify the same constancy towards Mazarin. A stroke of fortune came at the very first to strengthen the regent's position. Since the death of Cardinal Richelieu, the Spaniards, but recently overwhelmed

at the close of 1642, had recovered courage and boldness; new counsels prevailed at the court of Philip IV., who had dismissed Olivarez; the House of Austria vigorously resumed the offensive; at the moment of Louis XIII.'s death, Don Francisco de Mello, governor of the Low Countries, had just invaded French territory by way of the Ardennes, and laid siege to Rocroi, on the 12th of May [1643]. The French army was commanded by the young Duke of Enghien [afterwards known as the Great Condé], the prince of Condé's son, scarcely 22 years old; Louis XIII. had given him as his lieutenant and director the veteran Marshal de l'Hôpital; and the latter feared to give battle. The Duke of Enghien, who 'was dying with impatience to enter the enemy's country, resolved to accomplish by address what he could not carry by authority. He opened his heart to Gassion alone. As he [Gassion, one of the boldest of Condé's officers] was a man who saw nothing but what was easy even in the most dangerous deeds, he had very soon brought matters to the point that the prince desired. Marshal de l'Hôpital found himself imperceptibly so near the Spaniards that it was impossible for him any longer to hinder an engagement.' . . . The army was in front of Rocroi, and out of the dangerous defile which led to the place, without any idea on the part of the marshal and the army that Louis XIII. was dead. The Duke of Enghien, who had received the news, had kept it secret. He had merely said in the tone of a master 'that he meant to fight, and would answer for the issue.'" The battle, which was fought May 19, 1643, resulted in the destruction, almost total, of the Spanish army. Of 18,000 men who formed its infantry, nearly 9,000 were killed and 7,000 were made prisoners. The whole of the Spanish artillery and 300 of their standards fell into the hands of the victors, who lost, according to their own reports, only 2,000 men, killed and wounded. "The prince was a horn captain," said Cardinal de Retz. And all France said so with him on hearing of the victory of Rocroi. The delight was all the keener in the queen's circle, because the house of Condé openly supported Cardinal Mazarin, bitterly attacked as he was by the Importants [a court faction or party so called, which was made up of 'those meddlers of the court at whose head marched the duke of Beaufort, all puffed up with the confidence lately shown to him by her Majesty,' and all expecting to count importantly among the queen's favorites], who accused him of reviving the tyranny of Richelieu. . . . And, indeed, on pretext offered by a feminine quarrel [August, 1643] between the young Duchess of Longueville, daughter of the prince of Condé, and the Duchess of Monthazon, the Duke of Beaufort and some of his friends resolved to assassinate the cardinal. The attempt was a failure, but the Duke of Beaufort, who was arrested on the 2d of September, was taken to the castle of Vincennes. Madame de Chevreuse, recently returned [after being exiled by Richelieu] to court, where she would fain have exacted from the queen the reward for her services and her past sufferings, was sent into exile, as well as the Duke of Vendôme. Madame d'Hautefort, but lately summoned by Anne of Austria to be near her, was soon involved in the same disgrace. . . . The party of the Importants was dead, and the power of Cardinal Mazarin seemed to be firmly established. 'It was not the thing just then for any decent man to be on bad terms with the court,' says Cardinal de Retz."—F. P. Guizot, *Popular history of France*, ch. 41-43.—"Cardinal Richelieu was

not so much a minister, in the precise sense of the word, as a person invested with the whole power of the crown. His preponderating influence in the council suspended the exercise of the hereditary power, without which the monarchy must cease to exist; and it seems as if that may have taken place in order that the social progress, violently arrested since the last reign, might resume its course at the instigation of a kind of dictator, whose spirit was free from the influences which the interest of family and dynasty exercises over the characters of kings. By a strange concurrence of circumstances, it happened that the weak prince, whose destiny it was to lend his name to the reign of the great minister, had in his character, his instincts, his good or bad qualities, all that could supply the requirements of such a post. Louis XIII., who had a mind without energy but not without intelligence, could not live without a master; after having possessed and lost many, he took and kept the one, who he found was capable of conducting France to the point, which he himself had a faint glimpse of, and to which he vaguely aspired in his melancholy reveries. . . . In his attempts at innovation, Richelieu, as simple minister, much surpassed the great king who had preceded him, in boldness. He undertook to accelerate the movement towards civil unity and equality so much, and to carry it so far, that hereafter it should be impossible to recede. . . . The work of Louis XI. had been nearly lost in the depth of the troubles of the sixteenth century; and that of Henry IV. was compromised by fifteen years of disorder and weakness. To save it from perishing, three things were necessary: that the high nobility should be constrained to obedience to the king and to the law; that Protestantism should cease to be an armed party in the State; that France should be able to choose her allies freely in behalf of her own interest and in that of European independence. On this triple object the king-minister employed his powerful intellect, his indefatigable activity, ardent passions, and an heroic strength of mind. His daily life was a desperate struggle against the nobles, the royal family, the supreme courts, against all that existed of high institutions, and corporations established in the country. For the purpose of reducing all to the same level of submission and order, he raised the royal power above the ties of family and the tie of precedent; he isolated it in its sphere as a pure idea, the living idea of the public safety and the national interest. . . . He was as destitute of mercy as he was of fear, and trampled under foot the respect due to judicial forms and usages. He had sentences of death pronounced by commissioners of his own selection: at the very foot of the throne he struck the enemies of the public interest, and at the same time of his own fortune, and confounded his personal hatreds with the vengeance of the State. No one can say whether or not there was deceit in that assurance of conscience which he manifested in his last moments: God alone could look into the depth of his mind. We who have gathered the fruit of his labours and of his patriotic devotion at a distance of time—we can only bow before that man of revolution, by whom the ways which led to our present state of society were prepared. But something sad is still attached to his glory: he sacrificed everything to the success of his undertaking; he stifled within himself and crushed down in some noble spirits the eternal principles of morality and humanity. When we look at the great things which he achieved, we admire him with gratitude; we would, but we

cannot, love his character."—A. Thierry, *Formation and progress of the Tiers État or Third Estate in France*, ch. 8.

1643.—Accession of Louis XIV.

1643.—Enghien's (Condé's) campaign on the Moselle.—Siege and capture of Thionville.—"On the 20th of May . . . Enghien made his triumphal entry into Rocroy. He allowed his troops to repose for two days, and then it was towards Guise that he directed his steps. He soon heard that Don Francisco de Melo had taken shelter at Philippeville, that he was trying to rally his cavalry, but that of all his infantry not above 2,000 men remained to him, and they disarmed and nearly naked. No army any longer protected Flanders, and the youthful courage of Enghien already meditated its conquest. But the Court, which had expected to sustain war in its own provinces, was not prepared to carry it into foreign countries. It became necessary to give up all idea of an invasion of Maritime Flanders and the siege of Dunkirk, with which Enghien had at first flattered himself. Then finding that the Spaniards had drawn off their troops from the fortifications on the Moselle, Enghien proposed to march thither, and take possession of them. . . . Although this project was very inferior to his first, its greatness surprised the Council of Ministers: they at first refused their consent, but the Duke insisted—and what could they refuse to the victor of Rocroy? Thionville was at that time considered to be one of the best fortresses in Europe. On arriving before its walls, after a seven days' march, Enghien . . . established his lines, erected bridges, raised redoubts, and opened a double line of trenches on the 25th of June. The French were several times repulsed, but always rallied; and everywhere the presence of Enghien either prevented or repaired the disorder. . . . The obstinate resistance of the garrison obliged the French to have recourse to mines, which, by assiduous labor, they pushed forward under the interior of the town. Then Enghien, wishing to spare bloodshed, sent a flag of truce to the governor, and allowed him a safe conduct to visit the state of the works. This visit convinced the Spaniards of the impossibility of defending themselves any longer. . . . They evacuated the town on the 22d of August. Thionville was then little more than a heap of ruins and ashes. . . . By this conquest Enghien soon became master of the whole course of the Moselle down to the gates of Trèves. Sierch alone ventured to resist him, but was reduced in 24 hours. Then, disposing his army in autumn quarters, he set off for Paris."—Lord Mahon, *Life of Louis, prince of Condé*, ch. 1.

1647-1648.—Conflict between court and Parliament.—Question of the Paulette.—Events leading to the First Fronde.—"The war was conducted with alternate success and failure, but with an unintermitted waste of the public revenue; and while Guébriant, Turenne, and Condé were maintaining the military renown of France, D'Emery, the superintendent of finance, was struggling with the far severer difficulty of raising her ways and means to the level of her expenditure. The internal history of the first five years of the regency is thenceforward a record of the contest between the court and the Parliament of Paris; between the court, promulgating edicts to replenish the exhausted treasury, and the Parliament, remonstrating in angry addresses against the acceptance of them." Of the four sovereign courts which had their seat at that time in the Palais de Justice of Paris, and of which the Parliament was the most considerable—the other three being the Chamber "des Comptes," the Cour des Aides and the Grand Conseil—the counselors or stipendiary judges held their offices for life. "But, in virtue of the law called Paulette [named from Paulet, its originator, in the reign of Henry IV] . . . they also held them as an inheritance transmissible to their descendants. The Paulette . . . was a royal ordinance which imposed an annual tax on the stipend of every judge. It was usually passed for a term of nine years only. If the judge died during that term, his heir was entitled to succeed to the vacant office. But if the death of the judge happened when the Paulette was not in force, his heir had no such right. Consequently, the renewal of the tax was always welcome to the stipendiary counselors of the sovereign courts; and, by refusing or delaying to renew it, the king could always exercise a powerful influence over them. In April, 1647, the Paulette had expired, and the queen-mother proposed the revival of it. But, to relieve the necessities of the treasury, she also proposed to increase the annual per centage which it imposed on the stipends of the counselors of the Chamber 'des Comptes,' of the Cour des Aides, and of the Grand Conseil. To concert measures of resistance to the contemplated innovation, those counselors held a meeting in the Great Hall of St. Louis; and at their request the Parliament, though not personally and directly interested in the change, joined their assembly." The queen sarcastically replied to their remonstrances that the "king would not only withdraw his proposal for an increase in the rate of the annual tax on their stipends, but would even graciously relieve them from that burden altogether. . . . Exasperated by the threatened loss of the heritable tenure of their offices, and still more offended by the sarcastic terms in which that menace was conveyed, the judges assembled in the hall of St. Louis with increased zeal, and harangued there with yet more indignant eloquence. Four different times the queen interdicted their meetings, and four different times they answered her by renewed resolutions for the continuance of them. She threatened severe punishments, and they replied by remonstrances. A direct collision of authority had thus occurred, and it behooved either party to look well to their steps." The queen began to adopt a conciliatory manner. "But the associated magistrates derived new boldness from the lowered tone and apparent fears of the government. Soaring at once above the humble topic on which

they had hitherto been engaged into the region of general politics, they passed at a step from the question of the Paulette to a review of all the public grievances under which their fellow subjects were labouring. After having wrought during four successive days in this inexhaustible mine of eloquence, they at length, on the 30th of June, 1648, commenced the adoption of a series of resolutions, which, by the 24th of July, had amounted in number to 27, and which may be said to have laid the basis of a constitutional revolution. . . . Important as these resolutions were in themselves, they were still more important as the assertion, by the associated magistrates, of the right to originate laws affecting all the general interests of the commonwealth. In fact, a new power in the state had suddenly sprung into existence. . . . That was an age in which the minds of men, in every part of Europe, had been rudely awakened to the extent to which the unconstitutional encroachments of popular bodies might be carried. Charles I. was at that time a prisoner in the hands of the English Parliament. Louis XIV. was a boy, unripe for an encounter with any similar antagonists. . . . The queen-mother, therefore, resolved to spare no concessions by which the disaffected magistracy might be conciliated. D'Emery was sacrificed to their displeasure; the renewal of the Paulette on its ancient terms was offered to them; some of the grievances of which they complained were immediately redressed; and the young king appeared before them in person, to promise his assent to their other demands. In return, he stipulated only for the cessation of their combined meetings, and for their desisting from the further promulgation of arrêts, to which they ascribed the force and authority of law. But the authors of this hasty revolution were no longer masters of the spirits whom they had summoned to their aid. . . . With increasing audacity, therefore, they preserved in defying the royal power, and in requiring from all Frenchmen implicit submission to their own. Advancing from one step to another, they adopted, on the 28th of August, 1648, an arrêt in direct conflict with a recent proclamation of the king, and ordered the prosecution of three persons for the offense of presuming to lend him money. At that moment their debates were interrupted by shouts and discharges of cannon, announcing the great victory of Condé at Lens. During the four following days religious festivals and public rejoicings suspended their sittings. But in those four days, the court had arranged their measures for a coup d'état. As the Parliament retired from Notre Dame, where they had attended at a solemn thanksgiving for the triumph of the arms of France, they observed that the soldiery still stood to the posts which, in honour of that ceremonial, had been assigned to them in different quarters of the city. Under the protection of that force, one of the presidents of the Chamber 'des Enquêtes,' and De Broussel, the chief of the parliamentary agitators, were arrested and consigned to different prisons, while three of their colleagues were exiled to remote distances from the capital. At the tidings of this violence, the Parisian populace were seized with a characteristic paroxysm of fury. . . . In less than three hours, Paris had become an entrenched camp. . . . They dictated their own terms. The exiles were recalled and the prisoners released. . . . Then, at the bidding of the Parliament, the people laid aside their weapons, threw down the barricades, re-opened their shops, and resumed the common business of life as quietly as if nothing bad occurred. . . . It was, however,

a short-lived triumph. The queen, her son, and Mazarin effected their escape to St. Germain; and there, by the mediation of Condé and of Gaston, duke of Orleans, the uncle of the king, a peace was negotiated. The treaty of St. Germain was regarded by the court with shame, and by the Parliament with exultation." Fresh quarrels over it soon arose. "Condé was a great soldier, but an unskillful and impatient peacemaker. By his advice and aid, the queen-mother and the king once more retired to St. Germain, and commanded the immediate adjournment of the Parliament from Paris to Montargis. To their remonstrances against that order they could obtain no answer, except that if their obedience to it should be any longer deferred, an army of 25,000 men would immediately lay siege to the city. War was thus declared."—J. Stepben, *Lectures on the history of France*, lect. 21.

1649.—First Fronde.—Doubtful origin of name.—Siege of Paris by Condé.—Dishonorable conduct of Turenne.—Deserted by army.—Peace of Rueil.—"The very name of this movement is obscure, and it is only certain that it was adopted in jest, from a child's game. It was fitting that the struggle which became only a mischievous burlesque on a revolution should be named from the sport of gamins and school-boys. Fronde is the name of a sling, and the boys of the street used this weapon in their mimic contests. How it came to be applied to the opponents of the government is uncertain. Some claimed it was because the members of the Parliament, like the young frondeurs, hurled their weapons at Mazarin, but were ready to fly when the officers of the police appeared. Others said the term had been used by chance by some counsellor, and had been adopted by the writers of epigrams and mazarinades. However derived, it was not ill applied."—J. B. Perkins, *France under Mazarin*, v. 1, ch. 9.—"Paul de Gondi, Coadjutor of Paris [Coadjutor, that is, of the Archbishop of Paris, who was his uncle], famous afterwards under the name of Cardinal de Retz, placed himself at the head of the revolution. . . . The Prince of Conti, brother of Condé, the Duke of Longueville, the Duke of Beaufort, and the Duke of Bouillon adopted the party of the coadjutor and the parliament. Generals were chosen for an army with which to resist the court. Although taxes levied by Mazarin had been resisted, taxes were freely paid to raise troops—12,000 men were raised; Condé [commanding for the queen] had 8,000 soldiers. These he threw around Paris, and invested 100,000 burgesses, and threatened to starve the town. The citizens, adorned with feathers and ribbons, made sorties occasionally, but their manœuvres were the subject of scorn by the soldiers. . . . As Voltaire says, the tone of the civil discords which afflicted England at the same time mark well the difference between the national characters. The English had thrown into their civil war a balanced fury and a mournful determination. . . . The French on the other hand threw themselves into

their civil strife with caprice, laughter, dissolution and debauchery. Women were the leaders of factions—love made and broke cabals. The Duchess of Longueville urged Turenne, only a short time back appointed Marshal of France, to encourage his army to revolt, which he was commanding for his king. Nothing can justify Turenne's action in this matter. Had he laid down his command and taken the side of his brother [the duke de Bouillon], on account of his family grievance [the loss of the principality of Sedan—see above: 1641-1642], the feudal spirit which in those days held affection for family higher than affection for country, might have excused him; but, while in the service of a sovereign and intrusted with the command of an army, to endeavour to lead his troops over to the enemy can be regarded as nothing short of the work of a traitor. He himself pleads as his apology that Condé was starving the population of Paris by the investment. . . . As it was he sacrificed his honour, and allowed his fair fame to be tarnished for the sake of a worthless woman who secretly jeered at his passion, and cared nothing for his heart, but merely for his sword for her own worldly advantage. As it was he endeavoured to persuade his army to declare for the parliament, and purposed taking it into Champagne, and marching for the relief of the capital; but the treachery of the marshal was no match for the subtlety of the cardinal. Before Turenne issued his declaration to his troops the colonels of his regiment had already been tampered with. The cardinal's emissaries had promised them pensions, and distributed £800,000 among the officers and soldiers. This was a decisive argument for mercenaries, who taught Turenne by forsaking him that mercenary services can only be commanded by money. D'Erlach had also stood firm. The regiments of Turenne, six German regiments, called by d'Erlach, marched one night to join him at Brisach. Three regiments of infantry threw themselves under the guns of Philipsburg. Only a small force was left to Turenne, who, finding the blow he intended hopeless, sent the troops still with him to join d'Erlach at Brisach, and retired himself with fifteen or twenty of his friends to Heilbron, thence to Holland, where he awaited the termination of the civil war. The news of the abandonment of Turenne was received with despair at Paris, with wild joy at St. Germain. His banishment, however, was not long. The leaders of the parliament became aware that the princes of the Fronde were trying to obtain foreign assistance to overturn the monarchy; that their generals were negotiating a treaty with Spain. They felt that order, peace, and the independence of parliament, which would in this case become dependent upon the nobility, was in danger. They took the patriotic resolution quickly to act of their accord. A conference had been opened between the parliament and the Court. Peace was concluded at Rueil, which, notwithstanding the remonstrances of Conti [brother of Condé, the family being divided in the First Fronde], Bouillon, and the other nobles of the Fronde, was accepted by the whole parliament. Peace was proclaimed in Paris to the discontent of the populace. . . . Turenne, on the conclusion of the treaty of Reuil, embarked in Zealand, landed at Dieppe, and posted to Paris."—H. M. Hozier, *Turenne*, ch. 6.—"After the signing of the peace, the Château of St. Germain became the resort of many Frondeurs; the Duchess de Longueville, the Prince of Conti, and nearly all the other chiefs of the party, hastened to pay their respects to the Queen. She received everybody without bitterness, some even with friendship; and the Minister on his part affected much general good-will.

. . . One of the first effects of the peace between the parties was a reconciliation in the House of Condé. The Princess Dowager employed herself with zeal and success in reestablishing harmony between her children. Condé, who despised his brother too much to hate him readily, agreed to a reconciliation with him. As to his sister, he had always felt for her great affection and confidence, and she no less for him: these sentiments were revived at their very first interview at Rueil, and he not only gave her back his friendship, but began to enter into her views, and even to be guided by her counsels. The Prince's policy was to make Royalty powerful and respected, but not absolute. He said publicly that he had done what he ought in upholding Mazarin, because he had promised to do so; but for the future, if things took a different line, he should not be bound by the past. . . . A prey to a thousand conflicting feelings, and discontented with everybody, and perhaps with himself, he took the resolution of retiring for several months to his government in Burgundy. On returning from Dijon in the month of August, the Prince found the Queen and the Cardinal at Compiègne, and very much dejected. . . . He . . . pressed her to return to Paris with her Minister, answering for Mazarin's safety, at the risk of his own head. . . . Their entry into Paris took place a few days after."—Lord Mahon, *Life of Louis, prince of Condé*, ch. 3-4.

1650-1651.—New Fronde, or the Petits Maîtres.—Alliance with Spain and defeat at Rethel.—Revolt, siege and reduction of Bordeaux.—"Faction, laid asleep for one night, woke again fresh and vigorous next morning. There was a Parliamentary party, a De Retz party, and a Condé party, and each party plotted and schemed unceasingly to discredit the others and to evoke popular feeling against all except itself. . . . Neither of the leaders, each pretending fear of assassination, ever stirred abroad unless in the company of 400 or 500 gentlemen, thus holding the city in hourly peril of an 'émeute.' Condé's arrogance and insolence becoming at last totally unbearable, the Court proceeded to the bold measure of arresting him. New combinations: De Retz and Orleans coalesce once more; De Retz coquets with Mazarin and is promised a cardinal's hat. Wily Mazarin strongly supports De Retz's nomination in public, and privately urges every member of the council to vote against it and to beseech the Queen to refuse the dignity. It was refused; upon which De Retz turned his energies upon a general union of parties for the purpose of effecting the release of Condé and the overthrow of the minister."—*De Retz and the Fronde* (*Temple Bar*, v. 38, pp. 535-536).—Condé, his brother Conti, and his brother-in-law Longueville, were arrested and conducted to Vincennes on January 18, 1650. "This was the second crisis of the sedition. The old Fronde had expired; its leaders had sold themselves to the Court; but in its place sprang up the New Fronde, called also, from the affected airs of its leaders, the Petits Maîtres. The beautiful Duchess of Longueville was the soul of it, aided by her admirer, Marsillac, afterwards Duke de la Rochefoucauld, and by the Duke of Bouillon. On the arrest of her husband and her brother, the duchess had fled to Holland, and afterwards to Stenai; where she and Bouillon's brother, Turenne, who styled himself the 'King's Lieutenant-General for the liberation of the Princess,' entered into negotiations with the Archduke Leopold. Bouillon himself had retired into

Guienne, which province was alienated from the Court because Mazarine maintained as its governor the detested Epernon. In July Bouillon and his allies publicly received a Spanish envoy at Bordeaux. Condé's wife and infant son had been received in that city with enthusiasm. But on the approach of Mazarine with the royal army, the inhabitants of Guienne, alarmed for their vintage, now approaching maturity, showed signs of submission; after a short siege Bordeaux surrendered, on condition of an amnesty, in which Bouillon and Le Rochefoucauld were included; and the Princess of Condé was permitted to retire (October 1st 1650). In the north, the Frondeurs, with their Spanish allies, seemed at first more successful. In the summer Leopold had entered Champagne, penetrated to Ferté Milon, and some of his marauding parties had even reached Dammartin. Turenne tried to persuade the Archduke to march to Vincennes and liberate the princes; but while he was hesitating, Gaston transferred the captives to Marcoussis, whence they were soon after conveyed to Havre. Leopold and Turenne, after a vain attempt to rouse the Parisians, retreated to the Meuse and laid siege to Mouzon. The Cardinal himself, like his master Richelieu, now assumed the character of a general. Uniting with his troops in the north the army of Guienne, he took up his quarters at Bethel, which had been captured by Du Plessis Praslin. Hence he ordered an attack to be made on the Spaniards. In the battle which ensued, these were entirely defeated, many of their principal officers were captured, and even Turenne himself narrowly escaped the same fate (December 15th 1650). The Cardinal's elation was unbounded. It was a great thing to have defeated Turenne, and though the victory was Du Plessis', Mazarine assumed all the credit of it. His head began to turn. He forgot that he owed his success to the leaders of the old Fronde, and especially to the Coadjutor; he neglected his promises to that intriguing prelate, though Gondi plainly declared that he must either be a prince of the Church or the head of a faction. Mazarine was also imprudent enough to offend the Parliament; and he compared them with that sitting at London—which indeed was doing them too much honour. The Coadjutor went over to the party of the princes, dragging with him the feeble-minded Orléans, who had himself been insulted by the Queen. Thus was produced a third phase of this singular sedition—the union of the old Fronde with the new. The Parliament now clamoured for the liberation of the princes. As the Queen hesitated, Gaston bluntly declared that the dismissal of Mazarine was necessary to the restoration of peace; while the Parliament added to their former demand another for the Cardinal's banishment. Mazarine saw his mistake and endeavoured to rectify it. He hastened to Havre in order to liberate the princes in person, and claim the merit of a spontaneous act. But it was too late; it was plain that he was acting only by constraint. The princes were conducted back in triumph to Paris by a large retinue sent to escort them. On February 25th, 1651, their innocence was established by a royal declaration, and they were restored to all their dignities and charges. Mazarine, meanwhile, who saw that for the present the game was lost, retired into exile; first into Bouillon, and afterwards to Brühl on the Rhine, where the Elector of Cologne offered him an asylum. From this place he corresponded with the Queen, and continued to direct her counsels. The anarchy and confusion that had ensued in France were such as promised him a speedy return."—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 1.

ALSO IN: T. Wright, *History of France*, v. 2, bk. 4, ch. 4.—J. Pardoe, *Louis XIV and the court of France*, v. 1, ch. 13-15.

1651-1652.—Loss of Catalonia. See SPAIN: 1648-1652.

1651-1653.—Arrogance of Condé and renewal of civil war.—King's majority proclaimed.—General changing of sides.—Battle of Porte St. Antoine and massacre of the Hôtel de Ville.—End of the Fronde.—Condé in service of Spain.—“The liberated captives were received with every demonstration of joy by all Paris and the Frondeurs, including the Duke of Orleans. The Queen, melancholy, and perhaps really ill, lay in bed to receive their visit of cold ceremony; but the Duke of Orleans gave them a grand supper, and there was universal joy at being rid of Mazarin. . . . There was a promise to assemble the States General, while Condé thought himself governing the kingdom, and as usual his arrogance gave offence in various quarters. One article in the compact which had gained his liberty was that the Prince of Conti should marry Mademoiselle de Chevreuse, but this alliance offended the pride of the elder brother, and he broke the marriage off hastily and haughtily. Madame de Chevreuse, much offended, repented of the aid she had given, went over to the Queen's party, and took with her the coadjutor, who was devoted to the rejected daughter, and could always sway the mob of Paris. So many persons had thus come to desert the cause of the Prince that Anne of Austria thought of again arresting him.” Condé, supposing himself in danger, fled from the city on July 6, and “went to his château of St. Maur, where his family and friends joined him, and he held a kind of court. Queen and Parliament both sent entreaties to him to return, but he disdain them all, and made the condition of his return the dismissal of the secretaries whom Mazarine had left. The Queen, most unwillingly, made them retire, and Condé did return for a short time; but he was haughtier than ever, and openly complained of Mazarin's influence, making every preparation for a civil war. Strangely violent scenes took place,” between the prince and the coadjutor and their respective adherents; and presently the prince “quitted Paris, went to Chantilly, and decided on war. Mazarin wrote to the Queen that the most prudent course would be to ally herself with the Parliament to crush the Princes. After they should have been put down the Parliament would be easily dealt with. She acted on this advice. The elections for the States General were beginning, but in order to quash them, and cancel all her promises, the Queen decided on proclaiming the majority of the King, and thus the close of her own regency. It was of course a farce, since he had only just entered his fourteenth year, and his mother still conducted the Government; but it made a new beginning, and was an occasion for stirring up the loyalty of the people. . . . Condé was unwilling to begin a civil war, and was only driven into it by his sister's persuasions and those of his friends. ‘Remember,’ he said, ‘if I once draw the sword, I shall be the last to return it to the scabbard.’ On the other side, Anne of Austria said, ‘Monsieur le Prince shall perish, or I will.’ From Montrond, Condé directed his forces to take possession of the cities in Guyenne, and he afterwards proceeded to Bordeaux. On the other hand, Mazarin repaired to Sedan, and contrived to raise an army in the frontier cities, with which he marched to join the King and Queen at Poitiers. War was raging again, still as the Fronde, though there had been a general change of sides, the Parliament being now for the

Court, and the Princes against it, the Duke of Orleans in a state of selfish agitation between the two. Learning that the royal army was advancing to his own appanage of Orleans, and fearing that the city might open its gates to them, he sent off his daughter, Mademoiselle [de Montpensier], to keep the citizens to what he called their duty to himself. She went with only two ladies and her servants . . . and found the gates closed against her." The persevering mademoiselle succeeded, however, in gaining admission to the town, despite the orders of the magistrates, and she kept out of it the soldiers of both factions in the war. But her own inclinations were strongly towards Condé and his side. "She went out to a little inn to hold a council with the Dukes of Beaufort and Nemours, and had to mediate between them in a violent quarrel. . . . Indeed, Condé's party were ill-agreed; he had even quarrelled with his sister, and she had broken with De la Rochefoucauld! The Duke de Bouillon and his brother Turenne were now on the Queen's side, and the command of the royal army was conferred on the Viscount. Condé, with only eight persons, dashed across France, to take the command of the army over which Beaufort and Nemours were disputing. The very morning after he arrived, Turenne saw by the disposition of the troops who must be opposed to him. 'M. le Prince is come,' he said. They were the two greatest captains of the age, and they fought almost in sight of the King and Queen at Bleneau. But though there were skirmishes [including, at the outset, the serious defeat of a division of the royal forces under Hocquincourt], no decisive engagement took place. It was a struggle of manœuvres, and in this Condé had the disadvantage. . . . Week after week the two armies . . . watched one another, till at last Condé was driven up to the walls of Paris, and there the gates were closed against both armies. Condé was at St. Cloud, whence, on the 2nd of July [1652], he endeavoured to lead his army round to Charenton at the confluence of the Seine and the Loire; but when he came in front of the Porte St. Antoine, he found that a battle was inevitable and that he was caught in a trap, where, unless he could escape through the city, his destruction was inevitable. He barricaded the three streets that met there, heaping up his baggage as a protection, and his friends within, many of them wives of gentlemen in his army, saw the situation with despair." The only one who had energy to act was mademoiselle. She extorted from her hesitating father an order, by virtue of which she persuaded the magistrates of the city, not only to open the gates to Condé, but to send 2,000 men to the Faubourg St. Antoine. "Mademoiselle now repaired to the top of the great square tower of the Bastille, whence she could see the terrible conflict carried on in the three suburban streets which converged at the Porte St. Antoine." Seeing an opportunity to turn the cannon of the Bastille on the pursuing troops, she did so with effect. "Turenne was obliged to draw back, and at last Condé brought his army into the city, where they encamped in the open space of the Pré des Clercs. . . . Condé unworthily requited the hospitality wrung from the city. He was resolved to overcome the neutrality of the Parliament, and, in concert with Beaufort, instigated the mob of violence. Many soldiers were disguised as artisans, and mingled with the rabble, when, on the 4th of July, he went to the Hôtel de Ville, ostensibly to thank the magistrates, but really to demand their support against the Crown. These loyal men, however, by a majority of votes, decided on a petition to the King to return without Mazarin. On this Condé exclaimed publicly, 'These gentlemen will do

nothing for us. They are Mazarinists. Treat them as you please.' Then he retired to the Luxembourg with Gaston, while Beaufort let loose the mob. The Hôtel de Ville was stormed, the rabble poured in at doors and windows, while the disguised soldiers fired from the opposite houses, and the magistrates were threatened and pursued on all sides. They had one advantage, that they knew their way through the intricate passages and the mob did not. The first who got out rushed to the Luxembourg to entreat the Duke and Prince to stop the massacre; but Monsieur only whistled and beat his tattoo, and Condé said he knew nothing about sedition. Nor would Beaufort interfere till the disturbance had lasted many hours; but after all many more of the rabble were killed than of the magistrates. It was the last remarkable scene in the strange drama of the Fronde. The Parliament suspended its sittings, and the King transferred it to Pontoise, whither Molé and all the other Presi-

MAZARIN

dents proceeded, leaving Paris in disguise. This last ferocious proceeding of Condé's, though he tried to disavow it, had shocked and alienated every one, and he soon after fell sick of violent fever. Meanwhile, his castle of Montrond was taken after a year's siege, Nemours was killed in a duel by the Duke of Beaufort, and the party was falling to pieces. . . . Mazarin saw the opportunity, and again left the Court for the German frontier. This was all that was wanting to bring back the malcontents. Condé offered to make terms, but was haughtily answered that it was no time for negotiation, but for submission. Upon this, he proceeded to the Low Countries, and offered his sword to the Spaniards. The King entered Paris in state and held a bed of justice [*lit de justice*, when the king appeared in person before the parlement and commanded it by word of mouth to register some law], in which he proclaimed an amnesty, excepting from it Condé and Conti, and some others of their party, and forbidding the Parliament to interfere in State affairs. The Coadjutor, who had become a Cardinal, was arrested, and imprisoned until he made

his escape, dislocating his shoulder in his fall from the window, but finally reaching Rome, where he lived till the Fronde was forgotten, but never becoming Archbishop of Paris. . . . When all was quiet, Mazarin returned, in February, 1653, without the slightest opposition, and thus ended the Fronde, in the entire triumph of the Crown. . . . The misery, distress and disease caused by these wars of the Fronde were unspeakable. There was nothing to eat in the provinces where they had raged but roots, rotten fruit, and bread made of bran. . . . 'Le misère de la Fronde' was long a proverbial expression in France."—C. M. Yonge, *Cameos from English history*, ch. 15.

1652.—Loss of Gravelines and Dunkirk.—Spanish invasion of Picardy.—"In the spring of 1652, the Spanish forces, under the command of the archduke, had undertaken the siege of Gravelines, which was obliged to capitulate on the 18th of May. The archduke next undertook the siege of Dunkirk, but, at the earnest desire of the princes, he merely blockaded the place, and sent Fuensaldaña with about 14,000 men into Picardy to their assistance. . . . The court, in great alarm, sought first a retreat in Normandy, but the Duke of Longueville, who still held the government of that province, refused to receive Mazarin. The fears of the court were not lessened by this proceeding, and it was even proposed to carry the king to Lyons; but the wiser counsels of Turenne finally prevailed, and it was resolved to establish the army at Compiègne, and lodge the court at Pontoise. Fuensaldaña forced the passage of the Oise at Chauni, and then joined the duke of Lorraine at Fismes, on the 20th of July, when their joint forces amounted to full 20,000 men, while Turenne had not more than 9,000 to oppose to them. But the Spaniards were, as usual, only pursuing a selfish policy, and Fuensaldaña, in pursuance of the archduke's orders, left a body of 3,000 cavalry to reinforce the duke of Lorraine, and returned with the rest of his troops to assist in the siege of Dunkirk," which soon surrendered to his arms.—T. Wright, *History of France*, v. 2, p. 86.

1652-1653.—Last phase of the Fronde at Bordeaux.—Attempted revolution by the Society of the Ormée. See BORDEAUX: 1652-1653.

1653-1656.—Condé's campaigns against his own country, in the service of Spain.—"Condé, unfortunately for his fame, made no attempts at reconciliation, and retired to the Spaniards—an enemy of his country! He captured several small places on the [Flemish] frontier, and hoped to return in spring victorious. A few days after the entry into Paris, Turenne set out to oppose him; and, retaking some towns, had the satisfaction of compelling him to seek winter quarters beyond the limits of France. . . . Condé persuaded the Spanish to bring 30,000 men into the field for the next campaign: Turenne and La Ferté had but 13,000. To paralyze the plans of the enemy, the Viscount proposed, and his proposal was allowed, to be always threatening their rear and communications; to occupy posts they would not dare to attack, and so to avoid fighting, at the same time hindering them from all important undertakings. He began by throwing himself between two corps of their army, at the point where they expected to effect a junction; and in the eight or nine days thus gained, he recovered Rhétel, without which it would have been, as he declares himself, impossible to defend

Picardy and Champagne. Rhétel, so much an object of anxiety, was taken in three days. Baffled in their original purposes, and at a loss, the Spanish expected a large convoy from Cambray, escorted by 3,000 horse. Turenne got news of this, and, posting himself near Peronne to intercept it, drove it back to Cambray [August 11, 1653]. There Condé and Fuensaldaña turned upon him; but he took up a position, which they watched for three or four days, and there defied their attack. They refused the challenge. Thence the enemy drew off," with designs on Guise, which Turenne frustrated. "Condé then laid siege to Rocroi, where his own first glory had been gained; and this place is so hemmed in by woods and defiles, that the relief of it was impossible. But Turenne compensated for the loss of it by the equally valuable recapture of Mouson. Thus the whole year was spent in marches and countermarches, in gains and losses, which had no influence on events. By this time the malcontents were so prostrate that Condé's brother, the Prince de Conti, and his sister, the Duchesse de Longueville, made their peace with the court. . . . The year 1654 opened with the siege of Stenay by the young king in person, who was carried thither by Mazarin, to overawe Condé's governor with the royal name and majesty. That officer was more true to his trust than to his allegiance, and Stenay cost a siege. . . . Condé could do no better than imitate Turenne's policy of the previous year, and besiege Arras as an equivalent for Stenay; to which end he mustered 32,000 men. Arras was a town of some value. Condé had caught it at disadvantage; the governor, Mondejeu . . . was put on his defence with 2,500 foot and 100 horse. To reinforce this slender garrison was the first care of Turenne. . . . Mazarin was anxious for Arras, and offered Turenne to break up the siege of Stenay, for the sake of reinforcing the army of relief. This proposal the Viscount declined. He must have been very confident of his own capacity; for he could collect only 14,000 men to hover around the enemy's camp. . . . He proposed no attempt upon the intrenchments till he had the aid of the troops from Stenay; . . . but he disposed his parties around so as to prevent the enemy's convoys from reaching them." Stenay surrendered on August 6, and Turenne, with reinforcements from its besiegers, attacked the Spanish lines at Arras on the night of the 24th, with complete success. The Spaniards raised the siege and retreated to Cambray, leaving 3,000 prisoners and 63 pieces of cannon in the hands of the French. "The capture of Quesnoy and Binches filled up the rest of the year; the places were weak and the garrisons feeble. Nor did the next season, 1655, offer anything of interest. Turenne reduced Landrecies, Condé, and Guislain, while his active opponent was sometimes foiled by his precautions, and sometimes baffled by the absurd behaviour of the Spanish authorities. . . . The great event of 1656 was the siege of Valenciennes. This place . . . was invested by Turenne about the middle of June; but hardly had his camp been intrenched before he repented of his undertaking. The Scheldt flows through the town, and by reservoirs and sluices was flooded at the will of the enemy. Turenne's camp was largely inundated. . . . He had overestimated his means: so great was the circle of his circumvallation that he had not men enough to guard it adequately, when Condé and the Spanish appeared with 20,000 men to the relief of the place." They broke through his lines and forced him to retreat, with a heavy loss of prisoners taken. "The Viscount retrieved his credit by the bold stand he made after the defeat."—T. O. Cockayne, *Life of Marshal Turenne*, pp. 58-69.

1655-1658.—Alliance with the English Commonwealth against Spain.—Taking of Dunkirk for England and Gravelines for France.—End of the war.—“Mazarin was now bent upon an enterprise which, if successful, must finish the war. A deadly blow would be struck at the strength of Spain if Dunkirk, Mardyck, and Gravelines—the possession of which was of vital importance to her communication with Flanders, as well as enabling her to ruin French commerce on that coast—could be wrested from her. For this the coöperation of some maritime power was necessary, and Mazarin determined at all costs to secure England. With Cromwell, the only diplomatist by whose astuteness he confessed himself baffled, he had been negotiating since 1651. . . . At length on November 3, 1655, a treaty was signed at Westminster, based upon freedom of commerce and an engagement that neither country should assist the enemies or rebels of the other; Mazarin consented to expel Charles II., James, and twenty named royalists from France. Cromwell similarly agreed to dismiss from England the emissaries of Condé. But Mazarin was soon anxious for a more effectual bond. . . . Cromwell had equally good reasons for drawing closer to France, for Spain was preparing actively to assist Charles II. French and English interests thus coinciding, an alliance was signed at Paris on March 23, 1657 [see ENGLAND: 1655-1658]. Gravelines and Dunkirk were to be at once besieged both by land and sea. England was to send 6,000 men to assist the French army. Gravelines was to become French and Dunkirk English; should the former fall first it was to be held by England until Dunkirk too was taken. . . . The alliance was not a moment too soon. The campaign of 1657 had opened disastrously. The tide was however turned by the arrival of the English contingent. Montmédy was immediately besieged, and capitulated on August 4. The effect was again to make Mazarin hang back from further effort, since it seemed possible now to make peace with Spain, and thereby avoid an English occupation of Dunkirk. But Cromwell would stand no trifling, and his threats were so clear that Mazarin determined to act loyally and without delay. On September 30, Turenne laid siege to Mardyck, which protected Dunkirk, and took it in four days. It was at once handed over to the English.” In the spring of 1658 the siege of Dunkirk was begun. The Spaniards, under Don John of Austria and Condé, attempting to relieve the place, were defeated (June 13) in the battle of the Dunes, by Turenne and Cromwell’s Ironsides (see ENGLAND: 1655-1658). “Dunkirk immediately surrendered, and on the 25th was in Cromwell’s possession. Two months later Gravelines also fell. A short and brilliant campaign followed, in which Don John and Condé, shut up in Brussels and Tournai respectively, were compelled to remain inactive while fortress after fortress fell into French hands. A few days after the fall of Gravelines Cromwell died; but Mazarin was now near his goal. Utterly defeated on her own soil, beaten, too, by the Portuguese at Elvas, and threatened in Milan, her army ruined, her treasury bankrupt, without a single ally in Europe, Spain stood at last powerless before him.”—O. Airy, *English Restoration and Louis XIV*, ch. 6.

1657.—Candidacy of Louis XIV for the imperial crown. See GERMANY: 1648-1705

1659-1661.—Treaty of the Pyrenees.—Marriage of Louis XIV to the Spanish infanta.—“The Spaniards could struggle no longer: they sued for peace. Things were prepared for it on every hand: Spain was desperate; matters far from settled or safe in France; in England the Protector’s death had come very opportunely for Mazarin; the strong man was no longer there to hold the balance between the European powers. Questions as to a Spanish marriage and the Spanish succession had been before men since 1648; the Spaniards had disliked the match, thinking that in the end it must subject them to France. But things were changed; Philip IV. now had an heir, so that the nations might hope to remain under two distinct crowns; moreover, the needs of Spain were far greater than in 1648, while the demands of France were less. So negotiation between Mazarin and Louis de Haro on the little Isle of Pheasants in the Bidassoa, under the very shadow of the Pyrenees, went on prosperously; even the proposal that Louis XIV. should espouse the Infanta of Spain, Maria Theresa, was at last agreed to at Madrid. The only remaining difficulty arose from” the fact that the young king, Louis XIV, had fallen in love with Maria Mancini, Cardinal Mazarin’s niece, and wished to marry her. “The King at last abandoned his youthful and pure passion, and signed the Treaty of the Pyrenees [concluded November 7, 1659], condemning himself to a marriage of state, which exalted high the dignity of the French Crown, only to plunge it in the end into the troubles and disasters of the Succession War [1702-1713]. The treaty of peace begins with articles on trade and navigation: then follow cessions, restitutions, and exchanges of territories. 1. On the Northern frontier Spain ceded all she had in Artois, with exception of Aire and S. Omer; in Flanders itself France got Gravelines and its outer defences. In Hainault she became mistress of the important towns, Landrecies, Quesnoy, and Avesnes, and also strengthened her position by some exchanges; in Luxemburg she retained Thionville, Montmédy, and several lesser places; so that over her whole northern border France advanced her frontier along a line answering to her old limits. . . . In return she restored to Spain several of her latest conquests in Flanders: Ypres, Oudenarde, Dixmüden, Furnes, and other cities. In Condé’s country France recovered Rocroy, Le Câtelet and Linchamp, occupied by the Prince’s soldiers; and so secured the safety and defences of Champagne and Paris. 2. More to the East, the Duke of Lorraine, having submitted with such good grace as might be, was reinstated in his Duchy. . . . But France received her price here also, the Duchy of Bar, the County of Clermont on the edge of Champagne, Stenay, Dun, Jametz, Moyenvic, became hers. The fortifications of Nancy were to be raised for ever; the Duke of Lorraine bound himself to peace, and agreed to give France free passage to the Bishoppicks and Alsace. This was the more necessary, because Franche-Comté, the other highway into Alsace, was left to the Spaniards, and such places in it as were in the King’s hands were restored to them. Far out in Germany Louis XIV. replaced Jülich in the hands of the Duke of Neuberg; and that element of controversy, the germ or pretext of these long wars, was extinct for ever. On the Savoyard border France retained Pinerolo, with all the means and temptations of offence which it involved: she restored to the Duke her other conquests within his territories, and to the Spaniards whatever she held in Lombardy; she also honour-

ably obtained an amnesty for those subjects of Spain, Neapolitans or Catalans, who had sided with France. Lastly, the Pyrenees became the final, as it was the natural, boundary between the two Latin kingdoms. . . . Roussillon and Conflans became French: all French conquests to the south of the Pyrenees were restored to Spain. The Spanish King renounced all claims on Alsace or Breisach: on the other hand the submission of the great Condé was accepted; he was restored to all his domains; his son, the young Duke of Enghien, being made Grand Master of France, and he himself appointed Governor of Burgundy and Bresse: his friends and followers were included in the amnesty. Some lesser stipulations, with a view to the peace of Europe, for the settlement of the differences between Spain and Portugal, between the Dukes of Savoy and Mantua, between the Catholic and the Protestant Cantons of Switzerland, and an agreement to help forward peace between the Northern Courts, worthily close this great document, this weighty appendix to the Treaties of Westphalia. A separate act, as was fitting, regulated all questions bearing on the great marriage. It contains a solemn renunciation, intended to bar for ever the union of the two Crowns under one sceptre, or the absorption into France of Flanders, Burgundy, or Charolais. It was a renunciation which, as Mazarin foresaw long before, would never hold firm against the temptations and exigencies of time. The King's marriage with the Infanta Maria Theresa of Spain did not take place till the next year, by which time Mazarin's work in life seemed well nigh over; racked with gout, he had little enjoyment of his triumphs. . . . He betook himself to the arrangement of his own affairs: his physicians giving him, early in 1661, no hopes of recovery. . . . These things arranged, the Cardinal resigned himself to die 'with a serenity more philosophic than Christian'; and passed away on the 8th of March, 1661.—G. W. Kitchin, *History of France*, v. 3, bk. 4, ch. 8.—'The Treaty of the Pyrenees, which completed the great work of pacification that had commenced at Münster, is justly celebrated as having put an end to such bitter and useless animosities. But, it is more famous, as having introduced a new era in European politics. In its provisions all the leading events of a century to come had their origin—the wars which terminated with the Treaties of Aix-la-Chapelle, Nimeguen, and Ryswick, and that concerning the Spanish succession. So great an epoch in history has the Pyrenean Treaty been accounted by politicians, that Lord Bolingbroke was of opinion, 'That the only part of history necessary to be thoroughly studied, goes no farther back than this treaty, since, from that period, a new set of motives and principles have prevailed all over Europe.'—J. Dunlop, *Memoirs of Spain during the reigns of Philip IV and Charles II*, v. 1, ch. 11.

1660-1688.—Footing gained in Newfoundland. See NEWFOUNDLAND: 1660-1688.

1661.—Personal assumption of government by Louis XIV.—Extraordinary characteristics of reign of the Grand Monarch.—'On the death of Mazarin in 1661 Louis [XIV] had already reigned eighteen years. He was now in his twenty-third year, and up to this time had been content to let the Cardinal rule. Under the *régime* of Mazarin and Anne of Austria the King had been little more than a cipher to his subjects. Men were now to realise that a new epoch had been reached in the history of France, and that in the development in store for this country the personality of their sovereign would be an important factor. . . . He had all the kingly gifts necessary for the rôle. He was

dignified, reserved, calm, and courteous. Majestic in person, his manners and carriage were above criticism. . . . His gravity of manner and habitual discretion impressed favourably those with whom he came in contact. 'He would have been every inch a king,' Saint-Simon tells us, 'even if he had been born under the roof of a beggar,' and Bolingbroke, writing from personal observation, declared that, 'if he was not the greatest king he was the best actor of majesty, at least, that ever filled a throne.' . . . Though the Jesuits had superintended his religious training he was in reality ignorant of the rudiments of Christianity, and his general education had been scandalously neglected owing to the incapacity of Villeroi and Péréfixe. . . . As long as Colbert lived, the influences brought to bear on Louis were on the whole beneficial, but towards the end of his reign Louis allowed himself to be guided at times by the judgment of Madame de Maintenon, who herself was influenced by certain priests, whose opinions often lacked wisdom and discernment. Freed from Colbert's advice, Louis tended to promote to the highest offices of state men often incapable or untrustworthy. . . . When Chamillard was allowed to rule at Versailles, and Villeroi, Tallard, and Marsin were preferred to Catinat, Vendôme, and Villars, it was evident that Louis' successes in the early portion of his reign were due in great measure to his good fortune in finding round him a number of able men, trained under Mazarin's *régime*. It must, however, be remembered, in extenuation of Louis' later appointments, that he was always led to believe that the genius of Colbert, Louvois, and Lionne was but a reflection of his own, and that he was the moving spirit in all departments of government. Accordingly, when a minister died, Louis, convinced that all his subordinates were equal in talent and looked to him for the initiative, simply handed on the vacant office to a relative of its last occupant. What aggravated the faults engendered by Louis' bad education was his pride. This feature in his character rapidly became very prominent, and early developed into the worst form of arrogance. . . . As he grew older, the flaws in his character, pardonable as they might be in his earlier years, degenerated into very serious faults. His ignorance grew into something like stupidity, his firmness developed into obstinacy, his pride became mere arrogance and selfishness. Hence he considered himself to be under the special care of Providence, to be above all other men; to be a privileged King among kings. Caprice at time seems to have dictated many of his actions. . . . The only justification for Louis is to be found (1) in his early education and surroundings,—even at an early age it was instilled in him that kings might do as they pleased; (2) in the attitude of the clergy, who from Bossuet downwards vied with each other in the most abject flattery of the King; (3) in the atmosphere of the corrupt Court where adulation of Louis grew into one might almost say idolatry. He was assured that all his wars were justifiable; the real condition of his kingdom was never brought to his notice; he was always ignorant of the state of public opinion; he had no friend in whom he could confide and from whom he could learn the truth. . . . His strength lay in his firm belief in himself, in his conviction of the divine origin of royalty, in his determination to be in reality a King, in his energy and honest desire to do his duty. Only a few of those about him had any idea of his true character, of his sense of responsibility, of his resolve to carry out conscientiously the duties of kingship. . . . The theory of the divine origin of kingship was firmly held by

Louis and generally accepted in France. In his memoirs Louis lays it down that kings are God's lieutenants, answerable to him alone. The King represents the nation, and all authority lies in the hands of the King. 'L'état, c'est moi' represents accurately Louis' conviction that in him were centered all the threads of internal government as well as of foreign policy, and that all Frenchmen were merely instruments for carrying out his wishes. . . . He was convinced that a divine instinct would lead him to make right decisions. An absolute unlimited monarchy was especially agreeable to God. Thus Louis' policy both at home and abroad can be shown to have a distinctly religious basis. His wars of aggrandisement were excused on the ground that the victories of the French arms would lead to the advance of religion. In his attacks on the Protestants, Jansenists, and Quietists, he was merely carrying to its logical conclusion his theory of absolutism. But he only arrived at a decision in religious matters after very careful consideration. Painfully and laboriously he came to his conclusions, and unfortunately in each case—in the revocation of the Edict of Nantes, in the exile of Fénelon from the Court, in the demolition of Port Royal, and in the introduction of the Bull Unigenitus into the kingdom—Louis made a wrong decision, and inflicted in rapid succession a series of severe blows on the unity and prosperity of France. In his view of the divine origin of the royal power Louis was supported by the Church. Bossuet's celebrated declaration of the theory of divine right is well known. He asserted that kings were gods, that they carried on their brows the stamp of divine authority, and that they had to render an account of their actions to no man. The adoption of this theory of divine right, when joined to a consciousness of unlimited power, brought Louis to believe in his own infallibility. On these principles then France was governed for nearly a century and a half. . . . Louis XIV. was not content merely to accept the theory of absolute power; he was resolved to be King in fact, and carried out his determination during the whole of his long reign. The first half of the eighteenth century saw the government of France directed by two prelates, Dubois and Fleury, while in the seventeenth century till 1661, Richelieu and Mazarin to the rise of Dubois, Louis governed by himself. Under him the absolute monarchy became definitely a distinct form of government with its own institutions, organs, and agents responsible to the King alone. All rival authorities and jurisdictions were suppressed. The States-General were never summoned. A government of divine origin had no need to consult the people, and Louis himself tells us in his memoirs that it is certain that the necessity of accepting the law from the people is the worst calamity that can fall on a man of kingly rank."—A. Hassall, *Louis XIV (Heroes of the nations, pp. 82-86, 88-90)*.—Louis XIV's reign "marks one of the most memorable epochs in the annals of mankind. It stretches across history like a great mountain-range, separating ancient France from the France of modern times. On the farther slope are Catholicism and feudalism in their various stages of splendour and decay—the France of crusades and chivalry, of St. Louis and Bayard. On the hither side are free-thought, industry, and centralization—the France of Voltaire, Turgot and Condorcet. When Louis came to the throne, the 'Thirty Years' War still wanted six years of its end, and the heat of theological strife was at its intensest glow. When he died, the religious temperature had cooled nearly to freezing-point, and a new vegetation of science and positive inquiry was overspreading the world.

. . . The reign of Louis XIV . . . was the great turning-point in the history of the French people. The triumph of the Monarchical principle was so complete under him, independence and self-reliance were so effectually crushed, both in localities and individuals, that a permanent bent was given to the national mind—a habit of looking to the Government for all action and initiative permanently established. . . . Spontaneity in the population at large was extinct, and whatever there was to do must be done by the central authority. As long as the Government could correct abuses it was well; if it ceased to be equal to this task they must go uncorrected. When at last the reform of secular and gigantic abuses presented itself with imperious urgency, the alternative before the Monarchy was either to carry the reform with a high hand, or perish in the failure to do so. . . . And through having placed the Monarchy between these alternatives, it is no paradox to say that Louis XIV was one of the most direct ancestors of the Great Revolution."—J. C. Morison, *Reign of Louis XIV (Fortnightly Review, Mar., 1874)*.

Also in: J. I. von Döllinger, *Policy of Louis XIV (Studies in European history, ch. 11)*.

1661-1680.—Revived and growing persecution of the Huguenots.—"One of the King's first acts, on assuming the supreme control of affairs at the death of Mazarin, was significant of his future policy with regard to the Huguenots. Among the representatives of the various public bodies who came to tender him their congratulations, there appeared a deputation of Protestant ministers, headed by their president Vignole; but the King refused to receive them, and directed that they should be ordered to leave Paris forthwith. Louis was not slow to follow up this intimation by measures of a more positive kind, for he had been carefully taught to hate Protestantism; and, now that he possessed unrestrained power, he flattered himself with the idea of compelling the Huguenots to abandon their convictions and adopt his own. His minister Louvois wrote to the governors throughout the provinces that 'his majesty will not suffer any person in his kingdom but those who are of his religion.' . . . A series of edicts was accordingly published with the object of carrying the King's purposes into effect. The conferences of the Protestants were declared to be suppressed. Though worship was still permitted in their churches, the singing of psalms in private dwelling was declared to be forbidden. . . . Protestant children were invited to declare themselves against the religion of their parents. Boys of fourteen and girls of twelve years old might, on embracing Roman Catholicism, become enfranchised and entirely free from parental control. . . . The Huguenots were again debarred from holding public offices, though a few, such as Marshal Turenne and Admiral Duquesne, who were Protestants, broke through this barrier by the splendor of their services to the state. In some provinces, the exclusion was so severe that a profession of the Roman Catholic faith was required from simple artisans. . . . Colbert, while he lived, endeavored to restrain the King, and to abate these intolerable persecutions. . . . He took the opportunity of cautioning the King lest the measures he was enforcing might tend, if carried out, to the impoverishment of France and the aggrandizement of her rivals. . . . But all Colbert's expostulations were in vain; the Jesuits were stronger than he was, and the King was in their hands; besides, Colbert's power was on the decline. . . . In 1666 the queen-mother died, leaving to her son, as her last bequest, that he should suppress and exterminate heresy within his dominions. . . . The Bishop of

Meaux exhorted him to press on in the path his sainted mother had pointed out to him. . . . The Huguenots had already taken alarm at the renewal of the persecution, and such of them as could readily dispose of their property and goods were beginning to leave the kingdom in considerable numbers for the purpose of establishing themselves in foreign countries. To prevent this, the King issued an edict forbidding French subjects from proceeding abroad without express permission, under penalty of confiscation of their goods and property. This was followed by a succession of severe measures for the conversion or extirpation of such of the Protestants—in numbers about a million and a half—as had not by this time contrived to make their escape from the kingdom. The kidnapping of Protestant children was actively set on foot by the agents of the Roman Catholic priests, and their parents were subjected to heavy penalties if they ventured to complain. Orders were issued to pull down the Protestant places of worship, and as many as eighty were shortly destroyed in one dio-

COLBERT

cese. . . . Protestants were forbidden to print books without the authority of magistrates of the Romish communion. Protestant teachers were interdicted from teaching children any thing more than reading, writing, and arithmetic. . . . Protestants were only allowed to bury their dead at daybreak or at nightfall. They were prohibited from singing psalms on land or on water, in workshops or in dwellings. If a priestly procession passed one of their churches while the psalms were being sung, they must stop instantly on pain of the fine or imprisonment of the officiating minister. In short, from the pettiest annoyance to the most exasperating cruelty, nothing was wanting on the part of the 'Most Christian King' and his abettors."—S. Smiles, *Huguenots*, ch. 7.

1661-1683.—Administration of Colbert.—Plan for the upbuilding of industry and commerce.—Organization of the East and West India companies.—Other companies.—Results.—“At Mazarin's death Colbert [1610-1683] was at first made intendant of finance (March 16, 1661). He rapidly rose in the king's favour. In January, 1664,

he was made *surintendant des bâtiments et manufactures*, in 1665, controller-general, and finally, in 1669, minister of the marine, thus uniting in his hands all the important branches of administration except that of war. But from the first he exerted a large influence upon the direction of affairs. For the first three years of his service to the king his time was largely absorbed by the prosecution of the 'affair Fouquet' [who had incurred Colbert's hostility by the misappropriation of state funds] and by the reorganization of the finances of the kingdom. It was not until 1664 that he had worked out a large plan for the upbuilding of industry and the establishment of commerce. . . . He organized the *conseil de commerce*; he framed the high protective tariff of 1664 [and the tariff of 1667 which led to the Dutch and English wars]; he developed a comprehensive plan to restore industry and create manufactures, to build up a strong navy and merchant marine; and he organized the East and West India Companies. . . . The development of over-sea commerce occupied the most important place in the great minister's plan for the regeneration of France. . . . The success of the Dutch with their wealth and power upon the sea exerted a large influence upon his mind. He attributed their success to trade, asserting that the Dutch East India Company had assets amounting to no less than 800,000,000 livres; that Holland had become the entrepôt in Europe for the rich trade with the Indies; and furthermore that the Dutch had made themselves masters of the trade with the ports of the Baltic, with the French West Indies, and of the carrying trade of Europe. Colbert decided to organize two large companies which would at least dispute with them the trade with the two Indies. There is something stupendous in the way in which he projected the East and West India Companies. To the one he assigned, as the field for its activity, the vast expanse from the Cape of Good Hope eastward even to the straits of Magellan, including all the East Indies, China, Japan, and all the oriental seas; to the other, he granted immense territories in the three continents of North America, South America and Africa, and many prosperous islands in the West Indies. . . . Of the two companies, Colbert considered the East India Company of greater importance. Its organization became a matter of great moment. . . . The king, the queen, the queen-mother, the princes of royal blood, noblemen, officials of high rank, subscribed for varying sums. A veritable campaign was pursued by Colbert to persuade or force judges, revenue-farmers, intendants and merchants throughout the kingdom to subscribe to the funds of the company. Everything was done to make the enterprise appear attractive as an investment. National pride was appealed to by pointing out the success and superiority of the Dutch in the oriental trade. Special rights were offered to subscribers of 10,000 and 20,000 livres. In short, the organization of the company [East India] was made an affair of state. The organization of the West India Company was not regarded as a matter of such importance. . . . This point is of some importance, because it shows clearly that Colbert expended much more effort in the organization of the former company and expected much larger results from it. In this he was destined to be disappointed, for the West India Company yielded much larger results. . . . The problems of the two companies were quite different. . . . One of the chief tasks imposed upon the West India Company at its creation was to maintain its monopoly of trade to the exclusion of all foreigners. The outbreak

of the war with the English, however, forced the company to expend so much of its energy in the defense of the islands and in carrying on war against the enemy, that it was forced to forego its monopoly by admitting both private French traders and the Dutch to the commerce of the islands. The necessity for this is proved by the fact that the directors of the company in France and the administrators in the islands, acting independently of one another, took the step almost simultaneously. But in spite of the fact that the admission of foreign traders during the war was made necessary by the inability of the West India Company to supply the islands with food, the practice of admitting them did not cease at the close of the war in July, 1667. For over a year after that date the Dutch continued their efforts to draw the commerce of the French islands back into their control and they were so successful that Colbert was forced to begin a long and difficult campaign to drive them from the French possessions. An *arrêt* of the *conseil d'état* of September 10, 1668, formally forbade the West India Company to grant permission to foreigners to trade within its concession, under penalty of being deprived of the privileges which the king had granted it. . . . In addition to these two companies, Colbert, during the course of his ministry, organized for various purposes five other commercial companies, namely, the Company of the North, the Company of the Levant, the Company of the Pyrenees, the first and second companies of Senegal. The Company of the North was organized in 1669 with the purpose of building up a trade with the ports of Northern Europe, especially with those of the Baltic, and thus of making France independent of the Dutch trader. It was granted a monopoly of trade with Holland, the coasts of Germany, Sweden, Norway, Muscovy, and other countries of the North. De Lagny, who was later to become director of commerce, and Colbert de Terron, intendant at Brouage, were especially charged with the direction of the enterprise. Premiums were offered for the exportation and importation of cargoes to and from the North. The king agreed to take on liberal terms, masts, lumber, tar, and other articles necessary for his navy. It was in this same year that Colbert formed the plan of organizing a new company to re-establish commerce with the Levant. . . . Letters-patent were issued to the Company of the Levant in July, 1670. Its capital was fixed at 3,000,000 livres and the king agreed to furnish one-fourth of it. The Company of the Pyrenees was organized in 1671, in preparation for the war with the Dutch, in order that the royal marine might not lack masts and lumber, supplied ordinarily by trade with the North, which might be interrupted during the war. Finally, in 1673, a company was organized for the exploitation of Senegal and another for the same purpose in 1679 and 1681. . . . All of these companies received the attention of Colbert and were organized to do a very definite work in the fulfillment of his larger plans. Their history is interesting, not so much for what they actually accomplished, as for the insight which they give into what he wished to accomplish and attempted to do. It reveals the vast importance which Colbert attached to foreign and colonial commerce. . . . There are some obvious, but at the same time fundamental principles which underlay the whole of Colbert's colonial commercial policy. First of all, he considered the chief end of establishing colonies to build up trade. . . . In the second place, he considered colonies as the exclusive property of the mother country. . . .

Finally, the interests of the colonies should be subjected to those of the mother country. Wherever they came into conflict, the former should always be sacrificed to the latter. . . . One redeeming feature of Colbert's whole commercial policy, which makes one pardon many a fault, was the fact that it was eminently patriotic. Colbert worked indefatigably for the interests of France and of her people. Personal interests, the interests of commercial companies and of the colonies were all subjected to sacrifices which would insure the realization of his larger plan to increase the wealth of the nation and to lift France to a position of real and abiding power. . . . Colbert had found the French in 1661, at the beginning of his ministry, in possession of some rich West India colonies, but he saw their whole profit going to enrich the enterprising traders of Holland. Only a few struggling French vessels, three or four in 1662, out of a total of 150, he said, were finding their way to these colonies. At his death in 1683, he had driven the Dutch from the field and more than 200 French vessels were trading annually at Martinique, Guadeloupe and St. Domingo. He had awakened the ports of La Rochelle, Bordeaux and Nantes, especially, to new life, and the West India trade became henceforth a source of much profit to their merchants and traders and served as a base of their whole commercial development in the eighteenth century."—S. L. Mims, *Colbert's West India policy*, pp. 7-11, 182-184, 12-13, 332, 338-339.—In Colbert's efforts to establish financial equilibrium he had to contend, on the losing side, with the despotic Louvois who played on the vanity of Louis XIV and engaged him in wars big and little; and all of Colbert's strict economy could stay but for a limited time the approach of national distress.—See also INDIA: 1605-1743; MILITARY ORGANIZATION: 16; TAILLE AND GABELLE; TARIFF: 1664-1667.

1665.—Great Days of Auvergne.—"We must read the curious account of the Great Days of Auvergne, written by Fléchier in his youth, if we would form an idea of the barbarism in which certain provinces of France were still plunged, in the midst of the brilliant civilization of the 17th century, and would know how a large number of those seigniors, who showed themselves so gallant and tender in the boudoirs of Paris, lived on their estates, in the midst of their subjects; we might imagine ourselves in the midst of feudalism. A moment bewildered by the hammer of the great demolisher [Richelieu], which had battered down so many Châteaux, the mountains squires of Auvergne, Limousin, Marche and Forez had resumed their habits under the feeble government of Maz-

arin. Protected by their remoteness from Paris and the parliament, and by the nature of the country they inhabited, they intimidated or gained over the subaltern judges, and committed with impunity every species of violence and exaction. A single feature will enable us to comprehend the state of these provinces. There were still, in the remoter parts of Auvergne, seigniors who claimed to use the wedding right (*droit de jangage*), or, at the least, to sell exemption from this right at a high price to bridegrooms. Serfhood of the glebe still existed in some districts. August 31, 1665, a royal declaration, for which ample and noble reasons were given, ordered the holding of a jurisdiction or court 'commonly called the Great Days,' in the city of Clermont, for Auvergne, Bourbonnais, Nivernais, Forez, Beaujolais, Lyonnais, Combrailles, Marche, and Berry. A president of parliament, a master of requests, sixteen councillors, an attorney-general, and a deputy procurator-general, were designated to hold these extraordinary assizes. Their powers were almost absolute. They were to judge without appeal all civil and criminal cases, to punish the 'abuses and delinquencies of officers of the said districts,' to reform bad usages, as well in the style of procedure as in the preparation and expedition of trials, and to try all criminal cases first. It was enjoined on bailiffs, seneschals, their lieutenants and all other judges, to give constant information of all kinds of crimes, in order to prepare matter for the Great Days. A second declaration ordered that a posse should be put into the houses of the contumacious, that the châteaux where the least resistance was made to the law should be razed; and forbade, under penalty of death, the contumacious to be received or assisted. The publication of the royal edicts, and the prompt arrival of Messieurs of the Great Days at Clermont, produced an extraordinary commotion in all those regions. The people welcomed the Parisian magistrates as liberators, and a remarkable monument of their joy has been preserved, the popular song or Christmas hymn of the Great Days. Terror, on the contrary, hovered over the châteaux; a multitude of noblemen left the province and France, or concealed themselves in the mountains; others endeavored to conciliate their peasants. . . . The Great Days at least did with vigor what it was their mission to do; neither dignities, nor titles, nor high connections preserved the guilty. . . . The Court of Great Days was not content with punishing evil; it undertook to prevent its return by wise regulations: first, against the abuses of seigniorial courts; second, against the vexations of seigniors on account of feudal service due them; third, concerning the mode and abbreviation of trials; and lastly, concerning the reformation of the clergy, who had no less need of being reformed than the nobility. The Great Days were brought to a close after three months of assizes (end of October, 1665—end of January, 1666), and their recollection was consecrated by a medal."—H. 1679-1681.—Complete absorption of Les Trois-Evêchés and Alsace.—Assumption of entire sovereignty by Louis XIV.—Encroachments of the Chambers of Reannexion.—Seizure of Strasburg.—"The Lorraine Trois-Evêchés, recovered by France from the Holy Roman Empire, had remained in an equivocal position, as to public law, during nearly a century, between their old and new ties: the treaty of Westphalia had cut the knot by the formal renunciation of the Empire to all rights over these countries; difficulties nevertheless still subsisted relative to the fiefs and the pendencies of Trois-Evêchés possessed by members of the Empire. Alsace, in its turn, from the treaty of Westphalia to the peace of Nimeguen, had offered analogous and still greater difficulties, this province of Teutonic tongue not having accepted the annexation to France as easily as the Walloon province of Trois-Evêchés, and the treaty of Westphalia presenting two contradictory clauses, one of which ceded to France all the rights of the Emperor and the Empire, and the other of which reserved the 'immediateness' of the lords and the ten cities of the prefecture of Alsace towards the Empire [see GERMANY: 1648]. . . . At last, on the complaints carried to the Germanic Diet by the ten Alsacian cities, joined by the German feudatories of Trois-Evêchés, Louis, who was then very conciliatory towards the Diet, consented to take for arbiters the King of Sweden and some princes and towns of Germany (1665). The arbitration was protracted for more than six years. In the beginning of 1672, the arbiters rendered an ambiguous decision which decided nothing and satisfied no one. War with Holland broke out meanwhile and changed all the relations of France with Germany. . . . Louis XIV. disarmed or took military occupation of the ten cities and silenced all opposition. . . . In the conferences of Nimeguen, the representatives of the Emperor and the Empire endeavored to return to the 'immediateness,' but the King would not listen to a renewal of the arbitration, and declared all debate superfluous. 'Not only,' said the French plenipotentiaries, 'ought the King to exercise, as in fact he does exercise, sovereign dominion over the ten cities, but he might also extend it over Strasburg, for the treaty of Münster furnishes to this city no special title guaranteeing its independence better than that of the other cities.' It was the first time that Louis had disclosed this bold claim, resting on an inaccurate assertion. The Imperialists, terrified, yielded as regarded the ten cities, and Alsace was not called in question in the treaty of Nimeguen. Only the Imperialists protested, by a separate act, against the conclusions which might be drawn from this omission. The ten cities submitted and took to the King an oath of fidelity, without reservation towards the Empire; their submission was celebrated by a medal

bearing the device: 'Alsatia in provinciam reducta' (1680). The treaty of Nimeguen was followed by divers measures destined to win the Alsatian population. . . . This wise policy bore its fruits, and Alsace, tranquilized, gave no more cause of anxiety to the French government. France was thenceforth complete mistress of the possessions which had been ceded to her by the Empire; this was only the first part of the work; the point in question now was, to complete these possessions by joining to them their natural appendages which the Empire had not alienated. The boundaries of Lower Alsace and the Messin district were ill defined, encroached upon, entangled, on the Rhine, on the Sarre, and in the Vosges, by the fiefs of a host of petty princes and German nobles. This could not be called a frontier. Besides, in the very heart of Alsace, the great city of Strasburg preserved its independence towards France and its connection with the Empire. A pacific method was invented to proceed to aggrandizements which it would seem could only be demanded by arms; a pacific method, provided that France could count on the weakness and irresolution of her neighbors; this was to investigate and revendicate everything which, by any title and at any epoch whatsoever, had been dependent on Alsace and Trois-Evêchés. We may comprehend whether this would lead, thanks to the complications of the feudal epoch; and it was not even designed to stop at the feudal system, but to go back to the times of the Frankish kings! Chambers of 'reannexation' were therefore instituted, in 1679, in the Parliament of Metz, and in the sovereign council of Alsace, with a mission which their title sufficiently indicated. . . . Among the nobles summoned, figured the Elector of Treves, for Oberstein, Falkenburg, etc.; the Landgrave of Hesse, for divers fiefs; the Elector Palatin, for Seltz and the canton situated between the Lauter and the Keich (Hogenbach, Germersheim, etc.); another prince palatine for the county of Veldentz; the Bishop of Speyer, for a part of his bishopric; the city of Strasburg, for the domains which it possessed beyond the Rhine (Wasselonne and Marlenheim); lastly, the King of Sweden, for the duchy of Deux-Ponts or Zweibrücken, a territory of considerable extent and of irregular form, which intersected the cis-Rhenish Palatinate. . . . By divers decrees rendered in March, August, and October, 1680, the sovereign council of Alsace adjudged to the King the sovereignty of all the Alsatian seigniories. The nobles and inhabitants were summoned to swear fidelity to the King, and the nobles were required to recognize the sovereign council as judge in last resort. The chamber of Metz acted on a still larger scale than the chamber of Breisach. April 12, 1680, it united to Trois-Evêchés more than 80 fiefs, the Lorraine marquisate of Pont-à-Mousson, the principality of Salm, the counties of Saarbrück and Veldentz, the seigniories of Sarrebourg, Bitche, Homburg, etc. The foundation of the new town of Sarre-Louis and the fortification of Bitche consolidated this new frontier; and not only was the course of the Sarre secured to France, but France, crossing the Sarre, encroached deeply on the Palatinate and the Electorate of Treves, posted herself on the Nabe and the Blies, and threw, as an advance-guard, on a peninsula of the Moselle, the fortress of Mont-Royal, half-way from Treves to Coblenz, on the territories of the county of Veldentz. The parliament of Franche-Comté, newly French as it was, zealously followed the example of the two neighboring courts. There was also a frontier to round towards the Jura. . . . The Duke of Wurtemberg was required to swear allegiance to the King for his county of

Montbéliard. . . . The acquisitions made were trifling compared with those which remained to be made. He [Louis XIV] was not sure of the Rhine, not sure of Alsace, so long as he had not Strasburg, the great city always ready to throw upon the French bank of the river the armies of the Empire. France had long aimed at this conquest. As soon as she possessed Metz she had dreamed of Strasburg. . . . Though the King and Louvois had prevented Créqui from besieging the place during the war, it was because they counted on surprising it after peace. This great enterprise was most ably manœuvred." The members of the regency of the city were gained over, one by one. "The Imperial troops had evacuated the city pursuant to the treaty of Nimeguen; the magistrates dismissed 1,200 Swiss which the city had in its pay; then, on the threatening demands of the French, they demolished anew Fort Kehl, which they had rebuilt since its destruction by Créqui. When the fruit seemed ripe, Louis stretched out his hand to gather it. In the latter part of September, 1681, the garrisons of Lorraine, Franche-Comté, and Alsace put themselves in motion. . . . The 28th, 35,000 men were found assembled before the city; Baron de Montclar, who commanded this army, informed the magistrates that 'the sovereign chamber of Breisach having adjudged to the king the sovereignty of all Alsace, of which Strasburg was a member, his Majesty desired that they should recognize him as their sovereign lord, and receive a garrison.'" On September 30 the capitulation of the city was signed; on October 23 the king was received as its sovereign."—H. Martin, *History of France: Age of Louis XIV* (tr. by M. L. Booth), v. 1, ch. 7.—See also GERMANY: 1648-1715; NETHERLANDS: 1674-1678.

1681-1698.—Climax of persecution of Huguenots.—Dragonnades.—Revocation of the Edict of Nantes.—Great exodus of French Protestants and consequent national loss.—"Love and war suspended for a considerable time" the ambition of the king to extinguish heresy in his dominions and establish uniformity of religious worship; "but when Louis became satiated at once with glory and pleasure, and when Madame de Maintenon, the Duke de Beauvilliers, the Duke de Montausier, Bossuet, the Archbishop of Rheims, the Chancellor Letellier, and all the religious portion of the court, began to direct his now unoccupied and scrupulous mind to the interests of religion, Louis XIV. returned to his plans with renewed ardor. From bribery they proceeded to compulsion. Missionaries, escorted by dragoons, spread themselves at the instigation of Bossuet, and even of Fénelon, over the western, southern and eastern provinces, and particularly in those districts throughout which Protestantism, more firmly rooted among a more tenacious people, had as yet resisted all attempts at conversion by preaching. . . . Children from above seven years of age were authorized to abjure legally the religion of their fathers. The houses of those parents who refused to deliver up their sons and daughters were invaded and laid under contributions by the royal troops. The expropriation of their homes, and the tearing asunder of families, compelled the people to fly from persecution. The king, uneasy at this growing depopulation, pro-

nounced the punishment of the galleys against those who sought liberty in flight; he also ordered the confiscation of all the lands and houses which were sold by those proprietors who were preparing to quit the kingdom. . . . Very soon the proscription was organized en masse: all the cavalry in the kingdom, who, on account of the peace, were unemployed, were placed at the disposal of the preachers and bishops, to uphold their missions [known as the dragonnades] with the sabre. . . . Bossuet approved of these persecutions. Religious and political faith, in his eyes, justified their necessity. His correspondence is full of evidence, while his actions prove that he was an accomplice: even his eloquence . . . overflowed with approbation of, and enthusiasm for, these oppressions of the soul and terrors of heresy."—A. de Lamartine, *Memoirs of celebrated characters*, v. 3: *Bossuet*.—"The heroism of conviction, it has been truly said, was now displayed, not in resistance, but, if the paradox may be admitted, in flight. The outflow was for the moment arrested at the remonstrance of Colbert, now for the last time listened to in the royal councils, and by reason of the sympathy aroused by the fugitives in England; but not before 3,000 families had left the country. The retirement and death of the great minister were the signal for revived action, wherever an assembly of huguenots larger than usual might warrant or colour a suspicion of rebellion. In such excuses, not as yet an avowed crusade, the troopers of the duke de Noailles were called in at Grenoble, Bourdeaux, and Nimes. Full forty churches were demolished in 1683, more than a hundred in 1684. But the system of military missions was not organized until in 1685 the defence of the Spanish frontier offered the opportunity for a final subjugation of the huguenots of Béarn. The dragonnade passed through the land like a pestilence. From Guienne to Dauphiné, from Poitou to Upper Languedoc, no place was spared. Then it pervaded the south-east country, about the Cevennes and Provence, and ravaged Lyons and the Pays de Gex. In the end, the whole of the north was assailed, and the failing edict of Nantes was annulled on the 1st of October. The sombre mind of Madame de Maintenon had postulated the Recall as a preliminary to the marriage which the king had already conceded. On the 21st of the month the great church at Charenton was doomed; and on the 22nd the 'unadvised and precipitate' Edict of Revocation was registered in the Chambre des Vacances. . . . The year 1685 is fitly identified with the depopulation of France. And yet, with a blindness that appears to us incredible, the government refused to believe in the desire or the possibility of escape. The penalties attached to capture on the road,—the galleys or the nunnery,—the vigilant watch at the frontier, the frigates cruising by every coast, all these difficulties seem to have persuaded Louvois that few would persist in risking flight. What these measures actually effected was doubtless to diminish the exodus, but in no marked degree. At length, it came to be thought that the emigration was due to its prohibition, as though the huguenots must do a thing from mere perverseness. The watch was relaxed, and a result unlooked for issued. It was the signal of the greatest of the emigrations, that of 1688. . . . In the statistical question [as to the total number of the Huguenot exiles from France after the revocation of the Edict of Nantes] it is impossible to arrive at a certain result; and the range which calculation or conjecture has allowed to successive historians may make one

pause before attempting a dogmatic solution. Basnage, a year after the Recall, reckoned the emigrants above 150,000: next year Jurieu raised the total above 200,000. Writing later Basnage found between 300,000 and 400,000; and the estimate has been accepted by Sismondi. Lastly Voltaire, followed in our own day by Hase, counted 500,000. These are a few of the sober calculations, and their mean will perhaps supply the ultimate figure. I need only mention, among impossible guesses, that of Limiers, which raises the account to 800,000, because it has been taken up by the Prussian statesman Von Dohm. . . . The only historian who professes to have pursued the enquiry in exact detail is Capefigue; and from his minute scrutiny of the cartons des généralités, as prepared in the closing years of the 17th century, he obtains a computation of 225,000 or 230,000. Such a result must be accepted as the absolute minimum; for it was the plain interest of the intendants who drew up the returns, to put all the facts which revealed the folly of the king's action at the lowest cipher. And allowing the accuracy of Capefigue's work, there are other reasons for increasing his total. . . . We cannot set the emigration at a lower fraction than one-fifth of the total huguenot society. If the body numbered two millions, the outflow will be 400,000. If this appear an extreme estimate, it must be remembered that one-fifth is also extreme on the other side. Reducing the former aggregate to 1,500,000, it will be clearly within the bounds of moderation to leave the total exodus a range between 300,000 and 350,000. How are we to distribute this immense aggregation? Holland certainly claims near 100,000; England, with Ireland and America, probably 80,000. Switzerland must have received 25,000; and Germany, including Brandenburg, thrice that number. The remainder will be made up from the north of Europe, and from the exiles whom commerce or other causes carried in isolated households elsewhere, and of whom no record is preserved to us. . . . The tale then of the emigrants was above 300,000. It follows to ask what was the material loss involved in their exodus. Caveirac is again the lowest in his estimate: he will not grant the export of more than 250,000 livres. He might have learnt from Count d'Avaux himself, that those least likely to magnify the sum confessed that by the very year of the Recall twenty million livres had gone out of the country; and it is certain that the wealthier merchants deferred their departure in order to carry as much as they could with them. Two hundred and fifty traders are said to have quitted Rouen in 1687 and 1688. Probably the actual amount was very far in excess of these twenty millions: and a calculation is cited by Macpherson which even affirms that every individual refugee in England brought with him on an average money or effects to the value of £60. . . . It will be needless to add many statistics of the injury caused by their withdrawal from France. Two great instances are typical of the rest. Lyons which had employed 18,000 silklooms had but 4,000 remaining by the end of the century. Tours with the same interest had had 800 mills, 80,000 looms, and perhaps 4,000 workpeople. Of its 3,000 ribbon-factories only sixty remained. Equally significant was the ruin of the woollen trade of Poitou. Little was left of the druggut-manufacture of Coulonges and Châtaigneraie, or of the industry in serges and bombazines at Thouars; and the export traffic between Châtaigneraie and Canada, by way of La Rochelle, was in the last year of the century absolutely extinct."—R. 1689-1690.—War of the League of Augsburg.—Second devastation of the Palatinate.—“The interference of Lewis in Ireland on behalf of James [the Second, the de throne d Stuart king] caused William [prince of Orange, now king of England] to mature his plans for a great Continental confederacy against France. On May 12, 1689, William, as Stadtholder of the United Provinces, had entered into an offensive and defensive alliance with the Emperor against Lewis. On May 17, as King of England, he declared war against France; and on December 30 joined the alliance between the Emperor and the Dutch. His example was followed on June 6, 1690, by the King of Spain, and on October 20 of the same year by Victor Amadeus, Duke of Savoy. This confederation was called the ‘Grand Alliance.’ Its main object was declared to be to curb the power and ambition of Lewis XIV.; to force him to surrender his conquests, and to confine his territories to the limits agreed upon between him and the Emperor at the treaty of Westphalia (1648), and between France and Spain at the treaty of the Pyrenees (1650). The League of Augsburg, which William had with so much trouble brought about, had now successfully developed into the Grand Alliance.”—E. Hale, *Fall of the Stuarts and Western Europe*, ch. 14, sect. 5.—“The work at which William had toiled indefatigably during many gloomy and anxious years was at length accomplished. The great coalition was formed. It was plain that a desperate conflict was at hand. The oppressor of Europe would have to defend himself against England allied with Charles the Second King of Spain, with the Emperor Leopold, and with the Germanic and Batavian federations, and was likely to have no ally except the Sultan, who was waging war against the House of Austria on the Danube. Lewis had, towards the close of the preceding year, taken his enemies at a disadvantage, and had struck the first blow before they were prepared to parry it. But that blow, though heavy, was not aimed at the part where it might have been mortal. Had hostilities been commenced on the Batavian frontier, William and his army would probably have been detained on the continent, and James might have continued to govern England. Happily, Lewis, under an infatuation which many pious Protestants confidently ascribed to the righteous judgment of God, had neglected the point on which the fate of the whole civilised world depended, and had made a great display of power, promptitude, and energy, in a quarter where the most splendid achievements could produce nothing more than an illumination and a Te Deum. A French army under the command of Marshal Duras had invaded the Palatinate and some of the neighbouring principalities. But this expedition, though it had been completely successful, and though the skill and vigour with which it had been conducted had excited general

admiration, could not perceptibly affect the event of the tremendous struggle which was approaching. France would soon be attacked on every side. It would be impossible for Duras long to retain possession of the provinces which he had surprised and overrun. An atrocious thought rose in the mind of Louvois, who, in military affairs, had the chief sway at Versailles. . . . The ironhearted statesman submitted his plan, probably with much management and with some disguise, to Lewis; and Lewis, in an evil hour for his fame, assented. Duras received orders to turn one of the fairest regions of Europe into a wilderness. Fifteen years had elapsed since Turenne had ravaged part of that fine country. But the ravages committed by Turenne, though they have left a deep stain on his glory, were mere sport in comparison with the horrors of this second devastation. The French commander announced to near half a million of human beings that he granted them three days of grace, and that, within that time, they must shift for themselves. Soon the roads and fields, which then lay deep in snow, were blackened by innumerable multitudes of men, women, and children flying from their homes. Many died of cold and hunger: but enough survived to fill the streets of all the cities of Europe with lean and squalid beggars, who had once been thriving farmers and shopkeepers. Meanwhile the work of destruction began. The flames went up from every marketplace, every hamlet, every parish church, every country seat, within the devoted provinces. The fields where the corn had been sown were ploughed up. The orchards were hewn down. No promise of a harvest was left on the fertile plains near what had once been Frankenthal. Not a vine, not an almond tree, was to be seen on the slopes of the sunny hills round what had once been Heidelberg. No respect was shown to palaces, to temples, to monasteries, to infirmaries, to beautiful works of art, to monuments of the illustrious dead. The far-famed castle of the Elector Palatine was turned into a heap of ruins. The adjoining hospital was sacked. The provisions, the medicines, the pallets on which the sick lay, were destroyed. The very stones on which Manheim had been built were flung into the Rhine. The magnificent Cathedral of Spire perished, and with it the marble sepulchres of eight Cæsars. The coffins were broken open. The ashes were scattered to the winds. Treves, with its fair bridge, its Roman baths and amphitheatre, its venerable churches, convents, and colleges, was doomed to the same fate. But, before this last crime had been perpetrated, Lewis was recalled to a better mind by the execrations of all the neighbouring nations, by the silence and confusion of his flatterers, and by the expostulations of his wife. . . . He relented; and Treves was spared. In truth he could hardly fail to perceive that he had committed a great error. The devastation of the Palatinate, while it had not in any sensible degree lessened the power of his enemies, had inflamed their animosity, and had furnished them with inexhaustible matter for invective. The cry of vengeance rose on every side. Whatever scruple either branch of the House of Austria might have felt about coalescing with Protestants was completely removed.”—T. B. Macaulay, *History of England*, ch. 11.

1689-1691.—Campaigns in the Netherlands and in Savoy.—“Our limits will not permit us to describe at any length the war between Louis XIV. and the Grand Alliance, which lasted till the Peace of Ryswick, in 1697, but only to note some of the chief incidents of the different campaigns. The Imperialists had, in 1680, notwithstanding the efforts it was still necessary to make against the Turks, brought an army of 80,000 men into the field, which was divided into three bodies under the command of the Duke of Lorraine, the Elector of Bavaria, and the Elector of Brandenburg; while the Prince of Waldeck, in the Netherlands, was at the head of a large Dutch and Spanish force, composed, however, in great part of German mercenaries. In this quarter, Marshal d’Humières was opposed to Waldeck, while Duras commanded the French army on the Rhine. In the south, the Duke of Noailles maintained a French force in Catalonia. Nothing of much importance was done this year; but on the whole the war went in favour of the Imperialists, who succeeded in recovering Mentz and Bonn. 1690: This year, Marshal d’Humières was superseded by the Duke of Luxembourg, who infused more vigour into the French operations. . . . Catinat was sent this year into Dauphiné to watch the movements of the Duke of Savoy, who was suspected by the French Court, and not without reason, of favouring the Grand Alliance. The extravagant demands of Louis, who required Victor Amadeus to unite his troops with the army of Catinat, and to admit a French garrison into Vercelli, Verrua, and even the citadel of Turin itself, till a general peace should be effected, caused the Duke to enter into treaties with Spain and the Emperor, June 3d and 4th; and on October 20th, he joined the Grand Alliance by a treaty concluded at the Hague with England and the States-General. This last step was taken by Victor Amadeus in consequence of his reverses. He had sustained from Catinat in the battle of Staffarda (August 17th) a defeat which only the skill of a youthful general, his cousin the Prince Eugene, had saved from becoming a total rout. As the fruits of this victory, Catinat occupied Saluzzo, Susa, and all the country from the Alps to the Tanaro. During these operations another French division had reduced, without much resistance, the whole of Savoy, except the fortress of Montmélian. The only other event of importance during this campaign was the decisive victory gained by Luxembourg over Prince Waldeck at Fleurus, July 1st. The captured standards, more than a hundred in number, which Luxembourg sent to Paris on this occasion, obtained for him the name of the ‘Tapassier de Nôtre Dame.’ Luxembourg was, however, prevented from following up his victory by the orders of Louvois, who forbade him to lay siege to Namur or Charleroi. Thus, in this campaign, France maintained her preponderance on land as well as at sea by the victory off Beachy Head [see ENGLAND: 1690 (June)]. . . . The Imperialists had this year lost one of their best leaders by the death of the Duke of Lorraine (April). He was succeeded as commander-in-chief by Maximilian Emanuel, Elector of Bavaria; but nothing of importance took place upon the Rhine. 1691: The campaign of this year was singularly barren of events, though both the French and English kings took a personal part in it. In March, Louis and Luxembourg, laid siege to Mons, the capital of Hainault, which surrendered in less than three weeks. King William, who was in the neighbour-

hood, could not muster sufficient troops to venture on its relief. Nothing further of importance was done in this quarter, and the campaign in Germany was equally a blank. On the side of Piedmont, Catinat took Nice, but, being confronted by superior numbers, was forced to evacuate Piedmont; though, by way of compensation, he completed the conquest of Savoy by the capture of Montmélian. Noailles gained some trifling successes in Spain; and the celebrated French corsair, Jean Bart, distinguished himself by his enterprises at sea. One of the most remarkable events of the year was a domestic occurrence, the death of Louvois.”—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 5.—See also SAVOY AND PIEDMONT: 1580-1713; LIÈGE: 1691.

ALSO IN: F. P. Guizot, *Popular history of France*, v. 5, ch. 44.

1692.—Taking of Namur and victory of Steinkirk, or Steenkerke.—“Never perhaps in the whole course of his unresting life were the energies of William [of Orange] more severely taxed, and never did his great moral and intellectual qualities shine forth with a brighter lustre, than in the years 1692-93. The great victory of La Hogue [see ENGLAND: 1692] and the destruction of the flower of the French fleet did, it is true, relieve England of any immediate dread either of insurrection or invasion, and so far the prospect before him acquired a slight improvement towards the summer of 1692. But this was the only gleam of light in the horizon. . . . The great coalition of Powers which he had succeeded in forming to resist the ambition of Louis was never nearer dissolution than in the spring of 1692. The Scandinavian states, who had held aloof from it from the first, were now rapidly changing the benevolence of their neutrality into something not easily distinguishable from its reverse. The new Pope Innocent XII. showed himself far less amicably disposed towards William than his two predecessors. The decrepitude of Spain and the arrogant self-will of Austria were displaying themselves more conspicuously than ever. Savoy was ruled by a duke who was more than half suspected of being a traitor. . . . William did succeed in saving the league from dissolution, and in getting their armies once more into the field. But not, unfortunately, to any purpose. The campaign of the present year was destined to repeat the errors of the last, and these errors were to be paid for at a heavier cost. . . . The French king was bent upon the capture of the great stronghold of Namur, and the enemy, as in the case of Mons, were too slow in their movements and too ineffective in their dispositions to prevent it. Marching to the assault of the doomed city, with a magnificence of courtly pageantry which had never before been witnessed in warfare, Louis sat down before Namur, and in eight days its faint-hearted governor, the nominee of the Spanish viceroy of the Netherlands, surrendered at discretion. Having accomplished, or rather having graciously condescended to witness the accomplishment of this feat of arms, Louis returned to Versailles, leaving his army under the command of Luxembourg. The fall of Namur was a severe blow to the hopes of William, but yet worse disasters were in store for him. He was now pitted against one who enjoyed the reputation of the greatest general of the age, and William, a fair but by no means brilliant strategist, was unequal to the contest with his accomplished adversary. Luxembourg lay at Steinkirk, and William approaching him from a place named Lambeque, opened his attack upon him by a well-conceived surprise which

promised at first to throw the French army into complete disorder. Luxembourg's resource and energy, however, were equal to the emergency. He rallied and steadied his troops with astonishing speed, and the nature of the ground preventing the allies from advancing as rapidly as they had expected, they found the enemy in a posture to receive them. The British forces were in the front, commanded by Count Solmes, the division of Mackay, a name now honourable for many generations in the annals of continental, no less than of Scottish, warfare, leading the way. These heroes, for so, though as yet untried soldiers, they approved themselves, were to have been supported by Count Solmes with a strong body of cavalry and infantry, but at the critical moment he failed them miserably, and his failure decided the fortunes of the day. . . . The division was practically annihilated. Its five regiments, 'Cutt's, Mackay's, Angus's, Graham's, and Leven's, all,' as Corporal Trim relates pathetically, 'cut to pieces, and so had the English Life-guards been too, had it not been for some regiments on the right, who marched up boldly to their relief, and received the enemy's fire in their faces, before any one of their own platoons discharged a musket.' Bitter was the resentment in the English army at the desertion of these gallant troops by Count de Solmes, and William gave vent to one of his rare outbursts of anger at the sight. We have it indeed on the authority above quoted—unimpeachable as first-hand tradition, for Sterne had heard the story of these wars at the knees of an eyewitness of and actor in them—that the King 'would not suffer the Count to come into his presence for many months after.' The destruction of Mackay's division had indeed decided the issue of the struggle. Luxembourg's army was being rapidly strengthened by reinforcements from that of Boufflers, and there was nothing for it but retreat. The loss on both sides had been great, but the moral effect of the victory was still greater. William's reputation for generalship, perhaps unduly raised by his recent exploits in Ireland, underwent a serious decline."—H. D. Traill, *William the Third*, ch. 10.—On the Rhine and on the Spanish frontier nothing of importance occurred during 1692. The duke of Savoy gained some advantages on his side and invaded Dauphiny, without any material result. The invasion called into action a young heroine, Mademoiselle de La Tour-du-Pin, whose portrait has a place at Saint-Denis by the side of that of Jeanne D'Arc.—H. Martin, *History of France: Age of Louis XIV* (tr. by M. L. Booth), v. 2, ch. 2.

1693 (July).—Battle of Neerwinden, or Landen.—"Lewis had determined not to make any advance towards a reconciliation with the new government of England till the whole strength of his realm had been put forth in one more effort. A mighty effort in truth it was, but too exhausting to be repeated. He made an immense display of force at once on the Pyrenees and on the Alps, on the Rhine and on the Meuse, in the Atlantic and in the Mediterranean. That nothing might be wanting which could excite the martial ardour of a nation eminently high-spirited, he instituted, a few days before he left his palace for the camp, a new military order of knighthood, and placed it under the protection of his own sainted ancestor and patron. The cross of Saint Lewis shone on the breasts of the gentlemen who had been conspicuous in the trenches before Mons and Namur, and on the fields of Fleurus and Steinkirk. . . . On the 18th of May

Lewis left Versailles. Early in June he was under the walls of Namur. The Princesses, who had accompanied him, held their court within the fortress. He took under his immediate command the army of Boufflers, which was encamped at Gembloux. Little more than a mile off lay the army of Luxembourg. The force collected in that neighbourhood under the French lilies did not amount to less than 120,000 men. Lewis had flattered himself that he should be able to repeat in 1693 the stratagem by which Mons had been taken in 1601 and Namur in 1692; and he had determined that either Liege or Brussels should be his prey. But William had this year been able to assemble in good time a force, inferior indeed to that which was opposed to him, but still formidable. With this force he took his post near Louvain, on the road between the two threatened cities, and watched every movement of the enemy. . . . Just at this conjuncture Lewis announced his intention to return instantly to Versailles, and to send the Dauphin and Boufflers, with part of the army which was assembled near Namur, to join Marshal Lorges who commanded in the Palatinate. Luxembourg was thunderstruck. He expostulated boldly and earnestly. Never, he said, was such an opportunity thrown away. . . . The Marshal reasoned: he implored: he went on his knees: but all was vain; and he quitted the royal presence in the deepest dejection. Lewis left the camp a week after he had joined it, and never afterwards made war in person. . . . Though the French army in the Netherlands had been weakened by the departure of the forces commanded by the Dauphin and Boufflers, and though the allied army was daily strengthened by the arrival of fresh troops, Luxembourg still had a superiority of force; and that superiority he increased by an ardoit stratagem." He succeeded by a feint in inducing William to detach 20,000 men from his army and to send them to Liege. He then moved suddenly upon the camp of the allies, with 80,000 men, and found but 50,000 to oppose him. "It was still in the [English] King's power, by a hasty retreat, to put between his army and the enemy the narrow, but deep, waters of the Gette, which had lately been swollen by rains. But the site which he occupied was strong; and it could easily be made still stronger. He set all his troops to work. Ditches were dug, mounds thrown up, palisades fixed in the earth. In a few hours the ground wore a new aspect; and the King trusted that he should be able to repel the attack even of a force greatly outnumbering his own. . . . On the left flank, the village of Romsdorff rose close to the little stream of Landen, from which the English have named the disastrous day. On the right was the village of Neerwinden. Both villages were, after the fashion of the Low Countries, surrounded by moats and fences." Notwithstanding the strength of the position held by the allies, and the valor with which they defended it, they were driven out of Neerwinden (July 20)—but only after the shattered village had been five times taken and retaken—and across the Gette, in confusion and with heavy loss. "The French were victorious: but they had bought their victory dear. More than 10,000 of the best troops of Lewis had fallen. Neerwinden was a spectacle at which the oldest soldiers stood aghast. The streets were piled breast high with corpses. Among the slain were some great lords and some renowned warriors. . . . The region, renowned as the battle field, through many ages, of the greatest powers of Europe, has seen only two more terrible days, the day of Malplaquet and the day of Waterloo. . . . There was no pursuit, though the sun was still high in the heaven

when William crossed the Gette. The conquerors were so much exhausted by marching and fighting that they could scarcely move. . . . A very short delay was enough for William. . . . Three weeks after his defeat he held a review a few miles from Brussels. The number of men under arms was greater than on the morning of the bloody day of Landen; their appearance was soldierlike; and their spirit seemed unbroken. William now wrote to Heinsius that the worst was over. 'The crisis,' he said, 'has been a terrible one. Thank God that it has ended thus.' He did not, however, think it prudent to try at that time the event of another pitched field. He therefore suffered the French to

said to have entertained hopes of carrying the war in that one campaign to the very gates of Lyons; but the successes which inspired him with such expectations alarmed the court of France, and Louis detached in haste a large body of cavalry to reinforce Catinat. That general marched at once to fight the Duke of Savoy, who, presuming on his strength, suffered the French to pour out from the valley of Suza into the plain of Piedmont, abandoned the heights, and was consequently defeated at Marsaglia on the 4th of October. Catinat, however, could not profit by his victory; he was too ill supplied in every respect to undertake the siege of Coni, and the state of the French armies at this

BATTLE OF MARSAGLIA

(From a painting by Deveria)

besiege and take Charleroi; and this was the only advantage which they derived from the most sanguinary battle fought in Europe during the seventeenth century."—T. B. Macaulay, *History of England*, v. 4, ch. 20.

1693 (October).—Defeat of the duke of Savoy at Marsaglia.—"The great efforts made by Louis in the north prevented him from strengthening the army of Catinat sufficiently to act with energy against the Savoyard prince, and it was determined to restrict the campaign of 1693 to the defensive on the part of France. The forces of the duke had in the meantime been reinforced from Germany, and he opened the campaign with a brilliant and successful movement against Pignerol. . . . He is

time marks as plainly that Louvois was dead, as the state of the finances speaks the loss of Colbert."—G. P. R. James, *Life and times of Louis XIV*, v. 2, ch. 11.

1694.—Campaigns without battles.—Operations at sea.—In 1694, King William was "in a position to keep an army afoot in the Netherlands stronger than any had hitherto been. It was reckoned at 31,800 horse, including a corps of dragoons, and 58,000 foot; so great a force had never been seen within the memory of man. All the best-known generals, who had hitherto taken part in the wars of western Europe, were gathered round him with their troops. The French army, with which the Dauphin, but not the King, was present, was not much smaller; it was once more led by Marshal Luxembourg. These two hosts lay over against one another in their camps for a couple of

months; neither offered battle to the other. . . . This campaign is notable in the annals of the art of war for the skill with which each force pursued or evaded the other; but the results were limited to the recovery by the allies of that unimportant place, Huy. William had thought himself fortunate in having come out of the previous campaign without disaster: in this campaign the French were proud to have held their lines in presence of a superior force. On the coast also the French were successful in repelling a most vehement and perilous attack. They had been warned that the English were going to fall on Brest, and Vauban was sent down there in haste to organise the defence; and in this he was thoroughly successful. When the English landed on the coast in Camaret Bay (for the fort of that name had first to be taken) they were saluted by two batteries, which they had never detected, and which were so well placed that every shot told, and the grape-shot wounded almost every man who had ventured ashore. The gallant General, Talmash, was also hit, and ere long died of his wounds. The English fleet, which had come to bombard Brest, was itself bombarded from the walls. [See BREST: 1694.] But though this great effort failed, the English fleet still held the mastery of the Channel: it also blockaded the northern coast of France. After Brest it attacked Dieppe, laying it almost entirely in ashes; thence it sailed to Havre, and St. Malo, to Calais, and Dunkirk. This was of great use in the conduct of the war. King William observes that had not the coasts been kept in a state of alarm, all the forces detained there for defensive purposes would have been thrown on the Netherlands. . . . But the most important result of the maritime war lay on another side. In May, 1694, Noailles pushed into Catalonia, supported by Tourville, who lay at anchor with the fleet in the Bay of Rosas. . . . It was of incalculable importance to Spain to be in alliance with the maritime powers. Strengthened by a Dutch fleet and some Spanish ships, Admiral Russell now appeared in the Mediterranean. He secured Barcelona from the French, who would never have been kept out of the city by the Spaniards alone. The approach of the English fleet had at this time the greatest influence in keeping the Duke of Savoy staunch to the confederation. In Germany the rise of the house of Hanover to the Electoral dignity had now caused most unpleasant complications. A shoal of German princes, headed by the King of Denmark, as a Prince of the Empire, and offended by the preference shown to Hanover, inclined, if not to alliance with France, at least to neutrality. . . . We can have no conception, and in this place we cannot possibly investigate, with what unbroken watchfulness King William, supported by Heinsius, looked after the German and the Northern courts, so as to keep their irritation from reacting on the course of the great war. . . . When the French, in June, 1694, crossed the Rhine, meaning, as they boasted with true Gallic arrogance, soon to dip their swords in the Danube, they found the Prince of Baden so well prepared, and posted so strongly near Wisloch, that they did not venture to attack him. . . . The general result is this: neither side was as yet really superior to the other; but the French power was everywhere checked and held within bounds by the arms and influence of William III."—L. von Ranke, *History of England, 17th century, v. 5, bk. 20, ch. 6.*

1694-1697.—Wars with England in Newfoundland (King William's War).—Results. See NEWFOUNDLAND: 1694-1698; CANADA: 1692-1697.

1695-1696.—End of the War of the League of Augsburg.—Loss of Namur.—Terms with Savoy.—Peace of Ryswick.—"Military and naval efforts were relaxed on all sides; on the Rhine the Prince of Baden and the Maréchal de Logres, both ill in health, did little but observe each other; and though the Duke of Savoy made himself master of Casal on the 11th July, 1695, no other military event of any consequence took place on the side of Italy, where Louis entered into negotiations with the duke, and succeeded, in the following year, in detaching him from the league of Augsburg. As the price of his defection the whole of his territories were to be restored to him, with the exception of Suza, Nice, and Montmeillan, which were promised to be delivered also on the signature of a general peace. Money was added to render the consent of a needy prince more ready. . . . The duke promised to obtain from the emperor a pledge that Italy should be considered as neutral ground, and if the allies refused such a pledge, then to join the forces of Savoy to those of France, and give a free passage to the French through his dominions. In consequence of this treaty . . . he applied to the emperor for a recognition of the neutrality of Italy, and was refused. He then hastened, with a facility which distinguished him through life, to abandon his friends and join his enemies, and within one month was generalissimo for the emperor in Italy fighting against France, and generalissimo for the King of France in Italy fighting against the emperor. Previous to this chance, however, the King of England opened the campaign of 1695 in the Netherlands by the siege of Namur. The death of Luxemburg had placed the French army of Flanders under the command of the incapable Marshal Villeroy; and William, feeling that his enemy was no longer to be much respected, assumed at once the offensive. He concealed his design upon Namur under a variety of manœuvres which kept the French generals in suspense; and, then leaving the Prince of Vaudemont to protect the principal Spanish towns in Flanders, he collected his troops suddenly; and while the Duke of Bavaria invested Namur, he covered the operations of the siege with a considerable force. Villeroy now determined to attack the Prince of Vaudemont, but twice suffered him to escape; and then, after having apparently hesitated for some time how to drive or draw the King of England from the attack upon Namur, he resolved to bombard the city of Brussels, never pretending to besiege it, but alleging as his motive for a proceeding which was merely destructive, the bombardment of the maritime towns of France by the English. During three days he continued to fire upon the city, ruining a great part thereof, and then withdrew to witness the surrender of the citadel of Namur on the 2nd September, the town itself having capitulated on the 4th of the preceding month. As some compensation, though but a poor one, for the loss of Namur, and the disgrace of the French arms in suffering such a city to be captured in the presence of 80,000 men, Montal took Dixmude and Deynse in the course of June. . . . The only after-event of any importance which occurred in Flanders during this war, was the capture of Ath by the French, in the year 1697, while negotiations for peace were going on with activity at Ryswick. . . . Regular communications regarding peace having been once established, Ryswick, near the Hague, was appointed for the meeting of plenipotentiaries; and Harlay, Torci, and Callières appeared at that place as representatives of Louis. The articles which had been formerly sketched out at Utrecht formed the base of the treaties now agreed upon; and Louis

yielded far more than could have been expected from one so proud and so successful."—G. P. R. James, *Life and times of Louis XIV*, v. 2, ch. 11.

1697.—Peace of Ryswick.—"The Congress for the treaty or series of treaties that was to terminate the great European war, which had now lasted for upwards of nine years, was held at Ryswick, a château near the Hague. The conferences were opened in May, 1697. Among the countries represented were Sweden, Austria, France, Spain, England, Holland, Denmark and the various States of the German Empire. The treaties were signed, in severalty, between the different States, except Austria, in September and October, 1697, and with the Emperor, in November. The principal features of the treaty were, as between France and Spain, that, the former country was to deliver to Spain Barcelona, and other places in Catalonia; also various places which France had taken in the Spanish Netherlands, during the war, including Luxembourg and its Duchy, Charleroi, Mons and Courtrai. Various others were excepted, to be retained by France, as dependencies of French possessions. The principal stipulations of the treaty, as between France and Great Britain, were that France formally recognized William III. as lawful king of Great Britain, and agreed not to trouble him in the possession of his dominions, and not to assist his enemies, directly or indirectly. This article had particular relation to the partisans of the exiled Stuart king, then living in France. By another article, all places taken by either country in America, during the war, were to be relinquished, and the Principality of Orange and its estates situated in the south of France were to be restored to William. In the treaty with Holland, certain possessions in the East Indies were to be restored to the Dutch East India Company; and important articles of commerce were appended, among which the principle was laid down that free ships should make free goods, not contraband of war. By the treaty with the Emperor and the German States, the Treaties of Westphalia and Nymegen were recognized as the basis of the Treaty of Ryswick, with such exceptions only as were to be provided in the latter treaty. France also was to give up all territory she had occupied or controlled before or during the war under the name of 'reunions,' outside of Alsace, but the Roman Catholic religion was to be preserved in Alsace as it then existed. This concession by France included among other places Freiburg, Brisach, and Treves; and certain restitutions were to be made by France, in favor of Spire, the Electors of Treves, and Brandenburg and the Palatinate; also, others in favor of certain of the smaller German Princes. The city of Strasburg, in return, was formally ceded to France, . . . and the important fort of Kehl was yielded to the Empire. The navigation of the Rhine was to be free to all persons. The Duke of Lorraine was to be restored to his possessions with such exceptions as were provided in the treaty. By the terms of this treaty, a more advantageous peace was given to Spain than she had any expectation of. . . . Not only were the places taken in Spain, including the numerous fortified places in Catalonia, yielded up, but also, with some exceptions, those in the Spanish Netherlands, and also the important territory of Luxembourg; some places were even yielded to

Spain that France had gained under former treaties."—J. W. Gerard, *Peace of Utrecht*, ch. 4.—"The restitutions and cessions [from France to Germany] comprised Treves, Germersheim, Deux-Ponts, Veldentz, Montbéliard, Kehl, Freiburg, Breisach, Philippsburg, the Emperor and the Empire ceding in exchange Strasbourg to the King of France in complete sovereignty. . . . Louis XIV. had consented somewhat to relax the rigor of the treaty of Nimeguen towards the heir of the Duchy of Lorraine, nephew of the Emperor by his mother; he restored to the young Duke Leopold his inheritance in the condition in which Charles IV. had possessed it before the French conquest of 1670; that is to say, he restored Nancy, allowing only the ramparts of the Old Town to remain, and razing all the rest of the fortifications without the power of restoring them; he kept Marsal, an interior place calculated to hold Lorraine in check, and also Sarre-Louis, a frontier-place which separated Lorraine from the Germanic provinces; he restored Bitche and Homburg dismantled, without power to reestablish them, and kept Longwy in exchange for a domain of similar value in one of the Trois-Evêchés; finally, he no longer demanded, as at Nimeguen, four great strategic routes through Lorraine, and consented that the passage should always be open to his troops. The House of Lorraine was thus reestablished in its estates after twenty-seven years of exile."—H. Martin, *History of France: Age of Louis XIV* (tr. by M. L. Booth), v. 2, ch. 2.—See also AUSTRIA: 1672-1714; CANADA: 1692-1697; NEWFOUNDLAND: 1694-1697; HAITI, REPUBLIC OF: 1697-1803.

1702-1710.—Camisard rising of the French Protestants in the Cévennes.—"The movement known as the War of the Camisards is an episode of the history of Protestantism in France which, though rarely studied in detail and perhaps but partially understood, was not devoid of significance. When it occurred, in the summer of 1702, a period of little less than 17 years had elapsed since Louis XIV., by his edict of Fontainebleau, October, 1685, solemnly revoked the great and fundamental law enacted by his grandfather, Henry

IV., for the protection of the adherents of the Reformed faith, known in history as the Edict of Nantes. During the whole of that period the Protestants had submitted, with scarcely an attempt at armed resistance, to the proscription of their tenets. . . . The majority, unable to escape from the land of oppression, remained at home . . . nearly all of them cherishing the confident hope that the king's delusion would be short-lived, and that the edict under which they and their ancestors had lived for three generations would, before long, be restored to them with the greater part, if not the whole, of its beneficent provisions. Meanwhile, all the Protestant ministers having been expelled from France by the same law that prohibited the expatriation of any of the laity, the people of the Reformed faith found themselves destitute of the spiritual food they craved. True, the new legislation effected to regard that faith as dead, and designated all the former adherents of Protestantism, without distinction, as the 'New Converts,' 'Nouveaux Convertis.' And, in point of fact, the great majority had so far yielded to the terrible pressure of the violent measures brought to bear upon them . . . that they had consented to sign a promise to be 'reunited' to the Roman Catholic Church, or had gone at least once to mass. But they were still Protestants at heart. . . . Under these circumstances, feeling more than ever the need of religious comfort, now that remorse arose for a weak betrayal of conscientious conviction, the proscribed Protestants, especially in the south of France, began to meet clandestinely for divine worship in such retired places as seemed most likely to escape the notice of their vigilant enemies. . . . It was not strange that in so exceptional a situation, a phase of religious life and feeling equally exceptional should manifest itself. I refer to that appearance of prophetic inspiration which attracted to the province of Vivarais and to the Cévennes Mountains the attention of all Europe. . . . Historically . . . the influence of the prophets of the Cévennes was an important factor in the Protestant problem of the end of the 17th and the commencement of the 18th centuries. . . . Various methods were adopted to put an end to the prophets with their prophecies, which were for the most part denunciatory of Rome as Antichrist and foreshadowed the approaching fall of the papacy. But this form of enthusiasm had struck a deep root and it was hard to eradicate it. Imprisonment, in convent or jail, was the most common punishment, especially in the case of women. Not infrequently to imprisonment was added corporal chastisement, and the prophets, male and female, were flogged until they might be regarded as fully cured of their delusion. . . . But no utterances of prophets, however fervid and impassioned, would have sufficed to occasion an uprising of the inhabitants of the Cévennes Mountains, had it not been for the virulent persecution to which the latter found themselves exposed at the hands of the provincial authorities directly instigated thereto by the clergy of the established church. For it must be noticed that a large part of the population of the Cévennes was still Protestant, and made no concealment of the fact, even though the king's ministers affected to call them 'New Catholics,' or 'New Converts.' The region over which the Camisard war extended with more or less violence comprised six episcopal dioceses, which, in 1608, had an aggregate population of about two-thirds of a million of souls. Of these souls, though Protestantism had been dead in the eye of the law for 13 years, fully one-fourth were still Protestant. . . . The war may be said to have begun on the 24th of July, 1702, when the

Abbé du Chayla, a noted persecutor, was killed in his house, at Pont de Montvert, by a band of 40 or 50 of the 'Nouveaux Convertis,' whom he had driven to desperation by his cruelty to their fellow believers. If we regard its termination to be the submission of Jean Cavalier, the most picturesque and, in some regards, the most able of the leaders, in the month of May, 1704, the war lasted a little less than two years. But, although the French government had succeeded, rather by craft than by force, in getting rid of the most formidable of its opponents . . . it was not until five or six years later—that is, until 1709 or 1710—that . . . comparative peace was finally restored. . . . During the first months of the insurrection the exploits of the malcontents were confined to deeds of destruction accomplished by companies of venturesome men, who almost everywhere eluded the pursuit of the enemy by their superior knowledge of the intricacies of the mountain woods and paths. The track of these companies could easily be made out; for it was marked by the destruction of vicarages and rectories, by the smoke of burned churches, too often by the corpses of slain priests. The perpetrators of these acts of violence soon won for themselves some special designations, to distinguish them from the more passive Protestants who remained in their homes, taking no open part in the struggle. . . . About the close of 1702, however, or the first months of 1703, a new word was coined for the fresh emergency, and the armed Protestants received the appellation under which they have passed into history—the Camisards. Passing by all the strange and fanciful derivations of the word which seem to have no claim upon our notice, unless it be their evident absurdity, we have no difficulty in connecting it with those nocturnal expeditions which were styled 'Camisades'; because the warriors who took advantage of the darkness of the night to ride out and explore or force the enemy's entrenchments, sometimes threw over their armor a shirt that might enable them to recognize each other. Others will have it that, though the name was derived from the same article of apparel—the 'camisa' or shirt—it was applied to the Cévenol hands for another reason, namely, "that when they found opportunities, they carried off clean linen from the villages and left their soiled garments in exchange. The final overthrow of the Camisards "was not accomplished without the employment of 100,000 troops, certainly far more than ten times the total number ever brought into the field by the Camisards. . . . Not less than three officers of the highest grade in the service, marshals of France, were successively appointed to put down a revolt which it might have been expected a simple colonel could suffice to quell—M. de Broglie being succeeded by the Marshal de Montrevel, the Marshal de Montrevel by the Marshal de Villars, and the Marshal de Villars by the Marshal de Berwick."—H. M. Baird, *Camisard uprising (Papers of the American Society of Church History, v. 2, pp. 13-34)*.

1710.—War of the Spanish Succession: Misery of the nation.—Overtures for peace.—Conferences at Gertruydenberg.—“France was still reduced to extreme and abject wretchedness. Her finances were ruined. Her people were half starving. Marlborough declared that in the villages through which he passed in the summer of 1710, at least half the inhabitants had perished since the beginning of the preceding winter, and the rest looked as if they had come out of their graves. All the old dreams of French conquests in the Spanish Netherlands, in Italy, and in Germany were dispelled, and the French generals were now struggling desperately and skilfully to defend their own frontier. . . . In 1710, while the Whig ministry [in England] was still in power, but as a time when it was manifestly tottering to its fall, Lewis had made one more attempt to obtain peace by the most ample concessions. The conferences were held at the Dutch fortress of Gertruydenberg. Lewis declared himself ready to accept the conditions exacted as preliminaries of peace in the preceding year, with the exception of the article compelling Philip within two months to cede the Spanish throne. He consented, in the course of the negotiations, to grant to the Dutch nearly all the fortresses of the French and Spanish Netherlands, including among others Ypres, Tournay, Lille, Furnes, and even Valenciennes, to cede Alsace to the Duke of Lorraine, to destroy the fortifications of Dunkirk, and those on the Rhine from Bâle to Philipsburg. The main difficulty was on the question of the Spanish succession. . . . The French troops had already been recalled from Spain, and Lewis consented to recognise the Archduke [Charles of Austria, later Emperor Charles VI] as the sovereign, to engage to give no more assistance to his grandchild, to place four cautionary towns in the hands of the Dutch as a pledge for the fulfilment of the treaty, and even to pay a subsidy to the allies for the continuance of the war against Philip [grandson of Louis XIV]. The allies, however, insisted that he should join with them in driving his grandson by force of arms from Spain, and on this article the negotiations were broken off.”—W. E. H. 1715.—Death of Louis XIV.—Character of his reign.—Louis XIV died September 1, 1715, at the age of 77 years, having reigned 72 years. “Riche-

lieu, and after him Mazarin, governing as if they had been dictators of a republic, had extinguished, if I may use the expression, their personality in the idea and service of the state. Possessing only the exercise of authority, they both conducted themselves as responsible agents towards the sovereign and before the judgment of the country; while Louis XIV., combining the exercise with the right, considered himself exempted from all rule but that of his own will, and acknowledged no responsibility for his actions except to his own conscience. It was this conviction of his universal power, a conviction genuine and sincere, excluding both scruples and remorse, which made him upset one after the other the twofold system founded by Henry IV., of religious liberty at home, and abroad of a national preponderance resting upon a generous protection of the independence of states and European civilisation. At the personal accession of Louis XIV., more than fifty years had passed since France had pursued the work of her policy in Europe, impartial towards the various communions of Christians, the different forms of governments, and the internal revolutions of the states. Although France was catholic and monarchical, her alliances were, in the first place, with the Protestant states of Germany and with republican Holland; she had even made friendly terms with regicide England. No other interest but that of the well-understood development of the national resources had weight in her councils, and directed the internal action of her government. But all was changed by Louis XIV., and special interests, the spawn of royal personality, of the principle of the hereditary monarchy, or that of the state religion, were admitted, soon to fly upward in the scale. Thence resulted the overthrow of the system of the balance of power in Europe, which might be justly called the French system, and the abandonment of it for dreams of an universal monarchy, revived after the example of Charles V. and Philip II. Thence a succession of enterprises, formed in opposition to the policy of the country, such as the war with Holland, the factions made with a view to the Imperial crown, the support given to James II. and the counter-revolution in England, the acceptance of the throne of Spain for a son of France, preserving his rights to the Crown. These causes of misfortune, under which the kingdom was obliged to succumb, all issued from the circumstance applauded by the nation and conformable to the spirit of its tendencies, which, after royalty had attained its highest degree of power under two ministers, delivered it unlimited into the hands of a prince endowed with qualities at once brilliant and solid, an object of enthusiastic affection and legitimate admiration. When the reign, which was to crown under such auspices the ascendant march of the French monarchy, had falsified the unbounded hopes which its commencement had excited; when in the midst of fruitless victories and continually increasing reverses, the people beheld progress in all the branches of public economy changed into distress,—the ruin of the finances, industry, and agriculture—the exhaustion of all the resources of the country,—the impoverishment of all classes of the nation, the dreadful misery of the population, they were seized with a bitter disappointment of spirit, which took the place of the enthusiasm of their confidence and love.”—A. Thierry, *Formation and progress of the Tiers État or Third Estate in France*, ch. 9.

1715.—Accession of King Louis XV.

1715-1723.—State of the kingdom at the death of Louis XIV.—Minority of Louis XV and regency of the Duke of Orleans.—“Louis XIV. . . .

left France excessively exhausted. The State was ruined, and seemed to have no resource but bankruptcy. This trouble seemed especially imminent in 1715, after the war, during which the government had been obliged to borrow at 400 per cent., to create new taxes, to spend in advance the revenue of two years, and to increase the public debt to 2,400 millions. The acquisition of two provinces (Flanders, Franche-Comté) and a few cities (Strassburg, Landau, and Dunkirk) was no compensation for such terrible poverty. Succeeding generations have remembered only the numerous victories, Europe defied, France for twenty years preponderant, and the incomparable splendor of the court of Versailles, with its marvels of letters and arts, which have given to the 17th century the name of the age of Louis XIV. It is for history to show the price which France has paid for her king's vain attempts abroad to rule over Europe, and at home to enslave the wills and consciences of men. . . . The weight of the authority of Louis XIV. had been crushing during his last years. When the nation felt it lifted, it breathed more freely; the court and the city burst into disrespectful demonstrations of joy; the very coffin of the great king was insulted. The new king [Louis XV., great-grandson of Louis XIV.] was five years old. Who was to govern? Louis XIV. had indeed left a will, but he had not deceived himself with regard to the value of it. 'As soon as I am dead, it will be disregarded; I know too well what became of the will of the king, my father!' As after the death of Henry IV. and Louis XIII. there was a moment of feudal reaction; but the decline of the nobility may be measured by the successive weakening of its efforts in each case. Under Mary de' Medici it was still able to make a civil war; under Anne of Austria it produced the Fronde; after Louis XIV. it only produced memorials. The Duke of Saint-Simon desired that the first prince of the blood, Philip of Orleans, to whom the will left only a shadow of power, should demand the regency from the dukes and peers, as heirs and representatives of the ancient grand vassals. But the Duke of Orleans convoked Parliament in order to break down the posthumous despotism of the old king, feigning that the king had committed the government to his hands. The regency, with the right to appoint the council of regency as he would, was conferred upon him, and the command of the royal household was taken from the Duke of Maine [one of the bastard sons of Louis XIV.], who yielded this important prerogative only after a violent altercation. As a reward for the services of his two allies, the Duke of Orleans called the high nobility into affairs, by substituting for the ministries six councils, in which they occupied almost all the places, and accorded to Parliament the right of remonstrance. But two years had hardly passed when the ministries were re-established, and the Parliament again condemned to silence. It was plain that neither nobility nor Parliament were to be the heirs of the absolute monarchy. . . . Debauchery had, until then, kept within certain limits; cynicism of manners as well as of thought was now adopted openly. The regent set the example. There had never been seen such frivolity of conduct nor such licentious wit as that exhibited in the wild meetings of the routés of the Duke of Orleans. There had been formerly but one salon in France, that of the king; a thousand were now open to a society which, no longer occupied with religious questions, or with war, or the grave futilities of etiquette, felt that pleasure and change were necessities. . . . Louis XV. attained his majority February 13, 1723, being then 13 years old. This terminated the regency of the

Duke of Orleans. But the king was still to remain a long time under tutelage; the duke, in order to retain the power after resigning the regency, had in advance given [Cardinal] Dubois the title of prime minister. At the death of the wretched Dubois he took the office himself, but held it only four months, dying of apoplexy in December, 1723."—V. Duruy, *History of France*, ch. 52, 55.

ALSO IN: E. Lavisse, *History of France*.—J. B. Perkins, *France under the regency*.—F. Rocquain, *Revolutionary spirit preceding the French Revolution*.—I. de Saint-Amand, *Last years of Louis XV.*—W. C. Taylor, *Memoirs of the House of Orleans*.

1717-1719.—Prime Minister Dubois and his foreign policy.—Triple Alliance.—Quadruple Alliance.—"Reform and retrenchment were essential to the Regent's [Duke of Orleans] policy. So also and in even greater degree was peace. Another war would have completed the ruin which the wars of Louis XIV had begun. Orleans found himself confronted by the bitter enmity of Philip of Spain, who in spite of treaty obligations still aspired not only to the regency but also to the reversion of the crown of France in the event of Louis XV's death without heirs. A deadly struggle for this reversion between Philip V and the Regent was therefore inevitable. The Pyrenees, whose disappearance had been acclaimed so pompously by Louis XIV reappeared, as formidable a barrier as ever, before that monarch was cold in his grave. The Regent therefore had to checkmate the policy of Spain. Spain had been raised by the able administration of Alberoni from the inferior position she had occupied, and was already a menace to the maintenance of the Treaty of Utrecht. That treaty was all-important to France, and Orleans nerved himself to a great effort to avert the danger. He was fortunate in the co-operation of a really able minister. The Abbé (afterwards Cardinal), Dubois, has been roughly handled by history. He had been the tutor of Orleans and must therefore presumably share the blame for the previous vices of his pupil. If so he may also reasonably be credited with some share in that pupil's undoubted virtues. That he was a regular pander to the orgies of Orleans has never been proved, though it has been repeatedly asserted. The vitriolic St. Simon was the Abbé's special enemy, and it is from him that historians have faithfully copied the lists of his outrageous vices. He was probably no better than his age; a worldling no doubt, and a parvenu, which was much more discreditable in St. Simon's eyes: violent and ill-tempered he was still a bold diplomatist and was not afraid of novelties: never a very popular characteristic. Under the guidance of these two enlightened libertines, Orleans and Dubois, France entered on the remarkable period of eight years known as the Regency. It is possible and has been popular to denounce their policy as treacherous and shameful to France. That is a matter of opinion. And it may be urged on the other hand that by abandoning the fetish of the Spanish *entente*, which had brought nothing but ill to France in the past and was destined, in the form of the 'Family Compact,' to bring her nothing but ill in the future, they broke antiquated idols and saved their country from a disastrous war. The move by which Orleans and his minister hoped to checkmate Spain was no less than a *rapprochement* with England. The family interests of the house of Hanover and that of the house of Orleans were very similar. Both houses desired to thwart the ambitions of a claimant; and it was obviously to the interest of both that each should

agree to throw over the claimant who threatened the other, that Orleans should abandon the Stuarts and George repudiate Philip of Spain. England had already made overtures, but Orleans was extremely reluctant to sacrifice the ill-fated Stuarts. After the failure of the abortive rising in Scotland in 1715, England had less and France more incentive to come to terms with the other power. Orleans, however, was still halting between two opinions, and James III was still at Avignon when Dubois' influence brought him to a decision. The Abbé went to Hanover and had interviews with the King of England. These ended (on 4 January, 1717) in the conclusion of the Triple Alliance between England, France, and Holland. This alliance confirmed the Treaty of Utrecht: James III was to be expelled from Avignon; the Hanoverian line was acknowledged in England, and that of Orleans in France in the event of the childless death of Louis XV. The works of Mardick were to be destroyed. This treaty has been fiercely denounced by French historians. It is condemned as the one really ignominious and treasonable treaty signed by France during the Bourbon period, and it has been asserted that that country, rather than destroy the works at Mardick, should have fought for them to the last drop of her blood. But what was the alternative? Inevitable and almost certainly disastrous war, just at the moment when a period of recuperation was of the last importance to the country. The union of the crowns of France and Spain which was adumbrated was the very thing that Europe had so carefully guarded against in the terms of the Peace of Utrecht, and if it was effected it would bring the whole of Europe about the ears of France. It is all very well to say that the exclusion of Philip of Spain was the personal interest of Orleans, but it was also most certainly the interest of France. The Regent may have, in the Triple Alliance, secured his personal interest, but it is absurd to assume that in doing so he necessarily sacrificed the national interest. The most that can be said then is that he broke with tradition; but France had found before, and was to find again in the War of the Austrian Succession, that there was little profit or credit in blind adherence to tradition. Spain was completely checkmated by this move and, when in 1717 she laid hands on Sardinia and proceeded in the following year to attack Sicily, she flung the Emperor [Charles VI, the Holy Roman Emperor] into the arms of the Triple Alliance, which was thus converted into the Quadruple Alliance (2 August, 1718). The four allies immediately laid down their terms. The Emperor was to abandon his claim on Spain and the Indies, and the King of Spain his on Italy and the Netherlands. Sardinia was to be exchanged for Sicily, Savoy receiving Sardinia and the Emperor Sicily. Parma and Tuscany were to be secured for the children of Philip V by his second wife Elizabeth Farnese. The annihilation of the Spanish fleet by the English under Byng at Cape Passaro (11 August, 1718) ensured the acceptance of these terms. Alberoni plunged wildly, strove to raise a rebellion in Hungary, schemed for a Stuart restoration in England, and endeavoured to embarrass the French Government by fomenting a rising in Brittany (December, 1718, the Cellamare plot). Dubois discovered the plot by means of a somewhat discreditable intrigue. France then sent an army to ravage Spain, and Berwick threatened Madrid. Thus, as Voltaire says, 'the first war of Louis XV was against his uncle whom Louis XIV had established at such cost; was in fact civil war.' But civil war is sometimes the lesser of two evils."—J. R. M. Macdonald, *History of*

1717-1720.—John Law and his Mississippi scheme.—"When the Regent Orleans assumed the government of France, he found its affairs in frightful confusion. The public debt was three hundred millions; putting the debt on one side, the expenditure was only just covered by the revenue. St. Simon advised him to declare a national bankruptcy. De Noailles, less scrupulous, proposed to debase the coinage. . . . In such desperate circumstances, it was no wonder that the regent was ready to catch eagerly at any prospect of success. A remedy was proposed to him by the famous John Law of Lauriston. This new light of finance had gambled in, and been banished from, half the courts of Europe; he had figured in the English 'Hue and Cry,' as 'a very tall, black, lean man, well-shaped, above six feet high, large pock-holes in his face, big-nosed, speaks broad and loud.' He was a big, masterful, bullying man, one of keen intellect as well; the hero of a hundred romantic stories. . . . He studied finance at Amsterdam, then the great school of commerce, and offered his services and the 'system' which he had invented, first to Godolphin, when that nobleman was at the head of affairs in England, then to Victor Amadeus, duke of Savoy, then to Louis XIV., who, as the story goes, refused any credit to a heretic. He invented a new combination at cards, which became the despair of all the croupiers in Europe: so successful was this last invention, that he arrived for the second time at Versailles, in the early days of the regency, with upwards of £120,000 at his disposal, and a copy of his 'system' in his pocket. . . . There was a dash of daring in the scheme which suited well with the regent's peculiar turn of mind; it was gambling on a gigantic scale. . . . Besides, the scheme was plausible and to a certain point correct. The regent, with all his faults, was too clever a man not to recognize the genius which gleamed in Law's dark eyes. Law showed that the trade and commerce of every country was crippled by the want of a circulating medium; species was not to be had in sufficient quantities; paper, backed by the credit of the state, was the grand secret. He adduced the examples of Great Britain, of Genoa, and of Amsterdam to prove the advantage of a paper currency; he proposed to institute a bank, to be called the 'Bank of France,' and to issue notes guaranteed by the government and secured on the crown lands, exchangeable at sight for specie, and receivable in payment of taxes; the bank was to be conducted in the king's name, and to be managed by commissioners appointed by the States-General. The scheme of Law was based on principles which are now admitted as economical axioms; the danger lay in the enormous extent to which it was intended to push the scheme. . . . While the bank was in the hands of Law himself, it appears to have been managed with consummate skill; the notes bore some proportion to the amount of available specie; they contained a promise to pay in silver of the same standard and weight as that which existed at the time. A large dividend was declared; then the regent stepped in. The name of the bank was changed to that of the Royal Bank of France, the promise to pay in silver of a certain weight and standard was dropped, and a promise substituted to pay 'in silver coin.' This omission, on the part of a prince who had already resorted to the expedient of debasing the currency, was ominous, and did much to shake public confi-

dence; the intelligence that in the first year of the new bank 1,000,000,000 of livres were fabricated, was not calculated to restore it. But these trifles were forgotten in the mad excitement which followed. Law had long been elaborating a scheme which is for ever associated with his name, and beside which the Bank of France sank into insignificance. In 1717, the year before the bank had been adopted by the regent, the billets d'état of 500 livres each were worth about 160 livres in the market. Law, with the assent of the regent, proposed to establish a company which should engross all the trade of the kingdom, and all the revenues of the crown, should carry on the business of merchants in every part of the world, and monopolize the farming of the taxes and the coining of money; the stock was to be divided into 200,000 shares of 500 livres each. The regent nearly marred the scheme at starting by inserting a proviso that the depreciated billets d'état were to be received at par in payment for the new stock, on which four per cent. was guaranteed by the State." Law's company was formed, under the name of the Company of the West, and obtained for the basis of its operations a monopoly of the trade of that vast territory of France in the valley of the Mississippi which bore the name of Louisiana. The same monopoly had been held for five years by one Crozat, who now resigned it because he found it unprofitable; but the fact received little attention (see LOUISIANA: 1717-1718). "Louisiana was described as a paradise. . . . Shareholders in the company were told that they would enjoy the monopoly of trade throughout French North America, and the produce of a country rich in every kind of mineral wealth. Billets d'état were restored to their nominal value; stock in the Mississippi scheme was sold at fabulous prices; ingots of gold, which were declared to have come from the mines of St. Barbe, were taken with great pomp to the mint; 6,000 of the poor of Paris were sent out as miners; and provided with tools to work in the new diggings. New issues of shares were made; first 50,000, then 50,000 more; both at an enormous premium. The jobbers of the rue Quincampoix found ordinary language inadequate to express their delight: they invented a new slang for the occasion, and called the new shares 'les filles,' and 'les petites filles,' respectively. Paris was divided between the 'Anti-system' party who opposed Law, and the Mississippians who supported him. The State borrowed from the company fifteen hundred millions; government paid its creditors in warrants on the company. To meet them, Law issued 100,000 new shares; which came out at a premium of 1,000 per cent. The Mississippians went mad with joy—they invented another new slang phrase; the 'cinq cents' eclipsed the filles and the petites filles in favour. The gates of Law's hotel had to be guarded by a detachment of archers; the cashiers were mobbed in their bureaux; applicants for shares sat in the anterooms; a select body slept for several nights on the stairs; gentlemen disguised themselves in Law's livery to obtain access to the great man. . . . By this time the charter of the company of Senegal had been merged in the bank, which also became sole farmer of the tobacco duties; the East India Company had been abolished, and the exclusive privilege of trading to the East Indies, China, and the South Seas, together with all the possessions of Colbert's company were transferred to Law. The bank now assumed the style of the Company of the Indies. Before the year [1710] was out the regent had transferred to it the exclusive privilege of the mint, and the contract of all the great farms. Almost every branch

of industry in France, its trade, its revenue, its police, were now in the hands of Law. Every fresh privilege was followed by a new issue of shares. . . . The shares of 500 franks were now worth 10,000. The rue Quincampoix became impassable, and an army of stockjobbers camped in tents in the Place Vendôme. . . . The excitement spread to England [where the South Sea Bubble was inflated by the madness of the hour—see SOUTH SEA BUBBLE]. . . . Law's system and the South Sea scheme both went down together. Both were calculated to last so long, and so long only, as universal confidence existed; when it began to be whispered that those in the secret were realizing their profits and getting out of the impending ruin, the whole edifice came down with a crash. . . . No sooner was it evident that the system was about to break down, than Law, the only man who could at least have mitigated the blow, was banished."—Viscount Bury, *Exodus of the western nations*, v. 2, ch. 5.

1723-1774.—Character and reign of Louis XV. —King's mistresses and their courtiers who conducted the government.—State and feeling of the nation.—After the death of the Duke of Orleans, "a short period of about two years and a-half comprehends the administration of the Duke of Bourbon, or rather of his mistress, la Marquise de Prie. Fleury [Cardinal] then appears on the stage, and dies in 1743. He was, therefore, minister of France for seventeen years. On his death, the king (Louis XV.) undertook to be his own prime minister; an unpromising experiment for a country at any time. In this instance the result was only that the king's mistress, Madame de Chateauroux, became the ruler of France, and soon after Madame de Pompadour, another mistress, whose reign was prolonged from 1745 to 1763. Different courtiers and prelates were seen to hold the first offices of the state during this apparent premiership of the monarch. The ladies seem to have chosen or tolerated Cardinal Tencin, Argençon, Orsy, Mauirpau, and Amelot, who, with the Dukes Noailles and Richelieu, succeeded to Fleury. Afterwards, we have Argençon and Machault, and then come the most celebrated of the ministers or favourites of Madame de Pompadour, the Abbé de Bernis and the Duc de Choiseul. The last is the most distinguished minister after Fleury. He continued in favour from 1758, not only to 1763, when Madame de Pompadour died, but for a few years after. He was at length disgraced by la Comtesse Dubarri, who had become the king's mistress soon after the death of Madame de Pompadour, and remained so, nearly to the death of the monarch himself, in 1774."—W. Smyth, *Lectures on the history of the French Revolution*, lect. 3.—"The regency of the Duke of Orleans lasted only eight years, but it was not without a considerable effect upon the destinies of the country. It was a break in the political and the religious traditions of the reign of Louis XIV. The new activity imparted to business during this period was an event of equal importance. Nothing is more erroneous than to suppose that constantly increasing misery at last excited revolt against

the government and the institutions of the old régime. . . . The influence of literature in France during the eighteenth century was important, yet it is possible to overestimate it. The seed of political and social change was shown by the writers of the period, but the soil was already prepared to receive it. . . . The course of events, the conduct of their rulers, prepared the minds of the French people for political change, and accounted for the influence which literature acquired. The doctrines of philosophers found easy access to the hearts of a people with whom reverence for royalty and a tranquil acceptance of an established government had been succeeded by contempt for the king and hatred for the régime under which they lived. We can trace this change of sentiment during the reign of Louis XV. The popular affection which encircled his cradle accompanied him when he had grown to be a man. . . . Few events are more noticeable in the history of the age than the extraordinary expressions of grief and affection that were excited by the illness of Louis XV. in 1744. . . . A preacher hailed him as Louis the well beloved, and all the nation adopted the title. 'What have I done to be so loved?' the king himself asked. Certainly he had done nothing, but the explanation was correctly given. 'Louis XV. is dear to his people, without having done anything for them, because the French are, of all nations, most inclined to love their king.' This affection, the result of centuries of fidelity and zeal for monarchical institutions, and for the sovereigns by whom they were personified, was wholly destroyed by Louis's subsequent career. The vices to which he became addicted were those which arouse feelings not only of reprehension, but of loathing. They excited both aversion and contempt. The administration of the country was as despicable as the character of the sovereign. Under Louis XIV. there had been suffering and there had been disaster, but France had always preserved a commanding position in Europe. . . . But now defeat and dishonor were the fate of a people alike powerful and proud. . . . The low profligacy into which the king had sunk, the nullity of his character, the turpitude of his mistress, the weakness of his administration, the failure of all his plans, went far toward destroying the feelings of loyalty that had so long existed in the hearts of the French people. Some curious figures mark the decline in the estimation in which the king was held. In 1744, six thousand masses were said at Notre Dame for the restoration of Louis XV. to health; in 1757, after the attempted assassination by Damiens, there were six hundred; when the king actually lay dying, in 1774, there were only three. The fall from six thousand to three measures the decline in the affection and respect of the French people for their sovereign. It was with a public whose sentiments had thus altered that the new philosophy found acceptance."—J. B. Perkins, *France under the regency*, ch. 1.

1733.—First family compact of the Bourbons (France and Spain).—"The two lines of the house of Bourbon [in France and in Spain] once more became in the highest degree prominent. . . .

As early as November 1733 a Family Compact (the first of the series) was concluded between them, in which they contemplated the possibility of a war against England, but without waiting for it entered into an agreement against the maritime supremacy of that power. . . . The commercial privileges granted to the English in the Peace of Utrecht seemed to both courts to be intolerable."—L. von Ranke, *History of England*, v. 5, bk. 22, ch. 4.—"It is hardly too much to say that the Family Compact of 1733 . . . is the most important document of the middle period of the 18th century and the most indispensable to history. If that period seems to us confused, if we lose ourselves in the medley of its wars—war of the Polish election, war of Jenkins' ear, war of the Austrian succession, colonial war of 1756—the simple reason is that we do not know this treaty, which furnishes the clue. From it we may learn that in this period, as in that of Louis XIV. and in that of Napoleon, Europe struggled against the ambitious and deliberately laid design of an ascendant power, with this difference, that those aggressors were manifest to all the world and their aims not difficult to understand, whereas this aggression proceeded by ambush, and, being the aggression not of a single state but of an alliance, and a secret alliance, did not become clearly manifest to Europe even when it had to a considerable extent attained its objects. . . . The first two articles define the nature of the alliance, that it involves a mutual guarantee of all possessions, and has for its object, first, the honour, glory, and interests of both powers, and, secondly, their defence against all damage, vexation, and prejudice that may threaten them." The first declared object of the Compact is to secure the position of Don Carlos, the Infant of Spain, afterwards Charles III., in Italy, and "to obtain for him the succession in Tuscany, protecting him against any attack that may be attempted by the Emperor or by England. Next, France undertakes to 'aid Spain with all her forces by land or sea, if Spain should suspend England's enjoyment of commerce and her other advantages, and England out of revenge should resort to hostilities and insults in the dominions and states of the crown of Spain, whether within or outside of Europe.'" Further articles provide for the making of efforts to induce Great Britain to restore Gibraltar to Spain; set forth "that the foreign policy of both states is to be guided exclusively by the interests of the house"; denounce the Austrian Pragmatic as "opposed to the security of the house of Bourbon." "The King of France engages to send 32,000 infantry and 8,000 cavalry into Italy, and to maintain other armies on his other frontiers; also to have a squadron ready at Toulon, either to join the Spanish fleet or to act separately, and another squadron at Brest, 'to keep the English in fear and jealousy'; also, in case of war with England breaking out, to commission the largest possible number of privateers. Spain also promises a fixed number of troops. The 11th and 12th articles lay the foundation of a close commercial alliance to be formed between France and Spain. Article 13 runs as follows:—"His Catholic majesty, recognising all the abuses which have been introduced into commerce, chiefly by the British nation, in the eradication of which the French and Spanish nations are equally interested, has determined to bring everything back within rule and into agreement with the letter of treaties"—to which end the two kings make common cause. "Finally the 14th article provides that the present treaty shall remain profoundly secret as long as the contracting parties shall judge it agreeable to their interests, and shall

be regarded from this day as an eternal and irrevocable Family Compact. . . . Here is the explanation of the war which furnished the immediate occasion of the first Compact, a war most misleadingly named from the Polish election which afforded an ostensible pretext for it, and deserving better to be called the Bourbon invasion of Italy. Here too is sketched out the course which was afterwards taken by the Bourbon courts in the matter of the Pragmatic Sanction. Thirdly, here most manifestly is the explanation of that war of Jenkins' ear, which we have a habit of representing as forced upon Spain by English commercial cupidity, but which appears here as deliberately planned in concert by the Bourbon courts in order to eradicate the 'abuses which have been allowed to creep into trade.'—J. R. Seeley, *House of Bourbon*, (*English Historical Review*, January, 1886).

1733-1735.—War with Austria, in Germany and Italy.—Final acquisition of Lorraine.—Naples and Sicily transferred to Spain.—In the war with Austria which was brought about by the question of the Polish succession (see POLAND: 1732-1733), the French "struck at the Rhine and at Italy, while the other powers looked on unmoved; Spain watching her moment, at which she might safely interfere for her own interests in Italy. The army of the Rhine, which reached Strasburg in autumn 1733, was commanded by Marshal Berwick, who had been called away from eight years of happy and charming leisure at Fitz-James. With him served for the first time in the French army their one great general of the coming age, and he too a foreigner, Maurice, son of Augustus II. of Poland and the lovely Countess of Königsmark. . . . He is best known to us as Marshal Saxe. It was too late to accomplish much in 1733, and the French had to content themselves with the capture of Kehl: in the winter the Imperialists constructed strong lines at Ettlingen, a little place not far from Carlsruhe, between Kehl, which the French held, and Philipsburg, at which they were aiming. In the spring of 1734 French preparations were slow and feeble: a new power had sprung up at Paris in the person of Belle-Isle, Fouquet's grandson, who had much of the persuasive ambition of his grandfather. He was full of schemes, and induced the aged Fleury to believe him to be the coming genius of French generalship; the careful views of Marshal Berwick suited ill his soaring spirit; he wanted to march headlong into Saxony and Bohemia. Berwick would not allow so reckless a scheme to be adopted; still Belle-Isle, as lieutenant-general with an almost independent command, was sent to besiege Trarbach on the Moselle, an operation which delayed the French advance on the Rhine. At last, however, Berwick moved forwards. By skilful arrangements he neutralised the Ettlingen lines, and without a battle forced the Germans to abandon them. Their army withdrew to Heilbronn, where it was joined by Prince Eugene. Berwick, freed from their immediate presence, and having a great preponderance in force, at once sat down before Philipsburg. There, on the 12th of June, as he visited the trenches, he was struck by a ball and fell dead. So passed away the last but one of the great generals of Louis XIV.: France never again saw his like till the genius of the Revolution evoked a new race of heroes. It was thought at first that Berwick's death, like Turenne's, would end the campaign, and that the French army must get back across the Rhine. The position seemed critical,

Philipsburg in front, and Prince Eugene watching without. The Princes of the Empire, however, had not put out any strength in this war, regarding it chiefly as an Austrian affair; and the Marquis d'Asfeld, who took the command of the French forces, was able to hold on, and in July to reduce the great fortress of Philipsburg. Therewith the campaign of the Rhine closed. In Italy things had been carried on with more vigour and variety. The veteran Villars, now 81 years old, was in command, under Charles-Emmanuel, King of Sardinia. . . . Villars found it quite easy to occupy all the Milanese: farther he could not go; for Charles-Emmanuel, after the manner of his family, at once began to deal behind his back with the Imperialists and the campaign dragged. The old Marshal, little brooking interference and delay, for he still was full of fire, threw up his command, and started for France: on the way he was seized with illness at Turin, and died there five days after Berwick had been killed at Philipsburg. With them the long series of the generals of Louis XIV. comes to an end. Coigny and the Duke de Broglie succeeded to the command. Not far from Parma they fought a murderous battle with the Austrians, hotly contested, and a Cadmean victory for the French: it arrested their forward movement, and two months were spent in enforced idleness. In September, 1734, the Imperialists inflicted a heavy check on the French at the Secchia; afterwards however emboldened by this success, they fought a pitched battle at Guastalla, in which, after a fierce struggle, the French remained masters of the field. Their losses, the advanced time of the year, and the uncertainty as to the King of Sardinia's movements and intentions, rendered the rest of the campaign unimportant. As however the Imperialists, in order to make head against the French in the valley of the Po, had drawn all their available force out of the Neapolitan territory, the Spaniards were able to slip in behind them, and to secure that great prize. Don Carlos landed at Naples and was received with transports of joy: the Austrians were defeated at Bitonto; the Spaniards then crossed into Sicily, which also welcomed them gladly; the two kingdoms passed willingly under the rule of the Spaniards. In 1735 Austria made advances in the direction of peace; for the French had stirred up their old friend the Turk, who, in order to save Poland, proposed to invade Hungary. Fleury, no lover of war, and aware that England's neutrality could not last forever, was not unwilling to treat: a Congress at Vienna followed, and before the end of 1735 peace again reigned in Europe. The terms of the Treaty of Vienna (3 Oct. 1735) were very favourable to France. Austria ceded Naples and Sicily, Elba, and the States degli Presidii to Spain, to be erected into a separate kingdom for Don Carlos: France obtained Lorraine and Bar, which were given to Stanislaus Leczinski on condition that he should renounce all claim to the Polish Crown; they were to be governed by him under French administration: Francis Stephen, the former Duke, obtained, as an indemnity, the reversion of Tuscany, which fell to him in the following year. Parma and Piacenza returned to the Emperor, who also obtained from France a guarantee of the Pragmatic Sanction. Thus France at last got firm hold of the much-desired Lorraine country, though it was not absolutely united to her till the death of Stanislaus in 1766."—G. W. Kitchin, *History of France*, bk. 6, ch. 2.

1738-1740.—Question of the Austrian succes-

sion.—Guarantee of the Pragmatic Sanction. See AUSTRIA: 1718-1738; 1740.

1738-1770.—Fatal policy in Europe which lost to the French their opportunity for colonial aggrandizement.—“Louis XIV. had made France odious to her neighbors and suspected by all Europe. Those who succeeded him required much prudence and wisdom to diminish the feelings of fear and jealousy which this long reign of wars and conquests had inspired. They were fortunate in that the moderation demanded of them was for France the most skilful and advantageous policy. France kept Alsace, Franche-Comté, Flanders, Roussillon, and beyond this enlarged frontier she was no longer menaced by the same enemies. The treaty of Utrecht had modified the entire balance of power. There was henceforward no house of Austria excepting in Germany. . . . Spain was no longer to be feared; she was weakened, she was becoming dependent. A cadet of France, a Bourbon, reigned at Madrid. . . . It seemed that henceforward France had only to conserve on the continent. She presented to it the most compact power. Her principal enemy in it was greatly reduced. She was surrounded by states, weaker than she, who deferred to her and feared her; she could resume that fine rôle of moderator and guardian of the peace of Europe which Richelieu had prepared for her, and bear elsewhere, into the other hemisphere, the superabundance of her forces and that excess of vigor which in great nations is precisely the condition of health. The future of her grandeur was henceforward in the colonies. There she would encounter England. Upon this new stage their rivalry would be revived, more ardent than in the days of the hundred years' war. To maintain this struggle which extended over the entire world, France would not be too strong with all her resources. When she was engaged in Canada and the Indies at the same time, she would not need to carry her armies across the Rhine. Peace on the continent was the condition necessary to the magnificent fortune which awaited her in America and Asia. If she wished to obtain it she must renounce continental ambitions. She could do it; her defense was formidable. No one about her would dare to fire a gun without her permission. But, alas! she was far removed from this wisdom, and, in attempting to establish colonies, and make changes in the kingdoms of Europe at the same time, she compromised her power in both worlds at once. The French desired colonial conquests, but they could not abstain from European conquests, and England profited by it. Austria became her natural ally against France. These powerful diversions kept the French on the ground. However, they could have yet curbed Austria: they had Prussia, Savoy, Poland and Turkey if necessary. Diplomacy was sufficient for this game; but this game was not sufficient for the French politicians. The hatred of the house of Austria survived the causes of rivalry. This house seemed always ‘the monster’ of which Balzac spoke. One was not satisfied to have chained it; one could cease only after having annihilated it. ‘There is always,’ writes Argenson, ‘for politicians a fundamental rule of reducing this power to the point where the Emperor will not be a greater landholder than the richest elector. Charles VI. died in 1740; he left only a daughter; the opportunity seemed favorable, and noisily sounding the death-cry (l'hallali) they took the field at the head of all the hunters by inheritance [see AUSTRIA: 1740-1741, and after; ITALY: 1741-1743 to 1746-1747; NETHERLANDS: 1746; 1747-1795; also BELGIUM:

1745; 1756-1747; BOHEMIA: 1631-1757]. They went ‘to make an emperor, to conquer kingdoms!’ The Bavarian whom they crowned was a stage emperor, and, as for conquests, they were considered only too fortunate that Maurice of Saxe preserved to France those of Louis XIV. The coalition had no other result than to enlarge Prussia [see AIX-LA-CHAPELLE: Congresses: 2; NEW ENGLAND: 1745-1748]. Meanwhile France was beaten on the sea and abandoned solely to the resources of his genius Duplex, who with a handful of men was founding an empire [see INDIA: 1743-1752]. There was besides another small matter; after having exposed Canada [see NEW ENGLAND: 1744; 1745] in order to conquer Silesia for the king of Prussia, it was lost in order to have the pleasure of giving back that province to the queen of Hungary. France had played the game of England in the war of the succession of Austria, she played that of Austria in the seven years' war [see GERMANY: 1755-1756, and after; ENGLAND: 1754-1755]. Frederick was the most equivocal of allies. In 1755, he deserted cynically and passed over to the English, who had just recommenced war against France. England having Prussia, it was important, in order to maintain the equilibrium, that France have Austria. Maria Theresa offered her alliance and France accepted it. Thus was concluded the famous treaty of May 1, 1756. The object of this alliance was entirely defensive. This was what France did not understand, and she did not cease to be a dupe for having changed partners. Louis XV. made himself the defender of Austria with the same blindness as he had made himself her adversary. The continental war which was only the accessory became the principal. From a ruling power, France fell to the rank of a subordinate. She did not even attain the indirect result to which she sacrificed her most precious interests. Frederick kept Silesia. France lost Canada and abandoned Louisiana; the empire of the Indies passed to the English [see CANADA: 1750-1753 to 1760; NOVA SCOTIA: 1749-1755; 1755; OHIO (Valley): 1748-1754, and after; U. S. A.: 1748-1754; CAPE BRETON ISLAND: 1758-1760; INDIA: 1758-1761]. Louis XV. had thus directed a policy the sole reason for which was the defeat of England, in such a way as to assure the triumph of that country. ‘Above all,’ wrote Bernis to Choiseul, then ambassador at Vienna, ‘arrange matters in such a way that the king will not remain in servile dependence on his allies. That state would be the worst of all.’ It was the state of France during the last years of the reign of Louis XV. The alliance of 1756, which had been at its beginning and under its first form, a skilful expedient, became a political system, and the most disastrous of all. Without gaining anything in territory, France lost her consideration in Europe. She had formerly grouped around her all those who were disturbed by the power of Austria; forced to chose between them and Austria, she allowed the Austrians to do as they chose. To crown the humiliation, immediately after a war in which she had lost everything to serve the hatred of Maria Theresa for Frederick, she saw those unreconcilable Germans draw together without her knowledge, come to an understanding at her expense, and, in concert with Russia, divide the spoil of one of the oldest clients of the French monarchy, Poland. There remained to France but one ally, Spain. They were united in 1761 by the Family Pact, the only beneficial work which had been accomplished in these years of disaster. . . . To the anger of having felt herself made

use of during the war, to the rancor of having seen herself duped during the peace, was joined the fear of being despoiled one day by an ally so greedy and so little scrupulous. 'I foresee,' said Mably some years later, 'that the Emperor will demand of us again Lorraine, Alsace and everything which may please him.'—'Who can guaranty France, if she should experience a complicated and unfortunate war,' said one of the ministers of Louis XVI., 'that the Emperor would not reclaim Alsace and even other provinces?' It was in this way that the abuse made by Austria of the alliance revived all the traditions of rivalry. Add that Maria Theresa was devout, that she was known to be a friend of the Jesuits, an enemy of the philosophers, and that at the King's court, the favorites were accounted as acquired from Austria: everything thus contributed to render odious to public opinion the alliance which, in itself, already seemed detestable. At the time when they were beginning to style the partisans of new ideas 'patriots,' they were in the habit of confounding all the adversaries of these ideas with the 'Austrian party.' . . . The marriage of Marie Antoinette with the Dauphin was destined to seal forever the alliance of 1756. The unfortunate princess accumulated on her head the hatreds and prejudices heaped up by three centuries of rivalry and excessively stimulated by the still smarting impression of recent wrongs. Even the cause of her coming to France rendered her suspected by the French; they imputed to her as a crime her attachment to the alliance which was, notwithstanding, the very reason of her marriage. To understand the prodigious unpopularity which pursued her in France, it is necessary to measure the violence of the passions raised up against her mother and her country; it was summed up, long before the Revolution, in that word which became for Marie Antoinette a decree of forfeiture and of death; the Austrian."—A. Sorel, *L'Europe et la révolution française* (tr. from the French), pt. I, pp. 288-297.

1743 (October).—Second family compact of the Bourbon kings.—"France and Spain signed a secret treaty of perpetual alliance at Fontainebleau, October 25th, 1743. The treaty is remarkable as the precursor of the celebrated Family Compact between the French and Spanish Bourbons. The Spaniards, indeed, call it the Second Family Compact, the first being the Treaty of November 7th, 1733, of which, with regard to colonial affairs, it was a renewal. But this treaty had a more special reference to Italy. Louis XV., engaged to declare war against Sardinia, and to aid Spain in conquering the Milanese. Philip V. transferred his claims to that duchy to his son, the Infant Don Philip, who was also to be put in possession of Parma and Piacenza. All the possessions ceded by France to the King of Sardinia, by the Treaty of Utrecht, were to be again wrested from him. A public alliance was to be formed, to which the Emperor Charles VII. was to accede; whose states, and even something more, were to be recovered for him. Under certain circumstances war was to be declared against England; in which case France was to assist in the recovery of Gibraltar, and also, if possible, of Minorca. The new colony of Georgia was to be destroyed, the Asiento withdrawn from England, &c."—T. H. Dyer, *History of modern Europe*, v. 3, bk. 6, ch. 4.

1745-1763.—Madame de Pompadour as a political force.—Patron of the arts and letters.—"The life of a left-handed queen is always invested with a certain degree of interest, for it is

safe to assume that, in order to arouse something more than an ephemeral passion in the heart of a monarch, a woman must have been the possessor of exceptional qualities. But in all the long roll of *reines de la main gauche* it is open to question whether there is one whose career affords anything approaching the attraction for the student of history or for the general reader as does that of the subject of the present volume. For Madame de Pompadour was no ordinary king's mistress; she was a great political force. She made and unmade Ministers, she selected Ambassadors, she appointed generals, she conferred pensions and places. Upon her rests the responsibility for that sudden change in the traditional policy of France towards the House of Hapsburg which enabled the vindictive Maria Theresa to fan the ashes of the War of the Austrian Succession [1756-1763] into the devouring flame which ravaged Europe for seven long years; and to her influence must be ascribed, in a great measure, the suppression of the Jesuits in France. Nor was her activity by any means confined to politics. It is to her that France is indebted for the world-famous manufactory of Sèvres; while the establishment of the *École Militaire*, which in the twenty-seven years of its existence gave to the country so many distinguished officers, Napoleon among the number, was mainly due to her efforts. Men of letters and artists, too, found in her a generous and appreciative friend. She protected Voltaire and Montesquieu, rescued the elder Crébillon from poverty and neglect, encouraged Diderot and d'Alembert in their herculean labours, and made the fortune of Marmontel; while it was she who introduced Boucher and his work to the Court of Louis XV., placed his *Forges de Vulcain* in the monarch's private apartments at Marly, purchased the famous *Lever du Soleil* and *Coucher du Soleil* (now in the Wallace Collection in London), and promoted his interests and those of his fellow-artists in every way. In short, almost from the day on which she was installed at Versailles as *maîtresse déclarée* till her death in 1764, the influence of Madame de Pompadour was paramount in all matters, from politics to porcelain, and it is not too much to say that, during that period, it was she, rather than Louis XV., who was the real ruler of France and the fountain of honour. For a woman of middle-class origin, the daughter of a man who had once been compelled to fly the country to escape being broken on the wheel, to attain to a post which had hitherto been regarded as the peculiar appanage of the nobility was, as may be imagined, no easy task; to retain it for nineteen years was one which taxed her resources to the utmost. Her elevation, indeed, was the signal for an outburst of hostility before which a less resolute woman must inevitably have succumbed. She was called upon to face the enmity of the Royal Family, of powerful Ministers, of the ladies of the Court—most bitter antagonists of all—of the Jesuits, and of the rabble of Paris, who, strange as it may seem, resented their sovereign's departure from the custom observed by his predecessors almost as much as the *noblesse*. But never for a moment did she flinch. With an unrivalled skill, which compels the reluctant admiration even of those who find in her life but scant cause for eulogy, she contrived to make herself absolutely indispensable to the happiness of her royal lover, and that accomplished, proceeded to crush her enemies. One by one they were met, out-manœuvred, and driven from the field or forced to sue for quarter; and though on more than one

occasion, notably at the time of Damiens's attempt upon the life of Louis XV., her fall seemed inevitable, the only result of the machinations of her foes was to leave her more powerful than ever. She died at the early age of forty-two, worn out by the storm and stress of a life which she once described as 'like that of a Christian, a perpetual combat,' a prey to wounded vanity and disappointed ambition. Wearying of the petty triumphs of Versailles, she had sought to associate her name with triumphs of another kind, and did not long survive the humiliating termination of the war into which she had so recklessly dragged her country."—H. N. Williams, *Madame de Pompadour*, pp. v-vii.

1756-1759. — Jansenism. — Beaumont, archbishop of Paris.—Banished by Louis XV.—Bed of justice.—Various mandates.—Beaumont recalled.—Exiled a second time.—"The interminable strife between the secular jurisdiction and ecclesiastical discipline had all the relentless bitterness of a civil war. A society which was at once unbelieving and bigoted went mad over theological questions worthy of the deliberations of a Council of Byzantium; and at the very height of the Seven Years' War there were in Paris, as Voltaire remarked, fifty thousand ranters who could not tell you what countries the Danube or the Elbe flowed through, and who thought that the world was turned topsy-turvy by the contradictory propositions of the adepts of Jansenius and the disciples of Molina. After all, the question was more serious than one is inclined to think at first blush. Jansenism, 'the third estate of religion,' as it has been aptly called, was in effect only a preparatory step in the direction of republican doctrines. . . . Jansenism in France was characterized by the same sublime indifference to suffering, untamable curiosity, and the same revolutionary spirit which marked English Protestantism. Louis XIV., jealously guarding his royal prerogative, was not slow to perceive it. He felt that discipline was no less indispensable in the Church than in the barracks, and he understood that the throne was built upon the same foundation as the altar. The Bull *Unigenitus*, of 1713, was designed to re-establish unity of doctrine; and when the Jansenists refused to bow to the decree of the sovereign pontiff, the great king said to himself that that rebellion against the authority of the pope would prove to be the signal for attack upon monarchical principles. He was not mistaken. When Parliament showed itself favorable to Jansenism, it was not so much because of any particular opinions upon free-will or salvation as from an instinctive leaning toward the spirit of revolution, the germs of which existed in the new sect. Religious controversy gradually led to political controversy. Parliament led the way to parliamentarism. They began by refusing to rec-

ognize the episcopal jurisdiction of an archbishop, to end by defying the authority of a king. Christophe de Beaumont, priest with decided convictions, austere and unbending churchman, so strong in his contempt for the temptations of rank and title that Louis was obliged to summon him three times before he could induce him to leave his see of Vienne in Dauphiné to accept the archbishopric of Paris.—Christophe de Beaumont was faithful to the traditions of the Church when he denied that the Parliament of Paris was competent to deal with matters purely religious, such as the administration of the sacraments. His doctrine, after all, was only that of a separation of the two powers. Louis [XV] inclined toward the doctrines of the archbishop, whose virtue he knew and appreciated. Like Louis XIV, he recognized the authority of the Bull *Unigenitus*, and treated Jansenism as heresy. Like Louis XIV, he distrusted, not without good reason, the Parliament and populace of Paris. 'I know the people of Paris,' he said; 'they must have remonstrances and shows, and some day perhaps something worse than that.' Madame de Pompadour would have done as the king wished to do, and have espoused the cause of the archbishop, if the archbishop had been a courtier; but Christophe de Beaumont . . . could not conceive of such a thing as a churchman bending the knee to a royal favorite, and the bare idea of soliciting favors from a Pompadour would have brought a flush of shame to his brow. He would have preferred exile twice over. . . . The king admired the archbishop, but did not sustain him. D'Argenson wrote on the 6th of March, 1756: 'The personal government of Louis XV, might well adopt the device,—*Dividatur*. It is a method of doing business which he learned from Cardinal de Fleury. All his strength is directed to that end. Thus it is that while he does only about half right, he does only about half wrong, which produces chaos and other deplorable results.' By this system the monarch failed to satisfy either magistrates or clergy. First he exiled the Parliament, then the archbishop. The curés continued to refuse to administer the sacraments to Jansenists. The magistrates sent their bailiffs, and the sick people partook of communion under the protection of bayonets. The Eucharist became an object of derision through the strife of faction. The court wavered between the two sides; after having sent the archbishop of Paris to Conflans, Louis [XV], leaving him in disgrace, gave judgment in his favor. In a bed of justice held on the 13th of December, 1756, the king forbade Parliament to decree that the sacraments should be administered, or that a general assembly should be convened, or that the course of justice should be interfered with, or the registration of edicts suspended. He suppressed the Chambers of Inquiry (*Enquêtes*) and announced that whoever did not obey would be punished. One hundred and fifty members of Parliament resigned. All Paris was in commotion. An *émeute* was thought to be imminent. Curses and anathemas were heard on all sides. The diatribes of the Jansenists and the parliamentary faction served to excite Damiens to the madness of fanaticism. He believed that in striking down Louis XV, he was acting for the service of God and the good of the people. Madame de Pompadour, even more fickle than the king, was at odds with the Parliament at this time. Nevertheless, the archbishop remained in exile because he would not, at any price, bend his knee to the favorite. The mandate which he sent from Conflans to Paris offended the marquise deeply. 'Let us search our hearts,

dear brethren,' he said, 'and see if the errors of our minds and hearts have not merited this terrible demonstration of the wrath of God. Let us inquire, without prejudice, what is the meet reward for the false doctrines with which men's minds are filled,—such license in speech, such blasphemy against God and his Christ, such wicked arguments against revealed truth, such scandalous conduct among all sorts and conditions of men; let us notice especially whether, since the degeneration of faith among us, there has not crept into men's minds and their writings a multitude of principles of thought which lead to disobedience and even to rebellion against the king and his laws. It would be easy for us to remind you of the maxims of the blessed teachers, who never cease to inculcate a true sense of the fidelity which is due to the princes of the earth; the decisions of the councils, which have called down the curse of Heaven upon every doctrine tending to incite nations to rebellion against their sovereigns; and the continued teaching of the spiritual pastors, who have always said with the great apostle: "Obey in all things your temporal masters." What ought we to think of the execrable crime which was conceived in the heart of our country and perpetrated under our eyes? What should be our righteous anger at the thought of so foul an attempt treasonably committed with deliberate premeditation, and in the very palace, where everything proclaims the majesty of our sovereign lord?' This saintly language aroused the admiration of the queen and dauphin and all pious people. But it seemed a satire to the protecting genius of the philosophers, the friend of Voltaire and Quesnay, the patroness of the Encyclopedists. Louis XV. at heart agreed with the archbishop. He recalled him in October, 1757. But always true to his system of counterpoises, he permitted the resigning members of Parliament to resume their duties. The archbishop, unrelentingly pursued by the ill-will of the favorite, was exiled a second time, from January, 1758, to October, 1759. The inflexible prelate would never yield a jot in the matter of doctrine. 'Let them prepare a scaffold in the sight of the court,' he cried; 'I will gladly mount it to maintain my rights, fulfil my duties, and obey the dictates of my conscience.' The disputes concerning the Bull *Unigenitus* were at last adjusted; but religious authority was weakened at the same time and in the same degree as the power of the throne. Emboldened by their polemical writers, the members of the Parliament of Paris gradually set themselves up as guardians of the public liberties and critics of absolute monarchy. Some nobles, D'Argenson, for example, and Choiseul, and other disciples of Voltaire, fondly fancied that the aristocracy might retain its privileges if the clergy lost theirs. Louis XV., catching a glimpse of the cataclysm of the future, had no such illusion; he was, in the depths of his soul, the foe of Parliament and the friend of the Church. If the Very Christian king seemed sometimes to deal gently with the philosophers, it was only because they toadied to his mistress, and sought to lighten his own burden by lulling his remorse to sleep."—I. de Saint-Amand, *Women of the court of Louis XV.*, pp. 205-212.—See also PORT ROYAL AND THE JANSENISTS.

1761 (August).—Third family compact of the Bourbon kings.—"On the 15th of August [1761] . . . Grimaldi [Spanish ambassador at the French court] and Choiseul [the ruling minister, at the time, in France] signed the celebrated Family Compact. By this treaty the Kings of France and Spain agreed for the future to consider every Power, as their enemy which might become the enemy of either, and to guarantee the respective dominions in all parts of the world which they might possess at the next conclusion of peace. Mutual succours by sea and land were stipulated, and no proposal of peace to their common enemies was to be made, nor negotiation entered upon, unless by common consent. The subjects of each residing in the European dominions of the other were to enjoy the same commercial privileges as the natives. Moreover, the King of Spain stipulated the accession of his son, the King of Naples, to this alliance; but it was agreed that no prince or potentate, except of the House of Bourbon, should ever be admitted to its participation. Besides this treaty, which in its words at least applied only to future and contingent wars, and which was intended to be ultimately published, there was also signed on the same day a special and secret convention. This imported, that in case England and France should still be engaged in hostilities on the 1st of May 1762 Spain should on that day declare war against England, and that France should at the same period restore Minorca to Spain. . . . Not only the terms but the existence of a Family Compact were for some time kept scrupulously secret. Mr. Stanley, however, gleaned some information from the scattered hints of the Duke de Choiseul, and these were confirmed to Pitt from several other quarters." As the result of the Family Compact, England declared war against Spain on the 4th of January, 1762. Pitt had gone out of office in October because his colleagues and the King would not then consent to a declaration of war against the Spanish Bourbons (see ENGLAND: 1760-1763). The force of circumstances soon brought them to the measure.—Lord Mahon, *History of England*, v. 4, ch. 37.—See also SPAIN: 1761-1763.

1761-1773.—Turgot as intendant.—His administration.—Efforts to establish the *taille* and *corvée* on a more equitable basis.—"For ten thousand who are well informed about Marat or Robespierre, there is perhaps one to whom the name of Turgot suggests a clear and definite idea. Yet it would be difficult to name many men of either ancient or modern times who deserve better than Turgot to be held in loving and reverent remembrance, not merely in his own country, but in every country that professes to admire great powers steadily applied to great purposes, and intellectual eminence ennobled by benevolence of heart and purity of life. That he signally failed to accomplish much of the good at which he aimed so earnestly reflects dishonour on others rather than on him. . . . Anne Robert Jacques Turgot was the youngest of the three sons of Michael Etienne Turgot, Provost of the Merchants of Paris under Louis XV., and was born at Paris in the year 1727. . . . The youngest of three sons, Turgot . . . was destined to the Church. From the College of Louis le Grand and the College de

Plessis he advanced to the seminary of St. Sulpice, and thence, as bachelor of theology, to the Sorbonne, in order to be licensed. . . . At the Sorbonne, Turgot spent two years, devoted by no means mainly to theology. His studies were very various, and included ancient and modern languages, literature, law, geography, and mathematics. . . . Having been elected, in 1749, Prior of the Sorbonne, he was required, as a consequence of this nominal dignity, which was conferred by the doctors on the bachelor of the most distinguished family, to deliver two Latin discourses, one at the opening, the other at the close, of the theological theses. He chose as the subject of the first, 'The benefits which the establishment of Christianity has conferred upon mankind;' and for the second, 'The successive development of the human intelligence.' Of the latter it may be remarked, in passing, that it contains one memorable passage: 'Colonies are like fruits, which cling to the parent tree only till they are ripe; when the Greek colonies became sufficient for themselves, they did what Carthage did, and what one day America will do.' This was written twenty-six years before the declaration of American independence. . . . In 1753 he obtained the title of Master of Requests, having in the previous year held successively two offices preliminary to this. . . . His spare time he still devoted to science, literature, and philosophy. Mathematics, physics, chemistry, metaphysics, and history, as well as philosophy, he continued to study; and to his knowledge of Greek and of Latin he added that of Hebrew. . . . In 1761 . . . he was named Intendant of the 'generality' of Limoges. There he was to spend the next thirteen years of his life in efforts, much less successful than laborious, to improve a state of things that had gone far beyond the possibility of peaceful improvement or of gradual change. Voltaire, on hearing of his appointment, wrote to him thus: 'One of your colleagues has told me that an intendant is fit only to do mischief. I hope you will prove that he can do much good.' Assuredly, will was not wanting, or wisdom; but, as it has been well said, 'in the heart of a poor province he consumed the most valuable portion of a man's life in struggling with a prodigious expenditure of intelligence and energy against the prejudices of the very people whom he wished to aid, against the avidity of a grasping government, in the hope of slightly bettering the condition of poor peasants. We ought not, however, to regret this long sacrifice, seemingly barren as it was. His administration prepared the way for his ministry, and his ministry smoothed the way for the Revolution.' . . . On assuming office, Turgot's first, as it was his constant, endeavour was to lighten the load of taxation, and to distribute it more justly. It was inevitable that there should be large arrears of taxes that could not be paid. Limoges was a million of francs (£40,000) behindhand, and three years were needed to raise even the annual contribution. The *taille* was raised not only with exemption of the lands of nobles, but, in at least a third of the districts, on the utterly untrustworthy declarations of those taxed, and, in the other two-thirds, on a survey made twenty-two years before, hurriedly, by one surveyor, often a stranger to the country, without discussion, without appeal, without note of changes by death, or sale, or succession during all the years that followed. For five years Turgot devoted himself to the task of obtaining an accurate survey and census, or *cadastre*. In 1762, he wrote to the Controller-General:—'The work which I have

done is already vast, and almost beyond my strength. I look forward with fear, but not wholly without hope, to what of my task remains.' When offered the more lucrative post of Intendant of Lyons, he declined the promotion, in the hope that he might succeed in establishing the *taille* on a more equitable basis within the district of Limoges. Unaided by the Government, however, he could not complete the work; and the abuses continued, abated only in individual cases by the Intendant's decisions, which, of necessity, were often given without due knowledge of the facts. In the *corvée*, or compulsory work upon the roads, from which, as usual, both clergy and nobility were exempt, a beneficial change was made by the substitution of a payment in money for the actual labour, and by the extension of the tax to all the peasants of the district, instead of merely those in the parishes bordering on the roads. Still more oppressive was the *corvée* for the transport of military equipages, the peasants who lived near the high roads being forced to furnish lodging to the soldiers, and cattle to draw the wagons. Turgot himself describes some of the scenes that resulted from this exaction. 'Often,' he says, 'on the road, soldiers mount upon the vehicles already overloaded; impatient of the slowness of the oxen, they goad them with their swords, and, if the peasant remonstrates, he invariably gets the worst, and returns soundly beaten.' This, too, was replaced by a money-tax, spread over a wider area; and the whole province paid an official to take entire charge of the military transport. The raising of the militia was another grievance. Some evaded the decision of the ballot, and fled into the woods; while others, in arms, pursued them to compel them to share the common hardship. Fighting ensued. Substitutes had been forbidden by law, but in Limoges, as elsewhere, breaches of the law had been connived at, and Turgot established peace by venturing to authorise the practice of substitution. Turgot encouraged, and personally aided, the construction of roads; he built barracks in towns for the soldiers who had been before quartered on the peasants. He promoted agriculture, and became the president of a society to the prizes given by which he contributed; he encouraged the growth of the potato, and established a veterinary college. In 1770 and 1771, a terrible famine laid waste the province. 'One cannot think without a shudder,' he writes, 'of the fate which threatens the inhabitants. On what can the people live who have sold their furniture, their cattle, their clothes, for food? What help can they get from proprietors who have reaped no crop, who have no funds to buy seed, and who last year spent more than their income in support of their children and dependants? How are the proprietors themselves to live? Large tracts of country have not been sown from want of means. How can the inhabitants pay taxes? How can they avoid death by hunger?' At such a crisis it was not enough to insist on freedom of trade, which, as we have seen, did not exist even between province and province. Energetic means of various kinds were adopted. The parliament of Bordeaux empowered him to levy a contribution on all the richer persons without distinction, in aid of the sufferers; temporary employment was provided, and, by these and other devices, the worst of the affliction was avoided; but a debt of 20,000 livres had been contracted. After these two years of scarcity, the arrears of taxation rose in 1773 to four millions of francs, as was natural when the government claimed, in one or other form, more

than half, and nearly two-thirds, of the net revenue. Well might Turgot tell the Controller-General, the Abbé Terray (to whom afterwards he succeeded in his office): 'It is physically impossible to extort the current taxes and the enormous arrears without—aye, even with—ruin to the taxed.' No redress, however, no alleviation, was to be obtained; the claim for money that could not be raised could not be abandoned. If Turgot left his province worse than he found it, the reason was the same as that which made the Revolution an inevitable necessity. The grand evil in the small scale, as on the large, was, it has been truly said, 'the existence of classes iniquitously privileged, who not only threw on the plebeians, that is, the people, all the burdens of the state, but devoured the national substance by their exactions: and, further, the numerous trammels which crippled trade and industry, loaded production with useless and injurious costs, isolated the consumer, paralysed intelligence by robbing it of its rightful reward, and doomed labour to sterility. To restore to France its natural fertility, it was indispensable to clear the soil of that parasitic vegetation.'—W. B. Hodgson, *A. R. J. Turgot, his life, times, and opinions*, pp. 1, 3, 8, 11-12, 14, 20-23.

1774-1788.—Court and government of Louis XVI.—His vacillations.—Parlement of Paris.—Turgot, Necker, Calonne, Brienne.—Assembly of Notables.—'On the 10th of May, 1774, Louis XVI. ascended the throne, the cynosure of the high hopes of the Nation. . . . The minds of men had been so greatly agitated during a long period of years, and public opinion so much misled by conflicting theories, that there had come to be more diversity than unanimity of thought in regard to the changes necessary to be introduced into the political system. But the general public, at least, had in mind some definite ideas of reform. The dismissal of ministers whom they detested, the recall of the ancient Parliament, prompt reconstruction of the finances, and a speedy termination of the famine, were the first satisfactions that they demanded of the young King. Louis XVI. was, at heart, fully disposed to walk in the way of reform. But, though he was a good and honest man, he possessed a limited intelligence and an undecided will. The first Edict of his reign revealed his true sentiments. It remitted all 'accession dues,' which amounted to 24,000,000 livres, and cost the tax-payers some 40,000,000 livres. . . . Some astonishment was felt that, in spite of the assurances of reform, contained in the Royal Edict, the Maupeou Parliament was allowed to remain in office and to congratulate the King upon his accession. . . . Louis XVI. sent away some of the ministers, whose dismissal was desired—notably the Duc d'Aiguillon—but he allowed Maupeou [chancellor of France] and the Abbé Terray to remain in power. . . . The Archbishop of Paris [Christophe de Beaumont], and

other prelates, represented to the King that, if he recalled the former Parliament, Religion in France would be completely done for. Mistrusting the influence of Marie Antoinette, to whom it attributed the dismissal of the Duc d'Aiguillon, the clerical party tried to alienate from her the King's affections. . . . On the evening of the day on which he had dismissed the two hated ministers, he nominated Turgot—one of the most prominent chiefs of the Economist party—Comptroller-General. His choice was much applauded, for Turgot was well known to be a man of great honesty, if something of an innovator. In Limousin, where he had held the post of Intendant, he was adored by the inhabitants."—F. Rocquain, *Revolutionary spirit preceding the French Revolution*, pp. 120, 121, 124.—"Turgot was not entrusted with the ministry of finance till the situation had become so desperate, that only the most drastic measures could prevent a speedy collapse of the monarchical fabric. Thoroughly instructed by his memorable administration of Limousin, Turgot was fully aware of the circumstances under which he entered office. No man of his day knew better the strength of traditional institutions, and the intimate connection of the present with the past. He, at any rate, is free from the blame so often imputed to unsuccessful reformers, the reproach of hasty, ill-considered innovation. With calm instructed vision he contemplated the evils which afflicted France. Following the conclusions of the economical school which he adorned, he drew up, in conjunction with Malherbes, the only possible scheme for saving the country. The plan in its entire form comprised nearly every change, which, after years of turmoil, produced modern France. Among the projects of this reforming ministry were provincial self-government, popular education, freedom of the press, and the admission of the burgher class to all public offices; the abolition of the road *corvée*, and of guilds, and hindrances to agriculture; the equitable distribution of taxation, the liberation of trade, and the reorganization of justice, police, and finance; the commutation of feudal burdens and seigniorial rights; reduction of the royal expenditure; disuse of *lettres de cachet*; and through the minister of war, St. Germain, improvement of discipline, and the recognition of merit in the army. . . . There was in truth no reason to discredit the ability of Turgot's ministry to save the state, far on the road to destruction as that state had gone. The means employed would certainly have amounted to a revolution; but they would have been applied with judgment, and with prudent consideration for the sacrifices and derangements necessarily involved in such a process. The trite assertion that France was not to be purged by anything short of a consuming fever is nothing but the commonplace of a careless historical optimism. . . . The changes contemplated by Turgot would have rendered needless a series of spasmodic revolutions, following no fixed principle, owning no guides, and submitting to no laws of politics or morality. To execute them, however, power was required to control the influential, the ignorant, and the base. . . . The power was not available. Though Turgot won the entire approval of the king for his plans of removing hardship and abuse, and the good Louis was persuaded that only he and his minister cared for the people, the contemplated reforms were hardly commenced when it became evident that the royal authority would shrink from engaging with the furious opposition aroused in all conservative quarters. . . . Louis had no sense for the arbitrary element in personal

government. He could not comprehend that pure monarchies possess the essential disadvantage of wittingly or unwittingly nurturing anachronisms and abuses, and that to redress the social balance the discretionary power of despotism must occasionally be exercised. . . . On the decree of the first and most urgent reform, namely, the emancipation of the corn trade from absurd regulations, he displayed an entire lack of firmness to withstand the uproar which interested and prejudiced opponents excited by vulgar fallacy and suborning arts. And though he was induced to overcome the resistance of the parliament of Paris to following edicts of great moment by the recognized act of a *lit de justice*, his reluctance to support his ministers in their policy became so embarrassing that it was evident that they soon would have no alternative but resignation. Moreover, Louis became as suspicious of his servants as they of him. While anxious to adopt their suggestions for the purification of the state, he shrank from their schemes for reconstructing it. Turgot, staunch monarchist though he was, hesitated not to lay before him demands for fundamental changes in the French constitution. That Louis was wrong in supposing that France might be saved by mere amendments is certain; that Turgot, perhaps impatient to sound at once the full depth of the king's confidence, submitted too abruptly a revolutionary project, seems equally clear. Possibly further intercourse with one another might have brought king and minister into accord if at this juncture the enmity of the court to the ministry had not culminated in a personal intrigue against Turgot and Vergennes."—A. Weir, *Introduction to the history of modern Europe*, pp. 51-53.—"The men, with whose interests or prejudices these changes clashed, soon roused themselves. The financiers, the hangers-on of the Court, all those whose existences depended upon the old abuses, arrayed themselves against Turgot; and the clergy, on their side, neglected their former foes to attack the minister. The Parliament, itself, took part against him. The long exile that the magistrates had endured had damped their patriotism and enfeebled their views. Re-established under conditions that deprived them of their old ascendancy, they had experienced a profound feeling of bitterness, and seemed to have but one care, that of preserving their own privileges. . . . The entire Parliament was stirred up against Turgot; his person, ideas, and administration, were all turned into ridicule. . . . Excited by the idea that all feudal dues were to be abolished, the peasants, in different localities, rebelled against their lords. In view of these troubles the Parliament issued a Decree, by which it enjoined 'all subjects of the King, copyholders and vassals of lords to continue, as in the past, to pay—whether to the King or to the said lords—all dues and obligations according to the statutes of the kingdom.' Besides this, the Decree expressly forbade anyone 'to promote, whether by unguarded remarks or by indiscreet writings, any alteration of the said dues and usages, under penalty of the offenders being proceeded against as rebels to the laws, and disturbers of the public peace, and punished with an exemplary punishment.' This Decree, posted throughout Paris, was looked upon as a sort of embargo put upon the projects of the Ministry. . . . All this time clouds were gathering against Turgot at Court. The Queen, whose conduct already exhibited marks of that frivolity, of which she subsequently gave such lamentable proofs, was most impatient with the Comptroller-General's plans of economy."—F. Rocquain, *Revolutionary*

*spirit preceding the French Revolution*, pp. 133, 130.—"The king came to the conclusion that the ministerial policy was dangerous, and that the discontent it aroused was unendurable. Reproached by queen and court for parsimony towards their favorites; summoned by clergy, nobility, and lawyers to prevent the disturbance of feudal institutions, Louis XVI. made up his mind to discard all heroic measures. Turgot, Malesherbes, and St. Germain were dismissed from his service, and France resumed the road to blind revolution."—A. Weir, *Introduction to the history of modern Europe*, p. 54.—"His successor, Necker, a skilful banker rather than a far-seeing statesman, did his best to promote economy, establish the credit of the State, and postpone burning social questions. He warned Louis that bankruptcy would follow an open alliance with the American colonists against England. Yet such was his financial skill and personal credit with bankers that he was able to raise loans and tide over the financial strain of that war; but success in borrowing enhances financial difficulties in the future. Moreover, Lafayette and the French soldiers returned from the United States inflamed with a love of liberty and self-government. 'The American revolution (wrote Young) has laid the foundation of another in France, if Government does not take care of itself.' Yet at the time when the proposed American Constitution was the general topic of conversation in the *salons* of Paris, Louis was weak enough to decree that only those whose families had been noble for four generations could attain high offices in the French army. Necker was brought by the financial needs of the State to demand that the privileged classes should be taxed. Feeling his fall to be near, he published (Jan. 1781) his 'Account of the finances,' laying bare for the first time the expenses of the Court, which were nearly one-third of the cost of maintaining the whole army. Bankruptcy was soon brought nearer by the spendthrift policy of the frivolous Calonne—'Whoever wishes for credit must cultivate luxury'; and when in his much ridiculed Assembly of Notables he ventured to suggest the equalisation of taxation as the inevitable cure, he was dismissed (1787). His successor, Loménie de Brienne, the Archbishop of Toulouse, sought to carry out the aims of the Encyclopædists [see below 1789: Survey of France on the eve of revolution: Literary forerunners] by the methods of Richelieu, to establish liberty and equality by royal decree. He extended to all the provinces the plan, conceived by Turgot, and commenced by Necker in Berri and Guienne, of provincial and parochial assemblies. He also permitted the redemption of the *corvée* by a money payment [see below 1789], abolished the provincial customs dues, and sought to impose a general land tax and a stamp tax. These last were resisted by the Paris Parliament, which declared itself incapable of registering a perpetual tax; but the king overbore their opposition by a *lit de justice* and for a time exiled them from Paris. Finally, Brienne in May 1788 suppressed nearly all the powers of the Parlements, and tried to substitute a Plenary Court, composed of dignitaries nominated for life by the king, as the sole authority for registering laws for all France. This *coup d'état* enraged all classes and interests—the privileged orders, who saw themselves thenceforth taxable at the will of the sovereign; the provincial patriots, menaced with a complete subjection to the capital; and the democrats, who longed for a complete representation of the nation. All rallied round the Parlements as the chief barriers against a central despotism: Mirabeau ex-

pressed the ideas of all friends of freedom when he wrote, 'I will never make war on the Parlements save in presence of the nation.' The people of Rennes and Grenoble rose in defence of their Parlements. Louis bowed before the storm, dismissed the Minister who had raised it, recalled Necker, and finally convoked for 1789 the States General of France, representing the three orders—Nobles, Clergy, and Commons.—J. H. Rose, *Revolutionary and Napoleonic era, 1789-1815*, pp. 33-35.—Lafayette demanded, and he alone signed the demand, that the king convoked the States-General.—"There is no doubt that the French administrative body, at the time when Louis XVI began to reign, was corrupt and self-seeking. In the management of the finances and of the army, illegitimate profits were made. But this was not the worst evil from which the public service was suffering. France was in fact governed by what in modern times is called 'a ring.' The members of such an organization pretend to serve the sovereign, or the public, and in some measure actually do so; but their rewards are determined by intrigue and favor, and are entirely disproportionate to their services. They generally prefer jobbery to direct stealing, and will spend a million of the state's money in a needless undertaking, in order to divert a few thousands into their own pockets. They hold together against all the world, while trying to circumvent each other. Such a ring in old France was the court. By such a ring will every country be governed, where the sovereign who possesses the political power is weak in moral character or careless of the public interest; whether that sovereign be a monarch, a chamber, or the mass of the people. Louis XVI., king of France and of Navarre, was more dull than stupid, and weaker in will than in intellect. . . . He was . . . thoroughly conscientious, and had a high sense of the responsibility of his great calling. He was not indolent, although heavy, and his courage, which was sorely tested, was never broken. With these virtues he might have made a good king, had he possessed firmness of will enough to support a good minister, or to adhere to a good policy. But such strength had not been given him. Totally incapable of standing by himself, he leant successively, or simultaneously, on his aunt, his wife, his ministers, his courtiers, as ready to change his policy as his adviser. Yet it was part of his weakness to be unwilling to believe himself under the guidance of any particular person; he set a high value on his own authority, and was inordinately jealous of it. No one, therefore, could acquire a permanent influence. Thus a well-meaning man became the worst of sovereigns. . . . Louis XV. had been led by his mistresses; Louis XVI. was turned about by the last person who happened to speak to him. The courtiers, in their turn, were swayed by their feelings, or their interests. They formed parties and combinations, and intrigued for or against each other. They made bargains, they gave and took bribes. In all these intrigues, bribes, and bargains, the court ladies had a great share. They were as corrupt as the men, and as frivolous. It is probable that in no government did women ever exercise so great an influence. The factions into which the court was divided tended to group themselves round certain rich and influential families. Such were the Noailles, an ambitious and powerful house, with which Lafayette was connected by marriage; the Broglies, one of whom had held the thread of the secret diplomacy which Louis XV. had carried on behind the backs of his acknowledged ministers; the Polignacs, new people,

creatures of Queen Marie Antoinette; the Rohans, through the influence of whose great name an unworthy member of the family was to rise to high dignity in the church and the state, and then to cast a deep shadow on the darkening popularity of that ill-starred princess. Such families as these formed an upper class among nobles. . . . It is not easy, in looking at the French government in the eighteenth century, to decide where the working administration ended, and where the useless court that answered no real purpose began. . . . There was the department of hunting and that of buildings, a separate one for royal journeys, one for the guard, another for police, yet another for ceremonies. There were five hundred officers 'of the mouth,' table-bearers distinct from chair-bearers. There were tradesmen, from apothecaries and armorers at one end of the list to saddle-makers, tailors and violinists at the other. . . . The military and civil households of the king and of the royal family are said to have consisted of about fifteen thousand souls, and to have cost forty-five million francs per annum. The holders of many of the places served but three months apiece out of every year, so that four officers and four salaries were required, instead of one. With such a system as this we cannot wonder that the men who administered the French government were generally incapable and self-seeking. Most of them were politicians rather than administrators, and cared more for their places than for their country. Of the few conscientious and patriotic men who obtained power, the greater number lost it very speedily."—E. J. Lowell, *Eve of the French Revolution*, ch. 2.

1775-1776.—Relations with England.—"The attitude of France toward Great Britain in the years 1775 and 1776 was one of extremely delicate adjustment. She was under the jealous and watchful eye of Lord Stormont, the British Ambassador, whom not the slightest movement escaped; who was ready at any moment to charge her Government with bad faith, or to call the ministry to account for breach of international contracts. There was a decided sympathy on the part of the French Cabinet toward the American Colonists, through which aid had already begun to go out secretly to them from France; though the appearance of neutrality was carefully maintained, and peace continued with Great Britain. But it did not suit the plans of the Comte de Vergennes, the Secretary of State in France, to have a young French nobleman like the Marquis de La Fayette make a demonstration before the world in favor of the people whom the English nation at that time called *insurgents*, and the English Government *rebels*. . . . La Fayette discovered this very quickly, and it greatly retarded his progress, though it did not defeat the ultimate fulfilment of his purpose."—C. Tower, *Marquis de La Fayette in the American Revolution*, p. 20.

