# REPORT OF THE CALIFORNIA STATE PARK COMMISSION 

To His Excellency, C. C. YOUNG, Governor of the State of California, and to the<br>Senate and Assembly, General Legislature (1929)

SIRS: Acting under authority conferred by chapter 764 of the Statutes of 1927, the State Park Commission submits herewith its report embodying the results of the state-wide survey of potential state park areas. Section 1 of the act referred to provides as follows:

[^28]In order to carry out the foregoing direction and defray the expenses of the survey, $\$ 15,000$ was made available by the act.

The same legislature (chapter 763 of the Statutes of 1927) also created the State Park Commission. One of the first acts of the newly appointed State Park Commission was the selection of Frederick Law Olmsted to take charge of and undertake this survey in cooperation with the commission. The commission was fortunate in inducing Mr. Olmsted to accept this appointment. To direct the making of the survey with the infinite details of such a vast undertaking has meant a great personal sacrifice on Mr. Olmsted's part, involving the taking of time from other important and more lucrative employment. It means, practically, the donation of a considerable portion of his valuable time to the state.

A state-wide park survey of California presents problems of a magnitude and complexity which probably do not exist to the same degree in any other state. The great size of California, its longitudinal extent with a coast line of almost a thousand miles in length, its magnificent beaches, its extensive mountain ranges, variety of climate, the fact that, for these reasons, it contains some of the finest specimens of trees and forested areas to be found anywhere in the world, multiplies the problems of survey.

Mr. Olmsted lost no time in organizing the survey. The state was divided into districts, the Park Commission held public meetings in both Los Angeles and San Francisco where representatives of all interested organizations were in attendance and a little later questionnaires were sent out to individuals and organizations throughout the state in order that all arailable information on the subject might be received. Volunteer Regional Reporters and Advisory Groups were selected to assist in this work. These volunteers worked without compensation and the commission can not express in generous enough terms its obligation to these self-sacrificing individuals for the valuable aid they have rendered and the information which they have furnished the survey and the commission. Without the splendid cooperation of these public spirited citizens, the survey could not have been completed with the funds available and within the prescribed time limit. The State Park Commission desires to publicly express to these individuals its deep and abiding obligation and appreciation of their helpful assistance.

Upwards of 325 park projects were recommended from various sources. All of these received consideration and those which held out any promise of being of potential state park caliber were personally inspected and reported on by some representative of the park survey.

All of this great mass of material which has been collected regarding these proposed state park areas has been carcfully examined and classified by Mr. Olmsted, and recommendations made as to the relative desirability of acquiring these areas for state park purposes. The results of the survey are embodied in Mr. Olmsted's report which accompanies and is made a part of this formal report of the State Park Commission.

We can not praise too highly this magnificent report which deals with the problems in hand in a masterly fashion. There is no doubt but that as soon as this report is made public there will be a demand for copies from all parts of the United States because of the outstanding and comprehensive manner in which these state park problems are treated. The report speaks for itself and is a masterpiece in its line.

On November 6th, last, the people of the state, by rote of 975,979 for, and 346,998 against, overwhelmingly ratified what is commonly known as the State Park Bond Act. This act was also, as a preliminary to submission to the people, passed by the last legislature (chapter 765, Statutes of 1927) and provides for the issuance of $\$ 6,000,000$ in state bonds to be used for the purchase of park lands, provided always that in making any purchase one-half of the cost of the project is given to the state by contributions in money or land.

The importance of the passage of this bond issue cannot be overestimated for it means that the state wi!! eventually acquire $\$ 12,000,000$ worth of state property with an expenditure of only $\$ 6,000,000$. The feature of matching dollar for dollar will encourage and stimulate gifts, of both money and land. Already the commission has received information of prospective gifts, notably of the Bliss property, including Rubicon Point on Lake Tahoe and of various memorial groves of redwoods along the Redwood Highway. All of these are about to be donated to the state for park purposes on condition that an equal value of state bond money be used to add to the areas donated. The commission has also applied to the United States government to set aside certain outstanding areas in the desert regions of southern California, and in other portions of the state, for the purpose of eventually adding them to the state park system.

The importance of this whole park movement which the last legislature so wisely inaugurated and which the Governor of this state has so enthusiastically supported and which the people of the state have so overwhelmingly approved, can not be overestimated. California, because of its natural and scenic resources, is one of the most favored states in the Union. These resources are of incalculable value and the state has a vital interest in their preservation. A great opportunity is now open to preserve some of the best of these areas and in the accompanying report of Mr. Olmsted's, the commission is receiving advice and information of the highest order to guide it in its policy of the acquistion of these lands.

With grateful acknowledgement to all those who have rendered such able and generous assistance in the furnishing and presentation of the basic data which have been incorporated therein, the attached report and recommendations are respectfully submitted.

December 31, 1928.

## REPORT OF THE DIRECTOR OF THE SURVEY

To the California State Park Commission
Gentlemen: I submit herewith the report of the survey conducted under your instructions in pursuance of chapter $70+$ of the Statutes of 1927, as presented to and discussed with you on December 14th. together with certain amplifications then agreed upon.

Respectfully submitted.

> Freder'ck Liw Olisti-in
> Director of Survey

December 29, 1928.

## PART I-SCOPE AND LIMITATIONS OF THE SURVEY, METHOD OF CONDUCTING IT AND ACKNOWLEDGMENTS

The scope of the survey as authorized by the legislature is rery broad, comprising not only investigations "to determine what lands are suitable and desirable for the ultimate development of a comprehensive, well-balanced state park system," but those necessary "to define the relation of such a system to other means of conserving and utilizing the scenic and recreational resources of the state." Fully to comply with the latter part of this authorization would involve a complete and comprehensive analysis of the scenic and recreational resources of California and of all the important means by which they can be conserved and utilized, both through public initiative and through private initiative.

The brief time alloted for making the survey and the limits of the appropriation available (a total of fifteen thousand dollars including the central office expenses) when compared with the vast extent of the state, the richness and variety of its scenic and recreational resources. the diversity of means employed in utilizing them, and the difficulties of transportation in many areas, made it obvious from the beginning that the study and presentation of so large a scope of facts must be in many respects more superficial, hurried and tentative than I could wish, and that however much knowledge I could obtain of conditions

Feather Falls, Butte County
(See page 65)
by the most diligent personal observation the conclusions of the survey must be based, in large part, on data and opinions gathered by numerous collaborators. The organization adopted was as follows:

1. A small central staff was organized of men professionally trained in dealing with cognate problems. This staff consisted of the undersigned, as director of the survey, of Mr. Daniel R. Hull of Los Angeles, former landscape architect of the National Parks Service, of Mr. H. W. Shepherd of Berkeley, landscape architect and professor of landseape architecture at the University of California, and of Mr. Emerson Knight of San Francisco, landscape architect, all members of the Pacific Coast Chapter of the American Society of Landscape Architects; supplemented at times by technically trained assistants in the regular employ of Olmsted Brothers. The members of this staff, in view of the public interests at stake, worked at rates of pay much below their normal professional compensation.
2. At my suggestion the commission selected and appointed representative citizens throughout the state, interested and well-informed on the general subject, to act as advisers, divided into twelve groups, corresponding with the twelve territorial divisions into which the state was divided for the purposes of the survey. Those districts were as follows:
District $\quad$ 1: Del Norte, Humboldt and Mendocino countics.
District $11:$ Butte, Glenn, Lassen, Modoc, Plumas, Shasta, Siskiyou. Tchama and
Trinity countics.

District 111: Colusa, El Durado, Nevada, Placer, Sacramento, Sierra, Sutter, Yolo and Yuba countics.
District IV: Alameda, Contra Costa, Lakc, Marin, Napa, San Francisco, San Matco Solano and Sonoma countics.
District V: Alpine, Amador, Calaveras, Mariposa. Merecd. San Joaquin, Stanislaus and Tuolumne counties.
District VI: Inyo and ilono counties.
District VII: Fresno, Kern, K゙ings, Madera and Tulare countics.
District V111: Montcrey, San Benito, Santa Clara and Santa Cruz countics.
District IX: Santa Barbara, San Luis Obispo and Ventura countics.
${ }^{1}$ istrict $X$ : L.os Angeles and Orange countics.
1)istrict XI: Riverside and San Bernardino counties.

District XII: Imperial and San Diego countics.
A great deal of valuable information and advice was obtained from these advisers, not only as to the districts specially assigned to cach but upon other matters, partly in response to specific questions and partly in response to a general invitation to volunteer advice, suggestions and information. Naturally the response varied, but in the aggregate the amount of time given and the value of the services rendered were very great. These advisers contributed freely of their time and in some cases incurred considerable expense for traveling and
otherwise without charge to the state．The names of these advisers and their districts were as follows：
－Abbott，Clinton G ..... （12）

3. Regional reporters, selected after consultation with the above advisers, were induced to undertake, without compensation, the making of special field examinations and reports on various regions within the state. A considerable number of the advisers acted also as regional reporters and in addition to them the following:

Gold Lake, Sierra County. Typical Alpine Lake
(See pages 48 and 63)
4. The purposes of the survey were made widely known through the cooperation of the press, through public hearings held by the commission, and through the activity of many civic and other organizations and committees, both local and statewide; and from these organizations and committees and from individuals came a great quantity of suggestions and information, mainly as to specific projects for state parks believed to be desirable, but also on matters of general policy.
5. Hearty cooperation was given by officials and employees of branches of the state and federal governments, especially the other divisions of the Department of Natural Resources and the Division of Highways of the Department of Public Works, the Forest Experiment Station at Berkeley, the National Forest Service, and the National Parks Service.

As data came in from all these sources it was arranged and digested in the office of the commission's able secretary, Mrs. Laura E. Gregory, and by the staff of the survey, and followed up both by correspondence and by personal examinations in the field by regional reporters and by members of the staff. The examining and checking up on specific projects for state parks suggested from all sources was systematic, and except that the limitations of time and funds made it in some cases more hurried and less thorough than would have been desirable, it was tolerably complete.

As to the broader aspect of the survey, calling for a general study of the resources of the state as a whole for enjoyment of scenery and of the pleasures of nonurban outdoor life, the results were somewhat less satisfactory. It was hoped that it might be possible through the volunteer regional reporters to make a general "dragnet" survey covering all parts of the state, such as would bring to attention all areas characterized by important resources of the kinds under consideration, regardless of whether they were previously well known or not, and systematic information as to the manner in which they are now being utilized and the manner in which they are being conserved in some cases and destroyed in others. But although very valuable reports were secured from many of the reporters on questions referred to them in regard to specific localities and specific problems, especially in regard to definite projects for state parks, too few of them had the time available or the previous experience necessary for making such a systematic gencral survey to cover more than limited areas. The conclusions in regard to that aspect of the survey, therefore, have had to depend to a large degree upon the personal observations of the director and the small technical staff, supplemented and guided by a mass of fragmentary comments and observations from the regional reporters and advisers, and by information obtained from technical organizations which have made systematic studies of special areas.

## PART II REVIEW OF THE SCENIC AND RECREATIONAL RESOURCES OF CALIFORNIA AND OF VARIOUS MEANS OF CONSERVING AND UTILIZING THEM, OF WHICH MEANS STATE PARKS COMPRISE ONLY ONE

## A. Genikal Considir thions

The magnitude and impertance, socially and economically, in California, of the values arising directly and indirectly from the enjoyment of scenery and from related pleasures of nonurban outdoor life, considered in the aggregate and without regard to the means by which they are made available, are incalculably great, and in this summary are taken for granted.
Some conception of the variety and extent of the means by which these values are sought, and of the aggregate price at which they are valued by those who seek them, may be derived from a brief and partial enumeration:
(1) Automobile pleasure trips and tours

Riding for no other purpose than enjoyment of the pleasant out-ofdoors through which one passes, or with that as a controlling motive combined with some other purpose or excuse, is one of the "major sports" of California. Statistical measurement of its extent is impossible; but no less an authority than a member of the State Highway Commission has indicated his belief that half the travel on California highways is of this class. If so, substantially half the annual expenditures on the purchase, operation and servicing of California's $1,880,000$ automobiles, and on the construction and maintenance of some 7000 miles of public highways, is one item gladly paid for obtaining values of the sort we are considering.
(2) Other means of locomotion through pleasant scenery for the sake of enjoyment, as by rail, by boat, on horseback, or on foot.
(3) Commercially operated hotels, resorts, camps, eating places, stores, etc., used and supported by automobilists and others on their pleasure trips, and in localities where they stop for the prime purpose of enjoying outdoor life. Of this business also there are no adequate statistics, but it is enormous.
(4) Private vacationist duelling places established and used solely or primarily because of the enjoyment obtainable by means of them, and mainly from the pleasantness of their outdoor environment; ranging from tents and little week-end and vacation cabins, in canyon or forest or at the seashore, to palatial country estates.
(5) That share of the passenger and freight business of common carriers, and that share of mercantile, manufacturing, agricultural and miscellaneous service businesses required for the creation, maintenance and operation of the above facilities.
(6) Other confessedly recreational uses (i.e. other than by automobile and by occupation of pleasantly situated temporary domiciles as above) of scenically agreeable places on the coast, in the mountains, in the forests, on streams and lakes, etc. (bathing, boating, fishing, and other outdoor sports, nature study, and just plain quiet enjoyment of one's outdoor surroundings), through substantially gratuitous use of lands not privately owned by the users. This includes (a) lands publicly held for such use (as parks), and (b) lands held primarily for other purposes with which such use is not inconsistent (such as public forests and watershed lands, and such as timber or grazing lands, or vacant areas) which have agreeable landscapes and which the public enjoy either from neighboring roads or public places, or through being permitted to wander on them by sufferance.

Lands held as public parks thus appear only as one minor subdivision, fractionally minute in area, of the vast aggregate of lands from which these scenic and recreational values are even now derived in so large a measure as to make regard for them an important factor in manage-. ment.

The kinds of values sought by such means have always been part of the joy of living for many people; but in our time, in America, there has been an enormous increase in the proportion of people who have time left for the pursuit of such values after earning the bare necessities of existence.

These values, together with others which directly make life worth living, as distinguished from things which are valued only because they can be exchanged for something one really wants, are the final things which economic prosperity enables people to buy: In California today people are using their economic wealth in the ways above indicated to buy values of this particular kind enormously, incredibly to anyone of a former age or another country. And they will probably seek to buy this kind of values more and more.
How far such values can be bought, at any price, by succeeding generations in California will depend largely on the degree to which the physical conditions which make them possible are permanently conserved or are destroyed by the first comers through their wasteful methods of exploiting them.

The enormous development in California of the use of these scenic and recreational values of the out-of-doors has resulted in part from the economic prosperity of the people, leaving them time and means
for such enjoyment, and in part from the lavish abundance of naturally favorable conditions of landscape and climate.

But there are signs on every hand that because of this very abundance (and of the increasing rate at which the favorable conditions are being put to use) careless, hasty, shortsightedly selfish methods of exploiting the natural assets of scenic value are rapidly killing the geese that lay the golden eggs.

To take a single type of this destructive exploitation: Every year thousands of "cabin-site subdivisions" and other residential and pleasure resort developments (of the types listed as (3) and (4) above) are being laid out in the pleasantest spots readily available as private speculations with the sole motive of making quick sales and "getting out from under"; and in a considerable proportion of cases in such a crowded and unsatisfactory manner that before half of the lots are actually put to use the natural advantages of the spot for such use are in large part permanently destroyed and the place tends to become a rural slum, in which the occupants fail to get in any satisfactory measure what they hoped and paid for. In every such case a good opportunity is wrecked, the more enterprising lot owners gradually abandon the blighted spot for a new venture in virgin territory, which in turn is apt to become similarly blighted because those who determine what is done to it lack either the will or the skill to use the opportunity other than destructively:

The procedure is identical in principle with such destructive exploitation of natural timber resources as converts lands of potentially permanent timber productivity into useless barrens.

The most urgent concerns of the state in this connection are: (1) to teach the great mass of well-intentioned people how to get what they want in enjoyment of scenic and recreational values, how to get it successfully for themselves now and on their own initiative, and how to get it without destroying the natural assets on which the continued enjoyment of such values depends; and (2) to curb and limit the actirities of exploiters who would destroy the birthright of their successors, no matter what its value, for the sake of a quick turn of profit to themselves.

The first concern of the state, then. is one of public education, including
(a) Study and research as to the various good and bad methods by which the use of scenic and recreational resources is and can be carried on, and (b) getting the results of such knowledge across to the people.

The second concern of the state, in this matter, direct prevention of unwarrantably destructive exploitation of such resources, has many ramifications. The chief means of prevention are these:
(a) By Proprietary Control
(1) Parks. Peculiarly valuable scenic and recreational resources of many kinds which under private ownership and management are specially subject either to destructive exploitation or to a narrow monopolization which makes their enjoyment by the ordinary citizen impossible, can most simply and effectively be protected against wasteful abuse by means of their public ownership and management in perpetuity as parks. To acquire and manage such parks is the prime function of the State Park Commission.
(2) Other public holdings. Lands now held or which may come to be held by the state and its subdivisions and agencies, and by the federal government, primarily for other purposes than the conservation and use of their scenic and recreational resources, can, and obviously should, be protected against the unnecessary and wasteful impairment of such elements of scenic and recreational value as they contain by a proper and businesslike regard for these values as byproducts in their public management; and in case of the alienation of such lands by establishing reasonable conditions and restrictions for ensuring a continuance of the same general policy. This is now the policy of the U. S. Forest Service in management of the national forests, constituting the largest areas of publicly owned land in the state, amounting to nearly one-fifth of its entire territory.

But there are many other valuable public lands to which the principle should be systematically applicd. The most familiar and widespread of these are the lands of the highway system, the location and boundaries of which, as well as their physical treatment, should be determined in considerable measure, as is now well recognized by the Department of Public Works, by regard for the scenic enjoyment to be derived by the public from their use concurrently with their use for purely economic transportation.

Another notable example, as to which the principle has not yet been officially recognized, is to be found in the tidelands. The state received from the United States, in trust for the people, the entire coast of California up to "ordinary high water," and still owns most of it. This is a vastly important area of publicly owned land, the administration of which intimately affects the scenic and recreational resources of the state.

In this connection the State Park Commission can and should collaborate, in a consulting and advisory capacity, with the various responsible public agencies in charge of such public lands.
(3) Protective restrictions or easements on private land. In connection with the creation of the better class of residential subdivisions in America there has occurred within the last thirty years a notable development in the methods of applying a very old legal device, that of covenants entered into by the owners of land in regard to the manner of use of the land, to the end of guarding against forms of exploitation injurious to the community. Methods have been found for making such covenants reasonably elastic and adaptable to changing conditions, instead of attempting to impose a rigid arbitary control by a "dead hand" as in the old days; and with these improvements in technique the method has become a far more valuable and practical device. There have been some beginnings here and there of the use of this device by agreement between private landowners and public authorities; as where a park, parkway, or pleasure drive is laid out and constructed at public expense on a public right of way in a manner bencficial to the owners of abutting lands and the latter agree voluntarily, as a matter of public spirit, or of enlightened selfishness, to subject their land along the borders of this public improvement to certain covenants. These covenants provide that the land will not be used in certain specified ways detrimental to the valuc of the public improvement and to the general attractiveness of the region through which it runs, but are so drawn as not to interfere with uses

Mouth of San Luis Rey River, San Diego County
(See pages 40 to 14 and 57 )

Lake Tahoe, from near Eldorado County Park; Bliss Memorial Park, extreme left;
of the land appropriate to the local conditions. Such covenants have often been entered into, for example, by landowners along a given stretch of highway, requiring any buildings to be set back certain distances from the highway. In many cases, such agreements have been entered into for a nominal consideration, sometimes upon condition that similar easements are secured throughout the unit of highway in question; and in the latter case the required easements have sometimes been acquired from a recalcitrant minority by condemnation in order to make the whole project effective.

By patience and tact in negotiation and by the application of adequate technical skill, a great many landowners in California can, I believe, be induced to enter voluntarily into agreements with public authorities that will safeguard the scenic and recreational resources of their neighbors from all the most scriously threatening dangers that attend wholly individualistic management.

## (b) By Regulation under the Police Power

To some extent, and under proper circumstances, it is practicable by public regulation to check certain unnecessary and unreasonable impairments of the state's natural resources, such as are often caused by methods of exploiting private property which are needlessly wasteful or destructive of those resources.

In relation to scenic and recreational resources this can sometimes be done by more effective use of the now well established method of public regulation of subdivision platting, and by extending and perfecting the operation of reasonable zoning regulations in regions where the permanent welfare of the community is clearly dependent on conserving its general scenic and recreational attractions and where the ill-advised exploitation of a few properties may not only conflict with the larger interest of the state in the region but seriously depreciate the aggregate of private property values in the region itself. It is only the more flagrant cases of misuse of private property which can thus be definitely prevented; for it would be contrary to our American political and legal principles to emasculate individual initiative under guise of police power regulation. But it often happens that the deliberate review and consideration of plans prepared on private initiative which is brought about by wholly reasonable police regulations of the kinds above mentioned gives opportunity for constructive education and leads to the voluntary adoption by the individual of much better development plans than would have been followed in the absence of such review.

It is worth while to examine here in some detail two notable opportunities for the intelligent use of existing public proprietary control, existing primarily for other than park purposes (a 2 above), and of proper police regulation over related private property ( $b$ above).

4-64895

Malibu Coast, Los Angeles County. Pt. Dume in distance
(See pages 22 to 25, 40 to 44 and 58)
First opportunity: The tidelands.
The State of California, and municipalities created by and holding from it, broadly speaking now possess title, in trust for the people, to the entire coast of California between ordinary high tide and low tide, and to the submerged lands beyond so far as that ownership can be made effective. These so-called tidelands are held in trust for the people's use in various ways, primarily in navigation. But the vast majority of them are so exposed and so conditioned that without prejudice to navigation they can and should be administered largely in the interest of protecting the scenic and recreational resources so intimately associated with them. These public tidelands embrace a large and sometimes the major part of the area directly used for recreation at beaches all along the coast. The manner in which their use is controlled and regulated, or left free from regulation, can profoundly influence not only the manner of use of these public lands but also the manner of use and development of the immediately abutting upland even when not publicly owned. At present, except in a few localities, no precise determination has been made of the landward limit of the state's tideland ownership, and no detailed supervision and control is exerted over the actions of abutting owners, who have in some cases, without permission from or supervision by the state, encroached upon its tideland property with pilings and buildings and artificial fillings to the detriment of the interests of the people for whom the state holds those lands in trust.

It should be made the duty of some suitable agency, presumably the Department of Natural Resources, actively and systematically to

Laguna Beach Project, Orange County
(See pages 22 to 25, 40 to 44 and 58)
protect the proprietary interests of the state in all tidelands not yet definitely assigned to specialized uses under specialized agencies, such as the Harbor Commissioners, to ascertain, survey and firmly establish the maximum legal limits of the state's proprietary control; to study the use to which the various parts of these lands can most wisely and properly be put-some for commerce, some for fisheries, some for mineral wealth, some for combinations of uses in which recreation is an important part; and to provide for their proper administration and for the proper regulation of their use and prevention of their abuse by the general public and by abutting riparian owners. To that end there is need of legislation and of appropriations for actively protecting the state's proprietary rights. The values at stake along a thousand miles of almost unwatched tideland boundary, with many thousands of aggressive private neighbors ready to take an ell where they can get an inch, are too vast to be left longer without vigorous safeguarding.

Moreover it is the right and the duty of the state to bring about the establishment and enforcement of suitable police regulations governing the use of private land abutting on the public tidelands and the public highway of the ocean so far as is necessary to prevent those unreasonable dangers to the "safety, health, morals or general welfare of the people," which are, in fact, liable to occur in the unregulated competitive use of separate parcels of ocean-front land.

For example, an ocean beach, considered either as a geological structure adjusted by nature to withstand the impact of storm waves or as a place of human recreation, extends as a unit from beyond the
seaward side of low-water surf to the upper limit or crest of the wave washed material that forms the beach. But ordinarily this unit is owned partly by the state and partly by upland owners, with some very real overlapping of rights. When an attempt is made to fix a sharp boundary of these two "ownerships" the dividing line has traditionally been described by the courts, broadly, as the line of "ordinary high water," usually interpreted as being the imaginary line of a mathematically computed "mean high tide"; but the rights of the two parties are not as sharply separated by this line as are the rights of two owners of upland real estate by the joint boundary. Where recreational uses of the coastal lands as a whole, including in such uses private dwelling places and commercial resorts, afford or are likely to afford the maximum values obtainable, as they largely do on the California coast, the natural resources of the locality can generally be used to far better advantage, at less economic cost, with less danger to property and life and with larger returns to all concerned, if buildings and other structures are kept to the landward and safe side of the crest of the beach and if the entire natural unit of the beach is kept free to absorb the impact of storm waves and for recreational uses. Private developments along a beach usually begin in this sensible way, leaving the whole of the beach proper free from fixed structures. But when a subdivision separates ownership of the riparian edge from ownership of the back land, unregulated competition tempts to expansion of structures on the riparian edge seaward, occupying part of the beach, inviting danger and high construction costs, and greatly reducing the total values obtainable from the beach and the hinterland.

In such situations a police regulation fixing in advance a reasonable "front building line" for all private landowners, in the common interest and with proper provision for adaptation by a competent central authority to meet special local conditions, would prevent an immense final waste of natural resources.

To decree, as a condition of approving subdivision plats, that the now private portion of all ocean shores (that is to say; above "ordinary high water") shall be dedicated to public use for street or park purposes might be confiscatory and unconstitutional. But to decree that such private marginal lands along the beaches shall not be used for certain purposes to which they are naturally ill adapted, which invite danger to property and life, and which tend to impair the potential aggregate values of property in the region as a whole, would be a reasonable and farsighted use of the state's police power; and in connection with suitable regulation of the public use of the state's portion of all beaches would leave it open to the state, at proper times and places, to acquire
by gift, purchase or condemnation so much of the upper portions of the beaches, now privately owned, as it may prove expedient to have in public rather than in private ownership.

More definite suggestions for legislation on these lines will be filed with the commission.

Sacramento River near Rio Vista
Second opportunity: The lower Sacramento River and tributaries.
One of the most striking examples I have observed in California of the possibilities of conserving and utilizing scenic and recreational resources as a secondary but important incident of public control of land exercised primarily for other ends is in connection with the flood-plain portion of the Sacramento River and its tributaries.

For a distance of more than eighty miles, from Antioch past Sacramento to above Marysville, the river channels, together with marginal strips of flood plain, are enclosed by levees constructed by the state for flood protection. Along many of these levees there are roads, built and maintained by the state and by its agents, the counties. From the levees, by automobile and otherwise, there are commanded delightful views of the river and its margins and of miles and miles of beautiful orchards and farming lands outside of and below the levees. The land within these levees is subject to special rights vesting in the state for ensuring the free passage of flood waters, preventing dangerous obstructions and protecting the river banks and levees from erosion. The water channels themselves are subject to rigid public control in the interest of navigation by the federal government, and are used not only for freighting but largely by passenger steamers
and pleasure boats. The situation is subject to further public control by the California Debris Commission, and must be still further controlled and managed by the state in carrying through the farreaching public program of conserving and utilizing the water resources of the state. Along the course of this great system of waterways, levees and roads there are numerous delightful spots for recreation, and the route as a whole is in effect, even at present, a river parkway on a vast scale, of great landscape beauty, and enjoyed by thousands of people.

It is physically possible, while dealing successfully with the flood problem, with the commercial navigation problem, with the irrigation problem, and with the general conservation and utilization of agricultural and industrial opportunities, that events should take either one of two opposite courses in respect to the scenic and recreational assets.

On the one hand the roads along the levees may become gradually more and more shut in by structures and otherwise, and less and less agreeable, the marginal lands between the levees and the river more and more occupied by dumps and other unsightly conditions such as have already occurred in places, the trees become frequently destroyed where of great landscape value and allowed to grow up thickly where open views are highly desirable, and in general the great scenic assets of this remarkable situation become gradually frittered away and the recreational use of the roads and of the river destructively exploited by a poor class of private catchpenny devices crowding close to the stream of travel.

On the other hand, by a comparatively limited extension of the large degree of public control already established over the situation by the numerous public agencies concerned, and by the coordination of the policies, plans and methods of those agencies together with those of the State Park Commission, a situation which now offers admirable opportunities for scenic enjoyment by road and by water and many pleasant natural recreation spots along the river could not only be maintained but greatly enhanced in scenic value. Some of the methods by which this end can be sought are by opening and keeping open the finest possible views of river and meadow and woodland, by acquiring and improving a limited number of picnic places and camping places, and of natural parks on the flooded lowlands within the levees where not needed in connection with navigation or industry, and by prevention through appropriate zoning regulations of types of private use and misuse along the route injurious to the general welfare and to the aggregate property values of the localities into which they might be thrust by shortsighted or selfish individuals.

South Fork of Eel River, Humboldt County (See pages 44 and 60)

There are many other streams in California, both north and south, along which joint and coordinated management for flood control, for conservation and use of water, for highway transportation and for conservation and use of scenic and recreational resources, would bring far greater dividends than the separate pursuit of one or more of these ends independently. But the Sacramento River is the outstanding example among them and must suffice in this summary review.

Few Californians realize what a tremendous scenic and recreational asset it is capable of being made by an expenditure quite trifling in money alongside of all that has been spent and will be spent on unavoidable public improvements of the river and its margins. The need here, as in other parallel cases of less magnitude, is not so much for money as for painstaking cooperative effort; for vision to see where and how scenic and recreational by-products can be salvaged, and for technical skill in salvaging them economically.

I conceive that it is a proper continuing function of the Division of Parks to watch for such opportunities, call attention to them and try by consultation and advice to bring about the needful cooperation, for which the present organization of the various departments of the state government is so much more favorable than in the past.

A third great system of publicly controlled lands acquired primarily for other than park purposes must here be briefly discussed in its relation to a prospective system of State Parks, namely the Highways of the state.

The vast amount of enjoyment of the scenic resources of California which people get simply from riding in automobiles on public roads is essentially independent in most cases of the ownership of the adjoining lands. It has been well said that "the land belongs to its owner but the landscape to him who for the time being enjoys it."

Thousands of square miles of land in California, privately owned but threaded by public roads, present beautiful landscapes which are possessed in this sense by the riders on the roads. These landscapes can be and are enjoyed in the highest degree by the public without trespass, and often without the slightest conflict between such public enjoyment and the private economic uses of the land. That is to say; it often happens the land under its present cconomic use, for grazing or otherwise, offers as beautiful landscapes as could well be asked, admirably enjoyable from public roads and trails; and in such cases even if the aggregate value of the public enjoyment of the landscape is greater than the value of the land to its owners there would be little to gain and much to lose through withdrawing it from private use and public taxation by making it a public park, provided some other

California Landscape of the "Woodland" Type

## On the Redwood Highway, Humboldt County

(See pages 44,48 and 60 )
means can be found for avoiding impairment of the total aggregate values derivable both from the land and from its landscape.

The chief danger of such impairment lies in the fact that just in proportion as the public is attracted by the pleasantness of such a region to use roads through it in large numbers, there arises a temptation to use the land abutting on these roads for new purposes, designed to exploit the presence of the pleasure-seeking public; purposes often parasitic in character and tending gradually to destroy the qualities which mainly induced the public to go there and justified the expenditure on the roads that brought them.

Suppose a new or improved road suddenly increases the accessibility, to week-enders, vacationists and tourists by automobile, of a lovely stretch of country, say a country largely occupied by grazing land and scattered woodlands of little economic value. New's of its beauty and of the excellence of the road spreads like wild-fire. Pleasure travel grows by leaps and bounds; partly diverted from older routes, partly stimulated into existence by the new possibilities of enjoyment. The vast majority of the land is not and cannot be used
for any other economic purpose than before and is raised but a fraction in its rentable and taxable value by the better transportation. But along the margin of the road there rapidly spring up new uses, partly parasitic on the pleasure traffic, partly serving real needs of that traffic; both too often done in places and in ways which progressively ruin the quality of the landscapes visible from the road. Speculative optimism causes a wholly unjustified multiplication both of the parasites and of the roadside services which in moderation were needful, so that competition alone tends to reduce the net earnings of most of them toward the vanishing point; while at the same time their multiplication spoils the attractiveness of the route, checks the growth of the pleasure travel or begins to reduce it again, and sets the stage for diverting it to some other region not yet spoiled by such parasitism.

The wastes involved in such processes as these are greatly increased in frequency and in seriousness by the increased mobility characteristic of modern conditions, especially in America, and perhaps most of all in California. There is a weakening of factors which have often checked such wastes elsewhere and in the past, such as tenacious local traditions and habits, well-established local pride in things which have made a region famous, and a general blind resistance to any changes good or bad. New safeguarding factors need to be developed, and there is peculiar need and opportunity to develop them in California. They can be developed only by cautious but courageous and active experimentation along many different lines, for no simple, easy, panacea for these troubles has been devised, or is likely to be devised.

The creation of State Parks is one promising line of experimentation, but others are fully as important. The simplest way to indicate some of them is to take a hypothetical case of a new state highway through a region of beautiful landscapes but of moderate economic land values. It is assumed that the road is located and designed not only with regard to a proper balance of cost and efficiency in the road as a means of transportation between terminals, but with regard also to exhibiting the beauty of the landscape effectively; and that a right of way is secured sufficient to include, with some margin of safety, all the land necessary for construction and maintenance and for probable future widenings and improvements of the road. What more is desirable?

1. Control of the foregrounds of the more notable and valuable landscapes enjoyable from the road, especially in those places where there is relatively great danger of great scenic loss through lack of control, and where the cost of insurance against that loss is low in proportion to what it buys. The selection of these places and determination of the kind and extent of control which will buy the most insurance at the least cost requires a high order of discretion. At
one place, let us say, an inspiring outlook over miles of valley and mountain can be permanently assured by anything which guards against obstructive or distracting objects on a certain strip of land beside the road varying (say) from 55 to 150 feet wide. Less would not give the insurance, more is unnecessary. That insurance could be secured in various ways:
(a) By a simple widening of the "right of way," and the maintenance of the area by or for the highway authorities.
(b) By supplementing the highway by a "park" strip publicly owned and maintained, a procedure more likely to be justified if the strip can perform other park functions than mere control of the foreground of highway views.
(c) By securing from the private owner of the strip (outside the portion necessary for the physical construction and maintenance of the road) an agreement, in the legal form of an easement, that he will not so use that strip as to blockade or impair the view across it from the highway, although free to use it in any other way. The precise wording of the grant of such an easement in order to meet the needs of any particular case-to accomplish the public purpose with a minimum of practical interference with the reasonable desires of the land owner-sometimes requires much technical skill in respect to landscape and to legal considerations and in negotiation, but with patience could often be secured with little or no money payment as an incident and condition of locating the highway through that owner's land, or less favorably as a supplementary agreement.
(d) In some cases police regulations justifiable on other grounds as applicable to the use of lands adjoining a highway may reduce or avoid the need of acquiring such forms of foreground control as are noted above.
2. To provide for temporary stopping places, in the form of turn-outs, short spurs, or loops, for enjoyment of views in quiet, or for picnics, so arranged as to give a maximum of pleasantness and privacy to those who use them and a minimum of interference of such uses with the regular use and enjoyment of the highway by through travel and with the use and protection of adjoining private land. There is great need of systematic provision of such places along many California highways. They must, from their nature, ordinarily be publicly provided, maintained and policed, because it is impracticable to provide and operate them as such at a profit. They must, therefore, be publicly owned. It is immaterial whether they are technically regarded as little parks or as incidents of the highway; but ordinarily the necessary slight maintenance and policing of them can most

Marysville Buttes, Sutter County
(See pages 49 and 65 )
efficiently and economically be done as an incident of the maintenance and policing of the highway which they serve, and by the same force.
3. Areas adjoining the highway, of special beauty or other public interest, usually much larger than those of classes (1) or (2); embracing both (a) state or local parks intended for actual entry by the public for the better enjoyment of whatever special interest they present; generally including automobile parking facilities, often picnic places, and sometimes camping facilities; and varying enormously in size and in the qualities that give them special value, scenic, recreational, historic, scientific or otherwise; and also (b) areas valuable solely or chiefly for enjoyment from the highway in passing. These last will, in some cases, be so conditioned that the simplest and most economical way to assure the maintenance of what makes them of interest to the public passing on the highway is to acquire the land for park purposes and manage it at public expense solely for that purposz; but in many cases it should be possible, by the exercise of ingenuity and initiative to sccure the essential public purpose in view at a lower cost to all concerned through agreements with the private owners, leaving to them the possession and exclusive use of the land, but guaranteeing against destructive changes in the things which make the area one of notable public interest and concern.

In the course of this survey, in traversing California highways largely used for pleasure travel, I have observed a great many cases where the pleasure derived from the use of the highway was very largely dependent upon the condition of certain critical strips and fragments of private land, upon which a few unfortunately placed sheds or advertising signs or trees or even bushes could almost completely obstruct or ruin the view from the highway of distant landscapes of great beauty.

In some of these cases the natural growth of vegetation on these parcels would in time close out these views. In other cases the cutting of a few foreground trees for fuel or otherwise would greatly impair the highway landscape. In most of these cases the present economic value of the landowners' right to do or permit the things which would work such injury to the landscape is little or nothing. If the facts were called to their attention, some, doubtless, would capitalize the "nuisance value" of these fragments of their land and try to blackmail the public by threat of committing the injuries; but I have sufficient confidence in the decency and public spirit of the majority of Californians to believe that if properly approached they would gladly execute properly drafted agreements, for themselves and their successors in title, to avoid these needless and serious injuries to the scenery of the highway where to do so would not involve really serious economic losses to them.

And to supplement such voluntary grants, in regions where it is widely recognized that the general welfare and even the economic prosperity of the inhabitants and landowners of the region as a whole are largely dependent on the maintenance of its attractiveness to people seeking pleasant outdoor surroundings, at least the more indefensible selfish abuses of the privilege of abutting on a scenic highway can be controlled by local zoning regulations, if they are framed under competent technical advice, legal and otherwise.

I have not included the provision of overnight camping places as a normal public function incidental to highways used for pleasure

Hotaling Peninsula, Clear Lake, Lake County
(See pages 49 and 65)
[34]
travel. No such camp that is much used can be kept in sanitary, decent and agreeable condition without considerable equipment and constant maintenace and care, for which the users should reasonably pay a fair charge. There is, therefore, no sharp line of demarcation between the operation of such camps and the operation of hotels; and private enterprise tends to supply them in a great variety of types, all subject to regulation and inspection by the Board of Health. It appears to me that there are only two conditions under which the state would be justified in establishing public camping places and operating them directly or through lessees; first, where a State Park or kindred public recreational area, established for other reasons, is so situated that it cannot be adequately enjoyed by the public without the convenience of proper provision for camping in connection therewith; and second, perhaps, where the adequate enjoyment by the public of an agreeable stretch of country made accessible by state highways appears to require provision for camping in localities and under conditions which make it unlikely that the need will be satisfactorily met by private initiative.

B. Distribution and Character of the More Notable Resources of the State of Scenic, Recreational and Related Kinds.

A map of the state has been prepared to accompany this report indicating in a broad way the general distribution of many of the resources under consideration. This map will be found at the end of the report.

While the fundamental elements determining the characteristics of scenery are geologic - the land forms, the soil and rocks, the waterthe most significant single criterion of landscape conditions which can be shown on a small scale map, in addition to streams and large bodies of water, is the distribution of the various types of natural vegetation.

On this map are shown the regions throughout the state characterized by each of the following types of natural growth. The map is based mainly on the much more detailed but as yet unfinished surveys of the Forest Experiment Station at Berkeley, supplemented in some areas by much more superficial observations. No distinction can be made on this scale between virgin forests and second growth or cut over areas, and no attempt is made to show areas of any type less than a township in size.

Reduood Forests. This comprises the noble forests of the "redwood belt," including many admixtures of Douglas Fir, Madrone, and other trees, beside the pure stands of redwood groves, and the richest and most beautifulundergrow ths of all the California forests. (Pages 30, 47.)

Big Tree Groves. The locations of all the more important stands of the Big Trees of the Sierras are shown by symbols. (Page 62.)

Pine Forests. The areas grouped under this designation, although mainly characterized by pines, vary greatly in composition and in density in different parts of the state. All are regions of "tall timber" and of sylvan beauty. (Page 45.)

Douglas Fir. These are outlyers, in the northern part of the state, of the greater Douglas Fir forests of Oregon and Washington, often in nearly pure stands. As an admixture in other types of forest, the Douglas Fir is much more widely spread.

Fir Forests. These forests, mainly composed of red and white fir, mark generally higher levels in the mountains than the "Pine Forest."

Alpine Forests. These are the forests of still higher mountain slopes, up to timber line, varied and picturesque, but often of little timber value.

Woodlands. This term is used to cover a great variety of growths, mainly characteristic of the foot-hills and the fringes of forest regions, of relative little timber value but often of great landscape charm.

Oaks of many kinds, both evergreen and deciduous, are the most prevalent trees, sometimes in close groves, but often more widely scattered through grass land and chaparral in the beautiful park-like landscapes which are among the most charming and characteristic elements of California scenery. Digger pines are common in some of the woodlands, and others, especially toward the deserts, are largely of Juniper. (Pages 29, 34, 35.)

Brush Land. "Woodland" and "Brush land" merge one into the other imperceptibly, and from the purely landscape standpoint much that has been rated as "brush" by the foresters might be counted as beautiful though dwarfish woodland. Brush also includes much bushy chaparral in the southern part of the state, but low and more open bushy growth, at all approximating sagebrush land in appearance, is classed with grazing land and desert.

Blank areas on the map include the latter kind of low brush land, grazing land, deserts and lands dominantly agricultural. Within these blank areas occur in places many fragments and passages of woodland and other scenery of considerable interest, which it was impracticable to record, except that some of the desert regions of special interest are designated by symbol.

Throughout all these regions of different vegetation, the quality of the scenery varies largely with the local topography. This is impossible to generalize; but the most notable scenery and the most favorable opportunities for recreation are often associated with streams, lakes, or the ocean, or with mountains, canyons, buttes, or outstanding rocks.

The main types of these scenic resources can most conveniently be discussed in groups similar to those under which specific State Park projects will be discussed below.

Sea Coast. The regions along the line of contact between land and ocean, both on the Atlantic and the Pacific coasts of the United States, because of their scenery, their climatic conditions and the variety of enjoyments to which they are adapted, constitute one of the great scenic and recreational resources of the continent, drawing people in constantly increasing numbers from the prosperous but less agreeable vast interior.

The coast of California differs climatically from the Atlantic coast mainly in that the movement of air is almost constantly from off the cool sea, making the temperatures far more equable throughout the year and in general refreshingly cool even in the "vacation season" of summer, when most of the fertile and populous areas of the interior, both of California and of the continent as a whole, become unpleasantly hot.

The temperatures which characterize the California coast the year round, are most nearly represented on the Atlantic side by the summer climate of the coast of Maine, a climate which in combination with picturesque scenery has made that coast a summer resort of national importance in spite of two drawbacks, which are also shared by the coast of California, namely the prevalence of water temperatures which most people find uncomfortably cold for bathing, and a tendency to fogs. Both these drawbacks are increasingly noticeable as one passes up the coast from San Diego to Del Norte counties. The California beaches, of which there are hundreds of miles, although less continuous than those of the Atlantic coast south of the Gulf of Maine, are used and will be used, because of the water temperatures and often too heavy surf, proportionately less for actual bathing and swimming and proportionately more as refreshing seaside playgrounds than those of corresponding latitudes on the Atlantic coast. On the other hand, the extraordinarily equable and refreshing climate of the entire belt of sea coast land which feels the influence of the sea breezes, accompanied by the immensely diversified and beautiful character of the coastal landscapes-alternating between beaches and rocks; plains or lagoons and dunes, mesas or mountains; open fields or chaparral slopes and woodlands or forests; with the land often

Bodega Bay, Sonoma County
(See pages 40 to 44 and 59)
rising tier on tier in sight of the sea for miles inland-makes a trip along almost any part of this coast, or a sojourn on it whether brief or extended, far more refreshing than is generally the case on the Atlantic coast. Moreover during the heat of summer, these conditions tend to make a broader belt of seaboard land naturally attractive for enjoyment and refreshment of city and inland dwellers than is the case on the Atlantic coast with its prevalence of summer breezes off the hot interior and its prevailingly flat topography:

An important conclusion to be drawn from these considerations is not only that California has vast resources of scenic and recreational values along its hundreds of miles of coast-that is a fact which everyone knows. More specifically it is that in the utilization of these resources there is great danger of waste through following the line of least resistance in the subdivision and occupation of the sea coast lands in such a way that a limited number of people will skim the cream of sites along the outermost edge of this coastal belt and in the process greatly depreciate the values otherwise obtainable from the belt as a whole, both by those who would later occupy residential sites and resorts near but not directly on the sea, and by the vast numbers living in the interior who will want to enjoy the coastal belt by means of brief excursions.

I am not one of those who would like to see the entire non-commercial sea coast of California made into a public park and kept free from dwelling houses, even if it were financially practicable to bring this about. I believe that one of the desirable ways for millions of people to use and enjoy this natural asset is by occupying cottages, hotels, clubs, and the like, along the coast. I would not even wish to
see such dwelling places uniformly and everywhere separated from the shore by an automobile road across which their occupants must pass to reach the water's edge. But it is perfectly clear that a long continuation of the sort of developments which have recently been taking place along the coast, especially in southern California, without any systematic general planning for the future, would result in an ill-balanced and relatively unprofitable use of a great natural asset. Specifically it would result in:
(1) A disproportionately small, indeed an absurdly inadequate, provision of facilities for enjoyment of coastal scenery by automobile, which is the chief way in which it is likely to be seen and enjoyed by a large proportion of the citizens of California and of visitors to the state. The present tendency is plainly toward the gradual progressive walling off of nearly all the agreeable views of the sea and shore from the coastwise highways by building and other developments on private land.
(2) A crowding forward, especially upon the beaches, of private structures of a sort and in a manner which are sometimes dangerous and which tend greatly to diminish the value of the beaches for enjoyment, (a) by other occupants of beach-front property, (b) by occupants of neighboring upland property, (c) by the general public which has very positive rights to the use of a large part of every beach; rights for which the state is trustee and which it is the state's duty to safeguard.
(3) A disproportionately small provision for convenient and agreeable means of access for the public to the portions of beaches and other shores in which they have rights, and inadequate and unsatisfactory provision for the parking of cars by which they reach these points and for various conveniences and comforts needed for the reasonable enjoyment of the shores.
(4) An irritating and confusing conflict of complicated and little understood public and private rights in various parts of the beaches at various stages of the tide, unsatisfactory both to the public and to owners of riparian land.
(5) A tendency toward the initial development of too continuously urbanized (and often slummily urbanized) narrow shore fringes, to the great detriment of the total scenic, recreational, and residential values otherwise obtainable from the entire coastal belt.

One important measure toward counteracting these tendencies is the acquirement and management, in perpetuity, as non-urbanized public parks, of considerable stretches of coast of various types, including beaches, especially in Southern California where the urge to use the coast for recreation is stronger than in the north and where
the attempts to exploit this urge, often in a short-sighted and publicly injurious manner, are now most active.

Another is to bring about much better and more farsighted regional planning of the steadily progressive subdivision, rearrangement and utilization of that far greater extent of lands in the coastal belt which will, and should, remain in private ownership; planning so as to avoid the wasteful frittering away of the great values involved.

It is impossible in this report to discuss adequately the varieties of coastal scenery throughout California, but a few regions of the coastal belt will be discussed in more detail in connection with specific state park projects.

Forest and Woodland Types. Undoubtedly the forests of California are among its most notable scenic assets. Outstanding among them and unique in all the world are its redwood forests with their characteristic undergrowths, and its groves of Big Trees. Only less notably unique in beauty than these are its primeval forests and woodlands of certain other types.

With minor exceptions the forests of California, unlike those of the East, never extended over much land fit for agriculture, and with good economic management they will be perpetuated where they stand. But not as they stand. These venerable forests, made up in part of the oldest, largest and most impressive of all living things, when once cut will probably never more be seen by man; not though our remote decendants live on in a California of unchanged climate thousands of years longer than it has taken to grow the trees we see. For to let trees grow so old and large is "uneconomic" as a matter of timber growth.

This generation has received, as a free inheritance from past ages, a hoard of forest wealth. Regarded as economic or exchangeable wealth, not increasing at a normal rate of interest, it calls for liquidation; and it is being liquidated by lumbering operations just as fast as it can be pushed on to a somewhat glutted market. But if any of the future generations for thousands of years to come are to have opportunity of enjoying the spiritual values obtainable from such primeval forests, this generation must exercise the economic selfrestraint necessary for passing on some portion of this inheritance, instead of "cashing-in" on all of it.

A glance at the map shows how considerable a part of the forested regions of California is included within the boundaries of national forests and national parks. There is much private land within those boundaries, but slowly and gradually, by a process of trading and purchase, the government holdings in the forests are being consolidated; and a beginning has been made on the vitally needed

acquirement of the much fewer private holdings inside the National Park boundaries.

The Federal Government has thus already set apart in California for permanent public administration forested areas largely available for free public recreation that are more extensive than the combined state parks and state forests of any state in the union. It is important to consider, therefore, under what circumstances and for precisely what reasons the state is justified in purchasing and administering forest lands as state parks.

Most of the timberlands within national forest boundaries, whether now privately owned or owned by the government, will sooner or later be cut over and operated as perpetual-yield timber-crop forests; having, it is true, large incidental recreational possibilities; but not retaining the scenic and inspirational qualities peculiar to virgin forests of huge and venerable trees.

There are some important exceptions to this general rule.
Recreational areas in national forests are definitely set apart from time to time by the Secretary of Agriculture on recommendation of the Forest Service in localities where scenic and recreational values are of dominant importance, and are thereafter managed substantially for the same purposes as if they were parks. Some of these include notable stands of big timber.

Wilderness areas in the national forests are in process of being set apart by similar administrative action in localities now unpenetrated by roads, where there are practically no privately owned lands, where roads are unlikely ever to be needed for fire-fighting or other administrative purposes, and where natural wilderness conditions can be maintained in perpetuity; but these areas, while of immense recreational value to those who will pay the price of effort, by which alone the true wilderness can be enjoyed, are most often high mountain areas and seldom include heavy stands of timber.

Special withdrawals in the national forests, have been made of limited areas, most often about a square mile in extent, embracing typical examples of various kinds of natural forest, with the intention of keeping them permanently in their natural condition, primarily for scientific study and as a check on the results of experiments elsewhere. These in effect are museum specimens of many of those types of forests which happen to occur on national forest lands.

The national parks, for those forest areas which they include, do as much as state parks would be likely to do.

But in relation to the forest scenery of California as a whole and its enjoyment by the people of the state there are notable shortcomings in this great system of national reservations.

Luxuriant Growth in Northern Redwood Forest

1. The most notable and serious is that the great redwoods, California's noblest forest heritage, lie almost wholly outside the national forests, having been acquired by private owners before the latter were set apart. To preserve adequate and worthy examples of virgin redwood forests is by far the most important and urgent single duty of the State Park Commission in relation to forest types.
2. The Big Trees of the Sierra, occurring only at rare and scattered localities, are in larger proportion now included in national parks and national forests and in all such cases permanently protected; but a few notable examples not so protected cry out for protection by the state.
3. Certain other examples of beautiful, inspiring and botanically important types of forest and woodland growth characteristic of California are, by accident of geographic distribution, not well represented and preserved in the national system of reservations, and these too call for action by the state.
4. In relation to the use and enjoyment of the scenic resources of the national forests by the public of California two classes of problems arise calling for special consideration by the state.
(a) Many parcels of land which passed into private ownership before the national forests were created, or which have since so passed, mainly under color of mineral claims, constitute keys to the public enjoyment of parts of the forests having great scenic or iecreational value or are so situated that their exploitation in private hands might seriously impair such values. In so far as these private lands are valuable mainly for timber production they are gradually being consolidated in national forest ownership; but in so far as their value is mainly or exclusively for the recreation of the people of California the burden of acquiring them is not a legitimate charge on the national forests, and in some cases their acquirement for state park purposes seems the most desirable course, with provision for subsequent readjustment of boundaries by exchange with the national forest service so as to produce satisfactory administrative units.
(b) The resort to parts of the national forests of pleasure seekers in concentrated numbers, drawn mainly from the population of California, creates problems of sanitation, of policing, and of providing many kinds of facilities and conveniences, necessarily involving large expenditures. Congress has shown no disposition to provide at all adequately for these expenditures at the cost of the general taxpayers of the nation, and it would seem probable that this condition must be met in one or both of two ways: (1) By the transfer in some cases of the burden of administering these recreational areas in the national forests to state, county, and local authorities, as has already been
done in a few instances, and (2) by the establishment of a suitable system of charges through which those who avail themselves of these special facilities shall pay part or all of the costs involved in providing and administering them. To encourage concentrated recreational use of public lands, whether forested or otherwise, without squarely meeting the cost of thoroughly adequate administration is simply to invite destruction of the natural assets and justifiable dissatisfaction on the part of the public.

Types variously combining lake, stream, woodland and topographic interest, other than those associated with national forests and in most cases now privately owned. (Illus. pages $14,29,33,35,41,49,58$.)

Such areas are distributed widely throughout the state in great variety. Most of them will and must remain in private ownership, and in such ownership can continue to contribute largely to the enjoyment of scenery and to recreational use. The state's concern with their future, except so far as they may properly be included as parts of a state park system, has already been discussed.

The chief criteria for determining which of them should be included in an "ultimate, comprehensive state park system," as in the case of the less miscellaneous groups, appear to be these:

1. They should be sufficiently distinctive and notable to interest people from comparatively distant parts of the state to visit and use them, not merely good enough to attract people from the region in which they are situated and merely because of the absence of more interesting areas within easy reach. Also they should, in general, be situated beyond the limits of urban and suburban communities which

Butano Falls, Santa Cruz County

(See pages 49 and 61)

have sufficient population and wealth to assume the obligation of providing parks that would be mainly serviceable for the daily use of their own citizens, even though of incidental value to people of distant communities.
2. They should be characterized by scenic and recreational resources of kinds which are unlikely to be reasonably well conserved and made available for enjoyment under private ownership, or which under private ownership are likely to be so far monopolized as to make it seriously difficult or impossible for the ordinary citizen to secure enjoyment of them, except at a cost in time and money disproportionate to the cost of providing that enjoyment through state parks.
3. They should be as nearly as possible just sufficient in number and extent and character to meet the prospective demands of the people for the kinds of enjoyment which they can provide, and which cannot or will not be supplied by such other means as local parks, national parks and forests, and the use of scenic highways. The gauging of that demand in advance is very difficult; but there is every indication that it will be much greater than can be provided for under the present bond issue.
4. They should be geographically distributed with a view to securing a wide and representative variety of types for the state as a whole, and at the same time making a reasonable assortment of them equitably accessible to the people in each part of the state. "Equitably accessible" in respect to state parks obviously does not mean that if one community has a state park within half an hour's ride every other community should have one equally near. A state park system cannot be laid out on that scale of accessibility. It means more nearly that a fair assortment of state parks should be within the reach of a day's travel by automobile of any considerable body of population.

Desert Types. Certain desert areas have a distinctive and subtle charm, in part dependent on spaciousness, solitude, and escape from the evidence of human control and manipulation of the earth, a charm of constantly growing value as the rest of the earth becomes more completely dominated by man's activities. This quality is a very vulnerable one. Its bloom is easily destroyed by comparatively slight changes made by man. The very conditions which make a desert what it is leave every man-made scar upon its surface so completely unsoftened by natural processes as to produce a rapidly cumulative deterioration of its precious wildness.

The desert is in general worth so little for any other purpose than occasional enjoyment of its untamed character, and so much of it in southeastern California is within easy reach by automobile of so large a population, that it seems a clear duty of the state to acquire and
preserve inviolate several desert areas large enough for future generations to enjoy in perfection the essential desert qualities. As in the case of the ancient redwood forests, only such public action by the present generation on an adequate scale can preserve this heritage for the people of centuries to come. Nowhere else are casual thoughtless human changes in the landscape so irreparable, and nowhere else is it so important to control and completely protect wide areas.

On the map some of the regions of special desert interest are indicated by symbols. (See also pages $13,48,67$.)

LAWTON

Old Mining Town of Columbia, Tuolumne County<br>(See pages 52 and 66)

Areas of other special interest, historic, scientific and otherwise.
The places of historic interest brought to attention by the survey are broadly of two sorts: Those marked by buildings or other objects of intrinsic architectural or picturesque interest having historic associations, and those which have historic interest, merely because of some event which is associated with the site but which left no substantial physical reminder.

In general I believe that the latter can best be dealt with by the erection of suitable tablets or markers, with or without public acquirement of land for a setting; and except when such a site is worthy for other reasons of being made into a state park its acquirement and administration hardly seems to be an appropriate function of the State Park Commission.

In some cases of historic objects, such as buildings, the case is different. There is sometimes urgent need of action to protect them from disintegration or vandalism and where they are of statewide interest, and local or private initiative is unlikely to take the necessary steps for their preservation, the state ought to do so. Here, again, if the prime object which the state has in view, namely, the preservation and respectful treatment of the historic object and reasonable opportunity for the public to see it can be satisfactorily accomplished by agreement with the owner or owners, without the state's taking title to the property and assuming the entire burden of caring for and protecting a small isolated unit, this course will often be the wiser But there are some cases where the only practicable course is for the state to take title to the land, to repair and protect the object, give it a suitable setting, and permanently safeguard it, all of which involses considerable annual expense without much possibility of securing any corresponding revenue in any dignified and legitimate way:

Much the same may be said of certain objects of archcological interest, remains of Indian culture now neglected and seriously subject to destruction by thoughtless vandalism, and to various isolated objects of special scientific interest, geological, botanical, zoologic and otherwise.

On al! of these special subjects this survey has had to rely mainly upon information voluntecred by specialists, and I do not feel that the information obtained is as yet sufficiently comprehensive and systematized. Certain fairly definite recommendations are made below, but the subject deserves further study.

Coast Line, Del Norte County
(Ser pages 40 to 44 and 00 )

## PART III-DISCUSSION OF SPECIFIC STATE PARK PROJECTS

Projects for upwards of 330 distinct and separate state parks have been placed before the commission and studied by the survey staff, and data in regard to them filed with the commission under corresponding file numbers grouped in twelve geographic districts.

The number of projects is stated approximately because in some cases it was a matter of arbitrary choice whether to treat two or more proposals as distinct and separate projects or as variants, alternatives, or more or less separable parts of one project.

Coming from so great a variety of sources as they do the projects naturally vary from offers to sell land which the owners or agents think there might be a chance of unloading on the state (sometimes with little appreciation of the qualities which might make land desirable for state park purposes), to well-considered projects of the utmost importance, put forward in a public spirited way and with an excellent understanding of the needs of a state park system.

In digesting, classifying and considering this mass of projects the first step is a process of elimination.

Independent opinions have been sought as to all of the projects from the members, 175 in number, of the advisory groups, and while the opinions expressed in this report are my own and rest on a much more comprehensive study than that of any member of the advisory groups, I find that my opinions are confirmed in most instances by the consensus of judgment of these advisers so far as definitely expressed. In all cases where the judgments so expressed are not unanimously or by a substantial majority in accordance with my own, I call attention to that fact in the detailed tabulations submitted with this report.

For purposes of discussion I first reduced the number of projects slightly by consolidating about 15 of them, some of which are important, urgent and quite fit to stand alone on their own merits, with larger and more comprehensive projects that will be recommended for favorable consideration.

Next, I recommend the initial elimination of 171 projects for one or more of the reasons stated below:

Eight projects mainly or wholly because they lie within the limits of incorporated municipalities and are therefore excluded by law from the scope of the state park system.

Ninty-eight projects because clearly subject to one or more of the following objections:

1. Definitely lacking in qualities suitable for a state park.
2. Definitely more of local than of statewide value.
3. Too small or isolated or both to justify acquirement and administration by the state in the absence of more notably outstanding qualities.
4. Manifestly too costly in proportion to their value for state park purposes.
5. Distinctly less valuable as state parks than other projects which would serve similar purposes.

Sixteen projects for reasons elosely analagous to those above mentioned, but not falling precisely under the wording there used.
(a) Five projects which, while not lying within the boundaries of incorporated municipalities are surrounded by or closely adjacent to such municipalities and are well within the limits of the metropolitan agglomerations of San Francisco or Los Angeles, occupying land of relatively high price and so situated as to be serviceable mainly for local daily use by those metropolitan populations, thus falling into a class of metropolitan urban parks logically indistinguishable from the case of parks within municipal boundaries normally excluded by law from the state park system.
(b) Eleven projects which if situated in some other part of the state would have considerable distinction, but which do not stand out sufficiently from their local surroundings in view of their probable cost, or which embody features more or less satisfactorily represented in other projects that are more advantageous, or which can clearly be deferred for some years without much danger of loss.

Fifty-one projects primarily because (1) now part of a national park, adequately protected and open to public enjoyment, or (2) included within the boundaries of a national park and legitimately the duty of the national government to acquire and administer as part of that park, or (3) part of a national forest wholly free from included private holdings and reasonably protected as to scenic and recreational values, or ( 4 ) within a national forest and presenting no condition, either as to included private holdings or otherwise, that would seem at present to offer any justification for creating a state park within the forest, or (5) now held and protected by some other public or quasi-public agency and clearly not in urgent need of action by the state.

In addition I would withdraw from immediate consideration: Eight projects for the fencing in and preservation of certain species of animals, which projects should be referred to the Fish and Game Commission before passing on them; also twelve projects and groups of projects closely associated with state highway rights of way and four projects within the proposed limits of the Kennett Reservoir,

all of which should be referred to the Department of Public Works before passing on them.

There remain about one hundred twenty-five projects for favorable discussion in this report. All would be worth including in a comprehensive state park system if possible, and with others much less urgent would make a well-balanced system. But it is perfectly obvious that they could not all be acquired by the state without spending several times the six million dollars of the present bond issue unless much more than half the market value of the properties is contributed from other sources.

It is also desirable for a time to hold certain amounts in reserve for possible use in connection with some of the projects referred for consideration by other divisions of the state government and for other border-line cases.

It will, therefore, be necessary before proceeding with acquirements under the bond issue to select still further among these listed projects. The principles which should control these selections are discussed on the last two pages of this report.

## Sea Coast Projects

There are two sea coast projects that do not fall into groups with others.

Point Lobos, file number 5700, Monterey county, four miles south of Carmel. The most outstanding example on the Coast of California of pieturesque rock and surf scenery in combination with unique vegetation; including typical Monterey Cypresses. The entire point between the highway and the sea, comprising over 400 acres, is highly desirable. The most essential part of the point is considerably smaller.
Santa Cruz Island, file number 6150, Santa Barbara County. The most notable of the istands off the coast of Southern California in respect to vegetation, scenery, sea-caves and running water. rising to 2400 feet clevation. Good fishing, boating, bathing. About 24 miles long, about 90 square miles. About $2+$ miles offshore from Santa Barbara.

## Lower Southern Sea Coast Group

Southwest Boundary Park-Silver Strand, file number 7505. San Dicgo County. Beach and bay frontage. Five miles of barricr beach between Pacific Ocean and San Diego Bay, and five miles more of beach backed by extensive lowlands, marshes. lagoons, and some hills, extending to the Mexican border at the Southwest corner of the United States.
Estuary Beach Parks, file number 7530, San Diego County, A series of beaches, together with valleys at the mouths of which they lie, with inland water, meadows and enclosing hills, in part wooded. Several areas between San Juan Capistrano and San Diego with from one to five miles of beach each.

Inland Canyon, Laguna Beach Project, Orange County (See pages 40 10 44 and 57)

In the same stretch of coast with these estuary beaches, there are some narrow strips of land between the state highway and the sea. some with and some without beaches. which ought to be acquired either as additions to the highway right of way or as state parks. Note.-The southernmost of the "estuary beach projects." adjoining Torrey Pines and clearly desirable as a park in extension of Torrey Pines, is eliminated by law because within the city limits of San Diego. as is also the case with Mission Bay, where the state's ownership of tidelands should be used to assist San Diego in establishing a local park.)

Laguna Beach Park, file number 0800. Orange County: Sandy beaches and bluffs with large arcas of adjoining hill land, two small lakes, a pleasant canyon, and the long northeast arm of $\times$ ewport tidal inlet, vauable for small boating and water sports. 50.000 acres or less depending on amount of hill land secured. Northeast and southeast of Laguna Beach for several miles, excepting the town of I aguna Beach and other subdivided lands.

## Upper Southern Sea Coast Group

Malibu Coast, (westerly part). file number $60 \div 0$. Los Angeles County. A series of beaches. with bluffs and mesas, alternating with valley mouths, backed by the Santa Monica Mountains and traversed by the new state highway along the coast. extending eastward frem the lentura County line.
(Projects for state parks on the easterly part of the Malibu Coast are regarded as within the Metropolitan Suburban Zone of Los Angeles, as are others along the coast between that point and Newport.)

Point Mugu and Ventura County Beaches, file number 6450, Ventura County Beaches, lagoons, small dunes and flat lowland ahutting against bold hills at southeant side of Santa Clara delta and extending toward subdivided areas near I fueneme.

Rincon Beach, ete., tile number 0275 , Ventura County. Several beaches, of which Rincon is typical, with narrow strips of private land between state highway and ocean. beginning to be occupied by cabins.

Gaviota Pass, file number (1115, Santa Barbara County: Beach, valley mouth. picturesque rocks, canyon and live-oal, valley rising to pass, on state highway. I listoric interest. Adjoining Santa Barbara National Forest

Pismo Beach, tile number 6175, San Luis Obispo County. Some fifteen miles of excellent broad, sandy beach backed by duncs, with lowland and lagoons.

Morro Bay, file number 0225, San Luis Obispo County: Large shallow sandy bay with extensive state tidelands, enelosed from oecan by peninsula of high dunes. Picturesque pinnacle of Morro Rock arising from sea at entrance to bay: owned by the United States. Several miles of good beach north and south of ruck. Much sutdivision and some tuilding along north beach and landward side of bay

## Middle Sea Coast Group

Cape San Martin Beach, file number 5517, Nonterey County: Beach and coast seencry, redwoods, extent indeterminate. Another excellent beach a tew miles north. at Pfeiffer Point, is held for public use in the Santa Barbara National Forest.

Moss Landing Beach Park, file number 5083, Santa Cruz and Monterey Countics. Ten mile stretch of pebbly and sandy beach with flat land behind, from point 2 miles south of Capitola to Pajaro River. Bathing and marine views. Several thousand acres available.

Santa Cruz County Beaches, file number 5820, Santa Cruz County. V'arious beaches along coast of Santa Cruz. Sandy and pebbly. Several miles.

Pescadero Beach, file number 3825, San Maten County. Beach one mile long. fronting a land-locked lagoon and marshland. Abrupt, pebbly blulfs. Good fishing About 100 acres, 2 miles from Peseadero.

## Northern Sea Coast Group

Bodega Bay, Gallagher Ranch and Joy Woods, file number 3600, Sonoma County. Includes Bodega Bay, inner and outer shores, beaches, notable dunes, and strip of land between occan and county coast road, reaching from Bodega Bay northward to the mouth of Russian River a distance of 12 to 10 rniles. Also strip of land four miles inland from ocean along Salmon and Tanncry Crecks to conncct with Gallagher Ranch and Joy Redwoods at Bodega. Fishing, boating. bathing, camping. hiking. Historical site of Russian settlement. About 3,000 acres.

Point Reyes Peninsula Park, file number 3777, Marin County. Hilly, forested. mesa, canyon, beach and bluff lands fronting on Drake's Bay, Pacific Ocean and Tomales Bay. Scenically fine. High recreational potentialities. Embraces several sutordinate projects.

Gualala River Park, file number 2155, Sonoma and Mendocino counties. Coast at mouth of Gualala River and lower part of north and south forks. Redwoods Scenically beautiful. Well suited to general recreation. 2,000 to 3,000 acres, includ ing part of north and south forks and mouth of Gualala River.

Russian Gulch, file number 2305, A lendocino County: Partly redwoods, some cut over land, creek and beach lands. Botanic interest considerable. Views, excepting at
ocean front, not outstanding. Fishing and pienics. 1.600 acres. Ten miles south of Fort Bragg, extending from Pacific Ocean front about four miles inland.

Freshwater, Stone and Big Lagoons, file number 2115, Humboldt County Notably beautiful lagoons, with their barrier beaches. Interesting woodland scenery on landward sides of lagoons. Haunt of wildfowl. Camping, pienics, fishing, boating and bathing, general recreation. Several park units of considerable extent to be selected along and near Redwood Highway. 30 to 45 miles north of Eureka.

## Redinood Forest Projects

## Northern Group

Completion of Humboldt State Redwood Park, file number 2150. Humboldt County: Redwood groves, mixed forest and undergrowth of outstanding beauty and associated stream and valley landscapes along and near Suth Fork of Eel River and tributaries, desirable to round out and complete as far as practicable the detached groves of the present state park by control and protection of the scenic beauty of the region along the Redwood Highway in which those units have been established, and by evtending it northward especially in the notable Bull Creck and Dyerville Flat region.

Prairie Creek Park, file number 2200, Humboldt County: Redwood forest and creek lands and possibly coastal lands to round out the present Russ Grove and other state park areas along Prairie Creek. Notable redwoods and undergrowth. Several recreational potentialities. From junction of Prairie and Redwood Creeks northerly to Humboldt-Del Norte County line.

Del Norte Coast Park, file number 2250, Del Norte County: Notable redwood. mixed forest and coastal views. L'ndergrowth luxuriant. Botanical and geological interest. Hiking and pienics. Desirable for amplifying the limits of the present Graves Grove, and to preserve an unmarred approach to it from the north and south. About eight to fourteen miles south of Crescent City and extending from Redwood Highway to the Pacific Occan.

Mill Creek-Smith River Park, file number 2300. Del Norte County: Notable stand of redwoods and heary undergrowth. Excellent forest and river scenery: Camping, pienics, fishing. Botanically interesting. Desirable for preserving an unbroken forest picture through a region of outstanding worth. Extending from a point in Elk Valley, four miles northeast of Crescent City to the new bridge on the Smith River and including several miles of river frontage and redwoods along the river and on M hill Creek.

Van Duzen River Park, file number 2325. Humboldt County: Notable redwood groves. Interesting for exceptional views along the river. Camping, fishing, bathing and general recreation. 1200 to 1000 acres. Extending 10 miles easterly along the river from a point one mile cast of Carlotta.

Montgomery Redwood Grove, file number 2190. Mendocino County: Notable redwouds; first growth. cut over in part. Interesting for recreation. especially pienics, camping and fishing. 800 acres. In . lontgomery Gulch, about 10 miles northwest of Lkiah.

Joshua Hendy Grove, file number 2177. Mendocino County. 480 acres. Excellent recreational possibilities. Exceptional first growth redwoods. Along Navarro River 30 miles west of Likiah, elose to the MeDonald to the Sea Highway.

## Southern Group

Additions to California Redwood Park, file number 5510. Santa Cruz County. Timbered canyons, ridges and slopes north and west of Big Basin. Redwoods and mixed conifers, excellent stream and interesting small falls. Camping and hiking. 2 1-2 hours from San Francisco. 12,000 acres

Felton Grove, file number 5000. Santa Cruz ${ }^{1 / C o u n t y: ~ I m p r e s s i v e ~ g r o v e ~ o f ~ f i n e ~}$ redwonds, adjoining forested hills, wonded stream and open meadow: 375 acres. Six miles from Santa Cruz on San Lorenzo Canyon Road.

San Mateo Redwoods, file number 3810, San Mateo County: 612 acres of first and second growth redwoods, mixed forest, open grazing lands on headwaters of 1 farrington Creek, 4 miles north of Lal 1 fonda and 3 miles west of Skyline Boulevard. Botanical and recreational interest. Topography rather steep.

Big Sur, file number 5725, Monterey County: Timbered canyon, including redwoods, sheltered from coastal fogs and winds. Big Sur River. Several springs and resort. Fine climatic conditions, camping, hiking and fishing. 1200 acres. 38 miles south of Monterey on Carmel-San Simeon Highway:

Hearst Tract, file number 5630, Alonterey County. Timhered canyon and headwaters of Little Sur River. Redwood and mixed conifers. Hiking. camping and fishing. 1200 acres. 9 miles cast of Carmel-San Simeon Highway, 20 miles south of Carmel.

## Big Trees

Calaveras Grove, file number 4100, Calaveras County: North and south groves of Big Trees, privately owned within the Stanislaus National Forest. The former one of the most impressive and earliest known groups of Big Trees; the latter associated with notatle sugar pines and mixed forest. Congressional grant for state park purposes of considerable arca of less excellent intervening forest is conditional on state acquiring one or both groves. Bcautiful mountain stream of Stanislaus river flows between the groves. Mavimum area about ( 000 acres. 23 miles northeast of Angels Camp.

Redwood Mountain, Redwood Canyon, file number 5250. Tulare County: One of the very best stands of Big Trees, with stream running through it. 4700 acres, more or less, privately owned timberland within Sequoia National Forest.

Tule River Sequoia Park, file number 5360, Tulare County. Reported to contain many good Big Trees. Investigation not completed. Near Tule River Indian rescriation.

## Other Projects Within National Forests

Here also there are two projects which cannot well be grouped with others; both of them important and urgent.

Kings Canyon, file number 5117. Fresno County. One of the most notable weenic canyons in the Sierras, into which the state is now building a road. The prisate land in the canyon should clearly be acquired for state park purpowes and an agreement entered into with the L'nited States Forest Service, which controls all the rest of the land in the canyon, for dealing with the administrative problems which will arise on the completion of the road.

San Jacinto Mountains, file number 7300. Rixerside County: Virgin timber and rugged peaks. An outlying and isolated southern representative of conditions characteristic of the Sierras. View of surrounding country from summit and fine view of desert from Hidden Lake. In Cleveland National Forest. Nternate sections owned by Southern Pacific with some private holdings besides. Important that entire area

Calaveras Big Trees, Calaveras County
(See pages t4 to 49 and 61)
still in a wilderness condition, above the region now nccupied by resorts, should be. publicly controlled as a wilderness unit. East of Itemet, south of Banning

There is a northern mountain wilderness project, the conditions of which are in some respects parallel with the San Jacinto project, but as to which my recommendation is different, namely:

Castle Crags Wilderness, file number 2506, Shasta County: A mountainou arca extending many miles west and southwest from Dunsmuir. marked by pietureque crags with high mountain lakes in western part. Within Shasta National Forest Private ownership extensive, alternate sections Southern Pacific; but explottation not imminent and gencral acquisition of these included private holdings can reasonably be deferred for more urgent projects. Good approaches from Pacific Highway to National Forest through private land outside of forest are greatly needed, howeler. and their acquisition is somewhat urgent.

## Lake Group

Lake Tahoe, file number 3100, Eldorado County: Lake-vicw forested areas bordering shores of Lake Tahoc, all within toundarics of Tahoc National Forest.
(a) Eldorado Colinty: Thisteen hundred feet of lake shore, sandy beach and sparsely timbered land. County ouncd, adjoining El Tahoc property. (0 acre=
(b) Baldwin-Brigham: Lake frontage southern end of Lake Tahoe where Fallen Leaf Lake enters Lake Tahoe. Privatcly owned.
(c) Fish Hatchery: Two hundred feet lake shore and sparuely timbered area. Camping and lake view. Owned by state.
(d) Tahoe Realty Company: One thousand feet lake shore and t mbered area Between highway and lake. Lake views and camping. 80 acres. Privately ouned
(c) Bliss Memorial: Scenic Rubicon Point and craggy shores including emall sandy beach. Timbered and of rough topography: 162 acres in trust for gift to atate. Tahoc City and Emerald Bay.
(f) Tallant Lakes: Six miles above Rubicon Point. Fine high Sierra lakes and forest. Camping 800 acres.

Donner Lake, file number 3155. Nevada County: Lake shore and timbered land east of lake near area of historic monument of Donner party: Variously proposed to include from 1500 to 12,000 acres. In Tahoe National Forest hut largely in private ownership, especially on shores of lake. Two miles west of Truckee on Auburn-Reno 1 Highway. Camping and boating

Blue Lake, file number 2560, Lassen County: Beautiful mountain lake and timber: 0,000 fect clevation. Within Modoc National Forest, but privately ouncd. 435 acres. Akey situation. Thirty miles south of Alturas. Filteen miles cast of Nadeline

Zaca Lake, file number 0475 , Santa Barbara County. Bcautiful high mountan lake surrounded ty mived forest. 320 acres private land. Surrounded by Santa Barbara National Forest lands. Ten miles off state highway between Los Olivos and Los Alamos.

Echo Lake, file number 3200. Eldorado County: High Sierra lake with timbered shores. Gateway to largely used Desolation Valley area set aside for recreation by Sceretary of Agriculture in Eldorado National Forest. North end of lake one mile from summit of Placerville-Tahoe highway: 110 acres. Privately owned within Eldorado National Forcst.

Gold Lake, file number 3250. Sierra County: 1 ligh Sierra lake and timbired region for camping boating and fishing. 081 acres. Privately owned within Plumas National Forest, in largely used lake basin area set apart for recreation by Secretary

Castle Crags, Shasta County
of Agriculture: Elesen miles north of Sierra City; seven miles by good road from Yuba Pass and seven miles south of Blairsden on Western Pacific Railroad.

It is convenient to group with the above a small mountain project not on a lake.
Grover's Hot Springs, file number 4200, Alpine County. High Sierra timbered slopes and canyon. Popular camping place and hot springs. 200 acres. Privately owned within Mlono National Forest, three and one-half miles west of Markleeville.

## IV'aterfall Group

Extension of Burney Falls State Park, file number 2505, Shasta County. Contiguous to one of the most buautiful falls in California, now a state park. Extension of 3000 acres includes frontage on Lake Britton and streams for camping and fishing. Within Lassen National Forest but mainly privately owned. Present park 335 acres. Ten miles north of Burney and reached from Redding-Alturas highway.

Feather Falls, file number 2571, Butte County. One of the most beautiful falls in the state. Attractive camping areas included within 3000 acres. In Plumas National Forest but 100 acres patented. Two miles north of Mooretown; twenty-t wo miles from Orovillc.

## Lake and River Projects <br> (Independent of National Forest areas)

Clear Lake Region, file number 3585, Lake County. Attractive, hilly, wooded and beach lands adjoining the western shore of Clear Lake, mostly in peninsula, known as Hotaling Estate. About 1260 acres, useful for general recreation. Excellent views. Also minor opportunities elsewhere on shores of Clear Lake.

Sacramento River, file number 3437, Sacramento, Solano and Sutter counties. Suggestion for conserving scenic and recreational values as by-product of other public activities relating to flood plain portion of Sacramento River and tributaries, as discussed above in this report. (See page 25.)

## Mountains, Buttes, Etc. <br> (Independent of National Forest areas)

Mt. Diablo, file number 3775, Contra Costa County: 5000 to 6000 acres of open, brushy or partly forested lands in Pinc Canyon and on the slopes of Mt. Diablo. To amplify and round out the small state park already preserved at the summit.

Mt. St. Helena, file number 3770, Napa and Sonoma counties. Mountain summit, forested, brush covered and voleanic lands on the slopes of Mt. St. Helena, 4500 acres. Views, fine. Botanical, geological and historic interest. Includes Robert Louis Stevenson Monument and Russian Alonument.
Howell Mountain, file number 3700. Napa County. 800 acres on the east side of Howell Mountain, east of St. Helena. Yellow Pine, Fir, Madrone and brush lands and creek. Capable of connection along ridge to Mt. St. Helena project.
Pioneer Memorial Park, file number 3460 Butte County. Scattered timber, brush and pasture land in Marysville Butte region. Historic and scenic valuc. Picnics. 500 acres or more. Six miles west of Live Oak.

Fremont Peak, file number 5025, San Benito County. Bold peak 3100 foot elevation where American flag was first raised in California in 1840. Valley views and historic interior. 100 to 200 acres. Ten miles west of Hollister and 10 miles south of San Juan.

The Pinnacles, file number 5050, San Benito County. Impressive colorful rock masses and seattered pines, north of and adjoining present National Nlonument. 100 acres. Roads from Soledad and I tollister.

## Projects of Historical and of Scientific Interest

## Extensions

Fort Ross Addition, file number 3007, Sonoma County: 100 acres or more, to include the harbor, core, ocean front and creck to round out and protect areas of historic interest now owned by state. On ocean front nine miles north of mouth of Russian River.

Marshall Monument Park Extension, file number 3407, Eldorado County: Site where gold was discovered in town of Coloma. Historic value. American River landscape and picnics. 20 acres or more in extension of existing small state park. Nine miles northwest of Placerville. Enlargement.

## Pioneer Group

Columbia Town, file number 4120 , Tuolumne County: Old mining town of great historic and picturesque interest. Four miles north of Sonora. This old town as it stands today is the most interesting. picturesque and historically valuatle monument of the early mining days of California which has been found in the course of the survey. lts physical characteristics should be preserved in perpetuity mainly by suitable agrecments entered into between the state and the property owners and in part by purchases, and also by the public's assistance in financing and supervising necessary: repairs, restorations and carc.
Shasta Town, file number 2900, Shasta County. Small old mining town. First Masonic lodge in state. Five miles west of Redding on Redding-Weaverville road.

Pioneer Memorial Park and Donner Lake Park, referred to under previous headings, belong fully as much in this historical class execpt that they contain no important physical remains of the historic events associated with them.
Mark Twain's Home, file 4230, Tuolumne County: Restored cabin one mile from Tuttletown on road to Jackass Hill. One acre and cabin owned by Tuolumne County. A few acres additional are desirable to preserve the pleasant foothill wondland setting and to provide for pienics, etc.

## Spanish Group

Santa Barbara County Missions, file number 6280, Santa Barbara County: Certain of the abandoned old Spanish missions which will rapidly disappear if not protected from further decay.

Camulos Ranch, file number 6111, Ventura County: Old Spanish ranch housc of historic intercst. In Del Valle. 10 acres.
De La Guerra Ranch, file 0120. Santa Barbara County. Of historic interest. Near Santa Barbara.

Vallejo Home, filc number 3975, Sonoma County: 300 acres, hillside, brush and rocky land in ranch form. Home of Gencral Mariano Guadalupe Vallejo. Property partly within limits of City of Sonoma.
Not only in the cases tisted in the two preceding groups but in several others, such as buildings of old Fort Tejon, in a pleasant setting along the Ridge Route, action by the state to protect their historic and picturesque interest, either by purchase or by securing protective easements while leaving the property in private hands, would be fully justificd where the results can be accomplished at reasonable cost.

## Archeological and Scientific Groups

As in the case of neglected remains of buildings of historic intercst belonging to the Spanish and the pioncer periods, there are many more or less valuable and interesting remains of Indian culture and objects of other scientifie intereat, which in the absence
of any protection are seriounly in danger of lose to the state through careless vandalism and irresponvible pifering and relic-hunting. The more notable of these are here listed but others have been recorded and more wilt doubtless be reported later. The cost of purchaving or of securing protective eavements from the landowners would be in most cases, trifling. and the cost of such measures as fencing posting signs and systematic inspection would be well justified.

Painted Rocks, file number 0185, San Luis Obispo County: Historic Indian paintings. Near Carrıso Plains, eastern San Luis Obıspo County. 5 acres of grazıng land.

Santa Barbara Pictograph, file number 0279, Santa Barbara County. Of archeolugic interest. Difficult of access. 10 acres. In mountains north of Santa Barbura.

Fish Traps, file number 7140, Riverside County. At line of old seashore where Indians formed rock basins to hold fish as tide receded. Near Berdels corner west of Necca. Privately owned, but owner interested in making arrangements with state that will safeguard permanent preservation in the public interest

Shell Mounds, in various localities, notably in Tulare County: Containing records of Indian culture which should be preserved intact unless and until excaviated under competent archeological supervision for public museums. Now subject to irresponsible and unrecorded private digging.

Petrified Forest, file number 377 , Sonoma County: About 100 acres on Santa Rosa-Calistoga road. 51-2 miles west of Calistoga. Probably the best of the screral petrified forest deposits in the state for scientific and popular interest. At present well protected by private owner and open to public inspection at a reasonable charge.

At the Petrified Forest, Sonoma County

## Minor Projects of Woodland, of Topographic Interest <br> (Independent of national forest areas and of state highway projects)

Several small but intrinsically desirable projects, distributed in various parts of the state, and embracing typical woodlands of live oak and other kinds and very interesting rock and land forms, most of which there is prospect of preserving at relatively trifling cost to the state, have been favorably considered and will be covered by a separate memorandum to the commission; but I am not satisfied that we have found all the most favorable opportunities, and it seems best not to make the list public pending further field study and negotiations.

## Desert Projects

Palnı Canyon, file number 7250, Riverside County. The best known and most frequented of palm canyons, including the original Washington Palms, near Palm Springs. Partly Indian lands and partly private lands. Difficulties which in the past have prevented a proposed transfer of these Indian lands to National Monument status may interfere with their acquirement for state park purposes; but it is urgently important, either by that means or by some other arrangement aeceptable to the Indians and the government, to provide for the public policing and care of the canyon, now subject to scrious danger from vandalism, from fires and from gencral carelessness, and also to bring the private holdings under public control.
Painted Canyon, file number 7275, Riverside County: Rugged walls of colored rock bordering desert, with interesting desert vegetation. Near Mecca. Alternate sections Southern Pacific and public domain.
Red Rock Canyon Region, file number 5200, Kern County. One or more arcas of descrt mainly unpatented public domain several square miles in extent including notable Joshua trees and other typical desert vegetation. Special features within this region are Red Rock Canyon, showing remarkable erosion forms and color (but now largely in private ownership), petrified forest, and Walker's Pass.
Borego Palm Canyon Region, file number 7575, San Diego County. An area of many square miles near the northeast corner of San Diego County, including paim canyons and the desert mountain esearpments descending toward Borego Valley, and including also the more interesting desert portions of the San Felipe Valley.

Santa Rosa Mountains and Salton Sea Region, file number 7325, Riserside. Imperial and San Diego counties. Descrt slopes and canyons of Santa Rosa Mountains, extending down to limits of cultivable land along Imperial V'alley Highway, including much of the old sea shore markings near base of mountains, and including also one broad stretch of desert plain reaching to Salton Sea. Associated with and preferably connected to the Borego Palm Canyon region.

Edom Palm Canyon Region, file number 7115, Riverside and San Bernardino counties. A palm canyon near Edom and Mecca, together with many square miles of desert plateau to the east. mainly in the public domain, extending northerly to Twenty-nine Palms. Varied in character from small valley where Edom palms are located to high platcaus with Joshua trees and a large varicty of desert vegetation with interesting rock forms.

Lost Horse Valley, file number 7200, San Bernardino County: Upland desert with surrounding mountains west of the northern part of the preceding.

Morongo Pass District (Devil's Garden), file number 7225, Riverside County. An area of special interest for its varicties of cactus and other desert vegetation. Northeast of Whitewater adjacent to Imperial Valley Highway on the approach to the two preceding.

Victorville Joshua Trees, file number 7450, San Bernardino County. Large groves of Joshua trees and other desert growth near state highway south of V'ictorville.

## Principles Governing Acquisition of Park Areas

It is almost impossible to state succinctly and without danger of misapprehension the principles which should control the choice, and order of precedence for acquisition under the authorized bond issue, of the projects above set forth, because the weight to be given to different considerations varies widely in different cases.
The principle easiest to state and of most general applicability is that every dollar of the bond issue money should be used to secure the largest possible values for the state. This means, of course, that as between two or more projects of which only one can now be carried through, the cost of the land to the state, in relation to its value for park purposes, must be a controlling consideration. That cost will be the price (not in excess of its market value for other purposes) at which the land can be obtained, by agreement or by condemnation, less the contributions (not less than half of the price to be paid) which are offered from other sources. A project for which the lands are offered at a low price, in relation to the park values which the project offers, or for which contributions in excess of half the price are offered from sources other than the state must have the preference.

In the general survey of the entire field an attempt has been made to keep an eye on probable costs, and balance them against park values, but in many cases the figures of probable cost obtained are not at all dependable. It will, therefore, be necessary in many cases, in order to assure getting the greatest possible values for the state's expenditure, to carry negotiations with landowners and prospective contributors through to quite definite figures on several alternative projects before taking title to one of them, often involving surveys and preliminary landscape studies for the manner of using and administering a prospective park in order to determine the most expedient boundaries, and also appraisals of market value. These negotiations will take time and money; some of them will lead to no definite result, except the extremely important negative one of avoiding purchases that seem desirable at first blush but would later prove injudicious. There is no dodging the fact that twelve million dollars of trust funds cannot be efficiently spent without considerable precautionary overhead expense.

Next, the selections must be such as will provide a reasonable geographic distribution and a reasonable well-balanced variety of kinds of parks; but some departure from an ideal balance of the different kinds and locations of parks desirable in a complete system may well be countenanced in the expenditure of the funds now a ailable, for the sake of giving a measure of preference to the more urgent "now
or-never" types of projects, on the theory that other types, which are perhaps equally desirable intrinsically but the opportunity for acquiring which will remain open for some years, may be added later.

The grouping of the projects in the above list was dictated partly with regard for the above considerations. It would have been desirable to arrange all of the worthy projects in such groupings that I could say a well-balanced system would result from acquiring those projects in each group which prove to be most advantageously obtainable, in as large a proportion within each group as the limit on total expenditures permits, without omitting representation of any one of the groups. I can go so far as to say that I believe substantial acquirements should be made in each one of the geographical groups into which the sea coast projects and redwood forest projects are divided, the former involving a large preponderance of heavy expenditures in Southern California and the latter a large preponderance of heavy expenditures in Northern California; that substantial acquirements should be made respectively in the Big Tree group, in the Desert group, in the Lake group, in the $W^{\prime}$ aterfall group, and in the Lake and River projects; and that as well distributed and extensive acquirements as possible should be made among the more miscellaneous projects listed under the other heads. The projects under the more miscellaneous headings do not lend themselves readily to formal groupings, either geographic or functional, such that a representative selection of the most feasible projects in each group would automatically result in a well-balanced selection. There will inevitably be some elimination of projects which prove not to have sufficient popular appeal to make possible the raising of contributions for matching the state's money. And for the rest, while I have some opinions as to relative urgency and relative importance in a well-balanced system, these opinions must be weighed and balanced in each case against considerations of cost as determined by practical negotiations with money in hand and power to decide and act. Final responsibility must rest upon the commission, acting judicially upon information and advice presented by its executive officer and other responsible agents, and seeking in all promising cases to balance cost against the qualities of intrinsic excellence, of importance as contributing to the well-balanced varicty of the ultimate park system, of urgency or danger of total loss through delay, and of reasonably equitable gcographic distribution.

## LETTER OF TRANSMITTAL.

To Honorable (.. C. Yousc, Governor of California.
Sir: I have the honor to submit to rou herewith report of the Boarel of Directors of the Veterans' Ilome of ' 'alliformia, hogether with reports of the officers of the llome, namely the ('ommandant. Serertary'Treasurer, Surgeon, Quartermaster- 'ommissary, Entrineer and Aljutant, giving the details of the several departments for the fiscal year inded June :30, 19:27.

Mr. W. D. Wagner served, with homor, as president of the Board of Directors during the last biemnimm and, in severing his connection with the board of Directors of the Home has earried with him the respeet and good will of the directors, nffeers and members of the Home. Nr. Larl E. Jensen, State Director of Institutions, has been appointed to the vacaney.

During the past rear there have been no changes in the persomme] of the officers of the Home with the exception of the Assistant Sirgeon. Dr. E. D. Cook was appointed Assistant Surgeon, dannary !, 1927. vice Dr . Arnold, resigned.

It is the ambition of the loard of Directore fo eomeluet the 110 me in as bountiful a mamber as possible and at the same time to practice economy without impairing efticieney. Owing to the eondition of the buildings, many minor repairs have been necessary and we are looking forward with a great deal of enthosiasm to the time when the now barraeks will be available.

The new l'ost Exchange' building is well mbler way and we expeet to occupy it by the first of the year. This bulding is being ereeted with funds set aside during the past fiseal year.

During the past year the board of Direetors has worked in a spirit of fraternity and harmons: The officers have conperated with the directors and with each other in every way and the feeling of umamity existing between the direetors and the offieers of the llome is extremely satisfactory:

The legislature has appropriated lumds for a new harracks hulding. work on which will be eommenced the first of the year. The appropriation for support will meet the meeds of the Home unless the membership eontimes to incrodse at the same rate that it is buw growing.

Our members take a lively interest in the varions activities ol the llome and they have a bowling alley, hilliad ame pool tahles, earel tables, and a rery capacioms and well-equipped library. We also have moving pieture shows there times rach wek which are tinamed from our Post fund. These are well atterded by the members and eivilians at the dlome. A nominal elarge is made for members who are perbsioners and nompensioners are admitted without charge.
$\because-55889$

Our main and hospital dining roms are well conducted, the food furnished being of good rnality and variety. There is little or no complaint from the membership. On holidays such as Fourth of July, Thanksgiving, ('hristmas, New Year's, Armistice Day, etc., a special and more elaborate dimer is served which seems to be much appreciated. Entertainments are frequently given and afford much pleasure to the reterans.

Every effort is being made to bring comfort and happiness to these reterans who have given their hest to their comntry and who are now incelpacitated and unable longer 10 care for themselves.

Very respectfully,
B. A. Forsterer, President, Boord of Dircctors.

## REPORT OF THE COMMANDANT.

> Headquarters, Veterans’ Home, November $1,192 \bar{i}$.

Subject : Amual report for the seventy-eighth fiscal year.
To: The President and members of the Board of Directors of the Veterans' Home of California.

1. The annual report of the C'ommandant, together with the reports of the Secretary-Treasurer, Surgeon, Quartermaster, and Engineer, for the seventy-eighth fiscal year, euding June 30, 1927, is respectfully: submitted. The staff officers in charge of departments will render reports in cletail covering the various activities pertaining to their respective departments. The C'ommandant's report will cover in a general way the conduct and needs of the 11 ome.
2. The population of the Home is constantly increasing, owing to the large number of Spanish and World War Veterans who are now seeking admission, the average membership being approximately 1000 men.
3. The need of new barracks buildings, as well as a new modern hospital, has been acutely felt for the past several years, owing to the constant fire hazard, a menace which is ever evident in the old wooden structures which were constructed during the early eighties. Sanitation of the quarters is very difficult, it being impossible to fully eliminate or keep the old wooden buildings free from bed bugs, as they inhabit the walls and floors of the buildings, breeding and requiring constant warfare.
4. Construction on the new Post Exchange, which building will also house the post office aud barber shop, has been started and is progressing very satisfactorily. As soon as this building shall have been completed, the old Post Exehange and an old barracks will be removed in order to insure clear ground upon which location the first authorized barracks, of the proposed new building program, will be erected. Nany fine expressions of extreme satisfaction are being voiced by the reterans of all wars and organizations, in that the present state administration met with instant response the obvions and extreme need of a building program for the Veterans' Home.
5. The Home has been exceptionally fortmate in that during the past year many organizations and individuals have taken a special interest in the welfare and entertainment of the members of the Home by providing excellent and frequent entertainments. Organizations other than veterans' organizations, who have contributed to this work, are the Boy Seouts of America, Masonic Organizations, the San Francisco Civic Association and the Band from the Salvation Army School of San Francisco. All veterans organizations have assisted. The public schools and religious denominations in the Napa Valley have also
assisted in this work. The social hall, howling alley, and motion picture theatre, have rendered exeeptional opportunities for entertaimment and are well attended and highly appreciated by the membership. The Home possesses nue of the finest small libraries in the state. and which is being constantly improved moder the able supervision of an efficient and experieneed librarian. The membership has aecess to a government post offiee maintained on the reservation.
6. The Veterans' Home of California, being so far removed from centers of entertainment, is extremely fortunate in having the "Home band," which is small, ineluding forrteen pieces only, but which is by far the main and most important attraction of entertainment among the membership as six enneerts a week are rendered which are most enthusiastically enjored by all members of the Home, including those siek in the Hospital. Many members are mable to attend the entertainments for various leasons, but are always able to enjoy the coneerts rendered by the "Home band."
7. The need of a Chaplain, as maintained in all other Homes, is again stressed, to conduet religions services, funeral services, welfare work among the membership, and to assist the Commandant in providing adequate and appropriate entertainment. At present, the Home is depending upon outside ministers which is very ineonvenient and musatisfactory. Quarters or adequate compensation is not available during the seventr-eighth and seventy-ninth fiseal years for this important position, although the staff position of chaplain has been ereated.
8. The Hospital is a rery important function of a Soldiers' Home as men domiciled in the barracks who beeome siek are eared for and treated there, also men in barracks whose ailments are not of a serious nature, rendering them Hospital patients, report to the Hospital at "sick call" each morning on acconnt of varions minor physieal disorders. Of the membership, there are approximately 175 men sick in the Hospital at all times and owing to the gradnal inerease in membership of the Home, the Hospital will hecome inadequate as its eapacity is 200 beds. Owing to the mmsmbstantial construction and obsolete equipment of the Hospital, a new non of modern fireproof, conerete construction, with modern equipment, is urgently needed.
9. The growing need of a dental surgeon is also stressed as the contraet dental surgeon, who reports twice a week, is mable to treat the many members who are very mueh in need of dental treatment. These men, many of whom are mable to depart from the Home for treatment, owing to physical infirmities and financial difficnlties, remain here in a painful condition whieh further impairs their health. Those who are able to leave for other HIomes or IIospitals where dental treatment is given are often delayed as a result of a well filled waiting list for dental treatment at those institutions and whieh delays always result in serions eompleations for lack of proper treatment whieh in many cases would have been too long dolayed. These cases are also always of a very painful nature.
10. The ennduet of the ranch, involving the raising of dairy products, ponltry, fruits, vegetables and lorage, has been very satisfactory. It is recommended that as the membership grows, the lIome inerease its production for food commodities such as poultry, pork, dairy products, vegetables, fruit and forage which ean be produced with less
cost than can the same be raised, purehased and tramsported ontherwise. Also the Home has the advantage in that it consinmes its products. Excess products enuld be exchanged with other institutions as planned by the director of that department of the state administration. With the state's eomtemplated fiture water development project in Rector Canyon, which will, when completed, adequately supply a good irrigation system for the varinus state institutions in the Napa Valley, the purchase of additional acreage. which is selling very reasonably. is deserving of much consideration, for with an efficient irrigation system, any state institution can greatly increase its production and to a mueh greater extent contribute to its own support and maintenance.
11. Owing to the deteriorated condition of the buildings, it has been necessary to constantly accomplish a great deal of minor repair work which ham been earried on in a highly satinfactory manner. With the proposed building progran in view, which has been approved by the state administration, and construction on which has been started. the future repairs effected will be confined to a minimum and only such repair work accomplished as will insure safety and health of the membership.
12. In spite of the continued activitien of those engaged in the illegal sale of liquor in the vicinity of the reservation. only a very small percentage of the membership are in any way disorderly or bring diseredit upon the Home.
13. We deeply appreciate and report with pleasure and satisfaction the fine way in which each and every deparmment of the state adminitration. with whom we come in contact. has rendered us their assistance. cooperation and courtesy. The Commandant desires to express his deep appreciation to the honorable Board of Directors of the Veterans' Home of Califormia for their fine support and most valuable advice in the conduct of the Home. The staff officers, members, and employees of the Home are deserving of a great deal of credit, consideration and commendation, to whom the Commandant desires to express his gratitude for their loyal support. efficiency, and cooperation.

Respect fully submitted.

Nelmay M. Molderman.<br>Colonel. Commandant.

## REPORT OF ADJUTANT.

Teterans’ Home, Calif., July 1, 1927.

## To the Commandant, Teterans' Home of California. <br> I herewith submit statement showing statisties of membership of the Veterans' Home of California, for the fiscal year ended June 30, 1927.

## STATISTICS.

Membership of the Home, June 30, 1926 ..... 998New admissions during the year-
Survivors of the Civil War ..... 28

Minor surgical operations ..... 40
Radiographs made ..... 50
With the promise of a new Hospital shortly, we look forward to better results.

## QUARTERMASTER-COMMISSARY REPORT.

Mr. B. A. Forsterer,<br>President, Board of Directors.

(Through Col. Nelson Mr. Holderman, Commandant.)
Sir: Herewith I have the honor to submit report of activities in the quartermaster-commissary department for the fiscal rear ended June 30. 1927.

This department embraces the quartermaster and commissary, store rooms, main kitchen, bakery. farm, chicken and hog ranches, dairy. transportation. lamdry, elothing, butcher shop, regetable garden. orchard, mattress shop. post exchange and theater.

## sLPPLIES.

Supplies furnished by the contractors to this institution have generally conformed closely to the state specifications, with a few exceptions where attempts were made to send inferior goods which were at once rejeeted and returned at the eontractor's expense. Our supplies are purchased by the State Purehasing Department at Sacramento, and after being received at the institution, samples are forwarded to the State Board of Health at Berkeley for analysis, and if not found up to the standard are rejected. It is very gratifying to state that few rejections had to be made.

## EMPLOTEES.

The rarious departments employ regularly is male and $2: 3$ female help ( $4+$ civilians and 30 members of the Home). totaling Tt. During the season of production a few more men are employed on the farm. The proportion of members to civilian help varies slightly but the general arerage is about the same. Every effort is made to obtain and keep good employees. Where the serviee rendered is exceptionally good, and beyond what the employee is supposed to render, increase of pay is recommended after six months of employment. Where possible, veterans are employed in preference to civilians. Increases in pay were granted July 1st. as recommended in several instances.

A new set of quarters for married emplorees (6) is recommended. Present set of quarters (6) now oceupied by married employees are ideal in every respect and much appreciated. The new quarters so recommended are intended for employees now withont quarters.

> WASTE.

All garbage from the kitchen, dining room, and restanrant is sent to the hog ranch, materially redneing the eost of feeding the hogs.

Board of Surver has been held at regular intervals, and old sacks. serap irnn, rags, wond, metal, ete., hare heen sold to the amount of安 30.86.

## KITCHEN.

The food is well cooked and of a very good variety. Our menu shows a well balaneed ration for both the older men and the working
men, the tables heing supplied daily with fresh vegetables and fresh from in season. It has always heren the aim of the kitelom to serve grood, wholesmene, and palatable fond, and in this we have been wery suceesstul. The cont of the ration is reported monthly and spreaks for itself. The work in the kiteden has heen elosely supervised to prewent waste.

The ranges now in nse are old and worn out through fair wear and tear. It is therefore refommended that they be replaced as soon as possible.

FRUITS.
That the orehard has furnished an abundance of fresh fruit during the season is made apparent by the following report :

| Apples, fresh | 4,733 | pounds |
| :---: | :---: | :---: |
| Apricots, fresh | 200 | pounds |
| Grapes, fresh | 2,133 | pounds |
| Peaches, fresh | 3,580 | pounds |
| l'ears, fresh | 1,494 | pounds |
| lumes, fresh | 1,057 | pounds |
| l'runes, fresh | 2,300 | pounds |
| l'runes, aried | 16,030 | pounds |

FARM.
The feed produced during the year, being especially good in weight and quality, is as follows:
Hay, alfalfa
Hay, mixed graln
Corn fodder
Ensilage

The rield has been above the average, due to intensive cultivation of the soil, which has been enriehed by working manure and lime well into the ground.

> DAlRY.

The herd is in splendid condition. The milk produeed during the year is of the best quality, and is served with butterfat and cream intact. Calves were sold to the amonnt of $\$ 207.50$. Value of stock on hand at date of report, \$12,400.

## CIII'KEN RANCII.

As eggs are served three times a week to the main mess, and daily to the hospital, in addition to requisitions from other departments, the total amount of eggs eonsimed during the year is approximately 24,694 dozen. All eggs produced in exeess to the amome consmmed are put down in waterglass for mse during the shor laying season.

## Hog havell.

The Tamworth breed swine are very prolifie and profitable, the entire herd being free from any kind of disease. Approximately 51,851 pounds of pork have been prodnced during the past year. Hogs and pigs have been sold to the amount of $\$ 292.44$, and the stoek on hand at date of report is valued at $\$ 6,045$.

## VEGETABLE GARDEN.

The regetables produced in the gardens of the Home have been of the best rarieties. and sufficient quantities have been grown to fully supply all departments with fresh vegetables during the season. The regetables raised are ralued at $\$ 2,280.76$.

## LAUNDRT.

The average number of pieces being laundered in one month totals 26,514.

After thorongh investigation in the matter of dry cleauing of the uniforms worn by the men, a test was made at San Francisco through a dye and cleaning establishment, with the result that the uniform was dry cleaned in a most satisfactory manner, and at a vers cheap rate. This method is now being employed and is highly satisfactory. To establish a dry cleaning plant here at the Home would be too expensive compared to the present prices for the work now being done.

CLOTHING.
The clothing purchased and issued to members of the Home is as follows:

TRANSPORTATION.
The rolling stock is in fair condition, although the Reo bus and Ford truck have outlived their usefulness, and will have to be replaced. The life of a machine can not be prolonged through constant repairs, which
are expensive and mowarranted. It is therefore recommended that the Reo bus, the Ford truck, and the luick passenger ear be replaced. These ears are in daily use. especially eluring our present program of construction work, and it is desirable that the be in exeellent condition.

## MATTRESS SHOI.

The malfresses uned in this Home are being made in our own shop, of good moss and tine quality ticking. The following, in addition to repairs and renovations, is an approximate report of the work done in the mattress shop during the past year. There is but one man employed in this shop.

```
Mattresses made ..----------------------------------------------
Pillows made _-----------------------------------------------------------
Chair eushions made----------------------------------------------------
Sheets made _---------------------------------------------------------
Aprons made -----c---------------------------------------------------
Towels made -------------------------------------------------------------
```

TAILOR SHOP.
Work in the tailor shop has been of a very profitable nature. As an illustration, there have been about 300 alterations made, besides uniforms mended and pressed, from which it can be seen that this work could not be done elsewhere withont entailing a great expenditure. We have but one man employed in this capacity.

## BAKERY.

Our present bake oven has been in use for a great number of years. It is a brick areh model, producing heat through fuel oil. A sample is taken from flom as received, and is sent to the Bureau of Pure Foods and Drugs, University of ('alifomia, Berkeley, for analysis and test. The strength of the flom depends "pon the quality of the gluten it contains. The greater elasticity and temacions character of gluten renders the making of light bread possible.

Our bread is light haked and of a smperion quality. The pastry as produced is of a similar quality. Hread is haked every day with the exception of Wednesclay pach week. The present bake oven is not in as good a condition as desired, and it is therefore recommended that it be replaced by a new oven. Bread making is very important.

## POST EXCHANGE.

The Post Exchange, minder the supervision of the quartermaster, is a profitable adjunet to the llome, besides being a great convenience to members, officers and employees. I eareful inventory of stock is taken every month, a complete report of expenditures and receipts made and the profit ascertained. For the Wwelve months ending June 30, 1927, the eash profit was \$4.2:37.9:3.

The present building is old and unfit for its mse, therefore a new structure has been recommended and is moder eonstruction.

Respertfully submitted.

## J. P. Edmunds, Major-Quartermaster.

# REPORT OF ENGINEER'S DEPARTMENT 

Veterans: Homie, Califorsia.
November 9, 1927.

Mr. B. A. Forsterer. Presidell, and the Board of Directors. I'eterans' Home of California.

(Through the Commandant.)
Genthemen: I have the honor to present herewith a report of the work performed by the rarious departments under my supervision during the fiseal year ending otune $30,192^{-}$.

## EAgineer's departalent.

Ice made and delivered during the year 179 tons, 1100 pounds and refrigeration furnished to milk and meat rooms.

Connections made and radiator installed; two overhead sprinklers for flower beds; electric lights for new bathroom and a wash tray installed in Commandant's residence; hot water connections made, hose connections placed in wash tray; baseboard receptacles, 10 base plugs and new outside light installed at Treasmrer's residence; pipes run, connections made and underground sprinkling system installed for lawn at Chief Surgeon's residence; wires run and three base plugs and wall bracket installed in Assistant Simrgeon 's residence; three base plugs, one new light installed and two lights mored to new location in guest cottage: hot water supplies to slop hoppers installed in Companies " $B$ "' and " $D$ '" heating coil installed, sewer pipe laid, lot and cold water connections made and two wash basins and one toilet installed in Company" 'D'’; hot and cold water commections made and basin installed in number 4 cottage C'ompany " (''"; telephone installed in Captain's office Company " $\mathrm{E}^{\text {" }}$; wires rm and eleetric connections made for farm foreman $s$ cottage; wires rmm and connections made for new mattress shop for light and power; main water pipe from Rector Canson tapped near electric depot for supplies to lavatories, toilets and drinking fountain; new ventilating fans, steam trap and heating system installed in new addition to Ifme library; new light placed at l'ost Exchange; steam coil for heating oil placed in receiving tank at oil spur track and motor driven pump to hamdle socpage water placed in pomping station there: telephone and call bell placed in guards quarters: hot water serviee installed in baggage room : eomections made, pipes rum and hodrant installed at temnis enomt: water pipes laid and stand pipes ereeterl in lawn at llome ehapel, veretable peeling machine. power meat erimber, dish washing machine and sheet iron dish and pot washing sink installed in llospital kitohm: ventilating fan in ${ }^{1}$ ard $f_{i}$ ambl floshometer in Ward $:$ installed at llnspital: new radiator installed in post oftiee : new sewer pipe laid at the septie tanks; owing to the maseriecable comblition of the woolen pipe seetion in the Rector ('myon pipe line it has bern neersany to keep a man employed most of the time repairing line in order to keep up a sufficient supply of water for Home uses; repairs to the sanitary system, electric
light and power system, stemand water systems were made as needed during the vear.

> CARPENTER SHOL.

Carpenter shop has been moved to a new location in room formerly used as a laundry, new shelving and cabinets placed and saw rig set up; two hardwood book cases, one library table, one lawn crib, six bird houses for aviary made and porch remodeled for installation of bathroom at Commandant's residence; new shelving placed in the Treasurer's residence; new eabinet and ironing board made for Assistant Surgeon's quarters; coal box made for Quartermaster's residence; window cabinet, drain board and shelf made for farm foreman's cottage; woodsheds erected for assistant florist and plumber's residences: four benches made for Company " F " and new shelving placed in Captain's office; window sash made for band quarters; partitions placed and doorway cut for new lavatory room in Company "D"; new shelving placed in dishwashing room and for water cooler in main dining room: window sash made and installed in tailor shop; feed mixing trough made for the dairy barn; old butcher shop building has been remodeled for use as a tailor shop; new building exected for use as a mattress shop: seventy-two flower boxes made and 500 flower stakes formed for florist ; bookstand made for Treasurer's office; twelve meat boxes made for butcher shop; ice box frame made for library; partition placed in Post Exchange; fifteen additional heavy benches made for nse in Home grounds; conservatory building has been overhanled and new mud sills, studding and rafters placed where needed; step ladder made for Company " $B$ "; four benches and platforms made for bowling alley; two stools made for laundry; window shades in the different barracks and quarters have been overhauled and repaired or replaced where needed; 700 window and door screens have been fabricated and have been installed in the different barracks and quarters replacing those that had become worn and unservieeable; owing to the necessity of keeping up the Hospital repairs it has been necessary to keep earpenter at Hospital constantly; sixty burial caskets have been fabrieated during the year; repairs to buildings ete., have been made as needed during the year.

## PAINT SIIOP.

All new work fabricated by the carpenter shop has been painted, stained, enameled or varnished as quality of work required; two bedrooms and closets painted at Commandant's residence; interior of quarters of Assisant Surgeon have been painted; new lavatory walls and floors and interior of Captain's office painted at Company "D"; interior walls and ceilings in cottages 4 and 6 Company "C" cleaned and painted; freight shed at electric depot painted; all burial caskets have been in addition to being painted, glazed with a light of glass set in top front of easket, wooden grave markers, temporarily in use in cemetery, have been painted and lettered as needed; window and door glass replaced when broken ; repairs to furniture, ete., made as needed during the year.

## TIN SHOL .

Two l-gallon milk cans and galvanized iron sink made for the carpenter's residence; twelve chair buckets, six trash cans, dough mixing pan, twelve toilet buckets, thirty-six soup tureens, four mush boilers, three 3 -gallon and three 2 -gallon coffee pots, large dish pan, six dippers and six covered food cans made for Hospital; lawn sprinkler and tube sprayer made for florist; one 5-gallon syrup can, twelve heary meat pans; six flom and cereal cans, two milk containers and one mixing tub made for main kitchen ; dipper made for laundry ; one sprinkling pot, seventy-two galvanized iron buckets, thirty-six garbage cans and ten garbage can covers made for Quartermaster's department; chimney top and flue rent made for Commandant's residence; ticket hopper, switch stand and music racks made for Lincoln theater; galvanized iron pipe made for conveying oil from tank cars to receiving tank at oil spur track; twelve heavy tin filing cases made for Treasurer's office; sixty radiator drip pans made for barracks and quarters; rentilator made and installed in prune shed; smoke stacks made and installed at painter's cabin; Adjutant's residence, mattress shop, electric depot, band leader's cottage and incinerator, two milk cans each made for Engineer's, Adjutant's and baker's residences and engineer's department ; thirtr-six candy boxes made for Post Exchange; serentr-two tin candle sticks and two dish strainers made for main dining room; two sink strainers made for Company ' F ''; brush containers made for paint shop; 2-gallon sprinkling can made for Assistant Surgeon's residence; large cake box made for Treasurer's residence; fountain made for aviary at Commandant's residence; metal motor box made for Engineer's department; six food troughs made for chicken ranch; two compartment galvanized iron wash tray made for Engineer employees' quarters; two 6-gallon heavy milk cans made for dairy barn; ice box lined and installed at library; stack made and installed for incinerator at Hospital; drain pipe and two strainers made for Rector Canyon pipe line; galvanized iron sink made for carpenter shop; food carrier made for police department; repairs to tin and ironware made as needed during the rear.

SPECIAL WORK.
Work on the installation of lavatory and toilet facilities at electric depot has been completed and is giving satisfactory service.
The interior of Quartermaster's residence has been painted.
The roads in Home grounds have been rebuilt under the direction of the State Highway Commission and the work has been done in a very satisfactory manner.

Card room has been placed on lower floor at north end of main hospital building. room painted, linoleum laid and new lighting fixtures installed.

A large conerete culvert has been placed across back road to carrs storm waters.

A new addition has been erected to the Home Library and additional lavatory and toilet facilities installed.

The "cockpit" in Company "D" barracks has been remodeled so as to accommodate a larger number of beds and additional toilet facilities installed.

Ditches lave been dug and pipe laid to drain springs in vicinity of the septic tanks.

Interior painting and installation of new lighting fixtures has been done on lower floor of main Hospital building for an additional ward.

Work on the reconstruction of the Home electric light, power and telephone distributing system has been completed, new poles erected and painted, new switches placed and all telephone wires are now carried in a lead cable.

Old worn-ont fence aromid temnis court has been removed and replaced with new fencing.

Respectfully submitted.
E. C. Borman, Captain-Engineer.

## LETTER OF TRANSMITTAL

Veterans' Home P. O., Cal., December 1, 1920.

llunorable C. (. Young,
Governor of the State of California. Sacramento, Califormia.

Sir: As President of the board of directors of the Veterans' Home of C'alifornia, I have the honor to submit herewith my report, together with reports of the officers of the Home, for the fiscal year ended June $30,1928$.

The personnel of the board has remained the same throughout the year. It consists of two Civil War reterans, four Spanish-American War reterans and one Workd War veteran. The attitude of the board has been a most harmonions one, as every director is desirous of working for the true welfare of the reterans under our care, while at the same time having also due regard for the interests of the taxpayers of the State of California, who provide the bulk of the money necessary in maintain the Home.

The number of enrolled members is constantly inereasing by reason of the steady influx of veterans of the Spanish-American War, who are now reaching the age where they need proper eare, and also becanse of admittance of veterans of the World War, who ean receive no further hospitalization from the Federal Veterans' Burean and whose eompensation is not sufficient to care for them on the outside.

At the present time, the enrolled membership of the Home is 1355. Abont twothirds thereof are Spanish-American War veterans, 228 are reterans of the World War, 154 Civil War reterans (the ranks of which are rapidly diminishing by death), and the balance are Indian War veterans, Foreign War veterans and veterans of miscellaneous campaigns, recognized as snel by the United States government. While but a few years ago we considered it a serious problem to care for 600 veterans actually present at the Home, we are now providing for elose to 900 men , an increase of 50 per cent, the arerage nmmber present during the month of November being $85 \bar{T}$.

This ever-increasing number has caused us to oceupy every available space in our dormitories or barracks, and has compelled us to put to lise as sleeping quarters even the garrets. This latter condition involves a great fire hazarl, as the exits from these garrets are anything but eonvenient. Since practically all our members are more or less physically deficient, the loss of life in the event of fire would, I fear, be quite eonsiderable. So far, sneh loss has been prevented only by grood fortune and also by the fact that most of these veterans are of an age when sleep is not very heavy, and their alertness to any unusual noise helps to protect the dormitories against disastrons fires.

I am happy to report that, owing to the first fireproof barracks building being about to be oceupied by us at the beginning of the year 1929 . we will be able to remove the ocmpants of these garrets and thereby reduce the fire risk to the minimum.

The need of additional fireprof barracks, however, is a very great one. This has been recognized by your administration in the adoption of a definite ten-year building program which proposes to replace all existing wooden barracks with fireproof reinforced buildings.

Several new smaller structures have been completed during the year, foremnst among which is the new Post Exchange Building, furnishing quarters for the Post Exchange Store, the post office, the barber shop and the news stand. This building has enabled us to tear down several unsightly and dilapidated wooden shacks, that had long outlived their usefulness. It also affords us the opportunity of concentrating many of the activities, patronized by our membership, in one building. Another new structure just completed is a two-story reinforced concrete building devoted to Quartermasters storeroom and living quarters for employees of the Quartermaster's Department; this building being located right to the rear of the present Quartermaster's offices and storeroom, furnishes a very excellent addition to the handling of the Quartermaster's Department at the Home.

One of the great difficulties that confronts us is how to provide suitable entertainment for the veterans. The Home being quite a distance away from the nearest town, makes it imperative that some sort of regular entertainment be furnished the men, since it does not seem advisable to permit them to spend their time in idleness and without proper diversion, especially when about 95 per cent of all members are unable to perform any kind of physical work. We have at the Home a building which contains a good sized library with two large reading rooms and a small theater with a seating capacity of abont 400 , and a small stage convenient for motion picture shows and miscellaneons entertainment. However, funds arailable for recreation purposes are scarce, and we must depend, to a large degree, upon the generosity of the reterans organizations, their auxiliaries and such fraternal orders as the Elks, the Masons, etc., for the better class of amusement, contributed by these organizations withont charge to the Home. The proper coordination of all efforts to offer the right kind of entertainment to our members presents a great problem under the present conditions at the Home. There is no officer available who could be charged with the duty of supervising such recreation for our men. It is, therefore. respectfully recommended that the position of Chaplain be created for the Veterans' Home of California; this Chaplain to be appointed by the board of directors in the usual way, to be given a reasonable salary and living quarters in like manner as the other officers of the Home. This Chaplain would not only look after the spiritual welfare of our veterans (a matter that is now attended to in a more or less haphazard fashion), but he wonld also be charged with the duty of organizing a recreation department within the scope of which would come the theater, the library and all miscellaneous entertainments. This, I am satisfied, would be a step in the right direction, would materially further the wellbeing of our members and enhance the value of the Ilome to the State of California.

From time to time the management of the Home experiences great difficulty in suppressing hootlegging and dope peddling. Although the authorities have, in the main. rendered us erery assistance, we find
it at times a perplexing task to get proper (oonperation, espectally when it comes to exterminating the mumerons bootlegring establishments that are mueh in evidence in the little town of Yountrille, located practically right at the gate of our Home. After all, our own police authorities are limited and, though we are ruthlessly suppressing the liquor traffic within our reservation and peremptorily discharging any member found trafficking in liquor or peddling dope, we are, nevertheless, rather helpless to suppress these evils when they are so apparently practiced in the town of Yountrille.

The gencral state of affairs at the Home, outside of the bad condition of our wooden barracks, has, I belicre, been quite satisfactory. Our farming activities have been successfully and ceonomically conducted; our hospital has rendered gratifying service to our members; the food served in our main dining room and in the hospital has been ample, well prepared and of sufficient variety. The gencral health of our membership has been excellent, considering the fact that all veterans are, of course, physically somewhat deficient.

There have been practically no complaints cither from within the Home or from the general public.

Our water supply has, in the main, been of satisfactory quantity and quality. The same comes to us from Rector ('anyon, connected by pipe line with our domestic reservoir. This pipe line consists partly of old wonden pipe which, for years, has given us a great deal of trouble and is very expensive to keep in repair, necessitating the eonstant employment of a repair force in order to avoid too much wastage and to keep a sufficient flow of water going into our reservoir. Gradually, we have been replacing this wooden pipe with iron pipe. It is earnently recommended that the balance of the wooden pipe be so replaced in order to do away with the constant costly repairs, and to insure to the Home a good and sufficient supply of water at all times.

We make grateful acknowledgement to the various state departments for their interest and assistance. and especially to the Departments of Finance and of Public Works, the fine cooperation and advice of which has been of inestimable value to the Home. While we are sedulously watching the funds allotted to us (and it is necessary to practice continually rigid economy), we feel assured that our needs will be met and that in due time we will see the consummation of the constructive program now in progress under your splendid administration.

We esteem it a pleasure and an honor to be able to serre the State of California and our veterans, and we appreciate deeply the interest and wise counsel that it has been our good fortume from time to time to receive at your hands.

Very respectfully yours,
B. A. FORSTERER, President, Board of Directors, Veterans * Home of California.

## REPORT OF THE COMMANDANT

Yeterans' Home P. O., Cal., October 1, 1928.

## To the President and Board of Directors, Tetcrans' Home of Califormia.

Gentlemen : I have the honor to submit to the board of directors of the Veterans' IIome of California my ammual report for the fiscal year ended June 30, 1928, together with the reports of the Secretary-Treasurer. Surgeon, Quartermaster, Adjutant and Engineer, to which reports special attention is respectfully invited as they render in detail a complete report of the business affairs of the Home. The Commandant's report will involve in a general way the conduct, future needs, and requirements of the Home.

In January, 1928, we found that it would be impossible to awoid creating a deficit, owing to the large increase in membership, for which no appropriation had been made. Therefore a financial statement was made to the Department of Finance, State Board of Control, showing that with the increased membership the expenses of the Home had correspondingly inereased both as to food and salaries. The chief of the Division of Finance, Mr. Alexander R. Heron, visited the Home and thoronghly investigated the conditions. and after the figures were presentel. declared that owing to the increase in membership for which no appropriation had been made when the 1926 budget was submitted, a defieit was justified. He allowed a deficit of $\$ 15,000$ for the seventy-ninth fiscal year, which carried the Home through very eomfortably to June 30, 1928.
A ten-year building program for the Veterans' Home has been initiated by the present state administration, which will replace with modern fireproof conerete structures the old wooden barracks, hospital and anxiliary buildings. whieh are at present occupied by the membership and varions departments. The extreme need of new fireproof barracks huildings, as well as a new modern fireproof Hospital, has heen evident for some years, due to the menacing fire hazard and the unsanitary condition of the present occupied buildings, many of which were constrneted during the eighties. Members are being quartered in third stories of some of the barracks, while some others are being quartered in garrets, owing to the overerowded condition of the Home. Frequent drills are being held by the fire company under the supervision of the fire marshal. and all fire equipment is frequently inspected. The proximity of the buildings, which are massive and of wooden construction, with poor fire exits, necessitates great care in the prevention of fire, which would be disastrous to life and property: Another menaee in the present wooden buildings, and in the matter of sanitation, is the bed bug. It is a well known fact that bed bugs inhabit old wooten buildings, and no matter what steps are taken to keep them ont, they reappear, for they live in the walls and eeilings. The very frement nse of bed bug poison eliminates them from the
beds, but they breed in the walls and ceilings and always reappear. The frequent use of bed bug poison also canses a stemeh in the rooms and, owing to the inflammable nature of most of these materials the fire hazard is increased.

The present state administration is deserving of high commendation for their response to the extreme needs of the Veterans IIome by the initiation of the ten-rear buiking program, and the Commandant urgently recommends, in view of existing conditions, that the program be expedited as much as possible and commensurate with fumds available. The first barracks on the new building program is now under construction and will be turned over to the Board of Directors, completed and ready to be occupied. by January 1, 1929. A new combination warehouse and single male employees quarters has just been com-

some of Old Veterans* Barracks at Veterans* Home of California.
pleted. The warehonse portion has been occupied by the Quartermaster. The second story, which will be ocenpied by single male emplorees, will be ready by Norember 1,1928 . A new combination building moder which is housed the Post Exchange. barber shop and post office, has bcen eompleted and ocenpied during the past rear. It was necessary to erect this bulding in order that the old Post Exchange, which had been condemned, be moved from the gromed which the new barracks, now under construetion, oceupies. This buikling has proved a source of extreme satisfaction to the population of the Home. One single employees quarters and one chuplex emploves quarters has just been completed and will soon be oceupied. Jianyimprovements have been made during the past year in other ways in promote the comfort and welfare of the members and emplorees.

There has been a decided increase in the membership of the Home during the past year due to the large number of reterans of all wars
who are becoming totally disabled, as a result of old age or sickness, and which renders them unable to earn a livelihood or to compete with the labor situation. In most cases the illness is a result of disabilities which originated while these men were in the service of their country. The membership of the Home on June 30, 1928, was 1315.

As the Home is some distance removed from centers of entertainment, a great deal of attention is devoted to entertainment and welfare work among the membership and employecs. Funds for this work are provided by the Post fund, which is supported by the Post Exchange, and unclaimed estates of deceased members, which estates have remained in the posthumous fund for a period of five years. Patriotic, fraternal and religious organizations have also contributed to this work by rendering frequent and appropriate entertainments. All national holidays have also been appropriately olserved. One of the most excellent sources of entertainment is the motion picture theater which presents a show on Wednesday, Friday and Sunday of each week, commencing at $7.30 \mathrm{p} . \mathrm{m}$. The members and employees of the Home are provided with a very fine library, which is well supplied with books, periodicals, magazines, newspapers and general literature. The Library is an important sonrce of entertainment for both the members and $\mathrm{cm}-$ ployees and affords an opportunity for mental improvement, as well as occupying the mind, which relieves the monotony always evident in the lives of disabled veterans who live in the soldiers' homes and hospitals. The "Home band," although small, renders exceptional entertainment and is indispensable. It presents six programs weekly and plays on special oceasions. It stands retreat daily; except Tuesday, when the field music (buglers) is substituted.

Religious services are regularly conducted in the Home Chapel. Sufficient appropriations should be made for the support of the staff position of IIome Chaplain, which was created by the board of directors and approved by the Governor before the budget was submitted to the legislature in 1927. The duties which wonld devolve upon the Home Chaplain and which are at present being performed by a contract Chaplain and not less than four ministers of different denominations, are as follows: The conduct of all regular religious services and as many special serviees as are required, the conduct of funeral services of deceased members and to see that the relatives are rendered every courtesy, convenience and comfort at the disposal of the Home, to make regular and frequent visits to the siek in the Hospital, conduct all welfare work among the membership and assist the Commandant in providing adequate and appropriate entertainment. The various ministers now performing these duties practically donate their services and are oftentimes obliged to come to the Home at great inconvenience and expense to themselves. This arrangement is entirely unsatisfactory to all concerned, and it is urgently recommended that appropriations be made, without delay, for the support of the important staff position of Home Chaplain.

Duc to the increasing number of hospital cases, which emanate from the ranks of the Spanish-American and World War veterans and which emergency will continue for some ycars to come, owing to the less matured ages of these men, serions and careful consideration should be
given to the Home Hospital. During the past several years a greater number of our hospital cases have been Civil War veterans of extrene age and afflicted with chronie tronbles. This condition has prompted our hospital to develop into an infirmary to some extent. White the Mexiean and Civil War reterans were rounger men and afllicted with troubles not chronic, doctors were provided who were well qualified to perform major operations and to handle all kinds of difficult major eases of any deseription. As these reterans of the Mexican and Civil wars reached the extreme ages and their eases beeame chronic, the necessity for employing speeialists was not so obvious. Now that the younger men of the two late wars are entering our hospital, many eases are serious enough to warrant the services of trained specialists, and since this condition will continue for some years to come, as heretofore

One of Small Dormitories at Veterans' Home of California.
stated, it is quite obvious that steps should be taken to seeure the services of highly trained surgeons, and assistant surgeons, including a dental surgeon, to properly and efficiently perform the duties devolving upon the hospital staff. Heretofore, we have been able to seeure the services of doctors for a very small compensation, the salary of the chief surgeon being $\$ 230$ and that of the assistant surgeon being $\$ 170$. It is true that many of these fine gentlemen have remained, not for the intrinsic remuneration, but for the love of the practice and the good that they could accomplish, as has been the case of Major Moore, who for several years gave his scrvices free to the Veterans' Home. It is obvious, however, that in the future, salary commensurate with the duties of men of the medical profession must be paid, else the services of competent and efficient surgeons and physicians can not be obtained. At the present time, all of our major cases are sent to other service hospitals in a eritical and dangerous condition. Oftentimes these cases require an
operation immediately and the time lost in transporting them to other hospitals and delaying the much needed operation, not only endangers life but reflects discredit upon this institution, and deprives our hospital of the confidence of the entire membership of the Home. The Veterans' Home Hospital should be a complete unit, eapable of efficiently

Library and Theatre Building at Veterans Home of California,
and effectively caring for and treating not less than 250 cases, and ultimately developed to a capacity of 400 beds, as the maximum membership is reached. It is urgently recommended that the above suggestions be carried into effect withont delay. In spite of the fact that a soldiers' home can not be classified as a hospital, that element of the home is of extreme importance as men who take sick in barracks. or are admitted as bed patients, are assigned to the hospital for treatment, while many men quartered in barracks report at siek call daily for various minor aihments. Of our total membership of approximately 1300 , it is safe to say that abont 200 men are receiving some kind of treatment at the hospital, which is at the present time in an overerowded condition, with many applicants waiting to be admitted. Like the barracks building, our hospital is old, obsolete, and not modernly equipped. The extreme need for a new fireproof eoncrete hospital with modern up-to date equipment is obrious to any observer and urgently recommended.

A great deal of serions consideration has been given to the land on the Home reservation which is being farmed, with view of installing an adequate drainage system which would restore much of the land now farmed to a highly productive state. All of the alfalfa land should be replanted; also about fifteen acres of the old orchard. Preparations are being made to plant fifteen acres of new orchard, as planned by the board of directors.

Due to the ever increasing membership, and as the maximum number is reached, it will be necessary and it is recommended that a clry clean-
ing plant be installed to replace the present unsatisfactory method of scrubbing and cleaning the uniforms of the members. The method now used is wholly unsanitary and unsatisfactory, as it serves to wear out and shrink the elothing, rendering it unfit for wear. The installation of a dry cleaning plant would effect a great saving in the Quartermaster's Department.

Discipline has been maintained at a high standard without resort to severe measures, except in a very few eases. It is not our policy to discharge members of the Home for infraction of rules and regulations. other than in extreme eases. Every endeavor is made to remove obstacles confronting men who are not amenable to discipline, which is not severe and which is exacted through kindness and justice. Discipline is absolutely necessary in all walks of life, in business, in the home and in the schools, but it is the poliey of the authorities of this Home that the discipline imposed be made as kindly as possible. The scourge of every soldiers' home or hospital is the peddler of poison liquor and nareotics. As in former years, this condition still exists around the reservation and in Yountville, but in spite of the fact that the illesal traffic is carried on, the conduct of the members has been excellent and reflects credlit upon themselves and the Home.

All state offieials and officials of the National Home Service, with whom we have come in contact, have rendered constant cooperation

Hospital at Veterans* Home of Callfornia.
and most courteons treatment. The ofticers, noncommissioned officers, members and employees have given the Commandant their loyal support and cooperation.

Respectfully sulmitted.

# REPORT OF THE ADJUTANT 

To the Commandant,
Veterans' Home of California.
I herewith submit statement showing statistics of membership of theVeterans' Home of California, for the fiscal year ended June 30, 1928:
STATISTICS
Membership of the Home, June 30, 1927 ..... 1,058
New admissions during the year-
Survivors of the Civil War ..... 29
Survivors of the Indian War
Survivors of the Spanish-American War ..... 320
Survivors of the World War ..... 222
Survivors of the Foreign Service ..... 21
Survivors of the other service ..... 10
Total admissions ..... 624
By readmission ..... 243
Total gain ..... 867
Losses during the year-
By discharge (own request) ..... 459
By dropped (absent without leave) ..... $\begin{array}{r}42 \\ 23 \\ \hline\end{array}$
By dropped (not renewing furlough)
By dropped (not renewing furlough) ..... 86

## SCHEDULE 4

Statement of Expenditures, Post Fund, for the Period July 1, 1927, to June 30, 1928-Seventy-ninth Fiscal Year

## SCHEDULE 5

Pension checks amounting to $\$ 174,712.19$ were cashed for members during the year. On July 1, 1927, the Special Deposit account showed a balance of $\$ 24,671.37$ on hand. Deposits amounting to $\$ 42,845.31$ and withdrawals amounting to $\$ 40,601.5 \$$ were made during the year, involving 2275 transactions.

Respectfully submitted.

> C. de Colmesnil, Secretary-Treasurer.

## HOSPITAL REPORT

<br>To the President and Board of Dircrtors. Veterens. Home of C'alifornier.<br>(Through the ('ommandant.)<br>Gentlemes: I have the honor to smmit herewith the Ammal Repoet of the Surgeon for the fiseal year ended Jume 30,1928 :

## IIospital Staff

> William Oliver Moore, Major-Surgeon. I:IChand E. Poole, Captain-Assistant Surgeon. W: O. Moore, M.I., Consulting Ophthalmic Surgeon. Frank Robertson, D. D. S., Dental Surgeon.

There is urgent need of a new hospital with a eapacity of 300) beds to properly eare for the inereased membership.

The medical staft should be increased, as two physicians can not properly care for the demands made.

The carefnatention given to members in the hospital is shown in the reduced death rate.

The quality and quantity of the food have beesl ample and the bill of fare varied and satisfactory.

Respeetfully submitted.
W. O. Moore, Major-Surgeon.

# QUARTERMASTER'S REPORT 

Veterans' Home P. O., Cal., November 27, 1928.
To the President and Board of Directors,
Veterans' Home of California.
(Through the Commandant.)
Gentlemen: I have the honor to submit report of activities in the Quartermaster Department for the fiscal year ended June 30, 1928.

This department embraces the quartermaster and commissary, storerooms, main kitehen, bakery, farm, ehieken and hog ranches, dairy, transportation, laundry, elothing, butcher shop, regetable garden, mattress shop, shoe shop, tailor shop, post exehange and theater.

## SUPPLIES

Supplies furnished by the contractors to this institution have generally conformed elosely to the state specifications, with the lew exceptions where attempts were made to send inferior goods, whieh were at onee rejeeted and returned at the eontractor's expense. Our supplies are purehased by the State Purehasing Department at Saeramento, and after being received at the institution samples are forwarded to the State Board of Health at Berkeley for analysis and test, and if not found up to the standard, are rejected. It is rery gratifying to state that few rejections had to be made.

## EMPLOYEES

The rarions departments employ regularly 35 men and 40 women employees ( 45 eivilians and 30 members of the Ilome), totaling 75 . During the season of production a few more men are employed on the farm. The proportion of members to eivilian help varies slightly but the general average is about the same. Every effort is made to obtain and keep good employees. Adrancement of salary based upon efficiency and length of service has been recommended and granted during the year to a number of employees, and which they fully appreciate. The preference of veterans and their dependents is always given in employment. This rule is strietly adhered to.

The new set of employee quarters (second story of quartermaster storeroom), now under construction, will solve the problem of housing these employees. It is fully appreciated by them. The quarters when completed will eontain every comfort desired.

## WASTE

All garbage from the kitehen, dining rooms and restaurant is sent to the hog raneh, materially reducing the cost of feeding.

Old sacks, serap iron, rubber or junk of any nature are sold to the junk dealers for the best prices obtainable. Authority: Board of Survey.

## hitchen

The food is well cooked and of a very good variety. Our menu shows a very nieely balanced ration for both the older men and the working men; the tables are supplied daily with fresh regetables and fresh fruit in season. It has always been the aim of the kitehen to serve good, wholesome and palatable food; in this we have been very successful. The eost of the ration is reported monthly and speaks for itself.

Electric ranges have replaced the oil-burning type. The many good features this lias aecomplished can best be appreciated by an inspection. Service, economy and eleanliness are some of the best features.

Chapel at Veterans' Home of California.

FRUITS
The orchard has furnished an abundance of fresh fruit during the season, as is shown by the following report :

| Apples | 8,622 pounds |
| :---: | :---: |
| Cherries | 610 pounds |
| Grapes | 8,295 pounds |
| Peaches | 1,971 pounds |
| Pears | 2,465 pounds |
| Plums | 2,723 pounds |
| Prunes, fresh | 2,199 pounds |
| Prunes, dried | 37,603 pounds |

## FARM

The feed protuced during the year, being especially good in weight and quality, is as follows:

| Hay, alfalfa | 03 pounds |
| :---: | :---: |
| Hay, mixed grain | 451,400 pounds |
| Ensilage | 250,000 pounds |
| ('orn fod | - 55,000 pounds |

The rield has been rery good, due to intensive cultivation of the soil, which has been emriched by working manure and lime well into the gromnd.

## DAIRY

The herd is in splendid eondition. The milk produced during the year is of the best quality, and is served with butterfat and cream intact. Calves were sold to the amount of $\$ 215$. Value of stock on hand at date of report, $\$ 12,87 \overline{5}$. Amonnt of milk to date, produced during the year, it, 8593 gallons.

## ('IIIKEN RAN('Il

The 110 me consmes during the year 99,18923 dozen eggs. This great gmantity ean be more readily melerstood in view of the fact that eggs are served three times a week to main mess, and daily to the hospital, also other reguisitions as called for. All eggs produced in excess of the amount consmmed are put down in waterglasis for use dmring the short laying season.

IIOG RANCCI
The swine are all of the Tamworth hreed (ham and bacon type). They are very prolific and profitable. Approximately 65, 499 pounds of pork have been prodnced during the past rear. Ilogs have been sold to the amount of $\$ 105$, and the stock on hand at date of leport is valued at $\$ 4,577$.

## VEGETABLE GARDEN

The vegretables produced in the sardens of the llome have been of the best varieties, and suffieient gmantities have been grown to fully supply all departments with fresh regetables during the season, as can be seen by the following:

|  | Pounds |
| :--- | :--- |

## LAUNDRY

The average number of pieces being laundered in one month totals 39,4\%0. It is recommended that with the eonstant inerease of member-
ship it will be necesabry to establish a dry eleaner at the Home．This will serve to do all of the work neressary in the tailor shop as well as the uniforms of the men．

## C＇I．OTHIN゙G

The elothing issued to members of the 1 lome is as follows：

| 17 | Kıit jackets | 550 |
| :---: | :---: | :---: |
| 12 | Handkerchiefs | 342 |
| 440 | Hosiery，cotton | 1，444 |
|  | Hosiery，merino | 1，807 |
| 17 | collars，white lin | 24 |
| 1 | Overshirts，cotton | 674 |
| 729 | Overshirts，merino | 821 |
| 151 | Army shirts，Crown | 40 |
| 135 | Suspenders | 401 |
| 370 | Drawers，merino | 871 |
| 1 | I ndershirts，merino | 875 |
| 1 | Indershirts，cotton | 3 |
| 20 | Company captain＇s |  |
| 10 | Overcoats，rainproof－－－ |  |
|  | Coats，short rainpronf．and trousers | 1 |
| 785 | Raincoats |  |
| T83 | Oilskin coats | 2 |

## TRANSPORTATION

The following replacements have been matle during the rear：Buick sedan for seven－passenger car：International bus for passenger ear． Reo；Chevrolet truck for Ford truck．In view of the increased work that is required for hauling and drayage an additional turek（dump body．）is reeonmented．

## MATTRESS SHOP

The mattresses used in this Home are being made in our own shop． of good moss and fine quality ticking．The following．in addition to repairs and renovations，is an approximate report of the work done in the mattress shop during the past year：

250 Sheets made
1.110

122 Aprons made
207

## TAILOR SHOI

Work in the tailor shop has been of a very profitable nature．Is an illustration，many alterations have been made，besides miforms mended and pressed．Whieh shows that this work eonld not be done elsewhere without entailing a great expenditure．There is but one man employed in this shop．

## BAKERT

Our present bake oven has been in use for a great number of years． It is a briek areh model，produeing heat through fuel oil．A sample is taken from flour as receised，and is sent to the Bureall of Pure Fond and Drugs，University of California，Berkeley，for analysis and test． The strength of the flour depends upon the yuality of the gluten it eontains．The greater elasticity and tenacious character of gluten renters the making of light bread possible．

Our bread is light baked and of a superior（quality．The pastry as produepd is of a similar quality．Sread is haked every day with the exception of Wednesday each week．The present bake oven is not in
as good condition as desired, and it is therefore recommended that an electric bake oven be installed.

## POS' EXCIIANGE

A new building has replaced the old wood structure. This building consists of the Post Office, Barber Shop, and Post Exchange, The Post Office is equipped with standard U. S. postal service, combination boxes, also other modern features. The report of the Board of Barber Examiners credits the Post Barber Shop as being A-1. This includes the personnel.

The interior of the Post Exchange is the latest in appointment and decoration. The merchandise carried is of high grade.

## GENERAL

Under the instruction of the Board of Directors some radical changes are being made, looking toward the comfort of the members of the Home.

Old style beds are being replaced with modern Simmons steel beds. Improved mattresses, lighter blankets containing more warmth are replacing the old ones. Sheets and pillow cases are made under our own direction from the best unbleached muslin. Bed complete is second to none in any soldiers' home.

Under the direction of the C'ommandant, this office in a determined effort to minister to the wants of our comrades under any circumstances and to make this a "real home" for them contemplates many improvements. Among the first is that of quartering the men (new barracks are under construction) ; all new steel beds, new bedding, steel lockers, steel chairs and steel dressers, and other equipment which will make it the most modern and comfortable barracks to date.

## SUMMARY

In consideration of the steady increase of nembership, we feel that more permanent improvements have been effected this year, for the money appropriated, than any previous year.

Respectfully submitted.
J. P. Edmunds, Major-Quartermaster.

## VETERANS' HOME OF CALIFORNIA Bill of Fare, Week ending December 8, 1928 SUNDAY

GREAKFAST: Soft hoiled eggs, cottage fried potatues, corn muffins, peach sauce, bread, butter, coffee.
DINNER: Roast leg of veal and sage dressing, buttered potatoes, green peas, tapioca frult pudding, cream sauce, bread, butter, coffee.
SUPPER: Cold boiled ham, potato salad, mayonnaise dressing, toasted corn flakes and milk, apricot pie, bread, butter, tea.

## MONDAY

BREAKFAST : Roast beef hash and gravy, American fried potatoes, graham muffins, stewed prunes, bread, butter, coffee.
H1NNWR: Vegetable soup, soda crackers, boiled beef and cabbage, boiled potatoes, beet pickles, bread, butter, coffee.

New Post Exchange Building, Yeterans' Home of Callfornia.

SUPPER: Pork chops and cream gravy; hash brown potatoes, macaroni and tomatoes. coffee buns, stewed prunes, bread, butter, tea, milk.

## TUESDAY

BREAKFAST: Veal fricassee, cottage fried potatoes, corn bread, stewed raisins, bread, butter, coffee.
DINNER: Baked pork and beans, army style; steamed potatoes, braized carrots, brown bread pudding, vanilla sauce; bread, butter, coffee.
SU゙PPER: Sirloin steak smothered in onions, baked potatoes, hominy grits and milk, graham buns, stewed raisins, bread, butter, tea.

## REPORT OF ENGINEER'S DEPARTMENT

Vimemans' Home P.o., Chl., July 20, 1928.

To the President and Bourd of Directors, Veterans' Home of California.
(Throngh the Commandant.)
Gexthemen: I have the homor to present herewith a report of the work performed by the department meder my supervision as well as the progress of the work of the State Department of Public Works, Division of Arehitreture, at this Home during the fiseal year endect June 30, 1928:

## ENGINEER 'S DEPARTMENT

Two hundred tons, 400 pounts of ice made and delivered to the Commissary Department, Hospital, Post Exchange, Main Kitehen and Dining Room, and to the different officers' and emplovees' 'quarters using ice, and refrigeration was furnished to meat and milk rooms. This plant has worked very satisfaetorily all year.

Carpenter's and bus driver's residenees have been wired for electrie lights; concrete foundations placed and three-compartment garage at C'ommandant's residence was moved to a more eonvenient location and concrete floor placed in same: foreman's enttage at Chicken Raneh wired for electrie service, water and sewer connections made and new electric and plumbing fixtures installed; ice chest installed at Treasurer's residence; electric range installed in Assistant Surgeon's quarters; hot water supplies connected up to the slop hoppers in the different barracks as a needed convenience to members of the Ilome quartered there. As the oil hurning ranges in the main kitchen had become unserviceable and were constantly in need of repairs, they were replaced with four heary duty electric ranges, which have since proved to be rery ceonomical as well as satisfactory in operation. In order to properly supply ranges with eleetrie energy it was necessary to run larger lines to Main Kitehen and to install new switehboards. As the electric and sewer lines were ton small for serviee at Guest IIonse they were replaced with larger lines. In order to make room for the fomndations for the proposed new buildings to be construeted, it has been necessary to reloeate the service lines in their vieinity. All necessary repairs have been made to sewer, electrie, water and steam lines and phumbing and electrical fixtures during the year.

## CARPENTER SIIOP

Partitions placed and glassed-in poreh ereeted at Assistant Surgeon's quarters; foreman's cottage at Chicken Ranch has been sereened and shelving plaeed where needed; an ariary has been construeted at ('ommandant's residenee; eight tables, three step ladders, three lockers, one office desk, one eabinet, three ironing boards and 46 burial easkets were manufactured during the rear; all window shades and window and
door screens in the different barracks and quarters were repaired or replaced where needed. In order to make repairs when needed it has been necessary to keep a carpenter at the hospital practically all the rear. Repairs and replacements to buildings, etc., made as needed during the year.

## 1'AINT SHOR

Foreman's cottage at Chieken Ranch painted. both exterior and interior: interiors of Butcher Shop and kitehen at Chief Surgeon's resiclence painted; walls and ceilings of Post Quartermaster Sergeant's residence cleaned and painted; bed room in Assistant Surgeon's quarters painted: electrie depot and freight shed painted; interiors of Ilome restaurant and Adjutant's residence painted; house at Cemetery painted; five rooms in Treasurer's residence painted; all work fabricated in Carpenter Shop has been painted, rarnished or stained as needed; burial easkets have been glazed as well as painted: headboards for Cemetery have been painted and lettered as needed: ninety lights of glass renewed around eamp; repairs and renovation of furniture, etc., have been made as needed during the year.

## TIN SHOP

Twenty milk eans; cighty-six garbage cans: forty-two extra garbage (an covers, seventy-eight galvanized iron buckets, ten smokestack hoods. one sprinkling ean, two mush boilers, one copper water tank, one gasoline tank, one eoal hod, six soup tureens, six cup boxes, one two-compartment galvanized iron wash tray, one water cooler, twelve meat pans, two pudding eans, one oil tank, two large symp cans, one eake box, one ticket box for theater, nine tin filing eases, one bread box and three funnels made during the year: repairs to tin and iron were made as needed during the rear.

## RECTOR CANYON WATER SUPPLF

As the demands for water from the Rector Canyon source are increasing very rapidly and will in a short time be greater than the supply, it is imperative that steps he taken to conserve the water or there will be a serious shortage of water for domestic purposes.

The present ten-inch wooten pipe line that extends from the baek road, near the State Game Farm, to the eatch basin on Rector Creek, a distance of 7481 feet, has deteriorated to such an extent that it is a question of only a very short time until it will be in such an merviceable condition that further repairs to it will be practically impossible, and this pipe must soon be replaced or our supply of water will be eut off. As a matter of economy it is imperative that this pipe line be replaced, as the continual repairs and replacements that have to be ('arried on at the present time in order to keep up the water supply have but a temporary effecet and the additional strain that is placed on this pipe by moving it in order to replace joints and collars that have become unfit for further use has a tendency to weaken it and eause it to leak more readily.

It is my recommendation, in orler that there may be a sufficient supply of water for the users of the Rector Cinvon water supply, the

Veterans' Home of California, Napa State Farm, Napa State Hospital, and the State Game Farm, that a dam be construeted on Rector Creek of sufficient eapacity to store enollgh water so that the danger of a water famine during the dry season will be eliminated, and I also recommend that an iron pipe line be laid from this dam to the State Game Farm sufficiently large enough to give an alectrate stpply of water for all purposes, and this iron pipe will stop the present continuous waste of water that can not be aroided under the present method.

If this dam is constructed it will be an econmme measure for it will not alone assure the users of the water supply of enough water for domestic uses but there will be an added amont of water that will bee available for irrigation purposes, thereby assuring greater erops on lands under cultivation.

## SPECIAL WORK

Ditehes have been dug and $18^{\prime \prime}$ and $6^{\prime \prime}$ eonerete pipe laid for drainage purposes in field in rear of old Post Office building, and the grounds in the vieinity of the septie tanks graded for additional acreage for raising hay and grain.

House at Chieken Rameh has been repaired for use as quarters hythe Post Quartermaster Sergeant.

An addition has been placed to foreman's eottage at Chicken Ranch.

## STATE WORK

Bath room at treasurer's residence has been remodeled and new fixtures installed.

Cement sidewalks repaired where needed and a six-foot cement sidewalk placed at entrance to new Post Exchange building.

Additional ehieken house ereeted at Chieken Raneh and cement floor placed in same.

Trench dug. concrete conduit placed for steam and hot water lines to new Post Exchange building, hot water storage tank installed, pipe laid and eovered and comections made for water and electric service lines to building.

Six-inch east iron water pipe laid from end of wrolght iron pipe line to ten-ineh wooden main at Rector Canyon. This work makes a continuous iron pipe line from reservoir in 1 ome grounds to the above ten-inch wooden pipe.

An ornamental fence similar to the one on the north and east side of Home grounds, with an ornamental drive and walk gate at entrance. has been ereeted around the Home cemetery.

Buildings have been removel from Ineation for new barracks building, and water, steam and eleetrie serviee lines relocated.

Cottage No. 7. Company "( ${ }^{(1)}$ has been remoteled for une as the Home restaurant.

Roofs of buildings on Home grounds have been repaired and asphalt strip shingles placed where needed; gutters of same buildings likewise repaired.

Work of contractors in the erection of two cottages for employees, store room and emplorees' quarters for Quartermaster, and new barracks building has been started and is progressing rapidly.

Respectfully submitted.

E. C. Borman, Captain-Engineer.

Band Stand and Flag Pole, Veterans' Home of California.

## SPECIAL REPORT

OF THE

# California Tax Commission 

DEALING WITH
The Taxation of Banks, Corporate Franchises, Securities and Solvent Credits

SUBMITTED TO<br>THE GOVERNOR OF CALIFORNIA

AUGUST 10, 1928

# ACT ESTABLISHING COMMISSION 

## CHAP'TER 455, STATUTES OF 1927

An act authorizing and providing for an investigation and report upon the matter of revemue and taxation, providing for a commission therefor and defining the pourers and dutics of such commission in respect thereto, and making an appropriation therefor.
[Approved by the Governor May 12, 1927.]
The pcople of the State of California do enact as follows:
Section 1. The sum of seventy-five thousand dollars, or as much thereof as may be necessary, is herehy appropriated out of any money in the state treasury, not otherwise appropriated, to be used at the direction of the governor for the purpose of investigating and reporting upon the matter of revenue and taxation as set forth hereinafter.

Sec. 2. The governor may direet any state officer, or appoint persons to constitute a commission to make the investigation and report authorized by this act. Said eommission shall be known as the California tax commission. The governor may authorize the employment of any expert or other assistants as may be necessary, to investigate the systems of revenue and taxation in foree in this and other states, and partieularly to examine into any and all matters appertaining to the subjects of revenue and taxation in this state. The findings and conclusions of such investigations and recommendations as to neeessary changes in the existing system in this state shall be reported to the governor for recommendation to the legislatmre at its session in January, 1929. There shall also be made a speeial investigation and report upon the matter of the relative burden of taxes borne by general property values and such property values as are taxed direetly by the state under the existing system of taxation.

Sec. 3. The eommission provided for in this act is hereby authorized and empowered, at the direction of the governor :
(1) To do any and all things necessary to make a full and complete investigation in aceordance with this act.
(2) To require the attendance of persons and the production of papers before them or any one thereof and to take testimony under oath and administer oaths in the same manner that any court in this state may.
(3) To require reports from all state, county and municipal officers as to matters of revemue and taxation appertaining to their respective offices, and to examine the records and papers of any such offieial as to any matter of revenue and taxation.

Sec. 4. It is herehy made the duty of any offieer referred to in subdivision 3 of section 3 of this act to promptly make report when requested to do so and any such officer who shall fail or refuse to make such report promptly shall be guilty of a misdemeanor.

Sec. 5. Except in the case of state officers, who shall receive no per diem or salary as members of this commission, the members of the commission authorized in this act shall receive as compensation for their services the sum of fifteen dollars per day for each day actually employed in this work, not exceeding twenty days in any one calendar month for the chairman of the commission and not exceeding ten days in any one calendar month for any other member of the commission. All members of the commission shall receive their actual and necessary expenses incurred in the performance of the duties of such commission.

## LETTER OF TRANSMISSION

August $10,1928$.
Honorable C. C. Young, Governor. State of California, State Capitol,

Sacramento, California.
Sir: The California Tax Commission constituted in accordance with the act of the fortr-serenth session of the legislature of the State of California, approved May 12, 1927, has the honor to submit this special report.
The existing situation seems to the Commission to constitute an emergener which requires the immediate attention of the Chief Executive and of the legislature. Recent litigation and court decisions have thrown the tax administration of the state into confusion and have placed in jeopardy an amount of state revenue estimated to be in excess of $\$ 22.000,000$. The members of the Commission are convinced that they would be dereliet in their duty if they failed to submit their analysis of this sitnation while there is yet time for action before the Norember election. Failure to secure remedial action at that time will probably permit the banks to escape entirely all state taxation for two years to come, involve the treasury in embarrassment and seriously prejudice the interests of the state.

The first section of this report will be found to contain a deseription of the nature of the present emergeney, an explanation of the necessity for prompt action, and a summary of the specific recommendations of the Commission. The remaining sections present an extended analysis and diseussion of the problems involved.
(Signed) Irving Martin, Chairman
II. L. Carvahan

## SUMMARY AND RECOMMENDATIONS

The Commission is advised that the present method of taxing national banks is probably invalid ${ }^{1}$ and that, if remedial action is not taken by the legislature at a special session and by the people at the clection in November, the state may lose more than $\$ 22,000,000$ of revenue, ${ }^{2}$ and the banks eseape all state taxation ${ }^{3}$ until such time as the sitnation is corrected.
Moreover, decisions of the State Supreme Court have recently invalidated both the solvent-credits act of 1925 and the 1.45 per cent solventcredits act of 1927. The state is confronted with the necessity of immediately dealing with the problem of the tax on intangible personal property.
Tnder the interpretation of the existing federal statute the method of taxing banks now in force in this state can apparently be maintained only at the sacrifice of the special treatment of intangibles, which is greatly desired by the public, and at the cost of the taxation of mortgages. ${ }^{4}$ There is no assurance that the congress will extend further the state's power to tax banks ${ }^{5}$ and the Commission believes that mortgages should not be taxed. ${ }^{6}$ Consequently some new method of taxing banks must be sought.

As a result of its study of the problem the Commission has reached the conclusion that the only practicable method of securing a substantial revemue from the banks is to proceed under the fonth method permitted by the federal statutes, and tax banks "according to or measured by net income." ${ }^{7}$ Under this method the state may continue to exempt real estate mortgages and may enact a solvent-credits law without danger of invalidating the bank tax. However, the rate on the proposed new ineme base for the banks must not be greater than the rate borne by other financial and business corporations. ${ }^{8}$

An investigation was made of the present taxes on other financial and business corporations to ascertain whether the present state franchise tax and local personal property tax (which the banks do not pay) might be recast into a form which would validate the proposed new bank tax. The Commission's suggested solution calls for a revision of the present state franchise tax, so as to make it similar in its base and in its rate to the proposed new bank tax, but with this difference: that the corporation may, under certain limitations, use its local personal property tax receipts in payment of its new franchise tax. The proposed new franchise tax promises to aceomplish a substantial improvement in the equity of the distribution of the tax burden.
The Commission requested its teehnical staff to estimate the rate which must be applied to the proposed new income base for the banks and the other corporations, in order merely to maintain and not to increase the present flow of revenue from taxes on banks and corpora-

[^29]tions. The staff estimates that the rate may be as low as 4 per cent, a figure lower than that in force in any state using this plan. ${ }^{1}$

On the basis of data supplied by the administration, the Commission has reached the conclusion that, unless the state's surplus should be dissipated by refunds of bank taxes, there appears to be no immediate need for a material augmentation of the state's revenue. ${ }^{2}$ The Commission has received confirmation from the Governor in this view.

While the taxation of the banks at the rate of 4 per cent on the proposed income base will produce much less than the present yield of the tax on bank shares, ${ }^{3}$ nevertheless, the proposed new franchise tax on corporations will result in greatly increased taxes for a group of financial corporations, many of them owned by or affiliated with large banks, and the new taxes from this group will probably offset much of the expected loss in bank taxes. The new plan will not materially change the amount of the taxes for merchants and manufacturers, considered as groups. ${ }^{4}$

In view of the technical character of the present bank tax suits, the ill effects which will almost inevitably flow from a continuance of the litigation, and the obvious fairness of the proposed new tax on banks, the Commission considers it reasonable to hope that the banks will cease their efforts to resist their taxes, which efforts now threaten to drain the state treasury of its entire surplus. The Commission confidently anticipates that the adoption of its program will result in the banks roluntarily withdrawing their suits and cooperating heartily in an effort to make the new plan a success.
The adoption of the recommendation that banks be taxed by the income method will make it possible to reëstablish a solvent-credits law similar to the 7 per cent law of 1925 . The Commission suggests constitutional changes which will result in intangible property being taxed at a rate not in excess of 4 mills on the dollar ( $4 / 10$ of 1 per cent on their full value), a maximum rate which compares favorably with those of other states taxing intangible property in this manner and which is sufficiently low to remove any serious competitive disadvantage. ${ }^{5}$

The Commission recognizes that its primary responsibility is to ascertain what fundamental adjustments are needed in the revenue system of the state, and to provide the Governor and the legislature with a satisfactory teehnical basis for intelligent action in January, 1929. However, an emergency has arisen. Action is imperative. The steps to meet the emergency should be such as will advance and not retard the general plans for the improvement of the revenue srstem of the state which the Commission has under consideration. The program recommended will achieve this result.

In brief the Commission recommends:
(1) That a speeial session of the legislature be called to consider the submission of a suitable proposal for an amendment ${ }^{6}$ to the constitution of the state for the approval of the people at the election in November, 1928;

[^30](2) That such proposed amendment provide for a tax on banks by the only available method which will produce a substantial revenue, the so-called fourth method provided by section 5219 of the Revised Statutes of the United States, viz, "aecording to or measured by their net ineome' ;
(3) That such proposed amendment grant eorresponding authority to the legislature to make the necessary ehange in the form of the present franchise tax on eorporations so as to permit the use of net income as a measure of the value of the franchises of eorporations; and
(4) That sueh proposed amendment remove the obstaeles which, under recent decisions of the Supreme Court of the state, hamper the legislature in any attempt to tax intangible personal property (not already exempt) in a special manner as is apparently desired by the people.

## THE BANK TAX PROBLEM

The situation under consideration involves three interrelated problems, as follows:
(1) The bank tax problem;
(2) The corporation franchise tax problem : and
(3) The intangible property tax problem.

Since the present crisis is traceable to difficulties which have arisen in connection with the bank taxes, this problem will be considered first.

## PRESENT METHOD OF TAXING BANKS

The present method of taxing banks in California is the so-called share-tax method, and dates from the adoption in 1910 of "Amendment Number One."

The Share-Tox Method.-Briefly, this method consists of (1) taxation of the real estate of the bank (but not of personal property) by the localities at the ordinary property tax rate, and (2) taxation by the state of the shares of the capital stock of the banks at a flat rate, which has varied from time to time, applied to a base consisting of the capital, surplus and undivided profits, with a deduction of the assessed value of real estate from this figure. ${ }^{1}$

It should be noted that exactly the same treatment is given to both state and national banks. Furthermore, it is significant that whereas the local tax on the bank's real estate is a tax directly on the bank itself, the portion of the tax that goes to the state is, in form, a tax on the shares. Although the banks are liable to the state for the tax, it is nevertheless plainly stated that it is paid by the banks on behalf of the stockholders. In the course of time, however, the tax on shares has come to be considered in fact a tax on the banks. The reason for

[^31]making the tax in form a tax on the shares rather than a tax on the banks direetly, lies in the fact that the federal law (section 5219 of the Revised Statutes of the Inited States, whieh sets forth the conditions under which the states may tax national banks) permitted a tax on shares, but at this time made no provision for a tax on the bank itself. ${ }^{1}$

Conditions: Before 1910.-The present share-tax method of taxing banks established in 1910, bronght about great improvement in the situation which had existed previonsly: The 'Tax Commission of 1906 reported that the then existing system of taxation had broken down completely in its application to banks. As a result of federal decisions national banks were paying no taxes at all exeept on their real estate, and the system in rogue for taxing state banks was "without uniformity, equality or regularity:"

The 1910 Commission Report ${ }^{3}$ contains the following statement:
"How lamentably our tax system breaks down when applied to banks is well known. The national banks are not really taxable at all. What they do pay is a gift of free will. The state commercial banks can easily evade taxation almost entirely, and probably two-thirds of what they pay is a free gift, while the whole amount is insignificant."

Results linder the Present Methord.-In general, the experience under the present plan of taxing banks has been good. The method provided is definite, and there has been no complaint of discrimination as among banks. The rates have been changed on three oceasions, and although these changes, and particularly the change made in 1921, provoked considerable controversy, and although some of the bankers now feel that they are heavily taxed, it may be said that the present method has given fair satisfaction both to the state and to the banks. ${ }^{*}$ The taxes assessed amnually since the adoption of the present plan, together with the rates in foree, are shown in Table I.

The Bank Suits.-Begmung with the Richmond case in 1921,5 there has been a line of decisions which has had the practical effect of restrieting the powers of the states in taxing mational banks within much more narrow limits than were previonsly supposed to apply: However, no litigation raising the question of illegal diserimination in the California method of taxing national banks was begun until after the so-called solvent-credits act had come into effect in the assessments of 1926. But in that year about two-thirds of the national bank taxes were paid under protest on the ground that the taxation of securities and solvent credits on a 7 per cent valuation constituted a diserimination prohibited by the provisions of the federal statute. Several state banks also paid this tax under protest in 1926. alleging discrimination also, hut based their case on the fourteenth amendment of the felleral constitution guaranteeing equal protection, alleging that the solvent-eredits act brought about an improper and arbitrary elassi-

fication of intangible propertr. In 1927 the proportion of national bank taxes paid moder protest was even higher than in 1926, and in due course suits were begun, to secure reparment of the tax. These suits are now pending in the state courts.

## AMOUNTS OF REVENUE IN JEOPARDY

The litigation initiated by the banks already involves a substantial sum and, unless prompt action is taken, may he so extended as to jeopardize an amount of reveme sufficient to wipe out the present treasury surplus. In other words. fatilure to establish, in the fall of 1928 , the constitutional foundation for a valid srstem of bank taxation may seriously embarrass the state s finances and require the imposition of special levies on other taxparers to replace the revenue involved.

The bank taxes for 1926 and 1927 paid under protest amount to

The national bank taxes for 1928 . practically all of which will probably be paid under protest and which can probably now be saved only by voluntary action by the banks, amount to

The national bank taxes for 1929 and 1930 which will be jeopardized in the absence of constitutional changes in the fall of 1928 are estimated at

[^33]The state bank taxes, relumd of which might be conecivably clamed as a matter of equity or legal right, are as follows:

Consequently the total smm which may ultimately prove to be in jeoparly, except for immediate action, is approximately$\$ 22,050,000$

The faets may be smmarized in another way:
First-If
(1) The state wins the 1926 and 1927 snits;
(2) The national banks win the 1928 suits;
(3) The state banks reeeive no refunds; amd
( 4 ) The sitnation is remedied before 19:9-
The amount to be refunded will be about
$\$ 2,549.000$
Second-If the national banks win the 1926 and 1927 suits as well as the 1928 suits (other assumptions remaining as under First)-the amount to be refunded will be abont
$\$ 5,470,000$
Third-If the sitnation is not remedied before 1929 (other assumptions remaining as under Sccomel)-the amount to be refunded will be about
$\$ 10570,000$
Fourth-If the state banks are relieved of their taves for 1928, 1929 and 1930 (other assumptions remaining as under Thired)-the amount to be refunded will be about $\$ 17,286,000$
Fifth-If all the state bank taxes for $1!206$ and $192 \overline{2}$ are refunded (other assmmptions remaining as under Fourth ) - the amount to be refunded will be about----- $\$ 2.0,050,000$
The amount of reveme involved to date is about $\$ 12,4 i 0,000$, as will appear if one adds all of the tases eredited in the above tabulation to the years 1926, 1927 and 1924. If there is no special session and the situation is permitted to drift two years fonger an atditional sum of abeut $\$ 9,5: 0,0,00$ will be involved, of $\$ 2.2,050,000$ in all.

[^34]
## THE POWER OF THE STATE TO TAX BANKS

To understand the basis of the suits as well as the conditions the state must meet in its effort to evolve a legally sound method of taxing banks, it is neeessary to examine in some detail the character of the limitations which the banks claim have been overridden by the state. As has been pointed out, the state may tax national banks only to the extent and in the manner permitted by the congress of the United States. It has the legal power to tax state banks in any manner, or to whatever extent it chooses within the limits of the general constitutional guarantees. As a practical matter, however, if the state imposes a eomparatively heary burden upon state banks, the result will be to drive them into the national banking system, since the advantages of a state eharter, as compared with the national eharter, are usually not so great as to make possible a substantial difference of treatment under the tax law. ${ }^{1}$

Federal Authorizution to Tax National Banks, Section 5.219.When the present system of national banks was established during the Civil War, ${ }^{2}$ considerable apprehension was felt lest the states cripple or destroy the new national banks by unfair or diseriminatory taxation. There was, indeed, good ground for such apprehension, since the congress itself at this time had used this very method to insure a monopoly of the note-issuing privilege for these new banks, having placed a prohibitively heary tax upon the note issues of institutions not a part of the national banking system. ${ }^{3}$

In the beginning no provision at all was made for state taxation of national banks. However, in 186t, the congress decided to permit the states to tax the shares of stock in national banks under certain limitations. ${ }^{4}$ The provision governing the powers of the state in this respect was modified in $1868,{ }^{5}$ at which time the language assumed the form which it was destinel to hold for a period of more than fifty years. The exact langnage of section 5219 of the Revised Statutes, as adopted

[^35]in 1868 and as in foree at the time Catifornia adopted Amendment Number One, was as follows:
Nothing herein shat prevent all the shares in muy association from being
included in the valuation of the personal property of the owner or holder of
such shares, in assessing taxes inposed hy the aththority of the state within
which the association is located; but the legishature of each state may deter-
mine and direct the manner and place of taxing all the shares of national
bamking associations loeated within the state subject only to the two restric-
tions. that the taxatiom shall not be at agreater rate than is assessed upon
other moneved capital in the hands of individual citizens of such state and
That the shares of any mational banking association owned by monresidents of
mis state shall be taxed in the city or town where the bank is loeated, and not
elsewhere. Nothing herwin shall be constried to exempt the real property
of associations from either state, comuty or monicipal taxes. (1) the same
extent, according to its value, as other real property is taxed.

It will be obserwed that whereas real property was made directly taxable to the bank, the only authority granted for further taxation was with respeet to the taxation of shares of stock in the bank, which could be included in the persomal property of the owners, with the significant proviso that the taxation should not be at a greater rate than that "assessed upon other monered capital in the hands of individual citizens of such state.'

Conception of Share Tax as Tax on the Bank.-Operating under the authority contained in this section, the taxation of mational banks gradually assumed a high degree of standardization throughout the Thion. The system of taxation almost universally in force in various states was the reneral property tax under which a pretense, at least. was made of taxing all property, real and personal, at a miform rate. The provision in section 5219 that all shares, including those owned by nonresidents of any state, should be taxed in the city or town where the bank was locaterl, together with the practice of collecting the tax on the shares from the bank directly, rather than from the individual shareholders, gradually resulted in the development of a general impression on the part of both the banks and the taxing officials, that the tax was in fact a tax on the bank, rather than a tax on the shares. It is true that no legal fomblation existed for this impression, but as evidence in support of the assertion that it was so understood, even by the banks, there may be eited the fact that the banks sought and secured from the congress in 1921 an amendment to the federal revemue act permitting the bank itself, rather than the shareholder, to deduct this tax in arriving at its net income for pmoses of federal taxation, an action which would be impossible to justify on any other ground than that the share tax was considered a tax on the bank itself. ${ }^{1}$

Position of Share Tux Uuder Modified General Property Tax.The history of taxation in this country since the Civil Wrar is largely the history of the gradual disintegration of the general property tax. With the growth of the corporate form of organization and the development of the technique of subelividiner the ineidents of ownership in

[^36]property with the aid of rarious types of paper instruments, it became increasingly diffienlt to provide satisfactory methods of offsetting liabilities against assets, and the general property tax gradually became a rery unjust tax because of the large amount of double taxation necessarily involved in the efforts to include intangible property on the assessment rolls. The various evidences of ownership were easily concealed, and it proved entirely feasible for the taxpayer to escape most of the erils of double taxation by the simple process of the refusal to disclose his holdings of intangibles. In a majority of the states of the Union, the hopelessness of attempting to administer successfully the general property tax under these conditions was recognized to a greater or less extent, and modifications were introduced in the tax systems of the states in the form of special low-rate taxes on intangibles or in the form of taxes on income. In California evidences of this movement are found in such prorisions as the following:
(1) The constitutional provision adopted in 1910 exempting real estate mortgages from taxation; ${ }^{1}$
(2) The exemption established in 1917 of slares of stock in corporations to the extent that the property of the corporation itself is taxed in this state $;$ : and
(3) The solvent-credits amendment to the constitution, passed in 1924 , together with the legislation based upon it. ${ }^{3}$

The Richmond Case, 1921.- The rarious modifications in the system of taxation to which attention has been called in the preceding section were made with apparently little apprehension regarding their possible effects upon the ralidity of the taxes being imposed upon national banks. Viewed in retrospect. it now appears remarkable that this question should not have arisen long before it did. However, in 1921, the Supreme Court decided that the Virginia tax on bank stock, which was imposed at a higher rate than that imposed upon intangible personal property in general, including bonds, notes and other evidences of indebtedness, violated the provisions of section 5219 . This decision was a tremendous shock. Virginia was one of the states which had adopted a low rate tax on intangibles. The facts in the case showed that whereas in Richmond the rate applied to bank stocks amounted to $\$ 1.75$ per $\$ 100$ of valuation, the tax on intangible personal property in general amounted to only 95 cents on each $\$ 100$ of valuation. In this case it was shown without dispute that moneved capital in the hands of individuals invested in bonds, notes and other eridences of indebtedncss. came into competition with national banks in the loan market. The court pointed out that by repeated decisions moneyed capital had been beld to include "something besides shares in bank corporations and others that enter into direct competition with those banks. They include not only moners invested in private banking property so called, but investments of individuals in securities that

[^37]represent money at interest and other evidences of indebtedness such as normally enter into the business of banking." It held further that there had been a clear showing of "competition relatively material in amount," and eonsequently that section 5219 had bren violated.

The annonncement of the decision in the Riehmond ease precipitated a veritable avalanche of litigation, banks in all parts of the country instituting suits in states where intangible personal property had been aecorded special treatment, to test the validity of the share taxes on the banks. The decision, together with the resulting litigation, also started a movement to secure from the eongress amendments to section 5219, liberalizing the powers granted the states in the taxation of national banks.

The 1923 Amendment of Section 5219.-The first fruit of the agitation to give the states a freer hand in the taxation of national banks was an amendment to section 5219, passed in $1923,{ }^{1}$ the text of which reads as follows:

The legislature of eacli state may determine and direct, subject to the provisions of this section, the manner and place of taxing all the shares of national banking associations, located within its limits. The several states may tax said shares, or include dividends derived therefrom in the taxable income of an owner or holder thereof, or tax the income of such assoriations, movided the following conditions are complied with:

1. (a) The imposition by said state of any one of the above three forms of taxation shall be in lien of the other.
(b) In the ease of a tax on said shares the tax imposed shall not be at a greater bate than is assessed upon other moneyed capital in the hands of individual citizens of surl state coming into competition with the business of national banks; morided, that honds, notes, or other evidences of indebtedness in the hands of individual citizens not employed or engaged in the banking or investment business and representing merely personal investments not made in competition with such business, shall not be deemed moneyed capital within the meaning of this section.
(e) In case of a tax on the net income of an association, the rate shall not be higher than the rate assessed upon other finaneial corporations nor higher than the highest of the rates assessed by the taxing state upon the net income of mercantile, mamufacturing, and business corporations doing business within its limits.
(d) In case the dividends derived from the said shares are taxed, the tax shall not be at a greater rate than is assessed mon the net income from other moneyed capital.
2. The shares or the net income as abow provided of any national banking association owned by monresidents of any state, or the dividends on such shares owned by sueh monresidents, shall be taxed in the taxing district where the association is located and not elsewhere; and such association shall make return of such income and pay the tax thereon as agent of such monresident shareholders.
3. Nothing herein shatl be construed to exempt the real property of associations from taxation in any state or in any subdivision thereof. to the same extent areording to its value, as other real property is tased.
4. The provisions of section 5219 of the Revised Statutes of the United States as heretofore in force shall not prevent the legalizing, ratifying or the confirming by the states of any tax heretofore paid. levied or assessed mpon the shares of national banks, or the collecting thereof, to the extent that such tax would be valid under said section.
It is clear that by this amendment the eongress opened two new possibilities for the taxation of national banks by states in addition to the old share tax. A state which had a personal ineome tax was now anthorized to include dividends on national bank stock in the taxable income

[^38]of the owner, or a state might tax the income of the bank itself. However, it could not use more than one of the three specified methods simultaneonsly.

The langnage describing the limitations which should apply in case the share-tax method were used was recast. (See 1 (b) quoted above.) At the time it was thought that this new langnage might make it possible for the states with low rate taxes on intangibles to avoid the charge of discrimination against bank shares. However, this hope was doomed to disappointment, ${ }^{1}$ for in later decisions the court decided that this language really added nothing to the powers of the states, but "did no more than put into express words that 'which aceording to repeated decisions of this conrt was implied before'."' ${ }^{2}$ It was during this period that Califormia arlopted the constitutional amendment of 1924 permitting the legislature to establish a low rate tax on intangibles.

The 1923 amendment to section 5219 was a disappointment in other respects as well. It had been hoped that it would meet the needs of the situation in states like New York, where there were in force both a personal income tax and a franchise tax (in the form of a business income tax) on corporations. New York, however, found the authority granted by the amendment inadeqnate because it did not give suffieient power to tax banks and their shareholders on an equality with other taxpayers. In the first place, it was impossible to tax both the bank on its income and the shareholder on his dividends, whereas New York taxed other corporations on their ineome and taxed the shareholders on their dividends as well under its personal income tax. In the second place, under the corporation income tax in New York (since it was in the form of a franchise tax which was legally not a tax directly on the net income of the corporation, but which rather used net income as a measure of the value of the franchise of the corporation) it was possible to define net income more broadly than if the tax were a simple income tax. It was possible, for example, to inchide the interest on tax-exempt govermment bonds in the base. The second amendment to section 5219, passed in 1926, was directly traceable to the desire on the part of the New York banks to secure anthority from the congress which would enable New York state to tax banks and their shareholders on precisely the same base as it taxed other corporations and their shareholders.

The 1926 Amendment of Section 5219.-The text of the 1926 amendment ${ }^{3}$ is as follows :
> 454. Sec. 5219. The lexislature of each state may determine and direct. subject to the provisions of this section, the manner and place of taxing all the shares of national banking associations located within its limits. The several states may (1) tax said shares, or (2) include dividends derived therefrom in the taxable income of an owner or holder thereof or (3) tax such associations on thair net income, or (t) acoording to or measured by their net income, provided the following conditions are complied with:
> 1. (a) The imposition by any state of any one of the above four forms of taxation shall be in lien of the others, excent as heremafter provided in subdivision (c) of this clanse.

[^39](b) In the rase of a tax on said shares the tax imposed shall not be at $n$ greater rate than is assessed upon other monered capital in the hands of indivithal citizens of such state coming into compretition with the business of national banks ; provided, that bonds, notes, or other evidences of indebtedness in the hands of individual citizens not employed or pagaged in the banking or investmont business and representing merely personal investments not made in competition with such business, shall not be deemed moneyed eapital within the meaning of this section.
(e) In rase of a thx on or areording to or measured by the net ineome of an association, the taxing state may, except in case of $n$ tax on wet ineome, include the entire net income received from all sourees, but the rate shall not he higher than the rate assessed upon other financial corporations nor higher than the highest of the rates nssessed by the taxing state upon mercantile, manufacturing, and business corporations doing business within its limits: provided. howerer, that a state whieh imposes a tax on or aceording to or measured by the net income of, or a fratuchise or excese tax on. finaneial, mercantile, manufacturing. and business corporations organized under its own laws or laws of other states and also imposes a tax upon the ineome of individuals, may include in such individual income dividends from national banking associations loeated within the state on condition that it also ineludes dividends from domestie corporations and may likewse include dividends from national bamking assofiations located without the state on condition that it also includes dividends from foreign corporations, but at no higher rate than is imposed on dividends from such other corporations.
(d) In case the dividends derived from the said shares are taxed, the tax shall not be at a gronter rate than is ussessed npon the net income from other moneyed eapital.
2. The shares of any mational banking association owned by nonresidents of any state. shall be taxed by the taxing district or by the state where the association is loeated and not elsewhere: and such assoriation shall make retnrn of such shares amd pay the tax thereon as agent of such nonresident shareholders.
3. Nothing herein shall be construed to exempt the real property of associatious from taxation in any state or in any subdivision thereof, to the same extent, according to its value, as other real property is taxed.
4. The provisions of section $521!$ of the Revised Statutes of the United States as heretofore in foree shall not prevent the legalizing. ratifying, or confirming by the states of any tax heretofore paid, levied, or assessed upon the shares of mational banks. or the rollecting thereof. to the extent that such tax would be valid under said section.
This is the form in which section 5219 stands today: The chief change, as compared with the 1923 amendment, consists of the addition of the fourth methot, which grants states authority to tax national banks "according to or measured by their net income." The original proposal for this amendment was prepared and submitted to the congress as a result of the joint activities of a committee of the American Bankers Association and a committee of the National Tax Association. The known purpose of these committees was to modify the 1923 amendment so as to permit a law such as the franchise tax on income of corporations in force in New York state to be applied to national banks. This intention is also plainly stated in the report of the House Committee on Banking and Currency. ${ }^{2}$

It should be particularly noted that if this new fourth method is utilized, it is no longer necessary to restrict the bank rate to that which is imposed on other monered capital. The comparison then becomes

[^40]one between the rate imposed on banks and that imposed on other corporations.

The new amendment also permits the inclusion of bank dividends for taxation under a state personal ineome tax. in addition to the taxation of the income of the bank it velf under a state business ineome tax.

Recent Decisions Interpreting Section 5219.-As has been pointed out, ${ }^{1}$ during the years following the Richmond deeision of 1921, numerous suits were brought, testing the powers of the states to tax national bank shares under the revenue laws of various states. Without attempting to review the history of the litigation in detail, it mar be noted that finally, with the deeisions handed down on March 21. 1927, in the so-ealled Wisconsin and Minnesota cases. ${ }^{2}$ the situation beeame so acute as to oceasion great apprehension in California regarding the validity of the bank taxes. At this time California was operating under the solvent-eredits law of 1925 , which called for a valuation of taxable securities and solvent eredits at $\bar{i}$ per cent of their value. At this jumeture, the legislature passed the law of April 20, 1927. ${ }^{3}$ which attempted to remove the ground for a claim of diserimination to the fullest extent possible withont a change in the constitution. br providing that such intangible property should be taxed at the rate of 1.45 per cent, the precise rate applied to the shares of stock of national banks. By this time it was deemed to be too late for this action to affect the assessments for the year 1927. It was hoped, howerer, that it would eliminate all question regarding the validity of the 1928 bank taxes.

## POSSIBILITY OF VALIDATING THE PRESENT SHARE TAX ON BANKS

On Mareh 8. 1928, the Supreme Court of C'alifornia handed down a deeision in the ease of Arnold is. Hopkins * which deelared both the so-called 7 per cent valuation law of 1925 and the aet of 1927 imposing the rate of 1.45 on taxable securities and solvent eredits to be unconstitutional. It is the contention of the Attorney General that the effeet of this deeision is to reestablish full rates of valuation and taxation on such property for the years 1926 and 1927 . with the result that the possible diserimination against national bank slares in these years, due to the 7 per cent valuation of intangibles, has been removed.

However, the Commission deemed it expedient to seek legal adrice as to whether, even with the solvent-eredits aet out of the equation, the present method of taxing banks on the value of their shares, when tested in the highest courts, is likely to be declared to vinlate the prorisions of seetion 5219 of the Revised Statutes of the United States. As a result of the study of the legal problem here involved, the Commission is advised that the validation of the present bank share method

[^41]will probably necessitate action which the Commission is loath to suggest, and which, in its opinion, the penple of the state would be unwilling to adnpt.

It wonld apparently be necessary for example, to eliminate the provision of the constitution (Article X1II, spetion 1). which exempts real cstate mortgages from taxation. It appears to be clear that the Supreme Conrt of the Enited States would holfl real estate mortgages to be "other moneyed capital in the hands of individual citizens of such state coming into competition with the business of national hanks." ${ }^{1}$

In addition to this mortgage expmptinn, a second ground for claim of discrimination may posibly be found in the present provisions permitting the deductions of debts from solvent credits. If the banks are able to show that this deduction confers upon owners of credits a substantial advantare which is unt availahle to the owners of bank shares, this in itself may be sufticient to invalidate the present bank share taxes.

The Commission is atvised. further, that the state, in defending the suits brought for reeovery of the 1926 and $199^{-1}$ bank taxes, will probably be in a stronger position than in the case of suits which mar be brought for the recovery of taxes for later years. This is because the banks, either through intent or neglect, have failed to include in their grounds for protest the diserimination which may be found to exist based on the mortcage and debt-leduction points. However, in fighting the 1926 and 1927 bank chses, the Attorney General has been foreed to presume that, following the decision of Arnold vs. Hopkins, the old law in force prior to 1926 became the law affecting the 1926 and 1927 assessments, and that the local assessors will proceed to reassess the securities and the solvent credits which were valued at 7 per cent, placing them on a full value basis. Indeed, if these suits are not withdrawn and the state must continue to defend them, the necessity may develop of asking for writs of mandate. calling upon such local assessors as have not done so voluntarily, to change their assessment rolls so as to reassess at full value the property in question. From the point of view of the development of that state of mutual confidence between the taxing ofticials and the taxpayers which is so essential to snccessful tax administration, the Commission feels very strongl? that it would be extremely unfortunate if it should prove necessary to resort to this process of reassessment for the years 1926 and $192 \bar{T}$.

Consequently, the Commission has earnestly sought to evolve a solution of the general problem which will effect the withdrawal of these 1926 and 1927 suits, not so much because of lack of confidence in the state's ability successfully to defend them, as becanse of reluctance to jeopardize the future success of the taxation of intangible property in the state, which would result if the 1926 and 1927 assessment of intangibles should be reopened.

[^42]If the Commission's legal advice is sound, it appears that the bank taxes assessed for the current year, 1928, are in serious jeopardy. With respect to the future, the method of taxing banks on their shares can apparently be maintained only at the cost of a constitutional amendment and appropriate legislation which would (1) remove the mortgage exemption and (2) withdraw the privilege of deducting debts from credits, or extend that privilege to owners of bank shares. It should be particularly noted that even then the state can not take any action to meet the solvent-credits problem. If it is to attempt to validate the bank-share tax it must continue to attempt to tax intangible property at full rate. The Commission is unwilling to recommend the taxation of mortgages, and it desires to recommend an arrangement for taxing solvent credits which will relieve the present unfortunate situation.

In summary, then, the Commission, while recognizing the necessity for immediate action, considers that the validation of the present share tax on banks would be purchased at too ligh a cost if it were necessary to return to the taxation of mortgages. Moreover, the Commission considers it important that the 1926 and 1927 bank suits should be withdrawn, in order that the ill effects of reassessment of intangibles may be avoided.

## OTHER POSSIBLE PLANS CONSIDERED

Being convinced of the unwisdom, as well as the futility, of recommending the taxation of mortgages, the Commission then proceeded to canvass the possibilities of securing an amendment to section 5219, and to analyze the other methods of bank taxation provided by that section in its present form. ${ }^{1}$

Outlook for Securing an Amendment to Section 5219.-The form of section 5219 after its amendment in 1926, was considered quite unsatisfactory by those states which did not have income taxes on corporations and individuals as a part of their state tax systems. There has been continuous agitation in favor of more liberal amendments to section 5219. The State of California has joined with other states in urging upon the congress the desirability of legislation, the situation in this state having been presented both at the hearings before the Senate Committee on February 23, 24 and 25, 1928, and at the hearing before the House Committee on May 10 and $11 .^{2}$ For a time it appeared probable that the congress would accede to a change which would add a proviso to the effect that the taxation of real estate mortgages at a low rate, or their entirc exemption, should not be considered good ground

[^43]for estahlishing a ease of diserimination against hank shares. However, the congress adjourned in lune without taking any action. The next session begins in December, and, althongh strong efforts will undonbtedly be made, the prospect does not appear to be bright for obtaining promptly a satisfactory amendment. In any case, there seems to be almost no chance at all that the congress will take action in time to validate the assessment of banks in California by the present method for the sear 1929. If action in the direction of revising the bank taxes in this state is postponed in the hope that the congress may at some future time pass a liberal amendment to section 5219, and it later develons that such action by the congress will not be forthcoming, it will mean that California will probably have to await changes to its constitution at the election in the fall of 1930 , before it can revise its bank tax system, thus placing the bank taxes for two more years in jeopardy.

The Commission believes that California should continue to cooperate with other states in attempting to scemre wider anthority from the congress to tax national banks. However, the Commission can not assume the responsibility for postponing the establishment of a legally sound system of bank taxation in the vague hope that the congress may at some future time validate the present bank-share tax.

Taxation of Banks "Acrording to or Measured by Their Net Income."-The powers granted the states by section 5219 in its present form, which is quoted in full on pages 22-23, may be conveniently summarized as authorizing any one of the following four methods:

First method.-Tas the real estate of the bank and tax the shares. The shares may not be taxed at a greater rate than "other moneyed capital in the hands of individual citizens of such state coming into competition with the business of national banks."

Scoond method.-Tax the real estate of the bank and tax the dividends on the shares by a personal income tax. The rate on the dividends must be not greater than the rate on the net income from "other moneyed capital."

Third method.-Tax the real estate of the hank and tax the net income of the bank. The income may not be taxed at a higher rate than that "assessed upon other finaneial corporations" or at a rate higher than the highest of the rates on business corporations in general (although the tax on other husinesses need not be in form an income tax). In addition, dividends on the shares may be taxed by a persomal income tax, if such a tax should ever be established in the state.

Fourth method.-Tax the real estate of the bank and tax the business of the bank by a lery "according to or measured by net income." As distinguished from the third method, this tax is designed to include within the scope of its application certain types of income which may not legally be reached by a pure net income tax-such as interest on tax-exempt government bonds. As under the third method, the rate may not be greater than the rate imposed on financial and business corporations in general (although the tax on other businesses need not be in form an ineome tax), and dividends on the shares might be taxed by a personal inenme tax, if such a tax existed in the state.

It will be noted that the first method is the present share-tax method which has been discussed and disearded as unavailable. As practical propositions, both the second and the third methods may also be
dropped from consideration. The reasons for discarding the second are that to tax merely the real estate and the dividends on shares in the form of a personal income tax would not only yield a comparatively insignificant sum, but that it would also require the establishment of an income tax. California has no personal income tax available for use for this purpose, and the advantage which would accrue through the possibility of taxing bank dividends is not a sufficiently weighty argument to justify the Commission in recommending the establishment of a personal income tax as an emergency measure. The third method may be discarded in favor of the fourth, because under the fourth everything can be accomplished which may be gained by proceeding under the third, and presumably ${ }^{1}$ more besides, viz, the inclusion, if desired, of tax-exempt interest in the base.

This leaves only the fourth method. A preliminary survey was suffcient to show that this method, that is, taxation of the bank "according to or measured by net income,", held sufficient promise to justify extended analysis.

This analysis, in both its fiscal and its legal aspects, involves the joint consideration of the tax on banks and the tax on other corporations. It will be recalled that if this fourth method of taxing banks is used, the rate may "not be higher than the rate assessed on other financial corporations nor higher than the highest of the rates assessed by the taxing states upon mercantile, mauufacturing, and business corporations doing business within its limits." ${ }^{2}$ Consequently, the next step is to examine the possibility of recasting the present taxes on business corporatons, so as to make them available for the validation of a tax on national banks under the fourth method.

[^44]
## THE CORPORATION FRANCHISE TAX PROBLEM

Quite aside from the question of recasting the present so-ealled franchise tax on corporations, so as to render it useful for the purpose of validating a new method of taxing banks, the Commission has been foreed to consider the problem of appraising the value of this tax as it now operates, and to consider the desirability of modifying it.

## PRESENT METHOD OF TAXING CORPORATE FRANCHISES

The present franchise tax is a misnomer. It is really a "corporate excess'" tax. ${ }^{1}$ It was established in its present form, except as to rate, in 1910, through the passage of Amendment Number One. The langnage of the constitution governing the taxation of corporate franchises reads as follows (Article XIII, section 14 (d)) :

All franchises, other than those expressly provided for in this section, shall be assessed at their cash value, in the manner to be provided by law, and shall be taxed at the rate of one per centum each year, and the taxes collected thereon shall be exclusively for the benefit of the state.

## EVOLUTION OF PRESENT METHOD

The taxation of franchises was treated at some length by the California Commission on Revenue and Taxation in its 1906 report. This report distinguished between speeial franchises enjoyed by public service corporations and corporate franchises in general. It proposed to provide for the taxation of special franchises of public service corporations by taking into account their value in fixing the rate of the tax on gross receipts whieh was recommended. The taxation of corporate franchises in general "was a much rexed question in California," ${ }^{2}$ according to the Commission, which said: "It is a question, open for scrious consideration, whether the taxation of such a franchise, tantamount to the taxation of the good will, against corporations, while similar items of property, if this be property, are not assessed against individuals and firms, does not constitute an unjust discrimination against corporations." The taxation of franchises at this time was in the hands of the loeal assessors, who apparently proceeded to appraise them on the general basis of the theory of corporate excess. "The whole matter of taxation of franchises," said the Commission, "is in an extremely unsatisfactory condition. ${ }^{3}$
"There is no doubt whatever that there is an element in the value of corporate property which is over and above the value of the tangible and physical property. It is a value which attaches to all the property of the corporations becanse of its ineome or earning power. If, however, the corporations were taxed upon the basis of their earnings or upon any equitable basis whieh referred to their earnings, the vexed question would disappear."

The recommendation of the Commission was that, in addition to the organization fees, ordinary corporations should be subjected to an

[^45]annual franchise tax in proportion to the capital issued, and the draft of the proposed Amendment Number One whieh appeared in the 1906 report provided for such a tax at the rate of $1 / 20$ of 1 per eent of the authorized eapital stoek. In addition, the Commission proposed that special franehises enjoyed by publie utilities sueh as water companies, not ineluded within the soope of the proposed gross receipts tax, should be assessed by the State Board of Equalization and taxed at 1 per eent. However, before this amendment was submitted to the voters in 1908, this provision was changed. The proposed rate was transformed into a speeifie scale of moderate rates. The proposed amendment of 1908 failed of passage, and before resubmitting the amendment in 1910, the proposal for a franchise tax on capital stock was eliminated and the present language inserted, which had the effeet of subjeeting all eorporations to a 1 per eent rate on a value to be fixed by the State Board of Equalization. This change seems to have been a eoneession to the prevailing public sentiment whieh existed at the time. The 1910 report of the Commission points out that the proposed plan practically continues the then existing arrangement exeept that the assessment is made a central, rather than a loeal function. It points out the ridiculous results whieh flowed from the rule that the franehise was taxable at the prineipal place of business of the eompany, corporations selecting as their prineipal place of business the eounties in whieh the assessors gave them favorable treatment. The following paragraph is illuminating :

> In the leading ease of Spring V'alley Water Works vs. Schottler, 62 Gal. 69, and other cases following it, the supreme (hurt has repeatedly approved of the following method for making a valuation of the franchises of every class of eorporation for purposes of taxation. This method consists in (1) ascertaining the total market calue of all outstanding securities, and (2) deducting therefrom the assessed ralue of any visible or tangible property which belongs to the corporation. The amendment makes no change except to transfer the administration of the law from the counties, which have not succeeded in collecting these taxes, to the state, which can do so with certainty and unjformity. The commission considers this one of the strongest features of the new plan. ${ }^{1}$

## RESULTS UNDER THE PRESENT SYSTEM

It is elear, then, that the practice of taxing corporate exeess under the title of a franehise tax is one of long standing in California. The numerous complaints whieh this Commission has received indicate, however, that the hope of the 1910 Commission that the transfer of the administration of this tax from the loeal assessors to the State Board of Equalization would result in "certainty and uniformity," has not been completely fulfilled. The evidenee before the Commission indicates that, from the point of riew of the taxpayer, the present franchise tax is an arbitrary tax, the amount of which it is impossible to antieipate and acerue. The taxpayers complain that they are unable to secure any explanation as to the basis on whieh the assessments are made, although it is generally understood that the underlying procedure is primarily that of the old corporate-excess method. Ganged as a device in a general property tax system designed to supplement loeal assessments of tangible property, the present franchise tax appears to he open to criticism, both becanse, if it suceeeds in attaining

[^46]its object, it is unjust, and beeause it does not smeceed in attaining its object.

The trend in morlern tax reform is distinctly away from the theory of the general property tax. Tangible property. or at least land and buildings, will doubtless continue to be taxed where located and without deduction for debts. In addition to such property taxation, there is rapidly being developed a system of business taxes imposed where the business aetivity is carried on, and measured by the earnings of the business or by some approximation thereto. In eonnection with its statistical study, the results of which are set forth later in this report, ${ }^{1}$ the Commission's technical staff has subjected the present franchise tax to an exhanstive test with respect to its adeqnacy as a modern business tax, and measured by this test, as will be seen from the figures there presented, it is without merit.

The taxes levied by the State Board of Erualization upon general franchises since the adoption of $\Lambda$ mendment Nmmber One, together with the ehanges in rates which have been made during this period, are set forth in Table II.

TABLE II
TAXES LEVIED ON CORPORATIONS
AND THE RATES APPLIED, BY YEARS, 1911-1928
(Source: State Board of Equalization)

| Fiscal year | Period covered | Taxes levied (in thousands of dollars) | Rates applied (percentage) |
| :---: | :---: | :---: | :---: |
| 63 | 1911-12 | 1.678 | 1.0 |
| 64 | 1912-13 | 1.631 | 1.0 |
| 65 | 1913-14 | 1.575 | 1.0 |
| 66 67 | 1914-15 | 1,762 | 1.0 |
| $\begin{aligned} & 67 \\ & 68 \end{aligned}$ | $1915-16$ $1916-17$ | 1.940 1,958 | 1.2 |
| 69 | 1917-18 | 2,104 | 1.2 |
| 70 | 1918-19 | 1.972 | 1.2 |
| 71 | 1919-20 | 2.034 | 1.2 |
| 72 | 1920-21 | 2,322 | 1.2 |
| 73 <br> 74 | 1921-22 | 3,147 3 3 | 1.6 |
| 75 | 1923-24 | 3,497 | 1.6 |
| 76 | 1924-25 | 3,932 | 1.6 |
| 77 | 1925-26 | 3,950 | 1.6 |
| 78 | $1926-27$ $1927-28$ | 4.057 4,725 ( | 1.6 |
| 80 | 1928-29 | 4.691 | 1.8 |

(a)See foot note 2 below.

It will be observed that the taxes on these franchises now yield approximately three times as much as they did in 1911. Rates have been changed on three oceasions. The last change, which occurred in 1927, coincided with the disappearance of the corporation license tax which had been invalidated by the State Supreme Court, and was insufficient to offset completely the loss of revenue resulting from this repeal. ${ }^{2}$

PLATE 3

CHART SHOWING FUNCTIONS OF DIVISION OF WATER RIGHTS

## BIENNIAL REPORT OF DIVISION OF WATER RIGHTS COVERING PERIOD SEPTEMBER 1, 1926, TO AUGUST

 31, 1928.
## CHAPTER I

Division of Water Rights Is Successor of State Water Commission.
The Division of Water Rights became the suceessor of the State Water Commission on July 29, 1921, by virtue of the enactment of Chapter 607 Statutes of 1921, which created the Department of Public Works. The Department was reorganized in 1923 under the prortsions of Chapter 286, Statutes of 1923, and again in 1927, under the provisions of Chapter 252, Statutes of 1927 . The powers and duties of the State Water Commission are now rested in the Direetor of Public Works, who functions in such matters by and through the chief of the Division of Water Rights. Reports of the office prior to 1921 were in the name of the State Water Commission, and reports since that time are in the name of the Division of Water Rights. This is, therefore, the seventh biennial report of this office, but the fourth biennial report of the Division of Water Rights. It covers the period from September 1, 1926, to August 31, 1928.

## Powers and Duties, Rules and Regulations.

In preeeding biennial reports the powers and duties of the office have been diseussed at some length. Suffice it to say here with respect thereto that the powers and duties of the office are those set forth in Chapter 586, Statutes of 1913 as amended, and that broadly speaking the Division exercises four main functions as follows:

1. Supervision of new rights to appropriate water.
2. Adjudication of existing appropriative rights to water.
3. Administration of streams-i. e., supervision over distribution of water to rightful elaimants.
4. Investigation of both surface and underground water conditions.

## Publications of the Division.

The law, under whieh the Division functions, is known as the Water Commission Aet, copies of which in pamphlet form showing amendments thereto, are available for distribution.

Rules and regulations governing the procedure in acting upon applieations to appropriate have been printed and are available in pamphlet form for distribution. So also are the rules and regulations adopted to govern the procedure in adjudicating existing rights printed in pamphlet form for distribution.

Five bulletins have heretofore been published and copy for two additional bulletins is now in the hands of the printer. The titles of these bulletins will be found on the inside of the baek cover of this report.

In this biennial report it is proposed to depart somewhat from previous practice and inelude only a brief statement of the work of the office during the past biemnium, reserving for publication in bulletin form a report of the results obtained in connection with the various investigations which have been conducted and are in progress. By this
means it is hoped to reduce somewhat the cost of the biennial report and make the data obtained by field investigations available to interested parties through bulletins, each of which can be distributed only to those interested in the partienlar smbject involved.

TABLE 1
Numerical Summary by Biennial Periods of Applications Received and Permils and Licenses Issued

|  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

## Supervision of New Rights to Appropriate Water.

Rights to appropriate water in California may now be initiated only by application to the Division of Water Rights. It is required that such an applieation state the source, amome to be appropriated, purpose, point of diversion, place of use, ete. If the application is approved, a permit is issned and if beneficial use of water is made, a license is issued in confimation of the right. Applieations are denied on acconnt of failure to supply necessary data, inability to seeure right of aceess, or becanse of lack of mappropriated water. Permits are revoked because of failme to proeeed diligently toward consummation of the project, and lieenses are revoked beeanse of abandonment. A statement concerning the law and the proeedure governing this phase of the activities of the Division will be found in Clapter III of the fifth biemnal report and in Chapter II of the sixth biemial report.

In Table 1 will be fonnd a numerical summary by biennial periods of applications received, applications elosed and permitted, permits revoked and lieensed and lieenses revoked. In Plates 4 to 9 both inelusive, there is shown graphically the rate of receipt and action upon applieations receired, second-feet applied for, acre-feet applied for, aereage proposed to be irrigated, and theoretical horsepower proposed to be developed. For those who seek to pursme the subjeet further,

PhATE I
APPLICATIONS RECEIVED AND ACTIONS SHOWN BY CUMULATIVE TOTALS

PLATE 5
APPLICATIONS RECEIVED
SHOWING RELATIVE NUMEERS FOR VARIOUS USES
Agricultural . Power . . Mining . . Municipal

reference is made to a complete analysis and tabulation of data with reference to applications filed, which may be examined in the office of the Division.

An examination of Table 1 and Plate 4 will indicate some interesting and significant facts. Prior to the year 1922 there was a constantly increasing number of pending applications. During the succeeding four years there was a reduction of more than 350 , or roughly 35 per cent in pending cases and since that time the number has remained substantially constant. The number of pending permits increased rapidly until the close of 1927 . During the following six months (January 1, 1928-June 30, 1928) there was for the first time in the history of the office a substantial decrease in the number of pending permits which resulted in there being three permits less pending on June 30, 1928, than on December 31, 1926. Uniformity may, therefore, be expected henceforth in the amount of effort required to handle these two phases of the activity of the Division in connection with supervision of rights to appropriate-i. e., the effort required to dispose of applications received and permits issued.

There is, however, and must continue to be, a constantly increasing number of licenses issued by the Division, which require a periodic check-up to ascertain whether or not they are abandoned and the correct names and addresses of beneficiaries. There will also be a continually increasing amount of effort in connection with petitions to change points of diversion or places of use.

By a more careful study of the annual progress reports of permittees, it has been found possible during the past biennium to reduce the number of wasted inspections of incomplete projects. During the years 1923 to 1926 , both inclusive, only 53 per cent of the permit inspections resulted in either revocation or license. During the course of the field season in 1927 an effort was made to increase this percentage by studying more carefully the annual progress reports and eliminating projects which were not ready for inspection. The percentage of inspections resulting in either revocation or licenses was increased to 60 in 1927 and in 1928 was still further increased to 77 per cent. This effort eliminated during the 1928 field season some 100 useless inspections which would have cost approximately $\$ 25$ each, and therefore represents a considerable saving.

Futile and abandoned projects once presented a very great obstacle to new appropriators. Some conception of the service performed by the Division in climinating this obstacle may be gained by knowledge of the fact that of each 100 applications received by the Division, 43 are denied prior to permit, 30 which receive a permit are revoked, and only 27 receive a license, thile of each 100 second-feet applied for, 85 are denied before permit, the right to $S$ is revoked after permit and before license, and the right to only 7 second-feet is confirmed by the issuance of a license, and of each 100 acre-fect applied for, 93 are denied, the right to 6.3 acre-fect is revoked after permit and before license and the right to only 0.7 acre-fect is confirmed by the issuance of license. This condition is reflected graphically in Plate 7.

During the bicnnium, \&1 learings upon a total of 176 protested applications and 59 hearings in the matter of revocation of permits and licenses have been convened in 17 different countics of the state.

PLATE 7
ACRE-FEET APPLIEO FOR AND ACTED UPON
SHOWN BY CUMULATIVE TOTALS

Lists of the more important applications received and permits issued for the various purposes, will be found as Tables 8 to 15 , inclusive, of this report.

In its action upon applications to appropriate, the Division during the past biennium lias profited both by the procedure developed through 12 years of previous experience and by the existence of a trained personnel which has undergone little change in recent years. The work is highly specialized requiring not alone technical training, but also experience in the actual handling of work of the office to secure efficient and economic performance.

## Adjudication of Existing Rights to Water.

The law and the procedure under which the Division acts in the adjudication or determination of existing rights to water, will be found set forth in some detail in earlier biemnial reports-notably Chapter III of the sixth biennial report, Chapter IV of the fifth biennial report and Chapter III of the fourth biennial report. The subject will be found explained in a pamphlet of the Division, entitled "Rules and Regulations Governing the Determination of Rights to the Use of Water." Suffice it to say here that the procedure involved is sufficient for an expeditious, economic and accurate determination of those facts with respeet to matters involved in water right controversies which are most difficult for the courts to ascertain, the findings of the Division as a result of its investigation being subject to confirmation or modification by superior court decree.

Twenty-one adjudication proceedings lave been undertaken by the Division of Water Rights and by its predecessor, the State Water Commission, either under court reference as provided in Section 24 of the Water Commission Act, or under the provisions of Sections 25 to $36 f$, thereof as summarized in Table 2. It will be noted that eight of the proceerlings have been completed, that one was abandoned because of legal complications and that 12 are still pending. Of the 10 acljudication proceedings pending on September 1, 1926, one has been completed and three new proceedings have been undertaken during the past biennium.

The eight completed proceedings have resulted in the establishment of 166 water rights, eovering a total direct flow equivalent of approximately 340 cubic feet per second, and storage to the extent of 3987 aere-feet per ammm. Of the total direct flow diversions decreed, approximately 307 cubic fect per second are for use for agrienltural purposes on approximately 13,650 acres of land, 11 cubic feet per second are for use for developing power, and two cubic feet per second are for use for mining purposes. The entire quantity of water decreed for diversion to storage is to be used for the irrigation of approximately 1900 acres, making a total area of approximately 15,550 acres of irrigated land to which water rights were decreed in the eight proceedings.

The Morrison Creek proceeding was the only one completed during the biennium. Morrison Creek is a small tributary of Smith River, in Del Norte County. This proceeding arose ont of an action instituted in the Superior Court by two lower riparian owners secking an injunction against an applieant who had received a permit from the Division of Water Rights to apropriate waters of the stream for use on monriparian lands.

PLITE $\delta$
ACREAGE TO BE IRRIGATED SHOWN BY CUMULATIVE TOTALS

PLATE!
THEORETICAL HORSEPOWER TO BE DEVELOPED SHOWN BY CUMULATIVE TOTALS

The court entered an order on March 5, 1926, referring the case to the Division of Water Rights for investigation and report as referee under the provisions of Section 24 of the Water Commission Act. Pursuant to such order a field investigation of conditions on Morrison Creek was made and a hearing in the matter was held by the Division. The report of the Division as refcree was submitted to the comrt on February 3, 1927. A decision was rendered by the court on April 5, 1927, in which it was ordered that judgment be entered in accordance with the report by the Division as referee.

In the Stanislaus River proceedings, the entry of judgment and deeree is still pending in the Superior Court.

In the Shasta River proceedings, learings were held on the contested claims, the order of determination was prepared, the order and all data collected by the Division were filed with the Superior Court of Siskiyou County, and the court hearings on the exceptions to the order were commenced on Angust 29, 1928. These latter hearings are still in progress.

In the Whitewater River proceeding's, the order of determination was prepared, the order and all data collected by the Division were filed with the comrt, and the court has set November 27, 1928, as the date for hearing any exceptions that may be filed against the order.

In the North Cow Creek proceedings a modified rotation schedule was tried ont during the 1927 season, after which the report of the Division as referee was prepared. This report and all data collected by the Division in the entire proceedings were filed with the court on March 5, 1928. The court issued an order directing water master service during the 1928 season, in accordance with the schedules contained in the report of referee, pending negotiations relative to a consent judgment, which are still in progress.

In the Oak Run Creek proceedings, a stipulation for a consent judgment was entered into by all parties to the case on March 7, 1927. The stipulation is contingent upon certain provisions being included in the North Cow Creek decree. The waters of Oak Run Creek have been apportioned during the past biennium in accordance with the provisions in the stipulation for consent judgment.

In both the Owl Creek and Soldier Creek eases, stipulations for consent judgment have been entered into by all parties, the stipulations have been filed with the court, and entry of decree is pending in each case. The waters of both streams have been apportioned during the past biennium in accordance with the stipulations for consent judgment.

In the Clover Creek case, the collection of engineering data in the field was made throughont the 1927 scason. Based upon the data collected, trial of a tentative schedule was made during the 1928 season. A report on the results of such trial is now in the course of preparation.

In the Butte Creek case, collection of engineering data in the field was made throughout the 1927 scason. The report of the Division as referee is now in the course of preparation.

Three adjudication proceedings have been initiated during the biennium ending September 1, 1928; all by court reference.

The Emerson Creek case was referred by the Superior Court of Modoc County on April 1, 1927. Collection of engineering data in the field was made throughout the 1927 season. A tentative schedule, based
upon the data eollected, was tried out during the 1928 season, a report on the results of which is now in the course of preparation.

The Los Alamos Creek ease was referred by the Superior Court of Santa Barbara County on May 9, 1927. The Division has made a preliminary fiedd investigation, based upon whieh, a form of settlement has been suggested to the attorneys in the ease. Negotiations relative to the proposed settlement are now in progress.

The Davis Creek case was referred by the Superior Court of Modoc County on Mareh 16, 1928. Colleetion of engineering data in the field was made thronghout the 1928 season. A report on the data collected is now in the course of preparation.

Applications Filed
of euch 100 applications filed 43 are cancelled, and of the 57 approved 30 are revoked and only 27 receive license.

Second-Feet Applied For
Of each 100 second-feet applied for 85 are denied (cancelled). and of the 15 second-feet allowed 8 are revoked because of failure to complete beneficial use and only 7 received license.

Acre-Feet Applied For
of each 100 acr-feet applied for 93 are dented (cancelled). and of the 7 acre-feet allowed 6.3 are re oked, berauce of failure in complete beneficlal use and onls .7 acre-foot receives a license.

ELIMINATION OF ABANDONED PROJECTS
One of the most fruitful fields of effort of the Division is the elimination of proposed projects which for one reason or another have been abandoned. Hopeless and abandoned projects once formed no little obstacle to proposed new development.

## Administration of Streams.

The ultimate objective of all water right litigation and administrative effort is delivery of water to the rightful elaimants, and Seetions 37 to $37 f$ of the Water Commission Aet make it a funetion of the Division of Water Rights to supervise the distribution of water "in aceordance with the determined rights." Upon the request of water users, the Division has also undertaken supervision over the distribution of water on streams prior to a determination of the rights by court decree. Supervision under one or the other conditions has been exercised during the past biennium on 14 different strean systems.

On Hat Creek in Shasta County, the water master service inaugurated in 1924 was continued by request of the water users during the 1927 and 1928 irrigation seasons, in aeeordance with the deeree entered May 14, 1924.

On Burney Creek in Shasta Comnty, water master serviee was also continued during the 1927 and 1928 irrigation seasons by request of the water users and in accordance with the decree entered January 30, 1926.
TABLE 2
Summary of Adjudication Proceedings

There has been considerable improvement during the bieminm in the control works and measuring devices on these two streams, whieh has made possible their administ ration by a single agent.

Diversions from North Cow Creek in Shasta County were regulated by water master during the 1927 season in aceordance with an agreement entered into by all parties involved in the court reference proceeding eovering this stream. The diversions were regulated during the 1928 season, pursmant to a eourt order direeting water master service in aceordance with the schedule of water allotments enntained in the report by the Division as referee.

The water master on North Cow Creek las also regulated the diversions from Oak Rmm (reek and Clover ('reek. In order to increase the efficieney of the distribution of water, permanent measuring devices were installed during 1928 on about two-thirds of the ditehes in the North C'ow Creek stream system.

Diversions from Oak Run Creek in Shasta Count were reculated by water master during the 1927 and 192 seasons in accordance with a stipnlation for consent juldrment in the court reference proceedings, which stipulation is contingent upon the inclusion of eertain provisions in the degree which will terminate the pending litiation on the North Cow Creek stream system. The distribution of water has operated very smonthly on this stream during the past biemium.

Diversions from Clover Creek in Shasta Comity were recrulated by water master during the 1027 and 1928 seasons. At the begimning of the fiedd investigation in the adjudication proceedings covering this stream, all water nsers agteed that diversions might be regulated during the 1927 season by the enqineer in charge of the investigation, in order to facilitate a study of the water requirements of the various lands. In making such regulations, all rights were to be treated as of equal priority, and if the water supply became inadecquate for all irrigated lands, it was to be prorated among the users in proportion to their irrigated areas.

All diversions from Clower Creck were regulated during the 1927 season in accordance with the arreement, and careful observation was made of the results of the use of water on eacll ranch. The water requirements of the rarions users were thus determined, and based thereon, an agreement was entered into by all parties providing a tentative schedule to be tried out during the 1928 season under water master supervision. All water nsers apparently were pleased with the smoothness of the operation of the tentative schedule.

Diversions from Owl Creek and Soldier Creek in Modloc County were regulated by the Division of Water Rishts during the 1927 and 1928 seasons in accordance with the rights defined in stipulations for consent judgment in the litigations pendiner on those streams. The water users on both streams have adreed that the Division of Wrater Rights may distribute the waters in accordance with the allotments and priorities defined in the stipulations pending entry of judgments and deerees on the two cases. The observance of priorities on these two streams during the past biemnim has resulted in a high degree of satisfaction amongr the water users with respect to water master service.

The water master serviee on Cedar Creek in Modoc County, which was commenced in 1926 by agrement among the water users, was con-3-6420s
timued during the 1927 and 1928 seasons under similar agreements. These agreements have provided for the enforcement, by water master service, of two decrees, one of which defines the rights to the natural flow of Cedar Creek, and the other defines the rights to the foreign water conveyed into the Cedar Creek watershed from Toms Creek.

Diversions from Emerson Creek in Modoc County were regulated by water master during the 1927 and 1928 seasons. At the beginning of the field investigation in the adjudication proceedings covering this stream, all water users agreed that diversions might be regulated during the 1927 season by the engineer in charge of the investigation, in order to facilitate a study of the water requirements of the various lands. In making such regulations, all rights were to be treated as of equal priority, and when the water supply became inadequate for all irrigated lands, it was to be prorated among the users in proportion to their irrigated areas.

All diversions from Emerson Creek were regulated during the 1927 season in accordance with the agreement, and careful observation was made of the results of the use of water on each ranch. Information was also obtained on the four classes of priorities of rights that apparently had been observed on this stream in recent years. Based upon the information obtained, an agreement was entered into by all parties providing a schedule of allotments and priorities to be tried out during the 1928 season under water master supervision. All water users apparently were pleased with the smoothness of the operation of the tentative schedule.

Due to the installation of suitable control works in the ditches on Soldier, Owl and Cedar crecks and the consequent saving of time for the water master in regulation of diversions, one man has been able to serve as water master on Emerson Creek, in addition to these three streams, during the past bieunium.

Little Shasta River was administered by water master during the 1928 season. This stream is involved in the adjudication proceedings on Shasta River and its tributaries. All water users on Little Shasta River have entered into a stipulation for consent judgment in which the rights on this stream have been treated as an independent unit. An agreement was entered into by all water users providing for water master service during the 1928 season in accordance with the rights defined in the stipulation for a consent judgment. The water users on Little Shasta River appear very well satisfied with the water master service in 1928.

Diversions from the West Fork of Carson River were regulated by water master during the biennium under agrcements among the water users, providing for distribution on the basis of schedules which were slight modifications of the adjudication decree entered in 1921. This river was administered by water master in 1922 and 1923, but in 1924 two riparian owners brought suit in the Superior Court of Alpine County, sceking to enjoin the Division of Water Rights from regulating the flow of the river in any manner that might interfere with the diversions into their ditches. This suit resulted in a suspension of water master service on the West Fork of Carson River from 1924 to 1926 , inclusive.

State supervision, in a measure, has also been exereised during the past biennium, over the diversions from Kings River and Sacramento River as is briefly deseribed elsewhere in this report.

A summary of the stream systems administered during the past biemminn is shown in the following table:

TABLE 3
Summary of Stream Systems Administered During Elennlum

| Name of stream systen | Location | Authority | Irrigated acreage involved |
| :---: | :---: | :---: | :---: |
| Ilat Creek. | Shasta County. | Court decree. | 2,500 |

## Investigations of Surface and Underground Water Conditions.

Investigation of surface and underground water conditions is becoming an inereasingly inportant phase of the activities of the Division. There is a growing recognition of the fact that a solution of water problems by litigation is tedious, diftientt, expensive and frequently unsatisfactory. If the solution involves merely an application of the prineiples of law to the problem in hand, then the eourt is well equipped to hantle the case. But in so far as intricate questions of water supply, ditch eapacities, erop acreages, and duty of water are involved, the court finds itself handicapped by reason of the fact that in connection with these subjeets whieh are highly teehnical, it must depend for its information upon the testimony of opposing experts, each concerned with the proof of his own client's case, rather than a complete presentation of the whole truth. It is in suely a situation that a survey or investigation by a disinterested and impartial publie office, employing experts trained in this partienlar work, ean be of inestimable assistanee to the court.

The Lindsay-Strathmore ease of Tulare County, which has oeeupied the attention of the courts intermittently now for more than 15 years, at an estimated cost of more than one-half million dollars, and the suit now in progress on Santa Margarita River in San Diego Connty, at an estimated cost of approximately one million dollars, are two eases which illustrate well the diffienlties eneomentered by the eourts in aseertaining the physieal facts upon which to base a just decision in matters of this kind. These are but two eases out of many which conld be eited. There ean be but one answer to questions of water smpply, diteh eapaeities, acreages, and duty of water, and this answer
is found better by investigation in the field than on the witness stand. And when that answer is found and presented to the court, it will not be a tedions or difficult matter for the court to apply those principles of law necessary for a complete solution of the problem as a whole.

Preceding biennial reports have noticed the varions investigations undertaken by the office prior to November 1, 1926. The Division had under way on that date an investigation on San Gabriel River, an investigation of groundwater conditions in the southern San Joaquin Valley, and the work of the Sacramento-San Joaquin Water Supervisor which embraced a genesal investigation of stream flow, return flow, diversions, duty of water, and salinity encroachments in the Sacramento Valley, the lower San Joaquin Valley and the Sacramento-San Joaquin Delta. The Division was at that time also working on an agreement with respect to the use of water from San Jacinto River and tributaries, based upon an investigation previously terminated.

Since November 1, 1926, the Division has undertaken an investigation of water problems in Ventura County and an investigation of water prohlems on upper Pit River in Modoc and Lassen counties. The Division now has under consideration with other parties, the inauguration of a system of smow survers which will make possible a more accurate ammal forecast of run-offi in California streams.

It is expected that the information and data obtained in these several investigations will later be made the subject of special bulletins covering the rarions subjects separately. At this time it is desired merely to set down generally the progress of the varions investigations.

## The San Gabriel Investigation.

This investigation was inangurated July 1, 1923. It was directed toward aseertaining the facts with respect to run-off, percolation, crround-water, and use of water in San Gabriel Valley in order that the Division might take intelligent ant appropriate action upon a large group of applications to appropriate water from San Gabriel River and tributary streams. The investigation is just now being concluded, the foree having been withdrawn from the field on September 1, 1928, and the text of the bulletins which are to be published eovering the work now being practically eompleted and largely in the hands of the printer.

Bulletin 5, embracing a report of the data collected prior to that time, was published september 30, 1926. The two additional bulletins noter above and which will embrace a complete report of all later information and data gathered in the course of the investigation, will be Bulletin 6 and Bulletin 7 . The former will be largely tables and the latter largely text, including analyses and conclusions.

This investigation has to date cost approximately $\$ 108,000$ of which $\$ 37,350$ was eontributed locally and the remainder was derived from funds appropriated by the State of California. The primary purpose of the investigation, so far as the Division itself is concermed, was served When the Division rendered its decision on July 5,1928 , in the matter of applications $3228,3329,3330,3331,3741,4014,4049,4447,4448,4534$, $4582,4590,4604,4260,5290$ and 5699 , whieh decision will be disenssed elsewhere in this report under the heading "San Gabriel Decision."

Sacramento-San Joaquin Water Supervisor Work.
Biennial reports of 1924 and 1926 and Bulletins 3 and $t$ of the Division, have dealt at some length with the history of the office of the Sacramento-san doaynin Water Supervisor, the causes leading up to the establishment of that offiee, and the pmposes which it is sought to serve thereby:

The office was ereated in the spring of $192-2$. It functions muler the direction of the Division of Water Rights and in cooperation with a so-ealled " l'ermanent Committee of the Sacramento-san Joaquin River Problems Conference," which is representative of the larger interests or groups of interests involved. The office is engaged in the collection of data with respect to stream thow, diversions, and return How on the Saeramento River and tributaries and in the upper San Joagnin Valley from Redding on the north to Mereed on the sonth. It is investigating the relation of salinity encroachments in the Sacra-mento-San Joaquin Delta to stream flow entering the delta, and in cooperation with the United States Department of Agrieulture, Division of Agricultural Engineering, it is carrying on an intensive duty of water study in the delta.

The work has a three-fold object : (1) to obtain information and data necessary for appropriate action by the Division upon the large number of applications to appropriate from those sources, (2) to aecomplish conservation measures in times of extreme low flow when there must either be retrenchment in use by some claimants or clamage to other claimants by reason of lack of water, and (3) to atlord the basie information which will assist in a solution of the differences between delta and upstrean water users. which differences have for more than eight years threatened disastrous litigation. It is hoped that ultimately out of this investigational work will eome a schednle of diversions which, as on Kings River, will be aceepted by the water nsers by eommon eomsent and finally adjust the diffrenees between all users.

During the first rear of its operation the office of sacramento-san Joaquin Water supervisor was supported almost entirely by voluntary local subseription. Since that time the work has heen earried on under state appropriation and is eosting approximately de:3)(00 per year.

Some conception of the importance of this work as it affects the solution of the difficulties between delta and upstream water users must have been in the mind of Superior Judere D. M. Yomer of San Joatuin County recently when, in mbing upon a motion of defendants in the famons IIolland Land Company case, which involves some . 000 defendants on the upper Sacramento and san Joaquin rivers, he urged the litigrants to seek a solution throngh emonecring and legislative processes su that development combl proced without the expense and delay of further litigation. The immensity of the problem which here eonfronts the court is indicated by the fact that there is involved an irrigation supply for 90,000 ateres of riep and 80.000 acres of gemeral erops on the Sacramento River itself, 50,000 acres of rice and 40,000 acres of general crops on its tributaries, 425,000 acres of general erops in the exceptionally fertile delta section, and 55,000 acres of general crops in the delta uplands, and there is involved also the matter of navigation on Saeramento River to a point 125 miles above Sacramento.

The federal govermment has intleated that a flow of 3.)00 second-feet is meessary to properly care for liefoht tramportation by water above

Sacramento and the investigations of the Division lead to the conclusion that an inflow of some 4000 second-feet into the delta is required to protect the irrigation supply of that area against salinity encroachment. A very much larger inflow is, of course, necessary to protect the large industrial water frontage of the Suisun Bay region.

With an almost mbroken succession of years of subnormal strean flow since 1916, the full satisfaction of these water requirements has heen impossible and in 1920,1924 and 1926 , but particularly in 1924 , the situation was acute. This will be the more vividly apparent by reference to Table 4, which indicates the amount of stream flow at Red Bluff, the irrigation draft Redding to Sacramento, and the segregations of the draft under the rarions rights clainued. Compare, in turn, these data with the faets that the ultimate use, Sacramento to Redding, of appropriative rights under permits already granted by the Division, will probably amount to 4000 second-feet and that there is a total maximum use to date of 2000 second-feet under old appropriative and riparian claims on the same stretch of river.

Fortunately use under permits issued by the Division has not yet reached full development, as will be indicated by reference to column 6 of Table 4, and fortunately also, due to rotation and idle lands, full use under all riparian ant old appropriative rights as indicated in columns 5 and 7 of Table 4 does not oecur simultaneously. Another factor which is vastly important in relieving the situation is the large percentage of return flow from diversions made for irrigation, as will be indicated by reference to Table 5.

Because of the general interest with which the study of the delta salinity problem has been followed, there is included in this report as Plate 11 a graphical representation of the data obtained for the year 1927 with respect to relation of stream flow to advance and retreat of salinity. A similar representation for previous years will be found in the earlier biennial reports. There is included also Table 6, showing the resultant data obtained from a study of duty of water on sedimentary soils in the delta.

During the past two years the work of the Sacramento-San Joaquin supervisor has contimed along lines very similar to those of earlier rears. With the more abundant water supply of 1927 and 1928 no critical situation has arisen among the varions claimants and the conservation phase of the work has been less predominant. There is published annually a mimeographed report in limited number embodying such information and data as have been made available through the operation of the office. It is hoped shortly to publish a bulletin in printed form embodying the more important data gathered in the course of the investigation since Bulletin 4 was issucd. With the acquiring each season of a more intimate knowledge of the water supervisor procedure on the part of the water users, and with the addition to the record each year of the valuable facts as to the uses of water, stream flow, etc., the office of the water supervisor becomes more and more prepared and ready to initiate upon short notice, in case of water shortage, some schedule or plan to be mutually agreed upon by the water users for the most equitable and efficient administration of the water.

Amount of Water Used on 23,500 Acres of Sedimentary Land in the Sacramento-San Joaquin Defta
(Reclamation District 999)

* The two columns for eacb of the years 1924 and 1925 are necessary because the figures for the amount of water almitted by surface inlets involve an item coneerning whose valuc there is uncertainty through a range equivalent to the diference between the maximum and minimum figures above noted.
${ }^{* *}$ Quantity of secpage has not been finally determined. Value given is provisional.

## Lower San Joaquin Valley Groundwater Investigation.

In 1925 the Division of Water Rights, in cooperation with the Division of Engineering and hrigation, undertook an investigation of the groundwater resources of the southern half of the San Joaquin Valley extending from the sonthern end to and including the Kings River area. The field work was placed in charge of Charles L. Kaupke, water master on Kings River, and early in 1927 Bulletin 11 of the Division of Engineering and Inrigation was published containing all information and data gathered at that time. The investigation was continued in cooperation until October, 1927, when the Division of Water Rights was obliged to withdraw becanse of lack of funds, after the expentiture of a total of $\$ 3,750$. The work is being continued under direction of the Division of Engineering and Irrigation.

## San Jacinto Investigation.

It was necessary in 1921 , because of a momber of protested applieations to appropriate from the san Jacinto River system in western Riverside Comnty, to modertake an investigation of run-off', pereolation, underground water and use of water on that stream system. The work was mulertaken in cooperation with the Division of Engineering and Irrigation and the five main local interested parties-Lake llemet Water Company, Fruitvale Jutnal Water Company, l'erris Valley Chamber of Commerce, Elsinore Valley Water Vsers' Association, and 'Temescal Water Company. A total of $\$ 3,000$ was subscriber for the investigation, which was terminated prior to the period of this report, and an aceount of which will be fonmel in the preceling two biennial reports. A typewritten report of the information and data obtained was distributed among the interested parties and an effort arose to bring about an allocation of the existing rights. A statement of claims of existing water rights was filed by each of the interested parties and the Division was called upon to prepare a schednle. A tentative schednle was accordingly prepared and was smbmitted to the water users on Angust $2.5,1927$. There have been mmerons conferences since that time looking toward an adjustment of the matter by stipulation and the matter is progressing foward a solution, it is hopeel, withont litigation.

## Ventura County Investigation.

In August, 1927, an investigation of the water problems of Ventura Comenty was undertaken. This is being carried on in eooperation with Ventura County and proposes an anmal expenditure of $\$ 15,000$ per year over a period of three years, one-half to be contributed by the county and one-half by the state. The investigation has as its object a determination of rainfall thromenout the area and the stream flow on Pirı C'reek, Sespe C'reek, Santa Panla Creek, Mitilija Creek, San Antonio Creek, Coyote Creek and Santa Clara River near the VenturaLos Angeles county line, and the location of percolation areas favorable to spreading water for moderground storage, a determination of ground water levels in the Santa Clara Valley area and on Oxnard Plain, a determination of the irrigated and irrigable lands of the comty, and a determination of the cluty of water.

As in the case of most investigations undertaken by the Division, the primary purpose of this investigation was to obtain information and clata refuired to act intelligently upon pencling applications. Here we have certain interests proposing storage for power purposes in the upper reaches of the stream (Sespe and Pirn creeks), and opposition thereto by irrigation interests on the ralley floor below, and we have conflieting interests among the proponents of irrigation enterprises on the valley Hoor (Moorpark-Conejo and Ojai Irrigation districts).

In order to improve the contact between loeal interests and the Division, a so-ealled "l'ermanent Committee" of 10 local men has been appointed and are consalted from time to time, either individtally or in committee meetings, with respeet to the varions phases of the work.

In August, 192s, a progress report of the work was gotten out covering the period August 20, 1927, to July 31,1928 . This report was mimeographed and only a limited number of copies prepared, sufficient for the parties direetly concermed. It is expected to publish such a $4-64208$
progress report ammally during the course of the investigation and to print a concluding report of the more important data in bulletin form.

## Pit River Investigation.

In September, 1928, an investigation was undertaken to determine annual run-off of the upper Pit River system, the extent of present uses of water therefrom, and the availability of water for further appropriation which will be in harmony with the proposed general plan of coordinated development of the water resources of the state.

The movement for the work originated among local interests and funds have been provided by the two counties involved in the upper Pit basin. Contracts have been prepared and are now submitted to the boards of stupervisors of Modoe Comnty and Lassen County, under the provisions of which the former will contribute $\$ 3,300 \mathrm{per}$ year and the latter $\$ 1,650$ per year over a period of three years. The Division proposes to contribute certain moneys during the first year and if funds for the purpose are appropriated. perhaps an additional smo in the third year.

An office has already been established at Alturas and the work started in order that the run-off of the 1928-1929 season may be measured. The study will embrace all that portion of the Pit River system lying in Modor and Lassen counties.

## Progress on Kings River.

The Kings River work has been continned about as deseribed in Chapter VI of the last biennial report. The schedule agreement entered into on September 27, 1921, and the river schedule prepared by the Division of Water Rights both remain in full force and effect.

During the year 1927, howerer, there was organized the Kings River Water Association, embracing 940,000 acres and consisting of the following units: Alta Irrigation District, The Cuthbert Burrel Company, Consolidated Irrigation Distriet, Corcoran Irrigation District, Crescent Canal Company, Fresno Irrigation District, James Irrigation District, Lagma Irrigation District, Lemoore Canal and Irrigation Company, Last Chance Water Ditch Company, Riverdale Irrigation District, Liberty Mill Race Ditch Company, Reed Ditch Company, Liberty Canal Company, Peoples Ditch Company, Stinson Canal and Irrigation Company, Tranquillity Irrigation District, John Heinlen Company and Fonthill Irrigation District. The members of this association entered into two agreements as follows:

1. "Water Right Indenture," setting forth the rights of the parties to the waters of Kings River. This indenture contains a schedule for each month in the year. For the principal irrigating months, April, May, June and July, the schedules are almost identieal with the Dirision of Water Rights' schedule prepared in 1921.
2. "Administrative Agreement," providing the necessary machinery for earrying into exceution the provisions of the schedule agreement. Incidentally a contact is maintaned with the Division of Water Rights by providing that the water master shall be nominated by the chief of the Division.

Charles L. Kanpke was duly nominated and elected water master for the Kings River Water Association, and on petition of the San

Joaquin Light and Power Corporation and the King River Water Association to the Division of Water Rights, he was also appointed water master to supervise the uperation of the balch power plant in accordance with the terms of the permits issued by the Division of Water Rights to the San Joarpuin Lisht and l'ower Corporation.

Thus, after 50 years of litigation, involving more than 200 suits with deeisions which were eonflieting and impossible of enforcement. the water users in 1917 entered into a voluntary agreement requesting this oftice to measure and reeord the actual diversions of water. There followed in $19: 2$ a request from thr water uners for the Division to draw up a tentative sehellnle of diversions for the year 1922, which all agreed to accept, and which was followed until, as noted above, there was organized duriner the past year the Kings River Water Asonciation, which will operate under an administrative agreement with respect to the distribution of water by a water master nominated by the Division of Water Rights. Thus, through their own efforts aided by the basic data gathered hy the Division and suggestions hy the Division, the water nsers of Kings River have rearhed an amieahle atreement.

Venturi Flume Adopted as Standard Measuring Device.
One of the essentials to the solution of each water right problem is an accurate determination of the amount of flow in the source and the amounts diverted. It is not always easy to make such a determination without considerable effort, expense, and loss of head. During the course of the past biemuium, the Dirision became interested in and made some tests of a measuring device developed by R. L. Parshall, irrigation engineer of the U. S. Department of Agriculture, in cooperation with the Colorado Experiment Station of Colorado Agricultural College. This device is the so-ealled "Improved Tenturi Flume." The results of the experiments conducted by the Dirision of Wrater Rights. with the assistance of Professor. S. II. Beckett. associate profesor of
irrigation investigations and practice, Inicersity of California al Davis. were rery satisfactory. It appeared that the improved Venturi flume. when moperly eonstructed, conld be depended upon for an acenrate determination of rate of flow of water at low cost and with very little loss of head. Aecordingly the Division approved this as a standard measmring device and published general plans, specifications and bills ol material, and tables of discharge.

## Cooperation with Federal Departments.

In previons liennial reports the Division has noticed at some length the valuable cooperation of varions federal departments-notably the Forest Service, Power C'ommission, War Department. Department of Agriculture and Geologieal Survey. Except in the case of the last named two offices, there lias been no financial arrangement with respect to this eooperation.

Previons to July 1,1927 , the smm of $\$ 10,000$ was contributed anmally by the State of Califorma through the Division of Water Rights to the work of the Water Resomres Branch of the Geological Surver and an additional sum was contributed throngh the office of the Division of Engineering and Irrigation. Since that date the whole financial cooperation of the state in this work is throngh the latter office, but the Genlogical surver contimes to cooperate with the Division of Water Rights in maintaining stream flow stations in which the Division is especially interested-particularly the low flow stations within the area covered by the work of the Sacramento-Nan Joaquin water supervisor. In connection with the work of the water supervisor's office, the Division also enntributes $\$ 5,000$ per year toward an investigation of duty of water in the Sacramento-Nan Joarpuin Delta condueted by the Department of I gricultme.

It is desired to acknowledge a continuation of the previous cordial and valuable conperation of all these federal offices during the past hienuinm.

## Applications Filed by Department of Finance.

Chapter 246 , Statutes 1927 , directs and anthorizes the Department of Finance pursmant to the provisions of the Water Commission Act and the mese and recrulations of the Division of Whater Rights to "fike an application or applications for any water or the nse thereof which, in the judgment of the State Department of Finance, is or may be required in the development ant completion of the whole or any part of a general or coordinated plan looking toward the development, utilization and conscration of the water resomres of the state."

Pursmant to the provisions of this enactment the Department of Finance called upon the Division to assist in the preparation of a group of applications which would serve the purpose of the general or coordinated plan which was under consideration for the full conservation. development and utilization of the waters of the state. Sneh a group of applications, inclucling 16 for agricultural purposes and 9 for power purposes, was prepared and filed by the Department of Finance on July 30. 1927, involving the waters of Trinity River and tributaries, Pit River and trihutaries, Sacramento River, Feather River, Yuba River. Hear River, American River and tributaries, Cosumnes River
and tributaries, Mokelumme River and tributaries, Calaveras River, Stanislans River amd tributaries, San Joarmin River, Kingrs River, and Kepon River.

## Los Angeles Office.

Of the 60:3 applications received prior to september 1, 192s. thepe were 1810, or 30 per eent, l'mom commties maturally tributory to Los Angeles. In the other phases of the Division's activities there is an "epual proportion which may be "onsidered as "Sonth of the 'lehachapi." This fact has caused an insistent demand for recognition on the part of the Division by maintaining some sort of braneh offiee in hos Angeles which wonld make available the literature of the Division and information relative to matters pernding before it as well as general information with respecet to water problems.

The Division therefore maintains a branch offee at 1025 Associated Realty Buildimg, Los Angeles, which acts as a headguarters for members of the staff of the Division when in southern (ablifornia and where the literature and blanks of the Division may be obtaned. This office is maintained jointly with the division of Arehitecture and the division of Engineering and Imigation of the Department of Publie Works. Duriug the course of the San Gabriel investiration it was the practice for the engineer in charge of that work to spemel one day each week in the Los Angeles office. Since the San Gabriel investimation was closed there has been no regnlar attendant thoronghly reesed in the work of the Division of Water Rights, but it is practical for those who can not obtain the desired information from the regular attendant to meet by appointment a member ol the staff of the Division ol Water Rights and thas obtain the contact with the main office which was refured.

## Legal Department.

A conrect solntion by the Division of legal unestions involved in its arministrative functioning is prerequisite to the valid and proper performance of its duties. The legal department therefore ascertains and applies the law as cletermined by the comrts and gives opinions in aeeordance with its interpretation of the law. While jurdicial power in the constitutional sense is not rested in the livision of Water Rights, nevertheless the Division is frequently ealled upon to make decisions affecting property rights in water which derisions, though nuly determinative of administrative action which is to follow, nevertheless embrace ruestions of law and of faet judicially determinable only hy the courts.

Three illastrations will suffiee to make it apparent that the Division must flecede guestions of law and of lact although it dors not possess that fimatite of derision which distingmishes the judicial power reserverl unto the comrts. The Water Commission Aet provides that there must be mappropriated water available to sipply the applieant for a permit to appropriate and makes the existence of such unappropriated water a prereguisite fact to the issmance of a permit by the Division of Wrater Rights (Section 1d). Furthermore, the act in Seetion 11 defines water open to appropriation as that which has never been appropriated, or that which having heen claimed has not heen or is not in process of being diligently put to use or which has veased
to be used, or which is not being used on riparian lands or is not reasonably needed for useful and beneficial purposes upon riparian lands, and raises a conclusive presumption (with certain exceptions) that waters not used by riparian owners for ten consecutive years since the passage of the act are not needed by them and are therefore open to appropriation. It is thens manifest that an application involves the legal rights of others and that the Division can not issue a permit to appropriate withont determining to a greater or lesser extent what the legal rights of others are. what the supply arailable is and what balance, if any, there may be open to appropriation. Necessarily such determinations especially in those cases where protestants appear and claim threatened interference with their rested rights often involve intricate questions of law as well as of fact.

As a serond illustration referenee is made to Sections 25 to 36 f of the water commission act wherein all existing appropriative rights in and to the waters of a strean system are preliminarily determined by the Division in its order of cetermination which when made defines and establishes all the appropriative rights and is in form and substance a julgment and decree laeking only in anthoritativeness the sanction of a comrt of law. Cltimately the court in which this order of determination is filed enters its judgment and decree after hearing any exceptions which may be made to the order filed by the Division. Thus the Division determines water rights but its determination is not anthoritative cxeept as adopted by action of a court of law thereafter taken.

As a third illustration Section 24 is referred to and therein it is provided that water suits may be transferred to the Division of Water Rights as referee.

A legal department is also necessary to interpret and construe the application of the Water Commission Act and of such other statutory provisions as may he pertinent to specific problems, to represent the Division in cont as defendant in cases to which it is made a party and as comicus curiue in such cases as may be of such general importance relative to water as to justify a presentation of views by the Division, to advise as to rarious matters of poliey and procedure which arise in the comse of daily rontine, and to participate in the preparation of contracts relative to conperative investigations as provided for in section $10 a$.

In enmmeration of the specific rulings made, opinions reudered, and other activities undertaken by the legal department during the biennium under consideration would be interesting, but important as they may have bem, it is not deemed appropriate to the seope of this report to more than recount two deeisions by the Division involving legal questions of outstanding importance. Howerer. in Appendix 1 . page th. of this report. important lecal rulings made in acting upon applications to appropriate and court proceedings participated in by the division during the past biemimm, are summarized or tabulated together with a digest of previons and recent Supreme and Appellate Court decisions citing and construing the water commission act.

The status of stored water released into the stream and abandoned was determined in the matter of application of the Waterford Irrigation District to appropriate waters of Tunhme River stored, used,
and released back to the river by San Francisro. In the ease presented by this applieation, the eity of San Francisen stored as an appropriator waters which had therctofore wasted into the ocean during seasons of high flow, released this water from storage during seasons of low flow, used it for power development, and then returned it to the stream without further use for it. This released storage angmenting the stream during a period when it coukd be used by lower and prior direct flow appropriators in the irrigation scason, was claimed by them. However the Waterford Irrigation District filed an application to appropriate 100 second-feet of this released storage amd was granted a permit to do so as against prior direct flow appropriators.

The Division held that such reldased storage came within the language of Section 17 of the water commission aet wherein it is provided that a permit may be secured for "water which having been appropriated or used flows back into a stream." It was further held by the Division that this water is not within the intent and scope of prior direct flow appropriators, inasmuch as it could be made available only by storage works not contemplated in their prior appropriations, that in its natural regime of flow it would have wasted into the ocean inasmuch as it is not at that time needed by prior appropriators, and that it is no more a part of the natural late irrigation season flow than is water added from a different watershed. Such released storage was held to be foreign in time or season just as other water may be foreign in source, and was held not to inhere to prior appropriators in the order of their respective priorities by analogy. E. Clemens Horst vis. New Blue Point Min. Co., 177 Cal. 631 and eases which hold that appropriations hy season are as distinct as appropriations from different somres of supply were considered to be especially in point by the Division.

Protection to the underground supply was held to be the governing consideration in the matter of varions applications to appropriate by storing and diverting the surface flows of San Gabriel River. The physical situation presented was that of a river debouching from a monntain watershed out of a narow canyon into a broad valley or hasin, through which the river flowed on the surface during a portion of the year and out of which the river emptied through a narrow pass. The applicants desired to store in the momentains and divert ahove the canyon mouth, to which pumpers from the basin belnw objected. These pumpers as overlying owners of a basin partly supplied by percolation from the river objected to any diversions from the strean above as endangering their supply.

In $q$ ranting permits to impomel in the canyon and divert therefrom the Division of Water Rights imposed ennditions designed to safeguard the supply to the pmopers in the valley below and to insure as great a percolation into the valley gravels as had theretofore oceured from the river.

The Division held that since an overlyiner pumper from an undergroumd basin has not the arbitrary right to enjoin a division out of the valley gravels to another waterished, it seems to follow that neither has such an owner an arbitrary riyht to enjoin diver'sion from a stream which flows into the valley. Hence it was held that protection to the pumper's supply was the governing consideration and after a
very intensive investigation over a period of years, the Division applied its knowledge of the facts found so as to define the quantities which might be taken and the conditions as to taking same which would afford protection to supply. In this case, however, the Division did not find it necessary to approve a taking of more water than that which would not have percolated. In other words the permits have been for that water which would not have pereolated and judgment has been reserved as to what quantity, if any, might be appropriated ef that whieh would pereolate. It was considered that water which percolates is open to appropriation providing such a taking does not deplete the supply necessary for the overlying lands in the valley.

The Division of Water Rights was not in the position in whieh the Supreme Court found itself when the question of supplying an equivalent by artificial methods was presented in Miller vs. Bay Cities Water Co. ( 157 Cal. 256 ) wherein the appropriation was enjoined but to the eontrary that very question was presented before the Division by the applicants and placed in issne before it as it might have been placed before the trial eourt in that case. The intensive investigation conducted by the Division had for one of its objects the ascertaimment of whether and, if so, how flood waters might be withheld and an equivalent to existing percolation assured by artificial methods.

It has been the decision of the Division in this ease that by the conditions imposed, great quantities of flood water may be salvaged for beneficial use without lessening the total quantities which would percolate indergromed were no salvage of floods made.

## Adjudication Procedure Upheld.

A ease involving the eonstitutionality of the adjudieation procedure of the Water Commission Aet was decided affirmatively by the Third District Court of Appeal. This is the most important deeision yet handed down concerning provisions of the Act.

In Bray vs. Superiar Court. 56 (al. App. Dec. 676, 955, 268 Pae. 374 , the petitioner for the writ of prohibition sought to arrest procredings instituted in the superior eourt of Siskiyou County by the filing of an order of determination therein by the Division of Water Rights. Proceerling under sections 25 to $36 f$ of the Water Commission Act the Division of Water Rights conducted a survey of Shasta River and filed an order setting forth the various water rights as fonnd by it. Upon the gromed that said procedure was meonstitutional, petitioner sought to prevent the superior eourt from proceeding to hear and determine the water rights of the parties involved. This the Third District Com't of Appeal refnsed to do, upholding the adjudieation provisions of the Water Commission Act. An application for hearing before the supreme Court was denied.

The opinion of Justice Plmmmer in this case supports the validity of a very important duty conferred upon the Division of Water Rights and as shown in his able opinion, the decisions of many other states are in accord with the constitutionality of such a procedure.

## Section 1b of Act Unconstitutional.

This section was intended to permit action asking review by the court of order's of the Division of Water Rights. It was adopted in 1923
as an amendment and was Resigned to give dissatisfied elaimants or protestants hefore the division more rady aseess to the eont. It was of no importance in the procedure of the division.

In Mojave River Irvigation District I's. Superior (fourt, 74 ('al., Dee. 711,262 late $i=4$, the supreme ('onrt hela section 16 of the Water Commission Aet meonstitutional. Invoking the remedy which the legislature, by amendment in 192?3, attempted to confer upon a dissatisfied applieant or protestant before the Commission, in the matter of an application for a permit to appropriate, Dix Van lyke and others, whon were protestants against an application filed by the Mojave River. Irrigation bistrict, hronght action in the superior court of San Bernardino C'onnty. By this action, muler section 16 Van Jyke songht a judement of the superoir eonet relative to whether a permit shond issue to the irrigation district. Thereupon the district sought and seened a writ of prohibition from the appellate court to arrest this suit by Yin Drke (5:3 ('al. גpp. Dec. 70, 256 Pac. 469) and after hearing granted, the supreme Court also granted a writ of prohibition.

## Financial Statement.

As Table $T$ there is submitted a statement showing the income and expenditures of the Division of Water Rights during the biennium

TABLE 7
Financial Statement Showing Income and Expenditures of the Division of Water Rights for the Seventy-eighth and Seventy-ninth Fiscal Years

|  | Balanee. <br> June 30, 1926 | Additional appropriations | Aetual expenditures | Balanee. Jume 30, 1928 |

| Fees collected and credited to General state Fund: July 1, 1926. to June 30, 1927 |  |  |  | \$27.73 76 |
| July 1, 1927, to Jume 30, 1928. | . | - -- |  | 12.33434 |
| Total July 1, 1926 to , lune 30, 1928. |  |  |  | \$40,108 10 |

July 1, 1926, to June 30, 1925. A segregation of the funds is made as to appropriative and contributive, the latter being entirely supplied by outside interests.

Only actual expenditures up to Jume 30, 1928, are included, no allowance being made for incumbrances as of that date paid subsequent thereto.

Fees amounting to $\$ 40,108.10$ were collected and transmitted to the State Controller for deposit in the State Treasury to the credit of the general fund of the state, as provided by law. These fees include those received for filing applications, those received in connection with the issuance of permits, and those received in connection with miscellaneous charges, such as for copring and certifying records. The main portion, however, is made up of application and permit fees, which are collected on a sliding scale basis as set forth in the Water Commission Act. The amount thus received in fees during cach of the last eleven rear's is as follows:
1917-1918 ..... $\$ 4,15773$
1918-1919 ..... 3,999 55
1919-1920 ..... 6,769 76
1920-1921 ..... 16,66070
1921-1929 ..... 17,362 09
192ำ-1923 ..... 18,311 81
1923-1924 ..... 16,15091
1924-1925 ..... 33,287 97
1925-19:6 ..... 25,471 79
1926-1927 ..... 27,773 76
1927-1928 ..... 12,334 34

## CHAPTER II

## DEVELOPMENTS IN LAW AND THOUGHT AFFECTING CALIFORNIA WATER LAW

## The Herminghaus Decision.

An important Supreme Court decision rendered during the past bienminm should be here noted, although it does not directly relate to the activities of the Jivision of Water Rights. The deeision referred to is that which was rendered in the rase of Herminghans at al. vs. Southern Califormu Edison Compuny, 200 Cal. 81, 252 Pac. 607. The opinion in this case definitely establishes (1) that the riparian owner is entitled as dgainst an upstream appropriator to demand the full flow of ammally recorring winter floods which overflow his lands, naturally irrigate them, and deposit silt and (2) that a riparian right does not include the storage of winter flow for smmmer release and use. The Supreme Court thus ruled against the contention of the state and various irrigation districts as amici euriac that the riparian owner was limited to an amount reasonably necessary by the ordinary and usual methods of diversion and use, and in favor of their contention that the storage of winter flows for summer usage was not an incident of the riparian right.

As to that portion of section 11 of the Water Commission A (et which declares that watem not reasonably neerled for useful and heneficial marnoses upon lands riparian thereto are subject to appropriation, the Supreme Court declared that the ease before it was one wherein all the waiers eoncerned had been found to be reasonably needed for riparian use and that the validity of said portion of section 11 was therefore not i ! issne.

However, section 4. was held uneonstitutional in so far as it might be considered a limitation upon riparian usage. No opinion was expressed as to its constitutionality as applicable to appropriative water rights. The portion of section 42 which was thus held inapplicable as a limitation upon riparian rights, provides that the term "useful or beneficial purposes" as used in the Water Commission Aet shall not mean the use of more than $2 \frac{1}{2}$ acre-feet per annum in the irrigation of menltivated areas of land not devoted to cultivated crops.

Mr. Justice Shenk wrote a vigorous dissenting opinion in support of the limitation of a riparian owner as against an appropriator. He declared that the majority opinion smpported the riparian proprietor in what might be ealled a vested right to an unreasonable use of water as against an appropriator, and further said that, in his opinion, sections 11 and 42 of the Water Commission det constituted valid regulations in the interest of the eonservation of the waters of the state; that as between a riparian owner and an appropriator of water, the rule of reasonable use should apply; and that the Water Commission Act properly established that rule and should be upheld as in harmony with present day requirements.

## Constitutional Amendment.

As an aftermath of the Herminghans decision, the legislature of 1927 , which convened a few days after the deeision was rendered, submitted to the people Assembly Constitntional Amendment No. 27, Statutes of $1927, ~ \mathrm{p} .2373$, whieh declares the publie welfare requires that the water resomees of the state be put to beneficial use to the fullest extent of which they are eapable: that waste, unreasonble use, and unreasonable methods of use must be prevented; that rights to water or the use thereof shall be limited to water reasonably required and shall not extend to waste, un'easonable nse, unreasomable methods of use or unreasonable methods of diversion: and that riparian rights attach to only so much of the flow as may be required or used consistently with this amendment, for purposes for which such lands are or may be adaptahle, in view of such reasonable and beneficial uses. It is further provided that nothing in this amendment shall deprive any riparian wwher of reasonable use moder reasonable methods of diversion and use or deprive any appropriator of water to which he is lawfully entitled. This amendment is deelared to be self-executing. Also the legislature is anthorized to enact laws in furtheranee of its poliey.

This amendment is apparently designed and intended to limit the riparian user to reasonable methods of diversion and to reasonable drantities of water regardless of the fact that the controversy may be betwers a riparian owner and an appropriator. In other words, it abrogates the rule of law upheld in the Herminghans ease that a riparian owner is limited by no rule of reasonableness as against an appropriator, the latter being a trespasser as against the riparian owner. It is directed to strike down the law of court decision heretofore established, to wit, that as against an appropriator the riparian owner is "king," and may not be restricted to reasonableness in quantity or method of use.

This amendment was adopted at the polls by an overwhelming vote and shortly thereafter was declared unconstitntional by a superior court ruling. Undonbtedly an appeal will soon bring the constitutionality of this amendment before the Supreme Court of California, hut the dpestion will be whether the safegnards of property atforded by the ferleral constitution have been violated by the Califomia constifution as now amended.

## Legislative and Legal Committees.

Further manifesting its desire to bring about the fullest possible utiliration of the water resoures of the state, the legislature of 1927 also created a joint legislatibe committer and directed it to investigate the water problems of the state and to reeommend some state-wide policy fon the conservation and use of water (Assmbly Concurrent Resolntion No. 30, Stats. 19:27. p. 2332). This committee appointed an advisory committee of nine attomers to report on legal propositions pertinent to the scope of its investiration.

The report of this leral committere embodies the conclusion that an axercise of the power of emment domain is the one eertain method by whieh stream flows may be stored, manipulated, and transported as may he necessary to carry out a state-wide plan of eonservation and use. This same remedy is applicable also to ordinary appropriators and
diverter: The legal committer then stated three distinct procedures tor such an exereise. First, the present statutory method of a proceeding in the superior eonrt, in whi"h the judge deeicles all questions escept the amoment of eompensation, which is fixed by a jury, unless a jur is waived by the parties. Ncomrl, the ereation of an administrative proceeding hy aet of the legislature, wheremder an administrative body wond inguire into the damage resulting ly the taking of water for public use and smbmit its findings, which would be final, if not objected to in eonrt, in which event such findings wonld be prim facic evidence as to the amomet of damage. Third, the adoption of a constitutional amendment which would establish a judicial tribunal to determine conflicting clams to water rights and the eompensation to be paid in case of eondemmation, its fimtings as to facts to be eonehsive, and its deeisions to be reviewable by appelate conts on ruestions of law only.

In the disenssion of the present statntory method of exereising eminent domain, mention is male of the fact that Section 24 of the Water C'ommission Aet permits the conts to appoint the Division of Water Rights as referee in litigation to determine rights in water or the use thereof and that said Division is equipped to gather data useful in an eminent domain proceeding involving water rights and might be made arailable hy law for the assistance of the conts in such eases.

In the disenssion of the second procedmre mentioned, the legal committee report states that some have suggested that the present Division of Water Rirhts could and as the administrative body to carry out this p:ocedure.