1787-1789.—Struggle of the Crown with the Parlement of Paris.—Demand yielded to for a meeting of the States-General.—Double representation of the third estate conceded.—Elections.—Cahiers.—Banished to Troyes (August, 1787), in consequence of its refusal to register two edicts relating to the stamp-duty and the land-tax, the Parlement of Paris "grew weary of exile, and the minister recalled it on condition that the two edicts should be passed. But this was only a suspension of hostilities; the necessities of the crown soon rendered the struggle more obstinate and violent. The minister had to make fresh applications for money; his existence depended on the issue of several successive loans to the amount of 440,000,000. It was necessary to obtain the enrolment of them. Brienne, expecting opposition from the parliament, procured the enrolment of this edict, by a 'bed of justice,' and to conciliate the magistracy and public opinion, the protestants were restored to their rights in the same sitting, and Louis XVI. promised an annual publication of the state of finances, and the convocation of the states-general before the end of five years. But these concessions were no longer sufficient: parliament refused the enrolment, and rose against the ministerial tyranny. Some of its members, among others the duke of Orleans, were banished. Parliament protested by a decree against 'lettres de cachet,' [sealed orders issued by the king for the arrest and arbitrary imprisonment of a person for an indefinite period without trial or explanation] and required the recall of its members. This decree was annulled by the king, and confirmed by parliament. The warfare increased. The magistracy of Paris was supported by all the magistracy of France, and encouraged by public opinion. It proclaimed the rights of the nation, and its own incompetence in matters of taxation; and, become liberal from interest, and rendered generous by oppression, it exclaimed against arbitrary imprisonment, and demanded regularly convoked states-general. After

this act of courage, it decreed the irremovability of its members, and the incompetence of any who might usurp their functions. This bold manifesto was followed by the arrest of two members, d'Epréménil and Goislard, by the reform of the body, and the establishment of a plenary court. Brienne understood that the opposition of the parliament was systematic, that it would be renewed on every fresh demand for subsidies, or on the authorization of every loan. Exile was but a momentary remedy, which suspended opposition, without destroying it. He then projected the reduction of this body to judicial functions. . . . All the magistracy of France was exiled on the same day, in order that the new judicial organization might take place. The keeper of the seals deprived the Parlement of Paris of its political attributes, to invest with them a plenary court, ministerially composed, and reduced its judicial competence in favour of bailiwicks, the jurisdiction of which he extended. Public opinion was indignant; the Châtelet protested, the provinces rose, and the plenary court could neither be formed nor act. Disturbances broke out in Dauphiné, Brittany, Provence, Flanders, Languedoc, and Béarn; the ministry, instead of the regular opposition of parliament, had to encounter one much more animated and factious. The nobility, the third estate, the provincial states, and even the clergy, took part in it. Brienne, pressed for money, had called together an extraordinary assembly of the clergy, who immediately made an address to the king, demanding the abolition of his plenary court, and the recall of the states-general: they alone could thenceforth repair the disordered state of the finances, secure the national debt, and terminate these disputes for power. . . . Obtaining neither taxes nor loans, unable to make use of the plenary court, and not wishing to recall the parliaments, Brienne, as a last resource, promised the convocation of the states-general. By this means he hastened his ruin. . . . He succumbed on the 25th August, 1788. The cause of his fall was a suspension of the payment of the interest on the debt, which was the commencement of bankruptcy. This minister has been the most blamed because he came last. Inheriting the faults, the embarrassments of past times, he had to struggle with the difficulties of his position with inefficient means. He tried intrigue and oppression; he banished, suspended, disorganized parliament; everything was an obstacle to him, nothing aided him. . . . The states-general had become the only means of government, and the last resource of the throne. They had been eagerly demanded by parliament and the peers of the kingdom, on the 13th of July, 1787; by the states of Dauphiné, in the assembly of Vizille; by the clergy in its assembly at Paris. The provincial states had prepared the public mind for them; and the notables were their precursors. The king after having, on the 18th of December, 1787, promised their convocation in five years, on the 8th of August, 1788, fixed the opening for the 1st of May, 1789. Necker was recalled, parliament re-established, the plenary court abolished, the bailiwicks destroyed, and the provinces satisfied; and the new minister prepared everything for the election of deputies and the holding of the states. At this epoch a great change took place in the opposition, which till then had been unanimous. Under Brienne, the ministry had encountered opposition from all the various bodies of the state, because it had sought to oppress them. Under Necker, it met with resistance from the same bodies, which desired power for themselves and oppression for the people. From being despotic, it had become national, and it still had them all equally against

it. Parliament had maintained a struggle for authority, and not for the public welfare; and the nobility had united with the third estate, rather against the government than in favour of the people. Each of these bodies had demanded the states-general: the parliament, in the hope of ruling them as it had done in 1614; and the nobility, in the hope of regaining its lost influence. Accordingly, the magistracy proposed as a model for the states-general of 1789, the form of that of 1614, and public opinion abandoned it; the nobility refused its consent to the double representation of the third estate, and a division broke out between these two orders. This double representation was required by the intellect of the age, the necessity of reform, and by the importance which the third estate had acquired. It had already been admitted into the provincial assemblies. . . . Opinion became daily more decided, and Necker wishing, yet fearing, to satisfy it, and desirous of conciliating all orders, of obtaining general approbation, convoked a second assembly of notables on the 6th of November, 1788, to deliberate on the composition of the states-general, and the election of its members. . . . Necker, having been unable to make the notables adopt the [double] representation of the third estate, caused it to be adopted by the council. The royal declaration of the 27th of November decreed, that the deputies in the states-general should amount to at least a thousand, and that the deputies of the third estate should be equal in number to the deputies of the nobility and clergy together. Necker moreover obtained the admission of the curés into the order of the clergy, and of protestants into that of the third estate."—F. A. Mignet, *History of the French Revolution, introduction*.—"The order provided also that the unity of election should be the *bailliage*, or county, and that each *bailliage* should elect a number of deputies to the States General proportionate to its population. A system of election was devised more complicated than that by which American citizens elect their President. When one recalls that this was laid upon a nation ignorant of the most rudimentary process of representative government, that in addition to the regular deputies alternates had also to be chosen, and that at each stage of the electoral body, the wonder is that the elections could have been conducted at all. As it was, all the provinces were by no means content to adopt the prescribed plan, and in some cases, notably that of Brittany, were so vehement in their opposition that special decrees had to be issued in their behalf. It is indeed hard to see how the electoral process could have been carried through had it not been for the invaluable advice given all parts of France by the Assembly of Dauphiné, of which Jean Joseph Mounier was president."—S. Mathews, *French Revolution*, pp. 115-116.—"At the Parish Assemblies the Third Estate is admitted almost without exception, under a slight property restriction, to fulfil the condition of being 'included in the roll of taxpayers.' This is very nearly universal suffrage. Had royalty established this suffrage, so contrary to the ideas of the century, for the very reasons that induced the philosophers and the writers in favour of reform to reject it? Did the King hope, in the poor and ignorant masses, to find an element of resistance against the new and revolutionary ideas of the middle classes? . . . If such a calculation did really exist, it was disproved by the event. To be sure, the *cahiers* [lists of grievances drawn up by the nation at the suggestion of the king to serve as instructions for the delegates to the Estates-General] are more timid than the books and pamphlets of the time; but as

a general thing they demand a Constitution, and a Constitution is the end of absolutism—it is, to some extent, the Revolution. . . . We must note how the misunderstanding between the *bourgeoisie* and the people was dissipated or diminished on the occasion of convocation and the drawing up of the *cahiers*. Collaboration took place between the *bourgeoisie* and the people in the drafting of the *cahiers* of the first degree, or the parish *cahiers*; and in general we must not, in the case of rural communities, regard these *cahiers* as the personal work of peasants. It was usually a man of the middle classes who held the pen, and in most localities, even in the most rustic, there were a few educated men. The majority of the parish *cahiers* that we possess testify to a considerable amount of culture—a culture higher than that of the provincial middle classes of to-day. If the *cahier* is not dictated by peasants, it is at least read to and approved by them. There is an assembly at which peasants and middle classes mingle together, chat with one another, and publicly discuss and debate. It is the first time such a colloquy has taken place; the occasion is a fraternal one and the classes are quickly in agreement. The middle-class man sees that the peasant is more intelligent or less imbecile than he supposed; that—by what obscure channels who knows?—the spirit of the times has touched him. The peasants, once they have met together, soon rise to the idea of a common interest; they have the sense that they are many and powerful, and they obtain, from the middle classes, a perception of their rights. For them this Parish Assembly is a civic apprenticeship. We must not picture the whole peasantry rising at once to the revolutionary idea of the mother-country. . . . To them, it appears in deadly earnest that the King is going to concern himself with the cure of the ills which afflict them; it is in earnest that they recount these ills, or, rather, accept the account of them that the gentlemen of the village write for them. . . . We have here no longer the vile populace, slighted and feared by Mably, Rousseau, and Condorcet. But it is not as yet the sovereign people. . . . It is true that men will still declaim against the populace, and the middle class will even establish itself as a caste politically privileged. But enlightened Frenchmen will no longer, after this royal experiment in universal suffrage, be unanimous in declaring the unlettered to be incapable of exercising political rights. A democratic party is about to declare itself, and will soon be fully formed. The method of convening the Third Estate at the Estates-General allows us almost to foretell the advent of universal suffrage, and, as a consequence, the establishment of the Republic, the national form of Democracy."—A. Aulard, *French Revolution*, v. 1, pp. 128-132.

1789.—Survey of France on the eve of revolution: Literary forerunners.—Rousseau, Voltaire, Montesquieu, Diderot, D'Alembert, Marquis d'Argenson, and others.—"One day some one cited in presence of Louis XV. the example of Frederick the Great, who admitted the philosophers in vogue and famous men of letters to his intimate acquaintance. 'That is not the way in France,' said the King, 'and as there are a few more wits and great noblemen here than there are in Prussia, I should want a very big table to gather them all around it.' And then he counted on his fingers: 'Maupertuis, Fontenelle, La Motte, Voltaire, Piron, Destouches, Montesquieu, Cardinal de

Polignac.' His attention was called to the fact that he had forgotten D'Alembert and Clairant.—'And Crébillon,' said he, 'and La Chaussée!'—'And Crébillon the younger,' cried some one; 'he ought to be more amiable than his father; and then there are the Abbé Prevost, the Abbé d'Olivet.'—'Very well,' replied Louis XV., 'for twenty-five years all of that crowd would have dined or supped with me.'—J. de Saint-Amand, *Court of Louis XV.*, p. 214.—'There is no given set of practical maxims agreed to by all members of the revolutionary schools for achieving the work of release from the pressure of an antiquated social condition, any more than there is one set of doctrines and one kind of discipline accepted by all Protestants. Voltaire was a revolutionist in one sense, Diderot in another, and Rousseau in a third, just as in the practical order, Lafayette, Danton, Robespierre, represented three different aspirations and as many methods. Rousseau was the most directly revolutionary of all the speculative precursors, and he was the first to apply his mind boldly to those of the social conditions which the revolution is concerned by one solution or another to modify. How far his direct influence was disastrous in consequence of a mischievous method, we shall have to examine. It was so various that no single answer can comprehend an exhaustive judgment. His writings produced that glow of enthusiastic feeling in France, which led to the all-important assistance rendered by that country to the American colonists in a struggle so momentous for mankind. . . . It was his work more than that of any other one man, that France arose from the deadly decay which had laid hold of her whole social and political system, and found that irresistible energy which warded off dissolution within and partition from without. We shall see, further, that besides being the first immediately revolutionary thinker in politics, he was the most stirring of reactionists in religion. His influence formed not only Robespierre and Paine, but Chateaubriand, not only Jacobinism, but the Catholicism of the Restoration. Thus he did more than any one else at once to give direction to the first episodes of revolution, and force to the first episode of reaction.'—J. Morley, *Rousseau*, pp. 2-3.—'In his *Contrat Social* Rousseau postulated the essential equality of the governor and the governed. But his sentimental attitude towards man involved a corresponding one towards the Deity; unable to accept Catholicism or even Christianity, he sought refuge from atheism in the arms of the *Etre Supreme*. It was this Supreme Being of Rousseau that was to become the official deity of France during the last days of the Reign of Terror.'—R. M. Johnston, *French Revolution*, p. 20.—'The glories of the age of Lewis XIV were the climax of a set of ideas that instantly afterwards lost alike their grace, their usefulness, and firmness of their hold on the intelligence of men. A dignified and venerable hierarchy, an august and powerful monarch, a court of gay and luxurious nobles, all lost their grace, because the eyes of men were suddenly caught and appalled by the awful phantom, . . . of a perishing nation. . . . The material misery caused by the wars of the great Lewis deepened the dark side, and the lustre of genius consecrated to the glorification of traditional authority . . . heightened the brightness of the brightness of the bright side, until the contrast was suddenly seen by a few startled eyes, and the new and deepest problem, destined to strain our civilization . . . came slowly into pale outline. There is no reason to think that Voltaire ever saw this gaunt and tremendous spectacle. Rousseau was its first voice. . . . Voltaire's task was different and

preparatory. It was to make popular the genius and authority of reason. The foundations of the social fabric were in such a condition that the touch of reason was fatal to the whole structure, which instantly began to crumble. Authority and use oppose a steadfast and invincible resistance to reason, so long as the institutions which they protect are of fair practical service to a society. But after the death of Lewis XIV, not only the grace and pomp, but also the social utility of spiritual and political absolutism passed obviously away. Spiritual absolutism was unable to maintain even a decent semblance of unity and theological order. Political absolutism by its material costliness, its argumenting tendency to repress the application of individual energy and thought to public concerns, and its pursuit of a policy in Europe which was futile and essentially meaningless as to its ends, and disastrous and incapable in its choice of means, was rapidly exhausting the resources of national well-being and viciously severing the tap-root of national life. To bring reason into an atmosphere so charged, was, as the old figure goes, to admit air to the chamber of the mummy. And reason was exactly what Voltaire [the critic, historian, and philosopher] brought. . . . Voltaire's universal talents made one of the most powerful instruments for conveying bold and inquisitive notions among many sorts and conditions of men, including both the multitude of common readers and playgoers in the towns, and the narrower multitudes of nobles and sovereigns. More than this, the brilliance and variety of his gifts attracted, stimulated, and directed the majority of the men of letters of his time. . . . The effect of all this was to turn a vast number of personages who were officially inimical to free-criticism, to be at heart abettors and fellow-conspirators in the great plot. . . . There are times when the inhumanity of a system stands out so red and foul, when the burden of its iniquity weighs so heavy, and the contagion of its hypocrisy is so laden with mortal plague, that no awe of dilettante condemnation nor minute scruple . . . can stay the hand of the man whose direct sight and moral energy have pierced the veil of use, and revealed the shrine of the infamous thing. . . . Voltaire had no calm breadth of vision. . . . There are moments which need not this calm breadth of wisdom, but a two-edged sword, and when the deliverers of mankind are they who 'come to send fire on earth.'—J. Morley, *Voltaire*, pp. 21, 24-28, 30, 41-42.—'A new Rabelais with an 18th century lisp, Montesquieu, by seasoning his *Lettres Persanes* with a sauce piquante compounded of indecency and style, succeeded in making the public swallow some incendiary morsels. The King of France, he declared, drew his power from the vanity of his subjects, while the Pope was 'an old idol to whom incense is offered from sheer habit'; nothing stronger has been said to this day. A few years later, in his *Esprit des Loix*, he produced a work of European reputation which eventually proved one of the main channels for the conveyance of English constitutional ideas to the thinking classes of France.'—R. M. Johnston, *French Revolution*, p. 16.—'The English superiority, proclaimed first by Voltaire, was further demonstrated by Montesquieu. For England had recently created a government which was stronger than the institutions that had stood on antiquity. Founded upon fraud and treason, it had yet established the security of law more firmly than it had ever existed under the system of legitimacy, of prolonged inheritance, and of religious sanction. It flourished on the unaccustomed belief that theological dissensions need not detract from the power of the State, while political dissen-

sions are the very secret of its prosperity. The men of questionable character who accomplished the change and had governed for the better part of sixty years, had successfully maintained public order, in spite of conspiracy and rebellion; they had built up an enormous system of national credit, and had been victorious in continental war. The Jacobite doctrine, which was the basis of European monarchy, had been backed by the arms of France, and had failed to shake the newly planted throne. A great experiment had been crowned by a great discovery. A novelty that defied the wisdom of centuries had made good its footing, and revolution had become a principle of stability more sure than tradition. Montesquieu undertook to make the disturbing fact avail in political science. He valued it because it reconciled him with monarchy. He had started with the belief that kings are an evil, and that their time was running short. His visit to Walpolean England taught him a plan by which they might be reprimed. He still confessed that a republic is the reign of virtue; and by virtue he meant love of equality and renunciation of self. But he had seen a monarchy that thrived by corruption. He said that the distinctive principle of monarchy is not virtue but honour, which he once described as a contrivance to enable men of the world to commit almost every offence with impunity. The praise of England was made less injurious to French patriotism by the famous theory that explains institutions and character by the barometer and the latitude. Montesquieu looked about him, and abroad, but not far ahead. . . . The motto of his work, *Prolem sine matre creatam*, was intended to signify that the one thing wanting was liberty; and he had views on taxation, equality, and the division of powers that gave him a momentary influence in 1780. His warning that a legislature may be more dangerous than the executive remained unheard."—J. E. E. Dalberg-Acton, *Lectures on the French Revolution*, pp. 6-8.

"If prudence kept Voltaire from scattering broadcast the new theories, because, as he once said, he did not wish to be murdered by his own valet, no such scruples or fears held back the two most outspoken champions of the intellectual revolution, Diderot [who launched the prospectus of the fourth volume of the *Encyclopédie*, a veritable arsenal of impiety] and d'Alembert [chief of the encyclopedists]. Morality is only relative to the senses of the individual: 'Pain and pleasure are the only springs of the moral universe.' 'Would you see man free and happy, do not meddle with his affairs.' 'Man is wicked, not because he is wicked, but because he has been made so.' Such are some of their assertions, implying that the individual is the supreme judge of his own conduct—a teaching which naturally led to moral, social, and political anarchy. All the old institutions and beliefs were vehemently assailed; and Diderot's destructive aims find their most ferocious expression in the wish that the last king might be strangled with the entrails of the last priest. These two men, aided by many other 'philosophers,' compiled the famous *Encyclopédie* (1766), a complete circle of education framed on the basis of the new scientific and philosophic research. It was designed to combat or tacitly exclude the older system of thought resting on authority or tradition. [This great reference work penetrated into every intellectual circle and brought with it the doctrines of materialism and atheism.] The Encyclopedists, as they were called, systematized the intellectual revolution,—the effort to emancipate and perfect mankind by means of human reason and knowledge.—J. H. Rose, *Revolutionary and Napoleonic era*, p. 25.—"Voltaire,

Diderot, d'Alembert, were at heart essentially aristocrats; for them the common man was an untrustworthy brute of low instincts, and their revolution would have meant the displacement of an aristocracy of the sword by an aristocracy of the intellect. Rousseau stood for the opposite view. To him it was only despotism that degraded man. Remove the evil conditions and the common man would quickly display his inherent goodness and amiability; tenderness to our fellows, or fraternity, was therefore the distinctive trait of manhood"—R. M. Johnston, *French Revolution*, p. 19.—"The editors of the Encyclopædia had not neglected economic questions, and had given much employment to a number of writers who ranked as Economists or as Physiocrats. Among the men most interested in such questions were Quesnay, the physician of Madame de Pompadour; Turgot, the ablest minister of Louis XVI, and the Marquis de Mirabeau, father of a more famous son. They concerned themselves, among other things, with theories of agriculture largely based on the condi-

MONTESQUIEU

tions of their country. With her large population France could with difficulty produce sufficient food for her people. The wheat which she did produce was brought to market under extremely bad conditions of distribution and of payment. The century witnessed what appeared to be an endless succession of short crops and consequent famine. Viewing these conditions as a whole, the economic thinkers concluded that the foundations of the State must repose on agriculture, and they quickly voiced a demand that there should be encouragement for the production of wheat and free circulation."—*Ibid.*, pp. 25-26.—"[The] prophecies of the coming Revolution are incessantly renewed in the writings of one of the ministers of Louis XV., the Marquis d'Argenson. It is he who writes in January, 1750: 'Republicanism is every day gaining on philosophic minds. People take an aversion to monarchism through demonstration. In fact, it is only slaves and eunuchs who aid monarchism by their false wisdom.' And on December 20 of the same year: 'See how many philosophic writers there are at present. The wind from England blows over this stuff. It is combustible. Look at the style in which Parliament remonstrances are written. These

procureurs general of Parliaments, these State syndics, would at need become great men. All the nation would take fire; the nobility would gain the clergy, and then the third estate. And if necessity should arise for assembling the States-General of the realm to regulate the demands for money, these States would not assemble in vain. One should be careful; all this is very serious.' It must be owned that D'Argenson is a true prophet. Every day he accentuates his sinister predictions. September 11, 1751, he writes: 'We have not, like the Romans, any Visigoths or Saracens who might invade us; but the Government may experience a revolution. Consider that it is no longer either esteemed or respected, and, which is worse, that it is doing all that is needed to ruin itself. The clergy, the army, the Parliaments, the people high and low, are all murmuring, all detaching themselves from the Government, and rightly. Things are going from bad to worse.' He returns to the charge September 9, 1752: 'The bad effects of our government by absolute monarchy are resulting in persuading France and all Europe that it is the worst of governments. . . . A mild but inactive prince allows the abuses to grow which were commenced by pride of Louis XIV.; no reform when it is necessary, no amelioration, appointments blindly made, prejudices without inquiry; everything shows an increasing tendency toward national ruin. Everything is falling into tatters, and private passions are working underhand to ruin and destroy us.' Is it not a curious thing to hear, forty years beforehand, the first mutterings of the formidable tempest which was to engulf everything,—nobility, clergy, Parliaments, monarchy? We are in the year 1750."—I. de Saint-Amand, *Court of Louis XV*, pp. 218-219.—"It was hope which made the Revolution, beckoning on those disciples of the new gospel, St. Just and Robespierre, far into the Reign of Terror. It was despair which finally laid France at the feet of Bonaparte."—J. H. Rose, *Revolutionary and Napoleonic era*, p. 26.—See also EUROPE: Modern: Revolutionary period; French Revolution; FRENCH LITERATURE: 1700-1794; 1700-1800; 1700-1814; 1750-1785.

1789.—Survey of France on the eve of revolution: Résumé of causes.—"The movement which took the form of revolution in France was the movement, common to all Europe, of the transformation of feudal institutions into those of the modern State: at the end of the eighteenth century it had proceeded far in England; it had been started in Austria; but in France no step had been made: yet in no other country was there greater need of change, and, what is more important, in no other country was the need so keenly felt: a public opinion had been created which was at once acutely critical of the actual and absurdly credulous of the ideal; which perceived with inexorable lucidity not only that grievances existed, both material and sentimental, but that these grievances depended directly on the political and social organisation; and which yet, having access to no machinery by which it could make itself felt as reform, was compelled, by defect of experience and power, to distort its vision and waste its force over imaginary constructions in the air: it is the conjunction of these two conditions—grievances dependent on political organisation, and opinion indignant but powerless for action—that explains at once the fact and the character of the Revolution of 1789."—G. L. Dickinson, *Revolution and reaction in modern France*, pp. 4-5.—"To trace the causes of the French Revolution necessitates a study of the history of France from the beginning of the feudal system as well as a

careful study of the qualities, the characteristics, the laws, the moral, social, political, physical, and racial features of the French. After the fall of the Roman Empire the Gauls, who had been in possession of France, were conquered by the Franks under Clovis, and the latter laid the foundations of the French monarchy and established the most severe and rigorous system of feudalism known throughout Europe. The Franks exacted from the conquered people all the dues of feudal superiors, and built up a system of separate states that took centuries to weld into one realm. . . . A combination of a few powerful barons would often interfere with the purposes of an ambitious king and in many ways curtail his power and influence. Allegiance to the crown sat lightly upon these haughty lords, who were absolute in their own manors or domains and brooked no insolence from any superior, in fact, often defying in open rebellion even the king himself. . . . The civil wars of the Fronde helped to break the independence of the barons and, at last, under the vigorous administration of Richelieu, the crown was made absolute. 'In a word,' says Mignet, 'power had become more and more concentrated, and as it had passed from the many to the few, it came at last, from the few to be invested in one alone.' No longer did the king have to depend upon the feudal lords for his army, for now he had means to support his own and was able to wage war against a foreign enemy or compel obedience from a rebellious vassal. The church was another enemy to the absolutism of the crown, it was an 'imperium in imperio,' and its first allegiance was due to Rome. Its power was not confined within the limits of any state, it was world wide. It was ever jealous of its rights, and always ready to resent any attempt made by the state to encroach upon its jurisdiction. It had built up a system that was based upon divine creation and authority. Its wealth, its vast possessions and privileges, its influence over the minds and consciences of men gave it an immense power in temporal as well as in spiritual matters. It had no standing army, but it had, instead, that terrible weapon of excommunication that made the most defiant monarch tremble and do penance. When it fulminated its decree from Rome, the king who defied its authority became an outcast, a social pariah; he was shorn of his power and his people absolved from their allegiance. . . . A struggle for supremacy with so mighty a power as this required all the intelligence, courage, and force the state could bring to bear. The contest in France continued uninterruptedly for centuries; it was long and bitter and was waged with all the arts and methods of intrigue and subtle diplomacy known to crafty churchmen and resourceful politicians, but gradually the state gained the ascendancy, and the pope in the reign of Francis I. granted to the crown the power of nomination to ecclesiastical dignities. . . . The encroachment, however, upon the power of the church was gradual but sure; her wealth was not diminished, nor were her estates confiscated, nor her privileges and exemption from taxation abolished, but she was deprived of her temporal power, and her right of appointment to ecclesiastical offices was greatly curtailed. This long conflict between the state and the church, however, had not estranged the loyalty of the people from the latter. No people were ever more devoted or more closely wedded to their religious faith than the French, and yet no nation was ever so overwhelmed, at last, by irreligion and infidelity. . . . Louis XIV. subdued the nobility and the church, restrained Parliament, and made them all

dependent upon his royal will. He quelled opposition whenever and in whatever form it manifested itself, and revoked the Edict of Nantes because it allowed a religious freedom not in consonance with his royal desire. Its revocation was both a crime and a blunder. It revived the old spirit of intolerance and persecution. . . . The Edict of Nantes was for the protection of the Huguenots and to call home from exile the descendants of those who had fled from the horrors of the massacre of St. Bartholomew. Its revocation revived intolerance and persecution and assured the dominancy of one creed, one church. In France the Huguenots were among the most industrious, prosperous, and enlightened of all the king's subjects. They were devoutly religious, were loyal to government, peace-loving, and tolerant of the opinions of others. . . . The loss to France, by the exile of these useful citizens, the Huguenots, was irreparable; many of them were the flower of their race and they were scattered by a brutal bigotry to the four corners of the earth, carrying with them, however, all their skill and talents to enrich the peoples among whom they settled. . . . The massacre resulted not only in depriving France of many of her best citizens, but left in the mind and heart of the nation the memory of a great wrong done in the name of religion. Men were breaking away from the restraints of the church and were beginning, without bigotry, to criticise and denounce injustice wherever and by whomsoever practised. . . . The controversy between the Jesuits and the Jansenists was an important event in the history of the emancipation of the minds of men from the severe and uncompromising rule of mere doctrine. All France was inflamed by the angry discussion. Bulls and denunciations thundered from the Vatican, but they only surcharged the already heated air and increased the bitterness of the contention. Both sides struggled to gain the favor of the court, but at last the Jansenists were proscribed by the king, and their cloister at Port Royal was levelled to the ground. The influence of their liberalism, however, spread in every direction and planted the seeds of revolution."—C. F. Warwick, *Mirabeau and the French Revolution*, pp. 16-18, 20-21, 28-30, 32.—"Nothing, on the contrary, is more certain than that American principles profoundly influenced France, and determined the course of the Revolution. It is from America that Lafayette derived the saying that created a commotion at the time, that resistance is the most sacred of duties. There also was the theory that political power comes from those over whom it is exercised, and depends upon their will; that every authority not so constituted is illegitimate and precarious; that the past is more a warning than an example; that the earth belongs to those who are upon it, not to those who are underneath. These are characteristics common to both Revolutions. At one time also the French adopted and acclaimed the American notion that the end of government is liberty, not happiness, or prosperity, or power, or the preservation of an historic inheritance, or the adaption of national law to national character, or the progress of enlightenment and the promotion of virtue; that the private individual should not feel the pressure of public authority, and should direct his life by the influences that are within him, not around him. And there was another political doctrine which the Americans transmitted to the French. In old colonial days the executive and the judicial powers were derived from a foreign source, and the common purpose was to diminish them. The assemblies were popular in origin and character, and everything that added to their power

seemed to add security to rights. . . . Now, although France was deeply touched by the American Revolution, it was not affected by the American Constitution. It underwent the disturbing influence, not the conservative. The Constitution, framed in the summer of 1787, came into operation in March 1789, and nobody knew how it worked, when the crisis came in France. . . . Moreover, the Constitution has become something more than the original printed paper. Besides amendments, it has been interpreted by the courts, modified by opinion, developed in some directions, and tacitly altered in others. Some of its most valued provisions have been acquired in this way, and were not yet visible when the French so greatly needed the guiding lessons of other men's experience. . . . At the Revolution there were many Frenchmen who saw in federalism the only way to reconcile liberty and democracy, to establish government on contract, and to rescue the country from the crushing preponderance of Paris and the Parisian populace. I do not mean the Girondins, but men of opinions different from theirs, and, above all, Mirabeau. He planned to save the throne by detaching the provinces from the frenzy of the capital, and he declared that the federal system is alone capable of preserving freedom in any great empire. The idea did not grow up under American influence; for no man was more opposed to it than Lafayette; and the American witness of the Revolution, Morris, denounced federalism as a danger to France. Apart from the Constitution, the political thought of America influenced the French next to their own. And it was not all speculation, but a system for which men died, which had proved entirely practical, and strong enough to conquer all resistance, with the sanction and encouragement of Europe. It displayed to France a finished model of revolution, both in thought and action, and showed that what seemed extreme and subversive in the old world, was compatible with good and wise government, with respect for social order, and the preservation of national character and custom."—J. E. Dalberg-Acton, *Lectures on the French Revolution*, pp. 32-33, 35, 37-38.

1789.—Survey of France on the eve of revolution: Condition of the people.—"In 1780 three classes of persons, the Clergy, the Nobles, and the King occupied the most prominent position in the State, with all the advantages which it comports; namely, authority, property, honors, or, at the very least, privileges, immunities, favors, pensions, preferences, and the like. . . . The privileged classes number about 270,000 persons, comprising of the nobility 140,000 and of the clergy 130,000. This makes from 25,000 to 30,000 noble families; 23,000 monks in 2,500 monasteries, and 37,000 nuns in 1,500 convents, and 60,000 curates and vicars in as many churches and chapels. Should the reader desire a more distinct impression of them, he may imagine on each square league of territory, and to each thousand of inhabitants, one noble family in its weathercock mansion, in each village a curate and his church, and, every six or seven leagues, a conventual body of men or of women. . . . A fifth of the soil belongs to the crown and the communes, a fifth to the third estate, a fifth to the rural population, a fifth to the nobles and a fifth to the clergy. Accordingly, if we deduct the public lands, the privileged classes own one half of the kingdom. This large portion, moreover, is at the same time

the richest, for it comprises almost all the large and handsome buildings, the palaces, castles, convents, and cathedrals, and almost all the valuable movable property. . . . Such is the total or partial exemption from taxation. The tax-collectors halt in their presence, because the king well knows that feudal property has the same origin as his own; if royalty is one privilege seignior is another; the king himself is simply the most privileged among the privileged. . . . After the assaults of 450 years, taxation, the first of fiscal instrumentalities, the most burdensome of all, leaves feudal property almost intact. . . . The privileged person avoids or repels taxation, not merely because it despoils him, but because it belittles him; it is a mark of plebeian condition, that is to say, of former servitude, and he resists the fisc as much through pride as through interest. . . . La Bruyère wrote, just a century before 1789, 'Certain savage-looking beings, male and female, are seen in the country, black, livid and sunburnt, and belonging to the soil which they dig and grub with invincible stubbornness. They seem capable of articulation, and, when they stand erect they display human lineaments. They are, in fact, men. They retire at night into their dens, where they live on black bread, water and roots. They spare other human beings the trouble of sowing, ploughing and harvesting, and thus should not be in want of the bread they have planted.' They continue in want of it during 25 years after this, and die in herds. I estimate that in 1715 more than one-third of the population, six millions, perish with hunger and of destitution. The picture, accordingly, for the first quarter of the century preceding the Revolution, far from being overdrawn, is the reverse; we shall see that, during more than half a century, up to the death of Louis XV, it is exact; perhaps, instead of weakening any of its points, they should be strengthened. . . . Undoubtedly the government under Louis XVI. is milder; the intendants are more humane, the administration is less rigid, the 'taille' becomes less unequal, and the 'corvée' is less onerous through its transformation, in short, misery has diminished, and yet this is greater than human nature can bear. Examine administrative correspondence for the last thirty years preceding the Revolution. Countless statements reveal excessive suffering, even when not terminating in fury. Life to a man of the lower class, to an artisan, or workman, subsisting on the labor of his own hands, is evidently precarious; he obtains simply enough to keep him from starvation and he does not always get that. Here, in four districts, 'the inhabitants live only on buckwheat,' and for five years, the apple crop having failed, they drink only water. There, in a country of vineyards, 'the vine-dressers each year are reduced, for the most part, to begging their bread during the dull season.' . . . In a remote canton the peasants cut the grain still green and dry it in the oven, because they are too hungry to wait. . . . Between 1750 and 1760, the idlers who eat suppers begin to regard with compassion and alarm the laborers who go without dinners. Why are the latter so impoverished, and by what chance, on a soil as rich as that of France, do those lack bread who grow the grain? In the first place, many farms remain uncultivated, and, what is worse, many are deserted. According to the best observers 'one-quarter of the soil is absolutely lying waste. . . . Hundreds and hundreds of arpents of heath and moor form extensive deserts.' . . . This is not sterility but decadence. The régime invented by Louis XIV. has produced its effect; the soil for a century past is reverting back to a wild state. . . . In the second place, cultivation, when it

does take place, is carried on according to mediæval modes. Arthur Young, in 1789, considers that French agriculture has not progressed beyond that of the 10th century. Except in Flanders and on the plains of Alsace, the fields lie fallow one year out of three and oftentimes one year out of two. The implements are poor; there are no ploughs made of iron; in many places the plough of Virgil's time is still in use. . . . Arthur Young shows that in France those who lived on field labor, and they constituted the great majority, are 76 per cent. less comfortable than the same laborers in England, while they are 76 per cent. less well fed and well clothed, besides being worse treated in sickness and in health. The result is that, in seven-eighths of the kingdom, there are no farmers but simply métayers. ['The poor people,' says Arthur Young, 'who cultivate the soil here are métayers, that is, men who hire the land without ability to stock it; the proprietor is forced to provide cattle and seed, and he and his tenants divide the product.'] . . . Misery begets bitterness in a man; but ownership coupled with misery renders him still more bitter"; and, strange as it appears, the acquisition of land by the French peasants, in small holdings, went on steadily during the eighteenth century, despite the want and suffering which were so universal. "The fact is almost incredible, but it is nevertheless true. We can only explain it by the character of the French peasant, by his sobriety, his tenacity, his rigor with himself, his dissimulation, his hereditary passion for property and especially for that of the soil. He had lived on privations and economized sou after sou. . . . Towards 1760, one-quarter of the soil is said to have already passed into the hands of agriculturists. . . . The small cultivator, however, in becoming a possessor of the soil assumed its charges. Simply as day-laborer, and with his arms alone, he was only partially affected by the taxes; 'where there is nothing the king loses his dues.' But now, vainly is he poor and declaring himself still poorer; the fisc has a hold on him and on every portion of his new possessions. . . . In 1715, the 'taille' [see TAILLE AND GABELLE] and the poll-tax, which he alone pays, or nearly alone, amounts to 66,000,000 livres, the amount is 93,000,000 in 1759 and 110,000,000 in 1789. . . . 'I am miserable because too much is taken from me. Too much is taken from me because not enough is taken from the privileged. Not only do the privileged force me to pay in their place, but, again, they previously deduct from my earnings their ecclesiastical and feudal dues. When, out of my income of 100 francs, I have parted with 53 francs, and more, to the collector, I am obliged again to give 14 francs to the seignior, also more than 14 for tithes, and, out of the remaining 18 and 19 francs, I have additionally to satisfy the excisemen. I alone, a poor man, pay two governments, one, the old government [the seigniorial government of the feudal régime], local and now absent, useless, inconvenient and humiliating, and active only through annoyances, exemptions and taxes; and the other [the royal government], recent, centralized, everywhere present, which, taking upon itself all functions, has vast needs and makes my meagre shoulders support its enormous weight.' These, in precise terms, are the vague ideas beginning to ferment in the popular brain and encountered on every page of the records of the States-General. . . . The privileged wrought their own destruction. . . . At their head, the king, creating France by devoting himself to her as if his own property, ended by sacrificing her as if his own property; the public purse is his private purse, while passions, vanities, personal weaknesses, lux-

urious habits, family solitudes, the intrigues of a mistress and the caprices of a wife, govern a state of 26,000,000 men with an arbitrariness, a heedlessness, a prodigality, an unskilfulness, an absence of consistency, that would scarcely be overlooked in the management of a private domain. The king and the privileged excel in one direction, in good-breeding, in good taste, in fashion, in the talent for self-display and in entertaining, in the gift of graceful conversation, in finesse and in gayety, in the art of converting life into a brilliant and ingenious festivity. . . . Through the habit, perfection and sway of polished intercourse they stamped on the French intellect a classic form, which, combined with recent scientific acquisitions, produced the philosophy of the 18th century, the ill-repute of tradition, the ambition of recasting all human institutions according to the sole dictates of reason, the appliance of mathematical methods to politics and morals, the catechism of the rights of man, and other dogmas of anarchical and despotic character in the 'Contrat Social.'—Once this chimera is born they welcome it as a drawing-room fancy; they use the little monster as a plaything, as yet innocent and decked with ribbons like a pastoral lambkin; they never dream of it becoming a raging, formidable brute; they nourish it, and caress it, and then, opening their doors, they let it descend into the streets.—Here, amongst a middle class which the government has rendered ill-disposed by compromising its fortunes, which the privileged have offended by restricting its ambition, which is wounded by inequality through injured self-esteem, the revolutionary theory gains rapid accessions, a sudden asperity, and, in a few years, it finds itself undisputed master of public opinion.—At this moment, and at its summons, another colossal monster rises up, a monster with millions of heads, a blind, startled animal, an entire people pressed down, exasperated and suddenly loosed against the government whose exactions have despoiled it, against the privileged whose rights have reduced it to starvation."—H. A. Taine, *Ancient régime*, bk. 1, ch. 1, 2, and bk. 5, ch. 1, 2, 5.—"When the facts of history are fully and impartially set forth, the wonder is rather that sane men put up with the chaotic imbecility, the hideous injustices, the shameless scandals, of the 'Ancien Régime,' in the earlier half of the century, many years before the political 'Philosophes' wrote a line,—why the Revolution did not break out in 1754 or 1757, as it was on the brink of doing, instead of being delayed, by the patient endurance of the people, for another generation. It can hardly be doubted that the Revolution of '89 owed many of its worst features to the violence of a populace degraded to the level of the beasts by the effect of the institutions under which they herded together and starved; and that the work of reconstruction which it attempted was to carry into practice the speculations of Mably and of Rousseau. But, just as little, does it seem open to question that, neither the writhings of the dregs of the populace in their misery, nor the speculative demonstrations of the Philosophes, would have come to much, except for the revolutionary movement which had been going on ever since the beginning of the century. The deeper source of this lay in the just and profound griefs of at least 95 per cent. of the population, comprising all its most valuable elements, from the agricultural peasants to the merchants and the men of letters and science, against the system by which they were crushed, or annoyed, whichever way they turned. But the surface current was impelled by the official defenders of the 'Ancien Régime' themselves. It was the Court, the Church, the Parliaments, and,

above all, the Jesuits, acting in the interests of the despotism of the Papacy, who, in the first half of the 18th century, effectually undermined all respect for authority, whether civil or religious, and justified the worst that was or could be said by the 'Philosophes' later on."—T. H. Huxley, *Introduction to F. Rocquain's Revolutionary spirit preceding the French Revolution.*—"I took part in the opening of the States-General, and, in spite of the pomp with which the royal power was still surrounded, I there saw the passing away of the old régime. The régime which preceded '89, should, it seems to me, be considered from a twofold aspect: the one, the general condition of the country, and the other, the relations existing between the government and the country. With regard to the former, I firmly believe that, from the earliest days of the monarchy, France had at no period been happier than she was then. She had not felt the effects of any great misfortune since the crash which followed Law's system. The long lasting ministry of Cardinal de Fleury, doubtless inglorious, but wise and circumspect, had made good the losses and lightened the burdens imposed at the end of the reign of Louis XV. If, since that time, several wars undertaken with little skill, and waged with still less, had compromised the honor of her arms and the reputation of her government; if they had even thrown her finances into a somewhat alarming state of disorder, it is but fair to say that the confusion resulting therefrom had merely affected the fortune of a few creditors, and had not tapped the sources of public prosperity; on the contrary, what is styled the public administration had made constant progress. [See also ADMINISTRATIVE LAW: In France.] If, on the one hand, the state had not been able to boast of any great ministers, on the other, the provinces could show many highly enlightened and clever intendants. Roads had been opened connecting numerous points, and had been greatly improved in all directions. It should not be forgotten that these benefits are principally due to the reign of Louis XV. Their most important result had been a progressive improvement in the condition of agriculture. The reign of Louis XVI. had continued favoring this wise policy, which had not been interrupted by the maritime war undertaken on behalf of American independence. Many cotton-mills had sprung up, while considerable progress had been made in the manufacture of printed cotton fabrics, and of steel, and in the preparing of skins. . . . I saw the splendors of the Empire. Since the Restoration I see daily new fortunes spring up and consolidate themselves; still nothing so far has, in my eyes, equalled the splendor of Paris during the years which elapsed between 1783 and 1780. . . . Far be it from me to shut my eyes to the reality of the public prosperity which we are now [1822] enjoying."—Chancellor Pasquier, *Memoirs*, pp. 44-47.—"The history of the revolution can no more be understood without understanding the part played in it by Paris, than one can conceive of the tragedy of Hamlet with the part of Hamlet left out; and to understand the part played by Paris in the revolution is equally impossible. . . . Let us commence at the bottom with the nobodies. . . . Since the days of Henry III (1574-80) the forcing of all industrial pursuits into the strait-jacket of guildships had been carried to the extreme of utter absurdity. Here, too, the chronic financial distress had been the principal cause. At first the handicrafts, which everybody had been at liberty to practice, were withdrawn from free competition and sold as a privilege, and then, when nothing was left to be sold, the old guilds were split up into a

number of guildlets, merely to have again something to put on the counter. And it was not only left pretty much to the masters whom they would admit to the freedom of the guild, but besides the charges for it were so high that it was often absolutely out of the reach even of the most skillful journeyman. Even a blood-aristocracy was not lacking. In a number of guilds only the sons of masters and the second husbands of masters' widows could become masters. Thus an immense proletariat was gradually formed, which to a great extent was a proletariat only because the law irresistibly forced it into this position. And the city proletariat proper received constant and ever-increasing additions from the country. There such distress prevailed, that the paupers flocked in crowds to the cities. . . . In 1791, long before the inauguration of the Reign of Terror, there were in a population of 650,000, 118,000 paupers (indigents). Under the 'ancien régime' the immigrant proletariat from the country was by the law barred out from all ways of earning a livelihood except as common day-laborers, and the wages of these were in 1788, on an average, 26 cents for men and 15 for women, while the price of bread was higher than in our times. What a gigantic heap of ferment!"—H. von Holst, *French Revolution*, lect. 2.—"The Revolution in France at the close of the eighteenth century was possible, not because the condition of the people had grown worse, but because it had become better. The material development of that country, during the fifty years that preceded the convocation of the States General, had no parallel in its past history. Neither the weight of taxation, nor the extravagance of the court, nor the bankruptcy of the government, checked an increase in wealth that made France in 1789 seem like a different land from France in 1715. The lot of large classes was still miserable, the burden of taxation upon a large part of the population was still grievous, there were sections where Arthur Young could truly say that he found only poverty and privileges, but the country as a whole was more prosperous than Germany or Spain; it was far more prosperous than it had been under Louis XIV. . . . Such an improvement in material conditions necessitated both social and political changes. In the most disastrous periods of French history, an alteration in the form of government, effected by the community at large, would have been impossible. Hunger and despair might excite a Jacquerie, bands of starving savages might burn the castle of a gentleman and murder his family, but such excesses had no permanent result. A revolution like that of 1789 was impossible until the condition of the people, both materially and mentally, was far removed from what it had been in the Hundred Years' War, or even during the era of the Fronde. Dense ignorance was still widespread in France in the latter part of the eighteenth century, but the intellectual condition of the middle classes had been largely, and that of the lower classes somewhat modified. The proportion of the peasantry capable of mental action more varied than providing for physical needs was larger under Louis XVI than under Louis XIV. In the cities, and among the middle and upper classes, increased activity and freedom of thought were among the most striking features of the age. The wealthy merchant no longer viewed society as did the bourgeois who kept a little shop on the Pont Neuf under the Valois kings. 'The merchants have discarded their former dress,' said Voltaire, 'politeness has gained the shop.' Even this change in manners was symbolical. But while social conditions had altered, political institutions remained

unchanged. New wine had been poured in, but the old bottles were still used. Tailles and corvées were no more severe in the eighteenth than in the fifteenth century, but they were more odious. A feudal privilege, which had then been accepted as a part of the law of nature, was now regarded as contrary to nature. The pre-eminence of birth, which had been freely accorded by the merchant and the member of Parliament of the seventeenth century, was galling to their descendants. The member of the third estate, who felt that in wealth and intelligence he was the equal of a social superior, chafed at distinctions which were the more strenuously insisted upon as they began to be questioned. Thus a demand for social equality, for the abolition of privileges and immunities by which any class profited at the expense of others, was fostered by economical changes. It received an additional impetus from the writings of theorists, philosophers, and political reformers."—J. B. Perkins, *France under the regency*, pp. 3-6.—See also EUROPE: Modern; FRENCH Revolution; GUILDS: Modern times; CENSORSHIP: France.

1789.—Survey of France on the eve of revolution: The Church.—In the century preceding the revolution the long conflict between Church and state had helped to stultify the spiritual sense and engendered the spirit of criticism; in addition to these difficulties the institution that had absorbed a large portion of the community wealth was exempt from bearing its share of the public burdens.—See also above: 1761-1764; 1774-1778; 1789; JESUITS: 1761-1769; PORT ROYAL AND THE JANSENISTS: 1702-1715.

1789.—Survey of France on the eve of revolution: Influence in Alsace-Lorraine. See ALSACE-LORRAINE: 1789-1794.

1789.—Survey of France on the eve of revolution: Colonial policy.—"It was not only the internal development of France that made the eighteenth century a critical era in political and social progress. The conflict between that country and England decided the fate of untold millions in India and America. . . . [See CANADA: 1750-1753 to 1760; NOVA-SCOTIA: 1749-1755; OHIO (Valley): 1748-1754, and after; U. S. A.: 1748-1754; CAPE BRETON ISLAND: 1758-1760; INDIA: 1758-1761.] A century and a half ago, it seemed possible, and even probable, that India and a great part of America would remain under French control. In Canada, an enterprising colony, though it had suffered from injudicious government, still bade fair to establish the power of the Bourbons over enormous tracts of fertile land which were traversed by hardy pioneers and explorers. The title of the French crown to the valley of the Mississippi was practically uncontested. . . . A nominal suzerainty could easily have been transformed into an undisturbed possession. In India, the genius of such men as La Bourdonnais and Duplex had fair to do for the Louis what Clive and Hastings were actually to do for the Georges. . . . Of all the evils which France suffered from misrule, none was more serious than the overthrow of her hopes of colonial development from the Bay of Bengal to the waters of the Great Lakes. The results of this contest for foreign supremacy were of an importance that can hardly be overestimated. . . . The position of England was assured as the greatest colonizing power since Rome. In the purposeless continental wars of

Louis XV., the blood and the money of the French people were freely expended, with little glory and less gain. The maritime contest with England . . . was lost for France, almost by default, through the inefficiency of her rulers."—J. B. Perkins, *France under the regency*, pp. 13-16.—See also COLONIZATION: French.

1789.—Nootka Sound controversy. See NOOTKA SOUND CONTROVERSY.

1789 (May).—Meeting of the States-General.—Conflict between the three estates.—Question of three Houses or one.—"The opening of the States-general was fixed for the 5th of May, 1789, and Versailles was chosen as the place of their meetings. On the 4th, half Paris poured into that town to see the court and the deputies marching in procession to the solemn religious ceremony, which was to inaugurate the important epoch. . . . On the following day, the States-General, to the number of 1,200 persons, assembled in the spacious and richly decorated 'salle des menus plaisirs.' The King appeared surrounded by his family, with all the magnificence of the ancient court, and was greeted by the enthusiastic applause of the deputies and spectators." The king made a speech, followed by Barentin, the keeper of the great seal, and by Necker, who, owing to his popularity among the third estate, had been recalled. The latter "could not prevail upon himself to avow to the Assembly the real state of affairs. He announced an annual deficit of 56,000,000 francs, and thereby confused the mind of the public, which since the meeting of the Notables, had always been discussing a deficit of from 120,000,000 to 140,000,000. He was quite right in assuming that those 56,000,000 might be covered by economy in the expenditure; but it was both irritating and untrue, when he, on this ground, denied the necessity of summoning the States-General, and called their convocation a free act of royal favour. . . . The balance of income and expenditure might, indeed, easily be restored in the future, but the deficit of former years had been heedlessly allowed to accumulate, and by no one more than by Necker himself. A floating debt of 550,000,000 had to be faced—in other words, therefore, more than a whole year's income had been expended in advance. . . . The real deficit of the year, therefore, at the lowest calculation, amounted to more than 200,000,000, or nearly half the annual income. . . . These facts, then, were concealed, and thus the ministry was necessarily placed in a false position towards the States-General; the continuance of the former abuses was perpetuated, or a violent catastrophe made inevitable. . . . For the moment the matter was not discussed. Everything yielded to the importance of the constitutional question—whether the three orders should deliberate in common or apart—whether there should be one single representative body, or independent corporations. This point was mooted at once in its full extent on the question, whether the validity of the elections should be scrutinised by each order separately, or by the whole Assembly."—H. von Sybel, *History of the French Revolution*, v. 1, bk. 1, ch. 2.—"It is impossible to give the exact number there present, but the most likely figures are these: The clergy, 308; the noblesse, 285, and the Third Estate, 621. It will be seen, therefore, that the number of the Third Estate was greater than that of the other two combined. The temper of the Assembly was, on the whole, liberal. Of the 308 clergy, though the bishops were well represented, 205 were curates. Two shades of political faith were represented in the ranks of the nobility; there was the liberalism of La Fayette, and the obstinate conservatism of 'Barrell' Mirabeau, the brother of

the count. Of the 621 delegates who composed the Third Estate, two-thirds were lawyers or legal officials—a most important fact; many of them, also were scholars. Only ten of them can possibly be considered as belonging to the lower classes. It will be seen, therefore, as a whole that the States General represented the well-to-do classes. It was not in the least an uncultured rabble, but was made up of the best blood in France. The desires of this highly intelligent body are to be found in overwhelming detail in the *cahiers*, or instructions, which their constituencies had given them. From these it appears that, on the whole, each of the three orders was anxious to give the state reforms, and may very fairly be considered as desirous of embodying in some form of constitution the spirit which had forced Louis and his ministers to summon the body. So far as revolution is concerned, it is evident from many facts that the States General regarded a revolution as already in progress, and considered itself as its product rather than its first step. Mirabeau has left the statement that 'there was not one commoner who did not come with very moderate sentiments to the National Assembly.' In nothing was the incompetence of Necker more clearly shown than in his refusal to decide in advance whether the new body should vote, as in 1614, by order or by member. The question was more than parliamentary. To vote by order (*par ordre*) was to maintain only a sort of corporate representation, in which the doubled membership of the Third Estate would have but one vote to the privileged orders' two; to vote by member (*par tête*) was to establish true representation and to give France a genuine national assembly, in which the Third Estate might outvote the other two. . . . When the States General assembled on May 6th to hold its first business session, it was at once confronted by the question as to whether the voting was to be *par ordre* or *par tête*. The difficulty first appeared in the necessity of verifying the delegates' credentials. The nobles proceeded at once to verify as a separate chamber, the vote standing 188 to 47; while the clergy, though voting 133 to 114 to verify as an order, did not proceed to organize as such. This attitude of the two orders was a legitimate outcome of the Old Régime. The fraction of a great people which had enjoyed where others had lost privileges, was now endeavoring to block all reform by continuing to oppose itself to the nation. It was the last ditch in which monopoly could fight. But the Third Estate refused even to verify credentials until it had been decided that the three estates were to meet in one indivisible assembly. May 11th it declared itself simply a collection of citizens without organization, without credentials, without legal existence. For weeks both sides obstinately sought to win over the other, and compromise became every day the more impossible. Business evidently was out of the question under such conditions, and May 28th the king interfered, commanding the three estates to verify separately. But matters had gone too far for such command to be obeyed. Mirabeau moved to invite the clergy 'in the name of the God of Peace' to join the commons. The curates wavered. Introduced by Mirabeau, Siéyès, the framer of nearly every constitution that France had during his life, on June 10th, moved that a committee inform the clergy and the nobles that the Third Estate summoned them for the last time; that on the next day its members would begin to verify not as an estate, but as *the representatives of the nation*. The clergy wavered still more. On June 11th the process of verification of these self-styled representatives of the nation began. Two

days later the curates began to come over. On June 17th, the slowly swelling company of commoners and curates adopted the name *National Assembly*, and France, if only Frenchmen would recognize it, ceased to be under the control of absolutism."—S. Mathews, *French Revolution*, pp. 116-120.—See also EUROPE: Modern: French Revolution.

1789 (June).—Third Estate seizes the reins, proclaims itself the National Assembly.—Tennis court oath.—Withdrawal of nobles and clergy from meeting of States-General.—National Assembly assumes sovereign powers.—Mobilization of troops.—Queen's plot.—Dismissal of Necker. "At last . . . on the proposal of Siyès [the Abbé,

a royal session on June 22, and he summoned the three orders to meet him. It was his design to direct them to unite in order to deliberate in common on matters of common interest, and to regain the royal initiative by laying down the lines of a new constitution. . . . On Saturday, the 20th, however, the course of events was interrupted by the famous scene in the tennis court. Troops had lately been pouring to an alarming extent into Paris, and exciting much suspicion in the popular party, and the Government very injudiciously selected for the royal session on the following Monday the hall in which the Third Order assembled. The hall was being prepared for the occasion, and therefore no meeting could be held. The members, ignorant of the fact, went to their chamber and were repelled by soldiers. Furious at the insult, they adjourned to the neighbourhood tennis court [Jeu-de-Paume]. A suspicion that the King meant

LOUIS XVI AND MARIE ANTOINETTE

deputy for Paris] and amid a storm of frantic excitement, the Third Estate alone voted themselves 'the National Assembly,' invited the other two orders to join them, and pushing their pretensions to sovereignty to the highest point, declared that the existing taxes, not having been consented to by the nation, were all illegal. The National Assembly, however, allowed them to be levied till its separation, after which they were to cease if not formally regranted. This great revolution was effected on June 17, and it at once placed the Third Order in a totally new relation both to the other orders and to the Crown. There were speedy signs of yielding among some members of the privileged orders, and a fierce wave of excitement supported the change. Malouet strongly urged that the proper course was to dissolve the Assembly and to appeal to the constituencies, but Necker declined, and a feeble and ineffectual effort of the King to accomplish a reunion, and at the same time to overawe the Third Order, precipitated the Revolution. The King announced his intention of holding

to dissolve them was abroad, and they resolved to resist such an attempt. With lifted hands and in a transport of genuine, if somewhat theatrical enthusiasm, they swore that they would never separate 'till the constitution of the kingdom and the regeneration of public order were established on a solid basis.' . . . One single member, Martin d'Auche, refused his assent. The Third Estate had thus virtually assumed the sole legislative authority in France, and like the Long Parliament in England had denied the King's power to dissolve them. . . . Owing to the dissension that had arisen, the royal session was postponed till the 23rd, but on the preceding day the National Assembly met in a church, and its session was a very important one, for on this occasion a great body of the clergy formally joined it. One hundred and forty-eight members of the clergy, of whom 134 were curés, had now given their adhesion. Two of the nobles, separating from their colleagues, took the same course. Next day the royal session was held. The project adopted in the

council differed so much from that of Necker that this minister refused to give it the sanction of his presence. Instead of commanding the three orders to deliberate together in the common interest, it was determined in the revised project that the King should merely invite them to do so. . . . It was . . . determined to withdraw altogether from the common deliberation, 'the form of the constitution to be given to the coming States-General,' and to recognise fully the essential distinction of the three orders as political bodies, though they might, with the approval of the Sovereign, deliberate in common. Necker had proposed . . . that the King should decisively, and of his own authority, abolish all privileges of taxation, but in the amended article the King only undertook to give his sanction to this measure on condition of the two orders renouncing their privileges. On the other hand, the King announced to the Assembly a long series of articles of reform which would have made France a thoroughly constitutional country, and have swept away nearly all the great abuses in its government. . . . He annulled the proceedings of June 17, by which the Third Estate alone declared itself the Legislature of France. He reminded the Assembly that none of its proceedings could acquire the force of law without his assent, and he asserted his sole right as French Sovereign to the command of the army and police. He concluded by directing the three orders to withdraw and to meet next day to consider his proposals."—W. E. H. Lecky, *History of England in the eighteenth century*, v. 5, ch. 20.—"The King . . . and . . . Queen . . . followed by their train . . . left the hall. . . . The Nobles rose in their turn and left the building: the Bishops preceded them, but of the lower clergy many—half, perhaps—lingered. The body of the Commons refused to move. They sat massed, in silence, at the far end of the great gaudy shed. . . . This curious and dire silence, a silence of revolt, lasted perhaps half an hour, when there entered into it the Master of the Ceremonies, young Dreux Brézé. . . . In [a] slightly irritable but well-bred drawl . . . he muttered something as though ashamed. They cried 'Speak up!' . . . He repeated the phrase. Various cries and exclamations arose. Then Mirabeau, standing forward, said—What did he say? It is uncertain, and will always be debated, but it was something like this: 'We are here by the will of the people and only death can dismiss us.' Dreux Brézé walked out with due ceremony, backward. All the last days of June the great roads sounded with . . . marching from every neighbouring garrison. . . . Of nearly all the troop so gathering one little portion, the half-irregular militia body (militia, but permanently armed) called 'the French Guards,' was other than foreign. . . . The rest were for the most part German-speaking mercenaries, the solid weapon of the Crown: and still they gathered. Neck to neck with the advance of that mobilisation the Assembly raced for power; for every brigade appearing you may count a new claim. In the first hours of their revolt, when Dreux Brézé had just retired, they proclaimed themselves 'inviolable'—that is, in their new sovereignty, they declared an armed offence to that sovereignty to be treason. . . . So, as the first week of July went by, everything was preparing: the Electoral College of Paris had met and continued in session, forming spontaneously a local executive for the capital: certain of the French Guard in Paris had sworn to obey the Assembly only, had been imprisoned . . . and released by popular force . . . and pardoned. The last troops had come in; the Assembly was finally formed. On the day when it named its first committee to discuss the new Con-

stitution, the Queen and those about the Queen had completed their plan, and the Crown was ready to re-arise and to scatter its enemies. . . . Necker, the symbol of the new claims, was to go—booted out at a moment's notice and over the frontier as well. A man of the Queen's, a man who had been ambassador at Vienna, a very trusted servant of over fifty years continually with the Monarchy, a man of energy, strong-stepping, loud, Breteuil was in one sharp moment to take his place. Old Broglio, brave and renowned, was to grasp the army—and the thing was done: the Assembly gone to smoke: the debating over: silence and ancient right restored. And as for the dependence on opinion and on a parliamentary majority for money! . . . why, a bold bankruptcy and begin again. So the Queen saw the sharp issue, now that all the regiments were assembled. A corps of German mercenaries were in the Park, encamped; their officers were cherished in the rooms of the Polignacs: they were a symbol of what was toward. Paris might or might not rise. If it rose, there would be action; if not, none. In either case victory and a prize worth all the miserable cajoling and submission to which the Court had been compelled while the soldiers were still unready. They were ready now. So the Queen. On Saturday the 11th of July, at three in the afternoon, Necker was sitting down with his wife and a certain friend to dinner: the excellent dinner of a man worth four millions of money—doubtfully acquired. Ten thousand men lay in arms within an hour of Versailles; at all the issues of Paris were troops amounting to at least two divisions more—mainly German cavalry: one regiment at Charente, Samade; one regiment at Ivry, one, of German hussars, at the Champ de Mars; one, of Swiss infantry, with a battery, at the Etoile (where is now the Arc de Triomphe). Two more, a German, south of the river; a whole camp at the northern gate—and many others. No food could enter the city save by leave of that circle of arms. . . . To Necker . . . was brought a note from the King; he opened it: it told him he was ordered out of office and ordered out of the kingdom too. . . . There followed three days which very much resembled, to the Queen and the General Staff of the Resistance, those days during which a general action is proceeding at the front. . . . 'Paris had risen.'—H. Belloc, *Marie Antoinette*, pp. 278-282.—Marie Antoinette "framed a definite scheme for the coercion of the French people by the Governments of Europe; it was she who betrayed to foreign chanceries the French plan of campaign when war had become inevitable; finally, it was she who inspired the declaration of Brunswick which accompanied the invasion of French territory, and she was in particular the author of the famous threat therein contained to give over Paris to military execution and to hold all the popular authorities responsible with their lives for the restoration of the pre-revolutionary state of affairs."—H. Belloc, *French Revolution*, pp. 40-50.

1789 (July).—The mob in arms.—Anarchy in Paris.—Taking of the Bastille.—"When, on the evening of July 11, the news reached Paris that Necker and his ministry had been dismissed, it was received with incredulity followed by dismay. The weakness of the court and the vanity of its dependence on the army were so well known that men believed with difficulty that an act of such folly could have been committed. Every one

awaited the result with consternation. The conflict between the crown and the Assembly had reached a crisis; victory for one must mean the destruction of the other. The court had challenged the people to a trial of strength, and the attitude of the populace left no doubt as to its determination. In this emergency the Assembly declared itself permanent, sat day and night, and elected Lafayette its vice-president. This choice was dictated by the probability of an armed struggle. Lafayette was the one man who so combined military knowledge with liberal opinions and public confidence as to fit him to command troops in the popular interest. The Assembly, in making him their vice-president,

heaviest expenditures. . . . 'During this fearful night, the bourgeoisie kept themselves shut up, each trembling at home for himself and those belonging to him.' On the following day, the 13th, the capital appears to be given up to bandits and the lowest of the low. . . . During these two days and nights, says Bailly, 'Paris ran the risk of being pillaged, and was only saved from the marauders by the national guard.' . . . Fortunately the militia organized itself, and the principal inhabitants and gentlemen enrol themselves; 48,000 men are formed into battalions and companies; the bourgeoisie buy guns of the vagabonds for three livres apiece, and sabres or pistols for twelve sous. At last, some of

PLAN OF PARIS IN 1789

pointed him out as their choice for military command. Although Paris was in a state of violent commotion, and daily conflicts were occurring between De Broglie's troops and a mob armed with weapons pillaged in the public buildings; although the Assembly considered the situation too serious to adjourn overnight,—the court remained in a condition of such blind security that a grand ball was given at the palace the night of July 13.”—B. Tuckerman, *Life of General Lafayette*, v. 1, pp. 222-223.—“During the night between the 12th and 13th of July, ‘all the barriers, from the Faubourg Saint-Antoine to the Faubourg Saint-Honoré, besides those of the Faubourgs Saint-Marcel and Saint-Jacques, are forced and set on fire.’ There is no longer an ‘octroi’; the city is without a revenue just at the moment when it is obliged to make the

offenders are hung on the spot, and other disarmed, and the insurrection again becomes political. But, whatever its object, it remains always wild, because it is in the hands of the populace. . . . There is no leader, no management. The electors who have converted themselves into the representatives of Paris seem to command the crowd, but it is the crowd which commands them. One of them, Legrand, to save the Hôtel-de-Ville, has no other resource but to send for six barrels of gun-powder, and to declare to the assailants that he is about to blow everything into the air. The commandant whom they themselves have chosen, M. de Salles, has twenty bayonets at his breast during a quarter of an hour, and, more than once, the whole committee is near being massacred. Let the reader imagine, on the premises where the discussions are

going on, and petitions are being made, 'a concourse of 1,500 men pressed by 100,000 others who are forcing an entrance,' the wainscoting cracking, the benches upset one over another . . . a tumult such as to bring to mind 'the day of judgment,' the death-shrieks, songs, yells, and 'people beside themselves, for the most part not knowing where they are nor what they want.' Each district is also a petty centre, while the Palais-Royal is the main centre. . . . One wave gathers here and another there, their strategy consists in pushing and in being pushed. Yet, their entrance is effected only because they are let in. If they get into the Invalides it is owing to the connivance of the soldiers"—H. A. Taine, *French Revolution*, v. 1, bk. 1, ch. 2.—"The 13th, . . . a day wasted by Government, [was] spent by Paris in busy preparation. Men talked wildly of destroying the Bastille, as a sign that would be understood. . . . The Bastille not only overshadowed the capital, but it darkened the hearts of men, for it had been notorious for centuries as the instrument and the emblem of tyranny. The captives behind its bars were few and uninteresting, but the wide world knew the horror of its history, the blighted lives, the ruined families, the three thousand dishonoured graves within the precincts, and the common voice called for its destruction as the sign of deliverance. At the elections both nobles and commons demanded that it should be levelled with the ground."—J. E. E. Dalberg-Acton, *Lectures on the French Revolution*, p. 84.—"The storming of that fortress which had stood so long as the instrument and sign of absolute power, the furious rage and bloodthirsty violence of the assailing mob, proclaimed the answer of the people to the threatening measures of the court. It was intended to strike terror into the hearts of the king, the queen, and their counsellors, to convince them that force would be met by force. In the fall of the Bastille was typified the fall of arbitrary power and feudalism. It was a blow, the purport of which none could mistake. The Duc de la Rochefoucauld-Liancourt went out to Versailles, entered the king's bed-chamber, and announced the event to him. 'Why,' said Louis XVI., 'this is a revolt.'—'No, sire,' was replied, 'it is a revolution.'"—B. Tuckerman, *Life of General Lafayette*, v. 1, p. 223.—"At the Bastille, firearms are discharged from ten in the morning to five in the evening against walls 40 feet high and 30 feet thick, and it is by chance that one of their shots reaches an 'invalid' on the towers. . . . The governor, on the first summons to surrender, orders the cannon to be withdrawn from the embrasures; he make the garrison swear not to fire if it is not attacked. . . . he receives several discharges without returning them, and lets the first bridge be carried without firing a shot. When, at length, he does fire, it is at the last extremity, to defend the second bridge, and after having notified the assailants that he is going to do so. . . . The people, in turn, are infatuated with the novel sensations of attack and resistance, with the smell of gunpowder, with the excitement of the contest; all they can think of doing is to rush against the mass of stone, their expedients being on a level with their tactics. . . . 'The Bastille was not taken by main force,' says the brave Elie, one of the combatants; 'it was surrendered before even it was attacked,' by capitulation, on the promise that no harm should be done to anybody. The garrison, being perfectly secure, had no longer the heart to fire on human beings while themselves risking nothing, and, on the other hand, they were unnerved by the sight of the immense crowd. Eight or nine hundred men only were concerned in the attack, most of them work-

men or shopkeepers belonging to the faubourg, tailors, wheelwrights, mercers, and wine-dealers, mixed with the French Guards. The Place de la Bastille, however, and all the streets in the vicinity, were crowded with the curious who came to witness the sight; 'among them,' says a witness, 'were a number of fashionable women of very good appearance, who had left their carriages at some distance. To the 120 men of the garrison, looking down from their parapets, it seemed as though all Paris had come out against them. It is they, also, who lower the drawbridge and introduce the enemy; everybody has lost his bead, the besieged as well as the besiegers, the latter more completely because they are intoxicated with the sense of victory. Scarcely have they entered when they begin the work of destruction, and the latest arrivals shoot at random those that come earlier; 'each one fires without heeding where or on whom his shot tells.' Sudden omnipotence and the liberty to kill are a wine too strong for human nature. . . . Elie, who is the first to enter the fortress, Cholat, Hulin, the brave fellows who are in advance, the French Guards who are cognizant of the laws of war, try to keep their word of honour; but the crowd pressing on behind them know not whom to strike, and they strike at random. They spare the Swiss soldiers who have fired on them, and who, in their blue smocks, seem to them to be prisoners; on the other hand, by way of compensation, they fall furiously on the 'invalides' who opened the gates to them; the man who prevented the governor from blowing up the fortress has his wrist severed by the blow of a sabre, is twice pierced with a sword and is hung, and the band which had saved one of the districts of Paris is promenaded through the streets in triumph. The officers are dragged along and five of them are killed, with three soldiers, on the spot, or on the way." M. de Launay, the governor, after receiving many wounds, while being dragged to the Hotel-de-Ville, was finally killed by bayonet thrusts, and his head, cut from his body, was placarded and borne through the streets upon a pitchfork.—H. A. Taine, *French Revolution*, v. 1, bk. 1, ch. 2.—"I was present at the taking of the Bastille. What has been styled the fight was not serious, for there was absolutely no resistance shown. Within the hold's walls were neither provisions nor ammunition. It was not even necessary to invest it. The regiment of gardes francaises which had led the attack, presented itself under the walls on the rue Saint Antoine side, opposite the main entrance, which was barred by a drawbridge. There was a discharge of a few musket shots, to which no reply was made, and then four or five discharges from the cannon. It has been claimed that the latter broke the chains of the drawbridge. I did not notice this, and yet I was standing close to the point of attack. What I did see plainly was the action of the soldiers, invalides, or others, grouped on the platform of the high tower, holding their muskets stock in the air, and expressing by all means employed under similar circumstances their desire of surrendering. The result of this so-called victory, which brought down so many favors on the heads of the so-called victors, is well-known. The truth is, that this great fight did not for a moment frighten the numerous spectators who had flocked to witness its result. Among them were many women of fashion, who, in order to be closer to the scene, had left their carriages some distance away."—Chancellor Pasquier, *Memoirs*, pp. 55-56.

1789 (July).—Surrender of authority by the king.—Organization of the National Guard with Lafayette in command.—Disorder and riot in the provinces.—Hunger in the capital.—Murder of Foulon and Berthier.—“The next morning the taking of the Bastille bore its intended fruit. Marshal de Broglie, who had found, instead of a loyal army, only disaffected regiments which had joined or were preparing to join the mob, sent in his resignation. . . . The king, deserted by his army, his authority now quite gone, had no means of restoring order except through the Assembly. He begged that body to undertake the work, promising to recall the dismissed ministers. . . . The power of the king had now passed from him to the National Assembly. But that numerous body of men, absorbed in interminable discussions on abstract ideas, was totally incapable of applying its power to the government of the country. The electors at the Hotel de Ville, on the 15th of July, resolved that there must be a mayor to direct the affairs of Paris, and a National Guard to preserve order. Dangers threatened from every quarter. When the question arose as to who should fill these offices, Moreau de Saint Méry, the president of the electors, pointed to the bust of Lafayette, which had been sent as a gift to the city of Paris by the State of Virginia, in 1784. The gesture was immediately understood, and Lafayette was chosen by acclamation. Not less unanimous was the choice of Bailly for mayor. Lafayette was now taken from the Assembly to assume the more active employment of commanding the National Guard. While the Assembly pursued the destruction of the old order and the erection of a new, Lafayette, at the age of 32, became the chief depositary of executive power. . . . Throughout France, the deepest interest was exhibited in passing events. . . . The victory of the Assembly over the king and aristocracy led the people of the provinces to believe that their cause was already won. A general demoralization ensued.” After the taking of the Bastille, “the example of rebellion thus set was speedily followed. Rioting and lawlessness soon prevailed everywhere, increased and imbibed by the scarcity of food. In the towns, bread riots became continual, and the custom-houses, the means of collecting the exorbitant taxes, were destroyed. In the rural districts, châteaux were to be seen burning on all sides. The towers in which were preserved the titles and documents which gave to the nobleman his oppressive rights were carried by storm and their contents scattered. Law and authority were fast becoming synonymous with tyranny; the word ‘liberty,’ now in every mouth, had no other signification than license. Into Paris slunk hordes of gaunt foot-pads from all over France, attracted by the prospect of disorder and pillage. . . . From such circumstances naturally arose the National Guard.” The king had been asked, on the 13th, by a deputation from the Assembly, “to confide the care of the city to a militia,” and had declined. The military organization of citizens was then undertaken by the electors at the Hotel de Ville, without his consent, and its commander designated without his appointment. “The king was obliged to confirm this choice, and he was thus deprived even of the merit of naming the chief officer of the guard whose existence had been forced upon him.” On the 17th the king was persuaded to visit the city, for the effect which his personal presence would have, it was thought, upon the anxious and excited public mind. Lafayette had worked with energy to prepare his National Guard for the difficult duty of preserving order and

protecting the royal visitor on the occasion. “So intense was the excitement and the insurrectionary spirit of the time, so uncertain were the boundaries between rascality and revolutionary zeal, that it was difficult to establish the fact that the new guard was created to preserve order and not to fight the king and pillage the aristocracy. The great armed mob, now in process of organization, had to be treated with great tact, lest it should refuse to submit to authority in any shape.” But short as the time was, Lafayette succeeded in giving to the powerless monarch a safe and orderly reception. “The king made his will and took the sacraments before leaving Versailles, for . . . doubts were entertained that he would live to return.” He was met at the gates of Paris by the new mayor, Bailly, and escorted through a double line of National Guards to the Hotel de Ville. There he was obliged to fix on his hat the national cockade, just brought into use, and to confirm the appointments of Lafayette and Bailly. “Louis XVI. then returned to Versailles, on the whole pleased, as the day had been less unpleasant than had been expected. But the compulsory acceptance of the cockade and the nominations meant nothing less than the extinction of his authority. . . . Lafayette recruited his army from the bourgeois class, for the good reason that, in the fever than raging for uncontrolled freedom, that class was the only one from which the proper material could be taken. The importance of order was impressed on the bourgeois by the fact that they had shops and houses which they did not wish to see pillaged. . . . The necessity for strict police measures was soon to be terribly illustrated. For a week past a large crowd composed of starving workmen, country beggars, and army deserters, had thronged the streets, angrily demanding food. The city was extremely short of provisions, and it was impossible to satisfy the demands made upon it. . . . On July 22, an old man named Foulon, a member of the late ministry, who had long been the object of public dislike, and was now detested because it was rumored that he said that ‘the people might eat grass,’ was arrested in the country, and brought to the Hotel de Ville, followed by a mob who demanded his immediate judgment.” Lafayette exerted vainly his whole influence and his whole authority to protect the wretched old man until he could be lodged in prison. The mob tore its victim from his very hands and destroyed him on the spot. The next day, Foulon’s son-in-law, Berthier, the Intendant of Paris, was arrested in the country, and the tragedy was re-enacted. “Shocked by these murders and disgusted by his own inability to prevent them, Lafayette sent his resignation to the electors, and for some time persisted in his refusal to resume his office. But no other man could be found in Paris equally fitted for the place; so that on the personal solicitation of the electors and a deputation from the 60 districts of the city, he again took command.”—B. Tuckerman, *Life of General Lafayette*, v. 1, ch. 9-10.—See also NATIONAL GUARD; MILITARY ORGANIZATION: 18.

1789 (July-August).—Cause and character of the “Emigration.”—“Everything, or nearly everything, was done by the party opposed to the Revolution in the excitement of the moment; nothing was the result of reasoning. Who, for instance,

reasoned out the emigration? It has oftentimes been asked how so extraordinary a resolution came to be taken; how it had entered the minds of men gifted with a certain amount of sense that there was any advantage to be derived from abandoning all the posts where they could still exercise power; of giving over to the enemy the regiments they commanded, the localities over which they had control; of delivering up completely to the teachings of the opposite party the peasantry, over whom, in a goodly number of provinces, a valuable influence might be exerted, and among whom they still had many friends; and all this, to return for the purpose of conquering, at the sword's point, positions, a number of which at least could be held without a fight. No doubt it has been offered as an objection, that the peasantry set fire to châteaux, that soldiers mutinied against their officers. This was not the case at the time of what has been called the first emigration, and, at any rate, such doings were not general; but does danger constitute sufficient cause for abandoning an important post? . . . What is the answer to all this? Merely what follows. The voluntary going into exile of nearly the whole nobility of France, of many magistrates who were never to unsheathe a sword, and lastly, of a large number of women and children,—this resolve, without a precedent in history, was not conceived and determined upon as a State measure; chance brought it about. A few, in the first instance, followed the princes who had been obliged, on the 14th of July, to seek safety out of France, and others followed them. At first, it was merely in the nature of a pleasant excursion. Outside of France, they might freely enjoy saying and believing anything and everything. . . . It occurred to the minds of a few men in the entourage of the Comte d'Artois, and whose moving spirit was M. de Calonne, that it would be an easy matter for them to create a kingdom for their sovereign outside of France, and that if they could not in this fashion succeed in giving him provinces to reign over, he would at least reign over subjects, and that this would serve to give him a standing in the eyes of foreign powers, and determine them to espouse his cause. . . . Thus in '89, '90, and '91, there were a few who were compelled to fly from actual danger; a small number were led away by a genuine feeling of enthusiasm; many felt themselves bound to leave, owing to a point of honor which they obeyed without reasoning it out; the mass thought it was the fashion, and that it looked well; all, or almost all, were carried away by expectations encouraged by the wildest of letters, and by the plotting of a few ambitious folk, who were under the impression that they were building up their fortunes."—Chancellor Pasquier, *Memoirs*, pp. 64-66.

1789 (August).—Night of sacrifices.—Sweeping out of feudalism.—"What was the Assembly doing at this period, when Paris was waiting in expectation, and the capture of the Bastille was being imitated all over France; when châteaux were burning, and nobles flying into exile; when there was positive civil war in many a district, and anarchy in every province? Why, the Assembly was discussing whether or not the new constitution of France should be prefaced by a Declaration of the Rights of Man. In the discussion of this extremely important question were wasted the precious days which followed July 17. . . . The complacency of these theorists was rudely shaken on August 4, when Salomon read to the Assembly the report of the Comité des Recherches, or Committee of Researches, on the state of France. A terrible report it was. Châteaux burning here and there; millers

hung; tax-gatherers drowned; the warehouses and depôts of the gabelle burnt; everywhere rioting, and nowhere peace. . . . Among those who listened to the clear and forcible report of Salomon were certain of the young liberal noblesse who had just been dining with the Duc de la Rochefoucauld-Liancourt, a wise and unlightened nobleman. At their head was the Vicomte de Noailles, a young man of thirty-three, who had distinguished himself at the head of his regiment under his cousin, Lafayette, in America. . . . The Vicomte de Noailles was the first to rush to the tribune. 'What is the cause of the evil which is agitating the provinces?' he cried; and then he showed that it arose from the uncertainty under which the people dwelt, as to whether or not the old feudal bonds under which they had so long lived and laboured were to be perpetuated or abolished, and concluded an impassioned speech by proposing to abolish them at once. One after another the young liberal noblemen, and then certain deputies of the tiers état, followed him with fresh sacrifices. First the old feudal rights were abolished; then the rights of the dovecote and the game laws; then the old copyhold services; then the tithes paid to the Church, in spite of a protest from Siéyès; then the rights of certain cities over their immediate suburbs and rural districts were sacrificed; and the contention during that feverish night was rather to remember something or other to sacrifice than to suggest the expediency of maintaining anything which was established. In its generosity the Assembly even gave away what did not belong to it. The old dues paid to the pope were abolished, and it was even declared that the territory of Avignon, which had belonged to the pope since the Middle Ages, should be united to France if it liked; and the sitting closed with a unanimous decree that a statue should be erected to Louis XVI, 'the restorer of French liberty.' Well might Mirabeau define the night of August 4 as a mere 'orgie.' . . . Noble indeed were the intentions of the deputies. . . . Yet the results of this night of sacrifices were bad rather than good. As Mirabeau pointed out, the people of France were told that all the feudal rights, dues, and tithes had been abolished that evening, but they were not told at the same time that there must be taxes and other burdens to take their place. It was of no use to issue a provisional order that all rights, dues and taxes remained in force for the present, because the poor peasant would refuse to pay what was illegal, and would not understand the political necessity of supporting the revenue. . . . This ill-considered mass of resolutions was what was thrown in the face of France in a state of anarchy to restore it to a state of order."—H. M. Stephens, *History of the French Revolution*, v. 1, ch. 5.

1789 (August).—Constitution-making and the Rights of Man.—"The constitution was now proceeded with in earnest. In the early days of July a preliminary committee had issued its first report. It regarded it as an essential that a Declaration of the Rights of Man—in other words, of the individual citizen—should precede the principles of government, a suggestion made in many of the cahiers, as a second committee appointed for the purpose of examining them very soon discovered. This important document, . . . was accepted on the 27th August 1780. It runs as follows:—"The representatives of the French people, organised as a National Assembly, believing that the ignorance, neglect, or contempt of the rights of man are the sole causes of public calamities, and of the corruption of governments, have determined to set forth in a solemn

declaration, the natural, inalienable, and sacred rights of man, in order that this declaration, being constantly before all the members of the social body, shall remind them continually of their rights and duties; in order that the acts of the legislative power, as well as those of the executive power, may be compared at any moment with the ends of all political institutions and may thus be more respected; and, lastly, in order that the grievances of the citizens, based hereafter upon simple and incontestable principles, shall tend to the maintenance of the constitution and redound to the happiness of all. Therefore, the National Assembly recognises and proclaims in the presence and under the auspices of the Supreme Being the following rights of man and of the citizen: Article 1. Men are born and remain free and equal in rights. Social distinctions may only be founded upon the general good. 2. The aim of all political association is the preservation of the natural and imprescriptible rights of man. These rights are liberty, property, security, and resistance to oppression. 3. The essence of all sovereignty resides essentially in the nation. No body nor individual may exercise any authority which does not proceed directly from the nation. 4. Liberty consists in the freedom to do everything which injures no one else; hence the exercise of the natural rights of each man has no limits except those which assure to the other members of society the enjoyment of the same rights. These limits can only be determined by law. 5. Law can only prohibit such actions as are hurtful to society. Nothing may be prevented which is not forbidden by law, and no one may be forced to do anything not provided for by law. 6. Law is the expression of the general will. Every citizen has a right to participate personally, or through his representative, in its enactment. It must be the same for all, whether it protects or punishes. All citizens, being equal in the eyes of the law, are equally eligible to all dignities and to all public positions and occupations, according to their abilities and without distinction, except that of their virtues and talents. 7. No person shall be accused, arrested, or imprisoned except in the cases and according to the forms prescribed by law. Any one soliciting, transmitting, executing, or causing to be executed any arbitrary order shall be punished. But any citizen summoned or arrested in virtue of the law shall submit without delay, as resistance constitutes an offence. 8. The law shall provide for such punishments only as are strictly and obviously necessary, and no one shall suffer punishment except it be legally inflicted in virtue of a law, passed and promulgated before the commission of the offence. 9. As all persons are held innocent until they shall have been declared guilty, if arrest shall be deemed indispensable, all severity not essential to the securing of the prisoner's person shall be severely repressed by law. 10. No one shall be disquieted on account of his opinions, including his religious views, provided their manifestation does not disturb the public order established by law. 11. The free communication of ideas and opinions is one of the most precious of the rights of man. Every citizen may, accordingly, speak, write, and print with freedom, but shall be responsible for such abuses of this freedom as shall be defined by law. 12. The security of the rights of man and of the citizen requires public military force. These forces, are, therefore, established for the good of all, and not for the personal advantage of those to whom they shall be entrusted. 13. A common contribution is essential for the maintenance of the public forces and for the cost of administration. This should be equitably distributed among all

the citizens in proportion to their means. 14. All citizens have a right to decide, either personally or through their representative, as to the necessity of the public contribution; to grant this freely; to know to what uses it is put; and to fix the amount, the mode of assessment and of collection, and the duration of the taxes. 15. Society has the right to require of every public agent an account of his administration. 16. A society in which the observance of the law is not assured, nor the separation of powers defined, has no constitution at all. 17. Since property is an inviolable and sacred right, no one shall be deprived thereof except in cases where public necessity, legally determined, shall clearly require it, and then only on condition that the owner shall have been previously and equitably indemnified.

"Various opinions have been expressed by modern historians on the Declaration of Rights. Professor Montague calls it 'a curious mixture of law, morals, and philosophy.' Dr. J. Holland Rose admits that the "Rights of Man" seemed to summon all peoples to a new political life.' Professor Paul Viollet particularly emphasises the fact that articles 1 and 10 were 'directly inspired' by America, the first by the Declaration of the Rights of Massachusetts (1770-80), and in a minor degree by documents having a similar purport and issued by Pennsylvania (1776) and Virginia (1776), the second by the Bill of Rights of New Hampshire (1784). 'Do not these "principles of 1780" represent the most commonplace assumptions of European Governments to-day?' asks Professor James Harvey Robinson. 'And yet every one of them was neglected by every European Government in the eighteenth century, if we except England. M. Seignobos reminds us that "when a Frenchman turned his attention to political questions in the eighteenth century, most of the institutions in the midst of which he lived appeared to him to be *abusés* contrary to reason and humanity.'" Now, if we are not prejudiced against the Declaration of the Rights of Man by careless and hostile critics, and by the suggestions made during the debates by Siéyès and others—which certainly reached a degree of fatuity rarely exceeded in the most futile of parliamentary discussions—and if we neglect one or two oratorical flourishes, do we not find it to be, after all, simply a dignified and succinct repudiation of *les abus*? Is it not a concrete and positive, although general, statement of the practical reforms which the Assembly was in duty bound to realise? Was there not back of each article some crying evil of long standing, in view of which the nation might expect a comprehensive constitutional guaranty?' Having enunciated certain principles, the next item on the programme, and assuredly the more difficult, was to embody them in a constitution. Weeks were spent in discussions, oftentimes carried on in an uproar, but eventually several preliminary matters were decided. The legislative body should be permanent and consist of a single chamber only, and the King should not have the right of absolute veto as hitherto. He could use his prerogative for two sessions, but no longer—a compromise engineered by Necker."—H. F. B. Wheeler, *French Revolution*, pp. 238-242.—See also CONSTITUTIONS: 1783-1848.

1789 (October).—Famine in Paris.—Insurrection of women.—Their march to Versailles.—Meantime, in Paris, "vast and incalculable was the misery: crowds of peruke-makers, tailors, and shoemakers, were wont to assemble at the Louvre and

in the Champs Elysées, demanding things impossible to be granted; demanding that the old regulations should be maintained, and that new ones should be made; demanding that the rate of daily wages should be fixed; demanding . . . that all the Savoyards in the country should be sent away, and only Frenchmen employed. The bakers' shops were besieged, as early as five o'clock in the morning, by hungry crowds who had to stand 'en queue'; happy when they had money to purchase miserable bread, even in this uncomfortable manner. . . . Paris was living at the mercy of chance: its subsistence dependent on some arrival or other: dependent on a convoy from Beauce, or a boat from Corbeuil. The city, at immense sacrifices, was obliged to lower the price of bread: the consequence was that the population for more than ten leagues round came to procure provisions at Paris. The uncertainty of the morrow augmented the difficulties. Everybody stored up, and concealed provisions. The administration sent in every direction, and bought up flour, by fair means, or by foul. It often happened that at midnight there was but half the flour necessary for the morning market. Provisioning Paris was a kind of war. The National Guard was sent to protect each arrival; or to secure certain purchases by force of arms. Speculators were afraid; farmers would not thrash any longer; neither would the miller grind. 'I used to see,' says Bailly, 'good tradesmen, mercers and goldsmiths, praying to be admitted among the beggars employed at Montmartre, in digging the ground.' Then came fearful whispers of the King's intention to fly to Metz. What will become of us if the King should fly? He must not fly; we will have him here; here amongst us in Paris! This produced the famous insurrection of women . . . on the 5th October."—G. H. Lewes, *Life of Robespierre*, ch. 9.—H. von Sybel, *History of the French Revolution*, v. 1, bk. 1, ch. 3-4.—"A thought, or dim raw-material of a thought, was fermenting all night [October 4-5], universally in the female head, and might explode. In squalid garret, on Monday morning Maternity awakes, to hear children weeping for bread. Maternity must forth to the streets, to the herb-markets and Bakers'-queues; meets there with hunger-stricken Maternity, sympathetic, exasperative. O we unhappy women! But, instead of Bakers'-queues, why not to Aristocrats' palaces, the root of the matter? Allons! Let us assemble. To the Hôtel-de-Ville; to Versailles; to the Lanterne! In one of the Guard houses of the Quartier Saint-Eustache, 'a young woman' seizes a drum,—for how shall National Guards give fire on women, on a young woman? The young woman seizes the drum; sets forth, beating it, 'uttering cries relative to the dearth of grains.' Descend, O mothers; descend, ye Judiths, to food and revenge!—All women gather and go; crowds storm all stairs, force out all women: the female Insurrectionary Force, according to Camille, resembles the English Naval one; there is a universal 'Press of women.' Robust Dames of the Halle, slim Mantua-makers, assiduous, risen with the dawn; ancient Virginity tripping to matins; the Housemaid, with early broom; all must go. Rouse ye, O, women; the laggard men will not act; they say, we ourselves may act! And so, like snowbreak from the mountains, for every staircase is a melted brook, it storms; tumultuous, wild-shrilling, towards the Hôtel-de-Ville. Tumultuous; with or without drum-music: for the Faubourg Saint-Antoine also has tucked-up its gown; and with besom-staves, fire-irons, and even rusty pistols (void of ammunition), is flowing on. Sound of it flies, with a velocity of sound, to the utmost Barriers. By seven o'clock, on this raw

October morning, fifth of the month, the Townhall will see wonders. . . . The National Guards form on the outer stairs, with levelled bayonets; the ten thousand Judiths press up, resistless; with obstinations, with outspread hands.—merely to speak to the Mayor. The rear forces them; nay from male hands in the rear, stones already fly: the National Guard must do one of two things; sweep the Place de Grève with cannon, or else open to right and left. They open: the living deluge rushes in. Through all rooms and cabinets, upwards to the topmost belfry: ravenous; seeking arms, seeking Mayors, seeking justice;—while, again, the better-dressed speak kindly to the Clerks; point out the misery of these poor women; also their ailments, some even of an interesting sort. Poor M. de Gouvion is shiftless in this extremity;—a man shiftless, perturbed: who will one day commit suicide. How happy for him that Usher Maillard the shifty was there, at the moment, though making representations! Fly back, thou shifty Maillard; seek the Bastille Company; and O return fast with it; above all, with thy own shifty head! For, behold, the Judiths can find no Mayor or Municipal; scarcely, in the topmost belfry, can they find poor Abbé Lefèvre the Powder-distributor. Him, for want of a better, they suspend there: in the pale morning light; over the top of all Paris, which swims in one's failing eyes:—a horrible end? Nay the rope broke, as French ropes often did; or else an Amazon cut it. Abbé Lefèvre falls, some twenty feet, rattling among the leads; and lives long years after, though always with 'a tremblement in the limbs.' And now doors fly under hatchets; the Judiths have broken the Armory; have seized guns and cannons, three money-bags, paper-heaps; torches flare: in few minutes, our brave Hôtel-de-Ville, which dates from the Fourth Henry, will, with all that it holds, be in flames! In flames, truly,—were it not that Usher Maillard, swift of foot, shifty of head, has returned! Maillard, of his own motion,—for Gouvion or the rest would not even sanction him,—snatches a drum: descends the Porch-stairs, rantan, beating sharp, with loud rolls, his Rogues'-march: To Versailles! Allons; à Versailles! As men beat on kettle or warming-pan, when angry she-bees, or say, flying desperate wasps, are to be hived; and the desperate insects hear it, and cluster round it,—simply as round a guidance, where there was none: so now these Menads round shifty Maillard, Riding-Usher of the Châtelet. The axe pauses uplifted; Abbé Lefèvre is left half-hanged: from the belfry downwards all vomits itself. What rub-adub is that? Stanislas Maillard, Bastille hero, will lead us to Versailles? Joy to thee, Maillard; blessed art thou above Riding-Ushers! Away, then, away! The seized cannon are yoked with seized cart-horses: brown-locked Demoiselle Théroigne, with pike and helmet, sits there as gunneress. . . . Maillard (for his drum still rolls) is, by heaven-rending acclamation, admitted General. Maillard hastens the languid march. . . . And now Maillard has his Menads in the Champs Elysées (Fields Tartarean rather); and the Hôtel-de-Ville has suffered comparatively nothing. . . . Great Maillard! A small nucleus of Order is round his drum; but his outskirts fluctuate like the mad Ocean: for Rascality male and female is flowing in on him, from the four winds: guidance there is none but in his single head and two drum-sticks. . . . On the Elysian Fields there is pause and fluctuation; but for Maillard, no return. He persuades his Menads, clamorous for arms and the Arsenal, that no arms are in the Arsenal; that an unarmed attitude, and petition to a National Assembly, will be the best: he hastily nominates or

sanctions generaleesses, captains of tens and fifties;—and so, in loosest-flowing order, to the rhythm of some 'eight drums' (having laid aside his own), with the Bastille Volunteers bringing up his rear, once more takes the road. Chaillot, which will promptly yield baked loaves, is not plundered; nor are the Sèvres Potteries broken. . . . The press of women still continues, for it is the cause of all Eve's Daughters, mothers that are, or that ought to be. No carriage-lady, were it with never such hysterics, but must dismount, in the mud roads, in her silk shoes, and walk. In this manner, amid wild October weather, they, a wild unwinged stork-flight, through the astonished country wend their way."—T. Carlyle, *French Revolution*, v. 1, bk. 7, ch. 4-5.

1789 (October).—Mob of men at Versailles, with Lafayette and the national guard.—King and royal family brought to Paris.—Before the memorable October 5 closed, the movement of the women upon Versailles was followed by an outpouring, in the same direction, of the masculine mob of Paris, headed by the National Guard. "A modern city would have dispersed it in short order, but when La Fayette succeeded in gathering the National Guard, he found his troops were bent upon bringing the king to Paris. Either sincerely or for the sake of appearances, La Fayette endeavored to procrastinate; the soldiers were polite but determined, and at last the general, probably not quite unwillingly, put himself at the head of another procession and also marched to Versailles. It is a good eight miles from Paris to Versailles, and when the crowd of hungry women reached the palace it was ready for sleep or for riot. It surged into the astonished and not altogether pleased Assembly, demanding that the price of bread be lowered by law, and then, after sending a deputation to the king, found its way into the great court of the palace. For a few hours the situation, if critical, was not hopeless. Some of the crowd were drunk, and others attempted to satisfy hunger by roasting a horse that had chanced to be shot. At last La Fayette arrived with his troops, and after disposing them in churches for the night, thinking all was quiet, retired to get a few hours' rest after twenty-four of constant exertion. His fatigue can hardly excuse his negligence, for as day broke, under what provocation it is not known, the mob broke into the palace, and made for the queen's apartment, apparently bent on murder. Two of the Life Guards were thrown out of the windows to the greater mob below, where in a second their heads were off and on pikes. The queen was aroused just in time. Heroic guards, at the risk of their lives, kept the inner doors of the palace closed until she went by a private staircase to the apartments of the king. This violence, however, was of but short duration, for La Fayette was able to bring about a return of order by means of his troops, and the wild night came to something like a peaceful morning. When morning came, the king appeared on the balcony, and was enthusiastically cheered when he promised to go to Paris. La Fayette led the queen and the dauphin upon the balcony, that the crowd might see her with a cockade in her hand. 'No children!' howled the crowd, and the queen bravely stood out alone with the general. La Fayette gave her the tricolor cockade, bent and in the most chivalrous way kissed her hand. The crowd was pleased, and in a way subdued, and a few hours later Louis, with the queen and the children, started for the capital, never again to return to the grand palace of Louis XIV. It was a third and wildest of all the processions of these two days—women, men, body-

guards, troops, La Fayette on his white horse, and the people from the slums surrounding the royal carriage, howling, 'we have got the baker, and the baker's wife, and the baker's little boy. Now we shall have bread.' And so they came to Paris and the shabby palace of the Tuileries. The Assembly at Versailles, instead of acting like men, and punishing the authors of this shameful affair, yielded to mob law, voted that the king and the Assembly were inseparable, and in its turn went to Paris. Quarters were prepared for it in one of the great riding-schools of the town, close by the royal palace of the Tuileries, and at last the capital had the king and the National Assembly in its own control. It was the guarantee that the Old Régime should not be restored. La Fayette and the *bourgeois* government of Paris (Commune) were the immediate gainers by the transfer of the Assembly to Paris. The Duke of Orleans was driven to England, the Commune repressed popular uprisings, and La Fayette, for the moment the most powerful man in France, with the aid of the National Guard, brought something like quiet into the excited capital. But the more sinister fact cannot be overlooked. Whether willingly or not, the municipal government of Paris, the commander-in-chief of the National Guard, the National Assembly, the king, had all been for the moment conquered by the proletarian mob, directed by demagogues."—S. Mathews, *French Revolution*, pp. 147-149.

Also in: A. B. Hart, *Lafayette*.—C. Tower, *Marquis de La Fayette*.

1789-1790.—Political parties.—Power of the bourgeoisie.—"It is now that definite parties begin to form in the Assembly. The Right, so called because its members sat on the right hand of the President's chair, was the party of reaction and obstruction, supporters of the throne and of the Church, such as Cazalès and the Abbé Maury. The ultra-conservative amongst them were known as the Extreme Right, and included D'Espréménil and Mirabeau's brother, while the Right Centre was a half-way house which had as guests Malouet, Bergasse, Lally-Tollendal, and Clermont-Tonnerre. Those opposite to them represented radicalism, and were known as the Left. The Extreme Left comprised Robespierre, Buzot, Pétion, and Dubois-Crancé, the Left proper Duport, Barnave, Alexandre Lameth, Talleyrand, and the Abbé Grégoire."—H. F. B. Wheeler, *French Revolution*, pp. 242-243.—"A democratic party is already becoming visible, especially in the journals. . . . Its programme is to obtain the suppression of the property requirements in general, this being the aim of the more advanced; or at least (and this is the aim of the practical politicians) the suppression of the qualification as regards eligibility, and an amelioration of the more anti-popular results of the *bourgeois* system which has just been established. . . . The democratic party had its origin neither among the peasantry nor among the workers. The rural masses, all joy at the destruction of the feudal system, wasted no thought on demanding the right to vote—a right which they seemed to regard rather as a burden, a service, or a danger, than as a desirable privilege. The workers, less numerous than now, were more sensible of their exclusion from the body politic; but . . . would, if left to their own instincts, have resigned themselves to the fact. It took the solicitations of certain middle-class reformers, and the fiery appeals of Marat, to make universal suffrage a popular subject; but for a long time it was not possible, even in Paris, to provoke any threatening movement of the 'passives' against the 'actives.' Anti-aristocrats and patriots: such were the Parisian

workers. They had no idea of democracy until the middle classes forced them to think of it; and as for the word 'republic,' it would seem to have been so far unknown in the poorer districts. It was, then, among the middle classes that a democratic party first grew up; badly organised, it is true, as were all the parties of those days, but with its tendencies sufficiently clear, and even clamorous. The leaders of the party in the Assembly were Robespierre, Buzot, Petion, Grégoire; outside the Assembly, the vehement Marat, the eloquent Lous-talot, the cautious Condorcet. The claims of the democrats increased unceasingly during the whole of the year 1790. This extraordinary year has been upheld as a year of national concord, as the best year of the Revolution, the year of fraternity. This may be: but it was also the period in which the whole state politic was taken possession of by the middle class at the expense of the people, and the period when the very unfraternal idea came into being that the middle class was itself the nation. With the applause which saluted the fall of the *ancien régime*, the old despotism, the old aristocracy, there mingled (to be heard plainly enough by the alert listener) a subdued hissing from the democrats hostile to the property suffrage and the *bourgeoisie*. . . . That this democratic party, composed of the cream of the middle class, ever succeeded in becoming a popular party, was due to the fact that the very trend of events was tending to make France become unconsciously a democratic country; and it was this year of 1790 that saw the spread of the great movement of municipal emancipation and of national agglomeration. The new France was becoming unified by a gigantic labour of organisation and construction, in which we seem to distinguish two very different movements; the one reasoned, and, as it were, artificial, the other spontaneous, popular, and instinctive. From the brains of the members of the great Assembly there issued reasoned institutions, meditated in the silence of the study; in which, it is true, the history of the people and their desires were always kept in mind; yet institutions which the people themselves did not help to elaborate: such as the division of France by departments, the organisation of the judiciary, and the civil constitution of the clergy. All this was no spontaneous growth of the soil, but was planted there by industrious hands, there to prosper more or less."—A. Aulard, *French Revolution*, v. 1, pp. 211-215.

1789-1791.—New constitution.—Appropriation and sale of Church property.—Issue of Assignats.—Abolition of titles of honor.—Civil constitution of the clergy.—Feast of the Federation.—Émigrés on the border and their conduct.—"Meanwhile, the Assembly was busy with further schemes of revolution and desperate finance. [See MONEY AND BANKING: Modern: 1789-1796.] France was divided into departments: the property of the Church was appropriated to meet the urgent necessities of the State: the disastrous assignats were issued: the subjection of the clergy to the civil power was decreed: the Parliaments were superseded, and the judicature of the country was reconstituted, upon a popular basis: titles of honour, orders of knighthood, armorial bearings—even liveries—were abolished: the army was reorganised, and the privileges of birth were made to yield to service and seniority. All Frenchmen were henceforth equal, as 'citoyens': and their new privileges were wildly celebrated by the planting of trees of liberty. The monarchy was still recognised, but it stood alone, in the midst of revolution."—T. E. May, *Democracy in Europe*, v. 2, ch. 13.—"The monarchy was continued and liberally

endowed; but it was shorn of most of its ancient prerogatives, and reduced to a very feeble Executive; and while it obtained a perilous veto on the resolutions and acts of the Legislature, it was separated from that power, and placed in opposition to it, by the exclusion of the Ministers of the Crown from seats and votes in the National Assembly. The Legislature was composed of a Legislative Assembly, formed of a single Chamber alone, in theory supreme, and almost absolute: but as we have seen, it was liable to come in conflict with the Crown, and it had less authority than might be supposed, for it was elected by a vote not truly popular, and subordinate powers were allowed to possess a very large part of the rights of Sovereignty which it ought to have divided with the King. This last portion of the scheme was very striking, and was the one, too, that most caused alarm among distant political observers. Too great centralization having been one of the chief complaints against the ancient Monarchy, this evil was met with a radical reform. . . . The towns received extraordinary powers; their municipalities had complete control over the National Guards to be elected in them, and possessed many other functions of Government; and Paris, by these means, became almost a separate Commonwealth, independent of the State, and directing a vast military force. The same system was applied to the country; every Department was formed into petty divisions, each with its National Guards, and a considerable share of what is usually the power of the government. . . . Burke's saying was strictly correct, 'that France was split into thousands of Republics, with Paris predominating and queen of all.' With respect to other institutions of the State, the appointment of nearly all civil functionaries, judicial and otherwise, was taken from the Crown, and abandoned to a like popular election; and the same principle was also applied to the great and venerable institution of the Church, already deprived of its vast estates, though the election of bishops and priests by their flocks interfered directly with Roman Catholic discipline, and probably, too, with religious dogma. . . . Notwithstanding the opposition of Necker, who, though hardly a statesman, understood finance, it was resolved to sell the lands of the Church to procure funds for the necessities of the State; and the deficit, which was increasing rapidly, was met by an inconvertible currency of paper, secured on the lands to be sold. This expedient . . . was carried out with injudicious recklessness. The Assignats, as the new notes were called, seemed a mine of inexhaustible wealth, and they were issued in quantities which, from the first moment, disturbed the relations of life and commerce, though they created a show of brisk trade for a time. In matters of taxation the Assembly, too, exceeded the bounds of reason and justice; exemptions previously enjoyed by the rich were now indirectly extended to the poor; wealthy owners of land were too heavily burdened, while the populace of the towns went scot free. . . . Very large sums, also, belonging to the State, were advanced to the Commune of Paris, now rising into formidable power. . . . The funds so obtained were lavishly squandered in giving relief to the poor of the capital in the most improvident ways—in buying bread dear and reselling it cheap, and in finding fanciful employment for artisans out of work. The result, of course, was to attract to Paris many thousands of the lowest class of rabble and to add them to the scum of the city. . . . On the first anniversary [July 14, 1790] of the fall of the Bastille, and before the Constitution had been finished . . .

a great national holiday [called the Feast of the Federation] was kept; and, amidst multitudes of applauding spectators, deputations from every Department in France, headed by the authorities of the thronging capital, defiled in procession to the broad space known as the Field of Mars, along the banks of the Seine. An immense amphitheatre had been constructed [converting the plain into a valley, by the labor of many thousands, in a single week], and decorated with extraordinary pomp; and here, in the presence of a splendid Court, of the National Assembly, and of the municipalities of the realm, and in the sight of a great assemblage surging to and fro with throbbing excitement, the King took an oath that he would faithfully respect the order of things that was being established, while incense streamed from high-raised altars, and the ranks of 70,000 National Guards burst into loud cheers and triumphant music; and even the Queen, sharing in the passion of the hour, and radiant with beauty, lifted up in her arms the young child who was to be the future chief of a disenthralled and regenerate people. . . . The following week was gay with those brilliant displays which Paris knows how to arrange so well. . . . The work, however, of the National Assembly developed some of its effects ere long. . . . The emigration of the Nobles, which had become very general from the 5th and 6th of October, went on in daily augmenting numbers; and, in a short time, the frontiers were edged with bands of exiles breathing vengeance and hatred." To all the many destructive and revolutionary influences at work was now added "the pitiful conduct of those best known by the still dishonorable name of 'Émigrés.' In a few months the great majority of the aristocracy of France had fled the kingdom."—W. O'C. Morris, *French Revolution and first empire*, ch. 3.—See also CIVIL CONSTITUTION OF THE CLERGY.

1790.—Rise of the clubs.—Jacobins, Cordeliers, Feuillants, Club Monarchique, and Club of '89.—"Every party sought to gain the people; it was courted as sovereign. After attempting to influence it by religion, another means was employed, that of the clubs. At that period, clubs were private assemblies, in which the measures of governments, the business of the state, and the decrees of the assembly, were discussed; their deliberations had no authority, but they exercised a certain influence. The first club owed its origin to the Breton deputies, who already met together at Versailles to consider the course of proceeding they should take. When the national representatives were transferred from Versailles to Paris, the Breton deputies and those of the assembly who were of their views held their sittings in the old convent of the Jacobins, which subsequently gave its name to their meetings. It did not at first cease to be a preparatory assembly, but as all things increase in time, the Jacobin Club did not confine itself to influencing the assembly; it sought also to influence the municipality and the people, and received as associates members of the municipality and common citizens. Its organization became more regular, its action more powerful; its sittings were regularly reported in the papers; it created branch clubs in the provinces, and raised

by the side of legal power another power which first counselled and then conducted it. The Jacobin Club, as it lost its primitive character and became a popular assembly, had been forsaken by part of its founders. The latter established another society on the plan of the old one, under the name of the Club of '89. Siéyès, Chapelier, Lafayette, La Rochefoucauld, directed it, as Lameth and Barnave directed that of the Jacobins. Mirabeau belonged to both, and by both was equally courted. These clubs, of which the one prevailed in the assembly, and the other amongst the people, were attached to the new order of things, though in different degrees. The aristocracy sought to attack the revolution with its own arms: it opened royalist clubs to oppose the popular clubs. That first established, under the name of the Club des Impartiaux, could not last because it addressed itself to no class opinion. Reappearing under the name of the Club Monarchique, it included among its members all those whose views it represented. It sought to render itself popular with the lower classes, and distributed bread; but, far from accepting its overtures, the people considered such establishments as a counter-revolutionary movement. It disturbed their sittings, and obliged them several times to change their place of meeting. At length, the municipal authority found itself obliged, in January, 1791, to close this club, which had been the cause of several riots."—F. A. Mignet, *History of the French Revolution*, ch. 3.—"At the end of 1790 the number of Jacobin Clubs was 200, many of which—like the one in Marseilles—contained more than a thousand members. Their organization extended through the whole kingdom, and every impulse given at the centre in Paris was felt at the extremities. . . . It was far indeed from embracing the majority of adult Frenchmen, but even at that time it had undoubtedly become—by means of its strict unity—the greatest power in the kingdom."—H. von Sybel, *History of the French Revolution*, v. 1, bk. 1, ch. 5.—"This Jacobin Club soon divided itself into three other clubs: first, that party which looked upon the Jacobins as lukewarm patriots left it, and constituted themselves into the Club of the Cordeliers, where Danton's voice of thunder made the halls ring; and Camille Desmoulins' light, glancing wit played with momentous subjects. The other party, which looked upon the Jacobins as too fierce, constituted itself into the 'Club of 1789; friends of the monarchic constitution'; and afterwards named Feuillant's Club, because it met in the Feuillant Convent. Lafayette was their chief; supported by the 'respectable' patriots. These clubs generated many others, and the provinces imitated them."—G. H. Lewes, *Life of Robespierre*, ch. 10.—"The Cordeliers were a Parisian club; the Jacobins an immense association extending throughout France. But Paris would stir and rise at the fury of the Cordeliers; and Paris being once in motion, the political revolutionists were absolutely obliged to follow. Individuality was very powerful among the Cordeliers. Their journalists, Marat, Desmoulins, Fréron, Robert, Hebert and Fabre l'Églantine, wrote each for himself. Danton, the omnipotent orator, would never write; but, by way of compensation, Marat and Desmoulins, who stammered or lisped, used principally to write, and seldom spoke. . . . The Cordeliers formed a sort of tribe, all living in the neighbourhood of the club."—J. Michelet, *Historical view of the French Revolution*, bk. 4, ch. 7, 5.

1790 (May).—Law requiring sale of small tracts of land.—Agricultural conditions.—“The continental country in which the liberation of agriculture first took place upon a considerable scale was France. There, as elsewhere, the development presents three principal phases: (1) the emancipation of the rural labourer in respect to his person; (2) the release of agricultural technique from the fetters imposed by law and custom; and (3) the liberation of the land, similarly, from ancient legal and customary fetters, and the opening of it to the possession of large numbers of people. One of the capital achievements of the Revolution was the abolition of all survivals of feudalism and serfdom. The number of serfs remaining to be set free in 1789 was not large. None the less, the liberation of such as there were, together with the cancellation of an intricate mass of surviving feudal and manorial obligations, was a step necessary to be taken before the French agricultural classes could be put in the way of the largest prosperity. By it the French people were guaranteed for the first time a universal status of personal, legal freedom. The liberation of technique, involving especially the abandonment of the three-field system and the introduction of machinery and of new methods of cultivation, came gradually and did not reach full fruition before the second half of the nineteenth century. In some of its aspects, at least, it was promoted, as well as accompanied, by a development which must be considered much the most important of all, i. e., the conversion of tenants, dependent cultivators, and ordinary labourers into independent, self-sustaining landholders; and attention must first be directed in some detail to this fundamental matter. Formerly it was supposed that the multiplicity of small proprietorships which is the distinguishing feature of rural France to-day was wholly a consequence of the Revolution. Research has shown that this is not true—that, on the contrary, the breaking up of the agricultural lands of France into little holdings was already under way long before 1789. Some students of the subject have gone so far as to maintain, indeed, that the number of landed proprietorships in France was scarcely smaller before 1789 than it is to-day. This is an extreme view, but it is nearer the truth than is the assertion of the historian Michelet that the class of peasant proprietors sprang entirely from the land sales of the Revolutionary period. During his travels in France in 1787-1789 Arthur Young was struck by the large number of instances in which the lord possessed the chateau and some seigniorial land while most of the area of the old manor was divided among peasants who owned their bits of ground subject only to the rendering of certain seigniorial payments. Throughout the seventeenth and eighteenth centuries impoverished seigneurs in increasing numbers had been obliged to sell land to their tenants; while the number of small holdings had been increased steadily by the redemption of waste land and by the enclosure and division of common land. No reliable statistics of French landholding prior to 1789 exist. Arthur Young, however, says that in 1787 a third of the land was tilled by peasant owners; and it has been estimated that at the outbreak of the Revolution the total number of proprietors was about three millions, of whom three-fifths would be classified to-day as small proprietors. Both Young and Malthus expressed the opinion that, as matters were going, France would become as badly overpopulated as was China. As late as 1823 McCulloch predicted that the land must certainly become, within fifty years, ‘the greatest pauper warren in

the world’ and share with Ireland the dubious honour of furnishing hewers of wood and drawers of water to other countries. After full allowance has been made for the growth of small holdings before the Revolution, the fact remains that the development was much accelerated by the Revolution itself. In the first place, the improvement of the conditions of landholding, through the suppression of manorial obligations, stimulated the desire of larger numbers of men to become proprietors. In the second place, the Revolution emphasised the principle and Napoleon sought to enforce it in the *Code*—of egalitarian inheritance, in accordance with which the bulk of a testator’s property was required to be divided equally among all of his children, without distinction of age or sex. Already before 1789 this policy was in common use among the bourgeoisie and the peasantry. And while in practise a rule of this kind must under any condition be subject to some evasions and limitations, there can be no question that the sanction lent the ‘partible succession’ by the Revolutionary assemblies and by the *Code* enhanced decidedly the principle’s effectiveness. More important than these influences, however, was the extensive sale of lands confiscated from the crown, from the émigrés, and from the Church. Through the years 1700-05 large areas were placed upon the market. Prices were low, payment was spread over a period of twelve or more years, a clear title was given, and no complicating obligations were imposed. The law of May 14, 1790, specifically enjoined that the lands should be sold in small portions, the large estates being broken up for the purpose, to the end that the number of ‘happy proprietors’ might be increased. Until 1793, when the practise was prohibited, peasants frequently combined to purchase large tracts which they forthwith divided among themselves.”—F. A. Ogg, *Economic development of modern Europe*, pp. 188-190.—See also AGRICULTURE: Modern: General survey; also France: Development since the Revolution.

1790-1791.—Revolution at Avignon.—Reunion of old papal province with France decreed.—“The old residence of the Popes [Avignon] remained until the year 1789 under the papal government, which, from its distance, exercised its authority with great mildness, and left the towns and villages of the country in the enjoyment of a great degree of independence. The general condition of the population was, however, much the same as in the neighbouring districts of France—agitation in the towns and misery in the country. It is not surprising, therefore, that the commotion of August 4th should extend itself among the subjects of the Holy see. Here, too, castles were burned, black mail levied on the monasteries, tithes and feudal rights abolished. The city of Avignon soon became the centre of a political agitation, whose first object was to throw off the papal yoke, and then to unite the country with France. . . . In June, 1790, the people of Avignon tore down the papal arms, and the Town Council sent a message to Paris that Avignon wished to be united to France.” Some French regiments were sent to the city to maintain order; but “the greater part of them deserted, and marched out with the Democrats of the town to take and sack the little town of Cavillon, which remained faithful to the Pope. From this time forward civil war raged without intermission. . . . The Constituent Assembly, on the 14th of September, 1791, decreed the reunion of the country with France. Before the new government could assert its authority, fresh and more dreadful atrocities had taken place,” ending with the fiendish massacre of 110 prisoners, held by a band of

ruffians who had taken possession of the papal castle.—H. von Sybel, *History of the French Revolution*, v. 1, bk. 3, ch. 2.

1790-1791.—Oath of the clergy.—Rise of the Jacobins.—Mirabeau.—King's flight to Varennes.—“On July 12th, 1790, the Civil Constitution of the Clergy was decreed. The sees of the bishops were made coterminous with the recently formed departments, and the bishops were elected by the secondary electors. Every parish was to have one priest, who was also elected and whose income was increased as that of the bishop was decreased. The State was responsible for the salaries, and residence was made obligatory. All the clergy must take the oath to the (yet unborn) Constitution. The Pope was to receive only a formal notice of election. It was inevitable that the Assembly should take some steps to deal with so important a part of the fabric of old France. . . . It was partly the ideal of an independent Gallican Church, and the tradition of the Jansenists, of whom there were a number in the Assembly, which decided the treatment

MIRABEAU

of the question. The King was induced to accept the new Constitution on August 26th. The result was a schism between the 'Constitutional' clergy and those who refused to take the oath. Gradually the area of conflict widened and the execution of the law was merged in a general persecution of the Church. The seizure of Church property had been largely caused by the necessity of raising funds. . . . The members of the Assembly are not to be despised. . . . By means of a Constitution they hoped to accomplish much, and although it was not the 'stupendous and glorious edifice of liberty,' as described by Charles James Fox, yet it was equally undeserving of the title bestowed upon it by Marie Antoinette, who called it 'a tissue of absurdities.' . . . The spirit of unrest was merging into the more dangerous spirit of disorder. At Nimes and Montaubon there was such serious agitation that it amounted almost to civil war. At Lyons and at Marseilles there were exciting scenes of bitter conflict; while everywhere there was a general feeling of insecurity. . . . The rise of the Jacobins was entirely due to marvellous organization, and it stands out on the pages of history as a famous ex-

ample of such methods. The leading Jacobins were not members of the lower class, but were for the most part professional men like Robespierre, Danton, and Camille Desmoulins. Nor was the club originally composed of extremists. But the admission of the public to debates gave authority to the more violent speakers, and the moderates seceded. In the autumn of 1790 the Jacobin Club of Paris published a newspaper which had immense effect, and, before the winter, was able to report the existence of 120 provincial clubs affiliated to the central society in the capital. Within two years it was calculated that there were no fewer than 26,000 of these clubs scattered through the numerous communes of France. In the face of so many dangers, disaster seemed inevitable. Its delay may justly be attributed in part to the marvellous personality of the Comte de Mirabeau. He had been born in 1740, and during the early part of his life had more than once been obliged to fly from his country. Four years before the outbreak of the Revolution he had been in England, where he was the friend of most of the leading Whigs of the day, and imbibed a lasting reverence for the English Constitution. During the preliminary meetings in Provence in 1788, Mirabeau had been rejected by the noblesse, so that in the spring of the following year, having offered himself to the Third Estate, he was elected for both Marseilles and Aix, and sat in the States-General for the latter. Much to the annoyance of Mounier, an acute observer and one who played an important part in the early scenes of the Revolution, Mirabeau became still more conspicuous, and soon took the lead, believing firmly and wisely in the necessity of a strong and capable executive in touch with the popular desires. He it was who consolidated the National Assembly and pointed out the futility of abstract declarations. He saw that the hopes of France lay in the King's choice of a minister, and he did his best to win the confidence of his Sovereign. He failed, however, because of the bitter opposition of the Queen, the arrogance of Lafayette, and the pusillanimous conduct of Necker. He was, besides, suspected of complicity with Orleans in the events of October 5th and 6th. . . . Throughout he was working strenuously for the good of his country, and he felt very strongly that, if only the King could be removed from Paris to some place a short distance away, a Constitutional Monarchy might then be established, firmly based upon the affections of the nation and the idea that the King and the people of France were one and indivisible. Mirabeau's schemes were destined to be ruined by the hostility of the Queen, prolonged until the critical moment was passed; and by the decree of November 7th, which kept the executive and legislature entirely apart. Even after this last event he continued to have hope, and was in constant communication with the Court. He boldly pointed out to the King that his plan of a counter-revolution was 'dangerous, criminal, and chimerical.' He told him very plainly that his only hope was to act in cordial co-operation with a still existing body of loyalists who were ready to carry out reform. He urged the King to withdraw from Paris, but not beyond the border. He saw that it would be fatal to appeal to the allies against France, but he believed that the royal provinces would rally to the King. As late as December, 1790, he presented to the Court the most complete and weighty of his memoranda, in which he urged it to concentrate its efforts on two objects: the discrediting of the existing Assembly and the election of another which should have full powers to reform the Constitution. Carlyle says 'had Mirabeau lived the history of

France and the world had been different'; but it is idle to speculate now whether his busy schemes would have succeeded, for he was cut off before they could be fulfilled. The golden opportunity for action was lost, and with Mirabeau's death on April 4th, 1791, the last hope for the ancient Monarchy of France was extinguished, for, as he himself said, 'When I am gone they will know what the value of me was. The miseries I have held back will burst from all sides on France. I carry in my heart the funeral pall of the French Monarchy; the dead remains of it will now be the sport of factions.' France did indeed become 'the sport of factions,' and Mirabeau's death opened the way for Robespierre and the Jacobins [and Duport, Barnave, and Lameth reigned supreme in the Assembly]. By the summer of 1791, Robespierre, at one time a lawyer and judge in Arras, became a person of great influence in the Assembly. The powerless King had lost his one supporter, and by June 20th, unable to bear the strain any longer, he made an attempt to reach the frontier.—R. W. Jeffery, *New Europe*, pp. 12-17.—“On Monday night, the Twentieth of June, 1791, about eleven o'clock, there is many a hackney-coach, and glass-coach (*carrosse de remise*), still rumbling, or at rest, on the streets of Paris. But of all glass-coaches, we recommend this to thee, O Reader, which stands drawn up in the Rue de l'Echelle, hard by the Carrousel and outgate of the Tuileries; in the Rue de l'Echelle that then was; 'opposite Ronsin the saddler's door,' as if waiting for a fare there! Not long does it wait: a hooded Dame, with two hooded Children has issued from Villequier's door, where no sentry walks, into the Tuileries Court-of-Princes; into the Carrousel; into the Rue de l'Echelle; where the Glass-coachman readily admits them; and again waits. Not long; another Dame, likewise hooded or shrouded, leaning on a servant, issues in the same manner; bids the servant good-night; and is, in the same manner, by the Glass-coachman, cheerfully admitted. Whither go so many Dames? 'Tis his Majesty's *Couchée*, Majesty just gone to bed, and all the Palace-world is retiring home. But the Glass-coachman still waits; his fare seemingly incomplete. By and by, we note a thickest Individual, in round hat and peruke, arm-and-arm with some servant, seemingly of the Runner or Courier sort; he also issues through Villequier's door; starts a shoebuckle as he passes one of the sentries, stoops down to clasp it again; is however, by the Glass-coachman, still more cheerfully admitted. And *now*, is his fare complete? Not yet; the Glass-coachman still waits.—Alas! and the false Chambermaid has warned Gouvion that she thinks the Royal Family will fly this very night; and Gouvion, distrusting his own glazed eyes, has sent express for Lafayette; and Lafayette's Carriage, flaring with lights, rolls this moment through the inner Arch of the Carrousel,—where a Lady shaded in broad gypsy-hat, and leaning on the arm of a servant, also of the Runner or Courier sort, stands aside to let it pass, and has even the whim to touch a spoke of it with her *badine*,—light little magic rod which she calls *badine*, such as the Beautiful then wore. The flare of Lafayette's Carriage rolls past; all is found quiet in the Court-of-Princes; sentries at their post; Majesties' Apartments closed in smooth rest. Your false Chambermaid must have been mistaken? Watch thou, Gouvion, with Argus' vigilance; for, of a truth, treachery is within these walls. But where is the Lady that stood aside in gypsy-hat, and touched the wheel-spoke with her *badine*? O Reader, that Lady that touched the wheel-spoke was the Queen of France! She has issued safe

through that inner Arch, into the Carrousel itself; but not into the Rue de l'Echelle. Flurried by the rattle and rencounter, she took the right hand not the left; neither she nor her Courier knows Paris; he indeed is no Courier, but a loyal stupid *ci-devant* Bodyguard disguised as one. They are off, quite wrong, over the Pont Royal and River; roaming disconsolate in the Rue du Bac; far from the Glass-coachman, who still waits. Waits, with flutter of heart; with thoughts—which he must button close up, under his jarvie-surtout! Midnight clangs from all the City-steeple; one precious hour has been spent so; most mortals are asleep. The Glass-coachman waits; and in what mood! A brother jarvie drives up, enters into conversation; is answered cheerfully in jarvie-dialect: the brothers of the whip exchange a pinch of snuff; decline drinking together; and part with good-night. Be the Heavens blest! here at length is the Queen-lady, in gypsy-hat; safe after perils; who has had to inquire her way. She too is admitted; her Courier jumps aloft, as the other, who is also a disguised Bodyguard, has done: and now, O Glass-coachman of a thousand,—Count Fersen, for the Reader sees it is thou,—drive! Dust shall not stick to the hoofs of Fersen: crack! crack! the Glass-coach rattles, and every soul breathes lighter. But is Fersen on the right road? North-eastward, to the Barrier of Saint-Martin and Metz Highway, thither were we bound: and lo, he drives right Northward! The royal Individual, in round hat and peruke, sits astonished; but right or wrong, there is no remedy. Crack, crack, we go incessant, through the slumbering City. Seldom, since Paris rose out of mud, or the Longhaired Kings went in Bullock-carts, was there such a drive. Mortals on each hand of you, close by, stretched out horizontal, dormant; and we alive and quaking! Crack, crack, through the Rue de Grammont; across the Boulevard; up the Rue de la Chaussée d'Antin,—these windows, all silent, of Number 42, were Mirabeau's. Towards the Barrier not of Saint-Martin, but of Clichy on the utmost North! Patience, ye royal Individuals; Fersen understands what he is about. Passing up the Rue de Clichy, he alights for one moment at Madame Sullivan's: 'Did Count Fersen's Coachman get the Baroness de Korff's new Berline?'—'Gone with it an hour-and-half ago,' grumbles responsive the drowsy Porter.—'*C'est bien*.' Yes, it is well;—though had not such hour-and-half been *lost*, it were still better. Forth therefore, O Fersen, fast, by the Barrier de Clichy; then Eastward along the Outer Boulevard, what horses and whipcord can do! Thus Fersen drives, through the ambrosial night. Sleeping Paris is now all on the right-hand of him; silent except for some snoring hum; and now he is Eastward as far as the Barrier de Saint-Martin; looking earnestly for Baroness de Korff's Berline. This Heaven's Berline he at length does descry, drawn up with its six horses, his own German Coachman waiting on the box. Right, thou good German: now haste, whither thou knowest!—And as for us of the Glass-coach, haste too, O haste; much time is already lost! The august Glass-coach fare, six Insides, hastily packs itself into the new Berline; two Bodyguard Couriers behind. The Glass-coach itself is turned adrift, its head towards the City; to wander whither it lists,—and be found next morning tumbled in a ditch. But Fersen is on the new box, with its brave new hammer-cloths; flourishing his whip; he bolts forward towards Bondy. There a third and final Bodyguard Courier of ours ought surely to be, with post-horses ready-ordered. There likewise ought that purchased Chaise, with the two Waiting-maids and their handboxes, to be; whom also her

Majesty could not travel without. Swift, thou deft Fersen, and may the Heavens turn it well! Once more, by Heaven's blessing, it is all well. Here is the sleeping Hamlet of Bondy; Chaise with Waiting-women; horses all ready, and postillions with their churn-boots, impatient in the dewy dawn. Brief harnessing done, the postillions with their churn-boots vault into the saddles; brandish circularly their little noisy whips. Fersen, under his jarvie-surtout, bends in lowly silent reverence of adieu; royal hands wave speechless inexpressible response; Baroness de Korff's Berline, with the Royalty of France, bounds off; forever, as it proved. Deft Fersen dashes obliquely Northward, through the country, towards Bougret; gains Bougret, finds his German Coachman and chariot waiting there; cracks off, and drives undiscovered into unknown space. A deft active man, we say; what he undertook to do is nimbly and successfully done. And so the Royalty of France is actually fled? This precious night, the shortest of the year, it flies, and drives! *Baroness de Korff* is, at bottom, *Dame de Tourzel*, Governess of the Royal Children: she who came hooded with the two hooded little ones; little Dauphin; little Madame Royale, known long afterwards as *Duchesse d'Angoulême*. *Baroness de Korff's Waiting-maid* is the Queen in gypsy-hat. The royal Individual in round hat and peruke, he is *Valet* for the time being. The other hooded Dame, styled *Travelling-companion*, is kind Sister Elizabeth; she had sworn, long since, when the Insurrection of Women was, that only death should part her and them. And so they rush there, not too impetuously, through the Wood of Bondy:—over a Rubicon in their own and France's History. Great; though the future is all vague! If we reach Bouillé? If we do not reach him? O Louis! and this all round thee is the great slumbering Earth (and overhead, the great watchful Heaven); the slumbering Wood of Bondy,—where Longhaired Childeric Donothing was struck through with iron; not unreasonably, in a world like ours. These peaked stone-towers are Raincy; towers of wicked D'Orléans. All slumbers save the multiplex rustle of our new Berline. Loose-skirted scarecrow of an Herb-merchant, with his ass and early greens, toilsomely plodding, seems the only creature we meet. But right ahead the great Northeast sends up evermore his gray brindled dawn: from dewy branch, birds here and there, with short deep warble, salute the coming Sun. Stars fade out, and Galaxies; Street-lamps of the City of God. The Universe, O my brothers, is flinging wide its portals for the Levee of the GREAT HIGH KING. Thou, poor King Louis, farest nevertheless, as mortals do, towards Orient lands of Hope; and the Tuileries with its Levees, and France and the Earth itself, is but a larger kind of doghutch,—occasionally going rabid."—T. Carlyle, *French Revolution*, pp. 382-386.—They reached Menehould in safety "but here the King was recognised by Drouet, the son of the post-master, who mounting his horse, pursued the royal fugitives to Varennes, raised an alarm, and caused them to be captured. . . . In consequence of their being rather later than was expected, the military preparations that had been made for their protection entirely failed. . . . The news of the flight filled Paris with consternation. The Assembly assumed all the executive power of the Government, and when the news of the King's arrest arrived, they dispatched Barnave, Latour, Maubourg and Pétion to conduct him and his family back to Paris. . . . The King's brother, the Count of Provence, who fled at the same time by a different route, escaped safely to Brussels. . . . The King after his return,

was provisionally suspended from his functions by a decree of the Assembly, June 25th."—T. H. Dyer, *History of modern Europe*, bk. 7.

1790-1791.—First movements toward the European coalition.—Rise of a republican party.—"The injuries inflicted by the decrees of the Assembly on August 4th, 1789, on several princes of the Empire, through their possessions in Alsace, Franche Comté, and Lorraine, might afford a pretext for a rupture between the German Confederation and France. . . . The German prelates, injured by the Civil Constitution of the clergy, were among the first to complain. By this act the Elector of Mentz was deprived of his metropolitan rights over the bishoprics of Strasburg and Spire; the Elector of Trèves of those over Metz, Toul, Verdun, Nancy and St. Diez. The Bishops of Strasburg and Bâle lost their diocesan rights in Alsace. Some of these princes and nobles had called upon the Emperor and the German body in January 1790, for protection against the arbitrary acts of the National Assembly. This appeal had been favourably entertained, both by the Emperor Joseph II. and by the King of Prussia; and though the Assembly offered suitable indemnities, they were haughtily refused. . . . The Spanish and Italian Bourbons were naturally inclined to support their relative, Louis XVI. . . . The King of Sardinia, connected by intermarriages with the French Bourbons, had also family interests to maintain. Catherine II. of Russia had witnessed, with humiliation and alarm, the fruits of the philosophy which she had patronised, and was opposed to the new order of things in France. . . . All the materials existed for an extensive coalition against French democracy. In this posture of affairs the Count d'Artois, accompanied by Calonne, who served him as a sort of minister, and by the Count de Durfort, who had been despatched from the French Court, had a conference with the Emperor, now Leopold II., at Mantua, in May 1791, in which it was agreed that, towards the following July, Austria should march 35,000 men towards the frontiers of Flanders; the German Circles 15,000 towards Alsace; the Swiss 15,000 towards the Lyonnais; the King of Sardinia 15,000 towards Dauphiné; while Spain was to hold 20,000 in readiness in Catalonia. This agreement, for there was not, as some writers have supposed, any formal treaty, was drawn up by Calonne, and amended with the Emperor's own hand. But the large force to be thus assembled was intended only as a threatening demonstration, and hostilities were not to be actually commenced without the sanction of a congress. [See also PADUA, DECLARATION OF.] . . . From the period of the King's flight to Varennes must be dated the first decided appearance of a republican party in France. During his absence the Assembly had been virtually sovereign, and hence men took occasion to say, 'You see the public peace has been maintained, affairs have gone on in the usual way in the King's absence.' The chief advocates of a republic were Brissot, Condorcet, and the recently-established club of the Cordeliers. . . . The arch-democrat, Thomas Payne, who was now at Paris, also endeavoured to excite the populace against the King. The Jacobin Club had not yet gone this length; they were for bringing Louis XVI. to trial

and deposing him, but for maintaining the monarchy."—T. H. Dyer, *History of modern Europe*, v. 4, bk. 7, ch. 2-3.—See also AUSTRIA: 1790-1797-1791 (July-September).—Attitude of foreign powers.—Coolness of Austria towards the émigrés.—Declaration of Pillnitz.—Completion of the constitution.—Restoration of the king.—Tumult in Champs de Mars.—Dissolution of the Constituent National Assembly.—“On the 27th of July, Prince Reuss presented a memorial [from the Court of Austria] to the Court of Berlin, in which the Emperor explained at length his views of a European Concert. It was drawn up, throughout, in Leopold’s usual cautions and circumspect manner. . . . In case an armed intervention should appear necessary—they would take into consideration the future constitution of France; but in doing so they were to renounce, in honour of the great cause in which they were engaged, all views of selfish aggrandizement. We see what a small part the desire for war played in the drawing up of this far-seeing plan. The document repeatedly urged that no step ought to be taken without the concurrence of all the Powers, and especially of England; and as England’s decided aversion to every kind of interference was well known, this stipulation alone was sufficient to stamp upon the whole scheme, the character of a harmless demonstration.” At the same time Catharine II of Russia, released from war with the Turks, and bent upon the destruction of Poland, desired “to implicate the Emperor as inextricably as possible in the French quarrel, in order to deprive Poland of its most powerful protector; she therefore entered with the greatest zeal into the negotiations for the support of Louis XVI. Her old opponent, the brilliant King Gustavus of Sweden, declared his readiness—on receipt of a large subsidy from Russia—to conduct a Swedish army by sea to the coast of Flanders, and thence, under the guidance of Bouillé, against Paris. . . . But, of course, every word he uttered was only an additional warning to Leopold to keep the peace. . . . Under these circumstances he [the emperor] was most disagreeably surprised on the 20th of August, a few days before his departure for Pillnitz, by the sudden and entirely unannounced and unexpected arrival in Vienna of the Count d’Artois. It was not possible to refuse to see him, but Leopold made no secret to him of the real position of affairs. . . . He asked permission to accompany the Emperor to Pillnitz, which the latter, with cool politeness, said that he had no scruple in granting, but that even there no chance of policy would take place. . . . Filled with such sentiments, the Emperor Leopold set out for the conference with his new ally; and the King of Prussia came to meet him with entirely accordant views. . . . The representations of d’Artois, therefore, made just as little impression at Pillnitz, as they had done, a week before, at Vienna. . . . On the 27th, d’Artois received the joint answer of the two Sovereigns, the tone and purport of which clearly testified to the sentiments of its authors. . . . The Emperor and King gave their sanction to the peaceable residence of individual Emigrés in their States, but declared that no armed preparations would be allowed before the conclusion of an agreement between the European Powers. To this rejection the two Monarchs added a proposal of their own—contained in a joint declaration—in which they spoke of the restoration of order and monarchy in France as a question of the greatest importance to the whole of Europe. They signified their intention of inviting the coöperation of all the European Powers. [See also PILLNITZ, DECLARATION OF.] . . . But as it was well ascertained

that England would take no part, the expressions they chose were really equivalent to a declaration of non-intervention, and were evidently made use of by Leopold solely to intimidate the Parisian democrats. . . . Thus ended the conference of Pillnitz, after the two Monarchs had agreed to protect the constitution of the Empire, to encourage the Elector of Saxony to accept the crown of Poland, and to afford each other friendly aid in every quarter. The statement, therefore, which has been a thousand times repeated, that the first coalition for an attack on the French Revolution was formed on this occasion, has been shown to be utterly without foundation. As soon as the faintest gleam of a reconciliation between Louis and the National Assembly appeared, the cause of the Emigrés was abandoned by the German Courts.”—H. von Sybel, *History of the French Revolution*, v. 1, bk. 2, ch. 6.—At Paris, meantime, “the commissioners charged to make their report on the affair of Varennes presented it on the 16th of July. In the journey, they said, there was nothing culpable; and even if there were, the King was inviolable. Dethronement could not result from it, since the King had not staid away long enough, and had not resisted the summons of the legislative body. Robespierre, Buzot, and Pétion repeated all the well known arguments against the inviolability. Duport, Barnave, and Salles answered them, and it was at length resolved that the King could not be brought to trial on account of his flight. . . . No sooner was this resolution passed than Robespierre rose, and protested strongly against it, in the name of humanity. On the evening preceding this decision, a great tumult had taken place at the Jacobins. A petition to the Assembly was there drawn up, praying it to declare that the King was deposed as a perfidious traitor to his oaths, and that it would seek to supply his place by all the constitutional means. It was resolved that this petition should be carried on the following day to the Champ de Mars, where every one might sign it on the altar of the country. Next day, it was accordingly carried to the place agreed upon, and the crowd of the seditious was reinforced by that of the curious, who wished to be spectators of the event. At this moment the decree was passed, so that it was now too late to petition. Lafayette arrived, broke down the barricades already erected, was threatened and even fired at, but . . . at length prevailed on the populace to retire. . . . But the tumult was soon renewed. Two invalids, who happened to be, nobody knows for what purpose, under the altar of the country, were murdered, and then the uproar became unbounded. The Assembly sent for the municipality, and charged it to preserve public order. Bailly repaired to the Champ de Mars, ordered the red flag to be unfurled, and, by virtue of martial law, summoned the seditious to retire. . . . Lafayette at first ordered a few shots to be fired in the air: the crowd quitted the altar of the country, but soon rallied. Thus driven to extremity, he gave the word, ‘Fire!’ The first discharge killed some of the rioters. Their number has been exaggerated. Some have reduced it to 30, others have raised it to 400, and others to several thousand. The last statement was believed at the moment, and the consternation became general. . . . Lafayette and Bailly were vehemently reproached for the proceedings in the Champ de Mars; but both of them, considering it their duty to observe the law, and to risk popularity and life in its execution, felt neither regret nor fear for what they had done. The factions were overawed by the energy which they displayed. . . . About this time the Assembly came to a determination which has

since been censured, but the result of which did not prove so mischievous as it has been supposed. It decreed that none of its members should be re-elected. Robespierre was the proposer of this resolution, and it was attributed to the envy which he felt against his colleagues, among whom he had not shone. . . . The new Assembly was thus deprived of men whose enthusiasm was somewhat abated, and whose legislative science was matured by an experience of three years. . . . The constitution was . . . completed with some haste, and submitted to the King for his acceptance. From that moment his freedom was restored to him; or, if that expression be objected to, the strict watch kept over the palace ceased. . . . After a certain number of days he declared that he accepted the constitution. . . . He repaired to the Assembly, where he was received as in the most brilliant times. Lafayette, who never forgot to repair the inevitable evils of political troubles, proposed a general amnesty for all acts connected with the Revolution, which was proclaimed amidst shouts of joy, and the prisons were instantly thrown open. At length, on the 30th of September [1791], Thouret, the last president, declared that the Constituent Assembly had terminated its sittings."—A. 1791 (October).—Meeting of the legislative assembly.—Party divisions.—Girondists and their leaders.—The Mountain.—"The most glorious destiny was predicted for the Constitution, yet it did not live a twelve month; the Assembly that was to apply it was but a transition between the Constitutional Monarchy and the Republic. It was because the Revolution partook much more of a social than of a political overthrow. The Constitution had done all it could for the political part, but the social fabric remained to be reformed; the ancient privileged classes had been scotched, but not killed. . . . The new Legislative Assembly [which met October 1, its members having been elected before the dissolution of the Constituent Assembly] was composed of 745 deputies, mostly chosen from the middle classes and devoted to the Revolution; those of the Right and Extreme Right going by the name of Feuillants, those of the Left and Extreme Left by the name of Jacobins. The Right was composed of Constitutionals, who counted on the support of the National Guard and departmental authorities. Their ideas of the Revolution were embodied in the Constitution. . . . They kept up some relations with the Court by means of Barnave and the Lameths, but their pillar outside the Assembly, their trusty counsellor, seems to have been Lafayette. . . . The Left was composed of men resolved at all risks to further the Revolution, even at the expense of the Constitution. They intended to go as far as a Republic, only they lacked common unity of views, and did not form a compact body. . . . They reckoned among their numbers Vergniaud, Guadet, and Gensonné, deputies of the Gironde [the Bordeaux region, on the Garonne], powerful and vehement orators, and from whom their party afterwards took the name of 'Girondins'; also Brissot [de Warville] (born 1754), a talented journalist, who had drawn up the petition for the King's

deposition; and Condorcet (born 1743), an ultra-liberal, but a brilliant philosopher. Their leader outside the Assembly was Pétion (born 1753), a cold, calculating, and dissembling Republican, enjoying great popularity with the masses. The Extreme Left, occupying in small numbers the raised seats in the Assembly, from which circumstances they afterwards took the name of 'the Mountain,' were auxiliaries of the 'Girondins' in their attempts to further a Revolution which should be entirely in the interest of the people. Their inspirers outside the Assembly were Robespierre (born 1759), who controlled the club of the Jacobins by his dogmatic rigorism and fame for integrity; and Danton (born 1759), surnamed the Mirabeau of the 'Breechless' (Sansculottes), a bold and daring spirit, who swayed the new club of the Cordeliers. The Centre was composed of nonentities, their moderation was inspired by fear, hence they nearly always voted with the Left."—H. Van Laun, *French Revolutionary epoch*, v. 1, bk. 1, ch. 2, sect. 3.—"The department of the Gironde had given birth to a new political party in the twelve citizens who formed its deputies. . . . The names (obscure and unknown up to this period), of Ducos, Guadet, Lafond-Ladebat, Grangeneuve, Gensonné, Vergniaud, were about to rise into notice and renown with the storms and disasters of their country; they were the men who were destined to give that impulse to the Revolution that had hitherto remained in doubt and indecision, before which it still trembled with apprehension, and which was to precipitate it into a republic. Why was this impulse fated to have birth in the department of the Gironde and not in Paris? Nought but conjectures can be offered on this subject. . . . Bordeaux was a commercial city, and commerce, which requires liberty through interest, at last desires it through a love of freedom. Bordeaux was the great commercial link between America and France, and their constant intercourse with America had communicated to the Gironde their love for free institutions. Moreover Bordeaux . . . was the birthplace of Montaigne and Montesquieu, those two great republicans of the French school."—A. de Lamartine, *History of the Girondists*, v. 1, bk. 4, sect. 1.—"In the new National Assembly there was only one powerful and active party—that of the Gironde. . . . When we use the term 'parties' in reference to this Assembly, nothing more is meant by it than small groups of from 12 to 20 persons, who bore the sway in the rostra and in the Committees, and who alternately carried with them the aimless crowd of Deputies. It is true, indeed, that at the commencement of their session, 130 Deputies entered their names among the Jacobins, and about 200 among the Feuillants, but this had no lasting influence on the divisions, and the majority wavered under the influence of temporary motives. The party which was regarded as the 'Right' had no opportunity for action, but saw themselves, from the very first, obliged to assume an attitude of defence. . . . Outside the Chamber the beau idéal of this party,—General Lafayette,—declared himself in favour of an American Senate, but without any of the energy of real conviction. As he had defended the Monarchy solely from a sense of duty, while all the feelings of his heart were inclined towards a Republic, so now, though he acknowledged the necessity of an upper Chamber, the existing Constitution appeared to him to possess a more ideal beauty. He never attained, on this point, either to clear ideas or decided actions; and it was at this period that he resigned his command of the National guard in Paris, and retired for a while to his estate in Auvergne. . . .

The Girondist Deputies . . . were distinguished among the new members of the Assembly by personal dignity, regular education, and natural ability; and were, moreover, as ardent in their radicalism as any Parisian demagogue. They consequently soon became the darlings of all those zealous patriots for whom the Cordeliers were too dirty and the Feuillants too luke warm. External advantages are not without their weight, even in the most terrible political crises, and the Girondists owe to the magic of their eloquence, and especially to that of Vergniaud, an enduring fame, which neither their principles nor their deeds would have earned for them. . . . The representatives of Bordeaux had never occupied a leading position in the Girondist party, to which they had given its name. The real leadership of the Gironde fell singularly enough into the hands of an obscure writer, a political lady, and a priest who carried on his operations behind the scenes. It was their hands that overthrew the throne of the Capets, and spread revolution over Europe. . . . The writer in this trio was Brissot, who on the 16th of July had wished to proclaim the Republic, and who now represented the capital in the National Assembly, as a constitutional member. . . . While Brissot shaped the foreign policy of the Girondist party, its home affairs were directed by Marie Jeanne Roland, wife of the quondam Inspector of Factories at Lyons, with whom she had come the year before to Paris, and immediately thrown herself into the whirlpool of political life. As early as the year 1789, she had written to a friend, that the National Assembly must demand two illustrious heads, or all would be lost. . . . She was . . . 36 years old, not beautiful, but interesting, enthusiastic and indefatigable; with noble aims, but incapable of discerning the narrow line which separates right from wrong. . . . When warned by a friend of the unruly nature of the Parisian mob, she replied, that bloodhounds were after all indispensable for starting the game. . . . A less conspicuous, but not less important, part in this association, was played by the Abbé Siéyès. He did what neither Brissot nor Madame Roland could have done by furnishing his party with a comprehensive and prospective plan of operations. . . . Their only clearly defined objects were to possess themselves of the reins of government, to carry on the Revolution, and to destroy the Monarchy by every weapon within their reach."—H. von Sybel, *History of the French Revolution*, v. 1, bk. 3, ch. 1.—See also below: 1791-1792.

ALSO IN: H. A. Taine, *French Revolution*, v. 2, bk. 4.

1791-1792.—Growth and spread of anarchy and civil war.—Activity of the émigrés and the ejected priests.—Decrees against them vetoed by the king.—Girondists in control of the government.—War with the German powers forced on by them.—"It was an ominous proof of the little confidence felt by serious men in the permanence of the new Constitution, that the funds fell when the King signed it. All the chief municipal posts in Paris were passing into the hands of Republicans, and when Bailly, in November, ceased to be Mayor of Paris, he was succeeded in that great office by Pétion, a vehement and intolerant Jacobin. Lafayette had resigned the command of the National Guard, which was then divided under six commanders, and it could no longer be counted on to support the cause of order. Over a great part of France there was a total insecurity of life and property, such as had perhaps never before existed in a civilised country, except in times of foreign invasion or successful rebellion. Almost all the towns in the south—Marseilles, Toulon, Nîmes,

Arles, Avignon, Montpellier, Carpentras, Aix, Montauban—were centres of Republicanism, brigandage, or anarchy. The massacres of Jourdain at Avignon, in October, are conspicuous even among the horrors of the Revolution. Caen in the following month was convulsed by a savage and bloody civil war. The civil constitution of the clergy having been condemned by the Pope, produced an open schism, and crowds of ejected priests were exciting the religious fanaticism of the peasantry. In some districts in the south, the war between Catholic and Protestant was raging as fiercely as in the 17th century, while in Brittany, and especially in La Vendée, there were all the signs of a great popular insurrection against the new Government. Society seemed almost in dissolution, and there was scarcely a department in which law was observed and property secure. The price of corn, at the same time, was rising fast under the influence of a bad harvest in the south, aggravated by the want of specie, the depreciation of paper money, and the enormously increased difficulties of transport. The peasantry were combining to refuse the paper money. It was falling rapidly in value. . . . In the mean time the stream of emigrants continued unabated, and it included the great body of the officers of the army who had been driven from the regiments by their own soldiers. . . . At Brussels, Worms, and Coblenz, emigrants were forming armed organisations."—W. E. H. Lecky, *History of England in the eighteenth century*, v. 5, ch. 21.—"The revolution was threatened by two dangerous enemies, the emigrants, who were urging on a foreign invasion, and the non-juring bishops and priests who were doing all in their power to excite domestic rebellion. The latter were really the more dangerous. . . . The Girondists clamoured for repressive measures. On the 30th October it was decreed that the count of Provence, unless he returned within two months, should forfeit all rights to the regency. On the 9th of November an edict threatened the emigrants with confiscation and death unless they returned to their allegiance before the end of the year. On the 20th of November came the attack upon the non-jurors. They were called upon to take the oath within eight days, when lists were to be drawn up of those who refused; these were then to forfeit their pensions, and if any disturbance took place in their district they were to be removed from it, or if their complicity were proved they were to be imprisoned for two years. The king accepted the decree against his brother, but he opposed his veto to the other two. The Girondists and Jacobins eagerly seized the opportunity for a new attack upon the monarchy. . . . Throughout the winter attention was devoted almost exclusively to foreign affairs. It has been seen that the emperor was really eager for peace, and that as long as he remained in that mood there was little risk of any other prince taking the initiative. At the same time it must be acknowledged that Leopold's tone towards the French government was often too haughty and menacing to be conciliatory, and also that the open preparations of the emigrants in neighbouring states constituted an insult if not a danger to France. The Girondists, the most susceptible of men, only expressed the national sentiment in dwelling upon this with bitterness, and in calling for vengeance. At the same time they had conceived the definite idea that their own supremacy could best be obtained and secured by forcing on a foreign war. This was expressly avowed by Brissot, who took the lead of the party in this matter. [See also GIRONDISMS.] Robespierre, on the other hand, partly through temperament and partly through jealousy of his

brilliant rivals, was inclined to the maintenance of peace. But on this point the Feuillants were agreed with the Gironde, and so a vast majority was formed to force the unwilling king and ministers into war. The first great step was taken when Duportail, who had charge of military affairs, was replaced by Narbonne, a Feuillant. Louis XVI. was compelled to issue a note (14 December, 1791) to the emperor and to the archbishop of Trier to the effect that if the military force of the emigrants were not disbanded by the 15th of January hostilities would be commenced against the elector. The latter at once ordered the cessation of the military preparations, but the emigrants not only refused to obey but actually insulted the French envoy. Leopold expressed his desire for peace, but at the same time declared that any attack on the electorate of Trier would be regarded as an act of hostility to the empire. These answers were unsatisfactory, and Narbonne collected three armies on the frontiers, under the command of Rochambeau, Lafayette, and Luckner, and amounting together to about 150,000 men. On the 25th of January an explicit declaration was demanded from the emperor, with a threat that war would be declared unless a satisfactory answer was received by the 4th of March. Leopold II. saw all his hopes of maintaining peace in western Europe gradually disappearing, and was compelled to bestir himself. . . . On the 7th of February he finally concluded a treaty with the king of Prussia. . . . On the 1st of March, while still hoping to avoid a quarrel, Leopold II. died of a sudden illness, and with him perished the last possibility of peace. His son and successor, Francis II., who was now 24, had neither his father's ability nor his experience, and he was naturally more easily swayed by the anti-revolutionary spirit. . . . The Girondists combined all their efforts for an attack upon the minister of foreign affairs, Delessart, whom they accused of truckling to the enemies of the nation. Delessart was committed to prison, and his colleagues at once resigned. The Gironde now came into office. The ministry of home affairs was given to Roland; of war to Servan; of finance to Clavière. Dumouriez obtained the foreign department, Duranton that of justice, and Lacoste the marine. Its enemies called it 'the ministry of the sansculottes.' . . . On the 20th of April [1792] Louis XVI. appeared in the assembly and read with trembling voice a declaration of war against the king of Hungary and Bohemia."—R. Lodge, *History of modern Europe*, ch. 22, sect. 20-21.—The sincere desire of the Emperor Leopold II. to avoid war with France, and the restraining influence over the King of Prussia which he exercised up to the time when Catherine II. of Russia overcame it by the Polish temptation, are set forth by H. von Sybel in passages quoted elsewhere.—See also GERMANY: 1791-1792.

1792 (April-July).—Opening of the war with Austria and Prussia.—Character of the Revolu-

tionary Army.—French reverses.—"Hostilities followed close upon the declaration of war. At this time the forces destined to come into collision were posted as follows: Austria had 40,000 men in Belgium, and 25,000 on the Rhine. These numbers might easily have been increased to 80,000, but the Emperor of Austria did no more than collect 7,000 or 8,000 around Brigau, and some 20,000 more around Rastadt. The Prussians, now bound into a close alliance with Austria, had still a great distance to traverse from their base to the theatre of war, and could not hope to undertake active operations for a long time to come. France, on the other hand, had already three strong armies in the field. The Army of the North, under General Rochambeau, nearly 50,000 strong, held the frontier from Philippeville to Dunkirk; General Lafayette commanded a second army of about the same strength in observation from Philippeville to the Lauter; and a third army of 40,000 men, under Marshal Luckner, watched the course of the Rhine from Lauterbourg to the confines of Switzerland. The French forces were strong, however, on paper only. The French army had been mined, as it seemed, by the Revolution, and had fallen almost to pieces. The wholesale emigration of the aristocrats had robbed it of its commissioned officers, the old experienced leaders whom the men were accustomed to follow and obey. Again, the passion for political discussion, and the new notions of universal equality had fostered a dangerous spirit of license in the ranks. . . . While the regular regiments of the old establishment were thus demoralised, the new levies were still but imperfectly organised, and the whole army was unfit to take the field. It was badly equipped, without transport, and without those useful administrative services which are indispensable for mobility and efficiency. Moreover, the prestige of the French arms was at its lowest ebb. A long and enervating peace had followed since the last great war, in which the French armies had endured only failure and ignominious defeat. It is not strange, then, that the foes whom France had so confidently challenged, counted upon an easy triumph over the revolutionary troops. The earliest operations fully confirmed these anticipations. . . . France after the declaration of war had at once assumed the initiative, and proceeded to invade Belgium. Here the Duke Albert of Saxe-Teschen, who commanded the Imperialist forces, held his forces concentrated in three principal corps: one covered the line from the sea to Tournay; the second was at Leuze; the third and weakest at Mons. The total of these troops rose to barely 40,000, and Mons, the most important point in the general line of defence, was the least strongly held. An able strategist gathering together 30,000 men from each of the French armies of the Centre and North, would have struck at Mons with all his strength, cut Duke Albert's communications with the Rhine, turned his inner flank, and rolled him up into the sea. But no great genius as yet directed the military energies of France. . . . By Dumouriez's advice, the French armies were ordered to advance against the Austrians by several lines. Four columns of invasion were to enter Belgium; one was to follow the sea coast, the second to march on Tournay, the third to move from Valenciennes on Mons, and the fourth, under Lafayette, on Givet or Namur. Each, according to the success it might achieve, was to reinforce the next nearest to it, and all, finally, were to converge on Brussels. At the very outset, however, the French encountered the most ludicrous reverses. Their columns fled in disorder directly they came within sight of the enemy. Lafayette

alone continued his march boldly towards Namur; but he was soon compelled to retire by the news of the hasty flight of the columns north of him. The French troops had proved as worthless as their leaders were incapable; whole brigades turned tail, crying that they were betrayed, casting away their weapons as they ran, and displaying the most abject cowardice and terror. Not strangely, after this pitiful exhibition, the Austrians—all Europe, indeed—held the military power of France in the utmost contempt. . . . But now the national danger stirred France to its inmost depths. French spirit was thoroughly roused. The country rose as one man, determined to offer a steadfast, stubborn front to its foes. Stout-hearted leaders, full of boundless energy and enthusiasm, summoned all the resources of the nation to stem and roll back the tide of invasion. Immediate steps were taken to put the defeated and disgraced armies of the frontier upon a new footing. Lafayette replaced Rochambeau, with charge from Longwy to the sea, his main body about Sedan; Luckner took the line from the Moselle to the Swiss mountains, with head-quarters at Metz. A third general, destined to come speedily to the front, also joined the army as Lafayette's lieutenant. This was Dumouriez, who, wearied and baffled by Parisian politics, sought the freedom of the field."—A. Griffith, *French Revolutionary generals*, ch. 1.

1792 (June-August).—King's dismissal of Girondist ministers.—Mob demonstration of June 20.—Lafayette in Paris.—His failure.—Country declared to be in danger.—Gathering of volunteers in Paris.—Brunswick's manifesto.—Mob attack on the Tuileries, August 10.—Massacre of the Swiss.—"Servan, the minister of war, proposed the formation of an armed camp for the protection of Paris. Much opposition was, however, raised to the project, and the Assembly decreed (June 6) that 20,000 volunteers, recruited in the departments, should meet at Paris to take part in the celebration of a federal festival on July 14, the third anniversary of the fall of the Bastille. The real object of those who supported the decree was to have a force at Paris with which to maintain mastery over the city should the Allies penetrate into the interior. Louis left the decree unexecuted, as he had the one directed against nonjurors. The agitators of the sections sought to get up an armed demonstration against this exercise of the King's constitutional prerogative. Though armed demonstrations were illegal, the municipality offered but a perfunctory and half-hearted resistance. . . . Louis, irritated at the pressure put on him by Roland, Clavière, and Servan, to sanction the two decrees, dismissed the three ministers from office (June 13). Dumouriez, who had quarreled with his colleagues, supported the King in taking this step, but in face of the hostility of the Assembly himself resigned office (June 15). Three days later a letter from Lafayette was read in the Assembly. The general denounced the Jacobins as the authors of all disorders, called on the Assembly to maintain the prerogatives of the crown, and intimated that his army would not submit to see the constitution violated (June 18). Possibly the dismissal of the ministers and the writing of this letter were measures concerted between the King and Lafayette. In any case the King's motive was to excite division between the constitutionalists and the Girondists, so as to weaken the national defence. The dismissal of the ministers was, however, regarded by the Girondists as a proof of the truth of their worst suspicions, and no measures were taken to prevent an execution of

the project of making an armed, and therefore illegal, demonstration against the royal policy. On June 20, thousands of persons, carrying pikes or whatever weapon came to hand, and accompanied by several battalions of the national guard, marched from St. Antoine to the hall of the Assembly. A deputation read an address demanding the recall of the ministers. Afterwards the whole of the procession, men, women and children, dancing, singing, and carrying emblems, defiled through the chamber. Instigated by their leaders they broke into the Tuileries. The King, who took his stand on a window seat, was mobbed for four hours. To please his unwelcome visitors, he put on his head a red cap, such as was now commonly worn at the Jacobins as an emblem of liberty, in imitation of that which was once worn by the emancipated Roman slave. He declared his intention to observe the constitution, but neither insult nor menace could prevail on him to promise his sanction to the two decrees. The Queen, separated from the King, sat behind a table on which she placed the Dauphin, exposed to the gaze and taunts of the crowds which slowly traversed the palace apartments. At last, but not before night, the mob left the Tuileries without doing further harm, and order was again restored. This insurrection and the slackness, if not connivance, of the municipal authorities, excited a widespread feeling of indignation amongst constitutionalists. Lafayette came to Paris, and at the bar of the Assembly demanded in person what he had before demanded by letter (June 28). With him, as with other former members of the constituent Assembly, it was a point of honour to shield the persons of the King and Queen from harm. Various projects for their removal from Paris were formed, but policy and sentiment alike forbade Marie Antoinette to take advantage of them. . . . The one gleam of light on the horizon of this unhappy Queen was the advance of the Allies. 'Better die,' she one day bitterly exclaimed, 'than be saved by Lafayette and the constitutionalists.' There was, no doubt, a possibility of the Allies reaching Paris that summer, but this enormously increased the danger of the internal situation. . . . To rouse the nation to a sense of peril the Assembly [July 11] caused public proclamation to be made in every municipality that the country was in danger. The appeal was responded to with enthusiasm, and within six weeks more than 60,000 volunteers enlisted. The Duke of Brunswick, the commander-in-chief of the allied forces, published a manifesto, drawn up by the emigrants. If the authors of this astounding proclamation had deliberately intended to serve the purpose of those Frenchmen who were bent on kindling zeal for the war, they could not have done anything more likely to serve their purpose. The powers required the country to submit unconditionally to Louis's mercy. All who offered resistance were to be treated as rebels to their King, and Paris was to suffer military execution if any harm befell the royal family. . . . Meanwhile, a second insurrection, which had for its object the King's deposition, was in preparation. The Assembly, after declaring the country in danger, had authorised the sections of Paris, as well as the administrative authorities throughout France, to meet at any moment. The sections had, in consequence, been able to render themselves entirely independent of the municipality. In each of the sectional or primary assemblies from 700 to 3,000 active citizens had the right to vote, but few cared to attend, and thus it constantly happened that a small active minority spoke and acted in the name of an apathetic constitutional majority. Thousands of volunteers

passed through Paris on their way to the frontier, some of whom were purposely retained to take part in the insurrection. The municipality of Marseilles, at the request of Barbaroux, a young friend of the Rolands, sent up a band of 500 men, who first sung in Paris the verses celebrated as the 'Marseillaise' [see MUSIC: Folk Music and Nationalism: France]. The danger was the greater since every section had its own cannon and a special body of cannoneers, who nearly to a man were on the side of the revolutionists. The terrified and oscillating Assembly made no attempt to suppress agitation, but acquitted (August 8) Lafayette, by 406 against 280 votes, of a charge of treason made against him by the left, on the ground that he had sought to intimidate the Legislature. This vote was regarded as tantamount to a refusal to pass sentence of deposition on Louis. On the following night the insurrection began. Its centre was in the Faubourg of St. Antoine, and it was organised by but a small number of men. Mandat, the commander-in-chief of the national guard, was an energetic constitutionalist, who had taken well-concerted measures for the defence of the Tuileries. But the unscrupulousness of the conspirators was more than a match for his zeal. Soon after midnight commissioners from 28 sections met together at the Hotel de Ville, and forced the Council-General of the Municipality to summon Mandat before it, and to send out orders to the officers of the guard in contradiction to those previously given. Mandat, unaware of what was passing, obeyed the summons, and on his arrival was arrested and murdered. After this the commissioners dispersed the lawful council and usurped its place. At the Tuileries were about 950 Swiss and more than 4,000 national guards. Early in the morning the first bands of insurgents appeared. On the fidelity of the national guards it was impossible to rely; and the royal family, attended by a small escort, left the palace, and sought refuge with the Assembly [which held its sessions in the old Riding-School of the Tuileries, not far from the palace, at one side of the gardens]. Before their departure orders had been given to the Swiss to repel force by force, and soon the sound of firing spread alarm through Paris. The King sent the Swiss instructions to retire, which they punctually obeyed. One column, passing through the Tuileries gardens, was shot down almost to a man. The rest reached the Assembly in safety, but several were afterwards massacred on their way to prison. For 24 hours the most frightful anarchy prevailed. Numerous murders were committed in the streets. The assailants, some hundreds of whom had perished, sacked the palace, and killed all the men whom they found there."—B. M. Gardiner, *French Revolution*, ch. 5.—"Terror and fury ruled the hour. The Swiss, pressed on from without, paralysed from within, have ceased to shoot; but not to be shot. What shall they do? Desperate is the moment. Shelter or instant death: yet How, Where? One party flies out by the Rue de l'Echelle; is destroyed utterly, 'en entier.' A second, by the other side, throws itself into the Garden; 'hurrying across a keen fusillade'; rushes suppliant into the National Assembly; finds pity and refuge in the back benches there. The third, and largest, darts out in column, 300 strong, towards the Champs Elysées: 'Ah, could we but reach Courbevoye, where other Swiss are!' Wo! see, in such fusillade the column 'soon breaks itself by diversity of opinion,' into distracted segments, this way and that:—to escape in holes, to die fighting from street to street. The firing and murdering will not cease: not yet for long. The red Porters of Hotels are shot at, be they 'Suisse' by

nature, or Suisse only in name. The very Firemen, who pump and labour on that smoking Carrousel [which the mob had fired], are shot at; why should the Carrousel not burn? Some Swiss take refuge in private houses; find that mercy too does still dwell in the heart of man. The brave Marseillaise are merciful, late so wroth; and labour to save. . . . But the most are butchered, and even mangled. Fifty (some say Fourscore) were marched as prisoners, by National Guards, to the Hôtel-de-Ville: the ferocious people bursts through on them, in the Place-de-Grève; massacres them to the last man. 'O People, envy of the universe! People, in mad Gaelic effervescence! Surely few things in the history of carnage are painfuller. What inefaceable red streak, flickering so sad in the memory, is that, of this poor column of red Swiss, 'breaking itself in the confusion of opinions'; dispersing, into blackness and death! Honour to you, brave men; honourable pity, through long times! Not martyrs were ye; and yet almost more. He was no King of yours, this Louis; and he forsook you like a King of shreds and patches: ye were but sold to him for some poor sixpence a-day; yet would ye work for your wages, keep your pledged word. The work now was to die; and ye did it. Honour to you, O Kinsmen; and may the old Deutsch 'Biederkeit' and 'Tapferkeit,' and Valour which is Worth and Truth, be they Swiss, be they Saxon, fail in no age!"—T. Carlyle, *French Revolution*, v. 2, bk. 6, ch. 7.

1792 (August).—Power seized by insurrectionary Commune of Paris.—Danton elected minister of justice.—Dethronement and imprisonment of the king.—"While the Swiss were being murdered, the Legislative Assembly were informed that a deputation wished to enter. At the head of this deputation appeared Huguenin, who announced that a new municipality for Paris had been formed, and that the old one had resigned. This was, indeed, the fact. On the departure of Santerre the commissioners of the sections had given orders to the legitimate council-general of the municipality to resign, and the council-general, startled by the events which were passing, consented. The commissioners then called themselves the new municipality, and proceeded, as municipal officers, to send a deputation to the Assembly. The deputation almost ordered that the Assembly should immediately declare the king's dethronement, and, in the presence of the unfortunate monarch himself, Vergniaud mounted the tribune, and proposed, on behalf of the Committee of Twenty-one, that the French people should be invited to elect a National Convention to draw up a new Constitution, and that the chief of the executive power, as he called the king, should be provisionally suspended from his functions until the new Convention had pronounced what measures should be adopted to establish a new government and the reign of liberty and equality. The motion was carried, and was countersigned by one of the king's ministers, De Joly; and thus the old monarchy of the Bourbons in France came to an end. But the Assembly had not yet completed its work. The ministry was dismissed, as not having the confidence of the people, and the Minister of War, d'Abancourt, was ordered to be tried by the court at Orleans for treason, in having brought the Swiss

Guards to Paris. The Assembly then prepared to elect new ministers. Roland, Clavière, and Servan were recalled by acclamation to their former posts. . . . Danton was elected Minister of Justice by 222 votes against 60; Gaspard Monge, the great mathematician, was elected Minister of Marine, on the nomination of Condorcet; and Lebrun-Tondu, a friend of Brissot and Dumouriez, and a former abbé, to the department of Foreign Affairs."—H. M. Stephens, *History of the French Revolution*, v. 2.—"He [Danton] does not even, as do Robespierre, Mirabeau, and others, occupy the stage of the Revolution from the first. Till the nation is attacked, his rôle is of secondary importance. . . . It is only in the saving of France, when the men of action were needed, that he leaps to the front. Then, suddenly, the whole nation and its story becomes filled with his name. For thirteen months, from that 10th of August, 1792, which he made, to the early autumn of the following year, Danton, his spirit, his energy, his practical grasp of things as they were, formed the strength of France. While the theorists, from whom he so profoundly differed, were wasting themselves in a kind of political introspection, he raised the armies. When the orators could only find great phrases to lead the rage against Dumouriez' treason, he formed the Committee to be a dictator for a falling nation. All that was useful in the Terror was his work; and if we trace to their very roots the action that swept the field and left it ready for rapid organisation and defence, then at the roots we nearly always find his masterful and sure guidance. There are in the Revolution two features, one of which is almost peculiar to itself, the other of which is in common with all other great crises in history. The first of these is that it used new men and young men, and comparatively unknown men, to do its best work. If ever a nation called out men as they were, apart from family, from tradition, from wealth, and from known environment, it was France in the Revolution. The national need appears at that time like a captain in front of his men in a conscript army. He knows them each by their powers, character, and conduct. But they are in uniform; he cares nothing for their family or their youth; he makes them do that for which each is best fitted. This feature makes the period unique, and it is due to this feature that so many of the Revolutionary men have no history for us before the Revolution."—H. Belloc, *Danton*, pp. xi-xii.—"Immediately after the insurrection, a week after he had taken the oath and made the short vigorous speech to the Assembly, Danton sent out his first and almost his only act as Minister of Justice, the circular of the 18th of August, which was posted to all the tribunals in France. It is peculiar rather than important; it is the attempt to convince the magistracy and all the courts of the justice and necessity of the insurrection, and at the same time to leave upon record a declaration of his own intentions now that he had reached power. In the first attempt he necessarily fails. The old judicature, appointed by the Crown and by the moderate ministers, largely re-elected by the people, wealthy for the most part, conservative by origin and tradition, would in any case have rejected such leadership; but the matter is unimportant; this passive body, upon which the reaction had counted not a little, and which De Cicé had planned to use against the Revolution, was destined to disappear at the first demand of the new popular powers. France for weeks was practically without courts of law. Those passages, on the other hand, in which Danton makes his own apology are full of interest. They contain in a few sentences the outline of all

his domestic policy, and we find in them Danton's memories, his fears of what his past reputation might do to hurt him. 'I came in through the breach of the Tuilleries, and you can only find in me the same man who was president of the Cordeliers. . . . The only object of my thoughts has been political and individual liberty, . . . the maintenance of the laws, . . . the strict union of all the Departments, . . . the splendour of the State, and the equality, not of fortune, for that is impossible, but of rights and of well-being.'—*Ibid.*, pp. 175-176.

ALSO IN: Aulard, *Lavisse et Rambaud, Histoire générale*.—L. Barthou, *Danton*.—L. Madelin, *Danton*.

1792 (August-September).—Conflict between Girondists of the Assembly and Jacobins of the Commune.—Authority of Danton.—Causes leading to the September massacres.—Lafayette's unsuccessful resistance to the Jacobins.—His departure from France.—Robespierre and his allies, convinced that they were in a minority, . . . determined to secure themselves in power by terrorising their opponents. On August 11 the signatures of the two famous petitions of *huit-mille* and *vingt-mille* were excluded from the exercise of public functions. On the 12th reactionary journals were suppressed; and, by closing the barriers and tampering with private correspondent, the Commune created an atmosphere of uneasiness in the city. The question now arose, how far would the Assembly allow the Commune to go? The majority of the deputies were not Republicans, nor were they on the side of disorder; most of them belonged to that very class at which the Commune was striking, and thus the contest of the Commune with the *bourgeoisie* resolved itself into a struggle with the Assembly. But the Assembly was now but the shadow of its always shadowy self. Of its 745 members only about a third registered their votes, and it was by this time only too well accustomed to submit to the noisy dictation of galleries and deputations. The first struggle was over the custody of the King. The Commune was unwilling that any but itself should have the keeping of so valuable a hostage; and the Assembly on August 13 gave way, and handed over its prisoner to the Commune, by whom he was incarcerated in the Temple. After this first victory, the Commune looked round for some means of getting control of the lives of individuals. Events played into its hands. On August 11 the new police-law, long under consideration, had been passed by the Assembly. It handed over to the Commune the duty of '*recherche des crimes contre la sûreté de l'état*,' and authorised all active citizens to drag before the authorities persons suspected of such crimes. Thus the life of every individual in Paris was placed at the mercy of the Commune. The Assembly made haste to remedy the harm done by this ill-considered measure, by reviving the power of the '*Conseil du département*'; but the furious outcry provoked by this step, and the appearance of Robespierre at the bar, overawed it into restricting the power of the revived *Conseil* to the assessment of taxes. The policing of Paris was thus secured to the Commune. The next encroachment was upon the judicial authorities. Already the functions of *juges de paix* had been usurped by the Sectional Assemblies under the supervision of a '*Comité de surveillance*' of fifteen members of the Commune. Unlimited power of imprisonment had been accorded to certain Communal Commissioners, and a list of 'opponents of the Revolution' had been handed to the tribunals. But this was not enough; and the Commune set itself to extort from the Assembly a spe-

cial extraordinary tribunal. On August 11 a court-martial had been appointed to try the military prisoners of August 10; and the more important civil prisoners, including the ex-ministers, had been sent before the High Court of Orleans. At the dictation of the Commune the Assembly now abandoned the court-martial and ordered the election of new juries to try these cases in the criminal Courts. Robespierre upon this again appeared at the bar (August 15) and demanded a special tribunal, elected by the Sections, with unlimited power, from which there should be no appeal. The Assembly fought the matter point by point; but on the 17th overpowered by the threats and persistence of the Commune, they were criminal enough and weak enough to decree the creation of a special tribunal. The reason of all this revolutionary activity is not far to seek: the primary elections for the Convention, which the Assembly had decreed on August 10, were to commence on August 27, and the secondary on September 2. Aware that they were supported by but a small minority of the electors,

DANTON

the Commune employed these measures of terror simply to secure for themselves a majority at the polls; and by August 26 at any rate, not to suggest an earlier date, it had been decided that, to complete the Terror, a general massacre of the prisoners should take place to coincide with the opening of the secondary elections. Events on the frontiers played into the hands of the faction. On August 26, just at the critical moment when, on the eve of the primary elections, signs of a more determined resistance both from the Assembly itself and from some of the Sections were disclosing themselves, there arrived the news of the fall of the frontier town of Longwy. With the French armies intact this reverse was of trifling importance—so at any rate it was regarded by the generals at the front—but it was sufficient for the demagogues. On the 28th Danton, in the name of the Ministry, demanded permission for the Commune to subject the city to domiciliary visits, ostensibly in search for muskets, of which he alleged there were 80,000 in Paris, in reality to secure the arrest of all reactionaries. This was the crowning item in the great scheme for delivering over the Moderates of Paris to the faction. From the morn-

ing of the 28th to the evening of the 31st these visits were in progress; of the promised 80,000 muskets only 2000 were secured, but, in their real object, the arrest of Moderates, the result of the visits was all that could be desired; and by the evening of August 31 every prison was full to overflowing."—J. R. M. Macdonald, *Legislative Assembly (Cambridge modern history, v. 8, pp. 240-241)*.—"The 10th of August is not, in the history of the Revolution, a turning-point or a new departure merely; it is rather a cataclysm, the conditions before and after which are absolutely different. You may compare it to the rush of the Atlantic, which 'in one dreadful day and night' swept away the old civilisation in the legend. . . . There is no better test of what the monarchy was than the comparison of that which came before with which succeeded its overthrow. There is no continuity. On the far side of the insurrection, up to the 9th of August itself, you have armies (notably that of the centre) contented with monarchy; you have a strong garrison at the Tuilleries, the ministers, the departments, the mayor of Paris (even) consulting with the crown. The King and the Girondins are opposed, but they are balanced; Paris is angry and expectant, but it has expressed nothing—it is one of many powers. The moderate men, the Rolands and the rest, are the radical wing. It is a triumph for the Revolution that the Girondins should be again in nominal control. Pétion is an idol. The acute friction is between a government of idealists standing at the head of a group of professional bourgeois, and a crown supported by a resurrected nobility, expecting succour and strong enough to hazard a pitched battle. Look around you on the 11th of August and see what has happened. Between the two opponents a third has been intervened—Paris and its insurrectionary Commune have suddenly arisen. The Girondins are almost a reactionary party. The Crown and all its scaffolding have suddenly disappeared [and the king has been imprisoned]. The Assembly seems something small, the ministry has fallen back, and there appears above it one man only—Danton, called Minister of Justice, but practically the executive itself. A crowd of names which had stood for discussion, for the Jacobins, for persistent ineffective opposition, appear as masters. In a word, France had for the moment a new and terrible pretender to the vacant throne, a pretender that usurped it at last—the Commune. The nine months [which followed] . . . formed the Republic; it is they that are the introduction to the Terror and to the great wars, and from the imprisonment of the King to the fall of the Girondins the rapid course of France is set in a narrowing channel directly for the Mountain. The Commune, the body that conquered in August, is destined to capture every position, and, as one guarantee after another breaks down, it will attain, with its extreme doctrines and their concomitant persecution, to absolute power. What was Danton's attitude during this period? It may be summed up as follows: Now that the Revolution was finally established, to keep France safe in the inevitable danger. He put the nation first; he did not subordinate the theory of the Revolution; he dismissed it. The Revolution had conquered: it was there; but France, which had made it and which proposed to extend the principles of self-government to the whole world, was herself in the greatest peril. When discussion had been the method of the Revolution, Danton had been an extremist. He was Parisian and Frondeur in 1700 and 1701; it was precisely in that time that he failed. The tangible thing, the objective to which all his mind leaned,

ROUGET DE LISLE SINGING THE "MARSEILLAISE" AT STRASBURG, APRIL 25, 1792

(Painting by L. A. Pils)

appeared with the national danger; then he had something to do, and his way of doing it, his work in the trade to which he was born, showed him to be of a totally different kind from the men above whom he showed. I do not believe one could point to a single act of his in these three-quarters of a year which was not aimed at the national defence. It is a point of special moment in the appreciation of his politics that Danton was alone in this position. He was the only man who acted as one of the innumerable peasantry of France would have acted, could fate have endowed such a peasant with genius and with knowledge. The others to the left and right were soldiers, poets, or pedants every one. Heroic pedants and poets who were never afraid, but not one of them could forget his theories or his vision and take hold of the ropes. Such diplomacy as there is is Danton's; it is Danton who attempts compromise, and it is Danton who persistently recalls the debates from personalities to work. It is he who warns the Girondins, and it is he who, in the anarchy that followed defeat, produced the necessary dictatorship of the Committee. Finally, when the Committee is formed, you glance at the names, the actions, and the reports, and you see Danton moving as a man who can see moves among the blind. He had been once 'in himself the Cordeliers'—it had no great effect, for there was nothing to do but propose rights; now, after the insurrection, he became 'in himself the executive,' and later 'in himself the Committee.' So much is he the first man in France during these few months of his activity, that only by following his actions can you find the unity of this confused and anarchic period. It falls into four very distinct divisions, both from the point of view of general history and from that of Danton's own life. The first includes the six weeks intervening between the 10th of August and the meeting of the Convention; it is a time almost without authority; it moves round the terrible centre of the massacres. During this brief time the executive, barely existent, without courts or arms, had him in the Ministry of Justice as their own power—a power unfortunately checked by the anarchy in Paris. The second division stretches from the meeting of the Convention to the death of the King. It covers exactly four months, from the 20th of September, 1792, to the 21st of January, 1793. It is the time in which the danger of invasion seems lifted, and in which Danton in the Convention is working publicly to reconcile the two parties [Girondins and Jacobins], and secretly to prevent, if possible, the spread of the coalition against France. The third opens with the universal war that follows the death of Louis, and continues to a date which you may fix at the rising of the 10th of March, or at the defeat of Neerwinden on the 16th. Danton is absent with the army during the greater part of these six weeks; he returns at their close, and when things were at their worst, to create the two great instruments which he destined to govern France—the Tribunal and the Committee. Finally, for two months, from the establishment of these to the expulsion of the Girondins on the 2nd of June, he is being gradually driven from the attempt at conciliation to the necessities of the insurrection. He is organising and directing the new Government of the Public Safety, and in launching that new body, in imposing that necessary dictator, we shall see him sacrificing one by one every minor point in his policy, till at last his most persistent attempt—I mean his attempt to save the Girondins—fails in its turn. Having so secured an irresistible government, and having created the armies, the chief moment of his

life was past. It remained to him to retire, to criticise the excesses of his own creation, and to be killed by it."—H. Belloc, *Danton*, pp. 171-175.—"The news of the 10th of August was carried to Lafayette by one of his own officers who happened to be in Paris on business. He learned that the throne was overturned and the Assembly in subjection, but he could not believe that the cause of the constitutional monarchy was abandoned without a struggle. He announced to the army the events that had taken place, and conjured the men to remain true to the king and constitution. The commissioners despatched by the Commune of Paris to announce to the different armies the change of government and to exact oaths of fidelity to it soon arrived at Sedan within Lafayette's command. The general had them brought before the municipality of Sedan and interrogated regarding their mission. Convinced, from their own account, that they were the agents of a faction which had unlawfully seized upon power, he ordered their arrest and had them imprisoned. Lafayette's moral influence in the army and the country was still so great that the Jacobins knew that they must either destroy him or win him over to their side. The latter course was preferred. . . . The imprisoned commissioners, therefore, requested a private conference with Lafayette, and offered him, on the part of their superiors in Paris, whatever executive power he desired in the new government. It is needless to say that Lafayette, whose sole aim was to establish liberty in his country, refused to entertain the idea of associating himself with the despotism of the mob. He caused his own soldiers to renew their oath of fidelity to the king, and communicated with Luckner on the situation. . . . Meanwhile emissaries from the Commune were sent to Sedan to influence the soldiers by bribes and threats to renounce their loyalty to their commander. All the other armies and provinces to which commissioners had been sent had received them and taken the new oaths. Lafayette found himself alone in his resistance. His attitude acquired, every day, more the appearance of rebellion against authorities recognized by the rest of France. New commissioners arrived, bringing with them his dismissal from command. The army was wavering between attachment to their general and obedience to government. On the 10th of August, the Jacobins, seeing that they could not win him over, caused the Assembly to declare him a traitor. Lafayette had now to take an immediate resolution. France had declared for the Paris Commune. The constitutional monarchy was irretrievably destroyed. For the general to dispute with his appointed successor the command of the army was to provoke further disorders in a cause that had ceased to be that of the nation and become only his own. Three possible courses remained open to him,—to accept the Jacobin overtures and become a part of their bloody despotism; to continue his resistance and give his head to the guillotine; to leave the country. He resolved to seek an asylum in a neutral territory with the hope, as he himself somewhat naively expressed it, 'some day to be again of service to liberty and to France.' Lafayette made every preparation for the safety of his troops, placing them under the orders of Luckner until the arrival of Dumouriez, the new general in command. He publicly acknowledged responsibility for the arrest of the commissioners and the defiance of Sedan to the Commune, in order that the municipal officers who had supported him might escape punishment. He included in his party his staff-officers, whose association with him would have subjected them to the fury of the Commune, and some others who

had also been declared traitors on account of obedience to his orders. He then made his way to Bouillon, on the extreme frontier. There, dismissing the escort, and sending back final orders for the security of the army, he rode with his companions into a foreign land."—B. Tuckerman, *Life of Lafayette*, v. 2, ch. 3.

1792 (September).—September massacres in the Paris prisons.—Attempt at general massacres throughout the provinces.—Danton's attitude in the matter.—Marat and his alleged part in the circular letter.—"Meanwhile, however, people had begun to suspect ulterior motives in this revolutionary energy of the Commune; and some of the Sections petitioned against the continued usurpations of that body. The result was that on August 30, just when its plans were reaching consummation, the Commune found itself dissolved by decree of the Assembly. Set only on preserving for a few days its existence and that of its *Comité de Surveillance*, which was superintending the actual preparations for the massacres, the Commune went the length of restoring Pétion to the chair; and he now headed a deputation to the Assembly, where a long memoir prepared by Robespierre was read, enlarging on the services of the Commune. During the whole of the 31st the Assembly stood firm, but on September 1 Thuriot, prompted by Danton, persuaded it to reinstate the Commune. The very next day was that on which the faction had decided to strike. It was hoped that the news of the fall of Verdun might arrive in time to serve as a pretext for the massacres; but it only reached Paris on September 4. The conspirators, therefore, had to make the most of the investment of that town and the probability of its fall; and Manuel proposed that, in view of the military crisis, the *tocsin* should be rung, the alarm-gun fired, the '*générale*' sounded, and all able-bodied citizens convoked to the Champ-de-Mars. The Assembly took up the cry, Vergniaud delivering an eloquent speech, and Danton the most famous of all his fiery orations. Meanwhile the *Comité de Surveillance* embarked upon the immediate preparations for the massacres. Coöpting a number of kindred spirits, it first moved the arrest of Roland, Brissot, and thirty other Brissotins—a deliberate attempt, though it proved unsuccessful, to include the Brissotins in the massacres; next it sent emissaries to some of the more violent Sections to extort a demand for the destruction of the prisoners. In two Sections (Poissonnière and Luxembourg) this was successful. Thus, when, at 2 p.m., the *tocsin* began to ring and the populace to flock to the Champ-de-Mars, the bands of assassins already gathered by the *Comité* started on their mission. The first victims were twenty-four priests who were awaiting examination in the cells of the Mairie itself. These unfortunates were bundled into carriages and conducted towards the Abbaye. On the way their escort of *fédérés* tried to provoke the populace to attack them, and, when they refused, set upon the victims themselves. On their arrival at the Abbaye the butchery was soon completed. The murderers now split up into detachments and distributed themselves among the various prisons. To give colour to the legend of 'popular justice,' no doubt also to save any friends of the assassins, informal tribunals, on which the murderers themselves sat, were established: before

these the miserable prisoners were dragged: all priests, royalists, and 'aristocrats,' were condemned at once and thrust out of the Salle de Justice on to the pikes of the murderers in the courtyard without. That no attempt at any kind of justice was made by these self-constituted tribunals is proved by the fact that many of the victims were common criminals, whose very crimes one might have thought would have commended them to such judges; 43 were boys under eighteen, and at least 35 were women. Amidst every circumstance of horror this carnage continued, with little interference from without, for four whole days. In Paris alone 1400 people perished."—J. R. M. Macdonald, *Legislative Assembly (Cambridge modern history, v. 8, pp. 241-242)*.—The tribunal was set up in the last wicket in the outer court "and around a large table—covered with papers, writing materials, the registers of the prisons, glasses, bottles, pistols, sabers, and pipes—were seated twelve judges, whose gloomy features and athletic proportions stamped them men of toil, debauch or blood. Their attire was that of the laboring classes. . . . Two or three of them attracted attention by the whiteness of their hands and the elegance of their shape; and that betrayed the presence of men of intellect, purposely mingled with these men of action to guide them. A man in a gray coat, a saber at his side, pen in his hand, . . . whose inflexible features seemed as though they were petrified, was seated at the center of the table, and presided over the tribunal. This was the Huisier Maillard, the idol of the mobs of the Faubourg Saint Marceau . . . an actor in the days of October, the 20th of June, and the 10th of August. . . . He had just returned from the Carmes, where he had organized the massacre. It was not chance that had brought him to the Abbaye at the precise moment of the arrival of the prisoners, and with the prison registers in his hand. He had received, the previous evening, the secret orders of Marat, through the members of the *Comité de Surveillance*. Danton had sent for the registers to the prison, and gone through them; and Maillard was shown those he was to acquit and condemn. If the prisoner was acquitted, Maillard said, 'Let this gentleman be set at liberty'; if condemned, a voice said, 'A la Force.' At these words the outer door opened, and the prisoner fell dead as he crossed the threshold. The massacre commenced with the Swiss, of whom there were 150 at the Abbaye, officers and soldiers. . . . They fell, one after another, like sheep in a slaughter-house. The tumbrils were not sufficient to carry away the corpses, and they were piled up on each side of the court to make room for the rest to die: their commander, Major Reding, was the last to fall. . . . After the Swiss, the king's guards, imprisoned in the Abbaye, were judged en masse. . . . Their massacre lasted a long time, for the people, excited by what they had drunk—brandy mingled with gun-powder—and intoxicated by the sight of blood, prolonged their tortures. . . . The whole night was scarcely enough to slay and strip them."—A. de Lamartine, *History of the Girondists, v. 2, bk. 25*.—"To moral intoxication is added physical intoxication, wine in profusion, bumpers at every pause, revelry over corpses. . . . They dance . . . and sing the 'carmagnole'; they arouse the people of the quarter 'to amuse them,' and that they may have their share of 'the fine fête.' Benches are arranged for 'gentlemen' and others for 'ladies': the latter, with greater curiosity, are additionally anxious to contemplate at their ease 'the aristocrats' already slain; consequently, lights are required, and one is placed on the breast of each corpse. Meanwhile,

slaughter continues, and is carried to perfection. . . . There are six days and five nights of uninterrupted butchery, 171 murders at the Abbaye, 169 at La Force, 223 at the Châtelet, 328 at the Conciergerie, 73 at the Tour-Saint-Bernard, 120 at the Carmelites, 79 at Saint-Firmin, 170 at Bicêtre, 35 at the Salpêtrière; among the dead, 250 priests, 3 bishops or archbishops, general officers, magistrates, one former minister, one royal princess, belonging to the best names in France, and, on the other side, one negro, several low class women, young scapegraces, convicts, and poor old men. . . . Fournier, Lazowski, and Bécard, the chiefs of robbers and assassins, return from Orleans with 1,500 cut-throats. On the way they kill M. de Brissac, M. de Lessart, and 42 others accused of 'lèse-nation,' whom they arrested from their judges' hands, and then, by way of surplus, 'following the example of Paris,' 21 prisoners taken from the Versailles prisons. At Paris the Minister of Justice thanks them, the Commune congratulates them, and the sections feast them and embrace them. . . . All the journals approve, palliate, or keep silent; nobody dares offer resistance. Property as well as lives belong to whoever wants to take them. . . . Like a man struck on the head with a mallet, Paris, felled to the ground, lets things go; the authors of the massacre have fully attained their ends. The faction has fast hold of power, and will maintain its hold. Neither in the Legislative Assembly nor in the Convention will the aims of the Girondists be successful against its tenacious usurpation. . . . The Jacobins, through sudden terror, have maintained their illegal authority; through a prolongation of terror they are going to establish their legal authority. A forced suffrage is going to put them in office at the Hotel-de-Ville, in the tribunals, in the National Guard, in the sections, and in the various administrations."—H. A. Taine, *French Revolution*, v. 2, bk. 4, ch. 9.—"But the massacre was not confined to Paris; on the contrary, to extend it to the Provinces, where the danger of reaction was very threatening, was one of the first objects of its promoters. Many of the most important of the State prisoners were at Orleans; and on August 30 the Assembly, on the demand of the Commune, had sent Fournier, an agent of the *Comité de Surveillance*, to fetch them—43 in number—to Paris. On September 3, seeing what would be the fate of the prisoners if they entered Paris, the Assembly ordered Fournier to take them to Saumur. He disobeyed and conducted them to Versailles, where he was met on September 9 by a detachment of the expert Paris murderers, who made short work of the prisoners. This massacre had been devised as early as August 30, but it was not until September 3 that the idea of a general massacre throughout the Provinces was developed. On that day a circular was sent by the hands of Commissioners of the Commune to all the Departments, announcing the fact that a 'portion of the fierce conspirators detained in the prisons had been put to death by the people,' and suggesting that the entire nation should hasten to adopt a measure so necessary for the public safety. Fortunately this incitement had but little effect; and the massacres at Lyons, Meaux, Rheims, Charleville, and Caen, were comparatively insignificant. This, however, in no way exonerates the authors of the atrocious manifesto. It has been suggested that the entire document was forged by Marat, who had long openly cried out for wholesale massacres; but there is nothing in the antecedents of Panes, Sergent, and the other members of the *Comité de Surveillance*, whose signatures were attached to it, to make it improbable that these signatures were genuine. The fact that

the circular went out in the official covers of the Ministry of Justice has been used as an argument to prove that Danton and Fabre d'Églantine were privy to it, though it lacked their countersign and the ministerial stamp. The suspicion against them is indeed strong; and when we remember Danton's attitude towards the Paris massacres, and the fact that he never denied, but rather took credit for, his share in both circular and massacres, it is difficult to acquit him. So much for the circular; as to the responsibility for the Paris massacres the *Comité de Surveillance* must bear the direct and chief blame, but the Commune itself must have been aware of the acts of its committee. Entrusted as it was with the control of the armed force, and responsible, therefore, for the safekeeping of the prisons, it could and should have ordered the National Guard to protect them; but the National Guard did nothing, and doubtless had its orders to do nothing. It could and should have thrown itself between the assassins and their victims; on the contrary, such of its members as entered the prisons entered them to encourage the murderers. Pétion, newly restored to power, was doubtless afraid for his own skin on account of his connexion with the Brissotins. On Thursday, the last day of the massacres, he actually went to the prison of La Force, was horrified, and remonstrated; but he regarded the ignoring of his remonstrances merely with mild surprise and went away. He certainly, however, went to Santorre and ordered him to use the National Guard; and on the whole, though his action was quite ineffective, he comes out of the matter better than the other authorities. As to the Assembly, it did little to stop the massacres; it had, it is true, half-heartedly tried to avert them, but had given way to the Commune on every point before they began; and, now that they were in progress, it was not till September 4 that it called (quite ineffectively) upon the Sections to take steps to ensure the security of life and property. It must not be forgotten, however, that the Brissotins, who after August 10 constituted the large majority of the Assembly, had themselves been threatened, and doubtless it was fear for their own lives that made them loth to interfere. With regard to the Executive Council, Danton and Roland were the Ministers directly responsible for the security of prisoners. As to the former it is impossible to believe that he was ignorant of what was being prepared by his intimates of the Commune, and circumstantial evidence accumulates round him from every side. It was he who filled the prisons, reinstated the Commune, ordered the *tocsin* to be rung. As Minister of Justice he was responsible for the life of each prisoner, and, himself the only truly strong man in Paris, he could have saved them. Yet his attitude was at best one of cynical indifference; and, if complete proof of his direct complicity in the massacres is still wanting, he is at least responsible for never having lifted a finger to stop them. Roland, the other responsible Minister, though his conduct was no whit more courageous, has at least this excuse, that his interference would almost certainly have been useless. This, however, scarcely justifies him in not interfering, and his talk of 'drawing a veil' and of 'events perhaps necessary' was as disgusting as it was cowardly; he had been directly threatened by Marat, and was doubtless afraid to move."—J. R. M. Macdonald, *Legislative Assembly (Cambridge modern history, v. 8, pp. 243-244)*.

1792 (September–November).—Meeting of the national convention.—Abolition of royalty.—Adoption of the era of a republic.—Establishment of equality.—Losing struggle of the Girondists with the Jacobins.—‘The Legislative Assembly did not wait until all the newly elected deputies had arrived in Paris before convoking the Convention. As soon as it learned that a certain number of them were in Paris the Assembly decided to give way to the new Convention. On September 19, 1792, upon receiving from Lasource a report drawn up by its Extraordinary Commission, the Assembly decreed that ‘the archivist should convoke the deputies of the National Convention for the morrow, September 20, 1792, at half-past four in the afternoon,’ at the Tuileries, and that the Mayor of Paris should provide them with a guard. The first session of the Convention accordingly took place on September 20, 1792. It was a session behind closed doors, during which the Assembly constituted itself. It notified the presence of 371 members out of the 749 who should have been elected. It named its officials by nominal appeal and aloud. Pétion was elected president by 235 votes among 253 voters. The secretaries were Condorcet, Brissot, Rabaut Saint-Etienne, Lasource, Vergniaud, and Camus. On the evening of the 21st the officials were completed by naming Condorcet vice-president by 194 votes among 349 voters. In these first votings the Convention exhibited tendencies which were anti-Robespierriest, anti-Maratist, or, one may say, anti-Parisian. The next morning the Legislative Assembly decided to call upon the National Convention in order to conduct it to its own hall, the Salle de Manège, in which it would have to sit until quarters had been prepared for it in the Tuileries. The speeches exchanged on this occasion by the two presidents give an interesting indication as to the ideas which were then held of the powers and the functions of the Convention. François (of Neufchâteau), president of the Legislative Assembly, stated that the Convention had unlimited power to establish ‘a free and popular government.’ Pétion, president of the Convention, said that the Constitution was only rendered sacred ‘by national superstition’; that the nation wished ‘to assure its rights and its welfare upon more solid bases’; that the Convention held in its hands ‘the destinies of a great people, of the entire world, and of the races of the future’; and that it was about to ‘labour for the human species.’ The same day, speaking from the tribune, Manuel defined the Convention as ‘an assembly of philosophers, occupied with preparing the happiness of the world’; and Basire also defined it as an assembly of philosophers. The National Convention was installed in the Salle de Manège in public session on September 21, 1792. It did not immediately occupy itself with the great question of the form of government to be instituted; secondary questions were raised at the outset. Thus, Manuel demanded for the president, whom he called ‘the President of France,’ extraordinary honours and a lodging in the Tuileries. . . . In opposing it, Chabot and Couthon pronounced against royalty. Mathieu even spoke of the ‘organisation of the republic.’ Danton, consistently with his character and his polity, made directly for the matter which was troubling the public, and said that in order to destroy ‘the vain phantoms of a dictatorship, the extravagant ideas of a triumvirate, and all these absurdities invented to frighten the

people, it must be declared that the Constitution will have to be accepted by the primary assemblies.’ For what the Convention has to do is to form a Constitution: ‘Let us remember that we have to review everything, to re-create everything; that the Declaration of Rights itself is not without blemish, and must suffer revision at the hands of as truly free people.’ France, too, must be reassured, alarmed as she is by the socialist propaganda: ‘Let us here abjure all exaggeration; let us declare that all territorial properties, all individual and industrial properties, shall be perpetually maintained.’ After various observations, in which appeared the unanimous anti-socialist zeal of the Convention it was decreed: ‘Firstly, that there could be no Constitution but that accepted by the people; secondly, that persons and properties were under the protection of the nation.’ Manuel then insisted that the question of the abolition of royalty was the first object of the labours of the Convention. Philippeaux and Quinette stated that it was more urgent to decree the provisional execution of the laws not abrogated, the maintenance of powers not suspended or revoked, and the convention of the payment of the public taxes. A decree fulfilling the required object was passed. The abolition of royalty was thus adjourned. It even seemed, after the penultimate decree, that this abolition could only be effected by a plebiscite. The session was about to rise when speech was demanded by Collot d’Herbois, president of the electoral assembly of Paris, which had given a republican mandate to its deputies: ‘You have just decided a wise thing,’ he said. ‘But it is a matter that you cannot put off till to-morrow; that you cannot put off till this evening; that you cannot postpone for a moment without being unfaithful to the wishes of the nation.’ . . . Then hesitation showed itself. Quinette objected: ‘We are commissioned only to establish a positive government, and the people will then choose between the old government, in which royalty found a place, and that which we shall offer it.’ According to him, it was necessary first of all to think about punishing Louis XVI. But Grégoire improvised a virulent attack upon kings and royalty in general, spoke of destroying ‘this magic talisman,’ and provoked a scene of enthusiasm. ‘All the members of the Assembly,’ says the *procès-verbal*, ‘rising in one spontaneous movement protested, by unanimous acclamation, against a form of government which has inflicted so many ills upon the country.’ Then there was more hesitation. Basire declared that he mistrusted enthusiasm; he wanted a serious discussion. Grégoire insisted: ‘Kings are morally what monsters are in physique.’ Ducos and Billaud-Varenne spoke in favour of immediate abolition. Manuel found abolition inconsistent with the principles laid down; they must confine themselves to *declaring* that the nation wished to dispense with a monarch. Finally all objections were overcome; hesitation ceased; the deputies rallied against royalty, and the following decree was the result: ‘The National Convention decrees unanimously that royalty is abolished in France.’ It is then decided that the decree shall be despatched by special courriers to the departments, to the armies, and solemnly proclaimed in every municipality. A deputy having proposed that illuminations and salutes by cannon should be ordered, the Convention passed to the order of the day, feeling that the people needed no encouragement in order to express its joy. . . . So far, no question of a republic. Nothing shows that the Convention had the intentions of leaving the new state of things without a name. But it dared not pronounce the decisive word. It seemed to be

waiting for encouragement from without. This encouragement came that very day. The Convention heard that the people were crying '*Vive la République!*' in the streets at the moment when the decree abolishing royalty was being pronounced. Members of the administration of the department of Seine-et-Oise, municipal officers and citizens of Versailles, came to the bar to say that the volunteers of Seine-et-Oise were 'proud to come and take the oath to preserve the republic.' The convention applauded. The citizens of the section of Quatre-Nations also came, to say that they would be only too happy to pay with their blood for the 'republic' which their deputies had 'decreed.' The Executive Council also pronounced the word 'republic.' Monge, Minister of Marine, declared in the Convention that the members of the 'first executive power of the French Republic' would 'die, if need be, as worthy republicans.' On the same day still (the 21st) the Minister of the Interior, Roland, sent a circular to the administrative bodies, saying: . . . 'You are about, gentlemen, to proclaim the republic; then proclaim fraternity; they are one and the same thing.' Thus from the evening of the 21st the people and the Government took the initiative, and opened up the question of declaring that France was a republic. But the Convention waited until the next day before coming to a decision. . . . The decree of establishment of the Republic is specified thus, in the form of an extract from the *procès-verbal*: 'A member demands that we shall henceforth date all documents, &c.: *the first year of the French Republic*. Another member proposes to join to this the calendar now in use: *the fourth year of Liberty*. This amendment is defeated, and it is decreed that all public documents shall henceforth bear the date of the *first year of the French Republic*.' It is then decreed—'That the seal of the National Archives shall be changed, and shall bear the impression of a woman leaning one hand upon a fasces, holding in the other a lance surmounted by a bonnet of liberty, and for legend these words: *Archives of the French Republic*, and that this alteration shall be extended to the seals of all the administrative bodies.' . . . There was no solemn proclamation of the Republic. . . . It was merely stated, and then in an indirect manner, that since royalty was abolished a Republic existed. . . . The Executive Council made no haste to promulgate it; it waited until September 26th to apply it to the seals of State. . . . The Jacobin Club took great care not to anticipate the decree of the Convention, or to speak of the Republic immediately after the abolition of royalty, as the ministers Monge and Roland had done, the citizens of Versailles at the bar of the Convention, and various gatherings in the streets. At their evening meeting on September 21st they were invited by Gerbet the younger to take the name of *Friends of the Republic*; but the Jacobins rejected the motion, as prejudicing the constitutional operations of the Convention, and took the name of the *Society of the Jacobins, friends of liberty and equality*. Not until September 24th did they decide to date their *procès-verbal* the first year of the Republic. . . . The general council of the commune of Saint-Yrieix, in an address which is undated, but which was read at the session of November 9th, expresses itself thus: 'Citizen legislators of France, the decree which you have passed for the establishment of the French Republic has brought consolation to our hearts, because in future we shall have no despot but the laws.' A number of the members of the general council of the commune of Amiens write on September 26th: 'Citizens, the reign of

liberty still allowed royalty to strike us with its iron sceptre. Long live the Republic! Life to the strenuous men of 1792, who are making the present so fair for France! Yes, the French, proud of the glorious name of republicans, will know how to deserve this. . . .' The municipality of Lisieux, in conjunction with the district administration, writes on the 25th: 'Yes, the republican government is a fitting one for us, and the only one fitting for a free people, whatever the extent of their territory.' The municipality of Saint-Marcellin (Isère) writes on October 9th: 'You declared that France was a Republic: by that you taught all the citizens of France that they were now only a single family, a people, a nation of brothers. . . . In improving the quality of men you have, like a new sun, filled the soul with a new warmth. . . .' The rural communes themselves in some regions declaim in chorus with the cities. Thus on October 27th the district of Beauvais sent up the adhesion of the 95 municipalities of its arrondissement to the decrees 'which abolished royalty and erected France a Republic.' It might have been feared that the departmental administrations, of which a very considerable number had protested against the doings of June 20th, would oppose the Republic. Not one protested against it; and of the whole 83 no less than 42 sent addresses of support and adherence. . . . As for the administrations of the 41 departments which did not feel obliged to send addresses to the Convention, or whose addresses are lost, there is nothing to give us reason to suppose that any of them exhibited the least hesitation in accepting and proclaiming the decree establishing the Republic. . . . We have seen that France expected a constitutional reform from the Convention. One of the first decrees passed by this Assembly (September 21, 1792) declared 'that there can be no Constitution but that which is accepted by the people.' Here, at a word, that Convention condemned in principle the Constitution of 1791, which had not been submitted to a plebiscite. It also ratified the wish for the establishment of a popular *referendum*, which dated from the very beginnings of the democratic party, and had recently been expressed by several of the electoral assemblies. But the Convention was forced immediately to enter upon the opportunist and revolutionary courses which it was obliged by circumstance to follow throughout its whole career; having proclaimed principles which were suited to normal time and to peace, it had to displace them by exceptional, often dictatorial measures, suited to the conditions of warfare and the abnormal circumstances from which it was unable to extricate itself. A few minutes after declaring that no constitutional reform could be valid except it were submitted to a plebiscite, it abolished royalty without consulting the people. The next day, September 22nd, it established the Republic, again without consulting the people; proclaimed it one and indivisible on the 25th, and rejected, on October 10th, a motion of Manuel's which suggested that the establishment of the Republic should be submitted to a plebiscite. . . . On September 29th the Convention decreed the establishment of a Committee of Constitution. . . . This election was a victory for the Rolandist or Girondist party. At the Jacobins, on October 14th, some one having proposed to send an address to the Committee of Constitution, Chabot said: 'I demand the adjournment of the previous question. I know that the Committee of Constitution includes Danton, Barère, and Condorcet; but the address in question will serve as well in the hands of our three friends as if placed at the disposition of the whole Committee; for after all those in our

favour are still only three against six.' Danton himself obtained a decision that in order to counterbalance the influence of the Girondists, the Jacobin Club should itself elect an 'Auxiliary Committee of Constitution.' Although the Girondins were perhaps more anxious to establish a Constitution than were the Montagnards—the polity of the Girondins, in fact, tending to establish a normal condition of things in which the departments would have the same legal influence as Paris—yet the Committee of Constitution took great care not to be precipitate in its labours. On October 19th it obtained the decree:

"At the request of the Committee of Constitution, the National Convention invites all the friends of liberty and equality to put before it, in any language, such plans, tendencies, and means as they think it proper to give a good Constitution for the French Republic; the Convention authorises its Committee of Constitution to have such suggestions translated and printed, and submitted to the Convention.' . . . The Jacobins, again, were in no hurry to set their Auxiliary Committee to work. This Committee was first of all instructed to hold a preliminary inquiry, precisely like the Convention Committee, and to stimulate an exchange of views with and between the affiliated Jacobin Clubs. The Committee was to consist of twelve members. Only six of these were named at first (October 19th). . . . Then, at a date unknown to us, there was a fresh election in which four of these members were eliminated, and the Committee was composed of eight members: Jeanbon Saint-André, Robert, Thuriot, Bentabole, Robespierre, Billaud-Varenne, Anthoine, Saint-Just. It was not until February 18, 1793, after the Convention Committee had presented its report, that the Jacobins completed their Committee, by electing or re-electing Dubois-Crancé, Collot d'Herbois, Clotz, and Couthon. . . . As for the Committee of Constitution of the Convention, we know nothing or almost nothing of its private debates. It left neither registers nor papers of any sort. We know only that Condorcet was appointed chairman, and it is evident, not only from the style, but from the ideas, that he was the chief author of the first *Proposal for a Constitution*."—A. Aulard, *French Revolution*, v. 2, pp. 144-157, 160-164.

1792 (September-December).—War on the northern frontier.—Battle of Valmy.—Retreat of the invading army.—Custine in Germany and Dumouriez in the Netherlands.—Annexation of Savoy and Nice.—Decree of December 15, proclaiming a crusade to establish republican institutions in neighboring countries.—"The defence of France rested on General Dumouriez. . . . Happily for France the slow advance of the Prussian general permitted Dumouriez to occupy the difficult country of the Argennes, where, while waiting for his reinforcements, he was able for some time to hold the invaders in check. At length Brunswick made his way past the defile which Dumouriez had chosen for his first line of defence; but it was only to find the French posted in such strength on his flank that any further advance would imperil his own army. If the advance was to be continued, Dumouriez must be dislodged. Accordingly, on the 20th of September, Brunswick, facing half-round from his line of march, directed his artillery against the hills of Valmy, where Kellermann and the French left were encamped.

The cannonade continued for some hours, but it was followed by no general attack. Already, before a blow had been struck, the German forces were wasting away with disease. . . . The King of Prussia began to listen to the proposals of peace which were sent to him by Dumouriez. A week spent in negotiations served only to strengthen the French and to aggravate the scarcity and sickness within the German camp. Discensions broke out between the Prussian and Austrian commanders; a retreat was ordered; and, to the astonishment of Europe, the veteran forces of Brunswick fell back before the mutinous soldiery and unknown generals of the Revolution. . . . In the meantime the Legislative Assembly had decreed its own dissolution . . . and had ordered the election of representatives to frame a constitution for France. . . . The Girondins, who had been the party of extremes in the Legislative Assembly, were the party of moderation and order in the Convention. . . . Monarchy was abolished, and France declared a Republic (Sept. 21). Office continued in the hands of the Gironde; but the vehement, uncompromising spirit of their rivals, the so-called party of the Mountain, quickly made itself felt in all the relations of France to foreign powers. The intention of conquest might still be as sincerely disavowed as it had been five months before; but were the converts to liberty to be denied the right of uniting themselves to the French people by their own free will? . . . The scruples which had lately condemned all annexation of territory vanished in that orgy of patriotism which followed the expulsion of the invader and the discovery that the Revolution was already a power in other lands than France. . . . Along the entire frontier, from Dunkirk to the Maritime Alps, France nowhere touched a strong, united, and independent people; and along this entire frontier, except in the country opposite Alsace, the armed proselytism of the French Revolution proved a greater force than the influences on which the existing order of things depended. In the Low Countries, in the Principalities of the Rhine, in Switzerland, in Savoy, in Piedmont itself, the doctrines of the Revolution were welcomed by a more or less numerous class, and the armies of France appeared for a moment as the missionaries of liberty and right rather than as an invading enemy. No sooner had Brunswick been brought to a stand by Dumouriez at Valmy than a French division under Custine crossed the Alsatian frontier and advanced upon Spire, where Brunswick had left large stores of war. The garrison was defeated in an encounter outside the town; Spire and Worms surrendered to Custine. In the neighbouring fortress of Mainz, the key to western Germany, Custine's advance was watched with anxious satisfaction by a republican party among the inhabitants, from whom the French general learnt that he had only to appear before the city to become its master. . . . At the news of the capture of Spire, the Archbishop retired into the interior of Germany, leaving the administration to a board of ecclesiastics and officials, who published a manifesto calling upon their 'beloved brethren' the citizens to defend themselves to the last extremity, and then followed their master's example. A council of war declared the city to be untenable; and, before Custine had brought up a single siege-gun, the garrison capitulated, and the French were welcomed into Mainz by the partisans of the Republic (Oct. 20). . . . Although the mass of the inhabitants held aloof, a Republic was finally proclaimed, and incorporated with the Republic of France. The success of Custine's raid into Germany did not divert the Convention from the design of attacking Austria in

the Netherlands, which Dumouriez had from the first pressed upon the Government. It was not three years since the Netherlands had been in full revolt against the Emperor Joseph. . . . Thus the ground was everywhere prepared for a French occupation. Dumouriez crossed the frontier. The border fortresses no longer existed: and after a single battle won by the French at Jemappes on the 6th November, the Austrians, finding the population universally hostile, abandoned the Netherlands without a struggle. The victory of Jemappes, the first pitched battle won by the Republic, excited an outburst of revolutionary fervour in the Convention which deeply affected the relations of France to Great Britain, hitherto a neutral spectator of the war. A decree was passed for the publication of a manifesto in all languages, declaring that the French nation offered its alliance to all peoples who wished to recover their freedom, and charging the generals of the Republic to give their protection to all persons who had suffered or might suffer in the cause of liberty. (Nov. 10.) A week later Savoy and Nice were annexed to France, the population of Savoy having almost unanimously declared in favour of France on the outbreak of war between France and Sardinia. On the 15th December the Convention proclaimed that a system of social and political revolution was henceforth to accompany every movement of its armies on foreign soil. 'In every country that shall be occupied by the armies of the French Republic'—such was the substance of the Decree of December 15th—'the generals shall announce the abolition of all existing authorities; of nobility, of serfage, of every feudal right and every monopoly; they shall proclaim the sovereignty of the people. . . . The French nation will treat as enemies any people which, refusing liberty and equality, desires to preserve its prince and privileged castes, or to make any accommodation with them.' This singular announcement of a new crusade caused the Government of Great Britain to arm.—C. A. Fyffe, *History of modern Europe*, v. 1, ch. 2.

1792 (November—December). — Charges against the king.—Jacobin clamor for his condemnation.—Contest in Convention.—'There were, without a doubt, in this conjuncture, a great number of Mountaineers who, on this occasion, acted with the greatest sincerity, and only as republicans, in whose eyes Louis XVI. appeared guilty with respect to the revolution; and a dethroned king was dangerous to a young democracy. But this party would have been more clement, had it not had to ruin the Gironde at the same time with Louis XVI. . . . Party motives and popular animosities combined against this unfortunate prince. Those who, two months before, would have repelled the idea of exposing him to any other punishment than that of dethronement, were stupefied; so quickly does man lose in moments of crisis the right to defend his opinions! . . . After the 10th of August, there were found in the offices of the civil list documents which proved the secret correspondence of Louis XVI. with the discontented princes, with the emigration, and with Europe. In a report, drawn up at the command of the legislative assembly, he was accused of intending to betray the state and overthrow the revolution. He was accused of having written, on the 10th April, 1791, to the bishop of Clermont, that if he regained his power he would restore the former government, and the clergy to the state in which

they previously were; of having afterwards proposed war, merely to hasten the approach of his deliverers; . . . of having been on terms with his brothers, whom his public measures had discountenanced; and, lastly, of having constantly opposed the revolution. Fresh documents were soon brought forward in support of this accusation. In the Tuileries, behind a panel in the wainscot, there was a hole wrought in the wall, and closed by an iron door. This secret closet was pointed out by the minister, Roland, and there were discovered proofs of all the conspiracies and intrigues of the court against the revolution; projects with the popular leaders to strengthen the constitutional power of the king, to restore the ancient régime and the aristocrats; the manœuvres of Talon, the arrangements with Miraheau, the propositions accepted by Bouillé, under the constituent assembly, and some new plots under the legislative assembly. This discovery increased the exasperation against Louis XVI. Mirabeau's bust was broken by the Jacobins, and the convention covered the one which stood in the hall where it held its sittings. For some time there had been a question in the assembly as to the trial of this prince, who, having been dethroned, could no longer be proceeded against. There was no tribunal empowered to pronounce his sentence, no punishment which could be inflicted on him: accordingly, they plunged into false interpretations of the inviolability granted to Louis XVI., in order to condemn him legally. . . . The committee of legislation, commissioned to draw up a report on the question as to whether Louis XVI. could be tried, and whether he could be tried by the convention, decided in the affirmative. . . . The discussion commenced on the 13th of November, six days after the report of the committee. . . . This violent party [the Mountain], who wished to substitute a coup d'état for a sentence, to follow no law, no form, but to strike Louis XVI. like a conquered prisoner, by making hostilities even survive victory, had but a very feeble majority in the convention; but without, it was strongly supported by the Jacobins and the commune. Notwithstanding the terror which it already inspired, its murderous suggestions were repelled by the convention; and the partisans of inviolability, in their turn, courageously asserted reasons of public interest at the same time as rules of justice and humanity. They maintained that the same men could not be judges and legislators, the jury and the accusers. . . . In a political view, they showed the consequences of the king's condemnation, as it would affect the anarchical party of the kingdom, rendering it still more insolent; and with regard to Europe, whose still neutral powers it would induce to join the coalition against the republic. But Robespierre, who during this long debate displayed a daring and perseverance that presaged his power, appeared at the tribune to support Saint Just, to reproach the convention with involving in doubt what the insurrection had decided, and with restoring, by sympathy and the publicity of a defence, the fallen royalist party. 'The assembly,' said Robespierre, 'has involuntarily been led far away from the real question. Here we have nothing to do with trial: Louis is not an accused man; you are not judges, you are, and can only be, statesmen. You have no sentence to pronounce for or against a man, but you are called on to adopt a measure of public safety; to perform an act of national precaution. A dethroned king is only fit for two purposes, to disturb the tranquillity of the state, and shake its freedom, or to strengthen one or the other of them. Louis was king; the republic is founded; the famous question

you are discussing is decided in these few words. Louis cannot be tried; he is already tried, he is condemned, or the republic is not absolved.' He required that the convention should declare Louis XVI. a traitor towards the French, criminal towards humanity, and sentence him at once to death, by virtue of the insurrection. The Mountaineers, by these extreme propositions, by the popularity they attained without, rendered condemnation in a measure inevitable. By gaining an extraordinary advance on the other parties, it obliged them to follow it, though at a distance. The majority of the convention, composed in a large part of Girondists, who dared not pronounce Louis XVI. inviolable, and of the Plain, decided, on Pétion's proposition, against the opinion of the fanatical Mountaineers and against that of the partisans of inviolability, that Louis XVI. should be tried by the convention. Robert Lindet then made, in the name of the commission of the twenty-one, his report respecting Louis XVI. The arraignment, setting forth the offences imputed to him, was drawn up, and the convention summoned the prisoner to its bar."—F. A. Mignet, *History of the French Revolution*, ch. 6.

1792-1793 (December-January).—King's trial and death sentence.—"On December 11, the ill-fated monarch, taken from his prison to his former palace, appeared at the bar of his republican judges, was received in silence and with covered heads, and answered interrogatories addressed to him as 'Louis Capet,' though with an air of deference. His passive constancy touched many hearts. . . . On the 26th the advocates of the King made an eloquent defence for their discredited client, and Louis added, in a few simple words, that the 'blood of the 10th of August should not be laid to his charge.' The debates in the Assembly now began, and it soon became evident that the Jacobin faction were making the question the means to further their objects, and to hold up their opponents to popular hatred. They clamored for immediate vengeance on the tyrant, declared that the Republic could not be safe until the Court was smitten on its head, and a great example had been given to Europe, and denounced as reactionary and as concealed royalists all who resisted the demands of patriotism. These ferocious invectives were aided by the expedients so often employed with success, and the capital and its mobs were arrayed to intimidate any deputies who hesitated in the 'cause of the Nation.' The Moderates, on the other hand, were divided in mind; a majority, perhaps, condemning the King, but also wishing to spare his life; and the Gironde leaders, halting between their convictions, their feelings, their desires, and their fears, shrank from a courageous and resolute course. The result was such as usually follows when energy and will encounter indecision. On January 14 [the 15th, according to Thiers and others], 1793, the Convention declared Louis XVI guilty, and on the following day [the speaking and voting lasted through the night of the 16th and the day after it] sentence of immediate death was pronounced by a majority of one [but the minority, in this view, included 26 votes that were cast for death but in favor of a postponement of the penalty, on grounds of political expediency], proposals for a respite and an appeal to the people having been rejected at the critical moment. The votes had been taken after a solemn call of the deputies at a sitting protracted for days; and the spectacle of the vast dim hall,

of the shadowy figures of the awestruck judges meting out the fate of their former Sovereign, and tier upon tier of half-seen faces, looking, as in a theatre, on the drama below, and breaking out into discordant clamor, made a fearful impression on many eye-witnesses. One vote excited a sensation of disgust even among the most ruthless chiefs of the Mountain, though it was remarked that many of the abandoned women who crowded the galleries shrieked approbation. The Duke of Orleans, whose Jacobin professions had caused him to be returned for Paris, with a voice in which effrontery mingled with terror, pronounced for the immediate execution of his kinsman. The minister of justice—Danton had resigned—announced on the 20th the sentence to the King. The captive received the message calmly, asked for three days to get ready to die (a request, however, at once refused), and prayed that he might see his family and have a confessor."—W. O'C. Morris, *French Revolution, and first empire*, ch. 5.

1792-1793 (December-February).—Determination to incorporate the Austrian Netherlands and to attack Holland.—Pitt's unavailing struggle for peace.—England driven to arms.—War with the maritime powers declared by the French.—"Since the beginning of December, the French government had contracted their far-reaching schemes within definite limits. They were compelled to give up the hope of revolutionizing the German Empire and establishing a Republic in the British Islands; but they were all the more determined in the resolve to subject the countries which had hitherto been occupied in the name of freedom, to the rule of France. This object was more especially pursued in Belgium by Danton and three other deputies, who were sent as Commissioners of the Convention to that country on the 30th of November. They were directed to enquire into the condition of the Provinces, and to consider Dumouriez's complaints against Pache [the Minister at War] and the Committee formed to purchase supplies for the army." Danton became resolute in the determination to incorporate Belgium and pressed the project inexorably. "It was a matter of course that England would interpose both by word and deed directly France prepared to take possession of Belgium. . . . England had guaranteed the possession of Belgium to the Emperor in 1790—and the closing of the Scheldt to the Dutch, and its political position in Holland to the House of Orange in 1788. Under an imperative sense of her own interests, she had struggled to prevent the French from gaining a footing in Antwerp and Ostend. Prudence, fidelity to treaties, the retrospect of the past and the hopes of the future—all called loudly upon her not to allow the balance of Europe to be disturbed, and least of all in Belgium."—H. von Sybel, *History of the French Revolution*, v. 2, bk. 5, ch. 5.—"The French Government resolved to attack Holland, and ordered its generals to enforce by arms the opening of the Scheldt. To do this was to force England into war. Public opinion was already pressing every day harder upon Pitt [see ENGLAND: 1793-1796]. . . . Across the Channel his moderation was only taken for fear. . . . The rejection of his last offers indeed made a contest inevitable. Both sides ceased from diplomatic communications, and in February 1793

France issued her Declaration of War."—J. R. Green, *History of the English people*, v. 4, bk. 9, ch. 4.

1793 (January).—Execution of the king.—“To this conclusion, then, hast thou come, O hapless Louis! The Son of Sixty Kings is to die on the Scaffold by form of law. Under Sixty Kings this same form of law, form of Society, has been fashioning itself together these thousand years; and has become, one way and other, a most strange Machine. Surely, if needful, it is also frightful, this Machine; dead, blind; not what it should be; which with swift stroke, or by cold slow torture, has wasted the lives and souls of innumerable men. And behold now a King himself or say rather Kinghood in his person, is to expire here in cruel tortures;—like a Phalaris shut in the belly of his own red-heated Brazen Bull! It is ever so; and thou shouldst know it, O haughty tyrannous man: injustice breeds injustice; curses and falsehoods do verily return ‘always home,’ wide as they may wander. Innocent Louis bears the sins of many generations: he too experiences that man’s tribunal is not in this Earth; that if he had no higher one, it were not well with him. A King dying by such violence appeals impressively to the imagination; as the like must do, and ought to do. And yet at bottom it is not the King dying, but the man! Kingship is a coat: the grand loss is of the skin. The man from whom you take his Life, to him can the whole combined world do more? . . . A Confessor has come; Abbé Edgeworth, of Irish extraction, whom the King knew by good report, has come promptly on this solemn mission. Leave the Earth alone, then, thou hapless King; it with its malice will go its way, thou also canst go thine. A hard scene yet remains: the parting with our loved ones. Kind hearts, environed in the same grim peril with us; to be left here! Let the reader look with the eyes of Valet Cléry through these glass-doors, where also the Municipality watches; and see the cruelest of scenes: ‘At half-past eight, the door of the ante-room opened: the Queen appeared first, leading her Son by the hand; then Madame Royale and Madame Elizabeth: they all flung themselves into the arms of the King. Silence reigned for some minutes; interrupted only by sobs.’ . . . For nearly two hours this agony lasts; then they tear themselves asunder. ‘Promise that you will see us on the morrow.’ He promises:—Ah yes, yes; yet once; and go now, ye loved ones; cry to God for yourselves and me!—It was a hard scene, but it is over. He will not see them on the morrow. The Queen in passing through the ante-room, glanced at the Cerberus Municipals; and, with woman’s vehemence, said through her tears, ‘Vous êtes tous des scélérats.’ King Louis slept sound, till five in the morning, when Cléry, as he had been ordered, awoke him. Cléry dressed his hair: while this went forward, Louis took a ring from his watch, and kept trying it on his finger; it was his wedding-ring, which he is now to return to the Queen as a mute farewell. At half-past six, he took the Sacrament, and continued in devotion, and conference with Abbé Edgeworth. He will not see his family: it were too hard to bear. At eight the Municipals enter: the King gives them his Will, and messages and effects; which they, at first, brutally refuse to take charge of: he gives them a roll of gold pieces,

a hundred and twenty-five louis; these are to be returned to Malesherbes, who had lent them. At nine, Santerre says the hour is come. The King begs yet to retire for three minutes. At the end of three minutes, Santerre again says the hour is come. ‘Stamping on the ground with his right-foot, Louis answers: Partons, Let us go.’—How the rolling of those drums comes in, through the Temple bastions and bulwarks, on the heart of a queenly wife; soon to be a widow! He is gone, then, and has not seen us? . . . At the Temple Gate were some faint cries, perhaps from voices of pitiful women: Grâce! Grâce! Through the rest of the streets there is silence as of the grave. No man not armed is allowed to be there: the armed, did any even pity, dare not express it, each man overawed by all his neighbours. All windows are down, none seen looking through them. All shops are shut. No wheel-carriage rolls, this morning, in these streets but one only. 80,000 armed men stand ranked, like armed statues of men; cannons bristle, cannoners with match burning, but no word or movement: it is as a city enchanted into silence and stone; one carriage with its escort, slowly rumbling, is the only sound. Louis reads, in his Book of Devotion, the Prayers of the Dying: clatter of this death-march falls sharp on the ear, in the great silence; but the thought would fain struggle heavenward, and forget the Earth. As the clock strikes ten, behold the Place de la Révolution, once Place de Louis Quinze: the Guillotine, mounted near the old Pedestal where once stood the Statue of that Louis! Far round, all bristles with cannons and armed men; spectators crowding in the rear; D’Orleans Egalite there in cabriolet. . . . Heedless of all Louis reads his Prayers of the Dying; not until five minutes yet has he finished; then the Carriage opens. What temper he is in? Ten different witnesses will give ten different accounts of it. He is in the collision of all tempers; arrived now at the black Maelstrom and descent of Death: in sorrow, in indignation, in resignation struggling to be resigned. ‘Take care of M. Edgeworth,’ he straitly charges the Lieutenant who is sitting with them: then they two descend. The drums are beating: ‘Taisez-vous, Silence!’ he cries in a terrible voice, ‘d’une voix terrible.’ He mounts the scaffold, not without delay; he is in puce coat, breeches of gray, white stockings. He strips off the coat; stands disclosed in a sleeve-waistcoat of white flannel. The executioners approach to bind him: he spurns, resists; Abbé Edgeworth has to remind him how the Saviour, in whom men trust, submitted to be bound. His hands are tied, his head bare; the fatal moment is come. He advances to the edge of the Scaffold, ‘his face very red,’ and says: ‘Frenchmen, I die innocent: it is from the Scaffold and near appearing before God that I tell you so, I pardon my enemies; I desire that France—’ A General on horseback, Santerre or another, prances out with uplifted hand: ‘Tambours!’ The drums drown the voice. ‘Executioners, do your duty!’ The Executioners, desperate lest themselves be murdered (for Santerre and his Armed Ranks will strike, if they do not), seize the hapless Louis; six of them desperate, him singly desperate, struggling there; and bind him to their plank. Abbé Edgeworth, stooping, bespeaks him: ‘Son of Saint Louis, ascend to Heaven.’ The Axe clanks down: a King’s Life is shorn away. It is Monday the 21st of January, 1793. He was aged 38 years four months and 28 days. Executioner Samson shows the Head: fierce shouts of Vive la République rises, and swells; caps raised on bayo-

nets, hats waving: students of the College of Four Nations take it up, on the far Quais; fling it over Paris. D'Orléans drives off in his cabriolet; the Townhall Councillors rub their hands, saying, 'It is done, It is done.' . . . In the coffee-houses that evening, says Prudhomme, Patriot shook hands with Patriot in a more cordial manner than usual. Not till some days after, according to Mercier, did public men see what a grave thing it was. A grave thing it indisputably is; and will have consequences. . . . At home this Killing of a King has divided all friends; and abroad it has united all enemies. Fraternity of Peoples, Revolutionary Propagandism; Atheism, Regicide; total destruction of social order in this world! All Kings, and lovers of Kings, and haters of Anarchy, rank in coalition; as in a war for life."—T. Carlyle, *French Revolution*, v. 3, bk. 2, ch. 8.

1793 (February-April).—Increasing anarchy.—Degradation of manners.—Formation of the terrible Revolutionary Tribunal.—Treacherous designs of Dumouriez.—His invasion of Holland.—His defeat at Neerwinden and retreat.—His flight to the enemy.—"While the French were . . . throwing down the gauntlet to all Europe, their own country seemed sinking into anarchical dissolution. Paris was filled with tumult, insurrection and robbery. At the denunciations of Marat against 'forestallers,' the shops were entered by the mob, who carried off articles at their own prices, and sometimes without paying at all. The populace was agitated by the harangues of low itinerant demagogues. Rough and brutal manners were affected, and all the courtesies of life abolished. The revolutionary leaders adopted a dress called the 'carmagnole,' consisting of enormous black pantaloons, a short jacket, a three-coloured waistcoat, and a Jacobite wig of short black hair, a terrible moustache, the 'bonnet rouge,' and an enormous sabre. [The name Carmagnole was also given to a tune and a dance; it is supposed to have borne originally some reference not now understood to Carmagnola in Piedmont.] Moderate persons of no strong political opinions were denounced as 'suspected,' and their crime stigmatised by the newly coined word of 'moderantisme.' The variations of popular feeling were recorded like the heat of the weather, or the rising of a flood. The principal articles in the journals were entitled 'Thermometer of the Public Mind;' the Jacobins talked of . . . being 'up to the level.' Many of the provinces were in a disturbed state. A movement had been organising in Brittany ever since 1791, but the death of the Marquis de la Rouarie, its principal leader, had for the present suspended it. A more formidable insurrection was preparing in La Vendée. . . . It was in the midst of these disturbances, aggravated by a suspicion of General Dumouriez's treachery, which we shall presently have to relate, that the terrible court known as the Revolutionary Tribunal was established. It was first formally proposed in the Convention March 9th, by Carrier, the miscreant afterwards notorious by his massacres at Nantes, urged by Cambacérés on the 10th, and completed that very night at the instance of Danton, who rushed to the tribune, insisted that the Assembly should not separate, till the new Court had been organised. . . . The extraordinary tribunal of August, 1792, had not been found to work fast enough, and it was now superseded by this new one, which became in fact only a method of massacring under the form of law. The Revolutionary Tribunal was designed to take cognisance of all counter-revolu-

tionary attempts, of all attacks upon liberty, equality, the unity and indivisibility of the Republic, the internal and external safety of the State. A commission of six members of the Convention was to examine and report upon the cases to be brought before it, to draw up and present the acts of accusation. The tribunal was to be composed of a jury to decide upon the facts, five judges to apply the law, a public accuser, and two substitutes; from its sentence there was no appeal. Meanwhile Dumouriez had returned to the army, very dissatisfied that he had failed in his attempts to save the King and baffle the Jacobins. He had formed the design of invading Holland, dissolving the Revolutionary Committee in that country, annulling the decree of Dec. 15th, offering neutrality to the English, a suspension of arms to the Austrians, reuniting the Belgian and Batavian republics, and proposing to France a re-union with them. In case of refusal, he designed to march upon Paris, dissolve the Convention, extinguish Jacobinism; in short, to play the part of Monk in England. This plan was confided to four persons only, among whom Danton is said to have been one. . . . Dumouriez, having directed General Miranda to lay siege to Maestricht, left Antwerp for Holland, Feb. 22nd, and by March 4th had seized Breda, Klundert and Gertruydenberg. Austria, at the instance of England, had pushed forward 112,000 men under Prince Josias of Saxe-Coburg. Clairfait, with his army, at this time occupied Berghem, where he was separated from the French only by the little river Roer and the fortress of Juliers. Coburg, having joined Clairfait, March 1st, crossed the Roer, defeated the French under Dampierre at Altenhoven, and thus compelled Miranda to raise the siege of Maestricht, and retire towards Tongres. Aix-la-Chapelle was entered by the Austrians after a smart contest, and the French compelled to retreat upon Liège, while the divisions under Stengel and Neully, being cut off by this movement, were thrown back into Limburg. The Austrians then crossed the Meuse, and took Liège, March 6th. Dumouriez was now compelled to concentrate his forces at Louvain. From this place he wrote a threatening letter to the Convention, March 11th, denouncing the proceedings of the ministry, the acts of oppression committed in Belgium, and the decree of December 15th. This letter threw the Committee of General Defence into consternation. It was resolved to keep it secret, and Danton and Lacroix set off for Dumouriez's camp, to try what they could do with him, but found him inflexible. His proceedings had already unmasked his designs. At Antwerp he had ordered the Jacobin Club to be closed, and the members to be imprisoned, at Brussels he had dissolved the legion of 'sans-culottes.' Dumouriez was defeated by Prince Coburg at Neerwinden, March 18th, and again on the 22nd at Louvain. In a secret interview with the Austrian Colonel Mack, a day or two after, at Ath, he announced to that officer his intention to march on Paris and establish a constitutional monarchy, but nothing was said as to who was to wear the crown. The Austrians were to support Dumouriez's advance upon Paris, but not to show themselves except in case of need, and he was to have the command of what Austrian troops he might select. The French now continued their retreat, which, in consequence of these negotiations, was unmoled. The Archduke Charles and Prince Coburg entered Brussels March 25th, and the Dutch towns were shortly after retaken. When Dumouriez arrived with his van at Courtraï, he was met by three emissaries of the Jacobins, sent apparently to sound him. He bluntly told them that

his design was to save France, whether they called him Cæsar, Cromwell or Monk, denounced the Convention as an assembly of tyrants, said that he despised their decrees. . . . At St. Amand he was met by Beurnonville, then minister of war, who was to supersede him in the command, and by four commissaries despatched by the Convention." Dumouriez arrested these, delivered them to Clairfait, and they were sent to Maestricht. "The allies were so sanguine that Dumouriez's defection would put an end to the Revolution, that Lord Auckland and Count Stahrenberg, the Austrian minister, looking upon the dissolution and flight of the Convention as certain, addressed a joint note to the States-General, requesting them not to shelter such members of it as had taken any part in the condemnation of Louis XVI. But Dumouriez's army was not with him. On the road to Condé he was fired on by a body of volunteers and compelled to fly for his life (April 4th)." The day following he abandoned his army and went over to the Austrian quarters at Tournay, with a few companions, thus ending his political and military career. "The situation of France at this time seemed almost desperate. The army of the North was completely disorganised through the treachery of Dumouriez; the armies of the Rhine and Moselle were retreating; those of the Alps and Italy were expecting an attack; on the eastern side of the Pyrenees the troops were without artillery, without generals, almost without bread, while on the western side the Spaniards were advancing towards Bayonne. Brest, Cherbourg, the coasts of Brittany, were threatened by the English. The ocean ports contained only six ships of the line ready for sea, and the Mediterranean fleet was being repaired at Toulon. But the energy of the revolutionary leaders was equal to the occasion."—T. H. Dyer, *History of modern Europe*, v. 4, bk. 7, ch. 5.

"Dumouriez presents a character particularly difficult for the modern Englishman to comprehend, so remote is it in circumstance and fundamentals from those of our time. Of good birth, but born in a generation when social differences had become a jest for intelligent and active men, . . . courageous, with a good knowledge of his trade of soldiering, of rapid decision and excellent judgment where troops or *terrain* were concerned, he was all at sea in the comprehension of men, and he bore no loyalty to the State. It is this last feature which will particularly surprise the English reader, for it is the singular and permanent advantage of oligarchic communities such as the British that they retain under any stress and show throughout the whole commonwealth the sense of the State. To betray the State, to act against its interests, to be imperfectly conscious of its existence, are crimes or weaknesses unknown to the citizens of an oligarchy, and a citizen of this country cannot easily conceive of them to-day. In democracies and despotisms, on the other hand, to forget one's duty to the State, to be almost oblivious of its corporate existence, is a common weakness. There is here a compensation, and by just so much as despotism and democracy permit rapid, effective and all-compelling action on the part of the State, by just so much as they permit sudden and sometimes miraculous enthusiasms which save or which confirm a State, by that also do they lack the quiet and persistent consciousness of the State which oligarchy fosters and determines. Dumouriez' excellence as a general can only be appreciated by those who have looked closely into the constitution of the forces which he was to command and the adversaries with whom he had to deal. It is the prime quality of a great commander that his mind stands ready for

any change in circumstances or in the material to his hand, and even when we have allowed for the element of luck which is so considerable in military affairs, we must not forget that Dumouriez saved without disaster the wretched and disorganized bands, inchoate and largely mutinous as to their old units, worthless and amateur as to their new, which had to meet, in and behind the Argonne, the model army of Prussia. We must not forget that his plan for the invasion of the Low Countries was a just and sensible one, nor with what skill, after the inevitable defeat and retreat of the spring of 1793, he saved his command intact. As a subordinate to an armed executive, to the Government of Napoleon, for instance, the man would have been priceless. Nay, had circumstances permitted him to retain supreme command of civil as of military power, he would have made no bad dictator. His mere technical skill was so considerable as to make the large sums paid him by the English Government seem a good bargain even at our distance of time, and his plans for the defence of England and for the attack on Napoleon are a proof of the value at which he was estimated. But Dumouriez was quite unable to act under the special circumstances in which he happened to be placed at the moment of his treason. A mere ambition had carried him from intrigue to intrigue among the politicians. He despised them as an active and capable soldier was compelled to despise them; he was too old to share any of their enthusiasms, even had his temperament permitted him to entertain any vision, political or religious. He certainly never felt the least moral bond attaching him to what was in his eyes the chance anarchy of the last six months of French Government under which he served, and if he is to be branded with the title of traitor, then we must brand with the same title all that multitude of varied men who escaped from the country in the Emigration, who left it in disgust, or even who remained in France, but despaired of French fortunes, in the turmoil of 1793. It is perhaps a worthy excuse for Dumouriez' failure to point out that he also was one of those whom the Court might have used had it known how to use men; but the Court had no such knowledge."—H. Belloc, *French Revolution*, pp. 67-60.

1793 (March-April).—Insurrection in La Vendée.—"Ever since the abolition of royalty and the constitution of 1700, that is, since the 10th of August, a condemnatory and threatening silence had prevailed in Normandy. Bretagne exhibited still more hostile sentiments, and the people there were engrossed by fondness for the priests and the gentry. Nearer to the banks of the Loire, this attachment amounted to insurrection; and lastly, on the left bank of that river, in the Bocage, Le Lorrain, and La Vendée, the insurrection was complete, and large armies of ten and twenty thousand men were already in the field. . . . It was particularly on this left bank, in Anjou, and Upper and Lower Poitou, that the famous war of La Vendée had broken out. It was in this part of France that the influence of time was least felt, and that it had produced least change in the ancient manners. The feudal system had there acquired a truly patriarchal character; and the Revolution, instead of operating a beneficial reform in the country, had shocked the most kindly habits and been received as a persecution. The Bocage and the Marais constitute a

singular country, which it is necessary to describe, in order to convey an idea of the manners of the population, and the kind of society that was formed there. Setting out from Nantes and Saumur and proceeding from the Loire to the sands of Olonne, Luçon, Fontenay, and Niort, you meet with an unequal undulating soil, intersected by ravines and crossed by a multitude of hedges, which serve to fence in each field, and which have on this account obtained for the country the name of the Bocage. As you approach the sea the ground declines, till it terminates in salt marshes, and is everywhere cut up by a multitude of small canals, which render access almost impossible. This is what is called the Marais. The only abundant produce in this country is pasturage, consequently cattle are plentiful. The peasants there grew only just sufficient corn for their own consumption, and employed the produce of their herds and flocks as a medium of exchange. It is well known that no people are more simple than those subsisting by this kind of industry. Few great towns had been built in these parts. They contained only large villages of two or three thousand souls. Between the two high-roads leading, the one from Tours to Poitiers, and the other from Nantes to La Rochelle, extended a tract thirty leagues in breadth, where there were none but cross-roads leading to villages and hamlets. The country was divided into a great number of small farms paying a rent of from five to six hundred francs, each let to a single family, which divided the produce of the cattle with the proprietor of the land. From this division of farms, the seigneurs had to treat with each family, and kept up a continual and easy intercourse with them. The simplest mode of life prevailed in the mansions of the gentry: they were fond of the chase, on account of the abundance of game; the gentry and the peasants hunted together, and they were all celebrated for their skill and vigour. The priests, men of extraordinary purity of character, exercised there a truly paternal ministry. . . . When the Revolution, so beneficent in other quarters, reached this country, with its iron level, it produced profound agitation. It had been well if it could have made an exception there, but that was impossible. . . . When the removal of the non-juring priests deprived the peasants of the ministers in whom they had confidence, they were vehemently exasperated, and, as in Bretagne, they ran into the woods and travelled to a considerable distance to attend the ceremonies of a worship, the only true one in their estimation. From that moment a violent hatred was kindled in their souls, and the priests neglected no means of fanning the flames. The 10th of August drove several Poitevin nobles back to their estates; the 21st of January estranged them, and they communicated their indignation to those about them. They did not conspire, however, as some have conceived. The known dispositions of the country had incited men who were strangers to it to frame plans of conspiracy. One had been hatched in Bretagne, but none was formed in the Bocage; there was no concerted plan there; the people suffered themselves to be driven to extremity. At length, the levy of 300,000 men excited in the month of March a general insurrection. . . . Obligated to take arms, they chose rather to fight against the republic than for it. Nearly about the same time, that is, at the beginning of March, the drawing was the occasion of an insurrection in the Upper Bocage and in the Marais. On the 10th of March, the drawing was to take place at St. Florent, near Ancenis, in Anjou. The young men refused to draw. The guard endeavoured to force them to comply. The military

commandant ordered a piece of cannon to be pointed and fired at the mutineers. They dashed forward with their bludgeons, made themselves masters of the piece, disarmed the guard, and were, at the same time, not a little astonished at their own temerity. A carrier, named Cathelineau, a man highly esteemed in that part of the country, possessing great bravery and powers of persuasion, quitting his farm on hearing the tidings, hastened to join them, rallied them, roused their courage, and gave some consistency to the insurrection by his skill in keeping it up. The very same day he resolved to attack a republican post consisting of eighty men. The peasants followed him with their bludgeons and their muskets. After a first volley, every shot of which told, because they were excellent marksmen, they rushed upon the post, disarmed it, and made themselves master of the position. Next day, Cathelineau proceeded to Chemillé, which he likewise took, in spite of 200 republicans and three pieces of cannon. A gamekeeper at the château of Maulevrier, named Stofflet, and a young peasant of the village of Chauzeau, had on their part collected a band of peasants. These came and joined Cathelineau, who conceived the daring design of attacking Chollet, the most considerable town in the country, the chief place of a district, and guarded by 500 republicans. . . . The victorious band of Cathelineau entered Chollet, seized all the arms that it could find, and made cartridges out of the charges of the cannon. It was always in this manner that the Vendéans procured ammunition. . . . Another much more general revolt had broken out in the Marais and the department of La Vendée. At Machecoul and Challans, the recruiting was the occasion of a universal insurrection. . . . Three hundred republicans were shot by parties of 20 or 30. . . . In the department of La Vendée, that is, to the south of the theatre of this war, the insurrection assumed still more consistency. The national guards of Fontenay, having set out on their march for Chantonnay, were repulsed and beaten. Chantonnay was plundered. General Verteil, who commanded the 11th military division, on receiving intelligence of this defeat, dispatched General Marcé with 1,200 men, partly troops of the line, and partly national guards. The rebels who were met at St. Vincent were repulsed. General Marcé had time to add 1,200 more men and nine pieces of cannon to his little army. In marching upon St. Fulgent, he again fell in with the Vendéans in a valley and stopped to restore a bridge which they had destroyed. About four in the afternoon of the 18th of March, the Vendéans, taking the initiative, advanced and attacked him . . . and made themselves masters of the artillery, the ammunition, and the arms, which the soldiers threw away that they might be the lighter in their flight. These more important successes in the department of La Vendée properly so called, procured for the insurgents the name of Vendéans, which they afterwards retained, though the war was far more active out of La Vendée. The pillage committed by them in the Marais caused them to be called brigands, though the greater number did not deserve that appellation. The insurrection extended into the Marais from the environs of Nantes to Les Sables, and into Anjou and Poitou, as far as the environs of Vihiers and Parthenay. . . . Easter recalled all the insurgents to their homes, from which they never would stay away long. To them a war was a sort of sporting excursion of several days; they carried with them a sufficient quantity of bread for the time, and then returned to inflame their neighbours by the accounts which they gave. Places of meeting were appointed for

the month of April. The insurrection was then general and extended over the whole surface of the country. It might be comprised in a line which, commencing at Nantes, would pass through Pornic, the Isle of Noirmoutiers, Les Sables, Luçon, Fontenay, Niort, and Parthenay, and return by Airvault, Thouar, Doué, and St. Florent, to the Loire. The insurrection, begun by men who were not superior to the peasants whom they commanded, excepting by their natural qualities, was soon continued by men of a higher rank. The peasants went to the mansions and forced the nobles to put themselves at their head. The whole Marais insisted on being commanded by Charette. . . . In the Bocage, the peasants applied to Messrs. de Bonchamps, d'Elbée, and de Laroche-Jacquelein, and forced them from their mansions to place them at their head." These gentlemen were afterwards joined by M. de Lescure, a cousin of Henri de Laroche-Jacquelein.—A. Thiers, *History of the French Revolution* (American edition), v. 2, pp. 146-152.

1793 (March-June).—Vigorous measures of the Revolutionary government.—Committee of Public Safety.—Final struggle of Jacobins and Girondists.—Fall of the Girondins.—The news of the defeat of Dumouriez at Neerwinden, which reached Paris on the 21st, "brought about two important measures. Jean Debry, on behalf of the diplomatic Committee, proposed that all strangers should be expelled from France within eight days who could not give a good reason for their residence, and on the same evening the Committee of General Defence was reorganized and placed on another footing. This committee had come into existence in January, 1793. It originally consisted of 21 members, who were not directly elected by the Convention, but were chosen from the seven most important committees. But now, after the news of Neerwinden, a powerful committee was directly elected. It consisted of 24 members, and the first committee contained nine Girondins, nine deputies of the Plain, and six Jacobins, including every representative man in the Convention. . . . The new Committee was given the greatest powers, and after first proposing to the Convention that the penalty of death should be decreed against every émigré over fourteen, and to every one who protected an émigré, it proposed that Dumouriez should be summoned to the bar of the Convention." Early in April, news of the desertion of Dumouriez and the retreat of Custine, "made the Convention decide on yet further measures to strengthen the executive. Marat, who, like Danton and Robespierre, was statesman enough to perceive the need of strengthening the executive, proposed that enlarged powers should be given to the committees; and Isnard, as the reporter of the Committee of General Defence, proposed the establishment of a smaller committee of nine, with supreme and unlimited executive powers—a proposal which was warmly supported by every statesman in the Convention. . . . It is noticeable that every measure which strengthened the terror when it was finally established was decreed while the Girondins could command a majority in the Convention, and that it was a Girondin, Isnard, who proposed the immense powers of the Committee of Public Safety [Comité de Salut Public]. Upon April 6 Isnard brought up a decree defining the powers of the new committee.

It was to consist of nine deputies, to confer in secret; to have supreme executive power, and authority to spend certain sums of money without accounting for them, and it was to present a weekly report to the Convention. These immense powers were granted under the pressure of news from the frontier, and it was obvious that it would not be long before such a powerful executive could conquer the independence of the Convention. Isnard's proposals were opposed by Buzot, but decreed; and on April 7 the first Committee of Public Safety was elected. It consisted of the following members:—Barère, Delmas, Bréard, Cambon, Danton, Guyton-Morveau, Treillard, Lacroix, and Robert Lindet. The very first proposal of the new committee was that it should appoint three representatives with every army from among the deputies of the Convention, with unlimited powers, who were to report to the committee itself. This motion was followed by a very statesmanlike one from Danton. He perceived the folly of the decree of November 18, which declared universal war against all kings. . . . On his proposition the fatal decree . . . was withdrawn, and it was made possible for France again to enter into the comity of European nations. It is very obvious that it was the foreign war which had developed the progress of the Revolution with such astonishing rapidity in France. It was Brunswick's manifesto which mainly caused the attack on the Tuileries on August 10; it was the surrender of Verdun which directly caused the massacres of September. It was the battle of Neerwinden which established the Revolutionary Tribunal, and that defeat and the desertion of Dumouriez which brought about the establishment of the Committee of Public Safety. The Girondins were chiefly responsible for the great war, and its first result was to destroy them as a party. . . . Their early influence over the deputies of the Plain rested on a belief in their statesmanlike powers, but as time went on that influence steadily diminished. It was in vain for Danton to attempt to make peace in the Convention; bitter words on both sides had left too strong an impression ever to be effaced. The Jacobin leaders despised the Girondins; the Girondins hated the Jacobins for having won away power from them. The Jacobins formed a small but very united body, of which every member knew its own mind; they were determined to carry on the Republic at all costs, and to destroy the Girondins as quickly as they could. . . . The desertion of Dumouriez had caused strong measures to be taken by the Convention, . . . and all parties had concurred. . . . But as soon as these important measures had been taken, which the majority of the Convention believed would enable France once more to free her frontiers from the invaders, the Girondins and Jacobins turned upon each other with redoubled ardour, and the death-struggle between them recommenced. The Girondins reopened the struggle with an attack upon Marat. Few steps could have been more foolish, for Marat, though in many ways a real statesman, had from the exaggeration of his language never obtained the influence in the Convention to which his abilities entitled him. . . . But he remained the idol of the people of Paris, and in attacking him the Girondins exasperated the people of Paris in the person of their beloved journalist. On April 11 Guadet read a placard in the Convention, which Marat had posted on the walls of Paris, full of his usual libellous abuse of the Girondins. It was referred to the Committee of Legislation with other writings of Marat," and two days later, on the report of the Committee, it was voted by the Convention (half of its members being absent), that

Marat should be sent before the Tribunal for trial. This called out immediate demonstrations from Marat's Parisian admirers. "On April 15, in the name of 35 sections of Paris, Pache and Hébert demanded the expulsion from the Convention of 22 of the leading Girondists as 'disturbers of the public peace,' including Brissot, Guadet, Vergniaud, Gensonné, Buzot, Barbaroux, Louvet, Pétion, and Lanjuinais. . . . On April 22 the trial of Marat took place. He was unanimously acquitted, although most of the judges of the Revolutionary Tribunal sympathized with the Girondins. . . . The acquittal of Marat was a fearful blow to the Girondin party; they had in no way discredited the Jacobins, and had only made themselves unpopular in Paris."—H. M. Stephens, *History of the French Revolution*, v. 2, ch. 7, 8.

"The ridicule and condemnation under which Marat justly falls do not attach to the patent moral truths he held, but to the manner in which

JEAN PAUL MARAT

he held them. He did not only hold them isolated from other truths—it is the fault of the fanatic so to hold any truth—but he held them as though no other truths existed. And whenever he found his ideal to be in practice working at a friction or stopped dead, his unnourished and acute enthusiasms at once sought a scapegoat, discovered a responsible agent, and suggested a violent outlet, for the delay. He was often right when he denounced a political intriguer: he often would have sacrificed a victim not unjustly condemned, he often discovered an agent partially responsible, and even the violent solutions that he suggested were not always impracticable. But it was the prime error of his tortured mind that beyond victims, and sudden violent clutches at the success of democracy, there was nothing else he could conceive. He was incapable of allowing for imperfections, for stupidities, for the misapprehension of mind by mind, for the mere action of time, and for all that renders human life infinitely complex and infinitely adjustable. Humour, the reflection of such wisdom, he lacked;—'judgment' (as the English

idiom has it) he lacked still more—if a comparative term may be attached to two such absolute vacuities. It must not be forgotten that so complete an absence of certain necessary qualities in the building up of a mind are equivalent to madness. Marat was not sane. His insanity was often generous, the creed to which it was attached was obvious enough, and in the eyes of most of us it is a creed to be accepted. But he worked with it as a madman who is mad on collectivism, let us say, or the rights of property, might work in our society, thinking of his one thesis, shrieking it and foaming at the mouth upon it, losing all control when its acceptance was not even opposed but merely delayed. He was valueless for the accomplishment of the ends of the Revolution. His doctrine and his adherence to it were so conspicuously simple and sincere that it is no wonder the populace made him (for a few months) a sort of symbol of their demand. For the rest, his face, like his character, was tortured; he carried with him a disease of the skin that irritated perpetually his wholly unbalanced temper. Some say (but one must always beware of so-called 'Science' in the reading of history) that a mixture or racial types produced in him a perpetual physical disturbance: his face was certainly distorted and ill-balanced—but physical suggestions of that sort are very untrustworthy. Those who met him in the management of affairs thought him worthless enough; a few who knew him intimately loved him dearly; more who came across him continually were fatigued and irritated by his empty violence. He was, among those young revolutionaries, almost an elderly man; he was (this should never be forgotten) a distinguished scholar in his own trade, that of medicine; and he effected less in the Revolution than any man to whom a reputation of equal prominence happened to attach. He must stand responsible for the massacres of September."—H. Belloc, *French Revolution*, pp. 76-78.—"The Commune of Paris steadily organized the more advanced republicans of the city for an open attack upon the Girondins. . . . Throughout the months of May, preparations for the final struggle went on; it was recognized by both parties that they must appeal to force, and arrangements for appealing to force were made as openly for the coup d'état of May 31 as they had been for that of August 10. On the one side, the Commune of Paris steadily concentrated its armed strength and formed its plan of action; on the other, the leading Girondins met daily at the house of Valazé, and prepared to move decrees in the Convention." But the Girondins were still divided among themselves. Some wished to appeal to the provinces, against Paris, which meant civil war; others opposed this as unpatriotic. On the 31st of May, and on the two days following, the Commune of Paris called out its mob to execute the determined coup d'état. On the last of these three days (June 2), the Convention surrounded, imprisoned and terrorized by armed ruffians, led by Henriot, lately appointed Commander of the National Guard, submissively decreed that the proscribed Girondin deputies, with others, to the number altogether of 31, should be placed under arrest in their own houses. This "left the members of the Mountain predominant in the Convention. The deputies of the Marsh or Plain were now docile to the voice of the Jacobin leaders," whose supremacy was now without dispute. On the preceding day, an attempt had been made, on the order of the Commune, to arrest M. Roland and two others of the ministers. Roland escaped, but Madame Roland, the more important Girondist leader, was taken and consigned to the Abbaye.—

1793 (March-September).—Formation of the great European coalition against revolutionary France.—“The execution of the King, together with the Convention’s decrees of November 19 and December 15, 1792, was a gauntlet thrown down by republican France to the governments of Europe, and the challenge was straightway accepted. The English government expelled the French diplomatic agent from its country, and cemented its alliance with the United Provinces of Holland. The Convention thereupon waited no longer, but declared war against England and Holland February 1, 1793. War against Spain, whose ambassador had vainly attempted to save the life of Louis XVI, and with the Holy Roman Empire, followed a month later. By early spring, 1793, France was at war with the First Coalition, comprising Austria, Prussia, Sardinia, England, Holland, Spain, Portugal, Tuscany, Naples, and the Holy Roman Empire. Had the coalition energetically pressed the war, its troops would soon have forced their way to Paris and there dictated the terms of peace. The governments, however, were either impotent or interested in other enterprises. Prussia considered the dissolution of Poland more important than war against France, and had, by treaty with Russia in January, 1793, gained liberally in the Second Partition. Spain, Holland, and Sardinia had not sufficient forces to attempt invasion. England had no foothold from which to launch an army, and was reduced to the exercise of her sea power and to the offer of subsidies to the continental governments. The burden of the land offensive, therefore, fell upon Austria—and even Austria did not contemplate a decisive invasion of France.”—L. H. Holt and A. W. Chilton, *Brief history of Europe from 1789 to 1815*, pp. 111-112.

1793 (April-August).—Minister Genet in America.—Washington’s proclamation of neutrality. See U. S. A.: 1793: Popular sympathy with French Revolution.

1793 (June).—Flight of most of the Girondists.—Their appeal to the country.—Insurrection in the provinces.—The rising at Lyons, Marseilles, Bordeaux, Toulon.—Progress of the Vendean revolt.—“After this day [of the events which culminated on the 2d of June, but which are commonly referred to as being of “the 31st of May,” when they began], when the people made no other use of their power than to display and to exercise the pressure of Paris over the representation, they separated without committing any excess. . . . La Montaigne caused the committees to be reinstated on the morrow, with the exception of that of public safety. They threw into the majority their most decided members. . . . They deposed those ministers suspected of attachment to the conquered; sent commissioners into the doubtful departments; annulled the project of the constitution proposed by the Girondists; and charged the committee of safety to draw up in eight days a project for the constitution entirely democratical. They pressed forward the recruiting and armament of the revolutionary army—that levy of patriotism en masse. They decreed a forced loan of a million upon the rich. They sent one after the other, ac-

cused upon accused, to the revolutionary tribunal. Their sittings were no longer deliberation, but cursory motions, decreed on the instant by acclamation, and sent immediately to the different committees for execution. They stripped the executive power of the little independence and responsibility it heretofore retained. Continually called into the bosom of their committees, ministers became no more than the passive executors of the measures they decreed. From this day, also, discussion was at an end; action was all. The disappearance of the Girondists deprived the Revolution of its voice. Eloquence was proscribed with Vergniaud, with the exception of those few days when the great party chiefs, Danton and Robespierre, spoke, not to refute opinions, but to intimate their will, and promulgate their orders. The Assemblies became almost mute. A dead silence reigned henceforth in the Convention. In the meanwhile the 22 Girondists [excepting Vergniaud, Gensonné, Ducos, Tonfrède, and a few others, who remained under the decree of arrest, facing all consequences], the members of the Commission of Twelve, and a certain number of their friends, warned of their danger by this first blow of ostracism, fled into their departments, and hurried to protest against the mutilation of the country. . . . Robespierre, Danton, the Committee of Public Safety, and even the people themselves, seemed to shut their eyes to these evasions, as if desirous to be rid of victims whom it would pain them to strike. Buzot, Barbaroux, Guadet, Louvet, Salles, Pétion, Bergeon, Lesage, Cressy, Kervélégan and Lanjuinais, threw themselves into Normandy; and after having traversed it, inciting all the departments between Paris and the Ocean, established at Caen the focus and centre of insurrection against the tyranny of Paris. They gave themselves the name of the Central Assembly of Resistance to Oppression. Bironet and Chasset had arrived at Lyons. The armed sections of this town were agitated with contrary and already bloody commotion [the Jacobin municipality having been overthrown, after hard fighting, and its chief, Chalier, put to death]. Brissot fled to Moulins, Robaut St. Etienne to Nismes, Grangeneuve, sent by Vergniaud, Tonfrède, and Ducos, to Bordeaux, raised troops ready to march upon the capital. Toulouse followed the same impulse of resistance to Paris. The departments of the west were on fire, and rejoiced to see the public, torn into contending factions, offer them the aid of one of the two parties for the restoration of royalty. The mountainous centre of France . . . was agitated. . . . Marseilles enrolled 10,000 men at the voice of Rebecqui and the young friends of Barbaroux. They imprisoned the commissioners of the Convention, Roux and Antiboul. Royalty, always brooding in the south, insensibly transformed this movement of patriotism into a monarchical insurrection. Rebecqui, in despair . . . at seeing loyalty avail itself of the rising in the south, escaped remorse by suicide, throwing himself into the sea. Lyons and Bordeaux likewise imprisoned the envoys of the Convention as Maratists. The first columns of the combined army of the departments began to move in all directions; 6,000 Marseillais were already at Avignon, ready to reascend the Rhone, and form a junction with the insurgents of Nismes and of Lyons. Brittany and Normandy uniting, concentrated their first forces at Evreux.”—A de Lamartine, *History of the Girondists*, v. 3, bk. 43.—The royalists of the west, “during this almost general rising of the departments, continued to extend their enterprises. After their first victories, the Vendéans seized on Bressure, Argenton, and Thouars. Entirely masters of their own coun-

try, they proposed getting possession of the frontiers, and opening the way to revolutionary France, as well as communications with England. On the 6th of June, the Vendean army, composed of 40,000 men, under Cathelineau, Lescure, Stofflet, and La Rochejacquin, marched on Saumur, which it took by storm. It then prepared to attack and capture Nantes, to secure the possession of its own country, and become masters of the course of the Loire. Cathelineau, at the head of the Vendean troops, left a garrison in Saumur, took Angers, crossed the Loire, pretended to advance upon Tours and Lemans, and then rapidly threw himself upon Nantes, which he attacked on the right bank, while Charette was to attack it on the left."—F. A. Mignet, *History of the French Revolution*, ch. 8.

1793 (June-October).—New Jacobin constitution postponed.—Concentration of power in the Committee of Public Safety.—Machine of revolutionary government.—"It was while affairs were in this critical condition that the Mountain undertook the sole conduct of the government in France. They had hitherto resisted all attempts of the Girondists to establish a new constitution in place of that of 1791. They now undertook the work themselves, and in four days drew up a constitution, as simple as it was democratic, which was issued on the 24th of June. Every citizen of the age of 21 could vote directly in the election of deputies, who were chosen for a year at a time and were to sit in a single assembly. The assembly had the sole power of making laws, but a period was fixed during which the constituents could protest against its enactments. The executive power was entrusted to 24 men, who were chosen by the assembly from candidates nominated by electors chosen by the original voters. Twelve out of the 24 were to be renewed every six months. But this constitution was intended merely to satisfy the departments, and was never put into practice. The condition of France required a greater concentration of power, and this was supplied by the Committee of Public Safety. Ever since the 6th of April the original members of the Committee had been re-elected, but on the 10th of July its composition was changed. Danton ceased to be a member, and Barère was joined by Robespierre, St. Just, Couthon, Billaud-Varennes, Collot d'Herbois, and, in a short time, Carnot. These men became the absolute rulers of France. The Committee had no difficulty in carrying their measures in the Convention, from which the opposition party had disappeared. All the state obligations were rendered uniform and inscribed in 'the great book of the national debt.' The treasury was filled by a compulsory loan from the rich. Every income between 1,000 and 10,000 francs had to pay ten per cent., and every excess over 10,000 francs had to be contributed in its entirety for one year. To recruit the army a levée en masse was decreed. 'The young men shall go to war; the married men shall forge arms and transport supplies; the wives shall make tents and clothes and serve in the hospitals; the children shall tear old linen into lint; the aged shall resort to the public places to excite the courage of the warriors and hatred against kings.' Nor were measures neglected against domestic enemies. On the 6th of September a revolutionary army, consisting of 6,000 men and 1,200 artillery men, was placed at the disposal of the Committee to carry out its orders throughout France. On the 17th the famous 'law of the suspects' was carried. Under the term 'suspect' were included all those

who by words, acts or writings had shown themselves in favour of monarchy or of federalism, the relatives of the emigrants, etc., and they were to be imprisoned until the peace. As the people were in danger of famine, a maximum price, already established for corn, was decreed for all necessaries; if a merchant gave up his trade he became a suspect, and the hoarding of provisions was punished by death. On the 10th of October the Convention definitely transferred its powers to the Committee, by subjecting all officials to its authority and by postponing the trial of the new constitution until the peace."—R. Lodge, *History of modern Europe*, ch. 23, sect. 11.—The Committee of Public Safety—the "Revolutionary Government," as Danton had named it, on the 2d of August, when he demanded the fearful powers that were given to it—"disposed of all the national forces; it appointed and dismissed the ministers, generals, Representatives on Mission, the judges and juries of the Revolutionary Tribunal. The latter instrument became its strong arm; it was, in fact, a court martial worked by civil magistrates. By its agents it directed the departments and armies, the political situation without and within, striking down at the same time the rebels within and the enemies without: for, together with the constitution were, of course, suspended the municipal laws and the political machinery of the communes; and thus cities and villages hitherto indifferent or opposed to the Revolution were republicanized. By the Tribunal it disposed of the persons of individuals; by requisition and the law of maximum (with which we are going to be better acquainted) it disposed of their fortunes. It can, indeed, be said that the whole of France was placed in a state of siege; but that was the price of its salvation. . . . But Danton has committed a great mistake,—one that he and especially France, will come to rue. He has declined to become a member of the Revolutionary Government, which has been established on his motion. 'It is my firm resolve not to be a member of such a government,' he had said. In other words, he has declined re-election as a member of the Committee de Salut Public, now it has been erected into a dictatorship. He unfortunately lacked all ambition. . . . When afterwards, on Sept. 8, one Gaston tells the Convention, 'Danton has a mighty revolutionary head. No one understands so well as he to execute what he himself proposes. I therefore move that he be added to the Revolutionary Government, in spite of his protest,' and it is so unanimously ordered, he again peremptorily declines. 'No, I will not be a member; but as a spy on it I intend to work.' A most fateful resignation! for while he still for a short time continues to exercise his old influence on the government, both from the outside, in his own person, and inside the Committee, in the person of Héroult de Sechelles, selected in his place, he very soon loses ground more and more,—so much so even that Héroult, his friend, is 'put in quarantine,' as was said in the Committee. And very natural. A statesman cannot have power when he shirks responsibility, and without power he soon loses all influence with the multitude. Those who now succeed him in power are Robespierre, Barère, Billaud-Varennes, and Carnot,—the two last very good working members, good men of the second rank, but after Danton not a single man is left fit to be leader."—L. Gronlund, *Ça Ira! or Danton in the French Revolution*, ch. 4.

1793 (July).—Assassination of Marat by Charlotte Corday.—“Amongst those who had placed faith in the Girondists and their ideals was a young woman of Normandy, Charlotte Corday. . . . When the mob of Paris rose and drove with insult from the Convention those who in her eyes were the heroic defenders of the universal principles of truth and justice, she bitterly resented the wrong that had been done, not only to the men themselves, but to that France of which she regarded them as the true representatives. Owing to Marat’s persistent cry for a dictatorship and for shedding of blood, it was he who, in the departments, was accounted especially responsible both for the expulsion of the Girondists and for the tyranny which now began to weigh as heavily upon the whole country as it had long weighed upon the capital. Incapable as all then were of comprehending the causes which had brought about the fall of the Girondists, Charlotte Corday imagined that by putting an end to this man’s life, she could also put an end to the system of government which he advocated. Informing her friends that she wished to visit England, she left Caen and travelled in the diligence to Paris. On her arrival she purchased a knife, and afterwards obtained entrance into Marat’s house on the pretext that she brought news which she desired to communicate to him. She knew that he would be eager to obtain intelligence of the movements of the Girondist deputies still in Normandy. Marat was ill at the time, and in a bath when Charlotte Corday was admitted. She gave him the names of the deputies who were at Caen. ‘In a few days,’ he said, as he wrote them hastily down, ‘I will have them all guillotined in Paris.’ As she heard these words she plunged the knife into his body and killed him on the spot. The cry uttered by the murdered man was heard, and Charlotte, who did not attempt to escape, was captured and conveyed to prison amid the murmurs of an angry crowd. It had been from the first her intention to sacrifice her life for the cause of her country, and, glorying in her deed, she met death with stoical indifference. ‘I killed one man,’ she said, when brought before the revolutionary court, ‘in order to save the lives of 100,000 others.’ . . . His [Marat’s] murder brought about contrary results to those which the woman who ignorantly and rashly had flung away her life hoped by the sacrifice to effect. . . . He was regarded as a martyr by no small portion of the working population of Paris. . . . His murder excited indignation beyond the comparatively narrow circle of those who took an active part in political life, while at the same time it added a new impulse to the growing cry for blood.”—B. M. Gardiner, *French Revolution*, ch. 7.

1793 (July-December).—Civil war.—Sieges of Lyons and Toulon.—Submission of Caen, Marseilles and Bordeaux.—Crushing of the Vendéans, and triumph of the Republicans.—“The insurgents in Calvados [Normandy] were easily suppressed; at the very first skirmish at Vernon [July 13], the insurgent troops fled. Wimpfen endeavoured to rally them in vain. The moderate class, those who had taken up the defence of the Girondists, displayed little ardour or activity. When the constitution was accepted by the other departments, it saw the opportunity for admitting that it had been in error, when it thought

it was taking arms against a mere factious minority. This retraction was made at Caen, which had been the headquarters of the revolt. The Mountain commissioners did not sully this first victory with executions. General Carteaux, on the other hand, marched at the head of some troops against the sectionary army of the south; he defeated its force, pursued it to Marseilles, entered the town [August 23] after it, and Provence would have been brought into subjection like Calvados, if the royalists, who had taken refuge at Toulon, after their defeat, had not called in the English to their aid, and placed in their hands this key to France. Admiral Hood entered the town in the name of Louis XVII., whom he proclaimed king, disarmed the fleet, sent for 8,000 Spaniards by sea, occupied the surrounding forts, and forced Carteaux, who was advancing against Toulon, to fall back on Marseilles. Notwithstanding this check, the conventionalists succeeded in isolating the insurrection, and this was a great point. The Mountain commissioners had made their entry into the rebel capitals; Robert Lindet into Caen; Tallien into Bordeaux; Barras and Fréron into Marseilles. Only two towns remained to be taken—Toulon and Lyons. A simultaneous attack from the south, west, and centre was no longer apprehended, and in the interior the enemy was only on the defensive. Lyons was besieged by Kellermann, general of the army of the Alps; three corps pressed the town on all sides. The veteran soldiers of the Alps, the revolutionary battalions and the newly levied troops, reinforced the besiegers every day. The people of Lyons defended themselves with all the courage of despair. At first, they relied on the assistance of the insurgents of the south; but these having been repulsed by Carteaux, the Lyonnese placed their last hope in the army of Piedmont, which attempted a diversion in their favour, but was beaten by Kellermann. Pressed still more energetically, they saw their first position carried. Famine began to be felt, and courage forsook them. The royalist leaders, convinced of the inutility of longer resistance, left the town, and the republican army entered the walls [October 6], where they awaited the orders of the convention. A few months after, Toulon itself [in the siege of which Napoleon Bonaparte commanded the artillery], defended by veteran troops and formidable fortifications, fell into the power of the republicans. The battalions of the army of Italy, reinforced by those which the taking of Lyons left disposable, pressed the place closely. After repeated attacks and prodigies of skill and valour, they made themselves masters of it, and the capture of Toulon finished what that of Lyons had begun [December 10]. Everywhere the convention was victorious. The Vendéans had failed in their attempt upon Nantes, after having lost many men, and their general-in-chief, Cathelineau. This attack put an end to the aggressive and previously promising movement of the Vendean insurrection. The royalists repassed the Loire, abandoned Saumur, and resumed their former cantonments. They were, however, still formidable; and the republicans, who pursued them, were again beaten in La Vendée. General Biron, who had succeeded General Berruyer, unsuccessfully continued the war with small bodies of troops; his moderation and defective system of attack caused him to be replaced by Canclaux and Rossignol, who were not more fortunate than he. There were two leaders, two armies, and two centres of operation. . . . The committee of public safety soon remedied this, by appointing one sole general-in-chief, Lechelle,

and by introducing war on a large scale into La Vendée. This new method, aided by the garrison of Mayence, consisting of 17,000 veterans, who, relieved from operations against the coalesced powers after the capitulation, were employed in the interior, entirely changed the face of the war. The royalists underwent four consecutive defeats, two at Châtillon, two at Cholet [the last being October 17]. Lescure, Bonchamps, and d'Elbée were mortally wounded; and the insurgents, completely beaten in Upper Vendée, and fearing that they should be exterminated if they took refuge in Lower Vendée, determined to leave their country to the number of 80,000 persons. This emigration through Brittany, which they hoped to arouse to insurrection, became fatal to them. Repulsed before Granville, utterly routed at Mons [Le Mans, December 12], they were destroyed at Savenay [December 23], and barely a few thousand men, the wreck of this vast emigration, returned to Vendée. These disasters, irreparable for the royalist cause, the taking of their land of Noirmoutiers from Charette, the dispersion of the troops of that leader, the death of Larochejacquelin, rendered the republicans masters of the country. The committee of public safety, thinking, not without reason, that its enemies were beaten but not subjugated, adopted a terrible system of extermination to prevent them from rising again. General Thurreau surrounded Vendée with sixteen entrenched camps; twelve movable columns, called the infernal columns, overran the country in every direction, sword and fire in hand, scoured the woods, dispersed the assemblies, and diffused terror throughout this unhappy country."—F. A. Mignet, *History of the French Revolution*, ch. 8.

1793 (July-December).—Progress of the war of the coalition.—Dissensions among the allies.—Unsuccessful siege of Dunkirk.—French victory of Hondschoote.—Successful operations on the Rhine and elsewhere.—"The civil war in which France for a moment appeared engulfed was soon confined to a few narrowing centres. What, in the meantime, had been the achievements of the mighty Coalition of banded Europe? Success, that might have been great, was attained on the Alpine and Pyrenean frontiers; and had the Piedmontese and Spaniards been well led they could have overrun Provence and Rousillon, and made the insurrection of the South fatal. But here, as elsewhere, the Allies did little; and, though defeated in almost every encounter, the republican levies held their ground against enemies who nowhere advanced. It was, however, in the North and the North-east that the real prize of victory was placed; and no doubt can exist that had unanimity in the councils of the Coalition prevailed, or had a great commander been in its camp, Paris might have been captured without difficulty, and the Revolution been summarily put down. But the Austrians, the Prussians, and the English, were divided in mind; they had no General capable of rising above the most ordinary routine of war; and the result was that the allied armies advanced tardily on an immense front, each leader thinking of his own plans only, and no one venturing to press forward boldly, or to pass the fortresses on the hostile frontiers, though obstacles like these could be of little use without the aid of powerful forces in the field. In this manner half the summer was lost in besieging May-

ence, Valenciennes, and Condé; and when, after the fall of these places [July-August], an attempt was made to invade Picardy, dissensions between the Allies broke out, and the British contingent was detached to besiege Dunkirk, while the Austrians lingered in French Flanders, intent on enlarging by conquest Belgium, at that period an Austrian Province. Time was thus gained for the French armies, which, though they had made an honorable resistance, had been obliged to fall back at all points, and were in no condition to oppose their enemy; and the French army in the North, though driven nearly to the Somme, within a few marches of the capital, was allowed an opportunity to recruit its strength, and was not, as it might have been easily, destroyed. A part of the hastily raised levies was now incorporated in its ranks; and as these were largely composed of seasoned men from the old army of the Bourbon Monarchy, and from the volunteers of Valmy and Jemmapes, a respectable force was before long mustered. At the peremptory command of the Jacobin Government, this was at once directed against the invaders, who did not know what an invasion meant. The Duke of York, assailed with vigor and skill, was compelled to raise the siege of Dunkirk [by the French victory at Hondschoote, September 8]; and, to the astonishment of Europe, the divided forces of the halting and irresolute Coalition began to recede before the enemies, who saw victory yielded to them, and who, feeble soldiers as they often were, were nevertheless fired by ardent patriotism."—W. O'C. Morris, *French Revolution*, ch. 6.—"The English on their part confined themselves to one important operation. They had on the outbreak of war despatched a fleet to the Mediterranean under the command of Lord Hood, and on the 4th of August 1793 the insurgents at Toulon, in the course of their opposition to the Convention, surrendered their city to the allied English and Spanish fleets. In Lyons the same progress of opposition was to be observed. The original insurgents had professed federalist opinions, but when the Convention sent an army against them open royalists took the place of the federalists. The vigorous action of the new government soon freed the French Republic from its foreign and internal foes. Carnot, on taking charge of military measures, saw that the only means of defeating the invaders was to take advantage of the numbers of his soldiers and to act in masses. Acting on this policy General Houchard raised the siege of Dunkirk and defeated the English and Hanoverians in the battle of Hondschoote (8th September). In spite of his victory Houchard was disgraced for not following it up with vigour. Jourdan, his successor, carrying out the same policy, concentrated his army against the Austrians, raised the siege of Maubeuge, and defeated the Austrians at Wattignies (16th October). [See below: 1793 (October).] These victories did not drive the Anglo-Austrian army out of France, but they stopped the progress of the allies and caused them to stand upon the defensive. Farther south the same vigour was displayed. Saint-Just restored discipline in the armies of the Rhine and the Moselle. Hoche, at the head of the latter, won the victory of the Geisberg (25th September) over the Austrians and Prussians, while Pichegru, at the head of the Army of the Rhine, relieved Landau and drove Würmser across the Rhine. Almost at the same time a powerful army, of which the best regiments were the former garrison of Valenciennes, captured Lyons on the 9th of October, and on the 18th of December Toulon was retaken by an army under

the command of General Dugommier. It was at the siege of Toulon that Napoleon Bonaparte first made himself conspicuous and won the rank of general of brigade. The republican armies were equally successful against the Spaniards. The Army of the Eastern Pyrenees, under D'Aoust, recovered Roussillon, while that of the Western Pyrenees, under Müller, drove the Spaniards across the Bidassoa. In La Vendée equal success was achieved. The former garrison of Mayenne, which was composed of excellent soldiers who had gained experience and discipline from their long resistance to the Prussians, destroyed the Vendéan armies, and the insurrection of the province was severely punished by Carrier at Nantes and by the infernal columns which, under General Turreau, were directed to devastate the country. These repeated successes in every quarter reconciled the French people to the hideous régime of the Reign of Terror. Its despotism was excused because of its success, and its absolute authority reluctantly submitted to as a necessary evil."—H. M. Stephens, *European history, 1789-1815, period 7, pp. 139-141.*

1793 (August).—Emancipation in Santo Domingo proclaimed. See HAITI, REPUBLIC OF: 1632-1803.

1793 (September-December).—"Reign of Terror" becomes the "Order of the Day."—Trial and execution of Marie Antoinette, Madame Roland, and the Girondists.—"On the 16th of September, the Faubourg Saint-Antoine surrounded the Hôtel de Ville, clamoring for 'Bread.' Hébert and Chaumette appeased the mob by vociferous harangues against rich men and monopolists, and by promising to raise a revolutionary army with orders to scour the country, empty the granaries, and put the grain within reach of the people. 'The next thing will be a guillotine for the monopolists,' added Hébert. This had been demanded by memorials from the most ultra provincial Jacobins. The next day the Convention witnessed the terrible reaction of this scene. At the opening of the session Merlin de Douai proposed and carried a vote for the division of the revolutionary tribunal into four sections, in order to remedy the dilatoriness complained of by Robespierre and the Jacobins. The municipality soon arrived, followed by a great crowd; Chaumette, in a furious harangue, demanded a revolutionary army with a travelling guillotine. The ferocious Billaud-Varenes declared that this was not enough, and that all suspected persons must be arrested immediately. Danton interposed with the powerful eloquence of his palmy days; he approved of an immediate decree for the formation of a revolutionary army, but made no mention of the guillotine. . . . Danton's words were impetuous, but his ideas were politic and deliberate. His motions were carried, amid general acclamation. But the violent propositions of Billaud-Varenes and others were also carried. The decree forbidding domiciliary visits and night arrests, which had been due to the Girondists, was revoked. A deputation from the Jacobins and the sections demanded the indictment of the 'monster' Brissot with his accomplices, Vergniaud, Gensonné, and other 'miscreants.' 'Lawgivers,' said the spokesman of the deputation, 'let the Reign of Terror be the order of the day!' Barère, in the name of the Committee of Public Safety, obtained the passage of a decree organizing an armed force to restrain counter-revolutionists and protect supplies. Fear led him to unite with the most violent, and to adopt the great motto of the Paris Commune, 'Let the Reign of Terror be the order of the day!' 'The royalists are conspiring,' he said; 'they want blood. Well they shall have that of the

conspirators, of the Brissots and Marie Antoinettes!' The association of these two names shows what frenzy prevailed in the minds of the people. The next day, September 6, two of the most formidable Jacobins, the cold, implacable Billaud-Varenes and the fiery Collot d'Herbois, were added to the Committee of Public Safety. Danton persisted in his refusal to return to it. This proves how mistaken the Girondists had been in accusing him of aspiring to the dictatorship. He kept aloof from the Committee chiefly because he knew that they were lost, and did not wish to contribute to their fall. Before leaving the ministry Garat had tried to prevent the Girondists from being brought to trial; upon making known his wish to Robespierre and Danton, he found Robespierre implacable, while Danton, with tears coursing down his rugged cheeks, replied, 'I cannot save them!' . . . On the 10th of October Saint-Just, in the name of the Committee of Public Safety, read to the Assembly an important report upon the situation of the Republic. It was violent and menacing to others beside the enemies of the Mountain; Hébert and his gang might well tremble. He inveighed not only against those who were plundering the government, but against the whole administration. . . . Saint-Just's report had been preceded on the 3d of October by a report from the new Committee of Public Safety, concluding with the indictment of 40 deputies; 39 were Girondists or friends of the Gironde; the fortieth was the ex-Duke of Orleans. Twenty-one of these 39 were now in the hands of their enemies, and of these 21 only 9 belonged to the first deputies indicted on the 2d of June; the remainder had left Paris hoping to organize outside resistance, and had been declared outlawed. The deputies subsequently added to this number were members of the Right who had signed protests against the violation of the national representation on that fatal day. . . . It was decided at the same session to bring the 40 deputies, together with Marie Antoinette, to trial. The Jacobins and the commune had long been demanding the trial of the unhappy queen, and were raising loud clamors over the plots for her deliverance. She might perhaps have escaped from the Temple if she would have consented to leave her children. During July a sorrow equal to that of the 21st of January had been inflicted on her; she had been separated from her young son under the pretence that she treated him like a king, and was bringing him up to make 'a tyrant of him.' The child was placed in another part of the Temple, and his education was intrusted to a vulgar and brutal shoemaker, named Simon. Nevertheless the fate of Marie Antoinette at this epoch was still doubtful; neither the Committee of Public Safety nor the ministry desired her death. While Lebrun, the friend of the Girondists, was minister of foreign affairs, a project had been formed which would have saved her life. Danton knew of it and aided it. . . . This plan was a negotiation with Venice, Tuscany, and Naples, the three Italian States yet neutral, who were to pledge themselves to maintain their wavering neutrality, in consideration of a guaranty of the safety of Marie Antoinette and her family. Two diplomatic agents who afterwards held high posts in France, Marat and Sémonville, were intrusted with this affair. As they were crossing from Switzerland into Italy, they were arrested, in violation of the law of nations, upon the neutral territory of the Grisons by an Austrian detachment (July 25). . . . At tidings of the arrest of the French envoys, Marie Antoinette was separated from her daughter and sister-in-law Elizabeth, and

transferred to the Conciergerie. On the 14th of October she appeared before the revolutionary tribunal. To the accusation of the public prosecutor, Fouquier-Tinville, made up of calumnies against her private life, and for the most part well-founded imputations against her political conduct, she opposed a plausible defence, which effaced as far as possible her part in the late government. . . . The following questions were put to the jurors: 'Has Marie Antoinette aided in movements designed to assist the foreign enemies of the Republic to open French territory to them and to facilitate the progress of their arms? Has she taken part in a conspiracy tending to incite civil war?' The answer was in the affirmative, and the sentence of death was passed on her. The decisive portions which we now possess of the queen's correspondence with Austria had not then been made public; but enough was known to leave no doubt of her guilt, which had the same moral excuses as that of her husband. . . . She met death [October 16] with courage and resignation. The populace who had hated her so much did not insult her last moments. . . . A week after the queen's death the Girondists were summoned before the revolutionary tribunal. Brissot and Lasource alone had tried to escape this bloody ordeal, and to stir up resistance against it in the South. Vergniaud, Gensonné, and Valazé remained unshaken in their resolve to await trial. Gensonné, who had been placed in the keeping of a Swiss whose life he had saved on the 10th of August, and who had become a gendarme, might have escaped, but he refused to profit by this man's gratitude. . . . The act of indictment drawn up by the ex-Feuillant Amar was only a repetition of the monstrous calumnies which had circulated through the clubs and the journals. Brissot was accused of having ruined the colonies by advocating the liberation of slaves, and of having drawn foreign arms upon France by declaring war on kings. The whole trial corresponded to this beginning. . . . On the 20th the Jacobins appeared at the bar of the Convention, and called for a decree giving the jurors of the revolutionary tribunal the right to bring the proceedings to a close as soon as they believed themselves sufficiently enlightened. Robespierre and Barère supported the Jacobin demand. Upon Robespierre's motion it was decreed that after three days' proceedings, the jurors might declare themselves ready to render their verdict. The next day the jurors availed themselves of their privilege, and declared themselves sufficiently informed, although they had not heard the evidence for acquittal, neither the accused nor their counsel having been allowed to plead their cause. Brissot, Vergniaud, Gensonné, Valazé, Bishop Fauchet, Ducos, Boyer-Fonfrède, Lasource, and their friends were declared guilty of having conspired against the unity and indivisibility of the Republic, and against the liberty and safety of the French people. . . . Danton, who had not been an accomplice in their death, had retired to his mother's home at Arcis-sur-Aube, that he might not be a witness thereof. The condemned were brought back to hear their sentence. The greater part of them rose up with a common impulse, and cried, 'We are innocent! People, they are deceiving you!' The crowd remained motionless and silent. . . . At midnight they partook of a last repast, passing the rest of the night in converse about their native land, their remnant of life being cheered by news of victory and pleasant sallies from young Ducos, who might have escaped, but preferred to share his friend Fonfrède's fate. Vergniaud had been given a subtle poison by

Condorcet, but threw it away, choosing to die with his companions. One of his noble utterances gives us the key to his life. 'Others sought to consummate the Revolution by terror; I would accomplish it by love.' Next day, October 31, at noon, the prisoners were led forth, and as the five carts containing them left the Conciergerie, they struck up the national hymn . . . and shouts of 'Long live the Republic.' The sounds died away as their number decreased, but did not cease until the last of the 21 mounted the fatal platform. . . . The murderers of the Girondists were not likely to spare the illustrious woman who was at once the inspiration and the honor of that party, and the very same day Madame Roland who had been for five months a prisoner at St. Pelagie and the Abbaye, was transferred to the Conciergerie. Hébert and his followers had long clamored for her head. During her captivity she wrote her *Memoirs*, which unfortunately have not been preserved complete; no other souvenir of the Revolution equals this, although it is not always reliable, for Madame Roland had feminine weaknesses of intellect, despite her masculine strength of soul; she was prejudiced against all who disagreed with her, and regarded caution and compromise with a noble but impolitic scorn. . . . The 18th Brumaire (November 10), she was summoned before the revolutionary tribunal; when she left her cell, clad in white, her dark hair floating loosely over her shoulders, a smile on her lips and her face sparkling with life and animation. . . . She was condemned in advance, not being allowed a word in her own defence, and was declared guilty of being an author or accomplice 'of a monstrous conspiracy against the unity and indivisibility of the Republic.' She heard her sentence calmly, saying to the judges: 'You deem me worthy the fate of the great men you have murdered I will try to display the same courage on the scaffold.' She was taken directly to the Place de la Revolution, a man condemned for treason being placed in the same cart, who was overwhelmed with terror. She passed the mournful journey in soothing him, and on reaching the scaffold bid him mount first, that his sufferings might not be prolonged. As she took her place in turn, her eye fell on a colossal statue of Liberty, erected August 10, 1793. 'O Liberty,' she cried, 'what crimes are committed in thy name!' Some say that she said, 'O Liberty, how they have deceived thee!' Thus died the noblest woman in history since the incomparable Joan, who saved France! . . . The bloody tribunal never paused; famous men of every party succeeded each other at the fatal bar, the ex-Duke of Orleans among them, but four days earlier than Madame Roland. . . . The day after Madame Roland's trial began that of the venerable Bailli, ex-mayor of Paris and ex-president of the Constituent Assembly, a man who played a great part early in the Revolution, but faded out of sight with the constituent power."—H. Martin, *Popular history of France, 1789-1877*, v. 1, ch. 16.

1793 (October).—Battle of Wattignies sometimes called "the chief feat of arms of the Republic."—Carnot, Napoleon's predecessor.—"The fate of the Queen and of the Republic had each come to a final and critical issue when the light broke, dully in either place, over Paris and over

the pastures of the frontier. There the army lay to arms in the valley, with Coburg entrenched upon the ridge above them, and beyond him the last famine . . . [which had decimated] Maubeuge; from dawn the French lines could hear, half a day's march to the northward, the regular boom of the bombardment. But Carnot was now come. . . . While the Republic . . . held the old world prisoner in Paris, and tortured it in the person of the Queen, out on the frontier in the water-meadows of Avesnes, the Republic lay in its chief peril from the old world free and armed. Coburg and every privilege held the crest of the hills invincibly, and Maubeuge was caught fast, unreachable beyond the entrenchments of that ridge. . . . Malplaquet lay just before the [French] army; within a march, Fleurus; within sound of cannon, Jemappes. Up above them beyond that wood of Avesnes, the line of the heights along the sky, was the enemy. . . . And all day long boomed to the north behind the hills the sullen guns before Maubeuge. At any hour that dull repeated sound might cease, and it would mean that the last fortress had fallen. All that day [October 13] Carnot passed in silence. . . . An hour before dusk the six generals were called to Carnot's tent, and here and there the bugles roused the troops called for reconnaissance. These few detachments crossed the woods, pierced gaps in the hedges, to prepare the advance of the morrow, noted and exchanged shots with the outposts of the evening, and at evening they retired. As they retired Carnot gave orders to the guns. Out of effective range, vague and careless of a target, they fired and proclaimed the presence of a relieving army to the besieged. Maubeuge, in that still evening, during a lull of the siege-pieces, heard those French guns, and Ferrant and the general officers with him counselled a sortie. Only Chancel stood out, but Chancel was in command of the camp of Maubeuge, and his authority was unassailable. He did not distinguish the French fire, he thought it Austrian; no instinct moved him. Therefore, all the next day, while the battle was engaged, the garrison of Maubeuge failed to move; and later, for this error, Chancel was tried and killed. . . . The troops fell back again through the wood of Avesnes and slept the last sleep before the battle. . . . Tuesday, October 15. A little before dawn the French bugles upon the frontier roused the troops of Avesnes; their calls ran down the line, they passed from the Diane to the Générale, the woods before them sent back echoes, and soon the army moved. Far off upon the left Fromentin, upon the far right Duquesnoy, began marching forwards and inwards converging, but the main body in the centre took the high road, which, if it could force its passage, would lead them straight to Maubeuge. . . . The guns began. Among the batteries of the French (too few for their task), two batteries, one of sixteen-pounders, the other of twelve, were the gift of the city of Paris. By some accident these, though ill-manned, silenced the Austrian fire at one critical and central point above Dourlers itself and close to the highroad. . . . Carnot seized upon the moment and ordered the charge. As his columns advanced to carry Dourlers he sent word at full speed to either wing that each must time itself by the centre, and forbade an advance upon the left or right until the high road should be forced and the centre of the Austrian position pierced or confused. . . . The front was long—over five miles—he could not enforce sagacity nor even be certain of intelligence, and as he doubted and feared the action of his distant lieutenants, he saw the cen-

tre advancing beneath his eyes. The Austrian cannon had abandoned the duel. The French line approached Dourlers, deployed, and began the ascent. A sudden and heavy fire of musketry from the hollow road and from the hedges met the sixteen thousand as they charged; they did not waver, they reached the garden walls, and closed until, to those watching from the hill, the attempt was confused and hidden by a rolling smoke and the clustered houses of the village. It was past mid-morning. . . . Carnot had come down the hill from the fork of the roads; he, and Jourdan beside him, followed behind the assault, bringing the headquarters of that general plan some half-mile forward. So they knew that the village of Dourlers was held. It was noon before the place was secured. . . . It was certain that the struggle for this central village would be desperate: all depended upon the extreme wings. If these (and both of them) could hold hard and neither advance too far up the slope nor suffer (either of them) a beating-in, then the work at Dourlers would be decisive. . . . The French carried it, they went beyond, they were almost upon the ridge above it. In the upland field below the crest of wood the Austrian cavalry under Müffling struck them in flank, and they were disordered. They were back in the village of Dourlers, and the fight for it was from house to house and from window to window. Twice it was cleared, twice lost. . . . [In the night Carnot received a note] said to have been the news that the lines of Weissenbourg were forced. . . . The Prussians were free to pass those gates between the Ardennes and the Vosges. Then Maubeuge was the last hold remaining; the very last of all. Jourdan proposed . . . some plan for reinforcing the defeated left and of playing some stalemate of check and countercheck against the enemy; but Carnot was big with new things. He conceived an adventure possible only from his knowledge of what he commanded; he dismissed the mere written traditions of war which Jourdan quoted because he knew that now—and within twelve hours—all must certainly be lost or won. . . . Carnot had determined to choose 7,000 [men], to forbid them rest, to march them right along his positions and add them to the 8,000 on his right extreme wing, and then at morning, if men so treated could still charge, to charge with such overwhelming and unexpected forces on the right, where no such effort was imagined, and so turn the Austrian line. . . . The 16th of October broke upon the Flemish Hills: the men who had endured that night-march along the front of the battle-field, the men who had received them among the positions of the extreme right, still drooped under the growing light and were invigorated by no sun. . . . The downward slope, which formed the eastern end of the Austrian line, the low rounded slope whose apex was the spire of the village, was but slightly defended, for it was but the extreme end of a position, and who could imagine then—or who *now*—that march through the sleepless night, or that men so worn should yet be ready for new action with the morning? No reinforcement, Coburg knew, could come from behind that army; and how should he dream that Carnot had found the power to feed the fortunes of the French from their own vitals and to drag these shambling 7,000, wrenched from west to east during the darkness: or how, if such a thing had been done, could any man believe that, such a torture suffered, the 7,000 could still charge? Yet, had Coburg known the desperate attempt he would have met it, he would have covered that ultimate flank of his long ridge and reinforced it

from his large reserve. But the deep mist and the dead silence harshly enforced during the night-march had hidden all the game, and in front of Wattignies, holding that round of sloping fields and the low semicircular end of the ridge before the village, there were but 3,000. . . . These, in that morning, expecting nothing but perhaps the few troops as they had met easily the day before, waited under the mist in formation and heard no sound. . . . As the mist finally lifted, the wide plain showed below them rolling southwards, a vast space of wind and air, and at the same moment they heard first bugles, then the shouts of command, and lastly the rising of the Marseillaise: Gaul was upon them. . . . The few heavy guns of the Austrians there emplaced were trained too late to check the onrush. The little pieces of the climbing and the surging men were dragged by laniards, unmasked behind gaps in the hurrying advance, crashed grape and were covered again for a moment by the living cover of the charge. The green at the hilltop was held, the poor yards and byres of Wattignies were scoured and thundered through, and Carnot, his hat upon his sword, and Duquesnoy, his face half blood, and all the host glorified to find before them in their halting midday sweat when the great thrust was over, the level fields of the summit, the Austrian line turned, and an open way between them and Maubeuge. . . . The strong line of Coburg was turned. Its strict discipline preserved it, as did the loose order of the Republican advance and the maddened fatigue of the young men who had just conquered: for these could work a miracle but not yet achieve a plan. The enemy fell back in order, sombre, massed and regular, unharassed, towards the Sambre. The stragglers French soldiery . . . possessed the main road unhindered; and that evening drank with their comrades in Maubeuge. In this way was accomplished what a principal critic of the art of war has called 'The chief feat of arms of the Republic.'—H. Belloc, *Marie Antoinette*, pp. 502, 509-511, 513-515, 519, 522, 523, 528, 529, 533-535.

"Carnot, the predecessor of Napoleon, and the organizing soldier of the early revolutionary wars, owed his power to backbone. He had not only a good solidity of brain, but an astonishing power of using it for hours and hours on end. This he owed perhaps to the excellent physical stock of which he came, the eldest of a very large family born to a notable lawyer in Burgundy. It was Carnot's pride to hold a commission in the learned arms which were to transform at that moment the art of war: for as Bonaparte, his successor, was a gunner, so he was a sapper. His practice of exact knowledge in application, and the liberal education which his career demanded, further strengthened the strong character he had inherited. More important still, in his democratic views he was what none of the older officers had been, convinced and sincere. He had not come within the influence of the very wealthy or of the very powerful. He was young, and he knew his own mind not only in matters of political faith but in the general domain of philosophy, and in the particular one of military science. It has been said of him that he invented the revolutionary method of strategical concentration and tactical massing in the field. There is some truth in this; but the method would not have been possible had he not also invented, in company with Danton, and supported after Danton left power, a universal system of conscription. Carnot understood, as only trained soldiers can, the value of numbers, and he depended with great sagacity upon

*the national temper* as at Wattignies, which was a victory directly due to his genius, though it was novel in him to have massed troops suddenly upon the right after a check on the extreme left of the field, yet the novelty would have been of no effect had he not comprehended that, with his young fellow-countrymen as troopers, he could depend upon a charge delivered after thirty-six hours of vigil. He used not only the national but also the revolutionary temper in war. One of the chief features, for instance, of the revolutionary armies when they began to be successful, was the development of lines of skirmishers who pushed out hardily before the main bodies and were the first in the history of modern warfare to learn the use of cover. This development was spontaneous: it was produced within and by each unit, not by any general command. But Carnot recognized it at Hondschoote and used it ever after. The stoical inflexibility of his temper is the noblest among the many noble characters of his soul. He never admitted the empire, and he suffered exile, seeming thereby in the eyes of the vilest and most intelligent of his contemporaries, Fouché, to be a mere fool. He was as hard with himself as with others, wholly military in the framework of his mind, and the chief controller of the Terror, which he used, as it was intended to be used, for the military salvation of the republic."—H. Belloc, *French Revolution*, pp. 74-76.

1793 (October).—Life in Paris during the Reign of Terror.—Gaiety in the prisons.—Tricoteuses, or knitting women.—Revolutionary costumes and modes of speech.—Guillotine as plaything and ornament.—"By the end of October, 1793, the Committee of General Security had mastered Paris, and established the Reign of Terror there by means of the Revolutionary Tribunal, and could answer to the Great Committee of Public Safety for the tranquillity of the capital. There were no more riots; men were afraid even to express their opinions, much less to quarrel about them; the system of denunciation made Paris into a hive of unpaid spies, and ordinary crimes, pocket-picking and the like, vanished as if by magic. Yet it must not be supposed that Paris was gloomy or dull; on the contrary, the vast majority of citizens seemed glad to have an excuse to avoid politics, of which they had had a surfeit during the last four years, and to turn their thoughts to the literary side of their favourite journals, to the theatres, and to art. . . . The dull places of Paris were the Revolutionary Committees, the Jacobin Club, the Convention, the Hôtel de Brienne, where the Committee of General Security sat, and the Pavillon de l'Égalité, formerly the Pavillon de Flore, in the Tuileries, where the Great Committee of Public Safety laboured. . . . Elsewhere men were lighthearted and gay, following their usual avocations, and busy in their pursuit of pleasure or of gain. It is most essential to grasp the fact that there was no particular difference, for the vast majority of the population, in living in Paris during the Reign of Terror and at other times. The imagination of posterity, steeped in tales of the tumbrils bearing their burden to the guillotine, and of similar stories of horror, has conceived a ghastly picture of life at that extraordinary period, and it is only after living for months amongst the journals, memoirs, and letters of the time that one can realize the fact that to the average Parisian the necessity of getting his dinner or his evening's amusement remained the paramount thought of his daily life. . . . Strange to say, nowhere was life more happy

and gay than in the prisons of Paris, where the inmates lived in the constant expectation that the haphazard chance of being brought before the Revolutionary Tribunal and condemned to death might befall them at any moment. . . . A little more must be said about the market-women, the tricotouses, or knitting-women of infamous memory. These market-women had been treated as heroines ever since their march to Versailles in October, 1789. . . . They formed their societies after the fashion of the Jacobin Club, presided over by Renée Audu, Agnès Lefevre, Marie Louise Bouju, and Rose Lacombe, and went about the streets of Paris insulting respectably dressed people, and hounding on the sans-culottes to deeds of atrocity. These Mænads were encouraged by Marat, and played an important part in the street history of Paris, up to the Reign of Terror, when their power was suddenly taken from them. On May 21, 1793, they were excluded by a decree from the galleries of the Convention; on May 26 they were forbidden to form part of any political assembly; and when they appealed from the Convention to the Commune of Paris, Chaumette abruptly told them 'that the Republic had no need of Joans of Arc.' Thus deprived of active participation in politics, the market-women became the tricotouses, or knitting-women, who used to take their seats in the Place de la Révolution, and watch the guillotine as they knitted. Their active power for good or harm was gone. . . . Life during the Terror in Paris . . . differed in little things, in little affectations of liberty and equality, which are amusing to study. The fashions of dress everywhere betrayed the new order of things. A few men, such as Robespierre, might still go about with powdered hair and in knee-breeches, but the ordinary male costume of the time was designed to contrast in every way with the costume of a dandy of the 'ancien régime.' Instead of breeches, the fashion was to wear trousers; instead of shoes, top-boots; and instead of shaving, the young Parisian prided himself on letting his moustache grow. In female costume a different motive was at work. Only David's art disciples ventured to imitate the male apparel of ancient Greece and Rome, but such imitation became the fashion among women. Waists disappeared; and instead of stiffened skirts and narrow bodices, women wore short loose robes, which they fancied resembled Greek chitons; sandals took the place of high-heeled shoes; and the hair, instead of being worked up into elaborate edifices, was allowed to flow down freely. For ornaments, gun-metal and steel took the place of gold, silver and precious stones. . . . The favourite design was the guillotine. Little guillotines were worn as brooches, as earrings and as clasps, and the women of the time simply followed the fashion without realizing what it meant. Indeed, the worship of the guillotine was one of the most curious features of the epoch. Children had toy guillotines given them; models were made to cut off imitation heads, when wine or sweet syrup flowed in place of blood; and hymns were written to La Sainte Guillotine, and jokes made upon it, as the 'national razor.' . . . It is well known that the desire to emphasize the abolition of titles was followed by the abolition of the terms 'Monsieur' and 'Madame,' and that their places were taken by 'Citizen' and 'Citizeness', and also how the use of the second person plural was dropped, and it was considered a sign of a good republican to tutoyer every one, that is, to call them 'thou' and 'thee.' . . . The Reign of Terror in Paris seems to us an age of unique experiences, a time unparal-

leled in the history of the world; yet to the great majority of contemporaries it did not appear so; they lived their ordinary lives, and it was only in exceptional cases that the serenity of their days was interrupted, or that their minds were exercised by anything more than the necessity of earning their daily bread."—H. M. Stephens, *History of the French Revolution*, v. 2, ch. 10.

1793 (October).—New republican calendar. See CHRONOLOGY: French Revolutionary era and calendar.

1793 (November).—Abandonment of Christianity.—Worship of reason instituted.—"Before the year ended the legislators of Paris voted that there was no God, and destroyed or altered nearly everything that had any reference to Christianity. Robespierre, who would have stopped short at deism, and who would have preserved the external decencies, was overruled and intimidated by Hébert and his frowsy crew, who had either crept into the governing committees or had otherwise made themselves a power in the state."—C. MacFarlane, *French Revolution*, v. 4, ch. 3.—"The establishment of the Republican era, the substitution of the Republican for the Gregorian calendar (by the decrees of October 5, 1793, and the 4th of *Frimaire* of the year II), show what a change had been accomplished, or was preparing itself in men's minds. That this measure was inspired by an anti-religious policy is plainly evident in the reports of Fabre d'Eglantine and Romme, so full were they of philosophic abuse of dogma. To replace the old dates and festivals by new; to change the names of the saints for the names 'of the objects which compose the true wealth of the nation'; this was to wrest from Catholicism her ornaments and her honour, to expel her violently from the nation's life. . . . The anti-Catholic movement had by this time reached such a stage in Paris that Bishop Gobel decided, with eleven of his vicars, to resign his duties. He appeared at the bar on the 17th of *Brumaire*, solemnly announced his resignation and that of his vicars, and laid aside his crucifix and his ring, and set the red bonnet on his head. There was a scene of enthusiasm. 'Every one,' says the *Journal des débats*, 'hastened to clasp in his arms the men who, weary of being divided between their religion and their country, would henceforth devote themselves entirely to their country.' The ecclesiastical members of the Convention followed suit, at this and following sessions, excepting a small number, of whom was Grégoire. After these striking examples there were very many resignations of curés and vicars throughout all France. On the 20th of *Brumaire* of the year II there was a Festival of Liberty at Notre Dame, at which the department and the Commune were present with a great gathering of people; and this festival was definitely anti-Christian in character. An actress from the Opera personified Liberty. The 'Torch of Truth' was seen to burn on the 'Altar of Reason.' Then the department and the Commune repaired to the bar of the Convention. Chaumette declared that the people wanted no more priests; no other gods than those whom Nature offers us. 'We, the people's magistrates, have verified its decision; we bring it you from the Temple of Reason.' And Chaumette demanded that the Church of Notre Dame should thenceforth bear the name of the Temple of Reason. A decree to that effect was immediately passed. The actress who figured as Liberty stood at the desk and received the embraces of the President, Laloy, and the secretaries.

Then the Convention proceeded to Notre Dame, where the ceremony was recommenced in its honour. . . . The 'dechristianising' movement quickly became general in Paris. Nearly all the sections renounced religion, closed their parish churches, and re-opened them as Temples of Reason. At the outset the Convention seemed to favour this movement. On the 25th of *Brumaire* it decreed 'that the presbyteries and parish churches situated in the communes which shall have renounced public worship, or their revenues, shall be destined to be of service in the relief of suffering humanity and public education.' It welcomed with benevolence the unfrocking of priests and the anti-religious masquerades which swarmed past the bar. At the session of the 30th of *Brumaire* it compromised itself still farther, when it admitted a deputation from the section of Unity, grotesquely decked out in sacerdotal habits, and allowed a theatrical parody of the Catholic religion to defile through the hall. . . . On the 3rd of *Frimaire* of the year II (November 24, 1793), upon the application of Chaumette, it passed the following resolution: 'Whereas the people of Paris has declared that it will recognise no other religion than that of Truth and Reason, the Council General of the Commune orders: 1. That all churches and temples of whatever religion or sect has existed in Paris shall immediately be closed. 2. That all priests and ministers of whatever religion shall be held personally and individually responsible for all disturbances of which the cause shall proceed from religious opinions. 3. That whosoever shall demand that either church or temple shall be opened shall be arrested as a suspect. 4. That the Revolutionary Committees shall be invited to keep a close watch upon all priests. 5. That the Convention shall be petitioned to issue a decree which shall exclude priests from the exercise of public functions of whatever kind, and from all employment in the national manufactories.' The 'cult of Reason,' organised in Paris by the sections, spread through the provinces also, under the auspices of the people's clubs and the deputy-commissioners. Many of the churches were closed, then converted into Temples of Reason; there were 'Goddesses of Reason' and anti-Catholic processions. Nearly all the cities appeared to rally to the new worship. In the south-west especially, under the auspices of Dartigoeyte and Cavaignac, the process of dechristianisation was so violent as to cause scandal. Taken on the whole, this movement, which was almost universally Deistic, not materialistic nor atheistic, seems to have been, in Paris, a cheerful and superficial so long as the people took part in it; but pedantic and sterile when embraced by a few men of letters only. The provinces took the matter more seriously. In the departments, and especially in the cities, there were serious and sincere attempts to abolish the ancient religion and to establish a rationalistic worship. The Goddesses of Reason were not actresses, as in Paris, but in almost every case, and this the most hostile witnesses do not deny, beautiful and virtuous young girls, belonging to the upper middle classes. This cult was eagerly adopted in those critical hours of the national defence (at the end of 1793) by the generality of active patriots, by the Jacobins, by the members of the revolutionary committees, by the municipal officers; in short, by the whole militant Revolution. One must not look to find a different aspect, a different spirit, among the worshippers of Reason, accordingly as they were, for example, Bretons or Provençals. If the festivals of Reason were not everywhere celebrated in the same manner; if the zeal for

'dechristianisation' was more violent in Strasburg, for instance, and Auch, than in Chartres or Limoges, it was because from the height of the Strasburg steeple men could see the Austrian outposts; because at Auch the Revolution was threatened by the machinations of the clergy; while at Chartres the enemy was far away, and at Limoges the Revolution had no dangerous adversaries. The cult of Reason was less a change of the religious conscience of the French than an expedient of patriotic defence against the Catholic clergy. Little by little it became transformed into the worship of the *Patrie*. The busts of the philosophers in the temples were soon replaced or eclipsed by those of Marat, Chabot, and Le Peletier, who were the personifications, in the popular mind, not of the doctrines of the new cult, but of revolutionary France attacked by reaction. Men finally turned away from the cold image of Reason, to honour above all the trinity of the bleeding martyrs of patriotism. What, in these circumstances, was the policy of the Government? We may sum it up in a word: it opposed, as far as it could, the violent attempts to destroy the Catholic religion, and sought, in the midst of the tempest, to maintain the liberty of worship. Not that the members of the Committee of Public Safety desired, as believers, to maintain the Catholic religion. Everything leads us, on the contrary, to believe that they expected and hoped that little by little, as enlightenment progressed, the Catholic religion would disappear. But they wished to avoid all violent persecution; firstly, lest internal discord should weaken the nation's power of defence; secondly, lest Europe should be too deeply scandalised, and so become unmanageable and intractable."—A. Aulard, *French Revolution*, v. 3, pp. 158-163.—See also ATHEISM.

1793-1794 (October-April).—Terror in the provinces.—Republican vengeance at Lyons, Marseilles, Toulon, Bordeaux, Nantes.—Fusillades and Noyades.—"The insurgents of Lyons, Marseilles, Toulon, and Bordeaux were punished with pitiless severity. Lyons had revolted, and the convention decreed [October 12] the destruction of the city, the confiscation of the property of the rich, for the benefit of the patriots, and the punishment of the insurgents by martial law. Couthon, a commissioner well tried in cruelty, hesitated to carry into execution this monstrous decree, and was superseded by Collot d'Herbois and Fouché. Thousands of workmen were employed in the work of destruction: whole streets fell under their pickaxes: the prisons were gorged: the guillotine was too slow for revolutionary vengeance, and crowds of prisoners were shot, in murderous 'mitrallades.' . . . At Marseilles, 12,000 of the richest citizens fled from the vengeance of the revolutionists, and their property was confiscated, and plundered. When Toulon fell before the strategy of Bonaparte, the savage vengeance and cruelty of the conquerors were indulged without restraint. . . . The dockyard labourers were put to the sword: gangs of prisoners were brought out and executed by fusillades: the guillotine also claimed its victims: the sans-culottes rioted in confiscation and plunder. At Bordeaux, Tallien threw 15,000 citizens into prison. Hundreds fell under the guillotine; and the possessions and property of the rich were offered up to outrage and robbery. But all these atrocities were far surpassed in La

ROLL CALL OF THE LAST VICTIMS OF THE REIGN OF TERROR

(After a painting by Ch. L. Muller)

Vendée . . . The barbarities of warfare were yet surpassed by the vengeance of the conquerors, when the insurrection was, at last, overcome. At Nantes, the monster Carrier outstripped his rivals in cruelty and insatiable thirst for blood. Not contented with wholesale mitrillades [shooting], he designed that masterpiece of cruelty, the noyades [drowning]; and thousands of men, women and children who escaped the muskets of the rabble soldiery were deliberately drowned in the waters of the Loire. In four months, his victims reached 15,000. At Angers, and other towns in La Vendée, these hideous noyades were added to the terrors of the guillotine and the fusillades."—T. E. May, *Democracy in Europe*, ch. 14.—"One begins to be sick of 'death vomited in great floods.' Nevertheless, hearest thou not, O Reader (for the sound reaches through centuries), in the dead December and January nights, over Nantes Town,—confused noises, as of musketry and tumult, as of rage and lamentation; mingling with the everlasting moan of the Loire waters there? Nantes Town is sunk in sleep; but Représentant Carrier is not sleeping, the wool-capped Company of Marat is not sleeping. Why unmoors that flat-bottomed craft, that 'gabarre'; about eleven at night; with Ninety Priests under hatches? They are going to Belle Isle? In the middle of the Loire stream, on signal given, the gabarre is scuttled; she sinks with all her cargo. 'Sentence of Deportation,' writes Carrier, 'was executed vertically.' The Ninety Priests, with their gabarre-coffin, lie deep! It is the first of the Noyades [November 16], what we may call 'Drownages' of Carrier; which have become famous forever. Guillotining there was at Nantes, till the Headsman sank worn out: then fusillading 'in the Plain of Saint-Mauve'; little children fusilladed, and women with children at the breast; children and women, by the hundred and twenty; and by the five hundred, so hot is La Vendée: till the very Jacobins grew sick, and all but the Company of Marat cried, Hold! Wherefore now we have got Noyading; and on the 24th night of Frostariou year 2, which is 14th of December 1793, we have a second Noyade; consisting of '138 persons.' Or why waste a gabarre, sinking it with them? Fling them out; fling them out, with their hands tied: pour a continual hail of lead over all the space, till the last struggler of them be sunk! Unsound sleepers of Nantes, and the Sea-Villages thereabouts, hear the musketry amid the night-winds; wonder what the meaning of it is. And women were in that gabarre; whom the Red Nightcaps were stripping naked; who begged, in their agony, that their smocks might not be stript from them. And young children were thrown in, their mothers vainly pleading: 'Wolfings,' answered the Company of Marat, 'who would grow to be wolves.' By degrees, daylight itself witnesses Noyades: women and men are tied together, feet and feet, hands and hands; and flung in: this they call Mariage Républicain, Republican Marriage. Cruel is the panther of the woods, the she-bear bereaved of her whelps: but there is in man a hatred crueler than that. Dumb, out of suffering now, as pale swoln corpses, the victims tumble confusedly seaward along the Loire stream; the tide rolling them back: clouds of ravens darken the River; wolves prowl on the shoal-places: Carrier writes, 'Quel torrent révolutionnaire, What a torrent of Revolution!' For the man is rabid; and the Time is rabid. These are the Noyades of Carrier; twenty-five by the tale, for what is done in darkness comes to be investigated in sunlight: not to be forgotten for centuries. . . . Men are all rabid; as

the Time is. Representative Lebon, at Arras, dashes his sword into the blood flowing from the Guillotine; exclaims, 'How I like it!' Mothers, they say, by his orders, have to stand by while the Guillotine devours their children: a band of music is stannned near; and, at the fall of every head, strikes up its 'Ça-ira.'"—T. Carlyle, *French Revolution*, v. 3, bk. 5, ch. 3.—See also below: 1794 (June-July).

Taine, *French Revolution*, v. 3, bk. 5, ch. 1, sect. 9.—*Horrors of the prison of Arras (Reign of Terror: A collection of authentic narratives*, v. 2).—Duchesse de Duras, *Prison journals during the French Revolution*.—A. des Echerolles, *Early life*, v. 1, ch. 7-13, v. 2, ch. 1.

1793-1794 (November-June).—Factions of the Mountain devour one another.—Destruction of the Hébertists.—Danton and his followers brought to the knife.—Robespierre and the Committee of Public Safety.—Feast of the Supreme Being.—"Robespierre was unutterably outraged by the proceedings of the atheists. They perplexed him as a politician intent upon order, and they afflicted him sorely as an ardent disciple of the Savoyard Vicar. Hébert, however, was so strong that it needed some courage to attack him, nor did Robespierre dare to withstand him to the face. But he did not flinch from making an energetic assault upon atheism and the excesses of its partisans. His admirers usually count his speech of the 21st of November one of the most admirable of his oratorical successes. . . . 'Atheism [he said] is aristocratic. The idea of a great being who watches over oppressed innocence and punishes triumphant crime is essentially the idea of the people. This is the sentiment of Europe and the Universe; it is the sentiment of the French nation. That people is attached neither to priests, nor to superstitions, nor to ceremonies; it is attached only to worship in itself, or in other words to the idea of an incomprehensible Power, the terror of wrongdoers, the stay and comfort of virtue, to which it delights to render words of homage that are all so many anathemas against injustice and triumphant crime.' This is Robespierre's favourite attitude, the priest posing as statesman. . . . Danton followed practically the same line, though saying much less about it. 'If Greece,' he said in the Convention, 'had its Olympian games, France too shall solemnize her sansculottid days. . . . If we have not honoured the priest of error and fanaticism, neither do we wish to honour the priest of incredulity: we wish to serve the people. I demand that there shall be an end of these anti-religious masquerades in the Convention.' There was an end of the masquerading, but the Hébertists still kept their ground. Danton, Robespierre, and the Committee were all equally impotent against them for some months longer. The revolutionary force had been too strong to be resisted by any government since the Paris insurgents had carried both king and assembly in triumph from Versailles in the October of 1789. It was now too strong for those who had begun to strive with all their might to build a new government out of the agencies that had shattered the old to pieces. For some months the battle which had been opened by Robespierre's remonstrance against atheistic intolerance, degenerated into a series of masked skirmishes. . . . Collot D'Herbois had come back in hot haste from Lyons. . . . Carrier was recalled from Nantes. . . . The presence of these men of blood gave new courage and resolution to the Hébertists. Though

the alliance was informal, yet as against Danton, Camille Desmoulins, and the rest of the Indulgents, as well as against Robespierre, they made common cause. Camille Desmoulins attacked Hébert in successive numbers of a journal [*Le Vieux Cordelier*] that is perhaps the one truly literary monument of this stage of the revolution. Hébert retaliated by impugning the patriotism of Desmoulins in the Club, and the unfortunate wit, notwithstanding the efforts of Robespierre on his behalf, was for a while turned out of the sacred precincts. . . . Even Danton himself was attacked (December, 1793) and the integrity of his patriotism brought into question. Robespierre made an energetic defence of his great rival in the hierarchy of revolution. . . . Robespierre, in whom spasmodical courage and timidity ruled by rapid turns, began to suspect that he had been premature; and a convenient illness, which some supposed to have been feigned, excused his withdrawal for some weeks from a scene where he felt that he could no longer see clear. We cannot doubt that both he and Danton were perfectly assured that the

preceded by a week the arrest of the Moderates. When the seizure of Danton had once before been discussed in the Committee, Robespierre resisted the proposal violently. We have already seen how he defended Danton at the Jacobin Club. . . . What produced this sudden tack? . . . His acquiescence in the ruin of Danton is intelligible enough on the grounds of selfish policy. The Committee [of Public Safety] hated Danton for the good reason that he had openly attacked them, and his cry for clemency was an inflammatory and dangerous protest against their system. Now Robespierre, rightly or wrongly, had made up his mind that the Committee was the instrument by which, and which only, he could work out his own vague schemes of power and reconstruction. And, in any case, how could he resist the Committee? . . . All goes to show that Robespierre was really moved by nothing more than his invariable dread of being left behind, of finding himself on the weaker side, of not seeming practical and political enough. And having made up his mind that the stronger party was bent on the destruction of the Dantonists, he became fiercer than Billaud himself. . . . Danton had gone, as he often did, to his native village of Arcis-sur-Aube, to seek repose and a little clearness of sight in the night that wrapped him about. He was devoid of personal ambition; he never had any humour for mere factious struggles. . . . It is not clear that he could have done anything. The balance of force, after the suppression of the Hébertists, was irretrievably against him, as calculation had already revealed to Robespierre. . . . After the arrest, and on the proceedings to obtain the assent of the Convention to the trial of Danton and others of its members, one only of their friends had the courage to rise and demand that they should be heard at the bar. Robespierre burst out in cold rage; he asked whether they had undergone so many heroic sacrifices, counting among them these acts of 'painful severity,' only to fall under the yoke of a band of domineering intriguers; and he cried out impatiently that they would brook no claim of privilege, and suffer no rotten idol. The word was felicitously chosen, for the Convention dreaded to have its independence suspected, and it dreaded this all the more because at this time its independence did not really exist. The vote against Danton was unanimous, and the fact that it was so is the deepest stain on the fame of this assembly. On the afternoon of the 16th Germinal (April 5, 1794), Paris in amazement and some stupefaction saw the once dreaded Titan of the Mountain fast bound in the tumbril, and faring towards the sharp-clanging knife [with Camille Desmoulins and others]. 'I leave it all in a frightful welter,' Danton is reported to have said. 'Not a man of them has an idea of government. Robespierre will follow me; he is dragged down by me. Ah, better be a poor fisherman than meddle with the governing of men!' . . . After the fall of the anarchists and the death of Danton, the relations between Robespierre and the Committees underwent a change. He, who had hitherto been on the side of government, became in turn an agency of opposition. He did this in the interest of ultimate stability, but the difference between the new position and the old is that he now distinctly associated the idea of a stable republic with the ascendancy of his own religious conceptions. . . . The base of Robespierre's scheme of social reconstruction now came clearly into view; and what a base! An official Supreme Being and a regulated Terror. . . . How can we speak with decent patience of a man who seriously thought that he

ROBESPIERRE

anarchic party must unavoidably roll headlong into the abyss. But the hour of doom was uncertain. To make a mistake in the right moment, to hurry the crisis, was instant death. Robespierre was a more adroit calculator than Danton. . . . His absence during the final crisis of the anarchic party allowed events to ripen, without committing him to that initiative in dangerous action which he had dreaded on the 10th of August, as he dreaded it on every other decisive day of this burning time. The party of the Commune became more and more daring in their invectives against the Convention and the Committees. At length they proclaimed open insurrection. But Paris was cold, and opinion was divided. In the night of the 13th of March, Hébert, Chaumette, Cloutz, were arrested. The next day Robespierre recovered sufficiently to appear at the Jacobin Club. He joined his colleagues of the Committee of Public Safety in striking the blow. On the 24th of March the Ultra-Revolutionist leaders were beheaded. The first bloody breach in the Jacobin ranks was speedily followed by the second. The Right wing of the opposition to the Committee soon followed the Left down the ways to dusty death, and the execution of the Anarchists only

should conciliate the conservative and theological elements of the society at his feet, by such an odious opera-piece as the Feast of the Supreme Being. This was designed as a triumphant ripost to the Feast of Reason, which Chaumette and his friends had celebrated in the winter. . . . Robespierre persuaded the Convention to decree an official recognition of the Supreme Being, and to attend a commemorative festival in honour of their mystic patron. He contrived to be chosen president for the decade in which the festival would fall. When the day came (20th Prairial, June 8, 1794), he clothed himself with more than even his usual care. As he looked out from the windows of the Tuileries upon the jubilant crowd in the gardens, he was intoxicated with enthusiasm. 'O Nature,' he cried, 'how sublime thy power, how full of delight! How tyrants must grow pale at the idea of such a festival as this!' In pontifical pride he walked at the head of the procession, with flowers and wheat-ears in his hand, to the sound of chants and symphonies and choruses of maidens. On the first of the great basins in the gardens, David, the artist, had devised an allegorical structure for which an inauspicious doom was prepared. Atheism, a statue of life size, was throned in the midst of an amiable group of human Vices, with Madness by her side, and Wisdom menacing them with lofty wrath. Great are the perils of symbolism. Robespierre applied a torch to Atheism, but alas, the wind was hostile, or else Atheism and Madness were damp. They obstinately resisted the torch, and it was hapless Wisdom who took fire. . . . The whole mummerly was pagan. . . . It stands as the most disgusting and contemptible anachronism in history."—J. Morley, *Robespierre (Critical miscellanies, second series)*.

1794 (March-July).—Withdrawal of Prussia from the European coalition as an ally, to become a mercenary.—Successes of the republic.—Conquest of the Austrian Netherlands.—Advance to the Rhine.—Loss of Corsica.—Naval defeat off Ushant.—"While the alliance of the Great Powers was on the point of dissolution from selfishness and jealousy, the French, with an energy and determination, which, considering their unparalleled difficulties, were truly heroic, had assembled armies numbering nearly a million of men. The aggregate of the allied forces did not much exceed 300,000. The campaign on the Dutch and Flemish frontiers of France was planned at Vienna, but had nearly been disconcerted at the outset by the refusal of the Duke of York to serve under General Clairfait. . . . The Emperor settled the difficulty by signifying his intention to take the command in person. Thus one incompetent prince who knew little was to be commanded by another incompetent prince who knew nothing, about war; and the success of a great enterprise was made subservient to considerations of punctilio and etiquette. The main object of the Austrian plan was to complete the reduction of the frontier fortresses by the capture of Landrecy on the Sambre, and then to advance through the plains of Picardy on Paris;—a plan which might have been feasible the year

before. . . . The King of Prussia formally withdrew from the alliance [March 13]; but condescended to assume the character of a mercenary. In the spring of the year, by a treaty with the English Government, his Prussian Majesty undertook to furnish 62,000 men for a year, in consideration of the sum of £1,800,000, of which Holland, by a separate convention, engaged to supply somewhat less than a fourth part. The organisation of the French army was effected under the direction of Carnot. . . . The policy of terror was nevertheless applied to the administration of the army. Custine and Houchard, who had commanded the last campaign, . . . were sent to the scaffold, because the arms of the republic had failed to achieve a complete triumph under their direction. . . . Pichegru, the officer now selected to lead the hosts of France, went forth to assume his command with the knife of the executioner suspended over his head. His orders were to expel the invaders from the soil and strongholds of the republic, and to reconquer Belgium. The first step towards the fulfilment of this commission was the recovery of the three great frontier towns, Condé, Valenciennes, and Quesnoy. The siege of Quesnoy was immediately formed; and Pichegru, informed of or anticipating the plans of the Allies, disposed a large force in front of Cambrai, to intercept the operations of . . . the allied army upon Landrecy. . . . On the 17th [of April] a great action was fought in which the allies obtained a success, sufficient to enable them to press the siege of Landrecy. . . . Pichegru, a few days after [April 26, at the redoubts of Troisville] sustained a signal repulse from the British, in an attempt to raise the siege of Landrecy; but by a rapid and daring movement, he improved his defeat, and seized the important post of Moucron. The results were, that Clairfait was forced to fall back on Tournay; Courtray and Menin surrendered to the French; and thus the right flanks of the Allies were exposed. Landrecy, which, about the same time, fell into the hands of the Allies, was but a poor compensation for the reverses in West Flanders. The Duke of York, at the urgent instance of the Emperor, marched to the relief of Clairfait; but, in the meantime, the Austrian general, being hard pressed, was compelled to fall back upon a position which would enable him for a time to cover Bruges, Ghent, and Ostend. The English had also to sustain a vigorous attack near Tournay; but the enemy were defeated with the loss of 4,000 men. It now became necessary to risk a general action to save Flanders, by cutting off that division of the French army which had outflanked the Allies. By bad management and want of concert this movement, which had been contrived by Colonel Mack, the chief military adviser of the Emperor, was wholly defeated [at Tourcoign, May 18]. . . . The French took 1,500 prisoners and 60 pieces of cannon. A thousand English soldiers lay dead on the field, and the Duke [of York] himself escaped with difficulty. Four days after, Pichegru having collected a great force, amounting, it has been stated, to 100,000 men, made a grand attack upon the allied army [at Pont Achin]. . . . The battle raged from five in the morning until nine at night, and was at length determined by the bayonet. . . . In consequence of this check, Pichegru fell back upon Lisle." It was after this repulse that "the French executive, on the flimsy pretence of a supposed attempt to assassinate Robespierre, instigated by the British Government, procured a decree from the Convention, that no English or Hanoverian prisoners should be made. In reply to this atrocious edict, the Duke of York issued a general order, enjoining forbearance to the troops under his com-

mand. Most of the French generals . . . refused to become assassins. . . . The decree was carried into execution in a few instances only. . . . The Allies gained no military advantage by the action of Pont Achin on the 22nd of May. . . . The Emperor . . . abandoned the army and retired to Vienna. He left some orders and proclamations behind him, to which nobody thought it worth while to pay any attention. On the 5th of June, Pichegru invested Ypres, which Clairfait made two attempts to retain, but without success. The place surrendered on the 17th; Clairfait retreated to Ghent; Walmoden abandoned Bruges; and the Duke of York, forced to quit his position at Tournay, encamped near Oudenarde. It was now determined by the Prince of Coburg, who resumed the chief command after the departure of the Emperor, to risk the fate of Belgium on a general action, which was fought at Fleurus on the 26th of June. The Austrians, after a desperate struggle, were defeated at all points by the French army of the Sambre under Jourdan. Charleroi having surrendered to the French . . . and the Duke of York being forced to retreat, any further attempt to save the Netherlands was hopeless. Ostend and Mons, Ghent, Tournay, and Oudenarde, were successively evacuated; and the French were established at Brussels. When it was too late, the English army was reinforced. . . . It now only remained for the French to recapture the fortresses on their own frontier which had been taken from them in the last campaign. . . . Landrecy . . . fell without a struggle. Quesnoy . . . made a gallant [but vain] resistance. . . . Valenciennes and Condé . . . opened their gates. . . . The victorious armies of the Republic were thus prepared for the conquest of Holland. . . . The Prince of Orange made an appeal to the patriotism of his countrymen; but the republicans preferred the ascendancy of their faction to the liberties of their country. . . . The other military operations of the year, in which England was engaged, do not require prolonged notice. The Corsicans, under the guidance of their veteran chief, Paoli, . . . sought the aid of England to throw off the French yoke, and offered in return allegiance of his countrymen to the British Crown. . . . A small force was despatched, and, after a series of petty operations, Corsica was occupied by British troops, and proclaimed a part of the British dominions. An expedition on a greater scale was sent to the West Indies. Martinique, St. Lucie and Guadeloupe were easily taken; but the large island of St. Domingo, relieved by a timely arrival of succours from France, offered a formidable [and successful] resistance. . . . The campaign on the Rhine was undertaken by the Allies under auspices ill calculated to inspire confidence, or even hope. The King of Prussia, not content with abandoning the cause, had done everything in his power to thwart and defeat the operations of the Allies. . . . On the 22d of May, the Austrians crossed the Rhine and attacked the French in their intrenchments without success. On the same day, the Prussians defeated a division of the Republican army [at Kaiserslautern], and advanced their head-quarters to Deux-Ponts. Content with this achievement, the German armies remained inactive for several weeks, when the French, having obtained reinforcements, attacked the whole line of the German posts. . . . Before the end of the year the Allies were in full retreat, and the Republicans in their turn had become the invaders of Germany. They occupied the Electorate of Treves, and they captured the important fort of Mannheim. Mentz also was placed under a close blockade. . . . At sea, England maintained her ancient reputation. The French had

made great exertions to fit out a fleet, and 26 ships of the line were assembled in the port of Brest," for the protecting of a merchant fleet, laden with much needed food-supplies, expected from America. Lord Howe, with an English fleet of 25 ships of the line, was on the watch for the Brest fleet when it put to sea. On June 1st he sighted and attacked it off Ushant, performing the celebrated manœuvre of breaking the enemy's line. Seven of the French ships were taken, one was sunk during the battle, and 18, much crippled, escaped. The victory caused great exultation in England, but it was fruitless, for the American convoy was brought safely into Brest.—W. Massey, *History of England during the reign of George III, v. 3, ch. 35.*

1794 (June-July).—Monstrous Law of the 22d Prairial.—Climax of the Reign of Terror.—Foundation of the future state.—"On the day of the Feast of the Supreme Being, the guillotine was concealed in the folds of rich hangings. It was the 20th of Prairial. Two days later Couthon proposed to the Convention the memorable Law of the 22d Prairial [June 10]. Robespierre was the draftsman, and the text of it still remains in his own writing. This monstrous law is simply the complete abrogation of all law. Of all laws ever passed in the world it is the most nakedly iniquitous. . . . After the probity and good judgment of the tribunal, the two cardinal guarantees in state trials are accurate definition, and proof. The offence must be capable of precise description, and the proof against an offender must conform to strict rule. The Law of Prairial violently infringed all three of these essential conditions of judicial equity. First, the number of the jury who had power to convict was reduced. Second, treason was made to consist in such vague and infinitely elastic kinds of action as inspiring discouragement, misleading opinion, depraving manners, corrupting patriots, abusing the principles of the Revolution by perfidious applications. Third, proof was to lie in the conscience of the jury; there was an end of preliminary inquiry, of witnesses in defence, and of counsel for the accused. Any kind of testimony was evidence, whether material or moral, verbal or written, if it was of a kind 'likely to gain the assent of a man of reasonable mind.' Now, what was Robespierre's motive in devising this infernal instrument? . . . To us the answer seems clear. We know what was the general aim in Robespierre's mind at this point in the history of the Revolution. His brother Augustin was then the representative of the Convention with the army of Italy, and General Bonaparte was on terms of close intimacy with him. Bonaparte said long afterwards . . . that he saw long letters from Maximilian to Augustin Robespierre, all blaming the Conventional Commissioners [sent to the provinces]—Tallien, Fouché, Barras, Collot, and the rest—for the horrors they perpetrated, and accusing them of ruining the Revolution by their atrocities. Again, there is abundant testimony that Robespierre did his best to induce the Committee of Public Safety to bring those odious malefactors to justice. The text of the Law . . . discloses the same object. The vague phrases of depraving manners and applying revolutionary principles perfidiously, were exactly calculated to smite the band of violent men whose conduct was to Robespierre the scandal of the Revolution. And there was a curious clause in the law as originally presented, which deprived the

Convention of the right of preventing measures against its own members. Robespierre's general design in short was to effect a further purgation of the Convention. . . . If Robespierre's design was what we believe it to have been, the result was a ghastly failure. The Committee of Public Safety would not consent to apply his law against the men for whom he had specially designed it. The frightful weapon which he had forged was seized by the Committee of General Security, and Paris was plunged into the fearful days of the Great Terror. The number of persons put to death by the Revolutionary Tribunal before the Law of Prairial had been comparatively moderate. From the creation of the Tribunal in April 1793, down to the execution of the Hébertists in March 1794, the number of persons condemned to death was 505. From the death of the Hébertists down to the death of Robespierre, the number of the condemned was 2,158. One-half of the entire number of victims, namely, 1,356, were guillotined after the Law of Prairial. . . . A man was informed against; he was seized in his bed at five in the morning; at seven he was taken to the Conciergerie; at nine he received information of the charge against him; at ten he went into the dock; by two in the afternoon he was condemned; by four his head lay in the executioner's basket."—J. Morley, *Robespierre (Critical miscellanies: Second series)*.—"When the Revolutionary Government was at its apogee liberty of whatever kind was a thing of the past. The least opposition exposed a citizen, even a woman, to the scaffold. Of course these laws were not and could not have been applied in all their rigour; else would the French have perished in tens of thousands. But the hundreds who were guillotined in virtue of these laws sufficed as an example. No one dared now to thwart the national defence. This result, it may be legitimate, was not the only one; the opponents of Robespierre's personal policy were equally reduced to silence and inaction. Until the period when the military victories suppressed the *raison d'être* of the dictatorship, there was a general and absolute suppression of will and courage. Such was the Terror, the effect and means of the Revolutionary Government. In this chronological summary, I have given many instances to show that the Revolutionary Government was not the application of any system. The leaders of this Government have been stigmatised as renegades from the principles of 1789, and they did indeed often violate the principle of individual liberty; they shed blood; they persecuted the French; they stifled the liberty of the press; they established a tyrannical dictatorship; finally they arrived, democrats as they were, at the suppression of nearly all the popular elections. But they only resigned themselves to these violent measures when forced by events, and to ensure the final triumph of the principles of 1789, on whose suppression monarchical Europe was bent. Obligated to make war in order to keep free, obliged to be soldiers in order to remain citizens, they organised a military discipline, and this Revolutionary Government was the reverse of their dreams and ideals. It had seemed to them that they could only conquer the *ancien régime* by using its weapons. This victory once achieved, they had every intention, as they were continually announcing, of doing just the contrary of what they performed in the year II: that is to say, of organising the Democratic Republic on a basis of liberty, equality, and fraternity. The most violent among them agreed in presenting the Terrorist rule as a provisional expedient. None the less, we must confess that this phrase, 'a provisional expedient,' does not give an absolutely exact and

complete idea of this undertaking. It happened that certain measures, entirely fortuitous and empirical, such as declaring all means of subsistence to be in common for the purposes of the national defence, by creating, for the time, collectivist cities of a kind, excited or awoke socialistic theories which later on found expression. On the other hand, certain elements of the Revolutionary Government, at the time when they were decreed, seemed of a kind to enter later on into the society of the future, and the measures taken in view of the success of the armies against the civil enemy were often spoken of as proper to a definite mental revolution. . . . The cult of a Supreme Being was not merely an expedient of national defence, but also an attempt to establish one of the fundamental essentials of the future State. At the same time schemes for a national education were being elaborated, which ended in tangible results and in foundations; so that we must think of the revolutionists of the year II as preparing to build the future State, while fighting Europe at the same time: to use the language of the time, with a trowel in one hand and a sword in the other. But the hand that held the trowel was only able to begin the work of construction; and these beginnings were often intermingled with the provisional institutions founded on account of the war, and intermingled in such a manner that it is not always easy to distinguish what these men considered provisional and what they meant to be permanent. All were not agreed as to the period when it would be necessary to emerge from the revolutionary state. Danton and his friends had wished to relax the bonds of the Terror before Europe had been vanquished, but they were broken. But even those who wished the Revolutionary Government to last as long as the war, and who rejected, out of policy, the idea of a committee of clemency, felt the horror of the hideous character which the brutal zeal of ignorant fanatics was engraving upon the face of the Republic. . . . At last the latent danger of this dictatorship of the national defence was frequently pointed out by Robespierre. At the very moment when everything was being organised with a view to the military victories, the peril of these military victories was denounced. . . . The precautions taken against the ambition of the generals entered into the Revolutionary Government as component elements, their purpose being to prepare it for the realisation of the idea of normal government which was at once made possible and compromised by the success of the armies. This government, according to circumstance, created empirically for the immediate present, without system and without plan, in some parts plainly bears the mark of pre-occupations concerning the future; and although entirely provisional, it contains the germs, the beginnings, of institutions; contains also points of departure for new or resuscitated theories; contains, in some degree, the France of the future"—A. Aulard, *French Revolution*, v. 2, pp. 201-205

1794 (June-July).—French victory at Fleurus.—Fall of Robespierre.—End of the Reign of Terror.—"Robespierre, blind and satisfied, went on his way rejoicing. On the 8th of June, as President of the Convention, he took the chief part in a solemn inauguration of the new religion. There were statues, processions, bonfires, speeches, and

Robespierre, beflowered, radiant in a new purple coat, pontificating over all. But beneath the surface all was not well. The Convention had not been led through the solemn farce without protest. Words of insult were hissed by more than one deputy as Robespierre passed within earshot, and the Jacobin leader realized fully that behind the docile votes and silent faces currents of rage and protest were stirring. For this, as for every ill, there was but one remedy, to sharpen the knife. Two days later, on the 10th, new decrees were placed before the Convention for intensifying the operations of the Revolutionary Tribunal. New crimes were invented 'spreading discouragement, perverting public opinion'; the prisoner's defence was practically taken away from him; and, most important, members of the Convention lost their inviolability. The Convention voted the decree, but terror had now pushed it to the wall and self-defence automatically sprang up. From that moment the Convention nerved itself to the inevitable struggle. Billaud, Collot and Barère, the *impures* of the Committee of Public Safety looked despairingly on all sides of the Convention for help to rid themselves of the monster, whose tentacles they already felt beginning to twine about them. Just at this critical moment a trivial incident arose that pierced Robespierre's armour in its weakest joint, and that crystallized the fear of the Convention into ridicule,—ridicule that proved the precursor of revolt. Catherine Théot, a female spiritualist, or medium, as we should call her at the present day, highly elated at the triumph of the Supreme Being over the unemotional Goddess of Reason, had made Robespierre the hero of her half-insane inspirations. She now announced to her credulous devotees that she was the mother of God, and that Robespierre was her son. It became the sensation of the day. Profiting by the temporary absence of St. Just with the army in the Netherlands, the Committee of Public Safety decided that Catherine Théot was a nuisance and a public danger, and must be arrested. Robespierre, intensely susceptible to ridicule, not knowing what to do, pettishly withdrew from the Convention, confined himself to his house and the Jacobin Club, and left the Committee to carry out its intention. Every member of the Convention realized that this was a distinct move against Robespierre. St. Just was with Jourdan's army in the north, and for the moment all eyes were fixed on that point. The campaign of 1794 might be decisive. France and Austria had put great armies in the field. The latter now controlled the belt of frontier fortresses, and if, pushing beyond these, she destroyed the French army, Paris and the Revolution might soon be at an end. As the campaign opened, however, fortune took her place with the tricolour flag. Minor successes fell to Moreau, Souham, Macdonald, Vandamme. In June the campaign culminated. The armies met south of Brussels at Fleurus on the 25th of that month. For fifteen hours the battle raged, Kléber with the French right wing holding his ground, the centre and left slowly driven back. But at the close of the day the French, not to be denied, came again. Jourdan, with St. Just by his side, drove his troops to a last effort, regained the lost ground, and more. The Austrians gave way, turned to flight, and one of the great victories of the epoch had been won. In a few hours the glorious news had reached Paris, and in Paris it was interpreted as an evil portent for Robespierre. For if there existed something that could possibly be described as a justification for terrorism, that something was national danger and national fear. Ever since the months of July, 1789, there had been a perfect correspondence

between military pressure on Paris and the consequent outbreak of violence. But this great victory, Fleurus, seemed to mark the complete triumph of the armies of the Republic; all danger had been swept away, so why should terror and the guillotine continue? As the captured Austrian standards were paraded in the Tuileries gardens and presented to the Convention on a lovely June afternoon, every inclination, every instinct was for rejoicing and good will. The thought that the cart was still steadily, lugubriously, wending its way to the insatiable guillotine, appeared unbearable. From this moment the fever of conspiracy against Robespierre coursed rapidly through the Convention. Some, like Sièyes, were statesmen, and judged that the turn of the tide had come. Others, like Tallien or Joseph Chênier, were touched in their family,—a brother, a wife, a sister awaiting judgment and the guillotine. Others feared; others hoped; and yet others had vengeance to satisfy, especially the remnants of Danton's, of Brissot's and of Hébert's party. St. Just saw the danger of the situation and attempted to cow opposition. He spoke threateningly of the necessity for a dictatorship and for a long list of proscriptions. It was the most silent member of the Committee of Public Safety, Carnot, who brought on the crisis. Affecting an exclusive concern for the conduct of the war and perfunctorily signing all that related to internal affairs, he was secretly restive and anxious to escape from the horrible situation. Prompted by some of his colleagues, he ordered, on the 24th of July, that the Paris national guard artillery should go to the front. This was taking the decisive arm out of the hands of Hanriot, for Hanriot had made his speech with Robespierre, had survived the fall of Hébert, and was still in command of the national guard. There could be no mistaking the significance of Carnot's step. On the same night Couthon loudly denounced it at the Jacobins, and the club decided that it would petition the Convention to take action against Robespierre's enemies. Next day Barère replied. He read a long speech to the Convention in which, without venturing names, he blamed citizens who were not heartened by the victories of the army and who meditated further proscriptions. On the 26th, the 8th of Thermidor, Robespierre reappeared in the assembly, and ascended the tribune to reply to Barère. Robespierre felt that the tide was flowing against him; instinct, premonitions, warned him that perhaps his end was not far off. In this speech—it was to be his last before the Convention—the melancholy note prevailed. There was no effort to conciliate, no attempt at being politic, only a slightly disheartened tone backed by the iteration which France already knew so well:—the remedy for the evil must be sought in purification; the Convention, the Committee of Public Safety, must be purged. Under the accustomed spell the Convention listened to the end. The usual motions were put. Robespierre left the assembly. It was voted that his speech should be printed; and that it should be posted in all the communes of France. For a moment it looked as though the iron yoke were immovably fixed. Then Cambon went to the tribune, and ventured to discuss Robespierre's views. Billaud followed. And presently the Convention, hardly realizing what it had done, rescinded the second of its two votes. Robespierre's speech should be printed, but it should not be placarded on the walls. At the Jacobin Club the rescinded vote of the Convention conveyed a meaning not to be mistaken. Robespierre repeated his Convention speech, which was greeted with acclamations. Billaud and Collot were received with hoots and groans, were driven

out, and were erased from the list of members. Through the night the Jacobins were beating up their supporters, threatening insurrection; and on their side the leaders of the revolt attempted to rally the members of the Convention to stand firmly by them. The next day was the 9th of Thermidor, St. Just made a bold attempt to control the situation. Early in the morning he met his colleagues of the Committee of Public Safety and, making advances to them, promised to lay before them a scheme that would reconcile all the divergent interests of the Convention. While the Committee awaited his arrival he proceeded to the body of the Convention, obtained the tribune, and began a speech. Realizing how far the temper of the assembly was against him, he boldly opened by denouncing the personal ambitions of Robespierre, and by advocating moderate courses—but he had not gone far when the members of the Committee, discovering the truth, returned to the Convention, and set to work with the help of the revolted members, to disconcert him. St. Just had perhaps only one weakness, but it was fatal to him on the 9th of Thermidor, for it was a weakness of voice. He was silenced by interruptions that constantly grew stormier. Billaud followed him and made an impassioned attack on the Jacobins. Robespierre attempted to reply. But Collot d'Herbois was presiding, and Collot declined to give Robespierre the tribune. The din arose; shouts of 'Down with the tyrant, down with the dictator,' were raised. Tallien demanded a decree of accusation. Members pressed around the Jacobin leader, who at this last extremity tried to force his way to the tribune. But the way was barred; he could only clutch the railings, and, asking for death, looking in despair at the public galleries that had so long shouted their Jacobin approval to him, he kept crying: 'La mort! la mort!' He had fallen. The whole Convention was roaring when Collot from the presidential chair announced the vote whereby Robespierre, St. Just, Couthon, Hanriot, and several others were ordered under arrest. Hanriot at this crisis again displayed his qualities of action. While the members of the Convention were wasting time in talk and self-congratulation, he was getting his forces together. He succeeded in freeing the accused deputies from their place of temporary arrest, and by the evening, all were gathered together at the Hotel de Ville. The Jacobins declared for Robespierre. The party made determined efforts through the evening to raise insurrection. But only small bodies of national guards could be kept together at the Hotel de Ville, and these began to dwindle away rapidly late in the evening when heavy rain fell. Meanwhile the Convention had met again in evening session. It appointed one of its own members, Barras, to command all the military forces that could be mustered, and then voted the escaped deputies outlaws for having broken arrest. The western districts of the city rallied to the Convention. Barras showed energy and courage. Information reached him of the state of affairs at the Hotel de Ville, and at one o'clock in the morning of the 20th he rallied several sectional battalions and marched quickly against the Robespierrists. At the Hotel de Ville there was little resistance. It was raining hard, and few remained with the Jacobin leaders. There was a short scuffle, in which Robespierre apparently attempted to kill himself and lodged a bullet in his jaw. The arrests were carried out, and a few hours later, no trial being necessary for outlaws, Robespierre, St. Just, Hanriot, Couthon, and about twenty more were driven through the streets to the guillotine."—R. M. Johnston, *French Revolution*, pp. 212-221.—

"Nothing could be easier and nothing would more satisfy the sense of the dramatic in history than to present him (Robespierre) as the guilty conceiver of an enormous crime, and to make Thermidor the retribution—turn to the documents of these seven weeks and you will discover that he would not sign the lists of the condemned, that he protested against nearly all the more famous of the prosecutions, and that the body directly responsible for them, the Committee of Public Safety, regarded him as a danger; more, you will find that the spokesman of that body says that Robespierre perished 'because he attempted to put a curb on the Revolution'; and you will find that those who chiefly overthrew him were men determined to push the terror to a further extreme"—H. Belloc, *Robespierre*, pp. x-xi.—"He [Robespierre] had qualities, it is true, which we must respect; he was honest, sincere, self-denying and consistent. But he was cowardly, relentless, pedantic, unloving, intensely vain and morbidly envious. . . . He has not left the legacy to mankind of one grand thought, nor the example of one generous and exalted action."—G. H. Lewes, *Life of Robespierre (Conclusion)*.—"The ninth of Thermidor is one of the great epochs in the history of Europe. It is true that the three members of the Committee of Public Safety [Billaud, Collot, and Barère], who triumphed were by no means better men than the three [Robespierre, Couthon, and St. Just] who fell. Indeed, we are inclined to think that of these six statesmen the least bad were Robespierre and St. Just, whose cruelty was the effect of sincere fanaticism operating on narrow understandings and acrimonious tempers. The worst of the six was, beyond all doubt, Barère, who had no faith in any part of the system which he upheld by persecution."—T. B. Macaulay, *Barère's Memoirs (Essays, v. 5)*.

1794-1795 (July-April).—Reaction against the Reign of Terror.—Thermidorians and the Jeunesse Dorée.—End of the Jacobin club.—Bread riots of Germinal 12.—Fall of the Mountain.—White terror in the provinces.—"On the morning of the 10th of Thermidor all the people who lived near the prisons of Paris crowded on the roofs of their houses and cried, 'All is over! Robespierre is dead!' The thousands of prisoners, who had believed themselves doomed to death, imagined themselves rescued from the tomb. Many were set free the same day, and all the rest regained hope and confidence. Their feeling of deliverance was shared throughout France. The Reign of Terror had become a sort of nightmare that stifled the nation, and the Reign of Terror and Robespierre were identical in the sight of the great majority. . . . The Convention presented a strange aspect. Party remnants were united in the coalition party called the 'Thermidorians.' Many of the Mountaineers and of those who had been fiercest in their missions presently took seats with the Right or Centre; and the periodic change of Committees, so long contested, was determined upon. Lots were drawn, and Barère, Lindet, and Prieur went out; Carnot, indispensable in the war, was re-elected until the coming spring; Billaud and Collot, feeling out of place in the new order of things, resigned. Danton's friends now prevailed; but, alas! the Dantonists were not Danton."—H. Martin, *Popular history of France from the first revolution, v. 1, ch.*

22.—“The Reign of Terror was practically over, but the ground-swell which follows a storm continued for some time longer. Twenty-one victims suffered on the same day with Robespierre, 70 on the next; altogether 114 were condemned and executed in the three days which followed his death. . . . A strong reaction against the ‘Terreur’ now set in. Upwards of 10,000 ‘suspects’ were set free, and Robespierre’s law of the 22 Prairial was abolished. Fréron, a leading Thermidorian, organized a band of young men who called themselves the Jeunesse Dorée [gilded youth], or Muscadins, and chiefly frequented the Palais Royal. They wore a ridiculous dress, ‘à la Victime’ [large cravat, black or green collar, and crape around the arm, signifying relationship to some of the victims of the revolutionary tribunal.—Thiers], and devoted themselves to punishing the Jacobins. They had their hymn, ‘Le réveil du Peuple,’ which they sang about the street, often coming into collision with the sans-culottes shouting the Marseillaise. On the 11th of November the Muscadins broke open the hall of the celebrated club, turned out the members, and shut it up for ever. . . . The committees of Salut Public and Sureté Générale were entirely remodelled and their powers much restrained; also the Revolutionary Tribunal was reorganized on the lines advocated by Camille Desmoulins in his proposal for a Comité de Clémence—which cost him his life. Carrier and Lebon suffered death for their atrocious conduct in La Vendée and [Arras]; 73 members who had protested against the arrest of the Girondins were recalled, and the survivors of the leading Girondists, Louvet, Lanjuinais, Isnard, Larévolière-Lépeaux and others. 22 in number, were restored to their seats in the Convention.”—S. Marceau, *Reminiscences of a regicide*, pt. 2, ch. 12.—“Billaud, Collot, and other marked Terrorists, already denounced in the Convention by Danton’s friends, felt that danger was every day drawing nearer to themselves. Their fate was to all appearance sealed by the readmission to the Convention (December 8) of the 73 deputies of the right, imprisoned in 1793 for signing protests against the expulsion of the Girondists. By the return of these deputies the complexion of the Assembly was entirely altered. . . . They now sought to undo the work of the Convention since the insurrection by which their party had been overwhelmed. They demanded that confiscated property should be restored to the relatives of persons condemned by the revolutionary courts; that emigrants who had fled in consequence of Terrorist persecutions should be allowed to return; that those deputies proscribed on June 2, 1793, who yet survived, should be recalled to their seats. The Mountain, as a body, violently opposed even the discussion of such questions. The Thermidorians split into two divisions. Some in alarm rejoined the Mountain; while others, headed by Tallien and Fréron, sought their safety by coalescing with the returned members of the right. A committee was appointed to report on accusations brought against Collot, Billaud, Barère, and Vadier (December 27, 1794). In a few weeks the survivors of the proscribed deputies entered the Convention amidst applause (March 8, 1795). . . . There was at this time great misery prevalent in Paris, and imminent peril of insurrection. After Robespierre’s fall, maximum prices were no longer observed, and assignats were only accepted in payment of goods at their real value compared with coin. The result was a rapid rise in prices, so that in December prices were double what they had been in July, and were continuing to rise in proportion as assignats decreased in value. . . . The maximum laws, already a dead letter, were re-

pealed (December 24). The abolition of maximum prices and requisitions increased the already lavish expenditure of the Government, which, to meet the deficit in its revenues, had no resource but to create more assignats, and the faster these were issued the faster they fell in value and the higher prices rose. In July 1794, they had been worth 34 per cent. of their nominal value. In December they were worth 22 per cent., and in May 1795 they were worth only 7 per cent. . . . At this time a pound of bread cost eight shillings, of rice thirteen, of sugar seventeen, and other articles were all proportionately dear. It is literally true that more than half the population of Paris was only kept alive by occasional distributions of meat and other articles at low prices, and the daily distribution of bread at three half-pence a pound. In February, however, this source of relief threatened to fail. . . . On April 1, or Germinal 12, bread riots, begun by women, broke out in every section. Bands collected and forced their way into the Convention, shouting for bread, but offering no violence to the deputies. . . . The crowd was already dispersing when forces arrived from the sections and cleared the House. The insurrection was a spontaneous rising for bread, without method or combination. The Terrorists had sought, but vainly, to obtain direction of it. Had they succeeded, the Mountain would have had an opportunity of proscribing the right. Their failure gave the right the opportunity of proscribing the left. The transportation to Cayenne of Billaud, Collot, Barère, and Vadier was decreed, and the arrest of fifteen other Montagnards, accused without proof, in several cases without probability, of having been accomplices of the insurgents. . . . The insurrection of Germinal 12 gave increased strength to the party of reaction. The Convention, in dread of the Terrorists, was compelled to look to it for support. . . . In the departments famine, disorder, and crime prevailed, as well as in Paris. . . . From the first the reaction proceeded in the departments with a more rapid step and in bolder form than in Paris. . . . In the departments of the south-east, where the Royalists had always possessed a strong following, emigrants of all descriptions readily made their way back; and here the opponents of the Republic, instigated by a desire for vengeance, or merely by party spirit, commenced a reaction stained by crimes as atrocious as any committed during the course of the revolution. Young men belonging to the upper and middle classes were organised in bands bearing the names of companies of Jesus and companies of the Sun, and first at Lyons, then at Aix, Toulon, Marseilles, and other towns, they broke into the prisons and murdered their inmates without distinction of age or sex. Besides the Terrorist and the Jacobin, neither the Republican nor the purchaser of State lands was safe from their knives; and in the country numerous isolated murders were committed. This lawless and brutal movement, called the White Terror in distinction to the Red Terror preceding Thermidor 9, was suffered for weeks to run its course unchecked, and counted its victims by many hundreds, spreading over the whole of Provence, besides the departments of Rhône, Gard, Loire, Ain, and Jura.”—B. M. Gardiner, *French Revolution*, ch. 10.

1794-1795 (October-May).—Subjugation of Holland.—Overthrow of the Stadtholdership.—

Establishment of the Batavian republic.—Peace of Basel with Prussia.—Successes on the Spanish and Italian frontiers.—Crumbling of the coalition.—“Pichegru having taken Bois le Duc, October 9th, the Duke of York retreated to the Ar, and thence beyond the Waal. Venloo fell October 27th, Maestricht November 3th, and the capture of Nimeguen on the 9th, which the English abandoned after the fall of Maestricht, opened to the French the road into Holland. The Duke of York resigned the command to General Walmoden, December 2nd, and returned into England. His departure showed that the English government had abandoned all hope of saving Holland. It had, indeed, consented that the States-General should propose terms of accommodation to the French; and two Dutch envoys had been despatched to Paris to offer to the Committee of Public Welfare the recognition by their government of the French Republic, and the payment of 200,000,000 florins within a year. But the Committee, suspecting that these offers were made only with the view of gaining time, paid no attention to them. The French were repulsed in their first attempt to cross the Waal by General Duncan with 8,000 English; but a severe frost enabled them to pass over on the ice, January 11th, 1795. Nothing but a victory could now save Holland. But Walmoden, instead of concentrating his troops for the purpose of giving battle, retreated over the Yssel, and finally over the Ems into Westphalia, whence the troops were carried to England by sea from Bremen. . . . General Alvinzi, who held the Rhine between Emmerich and Arnheim, having retired upon Wesel, Pichegru had only to advance. On entering Holland, he called upon the patriots to rise, and his occupation of the Dutch towns was immediately followed by a revolution. The Prince of Orange, the hereditary Stadtholder, embarked for England, January 19th, on which day Pichegru's advanced columns entered Amsterdam. Next day the Dutch fleet, frozen up in the Texel, was captured by the French bussars. Before the end of January the reduction of Holland had been completed, and a provincial [provisional?] government established at the Hague. The States-General, assembled February 24th, 1795, having received, through French influence, a new infusion of the patriot party, pronounced the abolition of the Stadtholderate, proclaimed the sovereignty of the people and the establishment of the Batavian Republic. A treaty of Peace with France followed, May 16th, and an offensive alliance against all enemies whatsoever till the end of the war, and against England forever. The sea and land forces to be provided by the Dutch were to serve under French commanders. Thus the new republic became a mere dependency of France. Dutch Flanders, the district on the left bank of the Hondt, Maestricht, Venloo, were retained by the French as a just indemnity for the expenses of the war, on which account the Dutch were also to pay 100,000,000 florins; but they were to receive, at the general peace, an equivalent for the ceded territories. By secret articles, the Dutch were to lend the French seven ships of war, to support a French army of 25,000 men, &c. Over and above the requisitions of the treaty, they were also called upon to re-clothe the French troops, and to furnish them with provisions. In short, though the Dutch patriots had ‘fraternised’ with the French, and received them with open arms, they were treated little better than a conquered people. Secret negotiations had been for some time going on between France and Prussia for a peace. . . . Frederick William II., . . . satisfied with his acquisitions in Poland, to which the English and Dutch

subsidies had helped him, . . . abandoned himself to his voluptuous habits,” and made overtures to the French. “Perhaps not the least influential among Frederick William's motives, was the refusal of the maritime Powers any longer to subsidise him for doing nothing. . . . The Peace of Basle, between the French Republic and the King of Prussia, was signed April 5th, 1795. The French troops were allowed to continue the occupation of the Rhenish provinces on the left bank. An article, that neither party should permit troops of the enemies of either to pass over its territories, was calculated to embarrass the Austrians. France agreed to accept the mediation of Prussia for princes of the Empire. . . . Prussia should engage in no hostile enterprise against Holland, or any other country occupied by French troops; while the French agreed not to push their enterprises in Germany beyond a certain line of demarcation, including the Circles of Westphalia, Higher and Lower Saxony, Franconia, and that part of the two Circles of the Rhine situate on the right bank of the Main. . . . Thus the King of Prussia, originally the most ardent promoter of the Coalition, was one of the first to desert it. By signing the Peace of Basle, he sacrificed Holland, facilitated the invasion of the Empire by the French, and thus prepared the ruin of the ancient German constitution.” In the meantime the French had been pushing war with success on their Spanish frontier, recovering the ground which they had lost in the early part of 1794. In the eastern Pyrenees, Dugommier “retook Bellegarde in September, the last position held by the Spaniards in France, and by the battle of the Montagne Noire, which lasted from November 17th to the 20th, opened the way into Catalonia. But at the beginning of this battle Dugommier was killed. Figuières surrendered November 24th, through the influence of the French democratic propaganda. On the west, Moncey captured St. Sebastian and Fuentarabia in August, and was preparing to attack Pampeluna, when terrible storms . . . compelled him to retreat on the Bidassoa, and closed the campaign in that quarter. On the side of Piedmont, the French, after some reverses, succeeded in making themselves masters of Mont Cenis and the passes of the Maritime Alps, thus holding the keys of Italy; but the Government, content with this success, ventured not at present to undertake the invasion of that country.” The king of Sardinia, Victor Amadeus, remained faithful to his engagements with Austria, although the French tempted him with an offer of the Milanese, “and the exchange of the island of Sardinia for territory more conveniently situated. With the Grand Duke of Tuscany they were more successful. . . . On February 6th, 1795, a treaty was signed by which the Grand Duke revoked his adhesion to the Coalition. . . . Thus Ferdinand was the first to desert the Emperor, his brother. The example of Tuscany was followed by the Regent of Sweden.”—T. H. Dyer, *History of modern Europe*, v. 4, bk. 7, ch. 7.

1794-1796.—Brigandage in La Vendée.—Chouannerie in Brittany.—Disastrous Quiberon expedition.—End of the Vendean War.—“Since the defeat at Savenay, the Vendée was no longer the scene of grand operations, but of brigandage and atrocities without result. The peasants, though detesting the Revolution, were anxious for peace; but, as there were still two chiefs, Charette and Stofflet, in the field, who hated each other, this wish could scarcely be gratified. General Thurieu,

sent by the former Revolutionary Committee, had but increased this detestation by allowing pillage and incendiaryism. After the death of Robespierre he was replaced by General Claucaux, who had orders to employ more conciliatory measures. The defeat of the rebel troops at Savenay, and their subsequent dispersion, had led to a kind of guerilla warfare throughout the whole of Brittany, known by the name of Chouannerie."—H. Van Laun, *French revolutionary epoch*, v. 1, bk. 2, ch. 2.—"A poor peasant, named Jean Cottereau, had distinguished himself in this movement above all his companions, and his family bore the name of Chouans (Chat-huans) or night-owls. . . . The name of Chouan passed from him to all the insurgents of Bretagne, although he himself never led more than a few hundred peasants, who obeyed him, as they said, out of friendship."—H. von Sybel, *History of the French Revolution*, v. 4, p. 238.—"The Chouans attacked the public conveyances, infested the high roads, murdered isolated bands of soldiers and functionaries. Their chiefs were Scepeaux, Bourmont, Cadoudal, but especially Puisaye . . . formerly general of the Girondins, and who wanted to raise a more formidable insurrection than had hitherto been organised. Against them was sent Hoche [September, 1794], who accustomed his soldiers to pacify rather than destroy, and taught them to respect the habits, but above all the religion, of the inhabitants. After some difficult negotiations with Charette peace was concluded (15th February), but the suppression of the Chouans was more difficult still, and Hoche . . . displayed in this ungrateful mission all the talents and humanity for which he was ever celebrated. Puisaye himself was in England, having obtained Pitt's promise of a fleet and an army, but his aide-de-camp concluded in his absence a treaty similar to that of Charette. . . . Stofflet surrendered the last. Not much dependence could be placed on either of these pacifications, Charette himself having confessed in a letter to the Count de Provence that they were but a trap for the Republicans; but they proved useful, nevertheless, by accustoming the country to peace." This deceptive state of peace came to an end early in the summer of 1795. "The conspiracy organised in London by Puisaye, assisted and subsidised by Pitt, . . . fitted out a fleet, which harassed the French naval squadron, and then set sail for Brittany, where the expedition made itself master of the peninsula of Quiberon and the fort Penthièvre (27th June). The Brittany peasants, suspicious of the Vendéans and hating the English, did not respond to the call for revolt, and occasioned a loss of time to the invaders, of which Hoche took advantage to bring together his troops and to march on Quiberon, where he defeated the vanguard of the émigrés, and surrounded them in the peninsula. Puisaye [who had, it is said, about 10,000 men, émigrés and Chouans] attempted to crush Hoche by an attack in the rear, but was eventually out-manœuvred, Fort Penthièvre was scaled during the night, and the émigrés were routed; whilst the English squadron was caught in a hurricane and could not come to their assistance, save with one ship, which fired indiscriminately on friend and foe alike. Most of the Royalists rushed into the sea, where nearly all of them perished. Scarcely a thousand men remained, and these fought heroically. It is said that a promise was given to them that if they surrendered their lives should be spared, and, accordingly, 711 laid down their arms (21st July). By order of the Convention . . . these 711 émigrés were shot. . . . From his camp at Belleville, Charette, one of the insurgent generals, responded to this execution

by the massacre of 2,000 Republican prisoners." In the following October another expedition of Royalists, fitted out in England under the auspices of Pitt, "landed at the Ile Dieu, . . . a small island about eight miles from the mainland of Poitou, and was composed of 2,500 men, who were destined to be the nucleus of several regiments; it also had on board a large store of arms, ammunition, and the Count d'Artois. Charette, named general commander of the Catholic forces, was awaiting him with 10,000 men. The whole of the Vendée was ready to rise the moment the prince touched French soil, but frivolous and undecided, he waited six weeks in idleness, endeavouring to obtain from England his recall. Hoche, to whom the command of the Republican forces had been entrusted, took advantage of this delay to cut off Charette from his communications, while he held Stofflet and the rest of the Brittany chiefs in check, and occupied the coast with 30,000 men. The Count d'Artois, whom Pitt would not recall, entreated the English commander to set sail for England (Dec. 17th, 1795), and the latter, unable to manage his fleet on a coast without shelter, complied with his request, leaving the prince on his arrival to the deserved contempt of even his own partisans. Charette in despair attempted another rising, hoping to be seconded by Stofflet, but he was beaten on all sides by Hoche. This general, who combined the astuteness of the statesman with the valour of the soldier, succeeded in a short time in pacifying the country by his generous but firm behaviour towards the inhabitants. Charette, tracked from shelter to shelter, was finally compelled to surrender, brought to Nantes, and shot (March 24th). The same lot had befallen Stofflet a month before at Angers. After these events Hoche led his troops into Brittany, where he succeeded in putting an end to the 'chouannerie.' The west returned to its normal condition."—H. Van Laun, *French revolutionary epoch*, v. 1, bk. 2, ch. 2; bk. 3, ch. 1.

ALSO IN: A. Thiers, *History of the French Revolution* (American edition), v. 3, pp. 144-145; 188-193; 230-240; 281-305; 343-345; 358-363; 384-380.

1795 (April).—Question of the constitution.—Insurrection "for bread and rights" of the first Prairial and its failure.—Disarming of the Faubourgs.—Bourgeoisie dominant again.—"The events of the 12th of Germinal decided nothing. The faubourgs had been repulsed, but not conquered. . . . After so many questions decided against the democratists, there still remained one of the utmost importance—the constitution. On this depended the ascendancy of the multitude or of the bourgeoisie. The supporters of the revolutionary government then fell back on the democratic constitution of '93, which presented to them the means of resuming the authority they had lost. Their opponents, on the other hand, endeavoured to replace it by a constitution which would secure all the advantage to them, by concentrating the government a little more, and giving it to the middle class. For a month, both parties were preparing for this last contest. The constitution of 1793, having been sanctioned by the people, enjoyed a great prestige. It was accordingly attacked with infinite precaution. At first its assailants engaged to carry it into execution without restriction; next they appointed a commission of eleven members to prepare the 'lois organiques' [organic laws] which were to render it practicable; by and by, they ventured to suggest objections to it on the ground that it distributed power too loosely, and only recognised one assembly dependent on the people,

even in its measures of legislation. At last, a sectionary deputation went so far as to term the constitution of '93 a decemviral [created by ten men] constitution, dictated by terror. All its partisans, at once indignant and filled with fears, organized an insurrection to maintain it. . . . The conspirators, warned by the failure of the risings of the 1st and 12th Germinal, omitted nothing to make up for their want of direct object and of organization. On the 1st Prairial (20th of May) in the name of the people, insurgent for the purpose of obtaining bread and their rights, they decreed the abolition of the revolutionary government, the establishment of the democratic constitution of '93, the dismissal and arrest of the members of the existing government, the liberation of the patriots, the convocation of the primary assemblies on the 25th Prairial, the convocation of the legislative assembly, destined to replace the convention, on the 25th Messidor, and the suspension of all authority not emanating from the people. They determined on forming a new municipality, to serve as a common centre; to seize on the barriers, telegraph, cannon, tocsins, drums, and not to rest till they had secured repose, happiness, liberty, and means of subsistence for all the French nation. They invited the artillery, gendarmes, horse and foot soldiers, to join the banners of the people, and marched on the convention. Meantime, the latter was deliberating on the means of preventing the insurrection. . . . The committees came in all haste to apprise it of its danger; it immediately declared its sitting permanent, voted Paris responsible for the safety of the representatives of the republic, closed its doors, outlawed all the leaders of the mob, summoned the citizens of the sections to arms, and appointed as their leaders eight commissioners, among whom were Legendre, Henri la Riviere, Kervelegan, &c. These deputies had scarcely gone, when a loud noise was heard without. An outer door had been forced, and numbers of women rushed into the galleries, crying 'Bread and the constitution of '93!' . . . The galleries were . . . cleared; but the insurgents of the faubourgs soon reached the inner doors, and, finding them closed, forced them with hatchets and hammers, and then rushed in amidst the convention. The Hall now became a field of battle. The veterans and gendarmes, to whom the guard of the assembly was confided, cried 'To arms!' The deputy Auguis, sword in hand, headed them, and succeeded in repelling the assailants, and even made a few of them prisoners. But the insurgents, more numerous, returned to the charge, and again rushed into the house. The deputy Feraud entered precipitately, pursued by the insurgents, who fired some shots in the house. They took aim at Boissy d'Anglas, who was occupying the president's chair. . . . Feraud ran to the tribune, to shield him with his body; he was struck at with pikes and sabres, and fell dangerously wounded. The insurgents dragged him into the lobby, and, mistaking him for Fréron, cut off his head and placed it on a pike. After this skirmish they became masters of the Hall. Most of the deputies had taken flight. There only remained the members of the Crête [the 'Crest'—a name now given to the remnant of the party of 'The Mountain'] and Boissy d'Anglas, who, calm, his hat on, heedless of threat and insult, protested in the name of the convention against this popular violence. They held out to him the bleeding head of Feraud; he bowed respectfully before it. They tried to force him, by placing pikes at his breast, to put the propositions of the insurgents to the vote; he steadily and courageously refused. But the Crétois, who approved of the insurrection, took posses-

sion of the bureaux and of the tribune, and decreed, amidst the applause of the multitude, all the articles contained in the manifesto of the insurrection." Meantime "the commissioners despatched to the sections had quickly gathered them together. . . . The aspect of affairs then underwent a change; Legendre, Kervelegan, and Auguis besieged the insurgents, in their turn, at the head of the sectionaries," and drove them at last from the hall of the convention. "The assembly again became complete; the sections received a vote of thanks, and the deliberations were resumed. All the measures adopted in the interim were annulled, and fourteen representatives, to whom were afterwards joined fourteen others, were arrested, for organizing the insurrection or approving it in their speeches. It was then midnight; at five in the morning the prisoners were already six leagues from Paris. Despite this defeat, the Faubourgs did not consider themselves beaten; and the next day they advanced en masse with their cannon against the convention. The sections, on their side, marched for its defence." But a collision was averted by negotiations, and the insurgents withdrew, "after having received an assurance that the Convention would assiduously attend to the question of provisions, and would soon publish the organic laws of the constitution of '93. . . . Six democratic Mountaineers, Goujon, Bourbotte, Romme, Duroy, Duquesnoy, and Soubrany, were brought before a military commission . . . and . . . condemned to death. They all stabbed themselves with the same knife, which was transferred from one to the other, exclaiming, 'Vive la République!' Romme, Goujon, and Duquesnoy were fortunate enough to wound themselves fatally; the other three were conducted to the scaffold in a dying state, but faced death with serene countenances. Meantime, the Faubourgs, though repelled on the 1st, and diverted from their object on the 2nd of Prairial, still had the means of rising," and the convention ordered them to be disarmed. "They were encompassed by all the interior sections. After attempting to resist, they yielded, giving up some of their leaders, their arms, and artillery. . . . The inferior class was entirely excluded from the government of the state; the revolutionary committees which formed its assemblies were destroyed; the cannoners forming its armed force were disarmed; the constitution of '93, which was its code, was abolished; and here the rule of the multitude terminated. . . . From that period, the middle class resumed the management of the revolution without, and the assembly was as united under the Girondists as it had been, after the 2nd of June, under the Mountaineers."—F. A. Mignet, *History of the French Revolution*, ch. 10.

1795 (June-September).—Framing and adoption of the constitution of the Year III.—Self-renewing decrees of the Convention.—Hostility in Paris to them.—Intrigues of the Royalists.—"The royalist party, beaten on the frontiers, and deserted by the court of Spain, on which it placed most reliance, was now obliged to confine itself to intrigues in the interior; and it must be confessed that, at this moment, Paris offered a wide field for such intrigues. The work of the constitution was advancing; the time when the Convention was to resign its powers, when France should meet to elect fresh representatives, when a new Assembly should succeed that which had so

long reigned, was more favourable than any other for counter-revolutionary manœuvres. The most vehement passions were in agitation in the sections of Paris. The members of them were not royalists, but they served the cause of royalty without being aware of it. They had made a point of opposing the Terrorists; they had animated themselves by the conflict; they wished to persecute also; and they were exasperated against the Convention, which would not permit this persecution to be carried too far. They were always ready to remember that Terror had sprung from its bosom; they demanded of it a constitution and laws, and the end of the long dictatorship which it had exercised. . . . Behind this mass the royalists concealed themselves. . . . The constitution had been presented by the commission of eleven. It was discussed during the three months of Messidor, Thermidor, and Fructidor [June-August], and was successively decreed with very little alteration." The principal features of the constitution so framed, known as the Constitution of the Year III, were the following. "A Council, called 'The Council of the Five Hundred,' composed of 500 members, of, at least, thirty years of age, having exclusively the right of proposing laws, one-third to be renewed every year. A Council called 'The Council of the Ancients,' composed of 250 members, of, at least, forty years of age, all either widowers or married, having the sanction of the laws, to be renewed also by one-third. An executive Directory, composed of five members, deciding by a majority, to be renewed annually by one-fifth, having responsible ministers. . . . The mode of nominating these powers was the following: All the citizens of the age of twenty-one met of right in primary assembly on every first day of the month of Prairial, and nominated electoral assemblies. These electoral assemblies met every 20th of Prairial, and nominated the two Councils; and the two Councils nominated the Directory. . . . The judicial authority was committed to elective judges. . . . There were to be no communal assemblies, but municipal and departmental administrations, composed of three, five, or more members, according to the population; they were to be formed by way of election. . . . The press was entirely free. The emigrants were banished for ever from the territory of the republic; the national domains were irrevocably secured to the purchasers; all religions were declared free, but were neither acknowledged nor paid by the state. . . . One important question was started. The Constituent Assembly, from a parade of disinterestedness, had excluded itself from the new legislative body [the Legislative Assembly of 1791]; would the Convention do the same? [The members of the Convention decided this question in the negative, and] decreed, on the 5th of Fructidor (August 22d), that the new legislative body should be composed of two-thirds of the Convention, and that one new third only should be elected. The question to be decided was, whether the Convention should itself designate the two-thirds to be retained, or whether it should leave that duty to the electoral assemblies. After a tremendous dispute, it was agreed on the 13th of Fructidor (August 30), that this choice should be left to the electoral assemblies. It was decided that the primary assemblies should meet on the 20th of Fructidor (September 6th), to accept the constitution and the two decrees of the 5th and the 13th of Fructidor. It was likewise decided that, after giving their votes upon the constitution and the decrees, the primary assemblies should again meet and proceed forth-

with, that is to say, in the year III. (1795), to the elections for the 1st of Prairial in the following year. [The right of voting upon the constitution was extended, by another decree, to the armies in the field.] No sooner were these resolutions adopted, than the enemies of the Convention, so numerous and so diverse, were deeply mortified by them. . . . The Convention, they said, was determined to cling to power; . . . it wished to retain by force a majority composed of men who had covered France with scaffolds. . . . All the sections of Paris, excepting that of the Quinze-Vingts, accepted the Constitution and rejected the decrees. The result was not the same in the rest of France. . . . On the 1st of Vendémiaire, year IV. (September 23, 1795), the general result of the votes was proclaimed. The constitution was accepted almost unanimously, and the decrees by an immense majority of the voters." The Convention now decreed that the new legislative body should be elected in October and meet November 6.—A. Thiers, *History of the French Revolution* (American edition), v. 3, pp. 305-315. 1795 (June-December).—Death of the late king's son (Louis XVII).—Treaty of Basel with Spain.—Acquisition of Spanish Santo Domingo.—Ineffectual campaign on the Rhine.—Victory at Loano.—"The Committees had formed great plans for the campaign of 1795; meaning to invade the territories of the allies, take Mayence, and enter Southern Germany, go down into Italy, and reach the very heart of Spain. But Carnot, Lindet, and Prieur were no longer on the Committee, and their successors were not their equals; army discipline was relaxed; a vulgar reactionist had replaced Carnot in the war department and was working ruin. . . . The attack in Spain was to begin with the Lower Pyrenees, by the capture of Pampeluna and a march upon Castile, but famine and fever decimated the army of the Western Pyrenees, and General Moncey was forced to postpone all serious action till the summer. At the other end of the Pyrenees, the French and Spaniards were fighting aimlessly at the entry to Catalonia. The war was at a standstill; but the negotiations went on between the two countries. The king of Spain, as in honor bound, made the liberation of his young kinsman, the son of Louis XVI., a condition of peace. This the Republic would not grant, but the prisoner's death (June 8, 1795) removed the obstacle. The counter-revolutionists accused the Committees of poisoning the child stiled by the royalist party Louis XVII. This charge was false; the poor little prisoner died of scrofula, developed by inaction, ennui, and the sufferings of a pitiless imprisonment, increased by the cruel treatment of his jailers, a cobbler named Simon and his wife. A rumor was also spread that the child was not dead, but had been taken away and an impostor substituted, who had died. Only one of the royal family now remained in the Temple, Louis XVI.'s daughter, afterwards the Duchesse d'Angoulême. Spain interceded for her, and she was exchanged. . . . Peace with Spain was also hastened by French successes beyond the Pyrenees; General Marceau, being reinforced, took Vittoria and Bilbao, and pushed on to the Ebro. On the 22d of July, Barthelmi, the able French diplomatist, signed a treaty of peace with Spain at Basle, restoring her Biscayan and Catalonian provinces, and accepting

Spanish mediation in favor of the king of Naples, Duke of Parma, king of Portugal, and 'the other Italian powers,' including, though not mentioning, the Pope; and Spain yielded her share of San Domingo, which put a brighter face on French affairs in America. . . . Guadeloupe, Santa Lucia, and St. Eustache were restored to the French. . . . Spain soon made overtures for an alliance with France, wishing to put down the English desire to rule the seas; and, before the new treaty was signed, the army of the Eastern Pyrenees was sent to reinforce the armies of the Alps and Italy, who had only held their positions in the Apennines and on the Ligurian coast against the Austrians and the Piedmontese by sheer force of will; but in the autumn of 1795 the face of affairs was changed. Now that Prussia had left the coalition, war on the Rhine went on between France and Austria, sustained by the South German States; France had to complete her mastery of the left bank by taking Mayence and Luxembourg; and Austria's aim was to dispute them with her. The French government charged Marceau to besiege Mayence during the winter of 1794-95, but did not furnish him the necessary resources, and, France not holding the right bank, Kléber could only partially invest the town, and both his soldiers and those blockading Luxembourg suffered greatly from cold and privation. Early in March, 1795, Pichegru was put in command of the armies of the Rhine and Moselle, and Jourdan was ordered to support him on the left (the Lower Rhine) with the army of Sambre-et-Meuse. Austria took no advantage of the feeble state of the French troops, and Luxembourg, one of the strongest posts in Europe, receiving no help, surrendered (June 24) with 800 cannon and huge store of provisions. The French now had the upper hand, Pichegru and Jourdan commanding 160,000 men on the Rhine. One of these men was upright and brave, but the other had treason in his soul; though everybody admired Pichegru, 'the conqueror of Holland.' . . . In August, 1795, an agent of the Prince of Condé, who was then at Brigau, in the Black Forest, with his corps of emigrants, offered Pichegru, who was in Alsace, the title of Marshal of France and Governor of Alsace, the royal castle of Chambord, a million down, an annuity of 200,000 livres, and a house in Paris, in the 'king's' name, thus flattering at once his vanity and his greed. . . . He was checked by no scruples; utterly devoid of moral sense, he hoped to gain his army by money and wine, and had no discussion with the Prince of Condé save as to the manner of his treason." In the end, Pichegru was not able to make his treason as effective as he had bargained to do; but he succeeded in spoiling the campaign of 1795 on the Rhine. Jourdan crossed the river and took Dusseldorf, with 168 cannon, on the 6th of September, expecting a simultaneous movement on the part of Pichegru, to occupy the enemy in the latter's front. But Pichegru, though he took Mannheim, on the 18th of September, threw a corps of 10,000 men into the hands of the Austrians, by placing it where it could be easily overwhelmed, and permitted his opponent, Wurmser, to send reinforcements to Clairfait, who forced Jourdan, in October, to retreat across the Rhine. "Pichegru's perfidy had thwarted a campaign which must have been decisive, and Jourdan's retreat was followed by the enemy's offensive return to the left bank [retaking Mannheim and raising the siege of Mayence], and by reverses which would have been fatal had they coincided with the outburst of royalist and reactionary plots and insurrections

in the West, and in Paris itself; but they had luckily been stifled some time since, and as the Convention concluded its career, the direction of the war returned to the hands which guided it so well in 1793 and 1794."—H. Martin, *Popular history of France from the first revolution*, v. 1, ch. 24.—The army of Italy won the victory of Loano on the 24th of November, which opened communication with Genoa. The army of the Alps finally reached the summits of Mont Cenis and the little St. Bernard, and drove the Piedmontese before it.