The legal eommittee, in its report. recommended consideration be given certain proposals for changes in the law of eminent domain and stated that said proposals were important no matter what procedure might be followed in the exercise of eminent domain. The changes proposed were: First, to allow a condemmation snit to be bronght in the enunty in which any part of the riparian land or the stream is situate, in order that correlative rights may be ascertained and damages determined in one proceeding : sccond. to anthorize the taking of possession of any property by one entitled to exercise eminent domain upon the making of deposit for the owner ; third, to provide for compensation by substitution or equivalent other than moner: fourth, to sristematically revise the mesent statutory provisions as to eminent domain; and fifth. 10 provide that irrigation is a public use and thereby entitles any wonld-be irrigator to exereise eminent domain.

In the report of the legal committee referred to, the prineipal diftieulty to the operation of a state-wide plan of water conservation and distribution was recognized to be the established law of court decision which declares the riparian owner's right to a full flow of the stream as aramst monriparian uses. (Ilerminghans case.) This applies equally to private development. Whether or not the state, under its police power or under its anthority orer narigable waters might diseregard the riparian right to that portion of the full flow which would be in excess of quantity needed under ceonomical usage. were held to be (questions which the committee, in view of the present state of the law, conld not determine with any assurance. Therefore, the only remaining method of operation whieh the committee felt could be utilized with certainty of success was the employment of eminent domain with pro-
visions for more adequate machinery to assure expeditions and intelligent awards of damage.

In commenting upon the three procedures suggested for an exercise of eminent domain, the legal committee points to the fact that usually it will not be desirable to condemn all of the riparian rights, but that in most cases the quantities in excess of what is reasonably required for economical use will constitute the portions songht. The great difficulty is stated to be the determination of the effect of such a taking, for the right of one riparian owner is correlative with the rights of many other riparian owners and thus the taking of 500 second-feet may not be damaging while the stream is flowing 10,000 second-feet, but may be very injurious when the stream falls to 1000 second-feet or when at some future time other riparian owners make use or increase use and share in the total supply left in the stream. Hence, the effect of a taking of any given amount of water is declared to be best determined by an investigation of the entire stream and the needs of all parties upon it. But such an investigation in individual condemnation proceedings might well be so expensive and burdensome as to be utterly impracticable. A remedy which the committee states has been suggested, is the condemnation of the entire riparian right of a defendant, with a guarantee by the condemning party, in lieu thereof, of a certain definite supply of watcr, to be taken from the appropriation of the condemning party. The committee also takes note of the suggestion that a procceding in rem before the superior court or one of the other tribunals snggested, might be provided to settle and determine all rights in a partienlar stream, in a manner similar to that under the adjudication procedure for appropriative rights in the Water Commission Act, with a provision that a riparian owner might, in lien of his riparian rights or compensation therefor accept a certain definite quantity of water.

## Suggested Fact Finding Body for Water Right Controversies.

The foregoing are suggestions noted by a committee selected from eminent attorneys of the state versed in water law. The suggestions revolve around condemnation and the different methods by which condemnation could be accomplished, i. e., whether by (1) ordinary court procedure amended and clarified, or (2) by an administrative body to determine facts and assess damages, the findings of which administrative body could be presented to the court for judicial ruling by a dissatisfied party, or (3) by creation of a constitutional body the findings of which wonld be subject to review as to law but not as to fact.

The last two alternatives substitute for a determination of facts by ordinary court procedure, a determination of facts by a body especially created for that particular purpose and functioning only in connection with ordinary water rights and condemnation of excess riparian rights. That such a body would function usefully and that it would fill a need is shown by the record of what has been accomplished throngh the Division of Water Rights. Under Sections 10 and $10 a$ of the Water Commission Act the Division is authorized to conduct investigations on stram systems and molergromed water basins, and under Section 24 it is anthorized to act as referee for the court as noted in the foregoins digest of the legal committee's suggestions. While the Water Commission Act was passed in 1914, it was not until 1917 that the first adjudication was attempted and not until some time later that advantage was
taken by the people of the state of all the different lacilities afforded by the act. Sinee the first adjudication in 1917, the Division has completed, or is now in process of completing, investigations into titles to water on $2,050,000$ ares. These investigations have been initiated as adjudieations, court referenees or simply investigations, the object being the same in each case, i. e., to determine the facts by which an foquitable determination of water rights could be made. These investigations have been initiated by the people affected and have in the main been paid for by these same people, althongh in one ease involving certain peeuliar cireumstances the state has paid the major part.

The Division has determined, or is in process of determining the faets. It has no power to enforce any determination of rights it may make through these investigations and yet, from the work done, the water right situation for $1,220,000$ acres has been eleared or is so near to being cleared that the end is in sight. On the remaining 830,000 acres the original investigative work is still in progress and the issues are not yet joined. An amicable agreement may be reached in these celses, but if the legal situation is such that it will finally be necessary to go to court, the great body of facts made available will very materialiy aid the court.

As estimated in the state-wide water resomees investigation, there are approximately $6,000,000$ acres under irrigation in Califormia, so that the acivities of the Division in these determinations eover one-third of the state's irrigated area and on 20 per cent a solution has been reached or nearly so. These determinations cover 24 separate investigations. The acreage covered by different investigations varies from 300 for the smallest to almost $1,000,000$ for the largest and is distributed quite uniformly over the state. The cost varies from about 20 cents to $\$ 1$ per acre for the most complex.

Each one of these determinations involves the satisfaction of the water righf in terms of water. The excess riparian right in flood waters is not recognized in the Water Commission Act and no case involving it has eome before the Division in its above work. It is obvious that the Division could not function in such a ease with its present anthorities except as a referee of the court. Suggestions called to attention by the legal committee propose a hody with either administrative or constitutional powers to determine the money value of this riparian right. In other words, a right which, in its nature is opposed to the development of the state, may he satistied in money instead of water. It is helieved that had the law been such that it had heen possible to rest the Division with these powers, more woukd have heen aceomplished than in the past, for it wonld have enabled this class of rases to have been brought before the Division. However, it had never been so universally recognized prior to the work of the legal committee and prior to the Herminghaus decision that excess riparian rights might have to be satisfied in other ways than by water.

While the work so far done has been considerable, yet its limitations have beeome apparent, and it is not to be expected that in the next 10 years, with the present powers of the Dirision of Water Rights, any such progress ean be made. This work has been done in conneetion with determination of faets in certain classes of situations, but a large part of the controversies possible on the remaining irrigated aereage and the future added acreage involves considerations of a different
nature. Any state body which functions to best efficiency in the future will have to be clothed with larger powers than the present Division.

Summing up, the point which it is sought to emphasize in this discussion is that a fact-finding body fulfills a real need. The suggestions of the legal committee are toward removal of certain weaknesses which exist in the informal investigations carried forward under the authority conferred on the Division of Water Rights. These suggestions also are directed toward the weaknesses which exist in court procedure in determining farts in romertion with romplex water right situations.

## APPENDIX $A$

## (A) IMPORTANT LEGAL RULINGS DURING THE PAST BIENNIUM RE APPLICATIONS TO APPROPRIATE, (B) COURT PROCEEDINGS PARTICIPATED IN BY DIVISION DURING PAST BIENNIUM, AND (C) DIGEST OF SUPREME AND APPELLATE COURT DECISIONS CITING AND CONSTRUING WATER COMMISSION ACT.

## A. Important Legal Rulings During Biennium re Applications to Appropriate.

In acting upon applications for permits to appropriate water, the Division of Water Rights has found it necessary to rule upon many legal questions. Some of the more important of such rulings during the past biennimm are briefly :

1. Sections 1 a and 15 of the Water Commission Act do not rest umlimited discretion in the Division of Water Rights to speculate upon what is the public welfare or to balance the welfare of one community against another.
2. Agricultural applications do not take priority orer prior power applications unless the element of public welfare is clearly involved. such not being the case in a dispute between a power company and an irrigation district. wherein the waters after power use are avalable for lower irrigation use.
3. Water may be appropriated for duck pond purposes, subject to the econdition that such use shall not interfere with either prior or subsequend rights obtained for higher uses such as domestic, irrigation, mumiophal, power or mining purposes, and subject to requlation and even stol! page of diversion by the Division of Water Rights.

+ Inder Section $2 a$ of the California Irrigation District Act, waters may be withrawn from appropriation so as to confer a priority upon an irrigation district for such withdrawn waters as against filings of others which intervene between the date of withdrawal and the date of filing of such district.
- . The Thited States Forest Service may apply for and receive permits for water tor lands which it proposes to lease for home sites under special use permits and for maintaining nurseries for propagating trees with which to reforest burut-over areas.

6. Applications seeking to appropriate for springs within public water reserves shonld obtain from the U. S. Department of the Interior a clear listing of the areas so reserved.
7. A protestant employing as a portion of his condnit system a chanmel cif glacial materials in which there is a loss of 90 per cent of the water diverted, camot reasonably object to a new appropriation upon the gromd that said new appropriation will so deplete the supply in the source that none will come through to him. providing sufficient
water is left arailable to him that he may, by employing the usual and ordinary methods of the locality involved, secure the amount of water previously obtained by him for actual beneficial use, plus a reasonable loss in transit.
8. Pending a determination of conflicting rights or while proceedings to secure access are under way, litigation may be adranced as suffidient cause for failure to construct.
?. Extensions of time within which to commence construction should 1ut he allowed for the purpose of reserving a priority until permittee can determine whether or not he wishes to proceed with the project.
9. The Division may condition its permits so as to afford protection io prior rights, restrict the permittee to unappropriated water, and safegnard the public interest generally.
10. A protested application to appropriate from a slough which has in a prior suit been determined by the court the canal of protestant must be denied.

12 An application for fire protection purposes states a beneficial use.
13. A county water district may appropriate water for the purpose of spreading it and causing it to sink into a groundwater basin from whence it can be pumped by individual owners for domestic and irrigation purposes.
14. A permit may be secured by application to use waters stored and released after use by the owners of the storage works, such waters being foreign in time or season just as other waters may be foreign in source, and the right thereto does not inhere to prior appropriators in the order of their respective priorities (Section 17 of the Water Commission Act ; E. Clemens Horst rs. New Blue Point Mining Co., 177 Cal. 631).
15. A reasonable time should be allowed an applicant for private use within which to secure necessary rights of way.
16. Tnder the appropriative doctrine of water rights use is not limited to the watershed of the source of supply.
17. Tse of water for golf courses, parks, gardens, and road sprinkling is a hencficial use for which water may be appropriated.
18. Wiaters which do not percolate into an undergronnd basin may be appropriated at a point above the basin and diverted to beneficial use. as against overlying land owners subject to conditions which insure ihe same percolation which would naturally have occurred were such diversions not made abore the basin.

## B. Court Proceedings Participated in by Division During Past Biennium.

ln the field of litigation, the Division has been a party defendant to i:ur suits in Humboldt County and two in Siskiyou County wherein the Fish and Game Commission. suing in the name of the People of the state of Califormia and the Klamath River Packers Association seek to have permits issued to the Elcetro Metals Company and H. W. Jackman reviewed in a procecding in certiorari. These suits are now dormant and will probably be dismissed.

In the case of Mojare Rieer Irrigation District vis. Superior Court, it C'al., Dec. 711, 262 l'ac. 72t, heretofore discussed, page 33 of this report, the Division appeared as an amious curiae. In the decision
reudered in this case. Section 16 of the Water Commission Act was held winconstitutional and therefore the following eases brought under that sention and to which the Division was a party defendant, have been dismissed:

California Delta Furms, Inc. et al. vs. East Bay Municipal Utilit! District et al.
Preston ris. Department of Public Works ot al.
Dix Van Dyke et al. vs. Department of Public TVorks et al.
Tuba River Power Company rs. Department of Public Works et al.
Onc ease proceeded to judgnent under Section 16 prior to the declaration of its invaliditr, and in another an important ruling had been made. Both cases related to permits granted to pump from wells in Tia Juana River Valley. In the first ease. that of Beyers et al. vs. Department of Public Wrorks of al., the superior court held that the source of supply was an melerground basin as distinguished from undergromed waters flowing through known and definite channels and in accordance with Section 42 , which limits the jurisdiction of the Division to surface waters and underground waters flowing through knowin and definite channels, adjudged the permit roid. In the other case, that of Coronado Water Company vis. Department of Public Works et al., the point of diversion was about one and three-quarters miles up the valley from that involred in the Beyer case and the court found in favor of the jurisdiction of the Division. The judgment and decree in the first case have been vacated because of the unconstitutionality of Section 16 and further proceedings in the second case are, of course, ended.

In two companion cases entitled Wennhold vis. Kiluegel et al., and Heimsoth vs. Kluegel ct al., trial under stipulation is pending, it being anticipated that at trial may prove mnecessary. These proceedings have been deseribed in previous reports. The onty development during the past biennium has been the overrnling of demurrers and motions to strike the Division's answers.

Under Sections 25 to $36 f$ of the Water Commission Act the Division has appeared in comrt in reference to its orders of determination and in opposition to execptions filed thereto in the matter of three important and large stream system adjudications. In the ease. In re Stanislaus Ricer. testimnny was taken during the past biennium and the Division's order filed therein has very recently been upheld in a decision by Judge Young of San Joaquin County with two rery minor modifications. A judgment and decree will he entered in the near future. In the case. In re shasfo River, the hearing of exceptions fled to the order of the Division has heen concluded before Judge Pullen, sitting in the superior court of Siskiyou County and the case will be submitted for eecision after transeripts have been received, arguments heard, and biets filed. In the case, In re Whitewater River, exceptions to the order of the Division have been received and the court will take the testimony and evidence relative thereto beginning May 21, 1929.

During the past biennimm the following court cases have bcen handled by the Division as referee under Section $2 t$ of the Water Commission Aet

Lemmet al. vs. Rutherford et al. (North Cow Creek, Shasta County) ;
Colby et al. rs. Strayer et al. (Oak Run Creek, Shasta County) ;

Morrison et al. vs. Hight (Morrison Creek, Del Norte County) ;
Cummins et al. vs. Allen et al. (Owl Creek, Modoc County) ;
San Francisco Cattle Loan Co. ct al. vs. Crampton et al. (Soldier Crcek, Morloc County) ;
Millville Diteh Company vs. Mufforl of al. (Clover Creck, Shasta County) ;
Butte Valley Irrigation District rs. Bray et al. (Butte Creek, Siskiyou County).
Also during the past biemnium the following additional court cases have been referred to the Division as referee and are now under investigation:

Murphey et ul. vs. Warren ct al. (Emerson Creek, Modoc County) ;
Reinhart vs. Easton et al. (Los Alamos Creek, Santa Barbara County) ;
Lake Shore Cuttle Co. ct al. vs. Mulkey et al. (Davis Creek, Modoc Country).
Supreme and Appellate Court decisions, which have cited and construed the Water Commission Act, are:

Barr vs. Branstetter, 42 Cal. App. 725, 184 Pac. 409 ;
Tulare IV ater Co. vs. State Wrater Commission, 187 Cal. 533, 202 Pac. 874;
City of Gilroy vs. Kell, 67 Cal. App. 734,228 Pac. 400 ;
Department of Public Works vs. Superior Court, 197 Cal. 215, 239 Pac. 1076 ;
Rich vs. McClure. 78 Cal. App. 209, 248 Pac. 275 ;
Herminghaus et al. vs. Southern Califormie Edison Co., 200 Cal. 81, 252 Pac. 607 ;
Fall River Valley Irrigation District vs. Mt. Shasta Power Corporation, 74 Cal. Dec. 275, 401, 259 Pac. 444 :
Mojave River Irrigation District vis. Superior Court, it Cal. Dec. 711, 262 Pac. 724 ;
Bray vs, Supcrior Court, 56 Cal. App. Dec. 676, 955, 268, Рac. 374.

## C. Digest of Supreme and Appellate Court Decisions Citing and Construing Water Commission Act.

In Burr vs. Braustctter, supra, defendant offered in evidence a certified eopy of an application for a permit to appropriate and contended that said application by plaintiff constituted an admission that plaintiff had no prior rights to the water of the source. The trial court refused to admit the certified copy as an admission against interest and the appellate court affirmed the rejection of this evidence. Said the appellate court:
"It is established by the findings of the rourt that plaintiff was entitled to
14 inches of the water of the creek. Mis application for to inches, or any
other amount, could not affect his title to the 1 t inches. Nor was the applica-
tion an admission that be bad no right to any of the water. It was simply
an attempt legally to secure, if he could. more water than be at that time had.
The objection to the admission in evidence of the applifation was properly
sustained."

In Tulare Water Compamy vs. Sitate Water Commission, supra, the Commission had denied a permit to the 'Tulare Water Company and rejected its application upon the gromud of inadequacy of supply. The company, donbtful of its remedy, petitioned for a writ of mandate and
also for a writ of certiorari. The Commission demurred. The trial court leld that the Commission's decision was final and that applicant lad no remedy. The appellate court, 34 C. A. D. 987,990 , affirmed the denial of certiorari as a remedy, but reversed the judgment denying a writ of mandate as remedy and directed the trial conrt to overrule the demurrer of the Commission. The Supreme Court, in an opinion by Justice Sloane and eonemring opinion by dustice Shaw held that mandamus was open as a remedy to applieant and sent the ease back to the trial conrt for a hearing upon the merits to determine whether or not the faets prereguisite to a writ existed. No trial upon the merits has taken place, and the case is still pending under stipulation with a probability that it will mever come to trial, in view of developments which may render a permit meecessary from the applicant's standpoint.

This deeision is decisive that if all prerequisite facts are found by a (e)urt to exist, an applieant is entitled to a writ of mandate to compel issuance of a permit.

In City of Gilroy vs. Kell, supra, a permit from the State Water Commission was held mavailing as a defense in that the court found that plantiff had prior rested rights and that the permit itself expressly |eclared its issuance "subject to vested rights."

The story of the case of Department of Public Wrorks vs. Superior Gourt, supra, and related cases, has been heretofore detailed in the hienmial reports of 1924 and 1926 . A writ of prohibition was granted by the Third Distriet ('ourt of Appeal (43 Cal. App. Dee. 823), denied by the Supreme ('ourt ( 69 ('al. Dec. 331), and finally granted by the Supreme Court upon reliearing (197 Cal. 215).

The importance of this litigation consists in fixing the status of the duties performed by the Division of Water Rights under a portion of Section 12 of the Water Commission Aet, whieh provides that in the ease of rights initiated prior to the Water Commission Aet, the Division may fix a time for complete application to beneficial use, if same has not yet been consummated and if, in the judgment of the Division, the right clamed has been diligently maintained. In issuing such a certifieate, the Supreme Comrt held, that the Division does not exereise judicial power and that its action in issuing a eertificate is not reviewable by certiorari. The supreme Court also distinguished this provision of the act from other provisions providing for court reviews. This decision is also important as a recognition by the Supreme Court of the distinct and separable portions of the Water Commission Aet relating to intiation of rights on the one hand and to determination of rights on the other hand.

The story of the case of Rich rs. Mc'lure, supra, has also been recounted in the biennial reports of 1924 and 1926 . Suffice it to say that prior to a hearing to appropriate, the Division rejeeted the application involved as incomplete. The trial court held that the applieation was of sufficient form and eontent and granted a writ of mandate directing the Division of Water Rights to hear and act upon the applieation. This judgment was affirmed upon appeal. The decision was gratifying to the Division in that it held "For obvious reasons the places of intended use must be stated, whether that use is to be made by the applicant or by those to whom he may sell the water.', In uther words. place of sale was held not plaee of beneficial use.

The case of Herminghans et al. r's. Southern California Edison Company, supra, has been discussed, supra, page 35.

In the case of Fall River Valley Irrigation District vs. Mt. Shasta f'ower Corporation, supra, the facts found were all of the waters of the source were needed for riparian usage and that there were no unappropriated water's to which permits issned by the State Water Commission could attach. The stream involved was one of almost uniform How thronghont the year, and no orerflow waters were involved. Within 10 years after the passage of the Water Commission Act defendant power company had completed its use of all the waters of the stream and plaintiff's permits to diver't above defendant's intake were held unavailing.

The case of Mojave River Irrigation District vs. Superior Court, supra, has been discussed, supra, page 33, as has also the case of Bray vs. Superior Court, supra, page 32. In the case first named the Third District Court of Appeal held Section $1 b$ unconstitutional ( 53 Cal . App. Dec. 70, 256 Pac. 469 ) and after a hearing granted, the Supreme Court rendered its opinion with the same result.

Q. In the commanication addressed to sonf rompany unm the e9th of Jathary. We requested that yon produce documents noted under the different headiuss, first. all records. documents. agremments and correspondence bearing upon the fixins of prices for the sale of cement : serond, all records. docoments and figures showint the cost of manufacturing or producing cement in your plants; third, all records, docoments. agreements or correspondener showing the rebating of profits or the division of protits and losses between your company and other manufacturers or dealers in cement : fourth, bilames sherets as of the begiming and also as of the emd of the year 13-2s; fifth, proft and lose areome as of the begrining and also as of the end of the year 1925 ; sixth, conies of your income tax retmens, begiming with the year \(1!\underline{2} .0\). to date and seventh. copies of your statements filed with the State Lasard of Equalization beginning with the year 192-5 to date. We now ask you, Mr. Merrill, if som will produce those records for the inspection and information of the committer.

Mk. Mtrapns: Mr. Chairman. immediataly mon receipt of the committee's befter. our office mate an extended investigation as to the right and prower of the committer to demand the dorements listed. I might first sily that as to the items referred to in items 1 to 3 . that there are no surh records or documents, agreaments: thates eorrert. isn't it, Mr. Merrill?

Mr. Merrilis: That is emrect.
('hathmas Joses: Wrait a minute: one being with reference to the fixing of prices, two being with reference to the rost of matheacturing or producing cement, and three being with referenoe to the rebating of division of profits and losses.
 reached the conclusion and adrised our dient that it was not within the right or buwer or juristiction of this committee to demand any such records. They are bivate trade secrets, and property of this company, of value. which it can bot disclose to its competitors. There are-inethermere, we dont believe that any answers to those questions, amb-n thes doroments. Would throw aby light upon any intuiry within the serpe of the committere. I might further say that this forporation is megmized mblev the laws of West Virginia : it has three plants; one in Chio allud ome at El I'aso, and one in Califorma; and the matters as to the pants outside of this state amb the records applying to them and the scoper of the dor-mnents, \(n s\) set forth in this letter. extend to all of the phants, are beyond, clenry. aty prasible jurisdiation or domatin of this committer.

1!. If gon wrow willing to furnixh stuh intormation, and ronld mot, at this moment. give the exact figure, within a few days you could so inform yourself fron the recorels of sour concem that you conld furnish that information to the committre? . 1 dereline th : Answre that question.
 thath sump coumsel has advised you not to amswer: A. And my premal reasons.
!. I'remal roasums. I take it the reusons of the remerem, not of your individually. prosonal- d. I intrrposingl: les: fes; not myself.
Q. But persomal reasons. Among those reasons, may it be that yon do not desire that the gorerment shatl be informed upon these pertienhar matters?

Mr. Themes: Of course, in this inquiry, Gempal"
Gexemal. Whbs: How is that?
Mu. Theigen : Vin memn, of course, in this inquiry:
Gramba. Webs: Cos . A. 1 think \(I\) haye answered that fuestion.
C'maman Inman: Remel the guestion. Mr. Raporter.
(By direction of the chaimm, the reporter reads the last umestion propounded.)
Comaman laman: The withess is directed to answer the question. A. That is unother way of asking the same question. I'nder these proceredings, I don't think it is any comern of the State of Califorma, and 1 decline to answer the question.

Cbabmax lxmas: When yon say the busimess of California. you menth the business of the Semate of the State of t'alifermia, too, do som, Mr. Cimorge: A. Yirs, sir.

Page 41. lines \(S\) to 13:
(ikxern. Welb: In fixing prices at whith your concern will bid when bids are usked for, do you figure the cost of tramsportation from emeh pant to the point of delivery? A. I decline to answer that question.
Q. Why do you derline to miswer that thestion: A. I think that is our persomal business.

Page 4 , line 24, to man ts, line 13:
f'hatrasin laman: All right, I will frame it: Will you produce for the benefit of this committer, at the menting which will be held in this roon tomorrow afternom at two odock, the intormation as to the prieps which you charged for cement mon varions jobs during this yent, and what the prices of these were in the twelve months of last sear. and eompare it with the priee list which was furnished yon by the Davemport people, and produce that information tomorrow afteruson?

Mr. Themen: The withess is advised that it is not neressary for him to sumply the information, beratase it involves rates that were artually relarged by him on each job: that is mivate information, which we very respertfully submit is not within the jurisdiction of this commitree.

Ghamman laman: Well. I will withdraw that.
12. Will you moluce prices upon bids for the state. comaty and politionl subdivisions of the state?

Mr. Theifes: Same alvier.
Witness: No, sir: I would not prohure any surh.
Page 48. lines 19 and 20):
fibnelat. Werif: Who premares this list of prices for sour comern: A. I defline to annwer that inmestion.
(Reporter reads fuestion and answer.)

Gexeral. Werb: Q. What are the emments comsidered in arriving at the prie o tixed upon surh lists: A. I decline to amswer that question.
Q. Do the prices quoted in those lists have any meation to the thantity of man' factored cement on hand? A. I decline to answer that question.
Q. Do such pricer haw any relation to the protit that will be realized if yond product be sold at the prices mentioned in that list: A. I dedine to answer that question.
Q. Were the prices, or are the prices-estart the question anew-stated in surb list arrived at throngh a consideration of the cost of mannfacture of the cement bs your company, and of the return uron the amome of capital invested by you company: A. You are talking about my price list?
12. The price list of your "oncern. A. 1 deedine to athewer the ghestion.
2. Sre these list pires the prices at vour tactory, or plant. or the price at the point of dedivery: . . I lectine to answer that question.
Q. Joes the price quoted in the bid include the rost of transportation? I declint to answer that question.
 to answer that question.
9. Is the prife of cement, torlay. the same as it was in fereember. 1928: A. I have been all ores the record-you are talking about Dlount Liable cement:
Q. Your concern. A. I answor all these questions-
(ieneral. Webs (interposing): Let the notes show that these questions that 1 am asking you all relate to your cement, and I think they de, with others. A. I dereline to answer the question.
12. Has there been be sour roncern a realuction in the price of cement within the last two months? A. I decline to answer the fultions.

1). Why do you make the sereral dectinations? A. Simply for the reasons I have ariven before: I will anwer any questions on anything that 1 malerstand. to the best of my knowledge, the resolution anthorizas, but, on my private business. I won't answer any questions.

Page \(-\boldsymbol{i}\). lines 2.2 to 27 :

Mr. Clark: Upod the advice of comusel.
Cimarman: Upon the advice of counsel.
General Webr: That is, declined to produer the papers, books and doruments called for, by the advice of counsel.

Mr. Clark: Ies.
(ieneral Webm: Q. These books are, sot far as all things (alled for in the subpoena, are so far under your control, that if you desired, you could have produced them: A. They are arailable, (ieneral.
Q. If this committee should anthorize representatives to call upon yon for the purpose of inspecting these books, papers, records and so forth in your office, would such representative be permitted and accorded the privilege of so examining them? A. I would be guided by the advice of counsel.

Mr. Clabk: I cam adrise the witness, now, Mr. Chairman, if you choose; I would advise him, upon the grounds heretefore stated, not to permit such an inspection.

Chamman lnman: That is yum answer, that umon the advice of counsel, fon woud decline to permit the committee to investigate any of the books and records in your office to obtain the information songht in the subpoena! A. Y'es, sir.
(ieneral Wemb: And if the committee, in persom, called at your office, and asked the permission to examine these varibus records, it would be refused that: A. That would be my answer.

Page 75 , lines 12 to 18 :
(2. (by (ieneral Webh) : You are getting a profit? A. Yes.
(2. What profit? * \(\%\) * (Advice by attorney.)

Witaess: A. I must refuse to answer, on the advior of counsel.
l'age 7 Th, lines 22 to 27 :
(2. (by GeneraI Webb) : Llow much profit do you think a reasonable profit? * * * (Advice by attorney).
A. (Witness) : I must refuse to answer it, Cieneral. on the advien of counsel.
l'age 76 , lines 4 to 18 :
Q. What are the factors which are taken into consideration by you and your coneren in determining what profit your commordity should yield?

Ms. C'lake: I will adyise the withess that, in suf fat as the question is direeted to profits, or what drofit, that be does mot need to answer the question. I bave fow ohjection as to prices eharged mow, or at any other time.

Gexeral Weirs: And the minswo is refused?
d. On the alfice of munsel, yes, sit:
Q. What was the total output of cement at your plant in 192心"?

Jr. ('LARK: 1 alvise the witness again that that is a question which he does mot nerd to answer.

\title{
REPORT OF THE DIVISION OF ARCHITECTURE STATE DEPARTMENT OF PUBLIC WORKS
}

\author{
Geo. B. McDougall, Chief of Division
}

\section*{HISTORY.}

The State Department of Engineering, of which the Bureau of Architecture was a part, was created by an act of the legislature, approved March 11, 1907, chapter 183, Statutes of the year 1907, and was organized in the May following. The Bureau of Architecture was organized very shortly thereafter and immediately began its activitics.

On July 30 , 1921, changes in the organization of the state government, as made by the legislature of 1921, and approved by the Governor, went into effect. The former Department of Engineering, with its Bureau of Architecture, was abolished and its functions transferred to the Department of Public Works, with five divisions, of which the Division of Architecture was one. On Angust 17, 1923, another Department of Public Works was created under chapter 286, Statutes of the year 1923, which provided for three divisions, of which the Division of Architecture was one. On July 29, 1927, a new Department of Public Works was created under chapter 252 , Statutes of the year 1927 , which provided for six divisions, of which the Division of Architecture is one. The activities of the Division of Architecture and the former Bureau of Architecture cover, therefore, a period of approximately 21 years.

\section*{DUTIES.}

To make plans and specifications for all new buildings of a value in excess of \(\$ 1,000\) at the various state institutions; to let contracts for and superintend their erection, or, in case satisfactory contracts cau not be made to construct the buildings by day labor; to care for all alterations and repairs to existing buildings, on the same basis where the amount involved is in excess of \(\$ 1,000\); to design and install all heating, lighting, ventilating, refrigerating, water supply, mechanical and electrical plants of every nature-whether changes, extensions, or original ; survey grounds, lay out walks, drives and roads; provide water supply, sewer and drainage systems, requiring the design and construction of dams, reservoirs, pipe lines, wells, pumping plants, ditches, sewage treatment and disposal plants and drains.

\section*{organization.}

The organization of the Division of Architecture consists of a Chief of Division, Assistant Architect, a Deputy Chief of Division and the following sections: Architectural, clerical, estimating, construction and engineering. Organization chart and personnel are given on pages 6 and 7. In addition the division maintains in conjunction with the divisions of Engineering and Irrigation and Water Rights an Accounting Department.

EMPLOYEES APARTMENT BUILDING--NORWALK STATE HOSPITAL,
FINANCES OF THE DIVISION.
The expenses attendant upon the operation of the Division of Arehiteeture are met as follows:
(1) Under chapter 142 , the legislnture of 1927 provided an appropriation for support for the Division of Architecture, in amount ................299,29. 95
(2) Under chapter 252 , the legishature of 1927 provided an appropriation for inerease of the State Architect's salary, in amount_-....-. ---
38495
(3) From executive order No. 333 , dated October 16, 192S, in amount - , 46,90000

The appropriation for support covers salaries, materials and supplies, service and expense, and property and equipment.

The salaries of all Sacramento office employees, of all Los Angeles office employees, and of a testing engineer in San Francisco are paid out of the Division of Architecture support.

All other employees are paid out of special appropriations for construction or billed to the department or institution for which the work is done.

\section*{OPERATION OF THE DIVISION.}

Under the subject of operation, the activities of the Division of Arehitecture can be listed under three main subdivisions:
1. Construction by contract or subeontraets.
2. Construction by day labor.
3. Miscellaneous activities.

When working drawings for a project are started in the drafting room, a decision is made by the executive head of the division of the method of construction to be followed; that is, whether the work shall go ahead on a basis of contracts, subcontracts, or day labor.

It is the policy of the state to construct its buildings under contracts. The day labor method is resorted to only where moncy can be saved to the state, either on account of the nature of the work itself, because of isolated locations, or in the case of work at institutions where patient or inmate labor is available. Approximately 20 per cent of the total work has been done on the day-labor basis during the present biennium.

A brief explanation of the services performed under the headings numbered 1,2 and 3 above will give an understanding of services that are being rendered.

\section*{CONSTRUCTION BY CONTRACT.}

A full understanding of the project in hand is first obtained by visits to the site by members of the section most intimately concerned, and by full diseussions with the head of the institution and his or her assistants. Complete preliminary sketches and itemized estimates of cost based on them are made; conferences are continued with the institution authorities and any required adjustments made, until both the plans and the estimated cost are satisfactory. Formal written letters of understanding on the above are then executed by those concerned and form the basis on which to proceed with the work. The working drawings are then prepared, including the architectural, structural, mechanical and electrical scale drawings, and all typical full-size architectural details. Specifications are written covering all branches of the work separated according to trades involved. After bids have been received, the con-

ADMINISTRATION BUILDING-SANTA BARBARA STATE TEACHERS
tract papers are executed, additional approvals obtained, after which actual construction is ordered ahead. A special inspector is put in charge, in accordance with the requirements of law, to sce that the interests of the state are protected. On small and relatively unimportant projects this requirement is often met by securing the assistance of an institution official, qualified and willing to care for the work along with his regular dutics.

The office maintains a constant general supervision over all work in the field by periodical trips, correspondence, etc.

The auditing of all accounts, parment of all claims, and similar work is cared for by the department auditor.

\section*{CONSTRUCTION BY DAY LABOR.}

The method used in handling this type of work is exactly the same as for contracts up to the point of making working drawings. As the construction is in the direct charge of the division, it is not necessary that such complete drawings be prepared. Skeleton specifications are written and other necessary information is conveyed by notes on the drawings, or by letter to the superintendent or general foreman in charge.

Complete bills of materials for all branches of the work are prepared in the office, and, where practicable, are checked by the representative in the field. Requisitions are then prepared and sent to the state purchasing agent, who attends to the actual purchases. Great care is necessary in the preparation of the lists and descriptions, as the whole transaction lacks the possibility of personal touch between buyer and seller ; and, as the average time required from the issuance of the requisition to the delivery of the material is about three weeks, it is obvious that mistakes in deliveries, which could disrupt the entire program, must be prevented.
In connection with mill work and similar items, it has been found advantageous to detail and list off accurately every piece of milled stock required, all doors, sash, etc., and furnish the bidders with such complete information. This takes the place of the usual "mill bid" of commercial practice, where there is always a chance of misunderstanding as to limits of requirements, and which furthermore requires each and every bidder to list off the materials, for which unnecessary multiple service the state mould have to pay. Such work naturally increases overhead costs, but this is considerably more than offset by the lower bids received for the materials.

All necessary mechanies and laborers are employed direct, through the medium of the Civil Service Commission.

All accounts are audited as mentioned under contract mork, these representing much more detail, since all claims for labor and every individual purchase of materials must be taken care of separately.

Day labor construction work is handled in the field by a competent superintendent of construction, this agent of the division being an active director of construction work rather than one who simply inspects the work of others as in the case of contract work. At biweekly intervals on day labor work he reports to the office on the total amount of work done on a project, which, with the segregation of his pay roll and cost accounting system maintained in the central office, enables the Divi-

GYMNASIUM BULDDING-CALIFORNIA POLYTECHNIC SCHOOL, SAN LUIS OBISPO
sion at any time to know whether or not a project is being eompleted within the original amount estimated.

\section*{MISCELLANEOUS WORK.}

This subdivision includes all the activities of various sections of the division over and above those directly related to projects for whieh money has actually been appropriated.

Assistance of an advisory nature is constantly being rendered the various departments and institutions, in connection with technical subjects. Sketches and estimates are prepared for considerable proposed work that is never carried to completion. Development plans for the new institutions, and for proposed changes in the older ones, are constantly being worked on. Also plot plans showing existing eonditions have been made and are being kept up to date.

Subcontracts are made in many cases rather than a general contract, where it can be demonstrated that a saving to the state ean be effected in landling the work in this manner. When such a procedure is followed, the Division of Architecture acts in the same capacity as a general contractor. Construction work on the State Capitol at Sacramento is being carried on by the subcontract methorl.

In many cases where a job is handled by day labor, certain portions of the work are let to subcontraetors where it is demonstrated that a saving to the state can be made or a better grade of work seemed. The day labor plan is sometimes used in order to save approximately two months time, which is involved in taking bids and executing and approving contracts.

\section*{REVOLVING FUND.}

In view of the fact that from four to six weeks elapse from the time obligations accrue until the claims covering them can be approved and paid the legislature has provided for the joint use of all the divisions of the Department of Publie Works, with the exception of the Division of Highways, the following funds to be used in advancing cash payments for labor, material and supply bills where such payments are necessary for the proper conduct of the business of the department:

(2) Emergency resolution No. 3, dated July 9, 1925

\title{
REPORT INDICATING STATUS OF CONSTRUCTION WORK HANDLED BY THE
} DIVISION OF ARCHITECTURE DURING THE PERIOD OF JULY 1, 1927, TO JANUARY 1, 1929

\section*{Agnews State Hospital, Agnew}

Chap. 142-1927.
W.O. 11-Addition to work therapy building, \(\$ 4,000\). Completed.

22 -Two cottages for physicians, \(\$ 16,000\). Completed.
69 -Levee and water development, \(\$ 21,407.66\). Completed.
86-Repairs to steam lines, \(\$ 3,996.49\). Completed.
Chap. 30-1925.
W.O. 325 -Plumbing and electrical shop, \(\$ 7,098\). Completed.

Chap. 142-1927. Agricultural Park, Sacramento
W.O. 8-Three barns, \$13,066.29. Completed.

15 -Remodeling and repairs to buildings, \(\$ 25,000\). Completed.
41—Machinery building, \(\$ 99,967.82\). Completed.
68 -Repairs, improvements to water and electric systems, \(\$ 30,000\). Completed.
Chap. 454-1925.
W.O. 129—Paving, \$2,243.12. Completed.

Executive Order No. 269.
W.O. 131-Pump shelter, \(\$ 8,000\). Completed.

Executive Order No. 307.
W.O. 138-Replacing barns destroyed by fire, \$5,797.71. Completed.

Chap. 30-1925.
W.O. 303 -Freight elevator shaft in main building, \(\$ 1,000\). Completed.

\section*{California Highway Commission}

Division of Highways district office building at Eureka together with proposed auxiliary buildings, \(\$ 69, \$ 10\). Completion date undetermined.

\section*{California National Guard}

Chap. 142-1927.
W.O. 16-Repairs to Los Angeles armory, \$5,260. Completed.

18 - Repairs and improvements to Sacramento armory, \(\$ 5,089.55\). Completed.

W.O. 19-Repairs and improvements to Stockton armory, \$4,158. Completed,

National Guard Support.
W.O. 19-Repairs and improvements to Stockton armory, \$269.01. Completed.

Military training camp at San Luis Obispo including the complete survey of the site and the construction of combination kitchen and mess halls, regimental warehouse, field artillery warehouse, rifle range, tent platforms, swimming pool, truck garage building, officers' club and recreational building, corrals and feed racks, water troughs, incinerator, reservoir and water system, sewage disposal plant and system, light and power system, road, officers' lavatories and enlisted men's lavatoriesFederal funds, \(\$ 213,999.50\); state and recreational funds, \(\$ 66,239.03\). Completed.

\section*{California Polytechnic School, San Luis Obispo}

Chap. 142-1927
W.O. 26 -Addition to boys' dormitory, \(\$ 38,000\). Completed.

27 -Addition to dining hall, \(\$ 13,500\). Completed.
28 -President's home and garage, \(\$ 18,000\). Completed.
29 -North wing of mechanical unit, \(\$ 17,000\). Completed.
77 -Repairs and improvements, \(\$ 27,975\). Completed.
117 -Diesel engine, \(\$ 10,000\). Completed.
Chap. 411-1925.
W.O. 259-Gymnasium, \(\$ 47,498.4 \mathrm{~S}\). Completed.

\section*{California Schools for the Deaf and Bllnd, Berkeley}

Chap. 142-1927.
W.O. 5 G-Dormitory for boys, \(\$ 69,000\). Completed by June 30, 1929.
\$8-Improvements to grounds, \(\$ 1,998.85\). Completed.
115 -Removing clock tower, \(\$ 3,256.44\). Completed.
119-Miscellaneous repairs and improvements, \(\$ 16,007.48\). Completed.
Chap. 30-1925.
W.O. 333 -Repairs and painting \$4,078.26. Completed.

Chap. 142-1927.

\section*{Chico State Teachers College, Chico}
W.O. 21-Improvements Mit. Shasta Summer School, \(\$ 3,000\). Completed. 52 -New main building, \(\$ 75,000\). Completed by August 1, 1929. 125-Repairs and painting, \(\$ 10,000\). Completed.
Executive Order 12.
W.O. 93-Razlng of walls and repairs, \(\$ 7,000\). Completed.

Executive Order.
W.O. 52-A-Supplementing W.O. 52, \(\$ 155,000\). Completed by August 1, 1929.

Chap. 30-1925.
W.O. 312-Gyminasium, \(\$ 35,000\). Completed.

\section*{Fish and Game Commission}

Chap. 142-1327.
W.O. 78-Superintendent's residence and employees' quarters and fced rooin at Tahoe Fish Hatchery, \(\$ 9,185.26\). Completed.
79-Superintendent's residence and employees' cottage Yosemite Fish Hatchery, \(\$ 6,653.91\). Completed.
99-Hatchery building, superintendent's residence and a garage building at Cold Creek, \(\$ 19,352.44\). Completed.
110-Hatchery building, superintendent's residence and an employees' quarters and garage building at Kaweah, \(\$ 20,000\). Completed.

\section*{Folsom State Prison, Represa}

Chap. 142-1927.
W.O. 32-Additional cell building, \(\$ 140,000\). Completed by January 1, 1930.

50 -Hospital building for tubercular prisoners, \(\$ 60,000\). Completed by January \(1,1930\).
61-Guards' cottages, \(\$ 22,500\). Completed.
82 -Repairs and improvements, \(\$ 14,000\). Completed.
87 -Equipment for wall construction, \(\$ 4,500\). Completed.
Executive Order 341.
W.O. 150-Repairs and improvements to bakery and officers' and guards' huilding, completing the entrance to cell block and the purcluase and installation of a portable oven, \(\$ 10,500\). Completed by Junc \(30,1929\).
Chap. 30-1925.
W.O. \(308-\) New post office, \(\$ 990.06\). Completed.

339 -Purchase of pipe for by-pass, \(\$ 707.12\). Completed.
Emergency Resolution 65.
W.O. 256 -New roof over old dining room, \(\$ 13,988.26\). Completed.

\section*{Fort Ross, Sonoma County}

Chap. 142-1927.
W.O. 104-Continuing restoration of Fort Ross, \$418.17. Completed.
\(12 \$\)-Continuing restoration of Fort Ross, \(\$ 3,781.83\). Completed by June 30 , 1929.

Chap. 142-1927.
Fresno State Teachers College, Fresno
W.O. 1-Permanent improvements at IIuntington Lake, \(\$ 15,000\). Completed. 40 -Science building, \(\$ 211,000\). Completed.

\section*{Humboldt State Teachers College}

Chap. 142-1927.
W.O. 37 -New gymnasium, \(\$ 35,000\). Completed by September 1, 1929.

38 -Completion of main building, \(\$ 15,000\). Completed by March 1, 1929.
Chap. 480-1925.
W.O. 305-Alterations in main building, \(\$ 1,000\). Completed.

366 - Alterations in main building, \(\$ 670.47\). Completed.
Industrial Home for Adult Blind, Oakland
Chap. 142-1927.
W.O. 35-Additions to Women's shop building. \(\$ 12,164.50\). Completed. 147 -Repairs to superintendent's residence. \(\$ 792.44\). Completed. 14 S -Waterproofing and roof covering. \(\$ 1,700\). Completed.

\section*{Los Angeles State Offices, Los Angeles}

Clap. 142-1927.
W.O. 92-Alterations to office quarters of Compensation Insurance Fund in Associated Realty Building, \(\$ 350\). Completed.
Chap. 142-1927-Department of Finance Support.
W.O. 108-Certain alterations on the tenth floor, Associated Realty Building, \(\$ 1,639\). Completed.

Chap. 142-1927-Department of Education Support.

2-Three patients' cottages at farm, \(\$ 215,000\). Completed.
45-Two assistant physicians cottages, \(\$ 17,000\). Completed.
\(66-\) Industrial Building, \(\$ 22,000\). Completed by June \(30,1929\).
70 -Improvement to water and power systems, \(\$ 10,000\). Completed b March 1, 1929.
85-Alterations in electric service equipment, \(\$ 2,891.16\). Completed.
91 -Miscellaneous repairs, \(\$ 4.078 .36\). Completed.
109 -Miscellanenus mechanical repairs and equipment, \(\$ 12,300\). Completer
Emergency Fund.
W.O. 346 -Installation of two new boilers, \(\$ 30,000\). Completed.

Chap. 30-1925.
W.O. 337-Miscellaneous repairs, \(\$ 1,999.51\). Completed.

\section*{Ventura School for Girls, Ventura}

\section*{Chap. 142-1927.}
W.O. 12-Laundry Building, \(\$ 12,970.94\). Completed.

116 -Miscellaneous repairs and lmprovements, \(\$ 13,222.03\). Completed. 139 -Repairs to septic tank, \(\$ 650\). Completed. 143 -New steam boiler, \(\$ 780\). Completed.
Chap. 30-1925-Support.
W.O. 254 -Repairs to electric pole lines, \(\$ 2,750\). Completed.

Chap. 142-1927.
Veterans' Home, Yountville
W.O. 39-Barracks Building, \(\$ 170,000\). Completed by April 1, 1929. 98-Miscellaneous repairs, \(\$ 32,704\). Completed. 49 -Store room and employees' building, single employees' cottage and duplex employees' cottage, \(\$ 35,000\). Completed.
Veterans' Home Fund, Federal Money.
W.O. 345 -Post Exchange Building, \(\$ 27,897.34\). Completed.

Chap. 142-1927.

\section*{Whittier State School, Whittler}
W.O. 34-Two cottages for boys, \(\$ 80,000\). Completed by May 1, 1929.

48-Administration building, \(\$ 50,000\). Completed by May 1, 1929.
114 -Hospital Bullding, \(\$ 35,000\). Completed by May 1, 1929.
W.O. 95 -Miscellaneous repairs, alterations and improvements, \(\$ 3,994.48\). Completed.
121-Catalina Island Summer Camp, \$2,999.44. Completed.
Chap. 30-1925.
W.O. 336 -Miscellaneous repairs and incinerator, \(\$ 2,890.94\). Completed.

Chap. 142-1927.

\section*{Woman's Relief Corps Home, Santa Clara}
W.O. 13-Repairs and improvements to buidings and drilling and equipment of water well, \(\$ 7,000\). Completed.
Total

COST OF OPERATION FOR THE PERIOD JULY 1, 1927
TO JANUARY 1, 1929
Total cost of work handled
Total cost of architectural and engineering service which includes the
following items:
\(-\$ 6,556,19144\)
printing, traveling, postage, freight and express, automobiles, ne and telegraph, private architects' fees and traveling expenses, janitor service, telephone operator, materials and supplies and equipment.
The cost of the architectural and engineer service rendered is 5.27 per cent of the total cost of the work handled, in amount \(\$ 6,563,691.44\).

At a cost of 5.27 per cent to the state the Division of Architecture has rendered on the work considered the largest construction program in the shortest period of time in its history. This accomplishment is even more apparent when consideration is given to the following facts:
(1) Out of a total of 194 projects handled, 22 were of a value of less than \(\$ 1,000\) and 74 were of a value between \(\$ 1,000\) and \(\$ 10,000\). Attention is called to the fact that it requires approximately the same effort, time and money to prepare a \(\$ 10,000\) project as it does a \(\$ 20,000\) project.
(2) A change of administration and a reorganization which created new department heads and new procedures demanding therefore on the part of the new officers, cautiousness, which fact slowed up action in securing the necessary approvals of procedure. At this date the Division of Architecture believes that all new officers involved in having to do with construction approvals are very familiar with our methods of operation because speedier approvals and cooperation are now forthcoming.
(3) The wide field of operations being seattered from Mount Shasta to San Diego, a total of 50 different places where construction activities
are being cared for. This situation produces a heary cost for securing preliminary data and maintaining supervision during construction.
(4) The cost of hiring the services of five private architectural firms.
(5) The cost of automobile replacements in the field heretofore being paid for from construction appropriations.
(6) The cost and time lost in moving to new office quarters.
(7) The salaries of the Auditing Division heretofore being paid from other funds.
(8) The great amount of time given to reports, survers, studies and conferences on proposed future projects not listed for construction during the biennium, the most important projects being as follows:
(a) The surrers, studies, preliminary drawings, estimates of cost, conferences, and inrestigations concerning designing of buildings and the water, serrer, and lighting problems for the new San Diego State Teachers College at San Diego.

Special Custodial Building-Mendocino State Hospital.
(b) Preliminary sketches, conterences and estimates of cost pertaining to the proposed scheme of development for California Institution for Women at Lanora, near Delhi, California.
(c) Proposed improvements to structures housing State Departments on the highways on the State boundary lines.
(d) Investigating, formulating and submission of a complete physical survey of all the existing buildings located at the California School for the Deaf, Berkeler.

\section*{COMMENTS.}

By having completed all the office work in connection with the 1927 construction appropriations by January 18, 1929, the division is now ready to proceed with the office work pertaining to the 1929 construction appropriations, thereby making a six months earlier start on new work than heretofore. This procedure, therefore, enables the earlier completion of projects in the field which results in housing problem relief, altrays a situation to be confronted brought about by the steady increase in the state's population. By June 30, 1929, the Division of Architecture will have completed in the field, all excepting four, of the 193 projects handled in the office for the 18 months period, July 1 , 1927, to January 1, 1929.
One of the most important assets the division possesses to enable the successful operation and accomplishment of a large building construction program is a schedule of building construction progress showing
the office and field activities of all projects to be undertaken, giving the name of institution, project, amount, contemplated dates of starting and completion of drawings, approvals and construction together with cost. This schedule of progress is formed at the beginning of a new construction era and is submitted to all persons involved for consideration and approval. This procedure eliminates all doubt and friction as to when a project will start and creates a definite goal to accomplish. The schedule is posted each month and shows at a glance the status of progress being made by the monthly percentage complete figures. An immediate summing up of the status and aecomplishments is always possible with the aid of the schedule.

The State of California through the services of this division is obtaining a high standard of excellence in all of its buildings and mechanical installations from the standpoint of design and economy. The division's work is always of such nature that it can be measured very closely. The division's expenses to operate will increase or clecrease according to the amount of construction work to be accomplished but every dollar spent will represent a certain percentage of construction work accomplished in connection with the architectural and engincering service involved.

The division's success in accomplishing the desired early enmpletion date for the office work in connection with the 1927 appropriations is due to the present efficient organization, cooperation and a striving to be up and doing at all times.

\section*{RECOMMENDATIONS.}
(1) Change the contract law so that contracts can be approved by the Deputy Attorney General in Sacramento instead of having to go to the San Francisco office for the Attorney General's personal approval as at present. This will probably save one week's time in exceuting contracts.
(2) Provide for inelnding a representative of the Department of Public Works on Commissions appointed to consider the establishment of new institutions involving the selection of sites and construction of buildings.
(3) Eliminate present requirement in contract law that contracts may not be let for amounts in excess of the estimates of the Department of Public Works.
(4) Continuation of having all construction projects carefully estimated before presentation for financing.
(5) Continuation of the policy of permanent building construction at all institutions where same is considered advisable.

\section*{TEN-YEAR BUILDING CONSTRUCTION PROGRAM AT STATE INSTITUTIONS}

At most of the state's institutions until comparatively recently, the determination as to what building construction development shonld be provided for at any given meeting of the legislature, has been based largely upon isolated consideration by the authorities responsible at the time, of a particular proposed structure and its location rather than upon a comprehensive development scheme taking into account some certain ultimate growth for each institution.

This has resulted unfortunately in various ways. For example:
1. The provision of proper quarters for employees until recently was neglected almost entirely with consequent serious difficulty in administration which will continue in diminishing degree until this need can be fully met, also construction costs which should have been borne in the past, must now be added to present and future expenditures.
2. The replacement of temporary buildings on account of serious neglect of this need, has involved and is involving much too long-continued use of insufficient, insanitary and fire-inviting structures, and from now on will require a disproportionately large money expenditure from which no increased inmate capacity will result.
3. The inmate capacity at practically all the institutions is less than the needs require with resulting overcrowding and inability of the institutions to accept commitment of many who should be admitted.
t. Building sites have in some cases been unwisely selected.

Yery early in his administration, Governor Young in order that he might have information needed for deciding what would be an orderly program of building construction as required to bring existing institutions up to their full capacity and to establish necessary new institutions if any, requested the Director of Public Works to have made a tentative building construction program to cover a period of ten years.

Such an orderly program will he based upon three principal factors: First, present and future needs during the ten-year period for inmate accommodations; second, probable amounts of money that can reasonably be expected to be made available for expenditure for building projects during succeeding bienniums for ten vears; and third, available building sites on the various properties taking into account areas now owned by the state and areas that can be expected to be added.

As to the first factor, figures for probable growth during the ensuing ten years have been arrived at on the basis of the average growth during the past twenty years.

Second, it is considered probable that provision can be made for expenditure for building construction at the institutions, of not more than \(\$ 5,000,000\) for each biennium or a total of \(\$ 25,000,000\) during the ten-year period.

Third, the building sites available for development at each of twentysix different institutions have been determined by means of plot plans of these institutions which have been completed and are available.
The plot plans above described show all existing buildings and the locations of all additional buildings required at each instituton to house the porton of estimated inmate growth during ten years which it is
thought should be assigned to it. In addition a separate sheet is being made showing the contours of the ground and still another sheet showing the location of all mechanical installations covering steam distribution, water supply and irrigation systems, electric and gas services for lighting and power, and sewage lines and disposal works.

Undoubtedly the most useful element in bringing about the total result in connection with the ten-year construction program is the plot plan. The gathering of the necessary information for and the making of these twenty-six plot plans have required several years time. They will be the means in addition of helping to solve the problem of orderly development, of saving time and money for all the state agencies and state officers who are concerned with any or all of the institutions. The Division of Architecture will retain the originals of these plot plans and will keep them up to date.

\section*{NINTH REPORT}

\section*{OF THE}

\section*{CALIFORNIA STATE BOARD OF ARCHITECTURE}

To His Excellcncy, C. C. Young,

\section*{Governor of the State of Califormia.}

The California State Board of Architecture herewith submits for your consideration, its ninth report, covering the period from March 31,1926 , to Mareh 31, 1928.

In accordance with the provisions of "An act to regulate the practice of arehitecture," the State Board shall consist of ten members, five of whom shall reside in the Northern District of California and shall constitute the Northern District Board for the examination of applicants for certificates to practice architecture in this state, and five members of said board shall be residents of the Southern District of California and shall constitute the Southern District Board for examination of applicants for certificates to practice architecture in this state.

Since the issme of the eighth report the following changes in the Northern District Board members were made: Frederick H. Meyer was appointed to succeed Clarence R. Ward, and James H. Plachek to succeed James R. Niller, whose terms had expired. James S. Dean was appointed to fill the racaney caused by the resignation of Edward Glass.

The California State Board at present is constituted as follows:
William H. Wheeler, President_---------------------San Diego
Frederick II. Meyer, Vice President
San Francisco
Albert J. Evers, Secretary-Treasurer_----------San Franciseo
A. M. Edelman, Assistant Secretary-Trcasurer_-_._-Los Angeles

John Parkinson_-----------------------------------Los Angeles

Mrron Hunt-------------------------------------Los Angeles
The Northern District Board, with offices at 537-538 Phelan Building, San Francisco, is as follows:

John J. Donovan.
James S. Dean.
James W. Plachek.
The Southern District Board, with offices at 1124 Associated Realty Building, Los Angeles, is as follows:

 John Parkinson.
Williait J. Dodd.
Mrron Hunt.

The annual meetings of the joint boards were held as follows: San Francisco, April 12 and 13, 1927, and Los Angeles, April 10 and 11, 1928. Each board has held the usual stated monthly meetings.

Two written examinations have been held each year for the Northern District at the University of Califomia at Berkeley, and for the Southern District at the University of Southern California, Los Angeles. (For the number of certificates issued, see financial statement.)

Uncler the date of July 20,1927 , the Attorney General of the State of California issued the opinion that without a certificate it is illegal to practice architecture or to put out any sign or card to advertise under any of the following titles: John Smith, Architecture; Architecture by John Smith; John Smith, Architecture and Building ; John Smith, Architecture and Engineering: Architectural Designer; Architectural Engineer; Architectural Draughtsman; Architect (Unc.); Designer of Homes; Designer and Builder; Designer (when this designation is used in comnection with architectural work.)

At the ammal meeting of \(192 \overline{7}\), a committee was appointed to amend the rules and regulations of the board. The committee reported at the annual meeting in 1928 , and the rules as adopted are published in this report.

All of which is respectfully submitted.
Dated March 31, 1928.

Williay H. Wheeler, President.

Albert J. Evers,
Secretary.

\title{
AN ACT TO REGULATE THE PRACTICE OF ARCHITECTURE
}

\author{
(Chaptel CCNIL.)
}
(Approved March 2.3, 1901.)
The people of the State of Culifornia, represented in senute and
Assmbly, do cnact as follows:
Section 1. Within sixty days from and after the passage of this act, the Governor of the state shall appoint ten persons, which persons so appointed shall constitute a board, which board shall be known and designated as the State Board of Architecture. Five members of said Board of Architecture shall be residents of the Northern District of California, and shall constitute the Northern District for the examination of applicants for certificates to practice arehitecture in this state. And five members of said board shall be appointed from the Southern District of California, and shall constitute the Southern District Board for the examination of applicants for certificates to practice architecture in this state. The Northern District shall be all that portion of the state north of the northerly line of the comnty of San Lnis Ohispo and the county of Kern and the country of San Bernardino. And the Southem Distriet shall be all that portion of the state south of the northerly line of the county of San Lnis Obispo and the county of Kern and of the county of San Bernardino. Said State Board of Architecture shall be appointed by the Governor as follows: Five members shall be appointed from the members in good standing of the San Francisco Chapter of the American Institute of Architects, or some similar institution or association of architects, two of whom shall be designated to hold office for two rears. Five members shall be appointed from the members of the Southern California Chapter of the American Institute of Arehitects, or some similar institution or association of architects, two of whom shall be designated to hold office for two years. Each person so appointed shall hold office for four years, unless in designated to hold office for two years. And thereafter, upon the expiration of the term of office of the persons so appointed, the Governor of the state shall appoint a successor or successors to such outgoing person or persons whose term of office shall have expired. to hold office for four years; provided. that the membership of the State Board of Architecture shall be composed as herein set forth. Each member shall hold over after the expiration of his term of office until his snccessor shall have been duly appointed and qualified. Any vacaney occurring in the membership of the board shall be filled by the Governor of the state for the unexpired term in like manner. The members of the board shall serve withont compensation from the state. The expenses of the board shall be paid out of the fees collected from applieants for certificates.

SEc. 2. The members of the State Board of Architecture shall, before entering upon the discharge of the duties of their office, take and file with the Secretary of State the constitutional oath of office. The said state Board of Architecture shall, within thirty days from and after their appointment, meet and elect from their nimber a president and a vice president, one of whom shall be a resident of the Northern District, and one a resident of the Southern District, and two seere-
taries, one from each district. The secretaries shall also act as treasurers. The person receiving the highest number of votes shall be secretary, and the person receiving the next highest number of votes, assistant secretary. Said persons shall hold office for two years, or until their successor's shall have been duly elected and qualified.

Sec. 3. The board may adopt rules and regulations for the government of its proceedings, not inconsistent with this act. The state board shall adopt a seal for its own use, and one for each of the district boards. The seal used by the Northern District Board shall have the words "Northern District" inseribed thereon, and the one for the Southern District shall have the words "Sonthern District" inscribed thereon, and the secretary and assistant secretary shall have charge, care and custody therenf. The secretary shall keep a correct record of all the proceedings of the board, which shall be open to public examination at all times. Six members shall constitute a quorum for the transaction of business of the State Board of Architecture, and three members shall constitute a quorum of the district boards for the transaction of business. Special meetings of the State Board of Architecture shall be called by the secretary upon the written request of four of its members, and by giving twenty days' written notice of such mecting, and the time and place at which such meeting is to be held, to each member of the board. The district boards shall call special meetings upon the written request of two of its members made to the secretary, and upon five days' written notice to each member of said district board. Within thirty days from and after the date of their appointment, the state board shall meet to organize, elect officers as in this act provided for, and formulate and adopt a code of rules and regulations for its govermment in the examination of applicants for certificates to practice architecture in this state; and such other rules and regulations as may be necessary and proper, not inconsistent with this act. The board may from time to time repeal or modify its rules and regulations, not inconsistent with this act. The state board shall meet annually, on the second Tuesday in April, for the purpose of transacting such business as may lawfully come before it, not inconsistent with this act. The district boards shall hold their regular mectings for the examination of applicants for certificates to practice architecture on the last Tuesday of January, April, July and October of cach year. The board of the Northern District shall meet in San Francisco; and the board of the Southern District shall meet in Los Angeles, and at such other times and places as they may elect, to examine applicants for certificates. Any person shall be entitled to an examination for a certificate to practice architecture upon payment, to the district board when he makes application, a fee of fifteen dollars, which fee shall be retained by the board; should the applicant pass a satisfactory examination by said district board, the secretary shall, upon the payment to him of a further fee of five dollars, issue to the applicant a certificate, signed by the president and secretary, sealed with the seal of the district board, and directed to the Serretary of State, setting forth the fact that the person therein named has passed a satisfactory examination, and that such person is entitled to a certificate to practice architecture in this state, in accordance with the provisions of this act; and upon the payment to the Secretary of State of a fee of five dollars, the secretary shall at once issue to the person therein named, a certificate to
practice arehitecture in this state in aceordance with the provisions of this act, which certificate shall contain the full mame of the applicant, his birthplace, and age, together with the mame of the district board issumg the certifieate, and date of issuance thereof. All papers received by the Secretary of State on application for certificate shall be kept on file in his offiee, and a proper index and reeord thereof shall be kept by him.

Ns:c. 4. Any architere in good standing, who shall show to the satisfaction of the "listrict board of the district in whieh such architect may reside, that he was engaged in the practice of the profession of arehitecture on the clate of the passage of this aet, shall be granted a certificate withont passing an examination, on the parment to the district board of a fee of five dollars; provided, such application shall be made within six months from and after the passage of this act. Said eertificate shall set forth the fact that the person to whom the same was issued was practieing architecture in this state at the time of the passage of this act, and that the person therein named is entitled to a eertificate to practice architecture without having to pass an examination by the district board ; and the Secretary of State shall, upon the payment to him of a fee of five dollars, isstue to the person named therein a eertificate to practiee architecture in this state, in accordance with the provisions of this act. Wach certificated architect shall have his certificate recorded in the office of the county recorder, in each and erery county in this state, in which the holder thereof shall practice, ant he shall pay to the recorder the same fee as is charged for the recording of deeds. A failure to have his certificate so recorded shall be deemed sufficient canse for revoeation of such eertifieate.

SEC. \(\bar{j}\). After the expiration of six months from the passage of this act, it shall be mlawful, and it shall be a misdemeanor. pmishable by fine of not less than fifty dollars nor more than five hundred dollars, for any person to practice architecture without a certificate in this state, or to adrertise, or put ont any sign or card, or other device which might indieate to the priblic that he was an architect; providerd, that nothing in this act shall prevent any person from making plans for his own buildings, nor furnishing plans or other data for buildings for other persons, provided the person so furnishing sueh plans or data shall fully inform the person for whom such plans or data are furnished that he, the person furnishing such plans, is not a certified arehitect; provided, that nothing in this act shall prevent the employment of an arehitect residing out of the State of California, to prepare plans and specifications for buildings or other structures within the state. eonditioned, he shall present satisfactory evidence to the board of the district in which the structmre is to be erected, that he is a competent arehitect. when such board shall issue to such arehitect a temporary ecrtificate for such employment. upon the payment of a fee of five dollars. Arehitects' certificates issued in aceordance with the provisions of this act shall remain in full force until revoked for canse, as hereinafter provided for in this act. A certificate may be revoked for dishonest practices, or for gross incompeteney in the practice of the profession, which questions shall be determined hy the distriet board of the distriet in which the person whose certificate is called in question shall resicle, or shall be doing business ; and upon a full investigation of the eharges by the clistrict board, an opportunity having been given the aecused
to be heard in his own defense or by counsel ; and upon the verdiet of at least four members of the distriet board, the board may issue its certificate to the Secretary of State revoling the certificate of the person accused; and the Secretary of State shall thereupon cancel such certificate. And on the cancellation of such certificate, it shall be the duty of the secretary of the district board to give notice of such cancellation to the county recorder of each county in the state, whereupon the recorder shall mark the certificate recorded in his office, "cancelled."

After the expiration of six months, the person whose certificate was revoked, may have a new certificate issmed to him by the Secretary of State upon the certificate of the district board by which the certificate was revoked.
Every certificated arehitect shall have a seal, the impression of which must contain the name of the architect, his place of business, and the words "certificated architect," with which he may stamp all plans prepared by him.

Sec. 6. This act shall take effect from and after its passage.

\section*{AMENDMENT TO ACT}

An act to amend an act entitled "An act to regulate the practice of arehitecture, approred March 23, 1901," adding a new section thereto to be numbered section seven, relating to an annual license fee.
(Approred March 26, 1903.)
The people of the State of Califormia, represented in Senate and Assembly, do enaet as follows:
Se tion 1. An act to regulate the practice of architeeture, approved Marelı 2:3, 1901, is hereby amended by adding a new section thereto to he numbered section seven.

SEc. 7. Each regularly eertificated architect shall pay an anmual license tee of five dollars, said fee to be paid to the secretary of the board of the district of which he shall be a resident, and shall be payable in advance on Jamary 1 , and shall become delinquent the first day of April of each year. after which date it shall be delinquent, and the certificate of such architects who shall fail to pay their license fees by April 1 of each year, shall be subject to cancellation by said district board, and notice of such cancellation shall be sent to each county recorder of the State of California and to the Secretary of State, as provided in section five of the act to regulate the practice of architecture, approved March 23, 1901, for cancellation of certificates. And the secretary of said district shall issue a receipt signed by the president and sectetary of the district, and under the seal of the district board, to cach arehiteet paying said license fee, showing that said certificated architect has paid his annual license fee, which license receipt shall be displayed in a prominent place in the office of said arelitect. The fees so eoflected shall be used to meet the expenses of the State Board of Arehitecture.
scc. 气. This act shall take effect immediately.

\section*{RULES AND REGULATIONS OF THE CALIFORNIA STATE BOARD OF ARCHITECTURE}

\section*{RU1\&N}
"Robert's linles of Orier" are adopted as the rules of this board for the conduet of business at its meetings.

\section*{OFFICERS}
I. The State Board of Arehitecture shall elect from its number a president and a rice president, one of whom shall be a resident of the Northern District. and one a resident of the southern District. who shall be respectively the president of the district boards: and two secretaries, one for each district. The secretaries shall also act as treasurers. The person not a resident of the same district as the president, receiving the highest number of votes shall be the secretary, and the person not resident of the same district as the vice president. receiving the highest number of votes, shall be assistant secretary. The secretary and assistant secretary must be residents of different districts and shall be secretaries of their respective districts. Said officers shall hold office for two years, or until their suceessors shall have been duly elected and gualified.
II. The board shall adopt a seal for its own use, and one for each of the district boards. The seal used by the Northern District board shall have the words " Northern District" ins ribed thereon, and the one of the Southern District shall have the words "Southern District" inscribed thereon, and the secretary and the assistant secretary shall have, respectively, the charge, care and custody thereof.
III. The secretary shall keep a record of all the proceedings of the board, which shall be open to public examination at all times.
IV. Six members shall constitute a quorm of the state board and three members shall constitute a quorum of the district board, for the transaction of business.
V. The certificates of competency to practice architecture, shall be signed by the president and secretary of the district board by which the certificate shall be ordered issued.

\section*{Meetings}
I. The anmual meetings of the state board shall be held alternately in San Francisco and Los Ingeles. The quarterly meetings of the district boards shall be held respectively in San Francisco and Los Angeles. The anmual meetings of the state board shall be held on the second Tuesclay in April. Special meetings of the state board shall be called by the secretary, upon the written request of four of its members, and by giving twenty dars' notice in writing of such meeting, and the time and place at which such meeting is to be held, to each member of the board.

1I. The district bnards shall hold their regular meetings for the examination of applicants for certificates to practice architecture. on the last Tuesday of each month.
III. The district boards shall call special meetings for their respective disiricts, upon the written request of two of its members. made
to the secretary of the district, and upon five days' mritten notice to each member of sueh district.
IV. The rhief place of business for the Northern District shall be San Francisco, and the Southern Distriet, Los Angeles.
V. Special meetings may be held for the purpose of examining applicants for ecrtifieates, at such places as the distriet board may clect, due notice of the time and place being. given to the applicants.

\section*{FINANCE}
1. The conduct of the finances of each district board shall conform to the rulings of the State Board of Control. All checks shall be signed by the secretary-treasmer of each district board.

\section*{CERTIFICATES}
I. The distriet board shall issue certificates to arehitects entitled to receive them, as provided for under sections (3) and (5) of the Act 10 liegulate the Practice of Architecture in the State of California, as approved March 23. 1901.
11. The district boards shall have anthority to issme "temporary" ecrtificates to monresident arehitects of the state, who shall show to the satisfaction of the board their competency to practice architecture. Such temporary certifieates shall be for stated buildings. The fee for sueh temporary certificates shall be five clollars ( \(\$ 5\) ), isstued by the board of the distriet in which the structure is to be erected.
III. Each member of a firm praeticing architecture, must have a separate certificate.

\section*{REINSTATEMENT}
I. A person whose certificate has been canceled by request, desiring to be reinstated as a certificated architect of the State of Califormia, may have a new certificate issued to him by submitting satisfactory evidence to the district board as to his character and honorable practice since the cancellation of his eertificate, and upon receipt of the necessary remittance to cover the current year's annmal license fee and the board certificate fec. The board certificate, in turn, to be sent to the Secretary of State. Sacramento, accompanied by the necessary fee for the state certifieate, and this state certificate to be recorded in the county recorder's office of the county in which said applicant shall practice. However, when a person whose certificate has been revoked by the district board for noupayment of anumal lieense fees, desires to be reinstated, this same procehure would be taken with the exception that all ammal license fees for the years intervening between the date of cancellation of this certifieate and the date of his request for remstatement mist be paid. Or, in lien of this latter, said person might file a new application and go through the same procedure and expense of applying for a certificate as in the first time.

\section*{EXAMINATIONS}
I. Every applicant must pass either an oral or written examination before having issued to him a certifieate to practice architecture in the State of California. In all cases where the applicant for examination
submits to the board satisfactory evidenee as to character, honorable praetice, competeney and qualifieations, and shows that he was granted a certifieate to practice arehitecture in another state or country where the standard of qualifieation is not lower than that recquired by the board, then and in such case, the demonstration and oral examination of the applicant's knowledge and ability so made, if fomd sufficient by the board, may take the place of written examination.
II. In all cases where the applicant for a certificate to practice arehitecture in the State of California shall submit to the board satisfactory evidenee as to charaeter, honorable practiee, competeney and qualifieations, and shows that he has been continuously engaged in the practice of struetural engineering on his own account, or as a member of a reputable firm or assoeiation of architeets or structural engineers for more than ten years prior to the date of his application, then and in such ease, the demonstration and oral examination of the applieant's knowledge and ability so made, if found sufficient by the board, may take the place of written examinations in the subjects of Materials and Specifications. Strength of Materials and Struetural Design ; provided, however, before being granted a certificate, he mist pass a satisfactory oral or written examination in Theory of Architecture and Arehitectural Design.
III. For oral examination, the personal attendance of the applieant, if a resident of the state, before a meeting of the board, or of an examination committee, shall be required before the certificate is issued. Applications for certifieates, from residents of other states, may be considered at any meeting of the board, without a personal appearance of the applieant, provided the exlibits as submitted, with proofs of the execution of previous works, are satisfactory to the board and establish an ability equal to that demanded by a regular examination.

Note- The California State Board of Arehitecture is a membar of the National Council of Architectural Registration Boards, and holders of certificates to practice architecture in other states, or nonresidents, desiring to make application for a certificate to practice in this state, will materially facilitate the consideration of their applications, by applying to the National Council of Arehitectural Registration Boards, suite :2300, 175 West Jackson Blvd., Chicago, Illinois.
IV. 1 Diploma of Graduation from the full four-years' course in arehitecture in any university or technical sehool, approved by the board, with at least four years' experience in an architect's office, before, during and after such course, two years of which experience must be after receiving diploma, may be aceepted with oral examination as satisfactory evidence of a competent knowledge of architectural design and construction required for a certificate to practice as an arehitect in California aecording to law. Applieants having such diploma, but not the required four years' experience, should apply, for written examination only after showing evidence of two years' office experience after graduation. Those applicants for certificates, not having college or technical training, shall have at least ten years' experience in an arehitect's office prior to making application for oral examination.

List of approved sehools on file at the board offices.
V. Applicants not having either the above technical training and experience, nor the ten consecutive years' experience in an arehitect's
office, and desiring to become certificated by passing the written examination, should have had fire years such arehitectural experience before taking the written examination.
VI. The president, vice president, secretary-treasmrer and assistant secretary-treasurer of the board shall constitute a standing committee for all written examinations. The written examinations are held semiannually at the University of California at Berkeley, and at the University of Sonthern California at Los Angeles, approximately in the months of Jannary and July. This regular class examination shall oceupy not less than four days, two dars shall be devoted to ascertaining the ability of the eandidate to make practical application of his knowledge in the ordinary professional work of an architect, including struetural design and supervision of buildings, and two days will include an effort toward ascertaining the qualifieations of the applicant in arehitectural design, theory and history.
VII. Applieations will be received at all times. If the number and urgener of the application received, make it seem expedient to the board to institute examinations at any other than the times heretofore mentioned, due notice of such additional examinations will be forwarded by the secretary to those whose applications are on file at his office. Applications for the regular examinations should be at the secretary's office two weeks before the date set for examinations, and must be attested by a notary and filed in duplicate.
VIII. The board meets on the last Tuesday of each month at which time qualified candidates may present themselves before the board for oral examination with drawings ( 3 types of buildings complete), photographs, letters and other data demoustrating their experience and qualifications.
IX. Applieants must submit definite substantiating mritten evidence that the work presented is their own.
X. Applicants. in order to pass, must receive a grade of 70 per cent. Applicants receiving a grade of 70 per cent or more in the examination in a given subject need never repeat that partionlar examination, but those receiving a grade of less than 70 per cent shall be considered to have failed in that subject, and shall be required to repeat the examination therein.
XI. Subjects covered by the written examination are as follows:

Design --------------------------------------------------1 1 day
Architectural Practice ----------------------------------1 \(\frac{1}{2}\) day
Materials and Specifications.---------------------------1 \(\frac{1}{2}\) day
Strength of Materials_-----------------------------------1 \(\frac{1}{2}\) day

\section*{Xll. Fees conneeted with taking ont a license are as follows:}

Applieation fee ------------------------------------------1500 0

Total

\(\$ 3000\)

\footnotetext{
Temporary license fee
}

An additional fee of \(\$ 10\) is repmired of each candidate taking the written examination in one or more subjects a second time.

Fees are not refunded for any eause.
Note.-Sample examination papers may be seen at the offices of the board.

\section*{ARCIITECT'S INDINIDUAL SEAL}
I. The architect's individual seal is for the purpose of making an impression, hence a rubber stamp will not be permitted.

\section*{TEXTBOOKS}

The following textbooks are suggested for study:
Itistory of Arichtecture, by A. D. F. IIamlin.
Good Practice in Construction, by Kinobloch.
Kidder-Nolan Arehiteet's and Builder's Handbook, 17th Edition.
A Mistory of Arehitecture, by Prof. Banister Fletcher and Banister F. Fletcher.

Essentials of Composition as Applied to Art, by John V. Van Pelt.
Architectural Composition, by J. B. Robinson.
A Dietionary of Arehitecture and Building, by Sturgis.
Blake on Law of Architecture and Building.
San Francisco or Los Angeles Building Ordinances.
State IIousing Manual.
Handbook of Building Construction, Vols. I and II, by Hool and Johnson.

Structural Engineers' Handbook Library, by Hool and Kinne.
1. Struetural Members and Connections.
2. Stresses in Frame Structures.
3. Steel and Timber Structures.
t. Reinforecd Conerete and Masonry Struetures.

\section*{NOTICE TO ARCHITECTS}

Many certifieated architects fail to comply with section \(\frac{t}{}\) of the "Act to Regulate the Practice of Arehitecture," which provides that each certifieated arehitect shall have his certifieate recorded in the office of the county recorder, in each and every county in this state in which the holder thereof shall practice. Your failure to observe this provision may jeopardize your position in the event of legal proceedings of any kind in which you might become involved.

It has also been brought to the attention of the board that the use of the seal on all drawings as mentioned in section 5 has been neglected. This provision of the act is mandatory as to the use of a seal.

It can not be too foreibly brought to your attention that it is incumbent on you to assist in upholding professional standards by using all legitimate means to impress the public with the dignity of the position of the certificated architect. and by using the seal on your drawings and other documents you will be assisting rery materially to this end. The impression of the seal as being correct as to form can be obtained from the secretary. The seal when applied to tracings will blne-print better if slightly blackened with pencil.

\section*{OLD AGE DEPENDENCY}

A Study of the Care Given to Needy Aged in California

"There's no place like home."

THE STATE DEPARTMENT OF SOCIAL WELFARE
SACRAMENTO, CALIFORNIA

1928

\section*{LETTER OF TRANSMITTAL}

To His Excelloncy, the Governor of California, and to the Monorable Members of the State Legisluture.

In accordance with 1927 legislative act which provides for a study of old age pension systems in other commmnities and of the conditions affecting care of the aged in this state, and requests the State Department of Social Welfare to make a report thereon with recommendations, we have the honor to transmit to you the results of such study in the following report.

Respectfully submitted.
STATE DEPARTMENT OF SOCTAL WELFARE, Anva L. Saylor, Director.

Department Members:
Rudolpi I. Coffee.
Maude Spear King. Robert E. Luceey. Lamina Graham Timmons. Mrs. D. E. F. Easton. Robert G. Sproul.

\section*{FOREWORD}

This report of an investigation into the conditinus affecting the care of aged persons in California is the result of an act passed by the 1927 state legislature as follows:

Chapter \(4 \overline{5}^{2} 2\), Statutes 1927.
"The state department of social welfare is hereby anthorized. empowered and directed to make a thorough and exhaustive investigation of old age pension laws of other states and countries and of the administration thereof and of each therent, also of conditions in California and the system of old age pensions best adapted to such conditions and to render its report thereon, with such reeommendations as it may have to make in respect therets. to the legislature of the state of California at the commencement of the forty-eighth session thereof."
Taking this request as an expreasion of the desire of the members of the legislature for concrete information regarding C'alifornia's own problem of adequate care for aged citizens, the state Department of Social Welfare has endeavored to secure the desired facts. A census of needy aged has been made by addition of special items regarding age groups on the regular annual report made by eomnties to the State Department. In intensive survey of a sample group of representatire counties was made, including institutional care as well as an analysis of outrelief given to aged persons. The present scheme of C'alifornia poor relief laws was made the subject of special study and is presented in this report. In accordance with the legislative request for information concerning old age pension laws in other states and other countries, a digest of these measures is included herein. It has not been possible to go into an exhaustive discussion of the various aspects of old age dependency ant the canses thereof: neither has it seemed wise to attempt a detailed study of the several remedies proposed by economists. There are two reasons for this curtailment of effort ; first, the amount of time, service and expense involved. and second, the fact that carefully compiled studies of this nature have been made by other states and are available for use.

Basing its recommendations upon the findings of the field survey and upon its knowledge of actual conditions existing in California, the State Department of Social Welfare has weighed carefully the evidence collected and offers herewith its suggestions for legislative action which would appear to meet the needs of the situation and at the same time fit into the present relief laws of the state and county governments. It will be seen that the proposed act retains many features of a bill presented to the 1927 legislature, but supplies some provisions which were lacking in that bill and which it is felt will insure better coordination of state and county activities to the end that more adeynate assistance will be given to needy aged.

The sources of information for the field surver were publie records in county offices, the records in private relief agencies, tonferences with officials, other individuals, committees and boards, and finalls. visits to and intcrviews with the aged people themselres,

The ficld work was done and the report written by Miss Esther De Turbeville, head of the County Division of this Department; as the work of the County Division includes inspection of county institutions and organization of county outrelief, Miss De Turbeville was exceptionally well qualified to undertake the task.

For many facts concerning the eare of aged in San Francisco and Alameda counties, the State Department is indebted to the Heller Committee for Research in Soeial Economics of the University of California, from whose recent publication, "The Dependent Aged in San Francisco" (1928), numerous quotations are made.

The courtesy extended by all the county officers faeilitated the work of the survey. Assistance given by executives and other workers in the county institutions and county relief and welfare offices was an important factor in securing the desired information.

Acknowledgment is made of the assistance rendered by the University of California Library (Department of Economies) and the State Library in assembling laws, reports and other pamphlets for the use of this survey.
The state officers of the Fraternal Order of Eagles offered any service which their members could give to the field surver. While it has not been necessary to eall upon them for personal assistance, the State Department of Social Welfare wishes to express its appreciation for their offer of eooperation and for their action in circularizing their members with instruction to aid the state survey by expediting the county reports on local census of needy aged.

\section*{PART I}

\section*{SUMMARY OF FINDINGS WITH RECOMMENDATIONS}

\section*{Chapter 1}

\section*{THE PROBLEM}

Aged persons in needy. circumstances do not make as strong appeal to public sentiment as do dependent ehildren. Yet they are as helpless as children and their need of protection is as great. Indeed they are more helpless, becatise they lack the vigor of youth and the hope of growth. It is only by personal knowledge such as was gained in this survey, that there can be full appreciation of the patience and braver: with which thousands of aged in California face the meertainties of their few remaining years. Their eomrage in the face of inereasing physical weakness is amazing.

It has not been the policy of the Tnited States govermment, up to the present time, to make any national provision for its needy citizens. The responsibility for such provision has been delegated to the states and by them passed on to the comnties. In ('alifornia, the comnty government has met this responsibility for the care and support of aged dependents with a dual system of institutional and non-institutional relief. While this system, originally, was similar to the almshouse and outcioor relief given in other American states. it has shown marked social progress in California in the last decade.

\section*{Institutional Care.}

California today has no "poorhonses." The county hospital is becoming more and more a medical hospital with a department for the eare of aged and chronic patients; in the larger counties the ablebodied (ambulatory) old people have been separated entirely from the hospital building and placed in county farms or homes for the aged. For the lonely old person without family ties, and for those who are unable because of physical weakness to maintain a home of their own, the comnty institutions offer a shelter which must be maintained. With rery few exceptions, these county institutions are well equipped and well managed.

Every county in California, with the exception of three (Alpinc. Mono and Mariposa), has a comnty hospital for the care of sick and aged. In addition, the larger counties have separate institutions for the aged. In all, there are sixty-three such county institutions in the state. All are under the supervision of the State Department of Social Welfarc. A census of these institutions, taken for the age groups, showed that on June 30, 1928, there were 5065 inmates who are 6.5 rears of age and over; of these 3612 , or 72 per cent, are 70 years of are or older. It is estimated that not more than 5 per cent of the aged persons in these institutions would be able, physically, mentally, or socially to live outside the institutions.

\section*{Non-institutional Care, Known as "Outrelief."}

In every community there are old people who do not need or desire institutional care. Some of them are able to continue some small bit
of work to earn part of their living expenses; in the case of many seen during this survey it seemed as though this small eftiort at independence is essential to their happiness and self respect. Some old persons own their homes where they wish to remain although they are without inenme; others have homes offered to them rent free by relatives or friends. For all of these it is more satisfactory and economical to contribute a small sum regularly to their support and permit them to remain outside of the institution until such time as sickness may require nursing care when they should have access to the county hospital unless other service is available.

California counties, with the exeeption of San Franeisco County, provide this group of old people with relief outside of the institutions. In San Franciseo county there is no provision from public funds except for institutional care. The private charities of the eity give outrelief to approximately 300 needy aged persons who are 65 years of age or older. This group of privately supported old people is included in the tabulation of outrelief cases inasmuch as they eonstitute the same group which receives public aid in the other counties.

There were on June 30. 1928, approximately 3600 persons 65 years of age and older, of whom about 2400 were 70 years of age or older. who were receiving relief in their own homes or other lodgings outside of institutions.

The number of couples is not large but they form a body which ealls for special consideration.

The larger counties, through county welfare departments or relief offices, are developing intelligent social treatment of these independent old people who are capable and desirous of life outside of an institution. In the majority of comnties. however, this surver diseloses that often the aid given is inadequate. Exelusive of Los Angeles C'ountry, which has worked out an interesting system of relief to the aged that is described elsewhere in this report, the average county aid given to aged persons outside of the county institutions is less than fifteen dollars ( \(\$ 15\) ) per month per capita. Instances were found where old men and old women were trying to exist upon \(\$ 5\) to \(\$ 10\) per month, enduring hardships rather than enter the eounty hospital or farm because they clislike institutional hife. In twentr-five eounties the monthly allowance to needy aget is fixed at \(\$ 10\) per month. Only six counties give a monthly allowance of \(\$ 20\) or more per capita.

Special attention has heen given in this surver to the old people living outside of the institutions and capable of self care, for this is the group which will be affected most hy any legislation that may be enacted to extend state aid to the needy aged. It is a group which is being augmented constantly hy the modern policy of supplanting edterly men and women by more youthful workers. Une of the most tragie things met in this surver was the appeal of the older man and woman for a chance to work and earn at least a part of their living. It is not a part of this report to discuss the adrantages or disadrantages to society of this modern policy in employment. The fact must be recognized, however, that it is becoming increasingly diffieult for a greyhaired man or woman to secure emplopment. In nany instances they are refused even the opportunity to register or apply for a position beeatuse of the age limit.
"It is the irony of fate that white life has bern lengthened, the working period has been shortened and thus a longer streteh of old age dependence results." (1)r. John X. Japp, former member of Ohio (Commission on Old \(\Lambda\) ge Insurance.)

Statisties on the sample gromp s.d. whed show that approximately three-fourths of the persons listed as "needy aged" are 70 years of age or older. Eighty-eight per cent are citizens cither by birth or naturalization. Nixtr-four per cent have lived in California twenty years or longer. The aged neweomers to the state were found mostly. in the southem comnties and the majority of them are natives of the United States. The foreign born in the aged gronp are, for the most part, old residents in California, many of them having come as children with their parents in pioneer days. Seventy per eent of the sample group are native born Americans; this includes a small number of aged Indians who live in their own cabins and receive county outrelief.

\section*{Brief Discussion of Suggested Plans for Improved System of Old Age Care in California.}

During this survey of California conditions affecting the aged, several plans have been suggested for bettering the system of aid. Mention of them is made here as follows:

\section*{1. Old Age Insurance or Social Insurance.}

The State Department of Social Welfare endorses this as the most scientific and desirable plan for the ultimate solution of old age care. There are so many angles, bowever, to the establishment of a contributory system that the smbject demands more consideration and technical investigation than is possible under this present study. The dependent aged now under ennsideration for relief are beyond the age where they could profit by a system of old age insmrance and, in any event, their needs must be met by an endowment or non-contributory plan while the better system of insurance is being perfeeted for the benefit of rounger workers.

It is hoped that some state provision will be made for further study of the subjeet of old age insmrance, to be carried on either by the state university or a special eommittee. The purpose of such study shond he to determine whether it is possible and advisable for California to inaugurate a contribntory system of old age insurance for its eitizens so that, in time, the number of dependent aged should be reduced to a minimum. A considerable hody of information on the subject of sueh insurance has been collected in the course of this present study and the Department of Social Welfare will be glad to plaee this material at the disposal of the legislative eommittee or other interested persons.

\section*{2. A state Home for the Vcedy Aged.}

There are several reasons why this plan is inadrisable: (1) the request for this surver came from an expressed desire of the old people themselves for life outside of any institution; (2) the state has no provision under present laws for smeh a home for the aged, and does not recognize a need for it; (3) the comnties are maintaining institutional homes for the aged which have the added adrantages of hospital wards, proximity to old friends and relatives, and the possibility of the aged person keeping in touch with familiar scenes by frequent visits:

\footnotetext{
2-64165
}
these county homes are needed by approximately 95 per cent of their present inmates and therefore must be continued and improved.

\section*{3. A General Old Age Pension Law Without the "Means" Qualification.}

The objection to the means qualification (restriction of property and income) is that it is class legislation. The State Department considers that it would not be possible or advisable for California to establish a non-contributory system of old age pensions without the means qualification. The whole movement towards old age assistance has as its incentive the welfare of the needy aged; the public is not concerned particularly with the welfare of those aged who are financially independent. The cost of a general old age pension system would be prohibitive if established by one American state; also it might have a tendency to draw to California many aged citizens from states which had no such provision.

\section*{4. A Non-contributory Eystem of State Old Age Pensions to Needy Aged.}

This form of old age relief was proposed in the bill which was presunted to the California legislature of 1925 . It has not been adopted by any of the American states. Some of the arguments put forward in support of this plan are that it has the advantage of simplicity, is "comparatively easy to administer and can become available almost immediately." Many of the proponents of old age pensions advocate this system of payments from state funds. Estimated costs of a state pension in California to persons 70 years of age and older restricted to residents of fifteen years' standing and with a "means" qualification, range from three million to five million dollars per year.' Aside from the financial cost to the state, a system of old age relief which should disregard the local county provisions for supervision and care would be inadvisable and would risk hardship to the old people involved. The decentralization of supervision which comes with local administration is the best safeguard against "laps and gaps" and is capable of more flexible adjustment to changing conditions or individual cireumstances than a long-distance supervision. Central administration from a state body is needed to insure uniform procedure in the numerous counties. C'operation between state and county governments makes for efficieney in every way and has been found the best plan in California in administration of state aid to children (the so-called "mothers' pension') and other welfare measures. It should be equally effective in any legislation affecting the needy aged of the state.

The State Department of Social Welfare recognizes the need for more aderquate and intelligent care of the needy aged, but doubts the wisdom and practicability of establishment of old age pension sustems by individual American states.

\section*{5. A System of State Aid to the Aged, Similar to State Aid to Children.}

This plan of assistance to needy is favored by the majority of county officers and by social workers throughout the state. The State Depart-

\footnotetext{
\({ }^{1}\) "Dependent Aged in San Franclsco," pp. 11\%, 118. University of California Press, 1928.
}
ment of Social Welfare considers that this plan, with some changes, can be made to meet the needs of the situation and fit into the existing state and county laws with less friction and less administration expense than any other which could be devised at this time. None of the old age pension laws in other states make allowance for necessary social adjustinents which must be made to fit the personal needs of the aged applicants. In some instances, money alone will not solve the problem; medical care, nursing care, occupation, better honsing, sncial smround-ings-these often are more important than financial aid in adding to the human happiness or usefulness of the aged. For this reason and becanse many of tle counties in California have established departments of social welfare or social service where constructive measures are applied to relief giving, the state department recommends a system of combined state and comnty aid to needy aged as outlined in the proposed Act presented herewith. This recommendation is made in the full expectation that all counties eventually will administer public aid with the sympathetic understanding and business-like methods which an experienced social worker puts into relief work. The act places the primary responsibility for action upon the countr government. In this way, local knowledge will be utilized and the old people retain the contacts and surroundings to which ther are accustomed; at the same time the state will be enabled to assist in raising the standard of care and relief in counties which are now giving inadequate aid to the aged. By reference to the table showing relief to the aged by comnties, page 31 . it will be noted that many of the old pioneers remain in the mountain mining districts and other rural counties where the general population is very small and public funds limited, so that it is almost impossible, without state aid, to provide adequate support for the needy aged outside of institutions.

While the citizens of California may sympathize with all needy aged, the state's responsibility is to its old residents, the pioneers who have given their productive years to the commonwealth. Therefore the residence qualification is placed at twenty rears. Sixty-four per cent of the needy aged now in the state have lived in California more than twenty rears. The other thirty-six per cent must continue to be cared for by the counties until they qualify by residence for state aid.
6. A Public Bequest Fund for the Aged.

California, in common with most of the western states, has very few private philanthropies or foundations such as are provided in the eastern cities of America to defray the expenses of special care or service to the sick, aged or other selected groups of needy people. In the course of this survey it was found that there are conditions among the aged which demand more or different treatment than can be given from public funds. The care of those suffering from incurable diseases, special treatments for the deaf, the acute need for a study of occupations suited to the aged, and special employment service for them on indiridual casework basis: these are some of the places where private charity can do much good. To bring this matter clearly before the public and to provide a definite place where moners may be given for such special purposes, the State Department of Social Welfare is recommending that a section be placed in the proposed act for the melfare of the aged, establishing a "Public bequest fund for the aged" in the office
of the state treasurer, to be expended in such manner and amount as may be advised from time to time by the state department or specified in the bequest.

\section*{Recommendations.}

This surver shows a large body of aged persons in California who are needy and beyond the age when they are physically able to earn enough to provide for their wants. In the case of those who still are able bodied and anxious to earn at least part of their livelihood, they are debarred from emplorment by age limits set by employers. These old people are without adequate income and without relatives who can support them ; many have no children or other relatives living. Those who have chidren, on the whole, receive some small aid from them but because of young families or unemplorment or sickness, these children are unable to carry the full support of the aged parents.

There is need for state direction of the standards of care and aid given to aged persons by the counties; such wide difference in aid as indicated by the table showing average amounts of monthly allowance to needy aged (page 31) is not justified by state-mide conditions as found in this surver. In order to establish uniform methods in relief to needr aged, the state must assume partial responsibility. Delegation of this administrative function to an existing state department, such as the Department of Social Welfare which now administers the state aid to dependent children, would involve less administrative expense than the creation of a special commission and, in addition, has the advantage of utilizing the social knowledge now on record in that department from every county in the state.

The recommendations of this report are embodied in the draft of proposed act submitted herewith. It is self-explanatory. It is not exactly like the old age laws in other communities although it resembles somewhat the Wisconsin law, in the feature of reimbursement to counties. It is designed to meet the local conditions as found throughout California.

There are three points on which the state department would desire to lay stress in summing up the needs of the aged in this state at the present time:
1. That for the homeless needy aged and for those who are physically or mentally disabled and may be considered as proper subjects for institutional care, there should be continuation of the present care and treatment in county hospitals and county homes; the counties should be encouraged to continue their programs of constant improvement of the care in these institutions.
2. That for the able-bodied or partially supported needy aged person, able to maintain a home outside of the institution, there should be social supervision by a local agency and adequate support through a system of state aid to the aged financed by combined state and county funds. This srstem is outlined in the proposed act presented herewith.
3. That there should be established in the office of the state treasurer a "Public bequest fund for the arred" to which gifts or bequests may be made; these funds to be used for the assistance of aged persons suffering from incurable diseases and for the benefit of other aged persons in such manner and amounts as may be recommended by the State Department of Social Welfare. This provision for a puhlic bequest
fund to the aged is made a part of the proposed act for the welfare of the aged as presented herewith.

\section*{Estimate of Cost of Proposed State Aid Plan.}

Any attempt to forecast the future costs of a system of aid to a state-wide group whose numbers are subject to change will contain an element of uncertainty. When the estimate is based upon actual expenditures, however, and the state definitely assumes responsibility for one-half of the amount alrealy recorded by the counties as relief to the aged, it should be possible to obtain a fairly reasonable idea of at least the immediate cost. This"plan is flexible and the amount maychange from year to year as the facts develop concerning potential applicants. The sum set in section 24 of the proposed act is a rough estimate of the demands which may be made from comnties that eleet to adopt this system of old age relief within the coming biennium.

The total expenditures by counties to aged ( 65 years and over) outside of institutions, for the fiscal year 1927-1928, was approximately \(\$ 677,088\). Of this amount \(\$ 462,738\) was given to those who are 70 years of age or older. Estimates are given on the two groups of aged : over 6.5 and 70 years of age, respectively.

Estimated cost of a system of state aid to the aged based upon aetual expenditures of the counties in outrelief to the needy aged, subjected to age qualifications and to the residence qualifieation of twenty years in the state: (Based upon 1928 reports from counties.)

\footnotetext{
* Los Angeles is the only counts wliere the present per capita expenditures for relief to needy aged, nutside of institutions, approximates \(\$ 360\) pur annum.
}

\section*{Chapter 2}

\section*{AN ACT TO PROVIDE STATE AID TO THE NEEDY AGED}

An act to be known as the "Old Aqe Welfare Act," providing for the protection, welfare and assistance of aged persons under certain conditions in the State of Califormia, and providing the method therefor, and making appropriation therefor and prescribing penalties for the violations of the provisions thereof.

Nection 1. Subject to the provisions, qualifications and restrictions contained in this act, every person residing in the State of California, if in need, shall be intitled to aid in old age.

Sec. 2. The amount of aid shall be fixed with due regard to the conditions in each case, but in no case shall it be an amount which, when added to the income of the applicant, from all other sources including income from property as computed under the terms of this act, shall exceed a total of one dollar per day.

Sec. 3. Aid may be granted under this act to the applicant who:
(a) Has attained the age of seventy ( 70 ) years or upwards;
(b) Has been a citizen of the United States for at least fifteen (15) years before making application for this aid;
(c) Jesides in the State of Califormia and has so resided contimuously for at least twenty (20) years immediately preceding the date of application, but continuous residence in the state shall not be deemed to have been interrupted by period of absence therefrom if the total of such periods does not exceed three years: or has so resided forty ( 40 ) years at least five ( 5 ) of which have immediately preceded this application; resides in the county or city and county in which the application is made and has so resided contimously for at least one year immediately preceding the date of application;
(d) Is not at the date of making application an inmate of any prison, jail, infirmary, insame asslum or any reform or correctional institution;
(e) During the ten years immediately preceding the date of application has not bech imprisoned for a felony or indictable misdemeanor;
(f) If married, has not, during the fifteen years preceding the date of application, deserted the other spouse or withont just cause failed to provide legal support for such other spouse and the minor children, if any, of such applicant;
(g) Has no children or other person responsible under the law of this state and able to support him.

Sec. 4. Aid under this act shall not be granted or paid to any person the value of whose property or if married the value of the combined property of husband and wife at the time of such application exceeds three thousand dollars.

Sec. 5. The income of the applicant at the time of such application shall be computed on the basis of an average income during the twelve months next prereding the date of such application ; the amual income of any property of applicant which docs not produce a reasomable income shall be computed at five per cent of the value.

Sec. 6. There is herely created in the state department of social welfarehereinafter called the "state depurtment"-a division to be known as the division of state aid to the aged; the dutics of this division shall be to supervise ambless unou the measures taken by county or city and county boards of supervisors-hereinafter called the "board"-for the care of neely aged citizens, to the end that they maly receive suitable care in their old age and that there may be, throughout the state, a uniform standard of record and method of treatment of aged persons based upon their individual needs and circmustances. In adonting ways and means for giving aid under this act, the state deparment, through the division of state aid to the aged, and the hoard shall consider whether the aged applicant is in such mental and physical conditiou that his needs can be met to advantage in a private home or whether his infirmities and habits are such as to retuire institutional care; whenever it is found possible and advisable, he shall be given aid in his own home or other suitable place in preference to a pmblic institution.

Sec. 7. The director of social welfare. with the approval of the Governor and the members of the state department, shall appoint and fix the compensation of the superintendent of the division of state aid to the aged-hereinafter called the
"superintendent"-who shall be a person with training and experience in reliff work and familiar with the social and economic conditions in California. The superintendent shall be responsible for the investigation, determination and superrision of state aid given under this act and for such other duties as properly may be assigned to this dirision by the director of social welfare.

Sec. S. The superintendent, with the upproval of the director. may appoint in each county and city aud connty an adrisory board of ritizens whose duty it shall be to cooperate with the state and county authorities in the investigation and superrision of aid given to the aged under this act and to make report upon the same with recommendations to the board and to the state department. In counties where there is an existing county department of public welfare or board with similar fnuetions in public relief, this body shall be appointed as the adrisory board.

Sec. 9. If the board with cousent of the state department shall deem it necessary, it mar require as a condition to the grant or continuance of aid in any cass. that all or anc part of the property of an applicant for aid be transferred to said hoard. Such property shall be mauaged br said board which shall pay the pet income thercof to the applicant; said board shall have power to sell. lease. or trausfer such property or defend and prosecute all suits concerning it and to pay all just claims against it and to do all things necessary for the protection. preserration and management thereof. If in the event the aid is discontinued during the life time of the aged recipient. the properts thus transferred to the countr exceeds the total amount paid as aid under this act. the remainder of such property shall be returned to the aged person : and in the event of his death such remainder shall he considered as the property of the deceased for proper administration proceedings. The board shall execute and deliver all necessary instruments to give effect to this section.

Siec. 10. (a) If at any time during the continuance of aid, the recipient or the hushand or wife of the recipient. become possessed of any property or income in excess of the amount allowed by law in respect to the amount of aid granted. it shall be the duts of the recipient inmeliately to notify the board of the receipt and possession of such property or income and the board may on inquiry and with the approval of the state department either cancel the aid or vary the amount therenf in accordance with circumstances and any excess aid paid shall be returned to the State of California and recoverable as a debt due the State of California.
(b) If on the death of an aged person receiving aid under this act, it is found that he was possessed of property or income in pxeess of the amount allowed by law in respect to the amount of aid. double the amount of the aid paid in excess of that to which the recipient was legally entitled mar be recovered by the state department as a preferred claim from his estate and paid into the treasury of the state of California.

Sifc. 11. All aid given under this act shall be absolutely inalienable by any assignment, sale. execution or otherwise and in case of bankruptey the aid shall not pass throngh any trustee or other persons acting on bebalf of creditors.

Sec. 12. Every case of aid granted to the aged under the provisions of this act shall be deemed to be grauted and shall be held subject to the provisions of any amending or repealing act that may be passed hereafter and no recipient under this act shall hare any claim for compensation or otherwise by reason of his aid being affected in any way by any such amending or repealing act.

Sec. 13. An applicant for aid shall file his application in writing with the board of the countr or city and countr in which he resides, in the manner and form Irescribed by the state department. All statements in the application shall be rerified by oath of the applicant.

Sec. 14. The board, directly or through the advisory board or other authorizel investigator, shall promptly make the necessary investigation. It shall, upmen receipt of the report of the investigation. decide upon the amount of aid, if any, and such decision shall be final: procided. hoorever. that in any case where such application is denied by the board, upon a petition setting forth the facts in full as to the necessity of such aid, verified by five reputable citizens of the county, such applicant shall have the right of appeal direct to said department and if the appeal is sustained by said department the payments of aid in the amounts determined by said department must be paid by the county or city and county as herein provided. An applicant whose application for aid under this act has been rejected mar not again apply for such aid until the expiration of one year from the date of previous application. If the application for aid be granted. the clerk of the board shall report the fact to the auditor of the county or city aud county. . Ill payments of
aid under this act shall be made monthly by the treasurer of the county or city and county in the manner now provided by law for payment of claims against the county or city and county. All aid under this act shall be renewed annually on verified applications and after such further investigations as the board may deem necessary and the amount of aid may be changed if the board finds that the recipient's circumstances have been changed. It shall be within the power of the board to cancel and revoke aid for cause and it may for cause suspend payments of aid for sueh periorls as it may deem proper.

See. 15. The clerk of the board of the county or city and county shall report monthly to the said state department in such manner and form as the latter may prescribe, the number of cases granted, changed, revoked or suspended under this act by the board during the preceding calendar month, tugether with copies of all applications received and a statement of the action of the board thereon and shall report the amount of aid to aged paid ont moder this act by said county or city and county during said periocl. Such report shall be audited by the state department. through its division of state aid to the aged, and when approved by said department, the state treasurer shall forthwith pas to the treasurer of said county or city and comity a sum equal to one-half of the total amount of said payments made to aged citizens under this act by said county during said period.

Sec. 16. The state department shall have power to and shall preseribe the form of application, the manner and form of reports and such additional rules and regulations as are necessary for the carrying out of the provisions of this act.

Sec. 17. The provisions of this aet are and shall be applicable to any counts or city and county which shall by affirmative vote of at least a majority of the members of the board elect to provide for such county or city and connty a system of aid to the aged hereunder.

Ser. 1s. All expenses incurred by county or city and county boards of supervisors and advisory boards, in administration, investigation, salaries or other necessary expenditures. in carrying out the provisions of this act, shall be paid by the county or city and county in the same way as other expenses of such county or city and county are paid.

See. 19. The state treasurer is anthorized to hold funds received either from gifts or bequests for the purpose of establishing a fund to be known as the lublie Bequest Fund for the Aged for the assistance of aged persons suffering from incurable diseases and for the benefit of other needy aged persons to be expended in suoh manner and amount as may be recommended by the state department.

Sec. 20. If at any time the state department has reason to believe that aid to the aged hats been obtained improperly, it shall canse special inquiry to be made and may suspend payment of any installment pending the inquiry. It shall notify the board and advisory board of such suspension. If it appears upon inquiry that the aid was obtained improperly, it shall be cancelled by the state department. but if it appears that aid was obtained properly, the suspended payments shall be payable in due course.

Sec. 21 . Any person who by means of a false statement or represputation or by impersonation or other fraudulent device obtains or attempts to obtain or aids or abets any person to obtain under this aet:
(a) Old age aid to which he is not entitled;
(b) A larger amount than that to which he is justly entitled:
(c) Pasment of any forfeited instalment grant;
(d) Or knowingly aids or abets in buying or in any way disjusing of the property of an applicant without the consent of the board, shall be guilty of a misdemeanor and umon conviction therpof shall be sentenced to pay a fine not exceeding five hundred dollars (sin(0)) or to undergo inprisonment not exceeding six months or both in the discretion of the court.

Sece ․ㅡ․ Any person who knowingly violates any provision of this act for which no penalty is specifically provided shall be guilty of a misdemeanor and subject to a fine not exceeding five hundred dollars (\$00) or to undergo imprisonment not exceeding six months or both in the discretion of the court.

Sec. 23. There is hereby appropriated out of any moneys in the state treasury not otherwise apmopriated the sum of \(\$ 3,0,000\) to be known as the "state aid to aged fund" for the purpose of payment by the state treasurer to the treasurers of the respective conntips and citips and conn!ies during the next two years, as herein provided.

Sec. 24. There is hereby appopriated out of any moness in the state treasmy not otherwise appropriated tho sum of twenty thousand dollars ( \(\$ 20,0\) (HO) for the
rxpense of the state department in the atministman of this act during the next two years.
ser. at. Nothing in this nct shall be construed as repealing may other ade or part of an act for the support of the poor exept in so far as neeessarily consistent therewith but the movisions of this act shall be eonstrued as an additional method of supporting the aged poor and to effect such purpose this act shall be liberally construed. If any portion of this act shall for any reason be adjudged by any court of competent jurisdietion to be invalid or unconstitutional such judgment shall not affect, impair or invalidate the remainder of this aet.

Sec. 26. This act shall be in eflect on and after the first day of July, 192!), but \(n 0\) aid granted hereunder shall be made payable until January 1, 1930.

\section*{PART II}

\section*{DISCUSSION OF FINDINGS}

\section*{A. CALIFORNIA POOR LAWS AND THEIR ADMINISTRATION}

\section*{Chapter 1}

\section*{The Responsibility of the State Government in the Present Poor Law Scheme and that of the County Government}
(a) The state assumes responsibility for institutional care of delinquents, mental defectives, insane, and the adult blind. It also gives a subsidy to counties for the care of tuberculous patients while cared for in county institutions which meet certain standards set by the Ștate Burean of Tuberculosis.

\section*{The State Institutions Are:}

State prisons (2); for adult offenders; under control of the State Board of Prison Directors.
State training schools (3) for juvenile offenders:
under control of the State Department of Institutions.
State hospitals for insane (6) :
under control of the State Department of Institutions.
State homes for feeble-minded (2):
under control of the State Department of Institntions.
State home for adult blind (1): industrial training; under control of the State Department of Institutions.

\section*{Subsidized Institutions Are:}

County tuberculosis sanatoria:
under supervision of State Department of Health, Bureau of Tubereulosis.
Children's institutions:
under supervision of State Department of Social Welfare. Subsidy to children eligible under the State Aid to Children Act.
The only financial relief given by the state to persons outside of institutions (outdoor relief or outrelief) is that given to dependent children under the State Aid to Children law; this allowance is given for the care of orphans, half orphans, ahandoned children and other dependent children whose fathers are suffering from tuberenlosis or permanent physical disability.

\section*{State Outrelief Responsibility.}

Aid to orphans, half orphans, abandoned ehildren and ehildren of tuberculous or permanently incapacitated fathers; the maximum aid is \(\$ 10\) per month per capita: actual anount of aid hased on need as determined on investigation by State Department of Social Welfare. Pol. Code 2283.
(b) The county govermment has legal responsibility for institutional eare of delinquents (those who do not belong in state institutions) and for the "indigent siek and dependent poor." The "dependent poor" who are honsed in ennuty institutions are, for the most part, the aged.

\section*{The County Institutions Are:}

County hospitals (55) : eight of these are exelusively for medieal and surgical patients; forty-seven are combined institutions housing both sick and aged patients.
County farms and homes for the aged (8) : these are separate institutions for the aged who are not acute hospital patients.
County detention homes (26) : for juvenile offenders. Connected with the juvenile courts and probation offices.
County jails (60) : for adult offenders.
All the above county institutions are under the supervision of the State Department of Social Welfare. Pol. Code 2333.

\section*{County Outrelief Responsibility.}

The eounty government has almost entire responsibility under the present laws for the outrelief of the poor. There is no age limit and no financial limit, except as it may be set locally by the board of county supervisors which is the governing hoard of the county. There are qualifications as to residence and need.

All fifty-cight counties give relief to the poor in their homes. The organization of the relief administration differs. There are four general forms of organization, and one county which uses the juvenile court as a relief office.

The most modern and satisfactory type of relief administration is found in those counties which have definite welfare departments for investigation and case work with the needy families and individuals who apply for aid; these are to be found in the larger counties, as a rule; the next grade is the group of counties that have appointed a "relief agent" who has the definite responsibility for this work. The probation officer is used by another group of counties for the investigating and administering of outrelief; in some counties this works well if the officer is socially minded and the commmity is small enough for him to combine the relief work with his juvenile eourt responsibilities. The primitive mode of administering outrelief is still followed by many of the smaller counties-that of having the members of the board of supervisors give county relief in their respective districts. One connty whieh has a charter unlike every other county in the state gives its outreliff throngh the juvenile court which limits it to children; this is San Francisco Countr, where no enunty relief is given to the aged or other adults outside of institutions.

All expenditure of public funds for relief to the poor is under the supervision of the State Department of Social Welfare. Pol. Code 23333.

\section*{('hapter 2}

\section*{HOW THE COUNTIES CARE FOR THE NEEDY AGED}

\section*{Institutional Care.}

California, fortunately, is so young a state that it has escaped many of the unhappy names and conditions which older communities have attached to connty institutions for honsing the aged poor. The terms "workhouse," "poorhouse" and "poorfarm" never have been applied to these California institutions; in some districts the name "almshouse" was used in early days hut that, too, is now obsolete. In a new community which had the opportunity to begin where older civilization had just arrived after years of weary strnggle, there were no disgraceful buildings or traditions to clear away. California had no public institutions for the poor until some of the old pioneers of the gold rush days hegan to break down; the first buildings for shelter of these unfortmates were called "county hospitals" and it is by this name that they have always been known. They were really old people's homes with medical supervision. It is only within the last twenty years that the country institutions have become medical hospitals in the modern meaning of the word. There are now in Cailfornia some of the finest and hest equipped modern hospitals in the country, maintained as county institutions for the medical and surgical treatment of those who are unable to pay for care in a private hospital. The development of public health education, health centers, diagnostic clinies, treatment clinies and training schools for nurses under public control, is closely connected with the higher standards in county hospitals. One result of this spirit of growth has been the tendeney to separate the sick from the aged in county institutions, much to the advantage of the aged. Even in comoties where there is not actual division of administration, there is usually a provision for segregation in wards or floors, so that the old people may come and go without being depressed by the sights and soumds of sick patients.
No children are supposed to be in the county hospital except for olservation or medical treatment; comnty detention homes are provided for temporary housing of homeless children. Criminals are not sent to county hospitals except for medical care; insane and feebleminded are not detained in the quarters occupied ly the old people. In the newer institntions, there is separate housing of the senile aged; this, however, is not done in every county. The mingling of senile dementia patients with normal old people is one of the unsatisfactory features still to be corrected.
Many of the county homes compare very favorably with private homes for the aged. In what private home could an inmate receiving free care go away for the summer months and have his room reserved until his return? This is done in some of the rural county hospitals in the momntains of California. Old prospectors are restive in the spring and the doors of the county institution swing both ways; a weatherbeaten old "hurro" is driven up, the pick and pan loaded on his patient back, and with many wavings of farewell to the old men left hehind the old mountainecr goes off to "earn his keep" till the autumn rains drive him back to the shelter of the "winter boarding house"- the comnty
hospital. There are vacant heds in some institutions of the mountain eomnties. The population of these counties is not increasing and the old men are passing.

In the San Joaquin and Saeramento valleys, on the contrary, the county homes and hospitals are filled to overflowing. In two of the central counties, on the day of visit, there were heds on the porches and the countr officers were considering a plan for "boarding out" some of the applicants who could not gain admission. In most of the large enmesties there is sueh a demand for beds that only the sick or disabled can be admitted. The result is a tendency to give outrelief to an inereasing number of old people outside the institutions.

Los Angeles County maintains an extensive and well equipped institution for the aged out at the County Farm, while the county hospital in the city is crowded with patients and anxiously awaiting the completion of the new 1600 -hed hospital now in course of construction. The farm really is a combination of three institutions and is an instance of remarkably good management and effieient personal service. The segregation of the old people, by their needs, into (1) the infirmary, (2) the psychopathic department and (3) the general home, makes for the hest interests of all. The population on day of visit was 1800 , with very few vacant beds.

San Francisco County has just erected a new huilding for the homeless aged poor, which carries over its imposing entrance the name "Laguna Honda Home." In the same grounds is the hospital building for aged chronic patients. This whole institution is entirely separate from the downtown county hospital for medical and surgical patients. The modern conreniences of the home as well as its spacious comfort and beantiful location make it a desirable shelter for those who have no other home. Occupation is one of the features stressed by the superintendent of the institution and the advantages of this system both to the institution and to the old people themselves is apparent. The population of Laguna Honda Home on day of visit was 1560.
- lameda County two years ago opened a magnificent new medical hospital in the city of Oakland, leaving its former county hospital huildings at San Leandro for the housing of chronic patients and homeless old people. Both institutions are now filled. The home at San Leandro, now known as Fairmont Hospital, is so erowded that it las a waiting list of aged applicants for admission. One of the unique features of this institution is the "industrial department" where the old men make toys, baskets and other articles which are sold on orders: and where workers are hisy in the cobbler shop, the tailor shop, the mattress shop, the machine shop, the canteen where special comforts may he purchased, the laundry and other activities. The workers there eonld not carn a living on the outside because they are partially disabled hy age or sickness and unable to work full time. But they are so eager to be busy and earning something that the shops have therapeutic as well as husiness value. The awerage daily population of the institution is 720. Only 280 are able to take any part in the industrial activities. The rest are bed patients or ton feeble to be allowed any exertion.

San Diego County is one of the progressive counties which have separated the care of the aged from the care of the sick. Edgemoor Farm houses all the homeless old penple except about fifty who are bed
patients in the chronic ward at the General Hospital. The senile aged are in special quarters quite apart from the other old people. The farm is attractive and well managed; the care and food are cxcellent. The population of the farm is 217 aged persons.

Fresuo County was one of the first in the state to furnish a separate huilding for the care of its old people as distinct from the sick in the hospital. A county building which had been used previously as an orphanage was remodeled for the housing of the homeless aged and is known now as the Old Peoples Home. It is not too far from the hospital for ready transfer in case of sickness. While the building is well kept and has some attractive features, it is not satisfactory for its present use ; the stairs that were climbed so nimbly by children's feet are somewhat steep for feet which have trod three score years and ten, and the large dormitories are not as well snited to the broken slumbers of the aged as smaller rooms would be. All the institutionally housed aged are at the Old Peoples Home except those who are bed patients at the General Hospital. The General Hospital is so crowded that beds are set on the porches. The Old Peoples Home is filled to capacity and unable to accommorlate all applicants for admission. An effort is made to have the county welfare department find boarding places for some of the aged applicants and to put others on the outrelief list. Fresno County is giving excellent scrvice to its sick and aged poor but in sadly inadequate huildings. The population of the Old Peoples Home is 110.

Other California counties that have followed the modern trend towards segregation and which maintain separate institutions for the care of their aged and sick patients are Santa Clara, San Mateo, San Luis Obispo and Tulare counties.

Of the forty-seven county institutions that combine the care of the sick and aged under one administration some of the hest equipped, which provide for segregation by means of detached buildings or wards, are San Joaquin, Orange, Santa Barbara, Solano, Riverside, San Bernardino, Kern, Monterey, Sacramento, Siskiyou, Nevada, Ventura, Tuolumne and Santa Cruz. In some of these the wards for the aged are old and inadequate.

San Joaquin County has perhaps the hest provision for the eare of aged in the group of combined institutions. Here the buildings for the aged are new and well planned with small wards, a number of private rooms, easy inclines instead of stairs, separate dining rooms and large reading ronms as well as assembly hall for entertainments.

Mariposa County, which has but five institntional patients, boards them in the hospital of a neighboring county at an agreed payment for their care. The cost of administration for an institution to care for five old people would not be justified; in this comnty it would involve also the cost of building, as there is 10 suitable country hospital building in Maríposa.

Owing to the growing tendeney in counties to extend outrelief to the old people who are physically able to care for themselves in their own homes or who have relatives or friends to look after them, the institutional group is becoming more and more a selected body of persons who are plysically, mentally or socially incapable of living away from institutional or nursing care. From personal observations during this surrey and from information given hy doctors, nurses and superintendents
it is estimated that not more than 5 per cent at the most and in some institutions not more than 1 per cent of the inmates could live comfortably outside of the county hospital on an income of \(\$ 30\) per month. This income will not provide nursing care. It is difficult to find a private boarding place for old people at \(\$ 30\) per month.

The greatest increase in the population of the county hospitals, at the present time, is in the medical and surgical wards and in the newer psychopathic wards which are being added to the institutions in all the large counties.

If present indications continue, the "county hospital" in California will soon be a hospital in fact as well as in name, caring only for physically and mentally sick patients: with a separate and distinct "Home"" department for old people who are homeless or suffering from chronic ailments and who can not be cared for adequately outside of the institution.

The total population of county hospitals and county farms on June 30,1928 , was 12,234 persons; these were segregated as follows :

Aged persons in chronic wards or "Home" departments

Custodial patients under 65 years of age are persons suffering from chronic ailments, wasting disease, or so crippled that they need perinanent care, in an institution.
Non-Institutional Care of the Aged (Ontrelief).
The care of aged outside of institutions, under the present state laws, is the responsibility of the counties. Some have met it with sympathetic and adequate measures but in the majority of counties the old people are the last to be considered. This is not altogether the fault of the county anthorities or their relief workers. Emergency distress and the eries of little children are demanding attention at all times, while the aged are patient and slow-moving and often wait to be asked as to their needs. As a rule the aid to children and the aid to old people are handled by the same county office, often by the same person. The present difference in status is chiefly that aid to the aged now comes entirely from county funds, whereas aid to dependent children comes from both state and county.

The State Department of Social Welfare, in its work of statewide supervision of county institutions and outrelief, comes in contact with all the various systems of county relief administration. As the result of continued years of effort on the part of the state department and a growing appreciation, by the counties, of the objectives of public aid, county funds for relief of the poor now are being expended more wisely and with greater regard to constructive results than ever before in California. County welfare departments in the large counties and individual social workers in the smaller counties are doing away with the aimless charity "dole" which so long has been associated with county ontrelief. However, the dole to the aged still continues in many counties which have established noder'n casework methods in dealing witlx younger dependents.

In this surver of the aged, a group of represenative counties was selected for analysis. This sample included communities which were characteristic of the old mining days, the early Spanish settlements, the great fruit industry, the lumber camps, the seacoast and the metropolitan areas. From Los Angeles County with a population of two million souls to El Dorado County with its seven thousand, and all the varying sizes and conditions indieated by the other counties in between, was a cross-section study than which none more interesting could be imagined.

Los Angeles, San Diego, Fresno, San Joaquin, Humboldt and Alameda counties have well organized social service departments in their county government, the majority of them known as county welfare departments; Santa Barbara County utilizes the services of the Associated Charities for part of its territory; Saeramento has a county charities department; San Franciseo County gives no aid to the aged except the blind, relying upon its private charitable organizations to take care of the old people outside of institutions; Tuolumne and El Dorado counties, mountain connties with small populations, give aid to the aged directly from the connty board of supervisors. These eleven were the counties chosen for study.

One of the most interesting and individual comnties in the group is Humboldt County, on the north coast, in the heart of the redwood lumber region. One-third of the aged dependents in Humboldt Countr are American Indians. They are practically all natives of the county and have their own little houses or cabins, mostly in the forest or near the shore. Some of them have well cultivated gardens. Several old widows live with their children or grandchildren. The arerage grant of aid to these aged Indians is \(\$ 10\) per month, with \(\$ 15\) or \(\$ 20\) to an aged couple. The occupations of these Indians have been chiefly fishing and wood cutting; many of the old men still depend upon part-time fishing to eke out their living.

Fresno and San Joaquin counties in the great southern valley and Sacramento County in the northern section are typical of the agricultural and fruit belt counties. The majority of their old people outside of the county institutions have been farm hands or fruit pickers, although a liberal sprinkling of old miners and eattlemen were found among them in the personal visits; many had followed the mines and eattle driving when young and turned to the farm and fruit work in their middle age.

Santa Barbara and San Diego counties in the south had some picturesque old Spanish pioneers, some of them members of families whose names are recorded in California history: with eharacteristic carelessness about land and money they have arrived at the end of their life journer with nothing except, perhaps, the house in which they are living and are dependent upon the county for maintenance. Gentle, courteous, proud of family are these old men and women of Spanish descent. Praetically all of them native-horn Californians, they represent a page in the state history which is almost forgotten. San Diego County has another group of aged, more recent arrivals in California, natives of the southern states of the Union: many of them eame to California seeking health for themselves or their children.
Tuolumne and El Dorado counties are in the "Mother Lode" counfry: gold was discovered in 1849 at Coloma in El Dorado County and
the distriet all through those momenains was settled by miners who came in the gold rush of the fifties and sixties. The high tide of the mining industry has passed long since but it left in its wake many old miners stranded on the mountain sides and in the canyons. The usual grant of county aid to the aged outside of the county hospital is \(\$ 10\) per month. When asked how they could live on \(\$ 10\) a month, the answer usially was that they eked out the meager allowance by "panning the creek" occasionally. Some months they get enough gold to trade in for three or four dollars worth of food or clothing; other months they find nothing. The lean months predominate. The winters in the mountains are long and cold and some of the old houses are not weather tight. But the old prospecting fever still burns and the satisfaction of being able to gratify it scems to mean more to these old miners than the physical comfort offered hy the county institution.

Alameda County is one of the commonities studied. This county has three large cities within its boundaries and also a rural district containing numerous small towns. Private charitable agencies, one in each of the four districts, are subsidized by the county to administer the public outrelief. By a system of coordination, thesc agencies unite in a "County Welfare Council" where county-wide problems are discussed and county-wide statistics compiled. The relief to needy aged is given almost entirely from county funds; the average aid is \(\$ 15\) per month.

San Francisco County, as stated above, gives no public ontrelief to aged except to the small number of aged blind. The private charities of the city give aid to the aged who apply to them for help but their. primary interest is in dependent children and the einergency aid needed hy poor families. Some of the worst cases of destitution among the aged were found in San Francisco.

The Heller Committee for Rescarch in Social Economies of the University of California made a detailed study of dependent aged in San Francisco, recently, and in the "Foreword" to that report is found the following statement:
"The facts gathered and set forth in this report establish three major propositions:
"1. That a considerable number of aged persons are to be found in San Francisco, homeless and childless, a pathetic group which is the community's bona fide responsibility.
" 2 . That the present program for care of these destitute old people lacks coherence and definiteness and is thercfore, relatively speaking, an ineffective program.
"3. That a new relief program will not be enough. Without a more generous allotment of money to care for these aged. nu melief program can be carried out successfully."
On page 77 of the same report on "The Dependent Aged in San Francisco," in summing up the attitude of a group of homeless ohd men who had been interviewed during the course of the study, the report says:
"These homeless old men refuse to exchange this life of hardship for the clean beds and sufficient meals of the County Relief llome. They speak with horror of it; many have heen there and say a return would kill them; even when they report good treatment

\footnotetext{
" The Dependent Aged in San Francisco," University of Califormia Press, 1928. \(4-64165\)
}
they leave and derline to return. It is not a prejudiee against the San Francise Home in partieular but acainst all institutions. Perhaps the explanation lies in the eurions optimism expressed by a brokendown clerk whom any impartial observer would consider ohvionsly incompetent to hold a position, 'Well, if I can only get a job, I'll be able to get along'."
The Los Angeles system of non-institutional care of the aged through a special department of the Outdoor Relief Division is perhaps the most complete and efficient plan of its kind in operation in any of the fifty-eight counties of the state. The county aid given to aged is classed as regular or permanent relief and is set apart from the emergeney relief department. Social workers are assigned definitely to this permanent relief department.

An interesting and unusual feature is the "Property Department." Mere is a provision for a sort of unique insmance of old age eare. Old persons possessing limited property but without adequate income for actual necessities of life may turn these small holdings in to the county government and thereby secure in return a regular monthly allowance as long as required. The allowance is small but it enables the aged couples or individuals to spend their last years in their own homes with actual needs supplied and minds at rest from the worry and meertainty of "where the next meal comes from." Under the friendly supervision of the county social worker the health of the old people is safeguarded and any changing condition is met. The number of such elients in Los Angeles County is approximately 250. The mortgage or deed involved may be lifted any time that a relative or friend or umexpected windfall enables the old people to refund to the county the amount of relief expended. In the case of an old couple, if one spouse dies, the smrvivor may eontime to live in the home with adjusted allowance.