1795 (October-December).—Insurrection of the 13th Vendémiaire, put down by Napoleon Bonaparte.—Dissolution of the National Convention.—Organization of the government of the Directory.—Licentiousness of the time.—"The Parisians . . . proclaimed their hostility to the Convention and its designs. The National Guard, consisting of armed citizens, almost unanimously sided with the enemies of the Convention; and it was openly proposed to march to the Tuilleries, and compel a change of measures by force of arms. The Convention perceiving their unpopularity and danger, began to look about them anxiously for the means of defence. There were in and near Paris 5,000 regular troops, on whom they thought they might rely, and who of course contemned the National Guard as only half soldiers. They had besides some hundreds of artillery men; and they now organised what they called 'the Sacred Band,' a body of 1,500 ruffians, the most part of them old and tried instruments of Robespierre. With these means they prepared to arrange a plan of defence; and it was obvious that they did not want materials, provided they could find a skilful and determined head. The insurgent sections placed themselves under the command of Danican, an old general of no great skill or reputation. The Convention opposed to him Menou; and he marched at the head of a column into the section Le Pelletier to disarm the National Guard of that district—one of the wealthiest of the capital. The National Guard were found drawn up in readiness to receive him at the end of the Rue Vivienne; and Menou, becoming alarmed, and hampered by the presence of some of the 'Representatives of the People,' entered into a parley, and retired without having struck a blow. The Convention judged that Menou was not master of nerves for such a crisis; and consulted eagerly about a successor to his command. Barras, one of their number, had happened to be present at Toulon and to have appreciated the character of Buonaparte. He had, probably, been applied to by Napoleon in his recent pursuit of employment. Deliberating with Tallien and Carnot, his colleagues, he suddenly said, 'I have the man whom you want; it is a little Corsican officer, who will not stand upon ceremony.' These words decided the fate of Napoleon and of France. Buonaparte had been in the Odeon Theatre when the affair of Le Pelletier occurred, had run out, and witnessed the result. He now happened to be in the gallery, and heard the discussion concerning the conduct of Menou. He was presently sent for, and asked his opinion as to that officer's retreat. He explained what had happened, and how the evil might have been

avoided, in a manner which gave satisfaction. He was desired to assume the command, and arranged his plan of defence as well as the circumstances might permit; for it was already late at night, and the decisive assault on the Tuilleries was expected to take place next morning. Buonaparte stated that the failure of the march of Menou had been chiefly owing to the presence of the 'Representatives of the People,' and refused to accept the command unless he received it free from all such interference. They yielded: Barras was named commander-in-chief; and Buonaparte second, with the virtual control. His first care was to despatch Murat, then a major of chasseurs, to Sablons, five miles off, where fifty great guns were posted. The Sectionaries sent a stronger detachment for these cannon immediately afterwards; and Murat, who passed them in the dark, would have gone in vain had he received his orders but a few minutes later. On the 4th of October (called in the revolutionary almanac the 13th Vendémiaire) the affray accordingly occurred. Thirty thousand National Guards advanced about two P. M., by different streets, to the siege of the palace: but its defence was now in far other hands than those of Louis XVI. Buonaparte, having planted artillery on all the bridges, had effectually secured the command of the river, and the safety of the Tuilleries on one side. He had placed cannon also at all the crossings of the streets by which the National Guard could advance towards the other front; and having posted his battalions in the garden of the Tuilleries and Place du Carousel, he awaited the attack. The insurgents had no cannon; and they came along the narrow streets of Paris in close and heavy columns. When one party reached the church of St. Roche, in the Rue St. Honoré, they found a body of Buonaparte's troops drawn up there, with two cannons. It is disputed on which side the firing began; but in an instant the artillery swept the streets and lanes, scattering grape-shot among the National Guards, and producing such confusion that they were compelled to give way. The first shot was a signal for all the batteries which Buonaparte had established; the quays of the Seine, opposite to the Tuilleries, were commanded by his guns below the palace and on the bridges. In less than an hour the action was over. The insurgents fled in all directions, leaving the streets covered with dead and wounded; the troops of the Convention marched into the various sections, disarmed the terrified inhabitants, and before nightfall everything was quiet. This eminent service secured the triumph of the Conventionalists. . . . Within five days from the Day of the Sections Buonaparte was named second in command of the army of the interior; and shortly afterwards, Barras finding his duties as Director sufficient to occupy his time, gave up the command-in-chief of the same army to his 'little Corsican officer.'—J. G. Lockhart, *Life of Napoleon Buonaparte*, ch. 3.—The victory of the 13th Vendémiaire "enabled the Convention immediately to devote its attention to the formation of the Councils proposed by it, two-thirds of which were to consist of its own members. The first third, which was freely elected, had already been nominated by the Reactionary party. The members of the Directory were chosen, and the deputies of the Convention, believing that for their own interests the regicides should be at the head of the Government, nominated La Réveillère-Lepeaux, Sièyes, Rewbel, Le Tourneur, and Barras. Sièyes refused to act, and Carnot was elected in his place. Immediately after this, the Convention de-

clared its session at an end, after it had had three years of existence, from the 21st September, 1792, to the 28th October, 1795 (4th Brumaire, Year IV). . . . The Directors were all, with the exception of Carnot, of moderate capacity, and concurred in rendering their own position the more difficult. At this period there was no element of order or good government in the Republic; anarchy and uneasiness everywhere prevailed, famine had become chronic, the troops were without clothes, provisions or horses; the Convention had spent an immense capital represented by assignats, and had sold almost half of the Republican territory, belonging to the proscribed classes; . . . the excessive degree of discredit to which paper money had fallen, after the issue of thirty-eight thousand millions, had destroyed all confidence and all legitimate commerce. . . . Such was the general poverty, that when the Directors entered the palace which had been assigned to them as a dwelling, they found no furniture there, and were compelled to borrow of the porter a few straw chairs and a wooden table, on the latter of which they drew up the decree by which they were appointed to office. Their first care was to establish their power, and they succeeded in doing this by frankly following at first the rules laid down by the Constitution. In a short time industry and commerce began to raise their heads, the supply of provisions became tolerably abundant, and the clubs were abandoned for the workshops and the fields. The Directory exerted itself to revive agriculture, industry, and the arts, re-established the public exhibitions, and founded primary, central, and normal schools. . . . This period was distinguished by a great licentiousness in manners. The wealthy classes, who had been so long forced into retirement by the Reign of Terror, now gave themselves up to the pursuit of pleasure without stint, and indulged in a course of unbridled luxury, which was outwardly displayed in balls, festivities, rich costumes and sumptuous equipages. Barras, who was a man of pleasure, favoured this dangerous sign of the reaction, and his palace soon became the rendezvous of the most frivolous and corrupt society. In spite of this, however, the wealthy classes were still the victims, under the government of the Directory, of violent and spoliative measures."—E. de Bonnechose, *History of France*, v. 2, pp. 270-273.

1796 (April-October).—Triple attack on Austria.—Bonaparte's first campaign in Italy.—Submission of Sardinia.—Armistice with Naples and the Pope.—Pillage of art treasures.—Hostile designs upon Venice.—Expulsion of the Austrians from Lombardy.—Failure of the campaign beyond the Rhine.—"With the opening of the year 1796 the leading interest of European history passes to a new scene. . . . The Directory was now able . . . to throw its whole force into the struggle with Austria. By the advice of Bonaparte a threefold movement was undertaken against Vienna, by way of Lombardy, by the valley of the Danube, and by the valley of the Main. General Jourdan, in command of the army that had conquered the Netherlands, was ordered to enter Germany by Frankfort; Moreau, a Breton

law-student in 1792, now one of the most skilful soldiers in Europe, crossed the Rhine at Strasbourg; Bonaparte himself, drawing his scanty supplies along the coast-road from Nice, faced the allied forces of Austria and Sardinia upon the slopes of the Maritime Apennines, forty miles to the west of Genoa. . . . Bonaparte entered Italy proclaiming himself the restorer of Italian freedom, but with the deliberate purpose of using Italy as a means of recruiting the exhausted treasury of France. His correspondence with the Directory exposes with brazen frankness this well-considered system of plunder and deceit, in which the general and the Government were cordially at one. . . . The campaign of 1796 commenced in April, in the mountains above the coast-road connecting Nice and Genoa. . . . Bonaparte . . . for four days . . . reiterated his attacks at Montenotte and at Millesimo, until he had forced his own army into a position in the centre of the Allies [Austrians and Piedmontese]; then, leaving a small force to watch the Austrians, he threw the mass of his troops upon the Piedmontese, and drove them back to within thirty miles of Turin. The terror-stricken Government, anticipating an outbreak in the capital itself, accepted an armistice from Bonaparte at Cherasco (April 28). . . . The armistice, which was soon followed by a treaty of peace between France and Sardinia, ceding Savoy to the Republic, left him free to follow the Austrians, untroubled by the existence of some of the strongest fortresses of Europe behind him. In the negotiations with Sardinia, Bonaparte demanded the surrender of the town of Valenza, as necessary to secure his passage over the river Po. Having thus artfully led the Austrian Beaulieu to concentrate his forces at this point, he suddenly moved eastward along the southern bank of the river, and crossed at Piacenza, 50 miles below the spot where Beaulieu was awaiting him. . . . The Austrian general, taken in the rear, had no alternative but to abandon Milan and all the country west of it, and to fall back upon the line of the Adda. Bonaparte followed, and on the 10th of May attacked the Austrians at Lodi. He himself stormed the bridge of Lodi at the head of his Grenadiers. The battle was so disastrous to the Austrians that they could risk no second engagement, and retired upon Mantua and the line of the Mincio. Bonaparte now made his triumphal entry into Milan (May 15). . . . In return for the gift of liberty, the Milanese were invited to offer to their deliverers 20,000,000 francs, and a selection from the paintings in their churches and galleries. The Dukes of Parma and Modena, in return for an armistice, were required to hand over forty of their best pictures, and a sum of money proportioned to their revenues. The Dukes and the townspeople paid their contributions with a good grace: the peasantry of Lombardy, whose cattle were seized in order to supply an army that marched without any stores of its own, rose in arms, and threw themselves into Pavia, after killing all the French soldiers who fell in their way. The revolt was instantly suppressed, and the town of Pavia given up to pillage. . . . Instead of crossing the Apennines, Bonaparte advanced against the Austrian positions upon the Mincio. . . . A battle was fought and lost by the Austrians at Borghetto. . . . Beaulieu's strength was exhausted; he could meet the enemy no more in the field, and led his army out of Italy into the Tyrol, leaving Mantua to be invested by the French. The first care of the conqueror was to make Venice pay for the crime of possessing territory intervening between the eastern and western

extremes of the Austrian district. Bonaparte affected to believe that the Venetians had permitted Beaulieu to occupy Peschiera before he seized upon Brescia himself. . . . 'I have purposely devised this rupture,' he wrote to the Directory (June 7th), 'in case you should wish to obtain five or six millions of francs from Venice. If you have more decided intentions, I think it would be well to keep up the quarrel.' The intention referred to was the disgraceful project of sacrificing Venice to Austria in return for the cession of the Netherlands. . . . The Austrians were fairly driven out of Lombardy, and Bonaparte was now free to deal with Southern Italy. He advanced into the States of the Church, and expelled the Papal Legate from Bologna. Ferdinand of Naples . . . asked for a suspension of hostilities against his own kingdom . . . and Bonaparte granted the king an armistice on easy terms. The Pope, in order to gain a few months' truce, had to permit the occupation of Ferrara, Ravenna, and Ancona, and to recognise the necessities, the learning, the taste, and the virtue of his conquerors by a gift of 20,000,000 francs, 500 manuscripts, 100 pictures, and the busts of Marcus and Lucius Brutus. . . . Tuscany had indeed made peace with the French Republic a year before, but . . . while Bonaparte paid a respectful visit to the Grand Duke at Florence, Murat descended upon Leghorn, and seized upon everything that was not removed before his approach. Once established in Leghorn, the French declined to quit it. . . . Mantua was meanwhile invested, and thither Bonaparte returned. Towards the end of July an Austrian relieving army, nearly double the strength of Bonaparte's, descended from the Tyrol. It was divided into three corps: one, under Quasdanovich, advanced by the road on the west of Lake Garda; the others, under Wurmser, the commander-in-chief, by the roads between the lake and the river Adige. . . . Bonaparte . . . instantly broke up the siege of Mantua, and withdrew from every position east of the river. On the 30th July, Quasdanovich was attacked and checked at Lonato. . . . Wurmser, unaware of his colleague's repulse, entered Mantua in triumph, and then set out, expecting to envelop Bonaparte between two fires. But the French were ready for his approach. Wurmser was stopped and defeated at Castiglione (Aug. 3), while the western Austrian divisions were still held in check at Lonato. . . . In five days the skill of Bonaparte and the unsparing exertions of his soldiery had more than retrieved all that appeared to have been lost. The Austrians retired into the Tyrol, leaving 15,000 prisoners in the hands of the enemy. Bonaparte now prepared to force his way into Germany by the Adige, in fulfilment of the original plan of the campaign. In the first days of September he again routed the Austrians, and gained possession of Roveredo and Trent. Wurmser hereupon attempted to shut the French up in the mountains by a movement southwards; but, while he operated with insufficient forces between the Brenta and the Adige, with a view of cutting Bonaparte off from Italy, he was himself [defeated at Bassano, September 8, and] cut off from Germany, and only escaped capture by throwing himself into Mantua with the shattered remnant of his army. The road into Germany through the Tyrol now lay open; but in the midst of his victories Bonaparte learnt that the northern armies of Moreau and Jourdan, with which he had intended to co-operate in an attack upon Vienna, were in full retreat. Moreau's advance into the valley of the Danube had, during the months of July and August, been attended

with unbroken military and political success. The Archduke Charles, who was entrusted with the defence of the Empire," fell back before Moreau, in order to unite his forces with those of Wartensleben, who commanded an army which confronted Jourdan. "The design of the Archduke succeeded in the end, but it opened Germany to the French for six weeks, and revealed how worthless was the military constitution of the Empire, and how little the Germans had to expect from one another. . . . At length the retreating movement of the Austrians stopped [and the archduke fought an indecisive battle with Moreau at Neresheim, August 11]. Leaving 30,000 men on the Lech to disguise his motions from Moreau, Charles turned suddenly northwards from Neuberg on the 17th August, met Wartensleben at Amberg, and attacked Jourdan . . . with greatly superior numbers. Jourdan was defeated [September 3, at Würzburg] and driven back in confusion towards the Rhine. The issue of the campaign was decided before Moreau heard of his colleague's danger. It only remained for him to save his own army by a skilful retreat," in the course of which he defeated the Austrian general Latour at Biberach, October 2, and fought two indecisive battles with the archduke, at Emmendingen, October 10th, and at Huningen on the 24th.—C. A. Fyffe, *History of modern Europe*, v. 1, ch. 3.

1796 (September).—Evacuation of Corsica by the English.—Reoccupation by the French.—"Corsica, which had been delivered to the English by Paoli, and occupied by them as a fourth kingdom annexed to the crown of the King of Great Britain, had just been evacuated by its new masters. They had never succeeded in subduing the interior of the island, frequent insurrections had kept them in continual alarm, and free communication between the various towns could only be effected by sea. The victories of the French army in Italy, under the command of one of their countrymen, had redoubled this internal ferment in Corsica, and the English had decided on entirely abandoning their conquest. In September 1796 they withdrew their troops, and also removed from Corsica their chief partisans, such as General Paoli, Pozzo di Borgo, Beraldi and others, who sought an asylum in England. On the first intelligence of the English preparations for evacuating the island, Buonaparte despatched General Gentili thither at the head of two or three hundred banished Corsicans, and with this little band Gentili took possession of the principal strongholds. . . . On the 5th Frimaire, year V. (November 25, 1796), I received a decree of the Executive Directory . . . appointing me Commissioner-Extraordinary of the Government in Corsica, and ordering me to proceed thither at once."—M. de Melito, *Memoirs*, ch. 4.

1796 (October).—Failure of peace negotiations with England.—Treaties with Naples and Genoa.—"It was France itself, more even than Italy, which was succumbing under the victories in Italy, and was falling rapidly under the military despotism of Bonaparte; while what had begun as a mere war of defence was already becoming a war of aggression against everybody. . . . The more patriotic members of the legislative bodies were opposed to what they considered only

a war of personal ambitions, and were desirous of peace, and a considerable peace party was forming throughout the country. The opportunity was taken by the English government for making proposals for peace, and a passport was obtained from the directory for lord Malmesbury, who was sent to Paris as the English plenipotentiary. Lord Malmesbury arrived in Paris on the 2nd of Brumaire (the 23rd of October, 1796), and next day had his first interview with the French minister Delacroix, who was chosen by the directory to act as their representative. There was from the first an evident want of cordiality and sincerity on the part of the French government in this negotiation; and the demands they made, and the political views entertained by them, were so unreasonable, that, after it had dragged on slowly for about a month, it ended without a result. The directory were secretly making great preparations for the invasion of Ireland, and they had hopes of making a separate and very advantageous peace with Austria. Bonaparte had, during this time, become uneasy on account of his position in Italy," and "urged the directory to enter into negotiations with the different Italian states in his rear, such as Naples, Rome, and Genoa, and to form an offensive and defensive alliance with the king of Sardinia, so that he might be able to raise reinforcements in Italy. For this purpose he asked for authority to proclaim the independence of Lombardy and of the states of Modena; so that, by forming both into republics, he might create a powerful French party, through which he might obtain both men and provisions. The directory was not unwilling to second the wishes of Bonaparte, and on the 19th of Vendémiaire (the 10th of October) a peace was signed with Naples, which was followed by a treaty with Genoa. This latter state paid two millions of francs as an indemnity for the acts of hostility formerly committed against France, and added two millions more as a loan." The negotiation for an offensive alliance with Sardinia failed, because the king demanded Lombardy.—T. Wright, *History of France*, v. 2, p. 758.

1796-1797 (October-April).—Bonaparte's continued victories in Italy.—His advance into Carinthia and the Tyrol.—Peace preliminaries of Leoben.—"Wurmser's second failure did not break down Austrian resolve. A new army was collected and placed under the command of Alvinczy. Towards the end of October the position was as follows: Alvinczy with thirty thousand men was on the Piave threatening an advance on Vicenza; Davidowich with twenty thousand more was at Roveredo; the main French army was at Verona and numbered about thirty thousand. Bonaparte now decided to reverse the operation he had carried out against Wurmser, to defeat Alvinczy on the Piave, then strike back through the valley of the Brenta at the flank and rear of Davidowich; but this time his plan failed. After some desultory fighting Alvinczy crossed the Piave and forced Bonaparte to retreat to Verona. On the 12th of November the two armies met a few miles east of Verona, at Caldiero, and the French were severely defeated. Bonaparte's position was now highly critical, for Davidowich had descended the Adige and was only held in check by a division occupying the strong position of Rivoli. Only a few miles separated the two Austrian armies, and it appeared as though their junction could not be prevented. But now that the loss of

BATTLEFIELDS OF NAPOLEON'S CAMPAIGN IN NORTHERN ITALY

an hour, or a single prompt decision, might mean all the difference between success and failure, the acute perception and superb audacity of Bonaparte made him more than a match for the slow and cautious generals opposed to him. On the night of the 14th the French army crossed the Adige at Verona and turned eastward; at Ronco the river was recrossed, and thence Bonaparte marched northwards to debouch on the flank and rear of Alvinczy. The success of the whole operation turned on the occupation of the bridge and village of Arcola, which the Austrians defended with great courage during the whole of the 15th and 16th. Bonaparte tried to repeat at this point the charge over the bridge of Lodi, but saw nearly all his personal staff killed and wounded, and was himself swept by an Austrian counterstroke into a swamp where he nearly perished. The fighting at Arcola was of a desperate character, but finally, on the 17th, the French were successful in forcing a passage, and Alvinczy, finding the enemy in force on his line of communications, decided to retreat. The last Austrian attempt to relieve Mantua was made two months later (January 1797) and under the same commander. Alvinczy now concentrated his main force, about thirty thousand men, at Roveredo and marched down the valley towards Verona; at the same time two smaller columns threatened the lower Adige from Vicenza and Padua. Bonaparte met Alvinczy at Rivoli (January 14) and by superior strategy inflicted a crushing defeat on the Austrians, who in two days lost thirteen thousand men. Thence he marched rapidly back to the lower Adige just in time to prevent the entry of Provera with nine thousand men into Mantua and to force him to capitulate. These utterly disastrous operations of the relieving army sealed the fate of the fortress, and two weeks later Wurmser surrendered with some twenty thousand men (February 2, 1797).”—R. M. Johnston, *Napoleon, a short biography*, pp. 39, 41.—Napoleon next occupied Bologna and terrified the pope into signing the Treaty of Tolentino. “The temporal power was allowed to exist, but within very curtailed limits. Not only Avignon, but the whole of Romagna, with Ancona, was surrendered to France. Even these terms, harsh as they were, were not so severe as the Directors had wished. But Bonaparte was beginning to play his own game; he saw that Catholicism was regaining ground in France, and he wished to make friends on what might prove after all the winning side.”—R. Lodge, *History of modern Europe*, ch. 23.—“The third and last phase [of Bonaparte’s campaign] was to be offensive once more. [The French influence in Italy having been secured by the creation of the two republics, Cisalpine and Cispadane, he was now free to turn his attention to the Austrian invasion.] The new Austrian army had been formed numbering about fifty thousand men, and had been placed under the command of the young Archduke Charles, who had just begun his brilliant military career. Bonaparte was slightly stronger in numbers, and manœuvring with wonderful strategic skill first through the Upper Venetian provinces, then through the Julian Alps, he constantly out-generaled his opponent, won a number of small engagements, and forced him steadily backwards. So relentlessly did he urge on his columns that on the 7th of April he had reached the little town of Leoben on the northern slope of the Alps, less than one hundred miles from Vienna. Then at last Austria acknowledged defeat; an armistice between the two armies was agreed to, and the basis for negotiating a peace.”—R. M. Johnston, *Napoleon, a short biog-*

*raphy*, pp. 41-42.—“Here Austrian envoys arrived to open negotiations. They consented to surrender Belgium, Lombardy, and the Rhine frontier, but they demanded compensation in Bavaria. This demand Bonaparte refused, but offered to compensate Austria at the expense of a neutral state, Venice. The preliminaries of Leoben, signed on the 18th April, gave to Austria, Istria, Dalmatia, and the Venetian provinces between the Oglio, the Po, and the Adriatic. At this moment, Hoche and Moreau, after overcoming the obstacles interposed by a sluggish government, were crossing the Rhine to bring their armies to bear against Austria. They had already gained several successes when the unwelcome news reached them from Leoben, and they had to retreat. Bonaparte may have failed to extort the most extreme terms from Austria, but he had at any rate kept both power and fame to himself.”—R. Lodge, *History of modern Europe*, ch. 23.

1797 (April-May).—Overthrow of Venice by Bonaparte.—When Napoleon, in March, entered upon his campaign against the Archduke Charles, “the animosity existing between France and Venice had . . . attained a height that threatened an open rupture between the two republics, and was, therefore, of some advantage to Austria. The Signoria saw plainly what its fate would be should the French prove victorious; but though they had 12,000 or 15,000 Slavonian troops ready at hand, and mostly assembled in the capital, they never ventured to use them till the moment for acting was past. On the Terra Firma, the citizens of Brescia and Bergamo had openly renounced the authority of St. Mark, and espoused the cause of France; the country people, on the other hand, were bitterly hostile to the new Republicans. Oppressed by requisitions, plundered and insulted by the troops, the peasants had slain straggling and marauding French soldiers; the comrades of the sufferers had retaliated, and an open revolt was more than once expected. General Battaglia, the Venetian providore, remonstrated against the open violence practised on the subjects of Venice; Buonaparte replied by accusing the government of partiality for Austria, and went so far as to employ General Andrieux to instigate the people to rise against the senate. The Directory, however, desired him to pause, and not to ‘drive the Venetians to extremity, till the opportunity should have arrived for carrying into effect the future projects entertained against that state.’ Both parties were watching their time, but the craven watches in vain, for he is struck down long before his time to strike arrives.” A month later, when Napoleon was believed to be involved in difficulties in Carinthia and the Tyrol, Venice “had thrown off the mask of neutrality; the tocsin had sounded through the communes of the Terra Firma, and a body of troops had joined the insurgents in the attack on the citadel of Verona. Not only were the French assailed wherever they were found in arms, but the very sick were inhumanly slain in the hospitals by the infuriated peasantry; the principal massacre took place at Verona on Easter

Monday [April 17], and cast a deep stain on the Venetian cause and character." But even while these sinister events were in progress, Bonaparte had made peace with the humiliated Austrians, and had signed the preliminary treaty of Leoben, which promised to give Venice to them in exchange for the Netherlands. And now, with all his forces set free, he was prepared to crush the venerable Republic, and make it subservient to his ambitious schemes. He "refused to hear of any accommodation; and, unfortunately, the base massacre of Verona blackened the Venetian cause so much as almost to gloss over the unprincipled violence of their adversaries. 'If you could offer me the treasures of Peru,' said Napoleon to the terrified deputies who came to sue for pardon and offer reparation, 'if you could cover your whole dominions with gold, the atonement would be insufficient. French blood has been treacherously shed, and the Lion of St. Mark must bite the dust.' On the 3d of May he declared war against the republic, and French troops immediately advanced to the shores of the lagunes. Here, however, the waves of the Adriatic arrested their progress, for they had not a single boat at command, whereas the Venetians had a good fleet in the harbour, and an army of 10,000 or 15,000 soldiers in the capital: they only wanted the courage to use them. Instead of fighting, however, they deliberated; and tried to purchase safety by gold, instead of maintaining it by arms. Finding the enemy relentless, the Great Council proposed to modify their government,—to render it more democratic, in order to please the French commander,—to lay their very institutions at the feet of the conqueror; and, strange to say, only 21 patricians out of 690 dissented from this act of national degradation. The democratic party, supported by the intrigues of Vittelan, the French secretary of legation, exerted themselves to the utmost. The Slavonian troops were disbanded, or embarked for Dalmatia; the fleet was dismantled, and the Senate were rapidly divesting themselves of every privilege, when, on the 31st of May, a popular tumult broke out in the capital. The Great Council were in deliberation when shots were fired beneath the windows of the ducal palace. The trembling senators thought that the rising was directed against them, and that their lives were in danger, and hastened to divest themselves of every remnant of power and authority at the very moment when the populace were taking arms in their favour. 'Long live St. Mark, and down with foreign dominion!' was the cry of the insurgents, but nothing could communicate one spark of gallant fire to the Venetian aristocracy. In the midst of the general confusion, while the adverse parties were firing on each other, and the disbanded Slavonians threatening to plunder the city, these unhappy legislators could only delegate their power to a hastily assembled provisional government, and then separate in shame and for ever. The democratic government commenced their career in a manner as dishonourable as that of the aristocracy had been closed." They "immediately despatched the flotilla to bring over the French troops. A brigade under Baraguai d'Hilliers soon landed [May 15] at the place of St. Mark; and Venice, which had braved the thunders of the Vatican, the power of the emperors, and the arms of the Othmans, . . . now sunk for ever, and without striking one manly blow or firing one single shot for honour and fame! Venice counted 1300 years of independence, centuries of power and renown, and many also of greatness and glory, but ended in a manner more dishonourable than any state of which history makes mention. The

French went through the form of acknowledging the new democratic government, but retained the power in their own hands. Heavy contributions were levied, all the naval and military stores were taken possession of, and the fleet, having conveyed French troops to the Ionian islands, was sent to Toulon."—T. Mitchell, *Principal campaigns in the rise of Napoleon*, ch. 6 (*Fraser's Magazine*, Apr., 1846).

1797 (May-October).—Napoleon's political work in Italy.—Creation of the Ligurian and Cisalpine republics.—Dismemberment of the Graubunden.—Peace of Campo-Formio.—Venice given over to Austria, and Lombardy and the Netherlands taken away.—"The revolution in Venice was soon followed by another in Genoa, also organised by the plots of the French minister there, Faypoult. The Genoese had in general shown themselves favourable to France; but there existed among the nobles an anti-French party; the Senate, like that of Venice, was too aristocratic to suit Bonaparte's or the Directory's notions; and it was considered that Genoa, under a democratic constitution, would be more subservient to French interests. An insurrection, prepared by Faypoult, of some 700 or 800 of the lowest class of Genoese, aided by Frenchmen and Lombards, broke out on May 22nd, but was put down by the great mass of the real Genoese people. Bonaparte, however, was determined to effect his object. He directed a force of 12,000 men on Genoa, and despatched Lavalette with a letter to the Doge. . . . Bonaparte's threats were attended by the same magical effects at Genoa as had followed them at Venice. The Senate immediately despatched three nobles to treat with him, and on June 6th was concluded the Treaty of Montebello. The Government of Genoa recognised by this treaty the sovereignty of the people, confided the legislative power to two Councils, one of 300, the other of 500 members, the executive power to a Senate of twelve, presided over by the Doge. Meanwhile a provisional government was to be established. By a secret article a contribution of four millions, disguised under the name of a loan, was imposed upon Genoa. Her obedience was recompensed with a considerable augmentation of territory, and the incorporation of the districts known as the 'imperial fiefs.' Such was the origin of the Ligurian Republic. Austrian Lombardy, after its conquest, had also been formed into the 'Lombard Republic'; but the Directory had not recognised it, awaiting a final settlement of Italy through a peace with Austria. Bonaparte, after taking possession of the Duchy of Modena and the Legations, had, at first, thought of erecting them into an independent state under the name of the 'Cispadane Republic'; but he afterwards changed his mind and united these states with Lombardy under the title of the Cisalpine Republic. He declared, in the name of the Directory, the independence of this new republic, June 20th 1797; reserving, however, the right of nominating, for the first time, the members of the Government and of the legislative body. The districts of the Valteline, Chiavenna, and Bormio, subject to the Grison League [Graubunden], in which discontent and disturbance had been excited by French agents, were united in October to the new state; whose constitution was modelled on that of the French Republic. Bonaparte was commissioned by the Directory to negotiate a

definitive peace with Austria, and conferences were opened for that purpose at Montebello, Bonaparte's residence near Milan. The negotiations were chiefly managed by himself, and on the part of Austria by the Marquis di Gallo, the Neapolitan ambassador at Vienna, and Count Meerfeld. . . . The negotiations were protracted six months, partly through Bonaparte's engagements in arranging the affairs of the new Italian republics, but more especially by divisions and feuds in the French Directory." The Peace of Campo Formio was concluded October 17. "It derived this name from its having been signed in a ruined castle situated in a small village of that name near Udine; a place selected on grounds of etiquette in preference to the residence of either of the negotiators. By this treaty the Emperor ceded the Austrian Netherlands to France; abandoned to the Cisalpine Republic, which he recognised, Bergamo, Brescia, Crema, Peschiera, the town and fortress of Mantua with their territories, and all that part of the former Venetian possessions to the south and west of a line which, commencing in the Tyrol, traversed the Lago di Garda, the left bank of the Adige, but including Porto Legnago on the right bank, and thence along the left bank of the Po to its mouth. France was to possess the Ionian Islands [see IONIAN ISLANDS] and all the Venetian settlements in Albania below the Gulf of Lodrino; the French Republic agreeing on its side that the Emperor should have Istria, Dalmatia, the Venetian isles in the Adriatic, the mouths of the Cattaro, the city of Venice, the Lagoons, and all the former Venetian terra firma to the line before described. The Emperor ceded the Breisgau to the Duke of Modena, to be held on the same conditions as he had held the Modenese. A congress composed of the plenipotentiaries of the German Federation was to assemble immediately, to treat of a peace between France and the Empire. To this patent treaty was added another secret one, by the principal article of which the Emperor consented that France should have the frontier of the Rhine, except the Prussian possessions, and stipulated that the Imperial troops should enter Venice on the same day that the French entered Mentz. He also promised to use his influence to obtain the accession of the Empire to this arrangement; and if that body withheld its consent, to give it no more assistance than his contingent. The navigation of the Rhine to be declared free. If, at the peace with the Empire, the French Republic should make any acquisitions in Germany, the Emperor was to obtain an equivalent there, and vice versâ. The Dutch Stadtholder to have a territorial indemnity. To the King of Prussia were to be restored his possessions on the left bank of the Rhine, and he was consequently to have no new acquisitions in Germany. Princes and States of the Empire, damaged by this treaty, to obtain a suitable indemnity. . . . By the Treaty of Campo Formio was terminated not only the Italian campaign, but also the first continental war of the Revolution. The establishment of Bonaparte's prestige and power by the former was a result still more momentous in its consequences for Europe than the fall of Venice and the revolutionising of Northern Italy."—T. H. Dyer, *History of modern Europe*, v. 4, bk. 7, ch. 8.—See also AUSTRIA: 1790-1797.

ALSO IN: A. Sorel, *L'Europe et la révolution française*.—A. Thiers, *History of the French Revolution* (American edition), v. 4, pp. 214-225.—W. Scott, *Life of Napoleon Buonaparte*, ch. 28.—*Memoirs of Napoleon dictated at St. Helena*, ch. 6-8.

1797 (September).—Conflict of the Directory and the two Councils.—Revolutionary coup d'état of the 18th of Fructidor.—Suppression of the Royalists and Moderates.—Practical overthrow of the constitution.—"The inevitable dissension between the executive power and the electoral power had already displayed itself at the conclusion of the elections of the Year V. The elections were made for the most part under the influence of the reactionary party, which, whilst it refrained from conspiring for the overthrow of the new Constitution, saw with terror that the executive power was in the hands of men who had taken part in the excesses and crimes of the Convention. Pichegru, whose intrigues with the princes of the House of Bourbon were not yet known, was enthusiastically made President of the Council of Five Hundred, and Barbé-Marbois was made President of the Ancients. Le Tourneur having become, by lot, the retiring member of the Directory, Barthélemy, an upright and moderate man, was chosen in his place. He, as well as his colleague, Carnot, were opposed to violent measures; but they only formed in the Directorate a minority which was powerless against the Triumvirs Barras, Rewbel, and La Réveillère, who soon entered upon a struggle with the two Councils. . . . There were, doubtless, amongst [their opponents] in the two Councils, some Royalists, and ardent reactionists, who desired with all their hearts the restoration of the Bourbons; but, according to the very best testimony, the majority of the names which were drawn from the electoral urn since the promulgation of the Constitution of the Year III. were strangers to the Royalist party. 'They did not desire,' to use the words of an eminent and impartial historian of our own day [De Barante, 'Life of Royer-Collard'], 'a counter-revolution, but the abolition of the revolutionary laws which were still in force. They wished for peace and true liberty, and the successive purification of a Directorate which was the direct heir of the Convention. . . . But the Directorate was as much opposed to the Moderates as to the Royalists.' It pretended to regard these two parties as one, and falsely represented them as conspiring in common for the overthrow of the Republic and the re-establishment of monarchy. . . . If there were few Royalists in the two Councils, there were also few men determined to provoke on the part of the Directors a recourse to violence against their colleagues. But as a great number of their members had sat in the Convention, they naturally feared a too complete reaction, and, affecting a great zeal for the Constitution, they founded at the Hotel Salm, under the name of the Constitutional Club, an association which was widely opposed in its spirit and tendency to that of the Hotel Clichy, in which were assembled the most ardent members of the reactionary party [and hence called Clichyans]. . . . The Council of Five Hundred, on the motion of a member of the Clichy Club, energetically demanded that the Legislative power should have a share in determining questions of peace or war. No general had exercised, in this respect, a more arbitrary power than had Bonaparte, who had negotiated of his own mere authority several treaties, and the preliminaries of the peace of Campo Formio. He was offended at these pretensions on the part of the Council of Five Hundred, and entreated the Government to look to the army for support against the Councils and the reactionary press. He even sent to Paris, as a support to the policy of the Directors, General Augereau, one of the bravest men of his army, but by no means scrupulous as to the employment of violent means, and disposed

to regard the sword as the supreme argument in politics, whether at home or abroad. The Directory gave him the command of the military division of Paris. . . . Henceforth a coup d'état appeared inevitable. The Directors now marched some regiments upon the capital, in defiance of a clause of the Constitution which prohibited the presence of troops within a distance of twelve leagues of Paris, unless in accordance with a special law passed in or near Paris itself. The Councils burst forth into reproaches and threats against the Directors, to which the latter replied by fiery addresses to the armies, and to the Councils themselves. It was in vain that the Directors Carnot and Barthélemy endeavoured to quell the rising storm; their three colleagues refused to listen to them, and fixed the 18th Fructidor [September 4] for the execution of their criminal projects. During the night preceding that day, Augereau marched 12,000 men into Paris, and in the morning these troops, under his own command, supported by 40 pieces of cannon, surrounded the Tuileries, in which the Councils held their sittings. The grenadiers of the Councils' guard joined Augereau, who arrested with his own hand the brave Ramel, who commanded that guard, and General Pichegru, the President of the Council of Five Hundred. . . . The Directors . . . published a letter written by Moreau, which revealed Pichegru's treason; and at the same time nominated a Committee for the purpose of watching over the public safety. . . . Forty-two members of the Council of Five Hundred, eleven members of that of the Ancients, and two of the Directors, Carnot [who escaped, however, into Switzerland] and Barthélemy, were condemned to be transported to the fatal district of Sinnamari. . . . The Directors also made the editors of 35 journals the victims of their resentment. They had the laws passed in favour of the priests and emigrants reversed, and annulled the elections of 48 departments. Merlin de Douai and François de Neufchâteau were chosen as successors to Carnot and Barthélemy, who had been banished and proscribed by their colleagues. That which took place on the 18th Fructidor ruined the Constitutional and Moderate party, whilst it resuscitated that of the Revolution."—E. de Bonnechose, *History of France, 4th period, v. 2, bk. 2, ch. 4.*—"During these two days, Paris continued perfectly quiet. The patriots of the faubourgs deemed the punishment of transportation too mild. . . . These groups, however, which were far from numerous, disturbed not in the least the peace of Paris. The sectionaries of Vendémiaire . . . had no longer sufficient energy to take up arms spontaneously. They suffered the stroke of policy to be carried into effect without opposition. For the rest, public opinion continued uncertain. The sincere republicans clearly perceived that the royalist faction had rendered an energetic measure inevitable, but they deplored the violation of the laws and the intervention of the military power. They almost doubted the culpability of the conspirators on seeing such a man as Carnot mingled in their ranks. They apprehended that hatred had too strongly influenced the determinations of the Directory. Lastly, even, though considering its determinations as necessary, they were sad, and not without reason; for it became evident that that constitution, on which they had placed all their hope, was not the termination of our troubles and our discord. The mass of the population submitted and detached itself much on that day from political events. . . . From that day, political zeal began to cool. Such were the consequences of the stroke of policy accomplished on the 18th of Fructidor. It

has been asserted that it had become useless at the moment when it was executed; that the Directory, in frightening the royalist faction, had already succeeded in overawing it; that, by persisting in this stretch of power, it paved the way to military usurpation. . . . But . . . the royalist faction . . . on the junction of the new third . . . would infallibly have overturned everything, and mastered the Directory. Civil war would then have ensued between it and the armies. The Directory, in foreseeing this movement and timely repressing it, prevented a civil war; and, if it placed itself under the protection of the military, it submitted to a melancholy but inevitable necessity."—A. Thiers, *History of the French Revolution* (American edition), v. 4, pp. 205-206.

1797-1798 (December-May).—Revolutionary intrigues in Rome.—French troops in possession of the city.—Formation of the Roman republic.—Removal of the pope.—"At Rome a permanent conspiracy was established at the French Embassy, where Joseph Bonaparte, as the ambassador of the Republic, was the centre of a knot of conspirators. On the 28th of December, 1797, came the first open attempt at insurrection. General Duphot, a hot-headed young man, one of the military attachés of the French Embassy, put himself at the head of a handful of the disaffected, and led them to the attack of one of the posts of the pontifical troops. In the ensuing skirmish a chance shot struck down the French general, and the rabble which followed him dispersed in all directions. It was just the opportunity for which the Directory had been waiting in order to break the treaty of Tolentino and seize upon Rome. Joseph Bonaparte left the city the morning after the émeute, and a column of troops was immediately detached from his brother's army in the north of Italy and ordered to march on Rome. It consisted of General Berthier's division and 6,000 Poles under Dombrowski, and it received the ominous title of l'armée vengeresse—the avenging army. As they advanced through the Papal territory they met with no sympathy, no assistance, from the inhabitants, who looked upon them as invaders rather than deliverers. 'The army,' Berthier wrote to Bonaparte, 'has met with nothing but the most profound consternation in this country, without seeing one glimpse of the spirit of independence; only one single patriot came to me, and offered to set at liberty 2,000 convicts.' This liberal offer of a re-inforcement of 2,000 scoundrels the French general thought it better to decline. . . . At length, on the 10th of February, Berthier appeared before Rome. . . . Wishing to avoid a useless effusion of blood, Pius VI. ordered the gates to be thrown open, contenting himself with addressing, through the commandant of St. Angelo, a protest to the French general, in which he declared that he yielded only to overwhelming force. A few days after, a self-elected deputation of Romans waited upon Berthier, to request him to proclaim Rome a republic, under the protection of France. As Berthier had been one of the most active agents in getting up this deputation, he, of course, immediately yielded to their request. The French general then demanded of the Pope that he should formally resign his temporal power, and accept the new order of things. His reply was the same as that of every Pope of whom such a demand has been made: 'We cannot—we will not!' In the midst of a violent thunder-storm he was torn from his palace, forced into a carriage, and carried away to Viterbo, and thence to Siena, where he was kept a prisoner for three months. Rome was ruled by the iron hand of a military governor. . . . Mean-

while, alarmed at the rising in Italy, the Directory were conveying the Pope to a French prison. . . . After a short stay at Grenoble he was transferred to the fortress of Valence, where, broken down by the fatigues of his journey, he died on August 10th, 1799, praying for his enemies with his last breath."—Chevalier O'Clery, *History of the Italian revolution*, ch. 2, sect. 1.

1798 (May-August).—Bonaparte's expedition to Egypt.—Seizure of Malta.—Pursuit by the English fleet under Nelson.—Battle of the Nile.—The treaty of Campo Formio, by which Austria obtained terms highly advantageous to her interests, dissolved the offensive and defensive alliance of the continental powers, and left England alone in arms. The humiliation of this country was to be the last and the greatest achievement of French ambition. . . . During the autumn and winter of this year [1797-8], preparations for a great armament were proceeding at Toulon, and other harbours in possession of the French. The army of Italy, clamorous for a promised donation of 1,000,000,000 francs, which the Directory were unable to pay, had been flattered by the title of the army of England, and appeased by the prospect of the plunder of this country. But whatever might be the view of the Directory, or the expectation of the army, Bonaparte had no intention of undertaking an enterprise so rash as a descent upon the coast of England, while the fleets of England kept possession of the seas. There was another quarter from which the British Empire might be menaced with a better chance of success. India could never be secure while Egypt and the great eastern port of the Mediterranean were in the possession of one of the great maritime powers. Egypt had been an object of French ambition since the time of Louis XIV. . . . It was for Egypt, therefore, that the great armament of Toulon was destined. The project was not indeed considered a very hopeful one at Paris; but such was the dread and hatred of the ruling faction for the great military genius which had sprung out of the anarchy of France, and of the 30,000 creditors whom they were unable to satisfy, that the issue of the expedition which they most desired was, that it might never return from the banks of the Nile. . . . The fleet, consisting of thirteen ships of the line, with several frigates, smaller vessels, and transports conveying 28,000 picked troops, with the full equipment for every kind of military service, set sail on the 14th of May. Attached to this singular expedition, destined for the invasion of a friendly country, and the destruction of an unoffending people, was a staff of professors, furnished with books, maps, and philosophical instruments for prosecuting scientific researches in a land which, to a Christian and a philosopher, was the most interesting portion of the globe. The great armament commenced its career of rapine by seizing on the important island of Malta. [See also HOSPITALERS OF ST. JOHN

OF JERUSALEM: 1565-1878.] Under the shallow pretence of taking in water for a squadron which had left its anchorage only two days, a portion of the troops were landed, and, after a show of resistance, the degenerate knights, who had already been corrupted, surrendered Malta, Gozo, and Cumino to the French Republic. A great amount of treasure and of munitions of war, besides the possession of the strongest place in the Mediterranean, were thus acquired without loss or delay. A conquest of such importance would have amply repaid and justified the expedition, if no ulterior object had been pursued. But Bonaparte suffered himself to be detained no more than twenty-four hours by this achievement; and having left a garrison of 4,000 men in the island, and established a form of civil government, after the French pattern, he shaped his course direct for Alexandria. On the 1st of July, the first division of the French troops were landed at Marabou, a few miles from the city. Aboukir and Rosetta, which commanded the mouths of the Nile, were occupied without difficulty. Alexandria itself was incapable of any effectual defence, and, after a few skirmishes with the handful of Janissaries which constituted the garrison, the French entered the place; and for several hours the inhabitants were given up to an indiscriminate massacre. Bonaparte pushed forward with his usual rapidity, undeterred by the horrors of the sandy desert, and the sufferings of his troops. After two victories over the Mamelukes, one of which was obtained within sight of the Pyramids [and called the Battle of the Pyramids], the French advanced to Cairo; and such was the terror which they had inspired, that the capital of Egypt was surrendered without a blow. Thus in three weeks the country had been overrun. The invaders had nothing to fear from the hostility of the people; a rich and fertile country, the frontier of Asia, was in their possession; but, in order to hold the possession secure, it was necessary to retain the command of the sea. The English Government, on their side, considered the capture of the Toulon armament an object of paramount importance; and Earl St. Vincent, who was still blockading the Spanish ports, was ordered to leave Cadiz, if necessary, with his whole fleet, in search of the French; but at all events, to detach a squadron, under Sir Horatio Nelson, on that service. . . . Nelson left Gibraltar on the 8th of May, with three ships of the line, four frigates, and a sloop. . . . He was reinforced, on the 5th of June, with ten sail of the line. His frigates had parted company with him on the 20th of May, and never returned." Suspecting that Egypt was Bonaparte's destination, he made sail for Alexandria, but passed the French expedition, at night, on the way, arrived in advance of it, and, thinking his surmise mistaken, steered away for the Morea and thence to Naples. It was not until the 1st of August that he reached the Egyptian coast a second time, and found the French fleet, of sixteen sail, "at anchor in line of battle, in the Bay of Aboukir. Nelson, having determined to fight whenever he came up with the enemy, whether by day or by night, immediately made the signal for action. Although the French fleet lay in an open roadstead, they had taken up a position so strong as to justify their belief that they could not be successfully attacked by a force less than double their own. They lay close in shore, with a large shoal in their rear; in the advance of their line was an island, on which a formidable battery had been erected; and their flanks were covered by numerous gun-boats. . . . The general action commenced at sunset, and continued throughout the

night until six o'clock the following morning, a period of nearly twelve hours. But in less than two hours, five of the enemy's ships had struck; and, soon after nine o'clock, the sea and shore, for miles around, were illuminated by a fire which burst from the decks of the 'Orient,' the French flag-ship, of 120 guns. In about half an hour she blew up, with an explosion so appalling that for some minutes the action was suspended, as if by tacit consent. At this time the French Admiral Brueys was dead, . . . killed by a chain-shot before the ship took fire. Nelson also had been carried below, with a wound which was, at first, supposed to be mortal. He had been struck in the head with a fragment of langridge shot, which tore away a part of the scalp. . . . At three o'clock in the morning four more of the French ships were

upon the French Revolution and empire, v. 1, ch. 9.

1798-1799 (August-April).—Arming against the second European coalition.—Conscription.—Overthrow of the Neapolitan kingdom.—Seizure of Piedmont.—Campaigns in Switzerland, Italy, and on the upper Danube.—Early successes and final reverses.—The Porte declared war against the French, and entered into an alliance with Russia and England (12th August). A Russian fleet sailed from Sebastopol, and blockaded the Ionian Islands; the English vessels found every Turkish port open to them, and gained possession of the Levant trade, to the detriment of France. Thus the failure of the Egyptian expedition delivered the Ottoman Empire into the hands of two Powers, the one intent upon its dismem-

(Naval battle of Aboukir)

(After painting by George Arnald, A.R.A.)

destroyed or taken. There was then an interval of two hours, during which hardly a shot was fired on either side. At ten minutes to seven another ship of the line, after a feeble attempt at resistance, hauled down her colours. The action was now over. Of the thirteen French ships of the line, nine had been taken, and two had been burnt." Two ships of the line and two frigates escaped. "The British killed and wounded were 895. The loss of the French, including prisoners, was 5,225. Such was the great battle of the Nile."—W. Massey, *History of England during the reign of George III*, v. 4, ch. 39.—See also EUROPE: Modern: Map of central Europe in 1812.

berment, the other eager to make itself master of its commerce; it gave England the supremacy in the Mediterranean; it inaugurated the appearance of Russia in southern Europe; it was the signal for a second coalition." Russia, "under Catherine, had but taken a nominal part in the first coalition, being too much occupied with the annihilation of Poland. . . . But now Catherine was dead, Paul I, her son and successor, took the émigrés in his pay, offered the Pretender an asylum at Mittau, promised his protection to the Congress at Rastadt, and fitted out 100,000 troops. Naples had been in a great ferment since the creation of the Roman Republic. The nobles and middle classes, imbued with French ideas, detested a Court sold to the English, and presided over by the imbecile Ferdinand, who left the cares of his government to his dissolute Queen. She hated the French, and now solicited Tuscany and Piedmont to unite with her

to deliver Italy from the sway of these Republicans. The Austrian Court, of which Bonaparte had been the conscious or unconscious dupe, instead of disarming after the Treaty of Campo-Formio, continued its armaments with redoubled vigour, and now demanded indemnities, on the pretext that it had suffered from the Republican system which the French introduced into Switzerland and Italy. [See also AUSTRIA: 1798-1806.] The Directory very naturally refused to accede to this; and thereupon Austria prepared for war, and endeavoured to drag Prussia and the German Empire [i.e. the association of German states in the 'Holy Roman Empire'] into it. . . . But Frederick Wil-

ANDRÉ MESSÉNA

liam's successor and the princes of the empire declined to recommence hostilities with France, of which they had reason, to fear the enmity, though at present she was scarcely able to resist a second coalition. The French nation, in fact, was sincerely eager for peace. . . . Nevertheless, and though there was little unity amongst them, the Councils and the Directory prepared their measures of defence; they increased the revenue, by creating a tax on doors and windows; they authorised the sale of national property to the amount of 125,000,000 francs; and finally, on the report of Jourdan, they passed the famous law of conscription (5th September), which compelled every Frenchman to serve in the army from the age of

20 to that of 25, the first immediate levy to consist of 200,000 troops. When the victory of the Nile became known at Naples the court was a prey to frenzied excitement. Taxes had already been doubled, a fifth of the population called to arms, the nobles and middle classes were tortured into submission. And when the report spread that the Russians were marching through Poland, it was resolved to commence hostilities by attacking the Roman Republic, and to rouse Piedmont and Tuscany to rebellion. Forty thousand Neapolitans, scarcely provided with arms, headed by the Austrian general Mack, made their way into the Roman states, guarded only by 18,000 French troops, dispersed between the two seas (12th November). Championnet, their commander, abandoned Rome, took up a position on the Tiber, near Civita-Castellana, and concentrated all his forces on that point. The King of Naples entered Rome, while Mack went to encounter Championnet. The latter beat him, routed or captured the best of his troops, and compelled him to retire in disorder to the Neapolitan territory. Championnet, now at the head of 25,000 men, returned to Rome, previous to marching on Naples, where the greatest disorder prevailed. At the news of his approach the Court armed the *lazzaroni* [the proletariat], and fled with its treasures to the English fleet, abandoning the town to pillage and anarchy (20th Dec., 1798). Mack, seeing his army deserting him, and his officers making common cause with the Republicans, concluded an armistice with Championnet, but his soldiers revolted and compelled him to seek safety in the French camp. On Championnet's appearance before Naples, which the *lazzaroni* defended with fury, a violent battle ensued, lasting for three days; however, some of the citizens delivered the fort of St. Elmo to the French, and then the mob laid down its arms (23rd January, 1799). The Parthenopean Republic [so called from one of the ancient names of the city of Naples] was immediately proclaimed, a provisional government organised, the citizens formed themselves into a National Guard, and the kingdom accepted the Revolution. The demand of Championnet for a war contribution of 27,000,000 francs roused the Calabrians to revolt; anarchy prevailed everywhere; commissioners were sent by the Directory to re-establish order. The French general had them arrested, but he was deposed and succeeded by Macdonald. In commencing its aggression the court of Naples had counted on the aid of the King of Sardinia and the Grand Duke of Tuscany. But Piedmont, placed between three republics, was herself sharing the Revolutionary ferment; the King, who had concluded an alliance with Austria, proscribed the democrats, who, in their turn, declared war against him by means of the Ligurian Republic, whither they had fled. When Championnet was compelled to evacuate Rome, the Directory, afraid that Sardinia would harass the French rear, had ordered Joubert, commanding the army of Italy, to occupy Piedmont. The Piedmontese troops opened every place to the French, entered into their ranks, and the King [December 8, 1798] was forced to give up all claims to Piedmont, and to take refuge in Sardinia. . . . [retaining the latter, but abdicating the sovereignty of Piedmont]. Tuscany being also occupied by the Republican troops, the moment war was declared against Austria, Italy was virtually under French dominion. These events but increased the enmity of the Coalition, which hurried its preparations, while the Directory, cheered by its successes, resolved to take the offensive on all points. . . . In the present struggle, however, the conditions of warfare were

changed. The lines of invasion were no longer, as formerly, short and isolated, but stretched from the Zuyder Zee to the Gulf of Tarentum, open to be attacked in Holland from the rear, and at Naples by the English fleet. . . . Seventy thousand troops, under the Archduke Charles, occupied Bavaria; General Hotze occupied the Vorarlberg with 25,000 men; Bellegarde was with 45,000 in the Tyrol; and 70,000 guarded the line of the Adige, headed by Marshal Kray. Eighty thousand Russians, in two equal divisions, were on their way to join the Austrians. The division under Suwaroff was to operate with Kray, that one under Korsakoff with the Archduke. Finally, 40,000 English and Russians were to land in Holland, and 20,000 English and Sicilians in Naples. The Directory, instead of concentrating its forces on the Adige and near the sources of the Danube, divided them. Fifteen thousand troops were posted in Holland, under Brune; 8,000 at Mayence, under Bernadotte; 40,000 from Strasburg to Bâle, under Jourdan; 30,000 in Switzerland, under Masséna; 50,000 on the Adige, under Schérer; 30,000 at Naples, under Macdonald. These various divisions were in reality meant to form but one army, of which Masséna was the centre, Jourdan and Schérer the wings, Brune and Macdonald the extremities. To Masséna was confided the principal operation, namely, to possess himself of the central Alps, in order to isolate the two imperial armies of the Adige and Danube and to neutralise their efforts. The Coalition having hit upon the same plan as the Directory, ordered the Austrians under Bellegarde to invade the Grisons [Graubunden], while on the other side a division was to descend into the Valteline." Masséna's right wing, under Lecourbe, defeated Bellegarde, crossed the upper Rhine and made its way to the Inn. Schérer also advanced by the Valteline to the upper Adige and joined operations with Lecourbe. "While these two generals were spreading terror in the Tyrol, Masséna made himself master of the Rhine from its sources to the lake of Constance, receiving but one check in the fruitless siege of Feldkirch, a position he coveted in order to be able to support with his right wing the army of the Danube, or with his left that of Italy. This check compelled Lecourbe and Dessoles to slacken their progress, and the various events on the Danube and the Po necessitated their recall in a short time. Jourdan had crossed the Rhine at Kehl, Bâle, and Schaffhausen (1st March), penetrated into the defile of the upper Danube, and reached the village of Ostrach, where he was confronted by the Archduke Charles, who had passed the Iller, and who, after a sanguinary battle [March 21], compelled him to retreat upon Tutlingen. The tidings of Masséna's success having reached Jourdan, he wished to support it by marching to Stockach, the key to the roads of Switzerland and Germany; but he was once more defeated (25th March), and retreated, not into Switzerland, whence he could have joined Masséna, but to the Rhine, which he imagined to be threatened. . . . In Italy the Directory had given orders to Schérer to force the Adige, and to drive the Austrians over the Piave and the Brenta." He attacked and carried the Austrian camp of Pastrengo, near Rivoli, on the 25th of March, 1799, inflicting a loss of 8,000 on the enemy; but on the 5th of April, when moving to force the lower Adige, he was defeated by Kray at Magnano. "Schérer lost his head, fled precipitately, and did not stop until he had put a safe distance between himself and the enemy. . . . The army of Switzerland, under Masséna, dispersed in the mountains, with both its flanks threatened, had

no other means of salvation than to fall back behind the Rhine."—H. Van Laun, *French revolutionary epoch*, v. 1, bk. 3, ch. 1, sect. 2.

1798-1799 (August-August).—Bonaparte's administration of Egypt.—His advance into Syria and repulse at Acre.—His victory at Aboukir and return to France.—"The daring and skilful manœuvre that had turned the French line and placed two British ships opposite each French one had decided the result of this great naval battle [Battle of the Nile]. Bonaparte and his army were now cut off from the world, and that in a country where the stores necessary for a European army could not be procured. Had Brueys' fleet not anchored at Aboukir, but sailed back to Malta, to Corfu, or even to Toulon, the position would have been threatening for England; as it was, Bonaparte and his thirty thousand men were in great jeopardy. He proceeded, however, with his extraordinary enterprise with an imperturbable self-reliance that inspired all those with whom he came into contact. Egypt was at that time a dependent province of the Turkish Empire ruled by a Bey and a dominant caste of military colonists who formed a splendid body of feudal cavalry known as the Mameluks. They proved, however, no match for the French army, and were crushed by the steady firing of the republican infantry at the battle of the Pyramids on the 21st of July. This victory gave Bonaparte possession of Egypt which he now administered and converted into a source of supply in even more relentless fashion than he had treated Italy. [He established two councils (consisting principally of Arab chiefs and Moslems) of the church and law by whose advice measures were to be nominally regulated.] During the autumn and early winter months he was actively engaged in matters of administration and prepared to turn Egypt into a firm base from which the next move might be securely made. [Cultivation was extended, canals opened, and the foundation of scientific researches laid.] What that next move might have been is perhaps indicated by the fact that he dispatched a letter to an Indian prince then at war with Great Britain, Tippoo Sahib, urging him to new efforts and promising him assistance. But India and even Constantinople were far off, and it is best to view as tentative this step of Bonaparte's, and to treat as only vague purposes the sayings attributed to him at this period in which he referred to the possibilities of founding a new Oriental empire, or of returning to France by way of Constantinople. What it is important not to forget is that once in Egypt every one of Bonaparte's movements was perfectly sound from a military point of view. Not one of them was based on any considerations in the least approaching the romantic. In January 1799, he had to resume active warfare. The Sultan decided to drive the French invaders out of his dominions, and for that purpose prepared two expeditions: one was to proceed by sea, the other by land through Asia Minor. Bonaparte determined not to await this double attack, but to take the offensive and deal with his opponents one at a time. Accordingly in January he marched across the desert from Egypt into Syria and after many hardships reached Jaffa, a small port already occupied by a Turkish advance guard. There was some severe fighting, the town was stormed and captured, and the French accepted the surrender of

some two thousand prisoners. But the question at once arose: what was to be done with these men? The army was short of food, and an arduous march through barren country lay before it. If the prisoners consumed rations, it would mean privation, perhaps even starvation for the army; if they were released they would probably rejoin the Turks, or at all events take to the hills and marauding. It was a difficult problem, and was resolved in the safest but least merciful way: the Turks were taken out and shot down. This terrible incident has long been one of those most criticised in Bonaparte's career, yet modern military writers do not hesitate to justify it on the ground that a general can never sacrifice the vital interests of his army to those of humanity. This may be true, but it might also be pertinently asked: was not the unprovoked attack of France on Malta and on Egypt at least as great a subject for reproach? Is it not far more important to award blame for the waging of an unjust war, than for what is only a military incident, of debatable necessity, occurring in the course of such a war? From Jaffa Bonaparte marched northwards to encounter the main Turkish force, and at Acre received a severe check. The Turks, assisted by Captain Sidney Smith of the British navy, defended the town with the utmost resolution, and after a siege of two months the French were beaten off. It was during the siege that a well-known incident occurred: Sidney Smith sent into the French camp a challenge inviting Bonaparte to meet him in single combat, to which he received the pertinent reply that the French general would accept if the British would produce a Marlborough to meet him! During these two months the French overran northern Palestine and fought numerous engagements against the Turks, one of which, that of Mount Tabor, was a brilliant and decisive victory. On the 20th of May the retreat began, and the army, after heavy losses and intense suffering, owing to lack of food and water and an outbreak of plague, reached Cairo a month later. Within a few weeks it was called on to make new exertions, for the Turkish fleet made its appearance off Aboukir and there disembarked some ten thousand troops. Bonaparte collected every available man, marched against the Turks, found them badly posted with their backs to the sea, routed, and in great part destroyed them. This was the battle of Aboukir (July 26). Shortly afterwards he gave secret orders to have a small frigate got ready in the port of Alexandria, and on the 23d of August, 1799, accompanied by Berthier, Murat, and a few others, he left the army and sailed for France. After a long journey and several narrow escapes from British cruisers, he arrived in the bay of Fréjus on the 9th of October. Had he commanded events and dates at the hand of Fate he could not have chosen better; for the pear was now exactly ripe. One month later he was the master of France."—R. M. Johnston, *Napoleon*, pp. 52-57.

1799 (April-September).—Murder of the French envoys at Rastadt.—Disasters in north Italy.—Suvarov's victories.—Anglo-Russian invasion of Holland and capture of the Dutch

fleet.—"While the French armies were thus humiliated in the field, the representatives of the republic at the congress of Rastadt [where peace negotiations with the states of the empire had been in progress for months] became the victims of a sanguinary tragedy. [See RASTADT, CONGRESS OF.] As France had declared war against the emperor [as sovereign of Austria], and not against the empire, the congress had not necessarily been broken off; but the representatives of the German states were withdrawn one after another, until the successes of the Austrians rendered the position of the French ministers no longer secure. At length they received notice, from the nearest Austrian commander, to depart within twenty-four hours; and the French ministers—Jean Debry, Bonnier, and Roberjeot—left Rastadt with their families and attendants late in the evening of the 8th of Floréal (the 28th of April). The night was very dark, and they appear to have been apprehensive of danger. At a very short distance from Rastadt they were surrounded by a troop of Austrian hussars, who stopped the carriages, dragged the three ministers out, and massacred them in the presence of their wives and children. The hussars then plundered the carriages, and took away, especially, all the papers. Fortunately for Jean Debry, he had been stunned, but not mortally wounded; and after the murderers were gone the cold air of the night restored him to life. This crime was supposed to have been perpetrated at the instigation of the imperial court, for reasons which have not been very clearly explained; but the representatives of the German states proclaimed loudly their indignation. The reverses of the republican arms, and the tragedy of Rastadt, were eagerly embraced by the opposition in France as occasions for raising a violent outcry against the directory. . . . It was in the midst of this general unpopularity of the directors that the elections of the year VII. of the republic took place, and a great majority of the patriots obtained admission to the councils, and thus increased the numerical force of the opposition. . . . The directory had made great efforts to repair the reverses which had marked the opening of the campaign. Jourdain had been deprived of the command of the army of the Danube, which had been placed, along with that of Switzerland, under the orders of Masséna. The command of the army of Italy had been transferred from Scherer to Moreau; and Macdonald had received orders to withdraw his forces from Naples and the papal states, in order to unite them with the army in Upper Italy. The Russians under Suvarrow had now joined the Austrian army in Italy; and this chief, who was in the height of his reputation as a military leader, was made commander-in-chief of the combined Austro-Russian forces, Melas commanding the Austrians under him. Suvarrow advanced rapidly upon the Adda, which protected the French lines; and, on the 8th of Floréal (the 27th of April), forced the passage of that river in two places, at Brivio and Trezzo, above and below the position occupied by the division of Serrurier, which formed the French left, and which was thus cut off from the rest of the army. Moreau, who took the command of the French forces on the evening of the same day, made a vain attempt to drive the enemy back over the Adda at Trezzo, and thus recover his communication with Serrurier; and that division was surrounded, and, after a desperate resistance, obliged to lay down its arms, with the exception of a small number of men who made their way across the mountains into Piedmont. Victor's division effected its retreat without much loss, and

Moreau concentrated his forces in the neighbourhood of Milan. This disastrous engagement, which took place on the 6th of Floréal, was known as the battle of Cassano. Moreau remained at Milan two days to give the members of the government of the Cisalpine republic, and all the Milanese families who were politically compromised, time to make their escape in his rear; after which he continued his retreat. . . . He was allowed to make this retreat without any serious interruption; for Suvarrow, instead of pursuing him actively, lost his time at Milan in celebrating the triumph of the anti-revolutionary party." Moreau first "established his army in a strong position at the confluence of the Tanaro and the Po, covered by both rivers, and commanding all the roads to Genoa; so that he could there, without great danger, wait the arrival of Macdonald." But soon, finding his position made critical by a general insurrection in Piedmont, he retired towards the mountains of Genoa. "On the 6th of Prairial (the 25th of May), Macdonald was at Florence; but he lost much time there; and it was only towards the end of the republican month (the middle of June), that he at length advanced into the plains of Piacenza to form his junction with Moreau." On the Trebbia he encountered Suvarrow's advance, under General Ott, and rashly attacked it. Having forced back Ott's advanced guard, the French suddenly found themselves confronted by Suvarrow himself and the main body of his army. "Macdonald now resolved to unite all his forces behind the Trebbia, and there risk a battle; but he was anticipated by Suvarrow, who attacked him next morning, and, after a very severe and sanguinary engagement, the French were driven over the Trebbia. The combat was continued next day, and ended again to the disadvantage of the French; and their position had become so critical, that Macdonald found it necessary to retreat upon the river Nura, and to make his way round the Apennines to Genoa. The French, closely pursued, experienced considerable loss in their retreat, until Suvarrow, hearing Moreau's cannon in his rear, discontinued the pursuit, in order to meet him." Moreau routed Bellegarde, in Suvarrow's rear, and took 3,000 prisoners; but no further collision of importance occurred during the next two months of the summer. "Suvarrow had been prevented by the orders of the Aulic Council from following up with vigour his victory on the Trebbia, and had been obliged to occupy himself with sieges which employed with little advantage valuable time. Recruits were reaching the French armies in Italy, and they were restored to a state of greater efficiency. It was already the month of Thermidor (the middle of July), and Moreau saw the necessity of assuming the offensive and attacking the Austro-Russians while they were occupied with the sieges; but he was restrained by the orders of the directory to wait the arrival of Joubert. The latter, who had just contracted an advantageous marriage, by which the moderate party had hoped to attach him to their cause, lost an entire month in the celebration of his nuptial festivities, and only reached the army of Italy in the middle of Thermidor (the beginning of August), where he immediately succeeded Moreau in the command; but he prevailed upon that able general to remain with him, at least until after his first battle. The French army had taken a good position in advance of Novi, and were preparing to act against the enemy while he was still occupied in the sieges, when news arrived that Alessandria and Mantua had surrendered, and that Suvarrow was preparing to unite against them the whole strength of

his forces. Joubert immediately resolved to fall back upon the Apennines, and there act upon the defensive; but it was already too late, for Suvarrow had advanced with such rapidity that he was forced to accept battle in the position he occupied, which was a very strong one. The battle began early in the morning of the 28th of Thermidor (the 15th of August); and very early in the action Joubert received a mortal wound from a ball which struck him near the heart. The engagement continued with great fury during the greater part of the day, but ended in the entire defeat of the French, who retreated from the field of battle in great confusion. The French lost about 10,000 men in killed and wounded, and a great number of prisoners. The news of this reverse was soon followed by disastrous intelligence from another quarter. The English had prepared an expedition against Holland, which was to be assisted by a detachment of Russian troops. The English forces, under Abercromby, landed near the mouth of the Helder in North Holland, on the 10th of Fructidor (the 27th of August), and defeated the French and Dutch republican army, commanded by Brune, in a decisive engagement [at the English camp, established on a well-drained morass, called the Zyp] on the 22nd of Fructidor (the 8th of September). Brune retreated upon Amsterdam; and the Russian contingent was thus enabled to effect its junction with the English without opposition. As one of the first consequences of this invasion, the English obtained possession of the whole Dutch fleet, upon the assistance of which the French government had counted in its designs against England. This succession of ill news excited the revolutionary party to a most unusual degree of violence."—T. Wright, *History of France*, v. 2, bk. 6, ch. 22-23.

1799 (August-December).—Campaign in Switzerland.—Battle of Zurich—Defeat of the Russians.—Suvarov's retreat across the Alps.—Reverses in Italy, and on the Rhine.—Fall of the Parthenopean and Roman republics.—Since the retreat of Masséna in June, the Archduke Charles had been watching the French on the Limmat and expecting the arrival of Russian reinforcements under Korsakoff; "but the Aulic Council, with unaccountable infatuation, ordered him at this important juncture to repair with the bulk of his army to the Rhine, leaving Switzerland to Korsakoff and the Russians. Before these injudicious orders, however, could be carried into effect, Masséna had boldly assumed the offensive (Aug. 14) by a false attack on Zurich, intended to mask the operations of his right wing, which meanwhile, under Lecourbe, was directed against the St. Gothard, in order to cut off the communication between the allied forces in Switzerland and in Italy. These attacks proved completely successful, . . . a French detachment . . . seizing the St. Gothard, and establishing itself at Airole, on the southern declivity. Lecourbe's left had meanwhile cleared the banks of the lake of Zurich of the enemy, who were driven back into Glarus. To obtain these brilliant successes on the right, Masséna had been obliged to weaken his left wing; and the Archduke, now reinforced by 20,000 Russians, attempted to avail himself of this circumstance to force the passage of the Limmat, below Zurich (Aug. 16 and 17); but this enterprise, the

success of which might have altered the fate of the war, failed from the defective construction of the pontoons; and the positive orders of the Aulic Council forbade his remaining longer in Switzerland. Accordingly, leaving 25,000 men under Hotze to support Korsakoff, he marched for the Upper Rhine, where the French, at his approach, abandoned the siege of Philipsburg, and retired to Mannheim; but this important post, the defences of which were imperfectly restored, was carried by a coup-de-main (Sept. 18), and the French driven with severe loss over the Rhine. But this success was dearly bought by the disasters in Switzerland, which followed the Archduke's departure. It had been arranged that Suwarroff was to move from Bellinzona (Sept. 21), and after retaking the St. Gothard combine with Korsakoff in a front attack on Massena, while Hotze assailed him in flank. But Massena, who was now the superior in numbers, determined to anticipate the arrival of Suwarroff by striking a blow, for which the presumptuous confidence of Korsakoff gave him increased facility. On the evening of 24th September, the passage of the river was surprised below Zurich, and the heights of Closter-Fabr carried by storm; and, in the course of the next day, Korsakoff, with his main army, was completely hemmed in at Zurich by the superior generalship of the French commander, who summoned the Russians to surrender. But the bravery shown by Korsakoff in these desperate circumstances equalled his former arrogance: on the 28th the Russian columns, issuing from the town, forced their way with the courage of despair through the surrounding masses of French, while a slender rear-guard defended the ramparts of Zurich till the remainder had extricated themselves. The town was at length entered, and a frightful carnage ensued in the streets, in the midst of which the illustrious Lavater was barbarously shot by a French soldier: while Korsakoff, after losing 8,000 killed and wounded, 5,000 prisoners, 100 pieces of cannon, and all his ammunition, stores, and military chest, succeeded in reaching Schaffhausen. The attack of Soul above the lake (Sept. 25) was equally triumphant. The gallant Hotze, who commanded in that quarter, was killed in the first encounter; and the Austrians, giving way in consternation, were driven over the Thur, and at length over the Rhine, with the loss of 20 guns and 3,000 prisoners. Suwarroff in the meantime was gallantly performing his part of the plan. On the 23d of September, the French posts at Airolo and St. Gothard were carried, after a desperate resistance, by the Russian main force, while their flank was turned by Rosenberg; and Lecourbe, hastily retreating, broke down the Devil's Bridge to check the advance of the enemy. A scene of useless butchery followed, the two parties firing on each other from the opposite brinks of the impassable abyss; but the flank of the French was at length turned, the bridge repaired, and the Russians, pressing on in triumph, joined the Austrian division of Auffenberg, at Wasen, and repulsed the French beyond Altdorf. But this was the limit of the old marshal's success. After effecting with severe loss the passage of the tremendous defiles and ridges of the Schachenthal, between Altdorf and Mutten, he found that Linken and Jellachich, who were to have moved from Coire to co-operate with him, had again retreated on learning the disaster at Zurich; and Suwarroff found himself in the midst of the enemy, with Massena on one side and Molitor on the other. With the utmost difficulty the veteran conqueror was prevailed upon, for the first time in his life, to order a retreat, which had

become indispensable, and the heads of his columns were turned towards Glarus and the Grisons. But though the attack of Massena on their rear in the Muttenenthal was repulsed with the loss of 2,000 men, their onward route was barred at Naefels by Molitor, who defied all the efforts of Prince Bagrathion to dislodge him; and in the midst of a heavy fall of snow, which obliterated the mountain paths, the Russian army wound its way (Oct. 5) in single file over the rugged and sterile peaks of the Alps of Glarus. Numbers perished of cold, or fell over the precipices; but nothing could overcome the unconquerable spirit of the soldiers: without fire or stores, and compelled to bivouac on the snow, they still struggled on through incredible hardships, till the dreadful march terminated (Oct. 10) at Ilantz. Such was the famous passage of the Alps by Suwarroff. Korsakoff in the meanwhile (Oct. 1-7) had maintained a desperate conflict near Constance, till the return of the Archduke checked the efforts of the French; and the Allies, abandoning the St. Gothard, and all the other posts they still held in Switzerland, concentrated their forces on the Rhine, which became the boundary of the two armies. . . . In Italy, after the disastrous battle of Novi, the Directory had given the leadership of the armies, both of Italy and Savoy, to the gallant Championnet, but he could muster only 54,000 troops and 6,000 raw conscripts to oppose Melas, who had succeeded Suwarroff in the command, and who had 68,000, besides his garrisons and detachments. The proposition of Championnet had been to fall back, with his army still entire, to the other side of the Alps: but his orders were positive to attempt the relief of Coni, then besieged by the Austrians; and after a desultory warfare for several weeks, he commenced a decisive movement for that purpose at the end of October, with 35,000 men. But before the different French columns could effect a junction, they were separately assailed by Melas: the divisions of Grenier and Victor were overwhelmed at Genola (Nov. 4), and defeated with the loss of 7,000 men; and though St. Cyr repulsed the Imperialists (Nov. 10) on the plateau of Novi, Coni was left to its fate, and surrendered with all its garrison (Dec. 4). An epidemic disorder broke out in the French army, to which Championnet himself, and numerous soldiers, fell victims: the troops giving way to despair, abandoned their standards by hundreds and returned to France; and it was with difficulty that the eloquent exhortations of St. Cyr succeeded in keeping together a sufficient number to defend the Bochetta pass, in front of Genoa, the loss of which would have entailed destruction on the whole army. The discomfited Republicans were driven back on their own frontiers; and, excepting Genoa, the tricolor flag was everywhere expelled from Italy. At the same time the campaign on the Rhine was drawing to a close. The army of Massena was not strong enough to follow up the brilliant success at Zurich, and the jealousies of the Austrians and Russians, who mutually laid on each other the blame of the late disasters, prevented their acting cordially in concert against him. Suwarroff at length, in a fit of exasperation, drew off his troops to winter quarters in Bavaria, and took no further share in the war; and a fruitless attempt in November against Philipsburg, by Lecourbe, who had been transferred to the command on the lower Rhine, closed the operations in that quarter."—*Epitome of Alison's history of Europe, sects. 245-251 (ch. 28, v. 7 of complete work)*.—Meantime, the French had been entirely expelled from southern Italy. On the withdrawal of Macdonald, with

most of his army, from Naples, "Cardinal Ruffo, a soldier, churchman, and politician, put himself at the head of a numerous body of insurgents, and commenced war against such French troops as had been left in the south and in the middle of Italy. This movement was actively supported by the British fleet. Lord Nelson recovered Naples; Rome surrendered to Commodore Trowbridge. Thus the Parthenopean and Roman republics were extinguished forever. The royal family returned to Naples, and that fine city and country were once more a kingdom. Rome, the capital of the world, was occupied by Neapolitan troops."—W. Scott, *Life of Napoleon*, ch. 38.

1799 (September-October).—Disastrous ending of the Anglo-Russian invasion of Holland.—Capitulation of the duke of York.—Dissolution of the Dutch East India Company.—"It is very obvious that the Duke of York was selected in an unlucky hour to be the commander-in-chief of this Anglo-Russian expedition, when we compare the time in which Abercrombie was alone on the marshy promontory of the Helder . . . with the subsequent period. On the 10th of September Abercrombie successfully repulsed the attack of General Brune, who had come for the purpose from Haarlem to Alkmar; on the 10th the Duke of York landed, and soon ruined everything. The first division of the Russians had at length arrived on the 15th, under the command of General Herrmann, for whom it was originally destined, although unhappily it afterwards came into the hands of General Korsakoff. The duke therefore thought he might venture on a general attack on the 10th. In this attack Herrmann led the right wing, which was formed by the Russians, and Abercrombie, with whom was the Prince of Orange, the left, whilst the centre was left to the Duke of York, the commander-in-chief. This decisive battle was fought at Bergen, a place situated to the north of Alkmar. The combined army was victorious on both wings, and Horn, on the Zuyder Zee, was occupied; the Duke of York, who was only a general for parades and reviews, merely indulged the centre with a few manœuvres hither and thither. . . . The Russians, therefore, who were left alone in impassable marshes, traversed by ditches, and unknown to their officers, lost many men, and were at length surrounded, and even their general taken prisoner. The duke concerned himself very little about the Russians, and had long before prudently retired into his trenches; and, as the Russians were lost, Abercrombie and the Crown Prince were obliged to relinquish Horn." The incapacity of the commander-in-chief held the army paralyzed during the fortnight following, suffering from sickness and want, while it would still have been practicable to push forward to South Holland. "A series of bloody engagements took place from the 2nd till the 6th of October, and the object of the attack upon the whole line of the French and Batavian army would have been attained had Abercrombie alone commanded. The English and Russians, who call this the battle of Alkmar, were indisputably victorious in the engagements of the 2nd and 3rd of October. They even drove the enemy before them to the neighbourhood of Haarlem, after having taken possession of Alkmar; but on the 6th, Brune, who owes his otherwise very moderate military renown to this engagement alone, having received a reinforcement

of some thousands on the 4th and 5th, renewed the battle. The fighting on this day took place at Castricum, on a narrow strip of land between the sea and the lake of Haarlem, a position favourable to the French. The French report is, as usual, full of the boasts of a splendid victory; the English, however, remained in possession of the field, and did not retire to their trenches behind Alkmar and to the marshes of Zyp till the 7th. . . . In not more than eight days afterwards, the want in the army and the anxiety of its incapable commander-in-chief became so great, the number of the sick increased so rapidly, and the fear of the difficulties of embarkation in winter so grew and spread, that the duke accepted the most shameful capitulation that had ever been offered to an English general, except at Saratoga. This capitulation, concluded on the 10th of October, was only granted because the English, by destroying the dykes, had it in their power to ruin the country."—F. C. Schlosser, *History of the eighteenth century*, v. 7, pp. 149-151.—"For the failure in accomplishing the great objects of emancipating Holland and restoring its legitimate ruler; for the clamorous joy with which her enemies, foreign and domestic, hailed the event; the government of Great Britain had many consolations. . . . The Dutch fleet, which, in the hands of an enterprising enemy, might have been so injuriously employed, was a capture of immense importance: if Holland was ever to become a friend and ally, we had abundant means of promoting her prosperity and re-establishing her greatness; if an enemy, her means of injury and hopes of rivalry were effectually suppressed. Her East-India Company, . . . long the rival of our own in power and prosperity, whose dividends in some years had risen to the amount of 40 per cent., now finally closed its career, making a paltry final payment in part of the arrears of dividends for the present and three preceding years."—J. Adolphus, *History of England: Reign of George III*, v. 7, ch. 109.

1799 (November).—Return of Bonaparte from Egypt.—First Napoleonic coup d'état.—Revolution of the 18th Brumaire.—End of the first republic.—Creation of the consulate.—"When Bonaparte, by means of the bundle of papers which Sidney Smith caused to find their way through the French lines, learned the condition of affairs in Europe, there was but one course consistent with his character for him to pursue. There was nothing more to be done in Egypt; there was everything to be done in France. If he were to lead his army back, even in case he should, by some miracle, elude the eager eyes of Lord Nelson, the act would be generally regarded as a confession of disaster. If he were to remain with the army, he could, at best, do nothing but pursue a purely defensive policy; and if the army were to be overwhelmed, it was no part of Napoleonism to be involved in the disaster. . . . It would be far shrewder to throw the responsibility of the future of Egypt on another, and to transfer himself to the field that was fast ripening for the coveted harvest. Of course Bonaparte, under such circumstances, did not hesitate as to which course to pursue. Robbing the army of such good officers as survived, he left it in command of the only one who had dared to raise his voice in opposition to the work of the 18th Fructidor . . . the heroic but indignant Kléber. Was there ever a more exquisite revenge? . . . On the arrival of Bona-

parte in Paris everything seemed ready to his hand. . . . The policy which, in the seizure of Switzerland and the Papal States, he had taken pains to inaugurate before his departure for Egypt had borne its natural fruit. As never before in the history of Europe, England, Holland, Russia, Austria, Naples, and even Turkey had joined hands in a common cause, and as a natural consequence the Directory had been defeated at every point. Nor was it unnatural for the people to attribute all these disasters to the inefficiency of the government. The Directory had really fallen into general contempt, and at the new election on the 30th Prairial it had been practically overthrown. Rewbell, who by his influence had stood at the head of affairs, had been obliged to give way," and Sieyès had been put in his place. "By the side of this fantastic statesman . . . Barras had been

KLÉBER

retained, probably for no other reason than that he was sure to be found with the majority, while the other members, Gohier, Moulins, and Roger-Ducos were men from whose supposed mediocrity no very decided opposition could be anticipated. Thus the popular party was not only revenged for the outrages of Fructidor, but it had also made up the new Directory of men who seemed likely to be nothing but clay in the hands of Bonaparte. . . . The manner in which the General was received can have left no possible doubt remaining in his mind as to the strength of his hold on the hearts of the people. It must have been apparent to all that he needed but to declare himself, in order to secure a well-nigh unanimous support and following of the masses. But with the political leaders the case, for obvious reasons, was far different. . . . His popularity was so overwhelming, that in his enmity the leaders could anticipate nothing but annihilation, in his friendship nothing but insignificance. . . . The member of the government who, at the time, wielded most

influence, was Sieyès, a man to whom personally the General had so unconquerable an aversion, that Josephine was accustomed to refer to him as her husband's *bête noire*. It was evident that Sieyès was the most formidable obstacle to the General's advance." "As a first movement, Bonaparte endeavored to bring about the removal of Sieyès from the Directory and his own election to the place. Failing this, his party attempted the immediate creation of a dictatorship. When that, too, was found impracticable, Sieyès was persuaded to a reconciliation and alliance with the ambitious soldier, and the two, at a meeting, planned the proceedings "which led to that dark day in French history known as the 18th Brumaire [November 9, 1799]. It remained only to get absolute control of the military forces, a task at that time in no way difficult. The officers who had returned with Bonaparte from Egypt were impatient to follow wherever their master might lead. Moreau, who, since the death of Hoche, was regarded as standing next to Bonaparte in military ability, was not reluctant to cast in his lot with the others, and Macdonald as well as Serurier soon followed his example. Bernadotte alone would yield to neither flattery nor intimidation. . . . While Bonaparte was thus marshalling his forces in the Rue de la Victoire, the way was opening in the Councils. A commission of the Ancients, made up of the leading conspirators, had worked all night drawing up the proposed articles, in order that in the morning the Council might have nothing to do but to vote them. The meeting was called for seven o'clock, and care was taken not to notify those members whose opposition there was reason to fear. . . . The articles were adopted without discussion. Those present voted, first, to remove the sessions of the Councils from Paris to Saint Cloud (a privilege which the constitution conferred upon the Ancients alone), thus putting them at once beyond the power of influencing the populace and of standing in the way of Bonaparte. They then passed a decree giving to Bonaparte the command of the military forces, at the same time inviting him to come to the Assembly for the purpose of taking the oath of allegiance to the Constitution." Bonaparte appeared, accordingly, before the Council; but instead of taking an oath of allegiance to the constitution, he made a speech which he closed by declaring: "We want a Republic founded on true liberty and national representation. We will have it, I swear; I swear it in my own name and that of my companions in arms." "Thus the mockery of the oath-taking in the Council of Ancients was accomplished. The General had now a more difficult part to perform in the Council of Five Hundred. As the meeting of the Assembly was not to occur until twelve o'clock of the following day, Bonaparte made use of the intervening time in posting his forces and in disposing of the Directory. . . . There was one locality in the city where it was probable aggressive force would be required. The Luxembourg was the seat of the Directory, and the Directory must at all hazards be crushed. . . . Bonaparte knew well how to turn all such ignominious service to account. In close imitation of that policy which had left Kléber in Egypt, he placed the Luxembourg in charge of the only man in the nation who could now be regarded as his rival for popular favor. Moreau fell into the snare, and by so doing lost a popularity which he was never afterwards able to regain. Having thus placed his military forces, Bonaparte turned his attention to the Directors. The resignations of Sieyès and of Roger-Ducos he already had upon his table. It

remained only to procure the others. Barras, without warning, was confronted by Talleyrand and Bruix, who asked him without circumlocution to resign his office," which he did, after slight hesitation. Gohier and Moulins were addressed by Bonaparte in person, but firmly resisted his importunities and his threats. They were then made prisoners by Moreau. "The night of the 18th passed in comparative tranquillity. The fact that there was no organized resistance is accounted for by Lanfrey with a single mournful statement, that 'nothing of the kind could be expected of a nation that had been decapitated. All the men of rank in France for the previous ten years, either by character or genius or virtue, had been mown down, first by the scaffolds and proscriptions, next by war.'" On the morrow, the 10th of Brumaire (November 10) the sitting of the two councils began at two o'clock. In the Council of Five Hundred the partisans of Bonaparte were less numerous than in that of the Ancients, and a powerful indignation at the doings of the previous day began quickly to show itself. In the midst of a warm debate upon the resignation of Barras, which had just been received, "the door was opened, and Bonaparte, surrounded by his grenadiers, entered the hall. A burst of indignation at once arose. Every member sprang to his feet. 'What is this?' they cried, 'swords here! armed men! Away! we will have no dictator here.' Then some of the deputies, bolder than the others, surrounded Bonaparte and overwhelmed him with invectives. 'You are violating the sanctity of the laws; what are you doing, rash man?' exclaimed Bigonnet. 'Is it for this that you have conquered?' demanded Destrem, advancing towards him. Others seized him by the collar of his coat, and, shaking him violently, reproached him with treason. This reception, though the General had come with the purpose of intimidating the Assembly, fairly overwhelmed him. Eye-witnesses declare that he turned pale, and fell fainting into the arms of his soldiers, who drew him out of the hall." His brother Lucien, who was president of the Council, showed better nerve. By refusing to put motions that were made to vote, and finally by resigning his office and quitting the chair, he threw the Council into confusion. Then, appearing to the troops outside, who supposed him to be still president of the Council, he harangued them and summoned them to clear the chamber. "The grenadiers poured into the hall. A last cry of 'Vive la République' was raised, and a moment later the hall was empty. Thus the crime of the conspirators was consummated, and the First French Republic was at an end. After this action it remained only to put into the hands of Bonaparte the semblance of regular authority. . . . A phantom of the Council of Five Hundred—Cornet, one of them, says 30 members—met in the evening and voted the measures which had been previously agreed upon by the conspirators. Bonaparte, Siéyès, and Roger-Ducos were appointed provisional consuls; 57 members of the Council who had been most prominent in their opposition were excluded from their seats; a list of proscriptions was prepared; two commissioners chosen from the assemblies were appointed to assist the consuls in their work of organization; and, finally, . . . they adjourned the legislative body until the 20th of February."—C. K. Adams, *Democracy and monarchy in France*, ch. 4.

1799 (November-December).—Constitution of the consulate.—Bonaparte as First Consul.—New constitution, monarchy in disguise.—"During the three months which followed the 18th Brumaire, approbation and expectation were general. A provisional government had been appointed, composed of three consuls, Bonaparte, Siéyès, and Roger-Ducos, with two legislative commissioners, entrusted to prepare the constitution and a definitive order of things. The consuls and the two commissioners were installed on the 21st Brumaire. This provisional government abolished the law respecting hostages and compulsory loans; it permitted the return of the priests proscribed since the 18th Fructidor; it released from prison and sent out of the republic the emigrants who had been shipwrecked on the coast of Calais, and who for four years were captives in France, and were exposed to the heavy punishment of the emigrant army. All these measures were very favourably received. But public opinion revolted at a proscription put in force against the extreme republicans. Thirty-six of them were sentenced to transportation to Guiana, and twenty-one were put under surveillance in the department of Charante-Inférieure, merely by a decree of the consuls on the report of Fouché, minister of police. The public viewed unfavourably all who attacked the government, but at the same time it exclaimed against an act so arbitrary and unjust. The consuls, accordingly, recoiled before their own act; they first commuted transportation into surveillance, and soon withdrew surveillance itself. It was not long before a rupture broke out between the authors of the 18th Brumaire. During their provisional authority it did not create much noise, because it took place in the legislative commissions. The new constitution was the cause of it. Siéyès and Bonaparte could not agree on this subject: the former wished to institute France, the latter to govern it as a master. . . . Bonaparte took part in the deliberations of the constituent committee, with his instinct of power, he seized upon everything in the ideas of Siéyès which was calculated to serve his projects, and caused the rest to be rejected. . . . On the 24th of December, 1799 (Nivose, year VIII), forty-five days after the 18th Brumaire, was published the constitution of the year VIII.; it was composed of the wrecks of that of Siéyès, now become a constitution of servitude."—F. A. Mignet, *History of the French Revolution*, ch. 14.—"The new constitution was still republic in name and appearance, but monarchical in fact, the latter concealed, by the government being committed, not to the hand of one individual, but of three. The three persons so fixed upon were denominated consuls, and appointed for ten years;—one of them, however, was really ruler, although he only obtained the modest name of First Consul. The rights which Bonaparte caused to be given to himself made all the rest nothing more than mere deception. The First Consul was to invite the others merely to consultation on affairs of state, whilst he himself, either immediately or through the senate, was to appoint to all places of trust and authority, to decide absolutely upon questions of peace or war, and to be assisted by a council of state. . . . In order to cover and conceal the power of the First Consul, especially in reference to the appointment of persons to offices of trust and authority, a senate was created, which neither belonged to the people nor to the government, but immediately from the very beginning was an assembly of courtiers and placemen,

and at a later period became the mere tool of every kind of despotism, by rendering it easy to dispense with the legislative body. The senate consisted of eighty members, a part of whom were to be immediately nominated from the lists of notability, and the senate to fill up its own body from persons submitted to them by the First Consul, the tribunate, and the legislative body. Each senator was to have a salary of 25,000 f.; their meetings were not public, and their business very small. From the national lists the senate was also to select consuls, legislators, tribunes, and judges of the Court of Cassation. Large lists were first presented to the communes, on which, according to Roederer, there stood some 500,000 names, out of which the communes selected 50,000 for the departmental lists, from which again 5,000 were to be chosen for the national list. From these 5,000 names, selected from the departmental list, or from what was termed the national list, the senate was afterwards to elect the members of the legislature and the high officers of government. The legislature was to consist of two chambers, the tribunate and the legislative body—the former composed of 100, and the latter of 300 members. The chambers had no power of taking the initiative, that is, they were obliged to wait till bills were submitted to them, and could of themselves originate nothing: they were, however, permitted to express wishes of all kinds to the government. Each bill (*projet de loi*) was introduced into the tribunate by three members of the council of state, and there defended by them, because the tribunate alone had the right of discussion, whilst the mere power of saying *Yea* or *Nay* was conferred upon the members of the legislative body. The tribunate, having accepted the bill, sent three of its members, accompanied by the members from the council of state, to defend the measure in the assembly of the legislative body. Every year one-fifth of the members of the legislative body was to retire from office, being, however, always re-eligible as long as their names remained on the national list. The sittings of the legislative body alone were public, because they were only permitted to be silent listeners to the addresses of the tribunes or councillors of state, and to assent to, or dissent from, the proposed law. Not above 100 persons were, however, allowed to be present as auditors; the sittings were not allowed to continue longer than four months; both chambers, however, might be summoned to an extraordinary sitting. . . . When the constitution was ready to be brought into operation, Sieyes terminated merely as he had begun, and Bonaparte saw with pleasure that he showed himself both contemptible and venal. He became a dumb senator, with a yearly income of 25,000 f.; and obtained 800,000 f. from the directorial treasury, whilst Roger Ducos was obliged to go away contented with a *douceur* of 120,000 f.; and, last of all, Sieyes condescended to accept from Bonaparte a present of the national domain of Crosne, which he afterwards exchanged for another estate. For colleagues in his new dignity Bonaparte selected very able and skilful men, but wholly destitute of all nobility of mind, and to whom it never once occurred to offer him any opposition; these were Cambacérés and Lebrun. The former, a celebrated lawyer, although formerly a vehement Jacobin, impatiently waited till Bonaparte brought forth again all the old plunder; and then, covered with orders, he strutted up and down the Palais Royal like a peacock, and exhibited himself as a show. Lebrun, who was afterwards created a duke, at a later period distinguished himself by being the first to revive the use of hair

powder; in fact, he was completely a child and partisan of the olden times, although for a time he had played the part of a Girondist. . . . As early as the 25th and 26th of December the First Consul took up his abode in the Tuileries. There the name of citizen altogether disappeared, for the consul's wife caused herself again to be addressed as Madame. Everything which concerned the government now began to assume full activity, and the adjourned legislative councils were summoned for the 1st of January, in order that they might be dissolved."—F. C. 1800 (January-June).—Affairs in Egypt.—Death of Kléber and how it altered Napoleon's foreign policy.—Affairs in Egypt had been on the whole unfavorable to the French, since that army had lost the presence of the commander-in-chief. Kléber, on whom the command devolved, was discontented both at the unceremonious manner in which the duty had been imposed upon him, and with the scarcity of means left to support his defence. Perceiving himself, threatened by a large Turkish force, he became desirous of giving up a settlement which he despaired of maintaining. He signed accordingly a convention with the Turkish plenipotentiaries, and Sir Sidney Smith on the part of the British at El Arish, January 28, 1800, by which it was provided that the French should evacuate Egypt and that Kléber and his army should be transported to France in safety. When the British government received advice of this convention they refused to ratify it. "The French people were clamouring daily more loudly for peace, and their demand was no longer to be overlooked. The public was aware of England's proposition, and the First Consul could no longer justify his policy of war, as he had done in the preceding year, by alleging Great Britain's unwillingness to treat. He accordingly accepted England's proposal, although solely for the purpose of taking the utmost advantage of his opponent's disinclination for war. In the course of her long contest on the seas England had made a number of valuable acquisitions. The Antilles, with the exception of Guadeloupe, and the factories at Pondicherry and Chandernagore in India had been taken by her from the French, while Holland had been compelled to give up Ceylon and the Cape of Good Hope, and Spain had yielded Trinidad to her

superior forces. In the Mediterranean Malta and Minorca had already fallen into her hands, and apparently the time was not far distant when Egypt also must be reckoned among the conquests of Great Britain. Relying upon the friendship of the 'neutral' powers, Napoleon thought himself strong enough to compel England to give up all of these acquisitions. But a sudden end was put to all such aspirations on the part of Napoleon by the arrival of tidings of the death of the Czar [Paul], followed shortly by word from Egypt that General Menou, who had succeeded to the command of the army in Egypt upon the assassination of Kléber [a fanatic Turk, Soliman Haleby, imagined he was inspired by Heaven to slay the enemy of the Prophet], had been defeated before Alexandria and driven back into the city. Upon learning of this the English showed themselves again less disposed to obtain peace at a sacrifice. Negotiations were broken off and each party strove to get the advantage of the other by means of military or diplomatic successes. England prosecuted every possible means for bringing about a reconciliation with the new Czar, and sent a corps of troops to Egypt which was there to join forces with the Turks in order to compel the French to capitulate. Napoleon on his part urged upon Spain the conquest of Portugal with a view to acquiring thus a territory which might be given to England as compensation for terms of peace of the most favourable character, just as he had delivered Venice to Austria in 1707. He further sought to secure to France the good-will of Alexander I, by sending to St. Petersburg his aide-de-camp Duroc, a man in whom he felt unlimited confidence. In the midst of these conflicting interests it was England which was successful. In Egypt Cairo was surrendered in June, and with its fall the capitulation of Alexandria was assured. On the Peninsula, too, the hopes of France were blasted, for there Spain concluded with Portugal the separate peace . . . guaranteeing independence to the latter country."—A. Fournier, *Napoleon the First*, pp. 214-216.

1800-1801 (May-February).—Bonaparte's second Italian campaign.—Crossing of the Alps.—Battle of Marengo.—Moreau in Germany.—Hohenlinden.—Austrian siege of Genoa.—"Preparations for the new campaign in spring were completed. Moreau was made commander-in-chief of the army of the Rhine, 150,000 strong. The plan of the campaign was concerted between the First Consul and Carnot, who had superseded Berthier as Minister at War. The operations were conducted with the utmost secrecy. Napoleon had determined to strike the decisive blow against Austria in Italy, and to command there in person. By an article in the Constitution the First Consul was forbidden to take command of an army. To this interdiction he cheerfully assented; but he evaded it, as soon as the occasion was ripe, by giving the nominal command of the army of Italy to Berthier. He began to collect troops at Dijon, which were, he publicly announced, intended to advance upon Italy. They consisted chiefly of conscripts and invalids, with a numerous staff, and were called 'the army of reserve.' Meantime, while caricatures of some ancient men with wooden legs and little boys of twelve years old, entitled 'Bonaparte's Army of Reserve,' were amusing the Austrian public, the real army of Italy was formed in the heart

of France, and was marching by various roads towards Switzerland. . . . The artillery was sent piecemeal from different arsenals; the provisions necessary to an army about to cross barren mountains were forwarded to Geneva, embarked on the lake, and landed at Villeneuve, near the entrance to the valley of the Simplon. The situation of the French army in Italy had become critical. Masséna had thrown himself into Genoa with 12,000 men, and was enduring all the rigours of a siege, pressed by 30,000 Austrians under General Ott, seconded by the British fleet. Suchet, with the remainder of the French army, about 10,000 strong, completely cut off from communication with Masséna, had concentrated his forces on the Var, was maintaining an unequal contest with Melas, the Austrian commander-in-chief, and strenuously defending the French frontier. Napoleon's plan was to transport his army across the Alps, plant himself in the rear of the Austrians, intercept their communications, then manœuvre so as to place his own army and that of Masséna on the Austrian right and left flanks respectively, cut off their retreat, and finally give them battle at the decisive moment. While all Europe imagined that the multifarious concerns of the Government held the First Consul at Paris, he was travelling at a rapid rate towards Geneva, accompanied only by his secretary. He left Paris on the 6th of May, at two in the morning, leaving Cambacérès to preside until his return, and ordering Fouché to announce that he was about to review the army at Dijon, and might possibly go as far as Geneva, but would return in a fortnight. 'Should anything happen,' he significantly added, 'I shall be back like a thunderbolt.' . . . On the 13th the First Consul reviewed the vanguard of his army, commanded by General Lannes, at Lausanne. The whole army consisted of nearly 70,000 men. Two columns, each of about 6,000 men, were put in motion, one under Tureau, the other under Chabran, to take the routes of Mont Cenis and the Little St. Bernard. A division consisting of 15,000 men, under Moncey, detached from the army of the Rhine, was to march by St. Gothard. Moreau kept the Austrian army of the Rhine, under General Kray, on the defensive before Ulm [to which he had forced his way in a series of important engagements, at Engen, May 2, at Moeskirch, May 4, at Biberach, May 6, and at Hochstadt, June 10], and held himself in readiness to cover the operations of the First Consul in Italy. The main body of the French army, in numbers about 40,000, nominally commanded by Berthier, but in fact by the First Consul himself, marched on the 15th from Lausanne to the village of St. Pierre, at the foot of the Great St. Bernard, at which all trace of a practicable road entirely ceased. General Marescot, the engineer who had been sent forward from Geneva to reconnoitre, reported the paths to be 'barely passable.' 'Set forward immediately!' wrote Napoleon. Field forges were established at St. Pierre to dismount the guns, the carriages and wheels were slung on poles, and the ammunition-boxes carried by mules. A number of trees were felled, then hollowed out, and the pieces, being jammed into these rough cases, 100 soldiers were attached to each and ordered to drag them up the steps. . . . The whole army effected the passage of the Great St. Bernard in three days."—R. H. Horne, *History of Napoleon Bonaparte*, ch. 18.—"From May 16 to May 10, the solitudes of the vast mountain track echoed to the din and tumult of war, as the French soldiery swept over its heights to reach the valley of the Po and the plains of Lombardy. A hill fort, for a time, stopped the daring invaders, but the ob-

stale was passed by an ingenious stratagem; and before long Bonaparte, exulting in hope, was marching from the verge of Piedmont on Milan, having made a demonstration against Turin, in order to hide his real purpose. By June 2 the whole French army, joined by the reinforcement sent by Moreau, was in possession of the Lombard capital, and threatened the line of its enemy's retreat, having successfully accomplished the first part of the brilliant design of its great leader. While Bonaparte was thus descending from the Alps, the Austrian commander had been pressing forward the siege of Genoa and his operations on the Var. Massèna, however, stubbornly held out in Genoa; and Suchet had defended the defiles of Provence with a weak force with such marked skill that his adversary had made little progress. When first informed of the terrible apparition of a hostile army gathering upon his rear, Melas disbelieved what he thought impossible; and when he could no longer discredit what he heard, the movements by Mont Cenis and against Turin, intended to perplex him, had made him hesitate. As soon, however, as the real design of the First Consul was fully revealed, the brave Austrian chief resolved to force his way to the Adige at any cost; and, directing Ott to raise the siege of Genoa, and leaving a subordinate to hold Suchet in check, he began to draw his divided army together, in order to make a desperate attack on the audacious foe upon his line of retreat. Ott, however, delayed some days to receive the keys of Genoa, which fell [June 4] after a defence memorable in the annals of war; and, as the Austrian forces had been widely scattered, it was June 12 [after a severe defeat at Montebello, on the 9th, by Lannes] before 50,000 men were assembled for an offensive movement round the well-known fortresses of Alessandria. Meanwhile, the First Consul had broken up from Milan; and, whether ill-informed of his enemy's operations, or apprehensive that, after the fall of Genoa, Melas would escape by a march southwards, he had advanced from a strong position he had taken between the Ticino, the Adda, and the Po, and had crossed the Scrivia into the plains of Marengo, with forces disseminated far too widely. Melas boldly seized the opportunity to escape from the weakened meshes of the net thrown round him; and attacked Bonaparte on the morning of June 14 with a vigor and energy which did him honor. The battle raged confusedly for several hours; but the French had begun to give way and fly, when the arrival of an isolated division on the field [that of Desaix, who had been sent southward by Bonaparte, and who turned back, on his own responsibility, when he heard the sounds of battle] and the unexpected charge of a small body of horsemen, suddenly changed defeat into a brilliant victory. The importance was then seen of the commanding position of Bonaparte on the rear of his foe; the Austrian army, its retreat cut off, was obliged to come to terms after a single reverse; and within a few days an armistice was signed by which Italy to the Mincio was restored to the French, and the disasters of 1799 were effaced. . . . While Italy had been regained at one stroke, the campaign in Germany had progressed slowly; and though Moreau was largely superior in force, he had met more than one check near Ulm, on the Danube. The stand, however, made ably by Kray, could not lessen the effects of Marengo; and Austria, after that terrible reverse, endeavored to negotiate with the dreaded conqueror. Bonaparte, however, following out a purpose which he had already made a maxim of policy, and resolved if possible to divide the Coalition, refused to treat with Austria

jointly with England, except on conditions known to be futile; and after a pause of a few weeks hostilities were resumed with increased energy. By this time, however, the French armies had acquired largely preponderating strength; and while Brune advanced victoriously to the Adige—the First Consul had returned to the seat of government—Moreau in Bavaria marched on the rivers which, descending from the Alps to the Danube, form one of the bulwarks of the Austrian Monarchy. He was attacked incautiously by the Archduke John—the Archduke Charles, who ought to have been in command, was in temporary disgrace at the Court—and soon afterwards [December 3] he won a great battle at Hohenlinden, between the Iser and the Inn, the success of the French being complete and decisive, though the conduct of their chief has not escaped criticism. This last disaster proved overwhelming, and Austria and the States of the Empire were forced to submit to the terms of Bonaparte. After a brief delay peace was made at Lunéville in February 1801."—W. O'C. Morris, *French Revolution and first empire*, ch. 10.

1800-1801 (June-February).—Emperor Paul intercedes with the First Consul in behalf of the king and queen of Naples.—Leaves the coalition.—The Pope befriends.—Court of Naples makes peace with France.—"Such was the victory of Marengo. It was dearly bought; for, apart from the heavy losses, amounting on either side to about one-third of the number engaged, the victors sustained an irreparable loss in the death of Desaix, who fell in the moment when his skill and vigour snatched victory from defeat. The victory was immediately due to Kellermann's brilliant charge; and there can be no doubt, in spite of Savary's statements, that this young officer made the charge on his own initiative. Yet his onset could have had little effect, had not Desaix shaken the enemy and left him liable to a panic like that which brought disaster to the Imperialists at Rivoli. Bonaparte's dispositions at the crisis were undoubtedly skilful; but in the first part of the fight his conduct was below his reputation. We do not hear of him electrifying his disordered troops by any deed comparable with that of Caesar, when, shield in hand, he flung himself among the legionaries to stem the torrent of the Nervii. At the climax of the fight he uttered the words 'Soldiers, remember it is my custom to bivouac on the field of battle'—tame and egotistical words considering the gravity of the crisis. . . . [The queen of the two Sicilies implored Emperor Paul to intercede with the First Consul in behalf of her husband. The Russian monarch, having been enraged at the discomfiture of Suvarov in Switzerland and dissatisfied with the conduct of Austria and England, was willing to accede to this request; and he made plans to quit the coalition and ally himself with the First Consul.] At the close of 1800 the Russian Emperor marshals the Baltic Powers for the overthrow of England's navy, and outstrips Bonaparte's wildest hopes by proposing a Franco-Russian invasion of India with a view to 'dealing his enemy a mortal blow.' This plan, as drawn up at the close of 1800, arranged for the mustering of 35,000 Russians of Astrakan; while as many French

were to fight their way to the mouth of the Danube, set sail on Russian ships for the Sea of Azov, join their allies on the Caspian Sea, sail to its southern extremity, and, rousing the Persians and Afghans by the hope of plunder, sweep the British from India. The scheme received from Bonaparte a courteous perusal; but he subjected it to several criticisms, which led to less patient rejoinders from the irascible potentate. . . . The Court of Naples also made peace with France by the treaty of Florence (March, 1801), whereby it withdrew its troops from the States of the Church [Murat, commander of the French army in Italy, respected the territory of the church, and reinstalled the officers of the pope in the patrimony of St. Peter's], and closed its ports to British and Turkish ships; it also renounced in favour of the French Republic all its claims over a maritime district of Tuscany known as the *Présidii*, the little principality of Piombino, and a port in the Isle of Elba. These cessions fitted in well with Napoleon's schemes for the proposed elevation of the heir of the Duchy of Parma to the rank of King of Tuscany or Etruria. The King of Naples also pledged himself to admit and support a French corps in his dominions. Sout with 10,000 troops thereupon occupied Otranto, Taranto, and Brindisi, in order to hold the Neapolitan Government to its engagements, and to facilitate French intercourse with Egypt."—J. H. Rose, *Life of Napoleon I*, pp. 238, 241, 243.

1801-1802.—Significance of the peace of Lunéville.—Bonaparte's preparations for conflict with England.—Northern Maritime League.—English bombardment of Copenhagen and summary crushing of League.—Murder of Russian tsar.—English expedition to Egypt.—Surrender of French army.—Peace of Amiens.—"The treaty of Lunéville was of far greater import than the treaties which had ended the struggle of the first coalition. . . . The significance then of the Peace of Lunéville lay in this, not only that it was the close of the earlier revolutionary struggle for supremacy in Europe, the abandonment by France of her effort to 'liberate the peoples,' to force new institutions on the nations about her by sheer dint of arms; but that it marked the concentration of all her energies on a struggle with Britain for the supremacy of the world. For England herself the event which accompanied it, the sudden withdrawal of William Pitt from office, which took place in the very month of the treaty, was hardly less significant. . . . The bulk of the old Ministry returned in a few days to office with Mr. Addington at their head, and his administration received the support of the whole Tory party in Parliament. . . . It was with anxiety that England found itself guided by men like these. . . . The country stood utterly alone; while the peace of Lunéville secured France from all hostility on the Continent. . . . To strike at England's wealth had been among the projects of the Directory; it was now the dream of the First Consul. It was in vain for England to produce, if he shut her out of every market. Her carrying-trade must be annihilated if he closed every port against her ships. It was this gigantic project of a 'Continental System' that revealed itself as soon as Buonaparte became finally master of France. From France itself and its dependencies in Holland and the Netherlands Eng-

lish trade was already excluded. But Italy also was shut against her after the Peace of Lunéville [and the Treaty of Foligno with the King of Naples], and Spain not only closed her own ports but forced Portugal to break with her English ally. In the Baltic, Buonaparte was more active than even in the Mediterranean. In a treaty with America, which was destined to bring this power also in the end into his great attack, he had formally recognized the rights of neutral vessels which England was hourly disputing. . . . The only powers which now possessed naval resources were the powers of the North. . . . Both the Scandinavian states resented the severity with which Britain enforced that right of search which had brought about their armed neutrality at the close of the American war; while Denmark was besides an old ally of France, and her sympathies were still believed to be French. The First Consul therefore had little trouble in enlisting them in a league of Neutrals, which was in effect a declaration of war against England, and which Prussia as before showed herself ready to join. Russia indeed seemed harder to gain." But Paul, the czar, afraid of the opposition of England to his designs upon Turkey, dissatisfied with the operations of the coalition, and flattered by Bonaparte, gave himself up to the influence of the latter. "It was to check the action of Britain in the East that the Czar now turned to the French Consul, and seconded his efforts for the formation of a naval confederacy in the North, while his minister, Rostopchin, planned a division of the Turkish Empire in Europe between Russia and her allies. . . . A squabble over Malta, which had been blockaded since its capture by Buonaparte, and which surrendered at last [September, 1800] to a British fleet, but whose possession the Czar claimed as his own on the ground of an alleged election as Grand Master of the Order of St. John, served as a pretext for a quarrel with England; and at the close of 1800 Paul openly prepared for hostilities. . . . The Danes, who throughout the year had been struggling to evade the British right of search, at once joined this neutral league, and were followed by Sweden in their course. . . . But dexterous as the combination was, it was shattered at a blow. On the 1st of April, 1801, a British fleet of 18 men-of-war [under Sir Hyde Parker, with Nelson second in command] forced the passage of the Belt, appeared before Copenhagen, and at once attacked the city and its fleet. In spite of a brave resistance from the Danish batteries and gunboats six Danish ships were taken, and the Crown Prince was forced to conclude an armistice which enabled the English ships to enter the Baltic. . . . But their work was really over. The seizure of English goods and the declaration of war had bitterly irritated the Russian nobles, whose sole outlet for the sale of the produce of their vast estates was thus closed to them; and on the 24th of March, nine days before the battle of Copenhagen, Paul fell in a midnight attack by conspirators in his own palace. With Paul fell the Confederacy of the North. . . . At the very moment of the attack on Copenhagen, a stroke as effective wrecked his projects in the East. . . . In March, 1801, a force of 15,000 men under General Abercrombie anchored in Aboukir Bay. Deserted as they were by Buonaparte, the French had firmly maintained their hold on Egypt. . . . But their army was foolishly scattered, and Abercrombie was able to force a landing five days after his arrival on the coast. The French however rapidly concentrated; and on the 21st of March their general attacked the English army on the ground it had won, with a force equal to its own. The battle

[known as the battle of Alexandria] was a stubborn one, and Abercrombie fell mortally wounded ere its close; but after six hours' fighting the French drew off with heavy loss; and their retreat was followed by the investment of Alexandria and Cairo. . . . At the close of June the capitulation of the 13,000 soldiers who remained closed the French rule over Egypt." Threatening preparations for an invasion of England were kept up, and gunboats and flatboats collected at Boulogne, which Nelson attacked unsuccessfully in August, 1801, "The First Consul opened negotiations for peace at the close of 1801. His offers were at once met by the English Government. . . . The negotiations which went on through the winter between England and the three allied Powers of France, Spain, and the Dutch, brought about in March, 1802, the Peace of Amiens." The treaty secured "a pledge on the part of France to withdraw its forces from Southern Italy, and to leave to themselves the republics it had set up along its border in Holland, Switzerland, and Piedmont. In exchange for this pledge, England recognized the French government, restored all the colonies which they had lost, save Ceylon and Trinidad, to France and its allies [including the restoration to Holland of the Cape of Good Hope and Dutch Guiana, and of Minorca and the citadel of Port Mahon to Spain, while Turkey regained possession of Egypt], acknowledged the Ionian Islands as a free republic, and engaged to restore Malta within three months to its old masters, the Knights of St. John."—J. R. Green, *History of the English people*, v. 4, bk. 9, ch. 5.—See also BOSPORUS: 1774-1807; CONSTANTINOPLE: 1920.

1801-1803.—Napoleon's extension of power in Spain and Italy.—Made president of the Italian republic.—Instigates and dictates revolutions in the Dutch and Swiss republics.—"No sooner was the Treaty of Amiens signed than Bonaparte began to make ready for the struggle which he foresaw and foretold. . . . Already controlling Holland and Italy, he was determined to be master of Spain and Portugal; and, pending the annexation of those countries, he sent his own generals in the guise of ambassadors, who were to dragoon the governments, keep watch on their doings, frustrate intrigues, and take care that the ports were rigidly closed to the English. . . . and this entailed interference with the politics of Italy, Holland, Germany, and Switzerland. . . . It was certainly no part of Bonaparte's scheme to promote Italian unity."—A. Guillard, *Napoleon (Cambridge modern history, v. 9, pp. 80, 82)*.—"His attention was turned first of all to Italy, where the Cisalpine and Ligurian Republics were again recognized and guaranteed [by the second article of the Lunéville Treaty]. The former had been very considerably increased by the annexation of Modena and the Legations; in both, French statesmen stood at the head of the government; both remained mere dependencies of France, and the will of the First Consul was supreme there as in France. Between these two countries lay Piedmont, whose destiny or that of its king had not yet been decided, with the exception of Savoy, which had been incorporated into France. . . . Napoleon took advantage of the acquisition of Tuscany to place Spain under obligations to himself and thus gain a directing hand in the management of her policy.

After the battle of Marengo he had succeeded in driving out of office in Madrid a ministry hostile to France. . . . Napoleon's object was attained October 1st, 1800, through the treaty of San Ildefonso, by which Tuscany, under the name of Kingdom of Etruria, was promised to the queen's daughter, who had married the Bourbon Prince of Parma. The transaction was completed by the signature of the Peace of Lunéville, and on the 21st of March, 1801, Spain declared herself ready . . . to cede to France Parma and its dependency Elba, and to give up Louisiana. In September, 1801, Napoleon had already conferred with certain men in Lombardy who were in his confidence; the next step was to arrange for the elaboration of a constitution according to his directions, which duty he assigned to Maret. The result of these labours was sent to Milan in order that it might there be secretly deliberated upon. According to it a single President was in this case also to be put at the head of the government. The authorities in Milan consented to everything, asking only that Napoleon would do them the favour to appoint the proper persons to the offices of State. And again the First Consul tried to conform with the provisions of the before-mentioned Article in the Treaty of Lunéville by inviting to Lyons the most prominent representatives of the three classes into which the people were divided according to the constitution. . . . At this place and with the concurrence of these deputies men were assigned to the principal offices with the exception of a single one, that of the Presidency. [Napoleon was made president January 25, 1802.] . . . His [Napoleon's] first official act was to change the name 'Cisalpine Republic' to the 'Italian Republic'—a clever stroke, for already many hearts had been fired with enthusiasm by the words of Alfieri: 'Italia virtuosa, magnanima, libera et una.' The name was taken to signify a complete programme of national unity and independence. And who was better fitted to make this dream a reality than the victor of Marengo? But this was after all nothing but a decoy. Napoleon's real designs were most clearly shown by the fate which overtook Piedmont. This country lay at the portals of France and formed a sort of bridge leading to the Republic of Lombardy. The French had occupied it ever since their last victory over the Austrians, and had not evacuated it after the conclusion of the Treaty of Lunéville. During the lifetime of Paul I. of Russia, who had drawn his sword among other things in defence of the legitimate rights of the King of Sardinia, Napoleon contented himself with simple occupation of the territory in order to avoid giving offence to his new-found friend. Hardly had the Czar breathed his last, however, before Gen. Jourdan—the Jacobin of the 18th Brumaire and now the docile tool of the new monarch—was forthwith commissioned to proclaim to the Piedmontese that their country was to form a French military division [by a decree of April 20, 1801] and to be portioned off into six prefectures. This was exactly the procedure of the Convention in former days when it set about the annexation of German possessions along the Rhine."—A. Fournier, *Napoleon the First*, pp. 210, 252-254.—"If the Dutch did not show the enthusiasm of the Italians for the doctrines of the French Revolution, those doctrines had, nevertheless, made their way into Holland even before the arrival of the armies of the Republic. . . . The Dutch Directory consisted of an executive body of five members. The Legislative authority was shared between two Chambers: a Grand Council, which was representative in character, and a Coun-

cil of Ancients. This system worked fairly well, and at any other time would probably have secured the well-being of the country. . . . This state of things [debt, revolutions, and requisitions] afforded Bonaparte abundant excuse for interference in Holland. Ever since the revolution of Brumaire, his wish had been to change the system of government. . . . In 1801 Bonaparte considered that the moment for intervention had come; and he drew up a Constitution which strengthened the executive, while it diminished the authority of the legislature to a corresponding extent. He created a Council of twelve members (*Staatsbewind*), with a Secretary-General and four Secretaries of State. The legislative power rested with a single Chamber of 35 members, chosen, in the first instance, by the Government, and afterwards to be renewed, one-third at a time, by the electors. This Chamber could only vote by a simple 'aye' or 'no' on the bills placed before them. Bonaparte resolved to submit this Constitution to the two Chambers for ratification, convinced that they would accept it eagerly. He was mistaken: the Chambers declined to give it their sanction, and they were supported in their refusal by two of the Directors. Bonaparte did not hesitate. On Sept. 26, 1801, Auzereau proclaimed the dissolution of the two Chambers; and, as the people made no sign, the *Moniteur* was able to say that 'the operation had been accomplished without the smallest disturbance.' Bonaparte declared that he would appeal to the nation; and he did in fact, a few days later, submit his Constitution to the suffrages of the Dutch. Of 416,410 electors, 52,219 voted against the Constitution, and 16,771 for it; the rest abstained. This abstention was treated by Bonaparte as acquiescence; and on October 6, 1801, he declared that the Constitution had been accepted. In order to reconcile the Batavians to the new arrangement, he agreed to reduce, from 25,000 to 10,000 men, the number of soldiers which Holland was to support till the conclusion of peace with England. But, as a set-off to this reduction, he exacted a contribution of 65,000,000 florins. . . . In Holland the *coup d'état* of September 18, 1801, was received . . . with resigned indifference. The most that could be said was, that those of the nation who longed for repose saw in it some hope of a period of tranquillity. . . . The gravest question which it had to deal with was the question of finance. There was a deficit of 50,000,000 florins; and the Council adopted most unpopular measures to make it good. They imposed, for example, a tax of 4 per cent. on property and of 10 per cent. on income for eight years. . . . The rupture of the Treaty of Amiens finally ruined the hopes of the Dutch. On June 25, 1803, Bonaparte imposed on them, in addition to the maintenance of the French army of occupation, the duty of providing 16,000 men, of fitting out five men-of-war and five frigates, and of building transports and boats sufficient for the accommodation of more than 60,000 men. This was too much for a country whose finances were exhausted. The Government, driven into a corner, attempted to evade its engagements, and to delay the outbreak of hostilities with Great Britain. Bonaparte, who got wind of these measures, proposed in 1803 to bind Holland more closely to France by placing, as he said, 'a man of character' at the head of affairs—he had already Schimmelpenninck in his eye—but the mass of business on his hands forced him to defer the execution of this plan. . . . In Switzerland, the effects of the French Revolution resembled those in Germany: the ancient federation of 13 cantons with its subject and allied provinces, together with the extraor-

dinary inequalities which existed between the country districts and the towns, disappeared once for all. In its place was created the Helvetic Republic, one and indivisible, which, by abolishing ecclesiastical and feudal burdens and the monopolies that clogged manufactures and commerce, and by establishing civil equality and liberty of conscience, laid the foundation of the democratic Switzerland of the nineteenth century. This work, it must be admitted, was accomplished less by the will of the citizens than by the conquering armies of the Revolution. . . . The existing Governments in Switzerland were strongly reactionary; and even in the small democratic cantons of Old Switzerland, Uri, Schwyz, and Unterwalden, which had furnished many officers to France, Jacobinism was held in abhorrence. Consequently, in no part of Europe were French *émigrés* more numerous, relatively speaking, than in Switzerland; and they were generally welcomed. . . . Bonaparte was not indifferent to what was passing in Switzerland; and, as in the case of Holland, he was on the watch for an opportunity to intervene. He gave the preference to neither of the two extreme parties which divided the country, but inclined rather to an intermediate group which recognised at once the advantages of the new *régime* and of certain institutions belonging to the past which it considered indispensable. This party, known in Switzerland as the Republican, stood midway between the patriots or Jacobins on the one side and the reactionaries or Federalists on the other. It was moderate in its claims and unionist in its objects. But the party was weak in numbers; its members were men of distinction who had been trained in the school of the Republic, and they formed, so to speak, a staff of officers without an army. Bonaparte nevertheless approached them; and on January 8, 1800, a *coup d'état* was effected at Bern which placed these men in power. . . . This *coup d'état* was speedily followed by another. Bonaparte could not tolerate the existence in Switzerland of two Assemblies, each with a Jacobin majority. He therefore encouraged the Executive Committee to substitute for the two Councils a Legislative Body composed of 43 members, of whom 35 were to be chosen from the Councils by the Executive Committee, while the remaining 8 were to be co-opted by the 35. The Legislative Body thus constituted was in its turn to appoint the executive in the shape of a Council of seven members. The Grand Council, on this proposal being submitted to it, discerned in it the hand of Bonaparte and voted it unanimously. The Senate, after a show of resistance, also acquiesced (August 8, 1800). The Republican party formed the majority in the new Government, both in the executive and in the legislative departments; and they thought themselves strong enough to establish a Constitution framed in accordance with their own ideas, that is to say, at once unionist and liberal. It was, however, no part of Bonaparte's plan to favour the creation of a centralised Switzerland which would be less under his control than a federation. The new Government submitted a scheme based on the French Consular Constitution. To this Bonaparte replied by a counter-project, the Constitution of Malmaison; and this he imposed upon the country in defiance of the Treaty of Lunéville, which had recognised Switzerland as an independent State. The Constitution of Malmaison (May, 1801) divided Switzerland into 17 cantons, to each of which was given autonomy in various matters, particularly in those relating to finance and public instruction. Each canton was placed under the authority of a prefect; and the admin-

istration was in each case adapted to local needs. The central authority consisted of a Diet of 77 members and a Senate of 25 members; and from the latter was chosen the First Magistrate of the country, who bore the title of Chief *Landammann* of Switzerland. The *Landammann* presided over a Council of Four, who formed the executive authority. This Constitution, in spite of its imperfections, was the best that the country could hope for at the time. Taking into account recent events, it met the requirements of nature and history better than the unionist Constitutions which had preceded it; it may even be said that in certain respects it was superior to the Act of Mediation which followed it (1803). All parties therefore agreed in demanding its modification; and the Republicans, who formed the majority in the Diet, appointed a committee to reconstruct Bonaparte's work. . . . A third *coup d'état* at Bern swept away the Government of the Moderates. The stroke was secretly planned at Bern by Bonaparte's agent Verninac, in collusion with the Bernese aristocrats. These latter, finding that Bonaparte was annoyed with the Republicans, made common cause with the Federalists of the small cantons in order to upset the Government. They succeeded, thanks to the support of French troops under General Montchoisy. The Diet was declared to be dissolved; the Constitution of Malmaison was reëstablished. . . . Bonaparte, on hearing of this proceeding, was deeply incensed, withdrew his support from the Federals, and, shifting his position in the manner familiar to him, made a show of sympathy with the Republicans. The latter, believing that the moment had come for a fresh *coup d'état*, took advantage of the absence of many of the Federals from Bern during the Eastern recess, declared the Senate indefinitely adjourned (April 17, 1802) and summoned an assembly of notables from all the cantons to agree on the changes to be made in the Constitution of Malmaison. This new Constitution, imposed by force, gave rise to incessant troubles. . . . This was the very moment chosen by Bonaparte, with Machiavellian astuteness, to withdraw his soldiers from Swiss territory. Bonaparte had not miscalculated; hardly had the last French soldier quitted Swiss soil than risings took place in all directions. . . . The Federalists, under experienced leaders, made themselves masters of Bern, and expelled the Government. They then defeated their rivals at Morat, October 4, 1802, and marched on Lausanne in order to overthrow the Government, which had taken refuge there. At this point Bonaparte intervened. . . . While he appeared merely to offer mediation, Bonaparte in reality imposed it by force. At the very moment when Rapp presented himself before the Helvetic Government, General Ney was ordered to march into Switzerland with 30,000 men and 'crush all opposition.' He issued proclamations in which he stated that it was 'at the request of the nation, and particularly on the demand of the Senate and the smaller cantons, that the First Consul intervened as mediator.' It was true; but, at the moment when the French invaded the territory of Switzerland, the Federalist Government despatched a protest to London, Vienna, and Berlin."—A. Guillard, *Cambridge modern history*, v. 9, pp. 88-91, 95, 97-100.

"While the Consul in these ways prepared the 'blockade' of England, he was assembling on the coast of the Channel near Boulogne an imposing army, which he thoroughly equipped and exercised—whether as mere demonstration or with a view to actual occasion—in what was requisite to accomplish with success the transit across the Chan-

nel. Flat transport-boats were built in great number, and the field-soldiers practised in the duties of the sailor. It was a gigantic apparatus which was here displayed for the consternation of John Bull. But it was not to be brought immediately into action. The enemy from without was, unfortunately for him, not the only one against which Napoleon had to do battle. In the interior of the country arose another enemy which was not to be subdued with army and navy. Against this foe he now turned. In this case also he was destined to conquer, and, with his genius for making everything contribute to his end, his prostrate antagonist was made to serve but as a stepping-stone to new greatness."—A. Fournier, *Napoleon the First*, pp. 260-270.—"The second preparation for war was the much discussed equipment of an expedition to invade England. It is a commonplace of history that the British empire has ever been fortified in the separation of the kingdom from the continent of Europe by a narrow but stormy estuary. There had been repeated invasions from the days of the Anglo-Saxons themselves down to the expedition of William of Orange; but growing wealth had furnished ever increasing armaments, and made access to England's shores so much more difficult with every year that, finally, successful invasion had come to be regarded by her enemies as impossible. . . . For years the project of a descent on England had been the standard pretext of the Convention and of the Directory to extort money from officeholders and patriots."—W. M. Sloane, *Life of Napoleon Bonaparte*, v. 2, p. 290.

1801-1804.—Civil Code and the Concordat.—"Four years of peace separated the Treaty of Lunéville from the next outbreak of war between France and any Continental Power. They were years of the extension of French influence in every neighbouring State; in France itself, years of the consolidation of Bonaparte's power, and of the decline of everything that checked his personal rule. . . . Among the institutions which date from this period, two, equally associated with the name of Napoleon, have taken a prominent place in history, the Civil Code and the Concordat. Since the middle of the 18th century the codification of law had been pursued with more or less success by almost every Government in the western continent. The Constituent Assembly of 1789 had ordered the statutes by which it superseded the variety of local customs in France to be thus cast into a systematic form. . . . Bonaparte instinctively threw himself into a task so congenial to his own systematizing spirit, and stimulated the efforts of the best jurists in France by his own personal interest and pride in the work of legislation. A Commission of lawyers, appointed by the First Consul, presented the successive chapters of a Civil Code to the Council of State. In the discussions in the Council of State Bonaparte himself took an active, though not always a beneficial, part. . . . In March, 1804, France received the Code which, with few alterations, has formed from that time to the present the basis of its civil rights. . . . It is probable that a majority of the inhabitants of Western Europe believe that Napoleon actually invented the laws which bear his name. As a matter of fact, the substance of these laws was fixed by the successive Assemblies of the Revolution; and, in the final revision which produced the Civil Code, Napoleon appears to have originated neither more nor less than several of the members of his Council whose names have long been forgotten. He is unquestionably entitled to the honour of a great legislator, not, however, as one who, like Solon or like

Mahomet, himself created a new body of law. . . . Four other Codes, appearing at intervals from the year 1804 to the year 1810, embodied, in a corresponding form, the Law of Commerce, the Criminal Law, and the Rules of Civil and of Criminal Process."—C. A. Fyffe, *History of modern Europe*, v. 1.—"It is . . . easy, from the official reports which have been preserved, to see what part the First Consul took in the framing of the Civil Code. While we recognise that his intervention was advantageous on some minor points, . . . we must say that his views on the subjects of legislation in which this intervention was most conspicuous, were most often inspired by suggestions of personal interest, or by political considerations which ought to have no weight with the legislator. . . . Bonaparte came by degrees to consider himself the principal creator of a collective work to which he contributed little more than his name, and which probably would have been much better if the suggestions of a man of action and executive authority had not been blended with the views, necessarily more disinterested, larger and more humane, of the eminent juriconsults whose glory he tried to usurp."—P. Lanfrey, *History of Napoleon*, v. 2, ch. 5.—"The famous Code Napoléon was an orderly, systematic, compact statement of the laws of France. Pre-revolutionary France had been governed by a perplexing number of systems of law of different historical origins. Then had come, with the Revolution, a flood of new legislation, inspired by different principles and greatly increasing the sum-total of laws in force. It was desirable to sift and harmonize all these statutes, and to present to the people of France a body of law, clear, rational, and logically arranged, so that henceforth all the doubt, uncertainty, and confusion which had hitherto characterized the administration of justice might be avoided and every Frenchman might easily know what his legal rights and relations were, with reference to the state and his fellow-citizens. The Constituent Assembly, the Convention, the Directory, had all appreciated the need of this codification and had had committees at work upon it, but the work had been uncompleted. Bonaparte now lent the driving force of his personality to the accomplishment of this task, and in a comparatively brief time the lawyers and the Council of State to whom he intrusted the work had it finished. The code to which Napoleon attached his name preserved the principle of civil equality established by the Revolution. It was immediately put into force in France and was later introduced into countries conquered or influenced by France, Belgium, the German territories west of the Rhine, and Italy."—C. D. Hazen, *French Revolution and Napoleon*, pp. 284-285.

"Far more distinctively the work of Napoleon himself was the reconciliation with the Church of Rome effected by the Concordat [July, 1801]. It was a restoration of religion similar to that restoration of political order which made the public service the engine of a single will. The bishops and priests, whose appointment the Concordat transferred from their congregations to the Government, were as much instruments of the First Consul as his prefects and his gendarmes. . . . An alliance with the Pope offered to Bonaparte the means of supplanting the popular organisation of the Constitutional Church by an imposing hierarchy, rigid in its orthodoxy and unquestioning in its devotion to himself. In return for the consecration of his own rule, Bonaparte did not shrink from inviting the Pope to an exercise of authority such as the Holy See had never even claimed in France. The whole of the existing French Bishops,

both the exiled non-jurors and those of the Constitutional Church, were summoned to resign their sees into the hands of the Pope; against all who refused to do so sentence of deposition was pronounced by the Pontiff. . . . The sees were reorganised, and filled up by nominees of the First Consul. The position of the great body of the clergy was substantially altered in its relation to the Bishops. Episcopal power was made despotic, like all other powers in France. . . . In the greater cycle of religious change, the Concordat of Bonaparte appears in another light. . . . It converted the Catholicism of France from a faith already far more independent than that of Fénelon and Bossuet into the Catholicism which in our day has outstripped the bigotry of Spain and Austria in welcoming the dogma of Papal infallibility."—C. A. Fyffe, *History of modern Europe*, v. 1, ch. 5.—"Bonaparte . . . perceived that the strength of the Bourbon cause lay not in the merits or talents of the royal family itself or its aristocratic supporters, but in its close identification with the authorities of the Roman Catholic Church. Through all the angry religious warfare of the Revolution the mass of the people had remained faithful to the priests and the priests were subject to the bishops. The bishops had refused to accept the various laws of the Revolution concerning them and had as a consequence been driven from the country. They were living mostly in England and in Germany, taking their cue from the Pope, who recognized Louis XVIII, brother of Louis XVI, as the legitimate ruler of France. Thus the religious dissension was fused with political opposition—royalists and bishops were in the same galley. Bonaparte determined to sever this connection, thus leaving the extreme royalists high and dry, a staff of officers without an army. No sooner had he returned from Marengo than he took measures to show the Catholics that they had nothing to fear from him, that they could enjoy their religion undisturbed if they did not use their liberty, under cover of religion, to plot against him and against the Revolutionary settlement. He was in all this not actuated by any religious sentiment himself, but by a purely political sentiment—he was himself, as he said, 'Mohammedan in Egypt, Catholic in France,' not because he considered that either was in the exclusive or authentic possession of the truth, but because he was a man of sense who saw the futility of trying to dragoon by force men who were religious into any other camp than the one to which they naturally belonged. Bonaparte also saw that religion was an instrument which he might much better have on his side than allow to be on the side of his enemies. He looked on religion as a force in politics, nothing else. Purely political, not spiritual, considerations determined his policy in now concluding with the Pope the famous treaty of Concordat, which reversed much of the work of the Revolutionary assemblies, and determined the relations of church and state in France for the whole nineteenth century. This important piece of legislation of the year 1802 lasted 103 years, being abrogated only under the present republic, in 1005. [See below: 1000-1004.] Bonaparte's thought was that by restoring the Catholic Church to something like its former primacy he would weaken the royalists. The people must have a religion, he said, but the religion must be in the hands of the government. Many of his adherents did not agree at all with him in this attitude. They thought it far wiser to keep church and state divorced as they had been by the latest legislation of the Revolution. Bonaparte discussed the matter with the famous philosopher Volney, whom he had just

appointed a senator, saying to him, 'France desires a religion.' Volney replied that France also desired the Bourbons. . . . He knew the influence that priests exercise over their flocks and he intended that they should exercise it in his behalf. He meant to control them as he controlled the army and the thousands of state officials. The control of religion ought to be vested in the ruler. 'It is impossible to govern without it,' he said. He therefore turned to the Pope and made the treaty. 'If the Pope had not existed,' he said, 'I should have had to create him for this occasion.' By the Concordat the Catholic religion was recognized by the Republic to be that 'of the great majority of the French people' and its free exercise was permitted. The Pope agreed to a reorganization involving a diminution in the number of bishoprics. He also recognized the sale of the church property effected by the Revolution. Henceforth the bishops were to be appointed by the First Consul but were to be actually invested by the Pope. The bishops in turn were to appoint the priests, with the consent of the government. The bishops must take the oath of fidelity to the head of the state. Both bishops and priests were to receive salaries from the state. They really became state officials. The Concordat gave great satisfaction to the mass of the population for two reasons—it gave them back the normal exercise of the religion in which they believed, and it confirmed their titles to the lands of the church which they had bought during the Revolution, titles which the church now recognized as legal. The church soon found that Bonaparte regarded it as merely another source of influence, an instrument of rule. The clergy now became his supporters and in large measure abandoned royalism. Moreover Bonaparte, by additional regulations to which he did not ask the Pope's assent, bound the clergy hand and foot to his own chariot. The Concordat was nevertheless a mistake. France had worked out a policy of entire separation of church and state which, had it been allowed to continue, would have brought the blessing of toleration into the habits of the country. But the Concordat cut this promising development short and by tying church and state together in a union which each shortly found disagreeable it left to the entire nineteenth century an irritating and a dangerous problem. Nor did it preserve, for long, happy relations between Napoleon and the Pope. Not many years later a quarrel arose between them which grew and grew until the Pope excommunicated Napoleon and Napoleon seized the Pope and kept him prisoner. Napoleon himself came to consider the Concordat as the worst blunder in his career."—C. D. Hazen, *French Revolution and Napoleon*, pp. 270-283.—See also CONCORDAT: 1515-1801; 1801-1871; EUROPE: Modern: Diffusion of French revolutionary ideas.

1801-1809.—Character of Napoleon's rule.—Constitutional changes.—Consul for life.—Summary of great reform measures.—"The Napoleonic régime differed from every other form of government hitherto seen in France. Napoleon's rule was in no sense a continuation of that of Louis XVI, nor of that of the Constituent Assembly. . . . Though he employed Jacobins and perpetuated the spirit of Jacobinism, he used every effort to rally round him the old noblesse, whose

hostility to Jacobinism never slept. His principal aim was to found a vast centralized system, and this object he carried out thoroughly. . . . On the return of Bonaparte from Egypt in 1799 it was plain to every Frenchman that a strong government alone could cope with the existing chaos within France and remedy the failure of the army in Italy. It was not the time to attempt to organize a constitutional régime or to carry out the ideas of 1789. . . . His first attempts at organization were effected during the Consulate—that period preliminary to the empire which is included between the years 1799 and 1805."—A. Hassal, *French people*, pp. 231-232.—"Confusion, ignorance, and corruption were the rule in administration and finance; hospitals had degenerated into nurseries of disease; public buildings were everywhere in decay; the roads were becoming impassable, and were infested by brigands; in certain districts a third of the population lived by begging and stealing; the law of the maximum, the requisitions, the war, the insecurity, the difficulties of communication, had ruined commerce; elementary education was becoming extinct, and where it existed was little better than a farce; everything in every department had been destroyed, and, in spite of innumerable positive decrees, nothing as yet had been recreated; every writing and record had been obliterated from the chart of France, and the only new inscription was a note of interrogation."—A. Hassall, *French people*, pp. 232-233.—"In the work of reconstruction Bonaparte had, he knew, the whole nation at his back. The revolution of Brumaire, he saw, had awakened the most lively hopes in the hearts of the French people. 'Never probably,' he said, 'has a monarch found his people more devoted to his wishes, and it would be unpardonable for a clever general not to take advantage of such a situation to establish a better government on a solid foundation. . . . The people, with the exception of the contemptible band of anarchists, are so weary and disgusted with the horrors and follies of the revolutionists that they are convinced that any change, no matter what, will bring some improvement.' The constitution drawn up with so much trouble by Sieyès was a masterpiece of complicated machinery. The famous abbé, whose fame as a constitution-monger is unequalled in modern times, had been till 1799 the political adviser of the Directory, though from his dislike of responsibility he had till then steadily refused to be a Director. . . . At the head of affairs were three consuls, one supreme, the others only advisers. Next came a Council of State, nominated by the first consul, and the business of this Council was to initiate laws. A Tribunate of one hundred chosen by the Senate was to discuss the laws, a Legislative body of three hundred chosen by the Senate was to accept or reject the laws, and a Senate of eighty nominated by the consuls for life had the power of vetoing any laws which affected the constitution. . . . The administrative arrangements were simpler. To the first consul was intrusted the power of appointing the ministers, while in each department a prefect, chosen by the first consul, presided over an elected council, and in each town a similarly chosen council was presided over by a mayor nominated by the prefect. The first consul was equally supreme in matters of justice. He appointed the judges for life, and the Senate nominated the members of the Cour de Cassation, which sat in Paris. Such a constitution was not likely to remain intact for long. . . . The constitution in the hands of the successful general could not escape mutilation, and two years before the fall of the Directory Bonaparte had indicated

clearly what his intentions were with regard to any obstacles which Sieyès or any other politician might set in the way of a successful general. . . . Having chosen his ministers, Bonaparte at once swept away all nominal checks on his power. Sieyès and his supporters had no doubt intended to set up a republic in Brumaire, but Bonaparte first got himself chosen consul for ten years, and in 1802 for life, and Sieyès found that by his constitution a strong monarchy had practically been created. The campaign of Marengo, in 1800, consolidated Bonaparte's position. After Hohenlinden peace with Austria was assured, and the Treaty of Lunéville was an immense triumph for Bonaparte, and enabled him, especially after the Treaty of Amiens was signed with England in 1802, to devote himself to the work of reconstruction. The following list of institutions created give at a glance an idea of the extent and character of the reforms carried out under the direction of the first consul: (1) The concordat, which restored the relations between the Gallican Church and the Papacy. (2) The establishment of the University of France. (3) The reorganization of the judicial system. (4) The Code Napoléon. (5) A system of local government. (6) The foundation of the Bank of France. (7) The establishment of the Legion of Honour. (8) The settlement of a system of taxation. . . . The concordat was an admirable piece of diplomacy, and though a blow at Jacobinism, was a valuable part of a general pacification. It attached the clergy to the government and weakened their connection with the Bourbons. The attacks made on the Church by the revolutionists of '89 were as unstatesmanlike as those made in later times by the third republic. Bonaparte was far too wise to ignore the religious sentiments of the nation, and though he had little sympathy with religious observances, he was fully alive to the influence wielded by the clergy among the peasantry. Joseph of Austria had well-nigh ruined the Hapsburg inheritance by his foolish alienation of the Church. Bonaparte made the clergy indeed dependent on the state, but by the concordat he ended the religious war which had continued for well-nigh ten years and had done more than any other single circumstance to destroy the work of the Revolution. [See also above: 1801-1804; CONCORDAT: 1515-1801.] When the Church had fallen through the attacks of the revolutionists the University of Paris, together with the twenty-one universities of France, also fell. By certain laws passed in May, 1806, and March, 1808, Bonaparte founded the modern University of France. 'In the establishment of a teaching body,' he said, 'my principal aim is to have a means of directing political and social opinions.' . . . He therefore formed the whole teaching profession into a corporation endowed by the state, and to the university was intrusted the control of all education, whether higher or secondary. By these means he enlisted education and the rising generation on his side, and provided France with a national system of education which lasted till our own day. [See also EDUCATION: Modern: 10th century: France.] Equally dependent on the central government was the whole judicial system. From 1802 he appointed the justices of the peace and exercised a close supervision over the appointment of the other judges, a similar supervision over the lists of jurors being exercised by the prefects. Above all civil and criminal courts was placed the Cour de Cassation, and the Senate was allowed, if necessary, to interfere with the working of the system. [See also COURTS: France: Continued lack of uniformity in the 18th century.] While justice was re-

organized Napoleon carried on the codification of the law which had already been begun in the early days of the Revolution. The Code Civil, though it crystallized the work of the Constituent Assembly and of the Committee of Public Safety, is known as the Code Napoleon, and was promulgated in 1809. Though not the result of his own conception, it bears upon it the impress of his own individual genius. [See also above: 1801-1804.] Other codes were the Code de Commerce, the Code Pénal [see CHILD WELFARE LEGISLATION: 1791-1872], and the Code d'Instruction Criminelle, all of which were issued through his influence. 'Thus,' writes M. Bodley, 'the whole centralized administration of France, which in its stability has survived every political crisis, was the creation of Napoleon and the keystone of his fabric. It was he who organized the existing administrative divisions of the departments, with the officials supervising them and the local assemblies attached to them.' The Code Napoléon is still in force, the relations of Church and State are still regulated by the concordat. The university was founded by him, the Bank of France owes its origin to him [see MONEY AND BANKING: Modern: 1793-1020], the Legion of Honour was his creation. His work of construction and reorganization forms the present framework of modern France, and most of this work dates from the Consulate. In place of chaos order was established, in place of a hopelessly mismanaged and corrupt system of taxation was substituted a regular equitable system which satisfied the peasant class. [See TAXATION: Taxation in Prussia, France, etc.; TARIFF: 1780-1826.] The price paid for this organization of the administration of religion, of justice, and of finance was the establishment of a despotism which, though infinitely more tolerable than the despotism of either the Convention or the Directory, tended as time went on to press heavily on all classes. The liberty of the press was not established, religion was not allowed independent action, education was only encouraged in so far as it conducted to the strengthening of the military system of France and to the support of the Napoleonic dynasty. Liberty in the true sense did not exist, but the principle of equality was favoured by Napoleon. Though the great emperor died a prisoner on Saint Helena, and though since his death France has seen the restoration of the Bourbons, the reign of Louis Philippe, and the second empire, followed by the establishment of the existing republic, the supremacy of the state, imposed by Napoleon, has never seriously been threatened, and the centralized system of the first empire remains most suitable to the French temperament."—A. Hassall, *French people*, pp. 233-230.

1802 (June-October).—Annexation of Piedmont, Parma, and the Isle of Elba.—"For the formal incorporation of Piedmont the First Consul waited until the definitive peace with England should be concluded. During the negotiations leading to that end his plenipotentiaries received the strictest injunctions to tolerate no interference of any kind on the part of Great Britain in Continental questions, and actually so absolute was Eng-

land's need of a time of respite however short that this sacrifice was made to it; the Treaty of Amiens contained no word in behalf of Victor Amadeus, King of Sardinia. As soon as all had been made safe in that quarter Napoleon proceeded without delay to take formal possession of the coveted territory. On September 4th a *Senatus consultum* dated at Paris declared Piedmont a French province with six departments, of which one was to bear the glorious name of Marengo. At the Court of Vienna the greatest consternation prevailed at this rapid extension of French authority in Italy. . . . To the south of Piedmont was the Ligurian Republic, territory of the old ducal city of Genoa. The Constitution here again was out of date, and on the 26th of June, 1802, a draft of a constitution prepared in Paris was delivered to the Genoese by the French ambassador Salicetti, the same person whose name is associated with Napoleon in his youth. This constitution was gratefully accepted by the government while announcing to the people of Genoa that 'it was meet that he who changed the face of all Europe should also give a new form to the Ligurian Republic.' Even before this time, in December, 1801, the little Republic of Lucca had been provided from the Tuileries with a constitution placing at the head a *Gonfalonier* who, like the Dutch President, was to hold office for a brief period lest he should acquire lasting importance, the real ruler being the political agent of France. No less dependent upon France was the Kingdom of Tuscany-Etruria, where Napoleon appointed his generals Clarke and Murat as guardians to the incapable young king, after whose death, in 1803, they continued in like office to the queen, while even the details of the military organization were determined upon in Paris. Finally, in August, 1802, when the British had withdrawn from it, the island of Elba, relinquished by Spain, was declared a French province. . . . Thus by midsummer of 1802 the whole of Upper Italy as far as Austrian Venetia had come to be directly or indirectly under the sceptre of France."—A. Fournier, *Napoleon the First*, pp. 254-255.—On October 11th, upon the death of Ferdinand de Bourbon, Duke of Parma, that duchy was also seized by Napoleon.

1802-1804.—Attitude of English public opinion towards Napoleonic policy.—War declared by Great Britain.—Detention of the English in France, Italy, Switzerland and the Netherlands.—Occupation of Hanover.—Napoleon's plan of campaign.—"The treaty with England signed at Amiens had, it is true, brought about a condition of affairs making it possible for arms to be cast aside for a moment, but it had given no promise of lasting peace. There were voices, as has before been observed, raised in the British Parliament emphatically denouncing the abandonment of Italy to Napoleon, thereby giving him the mastery over the Continent. . . . During the course of the year 1802, while France was engaged in the San Domingo enterprise, public opinion in England had taken a more and more pronounced attitude against France, and so marked had this feeling become that finally even the peace loving ministry of Addington was compelled to yield to the pressure. The stipulations of the Treaty of Amiens had not yet all been fulfilled; an important pledge yet remained in British keeping—the island of Malta, that highly-prized halting-place on the route to India. In view of the encroachments of France upon the Continent England had delayed the fulfilment of her compact to restore the island to the

Knights of St. John, and now rather regarded its possession as a desirable compensation for Napoleon's expansion. The situation was aggravated by the scathing attacks of English newspapers upon the ruler of France, and by the fact that when he demanded a cessation of this journalistic persecution, the London government waived responsibility, referring him to the legalized freedom of the press in England. . . . But Napoleon did not long remain undecided. His next step was to threaten. Should this foreign power be intimidated by threats he would derive this advantage, that his prestige in France and in Europe would be enhanced by just so much; but in case England really meant war, the colonial scheme must of course be given up, in which case, however, there opened up the alluring prospect—since England would not remain without allies—of a profitable war upon the Continent, a prospect, which, as has been seen, was continually kept in mind by the First Consul. A pretext was found in the autumn of 1802, when England made complaint of a violation of the neutrality of Switzerland through the entry into that country of the French army under Ney. Hereupon Napoleon dictated to his Minister of Foreign Affairs instructions for the guidance of the French ambassador, Otto, in London, and these reveal in the germ his entire future policy. In regard to Switzerland, the matter was to be considered closed. The establishment of British hirelings in the Alps would not be tolerated by him. In case war were threatened upon the further side of the Channel the question would arise of what sort it was to be. A mere naval warfare would be of little advantage to England on account of the paucity of spoils. It would, it is true, blockade the French ports, but it would at the same time bring about a counter blockade, since, upon the outbreak of hostilities, all the coast from Hanover to Taranto would be guarded by French troops. And what if the First Consul were to assemble the flat-boats of Flanders and Holland, thus providing means of transport for a hundred thousand men with which to keep England in a perpetual state of alarm over an always possible, and indeed even probable, invasion? If, on the other hand, the London Cabinet should conclude to rekindle war on the Continent, Napoleon would thereby simply be compelled to proceed to the conquest of all Europe. . . . Talleyrand and the other ministers as well as Napoleon's brothers were unreservedly in favour of the avoidance of open warfare. The Consul alone, irritated by the continued refusal to evacuate Malta and the defiant tone of the English press, allowed himself to be impelled to war. He now definitely gave up his colonial plans and himself sought to precipitate matters. He ordered copied in the *Moniteur* a report made by General Sebastiani, whom he had sent on a secret mission to Egypt. This report was to the effect that the British had failed as yet to evacuate Alexandria; also that, while existing hostilities continued there between the Turks and Mamelukes, 6,000 French soldiers would be sufficient to reconquer the country. If this report was published with a view to exasperating England, no doubt could remain as to its having accomplished its purpose. The prospect of seeing the route to India again imperilled was intolerable to the English, and any thought of renouncing the possession of Malta was from now on out of the question with them. But Napoleon carried matters yet further. In the annual report which he submitted to the legislative body in February, 1803, the subject discussed was the conflict between the two parties into which the English were divided, those in favour of peace as opposed

to those who were hostile to France. A half-million of soldiers, said he, must be kept in readiness by France against the possibility of victory to the second of these parties. England alone, however,—so the report went on,—was not sufficient to cope with France. British national pride was touched to the quick by this new insult. George III. promptly offered an ultimatum requiring, among other things, the indemnification of the King of Sardinia and the evacuation of Holland and Switzerland on the part of France. These terms were rejected. Toward the middle of May, 1803, the ambassadors of both countries were recalled [Lord Whitworth left Paris, May 12]. War was declared [made public May 16, and Order in Council directing reprisals, May 17]. Hostilities had meanwhile already begun. For weeks before that time England had given chase to all French merchantmen who had ventured out relying upon peace, and Napoleon made returns by putting under arrest all such Englishmen as were living in France [and before the month was out all the English in Italy, Holland, and Switzerland had also been made prisoners]. Soon after British squadrons were sent to blockade the French ports, whereupon Napoleon began to carry out to the letter the plan of campaign which he had mapped out in his instructions to Otto. It consisted, as has been seen, chiefly in three acts: the first being to blockade England in her turn by making inaccessible to her ships the coast of the Continent 'from Hanover to Taranto,' all of which should be guarded by French troops; the second step was to threaten an invasion by the gathering of an expeditionary army on the Channel; and third, in case the British power should be successful in kindling a war on the Continent in which her allies should be opposed to France, it was his purpose to make the Continent tributary to himself as far as the weapons of France could be made to carry. This programme was further accentuated by the order now issued by the Consul reviving the celebration of the birthday of the Maid of Orleans for the sake of nourishing the spirit of jingoism toward the ancient enemy of France. Before the month of May had expired a French army corps was marched into Hanover, which territory belonged to the King of England, and the troops of the Elector without much show of resistance capitulated. By means of this occupation the ships of the enemy were debarred from the mouths of the Weser and Elbe rivers, thus closing to British trade the most important avenues of communication with Northern Germany. The consequences soon became evident. . . . Soon after this, in June, a second army corps under command of Gouvion Saint-Cyr penetrated into the kingdom of Naples and, contrary to the terms of the treaty, occupied the ports of Taranto, Brindisi, and Otranto. The two extremes of the cordon being thus made secure, all that remained between was now closely and inseparably attached to the policy of France. First in turn came the Batavian Republic. It was compelled by treaty to provide sustenance for French troops to the number of 18,000 men and to hold in readiness for service a force of 16,000; in addition, five ships of the line and a hundred sloops carrying cannon were to be furnished for the naval war. In return Napoleon guaranteed to the republic the integrity of its territory, and promised to restore to it any colonies which might be lost during the course of the war and (circumstances permitting) with the addition of Ceylon (June 25th, 1803). Switzerland was the next to pledge herself in favour of France. An offensive and defensive alliance with her powerful neighbour

imposed upon her the obligation to raise an army of 16,000 men, which was to be increased to 28,000 in case France were attacked; that is to say, that a large proportion of the military force of the nation was put at the service of a totally foreign interest. Finally Spain and Portugal also were induced to enter the league. With Spain it had become a question of no slight significance."—A. Fournier, *Napoleon the First*, pp. 262, 264-268.

1804-1805.—Royalist plots and Bonaparte's use of them.—Abduction and execution of the Duc d'Enghien.—First Consul becomes emperor.—Coronation by the pope.—Acceptance of the crown of Italy.—The rupture with England furnished Bonaparte "with the occasion of throwing off the last disguise and openly restoring monarchy. It was a step which required all his audacity and cunning. He had crushed Jacobinism, but two great parties remained. There was first the more moderate republicanism, which might be called Girondism, and was widely spread among all classes and particularly in the army. Secondly, there was the old royalism, which after many years of helpless weakness had revived since Brumaire. These two parties, though hostile to each other, were forced into a sort of alliance by the new attitude of Bonaparte, who was hurrying France at once into a new revolution at home and into an abyss of war abroad. England, too, after the rupture, favoured the efforts of these parties. Royalism from England began to open communications with moderate republicanism in France. Pichegru acted for the former, and the great representative of the latter was Moreau, who had helped to make Brumaire in the tacit expectation probably of rising to the consulate in due course when Bonaparte's term should have expired, and was therefore hurt in his personal claims as well as in his republican principles. Bonaparte watched the movement through his ubiquitous police, and with characteristic strategy determined not merely to defeat it but to make it his stepping-stone to monarchy. He would ruin Moreau by fastening on him the stigma of royalism; he would persuade France to make him emperor in order to keep out the Bourbons. He achieved this with the peculiar mastery which he always showed in villainous intrigue. . . . Pichegru [who had returned secretly to France from England some time in January, 1804] brought with him wilder partisans, such as Georges [Cadoudal] the Chouan. No doubt Moreau would gladly have seen and gladly have helped an insurrection against Bonaparte. . . . But Bonaparte succeeded in associating him with royalist schemes and with schemes of assassination. Controlling the Senate, he was able to suppress the jury; controlling every avenue of publicity, he was able to suppress opinion; and the army, Moreau's fortress, was won through its hatred of royalism. In this way Bonaparte's last personal rival was removed. There remained the royalists, and Bonaparte hoped to seize their leader, the Comte d'Artois, who was expected, as the police knew, soon to join Pichegru and Georges at Paris. What Bonaparte would have done with him we may

# GENEALOGY OF THE BONAPARTE FAMILY.

\* First married to Josephine, widow of General Beauharnais.

judge from the course he took when the Comte did not come. On March 15, 1804, the Duc d'Enghien, grandson of the Prince de Condé, residing at Ettenheim in Baden, was seized at midnight by a party of dragoons, brought to Paris, where he arrived on the 20th, confined in the castle of Vincennes, brought before a military commission at two o'clock the next morning, asked whether he had not borne arms against the republic, which he acknowledged himself to have done, conducted to a staircase above the moat, and there shot and buried in the moat. . . . That the Duc d'Enghien was innocent of the conspiracy, was nothing to the purpose; the act was political, not judicial; accordingly he was not even charged with complicity. That the execution would strike horror into the cabinets, and perhaps bring about a new Coalition, belonged to a class of considerations which at this time Bonaparte systematically disregarded. This affair led immediately to the thought of giving heredity to Bonaparte's power. The thought seems to have commended itself irresistibly even to strong republicans and to those who were most shocked by the murder. To make Bonaparte's position more secure seemed the only way of averting a new Reign of Terror or new convulsions. He himself felt some embarrassment. Like Cromwell, he was afraid of the republicanism of the army, and heredity pure and simple brought him face to face with the question of divorcing Josephine. To propitiate the army, he chose from the titles suggested to him—consul, stadtholder, &c.—that of emperor, undoubtedly the most accurate, and having a sufficiently military sound. The other difficulty after much furious dissension between the two families of Bonaparte and Beauharnais, was evaded by giving Napoleon himself (but none of his successors) a power of adoption, and fixing the succession, in default of a direct heir, natural or adoptive, first in Joseph and his descendants, then in Louis and his descendants. Except abstaining from the regal title, no attempt was made to conceal the abolition of republicanism. . . . The change was made by the constituent power of the Senate, and the *Senatus-consulte* is dated May 18, 1804. The title of Emperor had an ulterior meaning. Adopted at the moment when Napoleon began to feel himself master both in Italy and Germany, it revived the memory of Charles the Great. To himself it was the more satisfactory on that account, and, strange to say, it gave satisfaction rather than offence to the Head of the Holy Roman Empire, Francis II. Since Joseph, the Habsburg Emperors had been tired of their title, which, being elective, was precarious. They were desirous of becoming hereditary emperors in Austria, and they now took this title (though without as yet giving up the other). Francis II. bartered his acknowledgment of Napoleon's new title against Napoleon's acknowledgment of his own. It required some impudence to condemn Moreau for royalism at the very moment that his rival was re-establishing monarchy. Yet his trial began on May 15th. The death of Pichegru, nominally by suicide, on April 6th, had already furnished the rising sultanism with its first dark mystery. Moreau was condemned to two years' imprisonment, but was allowed to retire to the United States."—J. R. Seeley, *Short History of Napoleon I.*, ch. 3, sect. 4.—C. C. Fauriel, *Last days of the Consulate*.—Chancellor Pasquier, in his Memoirs, narrates the circumstances of the seizure of the Duc d'Enghien at considerable length, and says: "This is what really occurred, according to what I have been told by those better situated to know. A council was held on the 9th of March. It is

almost certain that previous to this council, which was a kind of official affair, a more secret one had been held at the house of Joseph Bonaparte. At the first council, to which were convened only a few persons, all on a footing of family intimacy, it was discussed by order of the First Consul, what would be proper to do with a prince of the House of Bourbon, in case one should have him in one's power, and the decision reached was that if he was captured on French territory, one had the right to take his life, but not otherwise. At the council held on the 9th, and which was composed of the three Consuls, the Chief Justice, the Minister of Foreign Affairs, and M. Fouché, although the latter had not then resumed the post of Minister of Police, the two men who expressed contrary opinions were M. de Talleyrand and M. de Cambacérés. M. de Talleyrand declared that the prince should be sent to his death. M. Lebrun, the Third Consul, contented himself with saying that such an event would have a terrible echo throughout the world. M. de Cambacérés contended earnestly that it would be sufficient to hold the prince as hostage for the safety of the First Consul. The latter sided with M. de Talleyrand, whose counsels then prevailed. The discussion was a heated one, and when the meeting of the council was over, M. de Cambacérés thought it his duty to make a last attempt, so he followed Bonaparte into his study, and laid before him with perhaps more strength than might be expected from his character, the consequences of the deed he was about to perpetrate, and the universal horror it would excite. . . . He spoke in vain. In the privacy of his study, Bonaparte expressed himself even with greater violence than he had done at the council. He answered that the death of the duke would seem to the world but a just reprisal for what was being attempted against him personally; that it was necessary to teach the House of Bourbon that the blows struck with its sanction were liable to recoil on its own head; that this was the only way of compelling it to abstain from its dastardly schemes, and lastly, that matters had gone too far to retrace one's steps. M. de Talleyrand supplied this last argument."—Chancellor Pasquier, *Memoirs*, v. 1, pp. 190-191.—"While the eastern powers were . . . arming themselves against further encroachments on the part of France, Pope Pius VII. was making preparations in Rome for the journey to Paris for the coronation of Napoleon. This ceremony had seemed necessary to the Emperor in order to lend glory and splendour in the eyes of the world to his self-imposed dignity. Only under protest and after prolonged controversy in regard to the form of oath to be administered had the vicar of Christ at length consented to undertake the arduous winter journey in order to anoint him who had but shortly before been accounted guilty of a bloody crime. His decision was doubtless influenced by two contrary emotions, fear and hope: fear of bringing upon himself by refusal the wrath of the mighty potentate, and of being thus eventually despoiled of the States of the Church; and hope of obtaining new possessions, perhaps regaining the long-desired Legations, and having Europe see how the most powerful of her rulers, the adherent of the Koran in 1708, would bend his knee before the Bishop of Rome. Nor was the Pope alone in his decision, for the majority of the College of Cardinals, and with them the gifted Secretary of State, Consalvi, were in favour of the journey's being undertaken, and before the end of November, 1804, the Pope arrived in Paris. But here he at once became aware that every token of subordination, even to the most trifling details, was

being carefully avoided by Napoleon. In one matter only did he yield submission. Josephine, who had long been in dread of a separation, had revealed to the Pope that she had been united with her husband by civil marriage only and obtained from the Holy Father his promise that he would make the coronation conditional upon the previous consummation of a religious marriage. The Empress hoped thus to bind her husband irrevocably to herself, a hope later doomed to disappointment. For the time being, however, she was in so far successful that the church marriage was solemnized in secret by Fesch on the day before the coronation of the Imperial couple, which took place December 2d in the cathedral of Nôtre-Dame. It was observed that Napoleon kept the Pope awaiting his appearance, and that instead of allowing the pontiff to place the crown of golden laurel upon the imperial brow, as had been arranged, the candidate himself seized the diadem and set it upon his head before Pius could reach it. Not even in this formality would he yield pre-eminence to any one. The Pope recognized that his hopes had been but vain. The rôle which he had been called upon to play in Paris had been detrimental rather than advantageous to his prestige. This indeed he did accomplish: that the French bishops, who had sworn fidelity to the Civil Constitution and were therefore classed as heretics, were brought to return to the fold of the Roman primate; but of his other demands there was granted and assured only one, and that of very secondary importance: the re-establishment of the Gregorian Calendar with the understanding that, beginning with January 1st, 1806, the Revolutionary Calendar should be abandoned. The saints of the Church and their festal days again obtained recognition and honour in France. To this Napoleon had no objections. Was not his own precursor and ideal, Charlemagne, also of their number? And now that the papal benediction had consummated the establishment of the Empire the Italian question had also in its turn to come up for solution. The Italians were well content that the Republic should remain in the form of a kingdom under French dominion, but they protested against further payment of tribute and demanded assurance that the territory of the state should not suffer diminution and that French officials should be superseded by natives of the country. It had been Napoleon's original plan to turn over this vassal kingdom to one of his brothers, Joseph or Louis, but both refused the dignity, being unwilling to renounce their claims upon the throne of France; these two men, who but ten years before had been at a loss where to look for daily bread, now spurned a crown. Exasperated at this unlooked-for opposition to his wishes, the Emperor determined upon himself assuming the title of King of Italy and entrusting to a viceroy the government in his stead. This post was to be occupied by Eugène Beauharnais, who, together with Murat, was now raised to the rank of Prince of the Empire and Grand Dignitary of France. This project was disclosed to a body of Italian delegates who had come to Paris, whereupon they, on March 5th, 1805, officially and formally offered the crown to Napoleon. On the following day he announced to the Senate that he accepted the office, and on May 26th crowned himself in the cathedral of Milan with the iron crown of Lombardy as King of Italy. He is alleged to have pronounced at that time in a strikingly menacing tone the ancient formula: "God has bestowed it upon me; woe to him who shall lay hands upon it!"—A. Fournier, *Napoleon the First*, pp. 291-294.

1805 (January-April).—Third European coalition.—"In England Pitt returned to office in May, 1804, and this in itself was an evil omen for France. He enjoyed the confidence, not only of his own nation but of Europe, and he at once set to work to resume the threads of that coalition of which England had formerly directed the resources. Alexander I of Russia had begun to see through the designs of Napoleon; he found that he had been duped in the joint mediation in Germany, he resented the occupation of Hanover and he ordered his court to put on mourning for the duke of Enghien. Before long he broke off diplomatic relations with France (Sept. 1804), and a Russian war was now only a question of time. Austria was the power most closely affected by Napoleon's assumption of the imperial title. . . . While hastening to acknowledge Napoleon, Austria was busied in military preparations and began to resume its old connection with England. Prussia was the power on which France was accustomed to rely with implicit confidence. But the occupation of Hanover and the interference with the commerce of the Elbe had weakened Frederick William III's belief in the advantages of a neutral policy, and, though he could not make up his mind to definite action, he began to open negotiations with Russia in view of a rupture with France. The fluctuations of Prussian policy may be followed in the alternating influence of the two ministers of foreign affairs, Haugwitz and Hardenberg. Meanwhile Napoleon, ignorant or reckless of the growing hostility of the great powers, continued his aggressions at the expense of the lesser states. . . . These acts gave the final impulse to the hostile powers, and before Napoleon quitted Italy the Coalition had been formed. On the 11th of April, 1805, a final treaty was signed between Russia and England. The two powers pledged themselves to form an European league against France, to conclude no peace without mutual consent, to settle disputed points in a congress at the end of the war, and to form a federal tribunal for the maintenance of the system which should then be established. The immediate objects of the allies were the abolition of French rule in Italy, Holland, Switzerland, and Hanover; the restoration of Piedmont to the king of Sardinia; the protection of Naples; and the erection of a permanent barrier against France by the union of Holland and Belgium under the House of Orange. The coalition was at once joined by Gustavus IV. of Sweden, who inherited his father's devotion to the cause of legitimate monarchy, and who hoped to recover power in Pomerania. Austria, terrified for its Italian possessions by Bonaparte's evident intention to subdue the whole peninsula, was driven into the league. Prussia, in spite of the attraction of recovering honour and independence, refused to listen to the solicitations of England and Russia, and adhered to its feeble neutrality. Of the other German states Bavaria, Baden, and Wurtemberg were allies of France. As far as effective operations were concerned, the coalition consisted only of Austria and Russia. Sweden and Naples, which had joined secretly, could not make efforts on a great scale, and Eng-

land was as yet content with providing subsidies and the invaluable services of its fleet. It was arranged that one Austrian army under the archduke Charles should invade Lombardy, while Mack, with a second army and the aid of Russia, should occupy Bavaria and advance upon the Rhine."—R. Lodge, *History of modern Europe*, ch. 24, sect. 13-15.—See also AUSTRIA: 1798-1806.

1805 (March-December).—Napoleon's preparation for the invasion of England.—Nelson's long pursuit of the French fleets.—His victory and death at Trafalgar.—Napoleon's march to the Danube.—Capitulation of Mack at Ulm.—French in Vienna.—Battle of Austerlitz.—"The much debated question as to whether or not Bonaparte was victor in the diplomatic struggle, desired the rupture [with England] as it occurred and wanted war, is, in the light of the fullest information, apparently unanswerable. If he were a profound philosopher and constructive statesman disposed to abandon the struggle for mastery on the high seas and confine the expansion of France to the Continent, he was ready and his wishes were fulfilled; if, on the other hand, he intended to confront England by sea and her allies by land, he was unready, for he had no fighting navy and he had not expected war so soon. . . . Ten of his battle-ships were far away, the remaining thirty-three were just available and no more; there were orders out for building twenty-three new ones, and a visit to Normandy convinced him that all sixty-six could be manned by splendid crews from western France. . . . But the hard fact is that in May, 1803, the French naval power was negligible, while the French land power was in the highest state of efficiency. Pitt had his enormous fleets and his possible coalition in hand, Bonaparte his army and his incomparable military genius. Hostilities began by the seizure of many French merchantmen which were constructively in English harbors, though in many cases really at sea. . . . The French embargo on hostile ships antedated England's by three days, and simultaneously with its publication Clarke was instructed to drive English ships from the harbors of Tuscany. . . . Finally, in July the famous 'Continental System' was instituted by the decree which absolutely forbade the importation of all English wares into France or the sphere of her influence. In order to cut his enemy off from another quarter of the globe, to strengthen a maritime power hostile to England, and to secure new resources, Bonaparte had already extended the hand of friendship to the United States, having sold to them in April the immense territory then known by the name of Louisiana. The event was second in importance to no other in their history; for it gave them immediate control of the entire intercontinental river-system and later that of the Pacific coast, while indirectly it prepared the way for the conflict of 1812, which finally secured their commercial independence. [See also LOUISIANA: 1798-1803; U. S. A.: 1803: Louisiana Purchase.] . . . With sixty million francs in hand as security, Bonaparte raised as much more on credit, and the purchasing power of this hundred and twenty million francs was fully equal to that of four times the sum to-day. With it he refitted his little fleet, and purchased two hundred and fifty thousand muskets, a hundred thousand cavalry pistols, thirty thousand sabers, and a hundred batteries of field artillery, all arms of improved quality and pattern, the arms used at Austerlitz, and to which, as he told Latour-Maubourg, he owed that signal victory. The West Indies and Louisiana in one hemisphere, in the other the Cape of Good Hope,\* Egypt, and a portion of India, with St.

Helena and Malta as ports of call—of this he had dreamed; but the failure to secure San Domingo, and England's evident intention to keep Malta, combined to topple the whole cloud castle into ruins. The Continent must be his sphere of action. At once the states bordering on France were made to feel their position. Holland agreed to furnish five ships of the line, a hundred gunboats, eleven thousand men, and subsistence for a French army of eighteen thousand. For this France guaranteed her territorial integrity with the return of all her colonies, not even excepting Ceylon."—W. M. Sloane, *Life of Napoleon Bonaparte*, v. 2, pp. 286-289.—"Instead of the 25 ships and 28,000 men which the Court of Madrid had agreed in 1796 to hold in readiness for the service of France in the event of war, the Consul now demanded vast subsidies of money, 6,000,000 francs a month, enforcing his requisition by means of an army gathered at Bordeaux. But Bonaparte would accept of no gainsaying. . . . The expedient proved effectual, . . . and on October 10th, 1803, the treaty was concluded according to the wishes of Napoleon. Spain was thus ranged among the enemies of England and forced to undergo the experience of having war declared against her by the British Cabinet in the year 1804. Naturally Portugal could not remain unaffected by all that was thus taking place, and she was compelled to purchase neutrality by the payment to France of 1,000,000 francs a month. In February, 1804, Genoa also was put under obligation to furnish 6,000 sailors to her powerful neighbour for use in his naval warfare. This inheritance was exploited by the First Consul to its full value. . . . Nevertheless he made enormous outlays of money. Boulogne was the spot nearest to England which was available for the gathering and drill of a mighty force. Thither were summoned to form an Army of England the flower of the troops, a hundred and fifty thousand veterans and recruits, commanded by Soult, Ney, Davout, and Victor. For the first time Bonaparte could work his will in the construction of a fighting-machine. The result was the best machine so far constructed. Tactics were improved, the system of organization was reformed, equipment was simplified, discipline was strengthened, and enthusiasm was awakened to the highest pitch. Moreover, the soldiers were trained in the management of great flatboats, from which they were taught to disembark with precision and skill, both in stormy weather and in the face of opposition. Some were also instructed in the duties of the sailor in order that their services might be available if needed aboard men-of-war. . . . But the effect in England at the inception of the enterprise was electrical. Her standing army was already a hundred and thirty thousand strong, the militia numbered seventy thousand, and the reserve fifty thousand. In addition there was a body of volunteers which eventually reached the number of three hundred and eighty thousand in England and of over eighty thousand in Ireland. A system of signals was arranged between vessels of observation in the Channel and stations on the shore, beacons were ready on every hilltop, and the whole land was turned into a camp. The navy was not less strengthened: the number of men was raised from eighty to a hundred and twenty thousand, and a hundred vessels of the line, a hundred or more frigates, and several hundreds of smaller vessels, such as cruisers and gunboats, were gathered to protect the coasts. . . . Parliament authorized a loan of twelve millions sterling, which was promptly taken, and raised the taxes so as to double the revenue. The 'nation of

traders,' as the First Consul sneeringly called them, again stood at ease ready to face her hereditary foe, under a burden of expense which the people a year before had believed would crush them. . . . In April Nelson had finally been enticed to the West Indies, and Villeneuve, eluding him, had returned in May to European waters. Nelson, mistaking his enemy's destination, sailed in pursuit to Gibraltar; but one of his detached cruisers learned that the united French and Spanish squadrons were to meet at Ferrol, and by the middle of July the English admiralty was fully informed as to the whereabouts and plans of the French fleet. On the sixteenth of that month the Emperor issued orders for Villeneuve to unite the Spanish vessels with his own, and then to reinforce himself with the French squadrons of Rochefort and Brest, and appear in the Channel. On July twenty-second

ADMIRAL LORD COLLINGWOOD

a British fleet under Calder met Villeneuve off Cape Finisterre in a dense fog, but the latter was not checked in his passage to Vigo. By August second he found himself at the head of a Franco-Spanish fleet numbering no fewer than twenty-nine ships of the line, which were assembled in the harbors of Ferrol and Corunna. He complained, however, that he had 'bad masts, bad sails, bad rigging, bad officers, bad sailors.' Conceiving himself in all probability to be only the tool of a feint, he lost the little enthusiasm he had, and became sullen. Nelson had joined Admiral Cornwallis before Brest, and, leaving his best eight ships to strengthen both the guard and the blockading fleets, made for Portsmouth. Calder, too, had reinforced the blockaders, so that by August seventeenth there would be eighteen vessels before Ferrol; eighteen remained before Brest, while a third squadron, under Sterling, was cruising with five more, prepared to join either. Villeneuve was not ready for sea until the thirteenth. . . . After an effort to beat northward against a violent storm,

the French admiral received false news from a Danish merchant vessel that an English fleet of twenty-five sail was approaching. He . . . turned and made for Cadiz, especially as the Emperor's orders contained a clause authorizing him, in case of unforeseen casualties which materially altered the situation, . . . to anchor in the harbor of Cadiz after liberating the squadrons of Rochefort and Brest. It was no feigned anger with which Napoleon received this news. What a contrast between the efficiency of his land force and the utter incompetency of his shipbuilders, sailors, and naval officers!"—W. M. Sloane, *Life of Napoleon Bonaparte*, v. 2, pp. 290-292, 358-360.—"At a hint of disgrace the susceptible Frenchman made up his mind, at any risk, to fight. By this time Nelson had left England, and was off Cadiz with a powerful fleet; and he actually weakened his force by four sail-of-the-line, in order to lure his adversary out. On the 20th of October, 1805, the allied fleet was in the open sea; it had been declared at a council of war, that a lost battle was almost certain, so bad was the condition of many of the crews; but Villeneuve was bent on challenging Fate; and almost courted defeat, in his despair. . . . On the morning of the 21st, the allied fleet, 33 war ships, and a number of frigates, was off Cape Trafalgar, making for the Straits. . . . Nelson advanced slowly against his doomed enemy, with 27 ships and their attendant frigates; the famous signal floated from his mast, 'England expects every man to do his duty'; and, at about noon, Collingwood pierced Villeneuve's centre, nearly destroying the Santa Anna with a single broadside. Ere long Nelson had broken Villeneuve's line, with the Victory, causing frightful destruction; and as other British ships came up by degrees they relieved the leading ships from the pressure of their foes, and completed the ruin already begun. At about one, Nelson met his death wound, struck by a shot from the tops of the Redoubtable. . . . Pierced through and through, the shattered allied centre was soon a collection of captured wrecks. . . . Only 11 ships out of 33 escaped; and the burning Achille, like the Orient at the Nile, added to the grandeur and horrors of an appalling scene. Villeneuve, who had fought most honourably in the Bucentaure, was compelled to strike his flag before the death of Nelson. The van of the allies that had fled at Trafalgar, was soon afterwards captured by a British squadron. Though dearly bought by the death of Nelson, the victory may be compared to Lepanto; and it blotted France out as a great Power on the ocean. Napoleon . . . never tried afterwards to meet England at sea."—W. O'C. Morris, *Napoleon*, ch. 7.—"In the first days of September, 1805, Napoleon's great army was in full march across France and Germany, to attain the Danube. . . . The Allies . . . had projected four separate and ill-combined attacks; the first on Hanover and Holland by a Russian and British force; the second, on Lower Italy by a similar body; the third, by a great Austrian army on Upper Italy; and the fourth, by a United Austrian and Russian army, moving across Southern Germany to the Rhine. . . . By this time, the Austrian Mack had drawn close to the Inn, in order to compel Bavaria to join the Allies, and was even making his way to the Iller, but his army was far distant from that of the Russian chief, Kutusoff, and still further from that of Buxhöwden, the one in Galicia, the other in Poland. . . . Napoleon had seized this position of affairs, with the comprehensive knowledge of the theatre of war, and the skill of arranging armies upon it, in which he has no equals among modern captains. He opposed Masséna to

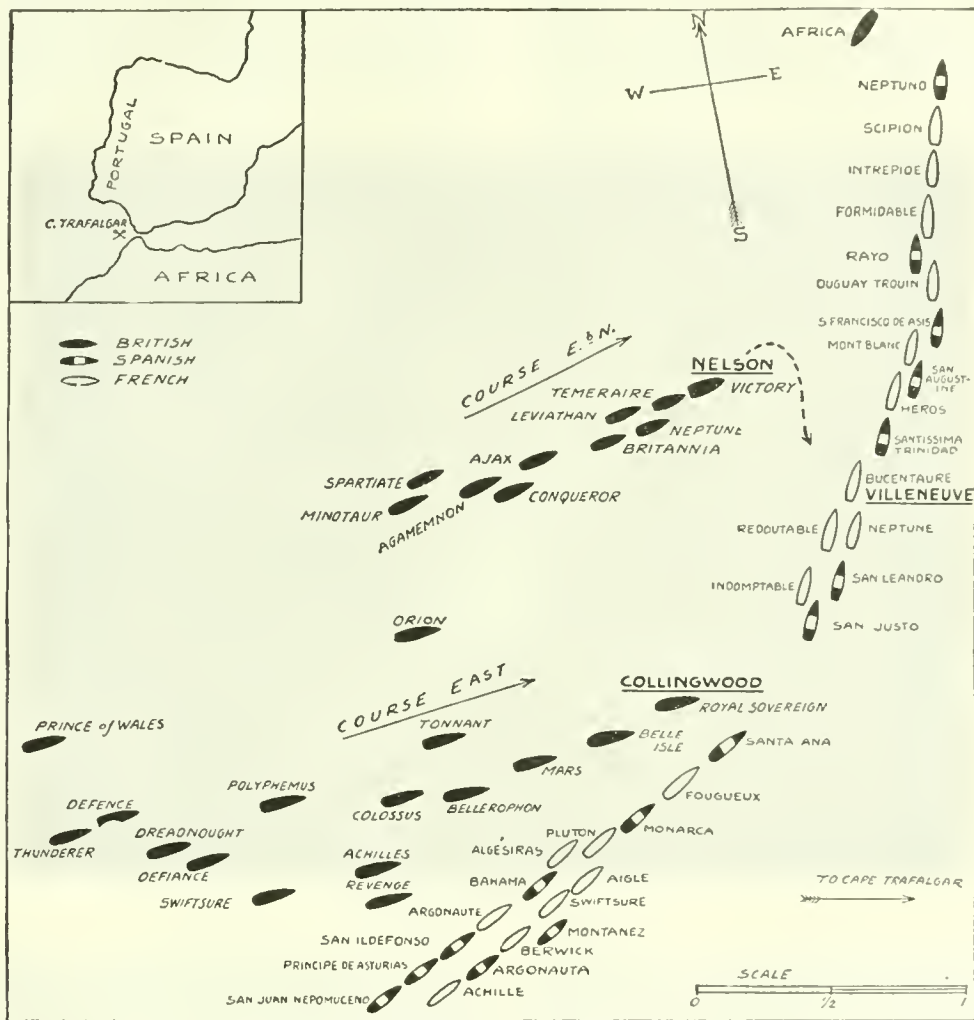

BATTLE OF TRAFALGAR  
(Painted by Turner)

the Archdukes, with a much weaker force, confident that his great lieutenant could hold them in check. He neglected the attacks from the North Sea, and the South; but he resolved to strike down Mack, in overwhelming strength, should he advance without his Russian supports. . . . The great mass of the Grand Army had reached the Main and Rhine by the last week of September. The left wing, joined by the Bavarian forces, and commanded by Bernadotte and Marmont, had marched

were in full march from the Rhine to the Main, across Würtemberg and the Franconian plains; and cavalry filled the approaches to the Black Forest, in order to deceive and perplex Mack. . . . The Danube ere long was reached and crossed, at Donauwörth, Ingolstadt, and other points; and Napoleon already stood on the rear of his enemy, interposing between him and Vienna, and cut him off from the Russians, even now distant. The net was quickly drawn round the ill-fated Mack. . . .

BATTLE OF TRAFALGAR, OCTOBER 21, 1805  
(After map reconstruction by Admiral Mark Kerr, R.N.)

from Hanover and Holland, and was around Wurtzburg; the centre, the corps of Soult, and Davoust, moved from the channel, was at Spire and Mannheim, and the right wing, formed of the corps of Ney and Lannes, with the Imperial Guard, and the horse of Murat, filled the region between Carlsruhe and Strasburg, the extreme right under Augereau, which had advanced from Brittany, being still behind but drawing towards Huningen. By this time Mack was upon the Iller, holding the fortress of Ulm on the upper Danube, and extending his forces thence to Memmingen. . . . By the first days of October the great French masses . . .

By the third week of October, the Grand Army had encompassed the Austrians on every side, and Napoleon held his quarry in his grasp. Mack . . . had not the heart to strike a desperate stroke, and to risk a battle; and he capitulated at Ulm on the 20th of October. Two divisions of his army had contrived to break out; but one was pursued and nearly destroyed by Murat, and the other was compelled by Augereau to lay down its arms, as it was on its way to the hills of the Tyrol. An army of 85,000 men had thus, so to speak, been well-nigh effaced; and not 20,000 had effected their escape. . . . His success, at this moment, had been

so wonderful, that what he called 'the loss of a few ships at sea,' seemed a trifling and passing rebuff of fortune. . . . He had discomfited the whole plan of the Allies; and the failure of the attack on the main scene of the theatre had caused all the secondary attacks to fail. . . . Napoleon, throwing out detachments to protect his flanks, had entered Vienna on the 14th of November. . . . The House of Hapsburg and its chief had fled. . . . Extraordinary as his success had been, the position of the Emperor had, in a few days, become grave. . . . Napoleon had not one hundred thousand men in hand—apart from the bodies that covered his flanks—to make head against his converging enemies. Always daring, however, he resolved to attack the Allies before they could receive aid from Prussia; and he marched from

of Frederick the Great, in the Seven Years' War, of turning his right wing, by an attack made, in the oblique order, in great force, and of cutting him off from his base at Vienna, and driving him, routed, into Bohemia. This grand project on paper, which involved a march across the front of the hostile army within reach of the greatest of masters of war, was hailed with exultation. . . . The Allies were soon in full march from Olmütz, and preparations were made for the decisive movement in the night of the 1st December, 1805. Napoleon had watched the reckless false step being made by his foes with unfeigned delight; 'that army is mine,' he proudly exclaimed. . . . The sun of Austerlitz rose on the 2nd, the light of victory often invoked by Napoleon. . . . The dawn of the winter's day revealed three large columns, suc-

(From painting by A. W. Devis)

Vienna towards the close of November, having taken careful precautions to guard his rear. . . . By this time the Allies were around Olmütz, the Archdukes were not many marches away, and a Prussian army was nearly ready to move. Had the Russians and Austrians fallen back from Olmütz and effected their junction with the Archdukes, they could, therefore, have opposed the French with a force more than two-fold in numbers. . . . But the folly and presumption which reigned among the young nobles surrounding the Czar—Alexander was now at the head of his army—brought on the Coalition deserved punishment, and pedantry had its part in an immense disaster. The force of Napoleon appeared small, his natural line of retreat was exposed, and a theorist in the Austrian camp persuaded the Czar and the Austrian Emperor, who was at the head of his troops at Olmütz, to consent to a magnificent plan of assailing Napoleon by the well-known method

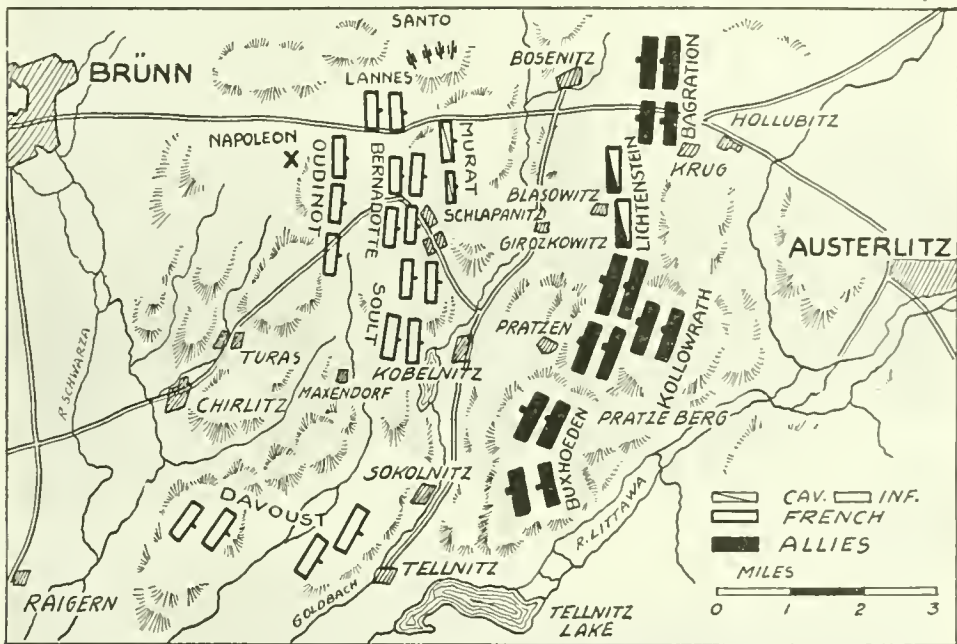

ceeded by a fourth at no great distance, toiling through a tract of marshes and frozen lakes, to outflank Napoleon's right on the Goldbach, the allied centre, on the tableland of Prätzen, immediately before the French front, having been dangerously weakened by this great turning movement. The assailants were opposed by a small force only, under Davoust, one of the best of the marshals. . . . Ere long Napoleon, who, like a beast of prey, had reserved his strength until it was time to spring, launched Soult in force against the Russian and Austrian centre, enfeebled by the detachment against the French right and exposed to the whole weight of Napoleon's attacks; and Prätzen was stormed after a fierce struggle, in which Bernadotte gave the required aid to Soult. The allied centre was thus rent asunder. Lannes meanwhile had defeated the allied right. . . . Napoleon now turned with terrible energy and in overwhelming strength against the four columns,

that had assailed his right, but had begun to retreat. His victorious centre was aided by his right, now set free; the Russians and Austrians were struck with panic, a horrible scene of destruction followed, the flying troops were slain or captured in thousands, and multitudes perished, engulfed in the lakes, the French artillery shattering their icy surface. The rout was decisive, complete, and appalling; about 80,000 of the Allies were engaged; they lost all their guns and nearly half their numbers, and the remains of their army were a worthless wreck. Napoleon had only 60,000 men in the fight. . . . The memorable campaign of 1805 is, perhaps, the grandest of Napoleon's exploits in war."—W. O'C. Morris, *Napoleon*, ch. 7.—See also AUSTRIA: 1798-1806.

"If he [Napoleon] had really hoped to throw an army on English soil under the momentary protection of his fleet, that project was ended: but

BATTLE OF AUSTERLITZ, DECEMBER 2, 1805

if at heart he despised that Revolutionary legacy, the 'freedom of the seas and the invasion of England,' if he always intended to destroy Great Britain, not by direct attack on land or sea, but by isolating her through the destruction of her continental allies, he might still be furious that his best efforts had resulted in so trivial a display, and that this fiasco by sea might be considered as a presage of similar results in the coming land campaign. History must accept this dilemma: either England or France was the author of the Russian and Austrian alliance which brought in those wars that drenched European soil with human blood. Either Pitt, by his subsidies and diplomacy, turned an army intended for the invasion of England against his continental allies, or else Napoleon taunted and exasperated them into a coalition for his own purposes. If the latter be true, then all the thousand indications that the French Emperor was never serious about the invasion are trustworthy."—W. M. Sloane, *Life of Napoleon Bonaparte*, v. 2, p. 360.

as imperial viceroy.—Napoleon's decrees concerning Italy.—His efforts toward making the pope a vassal king.—"Hardly had the signatures been appended to the treaty of peace at Pressburg when he [Napoleon] announced on the day following—and, characteristically enough, in a mere military order issued to the army—that the Bourbon dynasty in the kingdom of Naples had ceased to reign. The pretext for this step had, it must be acknowledged, been furnished by the Neapolitan court itself. Pressed by both English and Russians, Queen Caroline had determined upon risking all to gain all and, setting aside the promise made to France in August to remain neutral, opened the port of her capital to Russian and British troops. This had taken place in the midst of the war, and hence Napoleon's course in sending Masséna with a large body of troops across the Neapolitan frontier was capable of justification according to the laws of war. The outcome of it was that the effects of the victory of Austerlitz made themselves felt here as elsewhere, for the Czar, still crushed

by his defeat, recalled his troops from Naples to Corfu, and the English, following his example, also evacuated the port and sailed for Sicily, leaving to the mercy of the exasperated foe those whose fate had been confidently put in their keeping. No answer was received to the letter in which the queen made submission to the Emperor imploring his clemency, and in the middle of February, 1806, Joseph Bonaparte, who had put in an appearance with the army, took, as Imperial Viceroy, immediate possession of the capital whence the legitimate reigning family had shortly before taken flight. Only a few weeks later, before the end of March, and the Bourbon troops which offered resistance on the peninsula had been overcome and Sicily alone was left under dominion of Caroline and the English. On March 30, 1806, Napoleon

within the limits of the newly-conquered Venetian territory twelve titular duchies: Dalmatia, Istria, Friuli, Cadore, Belluno, Conegliano, Treviso, Feltre, Bassano, Vicenza, Padua, and Rovigo, and four similar ones in the kingdom of Naples: Gaeta, Otranto, Taranto, and Reggio, one in the principality of Lucca, and three in Parma and Piacenza. One fifteenth part of the revenue from these lands was to serve as endowment to the incumbent. Besides these Napoleon reserved to himself domains in Venetia amounting in value to 30,000,000 francs, and in Lucca amounting to 4,000,000, and in addition 1,200,000 francs annual tribute to be furnished by the kingdom of Italy and 1,000,000 by Naples. These titled estates and these funds were intended for use as rewards for conspicuous acts of service. The recipients of these favours—and who these

MURAT AT AUSTERLITZ

(From painting by H. Chartier)

apprised the Senate by letter of his determination to set his brother Joseph upon the throne as monarch of Naples and Sicily. This meant, as the letter itself implied, that the kingdom would henceforth be included within the sphere of Napoleonic power, since it expressly stated that the new king of the Two Sicilies should remain a Grand Dignitary of France. In view of this the law providing that the two crowns, the French and the Neapolitan, should never be united upon one head might as well never have existed. Together with this decree there were submitted to the Senate several others concerning Italy. One of these dealt with the question of incorporating the Venetian territory with the kingdom of Italy. Another had as its object the assignment of the principality of Guastalla to the Princess Borghese and her husband. Still others disclosed an entirely new and special purpose on the part of the head of the State. Napoleon, that is to say, proposed to found

were to be will shortly appear—acquired thereby, it is true, no prerogatives of any kind, but title and revenue were assured to the heirs in direct male line. This new feudal system had little more than the name in common with the ancient and obsolete one and should not be confused with it. Of especial significance, however, was the international element in it, for, according to it, citizens of one state could be transferred with their claims to another, French marshals and officials might acquire a legitimate share in state revenues of Italy, and but little later in those of Poland and Germany also—an additional proof that Napoleon's idea of an empire had long since been extended beyond the boundaries of France. Madame de Rémusat, speaking in her 'Memoires' of the new nobility, pauses to remark: 'Our country came before long to seem to Napoleon nothing more than a great province of the empire which he had resolved upon bringing into submission to himself.'

But in nothing did this imperial design disclose itself more clearly than in Napoleon's conduct toward the Pope. After the expulsion from Naples of the legitimate Royal House the entire Italian peninsula had become subject to the will of the conqueror with the exception of the States of the Church. It soon became evident, however, that herein also the rule was to be carried out, and all misgivings on that score received but too speedy confirmation in the bestowal of the Neapolitan principalities of Ponte Corvo and Benevento upon the French dignitaries Bernadotte and Talleyrand, without regard to the suzerainty of the Pope. It yet remained to be seen whether Pius would consent to play a rôle like that of Joseph Bonaparte as vassal king under Napoleon. Acceptance of this arrangement would mean possible continuation of the temporal power of the Pope, rejection, supposably its sacrifice to the design of the great potentate for a world empire. That the Pope could not be counted upon as a docile tool in the hands of the Corsican had already been shown in the recent war when Pius, demanding for himself unconditional neutrality, had raised a protest against the French, who, disregarding his attitude, occupied Ancona on their way toward Naples. Far from submitting quietly to such abuse, he had publicly affirmed that as the father of all believers, to observe political impartiality was his duty. In addition to these acts of contumacy Pius, adducing the decisions of the Council of Trent, had refused in June, 1805, Napoleon's request to dissolve the marriage of his youngest brother Jerome with Miss Patterson, an American. Such perversity on the part of the pontiff exasperated the Emperor, who considered himself, in contrast with his republican predecessors, to have made sufficient conciliatory advances. After his victory over the coalition he had the statement promulgated at Rome that he had occupied Ancona because the military forces of the Papal See would have been insufficient to hold the port against the English or the Turks,—i.e., against the Protestants and Infidels,—and because he, Napoleon, regarded himself as protector of the Church. Notwithstanding all this, Pius still refused to comprehend and, with unrefined suavity, requested the return of the Legations as compensation for his good offices at the time of the coronation. And this time Napoleon spoke in terms quite unmistakable. Writing February 13, 1806, he says: 'All Italy is to be subject to my law. I shall in no wise interfere with the independence of the Papal See, but upon condition that your Holiness shall show toward myself in things temporal the same respect which I observe toward your Holiness in things spiritual. . . . Your Holiness is sovereign of Rome, but I am its emperor.' And to Fesch, who was now his representative at the Papal court, he gave orders to demand the expulsion of all subjects of England, Russia, Sweden, and Sardinia, and the closing of the port of Rome to ships of these nations, adding that Joseph had instructions to uphold him by force of arms. The Roman pontiff was, moreover, to trouble himself no further with political affairs, since his protection had been assumed by Napoleon against the whole world. 'Say to him,' he continues, 'that my eyes are open and that I do not allow myself to be imposed upon except in so far as I desire; say to him that I am Charlemagne, the Sword of the Church, their Emperor, and that I propose to be treated as such.' Among those surrounding Joseph at this time was Miot de Melito, who says that Napoleon spoke freely in his correspondence with his brother in regard to his real intentions. He had thoughts of going to Rome in order to

have himself crowned as Emperor of the West, which would imply the entire relinquishment of temporal power on the part of the Pope, who would have to be satisfied with the chief spiritual authority alone and a few million francs income as compensation. This scheme had been confidentially revealed in Rome, but the cardinals had declared against it and were resolved rather to die than to live under such conditions. The strictest secrecy was maintained about the whole matter. Only to the second letter above mentioned did Pius reply to the effect that Napoleon was indeed Emperor of the French but in nowise Roman Emperor, and that any such close relation with himself as he demanded would deprive the Papal See of its authority in other countries. One concession, however, was made to the oppressor: Consalvi, the Pope's Secretary of State, having been indicated by Napoleon as the moving spirit in the resistance to him, was deposed from his office. Relations remained strained and eventually resulted in complete rupture."—A. Fournier, *Napoleon the First*, pp. 327-331.—See also PAPACY: 1808-1814.

1806 (January-October).—Napoleon's triumphant return to Paris.—Death of Pitt.—Peace negotiations with England.—King-making and prince-making by the Corsican Cæsar.—On December 27th, the day after the signing of the Treaty of Presburg, Napoleon left Vienna for Paris. "En route for Paris he remained a week at Munich to be present at the marriage of Eugene Beauharnais to the Princess Augusta, daughter of the King of Bavaria. Josephine joined him, and the whole time was passed in fêtes and rejoicings. On this occasion he proclaimed Eugene his adopted son, and, in default of issue of his own, his successor in the kingdom of Italy. Accompanied by Josephine, Napoleon re-entered Paris on the 26th of January, 1806, amidst the most enthusiastic acclamations. The national vanity was raised to the highest pitch by the glory and extent of territory he had acquired. The Senate at a solemn audience besought him to accept the title of 'the Great'; and public rejoicings lasting many days attested his popularity. An important political event in England opened new views of security and peace to the empire. William Pitt, the implacable enemy of the Revolution, had died on the 23rd of January, at the early age of 47; and the Government was entrusted to the hands of his great opponent, Charles James Fox. The disastrous results of the war of which Pitt had been the mainstay probably hastened his death. After the capitulation of Ulm he never rallied. The well-known friendship of Fox for Napoleon, added to his avowed principles, afforded the strongest hopes that England and France were at length destined to cement the peace of the world by entering into friendly relations. Aided by Talleyrand, who earnestly counselled peace, Napoleon made overtures to the English Government through Lord Yarmouth, who was among the détenus. He offered to yield the long-contested point of Malta—consenting to the continued possession of that island, the Cape of Good Hope, and other conquests in the East and West Indies by Great Britain, and proposing generally that the treaty should be conducted on the *uti possidetis* principle: that is, allowing each party to retain whatever it had acquired in the course of the war. Turkey acknowledged Napoleon as Emperor and

entered into amicable relations with the French nation; and what was still more important, Russia signed a treaty of peace in July, influenced by the pacific inclinations of the English Minister. Napoleon resolved to surround his throne with an order of nobles, and to place members of his family on the thrones of the conquered countries adjoining France in order that they might become parts of his system and co-operate in his plans. Two decrees of the 31st of March declared Joseph Bonaparte King of Naples, and Murat Grand Duke of Berg and Cleves. Louis Bonaparte was made King of Holland a few months afterwards, and Jerome King of Westphalia in the following year. The Princess Pauline received the principality of Guastalla, and Talleyrand, Bernadotte, and Berthier those of Benevento, Ponte-Corvo, and Neuchâtel. Fifteen dukedoms were created and bestowed on the most distinguished statesmen and generals of the empire, each with an income amounting to a fifteenth part of the revenue of the province attached to it. These became grand fiefs of the empire. Cambacérés and Lebrun were made Dukes of Parma and Placenza; Savary, Duke of Rovigo; Junot, of Abrantes; Lannes, of Montebello, &c. The manners of some of these Republican soldiers were ill adapted to courtly forms, and afforded amusement to the members of the ancient and legitimate order. . . . Napoleon's desire to conciliate and form alliances with the established dynasties and aristocracies of Europe kept pace with his daring encroachments on their hitherto exclusive dignity. Besides the marriage of Eugene Beauharnais to a Princess of Bavaria, an alliance was concluded between the hereditary Prince of Baden and Mademoiselle Stephanie Beauharnais, a niece of the Empress. The old French noblesse were also encouraged to appear at the Tuileries. During the Emperor's visit at Munich the Republican calendar was abolished and the usual mode of computing time restored in France. . . . The negotiations with England went on tardily, and the news of Fox's alarming state of health excited the gravest fears in the French Government. Lord Lauderdale arrived in Paris, on the part of England, in the month of August; but difficulties were continually started, and before anything was decided the death of Fox gave the finishing blow to all hope of peace. Lord Lauderdale demanded his passports and left Paris in October."—R. H. Horne, *History of Napoleon*, ch. 26.

1806-1810.—Commercial warfare with England.—British orders in council and Napoleon's Berlin and Milan decrees.—"Continental system."—"As the war advanced, after the Peace of Amiens, the neutrals became bolder and more aggressive. American ships were constantly arriving at Dutch and French ports with sugar, coffee, and other productions of the French and Spanish West Indies. And East India goods were imported by them into Spain, Holland, and France. . . . By the rivers and canals of Germany and Flanders goods were floated into the warehouses of the enemy [France], or circulated for the supply of his customers in neutral countries. . . . It was a general

complaint, therefore, that the enemy carried on colonial commerce under the neutral flag, cheaply as well as safely; that he was enabled not only to elude British hostilities, but to rival British merchants and planters in the European markets; that by the same means the hostile treasuries were filled with a copious stream of revenue; and that by this licentious use of the neutral flag, the enemy was enabled to employ his whole military marine for purposes of offensive war, without being obliged to maintain a squadron or a ship for the defence of his colonial ports. . . . Such complaints made against neutral states found a powerful exposition in a work entitled 'War in Disguise and the Frauds of the Neutral Flag,' supposed to have been written by Mr. James Stephen, the real author of the orders in Council. The British Government did not see its way at once to proceed in the direction of prohibiting to neutral ships the colonial trade, which they had enjoyed for a considerable time; but the first step was taken to paralyse the resources of the enemy, and to restrict the trade of neutrals, by the issue of an order in Council in May 1806, declaring that all the coasts, ports, and rivers from the Elbe to Brest should be considered blockaded, though the only portion of those coasts rigorously blockaded was that included between the Ostend and the mouth of the Seine, in the ports of which preparations were made for the invasion of England. The northern ports of Germany and Holland were left partly open, and the navigation of the Baltic altogether free. Napoleon, then in the zenith of his power, saw, in this order in Council, a fresh act of wantonness, and he met it by the issue of the Berlin decree of November 21, 1806. In that document, remarkable for its boldness and vigour, Napoleon charged England with having set at nought the dictates of international law, with having made prisoners of war of private individuals, and with having taken the crews out of merchant ships. He charged this country with having captured private property at sea, extended to commercial ports the restrictions of blockade applicable only to fortified places, declared as blockaded places which were not invested by naval forces, and abused the right of blockade in order to benefit her own trade at the expense of the commerce of Continental states. He asserted the right of combating the enemy with the same arms used against himself, especially when such enemy ignored all ideas of justice and every liberal sentiment which civilisation imposes. He announced his resolution to apply to England the same usages which she had established in her maritime legislation. He laid down the principles which France was resolved to act upon until England should recognise that the rights of war are the same on land as on sea. . . . And upon these premises the decree ordered, 1st, That the British islands should be declared in a state of blockade. 2nd, That all commerce and correspondence with the British islands should be prohibited; and that letters addressed to England or Englishmen, written in the English language, should be detained and taken. 3rd, That every British subject found in a country occupied by French troops, or by those of their allies, should be made a prisoner of war. 4th, That all merchandise and property belonging to British subjects should be deemed a good prize. 5th, That all commerce in English merchandise should be prohibited, and that all merchandise belonging to England or her colonies, and of British manufacture, should be deemed a good prize. And 6th, That no vessel coming direct from England or her colonies be allowed to enter any French port, or

any port subject to French authority; and that every vessel which, by means of a false declaration, should evade such regulations, should at once be captured. The British Government lost no time in retaliating against France for so bold a course; and, on January 7, 1807, an order in Council was issued, which, after reference to the orders issued by France, enjoined that no vessel should be allowed to trade from one enemy's port to another, or from one port to another of a French ally's coast shut against English vessels; and ordered the commanders of the ships of war and privateers to warn every neutral vessel coming from any such port, and destined to another such port, to discontinue her voyage, and that any vessel, after being so warned, which should be found proceeding to another such port should be captured and considered as lawful prize. This order in Council having reached Napoleon at Warsaw, he immediately ordered the confiscation of all English merchandise and colonial produce found in the Hanseatic Towns. . . . But Britain, in return, went a step further, and, by order in Council of November 11, 1807, declared all the ports and places of France, and those of her allies, and of all countries where the English flag was excluded, even though they were not at war with Britain, should be placed under the same restrictions for commerce and navigation as if they were blockaded, and consequently that ships destined to those ports should be liable to the visit of British cruisers at a British station, and there subjected to a tax to be imposed by the British Parliament. Napoleon was at Milan when this order in Council was issued, and forthwith, on December 17, the famous decree appeared, by which he imposed on neutrals just the contrary of what was prescribed to them by England, and further declared that every vessel, of whatever nation that submitted to the order in Council of November 11, should by that very act become denationalised, considered as British property, and condemned as a good prize. The decree placed the British islands in a state of blockade, and ordered that every ship, of whatever nation, and with whatever cargo, proceeding from English ports or English colonies to countries occupied by English troops, or going to England, should be a good prize. This England answered by the order in Council of April 26, 1800, which revoked the order of 1807 as regards America, but confirmed the blockade of all the ports of France and Holland, their colonies and dependencies. And then France, still further incensed against England, issued the tariff of Trianon, dated August 5, 1810, completed by the decree of St. Cloud of September 12, and of Fontainebleau of October 10, which went the length of ordering the seizure and burning of all British goods found in France, Germany, Holland, Italy, Spain, and in every place occupied by French troops. . . . The princes of the Rhenish Confederation hastened to execute it, some for the purpose of enriching themselves by the wicked deed, some out of hatred towards the English, and some to show their devotion towards their master. From Carlsruhe to Munich, from Cassel to Dresden and Hamburg, everywhere, bonfires were made of English goods. And so exacting were the French that when Frankfort exhibited the least hesitation in carrying out the decree, French troops were sent to execute the order. By means such as these [known as the Continental System of Napoleon] the commerce of the world was greatly deranged, if not destroyed altogether, and none suffered more from them than England herself."—L. Levi, *History of British commerce*, pt. 2, ch. 4 (with appended text of orders and decrees).—"The object

of the Orders in Council was . . . twofold: to embarrass France and Napoleon by the prohibition of direct import and export trade, of all external commerce, which for them could only be carried on by neutrals; and at the same time to force into the Continent all the British products or manufactures that it could take. . . . The whole system was then, and has since been, roundly abused as being in no sense a military measure, but merely a gigantic exhibition of commercial greed; but this simply begs the question. To win her fight Great Britain was obliged not only to weaken Napoleon, but to increase her own strength. The battle between the sea and the land was to be fought out on Commerce. England had no army wherewith to meet Napoleon; Napoleon had no navy to cope with that of his enemy. As in the case of an impregnable fortress, the only alternative for either of these contestants was to reduce the other by starvation. On the common frontier, the coast line, they met in a deadly strife in which no weapon was drawn. The imperial soldiers were turned into coast-guards-men to shut out Great Britain from her markets; the British ships became revenue cutters to prohibit the trade of France. The neutral carrier, pocketing his pride, offered his service to either for pay, and the other then regarded him as taking part in hostilities. The ministry, in the exigencies of debate, betrayed some lack of definite conviction as to their precise aim. Sometimes the Orders were justified as a military measure of retaliation; sometimes the need of supporting British commerce as essential to her life and to her naval strength was alleged; and their opponents in either case taunted them with inconsistency. Napoleon, with despotic simplicity, announced clearly his purpose of ruining England through her trade, and the ministry really needed no other arguments than his avowals. 'Salus civitatis suprema lex.' To call the measures of either not military, is as inaccurate as it would be to call the ancient practice of circumvallation unmilitary, because the only weapon used for it was the spade. . . . The Orders in Council received various modifications, due largely to the importance to Great Britain of the American market, which absorbed a great part of her manufactures; but these modifications, though sensibly\* lightening the burden upon neutrals and introducing some changes of form, in no sense departed from the spirit of the originals. The entire series was finally withdrawn in June, 1812, but too late to avert the war with the United States, which was declared in the same month. Napoleon never revoked his Berlin and Milan decrees, although by a trick he induced an over-eager President of the United States to believe that he had done so. . . . The true function of Great Britain in this long struggle can scarcely be recognized unless there be a clear appreciation of the fact that a really great national movement, like the French Revolution, or a really great military power under an incomparable general, like the French Empire under Napoleon, is not to be brought to terms by ordinary military successes, which simply destroy the organized force opposed. . . . If the course of aggression which Bonaparte had inherited from the Revolution was to continue, there were needed, not the resources of the Continent only, but of the world. There was needed also a diminution of ultimate resistance below the stored-up aggressive strength of France; otherwise, however procrastinated, the time must come when the latter should fail. On both these points Great Britain withstood Napoleon. She shut him off from the world, and by the same act prolonged her own powers of endur-

ance beyond his power of aggression. This in the retrospect of history was the function of Great Britain in the Revolutionary and Napoleonic period; and that the successive ministries of Pitt and his followers pursued the course best fitted, upon the whole, to discharge that function, is their justification to posterity."—A. T. Mahan, *Influence of sea power upon the French Revolution and empire*, v. 2, ch. 18-19.—See also CONTINENTAL SYSTEM OF NAPOLEON; TARIFF: 1789-1826; U. S. A.: 1804-1809.

1807.—Talleyrand.—Rupture with Napoleon.

TALLEYRAND

—Napoleon "was greatly aided by his foreign minister, Talleyrand, another of the remarkable figures of this remarkable epoch. Talleyrand was born in Paris in 1754, the scion of an ancient and powerful family. A childhood fall had so crippled him that the usual line of noble advancement, the army, was closed to him. His family, therefore, directed his studies for the church. At the outbreak of the Revolution he was Bishop of Autun, and was chosen the representative of the clergy of his diocese to the Estates General. The world of politics proved so much more attractive to him than his prospects in the church that two years later (1791) he resigned his Bishop's see and sought employment in diplomacy. After five years of vicissitude, at one time on special mission to London, at another (it is reported) selling buttons on the streets of New York to make a living, he was appointed by the influence of Barras—the same man who so advanced Napoleon's fortunes—minister of foreign affairs. There he remained for three years, gaining valuable experiences and following the prevailing custom of lining his pockets

with bribes. When he realized the depth of unpopularity into which the Directory had sunk, he resigned his post (1799) and associated himself, though in a minor capacity, with the conspiracy of Sieyès and Napoleon. He was not at once appointed minister of foreign affairs during the provisional consulate, for the taint of his reputation for official corruption and private immorality made him undesirable. In December, however, the new government, needing badly the benefit of his experience, reinstated him in his old office, and Napoleon as First Consul continued him there. For diplomacy under Napoleon, Talleyrand was well suited. He was unemotional and cynical, thoroughly familiar with diplomatic forms and procedure, unscrupulous, and endowed with a philosophic ability to detach himself from the event of the moment and discern the general trend of affairs. He had, withal, a genuine love of France and sought according to his understanding to advance her interests. The close alliance between him and Napoleon, formed in the winter of 1799-1800, continued until the ambitions of the conqueror passed the bounds of what Talleyrand believed to be expediency; then, 1807, Talleyrand left office and with calm cynicism watched the successive stages of the Emperor's downfall."—L. 1807 (July-December).—Apparent power and real weakness of Napoleon's empire.—"The dangers . . . that lay hid under the new arrangement of the map of Europe [by the Treaty of Tilsit], and in the results of French conquests, were as yet withdrawn from almost every eye; and the power of Napoleon was now at its height, though his empire was afterwards somewhat enlarged. . . . If England still stood in arms against it, she was without an avowed ally on the Continent; and, drawing to itself the great Power of the North, it appeared to threaten the civilized world with that universal and settled domination which had not been seen since the fall of Rome. The Sovereign of France from the Scheldt to the Pyrenees, and of Italy from the Alps to the Tiber. Napoleon held under his immediate sway the fairest and most favored part of the Continent; and yet this was only the seat and centre of that far-spreading and immense authority. One of his brothers, Louis, governed the Batavian Republic, converted into the kingdom of Holland; another, Joseph, wore the old Crown of Naples; and a third, Jerome, sat on the new throne of Westphalia; and he had reduced Spain to a simple dependency, while, with Austria humbled and Prussia crushed, he was supreme in Germany from the Rhine to the Vistula, through his confederate, subject, or allied States. This enormous Empire,

DISTRIBUTION OF THE EAGLES BY NAPOLEON

(After painting by J. L. David)

with its vassal appendages, rested on great and victorious armies in possession of every point of vantage from the Niemen to the Adige and the Garonne, and proved as yet to be irresistible; and as Germany, Holland, Poland, and Italy swelled the forces of France with large contingents, the whole fabric of conquest seemed firmly cemented. Nor was the Empire the mere creation of brute force and the spoil of the sword; its author endeavoured, in some measure, to consolidate it through better and more lasting influences. Napoleon, indeed, suppressed the ideas of 1789 everywhere, but he introduced his Code and large social reforms into most of the vassal or allied States; he completed the work of destroying Feudalism which the Revolution had daringly begun; and he left a permanent mark on the face of Europe, far beyond the limit of Republican France, in innumerable monuments of material splendour. . . . Nor did the Empire at this time appear more firmly established abroad than within the limits of the dominant State which had become mistress of Continental Europe. The prosperity of the greater part of France was immense; the finances, fed by the contributions of war, seemed overflowing and on the increase; and if sounds of discontent were occasionally heard, they were lost in the universal acclaim which greeted the author of the national greatness, and the restorer of social order and welfare. . . . In the splendour and success of the Imperial era, the animosities and divisions of the past, disappeared, and France seemed to form a united people. If, too, the cost of conquest was great, and exacted a tribute of French blood, the military power of the Empire shone with the brightest radiance of martial renown; Marengo, Austerlitz, Jena, and Friedland could in part console even thinned households. . . . The magnificent public works with which Napoleon adorned this part of his reign increased this sentiment of national grandeur; it was now that the Madeleine raised its front, and the Column, moulded from captured cannon; . . . and Paris, decked out with triumphal arches, with temples of glory, and with stately streets, put on the aspect of ancient Rome, gathering into her lap the gorgeous spoils of subjugated and dependent races. . . . Yet, notwithstanding its apparent strength, this structure of conquest and domination was essentially weak, and liable to decay. The work of the sword, and of new-made power, it was in opposition to the nature of things. . . . The material and even social benefits conferred by the Code, and reform of abuses, could not compensate vanquished but martial races for the misery and disgrace of subjection; and, apart from the commercial oppression [of the Continental System, which destroyed commerce in order to do injury to England], . . . the exasperating pressure of French officials, the exactions of the victorious French armies, and the severities of the conscription introduced among them, provoked discontent in the vassal States on which the yoke of the Empire weighed. . . . The prostration, too, of Austria and Prussia . . . had a direct tendency to make these powers forget their old discords in common suffering, and to bring to an end the internal divisions through which France had become supreme in Germany. . . . The triumphant policy of Tilsit contained the germs of a Coalition against France more formidable than she had yet experienced. At the same time, the real strength of the instrument by which Napoleon maintained his power was being gradually but surely impaired; the imperial armies were more and more filled with raw conscripts and ill-affected allies, as their size increased

with the extension of his rule; and the French element in them, on which alone reliance could be placed in possible defeat, was being dissipated, exhausted, and wasted. . . . Nor was the Empire, within France itself, free from elements of instability and decline. The finances, well administered as they were, were so burdened by the charges of war that they were only sustained by conquest; and, flourishing as their condition seemed, they had been often cruelly strained of late, and were unable to bear the shock of disaster. The seaports were beginning to suffer from the policy adopted to subdue England. . . . Meanwhile, the continual demands on the youth of the nation for never-ceasing wars were gradually telling on its military power; Napoleon, after Eylau, had had recourse to the ruinous expedient of taking beforehand the levies which the conscription raised; and though complaints were as yet rare, the anticipation of the resources of France, which filled the armies with feeble boys, unequal to the hardships of a rude campaign, had been noticed at home as well as abroad. Nor were the moral ills of this splendid despotism less certain than its bad material results. . . . The inevitable tendency of the Empire, even at the time of its highest glory, was to lessen manliness and self-reliance, to fetter and demoralize the human mind, and to weaken whatever public virtue and mental independence France possessed; and its authority had already begun to disclose some of the harsher features of Cæsarian despotism."—W. O'C. Morris, *French Revolution and first empire*, ch. 12.—"Notwithstanding so many brilliant and specious appearances, France did not possess either true prosperity or true greatness. She was not really prosperous; for not only was there no feeling of security, a necessary condition for the welfare of nations, but all the evils produced by so many years of war still weighed heavily on her. . . . She was not really great, for all her great men had either been banished or put to silence. She could still point with pride to her generals and soldiers, although the army, which, if brave as ever, had gradually sunk from the worship of the country and liberty to that of glory, and from the worship of glory to that of riches, was corrupt and degenerate; but where were her great citizens? Where were her great orators, her great politicians, her great philosophers, her great writers of every kind? Where, at least, were their descendants? All who had shown a spark of genius or pride had been sacrificed for the benefit of a single man. They had disappeared; some crushed under the wheels of his chariot, others forced to live obscurely in some unknown retreat, and, what was graver still, their race seemed extinct. . . . France was imprisoned, as it were, in an iron net, and the issues were closed to all the generous and ardent youth that had either intellectual or moral activity."—P. Lanfrey, *History of Napoleon*, v. 3, ch. 5.

1807-1808 (August - November).—Denmark, Portugal and Austria brought into the Napoleonic system.—Sweden accepts a truce.—Annexation of Tuscany.—Seizure of the papal marches.—Napoleon's "Treaty of Tilsit had secured Russia and Prussia; his alliances guaranteed Holland, Spain, Etruria (Tuscany), and northern Italy. There remained only Denmark, Portugal, Austria, and Sweden. Beginning immediately after the Treaty of Tilsit, he put pressure upon these

states until he brought them one by one into his system. . . . The Danish government's final decision was determined by Great Britain's action. The British government, learning of Napoleon's intentions toward Denmark, decided to forestall him. It therefore ordered a fleet and expeditionary force to Copenhagen to offer alliance, and in the event of refusal to cripple the Danish offensive power. This fleet arrived off Copenhagen August 3, 1807. As was expected, its offer of alliance was refused. . . . Five days later the Danes yielded, surrendering their fleet, and the British seized eighteen ships of the line, ten frigates, and forty-two smaller vessels. Denmark, of course, formally declared war upon Great Britain, and joined whole-heartedly Napoleon's alliance. [See also SWEDEN: 1807-1810.] . . . At the same time he was pressing Denmark, Napoleon was acting against Portugal, another gap in his continental blockade. . . . Like Denmark, Portugal, not allowed to maintain neutrality, was sure to lose with whichever belligerent she cast her fortunes. Napoleon expected her refusal and consequently signed a secret convention with Spain at Fontainebleau October 27, 1807, providing for military co-operation and the ultimate partition of Portugal. . . . The Portuguese government, recognizing the futility of resistance, prepared to flee. [See also PORTUGAL: 1807.] . . . Though Austria, with her single port of Trieste, could hardly be called one of the important trading countries, the moral advantage of her adhesion to the continental system was great. . . . By a convention signed at Fontainebleau October 11, 1807, all outstanding issues, especially those concerning boundaries in Illyria and Dalmatia, were settled, and Austria undertook to offer her mediation to the British government with a view to Anglo-French peace. When the British refused firmly such mediation, the Austrian ambassador withdrew from London. February 28, 1808, Austria accepted the principles of the continental blockade. . . . The pressure upon Sweden was exerted by Russia. February 10, 1808, Alexander demanded that Sweden withdraw from her alliance with Great Britain. Upon Sweden's refusal, Russian troops poured into Finland and in a quick campaign subjugated the country. June 17, 1808, Alexander endeavored to make his conquest agreeable to the Finns by promising them the enjoyment of their ancient rights and the convocation of their Diet. In November, 1808, Sweden accepted a truce, acknowledging the Russian occupation of Finland. Not until over a year later, however, after the abdication of the irreconcilable Swedish King Gustavus IV, did Sweden enter the continental system (January 6, 1810). [See also SWEDEN: 1807-1810.] Two other small possible gaps in the coast line Napoleon closed by outright annexation. The small Kingdom of Etruria (Tuscany, chief city Florence) had not been governed with the efficiency Napoleon expected. He therefore annexed it by decree May 30, 1808. To the south, the Pope had been sullenly hostile to Napoleon, even after the conclusion of the Concordat of 1801. Napoleon dealt with him arbitrarily. [In April, 1808, he detached the Northeastern papal provinces, known as the Marches, and added them to the Kingdom of Italy, although it was not until a year later that he annexed Rome and the adjoining provinces.]"—L. 1808 (September-October).—Imperial conference and Treaty of Erfurt.—Assemblage of kings.—"Napoleon's relations with the Court of Russia, at one time very formal, became far more amicable, according as Spanish affairs grew complicated. After the capitulation of Baylen they became positively affectionate. The Czar was too clear-sighted not to understand the meaning of this gradation. He quickly understood that the more difficulties Napoleon might create for himself in Spain, the more would he be forced to make concessions to Russia. . . . The Russian alliance, which at Tilsit had only been an arrangement to flatter Napoleon's ambition, had now become a necessity to him. Each side felt this; hence the two sovereigns were equally impatient to meet again; the one to strengthen an alliance so indispensable to the success of his plans, the other to derive from it all the promised advantages. It was settled, therefore, that the desired interview should take place at Erfurt towards the end of September, 1808. . . . The two Emperors met on the 27th of September, on the road between Weimar and Erfurt. They embraced each other with that air of perfect cordiality of which kings alone possess the secret, especially when their intention is rather to stifle than to embrace. They made their entry into the town on horseback together, amidst an immense concourse of people. Napoleon had wished by its magnificence to render the reception worthy of the illustrious guests who had agreed to meet at Erfurt. He had sent thither from the storehouses of the crown, bronzes, porcelain, the richest hangings, and the most sumptuous furniture. He desired that the Comédie-Française should heighten the brilliant effects of these fêtes by performing the chief masterpieces of our stage, from 'Cinna' down to 'La Mort de César,' before this royal audience. . . . All the natural adherents of Napoleon hastened to answer his appeal by flocking to Erfurt, for he did not lose sight of his principal object, and his desire was to appear before Europe surrounded by a court composed of kings. In this cortege were to be seen those of Bavaria, of Wurtemberg, of Saxony, of Westphalia, and Prince William of Prussia; and beside these stars of first magnitude twinkled the obscure Pleiades of the Rhenish Confederation. The reunion, almost exclusively German, was meant to prove to German idealists the vanity of their dreams. Were not all present who had any weight in Germany from their power, rank, or riches? Was it not even hinted that the Emperor of Austria had implored the favour, without being able to obtain it, of admission to the conferences of Erfurt? This report was most improbable. . . . The kings of intellect came in their turn to bow down before Cæsar. Goethe and Wieland were presented to Napoleon; they appeared at his court, and by their glory adorned his triumph. German patriotism was severely tried at Erfurt; but it may be said that of all its humiliations the one which the Germans most deeply resented was that of beholding their greatest literary genius decking himself out with Napoleon's favours [the decoration of the Legion of Honour, which Goethe ac-

cepted]. . . . The theatrical effect which Napoleon had in view in this solemn show at Erfurt having once been produced, his principal object was attained, for the political questions which remained for settlement with Alexander could not raise any serious difficulty. In view of the immediate and certain session of two such important provinces as those of Wallachia and Moldavia, the Czar, without much trouble, renounced that division of the Ottoman Empire with which he had been tantalised for more than a year. . . . He bound himself . . . by the Treaty of Erfurt to continue his co-operation with Napoleon in the war against England (Article 2), and, should it so befall, also against Austria (Article 10); but the affairs in Spain threw every attack upon England into the background. . . . The only very distinct engagement which the treaty imposed on Alexander was the recognition of 'the new order of things established by France in Spain.'—P. Lanfrey, *History of Napoleon*, v. 3, ch. 10.

1810 (February-December).—Annexations of territory to the empire: Holland, the Hansa towns, and the Valais in Switzerland.—Other changes in the map of Germany.—France reaches her greatest limits.—"The annexation of Holland (1810) [see NETHERLANDS: 1806-1810] was soon followed by that of the territory at the mouths of the Elbe, the Ems, and the Weser, including the Grand-Duchy of Oldenburg, and the three remaining free Imperial cities, Hamburg, Lübeck, and Bremen. With these acquisitions [Valais in Switzerland, Papal States and the Marches] in Italy and North Germany, France reached her greatest limits. Her Empire embraced 130 Departments, of which more than a quarter

(46) were alien to her in race and language. Her population was estimated at over 42,000,000 souls, about two-thirds of whom inhabited France proper. Napoleon was master of Europe from Hamburg to the frontiers of Spain. He was supreme in Italy, whose territory either was annexed to France, under his personal rule as King of Italy, or was held by vassals, as in Naples. In Central Europe he was Protector of the Confederation of the Rhine. He was Mediator of the Swiss Confederation. The Kings of Spain and Westphalia were his brothers. The King of Naples (Murat) was his brother-in-law. His marriage with the Archduchess Marie-Louise, in March, 1810, allied him with the Habsburgs, the first royal House in Europe."—C. S. Terry, *Short history of Europe*, p. 50.—"The English," said Napoleon, 'have torn asunder the public rights of Europe; a new order of things governs the universe. Fresh guarantees having become necessary to me, the annexation of the mouths of the Scheldt, of the Meuse, of the Rhine, of the Ems, of the Weser, and of the Elbe to the Empire appears to me to be the first and the most important. . . . The annexation of the Valais is the anticipated result of the immense works that I have been making for the past ten years in that part of the Alps.' And this was all. To justify such violence he did not condescend to allege any pretext—to urge forward opportunities that were too long in developing, or to make trickery subserve the use of force—he consulted nothing but his policy; in other words, his good pleasure. To take possession of a country, it was sufficient that the country suited him; he said so openly, as the simplest thing in the world, and thought proper to add that these new usurpations were but a beginning, the first, according to his own expression, of those which seemed to him still necessary. And it was Europe, discontented, humbled, driven wild by the barbarous follies of the continental system, that he thus defied, as though he wished at any cost to convince every one that no amicable arrangement or conciliation was possible; and that there was but one course for governments or men of spirit to adopt, that of fighting unto death."—P. Lanfrey, *History of Napoleon*, v. 4, ch. 2.

1810-1812.—Napoleon's divorce from Josephine and marriage to Marie-Louise of Austria.—Rupture with the tsar and preparations for war with Russia.—"Napoleon now revived the idea which he had often entertained before, of allying himself with one of the great ruling families. A compliant senate and a packed ecclesiastical council pronounced his separation from Josephine Beauharnais, who retired with a magnificent pension to Malmaison, where she died. As previous marriage proposals to the Russian court had not been cordially received, Napoleon now turned to Austria. The matter was speedily arranged with Metternich, and in March, 1810, the archduchess Maria Louisa arrived in France as the emperor's wife. The great importance of the marriage was that it broke the last links which bound Russia to France, and thus overthrew the alliance of Tilsit. Alexander had been exasperated by the addition of Western Galicia to the grand-duchy of Warsaw, which he regarded as a step

towards the restoration of Poland, and therefore as a breach of the engagement made at Tilsit. The annexation of Oldenburg, whose duke was a relative of the Czar, was a distinct personal insult. Alexander showed his irritation by formally deserting the continental system, which was more ruinous to Russia than to almost any other country, and by throwing his ports open to British commerce (Dec. 1810). . . . The chief grievance to Russia was the apparent intention of Napoleon to do something for the Poles. The increase of the grand-duchy of Warsaw by the treaty of Vienna was so annoying to Alexander that he began to meditate on the possibility of restoring Poland himself, and making it a dependent kingdom for the Czar, in the same way as Napoleon had treated Italy. He even went so far as to sound the Poles on the subject; but he found that they had not forgotten the three partitions of their country, and that their sympathies were rather with France than with Russia. At the same time Napoleon was convinced that until Russia was subdued his empire was unsafe, and all hopes of avenging himself upon England were at an end. All through the year 1811 it was known that war was inevitable, but neither power was in a hurry to take the initiative. Meanwhile the various powers that retained nominal independence had to make up their minds as to the policy they would pursue. For no country was the decision harder than for Prussia. Neutrality was out of the question, as the Prussian territories, lying between the two combatants, must be occupied by one or the other. The friends and former colleagues of Stein were unanimous for a Russian alliance and a desperate struggle for liberty. But Hardenberg, who had become chancellor in 1810, was too prudent to embark in a contest which at the time was hopeless. The Czar had not been so consistent in his policy as to be a very desirable ally; and, even with Russian assistance, it was certain that the Prussian frontiers could not be defended against the French, who had already garrisons in the chief fortresses. Hardenberg fully sympathised with the patriots, but he sacrificed enthusiasm to prudence, and offered the support of Prussia to France. The treaty was arranged on the 24th of February, 1812. Frederick William gave the French a free passage through his territories, and undertook to furnish 20,000 men for service in the field, and as many more for garrison duty. In return for this Napoleon guaranteed the security of the Prussian kingdom as it stood, and held out the prospect of additions to it. It was an unnatural and hollow alliance, and was understood to be so by the Czar. Scharnhorst, Gneisenau, and other friends of Stein resigned their posts, and many Prussian officers entered the service of the Czar. Austria, actuated by similar motives, adopted the same policy, but with less reluctance. After this example had been set by the two great powers, none of the lesser states of Germany dared to disobey the peremptory orders of Napoleon. But Turkey and Sweden, both of them old allies of France, were at this crisis in the opposition. . . . The Swedes were threatened with starvation by Napoleon's stern command to close their ports not only against English, but against all German vessels. Bernadotte, who had just been adopted as the heir of the childless Charles XIII, determined to throw in his lot with his new country, rather than with his old commander. He had also hopes of compensating Sweden for the loss of Finland by wresting Norway from the Danes, and this would never be agreed to by France. Accordingly Sweden prepared to support the cause of Alexan-

der."—R. Lodge, *History of modern Europe*, ch. 24, sect. 38, 41.—"Napoleon's Russian expedition should not be regarded as an isolated freak of insane pride. He himself regarded it as the unfortunate effect of a fatality, and he betrayed throughout an unwonted reluctance and perplexity. 'The war must take place,' he said, 'it lies in the nature of things.' That is, it arose naturally, like the other Napoleonic wars, out of the quarrel with England. Upon the Continental system he had staked everything. He had united all Europe in the crusade against England, and no state, least of all such a state as Russia, could withdraw from the system without practically joining England. Nevertheless, we may wonder that, if he felt obliged to make war on Russia, he should have chosen to wage it in the manner he did, by an overwhelming invasion. For an ordinary war his resources were greatly superior to those of Russia. A campaign on the Lithuanian frontier would no doubt have been unfavourable to Alexander, and might have forced him to concede the points at issue. Napoleon had already experienced in Spain the danger of rousing national spirit. It seems, however, that this lesson had been lost on him."—J. R. Seeley, *Short history of Napoleon*, ch. 5, sect. 3.—"Warnings and cautions were not . . . wanting to him. He had been at several different times informed of the desperate plans of Russia and her savage resolve to destroy all around him, provided he could be involved in the destruction of the Empire. He was cautioned, with even more earnestness, of the German conspiracies. Alquier transmitted to him from Stockholm a significant remark of Alexander's: 'If the Emperor Napoleon should experience a reverse, the whole of Germany will rise to oppose his retreat, or to prevent the arrival of his reinforcements.' His brother Jerome, who was still better situated for knowing what was going on in Germany, informed him, in the month of January, 1811, of the proposal that had been made to him to enter into a secret league against France, but the only thanks he received from Napoleon was reproach for having encouraged such overtures by his equivocal conduct. . . . Marshal Davout and General Rapp transmitted him identically the same information from Hamburg and Dantzic. But far from encouraging such confidential communications, Napoleon was irritated by them. . . . 'I do not know why Rapp meddles in what does not concern him [he wrote]. . . . I beg you will not place such rhapsodies under my eyes. My time is too precious to waste on such twaddle.' . . . In presence of such hallucination, caused by pride and infatuation, we seem to hear Macbeth in his delirium insulting the messengers who announced to him the approach of the enemy's armies."—P. Lanfrey, *History of Napoleon*, v. 4, ch. 6.—"That period ought to have been esteemed the happiest of Napoleon's life. What more could the wildest ambition desire? . . . All obeyed him. Nothing was wanting to make him happy! Nothing, if he could be happy who possessed not a love of justice. . . . The being never existed who possessed ampler means for promoting the happiness of mankind. Nothing was required but justice and prudence. The nation expected these from him, and granted him that unlimited confidence which he afterwards so cruelly abused. . . . Instead of considering with calmness and moderation how he might best employ his vast resources, he ruminated on projects beyond the power of man to execute; forgetting what innumerable victims must be sacrificed in the vain attempt. . . . He aspired at universal despotism, for no other reason than he-

cause a nation, isolated from the continent and profiting by its happy situation, had refused to submit to his intolerable yoke. . . . In the hope of conquering that invincible enemy, he vainly endeavoured to grasp the extremities of Europe. . . . Misled by his rash and hasty temper, he adopted a false line of politics, and converted in the north, as he had done before in the south, the most useful and powerful of his allies into a dangerous enemy."—E. Labaume, *Circumstantial narrative of the campaign in Russia*, pt. 1, bk. 1.

1812-1813 (December-March).—Napoleon's return from Russia.—Measures for creating a new army.—"Whilst Europe, agitated at once by hope, by fear, and by hatred, was inquiring what had become of Napoleon, whether he had perished or had been saved, he was crossing in a sledge—accompanied by the Duke of Vicenza, the Grand Marshal Duroc, Count Lobau, General Lefevre-Desnouettes, and the Mameluke Rustan—the vast plains of Lithuania, of Poland, and of Saxony, concealed by thick furs; for if his name had been imprudently uttered, or his countenance recognised, a tragical catastrophe would have instantly ensued. The man who had so greatly excited the admiration of nations, who was the object of their . . . superstition, would not at that moment have escaped their fury. In two places only did he allow himself to be known, Warsaw and Dresden. . . . That he might not occasion too great surprise, he caused himself to be preceded by an officer with a few lines for the 'Moniteur,' saying that on December 5 he had assembled his generals at Smorgoni, had delegated the command to King Murat, only so long as military operations were interrupted by the cold, that he had traversed Warsaw and Dresden, and that he was about to arrive in Paris to take in hand the affairs of the Empire. . . . Napoleon followed close on the steps of the officer who was to announce his arrival. On December 18, at half-past 11 P. M., he entered the Tuileries. . . . On the next morning, the 19th, he received the ministers and grandees of the court . . . with extreme hauteur, maintaining a tranquil but severe aspect, appearing to expect explanations instead of affording them himself, treating foreign affairs as of minor consequence, and those of a domestic nature as of principal import, demanding some light upon these last,—in short, questioning others in order to avoid being questioned himself. . . . On Sunday, the 20th of December, the second day after his arrival, Napoleon received the Senate, the Council of State, and the principal branches of the administration," which severally addressed to him the most fulsome flatteries and assurances of support. "After an infuriated populace basely outraging vanquished princes, nothing can be seen more melancholy than these great bodies prostrating themselves at the feet of a power, bestowing upon it a degree of

admiration which increases with its errors, speaking with ardour of their fidelity, already about to expire, and swearing to die in its cause when they are on the eve of hailing the accession of another. Happy are those countries whose established Constitutions spare them these humiliating spectacles!" As speedily as possible, Napoleon applied himself to the recreation of his lost army, by anticipating the conscription for 1814, and by making new calls upon the classes which had already furnished their contingents. All his measures were submissively sanctioned by the obsequious Senate; but many murmurs of discontent were heard among the people, and some movements of resistance needed to be put down. "However, when the enlightened classes of a country approve a measure, their support is extremely efficacious. In France, all those classes perceiving that it was necessary energetically to defend the country against a foreign enemy, though the Government had been still more in the wrong than they were, the levies were effected, and the high functionaries, sustained by a moral acquiescence which they had not always obtained, fulfilled their duty, though in heart full of sad and sinister forebodings."—A. 1814.—"The Marie-Louises."—The attitude of the people toward the empire and Napoleon.—"In spite of all deficiencies, of the 50,000 conscripts who passed through the depot of Courbevoine in the space of three months, only 1 per cent. deserted. What a testimony to the honour of the soldiers of 1814! . . . The nickname of 'Marie-Louises' was given to these poor little soldiers who had been hurriedly torn from their homes and formed into regiments, and a fortnight later were hurled into the thick of battle, and this name of 'Marie-Louise' they wrote large in their blood across the page of history. Those cuirassiers who could hardly sit their horses and whose furious charge crushed five hostile squadrons at Valjouan, they were Marie-Louises. Those cavalry were Marie-Louises of whom General Delort said, 'No one but a madman would expect me to charge with such cavalry,' and who burst through Montereau like a flood overthrowing the Austrian battalions massed in the streets. It was a Marie-Louise who stood in his place immovable under a heavy fire, indifferent alike to the noise of the bullets and the sight of men struck down beside him, and who answered Marshal Marmont, 'I would fire as much as any one else, only I don't know how to load my musket.' It was a Marie-Louise who took General Olsufjew prisoner at Champaubert, and would hand him over to none but to the Emperor himself. The conscripts of the 28th Regiment at the battle of Bar-sur-Aube, with no weapon but their bayonets, held the woods of Lévigny against four times their own number.

and they were Marie-Louises. The 14th Regiment of the Young Guard at the battle of Craonne remained for three hours on the crest of a plateau within close range of the enemy's guns while the grape shot mowed down 650 men out of 920: they also were Marie-Louises. The Marie-Louises went coatless in bitter frost; ill-clad and ill-fed they tramped bare-footed through the snow, they scarcely knew how to use their weapons, and day after day they fought stern and bloody battles. Yet through the whole campaign they uttered no word of complaint, and in the ranks there was no murmur against the Emperor. Truly, France has the right to feel proud of her Marie-Louises. Chateaubriand has said 'Such was my opinion of the genius of Napoleon, and of the courage of our soldiers, that I never dreamed it possible that a foreign invasion would be finally successful; I thought, however, that this invasion would make France realize so clearly the danger in which Napoleon's ambition had placed her that her people would themselves carry out their own redemption.' These opinions were wrong, and these hopes vain. If peace had been signed at Châtillon, no matter what the conditions were, France would have been freed from war, and her sons would have returned to their homes and to their work: from such a France Napoleon would have had nothing to fear. Again, if the enemy had been driven back across the Rhine, the pride and enthusiasm of the nation over their new victories would have relieved him of all anxieties. In spite of the incitements to rebellion and the alluring promises of the royalist placards, in spite of the disasters and the prevailing misery, the majority of Frenchmen certainly neither desired the fall of the empire nor loved the name of the Bourbons. . . . Even though a certain number of people disliked the despotic rule of the Emperor, they were not on that account anxious to place themselves under the thumb of a king; and though people wished to gain liberty, they also wished to retain equality. The mass of the nation disliked the continual wars and the high taxes imposed under the empire, but they heartily dreaded a revival of the old-fashioned titles, of the local tyranny of the squires, and of the power of the priests. The peasants did not care a rap that the Chamber was dumb, the Senate servile, or Rovigo arbitrary, or that some books were prohibited and some persons banished by a simple administrative order. In Paris the whole population was on the side of the Emperor. Three times during December and January Napoleon went on foot through the poorer quarters of the town; his calmness inspired the crowds with confidence, and he was received with cheers, while working-men pressed forward to offer him their services, and the only sign of disapproval was the silence of a few of the bourgeoisie. On January 25 the Emperor received the officers of the Parisian National Guard. These officers, who were not all by any means zealous supporters of the Government, were assembled to the number of nine hundred in the Hall of the Marshals. The Emperor announced that he was going to place himself at the head of the army, and with the help of God, and aided by the valour of his troops, he hoped to drive the enemy across the frontier; then, taking the Empress by one hand and the King of Rome by the other, he said, 'To the courage of the National Guard I entrust the Empress and the King of Rome—my wife and my son,' he added in a voice broken with emotion. At these words the enthusiasm of the audience could no longer be restrained. . . . On the following day the impression created by the Emperor's words

was found to be so deep and lasting that some people set to work to counteract it, and tried to make out that the imposing demonstration in the Hall of the Marshals was nothing more or less than a well-staged theatrical scene. The departure of the Emperor at four o'clock on the morning of January 25 to take command of the army restored the public confidence. Napoleon had been for so long invincible that people could not believe that he would fail to retrieve his fortunes now that France was invaded.'—H. Houssaye, *Napoleon and the campaign of 1814*, pp. 24-28.

1814 (January-March).—Allied invasion.—Capitulation of Soissons.—Its bearing upon the fate of France.—Napoleon's campaign of defense.—Cause lost.—Surrender of Paris.—'The battle of Leipzig was the overthrow of the French rule in Germany; there only remained, as evidence of what they had lost, 150,000 men, garrisons of the fortresses of the Vistula, the Oder, and the Elbe. Each success of the allies had been marked by the desertion of one of the peoples that had furnished its contingent to the Grand Army of 1812: after Prussia, Austria; at Leipzig the Saxons: the French had not been able to regain the Rhine except by passing over the bodies of the Bavarians at Hanau. Baden, Wurtemberg, Hesse, and Darmstadt declared their defection at nearly the same time; the sovereigns were still hesitating whether to separate themselves from Napoleon, when their people and regiments, worked upon by the German patriots, had already passed into the allied camp. Jerome Bonaparte had again quitted Cassel; Denmark found itself forced to adhere to the Coalition. Napoleon had retired to the left bank of the Rhine. Would Alexander cross this natural frontier of revolutionary France? 'Convinced,' says M. Bogdanovitch, 'by the experience of many years, that neither losses inflicted on Napoleon, nor treaties concluded with him, could check his insatiable ambition, Alexander would not stop at setting free the involuntary allies of France, and resolved to pursue the war till he had overthrown his enemy.' The allied sovereigns found themselves reunited at Frankfort, and an immediate march to Paris was discussed. Alexander, Stein, Blücher, Gneisenau, and all the Prussians were on the side of decisive action. The Emperor Francis and Metternich only desired Napoleon to be weakened, as his downfall would expose Austria to another danger, the preponderance of Russia on the Continent. Bernadotte insisted on Napoleon's dethronement, with the ridiculous design of appropriating the crown of France, traitor as he was to her cause. England would have preferred a solid and immediate peace to a war which would exhaust her in subsidies, and augment her already enormous debt. These divergencies, these hesitations, gave Napoleon time to strengthen his position. After Hanau, in the opinion of Ney, 'the allies might have counted their stages to Paris.' Napoleon had re-opened the negotiations. The relinquishment of Italy (when Murat on his side negotiated the preservation of his kingdom of Naples), of Holland, of Germany, and of Spain, and the confinement of France between her natural boundaries of the Rhine and the Alps; such were the 'Conditions of Frankfort.' Napoleon sent an answer to Metternich, 'that he consented to the opening of a congress at Mannheim: that the conclusion of a peace which would insure the independence of all the nations of the earth had always been the aim of his policy.' This reply seems evasive, but could the proposals of the allies have been serious? Encouraged by disloyal Frenchmen, they published the declaration of

Frankfort, by which they affirmed 'that they did not make war with France, but against the preponderance which Napoleon had long exercised beyond the limits of his empire.' Deceitful assurance, too obvious snare, which could only take in a nation weary of war, encrusted by twenty-two years of sterile victories, and at the end of its resources! During this time Alexander, with the deputies of the Helvetic Diet summoned at Frankfort, discussed the basis of a new Swiss Confederation. Holland was already raised by the partisans of the house of Orange, and entered by the Prussians. The campaign of France began."—A. Rambaud, *History of Russia*, v. 2, ch. 12.—"The campaign of 1814 in France, in which the courage of Napoleon's soldiers rivalled the genius of their leader, was divided into three distinct phases. The first phase lasted from January 25 to February 8, and was marked by the threatening advance of the allies. In vain had Napoleon conquered at Brienne, in vain had he held his own at La Rothière against three times his own numbers. His armies were in retreat, the situation appeared desperate, and the end of the war loomed near and inevitable. Napoleon felt himself powerless to stay the advance of the armies of Bohemia and Silesia, which had effected a junction with each other: he could no longer rely on his troops and could scarcely rely on himself. His one and only hope was that the enemy might commit a blunder. The second phase, which was marked by a succession of victories, lasted from February 9 to 26. The whole feature of the campaign was changed: the allies had committed the strategic fault for which Napoleon had been watching, and, instead of advancing on Paris by converging lines, had moved apart and separated their armies. The Emperor threw himself upon Blücher, worsted him in four successive fights, then turned on Schwarzenberg and drove him back in retreat on Chaumont and Langres. On February 26 the hosts of the coalition were beaten and separated, the army of Bohemia retreating towards the east, and the army of Silesia committed to a flank march in which it risked annihilation. Napoleon had won ten battles in twenty days and restored the balance of the campaign; he had seized the initiative and hoped for victory. The third phase of the campaign opened by the action at Bar-sur-Aube on February 27, and ended at the battle of Paris on March 30. In this phase the fortune of war turned against the Emperor, and his magnificent manoeuvres, combined with the heroic efforts of his soldiers, resulted only in Pyrrhic victories. There were, however, many alternations in the campaign, and many gleams of hope pierced the darkness. Three times the indomitable genius of Napoleon was on the point of restoring the fight, and three times the allies were on the brink of disaster, but fortune was on their side and saved them from defeat."—H. Houssaye, *Napoleon and the campaign of 1814*, pp. vii-viii.—"It was the firmness of Alexander which maintained the Coalition, it was the military energy of Blücher which saved it. Soon after his disasters he received reinforcements from the army of the North, and took the offensive against the marshals; then, hearing of the arrival of Napoleon at La Ferté Gaucher, he retreated in great haste, finding an unexpected refuge at Soissons, which had just been taken by the army of the North. At Craonne (March 7) and at Laon (10th to 12th March), with 100,000 men against 30,000, and with strong positions, he managed to repulse all the attacks of Napoleon."—A. Rambaud, *History of Russia*, v. 2, ch. 12.—"Soissons commanded the main road from Paris to Mons, and was consid-

ered an important strategical point. . . . Unfortunately the old fortifications of Soissons were in an absolutely useless condition. All the outer works had been destroyed, and the maintenance of the ramparts was the business of the town council, who only maintained them in so far as they helped in the collection of the octroi duties. . . . It was only in the middle of January 1814 that any steps were taken to put Soissons in a state of defence. A commission of generals was sent from Paris, and began the works most urgently needed. The breaches were repaired, banquettes and embrasures were constructed, the counterscarp was revetted, some houses were burnt close outside the ramparts, and two outworks were built in front of the Rheims gate. A garrison was allotted, consisting of 4,000 conscripts and National Guards with eight field-pieces. In spite of these works, and largely owing to the lack of discipline of the garrison, Winzingerode captured Soissons on February 14. General Rusca was killed, and a panic set in among the troops, who escaped along the Compiègne road. Winzingerode took possession of the town, but on February 16, on hearing of Blücher's defeats, he evacuated it and retired on Rheims, and Soissons was reoccupied by Moritz on February 19. Napoleon was surprised and annoyed that the Russians should have been able to capture Soissons so easily, and gave orders that the town should be put in a thorough state of defence. The Minister of War sent a Colonel Müller to Soissons to inspect the place. His report made it evident that Soissons had been captured owing to the neglect of some simple precautions, and that the place could be put in a state of defence in a few hours, and that the first necessity was to appoint an able and determined commandant. The Minister's choice fell upon Brigadier-General Moreau, who was not particularly able and who was absolutely lacking in determination. . . . Moreau did not carry out to the full the instructions of the Minister of War. . . . Like many others, Moreau thought that he had plenty of time available, even when Soissons was already surrounded with enemies. . . . At 9 a.m. on March 2 the outposts reported the simultaneous arrival of two hostile columns: Winzingerode's Russians were coming from Rheims and Bülow's Prussians from Laon. It has been mentioned that these generals had planned a concerted march upon Soissons, and they arrived under the walls of the town with admirable punctuality at the hour agreed upon. . . . The resistance offered by the garrison forced them [Winzingerode and Bülow] to give up the hope of capturing the place by a *coup de main*, as they had done on February 14; and, on the other hand, twelve hours' continued bombardment had not succeeded in making a breach. . . . The two generals thought that perhaps negotiations might give the town into their hands, and Bülow consequently sent a flag of truce. Captain Mertens appeared at the gate of Croÿ and demanded to be taken to the governor. . . . When a soldier begins to have doubts as to where his duty lies, he is in imminent danger of considering nothing but his own interests. Moreau . . . considered that an honourable capitulation which would save the town from the horror of pillage and preserve a fine body of troops for the Emperor, would suit his personal interest and would cast no reflection upon his honour as a soldier. Moreau asked for a delay of some hours in order to call together the council of defence; Captain Mertens raised no objection to this delay and returned to the Prussian lines. . . . Moreau assembled the council of defence, laid before them

Bülow's letter, and explained his view of the situation. . . . [This council of defence was still in session] when a fresh envoy was announced. This time it was Colonel Lowenstern, who had left the Russian cantonments. . . . Lowenstern had brought the following letter from Winzingerode: 'Before ordering the assault, and in hopes of saving Soissons from the horrors of pillage and massacre, I suggest that you should surrender the town to the united army of North Germany.' . . . Moreau laid this letter before the council of defence, which passed a resolution to the effect that 'In view of the weakness of the garrison, the lack of resources of the fortress, and the strength of the besiegers, resistance was obviously impossible, and, in consequence, the enemy's proposals ought to be accepted.' . . . The allies did not wait for the French to leave in order to make use of the advantages which the capitulation gave them. At midday Bülow began the construction of a second bridge under the guns of the town opposite the Rheims suburb. This bridge was completed during the night, and a third bridge was commenced on the following morning, the 4th; so the allies had in all, counting the bridge at Soissons, four bridges available in the neighbourhood of the fortress. . . . Although night was falling, the troops began at once to cross the Aisne by the Soissons bridge, and the passage continued during the whole of the following day and the succeeding night, by means of this bridge and the other three temporary ones. . . . On the morning of March 5 there remained on the left bank of the Aisne two regiments of infantry and six of Cossacks; the majority of the Cossacks crossed at Berry-au-Bac, and the remainder, with the infantry, managed, with great difficulty, to get across at Vailly. Meanwhile Napoleon and Marmont, who did not know of the surrender of Soissons, had continued their march in pursuit of Blücher's army. On March 4 the Emperor arrived at Fismes with the Old Guard, Ney's corps, and the cavalry of the Guard, thus blocking the road to Berry-au-Bac, while one brigade of cavalry advanced towards Rheims, from which it drove the enemy during the night. On the left, Marmont and Mortier crossed the Ourcq at 6.30 a.m., and their cavalry pursued the Russian rear-guard to within five miles of Soissons. When they reached Hartennes the marshals learnt of the capitulation, and Marmont stopped the pursuit and wrote to Berthier as follows: 'This regrettable event, which deprives us of the success we were on the point of achieving, is bound to alter the Emperor's plans.' . . . The Emperor was furious. On the following day he wrote to the Minister of War as follows: 'The enemy's situation was desperate, and we were in hopes that we should to-day reap the reward of several days' fatigue, but the treason or the folly of the commandant of Soissons has given this fortress to the enemy.' . . . The Emperor's anger was natural; he himself said that the capitulation of Soissons saved Blücher's army; Marmont was of opinion that the fate of France and the issue of the campaign turned upon Soissons holding out for thirty-six hours; and Thiers has stated that, next to the battle of Waterloo, the capitulation of Soissons is the most disastrous event of French history. These opinions are perhaps exaggerated, but it cannot be denied that the surrender of this town saved Blücher's army from disaster. This conclusion is drawn from French documents, and is also borne out by the majority of Russian and German papers.'—H. Houssaye, *Napoleon and the campaign of 1814*, pp. 117-118, 120, 122, 126-127, 129-131, 133-137.—'At Craonne, however, the Rus-

sian loss amounted to 5,000 men, the third of their effective force. The battle of Laon cost them 4,000 men. Meanwhile, De Saint Priest, a general in Alexander's service, had taken Rheims by assault, but was dislodged by Napoleon after a fierce struggle, where the émigré commander was badly wounded, and 4,000 of his men were killed (13th March). The Congress of Châtillon-sur-Seine was opened on the 28th of February. Russia was represented by Razoumovski and Nesselrode, Napoleon by Caulaincourt, Austria by Stadion and Metternich. The conditions proposed to Napoleon were the reduction of France to its frontiers of 1792, and the right of the allies to dispose, without reference to him, of the reconquered countries. Germany was to be a confederation of independent States, Italy to be divided into free States, Spain to be restored to Ferdinand, and Holland to the house of Orange. 'Leave France smaller than I found her? Never!' said Napoleon. Alexander and the Prussians would not hear of a peace which left Napoleon on the throne. Still, however, they negotiated. Austria and England were both agreed not to push him to extremities, and many times proposed to treat. After Napoleon's great success against Blücher, Castlereagh declared for peace. 'It would not be a peace,' cried the Emperor of Russia; 'it would be a truce which would not allow us to disarm one moment. I cannot come 400 leagues every day to your assistance. No peace, as long as Napoleon is on the throne.' Napoleon, in his turn, intoxicated by his success, enjoined Caulaincourt only to treat on the basis of Frankfort—natural frontiers. . . . As fortune returned to the allies, the congress was dissolved (19th of March). The Bourbon princes were already in France; Louis XVIII. was on the point of being proclaimed. Alexander, tired of seeing the armies of Bohemia and Silesia fly in turn before thirty or forty thousand French, caused the allies to adopt the fatal plan of a march on Paris, which was executed in eight days. Blücher and Schwartzberg united, with 200,000 men, were to bear down all opposition on their passage. The first act in the drama was the battle of Arcis-sur-Aube, where the Russians took six guns from Napoleon. The latter conceived a bold scheme, which perhaps might have saved him if Paris could have resisted, but which was his ruin. He threw himself on the rear of the allied army, abandoning to them the route to Paris, but reckoning on raising Eastern France, and cutting off their retreat to the Rhine. The allies, uneasy for one moment, were reassured by an intercepted letter of Napoleon's, and by the letters of the Parisian royalists, which revealed to them the weakness of the capital. 'Dare all!' writes Talleyrand to them. They, in their turn, deceived Napoleon, by causing him to be followed by a troop of cavalry, continued their march, defeated Marmont and Mortier, crushed the National Guards of Pauthod (battle of La Fère-Champenoise), and arrived in sight of Paris. Barclay de Tolly, forming the centre, first attacked the plateau of Romainville, defended by Marmont; on his left, the Prince of Wurtemberg threatened Vincennes; and on his right, Blücher deployed before Montmartre, which was defended by Mortier. The heights of Chaumont and those of Montmartre were taken; Marmont and Mortier with Monecy were thrown back on the ramparts. Marmont obtained an armistice from Colonel Orlof, to treat for the capitulation of Paris. King Joseph, the Empress Marie-Louise, and all the Imperial Government had already fled to the Loire. Paris was recommended 'to the generosity of the allied monarchs';

the army could retire on the road to Orleans. Such was the battle of Paris; it had cost, according to M. Bogdanovitch, 8,400 men to the allies, and 4,000 to the French (30th March). . . . The allied troops maintained a strict discipline, and were not quartered on the inhabitants. Alexander had not come as a friend of the Bourbons—the fiercest enemy of Napoleon was least bitter against the French; he intended leaving them the choice of their government. He had not favoured any of the intrigues of the émigrés, and had scornfully remarked to Jomini, 'What are the Bourbons to me?'—A. Rambaud, *History of Russia*, v. 2, ch. 12.—See also AUSTRIA: 1809-1814.

1814 (March-April).—Friendly reception of the allies in Paris.—Collapse of the empire.—Abdication of Napoleon.—Treaty of Fontainebleau.—"At an early hour in the morning [of the 31st of March], the Allied troops had taken possession of the barriers, and occupied the principal avenues leading to the city. Picquets of the Cossacks of the Guard were stationed at the corners of the principal streets. Vast multitudes thronged the Boulevards, in anxious and silent expectation of pending events. The royalists alone were active. The leaders, a small band indeed, had early assembled in the Place Louis XV., whence, with Bourbon banners displayed, they proceeded along the principal streets, haranguing the people and National Guard; but though not interfered with by the police,—for all seemed to feel that the Imperial government was at an end,—they were listened to with such perfect indifference, that many began to think their cause absolutely hopeless. It was between ten and eleven o'clock when the procession began to enter the city. Light horsemen of the Russian Guard opened the march; at the head of the main column rode the Emperor of Russia and the King of Prussia. . . . Then followed 35,000 men, cavalry, infantry, and artillery, the élite of the armies, in all the pride and circumstance of war and conquest. At first the multitude looked on in silent amazement; but the affability of the officers, above all, the condescending manner of the Czar, dispelled any fear they might still entertain; and shouts of 'Vive Alexander!' began to be heard; cries of 'Vive le Roi de Prusse!' were soon added. . . . The shouts of welcome increased at every step. The conquerors were now hailed as liberators; 'Vivent les Allies!' 'Vivent nos libérateurs!' sounded through the air, mingled at last with the long-forgotten cry of 'Vive le Roi!' 'Vivent les Bourbons!' . . . The Emperor Alexander had no sooner seen the troops file past on the Place Louis XV., than he repaired to the hôtel of Talleyrand, where in the evening, a council was assembled to deliberate on the important step next to be taken, and on the best mode of turning the glorious victories achieved to an honourable and beneficial account. . . . The points discussed were: 1. The possibility, on sufficient guarantees, of a peace with Napoleon; 2.

The plan of regency under Marie Louise; and, 3. The restoration of the Bourbons. The choice was not without difficulties. The first plan was easily dismissed; as the reception of the Allies proved clearly that the power of Napoleon was broken. The second seemed more likely to find favour, as promising to please the Emperor of Austria; but was finally rejected, as being, in fact, nothing more than a continuance of the Imperial reign under a different title. Against the restoration of the Bourbons, it was urged that the nation at large had evinced no desire for their recall, and seemed to have almost forgotten them. This, Talleyrand said, was owing entirely to the Congress of Chatillon, and the negotiations carried on with Napoleon; introducing at the same time, the Abbé de Pradt and Baron Louis, who fully confirmed the assertion. On being asked how he expected to obtain a declaration in favour of the exiled family, Talleyrand replied, that he was certain of the Senate; and that their vote would influence Paris, the example of which would be followed by all France. Alexander having on this assurance taken the opinion of the King of Prussia and Prince Schwarzenberg, signed a declaration to the effect that 'the Allies would treat no more with Napoleon Bonaparte, or with any member of his family.' A proclamation was issued at the same time, calling on the Conservative Senate to assemble and form a provisional government, for the purpose of drawing up a constitution suitable to the wishes of the French people. This the Allies promised to guarantee; as it was their wish, they said, to see France 'powerful, happy, and prosperous.' A printer was ready in attendance; and before dark, this memorable decree was seen placarded in all the streets of Paris. The inconstant populace had not even waited for such a signal, and had been already engaged in destroying the emblems of the Imperial government; an attempt had even been made to pull down the statue of Napoleon from the summit of the column of Austerlitz, in the Place Vendôme! The decisive impulse thus given, events moved rapidly forward. Caulaincourt's zealous efforts in favour of his master could effect nothing after the declaration already noticed. On the 2d, he took his departure for Fontainebleau; having, however, received the assurance that Napoleon would be suitably provided for. . . . The funds rose five per cent., and all other public securities in proportion, on the very day after the occupation of the capital; and wherever the Allied Sovereigns appeared in public, they were loudly cheered and hailed as liberators. From the first, officers of the Allied armies filled the public walks, theatres, and coffee-houses, and mixed with the people as welcome guests rather than as conquering invaders. The press, so long enslaved by Napoleon, took the most decided part against its oppressor; and from every quarter injurious pamphlets, epigrams, and satires, now poured upon the fallen ruler. Madame de Staël had characterised him as 'Robespierre on horseback'; De Pradt had more wittily termed him 'Jupiter Scapin'; and these sayings were not forgotten. But by far the most vivid sensation was produced by Chateaubriand's tract of 'Bonaparte and the Bourbons'; 30,000 copies of which are said to have been sold in two days. In proportion as the popular hatred of the Emperor evinced itself, grew the boldness of his adversaries. On the first of April, the Municipal Council of Paris met and already declared the throne vacant; on the next day, the Conservative Senate formed a Provisional Government, and issued a decree, declaring, first, 'That Napoleon Bonaparte had forfeited the throne and

the right of inheritance established in his family; 2d, That the people and army of France were disengaged and freed from the oath of fidelity which they had taken to him and his constitution.' . . . The members of the Legislative Assembly who happened to be in Paris, followed the example of the Senate. The Assembly had been dissolved in January, and could not meet constitutionally unless summoned by the Sovereign; this objection was, however, set aside, and the Assembly having met, ratified the act of deposition passed by the Senate. All the public functionaries, authorities and constituted bodies in and near Paris, hastened to send in their submission to the new powers; it was a general race in which honour was not always the prize of speed; for every address, every act of submission sent in to the new government, teemed with invectives against the deposed ruler. . . . It was in the night between the 2d and 3d, that Caulaincourt returned from his mission, and informed Napoleon of the events which had passed. . . . In what manner the Emperor received these fatal tidings we are not told. . . . At first it would seem that he entertained, or affected to entertain, thoughts of resorting to arms; for in the morning he reviewed his Guard, and addressed them in the following terms:—'Officers and soldiers of my Old Guard, the enemy has gained three marches on us, and outstripped us at Paris. Some factious men, emigrants whom I had pardoned, have surrounded the Emperor Alexander; they have mounted the white cockade, and would force us to do the same. In a few days I shall attack the enemy, and force them to quit the capital. I rely on you: am I right?' The troops readily replied with loud cheers to this address, calling out 'To Paris! to Paris!' but the Marshals and senior officers were by no means so zealous in the cause. . . . The Generals and Marshals . . . followed the Emperor to his apartments after the review; and having advised him to negotiate with the Allies, on the principle of a personal abdication, ended by informing him, that they would not accompany him if he persisted in the proposed attack on Paris. The scene which followed seems to have been of a very undignified description. Napoleon was almost convulsed with rage; he tore and trampled under foot the decree of the Senate; vowed vengeance against the whole body, who should yet, he said, be made to pay for their deed of 'felony'; but ended, nevertheless, by ignobly signing the abdication demanded of him. We say ignobly; for nothing can be more debasing in character, than to sink down from a very tempest of passion to tame submission. . . . The act of abdication was worded in the following terms: 'The Allied powers having proclaimed that the Emperor Napoleon is the sole obstacle to the re-establishment of peace in Europe, the Emperor Napoleon, faithful to his oath, declares that he is ready to descend from the throne, to quit France, and even to relinquish life, for the good of the country, which is inseparable from the rights of his son, from those of the regency in the person of the Empress, and from the maintenance of the laws of the empire. Done at our Palace of Fontainebleau, 4th April, 1814. Napoleon.' Caulaincourt, Marshals Ney and M'Donald, were appointed to carry this conditional abdication to Paris. . . . The commissioners on returning to Fontainebleau found the Emperor in his cabinet, impatiently awaiting the result of his mission. Marshal Ney was the first to speak; and in that abrupt, harsh and not very respectful tone which he had lately assumed towards his falling sovereign, told him at once, that 'France, the army and the cause of peace, demanded his unconditional abdication.' Caulaincourt added, that the full sovereignty of the Isle of Elba, with a

suitable establishment, had been offered by the Emperor Alexander; and Marshal M'Donald, who had so zealously defended the cause of his master, confirmed the statement,—declaring also that, 'in his opinion, the Imperial cause was completely lost, as they had all three'—the commissioners—'failed against a resolution irrevocably fixed.' 'What! exclaimed Napoleon, 'not only my own abdication, but that of Marie Louise, and of my son? This is rather too much at once.' And with these words he delayed the answer till next day, intending, he said, to consider the subject, and consult the army. . . . Words ran high between the fallen chieftain and his former 'subordinates; there were altercations, recriminations, and painful scenes, and it was only when Napoleon had signed the following unconditional abdication that perfect calm was restored:—'The Allied Sovereigns having declared that the Emperor Napoleon is the only obstacle to the re-establishment of a general peace, the Emperor Napoleon, faithful to his oath, declares, that he renounces, for himself and his heirs, the throne of France and Italy; and that there is no personal sacrifice, not even that of life itself, which he is not willing to make for the interest of France. Napoleon. Fontainebleau, 6th April 1814.' This deplorable document is written in so agitated and faltering a hand as to be almost illegible."—J. Mitchell, *Fall of Napoleon*, v. 2, bk. 3.—'On April 11, the formal act of abdication was delivered to the allies, and the treaty, generally known as the Treaty of Fontainebleau, was signed at Paris by Metternich for Austria, Nesselrode for Russia, and Hardenberg for Prussia, and by Ney, Macdonald and Caulaincourt for Napoleon, Napoleon himself ratifying it on the following day. It was not signed by any English representative, but it was ratified by England on April 27 so far as the stipulations with regard to Elba and the Italian duchies were concerned. There is no doubt that during the night between April 12 and 13 Napoleon endeavoured to poison himself; but the poison which he had kept with him for a long time had lost its efficacy. He remained after this a passive spectator of events. The Treaty of Fontainebleau is so important a document, and has been so little understood, that it is necessary to give a full account of it. It consists of eighteen articles. The first article declares that Napoleon Bonaparte renounces for himself, his successors and descendants, as well as for each of the members of his family, all rights of sovereignty and domination over the French Empire, the Kingdom of Italy, and all other countries. He and his consort are to preserve during their life the titles of Emperor and Empress, and the members of his family the titles with which they have been invested. He is to possess during his life the island of Elba in complete sovereignty, and is to receive an annual revenue of two millions of francs from the 'Grand Livre' of France, the Empress to have the reversion. The duchies of Parma, Piacenza and Guastalla are to be given in complete sovereignty to the Empress Marie Louise, and after her, to her son and to his descendants. The Bonaparte family is to receive an income of two millions and a half in land or revenue, of which they shall have the absolute property; they are also to keep whatever property they may possess. Josephine is to receive an income of a million, independently of her lands and other property. Eugène Beauharnais is to have an establishment outside France. The corvette which carries Bonaparte to the island of Elba is to remain his property, and he may take with him a guard of 400 men. The Frenchmen who go with him to Elba are to lose their

nationality if they do not return to France within three years. This treaty was, as we shall see, shamefully violated, but it should be mentioned that it was never formally recognized by Louis XVIII."—O. Browning, *Fall of Napoleon*, pp. 137-138.

1814 (April-June).—Departure of Napoleon for Elba.—Louis XVIII called to the throne.—Settlement of the constitution.—Evacuation of France by the allies.—Treaty of Paris.—Determination of the new boundaries of the kingdom.—“At length the fateful morning of April 20 dawned. Napoleon bitterly complained to the Austrian commissioner that his wife and child had not been allowed to join him, and that the guns and stores had been withdrawn from the island of Elba, thus leaving him without defence. He did not wish for a kingdom, and had therefore not asked for Corsica, but he wished for protection against the Barbary pirates. As he spoke again about his separation from his wife and child, tears rolled down his cheeks. He then said to Campbell, ‘I have been a bitter enemy of your nation. I avow it, but I am so no longer. I esteem you English more than all other nations. I am separated from the Empress in order to leave me in Elba without defence. If they act with trickery towards me I shall ask for an asylum in England. Do you think they will receive me there?’ Campbell replied that the sovereign and the nation would always keep their engagements with generosity and fidelity. ‘Yes,’ remarked Napoleon. ‘I feel sure that they will not refuse me.’ He then paced up and down the room, and eventually said, ‘Well, we will leave to-day.’ Then followed the famous ‘Adieux de Fontainebleau.’ The door of his study opened, the aide-de-camp called out ‘L’Empereur!’ and he passed with a salute and a smile to the head of the stairs and down into the court towards his carriage, which was drawn up between two ranks of the Old Guards. Calling for the officers, commissioned and non-commissioned, and for the foreign representatives, he addressed them in the well-known speech which need not here be produced in full. He began, ‘I bid you farewell. For twenty years I have found you always brave and faithful, marching in the path of glory. . . . As for you soldiers, be always faithful in the path of duty and honour. Serve your new sovereign with fidelity. The sweetest occupation of my life will be henceforth to make known to posterity all the great things you have done, and my only consolation will be to learn all that France will do for the glory of its name. You are all my children; I would embrace you all, but I will embrace you all in the person of your general.’ He then kissed General Petit on both cheeks. ‘I will embrace these eagles which have served us as guides in so many dangers and days of glory.’ He then gave a long loving embrace to the standard, and finally lifted up his left hand and said, ‘Adieu! Keep me in your remembrance.’ The carriage set off at a gallop. Of the men and officers, some wept, some were silent, and some cried, ‘Vive l’Empereur!’ The first night was spent at Briare in a large hotel, the second night at Nevers, and the third at Roanne. . . . Napoleon and his suite left Fréjus in carriages at sunset on April 28. The barge of the English man-of-war, the *Undaunted*, met them at the beach. He embarked with Captain Ussher and General Bertrand, and was received with a salute of twenty-one

guns. . . . On the afternoon of May 3 they arrived off Porto Ferrajo, the capital of Elba, but it was too calm for the frigate to enter the harbour. The next morning he rowed round the harbour, and when he returned to the ship determined on the flag of Elba, argent a bend gules, charged with three bees or, perhaps a reminiscence of his own family coat. He landed finally in his new dominion at two in the afternoon.”—O. Browning, *Fall of Napoleon*, pp. 136-142.—“On the day that Napoleon abdicated [April 11, 1814], the Senate, so-called guardian of the constitution, obsequious and servile to the Emperor in his days of fortune, turned to salute the rising sun, and in solemn session proclaimed Louis XVIII King of France. The allies, who had conquered Napoleon and banished him to a petty island in the Mediterranean, thought they were done with him for good and all. But from this complacent self-assurance they were destined to a rude awakening. . . . Louis XVIII, the new king, tried to adapt himself to the greatly altered circumstances of the country to which he now returned in the wake of foreign armies after an absence of twenty-two years. He saw that he could not be an absolute king as his ancestors had been, and he therefore granted a Charter to the French, giving them a legislature and guaranteeing certain rights which they had won and which he saw could not safely be withdrawn. His régime assured much larger liberty than France had ever experienced under Napoleon. Nevertheless certain attitudes of his and ways of speaking, and the actions of the royalists who surrounded him, and several unwise measures of government, soon rendered him unpopular and irritated and alarmed the people. He spoke of himself as King *by the grace of God*, thus denying the sovereignty of the people; he dated his first document, the Charter, from ‘the nineteenth year of my reign,’ as if there had never been a Republic and a Napoleonic Empire; he restored the white flag and banished the glorious tricolor which had been carried in triumph throughout Europe. What was much more serious, he offended thousands of Napoleon’s army officers by retiring or putting them on half-pay, many thus being reduced to destitution, and all feeling themselves dishonored. Moreover many former nobles who had early in the Revolution emigrated from France and then fought against her received honors and distinctions. Then, in addition, the Roman Catholic clergy and the nobles of the court talked loudly and unwisely about getting back their lands which had been confiscated and sold to the peasants, although both the Concordat of 1802 and the Charter of 1814 distinctly recognized and ratified these changes and promised that they should not be disturbed. The peasants were far and away the most numerous class in France, and they were thus early alienated from the Bourbons by these threats at their most vital interest, their property rights, which Napoleon had always stoutly maintained. Thus a few months after Napoleon’s abdication the evils of his reign were forgotten, the terrible cost in human life, the burdensome taxation, the tyranny of it all, and he was looked upon as a friend, as a hero to whom the soldiers had owed glory and repute and the peasants the secure possession of their farms. In this way a mental atmosphere hostile to Louis XVIII, and favorable to Napoleon, was created by a few months of Bourbon rule. Napoleon, penned up in his little island, took note of all this.”—C. D. Hazen, *French Revolution and Napoleon*, pp. 350-362.—When Napoleon was on his way to exile, the royalists were in conflict with

the national sovereignty party in the commission chosen by the Senate to draw up a constitution.—“The pretender’s agent, Abbé de Montesquieu, failed to win acceptance of the principle that royal right is superior to the nation’s will; and the formula adopted was as follows: ‘The French people freely call to the throne of France, Louis Stanislas Xavier de France, brother of the late king, and, after him, the other members of the house of Bourbon.’ Thus they did not recognize in the king whom they elected the title of Louis XVIII., and did not admit that between him and his brother, Louis XVI., there had been a rightful king, the poor child who died in the Temple and whom royalists called Louis XVII. The reign of Louis Stanislas Xavier was to date from the day when he swore allegiance to the Constitution: the executive power was vested in the king, who shared the legislative power with the Senate and a Chamber of Deputies. The Constitution sanctioned individual liberty, freedom of worship and the press, the sale of national goods, the public debt, and proclaimed oblivion of all acts committed since the beginning of the Revolution. The principles of 1789 were maintained, and in the sad state of France there was nothing better to be done than to rally round this Constitution, which was voted by the Senate, April 6, and accepted by the Legislature. . . . The Senate’s lack of popularity gave the royalist party hope that the act of April 6 might be retracted, and at this time that party won a faint success in a matter on which they laid great stress. Count d’Artois was on his way to Paris, and declared that he would not lay aside the white cockade on entering. . . . D’Artois . . . insisted on being recognized, unconditionally, as lieutenant-general of the kingdom, as he had entered Paris without making terms; but this time the Senate and temporary government did not yield. They intended that the prince should make a solemn promise, in his brother’s name, in regard to the Constitution. The czar interfered and explained to D’Artois that the allies were pledged to the Senate and the nation, and he was forced to submit and receive the lieutenant-generalcy of the kingdom from the Senate, ‘until Louis Stanislas Xavier of France should accept the Constitutional Charter.’ . . . The next question was to fix the terms of peace. . . . The enemy held nothing but Paris and the unfortified towns, French garrisons still occupying all the strongholds of France, old and new, and several important places far beyond the Rhine. . . . This was a powerful means of gaining, not the preservation of the natural frontiers, which could no longer be hoped for, but at least an important advance on the limits of the ancient monarchy. Unluckily a movement . . . broke out all over France, to claim the immediate evacuation of her soil by foreign armies;—an impatience which allowed no time for bargaining in the matter, and which precipitated an agreement (April 23) with the allied powers “to leave the French dominion as it had been on the 1st of January, 1792, in proportion as the places still occupied beyond those limits by French troops should be evacuated and restored to the allies. . . . This compact surrendered to the allies, without any compensation, 53 strongholds, 12,600 pieces of ordnance, arsenals and magazines filled with vast supplies.” The new king, calling himself Louis XVIII., arrived in Paris on the 3d of May, from England, where he had latterly resided. Negotiations for a definite treaty of peace were opened at once. “At Metternich’s suggestion, the allies decided to conclude their arrangements with France in Paris, and to

reserve general arrangements with Europe for a congress at Vienna [see VIENNA, CONGRESS OF]. . . . The royal council directed Talleyrand to try to win for the northern frontier those million people promised beyond the old limits; but Louis XVIII., by angering the czar, completed the sad work of April 23. . . . Accordingly, when France demanded a solid frontier, including the South of Belgium, . . . Lord Castlereagh absolutely refused, and was supported by Prussia, hostile to France, and by Austria, indifferent on that score, but disposed to follow England in everything. Russia did not side with France. . . . The allies were willing to grant, in place of the old dominion of the monarchy, on the Rhine side, the line of the Queich, which opened communication with Landau, and to the southeast the department of Vaucluse (once County Venaissin) given up by the Pope, besides Chambéry and a part of Savoy; finally, in the Jura region, Montbéliard. This made nearly 600,000 people. As for the colonies, England reluctantly returned Martinique, Guadeloupe, and the Isle of Bourbon, but refused to restore the Isle de France [for Mauritius, captured in 1810]. . . . The English declared that they would also keep Malta, taken from France, and the Cape of Good Hope, wrested from Holland. . . . Secret articles provided that Holland, under the rule of the House of Orange, should be increased by the countries ceded by France, between the sea, the French frontier of 1790, and the Meuse (Austrian Netherlands and Liège). The countries ceded by France on the left bank of the Rhine were to be divided . . . among the German states. Austria was to have the country bounded by the Po, Ticino, and Lake Maggiore, that is, the old Venetian states, Milan, and Mantua. The territory of the former Republic of Genoa was to be given to the King of Sardinia. Such was the end of the wars of the Empire. Republican France reached the goal of the old monarchy, the natural limits of ancient Gaul; the Empire lost them.”—H. Martin, *Popular history of France*, v. 2, ch. 17.—“The Peace of Paris [signed May 30] was followed by some subsidiary treaties. . . . By a Convention of June 3rd between Austria and Bavaria, Maximilian Joseph restored to Austria the Tyrol with the Vorarlberg, the principality of Salzburg, the district of the Inn and the Hausrück. During the visit of the Emperor Alexander and the King of Prussia to London in June, it was agreed that the Article of the Peace of Paris stipulating the agrandissement of Holland, should be carried out by the annexation of Belgium to that country, an arrangement which was accepted by the Sovereign of the Netherlands, July 21st 1814.”—T. H. Dyer, *History of modern Europe*, bk. 7, ch. 16.

1814-1815.—Ten months of Bourbon rule and its follies.—Return of Napoleon from Elba.—Flight of the king.—Hundred days.—Preparations for war.—“The peace of Paris did not endure a year. Ten months of Bourbon rule, vengeful, implacable, stupid; alike violent in act and in language; sufficed to bring France once more to the brink of revolution. Two acts alone are sufficient to demonstrate the folly of the royalists—the resumption of the white flag, and the changing of the numbers of the regiments. A prudent king would have adopted the tricolour when he agreed to a constitutional charter, and would have

refrained from wounding military sensibility by destroying the numbers of the regiments. But more stupid than these acts was the political policy pursued, a policy which aroused on all sides suspicions of what was worse than the grinding but gilded despotism of Napoleon—namely, that the Government favoured a forcible resumption of the confiscated lands, the restoration of tithes, and of the abolished exactions and imposts of feudalism. It has been surmised, and with much reason, that had Napoleon not reappeared a popular movement would have extorted from the king a really constitutional government. In that case France might have taken some real steps towards a free government, and the bases of liberty rather than of equality might have been laid. But while the Powers were wrangling at Vienna, and the Bourbons were irritating France, Napoleon was watching from Elba for the opportunity of resuming empire. It was not in the nature of the man to yield passively to anything, even to the inevitable. So long as a chance remained he looked out keenly for the propitious hour. He selected Elba as a residence because thence 'he could keep an eye upon France and upon the Bourbons.' It was his duty, he said, to guard the throne of France for his family and for his son. Thus, in making peace at Fontainebleau, he only bowed to a storm he could not then resist, and cherished in his mind the project of an imperial restoration. The hour for which he waited came at length. In February, 1815, he had arrived at the conclusion that with the aid of the army he could overthrow the Bourbons, whose government, he said, was good for priests, nobles, and countesses of the old time, but worth nothing to the living generation. The army, he knew, was still, and would be always, devoted to him. . . . He had weighed all the chances for and against the success of his enterprise, and he had arrived at the conclusion that he should succeed; for, 'Fortune had never deserted him on great occasions.' It has been said that his departure was precipitated by a report of the dissolution of the Congress of Vienna. . . . It is possible, indeed, that the rumour of an intention to confine him upon an island in the Atlantic may have exercised some influence over him; but the real reasons for the selection of the 26th of February were that he was tired of inactivity, and convinced that the favourable moment had arrived. Therefore, instructing Murat to second him by assuming a strong position in front of Ancona, he embarked his faithful Thousand, and set sail for France. On the 1st of March he landed on the shores of the Gulf of Juan, and on the 20th he entered the Tuileries. As he had predicted, the army rallied to the tricolour; the generals could neither restrain nor guide their soldiers; the Bourbon dukes and princes, and the brave Duchess of Angoulême—the 'only man of the family'—were utterly powerless before the universal military disaffection; and one after the other they were chased out of France. The army had restored Napoleon. Louis XVIII. drove out of Paris by the road to St. Denis on the 10th, a few hours before Napoleon, on the 20th, drove in by the Barrier of Italy; and on the 23rd, after a short stay at Lille, the King was safe in Ghent. 'The great question is,' wrote Lord Castlereagh to the Duke of Wellington three days afterwards, while yet in ignorance of the event, 'can the Bourbons get Frenchmen to fight for them against Frenchmen?' The result showed that they could not. In the then state of France the army was master of France. Louis and his ministers had done nothing to conciliate, and al-

most everything to irritate, the people; and even so early as November, 1814, Wellington did not see what means the King had of resisting the attack of a few hundred officers determined to risk everything. During the period occupied by Napoleon in passing from Elba to Paris, the conduct of the sovereigns and diplomatists assembled at Vienna offered a striking contrast to the weakness and inaptitude of the Bourbons. . . . That there was fear in Vienna is manifest, but the acts of the Allied Powers show that fear speedily gave place to resolution. For, as early as the 12th of March, before the Allies knew where Napoleon was, or anything about him, except that he was somewhere at large in France, they drew up that famous declaration, and signed it the next day, in which they declared that he had broken the sole legal tie to which his existence was attached, and that it was possible to keep with him 'neither peace nor truce.' 'The Powers, in consequence,' so runs this document, 'declare that Napoleon Buonaparte is placed beyond the pale of civil and social relations, and that, as a common enemy and disturber of the peace of the world, he has delivered himself over to public justice.' This declaration, which has been the subject of vehement criticism, was the natural consequence of the prevailing and correct appreciation of Napoleon's character. There was not a nation in Europe which felt the slightest particle of confidence or trust in him. Hence this declaration, made so promptly, was drawn up in ignorance of any professions he might make, because, beforehand, Europe felt that no professions of his could be relied on. The news of his success was followed by a treaty, adopted on the 25th of March, renewing the alliance of Chaumont, whereby Great Britain, Russia, Austria, and Prussia bound themselves to provide each 150,000 men; to employ, in addition, all their resources, and to work together for the common end—the maintenance of the Treaty of Paris, and of the stipulations determined on and signed at the Congress of Vienna. Further, they engaged not to lay down their arms but by common consent; nor before the object of the war should have been attained; nor, continues the document, 'until Buonaparte shall have been rendered absolutely unable to create disturbance, and to renew attempts for possessing himself of supreme power in France.' All the Powers of Europe generally, and Louis XVIII. specially, were invited to accede to the treaty; but, at the instance of Lord Castlereagh, the Four Great Powers declared in the most solemn manner that, although they desired to see his Most Christian Majesty restored to the throne, and also to contribute to that 'auspicious result,' yet that their 'principles' would not permit them to prosecute the war 'with a view of imposing any particular Government on France.' With Napoleon they refused to hold any communication whatever; and when he sent couriers to announce that he intended to observe existing treaties, they were stopped on the frontiers. . . . Wellington, on his own responsibility, acted for England, signed treaties, undertook heavy engagements in her name, and agreed to command an army to be assembled in Belgium; and having satisfied, as well as he could, the clamour of 'all' for subsidies from England, he took his departure from Vienna on the 20th of March, and arrived in Brussels on the 4th of April. The British Parliament and nation confirmed readily the proceedings of the Government and of the Duke of Wellington at Vienna. . . . Napoleon had formed a Ministry on the very evening of his return to the Tuileries. . . . He felt certain that war would ensue. Knowing

that at the moment when he returned from Elba a large part of the best troops of England were in America, that the German force on the Rhine was weak, and that the Russian armies were in Poland, he calculated that the Allied Powers would not be in a position to open the campaign, at the earliest, until the middle of July; and, for a moment, he hoped that, by working on the feelings of his father-in-law, the Emperor of Austria, and by rousing the anger of the Emperor Alexander against his allies, he would be able, if not to reduce his enemies to two, England and Prussia, at least to defer the period of hostilities until the autumn. . . . Before his great schemes of military preparation were half complete he found himself compelled by events to begin the war. What he actually did accomplish between March and June has been the subject of fierce controversy. His friends exaggerate, his enemies undervalue, his exertions and their results. But no candid inquirer can fail to see, that if his energetic activity during this period is far below that of the Convention when threatened by Europe, it is far above the standard fixed by his passionate critics. The real reason why he failed to raise a larger military force during the hundred days was that his genius worked upon exhausted materials. The nation, to use an expressive vulgarism, was 'used up.' . . . The proper conscription for 1815 had been levied in the autumn of 1813. The drafts on the rising generation had been anticipated, and hence there remained little available except the old soldiers. . . . The result of Napoleon's prodigious exertions to augment the military force of France appears to be this: Napoleon found ready to his hand a force of 223,072 men of all arms, officers included: that is 247,600 of the line, and 29,373 men ready to take the field. By the 13th of June he had raised this force to 276,082 men, officers included: that is 247,600 of the line, and 29,373 of the Imperial Guard. The number disposable for war was 108,130; and it therefore follows that Napoleon had increased the general effective by 53,010 men, and that part of it disposable for war by 43,130."—G. Hooper, *Waterloo*, bk. 1, ch. 1.

1815 (June).—Campaign in Belgium.—The four phases.—Napoleon's defeat and overthrow at Waterloo.—The operations now about to open may perhaps be divided into four phases as follows: "First phase—The Emperor's strategical concentration, or assembly of the *Armée du Nord*. Second phase—Passage of the Sambre, and the separation of the Allied Armies by the *Armée du Nord*. Third phase—The offensive campaign against Marshal Blücher, culminating in the Battle of Ligny. Fourth and final phase—The offensive campaign against the Duke of Wellington, terminating in the Battle of Waterloo."—A. F. Becke, *Napoleon and Waterloo*, p. 107.—"The nearest troops of the Allies were the Prussian army in the Rhenish provinces, and the army of British, Dutch, Belgians, Brunswickers, and Hanoverians, occupy-

ing Belgium. Napoleon's scheme, the best in his desperate circumstances, was to expel the British and Prussians, who were moving west, from Belgium, win the Rhine frontier—to arouse the enthusiasm of all France—before the Austrians were ready, and carry the war out of France. The Duke of Wellington proceeded to Belgium, for the first and last time to measure his skill with Napoleon's, and Marshal Blücher took over from Kleist the command of the Prussians. The two armies, the Prussian and the British, took up a line extending from Liège to the sea. The country on this line was open along the west, affording by nature little means of resisting an invasion, but most of the fortresses commanding the roads had been put in a state of moderate repair. The Prussians held the line of the Meuse and Sambre to beyond Charleroi, the head-quarters being at Namur. They numbered about 117,000 men . . . with 312 guns. . . . The motley mass of the British and their allies numbered 106,000 men . . . with 106 guns. . . . So entirely ignorant were the allies of Napoleon's movements, that on the very day on which he burst across the frontier, Wellington wrote to the Czar, who was at Vienna, respecting the general invasion of France. At that time the frontier of France approached within six miles of Charleroi (which is itself but 34 miles by the main road from Brussels). The Charleroi road was not only the most direct to Brussels, but was unprotected by fortresses; and the line of the allied armies was weakest here at the point of junction between them. . . . It was against the central weak point that Napoleon resolved to move, down the basins of the Sambre and the Meuse. . . . The mass of the troops was being assembled within a league of the frontier, but behind some small hills which completely screened them from the enemy's outposts. To conceal his designs to the last moment, the line of sentries along the frontier was tripled, and any attempt to pass the line was forbidden under pain of death. The arrangements were being carried out by Soult, who on the 2nd June had been appointed chief of the staff. . . . The army concentrated on the frontier consisted (according to Colonel Chesney) of 90,000 infantry and 22,000 cavalry—in all 112,000 men—with 344 guns. . . . Napoleon, accompanied by his brother Jerome, arrived in the camp, and in the evening of the 14th his soldiers, already elated by his presence, were excited to the highest pitch of enthusiasm by an address from Napoleon. . . . A general order fixed the attack upon the allies' position for three o'clock in the following morning (15th)." At the appointed time "the French left was in motion, Reille proceeding from Solre down the right bank of the Sambre. He was soon brought into collision with the Prussian outposts near Thuin; he drove them back and secured at ten o'clock the bridge of Marchiennes." The movements of other corps were delayed by various causes. Nevertheless, "of the Prussians only Ziethen's corps, and of Wellington's army only Perponcher's Dutch-Belgians, were as yet near the menaced position; while 40,000 French had passed the Sambre at Marchiennes and 70,000 more were entering Charleroi. When Reille deployed in front of Gosselies, the Prussians called in their detachments and retired from it upon Fleurus, . . . leaving open the road through Quatre Bras to Brussels. Ney, who had just come up, then took command of the left, . . . which was now directed upon Quatre Bras; and Napoleon galloped off to the road between Charleroi and Fleurus, where the retiring Prussians were concentrating. . . . At dark Ziethen [with the First Prussian corps] still

held Fleurus with his advanced guard, and the wood on its south, the bulk of his troops lay for the night upon the hill of Ligny, above the village of Bry. His loss during the day's manœuvring has been estimated at 2,000. On the French left, Ney . . . had come in contact with the advance guard of Wellington's army, a battalion of Nassauers and a light battery, in front of the village of Frasnes, two miles from Quatre Bras, the name applied to the farm-buildings at the intersection of the four main roads,—Brussels, Nivelles, Charleroi, Namur. . . . After a few cannon-shots the outpost fell back from Frasnes to Quatre Bras." Ney, after a reconnoissance, postponed attack until morning. "It had been intended by Napoleon that the whole army should have crossed the Sambre before noon; but from the several delays, . . . when night fell on the 15th, half of the cavalry of the guard, two of Grouchy's reserve divisions, Lobau's corps, and one-half of Gérard's corps were still on the south of the river. Ap-

MARSHAL NEY

parently relying on secret information from Paris—which contradicted the rumours that Napoleon was about to join the army—Wellington had been lulled into a false security, and the reports as to the concentration had been neglected. News of the enemy's advance across the Sambre did not reach him till three o'clock in the afternoon of the 15th, when the Prince of Orange in person reported the skirmish at Thuin. As he did not yet know the point of concentration, the British general, 'never precipitate or nervous' (Hooper), merely issued orders for all the troops to be in readiness. . . . At night intelligence was received from Mons that the French concentration was at Charleroi, and orders were issued for the immediate movement of the troops. . . . Wellington and the Prince of Orange, with several of the staff officers, went—it is said, to prevent a panic in Brussels—to the Duchess of Richmond's ball, where 'Belgium's capital had gathered then her beauty and her chivalry,' and, 'while all went merry as a marriage bell,' the staff officers stole away one by one. The Duke himself, 'throwing away golden

minutes' (Hamley), as if to show his confidence in his fortunes, remained to a late hour to return thanks after supper for the health of the Prince Regent of Great Britain, which the Prince of Orange proposed. . . . Blücher had received, at his head-quarters at Namur, news on the morning of the 14th of the French concentration, and he had ordered forward the corps of Pirch and Thielemann. . . . Napoleon did not foresee Blücher's promptitude, and nothing was done in the early morning of the 16th to proceed with the execution of the intended surprise. . . . No orders were issued by the Emperor till eight, when Napoleon's resolution was taken,—to strike at the Prussians, who would, he believed, if defeated, retire upon their natural base of communications, through Namur and Liège, and he would thus be left to deal separately with the British, who could not move from their base, the sea. The French army was to advance in two wings, the left under Ney, the right under Grouchy, with the reserve under the Emperor himself. Ney was to capture Quatre Bras, reconnoitre the Brussels road, and hold himself in readiness to march to Brussels, which Napoleon hoped to be able to enter the following morning. . . . Napoleon had 64,000 men to attack the position at Ligny; Ney on the left wing had 45,000 for Quatre Bras; Lobau had 10,000 to support either wing of the Grand Army; 5,000 troops were in the rear; and the victorious wing, whether Ney's or Grouchy's, was to wheel round and manœuvre in the direction of the other. Thielemann having come up before the French delivered their attack, Blücher had 85,000 men on the field. Wellington arrived at Quatre Bras (which is 20 miles from Brussels) at 11 o'clock in the forenoon. As Marshal Ney gave no sign of an imminent attack, Wellington galloped over, about seven miles, to confer with Blücher. . . . Wellington, after some discussion, in which he expressed his disapproval of Blücher's position, agreed to move to the rear of the Prussians, to act as a reserve, if his own position at Quatre Bras were not attacked. . . . He reached Quatre Bras when his own position was being assailed, and no help could be sent to Blücher. . . . At about three o'clock, when the heavy cannonade a few miles to the west intimated that a desperate battle was in progress at Quatre Bras, the signal for attack [on the Prussians, at Ligny] was given. The French left sped forward with impetuosity; the resistance was vigorous but futile, and the enemy streamed through the village. Blücher immediately moved forward fresh troops and retook the village, but was unable to retain it. . . . Thrice the Grenadiers forced their way into and through the village, but only to be driven back again." But "Blücher gradually exhausted his reserves, and when, in the dusk, Napoleon saw the last battalion moved forward and the ground behind Ligny vacant, he exclaimed, 'They are lost!' The Guards and the Cuirassiers were immediately ordered to attack," and the wearied Prussian infantry were broken by their onset. "The fugitives fled precipitately over the fields and along the roads to the east, and the order for the whole to retire was immediately given. . . . Blücher himself gathered a few of his squadrons to check the hot pursuit near Sombreffe, and thrice led them to the charge. His squadrons were broken, and after the last charge his horse fell dead, and the veteran marshal lay under it. His aid-de-camp, Nostitz, stood by him, and covered him with a cloak; the Cuirassiers galloped past without noticing him. . . . Gneisenau, who took temporary command from the accident to Blücher, ordered a retreat upon Wavre, with the

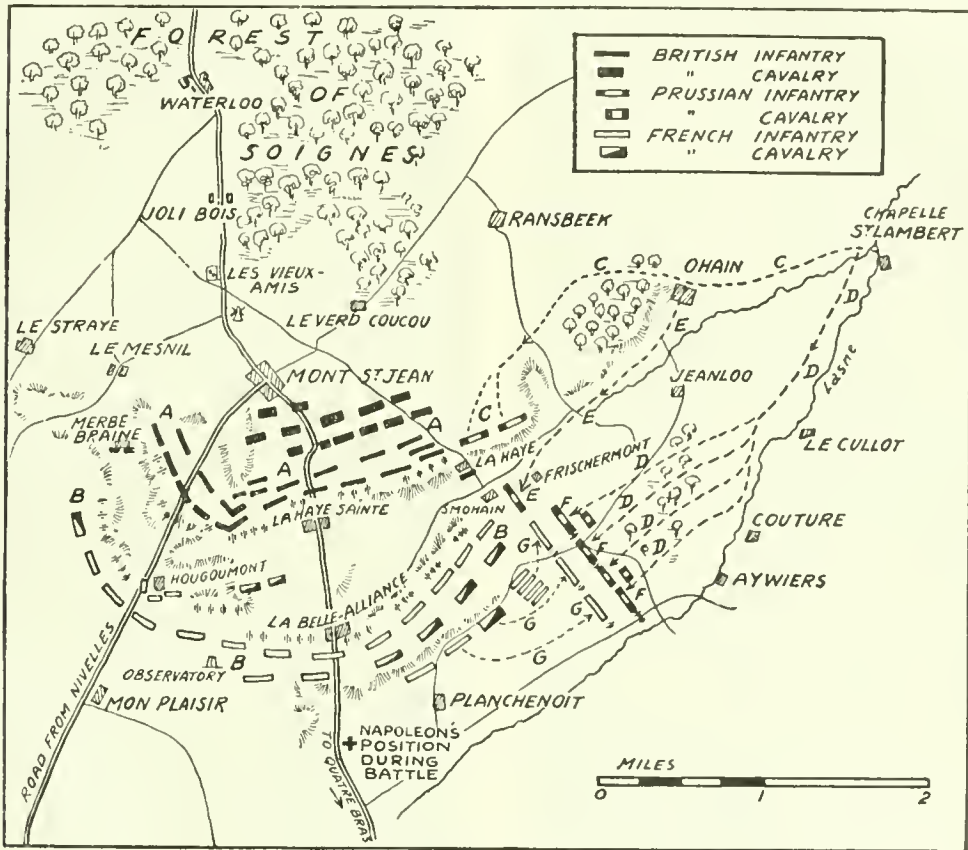

view of joining Bülow's corps and keeping open the communications with Wellington. . . . The loss on each side has been very variously estimated. Napoleon put his own loss at 7,000 men, Charras puts it at 11,000, and the loss of the Prussians at 18,000. The retreat upon Wavre abandoned the communications with Namur and Liège, through which the Prussian supplies came from the lower Rhine, for a new line by Louvain, but it kept the Prussians on a line parallel to the road on which Wellington must retreat, and thus still enabled the two armies to aid each other. 'This noble daring at once snatched from Napoleon the hoped-for fruits of his victory, and the danger Ligny had for a few hours averted was left impending over him' (Chesney)."—H. R. Clinton, *War in the Peninsula and Wellington's campaigns in France and Belgium*, ch. 12.—On Wellington's return to Quatre Bras from his interview with Blücher, he found, as stated above, that the Prince of Orange had already become desperately engaged with the superior forces of Ney. "The Duke's presence gave new life to the battle, and when Picton's division, followed by the Brunswickers and Van Merle's Belgian horse, arrived, he took the offensive, pushing forward right up to the edge of the farm of Gemioncourt. Ney, reinforced by the rest of Reille's corps and part of Kellerman's cavalry, violently retorted, and in the charge, which partially broke into spray before the squares, Wellington ran the risk of death or capture. But he leaped his horse over the 92d Highlanders lining the ditch on the Namur road, while his gallant-pursuers, cut up by the infantry fire, were killed or driven off. Ney was further reinforced by more guns and cavalry, and Wellington's brigades continued to arrive in parcels. The Marshal was always superior in horsemen and cannon, but after 5 o'clock his opponent had larger numbers of foot. Holding firmly to the cross-roads and the highway to Namur, Wellington became the stronger as the day waned; and when the Guards emerged from the Nivelles road and the Allies pressed forward, Ney, who had no fresh troops, was driven back, and his antagonist remained at sundown master of the whole field of battle. The position was maintained, but the cost was great, for there were no fewer than 4,600 killed and wounded, more than half being British soldiers. The thunder of cannon to the eastward had also died away, but none knew as yet at Quatre Bras how Blücher had fared at the hands of his redoubtable foe. Wellington, who slept at his head-quarters in Genappe, was on the field and scrutinising his outposts at daybreak on the 17th. Soon after came a report, confirmed a little later, that the Prussians had retreated on Wavre. . . . Napoleon had a belief that Blücher would retreat upon Liège, which caused him at a late hour in the day to despatch Grouchy to that side, and thus touch was lost. While the French were cooking and Napoleon was pondering, definite intelligence was brought to Wellington, who, learning for certain that Blücher was at Wavre, promised to stand fast himself at Mont St. Jean and fight, if Blücher would support him with two corps. The intrepid Marshal replied that he would come with his whole army, and Wellington got the famous answer before night. Thus was made, between generals who thoroughly trusted each other, that combination which led to the Battle of Waterloo. It was no chance combat, but the result of a deliberate design, rendered capable of execution, even when Blücher was wounded, by his resolve to retreat upon Wavre, and by Napoleon, who acted on conjecture that the Prussians would hurry towards

their base at Liège. The morning at Quatre Bras was peaceful; the Allies cooked their food before starting rearward. Wellington, it is said, lay down for a moment, and snatched perhaps a little sleep. There was no stir in front or on the exposed left flank; and, covered by a strong display of horsemen, the Allied divisions tramped steadily towards Mont St. Jean. . . . The retreat continued all day. A thunderstorm, so often a precursor of Wellington's battles, deluged the fields with rain, and pursuer and pursued struggling through the mire, were drenched to the skin by nightfall. . . . The results of two days' warfare may be thus summed up. Napoleon had inflicted a defeat, yet not a decisive defeat, upon the Prussians, who escaped from his ken to Wavre. He had then, at a late hour on the 17th, detached Grouchy with 33,000 men to follow them, and Grouchy at night from Gembloux reported that they had retired in three directions. Moving himself in the afternoon, Napoleon, uniting with Ney, had pursued Wellington to Mont St. Jean, and slept in the comfortable belief that he had separated the Allies. At that very time Wellington, who had assembled his whole force except 17,000 men, . . . was in close communication with Blücher, and intended on the 18th to stop Napoleon by delivering battle, and to hold him fast until Blücher could cut in on his right flank and rear. Thus it was the Allies who were united practically, and the French army which was separated into two groups unable to support each other. . . . The tempest which burst over the retreating columns on the 17th followed them to their bivouacs and raged all night, and did not cease until late on the fateful Sunday. Wellington, mounting his faithful Copenhagen at break of day, rode from the village of Waterloo to the field, where the armies on both sides, protected by watchful sentries, were still contending with the mischiefs inflicted by the storm. The position was the crest of a gentle slope stretching from Smobain to the Nivelles road, having upon and in advance of its right the château, garden, and wood of Hougomont, and in the centre, where the Charleroi road cut through the little ridge, the farm of La Haye Sainte. Both these posts were occupied, but the latter, unfortunately, not so solidly as Hougomont. . . . The position was well filled by the 69,000 men of all arms and 156 guns which were present that day. Napoleon, who slept at the farm of Caillou, and who had been out on foot to the front during the night, was also early in the field, and glad of the gift which he thought fortune had placed in his hands. When Reille had joined him from Genappe, he had 72,000 men, all admirable soldiers, and 240 guns, with which to engage in combat, and he reckoned that the chances were ninety to ten in his favour. He mounted his charger, reconnoitred his opponent's position, and then gave the orders which, promptly and finely obeyed, disclosed the French array. . . . It was now nearly eleven o'clock, and, although his opponent knew it not, Wellington had got news of the march from Wavre of Bülow, whose leading troops were actually, at that time, close to the wood of St. Lambert on the French right; while Grouchy was at Sart les Walhain, between Gembloux and Wavre. It is not practicable here to give a full account of the battle of Waterloo; we can only describe its broad outlines. The first gun was fired about twenty or thirty minutes past eleven, and preluded a dashing and sustained attack on Hougomont, which failed to carry the house, garden, or orchard, but did gain the wood. It was probably intended to divert attention from the attack on the left and

centre, which Ney, massing his guns opposite the British left, was preparing to execute. Wellington watched and in some measure controlled the fight for Hougomont, and then rode off to the centre, taking post at a solitary tree which grew near the Charleroi road above La Haye Sainte. Ney at half past one sent forward the whole of D'Erlon's corps, and although some of them pushed close up to and over the Wavre road, stormed the orchard of La Haye Sainte and took the Pappelotte farm, yet at the critical moment Sir William Ponsonby's Union Brigade of horse charged into the French infantry, already shattered by the fire

came the unexpected and unwelcome information that the whole Prussian army was approaching. . . . The signs of danger on his right flank, the punishment of D'Erlon's corps, the ineffectual attempt upon the British Guards in and about Hougomont, were followed by a kind of pause and the combat reverted to cannonading and skirmishing. But towards four o'clock Napoleon, increasing the fire of his artillery, threw forward a mass of cavalry, forty squadrons, and then began that series of reiterated onsets of horse which lasted for two hours. . . . Twice they were driven down the slope, and the third time, when they

BATTLE OF WATERLOO, JUNE 18, 1815

of Picton's troops, and the net result of the combined operation was that two eagles and 3,000 prisoners were captured, while nearly that number of killed and wounded remained on the ground. On the other side of La Haye Sainte the Household Brigade, led by Lord Anglesea in person, charged in upon and routed a large body of French cuirassiers. The grand attack thus completely failed, and the centre, like the right, remained intact. It was just before this combat began that Napoleon saw something like troops towards St. Lambert and despatched two brigades of light cavalry to reconnoitre. A Prussian staff officer was caught beyond Planchenoit, and from him

came on, they were strengthened by Kellerman and Guyot until they reached a force of 77 squadrons, or 12,000 men; but these also were repulsed, the British horse, what remained of them, charging when the French were entangled among the squares and disordered by the musketry and guns. Four times these fine troopers charged, yet utterly failed to penetrate or move a single foot battalion. But some time before the final effort, Ney by a fierce attack got possession of La Haye Sainte, and thus, just as the cavalry were exhausted, the French infantry were established within sixty yards of the Allied centre. And although the Emperor was obliged to detach one-

half of his Guard to the right, because Blücher had brought into play beyond Planchenoit against Lobau nearly 30,000 men, still the capture of La Haye Sainte was justly regarded as a grave event. Wellington during the cavalry fight had moved three brigades on his right nearer to Hougomont, and had called up Chassé and his Belgians to support them; and it was a little before this time that he cried out to Brigadier-General Adam, 'By G—, Adam, I think we shall beat them yet!' . . . The crisis of the battle had come for Napoleon. Unable after eight hours' conflict to do more than capture La Haye Sainte; hardly pressed by the Prussians, now strong and aggressive; owing such success as he had obtained to the valour and discipline of his soldiers—the Emperor delivered his last stroke, not for victory—he could no longer hope to win—but for safety. He sent forward the last ten battalions of his Guard to assail the British right, and directed the whole remaining infantry force available to attack all along the line. The Guard marched onward in two columns, which came successively in contact with their opponents. Napier's guns and the British Guards, who rising from the ground showed across the head of the first column, fired heavily and charging drove them in confusion back towards La Belle Alliance; and the second column, struck in flank by the musketry of the 52nd and 95th was next broken by a bayonet charge and pursued by Colonel Colborne to and beyond the Charleroi road. As Ziethen's Prussians were falling upon the French near Pappelotte, and Pirch and Bülow wrestling with the Imperial Guard in Planchenoit, Wellington ordered the whole of the British line to advance. The cheers arising on the right where he was, extended along the front and gave new strength to the wearied soldiers. He led the way. As he neared the Charleroi road, the riflemen, full of Peninsular memories, began to cheer him as he galloped up, but he called out, 'No cheering, my lads; forward and complete your victory.' He found that good soldier, Colborne, halted for a moment before three squares of the rallied Imperial Guard. 'Go on, Colborne,' he said; 'better attack them, they won't stand.' Nor did they. Wellington then turned to the right, where Vivian's Light Cavalry were active in the gloom, and we next find him once more with the 52nd near Rossomme, the farthest point of the advance, where that regiment halted after its grand march over the battlefield. Somewhere on the highway he met Blücher, who had so nobly kept his word, and it was then that Gneisenau undertook to chase the fugitives over the frontier. The French, or perhaps we should say the Napoleonic army, was destroyed, and the power which its mighty leader had built up on the basis of its astonishing successes was gone for ever."—G. Hooper, *Wellington*, ch. 9.

*History of the war in France and Belgium in 1815*.

1815 (June-August).—Napoleon's return to Paris.—Final abdication.—Personal surrender to the English.—Captivity at St. Helena.—"The vanquished army had lost 200 pieces of ordnance, and 30,000 men hors de combat or prisoners; as many more remained, independently of Grouchy's 35,000 men; but the difficulty was to rally them in presence of an enemy, that had taken lessons in audacity and activity from Napoleon himself. The loss of the allies was not less considerable, but there remained to them 150,000 men, the confidence of victory, and the certainty of being seconded by 300,000 allies, who were crossing the Rhine from Mentz to Bâle. Such was the issue of this struggle, commenced under such happy auspices, and which resulted more fatal to France than the battles of Poitiers and Azincourt. It must be admitted, that this disaster was the work of a multitude of unheard-of circumstances: if Napoleon can be reproached for certain faults, it must be allowed that fortune dealt cruelly with him in the lesser details, and that his enemies, in return, were as fortunate as they showed themselves skillful. However unjust be the spirit of party, we are forced to render homage to the merits of two generals, who, unexpectedly attacked in their cantonnements extending from Dinant and Liège to Renaix, near Tournay, had taken such wise measures as to be in condition next morning for giving battle to equal forces, and for afterwards conquering by an able concentration of the two armies. . . . In the very battle of Waterloo, the French might be censured for having attempted the first attack in masses too deep. This system was never successful against the murderous fire of English infantry and artillery. . . . There were likewise extraordinary charges of cavalry, which, being devoid of support, became heroic but useless struggles. Notwithstanding all this, it is almost certain that Napoleon would have remained master of the field of battle, but for the arrival of 65,000 Prussians on his rear; a decisive and disastrous circumstance, that to prevent was not entirely in his power. As soon as the enemy led 130,000 men on the battle-field, with scarcely 50,000 to oppose them, all was lost. . . . Napoleon had but one course left him, which was to direct Grouchy through the Ardennes on Laon, to collect at this point all that could be drawn from the interior, from Metz and from Rapp's corps, leaving but garrisons in Lorraine and Alsace. The imperial cause was very much shaken, but not entirely lost; should all Frenchmen determine on opposing Europe with the courage of the Spartans of Leonidas, the energy of the Russians in 1812, or of the Spaniards of Palafox. Unfortunately for them, as for Napoleon, opinion was very much divided on this subject, and the majority still believing that the struggle interested only the power of the emperor and his family, the fate of the country seemed of little consequence. Prince Jerome had collected 25,000 men in rear of Avesnes: he was ordered to lead them to Laon; there remained 200 pieces of artillery, beside those of Grouchy. . . . Reaching Laon on the 19th, where he had at first resolved to await the junction of Grouchy and Jerome, the emperor discussed, with the small number of the trustworthy who had followed him, the course he should adopt after this frightful disaster. Should he repair to Paris, and concert with the chambers and his ministers, or else remain with the army, demanding of the chambers to invest him with dictatorial power and an unlimited confidence, under the con-

viction that he would obtain from them the most energetic measures, for saving France and conquering her independence, on heaps of ruins? As it always happens, his generals were divided in opinion; some wished him to proceed to Paris, and deposit the crown into the hands of the nation's delegates, or receive it from them a second time, with the means of defending it. Others, with a better appreciation of the views of the deputies, affirmed, that far from sympathizing with Napoleon, and seconding him, they would accuse him of having lost France, and would endeavor to save the country by losing the emperor. . . . Lastly, the most prudent thought that Napoleon should not go to Paris, but remain at the head of the army, in order to treat with the sovereigns himself, by offering to abdicate in favor of his son. It is said, that Napoleon inclined to the idea of remaining at Laon with the army; but the advice of the greatest number determined him, and he departed for Paris."—Baron de Jomini, *History of the campaign of Waterloo*, pp. 184-189.—"It was a moment of unrelieved despair for the public men who gathered round him on his return to Paris, and among these were several whose fame was of earlier date than his own. La Fayette, the man of 1789; Carnot, organizer of victory to the Convention; Lucien, who had decided the revolution of Brumaire, —all these met in that comfortless deliberation. Carnot was for a dictatorship of public safety, that is, for renewing his great days of 1793; Lucien too liked the Roman sound of the word dictator. 'Dare!' he said to his brother, but the spring of that terrible will was broken at last. 'I have dared too much already,' said Napoleon. Meanwhile, in the Chamber of Representatives the word was not dictatorship but liberty. Here La Fayette caused the assembly to vote itself permanent, and to declare guilty of high treason whoever should attempt to dissolve it. He hinted that, if the word abdication were not soon pronounced on the other side, he would himself pronounce the word 'déchéance.' The second abdication took place on June 22d. 'I offer myself a sacrifice to the hatred of the enemies of France. My public life is finished, and I proclaim my son, under the title of Napoleon II, Emperor of the French.' On the 25th he retired to Malmaison, where Josephine had died the year before. He had by no means yet ceased to hope. When his son was passed over by the Chamber of Representatives, who named an executive commission of five, he protested that he had not intended to make way for a new Directory. . . . On the 27th he went so far as to offer his services once more as general, 'regarding myself still as the first soldier of the nation.' He was met by a refusal, and left Malmaison on the 29th for Rochefort, well furnished with books on the United States. France was by this time entering upon another Reign of Terror. Massacre had begun at Marseilles as early as the 25th. What should Napoleon do? He had been formerly the enemy of every other nation, and now he was the worst enemy, if not of France, yet of the triumphant faction in France. He lingered some days at Rochefort, where he had arrived on July 3d, and then, finding it impossible to escape the vigilance of the English cruisers, went on the 15th on board the 'Bellerophon' and surrendered himself to Captain Maitland. It was explained to him that no conditions could be accepted, but that he would be 'conveyed to England to be received in such manner as the Prince Regent should deem expedient.' He had written at the Île d'Aix the following characteristic letter to the Prince Regent:—"Royal Highness,—A prey to the factions which divide my country and to the enmity of the powers of Europe, I have ter-

minated my public career, and I come, like Themistocles, to seat myself at the hearth of the British people. I place myself under the protection of its laws, which I claim from your Royal Highness as the most powerful, the most constant, and the most generous of my enemies.' It was perhaps the only course open to him. In France his life could scarcely have been spared, and Blücher talked of executing him on the spot where the Duc d'Eng-hien had fallen. He therefore could do nothing but what he did. His reference to Themistocles shows that he was conscious of being the worst enemy that England had ever had. Perhaps he remembered that at the rupture of the treaty of Amiens he had studied to envenom the contest by detaining the English residents in France. Still he might reflect, on the other hand, that England was the only great country which had not been trampled down and covered with massacre by his soldiers. It would have been inexcusable if the English Government had given way to vindictive feelings, especially as they could well afford to be magnanimous, having just won the greatest of all victories. But it was necessary to deprive him of the power of exciting new wars, and the experiment of Elba had shown that this involved depriving him of his liberty. The frenzy which had cost the lives of millions must be checked. This was the principle laid down in the declaration of March 15th, by which he had been excommunicated as a public enemy. It was therefore necessary to impose some restraint upon him. He must be separated from his party and from all the revolutionary party in Europe. So long as he remained in Europe this would involve positive imprisonment. The only arrangement therefore which would allow him tolerable personal comfort and enjoyment of life, was to send him out of Europe. From these considerations grew the decision of the Government to send him to St. Helena. An Act of Parliament was passed 'for the better detaining in custody Napoleon Bonaparte,' and another Act for subjecting St. Helena to a special system of government. He was 'kept on board the 'Bellerophon' till August 4th, when he was transferred to the 'Northumberland.' On October 15th he arrived at St. Helena, accompanied by Counts Montholon, Las Cases, and Bertrand, with their families, General Gourgaud, and a number of servants. In April, 1816, arrived Sir Hudson Lowe, an officer who had been knighted for bringing the news of the capture of Paris in 1814, as governor. The rest of his life, which continued till May 5, 1821, was occupied partly in quarrels with this governor, which have now lost their interest, partly in the task he had undertaken at the time of his first abdication, that of relating his past life. He did not himself write this narrative, nor does it appear that he even dictated it word for word. It is a report made partly by General Gourgaud, partly by Count Montholon, of Napoleon's impassioned recitals; but they assure us that this report, as published, has been read and corrected throughout by him. It gives a tolerably complete account of the period between the siege of Toulon and the battle of Marengo. On the latter period there is little, except a memoir on the campaign of 1815, to which the editors of the Correspondence have been able to add another on Elba and the Hundred Days."—J. R. Seeley, *Short history of Napoleon I.*, ch. 6, sect. 5.

1815 (July-November).—English and Prussian armies in Paris.—Return of Louis XVIII.—Second Treaty of Paris.—Restoration of Napoleon's art-spoils.—Indemnity.—National debt.—Quadruple Alliance and the "Holy Alliance."—"The victorious Anglo-Prussian armies rapidly advanced upon the capital [and entered Paris July 7]; to reinforce them, Austrian troops crossed the Rhine, and Sardinian forces the Alps. Realising the hopelessness of resistance, Paris capitulated, and on July 8 readmitted Louis XVIII. as king. . . . The second Treaty of Paris (November 20, 1815) reduced her to her boundaries of 1700, installed an Allied army of occupation in her northeastern fortresses for a period not to exceed five years, exacted from her an indemnity of 700,000,000 francs, and compelled her to restore the works of art which the Revolutionary and Napoleonic armies had tastefully collected from the museums of the Continent. It has been calculated that the Bonapartist adventure of the Hundred Days cost France from first to last no less a sum than 1,570,000,000 francs. Only with the utmost difficulty did Wellington and Castlereagh prevent the Prussian and Austrian representatives at Paris from enforcing the cession of Alsace and Lorraine."—F. J. C. Hearnshaw, *Main currents of European history*, pp. 107-108.—"Meanwhile the northeastern departments should be occupied by 150,000 allied troops at French expense. The ambassadors of Great Britain, Russia, Prussia, and Austria received the right to tender their joint advice to the government even upon matters of internal politics. These provisions were embodied in the second Treaty of Paris, of November 20, 1815. The four Powers on the same day agreed to meet from time to time to concert measures for the preservation of the peace of Europe. The experiences of the last two decades made the idea of new revolutions no mere specter of reactionary minds. The French government of the second Restoration was moved by the same spirit that directed the leaders of the first. Louis XVIII was not inclined to listen to the doctrine of vengeance and tried to profit by the lessons of the Hundred Days. Wellington used the great authority which the victory of Waterloo gave him to counsel moderation. In consequence the first ministry was led by Talleyrand and included Fouché. The elections for the choice of new deputies, however, resulted in a decided victory for the ultras and the chamber was 'more royalist than the King.'"—H. E. Bourne, *Revolutionary period in Europe*, p. 464.—"Although he [Louis XVIII] clung tenaciously to the forms of the ancient monarchy and the white flag of his family, he had common sense enough to retain Napoleon's legal and administrative reforms and the Napoleonic institutions of the Legion of Honor, the Bank of France, the Concordat, and the University. He recognized the imperial nobility as on an equal footing with that of the old régime. He confirmed the charter which the year before he had granted to France."—C. J. H. Hayes, *Political and social history of modern Europe*, v. 2, p. 16.—"France was not in such unfortunate condition as one who has followed in detail the last great campaigns of Napoleon might imagine. She was defeated but not crushed. The economic advantage of having millions of sturdy, thrifty peasants as small landed proprietors was already displaying itself. The emperor, too, had waged his wars almost to the last at the expense of his conquered foes, and it was certainly a tribute to his foresight and to his genius for finance that the French national debt in 1815 was only one-sixth as large as that of Great Britain.

The middle class took immediate advantage of the return of peace to extend their trade and to expand their business-interests. For these reasons, France rapidly rose under the restored Bourbons to a position of strength and prosperity hardly equaled in all Europe, despite bad harvests, political unrest, and foreign military occupation which continued three years after Waterloo."—*Ibid.*, p. 15.—"In the long era of peace which they secured men had time to forget that foreign domination and military despotism had been the counterpart of reform. The ideal of civil equality and social justice, which the deputies of 1789 had cherished, could now make its appeal with renewed force. The proof of its vitality is recorded in hundreds of great acts of legislation in the later years of the nineteenth century."—H. E. Bourne, *Revolutionary period in Europe*, pp. 464-465.—See also PARIS: 1814-1830.

"Before quitting Paris in the fall of this eventful year of 1815, the Allies signed two more documents of great significance in the future history of Europe, that establishing the Quadruple Alliance. The former proceeded from the initiative of Alexander I, of Russia, whose mood was now deeply religious under the influence of the tremendous events of recent years and the fall of Napoleon, which to his mind seemed the swift verdict of a higher power in human destinies. He himself had been freely praised as the White Angel, in contrast to the fallen Black Angel, and he had been called the Universal Saviour. He now submitted a document to his immediate allies, Prussia and Austria, which was famous for a generation, and which gave the popular name to the system of repression which was for many years followed by the powers that had conquered in the late campaign, a document unique in the history of diplomacy. Invoking the name of 'the very holy and indivisible Trinity,' these three years have brought to pass in Europe, and in view, especially, of the benefits which it has pleased Divine Providence to confer upon those states whose governments have placed their confidence and their hope in Him alone, 'having reached the profound conviction that the policy of the powers, in their mutual relations, ought to be guided by the sublime truths taught by the eternal religion of God our Saviour' solemnly declare 'their unchangeable determination to adopt no other rule of conduct, either in the government of their respective countries, or in their political relations with other governments than the precepts of that holy religion, the precepts of justice, charity, and peace'; solemnly declare, also, that those principles 'far from being applicable exclusively to private life, ought on the contrary to control the resolutions of princes, and to guide their steps as the sole means of establishing human institutions, and of remedying their imperfections.' Henceforth, accordingly, 'conformably to the words of Holy Scripture' the three monarchs will consider themselves as brothers and fellow citizens, 'united by the bonds of a true and indissoluble fraternity,' and will lend 'aid and assistance to each other on all occasions and in all places, regarding themselves, in their relations to their subjects and to their armies, as fathers of families.' Hence, their 'sole principle of conduct' shall be that 'of rendering mutual service and testifying by unceasing good will the mutual affection with which they should be animated. Considering themselves all as members of one great Christian nation, the three allied princes look upon themselves as delegates of Providence called upon to govern three branches of the same family,' namely, Austria, Prussia, and Russia. 'Their majesties recommend, therefore, to their peoples, as the sole means of enjoying that peace which springs from a good conscience and is alone endur-

ing, to fortify themselves each day in the principles and practice of those duties which the Divine Saviour has taught to men.' 'All those powers who wish solemnly to make avowal' of these 'sacred principles shall be received into this Holy Alliance with as much cordiality as affection.' This document, born of the religious emotionalism of the Tsar, has no parallel. Written in the form of a treaty, it imposes none of the practical obligations of a treaty, but is rather a confession of faith and purpose. Diplomats were amazed at its unworldly character. Ultimately, nearly all the powers of Europe signed it, more out of compliment to the Tsar than from any intellectual sympathy. Metternich pronounced it a 'sonorous nothing,' a 'philanthropic aspiration clothed in a religious garb,' an 'overflow of the pietistic feelings of the Emperor Alexander'; Castlereagh, a 'piece of sublime mysticism and nonsense'; Gentz, a bit of 'stage decoration.' Yet for a generation this Holy Alliance or 'diplomatic apocalypse' stood in the mind of the world as the synonym for the régime of absolutism and repression which prevailed in Europe. But that régime was not the outcome of the treaty of the Holy Alliance, but rather that of the treaty of the Quadruple Alliance concluded in the same year. The former was a dead letter from the moment of issue, and did not influence the policy, either domestic or foreign, of any state. Its author, Alexander I, was, moreover, in 1815 a liberal in politics who had been largely instrumental in forcing the restored Bourbon, Louis XVIII, to grant a constitution to France, and who was himself about to grant one to Poland. He was certainly at this moment far from thinking of inaugurating a system of repression. But the latter, the treaty of the Quadruple Alliance, became under the manipulation of Metternich a stern and forbidding reality, as we shall see. The liberal newspapers of the Continent confused the two treaties, naturally enough, as Russia, Austria, and Prussia were signatories of both, and they came to speak with hatred of the Holy Alliance. The name excepted, however, the Holy Alliance is much less important than the Quadruple Alliance concluded November 20, 1815. Napoleon had been overthrown only by collective Europe, bound together in a great coalition. The episode of the 'Hundred Days,' occurring while the Congress of Vienna was laying the foundations of the new Europe, proved the necessity of the prolongation of that union. Hence, there appeared the 'Concert of Powers,' which for the next few years is the central fact in the international affairs of Europe."—C. D. Hazen, *Europe since 1815*, pp. 14-16. —See also HOLY ALLIANCE; ALX-LA-CHAPELLE: Congresses: 3; INTERNATIONAL LAW: 1792-1885.

1815.—The influence of Napoleon.—His heritage to France and Europe.—"It will probably be admitted, even by the most strenuous opponent of French imperialism, that with two exceptions Napoleon has exercised a greater influence upon the political and social state of Europe than any other single man. Nothing in the achievements of the Consulate and the Empire was fraught with such tremendous consequence for the future of European civilization as the conquest of Gaul by Julius Caesar or the assumption of the imperial crown by Charlemagne; but then we must remember that Caesar and Charlemagne were operating upon political conditions which were still comparatively simple and susceptible of receiving a deep and durable impress from a powerful will, while Napoleon, living many centuries afterwards, suf-

fered the penalty of time. He was brought up against complex masses of tradition, political, social, and ecclesiastical, which had been hardened by ages of settled European life and were protected by the great vested interests of an old community. He affronted many things which Europeans were wont to consider respectable and even holy, monarchical sentiment, aristocratic caste, the Catholic Church, the sentiment of nationality. Much of his work was immediately undone upon his fall. All of it was compressed within a period of twenty years. But when all deductions have been made for ill-calculated plans, transitional expedients, and policies triumphantly cancelled by his opponents, there remains a residuum of durable political influences so great as immeasurably to overthrow any which can be ascribed to any other modern ruler of a European state. In saying this we do not mean to imply that there have not been minds in Europe of finer, higher, and more original quality. The most durable and successful features of Napoleon's statesmanship are not those parts which one might be tempted to call extravagantly Napoleonic, but those which seem to satisfy deep-seated needs and to crown long processes of historical development. . . . The great transfiguring ideas in politics, even where they originate with men of action, can seldom be safely used until they have survived some controversy and become the familiar property of political thought. It is therefore no more a condemnation of Napoleon's genius to observe that he merely worked with the ideas of the French Revolution than to say that he breathed the air and trod the earth. The supreme proof of his genius lies, on the contrary, in the fact that he harnessed the wild living spirit of the Revolution to his own career. . . . The true greatness of Napoleon as a civil ruler lies in the fact, firstly that he saved for France the most valuable conquests of the French Revolution, social equality and industrial freedom, secondly that he brought to a conclusion the difficult operation of securing for the remodelled state the sanction and support of the Church, and thirdly that he gave to France a code of laws and a system of administration which remain substantially unchanged to-day. He saved equality which was a fierce national passion, and sacrificed liberty which had become a disease. The Code Napoléon, which he regarded as his main title to glory, is, so to speak, the last testament of the French Revolution. . . . Modern France is still very much as the Consulate left it. Parliamentary government has taken root, the Concordat has been denounced after an uneasy life of a hundred years, and some measure of decentralization has been effectually introduced into local government and the fabric of the University. The ideal of the lay state has become more widely held with the lapse of time, and is embodied in the scheme of compulsory secular education which the Third Republic owes to the oratory of Gambetta and the strenuous powers of Ferry. These changes, however, important though they be, have neither transformed the political spirit of France nor swept away the main blocks of Napoleonic granite, the Prefects, the Codes, the Legion of Honour, the *Lycée*. . . . One change, not of institutions but of political spirit, is certainly notable. France is no longer the firebrand of Europe."—H. A. L. Fisher, *Studies in history and politics*, pp. 198-201.—"There could never have been a national rising in Germany unless Napoleon had first broken the fetters which made all national movements in that country impossible. Spain learnt fitfully a similar lesson from the same source, and Russia became conscious of her national strength in her efforts to resist the invader. Fifteen years after Waterloo the

storm broke, and the eighty odd years which have succeeded the Revolution of 1830 [to 1912] are among the most remarkable that the world has ever known."—O. Browning, *History of the modern world*, p. 221.—See also EUROPE: Modern: Diffusion of revolutionary ideas, etc.

1815-1830. — Restored monarchy. — Louis XVIII and Charles X.—Career of the reactionaries.—Conquest of Algiers.—Ordinances of July.—Revolution.—Abdication and exile of the king.—"The royalists, after a quarter of a century of repression, now revenged themselves with truly French vehemence. In France a victorious party generally crushes its opponents; and the elections, held during the full swing of the royalist reaction, sent up to Paris a Legislative Assembly 'more royalist than the king himself.' Before it assembled, Louis XVIII, in spite of his promise only to punish those who were declared by the Assembly to be traitors, proscribed fifty-seven persons who had deserted to Napoleon in the 'Hundred Days.' . . . Of the proscribed men thirty-eight were banished and a few were shot. Among the latter the most illustrious was Marshal Ney, whose past bravery did not shield him from the extreme penalty for the betrayal of the military oath. . . . This impolitic execution rankled deep in the breasts of all Napoleon's old soldiers, but for the present all opposition was swept away in the furious tide of reaction. Brune, one of Napoleon's marshals, was killed by the royalist populace of Avignon; and the Protestants of the south, who were suspected of favouring Napoleon's home policy, suffered terrible outrages at Nîmes and Uzès in this 'white terror.' The restored monarchy had far stronger executive powers than the old system wielded before 1789, for it now drew into its hands the centralised powers which, under the Directory and the Empire, had replaced the old cumbrous provincial system; but even this gain of power did not satisfy the hot-headed royalists of the Chamber. They instituted judicial courts under a provost (prévôt), which

passed severe sentences without right of appeal. Dismissing the comparatively Liberal ministers Talleyrand and Fouché, Louis in September, 1816, summoned a more royalist ministry under the Duc de Richelieu, which was itself hurried on by the reactionaries. Chateaubriand fanned the flames of royalist passion by his writings, until the king even found it necessary to dissolve this mischievous Chamber, and the new deputies who assembled (February 1817) showed a more moderate spirit. France was soon delivered from the foreign armies of occupation, for the sovereigns of Russia, Austria, and Prussia, meeting at Aix-la-Chapelle (September 1818), in order to combat revolutionary attempts, decided that an early evacuation of French territory would strengthen the Bourbon rule in France; and they renewed the Quadruple Alliance, which aimed at upholding existing treaties. [See also AIX-LA-CHAPELLE: Congresses: 3.] The discontent in Germany and Italy awakened a sympathetic echo in France, which showed itself in the retirement of the Duc de Richelieu and the accession of a more progressive minister, Decazes (November 1819). This check to the royalist reaction was soon swept away by an event of sinister import. The Duc de Berry, second son of the Comte d'Artois, was assassinated (February 1820), as he was leaving the opera-house, by a fanatic who aimed at cutting off the direct Bourbon line. . . . His design utterly failed, for a posthumous son, the celebrated Comte de Chambord, was born in September 1820; and the only result was a new outburst of royalist fury. Liberty of the press was suspended, and a new complicated electoral system restricted the franchise to those who paid at least 1,000 francs a year in direct taxation: the Chamber of Deputies, a fifth part of which was renewed every year by an electorate now representing only the wealthy, became every year more reactionary, while the Left saw its numbers decline. The ultra-royalist ministry of Villèle soon in its turn aroused secret conspiracies, for the death of Napoleon (May 5, 1821) was now awakening a feeling of regret for the comparative liberty enjoyed in France during the Empire. Military conspiracies were formed, only to be discovered and crushed, and the veteran republican Lafayette was thought to be concerned in a great attempt projected in the eastern departments with its headquarters at Belfort; and the terrible society of the Carbonari secretly spread its arms through the south of France, where it found soil as favourable as in Italy itself. . . . A revolution in Spain held Ferdinand a prisoner in his palace at Madrid. Louis determined to uphold the throne of his Bourbon relative, and sent an army which quickly effected its object (1823). 'The Pyrenees no longer exist,' exclaimed Louis XVIII. In fact, everywhere in Europe absolutism seemed to be triumphant, and the elections of December 1823 sent up a further reinforcement to the royalist party; also the approaching end of the sensible old king foreshadowed a period of still more violent reaction under his hot-headed brother Charles. Louis XVIII. died on September 16, 1824. At his death the restoration seemed firmly established. . . . France had quickly recovered from twenty years of warfare, and was thought to have the strongest government in Europe. Always the chief of the reactionary nobles, Charles had said, 'It is only Lafayette and I who have not changed since 1789.' Honest, sincere, and affable as the new king was, yet his popularity soon vanished when it was seen how entirely he was under the control of his confessor; and the ceremonies of his coronation at Rheims showed that he intended to revive the almost forgotten past. In Guizot's words, 'Louis

XVIII. was a moderate of the old system and a liberal-minded inheritor of the 18th century: Charles X. was a true Émigré, and a submissive bigot.' Among the first bills which Charles proposed to the Chambers was one to indemnify those who had lost their lands in the Revolution. To give these lands back would have caused general unsettlement among thousands of small cultivators; but the former landowners received an indemnity of a milliard of francs, which they exclaimed against for its insufficiency just as loudly as the radicals did for its extravagance: by this tardy act of justice the State endeavoured to repair some of the unjust confiscations of the revolutionary era. . . . The attempts made by the Jesuits to regain their legal status in France, in spite of the prohibition dating from before the fall of the old régime, aroused further hostility to the king, who was well known to favour their cause. Nothing, however, so strengthened the growing opposition in the Chambers and in the country at large as a rigorous measure aimed at the newspapers, pamphlets, and books which combated the clerical reaction. These publications were to pay a stamp duty per page, while crushing fines were devised to ruin the offending critics. One of the leaders of the opposition, Casimir Périer, exclaimed against this measure as ruinous to trade: 'Printing would be suppressed in France and transferred to Belgium.' The king persevered in his mad enterprise: he refused to receive a petition from the most august literary society in Europe, the Académie Française, and cashiered its promoters as if they were clerks under his orders. Strange to say, the Chamber of Deputies passed the measure, while that of the Peers rejected it—an event greeted by illuminations all over Paris (April 1827). A few days afterwards, at a review of the National Guards in Paris, the troops raised cries for the liberty of the press and for the charter granted in 1815. The next day they were disbanded by royal command, but were foolishly allowed to retain their arms, which were soon to be used against the government. Charles next created seventy-six new peers to outvote his opponents in the Upper House. He also dissolved the Chamber of Deputies, but found the new members less pliable. Finally, Charles had to give way for the time, and accept a more moderate ministry under Martignac in place of the reactionary Villèle Cabinet. . . . Charles was soon able to dismiss this ministry, the last hope of conciliation, and formed (August 1829) a ministry under Count Polignac, one of whose colleagues was the General Bourmont who had deserted to the allies the day before Waterloo. The king's speech at the opening of the next session (March 1830) was curt and threatening, and the Chamber was soon prorogued. Reform banquets, a custom which the French borrowed from English reformers, increased the agitation, which the Polignac ministry vainly sought to divert by ambitious projects of invasion and partition of some neighbouring States. The only practical outcome of these projects was the conquest of the pirate stronghold of Algiers. This powerful fortress had been bombarded and reduced by Lord Exmouth with the British fleet in 1816, and the captives, mostly Italians, were released from that den of slave-dealers; but the Dey of Algiers had resumed his old habits, complaints from the French were met by defiance, and at last the French envoy quitted the harbour amid a shower of bullets. A powerful expedition effected a landing near the strongly-fortified harbour, and easily beat back the native attack; and then from the land side soon battered down the defences of the city [see BARBARY STATES: 1830]. Thus the city which had long been the terror of Mediterranean sailors

became the nucleus of the important French colony of Algeria (July 4, 1830). The design of Charles X and of his reactionary Polignac ministry to divert the French people from domestic grievances to foreign conquest needed the genius and strength of a Napoleon to ensure success. The mere fact of the expedition being under the command of the hated General Bourmont had made it unpopular. . . . So, although the victory was triumphantly announced throughout France, yet the elections sent up a majority hostile to the king. Nevertheless, with his usual blind obstinacy, Charles on the 25th July 1830 issued the famous ordinances which brought matters to a crisis. The first suspended the liberty of the press, and placed books under a strict censorship; the second dissolved the newly-elected Chamber of Deputies; the third excluded licensed dealers (patentés) from the franchise; the fourth summoned a new Chamber under the new conditions, every one of which violated the charter granted by the late king. The Parisians at once flew to arms, and raised barricades in the many narrow streets which then favoured street-defence. Marmont, hated by the people as being the first of Napoleon's marshals who had treated with the allies, was to quell the disturbances with some 20,000 troops of the line; but on the second day's fighting (July 28) the insurgents, aided by the disbanded National Guards and veterans of the empire, beat back the troops; and on the third day the royal troops, cut off from food and supplies, and exhausted by the heat, gave way before the tricolour flag; the defection of two line regiments left the Louvre unguarded; a panic spread among other regiments, and soon the tricolour floated above the Tuileries. Charles thereupon set the undignified example, soon to be followed by so many kings and princes, of giving way when it was too late. He offered to withdraw the hated ordinances, but was forced to flee from St. Cloud. He then tried the last expedient, also doomed to failure, of abdicating in favour of his little grandson the Duc de Bordeaux, since better known as the Comte de Chambord. Retiring slowly with his family to Cherbourg, the baffled monarch set out for a second and last exile, spent first at Holyrood Palace, Edinburgh, and ended at Göritz in Bohemia. More than 5,000 civilians and 700 soldiers were killed or wounded in these terrible 'three days' of July 1830, which ended all attempts to re-establish the tyranny of the old régime. The victims were appropriately buried in the Place de la Bastille. They freed not France alone, but dealt a fierce blow at the system of Metternich."—J. H. Rose, *Century of continental history*, ch. 23.

1830-1840.—Monarchy renewed under Louis Philippe.—Drift from the constitutional course.—Revolutionary outbreaks.—Louis Bonaparte.—Louis Philippe, Duke of Orleans, upon whom the Constitutional party set their hopes, was born in 1773. His father, a notorious Egalité, ended his career under the guillotine; his grandmother was the duchess of Orleans, sister-in-law of Louis XIV; and because of opposition this branch of the royal house was considered as a separate family. As early as 1814, Louis Philippe had determined to accept the throne in case it was offered him. The offer came in 1830 with the revolution of July. "Louis Philippe ascended the throne of the Bourbons as King, not of France, but of the French. He was supported by the heads of the Liberal Opposition and the leaders of the Napoleonic party who had returned from exile. The new monarchy was distinctly middle-class, finding favour with the manufacturers and shopkeepers, who dreaded a republic on the one hand and an aristocratic autocracy on the other. The supporters of the monarchy of July did not form a homogeneous body. They were composed of a party of movement and a party of reaction. The first, represented by Laffitte, Lafayette and Odilon Barrot, sympathised with the popular risings in different parts of Europe, and wished France to take the side of peoples against their Sovereigns. The second agreed with Louis Philippe in thinking that the Revolution of July had been closed on August 9th. The leaders of this party were Guizot, Casimir Périer and the Duc de Broglie. The King, however, was obliged to form his first Ministry from both sections, and we find that it included a number of incongruous names. It comprised Laffitte, Dupont de l'Eure, Bignon, Gérard, Molé, Casimir Périer, Dupin, Guizot, Broglie. Lafayette commanded the National Guard, as he had done in the days of the Revolution, and Odilon Barrot was Prefect of the Seine. This divergence of opinion became clearly shown in the attitude of the Government towards the Belgian Revolution of 1830. Some believed that they were bound to support a revolt which had directly sprung from their own. They called upon the King to declare himself a supporter of the democracy, to punish the Ministers of Charles X. who had signed the ordinances, and to prepare the way for a declaration of war against the Sovereigns and Ministers of the Holy Alliance. Polignac, Peyronnet, and two others were confined in the Château de Vincennes. The Chamber, at the end of September, had voted their accusation, and many were in favour of their death. The Chamber, however, presented an address to the King, recommending that capital punishment should be done away with, and Louis Philippe expressed his satisfaction. The agitation, however, continued. On October 17th rioters proceeded to the Palais Royal, crying 'Death to the Ministers!' and on the following day a mob of ruffians marched to Vincennes to execute the prisoners. They were resisted by Dumesnil, who declared that, if the gates were forced, he would blow the château into the air. In this crisis, which threatened the safety of the King, the Conservatives Broglie and Guizot determined to resign. Louis Philippe adopted a moderate course with tact and courage. He reconstituted the Ministry with Laffitte and Dupont de l'Eure at its head; but appointed as Minister of the Interior Montalivet, a man devoted to himself. Montalivet proposed a reform of the electorate, which, by reducing the property qualification for the franchise, doubled the number of voters, while his colleague

Mérilhou laid before the Chamber of Peers a scheme of public education which he thought would be popular in the country. At the same time the King resolutely opposed all violence. However, the trial of the Ministers took place on December 21st, before the Chamber of the Peers. They were condemned to imprisonment for life, but the extremists desired their death, and a revolt took place, which it required all the efforts of the army and the National Guard to keep in check. On February 14th, 1831, the anniversary of the death of the Duc de Berri, the Legitimists held a special service in the Church of St. Germain l'Auxerrois, when a collection was made for the soldiers of the Royal Guard who had been wounded in the days of the Revolution. The angry mob attacked the church and the presbytery, and on the following day the palace of the Archbishop was attacked, and Notre Dame itself was in danger of being sacked. . . . The result was to render the Liberals unpopular with the middle classes who governed the country. When the King refused to support the inhabitants of the Italian duchies of the Emilia against an Austrian intervention, Laffitte resigned. He was succeeded by Casimir Périer, the head of the Conservative party, a man of large fortune and commanding temper, clear head and energetic spirit, but possessed, above all, with the sense of authority and a passion for power. . . . He was always ready to take responsibility upon himself, even if it brought hatred with it, and aimed at the establishment of a free but regular government, a government of peace which encouraged no violence, either at home or abroad. He dissolved the Chamber on May 31st, 1831, and asked the electors to decide between the new monarchy and the old. The enlarged electoral body gave a decisive verdict, which disarmed, once and for all, the forces of Legitimism and at the same time repressed the Radicals. Meanwhile, the heads of the Opposition, Arago, Odilon Barrot and Laffitte, were returned to the Chamber. In fourteen months Casimir Périer had firmly established his authority over the Chamber, and the power of the Chamber over the Sovereign and the country. He carried to a practical result the programme of the Doctrinaires and the more Liberal Conservatives. To the democracy he opposed the army; to the revolutionaries the doctrines of Liberalism. He exercised a dictatorship, but a liberal dictatorship. He called to his side Dupin, Guizot and Thiers. Unfortunately his rule was short. . . . In the night of April 28th, 1832, an Italian steamer, the *Carlo Alberto*, landed in the neighbourhood of Marseilles the Duchesse de Berri, accompanied by some of her faithful supporters, such as Bourmont and Kergolay, with the object of recovering the crown for her son, the Duc de Bordeaux. She failed to rouse the south of France, but collected the chiefs of a new Vendéan insurrection at Nantes, and forced the Government to declare a state of siege in four Departments. . . . Reaching in this way the Château de Plassac, she issued to the people of La Vendée a summons to arms for May 24th. Only a few hundreds answered the call, and two engagements, one at La Chêne, the other at La Pénissière, sufficed to crush the movement. [See also ITALY: 1830-1832.] . . . The natural successor of Casimir Périer would have been Guizot, the leader of the Doctrinaires. But the King had the strongest objection to appointing him. He had got rid of one dictator and did not wish to subject himself to another. For four months, from June to October, 1832, the King strained every nerve to avoid entrusting the government to Guizot and his friends. . . . But events were too strong for him, and, after October 11th, he gave to Marshal

Soult the task of forming a Ministry. Broglie became Minister of Foreign Affairs, Thiers took the portfolio of the Interior, and Guizot that of Education. It was a 'Ministry of all the talents,' a triumph for the Doctrinaires. In February, 1833, Guizot was able to say, 'Insurrection is dead, the societies are dead, revolutionary propagandism is dead, and the revolutionary spirit is dead.' . . . In order to destroy the evil of unrest and all prospect of its revival, Guizot passed a law concerning primary education in June, 1833, which invited the Catholics to associate themselves with State officials in the work of establishing internal and social peace. . . . Thiers, on his side, urged the adoption of a system of public works at a cost of 100,000,000 francs to be spread over five years. But, in this very summer, the heads of the Republican party were stimulated to fresh efforts. The Ministry attempted to suppress activity by indicting twenty-seven of the Republican leaders before the Court of Assizes. They were all acquitted, and this gave new encouragement to the leaders, who thought the time had come to unfurl their standard. . . . In Lyons an insurrection lasted from April 9th to April 13th, and when news of the outbreak reached Paris barricades were raised there by the Republicans. Thiers adopted rigorous measures, arresting the most active members of the Society of the Rights of Man, and holding 40,000 soldiers in readiness to march. . . . Attempts of a similar kind made at St. Étienne, Clermont, Marseilles, Belfort, Luneville and elsewhere were extinguished with equal success. . . . Laws of great severity were passed against the carrying of arms and against the democratic journals. The elections which took place in May, 1834, produced a Parliament still more hostile to Republican ideas. It doubled the severity of previous Ministries. . . . The Government was determined to bring the whole of the offenders before a special High Court composed of the Chamber of Peers. Two thousand persons had been arrested, and 164 were brought to trial. The trial did not begin till March 5th, 1835, and was not concluded till January 23rd, 1836, by which time 4,000 witnesses had been examined. The offenders were sentenced to various terms of imprisonment, but were all amnestied on the occasion of the marriage of the Duc d'Orléans, which took place on May 8th, 1836. While this trial was proceeding, on July 28th, 1835, as Louis Philippe was riding with the most distinguished members of the Court, the Government, and the army, to attend a review in honour of the Revolution of July, a so-called infernal machine was exploded in the Boulevard du Temple close to the head of the cortège. . . . Eighteen persons who were close to the King were killed, amongst them the ancient Marshal Mortier, Duc de Treviso, and many others were wounded. The King was slightly injured, but continued his progress with commendable courage. The author of this conspiracy was Joseph Fieschi, a Corsican adventurer of abandoned character, who had once served under Murat. He seemed to have had only two accomplices, who were guillotined with him on February 16th, and were regarded as martyrs by the Democrats and Socialists. The result of this conspiracy was the passing of the Laws of September, three in number, dealing respectively with courts of assize, trial by jury, and the Press. The first gave the Ministry power to create as many courts of assize as might be thought necessary for trying offenders against the security of the State; the second allowed condemnations to take place by a bare majority of the jury; and the third established in their most repulsive form the most stringent laws

against the Press. The Press law was directed equally against Legitimists and Republicans, both opponents of the Government, but the Legitimists, having a larger command of money, were less affected by it. . . . Meanwhile a third Party was being organised, consisting partly of men who could not make up their minds, and partly of men whose ambitions had been disappointed. These were favoured by Louis Philippe, who did not like the Doctrinaires. The consequence was that the Broglie Ministry was overthrown, and, in February, 1836, a new Ministry was formed, in which the Presidency of the Council and the portfolio of Foreign Affairs were held by Thiers. The first Ministry of Thiers lasted from February 22nd to September 6th, 1836. From the first there was dissension between the Sovereign and his Ministers. . . . The difference broke into a flame with reference to the civil war between the Carlists and the Cristinos, which still continued in Spain. Great Britain intervened, according to the terms of the Quadruple Alliance. As early as March 18th, 1836, Thiers protested to Lord Palmerston against the policy of the Quadruple Alliance, and reserved to France liberty of action with regard to Spain. In July he made preparations for the intervention. He increased the foreign legion, which the Government had lent to the Queen of Spain against the Carlists, and offered the services of a general to command the royal army. . . . On August 24th, Louis Philippe, having heard that Thiers had allowed it to be announced that a French army would enter Spain, had an official denial inserted in the *Moniteur*, without communicating with his Minister. Thiers, unable to send the army which he had promised, decided to keep his soldiers in arms at the foot of the Pyrenees, but the King ordered him to disband them. Nothing but resignation was possible. . . . A new Ministry was formed, with Molé as President of the Council and Guizot as Minister of Education. Molé was opposed to the Doctrinaires and devoted to the King; Guizot, the head of the Doctrinaires, was purposely kept in a subordinate position. . . . The policy of the King and of Molé had rendered France secure against the attempts of Republicans and Legitimists, but a new danger threatened it by the revival of Napoleonism, which might have been thought to have become extinct by the death of the Duke of Reichstadt, the son of the great Napoleon, in 1832. The head of the Napoleon family was now Prince Louis Napoleon, son of the younger brother of Napoleon, who had been King of Holland, and Hortense Beauharnais, the daughter of Josephine."—O. Browning, *History of the modern world*, pp. 266-273.

Louis Bonaparte "was born in 1808, recollected having seen his illustrious uncle before the battle of Waterloo, and was carefully educated in the Napoleonic cult. Lord Malmesbury, meeting him at his mother's house in Rome in 1820, found him already persuaded that it was his destiny to rule over France. . . . His mother's house in Rome was a centre of nationalist politics, and in 1831 Louis Bonaparte, together with Charles Napoleon, his elder surviving brother, took part in the rising in the Romagna which came to so swift and unsatisfactory a conclusion. The French revolution of 1830 prompted him to enter into relations with the Republican chiefs in Paris, and in the following year, by the death of the duke of Reichstadt, he became heir to the Imperial claims. . . . The Revolution of 1830 had been partially led by Bonapartists, and Louis Bonaparte was convinced that but for an untimely accident it would have resulted in the re-establishment of the Imperial dynasty. On

two separate occasions he attempted to appeal from the Government of France to the people and the army. In 1836 he was taken red-handed at Strasburg, having failed to suborn the garrison. In 1840, an enterprise carried out with a similar lack of circumspection failed ignobly at Boulogne. These disastrous miscarriages were sufficient to ruin a reputation. Louis Bonaparte had not only grossly miscalculated the elementary conditions of success, but he had appeared in a ridiculous and melodramatic light as a hare-brained adventurer. Nevertheless there is something impressive in the pertinacity of his fatalism, and in the skill with which, when placed upon his trial in 1840, he contrived to define his political position. 'One last word, gentlemen, I represent before you a principle, a cause, and a defeat. The principle is the sovereignty of the people; the cause, that of the empire; the defeat, Waterloo. You have recognized the principle, you have served the cause, you wish to avenge the defeat.' He maintained that he desired not to bring about an Imperial restoration, but to convolve a national congress which should decide upon the political destinies of France."—H. A. L. Fisher, *Bonapartism*, pp. 131-133.—See also EUROPE: Modern: Revolutionary movement for self-government.

1841-1848.—Limited electoral body and its corruption.—Agitation for reform.—Re-entry of France into the European concert.—"When, at the close of 1840, in the midst of an internal crisis aggravated by dangerous foreign complications, King Louis Philippe called upon Guizot to form a Ministry, the two men had decided that they were reciprocally necessary to one another, and also necessary to the maintenance of the institution which was the foundation-stone both of the parliamentary bourgeoisie and of the Orleans dynasty. . . . With rare frankness and without the slightest embarrassment, Guizot, as Minister for Foreign Affairs, announced to Parliament in the month of November his views on foreign policy, now identical with those of Louis Philippe which he used to criticise. 'Revolution and war, as methods of action, are obsolete for France. She would do herself a great wrong, if she persisted in making use of them. Her methods of influence to-day are, peace, the spectacle of a sound government reposing on a broad liberty. Let us not talk to our fellow-citizens of lands to conquer, or of great wars of revenge. Rather let France prosper, and live free, intelligent, full of spirit, and tranquil.' Guizot proceeded at once to apply this pacific programme to the European crisis, which the Eastern business had pro-

voke. . . . Perhaps he expected at first that the English Minister would facilitate his task by some further concession. Like Louis Philippe, who was corresponding secretly with Leopold and even with Metternich, he was in hopes even on November 6, 1840, that an indulgent Europe would allow Mehemet Ali to hold, besides Egypt, the pachalik of Acre and even Crete for his life. 'It is not the extent of the sacrifice, but the fact of it that matters'—this was the way he put it in London, in Vienna, and elsewhere, when trying to extract from the Courts of Europe some balm for the wounded pride of France. . . . Palmerston, who cared as little for the politeness of Guizot as for the anger of Thiers, refused to allow it. 'If we yielded,' he said, 'the French nation would think that we were yielding to her threats, and not to the prayers of Louis Philippe; . . . the only way to keep straight with such people is to make them understand that you are ready to repel force by force.' . . . Confronted by the enmity of the general public, of the friends of Thiers, and of Liberals irritated by the news from the East and the demands of Europe, Guizot found himself in a difficult situation, when the discussion on the foreign policy of France opened in the Chamber of Deputies. On November 25 the Ministry had to meet a fierce combined attack by Thiers and Berryer, who severely blamed Louis Philippe and his Ministers for having humiliated by their cowardice and lack of confidence in the people a great nation that was still capable of wiping out the disgrace of 1815. By dint of eloquence and coolness, like that of Molé in former days under his own attacks, Guizot succeeded in repelling the assaults. . . . In the midst of Guizot's manœuvres in Paris, an invaluable supporter turned up for him in London. On November 15, 1840, Queen Victoria wrote Palmerston a decisive though courteously worded letter, which brought her impetuous Minister to reason. 'My one ardent desire is for peace; I attach a high, nay, extreme importance to our coming to some conciliatory arrangement with our neighbours.' The advice was practically a command, to which Palmerston could only bow. . . . The time had now arrived for the re-entry of France into the European Concert, from which she had been excluded six months before, that she might secure this concession for her client, this sole surviving result of the victories of Ibrahim which Palmerston and Europe had been able to neutralise. . . . On March 5, 1841, the European Conference by a final minute annulled the Convention of July 15. On this essential point France received due satisfaction. If, owing to the resistance of Russia, she failed in obtaining her desire in the shape of a new treaty confirming the note of 1839, and proclaiming the integrity of the Ottoman Empire under the protection of Europe, she could watch at any rate the preparation of a treaty which was to close the Dardanelles and the Bosphorus to all European fleets, and especially to Russian men-of-war. . . . On November 6, 1840, he [Guizot] announced his intention of repressing anarchy. The law-officers were entrusted to curb the violence of the Press, and keep a hand on assemblies and discussions tending to disorder. At the beginning of 1841, Jouffroy speaking officially on behalf of the majority in support of the same policy, approved of the Ministry abiding by the laws of September 1835, and shelving all electoral reform. . . . He prosecuted all newspapers and books that attacked the dynasty, in Paris or in the provinces. . . . As Metternich acutely remarked, the system of 'centralisation which was the essence of French political life,' enabled Guizot in spite of his unpopularity to carry out his designs and to secure their accept-

ance. He had, like Metternich, made up his mind to put 'an absolute veto upon all innovations in public life'; and henceforth Louis Philippe, willing to work with this Ministry, so long as he secured peace abroad, did not trouble himself about the possible demands of the Left and the Liberal party, as he had done in Molé's time. . . . From the day when the French bourgeoisie established itself in power by the aid of Louis Philippe, and by the same impulse forced the country to recognise its political and social privileges, it began to split up into segments and to obey varying influences. . . . This French bourgeoisie underwent an insensible transformation under the influences, religious, social, or economic, which had developed in so many different directions since the beginning of the nineteenth century. . . . These men sent their children to the Catholic Colleges, which continued to exist or had been revived, alongside of the State institutions where eclectic philosophy ruled, a sort of modernist State Catholicism, constructed, evolved and enacted by Victor Cousin. . . . If a bourgeois of this sort continued to adhere to an order of things which would guarantee the future well-being of their schemes, he was not prepared to sacrifice anything in its defence; this was a business to be left to Government, its prefects, and its functionaries. And gradually the habit of business on a large scale, the sense of affluence, the need for progress and the taste for it, disposed them to look with favour, even in politics, upon novelties which they would not have demanded, but which they were ready to accept. . . . All the men of the dynastic Left, from Odilon Barrot to Lafitte, during 1830 recommended political reform. . . . Guizot had scarcely come to power before a closer intimacy was set on foot between the partisans of the democracy, and these dissentient bourgeois who sought for popularity and novelty, among whom might now be reckoned, by the side of Thiers, Moderates like Dufaure and Passy, and above all Lamartine. . . . The most serious matter was that for the last ten years the democracy, especially the urban democracy, had been growing daily stronger and more conscious of its strength. The development of manufactures and commerce caused the working class to collect in the towns where business and luxury reigned. Between 1831 and 1846, the population of Paris increased by 300,000; and at Lyons, Marseilles, Lille, and Roubaix the rate of growth was the same. It was certainly not for their pleasure that the inhabitants of the French country-side flocked into districts destitute of light and air to earn a wretched wage in cramped workshops by long days' work, from which neither women nor the tenderest children were spared. But their number and their miserable condition aroused in themselves, and in the public, a sense of their needs, and of their value in the world. The singularly painful picture which Dr. Villermé drew in 1840, at the request of the Academy of Moral Sciences, of the physical and moral condition of the workers in certain manufactures marked the starting-point for the first working-class legislation ever passed in a French Parliament. To the cause of these masses of workers, whose lives it was alike their duty and their wish to ameliorate, many a writer devoted his labours and his talent. . . . For a Government that wished to be permanent, it was undoubtedly no easy task to find, among the various currents of opinion and of feeling which drove French society in various directions, the one to which it could best trust itself to escape shipwreck, to avoid collision with the middle classes on the one hand and the common folk, urban and rural, on the other. The situation being such, Guizot, while

supported and approved by the King, could devise nothing better than to remain in port, out of the way of the inconstant and capricious waves of public opinion raised by aspirations which he was determined to ignore. . . . [The shelter by which he (Guizot) hoped] to preserve safely the institutions created by the Orleans Monarchy, consisted of the 'country' as constituted by law, with electors paying 200 francs in taxes, and deputies chosen from those who paid 500 francs on their revenue. What they most wanted, in order to avoid the squalls that might still reach them from the ocean, was the solid break-water of a good stout majority."—E. Bourgeois, *History of modern France*, v. 1, pp. 228-232, 234, 237-244.

1842-1848.—Death of the duke of Orleans.—War in Algeria.—Defeat and capture of Abd-el-Kader.—The Spanish marriage.—Elections of 1846.—Revolution of 1848.—"In July, 1842, the Duke of Orleans, an amiable and deservedly beloved prince, was thrown from his carriage and killed, and a child of four years became the heir to the most burdensome of crowns. . . . The Duke of Nemours, the least distinguished of the king's sons, was named regent. The national feeling had been deeply wounded by the events of 1840. M. Guizot sought to compensate for this by various acquisitions in the Pacific. But little success resulted. [See PACIFIC OCEAN: 1800-1914; also MARQUESAS ISLANDS.] In the Society Islands, at Tahiti, an English missionary had excited the natives against the French. He was driven from the island (1844); but his reports made a stir in the English Parliament, and the French cabinet committed the blunder of asking the Chambers to vote an indemnity for a man who had caused the blood of French soldiers to be shed. Other similar concessions increased the public irritation. . . . The recognition of a right of visitation on the part of England, in 1841, for the repression of the slave-trade, excited so intense an opposition, that the Chamber forced the minister to cancel the treaty. For operations in Algeria, the minister had the good sense to choose an able and energetic man, General Bugeaud, who was capable of inspiring the Arabs with both fear and respect. Abd-el-Kader had violated his treaty, preached the Holy War, and, by the rapidity of his movements, spread terror through the province of Oran, and anxiety even to the gates of Algiers. The general pursued him without pausing as far as the western mountains, pacified that difficult region, and drove the enemy back into the desert. Having taken refuge in Morocco, Abd-el-Kader induced its emperor to take up arms in his cause. France replied to these provocations by the bombardment of Tangier and Mogadore, and by the victory of Isly, which General Bugeaud gained against much superior numbers. The Emperor made peace, and after a time, expelled Abd-el-Kader from his dominions. He was at once captured (November, 1847). [See also BARBARY STATES: 1830-1846.] Good relations with England were unwisely disturbed by the marriage of the Duke of Montpensier with the sister of the queen of Spain. The younger branch of the house of Bourbon was eager to inherit the fortune of the elder branch in the Peninsula, and to deprive an English candidate of the reversion of Spain, as though time had not divested princely unions of almost all importance. England manifested great discontent at being out-

witted. The ministry then, alarmed at the isolation in which France was about to be placed, made advances to Austria, and to win her, sacrificed to her Switzerland and Italy. Switzerland was then trying to reform her constitution so as to give more authority to the central power. But M. Guizot combated the Liberal party and favored the Sonderbund (the Separatists, 1847). The Austrians had occupied Ferrara and committed odious deeds of violence at Milan (February, 1848). M. Guizot contented himself with negotiating in favor of the victims. Thus France became the ally of an empire whose policy was then entirely one of oppression. . . . The elections of 1846, carefully prepared and conducted by the administration, gave it a majority. But it was becoming evident that in the *pays légal*, that is, in the small body of electors (220,000), the political sense was being lost, and calculation was taking the place of patriotism; the electors sold their votes to the deputies; the elected, their suffrage to the ministers; and the representative institutions were vitiated at their source. The president of the Council, upheld by a factitious majority, assumed a haughty tone toward the opposition in Parliament. He had, at the time of the elections, made many promises of reforms. The deputies of the left centre and of the dynastic left, directed by M. Thiers and M. Odilon Barrot, challenged him to fulfil his promises. They demanded the revision of certain taxes, the electoral and parliamentary reforms vainly proposed at each session since 1842. The minister rejected these inoffensive claims; the opposition replied by seventy banquets held in the most important cities, at which the grievances of the country were set forth. Paris belonged entirely to the opposition. A journal established by the Conservatives could not support itself. Even in that party itself disaffection showed itself. Several influential members of the majority went over to the opposition, and among the ministry itself several members objected to this extreme policy. But the presiding minister at the opening of the session of 1848 persisted in his irritating course. Exciting debates kept public opinion in a tumult for six weeks. External events, the victory of the Liberals in Switzerland, the movement in Italy, which was striving to escape from the oppression of Austria, reacted upon France. The opposition attempted a final demonstration,—the banquet of the twelfth arrondissement of Paris. The ministry prevented the meeting; immense crowds immediately gathered, and here and there disturbances broke out. On the evening of the 23d of February a Liberal ministry was appointed under the presidency of M. Thiers. But those who had commenced the movement found themselves unable to control it. The direction of the outbreak passed from their hands into those of experienced conspirators and veterans of the barricades, fighting men, who rushed into the crowd of the boulevards. To a shot fired upon the guard of the Foreign Office, the troops answered by a volley which cut down fifty inoffensive bystanders. At the sight of their dead bodies borne through the streets, amid cries of vengeance, the people of the faubourgs flew to arms. Marshal Bugeaud, commanding the army, had already taken proper steps to repress the riot, when, in the night of the 23rd and 24th, he received from the new ministry the order to withdraw his troops to the Tuileries. Rather than obey this senseless order, he resigned his command, and the resistance was paralyzed. The national guard did nothing; the Revolution followed. Abandoned by the Parisian bourgeoisie, Louis Philippe believed himself to be also abandoned by all France. At

noon he abdicated and departed, protected by a few regiments, without being followed or molested [the monarchy of Louis Philippe had lasted for eighteen years]. The Duke of Orleans was dead, the Prince of Joinville and the Duke of Aumale absent. There were left, with the Duke of Nemours, not a popular prince, and the young Duke of Montpensier, a woman and a child, the Duchess of Orleans and the Count of Paris. The duchess presented herself before the Chamber with the Count of Paris, but the insurgents followed her there and caused a provisional government to be proclaimed, composed of M. Dupont (de l'Eure), Arago, Lamartine, Crémieux, Ledru-Rollin and Garnier-Pagès. Thus through the incapacity of the government and the audacity of a party, France had, instead of a reform regularly carried out by the public authorities, a new insurrection which was to arrest work, destroy millions, shed blood, and interrupt the peaceful progress of the country." —V. Duruy, *History of France*, pp. 641-644.—See also EUROPE: Modern: Political revolution of 1848.

1848 (February-May).—Three months of provisional government.—Extraordinary measures.—Absolutism.—Creation of the Ateliers Nationaux.—Consequences.—On the morning of February 24th—the morning of the king's flight—M. de Lamartine, entering the Palais Bourbon, where the Chamber of Deputies held its meetings, found in the vestibule seven or eight persons waiting for him. "Who they were we are not told—or what they were, except that they belonged to the newspaper press. Even the names of the papers with which they were connected are not expressly stated—though the 'National' and 'Réforme' are indicated. They demanded a secret conference. Lamartine took them into a distant apartment." There they "proposed to him to substitute for Louis-Philippe the Comte de Paris as king, and the Duchess of Orleans as regent, and to place him [Lamartine] over them as minister." "Lamartine does not appear to have been surprised at the proposal. He does not appear to have doubted the power of seven or eight journalists to dethrone a king, create a regent, and appoint a minister! And he was right. The 'National' and the 'Réforme,' whose representatives stood before him, did more than all this, a couple of hours after. . . . He objected to their scheme that such an arrangement would not last, and declared himself in favour of a republic, based on universal suffrage; . . . they expressed their conviction, and separated, agreed, apparently, on the course of action to be pursued." A few hours later, the Chamber was invaded by a body of rioters, fresh from the sack of the Tuileries. The Duchess of Orleans, who had presented herself at the Chamber with her two children, fled before them. "M.

Sauzet, the President, disappeared. Lamartine [who was speaking] remained in the tribune, and desired Dupont de l'Eure to take the vacant chair." Thereupon a Provisional Government was appointed, in some fashion not clearly detailed. It underwent certain changes, by unexplained additions, within the following day or two, but "in the 'Moniteur' of February 27 (the third day of the existence of the Provisional Government), its members are arranged thus:—MM. Arago, Dupont de l'Eure, Albert (ouvrier), F. Marrast, F. Flocon, Lamartine, Marie, L. Blanc, Crémieux, Ledru Rollin, Garnier Pagès. . . . Within two days after its formation it was on the brink of ruin under an attack from the Terrorists [or Red Republicans, who assumed the red flag as their standard]. . . . The contest had left the members of the government in a state of mind which M. de Lamartine thinks peculiarly favourable to wise legislation. . . . 'Every member of the Council sought [he says], in the depths of his heart and of his intellect, for some great reform, some great legislative, political, or moral improvement. Some proposed the instantaneous abolition of negro slavery. Others, the abolition of the restrictions imposed by the laws of September upon the press. Some, the proclamation of fraternity among nations, in order to abolish war by abolishing conquest. Some, the abolition of the qualification of electors. And all, the principles of mutual charity among all classes of citizens. As quickly as these great democratic truths, rather felt than discussed, were converted into decrees, they were printed in a press set up at the door of the council-room, thrown from the windows to the crowd, and despatched by couriers through the departments.' . . . The important decrees, which actually bear date February 25 or 26, and which may therefore be referred to this evening of instinct, inspiration, and enthusiasm, are these:—The 18th, which sets at liberty all persons detained on political grounds. The 19th, by which the government—1, Engages to secure the existence of the operative (ouvrier) by employment; 2, Engages to secure employment (garantir du travail) to all citizens; 3, Admits that operatives ought to combine in order to enjoy the fruits of their labour; 4, And promises to return to the operatives, whose property it is, the million which will fall in from the civil list. The 22nd, which dissolves the Municipal Guards. The 26th, which declares that the actual government of France is republican, and that the nation will immediately be called on to ratify by its votes this resolution of the government and of the people of Paris. The 29th, which declares that Royalty, under any name whatever, . . . is abolished. . . . And the 30th, which directs the immediate establishment of national workshops (ateliers nationaux). We confess that we agree with Lamartine in thinking that they bear the stamp of instinct much more than that of reason. . . . The declaration that the actual government of France was republican . . . was palpably untrue. The actual government of France at that time was as far removed from republicanism as it was possible for a government to be. It was a many-headed Dictatorship—a despotic oligarchy. Eleven men—some appointed in the offices of a newspaper, and the others by a mob which had broken into the Chamber of Deputies—ruled France, during three months, with an absoluteness of which there is no other example in history. . . . They dissolved the Chamber of Deputies; they forbade the peers to meet; they added 200,000 men to the regular army, and raised a new metropolitan army of 20,000 more at double the ordinary pay; to meet this

expense they added 35 centimes to the direct taxes; they restricted the Bank from cash payments; they made its paper a legal tender, and then required it to lend them fifty millions; . . . they altered the hours of labour throughout France, and subjected to heavy fines any master who should allow his operatives to remain at work for the accustomed period . . . The necessary consequence of the 19th decree, promising employment to all applicants, was the creation of the ateliers nationaux by the 30th. These workshops were immediately opened in the outskirts of Paris. A person who wished to take advantage of the offers of the Government took from the person with whom he lodged a certificate that he was an inhabitant of the Département de la Seine. This certificate he carried to the mairie of his arrondissement, and obtained an order of admission to an atelier. If he was received and employed there, he obtained an order on his mairie for forty sous. If he was not received, after having applied at all of them, and found them all full, he received an order for thirty sous. Thirty sous is not high pay; but it was to be had for doing nothing; and hopes of advancement were held out. Every body of eleven persons formed an escouade; and their head, the escouadier, elected by his companions, got half a franc a day extra. Five escouades formed a brigade; and the brigadier, also elected by his subordinates, received three francs a day. Above these again were the lieutenants, the chefs de compagnie, the chefs de service, and the chefs d'arrondissement, appointed by the Government, and receiving progressively higher salaries. Besides this, bread was distributed to their families in proportion to the number of children. The hours supposed to be employed in labour were nine and a half. . . . To suppose that such an army . . . could be regularly organised, fed, and paid, for months in idleness, and then quietly disbanded, was a folly of which the Provisional Government was not long guilty. They soon saw that the monster which they had created could not be subdued, if it could be subdued at all, by any means short of civil war. . . . 'A thunder-cloud (says M. de Lamartine) was always before our eyes. It was formed by the ateliers nationaux. This army of 120,000 work-people, the great part of whom were idlers and agitators, was the deposit of the misery, the laziness, the vagrancy, the vice, and the sedition which the flood of the revolution had cast up and left on its shores.' . . . As they were managed, the ateliers nationaux, it is now admitted, produced or aggravated the very evils which they professed to cure or to palliate. They produced or continued the stagnation of business which they were to remedy; and, when they became absolutely intolerable, the attempt to put an end to them occasioned the civil war which they were to prevent."—N. W. Senior, *Journals kept in France and Italy, 1848-1852*, v. 1, pp. 14-50.—"The National Workshops . . . were a source of ultimate disappointment to those who had looked to them to solve the complex labor problems of the modern industrial system. Conceded by the Provisional Government against its will, and to gain time, that Government did not intend that they should succeed. Their creation was intrusted to the Minister of Commerce, Marie, a personal enemy of Louis Blanc, who [Marie], according to his own admission, was willing to make this experiment in order to render the latter unpopular and to show workmen the fallacy of his theories of production, and the dangers of such theories for themselves. The scheme was represented as Louis Blanc's though it was denounced

by him, was established especially to discredit him, and was a veritable travesty of his ideas. Blanc wished to have every man practice his own trade in real factories, started by state aid. They should be engaged in productive enterprises; moreover, only men of good character should be permitted to join these associations. Instead of this, the Government simply set men of the most varied sorts—cobblers, carpenters, metal workers, masons, to labor upon unproductive tasks, such as making excavations for public works. They were organized in a military fashion, and the wages were uniform, two francs a day. It was properly no system of production that was being tried, but a system of relief for the unemployed, who were very numerous owing to the fact that many factories had had to close because of the generally disturbed state of affairs. The number of men flocking to these National Workshops increased alarmingly: 25,000 in the middle of March; 66,000 in the middle of April; over 100,000 in May. As there was not work enough for all, the number of working days was reduced for each man to two a week, and his total wage for a week fixed at eight francs.—C. D. Hazen, *Modern Europe*, p. 409.

1848 (April-December).—Constituent national assembly and the constitution of the second republic.—Insurrection of the workmen of the Ateliers Nationaux.—Dictatorship of Cavaignac.—Appearance of Louis Napoleon.—Election to the presidency of the republic.—The election by universal suffrage of a constituent national assembly, twice deferred on account of fears of popular turbulence, took place on the 23d of April, and resulted in the return of a very Conservative majority, largely composed of Napoleonists, Legitimists and Orleanists. The meeting of the assembly was opened on May 7th. "The moderates were anxious to invest M. de Lamartine with a dictatorial authority," which he declined. "Eventually an executive commission of five was appointed. . . . The commission consisted of Arago, Garnier Pagès, Marie, Lamartine, and Ledru Rollin. . . . This conciliatory executive commission was elected by the Assembly on the 10th of May. On the 15th, the 'conciliated' mob broke into the chamber, insulted the deputies, turned them out, proclaimed a provisional government, and then marched to the Hôtel de Ville, where they were installed with due revolutionary solemnity;" but the National Guard rallied to the support of the government, and the insurrection was promptly suppressed. "Eleven vacancies in the Assembly had to be filled in the department of the Seine, on account of double returns. These elections produced fresh uneasiness in Paris. Eighth on the list stood Louis Napoleon Bonaparte; and among the names mentioned as candidates was that of Prince de Joinville, the most popular of the Orleans princes. The executive commission appears to have been more afraid of the latter than of the former; and to prevent the disagreeable circumstance of France returning him to the Assembly as one of her representatives, they thought themselves justified in declaring the whole Orleans family incapable of serving France in any capacity. . . . Louis Napoleon, on the first proclamation of the Republic, had at once offered his services; but was by the Provisional Government

requested to withdraw, as his great name might trouble the republic. . . . Two Bonapartes had been elected members for Corsica, and three sat in the Assembly; but, as the next heir of the Emperor, Louis Napoleon caused them much uneasiness. . . . Already mobs had gone about the Boulevard crying 'Vive l'Empereur.' The name of Bonaparte was not unpopular with the bourgeoisie; it was a guarantee of united and strong government to all. On his election, Louis Napoleon wrote to the President of the Assembly: a phrase in his letter gave considerable offence. Some days before, Lamartine had proposed his exclusion from the Assembly and the country; but, as it appeared he was in no way implicated in the seditious cries, they voted his admission by a large majority. The phrase which gave umbrage was: 'If the country imposes duties upon me, I shall know how to fulfil them.' . . . However, by a subsequent letter, dated the 15th, he restored confidence, by saying he would resign rather than be a cause of tumult. But the real difficulties of the government arose from a different cause. The National Assembly bore with impatience the expense of the Ateliers Nationaux: it was enough to submit to the factious spirit of those bodies; but it was too much to pay them for keeping on foot an organized insurrection, ever ready to break out and deluge the capital in blood. The executive commission had been desirous of finding means gradually to lessen the numbers receiving wages; and on the 12th of May, it was resolved to close the lists. The commission foresaw that if the Ateliers were at once abolished, it would produce a rebellion in Paris; and they hoped, first, by preventing any more being inscribed, and then by setting them to task-work, that they should gradually get the numbers reduced. . . . But the Assembly would not wait; they ordered all the workmen between 18 and 25 years old, and unmarried, to be drafted into the army, or to be discharged; and they were breaking them up so rapidly, that if the workmen wanted to fight it was evident that it must be done at once or not at all. . . . General Cavaignac, who had been sent for from Africa, was on his arrival in Paris named Minister at War, and had command of the troops. . . . Preparations for the conflict commenced on Thursday the 22nd of June; but it was noon of the following day ere the first shot was fired. It is said, that had the executive commission known what they were about, the heads of the insurrection might have been all arrested in the meantime, for they were walking about all day, and at one time met in the Jardin des Plantes. The fighting on the 23d continued all day, with much slaughter, and little practical result. . . . The extent of the insurgent lines swallowed up the troops, so that, though great numbers were in Paris, there appeared to be a deficiency of them, and loud complaints were made against the inefficiency of the executive commission. During the night the fighting ceased, and both parties were occupied in strengthening their positions. The Assembly was sitting in permanence; they were highly incensed against the executive commission, and wished them to send in their resignations; but the latter refused, saying it was cowardly to do so in the face of insurrection. The Assembly then formally deposed the commission, and appointed Cavaignac dictator; to which arrangement the executive commission at once assented. The General instantly ordered the National Guards to prevent assemblages in the streets, and that no one should go out without a pass: any one going about, out of uniform, without permission, was walked home.

In this manner many persons carrying ammunition to the insurgents were arrested. At noon, he sent a flag of truce with a proclamation, offering an amnesty to the rebels, at the suggestion of the ex-prefect Caussidière; but it was unhesitatingly rejected. This latter personage, though he was not among the barricades, was by many thought to be the head of the insurrection. The troops of the insurgents were managed with great military skill, showing that persons of military knowledge must have had the command; though no one knew who were their leaders. . . . During the early part of the day, the fighting was mainly on the southern side of the river. The church of St. Gervais and the bridges were carried with great slaughter, as well as the church of St. Severin, and their great head-quarters the Pantéon; and by four o'clock, the troops had conquered the whole of the south bank of the Seine. On the other side, a hot engagement was going on in the Faubourgs Poissonnière and St. Denis; these were carried with great loss at a late hour, whence the insurrection was forced back to its great stronghold, the Clos St. Lazare; which defied every effort of General Lamoricière to take it on Saturday. An unfinished hospital served as a citadel, and several churches and public buildings as out-posts; while the old city wall, which they had loop-holed, enabled them to fire on the troops in comparative security; but the buildings were breached with cannon, and the insurgents by four o'clock on Sunday were dispersed. . . . A desperate struggle was going on at a late hour in the Faubourg du Temple; and on the Monday morning the insurgents made a stand behind the Canal St. Martin, where they sent to treat on condition of retaining their arms. But Cavaignac would hear of no terms. It was thought, at one time, that they had surrendered; when some soldiers, going within the lines, were surprised and murdered. Hostilities at once began again, and the insurgents were finally subdued by one o'clock on Monday the 26th. The victory was dearly bought: 8,000 were ascertained to have been killed or wounded; and, as many bodies were thrown into the Seine unrecognised, this is much under the number. Nearly 14,000 prisoners were taken, and 3,000 of these died of gaol fever. . . . The excellent Archbishop of Paris, Denis Auguste Affre, fell a sacrifice to his Christian benevolence. Horrified at the slaughter, he, attended by two of his vicars carrying the olive-branch of peace, passed between the combatants. The firing ceased at his appearance; but, from the discharge of a single musket, it began again: he, nevertheless, mounted the barricade and descended into the midst of the insurgents, and was in the act of addressing them, when some patriot, fearing the effect of his exhortations, shot him from a window. . . . General Cavaignac, immediately after the pacification of Paris, laid down the temporary dictatorship with which he had been invested by the Assembly; but their gratitude for the salvation of society led them to appoint him President of the Council, with the power to name his own Ministry. He at once sent adrift all the red republican party, and chose a Ministry from among the moderate class of republicans; to which he afterwards added some members of the old opposition. . . . Prince Louis Napoleon was again thrust upon the Assembly, by being elected for Corsica; but he wrote a letter on the 8th of July, saying, that though he did not renounce the honour of one day sitting as a representative of the people, he would wait till the time when his return to France could not in any way serve as a pretext to the enemies of the republic. . . . On Tuesday, the 26th of September,

shortly after the president had taken his seat, Louis Napoleon appeared quietly in the chamber, and placed himself on one of the back benches. . . . The discussion of the constitution, which had been referred to a committee, was the only subject of interest, except the important question of how the president should be elected. It was proposed by some that the assembly itself should elect a president, a proposition which was eventually negated by a large majority. The real object was to exclude Louis Napoleon, whose great name gave him every chance of success, if an appeal were made to the universal suffrage of the nation, which the republicans distrusted. Another amendment was moved to exclude all pretenders to the throne; on which, allusion being made to Louis Napoleon, he mounted the rostrum, and denied that he was a pretender. . . . The red republicans were desirous of having no president, and that the constituent assembly itself should name the ministers. It was not the only constitutional point in dispute: for weeks and months the debate on the constitution dragged its weary length along; amendments were discussed, and the work when turned out was, as might have been expected, a botch after all. . . . It was eventually agreed, that to give validity to the election of a president it should be necessary that he should have more than a half of all the votes given; that is to say, more votes than all the other candidates put together; if not, the assembly was to choose between the highest candidate on the list and his competitors, by which means they hoped to be able to get rid of Bonaparte. . . . The constitution was proclaimed on the 10th of November. . . . The legitimist and Orleanist parties refused to start a candidate for fear of weakening Bonaparte, and thus throwing the choice into the hands of the assembly, who would choose General Cavaignac. Both these parties gave the former at least a negative support; and as M. Thiers declared that nine-tenths of the country were opposed to the General as too revolutionary, it was clear that in the country itself reaction was going on faster than in the assembly. . . . Louis Napoleon's chief support was from the inhabitants of the country districts, the peasantry. . . . On the 10th of December, 5,534,520 votes were recorded for Louis Napoleon. General Cavaignac had 1,448,302. Then came Ledru Rollin; then Raspail. Lamartine got 17,914; 23,210 were disallowed, as being given for some of the banished royal family. The total number of voters was 7,440,471."—E. S. Caley, *European revolution of 1848*, v. 1, ch. 4-5.—See also EUROPE: Modern: Political revolution of 1848.

1849-1851.—Monarchical assembly elected.—Repressive measures.—Franchise law of 1850.—Napoleon's conflict with the assembly.—Prelude to the coup d'état.—"The French had thus selected a Prince as President, an innovation in the

art of government. In the following May [1849] they did an equally astonishing thing in the election of a Legislative Assembly. This Assembly of 750 members contained about 500 Monarchists, who were divided into Legitimists, Orleanists, and a few Bonapartists; about 70 moderate Republicans of the kind that had thus far controlled the Republic, and about 180 Socialists. Thus the first legislature elected under the new Constitution of the Republic was overwhelmingly monarchical. Only 70 could be held to be sincerely attached to the present form of government. The explanation of this remarkable result lies in the fact that the Days of June were still very vivid in men's minds. The mass of Frenchmen voted for monarchical candidates because they believed that the Republic was dangerous to order and property. Thus both the President and the majority of the Assembly were, by reason of their very being, enemies of the Constitution under which they were elected. The situation was one that could not permanently endure. The three years that elapsed between the inauguration of the President and the coup d'état of 1851, which virtually ushered in the Empire, though it was not formally proclaimed until a year later, were a period not of legislative and social reform, but of adroit and tortuous factional politics, played not for the advancement of France, but for the advantage of party. . . . At first the President and the monarchical majority cooperated against the republican party, which each felt to be the real enemy. Opportunities for doing this were not slow in presenting themselves. Some of the Republicans unwisely attempted an insurrection against the Government, June 13, 1849. This was easily put down. Following up their victory, the authorities proceeded to cripple the Opposition severely. Thirty-three of their representatives were arrested and deprived of their seats in the Legislative Assembly. Their journals were suppressed. Public meetings were forbidden for a year, an order renewed several times later. As school-teachers had been effective friends of the Republic all over France, education was largely reorganized with a view of bringing it more closely under the control of the clergy, friends of monarchy. Paris was declared under martial law, which gave greater actual power than ever to the President. This removal of the republican leaders rendered easy the passage of further repressive legislation. The Assembly next enacted the Franchise Law of 1850. This provided that to be a voter one must have resided in a given commune for three years, and that that fact must be proved by the presence of one's name on the tax list. This law virtually abolished universal suffrage and re-established in a roundabout way a property qualification. It deprived over three million workmen, one-third of the electorate, of the suffrage, either because they paid no taxes or because to get work they had frequently to change their residence and could not, therefore, meet the three-year residence qualification. Those thus disfranchised, of course, bitterly hated the Assembly. [See also SUFFRAGE, MANHOOD: France: 1848-1875.] Another law was then passed restricting the freedom of the press by re-establishing the requirement of a preliminary deposit of 50,000 francs from all editors. This stamped out of existence most of the cheap newspapers of the Republicans and Socialists, as they could not meet the qualification. Having silenced the Republicans, the victors, President and Assembly, fell to warring with each other. This conflict, showing itself in many minor matters, became most pronounced and bitter over the question of a revision of the Constitution. The Con-

stitution forbade the re-election of the President at the end of his four-year term. Louis Napoleon had no desire to retire to private life. He believed that if only this article were stricken out the immense majority of Frenchmen would re-elect him. He demanded that this clause be revised by the Assembly. The Assembly refused. The President was balked in his ambition of continuing in power by peaceful means. He now showed that he was ready to resort to any means to that end. He planned and carried out with extraordinary precision and success a remarkable coup d'état. In order to discredit the Assembly with the people, he demanded that the law limiting the suffrage, which he himself had strongly urged, be repealed. This was refused, the Assembly not wishing to stultify itself so conspicuously. The President, with audacious duplicity, then posed as the guardian of the Constitution, as the representative of the principle of universal suffrage. He believed that the workmen would not intervene in behalf of the Assembly if he should attack it."—C. D. Hazen, *Europe since 1815*, pp. 201-203.