In consideration of the many tragic old people met in this survey who had lost all their property and savings through unwise investments, this property department of the county stands out as the salvation of numerous aged persons. Several were interviewed who expressed gratitude for their escape from investments in schemes which had failed miserahly. Two old ladies had wavered between deeding their little homes to the county or to a private institution whieh promised life care but which later became bankrupt and paid nothing to its ereditors. The thing which decided them in both eases was that the private institution required them to live in the institution, whereas the county gave them the option of remaining in heir respective little houses. "It was a blessing that I decided on the countr," said one of the old ladies, "I know the comnt! will never be hankrupt and I ean stay in my honse and tend my little garden till I die."

Other eounties have inquired abont the "Property Department" plan and several have adopted similar measmers for aceepting deeds or liens on the property of aged applicants for aid, but none has established the work on the husinesslike and extensive seate that has been maintained in Los Angeles C'ounts.

The passibility of maintaining their selt respect by receling property to the combty in return for life eare is appreciated by many old people who possess a home of their own but no ineome. It enables
them to feel that they have "paid their way," In the extent of their ability. On the other hand the system protects the eounty taxpayere from the negligent ehild of relative who does nothing for the old person during his lifetime but who invariably appears at his theath to elaim any property of which he may die possessed. The throry that any property owned by the aged should be used to defray as far as possible the expenses of eare and mantenance during their last years is socially sound.

Of eotirse the number of old people who own aty property is fat less than the number who are entirel! pemiless and dependent upon the eounty for support. Los Angeles ('ounty is assisting nore than a thousand old people in their homes through the Outdoor Relief Division of the eounty charities, of whom approximately six hundred are 70 rears of age or older. No distinetion is made by the county workers between the old people who have deeded their property to the enunty and those who are abolutely destitute; the differemee, if there is any, exists in the feeling of the old people themselves.

Los Angeles County s property department operates under a county ordinames. Its future development witl he watelied with mueh interest by students of social experiment. The remark of the old lady who congratulated herself upon having invested her all in the eounty whieh would "never be bankrupt" in preference to the unsound organization which had solicited her savings, represented in her little honse, indicates a growing appreciation of public protection.

This is especially signifieant in Los Angeles County which by reason of its mild climate and other attractions has drawn to itself many persons past middle age who desire to make their homes there. Two facts stand out in this surver of aged and are worthy of further analysis: (1) Los Angeles C'ounty and its neighboring counties have a higher percentage of elderly residents than the rest of the counties in California, and (2) they are on the whole a superior type of old people. Many of the needy old men and women interviewed in this study had early adramtages of education, good family background and vocational training; professional men and women were met, singers, artists, writers and teachers. in addition to the msmal group of day laborers. These old people came to C'alifornia with sufficient means to carc for their old age, but through unwise investments. in most cases, lost their savings and were compelled to apply to the eomnty Untdoor Relief Division for help. Letters have been reeeived from some ut these unfortmates asking if the state eould not enact legislation to protect "men and women over 60 years of age" from making investments in sehemes and organizations wheh were not financially somd. In the minds of many people legistation is the great remedy for all social evils! The difficulty in this situation is not a lack of legislation but the failure of the old people themselves to make proper investigation before investing their mones.

The arrangement for transfering property to the county in return for regular mantemance and care has a precedent in the New Zealand Old Age Pension. law, which allows that: "Iny person otherwise (ualified to receive a pension who owns propert!" on whieh he resides, and which does not permit of the granting of a full pension, may qualify for the full pension by transferring the said property to a
public trustee. The pensioner is permitted to reside on the said property, rent free, during his lifelime, but he most pay all rates and charges thereon. If a hushand and wife, both being pensioners, are living together and one dies the survivor is permitted to continue to reside on the property. On the death of both pensioner and survivor, or where the pensioner is no longer entitled to a pension, the public: trustee shall sell the property and, after deducting from the proceeds of the sale the amount of pension paid as a eonsequence of the transfer of the property, together with his commission and interest at the rate of four per eent, shall pay the balance to the person or persons entitled thereto. Provision is made for a pensioner or survivor, or next of. kin, paying such amounts as aforesaid at any time with a view to obtaining a transfer of the property and obviating a sale."

\section*{B. FACTS CONCERNING THE AGED POPULATION OF CALIFORNIA}
('hal'TER 1

\section*{Total Number of Aged Persons in California and Census of Needy Aged.}

Thr number of aged persons in California, areorling to the l'nitert States Census reports of 1920 , and the estimatel population figures for 1927 are as follows:
\begin{tabular}{|c|c|c|c|c|c|}
\hline \multirow[b]{2}{*}{Sourre} & Total & \multicolumn{2}{|l|}{G.5 years and over} & \multicolumn{2}{|l|}{Tio years and over} \\
\hline & pmpulation & Number & Pet. & Number & Pret. \\
\hline [. S. Census repmes. 1920 & 3,426.841 & 200.301 & \(\therefore\) - 5 & 11s,97\% & 3.44 \\
\hline Estimated prpulation. 1927 & & & & & \\
\hline (Eherle Eemon. Siervier) & -0.375.237 & 311, (6i\% & 5.9 & 184,905 & 3. \\
\hline
\end{tabular}

The age groups for 1927 are obtained by applying to the total pojurlation estimate the same pereentages whieh were shown in the 1920 census report; they are therefore only approximate figures. It is possible and indeed probable that the pereentage of aged has inereased slightly.

The actual number of nerdy aged in ('allifmia of the same age groups who are now receiving public aid from the counties is as follows:
\begin{tabular}{|c|c|c|c|c|}
\hline & \multicolumn{2}{|l|}{(i.) years amil orer} & \multicolumn{2}{|l|}{\%0 years and oret} \\
\hline Type of aid & Number & Pet. & N゙unber & I'ct. \\
\hline In institutions & - 506.5 & -58.5 & 3612 & 59.4 \\
\hline Gutside of institutions (ontrelief & 3588 & 41.5 & 2470 & 40.6 \\
\hline Total & S(i5:3 & 100.0 & 6082 & 100.0 \\
\hline
\end{tabular}

The number of aged supported by private charities in ('aliformia, exclusive of San Franciseo C'ounty, is very small. Family welfare soeleties and associated charities are few in nmmber and devene their service and money primarily to the support of dependent ehildren and emergeney aid to needy families. Relief to the aged usually means continned maintenance. Reatizing this fact, the private agencies generally refer aged dependents to the county relief office for public aid.

The census of dependent aged which is given herewith is hased upon reports from county anditors and county relief workers for the ontrelief group and upon combty hospital and home reports for the institutional group. In the case of a few eomoties, the report failed to show exact ages, as the relief reeords were not segregated by age groups; in these instances the number was estimated according to the age percentage rate which prevaled in the other eomenties. Where possible, these figures were cheeked hy personal investigation. The amount of aid given is an arerage amount: in the large connties the monthly allowanee ranges from \(\$ 7.50\) to \(\$ 00\), but the average was taken for the aged group. In the smaller eounties there is very little deviation from the fixed amount of monthly aid given. In most counties it is given in the form of a countr warrant which the aged recipient may eash; in other counties the aid is in the form of a grocery order for a stipulated amount.

It will be noted that San Francisco gives mo outrelief to aged except to the blind, who receive county blind pension of \(\$ 15\) per month; the other aged in the ontrelief column under San Franciseo County are supported by private charities but are included here, as they would be entitled to county aid if such aid were given in San Francisco.

The two age gronps are shown for the reason that, cluring this surver, the suggestion was made that any legislation providing state aid to the aged should set the age limit at 6.7 reats instead of 70 . These data were assembled to meet any requests for information regarding the (i.)-rear group.

Depondent Aged in the Counties of California, June 30, 1928

- Estimated. \({ }^{1}\) No hospital, \({ }^{2}\) No aged dependents.

\section*{Chapter 2}

\section*{SOCIAL FACTS SECURED BY ANALYSIS OF A SAMPLE GROUP OF NEEDY AGED}

The counties taken for special study in this survey were Alameda, El Dorado, Fresno, Humboldt, Los Angeles, Sacramento, San Deigo, San Joaquin, Santa Barbara, San Franciseo and Tuolumne. They were selected as representative of the statewide social and economic conditions in California. The combined population of these eleven counties, according to the 1927 estimate, is \(3,825,584\) or 71 per cent of the total population of the state. For details coneerning the aged in San Franciseo and Alameda counties, the recent study made by the Heller Committee for Researeh in Social Economies of the University of California \({ }^{1}\) was used, with a supplemental visit to the county institutions wherein alterations have been made since the publication of that study.

Inasmuch as the schedule filled out on individual histories is the same as that used in the university study, the statistical findings are comparable. The age of 65 years was taken as a minimum in the present survey and where San Francisco figures are quoted, they are adjusted to this age limit. The method used in securing the sample group for analysis was as follows : a complete list of the needy aged-in each county, both institutional and noninstitutional cases, was obtained and after certain data on the total were tabulated, arbitrary selection was made of every tenth name for personal investigation and sehedule record. In the larger counties where modern relief records are kept, the county welfare secretary and the county hospital superintendent prepared these lists for the survey worker. In counties where records of relief showed only the amount given with no information regarding ages of recipients, it was necessary for the state survey worker to copy the financial record from the county elerk or county anditor's books and then, by interviewing each member of the board of county supervisors, to learn which of the names in his district represented an aged person. This was a time-consuming procedure but it was the only practical method of securing the age groups. The prompt and courteous response of the county supervisor's to this inquiry rendered it possible to make out these lists correctly ; their assistance by means of local direction and often by actual transportation, enabled the state worker to visit many of the old people who live in places which are difficult of access. During the course of this survey more than a thousand of the aged dependents in the state were seen and interviewed hut, schedules were filled out only on those whose names fell within the ten per cent statistical selection.

The sample taken for analysis included many old people whose memories go back to the historic days of California: days of gold mines, of fortunes quiekly made and as quickly lost; of ships that eame "round the IIorn," of "prairie sehonners" that eame haltingly hut persistently across the uncharted plains east of the Sierra looking for the land of gold and promise. With exception of the two most southern counties (Los Angeles and San I)iego) these aged are, for the most part, old resirlents of the state.

\footnotetext{
\({ }^{1}\) "Dependent Aged in San Francisco." I'niversily of California Press, 192 R .
}

Exclusive of San Franciseo and Alameda counties, it was found there are approximately 3800 old persons sixty-five years of age or older who are receiving county aid in the group of counties studied. The number of personal schedules on which the following analysis is based is 388 or 10 per cent of the needy aged in these nine counties.

\section*{Housing.}

More than half of the needy old people of the state are housed in county institutions, almost 60 per eent being found in comnty hospitals, homes or farms. The pereentage of men in the institutions is much higher than that of the women. Eighty-one per cent of the aged inmates of county institutions are men.

Forty per cent of the needy aged in California are housed outside of the institutions. About half of them are paying rent, 12 per cent are living rent free in homes furnished them hy relatives or friends. Only 2 per cent are living with relatives. A trifle more than one-third of the outrelief group own their own homes ( 36 per cent) ; although most of these homes are little cottages or shacks which have not much financial value, they represent in many cases the savings of a lifetime and the old people will endure any hardship in preference to leaving them.

\section*{Sex.}

The sample taken from the statewide group shows that needy aged men outnumber the women. The same age group in the total population of California shows ahout 8 per cent more men than women, but the difference in the distribution of the sexes in the dependent list is much greater. In the outrelief group, the aged women outnumber the men, while the men predominate in the institutions. The proportions are as follow:
\begin{tabular}{|c|c|c|c|c|c|c|}
\hline \multicolumn{3}{|c|}{Institutional cure.} & \multicolumn{2}{|c|}{Outielirf} & \multicolumn{2}{|r|}{Total} \\
\hline & Number & cent & Numbe & Perernt & Number & Per rent \\
\hline Males & - 171 & \$1 & Ti & 4.3 & 24 & (i) \\
\hline Females & - 40 & 19 & 100 & 57 & 140 & 36 \\
\hline & 211 & 100 & 177 & 100 & 388 & 100 \\
\hline
\end{tabular}

\section*{Length of Time Aid Has Been Received.}

That it is not until their carning years are spent that these old people ask for help, would seem to be indieated by the fact that three-fourths of these aged have received aid less than six rears.

Although thirty-nine aged couples were included in the schedules taken, six of the wives were under 65 years of age and therefore they are not counted in with the sample group.

Marital Status.
\begin{tabular}{|c|c|c|c|c|}
\hline & Malcs & Females & Total & Percentage \\
\hline Single & - 102 & 17 & 119 & 30.6 \\
\hline Married & 50 & 36 & 86 & 22.4 \\
\hline Widowed & T6 & 78 & 154 & 39.6 \\
\hline Separated & 20 & 9 & 29 & 7.4 \\
\hline & 248 & 140 & 388 & 100 \\
\hline
\end{tabular}

Only one married couple was found in a country institution and in this instance both were bed patients. The widowed group is the largest, being almost 40 per cent of the total. The widowed men were found chiefly in the institutions, while the widowed women are living out in little cottages or honsekeeping rooms. Next to the widowed in point of numbers comes the unmarried group. Here the men far outnumber the women. Eighty-five per cent of the singles are men. The majority of the single men are receiving institutional care, although a higher percentage of them are living outside than is the case with widowed men. The old miners, seamen and lumberjacks are accustomed to "batching," as they call it, and avoid institutional life as long as they can. The single women seem to find homes outside of the county institutions. The San Francisco study brought out the fact that 80 per cent of the single old women were either in private institutional homes or receiving outrelief. Private homes for aged were not included in the present study but the small proportions of single women in the county institutions would seem to indicate that the San Francisco findings hold truc of the statewide group. The old people who report their marital status as "separated" were found in several instances to be deserted by their former spouses. Only a few were legally divorced.

\section*{Residence in State.}

More than three-fourths of the needy aged in this sample had lived in California fifteen years or longer. Sixty-four per cent had resided in the state for more than twenty years. Reference to the study of "Dependent Aged in San Franciseo" will show that in San Francisen and Alameda counties the percentage of old residents was higher than this; the statement is made for those counties that the average residence in the state is thirty-five years.
\begin{tabular}{|c|c|c|c|}
\hline Length of time in : & United States & California & County \\
\hline Less than 10 years & 1 & 67 & 106 \\
\hline 10 to 14 years_ & 2 & 28 & 37 \\
\hline 15 to 19 years & 7 & 45 & 55 \\
\hline -0 years and over- & 378 & 248 & 190 \\
\hline & 3 ss & 388 & 388 \\
\hline
\end{tabular}

\section*{Nativity.}

Seventy per cent of the old people are natives of the United States; 6 per cent are native-born Californians. The foreign born, constituting 30 per cent of the sample, emme mostly from Germany, Ireland, Great Britain, and Scandinavia, with a few from France and Switzerland. Southem Europe is represented searcely at all in this aged group, the Latins belmging to a later immigration; this appears to be true also of the Mexican whose numbers show dramatically in the county records
of relief to needy families and ehildren but of whose old people very few were found in the county aid lists.

By reference to the San Francisco study of dependent aged it will he seen that the proportion of foreign born there is much greater, in faet outnumbering the natives of the United States, but they have long residenee in the state. The statewide sample especially those from the southern comnties are predominantly of American birth but of more reeent arrival in California.

\section*{Race.}

The sample taken for analysis shows representatives of four races: White (Caueasian), Black (Afro-American), Yellow (Chinese), and Red (American Indian). The majority of the Afro-Americans are from the southern part of the state, the American Indians from the north coast and the Chinese from seattering counties all over the state. The whites constitute approximately 94 per eent of the entire group.

\section*{Children and Relatives.}

Less than one-third of the old people have living children. In the San Franeiseo study, it was found that only one-fifth of the dependent aged have living children. The statewide survey, taking in rural districts as well as cities, apparently touched a greater proportion of family people. A smaller number reported that while they lave no children, they have other relatives. The largest group, however, proved to be old people who have neither children nor other relatives living. On the whole, therefore, the dependent aged form a childless and lonely group.

Of those who have children, by far the greater number are outside of institutions; the children of these aged in the outrelief gromp are giving usually some small amount of aid to their parents; in most eases this aid takes the form of a rent-free home. Very few are living with their children. The inmates of institutions who have children rarely receive any aid from them.

The aid received from relatives, in no instanee, is sufficient to maintain the aged person but frequently, as in the ease of the children, it takes the form of free housing so that the old people may receive outrelief support from the eounty: Sometimes children or relatives pay the rent for the aged person, in other instances they furnish the aetual shelter by means of an extra roon or a detached building. Modern city housing, of the sort which small ineome people can aftord, usially means crowding. Small flats and cheap apartments provide no space for an inaetive person sueh as an aged man or woman is apt to be, hence the tendency to put the old people in a rented room or a small shaek. Most of the aged persons reported that their sons or daughters had young
families and small earnings and could not afford to do more than pay the rent for them.
\begin{tabular}{llrl}
\multicolumn{5}{c}{ Aged who have children or other relatives living } \\
Outrelief group
\end{tabular} Institutional Total

\section*{Former Occupations.}

The occupations followed by these old people touch almost every field of human encleavor except factories. Development of manufacturing industries in California is of recent growth. Thirty-five or forty years ago, which was the time of activity for these aged people. gold mines, lmmber camps, and wheatfields were the chief resonrees of the state, and these are reflected in the record of their life work. Sueh few old men as reported themselves to have been "mill hands" refer to saw mills and flour mills. Mining, lumbering, farming and the mechanical trades account for the majority of the men. The small group of professional men includes two journalists, four physicians, one minister, one artist. one dentist, several school teachers and an actor. This last. who is a fine appearing old gentleman, has not been on the stage for many years; his last acting was done in a motion picture play, for which he received very good pay. However, that was two years ago and he has not earned anything since, althongh he clings: to the hope that he may be called again any day when there is a "trpe" which he can portray.

The women in this sample gronp belong to the generation which, in its youth, did not educate its women to any gainful work outside of the home. The greatest number are widowed and in reply to the question regarding occupation reported "honsewife," disregarding often the makeshift unskilled work to which they have had to resort since the death of their husbands. Left alone, in most instances, when they were past middlle age, with no training for wage earning, these women have made a brave fight to support themselves motil age lessened their ability and opportunity for work. The next largest group of the women is found in the domestic service list; this again is an echo of the days when woman's sphere was the home. Here was found evidence of greater savings than in the "honsewife" group but aks greater record of unwise investment. A modern trade is indieated by the "beanty parlor operator"' who made a good living at her trade until aente illness used up her savings and made it impossible to continue her business. It was interesting to mote that three of the physicians in the list are women; their story of the difficulties which beset the pionere woman physician is one which commands the respect of the modern age when those difficulties have almost disappeared.

One woman whose special interest was surgery says sadly, " 1 was born too soon; when the world was ready to accept women surgeons I
was too old to practice." Two artists and a woman journalist lost their savings and moperty through dealings with unserupulnis promoters and "Ioan sharks.'

The women who reported themselves as "nurses" were not all hospital trained murses althongh the majority of them claim to have cared for the sick under direction of physieians. 'lloese women, as well as the sehool teachers on the list, did not have the benefits of retirement pension systems such as now are in foree.

\section*{Former Earnings.}

The most difficult item to secure in the individual histories was the record of customary carnings. Three-fourths of the entire group of aged could not give even a definite estimate of their former earning power. This was not due to any mental weakness or lack of memory ; it appeared to be rather the lack of a definite wage-earning period in their lives. The old men who were in trades or lumbering or the inines, as a rule had no employers; they worked for themselves and did not lieep aecounts on their profits or losses.

The farm hands. mill hands, fishermen and nthers who worked in seasonal necupations had to spread their seven or mine months' wages over twelve months' living, and found it difficult to answer the question of the year's earnings. In their active years it was customary for the farmer or other employer to pay a small wage and supplement it with living expenses; hence the large number who report "thirty dollars a month and found" or "forty dollars a month and board." The average calary for those who reported a straight monthly income was \(\$ 77\) per month. The maximum monthly salary reported was \(\$ 150\) and the: minimum \(\$ 35\). The professional group was the least definite of all. From the old morie actor, who reported \(\$ 800\) a month but admitted that he had earned this for only two months, to the inventor who has lived for years on hope alone, they were unable to assist the surver worker in arriving at any satisfactory record of their actual former income. Mechanies, builders and other laborers who had received daily wages, reported from \(* 1.50\) to \(\$ .5\) as their earnings, with an average of \$3.50 per day; but mone of them had a record of regular daily work at this rate for more than three sears at a time. Intervals of memployment oceurred in their histories during which ther lived on their savings. California still depends upon seasonal labor in agriculture. horticulture, lumber, fishing. canneries and other industrics. Every year, an army of men besieges the coast cities in the winter months seeking employment to tide over the period of enforced idleness. They live upon their summer earnings as long as possible, but nsually their funds are exhansted before the next season opens. Unless some plan for a winter pay roll can be devised, these seasonal laborers form a group of potential old age dependents, for they have no opportmity to hoard or invest their seasnn's earnings aqainst the rears when they will be too old to work.

\section*{Present Occupations and Earnings of the Aged.}

The only members of the aged group in this sample who continue to follow their original necupations are a few of the women who still do sewing, two old gardener's, a machinist and a fisherman. The rest of those who are now earning part of their support are doing "odd jobs" -anything that they can get to chn. In the ontrelief group the present necupations, none of them full time jobs, are as follows: Gardener. seamstress, machinist, janitor, salesman, cannery worker, cook, houseworker, laundry worker, dish washer, wood cutter and fisherman. In addition to these lines of work, two old women earn their rent by renting ronms, ne raises guinea pigs and rabhits, and several old men sell newspapers and peddle small articles. Earnings arerage less than \(\$ 15\) per month. The maximum amount is \(\psi 20\) and the minimum is \(\$: 3\) per month for the outrelief group.

In the institutional group, there are many old people who assist in the work of the institution or engage in some of the occupational activities maintained for the benefit of immates who are able to do part-time work. The superintendents of the three largest comnty homes in the state-Alameda, Los Angeles and San Franeisco-believe in the ralue of occupation and give opportunity to all the old people who have the strength and desire to be emploved. Earnings by the workers in the institutions range from \(\$ 2.50\) to \(\$ 0\) per month, aceording to the work done.

Only 6 per cent of the institutional immates in this sample are cmployed, while 25 per cent of the outrelief group are earning part of their support and many more are anxious 10 find work. In the entire sample group of ohl people, 36 per eent are capable of part-time work.

\section*{Causes of Dependency.}

The life stories of these old people differ as wibly as the experiences of any' other group taken as a cross-seetion of the eommmanty. Sickness, financial disaster, insufficient employment, and the death of husband or child-these stand out perhaps as the most frequent reasons given for the present state of dependence. But underlying memployment was, often, the weakness of ill health and interwoven with financial losses was heard the lament for a husband's death. Thus it is impossible to designate any one definite canse for the eronomic breakdown. Seasonal unemployment ran like a dark thread through the stories of many of the old men. The earthquake and fire of 1906 in San Francisco was held responsible for subsequent failures and discomragement by some of those interviewed. The loss of sons and daughters in the influenza wave of 1918 was given by four old women as the beginning of their misfortumes. Foolish investments of their life savings were blamed by a number of the old people; some claimed definitely to have been swindled, but had no redress. The most frequent complaint was that no one wanted to give them work; that they were able and willing but on account of age they were denied the opportunity to earn. Falling out of active work at 50 or 55 , either from sickness or a lay-off, they have tried persistently to get back into a job, but in vain; living upon savings soon eats up the small capital laid by for old age, so that by the time they are 65 they are pemiless. This experience was recounted by both men and women.

Whether their present condition of dependeney is the result of sickness, insufficient earnings, desertion, character defect, finaneial losses or other or mingled canses, the fact remains that these old people find themselves dependent as they near the end of their life journey; thes must he carried the remaining few steps of the way.

\section*{('IAA'TER :}

\section*{THE UNEMPLOYMENT PROBLEM OF THE AGED}

Any program which shall attempt to meet the weeds of the aged should consider the possibility of supplying employment to those who are still able and desirons to earn at least a part of their livelihood.

I nemplorment is a more serinus problem for the men and women past mildle age than it is for the younger worker, because it means usually that they face permanent loss of their earning power. Although a man of 60 may be vigorous physically and alert mentally, he is forced all ton often to drop into the class ealled "memployable" because of his years.

During the study of agel dependents in San Franciseo. one of the most pathetie features was the persistent declaration by old men and old women that "I can work if they would only give me a chance." At the San Franeisco Bureau for the IIandicapped it was found necessary to organize a special department known as the "Hourly Service Burean" for these old people. Analysis of 100 applicants aged 60 and over to this bureau showed that the chief handicap of these people was their age. They had been refused or ignored at the regular employment offices beeanse of the age limit set by emplogers. The employment offices do not care to register men and women past middle age. About the only avemue of work open to men and women of this age is that of "odd job"-house cleaning. gardening, part-time work-for which they are paid on an hourly basis. These "hourly service" clients are the more vigorons and persevering old people determined to work to the last ounce of strength and hopeful of still being able to earn their own living without the necessity of asking for "charity." Some of the men have had training and skill in the trades, and they complain bitterly about the age limit or "dead line" in industry whieh shuts them out of employment while they feel that they are still able to take a part in the world's work. Althnigh at their age there is little ehanee for any of these men to reestablish themselves permanently in industrial life and althongh few, if any, of them would be able to compete with younger men, yet they represent a definite waste of productive encrgy. Many of them are capable of part-time work, probably enough to earn most of their mantemance under a system of work adjusted to their strength; they have potential earning power under a proper scheme of placement and supervision.

Analysis of the state-wide sample gronp studied shows that more than one-third of these old people are capable of part-time work.

Almost all of the aged elients of the Outdoor Relief Division in Los Angeles spoke of their desire to earn something toward their living They ask again and again for work, hut the relicf exceutives state that the limited calls for workers whieh come into their office must be given first to the unemployed fathers of needy families; the old people must wait until the romger ont-of-work gionp is all placed before there is any demand for their services.

If a special employment service could be established for the older men and women, it would result not only in financial saving to the comety hut would add so materially to the morale and peace of mind
of those employed that words ean not measure the effeets upon this group of disenuraged nld people.

To finanee such a piece of personal employment service for the aged or near-aged would be ome of the finest and most sensible charities that a wealthy person could endow. It remains for some generons and courageons person to start an original picee of work for these sturdy old veterans of life who, as one old man said, wonld prefer "to wear out rather than rust out." This might be done through the proposed "I'nblic Bequest Fund for the Aged."

An interesting demonstration of the value in service given by elderly men was found in one of the southern connties, where a chan of "Smileage gasoline" stations is merated almost entirely by men past 60 years of age. The owner of the smileage stations in an intervew stated that the poliey of emploving elderly men was "good business and not philanthrops." The ages of the employees range from 45 to 85 years: wages begin at \(\$ 7.5\) per month, with atrance. The preferenee for older men has grown from experience: they are foumd to be "more eourteous to enstomers. more stable. take better eare of their gasoline stations have more pride in their work, are not lonking for change in jobs all the time, are glad to keel a place where gray hair is not a handieap: there is less turnover." The owner admitted that it might not be possible for a larger eorporation to nse so many old men heeanse the younger men are tramed to become future exeentives. but in a eomparatively limited business which is not secking to beeome much larger. the polies of employing able-bodied old men is very satisinetory.

Another instance of recornition of the employment problem confronting the middle-aged man and woman is a pieed of researeh work now in progress in San Francisen which is expeeted to develop into a special easework employment service later on. Private funds have been given by a socially-minded business man for a study of conditions affecting umemplorment of middle-aged workers. Seeking to learn the seope of the problem, a definite ecmsus of these unemployed will be taken showing ocenpations which they have followed previnusly, their experiences in employment agencies, the reasons underlying their present idleness, and other data eoncerning the worker. The study is modertaken by a young eollege woman who has had experience in employment work and in sneial serviee. Recommendations for improvement in the situation of these middle-aged workers will he made in the report, whieh will be emmpleted during the eoming winter. It is hoped that a definite employment service for men and women past 4.) vears of age will be the result of this much-needed st udy:

That the problem of old are unemployment is receiving serious thought in other eountries is shown hy the amonncement of a public poliey in France which requires factories to employ a pereentage of men between 50 and 60 rears old. MI. I 'anl ('onjole, a member of the Seine Department General Council, who introdnced the measure, makes this statement:
"Gray hair is the worker"s greatest burden. Only young men are wanted in this hurrying age of mass production. The older men often are quite as competent and certainly their experience and dependability are worth something but. regardless of that. soeiofy in some way must take eare of the older men still able to give a good women for their wages."

\section*{CIIAPTER 4}

\section*{PRIVATE HOMES FOR THE AGED}

Inspection and liceme of private homes for aged people was plaeed by law under the State Department of Social Welfare in 192.) (Stats. 1925, Chap. 510). Exploitation of children in boarding homes has been done away with practieally: in (alifornia, but the exploiting of helpless aged per-mis has gone on for sears without check. Instances are found, at times. eren now. There was no state control or inspection of private homes for old people until the act of 1925.

The State Department took up the new responsibility for these homes with the same poliey that hat prored so successful in the inspection and license of children's homes. In the matter of family boarding homes for the aged this system was found to be adequate and manyconditions have been improved.

A different and difficult problem was met in the institutional homes for aged, which require a lump sum paid in advance for life care of the aged entrant. This is a financial feature which does not seem to come under the insurance laws of the state as at present coustituted, and its proper adjustment is still to be worked out. The plight of the old people who were left stranded and pemniless by the financial failure of two homes of this character in California during the last two years emphasizes the serions nature of this problem. Some of the institutinnal homes are conducted at good standard by boards of directors who are motivated by the highest ideals. But there are alsn enthusiastic people with more sentiment than judgment who may open homes for the aged withont adequate thought for the financial responsibilities involved. Sometimes this latter class of home will offer "life "are" for a small sum which obvionsly is not hased on any estimated cont of maintenance for the life expectation of the inmate. Such an ill-onsidered arrangement results usmally in an appeal sooner or later to the general public for funds to meet the deficit; failing this resouree, there is the danger of bankruptey with its attending tragedy to the aged residents of the institution. To protect old people of limites 1 means from this risk the state department of social welfare, with the help of the legal department, is seeking a plan which shall endorse the sound institutions and prevent the operation of any others.

There are now in California 98 homes for aged hoiding license from the State Department. The capacity of these licensed homes is approximately 3800 persons, of which about 3500 are in institutional homes and 300 in family hoarding homes. Board in the family homes ranges from \(\$ t 0\) to \(\$ 100\) per month, with the average around \(\$ 60\) per month. There is great demand for boarding plaees for aged persons who can pay only \(\psi \dot{3} 0\) to \(\psi+0\) per month, but it is almost impossible to find acemmodations at this price. Some of the comery homes for aged will receive such ohl people who can not find other honsing and will permit them to pay \(\$ 30\) per month to the romity for care. The eounty authnrities are not generally in faven of this police. but it seems to meet a neerl.

\section*{Chapter 5}

\section*{ESTIMATED COSTS AND NUMBER OF POTENTIAL APPLICANTS FOR AID UNDER (A) A SYSTEM OF STATE AID TO THE AGED FINANCED EQUALLY FROM STATE AND COUNTY FUNDS, AND (B) A SYSTEM OF STRAIGHT STATE OLD AGE PENSIONS.}

\section*{(A) State Aid to the Aged.}

The findings of the present survey of dependent ared in California indicate that 7.5 per cent of the group are 70 years of ace or oleler, 64 per cent have lived in the state twenty years or tonger, and 88 per cent are citizens either hy hirth or naturalization. Applying these tests to the actual number of aged receiving relief outside of institutions on Jume 30, 1928, gives a net group of approximately 1580 aged who are known to be eligible under the proposed act by reason of age, residence, citizenship and need. Added to these might be 5 per cent of the instithtional population of the same age, or approximately 200 persons. This gives a total of 1780 applicants from the publicly-aided group and, if the same age group now receiving relief from private organizations (300) be added, it will approximate 2080 old people who are known to be needy and who may qualify for state aid under the proposed act. This, then, is the linow'n group of potential applicants.

Althongh the record of aged dependents now receiving public airl indicates a very low dependency rate among the aged residents of the state, being only 3.29 per cent in the 70 -rear group, there is no reason to believe that there is a great mass of destitute aged who are not being reached by the present system of relief. That the amount of aid given is inadequate in many instanees is apparent. It is probahle that there are sensitive old people who are suffering hardships in preference to seeking eounty aid. Notwithstanding the fact that in recent years public outrelief in California has been administered in the larger eonnties by trained social workers who have sought to understand aud to meet the needs of the aged without breaking down their self-respeet, there still lingers in the minds of some old people a stigma of disgrace in heing " on the county." 'This stigma which has attached to coment aid has not attached to aid received from state fumds. State support of orphans and widowed mothers with roung children is reeognizes as good public poliey and carries with it no brand of "pamperism." Therefore a provision for state aid to the aged shonld reach any needy old person who is not now in receipt of public aid from the eounties. No satisfactory metbod of cletermining the nmmber of potential applicants who are now being supported by children or other relatives or are otherwise being carel for without recourse to publice ad has ret been devised. In other states where commissions were appointed to study the question of old age dependeney a great deal of work was undertaken and much expense inenred by sending out agents to interriew thonsands of non-dependent old persons thronghont the eities and towns of the respective states. Much information was gaine 1 and many statistical data were compiled. Yet the admission is made that
"the number of citizens not now in receipt of publie relief who would apply for benefits under the proposed aet ean not be estimated with any high degree of precision in advance." " In other words, only the experience gained under actual operation of the law will demonstrate the number of sueh applicants. No adequate record of such experience is available for study. Pennsylvania made a start in this direetion under the Old Age Assistance law of 1923 ; forty-five county boards were organized to receive applieations and 2000 applieants were registreed when the law was declared unconstitutional and all activities thereunder ceased. In Montana, where a county old age pension law has been in effeet for five years, the number of applicants has grown from rear to year. While it has not yet been adopted by every county in the state, the last report shows that 41 out of the total of 56 counties in Montana have accepted the act. The total number of pensions paid (693) represents 7.85 per cent of the total age group in the state aceording to the 1920 census reports. No social data on Montana applicants are recorded. Wisconsin, the only other state which has an old age pension law in active operation, has had three years' experience in its administration. The number of applicants is less than anticipated and is not increasing very much in total volume. The number of pensions paid in 1927 (295) represents less than one-half of 1 per cent of the total age group in the state as shown in 1920 census reports. Wiseonsin has interesting social records on its aged applicants and as som as a representative number of its comnties adopt the provisions of the old age law, these records will eontribute valuable information on the whole problem of old age dependeney, from whieh it should be possible to derive a reliable factor for determining the number of potential applicants in an American community.

Any estimate of the cost of state aid to the aged in California must take into aceom the faet that the period of dependener will make this cost cumulative until the peak of applications is reachecd. Life expectaney in California, at 70 years of age, approximates nine years. according to the United States Life Tables compiled in 1920.

If the total group of known eligible aged, as estimated above at \(\underline{2}(080\) persons, should receive the maximun amount of aid possible under the proposed aet ( \(\$: 30\) per month) the state's half to be refunded to the counties would approximate \(\$ 375,000\) per aunum. Aecording to the records of comnty expenditure for relief, less than one-half of the needy aged are receiving the maximum amount. Based upon the present seale of actual expenditures as shown in county reports of 1928 , the cost to the state of a system of state aid to aged under the proposed act, if every known eligible old person is included, would be \(\$ 280,454\) per annum as shown on pare 13 of this report. Inasmuch as this amonnt includes an estimated sum to increase the aid in counties which are now giving an inaterfuate dole to the aged, which increase the counties may not put into rffect for several years, it is felt that the ammal total of \(\$ 280,454\) is a fair estimate for the next few years.

\footnotetext{
\({ }^{1}\) Massachusetts Report on Old Age Pensions, 1925, p. 36.
}

\section*{(B) A State Old Age Pension.}

An extimate of the cost of a state old age pension system is given in a reeent stuly made by the Heller Committee for Researeh in Social Eeonomies, of the I'niversity of C'alifornia, which, by their courtesy, is quoted below and made a part of this repert.'

\section*{Accuracy of the Estimate.}

It is necessary to impress upon the reater that any calculations of the cost of a state pension system are merely an estimate, based, moreover, upon extremely limited data, the applieation of which to C'alifornia eonditions is open to very serious question. For that reason, the committee is presenting an estimate ranging fairly wide limits, instead of a single figure.

Also, in view of the rapid growth and development of the state, the estimate has not been confined to any particular time, but is rather an estimate which will fumish some foundation upon which to base the probable increase in the expense of maintaining the proposed system.

The prohlem of estimating the probable cost breaks il into two parts; first, the determination of the cligible population; and, second, the determination of the probable cost per person.

\section*{Determination of the Number of Individuals 70 and Over Who Have Resided in California 15 Years.}

The United States census tabulates the popmlation of the state by sex in tuinguennial age groups. In view of the fifteen-year residence qualification, those who would qualify for a pension in 1925 must have been residents of the state in 1910 . Further, they must have been 5.5 rears of age and over at the time of that census.

While some of the population 55 and over in 1910 may have left the state, it is doubtful whether this is an appreciable factor and probably it may be safely left out of the calculation. If, then, a suitable mortality table can be found on the basis of which we may measure the probability of surviving a period of fifteen years, an estimate of the population of Calfornia 70 years of age and over, resident for fifteen years in the state in 1925 , can be made.

For determining this probability, we have the I'nited States Life Tables, 1910 , among which are separate tables by sex for the entire original recristration area. The mortality of the different sections of the United States not being miform, the question naturally arose whether these tables are suitable for measuring mortality in Califormia. They were, therefore, tested as follows: The probability of surviving a tenrear period was first computed from the tables by arerage quincuennial age groups. These figures were applied to the population for ('alifornia as shown by the census of 1910. By this process, the following results were derived, with which are compared the census figmres for 1920 .

\footnotetext{
1 "Depentent Aged in San Francisco." University of California Press, 1928, pp. 113-117.
}

A considerable difference dite to immigration into the state was to be expected, and on checking out the differences shown in the above table, it appeared that these differences fairly represented the immigration into the state during this decade.

A similar test was made for three cities, Oakland, San Francisco, and Los Angeles. While this test is not entirely conclusive and while undoubtedly more accurate resmits might have been obtained had a mortality table specifically for the State of Californa been constructed, in riew of the uncertainty of several other elements in the problem it did not seem worth the extra labor involved.

The tables having been tested, the probability of surviving for a period of fifteen years was calculated from the tables by sex in quinquennial age groups and applied to the census returns both for 1910 and for 1920, and resulted in the following estimate of population eligible by reason of age and residence in 1925 and in 1935 respectively :

Estimated idumber of White Males and Females Livi:ng in 1925 and 1935 in California Who Were 55 and over at 1910 and 1920 Census, Respectively

\section*{Eligible Population After Taking Into Consideration the Other Qualifications.}

No reliahle California data were available for the next phase of the problcm. The present study shows that 11.5 per cent of the population 70 rears and over in San Francisco is now dependent, but such a figure can not safely be used to predict pension applicants throughout the state, both hecause San Francisco is not necessarily representative of California as a whole, and because such a group does not include those old people who are not recciving charity but would apply for a pension. Turning to reports of the Xassachnsetts and Pemnsylvania commissions. we find that the Pennsylvania commission estimated, on the basis of actual applications, that 10.7 per cent of the population 70 and over would receive pensions. On the other hand. the Massachusetts commission, althongh its survey was based on a careful field investigation in many parts of the state and not upon actual applications for pension,
estimated about 18,000 to 20,000 as cligibte, which would be approximately 15 per eemt of the pophlation aqeed 7 (1) and over. rewident in the state fifteen years or more.

Experience has shown that the lull cost of any law such as this or a workman's compensation law, can not be definitely established during the first one or two years; but that it takes a certain length of time for the eligible population, even with the utmost publicity, to realize their rights and privileges. The cost steadily rises during this period. For that reason, the Massachusetts figures carry more weight than the Pemnsylvania figures. Even here there is internal evidence that the estimate may be low. For example, a table on page 73 of the Massachusetts report shows some 7806 persons 65 and over who might be eligible for this particular benefit. The table shows that of this group 64.7 per rent can be fully taken ware of by their chitdren. whereas only 7 per cent are described as being supported "in full with difficulty." Unless this group were an unusually selected group, it seems entirely contrary to common experience to accept these relationships. It seems far more likely that the number whose children can give them full support without difficulty is much less and that those who are receiving full support at the expense of the children's family is much greater. Of course, an increase in the number who can not he supported by children without difficulty would result directly in an increase of the population eligible for relief.

In view of these facts, the committees submit an estimate ranging between 15 per cent and 25 per cent of the population eligible by reason of age and residence. On this hasis, the minimum estimate of population eligible in 1925 is 13,355 and in 1935, 23,222. The corresponding maximum estimates are 22,258 for 1925 and 38,704 for 1935.

In view of the provisions of the law that the benefit is to be such an amount as will give the pensioner a total income of \(\$ 365\) per year, it seems, from a review of the applications submitted, that the estimated cost of the Pennsylvania commission of \(\$ 249.66\) is reasonable. Rounding out the figure to \(\$ 250\) per ease and applying it to the estimates above gives a final estimate of cost in 192.5 ranging between \(\$ 3,338,750\) and \(\$ 5,564,500\), and in 193.5 hetween \(\$ .5,805,500\) and \(\$ 9,676,000\).

Such an estimate can be no more than a rough indication of possible minimum and maximum costs. Probably no material crror could be found in the estimate of population eligible ly age and residence only, but in the absence of a thorough statewide investigation of the numbers of aged dependents within this population, the choice of a figure based on very limited experience in other states is purely a matter of judgment. The committee does not wish its יstimates of numbers or ecosts under a pension plan to he considered in any sense final or exact.

\section*{PART III \\ OLD AGE PENSION LAWS IN OTHER COMMUNITIES}

\section*{Chapter 1}

\section*{IN THE UNITED STATES}

During the last twenty years six bills have been introduced into the United States congress, all tending toward national responsibility for support of aged citizens. The first bill was introduced in 1909, the second in 1911, the third in 1913, the fourth in 1917, the fifth in 1926 and the sixth in 1928. The last measure presented made provision for a noncontributory pension to all persons 60 years of age and older, who have been citizens and residents of the United States for sixteen years, and whose income does not exceed \(\$ 12\) per week. The amount is graded according to income from all sources, the maximum pension being \(\$ 8\) per week. None of these bills has been reported out of the committee to which they were referred.

Five states have so-called old age pension laws on the statute books, but it was possible to secure information regarding operation from two only-Montana and Wisconsin. Nevada, Colorado and Kentucky replied that the law is not yet in operation. Pennsylvania and Arizona passed laws permitting old age pensions, hut in both states these laws were declared unconstitutional.

The territory of Alaska has what is known as the "pioncer law" which permits the payment of a cash allowance to those old residents who do not care to enter the Alaska Pioneers Home.

All the laws for assistance to the aged passed by the five states mentioned above-Montana, Wisconsin, Nevada, Colorado and Kentncky, are similar in certain respects. For example, the decision as to payment of old age pension is optional with the counties in each state. There is mo state control or supervision of the expenditure except in Wisconsin, which is the only state that provides for participation by the state govermment in the parment of such pensions to the aged.

The Wisconsin law provides for a refund by the state to the counties of one-third the amount expended under this act. Any county in the state can establish the pension system upon a two-thirds vote of the members of its comonty board, and can repeal the system after it has been in operation one rear. The maximmm aid or pension given to aged is one dollar per day. The minimum age limit is seventy years. Residence of fifteen years in the state is required. This law was passed in 1925.
According to the latest report on the operation of this old age pension law in Wisconsin (State Board of Control, 1927) five counties in the state have adupted the terms of the law since its enactment. Two of these counties reroked the system after a year's operation, hut one county restored it after six months' lapse. At the elose of the year 1927 four counties were giving old age pensions under this act.

The total number of pensioners for the year was 295 . This included 72 new cases and \(2: 3\) continued from the previnus year. The average
amount paid to these old people was \(\$ 19.20\) per month. The total expenditure for the year was \(\$ 49,638.50\), of which the state paid \(\$ 16,546.17\). Sixty per eent of Wisconsin applieants were native-born Anericans; 24 per cent own their own homes hut have no income.

The Montand lene leaves the administration and financing of the pension entirely to the eounty govermment. No central state supervision or participation is provided. The comnties report ammally to the state auditor who therebr is enabled to issue an annual report showng the state-wide operation of the law. The maximum pension under Montana's act is \(\$ 25\) per month. The minimmm age is \(i 0\) years. Residence of fifteen years in the state is required.

The report of the state auditor of Montana (1927) shows the operation of the law in 41 counties of the state. The total number of pensioners was 693 , of which number 293 were new eases during the year. The total expenditure by the counties for old age pension during 1927 was \(\$ 115399.96\). This would indieate that the arerage pension paid is less than \(\$ 20\) per month and considerably below the maximum provided in the act. No soeial data are arailable on the Montana applieants.

The absence of any reports to a state office in the laws of Nevada, Kentucky and Colorado makes it imposshle, apparently, to secure statewide information on the operation of the old age aet. Possibly this lack of reports may aceount indirectly for the statement that the law is inoperative.

\section*{Chapter 2}

\section*{OLD AGE PENSIONS IN FOREIGN COUNTRIES}

With the exception of the United States and China, all of the rivilized nations of the world have some system of assistance to their aged citizens, either in the form of pensions or contributory insurance.

The table given herewith was compiled by the Pennsylyania Commission on Old Age Pensions and appears in their report of January, 1927. The data were secured not only from docmments but from personal investigation made by the researeb director of the commission, who was sent abroad to study the various pension systems.

There have been only minor changes in these foreign laws since 1927, with the exception of Great Britain, where the scope of the law has been widened. and the Dominion of Canada which, in 1927, adopted a noncontributory system of pensions to aged.

Of all foreigin countries, Canada's people and their living conditions are most nearly comparable to those of the United States. Therefore the experience of that country in old age pensions is of such interest that special mention is made of it here.

The Dominion of Canada in 1927 enacted a law which provides an old age pension of \(\$ 20\) per month to citizens (British subjects) 70 years of age who have resided in the Dominion for twenty years and whose income, including the pension, does not exceed \(\$ 1\) per day. The law becomes effective only when accepted by the varions provinces. Onehalf of the amount expended by the Province under this act is refunded by the Dominion Government.

Three provinces have adopted the old age pension laws up to this writing. British Columbia accepted it in March, 1927, Manitoba and saskatehewan in 1928.

British Columbia is the only ('madian province where the law has been in operation long enongh to warrant a report on its workings. Administration is placed under the Workmen's Compensation Board, and local supervision is maintained by the same social workers who supervise expenditures under the Mothers' Pension Act. A report from the Old Age Pension Department under date of August 31, 1928, gives the following facts concerning the first vear's operation :

Number of applications granted, \(3: 378\).
Amount paid out for pensions, \(\$ .566,0+0\), half of which is borne by the British Columbia govermment and half hy the Dominion government.

APPENDIX 1
A GROUP OF SAMPLE LIFE STORIES OF AGED PERSONS INTERVIEWED DURING THIS SURVEY

Mr. P. Aged 78. Has lived 53 years in California.
Old Frenchman, a gardener. Who prefers to live alone and eke ont county allowance ly odd jobs cutting lawns.

IIe does not want to go to the county hospital. Lived in San Franeiseo from 1875 until fire of 1906. Was gardener at old Stanford mansion on Powell and C'alifornia streets. Also in Mark Mopkins Art Sehool. Saved nothing from the fire but three eats from the boarding house where he lived. "Didn't want to see them bmrn; a nice eat and two kittens." He walked to San Jose, gave the cats to a groceryman who took him in and got him a job. After a few months \(P\). went to Santa Barbara County, where he has lived ever since. Used to do fairly well at gardening, but after he broke his arm he last his customers. Now has only one regular eustomer, who pays him \(\$ 3\) per month. P. never married. He was left an orphan when 5 years old. No brothers or sisters. The connty allows him \(\$ 10\) a month. He lives in one room of an old tumbledown house, for which he pays \(\$ 3\) a month rent. With the assistance of the local social worker he has eollected enough furniture to make the room fairly comfortable. He has a little kitchen garden which helps out his food budget. His earnings do not average more than \(\$ 5\) or \(\$ 6\) per month.

\section*{Mrs. ('. Age 94. ILas lived in California 41 years.}

Mrs. (\%. was born in Virginia; married twice, both husbands dead. Second husband died in 1895. Had five children; all died unmarried. She had a dressmaking shop in San Francisen, employing forty people at time of 1906 earthquake and fire. Claims to have lost everything by fire. Business wrecked by earthruake conditions. She managed to support herself by sewing, earing for children, and doing various kinds of work until 1920, when she beeame sick and had to ask for aid. Does not believe in doctors. Ifas exceptionally good health, considering age. Even now, at 94 years, she wants to work and does mending whenever she can get it to do. Only six months ago she answered an advertisement for seamstress, but when she applied she was refused because of her age. The county allows her \(\$ 35\) per month, out of whieh she pays \(\$ 15\) rent.

Mr. and Mrs. "Sandy Bar Jim." Ages 71 and 70 (estimated). Califormia Indians.
"Sandy Bar Jim" and his wife are among the aged Indians on the comty welfare list. They have enltivated their land, and by Jim's wood cutting, managed to be self supporting until two years ago, when sickness brought them to want. The man's earnings now erpal more than half the living expenses of the old conple. They have no children.

A few years ago "Sandy Bar Jim" found some valuable Indian relies and sold them to a museum. Ite has discovered a few more from time to time, and this helps ont the meager budget of the old couple. He acts as interpreter for other Indians, as he went to schonl and speaks better English than most of the Indians in his district. These are nonreservation Indians. The county gives this old eouple \(\$ 12\) per month allowance.

Mrs. E. Age 74. Has lived in California 17 years.
She had two daughters, one married and the other a nurse. The nurse came to C'alifornia with her and they bought a home. Both worked and were prospering when the danghter became siek and, after a long illness, finally died, leaving the mother alone. To pay the hospital and doetor hills, Mrs. E. had to sell half of her lot. Her married danghter died also, so that she has no one left except an old sister in Pennsylyania, who is poor.

Mrs. E. did day work for several years and supported herself, then hecame ill, used up her savings and found she had nothing to live on. After a struggle she consented to deed her house to the county in return for a monthly eash allowance. This she did and was given a life tenure of the property with monthly eash allowance. She is happy to be allowed the privilege of remaining in her own home. She has a small annnity which pars her about \(\$ 5\) per month, and with the present eomnty allowance of \(\$ 18\) a month she manages to live.

Mr. and Mrs. B. Ages 74 and 73 . Have lived in California 9 years.
This elderly eomple-no ehildren-came to California for the man's health. He had suffered a breakdown after influenza in 1918, and has been asthmatie ever since. Otherwise they were in good health and had sufficient savings to carry them a few years, and the man fully expected to get work in Califormia. In this he was disappointed and the couple lived on their savings during periods of unemployment. Last year the savings were exhansted and the man was compelled to appeal to the county to help with rent and food. Woman had worried over their financial condition until she had become sick. The man asked for assistance in securing work. This has been his only plea. The only answer possible has been relief, althongh the workers realize that he does not want relief and takes it only becanse he is absolutely mable to live without it. The comnty at present time is allowing them \(\$ 31\) per month, ont of which they pay \(\$ 20\) per month rent.

\section*{Mrs. D. Age 70. Has lived in California 66 years.}

The dominant note in this woman's history since her husband died in 1906 is a persistent effort to secure employment. In acknowledging receipt of each comnty check her letters say, "I hope this aid is only. temporary", Three times in the five rears since she became dependent she has asked that the aid be discontinned, as she had secured work which seemed to be sufficiently permanent to justify her hopes of independenee. Ifowever, each time she has been compelled to apply again when the work ended. After her husband's death she wrote for newspapers, worked as a traveling saleswoman, painted place cards, did fine sewing, and finally did house work when it was the only work whieh offered. She say's as soon as she is well again, she plans to do mending for business women.

One letter conds with an apology for asking aid, and the words, "Oh, well, if one will live to be 70, what can one expect?" Her letters show cood command of English, semse of humor and undamed courage. A well known psychiatrist diagnosed her case as one of "a nervous condition due not to any organic nervous disease but to lack of eongenial (mployment."

The county is now allowing her dis) per month, out of which she has to pay \(\$ 15\) per month rent.

\section*{T. H. Age 69. Has lived all his life in California.}

This man worked for twenty-five sears for a well-established lumber company, at their saw mills, logging, piting, sawing and doing general labor. As he grew oted the former sulperintendent took him off the heary work and gave him responsibility for care of tools, janitor in office, ete. About nine vears aqo a new management took over the mill and arbitrarily placed a dead line at in years, discharging everyone over that age. H. was stumed, the mill had been his life for twentsfive years; so he lung on, lying about his age, as he frankly admits. His old friends at the mill did not betray him, beeause they knew he needed the work and could do it. One day a new man noticed him at work and reported "an old man" in the place. He was called into the office and dismissed. One of his friends in the mill put him back and told him to keep out of sight when the boss came around. He got through a few months that way, but finally his gray head was discovered, and he was discharged again. The old man became discouraged, and for years now has depended upon the \(\$ 10\) from the county and such odd jobs as he can find. Every old resident of the town knows his willingness to work and sympathizes with him, but there is nothing to be done. When he gets a job he relinduishes the county aid and works as long as he can.

He is active, keeps his own cabin clean, cooks for himself and is in fairly good health. His eyes are failing. He does not want to go to the county hospital.

\section*{Mr. C. Age 80. Lived in California 74 years.}

He lives in an old house which belonged to a neighbor but the family is all dead. Mr. C.'s house fell down from age and he moved his things into the house next door as it was empty and he lives there rent free. There are old portraits on the walls but he does not know their history. He came to California in 1854 with his father and mother. He was then a boy of 6. His brothers have died and he is left alone. He remembers when Coloma was a noisy, lively town of miners and dance halls and desperados and his mother used to warn the children to stay indoors because of the danger from stray bullets or trampling horses. He never married.

Mr. C. has been a miner but for most of his life has kept books for various stores and lumber mills. He has been the janitor of the school for a number of years and takes great pride in it. He sweeps the floor, rings the bell and opens and locks the door. For this he receives \(\$ 5\) per month but it is worth much more to him as it is his one claim to usefulness, his "job." The county has given him \(\$ 10\) a month for the last three years. He managed to support himself up to that time. He is in good health and seems to have no weakness except that of physical age.

Mrs. S. Age 95. Lived in California 78 years.
Mrs. S. came across the plains with a pioneer family when only 17. They settled in Sacramento where she married and came south to the county of Los Angeles. "There was no town then, only a dusty village,'" and no paved streets. Her husband was a brick mason and helped to build the city hall in Los Angeles-"the new city hall," Mrs. \(S\) called it! When told that a wonderful new city hall was being completed at First and Spring streets, she was delighted as a child and wished she could see it. "But the other one is a beautiful building," she said. "What are they going to do with two city halls?" The idea that the former city hall is now old and outgrown did not occur to her. After her husband's death she did washing and ironing and housework till she was over 70 , when she applied for help on account of sickness and was sent to the county farm where she is now. She has no living children or other relatives.

She is very feeble and her mind is not clear on recent happenings though she can recount all the incidents of her early life.

Mr. and Mrs. H. Ages 80 and 81. Lived in California 10 years.
American couple, man partially blind and deaf. Woman is infirm. Living with daughter who claims to be unable to support them. Daughter is widow with 2 children. She has been employed selling real estate. She gives free home to the old couple and county gives \(\$ 15\) per month for food. Man is attending eve clinic but gradually going blind. Works occasionally on lawns or any work he can get. Earns about \(\$ 1.50\) a week on average.

\section*{Mr. and Mrs. L. Ages 82 and 77. California Indians.}

This old Indian couple had 40 acres of land on which they lived with their married son, Charles, and his family. When the old man became too feeble to work, he deeded the property to his son to take care of him and the old mother. The son died and his wife claimed she was unable to provide for the old people, so they moved to the home of another son (James) who also is married and has 3 children. He has a very small house and the family is crowded. He hopes to build a little cabin for his old parents where they can live rent free and with the county grant of \(\$ 15\) for food they "can get along." The son's earnings are small and he cannot do more than give a home to the old people.

These Indians have never been on Reservation and are accepted as a county responsibility.

Mr. and Mrs. M. Ages 77 and 75. Have lived in California 20 years.
Aged English couple who came to United States about 40 years ago. Man was clerk and expert accountant in Pittsburgh, Pennsylvania. They were prosperous until 1907 when the hank in which they had deposited their savings, in Pittshurgh, failed. They then came to California but the man has not been able to secure a permanent position at clerical work on account of his age. Very anxious to work. Took a job clearing away some brush about 5. years ago, only work he could get.

When burning the brush he was badty burned about the legs. Was in hospital six weeks and has not been well since. Now earns \(\$ 10\) a month cutting lawns, etc. Woman had paralytic stroke and doctor says unfavorable prognosis. Daughter gives home rent free, takes care of the mother and does all the housework for them. Can not do more as her husband's earnings are small. The county gives them \(\$ 16\) per month.

Mr. C. Age 74. Has lived in California 23 years.
Aged man, well educated, neat in person and habits, gentle in speech. Had a college education and taught school for years in Minnesota. Then tutored and coached for a long time. Feels he is still able to do such work but no one will employ him on account of age. Came to California in 1902 and invested savings in real estate and lost. Has not had steady work for many years but managed to exist by doing odd jobs. Receiving help from friends and a small annuity of \(\$ 120\) which pays his room rent. Has a married brother in East who has family and also cares for older unmarried sister. This brother claims be can not do anything for Mr. C. The county allows him \(\$ 15\) per month.

Department of Industrial Relations,
State Building, Civic Center. San Francisco.

Sir: I have the honor of submitting to you herewith the Report of the Division of State Employment Agencies, covering the work of the state free employment agencies for the two fiscal years, 1926-1927 and 1927-1928.

Respectfully,
Setil R. Brown, Chief, Division of State Employment Agencies.

\section*{ACKNOWLEDGMENT}

I desire to extend my sincere thanks to the employers, organized workers, and civic betterment organizations who have cooperated with the Division of State Employment Agencies. I am grateful to the weekly and daily newspapers for the gratuitous publicity which they have given to state free employment agencies.

Setil R. Brown, Chief
Division of State Employment Agencies.

\section*{INTRODUCTION}

The act authorizing the establishment of the state free employment offices became cffective on August 8, 1915, but it was not until February 1,1915 , that the first offices were opened in the cities of San Francisco and Sacramento. From 1915 to 1928, the state free employment system was operated under the jurisdietion of the Commissioner of the Bureau of Labor Statistics, and the activities of the free employment offices, up to July 1, 1926, are deseribed in the biennial reports of the Bureau of Labor Statistics.

In 1927 the legislature created (Stats. 1927, chapter 440) a separate Division of State Employment Agencies within the Department of Industrial Relations; and on January 7, 1928, the Governor appointed the present Chief of the Division of State Employment Agencies.

In addition to the permanent free agencies which the division is operating in the cities of Bakersfield, Fresno, Los Angeles, Oakland, Sacramento, San Bernardino, San Diego, San Francisco, San Jose and Stockton, temporary seasonal offices are established from time to time to meet the needs of agriculture. During the two fiscal years by this report such seasonal offices were operated in Brawley, Chico, Hollister, Marysville, Modesto, Lodi and Neweastlc. These seasonal agencies were opened and were operated at the request of growers, fruit packing associations and civic organizations. These seasonal offices serve the needs of workers looking for agricultural employment and of farmers seeking agricultural workers during the peaks of the harvest seasons. The establishment of these temporary offices makes it unnecessary for thonsands of men and women to roam from ranch to ranch looking for work.
These agencies functioned to the apparent satisfaction of all concerned, filling all orders for farm labor quickly and efficiently. So far as known, no fruit was lost during the last season because of lack of agricultural workers.

It is essential that state free employment offices should be maintained in the various fruit districts of the state during the harvesting periods, and provision should be made in the biennial appropriations for the maintenance of these temporary offices each year, when the demand for agricultural workers is greatest.

Adequate financial provision should also be made for the enlargement of the present quarters of the Oakland free employment ageney. The activities of this office have grown considerably since it has been located in its present place. It will function more efficiently if more space is provided for its enlarging activities. The same applies to the Sacramento and Stockton offices which should be located in larger and more desirable quarters.

September 24, 1928.

\section*{THE STATE FREE EMPLOYMENT AGENCIES}

\section*{Number of Jobs Filled}

The work of the state free employment agencies during each of the two fiseal years covered by this report is shown in Tables 1, 2 and 3, and in the accompanying charts. More detailed statistics are presented in the following tables. Table 1 shows the number of jobs filled, by sexes, and by offices during the fiscal vear 1926-1927. Table 2 gives the same data for the fiscal year 1927-1928, and Table 3 gives the same information for the two fiscal years combined.

During the two fiscal years, the total number of jobs furnished was 330,948 . Of this total 273,888 , or 82.8 per cent, were jobs given to male applicants and 57,060 , or \(\mathbf{1 7 . 2}\) per cent, were jobs given to female applicants.

In 1926-1927, the total number of jobs furnished by the state employment agencies was 186,432; and in 1927-1928, the total number of jobs furnished was 144,516 . The decrease of 41,916 , or 22.5 per cent, in the number of jobs filled in the latter fiscal year compared with the preceding fiscal year can be accounted for by the slackened industrial and commercial activities during the latter period. Chart 2. taken from the Twenty-third Report of the Division of Labor Statistics and Law Enforcement, shows the fluctuations in employment in California manufacturing establishments during the calendar years 1926, 1927, and during six months in 1928. The data in this chart are based non reports from 780 identical manufacturing establishments, whose average monthly number of employees in 1926 was 165,910 . The fluctuations of employment, therefore, as shown in this chart are considered typical of industrial conditions in California during the two and one-half years mentioned. This chart shows a drop in employment during 1927 and in 1928 compared with the average employment in 1926.

The number of jobs filled by the state free employment agencies varies with the agricultural, commercial and industrial activities of the state. Whenever business is good and workers are in demand. more jobs are filled by the employment agencies, but during years of industrial depression, the demand for workers drops and the number of jobs filled by the free emplowment agencies is smaller. This is, of course, also true of the private employment agencies. Employment agencies do not create jobs; they fill the labor requirements of agriculture, commerce and industry.

\section*{Seasonal Offices}

As already mentioned in the introduction of this report, temporaryseasonal offices were operated during the two fiscal years in Brawley, Chico, Hollister, Lodi, Marysville, Modesto and Newcastle. The placements by each of these offices during each of the tro fiscal rears and during both fiscal years are shown in Tables 1, 2 and 3 . These offices, operated only during the harresting seasons, are a boon to the agriculture in the state.

\section*{Industrial and Domestic Departments}

Special industrial and domestic departments are maintained in San Francisco, Oakland and Los Angeles to serve the need of female applicants for employment in industrial pursuits and in domestic work. Table 3 and Chart 5 show that during the two fiscal years covered by this report, the industrial and domestic departments of Los Angeles, Oakland and San Francisen placed 46,236 female applicants in positions.

\section*{Commercial Departments}

Separate commercial departments are also maintained in San Francisco, Oakland and Los Angeles to meet the requirements of applicants for commercial positions. Better and more efficient service can be rendered by employers who apply for office help because of the operation of separate commercial departments. It will be seen in Table 3 and Chart 6 that the Los Angeles and Oakland commercial departments furnish more female than male labor. Thus, of the 5343 placements made by the Los Angeles office during the two fiscal years ended June \(30,1928,641\), or 12 per cent, were males, and 4702 , or 88 per cent, were females. Of the total number of 663 commercial jobs furnished by the Oakland office, 239 , or 36 per cent, were males, and 424 , or 64 per cent, were females. The commercial department of the San Francisco office filled 1505 commercial positions. Of this number, 1124, or 74.7 per cent, were males, and 381 , or 25.3 per cent, were females. The total commercial placements by the three commercial departments, during the two fiscal years, covered by this report, were 7511, or 2.3 per cent of the total jobs placed during this period.

\section*{The Ten Permanent Offices}

The ten permanent offices operated by the Division of State Employment Agencies in Bakersfield, Fresno, Los Angeles, Oakland, Sacramento, San Bernardino. San Diego, San Francisco, San Jose and Stockton filled 317,020 positions during the two fiscal years covered by this report. In the following tabulation these offices are ranked according to the highest numbers and percentages of the jobs they filled (Table 6) :
\begin{tabular}{lll} 
Nank of offices & \begin{tabular}{c} 
Number of jobs \\
filled
\end{tabular} & Per cent of \\
total
\end{tabular}

The San Jose, Stockton, Bakersfield and San Bernardino offices are part-time offices. The nanagers of these offices are also deputies for the Division of Labor Statistics and Law Enforcement of the Department of Industrial Relations.

\section*{Labor Wanted and Supplied}

Tables 5, 6 and 7 also show the numbers of persons wanted by employers, the registrations, applicants referred and original placements. In Table 7 these data are given for the two fiscal years, 1926-1927 and 1927-1928. It will be noted that the total number of persons wanted by employers during this period was 348,760 and that the number of applicants referred was 357,882 . The original placements refer to placements of individuals. Thus, 317,020 positions were filled with 119,949 persons. This shows a ratio of one person to 2.6 jobs. In other words, it would require 317,020 persons to fill that many jobs, if these jobs were filled by different persons; but, as shown in Table 6, the 317,020 jobs were filled by 119,949 persons.

Applicants for employment are not compelled to register every time they come in to ask for a job. Instead, applicants are only required to register with the state free employment agencies once a year. This is done to keep the files as up-to-date as possible, without causing unnecessary annoyance to the applicants for positions.

\section*{Industries Served}

Tables \(8,9,10,11\), and tables 20 to 42 , inclusive, show placements by industries, occupations, and by sexes, for each of the offices and for the two fiscal years covered by this report. In the following tabulation the industries and places of employment are arranged according to the largest percentages of persons placed (tables 42 and 43).

PLACEMENT OF MALE APPLICANTS, 1926-1927 and 1927 -1928
\begin{tabular}{llrr}

total
\end{tabular}

PLACEMENT OF FEMALE APPLICANTS, 1926-1927 and 1927-1928

*N. E. S.-Not elsewhere specified.

\section*{Average Monthly Placements}

The average monthly placements for eight calendar years, from 1920 to 1927, are shown in tables 12 to 19, inclusive, and in Chart 7, for the Fresno, Los Angeles, Oakland, Sacramento, San Francisco, San Jose and Stockton agencies. Since only these agencies have operated throughout this entire period of eight years, the other offices operated by the division were not included in these tabulations. Table 12 shows these data for the seven offices combined. The average monthly placements for the eight years and for 1927 as well as the percentages of decrease in 1927 compared with the monthly average for the eight years are shown in the following tabulation:
\begin{tabular}{|c|c|c|c|c|}
\hline Morth & \begin{tabular}{l}
Average for \\
8 years, 1920-1297
\end{tabular} & \[
\underset{1927}{\text { Nrmber in }^{2}}
\] & Decrea compare average Number & in 1927 with the 8 years Percent \\
\hline January & 10,400 & S,355 & 2,045 & 19.7 \\
\hline February & 10,216 & 7,289 & 2,927 & 28.7 \\
\hline March & 14,158 & 10,927 & 3,231 & 22.8 \\
\hline April & 15,240 & 12,305 & 2,935 & 19.3 \\
\hline May & 17,896 & 13,230 & 4,666 & 26.1 \\
\hline June & 18,243 & 12,332 & 5,911 & 32.4 \\
\hline July & 16,518 & 10,936 & 5,582 & 33.8 \\
\hline August & 18,389 & 13,550 & 4,839 & 26.3 \\
\hline September & 20,291 & 15,294 & 4,997 & 24.6 \\
\hline October - & 18,05S & 14,490 & \(3,59 \mathrm{~S}\) & 19.9 \\
\hline November & 12,885 & 10,623 & 2,262 & 17.6 \\
\hline December & 9,913 & 7,958 & 1,955 & 19.7 \\
\hline Average & 15,186 & 11,441 & 3.745 & 24.7 \\
\hline
\end{tabular}

A perusal of Table 12 will reveal employment conditions during each of the years from 1920 to 1927, inclusive. Thus, it will be noticed that during 1921, a year of industrial depression, the total placements were 129,241 compared with 226,649 placements in 1922 and 252,966 placements in 1923. Judged by these data, employment conditions were better in 1926 than in 1924 and 1925, or 1927.

During the two rears covered by this report the cost of maintaining the state free employment agencies was \(\$ 17 \pi, 789.08\). During the same period these agencies filled 330,948 jobs. This makes the average cost to the state per job filled by the agencies 54 cents. In the preceding biennial period the cost per job was 46 cents. The cost of filling each job depends upon the number of jobs furnished each year and upon the amount of money spent by the state employment agencies, while the number of jobs filled is primarily dependent upon business conditions, and also upon the number of seasonal offices operated.

\section*{Savings to Job Seekers}

While the cost to the state was 54 cents for every job given to the applicant free of charge, private employment agencies charged \(\$ 3.9 \mathrm{~S}\) for every temporary and permanent job they sold to their applicants during the calendar years of 1927 and 1928. That this was the average fee charged by private employment agencies is shown in the Twentythird Biennial Report of the Dirision of Labor Statisties and Law Enforcement. If the 330,948 job seekers would have had to pay for their jobs, the cost to them would have amounted to \(\$ 1,317,173\) or to
\(\$ 658,586\) per year. But, approximately, only 54 per cent of the jobs furnished by the state free employment agencies last in excess of eight days. Assuming that only 54 per cent, or 178,712 of the applicants who secured jobs, would have had to pay the average fee of \(\$ 3.98\), the total cost to them, during the two years considered, would have been \(\$ 711,274\), or \(\$ 355,637\) per year. Roughly estimated, therefore, the state free employment agencies may be said to have saved to their applicants the sum of \(\$ 355,637\) per year, during each of the two fiscal years covered by this report.

\section*{LETTER OF TRANSMITTAL}

October 31, 1928.
To His Excellency, Hon. C. C. Young,

Governor of the State of California.
Dear Sir: In accordance with Section No. 2537 of the Political Code of the State of California, the Board of State Harbor Commissioners submits herewith its report for the biennium commencing July 1,1926 , and ending June 30, 1928, the seventy-eighth and seventy-ninth fiscal years.

Respectfully,
BOARD OF STATE HARBOR COMMISSIONERS,
C. L. Tilden, President.

Frank C. Sykes.
Paul Scharrenberg.

THE FERRY BUILDING AND UNION DEPOT.

\section*{REPORT OF THE BOARD OF STATE HARBOR COMMISSIONERS}

The present members of the Board of State Harbor Commissioners took office on February 15, 1927, and, therefore, have served in such capacity less than one year and five months of the biennium covered by this report.

The business of the Port of San Francisco for the two fiscal years from July 1, 1926, to June 30, 1928, has increased materially over that of the previous biennium.

Cargo passing over the piers during the last biennium amounted to \(21,985.937\) tons, an increase of \(1,234,525\) tons, or 5.9 per cent over the preceding two years.

The State Belt Railroad handled 265,862 loaded cars, an increase of 23,933 , or 9.8 per cent over the preceding two years.

To supply additional facilities for handling this increased business, a capital expenditure of \(\$ 2,416,245.88\) was made during the biennium for property and equipment. This is \(\$ 230,545.98\) in excess of expenditures for similar purposes for the previous two years.

Cargo area available on June 30, 1928, amounted to \(7,369,015\) square feet, equivalent to 169 acres, an increase of 10 acres, or 6.2 per cent over June 30, 1926.

Operating revenue amounted to \(\$ 5,965,008.65\). This is an increase of \(\$ 373,011.67\), or 6.6 per cent over the previous biennium.

Operating revenue for the first year of the biennium amounted to \(\$ 2,952,492.05\), and for the second year \(\$ 3,012,516.60\), an increase of \(\$ 60,024.55\). This is principally the result of the rearrangement of assignments, the equalization and adjustment of rentals and the like.

Notwithstanding the increased business and revenue, and the additional facilities operated, the operating expense for the biennium, \(\$ 2,872,869.18\), was \(\$ 2,296.27\) less than for the preceding two years.

The operating expense for the first year of the biennium was \(\$ 1,472,299.13\) and for the last year (the first complete fiscal period over which the present board had control) \(\$ 1,400,570.05\), a reduction of \(\$ 71,729.08\). This decrease in operating expenses was brought about by numerous economies in rarious departments, without the loss of efficiency, or the curtailment of service, and by the strict regulation of the purchase of materials and supplies, and in the face of the fact that the board was compelled to absorb large wage increases awarded to practically all our employees.

Wage increases awarded by the San Francisco Impartial Wage Board to mechanies and other employees added \(\$ 1,503.95\) per month to the harbor pay roll, commencing March 1, 1927.

Wage increases granted to railroad employces by the Federal Wage Board necessitated the addition of \(\$ 1,233.97\) per month to the State Belt Railroad pay roll commencing May 1, 1928.

It, therefore, results that our pay roll has been increased by reason of said raises nearly \(\$ 3,000\) per month, or approximately \(\$ 3 \overline{5}, 000\) per annum.

Furthermore, expenditures for maintenance of State Belt Railroad buildings, roadway and equipment for the last year of the biennium

A ROW OF PIERS-FRONT VIEW.
exceeded by \(\$ 21,337.27\) expenditures for this purpose during the first year. This additional expense was made necessary because of the rundown condition of the road.

Briefly reviewing the above facts, it will be seen that by reducing expenses and increasing revenues as above set forth, during the last fiscal year, an increased net of \(\$ 131,753.63\) has been produced as compared with the next preceding year, and other miscellaneous savings bring this net amount up to \(\$ 142,099.49\).

This board has completed or is carrying on various projects under way when it took over the management of the harbor, and has initiated many major improvements now in various stages of completion. Among the most important of these are:

The completion of Pier 45.
The construction of Pier 48.
Extensive extensions to Piers 30 and 32.
Two eargo sheds and paving at Pier 50.
Connecting wharf between Piers 26 and 28.
Bulkhead wharf building for Piers 23 and 25.
Extension of grain terminal, Islais Creek.
Dredging Islais Creek channel and reelaiming approximately 26 aeres of tidelands.
Ferry terminal, foot of Hyde street.
Ferry slip "A."
Additional offices in the Ferry Building.
Paving Berry street from Embareadero to Third street.
Paving Embarcadero, Bay street to Powell street.
Construction of a new clamshell dredge.
Construction of two new mud scows.
Purchase of a new freight locomotive.
The present commeree of the port is being handled expeditiously, but new ships are being constantly added to the fleet now plying in and out of the harbor. Vessels of greater cargo eapacity are being assigned to the trade, and additional steamship companies are entering the field.
In an endeavor to meet the insistent demands for additional accommodations the board is proceeding with the construction of Pier 45, which will be completed early in 1929, and of Pier 48, which will be available later in the same year, and has planed other major improvements which will soon be under way, and which are imperatively necessary to take care of the rapidly growing business of this port.

The most important of these new improvements are:
A new pier estimated to cost \(\$ 500,000\), construction of whieh will be started shortly after January 1, 1929.

Two new modern piers at a cost of approximately \(\$ 1,000,000\) each, plans for which are now being prepared.

The board also contemplates the extension, sometime in the future, of the State Belt Railroad to the southern end of the waterfront, which project includes the widening of Illinois street, and the construction of a bridge across Channel street, jointly by the State of California and the city and county of San Franeisco and various railroads.

Other contemplated improvements include:
Wharf and tracks, Islais Creek. Estimated cost.-......- \$300,000
Raising wharf and Embarcadero, between Mission and
Harrison streets. Estimated cost----------------235,000
Storehouse and shops. Estimated cost------------------200,000
Retaining wall and wharf, Central Basin. Estimated cost 175,000
Additional Belt Railroad tracks. Estimated cost.------ 153,000
Lumber terminal. Estimated cost_--------------------- 60,000
In cooperation with the State Department of Finance, a new accounting system for the harbor has been devised and will shortly be installed. 'This new system, badly needed to replace the present inadequate and very ancient methods of recording the transactions of the port, is the result of more than a year of contimuous study and many months of eareful preparation. It provides for the extensive use of tabulating and bookkeeping machines, by which method very complete and comprehensive accounting and statistical records will be maintained at little, if any, additional cost.

Appended hereto are reports covering in detail the financial transactions of the board, the operations of the various departments and statistical data for the biemnium, together with general information in regard to the port.

\section*{THE PORT OF SAN FRANCISCO}

Since 1863 the Port of San Francisco has been owned and operated by the State of California, under the management of the Board of State Harbor Commissioners, consisting of three members, who are appointed by the Governor.

During this period of 65 years the port has been absolutely selfsupporting. It has met all the expenses of operation and maintenance and all bond interest and sinking fund charges, out of earnings, and cxcept for bonds to the extent of \(\$ 15,103,000\), outstanding as of June 30, 1928, has also paid out of earnings the cost of developing the larbor and constructing the facilities, the minimum value of which is estimated at \(\$ 75,000,000\).

Although self-supporting, this harbor is operated on a nonprofit basis, and the port charges are therefore exceedingly low, being fixed at the minimmm required to produce only sufficient funds to cover expenses and development costs.

San Franciseo is the only port in the United States where all the activities, including the State Belt Railroad, are coordinated and controlled by a single anthority.

\section*{SAN FRANCISCO BAY}

San Francisco Bay is a land-locked harbor, situated on the west coast of the I'nited States, almost midway between the ('anadian and Mexican borders. The hay proper, with 100 miles of shore line, is 48 miles long. 1 ts greatest width is 13 miles; its area is 450 square miles, 79 square miles of which offer safe anchorage.

Entrance to the harbor is through the famous "Golden Gate," a narrow passage approximately one mile wide and three miles long. The channcl is of sufficient depth to permit the largest vessels afloat to enter the harbor at any time.

A CORNER OF FISHERMAN'S LAGOON.

Two large navigable rivers, the Sacramento and the San Joaquin, flow into the Bay of San Francisco from the great interior valleys of the same names. These two vallcys comprise a vast inland empire of over thirty million acres, from which a steadily increasing stream of products flows into the harbor for shipment to all parts of the world.

Steamship companies operating regularly at the Port of San Francisco number 146, and during the last year 7555 vessels, with a total of 18,110,440 net registered tons entered the Golden Gate.

San Francisco is second among American ports in the total value of water-borne commerce, and enjoys a highly diversified and wellbalanced trade.

\section*{PORT FACILITIES}

The San Francisco water front extends from the Presidio on the north to the San Francisco-San Mateo County line on the south, a distance of approximately 10 miles. The Embarcadero, a 200 -foot thoroughfare, owned and maintained by the state, runs along the water front between the piers and the wholesale district of the city. The northern half of the water front is developed to its full capacity, with an unbroken line of piers and slips. Five miles of water front and 430 acres of water-front land, owned and controlled by the state, are available for additional piers, wharves, chamels and industries.

There are 46 piers and terminals, 15 passenger ferry slips and six car ferry slips in service on the water front, and, in addition, many small wharves and extensive bulkhead wharves connecting all the piers. Of the 46 piers and terminals 20 are of concrete construction and 26 of timber construction. The pieis range in length from 600 feet to 1300 feet, and in width from 100 feet to 386 feet. The slips between the piers range in width from 150 to 350 feet. These facilities provide over 17 miles of berthing space and 169 acres of cargo area.

\section*{PIERS IN COURSE OF CONSTRUCTION}

Two new modern concrete piers are now in course of construction. Pier 45 , which will be completed early in 1929 , will be over 1300 feet long and 382 feet wide, and will cost approximately \(\$ 2,000,000\). This will be the largest pier on the water front, and will accommodate at one time four of the largest vessels regularly visiting the harbor. The core of the pier is a solid fill, extending into the bay 1000 feet. The pier beyond the fill and the apron wharves along the sides will require 120,000 lineal feet, equal to approximately 23 miles of reinforced concrete piles.

Over \(2 \frac{1}{4}\) miles of State Belt Railroad tracks will serve the four transit sheds and the car ferry slip at the outer end of the pier.

Pier 48 will be of reinforced concrete construction, 623 feet long and 369 feet wide, and the bulkhead wharf will be 55 by 500 fect. There will be two belt railroad tracks along each side of the pier, and three tracks and two driveways in the center. The central section will be depressed so that the floors of the cars will be level with the deck of the pier in order to facilitate loading and unloading. This pier will cost in excess of \(\$ 1,000,000\) and eventually will be extended an additional 600 feet.

\section*{SPECIAL FACILITIES}

The Ferry Building and Union Depot is situated at the foot of Market street, San Franciseo's main thoroughfare, and is practically in the center of the water front, as at present developed. This famous building, familiar to every visitor to the eity, was opened to the public in 1898. It is 661 feet long, 150 feet wide, and the cloek tower extends to a height of 235 fect. The cost of the building and appurtenances was over \(\$ 2,300,000\).

Equipped with ten ferry slips, it is the landing place of the ferry boats from Oakland, Alameda, Berkeley, Riehmond, Vallejo, Sausalito and Belvedere. In addition to handling local traffie, these boats connect with the east bay transeontinental lines of the Sonthern Pacific, Atchison, Topeka and Santa Fe and Western Pacific railroads, and at Vallejo with the San Franciseo, Napa and Calistoga Railroad, and at Sansalito with the Northwestern Pacific Railroad. Over 51,000,000 people pass through the Ferry Building during the course of a year.

Three levels are necessary in front of the Ferry Building to handle the traffic. A viaduct for pedestrians extends from the second floor of the building over the 200 -foot Embarcadero to the foat of Market strect. The strept surface is given over principally to pedestrians, street ears, taxi cabs and other passenger vehicles. The street cars which reach the Ferry Building, via Market street, from every point in the eity turn on either one of three loops in front of the building for the return jomrney. In addition, several strect ear lines reach the building via the Embareadero from the north and sonth. Approximately 8500 street ears arrive at and depart from the Ferry Building every week day: A subway for vehicular traffie runs under the Embareadern and the street ear loops for a distance of over 1000 feet. Over 4, 000,000 vehicles passed through this subway during the last year.

The State Belt Railroad is the connecting link between the piers. Three transeontinental trunk lines, one loeal line and numerous industries adjacent to the Embareadern. The first mit of the State Belt Railroad was built in 1890. This has been added to from time to time, until it now extends practieally the entire length of the developed water front, and comprises 58 miles of main line, pier traeks and industrial spurs. The mechanical equipment consists of seven 75 -ton and one 60 -ton modern swithing loemotives, and one 15 -ton locomotive crane.

Islais Creek Grain Terminal is eqnipped with modern eleaning and grading machinery, and is used exelusively for the handling of grain for export. San Francisco is in the center of a large grain-producing district, and the rapidly increasing trade in this commodity has made it necessary to add an extensive addition to the terminal which will imerease the capacity by 75 per cent. The addition, which is well on the way to completion, consists of a wharf 540 feet long and 105 feet wide, and a shed 495 feet long and 220 feet wide, covering a portion of the wharf and extending over a solid fill on the land side. This will increase the length of the terminal to over 1250 feet.
The State Products Terminal at China Basin is a reinforeed conerete structure, 812 feet in length. The building is 134 fect wide and two stories high. This terminal is assigned for the handling of canned and dried fruits and other farm products, and to facilitate this handling

STATE PRODUCTS TERMINAL, CHINA BASIN-Showing second floor loading platform.
the second floor is set back to provile an elevated loading platform along its entire length. On the land side an elevated driveway is provided at the scoond-floor level for cargo arriving and departing by truck.

A new modern fumigating plant, privately operated, has recently been construeted adjacent to the State Products Terminal for the fumigation of cotton and other commodities as required by the United States goverument.

Pier 38 is equipped with pipe lines conneeting with a battery of privately operated tanks for the storage of Oriental regetable oils, molasses, etc. Large quantities of these products arriving at this port are pumped direetly from ship to tanks.

A banana terminal similar to those in New Orleans and Mobile, and nuique on this coast, has recently been established. Banana boats, arriving weekly, diseliarge approximately 700 tons of bananas cach trip.

Fishermen's lagoon, a sheltered cove with adequate wharf space, is the home of a great fleet of approximately 250 fishing boats, and presents a picturesque and interesting sight. The waters outside the Golden Gate abound in an umlimited variety of fish and provide a large and profitable industry.

\section*{FLOATING EQUIPMENT}

Two modern fire boats. maintained jointly by the city and county of San Francisco and the Board of State Harbor Commissioners, are in constant service on the water front for the protection of state and adjacent eity property. These boats are operated under the supervision of the San Francisco Fire Department, and are manned by regular members of the foree. Two of the Harbor Commission's tugs are also adequately equipped for fire fighting.

The board recently awarded contracts for the construetion of a new steel clamshell dredge and two mud seows. At the present time ouly one dredge and two seows are in operation.

In addition to the above the board also nperates six pile drivers, one oil barge, one lanneh and ten landing floats.

\section*{HISTORY}

San Francisco Bay was diseovered in 1715 by a party of Portola's men from the land side. Portola was at Monterey, the first eapital of California, situated on the coast approximately 100 miles south of San Francisco. A few days later the Spanish schooner San Carlos sailed north and found the entranee to the great land-locked harbor. This was the first ressel to pass through the "Golden Gate" and anchor in the bay.

Seventy years later little change had taken place in the harbor, and a roeky point extending into the bay at what is now the corner of Broadway and Battery streets was the enstomary landing place.

The first wharf was built in 1849, the year of the famous gold rush that bronght thonsands of pioneers to California in search of the precions metal. Hundreds of ressels were anchored in the bay, most of them having been deserted by their crews, who were lured to the foothills of the Sierra Nevada mountains by the promise of untold riches.

Many of the ships were beached and fitted up as stores, restaurants, banks and other places of business. In fact, a great part of the business of the thriving settlement was transacted on these vessels, or on the wharves which were built out over the shallow water of the cove.

During the next few years much of the water front property was acquired by private parties, through lease or purchase, and many wharves were erected by the owners to accommodate the increasing trade.

At that time the water extended inland several blocks beyond what is now the water front line.

The harbor of San Francisco is the outlet for the products of approximately 70 per cent of the area of the State of California, and cargo moring to and from this vast region to all parts of the world makes up a considerable part of the commerce of this port. Realizing the broad interest in the harbor, the state legislature in 1863 created the first Board of State Harbor Commissioners, and placed the port under state control, where it has since remained. However, it was not until 1871 that the state came into complete control of the water front.

The following extracts are from Port Series No. 12, a report prepared by the United States Board of Engineers for Rivers and Harbors, in cooperation with the United States Shipping Board, recently issued lyy the War Department:
"San Francisco Bay is the best harbor on the Pacific coast and one of the finest in the world.
The large sheltered deep water area and a great amount of shore line offer almost unlimited opportunities for terminal and industrial water front development.

San Francisco is the only port in the United States where the water front is owned and has been developed by the state, and where, also, the public terminal developments have been connected with one another and with rail carriers by a belt line, owned and operated by the state.

San Francisco is a shiuing example of efficient control of terminal and interchange facilities. There is no friction, no congestion, no delays at this port. Traffic moves to and from the piers with a smoothness and facility which is noticeably absent at some other ports not adequately coordinated. The flat switching charge between any two points on the Belt Line serves to avoid the overdevelopment and congestion which tends to occur where ports are improperly divided into zones for switching purposes. In this respect San Francisco is an example of efficiency which many ports would do well to emulate."

\section*{FINANCIAL REPORT OF THE 78TH AND 79TH FISCAL YEARS ENDED JUNE 30, 1927, AND JUNE 30, 1928}

Account 1.-Comparative Statement of Financial Status, as of June 30, 1928, and June 30, 1927.
Schedule No. 1. Fort Mason Tunnel Account.
Schedule No. 2. Analysis of Property and Equipment, showing comparative values of Real Estate, Seawall Lots, Plers and Wharves, Bulldings, Sewers and Pavements, Seawalls, Equipment, etc.
Account 2.-Comparative Statement of Revenue and Expense for the Flscal Years ended June 30, 1928, and June 30, 1927.
Schedule No. 1. Comparatlve Statement of Operating Revenue and Expense.
Schedule No. 2. Analysis of Revenue from Operations. Schedule No. 3. Analysis of Expense from Operations.
Schedule No. 4. Comparative Statement of Revenue and Expense of the Belt Raliroad, as at June 30, 1928, and June 30, 1927.
Account 1.-In the form of a balance sheet, exhlbits in comparative form, the financial condition of the Board of State Harbor Commissioners, as at June 30, 1928, and June 30, 1927.
Schedule No. 1. Fort Mason Tunnel Account shows there has been realized toward the payment of the cost of the tunnel, between October 22,1914 , and June \(30,1928, \$ 99,833.89\), of which \(\$ 2,152,24\) was realized during the fiscal year July 1, 1927, to June 30 , 1928, and \(\$ 182.58\) was realized during the fiscal year July 1,1926 , to June 30,1927 . The small amount realized during the biennial period toward payment of tunnel is due to the lessening of activities by the War Department.
Schedule. No. 2. Is an analysis of Property and Equipment under the jurisdiction of the Board of State Harbor Commissioners, as at June 30,1928 , as compared with June 30,1927 , showing the values of Real Estate, Seawall Lots, Plers and Wharves, Buildings, Sewers and Pavements, Seawalls, Equipment, etc., in a sum total of \(\$ 29,649,592.21\), as at June 30, 1928, and \(\$ 28,279,233.54\), as at June 30 , 1927, showing an increase of \(\$ 1,370,358.67\) as at June 30,1928 , and \(\$ 1,045,887.21\) as at June 30,1927 , or a total increase of \(\$ 2,416,245.88\) for biennial period.

These figures show the actual cost to the Board to construct or purchase and do not include the value of lands upon which the structures are situated with the exception of lands at Islais Creek and India Basin.
Account 2.-Exhibits in comparative form the Revenues earned and the Expenses incurred and reflects a revenue surplus of \(\$ 1,004,878.17\) from operations for the year ended June 30, 1928, as compared with \(\$ 862,778.68\) for the year ended June \(30,1927\).

Fixed Charges for the year ended June 30, 1928, were in excess of the year ended June 30,1927 , by \(\$ 388.88\), which is accounted for by the sale of \(\$ 250,000\) more Third San Francisco Seawall Bonds on June 18, 1928.
Schedule No. 1. Of Account 2, shows in comparative form the Operating Revenue and Expense by partlcular location.
Schedude No. 2. Of Account 2, is an analysis of Revenue from Operation and details the various sources of revenue by particular location.
Schedule No. 3. Of Account 2, is an analysis of Expense of Operation, and details by location the operating expense and repairs.
Schedule No. 4. Of Account 2, is a comparative statement of Revenue and Expense of the Belt Railroad for the year ended June 30. 1928, as compared with the year ended June 30, 1927. Switching Revenue for the year ended June 30, 1928, showed a decrease of \(\$ 7,605.15\), as compared with the previous year ended June 30, 1927, and Incidentals decreased \(\$ 2,778.06\), a loss of \(\$ 10,383.21\) for the year ended June 30 , 1928, as compared with the year ended June 30, 1927.

Maintenance of Equipment cost \(\$ 2,872.52\) more for the year ended June 30, 1928, than for the year ended June 30, 1927. Maintenance of Roadway and Buildings cost \(\$ 18,464.75\) more ; Operating Expense \(\$ 1,901.55\) more : Accldent Compensation \(\$ 4,976.84\) less, and Administrative Overhead \(\$ 3,407.33\) less, making a net loss of \(\$ 25,237.86\) for the fiscal year ended June 30, 1928, as compared with the fiscal year ended June 30, 1927. Increase in Operating Expense was caused by extenslve repair work on Roadway.
Exhibit A.-Of this report is a detall of property acquired during the blennial period, showing an expenditure of \(\$ 1,370,358.67\) from July 1, 1927, to June 30 , 1928, and \(\$ 1,045,887,21\) from July 1, 1926, to June 30, 1927, or a total of \(\$ 2,416,245.88\) for the Biennial Period from July 1, 1926 , to June 30 , 1928. Of this amount \(\$ 1,838,797.97\) was expended from Revenue Earned, and \(\$ 577,447.91\) was expended from the Third San Francisco Seawall Fund.

There is also submitted auxillary statements as follows:
1.- Contract work under way at date of last blennial report and since completed.
2. Work contracted for and completed withln biennial period-July 1 , 1926, to June 30, 1928.
3.-Work contracted for and not completed within biennlal period-July 1, 1926, to June \(30,1928\).

WORK CONTRACTED FOR AND NOT COMPLETED WITHIN BIENNIAL PERIOD JULY 1, 1926, TO JUNE 30, 1928

\section*{REPORT OF CHIEF ENGINEER}

\section*{To the Board of State Harbor Commissioners, San Francisco, California.}

Gentlemen: I beg to submit for your eonsideration my report as Chief Engincer of the Board of State Harbor Commissioners for the Iwo fiseal years begiming July 1, 1926, and ending June 30, 1928.

At the time of the presentation of the last biennial report on July 1, 1926, there were under construetion the following structures:

Two transit sheds on Pier 50, whieh were 36 per cent completed.
Pavement on Berry street, Embarcadero to Third street, which was s0 per eent eompleted.

The transit sheds on Pier 50 were eompleted on April 22, 1927, and the pier has been actively in serviee since that time.

The parement on Berry street was completed on August 5, 1926, and its value as a comection between the Embarcadero and the southerly industrial seetion of San Franeiseo is indicated by the traffie which it is now earrying.

For the purposes of this report, in which the principal activities of the Engineering Department during these two fiscal years will be consilered, the work of the department will be divided as follows:
1. Piers, Wharres and Buildings.
2. Paring.
3. Maintenanee and Repairs.
4. Dredging.
5. Electrieal.
6. Testing.
7. Designing and Drafting.
8. Recommendations.

\section*{1. PIERS, WHARVES AND BUILDINGS}

Pier 45.
Referenee was made in the last biennial report to the preparation of plans for Pier 45. These plans were completed and approved by the board on Angust \(\mathfrak{2}^{2} 6,1926\). Three complete sets of plans were prepared, one for an open pile structure and the other two for a solid fill structure, the difference being in the type of bulkhead retaining wall for enelosing the filled section. Bids were received on September 23, but were rejected as unsatisfactory and the work was readvertised. On October 13 bids were again received and the contract was awarded for construetion of a strueture with a filled core enclosed by loose rock retaining walls.

The pier as designed is 382 feet in width, 1200 feet in length on the westerly side and 1313 feet in length on the easterly side. It extends into the bay between Taylor and Jones streets and the length is secured by projecting the axis at an angle of \(37^{\circ} 30^{\prime}\) with the water front line. In the center of the structure is a depressed section 75 feet in width in which are located four railroad traeks and two driveways. Two tracks will serve the transit sheds on either side, and the other two will lead to the car ferry slip which is to be constructed in the center of the

A FREIGHTER LOADING AT PIER No. 32.
outer end of the pier. In addition two tracks are provided on each side of the pier for direct cargo movement between ship and car. There will be four transit sheds, the outer pair being accessible to trucks from the depressed driveways by means of ramps.

The filled core of the pier is 210 feet in width at the top and the rock wall slopes extend to the sides of the pier, provision being made to permit of dredging of slips to a depth of 35 feet. For a width of 56 feet the deck over the rock slope is of reinforced concrete on concrete piles, this construction extencling to the outside of the transit shed. The two shipside tracks on either side are carried on a creosoted pile and timber apron 30 feet in width. The core fill was made by depositing sand excavated by a suction dredge from the slips alongside.

The four transit sheds are to be of steel frame construction with concrete walls, galvanized steel sash and steel rolling doors. The shed fronts will be of reinforced concrete case in place and the remainder of the walls will be constructed of precast reinforced concrete slabs.

The substructure was 81 per cent completed on June 30, 1928.

\section*{Piers 30 and 32 Extensions.}

In order to furnish additional accommodations for the increasing business of the Matson Navigation Company, Piers 30 and 32 were extended to the pierhead line, a distance of 125 feet. The substructures are of reinforced concrete pile and deck construction, and the sheds are of timber with steel rolling doors. On account of the depth and the nature of the foundation material it was necessary to deposit 66,000 cubic yards of second-class rock to provide holding ground for the concrete piles. The dumping of rock was completed on March 4, 1927, the substructure on February 20, 1928, and the superstructure on April 4, 1928.

\section*{Pier 48.}

When completed as projected, Pier 48, located south of Channel street and adjacent to Pier 50, will be more than 1200 feet in length, providing two berths on each side. The width, 369 feet, will also permit of docking a smaller vessel across the end. An investigation of the foundation, however, revealed a submerged valley partially filled with extremely soft material, crossing the site of the pier about 800 feet from shore. In order to construct across this valley it will be necessary to deposit a large quantity of stable material into which to drive the foundation piles. This was not considered desirable at this time, and it was decided to first construct the pier of approximately one-lialf the ultimate length. In fact, to render this possible it was necessary to deposit 76,000 cubic yards of second-class rock and permit it to settle before beginning construction.

Pier 48 as now being constructed is 369 feet in width and 623 feet in length. The construction is of reinforced concrete except for the aprons carrying the two flush shipside tracks on each side, which are of creosoter pile and timber construction. In conjunction with the pier a section of concrete bulkhead wharf 500 feet in length and 55 feet in width is being constructed. There will be two transit sheds and

between the sheds there will be located three depressed railroad tracks and a double driveway.

The rock fill was completed on October 13, 1926, and the pier was 7.3 per cent completed on June 30, 1928.

\section*{Hyde Street Auto Ferry Terminal.}

In order to provide accommodations for the Berkeley line of the Golden Gate Ferry Company a terminal consisting of two ferry slips and a parking wharf was constructed at the foot of Hyde street between the Sausalito ferry terminal and the westerly entrance to Fishermen's Lagoon. The main aprons, which are of structural steel, are of sufficient width to carry two lines of traffic which materially expedites the loading and discharging of ferry boats. The slips are operated by electric motor, each slip being controlled by push button switches located in a central control station.

The Hyde Street Ferry Terminal was completed on August 31, 1927.

\section*{Slip A Ferry Terminal.}

In order to provide a ferry slip and terminal for the Monticello Steamship Company, old Slip A north of the Ferry Building, which had been out of service for a number of years, was removed and reconstructed in a new location. The adjacent wharves were also reconstructed and enlarged and a new building with offices and waiting room was erected. The apron is the same type as those installed at the Hyde street terminal, but it is operated by hydraulic cylinders in common with the rest of the slips at the Ferry Building.

The substructure of Slip A Ferry Terminal was completed on September 7, 1927, and the building, offices and waiting room on February 8, 1928.

Bulkhead Building, Piers 23 and 25.
Covered bulkhead wharf space is continually being used to greater advantage, and in order to provide additional space of this sort a bulkhead building was constructed extending from the north side of Pier 25 to the south side of Pier 23. The length is 402 feet, and in order to secure a width of 72 feet in the building between the piers, the bulkhead wharf was widened 38 feet. The wharf is timber construction on creosoted piles and the building is timber frame, the front being finished in cement plaster on metal lath. The wharf extension was completed on December 23, 1926, and the building on May 5, 1927.

\section*{Grain Terminal Extension.}

The tomnage handled through the Islais Creek Grain Terminal having increased to such a volume that additional facilities were a necessity, it was decided to construct an extension at the cast end of the existing terminal. This extension consists of a creosoted pile and timber wharf 540 feet in length and 105 feet in width, a timber frame and corrugated iron building 495 feet in length and 220 feet in width resting partly on the wharf and partly on the adjacent earth fill, and a depressed railroad track at the rear of the building. The columns in the portion of the building which are not carried by the wharf will be supported on piles and the floor will consist of bituminous pavement laid on a rolled rock base directly on the earth fill. The extension will
increase the storage capacity of the grain terminal approximately 75 per cent. The substructure was 77.2 per cent completed on June 30, 1928. On the same date the contract for the building had been let, but the work had not been begun.

\section*{Bulkhead Wharf and Building, Piers 26 and 28.}

Covered bulkhead wharf space is being provided between Piers 26 and 28 by the construction of a connecting wharf and building having a length between the piers of 200 feet and extending into the slip a distance of 137 feet. It is the intention to use the space for package freight delivered to and from trucks, and for this reason the deck on the wharf is being constructed at approximately truck height above the street and a continuous row of doors is to be provided along the front of the shed. The elevated platform will be accessible by means of ramps leading to Piers 26 and 28. The wharf consists of a timber deck supported on concrete jacketed timber piles. The shed is a timber frame structure with steel rolling doors. The work was 17.4 per cent completed on June 30, 1928.

\section*{California Development Association Offices.}

The construction of quarters for housing the growing staff and increasing activities of the California Development Association necessitated extensive remodeling of a portion of the Ferry Building. The location is in the center of the building between the two main second floor exits and above the rear nave along the east side of the building. In order to construct the third floor above the rear nave it was necessary to raise the roof and construct a new steel frame extending up from the building foundations. The main office space is 204 feet in length and 29 feet in width and the central wing, which is two stories in height, is 32 feet by 50 feet. An open observation deck is provided on the roof and a freight elevator was installed which serves not only these offices but the entire second floor of the building. The work was completed on January 4, 1928.

\section*{Pier 54, Repairs.}

A major item of maintenance was the repairs to the reinforced concrete deck beams and girders in Pier 54 . This pier, which was constructed in 1910, was the first reinforced concrete structure on the water front. During the last few years there has been a gradually accelerated cracking and spalling of the concrete outside the reinforcing steel along the bottom and lower portion of the sides of the beams and girders. This was most marked in the outer half of the pier and was undoubtedly due primarily to an insufficient embedment of the steel, to pouring the concrete too wet, which rendered it porous and to a certain extent to a design in which small beams provided an unnecessarily large number of surfaces where cracking and corrosion could begin.

The repairs consist in removing the defective concrete with air hammers, cleaning the corroded steel with a sand blast and covering with a heary coating of gunite over galvanized wire fabric. After the gunite work is completed the entire under side of the deck is to be given a heavy coat of asphalt. The repairs to Pier 54 were 54 per cent completed on June 30, 1928.

\section*{2. PAVING}

\section*{Embarcadero, Bay to Powell Street.}

The first asphalt pavement on The Embarcadero, except directly in front of the Ferry Building, was laid in 1917 and extended from Bay street to a point between Stockton and Powell strects. It was only 30 feet in width, and as the steadily increasing traffic consistently traveled on the smooth pavement and avoided the basalt block pavement alongside, it finally proved to be entircly inadequale. Its width was therefore increased to 60 feet by paving with a Topeka mixture on a concrete base, and the pavement was extended to Powell street and the entrance to Pier 43. The Belt Railroad track leads which were within the area were raised and resurfaced and paved with Topeka pavement on a bituminons concrete base. The work was completed on April 11, 1928.

Following the completion of the extensions to Piers 30 and 32 , the Hyde Street Ferry Terminal and Slip \(\Lambda\) Ferry Terminal, they were naved with the standard Topeka pavement laid over the decks of the structures.

\section*{3. MAINTENANCE AND REPAIR}

The largest single piece of work carried out by our maintenance and pile driving forces during the last two years was the removal and reconstruction of the dolphin between Ferry Slips 4 and 5. This was necessitated partly on account of natural deterioration and partly due to damages caused by the Key System and Southern Pacific ferryboats. For this reason the cost of the work was divided on an equitable basis between the two companies and the Harbor Commission.

The work of reconstructing fender lines and of replacing sills and stringers uncler the walls of the older transit sheds has gone on almost continuously. Also in the case of several of the sheds, it was found necessary to reconstruct the sides by sheathing with building paper and new siding. In conjunction with this work new doors and hangers were installed and these sheds should now be serviceable for many years. On some of the sheds the old shingle roofs have been covered with roofing felt, which has deteriorated to the point where patching is no longer economical. On one of these sheds the roof was removed down to the rafters and tight sheathing and new built-up roofing were laid. The results were very satisfactory and other roofs will be similarly reconstructed during the next biennium.

In addition to the items specifically mentioned, the ordinary maintenance of the structures, the repair of damages and smaller construction jobs have been carried out by the maintenance and pile driver forces.

\section*{4. DREDGING}

In the last biennial report the development of a portion of the first unit of the Islais Creek-India Basin project was outlined. It was stated that the rock embankment had been constructed enclosing approximately 26 acres of tidelands and that bids had been received for dredging the Islais Creek channel and reclaiming the area, but that they had been rejected as being too high. In 1927 the project was revived and a contract was awarded for filling this area. The channel was dredged from the Third street bridge to the pierhead line with
a depth of 35 feet at low tide and a width of 300 feet. The embankment was constructed on soft mud of a considerable depth, and just after the completion of the fill and while it was still in a semiliquid state, about 300 feet of the wall slid into the channel. This necessitated the placing of some additional rock by means of dump trucks and the topping off of a portion of the area with dry fill. The work was finally completed on November 23, 1927, and a part of the area is being utilized in connection with the construction of the extension to the grain terminal. Following the completion of this work the United States Engineers dredged the entrance out to deep water in the bay, completing the channel project to the inner berth at the grain terminal.

Even working three 8 -hour watches per day, our present dredging plant has hardly been able to handle the necessary maintenance dredging during the last two years. It was decided, therefore, to construct a new clamshell dredge and two dump scows and bids were received on May 9, 1928. Several alternate proposals were considered and contracts were finally entered into for a steel hull dredge, with machinery for handling a four-cubic-rard bucket and for two wooden dump scows of 300 cubic yards capacity. On June 30, 1928, the dredge mas 2 per cent completed and the scows were 25 per cent completed.

\section*{5. ELECTRICAL}

Following the completion of the transit sheds on Pier 50 and on the extensions of Piers 30 and 32 the electrical division made complete installations for lighting and power. The latest engineering practice in the distribution of lighting units was followed, and the results have been highly satisfactory. Other work carried out included all lighting in the offices of the California Development Association, new services on Piers 18, 26, 29 and 30 and rewiring Pier 54. Along The Embarcadero 150 Paragon lighting units were installed on the old light standards and in front of the Ferry Building 10 new donble cast iron standards replaced the old lighting units.

\section*{6. TESTING}

The testing laboratory has continued to function actively during the past two years. All materials of construction have been carefully tested and inspected before being used in the various structures. The same service has been performed for the Bureau of Architecture, State Department of Public Works, an assistant having been employed by that department to work with our testing engineer.

\section*{7. DESIGNING AND DRAFTING}

During the biennial period, plans and specifications were prepared for the projects which have been constructed or which are now under way. Plans were also prepared for numerous structures which have not yet been constructed, such as an auto ferry terminal at the foot of Webster street, a car ferry slip at the outer end of Pier 45, Pier 1 immediately north of the Ferry Building, a wharf along the south side of Islais Creek east of the Grain Terminal, etc. Studies were also made for a new arrangement of piers between the Ferry Building and Jıombard street, for additional storage tracks for the Belt Railroad and
for a shop and store building to be located on Scawall Lot 18. In addition the routine work of the drafting room was carried on and a complete new set of assignment plats was prepared.

\section*{8. RECOMMENDATIONS}

The projects specifically recommended in the last biennial report have all been started and will be completed during the next two years. At this time I wish to mention two others which seem to be of primary importance.

\section*{Shop, Garage and Stores Building.}

Plans were prepared some time ago for this building, to be located on Seawall Lot 17. This lot apparently being needed for yard space by the Belt Railroad, sketch plans were prepared for a building on Lot 18. Conferences were then held with the Purchasing Department regarding the portion of the building which was intended to be for their use, but no definite action lias yet been taken. As the present quarters are entirely inadequate and constitute a serious fire hazard, it is recommended that this project be carried out in the near future.

\section*{Belt Railroad and Trucking Highway to Islais Creek.}

The construction of Piers 48 and 50 south of Channel street, the more intensive use of Pier 54 and the increased activities at Islais Creek, emphasize the growing need of a Belt Railroad extension across Channel street and along Illinois street into the Islais Creek-Hunters Point district. As the use of this portion of the water front increases, a more adequate trucking highway will also be required. Preliminary studies seem to indicate that this can be accomplished most satisfactorily by constructing a new highway, street railway and railroad bridge across Channel street at Third street and by widening Illinois street betreen Fourth street and Islais Creek. The bridge project, which will necessarily be a joint municipal and state undertaking, has been the subject of considerable discussion and has been tentatively approved. The highway project has also been discussed to some extent, and as the Harbor Commission controls the property along the east side of Illinois strect between Eldorado and Eighteenth streets, this would also be to some extent a joint undertaking. As the construction of such a bridge and the acquisition of the necessary right of way for widening Illinois street will require considerable time, during which land values will continue to increase, it is recommended that such steps as seem proper and expedient be taken to further the entire project.

In conclusion I desire to express my appreciation of the support accorded to me by the board in connection with the work of the biennial period and also to commend the faithful cooperation of all employees of the Engineering Department.

Respectfully submitted.
Frank G. White, Chief Engineer.

\section*{REPORT OF CHIEF WHARFINGER}

\section*{To the Honorable Board of State Harbor Commissioners, San Francisco, California.}

Gentlemen: I submit herewith my report as the Chief Wharfinger of the Board of State Harbor Commissioners from the date of my appointment, May 11. 1927, to June 30, 1928.

The Wharfinger's Department controls the vessel operations and the berthing of ressels along the seventeen miles of berthing space available, and charyes and collects the dockage for the use of this space; controls all of the pier areas, over 169 acres, and allots it to cargo operations in rotation, so that there is seldom any pier area unused; collects the tolls on all cargo and demurrage charges when cargo remains on the piers beyond the free period.

The ever increasing number of ressel operations-coastwise, inland waterway, intercoastal and foreign-tax the facilities at our command more and more. This was alleviated at the beginning of this biennial period by the placing of the new Pier 50 in operation.

The covering of bulkheads and the placing of the new Piers 45 and 48 in service will enable us to take care of all operations that may offer themselves for a period.

The various piers, bulkhead wharves and terminals under our jurisdiction, and the classes of service they are mainly engaged in, are as follows:

Coastuise: Total number-sixteen.
Piers: 7, 16, 17, 18, 20, 24, 40, 43 ; Sec. D., Seawall; China Basin, Channel, 16 th street, 17 th street, Islais Inner, Islais Onter, and Tulare street wharves.
Inland W'atcruay: Total number-eight.
Piers 1, 3, 5, 9, 19, 23, 27, 38.
Intercoastal: Total number-nine.
Piers 21, 22, 26, 28, 29, 31, 35, 50, 54.
Foreign: Total number-fifteen.
Piers 11, 25, 30, 32, 33, 34, 36, 37, 39, 41, 42, 44, 46, China Basin Terminal, Islais Creek Grain Terminal.
Miscellancous: Fisherman's Wharf for the fishing fleet. Pier 15 for idle boats.
Tessel operations (docking at picrs to load or discharge cargo) during the last three six-month periods can be compared by the following:
\begin{tabular}{|c|c|c|c|c|c|}
\hline & Coastwise & Inland waterway & Foreign & Intercoastal & Total \\
\hline January 1 to June 30, 1927 & 4,031 & 17,534 & 952 & 476 & 22,993 \\
\hline July 1 to December 31, 1927 & 4,389 & 20,086 & 975 & 626 & 26,076 \\
\hline January 1 to June 30, 1928 & 4,132 & 20,917 & 1,041 & 580 & 26,670 \\
\hline
\end{tabular}

One item of interest is that the U. S. Battleships Colorado and New Mexico docked at Pier 33 for several dars commencing October 26, 1926, and April 25,1927 , respectively. The docking of the Colorado was the first instance of a ressel of this type being berthed alongside a pier in any port on the Pacific. During their stay, the wharf area was used by the personnel of the vessels for athletic sports and dancing.

Respectfully submitted.

\section*{E. M. Buckley, Chief Wharfinger.}

U. S. BATTLESHIP "COLORADO" DOCKED AT I'IER No. 33. OCTOBER 26, 1926.

\section*{REPORT OF SUPERINTENDENT OF STATE BELT RAILROAD}

\section*{To the Honorable Board of State Harbor Commissioners, San Francisco, California.}

Gentlemen : I beg to submit herewith my report, as Superintendent of the State Belt Railroad, to which position I was appointed April 1, 1927.

During the last biennium the road switched 265,862 cars, an increase of 23,933 cars over the preceding two years. The revenue has been the largest in the history of the road, exceeding the 1916-1918 period, inflated by the World War emergency. In October, 1927, a total of 25,105 cars were handled, an average of 810 cars per day for the thirtyone days. The peak was reached on October 10, 1927, when 832 cars were switched.

A daily average of 18 engine shifts was maintained during the peak load period, and a twenty-four-hour service is maintained each day, except Sundays and holidays, when service is limited to eight hours.
Maintenance of way costs have been heavy for the past two years, due to the necessity of rebuilding some of our main line. In the replacement of rails, it was found that the base of these rails, laid some fifteen years ago, was almost completely eaten away with rust. To overcome this, we are now coating rails with a preservative before laying them. This plan is also followed with all material placed underground, including frogs, switches, and tie plates.

Maintenance of motor power and equipment has been kept at a high standard by the personnel of our shops and, in order to perform this work more economically and effectively, we have, during the biennium, purchased a 100 -ton hydro-pneumatic vertical bushing press and a 14 -inch Monarch lathe, a radial drill press, and a portable electric welder.

For the convenience of the employees of the Belt Railroad, there has recently been constructed in the railroad yard a change room, in which are installed toilets, showers and lockers for the shop and trainmen.

A number of new industries have located near the west side of The Embarcadero during the period of this report and are being served by the Belt Railroad. Included among these is a paper company, wholesale grocery establishment, a cheese company, a large milling warehouse, and the warehouse of a chain store company.

The State Belt Railroad is seriously handicapped for lack of yard space for the storage and transportation of cars, and some provision should be made for such space if the road is to continue to grow and serve the piers and industries with economy and dispatch. Such expansion can be made only at considerable cost in so congested a district, but the need is imperative.

In the near future provision should also be made for the purchase of an additional 70 -ton switching locomotive and a locomotive crane of 50 tons capacity.

While every effort has been put forth to provide complete and efficient service for our patrons, the strict economy in operation necessary for low rates has not been lost sight of, and the universal spirit of
cooperation displayed by steamship companies, industries, and connecting railroads assisted materially in maintaining our schedules and avoiding confusion.

Respectfully submitted.
J. H. Wasserburger, Superintendent.

TYPE OF LOCOMOTIVE USED ON STATE BELT RAILROAD.

INTERIOR OF CHANGE ROOM RECENTLY ERECTED FOR THE EMPLOYEES OF THE STATE BELT RAILROAD.

\section*{REPORT OF ATTORNEY}

\section*{To the Honorable Board of State Harbor Commissioners, Ferry Building, San Francisco, California.}

Dear Sirs: 1 beg to submit the following report of matters handled by me for your honorable board during the period from August 10, 1927, to October 31, 1928. These matters naturally fall into, and will be reported under, the following classifieations:

First-Contraets and Agreements.
Second-Claims Against and in Behalf of Your Board.
Third-State Belt Railroad.
Fourth-Other Litigation.
Fifth-General Consultations and Advice.

\section*{I}

\section*{CONTRACTS AND AGREEMENTS}

During the above period I have prepared for your board nineteen contracts involving a total sum of \(\$ 1,506,208.20\), for work to be done for the improvement of the harbor and water front under your jurisdiction.

I have also prepared an agreement on your behalf with the California Development Association for the assignment of space to it, and providing for the repayment to you, over a period of ten years, of moneys expended by your board in the improvement of the said space in the Ferry Buitding.

I have prepared a form of bond and recommended that the same be used in all cases, providing that all common carriers and other owners or operators of cars furnishing the same to the State Belt Railroad for switching, inclemnify your board individually and in its representative capacity, against any fines or penalties arising by reason of the said ears not, in all respects, meeting the requirements of the Federal Safety Appliance Acts.

I have also prepared a form to be used by your board in the assignment of space in the Ferry Building; a special agreement re the Myde Street Ferry Terminal, supplementing an existing contract and settling a controversy relative to inadequate mechanism of a slip, and a bond for payment of freight charges, and other misecllaneous legal documents as required.

\section*{II}

\section*{CLAIMS AGAINST AND IN BEHALF OF YOUR BOARD}
(a) Claims Against Your Board.

Eight claims for damages alleged to have arisen because of injuries to persons or property by reason of the operation and maintenanee of the State Belt Railroad have been considered and the claimants or their attorneys answered. Liability in all eases was denied.

The claim of Philip Diez, formerly one of your employees, against your board and the State Compensation Insurance Fund has been considered, and I am cooperating with said State Compensation Insurance

Fund in its adjudication and settlement of this matter before the Industrial Accident Commission.

\section*{(b) Claims Made in Behalf of Your Board.}

Pursuant to legal enactment, I prepared a claim on behalf of the cashier of the Board of State Harbor Commissioners of San Francisco for \(\$ 2,039.98\) relative to additional compensation for services rendered by certain pile drivers.

I have also considered and am now endeavoring to collect three claims in favor of your board against various individuals in the aggregate amount of \(\$ 350\).

I have been successful in collecting two claims in favor of your board for damages to state property in the aggregate amount of \(\$ 775.28\).

\section*{III}

\section*{STATE BELT RAILROAD}

\section*{(a) Inquests.}

I have attended five coroner's inquests in connection with persons killed by the State Belt Railroad, and have secured a verdict, in each instance, absolring the said railroad from all liability or blame.
(b) Accidents.

I have receired reports on and considered twenty-five other accidents. In eight of these eases claims for damages were filed against your board, which I have disposed of as reported above under the heading "Claims." No claims relative to the remaining serentcen accidents have as yet becn made.
(c) Litigation Involving Alleged Violations of the Federal Safety Appliance Act.

A matter in which your board is vitally interested is the question to be decided by the United States courts, of the liability, if any, of your board, individually, or in its representative capacity, for penalties or fines under the Federal Safety Appliance Act, in the operation of the State Belt Railroad.

This matter has, on varions occasions, been presented by my predecessor in office to the United States District Court, the Cireuit Court of Appeals and the United States Supreme Court, upon the theory that an action against your board to impose such fines or peualtics is an action against the State of California, and can not be maintained at all, or, at any rate, not in the United States District Court.

The United States courts have decided that such actions are not actions against the state, but that the Harbor Commissioners, indiridually, are personally liable for the fines upon a tort theory.

In appealing the last such case tried in the District Court prior to my taking office. I endearored to raise, before the Circuit Court of Appeals, two new points, riz: that the principle of respondeat superior has no application to public officers in connection with a tort committed by a subordinate officer, and that the Federal Safety Appliance Act did not authorize the imposition of a penalty against any individual, but against a common carrier only. As these points were not presented by
the record in the lower court, they were not considered by the United States Circuit Court of Appeals.

During the past year I have arranged for the presentation to the United States courts of a new test case, and the same is now under submission before Honorable A. F. St. Sure, United States District Judge, upon briefs. The aforesaid points have been fully presented, and the record will be in a condition to properly present said points to the appellate court.
In the meantime, judgments in four cases involving total penalties and costs of \(\$ 765.85\) have been rendered against your predecessors in office and one judgment of \(\$ 100\) against the present board. Up to the present time I have been suecessful in arranging with the United States attorney to stay executions upon said judgments.

Besides the case now under submission and the cases in which judgments were rendered prior to my taking office, there are three cases pending, one against your predecessors in office and two against yourselves, involving the same questions. The case now under submission will serve as a test case for the determination of said three cases.
(d) Litigation Arising Out of the Operation of the State Belt Railroad.

Crean vs. Harbor Board.-This is an action for damages to the extent of \(\$ 50,000\) alleged to have arisen by reason of Charles Crean, husband of plaintiff, having met with a fatal accident on the State Belt Railroad. A demurrer will be filed in due course, and if overruled all liability will be denied by answer and the case tried.

Lucille De Martini, Defendant and Cross-complainant, vs. California Steel Products Co. and Board of State Harbor Commissioners, Cross-defendants.-There were cross-complaints filed by De Martini in three suits arising out of an accident alleged to have occurred by reason of the operation of the State Belt Railroad. All of these cross-complaints were dismissed with prejudice against the Board of State Harbor Commissioners after I submitted authorities to cross-complainant's attorney showing that your board was not liable.

\section*{IV}

\section*{OTHER LITIGATION}
(a) Cases Involving Claims Against Your Board.

Henry Cowell Lime and Cement Co. vs. State of California et al.This action has now been pending for approximately fourteen years and was originally brought by plaintiff to enjoin defendant from interfering with plaintiff's building on a certain strip of land along The Embareadero and involves the title to said land. Said strip of land adjoined land admittedly owned by plaintiff. I have been endeavoring to make a final disposition of this matter by settlement if possible. Otherwise, it will be necessary to proceed to trial early next year. This case is now on the general trial calendar.
Schaal vs. Watts and Board of State Harbor Commissioners et al.This is an action for damages to the extent of \(\$ 25,500\) alleged to have arisen by reason of the operation of a truck belonging to the Harbor Board. Said action was filed in Alameda County, and a motion for
change of place of trial to San Francisco County was granted, but the case has not been refiled in San Francisco County by plaintiff as yet, and I believe that the demurrer filed with the above mentioned motion, together with the authorities which I submitted to plaintiff's attorney, have convinced plaintiff that your board is not liable.

McGinn vs. Board of State Harbor Commissioners.-This action involves the blockading of Channel street between Seventh and Carolina streets and is of considerable importance by reason of the fact that it involves the control and jurisdiction of the Board of State Harbor Commissioners over said portion of Channel street. This case is set for trial on November 14, 1928.

\section*{(b) Suits and Proceedings by and on Behalf of Your Board.}

In the Matter of James K. Nelson, Inc., a Bankrupt.-The libel suits involved in this matter have been completed and the sums available prorated and paid. The bankruptey proceedings are still pending.
People, etc. ex rel. Wm. A. Sherman et al. vs. McCarthy et al.-This was an action for damages to state property involving small amounts and was finally settled for the sum of \(\$ 50\).
People, etc. ex rel. Wm. A. Sherman vs. Cassaretto et al.-This case involves the right of the Board of State Harbor Commissioners to charge tolls for the use of a portion of Channel street. The case itself was for one \(\$ 15\) charge, and the complaint was, in my opinion, inadequate and it was not deemed advisable to proceed to trial thereon. Accordingly, said suit was dismissed, and I am now preparing a test case which will properly raise the issues involved in this matter.
People, etc. vs. Coryell and U. S. Fidelity and Guaranty Co.-This action has been hanging fire for over eleven years. Had I received this case in time, I believe I could have collected the entire amount. However, despite the long delay, I endeavored to collect same for your account, but the court dismissed the case for lack of prosecution, five years having elapsed since defendant filed its answer and no stipulation having been entered into extending the time for trial. When this case was turned over to me by my predecessor it was my understanding that trial thereof had been commenced, but it was not then on the trial calendar and had never been started.
I had the case set for trial, but before said date was reached the case was dismissed for the reasons above stated.
I feel that in view of the many extensions grauted in this matter at the request of the United States Fidelity and Guaranty Company, and the representations made to prior boards in comection therewith, that the motion to dismiss should have never been made.

People ws. Rosenberg (two cases). -These cases involve claims for wharfage services furnished to defendant in the aggregate sum of approximately \(\$ 450\). Judgments were obtained, but no money has been collected as yet.

The former Board of State Harbor Commissioners refused a settlement that was offered in this matter, and which settlement is not now renewable. I have been unable to locate the defendant or any property belonging to him up to the present time. When last heard of,
he was in New York City, but in spite of every effort made, I have been unable to get in touch with him. Should he become available or any property be located belonging to him, I will endeavor to collect this account.

\section*{V \\ GENERAL CONSULTATIONS AND ADVICE}

It is my aim and purpose, as attorney for the Board of State Harbor Commissioners and the State Belt Railroad, to give to the Harbor Commissioners and their staff complete legal protection in all matters relating to the harbor and harbor improvement operations, and I am pleased to report that during the period of my employment all matters referred to me have been kept up to date.

Also, it has been and is my desire to personally protect and safeguard the interests of the harbor and the Harbor Commissioners to the best of my ability. In this connection I am pleased to report that up to the present time, I have been successful in defending your board against all elaims and have not authorized any money to be paid out as the result of any claim.

There are still some unfinished matters whieh have been left to yonr board from boards that have since passed out of existence. It is my desire to dispose of all past matters whenever this can be done to the advantage and best interests of your board.

I have, at your request, submitted opinions in writing upon matters in connection with which you desired a legal opinion, and have constantly given opinions and adrice orally and over the telephone, not only to members of your board bat to your executive employees. In this connection, it has been my effort to make my services constantly available both to yourselves and to your various departments and executive employees, so that they might have the benefit of legal advice at any and all times.

I have examined, at your request, the title to various portions of the water front, and particularly to the so-called Aquatic Park site.

I have effected a settlement of a controversy between ManningBaldwin, Inc., and their creditors, and disposed of garnishment proceedings against moneys due Manning-Baldwin, Inc., from your board, and have personally supervised the payment of said moneys to the bonding company for distribution among the said ereditors.

I have, at your request, interviewed your employces prior to their depositions being taken in a suit against the Sonthern Pacifie Company relative to danages claimed against said company involving shipments handled in part by the State Belt Railroad.

I am now preparing a resmme of all laws and statutes affecting the jurisdiction of the Board of State Harbor Commissioners over all harbor property with a view of recommending to the legislature amendments to such of the laws and statutes as are not now in proper form to give the board adequate powers for the proper administration of its affairs. This will take some time, but I hope to accomplish some good results from same.

Respectfully submitted.
Leon E. Morris, Attorney.

1 derrick, length of boom, 90 feet; lifting capacity', 10 tons.

\title{
SAN FRANCISCO PILOTAGE AND TOWAGE RATES \\ Port of San Francisco-Charges, Regulations, Etc., Not Under Jurisdiction of Board of State Harbor Commissioners \\ PILOTAGE
}

Jurisdiction: San Francisco Board of Pilot Commissioners, a state body, composed of three members. Office of Commissioner, Merchants Exchange Building, San Francisco; Pilot Office, Pier 7, San Francisco.

Pilotage in and out of San Francisco harbor is under the jurisdiction of a State Board of Pilot Commissioners, appointed by the Governor, which body establishes the rules and regulations regarding the conduct of all pilots, as well as licensing and commissioning pilots.

Pilotage in and out of San Francisco Bay is generally compulsory, except as follows:

All vessels sailing under an enrollment, and engaged in the coasting trade between the Port of San Francisco and any other port of the United States are exempt from pilotage unless a pilot be actually employed.

All foreign vessels and all American vessels from a foreign port or bound thereto. and all vessels sailing under a register between the Port of San Francisco and any other port of the United States are liable for pilotage.

Rates for pilotage are fixed by state laws as follows:
All vessels under 500 tons, \(\$ 2\) per draught foot;
All vessels over 500 tons, \(\$ 2\) per draught foot and 2 cents per ton for each and every ton registered measurement; and every vessel spoken inward and outward bound, except as hereinafter provided, shall pay the said rates.
A vessel is spoken by day by a pilot boat displaying a union jack, or by night displaying a torch or flare-up within a distance of three miles of the vessel. In all cases where inward bound vessels are not spoken until inside of the bar the rates of pilotage herein provided shall be reduced 50 per cent. Vessels engaged in the whaling or fishing trades shall be exempt from all pilotage except where a pilot is actually employed.