1851.—Plot of the coup d'état.—"In the beginning of the winter of 1851 France was still a republic; but the Constitution of 1848 had struck no root. There was a feeling that the country had been surprised and coerced into the act of declaring itself a republic, and that a monarchical system of government was the only one adapted for France. The sense of instability which sprang from this belief was connected with an agonising dread of insurrections. . . . Moreover, to those who watched and feared, it seemed that the shadow on the dial was moving on with a terrible steadiness to the hour when a return to anarchy was, as it were, pre-ordained by law; for the Constitution required that a new president should be chosen in the spring of the following year. . . . In general, France thought it best that, notwithstanding the Rule of the Constitution, which stood in the way, the then President should be quietly re-elected; and a large majority of the Assembly, faithfully representing this opinion, had come to a vote which sought to give it effect; but their desire was baffled by an unwise provision of the Republican Charter which had laid it down that no constitutional change should take place without the sanction of three-fourths of the Assembly. By this clumsy bar the action of the State system was hampered, and many whose minds generally inclined them to respect legality were forced to acknowledge that the Constitution wanted a wrench." The President of the republic, Prince Louis Napoleon Bonaparte, "had always wished to bring about a change in the Constitution, but, originally, he had hoped to be able to do this with the aid and approval of some at least of the statesmen and eminent generals of the country." But, "although there were numbers in France who would have been heartily glad to see the Republic crushed by some able dictator, there were hardly any public men who believed that in the President of the Republic they would find the man they wanted. Therefore his overtures to the gentlemen of France were always rejected. Every statesman to whom he applied refused to entertain his proposals. Every general whom he urged always said that for whatever he did he must have 'an

order from the Minister of War.' The President being thus rebuffed, his plan of changing the form of government with the assent of some of the leading statesmen and generals of the country degenerated into schemes of a very different kind; and at length he fell into the hands of persons of the quality of Persigny, Morny, and Fleury. . . . The President had been a promoter of the law of the 31st of May, restricting the franchise, but he now became the champion of universal suffrage. To minds versed in politics this change might have sufficed to disclose the nature of the schemes upon which the Chief of the State was brooding; but, from first to last, words tending to allay suspicion had been used with great industry and skill. From the moment of his coming before the public in February 1848, the Prince laid hold of almost every occasion he could find for vowing, again and again, that he harbored no schemes against the Constitution. . . . It was natural that in looking at the operation which changed the Republic into an Empire, the attention of the observer should be concentrated upon the person who, already the Chief of the State, was about to attain to the throne; and there seems to be no doubt that what may be called the literary part of the transaction was performed by the President in person. He was the lawyer of the confederacy. He no doubt wrote the Proclamations, the Plebiscites, and the Constitutions, and all such like things; but it seems that the propelling power which brought the plot to bear was mainly supplied by Count de Morry, and by a resolute Major, named Fleury. M. Morny was a man of great daring, and gifted with more than common powers of fascination. He had been a member of the Chamber of Deputies in the time of the monarchy; but he was rather known to the world as a speculator than as a politician. He was a buyer and seller of those fractional and volatile interests in trading adventures, which go by the name of 'Shares.' . . . He knew how to found a 'company,' and he now undertook to establish institutions which were destined to be more lucrative to him than any of his former adventures. . . . It seems, however, that the man who was the most able to make the President act, to drive him deep into his own plot, and fiercely carry him through it, was Major Fleury. . . . He was daring and resolute, and his daring was of the kind which holds good in the moment of danger. If Prince Louis Bonaparte was bold and ingenious in designing, Fleury was the man to execute. . . . The language held by the generals who declared that they would act under the authority of the Minister of War and not without it, suggested the contrivance which was resorted to. Fleury determined to find a military man capable of command, capable of secrecy, and capable of a great venture. The person chosen was to be properly sounded, and if he seemed willing, was to be admitted into the plot. He was then to be made Minister of War, in order that through him the whole of the land forces should be at the disposal of the plotters. Fleury went to Algeria to find the instrument required, and he so well performed his task that he hit upon a general officer who was christened, it seems, Jacques Arnaud Le Roy, but was known at this time as Achille St. Arnaud. . . . He readily entered into the plot. From the moment that Prince Louis Bonaparte and his associates had entrusted their secret to the man of Fleury's selection, it was perhaps hardly possible for them to flinch, for the exigencies of St. Arnaud, formerly Le Roy, were not likely to be on so modest a scale as to consist with the finan-

cial arrangements of a Republic governed by law, and the discontent of a person of his quality with a secret like that in his charge would plainly bring the rest of the brethren into danger. He was made Minister of War. This was on the 27th of October. At the same time M. Maupas or de Maupas was brought into the Ministry. . . . Persigny, properly Fialin, was in the plot. He was descended on one side of an ancient family, and disliking his father's name he seems to have called himself for many years after the name of his maternal grandfather. . . . It was necessary to take measures for paralyzing the National Guard, but the force was under the command of General Perrot, a man whose honesty could not be tampered with. To dismiss him suddenly would be to excite suspicion. The following expedient was adopted: the President appointed as Chief of the Staff of the National Guard, a person named Vieyra. The past life and the then repute of this person were of such a kind, that General Perrot, it seems, conceived himself insulted by the nomination, and instantly resigned. That was what the brethren of the Elysée wanted. On Sunday, the 30th, General Lawæstine was appointed to the command. . . . His function was—not to lead the force of which he took the command but—to prevent it from acting. . . . Care had been taken to bring into Paris and its neighborhood the regiments most likely to serve the purpose of the Elysée, and to give the command to generals who might be expected to act without scruples. The forces in Paris and its neighborhood were under the orders of General Magnan. . . . From time to time the common soldiery were gratified with presents of food and wine, as well as with an abundance of flattering words, and their exasperation against civilians was so well kept alive that men used to African warfare were brought into the humor for calling the Parisians 'Bedouins.' There was massacre in the very sound. The army of Paris was in the temper required. It was necessary for the plotters to have the concurrence of M. St. Georges, the director of the state printing-office. M. St. Georges was suborned. Then all was ready. On the Monday night between the 1st and 2d of December, the President had his usual assembly at the Elysée. Ministers who were loyally ignorant of what was going on were mingled with those who were in the plot. . . . At the usual hour the assembly began to disperse, and by eleven o'clock there were only three guests who remained. These were Morny (who had previously taken care to show himself at one of the theatres), Maupas, and St. Arnaud, formerly Le Roy. There was, besides, an orderly officer of the President, called Colonel Beville, who was initiated in the secret. . . . They were to strike the blow that night. . . . By and by they were apprised that an order which had been given for the movement of a battalion of gendarmerie, had duly taken effect without exciting remark. . . . The President entrusted a packet of manuscripts to Colonel Beville, and despatched him to the state printing-office. It was in the streets which surround this building that the battalion of gendarmerie had been collected. When Paris was hushed in sleep, the battalion came quietly out, and folded round the state printing-office. From that moment until their work was done the printers were all close captives, for no one of them was suffered to go out. . . . It is said that there was something like resistance, but in the end, if not at first, the printers obeyed. Each compositor stood whilst he worked between two policemen, and, the manuscript being cut into many pieces, no

one could make out the sense of what he was printing. By these proclamations the President asserted that the Assembly was a hot-bed of plots; declared it dissolved; pronounced for universal suffrage; proposed a new constitution; vowed anew that his duty was to maintain the Republic; and placed Paris and the twelve surrounding departments under martial law. In one of the proclamations he appealed to the army, and strove to whet its enmity against civilians, by reminding it of the defeats inflicted upon the troops in 1830 and 1848. The President wrote letters dismissing the members of the Government who were not in the plot; but he did not cause these letters to be delivered until the following morning. He also signed a paper appointing Morny to the Home Office. . . . The order from the Minister of War was probably signed by half-past two in the morning, for at three it was in the hands of Magnan. At the same hour Maupas (assigning for pretext the expected arrival of foreign refugees), caused a number of Commissaries to be summoned in all haste to the Prefecture of Police. At half-past three in the morning these men were in attendance. . . . It was then that, for the first time, the main secret of the confederates passed into the hands of a number of subordinate agents. During some hours of that night every one of those humble Commissaries had the destinies of France in his hands; for he might either obey the Minister, and so place his country in the power of the Elysée, or he might obey the law, denounce the plot, and bring its contrivers to trial. Maupas gave orders for the seizure at the same minute of the foremost Generals of France, and several of her leading Statesmen. Parties of the police, each under the orders of a Commissary, were to be at the doors of the persons to be arrested some time beforehand, but the seizures were not to take place until a quarter past six. . . . At the appointed minute, and whilst it was still dark, the designated houses were entered. The most famous generals of France were seized. General Changarnier, General Bedeau, General Lamoricière, General Cavaignac, and General Leflô were taken from their beds, and carried away through the sleeping city and thrown into prison. In the same minute the like was done with some of the chief members and officers of the Assembly, and amongst others with Thiers, Miot, Baze, Colonel Charras, Roger du Nord, and several of the democratic leaders. Some men believed to be the chiefs of secret societies were also seized. The general object of these night arrests was that, when morning broke, the army should be without generals inclined to observe the law, that the Assembly should be without the machinery for convoking it, and that all the political parties in the State should be paralyzed by the disappearance of their chiefs. The number of men thus seized in the dark was seventy-eight. Eighteen of these were members of the Assembly. Whilst it was still dark, Morny, escorted by a body of infantry, took possession of the Home Office, and prepared to touch the springs of that wondrous machinery by which a clerk can dictate to a nation. Already he began to tell 40,000 communes of the enthusiasm with which the sleeping city had received the announcement of measures not hitherto disclosed. When the light of the morning dawned, people saw the Proclamations on the walls, and slowly came to hear that numbers of the foremost men of France had been seized in the night-time, and that every General to whom the friends of law and order could look for help was lying in one or other of the prisons. The newspapers, to which a man

might run in order to know truly what others thought and intended, were all seized and stopped. The gates of the Assembly were closed and guarded, but the Deputies, who began to flock thither, found means to enter by passing through one of the official residences which formed part of the building. They had assembled in the Chamber in large numbers, and some of them having caught Dupin, their reluctant President, were forcing him to come and take the chair, when a body of infantry burst in and drove them out, striking some of them with the butt-ends of their muskets. . . . Driven from their Chamber, the Deputies assembled at the Mayoralty of the 10th arrondissement. There, upon the motion of the illustrious Berryer, they resolved that the act of Louis Bonaparte was a forfeiture of the Presidency, and they directed the judges of the Supreme Court to meet and proceed to the judgment of the President and his accomplices. These resolutions had just been voted, when a battalion of the Chasseurs de Vincennes entered the courtyard. . . . An aide-de-camp of General Magnan came with a written order directing the officer in command of the battalion to clear the hall, to do this if necessary by force, and to carry off to the prison of Mazas any Deputies offering resistance. . . . The number of Deputies present at this moment was 220. The whole Assembly declared that they resisted, and would yield to nothing short of force. . . . They were carried off, some to the Fort of Mount Valerian, some to the fortress of Vincennes, and some to the prison of Mazas. . . . By the laws of the Republic, the duty of taking cognizance of offences against the Constitution was cast upon the Supreme Court. The Court was sitting, when an armed force entered the hall, and the judges were driven from the bench, but not until they had made a judicial order for the impeachment of the President."—A. W. Kinglake, *Invasion of the Crimea*, v. 1, ch. 14.

1851.—Triumph of the coup d'état.—Destruction of the second republic.—"The second part of the Coup d'Etat, which drenched the boulevards with innocent blood, has cast a shade of horror over the whole transaction that time has been unable to efface. Paris is never so reduced in a crisis, whether the cause be just or unjust, that she is bereft of hands to erect and defend barricades in her streets. In the Faubourg St. Antoine an incipient rising on the 2d [of December] was suppressed immediately by the troops. The volcanic district from the Hôtel de Ville northward to the boulevards also showed signs of uneasiness, and throughout the morning of the 3d the military were busy pulling down partially completed barricades and dispersing small bodies of insurgents. There seems to be little question that the army was embittered against the populace. If this were so, the proclamation circulated by the president through the ranks on the 2d was not calculated to appease it. He styled the soldiers as the 'flower of the nation.' He pointed out to them that his interests and theirs were the same, and that they had suffered together in the past from the course of the Assembly. He reminded them of the years 1830 and 1848, when the army had fought the people in the streets of Paris, and concluded by an allusion to the military grandeur of the Bonapartes. During the afternoon of the 3d and morning of the 4th the troops remained

inactive, pending orders from the minister of war, and in this interval several strong barricades were erected in the restless quarters. On the afternoon of the 4th the boulevards, from the Madeleine to the Rue du Sentier, were occupied by a great body of troops awaiting orders to move east through the Boulevard Bonne Nouvelle upon the barricaded district. The soldiers stood at ease, and the officers lounged about, smoking their cigars. The sidewalks, windows, and balconies were crowded with men, women, and children, thoughtless on-lookers of the great military display. Suddenly a single shot was heard. It was fired from a window near the Rue du Sentier. The troops at the head of the column faced sharply to the south, and commenced a deliberate fusillade upon the crowded walks and balconies. The battalions farther west caught the murderous contagion, until the line of fire extended into the Boulevard des Italiens. In a few moments the beautiful boulevards were converted into a bloody pandemonium. The sidewalks were strewn with corpses and stained with blood. The air was rent with shrieks and groans and the breaking of glass, while the steady, incessant rattling of the musketry was intensified by an occasional cannon-shot, that brought down with a crash the masonry from some fine façade. This continued for nearly twenty minutes, when a lack of people to kill seems to have restrained the mad volleys of the troops. If any attempt was made by officers to check their men, it was wholly unavailing, and in some cases miserable fugitives were followed into buildings and massacred. Later in the day the barricades were attacked, and their defenders easily overcome. By nightfall insurgent Paris was thoroughly cowed. These allegations, though conflicting with sworn statements of Republicans and Imperialists, can hardly be refuted. The efforts of the Napoleonic faction to portray the thoughtless crowd of the boulevards as desperate and bloody-minded rebels have never been successful, while the opposition so brilliantly represented by the author of 'Histoire d'un Crime' have been too fierce and immoderate in their accusations to win public credence. The questions as to who fired the first shot, and whether it was fired as a signal for, or a menace against the military, are points on which Frenchmen of different political parties still debate. It is charitable to accept M. Hugo's insinuation that the soldiery were drunk with the president's wine, even though the fact implies a low state of discipline in the service. To what extent was the president responsible for the boulevard horror? M. Victor Hugo and M. de Maupas do not agree upon this point, and it seems useless to discuss it. Certain facts are indisputable. We know the army bore small love toward the Parisians, and we know it was in the streets by order of the president. We know that the latter was in bad company, and playing a dangerous game. We may discard M. Victor Hugo's statement as to the orders issued by the president from the Elysée on the fatal day, but we cannot disguise the fact that the boulevard horror subdued Paris, and crowned his cause with success. In other words, Louis Napoleon was the gainer by the slaughter of unoffending men, women, and children, and in after-years, when referring to the 4th of December, he found it for his interest to distort facts, and make figures lie. . . . Louis Napoleon had expressly stated in the proclamation that astonished Paris on the 2d that he made the people judge between him and the Assembly. The citizens of France were called upon to vote on the 20th and 21st of December 'Yes' or 'No' to the

question as to whether the president should be sustained in the measures he had taken, should be empowered to draw up a new constitution, and should retain the presidential chair for a period of ten years."—H. Murdock, *Reconstruction of Europe*, ch. 2.

1851-1852.—Transportation and exile of republicans.—Dictator's constitution for France.—Rapid progress of despotism.—Second empire ordained.—Elevation of Napoleon III to the throne.—The struggle was over: terror of the victors followed. Thirty-two departments were in a stage of siege. More than 100,000 citizens were languishing in prison. Trial followed trial in rapid succession, the cases being classed under three heads: 1st, persons found armed, or against whom serious charges existed; 2d, persons charged with minor offences; 3d, dangerous persons. The first class was judged at once by a council of war, the second sent to various tribunals, the third transported without trial. Many prisoners were not even questioned. Numbers were set free; but multitudes were still held. Under these conditions the date of the plébiscite, December 20 and 21, approached. Notices were posted to the effect that 'any person seeking to disturb the polls or to question the result of the ballot would be tried by a council of war.' All liberty of choice was taken from the electors, many of whom were arrested on suspicion of exciting others to vote against the president of the republic. When the lists were published it was found that the 'ayes' had carried the day, although many did not vote at all. Indubitably the figures were notably swelled by violence and fraud. . . . December 31, ex-Minister Baroche presented the result of the ballots to the prince-president,—a strange title now given to Louis Napoleon, for the time being, in lieu of another. . . . Next day, January 1, 1852, Archbishop Sibour celebrated a Te Deum in Notre Dame, the prince-president sitting under a canopy. . . . While the man of December 2 lodged in the palace of kings, the chief representatives of the republic were cast into exile. The executors of the plot treated the captive representatives very differently according as they were conservative or republican. When the prisoners were told that a distinction was to be made among them, they honorably refused to give their names, but they were betrayed by an usher of the Assembly. The republicans were then sent to Mazas, and treated like common thieves, M. Thiers alone being allowed a bed instead of the ordinary hammock. The other party were soon set free, with but few exceptions, and on the 8th of January the generals imprisoned at Ham, with their companion, Questor Baze, were sent to Belgium. Next day a series of proscriptions came out. All persons 'convicted of taking part in the recent insurrections' were to be transported, some to Guiana, some to Algiers. A second decree expelled from France, Algiers, and the French colonies, 'as a measure of public safety,' sixty representatives of the Left, including Victor Hugo and certain others, for whom it was reserved to aid in the foundation of a third republic. A third decree commanded the temporary absence from France and Algiers of eighteen other representatives, including the generals, with Thiers, De Rémusat, and several members of the Left, among them Edgar Quinet and Emile de Girardin. . . . The next step was to establish the famous 'mixed commissions' in every province.

These commissions were to try the numerous prisoners still held captive. . . . The mixed commissions of 1852, as the historian of the coup d'état (M. Eugène Ténot) declares, 'decided, without legal proceedings, without hearing of witnesses, without public trial, the fate of thousands and thousands of republicans.' They have left the indelible memory of one of the most monstrous events known in history. An act equally extraordinary in another way was the promulgation of the new constitution framed by the dictator alone (January 14, 1852). . . . The constitution of 1852 began by a 'recognition, confirmation, and guarantee of the great principles proclaimed in 1789, which are the foundation of the public rights and laws of France.' But it did not say one word about the freedom of the press, nor about freedom of clubs and association. . . . 'The government of the French republic is intrusted to Prince Louis Napoleon Bonaparte for the term of ten years.' In the preface Louis Napoleon threw aside the fiction of irresponsibility 'which deceives public sentiment'; the constitution therefore declares the leader of the state responsible to the French people, but omits to say how this responsibility may be realized; the French people have no resource save revolution. . . . The legislative body was to consist of 262 members (one for each 3,500 electors), chosen for five years by universal suffrage. This body would vote upon the laws and taxes. Louis Napoleon, having profited so largely by the repeal of the law of May 31, could scarcely refuse to retain direct universal suffrage, but he essentially altered its character by various modifications. He also so reduced the importance of the only great body still elective, that he had little or nothing to fear from it. Another assembly, the Senate, was to be composed of eighty members, which number might be increased to 150. The senators were irremovable, and were to be chosen by the president of the republic, with the exception of cardinals, marshals, and admirals, who were senators by right. The president might give each senator an income of 30,000 francs. The Senate was the guardian of the constitution and of 'the public liberty.' . . . The executive power chose all mayors, and was at liberty to select them outside the town council. In fact, the constitution of 1852 surpassed the constitution of the year VIII. as a piece of monarchic reaction. It entailed no consulate, but an empire.—dictatorship and total confiscation of public liberty. . . . Despotism spread daily in every direction. On the 17th of February the liberty of the press was notably reduced, and severe penalties were affixed to any infraction. In fact, the press was made dependent on the goodwill of the president. Education was next attacked, a decree of March 9, 1852, stripping the professors of the University of all the pledges and principles granted by the First Empire. . . . The new power, in 1852, labored to turn all the forces of the country to material interests, while it stifled all moral interests. It suppressed education and the press, and constantly stimulated the financial and industrial movement. . . . Numberless railroad companies now sprang to life, and roads were rapidly built upon a grand scale. The government adopted the system of grants on a long term of years,—say ninety-nine,—plus the guarantee of a small rate of interest. In everything the cry was for instant success, at any cost. Great financial operations followed on the heels of the first grants to railroad companies. . . . This year's budget, like the constitution, was the work of a single man. The dictator settled it by a decree; then, having ordered the elections for his Chamber of Deputies,

just before his constitution went into operation, he raised the universal state of siege (March 28). This was only a feint, for his government was a permanent state of siege. . . . The official candidates presented, or rather imposed, were generally elected; the republicans failed to vote throughout a great part of the country. . . . March 29, the prince-president proceeded to install the great state bodies at the Tuileries. It was thought that he would hint in his speech that he expected the title of Emperor, but he left that point vague, and still talked of preserving the republic. . . . During the session a rumor was current that Louis Napoleon was to be proclaimed emperor on the 10th of May, after the distribution of eagles to the army; but this was not carried out. The dictator had no desire to be made emperor in this fashion. He meant to do it more artfully, and to make it seem that the nation forced the accomplishment of his wishes upon him. He therefore undertook a fresh journey through the provinces. . . . The watchword was everywhere given by the authorities and influential persons, whose example was imitated by the crowd, irreconcilable opponents keeping silent. . . . He returned to Paris, October 16, and was received in state at the Orleans station. The official bodies greeted him with shouts of 'Long live the Emperor!' . . . Next day, the following paragraph appeared in the 'Moniteur': 'The tremendous desire for the restoration of the empire manifested throughout France, makes it incumbent upon the president to consult the Senate upon the subject.' The Senate and Legislature were convened November 4; the latter was to verify the votes, should the Senate decide that the people must be consulted in regard to a change in the form of government, which no one doubted would be the case. . . . The Senate . . . passed a decree for the submission of the restoration of the hereditary empire for popular acceptance (November 7); the senators then went in a body to St. Cloud to inform the prince-president of this decision. . . . The people were then called upon to vote for the plébiscite decreed by the Senate (November 20 and 21). Republican and legitimist protests were circulated in despite of the police, the government publishing them in the official organ, the 'Moniteur,' as if in defiance, thinking that the excessive violence of the republican proscribers of London and Guernsey would alarm the peace-loving public. The result of the vote was even greater than that of December 20, 1851; the authenticity of the figures may indeed be doubted, but there is not a doubt that there was really a large majority in favor of the plébiscite. France abandoned the struggle! On the evening of December 1, the three great state bodies, the two Chambers and the State Council, went to St. Cloud, and the president of the Legislature presented the result of the ballot to the new emperor, who sat enthroned, between his uncle Jerome and his cousin Napoleon."—H. Martin, *Popular history of France*, v. 3, ch. 15.

1852-1870.—Character of Napoleon III.—Brilliant social life and economic advance to compensate for political repression.—His home and foreign policies.—"The President who, by the endless witchery of a name, by a profitable absence of scruples, and by favorable circumstances, had known how to become an Emperor, was no mere vulgar adventurer, but was a man of ideas

as well as audacity, of generosity as well as egoism, of humanitarian aspirations for the betterment of the world, as well as of a vivid perception of the pleasures of personal advancement. . . . He declared his desire to finish the work his uncle had been forced to leave unfinished, to restore order, so sadly compromised by the unstable, feverish régimes since 1815—and this he could only do, he held, by exercising autocratic power—and then to cap the structure with liberty in all its plenitude. The history of the Second Empire falls into these two divisions—autocracy unlimited from 1852 to 1860, and a growing liberalism from 1860 to 1870, when the Empire collapsed, its programme woefully unrealized. . . . Political life was completely stamped out, intellectual independence well-nigh extinguished. Repression was all-powerful and endlessly pervasive. France was no longer a land of freedom. For several years she breathed a mephitic atmosphere of intellectual humiliation and effacement. In return for all this Napoleon [III] sought to entertain and divert and enrich France. His government was 'both repressive and progressive—repressive of whatever imperiled his power, progressive in devotion to whatever might adorn and strengthen it.' . . . The Tuileries . . . became the center of a court life probably the most brilliant and luxurious of the nineteenth century. Fête followed fête in swift succession. Life could not be more lavish or more gay. Sumptuous and showy, the balls, dinners, military parades, illuminations were, it was given out, not mere self-indulgence for the favored few, but were of advantage to all France. Did they not encourage business and trade? A shower of gold wherever it fell was considered highly fructifying. Some criticized, asking if it was worth while to overthrow parliament in order to put an orchestra in its place. . . . But pleasure did not engross the attention of the new sovereign. His reign was distinguished by a spirit of great enterprise, kindly feeling for the masses, good works of benefit to the different classes of society. The Emperor was no incorrigible conservative like Metternich, but a very modern man, anxious that his reign should be memorable for works of utility, of improvement. He had a genuine love for humanity, a sincere desire to help those who are heavy laden. He founded hospitals and asylums freely, and relief societies of various kinds for the poor. The free distribution of medicines was provided for. In 1864 laborers were given for the first time in French history the right to strike, which has proved a most important weapon in their hands for the betterment of their conditions. Banks were organized from which landed proprietors, both great and small, might obtain loans on easy terms to enable them to carry on improvements in agriculture. The railways, denounced by Thiers as 'the costly luxury of the rich,' 'toys for the Parisians,' were extended in a few years from a mileage of 2,000 to one of 6,000. Steamboat lines were established to enlarge the markets of France by transatlantic commerce. Canals were begun. For the Emperor was distinctly a man of his age, responsive to new ideas, and sincerely enthusiastic in promoting all the progress in the arts and trades which the marvelous discoveries of modern science rendered possible. No class of the population was ignored in these schemes. In Napoleon's opinion, preceding governments had failed precisely because they had considered only a class—the Legitimist monarchy only the aristocracy, the Orleanist monarchy only the rich bourgeoisie. The Empire, he said, stood for no class, but for the nation in all its entirety. A great international

exposition was held in Paris in 1855, bringing thousands of visitors to Paris, and giving a distinct impulsion to material progress by its impressive revelation of the wealth of the tools at man's disposal. A grandiose scheme for the modernization and beautification of Paris was projected, which, carried out by Baron Haussmann, made it the most attractive and comfortable capital in Europe. This transformation of the capital, indeed, was one of the principal undertakings of the Second Empire, an undertaking in process of execution during the entire course of the reign. All these enterprises greatly stimulated commerce. An era of unwonted speculation now set in. The Stock Exchange reflected vividly the buoyancy and daring of the period. Fortunes were made quickly, and of a size hitherto unknown in France. Thus, in an air of general prosperity, of economic expansion, of multifarious activity, men forgot their loss of lib-

NAPOLÉON III  
(Painting by Chappel)

erty, and even the great famines, great floods, and important business failures which occurred during this period did not produce the usual unrest. They were regarded as merely the reverse of what was, in the main, a most attractive picture."—C. D. Hazen, *Europe since 1815*, pp. 206-212.—See also PARIS: 1852-1870.—"The first four years of the Empire were marked by steady material progress. The Emperor had been recognized by foreign Powers, and in conjunction with England had carried to a successful conclusion a war for the preservation of the integrity of Turkey. At the Congress of Paris held at the conclusion of the Crimean campaign, Napoleon appeared as the arbiter of Europe. He then stood at the summit of his fortune. He had represented the Crimean war correctly enough as conceived in the traditional vein of French diplomacy. It was to the advantage of France that Russia should not be the predominant influence in Constantinople, for to rule in Constantinople was to rule in the Mediterranean, and the Mediterranean was as much a French as an English interest. He had defended the rights of

the Latin Church in the East, and accumulated a treasury of merit with the Vatican from which he intended to make long drafts. After an unpopular and ignoble peace France had emerged once more warlike and victorious, the leader of a crusade, the champion of the Latin Church, the defender of the sacred places of Palestine. . . . His marriage with a beautiful Spanish lady [Mlle. Eugénie de Montijo] had been welcome to the Catholic party, and the birth of a son was an additional touch to his prosperity. If Napoleon III had been content to act upon the maxim which he enunciated at Bordeaux and to keep the peace, it is probable that his dynasty might still be reigning in France. Unfortunately for himself, he was so far possessed of the Napoleonic tradition as to desire to reverse the treaties of 1815 and to promote the cause of nationalities. He told Lord

Wallachia under a foreign prince, who might shape an independent Roumanian nation. [See RUMANIA: 1856-1875.] On a visit to Osborne he took occasion to suggest to Prince Albert a vast redistribution of power on the southern and eastern shores of the Mediterranean. Spain might take Morocco, England might annex Egypt, Austria might find compensation for certain losses in Europe by the acquisition of part of Syria. By a hint here and a hint there he sowed in the minds of the diplomats of Europe the conviction that he was determined to upset the map and enlarge the boundaries of France. In his own cloudy intelligence there was always one burning question—the liberation of Italy. The problem was fatally bound up with the destinies of his house, for Italian policy marked the first stage in the road which led to the cataclysm of the Empire. The Italian ques-

EMPERESS EUGÉNIE AND THE LADIES OF HER COURT

(Painting by Winterhalter)

Cowley early in his reign that 'he was determined not to fall as Louis-Philippe had done by an ultra-pacific policy; that he knew well that the instincts of France were military and domineering, and that he was resolved to gratify them.' Revolutionary schemes of foreign policy floated like storm-driven clouds across the surface of his unquiet spirit. Among Lord John Russell's papers there is a document purporting to be a translation of a series of questions issued by Napoleon III on the possibility of a French expedition conquering and holding Australia. He threw out hints to Spain, that he might view without displeasure an invasion of Portugal, if Catalonia were ceded to France. He pressed England not once but twice to make the restoration of Poland a *sine qua non* of peace with Russia. [See also POLAND: 1863-1866.] Against the advice of Thouvenel, his ambassador at Constantinople, and despite the unconcealed opposition of Persigny, his envoy in London, he advocated the union of Moldavia and

tion was one of peculiar delicacy. The unity of Italy demanded not only the expulsion of Austria from Lombardy and Venice, but the expulsion of the Bourbons from Naples and Sicily and the abolition of the temporal power of the Papacy. The question was intimately bound up with French party feeling. The Radicals, led by Prince Napoleon, the Emperor's nephew, were vehemently attached to the cause of Italian liberation, and were prepared, largely through the influence of Manin, and his friend Henri Martin the historian, to accept Liberation at the hands of the Piedmontese monarchy. The Clericals, on the other hand, would not hear of any interference with the Papal dominion, and, in deference to their wishes, Napoleon, when President of the Republic, had dispatched a French force to crush the Roman democracy, and to restore the Pope to his former power. He could not, then, without contradicting his earlier policy, consent to the evacuation of Rome by the French troops who had been dis-

patched to defend the Pope against the surging tide of Italian democracy. Nor again could the Imperial Government acquiesce in the expulsion of the Bourbons from Naples without grave offence to the Legitimist party, and Napoleon specially desired to seduce the Legitimists from their allegiance to the white flag. The problem therefore, before the French Emperor was by no means simple. He wished to expel Austria from North Italy, to aggrandize Piedmont, and to indemnify France for her assistance by the annexation of Savoy. But while throwing this sop to the Nationalist and Radical parties of France, he must take care not to offend the Clericals and Legitimists. He conceived, therefore, of an Italy liberated from Austria and constituted as a federation under the nominal suzerainty of the Pope, an Italy containing as its main elements the kingdom of Naples, the Papal States, and a Piedmont stretching from the Alps to the Adriatic. It is significant of his divided will that he retained Walewsky at the head of his Foreign Office, though he knew him to be of the Clerical persuasion and opposed to the advancement of Piedmont. This was an idle dream. Napoleon underrated the strength of the national feeling in Italy, and overrated the power of France to contain it within bounds. His whole course of action was calculated to secure for France the minimum of advantage and for himself the maximum of odium. He encouraged Count Cavour to lay before the Congress of Paris in 1856 a reasoned statement of the abuses prevailing in the Papal States, with a view to exciting the indignation of Europe against an indefensible anachronism. Then, two years later, meeting the great statesman very secretly at Plombières, he pledged himself to assist Piedmont if she were attacked by Austria, and to extend her borders to the Adriatic. The war broke out in 1859, and directly led to the unification of Italy under Victor Emmanuel. The land of Dante owes more than it is willing yet to acknowledge to the Third Napoleon. He gave the shock which set the revolutionary forces in motion; he raised the wind and reaped the whirlwind. . . . Even before the outbreak of the Italian war, Napoleon had not altogether pleased the Clericals. He had declined to relax the irksome tutelage of the Organic Articles; the civil marriage was maintained; nor would he permit to the Catholics that measure of educational control for which their political leaders were striving. But now he had completely lost the clerical allegiance. He had permitted one of his publicists to write against the temporal dominion of the Pope; he had sanctioned the incorporation of the Romagna, which was one portion of that dominion, in the Italian kingdom, and had permitted Edmond About to cover the Papal administration with his brilliant and pointed ridicule. The conquest of Naples by Garibaldi, and the defeat of a Papal force led by a French officer at Castellidardo, filled the Catholic and royalist world with passionate indignation; and a new Vendée organized itself under the shadow of the Vatican. And while he had thus lost the support of the great conservative connexion in France, his diplomacy had excited grave distrust among the Powers of Europe."—H. A. L. Fisher, *Bonapartism*, pp. 149-154, 156.

1860.—Treaty of commerce with England.—"As the Italian war alienated the Clericals, so the treaty of commerce with England in 1860 estranged the manufacturers. Napoleon had been convinced by the logic of free-trade economics, and believed that by a series of commercial treaties he would be able to secure a great extension of French industry and commerce. His motives, however, were not purely scientific. He reckoned that a treaty with England would tend to dispel any clouds of dissatisfaction which might have collected over Savoy. He was aware indeed that, with the exception of the wine-growers of the South, industrial opinion was totally unprepared for such a reduction of duties as that which was embodied in the famous treaty of commerce which he drew up in concert with Richard Cobden. Nevertheless he carried through the negotiations secretly, swiftly, and in defiance of public opinion. He knew that he wanted the goodwill of England, and he believed that France would come to admit that a lowering of the tariff wall between the two great countries was all to her advantage. When Cobden told him of the statue to Peel with its inscription, 'He bettered the lot of the labouring and suffering classes by lowering the price of the necessaries of life,' the Emperor said that that was the reward which he coveted most, but that unfortunately in France they made revolutions and did not know how to make reforms. Having estranged the Clericals and the manufacturers, Napoleon turned to the support of the Liberals. It had been part of his original design to relax the tension of despotism when his power was thoroughly established, and by degrees to associate the representatives of the people in the task of government; and this idea was now commended to him not only by his own failure of physical health, but also by the desire of conciliating an important body of political opinion."—H. 1860-1870.—Modifications of the imperial constitution.—"Originally . . . the power of the Legislative Body was limited to voting and rejecting as a whole the laws submitted to it by the Executive; there was no such thing as criticism or control of the general policy of the reign: but the year 1860 opened a period of development in the direction of liberty; by a decree of the November of that year the Emperor permitted the Deputies to draw up an address in answer to his speech, giving them thereby the opportunity to criticise his policy; by that of December 1861 he allowed them to vote the budget by sections, that is to say, to discuss and, if desirable, reject its items; by that of January 1867 he substituted for the Address the right of questioning the Ministers, who might be delegated to the Chamber by

the Emperor to take part in certain definite discussions; lastly, by that of September 1869 he gave to the Legislative Body the right of initiating laws, removed the restrictions hitherto retained on the right of amendment and of questions, and made the Ministers responsible to the Chamber. Thus the Constitution was deliberately modified, by the initiative of the Emperor himself, from the form of imperial despotism to that of parliamentary monarchy: this modified Constitution was submitted to a plébiscite in May, 1870, and once more the people ratified the Empire by over seven million votes against a million and a half."—G. 1870 (June-July).—Hohenzollern incident.—Ems dispatch.—French unpreparedness and isolation.—Declaration of war against Prussia.—“From 1866 to 1870 the idea that ultimately a war would come between Prussia and France became familiar to the people and governments of both countries. Many Frenchmen desired ‘revenge for Sadowa.’ Prussians were proud and elated at their two successful wars, and intensely conscious of their new position in Europe. The newspapers of both countries during the next four years were full of crimination and recrimination, of abuse and taunt, the Government in neither case greatly discouraging their unwise conduct, at times even inspiring and directing it. Such an atmosphere was an excellent one for ministers who wanted war to work in, and both France and Prussia had just such ministers. Bismarck believed such a war inevitable, and in his opinion, it was desirable as the only way of completing the unification of Germany, since Napoleon would never willingly consent to the extension of the Confederation to include the South German states. All that he desired was that it should come at precisely the right moment, when Prussia was entirely ready, and that it should come by act of France, so that Prussia could pose before Europe as merely defending herself against a wanton aggressor. With responsible statesmen in such a temper it was not difficult to bring about a war. And yet the Franco-Prussian War broke most unexpectedly, like a thunderstorm, over Europe. Undreamed of July 1, 1870, it began July 15. It came in a roundabout way. The Spanish

throne was vacant, as a revolution had driven the monarch, Queen Isabella, out of that country. On July 2, news reached Paris that Leopold of Hohenzollern, a relative of the King of Prussia, had accepted the Spanish crown. Bismarck was behind this Hohenzollern candidacy, zealously furthering it, despite the fact that he knew Napoleon's feeling of hostility to it. Great was the indignation of the French papers and parliament and a most dangerous crisis developed rapidly. Other powers intervened, laboring in the interests of peace. On July 12, it was announced that the Hohenzollern candidacy was withdrawn. The tension was immediately relieved; the war scare was over. Two men, however, were not pleased by this outcome: Bismarck, whose intrigue was now foiled and whose humiliation was so great that he thought he must resign and retire into private life, and Gramont, the French minister of foreign affairs, a reckless, blustering politician who was not satisfied with the diplomatic victory he had won, but wished to win another which would increase the discomfiture of Prussia. The French ministry now made an additional demand that the King of Prussia should promise that this Hohenzollern candidacy should never be renewed. The King declined to do so and, in a despatch from Ems, authorized Bismarck to publish an account of the incident. Here was Bismarck's opportunity which he used ruthlessly and joyously to provoke the French to declare war. [By omitting parts of the Ems despatch he made it seem to be a curt account of negotiations abruptly terminated.] His account, as he himself says, was intended to be ‘a red flag for the Gallic bull.’ The effect of its publication was instantaneous. It aroused the indignation of both countries to fever heat. The Prussians thought that their King, the French that their ambassador had been insulted. As if this were not sufficient the newspapers of both countries teemed with false, abusive, and inflammatory accounts. The voice of the advocates of peace was drowned in the general clamor. The head of the French ministry declared that he accepted this war ‘with a light heart.’ This war, declared by France on July 15, grew directly out of mere diplomatic fencing. The French people did not desire it, only the people of Paris, inflamed by an official press. Indeed, until it was declared, the French people hardly knew of the matter of dispute. It came upon them unexpectedly. The war was made by the responsible heads of two Governments. It was in its origin in no sense national in either country. Its immediate occasion was trivial. But it was the cause of a remarkable display of patriotism in both countries.”—C. D. Hazen, *Fifty years of Europe, 1870-1919*, pp. 25-27.—“If the ‘Ems dispatch’ roused the French, it also profoundly stirred the Germans. A wave of indignation swept over all Germany at what was believed to be the insolent conduct of the French Ambassador, and the South Germans enthusiastically joined their northern brethren in the common war against their hereditary foe. Men fell into their places promptly and were transported with amazing rapidity to the frontier. What the French Minister of War had said of the readiness of the French armies [that all was in readiness “down to the last button on the last gaiter of the last soldier”] was, in reality, true only of the German, as about a million men were mobilized in Germany within two weeks without the slightest disorder. . . . On the other side of the Rhine all was disorder and confusion; soldiers could not find their officers; cannon were without ammuni-

tion; horses without harness; means of transport were lacking, the food supply was insufficient; officers were not provided with the necessary maps. So badly disorganized was the French War Office that those called to the colors were frequently obliged to travel across the country in order to get their uniforms. Instead of everything being ready 'to the last button,' chaos reigned in the French armies. To the amazement and chagrin of France, she found herself completely isolated, as all the other nations immediately declared their neutrality. Popular opinion, too, the world over, favored the Germans as defenders of their country against French aggression. To gain England's sympathy Bismarck published an unsigned treaty with Napoleon III showing how the latter was contemplating the annexation of Belgium, the neutrality of which Prussia was scrupulously respecting."—J. S. Schapiro, *Modern and contemporary European history*, pp. 190-191.—See also EUROPE: Modern; Wars of the great powers.

1870 (July-August).—Disastrous opening of the war.—Defeats at Wörth, Spicheren and Gravelotte.—Bazaine's army shut up in Metz.—July 23d Napoleon intrusted the regency to the empress for the period of his absence from Paris. . . . On the 28th, . . . accompanied by his son, [he] left for Metz, to assume command of the army. . . . The army consisted of eight corps. Of these, the 1st, under Marshal MacMahon, was stationed at Strasburg; the 2d, under General Frossard, at St. Avold; the 3d, under Marshal Bazaine, at Metz; the 4th, under General Ladmirault, at Diedenhofen (Thionville); the 5th, under General Faily, at Bitsch; the 6th, under Marshal Canrobert, in the camp at Châlons; the 7th, under General Felix Douay, at Belfort; the 8th.—the Imperial Guard—under General Bourbaki, at Nancy. Accordingly, the French forces were divided into two groups, the larger stationed on the Moselle, and the smaller in Alsace. To the latter belonged the 1st and 7th corps, both of which were placed under the command of Marshal MacMahon, with orders to prevent the crown prince's army from entering Alsace. The larger group comprised the 2d, 3d, and 4th corps. . . . The 6th and 8th were to have formed the reserve; but the greatly superior numbers of Prince Frederic Charles and Steinmetz, who were advancing against this larger group, necessitated the immediate bringing of those corps to the front. The connection between the two groups was to be maintained by the 5th corps, stationed at Bitsch. Skirmishing of the advanced posts and collisions between reconnoitering parties began on the 10th of July. The most important of these minor engagements was that at Saarbrücken, on the 2d of August [the French claiming a victory]. . . . August 4th the crown prince crossed the French frontier and attacked the town of Weissenburg, on the little river Lauter. . . . Weissenburg was successfully carried by Prussian and Bavarian battalions combined, and the Geisberg by sixteen battalions of Prussians alone. . . . August 5th MacMahon with his corps took up his position at Wörth, fortifying the heights westward from Sauerbach, together with the villages of Froschweiler and Elsasshausen, in the intention of meeting at that place the advancing columns of the crown prince, whose attack he expected on the 7th. To strengthen his army sufficiently for the

task required of it he endeavored bring up General Felix Douay's corps from Belfort and Mühlhausen, and that of General Faily from Bitsch; but only one division of the former arrived in time, and a division of the latter which was sent to his support did not reach the neighborhood of the battle-field until the evening of the 6th, in time to afford a partial protection on the retreat. Consequently, MacMahon was left with not more than 45,000 men to face the crown prince's whole army. . . . On the morning of the 6th the advance guard of the 5th corps became involved in a sharp action with the enemy," and "from a mere skirmish of the advance guard resulted the decisive battle of Wörth. . . . After Wörth itself had been carried, the fighting was most severe around the fortified village of Froschweiler. This was finally taken, and a desperate charge of the French cuirassiers repulsed. Thereupon MacMahon's army broke and fled in wild confusion, some toward the passes of the Vosges, others to Strasburg or Bitsch. . . . The trophies of victory were numerous and valuable: 200 officers and 9,000 men prisoners. . . . and the army-chest with 222,000 francs in gold. . . . The French lost 6,000 dead and wounded; the German loss was 480 officers and 10,153 men—a loss greater than that of Sadowa. . . . MacMahon, with about 15,000 of his defeated troops, reached Zabern on the morning of the 7th, and set out thence for Châlons, whither Generals Douay and Faily were also directed\* to lead their forces. A new army was to be formed at that point, and northern Alsace was abandoned to the crown prince's victorious troops. The Badish division received orders to march against Strasburg, and by the 9th the whole corps was assembled before that city, Hagenau having been taken by the cavalry on the way. . . . Preparations for a siege were made, a regular siege corps being formed . . . and placed under the command of General Werder. With the remainder of the third army the crown prince left Wörth on the 8th of August, marched through the unguarded passes of the Vosges, and entered Nancy on the 10th. . . . Detachments were left behind to blockade Bitsch and Pfalzburg. At Nancy the prince rested for a few days and waited for decisive news from the Saar and Moselle. A second victory was won on the 6th of August at Spichern [or Forbach]. Like the battle of Wörth, this action was not the result of a strategical combination, but rather of a misunderstanding. . . . Frossard [whose corps was encountered at Spichern] fell back on Metz by way of Saargemünd. Bazaine, who, although not more than seven or eight miles from the field of battle, had made no attempt to come to Frossard's assistance, led his corps to the same place. In this battle, owing to the unfavorable nature of the ground, the losses of the conquerors were heavier than those of the conquered. The Germans had 223 officers and 4,648 men dead, wounded, and missing; while the French, according to their own reports, lost 240 officers and 3,820 men, 2,000 of whom were taken prisoners. August 7th the victors continued their forward march, capturing great stores of provisions in Forbach. On the 9th St. Avold was taken, and foraging parties advanced almost to Metz. Marching through the Rhenish Palatinate, part of Prince Frederic Charles's army directed its course toward Metz by way of Saarbrücken, and part through Saargemünd. . . . In the imperial headquarters at Metz the greatest consternation prevailed. . . . It was [finally] decided to concentrate five army corps on the right bank of the Moselle,

at Metz, and to form a second army, consisting of four corps, under MacMahon's command, in the camp at Châlons. The first line of defence on the Rhine and Saar had been abandoned, and France was to be defended on the Moselle. By this decision Alsace and Lorraine were surrendered to the foe at the very outset." On the 9th of August the French emperor transferred the chief command from himself to Marshal Bazaine, while Lebœuf at the same time withdrew from the direction of the staff. Simultaneously, at Paris, the Gramont-Ollivier ministry resigned, and was succeeded by a cabinet formed under the presidency of Count Palikao (General Montauban). "New levies were called into the field, comprising all unmarried men between the ages of 25 and 30 not already enrolled in the 'garde mobile.' . . . In the German head-quarters . . . it was resolved in some way to make Bazaine's army harmless, either by shutting him up in Metz or by pushing him northward to the Belgian frontier. . . . The task was a difficult one. . . . All depended upon what course Bazaine might conclude to pursue, and the energy with which he executed his plans. It was his purpose to leave Metz with the field army and join MacMahon at Châlons. There would then be 300,000 French at that place to block the German march to Paris. In that event the Germans would have to leave 60,000 men before Metz . . . and Diedenhofen, and would not have enough left to venture an attack on the united and well-intrenched armies at Châlons. Accordingly, the union of those two armies must be prevented at any price, and Bazaine be attacked before Metz. The execution of this plan led to the severe fighting near that city—the battle of Colombey-Nouilly (Borny), on the 14th, Vionville on the 16th, and Gravelotte on the 18th." The battle of Gravelotte was "the first battle in the war in which a pre-arranged plan [Moltke's] was actually carried out. . . . It was a brilliant victory, and followed by important results. Bazaine's army was shut up in the fortress and among the outlying forts, and rendered unavailable for further service in the field. The losses of the French amounted to about 13,000 men, including 600 officers; the German loss was 890 officers and 19,260 men, of whom 320 officers and 4,900 men were killed outright. The number of combatants on the side of the French was about 140,000, on the side of the Germans 178,818, the former having 550, and the latter 822 cannon. It must be remembered, however, that the French occupied a position very much of the nature of a fortress, which had to be carried by storm."—W. Müller, *Political history of recent times*, sect. 25.

1870 (August-September). — Investment of Metz by the Germans.—Disastrous attempt of MacMahon to rescue Bazaine.—Catastrophe at Sedan.—"The huge, stubborn, vehement and bloody conflict waged in the rural tract between the northern edges of the Bois de Vaux and the Forest of Jaumont, which the French Marshal called the 'Defence of the Lines of Amanvillers,' the French Army, 'the Battle of St. Privat,' and the Germans the battle of 'Gravelotte—St. Privat,' established the mastery of the latter over 'the Army of the Rhine.' Marshal Bazaine had not proved strong enough to extricate the Army he was suddenly appointed to command from the false position in which it had been placed by the

errors and hesitations of the Emperor and Marshal Lebœuf. . . . The German leaders forthwith resolved, and acted on the resolve, to take the largest advantage of success. When the broadening day showed that the French were encamped under the guns of the fort, and that they did not betray the faintest symptom of fighting for egress on any side, the place was deliberately invested. . . . Soon the blockade was so far completed that only adventurous scouts were able at rare intervals to work their way through the German lines. As early as the forenoon of the 19th, the King had decided to form what came to be called the 'Army of the Meuse' out of the Corps which were not needed to uphold the investment of Metz, and thus place himself in a condition to assail the French Army collecting at Châlons. . . . This formidable force was put under the command of the Crown Prince of Saxony, who had shown himself to be an able soldier. Consequently, there remained behind to invest Bazaine, seven Corps d'Armée and a Division of Reserve under General von Kummer. . . . One Army had been literally imprisoned, another remained at large and behind it were the vast resources of France. Three Marshals were cooped up in the cage on the Moselle; one, MacMahon, and the Emperor were still in the field; and upon the forces with them it was resolved to advance at once, because prudence required that they should be shattered before they could be completely organized, and while the moral effect of the resounding blows struck in Alsace and Lorraine had lost none of its terrible power. Therefore the King and General von Moltke started on the morrow of victory to march on Paris through the plains of Champagne."—G. Hooper, *Campaign of Sedan*, ch. 10.—"While the German invasion had thus been rolling from Lorraine into the flats of Champagne, the shattered right wing of the army of the Rhine, with reinforcements sent off from Paris, had been drawn together in the well-known plains made memorable by the defeat of Attila. By 20 Aug. the first and fifth French corps marched rapidly from the Upper Moselle to the Marne, had been joined by the seventh corps from Belfort and by the twelfth formed in and despatched from Paris; and this force, numbering perhaps 130,000 men, with from 400 to 500 guns, had been concentrated round the great camp of Châlons. MacMahon was given the supreme command, and the first operations of the experienced chief showed that he understood the present state of affairs and were in accord with the rules of strategy. Bazaine, he knew, was in peril near Metz, and certainly had not attained the Meuse; and he was at the head of the last army which France could assemble for the defence of her capital. In these circumstances, impressed perhaps by the grand memories of the campaign of 1814, he most properly resolved to fall back towards Paris; but as Bazaine was possibly not far distant, and a position on the flank of the German advance might afford a favourable opportunity to strike, he withdrew northwards on the 21st to Rheims, in the double hope that he would approach his colleague and threaten the communications of the advancing enemy. This, we repeat, was following the art of war, and had MacMahon firmly adhered to his purpose, there would have been no Sedan and no treaty of Frankfurt. Unhappily the marshal, a hero in the field, was deficient in real strength of character, and at this critical moment evil counsels and false information shook, and at last changed, a resolve that ought to have never faltered. A new administration had

been formed in Paris, and Palikao, the minister of war, devoted to the Empire, and especially bent on satisfying the demands of the excited capital, which passionately insisted on the relief of Bazaine, had conceived a project by which he hoped that his great object would be effected and the 'dynasty' be restored in popular opinion. The army of the Meuse, he argued, was near that stream, round Verdun; the third army was far away to the south; there was a considerable interval between the two masses; and the army of Châlons, then at Rheims, was not far from the Upper Meuse. In those circumstances it was quite practicable, should MacMahon rapidly advance to the Meuse, to overpower with his largely superior force the army of the Meuse before support could be sent from the distant third army; and the enemy in his path being swept aside, the marshal could then descend on Metz, fall with the collected strength of the army of Châlons on the divided fragments of the investing force, and triumphantly effect his junction with Bazaine, having routed, perhaps, the first and second armies before the third could appear on the scene. The defiles and woods of the Argonne and the Ardennes, stretching between the French and the German armies, Palikao insisted, would form a screen to conceal the advance of the army of Châlons, and would greatly facilitate the proposed movement. This project reached MacMahon on 21 Aug., and may be pronounced one of the most reckless ever designed by a desperate gambler in war. . . . MacMahon at first refused to listen to what he condemned as a hopeless project; but bad advisers found their way to him, and his resolution was already yielding when a calamitous event fixed his shifting purpose. A despatch from Bazaine, obscure and untrue, announced that he was on his way northward. MacMahon inferred that his beleaguered colleague had left Metz and eluded his foes, and, thinking that he would reach Bazaine before long, in an evil hour for France and for himself, he consented to attempt the march to the Meuse."—W. O'C. Morris, *Campaign of Sedan (English Historical Review, April, 1888)*.—"It was not until the afternoon of August 23 that MacMahon's army passed through Rheims. Anxious, and knowing that everything depended on speed, he addressed some columns as they toiled onwards, reminding them that French soldiers had marched thirty miles a day under the sun of Africa. The difference, however, was great between raids made by a few light regiments and the advance of a raw unwieldy mass; and though the marshal endeavoured to hurry them forward, he was confronted with almost insurmountable obstacles. Scarcely had the army made a march towards establishing itself at Bethnville, on the Suipe, when commissariat difficulties obliged him to re-approach the line of the railway. He made a movement on his left, and reached Rethel on the 24th, in order to obtain for his troops several days' subsistence. This distribution occupied the whole of the 25th. . . . As the direction of the French movement could not now be concealed, at this point MacMahon made arrangements for marching with all possible rapidity. It may be doubted, however, whether Napoleon himself, at the head of the grand army, could have made the haste which the marshal designed with his raw and partly demoralized troops. . . . His army was altogether unequal to forced marches, and moved at this critical moment with the sluggishness inherent in its defective organization. Encumbered with stragglers, badly pioneered, and checked by hin-

drances of every kind, it made hardly ten miles a day; and it was the 27th of August before its right column, still far from the Meuse, passed through Vouziers, and the left reached Le Chêne. . . . On the 27th it was openly boasted of in Paris that MacMahon had gained at least forty-eight hours' start of the Crown Prince, and his coming success was firmly counted on by the imperialist cabinet, whereas, in reality, the whole scheme was foiled beforehand by Von Moltke's and General Blumenthal's prompt combination. . . . If in fighting, in the boldness of their cavalry, the activity of their staff, the cool firing of infantry, and the skilful tactical use of their guns, the superiority of the Germans to their antagonists had been already proved; it only required the contrast now presented between the movements of the two armies to show, that in no point had the difference of training and moral feeling told more in favour of the invaders than in that of the marching, on which the elder Napoleon so often relied for his advantage over these very Germans. . . . Between the 27th and the morning of the 20th, the right column of the French army had only its outposts at Buzancy, while the left, though its outposts touched Stenay, was only at Stonne and Beaumont, both columns spreading a long way backward; in other words, they were still a march from the Meuse, which they ought to have passed three days before, and their rearward divisions were yet distant. The German armies, from the 26th to the 20th, made astonishing exertions to close on MacMahon as he crossed towards the Meuse, and success was already within their grasp. The force of the Crown Prince of Saxony, in two columns, had reached the Meuse at Dun on the 27th, and was thus in a position to arrest and retard the vanguard of the French whenever it attempted to cross the river. Meanwhile the army of the Crown Prince of Prussia, hastening forward by Varennes and Grand Prè, and to the left by Senue and Suipe, had arrived close to the line of march of MacMahon's right column, and by the evening of the 28th had occupied it about Vouziers. A step farther, and this immense army would be upon the positions of the luckless French, who, assailed in flank and rear by superior numbers, could not fail to be involved in terrible disaster. . . . MacMahon [on the 27th], observing that the enemy so completely surrounded him, felt more than ever satisfied that it would be impossible to carry out the plan which had been prescribed to him at Paris; and to save, if possible, the sole army which France had at her disposal, he accordingly resolved to turn back in a westerly direction. . . . The same evening he sent . . . [a] telegram to the Count Palikao, at Paris. . . . In reply to this, the government sent a telegram to the emperor at eleven o'clock the same night, telling him that if they abandoned Bazaine there would certainly be a revolution in Paris, and they would themselves be attacked by all the enemy's forces. . . . The emperor admits that he could unquestionably have set this order aside, but 'he was resolved not to oppose the decision of the regency, and had resigned himself to submit to the consequences of the fatality which attached itself to all the resolutions of the government.' As for MacMahon, he again bowed to the decision intimated to him from Paris, and once more turned towards Metz. These orders and counter-orders naturally occasioned further delay, and the French headquarters had reached no farther than Stonne on the 28th. . . . On Monday, August 20, De Failly occupied the country between Beaumont and

Stonne, on the left bank of the Meuse; while the main body of the French army, under MacMahon in person, had crossed the river, and were encamped on the right bank at Vaux, between Moulzon and Carignan, and on the morning of the 30th the emperor telegraphed to Paris that a brilliant victory might be expected. MacMahon's position was in a sharp wedge of country formed by the confluence of the rivers Meuse and Chiers, and it was his intention to advance towards Montmédy. The other part of his army was close to the river on its left bank. . . . The battle—or rather series of battles, for the fighting extended over three days—which was to decide whether or not he would reach Metz and liberate Bazaine, began in earnest a little before noon on Tuesday, August 30.—H. M. Hozier, *Franco-Prussian War*, v. 1, ch. 13.—“The retreating French were concentrated, or rather massed, under the walls of Sedan, in a valley commonly called the Sink of Givonne. The army consisted of twenty-nine brigades, fifteen divisions, and four corps d'armée, numbering ninety thousand men. ‘It was there,’ says Victor Hugo, ‘no one could guess what for, without order, without discipline, a mere crowd of men, waiting, as it seemed, to be seized by an immensely powerful hand. It seemed to be under no particular anxiety. The men who composed it knew, or thought they knew, that the enemy was far away. Calculating four leagues as a day's march, they believed the Germans to be at three days' distance. The commanders, however, towards nightfall, made some preparations for safety. The whole army formed a sort of horse-shoe, its point turning towards Sedan. This disposition proved that its chiefs believed themselves in safety. The valley was one of those which the Emperor Napoleon used to call a “bowl,” and which Admiral Van Tromp designated by a less polite name. No place could have been better calculated to shut in an army. Its very numbers were against it. Once in, if the way out were blocked, it could never leave it again. Some of the generals,—General Wimpfen among them—saw this, and were uneasy; but the little court around the emperor was confident of safety. . . . “At worst,” they said, “we can always reach the Belgian frontier.” The commonest military precautions were neglected. The army slept soundly on the night of August 31. At the worst they believed themselves to have a line of retreat open to Mézières, a town on the frontier of Belgium. No cavalry reconnoissance was made that night; the guards were not doubled. The French believed themselves more than forty miles from the German army. They behaved as if they thought that army unconcentrated and ill-informed, attempting vaguely several things at once, and incapable of converging on one point, namely, Sedan. They thought they knew that the column under the Prince of Saxony was marching upon Châlons, and that the Crown Prince of Prussia was marching upon Metz. But that night, while the French army, in fancied security, was sleeping at Sedan, this is what was passing among the enemy. By a quarter to two A. M. the army of the Prince of Saxony was on its march eastward with orders not to fire a shot till five o'clock, and to make as little noise as possible. They marched without baggage of any kind. At the same hour another division of the Prussian army marched, with equal noiselessness, from another direction on Sedan, while the Würtembergers secured the road to Mézières, thereby cutting off the possibility of a retreat into Belgium. At the same moment, namely, five o'clock,—on all the hills around Sedan, at

all points of the compass, appeared a dense dark mass of German troops, with their commanders and artillery. Not one sound had been heard by the French army, not even an order. Two hundred and fifty thousand men were in a circle on the heights round the Sink of Givonne. They had come as stealthily and as silently as serpents. They were there when the sun rose, and the French army were prisoners.’ [Victor Hugo, *Choses Vues*.]—The battle was one of artillery. The German guns commanded every part of the crowded valley. Indeed the fight was simply a massacre. There was no hope for the French, though they fought bravely. Their best troops, the Garde Impériale, were with Bazaine at Metz. Marshal MacMahon was wounded very early in the day. The command passed first to General Ducrot, who was also disabled, and afterwards to Wimpfen, a brave African general who had hurried from Algeria just in time to take part in this disastrous day. He told the emperor that the only hope was for the troops to cut their way out of the valley; but the army was too closely crowded, too disorganized, to make this practicable. One Zouave regiment accomplished this feat, and reached Belgium. That night—the night of September 1—an aide-de-camp of the Emperor Napoleon carried this note to the camp of the king of Prussia:—Monsieur Mon Frère,—Not having been able to die in midst of my troops, it only remains for me to place my sword in the hands of your Majesty. I am your Majesty's good brother, Napoleon. . . . With Napoleon III. fell not only his own reputation as a ruler, but the glory of his uncle and the prestige of his name. The fallen emperor and Bismarck met in a little house upon the banks of the Meuse. Chairs were brought out, and they talked in the open air. It was a glorious autumn morning. The emperor looked care-worn, as well he might. He wished to see the king of Prussia before the articles of capitulation were drawn up: but King William declined the interview. When the capitulation was signed, however, he drove over to visit the captive emperor at a château where the latter had taken refuge. Their interview was private; only the two sovereigns were present. The French emperor afterwards expressed to the Crown Prince of Prussia his deep sense of the courtesy shown him. He was desirous of passing as unnoticed as possible through French territory, where, indeed, exasperation against him, as the first cause of the misfortunes of France, was so great that his life would have been in peril. The next day he proceeded to the beautiful palace at Cassel called *Wilhelmshöhe* [or *William's Height*]. It had been built at ruinous expense by Jérôme Bonaparte while king of Westphalia, and was then called *Napoleon's Rest*. . . . Thus eighty thousand men capitulated at Sedan, and were marched as prisoners into Germany; one hundred and seventy-five thousand French soldiers remained shut up in Metz, besides a few thousand more in Strassburg, Phalsbourg, Toul, and Belfort. But the road was open to Paris, and thither the various German armies marched, leaving the *Landwehr*, which could not be ordered to serve beyond the limits of Germany, to hold Alsace and Lorraine, already considered a part of the *Fatherland*.—E. W. Latimer, *France in the nineteenth century*, ch. 12.—“The German army had lost in the battle of Sedan about 460 officers and 8,500 men killed and wounded. On the French side the loss sustained in the battle and at the capitulation amounted according to their returns to the following: Killed 3,000 men; wounded 14,000; prisoners (in the

battle) 21,000; prisoners (at the capitulation) 83,000; disarmed in Belgium 3,000; total 124,000."—*Franco-German War: German official account*, pt. 1, v. 2, p. 408.—See also STATISTICS: Vital statistics.

1870 (September).—**Revolution at Paris.—Collapse of the empire.—Council of Government and National Defense instituted.**—At Paris, the whole truth of the tremendous disaster at Sedan was but slowly learned. On the afternoon of Saturday, September 3, Count de Palikao intimated a little part of it, only, "in a statement to the Corps Législatif, announcing that Marshal Bazaine, after a vigorous sally, had been obliged to retire again under the walls of Metz, and that Macmahon, after a series of combats, attended by reverses and successes—having at the outset driven a part of the enemy's army into the Meuse—had been compelled to retreat to Sedan and Mézières, a portion of his army having taken refuge in Belgium. The junction of the two armies had therefore not been made. The situation was serious, calmly observed the Minister of War, but not hopeless. Not hopeless! when the truth was that one army was blockaded and the other prisoner, and that there were no reserves. . . . At a midnight sitting Count de Palikao, still determined to conceal a portion of the truth, intimated that part of Marshal Macmahon's army had been driven back into Sedan, that the remainder had capitulated, and that the Emperor had been made prisoner. M. Jules Favre met this announcement of fresh disasters by a motion, declaring the Emperor and his dynasty to have forfeited all rights conferred by the Constitution, demanding the appointment of a Parliamentary Committee invested with the governing power, and having for its special mission the expulsion of the enemy from French territory, and further maintaining General Trochu in his post as Governor of Paris. The Chamber then adjourned till the morrow. But Paris had touched one of those crises when, as Pascal says, a grain of sand will give a turn to history and change the life of nations, and the morrow brought with it the downfall of the Ministry, of the dynasty, of the Empire, and of that bizarre constitutional edifice which had been kept waiting so long for its complemental crown. . . . It had been intimated that the Corps Législatif would reassemble at noon, before which time numerous groups collected on the Place de la Concorde, and eventually swelled to a considerable crowd. The bridge leading to the Palais Bourbon was guarded by a detachment of mounted gendarmes, and numerous sergents-de-ville. . . . Battalions of National Guards having, however, arrived, the gendarmes, after flourishing their swords, opened their ranks and allowed them to pass, followed by a considerable portion of the crowd, shouting 'Vive la République!' and singing the 'Chant du Départ.' The iron gates of the Palais Bourbon having been opened to admit a deputation of National Guards, the crowd precipitated itself forward, and in a few minutes the steps and courtyard were alike invaded. Cries of 'Vive la Garde Nationale!' 'Vive la Ligne!' 'Vive la République!' resounded on all sides, and the soldiers who occupied the court of the Palais Bour-

bon, after making a show of resistance, ended by hoisting the butt ends of their rifles in the air in sign of sympathy, joining at the same time in the shouts of the crowd, while the latter, encountering no further opposition, proceeded to invade the passages of the Chamber, at the moment Count de Kératry was attacking the Ministry for surrounding the Corps Législatif with troops and sergents-de-ville, contrary to the orders of General Trochu. Count de Palikao, having explained the relative positions of the Governor of Paris and the Minister of War, introduced a bill instituting a Council of Government and National Defence, composed of five members elected by the Legislative Body, the ministers to be appointed with the approval of the members of this Council, and he, Count de Palikao, to occupy the post of Lieutenant-General. M. Jules Favre having claimed priority for the motion which he had introduced the day before, M. Thiers, pleading the necessity for union, next moved that:—'In view of existing circumstances, the Chamber appoints a Commission of Government and National Defence. A Constituent Assembly will be convoked as soon as circumstances permit.' The Chamber having declared in favour of their urgency, these several propositions were eventually referred to the Bureau, and the sitting was suspended. It was during this period that the crowd penetrated into the Salles des Quatre Colonnes and de la Paix. . . . At half-past two, when the sitting was resumed, the galleries were crowded and very noisy. The members of the Left only were in their places. It was in vain the President attempted to obtain silence, in vain the solemn huissiers commanded it, MM. Gambetta and Crémieux appeared together at the tribune, and the former begged of the people to remain quiet. . . . A partial silence having been secured, Count de Palikao, followed by a few members of the majority, entered the Chamber, but did not essay to speak. . . . A minute or two afterwards, the clamour arose again, and a noisy multitude commenced invading the floor of the hall. . . . Nothing was left to the President but to put on his hat and retire, which he did, together with Count de Palikao and the members by whom the latter had been accompanied. By this time the Chamber was completely invaded by National and Mobile Guards, in company with an excited crowd, whose advance it was in vain now to attempt to repel. M. Jules Favre, having mounted the tribune, obtained a moment's silence. 'No scenes of violence,' cried he; 'let us reserve our arms for our enemies.' Finding it utterly impossible to obtain any further hearing inside the Chamber, M. Gambetta, accompanied by the members of the Left, proceeded to the steps of the peristyle, and there announced the dethronement of the Emperor to the people assembled outside. Accompanied by one section of the crowd, they now hurried to the Hôtel de Ville, and there installed themselves as a Provisional Government, whilst another section took possession of the Tuileries—whence the Empress had that morning taken flight—as national property. A select band of Republicans, mindful of what Count—now Citizen—Henri Rochefort had done to bring Imperialism into disrepute, proceeded to the prison of Sainte Pélagie and conducted the author of the Lanterne, and other political prisoners, in triumph to the Hôtel de Ville. The deputies who quitted the Chamber when it was invaded by the mob, met that same afternoon at the President's residence, and sent a deputation to the Hôtel de Ville, with a proposal to act in common with the new Government. This proposition was, however,

declined, on the score of the Republic having been already proclaimed and accepted by the population of Paris. At an evening meeting of nearly two hundred deputies, held under the presidency of M. Thiers, MM. Jules Favre and Simon attended on the part of the Provisional Government to explain that they were anxious to secure the support of the deputies, whom they hinted, however, could best serve their country in the departments. After this unequivocal rebuff, the deputies, who had in the meantime been apprised that seals had been placed on the doors of the Corps Législatif, saw that nothing remained to them but to protest, and protest they accordingly did against the events of the afternoon. . . . Not one of the two hundred deputies present so much as dared suggest the breaking of the seals and the assembling in the Legislative Chamber. . . . The Government which grasped the reins of power on the utter collapse of Imperial institutions was a mob-named one in the fullest sense of the term, the names having been chalked by the populace on the pillars of the portico of the Palais Bourbon during that invasion of the Chamber on the Sunday afternoon which resulted in the overthrow of the Imperial régime. The list appears to have been accepted by the principal members of the Left, who, although they would have preferred disassociating themselves from M. Rochefort, nevertheless felt that it was impossible to leave him out of the combination, and therefore adroitly—and not inappropriately, as the safety of Paris was especially in their keeping—made it embrace all the deputies for Paris, save, as M. Jules Simon observed, the most illustrious—meaning M. Thiers, who refused to join it. . . . The Government of National Defence, as it elected to style itself, on M. Rochefort's suggestion, was composed of the following members:—General Trochu, president; Jules Favre, Vice President and Minister for Foreign Affairs; Emanuel Arago; Crémieux, Minister of Justice; Jules Ferry, Secretary; Leon Gambetta, Minister of the Interior; Garnier-Pagès; Glais-Bizoin; Eugène Pelletan; Ernest Picard, Minister of Finance; Henri Rochefort; and Jules Simon, Minister of Public Instruction. Subsequently it associated with it General Le Flô, Minister of War; Admiral Fourichon, Minister of Marine; M. Dorian, Minister of Public Works; and M. Magnin, Minister of Agriculture and Commerce. These, with Count de Kératry, charged with the Prefecture of Police, M. Etienne Arago, appointed Mayor of Paris, composed altogether no less than eighteen members, upwards of two-thirds of whom were Bretons, advocates, or journalists. . . . For some days the new Government was prodigal of proclamations and decrees. Its first acts were to close the doors of the Palais Bourbon and the Palais du Luxembourg, and dissolve the Corps Législatif and abolish the Senate as bouches inutiles politiques, to issue proclamations to the army, or rather the débris of one, justifying the Revolution and appealing to the troops to continue their heroic efforts for the defence of the country, and to the National Guard, thanking them for their past, and asking for their future patriotism. It released all functionaries from their oaths, dismissed the ambassadors at foreign courts, appointed prefects in all the departments, and new mayors in the twenty arrondissements of the capital, proclaimed the complete liberty of the press, ordered all Germans not provided with special permission to remain, to quit the departments of the Seine and Seine-et-Oise within four-and-twenty hours. . . . It pressed forward the provisioning of the city and its works

of defence, increased the herds of sheep and oxen and the stores of corn and flour, provisionally abolished all local customs and octroi dues, and fixed the price of butcher's meat, armed the outer forts and the enceinte, blew up or mined all the bridges and fired all the woods in the environs, razed thousands of houses to the ground, felled roadside trees, and constructed huge barricades with them; laid in fact all the beautiful suburbs in waste; listened to the thousand and one wild schemes put forth by patriotic madmen for exterminating the invaders, and launched a huge captive balloon, which hovered daily over Paris to give timely notice of their dreaded arrival."—H. Vizetelly, ed., *Paris in peril*, ch. 1.

1870 (September-October).—Futile striving for allies and for peace without territorial sacrifices.—Investment of Paris.—Gambetta's organization of defense in the Provinces.—Bazaine's surrender at Metz.—"The Government of National Defence . . . imagined that the fall of the Empire would simplify the cruel position of France towards the enemy. The Dynasty which had declared war being reversed, and the men now in power having been throughout opposed to war and in favour of German unity, and now demanding nothing but peace, what motive could the King of Prussia have to continue the invasion of France? It was further to be considered that free France would defend her integrity to the last drop of her blood; that she would voluntarily give up neither an inch of her territory nor a stone of her fortresses. Such were the ideas which the new Minister of Foreign Affairs, M. Jules Favre, expressed on the 6th of September, in a circular addressed to the French agents in foreign countries. The Cabinet of Berlin was not slow in disabusing him of these convictions. Far from accepting the view that the Emperor Napoleon was the sole promoter of war, Count Bismarck, in two despatches of the 13th and of the 16th of September, threw the responsibility of the conflict on the French nation. He stated that the vast majority of the Chambers had voted for war, and that the Emperor was justified in assuring the King that he had been forced into a war to which he was personally averse. . . . In order to be secure against future aggression, Germany would ask for guarantees from the French nation itself, and not from a transitory Government. . . . In any case, Germany would require Strasburg and Metz. Thus the accession to power of the Republican Government did not modify the reciprocal positions of the two belligerents. Nevertheless, hope was entertained in Paris that the friendly intervention of the great powers might induce the victor to soften his rigour"; but intervention was declined by the Berlin Cabinet and not undertaken. "On the 19th of September the investment of Paris was completed. At the desire of the French Government, the English Cabinet applied to the German head-quarters, with the object of obtaining for M. Jules Favre an interview with Count Bismarck. This request having been granted, the two statesmen held conferences, on the 19th and 20th of September, at Ferrières, a castle of Baron Rothschild near Meaux. During these interviews the French Minister was sentimental and the German Minister coldly logical. They could not come to an agreement on any single point. . . . The Government of Paris . . . again proclaimed that France would not cede an inch of her territory. Meanwhile, in consequence

of the investment of Paris, the Government of National Defence was divided into two parts; some of its Delegates withdrew to Tours, forming a delegation of the central Government which remained in Paris. The German armies had continued their onward march, as well as their operations against the fortresses. Toul capitulated on the 23rd and Strasburg on the 28th of September. On the 5th of October, King William had established his headquarters at Versailles." Meantime "the Government of National Defence made a last attempt to secure allies, or at least the help of powerful mediators. With this object M. Thiers, who had placed himself at the disposal of the Administration of the 4th of September, was sent on a mission to the European Courts. From the 12th of September till the 20th of October, the old statesman visited in succession London, Vienna, St. Petersburg, and Florence. In none of these cities were his measures attended with happy results." At St. Petersburg and at London he was told—and he was himself convinced—"that the King of Prussia was compelled to consider the public opinion of Germany, and that France would have to resign herself to territorial sacrifices." He returned to France to advise, and to procure authority for, a conference with the German Chancellor. But events had already occurred which aggravated the forlorn condition of France. "The youngest and most enterprising member of the Government of Paris, M. Gambetta, had left the Capital on the 8th of October in a balloon for Tours. It was his intention to organise national defence in the Provinces. The day after his arrival at Tours, he issued a fiery Proclamation to the French people. . . . With an energy that called forth universal admiration, the Government of Tours, over which Gambetta presided as Dictator, organised resistance, formed a new army, and gathered together every possible resource for defence both in men and in materials. All these efforts could not arrest the progress of the invasion. From the 11th to the 31st of October, the Germans took successively Orleans, Soissons, Schlestadt and Dijon. Round Paris they repulsed the sallies of Malmaison, Champigny, and le Bourget. But all these defeats of heroic soldiers waned when compared to the appalling and decisive catastrophe of Metz. After the battle of Gravelotte, Marshal Bazaine had unsuccessfully attempted several sallies. . . . On the 7th of October, after an unfortunate battle at Woippy, lasting nine hours, Bazaine considered the situation desperate. His only thought was to obtain the most favourable conditions he could, and with this object he sent General Boyer to the headquarters at Versailles." After two weeks of negotiation, "on the 21st of October, the army encamped within the walls of Metz found itself without provisions. . . . Negotiations with Prince Frederick Charles, nephew of the King and Commander-in-chief of the besieging Army, were opened on the 25th, and terminated on the 27th of October. The conditions were identical with those of Sedan: capitulation of the town and its forts with all the material of war, all the army of the Rhine to be prisoners and the officers to be liberated on parole."—E. Simon, *Emperor William and his reign*, v. 2, ch. 13.—"The French Army of the Rhine at the time of the surrender still numbered 173,000 men, inclusive of 6,000 officers and 20,000 men remaining temporarily in Metz as sick or convalescent."—*Franco-German War: German official account*, pt. 2, v. 1, p. 201.

1870-1871.—War in the provinces.—Unsuccessful attempts to relieve the capital.—Distress in Paris.—Capitulation and armistice.—"The surrender of Metz and the release of the great army of Prince Frederick Charles by which it was besieged fatally changed the conditions of the French war of national defence. Two hundred thousand of the victorious troops of Germany under some of their ablest generals were set free to attack the still untrained levies on the Loire and in the north of France, which, with more time for organisation, might well have forced the Germans to raise the siege of Paris. The army once commanded by Steinmetz was now reconstituted, and despatched under General Manteuffel towards Amiens; Prince Frederick Charles moved with the remainder of his troops towards the Loire. Aware that his approach could not long be delayed, Gambetta insisted that Aurelle de Paladines should begin the march on Paris. The general attacked Tann at Coulmiers on the 9th of November, defeated him, and re-occupied Orleans, the first real success that the French had gained in the war. There was great alarm at the German headquarters at Versailles; the possibility of a failure of the siege was discussed; and 40,000 troops were sent southwards in haste to the support of the Bavarian general. Aurelle, however, did not move upon the capital: his troops were still unfit for the enterprise; and he remained stationary on the north of Orleans, in order to improve his organisation, to await reinforcements, and to meet the attack of Frederick Charles in a strong position. In the third week of November the leading divisions of the army of Metz approached, and took post between Orleans and Paris. Gambetta now insisted that the effort should be made to relieve the capital. Aurelle resisted, but was forced to obey. The garrison of Paris had already made several unsuccessful attacks upon the lines of their besiegers, the most vigorous being that of Le Bourget on the 30th of October, in which bayonets were crossed. It was arranged that in the last days of November General Trochu should endeavour to break out on the southern side, and that simultaneously the army of the Loire should fall upon the enemy in front of it and endeavour to force its way to the capital. On the 28th the attack upon the Germans on the north of Orleans began. For several days the struggle was renewed by one division after another of the armies of Aurelle and Prince Frederick Charles. Victory remained at last with the Germans; the centre of the French position was carried; the right and left wings of the army were severed from one another and forced to retreat, the one up the Loire, the other towards the west. Orleans on the 5th of December passed back into the hands of the Germans. The sortie from Paris, which began with a successful attack by General Ducrot upon Champigny beyond the Marne, ended after some days of combat in the recovery by the Germans of the positions which they had lost, and in the retreat of Ducrot into Paris. In the same week Manteuffel, moving against the relieving army of the north, encountered it near Amiens, defeated it after a hard struggle, and gained possession of Amiens itself. After the fall of Amiens, Manteuffel moved upon Rouen. This city fell into his hands without resistance. . . . But the Republican armies, unlike those which the Germans had first encountered, were not to be crushed at a single blow. Under the energetic command of Faidherbe the army of the north advanced again

upon Amiens. Goeben, who was left to defend the line of the Somme, went out to meet him, defeated him on the 23rd of December, and drove him back to Arras. But again, after a week's interval, Faidherbe pushed forward. On the 3rd of January he fell upon Goeben's weak division at Bapaume, and handled it so severely that the Germans would on the following day have abandoned their position, if the French had not themselves been the first to retire. Faidherbe, however, had only fallen back to receive reinforcements. After some days' rest he once more sought to gain the road to Paris, advancing this time by the eastward line through St. Quentin. In front of this town Goeben attacked him. The last battle of the army of the North was fought on the 19th of January. The French general endeavoured to disguise his defeat, but the German commander had won all that he desired. Faidherbe's army was compelled to retreat northwards in disorder; its part in the war was at an end. During the last three weeks of December there was a pause in the operations of the Germans on the Loire. . . . Gambetta . . . had . . . determined to throw the army of Bourbaki, strengthened by reinforcements from the south, upon Germany itself. The design was a daring one, and had the . . . French armies been capable of performing the work which Gambetta required of them, an inroad into Baden, or even the reconquest of Alsace, would most seriously have affected the position of the Germans before Paris. But Gambetta miscalculated the power of young, untrained troops, imperfectly armed, badly fed, against a veteran army. In a series of hard-fought struggles the army of the Loire under General Chanzy was driven back at the beginning of January from Vendôme to Le Mans. On the 12th, Chanzy took post before this city and fought his last battle. While he was making a vigorous resistance in the centre of the line, the Breton regiments stationed on his right gave way; the Germans pressed round him, and gained possession of the town. Chanzy retreated towards Laval, leaving thousands of prisoners in the hands of the enemy, and saving only the débris of an army. Bourbaki in the meantime, with a numerous but miserably equipped force, had almost reached Belfort. . . . Werder had evacuated Dijon and fallen back upon Vesoul; part of his army was still occupied in the siege of Belfort. As Bourbaki approached he fell back with the greater part of his troops in order to cover the besieging force, leaving one of his lieutenants to make a flank attack upon Bourbaki at Villersexel. This attack, one of the fiercest in the war, delayed the French for two days, and gave Werder time to occupy the strong positions that he had chosen about Montbéliard. Here, on the 15th of January, began a struggle which lasted for three days. The French, starving and perishing with cold, though far superior in number to their enemy, were led with little effect against the German entrenchments. On the 18th Bourbaki began his retreat. Werder was unable to follow him; Manteuffel with a weak force was still at some distance, and for a moment it seemed possible that Bourbaki, by a rapid movement westwards, might crush this isolated foe. Gambetta ordered Bourbaki to make the attempt: the commander refused to court further disaster with troops who were not fit to face an enemy, and retreated towards Pontarlier in the hope of making his way to Lyons. But Manteuffel now descended in front of him; divisions of Werder's army pressed down from the north; the retreat was cut off; and the unfortunate French general, whom a telegram from Gambetta removed from his com-

mand, attempted to take his own life. On the 1st of February, the wreck of his army, still numbering 85,000 men, but reduced to the extremity of weakness and misery, sought refuge beyond the Swiss frontier. The war was now over. Two days after Bourbaki's repulse at Montbéliard the last unsuccessful sortie was made from Paris. There now remained provisions only for another fortnight; above 40,000 of the inhabitants had succumbed to the privations of the siege; all hope of assistance from the relieving armies before actual famine should begin disappeared. On the 23rd of January Favre sought the German Chancellor at Versailles in order to discuss the conditions of a general armistice and of the capitulation of Paris. The negotiations lasted for several days; on the 28th an armistice was signed with the declared object that elections might at once be freely held for a National Assembly, which should decide whether the war should be continued, or on what conditions peace should be made. The conditions of the armistice were that the forts of Paris and all their material of war should be handed over to the German army; that the artillery of the enceinte should be dismantled; and that the regular troops in Paris should, as prisoners of war, surrender their arms. The National Guard were permitted to retain their weapons and their artillery. Immediately upon the fulfilment of the first two conditions all facilities were to be given for the entry of supplies of food into Paris. The articles of the armistice were duly executed, and on the 30th of January the Prussian flag waved over the forts of the French capital."—C. A. Fyffe, *History of modern Europe*, v. 3, ch. 6.

1871 (January-May).—Preliminaries of peace signed at Versailles.—Treaty of Frankfort.—Cession of Alsace and one-fifth of Lorraine.—Five milliards of indemnity.—“On the afternoon of January 28 [1871] the capitulation of Paris was signed, and an armistice agreed upon to expire on February 19 at noon. The provinces occupied by the armies of Bourbaki and Manteuffel were alone excluded from this agreement. On January 29 the German troops quietly took possession of the Paris forts. The regulars and mobiles became prisoners of war, with the exception of 12,000 men who were left under arms to preserve order. At the earnest request of Favre the National Guard were allowed to retain their arms. If Favre urged this as a measure to counteract the imperialistic ideas supposed to be still cherished by the prisoners returning from Germany, it was a political crime as well as a military folly. The National Guard became the armed Commune. . . . While the armies withdrew to the lines stipulated in the armistice, the elections went quietly forward. The assembly convened at

Bordeaux, and manifested a spirit that won for it universal respect. On February 17 M. Thiers was appointed chief of the executive power, and having named his ministry, he repaired to Versailles to arrange the preliminaries of peace. The conferences that followed with the German chancellor were perhaps the most trying ordeals to which the Frenchman had ever been subjected. No peace was possible save on the basis of the cession of miles of territory and the strongest of fortresses. France must also pay a war indemnity of no less than five milliards of francs. Bismarck, it is true, thought Thiers 'too sentimental for business, . . . hardly fit indeed to buy or sell a horse,' but no diplomatist, however astute, could have made better terms for stricken France. So thought the assembly at Bordeaux; and when Thiers an-

German troops marched out, and Paris was left to herself again. The war was over. Beyond the Rhineland, in Bavaria and Württemberg as well as in the north, all was joy and enthusiasm over the return of the army that had answered before the world the question, 'What is the German Fatherland?' On the 10th of May the definite treaty of peace was signed at Frankfort by which France ceded Alsace and a portion of Lorraine, including the fortresses of Metz and Strasburg, to her conqueror."—H. Murdock, *Reconstruction of Europe*, ch. 30.—The following are the heads of the Preliminary Treaty concluded at Versailles, to which the final Treaty of Frankfort conformed: "1. France renounces in favour of the German Empire the following rights: the fifth part of Lorraine including Metz and Thionville, and Alsace

BISMARCK DICTATING TERMS OF PEACE AT VERSAILLES, FEBRUARY, 1871

In conference with Thiers and Jules Favre

• (Painting by C. Wagner)

nounced the result of his mission with a quivering lip, he had its sympathy and support. On the 2d of March the assembly formally ratified the peace preliminaries by a vote of 546 to 107. It had been stipulated in the armistice that the German troops should not occupy Paris. The extension of time granted by the Germans entitled them to some compensation, and the entry of Paris was the compensation claimed. The troops detailed for this purpose were not chosen at random. To the Frenchman who on the 1st day of March beheld them pass along the Avenue de Malakoff or the Champs Elysées it was an ominous pageant. It was a German and not a Prussian army that he beheld. . . . That night the Hessians smoked their pipes on the Trocadéro, and the Bavarians stacked their arms in the Place de la Concorde, while the lights blazing from the palace of the Elysée announced the German military headquarters. On the third day of the month, the Bordeaux Assembly having ratified the peace preliminaries, the

less Belfort. [See also ALSACE-LORRAINE: 1871.] 2. France will pay the sum of five milliards of francs, of which one milliard is to be paid in 1871 and the remaining four milliards by instalments extending over three years. 3. The German troops will begin to evacuate the French territory as soon as the Treaty is ratified. They will then evacuate the interior of Paris and some departments lying in the western region. The evacuation of the other departments will take place gradually after payment of the first milliard, and proportionately to the payment of the other four milliards. Interest at the rate of five per cent. per annum will be paid on the amount remaining due from the date of the ratification of the Treaty. 4. The German troops will not levy any requisitions in the departments occupied by them, but will be maintained at the cost of France. A delay will be granted to the inhabitants of the territories annexed to choose between the two nationalities. 6. Prisoners of war will be immediately set at lib-

erty. 7. Negotiations for a definitive Treaty of Peace will be opened at Brussels after the ratification of this Treaty. 8. The administration of the departments occupied by the German troops will be entrusted to French officials, but under the control of the chiefs of the German Corps of occupation. 9. The present Treaty confers upon the Germans no rights whatever in the portions of territories not occupied. 10. This Treaty will have to be ratified by the National Assembly of France."

1871 (March-May).—**Insurrection of the communists of Paris.**—**Second siege and reduction of the capital.**—"On the 3d of March the German army of occupation—which had been in the assigned part of the city since the 1st—marched off through the Arc de Triomphe, and on the 7th the German headquarters were moved from Versailles. The great Franco-Prussian War was over . . . But before . . . peace could be attained, the country had yet to suffer from the so-called patriots of the Red Republicans worse outrage than it had endured at the hands of the German invaders. When the negotiations for the capitulation of Paris were in progress, Count Bismarck had warned M. Favre of the danger of allowing, as he proposed, the National Guard to retain their arms; and the members of the Government of National Defence might themselves have seen the risk they were incurring, had they calmly considered the various émeutes that had taken place during the siege, and in which the National Guard had always played such a conspicuous part on the side of disaffection. Now, in the full consciousness of their strength—somewhere about 100,000—and in their possession of a powerful artillery,—for during the German occupation they had, on the pretext of keeping them safe, got a large number of cannon into their hands,—they seemed determined to attempt the revival of the Reign of Terror. . . . The appointment of General d'Aurelle de Paladines as their commander gave great offence, and on the 9th March an attempt to place the tricolor on the column in the Place de la Bastille instead of the red flag of revolution led to an outbreak. A promise in the event of the cannon being given up, of the continuance of pay till 'ordinary work was resumed,' was disregarded, and the dismissal of D'Aurelle and the full recognition of the right of the National Guard to elect its own officers demanded. An effort of the government to seize the cannon in the Place des Vosges failed, and it was now clear enough that more energetic action than negotiations must take place. On the morning of the 18th March a large force of regular troops under Generals Vinoy and Lecomte proceeded to Montmartre and took possession of the guns; but the want of horses for their immediate removal gave time for the Reds to assemble and frustrate the effort, while, worst of all, a large number of the regular troops fraternized with the insurgents. General Lecomte and General Clément Thomas were taken prisoners and almost immediately shot. The outbreak, thus begun, spread rapidly; for, through some unaccountable timidity of the government, the government forces were withdrawn from the city, and the insurgents left free to act as they pleased. They seized General Chanzy at the Orleans railway station, took possession of the Ministry of Justice and the Hôtel de Ville, and threw up barricades round all the revolutionary quarters. The Central Committee of the National Guard, the leading man of which was Assi, . . . summoned the

people of Paris to meet 'in their comitia for the communal elections,' and declared their intention of resigning their power into the hands of the Commune thus chosen. The National Assembly removed from Bordeaux and held its sittings at Versailles; but bitter as was the feeling of the majority of the Deputies against the new turbulence, the position of affairs prevented any action from being taken against the insurgents. The removal of General d'Aurelle and the appointment of Admiral Saisset in his place was of no avail. A number of the inhabitants of Paris, styling themselves 'Men of Order,' attempted to influence affairs by a display of moral force, but they were fired on and dispersed. The Assembly was timid, and apparently quite unable to bring its troops into play. . . . Through Admiral Saisset concessions were offered, but the demands of the Communists increased with the prospect of obtaining anything. They now modestly demanded that they should supersede the Assembly wherever there was any prospect of collision of power, and be allowed to control the finances; and as a very natural consequence the negotiations were abandoned. This was on the 25th of March, and on the 26th the Commune was elected, the victory of the Reds being very easily gained, as hardly any of those opposed to them voted. Two days afterwards the Commune was proclaimed at the Hôtel de Ville, the members who had been elected being seated on a platform in red arm-chairs. The leading man of the new system was the honest but hot-headed and utopian Delescluze; Cluseret, a man of considerable military genius, who had led a life of a very wild nature in America, and who was the soul of the resistance when the actual fighting began, was Delegate of War; Grousset, of Foreign Affairs; and Rigault, of Public Safety. The new government applied itself vigorously to changes; conscription was abolished, and the authority of the Versailles government declared 'null and void.' Seeing that a desperate struggle must inevitably ensue, a very large number of the inhabitants of Paris quitted the city, and the German authorities allowed the prisoners from Metz and Sedan to return so as to swell the forces at the disposal of M. Thiers. They also intimated that, in view of the altered circumstances, it might again become necessary for them to occupy the forts they had already evacuated. The first shot in the second siege of Paris, in which Frenchmen were arrayed against Frenchmen, was fired on the 2d April, when a strong division of the Versailles army advanced against the National Guards posted at Courbevoie, and drove them into Paris across the Pont de Neuilly. During the ensuing night a large force of insurgents gathered, and were on the morning of the 3d led in three columns against Versailles. Great hopes had been placed on the sympathy of the regular troops, but they were doomed to disappointment. . . . The expedition . . . not only failed, but it . . . cost the Commune two of its leading men,—Duval, and that Flourens who had already made himself so conspicuous in connection with revolutionary outbreaks under the Empire and the Government of National Defence,—both of whom were taken and promptly shot by the Versailles authorities. The failure and the executions proved so exasperating that the 'Commune of Paris' issued a proclamation denouncing the Versailles soldiers as banditti. . . . They had ample means of gratifying their passion for revenge, for they had in their hands a number of leading men, including Darbois, Archbishop of Paris, and M. Bonjean, President of the Court of Cassation, and these—

two hundred in all—they proclaimed their intention of holding as hostages. M. Thiers was still hesitating, and waiting for a force sufficiently powerful to crush all opposition; and in this he was no doubt right, for any success of the Communists, even of the most temporary character, would have proved highly dangerous. The Germans had granted permission to the government to increase their original 30,000 troops to 150,000, and prisoners of Metz and Sedan had been pouring steadily back from Germany for this purpose. On the 8th April Marshal MacMahon took command of the forces at Versailles. A premature attack on the forts of Issy, Vanves, and Montrouge on the 11th failed, but on the 17th and 19th several of the insurgent positions were carried; on the 25th the bombardment of Issy and Vanves was begun, and from that time onwards operations against the city were carried on with the greatest activity, the insurgents being on all occasions put to the sword in a most merciless manner. Issy was taken on the 8th May, and Vanves on the 4th, and the enceinte laid bare. Inside Paris all this time there was nothing but jealousy. . . . First one leader, and then another, was tried, found wanting, and disgraced. . . . On the 21st May the defenders of the wall at the gate of St. Cloud were driven from their positions by the heavy artillery fire, and the besieging army, having become aware of the fact, pushed forward and secured this entrance to the city; and by the evening of the 22d there were 80,000 Versaillesists within the walls. Next day they gained fresh ground, and were ready to re-occupy the Tuileries and the Hôtel de Ville; but before this was possible the Communists, mad with despair, had resolved on that series of outrages against humanity that will make their names detested and their cause distrusted as long as the story of their crimes stands recorded in the annals of history. They had already perpetrated more than one act of vandalism. . . . On the 12th May, in accordance with a public decree, they had destroyed the private residence of M. Thiers with all its pictures and books; on the 16th the magnificent column erected in the Place Vendôme in memory of Napoleon I., and crowned by his statue, was undermined at one side and then pulled to the ground by means of ropes and utterly destroyed; and now on the 24th, in the last efforts of despairing rage, bands of men and women, still more frantic and eager for blood than were those of the Reign of Terror, rushed through the doomed city. Early in the morning the Tuileries, the Hôtel de Ville, the Ministry of Finance, the Palais d'Orsay, and other public and private buildings were seen to be on fire. The Louvre, too, with all its inestimable treasures, was in flames, and was saved with the greatest difficulty. If the Commune was to perish, it had clearly resolved that the city was to perish with it. Men and women marched about in bands with petroleum, and aided the spread of the conflagration by firing the city in different places. Heedless of the flames, the Versailles troops pressed on, eager, if possible, to save the lives of the 200 hostages, but, alas, in vain. A passion for blood had seized on the Commune, and its last expiring effort was to murder in cold blood, not only a large number of the hostages, but also batches of fresh victims, seized indiscriminately about the streets by bands of men and women, and dragged off to instant death. On the 26th Belleville was captured, and on the 27th and 28th the Cemetery of Père la Chaise was the scene of the final struggle,—a struggle of such a desperate nature—for there was no quarter—that,

for days after, the air of the district was literally fraught with pestilence. Many of the leaders of the Commune had fallen in the final contest, and all the others who were captured by the Versailles troops during the fighting were at once shot. Of the 30,000 prisoners who had fallen into the hands of the government, a large number, both men and women, were executed without mercy, and the rest distributed in various prisons to await trial, as also were Rossel, Assi, Grousset, and others, who were captured after the resistance was at an end. Cluseret succeeded in making good his escape. . . . Of the prisoners, about 10,000 were set free without trial, and the others were sentenced by various courts-martial during the following months and on through the coming year, either to death, transportation or imprisonment.”—H. Martin, *Popular history of France from the first revolution*, v. 3, ch. 24.

Lissagaray, *History of the commune of 1871*.—W. P. Pettridge, *Rise and fall of the Paris commune*.—J. Leighton, *Paris under the commune*.

1871 (April-May).—Government of the commune in Paris.—“For the conduct of affairs the Communal Council divided itself into ten ‘commissions,’ of finance, war, public safety, external relations, education, justice, labour and exchange, provisions, the public service, and the general executive. Of these the most efficient appears to have been that of finance; by advances from the bank and by the revenues of the post, the telegraph, the octrois, &c., means were found to provide for the current expenditure. The other commissions were admittedly inefficient, and especially the one which was most important for the moment, that of war:—‘as to a general plan,’ says Lissagaray, ‘there never was one: the men were abandoned to themselves, being neither cared for nor controlled’; ‘at the Ministry,’ says Gastyne, ‘no one is at his place. They pass their time in running after one another. The most insignificant Lieutenant will take orders from nobody, and wants to give them to everybody. They smoke, chat and chaff. They dispute with the contractors. They buy irresponsibly right and left because the dealers give commissions or have private relations with the officials’; ‘in the army of Versailles,’ said a member of the Commune, ‘they don’t get drunk: in ours they are never sober’; ‘the administration of war,’ said another, ‘is the organisation of disorganisation’; ‘I feel myself,’ said Rossel, on resigning his command, ‘incapable of any longer bearing the responsibility of a command where every one deliberates and no one obeys. The central committee of artillery has deliberated and prescribed nothing. The Commune has deliberated and resolved upon nothing. The Central Committee deliberates and has not yet known how to act. . . . My predecessor committed the fault of struggling against this absurd situation. I retire, and have the honour to ask you for a cell at Mazas.’ The same incompetence, leading to the same result of anarchy, was displayed by the Executive Commission:—‘in less than a fortnight,’ said Grosset, ‘conflicts of every kind had arisen; the Executive Commission gave orders which were not executed; each particular commission, thinking itself sovereign in its turn, gave orders too, so that the Executive Commission could have no real responsibility.’ On April 20 the Executive Commission was replaced by a committee, composed of a delegate from each of the

nine other commissions; still efficiency could not be secured, and at the end of the month it was proposed to establish a Committee of Public Safety. This proposition was prompted by the traditions of 1793, and brought into overt antagonism the two conflicting tendencies of the Commune: there were some of its members who were ready to save the movement by a despotism, to secure at every cost a strong administration, and impose the Commune, if need be by terror, upon Paris and the provinces. . . . On the other hand there was a strong minority which opposed the proposal, on the ground that it was tantamount to an abdication on the part of the Communal Council. . . . The appointment of the Committee was carried by forty-five votes to twenty-three; many of those who voted for it regarded it as merely another 'Executive Commission,' subordinate to, and at any moment subject to dismissal by, the Commune; and so, in effect, it proved; it was neither more terrible nor more efficient than the body to which it succeeded; it came into existence on the 1st of May, and on the 9th the complaint was already advanced that 'your Committee of Public Safety has not answered our expectations; it has been an obstacle, instead of a stimulus'; on the 10th a new committee was appointed, with similar results; all that the innovation achieved was to bring into clear relief the fact that there existed in the Commune a Jacobin element ready to recur to the traditions of 1793, and to make Paris the mistress of France by the guillotine or its modern equivalent."—G. L. Dickinson, *Revolution and reaction in modern France*, pp. 267-270.

1871-1876.—Assembly at Bordeaux.—Thiers elected chief of the executive power.—Founding of the republic.—Recovery of order and prosperity.—Resignation of Thiers.—Election of Marshal MacMahon.—Plans of the monarchists defeated.—Adoption of the constitution of 1875.—"The elections passed off more quietly than was to be expected, and the Assembly which came together at Bordeaux on the 13th of February exactly represented the sentiment of the nation at that particular moment. France being eager for peace, the Assembly was pacific. It was also somewhat unrepresentative, for the Republic had been represented in the provinces only by Gambetta, the promoter of war to the knife, who had sacrificed the interests of the Republic to what he conceived to be the interests of the national honor. Politics had, in truth, been little thought of, and Thiers was elected in 27 departments upon very diverse tickets, rather on account of his opposition to the war and his efforts in favor of peace than on account of his fame as a liberal orator and historian. Moved by the same impulse, the Assembly almost unanimously appointed him Chief of the Executive Power of the French Republic, and intrusted to him the double task of governing the country and of treating with the German Emperor. . . . It was apparently in the name of the Republic that peace was negotiated and the Government gradually reconstructed. . . . The Assembly, however, which was all-powerful, held that to change the form of government was one of its rights. It might have been urged that the electors had scarcely contemplated this, and that the Monarchists were in the majority simply because they represented peace, while in the provinces the Republic had meant nothing but war to the hilt. But these distinctions were not thought of in the press of more urgent business, namely, the treaty which was to check the shedding of blood, and the rudiments of administrative reconstruction. No mon-

archy would have been willing to assume the responsibility of this Treaty. . . . The Right accordingly consented to accept the name of Republic as a makeshift, provided it should be talked about as little as possible. Thiers had come to think, especially since the beginning of the war, that the Republic was the natural heir of Napoleon III. . . . He had, however, been struck with the circumstance that so many Legitimists had been elected to the Assembly, and he was no more eager than they to stop to discuss constitutions. . . . He was the more disposed to wait, inasmuch as he saw in the Chamber the very rapid formation and growth of a group in which he had great confidence. Of these deputies M. Jules Simon has given a better definition than they could themselves formulate,—for this political philosopher has written a masterly history of these years. . . . Here is what Simon says of this party in the Assembly: 'There were in this body some five-score firm spirits who were alike incapable either of forsaking the principles whereon all society rests, or of giving up freedom. Of all forms of government they would have preferred constitutional monarchy, had they found it established, or could they have restored it by a vote without resort to force. But they quickly perceived that neither the Legitimists nor the Bonapartists would consent to the constitutional form; that such a monarchy could obtain a majority neither in the Parliament nor among the people. . . . Some of these men entertained for the Republic a distrust which, at first, amounted to aversion. Being persuaded, however, that they must choose between the Republic and the Empire . . . they did not despair of forming a Republic at once liberal and conservative. In a word, they thrust aside the Legitimate Monarchy as chimerical, Republican and Cæsarian dictatorship as alike hateful. . . . Of this party M. Thiers was not merely the head, but the body also.' . . . But there was another party, which, although the least numerous in the Assembly and split into factions at that, was the most numerous in the country,—the Republican party."—P. de Rémusat, *Thiers*, ch. 6-7.—"In the wake of Thiers followed such men as Rémusat, Casimir Périer, Léou Say, and Lafayette. This added strength made the Republicans the almost equal rivals of the other parties combined. So great was Thiers' influence that, despite his conversion to Republicanism, he was still able to control the Monarchical Assembly. A threat of resignation, so great was the dread of what might follow it, and so jealous were the Monarchists of two shades and the Imperialists of each other, was enough to bring the majority to the President's terms. It was under such political conditions that the infant Republic, during its first year, undertook the tasks of preserving peace, of maintaining internal order, of retrieving disaster, of tempting back prosperity and thrift to the desolated land, of relieving it of the burdens imposed by war, and, at the same time, of acquiring for itself greater security and permanency. The recovery of France was wonderfully rapid; her people began once more to taste sweet draughts of liberty; the indemnity was almost half diminished; and her industries, at the end of the year, were once more in full career. But the Republic was a long way from complete and unquestioned recognition. The second year of the Republic (1872-73) was passed amid constant conflicts between the rival parties. Thiers still maintained his ascendancy, and stoutly adhered to his defence of Republican institutions; but the Assembly was restive under him, and energetic attempts were made to bring about a fusion

between the Legitimists and the Orleanists. These attempts were rendered futile by the obstinacy of the Count of Chambord, who would yield nothing, either of principle or even of symbol, to his cousin of Orleans. The want of harmony among the Monarchists postponed the consideration of what should be the permanent political constitution of France until November of the year 1872, when a committee of thirty was chosen to recommend constitutional articles. Against this the Republicans protested. They declared that the Assembly had only been elected to make peace with Germany; . . . that dissolution was the only further act that the Assembly was competent to perform. This indicated the confidence of the Republicans in their increased strength in the country; and the fact that the Monarchists refused to dissolve shows that they were not far from holding this opinion of their opponents. Despite the rivalries and bitterness of the factions, the Republic met with no serious blow from the time of its provisional establishment in February, 1871, until May, 1873. Up to the latter period two thirds of the enormous indemnity had been paid, and the German force of occupation had almost entirely retired from French territory.

But in May, 1873, a grave misfortune, alike to France and to the Republican institutions, occurred. At last the Monarchical reactionists of the Assembly had gathered courage to make open war upon President Thiers. Perceiving that his policy was having the effect of nourishing and adding ever new strength to the Republican cause, and that every month drifted them further from the opportunity and hope of restoring Monarchy or Empire . . . they now forgot their own differences, and resolved, at all hazards, to get rid of the Republic's most powerful protector. . . . The Duc de Broglie, the leader of the reactionary Monarchists, offered a resolution in the Assembly which was tantamount to a proposition of want of confidence in President Thiers. After an acrimonious debate, in which Thiers himself took part, De Broglie's motion was passed by a majority of fourteen. The President had no alternative but to resign; and thus the executive power, at a critical moment, passed out of Republican into Monarchical hands. Marshal MacMahon was at once chosen President. . . . MacMahon was strongly Catholic in religion; and so far as he was known to have any political opinions, they wavered between Legitimism and Imperialism—they were certainly as far as possible from Republicanism. Now was formed and matured a deliberate project to overthrow the young Republic, and to set up Monarchy in its place. All circumstances combined to favor its success. The new President was found to be at least willing that the thing should, if it could, be done. His principal minister, De Broglie, entered warmly into the plot. The Orleanist princes agreed to waive their claims, and the Count of Paris was persuaded to pay a visit to the Count of Chambord at his retreat at Frohsdorf, to acknowledge the elder Bourbon's right to the throne, and to abandon his own pretensions. The Assembly was carefully canvassed, and it was found that a majority could be relied upon to proclaim, at the ripe moment, Chambord as king, with the title of Henry V. The Republic was now, in the early autumn of 1873, in the most serious and real peril. It needed but a word from the Bourbon pretender to overthrow it, and to replace it by the throne of the Capets and the Valois. Happily, the old leaven of Bourbon bigotry existed in 'Henry V.' He conceded the point of reigning with parliamentary institutions, but he would not accept the tricolor as the flag of the restored mon-

archy. He insisted upon returning to France under the white banner of his ancestors. To him the throne was not worth a piece of cloth. To his obstinacy in clinging to this trifle of symbolism the Republic owed its salvation. The scheme to restore the monarchy thus fell through. The result was that the two wings of Monarchists flew apart again, and the Republicans, being now united and patient under the splendid leader-hip of Gambetta, once more began to wax in strength. It only remained to the Conservatives to make the best of the situation—to proceed to the forming of a Constitution, and to at least postpone to as late a period as possible the permanent establishment of the Republic. The first step was to confirm MacMahon in the Presidency for a definite period; and the 'Septennate,' giving him a lease of power for seven years—that is, until the autumn of 1880—was voted. . . . It was not until late in the year 1875 that the Constitution which is now the organic law of France was finally adopted [see FRANCE, CONSTITUTION OF]. The chief circumstance which impelled a majority of the Assembly to take this decisive step was the alarming revival of Imperialism in the country. This was shown in the success of Bonapartists in isolated elections to fill vacancies. Much as the Royalists distrusted a Republic, they dreaded yet more the restoration of the Empire; and the rapid progress made by the partisans of the Empire forced them to adopt what was really a moderate Republican Constitution. This Constitution provided that the President of the Republic should be elected by a joint convention of the Senate and the Chamber of Deputies; that the Senate should consist of 300 members, of whom 75 were to be elected for life by the Assembly, and the remaining 225 by electoral colleges, composed of the deputies, the councillors-general, the members of the councils d'arrondissement, and delegates chosen from municipal councils; that the vacancies in the life senatorships should be filled by the Senate itself, while the term of the Senators elected by the colleges should be nine years, one third retiring every three years; that the Chamber of Deputies should consist of 533 members, and that the deputies should be chosen by single districts, instead of, as formerly, in groups by departments; that the President could only dissolve the Chamber of Deputies with the consent of the Senate; that money bills should originate in the Lower Chamber, and that the President should have the right of veto. The 'Septennate' organized and the Constitution adopted, the Assembly, which had clung to power for about five years, had no reason for continued existence, and at last dissolved early in 1876, having provided that the first general election under the new order of things should take place in February. . . . The result of the elections proved three things—the remarkable growth of Republican sentiment; the great progress made, in spite of the memory of Sedan, by the Bonapartist propaganda; and the utter hopelessness of any attempt at a Royalist restoration."—G. 1875-1889.—Stable settlements of the republic.—Presidencies of MacMahon and Grévy.—Military operations in Tunis, Madagascar and Tonkin.—Revision of the constitution.—Expulsion of the princes.—Boulangism.—Election of Sadi Carnot to the presidency.—“The last day of the year 1875 saw a final prorogation of this monarchist assembly which had established the Republic. It had been in existence nearly five years. The elections to the Senate gave a small majority to the Republicans. Those to the Chamber of Deputies (February, 1876) gave about two-thirds of its 532 seats to Republicans, mostly moderate Republicans. The ministry to which the leadership of this assembly was soon confided, was therefore naturally a ministry of moderate Republicans. M. Dufaure was prime minister, and M. Léon Say minister of finance. . . . The Dufaure ministry was not long-lived, being succeeded before the year 1876 closed, by a ministry led by M. Jules Simon, a distinguished orator and writer. The tenure of French cabinets in general has been so little permanent under the Third Republic, that in the nineteen years which have elapsed since the fall of the Empire, twenty-five cabinets have had charge of the executive government. . . . Few events had marked the history of the Simon ministry when, suddenly, in May, 1877, the President of the Republic demanded its resignation. Much influenced of late by Monarchist advisers, he had concluded that the moderate Republican cabinets did not possess the confidence of the chambers, and, feeling that the responsibility of maintaining the repose and security of France rested upon him, had resolved, rather than allow the management of the affairs of the country to fall into the hands of M. Gambetta and the Radicals, to appoint a ministry of conservatives, trusting that the country would ratify the step. A ministry was organized under the Duke of Broglie, and the Chamber of Deputies was first prorogued, and then, with the consent of the Senate, dissolved. The death of M. Thiers in September caused a great national demonstration in honor of that patriotic statesman, ‘the liberator of the territory.’ The result of the ensuing elections was a complete victory for the Republicans, who secured nearly three-fourths of the seats in the new Chamber. The Marshal, appointing a ministry composed of adherents of his policy who were not members of the Assembly, attempted to make head against the majority, but was forced in December to yield to the will of the people and of their representatives, and to recall M. Dufaure and the moderate Republicans to office. The year 1878 therefore passed off quietly, being especially distinguished by the great success of the universal exhibition held at Paris. . . . At the beginning of 1879 elections were held in pursuance of the provisions of the constitution, for the renewal of a portion of the Senate. . . . Elections were held for the filling of 82 seats. Of these the Republicans won 66, the Monarchist groups 16. This was a loss of 42 seats on the part of the latter, and assured to the Republicans a full control of the Senate. It had also the effect of definitively establishing the Republic as the permanent government of France. The Republican leaders therefore resolved to insist upon extensive changes in the personnel of the Council of State and the judiciary body. . . . When they also proposed to make extensive changes in other departments, Marshal MacMahon, who foresaw the impossibility of maintaining harmonious relations with the cabinets which the Republican majority would now de-

mand, took these new measures as a pretext, and, on January 30, 1879, resigned the office of President of the Republic. On the same day the Senate and Chamber, united in National Assembly, elected as his successor, for the constitutional term of seven years, M. Jules Grévy, president of the Chamber of Deputies a moderate Republican who enjoyed general respect. M. Grévy was 71 years old. M. Gambetta was chosen to succeed him as president of the Chamber. The cabinet was remodelled, M. Dufaure resigning his office and being succeeded by M. Waddington. In the reorganized ministry one of the most prominent of the new members was M. Jules Ferry, its minister of education. He soon brought forward two measures which excited violent discussion: the one dealing with the regulation of superior education, the other with the constitution of the Supreme Council of Public Instruction. . . . In March, 1880, the Senate rejected the bill respecting universities. The ministry, now composed of members of the ‘pure Left’ (instead of a mixture of these and the Left Centre) under M. de Freycinet, resolved to enforce the existing laws against non-authorized congregations. The Jesuits were warned to close their establishments; the others, to apply for authorization. Failing to carry out these decrees, M. de Freycinet was forced to resign, and was succeeded as prime minister by M. Ferry, under whose orders the decrees were executed in October and November, establishments of the Jesuits and others, to the number of nearly 300, being forcibly closed and their inmates dispersed.”—V. Duruy, *History of France*, pp. 666-670.—“At last France had an administration which lasted a little over two years. But Ferry was still intensely unpopular. He had become the successor of Gambetta and the exponent of the policy of Opportunism, which he tried to carry out with even more constructive statesmanship. But he was totally wanting in Gambetta’s magnetism, and his domineering ways made him hated the more. The Clericals opposed him as the ‘persecutor’ of the Catholic religion, and the Radicals thought he did not go far enough in his hostility to the Church. For Jules Ferry saw that the times were not ripe for disestablishment, and that the system of the *Concordat*, in vogue since Napoleon I, really gave the State more control over the Clergy than it would have in case of separation. The State would lose its power in appointments and salaries. Jules Ferry knew that the Church could be useful to him, and the politic Leo XIII, very different from Pius IX, was ready to meet him part way, though the Pope himself had to humor to a certain extent the hostility to the Republic of the French Monarchists and Clericals. Jules Ferry, like Gambetta, also had to put up with the veiled hostility of President Grévy, working in Parliament through the intrigues of his son-in-law Wilson. Moreover, Ferry was made to bear the odium for a long period of financial depression, which had lasted since 1882, starting with the sensational failure (*krach*) of a large bank, the Union générale. So his career was made a torture and he was vilified perhaps more than any man of the third Republic. The extremists had in time another grievance against Jules Ferry in his opposition to a radical revision of the constitution. The enemies of the Republic still feigned to believe, especially when the death of the comte de Chambord in 1883 had fused the Legitimists and Orleanists, that an integral revision would pave the way for a monarchical restoration. The Radicals demanded the suppression of the power of the Senate, whose consent was necessary to summon a constitutional convention. A Congress was sum-

moned in 1884 at which the very limited programme of the Ministry was put through. The changes merely eliminated from the constitution the prescriptions for senatorial elections. After this, by an ordinary statute, life-senatorships were abolished for the future, and some changes were made in the choice of senatorial electors. [After the fall of the Ferry cabinet, 1885, a law was passed providing for *scrutin de liste*; each department being entitled to a number of deputies proportioned to the number of its citizens, the deputies for each being chosen on a general or departmental ticket; and any prince of families formerly reigning in France were declared ineligible to the office of president, deputy or senator.] Jules Ferry was what would today be called an imperialist. . . . [He] thought that the Triple Alliance of Germany, Austria, and Italy, formed in 1882, was going to isolate France permanently in Europe. So she was to regain her prestige by territorial annexations in the Sudan, the Congo, Madagascar [in accordance with the terms of the treaty signed in 1883, the foreign relations of the island were put under the control of France, while the queen of Madagascar retained control of internal affairs], Annam, and Tonkin. The French had some nominal rights on Tonkin since 1874, and disturbances there had caused a revival of activities. When the French officer Rivière was killed in an ambush in May, 1883, Jules Ferry sent heavy reinforcements and forced the King of Annam to acknowledge a French protectorate. This stirred up the Chinese, who also claimed Annam, and who caused the invasion of Tonkin by guerrillas supported by their own troops. After various operations in Tonkin the Treaty of Tien-tsin was signed with China in May, 1884, by which China made the concessions called for by the French. . . . While Jules Ferry in the spring of 1885 was actually negotiating a final peace with China on terms satisfactory to the French, the cession of Annam and Tonkin with a commercial treaty, and while he was categorically affirming in the Chamber of Deputies the success of military operations in Tonkin, a sudden dispatch from the East threw everything into a turmoil. General Brière de l'Isle telegraphed from Tonkin that the French had been disastrously defeated at Lang-son and General de Négrier severely wounded. The news proved to be a grievous exaggeration which was contradicted by a later dispatch some hours after, but the damage was done. On March 30, in the Chamber of Deputies, Jules Ferry was insulted and abused by the leaders of a coalition of anti-Republicans and Radicals. The 'Tonkinois,' as his vilifiers called him, disgusted and discouraged, made little attempt to defend himself and his Cabinet fell by a vote of 306 to 149. On April 4, the preliminaries of a victorious treaty of peace was signed with China. The fall of Jules Ferry was a severe blow to efficient government. It marked the end, for a long time, of any effort to construct satisfactory united Cabinets led by a strong man. It set a precedent for innumerable short-lived Ministries built on the treacherous sands of shifting groups. It paved the way for a deterioration in parliamentary management. It accentuated the bitter hatred now existing between the Union des gauches, as the united Gambetta and Ferry Opportunist groups called themselves, on the one hand, and the Radicals and the Extreme Left on the other. The Radicals, in particular, were influential, and one of their more moderate members, Henri Brisson, became the head of the next Cabinet. Brisson's name testified to an advance toward radicalism, but the Cabinet contained all sorts of

moderate and nondescript elements, dubbed a 'concentration' Cabinet. Its chief function was to tide over the elections of 1885, for a new Chamber of Deputies. In anticipation of this election Gambetta's long-desired *scrutin de liste* had been rather unexpectedly voted. The workings of the new method of voting were less satisfactory than had been anticipated. Republican dissensions and a greater union of the opposition caused a tremendous reactionary landslide on the first ballot. This was greatly reduced on the second ballot, so that the Republicans emerge with a large though diminished majority. But the old Left Centre had practically disappeared and the Radicals were vastly more numerous. The great divisions were now the Right, the moderate Union des gauches, the Radicals, and the revolutionary Extreme Left. The Brisson Cabinet was blamed for not 'working' the elections more successfully and it resigned at the time of President Grévy's re-election. He had reached the end of his seven years' term and was chosen again on December 28, 1885. He was to have troublesome experiences during the short time he remained in the Presidency. The Freycinet, Goblet, and Rouvier Cabinets, which fill the rest of Grévy's Presidency, were largely engrossed with a new danger in the person of General Boulanger. He first appeared in a prominent position as Minister of War in the Freycinet Cabinet. A young, brilliant, and popular though unprincipled officer, he soon devoted himself to demogogy and put himself at the head of the jingoes who called Ferry the slave of Bismarck. The expeditions of Tunis and Tonkin had, moreover, thrown a glamour over the flag and the army. Boulanger began at once to play politics and catered to the advanced parties, who adopted him as their own. He backed up the spectacular expulsion of the princes, which, as an answer to the monarchical progress, drove from France the heads of formerly reigning families and their direct heirs in line of primogeniture, and carried out their radiation from the army. [The Count of Paris and his son the Duke of Orleans, Prince Napoleon and his son Prince Victor were banished by presidential decree, June, 1886.] The populace cheered the gallant general on his black horse, and when Bismarck complained that he was a menace to the peace of Europe Boulanger's fortune seemed made. At a certain moment France and Germany were on the brink of war in the so-called Schnaebelle affair. So, when Boulanger was left out of the Rouvier Cabinet combination in May, 1887, as dangerous, he played more than ever to the gallery as the persecuted saviour of France and, on being sent to take command of an army corps in the provinces at Clermont-Ferrand, he was escorted to the train by thousands of enthusiastic manifestants. Meanwhile, President Grévy was nearing a disaster. In October, 1887, General Caffarel, an important member of the General Staff, was arrested for participating in the sale of decorations. When Boulanger declared that the arrest of Caffarel was an indirect assault on himself, originally responsible for Caffarel's appointment to the General Staff, the affair got greater notoriety. The scandal assumed national proportions when it was found to involve the President's own son-in-law Daniel Wilson, well known to be a shady and tricky politician, who had the octogenarian President under his thumb. The matter reached the scale of a Cabinet crisis, since it was by an overthrow of the Ministry that the President could best be reached. Unfortunately, Grévy could not see that the most dignified thing for him to do was to resign, even though he was in no way involved in Wilson's misdemeanors.

For days he tried to persuade prominent men to form a Cabinet; he tried to argue his right and duty to remain. But finally the Chamber and Senate brought actual pressure upon him by voting to adjourn to specific hours in the expectation of a presidential communication. He bowed to the inevitable and retired from the Presidency [December 2, 1887] with the reputation of a discredited old miser, instead of the great statesman he had appeared on beginning his term of office."—C. H. C. Wright, *History of the third French republic*, pp. 86-95—"On the next day the houses met in National Assembly at Versailles to choose the successor of M. Grévy. . . . The most prominent candidates for the Republicans were M. Ferry and M. de Freycinet; the former, however, was unpopular with the country. The followers of both, finding their election impossible, resolved to cast their votes for M. Sadi Carnot, a Republican of the highest integrity and universally respected. M. Carnot, a distinguished engineer, grandson of the Carnot who had, as minister of war, organized the victories of the armies of the Revolution, was accordingly elected President of the French Republic. . . . The chief difficulties encountered by the cabinet arose out of the active propagandism exercised in behalf of General Boulanger. . . . His name . . . became the rallying-point of those who were hostile to the parliamentary system, or to the Republican government in its present form. Alarmed both by his singular popularity and by his political intrigues, the government instituted a prosecution of him before the High Court of Justice; upon this he fled from the country, and the dangers of the agitation in his favor were, for the time at least, quieted. On May 5, 1880, the one-hundredth anniversary of the assembly of the States-General was held at Versailles. On the next day, President Carnot formally opened the Universal Exhibition at Paris."—V. 1894-1895.—Assassination of President Carnot.—Election and resignation of Casimir-Périer.—Election of Felix Faure to the presidency.—"On June 24, 1894, while at Lyons, whither he had gone to pay a state visit to an international exhibition, President Carnot was fatally stabbed by an underwitted Italian anarchist named Caserio Santo, and died within a few hours. Never were more futile and abominable crimes committed than those which sacrificed Carnot and McKinley. The customary promptness in the choice of a President . . . was observed in the election of Carnot's successor. The historic name and the social and financial position of the new chief magistrate, Jean Casimir-Perier, seemed to the monarchical sister-nations a guarantee of national stability and dignity. In reality the election brought about a more definite cleavage between rival political tendencies, Casimir-Perier, grandson of Louis-Philippe's great minister, obviously represented the Moderates, most of whom tried in all sincerity to carry out the *esprit nouveau* and a policy of good-will toward the Catholic Church. The Radicals said that this was playing into the hands of the Clericals, and to the Socialists Casimir-Perier was merely a hated capitalist. He was, moreover, unfortunately unfit for the acrimonies of political life. High-strung and emotional, he writhed under misinterpretation and abuse, and rebelled against the constitutional powerlessness of his office. He had never really wanted the Presidency and had accepted it chiefly through the personal persuasion of his friend the statesman Burdeau, who unfortunately died soon after his election. The brief Presidency of Casimir-Perier, lasting less than a year, was destined to see the beginning of the worst trial the French Republic had yet experienced, the famous Dreyfus case. . . . The Minister of War, General Mercier, who had recently committed some much-criticized administrative blunders, and who now wished to show his efficiency, caused the arrest of Dreyfus. Then, egged on by anti-Semitic newspapers which had got hold of Dreyfus's name, Mercier brought him before a court-martial. . . . With dramatic unexpectedness . . . (January 15), Casimir-Perier resigned the Presidency. During the whole Dreyfus affair Casimir-Perier had chafed because his ministers had constantly acted without keeping him informed, particularly when he was called upon by the German Government to acknowledge that it had had nothing to do with Dreyfus. He had lost by death the support of his friend Burdeau; he was discouraged by the campaign of abuse against him, especially the election as Deputy in Paris of Gérault-Richard, one of his most active vilifiers. In particular he felt that his own Cabinet, and above all its leader Dupuy, were false to him. A discussion in the Chamber concerning the duration of

the state guarantees to certain of the great railway companies ended in a vote unfavorable to the Cabinet, which resigned, whereupon Casimir-Perier seized the opportunity to go too. . . . Two days later the electoral Congress met at Versailles. The Radicals supported Henri Brisson. The Moderates and the Conservatives were divided between Waldeck-Rousseau and Félix Faure, but Waldeck-Rousseau having thrown his strength on the second ballot to Faure, the latter was elected. . . . Félix Faure's first Cabinet was led by the Republican Moderate Alexandre Ribot. It lasted less than a year and its history was chiefly noteworthy, at least in foreign affairs, by the increasing openness of the Franco-Russian *rapprochement* at the ceremonies of the inauguration of the Kiel Canal. In internal affairs there were some violent industrial disturbances and strikes. In October, 1895, the Moderates gave way to the Radical Cabinet of Léon Bourgeois."—C. H. C. Wright, *History of the third French republic*, pp. 114-116, 118-121.

1894-1896.—Final subjugation and annexation of Madagascar. See MADAGASCAR: 1894-1899.

1894-1906.—Dreyfus affair.—First trial and conviction.—Case reopened by Picquart in 1896.—Second trial, in 1899.—Vindication in 1906.—Significance of the affair.—"In October 1894, Alfred Dreyfus, an Alsatian Jew, and a captain in the artillery, attached to the General Staff, was arrested amid circumstances of unusual secrecy, was treated with great harshness, and was brought before a court-martial, where he was accused of treason, of transmitting important military documents to a foreign power, presumably Germany. The accusation rested on a document that had come into the possession of the War Office, and was soon to be famous as the 'bordereau,' a memorandum merely containing a list of several documents said to be inclosed. The *bordereau* bore no address, no date, nor signature, but it was declared to be in the known handwriting of Dreyfus. The court-martial, acting behind closed doors, found him guilty, and condemned him to expulsion from the army and to imprisonment for life. In January 1895 he was publicly degraded in a most dramatic manner in the courtyard of the Military School, before a large detachment of the army. His stripes were torn from his uniform, his sword was broken. Throughout this agonizing scene he was defiant, asserted his innocence, and shouted 'Vive la France!' He was then deported to a small, barren, and unhealthy island off French Guiana, in South America, appropriately called Devil's Island, and was there kept in solitary confinement. . . . No one questioned the justice of the verdict. The opinion was practically unanimous that he had received a traitor's deserts. Only the immediate family and circle of Dreyfus maintained that a monstrous wrong had been done, and demanded further investigation. Their protests passed unheeded. The case was considered closed.

"It was reopened in 1896 by Colonel Picquart, one of the youngest and most promising officers in the army, attached since June 1895 to the detective bureau, or Intelligence Department, of the General Staff. In the course of his duties he had become convinced that the 'bordereau' was not the work of Dreyfus, but of a certain Major Esterhazy, who was shortly shown to be one of the most abandoned characters in the army. Picquart informed his superior, the Minister of War, of this discovery. The military authorities, instead of investigating the matter, not wishing to have the case reopened, sent Picquart to Tunis and Algeria, the purpose apparently being to get him out of the

way. Colonel Henry was appointed to his place. By this time the public was becoming interested. Some of the documents in the famous case had found their way into print; the mysterious elements in the proceedings aroused curiosity and some uneasiness. Toward the end of 1897, Scheurer-Kestner, a vice-president of the Senate, who had become convinced of the innocence of Dreyfus, tried to have the case reopened. His efforts met with the blunt statement of the prime minister, Méline, that the Dreyfus case no longer existed, was a *chose jugée*. But the fact that a man of such importance, and such known integrity of character and mind, as Scheurer-Kestner, was convinced that a cruel wrong had been committed, was of unmistakable consequence. The wrath of the anti-Dreyfus party was increased; criminations and recriminations flew back and forth. Race hatred of the Jews, zealously fanned for several years by a group of journalists, fed the flames. Esterhazy was now brought before a court-martial, given a very travesty of a trial, and triumphantly acquitted, congratulated, *avec émotion*, by the members of the court itself (January 11, 1898). On the next day Colonel Picquart was arrested and imprisoned on charges made by Esterhazy. On the day following that, January 13th, Émile Zola, the well-known novelist, published a letter of great boldness and brilliancy, in which he made most scathing charges against the judges of both the Dreyfus and Esterhazy courts-martial, and practically dared the Government to prosecute him. His desire was thus to reopen the whole Dreyfus question. The Government prosecuted him in a trial which was a parody of justice, secured his condemnation to imprisonment and fine, and evaded the question of Dreyfus. The Zola condemnation was later quashed by a higher court on a mere technicality. He was later tried again, and again condemned (July 1898) by default, having fled to London. The Dreyfus case had not been reopened. Meanwhile, the Méline ministry had been overthrown, and the Brisson ministry had come into power, with Cavaignac as Minister of War. On July 7, 1898, Cavaignac, intending to settle this troublesome matter once for all, made a speech before the Chamber of Deputies in which, omitting all mention of the *bordereau*, he brought forward three documents as new proofs of the guilt of Dreyfus. His speech was so convincing that the Chamber, by a vote of five hundred and seventy-two to two, ordered that it should be posted in every one of the thirty-six thousand communes of France. The victory was overwhelming. Immediately, however, Colonel Picquart wrote to Cavaignac that he could prove that the first two documents cited had nothing to do with Dreyfus, and that the third was an outright forgery. He was rearrested. It was immediately after this that Zola was condemned for the second time, as stated above. Events now took a most sensational turn. At the end of August the newspapers of Paris contained the announcement that Colonel Henry had confessed that he had forged the document which Picquart had declared was a forgery and that then he had committed suicide. Cavaignac resigned, maintaining, however, that the crime of Henry did not prove the innocence of Dreyfus. The public was vastly disturbed by these events. Why was there any need of new proof to establish Dreyfus's guilt, and if the new proof was the work of crime, what about the original proof, the famous *bordereau*? At this juncture the case was referred to the Court of Cassation, the highest court in France. While it was deliberating, the President, Faure, known as an anti-Dreyfusite, died suddenly

under somewhat mysterious circumstances, and on February 18, 1899, Émile Loubet, known to be favorable to a reopening of the question, was chosen as his successor. Sensations showed no signs of abating. On June 2nd, Esterhazy, who had fled to England, announced that he had himself written the bordereau. The enemies of Dreyfus now asserted that he had simply been bribed by the Dreyfus party to make this declaration. On the next day the Court of Cassation annulled the decision of the court-martial of 1894, and ordered that Dreyfus be tried again before a court-martial at Rennes. Dreyfus was brought from Devil's Island, and his second trial began in August 1899. This new trial was conducted in the midst of the most excited state of the public mind in France, and of intense interest abroad. Party passions were inflamed as they had not been in France since the Commune. The supporters of Dreyfus were denounced frantically as slanderers of the honor of the army, the very bulwark of the safety of the country, as traitors to France. At the Rennes tribunal, Dreyfus encountered the violent hostility of the high army officers, who had been his accusers five years before. These men were desperately resolved that he should again be found guilty. The trial was of an extraordinary character. It was the evident purpose of the judges not to allow the matter to be thoroughly probed. Testimony, which in England or America would have been considered absolutely vital, was barred out. The universal opinion outside France was, as was stated in the London *Times*, 'that the whole case against Captain Dreyfus, as set forth by the heads of the French army, in plain combination against him, was foul with forgeries, lies, contradictions and puerilities, and that nothing to justify his condemnation had been shown.' Nevertheless, the court, by a vote of five to two, declared him guilty, 'with extenuating circumstances,' an amazing verdict. It is not generally held that treason to one's country can plead extenuating circumstances. The court condemned him to ten years' imprisonment, from which the years spent at Devil's Island might be deducted. Thus the 'honor' of the army had been maintained. President Loubet immediately pardoned Dreyfus, and he was released, broken in health. This solution was satisfactory to neither side. The anti-Dreyfusites vented their rage on Loubet. On the other hand, Dreyfus demanded exoneration, a recognition of his innocence, not pardon. But the Government was resolved that this discussion, which had so frightfully torn French society, should cease. Against the opposition of the Dreyfusites, it passed, in 1900, an amnesty for all those implicated in the notorious case, which meant that no legal actions could be brought against any of the participants on either side. The friends of Dreyfus, Zola, and Picquart protested vigorously against the erection of a barrier against their vindication. The bill, nevertheless, passed.

"Six years later, however, the Dreyfus party attained its vindication. The revision of the whole case was submitted to the Court of Cassation. On July 12, 1906, that body quashed the verdict of the Rennes court-martial. It declared that the charges which had been brought against Dreyfus had no foundation, that the bordereau was the work of Esterhazy, that another document of importance was a forgery, that the Rennes court-martial had been guilty of gross injustice in refusing to hear testimony that would have established the innocence of the accused. The case was not to be submitted to another military tribunal but was closed. The Government now restored

Captain Dreyfus to his rank in the army, or rather, gave him the rank of major, allowing him to count to that end the whole time in which he had been unjustly deprived of his standing. On July 21, 1906, he was invested with a decoration of the Legion of Honor in the very courtyard of the Military School, where eleven years before, he had been so dramatically degraded. Colonel Picquart was promoted brigadier-general, and shortly became Minister of War. Zola had died in 1903, but in 1908 his body was transferred to the Pantheon, as symbolizing a kind of civic canonization. Thus ended the 'Affair.' The Dreyfus case, originally simply involving the fate of an alleged traitor, had soon acquired a far greater significance. Party and personal ambitions and interests sought to use it for purposes of their own, and thus the question of legal right and wrong was woefully distorted and obscured. The Anti-Semites used it to inflame the people against the Jews. They won the support of the Clericals, ingeniously suggesting that the so-called anti-Religious legislation of the Third Republic, particularly that establishing secular education, was really the work of the Jews, influencing politicians by their money, and that the Jews were now getting control of the army, and that Dreyfus himself showed how they would use it for traitorous purposes. Further, reactionaries of all kinds joined the anti-Dreyfus party: Monarchists, anxious to discredit the Republic, that thus they might profit; so-called Nationalists, anxious to change the government along the lines of Boulangism and to adopt a vigorous foreign policy. On the other hand, there allied to the defense of Dreyfus those who believed in his innocence, those who denounced the hatred of a race as a relic of barbarism, those who believed that the military should be subordinate to the civil authority and should not regard itself above the law, as these army officers were doing; all who believed that the whole opposition was merely conducting an insidious, covert, dangerous attack upon the Republic, and all who believed that clerical influence should be kept out of politics."—C. D. Hazen, *Europe since 1815*, pp. 358-363.

1895.—Alliance with Russia.—The most important work of the new government was the arrangement of an alliance with Russia, which was conspicuously signified to the world by the union of the French and Russian fleets when they entered the German harbor of Kiel, on the 17th of June, to take part in the celebration of the opening of the Kaiser Wilhelm ship canal, between the Baltic and North seas (see GERMANY: 1895 [June]). This gave the greatest possible satisfaction to the nation, and powerfully strengthened the ministers for a time; but they were discredited a little later in the year by disclosures of waste, extravagance and peculation in the military department. Early in the autumn session of the Chamber of Deputies a vote was carried against them, and they resigned. A more radical cabinet was then formed, under M. Leon Bourgeois, president of the council and minister of the interior; with M. Berthelot holding the portfolio of foreign affairs, M. Cavaignac that of war, and M. Lockroy that of the marine.

1896 (April-May).—Change of ministry.—Socialist gains.—“The cleavage between the two tendencies of the Republican Party became more marked. The Moderates joined forces with the Conservatives to oppose the schemes for social and financial reforms of the Radicals and of the representatives of the working classes. Prominent among these was the proposal for a progressive income tax. The Senate, naturally a more conservative body, was opposed to the Bourgeois Cabinet, which had a majority, though not a very steadfast one, in the Chamber of Deputies. The Senate, usually a nonentity in determining the fall of a cabinet, for once successfully asserted its power and, by refusing to vote the credits asked for by the Ministry for the Madagascar campaign, caused it to resign in April, 1896. The enemies of the Senate maintained that the Chamber of Deputies, elected by direct suffrage, was the only judge of the fate of a cabinet. But Bourgeois's hold was at best precarious and he seized the opportunity to withdraw. The Méline Cabinet which followed was a return to the Moderates supported by the Conservatives. Its opponents accused it of following what in American political parlance is called a ‘stand-pat’ policy, but it remained in office longer than any ministry up to its time, a little over two years. It afforded, at any rate, an opportunity for the adversaries of the Republic to strengthen their positions and encouraged the transformation of the Dreyfus case into a political instead of a purely judicial matter.”—C. H. C. Wright, *History of the third French republic*, pp. 121-122.—The May elections revealed Socialistic gains throughout France; the Parti Ouvrier alone reckoned more than eighteen hundred municipal councillors elected upon its collectivist program.

1898 (May-November).—General elections.—Fall of the Méline ministry.—Brisson ministry struggling with the Dreyfus question.—Coalition cabinet, with Dupuy as president of the council.—“Public opinion was becoming yet more violently excited [over the Dreyfus case]. France was divided into two great camps, the line of cleavage often estranging the closest friends and relatives. On the one side was a vast majority consisting of the Clericals, the jingoes or Nationalists, the anti-Semites, and the unreflecting mass of the population. On the other were ranged the ‘intellectuals,’ the Socialists who were now rallying to the cause of tolerance, the Jews, and the few French Protestants. The League of the Rights of Man stood opposed to the association of the *Patrie Française*. In the midst of this turmoil were held the elections of May, 1898, for the renewal of the Chamber of Deputies. The political coloring of the new body was not sensibly changed, but the open Dreyfusites were all excluded. The Moderates now generally dubbed themselves ‘Progressists.’ None the less at the first session the

now long-lived Méline Cabinet resigned after a vote requesting it to govern with fewer concessions to the Right. The next Cabinet was Radical, headed by Henri Brisson. His mind was not yet definitely made up on the matter of revision, and he gave concessions to the Nationalists by appointing as Minister of War Godefroy Cavaignac. This headstrong personage, proud of an historic name, undertook to manage the Cabinet and to prove once for all to the Chamber the guilt of Dreyfus. In his speech he relied mainly on the letter mentioned at the Zola trial as written by the Italian to the German *attaché*. Once more the Dreyfus affair seemed permanently settled, and once more the contrary proved to be the case. In August Cavaignac discovered, to his dismay, that the document he had sent to the Chamber, with such emphasis on its importance, was an out-and-out forgery of Henry. The latter was put under arrest and committed suicide. Discussion followed between Brisson, now converted to revision, and Cavaignac, still too stubborn to change his mind with regard to Dreyfus, in spite of his recent discovery. Cavaignac resigned as Minister of War, was replaced by General Zurlinden, who withdrew in a few days and was in turn succeeded by another general, Chanoine, thought to be in sympathy with the Cabinet. He in turn played his colleagues false and resigned unexpectedly during a meeting of the Chamber. Weakened by these successive blows the Brisson Cabinet itself had to resign, but its leader had now forwarded to the supreme court of the land, the Cour de Cassation, the petition of Dreyfus's wife for a revision of his sentence. The first step had at last been taken. The Criminal Chamber accepted the request and proceeded to a further detailed investigation. The Brisson Ministry was followed by a third Cabinet of the unabashed Dupuy.”—C. H. C. Wright, *History of the third French republic*, pp. 128-131.

1899 (February-June).—Death of President Faure.—Election of Loubet.—Revolutionary attempts of “Nationalist” agitators.—Waldeck-Rousseau ministry.—“President Faure died suddenly and under mysterious circumstances on February 16, 1899. He had opposed revision and his death, attributed to apoplexy, was a gain to the revisionists who were accused by his friends of having caused his murder. . . . The successor of Félix Faure, Emile Loubet, was elected on February 18, 1899, by a good majority over Jules Méline, the candidate of the larger number of the Moderates or ‘Progressists’ and of the Conservatives. Loubet was himself a man of Moderate views, but he was thought to favor a revision of the Dreyfus case. Among the charges of his enemies was that, as Minister of the Interior in 1892, he had held, but had kept secret, the famous list of the ‘Hundred and Four’ and had prevented the seizure of the papers of Baron de Reinach and the arrest of Arton. So Loubet's return to Paris from Versailles was amid hostile cries of ‘Loubet-Panama’ and ‘Vive l'armée!’ On February 23, after the state funeral of President Faure, a de-

tachment of troops led by General Roget was returning to its barracks in an outlying quarter of Paris. Suddenly the Nationalist and quondam Boulangerist Paul Déroulède, now chief of the Ligue des Patriotes and vigorous opponent of parliamentary government, though a Deputy himself, rushed to General Roget, and, grasping the bridle of his horse, tried to persuade him to lead his troops to the Elysée, the presidential residence, and overthrow the Government. Déroulède had expected to encounter General de Pellieux, a more amenable leader, and one of the noisy generals at the Zola trial. General Roget, who had been substituted at the last moment, refused to accede and caused the arrest of Déroulède, with his fellow Deputy and conspirator Marcel Habert. Meanwhile the Dreyfus case had been taken out of the hands of the Criminal Chamber and given to the whole Court. To the dismay of the anti-Dreyfusites the Court, as a body, annulled, on June 3, the verdict of the court-martial of 1894, and decided that Dreyfus should appear before a second military court at Rennes for another trial. Thus party antagonisms were becoming more and more acute. In addition Dupuy, the head of the Cabinet, seemed to be spiting the new President. On the day after the verdict of the Cour de Cassation, at the Auteuil races, President Loubet was roughly jostled by a band of fashionable young Royalists and struck with a cane by Baron de Christiani. A week later, at the Grand Prize races at Longchamps, on June 11, Dupuy, as though to atone for his previous carelessness, brought out a large array of troops, so obviously over-numerous as to cause new disturbances among the crowd desirous of manifesting its sympathy with the chief magistrate. More arrests were made and, at the meeting of the Chamber of Deputies the next day, the Cabinet was overthrown by an adverse vote. The ministerial crisis brought about by the fall of Dupuy was as important as any under the Third Republic because of its consequences in the redistribution of parties. . . . At last public opinion was astounded by the masterly combination made by Waldeck-Rousseau, Gambetta's former lieutenant, who of recent years had kept somewhat aloof from active participation in politics. He brought together a ministry of 'défense républicaine,' which its opponents, however, called a cabinet for the 'liquidation' of the Dreyfus case. The old policy of 'Republican concentration' of Opportunists and Radicals was given up in favor of a mass formation of the various advanced groups of the Left, including the Socialists. Waldeck-Rousseau was a Moderate Republican, whose legal practice of recent years had been mainly that of a corporation lawyer, but he was a cool-headed Opportunist. He realized the ill-success of the policy of the 'esprit nouveau,' and saw the necessity of making advances to the Socialists, who more and more held the balance of power. He succeeded in uniting in his Cabinet Moderates like himself, Radicals, and, for the first time in French parliamentary history, an out-and-out Socialist, Alexandre Millerand, author of the famous 'Programme of Saint-Mandé' of 1896, or declaration of faith of Socialism. Still more astounding was the presence as Minister of War, in the same Cabinet with Millerand, of General de Galliffet, a bluff, outspoken, and dashing aristocratic officer, a favorite with the whole army, but fiercely hated by the proletariat because of his part in the repression of the Commune. The first days of the new Cabinet were stormy and its outlook was dubious. The task of reconciling such divergent elements, even against a common foe, seemed an impossibility, until at last the Radicals

under Brisson swung into line. Such was the beginning of a Republican grouping which later, during the anti-Clerical campaign, was known as *le Bloc*, the united band of Republicans.—C. H. C. Wright, *History of the third French republic*, pp. 131, 134-138.—See also SOCIALISM: 1890-1908.

1899-1900 (August-January).—Arrest and trial of revolutionary conspirators.—"The Waldeck-Rousseau Ministry took up the Dreyfus case with a queer combination of courage and weakness. . . . During the turmoil of the Dreyfus affair the Cabinet was, it seemed to many, unduly anxious over certain conspirators against the Republic. The symptoms of insubordination in high ranks in the army, linked with the Clerical manoeuvres, had encouraged the other foes of the Republic (spurred on by the Royalists), whether sincere opponents of the parliamentary régime like Paul Déroulède, or venal agitators such as the anti-Semitic Jules Guérin. But, certainly, above all objectionable were the proceedings of the Assumptionists, a religious order which had amassed enormous wealth, and which, by the various local editions of its paper *la Croix*, had organized a campaign of venomous slander and abuse of the Republic and its leaders. The Government, having got wind of a project of the conspirators to seize the reins of power during the Rennes court-martial, anticipated the act by wholesale arrests on August 12. Jules Guérin barricaded himself with some friends in a house in the rue de Chabrol in Paris, and defied the Government to arrest him without perpetrating murder. The grotesque incident of the 'Fort Chabrol' came to an end after thirty-seven days when the authorities had surrounded the house with troops to starve Guérin out and stopped the drains. In November a motley array of conspirators, ranging from André Buffet, representative of the pretender the Duke of Orléans, to butchers from the slaughter-houses of La Villette, were brought to trial before the Senate acting as a High Court of Justice, on the charge of conspiracy against the State. . . . Paul Déroulède and André Buffet were condemned to banishment for ten years and Jules Guérin to imprisonment for the same term. Two others, Marcel Habert and the comte de Lur-Saluces, who had taken flight, gave themselves up later and were condemned in 1900 and 1901, respectively. . . . The year 1899 had proved itself one of the most dramatically eventful in the history of the Republic. It was also to be one of the most significant in its consequences. For the new grouping of mutually jealous factions against a common danger had, in spite of the fiasco of the second Dreyfus case, shown a way to victory. And exasperation against the intrigues of the Clericals and the army officers was going to turn the former toleration of the 'esprit nouveau' into active persecution, especially as the Socialists and Radicals formed the majority of the new combination. In November, 1899, Waldeck-Rousseau laid before Parliament an Associations bill to regulate the organization of societies, which was intended indirectly to control religious bodies."—C. H. C. Wright, *History of the third French republic*, pp. 138, 140-142.

1900.—Elections of 1900.—Appearance of new group of Republican leaders.—Anti-clericalism and social reform become dominant policies.—“In the main the nation seems to have supported the Government in repelling the aggressive attacks of unbridled Clericalism, and in rejecting the pretensions of the Army to dictate French politics.”—*Spectator* (London), Feb. 3, 1900.—“All Republican factions united to wage war against royalism. A coalition, known as the *bloc*, was formed in the Chamber, composed of all types of Republicans, Moderate, Radical, and Socialist, which pledged itself to support the ‘*Cabinet of Republican Defense*,’ organized in 1899 by Premier Waldeck-Rousseau. For the first time a Socialist, Alexandre Millerand, was included in the Ministry. The Cabinet declared its readiness ‘to defend energetically republican institutions,’ and ‘to put an end to all agitations the object of which, it is easily seen, is against the system of government consecrated by universal suffrage.’ A noteworthy group of new statesmen arose to face the situation. Waldeck-Rousseau, Aristide Briand, Georges Clémenceau, René Viviani, and Emile Combes. The policies of the *bloc*, which may be summed up as anti-clericalism and social reform, have been the policies of successive ministries down to the outbreak of the World War in 1914.”—J. S. Schapiro, *Modern and contemporary European history*, p. 256.—See also BLOC: French.

1900-1904.—Abolition of the religious orders, and secularization of education, leading to separation of church and state.—Relations of church and state as fixed by the Concordat.—Control of property and education by religious orders.—Law of associations, restricting religious orders.—Protest of pope.—Enforcement of law of associations.—Abolition of all teaching by religious orders.—State monopoly of education.—The Dreyfus case had emphasized again the tendency of the Catholic church in France and especially the Jesuits and other religious orders to act as a rally-point for reactionaries. Hence by 1900 there was a wide-spread feeling that the church should be under the strict surveillance of the law. Hitherto the relations between the church and the government had been determined by the Concordat, negotiated by Napoleon I with Pope Pius VII in 1802, and by the Organic Statutes, promulgated by the French government at the same time. The former was in the nature of a treaty; the latter was not. The French government claimed rights under both; the Roman Church acknowledged no force in the Statutes that could be binding on itself. “The Concordat consists of a preamble and seventeen statutes. It is a reciprocal contract between the temporal and spiritual powers, and is therefore at the same time State law and Church law. The preamble states that the Catholic, Apostolic, and Roman religion is that of the great majority of the French people; it does not say that it is ‘the religion of France,’ as the Holy See would have

wished, and consequently it does not restore to the Catholic religion its former character of being a State religion. After establishing a new distribution of the French dioceses, it directs that the bishops shall be ‘nominated’ by the Government and ‘installed’ by the Pope. The alienation of ecclesiastical property, effected by the Revolution, is definitely sanctioned. In return the Government undertakes, as had already been done by the Constituent Assembly, to secure ‘a reasonable allowance to the bishops and curés, whose dioceses and parishes will be included in the new arrangement,’ and to take ‘measures to allow French Catholics to make foundations in favour of churches if they wish.’ As regards the Organic Statutes, promulgated at the same time as the Concordat, 18th April, 1802, they proclaim that no bull, pastoral letter, or writing of any kind from the Holy See shall be published in France without the authority of the Government; no council, general or special, shall be held without this authority. There must be no other delegate from Rome in France besides the Nuncio, the official representative of the Sovereign Pontiff. Any infraction on the part of the clergy of the provisions either of the Concordat or of French law is referred to the Council of State, who must decide if there has been any abuse. The Organic Statutes were equally concerned with questions relating to discipline, doctrine, and even dogma—which are purely spiritual questions. They therefore not only upheld the Declaration of 1682 as a declaration of the principles of the Gallican Church, but also expected all the professors to teach it in the seminaries. According to the Concordat, bishops had a right to appoint curés; the Organic Statutes obliged them to obtain the approval of the Government for their appointments. Although the Organic Statutes are, with the Concordat, part of one and the same State law, they must not be considered to be entirely on the same footing. The Concordat concluded between the two powers binds them together; the Organic Statutes, an exclusive product of the French Government, never received the sanction of the Papal authority. They were, on the contrary, a source of further quarrels with the Roman Court. Even in our days, they frequently lead to conflict, the representatives of the Church having refused, on various occasions, to recognise the validity of decisions made in virtue of these Statutes by the French Government.”—J. Legrand, *Church and state in France* (Contemporary Review, May, 1901).—See also above: 1801-1804; CONCORDAT: 1515-1801.

While relations between the secular clergy and the government had been thus defined, nothing had been said about the religious orders, whose ownership of property and whose control of the education of French youth in their seminaries were steadily increasing. They formed a great alien body, bound together by the strictest ties of brotherhood, and owing allegiance to a power outside of the state, whose control over their consciences was naturally greater than that of the republican laws. The first step in bringing the church under the surveillance of the state consisted in the framing of the general law on associations, which would necessarily make these orders responsible to the government. The annulment of the Concordat seems at first not to have been contemplated. It was the result of the increasing volume of anti-clerical feeling aroused by the opposition of the church to the Bill of Associations, which made this legislation only the beginning of a protracted and heated battle be-

tween church and state in France. The beginning of this battle is to be found in a speech of the French prime minister, M. Waldeck-Rousseau, delivered at Toulouse October 28, 1900, in which he forecasts a bill to be brought up in the next session of the chambers, to regulate and restrict the religious orders in France. In explaining the necessity for such a bill he says, "The question is the rendering free, and subject only to the common law, all the associations which are in themselves lawful as regards the safety of the State. Another object of the same Bill is to cope with the peril which arises from the continuous development in a Democratic society of an organism which, according to a famous definition, the merit of which is due to our old Parliaments, 'tends to introduce into the State under the specious veil of a religious institution a political corporation the object of which is to arrive first at complete independence and then at the usurpation of all authority.' . . . The fundamental statute [the Concordat] determining the relations between the churches and the State should be exactly applied so long as it has not been altered, and we have always interpreted its spirit with the broadest tolerance. But as things are now going, what will remain of this pact of reciprocal guarantees? It had been exclusively confined to the secular clergy owing hierarchic obedience to their superiors and to the State and to questions of worship, the preparation for ecclesiastical functions and preaching in the churches." He goes on to say that this statute does not affect the monastic associations "covering the territory with a close network" which are gaining a dangerous control of property, and, through their seminaries, of the instruction of French youth. This last prerogative threatens the "moral unity" of the nation. He concludes, "If we attach so much importance to a Law on Association it is also because it involves the solution of at least a portion of the education question. This Bill is the indispensable guarantee of the most necessary prerogatives of modern society."

Late in December—a few days before the opening of debate on the bill in the chambers—the attitude of the church upon it was fully declared by the pope (Leo XIII), in a lengthy interview which M. Henri des Houx, one of the members of the staff of the *Matin*, was permitted to publish in that Paris journal. "After M. Waldeck-Rousseau's Toulouse speech, and in presence of the Associations Bill," said the pope, "I can no longer keep silent. It is my Apostolic duty to speak out. . . . Now, the Pope cannot consent to allow the French Government to twist the Concordat from its real intent and transform an instrument of peace and justice into one of war and oppression. The Concordat established and regulated in France the exercise of Catholic worship and defined, between the Church and the French State, mutual rights and duties. The religious communities form an integral part of the Apostolic Church as much as the secular clergy. . . . The Concordat is silent as to religious communities. This means that the regular clergy has no share in the special rights and relative privileges granted by the Concordat to the members of the secular ecclesiastical hierarchy. It does not mean that religious orders are to be excluded from the common law and put outside the pale of the State. . . . There was no need of mentioning the religious communities in the Concordat because these pious bodies were permitted to live under the shelter of the equal rights accorded to men and citizens by the fundamental clauses of your

Constitution. But if an exception is to be made to these solemn declarations in the case of certain citizens it is an iniquity towards the Church, an infraction of the intentions of the negotiators of 1801. Look at the countries with which the Holy See has signed no Concordat, and even at Protestant countries like England, the United States, and many another. Are religious communities there excluded from the liberties recognized as belonging to other citizens? . . . Why does France figure to-day by the side of the great nations in the concert of the Powers settling the Chinese question? Whence have your Ministry for Foreign Affairs and your representative in Peking the authority which gives weight to their opinion in the assembly of plenipotentiaries? What interest have you in the north of China? Are you at the head there in trade and industry? Have you many traders there to protect? No. But you are there the noblest champions of Christian civilization, the protectors of the Catholic missions. Your foreign rivals are envious of this privileged situation. They are seeking to dispute your rights laid down in treaties that assign to you the rôle of defenders of native missions and Christian settlements. . . . Hitherto your Governments had had a better notion of the importance of their rights. It is in the name of treaties guaranteeing them that they protested to me when the Chinese Emperor asked me to arrange diplomatic relations directly with the Holy See. Upon the insistence of M. de Freycinet, the then Minister, I refused, so fearful was I that France might believe, even wrongfully, that I wished in any way to diminish her prestige, her influence, and her power. In the Levant, at Constantinople, in Syria, in the Lebanon, what will remain of the eminent position held by your Ambassador and Consuls if France intends to renounce representing there the rights of Christianity? . . . M. Waldeck-Rousseau, in his Toulouse speech, spoke of the moral unity of France. Who has laboured more than I for it? Have I not energetically counselled Catholics to cease all conflict against the institutions which your country has freely chosen and to which it remains attached? Have I not urged Catholics to serve the Republic instead of combating it? I have encountered warm resistance among them, but I believe that their present weakness arises from their very lack of union and their imperfect deference to my advice. The Republican Government at least knows in what degree my authority has been effective towards bringing about that public peace and moral unity which is proclaimed at the very moment when it is seriously menaced. It has more than once thanked me. If the Pontifical authority has not been able entirely to accomplish the union so much desired I at least have spared no effort for it. Is there now a desire to reconstitute the union of Catholics against the Republic? How could I prevent this if, instead of the Republic liberal, equitable, open to all, to which I have invited Catholics to rally, there was substituted a narrow, sectarian Republic, governed by an inflamed faction governed by laws of exception and spoliation, repugnant to all honest and upright consciences, and to the traditional generosity of France? Is it thought that such a Republic can obtain the respect of a single Catholic and the benediction of the Supreme Pontiff? I still hope that France will spare herself such crises, and that her Government will not renounce the services which I have been able to render and can still render it. On several occasions, for instance, and quite recently, I have been

asked by the head of a powerful State to allow disregard of the rights of France in the East and Far East. Although compensations were offered to the Church and the Holy See, I resolved that the right of France should remain intact, because it is an unquestionable right, which France has not allowed to become obsolete. . . . But if in your country the religious orders, without which no Catholic expansion is possible, are ruined and suppressed, what shall I answer whenever such requests are renewed to me? Will the Pope be alone in defending privileges the possessors of which prize them so little?"

The threatened bill was brought forward by the government and debate upon it opened on January 15th, 1901. The most stringent clauses of the measure were translated and communicated to the *London Times* by its Paris correspondent, as follows:

"II. Any association founded on a cause, or for an illicit end, contrary to the laws, to public order, to good manners, to the national unity, and to the form of the Government of the Republic, is null and void.

"III. Any member of an association which has not been formed for a determined time may withdraw at any term after payment of all dues belonging to the current year, in spite of any clauses to the contrary.

"IV. The founders of any association are bound to publish the covenants of the association. This declaration must be made at the prefecture of the Department or at the sub-prefecture of the district which is the seat of the association. This declaration must reveal the title and object of the association, the place of meeting and the names, professions, and domiciles of the members or of those who are in any way connected with its administration. . . . The founders, directors, or administrators of an association maintained or reconstituted illegally after the verdict of dissolution will be punished with a fine of from 500f. to 5,000f. and imprisonment ranging from six days to a year. And the same penalty will apply to all persons who shall have favoured the assemblage of the members of the dissolved association by the offer of a meeting place. . . .

"X. Associations recognized as of public utility may exercise all the rights of civil life not forbidden in their statutes, but they cannot possess or acquire other real estate than that necessary for the object which they have in view. All personal property belonging to an association should be invested in bonds bearing the name of the owner. Such associations can receive gifts and bequests on the conditions defined by Clause 900 of the Civil Code. Real estate included in an act of donation or in testamentary dispositions, which is not necessary for the working of the association, is alienated within the period and after the forms prescribed by the decree authorizing acceptance of the gift, the amount thereby represented becoming a part of the association's funds. Such associations cannot accept a donation of real estate or personal property under the reserve of usufruct for the benefit of the donor.

"XI. Associations between Frenchmen and foreigners cannot be formed without previous authorization by a decree of the Conseil d'Etat. A special law authorizing their formation and determining the conditions of their working is necessary in the case, first of associations between Frenchmen, the seat or management of which is fixed or emanates from beyond the frontiers or is in the hands of foreigners; secondly, in the case of associations whose members live in common. . . .

"XIV. Associations existing at the moment of the promulgation of the present law and not having previously been authorized or recognized must, within six months, be able to show that they have done all in their power to conform to these regulations."

Discussion of the bill in the Chamber of Deputies was carried on at intervals during ten weeks, the government defeating nearly every amendment proposed by its opponents, and carrying the measure to its final passage on the 20th of March, by a vote of 303 to 220. On June 2, 1902, M. Waldeck-Rousseau resigned, and a new radical cabinet was formed by M. Émile Combes, who began to enforce the Law of Associations with energy. Some religious orders—teaching orders and others—had refused or neglected to register themselves and obtain authorization, as required by the law, and these were now to be closed. In many cases there was resistance to the closing of the unauthorized schools. In a few cases there was a refusal by military officers to obey commands for the assistance of their soldiery in enforcing the law. Magistrates, too, opposed the government, and a majority of the councils in the departments of France withheld their support. Nevertheless the government proceeded firmly in the matter and the provisions of the law were carried out. When the Chambers were reconvened in October the burning subject came up for fierce discussion, and the attitude and acts of the Combes Ministry were approved in the Chamber of Deputies by 329 against 233. That the people as a whole approved of the anti-clerical campaign was shown by the fact that elections for a section of the Senate, occurring early in January, 1903, went favorably for the government. M. Fallières was reelected president of that body, while M. Bourgeois was seated again in the presiding chair of the lower chamber. The Combes ministry was strengthened in its hold of power by the continued agitation that attended the execution of the Associations Law as applied to the religious orders and brotherhoods. Every where the closing of schools and religious houses was resisted with increasing determination. To facilitate a difficult process, the government, after a heated debate in the Chambers, for a fortnight published, in March, 1903, a list of the religious orders which would not be authorized to continue under the new law. This list included all the teaching, preaching, and contemplative orders, of Redemptorists, Capuchins, Benedictines, Dominicans, and Passionists. A few months later the same entire refusal of authorization to the teaching orders of women was voted, but by a diminished majority. The clericals, on their side, were as energetic as the parties of the government, and were supported very generally by the magistracy of the country at large, which dealt so leniently with the resistance and rioting provoked by the enforcement of the law that the government was left practically dependent on the army and the police. The army, too, was a doubtful instrument of authority in many cases, numerous officers of all grades resigning to escape the repugnant mandate of law. The most threatening situation arose in Brittany, consequent on the inauguration of a monument to Renan, which the Catholics regarded as an insult to the church. The interdiction of all teaching on the part of the religious orders was clinched by a bill, late in the year 1904, which made education a state monopoly, and forbade all members of religious orders, authorized or unauthorized, to engage in teaching. Naturally the Law of Associations had not been

carried out without wide-spread personal and economic distress. Thousands of monks and nuns were rendered homeless and destitute, and forced to emigrate or to take up secular professions. On the other hand the closing of the religious schools involved a great expenditure on the part of the state for new school-houses, and the government with difficulty succeeded in passing an act which laid the cost of this provision on the communes, instead of accepting it for the state at large.

1904-1906.—Growth of friendship between France and England through mutual fear of Germany.—Entente cordiale between France and England concerning foreign trade and colonial possessions.—Jealousy of Germany.—Algeciras congress on Morocco.—The unprecedented economic and colonial expansion of the three great European powers—England, France and Germany—at the end of the nineteenth century had brought them into conflict and competition at many points. But both France and England felt that Germany was a more serious enemy to both of them than either could be to the other. Hence, during the first few years of the twentieth century, France and England steadily drew closer together. "Neither in England nor in France is the principle of the understanding to be sought. Rather was it the fear of Germany which determined England—not only her King and Government but the whole of her people—to draw near to France."—A. Tardieu, *France and the alliances*, p. 46.—This new friendship culminated in the Entente Cordiale, which was signed April 8, 1904. This treaty had been largely arranged by King Edward VII. "He it was who both conceived and facilitated it, while still many believed that the moment was premature. Edward VII. has been both praised and attacked without stint. Perhaps he deserves neither the 'excess of honor nor yet the excess of abuse.' Among present sovereigns, he has one superiority, that of having gained experience in life before reigning. . . . He is not afraid of taking the initiative; and so far his initiative has been a success. The boldest example of it was his visit to Paris in 1903. Putting aside all objections, and being convinced of his success, he arrived in France amidst an atmosphere of uncertainty. When the first platoons of cuirassiers rode down the Champs Elysées, embarrassment and anxiety weighed on the public. The Nationalists had declared their intention of hissing. What

would be the result of a hostile manifestation? The King, as far as he was concerned, did not believe in the danger, and he was right. The Parisians accorded him, not an enthusiastic, but, from the first, a respectful, and soon a genial, reception. The road was clear. Two months later, Mr. Loubet paid King Edward a return visit. And, on welcoming his colleague, Mr. Delcassé, to London, Lord Lansdowne said to him: 'Now we are going to have some conversation.' As a matter of fact, there was conversation both in Paris and in London. . . . On the 8th of April, 1904, the agreement was signed, and its immediate publication produced a deep impression in Europe."—*Ibid.*, pp. 60-62.

The *Entente Cordiale* (see ENTENTE CORDIALE), recognizing as it did the right of France to keep order in Morocco, naturally annoyed Germany, who felt that she had as much right to Morocco as did France. In 1905 Emperor William paid a visit to Tangier, and pointedly recognized the sultan as the independent ruler of Morocco. Then he called for an international congress to settle the mutual rights of France and the other countries in Morocco. The congress met at Algeciras in 1906, and after granting both the independence of Morocco and the right of France to keep order, forbade annexation and established the "open door."—See also MOROCCO: 1905-1906; 1911-1912; 1911-1914; 1912-1919; ITALY: 1906: Part of Italy at Algeciras conference; MEDITERRANEAN SEA; U. S. A.: 1905-1906; WORLD WAR: Diplomatic background: 4.

1904-1908.—Separation of church and state.—Breach between the pope and the French government.—Law abrogating Concordat and decreeing separation of church and state.—Resistance of pope.—Results of separation.—The separation of church and state in France involved the nullification of the Concordat, negotiated by Napoleon I with Pope Pius VII in 1802 (see PAPACY: 1808-1814), and of what are known as the Organic Statutes, promulgated by the French Government at the same time. The former was in the nature of a treaty; the latter was not. The French government claimed rights under both; the Roman Church acknowledged no force in the Statutes that could be binding on itself.

MEASURES AND PROCEEDINGS OF THE SEPARATION AS RECOUNTED BY ITS ADVOCATES.—"The action of the Republic in suppressing the religious orders had produced strained relations between it and the Vatican. This was intensified by the 'nom-inavit nobis' controversy. In the Bulls instituting some bishops whom the President had nominated, and which had to have the sanction of the Government before they could be published and be valid in France, the Vatican had inserted the word 'nobis,' implying that the President had merely nominated the bishop to the Pope for appointment and that the appointment was really in the hands of the Pope. The French Government, under the guidance of M. Combes, the Premier and Minister of Public Worship, insisted that this word must be removed before the bull was sanctioned, and as both sides refused to yield no bishop was instituted. Relations were still further strained by the visit of the President to the King of Italy. . . . To visit the King was to insult the Pope by disregarding the protest made by him against the occupation of Rome. President Loubet was the first Roman Catholic ruler who ventured to disregard the feelings and protests of the Pope. From the 24th to the 28th April, 1904, M. Loubet was the guest of King Victor Emmanuel, and gave no intimation to the

Pope of his intention to visit Rome, and did not include a visit to the Vatican in his programme. On the 28th of April, Cardinal Merry del Val sent to the representatives of the Curia at the Courts of all the Roman Catholic powers in the world, to be communicated to the Governments to which they were commissioned, a protest against the action of the French Government [couched in terms which the French government felt to be insulting]. . . . The French Government replied by recalling its ambassador from the Vatican and breaking off diplomatic relations with the Pope.

"In the summer of the same year the friction between the French Government and the Vatican was increased by the cases of the bishops of Laval and Dijon. Bishop Geay of Laval, in his opening discourse in his cathedral, had proclaimed his adherence to the Republic and his desire to be the shepherd of all his flock. He denounced Orleanism and refused to support reactionaries at the elections. . . . He was summoned to appear at Rome. He submitted the summons to the Government, as he was required by the Organic Articles to do, and he was refused permission to leave his diocese. Subsequently, under threats of excommunication, he went, and was immediately informed by the Minister of Public Worship that his salary was stopped from the day he left his diocese without permission. A similar summons to Mgr. Le Nordez, Bishop of Dijon, led to similar results. . . .

"In the month of October, 1904, M. Combes, replying to several interpellations addressed to the Government, reviewed the history of the relations of the Vatican to the Republic since its foundation in 1870, and showed that there had been a continuous disregard of the Concordat and of the Organic Articles by the Vatican, and that clericalism had been the most inveterate enemy of the Republic. He showed that no stipulations could safeguard the rights of the State, which were denied by the doctrines of the Catholic Church. The confidence of the Chamber was expressed by a vote of 548 to 88. In November he introduced a Bill for the separation of Church and State, which was referred to a Commission, by which it was adopted on the 2nd December. In the middle of January, 1905, M. Combes, owing to resentment at certain incidents in connection with the administration of the army [the so-called 'delation scandal' revealing a widespread espionage of and discrimination against Catholic officers in the army carried on under the management of the Free Masons], carried a vote of confidence by a majority of only ten votes and resigned. Before the end of the month a new Cabinet under the presidency of M. Rouvier, retaining several members of M. Combes' administration, was formed, which asserted its determination to carry out the policy of its predecessor in its relations with the Vatican. The Chamber of Deputies referred to a new Commission all the Bills dealing with the question of Church and State which had been presented to it, including that of M. Combes. Instead of adopting any one of them, the Commission decided to draft its own Bill, and shortly afterwards presented to the Chamber a Bill which engaged the close attention of the deputies for several months in the spring and summer of the year 1905. It passed through the Chamber on the 3rd of July, and was sent to the Senate the following day. . . . The Senate made no alterations in the Bill, and it became law on the 6th of December, 1905."—J. A. Bain, *New Reformation*, ch. 17.—The bill guaranteed liberty of conscience

and freedom of worship, but withdrew the financial provision for the clergy hitherto made by the state, and the recognition of the Catholic church as the Church of France. This abrogated the Concordat. Arrangements for continuing Catholic worship, however, were made in the form of associations *cultuelles* (associations of worship) which were to be organized in each commune, and were to take over the personal property of the church, after it had been inventoried by officers of the state. In addition due financial provision was made for the clergy for a period of from five to eight years, to enable them to re-adjust their economic status, before final withdrawal of state funds. The feature which most angered the devout was the sacrilege involved in the inventory of the sacred utensils of the church. The controversy with the Pope, however, largely turned on the formation of the associations of worship which the Pope refused to sanction, and failure to form which left the church without any legal position whatever. "The law of the 9th of December, 1905, which put an end to the régime of the Concordat and substituted that of separation between Church and State, had been promulgated on the 11th of December, 1905. It was to come into effect a year after its promulgation. The Protestants and the Israelites had accepted it even before it was passed; but they represented an infinitesimal minority, and it was not that minority that the legislators had had in view when they framed the law of separation. The one question in the matter was that of the attitude that would be taken by the Catholics,—the counsels that would come to them from Rome.

"In the French Episcopate there were two opposing currents of opinion, one for acceptance of the law, under certain reserves, the other for resistance. In the latter part of November, 1905, some bishops met in Paris and agreed that energetic efforts must be made to prevent action at Rome on misinformation as to the situation of the Church in France and the state of mind prevailing in it. Monseigneur Fulbert Petit, Archbishop of Besançon, was their chosen envoy, and in the following January he repaired to Rome. There he met other bishops who had come to give counsels to the Pope that were not pacific; and he met, also, the Père Le Doré, former superior of the dissolved congregation of the Eudistes, well known for his uncompromising opinions and his aggressive temper, but who had been commissioned to convey to Rome the proceedings of the meeting of French cardinals at Paris, on the 28th of December, which showed a majority in favor of the acceptance of the law. At the same time, an important meeting of bishops was held at Albi, under the presidency of Mgr. Mignot, the majority at which meeting, notably the Archbishop who received them and the Archbishop of Toulouse, Mgr. Germain, made no secret of their desire to adjust themselves to the law, according to the expression of Cardinal Lecot.

"But nothing said or done drew the Pope from the silence which he kept. Then it was rumored that the head of the Church would reserve his decision until a general assembly of the French episcopate, which the French cardinals had advised, could be held, to propose a solution of the question. This, however, was contradicted positively by the party which urged resistance to the law.

"Such was the situation when the Government, obliged to act,—since the period of delay fixed by the law was only a year,—came to the first proceedings which the Act prescribed. Article 43

of the law provided for administrative rules, of which the part relating to inventories appeared logically the first, that being the operation which needed consideration before all others. The second part of the regulations had to do with the life pensions and temporary provisions accorded to the ministers of religion. The regulation concerning pensions and provisions was published in the *Journal Officiel* of January 20, 1906. [Article 11 of the Act assigned to priests or ministers of more than sixty years of age, who had been not less than thirty years in an ecclesiastical service salaried by the state, a yearly life pension of three-fourths of their former stipend. To those under sixty years of age and above forty-five, whose service had been for less than thirty years but not less than twenty, it assigned one-half of their previous compensation.] . . .

"The first executive act imposed on the Government was the inventorying of the property, movable and fixed, belonging to the State, to the departments or to the communes, of which the establishments of public worship had had the use. Article 3 of the law required this to be proceeded with immediately after its promulgation. This article had been voted in the Chamber and in the Senate by very large majorities, and, so to speak, without discussion, so rational and judicial it seemed to be. In fact, as the existence of the public establishments of worship came to an end with the régime of the Concordat, the succession to them was left open, and an inventory, descriptive and estimative, of their property, was a necessary measure preliminary to any devolution of such property, dependent on that succession. . . . Being one of those conservative measures which attack no right and leave a continuous state of things, there was no expectation of much feeling about it among Catholics. . . . Apparently, the consistent attitude on the part of Catholics, provisionally, at least, and until the Pope had spoken, would be one of calm, of prudence, of expectancy. Such was the purport of the instructions given by the bishops, even by the most combative. These latter, while condemning the law with vehemence, did not counsel a recourse to force against the agents appointed to make the inventory. They required but one thing of their priests and of the administrators of parish property, which was that they should not cooperate in the work, and that they should make declaration that their non-resistance did not imply acceptance of the law.

"On the 29th of December, 1905, a first decree for regulating the procedure was issued by the Council of State. This was followed by a circular from the Minister of Finance which, it must be confessed, roused a justifiable feeling among the Catholics. From one phrase in that circular it could be understood that the officials making the inventory were authorized to demand the opening of the tabernacles. M. Groussau questioned the Minister on the subject, and M. Merlou cleared away all misunderstanding by replying that officials were to accept the declaration of the curé of a church as to the contents of its tabernacle; and that they had been instructed to avoid everything that could give pain to pious minds. The Abbé Gayraud recognized that these decisions of the Government were in conformity with the instructions of the Cardinal Archbishop of Paris, and the interpellation was withdrawn.

"The inventories were begun at once after this decision of the question of the tabernacles. At first there was no disorder. The bishops, notably those of Toulouse, of Rouen, of Albi, of Besançon,

of Arras and Chartres, and their curés, from their example, confined themselves to the reading of a protestation to the receiver of the registration, after which the receiver was left free to fulfil his mission. But soon, in some dioceses, particularly in Paris, in the West, and in one part of the Center, the inventorying was made the pretext for demonstrations more political than religious, organized by enthusiasts or by political cliques. Generally the clergy were passively present at these demonstrations. . . . These tumultuous manifestations, at the head of which the most conspicuous personalities of the reactionary opposition were often seen, ended by degenerating into veritable riots, necessitating the intervention of troops, and leading finally to bloody conflicts."—R. Wallier, *Le Vingtième Siècle Politique, Année 1906, pp. 123-132.*—It was not until February 17th that the silence of the pope on the matters that were agitating France and the papal church was broken. Then the encyclical "Vehementer nos," so named, according to custom, from its first word, was published. See PAPACY: 1906 (February).

MEASURES AND PROCEEDINGS OF THE SEPARATION AS RECOUNTED BY OPPONENTS.—"In the first period of his premiership M. Combes was not prepared either to denounce the Concordat or to separate the churches from the State, simply because he found public opinion not yet ripe for either measure. Later he thought he saw in adopting this course a means of prolonging his official existence, a matter of considerable importance to a country doctor like himself without large private resources. Having slaughtered nearly all religious congregations or prepared their ultimate extinction, Combes appeared to seek no further occupation for himself and to fortify his position by attacking the Church itself, whose secular clergy he had so recently praised and sought to protect from unfair and 'unjust concurrence or competition with the regulars!' Like Waldeck-Rousseau, Combes saw here an opportunity to 'save' the Republic from 'clerical reaction.' Throughout its whole discreditable history this third Republic of France has only been kept alive by being periodically 'saved' by some clever politician from 'perils' conjured up to terrorize the peasantry, who still recall the misery of their ancestors in the old régime and the misfortunes of France in the downfall of the first and second Empires. . . . The Pope protested, in March, 1904, against the bad faith and infamous aggressions of the French Government in the matter of religious education and those imparting it, and M. Delcassé, through the French Ambassador at the Vatican, protested against the Papal protest. In the following month M. Loubet, as President of the French Republic, visited the King of Italy at Rome, at the same time politely, but significantly, ignoring the existence of the Pope and the Vatican, at which court France then had accredited an Ambassador! Then followed the protest of the Vatican, addressed directly to the French Government, and the protest simultaneously sent to all the powers where Papal Nuncios are in residence. . . .

"In March, 1904, had arisen the trouble in the Diocese of Dijon, France, which culminated in students of the diocesan seminary refusing to receive ordination from the hands of the Bishop, Mgr. Le Nordez. The Bishop of Dijon was, unfortunately, not the only one of the French episcopate claiming to be a 'victim of hatred, deceit and calumny.' Almost from the commencement of his episcopate Mgr. Geay, Bishop of Laval, was attacked by accusations filed at Rome, charges which were examined into during the Pontificate

of Leo XIII, and which led the Holy Office to advise the Bishop to resign his see. It was then (in 1900) thought at Rome that in the local conditions actually then existing it was impossible for Mgr. Geay to govern the diocese with the necessary authority and efficacy. Mgr. Geay agreed to resign, provided he received another bishopric in France. This condition appeared unacceptable to the Vatican, but no further action was taken in this case until May 17, 1904, when by order of Pius X the request for the Bishop's resignation was renewed, and in case it was not forthcoming within a specified time an ecclesiastical trial was intimated as inevitable. Notwithstanding the secret and private character of this last letter emanating from the Holy Office, Mgr. Geay communicated its contents to the French Government. Combes and Delcassé, jealous of the prerogatives of the French State and presumably caring little for the honor of the French episcopate, notified Cardinal Merry del Val (by the acting *Chargé d'Affaires*) 'that if the letter of May 17 is not annulled the government will be led to take the measures that a like derogation of the compact which binds France and the Holy See admits of.' The Papal Nuncio at Paris explained to M. Delcassé that this was not a threat of *deposition* of the Bishop without a decision of the French Government, but an invitation to the Bishop to meet the charges by a voluntary resignation.

"As regards Mgr. Le Nordez and Mgr. Geay, respectively Bishops of Dijon and Laval, their long hesitation between the wishes of the French Government and the will of the Holy See ended by the departure of both of them for Rome. The government then promptly suppressed their salaries and after they had (under virtual pressure) placed their 'voluntary resignation' in the hands of the Holy Father, an allowance from the funds of the Vatican was made to each of them. They have since lived in France in a retirement, varied at first by interviews of Mgr. Geay with reporters that have since happily ceased. The severance of diplomatic relations with the Vatican was completed by a note from M. Delcassé to the Papal Nuncio at Paris stating that in consequence of the rupture of diplomatic relations between France and the Vatican 'the mission of the Nuncio would henceforth be deprived of scope.' In the parliamentary session of November 26, 1904, the credit for the Embassy at the Vatican was stricken from the budget. . . .

"After the downfall of Combes, through the odium attaching to his spy system, the Minister of the Interior and of Public Worship presented to the Chamber of Deputies on behalf of the Rouvier Ministry a project of law to establish the separation. If for Combes separation had signified little else than spoliation, aggravated by oppression, the Rouvier plan sought to render spoliation less unjust, less intolerant. The ministerial project having been somewhat altered by the commission, conferences were held and a final agreement having been obtained, the proposed law was reported to the Chamber of Deputies in March, 1905. It is unnecessary to follow the parliamentary evolution of this immature project, forced as an issue by two successive Premiers who had far less solicitude for the permanent interests of their country than to assure their own continuance in power. M. Briand, speaking for the commission, took great trouble to throw upon the Pope the responsibility of a law which he at the same time declared to be perfectly good, beneficent for the Republic and honorable for its au-

thors! Alas! for separatists, in an unguarded moment Combes betrayed the utter falsity and ridiculous insincerity of this pompous and solemn pretence of the anti-religious majority, that the Pope forced the separation upon France. In the parliamentary session of January 14, 1905, Combes declared: 'When I assumed power I judged that public opinion was insufficiently prepared for this reform. I have judged it to be necessary to lead it to that.'

"When the law of separation, as finally adopted in the Chamber of Deputies, was referred to the Senate, the Senatorial commission, under ministerial pressure, adopted the law as passed in the Chamber, without change of a single word. Although the law was the most important of any passed in France for a hundred years, and though it is fraught with grave influences upon the destinies of the country, this hastily matured, ill-framed measure, with all its unjust and vexatious provisions, was swallowed whole by a commission of cowardly, truckling Senatorial politicians, who disregarded their plain duty at the dictation of Radicals and Socialists on the outside. Separationists both in and out of Parliament were eager to see the law become operative before the universal suffrage of France could have an opportunity of passing judgment upon the principle of the separation in the parliamentary elections of May, 1906. . . .

"In the Papal Consistory of December 11, 1905, the Pope pronounced an allocution protesting against the law of separation in mild and temperate language, announcing his intention of again treating upon the same subject 'more solemnly and more deliberately at an opportune time.' The Holy Father evidently waited for the regulations of public administration that would indicate in what manner the Government of France intended to administer and enforce the law. . . .

"Immediately after the adoption of the law of separation the government appointed a special commission to elaborate rules of public administration by which the law was to be interpreted and applied. This commission being stuffed with the anti-religious element, its work was worthy of its authors. . . . The first details of the regulations officially promulgated governed the taking of inventories of all movable and real property of churches, chapels and ecclesiastical buildings, including rectories, chapter houses, homes of retreat for aged and infirm priests (even pension endowments), etc., ostensibly to facilitate the transfer of these properties to such associations for the maintenance of public worship as might be formed under the provisions of the law of separation. These inventories were imposed upon all religious bodies—Catholic, Protestant and Jewish—and the law was made applicable to Algiers, where there is a large Mahomedan population. Viewed in the abstract, the taking of inventories was a formality necessary to an application of principles inscribed in the law. As estimates of value such inventories are worthless, because compiled by agents of the administration of Public Domains or treasury agents, unaided by experts in art, architecture and archival paleography. The Director General of the Register prescribed to agents taking these inventories a request for the opening of tabernacles in churches and chapels to facilitate completeness and accuracy. This order aroused a storm of indignation throughout France and the government realized that a stupid blunder had been made, and it was announced that agents would content themselves with gathering and incorporating into their report declarations of the

priests upon the nature and value of sacred vessels contained in the tabernacles.

"The taking of inventories of churches and their contents commenced simultaneously in many parts of France in the latter part of January, 1906. Instead of the simple formality hastily accomplished without general observation, of which separatists had dreamed, this proceeding was characterized in various places by scenes of the wildest disorder. When officials of the Registry presented themselves for the taking of the inventories, the clergy, surrounded or attended by trustees of the building, read formal protests against what most of them styled 'the first step in an act of spoliation.' . . . If these protests had not been accompanied by physical violence, the country might have been spared the shocking scenes that took place in Paris and the provinces. In many churches free fights took place between militant Catholic laymen, opposed to an inventory, and police, firemen and troops, who burst open the doors of churches or broke them down with fire axes in order to make an inventory possible. While at the doors chairs and fragments of broken confessionals were flying through the air, pious women within sang: 'We will pray God that the Church may be able to teach the truth, to combat error which causes division, to preach to all charity!'"—F. W. Parsons, *Separation of church and state in France* (*American Catholic Quarterly Review*, July, 1906).

Shortly after the new president of the French republic, Fallières, took office (February 18, 1906), the ministry of Rouvier fell, and was replaced by a ministry nominally presided over by Sarrien, but actually in control of Clemenceau, minister of the interior. The most important section of the ministerial declaration was its statement with regard to the execution of the law on the separation of church and state. "The law on the separation of Church and State has met, in the execution of the provisions relating to the inventories, a resistance as unexpected as it is unjustified. There is no one among us who wishes to assail in any manner whatever the freedom of religious belief and worship. The law will be applied in the same liberal spirit in which it was adopted by the Parliament. . . . But it is our duty to insure the execution of all laws throughout the land. Under a republican government the law is the highest expression of national sovereignty; it must everywhere be respected and everywhere obeyed. The Government intends to apply with all necessary circumspection, but with inflexible firmness, the new legislation which certain parties of opposition strive vainly to misrepresent." The intentions of the ministry were apparently supported by the elections to the Chamber of Deputies. "But the mere figures do not bring out the full significance of the election. Even more important than the fact that only 108 Clerical and Nationalist deputies were returned is the fact that these 108 represent, with very few exceptions, the most ignorant and backward districts in France. Immediately after the election the *Matin* published an electoral map of France, in which the districts represented by Opposition deputies were left white. It is an instructive document. The whole of central France is a solid mass of black, in the north and south the white spots are few and scattered, in the east black very greatly predominates; only in the west is there any conspicuous show of white."—R. Dell, *France, England, and Mr. Bodley* (*Fortnightly Review*, Sept., 1906).—Manifestly the majority in France approved the severance of religious institutions

from the political organization of the state. In recognition of the fact, the general assembly of French bishops, sitting soon afterwards at Paris, petitioned the pope, by the vote of a large majority, to permit the forming of public worship associations under the separation law. The papal reply, given late in the summer, was a new encyclical, formally forbidding French Catholics to form such associations for taking the offered use of the church buildings and property, as provided for continued exercises of religion by the law. A little later the prohibition was carried farther, and French Catholics were forbidden to conform to the associations' law of 1901, as well as to the separation law. There seems to have been a disposition in the government to extend, from one year to two, the period allowed for conformity to the latter enactment; but this attitude on the part of the head of the church dispelled it. Accordingly, on December 11, 1906, when the term fixed by the law expired, sequestration of the property of the vestries was pronounced, and buildings occupied in connection with the churches by bishops, rectors, seminaries, etc., were ordered to be vacated with no further delay. Before matters reached this stage Sarrien had resigned, on account of ill health, and the premiership had passed to Clemenceau. The cabinet underwent a degree of reconstruction soon afterwards, and the courageous Picquart, formerly colonel, now brigadier-general, who had stood so long almost alone in army circles as a champion of justice to Dreyfus, had been given the portfolio of war. For a time after the promulgation of the law the church had remained passive, awaiting orders from the pope. "The practical question, what course the French Catholics were to adopt when the law should go into effect, was first answered by the pope in his encyclical *Gravissimo*, published August 10, 1906, eight months after the promulgation of the law. The gist of the document is in two sentences: 'After having condemned as was our duty this iniquitous law, we examined with the greatest care whether the articles of the aforesaid law would leave at least some means of organizing religious life in France so as to rescue the sacred principles upon which rests the Holy Church.' Having consulted the bishops, and addressed 'fervent prayers to the Father of Light,' the pope came to the following conclusion: 'As for the associations of worship, as the law organizes them, we decree that they can absolutely not be formed without violating the sacred rights which are the very life of the church.' Is there any other form of association which might be both legal and canonical? Pius X did not see any. Therefore, as long as the law remained as it was, the Holy Father forbade the French Catholics to try any form of association which did not promise, in an 'unmistakable and legal manner, that the divine constitution of the church, the immutable rights of the Roman pontiff and the bishops, as well as their authority over the property necessary to the church, especially over the sacred edifices, will be forever insured in those associations.' . . . For this decision there were, from the ecclesiastical point of view, three grounds. One was the failure of the law of 1905 to recognize, in so many words, the authority of the ecclesiastical hierarchy. Another was the abrupt fashion in which the French government broke off its diplomatic relations with the Vatican. The fact that the government consistently ignored the pope during the drafting of the bill was a third. . . . Under what régime the churches were to live was at first somewhat uncertain; but

M. Briand speedily discovered in existing legislation all that was needed to insure the continuance of religious worship. He was willing to admit that the church was not obliged to avail herself of the privileges that the new law provided for her. Law imposes duties on citizens, but it does not force them to make use of rights or privileges. Everything that is not forbidden is lawful. . . . The minister stated that the priests could make use of the churches after having filed such an application or declaration as is required for ordinary meetings by the law of 1881. These declarations would be valid for a whole year instead of for one meeting. But under this régime the priests would be simply temporary occupants of the buildings of worship without any legal title. This compromise proved no more satisfactory to the Vatican than the law of 1905. . . . The pope refused to sanction this arrangement. He objected to the scheme of yearly declaration. In the first place he complained that this broad interpretation of the law on public meetings was merely a personal fancy of M. Briand which might not bind his successors. In the second place, the dignity of the priests did not allow them to accept the humiliating position of simple occupants of the churches. . . . The government, however, could not leave several million Catholics in a position in which opportunity to perform their religious duties depended upon uncertain texts and the circulars of a temporary minister of worship. It therefore set out to draft a bill that would be acceptable to the church without any recourse to the discarded associations of worship. The new bill was submitted to Parliament December 15, 1906; was accepted by the Chamber December 21 and by the Senate December 29, and was promulgated January 2, 1907. . . . Most of the privileges granted in the law of 1905 are withdrawn; and the law of associations of 1901, combined with the law of public meetings of 1881, forms the basis of the new régime. . . . Of all the catastrophes prophesied or feared by foes or friends none has occurred. The new régime so violently attacked in and out of France is being gradually acclimated."—O. Guerlac, *Separation of church and state in France (Political Science Quarterly, June, 1908)*.

FROM THE STANDPOINT OF THE CHURCH.—"The third meeting of the French episcopate, held at the Château de la Muette, Paris, January 15-19, resulted in a declaration (approved by the Holy See) of their unanimous consent to essay the organization of public worship in churches to be placed at the Bishops' disposal free; an essential condition being a legal contract (authorized by Government) between themselves or their clergy and the Prefects or Mayors to whom such churches (sequestered in December) have been handed or will be handed over; the contract to be for a term of eighteen years, during which term (being fixed by the common law of municipal leases of communal properties) neither Mayors nor Prefects shall in any way interfere either in parochial administration or in regard to the conditions of occupancy of the edifices, which must be, as regards police, under control of the priest in charge, the mayor intervening only on grave occasions when his official duties require him according to law to re-establish disturbed order.—This document, published on January 20, was immediately, with a form of contract, sent by each Bishop to the Parish priests in his diocese with a request to be informed immediately whether the proposed contract would be entered into by their respective mayors, and instructing

them if possible to get it signed at once and return it to the Bishop. Of course, from every parish where Catholics are strong and zealous the signed contracts were quickly obtainable or obtained. But so soon as the Minister of Worship learned these proceedings, he circularized the Prefects of France on February 1: 'You will shortly receive instructions concerning the application of the Article in the Law of January 2, 1907, providing that free use of Communal buildings intended for worship, and of their fittings, may, subject to the requirements of Article 13 in the Law of 9 December, 1905, be accorded by an administration act of the mayors to the ministers of worship specified in declarations of worship-meetings. It is extremely urgent, to prevent mayors being entrapped into giving their signatures, that you should telegraphically warn them, they are not entitled to enter into a contract of this kind without preliminary deliberation by their municipal council, and that they should, pending the vote of that body, confine themselves, if asked for it, to giving an acknowledgment of receipt of any request for use of edifices they may have received. You will also assure them they shall at a very early date receive instructions defining the conditions to be observed to render such contracts valid, and will direct them to do nothing until those instructions reach them.' It is due to M. Briand to acknowledge: first, that he lost no time whatever in fulfilling this promise; second, that his new circular on the application of the law of January 2, 1907, which bears date Paris, February 3rd, and was published the following evening, lays down regulations concerning the leases of Churches and Communal Chapels which on the face of these are fair, reasonable, and likely to be universally acceptable. The main conditions are, approval of the agreements by the municipal councils, failing which mayors cannot enter into them; maximum term to be eighteen years; the lessee (whether a curé, or a worship association) to keep the buildings in proper repair; leases for longer periods than eighteen years to be sanctioned by the prefect; that the curé acts by permission of his ecclesiastical superior may be stated in the lease, but such superior is not to be entitled in any way, once the document is signed, to interfere, or exercise authority. . . . In Paris the appearance of the circular was hailed with satisfaction by Catholics and reasonable men. . . . Cardinal Richard deems it proper and useful to direct his priests to make the declaration, after the contract is duly signed, and when His Eminence shall authorize them to make it. . . . His Eminence lost no time in submitting to the Protestant prefect of the Seine, M. de Selves, a draft lease of the Paris Cathedral (Notre Dame) and the historical St. Denis Basilica. It was understood that, if settled and signed, this contract should serve as the model to be followed in the remaining eighty-five French dioceses. The Cardinal Secretary of State at the Vatican authorized these negotiations, against his personal judgment, without any illusions as to the result, simply to satisfy the French episcopate and a minority in the Sacred College. . . . After negotiations extending over three weeks, the Prefect informed the Cardinal (in writing, on February 23) that His Eminence's proposals were unacceptable, but the government invited amended ones based on ministerial declarations made in the Chamber during a stormy debate on February 10, when M. Briand found himself forced to confess the churches were left open in view of the truth that a parliamentary majority had 'no right to hinder

millions of Catholic compatriots from practising their religion.' The Cardinal Archbishop replied immediately that the text of the draft submitted embodied the extreme limits of possible concessions."—J. F. Boyd, *French ecclesiastical revolution (American Catholic Quarterly Review, Jan.-Apr., 1907)*.

RESULTS.—"The Church Separation Law has failed to do the particular work for which it was voted by the preceding Parliament. Catholic citizens have chosen to undergo its penalties, with new pains and reprisals voted by the present Parliament, rather than accept that civil reorganization of their religion which it imposed on them. The result has been to deprive French Catholics, not only of the church property which had been restored to them after the confiscations of the Revolution, but also of all church property of whatever kind, even such as had since been gathered together by their private and voluntary contributions. It is impossible to foresee how they are legally to constitute new church property for themselves. By the automatic working of separation, Catholics, so far as any corporative action might be intended, are left quite outside their country's laws. The Associations Law had previously suppressed their religious orders and congregations, that is, all those teaching and other communities which combined individual initiatives into a working power for their religion. In virtue of that law, their convents and colleges and the other properties of such religious associations have 'reverted' to the State, which is gradually liquidating them for its own purposes.

"No example of temporal sacrifices for religion's sake on such a scale has been seen since Catholics in the France of the Revolution chose to lose all, in many cases life itself, rather than accept the schismatical civil constitution of their clergy, which was accompanied by a like nationalizing of all their church property."—S. Dewey, *Year in France (Atlantic Monthly, Aug., 1907)*.—"To question whether the Catholics in France, who have alone done more than the Catholics in any other nation for foreign missions and for the propagation of the faith, will succeed in maintaining the Church in their own country by private contributions, will perhaps arouse astonishment. Nevertheless it may be questioned. We do not doubt the generosity of our people, but that which does give us concern is the impossibility of organizing any revenue which can be permanent. . . . The Church would be able to surmount the difficulty if she had endowments, revenues, or property, as in other countries. But that of course demands some regular organization, some corporation or some body recognized by the laws of the country and capable of acquiring, possessing, and exercising ordinary property rights. We cannot state too emphatically that such an organization for the Church is not possible to-day in France. On one side the only body authorized by the law to look after the material side of the religious interests is the *association cultuelle*, or local committee of public worship, as defined and regulated by the Law of Separation. On the other side, this *association cultuelle* has been declared by the Pope incompatible with the hierarchical constitution of the Church of Rome, and the bishops, the priests, and the Catholic laity, in obedience to their Supreme Head, have abstained and will continue to abstain from forming any such organization. Not only, then, have there been no Catholic *associations cultuelles* to receive from the state the portion of the former religious property (the half perhaps) which we might have kept; but there will

be none in the future to receive a gift of any kind. In the eyes of the law there is no diocese, no parish, no corporation representing diocese or parish. The bishop and the pastor are only individual citizens, Messrs. So-and-So. They cannot hold property except as individuals, and what they might receive for religious purposes cannot be handed down to their successors,—it must revert only to their legal heirs. In brief, no permanent body whatever can provide for the maintenance of public worship.

"This is the situation with its almost insurmountable difficulties. In all probability it will be a long time before we escape from it."—F. Klein, *Present difficulties of the church in France (Fortnightly Review, Apr., 1908)*.

In spite of some of the obvious advantages of restraining the power of the church within the political organization of France, the threat of Pope Leo XIII that France would lose prestige in the Orient and in international diplomacy by breaking all connections with the Vatican was, to some extent, realized. "The inconvenience, the absurdity even, of the suppression of the French Embassy at the Vatican, are rapidly becoming patent even to the most politically inexperienced of French Jacobin fanatics. Even they are now deploring the decay of the French protectorate of Eastern Christians, the ecclesiastico-political problems presented by the declaration of a French protectorate over Morocco, and in general the advantage enjoyed by the rivals of France who possess an official representative through whom they may negotiate with the Vatican in defence of their national interests. . . . In the early spring of 1914 M. Maurice Barrès (who is as characteristic a spokesman of the reflex intuitions of the French temperament as Mr. Rudyard Kipling is of British sentiment), acting partially, perhaps, at the suggestion of his friend M. Poincaré, then President of the Republic, set out on a tour of inspection amid the traditional sites of French influence in the East. His report of the decadence of these establishments, and his proposals for remedying the evil, attracted wide attention. At the reception given at the French Embassy in Constantinople on July 14, 1914, the Ambassador, M. Bompard, acknowledged that the future of French prestige was 'menaced' in the East in consequence of the expulsion of certain religious orders from France, and praised M. Barrès for his patriotic campaign."—W. M. Fullerton, *Problems of power*, pp. 312, 331.

1906-1909.—Presidency of Armand Fallières.—Clemenceau ministry.—Socialistic tendency.—Casa Blanca affair.—Inauguration of the graduated income tax.—Purchase of the Great Western Railroad line by the state.—Sunday rest laws.—"M. Loubet's term of office expired on February 18, 1906. As he had signified that he did not desire re-election the Congress of Versailles chose as his successor M. Clément Armand Fallières, President of the Senate. . . . Soon after the election of M. Fallières the existing ministry suffered a defeat in the Chamber with respect to its administration of the Church and State Separation Law, and a new cabinet was formed by M. Sarrien, an old parliamentary hand, who had twice held office at the Ministry of the Interior in General Boulanger's time. For that post, however, M. Sar-

rien now secured the services of M. Georges Clemenceau, while M. Léon Bourgeois took charge of foreign affairs at the Quai d'Orsay. General Elections for the Chamber were held in May 1906, and resulted in the return of about 340 Republicans, Radicals, and Socialist-Radicals, there being also 117 Royalists, Bonapartists, and Nationalists, with 64 Conservative Republicans of M. Méline's school, and 75 Socialists. These elections generally ratified the policy pursued by successive Administrations with respect to the Church, for more than 400 candidates favouring that policy were returned. When in July 1906 the Cour de Cassation finally pronounced in favour of Captain Dreyfus's innocence, Colonel Picquart, who had been so much persecuted by his superiors in connection with the affair, was then raised to the rank of a general, and placed in command of the 10th Infantry Division in Paris. Moreover, when on October 19 that year M. Sarrien resigned the Premiership owing to ill-health and the weak position of his Cabinet, General Picquart secured in the Administration formed by M. Clemenceau, the post of Minister of War. . . . The Clemenceau Cabinet also included MM. Milliès-Lacroix, Colonies; Joseph Caillaux, Finances; Aristide Briand, Education, Worship, and ultimately Justice; Doumergue, Commerce; Guyot-Dessaignes, Justice; Alfred Picard, Marine; and Viviani, for whom a new post, that of Minister of Labour and Social Provision, was specially created. The Ministry speedily encountered attacks in the Chamber on Church and State questions. . . . Early in 1907 other trouble set in. A strike of the electric workers in Paris plunged the city into darkness on the evening of March 8; there was a terrible explosion on the *Jena* at Toulon (March 12), a fire at the arsenal there, great unrest among the State school-teachers who claimed trade-union rights, a series of alarming riots among the wine-growers of southern France (May and June), the sudden resignation of General Hagron, commander-in-chief designate, as a protest against General Picquart's administration of the law limiting active military service to two years, an anti-militarist crusade by the Anarchist and Syndicalist sects, and at last, in August, the murder of several Europeans at Casa Blanca in Morocco, as a result of the establishment of a European-Moorish control of the customs' service. This led to the despatch of French and Spanish expeditions to that locality, and by the end of the year the Morocco question was becoming more and more involved, whilst great unrest prevailed in France in connection with Labour troubles and the administration of Church property—a nasty scandal then arising, for some of the liquidators of the property of the expelled Religious Communities were accused of embezzlement. Meantime the Legislature did little or nothing to expedite political and social reforms. When 1908 arrived the Cabinet was partially reconstructed owing to the sudden death of the Minister of Justice, whose post was taken by M. Briand, while M. Cruppi became Minister of Commerce in the place of M. Doumergue. Nevertheless, the ministry was still incessantly attacked, and its income-tax proposals, introduced by M. Caillaux, were subjected to much acrimonious discussion. Further, great difficulties arose with the budget. . . . The municipal elections which took place throughout France a little later favoured the Radical-Socialist party. Trouble afterwards arose with the so-called General Confederation of Labour, which really represents but a small minority of the wage-earners, and several of whose chief officials and members belong to the so-called Syndicalist sect, which has taken

over some of the revolutionary ideas of the Anarchists. At a riotous demonstration of this body in the environs of Paris the troops, on being stoned, retaliated by firing on the crowd, thereby killing three and wounding a score of persons. This occurred at the end of July. In May President Fallières had paid a state visit to London in connection with the Franco-German Exhibition at Shepherd's Bush. . . . In July he sailed for the Baltic and was received in turn by the Kings of Denmark and Norway, the Emperor of Russia and the King of Sweden. The outlook in international affairs then appeared to be fairly clear, but in September another war scare arose. The Sultan of Morocco was now no longer Abdul Aziz, but one of his brothers, Muley Hafid, who, after prosecuting a successful rebellion, had become the acknowledged sovereign. French and Spanish forces were still quartered at Casa Blanca, and serious trouble arose between France and Germany respecting certain men of German nationality who, having deserted from the French Foreign Legion, were arrested by the French at the moment when, in the charge of an official of the German Consulate, they were about to embark for Europe. France claimed the right to arrest all deserters from her forces. Germany maintained, however, that as these men had been under the protection of one of her officials, the French had possessed no right to lay hands on them. MM. Clemenceau and Pichon were firm in upholding the French view, but Germany refused to entertain it, and for several weeks there was a danger of war between the two countries. Moreover, the international situation was further complicated by Austria's formal annexation of Bosnia and Herzegovina (October). It has been said that Great Britain, at this point, offered to assist France with five divisions of troops in the event of hostilities occurring between her and Germany. However that may be, the French took steps to meet eventualities. . . . Fortunately, the efforts of diplomacy proved successful, and it was ultimately decided that the Hague Arbitration Court should adjudicate upon the Casa Blanca affair (November). Further negotiations ensued, and early in February 1909 a declaration was signed by Herr von Schön, German Minister for Foreign Affairs, and M. Jules Cambon, French Ambassador in Berlin, by which the special political interests of France in Morocco were recognised, whilst both powers covenanted that they would abstain from seeking any economic privileges in that country for themselves or others, that they would respect each other's commercial interests, and, further, endeavour to associate their respective subjects in those business enterprises of which they might obtain the undertaking. . . . On May 22, 1909, the Court of the Hague gave its decision respecting the Casa Blanca deserters, doing so very ingeniously, for it cast blame on both parties, and yet accorded them some outward semblance of satisfaction. Both countries were disappointed at this result, and the Clemenceau Ministry was weakened by it.—E. A. Vizetelly, *Republican France*, pp. 466, 468, 470-473.—See also MOROCCO: 1007-1009; 1009.—“The Clemenceau ministry, which survived until July, 1909, adopted a programme which was more frankly socialistic than that of any of its predecessors. It added to the system of state-owned railways the Great Western line [about thirty-seven hundred miles; and an important step toward the nationalization of railways. It is expected that by 1950 or 1960, when the charters of the other companies will have expired, all French railways will be under government ownership and operation]; it inaugurated a

graduated income tax [introduced by Caillaux, and approved by a large majority of deputies, March, 1909], and put the measure in the way of enactment at the hand of the Chamber; it carried fresh and more rigorous legislation in hostility to clericalism; and, in general, it gave free expression to the unquestionable trend of the France of to-day away from the individualism of the Revolutionary period in the direction of the ideals of collectivism. The Briand ministry by which it was succeeded followed in the same lines, three of its members, indeed, being active socialists."—F. A. Ogg, *Governments of Europe*, pp. 331-332.—In 1906, a law was passed making Sunday a day of rest from most descriptions of industry and commerce, exceptions being made to allow travel and transportation companies, lighting and water works, newspaper offices, and some other performers of public services, to continue their operations, while hotels, restaurants, wine shops, drug stores, and the like, were exempted from closing their doors.—See also SUNDAY OBSERVANCES: Legal institution of a weekly rest day.

1906-1909.—Era of socialist and syndicalist experiment.—Agitation for the eight hour law.—Strikes and the unionizing of public employees.—Resignation of Clemenceau ministry.—Advent of a new ministry with Briand as premier.—As the battle between the church and state drew to its close, another problem presented itself—the problem of industrial and social reform, looking toward a better distribution of wealth and opportunity throughout the great body of citizens. Some program of economic reform had been implicit in the plans of the government since 1900. The Socialists had been steadily gaining in power in the Chamber and the ministry, and by the elections of 1906 they were heavily reinforced. "Socialism is a power in French politics, not in French life. Its pledged battalion in Parliament often rules Governments; it has raised men to Cabinet rank, and at least its name is the password for an army of politicians—the 'Unified Socialist Radical'—and no Republican majority could be formed now against the name of Socialism. Collectivism, expropriation, with or without compensation, nationalization, State purchase of railways as a preliminary step, national monopolies, and State ownership of mines, of vineyards, and of docks, and of wheatfields to come, national confiscation of land and capital, have been in the political air for years. Political leaders have played every variation on the tunes, and their hearers know them by heart. In no country is Socialism so much of a household word and such a political power; yet probably in none is it less a household thing and less of a social power."—L. Jerrold, *Real France*, p. 71.—"A new series of brotherhoods, in the form of trade unions under the General Confederation of Labor, came into the forefront of French public life. Repudiating the slow method of social legislation, the unions advocated direct attack *en masse* on the economic forces which stood in their way, through the medium of the general strike and sabotage. The policy . . . went under the name of syndicalism (see LABOR MOVEMENTS). Under the syndicalist régime there were to be no small or isolated strikes. The cause of one worker or group of workers was the cause of all. For example "should the carpenters have a grievance the entire building trade was to support them in a general industrial strike."—J. S. Schapiro, *Modern and contemporary European history*, p. 268.—In other words, since the workers had only one asset in life—their numbers—they were to use this one weapon to its utmost by making their

demands and fighting their battles always in the greatest mass consistent with thorough organization. "France, . . . invented, and become the propagator of, *Syndicalism*; . . . but *Syndicalism* is less applicable, one might almost say less needed, in her case than in that of the other modern States. Yet, true as this is, it may be argued that *Syndicalism* is more needed in France than elsewhere, since at a time of social disintegration (when religious scepticism, political and financial scandals, parliamentary frivolity and general irresponsibility are corroding the sentiment of respect) the tyrannical discipline of *Syndicalism* may be the one element capable of transforming French individualism into an instrument of altruistic action, pending the economic adjustments of the society of the future. The dictatorial demagogues who founded *Syndicalism* may all unwittingly have been rendering a singular service to the ideal of Social order."—W. M. Fullerton, *Problems of power*, pp. 274-275.—"The Confederation began to agitate vigorously for an eight-hour law for all labor. It fixed May 1, 1906, as the day for beginning a general strike, when all labor was to cease in order to compel the Government to pass such a law. When the day arrived there was almost a panic throughout France, and the troops were called out to preserve order. Many stopped work on that day, but the strike was not sufficiently general to prove successful. In March, 1907, nearly all of Paris was plunged in darkness because of a strike of the gas and electric workers organized by the Confederation; but this, too, proved a failure, although it showed the new spirit animating the French working class. Most disturbing to the Government was the unionizing of public employees, such as teachers and postmen, who desired to be affiliated with the Confederation. In 1909 a strike of those employed in the public postal and telegraph offices took place, which failed mainly because many persons not in the service volunteered to take the places of the strikers. [In introducing the principle of syndicalism among 800,000 employes of the close-knit and bureaucratic government of France, it threatened to disrupt the very foundations of the state, and precipitate civil revolution also.] To prevent a similar occurrence the Chamber of Deputies passed a resolution denying the right of public employees to strike and forbidding them to join the Confederation."—J. S. Schapiro, *Modern and contemporary European history*, p. 269.—"The Departmental Councils protested, however, against these civil-service strikes, and M. Clemenceau, emboldened by that attitude, initiated a campaign of punishment. The Revolutionaries of the Labour Confederation then threatened a general railway strike, but it did not take place, though somewhat later there was a strike among the naval reservists. Moreover, the departments of Marine and Finances quarrelled over the former's application for £1,200,000 in order to improve the lamentable condition of the fleet. On this matter being debated M. Delcassé roundly denounced the mismanagement of naval affairs, and a committee of inquiry, under his presidency, was appointed. . . . If the Clemenceau Cabinet was kept in office it was chiefly from fear of what might follow it. On July 15 it managed to secure a qualified vote of confidence, but a few days later, when the report of the navy inquiry commission came on for debate, the Prime Minister, angered by M. Delcassé's *exposé* of the blunders committed in naval administration, lost all self-control, and impetuously denounced the former Foreign Secretary, whose policy respecting Morocco, said he, had led to the humiliation of

France at Algeiras. This upset the Chamber, which, in the light of recent events, regarded the denunciation as unjust, and a vote of confidence was refused by 212 to 76 votes. The Government thereupon resigned. . . . Such was the position at the advent of the new French Ministry, which was formed by M. Aristide Briand, a Breton of Nantes, where he was born in 1862. He practised for a while as an advocate at Saint Nazaire, then joined the Socialists of Jules Guesde's school, and repairing to Paris, preached at one moment the doctrines of Syndicalism and the General Strike. But he gradually abandoned those extremist principles, became political editor of *La Lanterne*, then a deputy, and, in March, 1906, joined the Sarrien cabinet as Minister of Worship, in which capacity he brought the Separation of Church and State to an issue. He had made his way by sheer force of ability and shrewdness; yet remembering some of his antecedents a good many folk became apprehensive when M. Fallières called him to the Premiership. In his declaration of policy M. Briand promised conciliation and tolerance, the reorganisation of the navy, the firm maintenance of secular education, the enactment of working-class pensions and the income tax, the regularisation of the position of civil servants, and a trial of the proportional representation system in municipal elections."—E. A. Vizetelly, *Republican France*, pp. 473-475.

1907 (May-July).—Revolt of wine-growers of the Midi.—From various causes, the wine-growers of Southern France have suffered from an increasing decline in the market for their products. They attributed this wholly to the extensive manufacture of adulterated and counterfeited wines, though it came partly, without doubt, from the increasing use of beers and spirituous liquors among the French. The struggling cultivators of the grape, who could hardly obtain a living from their vineyards, accused the government of neglect to make and enforce effective laws for the suppression of the adulterating frauds. They demanded new measures for the suppression of all vinous beverages that were not the pure product of the grape. In the spring of 1907 their attitude became seriously threatening; for a leader named Marcelin Albert, having an eloquent tongue, a bold spirit, and a capacity for command, had risen among them. Alarming demonstrations of popular excitement occurred in the cities of Perpignan, Montpellier, Narbonne, and others. Then, in May, the discontented people gave formal notice that they would refuse to pay taxes if all adulterate wine-making was not summarily stopped by June 10th. At the appointed time the threat was even more than made good, for most of the municipal officers in the four departments of Gard, Aude, Hérault, and the Pyrenées Orientales resigned and the machinery of local government was dissolved. Premier Clemenceau secured new legislation from Parliament against wine adulteration, while promptly ordering troops to the region of revolt on the other. Marcelin Albert and another leader, Dr. Ferroul, Mayor of Narbonne, were arrested, and order was soon restored, though a few collisions with turbulent crowds were attended with some loss of life. The new laws enacted for the occasion were intended in part to secure an annual record of the vineyard product of the country that

would enable the Government to keep knowledge of it from the vine to the wine cask, and make fraudulent tampering with it more difficult, at least.

1909 (June).—Earthquake along the Mediterranean coast.—A shock which ran through southern France on the night of June 11 was most severe in the Bouches-du-Rhône, but extended over a very wide area, including the whole Mediterranean coast of France, and was also felt in Spain and Portugal. Official reports stated that 55 lives were known to have been lost. A great amount of damage had been done, especially in the villages; in the towns the buildings for the most part withstood the shock, though it was sufficiently violent to cause panic among the population in Marseilles, Toulon, and other places.

1909-1910.—Financial position.—Labor unrest.—State Domains Service takes over the administration of church property.—Floods and the relief fund.—General elections.—Resolution for the impeachment of Briand.—His resignation.—On Briand's assumption of office "the Chamber gave a fairly favourable reception to . . . [his] programme [see above: 1909 1910]. There was, however, no little discontent when M. Doumer, now President of the Budget Committee, announced that to provide for the estimates it would be necessary to find an additional sum of eight millions sterling. During the recess the Czar, whilst on his way to Cowes to visit King Edward VII, called at Cherbourg, where he was met by President Fallières. In October the execution of Señor Ferrer, in connection with the Barcelona riots, with which he had really had little or nothing to do, led to disturbances in Paris, where the Spanish embassy was threatened, but the authorities prevented excesses. In the Chamber came debates on electoral reform, but while

the principle of list voting was accepted, that of proportional representation—to further which an influential League had lately been started—was adjourned. Paris was far more interested, at that moment, in the sensational trial of Mme. Steinheil on charges of murder. The financial position now led to further taxation, and though the Senate was dealing actively with the question of workmen's pensions, the unrest in the Labour world increased week by week, there being several strikes attended by violence. Towards the end of the year a further scandal arose respecting the property of the Religious Orders. Waldeck-Rousseau had estimated its value at two millions sterling, but only a twentieth part of that sum now remained, for liquidators and lawyers had preyed unscrupulously upon the funds, and there had been collusive sales of many of the properties. Further, the numerous actions at law for the return of donations made by private families to the Orders, had often ended in the amounts at stake being exhausted in costs. M. Briand was not personally responsible for this state of affairs, but as some of the liquidators had been appointed by him, the scandal tended to weaken his position. The upshot was the transference of the administration of Church property to the State Domains Service. One of the liquidators, a man named Duez, was also arrested for embezzlement, he having admitted that he had purloined £160,000. Further, a parliamentary scandal arose on Minister Millerand being accused of taking excessive fees as an advocate. In January 1910, owing to the rising of the Seine, Yonne, and Marne, disastrous floods occurred in Paris and elsewhere. A large relief fund was raised by public subscription, and the Chamber voted £800,000 for the sufferers; but it would not ratify certain new taxation proposals, and in order to secure budgetary equilibrium more than six millions sterling had to be procured by means of bonds. However, on the Customs Tariff being revised in a Protectionist sense, assistance was voted for the improvement of peasant holdings, as well as the pensions bill for the benefit of the working classes and the peasantry; M. Delcassé's costly, but necessary, programme for the improvement of the navy was also adopted. About the end of April there were General Elections for the Chamber, these resulting in the defeat of several prominent men, such as MM. Allemane and Doumer, and the return of over 230 candidates who were new to parliamentary life. M. Brisson, long President of the Chamber, was confirmed in that post (June 1), and 403 deputies gave the Government a vote of confidence, there being 110 opponents belonging to the extremist parties. A somewhat serious riot soon afterwards occurred at the funeral of a workman injured in a strike affray, and when an amnesty for offences connected with Labour troubles was proposed, the Chamber rejected the suggestion. In August the attitude of the railway workers became threatening, and in October those of the Northern Line at last came out on strike, being followed by their comrades of the West. The Government, however, took vigorous measures and thereby saved the situation. The Army Reserves were called out; the various lines were guarded by the military; soldiers with a knowledge of railway work—among them being all those strikers who, as reserve men, had been temporarily reincorporated in the army—were called upon to ensure the various services; and with few exceptions they did their duty. Thus, although there was so-called Sabotage in more than one direction, al-

though more than one bomb was thrown, and more than one attempt made to displace the metals or impede or wreck the trains, the Government's firmness created such a great impression that the men of all the other railway lines—whose participation in the strike had been feared—refrained from 'coming out.' The workers of the Paris Electric Light and Motor Power service certainly tried to terrify the capital by holding up the tube trains and plunging the city into darkness, as they had done once before, but this affair collapsed, and its promoter, 'Secretary' Pataud, fled for a time to Belgium. However, M. Viviani, the Labour Minister, resigned, and M. Briand was subjected to violent attacks by the revolutionary extremists in the Chamber. A resolution for his impeachment was rejected by the more moderate-minded majority, and he finally secured a vote of confidence. Immediately afterwards (November 2), having decided to reconstruct his Administration, he resigned."—E. A. Vizetelly, *Republican France*, pp. 475-477. 1909-1910.—Social insurance.—Old-age pensions. 1910-1912.—Ministries of Briand, Monis, Caillaux, and Poincaré.—Foreshadowings of war with Germany.—Agadir crisis.—Negotiations over Morocco.—"Briand went through the ceremony of resigning and accepting the mission to form a new Cabinet. It proved not very homogeneous and withdrew in February, 1911. The Monis Cabinet, of more advanced Socialistic-Radical principles, lasted only a few months and faced new disturbances with wine-producers. This time the trouble was in the East, where many were dissatisfied with the artificial limitation of districts entitled to produce wines labelled 'champagne.' The Socialistic-Radical Ministry of Joseph Caillaux (June, 1911) encountered a new and dangerous crisis in the relations with Germany [Agadir crisis]. The mutual agreement between the two countries for the economic development of Morocco had, through financial rivalries, not worked well. There was also friction over similar attempts for the development of the French Congo. . . . Spain also took the opportunity of asserting its rights to parts of the North in accordance with its revisionary claims by the Treaty of 1904. Thereupon Germany declared that the agreements of Algieras and of 1909 had been nullified by France and demanded compensations. . . . Difficult negotiations were carried on between France and Germany through the summer of 1911, and at moments the two countries were on the very brink of war. The English Government backed up France. Lloyd George and Premier Asquith made public declarations to that effect. French capitalists also began calling in their funds invested in Germany and a financial crisis threatened that country. Thus brought to terms the Germans became more moderate in their demands, and it was finally possible to reach a compromise, unsatisfactory to both parties. Germany definitely gave up all political claim to Morocco and acknowledged France as paramount there. [See also MOROCCO: 1911-1914.] On the other hand, a territorial readjustment was made in the Congo by which Germany added to the Cameroons about two hundred and thirty thousand square kilometres of land with a million people, and the new frontiers made annoying

salients into the French Congo. The treaty was signed in November, 1911, but the Pan-Germans were angry at any concessions to France, the Colonial Minister resigned, and the Emperor, who had thrown his influence on the side of peace, lost much prestige for a while. On the other hand, the French were correspondingly dissatisfied at the losses in the Congo. The opponents of the Prime Minister, Caillaux, had often taunted him with too close a relation between his official acts and his private financial interests. They now accused him of tricky concessions to Germany in connection with the Congo adjustments. M. Caillaux denied in the Chamber that he had ever entered into any private dealings apart from the negotiations of the ministry of Foreign Affairs. However, Clemenceau asked the Foreign Minister, M. de Selves, point-blank if the French Ambassador at Berlin had not complained of interference in the diplomatic negotiations. M. de Selves refused to answer, thus implicitly giving the lie to M. Caillaux. The consequence was a cabinet crisis and the resignation of the Ministry (January, 1912). [This was far from being the end to the matter. Caillaux re-appeared in the next ministry as holder of the portfolio of finance and the scandals concerning him culminated in the sensational trial of Madame Caillaux for murder. (See below: 1913-1914.)] After the downfall of M. Caillaux, Raymond Poincaré became head of a Cabinet more moderate than its predecessor, the Socialistic Radicals seeming somewhat discredited in public opinion. M. Poincaré was a strong partisan of proportional representation, and a measure for the modification of the method of voting was, under his auspices, passed by the Chamber, though it failed the following year in the Senate."—C. H. C. Wright, *History of the third French republic*, pp. 170-175.

1911.—Member of consortium to give financial aid to China. See RAILROADS: 1905-1921.

1911.—Revolt of the wine-growers in Champagne.—"Early in the spring trouble arose in the province of Champagne respecting the delimitation of the area where the name of champagne might be legally given to sparkling wine. By a decree of the Council of State, that name was reserved to the vintages of the department of the Marne and those of a part of the Aisne, the wines of the Aube being excluded. Many municipalities had protested and resigned owing to this decision, and in March rioting broke out at Bar-sur-Aube, where the new Prime Minister was burnt in effigy to the delight of thousands of demonstrators. There were also disturbances at Troyes, and after a while the Government reluctantly agreed to modify the delimitation rules. Thereupon, however, the wine-growers of the Marne rose up in wrathful fury, many houses and establishments being sacked and burnt at Damery, Dizy, Ay, Epernay, Venteuil, and other localities. The red flag was flaunted, a general refusal to pay taxes ensued, and the whole vineyard district of the Marne had to be subjected to military occupation before order could be restored. Even then the Government remained at a loss how to reconcile the rival claims of the Aube and the Marne, but was finally constrained to abolish delimitation altogether, whilst enacting, however, stringent regulations to prevent wine from being fraudulently described."—E. A. Vizetelly, *Republican France*, p. 470.

1913-1914.—Administration of Poincaré as president.—Louis Barthou as prime minister.—New military law.—Unified radicals and the moderate party.—Radical cabinet followed by a moderate.—Caillaux scandal.—M. Fallières' term expired on February 18, 1913. The two leading candidates were Raymond Poincaré, head of the Ministry, and Jules Pams, who was supported by the advanced Radicals. M. Poincaré's election was looked upon, because of his personal vigor, as a triumph of sound conservative republicanism, and it was predicted that he would prove a strong leader, able to give prestige to the Presidency and to bring order out of chaos. The early months of his Administration were less productive of results than had been hoped, but the European War came too soon to make definitive judgment safe. After M. Poincaré's election, M. Fallières made M. Briand President of the Council during the last weeks of his term, and M. Poincaré kept the same Cabinet. M. Briand, like M. Poincaré, advocated proportional representation. As the Chamber failed to take a vigorous position in support of the measure, and defeated the Ministry on a vote of confidence, the latter withdrew (March, 1913). Louis Barthou next became Prime Minister, and the important legislative measure of the year was the new military law. The Germans having largely increased their army, it was deemed necessary, in spite of the violent opposition of the Socialistic Radicals and the Socialists and the attempts of the syndicalists of the *Confédération générale du travail* to work up a general strike, to abrogate the Law of 1905 and to return to three years of military service without exemption. M. Barthou pushed the three-years bill already supported by the Briand Cabinet. France took upon herself an enormous financial burden, coupled with a corresponding loss of productive labor, yet events soon proved the wisdom of the step. The opposition to the Cabinet was virulent. There were now two great groupings of the chief political parties. The Radicals and Socialistic Radicals, under the name of 'Unified Radicals' waged war against the President and the Ministry. They were under the inspiration of men like Clemenceau and the active leadership of Joseph Caillaux and tried to revive the methods of the old *Bloc* of Combes. [See also *Bloc*: French.] They declared their intention of repealing the three-years law and proclaimed the tenets of their faith at the Congress of Pau. The Briand-Barthou-Millerand group, supporters of Poincaré, soon formed a Moderate Party with a programme of conciliation and reform known as the 'Federation of the Lefts.' The Barthou Cabinet had been overthrown early in December, 1913, after a vote on a government loan. President Poincaré had to call in a Radical Cabinet led by Gaston Doumergue, the programme of which Ministry was, after all, less 'advanced' than the Pau programme, especially as to the three-years bill. M. Caillaux, the master-spirit of the Radicals, was the Minister of Finance and the object of the hostility of the Moderates. They claimed that he used his position to cause speculation at the Stock Exchange, and accused him

of 'selling out' to Germany in the settlement after Agadir. The *Figaro*, edited by Gaston Calmette, began a violent campaign. Among the charges was that during the prosecution in 1911 of Rochette, a swindling promoter, the then Prime Minister Monis, now Minister of Marine, had, at Caillaux's instigation, held up the prosecution for fraud, during which delay Rochette had been able to put through other swindles. In the midst of the public turmoil over these charges Caillaux's wife went to Calmette's editorial offices and killed him with a revolver. Caillaux resigned and, the Rochette case having come up for discussion in the Chamber, when Monis denied that he had ever influenced the law, Barthou produced a most damaging letter. A parliamentary commission later decided that the Monis Cabinet had interfered to save Rochette from prosecution.—C. H. C. Wright, *History of the third French republic*, pp. 177-179.—"The trial of Madame Caillaux, wife of a former Premier, for the murder of Gaston Calmette, editor of *Le Figaro*, caused such a taking of sides throughout the length and breadth of France that to the outside world it looked as if civil war were imminent. As this case, on the surface an act of *drame passionnel*, dear to the Parisian journalist, was presented at the trial it appeared that Calmette, in a campaign against Caillaux, who was then Minister of the Treasury, published letters exchanged between the Caillaux before their marriage. Madame Caillaux, wishing to put a stop to such publication, went to M. Calmette's office and demanded that he return the letters to her. Upon his refusal, she shot him. Evidently the jury seemed to think that a woman had a right to resort to extreme measures in defence of her reputation, and they acquitted the defendant. Many ardent Frenchmen agreed with them. But now, in 1910, these same Frenchmen are faced by disclosures that the letters that Madame Caillaux tried to retrieve were not love letters but communications between her husband and Germany at the time of the Agadir incident—correspondence whose existence constituted a part of the treason for which Caillaux is now awaiting trial. Naturally, the prosecution did not want this fact to become known, since it would have been the cue for Germany to fly to arms. Madame Caillaux trusted to this reticence, and won her freedom thereby. Her husband's day of reckoning was postponed. But the 'case' played its part in the bringing on of the war."—V. Duruy, *History of France*, pp. 714-715.—"It was under such circumstances that the Deputies separated for the general elections. Three chief questions came before the voters, the three-years law, the income tax, and proportional representation. The results of the elections were inconclusive and the new Chamber promised to be as ineffective as its predecessor. On the second ballots the Socialists made a good many gains. The Doumergue Ministry resigned soon after the elections which it had carried through. President Poincaré offered the leadership to the veteran statesman Ribot, who with the co-operation of Léon Bougeois, formed a Moderate Cabinet with an inclination toward the Left. This Ministry was above the average, but its leaders were insulted and browbeaten and overthrown on the very first day they met the Chamber of Deputies. So then a Cabinet was formed, led by the Socialist René Viviani, who was willing, however, to accept the three-years law, though he had previously opposed it. But this victory for national defence was weakened by parliamentary revelations of military unpre-

paredness. In mid-July President Poincaré and M. Viviani left France for a round of state visits to Russia and Scandinavia. Paris was engrossed by the sensational trial of Madame Caillaux, which resulted in her acquittal, but this excitement was suddenly replaced by the European crisis, and President Poincaré cut short his foreign trip and hastened home. France loyally supported her ally Russia, and, on August 3, Baron von Schoen, the German Ambassador, notified M. Viviani of a state of war between Germany and France."—C. H. C. Wright, *History of the third French republic*, pp. 180-181.

1914.—Attitude toward war and peace preceding the World War.—Speech of Viviani to the French Senate and Chamber.—Press opinion of the invasion.—"Never was an international crime more flagrant than Germany's attack on France of August 2, 1914; never one more deliberately planned. . . . This 'call to arms' decided upon in cold blood by the German Government was to find the adversaries of yesterday and of to-morrow in widely divergent postures. The one, France, profoundly attached to peace, so long as it no longer meant servitude, and confident in its duration; the other, Germany, physically and spiritually intent on war. . . . The France of 1911, faithful guardian of the traditions of the race, honest, brave and free, differed somewhat from the France that had known defeat. To the generation branded by disaster another generation had succeeded which, not having suffered directly from defeat, sometimes failed to recognize its causes and its consequences. The 'spirit of revenge,' so often invoked by Germany as an excuse for her provocation, no longer existed. Had it, in the real sense of the word, ever existed? It is doubtful. A few noble minds and brave hearts like Paul Derouledé; a few momentary outbursts had at certain hours given tangible form to this feeling. But the nation as a whole—whether it be praised or blamed therefor—was foreign to these movements as facts have shown, Boulangism, born of internal discontent rather than of great international aspirations, had been but a brief flash in the pan. The memory of Alsace-Lorraine lived in our hearts but how were the lost provinces to be recovered? Before the Russian alliance, we had been too isolated to challenge the *status quo*; afterwards, we were bound to respect it. Years had passed without a single act of revenge. Hope remained, a religion which no one surrendered. But between hope and reality peace endured at first and then, accepted, reared a wall. The men of my generation who reached maturity about 1900, faced this painful problem with the patriotism of resignation. Those amongst them who had closely studied history had little belief in the efficacy of resignation to span the moral abyss created by Bismarck between France and Germany. But by far the greater number, allowing themselves to live with the times, paid little heed to the warnings of the past. The courtesies of the German Emperor in our days of national mourning—the deaths of Carnot and of MacMahon, the burning of the Charity Bazaar—and in the days of our national pride, such as the Exhibition of 1900, were not without effect. German penetration of France, of which the ever rising tide of emigration was

but a minor means, proceeded everywhere with extraordinary thoroughness. Our financiers were becoming accustomed to sleeping partnerships in which—as in the Bagdad matter—French money furnished German Direction with a bond capital for which the regular payment of dividends was but a very inadequate return. Our Socialists, hoodwinked by the material and political prosperity of German Socialism, were content after the Congress of Amsterdam to be the minor brethren of the Marxist order. Our conservatives, to whom imperial diplomacy laid assiduous siege in the salons, were not insensible to the fascination of social order as exemplified by the German Empire. There was infiltration in every stratum of French society. . . . Besides the political evolution of our Republic held us aloof from all idea of war. Not that the Republic—despite the difficulties of its birth in the throes of defeat, despite the handicap of a constitution drafted by its enemies—would have been incapable of having a foreign or a military policy: the war of 1914 furnished a triumphant answer to the doubts of reaction on these scores by showing that France could count both on the support of free peoples and upon the services of an army which at the Marne single handed checked the German onslaught. It is none the less true that the spirit of democracy—the soul of all our laws since 1877 and the practical expression of the individualist philosophy of the eighteenth century—is in its very essence a spirit of peace. Peace in its highest expression which proclaims the right both of individuals and of nations to live and be respected; lasting peace because political power entrusted to the majority insures the welfare of the greatest number and because legislation inspired thereby is repugnant to preparation for war and the increase of armaments. France, the most warlike of nations on the field of battle, had in peace lost her military habit of mind. . . . In 1905, at the very moment when Germany was beginning to rattle her sabre, the term of compulsory service had been reduced by a third. Three years later, in 1908, an even worse imprudence had reduced the period of instruction of the reserves, a measure in flagrant contradiction with the former, as the shorter the time spent in the initial training of recruits the more thorough and complete should be the instruction given to the reserves. In a word no one believed war possible. No one believed it possible because its atrocities were repugnant to men's ordinary vision. No one believed it possible because no one wanted war, and that being the case nobody believed that others wanted it. Not a Frenchman would have supported his Government in a war of aggression. Too many Frenchmen made the mistake of judging Germany by what France was, and of supposing Germany incapable of that which they knew France herself to be incapable of. Anyone who recalled the past in order to throw light upon the future and to dispel a dangerous sense of security met with disapproval. . . . It took ten years of German threats and blackmail to make the French Government, in 1913, take precautionary measures which, being hurriedly improvised, were naturally imperfect and incomplete. [See WAR, PREPARATION FOR: 1013; WORLD WAR: Diplomatic background: 5.] France, full of optimism and faith in the progress of mankind, would not listen to talk of war. France would not listen to talk of war for another reason. Conscious of her past defeat, and unconscious of her present strength, France inclined to the belief that war would only bring fresh re-

verses. At the beginning of the Moroccan crisis and in the course of its evolution, there were not lacking political men and parties who proclaimed that 'France was not ready,' dangerous talk in a country where the public mind is prone to believe bad news rather than good. The Frenchman is not loath to speak ill of other peoples, even when they are his friends; but he is even readier to speak ill of himself. It has often been remarked that in 1914 America and Great Britain knew very little about us and did not even suspect the reserves of energy and of abnegation which the war called forth. If America and Great Britain did not know France, their excuse is that France did not know herself. Read the French papers from 1900 to 1914 and see if you can find the slightest hint of the splendid picture that the following months are to present,—it is not there. Petty quarrels of politicians and parties, magnified by the Press, distorted the view not only of foreigners but of Frenchmen as well. The true France was hidden. Ignorance of one's strength leads men to seek the path of least resistance. People said and economists taught that 'war was impossible.' People also said, 'Of war, we will have none.' Thus one sees why all our compromises with Germany, painful though they were, met with the approval of the great majority, both in Parliament and in the country. Thus one sees why France, by reason alike of her qualities and of her faults, was so deeply attached to peace at the very moment when Germany had decided upon war. If, in 1914, Germany had wanted peace she would as in previous years have found France ready to enter into the necessary agreements. If Germany had wanted peace, France more than any other nation would have helped her to preserve it. But Germany wanted war! . . . I know no instance of political information so totally and utterly false as that which the Imperial German Government collected concerning us during the ten years prior to the war . . . Our military and other shortcomings were exaggerated by the reports of diplomats seeking to curry favour by judging us harshly. . . . Taking the increase of military expenditure of the six great European powers between 1883 and 1913 we find the following percentages:

France .....	70%
Italy .....	108%
Austria .....	111%
Russia .....	114%
England .....	153%
Germany .....	227%

"France, alarmed at the disparity between her Army of 450,000 men and that of 900,000 which the laws of 1911, 1912 and 1913 assure to Germany, votes the three years service and a slight increase in armaments. Immediately the Pan-German Press denounces this 'provocation.' I can still hear Baron von Stumm, who had been pleased till then to play at conciliation, remarking dryly during a dinner at the Dutch Legation in July, 1913, that 'If France presumes to challenge Germany's right to be stronger than she is, it must be that she desires war.' . . . From now on, the military leaders are not alone in the secret of this aggressive plan. The Governments of the German States are informed that France is to be attacked through Belgium. The Bavarian Legation at Berlin, in a report which Kurt Eisner made public, wrote: 'Germany cannot respect Belgian neutrality.' The Chief of the General Staff has declared that even English neutrality would be too high a price to pay

for respecting that of Belgium. For an offensive war against France is possible only through Belgium.' The plan decided upon and the sword ready, there remains only an opportunity to find. The assassination of the Archduke Franz Ferdinand furnishes it; and less than five weeks will suffice to bring about the explosion. Everything is ready and in its place; everything is prepared so that no possibility of averting war remains. Here again we have German proofs to present in the opening pages of this book on France and Peace. Not forgetting the Kaiser's letter to his Chancellor of July 28, 1914, in which William II demands the occupation of Belgrade by Austria-Hungary—war with Russia in other words—here is Bethmann-Hollweg's Note of August 3 in which he says: 'We were aware that the eventual acts of hostility by Austria against Serbia might bring Russia on the scene and drag us into a war in conjunction with our Ally. But we could not, knowing that the vital interests of Austria were at stake, either advise our Ally to a condescension incompatible with her dignity, or refuse her our support at this difficult juncture.' The confession is full; it was needless. For events speak for themselves and in the fatal week show Germany as eager to avoid the maintenance of peace as her future adversaries were to safeguard it.—A. Tardieu, *Truth about the treaty*, pp. 1, 9-14, 18-20, 22-23.—See also WORLD WAR: Diplomatic background: 4; 76; 77; also Causes: Indirect: k; l.

"Since 1912, there have been consultations between English and French general staffs, resulting in an exchange of letters between Sir Edward Grey and M. Paul Cambon. . . . The English fleet is guarding our [French] northern and western coast against aggression. . . . The French republic by the restoration of its strength and the making of diplomatic agreements invariably lived up to, has succeeded in freeing itself from the yoke which Bismarck imposed on Europe even in days of peace. . . . Italy will remain neutral. . . . What is being attacked are the liberties of Europe whose defenders France, her allies and her friends are proud to be. . . . France unjustly provoked . . . will defend herself against Germany and against every power which has not as yet announced its position but which should later on take sides with Germany."—R. Viviani, *Speech to French Senate and Chamber of Deputies*, Aug. 4, 1914.—"It is not strange that the rapid German invasion of Belgium and France in what Frenchmen regarded as a brutal attempt to dominate Europe and crush France into lasting insignificance, should have roused the deep patriotism of the French people to a peculiarly high pitch of exaltation. Before the German peril France rose as one man to defend the threatened soil of the Patrie."—T. L. Stoddart, *Present-day Europe*, p. 42.

1914 (August-September).—Assassination of Jaurès.—Reconstructed ministry.—Removal of the government to Bordeaux.—Military reverses.—"War found the Viviani Cabinet in office; then, on the top of this tremendous situation, came the assassination of Jean Jaurès, the Socialist polemist. Here was a combination to try the nerves of any statesman; but, Viviani, though new to office, boldly rose to the occasion. He did not lose his head over the war, and he made the assassination of Jaurès an occasion for a splendid manifesto in which he appealed to the patriotism of the working classes. At the same time he praised the dead orator, strongly condemned the deed by which he had come by his death, and promised punishment of the assassin. His frank recognition of Jaurès's high qualities won him the approval of the Socialists, and, incidentally, showed his magnanimity—for the dead leader was undoubtedly an embarrassing opponent. Viviani, like some of his chief colleagues in the Cabinet, began his political life as a Socialist, and probably remains one at heart; but responsibility has brought prudence, and thus the wine of generous ideals has been tempered by expediency. After he had conjured the danger of a civil outbreak, through the assassination of Jaurès, there remained the far greater danger: the European war. That was not so readily dealt with. Nevertheless, the premier, who had emerged from comparative obscurity less than ten years before, dealt faithfully with that crisis. There came the shock of reverses on the frontier, with the Germans marching rapidly on Paris. Taking counsel with the President and his constitutional advisers, Viviani reformed his Cabinet [August 26] and made it a Government of National Defence [called the Union Sacrée]. If it had not the width of the English concentration, it represented respectable elements and contained the most reputed politicians of the day. . . . No member of the Opposition, properly so called, was invited to take a portfolio. . . . Yet the Cabinet, such as it was, gave satisfaction to public opinion, and was a coherent effort to obtain the best results that political wisdom and experience could furnish. . . . The post of greatest difficulty belonged to Maitre Millerand, who undertook the Ministry of War. It was a crushing responsibility and presented changes of policy in the last forty years from which his department suffered; and secondly, because of the curious temperament of French deputies who find exercise for their ingenuity in obstruction and their talent for intrigue in the group system of French politics, by which a dozen different jealousies have to be met and overcome. Be this as it may, M. Millerand battled with considerable success against the sudden emergencies of the campaign. He is accused of having tried to do too much and of showing the temper of a dictator; but he had every excuse for adopting a system which means rapidity of action, even if it exposes the minister to the full effect of faults. The Chamber gave him three secretaries of state,

one charged with Transport and Commissariat, one with the Service de Santé, the third with Aviation, and he accepted them rather grudgingly, it is said; but of his own free will he chose a Parliamentary secretary for Munitions, and this decentralization had the happiest results. . . . Immediately in the rear of M. Millerand appears the figure of M. Aristide Briand, who is one of the most powerful politicians of the day. . . . He was always the potential premier in the Viviani Cabinet—the power behind the throne—but, officially, he was Vice-President of the Council, as Minister of Justice. The political discovery of the war was M. Albert Thomas, who is also a Socialist, but a Socialist of the complexion of M. Millerand: a real reformer with no touch of the revolutionary in him, and yet profoundly interested in Labour conditions. . . . M. Thomas's admission to the Cabinet as a consultative member, after he had been chosen by M. Millerand to be his first lieutenant, was a reward for unremitting labour at the Ministry of War. . . . One of the most attractive figures in the Cabinet is the venerable M. Ribot, Minister of Finance, whose principal achievement was to draw wealth from the legendary *bas de laine* [woolen stocking]. From its kindly depths he got twenty millions of good French money in seven weeks."—C. Dawbarn, *France at bay*, pp. 178-181, 184-187.—On September 3, the seat of government was temporarily moved to Bordeaux, following the precedent of the Franco-Prussian war, in order to deprive the possible capture of Paris of any political significance.

1914 (August-December).—World War: Operations on the western front.—Offensive in Alsace-Lorraine.—Battles of Charleroi, Ardennes, Marne and Ypres-Armentières. See WORLD WAR: 1014: I. Western front.

1914-1915. — Closing of Parlement. — Censorship.—"The war had hardly begun when the Government, without either popular or Parliamentary consent, brushed aside the Constitution and the laws and established what is in effect, if not in name, a dictatorship as oppressive and as complete as any ever exercised by either of the Napoleons. Germany declared war against France on August 3, 1914. [See WORLD WAR: Diplomatic background: 48.] The French Parliament met the next day and, as required by the Constitution, recognized the existence of a state of war. In a single session, without amendment or debate, it enacted into law eighteen bills submitted by the Government, and authorized the President of the Republic to borrow eight milliards of francs, to be spent upon the public services in any way the Government might see fit. It was perfectly willing to subordinate itself to the executive, and in the face of national danger legislate without comment on any subject or in any way the Government might desire. This, however, did not satisfy the wishes of M. Viviani and his associates, who almost immediately after their flight to Bordeaux declared the session of Parliament closed by a notice printed in the *Journal Officiel*. It [the Parlement] not only insisted that the Government had no legal right to close a session of Parliament held during 'a state of siege,' but it is further claimed that the only legal way that any session can be closed is by the reading of the decree of closure from the tribune of both chambers. As the budget for 1915 had not been voted, the Government was obliged to call Parliament together again before the expiration of the year. . . . December 24, when, after three meetings in which the chambers showed themselves as sub-

servient and as pliant as before, the session was again closed in the same illegal way. On January 12, 1915, Parliament met under the Constitution for its regular session, which must last at least five months. Until lately [January, 1916] it has at no time shown itself inclined to in any way embarrass the Government or to disobey the latter's orders, no matter how unconstitutional they might be. In fact, in two particulars, it has gone so far as even to surprise many Frenchmen who thoroughly approve of the present dictatorship. The members of the French Senate are elected for nine years. In January of this year the terms of 102 Senators expired. 'It is difficult,' said the Government, 'to call together the electoral colleges, and in fact some of the departments affected are in the hands of the enemy. It will be even more inconvenient to have 102 seats vacant. Let us therefore ignore the Constitution and by a simple act of Parliament indefinitely extend the terms of those Senators who are about to go out'—which Parliament on December 24, 1914, unanimously, and without a single word of debate, proceeded to do. . . . Using Article IX of the obsolete law of August 9, 1840, which permitted the military authorities during a 'state of siege' to forbid publications and meetings tending to excite disorder, and the law of August 4, 1914, which punishes indiscreet publications of a military nature, the Government has decreed a censorship the like of which the world has never known. No new newspaper may be started without the permission of the censorship. Of existing newspapers only one daily edition may be issued, no 'scare heads' or 'display type' may be used, no newspaper may be 'cried' in the streets. Every word that is printed must first be passed by the Censor, on pain of the suspension or suppression of the newspaper. No criticism of any one in authority, either civil or military, is allowed, nor may any military news be printed that is not passed by Headquarters."—G. B. McClellan, *Heel of war*, pp. 106-107, 116-117.—The diplomatic and military censorship came to an end with the ratification of the Versailles Treaty.—See also WORLD WAR: Miscellaneous and auxiliary services: III. Press reports and censorship: a, 3; PRINTING AND THE PRESS: 1014-1020.

1914-1918.—French women and their activities in war time.—"When the call to mobilize rang like a thunderclap through France, it was answered not only by the men, but also by the women, to whom a similar call was addressed by the Prime Minister, through the press. Women of all ranks and of every occupation, whether among the *noblesse* and *bourgeoisie*, the professional, commercial, or agricultural classes, rose up and responded with a burst of patriotic enthusiasm and an ardent desire to serve only to be found in a democratic country where national service is regarded as 'a sacrifice of arms demanded by the gods.' . . . First in the rank of Frenchwomen answering the call to mobilize were the members of the Croix Rouge, comprising the three great societies—'Secours aux Blessés Militaires,' 'L'Union des Femmes de France,' and 'L'Association des Dames Françaises.' The war of 1870 had shown Frenchwomen their heart-rending helplessness and ignorance, natural consequence of lack of training and organization. . . . They formed at once a nucleus, capable of indefinite expansion. At the call thousands more joined up for training, while others, who had retired, offered themselves as teachers and organizers of ambulances. Already in

1916 the numbers of hospitals organized and maintained by the three great branches of the Croix Rouge had grown to about 1800. . . . The work of the Société de Secours aux Blessés Militaires is not confined to hospitals and ambulances at the front. An important work is done by the *infirmières* at the railway stations. Their mission is to bring food to the trainloads of wounded, to dress their wounds, and give hospitality in the *dortoirs* attached to their railway canteens, to those unable to continue the journey the same night. . . . Writing of the French nurses who remained voluntarily in the occupied departments, M. Barthou says: They risked their liberty, their lives, even their honor, to defend our wounded from the ferocious enemy. . . . They gave their lives also equally to the wounded Germans, remembering that they were not only nurses, but Frenchwomen with the honor of France to uphold. . . . After four years of war they have proved their value as public servants in a manner which has given a warm human glow to the usually dry, official reports, records of bare facts. . . . Not only in the devastated regions, but throughout France, women are acting as mayors, head teachers, and postmasters. . . . At the declaration of war the mobilization of the women was greatly facilitated, as in England, by the suffrage and feminist societies, which were at once converted into centres for organizing the various branches of national service. These societies, with their staff of women trained in organizing and business methods, their branches in every part of France with offices and press departments, proved invaluable to their country. . . . The women of France inaugurated a vigorous campaign [against drink, vice, and child mortality], united under the banners of the 'Conseil National des Femmes' and the great Woman Suffrage Unions, 'Fédération Nationale,' 'Alliance Nationale,' and 'L'Union Française.' . . . Another enterprise created by the women of France . . . has been the 'Foyer du Soldat.' . . . The *foyers* providing healthy foods and temperance drinks, a cheerful, bright atmosphere where the soldier could find newspapers, writing material, music, and games, or rest and quiet according to his tastes, proved to be a real godsend to the French army. . . . In connection with the 'Foyer du Soldat' the women have worked that other scheme for the benefit of the homeless soldier on leave—namely, his adoption into a family who receive him in their own home, restoring his physical and mental health with rest, good food, and cheerful company. Another field in which Frenchwomen have exercised beneficial moral influence is to be found in the *ateliers* or workshops attached to the military hospitals. 'L'Atelier du Blessé' was started by Madame Renée Viviani at the beginning of the war. In these workshops of the hospitals, convalescent maimed, blind, and disfigured are trained in a trade which at the same time serves the purpose of a remedial physical exercise. . . . Another important society actively engaged in child welfare, almost entirely worked by women, is the 'Œuvre de la Chaussée du Maine.' Founded in 1871 by Madame de Pressensé, its first object was to assist the child victims of the war, not only to protect them during infancy, but to follow them through school-days, to the start in life with both material and spiritual aid. . . . The mother house is in Paris on the rue Vigée-Lebrun. . . . Among other numerous societies for the benefit of mothers and children is 'L'Accueil Français,' devoted to the children of the invaded districts, for 15,000 of whom Madame Manger, the indefatigable secretary, has found homes. Also, 'Pupilles de la Guerre,' di-

rected by Madame Henri May, and 'Veuves de la Guerre,' by Madame Pierre Goujon. All these organizations for the saving of child-life were federated during the first year of war, so that overlapping might be avoided and coöperation secured, into one society, 'L'Assistance à la Mère et l'Enfant,' under the presidency of Madame Michel, wife of General Michel, Governor of Paris at the outbreak of war. . . . But it is in hitherto unaccustomed spheres that Frenchwomen are now specially distinguishing themselves. What are the women of France doing? 'They are keeping the country going.' They have kept the country going as farmers and agricultural laborers. The mobilization of the men, in 1914, came in the midst of harvest, but everywhere the crops and the vintage were gathered in, the fields were ploughed and sown. The work of the farm went on without interruption, for the nation in arms must be fed. The Minister of Agriculture states in his *Journal Officiel* of February, 1916, in recognition of their services: 'The women placed at the head of an agricultural business will have the same rights as a man. Many of them have, by their courage and indisputable competence, earned a place in the first ranks on the agricultural committees.' . . . A business in which the Frenchwoman's nerve and endurance have rendered the same incalculable war service as that of the Englishwoman has been munition work. This is the report of M. Bourillon, Inspector of the Ministry of Works: 'Women have shown themselves as needing no special training to become irreproachable makers of shells and to give to artillery work the most exact inspection; . . . out of 80,000 shells verified in a workshop of 845 women, only one shell failed to pass the test—this on a visit taken at random.' . . . M. Albert Thomas, Minister of Munitions, states in his circular of July 1916: 'With the object of obtaining the utmost ability from the military munition workers and as a natural consequence of my circular relating to the employment of women hands, I have decided from henceforth to dispense with all mobilized workmen in works which, in every detail of their fabrication, can be confided entirely to women.' . . . Another excellent institution which France owes to her women is the 'Infirmières Visiteuses'—visiting nurses. Like so many other organizations, it was started by private individuals. . . . Not a single French society would consent to attend [the Women's Congress of the Hague, April, 1915] . . . and the 'Conseil National des Femmes Françaises,' a Federation of 150 feminist associations, affiliated with the Federation of eighty suffragist societies, gave the following reasons for their grave step in abstaining for the first time from taking part in a Peace Congress, declaring their unanimous decision neither to participate in this International Congress, nor to accept the programme it proposed. 'How would it be possible [went on the manifesto] for us at such a time as the present to meet the women of the enemy countries and again take up with them the work so tragically interrupted? Have they denounced the political crimes and sins against humanity perpetrated by their Government? Have they protested against the violation of Belgium, against the criminal acts of their army and their navy? If their voices have been raised, it has been too feebly for their protestations to reach us. We can only resume coöperation with them when they accept, as we do, respect for right as the basis of all social life and action. . . . To think of peace to-day, before peace can consecrate and establish the principles of right, would be to betray those for whom we are so many of us

proudly mourning. It is in order that future generations may reap the fruit of their splendid self-abnegation and death, that the women of France will continue the combat as long as needful; united with those who are fighting and dying for their country they will not associate themselves with one gesture of peace. Animated still by this spirit the women of France are keeping, and will keep their country going, till victory is assured."—C. E. Maud, *What French women are doing* (*Living Age*, Aug. 10, 1918).

1914-1918.—Revival of French prestige.—Production of ammunition.—"France was in 1914 'decadent France,' and in 1916, if not slightly earlier, 'splendid France.' This is the paradox which must be solved. In the course of two years the world almost completely changed its opinion about the French. . . . The German war-machine, held up for a few precious days in August, 1914, near the Belgian boundary, soon broke away and began to roll down upon France. Apparently the French military authorities had really expected Germany to respect her treaty concerning Belgium, and were not prepared for the thrust through that country. But the machine rolled on. Brussels fell, and later Antwerp. Soon the German columns were crossing the French frontier with apparently irresistible force. The French and English together were unable to check the movement. An appalling quiet seemed to have settled upon France. The few items of news which filtered out were not reassuring. . . . Then came the miracle of modern warfare, the Battle of the Marne. The French armies, defeated and flung back upon their soil, turned and defeated the invader, driving him back toward Belgium. Whether or not German military mistakes were partly responsible for this defeat, certain it is that the glory due France cannot be overstated. Then it was that the world began to change its mind about the French and to speak some words of commendation. We began to look somewhat below the surface, and as we did, we saw things long unsuspected. France, caught unprepared for war, compelled by the perfidy of the enemy to change her whole plan of defensive campaign, had in the course of a few weeks, with great courage and orderliness, accepted early de-

feats and retreat, had continued to gather more troops and to place them quietly where they could be most effectively used, and then, on the darkest day, had put in operation a plan of battle which in a few days drove the enemy far from his objective."—W. S. Davis, *Roots of the war*, pp. 116-117.—"France behind the lines was worthy of fighting France. She furnished in full measure that effort without which the heroism of her soldiers would have been vain. She too did her full duty. When war began—the first great European war in forty-three years—both France and Germany had to face the surprise of fire: our 75's inflicted losses on the Germans which their General Staff had not foreseen. Their heavy artillery for months smashed the morale of our Armies. To tell the truth no one was really ready—France even less than Germany—to meet the demands a successful war of artillery was going to make. Our manual of attack in 1913 said: 'Ground is won by infantry.' Three years later our experience dearly bought proclaimed: 'Ground is won by artillery.' Both perhaps were exaggerations, but the fact remains none the less that the French Army lacked the support in attack and the protection in defense which quick-firing heavy artillery affords and that its field artillery perfect in design was woefully short of ammunition. When we went to war, we had 1,300 rounds per gun, later on there were days when the expenditure was 4,000 rounds per gun. We had counted on a production of 15,000 three-inch shells a day and the total expenditure on certain days reached 400,000. In 1916, to demolish a yard of enemy trench, it took 407 kilogrammes of '75' shells, 203 kilogrammes of trench shells, 704 kilogrammes of heavy shells and 128 kilogrammes of high explosive shells. The lessons of battle obliged us first to keep our field artillery supplied, then to create quick firing heavy batteries. A doubly onerous task in almost impossible circumstances. All our iron and steel plants were near our frontiers, and invasion had robbed us of them! The Germans estimated that our loss in this way would be 60,000 workmen out of 112,000, 40 per cent. of our coal, 80 per cent. of our coke, 90 per cent. of our iron, 70 per cent. of our pig iron, 80 per cent. of our steel, 80 per cent. of our machinery. The estimate was correct. What did we do? The story of this prodigious effort has never been written. We had, in 1914, 3,606 pieces of 75. Despite loss and destruction, we had 6,555 when hostilities ceased. As to heavy artillery, the supply rose from 288 pieces in 1914 to 5,477 in 1918. In other words, we increased our field artillery by 77 per cent. and our heavy artillery by 1,043 per cent. One-tenth of this latter increase was obtained by reconstruction of old pieces, nine-tenths by new construction. All our artillery combined in 1914 had less than five million shells. The monthly output at the end of the war exceeded nine millions. So much for round figures. Now for details. In 1914, the production of 75's was negligible and there was no regular service of repair. In October, 1918, our workshops were turning out, for this caliber alone, 550 new tubes and 573 repaired, 593 new brakes and 195 repaired, 267 new carriages and 114 repaired. To these must be added shells, more shells and ever more shells. The battle of Champagne and Artois in 1915, lasting two months, cost us seven and a half million of 75 shells—an average of 121,000 a day. The battle of Verdun and the Somme in 1916—lasting ten months—cost us more than forty-three million 75 shells—an average of 144,000 a day. The offensive of 1918, lasting four months, cost

us nearly thirty-three million shells, an average of 272,500 a day. We met this increasing expenditure. The output of 75 shells at the beginning of the war was theoretically 13,000 a day, as a matter of fact it was 6,000. It rose to 150,000 a day in October, 1915,—to 173,000 in August, 1916,—to 203,000 in the following November, to 233,000 in May, 1917, which level is maintained and even exceeded to the end of the war. This increase of production—3,782 per cent.—was obtained under almost hopeless conditions brought about by invasion. It is to the everlasting honour of our Government, of our Parliament and of our industry that they were able to achieve it, in spite of everything.”—A. Tardieu, *Truth about the treaty*, pp. 31-33.

1915 (October).—French and British troops land at Salonika.—Declaration of war against Bulgaria.—Cabinet reconstruction under Premier Briand.—“When the great German offensive against Russia was brought to an end and armies were launched against Serbia, the French Press clamored loudly for intervention in assistance of their Balkan allies. The character of the intervention, the number of men required and so on was decided upon between the French and British military authorities, and armies from both countries were despatched to Salonika. . . . A statement of the Prime minister was urgently demanded on the subject of the new expedition, for there had been much misgiving as to the supposed delays, hesitations and mistakes of the Allied diplomacy. M. Viviani met the demand for a statement in the Chamber on October 12. He outlined the diplomatic negotiations which preceded the entry of Bulgaria into the war and said that in view of the German attack on Serbia it became incumbent both from moral and military points of view to send an expedition to the relief of that country. ‘We could not agree to the isolation of Serbia and the rupture of communications with our allies and our friends.’ He defended the violation of Greek

neutrality on the ground of the welcome offered to the French troops by a people already allied with Serbia; and he stated that Russia also was sending an army to co-operate with the British and French troops. On the day following this speech a political crisis was precipitated by the resignation of M. Delcassé the Minister for Foreign Affairs. . . . It soon became known that M. Delcassé’s resignation had direct reference to the Allied expedition to Salonika. The Foreign Minister had conducted the Balkan negotiations preliminary to the landing; but the resignation of M. Venizelos and the determination of Greece to maintain her neutrality, so greatly changed the aspect of affairs that M. Delcassé no longer felt justified in conducting a diplomacy, the conditions of which had been so completely altered. It then no longer seemed to him that the expedition to Salonika was advisable. The vote of confidence in the Government by M. Viviani was ultimately carried by 372 votes to 9, although about 200 deputies refrained altogether from voting. The resignation of M. Delcassé was the immediate cause of the fall of the French Government. For some time past the Ministry had failed to obtain the confidence of the country; though the exceedingly strict censorship effectually prevented any public criticism. Expressions of dissatisfaction came chiefly from the Parliamentary committees of Foreign Affairs, War, Navy, and Budget, each of which consisted of forty-four members drawn on a proportional basis from the various groups of the Chamber of Deputies and the Senate, and represented the informed and united opinion of Parliament. Matters were brought to a head by the failure of the *entente* diplomacy in the Balkans and the resignation of M. Delcassé; and on October 28 it was announced that a new Ministry was in course of formation under the Premiership of M. Briand. Three days later the constitution of the new Ministry was published. It contained, including the Under-Secretaries, twenty-three members, and showed no change in the preponderance of any one party. General Gallieni succeeded M. Millerand as Minister of War, while Admiral Lacaze became Minister of Marine. The other offices were distributed as follows: Justice, M. Viviani; Interior, M. Malvy; Finance, M. Ribot; Agriculture, M. Méline; Public Works, M. Marcel Sembat; Commerce, M. Clémentel; Colonies, M. Doumergue; Instruction and Inventions affecting National Defence, M. Painlevé. M. Briand himself assumed the direction of Foreign Affairs, while M. Jules Cambon, former Ambassador in Berlin, became Secretary-General to the Ministry of Foreign Affairs. The Ministers of State were M. de Freycinet, M. Bourgeois, M. Combes, M. Jules Guesde and M. Denys Cochin. The Cabinet thus contained no fewer than eight ex-Premiers of France; it included three Collectivist Socialists, three Independent Socialists, six Radicals and Socialist-Radicals, two Moderate Republicans, one Progressist and one member of the Right (M. Denys Cochin). The appointment of a General to the Ministry of War was not altogether harmonious to Radical sentiment more particularly in view of rumours early in the war that the new Minister had not escaped dissensions with General Joffre. But the personality and well-known patriotism of General Gallieni disarmed criticism, and entire confidence was felt that no friction would occur between him and the leader of the French army in the field. The first concern of M. Briand on coming into power was to issue a statement to the effect that the change of Ministry was in no way a sign of any change in policy. The policy of France was

summed up in the one word 'Victory' and their only motto was *La Paix par la Victoire*."—*Annual Register*, 1915, pp. 201-202.

1916 (December).—Reorganization of Briand's cabinet.—Joffre created marshal of France.—War committee established.—Abolition of political censorship.—"At the beginning of December the Chamber of Deputies was holding a series of secret sessions. More energetic measures of civil, commercial, and industrial mobilization were being discussed. The situation in England [see ENGLAND: 1916 (December)] at once quickened interest among French statesmen in the question whether the present Governmental machinery was in conformity with the exigencies of war, and also whether there should not be a reorganization of the supreme command of the army. On Dec. 7 the Chamber, by a vote of 344 to 160, passed a resolution expressing confidence in the Government in its conduct of the war and approving the proposals to reorganize the General Staff and 'to concentrate under restricted direction the conduct of the war.' Next day a special meeting of the Cabinet was held and the establishment of a War Council and the economic organization of the country were considered. The semi-official note issued on Dec. 10 stated that there would be 'a diminution in the number of the members of the Cabinet and the constitution of a restricted National Defense Committee, as in England.' Finally, on Dec. 12, M. Aristide Briand, the Premier, announced that he had completed the reconstruction of the Cabinet. The supreme direction of the war is concentrated in a National Defense Council of Five, consisting of M. Briand, Premier and Foreign Minister; M. Alexandre Ribot, Finance Minister; General Hubert Lyautey, Minister of War; Rear Admiral Lacaze, Minister of Marine, and M. Albert Thomas, who, as Minister of Fabrication Nationale (National Manufactures), is also to have control of munitions and transportation. The rest of the Cabinet has been reorganized, one of the Ministers being described as that of National Subsistence and Labor. General Lyautey, the new War Minister, has been French Resident General in Morocco. A resolution of confidence in the new Government was adopted by the Chamber of Deputies on Dec. 13, but as the voting on this occasion was 314 to 165, M. Briand's majority had in less than a week fallen from 184 to 140. M. Clemenceau says that the minority included some of the most important members of

the Chamber. The rest of the expected changes in the high command was made on Dec. 12, when it was announced that General Nivelle, commander of the French troops at Verdun, had been appointed Commander in Chief of the French armies of the north and northeast. This was followed next day by President Poincaré signing a decree naming 'General Joffre, Commander in Chief of the French Armies, technical counsel to the Government regarding the direction of the war.' Another decree declared that the Commanders in Chief of the armies of the north and northeast and of the Orient were now to be directly responsible to the Minister of War. The effect of this decree is to bring both General Nivelle and General Sarrail, Commander of the Entente forces in Macedonia, under the control of the War Office, now presided over by General Lyautey, and make them independent of the Commander in Chief, General Joffre."—*Cabinet changes in France* (*New York Times Current History*, Jan., 1917, pp. 622-623).—In addition to a decree creating General Joffre a marshal of France, President Poincaré signed another, December 27, revoking the decrees of December 2, 1915, and December 13, 1916, which had appointed Joffre commander-in-chief and also technical adviser to the government. The high command was now vested in the War Committee. A significant change is indicated by the adoption on December 14 by the Chamber of Deputies of a motion abolishing the political censorship, while retaining the diplomatic and military censorship. The motion was accepted by the Government and passed unanimously.—See also WORLD WAR: 1916: XII. Political conditions in belligerent countries: e.

1917.—Allied failures.—Campaigns on the western front.—Destruction of the Rheims cathedral.—"This year, 1917, was for the Allies a year of despair and disaster. When the weather permitted, the British and the French began another offensive, to try again to break asunder the German lines. The Allies were hampered by the German retreat which had left an area of terrible desolation over which an attack could not well be made; but in April the British took the immensely strong position of Vimy and in June, with a huge explosive charge, they blew up the supposedly impregnable position of Messines. Farther north they desperately strove to break down into the plain of Flanders and compel the evacuation of the seaports of Belgium whence the submarines constantly issued. They seemed to have good chance of success; but they fought with a fatal ill fortune and when the season came to an end they had endured fearful losses and taken from the Germans nothing that compelled an important retreat. During the summer the French made another effort to shatter the German lines. Near Laon they broke through the Chemin des Dames positions, and gained a brilliant local victory; but because of terrible losses, gave up the effort before anything decisive was accomplished. Later events were to show that this was the last great offensive effort the French could make by themselves. They had long borne the brunt of the war, and their losses had been so appalling that they were now almost at the point of despair. That they did not falter and accept a German peace, as traitors urged, was due to the efforts of their great man Clemenceau, and most of all to their own unconquerable spirit. The Cathedral of Rheims, one of the supreme examples of Gothic architecture and religious art, something which had been loved and admired for centuries,

which could not be replaced, was not far from the line of battle. Because, as they said, it was used by the French as an observation post, the Germans deliberately ruined it with shells from their cannon. From the very beginning the great German airships, the Zeppelins, sailed over the cities of England and France, dropping high explosives with fearful effect. Some military advantage was procured, but the nature of these air raids was such that the bombs were more apt to drop upon civilians than upon fortifications."—E. R. Turner, *Europe, 1789-1920*, pp. 561-562, 565.—See also *WORLD WAR: 1917: I. Summary: b, 2; II. Western front: a, 1; a, 2; b; b, 7; c; d, 22; d, 23; f.*

1917 (March).—Resignation of Premier Briand.—Ribot ministry.—"The first victim of the persistent attacks on the French Government in the Chamber of Deputies was one of the latest additions to the cabinet, General Louis Lyautey. He was called to take charge of the War Office from Morocco where he has been in control during the four years since that country became a French protectorate. There he has brought order out of chaos. . . . When called upon to defend his policy in the Chamber he began with what the Deputies chose to consider an insult and they howled him down. . . . 'I believe there are things which must not be spoken. You will permit me not to follow you into technical questions, because even in secret session my responsible opinion is that it would expose the national defense to risks.' At this a tumult of unprecedented violence broke out in the Chamber and he was not allowed to continue. There is evidence enough in the present war to justify his distrust of the Chamber of Deputies in keeping military secrets, but that did not matter. On account of the refusal of the Chamber to listen to him he was obliged to resign his post as Minister of War. This was followed by the resignation of the whole cabinet and Premier Briand laid down the office which he has held for a year and a half, on the very day when the French armies made their great advance. President Poincaré asked the ex-minister of Finance to form a new cabinet."—*French ministry resigns (Independent, Mar. 26, 1917, pp. 530-531).*—"The new Cabinet, about to take office, is headed by that veteran statesman Alexandre Ribot, who has been Minister of Finance in all the French Cabinets since the war started. No one, we believe, commands the confidence of all parties to a greater degree than does M. Ribot. It is a satisfaction to note that former Premier Viviani is to be Minister of Justice, and that former Premier Bourgeois becomes Minister of Labor. The next most striking appointment is assuredly that of Professor Painlevé, who had been Minister of Public Instruction, and now assumes control of perhaps the most important position in the Cabinet, namely, the Ministry of War. M. Thomas, the efficient Minister of Munitions, serves again in that office, and Admiral Lacaze and Louis Malvy, who have presided over the Navy and Interior Departments for two Ministries, continue in those offices. For the most part the other members are new men to Cabinet office, one of the most conspicuous being M. Jules Steeg, the editor of 'La Lanterne' and 'La Revue Bleue.' The new Cabinet apparently returns to the old order, in that it has dissolved the departments (Justice and Public Works, Commerce and Agriculture, Labor and National Subsistence) centralized under the late Ministry into the sep-

arate portfolios which that Ministry had combined. The present portfolios are fifteen in number, including the Under-Secretaryship of Aviation."—*New French cabinet (Outlook, Mar. 28, 1917, p. 539).*—See also *WORLD WAR: 1917: XII. Political conditions in the belligerent countries: d.*

1917 (September-November).—Painlevé ministry.—Georges Clemenceau called as prime minister.—"For the fifth time since the war began, France has a new Cabinet. The first Cabinet, headed by M. Viviani, supplanted its predecessor because the war executive needed more power. The second Cabinet, headed by M. Briand, came into being because a coalition ministry was needed. The third Cabinet, also headed by M. Briand, was due to a desire to place the conduct of the war under a small group of executives. The fourth Cabinet, headed by M. Ribot, was formed because its predecessor had not given sufficiently elaborate explanations of its war policies to Parliament. The fifth Cabinet will be established because of the growth of Socialism. Both in numbers and power there has been latterly in France a marked growth of Socialism. This is hardly reflected by the 166 Socialist members in the Chamber of Deputies. . . . The latest election to the Chamber took place in 1914, just before the outbreak of the war. At that time the moving force in the election was the reaction against the increased military effort following the conflict between Germany and France over Morocco; indeed, it may be said that the French Chamber was chosen for the distinct purpose of weakening the three-year military service law. But before the new Chamber could act the war began. The law which was to have been weakened proved the salvation of France. The Deputies chosen in 1914 had been well called the weakest that ever represented a great nation. After a while they recognized their weakness and became alarmed for fear that they might lose control of the war, and consequently their own political importance. . . . Stung by the indiscreet behavior of one or two members of his cabinet, M. Ribot resigned. President Poincaré requested him to form a new Ministry. When the names of the new Ministers were announced, the Socialist Party Council compelled the Socialist Ministers to withdraw, on the ground that the new Ministry did not offer sufficient guaranty for a truly democratic policy. When the new Ministers assembled without their Socialist members, Professor Painlevé, Minister of War, announced that he would not continue in office with no Socialist representation in the Cabinet. Hence a second Ribot resignation, and an invitation from the President to M. Painlevé to form a cabinet."—*French cabinet crisis (Outlook, Sept. 10, 1917, pp. 77-78).*—Premier Painlevé became also minister of war, and M. Ribot, minister of foreign affairs. No Socialists were included in the cabinet, in spite of Painlevé's efforts at conciliation, and so the government had a very short and very stormy existence.

Defeat came on November 13, the Chamber being dissatisfied with the treatment of the question of a supreme army command, and also with the laxity of the administration in dealing with alleged pro-German propaganda. "In November, 1917, on the very morrow of the Italian and Russian *débâcles*, the Cabinet of the well-intentioned but none too vigorous Premier Painlevé was overthrown. The hour called for a Committee of Public Safety without a guillotine; for a Danton without the September massacre. President Poincaré called as Prime Minister Georges Clemenceau, one of the most familiar figures in France. He was seventy-eight years old; one-time Premier already; a master debater; a highly influential figure in the Chambers; but known hitherto not so much as a constructive leader as a merciless, destructive critic, 'independent in his radicalism, and following no leader but his own principles.' As an editor he had been even more noteworthy than as a parliamentarian. In his *Aurore* had been published the famous 'I accuse' of Zola in the Dreyfus case. Under his strokes ministry after ministry had fallen. 'The Tiger,' contemporaries called him, alike in hatred and admiration. In the days of peace his qualities might sometimes have been questionable: in times of war they were as indispensable as powder and cannon."—W. S. Davis, *History of France*, p. 502.

—"Throughout the terrible period from November, 1917, when for the second time in his long political career he took office as Premier of the French Republic, Georges Clemenceau has borne the full burden of political responsibility in his war-worn and devastated country. . . . When he became President of Council and Minister of War the prospect of anything approaching to complete success seemed remote indeed. It was a thankless post he assumed and neither friends nor enemies believed at first that physically, mentally or politically could he bear the strain, and overcome the intrigues which were at once set on foot against him. But those who had the advantage of knowing Clemenceau well took a much more hopeful view of his chances of remaining Prime Minister until the close of the war. His mind as well as his body has been in strict training all his life. The one is as alert and as vigorous as the other. In the course of his stirring career his lightness of heart and gayety of spirit, his power of taking the most discouraging events as part of the day's work have carried him triumphantly through many a difficulty. . . . For below his exterior vigor and his brilliancy of conversation he possesses the most relentless determination that ever inspired a human being. Moreover a Frenchman may be witty and light-hearted and very wise at the same time. . . . '*Utrinque paratus*' has been the watchword of this indefatigable and undaunted political warrior throughout. It is well to recall also that he has invariably told his country the full truth about the situation as it appeared to him at the time, alike in opposition and in office, as a deputy, as a Senator and as a journalist at large. Beginning his political career as the intimate friend and almost pupil of the out-and-out Radical Republican, Etienne Arago, a sympathizer with the nobler men of the Commune, whom he endeavored to save from the ruthless vengeance of the reactionaries headed by Thiers, he had previously voted at Bordeaux in the minority of genuine Republicans who were in favor of continuing the war against Germany when all but enthusiastic patriots held that further resistance was hopeless. Many a time of late those events of *l'Année Terrible* must have come

back to his mind during these still more terrible four years. His attitude now is but the continuation and fulfillment of the policy he advocated then. Thereupon, five years devoted to service on the Municipal Council of Paris and to gratuitous ministrations as a doctor to the poor of one of the poorest districts of the French metropolis: a continuous endeavor to realize in some degree, by political action, the practical ends for which the Communards had so unfortunately and injudiciously striven. Then political work again on the floor of the Assembly at one of the most stirring periods of French history: supporting Gambetta vigorously in his fight as the head of the Republican Party against the dangerous reactionism of the Duc de Broglie and Marshal MacMahon, and opposing and denouncing the fiery orator whom he succeeded as the leader of the Left, when that statesman adopted trimming and opportunism as his political creed. The long fight against Colonization by Conquest, the exposure of shameless traffic in decorations, the support and overthrow of Boulanger, the Panama Scandal, the denunciation of the Alliance with despotic Russia, the advocacy of a close understanding with England: in each and all of these matters Clemenceau was well to the front. Then came the crash of exclusion from political life, due to the many enemies he had made by his inconvenient honesty and bitter tongue and pen. Once more, after the display of almost unequalled skill and courage as a journalist, exceptionally manifested in the championship of Dreyfus, a return to political life and unexpected acceptance of office. From first to last Clemenceau has been a stalwart Republican and a thoroughgoing democratic politician of the advanced Left, with strong tendencies to Socialism. . . . Socialism has never enjoyed the full advantage of his services, Clemenceau, as an avowed member of the Socialist Party, could not have played the glorious part for France as a whole which he has played since the beginning of the war. It was far more important, at such a desperate crisis, to carry with him the overwhelming majority of his countrymen, including even the reactionaries, than to act with a minority that has shown itself at variance with the real sentiments of the Republic, when France was fighting for her existence. . . . His deeds have been on a level with his words. Bolo and Duval shot; Caillaux in jail; Malvy exiled by decree of the Senate: the *Bonnet Rouge* gang tried and condemned; the wretched intrigue in Switzerland with the poor German tool, Austria, exposed and crushed: a new spirit breathed into all public affairs: the army reassured by his perpetual presence under fire and his unflinching resolve at the War Office that the splendid capacity and intrepidity of all ranks at the front shall not be sacrificed by treachery or cowardice at the rear: the Higher Command brimful of enthusiasm and confidence, due to the appointment of the military genius Foch as a generalissimo of the United Allied Armies and the reinstatement of General Mangin."—H. 1917-1918 (November-March).—German concentration in France.—"As soon as the United States entered the war her navy joined in the work. The naval superiority of the Allies was for the first time beyond all question, and the

addition of the American destroyers made it possible to protect 'convoys' of merchant ships also. The rate of destruction was now much diminished. Moreover, a new and terrible device was employed with increasing success: the depth bomb, which exploded beneath the water with fearful effect. Furthermore a vast *barrage* of mines was laid in the North Sea, hindering the exit of the German submarines; and in 1918 the British, in daring raids, succeeded in partly blocking the Belgian harbors out of which the submarines came. Altogether the submarines became less and less effective, and while they continued to be a serious menace until the end of the war, yet by the beginning of 1918 the Germans could no longer hope to win solely by them. . . . On the other hand, if they could strike on the west front before American aid arrived, it might be that victory would still be theirs. This chance they resolved to take, and all through the winter of 1917-18 there was a constant movement of troops and guns from the east to the west. Russia was completely broken, and only such forces were left there as were needed to guard the conquests and get such supplies as that ruined land could furnish."—E. R. Turner, *Europe, 1789-1920*, pp. 567, 568.

1918.—Defeatism.—Caillaux, Humbert, Bolo Pasha, Malvy.—"France had her especial internal problem in the defeatist activities of her own people—activities which Clemenceau was prompt to bring into the open. 'I intend to purge France of traitors,' he had said, and he began to do so when, on January 13th, 1918, he caused the arrest of former Premier Caillaux on the charge of 'plotting against the external security of the State'—treason, in other words. He is accused of working for Germany in Africa in 1911, his reward being an arrangement by which he was enabled to make a fortune on the Bourse. Letters concerning this episode, though they were supposed to be love letters, were in the possession of Calmette of the *Figaro*, who was shot by Madame Caillaux in an effort to secure them, according to the present belief. The code necessary to decipher them was acquired by France during the war, and the disclosure pointed the other information known to be true about Caillaux. Madame Caillaux was found 'not guilty' just before the outbreak of the war. Her husband, who had been Minister of the Treasury, resigned during the trial, and, upon her exoneration, became Paymaster General of the army, a colonel in rank. But the Caillaux were not popular in Paris, and after being mobbed one day they determined upon a trip to South America. There Caillaux made the acquaintance of Count Minotto, an employee of an American bank, who helped him with some clerical work on a report, [which] . . . Luxbourg, the German *charge d'affaires* in Argentina, . . . passed . . . on to Count Bernstorff in Washington, who, in turn, sent the information to Berlin. . . . Baron von Lancken, Chief of the German Political Department in Belgium in 1916, tried through various intermediaries to reach Caillaux with proposals for the stopping of the war, clearly believing that Caillaux would work in the interests of Germany. During a trip to Italy Caillaux stayed

for a time in Florence, and there left a strong box in which were found, later on, . . . documents that showed negotiations with German financial agents. So open was Caillaux in his conversations while in Italy that various allied representatives sent home warnings against him. . . . During a secret session of the Budget Commission of the Reichstag, Alsatian members being present, Caillaux was mentioned as a friend of Germany. During 1915 and 1916 there was broached throughout France, but especially in Paris, propaganda for a peace that would serve well Germany's purposes, but which could not fail to be dishonorable for France. The *Paris Journal* and the *Bonnet Rouge* were especially involved in the underhand campaign. Investigation proved that a senator, Humbert by name, owner of the *Journal*, had sold it for a handsome sum whose source was traced across the Rhine. The financial intermediary, who made a good commission for himself, was Lenoir, executed in October, 1919. He was the third to be executed, his predecessors having been Bolo Pasha, an adventurer, and one Duval, both directors of the *Bonnet Rouge*. Malvy, who held the Interior Portfolio in 1914, was yet another non-patriot, but the master spirit was Caillaux."—V. Duruy, *History of France*, pp. 741-742.—See also BOLOISM.—"As to the party which called itself Radical-Socialist—a party midway between the old Republican party of Gambetta, Jules Ferry, and Waldeck-Rousseau, and the Socialist party whose prophet was Karl Marx—it has been mortally wounded by the fall of its two principal leaders, M. Malvy and M. Caillaux. It was M. Caillaux who, obliged to relinquish power after the assassination of Gaston Calmette by his wife, forced the appointment of M. Malvy as Minister of the Interior. . . . It would be grossly unjust to hold the Radical-Socialists responsible jointly with M. Malvy and M. Caillaux for the acts which brought about the condemnation of the former by the High Court of Justice. Nevertheless, M. Caillaux and M. Malvy were the leaders, and the party supported them until the end was near. If M. Caillaux has been abandoned by almost all of his old friends, M. Malvy, whose case was in any event different, still has his partisans. France is a direct and simple country, and the disaster which befell two such conspicuous leaders is a terrible blow to the prestige of the Radical-Socialistic party."—J. Reinach, *Political parties in France* (*Nation*, Dec. 14, 1918).

1918 (June - November).—Confident attitude of the French people.—French Socialist attempt to discredit the Clemenceau ministry.—Clemenceau's speech before the Assembly.—Vote of confidence.—Untiring labors of the premier to win the war.—“When the enemy was arrayed in overwhelming numbers close to Amiens and within a few miles of Calais, when the German War Lords were decreeing the permanent subjugation of the territories they occupied in the West and in the East, when the long-range guns were bombarding the capital and the removal of the seat of government to the provinces was again being considered, the great French nation felt more confident of its future than at any moment since the victories won around Verdun. To every question Clemenceau's answer invariably was, ‘Je fais la guerre. Je fais la guerre. Je fais la guerre.’ Those who doubted were convinced; those who were doubtful saw their aspirations realized; those who had never wavered cheered for victory right ahead. On June 6th, 1918, the French Socialist group in the Chamber of Deputies made another of those attacks upon the National Administration which, sad to say, have done so much to discredit the whole Socialist Party, and even the Socialist cause, throughout Europe and the world. Pacifism and Bolshevism together—that is to say, an unholy combination between anti-nationalism and anarchism, have indeed shaken the influence of democratic Socialism to its foundations, just at the time when a sound, sober and constructive Socialist policy, in harmony with the aspirations of the mass of the people in Allied country, might have led mankind peacefully along the road to the new period of national and international coöperation. The Socialist Deputies in the Chamber held Clemenceau's Ministry, which they had done their very utmost to discredit and weaken, directly responsible for the serious military reverses recently undergone by the French and Allied armies. They insisted, therefore, upon Clemenceau's appearance in the tribune. But when they had got him in front of them their great object evidently was not to let him speak. There this old statesman stood, exposed to interruptions which were in the worst of bad taste. At last he thought the opportunity for which his enemies clamored had come, and began to address the Assembly. But no sooner had he opened his mouth than he was forced to give way to M. Marcel Cachin. Only then was he enabled to get a hearing, and this is a summary of what he said:—‘I regret that, our country being in such great danger, a unanimous vote of confidence cannot be accorded to us. But, when all is said, the opposition of the Socialists does not in the least enfeeble the Government. For four long years our troops have held their own at the front with a line which was being steadily worn down. Now a huge body of German soldiers fresh from Russia and in good heart come forward to assail us. Some retreat was inevitable. From the moment when Russia thought that peace could be obtained by the simple expression of wishes to that end we all knew that, sooner or later, the enemy would be able to release a million of men to fall upon us. That meant that such a retirement as we have witnessed must of necessity follow. Our men have kept their line unbroken against odds of five to one. They have often gone sleepless for three days and even

four days in succession. But our great soldiers have had great leaders, and our army as a whole has proved itself to be greater than even we could expect. The duties we have to perform here are, in contrast to their heroism, tame and even petty. All we have to do is to keep cool and hold on. The Germans are nothing like so clever as they believe themselves to be. They have but a single device. They throw their entire weight into one general assault, and push their advantage to the utmost. True they have forced back our lines of defense. But final success is that alone which matters, and that success for us is certain. The Government you see before you took office with the firm resolve never to surrender. So long as we stand here our country will be defended to the last. Give way we never shall. Germany has once more staked her all on one great blow, thinking to cow us into abandoning the conflict. Her armies have tried this desperate game before. They tried it on the Marne, they tried it on the Yser, they tried it at Verdun, they tried it elsewhere. But they never have succeeded, and they never shall. Our Allies to-day are the leading nations of the world. They have one and all pledged themselves to fight on till victory is within our grasp. The men who have already fallen have not fallen in vain. By their death they have once more made French history a great and noble record. It is now for the living to finish the glorious work done by the dead.’ This great speech raised the overwhelming majority of the Assembly to the highest pitch of enthusiasm. Nearly all present felt that the destinies of France hung in the balance, and that any vote given which might tend to discourage the men at the front at such a time was a direct service rendered to the enemy whose bombs were even then falling in the heart of Paris. The vote of confidence in Clemenceau and his Ministry was carried by 377 votes to 110; and of these 110 more than a third were convinced shortly afterwards that the course they had then taken in order to preserve the unity of their forces as factionists was unworthy of their dignity as men. Then, too, when the tide turned and the German hordes, after fresh glorious battles of the Marne and of the Somme, were in headlong retreat, Clemenceau, unrelayed by victory as he was undiscouraged by defeat, repeated again: ‘Je fais la guerre. Je fais la guerre. Je fais la guerre.’ Not until the German armies were finally vanquished would the Republican statesman talk of making peace. On both sides of the Atlantic, therefore, as on both sides of the Channel, knowing Great Britain and the United States by personal experience and able to gauge the cold resolution of the one and the inexhaustible resources and determination of the other, speaking and writing English well, he is now, as he has been throughout this tremendous war, a tower of strength to the forces of democracy and a very present help to all who are resolved to break down German militarism for evermore. . . . No man of his time of life, perhaps no man of any age ever carried on continuously such exhausting toil, physical and mental, as that which this marvelous old statesman of seventy-seven undertook and carried through from November, 1917, to November, 1918. His astounding energy and power of work were like those of a most vigorous young man in the height of training. Starting for the front in a motor-car at four or five o'clock in the morning at least three times a week, he kept in touch with generals, officers and soldiers all along the lines to an extent that would have seemed incredible if it had not been actually done. Once at the front he walked about under fire as if he had come out for the pleasure of risking his life with the *poilus* who

were fighting for *la Patrie*. The Higher Command was in constant fear for him. But he knew what he was about. Valuable as his own life might be to the country, to court death was a higher duty than to take care of himself, if by this seeming indifference he made Frenchmen all along the trenches feel that he and they were one. He succeeded."—H. M. Hyndman, *Clemenceau, the man and his time*, pp. 329-332, 336-337.

1918 (November).—Closing operations of the World War.—Signing of the armistice at Senlis.—French attitude toward Alsace-Lorraine.—The Germans "were fighting the last of their battles. Steadily through the tangled thickets, the rocks, and the mazes of barbed wire of the Argonne, the new American army was striking the inferior German force, and though their losses were very heavy, they advanced steadily, capturing positions deemed impregnable hitherto, and presently getting the main railway line, the vital line of German communications, under the fire of their great guns. If this line were cut, a large part of the German army might be forced to surrender. To the north the British and their comrades, with as splendid dash as was ever seen during the war, broke at last all through the Hindenburg Line, with its wide trenches, its deep underground fortifications, its labyrinths of barbed wire, and its thousands of machine-gun emplacements. Here the courage of the British soldier was aided by the 'tank' or small moving fortresses, which the British had first used in the Somme offensive of 1916, and which at last solved the problem of breaking the system of entrenchments. Moreover, they now broke through in Belgium, and occupied the coast with its submarine bases. Then turning south they began to threaten the other great artery of German rail communications, the trunk line from Paris to Berlin, which goes through the valley of the Meuse, by Namur and Liège. If this were cut, and if the Americans cut the other line in the south, then the Germans might be forced to surrender on the field or else save themselves only by a flight like that of the Austrian armies. The German soldiers, so wonderful in the days of success, began to waver now, and disaffection and despair increased among the German people. They had been slowly starved by the blockade, and after staking all, they had lost. The men of the [German] navy, ordered to dash out for a last effort, mutinied. The end was at hand; the authorities asked for an armistice. When the conditions were announced, they were terrible enough: not only must the Germans at once evacuate France, Belgium, and their other conquests, but they must abandon Alsace-Lorraine, and withdraw behind the Rhine, leaving the bridgehead fortresses

to the Allies, and leaving their richest industrial district. They must surrender their fleet and their submarines, disband their army and give up most of their military equipment. It was evident at once that the acceptance of such terms would mean the end of the war. November 9th, the German Emperor abdicated his throne and fled to Holland. Two days later, November 11th, German emissaries signed the Armistice terms."—E. R. Turner, *Europe, 1789-1920*, pp. 572-573.—See also WORLD WAR: 1918: II. Western front: x; 1918: XI. End of the war: a; a, 6; a, 9; c; Miscellaneous auxiliary services: I. Armistices: I; 1, 1.—"After the conclusion of the armistice, the mind of France was naturally concentrated chiefly upon the two provinces now recovered from Germany. As early as November 13, the members of the Lower House of the Alsace-Lorraine Diet met at Strasbourg and constituted themselves into a National Assembly. They also appointed a provisional administration of the two provinces. The march of the French troops through Alsace-Lorraine to the Rhine was accompanied by every pageantry and formality which could assist in making it impressive and historic. And it was reported that the French armies were received with enthusiasm everywhere by the great majority of the population. General Pétain entered Metz at the head of his troops on November 10, and the formal entry of Marshal Foch into Strasbourg took place on November 25 (Pétain and Castelnau having entered two days earlier). On the 25th also, the famous Statue of Strasbourg, in the Place de la Concorde in Paris, was relieved of the mourning garb which it had worn for so long. The crape and faded wreaths were removed from the statue, and Paris gave herself up to celebrating this symbol of the reunion. . . . The political aspects of the recovery of Alsace-Lorraine must now be mentioned, though, of course, the final decisions upon the points raised could not be taken until the Peace Conference in the following year. The idea of taking a plebiscite of the population in order to ascertain their wishes in regard to their own destiny, was rejected on all hands in France after the victory of the Allies. It will be remembered that it was only among the Socialists that this plan had found favor even during the weary years of the war. It was therefore taken for granted not only in France but in the countries of France's Allies, that the provinces would be reunited forthwith to the French Republic. The chief difference of opinion which arose related to an entirely different matter. This was the fate, not of Alsace-Lorraine, but of the small though important section of German territory known as the Saar Valley. The Saar Valley was very rich in coal, and many leading French statesmen advocated that this district, in addition to Alsace-Lorraine, should be annexed to France. By the original terms of the armistice the valley had been treated as occupied German territory and not in the same category as Alsace-Lorraine, but before the end of the year it became apparent that the French Government themselves were desirous of annexing this district. It is worth noting here that the French frontiers extended somewhat further to the east before the great Revolution than they did between 1815 and 1870; but the Saar Valley as a whole had never at any time been French, save during the brief period of the Napoleonic Conquest."—*Annual Register*, 1918, pp. 177-178.—See also WORLD WAR: 1918: XI. End of the war: c; ALSACE-LORRAINE: 1919.

1918 (November).—Influence in Hungary. See HUNGARY: 1918 (November).

1918-1920.—Condition of France.—Casualties.—Devastation.—Cost of the war.—General fi-

financial condition.—Paris as a pre-war money center.—Present balance of trade.—The economic and financial position of France at the outbreak of the war in 1914 was relatively good. The Viviani ministry which came into power on June 30 of that year had obtained a vote of credit for 805,000,000 francs, and this loan was being collected when the war began. The general mobilization of August 2 stopped entirely all activity in industry, commerce and agriculture. Work was paralyzed over the whole country; the twenty youngest military classes were called up, railways were requisitioned, as also were draft animals and all kinds of vehicles necessary for concentrating and feeding the armies. A large number of factories deprived of labor closed their doors; standing crops were gathered in with difficulty; old men, women and children who remained at home did their best to replace the absent. But the gaps were too numerous to be filled, and the soil of France, though so fertile, gradually yielded less and less. The same circumstances were seen in the industrial world; French mining and metallurgical centers fell into enemy hands from the very first days of the war. Those *départements* which were the richest in coal, iron ore and furnaces were temporarily lost; factories were sacked and their machinery destroyed. Lastly, the requisition of merchant ships crippled the foreign trade of France, in addition to the misfortune of having railway transport stopped for military needs.—See also *WORLD WAR: 1914: XI. Political situation: b; Causes: Indirect: e.*—“Germany attacked France to dominate, mutilate, and ruin her. . . . Victory gave us back our frontiers and our security. But it left us impoverished to an extent unparalleled in history. . . . Of a population of 37,707,000—of which 9,420,000 were men between nineteen and fifty years—8,410,000, or eighty-nine and five-tenths per cent. of our potential effectives, had been called to the colours and for nearly five years withdrawn from productive labour. Of these 8,410,000 men called to the colours, 5,564,000, or sixty-six per cent. met either death or injury; 1,364,000 killed; 740,000 mutilated; 3,000,000 wounded; 400,000 prisoners. Nearly all of the latter returned from Germany ill and wasted, one man in ten tubercular for life. Compared to the total number of men called to the colours (8,410,000), the killed (1,364,000), represent sixteen per cent.; fifty-seven per cent. of all Frenchmen called to the colours between the ages of eighteen and thirty-two—the young generation which is the chief strength of a country—were killed. In order to grasp the full significance of these figures, apply them to the population of the United States. Had American losses been on the French scale, it would have meant the raising by America of about twenty-six and a half million soldiers, of whom four millions would have died. This decline in man power went hand in hand with a decline in financial power.”—A. Tardieu. *Truth about the treaty*, p. 376.—According to the calculations of Professor E. L. Bogart, made for the Carnegie Endowment for International Peace, the economic or monetary value of human lives lost by France during the war represented a sum of 4,800 million dollars.

“Lord Derby, Ambassador of Great Britain in Paris, addressing a meeting of his countrymen in Liverpool, in 1910, said: ‘Suppose England were deprived of Lancashire [which includes the port of Liverpool and the greatest cotton industrial center of the world] by an earthquake; then you will understand what the ruins of war and German destruction means to France.’ A few figures to illustrate this comparison which though striking, is probably an understatement:

Inhabitants driven from their homes	2,732,000
Lands destroyed by battle	3,800,000 Hect
Villages devastated	4,022
Houses completely or partly destroyed	594,616
Schools destroyed	6,454
Factories destroyed (completely or partly)	20,539
Live stock carried off	1,360,000 head
Railway lines of general and local interest destroyed	4,789 km.
Roads destroyed	53,398 km.
Canals destroyed	948 km.
Public works destroyed on roads and railroads	5,041

“A large part of this destruction, carried out in cold blood behind the battle lines, was so thorough as to render reconstruction a matter of utmost difficulty. . . . No trace of industry [is] left in . . . ten departments, the most prosperous in France. No trace of agricultural life either. Fruit trees cut down, barns blown up, death everywhere. Take at random the Canton of Ribecourt in the Oise. Of its eighteen communes eight saw one hundred per cent. of their houses utterly wiped out. The proportion runs from eighty to ninety-five per cent. in seven other communes and there are only three where it falls below eighty per cent. Of nine hundred communes in the Department of the Aisne, only nineteen are untouched by war. In many regions after the Armistice it was possible to drive thirty or forty miles without coming across a single house.”—*Ibid.*, pp. 377-378, 383-384.—The devastated area covers approximately 6,000 square miles, or, in other words, a territory greater than the thirteen original American states, with a pre-war population of more than 2,000,000 people. The government engineers have estimated the pre-war cost of the average building in this district at five thousand dollars, the total destruction of which amounts to more than \$6,000,000,000, and the total damage, including buildings, agriculture, industry, furniture and public works, has been estimated at 64,000,000,000 francs, or \$13,000,000,000. “Without exception, the late antagonists of Germany [France] were facing almost unbelievable financial conditions, seemingly impossible of solution without crushing their whole economic and industrial existence. In order to meet, to grapple with, and to remedy these conditions, they . . . have to resort to taxation methods that appear humanly out of the question to endure, to drastic readjustments of the entire fabric of their national life. Relief from this burdensome taxation [has] been promised from time to time by the leaders in the various countries. These promises in many instances were based upon false and exaggerated ideas of Germany’s capacity to pay. Further, one must realize the impaired and in many instances destroyed economic life of the Allied Powers—a depletion and destruction which made the ensuing burdens seem impossible.”—B. M. Baruch. *Making of the reparation and economic sections of the treaty*, p. 3.—“The net cost of the war—deducting all that Germany has to reimburse (pensions and allowances) and all that France would have spent had there been no war—amounts to 150,000 millions. The grand total is 210,000 millions paid out of our Treasury from 1914 to 1919. For example our artillery and aviation cost us 46,000 millions; the equipment of our troops, 30,000 millions; separation allowances, 10,000 millions; food supplies for the Armies, 18,000 millions; pay, 12,000 millions; ocean freight, 12,000 millions; loans to our Allies, 11,000 millions. As the taxes during the war

brought in only 34,000 millions. it is evident that 176,000 millions had to be found by other means for meeting the cost of the struggle. Deducting the 33,000 millions lent us by our Allies, this leaves a sum of 143,000 millions in taxes, a total of 177,000 millions in all. The national debt which, in 1914, amounted to 35,000 millions with no foreign debt, has risen to 176,000 internal debt, and 33,000 millions foreign debt (68,000 millions at the October, 1920, rate of exchange). The budget has risen from about 5,000 millions in 1914 to 22,000 millions. But this new burden coincides with an enormous decrease in our capital."—A. Tardieu, *Truth about the treaty*, p. 377.—On October 21, 1919, L. L. Klotz, minister of finance, presented figures showing that France would have to borrow four hundred million dollars a year in order to balance the budget. "So much for the ruin directly due to Germany. Heavy as it is, it is not the only burden borne by France as a result of the war. All our economic means have suffered. Not one of our resources is whole. Our railways, which for nearly five years carried all the Armies of the Allies, were worn out by the strain and showed in 1920 a deficit of 2,400 millions. Our merchant marine, which amounted to three million tons before the war, lost a million tons by submarine warfare and they could not be replaced as all through the war our naval yards were busy producing artillery for all our Allies. Two-thirds of our investment in foreign countries, which represented 37,000 millions in 1914, became unproductive. Our exports, less by 1,500 millions in 1914 than our imports, show a deficit of 21,000 millions in 1919. The pound sterling in 1920 has maintained its up level at about fifty francs and the dollar at about fifteen. France, at the very moment when the great field of reconstruction opened before her, was in the situation of a wounded man who has lost so much blood that he can scarcely move his limbs and can scarcely raise himself."—*Ibid.*, p. 384.—For many years before the war Paris had been the ready-money center of the world; in no other capital was there so much fluid cash available at such short notice and low rates. Far-seeing economists had long contended against the enormous export of French capital to needy countries and had pointed out the dangers of this system of investment in the event of war. Others, again, defended the system, as, for instance, Caillaux, several times minister of finance, in a speech delivered at Lille on January 9, 1911: "There has been violent criticism of the system of exportation of French capital, without reflecting that a large portion of our economic and political force abroad is due to the fact that we are perhaps the biggest money-lenders in the whole world." Commenting upon this assertion, an exponent of the opposite school says: "M. Caillaux forgets, or neglects to mention, that while readiness and capacity to lend money to Foreign Powers increases the 'political force' and the diplomatic prestige of a State during the period prior to the conclusion of a loan, the lending State, once the operation is concluded, becomes, to a large degree, the slave of the borrowing nation, and is placed in a position of dependency that hampers its future diplomatic action. Moreover . . . 'Foreign loans are not productive; they do not serve to develop the wealth of the borrowing peoples, but to cover the costs of military preparations. . . . Bad for the borrowers, the operation is full of risks for the lenders. Two thousand millions of francs of Rumanian, Bulgarian and Servian securities are quoted on the Paris Bourse, the greater portion of which is in French hands. We have thus an immense amount of capital engaged in the most dangerous corner of

Europe, exposed to the chances of war, of domestic strife, of political revolutions and bad crops. . . . But it is, at the same time, obviously a legitimate ground for anxiety to those Frenchmen who, realizing that the counter-influences making for war are immensely preponderant, reflect with dismay what is to become of their exported savings when war breaks out, suddenly involving States, great or small, in which their capital is engaged."—W. M. Fullerton, *Problems of power*, p. 266.—It is estimated that, before the war, the thrifty French nation held Russian and Turkish securities to the amount of about thirty billions of francs, formerly producing about one and a half billion francs a year in interest. Since 1914 in the case of Turkey and 1917 in the case of Russia, these securities have been entirely worthless. The French government did, for a time, buy up the dishonored coupons from its people, but was unable to continue that course. France "before the war [was] a creditor nation, with no external debt at all, and we are now a debtor nation, we have not, during the war, played only the part of borrowers, but have helped some of our allies whose needs were overpressing, loaning them a total of 13 billion francs. A fact of great importance is that the balance of trade, though it has been up to now heavily unfavorable to us, as is natural, when we had so much to purchase owing to destruction, and our means of production were partly cramped, is improving with astonishing rapidity. During the first ten months of last year we exported to all countries, goods amounting to less than 8 billions; during the first ten months of the present year [1920] we more than doubled that number, exporting for nearly 19 billions. For the first time in October last this striking result was reached, that the balance of our trade was almost even, we importing for 2.5 billions, and exporting for 2.3 billions."—J. J. Jusserand, *Economic situation in France (Proceedings of the Academy of Political Science, Feb., 1921)*.—See also WORLD WAR: Miscellaneous auxiliary services: XI. Devastation: b; b, 3; XIV. Costs of war: a; b, 3; b, 4; COMMERCE: Commercial Age: 1914-1921.

Thiery, ed. *L'Economiste européen (London Times Annual Financial Review, Jan. 23, 1920)*.—*Speech of Lloyd George to German delegates at the London conference, Mar. 3, 1921*.

1918-1921.—Reconstruction.—Disbursements.—Production.—Re-population.—Statement by Jusserand, ambassador to the United States.—"Reconstruction of the devastated regions began without delay [as the French troops advanced] and has been carried on with method. To understand the extraordinary problem it presented, one must have seen and have felt it on the ground itself. Not a shelter, not an ordinary means of communication, not even a soil that could be cultivated—everything upheaved, pounded, ruined, killed, by four and a half years of destruction. The pioneer who comes into a new land can set to work to plow and to sow. The grain will grow. On the battlefields it is first necessary to remove projectiles, uproot wires, fill in shell-holes, level the ground. . . . The French peasant solved the problem instinctively, for he thought of himself and though he lacked labour, horses, everything in fact—even a roof over his head—he reaped, even in 1919, a harvest from the battlefield. Meanwhile with the energetic co-operation of the Government, mines and factories were repaired and in less than eighteen months after the

Armistice, the features of resurrected France begin to appear on the zone of death. This effort [at reconstruction] was carried on by the State with the aid of private assistance as soon as the ground was freed. The Government services were powerfully organized. On January 1, 1920, there were 195,000 on their payroll, including 15,000 technical employees and 180,000 labourers. Transportation by them within the devastated regions represents eleven million kilometric tons per month. The cost to October 1, 1920, amounting to about 20,500 millions, divided as follows:

Reparation in money and in kind for damages .....	11,715,000,000 frs.
Relief for refugees .....	1,015,000,000 "
Labour and transportation for State account .....	3,915,000,000 "
Restoration of railways, roads, canals, telegraph lines, reorganization of public services ..	3,400,000,000 "
Cost of administration .....	375,000,000 "
	<hr/>
	20,420,000,000 "

These 20,420 millions were supplied by the French Treasury alone. . . . It is . . . interesting to note that of the 20,420 millions spent up to October 1, 1920, by the French Government, salaries of officials have only amounted to 375 millions, or one and eight-tenths per cent. of the total. . . . Agriculture, which in money and in kind received 3,500,000,000 francs in cash, loans and advances, produced in 1910 five million hundredweights of cereals. In 1920, the cereal production of the devastated regions was 11,500,000 hundredweights, against 20,500,000 in 1913, or fifty-six per cent. of the pre-war crop. The 1920 crop was sufficient to assure the bread supply for the entire population of the ten devastated departments. . . . There were in 1914, in the regions affected by the war, 20,530 industrial plants of all kinds. The Ministry for the Liberated Regions made a thorough inquiry into 4,100 of these establishments selected from those employing in 1914 more than twenty workmen. This investigation gave very interesting results, the meaning of which should be made clear. The figures given below and the percentages relating thereto do not refer to the total number of factories ruined by the war, but only to one-fifth of them (4,100 out of 20,530). In other words, they are of value as a partial indication—not as a complete result. They express proportions which—while absolutely correct for the 4,100 establishments visited—may well be correct for the other 16,000, but which nevertheless as regards the latter may differ widely. Subject to this reservation which I ask the reader to bear in mind, here are the results of the investigation: Out of these 4,100 establishments, which employed over twenty people in 1914, 3,210 or seventy-six and six-tenths per cent. have resumed operation either entirely or in part as follows:

July 1, 1919 .....	706
October 1, 1919 .....	1,278
January 1, 1920 .....	1,806
April 1, 1920 .....	2,412
July 1, 1920 .....	3,004
August 1, 1920 .....	3,106
September 1, 1920 .....	3,210

These 4,100 establishments employed 768,678 workmen in 1914; on September 1, 1920, they employed 366,030, or forty-seven and seven-tenths per cent. . . . The population of the devastated region in October, 1920, was seventy-seven per cent. of the 1914

population. France has, by her own efforts, placed under cultivation sixty-eight per cent. of the arable lands in these regions. She has rebuilt all her most important railways and fifty-two per cent. of her roads. But she has only been able to restore to the farmers thirty-two per cent. of the live stock stolen by Germany. She has only been able to re-operate in factories to the extent of eighteen per cent. in full, twenty-six per cent. in part; this leaves fifty-four per cent. of her factories not yet in operation. Furthermore she has been able to replace destroyed houses by temporary constructions and repairs only to the extent of forty-nine per cent. Complete reconstruction of buildings has only been effected to an extent of ten and seven-tenths per cent. And this very low percentage expresses in striking fashion the limitations imposed by lack of money! . . . The France of the devastated regions and the other France behind the lines have put forward—alone and unaided—an immense effort of reconstruction. Farmers have tilled their fields and work has been started again without waiting to build a roof over their heads."—A. Tardieu, *Truth of the treaty*, pp. 385, 393-394, 397-398.—"We cannot pretend that, at the present time, after the destruction she has suffered, France has already healed all her wounds and regained her normal status and equilibrium; the wounds were too deep, so deep indeed that our enemies were pleased to hope that they were incurable and that, victorious though she was, France would not count in the future as she had in the past. . . . She is at work, peasants, laborers, teachers, bourgeois, all that have hands and brains are at work. Land is reclaimed by peasants who first think of rendering the ground fruitful again, and only afterwards of securing shelter for themselves and their families; hence the extraordinary appearance of most of the ravaged regions this summer, plentiful crops in many parts, dotted with villages and hamlets as thoroughly ruined most of them as on the day of the armistice. Rebuilding is expensive, labor scarce and costly. The problem needs the most earnest attention, for upon its solution, whatever be the personal disposition of the farmer, depends his health, welfare and efficiency. . . . Almost the totality of cultivable ground in the devastated regions has been cleared; half of it was, this summer [1920], under cultivation; most of the railroads, half the ordinary roads have been remade or are at least practicable; 77 per cent. of our industrial establishments are at work in whole or in part with 42 per cent. of their personnel of former days. The total number of factories in operation was 700 in July, 1919—in July, 1920, it was three thousand. The least favorable account concerns coal mines where the destruction was so complete, and only 60 per cent. is as yet under exploitation. . . . The expenses for reconstruction are, of course, not included in this total; Germany is bound to pay for them but our government cannot wait until she does to rebuild roads, railroads, canals and public edifices, or to advance to industries the necessary capital for setting to work again. Sixteen billions figure in the budget for reconstruction in 1921, and since Germany has not paid up to now, we have to borrow. . . . One of the items worthiest of notice in these, the most recent of our statistics, is food products; we imported almost one billion less than last year and exported almost one billion more. This will surely go on increasing both ways, with the continued reclaiming of the devastated regions and with the wider use, as fertilizers, throughout France, of potash from Alsace, phosphates from Tunis, and after a brief delay from the immense beds of phosphate recently discovered in Morocco.

These last will however be in full exploitation only when the railroad to Casablanca and the port in construction there are finished, a matter of two or three years. One of the heaviest items in our purchase from abroad in these latter times will thus gradually disappear."—J. J. 1919 (January-October).—Paris Peace Conference.—Making of reparation and economic sections of the Versailles treaty.—Signing of the treaty.—"The sittings of the Peace Conference, at which met representatives of the Allied and Associated Powers, were held in Paris at the Foreign Office on the Quai d'Orsay. The first meeting, on January 18th, 1919, was opened by President Poincaré. President Wilson nominated Premier Clémenceau for the chairmanship, Lloyd George and Vittoria Orlando, the Italian premier, seconding. Marquis Saionji and Baron Makino were Japan's representatives. In addition to M. Clémenceau, France was represented by Stephen Pichon, Foreign Minister, André Tardieu, diplomatist, journalist and Chief Censor, Léon Bourgeois, head of a Foreign Office Committee on the League of Nations, Louis Lucien Klotz, holder of the Finance portfolio, and Jules Cambon, General Secretary to the Foreign Office. The work of the Conference was facilitated by the turning of important questions over to committees, where they were sifted and prepared for presentation to the main body. Some of the matters discussed and embodied in the Treaty were war reparation to be made by the Germans, the disposition of the German warships, economic and financial problems, commercial treaties and tariffs, many territorial questions, the claims of Armenia, the independence of small nationalities, the rectifying of frontiers, the framing of an international labor code, the determination of Belgium's sovereignty, the demilitarizing of the Rhine territory, and, among the military terms, the forbidding of Germany's use of airplanes, dirigibles, and sub-

marines, the dismantling of Heligoland and Kiel, and the regulation of her manufacture of war material."—V. Duruy, *History of France, pp. 751-752*.—"The Allied leaders had agreed to a peace upon the basis of President Wilson's address of January 8, 1918 (containing the Fourteen Points) and the principles of settlement enunciated in his subsequent addresses. These principles had been formulated not in the interest of Germany, but to promote the real interest of the Allies themselves and to advance the cause of world peace and future security. Nevertheless, at an election held after the armistice and agreement as to the basic terms of peace, the English people, by an overwhelming majority, returned to power their Prime Minister on the basis of an increase in the severity of these terms of the peace, especially those of reparation. The French position, as evidenced by the expressions of the press of all political parties and by the speeches of the Deputies, showed an equally exacting attitude as to reparations. The apparently unanimous sentiment of the French people was perhaps typified in the placards which, during the days of the Peace Conference, covered the walls of Paris and of other cities, proclaiming, *Que L'Allemagne paye d'abord (Let Germany pay first)*. The French Government, in fact found it impossible during the months following the armistice to secure the adoption of any immediate taxation measures by the Chamber of Deputies. This body very justly insisted that the burdens of the war should in the first instance be assumed by Germany. . . . The French argument in favor of the inclusion of war costs was based on the terms of the signed armistice agreement of November 11, 1918. This agreement contained the following clause:

"Nineteen.—With the reservation that any future claims and demands of the Allies and the United States of America remain unaffected, the following financial conditions are required: Reparation for damage done. . . .

"Fortified by . . . vigorous support from the President, the American delegates, in informal conference, were able shortly to secure the acquiescence of Mr. Lloyd George, Mr. Clemenceau, and Mr. Orlando in the fundamental principle originally enunciated by the American delegation. This was that Germany's reparation obligations were to be determined in accordance with a fair construction of the Allies' pre-armistice declaration and that such construction excluded imposing upon Germany the 'costs of the war,' but was limited to what may be called actual damage. There remained to be settled precisely what should be considered as damage as distinct from war costs. After considerable discussion and debate, the thirty-one categories of damage which had been reported by the Commission on Reparation were reduced to ten. . . . On these there was general agreement except as to pensions and separation allowances. The inclusion of these items was vigorously urged by all the Allies, particularly Great Britain and France. With the abandonment of general war costs, these items afforded the only remaining basis for a large financial compensation from Germany for the tremendous sacrifices in blood and treasure which had been made by the British Empire. The French were insistent in view of the demands of their people that Germany should pay and thus relieve this sorely tried people who have suffered more than the world probably will ever realize. Unless the French delegates were firmly convinced of Germany's ability to pay considerably in excess of a capital sum of \$15,000,000,000, it is difficult to understand their acceptance of the inclusion of pensions and separation allowances in the categories which Germany

had to pay. It was forcibly brought to their attention that probably Germany could not pay much more than a capital sum of \$15,000,000,000. Hence, if pensions and separation allowances were included in the bill *pari-passu* with the other categories, France would not receive so large an amount as if these items were left out. Without pensions and separation allowances, the bill against Germany was estimated to be approximately \$15,000,000,000, which it was generally thought she could pay. France would have received full payment for her devastated areas. With the inclusion of pensions and separation allowances without a priority for the devastated areas, France would have a larger bill to present, but would receive a less sum of money than if she had excluded these items. . . . Sooner or later, if the amount of Germany's indebtedness is fixed at about a capital sum of \$15,000,000,000, France must insist either upon a priority for her devastated areas or a larger percentage than her claims under the categories would entitle her to; otherwise she will lose out. There was a division among the American delegation which made it frankly hesitant between maintaining on the one hand its original strict and possibly legalistic construction of the pre-armistice declaration (which would have excluded pensions and separation allowances), and supporting on the other hand a liberal construction which would admit the right of compensation for damage to the homes and families behind the front as well as damage to the houses at the front. . . . The final argument that won the unanimous approval of what was known as the Big Four was a memorandum submitted by General Smuts. He, as is well known, was one of the most liberal and courageous men at the Peace Conference. . . . It thus having been decided to include pensions and separation allowances, the categories of damage for which Germany is held responsible were finally formulated. . . . Owing to generally decreased production, and in part to the destruction of the war, the world's coal situation was so acute that reparation in the form of coal deliveries was considered of great importance. Though Germany might pay in money or in manufactured goods, France feared that without assured deliveries of coal, she would find her furnaces idle, her workmen unemployed, and her industrial reconstruction delayed. This depended in great measure on the repair of the Lens coal fields, which had been destroyed with such a deliberation and thoroughness that five years will hardly suffice to restore them. The first coal demand upon Germany is thus for the delivery to France annually for ten years of an amount of coal equal to the difference between the current production and the pre-war production of the destroyed French mines. This amount is not to exceed 20,000,000 tons per annum for the first five years and 8,000,000 tons per annum for the succeeding five years. France, on her part, undertakes to exercise due diligence in repairing the mines. Germany herself has been given the opportunity to make proposals where by her own engineers will repair the mines as a credit on Germany's reparation account. As the mines are gradually restored to normal operations, the deliveries on this account will diminish and may cease entirely before the expiration of the contract. . . . As a second category of coal provisions, France and Belgium are given an option upon German coal up to the normal pre-war exports of Germany to those countries, and provision is made for Italy's necessities."—B. M. Baruch, *Making of the reparation and economic sections of the treaty*, pp. 4-5, 23, 26, 29, 32, 39-41.—"Throughout the Treaty was woven the League of Nations, a bond of union for the

arbitration and adjustment of inter-racial and international difficulties. Because the treaty which closed the Franco-Prussian War had been signed at Versailles, the same place, ever the same room in that palace, was chosen for the signing of the new treaty which made compensation to France for almost half a century of humiliation. The Allied and Associated delegates and the German envoys, signed the Treaty on June 28th. [Chamber of Deputies approved it on Oct. 2nd.] The French Senate ratified it on October 11th, and President Poincaré affixed his signature on October 13th, 1919."—V. Duruy, *History of France*, p. 752.—See also PARIS, CONFERENCE OF; Outline of work; VERSAILLES, TREATY OF; U. S. A.: 1918-1919.

1919 (May-November).—Electoral reform.—Adoption of proportional representation and the scrutin de liste.—Leon Bourgeois and the League of Nations.—"In 1910, the days of fighting being merged in the days of the Armistice, a bill was passed [July 12] that introduced a modified form of proportional representation and brought back the *scrutin de liste* which had not been employed since 1885 [and was abandoned altogether in 1880]. This law went into effect first in the election of November, 1910."—V. Duruy, *History of France*, pp. 712-713.—"The law worked unsatisfactorily in the 1919 elections, because it provided for the use of the proportional feature only when no candidate had received a majority. As a result, the defects of both systems survived, causing dissatisfaction not only among the Socialists and Radicals who lost most heavily by it, but among the conservative elements who were forced into a *bloc*, against their will, to prevent the victory of their more radical but better organized opponents. The commission of the chamber on universal suffrage has now voted to change the present law; and it is very likely that a complete system of proportional representation will be adopted. The idea of proportional representation in France, however, is being fast supplanted by that of professional representation, that is, the representation of interests and classes in government."—R. L. Buell, *Political and social reconstruction in France* (*American Political Science Review*, Feb., 1921).—See also SUFFRAGE, MANHOOD: France: 1875-1910.—Five days before the close of the long session of the war parliament, Leon Bourgeois, former premier and minister of foreign affairs, was appointed French representative at the Council of the League of Nations.

1919-1920.—Government measures regulating labor.—Compulsory arbitration. —“Throughout the course of these two years the General Confederation of Labor has deserted the conservatism of Léon Jouhaux, its secretary; and its radical elements have been successful in forcing upon it the policy of the general strike. Within the General Confederation of Labor, the railwaymen have apparently led this movement. . . . This movement culminated in the general strike attempted by the General Confederation of Labor, following the First of May (1920) celebration. At this time the railwaymen, the metal workers, the transport workers on subways, taxicabs, street cars, etc., the electricians, and the gas workers, were all called out. The strike was unsuccessful, largely because there was no economic issue involved, and because it was called to enforce purely political demands upon the government. Its failure was also insured by the energetic action of the Millerand government which decided to bring legal proceedings against the General Confederation of Labor with a view to its dissolution. The government charged that it had gone beyond the purpose of labor unions, as laid down in the organization law of 1884, which was ‘the study and defense of their economic interests.’ At the present writing, judicial action is being taken in an attempt to dissolve this labor body. Such a stroke on the part of the government is remarkably bold, for the General Confederation of Labor now has a membership of nearly 2,000,000. It is supported by the Unified Socialist party with a polling strength of 1,700,000. Despite the *bloc* formed against them, the Socialist vote increased from 1,400,000 in 1914 to 1,700,000 in 1919. Their seats, however, were reduced from 101 to 68. This naturally increased the enmity of the Socialist party for the present régime, and strengthened the belief that in force alone—and not through the ballot—lay the one means of inaugurating the Socialist state. The increased radicalism of the Socialist party was illustrated in the Strasbourg congress, held in February, 1920. Here the party took a step which at Easter, 1919, it had proclaimed too ‘advanced;’ it withdrew from the Second International and resolved to enter negotiations with the Third International of Moscow, a thoroughly bolshevist organization. . . . The attempted dissolution of the labor confederation was the first move of the Millerand government to enforce the supremacy of law. The second was the introduction of a bill ‘for the peaceful settlement of industrial disputes,’ by M. Jourdain, minister of labor. This bill, submitted to the Chamber of Deputies in the spring of 1920, provides for conciliation and for compulsory arbitration in a large number of industries in which the public welfare is vitally involved. According to the terms of this bill, if a dispute arises in an industrial, commercial or agricultural establishment employing more than twenty men, a delegation of the workers involved must discuss the matters under dispute with the employer or his representative. . . . If such a dispute cannot be settled by the above method, it must be referred to conciliation. The conciliator may be jointly selected by the two

parties, or two conciliators may be chosen, one by each side. If no agreement as to the choice can be reached, the dispute must be referred to the conciliation committee of the trade concerned or to the local justice of the peace. . . . If an agreement cannot be reached, the parties are advised to appeal to arbitration. . . . If both parties, in the event of the failure of conciliation, decide to resort to arbitration, each nominates one or more arbitrators. If they cannot agree, they themselves choose an additional arbitrator. Any cessation of work during arbitration is prohibited. Compulsory arbitration with the equal prohibition of any ‘collective cessation of work’ while the decision is being arrived at, is prescribed for the following industries of an essentially public nature, and the stoppage of which would endanger the life and the health of the community: (a) railroads, street car lines, and other means of transportations on land or sea; (b) gas and electricity works; (c) coal mines, water, lighting and power plants; (d) hospitals; (e) in towns of over 25,000 inhabitants—funeral undertakers, garbage collectors, etc. If a strike occurs illegally in any of these plants for which compulsory arbitration is imposed, the government may take over the plant and personnel, and take whatever means it wishes to ensure the operation of the public services. . . . In the spring and summer of 1919, practically all of the government employees’ associations, most of which were known as *amicales*, became syndicates and joined the central labor body. The Clemenceau government did nothing to stop this clearly illegal movement. But the Millerand government, in June, 1920, ordered the syndicates of government employees dissolved. . . . The Millerand government does not deny the right of association to functionaries; such a right is granted to them by the associations law of 1901; but it does deny them the right to form typical labor unions, bringing with them the strike and affiliation with the General Confederation of Labor. . . . The Millerand government toward this end introduced a far-reaching bill (June, 1920) governing the whole scope of the place of the government employee in public administration. This bill lays down the methods of employing and promoting government employees, which shall be by competition, examinations, and periods of probation. It declares that strikes are absolutely illegal in any of the public services. It provides that each public service is to have an administrative council, upon which government employees are to be represented. Grievances of employees may be brought to this council. It is also to serve as a body of promotion and of discipline. In fact, it is to give the government employee an actual part in the direction of the service to which he belongs. In order to unify the activities of these administrative councils, a superior administrative council is to be formed as a court of appeals.”—R. L. Buell (*American Political Science Review*, Feb., 1921, v. 15, pp. 34-39).—See also LABOR ORGANIZATION: 1918-1921.

1920 (January).—Election of President Deschanel.—Premier Millerand and the cabinet of economic interests.—Economic council of labor.—“Paul Deschanel, who succeeded him [Raimond Poincaré] in 1920, belongs to the same political party, represents the same ideal of national solidarity. For the seven years preceding his election he had served as president of the Chamber of Deputies, refusing more than once to assume the office of premier and to take part again in the sharp conflict of parties. That he received in the National Assembly 734 of the 889 votes cast indicates once more the decline of the Radical-Socialist party as well as the general conviction that the duties of the presidency require a man of broad sympathies and judicial temperament. To many Frenchmen it would have seemed more fitting to bestow the office upon the aged war premier, Georges Clemenceau; but the very qualities which enabled the Radical Socialist statesman to become the savior of France—his courage, his daring, his impetuous spirit—were unsuited to the rarefied atmosphere of the Elysée. . . . Alexandre Millerand, who succeeded Clemenceau as premier on January 20, 1920, broke away from traditional practice in distributing cabinet portfolios. He made no attempt to base the cabinet upon a coalition of groups. Only three of his colleagues could properly be styled professional politicians. Millerand appealed for support, not to the political coteries in Parliament, but the organized and articulate economic interests outside. Banking institutions were represented by Marsal, minister of finance, who was not even a member of Parliament; the federated chambers of commerce, by Isaac; the federated agricultural associations, by Ricard; and the new economic council, which includes not only artisans and public employes, but managers and engineers as well, by Coupat.”—E. M. Sait, *Government and politics of France*, pp. 66-67, 326.—“M. Millerand, who is no novice in politics, has found a solid basis for his government than the old political groups; and herein lies his originality. The characteristic feature of French society at the moment is the tendency toward professional, industrial, and financial combination and association. Union for common action among the great financiers of iron working and shipbuilding dates from before the war. Necessities of national defense stimulated such associations of capital, under government auspices, during the conflict. Numerous *consortia* took over the management and distribution of raw materials, metals, coal, food, and contracts. Capitalists formerly divided into fiercely antagonistic groups, have been compelled to get together; and by bringing these different organizations into conference it has been possible virtually to create a general federation of capitalists. Commerce meanwhile has been undergoing a similar evolution. Regional grouping of merchants has been the natural answer to the incompetence of the bureaucracy to deal with all the problems of national sustenance. . . . The development of new ideas in the labor organizations is perhaps the most significant of all the French trend away from the old parliamentarism. The General Federation of Labor, after its heavy vote last September [1919] against Bolshevism and in favor of ‘productionism,’ has changed the emphasis of its propaganda from such slogans as immediate revolution by general strike to that of constructive transformation of society, to syndicalistic communism by legal methods. No less revolutionary in its ideals than before, French labor

has initiated new tactics which have made immediate appeal abroad, especially to the anarchistic syndicalists of Catalonia. First of all, the technical experts, managers, superintendents, professors, engineers, architects, chemists, electricians, and all the salaried elements which from time immemorial have stood with capital against labor, have organized into vast federations of technicians and gone over to the General Federation of Labor. This has brought the whole mechanism of production and distribution within reach of conquest by the proletariat, conquest also by imperceptible steps and by peaceful means. The instrument of this new idea is the Economic Council of Labor, a congress which associates managers, engineers, inventors, workmen, and coöperatives, in the effort to find solutions for all the problems of national economic life; while the mass of labor, by all the means in control, stands ready to force the adoption of these solutions upon the bureaucracy. Those supporting the Economic Council believe that the present political state will eventually pass into the position of a mere bureau of registration, recording and approving the decrees of the virtual government made up of the active creative forces in the nation. The Economic Council held its first meeting on January 8. . . . [See also LABOR ORGANIZATION: 1920; Economic council of labor.] The Millerand ministry emphasizes the passing of parliamentarism and the rise to power of the economic unit in government. Such a reclassification of political elements will not necessarily diminish the struggle between capital and labor, nor need it lessen friction between groups of interests. But it should make the struggle clearer and more in the open.”—*Millerand and the politicians* (*Nation*, Apr. 10, 1920, pp. 457-458).—See also LABOR ORGANIZATION: 1918-1921.

1920 (September).—Millerand president.—Renewed relations with the Vatican.—By an accident in travelling President Deschanel had a narrow escape from death. He fell from a railway train, and it was rumored that he was mentally incapacitated from continuing the duties of his office. He resigned September 17 and retired to a sanitarium. The election of a successor resulted in Premier Millerand being chosen by an overwhelming majority over Gustave Delory. M. Georges Leygues, one of Millerand's lieutenants, was entrusted with the formation of a new ministry, the intention being, it was generally supposed, that the president himself should enlarge the scope of the customary activity attached to his office by taking a more influential part in government, instead of acting as a mere figurehead in the republic. Leygues had been a colleague of

the president in the Waldeck-Rousseau cabinet in 1890, and was not averse from entering into negotiations with the Vatican. "Since 1905 France has maintained no official diplomatic relations with the Vatican. The change which the government is now trying to bring about is caused partly by considerations of foreign policy. But it is also caused by the desire to bury the anti-clerical quarrel which since the formation of the famous *bloc* during the Dreyfus affair, has kept France divided into two bitterly hostile camps. The separation laws of 1905 and 1907, it appears, removed clericalism as a menace to republican institutions. Despite this fact, successive anti-clerical governments have borne an antagonistic attitude not only toward the pope but toward Catholicism in general, which has naturally embittered many Catholics who have been patriotic Frenchmen, and has also prevented them from having a share in the administration of the government. The Millerand government [had] decided to bring an end to such a situation, . . . pursuing the policy of pacification which men such as Raymond Poincaré and Aristide Briand have been long advocating. The government hopes that the resumption of diplomatic relations with the Vatican will not only reconcile domestic differences between Clericals and anti-Clericals, but that it will lead to a recognition by the Pope of the present separation régime. . . . Diametrically opposed to the projects of the Catholic Republicans, many Radical-Socialists have demanded the abolition of all private church schools, and the compulsory attendance of every child at a public school from which clerical and religious influences of every nature should be rigorously excluded. They have not been loud in this demand for they realize that a state monopoly of education is at this time impossible. This was the position taken by M. Briand at the Radical congress of Pau in 1913. . . . The congress voted a proposition which would place all the Catholic schools under strict government supervision. Despite the attacks of the Radicals, it is probable that 'liberty of education' will be maintained, and that the church school will continue to exist, subject to rigid government inspection."—R. L. Buell, *Political and social reconstruction in France* (*American Political Science Review*, Feb., 1921).—See also PAPACY: 1920.

1921 (January).—Overthrow of the Leygues ministry.—Briand premier.—Allied conference in Paris.—Break-up of General Federation of Labor.—The unpopular foreign policy of the Leygues ministry led to its downfall on January 12. The president entrusted M. Raoul Péret, president of the Chamber, with the formation of a new cabinet. Poincaré was offered the portfolio of finance and Briand that of foreign affairs. On Poincaré's insistence that he himself or M. Viviani take the foreign office, M. Péret gave up the task

and made way for Aristide Briand. The choice of the Chamber would probably have fallen upon ex-president Poincaré, but he had committed himself to a rigid enforcement of the Versailles Treaty against Germany—a policy fraught with possibilities of foreign complications, particularly a split with England. Briand succeeded in framing his cabinet on the 16th and on the 20th presented his policy before parliament. It included reduction of expenditure and the reorganization of the financial administration; remedial measures against unemployment and industrial depression; reduction of military forces without weakening France's striking power; the conclusion of a new treaty with the Turks; close friendship with Great Britain and firmness in dealing with Germany, and, finally, non-recognition of Soviet Russia. Briand's conciliatory attitude evoked the opposition of Poincaré and Tardieu, leaders of a faction that favored cutting loose from Great Britain and shaping French foreign policy by military measures. From January 24 to 29 an Allied conference on German reparations and disarmament sat in Paris, terminating in complete agreement among the statesmen present. The French "Unknown Soldier" was solemnly buried under the Arc de Triomphe on the 28th. On the 13th the Tribunal Correctionnel decreed the dissolution of the *Conseil Général de Travail* or General Federation of Labor, a body which had been responsible for calling a series of revolutionary strikes during the previous year.

1921 (February 19).—Franco-Polish alliance.—A defensive alliance was concluded between France and Poland, providing *inter alia* for mutual assistance in economic reconstruction.

1921 (March).—National debt.—Budget.—Finance and economics.—On August 1, 1914, the French national debt stood at 27 billion francs. By March 1, 1921, it had risen to 302 billion francs. "The ordinary budget for 1921 provided for a revenue of 22,609,492,095 francs. In addition, an extraordinary budget of 750,000,000 francs was voted for the administration of Alsace-Lorraine. To add to the financial anxieties of the government, the Algerian budget showed a deficit for the first time in a number of years. A national six per cent loan of four billion francs, launched on October 20 [1920], was oversubscribed. From the standpoint of agriculture, reconstruction of the devastated area proceeded rapidly; the slow progress toward industrial reconstruction caused considerable complaint."—*Political Science Quarterly*, Supplement, Sept., 1921, p. 75.—See also EUROPE: Modern: Far-reaching effects of the World War.

1921 (March).—Occupation by France, England and Belgium of Düsseldorf, Duisburg and Ruhrort.—When the German delegation attended the London Conference of Feb. 28, to hear the allied demands for reparations, with counter-proposals which in the opinion of the representatives of France, England and Belgium fell far short of fulfilling the Versailles Treaty even as modified at the Boulogne and Brussels conferences, and as re-making reparations agreements with the Germans was still found to be impossible, the Allies decided that the penalties of the Versailles Treaty must be applied at once. Instructions had already been given by Marshal Foch to General Degoutte, the commanding officer of the invading contingent. "The patriotic spirit of the French ran high and there was general rejoicing in Paris over the invasion order. The three German towns of Düsseldorf, Duisburg and Ruhrort were occupied according to plan by French, British and Belgian troops on March 8. The allied troops were already on the march the night before. The occupation was

effected quietly and no resistance was encountered. The French moved from the French zone in the south and the British and Belgians from the east. When dawn came the advance guards, led by tanks and machine-gun corps, moved over the Düsseldorf bridge. British and French planes flew over the city. All the principal squares and strategic points had been occupied by 7 A.M. The British were represented only by two squadrons of cavalry, as their forces had been depleted by the dispatch of three battalions to Upper Silesia. Ten thousand French and 5,000 Belgians were engaged in the movement. Duisburg and Ruhrort were not occupied till the afternoon. The first act of the allied authorities was to post up a proclamation to the people signed by General Degoutte, Commander-in-Chief of the allied forces, stating. . . . 'This occupation constitutes in no fashion a measure of hostility toward the population. Under the reserve of strict observance of orders which the military authorities will judge indispensable to promulgate, there will be no interference with the economic life of the region. The allied command intends to maintain in the territories newly occupied a régime of liberty and order in which the prosperity of the country can develop.' No demonstrations occurred, and the general attitude of the populace was one of apathy. The Belgians seized Hamborn, the coaling port of the Thyssen iron works, on March 9. Meanwhile the allied experts in Paris set to work to draw up the plans for the other two penalties prescribed—collection of part of the value of German goods sold to allied countries, and the establishment of control over German customs in the Rhine area."—*New York Times Current History, Apr., 1921.*—Furthermore, the Reparations Commission notified Germany that the sum of 132,000,000,000 gold marks had been ascertained to be due from Germany to the Allies for war damages. The Allies, led by France, threatened to occupy the whole of the Ruhr Valley, in case of German failure to assent and arrange a satisfactory mode of payment.

1922 (January).—Fall of the Briand ministry.—New cabinet.—Poincaré's policy.—"Aristide Briand resigned his office as Premier on Jan. 12, and Raymond Poincaré, former President of France, became the new Premier on Jan. 13. No recent event has caused more excitement in French political circles than the resignation of M. Briand, occurring as it did in the midst of uncompleted negotiations with Mr. Lloyd George at Cannes. . . . With considerable difficulty [Poincaré] formed on Jan. 15, a Cabinet made up wholly of members of the Right. Its personnel was as follows: Raymond Poincaré—President of the Council and Minister of Foreign Affairs. Louis Barthou—Vice

Premier and Minister of Justice for France and Alsace-Lorraine. André Maginot—Minister of War and Pensions. M. Raiberti—Minister of Marine. Count Charles de Lasteyrie—Minister of Finance. Maurice Maunoury—Minister of the Interior. Léon Berard—Minister of Education. Yves le Trocquer—Minister of Public Works. Henry Chéron—Minister of Agriculture. Albert Sarraut—Minister of the Colonies. M. Reibel—Minister of the Liberated Regions. M. Peyronnet—Minister of Labor. Lucien Diot—Minister of Commerce. Paul Strauss—Minister of Health."—*New York Times Current History, Feb., 1922, p. 867.*—M. Poincaré declared himself in favor of the strict enforcement of the Versailles Treaty, and the occupation of the Rhine until Germany paid her reparations and restored the devastated provinces. He was in favor of the projected Anglo-French alliance, but stated that unless full guarantees respecting Russian and German demands were granted, France would not be represented at the Genoa conference. On January 10th, the Chamber of Deputies, by a vote of 472 to 107, gave their support for these policies.

1922 (January 6).—Represented at Cannes conference. See **CANNES CONFERENCE.**

1922 (April-July).—Problems at home and abroad.—Discussion with the United States regarding debt.—French policy toward Russia.—British opposition.—"The Parliament of France, which had adjourned on April 8, reassembled on May 23 to find itself faced with a heavy burden of responsibilities. German reparations, continuance of the debate on the military bill, no fewer than twelve interpellations on various matters of government policy, including the policy of France at the Economic conference at Genoa, filled the agenda to overflowing. The great Republican majority in Parliament, however, had the satisfaction of knowing that neither the Royalists nor the Radical Socialists had triumphed in the elections, which represented a decided victory for the Republican bloc in France. In its hands, above all, this newly assembled Congress held the power to reject or to approve the policy of M. Poincaré toward Germany and the allies of France. The German menace and the entente with England—these two problems continued to be the predominant issues. . . . The fateful date of May 31 passed, and a crisis with Germany was avoided by Germany's yielding to the French and allied demands. . . . One aspect of the whole reparation problem was France's indebtedness to the United States. On May 17 the French Government informed the American War Debt Funding Commission that it was ready to send a special mission to America to confer regarding the payment of this debt. Jean Parmentier, Administrator of the Ministry of Finance, was selected to head this mission, which was to be composed of several of the best French Treasury experts. The French war debt on May 15 amounted to \$3,340,857,503 of principal and \$430,000,000 of accumulated interest, as contrasted with Great Britain's debt of \$4,135,818,358 principal and \$611,000,000 interest. The American Government on June 1 notified the French Government that it was ready to receive the mission. Treasury officials at Washington expressed the view that France would make no immediate payments on account, and that the discussions would take the form of arranging terms of future payment when funds became available. Turning his attention to the proposed Russian conference at The Hague [see **HAGUE (ALLIED) CONFERENCE, 1922**], the Premier early in June sent to all the other powers invited to attend, including the United States, a carefully prepared note setting

forth the French policy toward Russia. Moscow, he said, must withdraw the memorandum of May 11 [see GENOA CONFERENCE], and must furthermore accept full recognition of Russia's pre-war debt. The Russians must pledge themselves to return foreign-owned property, must 'drop their counter-claim to damages totaling 50,000,000 gold rubles, and must abandon the demand for an international loan. When these conditions were fulfilled, and not before, France was ready to enter into new parleys with Russia. To this note the British replied on June 10 with a sharp attack. The British Government was resolutely opposed to the demand that the May 11 memorandum be withdrawn before the Hague committees met. No intimation that such a withdrawal would be demanded had been made at Genoa. As to the return of foreign-owned and nationalized property, Great Britain intimated in strong terms that this was a matter for Russia to decide for herself as a sovereign State. The British refused to join in any ultimatum to Moscow."—*New York Times Current History*, July, 1922, pp. 703-704.

1922 (May).—Represented at the Genoa conference. See GENOA CONFERENCE (1922).

1922 (July-December).—German reparations crisis.—Restoration of French liberated regions.—London conference on reparations.—British proposals rejected. See GERMANY: 1922 (July-August); (September-November); (December).

1922 (August-October).—Effect of moratorium granted to Germany.—Barthou appointed representative on reparations commission.—Seaman's strike.—"The moratorium granted to Germany by the Reparation Commission on Aug. 31, and the subsequent arrangements completed by Belgium and Germany for the payment of the reparation installments for the last five months of 1922, relieved political tension between France and the Berlin Government and the Stinnes-Lubersac agreement for reconstruction of the devastated areas of North France with German material—a special application of the Loucheur-Rathenau economic agreement—was generally hailed as a good omen for the bettering of relations between the two former adversaries. . . . The appointment of Louis Barthou, former Premier, and now Minister of Justice in the Poincaré Cabinet, to the position of French representative on the Reparation Commission was officially announced on Oct. 5. M. Barthou succeeded M. Dubois, and was in turn succeeded in the Cabinet by M. Coirat, a close personal friend of the Premier, whom he had served as Under Secretary of Foreign Affairs. M. Barthou, one of the most influential politicians in the present Parliament, is in complete accord with M. Poincaré's attitude toward the reparation problem. The first session of the commission over which he presided was devoted to a discussion of the cataclysmic state of German currency, with the mark standing at 3,000 to a dollar, and bankruptcy in sight, and the best method of compelling Germany to keep her pledge, in consideration of being granted a moratorium, to put her financial house in order. The seaman's strike which followed the Government's decree, Sept. 5, revoking the eight-hour day for seamen, held up thousands of travelers bound for North Africa and other Mediterranean ports and created an intolerable situation at Marseilles, with throngs of people waiting to embark, no ships in sight, and the plight of many daily growing worse. The strike began in protest against the Government's action, which, the authorities

pointed out, was not taken until other nations had refused to be bound by the eight-hour day, voted by the French Parliament on Aug. 2, 1919, and thereby placed France in an unfavorable position in respect to her merchant fleet. Thousands of tons of perishable goods were soon rotting on the docks. The situation underwent some improvement early in October, when the Government, through strikebreakers and crews of marines, succeeded in enabling a number of boats to clear."—*New York Times Current History*, Nov., 1922, pp. 332-334.

1875-1889.—Constitution of the third republic. The circumstances of the framing and adoption in 1875 of the constitution of the third republic will be found narrated under FRANCE: 1871-1876. The following is the text of the organic law of 1875, with the later amendatory and supplemental enactments. (*Note: Brackets indicate clauses that have been repealed.*)

1875 (FEBRUARY 25).—LAW ON THE ORGANIZATION OF THE PUBLIC POWERS.

Article 1. The legislative power is exercised by two assemblies: the Chamber of Deputies and the Senate. The Chamber of Deputies is elected by universal suffrage, under the conditions determined by the electoral law.<sup>1</sup> The composition, the method of election, and the powers of the Senate shall be regulated by a special law.<sup>2</sup>

Art. 2. The President of the Republic is chosen by an absolute majority of votes of the Senate and Chamber of Deputies united in National Assembly. He is elected for seven years. He is re-eligible.

Art. 3. The President of the Republic has the initiative of the laws, concurrently with the members of the two Chambers. He promulgates the laws when they have been voted by the two Chambers; he looks after and secures their execution. He has the right of pardon; amnesty can be granted by law only. He disposes of the armed force. He appoints to all civil and military positions. He presides over national festivals; envoys and ambassadors of foreign powers are accredited to him. Every act of the President of the Republic must be countersigned by a Minister.

Art. 4. As vacancies occur on and after the promulgation of the present law, the President of the Republic appoints, in the Council of Ministers, the Councilors of State in ordinary service. The Councilors of State thus chosen may be dismissed only by decree rendered in the Council of Ministers. [The Councilors of State chosen by virtue of the law of May 24, 1872, cannot, before the expiration of their powers, be dismissed except in the manner determined by that law. After the dissolution of the National Assembly, revocation may be pronounced only by resolution of the Senate.]<sup>3</sup>

Art. 5. The President of the Republic may, with the advice of the Senate, dissolve the Chamber of Deputies before the legal expiration of its term. [In that case the electoral colleges are summoned for new elections within the space of three months.]<sup>4</sup>

Art. 6. The Ministers are jointly and severally ("solidairement") responsible to the Chambers for the general policy of the government, and individually for their personal acts. The President of the Republic is responsible in case of high treason only.<sup>5</sup>

Art. 7. In case of vacancy by death or for any other reason, the two Chambers assembled together proceed at once to the election of a new President. In the meantime the Council of Ministers is invested with the executive power.<sup>1</sup>

Art. 8. The Chambers shall have the right by separate resolutions, taken in each by an absolute majority of votes, either upon their own initiative or upon the request of the President of the Republic, to declare a revision of the Constitutional Laws necessary. After each of the two Chambers shall have come to this decision, they shall meet together in National Assembly to proceed with the revision. The acts effecting revision of the constitutional laws, in whole or in part, must be by an absolute majority of the members composing the National Assembly. [During the continuance, however, of the powers conferred by the law of November 20, 1873, upon Marshal de MacMahon, this revision can take place only upon the initiative of the President of the Republic.]<sup>2</sup>

Art. 9. [The seat of the Executive Power and of the two Chambers is at Versailles.]<sup>3</sup>

1875 (FEBRUARY 24).—LAW ON THE ORGANIZATION OF THE SENATE.

Article 1. [The Senate consists of three hundred members: Two hundred and twenty-five elected by the departments and colonies, and seventy-five elected by the National Assembly.]<sup>1</sup>

Art. 2. [The departments of the Seine and Nord elect each five senators. The following departments elect four senators each: Seine-Inférieure, Pas de Calais, Gironde, Rhône, Finistère, Côtes-du-Nord. The following departments elect three senators each: Loire-Inférieure, Saône-et-Loire, Ille-et-Vilaine, Seine-et-Oise, Isère, Puy-de-Dôme, Somme, Bouches-du-Rhône, Aisne, Loire, Manche, Maine-et-Loire, Morbihan, Dordogne, Haute-Garonne, Charente-Inférieure, Calvados, Sarthe, Hérault, Basses-Pyrénées, Gard, Aveyron, Vendée, Orne, Oise, Vosges, Allier. All the other departments elect two senators each. The following elect one senator each: The Territory of Belfort, the three departments of Algeria, the four colonies of Martinique, Guadeloupe, Réunion and the French Indies.]<sup>2</sup>

Art. 3. [No one can be senator unless he is a French citizen, forty years of age at least, and enjoying civil and political rights.]<sup>3</sup>

Art. 4. [The senators of the departments and colonies are elected by an absolute majority and by "scrutin de liste," by a college meeting at the capital of the department or colony, and composed: (1) of the deputies; (2) of the general councilors; (3) of the arrondissement councilors; (4) of delegates elected, one by each municipal council, from among the voters of the commune. In the French Indies the members of the colonial council or of the local councils are substituted for the general councilors, arrondissement councilors and delegates from the municipal councils. They vote at the capital of each district.]<sup>4</sup>

Art. 5. [The senators chosen by the Assembly are elected by "scrutin de liste" and by an absolute majority of votes.]<sup>5</sup>

Art. 6. [The senators of the departments and colonies are elected for nine years and renewable by thirds every three years. At the beginning of

<sup>1</sup> See Arts. 3 and 11, law of July 16, 1875, *infra*.

<sup>2</sup> Amended by constitutional law of August 14, 1884, *infra*.

<sup>3</sup> Repealed by constitutional law of June 21, 1879, and see law of July 22, 1879, *infra*.

<sup>4</sup> By the constitutional law of August 14, 1884, it was provided that Articles 1 to 7 of this law should no longer have a constitutional character; and they were repealed by the law of December 9, 1884, *infra*.

<sup>1</sup> See laws of November 30, 1875, June 16, 1885, and February 13, 1880, *infra*.

<sup>2</sup> See laws of February 24, August 2, 1875, and December 9, 1884, *infra*.

<sup>3</sup> Ceased to have application after 1881.

<sup>4</sup> Amended by constitutional law of August 14, 1884, *infra*.

<sup>5</sup> See Art. 12, law of July 16, 1875, *infra*.

the first session the departments shall be divided into three series containing an equal number of senators each. It shall be determined by lot which series shall be renewed at the expiration of the first and second triennial periods.<sup>1</sup>

Art. 7. [The senators elected by the Assembly are irremovable. Vacancies by death, by resignation, or for any other reason, shall, within the space of two months, be filled by the Senate itself.]<sup>1</sup>

Art. 8. The Senate has, concurrently with the Chamber of Deputies, the initiative and passing of laws. Money bills, however, must first be introduced in and passed by the Chamber of Deputies.

Art. 9. The Senate may be constituted a Court of Justice to [try] either the President of the Republic or the Ministers, and to take cognizance of attacks made upon the safety of the State.

Art. 10. Elections to the Senate shall take place one month before the time fixed by the National Assembly for its own dissolution. The Senate shall organize and enter upon its duties the same day that the National Assembly is dissolved.

Art. 11. The present law shall be promulgated only after the passage of the law on the public powers.<sup>2</sup>

1875 (JULY 16).—LAW ON THE RELATIONS OF THE PUBLIC POWERS.

Article 1. The Senate and the Chamber of Deputies shall assemble each year the second Tuesday of January, unless convened earlier by the President of the Republic. The two Chambers continue in session at least five months each year. The sessions of each begin and end at the same time. [On the Sunday following the opening of the session, public prayers shall be addressed to God in the churches and temples, to invoke His aid in the labors of the Chambers.]<sup>3</sup>

Art. 2. The President of the Republic pronounces the closure of the session. He may convene the Chambers in extra session. He must convene them if, during the recess, an absolute majority of the members of each Chamber request it. The President may adjourn the Chambers. The adjournment, however, must not exceed one month, nor take place more than twice in the same session.

Art. 3. One month at least before the legal expiration of the powers of the President of the Republic, the Chambers must be called together in National Assembly and proceed to the election of a new President. In default of a summons, this meeting shall take place, as of right, the fifteenth day before the expiration of those powers. In case of the death or resignation of the President of the Republic, the two Chambers shall reassemble immediately, as of right. In case the Chamber of Deputies, in consequence of Article 5 of the law of February 25, 1875, is dissolved at the time when the presidency of the Republic becomes vacant, the electoral colleges shall be convened at once, and the Senate shall assemble as of right.

Art. 4. Every meeting of either of the two Chambers which shall be held at a time other than the common session of both is illegal and void, except the case provided for in the preceding article, and that when the Senate meets as a court of justice; and in this last case, judicial duties alone shall be performed.

Art. 5. The sittings of the Senate and of the Chamber of Deputies are public. Nevertheless each Chamber may meet in secret session, upon the re-

quest of a fixed number of its members, determined by the rules. It decides by absolute majority whether the sitting shall be resumed in public upon the same subject.

Art. 6. The President of the Republic communicates with the Chambers by messages, which are read from the tribune by a Minister. The Ministers have entrance to both Chambers, and must be heard when they request it. They may be represented, for the discussion of a specific bill, by commissioners designated by decree of the President of the Republic.

Art. 7. The President of the Republic promulgates the laws within the month following the transmission to the Government of the law finally passed. He must promulgate, with three days, laws whose promulgation shall have been declared urgent by an express vote in each Chamber. Within the time fixed for promulgation the President of the Republic may, by a message with reasons assigned, request of the two Chambers a new discussion, which cannot be refused.

Art. 8. The President of the Republic negotiates and ratifies treaties. He communicates them to the Chambers as soon as the interests and safety of the State permit. Treaties of peace, and of commerce, treaties which involve the finances of the State, those relating to the persons and property of French citizens in foreign countries, shall become definitive only after having been voted by the two Chambers. No cession, no exchange, no annexation of territory shall take place except by virtue of a law.

Art. 9. The President of the Republic cannot declare war except by the previous assent of the two Chambers.

Art. 10. Each Chamber is the judge of the eligibility of its members, and of the legality of their election; it alone can receive their resignation.

Art. 11. The bureau<sup>1</sup> of each Chamber is elected each year for the entire session, and for every extra session which may be held before the ordinary session of the following year. When the two Chambers meet together as a National Assembly, their bureau consists of the President, Vice-President and Secretaries of the Senate.

Art. 12. The President of the Republic may be impeached by the Chamber of Deputies only, and tried by the Senate only. The Ministers may be impeached by the Chamber of Deputies for offences committed in the performance of their duties. In this case they are tried by the Senate. The Senate may be constituted a court of Justice, by a decree of the President of the Republic, issued in the Council of Ministers, to try all persons accused of attempts upon the safety of the State. If procedure is begun by the ordinary courts, the decree convening the Senate may be issued any time before the granting of a discharge. A law shall determine the method of procedure for the accusation, trial and judgment.<sup>2</sup>

Art. 13. No member of either Chamber shall be prosecuted or held responsible on account of any opinions expressed or votes cast by him in the performance of his duties.

Art. 14. No member of either Chamber shall, during the session, be prosecuted or arrested for any offence or misdemeanor, except on the authority of the Chamber of which he is a member, unless he be caught in the very act. The detention or prosecution of a member of either Chamber is sus-

<sup>1</sup> The bureau of the Senate consists of a president, four vice-presidents, six secretaries and three questors; the bureau of the Chamber of Deputies is the same, except that there are eight secretaries instead of six.

<sup>2</sup> Fixed by law of April 10, 1889.

<sup>1</sup> See note 4, column 2, preceding page.

<sup>2</sup> *i. e.*, the law of February 25, 1875, *supra*.

<sup>3</sup> Repealed by law of August 14, 1884, *infra*.

pended for the session, and for its [the Chamber's] entire term, if it [the Chamber] demands it.

[*Note: Many texts introduce here the laws revising the foregoing, viz: the constitutional laws of June 21, 1870, and August 14, 1884, which are given below under those dates.*]

#### 1875 (AUGUST 2).—LAW ON THE ELECTION OF SENATORS.<sup>1</sup>

Article 1. A decree of the President of the Republic, issued at least six weeks in advance, determines the day for the elections to the Senate, and at the same time that for the choice of delegates of the municipal councils. There must be an interval of at least one month between the choice of delegates and the election of senators.

Art. 2. Each municipal council elects one delegate. The election is without debate, by secret ballot, and by an absolute majority of votes. After two ballots a plurality is sufficient, and in case of an equality of votes, the oldest is declared elected. If the Mayor is not a member of the municipal council, he presides, but shall not vote.<sup>2</sup> On the same day and in the same way an alternate is elected, who takes the place of the delegate in case of refusal or inability to serve.<sup>3</sup> The choice of the municipal councils shall not extend to a deputy, a general councilor, or an arrondissement councilor.<sup>3</sup> All communal electors, including the municipal councilors, are eligible without distinction.

Art. 3. In the communes where a municipal committee exists, the delegate and alternate shall be chosen by the old council.<sup>2</sup>

Art. 4. If the delegate was not present at the election, the Mayor shall see to it that he is notified within twenty-four hours. He must transmit to the Prefect, within five days, notice of his acceptance. In case of refusal or silence, he is replaced by the alternate, who is then placed upon the list as the delegate of the commune.<sup>4</sup>

Art. 5. The official report of the election of the delegate and alternate is transmitted at once to the Prefect; it states the acceptance or refusal of the delegates and alternates, as well as the protests raised, by one or more members of the municipal council, against the legality of the election. A copy of this official report is posted on the door of the town hall.<sup>6</sup>

Art. 6. A statement of the results of the election of delegates and alternates is drawn up within a week by the Prefect; this is given to all requesting it, and may be copied and published. Every elector may, at the bureaux of the prefecture, obtain information and a copy of the list, by communes, of the municipal councilors of the department, and, at the bureaux of the subprefectures a copy of the list, by communes, of the municipal councilors of the arrondissement.

Art. 7. Every communal elector may, within three days, address directly to the Prefect a protest against the legality of the election. If the Prefect deems the proceedings illegal, he may request that they be set aside.

Art. 8. Protests concerning the election of the delegate or alternate are decided, subject to an appeal to the Council of State, by the council of the prefecture, and, in the colonies, by the privy council. A delegate whose election is annulled because

he does not satisfy the conditions demanded by law, or on account of informality, is replaced by the alternate. In case the election of the delegate and alternate is rendered void, as by the refusal or death of both after their acceptance, new elections are held by the municipal council on a day fixed by an order of the Prefect.<sup>1</sup>

Art. 9. Eight days, at the latest, before the election of senators, the Prefect, and, in the colonies, the Director of the Interior, arranges the list of the electors of the department in alphabetical order. The list is communicated to all demanding it, and may be copied and published. No elector has more than one vote.

Art. 10. The deputies, the members of the general council, or of the arrondissement councils, who have been announced by the returning committees, but whose powers have not been verified, are enrolled upon the list of electors and are allowed to vote.

Art. 11. In each of the three departments of Algeria the electoral college is composed: (1) of the deputies; (2) of the members of the general councils, of French citizenship; (3) of delegates elected by the French members of each municipal council from among the communal electors of French citizenship.

Art. 12. The electoral college is presided over by the President of the civil tribunal of the capital of the department or colony. The President is assisted by the two oldest and two youngest electors present at the opening of the meeting. The bureau thus constituted chooses a secretary from among the electors. If the President is prevented from presiding his place is taken by the Vice-President of the civil tribunal and, in his absence, by the oldest justice.

Art. 13. The bureau divides the electors in alphabetical order into sections of at least one hundred voters each. It appoints the President and Inspectors of each of these sections. It decides all questions and contests which may arise in the course of the election, without, however, power to depart from the decisions rendered by virtue of Article 8 of the present law.

Art. 14. The first ballot begins at eight o'clock in the morning and closes at noon. The second begins at two o'clock and closes at four o'clock. The third, if it takes place, begins at six o'clock and closes at eight o'clock. The results of the ballots are determined by the bureau and announced the same day by the President of the electoral college.<sup>1</sup>

Art. 15. No one is elected senator on either of the first two ballots unless he receives: (1) an absolute majority of the votes cast; and (2) a number of votes equal to one-fourth of the total number of electors registered. On the third ballot a plurality is sufficient, and, in case of an equality of votes, the oldest is elected.

Art. 16. Political meetings for the nomination of senators may take place conformably to the rules laid down by the law of June 6, 1868<sup>2</sup> subject to the following conditions: I. These meetings may be held from the date of the election of delegates up to the day of the election of senators inclusive; II. They must be preceded by a declaration made, at latest, the evening before, by seven senatorial electors of the arrondissement, and indicating the place, the day and the hour the meeting is to take place, and the names, occupation and residence of the candidates to be presented; III. The municipal authorities will see to it that no one is admitted

<sup>1</sup> Articles 2 (paragraphs 1 and 2), 3, 4, 5, 8, 13, 16, 19, and 23, which follow, are amended by Art. 8, law of December 9, 1884, *infra*; articles 24 and 25 are repealed by the same law.

<sup>2</sup> Amended by Art. 8, law of December 9, 1884, *infra*.

<sup>3</sup> See Art. 4, law of February 24, 1875, *supra*.

<sup>4</sup> See Art. 8, law of December 9, 1884, *infra*.

<sup>6</sup> See Art. 8, law of December 9, 1884, *infra*.

<sup>1</sup> See Art. 8, law of December 9, 1884, *infra*.

<sup>2</sup> This law has been superseded by a law of June 30, 1881.

to the meeting unless he is a deputy, general councillor, arrondissement councillor, delegate or candidate. The delegate will present, as a means of identification, a certificate from the Mayor of his commune, the candidate a certificate from the official who shall have received the declaration mentioned in the preceding paragraph.<sup>1</sup>

Art. 17. Delegates who take part in all the ballotings shall, if they demand it, receive from the State, upon the presentation of their letter of summons, countersigned by the President of the electoral college, a remuneration for traveling expenses, which shall be paid to them upon the same basis and in the same manner as that given to jurors by Articles 35, 90 and following, of the decree of June 18, 1811. A public administrative regulation shall determine the method of fixing the amount and the method of payment of this remuneration.<sup>2</sup>

Art. 18. Every delegate who, without lawful reason, shall not take part in all the ballotings, or, having been hindered, shall not have given notice to the alternate in sufficient season, shall, upon the demand of the public prosecutor, be punished by a fine of fifty francs by the civil tribunal of the capital.<sup>3</sup> The same penalty may be imposed upon the alternate who, after having been notified by letter, telegram, or notice personally delivered in due season, shall not have taken part in the election.

Art. 19. Every attempt at corruption by the employment of means enumerated in Articles 177 and following, of the Penal Code, to influence the vote of an elector, or to keep him from voting, shall be punished by imprisonment of from three months to two years, and a fine of from fifty to five hundred francs, or by one of these two penalties alone. Article 463 of the Penal Code shall apply to the penalties imposed by the present article.<sup>4</sup>

Art. 20. It is incompatible for a senator to be: I. Councillor of State, Maître de Requêtes, Prefect or Sub-Prefect, except Prefect of the Seine and Prefect of Police; II. Member of the courts of appeal ("appel")<sup>5</sup> or of the tribunals of first instance, except public prosecutor at the court of Paris; III. General Paymaster, Special Receiver, official or employe of the central administration of the ministries.

Art. 21. The following shall not be elected by the department or the colony included wholly or partially in their jurisdiction, during the exercise of their duties and during the six months following the cessation of their duties by resignation, dismissal, change of residence, or other cause: I. The First Presidents, Presidents, and members of the courts of appeal ("appel"); II. The Presidents, Vice-Presidents, Examining Magistrates, and members of the tribunals of first instance; III. The Prefect of Police; Prefects and Sub-Prefects, and Prefectorial General Secretaries; the Governors, Directors of the Interior, and General Secretaries of the Colonies; IV. The Chief Arrondissement Engineers and Chief Arrondissement Road-Surveyors; V. The School Rectors and Inspectors; VI. The Primary School Inspectors; VII. The Archbishops, Bishops, and Vicars General; VIII. The officers of all grades

of the land and naval force; IX. The Division Commissaries and the Military Deputy Commissaries; X. The General Paymasters and Special Receivers of Money; XI. The Supervisors of Direct and Indirect Taxes, of Registration of Lands and of Posts; XII. The Guardians and Inspectors of Forests.

Art. 22. A senator elected in several departments, must let his choice be known to the President of the senate within ten days following the verification of the elections. If a choice is not made in this time, the question is settled by lot in open session. The vacancy shall be filled within one month and by the same electoral body. The same holds true in case of an invalidated election.

Art. 23. If by death or resignation the number of senators of a department is reduced by one-half, the vacancies shall be filled within the space of three months, unless the vacancies occur within the twelve months preceding the triennial elections. At the time fixed for the triennial elections, all vacancies shall be filled which have occurred, whatever their number and date.<sup>1</sup>

Art. 24. [The election of senators chosen by the National Assembly takes place in public sitting, by "scrutin de liste," and by an absolute majority of votes, whatever the number of ballotings.]<sup>2</sup>

Art. 25. [When it is necessary to elect successors of senators chosen by virtue of Article 7 of the law of February 24, 1875, the Senate proceeds in the manner indicated in the preceding article.]<sup>3</sup>

Art. 26. Members of the Senate receive the same salary as members of the Chamber of Deputies.<sup>4</sup>

Art. 27. There are applicable to elections to the Senate all the provisions of the electoral law relating: I. to cases of unworthiness and incapacity; II. to offences, prosecutions, and penalties; III. to election proceedings, in all respects not contrary to the provisions of the present law.

#### Temporary provisions.

Art. 28. For the first election of members of the Senate, the law which shall determine the date of the dissolution of the National Assembly shall fix, without regard to the intervals established by Article 1, the date on which the municipal councils shall meet for the election of delegates and the day for the election of Senators. Before the meeting of the municipal councils, the National Assembly shall proceed to the election of those Senators whom it is to choose.

Art. 29. The provisions of Article 21, by which an interval of six months must elapse between the cessation of duties and election, shall not apply to officials, except Prefects and Sub-Prefects, whose duties shall have ceased either before the promulgation of the present law or within twenty days following.

#### 1875 (NOVEMBER 30).—LAW ON THE ELECTION OF DEPUTIES.<sup>5</sup>

Article 1. The deputies shall be chosen by the voters registered: I. upon the lists drawn up in accordance with the law of July 7, 1874; II. upon the supplementary list including those who have lived in the commune six months. Registration upon the supplementary list shall take place conformably to the laws and regulations now governing the political electoral lists, by the committees and according to the forms established by Articles

<sup>1</sup> Article 8, law of December 9, 1884, *infra*.

<sup>2</sup> Done by decree of December 26, 1875.

<sup>3</sup> Of the department.

<sup>4</sup> See Article 8, law of December 9, 1884, *infra*.

<sup>5</sup> France is divided into twenty-six judicial districts, in each of which there is a cour d'appel. There are similar courts in Algeria and the colonies. The Cour de Cassation is the supreme court of appeal for all France, Algeria and the colonies.—See also law of December 26, 1887, *infra*. By a law of November 16, 1897, the director and under-director of the Bank of France are intelligible as senators or deputies.

<sup>1</sup> Article 8, law of December 9, 1884, *infra*.

<sup>2</sup> Repealed by law of December 9, 1884, *infra*.

<sup>3</sup> Articles 24 and 25 repealed by law of December 9, 1884, *infra*.

<sup>4</sup> See Article 17, law of November 30, 1875, *infra*.

<sup>5</sup> See, *infra*, the laws of June 16, 1885, and February 13, 1889, and July 12, 1919, amending the electoral law.

1, 2 and 3 of the law of July 7, 1874. Appeals relating to the formation and revision of either list shall be carried directly before the Civil Chamber of the Court of Appeal ("Cassation"). The electoral lists drawn up March 31, 1875, shall serve until March 31, 1876.

Art. 2. The soldiers of all ranks and grades, of both the land and naval forces, shall not vote when they are with their regiment, at their post or on duty. Those who, on election day, are in private residence, in non-activity or in possession of a regular leave of absence, may vote in the commune on the lists of which they are duly registered. This last provision applies equally to officers on the unattached list or on the reserve list.

Art. 3. During the electoral period, circulars and platforms ("professions de foi") signed by the candidates, placards and manifestoes signed by one or more voters, may, after being deposited with the public prosecutor, be posted and distributed without previous authorization. The distribution of ballots is not subjected to this deposit.<sup>1</sup> Every public or municipal official is forbidden to distribute ballots, platforms and circulars of candidates. The provisions of Article 10 of the organic law of August 2, 1875, on the elections of Senators, shall apply to the elections of deputies.

Art. 4. Balloting shall continue one day only. The voting occurs at the chief place of the commune; each commune may nevertheless be divided, by order of the Prefect, into as many sections as may be demanded by local circumstances and the number of voters. The second ballot shall take place the second Sunday following the announcement of the first ballot, according to the provisions of Article 65, of the law of March 15, 1840.

Art. 5. The method of voting shall be according to the provisions of the organic and regulating decrees of February 2, 1852. The ballot is secret. The voting lists used at the elections in each section, signed by the President and Secretary, shall remain deposited for eight days at the Secretary's office at the town hall, where they shall be communicated to every voter requesting them.

Art. 6. Every voter is eligible, without any tax qualification, at the age of twenty-five years.<sup>2</sup>

Art. 7. No soldier or sailor forming part of the active forces of land or sea may, whatever his rank or position, be elected a member of the Chamber of Deputies. This provision applies to soldiers and sailors on the unattached list or in non-activity, but does not extend to officers of the second section of the list of the general staff, nor to those who, kept in the first section for having been commander-in-chief in the field, have ceased to be employed actively, nor to officers who, having privileges acquired on the retired list, are sent to or maintained at their homes while awaiting the settlement of their pension. The decision by which the officer shall have been permitted to establish his rights on the retired list shall become, in this case, irrevocable. The rule laid down in the first paragraph of the present Article shall not apply to the reserve of the active army nor to the territorial army.

Art. 8. The exercise of public duties paid out of the treasury of the State is incompatible with the office of deputy.<sup>3</sup> Consequently every official

elected deputy shall be superseded in his duties if, within the eight days following the verification of powers, he has not signified that he does not accept the office of deputy. There are excepted from the preceding provisions the duties of Minister, Under Secretary of State, Ambassador, Minister Plenipotentiary, Prefect of the Seine, Prefect of Police, First President of the Court of Appeal ("Cassation,") First President of the Court of Accounts, First President of the Court of Appeal ("appel") of Paris, Attorney General at the Court of Appeal ("Cassation,") Attorney General at the Court of Accounts, Attorney General at the Court of Appeal of Paris, Archbishop and Bishop, Consistorial Presiding Pastor in consistorial districts whose capital has two or more pastors, Chief Rabbi of the Central consistory, Chief Rabbi of the Consistory of Paris.<sup>4</sup>

Art. 9. There are also excepted from the provisions of Article 8: I. titular professors of chairs which are filled by competition or upon the nomination of the bodies where the vacancy occurs; II. persons who have been charged with a temporary mission. All missions continuing more than six months cease to be temporary and are governed by Article 8 above.

Art. 10. The official preserves the rights which he has acquired to a retiring pension, and may, after the expiration of his term of office, be restored to active service. The civil official who, having had twenty years of service at the date of the acceptance of the office of deputy, shall be fifty years of age at the time of the expiration of this term of office, may establish his rights to an exceptional retiring pension. This pension shall be regulated according to the third Paragraph of Article 12 of the law of June 9, 1853. If the official is restored to active service after the expiration of his term of office, the provisions of Article 3, Paragraph 2, and Article 28 of the law of June 9, 1853, shall apply to him. In duties where the rank is distinct from the employment, the official, by the acceptance of the office of deputy, loses the employment and preserves the rank only.

Art. 11. Every deputy appointed or promoted to a salaried public position ceases to belong to the Chamber by the very fact of his acceptance; but he may be re-elected, if the office which he occupies is compatible with the office of deputy. Deputies who become Ministers or Under-Secretaries of State are not subjected to a re-election.

Art. 12. There shall not be elected by the arrondissement or the colony included wholly or partially in their jurisdiction, during the exercise of their duties or for six months following the expiration of their duties due to resignation, dismissal, change of residence, or any other cause: I. The First-Presidents, Presidents, and members of the Courts of Appeal ("appel"); II. The Presidents, Vice-Presidents, Titular Judges, Examining Magistrates, and members of the tribunals of first instance; III. The Prefect of Police; the Prefects and General Secretaries of the Prefectures; the Governors, Directors of the Interior, and General Secretaries of the Colonies; IV. The Chief Arrondissement Engineers and Chief Arrondissement Road-Surveyors; V. The School Rectors and Inspectors; VI. The Primary School Inspectors; VII. The Archbishops, Bishops, and Vicars General; VIII. The General Paymasters and Special Receivers of Money; IX. The Supervisors of Direct and Indirect Taxes, of Registration of Lands, and of Posts; X. The Guardians and Inspectors of For-

<sup>1</sup> See, however, a law of December 20, 1878, by which deposit is made necessary.

<sup>2</sup> By law of July 20, 1895, no one is eligible as member unless he has complied with the law regarding military service. This was further modified by the law of March 21, 1905.

<sup>3</sup> By law of November 16, 1897, the director and under-director of the Bank of France are ineligible as deputies or senators.

<sup>4</sup> These religious officials were made ineligible for eight years by the law of Dec. 9, 1905.

ests. The Sub-Prefects shall not be elected in any of the arrondissements of the department where they perform their duties.<sup>1</sup>

Art. 13. Every imperative mandate is null and void.

Art. 14. Members of the Chamber of Deputies are elected by single districts. Each administrative arrondissement shall elect one deputy. Arrondissements having more than 100,000 inhabitants shall elect one deputy in addition for every additional 100,000 inhabitants or fraction of 100,000. Arrondissements of this kind shall be divided into districts whose boundaries shall be established by law and may be changed only by law.<sup>2</sup>

Art. 15. Deputies shall be chosen for four years. The Chamber is renewable integrally.

Art. 16. In case of vacancy by death, resignation, or otherwise, a new election shall be held within three months of the date when the vacancy occurred. In case of option,<sup>3</sup> the vacancy shall be filled within one month.

Art. 17. The deputies shall receive a salary. This salary is regulated by Articles 96 and 97 of the law of March 15, 1849, and by the provisions of the law of February 16, 1872.<sup>4</sup>

Art. 18. No one is elected on the first ballot unless he receives: (1) an absolute majority of the votes cast; (2) a number of votes equal to one-fourth of the number of voters registered. On the second ballot a plurality is sufficient. In case of an equality of votes, the oldest is declared elected.

Art. 19. Each department of Algeria elects one deputy.<sup>5</sup>

Art. 20. The voters living in Algeria in a place not yet made a commune, shall be registered on the electoral list of the nearest commune. When it is necessary to establish electoral districts, either for the purpose of grouping mixed communes in each of which the number of voters shall be insufficient, or to bring together voters living in places not formed into communes the decrees for fixing the seat of these districts shall be issued by the Governor-General, upon the report of the Prefect or of the General commanding the division.

Art. 21. The four colonies to which senators have been assigned by the law of February 24, 1875, on the organization of the Senate, shall choose one deputy each.<sup>2</sup>

Art. 22. Every violation of the prohibitive provisions of Article 3, Paragraph 3, of the present law shall be punished by a fine of from sixteen francs to three hundred francs. Nevertheless the criminal courts may apply Article 463 of the Penal Code. The provisions of Article 6 of the law of July 7, 1874, shall apply to the political electoral lists. The decree of January 20, 1871, and the laws of April 10, 1871, May 2, 1871, and February 18, 1873, are repealed. Paragraph 11 of Article 15 of the organic decree of February 2, 1852, is also repealed, in so far as it refers to the law of May 21, 1836, on lotteries, reserving, however, to the courts the right to apply to convicted persons Article 42 of the Penal Code. The provisions of the laws and decrees now in force, with which the present law does not conflict, shall continue to be applied.

Art. 23. The provision of Article 12 of the pres-

<sup>1</sup> Justices of the peace and councilors of the prefecture were made ineligible by law of March 30, 1902.

<sup>2</sup> See laws of June 16, 1885, Feb. 13, 1889, and July 12, 1919, *infra*.

<sup>3</sup> *i. e.*, when a deputy had been elected from two or more districts.

<sup>4</sup> Amended by law of November 23, 1906, fixing a salary of 15,000 francs.

<sup>5</sup> See Article 3, law of February 13, 1889, *infra*.

ent law by which an interval of six months must elapse between the expiration of duties and election, shall not apply to officials, except Prefects and Sub-Prefects, whose duties shall have ceased either before the promulgation of the present law or within the twenty days following it.

1879 (JUNE 21).—LAW REVISING ARTICLE 9 OF THE CONSTITUTIONAL LAW OF FEBRUARY 25, 1875.

Article 9 of the constitutional law of February 25, 1875, is repealed.

1870 (JULY 22).—LAW RELATING TO THE SEAT OF THE EXECUTIVE POWER AND OF THE CHAMBERS AT PARIS.

Article 1. The seat of the Executive Power and of the two Chambers is at Paris.

Art. 2. The Palace of the Luxembourg and the Palais-Bourbon are assigned, the first to the use of the Senate, the second to that of the Chamber of Deputies. Nevertheless each of the Chambers is authorized to choose, in the city of Paris, the palace which it wishes to occupy.

Art. 3. The various parts of the palace of Versailles now occupied by the Senate and Chamber of Deputies preserve their arrangements. Whenever, according to Articles 7 and 8 of the law of February 25, 1875, on the organization of the public powers, a meeting of the National Assembly takes place, it shall sit at Versailles, in the present hall of the Chamber of Deputies. Whenever, according to Article 9 of the law of February 24, 1875, on the organization of the Senate, and Article 12 of the constitutional law of July 16, 1875, on the relations of the public powers, the Senate shall be called upon to constitute itself a Court of Justice, it shall indicate the town and place where it proposes to sit.

Art. 4. The Senate and Chamber of Deputies will sit at Paris on and after November 3 next.

Art. 5. The Presidents of the Senate and Chamber of Deputies are charged with the duty of securing the external and internal safety of the Chambers over which they preside. To this end they have the right to call upon the armed force and every authority whose assistance they judge necessary. The demands may be addressed directly to all officers, commanders, or officials, who are bound to obey immediately, under the penalties established by the laws. The Presidents of the Senate and Chamber of Deputies may delegate to the questors or to one of them their right of demanding aid.

Art. 6. Petitions to either of the Chambers can be made and presented in writing only. It is forbidden to present them in person or at the bar.

Art. 7. Every violation of the preceding article, every provocation, by speeches uttered publicly, or by writings, or printed matter, posted or distributed, to a crowd upon the public ways, having for an object the discussion, drawing up, or carrying to the Chambers or either of them, of petitions, declarations, or addresses—whether or not any results follow such action—shall be punished by the penalties enumerated in Paragraph 1 of Article 5 of the law of June 7, 1848.

Art. 8. The preceding provisions do not diminish the force of the law of June 7, 1848, on riotous assemblies.

Art. 9. Article 463 of the Penal Code applies to the offences mentioned in the present law.

1884 (AUGUST 14).—LAW PARTIALLY REVISING THE CONSTITUTIONAL LAWS.

Article 1. Paragraph 2 of Article 5 of the constitutional law of February 25, 1875, on the Organ-

ization of the Public Powers, is amended as follows: "In that case the electoral colleges meet for new elections within two months, and the Chamber within the ten days following the close of the elections."

Art. 2. To Paragraph 3 of Article 8 of the same law of February 25, 1875, is added the following: "The Republican form of the Government cannot be made the subject of a proposed revision. Members of families that have reigned in France are ineligible to the presidency of the Republic."

Art. 3. Articles 1 to 7 of the constitutional law of February 24, 1875, on the Organization of the Senate, shall no longer have a constitutional character.<sup>1</sup>

Art. 4. Paragraph 3 of Article 1 of the constitutional law of July 16, 1875, on the Relation of the Public Powers, is repealed.

1884 (DECEMBER 9).—LAW AMENDING THE ORGANIC LAWS ON THE ORGANIZATION OF THE SENATE AND THE ELECTIONS OF SENATORS.

Article 1. The Senate consists of three hundred members, elected by the departments and the colonies. The present members, without any distinction between senators elected by the National Assembly or the Senate and those elected by the departments and colonies, maintain their term of office during the time for which they have been chosen.

Art. 2. The department of the Seine elects ten senators. The department of the Nord elects eight senators. The following departments elect five senators each: Côtes-du-Nord, Finistère, Gironde, Ile-et-Vilaîne, Loire, Loire-Inférieure, Pas-de-Calais, Rhône, Saône-et-Loire, Seine-Inférieure. The following departments elect four senators each: Aisne, Bouches-du-Rhône, Charente-Inférieure, Dordogne, Haute-Garonne, Isère, Maine-et-Loire, Manche, Morbihan, Puy-de-Dôme, Seine-et-Oise, Somme. The following departments elect three senators each: Ain, Allier, Ardèche, Ardennes, Aube, Aude, Aveyron, Calvados, Charente, Cher, Corrèze, Corse, Côte-d'Or, Creuse, Doubs, Drôme, Eure, Eure-et-Loir, Gard, Gers, Hérault, Indre, Indre-et-Loire, Jura, Landes, Loir-et-Cher, Haute-Loire, Loiret, Lot, Lot-et-Garonne, Marne, Haute-Marne, Mayenne, Meurthe-et-Moselle, Meuse, Nièvre, Oise, Orne, Basses-Pyrénées, Haute-Saône, Sarthe, Savoie, Haute-Savoie, Seine-et-Marne, Deux-Sèvres, Tarn, Var, Vendée, Vienne, Haute-Vienne, Vosges, Yonne. The following departments elect two senators each: Basses-Alpes, Hautes-Alpes, Alpes-Maritimes, Ariège, Cantal, Lozère, Hautes-Pyrénées, Pyrénées-Orientales, Tarn-et-Garonne, Vaucluse. The following elect one senator each: the Territory of Belfort, the three departments of Algeria, the four colonies: Martinique, Guadeloupe, Réunion and French Indies.

Art. 3. In the departments where the number of senators is increased by the present law, the increase shall take effect as vacancies occur among the life senators. To this end, within eight days after the vacancy occurs, it shall be determined by lot what department shall be called upon to elect a senator. This election shall take place within three months of the determination by lot. Furthermore, if the vacancy occurs within six months preceding the triennial election, the vacancy shall be filled at that election. The term of office in this case shall expire at the same time as that of the other senators belonging to the same department.

Art. 4. No one shall be a senator unless he is a French citizen, forty years of age, at least, and enjoying civil and political rights. Members of families that have reigned in France are ineligible to the Senate.<sup>1</sup>

Art. 5. The soldiers of the land and naval forces cannot be elected senators. There are excepted from this provision: I The Marshals and Admirals of France; II The general officers maintained without limit of age in the first section of the list of the general staff and not provided with a command; III The general officers placed in the second section of the list of the general staff; IV Soldiers of the land and naval forces who belong either to the reserve of the active army or to the territorial army.

Art. 6. Senators are elected by "scrutin de liste," by a college meeting at the capital of the department or colony, and composed: (1) of the Deputies; (2) of the General Councilors; (3) of the Arrondissement Councilors; (4) of delegates elected from among the voters of the commune, by each Municipal Council. Councils composed of ten members shall elect one delegate. Councils composed of twelve members shall elect two delegates. Councils composed of sixteen members shall elect three delegates. Councils composed of twenty-one members shall elect six delegates. Councils composed of twenty-three members shall elect nine delegates. Councils composed of twenty-seven members shall elect twelve delegates. Councils composed of thirty members shall elect fifteen delegates. Councils composed of thirty-two members shall elect eighteen delegates. Councils composed of thirty-four members shall elect twenty-one delegates. Councils composed of thirty-six members or more shall elect twenty-four delegates. The Municipal Council of Paris shall elect thirty delegates. In the French Indies the members of the local councils take the place of Arrondissement Councilors. The Municipal Council of Pondichéry shall elect five delegates. The Municipal Council of Karikal shall elect three delegates. All the other communes shall elect two delegates each. [The balloting takes place at the capital of each district.]<sup>2</sup>

Art. 7. Members of the Senate are elected for nine years. The Senate is renewed every three years according to the order of the present series of departments and colonies.

Art. 8. Articles 2 (paragraphs 1 and 2), 3, 4, 5, 8, 14, 16, 10 and 23 of the organic law of August 2, 1875, on the Elections of Senators are amended as follows: "Art. 2 (paragraphs 1 and 2). In each Municipal Council the election of delegates takes place without debate and by secret ballot, by "scrutin de liste" and by an absolute majority of votes cast. After two ballots a plurality is sufficient, and in case of an equality of votes the oldest is elected. The procedure and method is the same for the election of alternates. Councils having one, two, or three delegates to choose shall elect one alternate. Those choosing six or nine delegates elect two alternates. Those choosing twelve or fifteen delegates elect three alternates. Those choosing eighteen or twenty-one delegates elect four alternates. Those choosing twenty-four delegates elect five alternates. The Municipal Council of Paris elects eight alternates. The alternates take the place of delegates in case of refusal or inability to serve, in the order determined by the number of votes received by each

<sup>1</sup>Therefore, may be amended by ordinary legislation. See the law of December 9, 1884.

<sup>1</sup>By law of July 20, 1895, no one may become a member of Parliament unless he has complied with the law regarding military service.

<sup>2</sup>Repealed by the law of Dec. 17, 1908.

of them. Art. 3. In communes where the duties of a Municipal Council are performed by a special delegation organized by virtue of Article 44 of the law of April 5, 1884, the senatorial delegates and alternates shall be chosen by the old council. Art. 4. If the delegates were not present at the election, notice is given them by the Mayor within twenty-four hours. They must within five days notify the Prefect of their acceptance. In case of declination or silence they shall be replaced by the alternates, who are then placed upon the list as the delegates of the commune. Art. 5. The official report of the election of delegates and alternates is transmitted at once to the Prefect. It indicates the acceptance or declination of the delegates and alternates, as well as the protests made by one or more members of the Municipal Council against the legality of the election. A copy of this official report is posted on the door of the town hall. Art. 8. Protests concerning the election of delegates or alternates are decided, subject to an appeal to the Council of State, by the Council of the Prefecture, and, in the colonies, by the Privy Council. Delegates whose election is set aside because they do not satisfy the conditions demanded by law, or because of informality, are replaced by the alternates. In case the election of a delegate and of an alternate is rendered void, as by the refusal or death of both after their acceptance, new elections are held by the Municipal Council on a day fixed by decree of the Prefect. Art. 14. The first ballot begins at eight o'clock in the morning and closes at noon. The second begins at two o'clock and closes at four o'clock. The third begins at seven o'clock and closes at ten o'clock. The results of the ballotings are determined by the bureau and announced immediately by the President of the electoral college. Art. 16. Political meetings for the nomination of senators may be held from the date of the promulgation of the decree summoning the electors up to the day of the election inclusive. The declaration prescribed by Article 2 of the law of June 30, 1881, shall be made by two voters, at least. The forms and regulations of this Article, as well as those of Article 3, shall be observed. The members of Parliament elected or electors in the department, the senatorial electors, delegates and alternates, and the candidates, or their representatives, may alone be present at these meetings. The municipal authorities will see to it that no other person is admitted. Delegates and alternates shall present as a means of identification a certificate from the Mayor of the commune; candidates or their representatives a certificate from the official who shall have received the declaration mentioned in Paragraph 2. Art. 19. Every attempt at corruption or constraint by the employment of means enumerated in Articles 177 and following of the Penal Code, to influence the vote of an elector or to keep him from voting, shall be punished by imprisonment of from three months to two years, and by a fine of from fifty francs to five hundred francs, or by one of these penalties alone. Article 463 of the Penal Code is applicable to the penalties provided for by the present article. Art. 23. Vacancies caused by the death or resignation of senators shall be filled within three months; moreover, if the vacancy occurs within the six months preceding the triennial elections, it shall be filled at those elections."

Art. 9. There are repealed: (1) Articles 1 to 7 of the law of February 24, 1875, on the organization of the Senate; (2) Articles 24 and 25 of the law of August 2, 1875, on the elections of senators.

#### Temporary provision.

In case a special law on parliamentary incompatibilities shall not have been passed at the date of the next senatorial elections, Article 8, of the law of November 30, 1875, shall apply to those elections. Every official affected by this provision, who has had twenty years of service and is fifty years of age at the date of his acceptance of the office of senator, may establish his right to a proportional retiring pension, which shall be governed by the third paragraph of Article 12, of the law of June 9, 1853.

#### 1885 (June 16).—LAW AMENDING THE ELECTORAL LAW.

Article 1. [The members of the Chamber of Deputies are elected by "scrutin de liste."]<sup>1</sup>

Art. 2. [Each department elects the number of deputies assigned to it in the table<sup>2</sup> annexed to the present law, on the basis of one deputy for seventy thousand inhabitants, foreign residents not included. Account shall be taken, nevertheless, of every fraction smaller than seventy thousand.<sup>3</sup> Each department elects at least three deputies. Two deputies are assigned to the territory of Belfort, six to Algeria, and ten to the colonies, as is indicated by the table. This table can be changed by law only.]<sup>1</sup>

Art. 3. [The department forms a single electoral district.]<sup>1</sup>

Art. 4. Members of families that have reigned in France are ineligible to the Chamber of Deputies.

Art. 5. No one is elected on the first ballot unless he receives: (1) an absolute majority of the votes cast; (2) a number of votes equal to one-fourth of the total number of voters registered. On the second ballot a plurality is sufficient. In case of an equality of votes, the oldest of the candidates is declared elected.

Art. 6. Subject to the case of a dissolution foreseen and regulated by the Constitution, the general elections take place within sixty days preceding the expiration of the powers of the Chamber of Deputies.

Art. 7. Vacancies shall not be filled which occur in the six months preceding the renewal of the Chamber.

#### 1887 (December 26).—LAW ON PARLIAMENTARY INCOMPATIBILITIES.

Until the passage of a special law on parliamentary incompatibilities, Articles 8 and 9 of the law of November 30, 1875, shall apply to senatorial elections. Every official affected by this provision who has had twenty years of service and is fifty years of age at the time of his acceptance of the office of senator, may establish his rights to a proportional retiring pension, which shall be governed by the third paragraph of Article 12 of the law of June 9, 1853.

#### 1889 (February 13).—LAW RE-ESTABLISHING SINGLE DISTRICTS FOR THE ELECTION OF DEPUTIES.

[Article 1. Articles 1, 2 and 3 of the law of June 16, 1885, are repealed.]

Art. 2. Members of the Chamber of Deputies are elected by single districts. Each administrative arrondissement in the departments, and each mu-

<sup>1</sup> Articles 1, 2 and 3 repealed by the law of February 13, 1889, which in turn was repealed by the law of July 12, 1919, *infra*.

<sup>2</sup> This table may be found in the *Bulletin des Lois*, twelfth series, No. 15,518; and in the *Journal Officiel* for June 17, 1885, p. 3074.

<sup>3</sup> *i. e.*, fractions of less than 70,000 are entitled to a deputy.

nicipal arrondissement at Paris and at Lyons, elects one deputy. Arrondissements whose population exceeds one hundred thousand inhabitants elect an additional deputy for every one hundred thousand or fraction of one hundred thousand inhabitants. The arrondissements are in this case divided into districts, a table<sup>1</sup> of which is annexed to the present law and can be changed by a law only.

Art. 3. One deputy is assigned to the territory of Belfort, six to Algeria, and ten to the colonies, as is indicated by the table.

Art. 4. On and after the promulgation of the present law, until the renewal of the Chamber of Deputies, vacancies occurring in the Chamber of Deputies shall not be filled.<sup>2</sup>

#### 1880 (July 17).—LAW ON MULTIPLE CANDIDATURES.

Article 1. No one may be a candidate in more than one district.

Art. 2. Every citizen who offers himself or is offered at the general or partial elections must, by a declaration signed or countersigned by himself, and duly legalized, make known in what district he means to be a candidate. This declaration is deposited, and a provisional receipt obtained therefor, at the Prefecture of the department concerned, the fifth day, at latest, before the day of election. A definitive receipt shall be delivered within twenty-four hours.

Art. 3. Every declaration made in violation of Article 1 of the present law is void and not to be received. If declarations are deposited by the same citizen in more than one district, the earliest in date is alone valid. If they bear the same date, all are void.

Art. 4. It is forbidden to sign or post placards, to carry or distribute ballots, circulars, or platforms in the interest of a candidate who has not conformed to the requirements of the present law.

Art. 5. Ballots bearing the name of a citizen whose candidacy is put forward in violation of the present law shall not be included in the return of votes. Posters, placards, platforms, and ballots posted or distributed to support a candidacy in a district where such candidacy is contrary to the law, shall be removed or seized.

Art. 6. A fine of ten thousand francs shall be imposed on the candidate violating the provisions of the present law, and one of five thousand francs on all persons acting in violation of Article 4 of the present law.

#### 1910 (July 12).—LAW TO AMEND THE ORGANIC LAWS ON ELECTION OF DEPUTIES AND TO ESTABLISH SCRUTIN DE LISTE WITH PROPORTIONAL REPRESENTATION.

Article 1. Members of the Chamber of Deputies shall be elected by "scrutin de liste" by departments.

Art. 2. Each department shall elect one deputy for every 75,000 inhabitants of French nationality, a remainder exceeding 37,500 giving the right to an additional Deputy. Each department shall elect at least three Deputies. Provisionally and until a new census has been taken each department shall have the same number of seats [in the Chamber of Deputies] as at present.

Art. 3. Each department shall form a single electoral area. Provided that when the number of Deputies to be elected by a department is greater than six the department may be divided

into electoral areas each of which shall be entitled to elect at least three Deputies. Such division shall be enacted by law. Notwithstanding the foregoing provision the Departments of the Nord, the Pas de Calais, the Aisne, the Somme, the Marne, the Ardennes, the Meurthe-et-Moselle, and the Vosges shall not be divided for the next election.

Art. 4. No person can be a candidate in more than one electoral area, and the law of July 17, 1889, relating to multiple candidatures shall apply to elections under this act; declarations of candidature may nevertheless be either individual or collective.

Art. 5. Lists are constituted for any particular electoral area by groups of candidates who sign a legally authenticated declaration. Declarations of candidature shall indicate the order in which candidates are presented. If the declarations of candidature are presented on separate sheets they must specify the candidates in conjunction with whom the signatory or signatories stand and who agree by joint and duly authenticated declaration to put the names of the signatories on the same list as their own. A list shall not include a number of candidates greater than the number of deputies to be elected in the electoral area. An individual candidature shall be considered as forming a separate list. In such case the declaration of candidature shall be supported by one hundred electors of the electoral area, whose signatures shall be authenticated and shall not be used in support of more than one candidature.