In the event a vessel not carrying cargo to the Port of San Francisco, nor seeking any thereat, is compelled to enter said port solely by reason of her being in distress or requiring repairs, provisions or fuel, the rates of pilotage into said harbor shall be as follows :

All vessels under 500 tons, \(\$ 1\) per draught foot;
All vessels over 500 tons, \(\$ 1\) per draught foot and 1 cent per ton for each and every ton registered measurement; and every vessel spoken inward bound shall pay the said rates. There shall be no reduction of rates of pilotage to vessels in distress where the ressel is spoken inside the bar. In the event that the yessel shall leave the Port of San Francisco without carrying any cargo therefrom, she shall pay the last-mentioned rates of pilotage out of the harbor of San Francisco.

\section*{TOWAGE}

Towage in San Francisco is conducted by private tow boat companies and the charges for the services performed vary according to the conditions under which the contract is to be carried out, but are generally assessed within the range of the following schedule:

\section*{Sailing Vessels}

The cost of towage from sea (lightship) to anchorage varies with distance and size of vessel, ranging from \(\$ 100\) to \(\$ 250\).

For moving a ressel of 2000 tons net register in the harbor the charges are approximately:

Docking, city front

Fore and aft rigged vessels pay, according to size, from \(\$ 20\) to \(\$ 30\)
for docking, and from \(\$ 50\) to \(\$ 100\) for towing to sea.

\section*{Steam and Motor Ships}
(Charges based on net tonnage of vessel.)

2. Towing (without power) from dock to dock between Meiggs (Fisherman's) Wharf to Mission Rock

7500 to 15000
3. Services of tug assisting to Union Iron Works or Hunters Point
\(40 \quad 00\) to \(70 \quad 00\)
4. Towing (without power) to Union Iron Works or Hunters Point

90 to 29.00
5. Services of tug assisting to Oakland Harbor (east of bridge

\title{
UNITED STATES GOVERNMENT REGULATIONS, FEES AND OFFICIALS \\ \\ CUSTOMS DISTRICT
} \\ \\ CUSTOMS DISTRICT
}

The Customs District of the Port of San Francisco comprises all that portion of the State of California north of San Luis Obispo, Fern and San Bernardino countles

Customs House, located at Washington and Hattery streets, San Francisco. Customs Officers: Collector of Customs, W. B. Hamilton; Assistant Collector of Customs, Henry E. Farmer: Acting Surveyor of Customs, John T. Stone; Comptroller of Customs, John J. Deane ; Appraiser of Customs, Bert Kahn.

\section*{CUSTOMS FEES}

The ordinary entrance fees for vessels arriving from foreign ports with cargo are \(\$ 5.70\) for foreign vessels and \(\$ 5.50\) for American vessels.

The ordinary clearance fees for vessels going to foreign ports, either American or foreign vessels, are \(\$ 2.50\).

Foreign vessels entering from a domestic port are charged a fee of \(\$ 2\); likewise a fee of \(\$\) ? for clearing to a domestic port.

UNITED STATES INSPECTION OF STEAM VESSELS
John K. Bulger, Customs House, Supervising Inspector First District.
Joseph P. Dolan, United States Local Inspeetor of Boilers.
Frank H. Turner, United States Local Inspector of Hulls.
UNITED STATES SHIPPING COMMISSIONER
Walter Macarthur, Appraiser's Building.

\section*{UNITED STATES IMMIGRATION SERVICE}

John D. Nagle, Commissioner of Immigration; offices: Angel Island and Appraiser's Building, San Francisco.

\section*{UNITED STATES QUARANTINE SERVICE}

Dr. J. R. Ridlon, Surgeon, United States Public Health Service, in charge: offices Angel Island and Barge Office, Fisherman's Wharf, San Francisco.

The federal government handles the entire matter of inspection, quarantine and fumigation in this port. Where fumigation is required, the charge amounts to about 13 cents per thousand cubic feet of air space fumigated, plus \(\$ 1\) for supervision and \(\$ 2\) labor. This applies where the operation is conducted at the Angel Island Station, but in cases where vessels are fumigated on the San Francisco side, the expenses of the fumigating officer amounting to hotel accommodations and incidental expenses are charged in addition to the above rate.

UNITED STATES LIGHTHOUSE SERVICE
H. W. Rhodes, Inspector; office: Customs House.

UNITED STATES ATTORNEY
Geo. J. Hatfield; office: Post Office Building.
UNITED STATES MARSHAL
Fred Esola; office: Post Office Euilding.
UNITED STATES PASSPORT AGENCY
William A. Newcome, Passport Agent; office: Customs House.

\section*{INTERNAL REVENUE DEPARTMENT}

John P. McLaughlin, Collector; office: Customs House.

\section*{UNITED STATES BUREAU OF FOREIGN AND DOMESTIC COMMERCE}

Leonard B. Gary, District Manager; office: Customs House.

\section*{UNITED STATES COAST GUARD SERVICE}

Captain D. F. A. deOtte, Division Commander, California Division ; office: Customs House.

LIFE SAVING DIVISION
John Killey, District Commander.
UNITED STATES NAVY
Office: Twelfth Naval District, 100 Harrison street.

Office: Plant Quarantine, Ferry Building.

\section*{BOARDS OF STATE HARBOR COMMISSIONERS}

First Board-C. L. Taylor, appointed November 4, 1863; D. C. McRuer, appointed November 4, 1863 ; S. S. Tilton, appointed November 4, 1863.

Second Boavd-C. L. Taylor, S. S. Tilton, James Laidley, appointed November 6, 1865.

Third Board-S. S. Tilton, James Laidley, James H. Cutter, appointed November 4, 1867.

Fourth Board-James H. Cutter, John J. Mark, appointed December 6, 1869 ; Jasper O'Farrell, appointed January \(15,1870\).

Fifth Board-John J. Marks, Jasper O'Farrell, Washington Bartlett, appointed June 23, 1870.

Sixth Board-John J. Marks, Jasper O'Farrell, John Rosenfeld, appointed November 29, 1871.

Seventh Board-John Rosenfeld, Jasper O'Farrell, Lewis Cunningham, appointed March 1, 1873.

Eighth Board-Lewis Cunningham, John Rosenfeld, Samuel Soule, appointed March 13, 1873.

Ninth Board-Lewis Cunningham, Samuel Soule, T. D. Mathewson, appointed June 5, 1873.

Tenth Board-Samuel Soule, T. D. Mathewson, D. C. McRuer, appointed April 21, 1874.

Eleventh Board-Wm. Blanding, appointed March 4, 1876 ; Bruce B. Lee, appointed March 4, 1876; A. M. Burns, appointed March 4, 1876. Frank McCoppin succeeded Burns, Óctober 28, 1879.

Twelfth Board-Wm. Blanding, G. S. Evans, appointed January 27, 1880; Wm. A. Fhillips, appointed March 4, 1880.

Thirteenth Board-Wm. Blanding, Wm. H. Knight, appointed November 23, 1892 : Geo. S. Evans, Wm. A. Phillips.

Fourteenth Board-Wm. Irwin, appointed March 20, 1883; died March 1, 1886 ; A. C. Paulsell, appointed March 20, 1883 ; John H. Wise, appointed March 20, 1883.

Fifteenth Board-Frank McCoppin, appointed April 1, 1886; A. C. Paulsell, John H. Wise.

Sixteenth Board-William D. English, appointed March 13, 1887 ; A. C. Paulsell, John H. Wise.

Seventeenth Board-William D. English, A. C. Paulsell, Charles O. Alexander, appointed March 13, 1889.

Eighteenth Board-William D. English, Charles O. Alexander, William H. Brown, appointed March 13, 1890.

Nineteenth Board-C. F. Bassett, appointed March 31, 1891 ; Charles O. Alexander, William H. Brown,

Twentieth Board-C. F. Bassett, William H. Brown, Dan T. Cole, appointed March 13, 1893.

Twenty-first Board-C. F. Bassett, Dan T. Cole, F. S. Chadbourne, appointed March 13, 1894.

\section*{LETTER OF TRANSMITTAL.}

To His Excellency, C. C. Young, Governor of the State of California, Sacramento, California.

Honorable Sir: Conforming with the provisions of section 4 of the Optometry Law of the State of California, T. A. Bromba\&h, Opt.D., Secretary of the Board of Examiners in Optometry of the State of California, has the honor of presenting for your consideration the twenty-fourth annual report showing the activities of this branch of the state government for the year 1927.

Respectfully submitted.

> T. A. Brombacir, Secretary.

San Franciseo, California, December 31, 1927.

\section*{REPORT OF THE BOARD OF EXAMINERS IN OPTOMETRY FOR THE YEAR 1927.}

\section*{MEETINGS.}

During the year 1927 the Board of Optometry held eight meetings. The following gives the date and place of each session :

October 29, 1927
Fresno

At the two statutory meetings examinations of candidates desiring to obtain a certificate to practice optometry in the State of California were held.

EXAMINATION STATISTICS.

\section*{OPTOMETRISTS' EXCHANGE.}

The Board of Optometry has been maintaining an employment bureau for registered men who desire to open an office or obtain a position with another optometrist. The following gives the number of applications applied for, etc.:

\section*{LEGAL DEPARTMENT.}

Throughout the year many infractions of the law were checked and corrected. The more important cases were regularly tried by the board as well as in the civil courts, while minor violations were informally heard by members of the board. The following is a report on cases handled through the legal department of the State Board of Optometry :

\end{tabular}

\section*{INFORMAL HEARINGS, INVESTIGATIONS.}

During the year fourteen optometrists were cited to appear before the board for informal trial for minor violations of the law. Upon promise to comply with the Rules and Regulations and Code of Ethics, they were released with a reprimand.

The inspector, W. B. Luckenbach, in his tours of investigation (ordered by the State Board) has corrected 123 minor violations of the law. His work has been most thorough and satisfactory.

The word 'companies, as used in this section shall include persons, partnerships, joint stock associations, companies, and corporations * * *.
    "(c) The shares of capital stock of all banks, organized under the laws of this state, or of the United States, or of any other state and located in this state, shall be assessed and taxed to the owners or holders thereof by the state board of equalization, in the manner to be prescribed by law, in the city or town where the bank is located and not elsewhere. There shall be levied and assessed upon such shares of capital stock an annual tax, payable to the state, of one per centum upon the value thereof." (For various clianges in rate, see page 16.) "The value of each share of stock in each bank, except such as are in liquidation, shall be taken to be the amount paid in thereon, together with its pro rata of the aecumulated surplus and undivided profits. The value of each share of stock in each bank which is in liquidation shall be taken to be its pro rata of the actual assets of such bank. This tax shall be in lieu of all other taxes and licenses, state, county and municipal, upon such shares of stock and upon the property of such banks, except county and municipal taxes on real estatc and except as otherwise in this section provided. In determining the value of the capital stock of any bank there shall be deducted from the value, as defined above, the value, as assessed for county taxes, of any real estate, other than mortgage interests thereln, owned by such bank and taxed for county purposes. The hanks shall be liable to the state for this tax and the same shall be paid to the state by them on behalf of the stockholders in the manner and at the time prescribed by law, and they shall have a lien upon the shares of stock and upon any dividends declared thereon to secure the amount so paid * * *.
    "The word 'hanks' as used in this suhdivision shall inelude banking associations, savings and loan societies and trust companies, but shall not include building and loan associatlons."

    The omitted material from the subdivision (c) relates to unincorporated banks. There are no unincorporated banks in Californla.

[^42]:    ${ }^{1}$ It has been suggested that it may be feasible to differentiate in the treatment of intangibles as between those which coniorm to the precise standards set for bank investments and those which do not, applying the bank rate, for example, to mortgages with terms up to five years, but granting more favored treatment to mortgages of longer term in which national banks have no legal power to deal. See Harley L. Lutz, "The Problem of National Bank Taxation, with Special Reference to California," Bulletin of National Tax Association, vol. xiii, no. 9, (June, 1928) pages 26026 S . The Commission, however, is unable to discern any ground in equity for such a distlnction and is advised that the courts would probably not assent to so narrow an interpretation of what constitutes competition.

[^43]:    ${ }^{1}$ It was suggested that it might be possible to eliminate the charge of discrimination based upon the exemption of real estate mortgages through the device of permitting the banks, in calculating the value of their shares, to deduct the amount of real estate mortgages owned. Analysis, however, showed that this offered no solution of the legal difficulty: Moreover, to adopt this course of action would, as a practical matter, destroy the productivity of the tax, hecause of the huge amounts of mortgages held by the banks. The following figures for the 448 banks which replied to the Commission's questionnaire will make this clear.

    Valuation of shares
    state tax
    Mortgages
    
    owned $\$ 265,072,630$

    ${ }^{2}$ The corporation license tax was repealed by Chapter 221, Statutes of Cailfornia, 47 th sesslon, approved April 20, 1927. The yield of this tax during thls period was as follows, in thousands of dollars:
    

    The Commission has a positive reason for snggesting a change in the form of the present franchise tax. It wishes to make it available for use as an element in the solution of the bank tax difficulty. An examination of the effects of the tax in operation leads to the conclusion that there are no strong reasons for preserving the present form of the tax. On the contrary, the proposed changes in the form of the tax may be expected to improve greatly its equity and general usefulness as a business tax.

    ## ANALYSIS OF PROPOSED NEW BANK AND FRANCHISE TAXES

    It will be recalled that the fourth method of taxing national banks contemplates a tax on the banks "according to or measured by net ineome" and that the rate applied may "not be higher than the rate assessed upon other financial enrporations nor higher than the highest of the rates assessed by the taxing state upon mereantile, manufacturing, and business corporations doing business within its limits." ${ }^{1}$ Questions then arise as to what the effects would be of introducing such a system in California. What do the present bank taxes amount to in terms of a rate on the proposed income base? What do the present taxes on corporations amount to when related to such a base? What adjustments in the distribution of taxes would result from the introduction of the new system?

    ## SIMILAR TAXES IN OTHER STATES

    Before taking up these questions, it may be pointed out that the system under analysis is not entirely novel and untried. Similar taxes have already becu adopted in New York and Massachusetts. In addition, taxes more or less elosely approximating those proposed are in foree in Wisconsin and sereral other states. ${ }^{2}$

    New .York adopted the plan of taxing mational banks under the fourth method by a law which went into effect Mareh 31, 1927. ${ }^{3}$ At the same time state banks were subjected to a levy which was frankly designated as a franchise tax in the title. The rate imposed on both classes of banks was $4 \frac{1}{2}$ per cent. This was the rate already imposed under the franchise tax on corporations in general, a tax which had been established in 1917. ${ }^{\text {t }}$ New York includes income from tax-exempt securities in the base, on the theory that the tax is one on the franchise whose value is measured by net income, and is not a direct tax on the income itself.

    In $1927^{5}$ Hassachusetts also imposed a tax on national banks under the authority granted by the fourth method of section 5219, including income from tax-exempt securities in the base. In contrast with New York, the Massachusetts statute does not mention a specific rate. It merely provides that the tax shall be "at the rate assessed on other financial enporations : provided, that such rate shall not be higher than the highest of the rates assessed under the ehapter on mereantile, manufacturing, and business corporations doing business in the common-

    wealth." In accordance with this direetion the Commissioner of Corporations and Taxation each year determines the rate which has been imposed upon such other corporations, and proceeds to apply this rate to banks. The rate the first year was 6 per cent and the following year $5.3 \pm$ per cent.

    ## PRESENT BANK TAXES RELATED TO NET INCOME OF BANKS

    To determine the rate it would be necessary to impose upon the net income of the banks in order to rield the anount now collected throngh the tax on bank shares, a questiomaire was sent to each of the 483 banks in the state. The response to this questionnaire was remarkably complete, only four small banks failing to reply to the request for data. ${ }^{1}$

    Table III summarizes in brief form the results of this questionnaire. It appears from the figures here presented that to vield the full amount of the present bank taxes, the proposed tax on banks "according to or measured by their net income" would have to be levied at the rate of 11.6 per cent.

    TABLE III
    SUMMARY OF RESULTS OF QUESTIONNAIRE TO BANKS SHOWING RATIO OF PRESENT TAX ON BANK STOCK TO NET INCOME OF BANKS

    |  | National banks | State banks | Total |
    | :---: | :---: | :---: | :---: |
    | Number of banks to which questionnaires were sent (\%) | 217 | 266 | 483 |

    | Net income, 1927 (b).- | §20,839,000 | \$18,112,000 | \$35,951,000 |
    | Tax on ahares, 1928 | \$2.366,000 | \$2.177,000 | \$4.543,000 |
    | Ratio of tax on shares to net income (c) | $11.4 \%$ | 12.0\% | 11.6\% |

    (©) Questionnaires were gent to all banks reported by the State Board of Equalization as paying a share tax in 1927.
    (b) This item includes dividends, tax-exempt interest and the 1927 share tax. Also no deduction has been made for losses incurred in previous years.
    (c) This figure is the ratio between the total taxes paid by all the bsaks in the sample and the total income of those banks in the eample operating at a profit.

    ## PRESENT FRANCHISE AND PERSONAL PROPERTY TAXES RELATED TO NET INCOME OF CORPORATIONS

    The rate which it would be practicable to apply to the net income of the banks under the proposed new system would depend largely upon the rate it would be feasible to impose on financial and business corporations generally, for the rate on banks, under the provisions of section 5219, may not be oreater than the rate on other corporations.

    The taxes now paid by ordinary corporations (in addition to the real estate tax which is paid by both the banks and the eorporations) which are properly comparable to the share tax which the banks now pay, are the state franchise tax and the local personal property tax. To determine the amomet of these taxes in terms of a rate on net income, a questionnaire was sent to a sample of 2097 eorporations selected from a total of about 25,000 corporations which paid a state franchise tax in 1927. This sample inchuled all of the large corporations in the state and a random selection of the small corporations in each group. The

    | Grand total. | 1,423 | 5.1 | 17.8 | 5.7 | 2.1 |

    (a) Companies operating at a loss are unt included, whereas they are included in Table V.
    (b) Arithmetic mean.
    (0) When buildiog and loan companies are subdivided into mutual and stock companies, the mutual group, because of the fact that their net income is not reduced by interest payments to so great an extent as in the stock compaoies, appears to be psying lighter taxes than is really the case. The average tax in the case of the stock companies is shown to be 7.5 per cent as compared with 2.5 per cent for the mutuals. A committee representing the building and loan is cooperating with the Commission with a view to arriving at an equitable solution of the problcun of determining the true net income of mutual building and loan associations.
    found, it will be recalled, that the share tax amounted to 11.6 per cent of the income of the banks. It now appears that the franchise and personal property taxes together amount to only 4.4 per cent of the income of this sample of business and other financial corporations.

    These two percentages, 11.6 for the banks and 4.4 for the other corporations, reveal the character of the problem of determining the rate of the proposed new tax on banks. If the banks are to continue to be taxed to the same extent as at present, it becomes necessary, under the requirements of section 5219 , to increase the taxes on these other corporations from the 4.4 per cent they now pay to the 11.6 per cent which the banks now pay. Such a rate would be more than double that imposed on such corporations in either Massachusetts or New York, the two states which nse the fourth method of taxing banks. It would greatly increase the burden on the corporations and, because of the large base affected, would yield a revenue far in exeess of the amount needed to mect the present emergency.

    The data in Table IV also make it clear that there is wide variation among the groups. The figure for oil eompanies is 6.7 per cent, while the figure for investment and finance companies is only $9 / 10$ of 1 per cent. Manufacturing companies pay 5 per cent and incorporated merchants pay 5.8 per cent.

    The variations within each group are also very great. In one group, the oil companies, one corporation paid franchise and personal property taxes which, combined, amounted to less than $1 / 100$ of 1 per

    (a) Companies operating at a loss are not included.
    cent of the corporation's net income. Another company paid taxes amounting to more than fourteen times its net ineome. Still another, suffering a emsiderable loss in this year. paid tases of nearly $\$ 30,000$. Extreme eases are not especially significant; but if the 25 per cent of cases paying the highest proportion, and the per cent paying the lowest proportion, of income in taxes are disregarded, there can still be fomed, in the middle half of several groups, some corporations paying at least five times as much in terms of income as others. Table VI shows this to be trine in the case of oil, mining, agrienltural, water and miseellaneons corporations.
    The difference in the burden, in terms of net income, of the share tax paifl by the hanks and the franchise and personal property taxes paid h. the business and financial corporations is again apparent in Table ViII. Fewer than one-fifth of the banks pay share taxes of less than 10 per cent of their income, whereas only one-fifth of the business and financial corporations pay franchise and personal property taxes in excess of that amount. Only three banks pay less than 4 per cent. although more than half of the business corporations pay less than this amount. A relatively small propertion of the bnsiness corporations fall in the gronps paying high taxes; but a few business corporations, as well as banks. pay more than their total net income in taxes.

    The burden, in terms of net income, of the present share and franchise and personal property taxes varies with the amount of the income

    | Total.. | 282 | 82 | 17 | 11 | 392 |

    (a) Banks operating at a loss are not included.
    as well as with the kind of bnsiness. This is shown in Tables VIII and IX.

    The average ${ }^{1}$ tax for the different income classes is as follows:

    | Income | Banks | Business corporations |
    | :---: | :---: | :---: |
    | Under \$25,000 | 16.7 | 6.5 |
    | \$ 25,000-99,999 | 11.4 | 3.2 |
    | \$ 100,000-999,999 | 11.6 | 2.5 |
    | \$1,000,000 and ore | 9.7 | 1.5 |

    The arerage business corporation with an income of less than $\$ 25,000$ pays more than four times as much in taxes, in proportion to its income, as the eorporation with an income of $\$ 1,000,000$ or more. The divergence is not so great among the banks, but the small banks pay, on the average, 70 per cent more than the large ones.

    One-fourth of the business and finaneial corporations with ineome under $\$ 25,000$ pay a tax of more than 16 per cent. Only one business corporation with income in excess of $\$ 1,000,000$ pays a tax of more than 16 per cent of its income. One-fourth of the banks with income under $\$ 25,000$ pay a tax of more than 27 per cent. No bank with an ineome in excess of $\$ 1,000,000$ pays as much as 20 per eent.

    | Totala | 1.246 | \$241.999 | \$2.427 | 1.0 |

    (a) For a similar comparison of this tax plus local personal property taxes, see Table Y. page 35.
    (b) This differs from net income as reported to the federal tax anthorities in the foltowing respeets: Dividends, taxexermpt interest and the California state franchise tax for 1327 have been added. Also, losses for preeeding years have not been dedueted. In the case of mining and oil companies, book depletioo has been used in place of the depletion allowed on the fe.leralreturna. Where the husiaess extenda to severalstates, the California share has been allocated on the basis of gross reeeints except in a few instances where the corparation has recommended and supplied some ot her basis of allocation.
    (0) This figure is the ratio between the total franchise taxes paid by all the corporations in the sample and the total net income of those corporations in the sample operating at a profit.

    ## PRESENT FRANCHISE TAX RELATED TO NET INCOME OF CORPORATIONS

    In Table X data are presented which show how variable the present franchise tax is when related to net income. The widest variation appears in the financial groups. Building and loan associations pay 5 per cent of net income. whereas investment and other financial corporations pay only - $/ 10$ of 1 per cent.

    ## IMPORTANCE OF INCLUDING TAX-EXEMPT INTEREST IN BASE

    As has been pointed out, ${ }^{1}$ the 1926 amendment to section 5219 was drafted with the avowed object of permitting the inclusion in the tax base of such income as the interest from tax-exempt bonds. The point, howerer, has not been adjudicated and a suit ${ }^{2}$ has already been filed in Massachusetts questioning the right of a state to include such interest.

    In the case of corporations other than banks, the point is not of vital importance. But the banks hold such large quantities of these taxexempt bonds that the effect of a lecision holding that the state may not include them in the base would be very serious indeed. An analysis of the replies of the banks to the ('ommission's questionnaire indicates that the non-inclusion of federal bond interest would reduce the tax base of the banks approximately one-fourth and the non-inclusion of all interest exempt from the federal income tax would reduce that base by more than one-half.

    However, it is understood that, in case of a decision holding that such income may not be included, the banks through their national organization, will actively cooperate with the states with the object of securing remedial legislation from the congress.

    ## RATE OF PROPOSED NEW BANK AND FRANCHISE TAXES

    The rate of the proposed new taxes should in the judgment of the Commission be 4 per cent. This is the rate which the technical staff estimates will insure a continuance of the present flow of revenue from these sources but not inerease it.

    It will be recalled ${ }^{3}$ that the following rates are in force in other states:

    $$
    \begin{aligned}
    & \text { Massachusetts -------------------------------- } 5.34 \text { per cent } \\
    & \text { Wisconsin * -------------------------------------- } 6.0 \text { per cent }
    \end{aligned}
    $$

    The Commision recommends further that a minimum franchise tax of $\$ 25$ be required and that a credit or offset (which will not affect this minimum) be permitted against the new state franchise tax for taxes paid on personal properts, to the extent of 90 per cent of such franchise tax. This will operate to prevent the disturbance of the revennes which the localities now receive from the personal property tax.

    The following letters have passel between the chairman of the Commission and the Governor, bearing upon the adequacy of the present state revenues:

    June 2S, 1928.
    Hon. C. C. Young,
    Governor of California, Saeramento, California.
    My Dear Governor Young:
    The Culiforuia Tax Commission appointed by you under the law approved May 12, 1927, hus now reached a point in its studies and deliberations where it must make its assumption racgarding proper future financial needs of the state govermment in the years wheh lie immediately aheal.

    Your Commission has direeted me as chairman to inguire whether you are in a position to supply us with a statement regarding the state's finaucial outlook with particular reference to the ndequacy of the revenues now aecruing to cover the expenses which seem to be in prospeet.

    Yours very truly,

    ## CALIFORNIA TAN COMLISSION,

    By Irring Martin, Chairman.July 16, 1925.

    Mr. Irving Martin, Chairmnn, Califoruia Tax Commission.
    Dear Mr. Martin :
    I have before me your letter of recent date inguiring, on behalf of the California Tax Commission, whether 1 can supply you with a statement regarding the adequacy of revenue now aceruing to cover state expenses which seem to be in prospeet.

    In recommending to the legislature the passage of an act authorizing the appointment of a Tax Commission, it was ms thought that such a Commission should chiefly coucern itself with the task of stabilizing California's tax system, and of achiering the most equitable distribution of the existing tax burden which can be found. As I am sure the Commission recognizes, we have no desire or need for additional large revenues, and we certainly do not wish to impose additional burdens upou taxpayers.

    Through the cooperation of the legislature in 1927, a budget was adopted earrying a new poliey, by which the inerease in total state expenditures was held down to a pereentage lower than the estimated percentage of increase in the state's population. This statement applies to all expenditures, ineluding even thuse for promanent improvements uther than the new highway construction program, which was formed subsequent to the adoption of the budget.

    I have already advised department heads that the same policy will be followed in the $1: 292$ budget, and that no inereased expenditures should be expected other than those necessitated by the increasing population of our schools or institutions.

    With this program we have been able to conserve the state surplus to such an extent that a fundamental study of the tax system can now be made without the pressure of urgent demands for more revenue. The only factor which appears to threaten this surplus is the very unlikely possibility that the national banks might persist in the prosecntion of their suits for recovery of taxes paid under protest.

    It is my understanding that representatives of the banks have publiely stated that the purpose of these suits is not to avoid payment of taxes, but to require a correction of technieal faults in the present method of taxing banks. If your Commission sueceeds in the correction of these technical faults, it is ineonceivable that the banks will allow themselves to be placed in the position of seeking to evade their fair share of taxes for the support of the state gorerument. or to profit unduly by the depletion of the state's surphus.

    Accordingly, to answer briefly your question. my present view of the financial situation convinces me that the Tux Commission may continue to devote itself to the task of equalizing the tax burden and stabilizing our tax system, rather than seekiug any material increase in public revenues beyond that which should be expected to acerue with the normal growth of the state.

    Yours vers sineerels,
    C. C. Toung,

    Governor.

    ## MISCELLANEOUS FEATURES OF PROPOSED NEW FRANCHISE TAX

    The drafting of the statute imposing the proposed new franchise tax involves a large number of technical questions relating to the precise scope of application of the tax, the definition of income and the allocation of income in and ont of the state, the full discussion of which would unduly prolong this report. Some of these problems are difficult but they are for the most part problems of detail. The Commission will be prepared to submit definite recommendations respecting them. Its recommendations may be expected to follow, in the main, the precedents which have been established in New York state, where such a tax has been in force continuously since 1917. The form of the proposed constitutional amendment is considered to be broad enough to enable the legislature to extend special treatment to dividends received from a corporation which has already paid the tax, with the object of aroiding double taxation.

    ## THE INTANGIBLE PROPERTY TAX PROBLEM

    The adoption of the proposal to tax banks "aceording to or measured by their net income" will clear the ground for an approach to the prohlem of the taxation of intangible property. As has been ponted out, ${ }^{1}$ so long as the state utilizes the share-tax method of taxing banks. it is apparently impossible, under the federal statute, to apply a low rate to intangibles withont reducing the rate on bank shares to the same level. Howerer, it the state moves to the taxation of banks on the income basis, there no longer exists the neeessity of eomparing the tax with that on intangibles, but rather. the eomparison becomes one between the rate imposed on the banks and the rate imposed upon other corporations.

    ## RECENT HISTORY OF THE TAXATION OF INTANGIBLES IN CALIFORNIA

    Even before the adoption of the 1910 constitutional amendment exempting mortgages, ${ }^{2}$ it had been the practice in California to attempt to avoid double taxation by an arrangement which had the practical effect of reeognizing the mortgage loan as an interest in the real estate. The effect of the constitutional amendment was merely to deny the recomition of any deduction for mortgage indebtedness and to ignore the mortgages for tax purposes.

    In 1917 the state took a sccond significant step by inserting in the l'olitical Code a provision to the effect that shares of stock in corporations were to be ignored by the assessors to the extent that the property of the corporation itself was taxed by this state. ${ }^{3}$ The language of this section, which is a rather remarkable bit of exegesis, reads as follows: ${ }^{4}$

    Shares of stork in corporations pussess no intrinsie value over and above the actual value of the property of the corporation whith they stand for and represent. The assessment amb taxation of such shares, and also of all corporate property, would be donble taxation. All properly belonging to corporations shall be assessed and taxed in the manuer provided by law : but no assessment shall be mate of shares of stock iu any corporation except as prescribed in the constitution of this state and the laws enacted pursuant to such provisions of the constitution.

    This action in 1917 brought into sharp relief the status of securities of corporations whose property lay within the state, as compared with those of en porations whose property lay nutside. From the point of view of the investor, the securities of corporations with outside property were placed at a distinct disadrantage. The outside property was presumably taxed where located, just as the property lying in California was taxed in California, hut a California investor was taxed on his holdings in one case and not in the other. Althongh the administration of the law was lax, the imposition of the tax on the specified securities worked considerable hardship in the eases of taxpayers who were unusually eonscientious or unfortunate. The issue became one of

    importance for several reasons, one of which was the eagerness to render residence in California attractive. It was felt to be bad policy to counsel a newcomer to change his investments upon settling in the state, upon penalty of being subjected to an exceedingly heary tax in case his holdings of taxable securities should become known to the assessor. In addition, it was alleged that the existing arrangement worked to the disadvantage of certain businesses whose assets consisted in part of intangibles, in that they were in active competition with businesses in other states which offered special treatment to such property. Again, the diserimination against securities of companies with outside properties was considered by some to be contrary to sound business and public poliey, in that it discouraged a wise diversification of investment. The San Francisco fire is said to have had the effect of impressing upon the minds of investors the advisability of diversifying their holdings, in order to reduce the risk which was present when a large proportion of the interests were concentrated in a particular area.

    The Constitutional Amendment of 1924.-All of these factors, together with others, combined to give strength to the agitation which resulted in the adoption of the following constitutional amendment in 1924 (Article XIII, section 12 ${ }_{2}^{2}$ ) :

    The legislature, subject to section one of article four shall have power to provide for the assessment, levy and collection of taxes upon all notes, debentures, shares of capital stock, bonds, solvent credits or mortgages, not exempt from taxation under the provisions of this constitution, in a manner, at a rate or rates or in proportion to value different from any other property in this state subject to taxation; taxes imposed by any act of the legislature adopted pursuant to the powers hereby conferred shall be in lieu of all other property taxes, state, county, munieipal or district, upon such property. The legislature shall provide for an equitable distribution of such taxes to the county, muncipality or district in which such property is taxed; provided, that the rate or rates of taxation of such securities, and penalties, shall not exceed those assessed or imposed upon other property in this state not exempt from taxation, and that when the same shall have been fixed by the legislature, they shall not be altered except by rote of two-thirds of all the members elected to each of the two houses roting in favor thereof.

    Nothing in this act shall be construed to apply to any property the taxation of which is provided for in section fourteen of this article nor to authorize the assessment or taxation of any property now exempt from taxation under this constitution.

    Attention is called partienlarly to the language which grants the legislature power "to provide for the assessment, levy and collection of taxes" upon the types of property mentioned, "in a manner, at a rate or rates, or in proportion to value different from any other property in this state." This language was destined later to be interpreted by the court as imposing a duty upon the legislature to specify both the rate and the "proportion to value," in case it chose to give such property preferential treatment. ${ }^{1}$ Furthermore, the stipulation that the legislature should "provide for an equitable distribution of such taxes to the county, municipality or district in whieh such property is taxed," was to prove a source of diffieulty.

    The Solvent-Credits Aet of 1925.-Pursuant to the anthority granted by the constitutional amendment, the legislature of 1925 passed the so-called 7 per cent law. This aet was approved by the Governor on March 20, 1925, too late presumably for it to affect the assessments of that year. It consequently first came into practical operation in con-

    neetion with the 1926 assessment. The signifieant language of this new law appeared in an amendment to seetion 3627 of the Politieal Code, which read as follows: ${ }^{1}$

    Sec. 2. Section three thousand six humdred twenty-seven of the Politieal Code is hereby amended to read ns follows:
    3627. All taxable property must he assessed at its full cash value, except that all motes, debentures, shares of capital stock, bomds, solvent credits, and mortgages or deeds of trust, which are taxable to the owner thereof under provisions of the laws of this state other than this seetion and section three thousand six bundred twenty-seven $a$ of this code, belonging to a taxpayer who, in person, or when absent from the county, by his representative, has complied with the provisions of section three thousand six hundred and twenty-nine of this code, shall be assessed at seren per eent of the full cash value thereof. In determining the full cash value of such shares of capital stock there shall be deducted the value of the property in California of the corporation by which such shares of capital stock are issued. Land und improvements thereon shall be separately assessed. Cultivated aud uneultivated land. of the same quality, and similarly situated, shall be assessed at the same value.

    Sce. 3. A new section is hereby faded to the Politieal Code to be numbered three thousand six hundred twent $y$-seven $a$ and to read as follows:
    $362 \overline{7} a$. The assessor of each comnty, eity and county, city, district, or other political subdivision, shall assess notes, debentures, shares of capital stock, bonds, solvent eredits, and mortgages or deeds of trust, which are taxable to the owner thereof under provisions of the laws of this state other than this seetion and section three thousand six hundred twenty-seven of this code, at seven per cent of the full cash value therenf: provided, that the taxpayer shall have included sueh property in the annu:al statement, under oath, made and delivered to the assessor as required by law; procided. howerer, that as to sueh property so included in such anmual statement that may be made as of the first Monday of March, 1926, if any sueh property so diselosed shall have escaped assessment for the last preceding year and shall have been then in the ownershiy or under the control of the same person so ineluding sueh property in such amual statement, the provisions of section three thousand six hundred forty-nine of the Politieal Code shall not apply: and provided, further, that in the event of failure or refusal to tile such annual statement such property shall be assessed at its full cash value, except as provided in seetion three thousand six hundred twenty-seven of this code. In determining the full cash value of the properties hereinbefore enumerated in this section, the assessor shall not take into account the existence of any custom or common method, if any, of assessing any other class or classes of property at less than the full eash value thereof.
    The legislature, it will be observed, eoutented itself with providing that the valuation of the specified intangibles should be at 7 per eent of full eash value. It left to the loealities the application of whatever rates might exist in caeh taxing district. No formal provision was made for an equitable distribution of the tax, it being contemplated that the yield should acerue to the local taxing authorities applying the rates.

    The 1.45 Prr Cent Lau of 1927 .--The 1925 law was in foree during the assessment perind of 1926 . The ansessment for 1927 was barely under way when the Suprense Court of the United States, on Mareh 21, 1927, handed down its decisions in the Wisconsin and Minnesota bank eases. ${ }^{2}$ The effect of these decisions upon the validity of the California bank taxes immediately beeame a subject of discussion. The text of the decisions was published in the Journal of the state assembly for April 5, 1927, and on April 20, only one month after the decisions

    had been made, the legislature, in an effort to save the bank taxes and to preserve the state banking system, passed a law which practically withdrew the favored treatment which had been extended to intangibles by the solvent-credits act of 1925 . This action, however, was not permitted to affect the 1927 assessments, and these were made under the 1925 law, intangibles being assessed at 7 per cent. Several county assessors testify that the effect of the decisions and of the action of the legislature was immediately discernible. They state that whereas, up to this time, taxpayers had shown some encouraging willingness to disclose their holdings of intangibles, these developments resulted in causing them immediately to revert to the policy of secrecy and concealment, which had been in evidence prior to the enactment of the 1925 law. These facts must be borne in mind in interpreting the assessment statistics.

    The most important sections of the new law read as follows : ${ }^{1}$
    Sec. 2. Seetion 3627 t of the Political Code is herely amended to read as follows:
    362 ta. Each connty or city and comnty shall tax notes, debentures, slares of capital stock, bonds, solvent credits and mortgages or deeds of trust, which are taxable to the owner thereof under the provisions of the laws of the state, at a rate of one and forty-five hundredths per centum of the full cash value thereof: prorided, that the taxpayer shall have included such property in the annual statement under oath made and delivered to the assessor as required by law ; provided. that in the event of failure or refusal to file such amnal statement such property shall be assessed at donhle its full cash value. The taxes so collected shall be deposited in the general fund of the county or city and county in which such property is taxed.

    Sec. 3. Section 3628 of the Political Code is hereby amended to read as follows:
    3628. Exrept as otherwise provided in the constitution of this state, all taxable property shall he assessed in the comity, city. city and county, town, township, or district in which it is situated. Land shall be assessed in parcels, or subdivisions, not exceeding six hundred forty acres each; and tracts of land containing more than six hundred forty acres. which have been seetionized by the United States govermment, shall be assessed by sections or fractions of sections. Land sold by the state for which no patent has been issued, shall be assessed the same as other land, but the owner shall be entitled to a deduction from such assessed raluation in the amome due the state as principal upon the purchase price. The assessor must, between the first Mondays in Mareh and July of each year, ascertain the names of all taxable inhabitants. and all the property in his comnty subject to taxation, except such as is required to be assessed by the state board of equalization and must assess such property to the persons by whom it was owned or claimed, or in whose possession or control it was, at twelve oclock merianan of the first Monday in Aarch next preceding; but no mistake in the name of the owner or supposed owner of real property shall render the assessment thereof invalid. In assessing solvent credits, not serelred by mortgage, deed of trust. contract or other ohligation, where land sitnated in this state is pledged as seemety therefor, a deduction from the assessed value shall be made of such debts, unsecured by mortgage. dead of trust, contract or other obligation, where land sithated within this state is pledged as secmity therefor, as may be owing by such person. firm. corporation or association to bona fide residents of this state.

    This legislation did not, in terms, repeal the 1925 law, but rather provided that such property was to be assessed at full valne and taxed uniformb throughout the state at the rate of 1.45 per cent, which was the rate applied to bank shares. With respect to the disposition of the yickl, the new law provided that the taxes should be "deposited in the

    general fund of the county or city and county in which sueh property is taxed." This aet of 1920 was destined never to be actually enforect.

    Effect of Solvent Crerlits Leyislation I pon Assessments.-The form in which the assessment statisties were prepared during the years in question makes it diffienlt to present satisfactory data with respect to the effects of the atoption of this solvent-eredits legislation. The property subject to the 7 per cent valuation is merged with other property, so that it is impossible from the published statisties to segregate the base whieh was affeeted by the act. The Commission, however, found that the assessors in 24 comnties were in a position to supply the necessary details. Ipon the basis of returns received from these counties, Table NI has been prepared. These 24 counties, although both large and small, include some of the most important in the state, their taxable property in 1926 representing 78 per cent of the assessment rolls for the entire state.

    In 1925 the old law was in force, and these intangibles were presumably taxed at full value. The assessed value that year amounted to approximately s1 millions. In 1926, the first year in which the 7 per cent law was in force, the corresponding property in these 24 counties dropped in assessed value to (65) millions. If one assumes that the 1925 raluation is on approximately a 40 per cent basis. it would appear that the effect of the $\overline{7}$ per cent law in the first rear of its operation was to increase the amount of property diselosed by about four and one-half times. In other words, althongh a great many people undoubtedly reported their property to the assessor who did not report it in 1925 . not a sufficiently large number reported to make up for the loss due in revenue resulting from the lower assessment. ${ }^{1}$ However, in 1927 , in spite of the fact that taxpayers were disturbed by the Supreme Court deeisions and the legislation at Saeramento, the assessment in these 24 eounties rose to approximately $\$ 7 \overline{7}, 000.000$. or almost to the 1925 level. It seems reasonable to suppose that. had these disturbing events not interfered, the assessment in 1927 wouth have surpassed he a material amount the assessment in 1925. Moreover, it seems probable, as the supporters of the solvent-credits measure contend. that legislation of this type could not be expected to exert its full influence during the first years of its operation. Only after a considerable period of stability, dhuring which the taxpayer has had an opportunity to beeome thoronghly familiar with the workings of the system and to gain ennfidence in the good faith of the taxing anthority, can the full effect of an act of this type be expected to become apparent.

    Although the net effect on the face of the figures was to decrease the assessment roll. it should be noted that in $1: 3$ out of the -4 comities for which data are available, the assessed value of intangibles inereased in 1926 and again in 1927 .

    TABLE XI

    ## assessed values of intangibles subject to the seven per cent law

    IN CERTAIN CALIFORNIA COUNTIES-1925-1927| County | 1925 | 1926 | 1927 |
    | :---: | :---: | :---: | :---: |

    | Totals | \$80,687,306 | \$64.799,495 | \$71,161,959 |

    The Decision in the Case of Arnold iss. Hophins.-As the opening day of the 1928 assessment period approached, a state of uncertainty developed as to whether the new 1.45 per cent law of 1927 was to be applied. In San Francisco, for example, the assessor prepared his forms in such a manner that the returns would be valid under either the 7 per cent solvent credits law of 1925 or the 1.45 per cent law of 1927. In Los Angeles County the assessor announced his conviction that the 1927 law was invalid and the 1925 law was in force. The question was brought before the courts in the form of an application from a taxpayer in Los Angeles County for a writ of mandate to prohibit the assessor of Los Angeles C'ounty from proceeding under the 1925 law.

    The Supreme Court of Califormia, in a decision handed down on March 8,1928 , held that both parties were right and both were wrong; that each had been successful in picking vital flaws in the act he attacked and that each had tailed in his defense of the act he supported. Both the 1925 and the 1927 laws were held invalid.

    With respect to the 1925 law the court unaninously said:
    When these provisions of this amendment are thus read together they would seem to compel the conclusion that the duty imposed mon the legislature thereby was that of moviding a law covering the entire field of taxation of the torms of property designated therein, and embracing in its express provisions the valuation, the rate or rates of taxation and the equitable distribution of the taxes to be derived from the burden thus to be laid upon such properties. For the legislature in attempted compliance with the foregoing provisions of said amendment to merely fix a basis of assessment for such properties, but to go no farther, would not sutfice to meet the requirement that the taxes imposed at such valuation should be in lien of all other property taxes, state, county, municipal or district upon such property, for the reason that to merely fix a basis of assessment is not to impose taxes; while to leave
    the imposition of the rate or rates of tnxation inferentially to the counties, municipalities or districts theretofore imposing such taxes at rates fixed by each of these can by no process of reasoning amount to the imposition of taxes by "an act of the legislature pursuant to the powers hereby conferred" which shall be "in lieu of all such former and local tuxation." Nor would the mere fixation of a basis of assessment suffice to comply with the requirement that "The legislature shall provide for an equitable distribution of such taxes"; nor wonld it suffice to furnish the guarantee contained in the proviso that "the rate or rates of taxation of such securitics and penalties shall not exceed those imposed upon other property in this state not exempt from taxation"; nor would it furnish to succeeding legislatures a "rate or rates" of taxation of such securities which such succeeding legislatures could not alter except by a two-thirds vote of the members thereof. It would seem, therefore, to follow that the act of the legislature of 1925, by its mere fixing of a basis of assessment of the properties enumerated therein, fails to meet the other foreqoing requirements of this amendment to the constitution, and must therefore and for the reasons above set forth be beld to be invalid.
    On the other hand, the 1927 law avoided these pitfalls, but only to fall into another, viz, the requirement of an equitable distribution. The majority decision signed by five of the seven judges ${ }^{1}$ reads in part as follows:

    *     *         * the legislature of 1927 apparently overlooked or misconceived one of the most vital requirements of the aforesaid amendment to the constitution. viz, that requiring that "The legislature shall provide for an equitable distribution of such taxes to the county, munieipality or district in which such property is taxed."

    In considering the reasons which impel us to this conclusion we are met at the outset with the obstacle arising out of the use by the framers of the foregoing constitutional amendment of the word "or" in the abovequoted clause thereof, and which, if strictly construed to mean "or" instead of "and," would seem to give to the legislature power to repose the funds derived from the taxation of these so-called intangibles in any one of the local entities named in the constitution, and that such disposition of these funds would constitute "an equitable distribution" thereof.

    We are unable, however, to so interpret the framers of the constitutional amendment.

    *     *         * We are, therefore, constrained to hold that the get of 1927, by its failure to provide for such equitable distribution of the taxes upon these designated forms of property to the countr, municipality and district in which such property is taxed, has not been framed in compliance with the requirements and limitations of said amendment to the constitution, and is for that reason invalid.
    This decision produced great commotion in assessment circles. It was a time of hurried conferences among assessors and of manifestos to taxpayers. The practical result was that by various methods, some more naïre than others, general notice was given that taxpayers had "nothing to fear" and that they would receive "fair treatment" at the assessors' offices. This extra-legal sitnation is one which should not be allowed to continne. The practice with respect to the taxation of this property should not be left to the discretion of the assessors. It is unfair to the assessors and to the taxpayers alike. It is detrimental to the best interests of the state.

    ## PROPOSED PLAN FOR THE TAXATION OF INTANGIBLES

    In reaching its deeision regarding the taxation of intangibles, the Commission has been influeneed by various considerations.

    In the first place, it has taken into account the fact that the issue has recently been submitted to the people and their decision recorded in the constitutional amendment of 1924 . It is clear that they approve of the policy of a low rate tax on intangibles. It was not understood, of course, at the time the amendment was adopted that a solvent-credits law would imperil the bank taxes. But the adoption of the Commission's emergency program will eliminate that complication and restore the issue to the form in which it stood in 1924, in which form it has received the approval of the electorate.

    On the whole, the Commission considers the establishment of a solvent-credits law to be a forward step in the evolution of the state's system of taxation. It is not a long step, to be sure, but it is a step in what is believed to be the right direction. The Commission is convinced that the taxation of such property at a full valuation and at the full rate is an administrative impossibility and an ethical monstrosity. To extend special treatment to such property is, in its opinion, a practical necessity.

    The Commission has been urged to recommend a personal income tax as a solution of this problem. However, it is not prepared to advance such a proposal as an emergency measure. The difficulty of improvising suitable administrative machinery would alone be sufficient to prechude such a recommendation. Moreover, while aware of the strong and growing convietion in many quarters that a personal income tax may ultimately prove to be desirable, the Commission is not convinced that at present public sentiment throughout the state is in favor of such a tax. It therefore reserves this entire question for more deliberate study and treatment in its general report.

    The Commission recommends that intangible property be taxed at a rate not in excess of 4 mills on the full value of the property. ${ }^{1}$

    In suggesting this maximum limit the Commission has had regrard, first of all. to the rates imposed by similar laws in other states. As will appear from an examination of Table XII, of the serenteen states which use this method, six impose the rate proposed as the upper limit for California, riz, 4 mills. Seven states impose higher rates and only four ${ }^{1}$ have lower rates. ${ }^{2}$ No one of these four states (Michigan, Minnesota, Montana and Alabama) is an important competitor of California as a place of residence. Clearly a rate of four mills on the dollar

    would remove any material competitive disadvantage as compared with states imposing solvent-eredits laws.

    Within the proposed maximum of 4 mills, the Commission proposes that the legislature in January fix, by a simple majority vote, the exaet rate to be applied. As to what this rate should be, it makes at present no definite reeommendation.

    Certain advantages would obviously acerue from fixing the rate in mills at the point established by the 7 per cent law of 1925 . In round figures a rate of 3 mills on the dollar ( $3 / 10$ of 1 per cent) would be ronghly equivalent.
    In support of the rate of 4 mills it may be observed that such a rate would be high enough to protect the state fully against any possible elarge of bad faith if it might at some future time decide to adopt a personal income tax with rates as high as those in the state of Wiseonsin, where the maximum is 6 per cent. Thus the seleetion of the full 4 -mill rate might eonduee to stability and confidence.

    Stability of poliey within fairly narrow limits with respeet to the contribution exaeted from intangibles is of great importance, of greater importance than the precise rate. The 4 -mill constitutional limit would contribute toward this stability. The Commission entertains no illusions regarding the probable yield of the tax. With an unfortunate record of instability during the past few years, the people of the state should not be disappointed if for several years the new tax, even at the full 4 mills, fails to produce more than is now collected. The Commission believes, however, that if confidence can be promptly restored, the yield at that rate would soon be substantially greater.

    There are those who urge that a very low rate, such as 1 mill, would result in a practically complete diselosure and an augmented total yield. However, the Commission finds little ground for the belief that the yield would be inereased by redueing the rate below 4 mills.

    The Commission recommends that the yield of the propased new tax on intangible property should aecrue to the benefit of the localities and that this be speeified in the constitutional amendment. The legislature should, however, be given power to determine the precise plan of distribution without being bound by the language of the 1924 amendment which has been so narrowly interpreted by the courts.

    ## SUGGESTED FORM OF CONSTITUTIONAL AMENDMENT

    The following draft is submitted as representing the Commission's conception of an amendment to the constitution well suited to further the accomplishment of the program recommended in this report :

    Senote Constitutional Amendment Jo. 1-1 resolution to propose to the people of the State of California an amendment to the Constitution of the State of California adding to article thirteen thercof a new section to be numbered sixteen, relative to taxation.

    Resolved by the senate. the assembly concurring, that the legislature of the State of Califormia, in extraordinary session commencing on the fourth day of September, one thousand nine hundred twenty-eight, two-thirds of all the members elected to each of the two houses voting in favor thereof, hereby proposes to the people of the State of California that the Constitution of the State of California be amended by adding to article thirteen thereof a new section, to be numbered sixteen and to read as follows:

    Section 16. Notwithstanding any other provision of this constitution:
    (1) a. Banks, including national banking associations, located within the state, shall ammully pay to the state a tax according to or measured by their net income, which shall be in lieu of all other taxes upon such banks, or the shares thereof, except taxes upon their real property. The amount of the tax shall be equivalent to four per cent of their net income.
    b. The legislature, two-thirds of all the members elected to each of the two honses voting in favor thereof, may pass an act effecting a change in the taxation of banks, or the shares thereof, to any other method now or hereafter permitted by the congress of the United States; provided, that the change apply to all banks located within the state.
    c. If it be finally determined that any tax levied upon any national banking association, or the shares thereof, is invalid, said association, or the shares thereof, shall be reassessed in conformity with any method authorized by the congress of the United States. No claim against the state for refund or rebate of taxes paid shall be allowed withont first deducting therefrom the amount of any umpaid reassessment.
    (2) Corporations doing business in this state, of the class corered by subdivision $(d)$ of section 14 of this article, in lieu of the tax thereby provided for. shall annually pay to the state for the privilege of exercising their corporate franchises within this state a tax according to or measured by their net income. The amount of the franchise tax shall he equivalent to four per cent of their net income. The tax shall be subject to offset, in a manner to be prescribed by the legislature, in the amount of personal property taxes paid to the state or political subdivisions thereof, but the offset shall not exceed ninety per cent of surh tax. In any event each such corporation shall pay an annual minimum franchise tax to the state, not subject to offset, of twenty-five dollars.
    (3) The legislature, two-thirds of all the members elected to each of the two houses voting in favor thereof, may pass an act changing the rates, or the pereentage of offset provided for in paragraphs (1) or (2) hereof.
    (1) Notes, debentures, shares of capital stock, bonds, solvent credits and mortgages, not exempt from taxation and not otherwise taxed under subdivisions $(a)$ and $(b)$ of section 14 of this article, shall be declared in a manner to be prescribed by the legislature and shall be taxed at a rate of four-tenths of one per cent of their actual value unless lower rates are fixed through an act passed by a majority vote of the legislature. Said tax shall be in lieu of all other property taxes thereon, and the proceeds of said tax shall not go to the state but to suel political subdivisions thereof, and in such manner, as the legislature may determine.
    (5) The legislature shall define "corporations" and "doing business"; shall define "net income," including, if possible, the entire net income received from all sources: shall provide for the assessment, levy and collection of the aforesaid taxes, which shall become a lien ou the first Monday in March of $19: 9$ and each year thereafter; and shall pass laws necessary to carry out this section.

    In preparing this draft it has been the intention of the Commission to further the accomplishment of the following major results:
    (1) To eliminate the present tax on bank shares and in the future to tax banks "according to or measured by" their net income, this net income to be defined by the legislature in accordance with the authority granted by section 5219 of the Revised Statutes, in such manner as to "include the entire net income received frou all sources," including, if legally possible, interest from tax-exempt securities, the banks continuing, as at present, to pay taxes on their real property.
    (2) To supersede the present so-called "franchise" or corporate excess tax authorized by subdivision (d), section 14 of article XIII with a true franchise tax payable by all corporations doing business in the state, other than banks, such public utilities as are subject to the present gross receipts taxes, and insurance companies, the value of the franchise to be measured by their net income, which is to be defined as in the case of banks.
    (3) To permit a credit or offset against the proposed new franchise tax on corporations for such state and local personal property taxes paid by such corporations in California as are properly attributable to the accounting period covered by the return of net income by which the new franchise tax is measured, but to impose a mininum state tax of $\$ 25$ even though the amount of the offset should exceed the franchise tax found to be due.
    (4) To impose a low rate tax on intangibles, subject to the constitutional limitations, in a manner to be preseribed by the legislature, said tax to be a lieutax, but one which will not apply to that class of property otherwise treated by section 14 of article XIII. An upper limit of 4 mills is fixed by the amendment, but changes in rate may be made from time to time by the legislature through a majority vote.
    (5) To empower the legislature, by a two-thirds vote, to move, as necessity may demand or it appear advisable, from the method of taxing banks according to or mcasured by their net income to any other method of taxing banks, or their shares, which the congress has authorized in respect to national bank taxation. If any such change is effected it must be made to apply to all banks, including state as well as national banks.
    (6) To require a reassessment of banks, or their shares, in the event that the state tax assessed against banks, or their shares, be invalid, the reassessment to be in accordance with any method made arailable by the congress for the taxation of national banks, or their shares, at the time of the invalid assessment.

    ## LETTER OF TRANSMITTAL.

    San Francisco, California, January 2, 1928.

    Hon. Clement Calhoun Young,
    Governor of the Slate of California.
    Sacramento, Californin.
    Your Excellency : ('onforming with the provisions of section 2 of the Medical Practice Act of the State of California, Charles B. Pinkham, M.D., secretary-treastrer of the Board of Medical Examiners, has the honor of respectfully presenting for your consideration the ammal report showing the activities of this branch of the state government for the calendar year 1927.

    Respect fully subuitted.

    Charles B. Pinifiam, Ml.D.,<br>Sceretary-Treasurer.

    ## REPORT OF THE BOARD OF MEDICAL EXAMINERS FOR THE YEAR 1927.

    During the catentar yat of 1927 we have further been impressed with the ugency of ennstant vigilance in investigation of eredentials presented by those who seek anthority to practice in Catifornia, lest fraud be perpetrated.

    Every state has its quota of francls who either seek to obtain a license to practice or who have been granted such a lieense either through suceessful presentation of bogns eredentials or, as happens in rare instanees, through ehieanery of state offieials entrusted with licensing power.

    Vigilant administration of the licensing function is mallified in many states by lack of funds, making impossible the maintenance of adequate elerical foree to satistactorily investigate credentials, as well as efficiently investigate dereliction on the part of the lieensed and mulieensed individuals. California removed this handieap in 1917 when the legislatmre enacted the section of the Medical Praetice Aet demanding an anmal registration fee. Other states have reoognized the wistom of anmal registration and now seventeen states, as well as the 'Territory of IAwaii, have incorporated this featmre in their statutes.

    Failure to pmish offenders for their misdeeds breeds contempt for law and engenders hrazen effrontery in continned perpetration of frand, such individuals moving from state to state, perhaps stimulated by that spirit of mmest that hannts the evil doer.

    How the "green goods" dealers in frandulent eredentials operate has been related by the secretary-treasmrer of the Board of Medieal Examiners of California, printed as follows:

    A Study in Diplomas-dommal of Ameriean Med. Association, June 26, 1924.

    Diploma Mills and Fraudulent Sitate Licenses-Anmal Report, 1923. Credentials-Anmual Report, 1926.
    Mushroom Edneational Institutions-Federation Bulletin, Jannary, 1917.

    Problems of Enforcement- Ammal Report, 1926.
    Retrospect-Ammal lieport, 19:\%.
    Safegrarding State Board Records-Federation Bulletin, Fehruarr, 1927.

    Safeguards Against Imposition in State Board ExaminationsFederation Bulletin, November, 192.2 .

    Spurious Diplomas-Federation Bulletin, February, 1926.
    State Board Problems - Federation Bulletin, Mareh, 1918.
    ('alifornia has its share of framels and those who attempt frand, but still we feel that we are about as per cent pure.

    Now that Vom Exeellemey has mate the so-ealled "Diploma Mill Bill" (chapter 7!), Statutes $1!2 \cdot 2$ ) a law, the (liphoma mill mongers. the dealers in "rreen gronls" protessional erertentials, the impostor" who seek to foist fraudulent credentials upon the publie and the sharper who attempts to impersonate anotler in examination will give California a wide berth, for a one- to three-year penitentiary sontence faces one who attempts to gain the right of professional practice hy other than honest endeavor.

    2-56790

    Within the past yer we have investigated three attempts to wain a license by fraud (all prior to the date when the "Diploma Mill Bill" became a California law) -two attempted in California and one in the District of Columbia, where by means of a fraudulent diploma from a defunct California medical school an applicant gained admittance to examination for a license to practice medicine and surgery.

    ## Ralph M. Petinajr.

    Claiming three years medical study at the University of Vermont, filed an application accompanied by a diploma from the College of Physicians and Surgeons, Merlical Department, University of Southern California, dated June 17, 1920. and was admitted to the March. 1926, examination of the California board pending a check on his credentials.
    
    *Photo of Ralph Putnam.
    
    ralph Mather mg having appeared before me and being identified as the are individual shown in the attached photograph, being duly worn, deposes and save, (1) that the attached photo wave taken within 60) day, of the date hereof.
    (2) That a duplicate thereof is attached in his application to the Board of Medical Examines of California.
    (3) That each such photograph is made a part
    

    Subscribed and sworn to before me this
    

    Atfi levit on Reverse Side of Photo.

    He failed miserably: Investigation of his record in the University of Vermont disclosed "that Mr. Putnam never received ans medical credits from this institution. It is very difficult for us to understand how Mr. Putnam could have been admitted to the University of Southern California on June 17. 1920. It is certain in my mind he was not admitted there on credentials prepared at this office." From the Univarsity of Southern California we learned Putnam had been given senior standing on a transcript from the University of Vermont showing the completion of three years medical studies. This self-evident conflict of record was clarified when Ralph Putnam on May 14,1926 , appeared before the secretary of the California board, and (in the presene of our investigator, the interview having been stenographically reported) related that a student friend of his who was doing janitor

    
    
     jerts completed amd grates. makime it appear on said franseript that he had eompleted threre yeare medteal sthely at the 'miversity of Vermont. This he sent to the Colleqe ol' Dhysicians and simerenns, Medical Department of the [nivervity of somthern ('alifornial, and thereon was admitted to senior stameling qraduatiner with his elass in 1:120. Putnam further related that he had taken the medieal board examinations in Comectient and Jlassachusets on the same framdulent eredentials: he had presented to the C'alifornia hoard, said states not having discovered the deception. The records show that Putnam failed in the ('onneetient. July, 19\%), examination and that he failed in the Massachusetti examination of November, 1920, March, May and July, 1921, and March and July, 192.) We last heard of Ralph Putnam in November, 1926, when he was reported as having left the Abilene. Texas, state hospital after a liow weeks" stay, the smperintendent relating " Ite will not do at all.' Vale l'utnam, we emmemb you to some other profexsional elime than California.
    
    

    Ithl lavit on Revirse side of Ihoto.

    Wi.ymuth L. swainsuli
     tion smmewhat similar-*ame Wremoth Leopold swamson, who at the July: 19:\%, meeting of our hoarl ittempted to rush hurried eonsiteration of his receprocity applieation hased on a Temmesse license. In his affidavit he clamed eompletion of a premedical eourse at livingstone College, Salisbury, Nouth Carolina, durine the period 1917 to $1: 91: 1$ and submitted a transeript as evidence thereof whereon the name
    "Wevmoth Leo. Swainson'" and the date " Sugnsi 6, 19927," appeared to be in the same handwriting as was Swamson's signature to his appulication. This transeript showed the imprint of the seal of Livingstone College, yet the signature of " W. F. Trent, Prosident," was apparently not written by the same individual who wrote the name" "Wermoth Leo. Swainson" at the top of the docmment. This engendered a suspicion that, as in the Putnam case, Swainson had procured the printed transeript of Livingstone College duly signed and sealed in blank. Swainson related his medical education as four years completed at Meharry Medical College, Nashville, Tennessee, covering the period October, 1922, to May, 1925, and presented a diploma issued by said institution bearing the date May 21, 1925. Investigation proved the falsity of Swainson's affidavit relating his medical course at Meharry.

    From McGill University, Montreal, Canada, we learned that Swainson had entered that institution in October, 1920, on a preliminary education certificate, not from Livingstone College as related on his California application but from the College of the City of New York; that he was dismissed in May, 1922, it being related that he was arrested abont that time on a charge of stealing microscopes from McGill and that he had escaped from the detectives who had brought him to the medical building for investigation of the charge.

    He was next reported as having presented to IIoward Iniversiter, Washington, D. C., on Jume 10, 1924, transeripts showing his preliminary education had been completed at still another school, i.e.. Wolmer's High School, Jamaica, thongh the hearlmaster of this school reported he conld find no record of Swainson as a student. He also related to Lloward University that he had completed a comse at the University of Michigan 1915-1919, presenting a transeript as evidence thereof. Investigation proved the transcript to be the record of a Michigan student named Carlos Sebastian Esteves who graduated in 1922. His application for admission to Howard University School of Medicine was rejected. He is next reported to have filed similar credentials with the Indiana University School of Medicine in October, 1924. To both of these institutions he claimed to have completed the junior year in McGill University, relating in his application to Howard University that illucss had caused his departure from MeGill.

    Failing to qualify at either of these medical schools. Swainson was next reported in October, 1924 , to have been admitted to the senion class in Meharry Medical College on frandulent credentials showing that he had completed his first three years in medicine at MeGill University and was given his medical diploma lyy Meharry in May, 1925.

    On the eredentials above related he sneceeded in passing the written examination and was licemsed in Temessee Jnly 13, 1925, and this license so far as we are able to ascertam, is still in good stambing. In July, 1925, he is reported to have passed the West Virginia examination. However, the secretary of this board reports that Swainson's West Virginia license was revoked .July 27,1927 . Based upon his Tenmessee license, Swainson filed applieation with the Wisconsin board on Tune 29,1926 , wherein he again related the preliminary, premedical and medical education credentials that had been lound frandulent and Wisconsin issued him a reciprocity certificate July 1, 1926, which certificate, so far as we are able to ascertain, is still in good
    standing. Again it remained for the administrative officer of Califormia board to disedrer the framdulent eredentials presented by this applerant ant, as in the instance of l'utham, we commend him to the tender mereies ol' some state other than C'alifornia.

    One only regret is that swainson did mot delay the filiner of his applieation mat after July 29. 1997. so that we might make his the first prosecution mader Califormiå s new diploma mill bill signed by Your Excelleney, which provides a penalty of from one to three rears in the penitentiary for attempting to seemre a license to practice in California on frimdulent credentials.
    
    

    The Genuine Alma s. Pennington.

    SEP 211927
    No.
    o................--

    BOARD OF MEDICAL EXAMINERS OF ALHE STATE OF CALIFORNIt,
    I herelay ecrtify that the photograph on the reverse sille to which this slip is pasted, is a
    
    $\therefore$ al that op be is the identical person 1 have r. - un aiensich to the Board of Sicdical Examail Catiformia as worths applicant for a - Nice Pt wrian's Rid surgeon's or Drugless
    

    Affidavit Attached to Photn.

    Like Banquos ghost, the imposter who for several years has bere endeavoring to secmere a license in different states on the credentials of Ama Stevens Pemington of San Franciseo, will not down.

    We ean not unterstand why this imdividual should select Alma Stevens Pennington as the innocent victim of her impersnnation.

    Alma Stevens Pemington, a craduate of the Cniversity of California Medical school, licensed as a physician ant surgeon, has been a legitimate practitioner in California for several years and the story of how an impostor has used her credentials is most interesting, demonstrating first, the ease with which an impostor signing the name of a bona fide graduate ean obtain a eomplete ofticial transeript of the college records of said imdividual : second, how an impostor may impose on a state examining board that relise solely on dochmentary evidence without personal investigation.

    The scene opens in $1!201$ when the California board received an aftidavit from Chicago, Illinois, sirned "Alma Stevens Pemnington," relating the loss of her California certificate by a fire in Chieago, and
    a dmplicate certificate was issmed. Her letter clated Chicagn. Jamary 30. 1921. giving the addres -2.230 Wrashgton street, read: " I have a duplicate issued from the university as a diploma, this being issued November 1s, 1920." This mudonbtedly accounts for the impostor's claim that she has a diploma from the I'niversity of California.
    

    On December s. 1921 , at the request of said indiridnal we entorsed am Illinois reciprocity application whereon in aftidavit form was relaterl all the credentials of the legritmate Alma stevens l'ennington. The endorsers of cood moral character on said application are of interest. namely: (1) Lillian Hobbs Ti3 Montrose aremue, apartment 1. ('hicagn, mentioned in the Federation Bulletin 1920, page $2-6$, as having lost her appeal "from a sentence of 14 years imprisomment after conviction on the charge of cansing the cleath of Alda Christopherson by a criminal operation." In a letter dated Chicago, Jamary 2.2. $19 \mathbf{2}^{7}$, signed Lillian R. Hobbs. M.D.. copy of which was sent us by the Michigan board, she demed ever having recommended Alma Stevens Pemington, relating she had never known her, further stating that she had never lived at 7is: Montmae aveme. her address for the last twenty years being 40:.5 lndiana avemue. (hicago, and 36.5) N. Keeler areule. (2) Eva is. shaver, 1120 sidewick street. Chicago, this reported as having heen the address of a "notorions abortion hospital, the Sederwiek Maternity Home. Chicagn." Information further relates that in nmerous newspaper elippings, court deeisions, ete., she is
    reported as having been found enilty of the death of several patients due to abortions, but that she was nerer sentenced to prison. Her name appears in the transeript of the hearing before the California board which resulted in the rerocation of the license of Robert Adcox of "diploma mill'" fame, known as "the man with the gonds." Testimony therein related that Eva $\mathbb{S}$. Shaver had negotiated for a lieense for a frient, also offering cash for a medical diploma and Connecticut state license. This ciremmstance aronses suspicion that this impostor was a spoke in the "diploma mill wheel."

    After a period of quiescence the spurions one again came to light, this time again obtaining from the Vniversity of California full transcript of the legitimate Dr. Pemington's credentials, sending same to ns with an applieation to the Michigan board, the affidavit thereto being executed at Rockville, Indiana, the adilress Lock Box 233.
    

    The legitimate Dr. Pemington, then practicing in San Francisco, executed an affidavit to the effeet that she had never lost her original eertificate nor had she ever applied to either Illinois or Indiana for a liecuse.

    Through the cooperation of W. T. Gott, M.D.. then secretary of the Indiana board, the photograph of the spurions one was identified as a nurse named Agnes Martin reported employed, until a few days before Dr. Gott's visit, at the Indiana State Sanitarinm near Rockville, it being related that "she was connected with the institution about sixteen months as superintendent of nurses and matron of our ehildren's building.' " Reported as having shipped some of her effects to Dr. Robertson, Detroit, Michigan, investigation disclosed that on Oetober 13, 1926, Arthur E. Robertson and Agnes Martin were married at Toledo, Ohio. Dr. Robertson, according to reports, is conneeted with the Detroit Osteopathie Hospital.

    Again a period of quiescence broken by the reports of a letter from the Detroit Osteopathie Hospital addressed to the University of California Medieal School dated Detroit, July 21. 1927, relating: "We are interested in Agnes May Martin, who claims to have graduated from the Medical Division of the University of Califorma shortly after the
    close of the war. Her diploma has been presented to ms as proof of her statement. We are personally interested in Dr. Martin and are anxious to hare a confirmation of her statement. The information is vital to us at this time-will you kindly favor us with a prompt reply? Yours sincerely, Detroit Osteopathic Hospital, Superintendent's Office."

    Lionel S. Schmitt, M.D., acting dean of the University of California Medical School, minder date of August 10, 1927, wrote the Detroit Esteopathic Hospital as follows: "This is in reply to your letter of the twentry-first of July, 1927, concerning Dr. Agnes May Martin. In order that we may check up with our records may I ask you to send me the original or a photostatic copy of the diploma which Dr. Martin has presented to you ?",

    Under date of September 6, 1927, Mr. Schmitt wrote us: "Yon may be interested in knowing that no reply has ever been received from the Detroit Osteopathic Hospital to the letter requesting information concerning the diploma alleged to be held by Jones May Martin.'"

    Careful investigation failed to disclose that anyone by the name of Agnes May Martin had ever gradmated from a reputable medical colloge in California. Diplomas of the notorious Pacific Medical College have been sold broadcast over the world, so we do not presume to have a check on all Pacific Medical College diplomas.

    For persistency this ease is an outstanding one and of interest to examining boards.

    The Diploma Mill Bill, signed by Your Excellency amd now in effect in California will preclude the filing of fraudulent rectentials molder penalty of one to three rears' sentence in the penitentiary.

    ## Marry, Stewart Wittione.

    

    822S. Wabash are.
    

    The board of supervisurs of the District of C'olumbia wrote the C'alifornia board some time aros, smbling a photosiat of the applieation filed by LIary Stewart Wittinp on Soptomber 27,1926 . Whorein he marle attidavit he had "spent in medieal stuely in or ont ol medical
     of Physicians amd surmens, san Francison, and reecored the degree Doctor of Aedicine from the College of Physieians amb simeons, san Francisco, issued August 17, 191s. Althongh the affidavit was executed
     as Box 11. IBackstome, Massachmsetts. The certificates of enorl moral character on the applieation were simed by danes F . I browne and John J. Demnis, who, thongh practicing dentists of Sam Franciseo, made mo statement on the bamk to indieato they were not irralnates of medical
    
    eolleges. Each related he had known Wittkopp for nine years and had no hesitancy in recommending him (thongh they knew Wittkopp hat not attended medical selool) as worthy to be lieensed to practice medicine and smrery in the District of ('olmmbia. With his application Wittkopp preselnted what purported to be a hona fide diploma of the College of lhysicians and surgeons of San Franciseo. which later was reported framdutent by the officers in whage of the recorts ot the collecre.

    The ('ollege of Plysicians and surgeons of sim Francisco ceased medical teaching in 1!91s. Wittkopl was then, aceording to the records. a student in dentistry, graduating from the dental school in 1920 amd licensed to practice dentistre in Califormia in the same year. He was reported as an instrmetor in the ('alifornia ('himpractic College, san Francisco. in 1921.

    Althongh he had not attended medical college, Wittkopp is reported to have passed the medical examination in the District of Columbia, a circumstance that conclusively demonstrates that a written examination is not a sufficient basis on which to judge an applicant's qualifications to practice medicine and surgery.
    

    The District of Columbia reports the contemplated revocation of his lieense.

    The "Diploma Mill Bill" signed by Your Exeelleney and now in effect in California makes it a felony to file fraudulent credentials with the Board of Medical Examiners, Board of Osteopathic Examiners or Board of Chiropractic Examiners, or to impersonate another in any examination before these boards. The Board of Dental Fxaminers, through 1927 legislation, is also protected by a similar law.

    Other states will effectively check the medical credential erooks by adopting California's progressive punitive legislation.

    ## MEETINGS

    In compliance with the medical ant, theer regular meeting, were heln (February, Jume and Oetober, $1!\frac{1}{2} 7$ ), each of four days' duration, the time of the members fully neempied with husines details, legal huatings and written examinations. Legat hearings have developed into one of the outstanding features of our administrative funetions, demanding earnest attention to all legal details that no injustice may be done the respondent and that the labor of the board may not be mullified by: conut review.
    

    Alleged Spurious P. \& S. Diploma.

    ## APPLICATIONS PENDING DECEMBER 31, 1926.

    Reference to our last ammal report diseloses that on December :31. 1926, applications of the following classes were pending final di-position as eridenced by application fees on deposit:
    
    
    

    ```
    Class D-Plysicinus and surgeons-goverument credentials _-------------------- is
    C'lass F-Midwife _---_-----------------------------------------------------------
    ```

    Total
                            110
    
    ## APPLICATIONS FILED 1927.

    Comparative figures for 1926 and 1927 as tabulated herewith show a slight increase in the 1927 total, though still considerably lower than the total in 1924 and 1925.

    - The pronounced drop in the number of drugless applications filed has resulted from the creation of the osteopathic and chiropractic examining boards which now absorb those graduates of schools that grant osteopathic and chiropractic degrees who prior to the initiative enactment of Norember, 1922 . filed their applications with the Board of Medical Examiners.

    The established policy of the medical schools in limiting their senior class has resulted in a consistent unformity in the total annual number of written examinees from these schools. Applications from gradnates of foreign (particularly Russian) medical schools continne a problem in rerification. Russian gradnates report that diplomatic relations between the Soviet and United States Govermment have made it impossible to secure further verification of credentials. The plan followed by Miehigan and Pennsrlyania is worthy of study. Each of these states requires that a year interneship in an approred hospital be completed by every foreign graduate before he is eligible for a license.

    | Class of Applicant | $\begin{gathered} \text { Filed } \\ \text { 1925 } \end{gathered}$ | $\begin{aligned} & F \cdot \mathrm{j} 1 \epsilon d \\ & 19 ? 6 \end{aligned}$ | $\begin{gathered} \text { Fil, } l \\ 192 \% \end{gathered}$ |

    ## EXAMINATIONS.

    Written examinations have been conducted with the aceustomed careful attention to dotail, saferuarding the board against imposition and the applicant against injustice. Conferences held in the past with administrative officers of all the Califormia medieal schools determined their desire that state board examinations be continned rather than that the gradnate be antomatically franted anthority to practice by virtue of his medieal diploma. The student faced with the state board examination at the close of his medical course will keep eonstantly in mind those subjects that otherwise he would drop from further study after lis first or second rear. The state board examination is a spur to more earnest study and guarantess a better equipped practitioner.

    In addition to the time devoted to written examinations, the board held fonr oral exammations coincidentally in San Francisen and in Los Angeles. The amentments of 1927 require an oral examination of every licentiate of another state secking anthority to practice in Califorma whose application is hased on a state license dated ten or more rears before he applies to the Califormia board. The larger group of oral applicants continue to report in Los Augeles.

    ## WRITTEN EXAMINATION STATISTICS.

    Our existing Califormia medical schools again earned a perfect seore in the written examinations for 1927 , not a single graduate having f:ited, whereas of the graduates of extra state schools, 82 per rent passed and 17 per cont failed.

    The total mmber of applicants and the results are reflected in the following table:

    RECAPITULATION 1927 EXAMINATION RESULTS.

    | sichool | Passed | Failed | Total | Per cent passed | Per eent fainel |

    | Vixtra State . . . | 7 | 5 | 12 | $58+$ | $41+$ |

    ## SOURCE OF RECIPROCITY APPLICANTS.

    Onr 1926 ammal report erroneonsly credited Illinois as having the largest enrollment of physicians. This honor belongs to New York, credited in the 1927 American Medical Association Directory as listing 18,634. Pemnsylvania is second with an emrollment of 11,405 . Then follows Illinois with 10,893 , and California fourth, credited with a total of *8854. This group comprises not alone all graduates of medical colleges, regardless of licensure in California, but also inchudes those under jurisdiction of the Board of Osteopathic Examiners, who, under the law of this state, are entitled to practice as physicians and surgeons. Our compilation shows plysicians and surgeons licensed to practice in Califormia as follows:

    ## Board of Medical Examiners-practicing in California March 3, 1927. <br> 7693 <br> Board of Osteopathic Examiners--in California and elscwhere

    $\overline{8152}$
    Deduct this total from that appearing in the American Medical Association 1927 Directory and it then appears that in California there are at least 672 graduates of medical schools who do not hold a California license. It is related that these individuals are simply residents of California and not engaged in treating the sick and afflicted.

    The following table shows Illinois has again sent us the largest number of successful reciprocity applicants-almost double the number recorded last year. Iowa is next and New York third:
    

    ## CALIFORNIA LICENTIATES ENDORSED TO OTHER STATES.

    During 1927 fortr-four California licentiates songht endorsement for a license to praetice in other states as compared with fifty-seven recorded in 1926. During the past ten rears Califomia has endorsed 347 applications for her licentiates who seek anthority to practice in another state.

    Geographical distribution for 1927 is as follows:

    Arizona:
    Bishop, Frank, M.D.
    Iselimherg, IIarry E., M.T.

    Montgomery, Robt. R., M.D.
    I'arrish, Frederick W., M.D.

    ## HEARINGS

    Hearings of complaints aqainst those charged with riolation of specific provisions of the Medical Practice Act continue to occupy the greater portion of the members＇attention during each of the regular mectings，the method of procedure having been explained in our 1926 report，which listed $3 \overline{5}$ licentiates as having been called before the board，whereas during 1927 there have been 32 hearings．
    

    As reported in 1926. violations of the federal and state laws regulating nareotics comprised the larger percentage of complaints.
    

    ## LEGAL AND INVESTIGATION DEPARTMENTS.

    The following changes in the legal and investigation departments of the Board of Aedical Examiners have been made during 1927:

    Chief Comsel-Mr: Bradford Melvin, San Franciseo, appointed effective Navember 1, 1927, rice MIr. A. B. Bianchi.

    Associate Comsel-Mr: Otto Emme. Los Angeles. appointed effective November 1. 1,927.

    Assistant Special Arent-W'm. A. Brme, Los Angeles, appointed effective Alngust 1.5, 19:27.

    Assistant Special Arent-Tames W. Davilsm, San Franciseo, appointed effective November 1. 1927.
    Mr. Harry G. Henderson, who has served the board faithfully in the capacity of special agent for the past ten years and who since being admitted to the bar has bem of great service in court procedures incident to our enforcement activities, has deemed it expedient to resign that he may devote his entire attention to the practice of law. We wish him ungralified suceess in his chasen fiek.

    Southem Califomia, with its host of tomists and its large foregen population, ofters an attractive field for the multitude of therapentical fakirs. The sumthern seetiom of omi state has always proved attracive as a health recreation gromed and the physically defeetive partienlarly those suffering from pulmonary aftictions, hopefully reach out for any new allered curative idea, mo matter how impracticable or absurt. How a nomal mind can conceise of some of the apparatus or the methods empleyed is beyond emprehensim, but no more understandable than the gullibility of sufferers who pay exorhitant sums to these molern roodon doctors (?). We firmly believe that ours is the most active administrative boly charged moder the laws of California with the duty of protecting the public against this class of charlatans whe ghoulishly prey on suffering humanity:

    ## LEGISLATION.

    Several groyressive measures were passed by the 1927 legislature and appored by Your Exeellemey. Five enactments provided needed amendments to sprefife sedions of the Medical Practier Act. as follows:
    seretion 2 was amember ber redneing the ammal registration fee to one dollar chapter (6?3. Statutes $1!927$ ). The value of ammal reyisfration featme of omr ledical Aet was thisensset] in omr ammal reports
     inclusive. An ever-increasing nmmber of states are adopting this method of more aremrately recording hona fide licentiates.

    Seetions 9 and 10 were amended at the request of the medical teadeding institutions to modermize the subjects of instruction in medical eolleges. The bill also provited (at the reguest of the Perlie society of Califormia and the California ('olleger of ('hiropoly) for an increase in the requirements for the study of ehiropoly, following the program ontlined by the mational organization. ( 'hapter 639, Statutes 1927.)

    Section 11 was amended to correlate the subjeets of examination both for the physician and surqeon certificate and the ehiropody ecertifieate with the progress in edncation provided by amonding sections 9 and 10. (Chapter 66, Statutes 1!2゙27.)

    Section 13 (Reciproeity) amended to require a practical, clinical, oral examination when an application is based on a certifieate or license issued by a sister state ten or more rears before application is made to the ('aliformia board. This provision assmes (alifornia a better informed elass of pactitioner and practieally eloses the done to the impostor with framdulent eredentials, as well as the individual who may have secured a license in another state on a perfunctory test of qualifieations or knowledere. That laxity in licensmre is not a myth was disclosed in our ammal reports of 1923 , page !): 1924 , page 23 ; 1925 , page 5 , and 1926 , pare 8 . Section 13 was further amended by the nsteopathic profession to require a practical, elinical, oral examination of eertain applieants moder the asteopathic initiative. ('hapter 122, Statutes 1927.)

    Section $1 t$ was amended by two separate bills. One amended subdivision six mohibiting the ambulatory treatment of nareotic atdiets and requires hospitalization (chapter 5 ? , Statutes $192 \overline{7}$ ). This measure was designed to prevent the addiet from going from one phersician to another, obtaining a supply of mareotice from each and thereafter peddling the drog, a practice that has grown quito prevalent. The nareotic moblem was commented mon in omr ammal report 192 m , page 13. The section was further amended by adding sections $11 a$ and $11 h$. which provide for the revocation of the lieense of one who uses the suffix MI.D. or D.O. provided he has not earned either or both degrees after completing a full comse of instruction in a bona fide approved sebool. This measure will put an end to the use of the suffix M.D. hy those who obtained their dearree throngh diploma mill sonrees.

    Chapter 79 . Statutes 1927 , is an outstanding measure designed to eurb the activities of the vendor of frandulent eredentials or the impostor with fratudulent eredentials and is referred to as the "Diploma Mill Bill." which hamgs in the form of a prison sentence over the deater in professional "erecm-goods", degrees. A reritable swort of Damoeles is this prison sentence to be imposed on him who buys, sells or uses frandulent eredentials in applying lom a lieense to practice the healing art in ('alifornia, or who impersonates another in an examination for sueh lieense. The dire necessity lor this leqrislation was dis-
     s, and in this report. (Sce Framsulent Credentials.) California will now be warily aroided by dealers in frandulent credentials.

    Chapter 152, Statutes 1927, known as the College Incorporation Bill, is another measure designed to correct a long-existing evil in this state. and it is hoped will control the incorporation or at least the operation of professional degree-granting corporations of the sundown variety that without adequate physical properties, teaching persomel or funancial responsibility, extract the hard-earned shekels from the unwary in exchange for an ornate document conferring by authority of the state a degree of no value, thongh those duped are frequently told that by virtue of such degree they are legally entitled to go forth and practice on the human race. The seriousness of this condition resulting from our lax corporation laws has been a subject of comment in our annual reports of 1916 , page $1 ; 1917$, page $6 ; 1918$, page $6 ; 1919$, page 13 ; 1924 , page $24 ; 1926$, page 9 . Let us hope this 1927 legislation will accomplish results, and, if not, that continued interest in public welfare will bring about still further legislation that will effectively curb the birth of questionable professional schools. California, spending thousands in her industrial insurance, should be vitally interested in seeing that the most efficient professional service is available, thus assuring an earlier return to employment or a minimized disability. A grave economic loss results when an insurance carrier employs inferior professional attendants.

    Those from foreign countries who seek the right to practice in Califormia present an ever-increasing problem, owing to the difficulty connected with satisfactory verification of credentials. Here arises the question of intent so far as residence is concerned, which has resulted in eleven states now requiring full citizenship as an essential qualification for a license. Eleven other states require that first naturalization papers have been taken ont, while six require that the applicant for a license must have declared his intention of becoming a citizen. Legislation concerning citizenship in connection with graduates of foreign institutions is worthy of earnest consideration.

    Occasionally we hear a discussion regarding legislation designed to do away with the state board examination in so far as it concerns graduates of our university medical schools. Conferences with administrative officers of omr California schools leads us to believe such legistation does not meet with favor. It is certain that the student faced with the state board examination at the end of his course will study much harder and therefore be a much better informed practitioner than one who knows that antomatically he will be granted a license to practice as soon as his degree has been conferred. Nor can this exemption be confined to graduates of our university only, for in the shadow of such legislation stalks the phantom form of "class legislation," and either the courts will declare such legislation "unconstitutional" or will make it applicable to all classes of applicants, thus swinging back twentr-seven years, when the only requirement for license to practice in California was a diploma and a fee of $\$ 5$. I am sure we do not favor such recession.

    Legislation in five states has created a Basic Science Law designed to exact of each applicant for a license to practice any system of the healing art the same examination in the basie subjects, and if successful in obtaining the Basic Science Board certificate, the applieant may later apply to the medical or other examiners (depending on his eligibility) for examination for a license to practice. No one is permitted to
    apply for examination for a license unless he holds a basic seience cerfifieate, and a lare number have been granted by exemption in thr four states that now have this law. The thomght of reguiring the same basic knowledge of all is theoretically exeellent, but the practical development raises a doubt as to aceomplishment of other than added burden to the ir athates of Class A merdieal selionls.

    # LEGAL REPORT OF THE NORTHERN DISTRICT-1927. 

    San Franciseo, California, December 22, 1927.

    ## Dear Doctor Pinkilam:

    We are submitting herewith the regular ammal report showing the activities of the Legal Department of Northem Califormia for the year 1927, up to and ineluding December 15, 1927:

    *Proding January 1, 1927.

    ## VIOLATION BY LICENTIATES OF THE BOARD OF MEDICAL EXAMINERS OF STATE AND FEDERAL LAWS OTHER THAN THE STATE MEDICAL PRACTICE ACT.

    

    Respeetfully submitted.

    ## SEGREGATION OF FINES RECEIVED DURING 1927.

    We feel that our adopted policy of suspended sentences imposen on those found guilty of violation of the Medical Practice Act is having a pronounced effect in compelling observance of law. This police reflected in the legal reports is accountable in a measure for the 1927 loss of income from fines, particularly in the southern section. Whereas the 1926 income from fines amounted to $\$ 3.757 .50$, the returns for 1927 show the income from fines amounted to $\$ 1,968.75$, a loss of $\$ 1.788 .75$. We have firmly believed that exaction of fines has a tendency to encourage violation. whereas a jail sentence, suspended for one or two years, has a salutary effect in discouraging further violation.
    

    ## FINES OUTSTANDING AS OF DECEMBER 31, 1927.

    The following fines noted on the rarious reports of the Legal Department as having been imposed have not been forwarded to the State Treasurer as required under the provisions of section $2+$ of the Medical Practice Act:
    

    Total due board-North
    South
    

    ## ENFORCEMENT.

    Firm are we in the hope that $19: 27$ legislative enactment will speed up the now elogred wheels of justice. In our 1926 annual report, under the eaption "Enforcement," we related that one of the dishearteningr features of the board's work is reflected in the delays arising from court procedure undertaken by those licentiates who for their misconduct have been penalized after a conscientions hearing at a regular meeting of the board. It would appear from our experience that recourse to a writ of review or some similar court procedure will insure many years of practice regardless of the penalty imposed by the board. In 1924 the licenses of the following individuals were revoked:

    Dyment, I'hilip, M.D.-Revoked July \&, 1924, alleged fraudulent credentials; reported still practicing.

    Rinalilo, Engene, M.D.-Revoked July 9, 1924, alleged frandulent credentials: reported still practicing.

    Young, Frank P., M.D.-Revoked October 2.2, 19.24, alleged traffie in fraudulent credentials, ete., in commection with the so-called National Diploma Bill: reported still practicing.

    The 1925 annual report shows that each of the abore respondents appealed from the decision of the board. In March, 1925. We were informed that the superior courts of Los Angeles had sustained the judyment of the board. The respondents thereupon appeated from the judement of the superior conrt, since which time-a matter of nearly three years-our Legal Department reports these cases are waiting to be placed on the appellate court ealendar in Los Angeles for uronment.

    ## DECEASED.

    The cordial cooperation of the State Depardment of Puble llealth, Burean of Vital Statisties, and the American
     following 273 individnals dassed as "Doctors" who have died during 1927 . This rerord eomprises (1) those licensed mater the laws of (aliforma (nmmbermg 192) who have died in our state or elsewhere; (2) those who bave been reported as having died in Calilomia, but concerning whom we find no reeord of liernse. These names (mmbering st) we have prefixed bug an asterisk

    ## REPORT OF THE BOARD OF MEDICAL EXAMINERS FOR THE YEAR 1928

    ## RETROSPECT FOR 1928

    Medical edneation and leemsure during the year 1928 has pusimed the even tenor of its way, while the ever perplexing problem of enforcement finds California well in thr front rank when enmpared with the record of other similar boards in the United States. Your Board of Medical Examiners is to be commended lor its untiring, zealons devotion in the fulfillment of its obligations to the embl that not alone shall. be provided eompetent pratitioners for the people of this great commonwealth, but also that the public may be protected from the charlatans who prey upon the eredulous.

    Professional service by eompetent practitioners is reflected in the item of "Support" in many departments of our state government, notably the Department of Institutions, the State Compensation Insurance Fund, ete., where the eosts of operation are in inverse proportion to the competency of professional service. As an instance it has been said that the exaction of a higher standard of midwifery has materially lessened the number of those unfortmates who, made blind throngh virulent ophthalmia neonatormm, have heretofore added to the cost of support of institutions for the blind. Skilled treatment by competent practitioners carlier rehabilitates the intustrial worker, thus lessening the economic waste reflected in loss to the employer, as well as needless drain on otu Industrial Insurance Fund.

    ## MEDICAL EDUCATION

    Onr three medical sehools, always maintaining an emviable standard of excellence, will soon find eompanonship in the ITniversity of Southern California selionl of Medicine, which, moder the deanship of William Cutter, M.D., former secertary of the New York liard of Mrdieal Examiners and later dean of the New York l'ostgraduate Merlical Selool, beqan medical instruction Šeptember 17, 1928, with a registration of fifty-four and teaching the first year onls. The second year comrse will begin in September, 1929, and this progressing each year until the full eurrienlum required in all Class at medieal sehools will be in operation.

    What the future may hold for medical education may be forecast by the publication distributed by the Commission on Medieal Edneation, which, in its first report smbmitted last year. mentioned a "trend toward shortening elementary edueation." relating that "a mmber of schools are now eonducting medical education on the basis of three years of preseribed work" which, however. "may be distributed over four or five years, but the actual required work is approximately three years." Wilbur C. Davidson, M.D., Dean of the new Duke lniversity Sehool of Medicine to be opened in Durham, North Carolina, in 1930, adranced some original ideas in his paper "An M.J. Dereree Five Years After High Sehool," read before the anmal Congress on Medical Education, Medical Licensmre and Hospitals, Chieago, Febrnary 6, 192. The anthor shows wherein premedical and medical periods can be shortened withont sacrifieing the present high standard of medieal edneation, relating that the average fomr-year medieal conse of thirty-three weeks:
    each ean be condensed into three vears of fortr-four weeks each. Fortunately our California Medical Practice Act is sufficiently elastic to care for this new idea as it now provides for acceptance of graduates of medical schools operating on a four-quarter system. Tnder "Legislation' we present our suggestion for the one-year interneship or equiralent training.

    Since Your Excellency signed the College Ineorporation Bill, chapter 15:. Statntes 1927 , there has been marked inactivity in filing articles incorporating professional schools heretofore so easily accomplished. Foi many years any "fly-by-night" schools could secure a charter and moder cloak of state anthority confer degrees limited only by the imaginative ability of incorporators to evolve some new title or degree. The host thereof far surpasse the well adrertised fiftr-seven rarieties; howerer the College Ineorporation Bill sets a standarl that can be met noly by a bona fide institution with financial responsibility, teaching persomel and physical equipment. Tola-practic. one of the many varieties, made a brief struggle for recognition some three rears ago When a story published in a prominent San Francisco daily related the sale of a Tola-practic diploma for $\$ 200$. Poropathy has found no welcome recognition in California. Reports relate that Virginia during the past year has repealed a state law passed in 1918 permitting the establishing of a school of poropathy, claimed to be a new branch of therapentics. whereby manipulation and aboorption through the skin and the use of lotions applied directly to the diseased organs and nerves controlling them, such diseases as internal cancers, cerebro-spinal meningitis, epileps, tuberculosis of the joints, heart trouble, broken bones. dislocations and many other ills were said to be cured.

    ## LEGISLATION

    Our administrative experience since the last legislative session has dereloped need for additional amendments to the Nledical Practice Aet. It has been urged that a one-vear intermeship or equivalent training un ler direct supervision of the medical college should be added to the preaent edncational requirements. Such an amendment will not prore burdenseme inasmuch as om California medieal sehools will mot ennfer the degree "Doctor of Medicine" until the student has completed the full course of study, which includes an additional rear of hospital intermeship. It is argued that gradnates of extra state medical eolleges which do not require a hospital interneship before granting their Aliploma now eontract with our California hospital, to serve a rear interneship: however, learning that interneship is not demanded in our Medical Act, they apply for and pass the Califormia Board examination, thereafter abrogating their agreement. Thas the hospital is the sufferes, for competent internes are not easily found.

    Applicants presenting Medieal Corps emmmissions that do not measure up to the standard of Califormia s requirements will be afforded the opportmity under an amendment to section 12 to satisfy the Board as to their competeney through the areme of oral exammation.
    section 1t, whieh specifies eauses for ralling a licentiate hefore the hoard to show cause why his license should not be revoked, must be strengthened by certain amendments, to which there ean be no valid objection.

    As long as our Federal Nareotic Enforcement Bureau eonsiders the Harrison Nareotic Aet from the standpoint of revenue rather than as a punitive measure, we feel that California's hospitalization project. designed to reelaim the nareotic addict, will be serionsly handicapped. Just why those in authority at Washington accept eash offers in emmpromise of charges of allecred narentic traffic is beyond nur comprehension and we confess our inability to unlerstand jut where lies the line that separates the nareotic offender haled before a court for trial from the offenter who pays $\$ 0,000$ eash to compromise an alleged riolation of the Harrison Narcotic Act. In 1.917 one of our C'alifornia physicians was inrested on a eharge of violation of the Marrison Nareotic Aet and regarelless of protest by the Collector of Internal Revenue, as well as the attorney for the Board of Medieal Examiners, it was learmed after much correspondence that in 1919 the total offer in compromise (made by the proprietor of a drug store and the doctor) in the amount of \$. .000) had been accepted and the ease elosed. Another California lieentiate charged with violation of the Harrison Narcotie Aet evidently earried the "rabbit's foot," for his offer of s.7,00 in compromise was accepted, acerrling to reports in our files, by the Trea-nry Department. lite nal hevime serviee Narenti- Invinom, Washington, 1). 1: Our inquiry directed thereto elicited the following reply: "It is not the poliey of this Eureatu (Treasury Department. Office of Commisioner of Prohibition) to furnish information relative to the gravity of an offense committed by all alleged violator. The facts surrounding the case of Dr. .......- are ennsidered strictly confidential and no information can be divulged." We thereupon urgel modification of this rule and under date of $\Lambda$ pril 17. 1!2-s. J. M. Doran. Commissioner, Washington. D.C.. wrote us enclosing a copy of Form TD=6 issued by the Bureau of Prohibition, which modified the theretofore inexorable rule denving information in reference to eases settled in compromise: however, aceording to reports. "compromise" in still a recognized metho of procedure. One of our licentiates recently related that following an inventigation of alleged nareotic derelietions, he had been approached with an offer of compronise for $\$ 2.500$.

    In view of the situation just diseussed, it is evident that an amendment to the Medical let is essential so that those lientiates who settle flagrant violations of the Ilarrison Nareotie Aet out of court by payment of cash in compromise may be ealled betore this board for an explanation.

    Other amendments to section 14 have been approved by the Board of Metical Examiners.

    Seetion 17, the so-called penalty elanse, shonld also be strengthene d so an to diecourage certain objectionable methocts smacking of the "ballyono" side show tactics that have been called to our attention by some of our state organizations.

    California must be considered a profitable field for the quack. judging from the forms of "hokum" foisted upon those who seek relief for real or fancied ailments. Not only do we marvel at the credulity of those who fall pres to these charlatans, but we are puzzled as well to fathom how a normal mind can conceive such lndicrous ideas as are manifest by a mrriad of therapeutic "gold bricks" that run the gamut. One of the most norel contraptions recently reported was a fake radio
    by which the operator alleged he drew the Balm of Gilead from the air and claimed the United States Government although refusing him a patent, had offered him $\$ 1,000,000$ for his invention.

    ## DIPLOMA MILLS

    "Diploma Mills" dealing in fraudnlent medical as well as other educational credentials have been given such nationwide publicity that practically every state has heeded the warning and not only have the statutes in many states been fortified against the incorporation of visionary schools, but also amendments have been passed making the use of fraudulent credentials a punishable offense.

    Some idea of the far-reaching developments of this nefarions traffic was recently disclosed in our nation's capital when Assistant United States Attorney Pearl McCall appeared before a house committee in Washington, D.C., urging legislation to abolish diploma mills, relating that one group of individuals had incorporated two humdred "colleges and miversities" in the City of Washington and that these so-called schools had sent so many diplomas to students in Europe that the State Department had been bombarded with protests from foreign countries, further stating that at one address in Washington, D.C., there are about fifty "educational institutions."

    Since Your Excellency signert the Diploma Mill Bill, chapter 79, Statutes 1927, making traffic in or use of frandulent cretentials in California a felony, three instances demonstrating that enternal vigilance is vitally essential to safeguard the public have been given nur earnest attention.

    In May of 1928 our attention was directed to an advertisement reading as follows, reported as snbmitted to but refused by one of the leading New York papers: "For Sale-One Califomia IEedical Diploma, one Kansas Medical License. Information can be obtained from Agents, Dr. Arman Tuttle, New York City Office; Dr. Ralph L. White, New Canaan, Conn." The "California Medical diploma"' modoubtedly is one of the vast mumber emanating from "The Pacifie Medical College" of Los Angeles, a "paper" institution, so prominently featured in the "diploma mill" expose of $192 t$ and never approved as qualifying applicants under the California Medical Practice Act, whose diplomas are now practically worthless. On July: 3, 1928, the Appellate ('ourt, Southern District of California, sustained the Board's revocation October 20, 1924, of the license of Frank P. Yomng, II.D. (president and reputed owner of the Pacific Medical College), which followed a comprehensive hearing of charges in connection with alleged diploma mill irregularities.

    An individual who recently paid a fine in Los Angeles for violation of the Medical Practice Act is reported to have had on display in his office a medical diploma issued to an individual of a somewhat similar name, who died Jnly 28, 1914, according to the Jomrnal of the American Merlical Association of Augnst 8, 1914.

    Reports relate a sporadic outbreak of the diploma mill epidemic in one of our larger California cities; horever, our investigation department has the matter well in hand, fortified by the provisions of chapter 79. Statutes 1927.

    Recent investigation of the professional qualifications of an individual connected with one of the companies engaged in industrial insmrance work, whose professional card showed the suffix " M.D." following his name, disclosed that during the period he claimed attendance at Northwestern Medical School in C'hicago. Illinois, he was in the United States naval service and, aceording to his affidavit on an application for a license under the Pharmact Iet, he was at Mare Island, California, on the date he clamed to have graduated from Northwestern Medical school. It is reported that he resigned when eonfronted with the facts.

    ## HAMILTON McCLARTY

    

    Last sear information from a relable source related that three sam Francisco individuals had journeyed to Kansas City, Missouri, for the purpose of securing diplomas from the Kansas ('ity College of Mecticine and surgery, an institution made so infamons as a principal in the diploma mill expose of 1924 that the state of Missouri revoked its charter in 1926. One of these individuals filed an application for written examination for a physieian and surgenn certifieate, making affidavit to his alleged attendance at the Kansas City College of Nedicine and surgery envering specified vears. He had previously applied for a pharmacy license in California, in whieh application mender oath he detailed his experience as a druy clerk in Sin Franciseo, and, strange as it may seem, Hamilton MeClarty by affidavit claims that he was in Kansas City, Missonri, from July 2-5. 1916, to September 1, 191T, and also in San Francisco during the same periol. He also certified on his application to the Medical Board that he was in Kansas City, Misonuri. Mareh 29,1917 . to September 1, 1917, whereas during the same perind his application to the Pharmaer Board claims he was employed hy the Crocker Amazon Drug Company in San Francisco. From September 4, 2-6470s
    
    (APPLICATION TO MEDICAL BOARD) )

    1917, to October 4, 1920, according to his application to the Medical Board, he claimed service with the U. S. Army in France although his affidavit for a pharmacy license relates he was employed at the Westwood Pharmacy, San Francisco, from July 1, 1919, to September 20. 1921, but despite his affidavit of employment at the West wood Pharmacy from 1919 to 1921. he claims in his affidavit to the Medical Board that he was attending the Kansas City College of Medicine, Kansas City, Missouri, from October 10, 1920, to May 2, 1921. With his application he filed a medical diploma from said institution dated May ㅇ. 1921. His application to the Medical Board shows an unaccounted for lapse of five years between May 2, 1921 and July 9, 1926, although during this period Mc c tarty registered as a voter in San Francisco August $2: 3,1922$. and February 18, 1924.

    [SEAL]

    San Francisco, June 16th, 1928.
    The Consul General of Belgium.
    Jules Simon.

    How can McClarty reconcile his claim of attendance at the "National University of Belgium," Brussels, Belginm, with the record that during the same period he registered and roted in San Francisco?

    As a part of his application he filed an alleged diploma purported to have been issued by this mythical Belgian institution and an asserted transcript of his alleged course of study. Both of said documents printed in the French language were aceompanied by a translation duly certified by the Belgian Consul at San Francisco, who later stated that MeClarty made the translation, the Consul simply certifying that said translation was correct and that said certification carried no implication as to the existence or reputability of the "National University of Belgium." What of this alleged seliool with this euphonious title, whose visionary existence is explained by the following letters?

    # (Letterhead of Americau Consular Sirvice) 

    "CONSLLATE GENERAL
    Antwerp, Belgium.
    July 26, 192 S.
    "Board of Medical Examiners, San Francisco. California, [. S. A.

    ## "Gentlemen:

    "I have to acknowledge the receipt of your letter of July 3, 192S, stating that Itamilton MeClarty, a graduate of the Kansas City College of Mrdicine and Surger in 1921, the charter of which has been resoked by the state of Misouri as a diploma mill, has filed arplication for a written examination with you acompanied be a diploma issued by the Xational Coniversity of Belgium dated March 14. 19:S. It is noted that he clams attendance at this institution from Juse. 1926. to December, 1927.
    "This consulate general has made the most careful inquiries to determine as to whether there exists in Belgium an institution as the National Cnirersitr of Belgium and ean state definitely and authoritatively that no recognized institution of this mame exists. If there is any institution or organization in Belgium issuing diplomas uuder the name of the National Cnisersity of Belgimm it is doing so without proper authorization as it does not maintain any sehool or recognized institution and such a docment therefore is entirels worthless from an academic point of riew.
    "I have also commmicated with the four universities in Belgimm, the ones at Brussels, Liege, (ihent, and Lomain, and they inform me that mon stulent by the name of Hamilton MeClarty has ever beren registered with them for any enurses. It would appear from the feregoing therefore that Hamilton Mre larty is rembeavoring to file with you a document in which mofath or contidence can be placed.

    > "Yery respectfully yours.
    (Signed) GEORGE S. AESNERSMITH.
    American Consul Gemeral."
    334 Gis.ll.

    > (letterhead of American Consular Serviee)
    "CONSULATE GENERAL Antwerp, Belgium, Siptember 7. 1:12s.
    "C. 1s. l'inkbam, M.D., Esinire.
    secrotar-Treasurer, Board of Medieal Eamminers. sacramentu. Califoruia.

    ## "Sir:

    "Recopipt is arkuowledged of your letter of August 24, 192s. Baving regard to a diplomal supposed to be issued by au iustitution calliug itself National Vniversity of I Belgimm,' in which you request further information as to the somere of ralidity of these docmments.
    "In reply you ame informed that mosuch an institution as the "National Triversity of Thelgium exists, that in the opinion of members of the medical faculty to whou the dormuents in question have been submitted there is eridence of a bold fraud on the part of both the recipient of the so-called diploma aud of those who issued the same. They are further of the opinion that owing to the severity of the laws uf this rountry it is to be supposed that the documents submitted were not made in Belgium.

    > "Yery respectfully rours,
    (Signed) FRANCIS H. STYLES;
    American Consul in Charge."

    ## MEETINGS

    Three regular meetings have been held during the year 1928 , each of four days duration with an added half day devoted to a caucus. Early and late our members have labored at every meeting with time fully oceupied with business details, written examinations and legal hearings, the latter invariably eonsuming the better part of the last three days of each meeting.

    In addition to regular meetings there were four oral examinations held coineidently in San Francisen and Ios Angeles at intervals between regular meetings.

    ## APPLICATIONS PENDING DECEMBER 31, 1927

    On December 31, 1927, there were pending applications of the following elasses on file and awaiting final disposition at the next regular meeting:
    
    83
    This total is less by 27 than the applications pending at the close of the prior year.

    ## APPLICATIONS FILED

    Comparative figures for 1927 and 1928 show a loss of only 9 in the total mmber of applieations filed in 1928 and only 3 less than were filed in 1926. There was a noticeable gain in applieations for written examination for a physician and surgeon's certificate, constitnting the largest number reeorded for many years past.

    Perehance the amendments of 1927 that require an oral examination of reciprocity applicants who base their application on a license issmed by a sister state three or more years prior to the filing date with the California Board, may have diseouraged some that might otherwise have filed.

    |  | Filid | Filerd | Filed |
    | :---: | :---: | :---: | :---: |
    | Class of Applicent | 1924 | 1927 | 192 K |
    | A-Physician and Surgeon, written | 230 | 237 | 27.4 |
    | D-Physician and Surgeon, government credentials | 16 | 13 | 17 |
    | PB-Drugless Practitioner, writlen- | 12 | 1 | 1 |
    | C-Physician and Surgeon, reciprocity | 36\% | 360 | 308 |
    | CBB-Drugless Practitioner, recinrocity | 0 | 1 | 0 |
    | CE-Chiropodist, reciprocity_ | 1 | 5 | 7 |
    | E-Chiropodist, written- | 10 | 19 | 14 |
    | F-Midwife, written_ | 7 | 10 | 11 |
    | CF-Midwife, reciprocity | 1 | - | 0 |
    | Totals | 640 | 646 | $63 \%$ |

    ## CERTIFICATES ISSUED

    For the past ten years there has been a progressive inerease in the certificates issned following a written examination for a phrsician and surgeon's certifieate, muquestionably due to the reported steady increase in emrolment in medical colleges. During the same period there has been a yearly average of 346 reciprocity certifieates insmed, however the

    year 1928 showed a decrease and recorded the lowest number issued since 1918. While there has been a marked decrease in the direct reciprocity certificates issued, there has been a decided increase in the number granted after oral examination.

    CERTIFICATES ISSUED IN 1927 AND 1928

    | Class of Applicant |  | 1927 |  | 1928 |
    | :---: | :---: | :---: | :---: | :---: |
    | A-Physician and Surgeon: |  |  |  |  |
    | (a) Written examination_ |  | 232 |  | 276 |
    | (b) Government credentials_ |  | 8 |  | 3 |
    | C-Physician and Surgeon, reciprocity: |  |  |  |  |
    | (a) Direct | 254 |  | 136 |  |
    | (b) Oral | 67 |  | 85 |  |
    |  |  | 321 |  | 221 |
    | BB-Drugless, written_ |  | 1 |  | 0 |
    | E-Chiropody, written_ |  | 16 |  | 14 |
    | CE-Chiropody, reciprocity |  | 5 |  | 3 |
    | F-Midwife, written_ |  | 10 |  | 8 |
    | CF-Midwife, reciprocity |  | 0 |  | 0 |
    |  |  | 593 |  | 525 |

    In accord with our policy of tempering justice with mercy, the Board has given most earnest thought and consideration to many petitions for restoration of license:

    |  | Revoked | Restored |
    | :---: | :---: | :---: |
    | Baker, John E., M.D. | Feb. 29, 1928 | Oct. 15, 1928, Probation 5 yrs. |
    | Nelson, Arthur B., M.D. | July 13, 1926 | July 12, 1928, Probation 5 yrs. |
    | O'Hara, T. J., Naturopath | July 13, 1926 | July 12, 1928, Probation 5 yrs. |

    ## WRITTEN EXAMINATIONS

    For the first time in 19 rears the perfect score of the University of California was broken by the failure of one of the graduates of 1925 class. Graduates of Stanford and the College of Medical Evangelists again made a perfect score. Graduates of extra state schools made a better showing than in prior years, $88+$ per cent passed and $11+$ per cent failed; however, most of the failures are recorded against graduates of foreign schools, some of whom contend they have difficulty in expressing their thoughts in the English language.
    

    ## SOURCE OF RECIPROCITY LICENTIATES

    New York that records the largest enrollment of licensed physicians and surgeons, furnish the largest number of those granted California reciprocity certificates. Comparison with the statisties of 1927 shows a marked deerease in eertifieates issued on Illinois eredentials, this no doubt due to that provision in the Illinois law permitting admittance to the state board examination prior to possession of diploma, whereas the Califormia Medical lractice Aet requires possession of diploma as a prerequisite to admittance to examination. Iowa ranks third in loss of reciprocity lieentiates, due to a lecided falling off in the number of applieations filed by those liensed to practice in that state.

    ## SOURCE OF RECIPROCITY LICENTIATES

    | State | 1927 | 1928 | Statc. | 1927 | 1928 |

    ## HEARINGS

    Charges of unprofessional conduct under the provisions of section 14 of the Medical Practice Act hare been filed against thirty-six licentiates during the year just closed, an increase over the number of hearings held during the prior year. Each proceeds with due formality of court procedure, the board exercising conscientious consideration in arriving at its judgment.

    It is indeed disheartening when after weeks of earnest endeavor in securing evidence from distant points in the United States, after homs of patient listening to the testimony submitted and thereafter determining the respondent guilty of having obtained a California license by fraud, to have some court set aside the finding of the board-not because of the evidence but because of some technicality wherein a complaint was faulty, losing sight of the important issue, namely. fraud in obtaining a California license. Here again the Diploma Mill Bill offers a ray of hope and we trust that though our efforts to revoke a licemse ohtained be fraud are in vain. We have a trump eard throngh prosecution ou a felony complaint.

    As noted in prior reports, mareotic violators comprise the largest group of those charged with umprofessional conduct, althongh less in number than the year 1927.
    (a) Narcotic ..... 10
    (b) Illegal operation ..... 5
    (c) Habitual intemperance ..... 1
    (d) Miscellaneous ..... 20
    Total ..... 36

    The judgments rendered by the board during the year just closed are classified as follows:
    *Guilty-Revoked ..... 18
    Guilty-Probation ..... 7
    Guilty-Suspended ..... 1
    Not guilty ..... 1
    Dismissed ..... 6
    Deferred to February ' 29 ..... 2

    ## ANNUAL LEGAL REPORT-NORTH

    San Francisco, ('alifornia, December 31, 1928.
    C. B. Pinkham, M.D., Secretary-Treasurer,

    Board of Medical Examiners,
    623 State Building,
    San Franeiseo, California.
    Dear Doctor Pinkham:
    We are submitting herewith our annual report showing the ativities of the Legal Department of Northern California, from the date of our last report (December 15, 1927) to December 31, 1928.

    There has been an improvement in the cooperation afforded us in some of the courts of our district, but there is still evidence of a laek of maderstanding of the serionsness of allowing meducated people to treat the sick and afflieted.

    We have endeavored to present to the courts and jurors, who are the judges of fact, in cases involving the medical praetice aet, only outstanding violations, hoping in this mamer to aroid petty differences as to theraps: etc. We have tried to adrance the interests of the medical profession and the public at large by stopping the practice of medieine by those not possessed of proper license.

    ## VIOLATIONS OF SECTION 17 OF STATE MEDICAL PRACTICE ACT

    | Name | Location | Date | initiated | Disposition |

    ## LEGAL REPORT-SOUTHERN DISTRICT

    931 Asuciated Realty Bldg.. Los Angeles California, December 31, 1928.
    (harles B. Pinklham. M.D.
    see. Treas., Board of Medical Examiners.
    +20 State Office Building.
    sacramento. California.
    Dear Dr. Pinkhan:
    We submit herewith an annual report of the investiration and legal departments for the Southern Di-trict of the Board of Medical Examiners of the State of Califormia for the rear ending December 31, 1928.

    During this period we have investigated more than 300 alleged viola-tion- of the State Medical Practice Act. Three defendants who are not licentiates of the State Medical Board were convicted on criminal abortion charges and sentenced to state prison.

    Results in other cases are as follows:
    VIOLATIONS OF SECTION 17 OF THE STATE MEDICAL PRACTICE ACT

    | Name of case | Address | late initiated |  | Disposition |
    | :---: | :---: | :---: | :---: | :---: |
    | Allen. Mars | El Centro | July | 25. 1928 | Pleaded guilts. Sentenced to serve 60 days in county jail. Sentence suspeaded for 2 sears. |

    Respectfully submitted.

    > (Signed) Otto J. Emaie, Associate Counsel. Albert Cinter, Special Agent.

    ## SEGREGATION OF FINES RECEIVED DURING 1928

    We feel that our adopted poliey of stripended sentences imposed on those fomd guilty of violation of the Medical Practice Act is having a pronomneed effect in compelling observance of law. This policy reflected in the legal reports is accountable in a measure for the 1928 loss of inceme from fines.

    ## FINES RECEIVED DURING 1928-NORTHERN DEPARTMENT

    1926 Fines
    

    ## FINES OUTSTANDING AS OF DECEMBER 31, 1928

    The following fines noted on the valions reports of the Legal Department as having heen imposed have not been forwarded to the State Treasurer as required under the provisions of section $2 t$ of the Medical Practice Act:

    ## NORTHERN DEPARTMENT 1924 Fines

    
    The eordial cooperation of the State Department of Public Mealth, Burean of Vital Statisties, and the American Medical Association, Biographical Department, has been of inestimable value in the compilation of statisties of the following individuals classed as "Doctors" who have died during 1928. This record comprises (A) those licensed under the laws of California who have died in our state or clsewhere ; (B) those who have been reported as having died in California, but concerning whom we find no record of license. These names we have prefixed by an asterisk.

    ## LETTER OF TRANSMITTAL

    Honorable C. C. Y'uung,
    Governor of California.

    ## Dear Sir:

    We have the honor to submit herewith the third biemial report of the Yeterans' Welfare Board to June 30, 192s, the end of the seventyninth fiseal year.
    This report reflects the experienees and activities of the board in the investment of twenty-five millions of dollars in farms and homes for ('alifornia reterans pursmant to the provisions of the Veterans' F'arm and Home Purehase Act (chapter 519. Statutes 1921, as amended).

    Respeetfully yours.

    VETERANS' WELFARE BOARD<br>OF THE STATE OF CALIFORNLA.<br>John R. Qunn, Chaiman.<br>George M. Stout, Secretary.<br>Walter B. Kibbey.<br>Harold C. Moore.<br>Mertin A. Hope.

    Dated at Saeramento, California, this thirteenth day of Augnst, 1928.

    ## OFFICE SPACE, ORGANIZATION AND PERSONNEL

    The Teterans' Welfare Board maintains a main office and two district offices. The main office is located in the State Office Building, Sacramento, California. This office is divided into three separate divisions, namely: Executive, Accounting and Application departments.

    George M. Stout, secretary of the Yeterans' Welfare Board, is the executive officer. The Accounting Department records all statistical matter pertaining to finance. The Application Department registers all applications made by reterans, and, with a sympathetic consideration of the human element involved, classifies, for the board's action, applications which have been checked and verified as to eligibility and qualifications.

    Two district offices are maintained, one in the Security Building, San Francisco, and one in the Rives-Strong Building, Los Angeles. These offices obtain closer contact with the veterans in the large centers of population. At these branch offices interviews are held, appraisals made and tentative property purchases placed in escrow with local title insurance companies. After that stage of the transaction the cases are sent to the main office in Sacramento for consummation.

    Approximately twenty-six hundred feet of floor space has been provided by the state government in the new State Office Building in Sacramento to house the Veterans' Welfare Board's main office. A suite of four offices is provided for the San Francisco district offices and a suite of four offices is provided for the Los Angeles branch.

    ## PERSONNEL OF THE BOARD

    ## FOREWORD

    In 1921 the California state legislature eonvened at Sacramento for its forty-fourth session. The American Legion by that time had aceomplished its big task of proper organization and function, and had passed over the transitory period from a seething mass in khaki to a welimeaning. deliberative body of serious-minded service men, looking desperately and earnestly to the future. Many there were whose vision and foresight were too bemuddled to see anything ahead but despair and privation; their families were destitnte and separated; members were missing from the inroads of a deadly plague of influenza which spread and took away loved ones at home by the thousands. while the ravages and toll of war thinned the ranks of those who had gone overseas to fight a human foe.
    The American Legion, familiar with the mental and physical conditions of the hour, and knowing and understanding intimately the problems of the less fortunate of the discharged soldiers, marines and sailors, sent to Sacramento a Legion Legislative Committee to work and advise with the members of a most friendly and sympathetic state legislature, and out of that inspired and wise collaboration was conceived the best veteran remedial and welfare legislation yet enacted by any state of the Union.
    By all who have acquainted themselves with California's Yeterans' Welfare Acts, our legislation has been unanimously proclaimed as unsurpassed in principle, in economy, in benign influence on its beneficiaries, and in the ultimate good that will accrue to the state by reason of increasing by thousauds its number of substantial, contented, law abiding home owners. And to do these things without cost to the state, without increasing the tax burden on its citizenry, is an accomplishment without parallel in any state that has thus far attempted any form of relief legislation for its reterans.
    

    HOME PURCHASE CON'RACT No. 1.
    The first home purchased by the Veterans* Welfare Board was in July, 1922 , in the city of Los Angeles for a veteran permanently disabled in the World War. The veteran was carried on a stretcher to his new home by his comrades of the American Legion.

    ## ORIGIN OF VETERANS' WELFARE BOARD

    The Veterans' Welfare Board, as a state agency, was created by the California Veterans' Welfare Act, chapter 580. Statutes of 1921. The Honorable Wm. D. Stephens, then Governor of California, named the first board, which consisted of Frank H. Nichols of Los Angeles, chairman; Robert F. Smith of Bakersfield, secretary ; Fred F. Bebergall of San Francisco, and Walter B. Kibber of El Centro-all veterans as defined in the act creating the board-and the Honorable Alden Anderson, former Lieutenant Governor, of Sacramento.

    This board proved itself to be a well-balanced commission, composed of men of rast business experience and rision. The success thus far attained in the administration of the reteran welfare legislation of California has justified the statement repeatedly made that the board recognized a fiduciary trust-that of safeguarding the interest of the State of California, whose eredit has been loaned. as well as protecting to the fullest extent the welfare of the veteran whom it was created to serve.

    At the expiration of the term of member Fred F. Bebergall, the Hon. George J. Hatficld, now United States Attorney of San Francisco, was appointed and served a full four-year term. The personnel of the board remained unchanged until October, 1923, when Robert F. Smith was called to a larger field of service and resigned as secretary to take up important work at the national headquarters of the American Legion at Indianapolis. George M. Stout, then assistant secretary, was thercupon elected secretary by the board, and, on November 1, 1923, was appointed to board membership.

    The next change in the personnel of the board was occasioned by the resignation of Walter B. Kibbey in September, 192t, because of ill health and the pressure of his private business; whereupon Harold C. Moore, a banker and orchardist of Upland, San Bernardino County, was appointed by Governor Friend W. Richardson.

    After four years of serrice as chairman, Frank II. Nichols tendered his resignation to embark on a tour of the world. Simultaneonslywith his resignation, John R. Quinn. Past National Commander of the American Legion. and vice president of a prominent Los Angeles Bank, was appointed to board membership, succeeding Hon. Alden Anderson, whose term had expired, and Mr. Quimn was immediately designated as chairman of the board in August, 1926.

    On January 1, 1927, Walter B. Kibbey of Los Angeles, whose good health had been regained as the result of setcral major operations, was again appointed a member of the board, succeeding Hon. George J. Hatfield of San Francisen, whose term had expired and who was ineligible for reappointment by reason of holding the federal appointment as Inited States Attorney.

    In September, 1926, John P. Brennan, a contractor of Berkeley; was named a member of the board to fill ont the uncxpired term of Frank H. Niehols, resigned. John P. Brennan completed his term and served until May, 192s, when Merryn A. Hope, of San Mateo, a prominent and active worker in ex-service men's circles, was appointed by His Excellenes, Governor C. C. Young.

    # CALIFORNIA VETERANS' EDUCATIONAL INSTITUTE 

    (Chapter 579, Statutes 1921, as amended by chapter 403 , Statutes of 1923)
    With the object of providing vocational training and education for needy veterans, chapter 579, Statutes of 1921, appropriated the sum of $\$ 500,000$. This legislation was deemed advisable by the legislature to assist veterans whose education had been interrupted by the World War. Practically the entire appropriation has been spent and this function of the Veterans' Welfare Board has been completed, with the exception of eight students still in school.

    There is no doubt but that a lasting benefit has been derived from this legislation, not only to the student veteran who was enabled to complete his education or manual training, but to our state as well.

    The records of the institutions attended by these student veterans show the scholastic standing of the state's beneficiaries to have been much higher than the average of the student body of the same institution. Many of the students have attained the highest honors, as evidenced by awards of membership in honorary societies and honorary fraternities.

    These student veterans, due to the advanced knowledge gained through this timely assistance, are now prepared to face the world equipped to do their part in the world's progress of arts, letters, science and ethics. Education is the greatest guarantee against a repetition of the terrific crumblings that were witnessed during the World War.

    Professions and vocations chosen were as follows:

    195 Law.
    $\because 46$ Medicine.
    70 Chiropractic.
    -it Teaching.
    7S Stenography.
    18 Mechanical engineering.

    ## SCHEDULE OF EXPENDITURES

    

    # VETERANS' WELFARE BOARD ON LAND SETTLEMENT 

    (Chapter 580, Statutes of 1921)

    Due to the absence of any apparent need and the lack of demand, the California Veterans' Welfare Board did not attempt to establish a land settlement colony as was contemplated at the time the legislature enacted the Veterans' Land Settlement Act, chapter 580, Statutes of 1921.

    In anticipation of a popular demand on the part of veteran farmers, the Veterans' Welfare Board advertised for and received submissions of tracts of land throughont the state that might be suitable and adaptable to the purpose of colonization. One hundred and twenty tracts of land, ranging from 300 to 5000 acres, in all parts of the state, were offered at prices ranging from $\$ 50$ to $\$ 350$ an acre.

    Examination, inspection and appraisement of these tracts, in accordance with the provisions of the Land Settlement Act, resulted in the climination of about 95 per cent for various reasons.

    But before undertaking so stupendous a project, the board determined to go to the veterans whom the board was created to serve, and immediately invited representatives of organizations and all interested individual veterans to meet with the board, express themselves on the subject, and advise with it as to the proper procedure and policy to follow. Representatives of the Grand Army of the Republic, Spanish-American War Veterans, the Disabled American Veterans, the Veterans of Foreign Wars and the American Legion met in San Francisco on Febrnary 24, 1924. A similar meeting with the reterans in the south was held in Los Angeles on March 16, 1924. At each meeting it was the unanimous opinion of those present that the board should confine its operations to aiding farmers in the purchase of individual farms under the Farm and Home Purchase Act.
    Those meetings were well attended and deliberative, and the wisdom of the advice tendered was substantiated by ensuing events. There was never any demand for a veteran colony by any individual veteran or group of veterans who desired to enter an agricultural colony.

    From these experiences, and with the advice and cooperation of the veterans and their organizations, the Veterans' Welfare Board formulated its policy in favor of buying for the veteran who harbors a real desire to engage in agriculture, his individual farm; and the results have justified that policy.
    At its meeting of April 23. 1925, the Veterans' Welfare Board adopted the following resolution:

    

    An orange grove of a veteran farmer in one of the most successful citrus producing sections of southern California.
    

    A typical dairy herd. Veterans following dairying have been consistently successful
    

    ## VETERANS' FARM AND HOME PURCHASE ACT

    (Chapter 519. Statutes of 1921 , as amended by chapter 405 , Statutes of 1923 , and chapter 822 , Statutes of 1927)

    The Veterans' Welfare Board of the State of Califormia is charged with the expenditure of funds for the acquisition of farms and homes to be resold to California war veterans on a small payment plan at a low rate of interest. The specific act which the board administers is known as the Veterans' Farm and Home l'urchase Act, chapter 519. Statutes of 1921 . This legislation was made possible through the desire of the people of the state to express their gratification for the services rendered by California's retnrned soldiers. sailors and marines. The board operates by law exchusively for the benefit of the ex-service men.

    Thirty million dollars have thus far been made available by the voters throngh the sale of bonds, for the purpose of carrying on this work. These bonds are being retired with funds derived from the veterans' payments on farm and home purchase contracts. A sound financial plan, based upon a careful analysis of the existing financial situation and that to be created, is necessary to fulfill the provisions of the law and to safeguard the interests of the people of the state who are dependent upon the wisdom and foresight of the administrators charged with the responsibility of investing this immense amount of moner in farms and homes for its reterans.

    ## FINANCING PLAN

    The Veterans' Welfare Board derised a plan of finaneing based upon intimate interdependence of contractual revenue and contractual obligations, to insure, as nearly as practicable, a constant equilibrium of income and outgo of funds. Inadequacy of income to meet interest and redemption payments would compel the state to secure elsewhere the deficient revenue, a contingener plainly not contemplated as a normal occurrence by the Yeterans' Welfare Bond Acts. The same general principles apply to public business as apply to private business. but there exist essential differences which must be thoronghly muderstond if a clear comprehension of the financial affairs of a public enterprise is desired. The absence-comparatively speaking-of the elements of risk and profit in the conduct of public business makes it prohibitive to rely upon chance for ability to meet required expenditures. To be assured of this ability, the administrator may not, as in the ease of private business, indulge in mebulous hopes of future profits, but must possess as precise a foreknowledge of future resoures and liabilitics as ciremmstances will permit. Being restricted by constitutional and other legislative limitations, and having little diseriminatory power in matters of policy except by way of recommendation, his requirements an to financial information have reference to the question of how well he has discharged the public turst placed in him.

    Other considerations enter into the question of public acenuntability. The administration of a public enterprise is rarely intrunted to the same individuals for a long continuous period, and where, as is the ease in the Division of Farm and Home Purchases of the Veterans" Welfare Board, the commitments extend far into the future, the need of preci-
    sion and punctiliousness becomes apparent. Manifestly it would be fatal to the success of the enterprise if either the administrator or those under his personal direction were to rely solely, or even largely, upon their personal familiarity with the affairs of the undertaking. Their successors are clearly entitled to assume their trust in as tirgin a state as when it was first created. The private administrator need pay little attention to such considerations. He is frequently managing his own affairs, untrammeled by restrictions and untouched by jealousy: suspicion or political pressure. His error of judgment, his neglects and his prejudices redound to his orrn disadrantage. But the administrator of public affairs errs, misjudges or fails at the risk of public disapprobation. To enable him to face this risk, he needs financial information more accurate, more detailed, more frequent and more prompt than the manager of private business. The Veterans' Welfare Board of the State of California furnishes monthly financial statements describing in detail the financial condition and operations of its work, which are indispensable in its administration and in the formulation of its financial policy: These financial statements are subject to a rigid inspection by the auditors of the State Department of Finance, as well as being a public record.
    

    An attractive and comfortable bungalow in Pasadena.
    

    A reteran's home purchased in San Francisco.

    ## "VETERAN" DEFINED

    The state legislature, in defining a "veteran" for eligibility purposes under the Farm and Home Purchase Act, did not advocate the exclusion of service men of other wars who might desire to participate under the privileges offered, but defined a "reteran" as any citizen who has served on active duty in the armed forces of the United States in time of war and who has an honorable discharge therefrom. This definition includes reterans of the Spanish-American War, Civil War, Indian Wars and all other wars in which the United States has been engaged.

    ## HOW APPLICATION IS MADE

    Veterans desiring aid under the Farm and Home Purchase Act file preliminary applications with the board which are numbered as they are received and classified in groups of a series of a thousand. At the present time there are 32,000 applications on file, of which the board has classified 22,000. These preliminary applications are checked over and the fact that the applicant is a bona fide California veteran as defined by the Farm and Home Purchase Act is established and that he meets the adopted regulations and legal qualifications. The applicant, upon tentative approval, is given a personal interview to determine his fitness and ability to carry out the terms of a farm or home purchase contract. If the veteran meets the requirements, which are of a just and simple nature, he is then issued a selection certificate which authorizes him to select the farm or home desired and submit it with its legal description for the board's appraisement.

    The maximum amount allowed in the purchase of a farm is $\$ 7,500$ and in the purchase of a home $\$ 5,000$. However, in the case of a home purchase, the act provides that the reteran may finance a home with a maximum value of $\$ 7,500$ by personally financing the additional amount above the $\$ 5,000$ the board will invest.
    

    A modern five-room bungalow selected in Visalia.

    ## HAS CHOICE OF BUILDING OR BUYING ALREADY BUILT

    The veteran, in securing a home, has a choice of building to suit his needs or he may select a home already constructed. If he should have a home constructed, the contractor must assume the responsibility of whether or not it is acceptable to the Teterans' Welfare Board upon the basis of the board's appraisal. Having no way of inspecting houses under construction or dwellings which are to be submitted for purchase, the board finds it impracticable to make appraisals before completion or approve plans and specifications. When the veteran has selected the property he desires to acquire he files with the board an application to purchase which contains a legal description of the property, the asked price and a statement of indebtedness standing as an encumbrance. This application is signed and sworn to by the veteran and the property ewner. The board appraisers make a detailed inspection of the propcrtr and the findings of these appraisers determine the price the board will offer for the property.

    ## DETERMINATION OF VALUES

    The determination of the valuation of homes submitted for purchase under the Veterans' Farm and Home Purchase Act has important factors which are negligib]e to banks, real estate firms or other financial enterprises dealing in home loans. Age and resale value are secondary items when the amomnt loaned is 60 per cent or less of the appraised value and the period ranges from one to ten years.

    The Veterans' Welfare Board is ever confronted with the possibility of having to recover its investment by resale of the property that may be repossessed by reason of the defanlt of the original reteran pur-
    chaser. Unless the purchase price is conservatively in proportion to the actual market value, a loss may be sustained, especially if an arrearage in monthly installments has accumulated. This is particularly so sinee the board advances 95 per cent of the purehase price, the veteran being required to pay the other $\bar{j}$ per cent as his initial payment.

    Depreeiation is ordinarily equal to or greater than appreeiation. As the greatest hazard of loss is apparently within five years after the purehase, the age of the dwelling aequired is of major importance. Many features of new homes, modern today, will be slightly obsolete several year's hence, while honses that were out of date five or ten years ago are constantly becoming more diffieult to resell by reason of their age.

    A third factor equally important is the desirability and adaptability of the property to serve the purpose of this legislation-that of providing the applicant and his family with a suitable home for future years. Loeation is of considerable importanee to the purehaser. Aceessibility to transportation. schools, markets, churehes, parks and opportunity for employment have a direct bearing upon the suitability of the property.

    The proportion of lot valne to the dwelling eost is an essential point. A low priced lot destined to become a part of a desirable residential district is ideal, as it permits the expenditure of more money on the dwelling, offering the possibility of better quality and greater size without exceeding the maximum amount allowable under the law.

    The board las placed suitability on a par with investment possibilities in order to comply with its interpretation of the original intent and spirit of the act.
    

    A novel Spanish home purchased for a veteran in Los Angeles.

    ## LOADING CHARGES

    All administrative expense of the board is paid by the reteran through adding a loading charge to the purchase price of propertyselected. A careful appraisal of property is necessary to avoid loss in case a home or farm should be abandoned by the reteran purchaser and necessarily resold by the board. There are no funds available from which such a loss could be sustained except from the surplus derived from the loading charge, which would mean that each veteran purchaser would be standing a portion of this contingencr, were it to occur.

    The reteran is adrised of the details of the transaction and, if acceptable to the property owner, the board, after receipt of an initial payment from the applicant, immediately places the deal in escrow. Where a title search is made and the purchase transaction completed.

    If the title of the property is acceptable, the board purchases the property outright, paring cash. and sells it to the selecting reteran under the terms of a sales contract. The reteran makes an initial payment of 5 per cent, in the case of a home, or 10 per cent in the case of a farm. of the selling price of the property, and is charged with all expenses in connection with the appraisals, examination of title, incidental expense, and in addition an administration charge of 5 per cent. commonly called the loading charge. The balance is nsmally amortized orer a period of twenty years at 5 per cent interest, making the arerage monthly parment in the case of the purchase of a $\$ 5.000$ home $\$ 33.10$, or the arerage rearly installment of $\$ 560.50$ on a $\$ 7,500$ farm.

    ## BENEFITS OF THE AMORTIZED LOAN

    The theory of the amortization loan is to arrange the monthly payment of principal and interest at a fixed rate. which retires the entire amonnt by maturity. The beneficiary under other loan plans too often neglects the saring and accumulation necessary to meet the principal payment when due. and is compelled to seek renerwals and extensions. The amortized loan plan is growing in popularity daily and is receiving endorsement by many of the larger mortgage and building and loan companies.

    The major advantages to veterans under the act are as follows:

    1. Buying power of cash.
    2. Less taxes throngh the application of the $\$ 1,000$ exemption given reterans by the constitntion of the State of California. (Section $1 \frac{1}{4}$, article XIII.)
    3. Difference between 5 per cent charged by the state and 7 to 10 per cent ordinarily charged by private business concerns engaged in financing real estate deals.
    Illustration of No. 1.- $\$ 5.000$ cash purchase.
    Purchase for cash saves 10 to 15 per cent for a veteran. Fifteen per cent on $\$ 5,000$ deal equals $\$ 750$. Contracts on real estate, if acceptable by banks, are invariably discounted 20 per cent, and few builders are financially able to permit au outlay of money of any appreciable volume without curtailment of their building actirities and operations.

    ## Explanation of No. 2.

    In a majority of the counties the property to which the state holds title under the Farm and Home Purchase Act has been exempted from
    taxation under an existing law whieh provides that property, the tithe of which is vested in the State of California, shall not be subject to taxation. In other comnties the veterans under farm and home purchase contracts are assessed for taxes on the basis of their possessory interest in the farm or home and the $\$ 1,000$ exemption given them by the constitution of the State of California, is applied arainst the assessment.

    ## Advantage of No. 3.

    The contracts covering property purchases are figured to bear interest at 5 per cent. A $\$ 5,000$ purehase, if the contract is dated the first of the month, will call for a monthly installment of $\$ 33.10$, which includes the 5 per cent interest. This monthly payment will pay out the contract and enable the veteran to take title to the property in twenty years or two hundred and forty months. In those twenty years $\$ 5,201.20$ will have been paid in, which is segregated as follows : $\$ \bar{j}, 000$ principal, $\$ 2,915.20$ interest and $\$ 250$ administrative expense.

    If the interest rate were 7 per cent instead of 5 per cent, the monthly payments would be $\$ 38.77$. or $\$ 5.64$ more. In twenty years at that rate the veteran wonld have paid in $\$ 9,303.60$, exclusive of the $\$ 250$ administrative charge, or $\$ 1,352.40$ more than he would have to pay on a $\overline{5}$ per cent amortization plan.

    Figured from another angle, with interest at 7 per cent and monthly payments of $\$ 33.10$, snch as they actually are, it would require approximately thirty-one years to pay ont, or eleven years longer than under onr plan, and the veteran would have paid $\$ 12,258.10$, not ineluding the administrative charge.

    ## PROGRESS OF VETERAN FARMERS

    When the agricultural depression in the staple farm commodities such as corn, oats, barley, cotton and hay hit the United States, the farmers of California, attracted by the high prices of our specialty crops such as fruits and vegetables materially rectuced their acreage of staples, and set out fruits and vines. This has resulted in an increase of California fruit and vine acreage of 573,000 acres since 1919 , or an increase of 43 per cent.

    Despite these conditions now existing in California agriculture, the Veterans' Welfare Board has reason to be proud of the success of the great majority of veterans who have reecived aid under the farm purchase division of the aet. As of June $30,1928,250$ reterans have been placed on farms throughout ('alifornia. In so doing the board has invested close to $\$ 1,400,000$. Farms have been purchased in thirtyseven different counties of the state, and represent investment in practically all types of agricultural endeavor. The arerage cost of these farms is in excess of $\$ 5,400$.

    The success of the farm aid can be attributed to a great extent to the sincere effort made by the Board to place on the farms purchased only veterans of proven farm experience. Another contributing factor has been the exceptionally high agricultural valne of the properties purchased. The present agricultural outlook has more than vindicated the policy of careful selection of applicants, and warrants an eren more rigid examination of farm-minded reterans in the future, if the present success of the Farm Purchase Act is to be maintained. In the past California land values have been subjected to boom prices. They are now seeking the true level of their value, a value based on their net earning power. The board feels that the prospective veteran farmer should not allow himself to be stampeded into a farm because of the belief that land is at its lowest lerel of value. There is no sadder picture than a veteran who has worked conscientiously for several years only to face failure because of lack of financial resources. The board calls to the attention of all prospective farm applieants the present condition of agriculture and points ont the foolhardiness of jeopardizing their chances of success by endeavoring to start a farm project with inadequate finance, and insufficient stock or farm equipment.

    The present farm delinquener list is comparatively small. During the months of April and May a farm survey of the delingment farms was made by the agricnltural supervisors of the board in an effort to determine accurately the canses of the delinquencr. The results of this surrey bronght to light the fact that the bulk of the delinquency was on fruit and vineyard properties, and developed the fact that met over five farms were hopelessly delinquent.

    The chief reason for farm clelinquency, the survey showed, can be attributed, not to the lack of personal effort on the part of the reteran. but to the fact that many have taken practically raw land and have pioneered frnit and vineyard acreage. This development is being accomplished in the face of particularly low returns in the ease of producing acreage, and in many instances in the face of no returns in the case of acreage not yet into production. To meet these contingencies our veterans have worked on the outside, chiefly at farm labor on neighboring farms.

    Two cases of delinquency were nneovered by the survey on dairy projects bronght about becanse of the necessity on the part of the veteran to purchase cows. These herds were purchased on terms, nothing down and $\$ 75$ to $\$ 100$ monthly deductable from the cream check. Both these herds are now practically clear, and have a conservative value of $\$ 2,500$ each. Their owners have indicated their ability to start monthly payments immerliately, and they will monestionably have their delinquent balance paid out before the next annual installment is due in December. These men are established in the dairy industry, and should have clear sailing from now on.

    During the surver an effort was made to estimate the value of the delinquent farms. The survey clearly indicates that there has been an increase of 25 to 40 per cent in value, due to the enhancement of orchard, vineyard, dairy and other agricultural development.

    With over 200 veterans meeting their installment obligations promptly, increasing yearly the value of their real and personal property, and each year playing a more important part in the rural community life of the state, it is evident that the farm purchase division of the act is economically sound, and that those who sponsored the legislation, the people of the State of California, who voted the funds, and this board that administered the measure, all have good reason to be proud of the accomplishments of our veteran farmers over a period of subnormal agricultural years.

    ## RULES, REGULATIONS AND INSTRUCTIONS OF THE VETERANS' WELFARE BOARD

    ## Foreword.

    The Veterans' Furm and Home Purchase Act, as enacted by the legislature in 1921, stated: "The object of this act is to provide veterans with the opportunity to acquire farms and homes." Section 8 of the act st::tes, "The board shall have authority to make all needed rules and regulations for carrying out the provisions of this act."

    ## Eligibility.

    To be eligible, the applicant must qualify as a "veteran" as defined under section 2 of the act. Section 2 of the act is as follows:

    As used in this act the term "reteran" included any individual who has served on active duty in the Army, Navy or Marine Corps of the United States in time of war and has received an honorable discharge therefrom or who has been released from active duty under honorable conditions and who was, at the time of his enlistment, induction, commission or drafting, a bona fide resident of the State of California, but does not include-

    1. Any individual at any time after April 5, 1917, aud before November 12, 1918, or thereafter separated from such forces under other than honorable conditions;
    2. Any conscientious objector who performed no military duty whatever or refused to wear the uniform; or
    3. Any alien at any time during such period or thereafter discharged from the military or naval forces on account of his alienage.

    ## Residence.

    In determining the bona fide residence of an applicant at the date of enlistment, the board will apply the rules set forth in section 52 of the Political Code of the State of California.

    ## Time of War.

    "In time of war" as contained in section 2 of the act covers all wars in which the United States was a participant. The Spanish-American War, Philippine Insurrection and Boxer Expedition dated betweeu April 21, 1898, and July 4, 1902. The United States entered the World War April 7, 1917, and concluded hostilities November 11. 1918. The Punitive Expedition into Mexico March 10, 1916, to February 5, 1917, is not considered as a period of war.

    ## Preliminary Application.

    Any individual deeming himself a "reteran" and wishing to benefit under the act shall submit and file such information as will enable the board to determine his eligibility, qualifications and ability, and preference if any. This information shall be furnished in writing by replying to all questions on the preliminary application form (Farm and Home Purchase Form No. 1), conies of which will be furnished on request.

    ## Recording Discharge and Verification.

    The discharge should be reeorded by a county recorder and a copy of same made on the application by the recorder. The application must be sworn to before anyone authorized to administer oaths.

    ## Application to Purchase.

    When a veteran has beeu issued a selection and purchase certificate he is given an application to purchase, mon which form he submits the property for appraisal.

    ## Appraisal.

    Each property selection submitted is appraised by a board of appraisers created by the Veterans' Farm and Home Purchase Act.

    ## Mode of Purchase.

    The board pays cash for all property accepted and should any encumbrances of record stand against such property they are liquidated through escrow.
    

    A veteran's selection In Exeter.

    ## Administrative Charge.

    The administrative eharge is 5 per cent of the purehase price and it represents the estimated amount that will be necessary to earry a contraet over the period of years it is to run.

    ## Initial Payment.

    The applicant is required to make an initial parment with the board of 5 per cent of the selling price in the purchase of a home and 10 per cent in the purehase of a farm.
    Purchase of a Home Where the Veteran Does Not Have Equity. Straight purchase transactions are as follows:
    
    Appraisal fee 1200
    Administrative charge, 5 per cent of $\$ 5,000$
    Selling price to reteran
    $\$ 5,26200$
    Initial payment, $\overline{5}$ per cent of $\$ 5.262$
    $263 \quad 10$
    Balaned to be paid on contract
    $\$ 4,99 \mathrm{~S} 90$

    ## Purchase Price of Home Where Veteran Holds an Equity.

    When a veterin has an equity in property he desires the board to finance for him, the initial payment is waived providing his equity represents not less than 10 per cent of the appraised valuation. If his equity on the basis of the appraised valuation does not equal 10 per cent, he is required to reduce the balance to cover the required equity.
    Purchase price of home
    Appraisal fee 1200
    Administrative charge, 5 per cent of $\$ 5.000$
    Selling price
    $\$ 5.26200$

    Two more homes, typical of San Francisco, purchased for veterans.

    ## COST OF HOME BUILDING

    The average size house selected by veterans and applied for under the Veterans' Farm and Home Purchase Act is of the five-room plan, and the arerage size family of the reteran is three people. The average earning capacity of the reteran applicants is close to $\$ 170$ a month.

    Economists tell us that in a well-balanced budget, we should not spend more than 20 per cent of our income for rent. Under the conditions imposed by the Teterans' Farm and Home Purchase Act, the reteran, for a lesser amount than 20 per cent of his family budget, is buying his home. Our payments arerage $\$ 30$ a month.

    The greater interest that the reteran naturally develops in something that is eventually to become his sole property is the incentive for his keeping the property in the best of condition and caring for it with the pride that orrning one's own home should engender; his confidence in himself is increased: the perpetual marital difficulties that continually disrupt so many families are greatly lessened br the home ties; therefore better home life and better citizenship are served. Under such conditions, veterans' families are not prone to seize every opportunity to escape to the outside and take to the highwars to become a part of the horde that amnally goes delinquent and builds up the criminal record of the state "through the lack of a suitable home environment."

    The arerage prospective home builder-be he Mr. Ordinary Citizen or Comrade Veteran-thinks of "home costs" in three items, riz: Cost of lot, cost of materials and cost of labor; figuring of course that the cost of the house is the combined cost of the materials and the labor necessary to properly construct the house. Such, however, does not reflect the true conditions. The cost of construction alone (including labor and materials) represents about one-half, or 50 per cent. The
    

    A simple, well constructed east bay bungalow-Oakland.
    other 50 per cent goes to purchase the lot (including street work, ete.), and to pay promotion costs (profits, overhead. etc.). The average cost distribution in Califormia, on a s.5.000 home. we have fonnd from our experience to be approximately as follows:
    

    It does seem incredible that the profits or commissions item should be the largest of the four that go to erect a home. but the results are easily discernible and the question as to who is making the noner-the physical workers or the promoters-is simple to answer when we look around us to see who have the largest incomes in our various Califormia communities. We see no carpenters, plasterers bricklayers or plumbers living in $\$ 25.000$ or $\$ 50.000$ homes, and yet we have become accustomed to placing upon labor all the blame for increased building costs. It is a fact that of the cost of the ordinary five- or six-room house purchased by veterans muder the terms of the Veterans Farm and Home Purchase Act. only 26 per cent goes to labor at the job. distributed between the various crafts about as follows, dependiner. of course. in many instances, upon local conditions:

    9 per cent to carpenters.
    6 per cent to bricklarers.
    4 per cent to plasterers and hodcarriers.
    2 per cent to plumbers.
    1 per cent to electricians.
    $\pm$ per cent to miscellaneous costs.
    Of the materials cost. which represents 25 per cent of the total home cost, there is included handling. transportation and actual invoice prices. Thus the total material cost mounts up to 25 per cent. or virtually the same as the total charged against labor on the job.

    The most amazing item of expense in the cost of home construction is the proportionate amount spent for things other than construction. Time was when this expense was negligible: but 27 per cent for promotion looks exorbitant even now. especially when it is uncovered from its hiding place after it is found to exist, for it is rarely on the surface. nor does the promoter readily admit its existence. Promotion costs include interest on investment. bonnses, profits, commissions, overhead. sales costs. adrertising and all expenses incident to the use of moner. Charges for the uses of moner are largely speculative, but land is the greatest speculative commodity in the world.

    Of the cost of reterans hones. 2. per cent is charged. on the average. against the lot. There is, or should be, a real tangible relationship between the lot value and the value of the improvements thereon. For example, it would be entirels out of proportion to put a $\&=.500$ house on a $\$ 2,500$ lot. Lots have a well-established value in proportion to the value of the improvements in a well-dereloped residential section or district. The lot, unless under exceptional circumstances, should represent from 20 per cent to 25 per cent of the total cost of the home.

    To point ont that the expense of original financing and promoting of homes run high; that labor is not entirely responsible for the increased cost of construction; that there is a tangible relationship between cost of house and value of lot; that property valuations are not based on cash ralues; and that if original financing and promotion rum as high as 27 per cent, then it is likewise evident that the burden of refinancing, which oceurs approximately every three years, is also very expensive-is the object. These are some of the problems and difficulties that the Veterans' Welfare Board has endeavored to solve for the reterans of California.

    Recently published figures show that close to one-sixth of the national incomes goes to pay for honsing, so we are dealing with a problem that affects not only the veteran but every person in the State of California. Furthermore, requirements of increasing population alone call for the erection and construction in the United States of 1.419 new homes daily according to the latest authentic statistics. These figures are arrived at by dividing the estimated 1927 population increase of $2,242,576$ persons by the mumber of dars of the rear and the resulting figure, 6145 , representing the arerage daily population increase, is divided by 4.33, the arerage number of persons in an American family. It then follows that in the 5500 veterans' homes of California, there are honsed 23.815 members of California's reterans' families.

    ## BOARD'S MONTHLY VOLUME OF PURCHASES RESTRICTED

    A revolving fund of $\$ 750,000$ is placed at the disposal of the board in banks, from which checks may be drawn for the purchase of property. In order to reimburse this revolving fund, the board must produce a policy of title insurance for each purchase showing that the property was actually deeded to the State of California, and, as the board's investments average close to $\$ 1,000,000$ a month and throughont the state the average time necessary to elose a transaction is twenty days, we are restricted to a disbursement of funds a little greater than $\$ 1,000,000$ at a time. The amount of this revolving fund is provided for in the Farm and Home Purchase Act, and unless the legislature should authorize an increase in this fund the board will be limited as to the rolume of purchases.

    ## ADDITIONAL BOND ACT REQUIRED TO ASSIST ELIGIBLE VETERANS

    It is apparent that when the funds now available have been entirely exhansted there will be 10,000 veterans' applications on file who will be mable to receive any benefits whatever, through the lack of funds. The Veterans' Welfare Bond Aet of 1921 provided for the issuance of $\$ 10,000,000$ in California state bonds to purchase farms and homes. The actnal purchasing of farms and homes began in July, 1920, and in less than three years the fund derived from the sale of bonds under the $\$ 10,000,000$ Bond Act was entirely invested. Then came the need for another bond act, so the legislature roted a $\$ 20,000,000$ Bond Act through recommendation of the Legion, which was ratified by the voters with a rote of nearly three and one-half to one in the November election of 1926 .

    The $\$ 20,000,000$ Bond Act was estimated to be sufficient to assist those whose applieations had been filed up to that time and who were
    serious and determined to eventually own their own homes, but the intensive investment program of the board and the favorable publicity given the bond act as well as the board's activities and aecomplishments gave an added impetus to the filing of applications stimulating interest in the work, resulting in the receipt of 10,000 more applieations during the year 1927 and the six months of 1928 that have passed. And there is no way to determine how many more applications are to come, for California has over 100,000 eligible veterans.

    By January, 1927, bonds were being sold under that bond act and the purchase of more farms and homes with the proceeds followed. Since Januars, 1927, to date (eighteen months) over $\$ 15,000,000$ has been invested from the proceeds of the $\$ 20,000,000$ Bond Act, or an average of over $\$ 850,000$ per month.

    To date over 4900 homes have been purchased for California's reterans, costing an aggregate sum of over $\$ 23,100,000$, and 250 farms, comprising over 6000 acres and costing $\$ 1,340,000$, are under cultivation by Califormia reteran farmers, making a total investment by the state to date of well over $\$ 24,440,000$.

    There remains at the present writing, $\$ 4,000,000$ in anthorized bonds unsold, as a part of the $\$ 20,000,000$ Bond Act voted by the people to 1926. That $\$ t, 000,000$ in bonds is now in process of ereation and will shortly be adrertised and sold about Oetober 1, 1928. With the investment of the funds derived from that sale will terminate the investment program of the Veterans' Welfare Board and end, by reason of a depleted farm and home building fund, the possibility of aiding other
    

    Five-room bungalow overlooking the city-San Francisco,
    reterans in a like manner, unless and until another bond act is enacted by the legislature in its 1929 session, endorsed by the Governor and subsequently passed by the electorate. To accomplish these acts the American Legion will again have to take the lead, do the legislative work and the field work, educating and acquainting the voters with the facts as to purposes, and convincing them with facts and figures that the act has operated without cost and has been successfully administered.

    France has more home owners, compared with the total population, than any other country in the world, which, no doubt, accounts for the willingness of the French people to battle in time of invasion. The grasses are greener and the poppies are redder where thousands hare lain on the battlefields as mute testimony of what man will sacrifice for love of freedom, country and home.

    ## LEGISLATION IS JUSTIFIED

    When one considers the gratifying results-that additional home owners mean a greater interest in the state's welfare, and that this is brought about not by charity, but by merely extending a helping hand to those who sacrificed the most that we all might prosper-it is clearly seen that the plan is thoroughly justified as one of the most constructive pieces of legislation ever enacted by an American commonwealth.

    Brockhoff, August W., Napa

    ## FINANCIAL REPORT

    Submitted herewith is a report on the financial condition and operations of the Veterans' Welfare Board. mnder the Veterans' Farm and Home Purchase Act as of and to June 30. 1928.

    This report consists of a discussion of the most significant phases of the following statements:

    1. Balance sheet as of June $30,1928$.
    2. Statement of income to June $30,1928$.
    3. Statement of expenditures to June 30, 1928.

    And of schedules in analysis of certain items of the balance sheet.
    To distinguish the financial activities under the Veterans' Farm and Home Purchase Act from those under the Veterans' Welfare Act and under the Califormia Veterans' Educational Institute Act, the information conveyed by this report is designated as pertaining to the Division of Farm and Home Purchases of the Veterans' Welfare Board.

    The funds. contractual rights and other properties constituting the assets of which the Division of Farm and Home Purchases is possessed as of June 30,1928 , are sufficient to offset all current and ummatured obligations and to absorb adequate reserves, including a "reserve for future expenditures" of $\$ 1,839,591.8^{2}$ - . This reserve corresponds very nearly to what in a commercial undertaking would be termed "surplus", but in the case of the Division of Farm and Home Purelases represents merely an excess of income accrued over expenditures incurred, which is restricted in its application to the lawful expenditures under the Farm and Home Purchase Act.
    The available cash as shown in the balance sheet is ample to meet all current liabilities. None of the ummatured liabilities fall due in advance of corresponding contractual rights, which are likewise in excess of obligations.

    Your particular attention is invited to the following schedule analyzing certain items appearing on the balance sheet:

    Schedule 1-Warrants receivable-as of June 30, 1928.
    Schedule 2-Revolving funds undistributed-as of June 30, 1928.
    Schedule 3-Revolving funds in escrow-as of June 30, 1928.
    Schedule 4-Reimbursements receirable-as of June 30, 1928.
    Scherlule 5-Yeterans' home purchase contracts-as of Jnne 30, 1:28. (Attached.)
    Schednle 6-Yeterans' farm purchase contracts-as of June 30, 1928. (Attached.)
    Schedule 9—Deposits—as of June 30, 1928.
    In addition to providing an analysis of the corresponding balance sheet items, certain of these schedules are designed to bring out such information as will materially aid in the proper interpretation of the items which they support.

    ## Schedule 1-Warrants Receivable

    This schedule lists those claims filed with the State Board of Control for approval, for which Controller's warrants have not ret been received.

    ## Schedlle --Revolning Funds Undistributed

    This schedule lists claims filed to reimburse a revolving fund for eserow deposits made therefrom and sinee released from eserow throngh the purchase of homes.

    ## Schedule 3-Revolying Funds in Escrow

    This schedule lists those deposits in escrow, made from revolving funds, which have not ret been released from escrow. An escrow deposit is considered released as of the date shown on the policy of title insurance covering the property purchased thereby, or as of the date on which the deposit is retmrned to the Veterans' Welfare Board.

    ## Schedile +-Reimbursements Receivable

    This schedule lists deposits in escrow which have been released through the purchase of homes, but for which reimbursements claims have not yet been filed with the State Board of Control.

    > Schedule j-Veterans' Home Purchase Contracts (See Schedule)

    > Schedule 6-Veterans' Farm Purchase Contracts (See Schedule)

    ## Schedule 9-Deposits

    This schedule lists those ereditors of the Division of Farm and Home Purchases for whose account the division holds deposits in trust, as shown by item 4 of the balance sheet.

    ## Explanation of Financial Statements

    The several items composing the balance sheet, as well as the statements of income and expenditure, are fully explained in an "Explanation of Financial Statements" smbmitted under separate cover in looseleaf form.

    The said explanation will be uniformly applicable to the financial reports of this division which it is proposed to submit to your board at monthly intervals, and will be added to from time to time as the need arises.

    Respect fully submitted.
    (Signed) George MI. Stout, Secretary.
    Sacramento, California, Jume 30, 1928,

    ## FIRE INSURANCE

    The Veterans' Welfare Board. after two years' negotiation, completed arrangements whereby veteran home contract holders under the Veterans' Farm and Home Purchase Act may obtain fire insurance of full and complete protection at a saring to the reteran of 40 to 60 per cent on the premium.

    The insurance is written by the National Union Fire Insurance Company of Pittsburgh, or the Merchants Fire Assurance Corporation of New York. All home properties situated in Kern and Santa Barbara connties and sonth are insured against loss by fire by the National Union Fire Insurance Company of Pittsburgh. All insurance on homes in comnties to the north of Kern and Santa Barbara is written by the Merchants Fire Assurance Corporation of New York.

    The records of the board disclose that on April 2. 1928, the date the board's blanket fire insurance contract become effective, upwards of $\$ 20,000,000$ worth of fire insurance had been written by orer 200 fire insurance companies, at a total cost to the reterans of approximately $\$ 150,000$, at an arerage rate of $i 5$ cents per $\$ 100$ of insurance for a three-year period. On a rearly basis, this protection cost around $\$ 50.000$. with a total recover of less than $\$ 5,000$ during the board's entire existence on fire loss adjustments on reterans' homes.

    Cnder the present arrangement, the same amonnt of premiums would have purchased the same amount of fire insurance for a period of five years instead of three, thereby effecting a saving of 40 per cent, or $\$ 20,000$, annually.
    

    The substantial residence of a capital city veteran-Sacramento.
    

    A veteran's home of obvious requirements in Inglewood.

    Since April 2, 1928, and under the master insurance poliey, the board has purchased insurance for an amount not exceeding $\$ 12,000$, which would have cost $\$ 20,000$ under the old plan; thereby saving to onr veteran beneficiaries, during the short period from April 2 to June 30, the sum of $\$ 8,000$.

    The master or blanket coverage, providing for certificates issued in each case, in the amount required by the Veterans' Welfare Board, or in the amount desired by the veteran, if additional insurance is desired, is ordered from one of the two eompanies, depending upon its location. at the premium rate of 75 cents per $\$ 100$ of insurance for five years' duration. The Veterans' Welfare Board orders the insurance with the placing of the escrow and the insurance is effective automatieally with the recording of the deed.

    The only other insurance acceptable to the board is coverage containing such features as given by our master policy, to wit:

    1. Fallen building clause waiver.
    2. The vacancy permit.
    3. The elimination of the increased hazard clause.
    4. The agreements that any fire loss adjustment will be made on the basis of the appraisement of the Veterans' Welfare Board.
    5. The elimination of all clauses that may invalidate the insurance during its existence.

    In addition to the saring in the eost of insurance to the reteran, there are advantages to this board, through the standardizing of the insurance instead of having it written by hundreds of companies of various financial standings, ratings and reputations. It also means that all policies will be uniform and faultless, thereby reducing the cost of handling. The fact that the policies are to rum five years instead of three eliminates from two to four renewals cluring the life of our usual home purchase contract.

    ## TITLE INSURANCE

    When the Veterans' Welfare Board was first organized, the problem of protecting the reteran's money as well as state's money against defeetive real estate titles immediately became apparent. The board was buying properties in nearly every county in the state which made the risk of fraudulent transactions that much more possible. For the board to consummate the purehase of each pieee of property itself, it would have been necessary for a representative of the board to go to the county courthouse in each county wherein property being purchased was situated. With the limited amount of help given the board, it was impossible for a representative of the board to be personally present to pay over the money and consummate these purchases.

    The board, after eareful study of this problem, deeided that the title insurance companies were the only agency able to represent them in every purchase and fully protect both the veteran and the board against loss on account of defective titles or fraudulent transactions.

    Therefore, every purehase of a farm or home has been escrowed through some title insurance company in order that the board might have the maximum of protection against frand, forged doeuments, illegal trusts, undiselosed community property rights and other risks whieh enter into the purehase of real estate. In every purchase a cheek for the agreed price of the property has been made payable to the title insurance eompany accompanied by definite written instructions, whieh plaees the entire responsibility of the title being properly vested in the Veterans' Welfare Board of the State of California.

    As soon as the deed to the board is reeorded the title insurance eompany issues its policy of title insurance, insuring that the board owns the property as therein described. These title insurance policies, unlike other insurance policies, do not have to be renewed. They remain in full foree and effect as long as the property is owned by the board, which protects the veteran in his purehase.

    The eost to the veteran of this protection has been very small, compared to what it would have eost him had the board employed enough additional help to handle all of the detail work involved iu elosing these transactions.

    ## VETERANS' WELFARE BOND ACT OF 1925

    ## (Chapter 430, Statutes of 1925)

    At the forty-sixth session of the legislature a bond act, designated as chapter 430 , Statutes of 1925 , was enacted for the purpose of providing an additional $\$ 20,000,000$ to continue the administration of the Veterans' Farm and Home Purchase Act. This act was submitted to the people for ratification at the general election in November, 1926, receiving a majority vote of nearly three and a half to one.

    ## ABSTRACT OF ALL PROCEEDINGS OF THE VETERANS' WELFARE FINANCE COMMITTEE

    The Veterans' Welfare Finance Committee as created by law is composed of the Governor, Controller, Treasurer, chairman of the Board of Control and the chairman of the Teterans' Welfare Board. George M. Stout, secretary of the Veterans' Welfare Board, was appointed secretary pro tempore by the Veterans' Welfare Finance Committee.

    Meeting No. 1 was held in the office of the Governor, State Capitol, Sacramento, California, at 2 p.m., on the seventeenth day of November, 1926. This meeting was called to discuss the matter of procedure preliminary to the authorization, creation, adrertisement and sale of bonds under the Veterans' Welfare Bond Aet of 1925. A resolution was adopted authorizing the creation and sale of $\$ 2,500,000$ in bonds, to bear interest at the rate of $4 \frac{1}{2}$ per cent on the basis of the plans and projects of the Veterans' Welfare Board.

    Meeting No. 2 was held in the office of the Governor, State Capitol, Sacramento, California, at 10.30 a.m. on the twenty-fifth day of April, 1927. This meeting was for the purpose of considering the plans and projects of the Veterans' Welfare Board and to determine the necessity for the issuance of additional bonds under the provisions of the Veterans' Welfare Bond Act of 1925 , preliminary to the authorization of the sale of such bonds. A resolution was adopted authorizing the creation and sale of $\$ 3,000,000$ in bonds to bear interest at the rate of $4 \frac{1}{1}$ per cent on the basis of the plans and projects of the Yeterans' Welfare Board.

    Meeting No. 3 was held in the office of the Governor, State Capitol, Sacramento, California, at 11.45 a.m. on the thirtieth day of August, 1927. The purpose of this meeting was to consider the plans and projects of the Veterans' Welfare Board and to determine the necessity for the issuance of additional bonds under the provisions of the Veterans' Welfare Bond Act of 1925 , preliminary to the authorization of the sale of such bonds. A resolution was adopted authorizing the creation and sale of $\$ 2,500,000$ in bonds to bear interest at the rate of 4 per cent on the basis of the plans and projects of the Veterans' Welfare Board.

    Meeting No. 4 was held in the office of the Governor, State Capitol, Sacramento, California, at $10.30 \mathrm{a} . \mathrm{m}$. on the seventeenth day of November, 1927. The purpose of the meeting was to consider the plans and projects of the Veterans' Welfare Board and to determine the necessity for the issuance of additional bonds under the provisions of the Vet-
    

    At the foot of the Sierras. A Roseville veteran's residence.
    erans' Welfare Bond Aet of 1925 , preliminary to the authorization of the sale of such bonds. A resolution was adopted authorizing the ereation and sale of $\$ 4,000.000$ in bonds to bear interest at the rate of 4 per cent on the basis of the plans and projects of the Veterans' Welfare Board.

    Meeting No. 5 was held in the office of the Governor, State Capitol, Sacramento, California, at $2 \mathrm{p} . \mathrm{m}$. on the third day of April, 1928. The purpose of this meeting was to consider the plans and projects of the Veterans' Welfare Board and to determine the neeessity for the issuance of additional bonds under the provisions of the Veterans' Welfare Bond Aet of 1925, preliminary to the authorization of the sale of such bonds. A resolution was adopted anthorizing the ereation and sale of $\$ 4,000,000$ in bonds to bear interest at the rate of 4 per cent on the basis of the plans and projects of the Veterans' Welfare Board.

    For a complete analysis of the Veterans' Welfare Board Bond issues to June 30, 1928, refer to "Financial Report of the Veterans' Welfare Board," on page 60 of this publication.

    ## POLICY OF THE VETERANS' WELFARE BOARD

    The original set of interpretative rules and regulations referred to in the early part of this report have stood the test most fully. In a number of instances the disallowal of claims under the different sections of the rules and regulations adopted resulted in a demand for reconsideration, and in such case the board referred the claims to the Attorney General of Califomia in order that both the board and the veterans might have the benefit of a just and impartial decision.

    The Veterans' Welfare Board has maintained throughout its tenure the announced poliey of a strictly fair, just and impartial consideration for every veteran. There is no instance where a reteran dealing with the board personally can not accomplish for himself as much or more than through a representative. The Veterans' Welfare Board has for
    its policy, maximm benefit to the reteran heneficiary, plus absolute protection afforded the citizens of the State of California who have so generonsly extended their credit to their returned soldiers and sailors.

    ## ACKNOWLEDGMENT

    Acknowledgment is herebr made of the valuable assistance rendered to the Veterans' Welfare Board in the administration of the laws enacted by the legislature of the State of California. as follows:

    The American Legion and other patriotic reteran organizations of this state have cooperated with their moral support to the fullest extent, which has been a great help in administering the Veterans` Welfare Acts justly and impartially.

    The State Treasurer. Charles G. Johmson, has given great aid in handling of all bond matters.

    The inheritance tax appraisers have been the source of much valuable information to the hoard in appraising property thronghont the varions counties of the state.

    Attorney General U. S. Webb has fully cooperated with the board in the protection of the interests of the reteran as well as the state.

    Adjutant General R. E. Mittelstaedt has contributed liberally to the board with the facilities of his office in verification of military records necessary to rerify service records of reteran applicants.

    Erery arency of the state govermment has griven the fullest support to the board wherever possible.

    Included in the above is the press of the state and the publications of the reterans organizations, all of which have been generous in the publicity given to the results of the board's efforts to disseminate information of interest to reterans and the public generally.

    ## EXTRACT FROM SUMMARY OF PROCEEDINGS OF THE NINTH ANNUAL CONVENTION OF THE AMERICAN LEGION, DEPARTMENT OF CALIFORNIA

    ## liesohtron No.:

    Veterams Wielfare leand Commembed
     corporate, ereated by the forty-fourth session of the cialifornia legislature amb charged with the daal task of serving the war veterans of the State of "aliformia and protecting the interests of the state, has impartially. efficiently and expeditionsly
     farms and homes for ('allifornial vetrrans: and.

    Whereas. There was passed by the forty-sixth sission of the legislature and subsequently ratified by the general electorate a $\$ 20.000,000$ bond Act to provide for further purehases of farms and homms for fualified C'aliforniar veterans; and.

    Whereas. said endorsement by the legislature and ratification by the wotors of the State of ("aliformia, of sald Vetrrans" Welfare Bond Act was dirertly attributable to the impartial, efficiont and experlitions administration employed by the Vetrrans' Welfare IBoard ; athl,

    Whereas, The Veterans Wolfare Roard is now and has been composed of veterans in entire symmathy and acorod with the work with which it is charged amd hats both as the agent of the state amd the servant of the veterans performed its trust in a businesslike, sympathetic and sale mamor for all concernerl: now, therefore be it

    Resolied. Iby the American Legion in convention duly assembled at Liantal larbara, C'alifornia, that this ronvention do apmowe and commend the fair amd refferent methods of administration, the symbathetie and considerate treatment acoorden the reterans, and the buteretion given the interests of the state by the Vererans Wotfare Boand of the state of ('illiformia.

    ## REPORT TO THE LEGISLATURE OF THE STATE OF CALIFORNIA BY THE CALIFORNIA COMMISSION FOR THE STUDY OF PROBLEM CHILDREN, CHAPTER 349, STATUTES OF 1927

    ## To the Legistature of the state of C'aliformia:

    Your Commission for the Study of Prohlem Children, estahlished by chapter 349 of the laws of 1927 , respectfully submits a report of its findings. The members ot the commission were appointed in February, 1928 , and have been active for the past nine months, holding public and private hearings in different parts of the State of California, seeking information and guidance from many groups of citizens who, through their knowledge and experience, are qualified to snggest methods of prevention of delinquency and means of adjusting predelinquent children. Your commission feels that the time allowed for its aetivities has been all too short. So extensive and complieated is this prohlem that in sueh a brief period only its outstanding phases could be considered. So manifold are the prohlems and so serious their significance that the members of the commission feel that the state needs the services of a similar group to contimue the work it has commenced. Public opinion in the State of California has heen aroused to a high pitch by the serionsness of juvenile erime. During our meetings in varions parts of the state we have found great interest shown everywhere in matters relative to the problems of delinquency and its prevention ; and miversal desire has been expressed that constructive legislation may be enacted during the forty-eighth session of the legislature, in order to meet some of the more ontstanding needs. For the sake of brevity and convenience, the findings of the commission are presented in four parts :

    Part 1 is deroted to an elaboration of some of the ontstanding needs of the State of California at the present time.

    Part II contains first a general statement of the problem of delinquener and its prevention. Thereafter, brief mention is given of other matters whieh have heen suggested for consideration by many persons of experience and authority throughout the state. Future plans of the State of California will have to consider these problems.

    Part III consists of a copy of the act which created this commission, a description of its origin, organization, activities, and seope of work. Brief mention is given of the meetings and conferences of the commission.

    Part IV consists of a bibliography of books and artieles bearing on the problems reported upon hy the commission. The members of the commission wish to express to Dr. Norman Fenton, Director of the California Burean of Jurenile Research, their appreciation for his valuable assistance in assisting the secrectary in the final editing of this report.

    ## PART I

    Some outstanding meeds of the State of C'alifonia in the prevention of delinquener:

    ## 1. The establishment of a separate state institution in California for the care and training of defective or psychopathic delinquents by the State of California.

    Case 1. A seventeen-year-old high school girl of a local city, employed as a maid in a private home, strangled to death the year-old haby of her employer, using a towel to accomplish her purpose. She then calmly telephoned the police, stating that she did not know why she committed this horrible crime, except that she didn't like her employer, and anyhow the bahy was constantly crying. The girl, apparently of normal intelligence, comes from a good family, her father being a teacher of langnages in a large high sehool. C'onvicted of first degree murder, she was sentenced to San Quentin for life.

    Case 2. Two lads were bathing in an irrigation ditch. One, a negro, held the other under water and watched him drown. Panic-stricken, he disappeared in the bushes and the hody of the white lad was found and removed by the parents. A few days later this colored lad stood before a judge of the juvenile court, a mirderer at the age of nine.

    Case 3. A wife, the mother of two children, passed down a side street on her way to her home. A form sprang ont from the shadows and, cleaving her skull with a blunt weapon, ranished in the darkness. Two days later a lad of sixteen faced a court of justice and recounted in a dull, expressionless monotone a confession of murder in cold blood.

    These cases represent examples of individuals who are mentally or morally defective. At the present time in California there is no institution to which individuals of this sort can be sent and kept before they actually commit some serious crime, or even if they are young, after they do so; yet it has been stated by eminent criminologists that such individuals can be recognized in early childhood, and should be eared for in institutions. As these individuals are examined in the school, the juvenile court, or elsewhere for minor offenses which they commit, the symptoms which they show are usnally significant enough to suggest the need of permanent custodial care ; yet the difficulty in the way of sueh commitments for the protection of society is the fact that these individuals are often not feeble-minded, nor insane in the usual classification of state hospitals, and not convicted of crimes serious enough to warrant their permanent retention in some state penal institution. What happens is that after they get into difficulty they are sent to an institution for a short time and then released, for to attempt to keep them for any long period of time is impossible under existing laws and institutional provisions. The consequence is that such individuals are repeatedly in court for minor offenses, and eontinue so to behave thronghont a long period of their lives, or mntil in some criminal escapade they commit an offense serions enough to warrant their retention in the penitentiary for a long period of time. It is the opinion of experts in the state of Massachusetts that the establishment of this type of institution has been of tremendous signifieanee in redueing erime, and, according to Commissioner Sanford Bates, has perhaps heen as signifieant a protection to societ! there as the banmes Law in New York.*

    ## Definition of individuals to be cared for in such an institution.

    The types of individual who would be liable to commitment to the institution herein suggested are those whose personality shows either a combination of mental defect and delinquency, or of moral defect and delinquency. The mental defective with antisocial or delinquent traits is usually the produet of faulty or defective parentage, combined with faulty or defective environment. Mental defieiency implies an inherent lack of intelligence, or the hereditary inability for the mental faculties to develop to a normal level. Delinquency in such cases is an acquired characteristic and is due to lack of proper supervision and training or to the presence of vicious training.*

    The moral defective who would be suhject to commitment to this institution is one who may be of normal or even of superior intelligence, according to the standard measurements of intelligence, ret who is deficient in moral sense to such an extent that he is not readily suseeptible to training or social adjustment at a state school. There are a great many dangerous twists of personality, smeh as marked eruelty, tendeney to arson, an uncontrolled desire to steal or assault, sex perversions, etc., which, from the standpoint of our present knowledge of these characteristies, are not subject to ready improvement. Individuals who possess these traits to a marked degree may be considered morally defeetive. They are antisocial in their attitudes, and for the protection of society and also for their own welfare, they should have special institutional care.

    It is pretty well recognized today that all eriminals are not mentally defective or insane, that a relatively large number must be considered to have normal intelligence. Many possess a moral twist in their personality which renders them exceedingly unstable and difficult to control. At present there are in California institutions approximately three hundred of these mentally or morally defective individuals. These persons whose defective mentality is the cause of repeated offenses need something more than the imposition of sueeessive short sentences in prison. The experience of psychiatrists shows that a considerable percentage of these persons can, with a long enough period of industrial training, become honest and efficient. They need special training which can not be given in the various jails and prisons during their brief sentences. Treatment ean not be properly given in the present state institutions because they do not provide the restraint and discipline which it is necessary to give to this group at the beginning of the term of instruction. It is very difficult to prevent these mentally or morally defective delinquents from running away; they interfere greatly with an intelligent and humane system of dealing with the ordinary state wards, and the assoeiation of these mentally or morally defective delinquent persons with other immates of state institutions is radieally wrong.

    The state of Massachusetts reports that the removal of the few adult defective delinquents from the Wrentham State Sehoolt has been followed by an improvement in morale, happiness, and general well being in the boys' department quite out of proportion to the smallness of the number remored from the school. The whole standard of morale

    and discipline has been materially improved. These mentally or morally defective eases have no place in the present state institutions, but are such a disturbing element as to cause considerable turmoil and unrest, therehy serionsly interfering with the program of training and adjustment.

    It is therefore the recommendation of the commission that a separate institution or department for defective or psyehopathic delinquents be established. While it is impossible to give accurate figures relative to the number of defective or psychopathie delinquents at large, it is generally coneeded that there are many at present preying upon the general publie who should be committed to the institution herein described. We find that the eourts of California are now ready to commit these defective or psychopathic delinquents to a separate institution, and that there can be transferred from the present state institutions enough defective or psyehopathic delinquents to warrant the immediate establishment of a unit of three hundred or more with the probability of considerable inerease.

    ## Description of the institution.

    The institution for defective or psychopathie delinquents should have many of the characteristies and facilities of a sehool, as well as the seemrity of a prison, and ret there should he eliminated, in so far as possible, all features shgestive of prison or jail. While it would be necessary to provide secure quarters for many of these defective or psychopathic delinquents, eertain types eventually become institutionalized, eausing thereafter little difficulty from a behavior standpoint, and are perfectly contented with the routine life of the institution. It would be unfair to these individuals were an institution of the purely cell-block type planned for these defective or psychopathic delinquents. It is the recommendation of the conmission that such an institution should be on the cottage plan with adequate facilities to insure it the security of a prison for those cases in which the danger of escape is evident.

    At the present time in Califomia the only institution to which this type of case can be sent is the School for the Feeble-minded at Pacific Colony and the Sonoma State Home. In such institutions they interfere serionsly with the ordinary instuction, immsements, oecupations, and pleasures of the feeble-minded. At the smoma State Iome, Doctor Butler has found that over 90 per cent of his diseiphinary problems arise from this group of defective or psyehopathie delinquents, eonsisting of 4 per cent of the sehool's population.

    It wonld he most desirable to have this institution hilt up as a new undertaking. However, hecause of the necessity which now prevails in our state institutions in the matter of the eare of sueh individuals and heeanse of the added expense to the people of the State of California involved in the constmetion of a new institution, the emergency may be met by the estahlishment of separate mits at the Somoma State IIome, wherein eareful segregation would be provided. The commission leek, howerer, that as soon as the state is finameially able to do so, such separate institution or institutions should be developed.

    Proposed Act
    An act to provide an institution for the confinement, care, traming and rehabilitation of defertive or psychopathir delinquents: to provide for the commitment of such delinquents and to provide penalties for cortain violations of the art.

    The people of the State of Californin do cmot as follou's:
    Section 1. This act shall be known as the "Act for the care of defective or psychopathic delingments." The director of institutions, with the approval of the state board of control, is hereby anthorized and dirceted to provide on the grounds of an existing state institution or institutions or other property owned or acquired by the State of California an institutional unit or units to be used for the enstodial eare and treatment of defective or psychopathic delinquents of both sexes, each of which said unit or units shall be known as an institution for defective or psyehopathic delinquents. and shall be administered ans provided by law.

    SEC. 2. Any person shall be held to be a "defective or psychopathic delinquent," within the meaning of this act who shall be found by the eourt on a hearing on an application for commitment as a defective or psychopathie delinquent, to be mentally defective or who, after examination by the court into his record, character, and personality, has shown himself to be an habitual delinquent, or who shows tendencies toward becoming sueh, and when in the opinion of the court such delinquency is or may become a memaee to the health, person or property, and when such individual is not a proper subject for the schools for the feebleminded, for commitment as an insane person, or as a person addicted to the intemperate use of aleoholic beverages or nareotie drugs, or for placement in any other state sehool, the court shall make and record a finding to the effect that the defendant is a defective or psychopathic delinquent, as is hereinafter provided.

    SEC. 3. Whenever it appears by affidavit to the satisfaction of a magistrate of a county or city and county that any person is a defective or psychopathic delinquent within the meaning of this act, he mist issue and deliver to some peace officer for service, a warrant directing that sueh person be arrested and taken before a judge of the juvenile. court or before a judge of the superior eonrt for a hearing and examination on such charge. Such officer mmst therenpon arrest and detain such person until a hearing and examination ean be had. At the time of the arrest a copy of said affidavit and warrant of arrest must be personally delivered to sueh person. Such affidavit and warrant of arrest must be substantially in the form provided by section 2165 of the Political Code for the arrest of pervons charged with insanity. The person charged must be taken before the judge of the juvenile court or before a judge of the superior court before whom said affidavit and warrant of arrest must be delivered to be filed with the clerk. The judere must then inform him of his rights to make defense to such charge and produce any witnesses in relation thereto. The judge must by order fix such time and place for the hearing and examination in open court as will give a reasonable opportunity for the production and examination of witnesses. Such order must be entered in the minntes of the court by the elerk and a certified copy of the same served on sueh person. The judge may also order that such notice of the arrest of
    such person and the hearing of the charge be served on such relatives of said person known to be residing in the county, or city and county, as the court may deem necessary or proper. The judge may cause witnesses to be summoned and examined before him, and after a hearing and examination, if he believes the person charged is a defective or psychopathic delinquent, the court must make an order that such person be confined in the institution for defective or psychopathic delinquents for an indeterminate period.

    Sec. 4. The court at the hearing must inquire into the finaneial condition of the person committed or the parent, guardian, or other person charged with the support of such person. if a minor, and if the court finds such person or persons able to do so in whole or in part, a further order must be made requiring him or them to pay, to the extent the judge may consider just, the expenses of the proceedings in connection with the commitment of such person, the expenses of the delivery thereof to the institution for defective or psychopathic delinquents, and to pay to the said institution at stated periods such sums as in the opinion of the court are proper during such time as the person committed may remain in the said institution.

    Sec. 5. Whenever a girl or boy is brought before a juvenile court under the juvenile court law, or if on the arrest of any person charged with crime in any court, it appears to such court either before or after jurisdiction, that such person is a defective or psychopathic delinquent within the meaning of this act, the court may adjourn the proceedings or suspend the sentence, as the case may be, and direct some suitable person to take proceedings under this act against the person before the court, and the court may order that, pending the preparation, filing and hearing, of the petition the person before the court be detained in a place of safety, or if a minor, be placed under the guardianship of some suitable person on his entering into a recognizance for the appearance of the person upon trial or under conviction when required. If upon hearing of the petition, or upon a subsequent hearing under this act, the person before the court, upon trial, or under conviction be found not to be a defective or psychopathic delinquent as herein defined, the court may proceed with the trial or impose sentence, as the case may be; or, if such person be committed to the said institution as a defective or psychopathic delinquent, whenever thereafter the superintendent of the branch wherein said defective or psychopathic delinquent is confined and the director of institutions shall certify to the committing court that such person has been sufficiently treated, or shall give any other reason which is deemed by the court to be adequate and sufficient, the court may order the parole or discharge of the person so committed, or may order his or her return to await the further action of the court.

    Sec. 6. Any person committed minder the provisions of this act, except such persons as may be committed under the provisions of section 5, may, if deemed safe, be paroled by the superintendent of the branch wherein such defective or psyechopathic delinquent is confined, after a careful study of the case history and behavior record under such terms and conditions as may be established. Any such paroled immate may at any time during the parole period be recalled to the institution. The period of parole shall in no case be less than two
    bears, at the expiration of which time the superintendent, if he deems it safe to do so, may either extend the parole or discharge the inmate.

    SEr. 7. Witnesses at hearings for the eommitment of defective or psychopathic delinguents shall be entitled to receive the usmal fees and expenses allowed hy law in other cases in such courts; and any fees or traveling expenses payable to any witness in any procecding for the commitment of a defective or psychopathic delinquent, and all expenses connected with the execution of any process under this act. which may not be paid by the defective or prechopathic delinguent or his parent, guardian, or other person charged with his support if he be a minor, shall be paid by the connty treasurer of the county in which such person resides.

    Sec. 8. It shall be the duty of the sheriff of any county wherein an order is made by any court committing any person under this act, or of any other person designated by the said comrt, to execute the writ of commitment, and to receive as compensation therefor such fees as are now or may hereafter be provided by law for the transportation of prisoners to the state prison, and payable in the same manner; provided. that in all cases the parent, guardian or other person charged with the support of such person, being a minor, may, at his option, with the approval of the court, and in all cases where he is able or the estate of such person is sufficient, shall. if the said court approve. without expense to the county or state, execute said writ, after being duly sworn therefor, with like effect and with like powers as the sheriff would have; but no female person committed shall be taken to the said institution by any male person not her husband, father, brother or son, without the attendance of some woman of good character and mature age, chosen for the purpose by the court, which woman shall, if the court see fit. be paid therefor such reasonable remuneration as the court may allow.

    SEC. 9. For each person committed under this act there shall be paid by the county or city and country of which he is a bona fide resident, to the state treasurer, to the credit of the general fund of the state the sum of twent $y$-five dollars ( $\$ 25.00$ ) monthly for and during each month or part of a month such person so committed remains an inmate of the institution, in case the payments herein provided to be made by the person committed, or by his parent. guardian, or other person charged with his support, he being a minor, should not be made, and to the stent they are not made, not exceeding wenty-five dollars ( $\$ 2.5 .00$ ) per month.

    Sec. 10. Each enunty auditor must include in his state settlement report rendered to the controller in the months of May and December the amount due by reason of commitment under this act, and the county treasurer, at the time of the settlement with the state in such months, must pay to the state treasmrer, mpon the order of the enntroller, the anomits found to be due lyy reason of the commitments herein referred to.

    SEc. 11. Within thirty days after the huildings herein provided for are prepared to accommodate them, the department of institutions shall arrange for the commitment and transfer to said institution all persons then immates of any other institution in the State of California who may come under this act. The expense of such commitment and transfer is chargeable to said state, and the bills for same, when
    appoved by the department of institutions, must be paid by the treasurer of the state on the warrant of the enntroller out of any mones: provided for the care and maintenance of $d$ or $p$ ds.

    Sec. 12. In the event of the commitment and transfer of any immate or patient as provided in section 11 of this aet the liability of any estate, person or county for the care, support and maintenance of such person, shall be the same as it was to the institution from which the transfer is made.

    Sec. 13. Any person not authorized by law, who brings into the said institution, or within the grounds thereof, any opium, morphine. cocaine, or other nareotic, or any intoxicating liquor of any kind whatever, except for medicinal or mechanical pmrposes, or any firearms. weapons or explosires of any kind, is guilty of a felony:

    Sec. 14. If any person procure the escape of any inmate of the said institution, or adrise, comnive at. aid on assist in such escape, or conceal any such immate after such escape, he or she is guilty of a misdemeanor.

    Sec. 15. Anyone who shall knowingly contrive to have any person adjudged a d or p d under this act, unlawfully or improperly: shall be cleemed guilty of a misdemeanor.

    Sec. 16. The invalidity of any part of this act shall not be construed to affect the validity of any other part capable of having practical operation and effect without the invalid part.

    ## 2. The twenty-four-hour school,

    The original twenty-four-hour school bill was presented to the legislature of California in 1917 by the late Fred C. Nelles. He was also the author and sponsor of two other bills having the same purpose, one in 1921, and another in 1925. Because of his broad experience with the problem child, Mr. Nelles laid emphasis upon the twenty-four-hour school as an important feature of any adequate program of preventing delinquency. The plan for such schools gained increasing popularity with the passing rears and bills twice passed the state legislature, but failed on each oceasion to receive the Governor's signature.
    During the session of the legislature in 1927 there were more than a dozen measures prenented, based on the plan of providing twenty-fourhour care for certain children of school age. This was notable testimony of the extent to which the proposed school had grown in popular desire.

    These measures presented a wide and varring diversity of understanding of the nature of the twenty-four-hour school. As a result of conferences with the Governor, it was suggested that instead of attempting at that time to present a specific twenty-four-hour sehool bill, a study be made of the entire problem of "the prevention of juvenile delinquency and the proper care and training of predelinquent. delinquent, perchopathic and maladjusted children." Mr. Nelles thereupon prepared the bill creating the California Commission for the Study of Problem Children.

    Investigation by this commission has shown a widespread faith in the fundamental somidness of the idea of a twenty-four-hour school anong the inhabitants of the state.

    The type of child who would be helped by twenty-four-hour care is for the most part one who is likely to become delinquent unless something drastic is done in providing adecuate care and supervision for him. Examples of the children in question are those who are unmanageable in school; those whose homes are so inadequate as to be dangerons to their welfare; those who are a menaee to the other children in the neighborhood by virtue of their viciousness or immorality. These children will be cared for in the twenty-four-hour sehool and there given the needed training for good citizenship.

    The child who is habitually truant, who is insubordinate, dishonest, or who shows other sigus indicative of future criminal or antisocial behavior needs first of all a complete and thorough examination, and then a definite daily program of carefnlly planned and supervised activities. The twentr-four-hour school will provide continnous and thorough clinical observation. It will have facilities for moting the behavior of the child in all sorts of situations : sehoolroom, playground, workshop, dining room, playroom, and dormitory. All these aspects of the child's life may be studied under the anspices of a staff of trained persons. Then if recommendations are made they ean be carried out, because the twenty-four-hour school will have the child all the time and will have complete authority to arrange the child's environment so as to bring about desired habits and attitudes to replace those poor ones in the child likely to lead him sometime to the criminal court.

    Any sort of institution, even a school of this sort, is a place of last resort. The children placed there will be such that the best foster-home placement would not help. They will be cases of such seriousness as to require constant care under expert direction for the entire day and night, such as is not possible anywhere else in the community at present.

    It should however, be noted that the bill eontains definite safeguards to prevent the sending to such schools of children who can be better cared for in the community. The twenty-four-hour school serves as a last resort for children who, in the opinion of the board of admissions, will otherwise get into serious difficulty and into the juvenile court. The board of admissions, consisting as it does of reprersentatives of so many different departments of the city government, will prevent the sending of children to such a school because of some principal's prejudice, some teacher's irritation or some probation officer's annoyance. The personnel of the board of admissions is such that all possible safeguards are planned to prevent any injustice to a child. On the other hand, all possible opportunity is given for a careful and thorough consideration of each child as an individual-with a view to the child's best interests and future well-being, and to the protection of society.

    The twenty-four-hour school bill which follows was designed to mect the needs of such children. The measure presented is merely an enabling act. It would permit certain elementary schonl districts, with the approval of the State Board of Education, fo add to their present school equipment twenty-four-hour schools of the type outlined in the accompanving bill. The need for such schools is seen to be most acute in the more populous centers. The twenty-four-hour schools established
    by the larger cities will be standardized, and eventually, when the necessity becomes apparent, the idea can be extended by legislative action, and made universal throughout the state.

    ## Proposed Twenty-four-hour School Act

    An act providing for the establishment and maintenance of twenty-fourhour elementary schools by clementary school districts with the approval of the state board of education, providing for the admission to such schools and providing for the government, control, conduct, and support thereof.

    ## The people of the State of California do enact as follows:

    Section 1. This act shall be known as the "Twenty-four-hour school act."

    Sec. 2. The purpose of this act is to authorize the establishment of twenty-four-hour elementary schools for minors between the ages of eight and sixteen years and to provide for the attendance, maintenance, care, home supervision, guidance, observation, and education of those attending such schools, and to provide such minors with such vocational, home-making, mental, moral, physical and such other training as will tend to strengthen and develop such minors and enable them to become good and useful citizens. It shall be the duty of the staff of every twenty-four-hour school to make adjustment as rapidly as possible in order that the period of time the child is away from ordinary community life may be as brief as possible; to place such minors in proper homes where they will be assured of suitable educational opportunities, and to cooperate with child placement agencies to this end and to stimulate proper care of such minors by their parents.

    Sec. 3. Any elementary school district, with the approval of the state board of education, may establish and maintain one or more twenty-four-hour elementary schools in the discretion of the governing board of such district. Such school or schools shall be under the management and control of the governing board of the district which shall have in reference to such school or schools the same powers and daties which are now or may hereafter be assigned by law to such boards for the management of other schools of the district. A twenty-four-hour elementary school, as in this act designated and provided for shall be one of the public elementary schools of the district.

    SEc. 4. The governing board of any school district maintaining a twenty-four-hour school shall, upon the recommendation of the superintendent of schools of the district, appoint a board of admission to said twenty-four-hour school consisting of a child psychiatrist, a child psychologist, a member of the board of education, a representative of the welfare or charities department of the district in which the school is located, if such a department exists, and one other person designated by said superintendent. The prineipal of each twenty-four-hour school, the superintendent of schools of the district and a representative of the state department of education shall be ex officio members of said board of admission. Admission of pupils to a twentr-four-hour sehool shall be by one of the methods hereinafter provided.

    SEc. 5. It shall be the duty of the said board of admission itself or through some person or persons designated by it to investigate the case
    of any child whose name is submitted to it for eonsideration for admission to such school and to make recommendations to the superintendent of schools of the distriet in each case.
    SEc. 6. The governing board maintaining twenty-four-hour schools may assign to sueh school any minor between the ages of cight and sixteen years who is a resident of such school district, without parent or guardian. or whose parent or guardian does not exercise proper care, supervision and guidance over him, or who is, by reason of insubordinate conduct, or refusal to obey the rules and regulations of the school anthorities, in need of special educational training and diseipline to prerent him from becoming subject to the provisions of the juvenile court law, approved June 5. 1915, as amended. Any such pupil may be assigned to such school by order of the superintendent of schools of such district, approved in writing be the parent. or guardian. If the parent or guardian of sueh pupil shall enter intn a contract with the school distriet for the support of such pupil, he may be maintained in such sehool for the period of the assignment.

    Sec. 7. If the parent or guardian of any such pupil shall refuse to enter into a contract providing for the payment to the sehool district of a sum sufficient to meet the average cost of maintaining a pupil within such school including meals and a reasonable sum for lodging, and if the presence of the child within another sehool of the district or within its home is a menace to the future wellare of other children or of the child itself, it shall be the duty of the superintendent of schools of the district to cause to be filed in the superior court of the county in which such distriet is located, acting in such department thereof as shall be performing the functions of the juvenile court, or in any other court of competent jurisdiction a complaint asking for an order of the court, committing the child to such twenty-four-hour school and fixing the amount such parent or guardian must pay for its maintenance therein until such time as the superintendent of schools of the district shall report to the court that the best interests of the minor will be served by its discharge from such school. Should sueh pareut or guardian be unable to pay such amount the court may on such order provide for the payment by the county in which such district is located a sum sufficient to cover the costs of maintenance of such child during the period of its commitment to the school.

    Sec. 8. It shall be the duty of the principal of any school in the district in which there has been established a twenty-four-hour school to report to the superintendent of schools of that district any pupil in his sehool who he believes comes within the provisions and intent of this aet. This report shall be in writing and shall set forth the facts upon which he believes that the child comes within the provisions of this act.

    Sec. 9. Any minor who shall have been placed in the care and control of such twenty-four-hour school with the consent of the parent or guardian, shall remain therein, if placed therein by order of the superintendent of sehools of the district, for the duration of the period provided by said order or until further order of said superintendent of schools of the distriet; provided, however, that in any event the superintendent making such order shall review the same at intervals of at least twice a year following such order and upon such review may order the con-
    tinuance or termination of the stay of the child in the twenty-four-hour school.

    Sec. 10. If the minor shall have been placed in the twenty-four-hour sehool by order of the superintendent of schools of such district, the parent, or guardian with whose consent such minor was so placed in such school, shall have the right, upon application to the superintendent of schools who placed him therein, to secure the release of said minor and his restoration to the care, custody and control of such parent or guardian. The superintendent of the district shall require a written report from the principal of the twenty-four-hour school, giving the progress of the child and the advisability of release of such child from the twenty-four-hour school and in case such report indicates that the said minor is in need of further care and treatment, that his release would be detrimental to his own welfare or the welfare of others, then the superintendent of the district may report the minor to the juvenile court or other proper court for action, as provided under the juvenile court act of the State of California.
    Sec. 11. If at any time in the opinion of the principal of such twenty-four-hour school the further detention therein of said minor shall be detrimental may immediately, upon order of the principal be returned to the superintendent of schools of the district in which the school is located or to the court which committed the child, as the case may seem necessary for the best interest of the child.
    Sec. 12. Any pupil who absents himself from any twenty-four-hour elementary school without permission therefor being first obtained from the principal thereof shall be deemed an habitual truant within the meaning of subdivision ten of section 1 of the juvenile court act and dealt with as such.

    If any person contributes to the absence of any pupil from such school without permission first having been obtained from the principal thereof, or advises, connives at, or aids or assists in such absence or conceals any such pupil after any such absence, such person is guilty of a misdemeanor.

    SEC. 13. The course of study for said pupils and the method or methods used in enforcing said course of study shall be approved by the governing board of the district. There shall also be provided in such school or schools the proper facilities and equipment for rocational and trade training.

    Sec. 14. The principal shall reside in the twenty-four-hour school and shall be furnished suitable quarters, furniture, food, supplies and laundry for himself and his family. The governing board of the district may make provision for maintenance of such individual instructors, officers, and employees as the interests of such sehool or schools may in its judgment require to reside on the premises.

    Sec. 15. Each twenty-four-hour sehool may conduct clinies for the diagnosis and observation of children and to advise parents and school authorities regarding courses of study or treatment in the interests of the normal development of any child and to prevent waywardness and delinquency.

    Sec. 16. The const of securing sites or constructing and equipping huildings and in general the cost of housing and equipping twenty-fourhour schools including the necessary dormitories, dining halls, and other
    living quarters for pupits and employces of the district shall be a charge against the funds of the school district maintaining the same. The governing board of any such district may employ such principals, assistants, teachers, and employecs as are necessary in the judgment of the board for the proper conduct of such twenty-four-hour sehools and pay: them from the funds of the sehool district. All expenses of lodging and boarding pupils residing within the buildings of any twenty-fourhour school shall be paid from the sums received from contracts with the parents or guardians of the pupils within such school or from the funds of the county within which such school is located paid to the school district in pursuance of court orders for the maintenance of pupils therein.

    Sec. 17. The superintendent of public instruction shall apportion to every combly wherein one or more twenty-four-hour elementary sehools are established, an amount equal to one-half of the excess cost of educating pupils in such schools during the next preceding school year as computed by the various county superintendents of schools as provided in this act ; provided, that such apportiomment shall not exceed one hundred dollars per pupil for each pupil in average daily attendance at such school during the said year.

    There shall be set aside from the moners so received an amount sufficient to provide the necessary supervision by the state board of education. Apportionments made under the provisions of this section shall be in addition to any other apportionments made from the state school fund on account of the average daily attendance at such schools. No money shall be so apportioned unless such twente-four-hour elementary schools meet the requirements of the superintendent of public instruction based upon educational standards and standards established by state agencies authorized be law to inspeet or supervise childcaring institutions.

    On or before the thirty-first day of December, 1929, and on or before the thirtieth day of June and the thirty-first day of December in each succeeding year, the state controller shall transfer from the general fund of the state, to the state school fund, such sum, in addition to the funds already provided by law, as the superintendent of public instruction certifies is required to reimburse the several counties for one-half the excess moneys actually expended by the elementary school districts thereof for the education of pupils in twenty-four-hour elementary schools as provided in this act; provided, that such added amount shail not exceed one hundred dollars per pupil in average daily attendance therein during the next preceding school year.

    The state treasurer shall transfer from the general fund to the state school fund such sum as certified to him by the state controller under the provisions of this section.

    SEc. 18. The county superintendent of schools of every county must apportion from the state and county school moneys for the clementary grades of his county, to each school district establishing and maintaining a twenty-four-hour elementary school under the provisions of this act, an amount equal to the excess cost of educating pupils in twenty-four-hour elementary schools in said district during the next preceding school year as computed by him as provided in this act; provided, that such apportionment shall not exceed one hundred dollars
    per pupil for each pupil in average daily attendance at such school during said year. The apportionment made under the provisions of this section shall be in addition to any other apportionment made on account of average daily attendance of pupils at such schools.

    Sec. 19. This act shall be construed in conformity with the intent as well as the express provisions thereof and shall confer upon the governing board of any twenty-four-hour school or schools that may be created under the provisions of this act, authority to do all those lawful acts which it or they may deem necessary to promote the prosperity of such school or schools, or to promote the well being and education of all minors entrusted to their charge. In construing this act the singular shall include the plural and the plural the singular, and the masculine shall include the feminine.

    If any section or portion of this act shall at any time be declared unconstitutional or contrary to law, the balance of this act shall not be affected thereby, the intent of the Legislature in enacting this law being to make all parts thereof separable and independent so that the validity of any one part or portion shall not be affected or impaired by the invalidity of any other part or portion.

    ## 3. Clinical care of children by the local community and by state traveling clinics.

    In the hearings held throughout the state, there was universal agreement regarding the desirability of early clinical analysis of maladjusted children. By clinical analysis is meant the study of the child from every angle-physical, mental, social and educational, in order to find out the reason for his difficulties and to suggest a program for overcoming them. The commission recommends strongly that everything possible be done to encourage communities to develop adequate child guidance clinics of their own or in cooperation with nearby communities. These clinics have now become well-established features of all progressive cities. Where child guidance clinics have been tried out over a period of years, definite results have been obtained in the solution of the behavior difficulties from which children in such communities have suffered. Child guidance clinics have worked in cooperation with the school departments and have afforded much needed instruction to administrators and teachers in child guidance and mental hygiene. Aside from being an essential element in the reduction of delinquency and the cost of juvenile crime, their practical value to the school is apparent when one realizes that an unduly large proportion of a teacher's time and energy is given to such maladjusted children at the expense of the other children in the class. This involves two serions considerations; first, the fact that the ordinary teacher usually is able to do very little good for the problem child, since she lacks the training or facilitics necessary to adjust such problem children in the classroom; and second, the school progress of a large number of other children is disturbed and interfered with, because an undue amount of the teacher's attention and energy is given to the problem child. The situation is unfair to the children, the teacher, and the citizens of the community who support the schools. The child guidance clinic, then, serves as a means of getting expert assistance for the teacher and principal in meeting difficulties presented by
    individual problem children. Wilightened communities everywhere have accepted the need for school physicians and murses. The need for the child guidance clinic has now likewise become apparent. Investment of public money in expert assistance of this sort means greater happiness and effectiveness for citizens of the future, and less social and industrial maladjustment, with their resulting crime or mental disease.
    The child guidance clinic as a community undertaking is obviously impossible in the smaller communities and rural sections for many years to come; however, the problems of maladjustment among children are just as frequent and as serions in the smaller comnunities as in the large cities. Snaller communities everywhere have been helpless before this problem because of lack of adequate facilities to meet it. For this reason, the commission recommends strongly that there should be further extension of the work of traveling clinics operating from state institutions. Upon request of the schools or juvenile courts, such traveling elinics will go to outlying districts and render such expert clinical services as are required of them. The state of Illinois at the present time operates several traveling clinies visiting upon invitation many communities throughout the entire state. These clinics have now been in operation in Illinois for a number of years. Their value to the community is shown by the fact that these communities themselves contribute the sum of $\$ 170,000$ a year to maintain and continue this work. These clinics started originally as a demonstration at the expense of the state of Illinois. Recognizing the value of this clinical service, the communities voluntarily paid the expenses of the traveling clinics for the second year, and since then have contributed annually the sum of approximately $\$ 170,000$ for the continuance of this service, relieving the state of this expense. At the present time, various clinics operated by the state of Illinois through the Illinois Bureau for Juvenile Research are scheduled for twelve months in advance. This illustrates the attitude of a local communityregarding the desirability of such clinical service. Nembers of the commission have personally visited and studied the Illinois Plan and the Director of the Illinois Institute for Juvenile Research appeared before the commission in one of its hearings.
    The traveling clinic should be conducted on a definite schedule of appointments for the communities of the state. It should consist of a child psychiatrist, a psychologist, a psychiatric social worker, and a clerk. When the clinic visits a community, children who appear to be problems in the school or have already appeared in the juvenile court may be brought before this clinic and thoroughly examined. The examination is followed by a conference with those concerned with the child's welfare and the proposal of definite recommendations. An attempt is made to treat the home as well as the child. Later, the traveling clinic returns to the community to handle additional cases and to find out about those which were before it previously.
    4. Investigation into the causes of delinquency and the prevention of juvenile crime.
    The keynote of opinion everywhere wats that the primary need of the state is preventive work. This is, of course, the most sensible approach.

    Make all possible provision for those now delinquent, but prevent other children from becoming so. In order to prevent delinquency one must understand it. To arrive at understanding, one must inquire, investigate, and scrutinize. These last three words are the dictionary synonyms for rescarch. All too often research is considered merely as the search for new knowledge, but it is in addition the utilization of old. A bureau of research is an organization to gain new knowledge, but also to apply the most recent discoveries in practical, every-day situations.

    Research work into the problems of delinquency has been carried on in this state since 1917 by the California Bureau of Juvenile Research. Unfortunately, the appropriation for this work was vetoed in 1923, just as the work had begun to result in notable accomplishments. Consequently, though at that time California was in the forefront of progressive states in research work in juvenile delinquency, and persons came from all over the world to study our organization, today we are far hehind other states in this regard. There is little doubt that had such investigations continued California would have been amply repaid for its investment. When one considers that our ordinary juvenile crime bill is well up in the millions yearly, that, for example, one defective boy in California has been responsible for over ten million dollars in fires in various parts of the state, a small amount invested in practical research to prevent further depredations of this type is sound business economy.

    The California Bureau of Juvenile Research needs to be restored in order that California may again attempt to face its problems of juvenile crime. The work of this bureau is concerned for the most part with carrying into all parts of the State of Califormia, especially the smaller communities and rural sections, those methods of caring for maladjusted children which modern science has defined as the best. The Commission feels that the proposed budget of $\$ 40,000$ covering the activities of the California Bureau of Juvenile Research for the next biennium should be approved. The objectives of this appropriation are the following:

    1. To send a traveling elinic to communitien rerguesting sueh services in order to study and treat children whom teachers, parents, or probation officers feel are maladjusted and are actual or prospective delinquents. This is practical preventive work, carried on at a minimal expense to the state and eventually to be subsidized largely by the local communities. In addition to assisting the communities in connection with problems of predelinquency, this group will give advice on matters of vocational guidance to boys and girls in the public schools.

    The value of this direct clinical service to the people of the state of lllinois is summarized by the criminologist of that state as follows: "There is a growing realization that this preventive work is an economy from the point of view both of the state and the individual. It saves money for the state by helping men, women and children, who otherwise would have to be supported in state institutions, to become free sustaining members of a social group. In helping men to understand the problems of their own lives and how to meet these problems with courage and patience, this guidance makes for a greater measure of happiness on the part of the individual, and increases his contribution to the group."

    Another equally significant point testifying to the value of this work is the faet that the people of the state of Illinois spend almost $\$ 400,000$ annually on research work. The traveling elinic idea is so successful there that the local commmities voluntarily expend $\$ 170.000$ annually for the services of state traveling elinies. The work accomplished with actual cases of problem children in the community has becu of very great service in reducing juvenile crime.
    2. Educational work. Teachers, parents, social workers and others having contact with children need to be kept informed of the latest developments in the line of preventive work with children. Leetures on delinquency and its prevention will be given, upon request, by members of the staff of the California Bureau of Suvenile Research to parent-teacher associations, service elubs, women's clubs. parent study groups, high sehool and college students and elsewhere. It is planned also to broadeast radio talks for the general public, dealing with this subject of juvenile crime and its prevention.
    3. Regular clinical service to state institutions. The bureau will continue as in the past to provide clinical service to the Whitter State School, the California School for Girls at Ventura, the Preston School of Industry and other institutions. This type of service is essential if the work of these institutions is to be successful. The more thoroughly each boy and girl is studied, understood and treated, the less likely is it that he or she will be a further social and financial burden to the state. Furthermore, the communities into which these boys and girls go after release from the state schools, will derive security in proportion to the extent to which the officials of such institutions can predict and direct the behavior of the boy or girl when he or she becomes once more a free agent in society.
    4. Investigations. There is a great necessity for the scientific study of the many problems of delinqueney and maladjustment in children. The thorough aproach to the study of individual children which the facilities of the California Burean of Juvenile Research will offer make almost certain the achievement of new and valuable insights into child psyehology. It should be noted that all great advances in the practieal treatment of human ills have been based upon preliminary research into the nature and circumstances attending them. The problem of prerenting delinquency and reducing erime is no exception to this rule. The Director will supervise research work in the burean and cooperate with graduate schools of the universities of the state in furthering researeh. This phase of the bureau's work would not not be an academic exereise but rather a highly practical approaeh to the problems of juvenile relinquener.

    ## 5. A state reformatory for first offenders.

    For many years there has existed a recognized need in Califoruia for a reformatory to take care of young men. At the Preston School of Industry there are many eadets who do not properly beleng in that type of institution. Becanse of their antisocial behavior and unwillingness to adapt themselves to institutional regulations and courses of training as nffered at the Preston School of Industry, they become very
    serious disciplinary problems. By their interference with the more moderu methots of treating delinquents and their many attempts to eseape or to assault the supervisors in charge of their groups, stronger facilitips are necessary than those afforded at the Preston School of Industry, yet their offenses are not serious enough to warrant their incarceration in a state penitentiary. There are at the present time approximately five hundred first offenders under twenty-four years of age in the state penitentiaries of California. Many judges in California have expressed their regret at having to sentence many of these first offenders to state penitentiaries; but they have no other alternative beeause of the lack of proper facilities to eare for them in any other existing state institution. Many of these men are redeemable and could be returned to soeiety. Yet the stigma of being an ex-convict is so strong that it seems often impossible for them to secure satisfactory or steady employment upon their return to society. The state takes away their liberty for a period of years, during which they are given no instruction which would enable them to enter some gainful employment upon release. They are turned loose upon society withont supervision from the releasing institution and with no preteuse of adequate follow-up or after-care. It is not surprising that many of them turn in the direction of their former experiences and are sooner or later committed to the penitentiary for a second offense.

    The establishment of a reformatory trpe of institution to take care of this group would greatly reduce the number of recidivists now found in the state penitentiaries. Moreover, it wonld relieve the present overcrowded and unsatisfactory condition at the Preston School of Industry. In addition it would afford an opportunity for the proper segregation of state charges, for their rocational guidance and trade training, and for the development of an adequate parole system. These would in a large measure help to solve many of the perplexing problens surrounding this group.

    It is hoped that slould such an institution be created in California it will not be constructed on a penitentiary plan. The cottage plan should prevail in the institution for those who respond to fair treatment. Adequate provision for those who need strict inearceration should likewise be part of the institution, thongh not so conspicuous as to be the dominant note of its architecture.

    ## 6. To improve the standards and develop state supervision of probation.

    As a result of an informal study of the probation system, in which the very hearty and genuine cooperation of many of the chief probation officers of the state was enlisted, it was made obvions to the commission that a great deal of variation exists from county to county in the work of probation officers. A very signifieant need thronghout the state at the present time, from the standpoint of the care of delinquents and the prevention of juvenile crime, is a uniform system of probation. There are many problems involved in the field of probation-matters of personnel, salary, jurisdiction, nethods of reports, and supervision. The commission feels that some definite assistance from the state is rssential to properly coordinate the aetivities of probation work in the several counties. They feel that it might well fall within the jurisdie-
    tion of the Department of Public Welfare to undertake the establishment of a more uniform system of probation throughout the state.

    ## 7. A mental hygiene survey of the state.

    There is a very apparent need for a mental hygiene survey of the State of California. This need has been emphasized by many forwardlooking persons in the state who realize that without accurate knowledge of conditions, nothing very effective can be achieved in the matter of prevention of mental disease and mental abnormality throughout the state. The people of California need to know just what is the problem of mental disease and maladjustment which now confronts them. For example: Why are so many maladjusted ehildren following a career of juvenile erime? What are the needs of California in the field of mental hygiene? Only a scientific survey eonducted on the principles of the most advaneed methods of research ean give this information. It is therefore highly desirable that such a survey be made and that California know its problems and definitely plan to meet them.

    ## Proposed Act

    An act authorizing the governor to appoint a committce to conduct a. mental hygiene survey in the State of California and making an appropriation to defray the expenses of such a survey.

    The people of the State of Califormia do enact as follous:
    Section 1. The governor of California is hereby authorized, empowered and directed to appoint a committee composed of the directors of the state departments of education, institutions, health, and social welfare and three other members to make a study of the entire subject of mental hygiene in its relation to the population of the state and to report its findings and recommendations to the governor and to the legislature of California at its forty-ninth session.

    SEc. 2. The director of the state department of publie welfare will act as chairman of the eommittee and will eall necessary meetings and make all neeessary arrangements for carrying out the details involved in the activities of said survey in conformity with the plans of the committee.

    Sec. 3. No member of the committee shall receive any compensation other than actual and necessary expenses incident to the performance of his duties on the committee. Any member of said committee unable to attend meetings ealled by the chairman, shall be represented by some duly appointed substitute.

    Sec. 4. Said eommitteee shall have power and anthority to employ such expert and other assistanee as in its judgment shall be neeessary to the proper performance of its duties.

    Sec. 5. There is hereby appropriated out of the general funds in the state treasury not otherwise appropriated, the sum of twenty-five thousand dollars for the expenses of said survey. Said appropriation shall be made to the department of social welfare to be administered hy said department.

    ## 8. State recreational program.

    Among the many deterrents to juvenile delinquency that were suggested was that of reereational opportunities for children. Children need satisfying outlet for their abundant energies, and if an adequate opportunity is given for play they would sooner engage in that than in some form of malicions mischief. The problem of providing adequate recreational opportunities throughout the state is a very important one on this account.

    It would be rather difficult to outline without further investigation the means by whieh a state program of recreation could be effected. It has been suggested that the department of education of the state include in its personnel someone who would be in charge of recreational work. This person's duties would be to interest communities in the establishment of recreational centers and to suggest recreational activities for children who attend them. Upon request of the local community the expert so chosen should also survey the recreational possibilities of that particular commmity and suggest plans for building up a construetive recreational program. In short, this person should cooperate with local communities in their efforts to provide adequate play and recreational opportunities for children. He should also be the souree of information regarding the value of recreational opportunities.

    Scientific studies of the frequency of crime and delinqueney made in the city of Chicago show that it occurs repeatedly in certain localities of the congested districts where playground facilities are inadequate or do not exist. When such facilities are available delinquency decreases in an astonishingly short time. Boys and girls with a great deal of moecupied leisure time are likely to turn to activities which may lead them soon to delinquent habits. Thus, importance of a state-wide program of recreation cannot he over-emphasized in connection with the prevention of delinquency.

    The recreational center which is most adequate for the prevention of juvenile misconduct is one in which all types of activities are offered to children. There should be a regular department of the city or county publie library located on the playground with interesting books and comfortable places for children to read. There should be opportunities for children to play such games as eheckers, dominoes, lotto, and the like, which they eould come in and use just as they might horrow a book to read. There should be ample space for such activities as fontball, baseball, basketball, and track. Provision of a dressing room with shower baths for boys and another for girls is another necessity. The little children should have sandpiles, wading pools and other apparatus. If possible, there should also be a swimming pool for the use of all the children. A program such as this may sound rather expensive. It really is an ceonomy. When one considers the cost to the people of the community in the form of property destruction, of stolen and wreeked automobiles, of other types of petty stealing, etc., any investment tending to reduce this juvenile crime bill is a valuable (nnsideration.

    ## 9. The care of the feeble-minded.

    The State of California has for many years been faced with a tremendous problem in the care and training of the feeble-minded. The increase in population has far exceeded the expansion program of state institutions. Many feeble-minded children have been unable to secure admission to state institutions and have had to be provided for by private institutions and foster homes, which in many instances have proved very unsatisfactory. This is especially true in the metropolitan area and the investigation made by the commission relative to the situation of the feeble-minded in these private institutions has brought to light many very unsatisfactory situations. Many of these children are helpless and require the almost constant care of an attendant. It is evident that many of them have been seriously neglected. This negligence has resulted in considerable criticism of the state because of its inadequate institutional provision. The Director of State Institutions realizes the seriousness of the situation and in the opinion of the commission is bending every effort toward its solution. More beds will soon be available so that the nutstanding eases requiring attention can be received by the two state homes for the care and treatment of the feeble-minded. While the ten-vear building program planned by the Department of institutions includes considerable expansion and added facilities for the care and treatment of this class of patients. it is by no means adequate to take care of the large influx of population into the state and the increase in the number of feeble-minded to be cared for. Were the contemplated ten-year program completed todayit would barely meet the needs of 1928 .

    It is obvious!y unfair to expect any one administration to appropriate sufficient funds to bring our state institutions up to a capacity which would meet the present needs. The public shows a growing tendency toward a state bond issue which would make available sufficient funds to enable the Department of Institutions to care for all state wards without further delay. A bond issue of this type would more adequately equalize the financial burden of the state by distributing it over several rather than placing it in one administration. The state of New York has passed a large bond issue providing for adequate institutional care and as a result that state stands at the fore of all states in the union relative to the care and treatment of its wards. It is therefore urged that the present administration give very careful consideration to the needs for increased facilities for the care and treatment of the feeble-minded.
    10. Increasing the capacity of present state institutions for children.

    It is gratifying to note that the State Department of Institutions has launched a ten-year building program for California in order to make available additional facilities for caring for the large increase in the number of state wards due to the unusually rapid increase in the state's population. Such a program should receive the hearty support of all groups interested in child welfare. Whether such a program as planned is sufficient to care for immediate needs or for the needs ten years from now is a debatable question. It is one that might well fall within the scope of a state mental hygiene survey as recommended else-
    where in this report. Further investigation will undoubtedly show the need for an extensive bond issue to provide added facilities to meet the present needs of California institutions and to further the study and progress now being made in the care of children and the prevention of delinquency.

    ## 11. The wider use of the referee system.

    Many juvenile courts in cities of the first and second class are so crowded as to necessitate the service of juvenile court referees. The referee of the juvenile court holds a preliminary hearing of children's cases and is able quietly and satisfactorily to adjust the majority of such cases without the necessity of actual contact with the court itself. This not only clears the court calendar, but allows a much more satisfactory adjustment of those remaining cases requiring judicial action. Cases are carefully sifted and thoroughly prepared so that the judge is well informed relative to the entire case history. Where the referee is a woman trained in social work, landling the girls' cases, leer work is likely to be very effective. It is urged that the referee system in this state be extended and that juvenile courts throughout the state should be authorized to secure the services of as many referees as may seem necessary to assist the juvenile court judge to handle adequately the number of cases before the court.
    12. To place jail detention of children at the discretion of the court.
    "Section 14 of the juvenile court law should be amended so as to forbid the detention in jail of children under 18 in counties having other detention facilities for such children, except on written order of the judge of the juvenile court. At present jail detention is forbidden only for children under 16 , with the result that many boys of 16 and 17 are constantly being held in the city and comnty jails. * * * Detention in jail is about the worst introduction to the juvenile court that a boy can have. There will be some boys, and occasionally a girl, for whom jail detention will prove necessary, but the necessity shonld be passed upon by the juvenile court and not left to the discretion of peace officers or even of probation officers. "*

    ## 13. Making private hearings in children's cases more universally observed.

    The commission is greatly impressed by the far sighted provision in sections 16 and 16 -a of the Juvenile Court Act approved 1915 with subsequent amendments. The sections referred to make clear that in proceedings concerning any minor appearing before the juvenile court, said minor is entitled by right to a private hearing, either upon his own request or that of his parent or guardian or other person charged with his care. In the belief that the spirit as well as the letter of these sections of the Juvenile Court Act should be adhered to, it is our opinion that juvenile court judges should in every instance clearly inform the child, his parent or guardian. or the person charged with his care, of his rights in this matter.

    ## 14. Enforcing child labor laws regarding child migration.

    The migration of children due to parents moving from place to place is a growing problem in California. Thousands of these auto tourists with their families enter the state each year, remain for a time in auto camps or temporary quarters and then move on. Their children are not in school: they lack supervision and often get into trouble. Frequently they are forced to work and allowed no opportunity for educational advancement. This is true in both urban and rural communities. The commission points out the fact that it is now made unlawful in California to employ any resident child under sixteen years of age at any gainful ocelpation at the time when such child is required by law to be in school, or to employ any nonresident ehild under sixteen years of age at any gainful occupation at the time when such child, if a resident, would be required ly law to be in school. This fansighted legislation which is being enforced very successfully in many communities needs to be carried into effect more extensively throughout. the state.

    ## 15. To extend the use of foster homes and to remove the maximum limitation of $\$ 25$ for the care of court wards in boarding homes.

    At the present time in California there are 4800 children who have been placed in foster homes. These children have been placed in these homes because of unsuitable conditions in their own homes, illness or death, separation of parents, or other similar facts. The use of foster homes is to be encouraged; however, the commission feels that the most important problem in regard to foster homes is the improvement of the kind of home available for cont wards.

    ## Amend paragraph one of section 11 of the Juvenile Court Act of 1915, page 1225 .

    At the present time the comities are limited by the Juvenile Court Act to an expenditure of not more tham $\$ 2.50$ on foster homes. This has provell to be insufficient to meet the needs of these children. It has heen strongly urged that this limitation be raised to $\$ 35.00$ per month in cases in which, in the opinion of the conrt, such increase is neeessary: It is therefore the recommendation of the commission that paragraph 1, of section 11, of the Jurenile C'ourt Aet of 1915 be so amended as to allow this increase.

    ## 16. Continuation of the work of this commission.

    The length of time devoted by the commission for the study of prohlem children to the study of the problems within its scope has been entirely too short, as expressed earlier in this report. Our findings are not conclusive. Our activities have necessarily been confined to what seem to be the outstanding needs of the State of California at the present time. It is obvious that the problems involved are so intricate that no commission of this nature could be expected to outline in nine months a eomplete program for the prevention of delinquency. While the suggestions contained in this report may be said to represent some of the immediate needs in this field, the problem itself is so extensive
    as to demand the continued study of many groups of citizens interested in the welfare of children and in the prevention of crime. The communities visited by this commission evidenced a keen interest relative to a program of prevention of juvenile maladjustment. It is suggested, therefore that a similar group be appointed to go on with the work begun by this commission. Unless the State of California makes adequate plans and derelops a comprehensive program over a long period of years the problem of reducing juvenile crime will be greatly delayed in its solution.

    ## PART II.

    A. (ieneral statement of the problem of delinquency and its prevention.
    B. Specific items for further investigation and ronsideration.

    ## A. General statement of the causes of delinquency and its prevention.

    The primary purpose of this commission as defined in the legislative enactment is to develop a program designed not merely to meet the needs of the present, but more especially those of the future. California is confronted by gigantic problems in its efforts to reduce the social menace of maladjusted children and youfh. It wonld be presumptuous, indeed, for any commission in a brief period of nine months to return a report to the legislature of the State of California containing suggestions for meeting all the varied needs which are before the state in its efforts to deal with the problems of delinquency. Yet a beginning must be made-a comprehensive statement of the problem suggested-in order that eventually the entire problem may be adequately resolved. For this reason the commission invited to its meetings individuals of varied training and experience in order to accumulate information on the manifold aspects of the problem. To arrive at any fundamental understanding it was thought necessary to hear the points of view of all types of persons in the community who had any contact whatsoever with children, either delinquent or predelinquent. For this reason, among those who contributed information at the conferences were police and probation officers, judges, representatives of juvenile protective agencies, teachers, school administrators, superintendents of schools, psychiatrists, psychologists, visiting teachers, social workers, and many others whose daily work is concerned directly or indirectly with the welfare of children. The result of this procedure has been the accumulation of a great many facts of significance for any constructive plan leading to the prevention of delinquency in California.

    Throughout the state in all of its conferences and hearings the members of the commission were impressed by the wide-spread interest in welfare of children among all types of individuals in the communities risited. One might, without becoming alarmist, draw the conclusion that all agencies in the state are very much concerned about the prevalence or increase of juvenile maladjustment and are insistent that something be done to improve the condition of children in the State of California.
    In formulating any comprehensive plan to meet this emergency a number of facts stand out very prominently. Perhaps most significant of all is the need for an early recognition and early treatment of maladjustment in children. Teachers and school administrators need well-developed methods of recognizing maladjusted children in the early grades in the school. It is then up to the local community and the state to work out a plan to insure the treatment of such children. At the present time a teacher may note that a child in the primary grades is maladjusted. But the clinical facilities for the study of such a child are lacking; accordingly he is passed along from grade to grade, and nothing is done to bring about a better adjustment to society. Later the child gets into difficulty and is brought to the juvenile court. Then the people who knew him as a child refer to his earlier conduct and realize that the time when he should have been cared for was during his earlier maladjustment before he became delinquent.

    The first real social situation that the child meets as it grows up is the school. The children who adjust themselves readily to their work in sehool, who eonperate normally with their teacher, play well with
    other children, show un marked symptoms of behavior maladjustment, will in all probability later on compose the rank and file of good citizens. the substantial persons of the community. On the contrary, those children who early show difficulties in school, who are extremely abnormal in some trait of emotion or moral disposition, are the ones who are likely to be maladjusted eitizens of later life-the ne'er-dowells, the criminals, possibly even the insanc. The school has a very definite means of determining or predieting delinquency because it has been shown that truaney and outstanding maladjustment in school are precursors of delinquency-they are danger signals. The teacher or the school clinics may recognize the early signs of what may later he truancy or social maladjustment by a study of some of these traits of character and disposition which may be noticed before the child has committed any serious overt breach of school discipline. When a child has once becone an habitual truant or has become so difficult a problem in sehool as to make it necessary to consult the principal or some other official in the school system regarding his disposition, the child has already become a problem, marked and designated as such. His reputation is likely to pass from one teacher to another and he himself very soon, by reason of this continued suggestion, begins to feel a little different from other children. He then begins definitely to concern himself with ways and means of misbehaving and ultimately. probably with delinquent activities such as stealing or ruming away or some similar activity. The truant has musual opportunities for acquiring bad habits and for getting into social difficulties because of the fact of his having so much time on his hands with nothing to do.

    The problem of prevention of delinquency in a measure is one of preventing such striking signs of maladjustment to school as marked insubordination, seclusiveness or anger, petty thievery, lying or sneakiness, truancy and other symptoms. That is, to get to the root of this problem one would have to go into the very fundamentals of maladjustment in children. One must not begin with truancy; but one must begin before that with early symptoms of personal and social maladjustment. Thus, the fundamental observation made by the members of the commission was that more and more stress should be placed upon maladjustment during the early ages, with a view to getting at the root of all of these problems. Elsewhere in this report specific suggestions will be given regarding ways and means of accomplishing this through such things as juvenile research, traveling clinics, visiting teachers, better training of teachers and school administrators, and courses in child guidance and mental hygiene for all who are responsible for the welfare of children.

    It is obvious that no matter what methods we could use in the observation and guidance of young children there would still be a certain number who would not fit into ordinary community life; and there are a number of reasons why this will always be true. First of all. there are children who are mentally defective, whose intelligence is inadequate for understanding the ordinary requirements of communitylife. Such children are mentally incapable of ever coming into their social heritage, of ever being able to profit hy schools and other community puterprises leading to good citizenship. These children will have to be placed in speeial institutions for the feeble-minded. Sueh institutions, aceording to recent scientific investigations, can be sehools
    where these children will be able to learn as much as they are capable of learning and at their own rate of learning. Their lives can be made both happier and more effective by proper institutional training. In many cases such individuals will return to the community later on. doing some routine, menial work and supporting themselves comfortably ontside of an institution. The same considerations as these apply to children with physical handicaps, such as the blind, deaf. tubercular. crippled, and other similar unfortunates. The state must likewise provide special schools and classes for them, in order that their defects may be as small a handicap to their happiness and well being as is possible.

    There are other children who because of some abnormality of personality will be morally and socially unadaptable unless they have long and careful training. These children may or may not be of normal intelligence. Also, there are some children who have marked symptoms of mental disease, and these children, frequently known as psychopathic children, should have carefitl observation and guidance in an institution. The epilepties might be included in this group.

    The types of institution for defective, abnormal, and socially maladjusted children will be considered in the course of this report. To enlarge upon detailed descriptions of such institutions would take us. too far afield at this point, but it is pertinent to pause a moment and view the total prospect of the institutional provision for children of the State of California.

    First of all. emphasis should be placed upon the fact that a child should be sent to an institution only as a last resort. Every effort should be made to solve the child's difficulties in the community. Only when the resources of the community are inadequate to solve the child's problems should an institution be considered. Eren in the cases of the blind and deaf. the fact that these children will return to the community at some future time should not be lost sight of -especially howerer. should the socially or morally maladjusted child be treated in terms of community responsibility, for in a sense the very maladjustment of the child is a symptom not of the moral depravity of the child. but of the inadequacy of the social organization of the home and the community. Maladjustment of children is a symptom of inadequate social structure or of the unworthiness of the home or the community itself. Viewed from this angle we are concerned less with retaliation toward the offending child and more with the social causes which made possible the development in the child of such maladjustment. Children are like clay in our hands. Home, school, and community beliefs and ideals are what lead to their being what they arc. If a child has a number of bad habits the overwhelming probability is that one of the three factors-home, school, or community-is at least in part responsible. The child himself is to a large measure but the product of these influences. One method of determining how society is inadequate is to find ont the ways in which children and adolescents go wrong.

    To solve a child's problems in the eommunity spares him two rery difficult adjustments-the first, to an institution, and the second. to the community after leaving an institution. A foster-home placement is more desirable than an institutional plarement hecause such a change is likely to be much less serions. It is also ayniding the neeessity of removing the child to an artificial environment.

    But it is unlikely that we will be able in the near future to solvo all the problems of social maladjustment in children by fostor-home placement. One needs merely to spend a morning visiting sulch homes in see why this is so. Since the amount arailable for the support of ehildren in such places is inadequate, the type of foster parents who will volunteer for the task of caring for children is the first and most serious obstacle, so that facing the problems of maladjusted children in terms of actual present conditions we realize the need for increased institutional provision, however much the solution of a chitd's problem in the community is to be preferred to institutional care.

    To arrive at any integrated plam of state institutional care of children requires primarily a complete set of interconnected institutions for all ages of state wards from the cradle to the grave. That is, the State of California needs institutional provisions so that all types of maladjusted individuals may be cared for, the entire set of institutions being part of one integrated scheme. Specific mention of the shortcomings of the institutional provisions of the State of California in this regard will be made in the course of this report.

    Let us stress here one more point, namely, that there should never he an occasion for the release into the community, becanse there is mo other institution to which to send him, of any individual whom the competent staff of a state institution considers a "poor risk." Tn release a prospective murderer or thief, whether child or adult, into the community because he is "not insane" and has "served his time" is a very serious error. It is very poor treatment for the innocent public who pay for protection against such individuals. Science has now arrived at the threshold of crime prediction. Institutions staffed with competent psychiatrists, psychologists, teachers and social workers, can begin to predict with a measure of success the after-history of their charges, based upon a careful study of their history before coming to the institution, and of their attitudes and behavior while in the institution. More research and study of these problems is imperative. In fact, the most essential need at present is to define our problems and to begin to study them. For this reason the rommission goes nn reenrd very strongly in urging clinics and research work. As a matter of fact, the kind of research work advocated is largely a form of service-it consists in the utilization by experts of the most adranced scientific methods and procedures in practical life situations. Of course, from such research new knowledge results, but in the process of its accomplishment much is clerjved of direet value to human life.

    ## B. Specific items for further investigation and consideration*

    The following matters have been presented to the commission both by the public and by its own members. The time allotted the commission was so brief that it was impossible to give then the necessarystudy. It is felt that mention should be made of those which seriously affect the problem of delinquency, and which should be given further study before definite recommendations are made. It this commission. or a similar group, is continued, these are some considerations which need further thought and investigation for the purpose of arriving at specific recommendations:

    1. Training teachers in child guidance and mental hygiene.
    2. The value of visiting teachers.
    3. Special schools and classes for exceptional children.
    4. The extended use of vocational guidance and placement in the public sehools.
    5. Courses in parenthood in high schools and colleges.
    6. Courses for parents in child care.
    7. Special instruction of mothers in prenatal care.
    8. Instruction of police in child guidance.
    9. Need for supervision of recreational agencies.
    10. Unfortunate effects of crime publicity by newspapers.
    11. Motion pictures and juvenile crime.
    12. The value of the Berkeley Coordinating Council.
    13. Enforcement of child labor laws, especially regarding children in street trades.
    14. Supervision of towns on Mexican border.
    15. Survey of county jails and of methods and facilities for the detention of children.
    16. Transporting of children from juvenile court to state institutions under court and probation department.
    17. To amend section 4-c of the juvenile court law, whereby a child may be transferred to a criminal court for prosecution, to apply only to children over eighteen years of age.
    18. To investigate the need for more careful selection of juvenile court judges, to lengthen the tenure of office and to adjust the salary range.
    19. Increasing salaries and improving standards of employees in state institutions for children.
    20. A hospital school for unstable children.
    21. Certification of child psychiatrists, clinical psychologists, and social workers.
    22. Codification of laws relating to children.

    These items will now be considered in the above order.

    ## 1. Training teachers in child guidance and mental hygiene.

    As has been pointed out carlier in this report, the time to prevent delinquency and other social maladjustments is when the child is young. For this reason, the commission feels very strongly that an fosential factor in this state's proyram of preventing delinquency is the adequate training of teachers in child guidance and mental hygiene. If teachers are trained to recognize the early premonitory symptoms of juvenile delinquency, then by treating these carly expressions a great deal can be done to prevent the later occurrence of marked antisocial behavior.

    It is desirable that teachers be instructed in the need to scarch for mental or psychological causes in analyzing the moral and social difficulties from which children suffer, or because of which they are maladjnsted in school or in their life outside of school. The necessary
    approach to this point of view includes in the seope of its analysis of human maladjustinent the intimate details of the child's early life, relating them to those present euvironmental conditions to which he is not adequately adjusted. The trend in mental hygicne is away from the symptoms, or the outward manifestations of disease, and toward the patient's biographic or social background. So with children, the symptoms shown, while deserving of description and study, are often not the most essential factor in connection with the attainment of an understanding of the child's true difficulty and the control of it.

    The child who is fidgety, or one who is sensitive to the point of ready tearfulness at a slight reprimand, or one who is subject to terrors or sudden spells, is not likely to be helped by attempting to deal directly with these symptomatic expressions. Nor can such traits as theft, seclusiveness, temper nutbursts, or truaney be cured by preaching to the child the mworthiness of sueh behavior. The true underlying causes must be sought and treated. These may frequently be discerned by expert observation and study of the facts in the background of the child's life which are actually creating and maintaining the undesirable traits.

    Teachers need to know how to analyze the conditions underlying the behavior of the child whose mental attitude is described by such terins as the following: moody, lazy, vicious, mean, nervous, irritable, hateful, unruly, bashful, etc. Since the teacher has charge of the child during a period when many of his social and mental attitudes are still plastic, she has opportunity to try out a great many means for alleviating such undesirable conditions. Moreover, gaining a knowledge of the homelife and mental background of children gives a teacher better understanding of the causes which underlie any abnormal conditions she may observe in a child. The methods of diseovering and understanding these underlying facts should be taught to prospective teachers while they are in teacher-training institutions.

    ## Teachers in service should likewise be given this information.

    It is the opinion of many specialists in children's problems that these abnormal expressions of children are the first symptoms of social maladjustment and should be treated at once. There is no better person to recognize these conditions and to aid a program of treatment than the classronm teacher. Training all teachers in child guidance and mental hygiene will be a great step forward in the prevention of delinquency.

    ## 2. The value of visiting teachers.

    School departments have for many years felt the need of a closer. coordination between the school and the home. Scientific research has demonstrated the fact that a large amount of delinquency may be traced to the inadequate home. The inadequate home is often, though not necessarily always, the broken home. Well-meaning, conscientious parents sometimes provide a home environment for their children which is quite harmful. When a child misbehaves in school, is inattentive or disinterested in his work, the real canse is frequently not in the schoolroom situation but in such factors in the home as poor food,
    nagging. worry. sickness, ete. When for any reason a child becomes a problem in school, the ordinary classroom teacher has neither the time nor the energy to investigate the home with a riew to finding out the underlying factors. In order to make this contact with the home, many school systems are now employing visiting teachers who have had special training in social work, child care, and mental hygiene. Visiting teachers are no longer a fad or norelty in the school system. Where they have been tried, they have demonstrated beyond a doubt their value to the school system in improving its efficiency, and to society in the prevention of delinquency. Without such cooperation between the school and the home, the problem child is likely to become a disturbing element in the classroom, a truant, and finally a delinquent. Many cases have been adjusted by risiting teachers before srmptoms of delinquency had a chance to appear. It is the opinion of this commission, reinforced br school officials throughout the state, that additional risiting teachers are absolutely essential to the carrying forward of any constructive program looking toward the prevention of delinquency.

    In a recent publication* a brief summary of the results of the program of the Commonwealth Fund is given as follows: "In each of thirty cities of rarying size and wide distribution a risiting teacher was placed for a three-year periol, during which the local community paid one-third of the cost and the Fund the remainder. * * * Twentyfour cities continued visiting teacher service after the ond of the demenstration period; eight of them enlarged the staff to twn or three workers; demonstration aid continues for a limited time in two more. Meanwhile, thirty-seven other eities have introluced risiting teaching. as a result of a general increase in popular mederstanding of this useful plan for the study and adjustment of behavior difficultios appearing in the schools.

    ## 3. Special schools and classes for exceptional children.

    Exceptional children are of many types and include not merely the handicapped but also the unusually well endowed. All too often the state or local community concerns itself only with the handicapped child as regards special care and training. The blind, the erippled. the deaf, those with speech deferts-these are specially cared for in all enlightened communities todaly: The commission was impressed by the efforts made along these lines by many school systems throughout the State of California. Ther alsn moted posisibilities for improvement in this work. (for example, in the state program of training teachers for such classes and schonls), and the need tor an well more umprehensive program in caring for these types of unfortunate children.
    Two kinds of children needing special care will be enn-jlered at greater length here: first, the excentionally entowed child, and scennd. the sn-called problem child

    ## Gifted Children.

    Exceptionally endowed children will be considered from two standpoints : first, the prevention of crime, and seend, the conservation of

    talent. As regards the first aspeet of the problem a widespread enme needs to be corrected-namely, that delimpuey and erime are largely or entirely a matter of mental defeet. While the danger of the vicions moron cannot be denied, it must be noted upon consideration of recent scientific researeh that the total elimination of mental defectives would by no means solve the crime problem. In fact, there is every reason to believe that many present-day criminals are of superior mentality. A recent study in Ohio showed that a group of one hundred dull hoys in a period of five years had stolen or destroyed property to the extent of $\$ 860$, whereas the total for an equal group of arerage or better mentality in the same period of time was $\$ 158,777$.* This is merely one of study, but the evidmee is significant.

    We need to make provision in our sehools for the bright child as well as for other types of exceptional children. Many commmities in California are doing extremely interesting work in caring for the gitted child. Much more is needed before an allequate program of education for bright children is accomplished. We have noted elscwhere the relationship between truancy and jusenile delinquency. The bright child who is bored in school is a potential truant and hence a potential delinquent. All school systems need to introduce provisions for the education of bright children, for the sake of the future weltare of the child, and also from the standpoint of keeping children busy in wholesome and constructive activities in school and thus building up in them good habits and attitudes and avoiding social maladjustment. All ton often idleness is related to misconduct. There is truth in the proverth that the devil finds mischief for idle hands to do. The schools of the state have no justification in compelling bright children to go to school and then allowing them to be idle, disinterested, and so liable to beenme truants and delinquents becanse they are not provided with adeupuate expression for their exceptional mental powers. Special methods have been developed in many communities thronghont the United statesCalifornia needs to consider further the introduction of differentiated education for such children as a state wide program.

    But there is another and more wholesome reason why special classes and schools for gifted children are a need of this and other states. This is in order to conserve talent. Modern life has become so complicated, so many industries are dependent for their progress upon skilled intelligence, that the care and training of the exceptionally talented is an important economic issue. We recognize that we can not continue to waste our material resources in the physical world; still less can we afford to go on neglecting our resources in the mentality of our children. A gifted mind adequately trained may produce achievements of world-wide significance. Investment in the discovery and suitable training of the well-endowed is a matter of national progress and happiness. Such a program would result in the detection and development of much otherwise undiscovered talent and oceasionally even in the production of a true genius. If by a program of appropriate training of the thousands of gifted children in California a single Edison. Newton, Mozart or Michelangelo is developed-the world must consider the expenditure a modest one.

    ## Maladjusted or problem children.

    A great deal of interesting work is being done in the State of California in the way of special classes, or, in some large communities, special schools for maladjusted children, often called "problem children." The most satisfactory procedure is to have the children in the adjustment school or special school for a period of observation and to take advantage of every possible opportunity for clinical study of the child, and for observation of the child's behavior in the classroom and on the playground.

    The purpose of such classes or schools is not to get these children ont of the way, but rather to discover what it is in the child's makeup that is responsible for his inability to adapt himself to the ordinary school. In other words, the special classes or schools serve as diagnostic agencies. Children are studied there from the physical, mental and psychological standpoints, and an attempt is made to treat any unfortunate symptoms that the child presents. Then when the child has begun to show definite evidence of readjustment, he is returned to his own school or to some other school, as the case may be, with definite recommendations to the teachers regarding his treatment.

    Frequently some very serious belavior problems are solved in this way. It is highly desirable that more advantage be taken of these procedures, and that such special groups be taught or studied by experts qualified for this work. The advantage of the special school is not merely limited to the child treated in it, but it is obvious that the teacher and children in the class in which he was formerly a disturbing element are likewise helped.

    In the small communities in which they have special classes of this sort and where no clinical study is possible because of the restricted financial support of the school system, the state traveling clinic would be of great service. Coming into the community at certain stated intervals this clinic would be able to study such children as are assigned to the special class or school and report on these childreu to the teacher or principal, giving specific recommendations regarding the method of treating each particular child. The cooperation of the state traveling clinic and the special class teachers in the smaller community will lead to the readjustment of a great many children who otherwise are likely to become delinquent.

    ## 4. The extended use of vocational guidance and placement in the public schools.

    Industry today is stressing the need for careful job and personnel analysis in order to bring abont the placement of the worker where he can best express himself. The age of specialization is witl us to stay. Our public schools are in many instances missing the opportunity to train and prepare boys and girls properly for useful work. While there are usually many things which an individual can do, there are always a few which he can do better than others. Throngl the medium of vocational guidance and counsel, boys and girls have been snccessfully guided into industry and placed on jobs where their success has heen assured from the start. Our public schools are coming more and more to realize that education is a preparation for life, and that the wider and more varied the experienees it offers the better will be
    the success and adjustment of the worker. School hoards should be eneouraged to add to the curriculum as many vorational subjects as possible, not only in order to definitely train for specific trades, but in order to open up to the boy and girl a variety of vocational opportunities, so that by means of actual experience a more accurate method of vocational selection may be possible.

    It is the opinion of this commission that the responsibility of the public school does not cease upon the child's graduation from a prescribed course, but rather that this responsibility carries over into industry itself. There should be developed in connection with our public schools, placement departments wherein hoys and girls would receive information and assistance relative to vocational opportunities and positions in the field of industry itself. The average student going through our public schools takes academic subjects which in many instances have very little relation to his needs or to the needs of industry or professional life. As a result, the boy or girl coming from the elementary or the high school accepts the first job offered, regardless of his previous training, interest or adaptability. School boards should he urged to establish placement or employment departments in connection with vocational guidance and counseling and to assume the responsibility of following into industry those boys and girls who must leave school early. The commission commends very highly the splendid work being done by the public schools but feels that by the introduction of these additional procedures the value of the work would be greatly enhanced.

    ## 5. Courses in parenthood in high schools and colleges.

    The commission was very much interested in hearing about courses in parenthood which are being given at present in a few of the higher institutions of learning in the state. What is now being attempted is a very promising beginning. The greatest occupation, the one certain to be engaged in most extensively by young people now in our high schools and colleges, is parenthood. It is also the one about which least is known by the average high school and college graduate. Due to a combination of causes little attention lias been given in the past to this important aspect of social life. A course in the problems of parenthood will give to students, both boys and girls, an opportunity to learn, about the care of young children by actual experience in a babies' hospital or nursery school. It will also enlighten them regarding the manifold duties and responsibilities of parenthood. A generation of parents who are aware of their problems and are trained to meet them will do much to decrease the total of unhappiness and maladjustment in children, and in this way to prevent delinquency.

    ## 6. Courses for parents in child care.

    The commission is very much gratified to know the success of the recent experimentation along the lines of instruction of parents in child care carried on by the State Department of Education. It is highly gratifying, indeed, to find that California is very earnestly engaged in the problem of training parents in matters of child guidance and mental hygiene. Further increase in these facilities is advised in order that all parents in the state may have opportunity to learn about child
    eare and guidance. Well-informer parents can do a great deal to assist the school and the medical and psyehologieal ageneies of the community in readjusting children who show tendencies toward waywarduess.

    ## 7. Special instruction of mothers in prenatal care.

    The commission was very much impressed by the work now being done in the instruction of mothers in caring for themselves during pregnancy. The very valuable work earried on at present by the Children's Burean of the United States Department of Labor in collaboration with the varions states should be continued and if possible extended in this state. The Children's Bureau has been disseminating mueh valuable information to the prospective mothers about prenatal (eare. By varions other more direet methods, sneh as visiting nurses, it is doing much to instruct prospective mothers in the eare of themselves before the arrival of the baby. By adequate care for the mother during mregnancy, the ehild is given a good start toward a healthy life. In this way a foundation is laid for good eitizenship in later life.

    ## 8. Instruction of police in child guidance.

    The commission was very mueh impressed by the practiees in vogue in many cities of instructing policemen in the problems of ehild psyehology and child nature. This lhas the effeet of developing in members of the police force a sympathetic interest in children and their problems and in eliminating attitudes of brutality and resentment toward them. The commission was very mueh interested in the fact that in certain communities the polieewomen provide pleasant quarters in which children are brought in case they get into difficulties and that every effort is made to treat the child upon the basis of interest and kindness and medical and psyehological study rather than through brutality and punishment. The commission is highly in aceord with the modern tendency to regard the activities of the policeman as social work.

    ## 9. Need for supervision of recreational agencies.

    One consequence of modern industrial development is the faet that young people receive fairly large recompense for their part in industry. Employed yonths have considerable money of their own to spend. The commission has elsewhere referred to the need for reereational facilities throughout the state for all young people and for the supervision of motion picture houses and of the themes in the pietures shown. There is need to supervise, moreover, such commercial recreation places as dance halls, pool rooms, bowling alleys, and other places at which children are present. These have been sourees of delinqueney in the past, places where children have learned a great many immoral practices. While the commission is in no position to make any very definite statement in regard to it, it feels that this whole matter needs further investigation with a view to determining ways and means of eonducting wholesome recreational eenters of these types.

    ## 10. Unfortunate effects of crime publicity by newspapers.

    There is a need for suppression of the lurid aceounts of crime published in the newspapers of this state. While some of the daily papers have refrained from featuring criminal cases as headline articles, others by the use of vivid and sordid descriptions have gone to the other extreme. It is the opinion of many who eame before this commission that such publicity accentuated rather than eurtailed the repetition of sueh offenses against soeiety. Youths and unstable individuals may be excited to the point of emotional outbursts by such aecounts. All too often delinquents feed on reports of this nature and endeavor to outdo the advertised offender in similar antisocial behavior. Evidence for this is the repetition of similar offenses whenever the newspapers feature some outstanding erime such as the Hickman case. While such cases possibly carry a news value to certain classes of people, it is felt that they should not be featured as at present. Headline prominence, extensive deseription of all the ugly details coneerning the crime committed, and similar practices are likely to lead to an increase in the amount of delinquency in the State of California.

    ## 11. Motion pictures and juvenile crime.

    The edueational value of motion pictures has been very widely recognized and much use is made of them in schools at the present. There are unlimited possibilities in motion picture production both for desirable and uplifting themes and on the other hand for degrading and sensational subjects. While it is true that as yet no very fundamental studies have been made concerning the effeets of motion pictures upon the character of children, a great many suggestions have come from psyehologists, edueators, and others whieh indicate that certain types of pictures are not desirable for chitdren to sec. $\Lambda$ special investigation of this problem would be desirable. The whole subject is too extensive to cover in this report but from what has already been observed it is apparent that more care should be taken regarding the type of motion pictures whieh ehildren are permitted to see.

    Another factor which enters in with regard to the motion picture, irrespective of the type of picture, is the practiee of permitting children to attend the movies in the evening unaccompanied by their parents or some other responsible adult. The eonsequence of this is that children come out from movies late at night excited by the emotional themes portrayed, and the opportunity for abuse of these children or for their getting into some social difficulty is very great. The fact that these children are on the streets late at night and are moreover in an excited state of mind as a result of what they have seen is significant, especially in relation to the faet that so much of juvenile crime is committed after nine o'clock at night. Attempts should be made to secure the cooperation of motion pieture producers in the type of film made by them. Likewise, motion picture theater owners should be required to cooperate with the anthorities in the enforcement of existing laws relative to the attendance of minors at motion pieture theaters.

    ## 12. The value of the Berkeley Coordinating Council.

    The commission was very much interested in the description of an organization now in operation in the city of Berkeley, called the Berkeley Coordinating Council. This enterprise has obtained wide publicity, not merely in the state, but elsewhere in the nation, as a unique and extremely interesting social experiment. The Berkeley Coordinating Council is an attempt to organize the various agencies of the community and to focus their united interest and attention upon problem children as individuals. Once a week the chief of police, the head of the Child Welfare Department, the director of Research and Guidance of the School Department, the head of the Health Department. the director of the Health Center. the risiting teacher, the director of Elementary Education, the policewoman, and a representative of the Parent-Teacher Association, meet and discuss the cases of individual children in their community who have shown or are on the way to show delinquent tendencies. These individuals bring together their own information in regard to each child and plan a program in the best interest of the child's welfare. This program represents the decision of the group and, of course, has the conperation of all agencies in the city of Berkeley in its accomplishment. The plan takes little time of the officials involved (one hour weekly) and has resulted thus far in a great deal of valuable assistance to parents, teachers, principals, and police officers in the solution of problems presented in the community by children. The commission thinks it might be desirable to consider the appointment of a state coordinator, thoroughly familiar with the Berkeley Coordinating Council, who might go from community to community upon request and attempt to introduce the system or some modification of it throughout the state. The Berkeley Coordinating Council is essentially a practical method, and utilizes all the resources of the community in meeting the difficulties of individual children. It eliminates the usual overlapping, interference and diseord among the different departments of the city government.

    ## 13. Enforcement of child labor laws, especially regarding children in street trades.

    From many of the persons who presented testimony at the commission's hearings statements came that children were permitted to sell newspapers, peddle various kinds of articles and otherwise engage in remunerative work beyond the hours sanctioned by law. There have been a number of surveys made recently by the United States Department of Labor in all parts of the United States, which have shown that child labor laws are not rigidly enforced. One unfortunate consequence of the nonenforcement of child labor laws is the fact that it opens up many avenues toward juvenile delinquency. Children who are on the streets late at night are rery liable to come into contact with adults of uncertain moral character, are liable to temptations of various sorts and are subject to many influences tending to make them delinquent.

    Recent investigations in Boston. Masachnsetts, relative to street trade by children shows a serions cause of delinquency resulting from such practices. Foung children on the streets at all hours of the day
    and night soon acquire many bad practices. For example, juvenile bootblacks add to what they secure from their business by petty thievery from drunkards on Saturday night. The present California law prohibits boys under ten years of age and girls under eighteen years of age from engaging in street trade. It is felt that further study should be made of the California law with the possibility of amending the same so as to forbid the employment of boys under fourtcen years of age in street trading and boys under sixteen after seven o'clock at night. The fourteen-year age limit holds for other occupations where strict supervision is possible. With the difficulties in supervising street trading, the importance of raising the age limit is apparent. Further, California does not require the badge system, which seems to be the best form of lieensing street traders. Any proposed amendment should require badges for ehildren engaged in street trading.

    ## 14. Supervision of towns on Mexican border.

    The commission was greatly interested in the report of conditions in towns on the Mexican border. Some communities have taken the initiative and are endeavoring to supervise the border. They are trying to prevent children from crossing unless accompanied by their parents. The border is elosed at an hour early enough to prevent young people engaged in industry from erossing over in the evenings and getting into tromble. It is surgested that the state investigate the conditions of all border towns. When adequate supervision is not being given at the present time the federal grovernment shonld be advised of the need for more definite policing.

    ## 15. A survey of county jails and of methods and facilities for the detention of children.

    The commission was very mueh impressed by the findings of the State Department of Public Welfare in regard to the fact that hundreds of children annually are being detained in county jails at the present time. The Department of Public Welfare is suggesting legislation with regard to the inspection and eondemnation of county jails, with which the commission is in hearty aceord. It is very undesirable to have young children placed in jails that are often filthy and usually undesirable places of detention for them. It is suggested that children under the age of eighteen be placed in private homes under supervision, or be put on probation and left with their parents, or that anyother suitable deviee be utilized to prevent their being plaeed in the county jails.

    ## 16. Transporting of children from juvenile court to state institutions under court and probation department.

    The responsibility for transporting to state institutions children under commitment firom the juvenile court. and for their custody pending transportation, should be given to the court and probation department. Boys of 15 are now brought from detention homes to the county jail, handcuffed together, escorted by deputy sheriffs in automobiles to the train, still handcuffed, and so taken on to Preston. Older boys are taken direct from the jail in the same manner. The younger
    boys especially feel that they are being turned over to a criminal department. Very few of them really need to be handcuffed to be taken anywhere. It would be of mutual benefit to probation officers and to wards of the court for the probation department to have charge of this transportation under order of the court. In not a few instances it is best to arrange for parents themselves to take children to institutions.

    This change can be accomplished by an amendment to section 20 relating to the duties of probation officers. but might preferably be put into an additional section or subsection.*

    ## 17. To amend section 4c of the Juvenile Court Law, whereby a child may be transferred to a criminal court for prosecution, to apply only to children over sixteen years of age.

    The provision of section $4 c$ of the juvenile conrt law providing that the juvenile court may find any child an unfit subject and transfer him to the criminal courts for prosecution should be amended to apply only to children over 16 years of age. This also is not at present important so far as certain counties are concerned, as in these counties few children under 16 are so transferred to the eriminal courts. $\dagger$

    ## 18. To investigate the need for more careful selection of juvenile court judges, to lengthen the tenure of office and to adjust the salary range.

    The salaries of juvenile court judges in California should be raised to make them commensurate with salaries paid in New York, Illinois, and other progressive states. In some localities in California the service of the juvenile court is of a high order, yet in other localities, the situation is quite deplorable. Cases of children are handled in open court by judges who are not particularly interested in juvenile cases. It is suggested that a more careful method of selection might be uniform throughout the state, at the same time raising the standard of juvenile court service.