Art. 6. The lists shall be deposited at the prefecture after the commencement of the electoral period and at latest five days before the day of the election. The list and the title of the list shall be registered by the prefecture. Registration shall be refused to any list bearing more names than there are deputies to elect or bearing the name of any candidate belonging to another list already registered in the electoral area unless such candidate has previously withdrawn his name in accordance with the procedure laid down in Article Seven. Registration shall be accorded only to the names of candidates who have made a declaration in conformity with the terms of Articles 4 and 5. A provisional acknowledgment of the deposit of a list shall be given to each of the candidates who compose it. The definite receipt shall be delivered within the next twenty-four hours.

Art. 7. A candidate inscribed upon a list cannot be struck off unless he notifies the prefecture of his desire to withdraw by statutory declaration (*par exploit d'huissier*) five days before the day of the election.

Art. 8. Vacancies on any list may be filled at latest five days before the day of the election by the names of new candidates who make the declaration of candidature prescribed by Article 5.

Art. 9. Two days before the commencement of the poll the prefectural authorities shall cause the registered candidatures to be posted on the doors of the polling-booths.

Art. 10. Any candidate who obtains an absolute majority shall be declared elected provided that the number of seats to be filled is not exceeded. Any seats that remain to be filled shall be allotted in accordance with the following procedure: The *electoral quotient* shall be determined by dividing the number of voters, excluding blank or spoiled ballots, by the number of deputies to be elected. The *average figure* for each list shall be determined by dividing by the number of its candidates the total number of votes which they

<sup>1</sup> This table may be found in the *Journal Officiel* for February 14, 1880, pp. 76 and following; and in the *Bulletin des Lois*, twelfth series, No. 20,475. It has been modified several times.

<sup>2</sup> This law repealed by the law of July 12, 1919.

have obtained. To each list shall be allotted a number of seats equal to the number of times which its average figure contains the electoral quotient. The remaining seats, if any, shall be allotted to the list with the highest average figure. Within each list the seats obtained shall be allotted to the candidates who have received most votes.

Art. 11. An independent candidate, provided that he has not obtained an absolute majority of the votes, shall not be eligible for allotment of a seat until the candidates belonging to other lists who have obtained more votes than he has obtained shall have been declared elected.

Art. 12. In case of equality of votes the eldest candidate shall be elected. If more lists than one have any equal title to a seat, the seat is allotted to that one of the candidates eligible who has received most votes or, in case of equality of votes, to the eldest candidate. A candidate shall not be declared elected unless the number of votes obtained by him exceeds half the average of the votes of the list to which he belongs.

Art. 13. When the number of voters is not greater than half the number of registered electors, or if no list has obtained the electoral quota, no candidate shall be declared elected, and the electors of the area shall be summoned to a new election on the fifteenth day following. If at this new election no list obtains the electoral quotient, the seats shall be assigned to the candidates who have received most votes.

Art. 14. The reports on the proceedings at the election in each commune shall be prepared in duplicate. One copy shall be deposited at the secretariat at the *Mairie*; the other shall be at once posted under sealed cover addressed to the prefect for transmission to the counting commission (*commission de recensement*).

Art. 15. The votes shall be counted for each electoral area at the chief town of the department in public session at latest on the Wednesday following the day of the poll. The operation shall be performed by a commission composed of the president of the civil tribunal, and the president and the four members of the general council, not being candidates at the election, who have longest held office. In case of equal length of office the eldest shall be appointed. If the president of the civil tribunal is unable to serve, his place shall be filled by the vice-president and failing him by the senior judge. In case of inability to serve, the places of the members of the general council shall be filled by other members of the same body in order of seniority. The operations of the count shall be recorded in a report.

Art. 16. In case of a vacancy through death, resignation, or otherwise, an election shall take place within a period of three months counting from the day on which the vacancy took place.

Art. 17. Vacancies occurring within the six months preceding the next general election of the Chamber shall not be filled.

Art. 18. The present act shall apply to the departments of Algeria and to the colonies which shall retain their present number of Deputies. Further legislation shall make provision for the application of the present act to the territory of Belfort and for the redistribution of Alsace and Lorraine.

Art. 19. Any previous legislation conflicting with the present act is hereby repealed.—Taken from H. L. McBain and L. Rogers, *New constitutions of Europe*, pp. 546-549.

**FRANCE, University of.** See FRANCE: 1801-1809.

**FRANCHE-COMTE**, province of ancient France, bordered on the north by Lorraine and on the east by Alsace and Switzerland. The Jura mountains traverse its eastern side and contain iron deposits. Under the Roman occupation the Gallic tribe of the Sequani, which inhabited the region, was organized into the province *Maxima Sequanorum*. They later came under the rule of the kingdom of Burgundy (see BURGUNDY: 500). In the dissolution of the last kingdom of Burgundy (see BURGUNDY: 1032), its northern part maintained a connection with the empire, which had then become Germanic, much longer than the southern. It became divided into two chief states—the County Palatine of Burgundy, known afterwards as *Franche Comté*, or the “free county,” and Lesser Burgundy, which embraced western Switzerland and northern Savoy. “The County Palatine of Burgundy often passed from one dynasty to another, and it is remarkable for the number of times that it was held as a separate state by several of the great princes of Europe. . . . But, through all these changes of dynasty, it remained an acknowledged fief of the Empire, till its annexation to France under Lewis the Fourteenth. The capital of this county, it must be remembered, was Dole. The ecclesiastical metropolis of Besançon, though surrounded by the county, remained a free city of the Empire from the days of Frederick Barbarossa [1152-1190] to those of Ferdinand the Third [1637-1657]. It was then merged in the county, and along with the county it passed to France.”—E. A. Freeman, *Historical geography of Europe*, ch. 8, sect. 5.

14th century.—Inherited by Philip de Rouvre. —Remained with Margaret of Flanders after his death.—Conferred to Philip the Fearless. See BURGUNDY: 1364.

1477.—Seized by France. See BURGUNDY: 1477.

1512.—Included in the Circle of Burgundy. See GERMANY: 1493-1519.

1648.—Still held to form a part of the empire. See GERMANY: 1648: Peace of Westphalia; also Map: At peace of Westphalia.

1659.—Secured to Spain. See FRANCE: 1659-1661.

1674.—Final conquest by Louis XIV and incorporation with France. See NETHERLANDS: 1674-1678; NIMEGUEN, PEACE OF.

1789.—Division into departments.—It was not until the time of the Revolution that *Franche-Comté* lost her feeling of individual nationality which she had nourished for a long time. Then she became assimilated with France and took a prominent part in the wars of the republic. At this time the district was divided into departments: Jura, Doubs, Haute-Saône and an important portion of Ain.

**FRANCIA NOVA**, first kingdom of France. See FRANCE: 9th century; 843; GERMANY: 843-962.

**FRANCIS**, Saint, of Assisi (1181 or 1182-1226), founder of the order of Franciscan monks and the order of St. Clara for women. At about the age of twenty-four he embraced a life of poverty, penance, and meditation. When in 1208 he began to preach, an increasing band of followers gathered about him. In 1209 rules were drawn up, the pope's sanction obtained, and an order founded. Missionary bands were sent throughout Europe and parts of Africa, and Francis himself journeyed to the East. He was canonized in 1228 by Pope Gregory IX.—See also MONASTICISM: 13th century; FRANCISCAN FRIARS; ITALIAN LITERATURE: 12th-14th centuries.

**FRANCIS I** (1708-1765), Holy Roman emperor, grand duke of Tuscany and Lorraine; made emperor of Austria by marriage with Maria Theresa. See AUSTRIA: 1745 (September-October).

**Francis II** (1768-1835), Holy Roman emperor, 1792-1806. His reign marked the close of the Holy Roman Empire. As Francis I, emperor of Austria and king of Bohemia and Austria, 1804-1835. In his wars with France he lost a great part of his Austrian possessions; joined the Holy Alliance, pursuing throughout a reactionary policy. See AIX-LA-CHAPELLE: Congresses: 3; AUSTRIA: 1790-1797; 1809-1814; 1815-1835; 1815-1846; EUROPE: Renaissance and Reformation: Catholic reformation; GERMANY: 1791-1792; 1805-1806; HUNGARY: 1825-1844.

**Francis I**, emperor of Austria. See FRANCIS II, Holy Roman emperor.

**Francis I** (1494-1547), king of France, whose reign from 1515-1547 is noted chiefly for its four wars against the Emperor Charles V. **FRANCISCAN FRIARS**, an order of mendicant brothers founded by St. Francis of Assisi in the early thirteenth century [see also MONASTICISM: 13th century]. They were frequently called "Grey Friars" and "Cordeliers" from the color of the coarse garment they wore and the knotted cord which confined it. "The life of St. Francis falls like a stream of tender light across the darkness of the time. In the frescoes of Giotto or the verse of Dante we see him take Poverty for his bride. He strips himself of all; he flings his very clothes at his father's feet, that he may be one with Nature and God. His passionate verse claims the moon for his sister and the sun for his brother."—J. R. Green, *History of the English people*, v. 1, p. 255.—"He brought religion to the people. He founded the most popular body of ministers of religion that has ever existed in the Church. He transformed monachism by uprooting the stationary monk, delivering him from the bondage of property, and sending him, as a mendicant friar, to be a stranger and sojourner, not in the wilderness but in the most crowded haunts of men, to console them and to do them good. This popular instinct of his is at the bottom of his famous marriage with poverty. Poverty and suffering are the condition of the people, the multitude, the immense majority of mankind; and it was toward this people that his soul yearned."

—M. Arnold, *Pagan and mediæval religious sentiment (Essays in criticism, p. 210)*.—"Such a personality soon drew followers, and they went forth from Assisi two by two to spread the gospel. Sometimes they simply called themselves 'Penitents,' sometimes by the gladder name of 'God's troubadours.' At first they were simple laymen and might have developed into heretics like the followers of Peter Waldo. But in 1210 Francis met Innocent and obtained his oral approbation, although the new order was not formally established until several years after Innocent's death. By 1210, however, they had begun to spread outside Italy and were soon found in Spain, France, England, Germany and Hungary. They were now called 'Minorites' or 'the lowly' because of their humility. They also have often been called 'Mendicant Friars' or 'Begging Brothers,' because they had no property of their own and had to depend for food and lodging upon those to whom they preached and rendered other services. As their work was largely with the lepers and sick and poor and needy, they often had to beg their bread from other persons. But they were not allowed by Francis to receive any money, and were supposed to earn their living when they could. . . . In 1212 a girl of eighteen named Clare left her family to become a follower of Francis, who thereupon instituted a separate order for women, known as the 'Second Order of St. Francis,' or the 'Franciscan Nuns,' or the 'Poor Claires.' . . . Although Francis had forsaken learning along with father, family, and all other worldly interests, his followers often specialized in theology, or, like the Dominicans, taught at universities. . . . Roger Bacon and William of Rubruk were Franciscans. . . . As the new orders became so successful and influential in all Western Christian lands, the popes freed them entirely from the control of the bishops in whose

dioceses they might live and work. . . . Although the individual friars had vowed to lead lives of poverty, both organizations were soon building large churches and convents and receiving large gifts. . . . In time this too great wealth and popularity had an injurious effect. At the start the friars . . . represented a reform movement, but like most previous monastic orders, they were to decline in the course of time."—L. Thorndike, *History of medieval Europe*, pp. 440-452.—See also CHRISTIANITY: 11th-16th centuries; CAPUCHINS; HURONS; JAPAN: 1503-1625; PHILIPPINE ISLANDS: 1600: Spanish power, etc.

**FRANCK, César Auguste** (1822-1890), French composer, of Belgian birth. Studied with Benoist, and in 1872 became director of the Paris Conservatory. His position at the Conservatory and the personal devotion which he inspired made him eventually the greatest musical power in France. While in instrumentation he did not equal Berlioz, in fertility of invention he far surpassed that master. His principal works are the oratorios "Ruth," "Redemption," "Les Beatitudes" and "Rebecca." See MUSIC: Modern: 1830-1921.

**FRANCKE, August Herman** (1663-1727), German pietistic preacher and philanthropist, interested in education. See EDUCATION: Modern: 17th century; Germany: Francke, etc.; 18th century: Germany; UNIVERSITIES AND COLLEGES: 1604-1906.

**FRANCO, Joao**, Portuguese statesman; prime minister under King Carlos. See PORTUGAL: 1906-1909.

**FRANCO OF COLOGNE**, early writer of music. See MUSIC: Medieval: 11th-13th centuries.

**FRANÇOIS, Herman von**, German general. Commanded in East Prussia at the beginning of the World War. Driven into Königsberg by the Russians, he was superseded by Hindenburg. See WORLD WAR: 1914: II. Eastern front: b; e, 1.

**FRANÇOIS DE NEUFCHÂTEAU, Nicolas Louis François, Comte** (1750-1828), French statesman and poet. Deputy to the National Assembly; secretary and, later, president of Legislative Assembly; imprisoned for political reasons, 1793; minister of interior, 1797; president of the Senate, 1804-1806; created count by Napoleon I, 1808.

**FRANCO-JAPANESE TREATY** (1907). See JAPAN: 1905-1914.

**FRANCONIA: Duchy and Circle**.—"Among the great duchies [of the old Germanic kingdom or empire of the ninth, tenth and eleventh centuries], that of Eastern Francia, Franken, or Franconia is of much less importance in European history than that of Saxony. It gave the ducal title to the bishops of Würzburg; but it cannot be said to be in any sense continued in any modern state. Its name gradually retreated, and the circle of Franken or Franconia [see GERMANY: 1493-1510] took in only the most eastern part of the ancient duchy. The western and northern part of the duchy, together with a good deal of territory which was strictly Lotharingian, became part of the two Rhenish circles. Thus Fulda, the greatest of German abbeys, passed away from the Frankish name. In north-eastern Francia, the Hessian principalities grew up to the north-west. Within the Franconian

circle lay Würzburg, the see of the bishops who bore the ducal title, the other great bishopric of Bamberg, together with the free city of Nürnberg, and various smaller principalities. In the Rhenish lands, both within and without the old Francia, one chief characteristic is the predominance of the ecclesiastical principalities, Mainz, Köln, Worms, Speyer, and Strassburg. The chief temporal power which arose in this region was the Palatinate of the Rhine, a power which, like others, went through many unions and divisions, and spread into four circles, those of Upper and Lower Rhine, Westfalia, and Bavaria. This last district, though united with the Palatine Electorate, was, from the early part of the fourteenth century, distinguished from the Palatinate of the Rhine as the Oberpfalz or Upper Palatinate."—E. A. Freeman, *Historical geography of Europe*, ch. 8, sect. 1.—See also ALEMANNI: 406-504; SUEVI: 460-500.

1920.—Conflicts between French and German troops.—The German government having, against the veto of the French, sent troops into the Ruhr district, the French occupied Frankfort and other towns near their bridge-head at Mayence, April 6, 1920. (See GERMANY: 1920 [March-April].) A mob on April 7 jeered the French troops and insulted the officers. The mob refusing to make way, the troops opened fire, killing and wounding several. The French later withdrew the troops from the city.

FRANKING, privilege of sending mail matter free of charge. In the United States it was accorded by statute in Revolutionary War days to soldiers and government officials. Abolished in 1783, the practice was restored a few years later and to-day all officials of the United States government may send and receive official mail without charge. A fine of \$300 is provided for anyone unlawfully using an unstamped government envelope. In England the privilege was claimed by the House of Commons in 1660; secured by statute, 1764; and abolished, 1840.

FRANKLIN, or Frankleyn.—"There is scarce a small village," says Sir John Fortescue [fifteenth century], "in which you may not find a knight, an esquire, or some substantial householder (paterfamilias) commonly called a frankleyn, possessed of considerable estate; besides others who are called freeholders, and many yeomen of estate sufficient to make a substantial jury." . . . By a frankleyn in this place we are to understand what we call a country squire, like the frankleyn of Chaucer; for the word esquire in Fortescue's time was only used in its limited sense, for the sons of peers and knights, or such as had obtained the title."—H. Hallam, *Middle Ages*, v. 3, ch. 8, pt. 3.

FRANKPLEDGE.—"Early in the Norman period, probably in the reign of William I the Frankpledge system was developed, (and) held a great place in England's local government for more than three hundred years. Over nearly the whole, but not quite all of England, all men, unless they had property of their own, especially land, which would serve as security for them, or were vouched for by some responsible individual with whom they were specially connected as in his household for instance, must be in a frankpledge and a tithing, ten or twelve persons formally grouped together under a tithing man. It was the duty of the township to see that all its male inhabitants above the age of twelve were in a tithing."—G. B. Adams, *Constitutional history of England*, p. 72.—"When any one of them was accused of a crime and was not forthcoming, if he was a member of a tithing, the group was amerced; but if he was not a member, the township itself suffered. This system of mutual responsibility was enforced in two ways—by ameracements for failure of duty, and by periodical inspections, (view of Frankpledge) which are thought to be as old certainly as the reign of Henry I."—D. J. Medley, *English constitutional history*, p. 418.—"At some uncertain date the responsibility was placed upon the sheriff of seeing that the men in the county were properly enrolled and the tithings in working order. This he did in the practice called the sheriff's turn by going in circuit to each hundred and holding a 'view of frankpledge' in an especially full meeting of the hundred court [see COURTS: England] twice each year."—G. B. Adams, *Constitutional history of England*, p. 72.

FRANKS: Origin and earliest history.—"It is well known that the name of 'Frank' is not to be found in the long list of German tribes preserved to us in the 'Germania' of Tacitus. Little or nothing is heard of them before the reign of Gordian III. In A. D. 240 Aurelian, then a tribune of the sixth legion stationed on the Rhine, en-

countered a body of marauding Franks near Mayence, and drove them back into their marshes. The word 'Francia' is also found at a still earlier date, in the old Roman chart called the 'Charta Peutingeria,' and occupies on the map the right bank of the Rhine from opposite Coblentz to the sea. The origin of the Franks has been the subject of frequent debate, to which French patriotism has occasionally lent some asperity. . . . At the present day, however, historians of every nation, including the French, are unanimous in considering the Franks as a powerful confederacy of German tribes, who in the time of Tacitus inhabited the north-western parts of Germany bordering on the Rhine. And this theory is so well supported by many scattered notices, slight in themselves, but powerful when combined, that we can only wonder that it should ever have been called in question. Nor was this aggregation of tribes under the new name of Franks a singular instance; the same took place in the case of the Alemanni and Saxons. . . . The etymology of the name adopted by the new confederacy is also uncertain. The conjecture which has most probability in its favour is that adopted long ago by Gibbon, and confirmed in recent times by the authority of Grimm, which connects it with the German word Frank (free). . . . Tacitus speaks of nearly all the tribes, whose various appellations were afterwards merged in that of Frank, as living in the neighbourhood of the Rhine. Of these the principal were the Sicambri (the chief people of the old Iscævonian tribe), who, as there is reason to believe, were identical with the Salian Franks. The confederation further comprised the Bructeri, the Chamavi, Ansibarii, Tubantes, Marsi, and Chasuarri, of whom the five last had formerly belonged to the celebrated Cheruscan league, which, under the hero Arminius, destroyed three Roman legions in the Teutoburgian Forest. The strongest evidence of the identity of these tribes with the Franks is the fact that, long after their settlement in Gaul, the distinctive names of the original people were still occasionally used as synonymous with that of the confederation. . . . The Franks advanced upon Gaul from two different directions, and under the different names of Salians, and Ripuarians, the former of whom we have reason to connect more particularly with the Sicambrian tribe. The origin of the words Salian and Ripuarian, which are first used respectively by Ammianus Marcellinus and Jornandes, is very obscure, and has served to exercise the ingenuity of ethnographers. There are, however, no sufficient grounds for a decided opinion. At the same time it is by no means improbable that the river Yssel, Isala or Sal (for it has borne all these appellations), may have given its name to that portion of the Franks who lived along its course. With still greater probability may the name Ripuarii, or Riparii, be derived from 'Ripa,' a term used by the Romans to signify the Rhine. These dwellers on 'the Bank' were those that remained in their ancient settlements while their Salian kinsmen were advancing into the heart of Gaul."—W. C. Perry, *Franks*, ch. 2.—See also EUROPE: Middle Ages: Rise of Frankish kingdom; Roman civilization inherited, etc.; GERMANY: 3rd century.

253.—First appearance in the Roman world.—"When in the year 253 the different generals of Rome were once more fighting each other for the imperial dignity, and the Rhine-legions marched

to Italy to fight out the cause of their emperor Valerianus against . . . Aemilianus of the Danube-army, this seems to have been the signal for the Germans pushing forward, especially towards the lower Rhine. These Germans were the Franks, who appear here for the first time, perhaps new opponents only in name; for, although the identification of them, already to be met with in later antiquity, with tribes formerly named on the lower Rhine—partly, the Chamavi settled beside the Bructeri, partly the Sugambri formerly mentioned subject to the Romans—is uncertain and at least inadequate, there is here greater probability than in the case of the Alamanni that the Germans hitherto dependent on Rome, on the right bank of the Rhine, and the Germanic tribes previously dislodged from the Rhine, took at that time—under the collective name of the 'Free'—the offensive in concert against the Romans."—T. Mommsen, *History of Rome*, bk. 8, ch. 4.

306.—Defeat by Constantine.—Constantine the Great, 306, fought and defeated the Salian Franks in a great battle and "carried off a large number of captives to Trèves, the chief residence of the emperor, and a rival of Rome itself in the splendour of its public buildings. It was in the circus of this city, and in the presence of Constantine, that the notorious 'Ludi Francici' were celebrated; at which several thousand Franks, including their kings Regaisus and Ascaricus, were compelled to fight with wild beasts, to the inexpressible delight of the Christian spectators."—W. C. Perry, *Franks*, ch. 2.

406-409.—Defense of Roman Gaul. See GAUL: 406-409.

410-420.—Franks join in the attack on Gaul.—After vainly opposing the entrance of Vandals, Burgundians and Sueves into Gaul, 406, "the Franks, the valiant and faithful allies of the Roman republic, were soon [about 410-420] tempted to imitate the invaders whom they had so bravely resisted. Treves, the capital of Gaul, was pillaged by their lawless bands; and the humble colony which they so long maintained in the district of Toxandria, in Brabant, insensibly multiplied along the banks of the Meuse and Scheldt, till their independent power filled the whole extent of the Second, or Lower, Germany. . . . The ruin of the opulent provinces of Gaul may be dated from the establishment of these barbarians, whose alliance was dangerous and oppressive, and who were capriciously impelled, by interest or passion, to violate the public peace."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 31.—"They [the Franks] resisted the great invasion of the Vandals in the time of Stilicho, but did not scruple to take part in the subsequent ravages. Among the confusions of that disastrous period, indeed, it is not improbable that they seized the cities of Spire, Strasburg, Amiens, Arras, Therouane and Tournai, and by their assaults on Trèves compelled the removal of the prefectural

government to Arles. Chroniclers who flourished two centuries later refer to the year 418 large and permanent conquests in Gaul by a visionary king called Pharamund, from whom the French monarchy is usually dated. But history seeks in vain for any authentic marks of his performances."—P. Godwin, *History of France: Ancient Gaul*, bk. 3, ch. 11, sect. 5.

448-456.—Origin of the Merovingian dynasty.—The royal dynasty of the kingdom of the Franks as founded by Clovis is called the Merovingian. "It is thought that the kings of the different Frankish people were all of the same family, of which the primitive ancestor was Meroveus (Meer-wig, warrior of the sea). After him those princes were called Merovingians (Meer-wings); they were distinguished by their long hair, which they never cut. A Meroveus, grandfather of Clovis, reigned, it is said, over the Franks between 448 and 456; but only his name remains, in some ancient historians, and we know absolutely nothing more either of his family, his power, or of the tribe which obeyed him: so that we see no reason why his descendants had taken his name. . . . The Franks appear in history for the first time in the year 247. Some great captain only could, at this period, unite twenty different people in a new confederation; this chief was, apparently, the Meroveus, whose name appeared for such a long time as a title of glory for his descendants, although tradition has not preserved any trace of his victories."—J. C. L. S. de Sismondi, *French under the Merovingians*, ch. 3.

451.—Battle of Châlons. See HUNS: 451.

481-511.—Kingdom of Clovis.—"The Salian Franks had . . . associated a Roman or a Romanized Gaul, Aegidius, with their native chief in the leadership of the tribe. But, in the year 481, the native leadership passed into the hands of a chief who would not endure a Roman colleague, or the narrow limits within which, in the general turmoil of the world, his tribe was cramped. He is known to history by the name of Clovis, or Chlodwig, which through many transformations, became the later Ludwig and Louis. Clovis soon made himself feared as the most ambitious, the most unscrupulous, and the most energetic of the new Teutonic founders of states. Ten years after the fall of the Western empire [which was in 476], seven years before the rise of the Gothic kingdom of Theoderic, Clovis challenged the Roman patrician, Syagrius of Soissons, who had succeeded to Aegidius, defeated him in a pitched field, at Nogent, near Soissons (486), and finally crushed Latin rivalry in northern Gaul. Ten years later (496), in another famous battle, Tolbiac (Zülpich), near Cologne, he also crushed Teutonic rivalry, and established his supremacy over the kindred Alamanni of the Upper Rhine. Then he turned himself with bitter hostility against the Gothic power in Gaul. The Franks hated the Goths, as the ruder and fiercer of the same stock hate those who are a degree above them in the arts of peace, and are supposed to be below them in courage and the pursuits of war. There was another cause of antipathy. The Goths were zealous Arians; and Clovis, under the influence of his wife Clotildis, the niece of the Burgundian Gundobad, and in consequence, it is said, of a vow made in battle at Tolbiac, had received Catholic baptism from St. Remigius of Rheims [see CHRISTIANITY: 496-800]. The Frank king threw his sword into the scale against the Arian cause, and became the champion and hope of the Catholic population all over Gaul. Clovis was victorious. He crippled the Burgundian kingdom (500), which was finally destroyed by his sons (534). In a

battle near Poitiers, he broke the power of the West Goths in Gaul; he drove them out of Aquitaine, leaving them but a narrow slip of coast, to seek their last settlement and resting-place in Spain; and, when he died, he was recognized by all the world, by Theoderic, by the Eastern emperor, who honoured him with the title of the consulship, as the master of Gaul. Nor was his a temporary conquest. The kingdom of the West Goths and the Burgundians had become the kingdom of the Franks. The invaders had at length arrived who were to remain. It was decided that the Franks, and not the Goths, were to direct the future destinies of Gaul and Germany, and that the Catholic faith, and not Arianism, was to be the religion of these great realms."—R. W. Church, *Beginning of the Middle Ages*, ch. 2.—See also BELGIUM: Ancient and medieval history; GOTHS: 507-500.

500-768.—Origin of feudalism. See FEUDALISM: Definition, etc.

500-768.—Military art and equipment.—"The Frankish tribes whom Chlodovech had united by the power of his strong arm, and who under his guidance overran the valleys of the Seine, and Loire, were among the least civilised of the Teutonic races. In spite of their long contact with the empire, they were . . . still mere wild and savage heathen when they began the conquest of Northern Gaul. . . . Even the conquest of Southern Gaul seems to have made little difference in their military customs. The poetical bishop of Auvergne speaks of their unarmoured bodies girt with a belt alone, their javelins, the shields which they ply with such adroitness, and the axes which, unlike other nations, they use as missiles, not as weapons for close combat. He mentions their

dense array and their rapid rush, 'for they close so swiftly with the foe, that they seem to fly even faster than their own darts.' Agathias is more detailed, but he is evidently describing a race in exactly the same stage. 'The arms of the Franks,' he says, 'are very rude; they wear neither mail-shirt nor greaves, and their legs are only protected by strips of linen or leather. They have hardly any horsemen, but their foot-soldiers are bold and well practised in war. They bear swords and shields, but never use the sling or bow. Their missiles are axes and barbed javelins. . . . These last are not very long, they can be used either to cast or to stab. The iron of the head runs so far down the shaft that very little of the wood remains unprotected. In battle they hurl these javelins, and if they strike an enemy the barbs are so firmly fixed in his body that it is impossible for him to draw the weapon out. If it strikes a shield, it is impossible for the enemy to get rid of it by cutting off its head, for the iron runs too far down the shaft. At this moment the Frank rushes in, places his foot on the butt as it trails on the ground, and so, pulling the shield downwards, cleaves his uncovered adversary through the head, or pierces his breast with a second spear.' . . . For some two centuries on from the time of Chlodovech, these were the arms of the Frankish foot-soldiers; they seem to have borrowed nothing from their Roman predecessors. . . . Nothing could have been more primitive than the military organisation of the Merovingian era. The count or duke who was the civil governor of the *civitas* was also its military head. When he received the king's command, he ordered a levy *en masse* of the whole free population, Roman, it would appear, no less than Frankish. From this summons, it seems that no one had legal exemption save by the special favour of the king. In practice, however, we gather that it cannot have been usual to take more than one man from each free household. That the 'ban' did not fall on full-blooded Franks alone, or on landholding men alone, is obvious from the enormous numbers put in the field. . . . The fine for failing to obey the ban was enormous; by the Ripuarian law it was sixty solidi for free Franks, thirty for Romans, freedmen, or vassals of the Church. At a time when a cow was worth only one, and a horse six solidi, such a sum was absolutely crushing for the poor man, and very serious even to the rich. There is as yet no trace of anything feudal in the Merovingian armies. The Franks in Gaul appear, as far as can be ascertained from our sources, to have had no ancient nobility of blood, such as was to be found among the earl-kin of England, the Edilings of continental Saxony, and the Lombard ducal families. The Franks, like the Visigoths, seem to have known no other nobility than that of service. Chlodovech had made a systematic slaughter of all the ruling families of the small Frankish states which he annexed; apparently he succeeded in exterminating them. Among all his subjects none seems to have had any claim to stand above the rest except by the royal favour. The court officials and provincial counts and dukes of the early Merovings were drawn from all classes, even from the ranks of the Gaulish provincials. Great officers of state with Roman names are found early in the sixth century; by the end of it, the highest places of all were open to them. . . . The Frankish king, like all Teutonic sovereigns, had his own 'men' bound to him by oath; they were called *antrustions*, and corresponded to the English *gesith*, the Lombard *gaisind*, and the Gothic *saio*. But they do not appear to have been a very numerous body, certainly not one

large enough to form the chief element of importance in the host, though there were enough of them, no doubt, to furnish the king with a body-guard. . . . From the ranks of the *antrustions* were drawn the counts and dukes who headed the Frankish provincial levies in the field. It seems clear that these officials had very imperfect control over the men whom they led out to war. Being mere royal nominees, without any necessary local connection with the district which they ruled, their personal influence was often small. . . . Hence it was no marvel that bad discipline, and a tendency to plunder everywhere and anywhere, were the distinguishing features of a Merovingian army. Having exhausted its own scanty food supply, the host would turn to marauding even in friendly territory: the commanders were quite unable to keep their men from molesting their fellow-subjects, for hunger knows no laws. . . . Time after time large armies melted away, not because they had been defeated, but merely because the men would not stand to their colours when privations began. To this cause, more than to any other, is to be ascribed the fact that after the first rush of the Franks had carried them over Gaul, they failed to extend their frontiers to any appreciable extent for more than two hundred years. . . . Even the kings themselves often found that the hereditary respect of their people for the royal blood was insufficient to secure obedience. . . . Just as they [the Franks] appropriated relics of Roman state and show in things civil, so in certain military matters they did not remain entirely uninfluenced by the Roman practice. In the sixth and seventh centuries we find among them the feeble beginnings both of the use of cavalry and of the employment of armour, commencing around the person of the king, and gradually spreading downwards."—C. Oman, *History of the art of war*, pp. 51-54, 59-62.—See also MILITARY ORGANIZATION: 15; FEUDALISM: Continental growth.

511-752.—House of Clovis.—Ascendancy of the Austrasian Mayors of the Palace.—On the death of Clovis, his dominion, or, speaking more strictly, the kingly office in his dominion, was divided among his four sons, who were lads, then, ranging in age from twelve to eighteen. The eldest reigned in Metz, the second at Orleans, the third in Paris, and the youngest at Soissons. These princes extended the conquests of their father, subduing the Thuringians (515-528), overthrowing the kingdom of the Burgundians (523-534), diminishing the possessions of the Visigoths in Gaul (531-532), acquiring Provence from the Ostrogoths of Italy and securing from the Emperor Justinian a clear Roman-imperial title to the whole of Gaul. The last survivor of the four brother-kings, Clotaire I, reunited the whole Frank empire under his own sceptre, and on his death, 561, it was again divided among his four sons. Six years later, on the death of the elder, it was redivided among the three survivors. Neustria fell to Chilperic, whose capital was at Soissons, Austrasia to Sigebert, who reigned at Metz, and Burgundia to Guntram, who had his seat of government at Orleans. Each of the kings took additionally a third of Aquitaine, and Provence was shared between Sigebert and Guntram. "It was agreed on this occasion that Paris, which was rising into great importance, should be held in common by all, but visited by none of the three kings without the consent of the others." The reign of these three brothers and their sons, from 561 to 613, was one long revolting tragedy of civil war, murder, lust, and treachery, made horribly interesting by the rival careers of the evil Fredegunda and the great unfortunate Brunhilda, queens of

Neustria and Austrasia, respectively. In 613 a second Clotaire surviving his royal kin, united the Frank monarchy once more under a single crown. But power was fast slipping from the hands of the feeble creature who wore the crown, and passing to that one of his ministers who succeeded in making himself the representative of royalty—namely, the Mayor of the Palace. There was a little stir of energy in his son, Dagobert, but from generation to generation, after him, the Merovingian kings sank lower into that character which gave them the name of the fainéant kings ("rois fainéants")—the slothful or lazy kings—while the Mayors of the Palace ruled vigorously in their name and tumbled them, at last, from the throne. "While the Merovingian race in its decline is notorious in history as having produced an unexampled number of imbecile monarchs, the family which was destined to supplant them was no less wonderfully prolific in warriors and statesmen of the highest class. It is not often that great endowments are transmitted even from father to son, but the line from which Charlemagne sprang presents to our admiring gaze an almost uninterrupted succession of five remarkable men, within little more than a single century. Of these the first three held the mayoralty of Austrasia [Pepin of Landen, Pepin of Heristal, and Carl, or Charles Martel, the Hammer]; and it was they who prevented the permanent establishment of absolute power on the Roman model, and secured to the German population of Austrasia an abiding victory over that amalgam of degraded Romans and corrupted Gauls which threatened to leaven the European world." Pepin of Heristal, Mayor in Austrasia, broke the power of a rival Neustrian family in a decisive battle fought near the village of Testri, 687, and gathered the reins of the three kingdoms (Burgundy included) into his own hands. His still more vigorous son, Charles Martel, won the same ascendancy for himself afresh, after a struggle which was signalized by three sanguinary battles, at Amblève (716), at Vinci, near Cambrai (717) and at Soissons (718). When firm in power at home, he turned his arms against the Frisians and the Bavarians, whom he subdued, and against the obstinate Saxons, whose country he harried six times without bringing them to submission. His great exploit in war, however, was the repulse of the invading Arabs and Moors, on the memorable battle-field of Tours (732), where the wave of Mahommedan invasion was rolled back in western Europe, never to advance beyond the Pyrenees again. Karl died in 741, leaving three sons, among whom his power was, in the Frank fashion, divided. But one of them resigned, in a few years, his sovereignty, to become a monk; another was deposed, and the third, Pepin, surnamed "The Little," or "The Short," became supreme. He contented himself, as his father, his grandfather, and his great grandfather had done, with the title of Mayor of the Palace, until 752, when, with the approval of the pope and by the act of a great assembly of teudes and bishops at Soissons, he was lifted on the shield and crowned and anointed king of the Franks, while the last of the Merovingians was shorn of his long royal locks and placed in a monastery. The friendliness of the pope in this matter was the result and the cementation of an alliance which bore important fruits. As the champion of the church, Pepin made war on the Lombards and conquered for the papacy the first of its temporal dominions in Italy. In his own realm, he completed the expulsion of the Moors from Septimania, crushed an obstinate revolt in Aquitaine, and gave a firm footing to the two thrones which, when he died in 768, he left to his

sons, Carl and Carloman, and which became in a few years the single throne of one vast empire, under Carl—Carl the Great—Charlemagne.—W. C. Perry, *Franks*, ch. 3-6.—See also AUSTRASIA AND NEUSTRIA; MAYOR OF THE PALACE; ITALY: 568-800.

539-553.—Invasion of Italy.—Formal relinquishment of Gaul to them.—During the Gothic war in Italy,—when Belisarius was re-conquering the cradle of the Roman empire for the Eastern empire which still called itself Roman, although its seat was at Constantinople,—both sides solicited the

PEPIN, THE SHORT

help of the Franks. Theudebert, who reigned at Metz, promised his aid to both, and kept his word "He advanced [530, with 100,000 men] toward Pavia, where the Greeks and Goths were met, about to encounter, and, with an unexpected impartiality, attacked the astonished Goths, whom he drove to Ravenna, and then, while the Greeks were yet rejoicing over his performance, fell upon them with merciless fury, and dispersed them through Tuscany." Theudebert now became fired with an ambition to conquer all Italy; but his savage army destroyed everything in its path so recklessly, and pursued so unbridled a course, that famine and pestilence soon compelled a retreat and only one-third of its original number re-crossed the Alps. Notwithstanding this treachery, the emperor Justinian renewed his offers of alliance with the Franks (540), and "pledged to them, as the price of their fidelity to his cause, besides the usual subsidies, the relinquishment of every lingering claim, real or pretended, which the empire might assert to the sovereignty of the Gauls. The Franks accepted

the terms, and 'from that time,' say the Byzantine authorities, 'the German chiefs presided at the games of the circus, and struck money no longer, as usual, with the effigy of the emperors, but with their own image and superscription. Theudebert, who was the principal agent of these transactions, if he ratified the provisions of the treaty, did not fulfill them in person, but satisfied himself with sending a few tributaries to the aid of his ally. But his first example proved to be more powerful than his later, and large swarms of Germans took advantage of the troubles in Italy to overrun the country and plunder and slay at will. For twelve years, under various leaders, but chiefly under two brothers of the Alemans, Lutherr and Bukhelin, they continued to harass the unhappy object of all barbaric resentments, till the sword of Narses finally exterminated them [553]."—P. Godwin, *History of France: Ancient Gaul*, bk. 3, ch. 12.

768-814.—Charlemagne, emperor of the Romans.—As a crowned dynasty, the Carolingians or Carolingians or Carlings begin their history with Pepin the Short. As an established sovereign house, they find their founder in King Pepin's father, the great palace mayor, Carl, or Charles Martel, if not in his grandfather, Pepin Heristal. But the imperial splendor of the house came to it from the second of its kings, whom the French call "Charlemagne," but whom English readers ought to know as Charles the Great. The French form of the name has been always tending to represent "Charlemagne" as a king of France, and modern historians object to it for that reason. "France, as it was to be and as we know it, had not come into existence in his [Charlemagne's] days. What was to be the France of history was then but one province of the Frank kingdom, and one with which Charles was personally least connected. . . . Charles, king of the Franks, was, above all things, a German. . . . It is entirely to mistake his place and his work to consider him in the light of a specially 'French' king, a predecessor of the kings who reigned at Paris and brought glory upon France. . . . Charles did nothing to make modern France. The Frank power on which he rose to the empire was in those days still mainly German; and his characteristic work was to lay the foundations of modern and civilized Germany, and, indirectly, of the new commonwealth of nations, which was to arise in the West of Europe."—R. W. Church, *Beginnings of the Middle Ages*, ch. 7.—"At the death of King Pippin the kingdom of the Franks was divided into two parts, or rather . . . the government over the kingdom was divided, for some large parts of the territory seem to have been in the hands of the two brothers together. The fact is, that we know next to nothing about this division, and hardly more about the joint reign of the brothers. The only thing really clear is, that they did not get along very well together, that Karl was distinctly the more active and capable of the two, and that after four years the younger brother, Karlmann, died, leaving two sons. Here was a chance for the old miseries of division to begin again; but fortunately the Franks seem by this time to have had enough of that, and to have seen that their greatest hope for the future lay in a united government. The widow and children of Karlmann went to the court of the

Lombard king Desiderius and were cared for by him. The whole Frankish people acknowledged Charlemagne as their king. Of course he was not yet called Charlemagne, but simply Karl, and he was yet to show himself worthy of the addition 'Mag-nus.' . . . The settlement of Saxony went on, with occasional military episodes, by the slower, but more certain, processes of education and religious conversion. It appears to us to be anything but wise to force a religion upon a people at the point of the sword; but the singular fact is, that in two generations there was no more truly devout Christian people, according to the standards of the time, than just these same Saxons. A little more than a hundred years from the time when Charlemagne had thrashed the nation into unwilling acceptance of Frankish control, the crown of the Empire he founded was set upon the head of a Saxon prince. The progress in friendly relations between the two peoples is seen in the second of the great ordinances by which Saxon affairs were regulated. This edict, called the 'Capitulum Saxonicum,' was published after a great diet at Aachen, in 797, at which, we are told, there came together not only Franks, but also Saxon leaders from all parts of their country, who gave their approval to the new legislation. The general drift of these new laws is in the direction of moderation. . . . The object of this legislation was, now that the armed resistance seemed to be broken, to give the Saxons a government which should be as nearly as possible like that of the Franks. The absolute respect and subjection to the Christian Church is here, as it was formerly, kept always in sight. The churches and monasteries are still to be the centres from which every effort at civilization is to go out. There can be no doubt that the real agency in this whole process was the organized Church. The fruit of the great alliance between Frankish kingdom and Roman papacy was beginning to be seen. The papacy was ready to sanction any act of her ally for the fair promise of winning the great territory of North Germany to its spiritual allegiance. The most solid result of the campaigns of Charlemagne was the founding of the great bishoprics of Minden, Paderborn, Verden, Bremen, Osnabrück, and Halberstadt. . . . About these bishoprics, as, on the whole, the safest places, men came to settle. Roads were built to connect them; markets sprang up in their neighborhood; and thus gradually, during a development of centuries, great cities grew up, which came to be the homes of powerful and wealthy traders, and gave shape to the whole politics of the North. Saxony was become a part of the Frankish Empire, and all the more thoroughly so, because there was no royal or ducal line there which had to be kept in place."—E. Emerton, *Introduction to the study of the Middle Ages*, ch. 13.—Between 768 and 800 Charlemagne extinguished the Lombard kingdom and made himself master of Italy, as the ally and patron of the Pope, bearing the old Roman title of Patrician (see LOMBARDS: 754-774); he crossed the Pyrenees, drove the Saracens southward to the Ebro, and added a "Spanish March" to his empire (see CATALONIA: 712-1196; SPAIN: 778); he broke the obstinate turbulence of the Saxons, in a series of bloody campaigns which (see SAXONS: 772-804) consumed a generation; he extirpated the troublesome Avars, still entrenched along the Danube (see AVARS: 701-805), and he held with an always firm hand the whole dominion that came to him by inheritance from his father. "He had won his victories with Frankish arms, and he had taken possession of the conquered countries in the name of the Frankish people. Every step which he had taken had been

with the advice and consent of the nation assembled in the great meetings of the springtime, and his public documents carefully express the share of the Franks in his great achievements. Saxony, Bavaria, Lombardy, Aquitaine [see also AQUITAINE: 681-768], the Spanish Mark, all these great countries, lying outside the territory of Frankland proper, had been made a part of its possession by the might of his arm and the wisdom of his counsel. But when this had all been done, the question arose, by what right he should hold all this power, and secure it so that it should not fall apart as soon as he should be gone. As king of the Franks it was impossible that he should not seem to the conquered peoples, however mild and beneficent his rule might be, a foreign prince; and though he might be able to force them to follow his banner in war, and submit to his judgment in peace, there was still wanting the one common interest which should bind all these peoples, strangers to the Franks and to each other, into one united nation. About the year 800 this problem seems to have been very much before the mind of Charlemagne. If we look at the boundaries of his kingdom, reaching from the Eider in the north to the Ebro and the Garigliano in the south, and from the ocean in the west to the Elbe and the Enns in the east, we shall say as the people of his own time did, 'this power is Imperial.' That word may mean little to us, but in fact it has often in history been used to describe just the kind of power which Charlemagne in the year 800 really had. . . . The idea of empire includes under this one term, kingdoms, duchies, or whatever powers might be in existence; all, however, subject to some one higher force, which they feel to be necessary for their support. . . . But where was the model upon which Charlemagne might build his new empire? Surely nowhere but in that great Roman Empire whose western representative had been finally allowed to disappear by Odoacer the Herulian in the year 476. . . . After Odoacer the Eastern Empire, with its capital at Constantinople, still lived on, and claimed for itself all the rights which had belonged to both parts. That Eastern Empire was still alive at the time of Charlemagne. We have met with it once or twice in our study of the Franks. Even Clovis had been tickled with the present of the title of Consul, sent him by the Eastern Emperor; and from time to time, as the Franks had meddled with the affairs of Italy, they had been reminded that Italy was in name still a part of the Imperial lands. . . . But now, when Charlemagne himself was thinking of taking the title of Emperor, he found himself forced to meet squarely the question, whether there could be two independent Christian Emperors at the same time. . . . On Christmas Day, in the year 800, Charlemagne was at Rome. He had gone thither at the request of the Pope Leo, who had been accused of dreadful crimes by his enemies in the city, and had been for a time deprived of his office. Charlemagne had acted as judge in the case, and had decided in favor of Leo. According to good Teutonic custom, the pope had purified himself of his charges by a tremendous oath on the Holy Trinity, and had again assumed the duties of the papacy. The Christmas service was held in great state at St. Peter's. While Charlemagne was kneeling in prayer at the grave of the Apostle, the pope suddenly approached him, and, in the presence of all the people, placed upon his head a golden crown. As he did so, the people cried out with one voice, 'Long life and victory to Charles Augustus, the mighty Emperor, the Peace-bringer, crowned by God!' Einhard, who ought to have known, assures us that Charles was totally

surprised by the coronation, and often said afterward that if he had known of the plan he would not have gone into the church, even upon so high a festival. It is altogether probable that the king had not meant to be crowned at just that moment and in just that way, but that he had never thought of such a possibility seems utterly incredible. By this act Charlemagne was presented to the world as the successor of the ancient Roman Emperors of the West, and so far as power was concerned, he was that. But he was more. His power rested, not upon any inherited ideas, but upon two great facts: first, he was the head of the Germanic Race; and second, he was the temporal head of the Christian Church. The new empire which he founded rested on these two foundations." —E. Emerton, *Introduction to the study of the Middle Ages*, ch. 14.—The great empire which Charles labored, during all the remainder of his life, to organize in this Roman imperial character, was vast in its extent. "As an organized mass of provinces, regularly governed by imperial officers, it seems to have been nearly bounded, in Germany, by the Elbe, the Saale, the Bohemian mountains, and a line drawn from thence crossing the Danube above Vienna, and prolonged to the Gulf of Istria. Part of Dalmatia was comprised in the duchy of Friuli. In Italy the empire extended not much beyond the modern frontier of Naples, if we exclude, as was the fact, the duchy of Benevento from anything more than a titular subjection. The Spanish boundary . . . was the Ebro."—H. Hallam, *Middle Ages*, ch. 1, pt. 1.—"The centre of his realm was the Rhine; his capitals Aachen [or Aix-la-Chapelle] and Engelenheim [or Ingelheim]; his army Frankish; his sympathies as they are shewn in the gathering of the old hero-says, the composition of a German grammar, . . . were all for the race from which he sprang. . . . There were in his Empire, as in his own mind, two elements; those two from the union and mutual action and re-action of which modern civilization has arisen. These vast domains, reaching from the Ebro to the Carpathian mountains, from the Eyder to the Liris, were all the conquests of the Frankish sword, and were still governed almost exclusively by viceroys and officers of Frankish blood. But the conception of the Empire, that which made it a State and not a mere mass of subject tribes, . . . was inherited from an older and a grander system, was not Teutonic but Roman—Roman in its ordered rule, in its uniformity and precision, in its endeavour to subject the individual to the system—Roman in its effort to realize a certain limited and human perfection, whose very completeness shall exclude the hope of further progress." With the death of Charles in 814 the territorial disruption of his great empire began. "The returning wave of anarchy and barbarism swept up violent as ever, yet it could not wholly obliterate the past: the Empire, maimed and shattered though it was, had struck its roots too deep to be overthrown by force." The Teutonic part and the Romanized or Latinized part of the empire were broken in two, never to unite again; but, in another century, it was on the German and not the Gallo-Latin side of the line of its disruption that the imperial ideas and the imperial titles of Charlemagne came to life again, and his Teutonic Roman empire—the "Holy Roman empire," as it came to be called—was resurrected by Otto the Great, and established for eight centuries and a half of enduring influence in the politics of the world.—J. Bryce, *Holy Roman empire*, ch. 5.—"Gibbon has remarked, that of all the heroes to whom the title of 'The Great' has been given, Charlemagne alone has retained it as a permanent

addition to his name. The reason may perhaps be, that in no other man were ever united, in so large a measure, and in such perfect harmony, the qualities which, in their combination, constitute the heroic character, such as energy, or the love of action; ambition, or the love of power; curiosity, or the love of knowledge; and sensibility, or the love of pleasure—not, indeed, the love of forbidden, of unhallowed, or of enervating pleasure, but the keen relish for those blameless delights by which the burdened mind and jaded spirits recruit and renovate their powers. . . . For the charms of social intercourse, the play of a buoyant fancy, the exhilaration of honest mirth, and even the refreshment of athletic exercises, require for their perfect enjoyment that robust and absolute health of body and of mind which none but the noblest natures possess, and in the possession of which Charlemagne exceeded all other men. His lofty stature, his open countenance, his large and brilliant eyes, and the dome-like structure of his head, imparted, as we learn from Eginhard, to all his attitudes the dignity which becomes a king, relieved by the graceful activity of a practiced warrior. . . . Whether he was engaged in a frolic or a chase—composed verses or listened to homilies—fought or negotiated—cast down thrones or built them up—studied, conversed, or legislated, it seemed as if he, and he alone, were the one wakeful and really living agent in the midst of an inert, visionary, and somnolent generation. The rank held by Charlemagne among great commanders was achieved far more by this strange and almost superhuman activity than by any pre-eminent proficiency in the art or science of war. He was seldom engaged in any general action, and never undertook any considerable siege, excepting that of Pavia, which, in fact, was little more than a protracted blockade. But, during forty-six years of almost unintermitted warfare, he swept over the whole surface of Europe, from the Ebro to the Oder, from Bretagne to Hungary, from Denmark to Capua, with such a velocity of movement, and such a decision of purpose, that no power, civilized or barbarous, ever provoked his resentment without rapidly sinking beneath his prompt and irresistible blows. And though it be true, as Gibbon has observed, that he seldom, if ever, encountered in the field a really formidable antagonist, it is not less true that, but for his military skill, animated by his sleepless energy, the countless assailants by whom he was encompassed must rapidly have become too formidable for resistance. For to Charlemagne is due the introduction into modern warfare of the art by which a general compensates for the numerical inferiority of his own forces to that of his antagonists—the art of moving detached bodies of men along remote but converging lines with such mutual concert as to throw their united forces at the same moment on any meditated point of attack. Neither the Alpine marches of Hannibal nor those of Napoleon were combined with greater foresight, or executed with greater precision, than the simultaneous passages of Charlemagne and Count Bernard across the same mountain ranges, and their ultimate union in the vicinity of their Lombard enemies.”—J. Stephen, *Lectures on the history of France*, lect. 3.

814-962.—Dissolution of the Carolingian empire.—Charlemagne, at his death, was succeeded by his son Ludwig, or Louis the Pious—the single survivor of three sons among whom he had intended that his great empire should be shared. Mild in temper, conscientious in character, Louis reigned with success for sixteen years, and then lost all power of control, through the turbulence of his family and the disorders of his times. He “tried in vain to satisfy his sons (Lothar, Lewis, and Charles) by dividing and re-dividing: they rebelled; he was deposed, and forced by the bishops to do penance, again restored, but without power, a tool in the hands of contending factions. On his death the sons flew to arms, and the first of the dynastic quarrels of modern Europe was fought out on the field of Fontenay. In the partition treaty of Verdun [843] which followed, the Teutonic principle of equal division among heirs triumphed over the Roman one of the transmission of an indivisible Empire: the practical sovereignty of all three brothers was admitted in their respective territories, a barren precedence only reserved to Lothar, with the imperial title which he, as the eldest, already enjoyed. A more important result was the separation of the Gaulish and German nationalities. . . . Modern Germany proclaims the era of 843 the beginning of her national existence and celebrated its thousandth anniversary [in 1843]. To Charles the Bald was given Francia Occidentalis, that is to say, Neustria and Aquitaine; to Lothar, who as Emperor must possess the two capitals, Rome and Aachen, a long and narrow kingdom stretching from the North sea to the Mediterranean, and including the northern half of Italy; Lewis (surnamed, from his kingdom, the German) received all east of the Rhine, Franks, Saxons, Bavarians, Austria, Carinthia, with possible supremacies over Czechs and Moravians beyond. Throughout these regions German was spoken; through Charles's kingdom a corrupt tongue, equally removed from Latin and from modern French. Lothar's, being mixed and having no national basis, was the weakest of the three, and soon dissolved into the separate sovereignties of Italy, Burgundy and Lotharingia, or, as we call it, Lorraine [see also ALSACE-LORRAINE: 842-1477]. On the tangled history of the period that follows it is not possible to do more than touch. After passing from one branch of the Carolingian line to another, the imperial sceptre was at last possessed and disgraced by Charles the Fat, who united all the dominions of his great-grandfather. This unworthy heir could not avail himself of recovered territory to strengthen or defend the expiring monarchy. He was driven out of Italy in 887 and his death in 888 has been usually taken as the date of the extinction of the Carolingian Empire of the West. . . . From all sides the torrent of barbarism which Charles the Great had stemmed was rushing down upon his empire. . . . Under such strokes the already loosened fabric swiftly dissolved. No one thought of common defence or wide organization: the strong built castles, the weak became their bondsmen, or took shelter under the cowl: the governor—count, abbot, or bishop—tightened his grasp, turned a delegated into an independent, a personal into a territorial authority, and hardly owned a distant and feeble suzerain. . . . In Germany, the greatness of the evil worked at last its cure. When the male line of the eastern branch of the Carolingians had ended in Lewis (surnamed the Child), son of Arnulf [911], the chieftains chose and the people accepted Conrad the Franconian, and after him Henry the Saxon duke, both representing the female line of Charles. Henry laid the foundations

of a firm monarchy, driving back the Magyars and Wends, recovering Lotharingia, founding towns to be centres of orderly life and strongholds against Hungarian irruptions. He had meant to claim at Rome his kingdom's rights, rights which Conrad's weakness had at least asserted by the demand of tribute; but death overtook him, and the plan was left to be fulfilled by Otto his son."—J. Bryce, *Holy Roman empire*, ch. 6.—"The division of 888 was really the beginning of the modern states and the modern divisions of Europe. The Carolingian Empire was broken up into four separate kingdoms: the Western Kingdom, answering roughly to France, the Eastern Kingdom or Germany, Italy, and Burgundy. Of these, the three first remain as the greatest nations of the Continent; Burgundy, by that name, has vanished; but its place as a European power is occupied, far more worthily than by any King or Caesar, by the noble confederation of Switzerland."—E. A. Freeman, *Franks and the Gauls (Historical essays, 1st series, no. 7)*.—See also FRANCE: 843 and after; GERMANY: 814-843; 843-962; ITALY: 843-951; LORRAINE: 911-980; VERDUN, TREATY OF (843).

FREDERICK I, called Barbarossa (c. 1123-1190), Holy Roman emperor, 1155-1190; king of Germany, 1152-1190; king of Italy, 1155-1190; reign is noted for his wars against the German nobility, and for his six Italian expeditions, 1154-1186, in contest with the papacy and to recover imperial authority over the republican cities in Lombardy; 1189, joined Third Crusade, on the way to which he was drowned. See GERMANY: 1138-1197; CRUSADES: 1188-1192; FEDERAL GOVERNMENT: Medieval league in Lombardy; ITALY: 1154-1162; 1163-1164; 1166-1167; 1174-1183; PAPACY: 1122-1250; VENICE: 1177.

Frederick II (1194-1250), Holy Roman emperor, 1220-1250; king of Germany, 1212-1250; king of Sicily and Jerusalem; 1208, became king of the Two Sicilies; 1212, laid claim to the German throne; 1215, crowned emperor by the pope at Aix-la-Chapelle; 1220, crowned emperor of Rome; attempted to unite Italy and Germany, but was opposed by the pope; 1228-1229, crusade to the Holy Land, captured Jerusalem, Bethlehem and Nazareth from the Saracens. See GERMANY: 1197-1250; 1250-1272; CRUSADES: 1216-1229; also Map; FLORENCE: 1248-1278; ITALY: 1183-1250; 13th century; ITALIAN LITERATURE: 12th-14th centuries; JERUSALEM: 1187-1229; PAPACY: 1122-1250.

Frederick III (1415-1493), Holy Roman emperor; as Frederick IV, German king, and Frederick V, archduke of Austria; also duke of Styria and Carinthia; 1435, assumed the government of Styria and Carinthia, with his brother who died in 1430 and left him in control; 1440, became guardian of Ladislaus of Hungary, and was also made German king; 1445, secret treaty with the pope; 1452, crowned emperor by the pope; 1457, controlled lower Austria for a short time; arranged the marriage of his son Maximilian and Mary of Burgundy. See GERMANY: 1347-1403; BOHEMIA: 1458-1471; HUNGARY: 1442-1458; 1471-1487; JEWS: Austria-Hungary: 12th-19th centuries; LANDEFRIEDE.

Frederick III, the Fair (1286-1330), German king and duke of Austria; 1306, control of duchy of Austria; failed in his attempt to get possession of Bohemia and Moravia; 1314, chosen German king by a minority, and defeated by his rival, Louis of Bavaria, in 1322; 1325, he acknowledged Louis IV, duke of Upper Bavaria, emperor, in exchange for freedom. See GERMANY: 1314-1347; AUSTRIA: 1291-1349.

Frederick I (c. 1471-1533), king of Denmark and Norway, 1523-1533.

Frederick II (1534-1588), king of Denmark and Norway, 1558-1588.

Frederick III (1600-1670), king of Denmark and Norway, 1648-1670.

Frederick IV (1671-1730), king of Denmark and Norway, 1690-1730.

Frederick V (1723-1766), king of Denmark and Norway, 1746-1766.

Frederick VI (1768-1839), king of Denmark and Norway, 1808-1814; king of Denmark, 1814-1830.

Frederick VII (1808-1863), king of Denmark, 1848-1863.

Frederick VIII (1843-1912), king of Denmark, 1906-1912. See DENMARK: 1906; 1912-1915.

Frederick II (c. 1452-1504), king of Naples, 1496-1503. See ITALY: 1501-1504.

**Frederick I** (1657-1713), king of Prussia, 1701-1713; as Frederick III, elector of Brandenburg, 1688-1713; son of Frederick William, the Great Elector, and first king of Prussia. See GERMANY: 1701-1740; BRANDENBURG: 1700-1701; CHARITIES: Germany: 1684-1748; PRUSSIA: 1700.

**Frederick II, the Great** (1712-1786), king of Prussia, 1740-1786. During his reign he waged two successful wars against Maria Theresa of Austria—the War of the Austrian Succession and the Seven Years' War. In 1772 he took part in the first partition of Poland. He was a great organizer as well as administrator of statecraft, and a patron of the arts. See GERMANY: 1701-1740; 1740-1756; 1755-1756, to 1763-1790; AUSTRIA: 1740-1741; 1741 (October); 1742 (January-May); 1743-1744; 1744-1745; 1765-1700; BAVARIA: 1777-1779; CHARITIES: Germany: 1684-1748; CODES: 1751; MILITARY ORGANIZATION: 17; POLAND: 1763-1790.

**Frederick III** (1831-1888), king of Prussia and German emperor, 1888, March-June. He took part in the Franco-Prussian War. See GERMANY: 1888; Death, etc.

**Frederick II, king of Sicily, 1295-1337.**

**Frederick III, king of Sicily, 1355-1377.**

**Frederick I** (1670-1751), king of Sweden, and prince of Hesse. See SWEDEN: 1720-1792.

**Frederick I** (c. 1371-1440), elector of Brandenburg, 1417-1440, and burgrave of Nuremberg. He served in the Hungarian army and rescued King Sigismund in 1366. He also supported Sigismund in his candidacy for the imperial throne. For this he was made elector of Brandenburg, and thus became the founder of the Prussian dynasty. See BRANDENBURG: 1168-1417; PAPACY: 1414-1418.

**Frederick II, called Irontooth** (1413-1472), elector of Brandenburg, 1440-1470. See BRANDENBURG: 1417-1640.

**Frederick III, elector of Brandenburg.** See FREDERICK I, king of Prussia.

**Frederick III, the Pious** (1515-1576), elector of the Palatinate. See PALATINATE OF THE RHINE: 1518-1572.

**Frederick V** (1596-1632), elector of the Palatinate and king of Bohemia. See BOHEMIA: 1618-1620; GERMANY: 1618-1620; 1620.

**Frederick III, the Wise** (1463-1525), elector of Saxony, 1486-1525. He declined the imperial crown and advocated the election of Charles V in 1517; aided Luther in the Protestant reformation and secreted him at Wartburg, 1521-1522. See PAPACY: 1517; Luther's attack, etc.; 1517-1521.

**Frederick II, duke of Babenberg** (d. 1246). See AUSTRIA: 805-1246.

**FREDERICK AUGUSTUS I** (1670-1733), elector of Saxony, 1694-1733; king of Poland, 1697-1704 (deposed), and 1700-1733. See POLAND: 1668-1696.

**Frederick Augustus II, elector of Saxony and king of Poland, 1733-1793.**

**FREDERICK BARBAROSSA.** See FREDERICK I, Holy Roman emperor.

**FREDERICK CHARLES** (1828-1885), prince of Prussia. See GERMANY: 1866.

**FREDERICK HENRY** (1584-1647), prince of Orange. See NETHERLANDS: 1625-1647; 1648-1650.

**FREDERICK WILLIAM I** (1688-1740), king of Prussia, 1713-1740; control of Stettin and part of Pomerania in 1720 at the close of the war with Sweden. He laid the foundation of the military power of Prussia. See GERMANY: 1701-1740.

**Frederick William II** (1744-1797), king of Prussia, 1786-1797; 1792, joined an alliance with Austria against France; 1795, peace with France;

1793 and 1795, joined in the second and third partitions of Poland. See POLAND: 1763-1790.

**Frederick William III** (1770-1840), king of Prussia, 1797-1840; 1806-1807, war with France; 1812, union with France against Russia; 1813, War of Liberation; 1815, in Congress of Vienna; 1815, joined the Holy Alliance. See AIX-LA-CHAPELLE: Congresses: 3.

**Frederick William IV** (1705-1861), king of Prussia, 1840-1861; granted the constitution in 1848 after the revolution; 1849, declined the imperial crown; 1858, his brother became regent. See GERMANY: 1810-1847; 1848 (March); 1848-1850; 1850-1851; EDUCATION: Modern: 19th century: Germany.

**Frederick William** (1882- ), crown prince of German empire and of Prussia; command of the fifth army in the WORLD WAR. See WORLD WAR: 1914: I. Western front: g, 2.

**Frederick William, the Great Elector** (1620-1688), elector of Brandenburg and duke of Prussia, the founder of Prussian power. He restored his dominions to order and prosperity after the ravages caused by the Thirty Years' War; rid the country of foreign soldiers; centralized the administration; organized the Prussian army; laid the foundation of the navy and established his independence as duke of Prussia. He had the canal between the Oder and the Spree constructed and encouraged manufacture. Partly for this reason and also as a protection of the Protestants after the revocation of the Edict of Nantes, he welcomed thousands of French refugees, and settled large numbers of them in Brandenburg. See BRANDENBURG: 1640-1688; 1672-1697; PRUSSIA: 1618-1700; MILITARY ORGANIZATION: 27.

**FREDERICKSBURG, Battle of.** See U. S. A.: 1862.

**FREDERICKSBURG, Sedgwick's demonstration against.** See U. S. A.: 1863.

**FREEDMEN OF THE SOUTH**, the emancipated slaves of the United States.

**FREEDMEN'S BUREAU**, established in the war department of the United States in 1865 for the care of freedmen. It aided in the guardianship of the negro during the reorganization in the South. See U. S. A.: 1865 (July-December); 1865-1866.

**FREEDOM**, Academic. See ACADEMIC FREEDOM.

**FREEDOM OF DEBATE**: United States Senate. See CONGRESS OF THE UNITED STATES: Senate: Freedom of debate.

**FREEDOM OF SPEECH AND PRESS**, in its broadest sense and as a "constitutional proposition," means that every citizen may freely speak, write, and publish his sentiments, on all subjects, being responsible, only, for the abuse of that right, i. e., violation of public morals and the integrity of the government. Improper speech and publication can incur both civil and criminal liability as determined by general law in the protection of property, person and reputation. These regulations and restrictions are: (1) civil liability to damages for injuries caused by slander; (2) both civil and criminal liability for libel; and (3) criminal punishment for the speaking and publishing of blasphemous, obscene, indecent, or scandalous matter.—See also CENSORSHIP: Censorship of press and speech; U. S. A., CONSTITUTION OF; ACADEMIC FREEDOM; ITALY, CONSTITUTION OF.

Ancient Greek term. See ISONOMY.

**FREEDOM OF THE CITY**, custom in European and American cities of giving the rights and privileges of citizenship to a distinguished visitor. In the Middle Ages when the privilege of citizenship required a long term of apprenticeship, the freedom of the city was sometimes granted as a favor by special vote of the magistrate.—See also SUFFRAGE, MANHOOD: British empire: 1295-1832.

**FREEDOM OF THE SEAS**: Definition.—"Freedom is a relative term. It involves limitations as well as rights. There is no such thing as absolute freedom of any kind. A man is free only when his neighbors are limited. The matter is one of adjustment. As to the seas, the question is not one of 'whether,' but of 'how much.' It is, therefore, not surprising that there is a wide divergence of opinion as to what the term 'freedom of the seas' means."—A. G. Hays, *What is meant by freedom of the seas* (*American Journal of International Law*, Apr., 1918).—"By the term the high seas, in municipal and international law, is meant all that continuous body of salt water in the world which is navigable in its character and which lies outside of the territorial waters and maritime belts of the various countries."—C. H. Stockton, *International law*, p. 147.

1400-1650.—Sovereignty and trade.—"In early days, including the first portion of the Middle Ages, navigation upon the high seas was free to the world. Definite claims to parts of the high seas began, however, in the latter part of the Middle Ages. At the end of that period the republic of Venice claimed and was recognized as the sovereign of the Adriatic and the republic of Genoa as the ruler of the Ligurian Sea. Portugal claimed, by virtue of papal decree, to be the sovereign over the whole of the Indian Ocean and of the parts of the Atlantic Ocean lying south of Morocco. The Pope of Rome also gave to Spain the authority for her claim over the Pacific Ocean and the Gulf of Mexico. Sweden and Denmark claimed sovereignty over the Baltic. Great Britain claimed and attempted to enforce her sovereignty over the narrow seas; that is, the North Sea and the Atlantic Ocean from the North Cape to Cape Finisterre. But the extravagant assertions of Spain and Portugal were not submitted to by the French, Dutch, and English navigators, and when, in 1680, the Spanish ambassador Mendoza lodged a complaint with Queen Elizabeth against Drake for having made his famous voyage to the Pacific, Queen Elizabeth answered that vessels of all nations could navigate on the Pacific, since the use of the sea and the air was common to all, and that no title to the ocean could belong to any nation, since neither nature nor regard for the public use permits any possession of the ocean."—C. H. Stockton, *International law*, pp. 147-148.—"While England was contesting Spain's monopoly in western waters a new maritime power, the United Netherlands, was breaking down that of Portugal in the east. The ships of the Dutch East India Company won their way against the Portuguese, and made prize of their vessels, and in order to set at rest the scruples of stockholders who hesitated to pocket profits that had not been won in peaceful trade a Dutch lawyer named Grotius wrote a learned treatise on the law of prize. One chapter was devoted to arguments proving that the Indian Ocean was free to all and that the Portuguese claims there were groundless. When, in 1608, the Dutch were endeavoring to obtain the right to trade with the overseas dominions of Spain, this chapter was published as a separate work, under the title *Mare Liberum*, to give strength to their plea. Their effective argument was the sea power which they had

developed in the years of their contest with Spain. Their illicit traffic with Spanish possessions both in the east and west had assumed tremendous proportions during the years of war, and Dutch merchants in fear of losing these sources of profit dreaded the return of peace. With the powerful backing of England and France, they succeeded in obtaining from Spain in 1609 permission, in veiled terms, to trade in the Indies in places not actually occupied by Spain. . . . Within two months of the publication of the *Mare Liberum*, the Dutch were notified that they were no longer to fish in British Seas without license from the British crown. The disputes that arose over this prohibition were spread over many years, and were embittered by mutual suspicions. . . . Delegation after delegation of diplomats failed to arrange the double controversy, which was embittered by the fact that the Dutch were at the same time driving English traders away from the Spice Islands. . . . The English finally won admission to the eastern trade, but the fisheries question remained, in the parlance of the day, a root of bitterness." Thus it is "evident that in the sixteenth and seventeenth centuries the struggle for freedom of the seas was essentially a struggle for freedom of commerce."—L. F. Brown, *Freedom of the seas*, pp. 16-17, 19-21.

1650-1815.—Law of the sea in war.—Viewpoint as expressed by John Adams.—*Belligerent v. neutral*.—"It was during the long series of wars between England and France in the eighteenth and early nineteenth centuries that the question of what was to be the recognized law of the sea in time of war became an intensely embittered one. . . . The English came to follow pretty consistently the rule of the *Consolato del Mare*, that made enemy goods capturable on a neutral ship and neutral goods free on any enemy ship. They recognized that the flag covered the goods only as a treaty concession. Since the rule 'free ship, free goods' [followed by the French] made exception of contraband, its value depended somewhat upon the definition of contraband. . . . The earliest English list of contraband specifies arms, munitions, foodstuffs, and naval stores. . . . Charles I in his treaty with the Dutch in 1625 included besides provisions and naval stores gold, silver, copper, iron and lead. The usage of nations varied in an instructive way according to circumstances. . . . Another source of friction was the fictitious blockade. . . . Treaties of Utrecht in 1713 marked an important stage in the controversy. The principles of maritime law recognized in these treaties came to be spoken of as having become thereby a part of international law, as a general European settlement took place at that time. This was, of course, incorrect, but the existence of the impression gave more general currency to the principles involved. The most famous of these was the recognition by Great Britain of the principle 'free flag, free goods,' and the converse, 'enemy ship, enemy goods' in her treaties with France, Spain, and the Netherlands. Contraband was confined to enumerated articles useful in war, and clothing, foodstuffs, metals, and naval stores were expressly excluded. The right of visit was regulated and no persons not belonging to the armed forces of a belligerent were to be removed from a vessel. The ship's papers were to be proof of the contents of the cargo. On the other hand, neutral goods on an enemy ship were confiscable, contrary to the more liberal English usage. Provision was also made for the suppression of piracy."—*Ibid.*, pp. 41, 47-51.—"With the rivalries of the eighteenth century there developed specific antagonism to British commerce and British sea power. The doctrine that 'free ships make

free goods' was pleasant to the small states with weak navies which hoped to remain neutral in time of war. As such it was welcomed by the Scandinavian countries, Holland and Prussia. If by the law of nature the sea was free, and by the law of nations the right to trade was free to all men, it was an easy step from the doctrine that 'free ships make free goods' to that of the complete inviolability of private property at sea during war. Contraband remained an exception; but the list of contraband was limited to the actual implements of war. Such a doctrine harmonized with the spirit of eighteenth century enlightenment. The treaty between the United States and Prussia, which Adams and Franklin wrote and Frederick II agreed to, represents the extreme of the law of nature and it was at the same time an affront to existing British sea power."—J. S. Reeves, *Two conceptions of freedom of the seas* (*American Historical Review*, Apr., 1917, p. 541).—In 1783, John Adams expressed the viewpoint of the United States, relative to the freedom of the seas, in the following words: "The United States of America have propagated far and wide in Europe the ideas of the liberty of navigation and commerce. The powers of Europe, however, cannot agree, as yet, in adopting them in their full extent. Each one desires to maintain the exclusive dominion of some particular sea or river, and yet to enjoy the liberty of navigating all others. Great Britain wishes to preserve the exclusive dominion of the British seas, and, at the same time, to obtain of the Dutch a free navigation of all the seas in the East Indies. France has contended for the free use of the British and American seas; yet she wishes to maintain the Turks in their exclusive dominion of the Black Sea, and the Danube . . . and of the . . . Dardanelles. Russia aims at the free navigation of the Black Sea, the Danube, and the passage by the Dardanelles, yet she contends that the nations which border on the Baltic have a right to control the navigation of it. Denmark claims the command of the passage of the sound . . . France and Spain, too, begin to talk of an exclusive dominion of the Mediterranean, and of excluding Russia from it. For my own part, I think nature wiser than all the courts and estates in the world, and, therefore, I wish all her seas and rivers upon the whole globe free."—L. F. Brown, *Freedom of the seas*, p. 85.—Even the signatories of the armed neutralities of 1780 and 1790 were unable to enforce fully their views of neutral right. Through the famous rule of 1756 and the doctrine of continuous voyage (see CONTINUOUS VOYAGE), England persisted in the development of belligerent right. Under pressure of the Napoleonic wars, both of the chief belligerents extended the rules of blockade, contraband, and visit and search to extreme lengths. The War of 1812, fought in defence of neutral right, was indeterminate in outcome.

1815-1914.—Piracy and slave trade.—International agreements.—Two matters of public order were dealt with in the early nineteenth century: the Barbary pirates and the slave trade. In the former the United States took a leading part, but in the latter case opposed England's measures under cover of "freedom of the seas." In the Bering sea controversy the old claim of sea-sovereignty was revived, but was rejected by the arbitration court. In the period 1856-1000 sea law in war was again discussed and was severely limited by four international agreements—See also HAGUE CONFERENCES: 1800; 1007; LONDON, DECLARATION OF; PARIS, DECLARATION OF.

1893.—Term defined by Supreme court. See CRIMINAL LAW: 1803.

1914-1918.—German submarine procedure.—Part two of President Wilson's "Fourteen Points."—"When the war broke out in 1914 the presumption was that the belligerents would be governed by the principles agreed upon in 1856 in Paris and in 1907 at the Hague, and by the precedents of former wars. . . . The German government proceeded to carry out its announcement that it intended to establish freedom of the seas by means of the submarine [see LUSTANIA CASE]. When it became evident that it meant to persist in this course [the United States] . . . joined the ranks of its enemies and cooperated with Great Britain in an extension of belligerent right for the cutting-off of enemy trade to an extent never dreamed of even in the days of Napoleon. . . . [See also WORLD WAR: 1917: VIII. United States, etc.: a, 1.] Freedom of the seas has been violated in each of the ways by which it has been violated in the past. The claim to monopolize portions of the sea has been revived by the sowing of mines and the proclamation of danger zones; neutral commerce has been interrupted to an extent unprecedented in any previous war; and the sea lanes have been made unsafe for travel in a way that makes the days of piracy seem days of gentle usage."—L. F. Brown, *Freedom of the seas*, pp. 226, 228.—The stand taken by the United States was set forth in a "declaration of war aims" by President Wilson, January, 1918, as follows: "II. Absolute freedom of navigation upon the seas outside territorial waters alike in peace and in war except as the seas may be closed in whole or in part by international action for the enforcement of international covenants."—See also WORLD WAR: 1918: Statement of war aims: b, c.

Question still open.—Freedom of the seas, stressed so strongly by President Wilson, failed of discussion at the peace conference, and remains unsettled. "There has been no agreement upon this subject [freedom of the seas] since the Declaration of Paris in 1856, when privateering was abolished and the rights of neutrals were defined. The Declaration of London of 1909 was never ratified by all the interested Powers; therefore, when the Great War began, it was necessary to hark back to the Declaration of Paris of 1856, and conditions since then had made that instrument wholly inadequate for modern usage. The traditional policy of the United States has been for the protection of neutrals and a more liberal attitude toward the freedom of trade upon the seas. The policy of Great Britain has been the reverse, and at times there has been sharp disagreement between the two nations upon this question. It was never brought before the Peace Conference, however, and in consequence the world is practically without laws governing blockade, capture at sea, contraband, and the use of mines and submarines, for the Germans wiped the slate clean in their violent attempt to destroy both enemy and neutral commerce."—E. M. House, *Versailles peace in retrospect (What really happened at Paris)*, E. M. House and C. Seymour ed., p. 438.—"The ideal of the freedom of the sea as it presents itself to advanced American thought includes two reforms. The first is the abolition of the capture of private property at sea; the second the abolition of the commercial blockade. The first is one of the traditional objects of the United States' policy, and their representatives have never missed an opportunity of urging it at every international conference at which the laws of naval war have been discussed."—H. Sidebotham, *Freedom of the seas (Atlantic Monthly, Aug., 1916)*.—Some consider a third

point logically involved in these two, namely, the abolition of contraband. See CONTRABAND.

"The phrase ['Freedom of the Seas'] as it stands today [1918] unexplained, undefined, obscure, indeterminate, is shown by this necessity of a 'definition by reference' to be, if it continue so to be left, but a blind trap from which danger must arise. . . . When Germany employs the phrase she means . . . she would desire that it be stipulated in the law of nations that no blockade of any kind should be permitted of any port and that none of the objects of commerce should be held to be contraband of war except munitions. . . . Absolute liberty to all to pass freely in all directions upon the high seas in time of war as in time of peace to any port. . . . The British reason somewhat to the contrary. They take the position that true Freedom of the Seas has existed for a long period, that it owes its existence and maintenance to the British fleet, that for many years they have patrolled the world, have guarded with equal care the legitimate commerce of all other peoples at their own expense, have kept open the routes of trade, have exterminated pirates, [and] have lighted foreign channels where civilized governments did not exist to undertake the duty. . . . As to blockade they regard it,—a legitimate step in war when war may occur—each blockade or attempted blockade to be judged as to its validity in accordance with the circumstance of each particular case. As for capture at sea, they subscribe in a general way to the proposition that free ships make free goods, other than contraband, but they decline the proposition that free goods make free ships. . . . To understand the position which we [the United States] have in the past maintained it is necessary to take into consideration the fact that a secure and uninterfered with carrying trade, preferably as far as may be in our own bottoms, is a desideratum for this country, since we are large producers both of raw material and of manufactured goods and importers of goods of all kinds. We have therefore wished that our overseas trade with all foreign nations should remain, as far as possible, unrestricted whether they or any of them be at any given time at war or at peace with each other. We have also felt that the full scope of the rule . . . which provides for the immunity of private property on land from arbitrary seizure in case of war accompanied by invasion, should be extended to private property at sea."—C. S. Davison, *Freedom of the seas*, pp. 12-16.

**FREEPORT DOCTRINE**, statement made by Douglas at Freeport, Illinois, in 1858, in reply to a question put by Lincoln. It was to the effect that, in spite of the Dred Scott decision, any Territory might virtually exclude slavery by passing "unfriendly" police laws incompatible with its existence, and these could be made only by the local legislature, which would be opposed to slavery only if the people who elected the legislators were opposed to it. "Hence," as Douglas said, "no matter what the decision of the supreme court may be on that abstract question, still the right of the people to make a slave territory or a free territory is perfect and complete under the Nebraska Bill." This doctrine alienated many of Douglas's former supporters in the South and greatly weakened him in the presidential campaign of 1860.

**FRENCH EAST AFRICA**, or French Somaliland, a territory of about 5,700 square miles lying on the Strait of Bab-el-Mandeb and the Gulf of Aden. It is bounded on the north by the Italian colony Eritrea, on the south by the British Somaliland Protectorate, and on the west by Abyssinia, the latter a distance of fifty-six miles from the coast. The population is about 200,000, composed mainly of Arabs and native tribes, besides Indians and Europeans. Jibuti, the seat of government, is the largest town; it has a good harbor and will eventually be the eastern terminus of the great Trans-Saharan railroad which the French propose to construct. Between 200 and 300 ships enter the port annually, and there is considerable traffic with Abyssinia, to which inland country Jibuti is the main channel of transit for exports and imports. In 1803 France purchased the harbor of Obok, on the north shore of Tajura Bay, as set-off to the British occupation of Perim, though it was not until after the French withdrawal from Egypt in 1882 that effective occupation of the territory began.

**FRENCH FURY**, name for the duke of Anjou's attack on Antwerp in 1583. See NETHERLANDS: 1581-1584.

**FRENCH GUARD** (1789). See FRANCE: 1789 (June).

## FRENCH LITERATURE

1st-11th centuries.—Conquest of Gaul by Caesar.—Early religious writings.—“With the conquest of Gaul by Caesar (58-51 B.C.) there began an intricate process of evolution which, continuing for more than nine centuries, finally gave birth to a French language and literature. The humble *Sequence of St. Eudalie*—fragments of a Latin church chant—and the historical *Oath of Strasburg*, . . . are but the embryo of what that language and literature came to be. But at the end of the tenth century, when the Capetian dynasty began to establish its sway and to consummate French unity, there arose a French national life, and with it a genuine national language and literature. In France, as elsewhere, poetry preceded prose in the infancy of letters; and we see those poetic beginnings in a brief composition on the *Passion of Christ*, and in the three hundred verses of the *Life of St. Léger*, the earliest regularly versified document in French. . . . When their country was reduced to the status of a Roman province by Caesar, the Gauls, inferior to the Romans in civilization, had the Latin language imposed upon them.”—A. L. Konta, *History of French literature*, p. 3.

5th-15th centuries.—Development of the French language—“*Langue d’oc*” and “*langue d’oil*.”—“French literature dates its birth from the hour that the French race, after having spoken the Celtic tongue for a prolonged period and the Latin for a somewhat briefer one, began once more to use a tongue, or rather many tongues, distinguishable from the speech in common use in Germany, England, Italy, and Spain, that gradually developed into the French language. This moment of transformation must be assigned to the ninth century, certainly not earlier.”—E. Faguet, *Literary history of France*, p. 3.—“In the course of its development after the Frankish invasion of the fifth century—an invasion which contributed a good deal to its vocabulary but did not affect its fundamental characteristics—the language of France broke up into two large geographical divisions: in the south, the *langue d’oc*, which had close affinities with the Italian and Spanish modifications of the original *lingua romana*; in the north, the *langue d’oil*, the parent of modern French. This *langue d’oil* was itself subdivided into many dialects, the most important of which were those of Normandy, Picardy, Burgundy, and the Ile de France. But the election to the monarchy of Hugh Capet, Duke of France, in 987, made Paris the capital of the kingdom and led to the ultimate triumph of the dialect of the Ile de France. From this time on the other dialects of the north, and later, the *langue d’oc*, or provençal, began to sink into mere *patois*, though it was not until the fourteenth century that, mainly as the result of the political unification of the country; a recognised standard French emerged out of the general linguistic anarchy, and not until the fifteenth that its stability and uniformity were definitely assured.”—W. H. Hudson, *Short history of French literature*, pp. 1-2.—“It must be remembered . . . if we wish to distinguish precisely between Latin and Teutonic that ‘Romance’ was not one language; it was composed of many dialects—Italian, Spanish, Provençal, Languedoc, French, Burgundian, etc. And among all the dialects spoken in the territory of France itself, two large main groups are distinguishable—those dialects spoken north of the Loire, in which ‘*ouï*’ was pro-

nounced as ‘oil,’ and those spoken south of the Loire, in which ‘*ouï*’ was pronounced as ‘oc.’”—E. Faguet, *Literary history of France*, p. 10.—See also PHILOLOGY: 9; 11; FRANCE: Language; ENGLISH LITERATURE: 11th-14th centuries.

ALSO IN: C. F. Keary, *Dawn of history*, ch. 3.—G. C. Lewis, *Romance languages*.

1050-1350.—Poetry and narrative.—*Chansons de geste*.—*Romans de la table-ronde*.—Didactic and historical poetry.—Rutebeuf.—Fabliaux.—“The *chansons de geste* (songs of deeds or exploits), . . . were originally composed for recitation, either by the poet himself (*trouvère*) or by a professional minstrel (*jongleur*), in the castles of the feudal nobility, and, taking their tone from the audience to which they were addressed, they dealt almost entirely with incidents of fighting and slaughter. [See also MUSIC: Medieval: 12th century.] By far the most famous of these is the *Chanson de Roland*, which probably dates, in the form in which it has come down to us (a form which, however, it reached only after a long course of development and amplification), from the second half of the eleventh century. . . . Though monotonous in matter and style, the *chanson* has a great deal of real vigour and a certain Homeric directness and simplicity, while in places it rises to genuine epic grandeur. . . . In the formal classification adopted by many French writers on mediæval literature the *roman épique* is distinguished from the *chanson de geste* because, while the *chanson* is supposed to have a certain historical basis, . . . the *roman* is wholly legend or invention. The most important of the *romans épiques* belong to what is known as the Arthurian cycle. . . . As an example of a very large class we may here mention the famous *roman* (or, more correctly, the two connected *romans*) of *Tristan et Iseult*, the work of two Anglo-Norman poets, Bérout (about 1150) and Thomas (about 1170). . . . The most celebrated of the poets who dealt with the *matière de Bretagne* is . . . Chrétien de Troyes, who wrote in the latter half of the twelfth century. His works, which are distinguished by considerable delicacy and a real quality of style, include *Le Chevalier de la Charette*, a tale of Lancelot and Guinevere; *Le Chevalier du Lion*, which narrates the love and adventures of Yvain (Gawain), one of the knights of Arthur’s court; and the unfinished *Perceval* or *Le Conte del Graal*. . . . With these *romans épiques* we may also connect the *Lais*, or short stories in verse, written towards the end of the twelfth century by a certain Marie de France. . . . Her simplicity, tenderness, and skill in story-telling are well exemplified in such characteristic *lais* as *Le Chèvrefeuille* (on the love of Tristan and Iseult), *Les Deux Amans* (on a knight’s devotion to his mistress), *Eliduc* (on a wife’s sacrifice and her husband’s infidelity and remorse), and *Lanval* (which tells how a knight was loved by a fairy who took him with her to the Island of Avalon). . . . Another important branch of the literature of the Middle Ages is didactic poetry, which was written not only to amuse but also to instruct, which thus represents the ethical and scholastic movement in the thought of the time, and which therefore points back directly or indirectly to the influence of the Church. As a fondness for allegory was one of the outstanding features in mediæval taste, such poetry ran naturally into allegorical forms, as in the most famous example of its class, the *Roman de la*

*Rose*, the translation of which was the first work of our own Chaucer. . . . Narrative poetry flourished most in the north; in the south, and especially among the troubadours of Provence, it was lyrical poetry which was chiefly cultivated. . . . Upwards of three hundred and fifty of these troubadours or court-poets are known to us by name, and though the larger part of their production has disappeared, a very great mass still survives. There is, however, a marked sameness in their poetry; they sing of war, but more particularly of love and the casuistry of love; but the individual note is almost entirely wanting in their verse, and while they are ingenious, delicate, and remarkably expert in form and style, to which they gave the most assiduous attention, they are eminently artificial. [See also TROUBADOURS.] . . . Meanwhile, however, a change in the character of this lyrical poetry—a change parallel to that which we have already noted in narrative verse—was heralded in the work of the *trouvère* Rutebeuf (d. 1280), whose obvious personal sincerity is in striking contrast with the conventional make-believe of his contemporaries, and who, though he maintains the established mechanism or verse, takes for his themes his own struggles and misery, and frequently turns his satire upon the actual topics of the day. This break with tradition gives Rutebeuf a certain historical importance.”—W. H. Hudson, *Short history of French literature*, pp. 5-10, 14-15.—“The *Fableau*, or *Fabliau* (‘Fahella’), is a popular tale or folk-anecdote, generally satiric, sometimes pathetic, short in construction, usually containing some moral idea, though not always what would be called ‘moralising’. . . . The French *Fabliaux*, of which there are a very large number, . . . are tales in octosyllabic couplets (as a rule), and of varying lengths, but most of them are fairly short.”—E. Faguet, *Literary history of France*, p. 52.—“The desire of classical writers in the Middle Ages to give prominence to that part of classical literature which seemed best suited to the purpose of edification caused the fables of Phaedrus and Avianus to be regarded with special honour. Various renderings from the thirteenth century onwards were made under the title of *Isopets*, a name appropriated to collections of fables whether derived from Æsop or from other sources. . . . The aesthetic value of the mediæval fables, including those of Marie de France, is small; the didactic intention was strong, the literary art was feeble. It is far otherwise with the famous beast-epic, the *Roman de Renard*. The cycle consists of many parts or ‘branches,’ connected by a common theme. . . . It suddenly appeared in literature in the middle of the twelfth century, and continued to receive additions and variations during nearly two hundred years. The spirit of the *Renard* poems is essentially bourgeois; the heroes of the *chansons de geste* achieve their wondrous deeds by strength and valour; Renard the fox is powerful by skill and cunning. . . . The last of the *Renard* romances, *Renard le Contrefait*, was composed at Troyes before 1328.”—E. Dowden, *History of French literature*, pp. 28-20, 31.

1337-1465.—Prose and poetry.—Froissart and Villon.—“Prose developed much more slowly than verse in the French literature of the Middle Ages, and it was not till the beginning of the thirteenth century that it assumed any importance. . . . The most important prose writer is Jean Froissart (1337-1410?), whose *Chroniques*, the composition of which extended over many years, deal with the events of his own time (1325-1400) and particularly with the Hundred Years’ War. . . . There is no romantic colour, no chivalrous idealism, no pic-

turesqueness in his writing, but if his pages lack grace and charm, they are on the other hand rich in ideas.”—W. H. Hudson, *Short history of French literature*, p. 22.—See also ANNALS: Mediæval.—“François Villon (1431-1465?) [is] the greatest French poet of the Middle Ages and one of the strangest figures in any literature. . . . The greater part of his work is comprised in two ‘testaments’—an earlier *Petit Testament*, and a later *Grand Testament*—in which, under pretence of bequeathing his possessions, real or imaginary, he discourses about himself, introduces character-studies of his friends and acquaintances, and lampoons his enemies. . . . But the living Villon is rather to be sought in his *ballades*, a number of which are included in the *Grand Testament*: among them, the most famous of all, the *Ballade des Dames du Temps Jadis*, with its haunting refrain, ‘Mais où sont les neiges d’antan?’ Villon is never imitative or conventional; his verse has always the unmistakable ring of personality and truth; and his frequent touches of remorse, his genuine emotional quality, his profound sense of the beauty and brevity of life, the tender sadness with which again and again he lingers over the thought of death—a sadness shot at times with a spirit of macabre humour—suffice to explain the unique appeal which, alone among the poets of his age, he still makes to modern students.”—*Ibid.*, p. 15.

1498-1550.—Renaissance and Reformation.—Marguerite of Navarre.—Marot.—Rabelais.—Calvin.—“The first point of difference to be noted between the Renaissance in France and the Renaissance in Italy is one of time. Roughly speaking it may be said that France was a hundred years behind Italy. . . . But if the French Renaissance was a later and less rapid growth, it was infinitely harder. The Renaissance literature in Italy was succeeded by a long period of darkness, which remained unbroken, save by fitful gleams of light, till the days of Alfieri. [See ITALIAN LITERATURE: 1450-1505.] The Renaissance literature in France was the prelude to a literature, which, for vigour, variety, and average excellence, has in modern times rarely, if ever, been surpassed. The reason for this superiority on the part of France, for the fact that the Renaissance produced there more abiding and more far-reaching results, may be ascribed partly to the natural law that precocious and rapid growths are always less hardy than later and more gradual ones, partly to the character of the French nation, to its being at once more intellectual and less imaginative than the Italian, and therefore more influenced by the spirit of free inquiry than by the worship of beauty; partly to the greater unity and vitality of its political life, but in a large measure to the fact that in France the Renaissance came hand in hand with the Reformation. . . . We must look upon the Reformation as but a fresh development of the Renaissance movement, as the result of the spirit of free inquiry carried into theology, as a revolt against the authority of the Roman Church. Now the Renaissance in Italy preceded the Reformation by more than a century. There is no trace in it of any desire to criticise the received theology. . . . In France on the other hand the new learning and the new religion, Greek and heresy, became almost convertible terms. Lefèvre d’Étaples, the doyen of French humanists, translated the New Testament into French in 1524: the Estiennes [see PRINTING AND THE PRESS: 1466-1508], the Hebrew scholar François Vatable, Turnèbe, Ramus, the great surgeon Ambroise Paré, the artists Bernard Palissy and Jean Goujon were

all avowed protestants; while Clement Marot, Budé, and above all Rabelais, for a time at least, looked on the reformation with more or less favour. In fact so long as the movement appeared to them merely as a revolt against the narrowness and illiberality of monastic theology, as an assertion of the freedom of the human intellect, the men of letters and culture with hardly an exception joined hands with the reformers. It was only when they found that it implied a moral as well as an intellectual regeneration, that it began to wear for some of them a less congenial aspect. This close connexion between the Reformation and the revival of learning was, on the whole, a great gain to France. It was not as in Germany, where the stronger growth of the Reformation completely choked the other. In France they met on almost equal terms, and the result was that the whole movement was thereby strengthened and elevated both intellectually and morally. . . . French humanism can boast of a long roll of names honourable not only for their high attainments, but also for their integrity and purity of life. Robert Estienne, Turnèbe, Ramus, Cujas, the Chancellor de l'Hôpital, Estienne Pasquier, Thou, are men whom any country would be proud to claim for her sons. And as with the humanists, so it was with the Renaissance generally in France. On the whole it was a manly and intelligent movement. . . . The literature of the French Renaissance, though in point of form it is far below that of the Italian Renaissance, in manliness and vigour and hopefulness is far superior to it. It is in short a literature, not of maturity, but of promise. One has only to compare its greatest name, Rabelais, with the greatest name of the Italian Renaissance, Ariosto, to see the difference. How formless! how crude! how gross! how full of cumbersome details and wearisome repetitions is Rabelais! How limpid! how harmonious is Ariosto! what perfection of style, what delicacy of touch! He never wearies us, he never offends our taste. And yet one rises from the reading of Rabelais with a feeling of buoyant cheerfulness, while Ariosto in spite of his wit and gaiety is inexpressibly depressing. The reason is that the one bids us hope, the other bids us despair; the one believes in truth and goodness and in the future of the human race, the other believes in nothing but the pleasures of the senses, which come and go like many-coloured bubbles and leave behind them a boundless ennui. Rabelais and Ariosto are true types of the Renaissance as it appeared in their respective countries."—A. Tilley, *Literature of the French Renaissance*, ch. 2.—"When the French armies under Charles VIII. and Louis XII. made a descent on Italy, they found everywhere a recognition of the importance of art, an enthusiasm for beauty, a feeling for the æsthetic as well as the scholarly aspects of antiquity."—E. Dowden, *History of French literature*, p. 81.—"For . . . Frenchmen [the] first contact with Italy was a sort of revelation. . . . The primary characteristic of this new spirit is the development of individualism. . . . Owing to the exercise of this . . . freedom, to this basis of individualism, another idea takes shape, which may be termed the central idea of the Renaissance, an idea of which foreigners themselves admit that François Rabelais was the living incarnation; we allude to the idea of the goodness or of the divinity of Nature."—F. Brunetière, *Manual of the history of French literature*, pp. 47, 54.—"Around Francis I. . . . men of learning and poets gathered. . . . The King's sister, Marguerite of Navarre (1492-1549), perhaps the most accomplished

woman of her time, represents more admirably than Francis the genius of the age. . . . Her poems, *Marguerites de la Marguerite des Princesses* (1547), show the mediæval influences forming a junction with those of the Renaissance. Some are religious, but side by side with her four dramatic Mysteries and her eloquent *Triomphe de l'Agneau* appears the *Histoire des Satyres et Nymphes de Diane*, imitated from the Italian of Sannazaro. Among her latest poems, which remained in manuscript until 1896, are a pastoral dramatic piece expressing her grief for the death of her brother Francis I.; a second dramatic poem, *Comédie jouée au Mont de Marsan*, . . . [and] *Les Prisons*. . . . The union of the mundane and the moral spirit is singularly shown in Marguerite's collection of prose tales, written in imitation of Boccaccio, the *Heptaméron des Nouvelles* (1558). . . . Among the poets whom Marguerite received with favor at her court was Clement Marot, the versifier (1495- or 1496-1544). . . . In his literary origins Marot belongs to the Middle Ages, . . . but the spirit of the Renaissance and his own genius delivered him from the pressure of . . . authority. . . . Escaping, after his early *Temple de Cupido*, from the allegorising style, he learned to express his personal sentiments, and something of the gay, bourgeois spirit of France, with aristocratic distinction. . . . His gift to French poetry is especially a gift of finer art—firm and delicate expression, felicity in rendering a thought or a feeling, certainty and grace in poetic evolution, skill in handling the decasyllabic line. A great poet Marot was not, . . . but . . . his work served literature in important ways; it was a return from laboured rhetoric to nature. The most powerful personality in literature of the first half of the sixteenth century was not a poet, though he wrote verses, but a great creator in imaginative prose, great partly by virtue of his native genius, partly because the sap of the new age of enthusiasm for science and learning was thronging in his veins—François Rabelais."—E. Dowden, *History of French literature*, pp. 82-87.—"Rabelais was born at Chinon in Touraine, probably in 1400, though the actual date is uncertain . . . His one great work in literature consists of the chronicles of two fabulous giants—*La Vie très Horrificque du Grand Gargantua* [see EDUCATION: Modern: 16th century: Rabelais' Gargantua] and *Pantagruel, Roy des Dipsodes, avec ses Faicts et Prouesses Espouventables*. . . . Though Rabelais was a product of the early Renaissance, the roots of his genius were in the Middle Ages."—W. H. Hudson, *Short history of French literature*, p. 41.—"If the genius of the Renaissance is expressed ardently and amply in the writings of Rabelais, the genius of the Reformation finds its highest and most characteristic expression through . . . Jean Calvin (1509-64), . . . the great Reformer. . . . Yet Calvin was not merely a Reformer: he was also a humanist. . . . [In] 1530 he published his lucid and logical exposition of the Protestant doctrine—the *Christian Religionis Institutio*. It placed him, at the age of twenty-seven, as leader in the forefront of the new religious movement. But the movement was not merely learned, it was popular, and Calvin was resolved to present his work to French readers in their own tongue. His translation—the *Institution*—appeared probably in 1541. . . . It is perhaps not too much to say that Calvin is the greatest writer of the sixteenth century."—E. Dowden, *History of French literature*, pp. 93-94.

FAMOUS FRENCH WRITERS

1549-1580.—Rise of the classical school.—The Pléiade.—Transition from the Lyons school.—Ronsard.—His poetry and his influence.—Other members of the Pléiade and their work.—Du Bellay.—“In 1548 two gentlemen—one aged twenty-four, the other twenty-three— . . . dreamed of founding a new literary school, which, frankly breaking with the school of Marot . . . would not only partake of the spirit of the great Italians (as Seve did), but of the classical writers especially, and would unite in itself all the best aspects of humanism. . . . These two young men were Pierre de Ronsard and Joachim du Bellay. At Paris they saw each other frequently, and gathered round them a small number of friends. . . . One day they perceived they were seven—Daurat, the master of Ronsard, and their master in everything, Ronsard, Du Bellay, Baif, Belleau, Jodelle, and Pontus de Thyard. Thereupon they called themselves the Pléiade in imitation of the Alexandrian Pleiade. Later, in spite of the sacred number, about a dozen poets will have to be considered as forming the Pléiade. . . . In 1540 the manifesto of the new school, drawn up and signed by Du Bellay alone, appeared under the name of the ‘Défense et Illustration de la Langue française.’ . . . A very large part of the book is concerned with the means of enriching and strengthening the French language and literature; and now for the first time we have general principles laid down in a book of French criticism. . . . Ronsard in his conversations, in the two prefaces to the ‘Franciade,’ and in his little ‘Art Poétique à M. d’Elbenne,’ added some valuable instructions to these counsels. . . . The manifestoes of the Pléiade [are] . . . of such a kind that French literary art was inspired by them, and one might almost say lived on them, for two hundred years. The year 1540, then, marks the beginning of a classical literature, and more especially of a classical poetry.”—E. Faguet, *Literary history of France*, pp. 208-200, 302-303.—“The transition from Marot to Ronsard is to be traced chiefly through the school of Lyons. In that city of the South, letters flourished side by side with industry and commerce. . . . The Lyonesse poets, though imbued with Platonic ideas, rather carry on the tradition of Marot than announce the Pléiade. Pierre de Ronsard [1524-1585], . . . and Du Bellay broke with the tradition of the Middle Ages, and inaugurated the French classical school. . . . During forty years Ronsard remained the ‘Prince of Poets.’ . . . His work as a poet falls into four periods. From 1550 to 1554 he was a humanist without discretion or reserve. In the first three books of the *Odes* he attempted to rival Pindar; in the *Amours de Cassandre* he emulates the glory of Petrarch. From 1554 to 1560 . . . he was in discipleship to Anacreon and Horace. It is the period of the less ambitious odes found in the fourth and fifth books, the period of the *Amours de Marie* and the *Hymnes*. From 1560 to 1574 he was a poet of the court and of courtly occasions, an eloquent declaimer on public events in the *Discours des Misères de ce Temps*, and the unfortunate epic poet of his unfinished *Franciade*. During the last ten years of his life he gave freer expression to his personal feelings. . . . and to these years belong the admirable sonnets to Hélène de Surgères.”—E. Dowden, *History of French literature*, pp. 97, 100-101.—“Ronsard . . . was, in truth, one of the greatest of French poets. . . . [His] chief fault [was] that he sought to absorb in some way the most diverse and the most alien imaginative expressions, Greek, Latin, or Italian. . . . It was in the elegy proper, the expression of the most intimate feelings, that Ronsard

attained to the highest degree of perfection. . . . He restored classic poetry in France. The entire French poetical movement up to 1800 . . . springs from Ronsard. He is one of the three or four great names in French literature.”—E. Faguet, *Literary history of France*, pp. 306, 313, 317.—“Of the other members of the Pléiade, one—Jodelle—is remembered chiefly in connection with the history of the drama. Baif (1532-80) . . . translated from Sophocles and Terence, imitated Plautus, Petrarchised in sonnets, took from Virgil’s *Georgics* the inspiration of his *Météores*, was guided by the Anacreontic poems (found and published in 1554, by Henri Estienne) in his *Passe-Temps*, and would vain rival Theognis in his most original work *Les Muses*. . . . Remy Belleau (1528-77) practiced the Horatian ode and the sonnet; translated Anacreon; followed the Neapolitan Sannazaro in his *Bergerie* . . . and adapted the mediæval lapidary . . . to the taste of the Renaissance in his *Amours et Nouveaux Échanges des Pierres Précieuses*. . . . [His] delicate feeling for nature . . . is seen at its best in . . . *Avril*, included in . . . *Bergerie*. These are minor lights in the political constellation; but the star of Joachim du Bellay [1520-1500] shines with a ray which, if less brilliant than that of Ronsard, has a finer and more penetrating influence.”—E. Dowden, *History of French literature*, pp. 103-104.—“He became acquainted with Ronsard, as we have already seen, in 1548, issued his ‘Défense et Illustration’ in 1540, his first collection of poetry, the ‘Olive,’ in 1550. . . . He was, at first, a Petrarchan poet. . . . But this passion of his youth was short-lived, as was, moreover, his passion for antiquity. After the ‘Olive’ and some translations of Virgil, Ovid, and Ausonius, he returned . . . to his true vogue, which was that of an elegiac and satiric poet. [In] the ‘Antiquités de Rome’ and the ‘Regrets,’ . . . he gives us the feelings with which ancient Rome and modern Rome inspired him. . . . The satirical genius . . . may be already perceived in the ‘Poète Courtisan’ of 1550 and in the ‘Défense et Illustration.’ . . . The true Du Bellay is to be found in Du Bellay the melancholy and tender elegist. . . . It was this poet that wrote . . . the song of the *Vanneur de Blé*, which is still quoted by everyone. . . . And in a more lofty spirit . . . he wrote his ‘Sonnet du Petit Lire.’ . . . Du Bellay has much less imagination, less flower, and fewer original ideas than Ronsard, but he is a more sympathetic writer. . . . Among the other poets of the Pleiades were Olivier de Magny, a great friend of Ronsard and Du Bellay, Jacques Tahureau, Pontus de Thyard, and Amadis Jamyn, who deserves a less complete oblivion than that into which most literary histories cast him. . . . After the death of Ronsard between 1580 and 1610, his school showed signs of decadence—in its exaggeration, seen in the works of Du Bartas and d’Aubigné, in its enervation and weakness, exemplified by Desportes and Bertaut.”—E. Faguet, *Literary history of France*, pp. 317-320, 322, 324, 326.

1552-1610.—History and philology.—National feeling.—Philosophy.—Literature of the civil wars.—Du Bartas.—D’Aubigné.—Montaigne and his philosophy.—“The historical origins of France were studied for the first time with something of a critical spirit by Claude Fauchet in his *Antiquités Gadoises et Françoises* (1570-1601). . . . Etienne Pasquier (1520-1615) . . . in his *Recherches de la France* treated with learning and vigour various important points in French history. . . . Henri Estienne (1531-98) . . . in a trilogy of little treatises (1595-70) . . . attempted to establish [the] superiority [of the French language]. . . .

The philosophy of politics is represented by one great name, . . . Jean Bodin (1529-96), whose *République* may entitle him to be styled the Montesquieu of the Renaissance. . . . The *Commentaires* of Blaise de Montluc (1502-77) are said to have been named by Henri IV. 'the soldier's Bible.' . . . The controversies of the civil wars produced a militant literature. [Among those who wrote in this spirit were François Hotman, Hubert Languet, Marnix de Sainte-Aldegonde, Du Perron, Henri Estienne, and others.] The French Huguenots were not without their poets. Two of these—Guillaume Saluste, Seigneur du Bartas (1544-90) and Agrippa d'Aubigné [1550-1630] are eminent. The fame of Du Bartas . . . was indeed European."—E. Dowden, *History of French literature*, pp. 108-114.—"Du Bartas possessed a type of imagination which was little else but an extreme mastery over words. . . . He exaggerated all the faults of Ronsard. . . . D'Aubigné is a quite different sort of man. He was a narrow-minded, violent sectarian, . . . but he was a very noble man, and possessed great imagination. He wrote enormously, both in prose and verse. . . . The book which gives him his chief title to fame [is] '*Les Tragiques*,' written in 1577, but not published till 1616."—E. Faguet, *Literary history of France*, pp. 327-328.—In an age of confusion working towards clearness, an age of belligerency tending towards concord, [we have] a moralist, the most original of his century—Michel de Montaigne. Michel Eyquem, Seigneur de Montaigne, was born . . . in the year 1533. . . . He . . . retired from public functions in 1570, to enjoy a tranquil existence of meditation, and of rambling through books."—E. Dowden, *History of French literature*, p. 122.—"Montaigne's work in literature is relatively small in bulk and is throughout in a single form, for it is comprised entirely in three books of *Essais* (the first two published in 1580, the third in 1588), varying in length and numbering 107 in all."—W. H. Hudson, *Short history of French literature*, p. 47.—"The unity of the book, which makes no pretence to unity, may be found in the fact that all its topics are concerned with a common subject—the nature of men; . . . and that the same tranquil, yet insatiable curiosity is everywhere present. . . . The doctrine of Montaigne . . . is conveyed to the reader without system, in the most informal manner, in a series of discourses which seem to wander at their own will. . . . The style, although really carefully studied and superintended, has an air of light facility; . . . the book is of all books the most sociable, a living companion rather than a book, playful and humorous, amiable and well-bred, learned without pedantry, and wise without severity."—E. Dowden, *History of French literature*, pp. 123, 125-126.—See also EDUCATION: Modern: 16th century: Montaigne, etc.

1600-1630. — Poetry. — Malherbe. — His disciples.—Other poets.—Cyrano de Bergerac.—"The 'grand siècle,' as French historians call the seventeenth century—though for purposes of literary classification this must be understood to extend till the death of Louis XIV. in 1715—saw the consolidation of the power of the crown by Richelieu . . . and the culmination of the absolute monarchy. . . . The political movements have a direct importance for the student of literature. Centralisation in government was accompanied by centralisation in culture, and this in turn was largely responsible for the triumph of classicism. . . . Our present concern is with the poetry of the classical period. François de Malherbe, with whom our study begins, was born at Caen in 1555 [and died in 1628. His] . . . poems give him a certain place in

the history of his time as the poetic exponent of those ideals of government which it was Richelieu's great work to realise. Otherwise they have little interest for the modern reader."—W. H. Hudson, *Short history of French literature*, pp. 52, 55.—"He had begun by being a poet of the Petrarchan and 'precious' school, as almost everybody else was. . . . '*Les Larmes de Saint-Pierre*' . . . contains some very ridiculous passages . . . but also some very striking ones of true beauty. . . . Malherbe . . . drew up a poetical code of extreme severity. . . . Briefly, [his] doctrine is an attempt (not to proscribe, as he believed it to be) to improve and purify the classical doctrine already found in Ronsard. . . . Malherbe, although he was not followed by many disciples, was so greatly respected that he exercised at once a great influence on the French language. . . . His school, properly speaking, . . . was a restricted one. He had, in truth, but three disciples, the one slavish and lacking in talent, Colomby; the second possessed of a certain amount of talent, but independent-minded and indeed owing him but little, Maynard; and the third, highly gifted, but quite undisciplined, and who really owed him nothing, but is more a fascinated friend than a disciple, Racan. . . . Around them and after them, until 1830, flourished a literature, and especially a poetical literature, which was by no means classical. Théophile de Viau, whose reputation was . . . great, . . . was often put forward in opposition to Malherbe. . . . Saint-Amant resembles him in many ways, though less distinguished and pushing eccentricity and irregularity to a further extreme. . . . Cyrano de Bergerac must also be placed in the group of grotesques, though, in truth, Cyrano cannot be easily classified. . . . He was a *virtuoso*, a very versatile genius who could write easily in all styles, and succeeded brilliantly enough in them all. . . . In the history yet to be written of the authors who in the seventeenth century continued the traditions of the sixteenth century, and served as a link between the sixteenth and eighteenth centuries, Cyrano . . . will occupy a very important position."—E. Faguet, *Literary history of France*, pp. 364-366, 370-375, 370, 381-382.

1608-1715.—Hôtel de Rambouillet and the Précieuses.—Prose writers.—French Academy.—Poetry after Malherbe.—Critics of the classical school.—Boileau.—Fables of La Fontaine.—Mémorial and letter-writers.—Quarrel of the "Ancients and Moderns."—"In 1608 a distinguished lady, Catherine de Vivonne, Marquise de Rambouillet, . . . decided to retire from the rude Gascon court of Henry, and to throw open her mansion for literary and social gatherings. . . . Such is the origin of the *Hôtel de Rambouillet*, the first of those literary and social salons . . . which were destined to have so great an influence on French literature. . . . The real importance of the Hôtel de Rambouillet, and its famous *chambre bleue* . . . dates from 1618. . . . [Its] history falls into three periods. From 1620c.-1630 the circle takes in recruits and prospers. The hosts include Richelieu, the famous Mlle. Paulet, . . . and among authors, Malherbe, Racan his friend, Chapelain, Vaugelas, and [Jean Louis Guez de] Balzac. The second and most brilliant period extends from 1630 to the death of Voiture in 1648. . . . Fresh hosts [had been] added, [including,] among literary lights, Corneille, Ménage the grammarian, but above all the plebeian Vincent Voiture (1598-1648), the soul of the circle, who held his place on the tacit understanding that he should always be witty. . . . He wrote poems, . . . but he is more famous for his letters addressed to the marchioness and

the lords and ladies of her entourage. . . . Till about 1640 the talk of [the] *salon* remained free from exaggerated affectation. . . . But soon after, the epidemic broke out; heated discussions took place on minute topics of little moment. Things became still worse in the third period (1648 to 1665), (the date of the death of the Marquise de Rambouillet), though a few more additions were made, and Mme. de Sévigné, Mme. de la Fayette, and Fléchier joined the fashionable assembly. The quarrel of the *Uranistes* and *Jobelins* (1649) split the assembly, . . . and introduced a spirit of coterie and rivalry. It was then that the terms *précieux* and *précieuse* were first applied to the frequenters of the *Hôtel*, and similar literary salons formed on its model. Of these the most famous . . . [are those of *Mlle. de Scudéry* and *Mlle. de Sablé*.] . . . In time the salons of Paris were copied and their faults exaggerated by provincial coteries. . . . It was these later imitations that chiefly contributed to render preciousness ridiculous. In 1650 Molière dealt the *précieuses* . . . a severe blow in his satiric comedy of the *Précieuses Ridicules*. . . . But [their] faults were more than outweighed by the real services which preciousness rendered to French literature. François de Sales (1507-1622), . . . at the king's request, published a collection of spiritual letters addressed to a relative under the title of *L'Introduction à la Vie Dévote* (1609). Madeleine de Scudéry's (1607-1701) two chief novels are *Artamène, ou Le Grand Cyrus* (1640-1653), and *Clélie* (1654-1661). . . . In 1622 Charles Sorel (1500-1674) published the *Histoire Comique de Francion*, and five years later the *Berger Extravagant*. The greatest of the literary societies of France, the French Academy, sprang from a private society of men of letters at Paris, which about the year 1620 used to meet at the house of one Courart. . . . Richelieu . . . offered his protection and official recognition, . . . and under the title of *Académie Française* they held their first sitting on March 13th, 1634. . . . Their chief occupation . . . was the compilation of a dictionary, which has become famous under the name of *Dictionnaire de l'Académie*, and of which the first edition appeared in 1694. The Academy by undertaking its dictionary, and projecting a grammar, took away from polite society the direction of the language, although its object was the same as that of the *précieuses* and their followers. The efforts of both tended to make the language gain in dignity and precision, but impoverished it by the elimination of its picturesque and forceful elements. [See also ACADEMY, FRENCH.] . . . It received much help from Vaugelas (1585-1650), one of its early members. . . . One of the most famous of the academicians was Jean Louis Guez de Balzac (1594-1654), who was the first to apply to prose the principles which had guided Malherbe in verse. . . . If Balzac was devoid of ideas no man ever had more than his great contemporary and friend René Descartes, the founder of modern philosophy, as opposed to scholastic disputes and subtleties. . . . His chief works consist (a) of the *Discours de la Méthode* (1637), the first philosophical work of importance written in the French language; (b) of the posthumous *Traité des Passions* (1650), also in the vernacular; (c) of the *Meditationes* (1641) and *Principia* (1644), written in Latin. . . . By far the greatest writer of this period was Blaise Pascal. A consideration of his work [must include mention] of Port Royal and the Jansenists. [See PORT ROYAL.] . . . Pascal, when about twenty-three, . . . read eagerly in the writings of Jansen. [About] 1654 . . . he joined . . . [the community of Port Royal] and henceforth till his death in

1662 he threw himself with passionate devotion into its cause. Apart from Pascal's works as a mathematician and a physicist, his two great works are the *Lettres Provinciales* (1656-57) and the posthumous *Pensées*. [See also PORT ROYAL AND THE JANSENISTS: 1602-1700.] . . . The recognized critic of the classical school . . . is Nicholas Boileau, surnamed Despréaux. [He] was born . . . in 1636. . . . His first publications were *Satires* (1660-1665), . . . followed by the first *Épîtres*, by the *Art Poétique* (1674), by the first cantos of the clever serio-comic poem *Le Lutrin*. In 1677 Boileau was appointed, together with Racine, to write the history of the king. . . . The last period of his life, down to his death in 1711, was taken up with his polemics with the Moderns. To this period belong the *Reflexions Critiques sur Longin* (1694), the *Ode sur la Prise de Namur* (1693), the three last *Épîtres* (1695), and the three last *Satires* (1694, 1698, 1705). All Boileau's most important contributions to literature . . . fall under the head of literary criticism. . . . His . . . influence as a critic was immense, and lasted till the rise of the 'Romantic School' at the beginning of the 18th century. . . . Jean de la Fontaine [was] the greatest fabulist in the literature of the world. [He] was born on the 7th of July, 1621, . . . and his death [occurred] in 1695. Besides his *Fables* . . . La Fontaine is the author of five books of *Contes*, . . . five larger poems, . . . various smaller poems, . . . a tedious paraphrase of *Psyche*, and twelve plays which prove that La Fontaine was destitute of dramatic genius. The *Fables*, which consist of twelve books, were published and written at different times between 1668 and . . . 1694. . . . What distinguishes him above all things from most of his illustrious companions is the fact that he is a poet, in the sense that we can always recognize the unobtrusive but perpetual intervention of his own personality into his work. . . . But instead of depicting man only he made animals his special study, and, what is more, he is the only writer of his century who introduced external nature into his works. [Between 1650 and 1680] prose developed considerably in the direction of memoirs. Of these the most remarkable are the *Mémoires* (1662-1670) of Paul de Gondi, Cardinal de Retz (1613-1679), in which he relates the events of the Fronde. . . . The same period is also covered by the *Mémoires* of the Duc de la Rochefoucauld [1613-1680], the author of the more famous *Maximes*. . . . Epistolary art also finds many a notable representative in this age; in fact, it may be said to have reached perfection in the letters of Mme. de Sévigné (1627-1696). . . . A letter-writer also . . . was Marie Madeleine, Countesse de la Fayette (1634-1693). [A prose writer of the second half of the century was Jean de la Bruyère (1645-1696).] Apart from his unimportant *Dialogues sur le Quietisme* (1600), his only work is the *Caractères ou les Mœurs de ce Siècle* (1688), appended to a translation of the *Characters* of the Greek writer Theophrastus. . . . [It] consists of maxims and portraits [on many subjects]. The leading idea of the eighteenth century, the idea of human progress, first emerged in the famous 'Quarrel of the Ancients and Moderns,' which had its origin in an academic disputation as to whether Christian heroism and Christian faith afforded more suitable material for a Christian poet than the history and fables of antiquity. . . . The quarrel, which seemed appeased, broke out again at the beginning of the 18th century. [See CLASSICS: 16th-17th centuries.] . . . [François de la Motte Fénelon (1651-1715) was a writer whose] "respect for religion and antiquity connect [him] with the 17th century, but

[whose] political opinions, [and] intellectual curiosity, betray the immediate precursor of the 18th century. . . . The varied character of Fénelon's works is a proof of the originality and flexibility of his intellect."—L. E. Kastner and H. G. Atkins, *Short history of French literature*, pp. 100-103, 117, 119-124, 127, 129-131, 145-146, 153, 155, 157.—See also HISTORY: 24.

1700-1794.—Poetry of the eighteenth century.—"The literature of the eighteenth century, despite the many great names which adorn it, and the extraordinary practical influence which it exercised, is, from the point of view of strict literary criticism, which busies itself with form rather than matter, a period of decadence. In all the departments of Belles Lettres a servile imitation of the models of the great classical period is observable. . . . During the reign of Louis XVI., the Revolution and the Empire, . . . the average literary value of what is written in French is but small. . . . Poetry and the drama naturally suffered most from the course of events and poetry pure and simple suffered more than the drama. . . . The first poet who is distinctly of the eighteenth century, and not the least remarkable, was Jean Baptiste Rousseau (1669-1741). . . . Rousseau [was] a direct pupil of Boileau, who, with great faculties for the formal part of poetry, and not without some tincture of its spirit, set himself to be a lyric poet after Boileau's fashion. . . . Rousseau's principal works are certain odes, most of which are either panegyrical, . . . or else . . . drawn from the Bible. The *Cantates* are of the same kind as the latter. There . . . are curiously contrasted with the third principal divisions of his poems, consisting of epigrams. . . . It would not be easy to give a clearer idea of the strange conception of poetry which prevailed in France at this time than is given in the simple statement that Voltaire was acknowledged to be its greatest poet. . . . During the whole of his long life his literary production was incessant, and the form most congenial to him was poetry, or at least verse. Besides the *Henriade*, his only poem of great bulk is the scandalous burlesque epic of the *Pucelle*. . . . Besides these two long poems Voltaire produced an immense quantity of miscellaneous work, tales in verse, epistles in verse, discourses in verse, satires, epigrams, *vers de société* of every possible kind. . . . [Jean J.] LeFranc de Pompignan . . . had some poetical talent, which was shown principally in his ode on the death of J. B. Rousseau. . . . Saint Lambert . . . imitated Thomson's *Seasons* . . . in a poem of the same name, which set the fashion of descriptive poetry in France for a considerable time. The three most remarkable of his followers, all considerably superior to himself in power, were Lemierre, Delille, and Roucher. . . . It has been said that the glory of Delille as the greatest poet of the last quarter of the century was shared by . . . Escouchard Lebrun. . . . The places accorded by their contemporaries to Delille and Lebrun really belonged to two writers of a very different character. . . . Parny and André Chénier. . . . Chénier, beyond question the greatest poet of the eighteenth century in France, was born . . . in 1762. . . . He wrote frequently in the *Journal de Paris*, the organ of the moderate royalist party. . . . He was at last arrested in March, 1794, and was guillotined. . . . His poems are mostly antique in their titles and plans. . . . *La Jeune Tarentine*, *La Jeune Captive*, *L'Aveugle*, and some others, are of extreme merit."—G. Saintsbury, *Short history of French literature*, pp. 367-374.

1700-1799.—Drama.—Bondage of tragedy to

the classical form.—Crébillon.—Tragedies of Voltaire.—Comedy.—Its superiority to the tragedy of the period.—Beaumarchais. See DRAMA: 1700-1790.

1700-1800.—Philosophical spirit.—Fontenelle.—Montesquieu.—History and letters.—Voltaire.—Memoirs of Beaumarchais.—"The entire literary and intellectual movement of the eighteenth century is very often called the *philosophe* movement, and the writers who took part in it, *les philosophes*. The word 'philosopher' is, however, here used in a sense far different from its proper and usual one. *Philosophie*, in the ordinary language of the middle and later seventeenth century, meant simply freethinking on questions of religion. This freethinking . . . involved no revolutionary or even reforming attitude. . . . As, however, the next century advanced, the character of French scepticism became altered. . . . French 'philosophism' suddenly became militant and practical. . . . This spirit . . . overflowed into every department of literary occupation."—D. Saintsbury, *Short history of French literature*, p. 445.—In the eighteenth century there are "a number of writers who represent the transition from the old to the new, and are commonly described as the precursors of the *philosophes*. We will here confine our attention to two of these—Fontenelle and Montesquieu. Bernard Le Bouvier de Fontenelle was the son of a sister of Corneille, and was born in Corneille's native town, Rouen, in 1657. He found his true line in his entertaining book of popular science, *Entretiens sur la Pluralité des Mondes* (1686), his *Histoire des Oracles* (1687), and his *Éloges des Académiciens* (1708-19). He died in 1757. . . . Charles Louis de Secondat, Baron de la Brède and de Montesquieu, was born in the Château de la Brède, near Bordeaux, in 1689. . . . He died in 1755. . . . His principal contribution to general literature is to be found in his earlier *Lettres Persanes* (1721). . . . In their direct social and political purpose the *Lettres Persanes* distinctly anticipate the later eighteenth century literature of reform; in their combination of solid thought and vivacity of style they quite as distinctly point forward to . . . Voltaire."—W. H. Hudson, *Short history of French literature*, pp. 126, 128.—"The Baron de Montesquieu was an apostle of political liberty. . . . The *Lettres persanes* . . . is a bitter satire of the ridiculous characteristics of European society, in which Montesquieu touches upon the most serious questions of philosophy, politics, and morality. [With the publication of the *Lettres*] Montesquieu's reputation was suddenly established; the *Lettres*, we are told, 'sold like bread.'"—A. L. Kosta, *History of French literature*, pp. 307, 309.—"Montesquieu's place in the thought of this age is a high one. His views were noble and his scope of view was wide. His learning was sufficient to serve as a basis for his sound judgment to build upon, and his imagination served him well in enabling him to bring charmingly witty satire to the aid of his good sense and just discrimination in the sphere of political thought."—C. W. Hutson, *History of French literature*, p. 154.—"The most brilliant, influential, and infinitely versatile of all the French writers was Voltaire, whose real name was François-Marie Arouet, born at Paris in 1694. . . . [In] his *Lettres Philosophiques sur les Anglais*, . . . he undertook to make France understand England. These brought upon him further persecution, and it was in . . . retirement that he composed the *Éléments de la Philosophie de Newton*. This work, in the course of a few years, de-throned the official philosophers of France and Germany, Descartes and Leibnitz. The publication

of the *Épître à Madame du Châtelet* on the philosophy of Newton raised a new storm. . . . *Candide, ou l'optimisme* [was] his most important philosophical novel. . . . [The] years . . . passed in his retreat at Ferney were extremely fruitful. His prolific mind produced a quantity of poems of the most varied types, . . . numerous works of religious polemics, the *Dictionnaire Philosophique*, a number of pamphlets directed against his enemies. . . . At the same time Voltaire kept up an immense correspondence and animated with his spirit the *Encyclopédie* which d'Alembert and Diderot were compiling."—A. L. Kosta, *History of French literature*, pp. 286, 291-292, 295.—"In judging a man's character, it is unwise and unjust to separate him from his age. It is peculiarly fitting that he should be judged by his age when, as in the case of Voltaire, his is the greatest name of his age. His varied excellence, his immense influence, his prolonged period of intellectual work, entitle him to an extraordinary place in the literature of his country. On the other hand, his open unbelief, the mockery which he directed against everything held sacred by others, the bitterness of his assaults upon Christianity, have combined to give him a bad eminence. . . . But when we come to look deeply into the history of his times, it is easy to see how a mind, clear, subtle, bold, and naturally honest, was brought to indignant revolt against such religion as he saw around him, . . . while its lack of depth kept it from seeking the truth for itself with vital earnestness. . . . When we see how nearly he touches the supreme of excellence in . . . anything and everything except comedy, we cannot fail to be amazed at the fertility and versatility of his genius, and the wide sweep and sparkle of his powers. If he lacked depth, he had everything else."—C. W. Hutson, *History of French literature*, pp. 156, 171.—"In history proper, that is to say, the connected survey from documents of . . . the past, the age saw, if not the beginning, certainly the maturing of a philosophical conception of the science. Putting Bossuet out of the question, Vico in Italy, Montesquieu and Turgot in France, are usually and rightly credited with the working out of this great conception. But though pretty fully worked, or at least sketched out, it was not applied in any book of bulk and merit. The writings of Montesquieu and Turgot themselves are not history—they are essays of lesser or greater length in historical philosophy. Nor from the merely literary point of view has France any historical production of the first rank to put forward at this time. . . . Nor again do the memoirs of this time equal those of the seventeenth century in literary power, though they are useful as sources of historical and social information. . . . On the other hand, the letter-writers of the time are numerous and excellent. Although no one of them equals Madame de Sévigné in bulk and in completeness of merit, the letters of Mademoiselle de l'Éspinasse, of Madame du Defand, of Diderot to Mademoiselle Volland, and some others, are of very great excellence, and almost unsurpassed in their characterization of the intellectual and social peculiarities of the time. . . . Voltaire's . . . strictly historical work was indeed considerable, even if what is perhaps the most remarkable of it, the *Essai sur les Mœurs* (which may be described as a treatise, with instances, on the philosophy of history, as applied to modern times), be excluded. Besides smaller works, the histories of Charles XII., and Peter the Great, the *Age of Louis XII.*, the *Age of Louis XV.*, and the *Annals of the Empire*, belong to the class of which we are now treating. Of these there is no doubt that the *Siècle de Louis*

*Quatorze*, 1752, is the best, though the slighter sketches of Charles, 1731, and Peter, 1759, are not undeserving of the position they have long held as little masterpieces. Voltaire, however, was not altogether well qualified for a historian; indeed, he had but few qualifications for the work, except his mastery of a clear, light, and lively style. He had no real conception, such as Montesquieu had of the philosophy of history, or of the operation of general causes."—G. Saintsbury, *Short history of French literature*, pp. 400, 400, 411.—See also HISTORY: 25.—Mention must be made of the *Mémoires of Beaumarchais*, written during this period, which were among the contributing causes of the discontent preceding the revolution. They contained clever, witty attacks on judicial injustice and must be rated as among the most audacious polemics in literature.—See also FRANCE: 1789: Survey of France on the eve of revolution: Literary forerunners.

1700-1814. — Fiction. — Development of the novel and the short tale.—Philosophical and didactic tendency of later prose-writing.—"The peculiarity of the eighteenth century in France as regards literature—that is to say, the application of great talents to almost every branch of literary production without the result of a distinct original growth in any one department—is nowhere more noticeable than in the department of prose fiction. The names of Lesage, Prévost, Marivaux, Voltaire, Rousseau, are deservedly recorded among the list of the best novel writers. Yet, with the exception of *Manon Lescaut*, which for the time had no imitators, of the great works of Lesage which, admirable in execution, were by no means original in conception, and of the exquisite but comparatively insignificant variety of the prose *Conte*, of which Voltaire was the chief practitioner, nothing in the nature of a masterpiece, still less anything in the nature of an epoch-making work, was composed. The example of *Manon* was left for the nineteenth century to develop, the others either died out . . . or else were subordinated to a purpose, the purpose of advocating *philosophe* views, or of pandering to the not very healthy cravings of an altogether artificial society. Yet, so far as merely literary merits are concerned, few branches of literature were more fertile than this during the period. The first, and, on the whole, the most considerable name of the century in fiction is that of the author of *Gil Blas*. Alain René Lesage was born at Sarzeau, near Vannes, on the 8th of May, 1668, and died at Boulogne on the 17th of November, 1747. . . . He turned, though not very early, to literature and began by a translation of the 'Letters' of Aristænetus. . . . Perhaps the greatest stroke of good-fortune in his life was the suggestion of the Abbé de Lyonnet that he should turn his attention to Spanish literature. . . . He translated the 'New Don Quixote' of Avellaneda . . . and he adapted freely plays from Rojas, Lope de Vega, and Calderón. . . . *Gil Blas*, his greatest work, originally appeared in 1715, but was not completed until twenty years later. He also wrote—besides one or two bright but trifling minor works of a fictitious character, *La Valise Trouvée*, *Une Journée des Parques*, a keen piece of Lucianic satire, many other romances in the same general style as his great works, and more or less borrowed from Spanish originals. . . . The first writer of fiction after Lesage who is worthy of separate mention at any length . . . is Marivaux, an original and remarkable novelist, who, though by no possibility to be ranked among the great names of French literature, occupies a not inconsiderable place among those who are remarkable without

being great. . . . [The] works which concern us are the famous [unfinished] romance of *Marianne*, 1731-1742, and the less-known one of the *Paysan Parvenu*, 1735. His dramas, rather than his fictions, procured him a place in the Academy in 1742. . . . It is certain that [*Marianne*] is a remarkable novel, and that it, rather than the plays, gave rise to the singular phrase *Marivaudage*, with which the author, not at all voluntarily, has enriched literature. . . . The real importance of *Marianne* in the history of fiction is that it is the first example of the novel of analysis rather than of incident (though incident is still prominent), and the first in which an elaborate style, strongly imbued with mannerism, is applied to this purpose. [See also DRAMA: 1700-1790.] . . . A third eminent writer of novels was, in point of production, a contemporary of Lesage and Marivaux . . . and he more than either of them set the example of the modern novel. The Abbé Prévost, sometimes called Prévost d'Exiles, was born at Hesdin, in Picardy, in April, 1697. . . . His chief works of fiction are the *Mémoires d'un Homme de Qualité*, 1720, *Cleveland*, and the *Doyen de Killérine*, 1735, romances of adventure occupying a middle place between those of Lesage and Marivaux. But he would have been long forgotten had it not been for an episode or rather postscript of the *Mémoires* entitled *Manon Lescaut*, in which all competent criticism recognises the first masterpiece of French literature which can properly be called a novel. . . . The works of the three principal writers who have just been discussed belong to the first half of the century, and do not exhibit those characteristics by which it is most generally known. . . . The *philosophe* movement, which dominated the middle and latter portions of the age, was not long in invading the department of fiction. Each of the three celebrated men who stood at its head devoted himself to the novel in one or other of its forms; while Montesquieu, in the *Lettres Persanes*, came near to it, and each of the trio themselves had more or fewer followers in fiction.

"No long work of prose fiction stands under the name of Voltaire, but it may be doubted whether any of his works displays his peculiar genius more fully and more characteristically than the short tales in prose which he has left. Every one of them has a moral, political, social, or theological purpose. *Zadig*, 1748, is, perhaps, in its general aim, rather philosophical in the proper sense; *Babouc*, 1746, social; *Memnon*, 1747, ethical. *Micromégas*, 1752, is a satire on certain forms of science; the group of smaller tales, such as *Le Taureau Blanc*, are theological or rather anti-theological. *L'Ingénu*, 1767, and *L'Homme aux Quarante Écus* (same date), are political from different points of view. All these objects meet and unite in the most famous and most daring of all, *Candide*, 1758. Written ostensibly to ridicule philosophical optimism and on the spur given to pessimist theories by the Lisbon earthquake, *Candide* is really as comprehensive as it is desultory. . . . No inconsiderable portion of the extensive and unequal work of Diderot is occupied by prose fiction. He began by a licentious tale in the manner, but without the wit, of Crébillon the younger; a tale in which, save a little social satire, there was no purpose whatever. But by degrees he, like Voltaire, began to use the novel as a polemical weapon. The powerful story of *La Religieuse*, 1760, was the boldest attack which, since the Reformation and the licence of Latin writing, had been made on the drawbacks and dangers of conventual life. *Jacques le Fataliste*, 1766, is a curious book, partly suggested, no doubt, by Sterne, but

having a legitimate French ancestry in the *fairies* of the sixteenth century. . . .

"Neither Voltaire, however, nor Diderot devoted, in proportion to their other work, as much attention to prose fiction as did Jean Jacques Rousseau. Even the *Confessions* might be classed under this head without a great violation of propriety, and Rousseau's only other large books, *La Nouvelle Héloïse*, 1760, and *Émile*, 1764, are avowed novels. In both of these the didactic purpose asserts itself. In the latter, indeed, it asserts itself to a degree sufficient seriously to impair the literary merit of the story. The second title of *Émile* is *L'Éducation*, and it is devoted to the unfolding of Rousseau's views on that subject by the aid of an actual example in *Émile* the hero. . . . As a novel, properly so called, it has but little merit. The case is different with *Julie* or *La Nouvelle Héloïse*. This is a story told chiefly in the form of letters. . . . This famous book set the example, first, of the novel of sentiment, secondly, of the novel of landscape painting. . . . Jacques Henri Bernardin de Saint-Pierre was born at Havre in Bernardin, 1737 [and died in 1814]. . . . He met Rousseau, and the influence of Jean Jacques developed the sentimental morality, the speculative republicanism, and the ardent, if rather affected, love of nature which had already distinguished him. His best book, *Paul et Virginie*, is perhaps the only one of his works that can properly be called a novel; but *La Chaumière Indienne* deserves to be classed with it, and even the *Études de la Nature* are half fiction. . . . The later eighteenth century saw a vast number of novelists and novels, few of which were of much literary value, while most of them displayed the evil influences of the time in more ways than one."—G. Saintsbury, *Short history of French literature*, pp. 389-391, 393-400.

1750-1785.—Diderot and the Encyclopædists.—Rousseau.—His social philosophy and its influence.—Buffon.—Turgot.—"Diderot's [1713-1784] special achievement was as editor of the Encyclopædia. In its large folios were brought together all that free inquiry had been able to learn about every imaginable topic. Its articles on the practical arts were of great value. It was outwardly respectful toward Church and State, because otherwise authorization to publish it would have been refused. Articles upon ecclesiastical matters were usually given to liberal churchmen, but references were added to other articles upon kindred subjects in which opinions altogether different were set forth. The fundamental philosophy of the work was hostile to supernatural religion. It was a formidable exhibit of the triumphs of human reason unhampered by the restraints of an orthodoxy which still revered the medieval theologians as authoritative teachers. . . . By 1765 the seventeen volumes were ready to be delivered. There were also supplementary volumes, eleven of them filled with plates."—H. E. Bourne, *Revolutionary period in Europe*, p. 40.—Director-in-chief Diderot was primarily responsible for the entire enterprise, and he also provided innumerable articles on history, philosophy, and the applied sciences. But he also secured the co-operation of most of the leading men of the day . . . who wrote on their own special subjects—Montesquieu on taste; Voltaire on elegance, eloquence, wit, imagination; Rousseau on music; Marmontel on literature; Baron d'Holbach . . . on science; the Abbé Morcellet on theology; Quesnay and Turgot on political economy; and so on. After Diderot's, however, the name most closely connected with the *Encyclopédie* is that of the great mathematician Jean Le

Rond D'Alembert (1717-83). . . . The object of the *Encyclopédie* was twofold: it was intended both as a storehouse of information and as an arsenal of weapons for the use of all who were engaged in doing battle with the forces of ignorance and obstruction. . . . Its principal influence was exerted through the tone and tendency of its thought. On all subjects dealt with it represented the revolt of the modern spirit against authority, tradition, dogmatism, and the dead hand of the past. For this reason it was violently attacked by the conservative party in Church and State; . . . its editor was in frequent peril. . . . Only his splendid courage and tenacity of purpose enabled him to carry it forward. . . . The *Encyclopédie* was so closely identified with the activities of the philosophic party that *encyclopédie* came to be used currently as a synonym for *philosophe*. We have now to turn to the great opponent of the philosophic spirit, the Swiss 'Man of Feeling,' . . . Jean Jacques Rousseau, [who] was born in Geneva in 1712. . . . Rousseau's philosophy was one thing, his character quite another. . . . Though for some years he continued to live in squalid poverty he gradually became intimate with many women of social prominence and with a number of leading men of letters, among them Diderot, at whose invitation he undertook, as we have seen, the articles on music for the *Encyclopédie*. [See also ENCYCLOPÉDISTES.] . . . In 1749 the Academy of Dijon proposed as the subject for a prize essay the question 'Si le rétablissement des sciences et des arts a contribué à épurer les mœurs?' On reading this question in the *Mercur de France*, Rousseau . . . resolved to compete; he wrote his essay, which from first to last is a violent diatribe against all culture, in a sort of frenzy; it was crowned by the Academy; its publication in 1750 created a furor of excitement; and at thirty-eight he stepped from his obscurity and on the instant became famous as the audacious and eloquent apostle of a new and piquant gospel—the gospel of 'Back to Nature.' Four years later he followed this essay up with a *Discours sur l'Origine et les Fondements de l'Inégalité parmi les Hommes*, which further surprised the world by its startlingly radical central thesis that all civilisation is at bottom corruption. . . . Later . . . he wrote *Julie* (1761), *Le Contrat Social* (1761), and *Emile* (1762). . . . The *Contrat Social* is a work of a very different character; it is a treatise written in a style of scientific brevity and precision on the fundamental principles of government and civil society. Logical as it is in method, however, this Bible of the revolutionists (as Lecky aptly called it) is entirely utopian in theory, for in it, after his habit, Rousseau ignores historical facts and builds on the sandy basis of abstract speculation. But its bold proclamation of the sovereignty of the people made an immense impression in that era of general political unrest, and so great was afterwards its effect in the hands of the Jacobin leaders that it is no exaggeration to say that, visionary as were Rousseau's doctrines, 'his dream became a deed that shook the world.' [See also EDUCATION: Modern: 18th century: Rousseau.]

"George Louis Leclerc, Comte de Buffon (1707-88), is chiefly famous for his massive *Histoire Naturelle*, which well exemplifies the eighteenth-century enthusiasm for science and its fondness for reducing all knowledge to system. The consideration of this work does not fall within our province. But the *Discours* which he delivered on his admission to the Academy, commonly known as his *Discours sur le Style* (1753), gives him a certain status in literature. The principal interest

of this lies in its emphasis upon the purely individual quality in style—the quality which classicism tended to repress."—W. H. Hudson, *Short history of French literature*, pp. 141-145, 148, 151.—"Very many writers . . . attacked economical subjects at this time. But Turgot, though not remarkable for the form of his writings, was the most original and influential writer of the liberal school in this department. . . . He was born in 1727, and . . . died in 1781. Turgot's literary work is not extensive. . . . It consists of . . . discourses at the Sorbonne, of memoirs on various political occasions, of some letters on usury, of articles in the *Encyclopédie*."—G. Saint-bury, *Short history of French literature*, p. 462.—See also FRANCE: 1780: Survey of France on the eve of revolution: Literary forerunners.

1789-1820.—Period of transition.—Romanticism.—Madame de Staël.—Chateaubriand.—"The period of the Revolution and the Empire was a time of transition between the 18th and 19th centuries, belonging entirely to neither, but on the whole more akin in spirit to the latter than to the former. It marks the great change which came over literature from the time when the *Encyclopédie* still voiced the prevailing modes of thought and intellectual ideals, to the full outburst of the new genius in the Romantic movement. . . . We have seen that the *philosophes* and Encyclopédistes of the 18th century, while questioning all merely traditional authority in religion and politics, remained on the whole fairly conventional in matters of literature. It was the work of the writers of the transition period of which we now speak to point out new ideals more in keeping with the times, and to pave the way for the great literary revolution which was to follow, while going a considerable part of the way themselves. The two great names are those of Madame de Staël and Chateaubriand, who while working along different lines, had very much in common, and both in their different ways furthered the same tendency. Madame de Staël, by directing the attention of her countrymen to the literatures of other lands, and above all to that of Germany, suggested wider ideals, and struck the first note of that cosmopolitanism which was one of the proudest boasts of the Romantic school. She first drew attention to the Northern literatures as being especially worthy of consideration, and pointed out the romanticism which is their essential characteristic. It is, moreover, noteworthy that she was the first to use the word Romantic in its literary sense, as the opposite of Classic. Romanticism she declared to be the natural and only really living spirit of the time, classicism having no longer anything but a transplanted and unnatural existence. In this the revolt from 18th-century classicism and the declaration of the coming movement are very clearly and directly expressed. Chateaubriand's work in the transition was the necessary complement of that of Madame de Staël; for as she defined the characteristics of the change and established its theory, so he furnished it with ideals, and gave inspiration to the youthful reformers who were to carry the movement to its final realization. Like her he attached great importance to the literature of other countries, while his own writings range over the widest variety of subjects and scenes. He has been called the 'father of romanticism,' and the title is applicable both in the general and in the particular, for he both promoted by his general influence the tendency of the rising literature, and furnished the sources of the many different currents which that tendency later developed. . . . [Madame de Staël's] principal work

are: *De la Littérature considérée dans ses Rapports avec les Constitutions Sociales* (1800), *Delphine* (1802), *Corinne* (1807), *De l'Allemagne* (1810), and the unfinished *Considérations sur la Révolution Française* (1818). In the *Littérature* she lays down principles of literary criticism in its relation to the laws and institutions of society. . . . Her two novels, *Delphine* (1802) and *Corinne* (1807), both present the author herself in different guises and situations, and both show the liberty of the individual in conflict with the fetters and restraints of society. . . . The great and lasting work, however, on which her reputation depends is *De l'Allemagne* (1810). . . . The *Considérations sur la Révolution* (1818), which was left unfinished at her death, is more directly concerned with the political than with the literary side of her activity. . . . The new ideas and the theory of art defined by Mme. de Staël were realized by François René de Chateaubriand. His principal works are:—The *Essai sur les Révolutions* (1797), *Atala* (1801), *Le Génie du Christianisme* (1802), *René* (1805), *Les Martyrs* (1809), *Itinéraire de Paris à Jérusalem* (1811), *Les Natchez* (1826), and the *Mémoires d'Outre-Tombe*, which appeared partly before and partly after his death. Chateaubriand's first literary venture, the *Essai sur les Révolutions*, published in England in 1797, is curious from the fact that the ideas it contains are the exact opposite of his later creed. The work is impregnated with pessimism and scepticism. However, hardly was the work published when he turned round, principally owing to letters from a dead mother and sister. . . . This sentiment of religion, rather a sweet dream than a belief founded upon or requiring proofs, was for the rest of his life, with the royalism with which it was so closely connected, his faith and profession. Moreover, hardly had he published his *Essai* than he set about its refutation in the *Génie du Christianisme*. From this he detached and published in 1801 *Atala*, a kind of prose poem, an episode from the mass of his American impressions and reminiscences, which had a great and immediate success, and established his literary reputation. . . . It is not as a thinker that he is of such importance for the student of French literature. . . . Where his characteristic genius is to be seen is the glowing diction of his descriptive writings, in which he surpassed even his masters, Rousseau and Bernardin de St. Pierre, in the majestic language in which he speaks of some of the great and noble enthusiasms of life, and which acted like a trumpet call and an inspiration to the young and impressionable leaders of the Romantic school. On them Chateaubriand's influence can be traced, not in one style or in one direction alone, but in the most comprehensive fashion."—L. E. Kastner and H. G. Atkins, *Short history of French literature*, pp. 215-216, 210-223, 227.

1800-1875.—History.—Work of Mignet.—Methods and influence of Guizot.—Philosophical history of de Tocqueville.—Political history.—Nationalism.—Historical work of Lamartine, Thierry, Quinet, Michelet. See HISTORY: 26 to 30; 32; 33.

1800-1885.—Romantic movement.—Poetry and prose.—Lamartine.—Victor Hugo.—"Hernani" and the defeat of the Classicists.—Alfred de Vigny.—Alfred de Musset.—Reaction against romanticism.—"Emaux et Camées" of Gautier.—The Parnassiens.—Criticism.—Saint-Beuve.—"With the close of the eighteenth century and the beginning of the nineteenth literature was revived by imagination and sentiment. . . . Along with the ideas liberated by the social ferment was min-

gled the influence of that foreign literature brought to France during the wars of the Republic and of Napoleon. England, Germany, and the Orient all contributed to the great change that came in French literature; most notable was the influence exercised by Shakespeare and Goethe. . . . The romantic school originated in Germany, toward the end of the eighteenth century. . . . In France the movement was not accomplished until another revolution. . . . had occurred: the bitter fight between the adherents of the old classic school and those of the new school—the Romanticists. It raged from 1820 to 1830, the Romanticists finally winning a victory with the memorable performance of Victor Hugo's *Hernani* at the Théâtre Français. . . . The Romantic movement found the best expression in four great poets: Lamartine, . . . Hugo, . . . de Musset, . . . and de Vigny. . . . After these great masters came Auguste Barbier, Brizeux, Théophile Gautier, Sainte-Beuve, and others. Alphonse de Lamartine (1790-1869) . . . was by parentage Alphonse du Prat; but he inherited the fortune and name of his maternal uncle. . . . [He was] in turn historian, publicist, diplomat, orator, and politician. . . . His first literary work, published in 1820, was a volume of poems entitled *Méditations poétiques*. . . . Lamartine's *Chant du sucre* . . . won for him the cross of the Legion of Honor. One of his best lyric productions is *Le Lac*. . . . In his *Harmonies poétiques et religieuses* he seems to have attained the acme of his lyric talents. Lamartine's *Jocelyn*, a tragic poem, . . . is, according to Béranger, the best work of French narrative poetry. His novels are *Les Confidences*, *Raphael*, *Geneviève*, *Le Tailleur de pierre de Saint-Point*, *Graziella*."—A. L. Kosta, *History of French literature*, pp. 357, 360, 370-372.—Lamartine's poems presented "in outward form considerable resemblance to the accepted lyric poetry of the latter classical period, but [were] characterized by a much greater freshness and truth of poetical expression and thought. . . . But though the verse of Lamartine expressed the new spirit in old forms, and in a hesitating way, it still expressed it."—G. Saintsbury, *Primer of French literature*, p. 117.—See also HISTORY: 30.—"Victor Hugo (1802-1885) . . . was, at different times, a royalist, like his mother; a Bonapartist, like his father; . . . and a democratic Republican at his death. The works of Victor Hugo, as numerous as they are varied, attest his great imagination and his extraordinary power of thought."—A. L. Kosta, *History of French literature*, p. 372.—"The immense literary work of Victor Hugo began within four years of the battle of Waterloo, by the establishment of the journal called, oddly enough, *Le Conservateur Littéraire*, in which the poet, then only a boy of seventeen, took part with his brothers Abel and Eugène, and by degrees with all the rising spirits of the new movement. . . . But he soon appeared as an independent author, and his Royalist *Odes*, his mediæval *Ballades*, his barbaresque *Orientales*, and the somewhat more sober but not less beautiful volumes which followed under the titles of *Les Feuilles d'Automne*, *Les Voix Intérieures*, *Les Rayons et les Ombres*, etc., soon placed him at the head of French poetry, a position which in more than sixty years of life he did not lose. His innovations in drama were not less than those which he affected in poetry proper. *Cromwell* was not performed, but *Hernani* served as the battlefield between classics and romantics and resulted in the decided victory of the latter. It was followed by many other dramas which had an almost equal success. The main characteristics of Victor Hugo's poetry are an extraordinary boldness of thought

and phraseology, a complete contempt of artificial rules as to versification, diction, and choice of subject, and above all the most surprising command of musical language, and of a rushing style which carries away the reader whether he will or no. The young writer soon showed himself to be possessed of an equal faculty for prose and for poetry. His earliest prose works were romances of a wild character. . . . *Han d'Islande* [is] an impossible romance of Norway. . . . [In] *Bug Jargal*, . . . the scene is shifted to St. Domingo. . . . *Notre Dame de Paris*, in which the author shifts again to mediæval times, at once took rank as one of the most striking though one of the most unequal prose romances of the century, during which, till his death in 1885, Victor Hugo remained at the head of French literature, and perhaps of the literature of Europe."—G. Saintsbury, *Primer of French literature*, p. 110.—See also DRAMA: 1800-1900.—"A new era for French literature began in 1830. . . . As Chateaubriand, Lamartine, and Lamennais set the tone in 1815, so Hugo with his friends and others of the same free spirit did in 1830. . . . But Victor Hugo outlived all parties and groups and associations of which he was a member in that early time, and his life subsequent to the exciting days of 1830 was a steady development. . . . In 1841 Hugo was elected a member of the Academy. . . . [He] became more and more radical in politics. . . . When Louis Bonaparte, not content with his election to the presidency in 1848, overthrew the government, and proclaimed himself Napoleon III, . . . [in] 1851, there was no enemy more irreconcilable than Victor Hugo. The brave poet was banished, and did not touch the soil of France again till 1870, after Sedan when the Empire had ignominiously dissolved. . . . Most of his exile he spent on the island of Jersey, under the English flag. From there he issued a political pamphlet, 'Napoléon le Petit,' and a succession of volumes of poetry. His second great work of fiction, 'Les Misérables,' appeared in 1862, followed by 'Les Travailleurs de la Mer' [Toilers of the Sea], in 1866 and 'Quatre-vingt-treize,' in 1874. . . . Of his novels 'Les Misérables' is incomparably the best."—G. McL. Harper, *Masters of French literature*, pp. 197, 201, 204-206.—See also DRAMA: 1800-1900.—"The romantic love of vastness, richness, and sublimity, and the romantic absorption in the individual—these two qualities appear in their extremes throughout the work of Hugo; in that of Alfred de Vigny it is the first that dominates; in that of Alfred de Musset, the second. Vigny wrote sparingly—one or two plays, a few prose works, and a small volume of poems; but he produced some masterpieces. A far more sober artist than Hugo, he was also a far profounder thinker, and a sincerer man. . . . In his *Moïse*, his *Colère de Samson*, his *Maison du Berger*, his *Mont des Oliviers*, and others of his short reflective poems, he envisions man face to face with indifferent Nature, with hostile Destiny, with poisoned Love, and the lesson he draws is the lesson of proud resignation. In *La Mort du Loup*, the tragic spectacle of the old wolf driven to bay and killed by the hunters inspires perhaps his loftiest verses, with the closing application to humanity—'Souffre et meurs sans parler'—summing up his sad philosophy. No less striking and beautiful are the few short stories in his *Servitude et Grandeur Militaires*, . . . In the best work of Vigny there are no signs of the strain, the over-emphasis, the tendency towards the grotesque, always latent in Romanticism; its nobler elements are alone preserved; he has achieved the grand style. Alfred de Musset presents a complete contrast. He was the spoilt child

of the age—frivolous, amorous, sensuous, charming, unfortunate, and unhappy; and his poetry is the record of his personal feelings, his varying moods, his fugitive loves, his sentimental despairs. . . . Some of his lyrics are perfect; the famous song of Fortunio in itself entitles him to a high place among the masters of the language; and in his longer pieces—especially in the four *Nuits*—his emotion occasionally rises, grows transfigured, and vibrates with a strange intensity, a long, poignant, haunting note. . . . In poetry, the reaction against Romanticism had begun with the *Émaux et Camées* of Théophile Gautier—himself in his youth one of the leaders of the Romantic School; and it was carried further in the work of a group of writers known as the *Parnassiens*—the most important of whom were Leconte de Lisle, Sully Prudhomme, and Heredia. Their poetry bears the same relation to that of Musset as the history of Renan bears to that of Michelet, and the prose of Flaubert to that of Hugo. It is restrained, impersonal, and polished to the highest degree. The bulk of it is not great; but not a line of it is weak or faulty; and it possesses a firm and plastic beauty, well expressed by the title of Gautier's volume. . . . The *Parnassiens* particularly devoted themselves to classical subjects, and to descriptions of tropical scenes. Their rich, sonorous, splendidly moulded language invests their visions with a noble fixity, an impressive force. Among the gorgeous descriptive pieces of Leconte de Lisle, the exquisite lyrics of Sully Prudhomme, and the chiselled sonnets of Heredia some of the finest and weightiest verse of the century is to be found."—G. L. Strachey, *Landmarks in French literature*, pp. 218-220, 240-241.—"As Victor Hugo was the poet of the new movement, so Sainte-Beuve (1804-1869) was its critic; and like the poet, the critic retained for the whole of his life the superiority which he attained at the beginning of his career."—G. Saintsbury, *Primer of French literature*, p. 120.—"The chief critical writings [of Sainte-Beuve] are contained in the five volumes of 'Port-Royal,' the two volumes of 'Chateaubriand et son Groupe,' the three volumes of 'Premiers Lundis,' the five volumes of 'Portraits contemporains,' the three volumes of 'Portraits littéraires,' the single volume 'Portraits de Femmes,' and . . . best of all in the fifteen volumes of 'Causeries du Lundi,' and the thirteen of 'Nouveaux Lundis.' Forty-seven volumes, and yet no mention made of half-a-dozen others which might be classed as literary criticism! Of the importance of this work I cannot say too much. It is unique among the histories of literature in all languages. . . . Sainte-Beuve must be accounted really great as a discoverer, an appreciator, a defender of good literature."—G. McL. Harper, *Masters of French literature*, pp. 231-232.—"Of the various critics whom the general adoption of Sainte-Beuve's method has called, as already mentioned, into notice, three are perhaps deserving of special mention. [These are Taine, Scherer, and Paul de St. Victor.]—G. Saintsbury, *Primer of French literature*, p. 130.—Other famous and powerful critics of modern French literature are Brunetière (1840-1907) and Faguet (1847-1916).

1800-1921.—Romantic and idealistic novel-writing.—George Sand.—Dumas the elder.—Anatole France.—There was an "astonishing growth of the novel in the nineteenth century. . . . The surpassing exponent of idealistic fiction was a woman—George Sand. She possessed a rich inventive faculty and keen powers of observation, and while her gift of fancy conducted her into the realm of the ideal, she did not fall into the exaggerations of the romantic school. A writer of ex-

traordinary powers, she had an innate love for nature and humanity; within her peculiar province she was a master of French prose. Aurore Dupin (George Sand) was born at Paris in 1804 [and died in 1876]. . . . Latouche gave her a place on the editorial staff of *Le Figaro*, with indifferent results. It was then that she met . . . a young writer, Jules Sandeau, who collaborated with her in a romance, *Rose et Blanche*, under the pseudonym of 'Jules Sand.' . . . The novel *Indiana* [by Mme. Dudevant alone] was published under the name of George Sand. It created a sensation even among the victories of Romanticism. . . . [Other novels of this period are] *Valentine*, . . . and . . . *Lélia*. . . . After her break with de Musset in Italy George Sand published . . . the *Lettres d'un voyageur*, *Jacques*, *André*, *Le Secrétaire intime*, *Leone Leoni*, *Mauprat*, *Lavinia*, etc., . . . novels that belong to her initial period of productivity. . . . The second phase of George Sand's genius and ideas is expressed in her activities during the succeeding eight years. . . . She . . . became a philosopher and socialist. . . . She wrote . . . *The Itinerant Journeyman*, . . . *Spiridion*, . . . the *Sept cordes de la lyre*, *Le Meunier d'Angibault* (The Miller of Angibault) [which] is almost communistic, and . . . the *Pêché de M. Antoine* [in which she] preaches the socialistic theories of Charles Fourier. . . . [In] her country place at Nohant . . . she wrote . . . *Francis the Foundling*, . . . *The Master Bellringers*, . . . *La Petite Fadette* and . . . *The Devil's Pool*. . . . George Sand, in ten volumes, told the story of her past life in *Histoire de ma vie* and in *Elle et Lui*. . . . Madame Dudevant now entered on the third period of her literary career. It embraced: *Jean de la Roche*; *Valvèdre*; . . . *La Confession d'une jeune fille*; *Mademoiselle de la Quintinie*; . . . *Malgré Tout*; . . . *Césarine Dietrich*; *Soeur Jeanne*, etc. These novels are purely romantic. The best drama by George Sand is the *Marquis de Villemer*. . . . [She wrote many] other plays. . . . During the last years of her life she gave another proof of her versatility in [her] pleasing fairy tales. . . . George Sand's literary fertility is almost past belief. . . . Yet in the forty-four years of her literary life her powers did not deteriorate. Damas père, Sue [1804-1857], and Soulié were the principal representatives of those romanticists, called 'les violents,' whose special achievement was dramatic effect and the portrayal of exaggerated passions. Alexandre Dumas, the elder, is without doubt the most productive of modern novelists; he is also celebrated as a dramatic author. . . . *Les Trois Mousquetaires* [The Three Musketeers] remains one of the most popular works in the literature of all nations."—A. L. Konta, *History of French literature*, pp. 401-407.—See also DRAMA: 1800-1900.—Other novelists of note are Paul de Koch (1794-1871), Edmond About (1825-1885), playwright and journalist as well as novelist, Jules Verne (1828-1905). Here also we must consider Pierre Loti, whose real name is Julien Viaud. The scenes of his exotic novels are placed in the Orient, with which he was personally familiar. In a letter published by Osman Edwards, Lafcadio Hearn has said of him, "There is not much heart in Loti; but there is a fine brain; and there is a nervous system so extraordinary that it forces imagination back to the conditions of old Greek life, when men had senses more perfect than now. . . . No other literary man living sees and hears and smells and thrills as finely as he. . . . As for what he says of the Japanese women, it is perfectly impeccably accurate as far as it consists of a record of observations of senses. . . . But he keeps to sur-

faces; his life is surfaces." Among Loti's novels are "Aziyadé," and "Les Désenchantées," Turkish stories, and "Japonneries d'automne" and "Madame Chrysanthème," whose heroines are Japanese. Anatole Thibaut, known as Anatole France, was born in Paris in 1844. Both as a critic and a novelist, he has become one of the foremost of modern French writers. His novels include "La Rôtisserie de la Reine Pédauque," "Le Crime de Sylvestre Bonnard," "Thaïs," "Le Mannequin d'osier," and "L'Orme du mail." "His wit is so abundant that one forgets there were 'father wits' in times bygone. . . . [But] in his satires there is no fury. He does not wage war like Voltaire; the needful conviction and resentment are both wanting in him. . . . Anatole France is one of those diversely gifted minds to whom it is almost impossible to assign any one characteristic epithet. . . . In particular . . . [he] is a man of wit. This in itself is no small praise. . . . To be at once a critic, a novelist, a *fantaisiste*, according to occasion or circumstance, is thrice to merit the honors he has reaped."—Y. B. de Bury, *French literature of today*, pp. 213-215.—Jules Lemaitre, born in 1853, is known as a poet and playwright, a writer of tales, but especially as a literary and dramatic critic. His collected tales include "Serenus," "Myrrha," "Dix contes." "Les Rois" is a remarkable novel. "His way of writing being entirely the result of his own individuality, Lemaitre's talent is many-sided, bold, ironical, poetical, at times almost religious, and always proud and lofty. . . . His fame as a reviewer rose long before his first victories as a playwright."—*Ibid.*, pp. 185, 188.

1800-1921.—Realistic school.—Balzac.—Later realists.—Naturalism.—Zola.—De Maupassant.—Short story writing.—Psychological novels.—"Romanticism found other enemies than the defenders of classical tradition. . . . Scarcely fifty years had passed since the dawn of Romanticism, when it was destined to receive the deathblow of fatal decadence. . . . The triumph of Realism over Romanticism is the victory of science over imagination and sentiment. . . . Literary realism is the expression of a society no longer believing in the ideal, and with no other religion than that of facts. . . . In all styles, from lyricism to history Romantic literature had been poetry. . . . Stendhal, Mérimée, Balzac, and indeed, all the initiators of Realism, openly manifested their scorn for verse. . . . If Realism has not entirely stifled poetry, it has at least changed its character. . . . The novel, which already held as important a place in our literature, during the second half of the century becomes the richest and most flourishing of literary styles."—G. Pellissier, *Literary movement in France during the nineteenth century*, pp. 322, 332, 408.—"Balzac is the greatest French novelist. One-third or one-half of the best French novels are his. . . . He expressly formulated, and on many a page he illustrated, an unimpeachable doctrine of realism. He is the greatest French novelist, but wrote some of the most inartistic books in all French literature. He was the father of the realists; yet, for many of his own works his sons are tempted to disown him. . . . His life, from the turning-point in or about 1822, was one continual debauch of labor. . . . A large part of his work is the production of a weary mind and lacks spontaneity. . . . Whoever wishes to read something of Balzac and cares little about toiling through the long valley of the shadow which [his] whole 'Human Comedy' . . . really is, . . . will do well to begin . . . with the . . . successes of the great master. They are numerous enough. No other French writer, perhaps no two or three of them together, can offer so long a list

of splendid novels. 'Eugénie Grandet,' 'César Bironneau,' 'Le Curé de Tours,' 'Le Père Goriot,' 'La Femme de Trente Ans,' 'Un Début dans la Vie,' 'La Rabouilleuse,' 'Le Colonel Chabert,' 'L'Envers de l'Histoire contemporaine,' and of short stories: 'Jésus-Christ en Flandre,' 'Un Episode sous la Terreur,' 'Le Chef d'oeuvre inconnu,' 'La Messe de l'athée,' 'L'Auvergne rouge,' 'Le Requisitionnaire,' 'El Verdugo,' 'Un Drama au Bord de la Mer.'—G. McL. Harper, *Masters of French literature*, pp. 280, 285, 314-315.—"Prosper Mérimée (1803-1870), a man of exact taste and great scholarship, began by forging imitations of the Illyrian and other barbaric poetry, according to a general fancy of the early Romantics. He soon however quitted the school so far as outward companionship went. But he continued to write in a marvelous prose style, and to compose short tales and novels of extraordinary merit in construction and subtlety in depicting character."—G. Saintsbury, *Primer of French literature*, pp. 121-122.—Among his novels and short stories are "La Jacquerie," "Matteo Falcone," "Carmen, and "Colomba," which is his masterpiece.

"Marie-Henri Beyle (1783-1842), who took the pseudonym of Stendhal from the birthplace of the German scientist Winckelmann, whom he greatly admired, was a writer of great power and originality, and exercised a marked influence on the later writers of the naturalistic school. . . . Yet he wrote abominably, and it was not till long after his death that literary criticism awoke to his importance. 'I will not say he writes badly,' says Faguet, 'but that he does not write at all. He regards neither form nor method. He drafts, he never writes. Nevertheless, he is a great novelist.' . . . Of Stendhal's novels, *La Chartreuse de Parme* (immortalized by its description of the battle of Waterloo) and *Le Rouge et le Noir* are generally regarded as his most important fiction, and as having paved the way for the French psychologists of our own time. . . . Stendhal's best work, perhaps, is his minutely analytical study, *De l'Amour*, which fell flat at the time of publication, but has come to be recognized as unsurpassed of its kind. . . . If the deranged nervous system of Gustave Flaubert (1821-80) had not belied a body that bespoke the robust giant, he might have been the king of the Romanticists; for romantic he was by inclination and equipment. Instead, he wrote *Madam Bovary*—a dreary, a sordid tragedy of provincial life in Normandy. . . . Flaubert, however, though he has been acclaimed the high priest of realism, does not really belong to the school of disciples who afterward hailed him as master. . . . In one of his romantic reactions he took refuge in antiquity, and wrote *Salammbô*."—A. L. Konta, *History of French literature*, pp. 424-427.—Other novels are "La Tentation de Saint-Antoine," and the "Trois contes," containing three novelettes.

"Those curious literary twins, the brothers Goncourt (Edmond, 1822-06; Jules, 1830-70), afford a singular example of collaboration: each took the same subject, and elaborated it on the same plan, and then together they fused their separate productions into one work issued under both their names. The literary method which they introduced, and applied to the writing of history, as well as fiction, was microscopic in observation, and infinitely laborious and tortured in the record. . . . Among the novels which they jointly produced were *Sœur Philomène* (1861), . . . *Revue Maupepin* (1864), . . . *Germinie Lacerteux* (1865), . . . *Manette Salomon* (1867), . . . *Madame Gervaisais* (1860). . . . The dramas produced jointly are *Henriette Maréchal* and *La Patrie en danger*, protestations against

romanticism. The Goncourts made a specialty of the eighteenth century, and their art criticisms and historical studies are of considerable value. . . . After . . . the . . . death of his brother Jules, [Edmond Goncourt] continued his labors alone. Between 1844 and 1878 he produced the novels, *La Fille Elisa*, *Les Frères Zemganno*, *La Faustine*, *Chérie*; and he lived to see a fungous growth of the naturalistic fiction he had helped to nourish. From 1887 until his death he was occupied with the nine volumes of *Le Journal des Goncourt*, which is packed with information—more or less indiscreet—concerning the lives of himself and his literary contemporaries. . . . Alphonse Daudet (1840-97), one of the most engaging figures in modern French literature, combined the imagination and fancy of an idyllic poet with the faculty of observing and recording modern life in some of its sinister aspects. The exuberance of the Provençal was tempered and restrained by his Parisian environment and associations; his impressionable temperament and his keen perception of human suffering were held in check by a sense of humor that, in the main, saved him from errors of intolerance and disproportion. At first he wrote poems, collected in book form, in 1858, with the title *Amoureux*. This brought him some celebrity, but he did not long pursue the vocation of poet. In these first years he essayed the drama, to which he returned from time to time—always with indifferent success; earned his bread in journalism, and produced some fairy tales, including *Le Roman du Chaperon rouge*. Then in 1868-69 . . . there appeared two works that made him famous. The first of these, *Le Petit Chose*, was a pathetic leaf from his own life; the second, *Lettres de Mon Moulin* (Letters from my Windmill), a collection of tales and sketches—idyllic, realistic, humorous, analytic—that marked him a master of the *conte*. Daudet thereafter wrote many short stories—a vehicle in which his varied powers are seen in miniature, and in which he has not been surpassed by any of his contemporaries. With the publication of *Jack* (1873)—a poignant story of an illegitimate child, that profoundly affected George Sand—he realized that his *métier* was the novel. A year later, *Fromont jeune et Risler aîné* was a popular success, and revealed him as a realistic novelist of penetration and power."—A. L. Konta, *History of French literature*, pp. 428-431.—Other novels are "Numa Roumestan" (1882), "L'Évangéliste" (1883), "Sapho" (1884), "Tartarin de Tarascon" (1872), "Tartarin sur les Alpes" (1886), and "Port-Tarascon" (1890).

"'Naturalism,' says a distinguished critic, 'is still realism, but realism advertising scientific pretensions; or rather, it is an attempt to assimilate the proceedings of literature and the proceedings of science. It is, therefore, experimental. In short, the naturalistic novelists have been attentive observers of modern life, but have unfortunately paid attention only to its obscenities.' The chief representative of this school is Emile Zola (1840-1902), whose so-called scientific method . . . was especially directed to expounding human motives and conduct with reference to heredity. It is pretty generally agreed that he was the victim of his own theories—which he defined in his *Roman expérimental* and in his *Romanciers naturalistes*—and that in failing to demonstrate them in his own writings, he also failed to obtain the lasting recognition which he might otherwise have achieved through a happier employment of his powers. These consist of a prodigious talent for description; . . . of a gloomy imagination that impelled him to write as a kind of epic poet masquerading as a

scientific observer; of a vigor in composition, a fecund creative ability. . . . After the appearance of *Mes Haines*, *Mon Salon*, and *Edouard Manet* (an appreciation of the impressionistic painter), he produced a volume of short stories, *Contes à Ninon* (1864) that are not inferior in literary value to his later and more celebrated work, together with several novels, of which *Thérèse Raquin* (1867) will bear comparison with some of his most vivid creations. From 1871 until 1893 Zola occupied himself in writing the series of twenty novels on which his reputation chiefly rests—novels comprising a separate story in each volume, but linked by the same purpose, and introducing members of the same family under the general title, *Les Rougon-Macquart, histoire naturelle et sociale d'une famille sous le second Empire*. The Rougon-Macquart novels, in the order of their appearance, are: *La Fortune des Rougon*, *La Curée*, *Le Ventre de Paris*, *La Conquête de Plassans*, *La Faute de l'Abbé Mouret*, *Son Excellence Eugène Rougon*, *L'Assommoir*, *Une Page d'Amour*, *Nana*, *Pot-Bouille*, *Au Bonheur des Dames*, *La Joie de Vivre*, *Germinal*, *L'Œuvre*, *La Terre*, *Le Rêve*, *La Bête Humaine*, *L'Argent*, *La Débâcle*, *Le Docteur Pascal*. This plan—pursued partly by the methods of naturalistic observation, and also in a great measure by devouring books on the subject in hand—was to demonstrate scientifically and with reference to hereditary laws how a certain number of people of the same origin would conduct themselves in different environments. With two exceptions, these novels are repulsive and distorted pictures of life, often deformed, even in their most brilliant passages, by coarseness and bad taste. . . . In 1898, four years before his death, he startled France by his daring and eloquent espousal of the cause of Dreyfus—his famous letter in the *Aurore*, beginning 'J'accuse' . . . leading to an investigation and exposure of the conspiracy against the long-suffering army officer. . . . Both in his person and in his work *Guy de Maupassant* (1859-93) presents a paradox. Outwardly a ruddy athlete, a powerful oarsman and swimmer, he was in reality a neurasthenic; in his literary labors he found no joy, but only, as he has himself confessed, a refuge from the emptiness of life. . . . 'He was born,' says Faguet, 'to see and to paint that which he saw—and only that. But he saw it with a fullness and a miraculous intensity of vision, and he described it with a breadth and at the same time with a precision which enraptured and stupefied.' . . . After serving a literary apprenticeship of seven years (1873-80) to Flaubert, who was his godfather and an old friend of his mother, he put forth a volume of poems (*Des Vers*) of marked originality. In the same year he astonished the literary world with his story *Boule de suif*, contributed to the *Soirées de Médan*—a collection of short tales by Zola, J. K. Huysmans and others. This together with the two novels, *Une Vie* (1883)—a very painful but convincing picture of an average woman's tragic life—and *Pierre et Jean* (1888), are among the most remarkable of his productions. Maupassant's fame rests principally on his short tales, of which he composed over two hundred. Very many of these are models of concision and style."—*Ibid.*, pp. 434-438. —"One of the most puzzling enigmas of present-day literary France is the personality of . . . Romain Rolland [1866- ]. Here is a Frenchman born in the heart of France, of French descent, and yet with a temperament curiously un-French. Something that is Celtic, a great deal that is Teutonic, one may trace in the mentality of this great writer; but of the influence of that Latin or romance element which as a rule dominates French culture,

there is singularly little trace either in the man or in his work. . . . His inherited Teutonism has enabled M. Rolland to penetrate deep into the soul of the German people, to comprehend and to describe with power and insight the faults and the virtues of this nation. But not of this nation only, for it would be highly unjust to M. Rolland to represent him as merely interested in Germany; with equal insight and impartiality he has seized and portrayed the soul of his own people, and of those other Swiss and Italian peoples among whom he has dwelt from time to time. Superb flashes of racial psychology illuminate the pages of *Jean Christophe*. . . . M. Rolland, far from confining his sympathies to any one nation, has the faculty of thinking Europeanly, if one may use such a word. He, like his own Jean Christophe, 'has a European mind.'"—W. Stephens, *French novelists of to-day*, series 2, pp. 97, 101, 102.

1840-1896. — Symbolists and décadents. — "Charles Baudelaire (1821-1867) introduced into French literature the important influence of Poe whom he translated, but is chiefly known for the *Fleurs du mal* which, continuing the morbid Romanticism of Sainte-Beuve's *Joseph Delorme* combined with solicitude for form, was responsible for the vogue of the *genre macabre* and the cult of the 'horrible' that minor 'bold and bad' poets have since imitated in their pessimism. . . . Baudelaire was one of the first in France to praise Wagner's music, and he was among those who in poetry gave vogue to Symbolism. Alfred de Vigny employed symbols but did not leave a disciple. Baudelaire, on the other hand, at least prepared the way for the Symbolists and décadents who built their theory of poetry on the element of suggestion and the relations between things and the soul, precisely such as they professed to see in the music of Wagner. . . . For a short time the décadents were merely a party of protest, without any definite mark except the eccentricity which the Frenchman always assumes to scandalise the *bourgeois*. Soon the theory of Symbolism was devised and the décadents and Symbolists appeared as one party, though such was the individualism of these latter-day Romanticists that each man was really a law unto himself. In general, Symbolism was a method of evocation or of double suggestion, somewhat akin to tendencies more familiar to English poetry, whether in the Lake School or the pre-Raphaelites, in which an object is thought of in terms of another linked with it by some bond of union which the poet descries. We have seen in France a logical Symbolism in Alfred de Vigny, and even Leconte de Lisle occasionally let a suggestion of personal feeling be shown in some poetic figure. But the Symbolists got their method chiefly from Baudelaire . . . and through him they go back to Sainte-Beuve and the poems of *Joseph Delorme*. . . . The Symbolists were not particularly numerous, though they were noisy and eager to establish reviews such as *la Plume* in which to air their theories. . . . The deities of the décadents were Verlaine, Mallarmé, and to a minor degree, Villiers de l'Isle-Adam and Huysmans. The life of Paul Verlaine (1844-1896) was a tragedy. . . . Yet Verlaine probably came nearer to genius than any other poet of his time. Totally lacking in equilibrium and self-control, he in turn wrote lewd poems and verses permeated with devotion. . . . Verlaine's chief works were the Parnassian *Poèmes saturniens*, the *Fêtes galantes*, the transitional poems *la Bonne chanson*, *Romances sans paroles*, *Sagesse*, *Jadis et naguère*. The poems of his last years, often erotic babblings, represent the decline of his genius. Verlaine is a pre-Symbolist."—C. H.

1914-1922.—Literary activity during and after the World War.—“As early in the war as the winter of 1914-1915, writers began to speculate upon the nature of the after-war literature. Their prophecies, which at first were very dogmatic, became more and more uncertain as months and years elapsed, until gradually they were discontinued altogether when it became evident how deeply the war had cut into human affairs and how hazardous, therefore, any statement regarding the future must necessarily be. The cessation of hostilities has thrown no new light upon the subject, so that it is as useless as ever to attempt a description of the spirit of the literature of to-morrow. . . . The first short period of high emotional exaltation was followed by a longer period of keen observation of events, and also of intense intellectual tension and activity; . . . [the] second period was in its turn followed by one of marked decline of interest in the war or in war problems. And this is true of the whole field of literature: War experiences ceased, to a great extent, to inspire poets; war recollections ceased to be read so eagerly by the public; and, if some novelists, for conscience' sake, continued to make warriors of their heroes, they laid little stress on their heroic deeds; many novelists, indeed, ignored the war altogether. The same obtained, to even a greater degree, on the stage. . . . This is all easy to understand. But now, not only does that state of relative exhaustion explain the state of affairs during the last year of the war; it must also be taken into account in thinking of the future: for the nervous strain would not cease all at once with the signing of the armistice, nor even with the signing of the peace. Indeed, it is likely to be felt more and more for a long period of time. Can we not observe even in the finest writers of the war indisputable signs of that exhaustion? After *Gaspard*, Benjamin has produced more and more indifferent books; Barbusse has repeated himself after *Le Feu*, in *Clarté*; Duhamel himself may have rounded up his philosophy as he continued producing war books; after *Vie des Martyrs*, he did not improve in artistic beauty; Porché, once the vigorous singer of *L'Arrêt sur la Marne*, ends in the roguishness of *Les Butors et la Finette* and *La Fille aux Joux Roses*; and others could be added to the list, Genevoix, Péricard, Massis, etc. . . . On the other hand, modern progress undoubtedly favors rapid developments. . . . It is not unreasonable to believe that science will help us to recover more rapidly from the formidable shock than many seem inclined to believe. . . . Therefore, the lapse of time between the war and the interpretation thereof by poets and thinkers need not be so long as it would have been in the past. Indeed, attempts are actually being made in France to link up directly post-war literature with pre-war literature. This is the case with that group of young French writers who gather about the standard of the *Nouvelle Revue Française*. They have tried bravely to keep alive the spirit that animated them before 1914. It remains to be seen whether the same review-cover will actually “cover” the same philosophical tendencies as at the time when the war interrupted publication.”—A. Schinz, *French literature of the Great War*, pp. 381-384, 386-387.

FRIENDS, Society of: Origin and early history (1647-1689).—"The religious movement which began with the wandering preacher George Fox . . . grew into the Society of Friends, or, as they came to be commonly called, 'The Quakers.' George Fox was born in 1624, the year before Charles I came to the throne; and he was growing up to manhood all through the troubled time of that king's reign, while the storms were gathering which at last burst forth in the civil wars. It was not much that he knew of all this, however. He was growing up in a little out-of-the-way village of Leicestershire—Fenny Drayton—where his father was 'by profession a weaver.'" While he was still a child, the companions of George Fox "laughed at his grave, sober ways, yet they respected him, too; and when, by-and-by, he was apprenticed to a shoemaker, his master found him so utterly trustworthy, and so true and unbending in his word, that the saying began to go about, 'If George says "verily" there is no altering him.' . . . He was more and more grieved at what seemed to him the lightness and carelessness of men's lives. He felt as if he were living in the midst of hollowness and hypocrisy. . . . His soul was full of great thoughts of something better and nobler than the common religion, which seemed so poor and worldly. . . . He wandered about from place to place—Northampton, London, various parts of Warwickshire—

seeking out people here and there whom he could hear of as very religious, and likely to help him through his difficulties. . . . After two years of lonely, wandering life, he began to see a little light. It came to his soul that all these outward forms, and ceremonies, and professions that people were setting up and making so much ado about as 'religion,' were nothing in themselves; that priestly education and ordination was nothing—did not really make a man any nearer to God; that God simply wanted the hearts and souls of all men to be turned to Him, and the worship of their own thought and feeling. And with the sense of this there arose within him a great loathing of all the formalism, and priestcraft, and outward observances of the Churches. . . . But he did not find peace yet. . . . He writes: 'My troubles continued, and I was often under great temptations; I fasted much and walked abroad in solitary places many days.' . . . It was a time like Christ's temptations in the wilderness, or Paul's three years in Arabia, before they went forth to their great life-mission. But to him, as to them, came, at last, light and peace and an open way. . . . A voice seemed to come to him which said, 'There is one, even Christ Jesus, that can speak to thy condition.' 'And when I heard it,' he says, 'my heart did leap for joy.' Fixing his mind upon Christ, all things began to be clearer to him; he saw the grand simple truth of a religion of spirit and life. . . . It was at Dukinfield, near Manchester, in 1647, that he began to speak openly to men of what was in his heart. . . . In those days, when he was wandering away from men, and shrinking with a sort of horror from the fashions of the world, he had made himself a strong rough suit of leather, and this for many years was his dress. Very white and clean indeed was the linen under that rough leather suit, for he hated all uncleanness either of soul or body; and very calm and clear were his eyes, that seemed to search into men's souls, and quailed before no danger, and sometimes lighted up with wonderful tenderness. A tall, burly man he was, too, of great strength. . . . Everywhere he saw vanity and worldliness, pretence and injustice. It seemed laid upon him that he must testify against it all. He went to courts of justice, and stood up and warned the magistrates to do justly; he went to fairs and markets, and lifted up his voice against wakes, and feasts and plays, and also against people's cozening and cheating. . . . He testified against great things and small, bade men not swear, but keep to 'yea' and 'nay,' and this in courts of justice as everywhere else; he spoke against lip-honour—that men should give up using titles of compliment, and keep to plain 'thee' and 'thou'; 'for surely,' he said, 'the way men address God should be enough from one to another.' But all this was merely the side-work of his life, flowing from his great central thought of true, pure life in the light of the Spirit of God. That was his great thought, and that he preached most of all; he wanted men to give up all their forms, and come face to face with the Spirit of God, and so worship Him and live to Him. Therefore he spoke most bitterly of all against all priestcraft. . . . Gradually followers gathered to him; little groups of people here and there accepted his teachings—began to look to him as their leader. He did not want to found a sect; and as for a church—the Church was the whole body of Christ's faithful people everywhere; so those who joined him would not take any name as a sect or church. They simply called themselves 'friends'; they used no form of worship, but met together, to wait upon the Lord with one another; believing that His Spirit was always with them,

and that, if anything was to be said, He would put it into their hearts to say it." From the first, Fox suffered persecution at the hands of the Puritans. They "kept imprisoning him for refusing to swear allegiance to the Commonwealth; again and again he suffered in this way: in Nottingham Castle, in 1648; then, two years later, at Derby, for six months, at the end of which time they tried to force him to enter the army; but he refused, and so they thrust him into prison again, this time into a place called the Dungeon, among 30 felons, where they kept him another half-year. Then, two years later, in 1653, he was imprisoned at Carlisle, in a foul, horrible hole. . . . He was again imprisoned in Launceston gaol, for eight long months. After this came a quieter time for him; for he was taken before Cromwell, and Cromwell had a long conversation with him. . . . During Cromwell's life he was persecuted no more, but with the restoration of Charles II his dangers and sufferings began again. . . . His followers caught his spirit, and no persecutions could intimidate them. . . . They made no secret of where their meetings were to be, and at the time there they assembled. Constables and informers might be all about the place, it made no difference; they went in, sat down to their quiet worship; if any one had a word to say he said it. The magistrates tried closing the places, locked the doors, put a band of soldiers to guard them. The Friends simply gathered in the street in front, held their meetings there; went on exactly as if nothing had happened. They might all be taken off to prison, still it made no difference. . . . Is it wonderful that such principles, preached with such noble devotion to truth and duty, rapidly made way? By the year 1665, when Fox had been preaching for 18 years, the Society of Friends numbered 80,000, and in another ten years it had spread more widely still, and its founder had visited America, and travelled through Holland and Germany, preaching his doctrine of the inward light, and everywhere founding Meetings. Fox himself did not pass away until [1600] he had seen his people past all the days of persecution."—B. Herford, *Story of religion in England*, ch. 27.—"At a time when personal revelation was generally believed, it was a pardonable self-delusion that he [Fox] should imagine himself to be commissioned by the Divinity to preach a system which could only be objected to as too pure to be practised by man. This belief, and an ardent temperament, led him and some of his followers into unseasonable attempts to convert their neighbours, and unseemly intrusions into places of worship for that purpose, which excited general hostility against them, and exposed them to frequent and severe punishments. . . . Although they, like most other religious sects, had arisen in the humble classes of society, . . . they had early been joined by a few persons of superior rank and education. . . . The most distinguished of their converts was William Penn, whose father, Admiral Sir William Penn, had been a personal friend of the King [James II], and one of his instructors in naval affairs."—J. Mackintosh, *History of the revolution in England in 1688*, ch. 6.—It was during the life time of Fox that the name "Quaker" originated. "At one of the interviews between G. Fox and Gervas Bennet—one of the magistrates who had committed him at Derby—the former bade the latter 'Tremble at the word of the Lord'; whereupon Bennet called him a Quaker. This epithet of scorn well suited the tastes and prejudices of the people, and it soon became the common appellation bestowed on Friends."—C. Evans, *Friends in the seventeenth century*, ch. 2.

1656-1702.—In the American colonies.—"In 1656 Quakers came to Massachusetts from the Barbadoes. Several of them, including one woman . . . were hanged. In Virginia and other colonies also . . . very severe laws were framed against them."—G. P. Fisher, *History of the Christian church*, p. 492.—"But the most important event in the early history of the society on this continent was the settlement of Pennsylvania by William Penn and a large number of his brethren in faith, beginning in 1682. In 1690 there were at least 10,000 Friends in the American Colonies, and in 1702, 20,000 in Pennsylvania and New Jersey. . . . Soon after the Revolution of 1688 [Act of Toleration, 1686] the persecution ceased on both sides of the Atlantic."—I. Sharpless (*New Schaff-Herzog encyclopedia of religious knowledge*, v. 4, p. 394).

1689-1827.—Decline.—"By the end of the seventeenth century they were one of the most important bodies of dissenters in England. With the cessation of persecution, about the beginning of the eighteenth century, the Friends relaxed their missionary zeal, paid more attention to the discipline of their members and gradually settled down into a comparatively quiet existence. So far, however, was this discipline carried, in its minute supervision of the actions of members, that their numbers declined, and some have expressed a wonder that the society continued to exist at all. About the middle of the nineteenth century a new movement began, and since that time the great majority of the Friends have either dropped or modified many of the old customs and external forms."—United States Census, *Religious bodies*, 1916, pt. 2, pp. 292-293.

1827-1920.—Separation.—War-work.—Present strength.—"In 1827 came the great separation. The differences had been smoldering for years. The central figure was Elias Hicks, an eloquent minister from Long Island. From him one body was called Hicksite while the other was known as Orthodox, though neither side formally adopted the title. The former contained many Unitarians, but their basis was the non-necessity of the beliefs commonly known as Orthodox. . . . The formal separation began in Philadelphia. . . . In London, Dublin, New England and North Carolina, the whole meeting went with the Orthodox body, leaving them as a whole the strongest and best organized. Both bodies have lost numbers in the eastern United States since this date though of late years the tide has probably turned. In England there was also a gradual loss till about 1870 when 'adult school' work and missionary effort began to increase the zeal and spirit of the younger members. English Friends, with divergent doctrinal views, have been free from serious dissensions and are now an open-minded and progressive body. About 1840 there began a new tendency among Orthodox Friends—an Evangelical reaction from the Hicksite position. This was led by an English minister, Joseph John Gurney, and hence is commonly known as a 'Gurneyite' movement. The opposition from a staunch upholder of ancient ways was called 'Wilburite.' . . . Small divisions resulted, the Wilburite bodies being generally few in number though Philadelphia as a whole sympathized with them. . . . This has since in turn produced its reaction and the original basis of friendly doctrine and practise has to some extent reasserted itself."—I. Sharpless (*New Schaff-Herzog encyclopedia of religious knowledge*, v. 4, pp. 304-305).—During the American Civil War the Quakers "endeavored to maintain their ground in favor of peace, although not a few members of the different branches were found in the army. The close of the war brought

relief, and a Peace Association of Friends in America was organized. . . . It is to be noted that the movement for international arbitration received perhaps its strongest impulse from the annual gatherings at Lake Mohonk, N. Y., under the auspices of a Friend. During the decade [1906-1916], chiefly as a result of the Five Years' Meeting, there has been a strong tendency toward greater unity of effort in the fields of home and foreign missions, Bible Schools, Education, evangelistic work, philanthropy, and social reform . . . and the Friends have joined with other churches in the Federal Council of the Churches of Christ in America and similar organizations. The official position of the Friends in regard to the war with Germany is practically the same as that taken by Friends at the time of the American Revolution. They have simply reaffirmed their historic position in regard to all war, a position recognized by Congress in the Selective-draft act, which provided for the assignment of those Friends drafted to noncombatant service."—United States Census, *Religious bodies*, 1916, pt. 2, pp. 293-294.—The reconstruction work carried on in Europe, especially in Germany, by the American Friends Service Committee, in which all branches of Friends united, has been acclaimed on both sides of the Atlantic as perhaps the most vivid and concrete example of practical Christianity to-day [see also INTERNATIONAL RELIEF: American Friends]. Recent statistics show 20,028 members and about 9,000 other adherents of the Society of Friends in Great Britain, Cape Colony and Australia besides 2,307 in Ireland which has a separate organization (*Whitaker's Almanack*, 1920, p. 260).—The Society of Friends in the United States consisted of 104,442 members in 1920.—*Year Book of the Churches*, 1920.—See also MASSACHUSETTS: 1656-1661; PENNSYLVANIA: 1681; NEW JERSEY: 1673-1682; SLAVERY: 1688-1780.

**FRIENDS OF THE TEMPLE.**—"This is a small body which had its origin in Württemberg, Germany, upward of fifty years ago [1861]. It is variously called Temple Society, Friends of the Temple, 'Hoffmannites.' The Rev. Christopher Hoffmann, president of the Temple colonies in Palestine, and author of most of its standard literature appears to be its chief leader. The Friends of the Temple have for their great object the gathering of the people of God in Palestine. To this end they constitute Temples, i.e., spiritual communities in various countries, and these assist in the construction of the Temple in the Holy Land, which is to become a center for regenerated humanity."—H. K. Carroll, *Religious forces of the United States*, p. 153.—"A few adherents are found in Saxony, in Russia and in America. . . . Among the colonists in Palestine divisions have occurred which an attempt at reunion in 1897 did not fully reconcile. . . . The importance of the movement there to-day is to be found in its economic aspects, which now admittedly predominate, and in its support of

German interests in the East. Hoffmann's curious mixture of supernatural and rationalistic, Judaizing and Christian, Pietistic and Socialistic elements could never have served as the basis of a permanent structure; and in what he set out to do he may be said to have definitely failed."—*New Schaff-Herzog encyclopedia of religious knowledge*, v. 4, p. 398.

**FRIESLAND**, province in the northwestern part of the Netherlands. See NETHERLANDS: Map.

1582.—Educational decrees. See EDUCATION: Modern: 15th-16th centuries: Netherlands.

1815.—Ceded to Hanover by Congress of Vienna. See VIENNA, CONGRESS OF.

**FRIEZE**, in architecture, either a plain or decorated horizontal band. See ORDERS OF ARCHITECTURE.

"**FRIGHTFULNESS**" (German Schrecklichkeit), term applied in the World War by the Germans to their method of calculated ferocity in warfare, looking to victory through causing fear.

**FRIGIDUS**, Battle of the (394). See ROME: Empire: 370-395.

**FRILING**, semi-servile class among the ancient Saxons. See LÆTI.

**FRIMAIRE**, Month. See CHRONOLOGY: French revolutionary era and calendar.

**FRIOUL**, Duc de. See DUROC, GERAUD CHRISTOPHE MICHEL.

**FRISIANS.**—"Beyond the Batavians, upon the north, dwelt the great Frisian family, occupying the regions between the Rhine and Ems. The Zuyder Zee and the Dollart, both caused by the terrific inundations of the 13th century, and not existing at this period [the early Roman Empire], did not then interpose boundaries between kindred tribes."—J. L. Motley, *Rise of the Dutch republic, introduction*, sect. 2.—"The Frisians, adjoining [the Batavi] . . . in the coast district that is still named after them, as far as the lower Ems, submitted to Drusus and obtained a position similar to that of the Batavi. There was imposed on them instead of tribute simply the delivery of a number of bullocks' hides for the wants of the army; on the other hand they had to furnish comparatively large numbers of men for the Roman service. They were the most faithful allies of Drusus as afterwards of Germanicus."—T. Mommsen, *History of Rome*, bk. 8, ch. 4.