    ## 19. Increasing salaries and improving standards of employees of state institutions for children.

    The salary range of employees in state institutions does not compare favorably with that paid by private agencies or that paid for similar occupations in civil life. Because of the low range in salaries, institution heads are hindered in selecting the type of personnel most likely to carry on the very important activities of state institutions with greatest efficiency. Millions are spent each year on the care and treatment of state wards. Much better results might be obtained with the salary range increased to allow the selection of especially qualified or trained employees. The State of California has been very fortunate on many occasions in the type of person who has becn willing to take these unremunerative positions. Most of the institutions have among their trusted personnel, men and women whose devotion to human life and

    whose interest in unfortunates is so great that they place their service to these individuals above personal gain. Such persons are the backbone of most institutions. It seenis mnjust to take advantage of their loyalty and patriotisn by allowing this situation of inadequate wage scale to continue. These individuals maintain the morale and make possible the service of our institutions. Nevertheless, the men of small calibre who are employed at low wages to fill other positions, do a great deal of harm, not merely to the institution, but also to the wards of the state. These low-paid and indifierent individuals drift in and out of institutions, exhibiting a lack of interest in the welfare of their wards, and increase the cost of running the institution while decreasing its efficiency by a large labor turnover. This is poor economy. Carefu! study should be made of this entire situation during the next two years and a more adequate wage scale for state employees should be presented for consideration.

    ## 20. A hospital for unstable children.

    The child who is emotionally unstable and becomes delinquent is a case deserving the greatest pity and consideration. Many children in our public schools show instability at an early age. They might be classed as temperamentally defective children in that they are different from the normal group in behavior alone. Unless treated at an early age, these children later develop definite mental disorders bordering upon insanity.

    Cyril Burt in his book, "The Young Delinquent," states: "Incipient mental disease is often curable. Most neurotic cases can be improved and many psychopathic cases can be saved from insanity, but early detection and prompt measures are essential. The shock of arrest, trial and confinement added to the horrors of conscious guilt and revolt against an uncomprehending repression too often completes his final collapse. Diagnosis during childhood may deliver him from all of this, from punishment and perhaps from crime and most of all from himself."

    The ordinary mental hospital at present existing is not fitted to serve these unstable children. They should not be placed with the adult insane, nor is it fair to them that they be placed in a special ward for children in our present state hospitals. All are agreed that these nenrotic and psychopathic eases require long and specialized treatment. Of all classes of juvenile offenders they are the most difficult to deal with and the most sinned against. They cannot at present he certified as insane.

    When confined in a prison, reformatory, or similar institution, such individuals interfere serionsly with discipline and orderly routine, and their own mental state is likely to be aggravatel rather than improved. Study of such cases provides a convincing gromel for the establishment of a special institution for the unstable offender. Careful study should be given in the establishment of a hospital school for this group. With early detection, long years of training and supervised placement, they may be saved in greater proportions than the feeble-minded; just what the prospects are of making good citizens of this type of child remains to be solved by future research.

    It is the hope of this commission that the State of California will lake the lead in recognizing the need for the establishment of a wellequipped and properly planned hospital schonl for these unfortunates.

    ## 21. Certification of child psychiatrists, clinical psychologists, and social workers.

    Recent progress in the general field of child study and the prevention of delinquency has developed three specialists. These are the child psychiatrist, the elinical psychologist, and the social worker. It is ohwious that the success of such work depends on the competence of the individuals who are undertaking it. At the present time there are persons calling themselves psychologists who lack the requisite training for useful work along those lines, and a similar condition exists among psychiatrists and social workers. In many instances, the findings and recommendations of these unqualified persons are so incorrect as to he very detrimental to the best interests of the child. Some of their mistakes are apt to have a lasting effect upon his life. In order to bring this group of specialists under more adequate supervision and standardization, it is suggested that steps be taken toward the formulation of state certification for them.

    ## 22. Codification of laws relating to children.

    California is in the forefront of progressive states in its laws relative to the protection and welfare of its children. However, these laws have never been collected and codified in one publication but must be sought in many different books, pamphlets, and periodicals. Many laws passed a number of years ago have become obsolete. Those interested in the welfare of children and the prevention of delinquency have a great deal of difficulty in securing access to the many laws covering this subject. It is therefore of great importance to the welfare of children in the State of California and to the protection of their rights that these laws be gathered together, properly classified, published in one publication and distributed to those citizens and ageneies interested in the protection and welfare of children.

    ## PART III.

    Act creating commission. Origin of commission. Appointment of commission. Organization of commission. Scope of work. Limitations deemed necessary:

    Summary of work:
    Executive sessions.
    Conferences.
    Public hearings.

    ## Act Creating Commission

    #### Abstract

    An art creating a rommission to prepare and submit a report on juvenile delinquenc!. cmbodying a plan for the prevention of juvenile delinquency ard for the care and training of predelinquent, delinquent, psychopathic and maladjuster children, and providing for the payment of the expenses of the commission.

    (Approved by Governor May 6, 1927. In effect JuIy 29, 1927.)
    The people of the state of C'alifornia du emart as follom's:
    Section 1. There is hereby created a commission to be known as the "Commission for the study of problem children." The commission shall consist of seven members appointed by the govermor. They shall receive no compensation for their services.

    SEC. 2. It shall be the duty of said commission, in conjunction with the bureau of juvenile research of the Whittier State School, to make a study of juvenile delinquency in the State of California and to report and recommend to the Legislature of the State of California, at the forty-eighth session thereof, a plan for the prevention of juvenile delinquency and the proper care and training of predelinquent, delinquent, psychopathic and maladjusted children, such as, in the opinion of the commission, will be best calculated to remove the causes of juvenile delinquency and provide for the care and training of such children.

    Sec. 3. The department of institutions, with the approval of the State Department of Finance, may provide for the payment of the actual and necessary expenses of the commission out of such funds of the Department of Institutions as may be available therefor; and there is hereby appropriated from such funds an amount sufficient to pay said actual and necessary expenses.

    ## Origin of commission.

    In the section on the twenty-four-hour school, mention has been made of the conflicting ideas regarding the types of institution of this kind which were deemed desirable by various progressive and forward-looking citizens of the state during the session of the forty-seventh California legislature. This confusion was so apparent to the members of the legislature that they were loath to decide the matter without advice from a group of representative citizens and specialists. In the short time at the disposal of the members of that legislature it was evident that impartial and thoughtful consideration was not possible for the fortyseventh session. Therefore, the late Mr. Fred C. Nelles prepared a bill (the text of which is given in the previous scetion) to establish this commission, with the wise provision that not only the twenty-four-hour school should be given consideration but likewise the entire problem of juvenile maladjustment and its prevention.

    ## Appointment of the commission.

    In Febrmary, 1928, Govermor C. C. Yomg appointed the following members of the California Commission for the Study of Problem Children : Mariana Bertola, Elizabeth Mc्Manus, John P. Plover, Panl Rieger, Kenyon J. Scudder, Jewis M. Terman, Miriam Van Waters.

    ## Organization of commission.

    In compliance with an invitation of Chairman James A. Johnson of the California Crime Commission, the members of the California Commission for the Study of Problem Children met in joint session with the members of the Crime Commission in the Governor's office in the State Building, San Franciseo, on Wednesday, Mareh 14, 1928. The mecting was convened by Chairman Johnson at 10 a . m. At $2: 30$ p.m. the California Commission for the Study of Problem Children held its first session. The following members were present: Mariana Bertola. Elizabeth MeManus, John P. Plover, Paul Rieger and Kienyon J. Scudder. Those absent were: Lewis M. Terman, Miriam Van Waters.

    As a first order of business Mr. Paul Rieger of San Francisco was elected chairman. Mr. Kienyon J. Seudder, superintendent of Whittier State School, was chosen secretary. These officials have contimed to serve thronghont the year.

    ## Scope of work.

    On March 14, 1928, at $4: 30 \mathrm{p}$. m., the Commission for the Study of Problen Children met with the California Crime Commission and discussed the scope of work of each. It was agreed that all matters pertaining to the welfare of maladjusted children and the prevention of delinquency would be handled by the Commission for the Study of Problem Children. At another conference held at 10 a . m. on April 1, 1928, at the Whittier State School further definition of the work of the commission was given. Mr. Johnson, at the request of Chairman Rieger. outlined the "conference method" used by the Crime Commission in getting materials relevant to their problems. Mr. Johnson stated that the Crime Commission expected to turn over to this commission such matters as probation, playground facilities, and activities pertaining to juvenile cases. The discussion which followed Chairman Johnson's remarks was fruitful in delimiting the work of the two commissions and extending the possibilities of cooperation. It was agreed that this commission should approach the question of delinquency from the standpoint of prevention, considering such questions as the work of the public schools for problem children, chitd guidance clinies, adjustment schools, leisure hour occupation, ete.

    ## Limitations deemed necessary.

    The nine months available for this commission gave inadequate time for a very comprehensive study: Furthermore, the lack of adequate appropriations for the extensive research work necessary for a thorough analysis and study of the manifold problems which confront the state. again made imperative a clear definition in advance of the work deemed necessary in order that the available resources in time and expert assistance might be adequately used. It was therefore decided that the commission during its nine months would emphasize the important problems now facing the state and $g$ o into them intensively-that other problems of importance would be considered as thoroughly as possible, hut that no attempt would he made 10 go into them to such an extent as to distribute the resources of the commission over too wide a field and so render them confused and their report impractical to the mem.
    bers of the forty-eighth session of the California legislature. This accounts for the organization of Parts I and II of this report. Part I considers certain outstanding problens in detail; Part II considers certain important problems for the attention of the members of the legislature, but in less detail, and with mention of the need for further investigation of many of them.

    ## Summary of the work.

    Executive sessions of the commission were held in the morning before regular scheduled conferences, or in the afternoons at the conclusion of such meetings. Frequently an entire morning or afternoon was given to a closed session of the commission. The final meeting at the Whittier State School on November 14 and 15, 1928, was an executive session throughout and was devoted to a careful and detailed consideration of the matters presented in this report.
    Conferences were held at the following places:

    1. The Governor's Office, State Building, San Francisco, March 14, 1928.
    2. Whittier State School, Whittier, April 1, 1928.
    3. Office of the chairman of the Los Angeles County Probation Committee, Room 901, Hall of Records, Los Angeles, April 2. 1928.
    4. State Capitol, Sacramento, April 25 and 26, 1928.
    5. Yosemite Valley, May 23 and 24, 1928. [In connection with the Pacific Coast and California Conference on Social Work.]
    6. Wheeler Hall, University of California, Berkeley, August 6 and 7 . 1928.
    7. Sonoma State Home, Eldridge, September 15, 1928.
    8. State Building, San Francisco, Septemher 17 and 18, 1928.
    9. Department of Education, Chamber of Commerce Building, Los Angeles, October 15, 1928.
    10. Supervisors' Room, Courthouse, San Diego, October 15, 1928.
    11. Whittier State School, Whittier, November 15 and 16, 1928.

    The hearings held by the commission were open to interested persons. It was inadvisable in view of the short amount of time and the need for expert advice and guidance to open the sessions of the commission to the general public. However the attendance of members of the school systems, probation departments and other similar groups interested in child welfare was encomraged in order that they might profit by hearing the material presented.

    The following is a list of the mont important speakers at the conferences:

    Dr. Herman M. Adler, Director, Illinois Bureau of Juvenile Researeh :
    Judge C. N. Andrews. Juvenile Court, San Diego;
    Mr. J. C. Astredo. Chief Probation Officer, San Francisco County ;
    Miss Ifelen Babson, Principal, Eagle Rock High School:
    Dr. Bailer: University of California, Berkeley;
    Mr. Harold B. Baker, Part-time School. San Diego;
    Miss Edith Rates. Principal, Lafayette Junior High School, San Diego;

    Mr. II. Horton Blair, Viec Principal, Secondary Schools, San Diego;
    Mr. M. D. Boucher, Principal Elementary Schools, San Diegro;
    Dr. Paul E. Bowers, Neuropsychiatrist, Los Angeles;
    Dr. Olga Bridgman, Professor of Psychology and Pediatrics, T'niversity of California, Berkcley;
    Miss Edith M. Burleigh, Child Gnidance Clinic, Los Angeles;
    Dr. F. O. Butler, Superintendent. Sonoma State llome;
    Mr. O. H. Close, Superintendent, Preston School of Industry :
    Miss Cecelia M. Collier, Vice Prineipal of Secondary Sehools, San Diego;
    Dr. Herman W. Cover, Juvenile Hall, Los Angeles:
    Miss Susan B. Crosby, Part-time School, San Diego:
    Mr. Tam Deering, Secretary, Community Service, San Diego:
    Mr. Karl de Schweinitz, Director of Family Case Work, Philadelphia, Pa.;
    Dr. Virgil E. Dickson, Director of Research and Guidance, Berkeley Public Schools;
    Mr. Raymond Dunlap, Superintendent, Child Welfare Department. City Schools, Los Angeles;
    Miss Louise Drury, Jurenile Protective Association, Los Angeles:
    Mr. John P. Dyck, Principal, Metropolitan High School;
    Mr. George Easton, Vice Principal. Secondary Schools, San Diego;
    Dr. E. Van Norman Emery, Director, Child Guidance Clinic, Los Angeles;
    Irs. W. B. France. Parent-Tcacher Association. San Diego:
    Mr. Arthur Gould, Assistant Superintendent of Schools, Los Angeles :
    Mr. Francis H. Hiller, Field Representative, National Probation Association ;
    Mrs. Hinkson, Sacramento City Schools:
    Mr. Guy M. Hoyt. Director of the Department of Attendance, Los Angeles;
    Mr. Charles C. Hughes, Superintendent, Sacramento City Schools;
    Miss Adele Humphrev, Vice Principal, Polytechnic High School;
    Mr. James A. Johnson, Chairman, California Crime Commission:
    Miss Alice M. Jones, Vice Principal, Metropolitan Migh School, Los Angeles;
    Mr. W. A. Kearns, San Dicgo;
    Mr. Vierling Kersey, Assistant Superintendent of Schools, Los Angeles;
    Miss Layton, Supervisor of Teaching Science, University High School, Berkeley;
    Mrs. G. A. Lazar, Parent-Teacher Association, San Diego;
    Dr. T. Coe Little, County Alienist and Psychiatrist, San Diego;
    Miss Meredith. National Committee on Visiting Teachers;
    Miss Helen Montegriffo, El Retiro Nehool for Girls. Iıns Augeles:
    Dr. Anita Mïhl, State Department of Education. Sacramento;
    Dr. Henry Neuman, Brooklyn Society of Ethical Culture and New York University:
    Dr. Newman, San Diego;
    Miss Noonan, Bureau of Attendance and Guidance, San Francisco Public Schools:
    Miss Martha E. Nye, Principal. Elementary Schools, San Diego;
    Mr. William J. Oaks, Principal, Elementary Schools, San Diego ;

    Dr. George Ordahl, Psychologist, Sonoma State Home:
    Miss Katharin Ostrander, Juvenile Hall, Los Angeles;
    Miss Adele M. Ontcalt, Principal, Elementary Schools, San Diego:
    Mr. Claude Owen, Supervisor of Welfare Centers, Los Angeles;
    Mr. Howard II. Pattee, Director of the Child Welfare Department,
    Pasadena City Schools;
    Miss Phelps. San Diego;
    Mrs. Helen Watson Pierce, Assistant Superintendent of Schools, Los Angeles;
    Dr. V. H. Podstata, University of California, Berkeley;
    Miss Ethel Reynolds, Visiting Teacher. San Diego ;
    Dr. Alexander C. Roberts, President. San Francisco State Teachers ${ }^{\circ}$ College;
    Miss Berdena Robertson, Vice Principal, San Fernando High Schonl :
    Dr. Aaron J. Rosanoff, Psychiatrist, Los Angeles:
    Professor C. E. Rugh, Department of Education, University of California, Berkeley;
    Mrs. Anna L. Saylor, Director. State Department of Social Welfare: Judge Robert H. Scott, Juvenile Court, Los Angeles County :
    Mr. Charles H. Shallbach. Principal, Elementary Schools, San Diego;
    Mrs. Edna R. Sheldon, Assistant Director. Department of Attendance, Los Angeles;
    Miss Sallie Sisson, Vice Principal, Secondary Schools. San Diego;
    Mr. O. F. Snedigar, Chief Probation Officer, Oakland:
    Dr. H. R. Stoltz, Department of Education. University of California. Berkeley;
    Mr. Clarence R. Swenson, Vice Principal, Secondary Schools, San Diego;
    Miss Bertha Trowbridge. Visiting Teacher, San Diego;
    Mr. George C. Turner, Boys' Aid Society, San Francisco;
    Mr. Harold K. Vann, Chief Probation Officer, Seattle, Washington:
    Mr. August Vollmer, Chief of Police, Berkeley:
    Dr. Olive P. Walton, Ventura State Schonl for Girls;
    Mr. Homer K. Watson, Principal. Jacob A. Riis High Schonl, Lons Angeles;

    Judge Myron Westover, Superior Court, Los Angeles:
    Dr. J. Harold Williams. Los Angeles Psychiatric Clinic:
    Mr. C. E. Wilson, Probation Officer, Sacramento County;
    Dr. Elizabeth Woods. Director. Department of Psychology, Lns Angeles City Schools;
    Mr. W. F. Worcester, Chief Probation Officer. San Diego;
    Mr. C. E. Wright, Superintendent, California Junior Republic. Chino;
    Miss Ada York, Superintendent. County Schools, San Diego;
    Dr. E. F. Young, Denartment of Sociology, University of Southern California :
    Mr. W. B. Young, Probation Officer, San Joaquin Comnty;

    ## PART IN:

    Bibliography of books and articles relating to juvenile delingeney and the prevention of jurenile erime.

    # STATE OF CALIFORNLA <br> THE ADJUTANT GENERAL'S OFFICE 

    July 1, 192 S .
    The Hon. C. C. Young, Governor and Commander-in-Chief.

    Sir: Under the provisions of section 1928 , Political Code of California, I submit my report of activities of this department for the period July 1, 1926, to Jume 30, 192 s.

    Very respectfully,
    R. ${ }^{\text {E }}$. MTTELSTAEDT, The Adjutant General.
    

    ## INTRODUCTORY

    This report briefly covers some of the major aetivities of the Adjutant General's Department for the period July 1, 1926, to June 30, 1928. Its contents are largely statistical, amplified when necessary by appropriate comment. No attempt has bern made to mention or deseribe all activities of this department or to deseribe in detail those that are mentioned, for to do so would make the report too voluminous.

    Progress made by the National Guard of this state during the past two years in administration, organization and training may be described as very satisfactory. Progress as been gradual, a steady advancement resulting from improvements in methods, and inereased knowledge gained by experience. It is believed that the National Guard is developing on a sound foundation; one that will endure regardless of any temporary setbacks it may receive. Many of our officers and noncommissioned officers have served continuously since the organization of the National Guard following the World War, and the experience of these officers and non-commissioned officers has been of much value in promoting the welfare of the service.

    Administration has improved. New administrative methods have been tested and adopted. The problem of administration is being studied continually with the object of so simplifying it that it will cease to be an onerous burden on commanders having both tactical and administrative functions. The office of this department is organized so as to effect as much reduction as possible in administrative matters falling on tactical commanders, which policy leaves them an increased amount of time for training purposes.

    No changes in organization are proposed or recommended. Maximum adrantage has been taken of all allotments made by the War Department and of facilities made available from both state and federal sources. A few changes in location and character of organizations may be made necessary at a future date by reason of the organization of new units, recently anthorized for organization in this state.

    Training of personnel is perhaps the most important reason for organization and maintenance of the National Guard. In this I am happy to state, very satisfactory progress has been made. Commanders responsible for training are more and more tending to follow tested and approved methods of training, progressing by successive steps from basic to more advanced training. A considerable portion of the progress made has been due to the valuable aid and encouragement extended by the Commanding General. Ninth Corps Area, and the officers and noncommissioned officers of the Regular Army detailed as instruetors with various organizations.

    Our relations with the Militia Bureau and other agencies and individuals of the War Department continue most amiable.

    On the whole the National Guard of this state is in a very satisfactory condition, ranking high in organization, equipment, training and efficiency with that of other states. Morale and esprit de corps never were better. A real affection for National Guard service and National
    
    Sin Francisco Armory, Showing Compleion of Auditorium.

    Guard traditions exists in the minds of a great majority of the members of our organizations, manifested through their continued service. Under these conditions the National Guard of this state may be expected to record satisfactory progress and achievement so long as it exists.

    -Resigned. $\quad$ Died in office.

    ## ARMORIES

    The completion of the San Francisco and Los Angeles armories as authorized by the forty-sixth and forty-seventh legislatures has been accomplished and both of these buildings are now in a satisfactory condition. The Sacramento and Stockton armories also have been renovated.

    There are only four state-owned armories in this state; the remainder (twentr-nine) are rented or leased. The state-owned buildings are very satisfactory, but only one out of every ten of the leased buildings is suitable or satisfactory. In most cases they are very unsatisfactory but are the best obtainable at the rental the state can afford to pay.

    ## CALIFORNIA GUARDSMAN

    A factor that has been of great value in promoting moral and esprit, a competitive spirit in such matters, as drill attendance, athleties, etc., and in dissemination of matters of interest concerning the National Guard is the publication of The California Guardsman, a monthly magazine devoted to the activities of organizations of the National Guard of this state. This magazine, first published in December, 1924, has been enthusiastically received. It is compiled and edited by a staff composed of representatives from each organization, and is entirely self-supporting. It compares favorably, both in general appearance and published matter, with the best of similar publieations throughout the United States.

    An interesting and valuable feature of the California Guardsman is the publication therein of figures showing strength and average drill attendance monthly. This feature alone has been credited with greatly increasing average monthly drill attendance of organizations by reason of its challenge to the competitive spirit.

    ## CHANGES

    Changes since last report:

    ## Mustered Out of Service

    1. Medical Department Detachment (less 2d Battalion, MDD.) 143d Field Artillery, at Oakland, April 1, 1927, for the purpose of consolidation with 2 d Bn . Detachment. at Stockton.
    2. Medical Department Detachment (Yeterinary Service) 79th Brigade, Petaluma. April 12. 192 $\overline{7}$, on account of removal of Detachment Commander.
    3. Compauy D, 159th Infantry, Berkeles, October 10, 1927, on account of falling below standard of efficiency.
    4. Company A. 1Stth Infantry, Merced. November 1, 1927, on account of falling below standard of efficiener.
    5. Headquarters Company 79tb Brigade, San Francisco, November 10. 1927. for the purpose of reorganization of company at station of Brigade Headquarters, Los Angeles.

    ## Redesignation of Organizations

    1. Medical Department Detachment. 159th Infantry, Berkeley, redesignated Medical Department Detachment (less Medical Department Detachment, 3d Battalion) 159th Infantry, June T, 1927.
    2. Company L, 184th Infantry, Turlock, redesignated Compauy A. 18fth Infantry, December \&. 1927.

    ## New Organizations Organized

    1. State Detachment. Sacramento. Norember 12. 1926.
    2. Medical Department Detachment. 143d Field Artillerr. Stockton. April 1. 1927.
    3. Medical Department Detachment (Veterinary Service) i9th Brigade. Sacramento. April 21. 1927.
    4. Medical Department Detachment. 3d Battalion. 159th Infantry, San Francisco, June T, 1927.
    5. Headquarters Detachment, 40th Division. Berkeley, June 15, 192.
    6. Company L. 18tth Infantry, Napa. December 9. 1927.
    7. Headquarters Company, 79th Brigade. Lus Angeles, December 13. 1927.
    s. Company [15, 159th Infautry, Alameda, December ${ }^{2}-192 \overline{1}$.

    ## COLORS OF CALIFORNIA REGIMENTS PRESERVED

    ## Tattered Standards of Civil, Spanish-American and World War Units Are Being Restored

    Tattered, dilapidated and standards of California regiments, carriced by citizen soldiers of California from the beginning of the state's history in 1849, are now being restored at the Philadelphia Nary Yard by Katherine S. Richer, wife of Commander Thos. B. Richer, U. S. Navy. The historical colars and standards of all of the regiments of California's Militia and of the California National Guard are to be reconditioned. These old flags of the state were in a very dilapidated condition, due to their natural deterioration from time as well as from the months of scrvice, and in a few years would have been bevond saving and lost to posterity forever.

    When the work is completed on all of the California flags, including those of the World War regiments, they will be placed in the Rotunda of the State Capitol.

    The colors carried through the Philippine eampaign by the 1st California Volunteer Infantry (1st Inf., N. G. C., and now 250th C. A.) were the first to be restored. These flags were borne by this California rogiment in the Battle of Manila, the Battle of Malata, the Malacanam eampaign, and the expedition to the Island of Negros.

    Twenty-nine colors and guidons are to be restored, as follows:

    ## Civil War:

    Co. D, 2d Cavalry, Cal. Vol. (Guidon).
    Co. I, 2d Cavalry, Cal. Vol. (Guidon).
    Co. M, 1st Cavalry, Cal. Vol. (Guidon).
    National Guidon, Co. M, 1st Cal. Vol.
    Bear Flag, California 100.
    Battle Flag, California 100.
    National Color, Mountain Volunteers, Co. B, tth Reg. Cal. Vol.
    Regimental Colors, 4th Regiment of Infantry, Cal. Vol.
    National Color, 2d Cavalry, U. S. Vol. Cal. 100.
    National Color, 1st Infantry, Cal. Yol.
    National Color, 1st Cavalry, Cal. Vol.
    National Color, Sth Cal. Vol.
    Regimental Color, Gth Cal. Vol.
    National Color, 6th Cal. Vol.
    National Color, Tuolumne Rangers of Sonora.
    National Color, Amador Mountaineers.
    Spanish-American War:
    Regimental Color, 1st Pattalion Leavy Artillery, U. S. Volunteers.
    National Color, 1st Battalion, LLeavy Artillery, U. S. Vol.
    National Color, 1st and 2 d l'attalion, Cal. U. S. Yol. Infantry.
    Battalion Color, 1st and 2d Bn., Cal. U. S. Vols.
    

    Mrs. Katherlne Richey, wife of Commander T. B. Richey, Philadelphia Navy Yard, is standing beside a completed flag, while her helpers are shown at work on another battle-scarred California color.

    3-63096

    Regimental Color, 7th Reg. Cal. Vol.
    National Color, 7th Reg. Cal. Vol.
    Captured Spanish Flag taken from ship in Manila Bay.
    National Color, U. S. Vol. Sth Reg. Infantry.
    Regimental N. G. California 8th Regiment Infantry.
    National Color, 1st California U. S. Vol. Infantry.
    Regimental Color, 1st California U. S. Vol. Infantry.

    ## Other Flags:

    Union Veteran's Legion, Encampment.
    Pioneers 1819, Sacramento.
    The state is indebted to Mr. Alexander Heron, State Department of Finance, who arranged a special allotment of funds for the purpose of preserving the flags.

    ## DEATHS

    It is with deep regret that the death of the following officers during the period covered by this report is announced:

    ## National Guard

    First Lieutenant Lawrence Trson. 143d Field Artillery, on November 3, 1926, at San Francisco, California.

    First Lieutemant Ernest A. Fendt, National Guard Reserve, November 19. 1927, at Colusa, California.

    First Lieutenant Fred M. Wheeler, National Guard Reserve, on April 20, 1926, in Arizona.

    Second Lieutenant Percy C. Langenbach, 1Stth Infantry, on June 5, 1926, at Marysville, California.

    First Lientenant Joseph V. Bowman, 143d Field Artillery, on April 29, 1928, at Livermore, California.

    ## Regular Army

    Lieutenant Colonel George W. Winterburn, Q. M. C., U. S. Army, on March 10, 1927, at Sacramento, California. Colonel Winterburn had been on duty as Instructor, The Adjutant General's Office, since Augnst 4, 1923.

    ## DRILL ATTENDANCE

    Attendance at weekly armory drills continues to improve. This is very encouraging. Good drill attendance indicates a healthy condition in an organization, a state of high morale, and that its members are interested and enthusiastic. A large percentage of organizations now regularly have a drill attendance of over ninety per cent, an excellent figure comparable to the best of similar organizations in the United States. Comparatively few organizations have been rated unsatisfactory in drill attendance during the period covered by this report and corrective measures taken resulted in placing them again in a satisfactory condition within a short time.

    From the following chart showing drill attendance by month and year since January 1,1923 , it will be noted that average drill attendance has increased from approximately fifty-two per cent in 1923 to approximately seventy-one per cent in 1926 and over seventy-six per cent in 1927. The average drill attendance for the first six months of 1928 is over eighty-one per cent.

    Perhaps the greatest benefit obtained from a high drill attendance, in addition to its effect on morale, is the increased efficiency resulting from

    Perhaps the :
    addition to its
    having a large percentage of men present for training. Programs of training are progressive in character requiring attainment by successive steps of stated objectives. These objectives can only be reached when a large percentage of men habitually attend every drill and participate in the training. That inspection reports indicate the state of training is uniformly satisfactory in all mits throughout the state, is due in large part to the splendid drill attendance.

    Another factor having much to do with increasing drill attendance is the adoption of a medal of appropriate design for presentation to all enlisted men having a perfeet attendance record at armory drills and the field training period, during the calendar year. Efforts to win this medal are pronounced and they reflect on drill attendance records. In 1926, two hundred eighty-nine medals were issmed; in 1927 the number had inereased to five hundred fourteen. In other words, over ten per cent of the enlisted men attend every weekly armory drill and the summer train-
    

    Medal awarded for 100 per cent drill attendance. ing camp.

    ## EMERGENCIES

    Folsom.
    On November 24, 1927, at 11.30 a.m. the Governor called out five hundred officers and enlisted men to (fuell a riot and attempted outbreak at Folsom Prison in which twelve hundred convicts were involved. The first troops reported at $1 \mathrm{p} . \mathrm{m}$. and all of the troops were relieved at 10 a.m. the following day, the riot having been suppressed and the services of troops being no longer required. Colonel Wallace A. Masnn, 184th Infantry, was in command and the following listed units reported:
    

    ## St. Francis Dam Disaster.

    At the time of the St. Francis dam disaster on March 13, 1928, the commanding officers of the Infantry and Air Service units located in the Los Angeles district made a reconnaissance and reported the situa-
    tion. The Governor made a personal investigation and it was decided that troops would not be necessary although the 160th Infantry was held in readiness. Tentage, blankets and other supplies were, however, furnished the refugees.

    ## North Sacramento Flood.

    Sunday March 25, 1928, the American River overflowed its banks and members of Battery D, 143d Field Artillery and the 184th Infantry assisted in the rescue work and also in protecting property from looters. Two officers and fifty-two enlisted men under command of Captain A. E. Waite, 184th Infantry, reported and remained on duty until April 1. Blankets and cots were furnished the refugees and the North Sacramento Armory was used as a relief station.

    These emergencies furnished the first opportmities in recent years for tests of the ability of organizations to mobilize rapidly, with all equipment necessary, for effective service in civil disturbance or disaster emergency. The promptness with which they mobilized and reported at the scene of action, as well as the effective service rendered, furnishes a criterion indicating the promptness and the effectiveness of action to be expected in future emergencies.

    ## FINANCE

    Report of financial affairs together with comparative figmres since 1921 follows:

    |  | Areraga strength | Total cxpenditure | Cost per man |
    | :---: | :---: | :---: | :---: |
    | 73d fiscal year 1921-20 | 2,75\% | \$206,361 03 | \$107 49 |

    Federal aid to the extent of $\$ 816,721.50$ was apportioned to this state during the present fiscal year, or $\$ 184.67$ per guardsman, while the state provided funds to the extent of \$j0 per guardsman. (This federal aid does not include $\$ 70,000$ allotted for the permanent Training Camp at San Luis Obispo.) The federal government also has issned approximately $\$ 5,000,000$ worth of equipment to the state.

    ## FIELD TRAINING CAMP SITES

    ## San Luis Obispo.

    A permanent training camp for division troops has been established in San Luis Obispo County on the Morro Bay highway four and onehalf miles from the city of San Luis Obispo. The land could not be leased from its owners so it was purchased by a committee of citizens and on October 1, 1927, was leased to the state for twenty-five years. Financial arrangements were concluded by Colonel Alexander Herou, Director of Finance.

    This site which contains 1982 acres was selected after an exhaustive study of the field training requirements of the 40th Dirision. The search for a suitable site lasted three years and the one finally selected is as nearly ideal as is possible to locate. The War Department detailed a board of officers from Washington, D. C., of which Colonel W. N. Caldwell, General Staff, was president, to examine the site and the following quotations have been taken from the report of the board:

    There is everything here needed for an ideal military camp site.
    A wide plateau with just enough slope to make efficient drainage; wide and level for maneurers.

    There is a clear, level space for an aviation field facing the direction of the prevailing winds.

    There is a real artillery range.
    There is an ample supply of water.
    It will be a very simple matter to run a spur track on the property.
    Weather conditions, as taken from the U. S. Weather Bureau reports, indicate that the climate is ideal.

    With a deep water harbor only a day's march from the camp, where troops could embark or disembark in event of an emergencr, the site is ideal.

    The federal government has allotted approximately $\$ 134,969$ for the first year's construction work which includes complete water, sewer and electric light systems, two warehouses and one regimental unit which includes sixteen mess halls, four lavatories, sixty officers' and two hundred enlisted men's tent floors. This work has been completed and additional contracts have been let to start the second unit at a cost of $\$ 29,033$. The completed project, which will cost approximately $\$ 500,000$, will be built in units as fast as money becomes available, the ultimate plan calling for five regimental units and one unit for special troops.

    Our new camp site, pronounced the best training area in the United States by military experts, will not only provide better training
    
    NATIONAL GUARD TRAINING CAMP SITE AT SAN LUIS OBISPO.
    The site comprises a 2000 -acre tract which is here shown in the center, enclosed by a heavy line.
    
    Entrance to National Guard Training Camp, 40 th Division, at San Luis Obispo.
    

    Coast Artillery Camp Site at Capitola.
    faeilities but considerable money will be saved in transportation, freight, eartage and storage charges. In addition, the large sum spent each year to repair and alter temporary quarters under our old system will be saved. All improvements on the new eamp site will be of permanent construetion.

    The sum of $\$ 25,000$ has been raised by eontribution from offieers and culisted men, profits of camp post exchanges, holding of dances, entertainments, and by public subseription, for recreation purposes.

    A swimming pool 50 feet by 100 feet and a post exchange building have been constructed and reereation eenters for both enlisted men and officers will be built. All buildings and works were designed and construetion supervised by the Division of Arehitecture, Department of Publie Works, who deserve commendation for their exeellent work. All Regular Army and National Guard officers who have inspected or used the eamp have praised the installation highly.

    At date of this report the first organization to attend the new camp, the $1+3 d$ Field Artillery, has just completed its two weeks' period
    

    The reservoir assures ample supply of pure water which has its source in the Santa Barbara National Forest.
    of field training. Reports of this organization indicate that the camp site comes up to expectations in every way.

    ## Capitola.

    This 90 -acre tract has been improved by the federal government to the extent of adding hot water facilities, warehouse and painting of all buildings. This site is under a five-year lease and is used exclusively by the 250th Coast Artillery.

    ## FIELD TRAINING

    The following table shows the number of officers and enlisted men attending encampments by year:

    | Vear | Officers | Enlistcd men | Total |
    | :---: | :---: | :---: | :---: |
    | 1920 | 22 | 2S1 | 303 |
    | 1921 | 99 | 1,592 | 1.691 |
    | 1922 | 162 | 2,367 | 2.529 |
    | 1923 | 172 | 2,423 | 2,595 |
    | 1924 | 250 | 3,394 | 3,644 |
    | 1925 | 300 | 3,525 | 3,825 |
    | 1926 | 364 | 3,918 | 4,282 |
    | 1927 | 388 | 4,521 | 4,909 |

    1926 CAMP ATTENDANCE RECORD
    
    1927 CAMP ATTENDANCE RECORD
    
    $388 \quad 4521$

    Field training contimes to be satisfactory. Each year the number of men attending camps is greater than the year before. While highly desirable that every man attend camp, because training received there consists of instruction that can not be given during armory drills, it has been found impracticable to require men to attend when it would result in serious business difficulties. However, the number applying for furlough during the camp period is diminishing yearly.

    Reports of Regular Army inspectors on duty at field training camps indicate that very gratifying results are being obtained. Maximum results are being obtained by maximum use of the hours available. Military training is supplemented and made more interesting hy the inclusion of suitable ceremonies, and programs of athletic competitions, which have the effect of encouraging enlistments and reenlistments.

    ## HIGH SCHOOL CADET CORPS

    The High School Cadet Corps units are maintained in six schools. as follows: Sacramento, Fresno, Porterville, Dinuba, Oroville and Galt. The latter school was accepted, and Shasta Union High School withdrew from membership, during the period covered by this report.

    The Porterville Union High school was awarded silk national
    

    The flag at Camp San Luis Obispo is on a knoll near reservation headquarters -it is seen from the S. P. main line and for miles down the San Luis road. and state flags for having the most proficient High School Cadet Corps during the school year 1926-1927, as determined by an inspection made by a Regular Army officer. Again Porterville Union High School won first honors for having the most proficient Cadet Corps during the school year 1927-1928, for which it was awarded a silver trophy.

    During 1927 and 1928 State High School Cadet encampments were held at Fresno, in conjunction with the Fresno Raisin Day Celebration. Approximately 450 cadets were in attendance at each camp.

    The annual rifle and small bore competition was held at the State Target Range, Leona Heights, May 27 to 30, 1927, and May 26 to 29 , 1928.

    The Sacramento High School was awarded The Adjutaut General's trophy for high team score during the 1927 small arms firing competition. The Fresno High School was awarded The Adjutant General's trophy for having the highest team score in 1928.

    The following individual awards for excellence in rifle marksmanship and in the small bore competition 1927 and 1928:

    ## 1927 Individual Rifle avards.

    William Shartell. Sacramento High School, total score 315-gold medal. Joe Black, Sacramento High School, total score 301-silver medal. Clair Hill, Shasta Cnion High School, total score 300-bronze medal.

    ## 192\% Indizidual Small Bore avards.

    James Daley. Porterville High School, total score 359-gold medal. Charles Reuter. Porterville High School, total score 356-silver medal. George Snow, Sacramento High School, total score 351-bronze medal.

    ## 1928 Indiridual Rifle avards.

    Pvt. Lester Jeffreys, Fresno High School, total score 313 -gold medal.
    Prt. Jack Bartram, Fresno High School, total score 312-silver medal.
    Capt. Jouny Jan. Sacramento High School, total score 310-bronze medal.

    ## 1928 Individual Small Bore aicards.

    Prt. Lester Jeffreys, Fresno High School, total score 368-gold medal.
    1st Lt. Arthur Hilman, Sacramento High School, total score 359-silver medal.
    1st Lt. Lawrence 0 'Toole, Fresno High School, total score 35 -bronze medal.
    

    ## HISTORIES AND COAT OF ARMS

    As a means of promoting esprit de corps and perpetuating the history traditions and service of each organization, our National Guard organizations which under regulations of the War Department are entitled to carry colors or standards, have been anthorized to adopt a coat of arms commemorative of organization and service, and a motto indicative of the spirit or aims of the organization : the shield of the coat of arms, the crest described below, and the motto, to be embroidered on the regimental color or standard. The shield of the coat of arms is superimposed on the eagle's breast and the regimental motto on the scroll in the eagle's beak.

    The blazonry and description of the crest for the National Guard of this state, approved by the Secretary of War is as follows:

    ## Blazonry

    Crest: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field all proper.

    ## Description

    California the Sunset State, the Golden Gate commonwealth; the grizzly bear was on the flag of the California Republic. The original white settlement within
    the state was of Spanish origin and the twists of the wreath are accordingly gold and red.
    Each regiment accordingly has adopted a coat of arms and motto which have been approved and are as follows:

    ## Coat of Arms for the 159th Infantry

    Shield: Azure, three piles issuant or, in chief a prickly pear cactus, vert, a sheathed Roman sword paleways, point to base, gules, and a fleur-de-lis of the first.

    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field, all proper.

    Motto: Unity for Service.

    ## Coat of Arms for the 184th Infantry

    Shield: Azure, a chevron between a battle axe, a giant eactus and a fleur-de-lis, all or.

    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field, all proper.

    Motto: Let's Go.

    ## Coat of Arms for the 143d Field Artillery

    Shicld: Parti per saltire azure and gules, a fleur-de-lis between in chief the insignia of the 40 th Disision (a disc with twelve spiked rays) and in base a rattlesuake coiled to strike, all or.

    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field, all proper.

    Motto: Facta Non Verlia (Deeds Not Words).

    ## Coat of Arms for the 250th Coast Artillery

    Shield: Gules, a pale argent eharged with a palm tree proper, in dexter fess a tower triple towered and in sinister a fleur-de-lis encircled by a garland of laurel, all or.
    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly hear passant on a grassy field, all proper.

    Motto: Oram Oecidentalem Defendimus (We Defend the Western Coast).

    ## Coat of Arms for the 251st Coast Artillery

    Shield: Or, six pallets couped gules, a ship of Cabrillo's time argent; on a canton azure a fleur-de-lis encircled by a garland of laurel of the first.

    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field, all proper.

    Motto: We Aim To Hit.

    ## Coat of Arms for the 160th Infantry

    Shicld: Azure, two bandlets gules and vert fimbriated or between an angel's wings conjoined and inverted argent and a fleur-de-lis, within a diminished bordure engrailed of the fourth.

    Crest: That for the regiments of the California National Guard: On a wreath or and gules the setting sun behind a grizzly bear passant on a grassy field, all proper.

    Motto: Mabeant (Strike).

    ## INSTRUCTORS, REGULAR ARMY

    Under the provisions of paragraph 100, National Defense Act approved June 3, 1916, the War Department has detailed to this state, offieers and eulisted men of the Regular Army as instruetors of the National Guard. There are at present fourteen officers and fifteen enlisted men on duty with the National Guard of California. $\Lambda$ complete list of officers detailed and changes since last report follows:

    | BranchInfantry | Station | Reported |  | Relieved |  |

    ## RIFLE MARKSMANSHIP

    Due to the failure of congress to appropriate necessary funds national matches were not held in 1926.

    The National Guard and the California Civilian Teams partici－ pated in the national matches in 1927．The respective teams were comprised of the following：
    

    Mess hall at San Luis Obispo．

    ## National Guard Team

    Tcam Captain－Major John L．Farley，2⿹̄0th Coast Artillery．
    Teum Coach－Captain Leonard L．McGee，1Sth Infantry．
    Principals－1st Lt．Oroville H．Thompson．：251st Coast Artillery．
    2nd Lt．Charles O．Fry，251st Coast Artillery．
    1st Sgt．Francis C．Tremayne，Co．C．15！th Infantry．
    1st Sgt．Percy A．Rook，Jr．，Btry．B，251st Coast Artillery．
    1st Sgt．Forrest S．Taylor，Btry．F， $2 ⿹ 勹 巳 0 t h$ Coast Artillery．
    Sgt．Norman L．Mini，Howitzer Co．，1Sth Infantry．

    Corp．George O．Snow，Hq．Co．，1Stth Infantry．
    Alternates－Sgt．Ray B．Felton，Co．C，159th Infantry．
    1st Sgt．Francis A．Costa，Co．I，184th Infintry．

    ## Civilian Team

    Team Captain－E．N．Moor，Jr．
    Team Coach－Ned C．Cutting．
    Principals－W．Haack，Lester A．Pope，Eugene G．Gardner，Louis Bauner， Henry P．Ronkendorf，Marcus C．Dolson，Lucius R．Orton，Alvin A．Fischer， Henry C．Wright，Joseph S．Sadler．
    Alternates－Nick L．Kipp，Ned C．Cutting．

    ## RIFLE RANGES

    Rifle and pistol ranges are located at the following points：Chico， Laton（Fresno），Livermore，Lodi，Oakland（San Francisco，Alameda and Oakland），Elk Grove（Sacramento），Gigling（Salinas），Alameda Road（San Jose），Santa Ana，Turlock，Stockton，Visalia，Woodland and Sutter（Yuba City and Marysville）．

    These ranges serve practically all the troops of the state，with the exception of a regiment of infantry stationed at Los Angeles．Due to
    the high value placed on land in the vicinity of Los Angeles it has been impossible to obtain a range for use of troops at that station.

    ## SERVICE MEDALS

    Under seetion 2011 of the Political Code members of the National Guard are entitled to reeeive medals from the state for ten, fifteen, twenty and twenty-five years service. The following is a list of present members entitled to sueh medals:

    10-Year Service Medal

    ## SPECIAL REGULATIONS No. 3

    A regulation in pamphlet form on the subjeet of "Employment of Troops of the California National Gnard in Disaster" was published January 1, 1928. This regulation was very efficiently prepared by the 40 th Division Staff. Copies were sent to all of the larger eities of the state, as well as to each State Adjutant General. We have rereived many favorable eomments on this pamphlet which is probably the first to be published on this subject.

    ## STRENGTH

    There has been no material increase in the strength of our National Guard since the last report due to the fact that Congress has limited the strength of the National Guard of the United States to approximately 187,000. Four hundred and twenty-five offieers, six warrant
    ofticers and 5168 enlisted men, or a total of 5599 of this number are allotted to California and all units anthorized under the foregoing allotment have been organized. The last eongress made provision for an inerease in the National Guard, effective in 1929, aml in our state a new regiment of infantry will be added. This will increase the strength by approximately one thonsand men. Authority has been received to start organizing one battalion and two headquarters units after April 15,1929 , the remaining mits to be organized after July 1 , 1929. We have applications on file from forty-five cities in the state desiring National Guard mits.

    The War Department on December 9, 1927, revised the allotment of troops to various states, withdrawing certain units which muler the so-ealled modified program are not to be organized in time of peace. The following units were withdrawn from the State of California:

    SGth Corps Artillery Brizade Ileadquarters and Headquarters Lattery ;
    13Sth Balloon Gromp IJeadquarters and Headquarters Letachment:
    13Sth Balloon Group Medical Department Detachment:
    $12^{7}$ th Balloon Company :
    158th Photo Section. Balloon Group ;
    13sth balloon Service Company:
    13Sth Medical Regiment, consisting of: Headquarters, Service Company: Ifeadquarters Collecting Battalion; 192d, 193d, 194th Collecting Companies; 13Sth Veterinary Company.

    The allotment to this state now is as follows:

    ## 40th Division Troops

    Division Headquarters and Division Headquarters Detachment, 40th Divisien. Headquarters and Headquarters Detachment, fotlı Division Special Troops.
    Medical Department Detachment, 40th Division Special Troops.
    Ileadquarters Company, toth Division.
    40th Signal Company.
    40th Tauk Company.
    115̄th Motorercle Company.
    Service Company.
    79th Infantry Brigade, Consisting of: Headquarters and Headquarters Company; Brigade Medical Department Detachment; 1.eth Regiment Infantry; 1G0th Regiment Infantry.
    soth Iufantry Brigade, consisting of: Headquarters and lleadquarters Company; Brigade Medical Department Detachment; 1S4th Regiment Infantry; 185th Regiment Infantry.

    11,th Field Artillery Brigade Ammunition Train.
    143d Regiment Field Artillery.
    toth Division Air Service.
    115th Medical Regiment (less Ilospital Battalion), consisting of: Headquarters, Service Company, Headyuarters Collecting Battalion, 143d, 14th and 14ăth Collecting Companies. Headquarters Ambulance Battalion, 14th Ambulance Company (AD), 143 Bl and 14⿹\zh26灬th Ambulance Companies (MD), 110̄th Veterinary Company.

    40th Dirision Qnartermaster Train (part), consisting of: Ileadquarters and Headulurters Detachment. Medical Department Detachment, 157th Motor Transport Company, 159th and 160th Motor 'Transport Companies, 129th Motor Repair Section, 129th Wagon Company.

    Corps Troops
    196th Field Artillery Regiment, 15jumi Gun (less 1st and 3d Battalions).

    ## Coast Defense Troot̄s

    250th Coast Artillery Regiment (Heavy Tractor).
    251st Coast Artillery Regiment (Harbor Dcfense).

    ## UNITED STATES MILITARY ACADEMY, WEST POINT

    The regulations governing the selection of enlisted men of the National Guard for appointment to the United States Military Academy provides that the candidates be apportioned among the states in accordance with the strength of their respective National Guard organizations. The candidates are selected by competitive examination which is held between November 1 and 15 of each year.

    The following named members of the California National Guard have been recommended to take the entrance examination:

    1926
    Corp. Richard C. Parker, Hq. Co. 2d Bn., 159th Infantry.
    Prt. 1st Class Le Roy Bartlett, Jr., Btty. B, 143d Field Artillery.
    192
    Prt. Charles Coburn Smith, Jr., Co. A, 159th Infantry.
    Sgt. Robert Moorman Cheal, Co. A, 159th Infantry.
    1928
    Pyt. Joseph E. Stearns, Hq. Co., 3d Bn., 159th Infantry.

    ## WAR TROPHIES

    Under act of congress, approved June 7, 1921, the Chief of Ordnance was authorized to distribute captured German war trophies among the various states. The original allotment made to this state was distributed as listed in last report. Siuce that time two distributions have been made ; one in March, 1927, and another in May, 1928, the last being the final allotment.

    The second distribution includes articles to 109 patriotic organizations and individuals; the third and final distribution, to 105 organizations. This list which contains items from belt buckles to large guns weighing fifteen tons is too volnminous to print.

    ## OF

    ## STATE ATHLETIC COMMISSION OF CALIFORNIA

    To the Honorable C. C. Young, Governor of State of California, and To the Legislature of the State of California:

    Pursuant to the provisions of section 2 of an act approved by the electors of the State of California on November 4, 1924, entitled "An act to anthorize boxing and wrestling contests," the State Athletic Commission of California presents herewith the fourth annual report of its proceedings and aetivities beginning on the first day of December, 1927, and ending November 30, 1928.

    ## RECEIPTS OF COMMISSION

    The receipts of this Commission for the fourth fiscal year amounted to $\$ 122,985.58$, all of which has been turned into the state treasury to be credited to the State Athletic Commission fund.

    Herewith a summary of moneys received from month to month during the period covered in this report, December 1, 1927, to November 30,1928 :
    

    The money received by this Commission goes to improve conditions at the State Soldiers' Home at Yountville and will greatly aid, and possibly help the boys to forget for a time the sufferings and the sacrifiees they made in the cause of their eountry.

    ## MONEY RECEIVED FROJ LICENSES

    An itemized account of the moneys derived from the various licenses, December 1, 1927, to November 30, 1923, is as follows:

    Club license fee------------------------------- \$4,020 00
    
    Manager lieense fee----------------------------- 6,95000
    Boxer license fee--------------------------------- 9,790 00
    2-64161
    Sccond license fee ..... $\$ 2,09000$
    Physician license fee ..... 31000
    Timekeeper license fee ..... 27000
    Matchmaker license fce ..... 90000
    Wrestler license fee ..... 35000
    Announcer license fee ..... 19500

    ## LICENSES ISSUED

    All licenses issued by this Commission are given out and based on a calendar year, from January 1, 1928, to November 30, 1928, the following number of licenses being issned, to wit:
    Clubs ..... 71
    Referee ..... 64
    Manager ..... 278
    Boxer ..... 1,908
    Second ..... 422
    Physician ..... 62
    Timekeeper ..... 53
    Matchmaker ..... 36
    Wrestler ..... 66
    Announcer. ..... 38

    ## GATE RECEIPTS

    The gate receipts of the boxing and wrestling clubs of the state amounted to the gigantic sum of $\$ 2,192,384.67$. The greater portion of this vast amount finds its way back into the channels of trade and is soon in circulation again.

    By making a mental note of these receipts one can readily see that boxing in California represents nearly a two and one-half million dollar proposition. Under proper state control boxing is bound to thrive and prosper, thus a goodly sum will be realized each year for Califormia's soldiers and sailors.

    The gate receipts of the fourth fiscal year, segregated monthly, are as follows:

    |  |  |
    | :---: | :---: |
    |  |  |

    1928-January --------------------------------------------162,15696
    February--------------------------------- $\quad 322,30524$

    March 168,914 49
    April--------------------------------------194,805 29
    May_ 161,353 50
    June
    144,161 08
    July-------------------------------------------------150,58446
    August
    220,723 42
    September-----------------------------------------14 147,91735
    October
    246,85754
    November
    123,665 00
    Total
    \$2,192,384 67

    ## ATTENDANCE

    That boxing in California has become stabilized can easily be proven by comparing the attendance record of the past three years with the
    record of the year just passed. To be exaet $1,468,013$ persons attended boxing and wrestling shows this year; in 1925 the total attendance at all shows was $1,065,644$; in 1926 it was $1,720,843$; in $1927,1,697,510$.

    With such a keen interest in the boxing game, running clean as it is today, thousands and thousands of people in all walks of life have been and are enjoying an afternoon or evening of good, clean, vigorous and wholesome amusement.

    A sport which is endorsed by high offieials in the United States Government and was just reeently endorsed in a most emphatic manner by the electorate of this state.

    The monthly attendance is a follows:

    | 1927-December | 108,241 |
    | :---: | :---: |
    | 1928-January | 119,371 |
    | February | 180,789 |
    | Mareh | 123.204 |
    | April | 114,280 |
    | May | 121,393 |
    | June | 117.692 |
    | July | 105.721 |
    | August | 152,865 |
    | September | 104,490 |
    | October | 127,776 |
    | November | 90,430 |
    | Total | ,468,013 |

    SHOWS HELD
    The number of shows varies but little each month, as will be noted in the following tabulation :
    1927-December---------------------------------------------- 87
    
    
    March_----------------------------------------------- 96
    April_---------------------------------------------- 83
    
    
    July---------------------------------------------------182
    
    September-----------------------------------------. 84
    
    November--------------------------------------------- 82
    Total----------------------------------------------1, 1,017
    The record of shows held in 1928 notes but little variation ; i, c., in 1926 there were 1158 shows held, and in $1927,1135$.

    ## SUSPENSIONS

    The suspension poliey of the State Athletie Commission has had the desired effect in keeping the sport clean at all times.

    Close watch by inspeetors at each show has resulted in suspensions being kept at a minimum, but sufficient enough to prove that the disciplinary poliey of the Commission would be enforeed.
    A tabulation of the suspensions and the reasons therefor is given herewith:
    Fouling ..... 62
    Stalling ..... 31
    Non-appearance ..... 158
    Physically unfit ..... 97
    Infraction of Commission rules ..... 62
    Total suspensions ..... 410
    A weekly bulletin is mailed from the secretary's office each week to the actire clubs and to the press containing a list of those suspended and the reinstatements.

    ## PURSES CONFISCATED

    Section 10 of the initiative measure reads: "The referee shall have the power in his discretion to declare forfeited any prize, remuneration or purse, or any part thereof, belonging to the contestants or one of them, or any part of the gate receipts for which said contestants are competing, if in his judgment such contestant or contestants are not honestly competing."

    In accordance with the power given the referees under the law, the sum of $\$ 707.20$ was declared forfeited during the fourth fiscal year of this Commission.

    ## FINES

    From December 1, 1927, to November 30, 1928, the sum of $\$ 3.173 .05$ was imposed upon those in the boxing game for having broken one or more seetions of the Boring Law or Rules of the Commission.

    No fine was assessed against anyone where it was not absolutely essential, the fines were not exorbitant, but in all instances were imposed as a protection to the fans and the public.

    ## AMENDMENT NUMBER FIYE

    Public approval of the work of the State Athletic Commission for the past four years was stamped on the ballots at the general clection, Norember 6, 1925, by a majority of nearly 400,000 votes. Passed by a meager majority of $20,21 t$, the boxing initiative of $192 t$ ereated the State Athletic Commission. That the work of the Commission has met with the decided approval of California citizens was shown by the overwhelming vote of approval.

    ## Comparative Votes by Counties on Amendment No. 7 in 1924; on Amendment No. 5 in 1928

    As a matter of permanent record the Commission takes pleasure in submitting to your Excellency the vote by comnties on Amendment No. 7 in 1924 . which placed boxing and wrestling on the statute books and also the rote by counties on Amendment No. 5 in 1928, which retained the measure. It was a most decisive victory for the sport and a comparison of the figures will be found interesting:
    

    ## YOUNTVILLE BARRACKS

    The cornerstone for the first of a series of barracks to be built at the Veterans' Home at Yountville was laid on Saturday, October 21, 1928.

    This structure will cost $\$ 171,000$, which sum was appropriated out of the funds of the State Athletic Commission by the 1927 legislature.

    ## LAW APPROPRIATES FORTY THOUSAND DOLLARS

    The State Athletic Commission is a self-supporting organization, all salaries and cost of administration having been kept each year within the $\$ 40,000$ which the law appropriates and the detailed statement of expenditures shows that the sum of $\$ 39,405.50$ was actually spent in defraying the expenses the past year.

    The $\$ 40,000$ appropriation comes entirely from the Athletic Commission Fund, not a pemny coming from the General Fund of the State of California. A careful study of the detailed finawcial report on another page is suggested.

    ## AUDIT OF BOOKS

    The first complete audit of the books of the State Athletic Commission as kept by the secretary was made by the Department of Finance in Jaly, 1928, covering a period of three and one-half years, from January 1, 1925, to June 30, 1928. The auditors filed a very complimentary report with the Department of Finance as to the manner in which all moneys, books, papers, records, etc., had been kept.

    All balances of money were found to tally with the books of the State Controller.

    ## FINANCIAL REPORT

    Appended hereto and transmitted herewith is a financial report of the fourth fiscal year from December 1, 1927, to November 30, 1928 :

    ## LETTER OF TRANSMITTAL

    ## Sacramento, California, September 6, 1928.

    ## Hon. C. C. Young, <br> Governor, State of California.

    Dear Sir: In aecordance with the state law, I have the honor to submit herewith a bicmial report containing the transactions of this office during the seventy-cighth and seventy-ninth fiscal years ending June 30, 1927 and 1928, respectively.

    The balance sheets incorporated in this report, on pages 28-36, reflect the exact status of each fund, showing the balances as of July 1. 1926, cash and transfer receipts, cash and transfer payments and balances as of June 30, 1928.
    The great volume of business transacted by this office is shown by the cash receipts and payments for the biemimm, exclusive of the transfers during the perior involver. The eash receipts, including the sale of state bonds, and acerued interest and premiums thereon amounting to $\$ 18,775,119.57$, totaled $\$ 261,609,608.17$, allocated as follows:

    For the seventy-eighth fiscal year----------...- \$120,142,446 62
    
    
    Cash payments during the same periort, excluding transfers, totaled $\$ 241,85+, 720.91$, segregated as follows:
    
    The cash receipts for the preceding biennium totaled $\$ 224,231,786.08$ as against receipts under report, refleeting an increase of $\$ 37,377,82 \cdots .09$, or about 17 per cent.

    The eash payments during the preceding biennium totaled $\$ 211,594,-$ 808.38, compared with payments under report, showing an increase of $\$ 30,263,921.53$, or about $1+$ per cent.
    In connection with gross receipts and disbursements, I wish to invite your attention to summary under page 24 , covering period from the seventy-second fiscal year to the present report. This summary shows a decided inerease in business handled by this office and the healthy financial condition of the state.

    It is to be noted that there has been no increase in the number of employees for many years, although, as indicated in comparative yearly summary, the business has increased from year to year. This handicap, however, was obviated by the fact that this office has been conducted on strietly modern hanking basis since 1923 .

    ## CORPORATION FRANCHISE TAX

    This office collected corporation franchise taxes during this biemium in the sum of $\$ 89,109,511.08$, from over twentr-five thousand corporations, which is collected during the months of Jannary, February, July and Angust, entailing a great deal of detail.

    This tax is levied by the State Board of Equalization, under "Constitutional Amendment No. 1,'" adopted by the people in 1910. While this tax is collected and acknowledged to the taxpayers by this office, the books are kept and final receipts sent out by the State Controller. The corporation license tax and fees collected up to June, 1927, br the Secretary of State, were paid into the state treasury in weekly settlements. The corporation license tax was abolished br the last legislature, effective in Julw. 1927; therefore, the Secretary of State renders weekly settlements for office fees collected by him.

    The state law provides that "Franchise tax shall be paid in cash." but in order to accommodate taxpayers, certified checks and bank drafts or United States money orders are accepted in making settlement of franchise tax.

    ## OIL TAX

    In accordance with state statutes, this office collected during the past two vears the sum of $\$ 320,938.79$, representing oil tax protection, while the tax for the preceding biennium amounted to $\$ 260,598.44$, showing an increase of $\$ 60,340.35$, or about 23 per cent.

    ## GASOLINE TAX

    The gasoline tax created by the act of the 1923 legislature, under section 13, known as the "Motor vehicle fuel tax" and amended by the 1927 legislature, amounted to $\$ 46,894,527.35$, compared with the receipts during the preceding biennium, totaling $\$ 30,379,621.85$, slowing an increase of $\$ 16,514,905.50$, or about 54 per cent.

    ## BANK DEPOSITS

    Senate Bill No. 105, approved by the Governor on April 12, 1923, prorides for two methods of banking state moner, known as "Active and inactive deposits," and in accordance therewith, I have on deposit as of June 30. 1928, the following deposits:
    

    ## INTEREST ON BANK DEPOSITS

    The inactive deposits earn interest ranging from 3 per cent to 4 per cent, and the active deposits earn interest at the rate of $\bumpeq$ per cent on average daily balances.

    Interest was collected from depository banks during the present biennium in the sum of $\$ 3,117,114.90$, as against the preceding biennium totaling $\$ 2.393,493.43$, showing an increase of $\$ 723,621.47$.

    On page 25 of this report you will find a chronological schedule showing the interest on bank deposits, for each fiscal year, covering July 1, 1910, to the present report. This schedule shows a steady increase each year.

    As provided hy the Bamk Deposit Act, all bank deposits are fully protected, under the following securities, to wit: United States bonds or gold notes; state, countr, municijal, school and irrigation district bonds.

    ## BONDED INDEBTEDNESS OF THE STATE OF CALIFORNIA

    Under page 26 of this report you will note "Statement" in detail showing the actnal bonded indebtedness as ontstanding in the sum of $\$ 114,374,500$, as of June 30,1928 , which amonnt inchules the following items, to wit:

    Funded debt of 1873 , bearing interest at the rate of 6 per cent, held in trust by the State Treasmrer for the benefit of the following funds:

    $$
    \begin{aligned}
    & \text { School fund } \\
    & \$ 1,526,500 \quad 00 \\
    & \text { University fund } \\
    & \text { 751,000 } 00 \\
    & \text { Total } \\
    & -\$ 2,277,50000
    \end{aligned}
    $$

    ## INDIAN WAR BONDS, ACTS OF 1857 AND 1860

    The Indian war bonds, amounting to $\$ 4,000$, as shown under sehedule of bonded indebtedness, are also included and have matured and interest thereon expired.

    ## BOND AND SINKING FUNDS

    There are a number of sinking funds ereated for the payment of interest and principal on state bonds. The creation of new funds of this charaeter and the provisions for investments entail considerable jurgment and increases the functions of this office from year to year. The sinking funds are emmerated and briefly explained as follows, to wit:

    San Framcisco Scauall Sinling Fund. Monthly transfers from the revennes of the San Francisco harbor are made to provide for the payment of prineipal and interest on the San Francisco seawall bonds, act 1903. The balance of this bond issue was redeemed Jamuary 2, 1924.

    Sccond San Francisco Scawall Fumd. Monthly transfers from the revenues of the San Francisco harhor are made to provide for the payment of interest on the San Francisco harbor improvement bonds, act 1909.

    Third San Francisco Scawall Sinking Fund. Monthly transfers from the reventues of the San Franeisco harbor are made to provide for the payment of the principal and interest on the San Francisco harbor improvements bonds, act 1913.

    Indiu Basin. Sinking Fund. Monthly transfers from the revennes of the San Francisco harbor are made to provide for the payment of interest on the India Basin bonds.

    State Highu'ay Sinking Fund. This fund is replenished semiannually by transfers from the general fund to pay interest on the first state highway bouds.

    Second State Highwoy Sinking Fund. This fund is replenished semianmually by transfers from the general fund to pay interest on the second highway bonds, act 1915 .

    Third State Highway Sinking Fund. This fund is replenished semiannually by transfers from the general fund to pay interest on the third highway bonds, constitutional amendment, 1919.

    Interest and Sinking Fund of the University of California Building Bonds. This fund is replenished semiannually by transfers from the general fund to pay interest on the University of California building bonds.

    Sacramento State Building and Interest Fund. This fund is replenished by interest on investments and semiamual transfers from the general fund to pay interest on the Sacramento state building bonds.

    San Francisco State Building Sinking Fund. This fund is replenished by semiannual transfers from the general fund to pay principal and interest on the San Francisco state building bonds.

    ## UNIVERSITY OF CALIFORNIA BUILDING BONDS

    At the general election of November, 1914, a bond issue of $\$ 1,800,000$ was authorized, the proceeds to be devoted to the construetion of additional buildings at the state university at Berkeley. These bonds are all sold. The first forty of this issue were paid in January, 1921, and the same number will become due each year thereafter until 1965.

    ## SAN FRANCISCO STATE BUILDING BONDS

    At the general election in November, 1914, a bond issue of $\$ 1,000,000$ was authorized, the proceeds of which were to be used in the construetion and equipment of a state building in San Francisco. This issue has all been sold and the first 140 have matured and have been paid. Twenty of these bonds mature yearly until 1965.

    ## SACRAMENTO STATE BUILDING BONDS

    At the general election in November, 1914, the issuance and sale of $\$ 3,000,000$ of bonds was authorized, the proceeds of which were used in the construction of additional capitol buildings in Sacramento. These bonds have been sold. All of these bonds are due fifty years after date, and $\$ 50,000$ must be transferred each year from the general fund to the sinking fund and invested by the State Treasurer in bonds for the purpose of paying the prineipal.

    ## STATE HIGHWAY BONDS

    Of the issue of $\$ 18,000,000$ state highway bonds provided for by the Statutes of 1909, the first $\$ 400,000$ matured July 3, 1917, and were paid. Four hundred of these bonds mature yearly until all have been wholly redeemed. Up to June $30,1928, \$ 4,400,000$ of these bonds had been paid. Under the original act the interest on these bonds was paid by the counties, but in November, 1921, this financial burden was passed on to the state.

    ## SECOND STATE HIGHWAY BONDS

    At the election of Norember 7, 1916, there was authorized an additional $\$ 15,000,000$ state highway bonds. All of these bonds have been sold. On July 3, 1923 , these bonds began to mature at the rate of 375 ammally mutil all have been wholly redeemed. Under the original act the interest on these bonds was paid by the counties, but in November, 1921, this financial burden was passed on to the state.

    ## THIRD STATE HIGHWAY BONDS

    At a special election held on July 1, 1919, there was authorized the isunance and sale of $\$(0), 000), 00(0)$ state highway bonds. On .July 3 , 1926, these bonds began to mature at the rate of 1000 annually until all have been redeemed. An act roted upon on November 2,1921 , placed all interest charges upon the state and reliered the counties from this burden as provided in the original act. This act provided for the destruction of the remaining bonds and the engraving of new bonds at an interest rate to be determined by the State Highway Finance Board. On Mareh 23 to $2 s, 1921$, were eanceled and destroyed 34,578 of these bonds. The entire issue has been sold, as noted in bond schedule.

    ## SAN FRANCISCO HARBOR IMPROVEMENT BONDS, ACT 1913

    At the general election held in November, 1914, a bond issue of $\$ 10,000,000$ was authorized for the crection of wharves, piers, seawall and other betterments of the San Francisco harbor. Bonds to the amount of $\$ 5.250,000$ had been sold up to June 30,1928 .

    ## INDIA BASIN BONDS

    These bonds were authorized moder the Statutes of 1909 for the amount of $\$ 1,000,000$ to provide a fund for the aequisition by the Board of Harbor Commissioners of a necessary area for a tidal basin for wharves, piers, etc., in San Francisco. Litigation tied up action for several years. There have been sold of this issue bonds to the amount of \$\$53,000.

    ## VETERANS' WELFARE BONDS

    These bonds were authorized under an act of 1921 . in the sum of $\$ 10,000,000$, of which $\$ 4,000,000$ were sold during the seventy-fifth fiscal year and the balance sold as follows: During the seventr-sixth fiseal year $\$ t, 000,000$, during the seventy-serenth fiscal year $\$ 2,000,000$.

    A further issue was authorized under an act of 1925 , in the sum of $\$ 20,000,000$, out of which there have been sold up to June 30, 1928, $\$ 16,000,000$, and $\$ 4,000,000$ which will be sold on October $4,19 \div 8$.

    The interest on these bonds is to be paid ont of the general fund, likewise the redemption of bonds. These payments, however. will be reimbursed by the Veterans' Welfare Board to the general fund when funds are available.

    I wish to express my appreciation for the courteous cooperation of the various officers and departments in contact with the persomel of my office.

    Respectfully submitted.

    ## LETTER OF TRANSMITTAL

    ## To Governor C. C. Young and

    ## The Members of the State Legislature:

    The Commission on Pensions of State Employees under the direction of chapter 431 , Statutes of 1927 , respectfully transmit its report covering its investigations and study.

    The Commission was appointed by Governor Young early in November, 1927 , and held its first meeting on the twenty-first of this month. Subseguent meetings of the Commission were held on December 19, 1927. June 21, November $1: 3$ and December 17, 1928. Public meetings for discussion of the subject with state employees and other persons interested in the matter were held before the Commission in San Francisco, February 6, 1928; Ios Angeles, February 21, 1928; and Sacramento, Narch 9. 1928. At these meetings the whole question of a retirement system for state emplofees was fully discussed and a record was kept of the views and opinions expressed by state employees, state employees' associations, and other persons and organizations who attended or were represented.

    In order to be assmred of the possible scope of the investigation, its duties, and the general limitations of its activities, the Commission addressed two letters of inquiry to the Attorney General, which, together with the opinions received, are attached to this report as Appendix II. A copy of the enabling act is also attached as Appendix I.

    The act directed that the Commission should file a report on or before July 1, 1928, but as it was impossible to complete the actuarial study and the Commission's summation of the study by that time, a preliminary report was filed with the Governor on July 1, 1928, in accordance with the advice of the Attorney General. The investigation was then continned to completion as shown in the final report herewith submitted. The preliminary report is included with, and made a part of, this report. An actuarial report on the entire investigation submitted to the Commission by Mr. Barrett N. Coates, consulting actuary of San Franeiseo, and approved by Professor Albert II. Mowbray of the University of California, together with a legislative bill prepared under their supervision to put the retirement plan recommended into operation, if approved by the legislature, are also attached as appendices to the report.

    The preliminary report was filed by the chairman of the Commission after it had been approved by all the members of the Commission. The final report lacks the signature of Mrs. O. Shepard Barnum because of her absence in Europe at this time.

    The Commission desires to express its appreciation to Mr. Coates and his assistant, Mr. W. C. Green, and to Professor Mowbray for the excellent actuarial study completed by them; to the Attorney General for his cooperation with the Commission in its work; to Miss Lodema Shurtleff, secretary of the State Civil Service Commission, who acted thronghout the work of the Commission as its secretary without compensation ; and to all others who assisted in the preparation of this final report.

    > Respect fully yours, COMMISSION ON PENSIONS OF STATE EMPLOYEES. W. A. Johnstone, Chairman, J. C. Whitman, Commissioner, Ralph T. Fisher, Commissioner, John F. Dalton, Commissioner.

    # PRELIMINARY REPORT OF THE COMMISSION ON PENSIONS OF STATE EMPLOYEES FLLED WITH GOVERNOR YOUNG ON JULY 1, 1928 

    Hon. C. C. Young, June 30, 1928.<br>Governor of California, State Capitol, Sacramento, California.

    Dear Governor Young :
    Under the provisions of chapter 431 of the Statutes of 1927 you appointed Mr. Ralph T. Fisher, Mrs. O. Shepard Barnum, Mr. John F. Dalton, Mr. J. C. Whitman and W. A. Johnstone as the members of "a Commission on Pensions of State Employees," all of which members duly qualified and organized the Commission on November 21, 1927, with the election of W. A. Johnstone as chairman, J. C. Whitman as viee-chairman, and Lodema Shurtleff as secretary. The principal duties of the Commission are summed up in the following sentence included in section 1 of the act: "The commission shall be appointed for the purpose of inquiring into the subject of retirement pensions, allowances and annuities for state offieers and employees, especially with reference to the method of establishing and maintaining the fund from which such pensions, allowances and annuities shall be paid."

    Section 6 provides that "the commission shall on or before July 1, 1928, report the result of its inquiry to the governor and legislature, including such proposed legislation as it may deem advisable."

    This report must be considered in the light of a progress report for the reason that the time allowed for the intricate and technical studies required is not sufficient to complete a thorough and well-digested report upon the questions before the Commission. As pointed out further on, a supplementary and more complete report will be filed at a later date.

    The first decision of the Commission was that any recommendation made by it should be based upon an actuarial study of the situation in order that any plan so recommended might be regarded as actuarially sound and reliable. After a thorough examination of the actuarial field Mr. Barrett N. Coates of San Francisco, a recognized authority on such questions, with excellent experience and splendid standing in his profession, was selected as the actuary of the Commission, and Prof. A. H. Mowbray, professor of insurance with the University of California, as advisory actuary, to undertake the investigations and studies upon which a proper and sound recommendation might be based. It was the desire of the Commission to engage Prof. Mowbray on a full time basis, but his duties with the university would not pernit of this. The inembers of the Commission feel, however, that in the selection of these two men we have the best ability and advice obiainable. The excellent manner in which these studies have been handled up to this time has thoroughly justified this opinion of the Commission.

    The Commission held open meetings in the early part of this year at San Francisco, Los Angeles and Sacramento in order that all state employees' organizations or any other associations, or groups, or individuals who might be interested should have an opportunity to appear and express opinions as to the scope and application of any plan that might be submitted by the Commission. All of these meetings were well attended and many valuable suggestions were giveu to the Commission expressing the views of many people on this question. In general there was a surprising harmony of views and in the question of contribution it was practically manimously agreed that it should be upon the basis of half hy the employees and half by the state. At these meetings the Commission refrained from expressing any preferences or riews in order that a clear and unhampered expression of opinion might be received.

    A general outline of the study was first proposed. In order to have a proper understanding of its cluties and the range and application of this examination, an opinion was asked of the Attorney General, which was later receired and is attached to this report, marked "A." (See Appendix 11.) With this in mind, a general outline of a study based upon the following divisions was carricd along:

    1. (ieneral nature of propused system
    2. Eligibility of emplovees
    3. service retirement benefits
    4. Disability retirement benefits
    5. Death benefits
    6. Withdrawal benefits
    with a general consideration of the finaneing of any adopted system.
    The study required a great deal of technical preparation and the collection of a large mass of information relative to the status and history of all the state employees coming within the provisions of the act, somewhere around 11,000 questionnaire cards having heen sent out to assemble this information. Ater their return, the cards were segregated and classified into varions essential groups and the actuaries proceeded with the compilation of data needful in the consideration of the general questions involved in the study. These questions involved so many angles as to service and divisions of employees, retirement benefits, ages and other matters that the actuaries have been unahle to complete their study or to submit complete recommendations so that a complete and well-considered report can be subwitted by July 1st.

    It hecame apparent at this time that the work of the Commission could not be completed by July 1, 1928, the time set in the act for the filing of its report. The commissioners thereupon asked a further opinion from the Attorney General as to the life of the Commission, as referred to in the act, in order that they might know whether or not further time might be given to the study and in the completion of its report.
    The Attorney General rendered an opinion, dated June 18, 1928, in which he gave it as his view that the life of the Commission did not end with the date fixed for its report, but that it should continue until its work was properly completed. A copy of this opinion is also attached hereto, marked "B." (See Appendix II.)

    The chairman being advised that the actuaries were in a position to submit a progress report, a mecting of the Commission was held in San Francisco on Thursday, June 21st, attended by all members of the Commission. At this time reports were heard from the actuaries, who had compiled a considerable amount of data, and they were directed more definitely in the continuation of the survey than had been possible up to this time. It was pointed out by the actnaries that with about six weeks or two months more time they will be able to submit definite conclusions covering the main questions involved. The Commission then adjourned subject to call pending the completion of the actuarial study.

    It is also essential that, when the Commission has arrived at fairly definite conclusions as to what should be recominended, the matter of the financial burden involved should be discussed with the director of finance in order to receive the approval of this department upon the financial burdens which may be imposed upon the state by the adoption of any plan submitted. There is also the further question of the submission of a bill to be suhmitted at the next legislature which may put into effect the reeommendations of the Commission.

    As chairman of the Commission, I was directed, in conjunction with the actuaries, to prepare and submit to you a progress report that would comply with the requirements of the act for the filing of a report by July 1, 1928. As this is in harmony with the opinion of the Attorney General attached hereto, I believe that you will agree with the wisdom of the Commission's eontinuing its study upon this important matter until it is satisfied that it has thoroughly considered all of the phases of the matter before it, and that its recommendations are sound and practicable in the interests of botll the state officers and employees, and the general public.

    Yours respeetfully,
    (Signed) W. A. Johnstone, Chairman, Commission on Pensions.

    ## FINAL REPORT OF THE COMMISSION ON PENSIONS OF STATE EMPLOYEES TO GOVERNOR YOUNG AND THE STATE LEGISLATURE

    This report supplements and completes the preliminary report filed with Governor Young on July 1, 1928.

    ## PRELIMINARY WORK

    The organization and initial work of the Commission have already been described in the earlier report. In addition to holding the public meetings mentioned in that report, the Commission has given attention to recommendations advanced by interested persons. Numerous state departments and employees, as well as other interested citizens, have availed themselves of the opportunity of expressing what they believe to be desirable features of any retirement system which might be adopted. All of these expressions have been carefully considered.

    At the same time a comprehensive study has been made of the salient features of a number of present-day public retirement systems, notably those of New York state and city, Massachusetts, New Jersey, Chicago. San Francisco and Baltimore. These were of value as presenting a consensus of modern opinion on the subject, and gave a general idea of the costs that are involved. The cost of any system that might be proposed for California necessarily depends upon the number, age and length of service of eligible employees, their salary range, rates of withdrawal. etc., and the Commission found at the outset that no complete statistics were available along these lines. The procedure of securing definite information from each emplovee in the state service as of December 31, 1927, has already been described in the earlier report. To determine the rate of withdrawal from state service, an investigation was undertaken of all withdrawals from the service during the five-year period ending December 31, 1927, using the information on record in the office of the State Civil Service Commission.

    All departments have cordially cooperated in securing the information as to present employees necessary for the work of the Commission.

    ## REASONS FOR A RETIREMENT SYSTEM

    From the standpoint of the employee, the advantages of a retirement system are obvious. If its provisions are adequate, it prorides an assured income during old age or permanent disability, and gives it at minimum cost. The object of the state, as an employer, is to secure the improvement of its working personnel. An elaborate dissertation on the contribution of a retirement system toward this end is beyond the scope of this report, yet some mention should be made of some of the more important considerations.
    A sound retirement system provides the state with a sure and just method of eliminating from its active force those employees who have become incapable of performing their best work because of disability or superannuation. Unless death intervenes, every worker reaches
    this point at some time or other. Some may say: "Let him live on his savings, or on the charity of his children." But the discharge of a superannuated employce without adcquate provision for his future needs is repugnant to every instinct of humanity, and in practice this course will not be pursued. In the absence of a retirement system, the aged or disabled employee is left in active service as long as he can "go through the motions." He is really retired on the job, but the cost to the state of paying his full salary is eharged to the current salary budget, instead of to a retirement system, where it more properly belongs. To a very considerable extent, the state pays for a retirement system even though none is established.

    A sound retirement system is not charity, doled out to the aged employee. It is an orderly method of providing for his retirement at the end of his normal service-life, using a capital fund which has been built up during his active service with this very eventuality in prospect. It prevents the stagnation which besets a department when the avenues of adrancement are closed to the younger employees because of the continued employment of men and women far beyond their best days, but whose long service has won them the highest places within the department's command.

    A sound retirement system helps to make the service of the state a "life work" for the able man or woman who is attracted toward it, yet who hesitates becanse it does not offer any definite prospect of financial independence in later life. The increasing complexity of state governmental and regulatory functions makes it of the utmost importance to secure and hold the best possible type of employees. The retirement system can be of marked service in stabilizing the state's employed personnel, preventing at least a portion of the losses which oceur when trained, efficient employees leave the service because of superior opportunities elsewhere.

    ## UNSOUND SYSTEM WORSE THAN NONE

    An urgent responsibility rests npon the state to see that any retirement systen which it may sponsor is placed upon a sound financial basis, where liabilities are provided for as they are incurred, rather than when they mature. The current service year must be regarded as contributing its portion to the sum total of service which will some day entitle the employee to retire, and the current year should therefore bear its share of the ultimate cost. Any system which proposes to provide funds only as they are needed to meet disbursements is inviting disaster; the unseen habilities continue to mount, and the time will come when they will begin to mature in such volume as to cause serious embarrassment to the state, forcing it either to make staggering appropriations, or to default in its obligations to members of the system. Careful calculations have been made by the actuaries covering the annual cost of each proposed benefit, and as a further safeguard the Commission has proposed that at the end of each five-year period there be an investigation of the actual experience of the system as compared with the "expected" experience worked out by the actuaries. The determination of costs involves future salary scales, the interest rate earned on investments, mortality rate, withdrawal rate and various $\underset{2-64291}{\text { other }}$ elements which may change with changing conditions. By

    2-64291
    making these quinquennial investigations, the groundwork will be laid for any minor adjustments that may become necessary in order to assure that the system will work out as planned.

    ## COMPULSORY MEMBERSHIP

    The Commission belicres that membership in the system should be compulsory for all eligible employees. To do otherwise would be to defeat the purpose of the whole program to the extent that certain employees might elect to remain outside. An employee might take the position: "I want all my salary in cash now, and I will take my chances of being able to support myself in old age or if I am disabled." But when that emploree reaches the time when he should retire, or when he becomes disabled, the fact that he is outside of the retirement system will mean in practice that he will be continued in active service as long as he is able to present himself at his place of employment. Public opinion would never sustain the position that such an employee should be summarily discharged in his old age, without financial provison for his futmre, on account of his failure to come under the system when it was established. The state can secure full value for the money it contributes only throngh compulsory membership of all employees. One employee should have no more right than another to eontinue at full salary far berond the period of full working efficiency. In dratting the proposed legislation. the Commission has paid particular attention to safeguarding the rights of all emplovees by making the service retirement provisions elastic as to age, and by a special extension of the age of compulsory retirement for present emplorees.

    ## ELIGIBILITY OF EMPLOYEES

    The proposed act has been drawn on the assmmption that all state employees shall participate in the system, without regard to whether or not they have civil service status. Teachers and other employees in the public school system, and in the University of California are not included. Other exclusions are part-time employees, elected officers and officers appointed for fixed terms. There are certain cases where full-time employees are paid in part by the state and in part by federal or other authority, and these cmployees will participate on the basis of the amount of salary drawn from the state.

    As will appear later, the proposed system calls for the contribution of a certain percentage of salary by the employees, and the retirement annuty purehased by these accumulated contributions is "matehed" by the state. The maximum salary considered for the purposes of the system is $\$ 5,000$ per year. The required contributions of an employee who may receive more than this amont will be calculated on the $\$ 5,000$ maximum; if he wishes to make voluntary contributions beyond this figure, he may do so. but the state will assume no corresponding responsibility.

    All new employees will enter the system after their first six months of employment ; during the "probationary period" of six months they will be ontside of the system, and this period will not comnt toward their service credit.

    ## CONTRIBUTORY BASIS RECOMMENDED

    Early in its work the Commission realhed the conclusion that any proposed system should embody thr "contributory" principle. under whieh a substantial proportion of the cost of the benefits to be derived is paid directly hy employees in the form of a deduction from each salary check. The remainder of the cost of the system shonld he paid by the state. Inder this general plan the employee contributes regularly to what is for all praetieal purposes a savings aceount which will be available for him in old age or disability, and to whieh the state makes very substantial payments for his benefit. It seeures the active interest and conperation of the employees and keeps the additional eost to the state within reasonable bounds. The Commission further deeided that the enst as regards. future serviee should be divided, as nearly as possible, equally between the employees and the state. Both parties expect to benefit from the retirement system and it seem.s reasonable that the cost of the benefits in be earned should be divided in approximately ennal proportions.

    ## SCOPE OF BENEFITS CONSIDERED

    The recommendations of the Commission as to the nature and extent of benefits to be granted fall naturally into the four divisions, i. e.. service retirement, disability retirement, cleath benefits, withdrawal benefits, recommended in the first report. In considering these four aspects of the subject, the Commission was guided by the Attorney General's opinion of Deeember 29, 1927, which appears elsewhere in this report as a part thereot.

    ## SERVICE RETIREMENT BENEFIT

    The service retirement benefit necessarily is the fundamental feature of any system. All other benefits are relatively ineidental and ean be fitted to the service retirement allowance once that has been cletermined. The employee's prime interest is to be able to look forward to an assured income in his old age so that when he has given a lifetime of service to the state, he may be able to retire in dignity and comfort. The state as the emplower desires to reeognize its obligations to the people who have rendered long and faithful service. and to do it directly by means of a retirement allowance rather than by the alternative method of contimuing emplowment far past the time of physical and mental efficiency.

    Age and service are the determining factors in eligibility for serviee retirement. No system should be established which would encourage or permit the granting of any retirement allowance to an able-bodied person in middle life who through long experience may have just reached the peak of his ralue to the state. Neither will the interests of the public permit the payment of substantial retirement allowanees in return for short periods of service, regardless of the age at which retirement may take place. The Commission recommends a minimum retirement age of sixty and a maximum of seventy. The maximum age would be modified for persons now in the service to the extent that none should be subject to eompulsory retirement until five years after the establishment of the system, except for disability, provided there should be an absolute maximum age limit of seventy-fire years for
    present employees. The Commission also recommends a minimum service requirement of twenty years before there may be voluntary retirement.

    When an employee entering the service after the establishment of the srstem becomes eligible for service retirement, he will receive the following benefits:
    (a) An "Annuity" of such amount as can be purchased by his own contributions to the retirement fund accumulated with interest to the date of retirement.
    (b) A "Pension" of the same amount as his "annuity," to be paid for by the state.

    The total of the "annuity" and "pension" is the amount of his "retirement allowance." The exact amount to be realized by any employee under these provisions depends upon the amount contributed by lim to the fund during the period of his employment. The schedule of contributions appearing in the actuarial report calls for a definite percentage of salary from each emploree, based on his age at entry into the srstem. This percentage is known as his "normal contribution" and it is the "annuity" purchased by this "normal contribution" which the state matches to produce his "retirement allowance." The amount accumulated to his credit from his own "normal contributions" depends upon the actual salary which he receives each year up to retirement. The rates of "normal contribution," however, have been so figured that if the employce has the "average" salary experience as determined by the Commission's actuaries from the pay roll records for the past five years, he will be entitled to receive a "retirement allowance" at age 65 equal to one-seventieth of his "final compensation" for each year of service. By "final compensation" is meant the average salary received during the five years previous to retirement. For example, if an employee entered the service at age 30 and retired at age 65 , employing the average progression in salary throughout the period, he could retire at age 65 with a total allowance of $35 / 70$ or one-half of the average salary he received between the ages of 60 and 65 . If he elected to remain in the service beyond $6 \overline{5}$, the funds to his credit would continue to accumulate and if he retired at age 68, for example, he would receive a substantially larger allowance, because in the first place there would be more money available to purchase it, and in the second place his advanced age would mean that each dollar, accumulated to his credit would buy more in the way of an "annuity" than could be purchased if he retired vounger. Similarly, if he chose to retire between age 60 and 65 he would receive a considerably smaller allowance, since it would be reduced because a smaller amount would be available to his credit and because each dollar of his accumulation would purchase a smaller amount of "annuity" due to his longer expectation of life. The Commission believes that age $6 \overline{5}$ is a reasonable normal age for service retirement, but the retirement age has been made elastic, varying from 60 to 70 at the option of the employee, so that the system will fit individual needs as closely as possible.

    Any member of the system has the right to make any amount of additional contributions to the funds that he pleases, and the accumulations of his additional contributions will buy him a larger "annuity" upon retirement. However, the amount of "pension" provided him by
    the state would not be increased proportionately to cover his additional contributions but would be limited to such a figure as would match his accumulated "normal contributions."

    ## OPTIONAL FORMS OF RETIREMENT ALLOWANCES

    The retirement allowance will be paid monthly, and will cease at the death of the retired employec. In order to give sufficient latitude to meet the needs of individual cases, the employee may elect to take the actuarial equivalent of his regular retirement allowance in certain different forms. The first option provides that he can use his own accumulations to purchase a "cash refund ammity." He would then receive a smaller monthly payment, but, if he should die before the annuity payments had equalled his total accumulations, the balance would be paid in a lump sum to his beneficiary.

    The typical case covered by the second option is that of the employee whose wife is living when he retires, and who wishes to assure her an income if she should survive him. In consideration of paying him a lesser retirement allowance, the state would then agree to continue the payments as long as either the husband or wife survived. A variant of this situation is covered in the third option, under which the payments to the wife, after the death of the retired employee, would be reduced to one-half the original allowance. The employee may nominate any person to share in a joint allowance of this kind, provided that such person has an insurable interest in his life. These options represent no additional cost to the state or to the employee; they will always be calculated so as to be the actuarial equivalent of the regular form of allowance.

    ## SPECIAL ALLOWANCES FOR PRIOR SERVICE OF PRESENT EMPLOYEES

    The question of "prior service" is inevitably the storm center of the discussion of any proposed retirement system. The establishment of adequate retirement allowances for new employees is relatively easy becanse of the long period that will elapse before the allowances will be entered upon, but the present employees are distributed all along the road from yonth to old age, from a few months of service to forty years' service or more. What shall be done abont their "prior service?" The employees can not be expected to put up a lump sum equal to the accumulations ther would have had if an adequate retirement system had been in effect during their period of employment. If the state undertakes to make the employee's prior years of service count towards his retirement allowance in exactly the same measure as his future service, will the cost be prohibitive?

    Both in discussions at meetings of the Commission and at its public hearings, it was suggested that if no credit were given for "prior service" the cost of the proposed system would be correspondingly reduced. The Commission gave very careful and thorough consideration to this suggestion of recommending a system which would take care of future employees and the future service of present employees but which would make little or no allowance for "prior service." However, the more thought and study were given to the subject, the stronger became the conviction that unless "prior service" were given very substantial recognition by the state, the whole purpose of the proposed
    system would be defeated, and for many years the state would receive little or no benefit from the appropriations it made to take care of the future service.

    The purpose of the system is to provide for the orderly retirement of older employees, and this retirement can not be brought about unless the "retirement allowance" is a substantial proportion of the active salary: It is impossible to make the normal allowance for future service high enough so that men and women of already advanced years will he willing to retire. If "prior service" is not recognized, the present generation will pass before the state will realize any substantial benefits from the money it invests in the retirement plan. In all the sound public retirement systems which have come under the Commission's observation, substantial credit is allowed for "prior service," and the entire cost of this allowance is borne directly by the state or city. After careful considcration of this entire sulbject, the Commission recommends that when any present employee retires at age 65 or older, and enters upon his service retirement benefit consisting of the "amuity" and the "pension" as above described, he receive in addition thereto, a special allowance for each year of "prior service" equal to one-seventieth of his average salary for the three rears previous to the adoption of the system. For example, suppose an employee now age 58 entered the state service at age 30 , thus having 28 years of prior service, and that his average salary for the last three years is $\$ 200$ per month. Tpon retirement at age 65, he would then get the "ammity" purchased by his own contribution plus a "pension", of like amount from the state and, in addition, a special "prior service" allowance of $\$ 80$ per month which is $28 / 70$ or 410 of his present salary of $\$ 200$. If a present emplovee elects to retire before age 65 . the amoment of "prior service benefit" which he would get at age 65 will be discomnted, and used to buy an allowance at his actual retirement age.

    The most usual provision for "prior service" is for the state to guarantee a certain percentage, say $1 / 70$, of final salary for each year of "prior service." This means that the special allowance to be received by the present employees is based on the salary which they will be receiving just before they are retired. In the opinion of the Commission, the plan proposed under which the "prior service" allowance would be based upon the present salaries of the employees has two distinct adrantages. First, it takes away the uncertainty of guarantecing an allowance based on an unknown future salary. Second, since salaries tend to increase with length of service, the plan proposed will be less costly $t^{t}$ the state than one which based the allowance on final salary. Where compulsory retirement of any present employee takes place by reason of the age limit, or where he voluntarily retires after age 70, and where the total retirement allowance, including credits for "prior service," works out at less than $\$ 40$ per month, it is recommended that a minimum allowance of $\$ 40$ per month be paid, or 50 per cent of final salary, whichever is the smaller.

    ## DISABILITY RETIREMENT BENEFIT

    Second only in importance to the "service benefit" is the "disability retirement benefit." This takes care of cases where an employce
    becomes totally disablecl either by sickness or accident so that he is unable to perform his duties. It is the Commission's belief that no retirement system should be adopted unless it contains some form of disability allowances.

    It is proposed that this benefit shall be paid without regard to whether the disability is directly traceable to the employment. Under the State Workmen:s Compensation and Safety Aet certain definite benefits are provided where disability results from an occupational accident. In such a case the benefits now suggested by the Commission would be paid in addition to anything the emplovee might receive under the compensation act. If disability oceurred as a result of sickness or accident in no way connected with the employee's occupation. the Workmen's Compensation Act would not apple: but the employee would receive the disability benefit under the retirement system.

    Ten years of serrice has been set up as the minimum period before any emplovee will be eligible for a disability retirement allowance. When an employee. with more than ten rears' serrice. becomes phrsically or mentally incapacitated for the performance of duty; he will recise an "amuity", purchased by his own accumulations. The state would then add to this "annuity". a "disability pension" of such an amount as will bring the total disability retirement allowance to 90 per cent of 170 of his final salary for each year of service. "Final salary" is defined as the arerage salary for the last fire years. For example, if an employee with 20 years of service became disabled and had been receiving an average salary of $\$ 200$ per month for the preceding five rears, he would be entitled to receive a total disability allowance of $\$ 51.43$ per month. which is 90 per cent of 2070 of $\$ 200$ per month. If this rule works out so that the disability allowance is less than 25 per cent of the salar? then the amount would be recalculated and the emploree would reecive 90 per cent of 170 of his final salary for each year of possible service up to age 65, prorided that this amount did not exceed 25 per cent of his salarr. In fairness to the active employee the disability retirement allorrance must always be somerthat less than the serrice retirement benefit. It will not be permitted to exceed 90 per cent of the service retirement allowance which the emploree could draw assuming that he retired at his lowest possible retirement age. In any event the accumulations to the credit of the emploree will be used as far as ther will go in providing his disability retirement allowance.

    It is essential that "disability retirement" be made only after examination by a physician appointed by the administrative anthorityof the system, and that the allowance be cancelled if the emplovee does not continue to be incapacitated.

    ## death benefit

    Some form of death benefit is a feature of nost retirement systems. Perhaps the most common type is the payment of a fraction, usually-one-half, of the current years salar:. It is usually limited to include only those deaths which occur before the emplovee has retired, and nothing is paid upon the death of a retired employee, unless he has elected some special option upon retirement. Admittedly, the prime purpose of a retirement system is to take care of faithful employees
    who become incapacitated either on account of age or of physical or, mental disability, and it is not directly concerned with the provision of life insurance for an employee's dependents. The Commission has therefore concluded, in the interests of economy, that the death benefit, if any, should be merely a nominal amount, sufficient to defray the normal cost of the funeral and last illness.

    It must not be overlooked that the contribution standing to the credit of employees, accumulated by deductions from the pay roll, will mount up rapidly, and in a very few years all employees will have several hundred dollars saved in this way. These accumulations would be paid to the beneficiary of the employee in case he dies before service or disability retirement, and will in themselves-be assurance of a substantial average sum for the benefit of the family. The recommendation finally agreed upon by the Commission is that the employee's contributions, with interest to the date of death, be paid to his representative or beneficiary upon death before retirement, and that if the amount is less than $\$ 500$, the state add to it sufficient to bring it up to this minimum figure.

    ## WITHDRAWAL BENEFIT

    When all employee quits the service of the state for any reason except by disability or scrvice retirement, he will receive in one sum his own contributions to the retirement system, plus interest accumulations. Any contributions which the state has made on his behalf, looking to possible future service or disability retirement, shall remain the property of the state and a part of the retirement fund.

    ## COST OF PROPOSED SYSTEM-CONTRIBUTIONS BY EMPLOYEES

    The rates of contribution by employees are expressed in percentages of salary. The employee will have a pay roll deduction from his salary each pay day, and the percentage will be determined by his age, nearest birthday, when he enters the retirement system. The percentage will remain the same from that time on; if his salary increases or decreases, the actual amount held out of his salary check will vary accordingly, but the percentage will be unchanged. The actuaries have figured the rates on the assumption that 4 per cent interest will be allowed; on the basis of the salary scale as constructed from the state's experience, these rates will produce a retirement allowance of $1 / 70$ of "final salary" for each year of service, to be entered upon at age 65, one-half of which allowance will be purchased by these accumulated contributions, and the other half will be furnished by the state. It must always be kept in mind that the state does not guarantee $1 / 70$ of salary for each year served; the exact amount will be determined by the funds to the employee's credit when he is ready to retire, and this fund will be governed by his personal salary experience during his active service.
    In the interest of simplicity, the Commission urged the actuaries to make as few distinctions as possible between employees of the same age. Some systems provide different rates of contributions for different occupations, such as clerks, mechanics, laborers, etc., due to anticipated differences in salary scale and in the age when retirement will be desired. Calculations showed these differences, in the light of Cali.
    formia's experience, to be so small that they eonld be ignored, and the acturies were able to reduce contribution rates to two sets, one for male employees, and the other for female employees.

    It is a well-established fact that women who have the advantage of an annuity, or pension, live materially longer than men in the same situation. If the amount of retirement allowance is to be equal for men and women of equal service and salary, as seems essentially desirable, it is therefore necessary that the contributions mate by the women be slightly higher.

    The rates of contribution by employees as determined by the actuarim are shown in detail in the actuarial report. The average contribution for all employees will be about 1.09 per cent of salary.

    ## COST TO THE STATE

    As has already been stated, statistics assembled by the Commission as of December 31, 1927. showed 7533 eligible employees, with a total annual salary roll of $\$ 13,28+459$. All cost figures have been furnished by the actuaries as of that clate, and are given in detail in their report. For the sake of brevity, the discussion here deals only with the total cost of each benefit for all groups of employees.

    The annual estimated cost to the state of providing the service retirement benefit applicable to future service is $2.4 t$ per cent of the pay roll, or $\$ 323.997$ for the first rear. The actuaries' calculations show that this percentage contributed by the state each year should produce sufficient accumulations to "mateh" the retirement benefits produced by the contributions of the employees. It is a considerably smaller percentage than the arerage which will be paid by the employee. whiel follows naturally from the fact that whenever an employee quits the service his own contributions are returned to him in full, whereas the contributions made by the state are not paid over. The figure of $\$ 323,997$ represents 2.44 per cent applied to the 1927 eligible pay roll: as the state service grows, the same pereentage should be applied to the eligible pay rolls as they develop.

    Similarly, the annual estimated cost to the state of providing the disahilitr retirement benefit is $0.6 \pm$ per cent. or $\$ 85.31$ is for the first year. As has already been explained, it is proposed that the employee's contributions will be applied toward his disability allowance. and the expected amount to be reecived from this source has heen allowed for in the determination of the figure as fuoted. This should also be considered as a percentage applying with equal force to the future eligible pay roll.

    The cost of the proposed deafh benefit presents a different type of problem. The serviee and disability retirement features, exchsive of the liability for past service, can readily be expressed as a peremtage to be applied to future pay rolls. The state's obligation when an employee dies will merely be the amount by which that employees own contributions, with interest, ialls short of \$50(1) By far the heaviest cost to the state will be in the early years of the sistem. As the employees' contributions begin to pile up, the eost to the state will be very small. If all the present employees already had 10 their credit the amoments they would have acemmulated hat they been enntributing to the system from the beginning of their service, the present ammal

    3-64291
    cost of the proposed death benefit would be but $\$ 16.746$ (approximately), or 0.13 per cent of the pay roll. It is recommended that the state meet the death benefit cost on a "pay-as-yon-go" hasis, contributing each year the actual amount required by the deaths which occur. On this basis, the estimated cost for one rear on the pay roll as of December 31. 1927, is $\$ 46.235$.

    Thus far, the financial provision necessary by the state is 3.08 per cent of the eligible pay roll, ( 2.44 per cent for the serviec retirement feature, plus 0.64 per cent for the disability retirement), and an estimate of $\$ 46,235$ for deaths in the first year. It is recommended also that the state provide for the total expenses of administration of the system. It is scarcely practicable to charge any portion of this item directly against the employees.

    The "accrued liability" as regards present employees comes from two sources. In the main, it comes from the proposal that the state pay to each present employee, upon retirement at age 65 , a special allowance equal to $1 / 70$ of this present salary for each year of service before the establishment of the system (his "present" salary being taken as the average amount for the past three years). To this must be added the additional cost necessary to guarantee each present employee an allowance upon compnlsory retirement of not less than $\$ 40$ per month. The Commission recommends that with the accejtance of responsibility for these items by the state there should also be adopted a definite plan for funding the amounts over a proper period of years. The total "acerued liability", for prior service, expressed in one sum, is $\$ 3,226,382$. It is recommended that this should be taken care of by a sinking fund payment of $\$ 228,200$ for a period of twenty years. This is 1.72 per cent of the eligible pay roll at the end of 1927 . As the mumbers in the state serviec increase, this sinking fund payment for prior service will remain the same, and will therefore represent a decreasing percentage of the annual pay roll in years to come.

    At first glance, the cost of the special provision under which no present employee would be subject to eompulsory retirement except with a minimm retirement allowance of $\$ 40$ per month hardly secms to fall among the "acerned liabilities." But it is an obligation which concerms only present employees, and will not be incurred for employees entering the state service in the futme. It should therefore he expressed as a lomp sum, and then fimded over a period of years. since its expression as a pereentage of future pay rolls would result in increasing contributions by the state, which are not necessary. The liabilite for this "minmmon allowance." expressed in one smm, is \$281.140. l'ractically all of this is for present employees rely close to the age of compulsory retirement, who are either getting particularly low salaries, or have had but a short period of service. It must therefore be taken care of within a few vears, and the Commission reeonmemels the establishment of a simking fund of $\$ 60,72: 3$ orer a five-year period.

    Assembling the cost figures as already given, we have the following:
    Estimated Cost to State for First Year of Sustem

    |  | Per cent <br> of 19.27 |
    | :--- | :---: | :---: |
    | silaries |  |

    Exclusive of the relatively small item of the expense of administration, the total estimated cost for the first year of the system is $\$ 744,473$. A truer perspective is obtained by considering this as an addition of B. 61 per cent to the pay roll. As is shown in the summary just given. the cost for service and disability retirement as applied to future service is 3.08 per cent of salaries, to which should be added 0.13 per cent as the estimated " ultimate" cost of the death benefit, after the system has reached a normal condition, giving a total cost of 3.21 per cent exclusive of the extra load incidental to the establishment of the system. Private business is moving rapidly in the direction of retirement annuities for faithful emplovees, with a sharing of the cost between employer and employee. The advantages of such a system in the public service, where the financial incentive is normally less, are greater than in a private corporation, and it should prove of real assistance to the state in its competition with private business to secure and hold the best type of employees to liandle the increasing size and complexity of its business.

    A large part of the Commission's efforts have been spent in endeavoring to devise a system which would produce satisfactory results in the way of retirement allowances, and yet to hold the cost to the state, and to the employee, down to the minimum. The normal age for retircment was placed at 65 , instead of a few years earlier as is often found, because of the effect that this would have on the cost. Originally the Commission hoped to make the "normal" retirement allowance 160 of the final salary for each year of service, but preliminary estimates of cost led to the substitution of 1.70 as the normal fraction. It is felt that these adjustments, and others of similar effect, have not impaired the adequacy of the system to solve the retirement problem, but have placed it on a basis which the Commission can definitely recommend as a sound and conservative investment for the State of Califormia.

    In considering whether or not a retirement system should be established for state employees, the financial outlay required by the state merits and requires careful consideration. Yet the advantages to the state must be kept equally in mind. Costs are tangible; benefits are intangible, but none the less real. F. Spencer Baldwin, in a disenssion of a proposed contributory retirement plan for Massachusetts, appearing in the Annals of the American Academy of Political and Social Science, has said: "It is reasonably certain that a system such as is proposed would, in the long run, save money for the taxpayers. Such saving would be effected in three ways: First, through elimination of
    the direct waste of money paid to aged emplovees who have outlived their usefulness; second, through stoppage of the indirect loss entailed by the slow pace forced upon the rest of the workers by the presence of inefficient veterans; third, through the positive gain that would result from the substitution of younger men for the superannuated employees, from the increased efficiency promoted by the retirement system and possibly from the attraction of a higher grade of men into the municipal service." It is the belief of the Commission that the establishment of a sound retirement system for state employees, such as is described in this report, would prove to be a wise and timely investment for the people of California.

    ## ADMINISTRATION OF THE SYSTEM

    It is recommended by the Commission that the retirement systein be administered by a board of administration to consist of three members; namely, the president of the State Civil Service Commission, the Director of Finance and one other person to be appointed by the Governor. The members of the board will serve without pay, and may appoint a secretary as the execntive officer for the board and such other employees as may be necessary. This recommendation is included in the proposed legislation.

    At the public hearings it was the unanimons opinion expressed by the state employees present that the interests of the employees could best be represented upon a board of administration by the president of the State Civil Service Commission. The financial obligations involved make the selection of the Director of Finance as obviously essential. The third member is left to the judgment of the Governor.

    Respectfully submitted.
    COMMISSION ON PENSIONS OF STATE EMPLOYEES,
    W. A. Johnstone, Chairman, J. C. Whitaran, Commissioner, Ralpi T. Fisher, Cominissioner, John F. Dalton, Commissioner.
    Sacramento, California, December 31, 1928.

    ## APPENDIX I

    ## COPY OF ENABLING ACT

    (Statutes of 1927)

    ## CHAPTER 431

    An uct providing for a commission on pensions of state employees; providing for the appointment of members thereof; prescribing the powers and dutics of such commission, and making an appropriation therefor.

    ## [Approved by the Governor May 10, 1927.]

    ## The people of the State of California do enact as follows:

    Section 1. A commission is hereby created consisting of five members as follows: One shall be the commissioner of the state department of civil service, ex officio; four members to be appointed by the governor. The commission shall be appointed for the purpose of inquiring into the subject of retirement pensions, allowances and annuities for state officers and employees, especially with reference to the method of establishing and maintaining the fund from which such pensions, allowances and annuities shall be paid. A vacancy occurring in the office of a member of such commission shall be filled by the officer who made the original appointment.

    Sec. 2. A member of the commission shall not be disqualified from holding any other office, state or municipal, nor forfeit the same by reason of his appointment under this act, notwithstanding the provisions of any city charter.

    Sec. 3. Such commission shall have power to subpena and compel the attendance of witnesses, including public officers and employees, and to require the production of books, records and papers, to take and hear proofs and testimony and adopt rules for the conduct of its proceedings.

    Sec. 4. The commission shall relect a chairman and vice-chairman from among its own members and may employ a secretary and such other experts and employees as may be needed, in connection with the duties of the commission, and may fix their compensation, in accordance with the provisions of the civil service act. It shall be the duty of all persons subject to the authority of the state in that behalf to aid in all proper ways in carrying into effect the provisions of this act.

    Sec. 5. The members of such commission shall receive no compensation for their services, but shall be paid their actual and necessary traveling, hotel and other expenses incurred in the discharge of their duties.

    Sec. 6. The commission shall on or before July 1, 1928, report the result of its inquiry to the governor and Legislature, including such proposed legislation as it may deem advisable.

    Sec. 7. The sum of six thousand dollars $(\$ 6,000)$ or so much thereof as may be needed is hereby appropriated for the purpose of this act,
    payable by the treasurer on the warrant of the controller on the order of the chairman or vice chairman of such commission.

    SEC. S. The commission shall have the power to receive all voluntary gifts, or contributions, that may be made for carrying out the provisions of this act and upon the termination of the life of said commission, any surplus funds shall be paid to and become a part of, the reserve fund created by virtue of any pension law enacted as a result of this investigation.

    ## APPENDIX II

    ## OPINIONS FROM THE ATTORNEY GENERAL

    November 23, 1927.
    Hon. U. S. Webb,
    Attorncy Gencral.
    State Building.
    San Francisco, California.
    Dear Sir: At the initial meeting of the State Pension Commission held on Norember 21 st several questions arose as to the scope of the study to be undertaken and recommendations that may be made under the act creating the Commission. (Chapter 431, Statutes of 1027.)

    It was agreed that the extent of service which might well be included in a pension study is the following:
    a. Retirement pensions.
    b. Death bencfits.
    c. Disability allowances.

    The title of the act indicates that pensions alone might be considered, but the word "allowances" might indicate that death benefits and disability allowances may be included in a liberal construction of this word. We would like to have your opinion as to what limitations must govern our action in formulating a report in this regard; that is: may we, under the term "allowances," include a report on death beuefits and disability allowances for officers and employees?

    The act states that these benefits are to be considered for "state officers and employees." The members of the Commission are in doubt as to the meaning of this term and desire to know who are comprehended in the expression "state officers and employees," as well as to know what the lime of demareation betwern ofticers aud cmployees is.

    Further, wonld teachers and employees under our system of public schools come under the desiguatiou of "state officers and employees" as those words are used in the act? We have in mind that there are various employees of the public schools, such as janitors, who would not come within the purview of the Teachers Retirement Salary Act: and also. that there are teachers in the state comectional schools and various state institutions, such as the Deaf and Blind Schools at Berkeley, who are not included in the Teachers Retirement Salary Act.

    We thank you in advance for your assistance in giving us information on these questions.

    Yours rery truly,
    (Signed) W. A. Jomnstone, Chairman, Commission on Pensions of State Employees.

    December 29, 1927.

    ## W. A. Johnstone, Chairman.

    Commission on Pensions of State Employees.
    State Civil Scrrice Commission, Sacramento, California.
    IEAR Sir: We are in receipt of your communication referring to chapter 431 of the Statutes of California of 1927 (Statutes 1927 , page 714 ).

    This act provides for a commission on pensions for state employees. The title of the act is as follows:
    "An act providing for a commission on pensions of state employees; providing for the appointment of members thereof; prescribing the powers and duties of such commission, and making an appropriation therefor."
    In section 1 of the act it is provided that :
    "The commission shall be appointed for the purpose of inquiring into the subject of retirement peusions, allowances and annuities for state officers and employees, especially with reference to the method of establishing and maintaining the fund from which such pensions, allowances and annuities shall be naid."

    You first refer to the title of the act indicating that the only thing provided for in the why of relief for state employees is the proposed granting of "pensions for state employees." You also refer to the fact that in the body of the act the commission is authorized to inquire "into the subject of retirement pensions, allowances and annuities for state officers and employees."

    You state that at the initial meeting of this commission so created by the act it was agreed that the extent of service which might well be included in a pension study is the following:
    (a) Retirement pensions.
    (b) Death benefits.
    (c) Disability allowances.

    You ask for our opinion as to what limitations must govern your action in formulating a report in this regard, that is, whether your commission under the term "allowances" found in the bodr of the act might include a report on death benefits and disability allowances for officers and employees as well as a report on retirement pensions.

    The act merely creates a commission to make a study and report back to the legislature proposed legislation. Such legislation as so proposed may or may not be finally adopted by the legislature. Until so adopted it would have no force and effect. It would therefore appear that rour commission might in its discretion exercise the power to recommend any proposed legislation which tends to carry out the spirit and murnose of the act. which is to encourage faithful performance on the part of state employees and guarantee to them assurances against old age or disability, as well as assurance in favor of their families in the event of their death, if in your judgment this would lead to the fulfillment of the end desired.

    You further call attention to the fact that the title of the act refers to "state employees" while the body of the act refers to "state officers and emplosees." You ask who are comprehended within the expression "state officers and employees." I am of the opinion that this expression refers to any officer or employees of the state who is actually employed by the state and paid by the state. I do not think it necessary to go into the question as to the line of demarcation between "officers" and "employees."

    Further. you inquire whether terachers and employees under our system of public schools come under the designation of "state officers and employees." Such employees are in fact emplogees of the different sehool districts of the state and their salaries are not paid in full by the state. I therefore would not consider them as being state emploseres as contemplated by this act.
    lon further refer to teachers of certain state correctional schools and various state institutions who are not included in the Teachers' Retirement Salary Act. Ans such institution for which the state provides support and whose employees would receive their compensation wholly from the state are in my judgment included within the seope of this aet.

    Yery truly yours,
    U. S. Werb, Attorney General.
    (Signed) By Frank English,
    Deputy.

    June 6, 1928.
    Hox. U. S. Werb,
    Attorney General. State Building, San Francisco, California.
    Dear General : We are in considerable doubt as to the meaning of chapter 431, Statutes of 1927, "An act providing for a commission on pensions of state emplojees; proviling for the appointment of members thereof; prescribing the powers and duties of surf commission, and making an appropriation therefor."

    Wr have already asked one opinion from you as to the scope and application of this act, and considerable progress has been made in the assemblage of a large mass of clata which is now in the hands of Mr. Barrett N. Coates and Professor A. H. Mowbray of the University of California, who are acting as our actuaries.

    Section 6 provides that "the commission shall on or before July 1, 192S, report the result of its inguiry to the Governor and legislature, including such proposed legisiation as it may deem advisable."

    Section $S$ provides that the commission shall have the power to reeeive all voluntary gifts or contributions and "upon the termination of the life of said commission, any surplus funds shall be paid to and become a part of, the reserve fund created by virtue of any pension law enacted as a result of this investigation."

    The act itself does not definitely fix the life of the commission. On the reading of section 6 it might be inferred that its life ended on July 1, 192S, execpt for the fact that it must report to the legislature. I am in doubt as to how the commission ean report to a legislature that is not yet crented, and 1 am not sure whether this language might mean the legislature which possibly still exists.

    Section $S$ ealls for the payment to "the reserve fund created by virtue of any pension law enacted as a result of this investigation." Just how this commission, if its life ends on July 1, 1928, cau obey this instruction to pay any residue of its funds to a reserve fund that in the very nature of things can not be created for more than a year, I do not know. I have discussed this question to some extent with Mr. Christiansen here in Sacramento and on his suggestion I am submitting it to you. He is of the opinion, and I agree with him, that so far as the report is concerned there can be no great difference as to whether or not it is finally completed on July 1st. There is a strong probability that the commission and its aetuaries shall not be able to come to a well-digested conclusion within this time.

    The actuaries are now working upon the analysis of some twelve or thirteen thousand questionnaire cards covering the antire state employment roster affected by this survey. They advise me that they hope to have this analysis in such form as to be in shape for the consideration of the members of the commission in deciding to what extent such a system may be applied. Necessarily this involves a very careful consideration of the financial ohligations, and I am asking Mr. A. R. Heron, Director of Finance, to sit with the commission to advise it on these questions. Mr. Coates at the present time is in St. Louis making an investigation of an insurance company for the Insurance Commissioner of California. The earliest date, so I am advised by his office, that we can expect him back here is on June 18th. One member of the commission, Mrs. O. Shepard Barnum of Alhambra, whose husband, Dr. Barnum, died recently, expects to sail for Eurone and is very anxious to have the matter completed by this time in order that she may leave. I think it will be extremely difficult for the commissioners to properly digest the facts submitted by the actuaries and come to a well-balanced conclnsion within the two weeks of this month remaining after the 18 th.

    There will remain, then, the question of travel expenses for the commissioners, the mechanical work of making up the report, the preparation of the proposed legislation if any is agreed upon, and other matters of this sort involving a certain amount of money outlay. The Civil Service Commission has no money that can be used indirectly to do this work as we are running on a very short margin. Whether or not the Department of Finance could find additional money legally, I have some doubt. Whatever outlay may be called for would be of no great moment, but the legality of the outlay, of course, will be properly questioned by the Controller's office without some opinion from your office.

    According to the general terms of the act, which is very indefinite, about any conclusion may be drawn. It may be that the author of the measure had in mind that the commission should appear before the legislature on behalf of any recommendations submitted. The act provides only for travel expenses.

    If it is not too much trouble, I would be glad if you will give me your views as to what the life of the Pension Commission may be under the very vague terms of the act.

    Yours rery truly,
    (Signed) W. A. Johnstone, Chairman, Commission on Pensions.

    San Francisco, June 18, 1928.
    Hos. W. A. Johnstone,

    Dear Sir: I have before me your communication of recent date in which you state that you are in donbt as to the meaning of the act of the legislature of 1025 entitled, "An act providing for a commission on pensions of state employees," ete.

    You call attention to the fact that section 6 provides that the commission shall on or before July 1, 192S, report the result of its inquiry to the Governor and the legislature including such proposed legislation as it may deem advisable.

    4-64291

    You also call attention to section 8, which provides that the commission shall have the power to receive all voluntary gifts or contributions and that upon the termination of the life of the commission any surplus funds shall be paid to and become a part of the reserve fund created by virtue of any pension law enacted as the result of the efforts of the commission. You state that you are principally concerned in determining from the statute just what the length of life of the commission is, and you state that the act does not definitely fix the life of the commission.

    Iou state that you are in donbt as to bow the commission can report to a legislature that is not yet created and tbat yon are not sure whether this language might mean the legislature which possibly still exists. While this is not the main question you submit to this office, I see no difficulty in interpreting the statute in this regard. The fact that the present legislature adjourned its session in 1927 does not imply that there is not at the present time an existing legislature. The legislature of 1927 functions until its successors take office in 1929. The duties of the legislature do not consist only in attending the legislative sessions at Sacrameuto, but a great deal of work is carried on throngh the committees appointed at its sessions. Therefore, if your report were ready on July first it should be made to the Governor and the present legislature, which is still in existeace although not at the present time in session. Your doubt in this connection seems to have arisen from the fact that you questioned whether or not the legislatmre of 1927 still existed and with that doubt removed yon undoubtedly will have no further difficulty upon that phase of the matter.

    The specific question that you submit for the views of this office is the duration of the life of the commission. In this connection it is true that the statute does not specifically ereate the commission for any specific term. It does, however, create a commission for the purpose of inquiring into the subject of retiring pensions, etc., and for the purpose of proposing such legislation as it may deem advisable. The statute does provide that the commission shall report the result of its inquiry to the Governor and the legislature on or before July 1, 1928. While the language purports to be mandatory, in my opinion the statute must be given a liberal interpretation to effectuate the purposes for which it was enacted, and to give an interpretation to the statute which would defeat these purposes would not only be unreasonable but would be contrary to the spirit and the iutent of the act. I therefore am of the opinion that this language is directory and not mandatory. The obvious purpose of the section was to fix some definite date about which time the report should be rendered in order that the members of the legislature and the Governor could have the benefit of the views of the commission in ample time to consider the proposed legislation before the next session of the legislature.

    I, therefore, am further of the opinion that the commission should, if possible, endeavor to have this report on file with the Governor and the legislature on that date if it can conveniently be done. There js, however, in the statute no penalty attached to the failure to have the report filed on the particular date mentioned, nor could it reasonably be said if the report was not filed on that day that the life of the commission expired and its powers ceased becanse any such interpretation would not only defeat the purposes of the statnte but would, in my opinion, be an absurdity.

    I believe that the life of the commission ceatses when its labors have been fully performed. The commission is appointed to inquire into the subject of retirement pensions, etc. and to report to the legislature, and when the commission has completed its investigations and made its report to the legislature its duties have then been fully performed and its functions cease. In my opinion this is the only reasonable conclusion which can be drawn from the statute.

    Very truly yours,

    (Signed) U. S. Webs, Attorney General. By Charles A. Wetmore, Jr.,

    ## APPENDIX III.

    ## PROPOSED LEGISLATION TO PUT RETIREMENT PLAN INTO EFFECT

    An act to establish a retirement system to provide for the retirement of cmployces of the State of California.

    The Periple of the state of Califormia do cmact as follous:
    Section 1. The purpose of this act is to provide a means whereby public employees who heeome superannuated or incapacitated as is result of age or disability may be replaced hy more capable employees, thus effecting economy and efficiency in the public service without prejudice and without intlicting a hardship upon the employces removed, and at the same time to compensate such superannuated employees and those who may die or become incapacitated by making provision for their retirement and for the payment of death benefits.

    Sec. 2. The following words and phrases as used in this act, muless a different meaning is plainly required by context, shall have the following meanings:
    (a) "Retirement ststem" shall mean "state employees' retirement system" provided for in section 3 of this act.
    (b) "Employee" shall mean any person in the employ of the State" of California whose compensation is paid wholly out of funds eontributed by the state.
    (c) "Member"' shall mean any person included in the membership of the retirement system as provided in section $t$ of this act.
    (d) "State" shall mean "State of California."
    (e) "Board" shall mean "hoard of administration" as ereated in this act.
    $(f)$ "Retirement fund", shall mean "state employees' retirement fund" as ereated and established in section 5 of this act.
    $(g)$ "State service" shall mean service rendered as an employre of the state for compensation, and, for the purposes of this act a member shall be considered as being in the "state service" only while he is receiving compensation from the state for such service.
    (h) "Prior service" shall mean the state service of a member ren-
     on a prior service certificate and allowable as provided in section 7 of this act.
    (i) "Contmuons service" as applied to "prior service" shall mean all prior service, regardless of interruptions in such service and as applied to service as a member shall mean uninterrupted employment by the state, except that discontinuance of state service of a member from any canse whatever followed by reentrance into the state service within one year from the date of such discontinuance shall not eount as a break in the continuity of service.
    (j) "Beneficiary" shall mean any person in receipt of a pension. annuity, a retirement allowance, a death benefit or any other benefit provided in this act.
    ( $k$ ) "Compensation'" shall mean the remuneration payable in cash out of funds contributed by the state plus the monctary value, as determined by the board of administration, of board, lodging, fuel, laundry and other advantages allowed as remuneration by the state.
    (l) "Compeusation earnable" by a member shall mean the average compensation as determined by the board of administration upon the basis of the average period of employment of members in the same group or class of employment and at the same rate of pay, but such "compensation earnable" shall not exceed $\$ 416.66$ per month.
    (m) "Final compensation'" shall mean the average annual compensation earnable by a member during the five rears immediately preceding his retirement.
    (n) "Regular interest" shall mean interest at four per centum per annum, compounded amually, plus such additional interest as the board of administration may declare from year to year in accordance with the provisions of this act.
    (o) "Normal contributions" shall mean contributions at the rates provided for in subdivision (a), section 10 of this act.
    $(p)$ "Additional contributions" shall mean contributions at the rates provided for in subdivision (d), section 10 of this act.
    $(q)$ "Accumulated normal contributions" shall mean the sum of all the normal contributions, deducted from the compensation of a member, standing to the credit of his individual account, together with the regular interest thereon.
    (r) "Accumulated additional contributions" shall mean the sum of all the additional contributions, deducted from the compensation of a member, standing to the credit of his individual account, together with regular interest thereon.
    ( $s$ ) "Accumulated contributions" shall mean accumulated nomal contributions plus accumulated additional contributions.
    (t) "Pension" shall mean payments for life derived from contributions made by the state as provided in this act.
    (u) "Annuity" shall mean payments for life derived from contributions made by a member as provided in this act.
    (c) "Retirement allowance" shall mean the pension plus the annuity.
    $(u)$ "Fiscal year" shall mean any year commencing with July first and ending with June thirtieth next following.

    SEc. 3. A retirement system is hereby created and established to become effective $\qquad$ , and to be known as the "State employees' retirement system."

    Sec. 4. (a) With the exception of those employees who are excluded from membership as provided in subdivision (b) of this section, all employees shall become nembers of the retirement system as follows:
    (1) Every employee in state service on the date when this act becomes effective, shall become a member of the retirement system on
    that date, provided he has rendered at least one-half year's continuous scrvice, otherwise on the date when he shall have completed one-half year's continuous service.
    (2) Every employce who shall reenter state service after the date when this act heromes offective, and who, prior to such reentry, shall have completed six months of contimons state service, shall beeome a member of the retirement system upon suth reentry.
    (3) Every other employee who shall enter state service after the date when this act becomes effeetive, shall become a member of the retirement system upon the completion of six months of continuous service.
    (b) The following employees shall not beeomes nembers of the retirement system:
    (1) Elective officers.
    (2) Inmates of state institntions who are allowed eompensation for such service as they are able to perform.
    (3) Persons in state institutions principally for the purpose of training, but who reeeive compensation.
    (4) Persons employed under contract for a definite period and for the performance of specific duties requiring professional or high technical skill.
    (5) Employees serving on a part-time basis.
     pensation equals or exceeds $\$+16.66$ per month, and who file with the board of administration an affirmative election not to become members.
    (c) It shall be the duty of the head of each office or department to give immediate notice in writing to the board of administration of the change in status of any member in his offiee or department resulting from transfer, promotion, leave of ahsence, resignation, reinstatement, dismissal or death. The head of each office or department shall furnish snch other information concerning any member as the board may require.
    (d) Each member shall be suliject to all the provisions of this act and to all the rules and regulations adopted by the board of administration. Should the state service of any member, in any period of ten consecutive years, amonnt to less than five years, or should he withdraw more than one-quarter of his aceumnlated normal contributions, or should he die or be retired, he shall thereupon cease to be a member.

    Sec. 5. A fund is hereby ereated and established to be known as the state employees' retirement fund and shall consist of all the moncys paid into it in aceordance with the provisions of this act, whether surh moneys shall take the form of eash, securities or other assets.

    SEc. 6. A board of administration of said retirement system is hereby ereated, consisting of the president of the civil service commission, the director of finance and one other person to be appointed by the governor. The president of the civil service eommission shall be chairman of the board.

    The board may establish such rules and regulations as they deem proper and may appoint and fix the compensation of a secretary and such other employees as may be necessary. It shall maintain its office
    in the city of Sacramento, and the legislature shall appropriate funds necessary to pay all expenses of administration of the act. The members of the board shall serve without compensation, but they shall be reimbursed out of the funds appropriated in this section to defray the cost of operating the retirement system for any expense which they may have incurred throngh service on the board.

    The board shall be the sole authority and judge under this act and acts in amendment hereof as to the conditions ander which persons may be admitted to benefits under the system and shall have exclusive control of the administration and investment of the fund except as hereinafter expressly provided. As soon as practicable after the close of each fiscal year it shall file with the governor a report of its work for such fiseal year.

    SEc. 7. Subject to the following and to all other provisions of this act, including such rules and regulations as the board of administration may adopt in pursuance thereof, the said board shall determine and may modify allowances for service and disability.

    It shall fix and determine how much service rendered in any fiscal year shall be the equivalent of a year of service and of parts thereof, but shall credit one year for two hundred and fifty or more days of service rendered by employees on a per diem basis and one year for ten months or more of service rendered by employees on a monthly basis, but not more than one year for all service in any fiscal year.

    Time during which a member was absent from service without pay shall not be allowed in computing service.

    Each employee shall file with the board of administration such information affecting his status as a member of the retirement system as the board may require.

    The board of administration shall issue a prior service certificate to
     each member entering the retirement system after that date if such entry is within one ycar after rendering state service prior to ---------, and shall certify thereon service rendered prior to............---------- ; excluding therefrom the first half-year of service rendered. Service certified on a prior service certificate shall be the basis for a retirement allowance or benefit as provided in this act only if membership contimes until retirement on a retirement allowance or until the granting of such other benefit. Such certificate shall become void and not renewable if membership is diseontinmed except by retirement on a retirement allowance.

    SEC: 8. The management and control of the retirement system shall be vested in the board of administration as provided in section 6 of this act. The board shall exercise the powers and perform the duties conferred on it by said section, and in addition thereto
    ( 1 ) Immediately after the establishment of the retirement system the board shall make actuarial investigation of the mortality, service, compensation and experience of the members and beneficiaries of the system as herein defined, and adopt such tables and such rates as are required in paragraph 1 of this subsection. The board shall keep in eonvenient form such data as shall be necessary for the actuarial valuation of the retirement fund created by this act. In the five-year period nepiming with the time that this retirement system beeomes operative
    and in every five-year period thereafter, the board shall canse to be made an actuarial investiration into the mortality, service and compensation experience of the members and bencficiaries as defined by this act, and shall further canse to be made an actuarial valuation of the assets and liabilities of the retirement fund ereated in this aet, and upon the basis of such investigation and valuation shall
    (1) Adopt for the retirement system such interest rate and such mortality, salary serviee and other tables as shall be deemed necessary :
    (2) Revise or change the rates of contribution by members on the hasis of such mortality: service and other tables.
    (b) Contributions of members, or heneficiaries and of the state shall be improved with interest at the rate of four per cent ( $4 \%$ ) per ammu, compounded ammally. The hoard, however, at the end of each fiseal year, begimning with the second fiscal year of the operation of the retirement system may credit to all contributions held in the retirement fund at Jone thirtieth of the then current fiscal year, such additional interest as it may deem proper in the light of the earnings on the retirement fund during such fiscal rear, provided that the total interest credited to contributions during any fiscal year shall not exceed the carnings on the retirement fund during that rear; and protided, further, that interest at the rate of four per cent ( $4 \%$ ) per anmm, compomaded ammally, shall be used in the calculation of benefits under any mortality table adopted by the board, regardless of any additional interest allowed on contributims monder this paragraph.
    (c) In addition to other records and acenments, the board of administration shall keep such records and accounts as shall be necessary to show at any time.
    (1) The total accumblated contributions of members.
    (2) The total accumulated contributions of retired members less the amnity payments made to such member's.
    (3) The accumulated contributions of the state held for the benefit of members on accomnt of service rendered as members of the retirement system.
    (t) All other accumulated contributions of the state which shall include the amounts available to meet the obligation of the state on account of benefits that have been granted and on account of prior service of members.
    (d) In addition to rendering the amual report to the governor refuired ber section 6 of this act. the board shall canse to be published annally a financial statement showing an actuarial valuation of the assets and liabilities of the retirement system created by this act and a statement as to the accumulated eash and securities in the retirement fund as certified by the state controller.

    Sec. 9. The retirement fund shall be managed as follows:
    (a) The board of administration shall have exclusive control of the administration and investment of the said fund, subject to the restriction that no investment shall be made except upon the affirmative rote of the director of the department of finance and at least one other member of the board of administration, and subject also to the terms. conditions. limitations and restrictions imposed by the laws of the

    State of Califormia upon savings banks in the making of investments by savings banks.
    (b) The board of administration may deposit cash belonging to the retirement fund in any lieensed national bank or banks in this state or in any bank, banks or eorporations authorized or licensed to do a hanking business and organized under the laws of this state.
    (c) The state treasurer shall be the custodian of the retirement fund, suljeect to the exchusive control of the board of administration as to the administration, deposit and investment of said fund. All payments from said find shall be made by him only upon warrant signed by the president and secretary of the board of administration, subject to the approval of the state controller.
    (d) Interest on any eash and on any investments constituting a part of the said fund shall be paid into said fund as received.
    (c) Except as herein provided, no member and no employee of the board of administration shall have any interest. direct or indirect, in the making of any investment, or in the gains or profits accruing therefrom. And no member or employee of the said hoard directly or indirectly, for himself or as an agent or partner of others, shall borrow any of its funds or deposits or in any manner use the same except to make sueh emrent and neeessary payments as are authorized by said board: $n \cap r$ shall any member or employee of said board become an indorser or surety or become in any manner an obligor for moners invested by the board.

    SEc. 10. (a) The normal rates of contribution of members shall be those adopted by the board of administration and shall be based on sex and age at the nearest birthday at the time of entry into the retirement system. The salary and other seales adopted by the board as provider in section 8 shall form the basis of calculation of normal rates of contribution. The normal rates of contribntion fixed by the board shall be such as would provide on the average an annuity at age sixtr-five equal to mee one-hnndred and fortieth of the final arerage salary of members aceording to the tables adopted by the board, for each rear of service rendered after entering the system. The actual amount of ammity receivable by any member upon retirement shall be the aetuarial equivalent of his accumulated contributions, as provided in section 14 (a) (1). The rates so adopted shall remain in full force and affect until revised or changed by the board of administration in the manner providerl in section 8 of this act.
    (b) The normal rate of contribution established for the age sixtyfour shall he the rate for any member who has attained a greater age before entrance into the retirement system. In like manner the normal rate of emmtribution established for age sixteen shall be the rate for any member who enters the retirement system at a lesser age.
    (c) The board of administration shall certify to the head of each office or department the normal rate of contribution for each member provided for in subdivision (a) of this section. The head of each office or department shall apply such rate of eontribution to so much of the compensation of the member as does not exceed four hundred sixteen chollars and sixty-six cents ( $\$+16.66$ ) and shall certify to the state controller on each and every payroll the amount to be contributed, and
    shall furnish immediately to the board of administration a copy of each and every such pay roll; and each of said amounts shall be deducted by the state eontroller and shall be paid into the retirement fund, hereinafter movided for, and shall be credited by the board of administration, together with regular interest, to an individual account of the member for whom the contribution was made. Every member shall be deemed to consent and agree to the contribution made and provided for herein, and shall receipt in full for his salary or compensation, and payment less said contribution shall be full and complete discharge and aequittance of all claims and demands whatsoever for the services rendered by such persons during the period covered by such payment, except his claim to the benefits to which he may be entitled nuder the provisions of this act.
    (d.) Any member may elect to contribute at rates in exeess of those provided for in subdivision (a) of this section, for the purpose of providing additional henefits, hut the exereise of this privilege by a nember shall not place on the state any additional financial obligation. The board of administration, upon applieation, shall furnish to such member information eoncerning the nature and amount of additional henefits to be provided by such additional contributions.
    (c) At the end of each month the board of administration shall determine the aggregate amount of the compensation of all members on which the normal contribution for such month is calculated. There shall be paid to the retirement fund by the state as its contributions to the retirement fund:
    (1) A certain pereentage of such aggregate amount of compensation each month, to be known as the "normal service and disability contribution." Until the first actuarial raluation of the liabilities of the retirement system as provided in section 8 (a), the amount of the normal service and disability eontribution shall be three and eight onehundredths per centum of the compensation of all the members. Subsequent normal service and liahility contributions shall be at a rate per centum of the aggregate compensation of all the members, fixed by the board on the basis of the liabilities of the retirement fund as shown hy the actuarial valuations on aceount of the pensions provided for in section $14(a)(1)$ and (2), and section 16.
    (2) The sum of nineteen thonsand five hmolled dollars monthly until the time provided herein, to be known as the "acerued liability contribution," to provide for the lisbilities of the retirement fund on aceomt of prior serviep as granted hy seetion $14(a)(3)$ and section 16. The arerued liability rontributions shall be diseontinned at such time as the accumblations of such eoutributions, less payments on aerount of prior service, shall equal the present value as actuarially eomputed of the liabilities of the fund on account of prior service.
    (3) The stum of five thousand two hundred dollars monthly until the time provided herein, to be known as the "minimum service pension liability contribution,'" to provich fur the liahilities of the retirement fund on aceoment of mimmom serviee pensions as granted by section 14 (b). The minimum service pension eontribution shall be thiscontinued as sonn as the aremmulation of such eontribution, less payments on aceount of minimmu service pensions, shall equal the present
    value as actuarially computed of the liabilities of the fund on account of minimum service pensions.
    (4) At the end of each month, the amount, if any, paid during the month to the estates and beneficiaries of deceased members as death benefits in addition to the acemmulated contributions of such members.

    SEC. 11. The parments of the state into the state employees' retirement fund, as provided in seation 10 of this act, are hereby made obligations of the state. The Legislatme shall appropriate biennially, such amounts as are necessary to make such payments.

    SEc. 12. Should the state service of a member be discontinued except by death or retirement, he shall he paid six months after the date of discontinuance, such part of his accmmulated contributions as he shall demand: provided, that, if in the opinion of the board of administration. said member is permanently separated from state service by reason of such discontinnance, he shall be paid forthwith all of his accumulated contributions, and provided, also, that the board of administration may, in its discretion, withhold for not more than one year after a member last rendered state service all or part of his aecomulated nomal contributions if after a previous discontinuanee of state service he withdrew all or a part of his accumulated normal contributions and failed to redeposit such withdrawn amount in the retirement fund as provided in this section.

    Any member may redeposit in the retirement fund, in one sum or in not to exceed six monthly or twelve semimonthly payments, an amount equal to that which he withdrew therefrom at the last termination of his membership. If a member upon reentering the retirement system after a termination of his membership shall not make such redeposit, he shall reenter as a new member without credit for auy service and the rate of his contributions for future years shall be the normal rate provided for in subdivision (a). section 10, of this act at his age of reeutrance: otherwise his rate of contrihntion for future years shall be the same as his rate prior to the last termination of his membership, and his membership shall be the same as if umbroken by such last termination.

    SEC. 13. Retirement of a member for service shall be marle by the board of administration as follows:
    (a) On or after (one year or more from effective date) each member who has attained the age of seventy-five shall be retired forthwith, or on the first day of the calendar month nest succeeding that in which the said member shall have attained the age of seventy-five. On or after (five years from the effective date), each member who has attained the age of seventy years shall be retired on the first day of the calendar month next succeeding that in which the said member shall have attained the age of seventy years.
    (b) Any member in the state service may retire upon written application to the board of administration, stating what time, not less than thirty days subsequent to the filing of such application in case one of the options set forth in section 18 of this act is selected, he desires to be retired; provided, that said member. at the time so specified for his retirement, shall have completed twenty rears of eontimons serviee as defined in this act and attained the are of sixty years; and provided,
    further, that if at the time of his entrance into the retirement system the member shall have already completed twenty years of contimoms service as defined in this act and attained the age of sixty years, he shall complete ome additional year of service before retirement.

    SEe. 14. (a) A member, upon retirement for sprviee, shall receive a retirement allowince which shall eomsist of :
    (1) An anmity which shall be the actuarial equivalent of his atemmulated eontributions at the time of his retirement : and
    (2) A pension. purchased hy the contributions of the state edral to that portion of the ammity purchased by the ace.umulated normal contributions of the member: and
    (3) An arditional pension, purehased by the contributions of the state, which shall he equal to one-seventieth of his average ammal eompensation eamable during the last three rears of prior service aredited to him moltiplied hy the nmber of years of prior service credited to him, except that if a member shall retire before attaining the age of sixty-five years, the additional pension shall be reduced 10 that amount which the discounted value of the pension as provided for ahove in this paragraph, deferred to age sixty-five, will purchase at the actual age of retirement.
    (b) Any member who enters the retirement system on .................... or who enters after said date and received eredit for prior service. and who retires after attaining the age of seventy years, shall receive on aecount of prior service such additional pension. purchased by the contributions of the state, as will make his total retirement allowance, exelnsive of the annuity provided by his aecummlated additional contributions, not less than four hundred eighty ( $\$ 180$ ) dollars per rear unless such four humdred eighty ( $\$ 180$ ) dollars exceeds one-half of his final eompensation, in whieh event his total retirement allowance, exclusive of the annuity provided by his accumulated additional contributions, shall be not less than one-half of his final compensation.

    SEC. 15. On and after (one rear or more after effective date) retirement of a member for disability shall be made by the board of arministration upon medical examination as follows: Auy member while in the state service, or within four months after the discontinuance of state service, or while phrsically or mentally incapacitated for the performance of his duty if such ineapacity has been contimuons from diseontinuanee of state service, shall be examined by a phesician or strgen appointed hy the board of administration. upon the appliration of the head of the office or department in which said member is employed, or upon the application of said member or of a person acting in his behalf, stating that said member is physically or mentally incapacitated for the performance of duty and onght to be retired. provided that the said member has had ten or more years of contimons service immediately preceding his retirement. If such medieal examination shows, to the satisfaction of the board of administration, that the said member is physically or mentally incapacitated for the performance of duty and onght to he retired, the board of atministration shall retire the said member for disability forthwith.

    The board of administration shall seemre such medieal serviee and advien as may be necessary to eary ont the purpose of this seetion
    and of section 17 of this act, and shall pay for such medical services and advice stch compensation as the board shall deem reasonable.
    Sec. 16. (a) Upon retirement for disability a member who has attained the age of sixty years shall reeeive a service retirement allowance as provided in subdivision (a), section 14 of this act: otherwise he shall receive a retirement allowance which shall consist of:
    (1) An annuity which shall he the actuarial equivalent of his accumulated contributions at the time of his retirement; and if, in the opinion of the board of administration. such disability is not due to intemperance, wilful misconduct or violation of law on the part of the member,
    (2) A pension purchased by the contributions of the state which, tngether with his ammity provided by his aecumulated normal contributions, shall make the retirement aliowance, exelusive of the aunuity provided by his acemmulated additional contributions. equal to (1) ninety per cent of one-seventieth of his final compensation multiplied hy the mumber of years of service credited to him, if such retirement allowance exceeds ine-fourth of his final compensation: otherwise, (2) ninety per cent of one-seventieth of his final compensation multiplied by the number of years of service which would be ereditable to him were his service to entinue until attaimment by him of age sixty-five, but such retirement allowance shall not exceed one-fourth of such final compensation. In no event, howerer, shall the pension purchased by the contributions of the state be more than sufficient to make the retirement allowance, exelusive of the ammity provided by his acemmulated additional contributions, greater than ninety per cent of the retirement allowance, exclusive of any amnuty purchased by accumnlated additional contributions, receivalle hy the member shonld he retire for service at the lowest age at which he wonld be eligible for service retirement under the provisions of this act.
    (b) If, when disability is due to intemperance. wilful misconduct or violation of law, on the part of the member, the anmity to which said member is entitled under subdivision (a) of this section be less than two humdred forty ( $\$ 240$ ) dollars per year, the board of administration, in its discretion, may pay to said member, in one lump sum and in lien of said amnuity, his accumulated contributions.

    Sec. 17. (a) The brard of administration may, at its pleasure. refuire any disability heneficiary, under age sixty, to undergo medical examination, such examination to be made by a physician or surgeon, appointed by the board of administration, at the place of residence of said beneficiary or other place mutually agreed upon. Upon the basis of sill examination the board shall determine whether said diability heneficiary is still incapacitated. physically or mentally, for servire in the "ffice of department of the state where he was employed and in the position held ly him when retired for disability. If the hoard of administration shall determine that said beneficiary is not so incapacitated, his retirement allowance shall be canceled forthwith, and he thall be reinstated to the position held ly him when retired for disability.
    (b) Shomld a disability henefietary reenter the state servien and he migibln for membership in the retirement srstem in areordance with oublivision ( 1 ) section $t$ of this ate his fetirement allawame shall be
    canceled and he shall immediately become a member of the retirement syisem, his rate of contribution for future vears being that established for his age at the time of such reentry. IIis individual aceount shall be credited with his accomulated contributions less the ammity pavonents made to him. Surd member shall receive coedit for prion serviee in the same manner as if he had never been retired fond disahility.
    (c) Should said disability heneficiary, prom to attaining aqe sixty, engage in a gainful oceupation not in the state sprvie or should he reenter the state service and be ineligible for membership in the retirement system in areordance with subdivision (b), section 4 of this act. the board of administration shall reduce the amonnt of his retirement allowance to an amount which, when added to the compensation earned by him in such oeenpation, shall not exeeed the amonnt of the final compensation on the hasis of which his retirement allowance was determined. Should the carning eapacity of such beneficiary be further altered, the board may further alter his retirement allowance to an amount which shall not exceed the amonnt upon which he was originally retired, but which, subject to such limitation, shall equal, when added to the compensation eamed hy him. the amomet of his tinal empensation on the hasis of which his retirement allowance was detemined. When said disability heneficiary reaches age sixty, his retirement allowance shall be made equal to the amount upon which he was originally retired, and shall not again be modified for any cause.
    (d) Shonld amy disability bencficiary under age sixty refuse to submit to medieal examination his pension may he discontinued motil his withdrawal of such refusal, and should such refusal continue for one year his retirement allowaner may be canceled.
    (e) Should the retirement allowance of any disability beneficiary be cameled for any case other than reentrance of the state servire he shall be paid his accumblated contributions. less the ammity payments made to him.

    SE.C. 13. Until the first payment on account of any retirement allowance is made, the henefieiary may elect to receive the actuarial equivalent at that time of his retirement allowance in a lesser retirement allowance, payable thoughout life with the provision that:

    Option 1. If he die before he receive in annnity payments provided for in paragraph (1), sublivision (d). section 14 and paragraph (1), subdivision (a.), section 16 , of this act, the amount of his accumulated eontributions as it was at his retirement, the halanee of such aceumulated eontributions shall be paid to his estate or to such perom. having an insmable interest in his life, as he shall nominate by written desiguation only executed and tiled with the hoard of administration.

    Option 2. I'pon his death, his lesser retirement allowanee shall be continuel throughont the life of and paid to such person, having an insurable interest in his life, as he shall nominate by written designation duly expeuted and filed with the board of administration at the time of his retirement.

    Option 3. Lpon his death, one-half of his lesser retirement allowance shall be continued throughont the life of and paid to smeh person, having an insurable interest in his life, as he shall nominate by witten
    designation duly executed and filed with the hoard of administration at the time of his retirement.

    Option 4. Such other benefit or benefits shall be paid either to the beneficiary or to such other person or persons as he shall nominate, provided such other benefit or benefits, together with such lesser retirement allowance, shall be the actuarial equivalent of his retirement allowance, and shall be approved by the board of administration.

    SEC. 19. Upon the death of a member while in the state service. there shall be paid to his estate, or to such person having an insurable interest in his life as lie shall have nominated by written designation duly executed and filed with the board of administration, his accumulated contributions and if such accumulated contributions are less than five hundred dollars ( $\$ 000$ ), and, if, in the opinion of the board of administration, such death was not due to intemperance, wilful misconduct or violation of law, on the part of the member, in addition to his accummlated contributions such amonnt from the states contributions as shall make the total payable equal to five hundred (\$500) dollars.

    Sec. 211. No modification of the benefits provided in this aet shall be made on accomnt of any amomit or amounts payable to a beneficiary, as defined herein, under the provisions of the workmen's compensation insurance and safety laws of California.

    SEC. 21. A pension, an amuity or retirement allowance granted under the provisions of this act shall be payable in erfual monthly installments but a smaller pro rata amount may be paid for part of a month when the pension, annuity or retirement allowance begins after the first day of the month or ends before the last day of the month, or

    SEC. 22. The right of a person to a pension, an annnity or a retirement allowance, to the return of contribntions, the pension, annuity or retirement allowance itself, any optional benefit, any other right accrued or aceruing to any person under the provisions of this act and the monevs in the fund created under this act shall not be subjeet to execution, garmishment, attachment, or any other process whatsoever, and shall be massignable except as in this act specifieally provided.

    Sec. 23. If it shall be impracticable for the board of administration to determine from the records the length of service, the compensation or the age of any member, the said board may estimate, for the purposes of this act, such length of service, compensation or age.

    SEC. 24. No person whon has been retired for service or disability and who reeeires a retirement allowance monder the retirement system shall be paid for any service, except as a juror or as an election officer, rendered by him to the state after the date of his retirement.

    SEC. 25. If any section, or sections, or part of any section, of this act shall be found to be unconstitutional or invalid, for any reason, the remainder of the act shall not thereby be invalidated, but shall remain in full foree and eifeet.

    SEc. 26. All acts and parts of acts in so far as they confliet with this act are hereby repealed.

    ## APPENDIX IV

    ## ACTUARIAL REPORT ON PROPOSED RETIREMENT SYSTEM FOR EMPLOYEES OF STATE OF CALIFORNIA SUBMITTED TO COMMISSION ON PENSIONS OF STATE EMPLOYEES

    ## COLLECTION OF DATA

    In order to comply with the request of the Commission that the cost of certain proposed benefits be determined, it was necessary to assemble considerable statistical material bearing on past and present employees of the State of Califormia.

    A complete list of present cligible employees in service at the close of 1927 was obtained from the pay roll records filed with the State Controller. An information card was then sent to each employee through the head of his department, which he was requested to completc. Samwe of this card is shown on page fll. In all instances where the Civil Service Commission had on file a roster card for the employee, these were compared with the information secmed from the cmployees. so as (n) assure the aceuracy of the statistics as finally assembled.

    The period chosen for the investigation of past experience was from January 1, 1923, to Deccmber 31, 1927. Roster cards of the Civil Service Commission covering all civil service and temporary authorization employees in active service at any time during this experience period, but who separated from the service for any reason before the end of the period, were pulled from the files of terminated cards. Age data for these employees was not shown on the roster cards, but a thorough search through the records provided this information in approximately 62.5 per cent of the total number of terminations, and in approximately 97 per cent of the number of terminations of civil service employees.

    ## TABULATION

    All necessary information from the terminated roster cards and the information cards was codled and punched on Hollerith cards to facilitate the tabulation of the data. A sample of the Hollerith card used is shown on page 41 .

    All cards for part-time employees, extra help, employees elected or appointed for a fixed term, and employees with less than six months of service were excluded before any tabulations were made.

    ## SALARY SCALES

    The rates of salary were tabulated to establish a salary scale, showing the relative salaries at the various attained ages. The data was separated according to the following six arbitrary occupational groups:

    1. Male-Clerical and administrative.
    2. Male-Skilled lahor and meehanies.
    3. Male-Unskilled labor.
    t. Male-Institutional workers.
    4. Female-Clerical and administrative.
    5. Female-Institutional workers.

    The salaries were also kept separate for years 1923, 1925, and 1927 in order that any trends in rate of salary increase might be observed. The cards for which no age data was available were excluded from this part of the investigation. Average salaries by attained ages were computed and a salary scale derived for each group. It was found that no pereeptible difference appeared in the rate of salary increase by age for the various years under observation. The figures for all three years were therefore combined to form one salary scale for each occupational group.

    A careful examination of the graphs of the salary seales so computed showed that a combination of gronps might well be effected. One combination was made of occupational groups one and two listed above, and another of groups three and four. Salary scales for the resulting four groups were used in the computation of cost figures for the various benefits.

    The percentage rates of contribntion of employees were also computed using these four salary scales, but it was observed that the resulting rates for the two occupational groups of male employees were so close that in the interests of simplicity they could be combined. A similar situation was observed in the two nccupational groups of female employees. Accordingly, another combination was effected, and two salary scales were made, one for all male employees and one for all female employees. It was essential to retain these two groupings because of the uniformly higher mortality which may he expected anong male annuitants as compared with female ammitants. The superior longevity anticipated anong female employees makes it necessary for them to have greater accumnlations at retirement than male employees, in order to provide amnuities of like amount, which in turn means higher contribution rate for women than for men. The use of these final salary seales was limited to the computation of percentage rates of contributions of employees. All salary scales used are shown in Table 1.

    ## WITHDRAWAL RATES

    A study was next made of the rates of withdrawal of the employees by attained age and length of service. The rates used were confined to those of employees under civil service because the information on these employees was more complete and reliable than on the others, and becanse they represented a more stable group, whose experience would more nearly approximate that expected under a retirement system.

    An analysis of the withdrawals by year of termination showed that the years 1923 and 1927 presented an exceptionally high average withdrawal rate as compared with the vears 1924,1925 and 1926. To inchule both the years 1923 and 1927 in our investigation would have produced an abnormally high withdrawal rate, and for this reason the year 1923 was excluded from this study. From this four year experience period, "select" and "ultimate" rates of withdrawal were computed. Cards bearing mo age data were distributed in appropriate groups according to the distribution of the cards in those groups on which ages were available. "Sclect" rates were determined for the first three years of service, becanse the rates of withdrawal in the early years of service were much higher than the withdrawal rates of employees of the same age who had been in the service for a longer period.

    No reliable information was available for obtaining the reasons for separation from serviee and, therefore, it was impossible to determine the death rate or the rate of disability. The withdrawal rate, eomputed as deseribed above, included not only resignations and dismissals from service, hut also deaths and disabilities. In order to adjust for this faetor, there was dedueted from the gross withdrawal rate the assumed mortality and disability rate, using the standard tables mentioned in the description of the aetive service table whieh follows.

    It was found desirable to combine the data into two groups for the purposes of computation. The first group ineluded occupational groups 1,2 , and 5 , shown above, and the seeond group ineluded groups 3, 4, and 6.

    The final graduated rates of withdrawal used in the eonstruetion of the Aetive Serviee Tables are shown in Tables 2 and 3.

    ## ACTIVE SERVICE TABLE

    In order to compute an active service table it is necessary to have the following rates for employees in aetive serviee:

    1. Rate of mortality.
    2. Rate of disability.
    3. Rate of withdrawal.

    Only the third item mentioned alove was available from the data at our disposal. The rates of nortality for all groups of employees were assumed to be the same as shown by the American Experience Table of Mortality, which is a conservative table long aceepted as a standard among life insurance companies and known to follow closely the mortality generally experieneed under retirement systems.

    The rates of disability were taken from the experience of the City of New York Employees' Retirement Fund. The disability experience on laborers was used for our institutional group (eombination of oceinpational groups 3, 4, and 6) and an interpolated value between the experience of clerks and mechanies was used for our clerieal and administrative group (eombination of oeeupational groups $1, \underline{2}$, and 5 ). The rates of disability of the employees under a retirement system depend not only upon the partieular group eovered but upon the administration of the benefit. It is probable that the tables of rates of disability chosen will, with reasonable care in administration, be found to be a close approximation of the experience under the proposed system.

    Tables 2 and 3, in addition to showing the rates of withdrawal, show the assumed rates of disability and mortality. Tables 4 and 5 show the Aetive Service Tables.

    ## CONSTRUCTION OF MONETARY TABLES AND THE VALUATION OF BENEFITS

    Commutation columns were prepared for the valuation of each benefit. The rate of interest was assumed to be 4 per cent per annum compounded anmually: Mortality of service pensioners was assumed to follow 'MeClintock's Annuitants' Mortality Tables," using the appropriate tables for males and females. Mortality of disability pensioners was assumed to follow Hunter's Disability Table. Annuity values are shown in Table 6.

    Explanations of the construction of the commutation columns and of the formulas used in valuing the benefits would involve considerable mathematical analysis whieh is felt to be beyond the seope of this report.

    ## OUTLINE OF PROPOSED SYSTEM

    These fundamental tables were used to make various experimental calculations which were desired by the Commission in its analysis of different proposals. Final detailed calculations were made in accordance with the proposed system described in the Commission's report. The benefits and provisions of this system may be summarized as follows:

    ## 1. General Nature of Proposed System.

    1. System is to be on "savings-bank" principle. The actual amount of retirement allowance for future service will be dependent upon the accumulated funds to the credit of the employee at the time of retirement. Contribution rates are figured so that if the present salary scale holds good, and interest at 4 per cent per annum is credited, the retirement allowance at age 65 for future service will be $1 / 70$ of "final salary" for each rear of service. "Final salary" is defined as the average salary for the fire rears prior to service retirement.
    2. The first six months of an employec's service shall be ignored.

    ## II. Service Retirement Benefit.

    1. Ietirement is optional at age 60, provided there is a minimum of twenty years' service, and compulsory at age 70 . As regards present emplovees, any person over 65 years at adoption of system shall not be subject to compulsory retirement, except for disability, until he has served fire additional years.
    2. Maximum salary considered shall be $\$ 5,000$ per year. The state will not contribute on any portion of salary above this figure, though emp'oyees may contribute on full basis if he desires.
    3. Rates of contribution shall be "keyed" to produce an estimated retirement allowance of $1 / 70$ of final salary for each year of service, provided that retirement takes place at age 65. Retirement before or after 65 would produce proportionately smaller or larger percentage.
    4. Prior service is to be recognized by a special allowance furnished by the state, applicable upon retirement at or after age 65. This allowance shall he $1 / 70$ of salary for each year of prior service. Salary is to he considered as the average compensation for three years previous to the adoption of the system.
    5. No employee now in service shall be subject to compulsory retirement at any time on a retirement allowance less than $\$ 40$ per month. If the regular provisions of the system yield less than this amount when he becomes subject to compulsory retirement, the state shall make up the difference. Any present employee retiring after age 70 shall receire a minimum of $\$ 40$ per month.
    6. As regards future service, the state will "match" the retirement annuity purchased by the employee's accumulated contributions.

    ## III. Disability Retirement Benefit.

    1. Benefit shall not take effect unless employee has had at least ten years of serviee. Service prior to the adoption of the system will comnt toward this minimum.
    2. Disability benefits shall be entirely independent of Wrorkmen's Compensation benefits.
    3. Upon disability, emploree shall receive annuity purchased by his own aceumulations, plus such an allowance from the state as shall make his total benefit equal to 90 per cent of $1 / 70$ of final salary for each year of service. Final salary is the average salary receivel for five years prior to disability.
    4. If this works out at less than $2 \overline{5}$ per cent of final salary, employee shall he granted 90 per cent of $1 / 70$ of his final salary for each year of possible service $u p$ to age 65 , provided that this does not execed 25 per cent of final salary. In no event, however, shall the disability allowance exceed 90 per cent of the service retirement allowance which the employee could draw, assuming that he retired at his lowest possible retirement age.

    ## IV. Death Benefit.

    1. Upon death of any employee before service or disability retirement, the amount of his aceumulated contributions will be paid to his beneficiary.
    2. If his accumulations are less than $\$ 500$, the state will contribute an additional amount sufficient to bring them up to that figure.

    ## V. Withdrawal Benefit.

    1. When an employee withdraws from the service for any reason except service or disability retirement, his contributions with interest will be refunded to him.

    ## NUMBER AND SALARIES OF ELIGIBLE EMPLOYEES

    As has been stated, all cost studies were based on pay rolls as of Decemher 31, 1927. Number and salaries of eligible employees by main occupational groups are as follows:
    

    Where an employee receives maintenance or lodging as part of his compensation, it has been ineluded in his salary at the regular rate in use by the State Civil Service Commission. Part-time employces, and those in the service less than six months, are not included.

    ## CONTRIBUTION RATES FOR EMPLOYEES

    Table 7 shows the contribution rates of employee-members necessary to produce $\frac{1}{2}$ of a retirement allowance at age 65 , equivalent to $1 / 70$ of "final salary" for each rear of service. Rates are shown separately for male and female employees and are graded according to age nearest
    birthday at entry into the system. The rates range from 2.62 per cent of salary for a male employee aged 16 to 7.02 per cent for a female employce aged 64. Any employee entering the system at an age above 64 shall pay the same percentage which applies to age 64 . Applying these percentages to all employees in service at the end of 1927, as shown above, a total annual contribution by employees of $\$ 542,963$ is obtained, which is 4.09 per cent of the pay roll.

    ## ALLOWANCES AT SERVICE RETIREMENT AGES OTHER THAN 65

    The system contemplates voluntary service retirement at any age between 60 and 70 , provided there has been 20 years' service. Whenever service retirement takes place the employee will receive the "annuity" purchased by his own contributions, plus an equal amount as a "pension" from the state. If he retires before age 65, his estimated retirement allowance for each year of service will be less than $1 / 70$. If he retires after age 65 , it will be greater than $1 / 70$. Tables 8 and 9 show the approximate percentages of final average salary to be received by employees entering the system at any age from 20 to 60 , and retiring at any age from 60 to 70 . These tables are drawn up on the assumption that future salary increases are proportional to the salary scale. The 20 -year minimum service requirement includes service prior to the adoption of the system, and the approximate percentage allowance upon retirement is therefore shown for ages at entry into the system as high as 60 . To determine the approximate percentage which will be received by a present employee upon his retirement, the percentage from Table 8 or 9 must be obtained corresponding to his age at entry into the system, and to this percentage must be added the amount provided for his prior service allowance.

    ## ESTIMATED COST TO THE STATE

    In calculating the estimated cost to the state, no facts were available regarding the probable rate of service retirement after the minimum age of eligibility. Service retirement can take place at any age between 60 and 70 , subject to the minimum service requirement, and the cost will vary according to the age actually selected by employees. The assumption has been made that employees will retire, on the average, when they can secure a retirement allowance equal to one-half of their "final" salary, subject always to the compulsory retirement age limit.
    Where employees were over 70 years of age at the valuation date, it has been assumed they will retire at the end of two and one-half years.

    Cost calculations were made separately for each of the four main occupational groups, because of expected differences in salary scale, disability rates, and withdrawal rates. In assembliug the final cost figures, use was made of quinquennial age groups.

    Table 10 shows the total present value of all benefits contemplated in the proposed system. These figures do not have any direct bearing on current annual costs. The present value of all future benefits is a very necessary item in drawing up a balance sheet of a system in actual operation, since it then becomes necessary to show as liabilities the total value of all future benefits to present members, and to show as assets the funds in hand plus the present value of the future contributions regularly provided for by the state. These figures are of only theoreti-
    cal interest in setting up a new system on an actuarial basis, since the annual contributions necessary liy the state are figured so that their total present value will be equal to the prescnt value of all future obligations assumed. As a matter of record, however, the figures are made a part of this report.

    The important items of Table 10 are the liability for minimum service pension, and for prior service. These represent the total "load" the state will pick up over and above what it will cost to provide the benefits which are applicable to future service.

    Table 11 shows the estimated annual parments necessary to defray all costs of the proposed system, based on the eligible employees as of December 31, 1927. The total annual cost of each benefit is also shown as a percentage of the 1927 salaries. Prior service liability is assumed to he liquidated by equal annual payments over a 20 -year period, and the cost of minimum service pensions by equal annual parnents over a 5 -year period.

    The annual cost figures show that an annual appropriation of 3.08 per cent of the eligible par roll should be sufficient to meet all obligations for service and disability allowances applicable to future service. The first-year cost of the death benefit is estimated at 0.35 per cent of the pay roll; as the employees' contributions accumulate, this will rapidly decrease, and sloould reach an ultimate figure of 0.13 per cent of the pay roll. An additional estimated cost of 1.72 per cent of the 1927 eligible pay roll payable for 20 years, should take care of the prior service obligation, and 0.46 per cent for five years should cover the minimum pension provision. The table shows a total initial annual cost of 5.61 per cent of the eligible pay roll, or $\$ 744,4 \overline{3} 3$.

    In all these calculations of cost to the state, contributions called for from the employees have been omitted. No allowance has been made for the cost of administration, which it is presumed will be borne by the state.

    ## CHART ILLUSTRATING OPERATION OF SYSTEM

    Following Table 11 appears a chart showing the amount of disability or service allowance to which an "average" cmployee entering the service at age 25 would he entitled were he to retire under the proposed plan. The salary assumed to be carned by this "average" employee is shown as the figure corresponding to the salary scale adopted for male employees.

    ## PROVISION FOR QUINQUENNIAL INVESTIGATIONS

    Because of the many rariable factors entering into any proposed retirement system, it is extremely desirable that an actuarial investigation be made at least once in five years to determine how the actual experience compares with the original estimates of withdrawals, mortality, salary scales. interest rate, ete., so that any necessary adjustments can be made. A provision of this kind is found in all sound retirement systems.

    ## APPRECIATION

    In concluding this report I wish to express my appreciation to the members of the Commission for their courteous consideration in all matters from beginning to end of the work, to Miss Lodema Shurtleff,
    secretary of the Commission, who bore the larger part of the burden of collecting and checking the statistical information regarding present emplorees, and to Professor A. H. Mowbray, consulting actuary of the Commission for his invaluable and constructive cooperation. I am also grateful to the officers of other retirement systems who have willingly furnished information and suggestions, and especially to Mr. Ralph R. Nelson, secretary-actuary of the San Francisco City Employees Retirement System, who took an active interest in the work as it progressed and who made available the recorts and experience of his office.

    Respectfully submitted.
    Barrett N. Coates, Actuary.
    San Francisco, Cal., Norember 28, 1928.

    ## Commission on Pensions of State Employees, 331 Forum Building, Sacramento, California.

    Gentlemen : In accordance with your request I have joined with your actuary, Mr. Coates, in outlining the plans for getting the data for your study of the pension problem, and have conferred with you and him in developing the plan you are proposing. I have also currently checked the data and methods by which the rates of contribution furnished in Mr. Coates' report were determined as well as the data and methods of estimating the cost to the state of setting up the system and providing for the disability benefit and prior service credit. Finally, I have reviewed both the draft of your proposed report and Mr. Coates' actuarial report.

    I am pleased to say that I consider the proposed plan actuarially sound and in line with the best progress in pension arrangements, and that in my opinion the contribution rates submitted are such as, on the conditions noted in Mr. Coates' report, will provide the benefits contemplated. I am also of the opinion that the estimates of costs to the state are as accurate as can be made, considering the nature of the problem.

    I believe the state may proceed safely in reliance on these estimates. However, I concur in the recommendation that if the plan be adopted there be provision for periodic actuarial review. I deem this an essential provision in all pension plans. It permits timely adjustment for changes in conditions while such adjustment may be made with least difficulty and best effect.

    Respectfully submitted.
    (Signed) A. H. Mowbray, Consulting Actuary.
    Berkeley, Cal., December 8, 1928.

    ## INTRODUCTION

    ## To the forty-eighth Session of the Leyislature of California:

    The undersigned respectfully submit to the Legislature a report authorized and provided for by Senate Concurrent Resolution No. 25, approved by both houses of the forty-seventh session (1927) of the Legislature of California. The resolution found on pages 2402 and 2403 , Statutes of California, 1927 , is as follows:

    ## CHAPTER SJ

    Seuate Concurrent Resulution No. $2 \overline{5}-$ Relative to an investigation and report upon educational facilities for the instruction of the deaf.
    (Filed with Secretary of state April $29,1927$. )
    Whereas it is necessary and desirable that a thorough investigation be made of the various educational facilities, public and private, state and local, now provided for the deaf, of the number and distribution of deaf people in this state and of the adequacy and suitability of the California School for the Deaf located at Berkeley, Alaneda countr, in order that the Legislature may have available adequate information to enable it to fix and determine the policy that should be adopted in this regard; now. therefore, be it

    Kcsolecd by the Nenate, the Asscmbly concurring, That three members of the Senate shall be appointed by the president of the Senate and three members of the Assembly by the speaker of the Assembly, who shall constitute a committee whose duty it shall be to investigate the matters mentioned or contained in these resolutions and to report their findings in full to the Legislature at the forty-eighth session thereof and to make sueb recommendations in counections therewith as they deem of permanent benefit to the state: and be it further

    Fisolved, That the said cominittee shall proceed at once to organize by the election of one of its members as chairman and by the selection of a secretary and to proceed forthwith with said investigation in the manuer to be determined by said committee ; and be it further

    Resolved. That the committee shall have puwer to employ such assistance as may be necessary and that the expenses incurred in such investigation, not to exceed the sum of one thousand dollars, shall be paid equally by the Senate and Assembly out of their respective contingent funds; and be it further

    Resolved, That said committee is hereby authorized and empowered to do any and all things necessary to make a full and complete investigation of the matters and objects hereinbefore referred to, and is bereby authorized and empowered to require the production of persuns, books, agreements, documents, records and papers of every kind; to issue subpenas and to take all necessary means to compel the attendance of witnesses, and to procure testimony and the members of said committee are and each of them is hereby authorized to administer oaths; and all the provisions of article VIII of chapter II. title I, part III of the Political Code of the state relative to the attendance aud assemblage of witnesses before the Legislature and committees thereof, shall apply to the committee appointed under this resolution ; also said committee is hereby given leave to sit during the sessions of the Legislature, during the recess thereof, and during the interval between sessions thereof, either at the capitol, or at such other place, wr places as said committee shall from time to time designate.

    In pursuance of this resolution the president of the Senate appointed:
    Senator Arthur H. Breed, of Alameda County,
    Senator Thomas A. Maloney, of San Francisco County.
    Senator Herbert W. Slater. of Sonoma County ;
    and the speaker of the Assembly appointed:
    Assemblyman Robert B. Fry, of San Francisco County, Assemblyman Harry L. Parkman, of San Mateo County, Assemblyman Eugene W. Roland, of Alameda County.

    Pursuant to the request of Senator Arthmr H. Breed, author of Senate Concurrent Resolution No. 25 , the committee was summoned to meet in the office of the State Director of Education in the State building, San Francisco, September 22, 1927, at 10 a.m.

    Senator Breed called the meeting to order and all members of the committee were present except Senator Slater, whose unavoidable absence was explained by Senator Breed. The committee organized by electing Senator Slater, chairman; Senator Breed, vice chairman, and Assemblyman Parkman, secretary. The tentative order of business presented by the Director of Edncation was accepted and Mrs. Stella P. Trussell of the staff of the State Department of Education was elected to serve as assistant secretary to the committee and also its official stenographer. William John Conper, the State Director of Education, was requested to serve as the executive officer of the committec. At this meeting plans for the work of the committee were discussed and the following reduests were made: (1) That the Director of Education prepare a statement of the number and distribution of deaf minors in the State of California in so far as it could be compiled from the returns of the census of October, 1927; (2) that the Director of Education report what public schools were offering educational opportunities to deaf children; (3) that the principal of the State School for the Deaf at Berkeley make a report on enrollments in the school for each year during the preceding ten years; (4) that the Dircetor of Public Works of the State of California study the physical plant of the school, setting forth its present condition and the probable life of the varions buildings; (5) that the Director of Public Health report on the sanitary conditions of buildings and grounds together with any recommendations he might care to make; (6) that the Director of Education prepare a brief report on the history of the state school at Berkeley. An invitation was extended to the members of the faculty of the state school, and other interested persons to commmencate with the commission and its mentbers at any time. The second meeting was fixed for San Freancisco, Norember 10; 1927.

    ## Seoond Meeting.

    $\because$ The second meeting of the committee was called to order by Vice Chairman Breed, November 10, 1927, at cight o'clock p.m. Numerons commmications were received and ordered filed. Reports were received from Mr. George Berry, acting principal of the state school; Dr. Walter M. Dickie, State Director of Public Health, and William John Cooper, State Director of Erlueation. It was manimously decided to hold the next meeting of the committee at the Schonl for the Deaf, in Berkeley, Saturday. December 3, 1927, at 10 a.m.

    ## Third Meeting.

    On December 3, 1927, the following members of the committee, Senators Breed and Maloney and Assemblymen Parkman, Roland and

    Fry, met at the sehool in lberkeley and made a thorough inspection. The committee found conditions at the institution unsatisfactory from the point of view of its upkeep, maintenance and management, as follows :
    (a) There appeared to be no responsible executive or administrative head to the institution due to the triple management.
    (b) The morale of the employees and the spirit of the pupils was bad.
    (c) The sanitary conditions were deplorable.
    (d) The housing and schoolroom conditions were over-crowded and poorly lighted.
    (e) Play and recreational areas existing in the grounds were langerous.
    (f) Sidewalks and roadways, especially those to the hospital, were in disrepair and unsafe particularly for the blind children.
    $(g)$ There was $n 0$ night watchman in any building and only one outside night watchman for the whole school.

    These and other matters needed immediate attention and the committee recommended that the Department of Education spend the funds provided in the biennial budget for repairs and upkeep, on the more pressing improvements recommencled in the report of the State Director of Public Works.

    ## Fourth Meeting.

    The fourth meeting of the committec was held in the offices of the State Department of Education, Los Angeles, March 21, 1928, at 10 a.m. After a brief conference with Miss Elizabeth Bates, assistant superintendent of Los Angeles city schools in charge of classes for the deaf, the committee proceeded to the Seventeenth street sehool inspecting several classes of elementary and junior high school grade and thence to the Polytechnic high school where one class of senior high school grade was seen. At 2 o clock the committee met in formal session in the offices of the State Department of Education and listened to discussions participated in by Assistant Superintendent Elizabeth Bates. Miss Irene Short, supervisor of elasses for the deaf; Miss Lonise $A$. Williams, principal of the Seventeenth street school, and Mr. Roberts, coordinating officer for Los Augeles schools for the employment of physically handicapped persons. Through Miss Jean Conway, interpreter, the committee listened to discussion participated in by Mrs. Howard L. Terry, vice president California Association for the Deaf; Mrs. Clarence II. Doane and Mrs. James Conway. Communications were received and ordered filed. The committee discussed methods of teaching the deaf, the importance of training additional teachers for California and accepted a report on repairs made on the state school at Berkeley submitted by Mr. W. K. Daniels, deputy chief, Division of Architecture.*

    ## Fifth Meeting.

    This meeting, held in the State Building at San Francisco, October 16,1928 , was ealled to order at 8 p.m. by Secretary Parkman in the

    abscnee of the chairman and vice chairman. Senator Maloney was clected chairman protem. MIr. Elwood A. Stevenson, the new principal for the State School for the Deaf, was present, discussed the condition of the buildings, and explained changes he had made in the personnel of the school and his reasons therefor. After a discussion of all the factors concerned it was decided by unanimons vote to recommend to the Legislature that the State School for the Deaf remain on its present site in Berkeley. A discussion of the building program necessary to modernize the school followed. It was requested that Mr. Stevenson, Mr. Hill, the Chief of the Division of Schoolhouse Planning, and State Architect MreDongall study the site and sulbmit to this committee a rough ground plan of buildings that should he built during the next ten years. Secretary Parkman made a report on conditions at the school as they appeared to the committee which had, without giving notice, visited the school the previous day.

    ## Sixth Meeting.

    The sixth mecting was held in Sacramento, January 9, 1929. The meeting was called to order by Senator Slater, chairman, with the following members present: Senators Breerl, Maloney and Slater; Assemblymen Parkman and Roland. The executive officer. W. J. Cooper, submitted a brief outline of the form of a report to be made to the Legislature which was accepted. Mr. Cooper was requested to prepare the report in four chapters as follows: Chapter I, Deaf children in California; Chapter II, Facilities prorided by the state for the education of deaf children; Chapter 1II, Facilities provided by the public schools for the education of deaf children; Chapter IT, A plan for developing the state school at Berkeley: The report requested from a committee consisting of Mr. George B. McDongall. State Architect; Mr. Andrew P. Hill, Jr., chief, Division of Schoolhonse Planning in the State Department of Education, and Mr. Elwood A. Sterenson, principal of the State Sehool for the Deaf, was received and discussed. State Director of Finance Alexander R. Heron was asked for critieism and suggestions. It was the belief of Director Heron that requests for the biennimm 1929-1931, if not in exeess of $\$ 300,000$, conle he ineorporated in the exceutive budget; that the needed replacements shonld be extended throngh the four following biennial periods and should be adequate to replace buildings rapidly enough to make the California school adequate for its needs and modern in its buildings and equipment by 1939. With such directions to the subcommittee, the committee adjonrned requesting the subeommittee to be ready to report again on January 16 th.

    ## Seventh Meeting.

    The committee met pursuant to call on January 16. 1929, in Sacramento with all members present. All members of the subcommittee, Mr. McDougall, Mr. Hill and Mr. Stevenson, were present with a revised report which was presented by State Arehitect MeDougall. Mr. IIeron, Director of Finance, discussed the report and approved the subcommittee's request for $\$ 300,000$ to he incorporated in the exceutive budget for the next biemium. Deputy Director of Educa-
    tion Sam II. Coln represented Mr. Conper, who was unable to be present. The report of the sub-committee was adopted as C'hapter IV of the report of the legislative committee.

    ## Eighth Meeting.

    The eighth meeting of the committee was held in the State Building, San Franciseo, Febrnary 4. 1929, at 4 p.m., with the following members present : Senators Breed and Maloney, Assemblymen Parkman, Roland and Fry: Direetor of Edneation $\mathrm{W}^{\prime} \mathrm{m}$. John Cooper Was also present. Vice Chairman Breed officiated in the ehair. The tentative report of the eommitter to the forty-eighth session of the Legislature was presented, discussed and adopted. The secretary was instrneted to have printed one thousand eopies for the use of the Legislature, certain libraries in the state and others interested. Senator Slater was requested to present the findings of the report to the Senate. and Assemblyman Roland to present the findings to the Assembly: There being no further business the eommittee adjommed sine die.

    Respectfully submitted.
    Herbert W. Slater, Senator, Chairman;
    A. H. Breed, Senator, Vice Chairman ; Thomas A. Maloney, Senator: Robt. B. Fry, Assemblyman; Eugene W. Roland, Assemblyman; H. I. Parkman, Assemblyman, Seeretary.

    February 4, 1929.

    ## Chapter I

    ## DEAF CHILDREN IN CALIFORNIA

    It is an exceedingly difficult matter to ascertain how many deaf children there are in California. Experts in the field have established a ratio of one deaf person to every 2350 of the population. Assuming that there are five and one-half million people in the state at the present time we should expect to find between twenty-three hundred and twentyfour hundred deaf persons of whom seven or eight hundred might reasonably be expected to be children of school age.

    The census taken in October, 1927, provided for the reporting to the State Department of Education the age of physically handicapped minors. All seven years of age or less (which is under the compulsory school age) were reported as one group. Others were reported for the year of age. The tabulation is as follows:

    > 7 years or less
    > 156

    8 years----------------------------------------------18 89
    
    
    11 years----------------------------------------------- 73
    
    13 years----------------------------------------------105
    14 years----------------------------------------------100
    15 years----------------------------------------------- 85
    
    
    
    
    As respects geographic location these deaf children are found in forty-five counties in the state. The distribution is shown by the following table:

    | Counties | Deaf | Counties | Deaf |
    | :---: | :---: | :---: | :---: |
    | Alameda | 182 | Nevada | 1 |
    | Butte | 7 | Orange | 14 |
    | Colusa | 2 | Plumas | 1 |
    | Contra Costa | 7 | Riverside | 16 |
    | El Dorado | 3 | Sacramento | 27 |
    | Fresno | 29 | San Benito | 2 |
    | Glenn | 1 | San Bernardino | 23 |
    | Humboldt | 7 | San Diego | 69 |
    | Imperial | 3 | San Francisco | 92 |
    | Inyo | 3 | San Joaquin | 7 |
    | Kern | 11 | San Luis Obispo | 4 |
    | Kings | 7 | San Uateo | 6 |
    | Lake | 2 | Santa Barbara | 3 |
    | Lassen | 1 | Santa Clara | 14 |
    | Los Angeles. | 427 | Santa Cruz | 4 |
    | Marin | 7 | Sbasta | - 1 |
    | Mendocino | 4 | Sierra | 1 |
    | Merced | 3 | Siskiyou | 2 |
    | Monterey | 8 | Solano | 6 |

    

    It is possible for deaf children to obtain their education (a) from private tutors: (b) in non-public schools; (e) in the state school at Berkeley; (d) in special classes in the public schools. There are no records available to indicate how many children are receiving an education through nom-public facilities. The facilities provided by the state and schonl districts for educating such children are discussed in Chapters II and III.

    ## Chapter lI

    ## FACILITIES PROVIDED BY THE STATE FOR THE EDUCATION OF DEAF CHILDREN

    The first provision made for the education of the cleaf eame from private intiative. In an article witten for the biemial report of the superintendent of public instruction in $190 t$. Warring Wikkinsm, then principal of the state scloon, wrote:

    > On the 171h of March. 1860, it number of benevolent ladies in San Franrisco organized the Society for the Instruction and Maintenauce of the Deaf and the Blind. and on the 19th of $A_{p r i l}$ following, the Legislature appropriated $\$ 10,000$ for the erection of a building for carrying out the purpose of the sociely. The municipal authorities of San Franciseo gave \$T.0no toward the purchase of a hundred-vara lot on the comer of Fiftepnth and Mission Streets. which site was donated to the stite.'

    T'meter date of February 1,1861 , the hoard of managers, a gromp of twenty-three San Franciseo women, of whom Mrs. P. B. Clark was president and Mis. Jacob Tenderhill secretary, submitted a report to the Legishature. Aecording to this report, the school opened in a rented honse on Tehama strect, San Francisco, on the first day of May, 1860, with three pupils and Mr. H. B. Crandall, "inn intelligent and well educated deaf mute gentleman as instructor:" We are told that during the first month the pupil population increased to eight in mumber and had at the close of the first six monthe twenty-two on the rolls. ${ }^{2}$

    The amount receired from hoard and thition of pupils was insignificant and the institution accordingly was supported largely by private domation." The first interest of the state seems to have been an appropriation by the Legistature on April 19, 1860, of $\$ 10,000$ for the construction of a building at the corner of Mission and Sparks (Fifteenth) streets, San Francisen. ${ }^{4}$ This site was purchased with money appropriated by the city of San Francisco, $\underset{\text { Whe }}{ } .000$ in amount. Because of the state's interest, a board of five trustees was appointed. For reasous which are not clear at the present time, the Legislature of 1864 passed a concurent resolntion providing for a joint committee " to make due and diligent inquiries into the management and the conduct of the aftiaits of the deaf, dumh, and hlind asylm,", etc. The committee appointed, consisting of three Senator's and three Assemblymen, reported to the next session of the Legishature on comblitions at the school and recommented:
    (1) That the site and buildings did not provide for future derelopment;
    (2) That it seemed desirahle to more the school to a new location "in the immediate rieinity of San Francisen" ;
    (3) That the lady managers of the Asociation desired to withdraw and turn the project orer to the state. In regard to the state's responsibility for taking orer the school, the report reads as follows: "Your committec needs searcely add that it deems it a duty incumbent on the

    state so to do. and that the perople expeet it at our hands, that the waifs whom God has cast alung life shome at our leet, may le rared for as the ehildren of the state."
    (4) That it was fomm that the inemment prineipal was in ill health and clexired to retire. ${ }^{6}$

    The report of this commitler, 11.5 printed pages in length, bronght about alirectly or indirectly :
    (1) A better defined program for dealing with the education of the draf and hlind:
    (关) Better support of the institution by the state:
    (3) A new site ant buildings as nemed in Alameda Connty:
    (t) The clection of a now principal, Mr. Warring Wilkinson, who was to bring the institution, during his lifetime, to a position of national importance.

    That the establishment of the institution in Alameda County attracted much attention is inclicatid by an account from the "Erening Bulletin" of September 26, 1867. From an extract quoted from this paper and incorporated in the annual report of the institution, the following is quoted:

    The ceremonial of laying the cornerstune of the handsome new edifice in course of erection in Alameda County, took place at noon today. A large concourse of ladies and gentlemen were gathered together to take part in the interesting exercises attending the ceremony. Upwards of tifty vehicles of all classes, from private carringes to public omnibusses, from san Franciseo and Oakland, brought visiters to the ground-besides a great number, especially ladies, who arrivel on horseback. The spectators who took most interest in the performance, and were themselves the most interesting to the other spmetators, were a party of boys and girls, about fifty in all, from the Asylum.

    Reports indicate that the building was erected under many difficulties, including a scarcity of labor, a wet winter and an earthquake on October 21,1868 , all of which resulted in heary loss to the contractors and necessitated an additional $\$ 9,000$ for repairs caused by earthquake damage. ${ }^{5}$ The report of 1807 lists in addition to the blind pupils; thirty-five deaf bors and twenty-five deaf girls.

    On January 17, 1sī. the building was totally destroyed by fire. All pupils had been safely removed however and were a few days later sent home, through the generusity of the railroad company in supplying tickets. The Legislature of 1875 appropriated $\$ 2 \overline{2} .000$ to pay off a bank loan underwritten by the directors, which money had paid for temporary buildings for pupils, who returned to school in April. An appropriation of $\$ 110,000$ for the erection of permanent buildings, ${ }^{9}$ was made at the same session.

    The directors now sent the principal. Mr. Wilkinson, east to studyinstitutions of similar type and make a report. After much cliscussion of Mr. Wilkinson's report. the board adopted the plan of segregated buildings. "The plan," writes Mr. Wilkinson, "provides for indefinite expansion. It embraces a central refectory, a sehoolhouse, and as many 'homes,' as they are called, as the increase of pupils may from time to

    time require. At present two 'homes' are in process of erection, and will be completed in time for inspection by the coming Legislature." ${ }^{20}$

    In view of the fact that these buildings, and others built according to his plan, are still standing, and in nse, Mr. Wilkinson's description of them seems appropriate here.

    The construction of the buildings is of the most substantial character. lothing has been sacrificed to show, but every regard has been paid to comfort, safety and durability. A massive, concrete subfoundation of Fortland coment underlies all the walls. The foundations are of stone, granite water table, and superstructure of plain brick. with granite sills. galranized iron cornice, and slate roof. The partition walls throughout are of brick, interlaced and bonded strongly with iron. All the staircases are of stone and a spiral stone staircase, at the extreme end of the sleeping apartments, renders it impossible for the children to be cut off should fire, by any chance, obtain possession of the middle portion. The exterior walls are lined, and the interior are built with hollow brick, and plastered without the use of lath or furring. so that there is no wooden communication between the different stories. The basement floor is laid three inches thick, with artificial stone. With all these precautions, it is diffieult to see how fire ean obtain lodgment, and. if it does. the loss will be confined to a single building. the distance between the different 'homes' being ninety feet. ${ }^{21}$

    Considerable damage was done to the school by the earthquake of April, 1906. It is described in one of Mr. Wilkinson's reports as follows:

    The most important event of the two rears under review, and indeed in the history of the Institution and of California, was the earthquake of April 1s. $190 \%$. At $\bar{j} .13 o^{\circ}$ clock on the morning of that eventful day, just before the rising bell was rung, a sharp shock occurred which brought every member of the household to his feet, and cansed a rush for the doors. After a few seenuds' duration, the tremor died away, and every one breathed freer in the bope that the earthquake was over, but almost immediately a second and much severer shock followed. which lasted something over twenty seconds, and caused great confusion and consternation among officers and pupils, and no little damage to the buildings.'2

    The bill of repairs for the damage was $\$ 9,710.87$ exclusive of later repairs made in the tower of the Edncational Building at a cost of $\$ 772 .{ }^{13}$

    In 1905 the Lecrislature changed the name of the institution which had been officially known since 1872 as the "Deaf, Dumb and Blind Asyltum" to "The California Institution for the Deaf and Blind." "t Under this name the institution continned until 1921, when the Legislature created the State School for the Blincl. ${ }^{25}$ That part of the institution which was concerned with the education of the deaf has been from that time known as the Califormia School for the Deaf. ${ }^{26}$ At the same time provision for a board of trustees was repealed and both institutions were put under the control of the State Department of Education. The intent of the Legislature was the creation of two separate and inclependent schools, one for the deaf and one for the

    blind, to replace the historic institution which had ministered for so many years to both types of handicapped ehildren.

    The first step in the separation was the assigning by the State Board of Control of a certain portion of the grounds to the California School for the Blind. Each Legislature beginning with 192? has made some appropriation for the development of the State School fire the Blind. Before the close of the year 1929 adequate dormitories and sehool romm facilities shond be available for all hlind students on the site of the Sehool for the Blind.
    Until June 30, 1928, hewever, the two seloonks had hosinesis offiees fointly under the control of one business manager. In spite of the fact that it was necessary to use some buildings on the gromots of the Sehool for the Deaf and in spite of the finther fact that there is hut a single power plant and a single hospital to serve the meeds of hoth sehools, arrangements were made for the separation of the husiness atficirs of the two sehools on July 1, 1928. and from that date forward each prineipal has been held accountalle to the State Department of Education for hoth educational and husimess matter's.

    The service which the schonl has remdered to the state is indicated hy the following tables which give the enrollments by decades up to 1914 and by years sinee.
    

    ## Chapter III

    ## FACILITIES PROVIDED BY THE PUBLIC SCHOOLS FOR THE EDUCATON OF DEAF CHILDREN

    The establishment of classes for the instruction of the deaf in the public day schools of California was more or less intimately conneeted with the quarel among friends of the deaf over methods of instruction. Principal Wilkinson at the state sehtol seems to have been open minded on the subjeect of method and ready to use that method which was best adapted to the needs of the individual. At the same time, however, his experienee had led him to believe that more of his wards could profit by the so-ealled French, or sign method, than eould profit ly the Gerinan, or oral method. The advocates of the latter method were dissatisfied. Consequently the Legislature in 1903 added a new section to the Political Code, mumbered 1618, which reads as follows:

    The Board of Education of every city or city and county, or Board of School Trustees of every school district in this state, containing five or more deaf children, or chitdren who from dealness are umable to hear common conversation, between the ages of three and twenty-one rears, may in their discretion establish and maintain separate chasses in the primary and grammar wrades of the public sebools, wherein such pupils shall be tanght by the pure oral system for teaching the deaf. ${ }^{17}$ (Italies ours.)

    Table No. 111 shows that there are classes for deaf students in nine cities in California. It also indieates the date when classes were established in these cities and the akerage daily attendance of pupils on such classes ly years for a period of five years.
    

    It will he olserved from this table that three eities had established classes prior to the enactment of section 1618 ly the Legislature of 1903. That the principal of the state seliool was skeptieal of the results expected is evidenced hy his eomments in the 1904 report for the state school. Dr. Wilkinson wrote in part as follows:

    So far as I can see the passage of this statute has added nothing to the powers already rested in sehool boards, but the new section has been looked upon as giving legislative approval to the theory of educating the deaf in small local schools as against the support of a state bourding-school where denf chil-

    dren may be gathered froun all parts of the commonwealth and provided with a temporary home where the advantages of a carefully regulated regimen and of mombined experience are so arranged as to give the best results in the object derired, namely: the elucation of the deaf. I do not think that the passage of the Aet had any sueh purpose, but it has been so interpreted.

    The theory of the day school, as presented to parents and to those who are little aequainted with the peeuliar needs of the deaf, has some plausible features, largely sentimental, which appeal to the public. The separation of the deaf child from its home and the tender influence of a loving mother is not to be ignored. It seems, and often is, hard: but when I look over my letter-files, and read the many expressions of gratitude from mothers who appreciate what this maternal self-sacrifice has ultimately brought to them in the was of (mmfort and happiness, I can not heln feeling that this hardship is exaggerated. Now aud then a parent is fomm who declines to send his deaf child away from home to be educated, but thesp instances are very few, and are generally followed be keen regret in after vears, when it is too late to make gond the loss.

    The theory of the day school is not a new thing. In 1815 an essay ou the subject was mhlished in the lavarian "school Friend." and in 1 S 19 Mr. J. P. Arrowsmith of England issuerl a little hook on "The Art of Instrueting the Infint Deaf aud Dumb." which is based unon his expericnce with a deaf brother, and in which he advocated the education of deaf and bearing children together in ordinary schonls. Since his time repeated efforts have been made. with varying success, to carry into practice this play of educating the deaf in day scheols, sometimes with bearing children and sometimes classed by themselves. The bistory of our art is strewn with the wrecks of such schools. thongh many have been dereloped into boarding-sehools supported by the state.

    The oldest day school in the Cnited states was established in 1869 by Miss Sarah Fuller, a most estimable moman, who is still at the head of it. During the next twentr-five years, from 1869 to 1594 , eight other day schools were opened-two in Chicagn and one each in Cincinnati, St. 1.ouis, Detroit, Shebosgan, Cleveland, and Milwanke. In 180.5 the present activity in prometing day sehools for the deaf begim, and has had its most fruitful field in Illinois and Wisconsin. spreading so rapidly in the latter state as to receive the name of the "Wisconsin system." as thongh it were a dew cult. Seventeen such local schools have been established there. Illiunis has serenteen day schools for the deaf. of which twelve are in Chicago. Michigan has eight. Ohio seven, Californial three. Massachusetts one, Missouri one-a total of fifty-four schools in the lnited states.

    The following statisties, taken from the American Annals for the Deaf. January, 1904, are not without intures. Aremoling to these figures there were under instruction on November 10, 1:0.3. at all the schools for the deaf in the United States, $11,2 \underline{2} 5$ pupils, of which 9035 were in the various state institutions: Stit were in the day schonls, and $4+6$ were in denomiuational and pricate sohook. Reduced to decimals, these figures shum that there were in institutions, SS.50 per cent; in das schonls, 7.51 per cent; in denominational and private schools, 3.99 per cent.

    Considering that the theory of the dar school is so plausible: that it has beeu before the mblic in practical operation fur thirty-five years, and that for the past ten years it has been mished with extraordinary rigor by its disciples, one wonders why it has not made greater headwas.
    The day school is adrocated by a few women of exemtive experipher and sucass ans oral teachers, notably Miss Narah Filler. referred to above, Miss Mars Mclowan, principal of the twelve Chicago sehools, and Miss Frauees Wettstein. principal of the Milwaukee school. It is also favored by Dr. Alexander D. Bell, the distinguished inventur of the telephone, a man of large wealth, of most pleasing personality, and whose interest in the deaf has been so proven by his geuerous contributions of mones and his many acts of kindness as to win the affectionate esterm of all members of the profession, irrespective of differences of opinion enncerning methods of instruetion: but I do not think that 1r. Bell will claim to he a teacher of the deaf save in an amateurish and experimental was, as in his little selool in Washingtou. D. C., which be supported for a year or two to illustrate certain theories of his in regard to line writing and co-companionship of deaf and hearing chidren, and his interesting supervisory work with Geurge sanders, an account of which he wrote and pmblished in the American Anuals, wol. 24, pages 12t-139. Dr. Bell's belief in the superi-

    #### Abstract

    crity of the oral method of instruction has led him to an exaggerated faith in the advantage of the day scheol, as set forth in his open letter to the Legislature of Wiseonsin in 1855, and which had so large an influence in furthering the passage of a bill at that time. Several of the points in the summary of his leter would be conceded by most teachers, but the arguments for the same in the boody of the letter are not justified by facts and are not approved by the great number of those who are best fitted by years of fruitful service, of careful and impartial studr. of broad and many-sided investigations to decide which is the better way of educating the deaf and preparing them for useful citizenship-in local day schools or boarding-sehools. ${ }^{18}$

    The legislative committee. as indicated above (page 5 ) held one of its meetings in Las Angeles for the purpose of studying results obtained in the day sehook of that eity:

    The members of the committee were much pleased with the ability of many pupils to read the lips of the examiners. (the class teacher and the State Director of Elucation) aceurately, and with their ready responses. Many of these pupils spoke correctly and in monderstandable roice tones. In some cases, howerer, it is erident that speaking roices ean not be dereloped and the committee is conrineed that sehools should not be held ly the Legislature to any one methot. The committee was pheased to mote that the Legislature of 19.97 in amending section 161s of the Politieal Colde did nut continne the requirement in the original aet that day seh ol classes be condueted by the pure oral method.

    If the Legislature will deeide what educational opportunities shoukt be provided for deat children and make provision for the neeessary lmildings. equipnent and teaching force, it is helieved that the edueators of California are well qualifed to determine the best method to employ in the teaching and in the training of various individuals.

    ## ('hatreir IV

    ## THE PLAN FOR DEVELOPING THE STATE SCHOOL FOR THE DEAF AT BERKELEY

    The plan approved by this Legislative Committee for the future development of educational facilities in California for the deat of all ages, centers arombt the development itself of the facilities of the State Sehool for the Deaf at lerkeley, the expansion of its plant and persomnel, and the modernization of its curriculum. This plan, fully and atcurately set forth in the report of the sub-committee, was approved by rour Legislative Committee, mamimonsly adopted as a part of its report, and is hereby inenrporated as follows:

    ## REPORT OF SUB-COMMITTEE

    ## Elwoun A. Sterevson, Prineipal N゙ate Sehool for the Deaj G. B. McDoteall. State drehitect

    Andrew P. Hhas, Jr.. Chief of the Division of Schoolhouse Plaming
    Although distinctly specific, this report is intended to furnish suggestive material on Elucational Facilities for the Instruction of the Deaf in California. The authors felt a specific statement to be of more value than ambiguons general tescriptions. For this reason. one plan has been worked out and developed in detail. In this way a developmental procedure is illnstrated, and specific buildings estimated under practical conditions.

    ## I. THE SCOPE OF THE PROBLEM IN CALIFORNIA

    Today there are 500 deaf children attending schools for the deaf in the state-215 at the state sehool at Berkeley and 28.5 to 300 at the nine or ten special classes and day schools in the state. ${ }^{19}$ The office reeords at the state school indicate that there are from 60 to 7.5 applications on file for immediate atmission but which have to be denied hecanse of the absolnte inadequace of our housing and schoul facilities. Such conditions do not exist clapwhere in the United States. As it is, we are very much hampered and erowded in trying to take care of our present mumber ot 215 . The ennditions are ahmormal and far from adequate for proper and modern educational work with the deaf. The schoolhouse eapaeity is $1 \times 0$-mly 1 s classooms arailable in each of which not more than ten chibiren should be tanght umder normal conditions. The additional thirty-five maturally and clearly show the crowded condition of the classrooms.

    There is no definite way of determining exactly what the total prohlem of cleaf edueation in California is hecanse of the rapid increase in population in Califormia each rear. The tuture capacity of the state school at Berkeley will necessarily have to he large enough mot ouly to adequately care and provide for the present and the needs for the next fire rears, but also be sufficient to care for the varions features and needs that will appear fifteen and twenty years from today: The American Annals of the Deaf. Dr. Harry Best in his book, "The Deaf,"

    1)r. John Lonis Horn in his hook. "The Eilueation of the Exeeptional Child." atiord the information that there is approximately one deaf person in every 23.50 of population. Of this mumber it is roughly estimated that one-third are of school age. Such figuring and estimation depend entirely upon the accuraer of census taking, which with the deat is only approximate. Likewise there are certain other factors to be considered, namely: (1) The special care given hard-of-hearing ehildren in public sehools: (2) progress of preventive medical care: (3) accuracy of census. This naturally would tend to affeet these approximate estimates. This ratio, however, is followed ly all sehool men in this speeial field.
    Based on the relation of the increase in average daily attendance in our pullic sehools to the 1910 federal census, the state population in $1924-25$ was estimated at $5,102.150$ and it may be conservative to say that at present it is $5,575,000$. On this hasis there are approximately 2450 deaf persons in the sate and of this number there are approximately ino to son children of school age. The state at present is educating 500 of this number, which means that there are 250 or more who are not heing reached and who are lesing a rightfnl privilege. This clearly shows that the state has been lax in properly studying and meeting the problem of deaf education, and it follows. logically, that any scheme of reorganization must take them, and California: enntimuing growth, into consideration.

    The state sehonl at Berkeley in its new plan shombld be ahle to eare for 550 to 600 deaf children. As the population inereases and the mumber at the state selinol heenmes greater than ino or 600 another selinol should he establishel. In all events, beeanse of the wery nature of the special work, there will always he need for a state sehool and also reasons for day schools for the deaf. There are speeial classes for the deaf seattered alinut the state, varring in size from five to thirty, an arrangement. beeause of limited numbers and impossibility of grading, that is far from ideal and beneficial. Day shooks. like the one at Los Angeles, where the mumber runs oner seventer-five pupis, are better and as time goes on. sueh day schools will perhaps eare for one-third of the deaf chitdren of the state.

    The state school can look for a sehool pupulation of in 0 to 600 within the next ten years and even before that period of time. From this, one can appreciate the serions situation and how neeesary it is to meet the problem now and to prepare and plan properly and carefully in every detail. In fact, it is of so serions a mature that steps should be taken in the immediate future by the State Burean of Edueation of the Deaf (Division of Special Edueation) to make a very definite study of the situation and to lay plans to meet and solve the problem both in the larger eity day sehools and in the state sehool. It is a matter of importance and ean not be put off any longer. In truth, the remedy is now long past due and will be more diftientt to arrange than it would have been eight years ago.

    The physical and edueational adwantagen of the normal hearing ehild are always looked npon as of grave importance, and everything is done to guarantee him the fullest opportunity for proper and normal growth and development. If this is so, such care and prorision should be twofold as far as the deaf child is eoneerned. He is handicapped and
    requires the most expert aid amd adviee in matters pertaining to his development. Nothing shond be left mome that will make his future safe. The state owes this to the deall child in the same way it owes such to the hearing child. There is mo thonght of charity here. It is a question of right and privilege. Noney expented now is money sated, and lives made useful for the future. The Innger the solution is put off, the greater the expense inemred by the state eventually. In aldition to the future eost, is the pitiful and tragie thomert of so many wasted and blighted lives that womld have been productive assets. instead of sad and hopeless liabilities. This plea for just and prompt "onsideration is supported hy thomsands of " roiceless'" roiees of deaf children who happen to have now, and in the future, (abliforma as their mother state. Heed it and do something eonstroctive and homanitarian.

    ## THE FUTURE EDUCATIONAL POLICY AND PLAN

    Plans should be lormulated at once to afford every deaf child in the state the same opportunities at least as those offered in practieally every other state. Better still, these opportunities shomld be of a higher type so as to give the deaf ehild more if possible. Remember, every deaf child is a potential futme citizen of the state, either an asset or liability, largely determined hy the degree of opportunity oftered during the fumative years hetween five and twenty-ome. "As the twig is bent, so grows the tree"' is rery true here, and it behooves us to give the matter serions thought. Here is an opportumity of giving the deaf child the fullest possible development and at the same time give the state the chance to take a leading place in the special work with the deaf. This is guod construetive work for the Division of Specoial Erheation and the director at the State Shool for the Deal at Berkeley to work out.

    There are and always will he a certain mmber of deaf ehildren edtrcated at the day shools in the state. The mmber of years allowed and the nature of the traming in such schools are somewhat limited. The future polies, for the good of such children, is to provide armagements at the state school to afford these chiklren further edueation and train ing upon eompletion of the work at their respective day selonols. The average nomal deaf child is not below the nomal hearing child men tally, but becaluse of his lack of hearing is maturally below amd hehind in expression. Because of this erreat lack of langiage comprehension and expression, the deaf ehild is from three to fise years behind the hearing child. Therefore the deaf chiled rexpuises a longer period of sehonling and education. The day school allows dight years, whieh is altogether insufficient. The state schools provide trom twelve to fifteen years. All are agreeing to make the school period fifteen years so as to earry the rleaf child through the high sehool eurriculum. This is as it should be. Aceordingly, the state sehool plans to acemmodate all graduates of the day sehools and so give them as full an edncation and as complete a training at a trade as is possible. Without this further education, the average deaf ehild is at a woelul disadrantage with his hearing hothers and sisters. The state school is best suited for this higher training and edncation. All necessary facilities for this plan should be made possible. The state sehool should be looked upon as the

    Mother School for all deaf children in the state. Preindices and petty differences should be put aside and the factors faeed sumarely and the deaf ehild salvayed for the future. Furthermore, there shonld be prorisions made to eare for the deafened adult in the way of adjusting himself throngh lip reading and trade education. This is serious and is in need of attention.

    In the new plan, great and proper stress is to be placed on adequate trade teaching. It is the solution of the future success of the deaf child. The best trades snited to the deaf and found proper in the state, are to be introduced and skilled and capable teachers are to be employed. The industrial department is to be on an equal plane with that of the academic. The state school will be better able to afford this and arrange for it in every detail. It can not be done in the special classes or day schools in the cities. Attempts are made to be sure, but they are merely attempts and do not fill or answer the true needs. Eventually, after careful studr has been made and justifiable school population had. the large day sehools might be able to do a little trade teaching.

    Shortly a very essential and important position is to be established. It spells a very great day for the cleaf in California. It is a matter that is rital. The position is that of field agent and placement officer. This official is employed directly hy the state school and aids in culucating the parent as to the need of education for the deaf child. arranges for proper admission in the dar school, or the state school, and fellows up all such cases. Likewise he is to arrange to find places of emplownent for the graduates of the seho ol throngh contact with the outside. Detailed explanation of the work is not necessary at this particular time. The name of the positiou should he sufficient.
    Experience has impressed us with the great need of proper and necessary provisiun fur the high school boy and girl recently losing hearing and without necessary preparation to meet the new state of affairs. As far as schnoling is concerned, ther are fairly prepared. They need speech reading, or lip reading, and a training in a trade. There are many of this clase that must be cared for. The new plan hopes to make thi- neeessary provision. This is part of the thenght wpressell abowe as the problem of the deafened adult.

    Part of the new poliey is to make arransements to afford training for roung college men and women who desire to take up the work with the deat. A year of special training at the expense of the state is to he provided so as to induce the proper type of romg people into the work. This is repe essential and would assure a future teaching staff for the state schoul.

    Thder the new plan it is desired to follow the most modern methods of housing. There should he a sharp and distinct separation of the primary and academic mit, in classifieation, age and buildings. IInwexpr, grade governs the beginning and the end of each unit. In the primary unit all children hetween five and twelve years of age are to be housed and taught. Suljiect to grade, those between twelve and twentyone rears of age are to be in the academic mit. The following arrangement of classes and ages gives a comparison of the time needed to educate the normal and the deaf child:

    ## NORMAI, CHILD

    

    DEAF CHILD
    Primary Unit-
    

    The riciousness of attempting to edncate deat children along with normal ones is apparent from this seledule. If it takes two years alditional time, when trained instruetors and speceial facilities are at hamd, what a molnsal failure it must be under normal ciremustances.

    This means that the average deat child, reeeiving fifteen rears' whooling and entering at the age of five years, will be twenty upon graduation. He would have seven years in the primary unit and eight rears in the academie. The academie wond include the intermediate classes, from the sixth to the ninth grades.

    The arerage normal class should mot eontain more than ten (10) children. Under ordinary eomlitions and hasing estimates naturally upon state population, there can be exprected two classes of children to each grade. In addition, there are always two to three elasses of special children. Beeanse of our ahmomal situation with in many thronghont the state without sehcoling, it can be readily seen that one school popmlation will quickly reach the maximm. Considering all possible factors, we can base our estimates on the following:

    The Primary Unit-210 pupils (ages five to eleven years), seven wrades with three ten-pupil classes to a grade.

    The Academic Unit- 400 pupils (ages twelve to minetecn years), eight grades with five ten-pupil classes to a grade.

    ## REASONS FOR INDEPENDENT AND SEPARATE UNITS IN SCHOOL FOR THE DEAF

    All present day anthorities on deaf education and the results and findings of a reeent survey made by the National Researeh Council, ${ }^{20}$ support and adveeate the plan and poliey of separate and complets mits for the smaller and older ehildren. All reeent new buildings for the deaf throughont the comntry have been ereeted aecording to this poliey: For ordinary reasons it is logieal to honse smaller and larger childen in separate mits. The modern sehol for the deaf today eon sists of the primary unit and the aeademic unit. Each is independent of the other and funetions alone. The distinct separation is for various and obvions reasons: efueational, moral, diseiplinary and administrative. This ealls for a complete separation in sehool life, social life, and poliey: Through sueh separation, which must he complete in every respeet, there is opportunity for different arrangement of selool time

    
    and sehedule, which is very ensential. Instead of rising at 6 a. m., as to the older pupils, the younger children ean rise at $7: 15 \mathrm{a}$. 1 m ., and report to school at a normal time. In preparing and serving food, these children can receive food prepared for their growing needs. It is impossible to feed a large nomber of pupils ot rarying ages and needs in the same dining rooms, from the same kitehen, and with different trpes of food aecording to group needs, and all at the same meal time. This is made possible in different and splarate mits as herein explained. In this why the physieal side of the child's life as well as his moral side, ean he well taken care of, and a great amount of eriticism aroided.

    In this segregation in early years, each deaf child is given every opportunity to obtain a thorough and unlimited training in the reading of lips, and the use of spereh, if he has the ability to attain such. should he fail, it would he due to his native and inherent inability.

    It must be clearly understood that the complete primary unit must function as one. This means that in the construction, each and every part of the unit must be erected at the same time and ready for use immediately. It is essential and vitally important that this be done. If suel plan is not followed and merely one or two buildings of the primary unit erected, the solution is not met and the present serious eonditions will still exist with inereased difficulties of greater distances to travel, and mnsegregated dining quarters. If the entire primary unit can not be emstructed as one, it would be better not to do anything and admit the state's inability to financially solve this serions situation.

    ## il. THE EVALUATION OF THE PRESENT PLANT

    General description of property. The State Schools for the Deaf and for the Blind are situated in lberkeley on property bounded by Derby. Dwight way and Warring streets. The total area is 130 acres. This and the present buildings are shown in Chart I.

    The use made of the facilities. The two institutions have lived on this area for years, using many of the facilities there in common. Thus, the heating plant lias served both schools, and the grumnasium, shop and play field have done common duty: The original eonception of the school was uncloubtedly that of a single institution. The old dormitories are all gathered about the central administration building and the dining facilities.

    Time, howerer, has developed the fact that there is nothing in common in the education of the deaf and the blind. The school for the blind. at this writing, is about to become a mit complete in itself, with its own administrative foree, school building, dormitories and dining aceommodations. The development of the selonol for the deaf is tied up with the completion of the separation of the two institutions, and the reasons for this separation we shall now consider.

    Separating the two schools. Schonls are for ehildren. When the state invests money in edneation it expects to get a full value in return. That value is always relative, and predicated on two factors-how good the pupil product is, and what the eost has been. C'ost is often too obrious. It is so easy to measure! And as a result, it often dictates to the educational progran to such an extent, that the result the state expected to buy, is partially nullitiod by too mucls attention to cost. A good edueational product at a reasonable eost is our goal.

    Since the completion of the separation of the two institutions will undoubtedly be more costly, we must first evaluate the good to be gained, and second organize to minimize the cost. The present situation may be summarized, as follows:

    ## In favor of a single plant-

    1. A central heating plant costs less in eruipment, personnel and upkeep.
    2. A common gymnasium costs less than two, in building, supervision and upkeep.
    3. A common dining room costs less than separate ones.
    4. Common bakeries and laundries cost less than separate ones.

    万. One play area costs less than two.
    (5. One hospital costs less than two in housing and personnel.
    $\therefore$ rhe institution could ger along with ss garden and garden upkeep.
    5. Ghe administrative head costs less than separate principals for each.
    !) Buokkeeping. purchasing. auditing nul flerching will cost less.

    ## Against it.

    1. A central heating plant leares nu one in control and institutes a domblheaded system issuing conflicting orders to the engineer and his repair men.
    a. This makes it inpossible to hold these men respunsible to anyone and each priacipal often suspects serrice is being denied him, while less important matters are attended to at the other school.
    b. Separate heating systems would cost more but allow principals to place responsibility definitely.
    2. The blind have very little use for a gymnasium. Facilities are being prorided for them in their dormitories as their actions need close supervision. The deaf do need a gymnasinm. They can use the present one to advantage by keeping after-school play clothes and equipment in the dressing rooms, as well as g.mmasium equipment.
    3. A common dining room is not feasible now. The blind have facilities for boys and girls in their new dormitories. Eating hours are not common to the two sthools. I'upils do not mix well together. Pupils working in the dining room are best trained in sinall groups. For social and biological reasons, it is desirable to separate the primary and aeademic groups within the deaf school itself.
    4. A common bake shop assumes the promiscuons training of handicappeel children, a mixing of accounts and a double headed authority.
    5. The deaf and blind can not play tonether. They can not play the same ganes. As their play hours are practically identieal, separate areas are essential.
    6. The recent Hlu epidemic showed the futility of one hospital. A lospital for each school, preferably attached to a dormitory is desirable. In case of epidemie, the wards can be pushed back into, the dormitory space, without disturbing supplies, facilities or supervision.
    7. Each institution needs its own garden space. Each is developed and managed differently. The blind enjoy a small garden area near home, to wander in. The deaf may be taught gardening as a vocation.

    There scems to be every educational reason for separating the sehools. Omitting heat, this biennimm's building program will just about complete the blind school's ability to function alone. The properties can then he separated by feneing, and each institution will then be responsible for its own ehildren in social, moral and culture fields. At present, with the duplicate use of buildings, the blind ereate continual disciplinary problems, which oceur in and about buildings largely used by the deaf. Whom they are to obey, particularly when they are given eonflieting orders, is an ineessant problem.

    Two separate heating plants would he very expensive. The present plant, when properly cleveloped might be put under the supervision of Dr. Stevenson (principal of the Deaf School), with an arranrement whereby he would sell steam to the Blind sehool, and the Blind school would be entirely responsible for the repair of its system after it left the main plant.

    The size of school sites. The boundary lines for the schnols when separated, seem to take care of themselves in an easy way. The dotted lines on Chart I, show a division sensible to the property, and acceptable to the present institution heads. This gives the blind school about 10 acres of land and the school for the deaf the balance. The blind fall heir to most of the present play area. This contemplates the development of a new physical edueation field for the deaf.

    The present site development. The present site is developed on a separate building unit basis, with an attempt at a symmetrical plan on a site that was unsymmetrical. As buildings to the rear were developed, the fintility of maintaining a symmetry became obvious, and the later buildings, do not complete the original scheme. The set back of the buildings, about 500 feet from the street, made necessary the upkeep of an extensive garden front and a large amount of roadway. A new seheme should cut down the garden front and discard the symmetrical plan. Both should result in a distinet future saring. The present facilities are badly scattered and poorly related. The administrative suite is inadequate, but all that can be spared at present. The workers in the business departments are subject to interruption byanyone coming to the institution. The business ottice is far from the commissary and storage, and a eustodian, who has no knowledge of the original order, aceents goods for quality. In such a seattered plant. the executive foree wastes valuable time in getting about, and the ehildren are out aud into the buildings so many times as to keep the corridors enntmally dirty, and increase floor. door and mat wear. A eomplete new selieme is needed, which separates the children by are (school group), and sex, and keeps the whole enmpaet and easy to supervise.

    The grmansium is so far from the dormitories that play clothes, showers and play equipment are kept in each dormitory basement, thus doubling showre and play equipment. The new scheme should develop so the gymnasium dressing rooms alone serve this need.

    On November i,, 1928 , the State Arehiteet's Office rendered a report on minimm repairs needed to keep these old buildings in usable shape, as follows:
    

    These repairs are of a stop-gap nature. They do not contemplate remodeling in any way. Practically all these buildings are ont of date at this writing, and remodeling is not practical.

    They can not, of course, be replacerl at once, but their nature in general is such as to negate the educational program at every turn. Ther are tall, mostly three-story, and would he dangerous in an earthquake. They are inartistic and institutional in appearance. Inside they are bare and clamme looking. The halls are unheated. The wards are bare and jail-like. The plumbing fixtures are inconveniently located and inadequate. There has been poor planning as to pupil loekers, janitor space, linen care and storage, ete. Ontside the clothes he or she wears, there is no arrangement by which a child may have a personal helonging, unless it is lneked up in his basement locker. The living quarters (living romss) are hare in appearance and furnished like a poorhouse or a jail. The entire atmosphere is forbidding and depressing. As bousing for a handicappet group that is inclined to be over-sensitive. this enviromment is designed to increase their sensitiveness instead of alleriate it.

    Some time ago Dr. Sterenson evaluated the present plant for the Division of Seloolhonse l'lanning. Nis estimate of the worth of the varions mits follows:

    The value of the present buildings.

    ## School Building and Administration.

    True capacity-1s classrooms for 180 children.
    Caring for 215 children in the 18 roms. Overerowded.
    No office for surwising teacher.
    No arrangement for sehool supply room.
    So room for masial rhythm or activity room.
    No opportunity for special speech corrective work.
    No opportunity for sloyd work for young children.
    Nothing of a modern mature in any way.
    Several rooms small and ill adapted to our work.

    Seroral remms pooly lighted and arranged．
    Toilet facilitips in every way inaleyuate and insanitary．
    No urrangement to eare for ehildren in hulding during reens in had weather．
    l＇revals furthey emrellmout of waitime ehildrem．
    l＇revents the earrying on of sohool work in the mondera amd stametardizerd manmer．
    1 heeks and retards normal progress and adsumeement．
    lowation of offies in relation to other featares of plant rery pans．Lark of man－ equtration．
    buikline is ont of date and combliontes matters．
    Building has sem servieq sineq 1どう，or，in other words，has served abmast fifty years．It hats spred its jurgus and its period of use is lomg sine past．

    ## Dormitories．

    All are physically poor and have called for constant repair．Thery are ill－adapteyl to samitary and healthful homsing and care of ehildren．Luildinzs are ald and date bark to 1sts．having sren sorvier for fifty yats．Conditions and phanning of aceommodations for chidren have changed in this period of time．They are diffient to keep warm and comfortable．The arrangements and accommonlations are vers poor．Much of our illuess and epidemirs comes from the inalequate and faluty housing．They have a bad intluence on discipline and the care of properts． Such comelitions affect normal progress and actions of elideren．Thildings are locatmb teo close to one amother．Toilet facilities are very foor and inadenuate．No hot water lines are available in most of the buildings．There is un suitable place for play and recreation．Each is of the old style，running three stories high and poorly equipued．Fach is a fire hazard and dangerous．Bathing facilities and toilet accom－ modations are abominable and far from answering the needs．The loosing capacity has been reached in all the buildings excepting one．Can not accommodate now punils．

    ## Refectory Building．

    This building is in wery poor enudition．It is true that al coat of paint will make any phace look clean．but it can not cover up the multitude of sins that are evident because of the inadequacy of the mrampements aml physioal conditions．Prevents same and wholesome management．It is very inefticient．Causes much unnecessary grief and responsibility．It is oue of the oldest buiklings on the grounds．The conditions are disgraceful．Causes additional and extra labor and time and is rers expensive in management．It is very poorly arranged and calls for eonstant rejair． It is far from answering the requirements．

    ## Bakery and Laundry Building．

    Part of this is msed for slemping guarters for the employeen．Whe of the oldest buiklings and in rery peor shape．It is madequate and manatary and is out of the guestion．The somencrew quarters can be foumd for thes features the better．

    ## Hospital．

    This buikding has already been romdemmexl．It apparently looks safu amd elean but is made so from constant labor and berause it is a hospital．Howerer，it is not safe．In the next place，it is far from adnquate to ：mswer the purposes of a bospital for our numbers．

    In epidemies it is neressiry th scatter cases in the various buildings wherever there is aralable spare，thus dividing the raw and attention and trebline the expensw and labor．This is far from efficiency，ly using the same hospital，each school innocently exposes the other sehool to possible eontagion，whieh in turn ealrees umecessary gharantime and loss of time．Nll is expensive and umecessary．

    ## Trades and Gymnasium Buildings．

    There is one modern usable buidens on the present fampus of the doaf school－ the new grmansimm．The slonp building，next in age，is not suitable for its present usage．for the following reasons：

    1．It has a ceiling leight too low，suitable for an oftice or small classmom buidjang．
    2．It has insufficient light．Where lips are to be read．limht is essantial．
    3．The spans are short．and mumrous posts necessary in the shops．
    4．Threm－story holdings arre all mumensisary earthquake hazard．
    $\therefore$ ．The trpe of industrial work fontemplated will demand heavy machinery，fur which the present plant was mot designed．Reponstruction to acommorlate it will be costly，and leave a botch joh in the end．This building，therefore，is best used for
    some of the trades like wraving and cobbling. and waste spaer on the upper floors converted into temporary living quarters for the help.

    ## Engine Room.

    Fach sehool should have its own engine room and rew of workers. Again the thought should be that the schools, although side by side, are miles apart and should function in an independent mamer. Theoretically. an engine room. with proper "alacity to answer the needs and the proper number of men should be able to answer the requirements of both schonls. Howerer, in actuality such dual use of the same mint closes not work out in an efficient manner. It is too loose, and detrimental to efficient management. The dual use of any unit or groun of emplorees is had. There is no definite way of cheeking matorials, time of labor, and actual cost of operation of eath school. One selionl may consmme and use more material, time, and labor than its prorated share. Likewise, men are in a position to play off one school on the other and shirk their true responsibilities. It is far from satisfactory and cheeks progress. The present poor physical conditions of the buildings are a result of this dual practies. It hampers good supervision of work and the aceomplishment of a program. The only satisfactory arrangement to relieve such bad eonditions and to be ahle to kerp the physical comlitions of buidings in good shape is to hare two separate plants. The present phant mar be used for a while but eventually each unit should have its own.

    From this report, it is evident that the plant for the deaf at Berkeley is, in general, ont of comdition, ineomvenient and obsolete.

    ## 111. THE NEW SCHOOL'S SPECIFIC NEEDS

    General Statement. The needs of the institntion may be enumerated as follows:
    The primary mit shonld eontain the following buldings and features: Schonlhorise.
    Separate cottages for boys and girls.
    serviee building or refectory.
    Sufficient separate play areas for both hoys and girls.
    The aeademie unit shonld eontain:
    Schoolhonse and administration.
    Separate cottages for boys and girls.
    Service huikling and refeetor?
    fymnasimm.
    Trades building.
    Athletie field.
    Separate play areas for hoys and girls.
    For both units there shoukd be a common hospital and a eommon power plant.

    Administrative facilities.
    The establishment of an independent school.
    The gathering together of varions administrative duties.
    The assignment of special supervisory duties and location of supervisor's quarters.
    The proper relation of huildings and departments for ease of supervision.

    Housing problems.
    Hnusing the pupils.
    Honsing the instrnetors and ixeentives.
    Honsing the help.

    Mrehanical servier.
    Heat.
    Electricity:
    Water.
    Sewage.
    The institutional servies.
    Hospital.
    Dining and eookingr.
    Lamodry:
    freenhonse and gravelen.

    ## THE PRIMARY UNIT

    Specifieations and facilities of the Primary Unit buildings.
    The Schoolhouse. lmmediate ennstrmetion is needed to eare for an initial 150 in dormitory space, in two dormitory cottages, eapacity of each being 75 children. As conditions warrant other cottages are to be erected. The schoolhouse, however, is to be crected complete to care for 210 pupils. It is set at 210 and it is on this basis that the following statements are made:

    The school building is to contain 24 rooms- 21 for actual classromms to care for 210 pupils areraging 10 to a room. One room is to be devoted to musical rhythm where certain phases of speech teaching and correction are to be carried on. Another room is to be devoted to activities and action. Another room is to be devoted to lectures, special coaching of individual pupils, and demonstration work for new teachers and for those taking traming. These constitute the $2 t$ classroons to be had in the new school building. Each classroom is to average 20 feet by 18 feet and is to contain a teacher's closet and a small cloakroom for the children. The rooms throughout are to contain sufficient slate, with some arrangement whereby permanent drill work ean remain on eertain slates. A central revolving slate would answer this purpose. Likewise, each room is to have a border of cork above and below the slates for the use of posters, pictures and such. In the first two classes or grades, provisions for small individual kindergarten tables and chairs are to be had in addition to the semi-cirele of chairs used in lessons in lip reading and speech. Likewise, in these two grades as well as the next grade (first three) there are to be sand tables and clay bins. Each elass thronghont is to have a mirror on a standard for speech work. The first three grades will also have a small suitable wash basin for cleaning purposes. All grades above the adranced beginners, or second year, will have the individual desk and also the semicircle of chairs.

    The school building will contain an office for the supervising teacher in charge. There will also be a supply room in which are kept materials, books, ete., to be used in the rarious classrooms. A small but suitable library for children's use in connection with their sehool work. This is a combination library and reading room, but not arranged along the same lines as one for the hearing. There should be a reception room or parlor where parents and risitors ean call, wait, and visit their children and teacher. There should be an assembly room, large enongh to contain 210 ehildren for school programs, plays and entertainments.

    Tbroughout there should be adequate toilet facilities for both sexes and separate areas where each group can go during recess period on rainy days. There should be arrangements for a Sloyd room or Primary Industrial room which will hold 12 children. There should also be an arrangement to have a miniature gymnasium or room for ealisthenies for the Primary group. The large gymmasimm in the Aeademic Unit will be for the older students only. For the younger girls there should be a sewing ronm where they can begin the rudiments of sewing and be prepared to take adranced sewing when the go to the Academic Unit. There should be space for storage purposes so that material and furniture ean be carefully checked and cared for at all times.

    Cottages or Dormitory Cottages. There should be two dormitories to accommodate approximately 75 children, boys in one cottage and girls in another. A third, arranged to aceommodate 50 of the youngest boys and girls housed in separate wings, would bring the number to 210 . The children should be housed three or four to a room but not more. As to specific detail as to size and arrangements of rooms, such will be determined by the architect. As to the mechanical arraugements, these can also be left to the architect, giving consideration of course to certain features that call for special attention and advice from the head of the school in planning. In addition to rooms for the children, there necessarily must be quarters for those who are in charge of the children outside sehool hours. There should be quarters for the chief honsemother who is in charge of all children. She is assisted by three housemothers in each cottage. One housemother should not have more than 25 children to eare for. In fact, 20 is better than 25 . The chief housemother must be free to attend to all matters, meet parents and to do relief duty whenever necessary. Quarters must be armanged for these officers. Likewise there should be quarters for at least four teachers to live in and to perform certain night duties or evening duties. Other features of the cottages. such as reading and study hall, play room, reception rooms for teachers and officers, storerooms, sorting rooms, ete., are detail for the architect and have no place here. This, however, affords an idea of the general nutline of a cottage.

    The Service or Refectory Building. This should contain a dining room large enough to accommodate 210 children. Homelike atmosphere should be had at every opportunity. Small round tables with perhaps five at a table should be arranged. space should be ample. Serving room should be ample. Kitchen and matron's office and smpply room should be well arranged. A pantry is of great value. Otheer's' dining romm to eare for honsemothers and teachers, and an employees' dining room are necessary. There shonk be a secondary storeronm to the general storeroom (Academic and Administration Unit), where necessary supplies for a week's duration can be kept. All neeessary refrigeration chanbers for the needs of the mit should be supplied.

    THE ACADEMIC UNIT
    Specifications and Facilities of Academic Unit Buildings. The eventual population of the Academic Unit will be 400 and consequently when the time comes for constructing this unit plans should be made to follow this number. It will be noted that the general outline of build-
    ings is practically the same for both units with the exception that the Academic Unit has a gymnasium and a trades building in addition.

    School Building. This will be considered the main building of the entire plant, as it will be the largest. It will contain the prineipal's office, public space or reception room and business offices. Aceording to the number, there will be 40 classrooms. In general seheme, it will follow out the plan of the Primary Unit school building as far as rooms are concerned and auditorimm or assembly room. Again the detail and laying out of neeessary features will be for the architect.

    Dormitory Cottages. It is hoped to arrange it so that calh cottage will accommodate 50 pupils. The housing arrangements as to number to a room and the number of quarters for counsellors and supervisors and teachers will follow elosely those of the Primary Unit. Naturally, because of difference in age, there will be different features necessary in many respects. On the basis of 50 to a eottage and with 400 as full capacity, it will mean eight dormitory cottages, four for older girls and four for older bors. Suitable and separate play areas must be prorided.

    Service and Refectory Building. Again, this would be along similar limes as that of the Primary Unit, only on a larger seale. The general storeroom and commissary department should be in this building. In this building, there should be three dining rooms, one for the pupils, one for the officers and one for the employees.

    Gymnasium. At present there is a gymnasium already on the grounds. It is practically a new building and is in fair physical shape, although in its dual usage has not received the best of care. With certain repairs and alterations it is felt that it ean be made to answer the purposes rery nicely and will be found adequate for 400 pupils. There may be need of a few additions and alterations in a meehanical service way, but the building will admirably answer the conditions.

    ## IV. THE IMPORTANCE OF TEACHING TRADES

    One of the most important and vital departments of a well-organized school for the deaf is the Trades Department, or Industrial Department. In fact, a school for the deaf without an efficient department of trades teaehing is not answering its full duty and responsibility to the deaf pupils. It is utterly a failure in its mission. It is here that the average deaf child's future happiness and success in life is determined. A deat child without adequate trade knowledge is in a sorry plight indeed. Without an understanding of a trade, he is helpless and dependent. This feature of deaf edueation can not be over emphasized. California, in its new plan, should wive ready reeognition to this important phase and do everything possible to afford the deaf child the great opportunity of taking his place with his hearing brothers and sisters, and of heing an independent and self-supporting citizen. It is only through proper and efficient trade teaching that this can be done. We must not deeeive ourselves into thinking otherwise. Becanse of handieap, the deaf child has no opportunity to enter the so-ealled whitecollared jobs, and is very much limited in the way of earning a livelihood.

    The learning of proper trades at schools is the open sesame for the deaf ehild and the sooner we face and appreciate this wholesome truth,
    the better prepared the deaf child will be to meet outside conditions upon graduation. This fact should be indelibly impressed upon our minds and nothing left undone that will give the deaf this necessary foundation.

    Remember the opportunities for him are very limited; that he can not find entrance into all lines of endearor; that his only hope is in the trades; that even in trades he is limited to a certain number ; that in trades, he must orercome certain false prejudices and misunderstanding; that he must compete with his hearing brothers who have all the adrantage; that because of these factors, we must provide him with the best and suitable trades, with the best trpe of instructors and with the best possible equipment. All states are thinking in terms of affording the handicapped child the best. so that there will be no handicapped adults. Let California now grasp the opportunity of planning a trades department that will answer the crying need and prarer of the deaf pupil.

    We are teaching certain trades at present, but not in the may that we should. There is rast opportunity for improvement. The trades taught at present are : printing and linotype operating, cabinet-making, shoemaking and barbering (part-time). This is inadequate. There is really rery little in a constructive way being done for the girls. They learn a little of domestic science and sewing, but very little. We can not truthfully say that we are teaching these trades because present existing conditions prevent such teaching.

    Under the new plan and with a new building, we desire to arrange a group of suitable trades, to have regular courses of study outlined, and to make a close connection with similar trades carried on on the outside. The following are the trades we suggest be established:

    ## FOR THE BOYS

    It is understood that in the Primary Unit, arrangements are possible in Primary Industrial or Sloyd where the younger boys are taught the rudimentary manipulations, the handling of tools, and the habits of industry. It is a sort of "try-out" or "selection" shop where the instructor is able, after three years, to determine to a degree, just what trpe of trade a certain boy would be best suited for. When he is transferred to the Academic Lnit, he can be properly placed in a trade.

    Printing and linotype operating.
    Cabinet-making, finishing, carpentry, glazing, mill work.
    Tailoring (cleaning and pressing).
    Baking.
    Barbering.
    Painting (sign painting).
    Shoemaking.
    Machinist's trade.
    FOR THE GIRLS

    Domestic science.
    Sewing - operation of power machines-shirt-making.
    Beauty culture work.
    Novelty mork.
    Typing.

    Filing.
    Adding machine operating and the operating of other similar machines.
    Comptometry.

    This department should receive the same eonsideration and support as the educational side of the school. There should be a supervisor of trades, to look atter the work in the same way that there is a principal supervising academic instrmetion. All teachers of trades should be on the same plane with teachers of classes.

    It is desired to work in eoopreration with the state anthorities in this particular field and to emphasize this department. It is also further planned to arrange to comect with local industries in the respective trades tanght, and in this manner have practical work and part-time cooperative instruction.

    Hospital. Each school should have its own separate hospital and should be considered as thongh each were 100 miles apart. One doctor eould answer the needs of both imlependent hospitals. It wonld merely mean the services of one more muse and a maid for the hospital or infirmary for the blind. Howerer, such arrangement wonld spell better and more efficient management of hospital, more definite accoming and recording work and service, due respect from employee, a clearer understanding of responsibility and better and uninterrupted care of the children. Each principal would then be directly responsible in every way for his hospital and would be able to hold his employees to striet account for cverything transpiring in the hospital. By all means a separate and independent hospital directly under the charge of the head of the school. If this can not be accomplished, it would be far better to arrange for infirmary wards in each of the new cottages for the children. This would be more expensive in upkeep and an antiquated practice, yet would be fir better than contiming the dual use of one place. There are many factors that are diffienlt to explain in this dual arrangement. Furthermore in the erection ut this separate hospital, it shond be placed in an acepssible location to both primary and academic units. It should be easily and quickly reached. There are children who must visit the hospital three times a day and this calls for time. Distances. therefore, should be short.

    The new hospital for a sehon popmation of 550 to 600 should have a capacity of at least twenty-five heds with two separate wards for possible contagion. This is on the basis of providing for 5 per cent of the school population. In case of a severe epitemic, the hospital. if erected in connection with one or two of the dormitories, conld hare the overHow of cases eared for in the dormitory cottage. If this hospital connected to a cottage for each sex, the situation would be ideal.

    Engine Room. The new heating plant ought to be located on the lowest portion of the land mson, to allow the natural comensation In the boilers. The present plant is nsable during the reconstrution periof. Eventually, howerer, it nught to be remoteled to suit blind schonl needs, or entirely abomboned in fasor of a new plant. under 1)r. Stevenson's management, whieh woukl sell steam to the School for the Blind. Separate heat plants allow each school to develop heat and plumbing repair crews. Often such erews com take eare of all the general repair work about the campus.

    Water. If there is water on our grounds for drilling purposes, it would be more economical to hive our own water supply, because of the large amonnt necessary to earry on omm work. As it is, we have a
    water hill of snmething like $\$ 3.500$ to $\$ 3.800$ a year and this calls for a very careful use of water at this cosis. This cosit is for drinking, cooking, lousing, and ground purposes only. The present arrangement is very poor. All water consmmed by both schonls goes through one meter and is so charged. There is no method of actually gauging the water consmmption of each schol, thus preventing any opportunity for checking up and warding off excessive and wasteful use of water. This is not a logical or businesslike arrangement and does not gire chance for efficient management and check. Then again. one school shonld not carry the expense of water consmmption in its budget for both sehonls. If the bills are in excess of the allocated amount in the hudget, the school that hears this burden suffers. Any dual use of any building, eommodity, employee, and article is not good business and is rery difficult of proper and efficient accounting. It complicates matters and results in inefficiency and greater expense. If, in the new planning. water must he hought, it is suggested that all piping be separate. Water lines going to the School for the Blind should be accounted for on separate meters and should come out of the budget for the blind. All piping and water going to the buildings of the School for the Deaf should be separate, and metered and paid for out of its budget. This. then. places responsihility directly on the shoulders of each principal and affords an opportmity for efficient and economical handling of such.

    Electricity. Each scliool should be served independent of the other and each should be responsible for its own consumption and the costs of the same. As to the mamufacturing of nur own current, state engineers would he in a better position to advise. At present we pay about two cents a kilowatt. In some states, perlaps it would be cheaper to manufacture current. It has been mannfactured as low as one-half cent a kilowatt. where heat had to be produced. The current could be cenerated since we have to produce heat for our buildings. It would be well to study the matter, since the Shool for the Deaf will soon become a large schwol, housing 600 pupils, with a dozen or more buildings. If the larger schools have gond reasons for purchasing current, we could he governed accordingly:

    Laundry. At present laundry wrork is done by outside contract at a cost of $\$ 7,200$ for 370 persons, 325 of whom are here only nine months. Collection and washing is done once a week. It would be clearer to say that the contract is $\$ 600$ a month or $\$ 7,200$ a year for one washing a week for 370 persons. Any number over 370 is to be charged $\$ 1.60$ per individual additional each month. Regardless of the fact that the children ( 325 ) are at home for the three summer months, the charge of $\$ 600$ is effective. Any wasbing that is out of the ordinary, such as hospital wash cansed by epidemies, is additional charge. During the holidars when the children are at home for two weeks at Christmas. the charge remains the same. This may seem cheap, but with the proper equipment and proper workers, the school could do its own laundry work at less cost ; if not less, at least at the same enst, and also be able to do the cmergener washing and have it ready when needed. A laundry of onl own would permit of teaching a certain type of deaf girl and a boy a trade, as we can send them to the laundry during the shop time to assist in the work and to learn the rarious operations.

    Greenhouse. The present greenhouse is larger than our needs. In faet, onr grounds are too large for one man. A smaller greenhouse will answer our purposes. Suffieient landscape work with the shrubbery and limited planting to make good appearanees around buiddings will be satisfactory. One man and a helper eonld take care of this. There eould be more road and play areas to be cared for by yardmen. The new wreenhouse shonht be located out of the way of the main buildings and adjacent to the agrienltural areas.

    ## V. HOUSING PROBLEMS AND NEEDS

    Principal's Cottage and Home. The principal or lead of the school, becanse of the nature of his work and position (in loco parentis), must live on the gromds. This arrangement is common in all such schools. The present cottage dates back to 1880 and is in very poor physical condition. The supports and timbers are rotted and the entire place damp, musty and bad. It is far from adequate, although attempts have been made to paint and dress it up. It has seen its service and could be razed any time without the state feeling that it was a loss or an expense. In locating the new eottage, thought must be given to the fact that the primeipal and his family saerifice a great part of their private family life by living on the grounds and within sight and call twenty-four hours of the day. The cottage should be given some privacy and should also face the strect as a residence. It the same time it slould be aceessible for immediate eall.

    ## Assistant to Principal's (Steward or Business Manager) Cottage.

    It is enstomary to arrange for living quarters on the gromeds for the assistant to the prineipal or steward who eares for the business and phesieal side of the school. Te shonld be within eall at all times to be on duty in the absence of the head, and to be on hand if necessary with reference to emergency deliveries and work pertaining to commissary and general stores. This spells greater efficiency. Ife should be responsible in general for the Aeademic and Service buildings after working hours.

    Bookkeeper and Assistant Steward's Cottage. In a large school, the same arrangement is followed as above. In our new plan of school management, the assistant steward should be responsible for the Primary Tnit, during off homrs, and live near it.

    Engineer's Cottage. This refer's to the chief engineer and building superintendent. There is no need of going into detail as to why this employee should be on the grounds and close at hand at all times. The very mature of his responsibility would demand that he be housed on the grounds. Many times throughont the year he is ealled mpon for emergency work which, if not done at the time, might prove very destructive and expensive in the end.

    Quarters for Faculty, Housemothers and Officers. This is a condition that needs $n 0$ explaining. The people who care for the children outside of school and who live with them must be provided for. Such provisions are made in the respective cottages where the children are located. Certain teachers are employed with the understanding that they live at the sehool. Teachers of sewing, cooking, physieal culture, supervising teachers and sueh nsmally follow this understanding.

    Lower salaries ean be paid in this way. This is customary in all schools for the deaf.

    Employees' Cottages. (Separate for sexes.) This is customary and size depends naturally on number of help. One cottage should care for 12 to 15 employees. Roughly speaking, the Primary Unit would have 15 emplorees and the Aeademie about 30 employees. These are help such as eooks, janitors, yardmen, ete.

    ## VI. REASONS FOR COMPLETE AND FULL SEPARATION OF SCHOOLS

    This thonght had been started back in 1920 and has been slowly carried out. This rear sees the complete and full separation as far as financial operation is coneemed and as far as student housing, care and schooling are coneerned. Further steps should be taken and the two schools should operate without any dependence upon the other. There should be no dual nse of any building, fund, unit or group of employees. It was with this elear understanding that the principal of the School for the Deaf willingly accepted the offer to come to Califormia. Each school should be distinctly individual and independent, and there should be no orerlapping in any way. No two schools so diametrically opposite in work and purposes, in persomnel, in spirit, and for economical and efficient management, can operate in a dual nature or have units subject to the use and control of both. It can not be done and to expect such is humanly impossible and rery monair to those in charge. It is detrimental to all harmony and progress. The past conditions and experiences of the two schools are common knowledge to the profession in this special work. Likemise, the difficulties and tronbles are eommon knowledge to state officials. Why continue them? Why not a solution and a remedy? If there is true desire to have a well-organized sehool with a wholesome and progressive future, the state should consider each school as a separate unit and make it possible for each to operate alone.

    ## VII. SUGGESTED AREAS FOR EACH SCHOOL

    Since it is definitely decided that both are to remain on the same general site, distinct demareation and boundary lines should be made, as shown on Chart 1.

    ## VIII. REASONS FOR IMMEDIATE CONSTRUCTION OF PRIMARY UNIT

    a. Present school and housing faeilities are inadequate for small rhildren.
    b. Small children at present are not reeeiving fall opportmity for school and mental attainment.
    c. Classrooms are dark, crowded and ill-adapted to work and progress of small children.
    d. There is $n 0$ additional space for new children.
    e. There is no available space for modern means of special teaching. such as musieal rhythm, play room and action room.
    f. By arranging to have smaller ehildren eared for in a new building, the older children will have better conditions in the old school building for a time.
    g. Becatse of lack of room, children are crowded in classrooms, snmetimes placed ont of their grade.
    h. There is no suitable play area or lavatory facilities for smaller children in connection with sehoohnouse.
    i. Housing arrangements in every way are detrimental to proper eare and development. They are too close to the older ehildren. The facilities are poor and inadequate. There is no opportunity for wholesome and full growth.
    j. Small ehikleen must rise at the same lome as older children. They must eat at the same time, eat the same food as prepared for older children, and must follow the rontine as set for all pupils.
    k. Iresent conditions prevent edneation reaching all deaf children entitled to it in the state.

    ## IX. THE PROBLEMS OF A NEW PLANT

    The problems of a new plant derelopment are threefold:

    1. The general order of obsoleseence of the existing buildings.
    2. The major plaming objectives of any new scheme.
    3. The relative eost of sueh a scheme.

    These topics ean be developed only by adopting a scheme and tracing it throngh a period of growth, to final completion. This we purpose to do now, and we are assuming a prorram that eompletely re-houses the institution.

    The Obsolescence of Buildings. The buildings with their erection dates, their general order of obsolescence, and the particular years in which they must be razed respectively to permit of the exeention of the tentative ten-year new building construction program, are listed below:

    1. Strauss Hall, constructed in 1878 ; brick and wood construction ; to be razed in Angust, 1929, when the blind boys now using it will have moved to a new building now under comstruction at the state Sehool for the Blind.
    2. Moss Hall, constructed in IST~; brick and wood construetion ; to be razed in 1934 when a dormitory for girls in the academic unit will have been constructed with proposed 1933 appropriation.
    3. Greenhouse, construeted in 1892 ; wood and glass; to be razed at a future time to clear a site for the completion of the academic unit sehool building which is to be constructed at a future time beyond the coming ten-year period.
    4. Bartlett Hall, construeted in 189) ; brick and wood construction; to be razed in 19:31 to elear site for academie mit dining room to be built with proposed 1931 appropriation.
    5. Willard Hall, constructed in 1881; brick and wood construction ; to be razed at a future time berond the coming ten-year period when provision is made for athletic field.
    6. Principal's Residence, construeted in 1880 ; wood frame construetion; to be razed at a future time to clear site for two girls' dormitory buildings in aeademie unit to be crected at a future time heyond the coming ten-year period; the new residence for the prineipal having been ereeted with proposed 1935 appropriation.
    7. Education Building, eonstrueted in 1881; brick and wood construction; to be razed at a future time to clear site for completion
    of Hospital Building and for academic unit boys' dormitory building which are to be erected at a future time beyond the coming ten-year period.
    8. Hospital Building, constructed in 1902 ; wood frame construction with brick filling between posts; to be razed at a future time, when provision is made for athletic field. The major portion of the new hospital building is to be constructed with proposed 1937 appropriation.
    9. Refectory Building, constructed in 1880; brick and wood construction; to be razed at a future time beyond the coming ten-year period when provision is made for athletic field.
    10. Laundry and Help's Quarters Building, constructed in 1888; brick and wood construction; to be razed at a future time beyond the coming ten-year period when provision is made for athletic field.
    11. Bakery and Help's Quarters Building, constructed in 1879; brick and wood construction; to be razed at a future time beyond the coming ten-year period when provision is made for athletic field.
    12. Durham Hall, constructed in 1890 ; brick and wood construction; to be razed at a future time beyond the coming ten-year period when two academic unit girls dormitory buildings, to be erected at a future time beyond the coming ten-year period, have been completed.

    ## REPAIRS NECESSARY TO OLD BUILDINGS

    The plan we are to develop will cut down the repairs needed on old buildings. The list from the State Architect's office, shown on page 26, totaling $\$ 30,000$, can be cut to the following list, totaling $\$ 15,000$.

    Repairs needed to keep old building' in usable condition until replacement.

    1. Bartlett Hall-Willard Hall-Durham Hall-
    Plaster patching, touching up paint work and miscellaneous repairs_ $\$ 3,000 \quad 00$
    2. Hospital Building-
    
    3. Laundry Building-Bakery Building-
    
    4. Education Building-

    New concrete floors in toilets, miscellaneous repairs and painting_-- 1,40000
    5. Plumbing-

    Run hot water to basins in Bartlett, Willard and Durham
    
    Repairs in domestic science and employees' quarters...-.-- 54000
    6. Heating-
    
    7. Electrical work-
    
    
    
    
    
    
    

    ## MAJOR PLANNING OBJECTIVES

    Under this heading we attempt to colleet the major aspects of data developed in this report. that a new building plan must meet. These are listed under the three headings--administrative needs., edueational and moral needs and economic aims.

    ## Administrative needs.

    1. Complete separation of Deat and Blind sehools.
    2. Destroy old buildings in general order of obsoleseence.
    3. Destroy old buildings and erect new ones, so the sehool population can grow.
    4. Develop into a compact plant that is:
    a. Easy to get about for general supervision.
    b. Conneeted together, so ehildren can remain under cover during the school day.
    e. Do not use dormitory halls for eross plant cireulation.

    ј. Provide living quarters for:
    a. President.
    b. Steward (business manager) where he can have general superrision of academie unit.
    c. Assistant Steward, where he is available for emergeney call.
    d. Engineer, where he is available for emergeney call.
    e. Honse help (in varions dormitories) needed for plant supervision.
    f. House other help, separated by sex, on the site.
    6. Gather administrative offiees near together.
    7. House chief honse mother central to each dormitory group, and have :
    a. Parent reception rooms common to the gronp.
    b. Trunk rooms in common.
    c. Mending romms in common.
    8. Hospital, central to the general group, and:
    a. Served by utility drive.
    b. Connected to a dormitory of each sex.
    9. Have one central commissary serving:
    a. $\Delta$ kitchen or kitehens for sehool groups.
    b. Dining facilities for school groups, faculty, and help.
    10. Have one steam plant for both schools, with provision whereby steam may be sold the Blind School.
    a. Engineer responsible to Dr. Stevenson alone.
    b. Engineer living nearby, for emergency call.
    11. Properly relate green-honse to agricultural areas.
    12. Hare main anditorim connected to sehool but usable by public, with necessaries available.
    13. Have garage storage for school bus, residents' autos, etc., and service roads to assembly hall stage, primary sehool assembly, all play areas, gymnasium stage, all residences, trunk rooms, vocational rooms, mending rooms (for lamdry delivery) hospital, main entrance, boiler house, commissary, stewards' store room, etc.

    ## Educational and moral needs.

    1. Plan for an eventual plant of abont 600 capacity; 210 primary, and 400 academic.
    2. Preserve classroom and shop space for adult instruction.
    3. Separate primary and academie groups completely.
    4. Separate primary and academic dormitories by sex.
    5. Contemplate immediate construction of the primary unit.
    6. See that employees' (quarters are well separated from pupils' dormitories.
    7. Develop play areas adjacent to each dormitory group :
    a. Use the athletic field for boys.
    b. Use gymnasium for academic boys and girls.
    c. Devclop a new playing ficld for the deaf.
    8. Plan a new vocational init with:
    a. One story, wide space, construetion.
    b. Face away from sehool plant, but comnect to it.
    c. Have service road and drive to it.
    d. Plan for vocational instruction in kitehens, lamdry, bake shop, agricultural fields, etc.
    Economic aims.
    9. Have a single steam plant, and sell to the blind.
    10. Use a smaller front set-back from street.
    11. Use a common commissary.
    12. Liess roadway.
    13. Keep repairs of old buildings down to a limit.
    14. Develop a comprehensive seheme to care for growth.
    15. Check all plans carefully to assure:
    a. Sound administrative values.
    b. Inexpensive permanent architectural construction and style.
    c. Proper functional diagnosis.
    

    ## X. A SUGGESTED TENTATIVE TEN-YEAR BUILDING AND REORGANIZATION PLAN

    We now submit one plan which will meet the above requirements and is illustrated in Chart 2.
    The development in successive biemniums is listed on Chart 2. This development for the next five hienniums would proceed somewhat as follows:

    | Build | Cost | Razf |
    | :---: | :---: | :---: |
    | Biennium 1929-1931-Total capacity 1929: 215. |  |  |
    |  |  |  |
    | Primary Unit- |  |  |
    | 1. Boys' dormitory; capacity 68 ; girls' dormitory, capacity 68. Construction |  | Strauss Hall (in temporary use for blind boys). |
    | 2. Dining room, kitchen and commissary | \$200,000 | Lean-to between bakery and |
    | building. Construction and furnishings_ | \$0,000 | laundry. |
    | 3. New boiler, service connections, im- |  |  |
    | ience | 20,000 |  |
    | Total for biennium | \$300,000 |  |
    | Biennium 1931-1933- |  |  |
    | Total capacity July ${ }^{1}$. 1931 :$215-60+6 S+68=291$. |  |  |
    | S ${ }^{\text {cademic Unit- }}$ |  |  |
    | 4. Dining room. Construction and furnishings | \$50,000 | Barlett Hall (capacity 60). |
    | Primary Unit- |  |  |
    | i. School and assembly: Construction and furnishings | 165,000 |  |
    | Total for biennium | \$215,000 |  |
    | Biennium 1933-1935- |  |  |
    | Academic Unit- |  |  |
    | 6. Two dornitories, one for girls and one for boys (capacity 136). Construction |  | Moss Hall (capacity 50). To be razed in 1934 after new |
    | and furnishings --------------------- | \$200,000 | completed. |
    | Total for biennium | \$200,000 |  |
    | Biennium 1935-1937-- |  |  |
    | Total capacity July 1, 1935 : |  |  |
    |  |  |  |
    | school unit. Construction and furnish- |  |  |
    | 8. New boiler and permanent building to $\$ 150,000$ |  |  |
    |  |  |  |
    | 3. Principal's residence. Construction and 25,000 |  |  |
    | Total for biennium.--------------------- \$210,000 |  |  |
    | Biennium 1937-1939- |  |  |
    | Total capacity July 1, 1937: 37\% <br> 10. Boys' dormitory (capacity 68). Con- |  |  |
    |  |  |  |
    | Scademic Unit- |  |  |
    | 11. Shop building. Construction and equip- |  |  |
    | 12. Mrespital. Construction and equipment | $\begin{aligned} & 25,00 \\ & 50,000 \end{aligned}$ |  |
    | Total for blennium_ | \$175,000 |  |
    | Grand total for five bienniums <br> Total capacity July 1, 1939: | 1,100,000 |  |

    ## XI. CONCLUSION

    Under the above program, partial reconstruction of the plant as indieated by the program itself and as shown on Chart 2, will have been acemmpished at the end of the biemnium 1937-1939. The eost of the full eompletion of the reconstruction would be aecomplished during suceceding bienniums. The cost of the reconstruction of this plant may seem high. The reader is reminded, however, that other state institutions clemanding similar facilities are costing this much or more. Since the situation at the State School for the Deaf in Berkeley is eritical, it seems reasonable to plan for the largest hiemmal expenditure during the biennium 1929-1931.

    The foregoing report of the subcommittee, to our minds, so fully and yet so suceinctly sets forth the vital necels of the State School for the Deaf at Berkeley from an institutional, administrative and edueational viewpoint, that your legislative committee feels that it could not have tone better than to have set it forth at length herein. Years of inattention, and even neglect, have resulted, as inevitably would be the ease, in dilapidated conditions of the antiquated structures now on the sehool grounds; most of them built approximately a half-eentury ago. The triple-headed government of the employees of the State School for the Deaf and the State School for the Blind, which up until the last biemnimm were both governed together, has undermined the discipline and presented a situation making efficiency and ceonomy impossible. Four committee believes that this unfortunate condition has been greatly improved by the division of the two schools into separate units, with separate gromnds, buildings and recreational facilities. We feel that the entire separation of the two institutions will complete the work now well begun.

    We are firmly conrinced that the new plant for the Deaf School, the plans and program for which are ineorporated herein and reeommended for fulfilment to the legislative and administrative departments of our state, combined with the skilled and eonscientious work of the expert teaching staft, will place Califormia's State School for the Deaf on a par with, if indeed not superior to, any similar state institution.

    Herbert W. Slater, Senator, Chairman; A. H. Breed, Senator, Vice Chairman ; Thomas A. Maloney, Senator; Robt. B. Fry, Assemblyman;
    Eugene W. Roland, Assemblyman:
    H. L. Parkman, Assemblyman, Secretary.

    ## APPENDIX "A"

    Following are the work orders issued by the Division of Architecture for repair work at the State School for the Deaf done during the last biennium and made available out of repairs, improvements and equipment appropriation of $\$ 22,000$; chapter 142, Statutes 1927.

    Work Order No. 88-\$2,000. (Entire amount used. All work coming under this work order was in connection with the blind section of the school.)

    1. Concretc work, including steps and concrete gutters.
    2. Stone wall, including new wall and addition to existing wall.
    3. Grading and filling.
    4. Pipe railing.
    5. Flag polc.
    6. Gravel and oil on roadways.

    Work Order No. 115- $\$ 6,000$. (When this work was completed there remained a balance of some $\$ 2,700$ which was then turned with work order No. 119 which was for repairs.)

    1. Removing tower and continuing roof of chapel Educational Building.

    Work Order No. 119- $\$ 13,263.92$, plus $\$ 2,700$ from work order No. 115 , making a total of $\$ 15,963.92$.
    Educational Building:

    1. Keldon lighting units in classrooms.
    2. Painting woodwork in the classrooms to match those which were done last summer.
    3. Painting woodwork, walls and ceilings on the lower floor of Educational Building.
    4. Painting woodwork and walls, upper corridor:
    5. Painting plaster walls of auditorium and dressiug rooms.

    Durham Hall:

    1. Painting first floor walls, ceilings :and woodwork.
    2. Repainting radiators and piping.
    3. Repairs to metal ceilings on third floor and painting same.
    4. Repainting all painted floors.
    5. Repainting porel and outside steps.
    6. New outside door on east porch.

    Willard Hall:

    1. Painting walls, ceilings and woodwork first floor.
    2. Repairing roof where timbers have rotted.
    3. Repainting wooden floors.
    4. Study room lighting fixtures same as in Bartlett and Durham halls.
    5. Repairs to gutters and downspouts.
    6. Repairing and painting porch and steps.

    ## Bartlett Hall:

    1. Painting walls, ceiling and woodwork first floor.
    2. Painting woodwork, walls and ceilings throughout the building.
    3. Painting radiators and piping.
    4. Replacement of certain doors and repairing plastering.
    5. Six new toilets and four new lavatories and installing hot water sym to fixtures in toilet rooms on all floors.

    ## Moss Hall:

    1. Painting first flow walls, ceiling and woodwork.
    2. New cement floor in locker room.

    ## Strauss Hall:
